(b) If a local agency undertakes a project to implement a rule or regulation imposed by a certified state environmental regulatory program listed in Section 15251, the project shall be exempt from CEQA with regard to the significant effects analyzed in the document prepared by the state agency as a substitute for an EIR. The local agency shall comply with CEQA with regard to any site-specific effect of the project which was not analyzed by the certified state agency as a significant effect on the environment. The local agency need not re-examine the general environmental effects of the state rule or regulation.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080, 21080.5 and 21154, Public Resources Code.

§ 15185. Administrative Appeals.

(a) Where an agency allows administrative appeals upon the adequacy of an environmental document, an appeal shall be handled according to the procedures of that agency. Public notice shall be handled in accordance with individual agency requirements and Section 15202(e).

(b) The decisionmaking body to which an appeal has been made shall consider the environmental document and make findings under Sections 15091 and 15093 if appropriate.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21082 and 21083, Public Resources Code.

§ 15187. Environmental Review of New Rules and Regulations.

(a) At the time of the adoption of a rule or regulation requiring the installation of pollution control equipment, establishing a performance standard, or establishing a treatment requirement, the California Air Resources Board, Department of Toxic Substances Control, Integrated Waste Management Board, State Water Resources Control Board, all regional water quality control boards, and all air pollution control districts and air quality management districts, as defined in Section 39025 of the Health and Safety Code, must perform an environmental analysis of the reasonably foreseeable methods by which compliance with that rule or regulation will be achieved.

(b) If an EIR is prepared by the agency at the time of adoption of a rule or regulation, it satisfies the requirements of this section provided that the document contains the information specified in subdivision (c) below. Similarly, for those State agencies whose regulatory programs have been certified by the Resources Agency pursuant to Section 21080.5 of the Public Resources Code, an environmental document prepared pursuant to such programs satisfies the requirements of this section, provided that the document contains the information specified in subdivision (c) below.

(c) The environmental analysis shall include at least the following:

(1) An analysis of reasonably foreseeable environmental impacts of the methods of compliance;

(2) An analysis of reasonably foreseeable feasible mitigation measures relating to those impacts; and

(3) An analysis of reasonably foreseeable alternative means of compliance with the rule or regulation, which would avoid or eliminate the identified impacts.

(d) The environmental analysis shall take into account a reasonable range of environmental, economic, and technical factors, population and geographic areas, and specific sites. The agency may utilize numerical ranges and averages where specific data is not available, but is not required to, nor should it, engage in speculation or conjecture.

(e) Nothing in this section shall require the agency to conduct a project level analysis.

(f) Nothing in this section is intended, or may be used, to delay the adoption of any rule or regulation for which this section requires an environmental analysis.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21159 and 21159.4, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15188. Focused EIR for Pollution Control Equipment.

This section applies to projects consisting solely of the installation of pollution control equipment and other components necessary to the installation of that equipment which are undertaken for the purpose of complying with a rule or regulation which was the subject of an environmental analysis as described in Section 15187.

(a) The lead agency for the compliance project may prepare a focused EIR to analyze the effects of that project when the following occur:

(1) the agency which promulgated the rule or regulation certified an EIR on that rule or regulation, or reviewed it pursuant to an environmental analysis prepared under a certified regulatory program and, in either case, the review included an assessment of growth inducing impacts and cumulative impacts of, and alternatives to, the project;

(2) the focused EIR for the compliance project is certified within five years of the certified EIR or environmental analysis required by subdivision (a)(1); and

(3) the EIR prepared in connection with the adoption of the rule or regulation need not be updated through the preparation of a subsequent EIR or supplemental EIR pursuant to section 15162 or section 15163.

(b) The discussion of significant environmental effects in the focused EIR shall be limited to project–specific, potentially significant effects which were not discussed in the environmental analysis required under Section 15187. No discussion of growth–inducing or cumulative impacts is required. Discussion of alternatives shall be limited to alternative means of compliance, if any, with the rule or regulation.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21159.1, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15189. Compliance with Performance Standard or Treatment Requirement Rule or Regulation.

This section applies to projects consisting solely of compliance with a performance standard or treatment requirement which was the subject of an environmental analysis as described in Section 15187.

(a) If preparing a negative declaration, mitigated negative declaration or EIR on the compliance project the lead agency for the compliance project shall, to the greatest extent feasible, use the environmental analysis prepared pursuant to Section 15187. The use of numerical averages or ranges in the environmental analysis prepared under Section 15187 does not relieve the lead agency on the compliance project from its obligation to identify and evaluate the environmental effects of the project.

(b) Where the lead agency determines that an EIR is required for the compliance project, the EIR need address only the project–specific issues or other issues that were not discussed in sufficient detail in the environmental analysis prepared under Section 15187. The mitigation measures imposed by the lead agency shall be limited to addressing the significant effects on the environment of the compliance project. The discussion of alternatives shall be limited to a discussion of alternative means of compliance, if any, with the rule or regulation.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21159.2, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15190. Deadlines for Compliance with Sections 15188 and 15189.

(a) The lead agency for a compliance project under either Section 15188 or Section 15189 shall determine whether an EIR or negative declaration should be prepared within 30 days of its determination that the application for the project is complete.

(b) Where the EIR will be prepared under contract to the lead agency for the compliance project, the agency shall issue a request for proposal for preparation of the EIR not later than 30 days after the deadline for response to the notice of preparation has expired. The contract shall be awarded within 30 days of the response date on the request for proposals.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21159.3, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

Article 13. Review and Evaluation of EIRs and Negative Declarations

§ 15200. Purposes of Review.

The purposes of review of EIRs and negative declarations include:

(a) Sharing expertise,

(b) Disclosing agency analyses,

(c) Checking for accuracy,

(d) Detecting omissions,

(e) Discovering public concerns, and

(f) Soliciting counter proposals.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21000, 21108 and 21152, Public Resources Code; *Environmental Defense Fund* v. *Coastside County Water District* (1972) 27 Cal. App. 3d 695; *County of Inyo* v. *City of Los Angeles* (1977) 71 Cal. App. 3d 185.

History
1. New Article 13 (Sections 15201–15203) filed 2–2–78; effective thirtieth day thereafter (Register 78, No. 5).
2. Repealer of Article 13 (Sections 15201–15203) and new Article 13 (Sections 15200–15209) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
3. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15201. Public Participation.

Public participation is an essential part of the CEQA process. Each public agency should include provisions in its CEQA procedures for wide public involvement, formal and informal, consistent with its existing activities and procedures, in order to receive and evaluate public reactions to environmental issues related to the agency's activities.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21000, 21082, 21108 and 21152, Public Resources Code; *Environmental Defense Fund v. Coastside County Water District* (1972) 27 Cal. App. 3d 695; *People* v. *County of Kern* (1974) 39 Cal. App. 3d 830; *County of Inyo* v. *City of Los Angeles* (1977) 71 Cal. App. 3d 185.

§ 15202. Public Hearings.

(a) CEQA does not require formal hearings at any stage of the environmental review process. Public comments may be restricted to written communications.

(b) If an agency provides a public hearing on its decision to carry out or approve a project, the agency should include environmental review as one of the subjects for the hearing.

(c) A public hearing on the environmental impact of a project should usually be held when the lead agency determines it would facilitate the purposes and goals of CEQA to do so. The hearing may be held in conjunction with and as a part of normal planning activities.

(d) A draft EIR or negative declaration should be used as a basis for discussion at a public hearing. The hearing may be held at a place where public hearings are regularly conducted by the lead agency or at another location expected to be convenient to the public.

(e) Notice of all public hearings shall be given in a timely manner. This notice may be given in the same form and time as notice for other regularly conducted public hearings of the public agency.

(f) A public agency may include, in its implementing procedures, procedures for the conducting of public hearings pursuant to this section. The procedures may adopt existing notice and hearing requirements of the public agency for regularly conducted legislative, planning, and other activities.

(g) There is no requirement for a public agency to conduct a public hearing in connection with its review of an EIR prepared by another public agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21000, 21082, 21108 and 21152, Public Resources Code; *Concerned Citizens of Palm Desert, Inc.* v. *Board of Supervisors* (1974) 38 Cal. App. 3d 272.

§ 15203. Adequate Time for Review and Comment.

The lead agency shall provide adequate time for other public agencies and members of the public to review and comment on a draft EIR or negative declaration that it has prepared.

(a) Public agencies may establish time periods for review in their implementing procedures and shall notify the public and reviewing agencies of the time for receipt of comments on EIRs. These time periods shall be consistent with applicable statutes, the State CEQA Guidelines, and applicable clearinghouse review periods.

(b) A review period for an EIR does not require a halt in other planning or evaluation activities related to a project. Planning should continue in conjunction with environmental evaluation.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21082, 21108 and 21152, Public Resources Code. Formerly Sections 15160(a) and (e).

§ 15204. Focus of Review.

(a) In reviewing draft EIRs, people should focus on the sufficiency of the document in identifying and analyzing the possible impacts on the environment and ways in which the significant effects of the project might be avoided or mitigated. Comments are most helpful when they suggest additional specific alternatives or mitigation measures that would provide better ways to avoid or mitigate the significant environmental effects.

(b) In reviewing negative declarations, people should focus on the proposed finding that the project will not have a significant effect on the environment. If people believe that the project would have a significant effect, they should:

(1) Identify the effect,

(2) Explain why they believe the effect would occur, and

(3) Explain why they believe the effect would be significant.

(c) Reviewers should explain the basis for their comments, and whenever possible, should submit data or references in support of the comments.

(d) Reviewing agencies or organizations should include with their comments the name of a contact person who would be available for later consultation if necessary.

(e) This section shall not be used to restrict the ability of reviewers to comment on broader issues and on the general adequacy of a document or to reject comments not focused as recommended by this section.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21104 and 21153, Public Resources Code. Formerly Section 15161.

§ 15205. Review by State Agencies.

(a) Draft EIRs and negative declarations to be reviewed by state agencies shall be submitted to the State Clearinghouse, 1400 Tenth Street, Sacramento, California 95814.

(b) The following environmental documents shall be submitted to the State Clearinghouse for review by state agencies:

(1) Draft EIRs and negative declarations prepared by a state agency where such agency is a lead agency.

(2) Draft EIRs and negative declarations prepared by a public agency where a state agency is a responsible agency, trustee agency, or otherwise has jurisdiction by law with respect to the project.

(3) Draft EIRs and negative declarations on projects identified in Section 15206 as being of statewide, regional, or areawide significance.

(4) Draft EIRs, environmental assessments, and findings of no significant impact prepared pursuant to NEPA, the Federal Guidelines (Title 40 CFR, Part 1500, commencing with Section 1500.1).

(c) Public agencies may send environmental documents to the State Clearinghouse for review where a state agency has special expertise with regard to the environmental impacts involved. The areas of statutory authorities of state agencies are identified in Appendix B.

(d) When an EIR or negative declaration is submitted to the State Clearinghouse for review, the review period set by the lead agency shall be at least as long as the period provided in the state review system operated by the State Clearinghouse. In the state review system, the normal review period is 45 days for EIRs and 30 days for negative declarations. In exceptional circumstances, the State Clearinghouse may set shorter review periods when requested by the lead agency.

(e) The number of copies of an EIR or negative declaration submitted to the State Clearinghouse shall not be less than ten unless the State Clearinghouse approves a lower number in advance.

(f) While the lead agency is encouraged to contact the regional and district offices of state responsible agencies, the lead agency must, in all cases, submit documents to the State Clearinghouse for distribution in order to comply with the review requirements of this section.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083, 21104 and 21153, Public Resources Code. Formerly Section 15161.5.

§ 15206. Projects of Statewide, Regional, or Areawide Significance.

(a) Projects meeting the criteria in this section shall be deemed to be of statewide, regional, or areawide significance. A draft EIR or negative declaration prepared by any public agency on a project described in this

the lead agency must involve the federal agency in the preparation of the joint document. This involvement is necessary because federal law generally prohibits a federal agency from using an EIR prepared by a state agency unless the federal agency was involved in the preparation of the document.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.5 and 21083.7, Public Resources Code; Section 102(2)(D) of NEPA, 43 U.S.C.A. 4322 (2)(D); 40 C.F.R. Part 1506.2.

§ 15223. Consultation with Federal Agencies.

When it plans to use an EIS or finding of no significant impact or to prepare such a document jointly with a federal agency, the lead agency shall consult as soon as possible with the federal agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.5 and 21083.7, Public Resources Code.

§ 15224. Time Limits.

Where a project will be subject to both CEQA and the National Environmental Policy Act, the one year time limit and the 105 day time limit may be waived pursuant to Section 15110.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21083.6, Public Resources Code.

§ 15225. Circulation of Documents.

(a) Where the federal agency circulated the EIS or finding of no significant impact for public review as broadly as state or local law may require and gave notice meeting the standards in Section 15072(a) or 15087(a), the lead agency under CEQA may use the federal document in the place of an EIR or negative declaration without recirculating the federal document for public review. One review and comment period is enough. Prior to using the federal document in this situation, the lead agency shall give notice that it will use the federal document in the place of an EIR or negative declaration and that it believes that the federal document meets the requirements of CEQA. The notice shall be given in the same manner as a notice of the public availability of a draft EIR under Section 15087.

(b) If an EIS has been prepared and filed pursuant to NEPA on the closure and reuse of a military base and the Lead Agency decides that the EIS does not fully meet the requirements of CEQA or has not been circulated for public review as state and local law may require, the Lead Agency responsible for preparation of an EIR for a reuse plan for the same base may proceed in the following manner:

(1) Prepare and circulate a notice of preparation pursuant to Section 15082. The notice shall include a description of the reuse plan, a copy of the EIS, an address to which to send comments, and the deadline for submitting comments. The notice shall state that the lead agency intends to utilize the EIS as a draft EIR and requests comments on whether the EIS provides adequate information to serve as a draft EIR and what specific additional information, if any, is necessary.

(2) Upon the close of the comment period, the lead agency may proceed with preparation and circulation for comment of the draft EIR for the reuse plan. To the greatest extent feasible, the lead agency shall avoid duplication and utilize the EIS or information in the EIS as all or part of the draft EIR. The EIR shall be completed in compliance with the provisions of CEQA.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.5, 21083.8 and 21092, Public Resources Code.

HISTORY

1. New subsection (a) designator, new subsections (b)–(b)(2), and amendment of NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15226. Joint Activities.

State and local agencies should cooperate with federal agencies to the fullest extent possible to reduce duplication between the California Environmental Quality Act and the National Environmental Policy Act. Such cooperation should, to the fullest extent possible, include:

(a) Joint planning processes.

(b) Joint environmental research and studies.

(c) Joint public hearings.

(d) Joint environmental documents.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.5 and 21083.7, Public Resources Code; 40 C.F.R. Part 1506.2.

§ 15227. State Comments on a Federal Project.

When a state agency officially comments on a proposed federal project which may have a significant effect on the environment, the comments shall include or reference a discussion of the material specified in Section 15126. An EIS on the federal project may be referenced to meet the requirements of this section.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21101, Public Resources Code.

§ 15228. Where Federal Agency Will Not Cooperate.

Where a federal agency will not cooperate in the preparation of joint document and will require separate NEPA compliance for the project at a later time, the state or local agency should persist in efforts to cooperate with the federal agency. Because NEPA expressly allows federal agencies to use environmental documents prepared by an agency of statewide jurisdiction, a local agency should try to involve a state agency in helping prepare an EIR or negative declaration for the project. In this way there will be a greater chance that the federal agency may later use the CEQA document and not require the applicant to pay for preparation of a second document to meet NEPA requirements at a later time.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21083.5, Public Resources Code; Section 102(2)(D) of NEPA, 42 U.S.C.A. 4322(2)(D).

§ 15229. Baseline Analysis for Military Base Reuse Plan EIRs.

When preparing and certifying an EIR for a plan for the reuse of a military base, including when utilizing an Environmental Impact Statement pursuant to Section 21083.5 of the Public Resources Code, in addition to the procedure authorized pursuant to subdivision (b) of Section 21083.8 of the Public Resources Code, the determination of whether the reuse plan may have a significant effect on the environment may, at the discretion of the lead agency, be based upon the physical conditions which were present at the time that the federal decision for the closure or realignment of the base or reservation became final. These conditions shall be referred to as the "baseline physical conditions." Impacts which do not exceed the baseline physical conditions shall not be considered significant.

(a) Prior to circulating a draft EIR pursuant to the provisions of this Section, the lead agency shall do all of the following, in order:

(1) Prepare proposed baseline physical conditions, identify pertinent responsible and trustee agencies and consult with those agencies prior to the public hearing required by subdivision (a)(2) as to the application of their regulatory authority and permitting standards to the proposed baseline physical conditions, the proposed reuse plan, and specific, planned future nonmilitary land uses of the base or reservation. The affected agencies shall have not less than 30 days prior to the public hearing to review the proposed baseline physical conditions and the proposed reuse plan and to submit their comments to the lead agency.

(2) Hold a public hearing at which is discussed the federal EIS prepared for, or being prepared for, the closure or realignment of the military base or reservation. The discussion shall include the significant effects on the environment, if any, examined in the EIS, potential methods of mitigating those effects, including feasible alternatives, and the mitigative effects of federal, state, and local laws applicable to future nonmilitary activities. Prior to the close of the hearing, the lead agency shall specify whether it will adopt any of the baseline physical conditions for the reuse plan EIR and identify those conditions. The lead agency shall specify particular baseline physical conditions, if any, which it will examine in greater detail than they were examined in the EIS. Notice of the hearing shall be given pursuant to Section 15087. The hearing may be continued from time to time.

(3) Prior to the close of the hearing, the lead agency shall do all of the following:

section shall be submitted to the State Clearinghouse and should be submitted also to the appropriate metropolitan area council of governments for review and comment.

(b) The lead agency shall determine that a proposed project is of statewide, regional, or areawide significance if the project meets any of the following criteria:

(1) A proposed local general plan, element, or amendment thereof for which an EIR was prepared. If a negative declaration was prepared for the plan, element, or amendment, the document need not be submitted for review.

(2) A project has the potential for causing significant effects on the environment extending beyond the city or county in which the project would be located. Examples of the effects include generating significant amounts of traffic or interfering with the attainment or maintenance of state or national air quality standards. Projects subject to this subsection include:

(A) A proposed residential development of more than 500 dwelling units.

(B) A proposed shopping center or business establishment employing more than 1,000 persons or encompassing more than 500,000 square feet of floor space.

(C) A proposed commercial office building employing more than 1,000 persons or encompassing more than 250,000 square feet of floor space.

(D) A proposed hotel/motel development of more than 500 rooms.

(E) A proposed industrial, manufacturing, or processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or encompassing more than 650,000 square feet of floor area.

(3) A project which would result in the cancellation of an open space contract made pursuant to the California Land Conservation Act of 1965 (Williamson Act) for any parcel of 100 or more acres.

(4) A project for which an EIR and not a negative declaration was prepared which would be located in and would substantially impact the following areas of critical environmental sensitivity:

(A) The Lake Tahoe Basin.

(B) The Santa Monica Mountains Zone as defined by Section 74663 of the Government Code.

(C) The California Coastal Zone as defined in, and mapped pursuant to, Section 30103 of the Public Resources Code.

(D) An area within 1/4 mile of a wild and scenic river as defined by Section 5093.5 of the Public Resources Code.

(E) The Sacramento–San Joaquin Delta, as defined in Water Code Section 12220.

(F) The Suisun Marsh as defined in Public Resources Code Section 29101.

(G) The jurisdiction of the San Francisco Bay Conservation and Development Commission as defined in Government Code Section 66610.

(5) A project which would substantially affect sensitive wildlife habitats including but not limited to riparian lands, wetlands, bays, estuaries, marshes, and habitats for endangered, rare and threatened species as defined by Section 15380 of this Chapter.

(6) A project which would interfere with attainment of regional water quality standards as stated in the approved areawide waste treatment management plan.

(7) A project which would provide housing, jobs, or occupancy for 500 or more people within 10 miles of a nuclear power plant.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference. Section 21083, Public Resources Code.

HISTORY

1. Amendment of subsection (b)(5) filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§15207. Failure to Comment.

If any public agency or person who is consulted with regard to an EIR or negative declaration fails to comment within a reasonable time as specified by the lead agency, it shall be assumed, absent a request for a specific extension of time, that such agency or person has no comment to make. Although the lead agency need not respond to late comments, the lead agency may choose to respond to them.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21104 and 21153, Public Resources Code; *Cleary* v. *County of Stanislaus* (1981) 118 Cal. App. 3d 348. Formerly Section 15162.

§ 15208. Retention and Availability of Comments.

Comments received through the consultation process shall be retained for a reasonable period and available for public inspection at an address given in the final EIR. Comments which may be received on a draft EIR or negative declaration under preparation shall also be considered and kept on file.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21104, 21082.1 and 21153, Public Resources Code; Section 4, Chapter 480, Statutes of 1981; *People* v. *County of Kern* (1974) 39 Cal. App. 3d 830.

§ 15209. Comments on Initiative of Public Agencies.

Every public agency may comment on environmental documents dealing with projects which affect resources with which the agency has special expertise regardless of whether its comments were solicited or whether the effects fall within the legal jurisdiction of the agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21104 and 21153, Public Resources Code.

Article 14. Projects Also Subject to the National Environmental Policy Act (NEPA)

§ 15220. General.

This article applies to projects that are subject to both CEQA and NEPA. NEPA applies to projects which are carried out, financed, or approved in whole or in part by federal agencies. Accordingly, this article applies to projects which involve one or more state or local agencies and one or more federal agencies.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.5, 21083.6 and 21083.7, Public Resources Code; National Environmental Policy Act of 1969, Public Law 91–190 as amended, 42 U.S.C.A. 4321–4347; NEPA Regulations, 40 Code of Federal Regulations (C.F.R.) Parts 1500–1508.

HISTORY

1. New Article 14 (Sections 15220–15228) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15221. NEPA Document Ready Before CEQA Document.

(a) When a project will require compliance with both CEQA and NEPA, state or local agencies should use the EIS or finding of no significant impact rather than preparing an EIR or negative declaration if the following two conditions occur:

(1) An EIS or finding of no significant impact will be prepared before an EIR or negative declaration would otherwise be completed for the project; and

(2) The EIS or finding of no significant impact complies with the provisions of these guidelines.

(b) Because NEPA does not require separate discussion of mitigation measures or growth inducing impacts, these points of analysis will need to be added, supplemented, or identified before the EIS can be used as an EIR.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.5 and 21083.7, Public Resources Code; Section 102(2)(C) of NEPA, 43 U.S.C.A. 4322(2)(C).

§ 15222. Preparation of Joint Documents.

If a lead agency finds that an EIS or finding of no significant impact for a project would not be prepared by the federal agency by the time when the lead agency will need to consider an EIR or negative declaration, the lead agency should try to prepare a combined EIR–EIS or negative declaration–finding of no significant impact. To avoid the need for the federal agency to prepare a separate document for the same project,

Article 16. EIR Monitor

§ 15240. EIR Monitor.

The Secretary for Resources may provide for publication of a bulletin entitled "California EIR Monitor" on a subscription basis to provide public notice of amendments to the guidelines, the completion of draft EIRs, and other matters as deemed appropriate. Inquiries and subscription requests should be sent to the following address:

SECRETARY FOR RESOURCES
ATTENTION: CALIFORNIA EIR MONITOR
1416 NINTH STREET, ROOM 1311
SACRAMENTO, CALIFORNIA 95814

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21088, Public Resources Code.

HISTORY

1. New Article 16 (Section 15240) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

Article 17. Exemption for Certified State Regulatory Programs

§ 15250. General.

Section 21080.5 of the Public Resources Code provides that a regulatory program of a state agency shall be certified by the Secretary for Resources as being exempt from the requirements for preparing EIRs, negative declarations, and initial studies if the Secretary finds that the program meets the criteria contained in that code section. A certified program remains subject to other provisions in CEQA such as the policy of avoiding significant adverse effects on the environment where feasible. This article provides information concerning certified programs.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.5, Public Resources Code.

HISTORY

1. New Article 17 (Sections 15250–15253) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15251. List of Certified Programs.

The following programs of state regulatory agencies have been certified by the Secretary for Resources as meeting the requirements of Section 21080.5:

(a) The regulation of timber harvesting operations by the California Department of Forestry and the State Board of Forestry pursuant to Chapter 8, commencing with Section 4511 of Part 2 of Division 4 of the Public Resources Code.

(b) The regulatory program of the Fish and Game Commission pursuant to the Fish and Game Code.

(c) The regulatory program of the California Coastal Commission and the regional coastal commissions dealing with the consideration and granting of coastal development permits under the California Coastal Act of 1976, Division 20 (commencing with Section 30000) of the Public Resources Code.

(d) That portion of the regulatory program of the Air Resources Board which involves the adoption, approval, amendment, or repeal of standards, rules, regulations, or plans to be used in the regulatory program for the protection and enhancement of ambient air quality in California.

(e) The regulatory program of the State Board of Forestry in adopting, amending, or repealing standards, rules, regulations, or plans under the Z'berg–Nejedly Forest Practice Act, Chapter 8 (commencing with Section 4511) of Part 2 of Division 4 of the Public Resources Code.

(f) The program of the California Coastal Commission involving the preparation, approval, and certification of local coastal programs as provided in Sections 30500 through 30522 of the Public Resources Code.

(g) The Water Quality Control (Basin)/208 Planning Program of the State Water Resources Control Board and the Regional Water Quality Control Boards.

(h) The permit and planning programs of the San Francisco Bay Conservation and Development Commission under the McAteer–Petris Act, Title 7.2 (commencing with Section 66600) of the Government Code and the Suisun Marsh Preservation Act, Division 19 (commencing with Section 29000) of the Public Resources Code.

(i) The pesticide regulatory program administered by the Department of Food and Agriculture and the county agricultural commissioners insofar as the program consists of:

(1) The registration, evaluation, and classification of pesticides.

(2) The adoption, amendment, or repeal of regulations and standards for the licensing and regulation of pesticide dealers and pest control operators and advisors.

(3) The adoption, amendment, or repeal of regulations for standards dealing with the monitoring of pesticides and of the human health and environmental effects of pesticides.

(4) The regulation of the use of pesticides in agricultural and urban areas of the state through the permit system administered by the county agricultural commissioners.

(j) The regulations of weather resources management projects through the issuance of operating permits by the State Department of Water Resources pursuant to the California Weather Resources Management Act of 1978 (Water Code Sections 400 et seq.).

(k) The power plant site certification program of the State Energy Resources Conservation and Development Commission under Chapter 6 of the Warren–Alquist Act, commencing with Public Resources Code Section 25500.

(l) The regulatory program of the State Water Resources Control Board to establish instream beneficial use protection programs.

(m) That portion of the regulatory program of the South Coast Air Quality Management District which involves the adoption, amendment, and repeal of regulations pursuant to the provisions of the Health and Safety Code.

(n) The program of the Delta Protection Commission involving the preparation and adoption of a Resource Management Plan for the Sacramento–San Joaquin Delta (Pub. Resources Code § 29760 ff.), and the Commission's review and action on general plan amendments proposed by local governments to make their plans consistent with the provisions of the Commission's Resource Management Plan (Pub. Resources Code § 29763.5).

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.5, Public Resources Code.

HISTORY

1. New subsection (m) filed 3–1–89; operative 3–31–89 (Register 89, No. 10).
2. New subsection (n) filed 11–9–94; operative 12–9–94 (Register 94, No. 45).

§ 15252. Substitute Document.

The document used as a substitute for an EIR or negative declaration in a certified program shall include at least the following items:

(a) A description of the proposed activity, and

(b) Either:

(1) Alternatives to the activity and mitigation measures to avoid or reduce any significant or potentially significant effects that the project might have on the environment, or

(2) A statement that the agency's review of the project showed that the project would not have any significant or potentially significant effects on the environment and therefore no alternatives or mitigation measures are proposed to avoid or reduce any significant effects on the environment. This statement shall be supported by a checklist or other documentation to show the possible effects that the agency examined in reaching this conclusion.

(A) Specify the baseline physical conditions which it intends to adopt for the reuse plan EIR, and specify particular physical conditions, if any, which it will examine in greater detail than were examined in the EIS.

(B) State specifically how it intends to integrate its discussion of the baseline physical conditions in the EIR with the reuse planning process, taking into account the adopted environmental standards of the community, including but not limited to, the adopted general plan, specific plan or redevelopment plan, and including other applicable provisions of adopted congestion management plans, habitat conservation or natural communities conservation plans, air quality management plans, integrated waste management plans, and county hazardous waste management plans.

(C) State the specific economic or social reasons, including but not limited to, new job creation, opportunities for employment of skilled workers, availability of low and moderate-income housing, and economic continuity which support selection of the baseline physical conditions.

(b) An EIR prepared under this section should identify any adopted baseline physical conditions in the environmental setting section. The baseline physical conditions should be cited in discussions of effects. The no-project alternative analyzed in an EIR prepared under this section shall discuss the conditions on the base as they exist at the time of preparation, as well as what could be reasonably expected to occur in the foreseeable future if the reuse plan were not approved, based on current plans and consistent with available infrastructure and services.

(c) All public and private activities taken pursuant to or in furtherance of a reuse plan for which an EIR was prepared and certified pursuant to this section shall be deemed to be a single project. A subsequent or supplemental EIR shall be required only if the lead agency determines that any of the circumstances described in Section 15162 or 15163 exist.

(d) Limitations:

(1) Nothing in this section shall in any way limit the scope of review or determination of significance of the presence of hazardous or toxic wastes, substances, and materials, including but not limited to, contaminated soils and groundwater. The regulation of hazardous or toxic wastes, substances, and materials shall not be constrained by this section.

(2) This section does not apply to hazardous waste regulation and remediation projects undertaken pursuant to Chapter 6.5 (commencing with Section 25100) or Chapter 6.8 (commencing with Section 25300) of Division 20 of the Health and Safety Code or pursuant to the Porter-Cologne Water Quality Control Act (Water Code Section 13000, et seq.)

(3) All subsequent development at the military base or reservation shall be subject to all applicable federal, state, or local laws, including but not limited to, those relating to air quality, water quality, traffic, threatened and endangered species, noise, and hazardous or toxic wastes, substances, or materials.

(e) "Reuse plan" means the initial plan for the reuse of military base adopted by a local government, including a redevelopment agency or joint powers authority, in the form of a general plan, general plan amendment, specific plan, redevelopment plan, or other planning document. For purposes of this section, a reuse plan also shall include a statement of development policies, a diagram or diagrams illustrating its provisions, including a designation of the proposed general distribution, location, and development intensity for housing, business, industry, open space, recreation, natural resources, public buildings and grounds, roads, and other transportation facilities, infrastructure, and other categories of proposed uses, whether public or private.

(f) This section may be applied to any reuse plan EIR for which a notice of preparation is issued within one year from the date that the federal record of decision was rendered for the military base or reservation closure or realignment and reuse, or prior to January 1, 1997, whichever is later, but only if the EIR is completed and certified within five years from the date that the federal record of decision was rendered.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21083.1, Public Resources Code.

HISTORY

1. New section filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

Article 15. Litigation

§ 15230. Time Limits and Criteria.

Litigation under CEQA must be handled under the time limits and criteria described in Sections 21167 et seq. of the Public Resources Code and Section 15112 of these guidelines in addition to provisions in this article.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21167 et seq., Public Resources Code.

HISTORY

1. New Article 15 (Sections 15230-15233) filed 7-13-83; effective thirtieth day thereafter (Register 83, No. 29).
2. Editorial correction of 7-13-83 order redesignating effective date to 8-1-83 filed 7-14-83 (Register 83, No. 29).

§ 15231. Adequacy of EIR or Negative Declaration for Use by Responsible Agencies.

A final EIR prepared by a lead agency or a negative declaration adopted by a lead agency shall be conclusively presumed to comply with CEQA for purposes of use by responsible agencies which were consulted pursuant to Sections 15072 or 15082 unless one of the following conditions occurs:

(a) The EIR or negative declaration is finally adjudged in a legal proceeding not to comply with the requirements of CEQA, or

(b) A subsequent EIR is made necessary by Section 15162 of these guidelines.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080.1, 21166, 21167.2 and 21167.3, Public Resources Code.

§ 15232. Request for Hearing.

In a writ of mandate proceeding challenging approval of a project under CEQA, the petitioner shall, within 90 days of filing the petition, request a hearing or otherwise be subject to dismissal on the court's own motion or on the motion of any party to the suit.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21167.4, Public Resources Code.

§ 15233. Conditional Permits.

If a lawsuit is filed challenging an EIR or negative declaration for non-compliance with CEQA, responsible agencies shall act as if the EIR or negative declaration complies with CEQA and continue to process the application for the project according to the time limits for responsible agency action contained in Government Code Section 65952.

(a) If an injunction or a stay has been granted in the lawsuit prohibiting the project from being carried out, the responsible agency shall have authority only to disapprove the project or to grant a conditional approval of the project. A conditional approval shall constitute permission to proceed with a project only when the court action results in a final determination that the EIR or negative declaration does comply with the provisions of CEQA (Public Resources Code Section 21167.3a).

(b) If no injunction or stay is granted in the lawsuit, the responsible agency shall assume that the EIR or negative declaration fully meets the requirements of CEQA. The responsible agency shall approve or disapprove the project within the time limits described in Article 8, commencing with Section 15100, of these guidelines and described in Government Code Section 65952. An approval granted by a responsible agency in this situation provides only permission to proceed with the project at the applicant's risk prior to a final decision in the lawsuit (Public Resources Code Section 21167.3b).

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21167.3, Public Resources Code; *Kriebel* v. *City Council* (1980) 112 Cal. App. 3d 693.

§ 15265. Adoption of Coastal Plans and Programs.

(a) CEQA does not apply to activities and approvals pursuant to the California Coastal Act (commencing with Section 30000 of the Public Resources Code) by:

(1) Any local government, as defined in Section 30109 of the Public Resources Code, necessary for the preparation and adoption of a local coastal program, or

(2) Any state university or college, as defined in Section 30119, as necessary for the preparation and adoption of a long–range land use development plan.

(b) CEQA shall apply to the certification of a local coastal program or long–range land use development plan by the California Coastal Commission.

(c) This section shifts the burden of CEQA compliance from the local agency or the state university or college to the California Coastal Commission. The Coastal Commission's program of certifying local coastal programs and long–range land use development plans has been certified under Section 21080.5, Public Resources Code. See Section 15192.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.9, Public Resources Code.

§ 15266. General Plan Time Extension.

CEQA shall not apply to the granting of an extension of time by the Office of Planning and Research to a city or county for the preparation and adoption of one or more elements of a city or county general plan.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.10(a), Public Resources Code.

§ 15267. Financial Assistance to Low or Moderate Income Housing.

CEQA does not apply to actions taken by the Department of Housing and Community Development to provide financial assistance for the development and construction of residential housing for persons and families of low or moderate income, as defined in Section 50093 of the Health and Safety Code. The residential project which is the subject of the application for financial assistance will be subject to CEQA when approvals are granted by another agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.10(b), Public Resources Code.

§ 15268. Ministerial Projects.

(a) Ministerial projects are exempt from the requirements of CEQA. The determination of what is "ministerial" can most appropriately be made by the particular public agency involved based upon its analysis of its own laws, and each public agency should make such determination either as a part of its implementing regulations or on a case–by–case basis.

(b) In the absence of any discretionary provision contained in the local ordinance or other law establishing the requirements for the permit, license, or other entitlement for use, the following actions shall be presumed to be ministerial:

(1) Issuance of building permits.

(2) Issuance of business licenses.

(3) Approval of final subdivision maps.

(4) Approval of individual utility service connections and disconnections.

(c) Each public agency should, in its implementing regulations or ordinances, provide an identification or itemization of its projects and actions which are deemed ministerial under the applicable laws and ordinances.

(d) Where a project involves an approval that contains elements of both a ministerial action and a discretionary action, the project will be deemed to be discretionary and will be subject to the requirements of CEQA.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b)(1), Public Resources Code; *Day* v. *City of Glendale*, 51 Cal. App. 3d 817.

§ 15269. Emergency Projects.

The following emergency projects are exempt from the requirements of CEQA.

(a) Projects to maintain, repair, restore, demolish, or replace property or facilities damaged or destroyed as a result of a disaster in a disaster stricken area in which a state of emergency has been proclaimed by the Governor pursuant to the California Emergency Services Act, commencing with Section 8550 of the Government Code.

(b) Emergency repairs to public service facilities necessary to maintain service.

(c) Specific actions necessary to prevent or mitigate an emergency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080(b)(2), (3), and (4) and 21172, Public Resources Code.

§ 15270. Projects Which Are Disapproved.

(a) CEQA does not apply to projects which a public agency rejects or disapproves.

(b) This section is intended to allow an initial screening of projects on the merits for quick disapprovals prior to the initiation f the CEQA process where the agency can determine that the project cannot be approved.

(c) This section shall not relieve an applicant from paying the costs for an EIR or negative declaration prepared for his project prior to the lead agency's disapproval of the project after normal evaluation and processing.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b)(5), Public Resources Code.

§ 15271. Early Activities Related to Thermal Power Plants.

(a) CEQA does not apply to actions undertaken by a public agency relating to any thermal power plant site or facility, including the expenditure, obligation, or encumbrance of funds by a public agency for planning, engineering, or design purposes, or for the conditional sale or purchase of equipment, fuel, water (except groundwater), steam, or power for such a thermal power plant, if the thermal power plant site and related facility will be the subject of an EIR or negative declaration or other document or documents prepared pursuant to a regulatory program certified pursuant to Public Resources Code Section 21080.5, which will be prepared by:

(1) The State Energy Resources Conservation and Development Commission,

(2) The Public Utilities Commission, or

(3) The city or county in which the power plant and related facility would be located.

(b) The EIR, negative declaration, or other document prepared for the thermal power plant site or facility, shall include the environmental impact, if any, of the early activities described in this section.

(c) This section acts to delay the timing of CEQA compliance from the early activities of a utility to the time when a regulatory agency is requested to approve the thermal power plant and shifts the responsibility for preparing the document to the regulatory agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 15080(b)(6), Public Resources Code.

§ 15272. Olympic Games.

CEQA does not apply to activities or approvals necessary to the bidding for, hosting or staging of, and funding or carrying out of, Olympic Games under the authority of the International Olympic Committee, except for the construction of facilities necessary for such Olympic Games. If the facilities are required by the International Olympic Committee as a condition of being awarded the Olympic Games, the lead agency need not discuss the "no project" alternative in an EIR with respect to those facilities.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b)(7), Public Resources Code.

§ 15273. Rates, Tolls, Fares, and Charges.

(a) CEQA does not apply to the establishment, modification, structuring, restructuring, or approval of rates, tolls, fares, and other charges by public agencies which the public agency finds are for the purpose of:

(1) Meeting operating expenses, including employee wage rates and fringe benefits,

(2) Purchasing or leasing supplies, equipment, or materials,

(3) Meeting financial reserve needs and requirements,

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.5, Public Resources Code.

15253. Use of an EIR Substitute by a Responsible Agency.

(a) An environmental analysis document prepared for a project under a certified program listed in Section 15251 shall be used by another agency granting an approval for the same project where the conditions in Subsection (b) have been met. In this situation, the certified agency shall act as lead agency, and the other permitting agencies shall act as responsible agencies using the certified agency's document.

(b) The conditions under which a public agency shall act as a responsible agency when approving a project using an environmental analysis document prepared under a certified program in the place of an EIR or negative declaration are as follows:

(1) The certified agency is the first agency to grant a discretionary approval for the project.

(2) The certified agency consults with the responsible agencies, but the consultation need not include the exchange of written notices.

(3) The environmental analysis document identifies:

(A) The significant environmental effects within the jurisdiction or special expertise of the responsible agency.

(B) Alternatives or mitigation measures that could avoid or reduce the severity of the significant environmental effects.

(4) Where written notices were not exchanged in the consultation process, the responsible agency was afforded the opportunity to participate in the review of the property by the certified agency in a regular manner designed to inform the certified agency of the concerns of the responsible agency before release of the EIR substitute for public review.

(5) The certified agency established a consultation period between the certified agency and the responsible agency that was at least as long as the period allowed for public review of the EIR substitute document.

(6) The certified agency exercised the powers of a lead agency by considering all the significant environmental effects of the project and making a finding under Section 15091 for each significant effect.

(c) Certified agencies are not required to adjust their activities to meet the criteria in Subsection (b). Where a certified agency does not meet the criteria in Subsection (b):

(1) The substitute document prepared by the agency shall not be used by other permitting agencies in the place of an EIR or negative declaration, and

(2) Any other agencies granting approvals for the project shall comply with CEQA in the normal manner. A permitting agency shall act as a lead agency and prepare an EIR or a negative declaration. Other permitting agencies, if any, shall act as responsible agencies and use the EIR or negative declaration prepared by the lead agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002.1(d), 21080.5 and 21165, Public Resources Code.

Article 18. Statutory Exemptions

§ 15260. General.

This article describes the exemptions from CEQA granted by the Legislature. The exemptions take several forms. Some exemptions are complete exemptions from CEQA. Other exemptions apply to only part of the requirements of CEQA, and still other exemptions apply only to the timing of CEQA compliance.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b), Public Resources Code.

HISTORY

1. New Article 18 (Sections 15260–15277) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15261. Ongoing Project.

(a) If a project being carried out by a public agency was approved prior to November 23, 1970, the project shall be exempt from CEQA unless either of the following conditions exists:

(1) A substantial portion of public funds allocated for the project have not been spent, and it is still feasible to modify the project to mitigate potentially adverse environmental effects, or to choose feasible alternatives to the project, including the alternative of "no project" or halting the project; provided that a project subject to the National Environmental Policy Act (NEPA) shall be exempt from CEQA as an on–going project if, under regulations promulgated under NEPA, the project would be too far advanced as of January 1, 1970, to require preparation of an EIS.

(2) A public agency proposes to modify the project in such a way that the project might have a new significant effect on the environment.

(b) A private project shall be exempt from CEQA if the project received approval of a lease, license, certificate, permit, or other entitlement for use from a public agency prior to April 5, 1973, subject to the following provisions:

(1) CEQA does not prohibit a public agency from considering environmental factors in connection with the approval or disapproval of a project, or from imposing reasonable fees on the appropriate private person or entity for preparing an environmental report under authority other than CEQA. Local agencies may require environmental reports for projects covered by this paragraph pursuant to local ordinances during this interim period.

(2) Where a project was approved prior to December 5, 1972, and prior to that date the project was legally challenged for noncompliance with CEQA, the project shall be bound by special rules set forth in Section 21170 of CEQA.

(3) Where a private project has been granted a discretionary governmental approval for part of the project before April 5, 1973, and another or additional discretionary governmental approvals after April 5, 1973, the project shall be subject to CEQA only if the approval or approvals after April 5, 1973, involve a greater degree of responsibility or control over the project as a whole than did the approval or approvals prior to that date.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21169, 21170 and 21171, Public Resources Code; *County of Inyo v. Yorty*, 32 Cal. App. 3d 795.

§ 15262. Feasibility and Planning Studies.

A project involving only feasibility or planning studies for possible future actions which the agency, board, or commission has not approved, adopted, or funded does not require the preparation of an EIR or negative declaration but does require consideration of environmental factors. This section does not apply to the adoption of a plan that will have a legally binding effect on later activities.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21102 and 21150, Public Resources Code.

§ 15263. Discharge Requirements.

The State Water Resources Control Board and the regional boards are exempt from the requirement to prepare an EIR or a negative declaration prior to the adoption of waste discharge requirements, except requirements for new sources as defined in the Federal Water Pollution Control Act or in other acts which amend or supplement the Federal Water Pollution Control Act. The term "waste discharge requirements" as used in this section is the equivalent of the term "permits" as used in the Federal Water Pollution Control Act.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 13389, Water Code.

§ 15264. Timberland Preserves.

Local agencies are exempt from the requirement to prepare an EIR or negative declaration on the adoption of timberland preserve zones under Government Code Sections 51100 et seq. (Gov. Code, Sec. 51119).

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 51119, Government Code.

(4) Obtaining funds for capital projects, necessary to maintain service within existing service areas, or

(5) Obtaining funds necessary to maintain such intra-city transfers as are authorized by city charter.

(b) Rate increases to fund capital projects for the expansion of a system remain subject to CEQA. The agency granting the rate increase shall act either as the lead agency if no other agency has prepared environmental documents for the capital project or as a responsible agency if another agency has already complied with CEQA as the lead agency.

(c) The public agency shall incorporate written findings in the record of any proceeding in which an exemption under this section is claimed setting forth with specificity the basis for the claim of exemption.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b)(8), Public Resources Code.

§ 15274. Family Day Care Homes.

(a) CEQA does not apply to establishment or operation of a large family day care home, which provides in-home care for up to twelve children, as defined in Section 1596.78 of the Health and Safety Code.

(b) Under the Health and Safety Code, local agencies cannot require use permits for the establishment or operation of a small family day care home, which provides in-home care for up to six children, and the establishment or operation of a small family day care home is a ministerial action which is not subject to CEQA.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21083, Public Resources Code.

HISTORY

1. Amendment of section heading, repealer and new section, and amendment of NOTE filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15275. Specified Mass Transit Projects.

CEQA does not apply to the following mass transit projects:

(a) The institution or increase of passenger or commuter service on rail es or high-occupancy vehicle lanes already in use, including the modnization of existing stations and parking facilities;

(b) Facility extensions not to exceed four miles in length which are required for transfer of passengers from or to exclusive public mass transit guideway or busway public transit services.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b)(11), (12), and (13), Public Resources Code.

§ 15276. State and Regional Transportation Improvement Programs.

CEQA does not apply to the development or adoption of a regional transportation improvement program or the state transportation improvement program. Individual projects developed pursuant to these programs shall remain subject to CEQA.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b)(14), Public Resources Code.

§ 15277. Projects Located Outside California.

CEQA does not apply to any project or portion thereof located outside of California which will be subject to environmental impact review pursuant to the National Environmental Policy Act of 1969 or pursuant to a law of that state requiring preparation of a document containing essentially the same points of analysis as in an environmental impact statement prepared under the National Environmental Policy Act of 1969. Any emissions or discharges that would have a significant effect on the environment in the State of California are subject to CEQA where a California public agency has authority over the emissions or discharges.

NOTE: Authority cited: Sections 21083 and 2187, Public Resources Code. Reference: Section 21080(b)(15), Public Resources Code; 58 Opinions of the California Attorney General 614 (S.O. 75/50).

15278. Application of Coatings.

(a) CEQA does not apply to a discretionary decision by an air quality anagement district for a project consisting of the application of coatings within an existing facility at an automotive manufacturing plant if the district finds all of the following:

(1) The project will not cause a net increase in any emissions of any pollutant for which a national or state ambient air quality standard has been established after the internal emission accounting for previous emission reductions achieved at the facility and recognized by the district.

(2) The project will not cause a net increase in adverse impacts of toxic air contaminants as determined by a health risk assessment. The term "net increase in adverse impacts of toxic air contaminants as determined by a health risk assessment" shall be determined in accordance with the rules and regulations of the district.

(3) The project will not cause any other adverse effect on the environment.

(b) The district shall provide a 10-day notice, at the time of the issuance of the permit, of any such exemption. Notice shall be published in two newspapers of general circulation in the area of the project and shall be mailed to any person who makes a written request for such a notice. The notice shall state that the complete file on the project and the basis for the district's findings of exemption are available for inspection and copying at the office of the district.

(c) Any person may appeal the issuance of a permit based on an exemption under subdivision (a) to the hearing board as provided in Section 42302.1 of the Health and Safety Code. The permit shall be revoked by the hearing board if there is substantial evidence in light of the whole record before the board that the project may not satisfy one or more of the criteria established pursuant to subdivision (a). If there is no such substantial evidence, the exemption shall be upheld. Any appeal under this subdivision shall be scheduled for hearing on the calendar of the hearing board within 10 working days of the appeal being filed. The hearing board shall give the appeal priority on its calendar and shall render a decision on the appeal within 21 working days of the appeal being filed. The hearing board may delegate the authority to hear and decide such an appeal to a subcommittee of its body.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Chapter 1131, Statutes of 1993, Section 1.

HISTORY

1. New section filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15279. Housing for Agricultural Employees.

(a) CEQA does not apply to any development project which consists of the construction, conversion, or use of residential housing for agricultural employees, as defined below, provided the development is either:

(1) Affordable to lower income households, as defined in Section 50079.5 of the Health and Safety Code, there is no public financial assistance for the development project, and the developer provides sufficient legal commitments to the appropriate local agency to ensure that the housing units will continue to be available to lower-income households for a period of at least 15 years; or

(2) Affordable to low and moderate-income households, as defined in paragraph (2) of subdivision (h) of Section 65589.5 of the Government Code, at monthly housing costs determined pursuant to paragraph (2) of subdivision (h) of Section 65589.5 of the Government Code, there is public financial assistance for the project, and the developer provides sufficient legal commitments to the appropriate local agency to ensure that the housing units will continue to be available to low and moderate-income households for a period of at least 15 years.

(b) The development must also meet all the following criteria:

(1) It is consistent with the applicable city, county, or city and county general plan as it existed on the date the project application was deemed complete.

(2) It is consistent with the local zoning, as it existed on the date the project application was deemed complete, unless the zoning is inconsistent with the general plan because the city, county, or city and county has not rezoned the property to bring it into consistency with the general plan.

(3) If the project is proposed in an urbanized area, it does not exceed 45 dwelling units, or if it consists of dormitories, barracks or other group living facilities houses not more than 45 agricultural employees, and its

site is adjacent on at least two sides to land that has been previously developed.

(4) If the project is proposed in a nonurbanized area, its site is zoned for general agricultural use and the project consists of not more than 20 dwelling units or, if it consists of dormitories, barracks or other group living facilities, it houses not more than 20 agricultural employees.

(5) Its site is not more than five acres in area, except that a project located in an area with a population density of at least 1000 persons per square mile shall not be more than two acres in area.

(6) Its site is, or can be, adequately served by utilities.

(7) Its site has no value as wildlife habitat.

(8) Its site is not included on any list of hazardous waste or other facilities and sites compiled pursuant to Section 65962 of the Government Code.

(9) It will not involve the demolition of, or any substantial adverse change in, any structure that is listed, or determined to be eligible for listing in the California Register of Historical Resources.

(c) As used in this section, "residential housing for agricultural employees" means housing accommodations for an agricultural employee, as defined in subdivision (b) of Section 1140.4 of the Labor Code.

(d) As used in this section, "urbanized area" means either of the following:

(1) an area with a population density of at least 1000 persons per square mile; or

(2) an area with a population density of less than 1000 persons per square mile that is identified as an urban area in the general plan adopted by the applicable city, county, or city and county and was not designated at the time the application was deemed complete as an area reserved for future urban growth.

(e) This section does not apply if the public agency which is carrying out or approving the development project determines that there is a reasonable possibility that the project would have a significant effect on the environment due to unusual circumstances or that the cumulative impact of successive projects of the same type in the same area over time would be significant.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.10, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15280. Lower-Income Housing Projects.

(a) CEQA does not apply to any development project which consists of the construction, conversion, or use of residential housing consisting of not more than 45 units in an urbanized area, provided that it is either:

(1) Affordable to lower-income households, as defined in Section 50079.5 of the Health and Safety Code, and the developer provides sufficient legal commitments to the appropriate local agency to ensure that the housing units will continue to be available to lower income households for a period of at least 15 years; or

(2) Affordable to low and moderate-income households, as defined in paragraph (2) of subdivision (h) of Section 65589.5 of the Government Code, at monthly housing costs determined pursuant to paragraph (2) of subdivision (h) of Section 65589.5 of the Government Code.

(b) The development must also meet all the following criteria:

(1) It is consistent with the local jurisdiction's general plan as it existed on the date the project application was deemed complete.

(2) It is consistent with the local zoning as it existed on the date the project application was deemed complete, unless the zoning is inconsistent with the general plan because the city, county, or city and county has not rezoned the property to bring it into consistency with the general plan.

(3) Its site has been previously developed or is currently developed with urban uses, or the immediately contiguous properties surrounding the site are or have been previously developed with urban uses.

(4) Its site is not more than two acres in area.

(5) Its site is, or can be, adequately served by utilities.

(6) Its site has no value as wildlife habitat.

(7) It will not involve the demolition of, or any substantial adverse change in, any district, landmark, object, building, structure, site, area, or place that is listed, or determined to be eligible for listing in the California Register of Historical Resources.

(8) Its site is not included on any list of hazardous waste or other facilities and sites compiled pursuant to Section 65962.5 of the Government Code, and the site has been subject to an assessment by a California registered environmental assessor to determine both the presence of hazardous contaminants, if any, and the potential for exposure of site occupants to significant health hazards from nearby properties and activities.

(c) For purposes of this section, "urbanized area" means an area that has a population density of at least 1000 persons per square mile.

(d) If hazardous contaminants are found on the site, they must be removed or any significant effects mitigated to a level of insignificance in order to apply this exemption. If a potential for exposure to significant health hazards from nearby properties and activities is found to exist, the effects of the potential exposure must be mitigated to a level of insignificance in order to apply this exemption. Any removal or mitigation to insignificance must be completed prior to any residential occupancy of the project.

(e) This section does not apply if there is a reasonable possibility that the project would have a significant effect on the environment due to unusual circumstances or due to the related or cumulative impacts of reasonably foreseeable other projects in the vicinity.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.14, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15281. Air Quality Permits.

CEQA does not apply to the issuance, modification, amendment, or renewal of any permit by an air pollution control district or air quality management district pursuant to Title V, as defined in Section 39053.3 of the Health and Safety Code, or pursuant to an air district Title V program established under Sections 42301.10, 42301.11, and 42301.12 of the Health and Safety Code, unless the issuance, modification, amendment, or renewal authorizes a physical or operational change to a source or facility.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.24, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15282. Other Statutory Exemptions

The following is a list of existing statutory exemptions. Each subsection summarizes statutory exemptions found in the California Code. Lead agencies are not to rely on the language contained in the summaries below but must rely on the actual statutory language that creates the exemption. This list is intended to assist lead agencies in finding them, but not as a substitute for them. This section is merely a reference tool.

(a) The notification of discovery of Native American burial sites as set forth in Section 5097.98(c) of the Public Resources Code.

(b) Specified prison facilities as set forth in Sections 21080.01, 21080.02, 21080.03 and 21080.07 of the Public Resources Code.

(c) The lease or purchase of the rail right-of-way used for the San Francisco Peninsula commute service between San Francisco and San Jose as set forth in Section 21080.05 of the Public Resources Code.

(d) Any activity or approval necessary for or incidental to project funding or authorization for the expenditure of funds for the project, by the Rural Economic Development Infrastructure Panel as set forth in Section 21080.08 of the Public Resources Code.

(e) The construction of housing or neighborhood commercial facilities in an urbanized area pursuant to the provisions of Section 21080.7 of the Public Resources Code.

(f) The conversion of an existing rental mobilehome park to a resident initiated subdivision, cooperative, or condominium for mobilehomes as set forth in Section 21080.8 of the Public Resources Code.

(g) Settlements of title and boundary problems by the State Lands Commission and to exchanges or leases in connection with those settlements as set forth in Section 21080.11 of the Public Resources Code.

(h) Any railroad grade separation project which eliminates an existing grade crossing or which reconstructs an existing grade separation as set forth in Section 21080.13 of the Public Resources Code.

(i) The adoption of an ordinance regarding second units in a single-family or multifamily residential zone by a city or county to implement the provisions of Sections 65852.1 and 65852.2 of the Government Code as set forth in Section 21080.17 of the Public Resources Code.

(j) The closing of any public school or the transfer of students from that public school to another school in which kindergarten or any grades 1 through 12 is maintained as set forth in 21080.18 of the Public Resources Code.

(k) A project for restriping streets or highways to relieve traffic congestion as set forth in Section 21080.19 of the Public Resources Code.

(l) The installation of new pipeline or maintenance, repair, restoration, removal, or demolition of an existing pipeline as set forth in Section 21080.21 of the Public Resources Code, as long as the project does not exceed one mile in length.

(m) The activities and approvals by a local government necessary for the preparation of general plan amendments pursuant to Public Resources Code § 29763 as set forth in Section 21080.22 of the Public Resources Code. Section 29763 of the Public Resources Code refers to local government amendments made for consistency with the Delta Protection Commission's regional plan.

(n) Minor alterations to utilities made for the purposes of complying with Sections 4026.7 and 4026.8 of the Health and Safety Code as set forth in Section 21080.26 of the Public Resources Code.

(o) The adoption of an ordinance exempting a city or county from the provisions of the Solar Shade Control Act as set forth in Section 25985 the Public Resources Code.

) The acquisition of land by the Department of Transportation if ved or acquired within a statewide or regional priority corridor desigted pursuant to Section 65081.3 of the Government Code as set forth in Section 33911 of the Public Resources Code.

(q) The adoption or amendment of a nondisposal facility element as set forth in Section 41735 of the Public Resources Code.

(r) Cooperative agreements for the development of Solid Waste Management Facilities on Indian country as set forth in Section 44203(g) of the Public Resources Code.

(s) Determinations made regarding a city or countys regional housing needs as set forth in Section 65584 of the Government Code.

(t) Any action necessary to bring a general plan or relevant mandatory element of the general plan into compliance pursuant to a court order as set forth in Section 65759 of the Government Code.

(u) Industrial Development Authority activities as set forth in Section 91543 of the Government Code.

(v) Temporary changes in the point of diversion, place of use, of purpose of use due to a transfer or exchange of water or water rights as set forth in Section 1729 of the Water Code.

(w) The preparation and adoption of Urban Water Management Plans pursuant to the provisions of Section 10652 of the Water Code.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 5097.98(c), 21080.01, 21080.02, 21080.03, 21080.05, 21080.07, 21080.08, 21080.7, 21080.8, 21080.11, 21080.13, 21080.17, 21080.18, 21080.19, 21080.21, 21080.22, 21080.26, 25985, 33911, 41735 and 44203(g), Public Resources Code.

HISTORY

1. New section filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

Article 19. Categorical Exemptions

§ 15300. Categorical Exemptions.

Section 21084 of the Public Resources Code requires these guidelines to include a list of classes of projects which have been determined not to have a significant effect on the environment and which shall, therefore, be exempt from the provisions of CEQA.

In response to that mandate, the Secretary for Resources has found that the following classes of projects listed in this article do not have a significant effect on the environment, and they are declared to be categorically exempt from the requirement for the preparation of environmental documents.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21084, Public Resources Code.

HISTORY

1. Renumbering and amendment of former Article 8 (Sections 15100–15129) to Article 19 (Sections 15300–15329) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15300.1. Relation to Ministerial Projects.

Section 21080 of the Public Resources Code exempts from the application of CEQA those projects over which public agencies exercise only ministerial authority. Since ministerial projects are already exempt, Categorical Exemptions should be applied only where a project is not ministerial under a public agency's statutes and ordinances. The inclusion of activities which may be ministerial within the classes and examples contained in this article shall not be construed as a finding by the Secretary for resources that such an activity is discretionary.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21084, Public Resources Code.

§ 15300.2. Exceptions.

(a) Location. Classes 3, 4, 5, 6, and 11 are qualified by consideration of where the project is to be located—a project that is ordinarily insignificant in its impact on the environment may in a particularly sensitive environment be significant. Therefore, these classes are considered to apply in all instances, except where the project may impact on an environmental resource of hazardous or critical concern where designated, precisely mapped, and officially adopted pursuant to law by federal, state, or local agencies.

(b) Cumulative Impact. All exemptions for these classes are inapplicable when the cumulative impact of successive projects of the same type in the same place, over time is significant—for example, annual additions to an existing building under Class 1.

(c) Significant Effect. A categorical exemption shall not be used for an activity where there is a reasonable possibility that the activity will have a significant effect on the environment due to unusual circumstances.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21084, Public Resources Code; *Wildlife Alive* v. *Chickering* (1977) 18 Cal. 3d 190.

§ 15300.3. Revisions to List of Categorical Exemptions.

Any public agency may, at any time, request that a new class of Categorical Exemptions be added, or an existing one amended or deleted. This request must be made in writing to the Office of Planning and Research and shall contain detailed information to support the request. The granting of such request shall be by amendment to these guidelines.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21084, Public Resources Code.

be prepared. During or immediately after preparation of an initial study for a private project, the lead agency may consult with the applicant to determine if the applicant is willing to modify the project to reduce or avoid the significant effects identified in the initial study.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080(c), 21080.1, 21080.3, 21082.1, 21100 and 21151, Public Resources Code.

HISTORY

1. Amendment filed 8–19–94; operative 9–19–94 (Register 94, No. 33).

§ 15064. Determining the Significance of the Environmental Effects Caused by a Project.

(a) Determining whether a project may have a significant effect plays a critical role in the CEQA process.

(1) If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, the agency shall prepare a draft EIR.

(2) When a final EIR identifies one or more significant effects, the lead agency and each responsible agency shall make a finding under Section 15091 for each significant effect and may need to make a statement of overriding considerations under Section 15093 for the project.

(b) The determination of whether a project may have a significant effect on the environment calls for careful judgment on the part of the public agency involved, based to the extent possible on scientific and factual data. An ironclad definition of significant effect is not always possible because the significance of an activity may vary with the setting. For example, an activity which may not be significant in an urban area may be significant in a rural area.

(c) In determining whether an effect will be adverse or beneficial, the lead agency shall consider the views held by members of the public in all areas affected as expressed in the whole record before the lead agency. Before requiring the preparation of an EIR, the lead agency must still determine whether environmental change itself might be substantial.

(d) In evaluating the significance of the environmental effect of a project, the lead agency shall consider direct physical changes in the environment which may be caused by the project and reasonably foreseeable indirect physical changes in the environment which may be caused by the project.

(1) A direct physical change in the environment is a physical change in the environment which is caused by and immediately related to the project. Examples of direct physical changes in the environment are the dust, noise, and traffic of heavy equipment that would result from construction of a sewage treatment plant and possible odors from operation of the plant.

(2) An indirect physical change in the environment is a physical change in the environment which is not immediately related to the project, but which is caused indirectly by the project. If a direct physical change in the environment in turn causes another change in the environment, then the other change is an indirect physical change in the environment. For example, the construction of a new sewage treatment plant may facilitate population growth in the service area due to the increase in sewage treatment capacity and may lead to an increase in air pollution.

(3) An indirect physical change is to be considered only if that change is a reasonably foreseeable impact which may be caused by the project. A change which is speculative or unlikely to occur is not reasonably foreseeable.

(e) Some examples of physical changes which may be deemed to be a significant effect on the environment are contained in Appendix G.

(f) Economic and social changes resulting from a project shall not be treated as significant effects on the environment. Economic or social changes may be used, however, to determine that a physical change shall be regarded as a significant effect on the environment. Where a physical change is caused by economic or social effects of a project, the physical change may be regarded as a significant effect in the same manner as any other physical change resulting from the project. Alternatively, economic and social effects of a physical change may be used to determine that the physical change is a significant effect on the environment. If the physical change causes adverse economic or social effects on people, those adverse effects may be used as a factor in determining whether the physical change is significant. For example, if a project would cause overcrowding of a public facility and the overcrowding causes an adverse effect on people, the overcrowding would be regarded as a significant effect.

(g) The decision as to whether a project may have one or more significant effects shall be based on substantial evidence in the record of the lead agency.

(1) If the lead agency determines there is substantial evidence in the record that the project may have a significant effect on the environment, the lead agency shall prepare an EIR (*Friends of B Street* v. *City of Hayward* (1980) 106 Cal. App. 3d 988). Said another way, if a lead agency is presented with a fair argument that a project may have a significant effect on the environment, the lead agency shall prepare an EIR even though it may also be presented with other substantial evidence that the project will not have a significant effect (*No Oil, Inc.* v. *City of Los Angeles* (1974) 13 Cal. 3d 68).

(2) If the lead agency determines there is substantial evidence in the record that the project may have a significant effect on the environment but the lead agency determines that revisions in the project plans or proposals made by, or agreed to by, the applicant would avoid the effects or mitigate the effects to a point where clearly no significant effect on the environment would occur and there is no substantial evidence in light of the whole record before the public agency that the project, as revised, may have a significant effect on the environment then a mitigated negative declaration shall be prepared.

(3) If the lead agency determines there is no substantial evidence that the project may have a significant effect on the environment, the lead agency shall prepare a negative declaration (*Friends of B Street* v. *City of Hayward* (1980) 106 Cal. App. 3d 988).

(4) The existence of public controversy over the environment effects of a project will not require preparation of an EIR if there is no substantial evidence before the agency that the project may have a significant effect on the environment.

(5) Argument, speculation, unsubstantiated opinion or narrative, or evidence that is clearly inaccurate or erroneous, or evidence that is not credible, shall not constitute substantial evidence. Substantial evidence shall include facts, reasonable assumptions predicated upon facts, and expert opinion support by facts.

(6) Evidence of economic and social impacts that do not contribute to or are not caused by physical changes in the environment is not substantial evidence that the project may have a significant effect on the environment.

(h) After application of the principles set forth above in Section 15064(g), and in marginal cases where it is not clear whether there is substantial evidence that a project may have a significant effect on the environment, the lead agency shall be guided by the following principle: If there is disagreement among expert opinion supported by facts over the significance of an effect on the environment, the Lead Agency shall treat the effect as significant and shall prepare an EIR.

(i)(1)(A) Except as otherwise required by Section 15065, a change in the environment is not a significant effect if the change complies with a standard that meets the definition in subsection (i)(3).

(B) If there is a conflict between standards, the lead agency shall determine which standard is appropriate for purposes of this subsection based upon substantial evidence in light of the whole record.

(C) Notwithstanding subsection (i)(1)(A), if the lead agency determines on the basis of substantial evidence in light of the whole record that a standard is inappropriate to determine the significance of an effect for a particular project, the lead agency shall determine whether the effect may be significant as otherwise required by this section, Section 15065, and the Guidelines.

(c) When a public agency approves an applicant's project, either the agency or the applicant may file a notice of exemption.

(1) When a state agency files this notice, the notice of exemption is filed with OPR. A form for this notice is provided in Appendix E. A list of all such notices shall be posted on a weekly basis at the Office of Planning and Research, 1400 Tenth Street, Sacramento, California. The list shall remain posted for at least 30 days.

(2) When a local agency files this notice, the notice of exemption is filed with the county clerk of each county in which the project will be located. Copies of all such notices will be available for public inspection and such notices shall be posted within 24 hours of receipt in the office of the county clerk. Each notice shall remain posted for a period of 30 days. Thereafter, the clerk shall return the notice to the local agency with a notation of the period it was posted. The local agency shall retain the notice for not less than 9 months.

(3) When an applicant files this notice, special rules apply.

(A) The notice filed by an applicant is filed in the same place as if it were filed by the agency granting the permit. If the permit was granted by a state agency, the notice is filed with OPR. If the permit was granted by a local agency, the notice is filed with the county clerk of the county or counties in which the project will be located.

(B) The notice of exemption filed by an applicant shall contain the information required in subdivision (a) together with a certified document issued by the public agency stating that the agency has found the project to be exempt. The certified document may be a certified copy of an existing document or record of the public agency.

(C) A notice filed by an applicant is subject to the same posting and time requirements as a notice filed by a public agency.

(d) The filing of a Notice of Exemption and the posting on the list of notices start a 35 day statute of limitations period on legal challenges to the agency's decision that the project is exempt from CEQA. If a Notice of Exemption is not filed, a 180 day statute of limitations will apply.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21108 and 21152, Public Resources Code.

HISTORY

1. Amendment of subsections (b) and (c) filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).
2. Amendment of subsections (a)(2), (c)(1), (c)(2), (c)(3)(A) and (c)(3)(C) filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15063. Initial Study.

(a) Following preliminary review, the lead agency shall conduct an initial study to determine if the project may have a significant effect on the environment. If the lead agency can determine that an EIR will clearly be required for the project, an initial study is not required but may still be desirable.

(1) All phases of project planning, implementation, and operation must be considered in the initial study of the project.

(2) To meet the requirements of this section, the lead agency may use an initial study or a similar analysis prepared pursuant to the National Environmental Policy Act.

(b) Results.

(1) If the agency determines that there is substantial evidence that any aspect of the project, either individually or cumulatively, may cause a significant effect on the environment, regardless of whether the overall effect of the project is adverse or beneficial, the lead agency shall do one of the following:

(A) Prepare an EIR or

(B) Use a previously prepared EIR which the lead agency determines would adequately analyze the project at hand, or

(C) Determine, pursuant to a program EIR, tiering, or another appropriate process, which of a project's effects were adequately examined by an earlier EIR or negative declaration. Another appropriate process may include, for example, a master EIR, a master environmental assessment, approval of housing and neighborhood commercial facilities in urban areas as described in section 15181, approval of residential projects pursuant to a specific plan as described in section 15182, approval of residential projects consistent with a community plan, general plan or zoning as described in section 15183, or an environmental document prepared under a State certified regulatory program. The lead agency shall then ascertain which effects, if any, should be analyzed in a later EIR or negative declaration.

(2) The lead agency shall prepare a negative declaration if there is no substantial evidence that the project or any of its aspects may cause a significant effect on the environment.

(c) Purposes. The purposes of an initial study are to:

(1) Provide the lead agency with information to use as the basis for deciding whether to prepare an EIR or negative declaration;

(2) Enable an applicant or lead agency to modify a project, mitigating adverse impacts before an EIR is prepared, thereby enabling the project to qualify for a negative declaration;

(3) Assist the preparation of an EIR, if one is required, by:

(A) Focusing the EIR on the effects determined to be significant,

(B) Identifying the effects determined not to be significant,

(C) Explaining the reasons for determining that potentially significant effects would not be significant, and

(D) Identifying whether a program EIR, tiering, or another appropriate process can be used for analysis of the project's environmental effects.

(4) Facilitate environmental assessment early in the design of a project;

(5) Provide documentation of the factual basis for the finding in a negative declaration that a project will not have a significant effect on the environment;

(6) Eliminate unnecessary EIRs;

(7) Determine whether a previously prepared EIR could be used with the project.

(d) Contents. An initial study shall contain in brief form:

(1) A description of the project including the location of the project;

(2) An identification of the environmental setting;

(3) An identification of environmental effects by use of a checklist, matrix, or other method, provided that entries on a checklist or other form are briefly explained to indicate that there is some evidence to support the entries. The brief explanation may be either through a narrative or a reference to another information source such as an attached map, photographs, or an earlier EIR or negative declaration. A reference to another document should include, where appropriate, a citation to the page or pages where the information is found.

(4) A discussion of ways to mitigate the significant effects identified, if any;

(5) An examination of whether the project would be consistent with existing zoning, plans, and other applicable land use controls;

(6) The name of the person or persons who prepared or participated in the initial study.

(e) Submission of Data. If the project is to be carried out by a private person or private organization, the lead agency may require such person or organization to submit data and information which will enable the lead agency to prepare the initial study. Any person may submit any information in any form to assist a lead agency in preparing an initial study.

(f) Format. Sample forms for an applicant's project description and a review form for use by the lead agency are contained in Appendices H and I. When used together, these forms would meet the requirements for an initial study, provided that the entries on the checklist are briefly explained pursuant to subsection (d)(3). These forms are only suggested, and public agencies are free to devise their own format for an initial study. A previously prepared EIR may also be used as the initial study for a later project.

(g) Consultation. As soon as a lead agency has determined that an initial study will be required for the project, the lead agency shall consult informally with all responsible agencies and all trustee agencies responsible for resources affected by the project to obtain the recommendations of those agencies as to whether an EIR or a negative declaration should

(2) In the absence of a standard that satisfies subsection (i)(1)(a), the lead agency shall determine whether the effect may be significant as otherwise required by this section, Section 15065, and the Guidelines.

(3) For the purposes of this subsection a "standard" means a standard of general application that is all of the following:

(A) a quantitative, qualitative or performance requirement found in a statute, ordinance, resolution, rule, regulation, order, or other standard of general application;

(B) adopted for the purpose of environmental protection;

(C) adopted by a public agency through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency;

(D) one that governs the same environmental effect which the change in the environment is impacting; and,

(E) one that governs within the jurisdiction where the project is located.

(4) This definition includes thresholds of significance adopted by lead agencies which meet the requirements of this subsection.

History

1. New section filed 5–8–80; effective thirtieth day thereafter (Register 80, No. 19).
2. Amendment filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
3. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15003. Policies.

In addition to the policies declared by the Legislature concerning environmental protection and administration of CEQA in Sections 21000, 21001, 21002, and 21002.1 of the Public Resources Code, the courts of this state have declared the following policies to be implicit in CEQA:

(a) The EIR requirement is the heart of CEQA. (*County of Inyo v. Yorty*, 32 Cal. App. 3d 795.)

(b) The EIR serves not only to protect the environment but also to demonstrate to the public that it is being protected. (*County of Inyo v. Yorty*, 32 Cal. App. 3d 795.)

(c) The EIR is to inform other governmental agencies and the public generally of the environmental impact of a proposed project. (*No Oil, Inc. v. City of Los Angeles*, 13 C. 3d 68.)

(d) The EIR is to demonstrate to an apprehensive citizenry that the agency has, in fact, analyzed and considered the ecological implications of its action. (*People ex rel. Department of Public Works v. Bosio*, 47 Cal. App. 3d 495.)

(e) The EIR process will enable the public to determine the environmental and economic values of their elected and appointed officials thus allowing for appropriate action come election day should a majority of the voters disagree. (*People v. County of Kern*, 39 Cal. App. 3d 830.)

(f) CEQA was intended to be interpreted in such a manner as to afford the fullest possible protection to the environment within the reasonable scope of the statutory language. (*Friends of Mammoth v. Board of Supervisors*, 8 Cal. 3d 247.)

(g) The purpose of CEQA is not to generate paper, but to compel government at all levels to make decisions with environmental consequences in mind. (*Bozung v. LAFCO* (1975) 13 Cal.3d 263)

(h) The lead agency must consider the whole of an action, not simply its constituent parts, when determining whether it will have a significant environmental effect. (*Citizens Assoc. For Sensible Development of Bishop Area v. County of Inyo* (1985) 172 Cal.App.3d 151)

(i) CEQA does not require technical perfection in an EIR, but rather adequacy, completeness, and a good-faith effort at full disclosure. A court does not pass upon the correctness of an EIR's environmental conclusions, but only determines if the EIR is sufficient as an informational document. (*Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal.App.3d 692)

(j) CEQA requires that decisions be informed and balanced. It must not be subverted into an instrument for the oppression and delay of social, economic, or recreational development or advancement. (*Laurel Heights Improvement Assoc. v. Regents of U.C.* (1993) 6 Cal.4th 1112 and *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553)

Note: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21000–21176, Public Resources Code.

History

1. New section filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).
3. Editorial correction of 7–13–83 order filed 7–26–83 (Register 83, No. 33).
4. New subsections (g)–(j) filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

5004. Time of Preparation.

(a) Before granting any approval of a project subject to CEQA, every lead agency or responsible agency shall consider a final EIR or negative declaration or another document authorized by these guidelines to be used in the place of an EIR or negative declaration. See the definition of "approval" in Section 15352.

(b) Choosing the precise time for CEQA compliance involves a balancing of competing factors. EIRs and negative declarations should be prepared as early as feasible in the planning process to enable environmental considerations to influence project program and design and yet late enough to provide meaningful information for environmental assessment.

(1) With public projects, at the earliest feasible time, project sponsors shall incorporate environmental considerations into project conceptualization, design, and planning. CEQA compliance should be completed prior to acquisition of a site for a public project.

(2) To implement the above principles, public agencies shall not undertake actions concerning the proposed public project that would have a significant adverse effect or limit the choice of alternatives or mitigation measures, before completion of CEQA compliance. For example, agencies shall not:

(A) Formally make a decision to proceed with the use of a site for facilities which would require CEQA review, regardless of whether the agency has made any final purchase of the site for these facilities, except that agencies may designate a preferred site for CEQA review and may enter into land acquisition agreements when the agency has conditioned the agency's future use of the site on CEQA compliance.

(B) Otherwise take any action which gives impetus to a planned or foreseeable project in a manner that forecloses alternatives or mitigation measures that would ordinarily be part of CEQA review of that public project.

(3) With private projects, the Lead Agency shall encourage the project proponent to incorporate environmental considerations into project conceptualization, design, and planning at the earliest feasible time.

(c) The environmental document preparation and review should be coordinated in a timely fashion with the existing planning, review, and project approval processes being used by each public agency. These procedures, to the maximum extent feasible, are to run concurrently, not consecutively. When the lead agency is a state agency, the environmental document shall be included as part of the regular project report if such a report is used in its existing review and budgetary process.

Note: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21105, Public Resources Code; *Friends of Mammoth* v. *Board of Supervisors*, (1972) 8 Cal. 3d 247; *Mount Sutro Defense Committee* v. *Regents of the University of California*, (1978) 77 Cal. App. 3d 20.

History

1. New section filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).
3. New subsections (b)(2)–(b)(2)(B), subsection renumbering, amendment of subsection (c), and amendment of Note filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15005. Terminology.

The following words are used to indicate whether a particular subject in the Guidelines is mandatory, advisory, or permissive:

(a) "Must" or "shall" identifies a mandatory element which all public agencies are required to follow.

(b) "Should" identifies guidance provided by the Secretary for Resources based on policy considerations contained in CEQA, in the legislative history of the statute, or in federal court decisions which California courts can be expected to follow. Public agencies are advised to follow this guidance in the absence of compelling, countervailing considerations.

(c) "May" identifies a permissive element which is left fully to the discretion of the public agencies involved.

Note: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21082 and 21083, Public Resources Code.

History

1. New section filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29). For history of former section, see Register 75, No. 1.

2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

3. Editorial correction of 7–13–83 order filed 7–26–83 (Register 83, No. 33).

§ 15006. Reducing Delay and Paperwork.

Public agencies should reduce delay and paperwork by:

(a) Integrating the CEQA process into early planning. (15004(c))

(b) Ensuring the swift and fair resolution of lead agency disputes. (15053)

(c) Identifying projects which fit within categorical exemptions and are therefore exempt from CEQA processing. (15300.4)

(d) Using initial studies to identify significant environmental issues and to narrow the scope of EIRs. (15063)

(e) Using a negative declaration when a project not otherwise exempt will not have a significant effect on the environment. (15070)

(f) Using a previously prepared EIR when it adequately addresses the proposed project. (15153)

(g) Consulting with state and local responsible agencies before and during preparation of an environmental impact report so that the document will meet the needs of all the agencies which will use it. (15083)

(h) Urging applicants, either before or after the filing of an application, to revise projects to eliminate possible significant effects on the environment, thereby enabling the project to qualify for a negative declaration rather than an environmental impact report. (15063(c)(2))

(i) Integrating CEQA requirements with other environmental review and consulting requirements. (Public Resources Code Section 21080.5)

(j) Eliminating duplication with federal procedures by providing for joint preparation of environmental documents with federal agencies and by adopting completed federal NEPA documents. (15227)

(k) Emphasizing consultation before an environmental impact report is prepared, rather than submitting adversary comments on a completed document. (15082(b))

(l) Combining environmental documents with other documents such as general plans. (15166)

(m) Eliminating repetitive discussions of the same issues by using environmental impact reports on programs, policies, or plans and tiering from reports of broad scope to those of narrower scope. (15152)

(n) Reducing the length of environmental impact reports by means such as setting appropriate page limits. (15141)

(o) Preparing analytic rather than encyclopedic environmental impact reports. (15142)

(p) Mentioning only briefly issues other than significant ones in EIRs. (15143)

(q) Writing environmental impact reports in plain language. (15140)

(r) Following a clear format for environmental impact reports. (15120)

(s) Emphasizing the portions of the environmental impact report that are useful to decision–makers and the public and reducing emphasis on background material. (15143)

(t) Using incorporation by reference. (15150)

(u) Making comments on environmental impact reports as specific as possible. (15204)

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003 and 21083, Public Resources Code.

HISTORY

1. New section filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29). For history of former section, see Register 80, No. 19.

2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

3. Amendment of subsections (g), (m) and (u) filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).

§ 15007. Amendments.

(a) These guidelines will be amended from time to time to match new developments relating to CEQA.

(b) Amendments to the guidelines apply prospectively only. New requirements in amendments will apply to steps in the CEQA process not yet undertaken by the date when agencies must comply with the amendments.

(c) If a document meets the content requirements in effect when the document is set out for public review, the document shall not need to be revised to conform to any new content requirements in guideline amendments taking effect before the document is finally approved.

(d) Public agencies shall comply with new requirements in amendments to the guidelines beginning with the earlier of the following two dates:

(1) The effective date of the agency's procedures amended to conform to the new guideline amendments; or

(2) The 120th day after the effective date of the guideline amendments.

(e) Public agencies may implement any permissive or advisory elements of the guidelines beginning with the effective date of the guideline amendments.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21082 and 21087, Public Resources Code; *Stevens* v. *City of Glendale*, 125 Cal. App. 3d 986.

HISTORY

1. New section filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).

2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

Article 2. General Responsibilities

§ 15020. General.

Each public agency is responsible for complying with CEQA and these Guidelines. A public agency must meet its own responsibilities under CEQA and shall not rely on comments from other public agencies or private citizens as a substitute for work CEQA requires the lead agency to accomplish. For example, a lead agency is responsible for the adequacy of its environmental documents. The lead agency shall not knowingly release a deficient document hoping that public comments will correct defects in the document.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21082, 21082.1, Public Resources Code; *Russian Hill Improvement Association* v. *Board of Permit Appeals*, 44 Cal. App. 3d 158 (1975).

HISTORY

1. Repealer of Article 2 (Sections 15005 and 15006) and new Article 2 (Sections 15020–15025) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29). For prior history, see Registers 80, No. 19; 75, No. 1; and 73, No. 50.

2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15021. Duty to Minimize Environmental Damage and Balance Competing Public Objectives.

(a) CEQA establishes a duty for public agencies to avoid or minimize environmental damage where feasible.

(1) In regulating public or private activities, agencies are required to give major consideration to preventing environmental damage.

(2) A public agency should not approve a project as proposed if there are feasible alternatives or mitigation measures available that would substantially lessen any significant effects that the project would have on the environment.

(b) In deciding whether changes in a project are feasible, an agency may consider specific economic, environmental, legal, social, and technological factors.

(c) The duty to prevent or minimize environmental damage is implemented through the findings required by Section 15091.

(d) CEQA recognizes that in determining whether and how a project should be approved, a public agency has an obligation to balance a variety of public objectives, including economic, environmental, and social factors and in particular the goal of providing a decent home and satisfying living environment for every Californian. An agency shall prepare a statement of overriding considerations as described in Section 15093 to reflect the ultimate balancing of competing public objectives when the

agency decides to approve a project that will cause one or more significant effects on the environment.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21000, 21001, 21002, 21002.1 and 21081, Public Resources Code; *San Francisco Ecology Center* v. *City and County of San Francisco*, (1975) 48 Cal. App. 3d 584; *Laurel Hills Homeowners Association* v. *City Council*, (1978) 83 Cal. App. 3d 515.

§ 15022. Public Agency Implementing Procedures.

(a) Each public agency shall adopt objectives, criteria, and specific procedures consistent with CEQA and these Guidelines for administering its responsibilities under CEQA, including the orderly evaluation of projects and preparation of environmental documents. The implementing procedures should contain at least provisions for:

(1) Identifying the activities that are exempt from CEQA. These procedures should contain:

(A) Provisions for evaluating a proposed activity to determine if there is no possibility that the activity may have a significant effect on the environment.

(B) A list of projects or permits over which the public agency has only ministerial authority.

(C) A list of specific activities which the public agency has found to be within the categorical exemptions established by these guidelines.

(2) Conducting initial studies.

(3) Preparing negative declarations.

(4) Preparing draft and final EIRs.

(5) Consulting with and obtaining comments from other public agencies and members of the public with regard to the environmental effects of projects.

(6) Assuring adequate opportunity and time for public review and comment on the Draft EIR or Negative Declaration.

(7) Evaluating and responding to comments received on environmental documents.

(8) Assigning responsibility for determining the adequacy of an EIR or negative declaration.

(9) Reviewing and considering environmental documents by the person or decision making body who will approve or disapprove a project.

(10) Filing documents required or authorized by CEQA and these Guidelines.

(11) Providing adequate comments on environmental documents which are submitted to the public agency for review.

(12) Assigning responsibility for specific functions to particular units of the public agency.

(13) Providing time periods for performing functions under CEQA.

(b) Any district, including a school district, need not adopt objectives, criteria, and procedures of its own if it uses the objectives, criteria, and procedures of another public agency whose boundaries are coterminous with or entirely encompass the district.

(c) Public agencies should revise their implementing procedures to conform to amendments to these guidelines within 120 days after the effective date of the amendments. During the period while the public agency is revising its procedures, the agency must conform to any statutory changes in the California Environmental Quality Act that have become effective regardless of whether the public agency has revised its formally adopted procedures to conform to the statutory changes.

(d) In adopting procedures to implement CEQA, a public agency may adopt the State CEQA Guidelines through incorporation by reference. The agency may then adopt only those specific procedures or provisions described in subsection (a) which are necessary to tailor the general provisions of the guidelines to the specific operations of the agency. A public agency may also choose to adopt a complete set of procedures identifying in one document all the necessary requirements.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21082, 21100.2 and 21151.5, Public Resources Code.

§ 15023. Office of Planning and Research (OPR).

(a) From time to time OPR shall review the State CEQA Guidelines and shall make recommendations for amendments to the Secretary for Resources.

(b) OPR shall receive and evaluate proposals for adoption, amendment, or repeal of categorical exemptions and shall make recommendations on the proposals to the Secretary for Resources. People making suggestions concerning categorical exemptions shall submit their recommendations to OPR with supporting information to show that the class of projects in the proposal either will or will not have a significant effect on the environment.

(c) The State Clearinghouse in the Office of Planning and Research shall be responsible for distributing environmental documents to State agencies, departments, boards, and commissions for review and comment.

(d) Upon request of a Lead Agency or a project applicant, OPR shall provide assistance in identifying the various responsible agencies and any federal agencies which have responsibility for carrying out or approving a proposed project.

(e) OPR shall ensure that state responsible agencies provide the necessary information to lead agencies in response to notices of preparation within at most 30 days after receiving a notice of preparation.

(f) OPR shall resolve disputes as to which agency is the lead agency for a project.

(g) OPR shall receive and file all notices of completion, determination, and exemption.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080.4, 21083, 21086, 21087, 21108 and 21161, Public Resources Code.

HISTORY

1. Amendment of subsection (e) and new subsection (g) filed 1-30-86; effective thirtieth day thereafter (Register 86, No. 5).

§ 15024. Secretary for Resources.

(a) The Guidelines shall be adopted by the Secretary for Resources. The Secretary shall make a finding that each class of projects given a categorical exemption will not have a significant effect on the environment.

(b) The Secretary may issue amendments to these Guidelines.

(c) The Secretary shall certify state environmental regulatory programs which meet the standards for certification in Section 21080.5, Public Resources Code.

(d) The Secretary shall receive and file notices required by certified state environmental regulatory programs.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080.5, 21083, 21084, 21086, 21087, 21088 and 21152, Public Resources Code.

HISTORY

1. Amendment filed 1-30-86; effective thirtieth day thereafter (Register 86, No. 5).

§ 15025. Delegation of Responsibilities.

(a) A public agency may assign specific functions to its staff to assist in administering CEQA. Functions which may be delegated include but are not limited to:

(1) Determining whether a project is exempt.

(2) Conducting an initial study and deciding whether to prepare a draft EIR or negative declaration.

(3) Preparing a negative declaration or EIR.

(4) Determining that a negative declaration has been completed within a period of 105 days.

(5) Preparing responses to comments on environmental documents.

(6) Filing of notices.

(b) The decisionmaking body of a public agency shall not delegate the following functions:

(1) Reviewing and considering a final EIR or approving a negative declaration prior to approving a project.

(2) The making of findings as required by Sections 15091 and 15093.

(c) Where an advisory body such as a planning commission is required to make a recommendation on a project to the decisionmaking body, the advisory body shall also review and consider the EIR or negative declaration in draft or final form.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21082, Public Resources Code; *Kleist v. City of Glendale* (1976) 56 Cal. App. 3d 770.

Article 3. Authorities Granted to Public Agencies by CEQA

§ 15040. Authority Provided by CEQA.

(a) CEQA is intended to be used in conjunction with discretionary powers granted to public agencies by other laws.

(b) CEQA does not grant an agency new powers independent of the powers granted to the agency by other laws.

(c) Where another law grants an agency discretionary powers, CEQA supplements those discretionary powers by authorizing the agency to use the discretionary powers to mitigate or avoid significant effects on the environment when it is feasible to do so with respect to projects subject to the powers of the agency. Prior to January 1, 1983, CEQA provided implied authority for an agency to use its discretionary powers to mitigate or avoid significant effects on the environment. Effective January 1, 1983, CEQA provides express authority to do so.

(d) The exercise of the discretionary powers may take forms that had not been expected before the enactment of CEQA, but the exercise must be within the scope of the power.

(e) The exercise of discretionary powers for environmental protection shall be consistent with express or implied limitations provided by other laws.

NOTE: Authority cited: Sections 21083 and 2187, Public Resources Code. App. 3d 707; *E.D.F. v. Mathews*, 410 F. Supp. 336, 339 (D.D.C., 1976); *Friends of Mammoth v. Board of Supervisors*, (1972) 8 Cal. 3d 247; *Pinewood Investors v. City of Oxnard* (1982) 133 Cal. App. 3d 1030.

HISTORY

1. Repealer of Article 3 (Sections 15010–15016) and new Article 3 (Sections 15040–15045) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29). For prior history, see Registers 82, No. 2; 80, No. 19; 78, No. 5; 76, No. 41; 75, Nos. 1 and 18; 74, Nos. 3 and 4; and 73, No. 50.
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15041. Authority to Mitigate.

Within the limitations described in Section 15040:

(a) A lead agency for a project has authority to require feasible changes in any or all activities involved in the project in order to substantially lessen or avoid significant effects on the environment, consistent with applicable constitutional requirements such as the "nexus" and "rough proportionality" standards established by case law (Nollan v. California Coastal Commission (1987) 483 U.S. 825, Dolan v. City of Tigard, (1994) 512 U.S. 374, Ehrlich v. City of Culver City, (1996) 12 Cal. 4th 854.).

(b) When a public agency acts as a responsible agency for a project, the agency shall have more limited authority than a lead agency. The responsible agency may require changes in a project to lessen or avoid only the effects, either direct or indirect, of that part of the project which the agency will be called on to carry out or approve.

(c) With respect to a project which includes housing development, a lead or responsible agency shall not reduce the proposed number of housing units as a mitigation measure or alternative to lessen a particular significant effect on the environment if that agency determines that there is another feasible, specific mitigation measure or alternative that would provide a comparable lessening of the significant effect.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21002.1 and 21085, Public Resources Code; *Golden Gate Bridge, Etc., District v. Muzzi* (1978) 83 Cal. App. 3d 707; and *Laurel Hills Homeowners Assn. v. City Council of City of Los Angeles* (1978) 83 Cal. App. 3d 515.

HISTORY

1. Amendment of first paragraph, subsection (a) and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15042. Authority to Disapprove Projects.

A public agency may disapprove a project if necessary in order to avoid one or more significant effects on the environment that would occur if the project were approved as proposed. A lead agency has broader authority to disapprove a project than does a responsible agency. A responsible agency may refuse to approve a project in order to avoid direct or indirect environmental effects of that part of the project which the responsible agency would be called on to carry out or approve. For example, an air quality management district acting as a responsible agency would not have authority to disapprove a project for water pollution effects that were unrelated to the air quality aspects of the project regulated by the district.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002 and 21002.1, Public Resources Code; *Friends of Mammoth v. Mono County*, 8 Cal. App. 3d 247; *San Diego Trust and Savings Bank v. Friends of Gill*, 121 Cal. App. 3d 203.

§ 15043. Authority to Approve Projects Despite Significant Effects.

A public agency may approve a project even though the project would cause a significant effect on the environment if the agency makes a fully informed and publicly disclosed decision that:

(a) There is no feasible way to lessen or avoid the significant effect (see Section 15091); and

(b) Specifically identified expected benefits from the project outweigh the policy of reducing or avoiding significant environmental impacts of the project. (See Section 15093.)

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002 and 21002.1, Public Resources Code; *San Francisco Ecology Center v. City and County of San Francisco*, (1975) 48 Cal. App. 3d 584; *San Diego Trust & Savings Bank v. Friends of Gill*, (1981) 121 Cal. App. 3d 203.

§ 15044. Authority to Comment.

Any person or entity other than a responsible agency may submit comments to a lead agency concerning any environmental effects of a project being considered by the lead agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21000, 21001, 21002.1, 21104 and 21153, Public Resources Code.

HISTORY

1. Amendment filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).

§ 15045. Fees.

(a) For a project to be carried out by any person or entity other than the lead agency, the lead agency may charge and collect a reasonable fee from the person or entity proposing the project in order to recover the estimated costs incurred in preparing environmental documents and for procedures necessary to comply with CEQA on the project. Litigation expenses, costs and fees incurred in actions alleging noncompliance with CEQA are not recoverable under this section.

(b) Public agencies may charge and collect a reasonable fee from members of the public for a copy of an environmental document not to exceed the actual cost of reproducing a copy.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21089 and 21105, Public Resources Code.

HISTORY

1. Amendment of subsection (a) and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

Article 4. Lead Agency

§ 15050. Lead Agency Concept.

(a) Where a project is to be carried out or approved by more than one public agency, one public agency shall be responsible for preparing an EIR or negative declaration for the project. This agency shall be called the lead agency.

(b) Except as provided in subsection (c), the decisionmaking body of each responsible agency shall consider the lead agency's EIR or negative declaration prior to acting upon or approving the project. Each responsible agency shall certify that its decisionmaking body reviewed and considered the information contained in the EIR or negative declaration on the project.

(c) The determination of the lead agency of whether to prepare an EIR or a negative declaration shall be final and conclusive for all persons, including responsible agencies, unless:

(1) The decision is successfully challenged as provided in Section 21167 of the Public Resources Code,

(2) Circumstances or conditions change as provided in Section 15162, or

(3) A responsible agency becomes a lead agency under Section 15052.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080.1, 21165 and 21167.2, Public Resources Code.

HISTORY

1. Repealer of Article 4 (Sections 15020–15043) and new Article 4 (Sections 15050–15053) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29). For prior history, see Registers 82, No. 2; 80, No. 19; 78, No. 5; 76, No. 41; 75, Nos. 1, 5 and 22; 74, Nos. 13 and 26; and 73, No. 50.
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15051. Criteria for Identifying the Lead Agency.

Where two or more public agencies will be involved with a project, the determination of which agency will be the lead agency shall be governed by the following criteria:

(a) If the project will be carried out by a public agency, that agency shall be the lead agency even if the project would be located within the jurisdiction of another public agency.

(b) If the project is to be carried out by a nongovernmental person or entity, the lead agency shall be the public agency with the greatest responsibility for supervising or approving the project as a whole.

(1) The lead agency will normally be the agency with general governmental powers, such as a city or county, rather than an agency with a single or limited purpose such as an air pollution control district or a district which will provide a public service or public utility to the project.

(2) Where a city prezones an area, the city will be the appropriate lead agency for any subsequent annexation of the area and should prepare the appropriate environmental document at the time of the prezoning. The local agency formation commission shall act as a responsible agency.

(c) Where more than one public agency equally meet the criteria in subsection (b), the agency which will act first on the project in question shall be the lead agency.

(d) Where the provisions of subsections (a), (b), and (c) leave two or more public agencies with a substantial claim to be the lead agency, the public agencies may by agreement designate an agency as the lead agency. An agreement may also provide for cooperative efforts by two or more agencies by contract, joint exercise of powers, or similar devices.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21165, Public Resources Code.

§ 15052. Shift in Lead Agency Designation.

(a) Where a responsible agency is called on to grant an approval for a project subject to CEQA for which another public agency was the appropriate lead agency, the responsible agency shall assume the role of the lead agency when any of the following conditions occur:

(1) The lead agency did not prepare any environmental documents for the project, and the statute of limitations has expired for a challenge to the action of the appropriate lead agency.

(2) The lead agency prepared environmental documents for the project, but the following conditions occur:

(A) A subsequent EIR is required pursuant to Section 15162,

(B) The lead agency has granted a final approval for the project, and

(C) The statute of limitations for challenging the lead agency's action under CEQA has expired.

(3) The lead agency prepared inadequate environmental documents without consulting with the responsible agency as required by Sections 15072 or 15082, and the statute of limitations has expired for a challenge to the action of the appropriate lead agency.

(b) When a responsible agency assumes the duties of a lead agency under this section, the time limits applicable to a lead agency shall apply to the actions of the agency assuming the lead agency duties.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21165, Public Resources Code.

§ 15053. Designation of Lead Agency by Office of Planning and Research.

(a) If there is a dispute over which of several agencies should be the lead agency for a project, the disputing agencies should consult with each other in an effort to resolve the dispute prior to submitting it to OPR. If an agreement cannot be reached, any public agency, or the applicant if a private project is involved, may submit the dispute to OPR for resolution.

(b) OPR shall designate a lead agency within 21 days after receiving a completed request to resolve a dispute.

(c) Regulations adopted by OPR for resolving lead agency disputes may be found in Title 14, California Administrative Code, Sections 16000 et seq.

(d) Designation of a lead agency by OPR shall be based on consideration of the criteria in Section 15052 as well as the capacity of the agency to adequately fulfill the requirements of CEQA.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21165, Public Resources Code; and California Administrative Code, Title 14, Sections 16000–16041.

Article 5. Preliminary Review of Projects and Conduct of Initial Study

§ 15060. Preliminary Review.

(a) A lead agency is allowed 30 days to review for completeness applications for permits or other entitlements for use. While conducting this review for completeness, the agency should be alert for environmental issues that might require preparation of an EIR or that may require additional explanation by the applicant. Accepting an application as complete does not limit the authority of the lead agency to require the applicant to submit additional information needed for environmental evaluation of the project. Requiring such additional information after the application is complete does not change the status of the application.

(b) Except as provided in Section 15111, the lead agency shall begin the formal environmental evaluation of the project after accepting an application as complete and determining that the project is subject to CEQA.

(c) Once an application is deemed complete, a lead agency must first determine whether an activity is subject to CEQA before conducting an initial study. An activity is not subject to CEQA if:

(1) The activity does not involve the exercise of discretionary powers by a public agency;

(2) The activity will not result in a direct or reasonably foreseeable indirect physical change in the environment; or

(3) The activity is not a project as defined in Section 15378.

(d) If the lead agency can determine that an EIR will be clearly required for a project, the agency may skip further initial review of the project and begin work directly on the EIR process described in Article 9, commencing with Section 15080. In the absence of an initial study, the lead agency shall still focus the EIR on the significant effects of the project and indicate briefly its reasons for determining that other effects would not be significant or potentially significant.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080(b), 21080.2 and 21160, Public Resources Code.

HISTORY

1. Repealer of Article 5 (Sections 15050–15056) and new Article 5 (Sections 15060–15065) filed 7–13–83; effective thirtieth day thereafter (Register 83,

No. 29). For prior history, see Registers 80, No. 19; 78, No. 5; 76, No. 41; 75, Nos. 1, 5 and 22; and 73, No. 50.

2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

3. Amendment of section and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15060.5. Preapplication Consultation.

(a) For a potential project involving the issuance of a lease, permit, license, certificate, or other entitlement for use by one or more public agencies, the lead agency shall, upon the request of a potential applicant and prior to the filing of a formal application, provide for consultation with the potential applicant to consider the range of actions, potential alternatives, mitigation measures, and any potential significant effects on the environment of the potential project.

(b) The lead agency may include in the consultation one or more responsible agencies, trustee agencies, and other public agencies who in the opinion of the lead agency may have an interest in the proposed project. The lead agency may consult the Office of Permit Assistant in the Trade and Commerce Agency for help in identifying interested agencies.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.1, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15061. Review for Exemption.

(a) Once a lead agency has determined that an activity is a project subject to CEQA, a lead agency shall determine whether the project is exempt from CEQA.

(b) A project is exempt from CEQA if:

(1) The project is exempt by statute (see, e.g. Article 18, commencing with Section 15260).

(2) The project is exempt pursuant to a categorical exemption (see Article 19, commencing with Section 15300) and the application of that categorical exemption is not barred by one of the exceptions set forth in Section 15300.2.

(3) The activity is covered by the general rule that CEQA applies only to projects which have the potential for causing a significant effect on the environment. Where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, the activity is not subject to CEQA.

(4) The project will be rejected or disapproved by a public agency. (See Section 15270(b)).

(c) Each public agency should include in its implementing procedures a listing of the projects often handled by the agency that the agency has determined to be exempt. This listing should be used in preliminary review.

(d) After determining that a project is exempt, the agency may prepare a notice of exemption as provided in Section 15062. Although the notice may be kept with the project application at this time, the notice shall not be filed with OPR or the county clerk until the project has been approved.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080(b), 21080.9, 21080.10, 21084, 21108(b) and 21152(b), Public Resources Code; *No Oil, Inc.* v. *City of Los Angeles* (1974) 13 Cal. 3d 68.

HISTORY

1. Amendment of subsection (d) filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).

2. Amendment of section and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15062. Notice of Exemption.

(a) When a public agency decides that a project is exempt from CEQA and the public agency approves or determines to carry out the project, the agency may file a notice of exemption. The notice shall be filed, if at all, after approval of the project. Such a notice shall include:

(1) A brief description of the project,

(2) A finding that the project is exempt from CEQA, including a citation to the State Guidelines section or statute under which it is found to be exempt, and

(3) A brief statement of reasons to support the finding.

(b) A notice of exemption may be filled out and may accompany the project application through the approval process. The notice shall not be filed with the county clerk or OPR until the project has been approved.

(c) When a public agency approves an applicant's project, either the agency or the applicant may file a notice of exemption.

(1) When a state agency files this notice, the notice of exemption is filed with OPR. A form for this notice is provided in Appendix E. A list of all such notices shall be posted on a weekly basis at the Office of Planning and Research, 1400 Tenth Street, Sacramento, California. The list shall remain posted for at least 30 days.

(2) When a local agency files this notice, the notice of exemption is filed with the county clerk of each county in which the project will be located. Copies of all such notices will be available for public inspection and such notices shall be posted within 24 hours of receipt in the office of the county clerk. Each notice shall remain posted for a period of 30 days. Thereafter, the clerk shall return the notice to the local agency with a notation of the period it was posted. The local agency shall retain the notice for not less than 9 months.

(3) All public agencies are encouraged to make postings pursuant to this section available in electronic format on the Internet. Such electronic postings are in addition to the procedures required by these guidelines and the Public Resources Code.

(4) When an applicant files this notice, special rules apply.

(A) The notice filed by an applicant is filed in the same place as if it were filed by the agency granting the permit. If the permit was granted by a state agency, the notice is filed with OPR. If the permit was granted by a local agency, the notice is filed with the county clerk of the county or counties in which the project will be located.

(B) The notice of exemption filed by an applicant shall contain the information required in subdivision (a) together with a certified document issued by the public agency stating that the agency has found the project to be exempt. The certified document may be a certified copy of an existing document or record of the public agency.

(C) A notice filed by an applicant is subject to the same posting and time requirements as a notice filed by a public agency.

(d) The filing of a Notice of Exemption and the posting on the list of notices start a 35 day statute of limitations period on legal challenges to the agency's decision that the project is exempt from CEQA. If a Notice of Exemption is not filed, a 180 day statute of limitations will apply.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21108 and 21152, Public Resources Code.

HISTORY

1. Amendment of subsections (b) and (c) filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).

2. Amendment of subsections (a)(2), (c)(1), (c)(2), (c)(3)(A) and (c)(3)(C) filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

3. New subsection (c)(3) and subsection renumbering filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15063. Initial Study.

(a) Following preliminary review, the lead agency shall conduct an initial study to determine if the project may have a significant effect on the environment. If the lead agency can determine that an EIR will clearly be required for the project, an initial study is not required but may still be desirable.

(1) All phases of project planning, implementation, and operation must be considered in the initial study of the project.

(2) To meet the requirements of this section, the lead agency may use an environmental assessment or a similar analysis prepared pursuant to the National Environmental Policy Act.

(3) An initial study may rely upon expert opinion supported by facts, technical studies or other substantial evidence to document its findings.

However, an initial study is neither intended nor required to include the level of detail included in an EIR.

(b) Results.

(1) If the agency determines that there is substantial evidence that any aspect of the project, either individually or cumulatively, may cause a significant effect on the environment, regardless of whether the overall effect of the project is adverse or beneficial, the lead agency shall do one of the following:

(A) Prepare an EIR or

(B) Use a previously prepared EIR which the lead agency determines would adequately analyze the project at hand, or

(C) Determine, pursuant to a program EIR, tiering, or another appropriate process, which of a project's effects were adequately examined by an earlier EIR or negative declaration. Another appropriate process may include, for example, a master EIR, a master environmental assessment, approval of housing and neighborhood commercial facilities in urban areas as described in section 15181, approval of residential projects pursuant to a specific plan as described in section 15182, approval of residential projects consistent with a community plan, general plan or zoning as described in section 15183, or an environmental document prepared under a State certified regulatory program. The lead agency shall then ascertain which effects, if any, should be analyzed in a later EIR or negative declaration.

(2) The lead agency shall prepare a negative declaration if there is no substantial evidence that the project or any of its aspects may cause a significant effect on the environment.

(c) Purposes. The purposes of an initial study are to:

(1) Provide the lead agency with information to use as the basis for deciding whether to prepare an EIR or negative declaration;

(2) Enable an applicant or lead agency to modify a project, mitigating adverse impacts before an EIR is prepared, thereby enabling the project qualify for a negative declaration;

(3) Assist the preparation of an EIR, if one is required, by:

(A) Focusing the EIR on the effects determined to be significant,

(B) Identifying the effects determined not to be significant,

(C) Explaining the reasons for determining that potentially significant effects would not be significant, and

(D) Identifying whether a program EIR, tiering, or another appropriate process can be used for analysis of the project's environmental effects.

(4) Facilitate environmental assessment early in the design of a project;

(5) Provide documentation of the factual basis for the finding in a negative declaration that a project will not have a significant effect on the environment;

(6) Eliminate unnecessary EIRs;

(7) Determine whether a previously prepared EIR could be used with the project.

(d) Contents. An initial study shall contain in brief form:

(1) A description of the project including the location of the project;

(2) An identification of the environmental setting;

(3) An identification of environmental effects by use of a checklist, matrix, or other method, provided that entries on a checklist or other form are briefly explained to indicate that there is some evidence to support the entries. The brief explanation may be either through a narrative or a reference to another information source such as an attached map, photographs, or an earlier EIR or negative declaration. A reference to another document should include, where appropriate, a citation to the page or pages where the information is found.

(4) A discussion of ways to mitigate the significant effects identified, if any;

(5) An examination of whether the project would be consistent with existing zoning, plans, and other applicable land use controls;

(6) The name of the person or persons who prepared or participated in the initial study.

(e) Submission of Data. If the project is to be carried out by a private person or private organization, the lead agency may require such person or organization to submit data and information which will enable the lead agency to prepare the initial study. Any person may submit any information in any form to assist a lead agency in preparing an initial study.

(f) Format. Sample forms for an applicant's project description and a review form for use by the lead agency are contained in Appendices G and H. When used together, these forms would meet the requirements for an initial study, provided that the entries on the checklist are briefly explained pursuant to subsection (d)(3). These forms are only suggested, and public agencies are free to devise their own format for an initial study. A previously prepared EIR may also be used as the initial study for a later project.

(g) Consultation. As soon as a lead agency has determined that an initial study will be required for the project, the lead agency shall consult informally with all responsible agencies and all trustee agencies responsible for resources affected by the project to obtain the recommendations of those agencies as to whether an EIR or a negative declaration should be prepared. During or immediately after preparation of an initial study for a private project, the lead agency may consult with the applicant to determine if the applicant is willing to modify the project to reduce or avoid the significant effects identified in the initial study.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080(c), 21080.1, 21080.3, 21082.1, 21100 and 21151, Public Resources Code; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359, *San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus* (1994) 27 Cal.App.4th 713, *Leonoff v. Monterey County Board of Supervisors* (1990) 222 Cal.App.3d 1337.

HISTORY

1. Amendment filed 8–19–94; operative 9–19–94 (Register 94, No. 33).
2. Amendment of subsection (a)(2), new subsection (b)(3) and amendment of NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15064. Determining the Significance of the Environmental Effects Caused by a Project.

(a) Determining whether a project may have a significant effect plays a critical role in the CEQA process.

(1) If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, the agency shall prepare a draft EIR.

(2) When a final EIR identifies one or more significant effects, the lead agency and each responsible agency shall make a finding under Section 15091 for each significant effect and may need to make a statement of overriding considerations under Section 15093 for the project.

(b) The determination of whether a project may have a significant effect on the environment calls for careful judgment on the part of the public agency involved, based to the extent possible on scientific and factual data. An ironclad definition of significant effect is not always possible because the significance of an activity may vary with the setting. For example, an activity which may not be significant in an urban area may be significant in a rural area.

(c) In determining whether an effect will be adverse or beneficial, the lead agency shall consider the views held by members of the public in all areas affected as expressed in the whole record before the lead agency. Before requiring the preparation of an EIR, the lead agency must still determine whether environmental change itself might be substantial.

(d) In evaluating the significance of the environmental effect of a project, the lead agency shall consider direct physical changes in the environment which may be caused by the project and reasonably foreseeable indirect physical changes in the environment which may be caused by the project.

(1) A direct physical change in the environment is a physical change in the environment which is caused by and immediately related to the project. Examples of direct physical changes in the environment are the dust, noise, and traffic of heavy equipment that would result from con-

struction of a sewage treatment plant and possible odors from operation of the plant.

(2) An indirect physical change in the environment is a physical change in the environment which is not immediately related to the project, but which is caused indirectly by the project. If a direct physical change in the environment in turn causes another change in the environment, then the other change is an indirect physical change in the environment. For example, the construction of a new sewage treatment plant may facilitate population growth in the service area due to the increase in sewage treatment capacity and may lead to an increase in air pollution.

(3) An indirect physical change is to be considered only if that change is a reasonably foreseeable impact which may be caused by the project. A change which is speculative or unlikely to occur is not reasonably foreseeable.

(e) Economic and social changes resulting from a project shall not be treated as significant effects on the environment. Economic or social changes may be used, however, to determine that a physical change shall be regarded as a significant effect on the environment. Where a physical change is caused by economic or social effects of a project, the physical change may be regarded as a significant effect in the same manner as any other physical change resulting from the project. Alternatively, economic and social effects of a physical change may be used to determine that the physical change is a significant effect on the environment. If the physical change causes adverse economic or social effects on people, those adverse effects may be used as a factor in determining whether the physical change is significant. For example, if a project would cause overcrowding of a public facility and the overcrowding causes an adverse effect on people, the overcrowding would be regarded as a significant effect.

(f) The decision as to whether a project may have one or more significant effects shall be based on substantial evidence in the record of the lead agency.

(1) If the lead agency determines there is substantial evidence in the record that the project may have a significant effect on the environment, the lead agency shall prepare an EIR (*Friends of B Street* v. *City of Hayward* (1980) 106 Cal. App. 3d 988). Said another way, if a lead agency is presented with a fair argument that a project may have a significant effect on the environment, the lead agency shall prepare an EIR even though it may also be presented with other substantial evidence that the project will not have a significant effect (*No Oil, Inc.* v. *City of Los Angeles* (1974) 13 Cal. 3d 68).

(2) If the lead agency determines there is substantial evidence in the record that the project may have a significant effect on the environment but the lead agency determines that revisions in the project plans or proposals made by, or agreed to by, the applicant would avoid the effects or mitigate the effects to a point where clearly no significant effect on the environment would occur and there is no substantial evidence in light of the whole record before the public agency that the project, as revised, may have a significant effect on the environment then a mitigated negative declaration shall be prepared.

(3) If the lead agency determines there is no substantial evidence that the project may have a significant effect on the environment, the lead agency shall prepare a negative declaration (*Friends of B Street* v. *City of Hayward* (1980) 106 Cal. App. 3d 988).

(4) The existence of public controversy over the environment effects of a project will not require preparation of an EIR if there is no substantial evidence before the agency that the project may have a significant effect on the environment.

(5) Argument, speculation, unsubstantiated opinion or narrative, or evidence that is clearly inaccurate or erroneous, or evidence that is not credible, shall not constitute substantial evidence. Substantial evidence shall include facts, reasonable assumptions predicated upon facts, and expert opinion support by facts.

(6) Evidence of economic and social impacts that do not contribute to or are not caused by physical changes in the environment is not substantial evidence that the project may have a significant effect on the environment.

(7) The provisions of sections 15162, 15163, and 15164 apply when the project being analyzed is a change to, or further approval for, a project for which an EIR or negative declaration was previously certified or adopted (e.g. a tentative subdivision, conditional use permit). Under case law, the fair argument standard does not apply to determinations of significance pursuant to sections 15162, 15163, and 15164.

(g) After application of the principles set forth above in Section 15064(g), and in marginal cases where it is not clear whether there is substantial evidence that a project may have a significant effect on the environment, the lead agency shall be guided by the following principle: If there is disagreement among expert opinion supported by facts over the significance of an effect on the environment, the Lead Agency shall treat the effect as significant and shall prepare an EIR.

(h)(1)(A) Except as otherwise required by Section 15065, a change in the environment is not a significant effect if the change complies with a standard that meets the definition in subsection (i)(3).

(B) If there is a conflict between standards, the lead agency shall determine which standard is appropriate for purposes of this subsection based upon substantial evidence in light of the whole record.

(C) Notwithstanding subsection (i)(1)(A), if the lead agency determines on the basis of substantial evidence in light of the whole record that a standard is inappropriate to determine the significance of an effect for a particular project, the lead agency shall determine whether the effect may be significant as otherwise required by this section, Section 15065, and the Guidelines.

(2) In the absence of a standard that satisfies subsection (i)(1)(a), the lead agency shall determine whether the effect may be significant as otherwise required by this section, Section 15065, and the Guidelines.

(3) For the purposes of this subsection a "standard" means a standard of general application that is all of the following:

(A) a quantitative, qualitative or performance requirement found in a statute, ordinance, resolution, rule, regulation, order, or other standard of general application;

(B) adopted for the purpose of environmental protection;

(C) adopted by a public agency through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency;

(D) one that governs the same environmental effect which the change in the environment is impacting; and,

(E) one that governs within the jurisdiction where the project is located.

(4) This definition includes thresholds of significance adopted by lead agencies which meet the requirements of this subsection.

(i)(1) When assessing whether a cumulative effect requires an EIR, the lead agency shall consider whether the cumulative impact is significant and whether the effects of the project are cumulatively considerable. An EIR must be prepared if the cumulative impact may be significant and the project's incremental effect, though individually limited, is cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects. "Probable future projects" are defined in Section 15130.

(2) A lead agency may determine in an initial study that a project's contribution to a significant cumulative impact will be rendered less than cumulatively considerable and thus is not significant. When a project might contribute to a significant cumulative impact, but the contribution will be rendered less than cumulatively considerable through mitigation measures set forth in a mitigated negative declaration, the initial study shall briefly indicate and explain how the contribution has been rendered less than cumulatively considerable.

(3) A lead agency may determine that a project's incremental contribution to a cumulative effect is not cumulatively considerable if the project

will comply with the requirements in a previously approved plan or mitigation program which provides specific requirements that will avoid or substantially lessen the cumulative problem (e.g. water quality control plan, air quality plan, integrated waste management plan) within the geographic area in which the project is located. Such plans or programs must be specified in law or adopted by the public agency with jurisdiction over the affected resources through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency.

(4) A lead agency may determine that the incremental impacts of a project are not cumulatively considerable when they are so small that they make only a de minimis contribution to a significant cumulative impact caused by other projects that would exist in the absence of the proposed project. Such de minimus incremental impacts, by themselves, do not trigger the obligation to prepare an EIR. A de minimus contribution means that the environmental conditions would essentially be the same whether or not the proposed project is implemented.

(5) The mere existence of significant cumulative impacts caused by other projects alone shall not constitute substantial evidence that the proposed project's incremental effects are cumulatively considerable.

HISTORY

1. Amendment of section heading, section and NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
2. Repealer of subsection (i) and new subsections (i)(1)(A)–(i)(4) filed 8–24–98; operative 8–24–98 pursuant to Government Code section 11343.4(d) (Register 98, No. 35).
3. Repealer of subsection (e), subsection relettering, new subsections (f)(7) and (i)(1)–(i)(5) and amendment of NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

15064.5. Determining the Significance of Impacts to Archaeological and Historical Resources.

(a) For purposes of this section, the term "historical resources" shall include the following:

(1) A resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources (Pub. Res. Code §5024.1, Title 14 CCR, Section 4850 et seq.).

(2) A resource included in a local register of historical resources, as defined in section 5020.1(k) of the Public Resources Code or identified as significant in an historical resource survey meeting the requirements section 5024.1(g) of the Public Resources Code, shall be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.

(3) Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be an historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register of Historical Resources (Pub. Res. Code § 5024.1, Title 14 CCR, Section 4852) including the following:

(A) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;

(B) Is associated with the lives of persons important in our past;

(C) Embodies the distinctive characteristics of a type, period, region, method of construction, or represents the work of an important creative individual, or possesses high artistic values; or

(D) Has yielded, or may be likely to yield, information important in prehistory or history.

(4) The fact that a resource is not listed in, or determined to be eligible for listing in the California Register of Historical Resources, not included in a local register of historical resources (pursuant to section 5020.1(k) of the Public Resources Code), or identified in an historical resources survey (meeting the criteria in section 5024.1(g) of the Public Resources Code) does not preclude a lead agency from determining that the resource may be an historical resource as defined in Public Resources Code sections 5020.1(j) or 5024.1.

(b) A project with an effect that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment.

(1) Substantial adverse change in the significance of an historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired.

(2) The significance of an historical resource is materially impaired when a project:

(A) Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register of Historical Resources; or

(B) Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to section 5020.1(k) of the Public Resources Code or its identification in an historical resources survey meeting the requirements of section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or

(C) Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register of Historical Resources as determined by a lead agency for purposes of CEQA.

(3) Generally, a project that follows the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings or the Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings (1995), Weeks and Grimmer, shall be considered as mitigated to a level of less than a significant impact on the historical resource.

(4) A lead agency shall identify potentially feasible measures to mitigate significant adverse changes in the significance of an historical resource. The lead agency shall ensure that any adopted measures to mitigate or avoid significant adverse changes are fully enforceable through permit conditions, agreements, or other measures.

(5) When a project will affect state–owned historical resources, as described in Public Resources Code Section 5024, and the lead agency is a state agency, the lead agency shall consult with the State Historic Preservation Officer as provided in Public Resources Code Section 5024.5. Consultation should be coordinated in a timely fashion with the preparation of environmental documents.

(c) CEQA applies to effects on archaeological sites.

(1) When a project will impact an archaeological site, a lead agency shall first determine whether the site is an historical resource, as defined in subsection (a).

(2) If a lead agency determines that the archaeological site is an historical resource, it shall refer to the provisions of Section 21084.1 of the Public Resources Code, and this section, Section 15126.4 of the Guidelines, and the limits contained in Section 21083.2 of the Public Resources Code do not apply.

(3) If an archaeological site does not meet the criteria defined in subsection (a), but does meet the definition of a unique archeological re-

source in Section 21083.2 of the Public Resources Code, the site shall be treated in accordance with the provisions of section 21083.2. The time and cost limitations described in Public Resources Code Section 21083.2 (c–f) do not apply to surveys and site evaluation activities intended to determine whether the project location contains unique archaeological resources.

(4) If an archaeological resource is neither a unique archaeological nor an historical resource, the effects of the project on those resources shall not be considered a significant effect on the environment. It shall be sufficient that both the resource and the effect on it are noted in the Initial Study or EIR, if one is prepared to address impacts on other resources, but they need not be considered further in the CEQA process.

(d) When an initial study identifies the existence of, or the probable likelihood, of Native American human remains within the project, a lead agency shall work with the appropriate native americans as identified by the Native American Heritage Commission as provided in Public Resources Code § 5097.98. The applicant may develop an agreement for treating or disposing of, with appropriate dignity, the human remains and any items associated with Native American burials with the appropriate Native Americans as identified by the Native American Heritage Commission." Action implementing such an agreement is exempt from:

(1) The general prohibition on disinterring, disturbing, or removing human remains from any location other than a dedicated cemetery (Health and Safety Code Section 7050.5).

(2) The requirements of CEQA and the Coastal Act.

(e) In the event of the accidental discovery or recognition of any human remains in any location other than a dedicated cemetery, the following steps should be taken:

(1) There shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until:

(A) The coroner of the county in which the remains are discovered must be contacted to determine that no investigation of the cause of death is required, and

(B) If the coroner determines the remains to be Native American:

1. The coroner shall contact the Native American Heritage Commission within 24 hours.

2. The Native American Heritage Commission shall identify the person or persons it believes to be the most likely descended from the deceased native american.

3. The most likely descendent may make recommendations to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in Public Resources Code Section 5097.98, or

(2) Where the following conditions occur, the landowner or his authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity on the property in a location not subject to further subsurface disturbance.

(A) The Native American Heritage Commission is unable to identify a most likely descendent or the most likely descendent failed to make a recommendation within 24 hours after being notified by the commission.

(B) The descendant identified fails to make a recommendation; or

(C) The landowner or his authorized representative rejects the recommendation of the descendant, and the mediation by the Native American Heritage Commission fails to provide measures acceptable to the landowner.

(f) As part of the objectives, criteria, and procedures required by Section 21082 of the Public Resources Code, a lead agency should make provisions for historical or unique archaeological resources accidentally discovered during construction. These provisions should include an immediate evaluation of the find by a qualified archaeologist. If the find is determined to be an historical or unique archaeological resource, contingency funding and a time allotment sufficient to allow for implementation of avoidance measures or appropriate mitigation should be available. Work could continue on other parts of the building site while historical or unique archaeological resource mitigation takes place.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.2, 21084 and 21084.1, Public Resources Code; and *Citizens for Responsible Development in West Hollywood v. City of West Hollywood* (1995) 39 Cal.App.4th 490.

HISTORY

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15064.7. Thresholds of Significance.

(a) Each public agency is encouraged to develop and publish thresholds of significance that the agency uses in the determination of the significance of environmental effects. A threshold of significance is an identifiable quantitative, qualitative or performance level of a particular environmental effect, non–compliance with which means the effect will normally be determined to be significant by the agency and compliance with which means the effect normally will be determined to be less than significant.

(b) Thresholds of significance to be adopted for general use as part of the lead agency's environmental review process must be adopted by ordinance, resolution, rule, or regulation, and developed through a public review process and be supported by substantial evidence.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21082 and 21083, Public Resources Code.

HISTORY

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15065. Mandatory Findings of Significance.

A lead agency shall find that a project may have a significant effect on the environment and thereby require an EIR to be prepared for the project where any of the following conditions occur:

(a) The project has the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self–sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of an endangered, rare or threatened species, or eliminate important examples of the major periods of California history or prehistory.

(b) The project has the potential to achieve short–term environmental goals to the disadvantage of long–term environmental goals.

(c) The project has possible environmental effects which are individually limited but cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects as defined in Section 15130.

(d) The environmental effects of a project will cause substantial adverse effects on human beings, either directly or indirectly.

HISTORY

1. Amendment of subsection (a) and NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
2. Amendment of subsection (c) and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

Article 6. Negative Declaration Process

§ 15070. Decision to Prepare a Negative or Mitigated Negative Declaration.

A public agency shall prepare or have preared a proposed negative declaration or mitigated negative declaration for a project subject to CEQA when:

(a) The initial study shows that there is no substantial evidence, in light of the whole record before the agency, that the project may have a significant effect on the environment, or

(b) The initial study identifies potentially significant effects, but:

(1) Revisions in the project plans or proposals made by or agreed to by the applicant before a proposed mitigated negative declaration and initial study are released for public review would avoid the effects or mitigate the effects to a point where clearly no significant effects would occur, and

(2) There is no substantial evidence, in light of the whole record before the agency, that the project as revised may have a significant effect on the environment.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21064, 21064.5, 21080(c) and 21082.1, Public Resources Code; *Friends of B Street v. City of Hayward*, (1980) 106 Cal. App. 3d 988; *Running Fence Corp. v. Superior Court*, (1975) 51 Cal. App. 3d 400.

HISTORY

1. Repealer of Article 6 (Sections 15060–15069.8) and new Article 6 (Sections 15070–15075) filed 7–13–83; designated effective 8–1–83 (Register 83, No. 29). For prior history, see Registers 80, No. 19; 78, No. 5; 76, No. 41; 75, No. 1; and 73, No. 50).
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).
3. Amendment of section heading, section and NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15071. Contents.

A negative declaration circulated for public review shall include:

(a) A brief description of the project, including a commonly used name for the project, if any;

(b) The location of the project, preferably shown on a map, and the name of the project proponent;

(c) A proposed finding that the project will not have a significant effect on the environment;

(d) An attached copy of the initial study documenting reasons to support the finding; and

(e) Mitigation measures, if any, included in the project to avoid potentially significant effects.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(c), Public Resources Code.

§ 15072. Notice of Intent to Adopt a Negative Declaration or Mitigated Negative Declaration.

(a) A lead agency shall provide a notice of intent to adopt a negative declaration or mitigated negative declaration to the public, responsible agencies, trustee agencies, and the county clerk of each county within which the proposed project is located, sufficiently prior to adoption by the lead agency of the negative declaration or mitigated negative declaration to allow the public and agencies the review period provided under Section 15105.

(b) The lead agency shall mail a notice of intent to adopt a negative declaration or mitigated negative declaration to the last known name and address of all organizations and individuals who have previously requested such notice in writing and shall also give notice of intent to adopt a negative declaration or mitigated negative declaration by at least one of the following procedures to allow the public the review period provided under Section 15105:

(1) Publication at least one time by the lead agency in a newspaper of general circulation in the area affected by the proposed project. If more than one area is affected, the notice shall be published in the newspaper of largest circulation from among the newspapers of general circulation in those areas.

(2) Posting of notice by the lead agency on and off site in the area where the project is to be located.

(3) Direct mailing to the owners and occupants of property contiguous to the project. Owners of such property shall be identified as shown on the latest equalized assessment roll.

(c) The alternatives for providing notice specified in subsection (b) shall not preclude a lead agency from providing additional notice by other means if the agency so desires, nor shall the requirements of this section preclude a lead agency from providing the public notice at the same time and in the same manner as public notice required by any other laws for the project.

(d) The county clerk of each county within which the proposed project is located shall post such notices in the office of the county clerk within 24 hours of receipt for a period of at least 20 days.

(e) For a project of statewide, regional, or areawide significance, the lead agency shall also provide notice to transportation planning agencies and public agencies which have transportation facilities within their jurisdictions which could be affected by the project as specified in Section 21092.4(a) of the Public Resources Code. "Transportation facilities" includes: major local arterials and public transit within five miles of the project site and freeways, highways and rail transit service within 10 miles of the project site.

(f) A notice of intent to adopt a negative declaration or mitigated negative declaration shall specify the following:

(1) A brief description of the proposed project and its location.

(2) The starting and ending dates for the review period during which the lead agency will receive comments on the proposed negative declaration or mitigated negative declaration. This shall include starting and ending dates for the review period. If the review period has been is shortened pursuant to Section 15105, the notice shall include a statement to that effect.

(3) The date, time, and place of any scheduled public meetings or hearings to be held by the lead agency on the proposed project, when known to the lead agency at the time of notice.

(4) The address or addresses where copies of the proposed negative declaration or mitigated negative declaration including the revisions developed under Section 15070(b) and all documents referenced in the proposed negative declaration or mitigated negative declaration are available for review. This location or locations shall be readily accessible to the public during the lead agency's normal working hours.

(5) The presence of the site on any of the lists enumerated under Section 65962.5 of the Government Code including, but not limited to lists of hazardous waste facilities, land designated as hazardous waste property, and hazardous waste disposal sites, and the information in the Hazardous Waste and Substances Statement required under subsection (f) of that section.

(6) Other information specifically required by statute or regulation for a particular project or type of project.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21091, 21092, 21092.2, 21092.4, 21092.3, 21092.6 and 21151.8, Public Resources Code.

HISTORY

1. Amendment of subsections (a), (a)(3) and NOTE filed 8–19–94; operative 9–19–94 (Register 94, No. 33).
2. Amendment of section heading, section and NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15073. Public Review of a Proposed Negative Declaration or Mitigated Negative Declaration.

(a) The lead agency shall provide a public review period pursuant to Section 15105 of not less than 20 days. When a proposed negative declaration or mitigated negative declaration and initial study are submitted to the State Clearinghouse for review by state agencies, the public review period shall not be less than 30 days, unless a shorter period is approved by the State Clearinghouse under Section 15105(d).

(b) When a proposed negative declaration or mitigated negative declaration and initial study have been submitted to the State Clearinghouse for review by state agencies, the public review period shall be at least as long as the review period established by the State Clearinghouse.

(c) A copy of the proposed negative declaration or mitigated negative declaration and the initial study shall be attached to the notice of intent to adopt the proposed declaration that is sent to every responsible agency and trustee agency concerned with the project and every other public agency with jurisdiction by law over resources affected by the project.

(d) Where one or more state agencies will be a responsible agency or a trustee agency or will exercise jurisdiction by law over natural re-

sources affected by the project, or where the project is of statewide, regional, or areawide environmental significance, the lead agency shall send copies of the proposed negative declaration or mitigated negative declaration to the State Clearinghouse for distribution to the state agencies.

(e) The lead agency shall notify in writing any public agency which comments on a proposed negative declaration or mitigated negative declaration of any public hearing to be held for the project for which the document was prepared. A notice provided to a public agency pursuant to Section 15072 satisfies this requirement.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21000(e), 21003(b), 21080(c), 21081.6, 21091 and 21092.5, Public Resources Code; *Plaggmier* v. *City of San Jose*, (1980) 101 Cal. App. 3d 842.

HISTORY

1. Amendment of section heading, section and NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15073.5. Recirculation of a Negative Declaration Prior to Adoption.

(a) A lead agency is required to recirculate a negative declaration when the document must be substantially revised after public notice of its availability has previously been given pursuant to Section 15072, but prior to its adoption. Notice of recirculation shall comply with Sections 15072 and 15073.

(b) A "substantial revision" of the negative declaration shall mean:

(1) A new, avoidable significant effect is identified and mitigation measures or project revisions must be added in order to reduce the effect to insignificance, or

(2) The lead agency determines that the proposed mitigation measures or project revisions will not reduce potential effects to less than significance and new measures or revisions must be required.

(c) Recirculation is not required under the following circumstances:

(1) Mitigation measures are replaced with equal or more effective measures pursuant to Section 15074.1.

(2) New project revisions are added in response to written or verbal comments on the project's effects identified in the proposed negative declaration which are not new avoidable significant effects.

(3) Measures or conditions of project approval are added after circulation of the negative declaration which are not required by CEQA , which do not create new significant environmental effects and are not necessary to mitigate an avoidable significant effect.

(4) New information is added to the negative declaration which merely clarifies, amplifies, or makes insignificant modifications to the negative declaration.

(d) If during the negative declaration process there is substantial evidence in light of the whole record, before the lead agency that the project, as revised, may have a significant effect on the environment which cannot be mitigated or avoided, the lead agency shall prepare a draft EIR and certify a final EIR prior to approving the project. It shall circulate the draft EIR for consultation and review pursuant to Sections 15086 and 15087, and advise reviewers in writing that a proposed negative declaration had previously been circulated for the project.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080, Public Resources Code; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359; *Leonoff v. Monterey County Board of Supervisors* (1990) 222 Cal.App.3d 1337; and *Long Beach Savings and Loan Assn. v. Long Beach Redevelopment Agency* (1986) 188 Cal.App.3d 249.

HISTORY

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15074. Consideration and Adoption of a Negative Declaration or Mitigated Negative Declaration.

(a) Any advisory body of a public agency making a recommendation to the decisionmaking body shall consider the proposed negative declaration or mitigated negative declaration before making its recommendation.

(b) Prior to approving a project, the decisionmaking body of the lead agency shall consider the proposed negative declaration or mitigated negative declaration together with any comments received during the public review process. The decisionmaking body shall adopt the proposed negative declaration or mitigated negative declaration only if it finds on the basis of the whole record before it (including the initial study and any comments received), that there is no substantial evidence that the project will have a significant effect on the environment and that the negative declaration or mitigated negative declaration reflects the lead agency's independent judgment and analysis.

(c) When adopting a negative declaration or mitigated negative declaration, the lead agency shall specify the location and custodian of the documents or other material which constitute the record of proceedings upon which its decision is based.

(d) When adopting a mitigated negative declaration, the lead agency shall also adopt a program for reporting on or monitoring the changes which it has either required in the project or made a condition of approval to mitigate or avoid significant environmental effects.

(e) A lead agency shall not adopt a negative declaration or mitigated negative declaration for a project within the boundaries of a comprehensive airport land use plan or, if a comprehensive airport land use plan has not been adopted, for a project within two nautical miles of a public airport or public use airport, without first considering whether the project will result in a safety hazard or noise problem for persons using the airport or for persons residing or working in the project area.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080(c), 21081.6, 21082.1 and 21096, Public Resources Code; *Friends of B Street* v. *City of Hayward*, (1980) 106 Cal. App. 3d 988.

HISTORY

1. Amendment of section heading, section and NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15074.1. Substitution of Mitigation Measures in a Proposed Mitigated Negative Declaration.

(a) As a result of the public review process for a proposed mitigated negative declaration, including any administrative decisions or public hearings conducted on the project prior to its approval, the lead agency may conclude that certain mitigation measures identified in the mitigated negative declaration are infeasible or otherwise undesirable. Prior to approving the project, the lead agency may, in accordance with this section, delete those mitigation measures and substitute for them other measures which the lead agency determines are equivalent or more effective.

(b) Prior to deleting and substituting for a mitigation measure, the lead agency shall do both of the following:

(1) Hold a public hearing on the matter. Where a public hearing is to be held in order to consider the project, the public hearing required by this section may be combined with that hearing. Where no public hearing would otherwise be held to consider the project, then a public hearing shall be required before a mitigation measure may be deleted and a new measure adopted in its place.

(2) Adopt a written finding that the new measure is equivalent or more effective in mitigating or avoiding potential significant effects and that it in itself will not cause any potentially significant effect on the environment.

(c) No recirculation of the proposed mitigated negative declaration pursuant to Section 15072 is required where the new mitigation measures are made conditions of, or are otherwise incorporated into, project approval in accordance with this section.

(d) "Equivalent or more effective" means that the new measure will avoid or reduce the significant effect to at least the same degree as, or to a greater degree than, the original measure and will create no more adverse effect of its own than would have the original measure.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(f), Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15075. Notice of Determination on a Project for Which a Proposed Negative or Mitigated Negative Declaration Has Been Approved.

(a) After deciding to carry out or approve a project for which a negative declaration or mitigated negative declaration has been approved, the lead agency shall file a notice of determination. For projects with phases, the lead agency shall file a notice of determination after deciding to carry out approve each phase.

(b) The notice of determination must include:

(1) An identification of the project including its common name where possible, and its location.

(2) A brief description of the project.

(3) The date on which the agency approved the project.

(4) The determination of the agency that the project will not have a significant effect on the environment.

(5) A statement that a negative declaration or a mitigated negative declaration has been prepared pursuant to the provisions of CEQA.

(6) The address where a copy of the negative declaration or mitigated negative declaration may be examined.

(c) If the lead agency is a state agency, the lead agency shall file the notice of determination with OPR.

(d) If the lead agency is a local agency, the local agency shall file the notice of determination with the county clerk of the county or counties in which the project will be located within five working days after approval of the project by the lead agency. If the project requires a discretionary approval from any state agency, the local lead agency shall also file with OPR.

(e) All notices filed pursuant to this section shall be available for public inspection and shall be posted by the county clerk within 24 hours of receipt. Each notice shall remain posted for a period of at least 30 days. Thereafter, the clerk shall return the notice to the local lead agency with a notation of the period it was posted. The local lead agency shall retain the notice for not less than 9 months. The filing of the notice of determination and the posting on a list of such notices starts a 30–day statute of limitations on court challenges to the approval under CEQA.

(f) Public agencies are encouraged to make copies of all notices filed pursuant to this section available in electronic format on the Internet. ch electronic notices are in addition to the posting requirements of se guidelines and the Public Resources Code.

OTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080(c), 21108(a) and (c), 21152(a) and (c) and 21167(b), Public Resources Code; *Citizens of Lake Murray Area Association* v. *City Council*, (1982) 129 Cal. App. 3d 436.

HISTORY

1. Amendment of subsections (c) and (d) filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).
2. Amendment of section heading and section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
3. New subsection (f) filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

Article 6.5. Statutory Exemptions

HISTORY

1. Repealer of Article 6.5 (Sections 15070–15079.7) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29). For prior history, see Register 78, No. 5.
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

Article 7. EIR Process

§ 15080. General.

To the extent possible, the EIR process should be combined with the existing planning, review, and project approval process used by each public agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061, 21100 and 21151, Public Resources Code.

HISTORY

1. Repealer of Article 7 (Sections 15080–15089) and new Article 7 (Sections 15080–15096) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29). For prior history, see Registers 82, No. 2; 80, No. 19; 78, No. 5; 77, No. 1; 76, No. 41; 75, No. 1; and 73, No. 50.
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15081. Decision to Prepare an EIR.

The EIR process starts with the decision to prepare an EIR. This decision will be made either during preliminary review under Section 15060 or at the conclusion of an initial study after applying the standards described in Section 15064.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21100, Public Resources Code; *No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal. 3d 68; *Friends of B Street* v. *City of Hayward* (1980) 106 Cal. App. 3d 988.

§ 15081.5. EIRs Required by Statute.

(a) A lead agency shall prepare or have prepared an EIR for the following types of projects. An initial study may be prepared to help identify the significant effects of the project.

(1) The burning of municipal wastes, hazardous wastes, or refuse–derived fuel, including but not limited to tires, if the project is either:

(A) The construction of a new facility; or

(B) The expansion of an existing facility that burns hazardous waste that would increase its permitted capacity by more than 10 percent. This does not apply to any project exclusively burning hazardous waste for which a determination to prepare a negative declaration, or mitigated negative declaration or environmental impact report was made prior to July 14, 1989. The amount of expansion of an existing facility is calculated pursuant to subdivision (b) of Section 21151.1 of the Public Resources Code.

(C) Subsection (1) of the subdivision does not apply to:

1. Projects for which the State Energy Resources Conservation and Development Commission has assumed jurisdiction pursuant to Chapter 6 (commencing with Section 25500) of Division 15 of the Public Resources Code.

2. Any of the types of burn or thermal processing projects listed in subdivision (d) of Section 21151.1 of the Public Resources Code.

(2) The initial issuance of a hazardous waste facilities permit to a land disposal facility, as defined in subdivision (d) of Section 25199.1 of the Health and Safety Code. Preparation of an EIR is not mandatory if the facility only manages hazardous waste which is identified or listed pursuant to Section 25140 or Section 25141 of the Health and Safety Code on or after January 1, 1992; or only conducts activities which are regulated pursuant to Chapter 6.5 (commencing with Section 25100) of Division 20 of the Health and Safety Code on or after January 1, 1992. "Initial issuance" does not include the issuance of a closure or postclosure permit pursuant to Chapter 6.5 (commencing with Section 25100) of Division 20 of the Health and Safety Code.

(3) The initial issuance of a hazardous waste facility permit pursuant to Section 25200 of the Health and Safety Code to an off–site large treatment facility, as defined pursuant to subdivision (d) of Section 25205.1 of that code. Preparation of an EIR is not mandatory if the facility only manges hazardous waste which is identified or listed pursuant to Section 25140 or Section 25141 of the Health and Safety Code on or after January 1, 1992; or only conducts activities which are regulated pursuant to Chapter 6.5 (commencing with Section 25100) of Division 20 of the Health and Safety Code on or after January 1, 1992. "Initial issuance" does not include the issuance of a closure or postclosure permit pursuant to Chapter 6.5 (commencing with Section 25100) of Division 20 of the Health and Safety Code.

(4) Any open pit mining operation which is subject to the permit requirements of the Surface Mining and Reclamation Act (beginning at Section 2710 of the Public Resources Code) and which utilizes a cyanide heap–leaching process for the purpose of extracting gold or other precious metals.

(5) An initial base reuse plan as defined in Section 15229.

(b) A lead agency shall prepare or have prepared an EIR for the selection of a California Community College, California State University, University of California, or California Maritime Academy campus location and approval of a long range development plan for that campus.

(1) The EIR for a long range development plan for a campus shall include an analysis of, among other significant impacts, those environmental effects relating to changes in enrollment levels.

(2) Subsequent projects within the campus may be addressed in environmental analyses tiered on the EIR prepared for the long range development plan.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080.09, 21083.8, 21083.8.1, 21151.1 and 21151.7, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15082. Determination of Scope of EIR.

(a) Notice of Preparation. Immediately after deciding that an environmental impact report is required for a project, the lead agency shall send to each responsible agency a notice of preparation stating that an environmental impact report will be prepared. This notice shall also be sent to every federal agency involved in approving or funding the project and to each trustee agency responsible for natural resources affected by the project.

(1) The notice of preparation shall provide the responsible agencies with sufficient information describing the project and the potential environmental effects to enable the responsible agencies to make a meaningful response. At a minimum, the information shall include:

(A) Description of the project,

(B) Location of the project indicated either on an attached map (preferably a copy of a U.S.G.S. 15′ or 7 1/2′ topographical map identified by quadrangle name, or by a street address in an urbanized area), and

(C) Probable environmental effects of the project.

(2) A sample for a notice of preparation is shown in Appendix J. Public agencies are free to devise their own formats for this notice. A copy of the initial study may be sent with the notice to supply the necessary information.

(3) To send copies of the notice of preparation, the lead agency shall use either certified mail or any other method of transmittal which provides it with a record that the notice was received.

(4) The lead agency may begin work on the draft EIR immediately without awaiting responses to the notice of preparation. The draft EIR in preparation may need to be revised or expanded to conform to responses to the notice of preparation. A lead agency shall not circulate a draft EIR for public review before the time period for responses to the notice of preparation has expired.

(b) Response to Notice of Preparation. Within 30 days after receiving the notice of preparation under subsection (a), each responsible agency shall provide the lead agency with specific detail about the scope and content of the environmental information related to the responsible agency's area of statutory responsibility which must be included in the draft EIR.

(1) The response at a minimum shall identify:

(A) The significant environmental issues and reasonable alternatives and mitigation measures which the responsible agency will need to have explored in the draft EIR; and

(B) Whether the agency will be a responsible agency or trustee agency for the project.

(2) If a responsible agency fails by the end of the 30 day period to provide the lead agency with either a response to the notice or a well justified request for additional time, the lead agency may presume that the responsible agency has no response to make.

(3) A generalized list of concerns not related to the specific project shall not meet the requirements of this section for a response.

(c) Meetings. In order to expedite the consultation, the lead agency, a responsible agency, a trustee agency, or a project applicant may request one or more meetings between representatives of the agencies involved to assist the lead agency in determining the scope and content of the environmental information which the responsible agency may require. Such meetings shall be convened by the lead agency as soon as possible, but no later than 30 days, after the meetings were requested. On request, the Office of Planning and Research will assist in convening meetings which involve state agencies.

(d) State Clearinghouse. When one or more state agencies will be a responsible agency or a trustee agency, the lead agency shall send a notice of preparation to each state responsible agency and each trustee agency with a copy to the State Clearinghouse in the Office of Planning and Research. The State Clearinghouse will ensure that the state responsible agencies and trustees reply to the lead agency within the required time.

(e) Identification Number. When the notice of preparation is submitted to the State Clearinghouse, the state identification number issued by the Clearinghouse shall be the identification number for all subsequent environmental documents on the project. The identification number should be referenced on all subsequent correspondence regarding the project, specifically on the title page of the draft and final EIR and on the notice of determination.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.4, Public Resources Code.

HISTORY

1. Amendment of subsection (b) filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).

§ 15083. Early Public Consultation.

Prior to completing the draft EIR, the lead agency may also consult directly with any person or organization it believes will be concerned with the environmental effects of the project. Many public agencies have found that early consultation solves many potential problems that would arise in more serious forms later in the review process. This early consultation may be called scoping. Scoping will be necessary when preparing an EIR/EIS jointly with a federal agency.

(a) Scoping has been helpful to agencies in identifying the range of actions, alternatives, mitigation measures, and significant effects to be analyzed in depth in an EIR and in eliminating from detailed study issues found not to be important.

(b) Scoping has been found to be an effective way to bring together and resolve the concerns of affected federal, state, and local agencies, the proponent of the action, and other interested persons including those who might not be in accord with the action on environmental grounds.

(c) Where scoping is used, it should be combined to the extent possible with consultation under Section 15082.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21082.1, Public Resources Code; Section 4, Chapter 480 of the Statutes of 1981; 40 Code of Federal Regulations, Part 1501.7.

§ 15083.5. City or County Consultation with Water Agencies.

This guideline addresses consultation between a city or county and affected water agencies at the notice of preparation stage of environmental review.

(a) This guideline shall apply only to projects which meet all of the following criteria:

(1) The project consists of any of the following activities for which an application has been submitted to a city or county:

(A) A residential development of more than 500 dwelling units.

(B) A shopping center or business establishment that will employ more than 1,000 persons or have more than 500,000 square feet of floor space.

(C) A commercial office building that will employ more than 1,000 persons or have more than 250,000 square feet of floor space.

(D) A hotel, motel or both with more than 500 rooms.

(E) An industrial, manufacturing, or processing plant, or industrial park intended to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area.

(F) Any mixed-use project that would demand an amount of water equal to, or greater than, the amount of water needed to serve a 500-dwelling unit project.

(2) As part of approval of the project, any of the following are required:

(A) An amendment to, or revision of, the land use element of a general plan or a specific plan, which would result in a net increase in the stated population density or building intensity to provide for additional development.

(B) The adoption of a specific plan, unless the city or county has previously complied with this section for the project.

Notwithstanding the foregoing provisions of this subsection (a)(2), when a project is identified in connection with the revision of any part of a general plan, that project is subject to the requirements of this section only if the project results in a net increase in the stated population density or building intensity, and if the city or county has not previously complied with the requirements of this section for the project in question.

(3) A city or county has determined that an environmental impact report is required in connection with the project.

(b) For projects subject to this guideline, a city or county shall identify any water system that is, or may become, a public water system, as defined in Section 10912 of the Water Code, that may supply water for the project. When a city or county releases a notice of preparation for review, it shall send a copy of the notice to each public water system which serves or would serve the proposed project and request that the system both indicate whether the projected water demand associated with the proposed project was included in its last urban water management plan and assess whether its total projected water supplies available during normal, single-dry, and multiple-dry water years as included in the 20-year projection contained in its urban water management plan will meet the projected water demand associated with the proposed project, in addition to the system's existing and planned future uses.

(c) The governing body of a public water system shall approve and submit its water supply assessment to the city or county not later than 30 days after the date on which the request and notice of preparation were received. If the public water system fails to submit its assessment within the allotted time, the lead agency may assume, unless there has been a request for a specific extension of time from the public water system, that the public water system has no information to submit. If a public water system concludes there would be insufficient water to serve the proposed project, it shall provide the city or county with its plans for acquiring additional water supplies.

(d) The lead agency shall include within the EIR the public water system's assessment and any other information provided by the water agency, up to a maximum of ten typewritten pages. The assessment and information may only exceed that length with the approval of the lead agency. The lead agency may independently evaluate the water system's information and shall determine, based on the entire record, whether projected water supplies will be sufficient to satisfy the demands of the proposed project, in addition to existing and planned future uses. If the lead agency determines that water supplies will not be sufficient, the lead agency must include that determination in its findings for the project pursuant to Sections 15091 and 15093.

(e) For purposes of this section, "public water system" means a system as defined in Section 10912 of the Water Code with 3,000 or more service connections.

(f) This section does not apply to the County of San Diego and the cities in the county as provided in Section 10915 of the Water Code.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21151.9, Public Resources Code.

HISTORY

1. New section filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15084. Preparing the Draft EIR.

(a) The draft EIR shall be prepared directly by or under contract to the lead agency. The required contents of a draft EIR are discussed in Article 9 beginning with Section 15120.

(b) The lead agency may require the project applicant to supply data and information both to determine whether the project may have a significant effect on the environment and to assist the lead agency in preparing the draft EIR. The requested information should include an identification of other public agencies which will have jurisdiction by law over the project.

(c) Any person, including the applicant, may submit information or comments to the lead agency to assist in the preparation of the draft EIR. The submittal may be presented in any format, including the form of a draft EIR. The lead agency must consider all information and comments received. The information or comments may be included in the draft EIR in whole or in part.

(d) The lead agency may choose one of the following arrangements or a combination of them for preparing a draft EIR.

(1) Preparing the draft EIR directly with its own staff.

(2) Contracting with another entity, public or private, to prepare the draft EIR.

(3) Accepting a draft prepared by the applicant, a consultant retained by the applicant, or any other person.

(4) Executing a third party contract or memorandum of understanding with the applicant to govern the preparation of a draft EIR by an independent contractor.

(5) Using a previously prepared EIR.

(e) Before using a draft prepared by another person, the lead agency shall subject the draft to the agency's own review and analysis. The draft EIR which is sent out for public review must reflect the independent judgment of the lead agency. The lead agency is responsible for the adequacy and objectivity of the draft EIR.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21082.1, Public Resources Code.

§ 15085. Notice of Completion.

(a) As soon as the draft EIR is completed, a notice of completion must be filed with OPR in a printed hard copy or in electronic form on a diskette or by electronic mail transmission.

(b) The notice of completion shall include:

(1) A brief description of the project,

(2) The proposed location of the project,

(3) An address where copies of the draft EIR are available, and

(4) The period during which comments will be received on the draft EIR.

(c) A form for the notice of completion is included in the appendices.

(d) Where the EIR will be reviewed through the state review process handled by the State Clearinghouse, the cover form required by the State Clearinghouse will serve as the notice of completion.

(e) Public agencies are encouraged to make copies of notices of completion filed pursuant to this section available in electronic format on the Internet.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21161, Public Resources Code.

HISTORY

1. Amendment of subsections (a) and (d) filed 1-30-86; effective thirtieth day thereafter (Register 86, No. 5).
2. Amendment of subsection (a) and new subsection (e) filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15086. Consultation Concerning Draft EIR.

(a) The lead agency shall consult with and request comments on the draft EIR from:

(1) Responsible agencies,

(2) Trustee agencies with resources affected by the project, and

(3) Any other state, federal, and local agencies which have jurisdiction by law with respect to the project or which exercise authority over resources which may be affected by the project, including water agencies consulted pursuant to section 15083.5.

(4) Any city or county which borders on a city or county within which the project is located.

(5) For a project of statewide, regional, or areawide significance, the transportation planning agencies and public agencies which have transportation facilities within their jurisdictions which could be affected by the project. "Transportation facilities" includes: major local arterials and public transit within five miles of the project site, and freeways, highways and rail transit service within 10 miles of the project site.

(6) For a state lead agency, the Department of Fish and Game as to the impact of the project on the continued existence of any endangered or threatened species pursuant to Article 4 (commencing with Section 2090) of Chapter 1.5 of Division 3 of the Fish and Game Code.

(7) For a state lead agency when the EIR is being prepared for a highway or freeway project, the State Air Resources Board as to the air pollution impact of the potential vehicular use of the highway or freeway and if a non-attainment area, the local air quality management district for a determination of conformity with the air quality management plan.

(8) For a subdivision project located within one mile of a facility of the State Water Resources Development System, the California Department of Water Resources.

(b) The lead agency may consult directly with:

(1) Any person who has special expertise with respect to any environmental impact involved.

(2) Any member of the public who has filed a written request for notice with the lead agency or the clerk of the governing body.

(3) Any person identified by the applicant whom the applicant believes will be concerned with the environmental effects of the project.

(c) A responsible agency or other public agency shall only make substantive comments regarding those activities involved in the project that are within an area of expertise of the agency or which are required to be carried out or approved by the responsible agency. Those comments shall be supported by specific documentation.

(d) Prior to the close of the public review period, a responsible agency or trustee agency which has identified what that agency considers to be significant environmental effects shall advise the lead agency of those effects. As to those effects relevant to its decision, if any, on the project, the responsible or trustee agency shall either submit to the lead agency complete and detailed performance objectives for mitigation measures addressing those effects or refer the lead agency to appropriate, readily available guidelines or reference documents concerning mitigation measures. If the responsible or trustee agency is not aware of mitigation measures that address identified effects, the responsible or trustee agency shall so state.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21081.6, 21092.4, 21092.5, 21104 and 21153, Public Resources Code.

HISTORY

1. Amendment of section and NOTE filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15087. Public Review of Draft EIR.

(a) The lead agency shall provide public notice of the availability of a draft EIR at the same time as it sends a notice of completion to OPR. This notice shall be given as provided under Section 15105. Notice shall be mailed to the last known name and address of all organizations and individuals who have previously requested such notice in writing, and shall also be given by at least one of the following procedures:

(1) Publication at least one time by the public agency in a newspaper of general circulation in the area affected by the proposed project. If more than one area is affected, the notice shall be published in the newspaper of largest circulation from among the newspapers of general circulation in those areas.

(2) Posting of notice by the public agency on and off the site in the area where the project is to be located.

(3) Direct mailing to the owners and occupants of property contiguous to the parcel or parcels on which the project is located. Owners of such property shall be identified as shown on the latest equalized assessment roll.

(b) The alternatives for providing notice specified in subsection (a) shall not preclude a public agency from providing additional notice by other means if such agency so desires, nor shall the requirements of this section preclude a public agency from providing the public notice required by this section at the same time and in the same manner as public notice otherwise required by law for the project.

(c) The notice shall disclose the following:

(1) A brief description of the proposed project and its location.

(2) The starting and ending dates for the review period during which the lead agency will receive comments. If the review period is shortened, the notice shall disclose that fact.

(3) The date, time, and place of any scheduled public meetings or hearings to be held by the lead agency on the proposed project when known to the lead agency at the time of notice.

(4) A list of the significant environmental effects anticipated as a result of the project, to the extent which such effects are known to the lead agency at the time of the notice.

(5) The address where copies of the EIR and all documents referenced in the EIR will be available for public review. This location shall be readily accessible to the public during the lead agency's normal working hours.

(6) The presence of the site on any of the lists of sites enumerated under Section 65962.5 of the Government Code including, but not limited to lists of hazardous waste facilities, land designated as hazardous waste property, hazardous waste disposal sites and others, and the information in the Hazardous Waste and Substances Statement required under subsection (f) of that Section.

(d) The notice required under this section shall be posted in the office of the county clerk of each county in which the project will be located for a period of at least 30 days. The county clerk shall post such notices within 24 hours of receipt.

(e) In order to provide sufficient time for public review, the review period for a draft EIR shall be as provided in Section 15105. The review period shall be combined with the consultation required under Section 15086. When a draft EIR has been submitted to the State Clearinghouse, the public review period shall be at least as long as the review period established by the Clearinghouse.

(f) Public agencies shall use the State Clearinghouse to distribute draft EIRs to state agencies for review and should use areawide clearinghouses to distribute the documents to regional and local agencies.

(g) To make copies of EIRs available to the public, lead agencies should furnish copies of draft EIRs to public library systems serving the area involved. Copies should also be available in offices of the lead agency.

(h) Public agencies should compile listings of other agencies, particularly local agencies, which have jurisdiction by law and/or special expertise with respect to various projects and project locations. Such listings should be a guide in determining which agencies should be consulted with regard to a particular project.

(i) Public hearings may be conducted on the environmental documents, either in separate proceedings or in conjunction with other proceedings of the public agency. Public hearings are encouraged, but not required as an element of the CEQA process.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21091, 21092, 21092.2, 21092.3, 21092.6, 21104, 21153 and 21161, Public Resources Code.

History

1. Amendment of subsection (a) filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).

Amendment of subsection (a)(3) and Note filed 8–19–94; operative 9–19–94 (Register 94, No. 33).

3. Amendment of section and Note filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15086. Evaluation of and Response to Comments.

(a) The lead agency shall evaluate comments on environmental issues received from persons who reviewed the draft EIR and shall prepare a written response. The lead agency shall respond to comments received during the noticed comment period and any extensions and may respond to late comments.

(b) The written response shall describe the disposition of significant environmental issues raised (e.g., revisions to the proposed project to mitigate anticipated impacts or objections). In particular, the major environmental issues raised when the lead agency's position is at variance with recommendations and objections raised in the comments must be addressed in detail giving reasons why specific comments and suggestions were not accepted. There must be good faith, reasoned analysis in response. Conclusory statements unsupported by factual information will not suffice.

(c) The response to comments may take the form of a revision to the draft EIR or may be a separate section in the final EIR. Where the response to comments makes important changes in the information contained in the text of the draft EIR, the lead agency should either:

(1) Revise the text in the body of the EIR, or

(2) Include marginal notes showing that the information is revised in the response to comments.

Note: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21104 and 21153, Public Resources Code; *People* v. *County of* [illegible], (1974) 39 Cal. App. 3d 830; *Cleary v. County of Stanislaus*, (1981) 118 Cal. [illegible] 3d 348.

15088.5. Recirculation of an EIR Prior to Certification.

(a) A lead agency is required to recirculate an EIR when significant new information is added to the EIR after public notice is given of the availability of the draft EIR for public review under Section 15087 but before certification. As used in this section, the term "information" can include changes in the project or environmental setting as well as additional data or other information. New information added to an EIR is not "significant" unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement. "Significant new information" requiring recirculation include, for example, a disclosure showing that:

(1) A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.

(2) A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.

(3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the significant environmental impacts of the project, but the project's proponents decline to adopt it.

(4) The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded. (*Mountain Lion Coalition v. Fish & Game Com.* (1989) 214 Cal.App.3d 1043).

(b) Recirculation is not required where the new information added to [illegible] EIR merely clarifies or amplifies or makes insignificant modifications in an adequate EIR.

(c) If the revision is limited to a few chapters or portions of the EIR, [illegible]e lead agency need only recirculate the chapters or portions that have been modified.

(d) Recirculation of an EIR requires notice pursuant to Section 15087, and consultation pursuant to Section 15086.

(e) A decision not to recirculate an EIR must be supported by substantial evidence in the administrative record.

(f) The lead agency shall evaluate and respond to comments as provided in Section 15088. Recirculating an EIR can result in the lead agency receiving more than one set of comments from reviewers. Following are two ways in which the lead agency may identify the set of comments to which it will respond. This dual approach avoids confusion over whether the lead agency must respond to comments which are duplicates or which are no longer pertinent due to revisions to the EIR. In no case shall the lead agency fail to respond to pertinent comments on significant environmental issues.

(1) When the EIR is substantially revised and the entire EIR is recirculated, the lead agency may require that reviewers submit new comments and need not respond to those comments received during the earlier circulation period. The lead agency shall advise reviewers, either within the text of the revised EIR or by an attachment to the revised EIR, that although part of the administrative record, the previous comments do not require a written response in the final EIR, and that new comments must be submitted for the revised EIR. The lead agency need only respond to those comments submitted in response to the recirculated revised EIR. The lead agency shall send directly to every agency, person, or organization that commented on the prior draft EIR a notice of the recirculation specifying that new comments must be submitted.

(2) When the EIR is revised only in part and the lead agency is recirculating only the revised chapters or portions of the EIR, the lead agency may request that reviewers limit their comments to the revised chapters or portions. The lead agency need only respond to (i) comments received during the initial circulation period that relate to chapters or portions of the document that were not revised and recirculated, and (ii) comments received during the recirculation period that relate to the chapters or portions of the earlier EIR that were revised and recirculated. The lead agency's request that reviewers limit the scope of their comments shall be included either within the text of the revised EIR or by an attachment to the revised EIR.

(g) When recirculating a revised EIR, either in whole or in part, the lead agency shall, in the revised EIR or by an attachment to the revised EIR, summarize the revisions made to the previously circulated draft EIR.

Note: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21092.1, Public Resources Code; *Laurel Heights Improvement Association v. Regents of the University of California* (1993) 6 Cal. 4th 1112.

History

1. New section filed 8–19–94; operative 9–19–94 (Register 94, No. 33).
2. New subsections (f)–(g) filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15089. Preparation of Final EIR.

(a) The lead agency shall prepare a final EIR before approving the project. The contents of a final EIR are specified in Section 15132 of these guidelines.

(b) Lead agencies may provide an opportunity for review of the final EIR by the public or by commenting agencies before approving the project. The review of a final EIR should focus on the responses to comments on the draft EIR.

Note: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21100, 21105 and 21151, Public Resources Code; *City of Carmel–by–the–Sea* v. *Board of Supervisors*, (1977) 71 Cal. App. 3d 84; State Administrative Manual, Section 1060.

§ 15090. Certification of the Final EIR.

(a) Prior to approving a project the lead agency shall certify that:

(1) The final EIR has been completed in compliance with CEQA;

(2) The final EIR was presented to the decisionmaking body of the lead agency and that the decisionmaking body reviewed and considered the information contained in the final EIR prior to approving the project; and

(3) The final EIR reflects the lead agency's independent judgment and analysis.

(b) When an EIR is certified by a non–elected decision–making body within a local lead agency, that certification may be appealed to the local lead agency's elected decision–making body, if one exists. For example, certification of an EIR for a tentative subdivision map by a city's planning commission may be appealed to the city council. Each local lead agency shall provide for such appeals.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21082.1, 21100 and 21151, Public Resources Code; *City of Carmel–by–the–Sea* v. *Board of Supervisors* (1977) 71 Cal. App. 3d 84; *Kleist* v. *City of Glendale* (1976) 56 Cal. App. 3d 770.

HISTORY

1. Amendment of section heading, section and NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15091. Findings.

(a) No public agency shall approve or carry out a project for which an EIR has been certified which identifies one or more significant environmental effects of the project unless the public agency makes one or more written findings for each of those significant effects, accompanied by a brief explanation of the rationale for each finding. The possible findings are:

(1) Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the final EIR.

(2) Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency.

(3) Specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the final EIR.

(b) The findings required by subsection (a) shall be supported by substantial evidence in the record.

(c) The finding in subsection (a)(2) shall not be made if the agency making the finding has concurrent jurisdiction with another agency to deal with identified feasible mitigation measures or alternatives. The finding in subsection (a)(3) shall describe the specific reasons for rejecting identified mitigation measures and project alternatives.

(d) When making the findings required in subsection (a)(1), the agency shall also adopt a program for reporting on or monitoring the changes which it has either required in the project or made a condition of approval to avoid or substantially lessen significant environmental effects. These measures must be fully enforceable through permit conditions, agreements, or other measures.

(e) The public agency shall specify the location and custodian of the documents or other material which constitute the record of the proceedings upon which its decision is based.

(f) A statement made pursuant to Section 15093 does not substitute for the findings required by this section.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21002.1, 21081 and 21081.6, Public Resources Code; *Laurel Hills Homeowners Association* v. *City Council* (1978) 83 Cal. App. 3d 515; *Cleary* v. *County of Stanislaus* (1981) 118 Cal. App. 3d 348; *Sierra Club* v. *Contra Costa County* (1992) 10 Cal.App.4th 1212; *Citizens for Quality Growth* v. *City of Mount Shasta* (1988) 198 Cal.App.3d 433.

HISTORY

1. Amendment of subsections (a) and (a)(3), new subsections (d) and (e), and amendment of NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
2. Amendment of subsection (c), new subsection (f) and amendment of NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15092. Approval.

(a) After considering the final EIR and in conjunction with making findings under Section 15091, the lead agency may decide whether or how to approve or carry out the project.

(b) A public agency shall not decide to approve or carry out a project for which an EIR was prepared unless either:

(1) The project as approved will not have a significant effect on the environment, or

(2) The agency has:

(A) Eliminated or substantially lessened all significant effects on the environment where feasible as shown in findings under Section 15091, and

(B) Determined that any remaining significant effects on the environment found to be unavoidable under Section 15091 are acceptable due to overriding concerns as described in Section 15093.

(c) With respect to a project which includes housing development, the public agency shall not reduce the proposed number of housing units as a mitigation measure if it determines that there is another feasible specific mitigation measure available that will provide a comparable level of mitigation.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21002.1, 21081 and 21085, Public Resources Code; *Friends of Mammoth* v. *Board of Supervisors*, (1972) 8 Cal. App. 3d 247; *San Francisco Ecology Center* v. *City and County of San Francisco*, (1975) 48 Cal. App. 3d 584; *City of Carmel–by–the–Sea* v. *Board of Supervisors*, (1977) 71 Cal. App. 3d 84; *Laurel Hills Homeowners Association* v. *City Council*, (1978) 83 Cal. App. 3d 515.

§ 15093. Statement of Overriding Considerations.

(a) CEQA requires the decision–making agency to balance, as applicable, the economic, legal, social, technological, or other benefits of a proposed project against its unavoidable environmental risks when determining whether to approve the project. If the specific economic, legal, social, technological, or other benefits of a proposal project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered "acceptable."

(b) When the lead agency approves a project which will result in the occurrence of significant effects which are identified in the final EIR but are not avoided or substantially lessened, the agency shall state in writing the specific reasons to support its action based on the final EIR and/or other information in the record. The statement of overriding considerations shall be supported by substantial evidence in the record.

(c) If an agency makes a statement of overriding considerations, the statement should be included in the record of the project approval and should be mentioned in the notice of determination. This statement does not substitute for, and shall be in addition to, findings required pursuant to Section 15091.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002 and 21081, Public Resources Code; *San Francisco Ecology Center* v. *City and County of San Francisco* (1975) 48 Cal. App. 3d 584; *City of Carmel–by–the–Sea* v. *Board of Supervisors* (1977) 71 Cal. App. 3d 84; *Sierra Club* v. *Contra Costa County* (1992) 10 Cal.App.4th 1212; *Citizens for Quality Growth* v. *City of Mount Shasta* (1988) 198 Cal.App.3d 433.

HISTORY

1. Amendment of subsections (a) and (b) and amendment of NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
2. Amendment of subsections (b) and (c) and amendment of NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15094. Notice of Determination.

(a) The lead agency shall file a notice of determination within 5 working days after approval of the project by the lead agency. The notice shall include:

(1) An identification of the project including its common name where possible and its location.

(2) A brief description of the project.

(3) The date when the agency approved the project.

(4) The determination of the agency whether the project in its approved form will have a significant effect on the environment.

(5) A statement that an EIR was prepared and certified pursuant to the provisions of CEQA.

(6) Whether mitigation measures were made a condition of the approval of the project.

(7) Whether findings were made pursuant to Section 15091.

(8) Whether a statement of overriding considerations was adopted for the project.

(9) The address where a copy of the final EIR and the record of project approval may be examined.

(b) If a state agency is the lead agency, the notice of determination shall be filed with OPR.

(c) If a local agency is the lead agency, the notice of determination shall be filed with the county clerk of the county or counties in which the project will be located. If the project requires discretionary approval from a state agency, the notice of determination shall also be filed with OPR.

(d) A notice of determination filed with the county clerk is available for public inspection and shall be posted within 24 hours of receipt for a period of at least 30 days. Thereafter, the clerk shall return the notice to the local lead agency with a notation of the period during which it was posted. The local lead agency shall retain the notice for not less than 9 months.

(e) A notice of determination filed with OPR is available for public inspection and shall be posted for a period of at least 30 days.

(f) The filing of the notice of determination and the posting of such notice starts a 30–day statute of limitations on court challenges to the approval under CEQA.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21108, 21152 and 21167, Public Resources Code; *Citizens of Lake Murray Area Association* v. *City Council*, (1982) 129 Cal. App. 3d 436.

HISTORY

1. Amendment of subsections (b) and (c) filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).
2. Amendment of subsection (a), new subsections (d) and (e), subsection relettering, and amendment of newly designated subsection (f) filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15095. Disposition of a Final EIR.

The lead agency shall:

(a) File a copy of the final EIR with the appropriate planning agency of any city, county, or city and county where significant effects on the environment may occur.

(b) Include the final EIR as part of the regular project report which is used in the existing project review and budgetary process if such a report is used.

(c) Retain one or more copies of the final EIR as public records for a reasonable period of time.

(d) Require the applicant to provide a copy of the certified, final EIR to each responsible agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21105, 21151 and 21165, Public Resources Code; *County of Inyo v. Yorty*, (1973) 32 Cal. App. 3d 795.

§ 15096. Process for a Responsible Agency.

(a) General. A responsible agency complies with CEQA by considering the EIR or negative declaration prepared by the lead agency and by reaching its own conclusions on whether and how to approve the project involved. This section identifies the special duties a public agency will have when acting as a responsible agency.

(b) Response to Consultation. A responsible agency shall respond to consultation by the lead agency in order to assist the lead agency in preparing adequate environmental documents for the project. By this means, the responsible agency will ensure that the documents it will use will comply with CEQA.

(1) In response to consultation, a responsible agency shall explain its reasons for recommending whether the lead agency should prepare an EIR or negative declaration for a project. Where the responsible agency disagrees with the lead agency's proposal to prepare a negative declaration for a project, the responsible agency should identify the significant environmental effects which it believes could result from the project and recommend either that an EIR be prepared or that the project be modified to eliminate the significant effects.

(2) As soon as possible, but not longer than 30 days after receiving a notice of preparation from the lead agency, the responsible agency shall send a written reply by certified mail or any other method which provides the agency with a record showing that the notice was received. The reply shall specify the scope and content of the environmental information which would be germane to the responsible agency's statutory responsibilities in connection with the proposed project. The lead agency shall include this information in the EIR.

(c) Meetings. The responsible agency shall designate employees or representatives to attend meetings requested by the lead agency to discuss the scope and content of the EIR.

(d) Comments on Draft EIRs and Negative Declarations. A responsible agency should review and comment on draft EIRs and negative declarations for projects which the responsible agency would later be asked to approve. Comments should focus on any shortcomings in the EIR, the appropriateness of using a negative declaration, or on additional alternatives or mitigation measures which the EIR should include. The comments shall be limited to those project activities which are within the agency's area of expertise or which are required to be carried out or approved by the agency or which will be subject to the exercise of powers by the agency. Comments shall be as specific as possible and supported by either oral or written documentation.

(e) Decision on Adequacy of EIR or Negative Declaration. If a responsible agency believes that the final EIR or negative declaration prepared by the lead agency is not adequate for use by the responsible agency, the responsible agency must either;

(1) Take the issue to court within 30 days after the lead agency files a notice of determination;

(2) Be deemed to have waived any objection to the adequacy of the EIR or negative declaration;

(3) Prepare a subsequent EIR if permissible under Section 15162; or

(4) Assume the lead agency role as provided in Section 15052(a)(3).

(f) Consider the EIR or Negative Declaration. Prior to reaching a decision on the project, the responsible agency must consider the environmental effects of the project as shown in the EIR or negative declaration. A subsequent or supplemental EIR can be prepared only as provided in Sections 15162 or 15163.

(g) Adoption of Alternatives or Mitigation Measures.

(1) When considering alternatives and mitigation measures, a responsible agency is more limited than a lead agency. A responsible agency has responsibility for mitigating or avoiding only the direct or indirect environmental effects of those parts of the project which it decides to carry out, finance, or approve.

(2) When an EIR has been prepared for a project, the Responsible Agency shall not approve the project as proposed if the agency finds any feasible alternative or feasible mitigation measures within its powers that would substantially lessen or avoid any significant effect the project would have on the environment. With respect to a project which includes housing development, the responsible agency shall not reduce the proposed number of housing units as a mitigation measure if it determines that there is another feasible specific mitigation measure available that will provide a comparable level of mitigation.

(h) Findings. The responsible agency shall make the findings required by Section 15091 for each significant effect of the project and shall make the findings in Section 15093 if necessary.

(i) Notice of Determination. The responsible agency should file a notice of determination in the same manner as a lead agency under Section 15075 or 15094 except that the responsible agency does not need to state that the EIR or negative declaration complies with CEQA. The responsible agency should state that it considered the EIR or negative declaration as prepared by a lead agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21165, 21080.1, 21080.3, 21080.4, 21082.1 and 21002.1(b) and (d), Public Resources Code.

History

1. Amendment of subsections (b) and (d) filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).

§ 15097. Mitigation Monitoring or Reporting.

(a) This section applies when a public agency has made the findings required under paragraph (1) of subdivision (a) of Section 15091 relative to an EIR or adopted a mitigated negative declaration in conjunction with approving a project. In order to ensure that the mitigation measures and project revisions identified in the EIR or negative declaration are implemented, the public agency shall adopt a program for monitoring or reporting on the revisions which it has required in the project and the measures it has imposed to mitigate or avoid significant environmental effects. A public agency may delegate reporting or monitoring responsibilities to another public agency or to a private entity which accepts the delegation; however, until mitigation measures have been completed the lead agency remains responsible for ensuring that implementation of the mitigation measures occurs in accordance with the program.

(b) Where the project at issue is the adoption of a general plan, specific plan, community plan or other plan–level document (zoning, ordinance, regulation, policy), the monitoring plan shall apply to policies and any other portion of the plan that is a mitigation measure or adopted alternative. The monitoring plan may consist of policies included in plan–level documents. The annual report on general plan status required pursuant to the Government Code is one example of a reporting program for adoption of a city or county general plan.

(c) The public agency may choose whether its program will monitor mitigation, report on mitigation, or both. "Reporting" generally consists of a written compliance review that is presented to the decision making body or authorized staff person. A report may be required at various stages during project implementation or upon completion of the mitigation measure. "Monitoring" is generally an ongoing or periodic process of project oversight. There is often no clear distinction between monitoring and reporting and the program best suited to ensuring compliance in any given instance will usually involve elements of both. The choice of program may be guided by the following:

(1) Reporting is suited to projects which have readily measurable or quantitative mitigation measures or which already involve regular review. For example, a report may be required upon issuance of final occupancy to a project whose mitigation measures were confirmed by building inspection.

(2) Monitoring is suited to projects with complex mitigation measures, such as wetlands restoration or archeological protection, which may exceed the expertise of the local agency to oversee, are expected to be implemented over a period of time, or require careful implementation to assure compliance.

(3) Reporting and monitoring are suited to all but the most simple projects. Monitoring ensures that project compliance is checked on a regular basis during and, if necessary after, implementation. Reporting ensures that the approving agency is informed of compliance with mitigation requirements.

(d) Lead and responsible agencies should coordinate their mitigation monitoring or reporting programs where possible. Generally, lead and responsible agencies for a given project will adopt separate and different monitoring or reporting programs. This occurs because of any of the following reasons: the agencies have adopted and are responsible for reporting on or monitoring different mitigation measures; the agencies are deciding on the project at different times; each agency has the discretion to choose its own approach to monitoring or reporting; and each agency has its own special expertise.

(e) At its discretion, an agency may adopt standardized policies and requirements to guide individually adopted monitoring or reporting programs. Standardized policies and requirements may describe, but are not limited to:

(1) The relative responsibilities of various departments within the agency for various aspects of monitoring or reporting, including lead responsibility for administering typical programs and support responsibilities.

(2) The responsibilities of the project proponent.

(3) Agency guidelines for preparing monitoring or reporting programs.

(4) General standards for determining project compliance with the mitigation measures or revisions and related conditions of approval.

(5) Enforcement procedures for noncompliance, including provisions for administrative appeal.

(6) Process for informing staff and decision makers of the relative success of mitigation measures and using those results to improve future mitigation measures.

(f) Where a trustee agency, in timely commenting upon a draft EIR or a proposed mitigated negative declaration, proposes mitigation measures or project revisions for incorporation into a project, that agency, at the same time, shall prepare and submit to the lead or responsible agency a draft monitoring or reporting program for those measures or revisions. The lead or responsible agency may use this information in preparing its monitoring or reporting program.

(g) When a project is of statewide, regional, or areawide importance, any transportation information generated by a required monitoring or reporting program shall be submitted to the transportation planning agency in the region where the project is located. Each transportation planning agency shall adopt guidelines for the submittal of such information.

Note: Authority: Sections 21083 and 21087, Public Resources Code. References: Sections 21081.6 and 21081.7, Public Resources Code.

History

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

Article 8. Time Limits

§ 15100. General.

(a) Public agencies shall adopt time limits to govern their implementation of CEQA consistent with this article.

(b) Public agencies should carry out their responsibilities for preparing and reviewing EIRs within a reasonable period of time. The requirement for the preparation of an EIR should not cause undue delays in the processing of applications for permits or other entitlements to use.

Note: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21000–21176, Public Resources Code.

History

1. Renumbering and amendment of former Article 8 (Sections 15100–15129) to Article 19 (Sections 15300–15329) and new Article 8 (Sections 15100–15112) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29). For prior history, see Register 82, No. 2.
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15101. Review of Application for Completeness.

A lead agency or responsible agency shall determine whether an application for a permit or other entitlement for use is complete within 30 days from the receipt of the application except as provided in Section 15111. If no written determination of the completeness of the application is made within that period, the application will be deemed complete on the 30th day.

Note: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21083, Public Resources Code; and Section 65943, Government Code.

§ 15102. Initial Study.

The lead agency shall determine within 30 days after accepting an application as complete whether it intends to prepare an EIR or a negative declaration or use a previously prepared EIR or negative declaration except as provided in Section 15111. The 30 day period may be extended 15 days upon the consent of the lead agency and the project applicant.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.2, Public Resources Code.

HISTORY

1. Amendment filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).

§ 15103. Response to Notice of Preparation.

Responsible agencies and trustee agencies shall provide a response to a notice of preparation to the lead agency within 30 days after receipt of the notice. If a responsible agency fails to reply within the 30 days with either a response or a well justified request for additional time, the lead agency may assume that the responsible agency has no response and any ignore a late response.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.4, Public Resources Code.

HISTORY

1. Amendment filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).

§ 15104. Convening of Meetings.

The lead agency shall convene a meeting with agency representatives to discuss the scope and content of the environmental information a responsible agency will need in the EIR as soon as possible but no later than 30 days after receiving a request for the meeting. The meeting may be requested by the lead agency, a responsible agency, a trustee agency, or by the project applicant.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.4, Public Resources Code.

§ 15105. Public Review Period for a Draft EIR or a Proposed Negative Declaration or Mitigated Negative Declaration.

(a) The public review period for a draft EIR shall not be less than 30 days nor should it be longer than 60 days except in unusual circumstances. When a draft EIR is submitted to the State Clearinghouse for review by state agencies, the public review period shall not be less than 45 days, unless a shorter period, not less than 30 days, is approved by the State Clearinghouse.

(b) The public review period for a proposed negative declaration or mitigated negative declaration shall be not less than 20 days. When a proposed negative declaration or mitigated negative declaration is submitted to the State Clearinghouse for review by state agencies, the public review period shall not be less than 30 days, unless a shorter period, not less than 20 days, is approved by the State Clearinghouse.

(c) If a draft EIR or proposed negative declaration or mitigated negative declaration has been submitted to the State Clearinghouse for review by state agencies, the public review period shall be at least as long as the review period established by the State Clearinghouse.

(d) A shortened Clearinghouse review period may be granted in accordance with the provisions of Appendix L and the following principles:

(1) A shortened review shall not be granted for any proposed project of statewide, areawide, or regional environmental significance.

(2) Requests for shortened review periods shall be submitted to the Clearinghouse in writing by the decision–making body of the lead agency, or a representative authorized by ordinance, resolution, or delegation of the decision–making body.

(3) The lead agency has contacted responsible and trustee agencies and they have agreed to the shortened review period.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21091 and 21092, Public Resources Code; *People* v. *County of Kern*, 39 Cal. App. 3d 830.

HISTORY

1. Amendment of section heading, section and NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15106. Review by State Agencies.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21104 and 21153, Public Resources Code.

HISTORY

1. Repealer filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15107. Completion of Negative Declaration for Certain Private Projects.

With private projects involving the issuance of a lease, permit, license, certificate, or other entitlement for use by one or more public agencies, the negative declaration must be completed and approved within 180 days from the date when the lead agency accepted the application as complete.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21100.2 and 21151.5, Public Resources Code.

HISTORY

1. Amendment of section heading and section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15108. Completion and Certification of EIR.

With a private project, the lead agency shall complete and certify the final EIR as provided in Section 15090 within one year after the date when the lead agency accepted the application as complete. Lead agency procedures may provide that the one–year time limit may be extended once for a period of not more than 90 days upon consent of the lead agency and the applicant.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21100.2 and 21151.5, Public Resources Code; and Government Code Section 65950.

§ 15109. Suspension of Time Periods.

An unreasonable delay by an applicant in meeting requests by the lead agency necessary for the preparation of a negative declaration or an EIR shall suspend the running of the time periods described in Sections 15107 and 15108 for the period of the unreasonable delay. Alternatively, an agency may disapprove a project application where there is unreasonable delay in meeting requests. The agency may allow a renewed application to start at the same point in the process where the application was when it was disapproved.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21100.2 and 21151.5, Public Resources Code; *Carmel Valley View, Ltd.* v. *Maggini*, 91 Cal. App. 3d 318.

§ 15110. Projects with Federal Involvement.

(a) At the request of an applicant, the lead agency may waive the one–year time limit for completing and certifying a final EIR or the 105–day period for completing a negative declaration if:

(1) The project will be subject to CEQA and to the National Environmental Policy Act,

(2) Additional time will be required to prepare a combined EIR–EIS or combined negative declaration–finding of no significant impact as provided in Section 15221, and

(3) The time required to prepare the combined document will be shorter than the time required to prepare the documents separately.

(b) The time limits for taking final action on a permit for a development project may also be waived where a combined EIR–EIS will be prepared.

(c) The time limits for processing permits for development projects under Government Code Sections 65950–65960 shall not apply if federal statutes or regulations require time schedules which exceed the state time limits. In this event, any state agencies involved shall make a final decision on the project within the federal time limits.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.6 and 21083.7, Public Resources Code; Sections 65951 and 65954, Government Code; Public Law 91–190 as amended, 42 U.S.C.A. 4321–4347.

HISTORY

1. Amendment of subsection (a)(2) filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).

§ 15111. Projects with Short Time Periods for Approval.

(a) A few statutes or ordinances require agencies to make decisions on permits within time limits that are so short that review of the project under CEQA would be difficult. To enable the lead agency to comply with both

the permit statute and CEQA, the lead agency shall deem an application for a project not received for filing under the permit statute or ordinance until such time as progress toward completing the environmental documentation required by CEQA is sufficient to enable the lead agency to finish the CEQA process within the short permit time limit. This section will apply where all of the following conditions are met:

(1) The enabling legislation for a program, other than Chapter 4.5 (commencing with Section 65920) of Division 1 of Title 7 of the Government Code, requires the lead agency to take action on an application within a specified period of time that is six months or less, and

(2) The enabling legislation provides that the project will become approved by operation of law if the lead agency fails to take any action within such specified time period, and

(3) The project involves the issuance of a lease, permit, license, certificate, or other entitlement for use.

(b) Examples of time periods subject to this section include but are not limited to:

(1) Action on a timber harvesting plan by the Director of Forestry within 15 days pursuant to Section 4582.7 of the Public Resources Code,

(2) Action on a permit by the San Francisco Bay Conservation and Development Commission within 90 days pursuant to Section 66632(f) of the Government Code, and

(3) Action on an oil and gas permit by the Division of Oil and Gas within 10 days pursuant to Sections 3203 or 3724 of the Public Resources Code.

(c) In any case described in this section, the environmental document shall be completed or certified and the decision on the project shall be made within the period established under the Permit Streamlining Act (Government Code Sections 65920, et seq.).

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21100.2 and 21151.5, Public Resources Code; *N.R.D.C. v. Arcata National Corp.* (1976) 59 Cal. App. 3d 959.

HISTORY

1. Repealer of subsection (b)(1), subsection renumbering, amendment of subsection (c) and amendment of NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15112. Statutes of Limitations.

(a) CEQA provides unusually short statutes of limitations on filing court challenges to the approval of projects under the act.

(b) The statute of limitations periods are not public review periods or waiting periods for the person whose project has been approved. The project sponsor may proceed to carry out the project as soon as the necessary permits have been granted. The statute of limitations cuts off the right of another person to file a court action challenging approval of the project after the specified time period has expired.

(c) The statute of limitations periods under CEQA are as follows:

(1) Where the public agency filed a notice of determination in compliance with Sections 15075 or 15094, 30 days after the filing of the notice and the posting on a list of such notices.

(2) Where the public agency filed a notice of exemption in compliance with Section 15062, 35 days after the filing of the notice and the posting on a list of such notices.

(3) Where a certified state regulatory agency files a notice of decision in compliance with Public Resources Code Section 21080.5(d)(2)(v), 30 days after the filing of the notice.

(4) Where the Secretary for Resources certifies a state environmental regulatory agency under Public Resources Code Section 21080.5, the certification may be challenged only during the 30 days following the certification decision.

(5) Where none of the other statute of limitations periods in this section apply, 180 days after either:

(A) The public agency's decision to carry out or approve the project, or

(B) Commencement of the project if the project is undertaken without a formal decision by the public agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21167, 21167.3 and 21080.5, Public Resources Code; *Kriebel v. City Council*, 112 Cal. App. 3d 693; *Citizens of Lake Murray Area Association v. City Council*, (1982) 129 Cal. App. 3d 436.

Article 9. Contents of Environmental Impact Reports

§ 15120. General.

(a) Environmental Impact Reports shall contain the information outlined in this article, but the format of the document may be varied. Each element must be covered, and when these elements are not separated into distinct sections, the document shall state where in the document each element is discussed.

(b) The EIR may be prepared as a separate document, as part of a general plan, or as part of a project report. If prepared as a part of the project report, it must still contain one separate and distinguishable section providing either analysis of all the subjects required in an EIR or as a minimum, a table showing where each of the subjects is discussed. When the lead agency is a state agency, the EIR shall be included as part of the regular project report if such a report is used in the agency's existing review and budgetary process.

(c) Draft EIRs shall contain the information required by Sections 15122 through 15131. Final EIRs shall contain the same information and the subjects described in Section 15132.

(d) No document prepared pursuant to this article that is available for public examination shall include a "trade secret" as defined in Section 6254.7 of the Government Code, information about the location of archaeological sites and sacred lands, or any other information that is subject to the disclosure restrictions of Section 6254 of the Government Code.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21100, 21105 and 21160, Public Resources Code.

HISTORY

1. Repealer of Article 9 (Sections 15140–15151) and new Article 9 (Sections 15120–15132) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29). For prior history, see Registers 82, No. 2; 80, No. 19; 78, No. 5; 77, No. 1; 76, No. 41; 75, Nos. 1 and 18; and 73, No. 50.
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).
3. New subsection (d) and amendment of NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15121. Informational Document.

(a) An EIR is an informational document which will inform public agency decisionmakers and the public generally of the significant environmental effect of a project, identify possible ways to minimize the significant effects, and describe reasonable alternatives to the project. The public agency shall consider the information in the EIR along with other information which may be presented to the agency.

(b) While the information in the EIR does not control the agency's ultimate discretion on the project, the agency must respond to each significant effect identified in the EIR by making findings under Section 15091 and if necessary by making a statement of overriding considerations under Section 15093.

(c) The information in an EIR may constitute substantial evidence in the record to support the agency's action on the project if its decision is later challenged in court.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21061, Public Resources Code; *Carmel Valley View, Ltd. v. Board of Supervisors*, (1976) 58 Cal. App. 3d 817.

§ 15122. Table of Contents or Index.

An EIR shall contain at least a table of contents or an index to assist readers in finding the analysis of different subjects and issues.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21061, Public Resources Code.

§ 15123. Summary.

(a) An EIR shall contain a brief summary of the proposed actions and its consequences. The language of the summary should be as clear and simple as reasonably practical.

(b) The summary shall identify:

(1) Each significant effect with proposed mitigation measures and alternatives that would reduce or avoid that effect;

(2) Areas of controversy known to the lead agency including issues raised by agencies and the public; and

(3) Issues to be resolved including the choice among alternatives and whether or how to mitigate the significant effects.

(c) The summary should normally not exceed 15 pages.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21061, Public Resources Code.

§ 15124. Project Description.

The description of the project shall contain the following information but should not supply extensive detail beyond that needed for evaluation and review of the environmental impact.

(a) The precise location and boundaries of the proposed project shall be shown on a detailed map, preferably topographic. The location of the project shall also appear on a regional map.

(b) A statement of the objectives sought by the proposed project. A clearly written statement of objectives will help the lead agency develop a reasonable range of alternatives to evaluate in the EIR and will aid the decision makers in preparing findings or a statement of overriding considerations, if necessary. The statement of objectives should include the underlying purpose of the project.

(c) A general description of the project's technical, economic, and environmental characteristics, considering the principal engineering proposals if any and supporting public service facilities.

(d) A statement briefly describing the intended uses of the EIR.

(1) This statement shall include, to the extent that the information is nown to the lead agency,

(A) A list of the agencies that are expected to use the EIR in their decision-making, and

(B) A list of permits and other approvals required to implement the project.

(C) A list of related environmental review and consultation requirements required by federal, state, or local laws, regulations, or policies. To the fullest extent possible, the lead agency should integrate CEQA review with these related environmental review and consultation requirements.

(2) If a public agency must make more than one decision on a project, all its decisions subject to CEQA should be listed, preferably in the order in which they will occur. On request, the Office of Planning and Research will provide assistance in identifying state permits for a project.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080.3, 21080.4, 21165, 21166 and 21167.2, Public Resources Code; *County of Inyo* v. *City of Los Angeles* (1977) 71 Cal. App. 3d 185.

HISTORY

1. Amendment of subsections (b) and (d)(1)(B), new subsection (d)(1)(C) and amendment of NOTE filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15125. Environmental Setting.

(a) An EIR must include a description of the physical environmental conditions in the vicinity of the project, as they exist at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, from both a local and regional perspective. This environmental setting will normally constitute the baseline physical conditions by which a lead agency determines whether an impact is significant. The description of the environmental setting shall be no longer than is necessary to an understanding of the significant effects of the proposed project and its alternatives.

(b) When preparing an EIR for a plan for the reuse of a military base, lead agencies should refer to the special application of the principle of baseline conditions for determining significant impacts contained in Section 15229.

(c) Knowledge of the regional setting is critical to the assessment of environmental impacts. Special emphasis should be placed on environmental resources that are rare or unique to that region and would be affected by the project. The EIR must demonstrate that the significant environmental impacts of the proposed project were adequately investigated and discussed and it must permit the significant effects of the project to be considered in the full environmental context.

(d) The EIR shall discuss any inconsistencies between the proposed project and applicable general plans and regional plans. Such regional plans include, but are not limited to, the applicable air quality attainment or maintenance plan or State Implementation Plan, area-wide waste treatment and water quality control plans, regional transportation plans, regional housing allocation plans, habitat conservation plans, natural community conservation plans and regional land use plans for the protection of the coastal zone, Lake Tahoe Basin, San Francisco Bay, and Santa Monica Mountains.

(e) Where a proposed project is compared with an adopted plan, the analysis shall examine the existing physical conditions at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced as well as the potential future conditions discussed in the plan.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21061 and 21100, Public Resources Code; *E.P.I.C.* v. *County of El Dorado*, (1982) 131 Cal. App. 3d 350; *San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus* (1994) 27 Cal.App.4th 713; *Bloom v. McGurk* (1994) 26 Cal.App.4th 1307.

HISTORY

1. Amendment of section and NOTE filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15126. Consideration and Discussion of Environmental Impacts.

All phases of a project must be considered when evaluating its impact on the environment: planning, acquisition, development, and operation. The subjects listed below shall be discussed as directed in Sections 15126.2, 15126.4 and 15126.6, preferably in separate sections or paragraphs of the EIR. If they are not discussed separately, the EIR shall include a table showing where each of the subjects is discussed.

(a) Significant Environmental Effects of the Proposed Project.

(b) Significant Environmental Effects Which Cannot be Avoided if the Proposed Project is Implemented.

(c) Significant Irreversible Environmental Changes Which Would be Involved in the Proposed Project Should it be Implemented.

(d) Growth-Inducing Impact of the Proposed Project.

(e) The Mitigation Measures Proposed to Minimize the Significant Effects.

(f) Alternatives to the Proposed Project.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21003, 21100 and 21081.6, Public Resources Code; *Citizens of Goleta Valley v. Board of Supervisors*, (1990) 52 Cal.3d 553; *Laurel Heights Improvement Association v. Regents of the University of California*, (1988) 47 Cal. 3d 376; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359; and *Laurel Heights Improvement Association v. Regents of the University of California* (1993) 6 Cal. 4th 1112.

HISTORY

1. Amendment of subsection (d), repealer and new subsections (d)(1)-(4), amendment of subsection (d)(5), new subsections (d)(5)(A)-(B)3, designation of subsection (d)(5)(C) and amendment of NOTE filed 8-19-94, operative 9-19-94 (Register 94, No. 33).
2. Amendment of section heading, repealer of subsection (e), subsection relettering, and amendment of NOTE filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
3. Amendment of first paragraph, repealer and new subsections (a)-(f) and amendment of NOTE filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15126.2. Consideration and Discussion of Significant Environmental Impacts.

(a) The Significant Environmental Effects of the Proposed Project. An EIR shall identify and focus on the significant environmental effects of the proposed project. In assessing the impact of a proposed project on the environment, the lead agency should normally limit its examination to

changes in the existing physical conditions in the affected area as they exist at the time the notice of preparation is published, or where no notice of preparation is published, at the time environmental analysis is commenced. Direct and indirect significant effects of the project on the environment shall be clearly identified and described, giving due consideration to both the short–term and long–term effects. The discussion should include relevant specifics of the area, the resources involved, physical changes, alterations to ecological systems, and changes induced in population distribution, population concentration, the human use of the land (including commercial and residential development), health and safety problems caused by the physical changes, and other aspects of the resource base such as water, historical resources, scenic quality, and public services. The EIR shall also analyze any significant environmental effects the project might cause by bringing development and people into the area affected. For example, an EIR on a subdivision astride an active fault line should identify as a significant effect the seismic hazard to future occupants of the subdivision. The subdivision would have the effect of attracting people to the location and exposing them to the hazards found there.

(b) Significant Environmental Effects Which Cannot be Avoided if the Proposed Project is Implemented. Describe any significant impacts, including those which can be mitigated but not reduced to a level of insignificance. Where there are impacts that cannot be alleviated without imposing an alternative design, their implications and the reasons why the project is being proposed, notwithstanding their effect, should be described.

(c) Significant Irreversible Environmental Changes Which Would be Caused by the Proposed Project Should it be Implemented. Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible since a large commitment of such resources makes removal or nonuse thereafter unlikely. Primary impacts and, particularly, secondary impacts (such as highway improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also irreversible damage can result from environmental accidents associated with the project. Irretrievable commitments of resources should be evaluated to assure that such current consumption is justified.

(d) Growth–Inducing Impact of the Proposed Project. Discuss the ways in which the proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Included in this are projects which would remove obstacles to population growth (a major expansion of a waste water treatment plant might, for example, allow for more construction in service areas). Increases in the population may tax existing community service facilities, requiring construction of new facilities that could cause significant environmental effects. Also discuss the characteristic of some projects which may encourage and facilitate other activities that could significantly affect the environment, either individually or cumulatively. It must not be assumed that growth in any area is necessarily beneficial, detrimental, or of little significance to the environment.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21003 and 21100, Public Resources Code; *Citizens of Goleta Valley v. Board of Supervisors*, (1990) 52 Cal.3d 553; *Laurel Heights Improvement Association v. Regents of the University of California*, (1988) 47 Cal.3d 376; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359; *Laurel Heights Improvement Association v. Regents of the University of California* (1993) 6 Cal.4th 1112; and *Goleta Union School Dist. v. Regents of the Univ. Of Calif* (1995) 37 Cal. App.4th 1025.

HISTORY

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15126.4. Consideration and Discussion of Mitigation Measures Proposed to Minimize Significant Effects.

(a) Mitigation Measures in General.

(1) An EIR shall describe feasible measures which could minimize significant adverse impacts, including where relevant, inefficient and unnecessary consumption of energy.

(A) The discussion of mitigation measures shall distinguish between the measures which are proposed by project proponents to be included in the project and other measures proposed by the lead, responsible or trustee agency or other persons which are not included but the lead agency determines could reasonably be expected to reduce adverse impacts if required as conditions of approving the project. This discussion shall identify mitigation measures for each significant environmental effect identified in the EIR.

(B) Where several measures are available to mitigate an impact, each should be discussed and the basis for selecting a particular measure should be identified. Formulation of mitigation measures should not be deferred until some future time. However, measures may specify performance standards which would mitigate the significant effect of the project and which may be accomplished in more than one specified way.

(C) Energy conservation measures, as well as other appropriate mitigation measures, shall be discussed when relevant. Examples of energy conservation measures are provided in Appendix F.

(D) If a mitigation measure would cause one or more significant effects in addition to those that would be caused by the project as proposed, the effects of the mitigation measure shall be discussed but in less detail than the significant effects of the project as proposed. (*Stevens v. City of Glendale* (1981) 125 Cal.App.3d 986.)

(2) Mitigation measures must be fully enforceable through permit conditions, agreements, or other legally–binding instruments. In the case of the adoption of a plan, policy, regulation, or other public project, mitigation measures can be incorporated into the plan, policy, regulation, or project design.

(3) Mitigation measures are not required for effects which are not found to be significant.

(4) Mitigation measures must be consistent with all applicable constitutional requirements, including the following:

(A) There must be an essential nexus (i.e. connection) between the mitigation measure and a legitimate governmental interest. *Nollan v. California Coastal Commission*, 483 U.S. 825 (1987); and

(B) The mitigation measure must be "roughly proportional" to the impacts of the project. *Dolan v. City of Tigard*, 512 U.S. 374 (1994). Where the mitigation measure is an ad hoc exaction, it must be "roughly proportional" to the impacts of the project. *Ehrlich v. City of Culver City* (1996) 12 Cal.4th 854.

(5) If the lead agency determines that a mitigation measure cannot be legally imposed, the measure need not be proposed or analyzed. Instead, the EIR may simply reference that fact and briefly explain the reasons underlying the lead agency's determination.

(b) Mitigation Measures Related to Impacts on Historical Resources.

(1) Where maintenance, repair, stabilization, rehabilitation, restoration, preservation, conservation or reconstruction of the historical resource will be conducted in a manner consistent with the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings (1995), Weeks and Grimmer, the project's impact on the historical resource shall generally be considered mitigated below a level of significance and thus is not significant.

(2) In some circumstances, documentation of an historical resource, by way of historic narrative, photographs or architectural drawings, as mitigation for the effects of demolition of the resource will not mitigate the effects to a point where clearly no significant effect on the environment would occur.

(3) Public agencies should, whenever feasible, seek to avoid damaging effects on any historical resource of an archaeological nature. The following factors shall be considered and discussed in an EIR for a project involving such an archaeological site:

(A) Preservation in place is the preferred manner of mitigating impacts to archaeological sites. Preservation in place maintains the relationship between artifacts and the archaeological context. Preservation may also avoid conflict with religious or cultural values of groups associated with the site.

(B) Preservation in place may be accomplished by, but is not limited to, the following:

1. Planning construction to avoid archaeological sites;

2. Incorporation of sites within parks, greenspace, or other open space;

3. Covering the archaeological sites with a layer of chemically stable soil before building tennis courts, parking lots, or similar facilities on the site.

4. Deeding the site into a permanent conservation easement.

(C) When data recovery through excavation is the only feasible mitigation, a data recovery plan, which makes provision for adequately recovering the scientifically consequential information from and about the historical resource, shall be prepared and adopted prior to any excavation being undertaken. Such studies shall be deposited with the California Historical Resources Regional Information Center. Archaeological sites known to contain human remains shall be treated in accordance with the provisions of Section 7050.5 Health and Safety Code.

(D) Data recovery shall not be required for an historical resource if the lead agency determines that testing or studies already completed have adequately recovered the scientifically consequential information from and about the archaeological or historical resource, provided that the determination is documented in the EIR and that the studies are deposited with the California Historical Resources Regional Information Center.

NOTE: Authority: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21003, 21100 and 21084.1, Public Resources Code; *Citizens of Goleta Valley v. Board of Supervisors*, (1990) 52 Cal.3d 553; *Laurel Heights Improvement Association v. Regents of the University of California*, (1988) 47 Cal.3d 376; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359; *Laurel Heights Improvement Association v. Regents of the University of California* (1993) 6 Cal.4th 1112; and *Sacramento Old City Assn. v. City Council of Sacramento* (1991) 229 Cal.App.3d 1011.

HISTORY

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15126.6. Consideration and Discussion of Alternatives to the Proposed Project.

(a) Alternatives to the Proposed Project. An EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. Rather it must consider a reasonable range of potentially feasible alternatives that will foster informed decisionmaking and public participation. An EIR is not required to consider alternatives which are infeasible. The lead agency is responsible for selecting a range of project alternatives for examination and must publicly disclose its reasoning for selecting those alternatives. There is no ironclad rule governing the nature or scope of the alternatives to be discussed other than the rule of reason. (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553 and *Laurel Heights Improvement Association v. Regents of the University of California* (1988) 47 Cal.3d 376).

(b) Purpose. Because an EIR must identify ways to mitigate or avoid the significant effects that a project may have on the environment (Public Resources Code Section 21002.1), the discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly.

(c) Selection of a range of reasonable alternatives. The range of potential alternatives to the proposed project shall include those that could feasibly accomplish most of the basic objectives of the project and could avoid or substantially lessen one or more of the significant effects. The EIR should briefly describe the rationale for selecting the alternatives to be discussed. The EIR should also identify any alternatives that were considered by the lead agency but were rejected as infeasible during the scoping process and briefly explain the reasons underlying the lead agency's determination. Additional information explaining the choice of alternatives may be included in the administrative record. Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are: (i) failure to meet most of the basic project objectives, (ii) infeasibility, or (iii) inability to avoid significant environmental impacts.

(d) Evaluation of alternatives. The EIR shall include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project. A matrix displaying the major characteristics and significant environmental effects of each alternative may be used to summarize the comparison. If an alternative would cause one or more significant effects in addition to those that would be caused by the project as proposed, the significant effects of the alternative shall be discussed, but in less detail than the significant effects of the project as proposed. (*County of Inyo v. City of Los Angeles* (1981) 124 Cal App.3d 1).

(e) "No project" alternative.

(1) The specific alternative of "no project" shall also be evaluated along with its impact. The purpose of describing and analyzing a no project alternative is to allow decisionmakers to compare the impacts of approving the proposed project with the impacts of not approving the proposed project. The no project alternative analysis is not the baseline for determining whether the proposed project's environmental impacts may be significant, unless it is identical to the existing environmental setting analysis which does establish that baseline (see Section 15125).

(2) The "no project" analysis shall discuss the existing conditions at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, as well as what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services. If the environmentally superior alternative is the "no project" alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives.

(3) A discussion of the "no project" alternative will usually proceed along one of two lines:

(A) When the project is the revision of an existing land use or regulatory plan, policy or ongoing operation, the "no project" alternative will be the continuation of the existing plan, policy or operation into the future. Typically this is a situation where other projects initiated under the existing plan will continue while the new plan is developed. Thus, the projected impacts of the proposed plan or alternative plans would be compared to the impacts that would occur under the existing plan.

(B) If the project is other than a land use or regulatory plan, for example a development project on identifiable property, the "no project" alternative is the circumstance under which the project does not proceed. Here the discussion would compare the environmental effects of the property remaining in its existing state against environmental effects which would occur if the project is approved. If disapproval of the project under consideration would result in predictable actions by others, such as the proposal of some other project, this "no project" consequence should be discussed. In certain instances, the no project alternative means "no build" wherein the existing environmental setting is maintained. However, where failure to proceed with the project will not result in preservation of existing environmental conditions, the analysis should identify the practical result of the project's non–approval and not create and analyze a set of artificial assumptions that would be required to preserve the existing physical environment.

(C) After defining the no project alternative using one of these approaches, the lead agency should proceed to analyze the impacts of the no project alternative by projecting what would reasonably be expected to occur in the foreseeable future if the project were not approved, based

on current plans and consistent with available infrastructure and community services.

(f) Rule of reason. The range of alternatives required in an EIR is governed by a "rule of reason" that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency determines could feasibly attain most of the basic objectives of the project. The range of feasible alternatives shall be selected and discussed in a manner to foster meaningful public participation and informed decision making.

(1) Feasibility. Among the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries (projects with a regionally significant impact should consider the regional context), and whether the proponent can reasonably acquire, control or otherwise have access to the alternative site (or the site is already owned by the proponent). No one of these factors establishes a fixed limit on the scope of reasonable alternatives. (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553; see *Save Our Residential Environment v. City of West Hollywood* (1992) 9 Cal.App.4th 1745, 1753, fn. 1).

(2) Alternative locations.

(A) Key question. The key question and first step in analysis is whether any of the significant effects of the project would be avoided or substantially lessened by putting the project in another location. Only locations that would avoid or substantially lessen any of the significant effects of the project need be considered for inclusion in the EIR.

(B) None feasible. If the lead agency concludes that no feasible alternative locations exist, it must disclose the reasons for this conclusion, and should include the reasons in the EIR. For example, in some cases there may be no feasible alternative locations for a geothermal plant or mining project which must be in close proximity to natural resources at a given location.

(C) Limited new analysis required. Where a previous document has sufficiently analyzed a range of reasonable alternative locations and environmental impacts for projects with the same basic purpose, the lead agency should review the previous document. The EIR may rely on the previous document to help it assess the feasibility of potential project alternatives to the extent the circumstances remain substantially the same as they relate to the alternative. (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 573).

(3) An EIR need not consider an alternative whose effect cannot be reasonably ascertained and whose implementation is remote and speculative. (*Residents Ad Hoc Stadium Committee v. Board of Trustees* (1979) 89 Cal. App.3d 274).

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21002.1, 21003 and 21100, Public Resources Code; *Citizens of Goleta Valley v. Board of Supervisors*, (1990) 52 Cal.3d 553; *Laurel Heights Improvement Association v. Regents of the University of California*, (1988) 47 Cal.3d 376; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359; and *Laurel Heights Improvement Association v. Regents of the University of California* (1993) 6 Cal.4th 1112.

HISTORY

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15127. Limitations on Discussion of Environmental Impact.

The information required by Section 15126(c) concerning irreversible changes, need be included only in EIRs prepared in connection with any of the following activities:

(a) The adoption, amendment, or enactment of a plan, policy, or ordinance of a public agency;

(b) The adoption by a local agency formation commission of a resolution making determinations; or

(c) A project which will be subject to the requirement for preparing an environmental impact statement pursuant to the requirements of the National Environmental Policy Act of 1969, 42 U.S.C. 4321–4347.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21100.1, Public Resources Code.

HISTORY

1. Amendment of first paragraph, subsection (c) and NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15128. Effects Not Found to Be Significant.

An EIR shall contain a statement briefly indicating the reasons that various possible significant effects of a project were determined not to be significant and were therefore not discussed in detail in the EIR. Such a statement may be contained in an attached copy of an initial study.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21100, Public Resources Code.

§ 15129. Organizations and Persons Consulted.

The EIR shall identify all federal, state, or local agencies, other organizations, and private individuals consulted in preparing the draft EIR, and the persons, firm or agency preparing the draft EIR, by contract or other authorization.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21104 and 21153, Public Resources Code.

§ 15130. Discussion of Cumulative Impacts.

(a) An EIR shall discuss cumulative impacts of a project when the project's incremental effect is cumulatively considerable, as defined in section 15065(c). Where a lead agency is examining a project with an incremental effect that is not "cumulatively considerable," a lead agency need not consider that effect significant, but shall briefly describe its basis for concluding that the incremental effect is not cumulatively considerable.

(1) As defined in Section 15355, a cumulative impact consists of an impact which is created as a result of the combination of the project evaluated in the EIR together with other projects causing related impacts. An EIR should not discuss impacts which do not result in part from the project evaluated in the EIR.

(2) When the combined cumulative impact associated with the project's incremental effect and the effects of other projects is not significant, the EIR shall briefly indicate why the cumulative impact is not significant and is not discussed in further detail in the EIR. A lead agency shall identify facts and analysis supporting the lead agency's conclusion that the cumulative impact is less than significant.

(3) An EIR may determine that a project's contribution to a significant cumulative impact will be rendered less than cumulatively considerable and thus is not significant. A project's contribution is less than cumulatively considerable if the project is required to implement or fund its fair share of a mitigation measure or measures designed to alleviate the cumulative impact. The lead agency shall identify facts and analysis supporting its conclusion that the contribution will be rendered less than cumulatively considerable.

(4) An EIR may determine that a project's contribution to a significant cumulative impact is de minimus and thus is not significant. A de minimus contribution means that the environmental conditions would essentially be the same whether or not the proposed project is implemented.

(b) The discussion of cumulative impacts shall reflect the severity of the impacts and their likelihood of occurrence, but the discussion need not provide as great detail as is provided for the effects attributable to the project alone. The discussion should be guided by the standards of practicality and reasonableness, and should focus on the cumulative impact to which the identified other projects contribute rather than the attributes of other projects which do not contribute to the cumulative impact. The following elements are necessary to an adequate discussion of significant cumulative impacts:

(1) Either:

(A) A list of past, present, and probable future projects producing related or cumulative impacts, including, if necessary, those projects outside the control of the agency, or

(B) A summary of projections contained in an adopted general plan or related planning document, or in a prior environmental document which has been adopted or certified, which described or evaluated regional or areawide conditions contributing to the cumulative impact. Any such planning document shall be referenced and made available to the public at a location specified by the lead agency;

1. When utilizing a list, as suggested in paragraph (1) of subdivision (b), factors to consider when determining whether to include a related project should include the nature of each environmental resource being examined, the location of the project and its type. Location may be important, for example, when water quality impacts are at issue since projects outside the watershed would probably not contribute to a cumulative effect. Project type may be important, for example, when the impact is specialized, such as a particular air pollutant or mode of traffic.

2. "Probable future projects" may be limited to those projects requiring an agency approval for an application which has been received at the time the notice of preparation is released, unless abandoned by the applicant; projects included in an adopted capital improvements program, general plan, regional transportation plan, or other similar plan; projects included in a summary of projections of projects (or development areas designated) in a general plan or a similar plan; projects anticipated as later phase of a previously approved project (e.g. a subdivision); or those public agency projects for which money has been budgeted.

3. Lead agencies should define the geographic scope of the area affected by the cumulative effect and provide a reasonable explanation for the geographic limitation used.

(2) A summary of the expected environmental effects to be produced by those projects with specific reference to additional information stating where that information is available, and

(3) A reasonable analysis of the cumulative impacts of the relevant projects. An EIR shall examine reasonable, feasible options for mitigating or avoiding the project's contribution to any significant cumulative effects.

(c) With some projects, the only feasible mitigation for cumulative impacts may involve the adoption of ordinances or regulations rather than the imposition of conditions on a project-by-project basis.

(d) Previously approved land use documents such as general plans, specific plans, and local coastal plans may be used in cumulative impact analysis. A pertinent discussion of cumulative impacts contained in one or more previously certified EIRs may be incorporated by reference pursuant to the provisions for tiering and program EIRs. No further cumulative impacts analysis is required when a project is consistent with a general, specific, master or comparable programmatic plan where the lead agency determines that the regional or areawide cumulative impacts of the proposed project have already been adequately addressed, as defined in section 15152(e), in a certified EIR for that plan.

(e) If a cumulative impact was adequately addressed in a prior EIR for a community plan, zoning action, or general plan, and the project is consistent with that plan or action, then an EIR for such a project should not further analyze that cumulative impact, as provided in Section 15183(j).

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083(b), 21093, 21094 and 21100, Public Resources Code; *Whitman* v. *Board of Supervisors*, (1979) 88 Cal. App. 3d 397; *San Franciscans for Reasonable Growth v. City and County of San Francisco* (1984) 151 Cal.App.3d 61; *Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal.App.3d 692; *Laurel Heights Homeowners Association v. Regents of the University of California* (1988) 47 Cal.3d 376; *Sierra Club v. Gilroy* (1990) 220 Cal.App.3d 30; *Citizens to Preserve the Ojai v. County of Ventura* (1985) 176 Cal.App.3d 421; *Concerned Citizens of South Cent. Los Angeles v. Los Angeles Unified Sch. Dist.* (1994) 24 Cal.App.4th 826; *Las Virgenes Homeowners Fed'n v. County of Los Angeles* (1986) 177 Cal.App.3d 300; *San Joaquin Raptor/Wildlife Rescue Ctr v. County of Stanislaus* (1994) 27 Cal.App.4th 713; and *Fort Mojave Indian Tribe v. Cal. Dept. Of Health Services* (1995) 38 Cal.App.4th 1574.

HISTORY

Amendment of section heading, new subsection (d) and amendment of NOTE filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

2. Amendment of section and NOTE filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15131. Economic and Social Effects.

Economic or social information may be included in an EIR or may be presented in whatever form the agency desires.

(a) Economic or social effects of a project shall not be treated as significant effects on the environment. An EIR may trace a chain of cause and effect from a proposed decision on a project through anticipated economic or social changes resulting from the project to physical changes caused in turn by the economic or social changes. The intermediate economic or social changes need not be analyzed in any detail greater than necessary to trace the chain of cause and effect. The focus of the analysis shall be on the physical changes.

(b) Economic or social effects of a project may be used to determine the significance of physical changes caused by the project. For example, if the construction of a new freeway or rail line divides an existing community, the construction would be the physical change, but the social effect on the community would be the basis for determining that the effect would be significant. As an additional example, if the construction of a road and the resulting increase in noise in an area disturbed existing religious practices in the area, the disturbance of the religious practices could be used to determine that the construction and use of the road and the resulting noise would be significant effects on the environment. The religious practices would need to be analyzed only to the extent to show that the increase in traffic and noise would conflict with the religious practices. Where an EIR uses economic or social effects to determine that a physical change is significant, the EIR shall explain the reason for determining that the effect is significant.

(c) Economic, social, and particularly housing factors shall be considered by public agencies together with technological and environmental factors in deciding whether changes in a project are feasible to reduce or avoid the significant effects on the environment identified in the EIR. If information on these factors is not contained in the EIR, the information must be added to the record in some other manner to allow the agency to consider the factors in reaching a decision on the project.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21001(e) and (g), 21002, 21002.1, 21060.5, 21080.1, 21083(c) and 21100, Public Resources Code.

§ 15132. Contents of Final Environmental Impact Report.

The final EIR shall consist of:

(a) The Draft EIR or a revision of the draft.

(b) Comments and recommendations received on the Draft EIR either verbatim or in summary.

(c) A list of persons, organizations, and public agencies commenting on the Draft EIR.

(d) The responses of the Lead Agency to significant environmental points raised in the review and consultation process.

(e) Any other information added by the lead agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21100, Public Resources Code.

Article 10. Considerations in Preparing EIRs and Negative Declarations

§ 15140. Writing.

EIRs shall be written in plain language and may use appropriate graphics so that decisionmakers and the public can rapidly understand the documents.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003 and 21100, Public Resources Code.

HISTORY

1. Repealer of Article 10 (Sections 15160-15167) and new Article 10 (Sections 15140-15153) filed 7-13-83; effective thirtieth day thereafter (Register 83, No. 29). For prior history, see Registers 80, No. 19; 78, No. 5; 76, No. 41; 75, No. 1; and 73, No. 50.

2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15141. Page Limits.

The text of draft EIRs should normally be less than 150 pages and for proposals of unusual scope or complexity should normally be less than 300 pages.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21100, Public Resources Code.

§ 15142. Interdisciplinary Approach.

An EIR shall be prepared using an interdisciplinary approach which will ensure the integrated use of the natural and social sciences and the consideration of qualitative as well as quantitative factors. The interdisciplinary analysis shall be conducted by competent individuals, but no single discipline shall be designated or required to undertake this evaluation.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21000, 21001 and 21100, Public Resources Code.

§ 15143. Emphasis.

The EIR shall focus on the significant effects on the environment. The significant effects should be discussed with emphasis in proportion to their severity and probability of occurrence. Effects dismissed in an Initial Study as clearly insignificant and unlikely to occur need not be discussed further in the EIR unless the Lead Agency subsequently receives information inconsistent with the finding in the Initial Study. A copy of the Initial Study may be attached to the EIR to provide the basis for limiting the impacts discussed.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15144. Forecasting.

Drafting an EIR or preparing a negative declaration necessarily involves some degree of forecasting. While foreseeing the unforeseeable is not possible, an agency must use its best efforts to find out and disclose all that it reasonably can.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15145. Speculation.

If, after thorough investigation, a lead agency finds that a particular impact is too speculative for evaluation, the agency should note its conclusion and terminate discussion of the impact.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code; *Topanga Beach Renters Association* v. *Department of General Services* (1976) 58 Cal. App. 3d 712.

§ 15146. Degree of Specificity.

The degree of specificity required in an EIR will correspond to the degree of specificity involved in the underlying activity which is described in the EIR.

(a) An EIR on a construction project will necessarily be more detailed in the specific effects of the project than will be an EIR on the adoption of a local general plan or comprehensive zoning ordinance because the effects of the construction can be predicted with greater accuracy.

(b) An EIR on a project such as the adoption or amendment of a comprehensive zoning ordinance or a local general plan should focus on the secondary effects that can be expected to follow from the adoption, or amendment, but the EIR need not be as detailed as an EIR on the specific construction projects that might follow.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15147. Technical Detail.

The information contained in an EIR shall include summarized technical data, maps, plot plans, diagrams, and similar relevant information sufficient to permit full assessment of significant environmental impacts by reviewing agencies and members of the public. Placement of highly technical and specialized analysis and data in the body of an EIR should be avoided through inclusion of supporting information and analyses as appendices to the main body of the EIR. Appendices to the EIR may be prepared in volumes separate from the basic EIR document, but shall be readily available for public examination and shall be submitted to all clearinghouses which assist in public review.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15148. Citation.

Preparation of EIRs is dependent upon information from many sources, including engineering project reports and many scientific documents relating to environmental features. These documents should be cited but not included in the EIR. The EIR shall cite all documents used in its preparation including, where possible, the page and section number of any technical reports which were used as the basis for any statements in the EIR.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15149. Use of Registered Professionals in Preparing EIRs.

(a) A number of statutes provide that certain professional services can be provided to the public only by individuals who have been registered by a registration board established under California law. Such statutory restrictions apply to a number of professions including but not limited to engineering, land surveying, forestry, geology, and geophysics.

(b) In its intended usage, an EIR is not a technical document that can be prepared only by a registered professional. The EIR serves as a public disclosure document explaining the effects of the proposed project on the environment, alternatives to the project, and ways to minimize adverse effects and to increase beneficial effects. As a result of information in the EIR, the lead agency should establish requirements or conditions on project design, construction, or operation in order to protect or enhance the environment. State statutes may provide that only registered professionals can prepare technical studies which will be used in or which will control the detailed design, construction, or operation of the proposed project and which will be prepared in support of an EIR.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15150. Incorporation by Reference.

(a) An EIR or negative declaration may incorporate by reference all or portions of another document which is a matter of public record or is generally available to the public. Where all or part of another document is incorporated by reference, the incorporated language shall be considered to be set forth in full as part of the text of the EIR or negative declaration.

(b) Where part of another document is incorporated by reference, such other document shall be made available to the public for inspection at a public place or public building. The EIR or negative declaration shall state where the incorporated documents will be available for inspection. At a minimum, the incorporated document shall be made available to the public in an office of the lead agency in the county where the project would be carried out or in one or more public buildings such as county offices or public libraries if the lead agency does not have an office in the county.

(c) Where an EIR or negative declaration uses incorporation by reference, the incorporated part of the referenced document shall be briefly summarized where possible or briefly described if the data or information cannot be summarized. The relationship between the incorporated part of the referenced document and the EIR shall be described.

(d) Where an agency incorporates information from an EIR that has previously been reviewed through the state review system, the state identification number of the incorporated document should be included in the summary or designation described in Subsection (c).

(e) Examples of materials that may be incorporated by reference include but are not limited to:

(1) A description of the environmental setting from another EIR.

(2) A description of the air pollution problems prepared by an air pollution control agency concerning a process involved in the project.

(3) A description of the city or county general plan that applies to the location of the project.

(f) Incorporation by reference is most appropriate for including long, descriptive, or technical materials that provide general background but do not contribute directly to the analysis of the problem at hand.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15151. Standards for Adequacy of an EIR.

An EIR should be prepared with a sufficient degree of analysis to provide decisionmakers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among the experts. The courts have looked not for perfection but for adequacy, completeness, and a good faith effort at full disclosure.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21061 and 21100, Public Resources Code; *San Francisco Ecology Center* v. *City and County of San Francisco*, 48 Cal. App. 3d 584 (1975).

§ 15152. Tiering.

(a) "Tiering" refers to using the analysis of general matters contained in a broader EIR (such as one prepared for a general plan or policy statement) with later EIRs and negative declarations on narrower projects; incorporating by reference the general discussions from the broader EIR; and concentrating the later EIR or negative declaration solely on the issues specific to the later project.

(b) Agencies are encouraged to tier the environmental analyses which ey prepare for separate but related projects including general plans, oning changes, and development projects. This approach can eliminate epetitive discussions of the same issues and focus the later EIR or negative declaration on the actual issues ripe for decision at each level of environmental review. Tiering is appropriate when the sequence of analysis is from an EIR prepared for a general plan, policy, or program to an EIR or negative declaration for another plan, policy, or program of lesser scope, or to a site-specific EIR or negative declaration. Tiering does not excuse the lead agency from adequately analyzing reasonably foreseeable significant environmental effects of the project and does not justify deferring such analysis to a later tier EIR or negative declaration. However, the level of detail contained in a first tier EIR need not be greater than that of the program, plan, policy, or ordinance being analyzed.

(c) Where a lead agency is using the tiering process in connection with an EIR for a large-scale planning approval, such as a general plan or component thereof (e.g., an area plan or community plan), the development of detailed, site-specific information may not be feasible but can be deferred, in many instances, until such time as the lead agency prepares a future environmental document in connection with a project of a more limited geographical scale, as long as deferral does not prevent adequate identification of significant effects of the planning approval at hand.

(d) Where an EIR has been prepared and certified for a program, plan, policy, or ordinance consistent with the requirements of this section, any lead agency for a later project pursuant to or consistent with the program, plan, policy, or ordinance should limit the EIR or negative declaration on the later project to effects which:

(1) Were not examined as significant effects on the environment in the prior EIR; or

(2) Are susceptible to substantial reduction or avoidance by the choice of specific revisions in the project, by the imposition of conditions, or other means.

(e) Tiering under this section shall be limited to situations where the project is consistent with the general plan and zoning of the city or county in which the project is located, except that a project requiring a rezone to achieve or maintain conformity with a general plan may be subject to tiering.

(f) A later EIR shall be required when the initial study or other analysis finds that the later project may cause significant effects on the environment that were not adequately addressed in the prior EIR. A negative declaration shall be required when the provisions of Section 15070 are met.

(1) Where a lead agency determines that a cumulative effect has been adequately addressed in the prior EIR, that effect is not treated as significant for purposes of the later EIR or negative declaration, and need not be discussed in detail.

(2) When assessing whether there is a new significant cumulative effect, the lead agency shall consider whether the incremental effects of the project would be considerable when viewed in the context of past, present, and probable future projects. At this point, the question is not whether there is a significant cumulative impact, but whether the effects of the project are cumulatively considerable. For a discussion on how to assess whether project impacts are cumulatively considerable, see Section 15064(i).

(3) Significant environmental effects have been "adequately addressed" if the lead agency determines that:

(A) they have been mitigated or avoided as a result of the prior environmental impact report and findings adopted in connection with that prior environmental report;

(B) they have been examined at a sufficient level of detail in the prior environmental impact report to enable those effects to be mitigated or avoided by site specific revisions, the imposition of conditions, or by other means in connection with the approval of the later project; or

(C) they cannot be mitigated to avoid or substantially lessen the significant impacts despite the project proponent's willingness to accept all feasible mitigation measures, and the only purpose of including analysis of such effects in another environmental impact report would be to put the agency in a position to adopt a statement of overriding considerations with respect to the effects.

(g) When tiering is used, the later EIRs or negative declarations shall refer to the prior EIR and state where a copy of the prior EIR may be examined. The later EIR or negative declaration should state that the lead agency is using the tiering concept and that it is being tiered with the earlier EIR.

(h) There are various types of EIRs that may be used in a tiering situation. These include, but are not limited to, the following:

(1) General plan EIR (Section 15166).

(2) Staged EIR (Section 15167).

(3) Program EIR (Section 15168).

(4) Master EIR (Section 15175).

(5) Multiple-family residential development/residential and commercial or retail mixed-use development (Section 15179.5).

(6) Redevelopment project (Section 15180).

(7) Housing/neighborhood commercial facilities in an urbanized area (Section 15181).

(8) Projects consistent with community plan, general plan, or zoning (Section 15183).

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061, 21093, 21094, 21100 and 21151, Public Resources Code; *Stanislaus Natural Heritage Project, Sierra Club v. County of Stanislaus* (1996) 48 Cal.App.4th 182; *Al Larson Boat Shop, Inc. v. Board of Harbor Commissioners* (1993) 18 Cal.App. 4th 729; and *Sierra Club v. County of Sonoma* (1992) 6 Cal.App. 4th 1307.

HISTORY

1. Amendment of section and NOTE filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15153. Use of an EIR from an Earlier Project.

(a) The lead agency may employ a single EIR to describe more than one project, if such projects are essentially the same in terms of environmental impact. Further, the lead agency may use an earlier EIR prepared in connection with an earlier project to apply to a later project, if the circumstances of the projects are essentially the same.

(b) When a lead agency proposes to use an EIR from an earlier project as the EIR for a separate, later project, the lead agency shall use the following procedures:

(1) The lead agency shall review the proposed project with an initial study, using incorporation by reference if necessary, to determine whether the EIR would adequately describe:

(A) The general environmental setting of the project,

(B) The significant environmental impacts of the project, and

(C) Alternatives and mitigation measures related to each significant effect.

(2) If the lead agency believes that the EIR would meet the requirements of Subsection (1), it shall provide public review as provided in Section 15087 stating that it plans to use the previously prepared EIR as the draft EIR for this project. The notice shall include as a minimum:

(A) An identification of the project with a brief description;

(B) A statement that the agency plans to use a certain EIR prepared for a previous project as the EIR for this project;

(C) A listing of places where copies of the EIR may be examined; and

(D) A statement that the key issues involving the EIR are whether the EIR should be used for this project and whether there are any additional, reasonable alternatives or mitigation measures that should be considered as ways of avoiding or reducing the significant effects of the project.

(3) The lead agency shall prepare responses to comments received during the review period.

(4) Before approving the project, the decisionmaker in the lead agency shall:

(A) Consider the information in the EIR including comments received during the review period and responses to those comments,

(B) Decide either on its own or on a staff recommendation whether the EIR is adequate for the project at hand, and

(C) Make or require certification to be made as described in Section 15090.

(D) Make findings as provided in Sections 15091 and 15093 as necessary.

(5) After making a decision on the project, the lead agency shall file a notice of determination.

(c) An EIR prepared for an earlier project may also be used as part of an initial study to document a finding that a later project will not have a significant effect. In this situation a negative declaration will be prepared.

(d) An EIR prepared for an earlier project shall not be used as the EIR for a later project if any of the conditions described in Section 15162 would require preparation of a subsequent or supplemental EIR.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21100, 21151 and 21166, Public Resources Code.

§ 15154. Projects Near Airports.

(a) When a lead agency prepares an EIR for a project within the boundaries of a comprehensive airport land use plan or, if a comprehensive airport land use plan has not been adopted for a project within two nautical miles of a public airport or public use airport, the agency shall utilize the Airport Land Use Planning Handbook published by Caltrans' Division of Aeronautics to assist in the preparation of the EIR relative to potential airport-related safety hazards and noise problems.

(b) A lead agency shall not adopt a negative declaration or mitigated negative declaration for a project described in subsection (a) unless the lead agency considers whether the project will result in a safety hazard or noise problem for persons using the airport or for persons residing or working in the project area.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21096, Public Resources Code.

HISTORY

1. New section filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

Article 11. Types of EIRs

§ 15160. General.

This article describes a number of examples of variations in EIRs as the documents are tailored to different situations and intended uses. These variations are not exclusive. Lead agencies may use other variations consistent with the guidelines to meet the needs of other circumstances. All EIRs must meet the content requirements discussed in Article 9 beginning with Section 15120.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21061, 21100 and 21151, Public Resources Code.

HISTORY

1. New Article 11 (Section 15180) filed 12-14-73 as an emergency; effective upon filing. Certificate of Compliance included (Register 73, No. 50).
2. Repealer of Article 11 (Section 15180) and new Article 11 (Sections 15160-15170) filed 7-13-83; effective thirtieth day thereafter (Register 83, No. 29).
3. Editorial correction of 7-13-83 order redesignating effective date to 8-1-83 filed 7-14-83 (Register 83, No. 29).

§ 15161. Project EIR.

The most common type of EIR examines the environmental impacts of a specific development project. This type of EIR should focus primarily on the changes in the environment that would result from the development project. The EIR shall examine all phases of the project including planning, construction, and operation.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21061, 21100 and 21151, Public Resources Code.

§ 15162. Subsequent EIRs and Negative Declarations.

(a) When an EIR has been certified or a negative declaration adopted for a project, no subsequent EIR shall be prepared for that project unless the lead agency determines, on the basis of substantial evidence in the light of the whole record, one or more of the following:

(1) Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

(2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

(3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:

(A) The project will have one or more significant effects not discussed in the previous EIR or negative declaration;

(B) Significant effects previously examined will be substantially more severe than shown in the previous EIR;

(C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

(D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

(b) If changes to a project or its circumstances occur or new information becomes available after adoption of a negative declaration, the lead agency shall prepare a subsequent EIR if required under subsection (a). Otherwise the lead agency shall determine whether to prepare a subsequent negative declaration, an addendum, or no further documentation.

(c) Once a project has been approved, the lead agency's role in project approval is completed, unless further discretionary approval on that project is required. Information appearing after an approval does not require reopening of that approval. If after the project is approved, any of the conditions described in subsection (a) occurs, a subsequent EIR or negative declaration shall only be prepared by the public agency which grants the next discretionary approval for the project, if any. In this situation no other responsible agency shall grant an approval for the project until the subsequent EIR has been certified or subsequent negative declaration adopted.

(d) A subsequent EIR or subsequent negative declaration shall be given the same notice and public review as required under Section 15087 or Section 15072. A subsequent EIR or negative declaration shall state where the previous document is available and can be reviewed.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21166, Public Resources Code; *Bowman v. City of Petaluma* (1986) 185 Cal.App.3d 1065; *Benton v. Board of Supervisors* (1991) 226 Cal.App.3d 1467; and *Fort Mojave Indian Tribe v. California Department of Health Services et al.* (1995) 38 Cal.App.4th 1574.

HISTORY

1. Amendment of section heading, text and NOTE filed 8–19–94; operative 9–19–94 (Register 94, No. 33).
2. Amendment of subsection (c) and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15163. Supplement to an EIR.

(a) The lead or responsible agency may choose to prepare a supplement to an EIR rather than a subsequent EIR if:

(1) Any of the conditions described in Section 15162 would require the preparation of a subsequent EIR, and

(2) Only minor additions or changes would be necessary to make the previous EIR adequately apply to the project in the changed situation.

(b) The supplement to the EIR need contain only the information necessary to make the previous EIR adequate for the project as revised.

(c) A supplement to an EIR shall be given the same kind of notice and public review as is given to a draft EIR under Section 15087.

(d) A supplement to an EIR may be circulated by itself without recirculating the previous draft or final EIR.

(e) When the agency decides whether to approve the project, the decision–making body shall consider the previous EIR as revised by the supplemental EIR. A finding under Section 15091 shall be made for each significant effect shown in the previous EIR as revised.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21166, Public Resources Code.

§ 15164. Addendum to an EIR or Negative Declaration.

(a) The lead agency or a responsible agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred.

(b) An addendum to an adopted negative declaration may be prepared if only minor technical changes or additions are necessary or none of the conditions described in Section 15162 calling for the preparation of a subsequent EIR or negative declaration have occurred.

(c) An addendum need not be circulated for public review but can be included in or attached to the final EIR or adopted negative declaration.

(d) The decision–making body shall consider the addendum with the final EIR or adopted negative declaration prior to making a decision on the project.

(e) A brief explanation of the decision not to prepare a subsequent EIR pursuant to Section 15162 should be included in an addendum to an EIR, the lead agency's required findings on the project, or elsewhere in the record. The explanation must be supported by substantial evidence.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21166, Public Resources Code; *Bowman v. City of Petaluma* (1986) 185 Cal.App.3d 1065; and *Benton v. Board of Supervisors* (1991) 226 Cal.App.3d 1467.

HISTORY

1. Amendment of section heading, text and NOTE filed 8–19–94; operative 9–19–94 (Register 94, No. 33).
2. Amendment of subsection (b) and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15165. Multiple and Phased Projects.

Where individual projects are, or a phased project is, to be undertaken and where the total undertaking comprises a project with significant environmental effect, the lead agency shall prepare a single program EIR for the ultimate project as described in Section 15168. Where an individual project is a necessary precedent for action on a larger project, or commits the lead agency to a larger project, with significant environmental effect, an EIR must address itself to the scope of the larger project. Where one project is one of several similar projects of a public agency, but is not deemed a part of a larger undertaking or a larger project, the agency may prepare one EIR for all projects, or one for each project, but shall in either case comment upon the cumulative effect.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21061, 21100 and 21151, Public Resources Code; *Whitman* v. *Board of Supervisors*, 88 Cal. App. 3d 397 (1979).

§ 15166. EIR As Part of a General Plan.

(a) The requirements for preparing an EIR on a local general plan, element, or amendment thereof will be satisfied by using the general plan, or element document, as the EIR and no separate EIR will be required, if:

(1) the general plan addresses all the points required to be in an EIR by Article 9 of these guidelines and

(2) the document contains a special section or a cover sheet identifying where the general plan document addresses each of the points required.

(b) Where an EIR rather than a negative declaration has been prepared for a general plan, element, or amendment thereto, the EIR shall be forwarded to the State Clearinghouse for review. The requirement shall apply regardless of whether the EIR is prepared as a separate document or as a part of the general plan or element document.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061, 21083, 21100, 21104, 21151 and 21152, Public Resources Code.

§ 15167. Staged EIR.

(a)Where a large capital project will require a number of discretionary approvals from government agencies and one of the approvals will occur more than two years before construction will begin, a staged EIR may be prepared covering the entire project in a general form. The staged EIR shall evaluate the proposal in light of current and contemplated plans and produce an informed estimate of the environmental consequences of the entire project. The aspect of the project before the public agency for approval shall be discussed with a greater degree of specificity.

(b) When a staged EIR has been prepared, a supplement to the EIR shall be prepared when a later approval is required for the project, and the information available at the time of the later approval would permit consideration of additional environmental impacts, mitigation measures, or reasonable alternatives to the project.

(c) Where a statute such as the Warren–Alquist Energy Resources Conservation and Development Act provides that a specific agency shall be the lead agency for a project and requires the lead agency to prepare an EIR, a responsible agency which must grant an approval for the project before the lead agency has completed the EIR may prepare and consider a staged EIR.

(d) An agency requested to prepare a staged EIR may decline to act as the lead agency if it determines, among other factors, that:

(1) Another agency would be the appropriate lead agency; and

(2) There is no compelling need to prepare a staged EIR and grant an approval for the project before the appropriate lead agency will take its action on the project.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21003, Public Resources Code.

§ 15168. Program EIR.

(a) General. A program EIR is an EIR which may be prepared on a series of actions that can be characterized as one large project and are related either:

(1) Geographically,

(2) As logical parts in the chain of contemplated actions,

(3) In connection with issuance of rules, regulations, plans, or other general criteria to govern the conduct of a continuing program, or

(4) As individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects which can be mitigated in similar ways.

(b) Advantages. Use of a program EIR can provide the following advantages. The program EIR can:

(1) Provide an occasion for a more exhaustive consideration of effects and alternatives than would be practical in an EIR on an individual action,

(2) Ensure consideration of cumulative impacts that might be slighted in a case–by–case analysis,

(3) Avoid duplicative reconsideration of basic policy considerations,

(4) Allow the lead agency to consider broad policy alternatives and program wide mitigation measures at an early time when the agency has greater flexibility to deal with basic problems or cumulative impacts,

(5) Allow reduction in paperwork.

(c) Use With Later Activities. Subsequent activities in the program must be examined in the light of the program EIR to determine whether an additional environmental document must be prepared.

(1) If a later activity would have effects that were not examined in the program EIR, a new initial study would need to be prepared leading to either an EIR or a negative declaration.

(2) If the agency finds that pursuant to Section 15162, no new effects could occur or no new mitigation measures would be required, the agency can approve the activity as being within the scope of the project covered by the program EIR, and no new environmental document would be required.

(3) An agency shall incorporate feasible mitigation measures and alternatives developed in the program EIR into subsequent actions in the program.

(4) Where the subsequent activities involve site specific operations, the agency should use a written checklist or similar device to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were covered in the program EIR.

(5) A program EIR will be most helpful in dealing with subsequent activities if it deals with the effects of the program as specifically and comprehensively as possible. With a good and detailed analysis of the program, many subsequent activities could be found to be within the scope of the project described in the program EIR, and no further environmental documents would be required.

(d) Use With Subsequent EIRS and Negative Declarations. A program EIR can be used to simplify the task of preparing environmental documents on later parts of the program. The program EIR can:

(1) Provide the basis in an initial study for determining whether the later activity may have any significant effects.

(2) Be incorporated by reference to deal with regional influences, secondary effects, cumulative impacts, broad alternatives, and other factors that apply to the program as a whole.

(3) Focus an EIR on a subsequent project to permit discussion solely of new effects which had not been considered before.

(e) Notice With Later Activities. When a law other than CEQA requires public notice when the agency later proposes to carry out or approve an activity within the program and to rely on the program EIR for CEQA compliance, the notice for the activity shall include a statement that:

(1) This activity is within the scope of the program approved earlier, and

(2) The program EIR adequately describes the activity for the purposes of CEQA.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21003, Public Resources Code; *County of Inyo* v. *Yorty*, 32 Cal. App. 3d 795 (1973).

§ 15169. Master Environmental Assessment.

(a) General. A public agency may prepare a master environmental assessment, inventory, or data base for all, or a portion of, the territory subject to its control in order to provide information which may be used or referenced in EIRs or negative declarations. Neither the content, the format, nor the procedures to be used to develop a master environmental assessment are prescribed by these guidelines. The descriptions contained in this section are advisory. A master environmental assessment is suggested solely as an approach to identify and organize environmental information for a region or area of the state.

(b) Contents. A master environmental assessment may contain an inventory of the physical and biological characteristics of the area for which it is prepared and may contain such additional data and information as the public agency determines is useful or necessary to describe environmental characteristics of the area. It may include identification of existing levels of quality and supply of air and water, capacities and levels of use of existing services and facilities, and generalized incremental effects of different categories of development projects by type, scale, and location.

(c) Preparation.

(1) A master environmental assessment or inventory may be prepared in many possible ways. For example, a master environmental assessment may be prepared as a special, comprehensive study of the area involved, as part of the EIR on a general plan, or as a data base accumulated by indexing EIRs prepared for individual projects or programs in the area involved.

(2) The information contained in a master environmental assessment should be reviewed periodically and revised as needed so that it is accurate and current.

(3) When advantageous to do so, master environmental assessments may be prepared through a joint exercise of powers agreement with neighboring local agencies or with the assistance of the appropriate Council of Governments.

(d) Uses.

(1) A master environmental assessment can identify the environmental characteristics and constraints of an area. This information can be used to influence the design and location of individual projects.

(2) A master environmental assessment may provide information agencies can use in initial studies to decide whether certain environmental effects are likely to occur and whether certain effects will be significant.

(3) A master environmental assessment can provide a central source of current information for use in preparing individual EIRs and negative declarations.

(4) Relevant portions of a master environmental assessment can be referenced and summarized in EIRs and negative declarations.

(5) A master environmental assessment can assist in identifying long range, areawide, and cumulative impacts of individual projects proposed in the area covered by the assessment.

(6) A master environmental assessment can assist a city or county in formulating a general plan or any element of such a plan by identifying environmental characteristics and constraints that need to be addressed in the general plan.

(7) A master environmental assessment can serve as a reference document to assist public agencies which review other environmental documents dealing with activities in the area covered by the assessment. The public agency preparing the assessment should forward a completed copy to each agency which will review projects in the area.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21003, Public Resources Code.

§ 15170. Joint EIR–EIS.

A lead agency under CEQA may work with a federal agency to prepare a joint document which will meet the requirements of both CEQA and NEPA. Use of such a joint document is described in Article 14, beginning with Section 15220.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.5 and 21083.7, Public Resources Code.

Article 11.5. Master Environmental Impact Report

§ 15175. Master EIR.

(a) The Master EIR procedure is an alternative to preparing a project EIR, staged EIR, or program EIR for certain projects which will form the basis for later decision making. It is intended to streamline the later environmental review of projects or approval included within the project, plan or program analyzed in the Master EIR. Accordingly, a Master EIR shall, to the greatest extent feasible, evaluate the cumulative impacts, growth inducing impacts, and irreversible significant effects on the environment of subsequent projects.

(b) A lead agency may prepare a Master EIR for any of the following classes of projects:

(1) A general plan, general plan update, general plan element, general plan amendment, or specific plan.

(2) Public or private projects that will be carried out or approved pursuant to, or in furtherance of, a redevelopment plan.

(3) A project that consists of smaller individual projects which will be carried out in phases.

(4) A rule or regulation which will be implemented by later projects.

(5) Projects that will be carried out or approved pursuant to a development agreement.

(6) A state highway project or mass transit project which will be subject to multiple stages of review or approval.

(7) A plan proposed by a local agency, including a joint powers authority, for the reuse of a federal military base or reservation that has been closed or is proposed for closure by the federal government.

(8) A regional transportation plan or congestion management plan.

(9) Regulations adopted by the California Department of Fish and Game for the regulation of hunting and fishing.

(c) A lead agency may develop and implement a fee program in accordance with applicable provisions of law to generate the revenue necessary to prepare a Master EIR.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21156, 21157 and 21089, Public Resources Code.

HISTORY

1. New article 11.5 (sections 15175–15175.5) and section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15176. Contents of a Master EIR.

A lead agency shall include in a Master EIR all of the following:

(a) A detailed discussion as required by Section 15126.

(b) A description of anticipated subsequent projects that are within the scope of the Master EIR, including information with regard to the kind, size, intensity, and location of the subsequent projects, including, but not limited to all of the following:

(1) The specific type of project anticipated to be undertaken such as a single family development, office–commercial development, sewer line installation or other activities.

(2) The maximum and minimum intensity of any anticipated subsequent project, such as the number of residences in a residential development, and with regard to a public works facility, its anticipated capacity and service area.

(3) The anticipated location for any subsequent development projects, and, consistent with the rule of reason set forth in Section 15126, subdivision (d)(5), alternative locations for any such projects.

(4) A capital outlay or capital improvement program, or other scheduling or implementing device that governs the submission and approval of subsequent projects, or an explanation as to why practical planning considerations render it impractical to identify any such program or scheduling or other device at the time of preparing the Master EIR.

(c) A description of potential impacts of anticipated projects for which there is not sufficient information reasonably available to support a full assessment of potential impacts in the Master EIR. This description shall not be construed as a limitation on the impacts which may be considered in a focused EIR.

(d) Where a Master EIR is prepared in connection with a project identified in subdivision (b)(1) of section 15175, the anticipated subsequent projects included within a Master EIR may consist of later planning approvals, including parcel–specific approvals, consistent with the overall planning decision (e.g., general plan, or specific plan, or redevelopment plan) for which the Master EIR has been prepared. Such subsequent projects shall be adequately described for purposes of subdivision (b) or of this section (15176) if the Master EIR and any other documents embodying or relating to the overall planning decision identify the land use designations and the permissible densities and intensities of use for the affected parcel(s). The proponents of such subsequent projects shall not be precluded from relying on the Master EIR solely because that document did not specifically identify or list, by name, the subsequent project as ultimately proposed for approval.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21157, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15177. Subsequent Projects Within the Scope of the MEIR.

(a) After a Master EIR has been prepared and certified, subsequent projects which the lead agency determines as being within the scope of the Master EIR will be subject to only limited environmental review.

(b) Except as provided in subsection (2) of this subdivision, neither a new environmental document nor the preparation of findings pursuant to section 15091 shall be required of a subsequent project when all of the following requirements are met:

(1) The lead agency for the subsequent project is the lead agency or any responsible agency identified in the Master EIR.

(2) The lead agency for the subsequent project prepares an initial study on the proposal. The initial study shall analyze whether the subsequent project was described in the Master EIR and whether the subsequent project may cause any additional significant effect on the environment which was not previously examined in the Master EIR.

(3) The lead agency for the subsequent project determines, on the basis of written findings, that no additional significant environmental effect will result from the proposal, no new additional mitigation measures or alternatives may be required, and that the project is within the scope of the Master EIR. "Additional significant environmental effect" means any project–specific effect which was not addressed as a significant effect in the Master EIR.

(c) Whether a subsequent project is within the scope of the Master EIR is a question of fact to be determined by the lead agency based upon a review of the initial study to determine whether there are additional significant effects or new additional mitigation measures or alternatives required for the subsequent project that are not already discussed in the Master EIR.

(d) Prior to approval of the proposed subsequent project, the lead agency shall incorporate all feasible mitigation measures or feasible alternatives appropriate to the project as set forth in the Master EIR and provide notice in the manner required by Section 15087.

(e) When the lead agency approves a project pursuant to this section, the lead agency shall file a notice in the manner required by Section 15075.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21157, 21157.6 and 21158, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15178. Subsequent Projects Identified in the MEIR.

(a) When a proposed subsequent project is identified in the Master EIR, but the lead agency cannot make a determination pursuant to Section 15177 that the subsequent project is within the scope of the Master EIR, and the lead agency determines that the cumulative impacts, growth inducing impacts and irreversible significant effects analysis in the Master EIR is adequate for the subsequent project, the lead agency shall prepare a mitigated negative declaration or a focused EIR if, after preparing an initial study, the lead agency determines that the project may result in new or additional significant effects. Whether the cumulative impacts, growth inducing impacts and irreversible significant effects analyses are adequate is a question of fact to be determined by the lead agency based upon a review of the proposed subsequent project in light of the Master EIR.

(b) A lead agency shall prepare a mitigated negative declaration for any proposed subsequent project if both of the following occur:

(1) The initial study prepared pursuant to Section 15177 has identified potentially new or additional significant environmental effects that were not analyzed in the Master EIR; and

(2) Feasible mitigation measures or alternatives will be incorporated to revise the subsequent project before the negative declaration is released for public review pursuant to Section 15073 in order to avoid or mitigate the identified effects to a level of insignificance.

(c) A lead agency shall prepare a focused EIR if the subsequent project may have a significant effect on the environment and a mitigated negative declaration pursuant to subdivision (b) of this section cannot be prepared.

(1) The focused EIR shall incorporate by reference the Master EIR and analyze only the subsequent project's additional significant environmental effects and any new or additional mitigation measures or alternatives that were not identified and analyzed by the Master EIR. "Additional significant environmental effects" are those project–specific effects on the environment which were not addressed as significant in the Master EIR.

(2) A focused EIR need not examine those effects which the lead agency, prior to public release of the focused EIR, finds, on the basis of the initial study, related documents, and commitments from the proponent of a subsequent project, have been mitigated in one of the following manners:

(A) Mitigated or avoided as a result of mitigation measures identified in the Master EIR which the lead agency will require as part of the approval of the subsequent project;

(B) Examined at a sufficient level of detail in the Master EIR to enable those significant effects to be mitigated or avoided by specific revisions to the project, the imposition of conditions of approval, or by other means in connection with approval of the subsequent project; or

(C) The mitigation or avoidance of which is the responsibility of and within the jurisdiction of another public agency and is, or can and should be, undertaken by that agency.

(3) The lead agency's findings pursuant to subdivision (2) shall be included in the focused EIR prior to public release pursuant to Section 15087.

(4) A focused EIR prepared pursuant to this section shall analyze any significant environmental effects when:

(A) Substantial new or additional information shows that the adverse environmental effect may be more significant that was described in the Master EIR; or

(B) Substantial new or additional information shows that mitigation measures or alternatives which were previously determined to be infeasible are feasible and will avoid or reduce the significant effects of the subsequent project to a level of insignificance.

(d) A lead agency shall file a notice of determination shall be filed pursuant to Section 15075 if a project has been approved for which a mitigated negative declaration has been prepared pursuant to this section and a notice of determination shall be filed pursuant to Section 15094 if a project has been approved for which a focused EIR has been prepared pursuant to this section.

(e) When a lead agency determines that the cumulative impacts, growth inducing impacts and irreversible significant effects analysis in the Master EIR is inadequate for the subsequent project, the subsequent project is no longer eligible for the limited environmental review available under the Master EIR process and shall be reviewed according to Article 7 (commencing with Section 15080) of these guidelines. The lead agency shall tier the project specific EIR upon the Master EIR to the extent feasible under Section 15152.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21081(a)(2), 21157.5 and 21158, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15179. Limitations on the Use of the Master EIR.

The certified Master EIR shall not be used in accordance with this article if either (i) it was certified more than five years prior to the filing of an application for a later project, or (ii) a project not identified in the certified Master EIR as an anticipated subsequent project is approved and the approved project may affect the adequacy of the Master EIR, unless the lead agency does one of the following:

(a) Reviews the Master EIR and finds that no substantial changes have occurred with respect to the circumstances under which the Master EIR was certified, or that there is no new available information which was not known and could not have been known at the time the Master EIR was certified; or

(b) Prepares a subsequent or supplemental EIR that updates or revises the Master EIR and which either (i) is incorporated into the previously certified Master EIR, or (ii) references any deletions, additions or other modifications to the previously certified Master EIR.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21157.6, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15179.5. Focused EIRs and Small Projects.

(a) When a project is a multiple family residential development of 100 units or less or is a residential and commercial or retail mixed–use commercial development of not more then 100,000 square feet, whether or not the project is identified in the Master EIR, a focused EIR shall be prepared pursuant to this section when the following conditions are met:

(1) The project is consistent with a general plan, specific plan, community plan, or zoning ordinance for which an EIR was prepared within five years of certification of the focused EIR; and

(2) The parcel on which the project is to be developed is either:

(A) Surrounded by immediately contiguous urban development;

(B) Previously developed with urban uses; or

(C) Within one–half mile of an existing rail transit station.

(b) A focused environmental impact report prepared pursuant to this section shall be limited to a discussion of potentially significant effects on the environment specific to the project, or which substantial new information shows will be more significant than described in the prior environmental impact report. No discussion shall be required of alternatives to the project, cumulative impacts of the project, or the growth inducing impacts of the project.

(c) This section does not apply where the lead agency can make a finding pursuant to Section 15177 that the subsequent project is within the scope of the Master EIR, where the lead agency can prepare a mitigated negative declaration or focused EIR pursuant to Section 15178, or where, pursuant to Section 15162 or Section 15163, the environmental impact report referenced in subdivision (a)(1) of this section must be updated

through the preparation of a subsequent environmental impact report or a supplemental environmental impact report.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21158.5, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

Article 12. Special Situations

§ 15180. Redevelopment Projects.

(a) All public and private activities or undertakings pursuant to or in furtherance of a redevelopment plan constitute a single project, which shall be deemed approved at the time of adoption of the redevelopment plan by the legislative body. The EIR in connection with the redevelopment plan shall be submitted in accordance with Section 33352 of the Health and Safety Code.

(b) An EIR on a redevelopment plan shall be treated as a program EIR with no subsequent EIRs required for individual components of the redevelopment plan unless a subsequent EIR or a supplement to an EIR would be required by Section 15162 or 15163.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21090, Public Resources Code.

HISTORY

1. New Article 12 (Sections 15190–15192) filed 1–6–76 as an emergency; effective upon filing (Register 76, No. 2).
2. Certificate of Compliance filed 4–2–76 (Register 76, No. 14).
3. Repealer of Article 12 (Sections 15190–15193) and new Article 12 (Sections 15180–15185) filed 7–13–83; effective 8–1–83 (Register 83, No. 29). For prior history, see Registers 82, No. 2; 81, Nos. 30 and 45; 80, No. 15; 79, Nos. 18, 23 and 30; and 78, No. 33.
4. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

15181. Housing and Neighborhood Commercial Facilities in Urbanized Areas.

(a) A lead agency may approve a project involving the construction of housing or neighborhood commercial facilities in an urbanized area with the use of an EIR or negative declaration previously prepared for a specific plan, local coastal program, or port master plan if the lead agency complies with the requirements of this section.

(b) The procedures for complying with this section are as follows:

(1) The lead agency shall conduct an initial study to determine whether the project may have one or more significant effects on the environment.

(2) The lead agency shall give notice of its proposed use of a previously prepared EIR to all persons who had submitted a written request for notice and shall also give notice by either:

(A) Posting notice on and off the site in the area where the project would be located, or

(B) Mailing notice directly to owners of property contiguous to the project site.

(3) The lead agency shall make the following findings with regard to planning and the previously prepared EIR.

(A) That the project is consistent with either:

1. A specific plan which was adopted for the area pursuant to Article 8 (commencing with Section 65450), Article 9 (commencing with Section 65500), and Article 10 (commencing with Section 65550) of Chapter 3 of Title 7 of the Government Code, or

2. A local coastal program or port master plan certified pursuant to Article 2 (commencing with Section 30510) of Chapter 6 of Division 20 of the Public Resources Code.

(B) That the specific plan, local coastal program, or port master plan was adopted not more than five years prior to the finding made pursuant to this subsection and that the method of adoption was the procedure specified by Article 9 (commencing with Section 65500) of Chapter 3 of Title 7 of the Government Code for adopting specific plans and regulations.

(C) That the specific plan or local coastal program or port master plan was the subject of a certified environmental impact report.

(D) That the environmental impact report is sufficiently detailed so that all the significant effects of the project on the environment and measures necessary to mitigate or avoid any such effects can be determined. This examination of the previously prepared EIR shall include a further, specific finding as to:

1. Whether there would be any significant physical effects on existing structures and neighborhoods of historical or aesthetic significance if any exist in the area covered by the plan or program, and

2. Whether measures necessary to mitigate or avoid such effects are included in the EIR.

(E) That a subsequent EIR is not required pursuant to Public Resources Code Section 21166 and Guidelines Section 15162.

(4) The lead agency shall make one or more findings as required by Section 15091 with regard to mitigating or avoiding each significant effect that the project would have on the environment.

(5) The lead agency shall file a notice of determination with the county clerk if the lead agency approves the project.

(c) As used in this section, "neighborhood commercial facilities" means those commercial facilities which are an integral part of a project involving the construction of housing and which will serve the residents of such housing.

(d) As used in this section, "urbanized area" means only those areas mapped and designated as urbanized by the U.S. Bureau of the Census.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.7, Public Resources Code.

§ 15182. Residential Projects Pursuant to a Specific Plan.

(a) Exemption. Where a public agency has prepared an EIR on a specific plan after January 1, 1980, no EIR or negative declaration need be prepared for a residential project undertaken pursuant to and in conformity to that specific plan if the project meets the requirements of this section.

(b) Scope. Residential projects covered by this section include but are not limited to land subdivisions, zoning changes, and residential planned unit developments.

(c) Limitation. This section is subject to the limitation that if after the adoption of the specific plan, an event described in Section 15162 should occur, this exemption shall not apply until the city or county which adopted the specific plan completes a subsequent EIR or a supplement to an EIR on the specific plan. The exemption provided by this section shall again be available to residential projects after the lead agency has filed a Notice of Determination on the specific plan as reconsidered by the subsequent EIR or supplement to the EIR.

(d) Alternative. This section provides an alternative to the procedure described in Section 15181.

(e) Fees. The lead agency has authority to charge fees to applicants for projects which benefit from this section. The fees shall be calculated in the aggregate to defray but not to exceed the cost of developing and adopting the specific plan including the cost of preparing the EIR.

(f) Statute of Limitations. A court action challenging the approval of a project under this section for failure to prepare a supplemental EIR shall be commenced within 30 days after the lead agency's decision to carry out or approve the project in accordance with the specific plan.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 65453, Government Code.

§ 15183. Projects Consistent with a Community Plan, General Plan, or Zoning.

(a) CEQA mandates that projects which are consistent with the development density established by existing zoning, community plan, or general plan policies for which an EIR was certified shall not require additional environmental review, except as might be necessary to examine whether there are project–specific significant effects which are peculiar to the project or its site. This streamlines the review of such projects and reduces the need to prepare repetitive environmental studies.

(b) In approving a project meeting the requirements of this section, a public agency shall limit its examination of environmental effects to those which the agency determines, in an initial study or other analysis:

(1) Are peculiar to the project or the parcel on which the project would be located,

(2) Were not analyzed as significant effects in a prior EIR on the zoning action, general plan or community plan with which the project is consistent,

(3) Are potentially significant off-site impacts and cumulative impacts which were not discussed in the prior EIR prepared for the general plan, community plan or zoning action, or

(4) Are previously identified significant effects which, as a result of substantial new information which was not known at the time the EIR was certified, are determined to have a more severe adverse impact than discussed in the prior EIR.

(c) If an impact is not peculiar to the parcel or to the project, has been addressed as a significant effect in the prior EIR, or can be substantially mitigated by the imposition of uniformly applied development policies or standards, as contemplated by subdivision (e) below, then an additional EIR need not be prepared for the project solely on the basis of that impact.

(d) This section shall apply only to projects which meet the following conditions:

(1) The project is consistent with:

(A) A community plan adopted as part of a general plan,

(B) A zoning action which zoned or designated the parcel on which the project would be located to accommodate a particular density of development, or

(C) A general plan of a local agency, and

(2) An EIR was certified by the lead agency for the zoning action, the community plan, or the general plan.

(e) This section shall limit the analysis of only those significant environmental effects for which:

(1) Each public agency with authority to mitigate any of the significant effects on the environment identified in the EIR on the planning or zoning action undertakes or requires others to undertake mitigation measures specified in the EIR which the lead agency found to be feasible, and

(2) The lead agency makes a finding at a public hearing as to whether the feasible mitigation measures will be undertaken.

(f) An effect of a project on the environment shall not be considered peculiar to the project or the parcel for the purposes of this section if uniformly applied development policies or standards have been previously adopted by the city or county with a finding that the development policies or standards will substantially mitigate that environmental effect when applied to future projects, unless substantial new information shows that the policies or standards will not substantially mitigate the environmental effect. The finding shall be based on substantial evidence which need not include an EIR. Such development policies or standards need not apply throughout the entire city or county, but can apply only within the zoning district in which the project is located, or within the area subject to the community plan on which the lead agency is relying. Moreover, such policies or standards need not be part of the general plan or any community plan, but can be found within another pertinent planning document such as a zoning ordinance. Where a city or county, in previously adopting uniformly applied development policies or standards for imposition on future projects, failed to make a finding as to whether such policies or standards would substantially mitigate the effects of future projects, the decisionmaking body of the city or county, prior to approving such a future project pursuant to this section, may hold a public hearing for the purpose of considering whether, as applied to the project, such standards or policies would substantially mitigate the effects of the project. Such a public hearing need only be held if the city or county decides to apply the standards or policies as permitted in this section.

(g) Examples of uniformly applied development policies or standards include, but are not limited to:

(1) Parking ordinances,

(2) Public access requirements,

(3) Grading ordinances.

(4) Hillside development ordinances.

(5) Flood plain ordinances.

(6) Habitat protection or conservation ordinances.

(7) View protection ordinances.

(h) An environmental effect shall not be considered peculiar to the project or parcel solely because no uniformly applied development policy or standard is applicable to it.

(i) Where the prior EIR relied upon by the lead agency was prepared for a general plan or community plan that meets the requirements of this section, any rezoning action consistent with the general plan or community plan shall be treated as a project subject to this section.

(1) "Community plan" is defined as a part of the general plan of a city or county which applies to a defined geographic portion of the total area included in the general plan, includes or references each of the mandatory elements specified in Section 65302 of the Government Code, and contains specific development policies and implementation measures which will apply those policies to each involved parcel.

(2) For purposes of this section, "consistent" means that the density of the proposed project is the same or less than the standard expressed for the involved parcel in the general plan, community plan or zoning action for which an EIR has been certified, and that the project complies with the density-related standards contained in that plan or zoning. Where the zoning ordinance refers to the general plan or community plan for its density standard, the project shall be consistent with the applicable plan.

(j) This section does not affect any requirement to analyze potentially significant offsite or cumulative impacts if those impacts were not adequately discussed in the prior EIR. If a significant offsite or cumulative impact was adequately discussed in the prior EIR, then this section may be used as a basis for excluding further analysis of that offsite or cumulative impact.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21083.3, Public Resources Code.

HISTORY

1. Amendment of section heading and subsections (a)(2) and (b) filed 1-30-86; effective thirtieth day thereafter (Register 86, No. 5).
2. Amendment of section heading and section filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15184. State Mandated Local Projects.

Whenever a state agency issues an order which requires a local agency to carry out a project subject to CEQA, the following rules apply:

(a) If an EIR is prepared for the project, the local agency shall limit the EIR to considering those factors and alternatives which will not conflict with the order.

(b) If a local agency undertakes a project to implement a rule or regulation imposed by a certified state environmental regulatory program listed in Section 15251, the project shall be exempt from CEQA with regard to the significant effects analyzed in the document prepared by the state agency as a substitute for an EIR. The local agency shall comply with CEQA with regard to any site-specific effect of the project which was not analyzed by the certified state agency as a significant effect on the environment. The local agency need not re-examine the general environmental effects of the state rule or regulation.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080, 21080.5 and 21154, Public Resources Code.

§ 15185. Administrative Appeals.

(a) Where an agency allows administrative appeals upon the adequacy of an environmental document, an appeal shall be handled according to the procedures of that agency. Public notice shall be handled in accordance with individual agency requirements and Section 15202(e).

(b) The decisionmaking body to which an appeal has been made shall consider the environmental document and make findings under Sections 15091 and 15093 if appropriate.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21082 and 21083, Public Resources Code.

§ 15186. School Facilities.

(a) CEQA establishes a special requirement for certain school projects, as well as certain projects near schools, to ensure that potential health impacts resulting from exposure to hazardous materials,wastes, and substances will be carefully examined and disclosed in a negative declaration or EIR, and that the lead agency will consult with other agencies in this regard.

(b) When a project located within one–fourth mile of a school involves the construction or alteration of a facility which might reasonably be anticipated to emit hazardous or acutely hazardous air emissions, or which would handle acutely hazardous material or a mixture containing acutely hazardous material in a quantity equal to or greater than that specified in subdivision (a) of Section 25536 of the Health and Safety Code, which may impose a health or safety hazard to persons who would attend or would be employed at the school, the lead agency must:

(1) Consult with the affected school district or districts regarding the potential impact of the project on the school when circulating the proposed negative declaration or draft EIR for review.

(2) Notify the affected school district of the project, in writing, not less than 30 days prior to approval or certification of the negative declaration or EIR. This subdivision does not apply to projects for which an application was submitted prior to January 1, 1992.

(c) When the project involves the purchase of a school site or the construction of a secondary or elementary school, the negative declaration or EIR prepared for the project shall not be approved or certified by the school board unless:

(1) The negative declaration or EIR contains sufficient information to determine whether the property is:

(A) The site of a current or former hazardous waste or solid waste disposal facility and, if so, whether wastes have been removed.

(B) A hazardous substance release site identified by the Department of Toxic Substances Control in a current list adopted pursuant to Section 25356 of the Health and Safety Code for removal or remedial action pursuant to Chapter 6.8 (commencing with Section 25300) of Division 20 of the Health and Safety Code.

(C) The site of one or more buried or above ground pipelines which carry hazardous substances, acutely hazardous materials, or hazardous wastes, as defined in Division 20 of the Health and Safety Code. This does not include a natural gas pipeline used only to supply the school or neighborhood.

(2) The lead agency has notified in writing and consulted with the county or city administering agency (as designated pursuant to Section 25502 of the Health and Safety Code) and with any air pollution control district or air quality management district having jurisdiction, to identify facilities within one–fourth mile of the proposed school site which might reasonably be anticipated to emit hazardous emissions or handle hazardous or acutely hazardous material, substances, or waste. The notice shall include a list of the school sites for which information is sought. Each agency or district receiving notice shall provide the requested information and provide a written response to the lead agency within 30 days of receiving the notification. If any such agency or district fails to respond within that time, the negative declaration or EIR shall be conclusively presumed to comply with this section as to the area of responsibility of that agency.

(3) The school board makes, on the basis of substantial evidence, one of the following written findings:

(A) Consultation identified none of the facilities specified in paragraph (2).

(B) The facilities specified in paragraph (2) exist, but one of the following conditions applies:

1. The health risks from the facilities do not and will not constitute an actual or potential endangerment of public health to persons who would attend or be employed at the proposed school.

2. Corrective measures required under an existing order by another agency having jurisdiction over the facilities will, before the school is occupied, mitigate all chronic or accidental hazardous air emissions to levels that do not constitute any actual or potential public health danger to persons who would attend or be employed at the proposed school. When the school district board makes such a finding, it shall also make a subsequent finding, prior to occupancy of the school, that the emissions have been so mitigated.

This finding shall be in addition to any findings which may be required pursuant to Sections 15074, 15091 or 15093.

(d) When the lead agency has carried out the consultation required by paragraph (2) of subdivision (b), the negative declaration or EIR shall be conclusively presumed to comply with this section, notwithstanding any failure of the consultation to identify an existing facility.

(e) The following definitions shall apply for the purposes of this section:

(1) "Acutely hazardous material," is as defined in 22 C.C.R. §66260.10.

(2) "Administering agency," is as defined in Section 25501 of the Health and Safety Code.

(3) "Hazardous air emissions," is as defined in subdivisions (a) to (f), inclusive, of Section 44321 of the Health and Safety Code.

(4) "Hazardous substance," is as defined in Section 25316 of the Health and Safety Code.

(5) "Hazardous waste," is as defined in Section 25117 of the Health and Safety Code.

(6) "Hazardous waste disposal site," is as defined in Section 25114 of the Health and Safety Code.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. References: Sections 21151.4 and 21151.8, Public Resources Code.

HISTORY

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15187. Environmental Review of New Rules and Regulations.

(a) At the time of the adoption of a rule or regulation requiring the installation of pollution control equipment, establishing a performance standard, or establishing a treatment requirement, the California Air Resources Board, Department of Toxic Substances Control, Integrated Waste Management Board, State Water Resources Control Board, all regional water quality control boards, and all air pollution control districts and air quality management districts, as defined in Section 39025 of the Health and Safety Code, must perform an environmental analysis of the reasonably foreseeable methods by which compliance with that rule or regulation will be achieved.

(b) If an EIR is prepared by the agency at the time of adoption of a rule or regulation, it satisfies the requirements of this section provided that the document contains the information specified in subdivision (c) below. Similarly, for those State agencies whose regulatory programs have been certified by the Resources Agency pursuant to Section 21080.5 of the Public Resources Code, an environmental document prepared pursuant to such programs satisfies the requirements of this section, provided that the document contains the information specified in subdivision (c) below.

(c) The environmental analysis shall include at least the following:

(1) An analysis of reasonably foreseeable environmental impacts of the methods of compliance;

(2) An analysis of reasonably foreseeable feasible mitigation measures relating to those impacts; and

(3) An analysis of reasonably foreseeable alternative means of compliance with the rule or regulation, which would avoid or eliminate the identified impacts.

(d) The environmental analysis shall take into account a reasonable range of environmental, economic, and technical factors, population and geographic areas, and specific sites. The agency may utilize numerical ranges and averages where specific data is not available, but is not required to, nor should it, engage in speculation or conjecture.

(e) Nothing in this section shall require the agency to conduct a project level analysis.

(f) Nothing in this section is intended, or may be used, to delay the adoption of any rule or regulation for which this section requires an environmental analysis.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21159 and 21159.4, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15188. Focused EIR for Pollution Control Equipment.

This section applies to projects consisting solely of the installation of pollution control equipment and other components necessary to the installation of that equipment which are undertaken for the purpose of complying with a rule or regulation which was the subject of an environmental analysis as described in Section 15187.

(a) The lead agency for the compliance project may prepare a focused EIR to analyze the effects of that project when the following occur:

(1) the agency which promulgated the rule or regulation certified an EIR on that rule or regulation, or reviewed it pursuant to an environmental analysis prepared under a certified regulatory program and, in either case, the review included an assessment of growth inducing impacts and cumulative impacts of, and alternatives to, the project;

(2) the focused EIR for the compliance project is certified within five years of the certified EIR or environmental analysis required by subdivision (a)(1); and

(3) the EIR prepared in connection with the adoption of the rule or regulation need not be updated through the preparation of a subsequent EIR or supplemental EIR pursuant to section 15162 or section 15163.

(b) The discussion of significant environmental effects in the focused EIR shall be limited to project–specific, potentially significant effects which were not discussed in the environmental analysis required under Section 15187. No discussion of growth–inducing or cumulative impacts is required. Discussion of alternatives shall be limited to alternative means of compliance, if any, with the rule or regulation.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21159.1, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15189. Compliance with Performance Standard or Treatment Requirement Rule or Regulation.

This section applies to projects consisting solely of compliance with a performance standard or treatment requirement which was the subject of an environmental analysis as described in Section 15187.

(a) If preparing a negative declaration, mitigated negative declaration or EIR on the compliance project the lead agency for the compliance project shall, to the greatest extent feasible, use the environmental analysis prepared pursuant to Section 15187. The use of numerical averages or ranges in the environmental analysis prepared under Section 15187 does not relieve the lead agency on the compliance project from its obligation to identify and evaluate the environmental effects of the project.

(b) Where the lead agency determines that an EIR is required for the compliance project, the EIR need address only the project–specific issues or other issues that were not discussed in sufficient detail in the environmental analysis prepared under Section 15187. The mitigation measures imposed by the lead agency shall be limited to addressing the significant effects on the environment of the compliance project. The discussion of alternatives shall be limited to a discussion of alternative means of compliance, if any, with the rule or regulation.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21159.2, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15190. Deadlines for Compliance with Sections 15188 and 15189.

(a) The lead agency for a compliance project under either Section 15188 or Section 15189 shall determine whether an EIR or negative declaration should be prepared within 30 days of its determination that the application for the project is complete.

(b) Where the EIR will be prepared under contract to the lead agency for the compliance project, the agency shall issue a request for proposal for preparation of the EIR not later than 30 days after the deadline for response to the notice of preparation has expired. The contract shall be awarded within 30 days of the response date on the request for proposals.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21159.3, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

Article 13. Review and Evaluation of EIRs and Negative Declarations

§ 15200. Purposes of Review.

The purposes of review of EIRs and negative declarations include:

(a) Sharing expertise,

(b) Disclosing agency analyses,

(c) Checking for accuracy,

(d) Detecting omissions,

(e) Discovering public concerns, and

(f) Soliciting counter proposals.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21000, 21108 and 21152, Public Resources Code; *Environmental Defense Fund* v. *Coastside County Water District* (1972) 27 Cal. App. 3d 695; *County of Inyo* v. *City of Los Angeles* (1977) 71 Cal. App. 3d 185.

HISTORY

1. New Article 13 (Sections 15201–15203) filed 2–2–78; effective thirtieth day thereafter (Register 78, No. 5).
2. Repealer of Article 13 (Sections 15201–15203) and new Article 13 (Sections 15200–15209) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
3. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15201. Public Participation.

Public participation is an essential part of the CEQA process. Each public agency should include provisions in its CEQA procedures for wide public involvement, formal and informal, consistent with its existing activities and procedures, in order to receive and evaluate public reactions to environmental issues related to the agency's activities. Such procedures should include, whenever possible, making environmental information available in electronic format on the Internet, on a web site maintained or utilized by the public agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21000, 21082, 21108 and 21152, Public Resources Code; *Environmental Defense Fund* v. *Coastside County Water District* (1972) 27 Cal. App. 3d 695; *People* v. *County of Kern* (1974) 39 Cal. App. 3d 830; *County of Inyo* v. *City of Los Angeles* (1977) 71 Cal. App. 3d 185.

HISTORY

1. Amendment filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15202. Public Hearings.

(a) CEQA does not require formal hearings at any stage of the environmental review process. Public comments may be restricted to written communications.

(b) If an agency provides a public hearing on its decision to carry out or approve a project, the agency should include environmental review as one of the subjects for the hearing.

(c) A public hearing on the environmental impact of a project should usually be held when the lead agency determines it would facilitate the purposes and goals of CEQA to do so. The hearing may be held in conjunction with and as a part of normal planning activities.

(d) A draft EIR or negative declaration should be used as a basis for discussion at a public hearing. The hearing may be held at a place where public hearings are regularly conducted by the lead agency or at another location expected to be convenient to the public.

(e) Notice of all public hearings shall be given in a timely manner. This notice may be given in the same form and time as notice for other regularly conducted public hearings of the public agency. To the extent that the public agency maintains an Internet web site, notice of all public hearings should be made available in electronic format on that site.

(f) A public agency may include, in its implementing procedures, procedures for the conducting of public hearings pursuant to this section. The procedures may adopt existing notice and hearing requirements of the public agency for regularly conducted legislative, planning, and other activities.

(g) There is no requirement for a public agency to conduct a public hearing in connection with its review of an EIR prepared by another public agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21000, 21082, 21108 and 21152, Public Resources Code; *Concerned Citizens of Palm Desert, Inc.* v. *Board of Supervisors* (1974) 38 Cal. App. 3d 272.

HISTORY

1. Amendment of subsection (e) filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

15203. Adequate Time for Review and Comment.

The lead agency shall provide adequate time for other public agencies and members of the public to review and comment on a draft EIR or negative declaration that it has prepared.

(a) Public agencies may establish time periods for review in their implementing procedures and shall notify the public and reviewing agencies of the time for receipt of comments on EIRs. These time periods shall be consistent with applicable statutes, the State CEQA Guidelines, and applicable clearinghouse review periods.

(b) A review period for an EIR does not require a halt in other planning or evaluation activities related to a project. Planning should continue in conjunction with environmental evaluation.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21082, 21108 and 21152, Public Resources Code. Formerly Sections 15160(a) and (e).

§ 15204. Focus of Review.

(a) In reviewing draft EIRs, persons and public agencies should focus on the sufficiency of the document in identifying and analyzing the possible impacts on the environment and ways in which the significant effects of the project might be avoided or mitigated. Comments are most helpful when they suggest additional specific alternatives or mitigation measures that would provide better ways to avoid or mitigate the significant environmental effects. At the same time, reviewers should be aware that the adequacy of an EIR is determined in terms of what is reasonably feasible, in light of factors such as the magnitude of the project at issue, the severity of its likely environmental impacts, and the geographic scope of the project. CEQA does not require a lead agency to conduct every test or perform all research, study, and experimentation recommended or demanded by commentors. When responding to comments, lead agencies need only respond to significant environmental issues and do not need to provide all information requested by reviewers, as long as a good faith effort at full disclosure is made in the EIR.

(b) In reviewing negative declarations, persons and public agencies should focus on the proposed finding that the project will not have a significant effect on the environment. If persons and public agencies believe that the project may have a significant effect, they should:

(1) Identify the specific effect,

(2) Explain why they believe the effect would occur, and

(3) Explain why they believe the effect would be significant.

(c) Reviewers should explain the basis for their comments, and should submit data or references offering facts, reasonable assumptions based on facts, or expert opinion supported by facts in support of the comments. Pursuant to Section 15064, an effect shall not be considered significant in the absence of substantial evidence.

(d) Reviewing agencies or organizations should include with their comments the name of a contact person who would be available for later consultation if necessary. Each responsible agency and trustee agency shall focus its comments on environmental information germane to that agency's statutory responsibility.

(e) This section shall not be used to restrict the ability of reviewers to comment on the general adequacy of a document or of the lead agency to reject comments not focused as recommended by this section.

(f) Prior to the close of the public review period for an EIR or mitigated negative declaration, a responsible or trustee agency which has identified significant effects on the environment may submit to the lead agency proposed mitigation measures which would address those significant effects. Any such measures shall be limited to impacts affecting those resources which are subject to the statutory authority of that agency. If mitigation measures are submitted, the responsible or trustee agency shall either submit to the lead agency complete and detailed performance objectives for the mitigation measures, or shall refer the lead agency to appropriate, readily available guidelines or reference documents which meet the same purpose.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080, 21081.6, 21080.4, 21104 and 21153, Public Resources Code, Formerly Section 15161; *San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus* (1996) 42 Cal.App.4th 608; and *Leonoff v. Monterey County Board of Supervisors* (1990) 222 Cal.App.3d 1337.

HISTORY

1. Amendment of section and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15205. Review by State Agencies.

(a) Draft EIRs and negative declarations to be reviewed by state agencies shall be submitted to the State Clearinghouse, 1400 Tenth Street, Sacramento, California 95814. When submitting such documents to the State Clearinghouse, the public agency shall include, in addition to the printed copy, a copy of the document in electronic form on a diskette or by electronic mail transmission, if available.

(b) The following environmental documents shall be submitted to the State Clearinghouse for review by state agencies:

(1) Draft EIRs and negative declarations prepared by a state agency where such agency is a lead agency.

(2) Draft EIRs and negative declarations prepared by a public agency where a state agency is a responsible agency, trustee agency, or otherwise has jurisdiction by law with respect to the project.

(3) Draft EIRs and negative declarations on projects identified in Section 15206 as being of statewide, regional, or areawide significance.

(4) Draft EIRs, environmental assessments, and findings of no significant impact prepared pursuant to NEPA, the Federal Guidelines (Title 40 CFR, Part 1500, commencing with Section 1500.1).

(c) Public agencies may send environmental documents to the State Clearinghouse for review where a state agency has special expertise with regard to the environmental impacts involved. The areas of statutory authorities of state agencies are identified in Appendix B. Any such environmental documents submitted to the State Clearinghouse shall include, in addition to the printed copy, a copy of the document in electronic format, on a diskette or by electronic mail transmission, if available.

(d) When an EIR or negative declaration is submitted to the State Clearinghouse for review, the review period set by the lead agency shall be at least as long as the period provided in the state review system oper-

ated by the State Clearinghouse. In the state review system, the normal review period is 45 days for EIRs and 30 days for negative declarations. In exceptional circumstances, the State Clearinghouse may set shorter review periods when requested by the lead agency.

(e) The number of copies of an EIR or negative declaration submitted to the State Clearinghouse shall not be less than ten unless the State Clearinghouse approves a lower number in advance.

(f) While the lead agency is encouraged to contact the regional and district offices of state responsible agencies, the lead agency must, in all cases, submit documents to the State Clearinghouse for distribution in order to comply with the review requirements of this section.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083, 21104 and 21153, Public Resources Code. Formerly Section 15161.5.

HISTORY

1. Amendment of subsections (a) and (c) filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15206. Projects of Statewide, Regional, or Areawide Significance.

(a) Projects meeting the criteria in this section shall be deemed to be of statewide, regional, or areawide significance.

(1) A draft EIR or negative declaration prepared by any public agency on a project described in this section shall be submitted to the State Clearinghouse and should be submitted also to the appropriate metropolitan area council of governments for review and comment.

(2) When such documents are submitted to the State Clearinghouse, the public agency shall include, in addition to the printed copy, a copy of the document in electronic format on a diskette or by electronic mail transmission, if available.

(b) The lead agency shall determine that a proposed project is of statewide, regional, or areawide significance if the project meets any of the following criteria:

(1) A proposed local general plan, element, or amendment thereof for which an EIR was prepared. If a negative declaration was prepared for the plan, element, or amendment, the document need not be submitted for review.

(2) A project has the potential for causing significant effects on the environment extending beyond the city or county in which the project would be located. Examples of the effects include generating significant amounts of traffic or interfering with the attainment or maintenance of state or national air quality standards. Projects subject to this subsection include:

(A) A proposed residential development of more than 500 dwelling units.

(B) A proposed shopping center or business establishment employing more than 1,000 persons or encompassing more than 500,000 square feet of floor space.

(C) A proposed commercial office building employing more than 1,000 persons or encompassing more than 250,000 square feet of floor space.

(D) A proposed hotel/motel development of more than 500 rooms.

(E) A proposed industrial, manufacturing, or processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or encompassing more than 650,000 square feet of floor area.

(3) A project which would result in the cancellation of an open space contract made pursuant to the California Land Conservation Act of 1965 (Williamson Act) for any parcel of 100 or more acres.

(4) A project for which an EIR and not a negative declaration was prepared which would be located in and would substantially impact the following areas of critical environmental sensitivity:

(A) The Lake Tahoe Basin.

(B) The Santa Monica Mountains Zone as defined by Section 74663 of the Government Code.

(C) The California Coastal Zone as defined in, and mapped pursuant to, Section 30103 of the Public Resources Code.

(D) An area within 1/4 mile of a wild and scenic river as defined by Section 5093.5 of the Public Resources Code.

(E) The Sacramento–San Joaquin Delta, as defined in Water Code Section 12220.

(F) The Suisun Marsh as defined in Public Resources Code Section 29101.

(G) The jurisdiction of the San Francisco Bay Conservation and Development Commission as defined in Government Code Section 66610.

(5) A project which would substantially affect sensitive wildlife habitats including but not limited to riparian lands, wetlands, bays, estuaries, marshes, and habitats for endangered, rare and threatened species as defined by Section 15380 of this Chapter.

(6) A project which would interfere with attainment of regional water quality standards as stated in the approved areawide waste treatment management plan.

(7) A project which would provide housing, jobs, or occupancy for 500 or more people within 10 miles of a nuclear power plant.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference. Section 21083, Public Resources Code.

HISTORY

1. Amendment of subsection (b)(5) filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
2. New subsection (a)(1) designator and new subsection (a)(2) filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15207. Failure to Comment.

If any public agency or person who is consulted with regard to an EIR or negative declaration fails to comment within a reasonable time as specified by the lead agency, it shall be assumed, absent a request for a specific extension of time, that such agency or person has no comment to make. Although the lead agency need not respond to late comments, the lead agency may choose to respond to them.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21104 and 21153, Public Resources Code; *Cleary* v. *County of Stanislaus* (1981) 118 Cal. App. 3d 348. Formerly Section 15162.

§ 15208. Retention and Availability of Comments.

Comments received through the consultation process shall be retained for a reasonable period and available for public inspection at an address given in the final EIR. Comments which may be received on a draft EIR or negative declaration under preparation shall also be considered and kept on file.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21104, 21082.1 and 21153, Public Resources Code; Section 4, Chapter 480, Statutes of 1981; *People* v. *County of Kern* (1974) 39 Cal. App. 3d 830.

§ 15209. Comments on Initiative of Public Agencies.

Every public agency may comment on environmental documents dealing with projects which affect resources with which the agency has special expertise regardless of whether its comments were solicited or whether the effects fall within the legal jurisdiction of the agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21104 and 21153, Public Resources Code.

Article 14. Projects Also Subject to the National Environmental Policy Act (NEPA)

§ 15220. General.

This article applies to projects that are subject to both CEQA and NEPA. NEPA applies to projects which are carried out, financed, or approved in whole or in part by federal agencies. Accordingly, this article applies to projects which involve one or more state or local agencies and one or more federal agencies.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.5, 21083.6 and 21083.7, Public Resources Code; National Environmental Policy Act of 1969, Public Law 91–190 as amended, 42 U.S.C.A. 4321–4347; NEPA Regulations, 40 Code of Federal Regulations (C.F.R.) Parts 1500–1508.

History

1. New Article 14 (Sections 15220–15228) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15221. NEPA Document Ready Before CEQA Document.

(a) When a project will require compliance with both CEQA and NEPA, state or local agencies should use the EIS or finding of no significant impact rather than preparing an EIR or negative declaration if the following two conditions occur:

(1) An EIS or finding of no significant impact will be prepared before an EIR or negative declaration would otherwise be completed for the project; and

(2) The EIS or finding of no significant impact complies with the provisions of these guidelines.

(b) Because NEPA does not require separate discussion of mitigation measures or growth inducing impacts, these points of analysis will need to be added, supplemented, or identified before the EIS can be used as an EIR.

Note: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.5 and 21083.7, Public Resources Code; Section 102(2)(C) of NEPA, 43 U.S.C.A. 4322(2)(C).

§ 15222. Preparation of Joint Documents.

If a lead agency finds that an EIS or finding of no significant impact for a project would not be prepared by the federal agency by the time when the lead agency will need to consider an EIR or negative declaration, the lead agency should try to prepare a combined EIR–EIS or negative declaration–finding of no significant impact. To avoid the need for the federal agency to prepare a separate document for the same project, the lead agency must involve the federal agency in the preparation of the joint document. This involvement is necessary because federal law generally prohibits a federal agency from using an EIR prepared by a state agency unless the federal agency was involved in the preparation of the document.

Note: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.5 and 21083.7, Public Resources Code; Section 102(2)(D) of NEPA, 43 U.S.C.A. 4322 (2)(D); 40 C.F.R. Part 1506.2.

§ 15223. Consultation with Federal Agencies.

When it plans to use an EIS or finding of no significant impact or to prepare such a document jointly with a federal agency, the lead agency shall consult as soon as possible with the federal agency.

Note: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.5 and 21083.7, Public Resources Code.

§ 15224. Time Limits.

Where a project will be subject to both CEQA and the National Environmental Policy Act, the one year time limit and the 105 day time limit may be waived pursuant to Section 15110.

Note: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21083.6, Public Resources Code.

§ 15225. Circulation of Documents.

(a) Where the federal agency circulated the EIS or finding of no significant impact for public review as broadly as state or local law may require and gave notice meeting the standards in Section 15072(a) or 15087(a), the lead agency under CEQA may use the federal document in the place of an EIR or negative declaration without recirculating the federal document for public review. One review and comment period is enough. Prior to using the federal document in this situation, the lead agency shall give notice that it will use the federal document in the place of an EIR or negative declaration and that it believes that the federal document meets the requirements of CEQA. The notice shall be given in the same manner as a notice of the public availability of a draft EIR under Section 15087.

(b) If an EIS has been prepared and filed pursuant to NEPA on the closure and reuse of a military base and the Lead Agency decides that the EIS does not fully meet the requirements of CEQA or has not been circulated for public review as state and local law may require, the Lead Agency responsible for preparation of an EIR for a reuse plan for the same base may proceed in the following manner:

(1) Prepare and circulate a notice of preparation pursuant to Section 15082. The notice shall include a description of the reuse plan, a copy of the EIS, an address to which to send comments, and the deadline for submitting comments. The notice shall state that the lead agency intends to utilize the EIS as a draft EIR and requests comments on whether the EIS provides adequate information to serve as a draft EIR and what specific additional information, if any, is necessary.

(2) Upon the close of the comment period, the lead agency may proceed with preparation and circulation for comment of the draft EIR for the reuse plan. To the greatest extent feasible, the lead agency shall avoid duplication and utilize the EIS or information in the EIS as all or part of the draft EIR. The EIR shall be completed in compliance with the provisions of CEQA.

Note: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.5, 21083.8 and 21092, Public Resources Code.

History

1. New subsection (a) designator, new subsections (b)–(b)(2), and amendment of Note filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15226. Joint Activities.

State and local agencies should cooperate with federal agencies to the fullest extent possible to reduce duplication between the California Environmental Quality Act and the National Environmental Policy Act. Such cooperation should, to the fullest extent possible, include:

(a) Joint planning processes,

(b) Joint environmental research and studies,

(c) Joint public hearings,

(d) Joint environmental documents.

Note: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.5 and 21083.7, Public Resources Code; 40 C.F.R. Part 1506.2.

§ 15227. State Comments on a Federal Project.

When a state agency officially comments on a proposed federal project which may have a significant effect on the environment, the comments shall include or reference a discussion of the material specified in Section 15126. An EIS on the federal project may be referenced to meet the requirements of this section.

Note: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21101, Public Resources Code.

§ 15228. Where Federal Agency Will Not Cooperate.

Where a federal agency will not cooperate in the preparation of joint document and will require separate NEPA compliance for the project at a later time, the state or local agency should persist in efforts to cooperate with the federal agency. Because NEPA expressly allows federal agencies to use environmental documents prepared by an agency of statewide jurisdiction, a local agency should try to involve a state agency in helping prepare an EIR or negative declaration for the project. In this way there will be a greater chance that the federal agency may later use the CEQA document and not require the applicant to pay for preparation of a second document to meet NEPA requirements at a later time.

Note: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21083.5, Public Resources Code; Section 102(2)(D) of NEPA, 42 U.S.C.A. 4322(2)(D).

§ 15229. Baseline Analysis for Military Base Reuse Plan EIRs.

When preparing and certifying an EIR for a plan for the reuse of a military base, including when utilizing an Environmental Impact Statement pursuant to Section 21083.5 of the Public Resources Code, in addition to the procedure authorized pursuant to subdivision (b) of Section 21083.8 of the Public Resources Code, the determination of whether the reuse plan may have a significant effect on the environment may, at the discretion of the lead agency, be based upon the physical conditions which were present at the time that the federal decision for the closure or realignment of the base or reservation became final. These conditions shall be referred to as the "baseline physical conditions." Impacts which do not exceed the baseline physical conditions shall not be considered significant.

(a) Prior to circulating a draft EIR pursuant to the provisions of this Section, the lead agency shall do all of the following, in order:

(1) Prepare proposed baseline physical conditions, identify pertinent responsible and trustee agencies and consult with those agencies prior to the public hearing required by subdivision (a)(2) as to the application of their regulatory authority and permitting standards to the proposed baseline physical conditions, the proposed reuse plan, and specific, planned future nonmilitary land uses of the base or reservation. The affected agencies shall have not less than 30 days prior to the public hearing to review the proposed baseline physical conditions and the proposed reuse plan and to submit their comments to the lead agency.

(2) Hold a public hearing at which is discussed the federal EIS prepared for, or being prepared for, the closure or realignment of the military base or reservation. The discussion shall include the significant effects on the environment, if any, examined in the EIS, potential methods of mitigating those effects, including feasible alternatives, and the mitigative effects of federal, state, and local laws applicable to future nonmilitary activities. Prior to the close of the hearing, the lead agency shall specify whether it will adopt any of the baseline physical conditions for the reuse plan EIR and identify those conditions. The lead agency shall specify particular baseline physical conditions, if any, which it will examine in greater detail than they were examined in the EIS. Notice of the hearing shall be given pursuant to Section 15087. The hearing may be continued from time to time.

(3) Prior to the close of the hearing, the lead agency shall do all of the following:

(A) Specify the baseline physical conditions which it intends to adopt for the reuse plan EIR, and specify particular physical conditions, if any, which it will examine in greater detail than were examined in the EIS.

(B) State specifically how it intends to integrate its discussion of the baseline physical conditions in the EIR with the reuse planning process, taking into account the adopted environmental standards of the community, including but not limited to, the adopted general plan, specific plan or redevelopment plan, and including other applicable provisions of adopted congestion management plans, habitat conservation or natural communities conservation plans, air quality management plans, integrated waste management plans, and county hazardous waste management plans.

(C) State the specific economic or social reasons, including but not limited to, new job creation, opportunities for employment of skilled workers, availability of low and moderate–income housing, and economic continuity which support selection of the baseline physical conditions.

(b) An EIR prepared under this section should identify any adopted baseline physical conditions in the environmental setting section. The baseline physical conditions should be cited in discussions of effects. The no–project alternative analyzed in an EIR prepared under this section shall discuss the conditions on the base as they exist at the time of preparation, as well as what could be reasonably expected to occur in the foreseeable future if the reuse plan were not approved, based on current plans and consistent with available infrastructure and services.

(c) All public and private activities taken pursuant to or in furtherance of a reuse plan for which an EIR was prepared and certified pursuant to this section shall be deemed to be a single project. A subsequent or supplemental EIR shall be required only if the lead agency determines that any of the circumstances described in Section 15162 or 15163 exist.

(d) Limitations:

(1) Nothing in this section shall in any way limit the scope of review or determination of significance of the presence of hazardous or toxic wastes, substances, and materials, including but not limited to, contaminated soils and groundwater. The regulation of hazardous or toxic wastes, substances, and materials shall not be constrained by this section.

(2) This section does not apply to hazardous waste regulation and remediation projects undertaken pursuant to Chapter 6.5 (commencing with Section 25100) or Chapter 6.8 (commencing with Section 25300) of Division 20 of the Health and Safety Code or pursuant to the Porter–Cologne Water Quality Control Act (Water Code Section 13000, et seq.)

(3) All subsequent development at the military base or reservation shall be subject to all applicable federal, state, or local laws, including but not limited to, those relating to air quality, water quality, traffic, threatened and endangered species, noise, and hazardous or toxic wastes, substances, or materials.

(e) "Reuse plan" means the initial plan for the reuse of military base adopted by a local government, including a redevelopment agency or joint powers authority, in the form of a general plan, general plan amendment, specific plan, redevelopment plan, or other planning document. For purposes of this section, a reuse plan also shall include a statement of development policies, a diagram or diagrams illustrating its provisions, including a designation of the proposed general distribution, location, and development intensity for housing, business, industry, open space, recreation, natural resources, public buildings and grounds, roads, and other transportation facilities, infrastructure, and other categories of proposed uses, whether public or private.

(f) This section may be applied to any reuse plan EIR for which a notice of preparation is issued within one year from the date that the federal record of decision was rendered for the military base or reservation closure or realignment and reuse, or prior to January 1, 1997, whichever is later, but only if the EIR is completed and certified within five years from the date that the federal record of decision was rendered.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

Article 15. Litigation

§ 15230. Time Limits and Criteria.

Litigation under CEQA must be handled under the time limits and criteria described in Sections 21167 et seq. of the Public Resources Code and Section 15112 of these guidelines in addition to provisions in this article.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21167 et seq., Public Resources Code.

HISTORY

1. New Article 15 (Sections 15230–15233) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15231. Adequacy of EIR or Negative Declaration for Use by Lead and Responsible Agencies.

A final EIR prepared by a lead agency or a negative declaration adopted by a lead agency shall be conclusively presumed to comply with CEQA for purposes of use by responsible agencies which were consulted pursuant to Sections 15072 or 15082 unless one of the following conditions occurs:

(a) The EIR or negative declaration is finally adjudged in a legal proceeding not to comply with the requirements of CEQA, or

(b) A subsequent EIR is made necessary by Section 15162 of these guidelines.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080.1, 21166, 21167.2 and 21167.3, Public Resources Code.

HISTORY

1. Amendment of section heading filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15232. Request for Hearing.

In a writ of mandate proceeding challenging approval of a project under CEQA, the petitioner shall, within 90 days of filing the petition, request a hearing or otherwise be subject to dismissal on the court's own motion or on the motion of any party to the suit.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21167.4, Public Resources Code.

§ 15233. Conditional Permits.

If a lawsuit is filed challenging an EIR or negative declaration for noncompliance with CEQA, responsible agencies shall act as if the EIR or negative declaration complies with CEQA and continue to process the application for the project according to the time limits for responsible agency action contained in Government Code Section 65952.

(a) If an injunction or a stay has been granted in the lawsuit prohibiting the project from being carried out, the responsible agency shall have authority only to disapprove the project or to grant a conditional approval of the project. A conditional approval shall constitute permission to proceed with a project only when the court action results in a final determination that the EIR or negative declaration does comply with the provisions of CEQA (Public Resources Code Section 21167.3a).

(b) If no injunction or stay is granted in the lawsuit, the responsible agency shall assume that the EIR or negative declaration fully meets the requirements of CEQA. The responsible agency shall approve or disapprove the project within the time limits described in Article 8, commencing with Section 15100, of these guidelines and described in Government Code Section 65952. An approval granted by a responsible agency in this situation provides only permission to proceed with the project at the applicant's risk prior to a final decision in the lawsuit (Public Resources Code Section 21167.3b).

Article 16. EIR Monitor

§ 15240. EIR Monitor.

The Secretary for Resources may provide for publication of a bulletin entitled "California EIR Monitor" on a subscription basis to provide public notice of amendments to the guidelines, the completion of draft EIRs, and other matters as deemed appropriate. Inquiries and subscription requests should be sent to the following address:

SECRETARY FOR RESOURCES
ATTENTION: CALIFORNIA EIR MONITOR
1416 NINTH STREET, ROOM 1311
SACRAMENTO, CALIFORNIA 95814

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21088, Public Resources Code.

HISTORY

1. New Article 16 (Section 15240) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

Article 17. Exemption for Certified State Regulatory Programs

§ 15250. General.

Section 21080.5 of the Public Resources Code provides that a regulatory program of a state agency shall be certified by the Secretary for Resources as being exempt from the requirements for preparing EIRs, negative declarations, and initial studies if the Secretary finds that the program meets the criteria contained in that code section. A certified program remains subject to other provisions in CEQA such as the policy of avoiding significant adverse effects on the environment where feasible. This article provides information concerning certified programs.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.5, Public Resources Code.

HISTORY

1. New Article 17 (Sections 15250–15253) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15251. List of Certified Programs.

The following programs of state regulatory agencies have been certified by the Secretary for Resources as meeting the requirements of Section 21080.5:

(a) The regulation of timber harvesting operations by the California Department of Forestry and the State Board of Forestry pursuant to Chapter 8, commencing with Section 4511 of Part 2 of Division 4 of the Public Resources Code.

(b) The regulatory program of the Fish and Game Commission pursuant to the Fish and Game Code.

(c) The regulatory program of the California Coastal Commission and the regional coastal commissions dealing with the consideration and granting of coastal development permits under the California Coastal Act of 1976, Division 20 (commencing with Section 30000) of the Public Resources Code.

(d) That portion of the regulatory program of the Air Resources Board which involves the adoption, approval, amendment, or repeal of standards, rules, regulations, or plans to be used in the regulatory program for the protection and enhancement of ambient air quality in California.

(e) The regulatory program of the State Board of Forestry in adopting, amending, or repealing standards, rules, regulations, or plans under the Z'berg–Nejedly Forest Practice Act, Chapter 8 (commencing with Section 4511) of Part 2 of Division 4 of the Public Resources Code.

(f) The program of the California Coastal Commission involving the preparation, approval, and certification of local coastal programs as provided in Sections 30500 through 30522 of the Public Resources Code.

(g) The Water Quality Control (Basin)/208 Planning Program of the State Water Resources Control Board and the Regional Water Quality Control Boards.

(h) The permit and planning programs of the San Francisco Bay Conservation and Development Commission under the McAteer–Petris Act, Title 7.2 (commencing with Section 66600) of the Government Code and the Suisun Marsh Preservation Act, Division 19 (commencing with Section 29000) of the Public Resources Code.

(i) The pesticide regulatory program administered by the Department of Food and Agriculture and the county agricultural commissioners insofar as the program consists of:

(1) The registration, evaluation, and classification of pesticides.

(2) The adoption, amendment, or repeal of regulations and standards for the licensing and regulation of pesticide dealers and pest control operators and advisors.

(3) The adoption, amendment, or repeal of regulations for standards dealing with the monitoring of pesticides and of the human health and environmental effects of pesticides.

(4) The regulation of the use of pesticides in agricultural and urban areas of the state through the permit system administered by the county agricultural commissioners.

(j) The regulations of weather resources management projects through the issuance of operating permits by the State Department of Water Resources pursuant to the California Weather Resources Management Act of 1978 (Water Code Sections 400 et seq.).

(k) The power plant site certification program of the State Energy Resources Conservation and Development Commission under Chapter 6 of the Warren–Alquist Act, commencing with Public Resources Code Section 25500.

(l) The regulatory program of the State Water Resources Control Board to establish instream beneficial use protection programs.

(m) That portion of the regulatory program of the South Coast Air Quality Management District which involves the adoption, amendment, and repeal of regulations pursuant to the provisions of the Health and Safety Code.

(n) The program of the Delta Protection Commission involving the preparation and adoption of a Resource Management Plan for the Sacramento–San Joaquin Delta (Pub. Resources Code § 29760 ff.), and the Commission's review and action on general plan amendments proposed by local governments to make their plans consistent with the provisions

of the Commission's Resource Management Plan (Pub. Resources Code § 29763.5).

(o) The program of the Department of Fish and Game for the adoption of regulations under the Fish and Game Code.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.5, Public Resources Code.

HISTORY

1. New subsection (m) filed 3–1–89; operative 3–31–89 (Register 89, No. 10).
2. New subsection (n) filed 11–9–94; operative 12–9–94 (Register 94, No. 45).
3. New subsection (o) filed 8–27–98; operative 8–27–98 pursuant to Government Code section 11343.4(d) (Register 98, No. 35).

§ 15252. Substitute Document.

The document used as a substitute for an EIR or negative declaration in a certified program shall include at least the following items:

(a) A description of the proposed activity, and

(b) Either:

(1) Alternatives to the activity and mitigation measures to avoid or reduce any significant or potentially significant effects that the project might have on the environment, or

(2) A statement that the agency's review of the project showed that the project would not have any significant or potentially significant effects on the environment and therefore no alternatives or mitigation measures are proposed to avoid or reduce any significant effects on the environment. This statement shall be supported by a checklist or other documentation to show the possible effects that the agency examined in reaching this conclusion.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.5, Public Resources Code.

§ 15253. Use of an EIR Substitute by a Responsible Agency.

(a) An environmental analysis document prepared for a project under a certified program listed in Section 15251 shall be used by another agency granting an approval for the same project where the conditions in Subsection (b) have been met. In this situation, the certified agency shall act as lead agency, and the other permitting agencies shall act as responsible agencies using the certified agency's document.

(b) The conditions under which a public agency shall act as a responsible agency when approving a project using an environmental analysis document prepared under a certified program in the place of an EIR or negative declaration are as follows:

(1) The certified agency is the first agency to grant a discretionary approval for the project.

(2) The certified agency consults with the responsible agencies, but the consultation need not include the exchange of written notices.

(3) The environmental analysis document identifies:

(A) The significant environmental effects within the jurisdiction or special expertise of the responsible agency.

(B) Alternatives or mitigation measures that could avoid or reduce the severity of the significant environmental effects.

(4) Where written notices were not exchanged in the consultation process, the responsible agency was afforded the opportunity to participate in the review of the property by the certified agency in a regular manner designed to inform the certified agency of the concerns of the responsible agency before release of the EIR substitute for public review.

(5) The certified agency established a consultation period between the certified agency and the responsible agency that was at least as long as the period allowed for public review of the EIR substitute document.

(6) The certified agency exercised the powers of a lead agency by considering all the significant environmental effects of the project and making a finding under Section 15091 for each significant effect.

(c) Certified agencies are not required to adjust their activities to meet the criteria in Subsection (b). Where a certified agency does not meet the criteria in Subsection (b):

(1) The substitute document prepared by the agency shall not be used by other permitting agencies in the place of an EIR or negative declaration, and

(2) Any other agencies granting approvals for the project shall comply with CEQA in the normal manner. A permitting agency shall act as a lead agency and prepare an EIR or a negative declaration. Other permitting agencies, if any, shall act as responsible agencies and use the EIR or negative declaration prepared by the lead agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002.1(d), 21080.5 and 21165, Public Resources Code.

Article 18. Statutory Exemptions

§ 15260. General.

This article describes the exemptions from CEQA granted by the Legislature. The exemptions take several forms. Some exemptions are complete exemptions from CEQA. Other exemptions apply to only part of the requirements of CEQA, and still other exemptions apply only to the timing of CEQA compliance.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b), Public Resources Code.

HISTORY

1. New Article 18 (Sections 15260–15277) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15261. Ongoing Project.

(a) If a project being carried out by a public agency was approved prior to November 23, 1970, the project shall be exempt from CEQA unless either of the following conditions exists:

(1) A substantial portion of public funds allocated for the project have not been spent, and it is still feasible to modify the project to mitigate potentially adverse environmental effects, or to choose feasible alternatives to the project, including the alternative of "no project" or halting the project; provided that a project subject to the National Environmental Policy Act (NEPA) shall be exempt from CEQA as an on–going project if, under regulations promulgated under NEPA, the project would be too far advanced as of January 1, 1970, to require preparation of an EIS.

(2) A public agency proposes to modify the project in such a way that the project might have a new significant effect on the environment.

(b) A private project shall be exempt from CEQA if the project received approval of a lease, license, certificate, permit, or other entitlement for use from a public agency prior to April 5, 1973, subject to the following provisions:

(1) CEQA does not prohibit a public agency from considering environmental factors in connection with the approval or disapproval of a project, or from imposing reasonable fees on the appropriate private person or entity for preparing an environmental report under authority other than CEQA. Local agencies may require environmental reports for projects covered by this paragraph pursuant to local ordinances during this interim period.

(2) Where a project was approved prior to December 5, 1972, and prior to that date the project was legally challenged for noncompliance with CEQA, the project shall be bound by special rules set forth in Section 21170 of CEQA.

(3) Where a private project has been granted a discretionary governmental approval for part of the project before April 5, 1973, and another or additional discretionary governmental approvals after April 5, 1973, the project shall be subject to CEQA only if the approval or approvals after April 5, 1973, involve a greater degree of responsibility or control over the project as a whole than did the approval or approvals prior to that date.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21169, 21170 and 21171, Public Resources Code; *County of Inyo v. Yorty*, 32 Cal. App. 3d 795.

§ 15262. Feasibility and Planning Studies.

A project involving only feasibility or planning studies for possible future actions which the agency, board, or commission has not approved, adopted, or funded does not require the preparation of an EIR or negative declaration but does require consideration of environmental factors. This

§ 15271. Early Activities Related to Thermal Power Plants.

(a) CEQA does not apply to actions undertaken by a public agency relating to any thermal power plant site or facility, including the expenditure, obligation, or encumbrance of funds by a public agency for planning, engineering, or design purposes, or for the conditional sale or purchase of equipment, fuel, water (except groundwater), steam, or power for such a thermal power plant, if the thermal power plant site and related facility will be the subject of an EIR or negative declaration or other document or documents prepared pursuant to a regulatory program certified pursuant to Public Resources Code Section 21080.5, which will be prepared by:

(1) The State Energy Resources Conservation and Development Commission,

(2) The Public Utilities Commission, or

(3) The city or county in which the power plant and related facility would be located.

(b) The EIR, negative declaration, or other document prepared for the thermal power plant site or facility, shall include the environmental impact, if any, of the early activities described in this section.

(c) This section acts to delay the timing of CEQA compliance from the early activities of a utility to the time when a regulatory agency is requested to approve the thermal power plant and shifts the responsibility for preparing the document to the regulatory agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 15080(b)(6), Public Resources Code.

§ 15272. Olympic Games.

CEQA does not apply to activities or approvals necessary to the bidding for, hosting or staging of, and funding or carrying out of, Olympic Games under the authority of the International Olympic Committee, except for the construction of facilities necessary for such Olympic Games. If the facilities are required by the International Olympic Committee as a condition of being awarded the Olympic Games, the lead agency need not discuss the "no project" alternative in an EIR with respect to those facilities.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b)(7), Public Resources Code.

§ 15273. Rates, Tolls, Fares, and Charges.

(a) CEQA does not apply to the establishment, modification, structuring, restructuring, or approval of rates, tolls, fares, and other charges by public agencies which the public agency finds are for the purpose of:

(1) Meeting operating expenses, including employee wage rates and fringe benefits,

(2) Purchasing or leasing supplies, equipment, or materials,

(3)Meeting financial reserve needs and requirements,

(4) Obtaining funds for capital projects, necessary to maintain service within existing service areas, or

(5) Obtaining funds necessary to maintain such intra–city transfers as are authorized by city charter.

(b) Rate increases to fund capital projects for the expansion of a system remain subject to CEQA. The agency granting the rate increase shall act either as the lead agency if no other agency has prepared environmental documents for the capital project or as a responsible agency if another agency has already complied with CEQA as the lead agency.

(c) The public agency shall incorporate written findings in the record of any proceeding in which an exemption under this section is claimed setting forth with specificity the basis for the claim of exemption.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b)(8), Public Resources Code.

§ 15274. Family Day Care Homes.

(a) CEQA does not apply to establishment or operation of a large family day care home, which provides in–home care for up to twelve children, as defined in Section 1596.78 of the Health and Safety Code.

(b) Under the Health and Safety Code, local agencies cannot require use permits for the establishment or operation of a small family day care home, which provides in–home care for up to six children, and the establishment or operation of a small family day care home is a ministerial action which is not subject to CEQA.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21083, Public Resources Code.

HISTORY

1. Amendment of section heading, repealer and new section, and amendment of NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15275. Specified Mass Transit Projects.

CEQA does not apply to the following mass transit projects:

(a) The institution or increase of passenger or commuter service on rail lines or high–occupancy vehicle lanes already in use, including the modernization of existing stations and parking facilities;

(b) Facility extensions not to exceed four miles in length which are required for transfer of passengers from or to exclusive public mass transit guideway or busway public transit services.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b)(11), (12), and (13), Public Resources Code.

§ 15276. Transportation Improvement and Congestion Management Programs.

(a) CEQA does not apply to the development or adoption of a regional transportation improvement program or the state transportation improvement program. Individual projects developed pursuant to these programs shall remain subject to CEQA.

(b) CEQA does not apply to preparation and adoption of a congestion management program by a county congestion management agency pursuant to Government Code Section 65089, et seq.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b)(13), Public Resources Code.

HISTORY

1. Amendment of section heading, section and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15277. Projects Located Outside California.

CEQA does not apply to any project or portion thereof located outside of California which will be subject to environmental impact review pursuant to the National Environmental Policy Act of 1969 or pursuant to a law of that state requiring preparation of a document containing essentially the same points of analysis as in an environmental impact statement prepared under the National Environmental Policy Act of 1969. Any emissions or discharges that would have a significant effect on the environment in the State of California are subject to CEQA where a California public agency has authority over the emissions or discharges.

NOTE: Authority cited: Sections 21083 and 2187, Public Resources Code. Reference: Section 21080(b)(15), Public Resources Code; 58 Opinions of the California Attorney General 614 (S.O. 75/50).

§ 15278. Application of Coatings.

(a) CEQA does not apply to a discretionary decision by an air quality management district for a project consisting of the application of coatings within an existing facility at an automotive manufacturing plant if the district finds all of the following:

(1) The project will not cause a net increase in any emissions of any pollutant for which a national or state ambient air quality standard has been established after the internal emission accounting for previous emission reductions achieved at the facility and recognized by the district.

(2) The project will not cause a net increase in adverse impacts of toxic air contaminants as determined by a health risk assessment. The term "net increase in adverse impacts of toxic air contaminants as determined by a health risk assessment" shall be determined in accordance with the rules and regulations of the district.

(3) The project will not cause any other adverse effect on the environment.

(b) The district shall provide a 10–day notice, at the time of the issuance of the permit, of any such exemption. Notice shall be published in two newspapers of general circulation in the area of the project and shall be mailed to any person who makes a written request for such a no-

section does not apply to the adoption of a plan that will have a legally binding effect on later activities.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21102 and 21150, Public Resources Code.

§ 15263. Discharge Requirements.

The State Water Resources Control Board and the regional boards are exempt from the requirement to prepare an EIR or a negative declaration prior to the adoption of waste discharge requirements, except requirements for new sources as defined in the Federal Water Pollution Control Act or in other acts which amend or supplement the Federal Water Pollution Control Act. The term "waste discharge requirements" as used in this section is the equivalent of the term "permits" as used in the Federal Water Pollution Control Act.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 13389, Water Code.

§ 15264. Timberland Preserves.

Local agencies are exempt from the requirement to prepare an EIR or negative declaration on the adoption of timberland preserve zones under Government Code Sections 51100 et seq. (Gov. Code, Sec. 51119).

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 51119, Government Code.

§ 15265. Adoption of Coastal Plans and Programs.

(a) CEQA does not apply to activities and approvals pursuant to the California Coastal Act (commencing with Section 30000 of the Public Resources Code) by:

(1) Any local government, as defined in Section 30109 of the Public Resources Code, necessary for the preparation and adoption of a local coastal program, or

(2) Any state university or college, as defined in Section 30119, as necessary for the preparation and adoption of a long–range land use development plan.

(b) CEQA shall apply to the certification of a local coastal program or long–range land use development plan by the California Coastal Commission.

(c) This section shifts the burden of CEQA compliance from the local agency or the state university or college to the California Coastal Commission. The Coastal Commission's program of certifying local coastal programs and long–range land use development plans has been certified under Section 21080.5, Public Resources Code. See Section 15192.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.9, Public Resources Code.

§ 15266. General Plan Time Extension.

CEQA shall not apply to the granting of an extension of time by the Office of Planning and Research to a city or county for the preparation and adoption of one or more elements of a city or county general plan.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.10(a), Public Resources Code.

§ 15267. Financial Assistance to Low or Moderate Income Housing.

CEQA does not apply to actions taken by the Department of Housing and Community Development to provide financial assistance for the development and construction of residential housing for persons and families of low or moderate income, as defined in Section 50093 of the Health and Safety Code. The residential project which is the subject of the application for financial assistance will be subject to CEQA when approvals are granted by another agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.10(b), Public Resources Code.

§ 15268. Ministerial Projects.

(a) Ministerial projects are exempt from the requirements of CEQA. The determination of what is "ministerial" can most appropriately be made by the particular public agency involved based upon its analysis of its own laws, and each public agency should make such determination either as a part of its implementing regulations or on a case–by–case basis.

(b) In the absence of any discretionary provision contained in the local ordinance or other law establishing the requirements for the permit, license, or other entitlement for use, the following actions shall be presumed to be ministerial:

(1) Issuance of building permits.

(2) Issuance of business licenses.

(3) Approval of final subdivision maps.

(4) Approval of individual utility service connections and disconnections.

(c) Each public agency should, in its implementing regulations or ordinances, provide an identification or itemization of its projects and actions which are deemed ministerial under the applicable laws and ordinances.

(d) Where a project involves an approval that contains elements of both a ministerial action and a discretionary action, the project will be deemed to be discretionary and will be subject to the requirements of CEQA.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b)(1), Public Resources Code; *Day* v. *City of Glendale*, 51 Cal. App. 3d 817.

§ 15269. Emergency Projects.

The following emergency projects are exempt from the requirements of CEQA.

(a) Projects to maintain, repair, restore, demolish, or replace property or facilities damaged or destroyed as a result of a disaster in a disaster stricken area in which a state of emergency has been proclaimed by the Governor pursuant to the California Emergency Services Act, commencing with Section 8550 of the Government Code. This includes projects that will remove, destroy, or significantly alter an historical resource when that resource represents an imminent threat to the public of bodily harm or of damage to adjacent property or when the project has received a determination by the State Office of Historic Preservation pursuant to Section 5028(b) of Public Resources Code.

(b) Emergency repairs to publicly or privately owned service facilities necessary to maintain service essential to the public health, safety or welfare.

(c) Specific actions necessary to prevent or mitigate an emergency. This does not include long–term projects undertaken for the purpose of preventing or mitigating a situation that has a low probability of occurrence in the short–term.

(d) Projects undertaken, carried out, or approved by a public agency to maintain, repair, or restore an existing highway damaged by fire, flood, storm, earthquake, land subsidence, gradual earth movement, or landslide, provided that the project is within the existing right of way of that highway and is initiated within one year of the damage occurring. This exemption does not apply to highways designated as official state scenic highways, nor any project undertaken, carried out, or approved by a public agency to expand or widen a highway damaged by fire, flood, storm, earthquake, land subsidence, gradual earth movement, or landslide.

(e) Seismic work on highways and bridges pursuant to Section180.2 of the Streets and Highways Code, Section 180 et seq.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080(b)(2), (3), and (4), 21080.33 and 21172, Public Resources Code; *Castaic Lake Water Agency* v. *City of Santa Clarita* (1995) 41 Cal.App.4th 1257; and *Western Municipal Water District of Riverside County* v. *Superior Court of San Bernardino County* (1987) 187 Cal.App.3d 1104.

HISTORY

1. Amendment of section and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15270. Projects Which Are Disapproved.

(a) CEQA does not apply to projects which a public agency rejects or disapproves.

(b) This section is intended to allow an initial screening of projects on the merits for quick disapprovals prior to the initiation f the CEQA process where the agency can determine that the project cannot be approved.

(c) This section shall not relieve an applicant from paying the costs for an EIR or negative declaration prepared for his project prior to the lead agency's disapproval of the project after normal evaluation and processing.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b)(5), Public Resources Code.

tice. The notice shall state that the complete file on the project and the basis for the district's findings of exemption are available for inspection and copying at the office of the district.

(c) Any person may appeal the issuance of a permit based on an exemption under subdivision (a) to the hearing board as provided in Section 42302.1 of the Health and Safety Code. The permit shall be revoked by the hearing board if there is substantial evidence in light of the whole record before the board that the project may not satisfy one or more of the criteria established pursuant to subdivision (a). If there is no such substantial evidence, the exemption shall be upheld. Any appeal under this subdivision shall be scheduled for hearing on the calendar of the hearing board within 10 working days of the appeal being filed. The hearing board shall give the appeal priority on its calendar and shall render a decision on the appeal within 21 working days of the appeal being filed. The hearing board may delegate the authority to hear and decide such an appeal to a subcommittee of its body.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Chapter 1131, Statutes of 1993, Section 1.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15279. Housing for Agricultural Employees.

(a) CEQA does not apply to any development project which consists of the construction, conversion, or use of residential housing for agricultural employees, as defined below, provided the development is either:

(1) Affordable to lower income households, as defined in Section 50079.5 of the Health and Safety Code, there is no public financial assistance for the development project, and the developer provides sufficient legal commitments to the appropriate local agency to ensure that the housing units will continue to be available to lower–income households for a period of at least 15 years; or

(2) Affordable to low and moderate–income households, as defined in paragraph (2) of subdivision (h) of Section 65589.5 of the Government Code, at monthly housing costs determined pursuant to paragraph (2) of subdivision (h) of Section 65589.5 of the Government Code, there is public financial assistance for the project, and the developer provides sufficient legal commitments to the appropriate local agency to ensure that the housing units will continue to be available to low and moderate–income households for a period of at least 15 years.

(b) The development must also meet all the following criteria:

(1) It is consistent with the applicable city, county, or city and county general plan as it existed on the date the project application was deemed complete.

(2) It is consistent with the local zoning, as it existed on the date the project application was deemed complete, unless the zoning is inconsistent with the general plan because the city, county, or city and county has not rezoned the property to bring it into consistency with the general plan.

(3) If the project is proposed in an urbanized area, it does not exceed 45 dwelling units, or if it consists of dormitories, barracks or other group living facilities houses not more than 45 agricultural employees, and its site is adjacent on at least two sides to land that has been previously developed.

(4) If the project is proposed in a nonurbanized area, its site is zoned for general agricultural use and the project consists of not more than 20 dwelling units or, if it consists of dormitories, barracks or other group living facilities, it houses not more than 20 agricultural employees.

(5) Its site is not more than five acres in area, except that a project located in an area with a population density of at least 1000 persons per square mile shall not be more than two acres in area.

(6) Its site is, or can be, adequately served by utilities.

(7) Its site has no value as wildlife habitat.

(8) Its site is not included on any list of hazardous waste or other facilities and sites compiled pursuant to Section 65962 of the Government Code.

(9) It will not involve the demolition of, or any substantial adverse change in, any structure that is listed, or determined to be eligible for listing in the California Register of Historical Resources.

(c) As used in this section, "residential housing for agricultural employees" means housing accommodations for an agricultural employee, as defined in subdivision (b) of Section 1140.4 of the Labor Code.

(d) As used in this section, "urbanized area" means either of the following:

(1) an area with a population density of at least 1000 persons per square mile; or

(2) an area with a population density of less than 1000 persons per square mile that is identified as an urban area in the general plan adopted by the applicable city, county, or city and county and was not designated at the time the application was deemed complete as an area reserved for future urban growth.

(e) This section does not apply if the public agency which is carrying out or approving the development project determines that there is a reasonable possibility that the project would have a significant effect on the environment due to unusual circumstances or that the cumulative impact of successive projects of the same type in the same area over time would be significant.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.10, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15280. Lower–Income Housing Projects.

(a) CEQA does not apply to any development project which consists of the construction, conversion, or use of residential housing consisting of not more than 45 units in an urbanized area, provided that it is either:

(1) Affordable to lower–income households, as defined in Section 50079.5 of the Health and Safety Code, and the developer provides sufficient legal commitments to the appropriate local agency to ensure that the housing units will continue to be available to lower income households for a period of at least 15 years; or

(2) Affordable to low and moderate–income households, as defined in paragraph (2) of subdivision (h) of Section 65589.5 of the Government Code, at monthly housing costs determined pursuant to paragraph (2) of subdivision (h) of Section 65589.5 of the Government Code.

(b) The development must also meet all the following criteria:

(1) It is consistent with the local jurisdiction's general plan as it existed on the date the project application was deemed complete.

(2) It is consistent with the local zoning as it existed on the date the project application was deemed complete, unless the zoning is inconsistent with the general plan because the city, county, or city and county has not rezoned the property to bring it into consistency with the general plan.

(3) Its site has been previously developed or is currently developed with urban uses, or the immediately contiguous properties surrounding the site are or have been previously developed with urban uses.

(4) Its site is not more than two acres in area.

(5) Its site is, or can be, adequately served by utilities.

(6) Its site has no value as wildlife habitat.

(7) It will not involve the demolition of, or any substantial adverse change in, any district, landmark, object, building, structure, site, area, or place that is listed, or determined to be eligible for listing in the California Register of Historical Resources.

(8) Its site is not included on any list of hazardous waste or other facilities and sites compiled pursuant to Section 65962.5 of the Government Code, and the site has been subject to an assessment by a California registered environmental assessor to determine both the presence of hazardous contaminants, if any, and the potential for exposure of site occupants to significant health hazards from nearby properties and activities.

(c) For purposes of this section, "urbanized area" means an area that has a population density of at least 1000 persons per square mile.

(d) If hazardous contaminants are found on the site, they must be removed or any significant effects mitigated to a level of insignificance in

order to apply this exemption. If a potential for exposure to significant health hazards from nearby properties and activities is found to exist, the effects of the potential exposure must be mitigated to a level of insignificance in order to apply this exemption. Any removal or mitigation to insignificance must be completed prior to any residential occupancy of the project.

(e) This section does not apply if there is a reasonable possibility that the project would have a significant effect on the environment due to unusual circumstances or due to the related or cumulative impacts of reasonably foreseeable other projects in the vicinity.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.14, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15281. Air Quality Permits.

CEQA does not apply to the issuance, modification, amendment, or renewal of any permit by an air pollution control district or air quality management district pursuant to Title V, as defined in Section 39053.3 of the Health and Safety Code, or pursuant to an air district Title V program established under Sections 42301.10, 42301.11, and 42301.12 of the Health and Safety Code, unless the issuance, modification, amendment, or renewal authorizes a physical or operational change to a source or facility.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.24, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15282. Other Statutory Exemptions

The following is a list of existing statutory exemptions. Each subsection summarizes statutory exemptions found in the California Code. Lead agencies are not to rely on the language contained in the summaries below but must rely on the actual statutory language that creates the exemption. This list is intended to assist lead agencies in finding them, but not as a substitute for them. This section is merely a reference tool.

(a) The notification of discovery of Native American burial sites as set forth in Section 5097.98(c) of the Public Resources Code.

(b) Specified prison facilities as set forth in Sections 21080.01, 21080.02, 21080.03 and 21080.07 of the Public Resources Code.

(c) The lease or purchase of the rail right–of–way used for the San Francisco Peninsula commute service between San Francisco and San Jose as set forth in Section 21080.05 of the Public Resources Code.

(d) Any activity or approval necessary for or incidental to project funding or authorization for the expenditure of funds for the project, by the Rural Economic Development Infrastructure Panel as set forth in Section 21080.08 of the Public Resources Code.

(e) The construction of housing or neighborhood commercial facilities in an urbanized area pursuant to the provisions of Section 21080.7 of the Public Resources Code.

(f) The conversion of an existing rental mobilehome park to a resident initiated subdivision, cooperative, or condominium for mobilehomes as set forth in Section 21080.8 of the Public Resources Code.

(g) Settlements of title and boundary problems by the State Lands Commission and to exchanges or leases in connection with those settlements as set forth in Section 21080.11 of the Public Resources Code.

(h) Any railroad grade separation project which eliminates an existing grade crossing or which reconstructs an existing grade separation as set forth in Section 21080.13 of the Public Resources Code.

(i) The adoption of an ordinance regarding second units in a single–family or multifamily residential zone by a city or county to implement the provisions of Sections 65852.1 and 65852.2 of the Government Code as set forth in Section 21080.17 of the Public Resources Code.

(j) The closing of any public school or the transfer of students from that public school to another school in which kindergarten or any grades 1 through 12 is maintained as set forth in 21080.18 of the Public Resources Code.

(k) A project for restriping streets or highways to relieve traffic congestion as set forth in Section 21080.19 of the Public Resources Code.

(l) The installation of new pipeline or maintenance, repair, restoration, removal, or demolition of an existing pipeline as set forth in Section 21080.21 of the Public Resources Code, as long as the project does not exceed one mile in length.

(m) The activities and approvals by a local government necessary for the preparation of general plan amendments pursuant to Public Resources Code § 29763 as set forth in Section 21080.22 of the Public Resources Code. Section 29763 of the Public Resources Code refers to local government amendments made for consistency with the Delta Protection Commission's regional plan.

(n) Minor alterations to utilities made for the purposes of complying with Sections 4026.7 and 4026.8 of the Health and Safety Code as set forth in Section 21080.26 of the Public Resources Code.

(o) The adoption of an ordinance exempting a city or county from the provisions of the Solar Shade Control Act as set forth in Section 25985 of the Public Resources Code.

(p) The acquisition of land by the Department of Transportation if received or acquired within a statewide or regional priority corridor designated pursuant to Section 65081.3 of the Government Code as set forth in Section 33911 of the Public Resources Code.

(q) The adoption or amendment of a nondisposal facility element as set forth in Section 41735 of the Public Resources Code.

(r) Cooperative agreements for the development of Solid Waste Management Facilities on Indian country as set forth in Section 44203(g) of the Public Resources Code.

(s) Determinations made regarding a city or countys regional housing needs as set forth in Section 65584 of the Government Code.

(t) Any action necessary to bring a general plan or relevant mandatory element of the general plan into compliance pursuant to a court order as set forth in Section 65759 of the Government Code.

(u) Industrial Development Authority activities as set forth in Section 91543 of the Government Code.

(v) Temporary changes in the point of diversion, place of use, of purpose of use due to a transfer or exchange of water or water rights as set forth in Section 1729 of the Water Code.

(w) The preparation and adoption of Urban Water Management Plans pursuant to the provisions of Section 10652 of the Water Code.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 5097.98(c), 21080.01, 21080.02, 21080.03, 21080.05, 21080.07, 21080.08, 21080.7, 21080.8, 21080.11, 21080.13, 21080.17, 21080.18, 21080.19, 21080.21, 21080.22, 21080.26, 25985, 33911, 41735 and 44203(g), Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15283. Housing Needs Allocation.

CEQA does not apply to regional housing needs determinations made by the Department of Housing and Community Development, a council of governments, or a city or county pursuant to Section 65584 of the Government Code.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 65584, Government Code.

HISTORY

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15284. Pipelines.

(a) CEQA does not apply to any project consisting of the inspection, maintenance, repair, restoration, reconditioning, relocation, replacement, or removal of an existing hazardous or volatile liquid pipeline or any valve, flange, meter, or other piece of equipment that is directly attached to the pipeline.

(b) To qualify for this exemption, the diameter of the affected pipeline must not be increased and the project must be located outside the boundaries of an oil refinery. The project must also meet all of the following criteria:

(1) The affected section of pipeline is less than eight miles in length and actual construction and excavation activities are not undertaken over a length of more than one–half mile at a time.

(2) The affected section of pipeline is not less than eight miles distance from any section of pipeline that had been subject to this exemption in the previous 12 months.

(3) The project is not solely for the purpose of excavating soil that is contaminated by hazardous materials.

(4) To the extent not otherwise required by law, the person undertaking the project has, in advance of undertaking the project, prepared a plan that will result in notification of the appropriate agencies so that they may take action, if necessary, to provide for the emergency evacuation of members of the public who may be located in close proximity to the project, and those agencies, including but not limited to the local fire department, police, sheriff, and California Highway Patrol as appropriate, have reviewed and agreed to that plan.

(5) Project activities take place within an existing right–of–way and that right–of–way will be restored to its pre–project condition upon completion of the project.

(6) The project applicant will comply with all conditions otherwise authorized by law, imposed by the city or county as part of any local agency permit process, and to comply with the Keene–Nejedly California Wetlands Preservation Act (Public Resources Code Section 5810, et seq.), the California Endangered Species Act (Fish and Game Code Section 2050, et seq.), other applicable state laws, and all applicable federal laws.

(c) When the lead agency determines that a project meets all of the criteria of subdivisions (a) and (b), the party undertaking the project shall do all of the following:

(1) Notify in writing all responsible and trustee agencies, as well as any public agency with environmental, public health protection, or emergency response authority, of the lead agency's invocation of this exemption.

(2) Mail notice of the project to the last known name and address of all organizations and individuals who have previously requested such notice and notify the public in the affected area by at least one of the following procedures:

(A) Publication at least one time in a newspaper of general circulation in the area affected by the proposed project. If more than one area is affected, the notice shall be published in the newspaper of largest circulation from among the newspapers of general circulation in those areas.

(B) Posting of notice on and off site in the area where the project is to be located.

(C) Direct mailing to the owners and occupants of contiguous property shown on the latest equalized assessment roll.

The notice shall include a brief description of the proposed project and its location, and the date, time, and place of any public meetings or hearings on the proposed project. This notice may be combined with the public notice required under other law, as applicable, but shall meet the preceding minimum requirements.

(3) In the case of private rights–of–way over private property, receive from the underlying property owner permission for access to the property.

(4) Immediately inform the lead agency if any soil contaminated with hazardous materials is discovered.

(5) Comply with all conditions otherwise authorized by law, imposed by the city or county as part of any local agency permit process, and to comply with the Keene–Nejedly California Wetlands Preservation Act (Public Resources Code Section 5810, et seq.), the California Endangered Species Act (Fish and Game Code Section 2050, et seq.), other applicable state laws, and all applicable federal laws.

(d) For purposes of this section, "pipeline" is used as defined in subdivision (a) of Government Code Section 51010.5. This definition includes every intrastate pipeline used for the transportation of hazardous liquid substances or highly volatile liquid substances, including a common carrier pipeline, and all piping containing those substances located within a refined products bulk loading facility which is owned by a common carrier and is served by a pipeline of that common carrier, and the common carrier owns and serves by pipeline at least five such facilities in California.

HISTORY

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15285. Transit Agency Responses to Revenue Shortfalls.

(a) CEQA does not apply to actions taken on or after July 1, 1995 to implement budget reductions made by a publicly owned transit agency as a result of a fiscal emergency caused by the failure of agency revenues to adequately fund agency programs and facilities. Actions shall be limited to those directly undertaken by or financially supported in whole or in part by the transit agency pursuant to Section 15378(a)(1) or (2), including actions which reduce or eliminate the availability of an existing publicly owned transit service, facility, program, or activity.

(b) When invoking this exemption, the transit agency shall make a specific finding that there is a fiscal emergency. Before taking its proposed budgetary actions and making the finding of fiscal emergency, the transit agency shall hold a public hearing. After this public hearing, the transit agency shall respond within 30 days at a regular public meeting to suggestions made by the public at that initial hearing. The transit agency may make the finding of fiscal emergency only after it has responded to public suggestions.

(c) For purposes of this subdivision, "fiscal emergency" means that the transit agency is projected to have negative working capital within one year from the date that the agency finds that a fiscal emergency exists. "Working capital" is defined as the sum of all unrestricted cash, unrestricted short–term investments, and unrestricted short–term accounts receivable, minus unrestricted accounts payable. Employee retirements funds, including deferred compensation plans and Section 401(k) plans, health insurance reserves, bond payment reserves, worker's compensation reserves, and insurance reserves shall not be included as working capital.

(d) This exemption does not apply to the action of any publicly owned transit agency to reduce or eliminate a transit service, facility, program, or activity that was approved or adopted as a mitigation measure in any environmental document certified or adopted by any public agency under either CEQA or NEPA. Further, it does not apply to actions of the Los Angeles County Metropolitan Transportation Authority.

HISTORY

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

Article 19. Categorical Exemptions

§ 15300. Categorical Exemptions.

Section 21084 of the Public Resources Code requires these guidelines to include a list of classes of projects which have been determined not to have a significant effect on the environment and which shall, therefore, be exempt from the provisions of CEQA.

In response to that mandate, the Secretary for Resources has found that the following classes of projects listed in this article do not have a significant effect on the environment, and they are declared to be categorically exempt from the requirement for the preparation of environmental documents.

No. 29). For prior history, see Registers 80, No. 19; 78, No. 5; 76, No. 41; 75, Nos. 1, 5 and 22; and 73, No. 50.

2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

3. Amendment of section and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15060.5. Preapplication Consultation.

(a) For a potential project involving the issuance of a lease, permit, license, certificate, or other entitlement for use by one or more public agencies, the lead agency shall, upon the request of a potential applicant and prior to the filing of a formal application, provide for consultation with the potential applicant to consider the range of actions, potential alternatives, mitigation measures, and any potential significant effects on the environment of the potential project.

(b) The lead agency may include in the consultation one or more responsible agencies, trustee agencies, and other public agencies who in the opinion of the lead agency may have an interest in the proposed project. The lead agency may consult the Office of Permit Assistant in the Trade and Commerce Agency for help in identifying interested agencies.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.1, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15061. Review for Exemption.

(a) Once a lead agency has determined that an activity is a project subject to CEQA, a lead agency shall determine whether the project is exempt from CEQA.

(b) A project is exempt from CEQA if:

(1) The project is exempt by statute (see, e.g. Article 18, commencing with Section 15260).

(2) The project is exempt pursuant to a categorical exemption (see Article 19, commencing with Section 15300) and the application of that categorical exemption is not barred by one of the exceptions set forth in Section 15300.2.

(3) The activity is covered by the general rule that CEQA applies only to projects which have the potential for causing a significant effect on the environment. Where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, the activity is not subject to CEQA.

(4) The project will be rejected or disapproved by a public agency. (See Section 15270(b)).

(c) Each public agency should include in its implementing procedures a listing of the projects often handled by the agency that the agency has determined to be exempt. This listing should be used in preliminary review.

(d) After determining that a project is exempt, the agency may prepare a notice of exemption as provided in Section 15062. Although the notice may be kept with the project application at this time, the notice shall not be filed with OPR or the county clerk until the project has been approved.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080(b), 21080.9, 21080.10, 21084, 21108(b) and 21152(b), Public Resources Code; *No Oil, Inc.* v. *City of Los Angeles* (1974) 13 Cal. 3d 68.

HISTORY

1. Amendment of subsection (d) filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).

2. Amendment of section and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15062. Notice of Exemption.

(a) When a public agency decides that a project is exempt from CEQA and the public agency approves or determines to carry out the project, the agency may file a notice of exemption. The notice shall be filed, if at all, after approval of the project. Such a notice shall include:

(1) A brief description of the project,

(2) A finding that the project is exempt from CEQA, including a citation to the State Guidelines section or statute under which it is found to be exempt, and

(3) A brief statement of reasons to support the finding.

(b) A notice of exemption may be filled out and may accompany the project application through the approval process. The notice shall not be filed with the county clerk or OPR until the project has been approved.

(c) When a public agency approves an applicant's project, either the agency or the applicant may file a notice of exemption.

(1) When a state agency files this notice, the notice of exemption is filed with OPR. A form for this notice is provided in Appendix E. A list of all such notices shall be posted on a weekly basis at the Office of Planning and Research, 1400 Tenth Street, Sacramento, California. The list shall remain posted for at least 30 days.

(2) When a local agency files this notice, the notice of exemption is filed with the county clerk of each county in which the project will be located. Copies of all such notices will be available for public inspection and such notices shall be posted within 24 hours of receipt in the office of the county clerk. Each notice shall remain posted for a period of 30 days. Thereafter, the clerk shall return the notice to the local agency with a notation of the period it was posted. The local agency shall retain the notice for not less than 9 months.

(3) All public agencies are encouraged to make postings pursuant to this section available in electronic format on the Internet. Such electronic postings are in addition to the procedures required by these guidelines and the Public Resources Code.

(4) When an applicant files this notice, special rules apply.

(A) The notice filed by an applicant is filed in the same place as if it were filed by the agency granting the permit. If the permit was granted by a state agency, the notice is filed with OPR. If the permit was granted by a local agency, the notice is filed with the county clerk of the county or counties in which the project will be located.

(B) The notice of exemption filed by an applicant shall contain the information required in subdivision (a) together with a certified document issued by the public agency stating that the agency has found the project to be exempt. The certified document may be a certified copy of an existing document or record of the public agency.

(C) A notice filed by an applicant is subject to the same posting and time requirements as a notice filed by a public agency.

(d) The filing of a Notice of Exemption and the posting on the list of notices start a 35 day statute of limitations period on legal challenges to the agency's decision that the project is exempt from CEQA. If a Notice of Exemption is not filed, a 180 day statute of limitations will apply.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21108 and 21152, Public Resources Code.

HISTORY

1. Amendment of subsections (b) and (c) filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).

2. Amendment of subsections (a)(2), (c)(1), (c)(2), (c)(3)(A) and (c)(3)(C) filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

3. New subsection (c)(3) and subsection renumbering filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15063. Initial Study.

(a) Following preliminary review, the lead agency shall conduct an initial study to determine if the project may have a significant effect on the environment. If the lead agency can determine that an EIR will clearly be required for the project, an initial study is not required but may still be desirable.

(1) All phases of project planning, implementation, and operation must be considered in the initial study of the project.

(2) To meet the requirements of this section, the lead agency may use an environmental assessment or a similar analysis prepared pursuant to the National Environmental Policy Act.

(3) An initial study may rely upon expert opinion supported by facts, technical studies or other substantial evidence to document its findings. However, an initial study is neither intended nor required to include the level of detail included in an EIR.

(b) Results.

(1) If the agency determines that there is substantial evidence that any aspect of the project, either individually or cumulatively, may cause a significant effect on the environment, regardless of whether the overall effect of the project is adverse or beneficial, the lead agency shall do one of the following:

(A) Prepare an EIR or

(B) Use a previously prepared EIR which the lead agency determines would adequately analyze the project at hand, or

(C) Determine, pursuant to a program EIR, tiering, or another appropriate process, which of a project's effects were adequately examined by an earlier EIR or negative declaration. Another appropriate process may include, for example, a master EIR, a master environmental assessment, approval of housing and neighborhood commercial facilities in urban areas as described in section 15181, approval of residential projects pursuant to a specific plan as described in section 15182, approval of residential projects consistent with a community plan, general plan or zoning as described in section 15183, or an environmental document prepared under a State certified regulatory program. The lead agency shall then ascertain which effects, if any, should be analyzed in a later EIR or negative declaration.

(2) The lead agency shall prepare a negative declaration if there is no substantial evidence that the project or any of its aspects may cause a significant effect on the environment.

(c) Purposes. The purposes of an initial study are to:

(1) Provide the lead agency with information to use as the basis for deciding whether to prepare an EIR or negative declaration;

(2) Enable an applicant or lead agency to modify a project, mitigating adverse impacts before an EIR is prepared, thereby enabling the project to qualify for a negative declaration;

(3) Assist the preparation of an EIR, if one is required, by:

(A) Focusing the EIR on the effects determined to be significant,

(B) Identifying the effects determined not to be significant,

(C) Explaining the reasons for determining that potentially significant effects would not be significant, and

(D) Identifying whether a program EIR, tiering, or another appropriate process can be used for analysis of the project's environmental effects.

(4) Facilitate environmental assessment early in the design of a project;

(5) Provide documentation of the factual basis for the finding in a negative declaration that a project will not have a significant effect on the environment;

(6) Eliminate unnecessary EIRs;

(7) Determine whether a previously prepared EIR could be used with the project.

(d) Contents. An initial study shall contain in brief form:

(1) A description of the project including the location of the project;

(2) An identification of the environmental setting;

(3) An identification of environmental effects by use of a checklist, matrix, or other method, provided that entries on a checklist or other form are briefly explained to indicate that there is some evidence to support the entries. The brief explanation may be either through a narrative or a reference to another information source such as an attached map, photographs, or an earlier EIR or negative declaration. A reference to another document should include, where appropriate, a citation to the page or pages where the information is found.

(4) A discussion of ways to mitigate the significant effects identified, if any;

(5) An examination of whether the project would be consistent with existing zoning, plans, and other applicable land use controls;

(6) The name of the person or persons who prepared or participated in the initial study.

(e) Submission of Data. If the project is to be carried out by a private person or private organization, the lead agency may require such person or organization to submit data and information which will enable the lead agency to prepare the initial study. Any person may submit any information in any form to assist a lead agency in preparing an initial study.

(f) Format. Sample forms for an applicant's project description and a review form for use by the lead agency are contained in Appendices G and H. When used together, these forms would meet the requirements for an initial study, provided that the entries on the checklist are briefly explained pursuant to subsection (d)(3). These forms are only suggested, and public agencies are free to devise their own format for an initial study. A previously prepared EIR may also be used as the initial study for a later project.

(g) Consultation. As soon as a lead agency has determined that an initial study will be required for the project, the lead agency shall consult informally with all responsible agencies and all trustee agencies responsible for resources affected by the project to obtain the recommendations of those agencies as to whether an EIR or a negative declaration should be prepared. During or immediately after preparation of an initial study for a private project, the lead agency may consult with the applicant to determine if the applicant is willing to modify the project to reduce or avoid the significant effects identified in the initial study.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080(c), 21080.1, 21080.3, 21082.1, 21100 and 21151, Public Resources Code; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359, *San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus* (1994) 27 Cal.App.4th 713, *Leonoff v. Monterey County Board of Supervisors* (1990) 222 Cal.App.3d 1337.

HISTORY

1. Amendment filed 8–19–94; operative 9–19–94 (Register 94, No. 33).
2. Amendment of subsection (a)(2), new subsection (b)(3) and amendment of NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15064. Determining the Significance of the Environmental Effects Caused by a Project.

(a) Determining whether a project may have a significant effect plays a critical role in the CEQA process.

(1) If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, the agency shall prepare a draft EIR.

(2) When a final EIR identifies one or more significant effects, the lead agency and each responsible agency shall make a finding under Section 15091 for each significant effect and may need to make a statement of overriding considerations under Section 15093 for the project.

(b) The determination of whether a project may have a significant effect on the environment calls for careful judgment on the part of the public agency involved, based to the extent possible on scientific and factual data. An ironclad definition of significant effect is not always possible because the significance of an activity may vary with the setting. For example, an activity which may not be significant in an urban area may be significant in a rural area.

(c) In determining whether an effect will be adverse or beneficial, the lead agency shall consider the views held by members of the public in all areas affected as expressed in the whole record before the lead agency. Before requiring the preparation of an EIR, the lead agency must still determine whether environmental change itself might be substantial.

(d) In evaluating the significance of the environmental effect of a project, the lead agency shall consider direct physical changes in the environment which may be caused by the project and reasonably foreseeable indirect physical changes in the environment which may be caused by the project.

(1) A direct physical change in the environment is a physical change in the environment which is caused by and immediately related to the project. Examples of direct physical changes in the environment are the dust, noise, and traffic of heavy equipment that would result from construction of a sewage treatment plant and possible odors from operation of the plant.

(2) An indirect physical change in the environment is a physical change in the environment which is not immediately related to the proj-

ect, but which is caused indirectly by the project. If a direct physical change in the environment in turn causes another change in the environment, then the other change is an indirect physical change in the environment. For example, the construction of a new sewage treatment plant may facilitate population growth in the service area due to the increase in sewage treatment capacity and may lead to an increase in air pollution.

(3) An indirect physical change is to be considered only if that change is a reasonably foreseeable impact which may be caused by the project. A change which is speculative or unlikely to occur is not reasonably foreseeable.

(e) Economic and social changes resulting from a project shall not be treated as significant effects on the environment. Economic or social changes may be used, however, to determine that a physical change shall be regarded as a significant effect on the environment. Where a physical change is caused by economic or social effects of a project, the physical change may be regarded as a significant effect in the same manner as any other physical change resulting from the project. Alternatively, economic and social effects of a physical change may be used to determine that the physical change is a significant effect on the environment. If the physical change causes adverse economic or social effects on people, those adverse effects may be used as a factor in determining whether the physical change is significant. For example, if a project would cause overcrowding of a public facility and the overcrowding causes an adverse effect on people, the overcrowding would be regarded as a significant effect.

(f) The decision as to whether a project may have one or more significant effects shall be based on substantial evidence in the record of the lead agency.

(1) If the lead agency determines there is substantial evidence in the record that the project may have a significant effect on the environment, the lead agency shall prepare an EIR (*Friends of B Street* v. *City of Hayward* (1980) 106 Cal. App. 3d 988). Said another way, if a lead agency is presented with a fair argument that a project may have a significant effect on the environment, the lead agency shall prepare an EIR even though it may also be presented with other substantial evidence that the project will not have a significant effect (*No Oil, Inc.* v. *City of Los Angeles* (1974) 13 Cal. 3d 68).

(2) If the lead agency determines there is substantial evidence in the record that the project may have a significant effect on the environment but the lead agency determines that revisions in the project plans or proposals made by, or agreed to by, the applicant would avoid the effects or mitigate the effects to a point where clearly no significant effect on the environment would occur and there is no substantial evidence in light of the whole record before the public agency that the project, as revised, may have a significant effect on the environment then a mitigated negative declaration shall be prepared.

(3) If the lead agency determines there is no substantial evidence that the project may have a significant effect on the environment, the lead agency shall prepare a negative declaration (*Friends of B Street* v. *City of Hayward* (1980) 106 Cal. App. 3d 988).

(4) The existence of public controversy over the environment effects of a project will not require preparation of an EIR if there is no substantial evidence before the agency that the project may have a significant effect on the environment.

(5) Argument, speculation, unsubstantiated opinion or narrative, or evidence that is clearly inaccurate or erroneous, or evidence that is not credible, shall not constitute substantial evidence. Substantial evidence shall include facts, reasonable assumptions predicated upon facts, and expert opinion support by facts.

(6) Evidence of economic and social impacts that do not contribute to or are not caused by physical changes in the environment is not substantial evidence that the project may have a significant effect on the environment.

(7) The provisions of sections 15162, 15163, and 15164 apply when the project being analyzed is a change to, or further approval for, a project for which an EIR or negative declaration was previously certified or adopted (e.g. a tentative subdivision, conditional use permit). Under case law, the fair argument standard does not apply to determinations of significance pursuant to sections 15162, 15163, and 15164.

(g) After application of the principles set forth above in Section 15064(f), and in marginal cases where it is not clear whether there is substantial evidence that a project may have a significant effect on the environment, the lead agency shall be guided by the following principle: If there is disagreement among expert opinion supported by facts over the significance of an effect on the environment, the Lead Agency shall treat the effect as significant and shall prepare an EIR.

(h)(1)(A) Except as otherwise required by Section 15065, a change in the environment is not a significant effect if the change complies with a standard that meets the definition in subsection (h)(3).

(B) If there is a conflict between standards, the lead agency shall determine which standard is appropriate for purposes of this subsection based upon substantial evidence in light of the whole record.

(C) Notwithstanding subsection (h)(1)(A), if the lead agency determines on the basis of substantial evidence in light of the whole record that a standard is inappropriate to determine the significance of an effect for a particular project, the lead agency shall determine whether the effect may be significant as otherwise required by this section, Section 15065, and the Guidelines.

(2) In the absence of a standard that satisfies subsection (h)(1)(A), the lead agency shall determine whether the effect may be significant as otherwise required by this section, Section 15065, and the Guidelines.

(3) For the purposes of this subsection a "standard" means a standard of general application that is all of the following:

(A) a quantitative, qualitative or performance requirement found in a statute, ordinance, resolution, rule, regulation, order, or other standard of general application;

(B) adopted for the purpose of environmental protection;

(C) adopted by a public agency through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency;

(D) one that governs the same environmental effect which the change in the environment is impacting; and,

(E) one that governs within the jurisdiction where the project is located.

(4) This definition includes thresholds of significance adopted by lead agencies which meet the requirements of this subsection.

(i)(1) When assessing whether a cumulative effect requires an EIR, the lead agency shall consider whether the cumulative impact is significant and whether the effects of the project are cumulatively considerable. An EIR must be prepared if the cumulative impact may be significant and the project's incremental effect, though individually limited, is cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects. "Probable future projects" are defined in Section 15130.

(2) A lead agency may determine in an initial study that a project's contribution to a significant cumulative impact will be rendered less than cumulatively considerable and thus is not significant. When a project might contribute to a significant cumulative impact, but the contribution will be rendered less than cumulatively considerable through mitigation measures set forth in a mitigated negative declaration, the initial study shall briefly indicate and explain how the contribution has been rendered less than cumulatively considerable.

(3) A lead agency may determine that a project's incremental contribution to a cumulative effect is not cumulatively considerable if the project will comply with the requirements in a previously approved plan or mitigation program which provides specific requirements that will avoid or substantially lessen the cumulative problem (e.g. water quality control plan, air quality plan, integrated waste management plan) within the geographic area in which the project is located. Such plans or programs must be specified in law or adopted by the public agency with jurisdiction over

the affected resources through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency.

(4) A lead agency may determine that the incremental impacts of a project are not cumulatively considerable when they are so small that they make only a de minimis contribution to a significant cumulative impact caused by other projects that would exist in the absence of the proposed project. Such de minimus incremental impacts, by themselves, do not trigger the obligation to prepare an EIR. A de minimus contribution means that the environmental conditions would essentially be the same whether or not the proposed project is implemented.

(5) The mere existence of significant cumulative impacts caused by other projects alone shall not constitute substantial evidence that the proposed project's incremental effects are cumulatively considerable.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21065, 21068, 21080, 21082, 21082.1, 21082.2, 21083 and 21100, Public Resources Code; *No Oil, Inc.* v. *City of Los Angeles* (1974) 13 Cal.3d 68; *San Joaquin Raptor/Wildlife Center v. Regents of the University of California* (1993) 6 Cal.4th 1112.

HISTORY

1. Amendment of section heading, section and NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
2. Repealer of subsection (i) and new subsections (i)(1)(A)–(i)(4) filed 8–24–98; operative 8–24–98 pursuant to Government Code section 11343.4(d) (Register 98, No. 35).
3. Repealer of subsection (e), subsection relettering, new subsections (f)(7) and (i)(1)–(i)(5) and amendment of NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).
4. Change without regulatory effect amending subsections (g), (h)(1)(A), (h)(1)(C) and (h)(2) filed 2–1–2001 pursuant to section 100, title 1, California Code of Regulations (Register 2001, No. 5).

§ 15064.5. Determining the Significance of Impacts to Archaeological and Historical Resources.

(a) For purposes of this section, the term "historical resources" shall include the following:

(1) A resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources (Pub. Res. Code §5024.1, Title 14 CCR, Section 4850 et seq.).

(2) A resource included in a local register of historical resources, as defined in section 5020.1(k) of the Public Resources Code or identified as significant in an historical resource survey meeting the requirements section 5024.1(g) of the Public Resources Code, shall be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.

(3) Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be an historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register of Historical Resources (Pub. Res. Code § 5024.1, Title 14 CCR, Section 4852) including the following:

(A) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;

(B) Is associated with the lives of persons important in our past;

(C) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or

(D) Has yielded, or may be likely to yield, information important in prehistory or history.

(4) The fact that a resource is not listed in, or determined to be eligible for listing in the California Register of Historical Resources, not included in a local register of historical resources (pursuant to section 5020.1(k) of the Public Resources Code), or identified in an historical resources survey (meeting the criteria in section 5024.1(g) of the Public Resources Code) does not preclude a lead agency from determining that the resource may be an historical resource as defined in Public Resources Code sections 5020.1(j) or 5024.1.

(b) A project with an effect that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment.

(1) Substantial adverse change in the significance of an historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired.

(2) The significance of an historical resource is materially impaired when a project:

(A) Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register of Historical Resources; or

(B) Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to section 5020.1(k) of the Public Resources Code or its identification in an historical resources survey meeting the requirements of section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or

(C) Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register of Historical Resources as determined by a lead agency for purposes of CEQA.

(3) Generally, a project that follows the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings or the Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings (1995), Weeks and Grimmer, shall be considered as mitigated to a level of less than a significant impact on the historical resource.

(4) A lead agency shall identify potentially feasible measures to mitigate significant adverse changes in the significance of an historical resource. The lead agency shall ensure that any adopted measures to mitigate or avoid significant adverse changes are fully enforceable through permit conditions, agreements, or other measures.

(5) When a project will affect state–owned historical resources, as described in Public Resources Code Section 5024, and the lead agency is a state agency, the lead agency shall consult with the State Historic Preservation Officer as provided in Public Resources Code Section 5024.5. Consultation should be coordinated in a timely fashion with the preparation of environmental documents.

(c) CEQA applies to effects on archaeological sites.

(1) When a project will impact an archaeological site, a lead agency shall first determine whether the site is an historical resource, as defined in subsection (a).

(2) If a lead agency determines that the archaeological site is an historical resource, it shall refer to the provisions of Section 21084.1 of the Public Resources Code, and this section, Section 15126.4 of the Guidelines, and the limits contained in Section 21083.2 of the Public Resources Code do not apply.

(3) If an archaeological site does not meet the criteria defined in subsection (a), but does meet the definition of a unique archeological resource in Section 21083.2 of the Public Resources Code, the site shall be treated in accordance with the provisions of section 21083.2. The time and cost limitations described in Public Resources Code Section 21083.2 (c–f) do not apply to surveys and site evaluation activities intended to de-

termine whether the project location contains unique archaeological resources.

(4) If an archaeological resource is neither a unique archaeological nor an historical resource, the effects of the project on those resources shall not be considered a significant effect on the environment. It shall be sufficient that both the resource and the effect on it are noted in the Initial Study or EIR, if one is prepared to address impacts on other resources, but they need not be considered further in the CEQA process.

(d) When an initial study identifies the existence of, or the probable likelihood, of Native American human remains within the project, a lead agency shall work with the appropriate native americans as identified by the Native American Heritage Commission as provided in Public Resources Code § 5097.98. The applicant may develop an agreement for treating or disposing of, with appropriate dignity, the human remains and any items associated with Native American burials with the appropriate Native Americans as identified by the Native American Heritage Commission." Action implementing such an agreement is exempt from:

(1) The general prohibition on disinterring, disturbing, or removing human remains from any location other than a dedicated cemetery (Health and Safety Code Section 7050.5).

(2) The requirements of CEQA and the Coastal Act.

(e) In the event of the accidental discovery or recognition of any human remains in any location other than a dedicated cemetery, the following steps should be taken:

(1) There shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until:

(A) The coroner of the county in which the remains are discovered must be contacted to determine that no investigation of the cause of death is required, and

(B) If the coroner determines the remains to be Native American:

1. The coroner shall contact the Native American Heritage Commission within 24 hours.

2. The Native American Heritage Commission shall identify the person or persons it believes to be the most likely descended from the deceased native american.

3. The most likely descendent may make recommendations to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in Public Resources Code Section 5097.98, or

(2) Where the following conditions occur, the landowner or his authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity on the property in a location not subject to further subsurface disturbance.

(A) The Native American Heritage Commission is unable to identify a most likely descendent or the most likely descendent failed to make a recommendation within 24 hours after being notified by the commission.

(B) The descendant identified fails to make a recommendation; or

(C) The landowner or his authorized representative rejects the recommendation of the descendant, and the mediation by the Native American Heritage Commission fails to provide measures acceptable to the landowner.

(f) As part of the objectives, criteria, and procedures required by Section 21082 of the Public Resources Code, a lead agency should make provisions for historical or unique archaeological resources accidentally discovered during construction. These provisions should include an immediate evaluation of the find by a qualified archaeologist. If the find is determined to be an historical or unique archaeological resource, contingency funding and a time allotment sufficient to allow for implementation of avoidance measures or appropriate mitigation should be available. Work could continue on other parts of the building site while historical or unique archaeological resource mitigation takes place.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.2, 21084 and 21084.1, Public Resources Code; and *Citizens for Responsible Development in West Hollywood v. City of West Hollywood* (1995) 39 Cal.App.4th 490.

HISTORY

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15064.7. Thresholds of Significance.

(a) Each public agency is encouraged to develop and publish thresholds of significance that the agency uses in the determination of the significance of environmental effects. A threshold of significance is an identifiable quantitative, qualitative or performance level of a particular environmental effect, non–compliance with which means the effect will normally be determined to be significant by the agency and compliance with which means the effect normally will be determined to be less than significant.

(b) Thresholds of significance to be adopted for general use as part of the lead agency's environmental review process must be adopted by ordinance, resolution, rule, or regulation, and developed through a public review process and be supported by substantial evidence.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21082 and 21083, Public Resources Code.

HISTORY

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15065. Mandatory Findings of Significance.

A lead agency shall find that a project may have a significant effect on the environment and thereby require an EIR to be prepared for the project where any of the following conditions occur:

(a) The project has the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self–sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of an endangered, rare or threatened species, or eliminate important examples of the major periods of California history or prehistory.

(b) The project has the potential to achieve short–term environmental goals to the disadvantage of long–term environmental goals.

(c) The project has possible environmental effects which are individually limited but cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects as defined in Section 15130.

(d) The environmental effects of a project will cause substantial adverse effects on human beings, either directly or indirectly.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21001(c) and 21083, Public Resources Code; and *San Joaquin Raptor/Wildlife Center v. County of Stanislaus* (1996) 42 Cal.App.4th 608.

HISTORY

1. Amendment of subsection (a) and NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
2. Amendment of subsection (c) and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

Article 6. Negative Declaration Process

§ 15070. Decision to Prepare a Negative or Mitigated Negative Declaration.

A public agency shall prepare or have prepared a proposed negative declaration or mitigated negative declaration for a project subject to CEQA when:

(a) The initial study shows that there is no substantial evidence, in light of the whole record before the agency, that the project may have a significant effect on the environment, or

(b) The initial study identifies potentially significant effects, but:

(1) Revisions in the project plans or proposals made by or agreed to by the applicant before a proposed mitigated negative declaration and initial study are released for public review would avoid the effects or mitigate the effects to a point where clearly no significant effects would occur, and

(2) There is no substantial evidence, in light of the whole record before the agency, that the project as revised may have a significant effect on the environment.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21064, 21064.5, 21080(c) and 21082.1, Public Resources Code; *Friends of B Street* v. *City of Hayward*, (1980) 106 Cal. App. 3d 988; *Running Fence Corp.* v. *Superior Court*, (1975) 51 Cal. App. 3d 400.

HISTORY

1. Repealer of Article 6 (Sections 15060–15069.8) and new Article 6 (Sections 15070–15075) filed 7–13–83; designated effective 8–1–83 (Register 83, No. 29). For prior history, see Registers 80, No. 19; 78, No. 5; 76, No. 41; 75, No. 1; and 73, No. 50).
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).
3. Amendment of section heading, section and NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15071. Contents.

A negative declaration circulated for public review shall include:

(a) A brief description of the project, including a commonly used name for the project, if any;

(b) The location of the project, preferably shown on a map, and the name of the project proponent;

(c) A proposed finding that the project will not have a significant effect on the environment;

(d) An attached copy of the initial study documenting reasons to support the finding; and

(e) Mitigation measures, if any, included in the project to avoid potentially significant effects.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(c), Public Resources Code.

§ 15072. Notice of Intent to Adopt a Negative Declaration or Mitigated Negative Declaration.

(a) A lead agency shall provide a notice of intent to adopt a negative declaration or mitigated negative declaration to the public, responsible agencies, trustee agencies, and the county clerk of each county within which the proposed project is located, sufficiently prior to adoption by the lead agency of the negative declaration or mitigated negative declaration to allow the public and agencies the review period provided under Section 15105.

(b) The lead agency shall mail a notice of intent to adopt a negative declaration or mitigated negative declaration to the last known name and address of all organizations and individuals who have previously requested such notice in writing and shall also give notice of intent to adopt a negative declaration or mitigated negative declaration by at least one of the following procedures to allow the public the review period provided under Section 15105:

(1) Publication at least one time by the lead agency in a newspaper of general circulation in the area affected by the proposed project. If more than one area is affected, the notice shall be published in the newspaper of largest circulation from among the newspapers of general circulation in those areas.

(2) Posting of notice by the lead agency on and off site in the area where the project is to be located.

(3) Direct mailing to the owners and occupants of property contiguous to the project. Owners of such property shall be identified as shown on the latest equalized assessment roll.

(c) The alternatives for providing notice specified in subsection (b) shall not preclude a lead agency from providing additional notice by other means if the agency so desires, nor shall the requirements of this section preclude a lead agency from providing the public notice at the same time and in the same manner as public notice required by any other laws for the project.

(d) The county clerk of each county within which the proposed project is located shall post such notices in the office of the county clerk within 24 hours of receipt for a period of at least 20 days.

(e) For a project of statewide, regional, or areawide significance, the lead agency shall also provide notice to transportation planning agencies and public agencies which have transportation facilities within their jurisdictions which could be affected by the project as specified in Section 21092.4(a) of the Public Resources Code. "Transportation facilities" includes: major local arterials and public transit within five miles of the project site and freeways, highways and rail transit service within 10 miles of the project site.

(f) A notice of intent to adopt a negative declaration or mitigated negative declaration shall specify the following:

(1) A brief description of the proposed project and its location.

(2) The starting and ending dates for the review period during which the lead agency will receive comments on the proposed negative declaration or mitigated negative declaration. This shall include starting and ending dates for the review period. If the review period has been is shortened pursuant to Section 15105, the notice shall include a statement to that effect.

(3) The date, time, and place of any scheduled public meetings or hearings to be held by the lead agency on the proposed project, when known to the lead agency at the time of notice.

(4) The address or addresses where copies of the proposed negative declaration or mitigated negative declaration including the revisions developed under Section 15070(b) and all documents referenced in the proposed negative declaration or mitigated negative declaration are available for review. This location or locations shall be readily accessible to the public during the lead agency's normal working hours.

(5) The presence of the site on any of the lists enumerated under Section 65962.5 of the Government Code including, but not limited to lists of hazardous waste facilities, land designated as hazardous waste property, and hazardous waste disposal sites, and the information in the Hazardous Waste and Substances Statement required under subsection (f) of that section.

(6) Other information specifically required by statute or regulation for a particular project or type of project.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21091, 21092, 21092.2, 21092.4, 21092.3, 21092.6 and 21151.8, Public Resources Code.

HISTORY

1. Amendment of subsections (a), (a)(3) and NOTE filed 8–19–94; operative 9–19–94 (Register 94, No. 33).
2. Amendment of section heading, section and NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15073. Public Review of a Proposed Negative Declaration or Mitigated Negative Declaration.

(a) The lead agency shall provide a public review period pursuant to Section 15105 of not less than 20 days. When a proposed negative declaration or mitigated negative declaration and initial study are submitted to the State Clearinghouse for review by state agencies, the public review period shall not be less than 30 days, unless a shorter period is approved by the State Clearinghouse under Section 15105(d).

(b) When a proposed negative declaration or mitigated negative declaration and initial study have been submitted to the State Clearinghouse for review by state agencies, the public review period shall be at least as long as the review period established by the State Clearinghouse.

(c) A copy of the proposed negative declaration or mitigated negative declaration and the initial study shall be attached to the notice of intent to adopt the proposed declaration that is sent to every responsible agency and trustee agency concerned with the project and every other public agency with jurisdiction by law over resources affected by the project.

(d) Where one or more state agencies will be a responsible agency or a trustee agency or will exercise jurisdiction by law over natural resources affected by the project, or where the project is of statewide, regional, or areawide environmental significance, the lead agency shall send copies of the proposed negative declaration or mitigated negative declaration to the State Clearinghouse for distribution to the state agencies.

(e) The lead agency shall notify in writing any public agency which comments on a proposed negative declaration or mitigated negative dec-

laration of any public hearing to be held for the project for which the document was prepared. A notice provided to a public agency pursuant to Section 15072 satisfies this requirement.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21000(c), 21003(b), 21080(c), 21081.6, 21091 and 21092.5, Public Resources Code; *Plaggmier v. City of San Jose*, (1980) 101 Cal. App. 3d 842.

HISTORY

1. Amendment of section heading, section and NOTE filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15073.5. Recirculation of a Negative Declaration Prior to Adoption.

(a) A lead agency is required to recirculate a negative declaration when the document must be substantially revised after public notice of its availability has previously been given pursuant to Section 15072, but prior to its adoption. Notice of recirculation shall comply with Sections 15072 and 15073.

(b) A "substantial revision" of the negative declaration shall mean:

(1) A new, avoidable significant effect is identified and mitigation measures or project revisions must be added in order to reduce the effect to insignificance, or

(2) The lead agency determines that the proposed mitigation measures or project revisions will not reduce potential effects to less than significance and new measures or revisions must be required.

(c) Recirculation is not required under the following circumstances:

(1) Mitigation measures are replaced with equal or more effective measures pursuant to Section 15074.1.

(2) New project revisions are added in response to written or verbal comments on the project's effects identified in the proposed negative declaration which are not new avoidable significant effects.

(3) Measures or conditions of project approval are added after circulation of the negative declaration which are not required by CEQA , which do not create new significant environmental effects and are not necessary to mitigate an avoidable significant effect.

(4) New information is added to the negative declaration which merely clarifies, amplifies, or makes insignificant modifications to the negative declaration.

(d) If during the negative declaration process there is substantial evidence in light of the whole record, before the lead agency that the project, as revised, may have a significant effect on the environment which cannot be mitigated or avoided, the lead agency shall prepare a draft EIR and certify a final EIR prior to approving the project. It shall circulate the draft EIR for consultation and review pursuant to Sections 15086 and 15087, and advise reviewers in writing that a proposed negative declaration had previously been circulated for the project.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080, Public Resources Code; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359; *Leonoff v. Monterey County Board of Supervisors* (1990) 222 Cal.App.3d 1337; and *Long Beach Savings and Loan Assn. v. Long Beach Redevelopment Agency* (1986) 188 Cal.App.3d 249.

HISTORY

1. New section filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15074. Consideration and Adoption of a Negative Declaration or Mitigated Negative Declaration.

(a) Any advisory body of a public agency making a recommendation to the decisionmaking body shall consider the proposed negative declaration or mitigated negative declaration before making its recommendation.

(b) Prior to approving a project, the decisionmaking body of the lead agency shall consider the proposed negative declaration or mitigated negative declaration together with any comments received during the public review process. The decisionmaking body shall adopt the proposed negative declaration or mitigated negative declaration only if it finds on the basis of the whole record before it (including the initial study and any comments received), that there is no substantial evidence that the project will have a significant effect on the environment and that the negative declaration or mitigated negative declaration reflects the lead agency's independent judgment and analysis.

(c) When adopting a negative declaration or mitigated negative declaration, the lead agency shall specify the location and custodian of the documents or other material which constitute the record of proceedings upon which its decision is based.

(d) When adopting a mitigated negative declaration, the lead agency shall also adopt a program for reporting on or monitoring the changes which it has either required in the project or made a condition of approval to mitigate or avoid significant environmental effects.

(e) A lead agency shall not adopt a negative declaration or mitigated negative declaration for a project within the boundaries of a comprehensive airport land use plan or, if a comprehensive airport land use plan has not been adopted, for a project within two nautical miles of a public airport or public use airport, without first considering whether the project will result in a safety hazard or noise problem for persons using the airport or for persons residing or working in the project area.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080(c), 21081.6, 21082.1 and 21096, Public Resources Code; *Friends of B Street v. City of Hayward*, (1980) 106 Cal. App. 3d 988.

HISTORY

1. Amendment of section heading, section and NOTE filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15074.1. Substitution of Mitigation Measures in a Proposed Mitigated Negative Declaration.

(a) As a result of the public review process for a proposed mitigated negative declaration, including any administrative decisions or public hearings conducted on the project prior to its approval, the lead agency may conclude that certain mitigation measures identified in the mitigated negative declaration are infeasible or otherwise undesirable. Prior to approving the project, the lead agency may, in accordance with this section, delete those mitigation measures and substitute for them other measures which the lead agency determines are equivalent or more effective.

(b) Prior to deleting and substituting for a mitigation measure, the lead agency shall do both of the following:

(1) Hold a public hearing on the matter. Where a public hearing is to be held in order to consider the project, the public hearing required by this section may be combined with that hearing. Where no public hearing would otherwise be held to consider the project, then a public hearing shall be required before a mitigation measure may be deleted and a new measure adopted in its place.

(2) Adopt a written finding that the new measure is equivalent or more effective in mitigating or avoiding potential significant effects and that it in itself will not cause any potentially significant effect on the environment.

(c) No recirculation of the proposed mitigated negative declaration pursuant to Section 15072 is required where the new mitigation measures are made conditions of, or are otherwise incorporated into, project approval in accordance with this section.

(d) "Equivalent or more effective" means that the new measure will avoid or reduce the significant effect to at least the same degree as, or to a greater degree than, the original measure and will create no more adverse effect of its own than would have the original measure.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(f), Public Resources Code.

HISTORY

1. New section filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15075. Notice of Determination on a Project for Which a Proposed Negative or Mitigated Negative Declaration Has Been Approved.

(a) After deciding to carry out or approve a project for which a negative declaration or mitigated negative declaration has been approved, the lead agency shall file a notice of determination. For projects with phases, the lead agency shall file a notice of determination after deciding to carry out or approve each phase.

(b) The notice of determination must include:

(1) An identification of the project including its common name where possible, and its location.

(2) A brief description of the project.

(3) The date on which the agency approved the project.

(4) The determination of the agency that the project will not have a significant effect on the environment.

(5) A statement that a negative declaration or a mitigated negative declaration has been prepared pursuant to the provisions of CEQA.

(6) The address where a copy of the negative declaration or mitigated negative declaration may be examined.

(c) If the lead agency is a state agency, the lead agency shall file the notice of determination with OPR.

(d) If the lead agency is a local agency, the local agency shall file the notice of determination with the county clerk of the county or counties in which the project will be located within five working days after approval of the project by the lead agency. If the project requires a discretionary approval from any state agency, the local lead agency shall also file with OPR.

(e) All notices filed pursuant to this section shall be available for public inspection and shall be posted by the county clerk within 24 hours of receipt. Each notice shall remain posted for a period of at least 30 days. Thereafter, the clerk shall return the notice to the local lead agency with a notation of the period it was posted. The local lead agency shall retain the notice for not less than 9 months. The filing of the notice of determination and the posting on a list of such notices starts a 30–day statute of limitations on court challenges to the approval under CEQA.

(f) Public agencies are encouraged to make copies of all notices filed pursuant to this section available in electronic format on the Internet. Such electronic notices are in addition to the posting requirements of these guidelines and the Public Resources Code.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080(c), 21108(a) and (c), 21152(a) and (c) and 21167(b), Public Resources Code; *Citizens of Lake Murray Area Association* v. *City Council*, 82) 129 Cal. App. 3d 436.

HISTORY

1. Amendment of subsections (c) and (d) filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).
2. Amendment of section heading and section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
3. New subsection (f) filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

Article 6.5. Statutory Exemptions

HISTORY

1. Repealer of Article 6.5 (Sections 15070–15079.7) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29). For prior history, see Register 78, No. 5.
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

Article 7. EIR Process

§ 15080. General.

To the extent possible, the EIR process should be combined with the existing planning, review, and project approval process used by each public agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061, 21100 and 21151, Public Resources Code.

HISTORY

1. Repealer of Article 7 (Sections 15080–15089) and new Article 7 (Sections 15080–15096) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29). For prior history, see Registers 82, No. 2; 80, No. 19; 78, No. 5; 77, No. 1; 76, No. 41; 75, No. 1; and 73, No. 50.
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15081. Decision to Prepare an EIR.

The EIR process starts with the decision to prepare an EIR. This decision will be made either during preliminary review under Section 15060 or at the conclusion of an initial study after applying the standards described in Section 15064.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21100, Public Resources Code; *No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal. 3d 68; *Friends of B Street* v. *City of Hayward* (1980) 106 Cal. App. 3d 988.

§ 15081.5. EIRs Required by Statute.

(a) A lead agency shall prepare or have prepared an EIR for the following types of projects. An initial study may be prepared to help identify the significant effects of the project.

(1) The burning of municipal wastes, hazardous wastes, or refuse–derived fuel, including but not limited to tires, if the project is either:

(A) The construction of a new facility; or

(B) The expansion of an existing facility that burns hazardous waste that would increase its permitted capacity by more than 10 percent. This does not apply to any project exclusively burning hazardous waste for which a determination to prepare a negative declaration, or mitigated negative declaration or environmental impact report was made prior to July 14, 1989. The amount of expansion of an existing facility is calculated pursuant to subdivision (b) of Section 21151.1 of the Public Resources Code.

(C) Subsection (1) of the subdivision does not apply to:

1. Projects for which the State Energy Resources Conservation and Development Commission has assumed jurisdiction pursuant to Chapter 6 (commencing with Section 25500) of Division 15 of the Public Resources Code.

2. Any of the types of burn or thermal processing projects listed in subdivision (d) of Section 21151.1 of the Public Resources Code.

(2) The initial issuance of a hazardous waste facilities permit to a land disposal facility, as defined in subdivision (d) of Section 25199.1 of the Health and Safety Code. Preparation of an EIR is not mandatory if the facility only manages hazardous waste which is identified or listed pursuant to Section 25140 or Section 25141 of the Health and Safety Code on or after January 1, 1992; or only conducts activities which are regulated pursuant to Chapter 6.5 (commencing with Section 25100) of Division 20 of the Health and Safety Code on or after January 1, 1992. "Initial issuance" does not include the issuance of a closure or postclosure permit pursuant to Chapter 6.5 (commencing with Section 25100) of Division 20 of the Health and Safety Code.

(3) The initial issuance of a hazardous waste facility permit pursuant to Section 25200 of the Health and Safety Code to an off–site large treatment facility, as defined pursuant to subdivision (d) of Section 25205.1 of that code. Preparation of an EIR is not mandatory if the facility only manges hazardous waste which is identified or listed pursuant to Section 25140 or Section 25141 of the Health and Safety Code on or after January 1, 1992; or only conducts activities which are regulated pursuant to Chapter 6.5 (commencing with Section 25100) of Division 20 of the Health and Safety Code on or after January 1, 1992. "Initial issuance" does not include the issuance of a closure or postclosure permit pursuant to Chapter 6.5 (commencing with Section 25100) of Division 20 of the Health and Safety Code.

(4) Any open pit mining operation which is subject to the permit requirements of the Surface Mining and Reclamation Act (beginning at Section 2710 of the Public Resources Code) and which utilizes a cyanide heap–leaching process for the purpose of extracting gold or other precious metals.

(5) An initial base reuse plan as defined in Section 15229.

(b) A lead agency shall prepare or have prepared an EIR for the selection of a California Community College, California State University, University of California, or California Maritime Academy campus location and approval of a long range development plan for that campus.

(1) The EIR for a long range development plan for a campus shall include an analysis of, among other significant impacts, those environmental effects relating to changes in enrollment levels.

(2) Subsequent projects within the campus may be addressed in environmental analyses tiered on the EIR prepared for the long range development plan.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080.09, 21083.8, 21083.8.1, 21151.1 and 21151.7, Public Resources Code.

HISTORY

1. New section filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15082. Determination of Scope of EIR.

(a) Notice of Preparation. Immediately after deciding that an environmental impact report is required for a project, the lead agency shall send to each responsible agency a notice of preparation stating that an environmental impact report will be prepared. This notice shall also be sent to every federal agency involved in approving or funding the project and to each trustee agency responsible for natural resources affected by the project.

(1) The notice of preparation shall provide the responsible agencies with sufficient information describing the project and the potential environmental effects to enable the responsible agencies to make a meaningful response. At a minimum, the information shall include:

(A) Description of the project,

(B) Location of the project indicated either on an attached map (preferably a copy of a U.S.G.S. 15' or 7 1/2' topographical map identified by quadrangle name, or by a street address in an urbanized area), and

(C) Probable environmental effects of the project.

(2) A sample for a notice of preparation is shown in Appendix I. Public agencies are free to devise their own formats for this notice. A copy of the initial study may be sent with the notice to supply the necessary information.

(3) To send copies of the notice of preparation, the lead agency shall use either certified mail or any other method of transmittal which provides it with a record that the notice was received.

(4) The lead agency may begin work on the draft EIR immediately without awaiting responses to the notice of preparation. The draft EIR in preparation may need to be revised or expanded to conform to responses to the notice of preparation. A lead agency shall not circulate a draft EIR for public review before the time period for responses to the notice of preparation has expired.

(b) Response to Notice of Preparation. Within 30 days after receiving the notice of preparation under subsection (a), each responsible agency shall provide the lead agency with specific detail about the scope and content of the environmental information related to the responsible agency's area of statutory responsibility which must be included in the draft EIR.

(1) The response at a minimum shall identify:

(A) The significant environmental issues and reasonable alternatives and mitigation measures which the responsible agency will need to have explored in the draft EIR; and

(B) Whether the agency will be a responsible agency or trustee agency for the project.

(2) If a responsible agency fails by the end of the 30 day period to provide the lead agency with either a response to the notice or a well justified request for additional time, the lead agency may presume that the responsible agency has no response to make.

(3) A generalized list of concerns not related to the specific project shall not meet the requirements of this section for a response.

(c) Meetings. In order to expedite the consultation, the lead agency, a responsible agency, a trustee agency, or a project applicant may request one or more meetings between representatives of the agencies involved to assist the lead agency in determining the scope and content of the environmental information which the responsible agency may require. Such meetings shall be convened by the lead agency as soon as possible, but no later than 30 days, after the meetings were requested. On request, the Office of Planning and Research will assist in convening meetings which involve state agencies.

(d) State Clearinghouse. When one or more state agencies will be a responsible agency or a trustee agency, the lead agency shall send a notice of preparation to each state responsible agency and each trustee agency with a copy to the State Clearinghouse in the Office of Planning and Research. The State Clearinghouse will ensure that the state responsible agencies and trustees reply to the lead agency within the required time.

(e) Identification Number. When the notice of preparation is submitted to the State Clearinghouse, the state identification number issued by the Clearinghouse shall be the identification number for all subsequent environmental documents on the project. The identification number should be referenced on all subsequent correspondence regarding the project, specifically on the title page of the draft and final EIR and on the notice of determination.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.4, Public Resources Code.

HISTORY

1. Amendment of subsection (b) filed 1-30-86; effective thirtieth day thereafter (Register 86, No. 5).
2. Change without regulatory effect amending subsection (a)(2) filed 2-1-2001 pursuant to section 100, title 1, California Code of Regulations (Register 2001, No. 5).

§ 15083. Early Public Consultation.

Prior to completing the draft EIR, the lead agency may also consult directly with any person or organization it believes will be concerned with the environmental effects of the project. Many public agencies have found that early consultation solves many potential problems that would arise in more serious forms later in the review process. This early consultation may be called scoping. Scoping will be necessary when preparing an EIR/EIS jointly with a federal agency.

(a) Scoping has been helpful to agencies in identifying the range of actions, alternatives, mitigation measures, and significant effects to be analyzed in depth in an EIR and in eliminating from detailed study issues found not to be important.

(b) Scoping has been found to be an effective way to bring together and resolve the concerns of affected federal, state, and local agencies, the proponent of the action, and other interested persons including those who might not be in accord with the action on environmental grounds.

(c) Where scoping is used, it should be combined to the extent possible with consultation under Section 15082.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21082.1, Public Resources Code; Section 4, Chapter 480 of the Statutes of 1981; 40 Code of Federal Regulations, Part 1501.7.

§ 15083.5. City or County Consultation with Water Agencies.

This guideline addresses consultation between a city or county and affected water agencies at the notice of preparation stage of environmental review.

(a) This guideline shall apply only to projects which meet all of the following criteria:

(1) The project consists of any of the following activities for which an application has been submitted to a city or county:

(A) A residential development of more than 500 dwelling units.

(B) A shopping center or business establishment that will employ more than 1,000 persons or have more than 500,000 square feet of floor space.

(C) A commercial office building that will employ more than 1,000 persons or have more than 250,000 square feet of floor space.

(D) A hotel, motel or both with more than 500 rooms.

(E) An industrial, manufacturing, or processing plant, or industrial park intended to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area.

(F) Any mixed-use project that would demand an amount of water equal to, or greater than, the amount of water needed to serve a 500-dwelling unit project.

(2) As part of approval of the project, any of the following are required:

(A) An amendment to, or revision of, the land use element of a general plan or a specific plan, which would result in a net increase in the stated population density or building intensity to provide for additional development.

(B) The adoption of a specific plan, unless the city or county has previously complied with this section for the project.

Notwithstanding the foregoing provisions of this subsection (a)(2), when a project is identified in connection with the revision of any part of a general plan, that project is subject to the requirements of this section only if the project results in a net increase in the stated population density or building intensity, and if the city or county has not previously complied with the requirements of this section for the project in question.

(3) A city or county has determined that an environmental impact report is required in connection with the project.

(b) For projects subject to this guideline, a city or county shall identify any water system that is, or may become, a public water system, as defined in Section 10912 of the Water Code, that may supply water for the project. When a city or county releases a notice of preparation for review, it shall send a copy of the notice to each public water system which serves or would serve the proposed project and request that the system both indicate whether the projected water demand associated with the proposed project was included in its last urban water management plan and assess whether its total projected water supplies available during normal, single–dry, and multiple–dry water years as included in the 20–year projection contained in its urban water management plan will meet the projected water demand associated with the proposed project, in addition to the system's existing and planned future uses.

(c) The governing body of a public water system shall approve and submit its water supply assessment to the city or county not later than 30 days after the date on which the request and notice of preparation were received. If the public water system fails to submit its assessment within the allotted time, the lead agency may assume, unless there has been a request for a specific extension of time from the public water system, that the public water system has no information to submit. If a public water system concludes there would be insufficient water to serve the proposed project, it shall provide the city or county with its plans for acquiring additional water supplies.

(d) The lead agency shall include within the EIR the public water system's assessment and any other information provided by the water agency, up to a maximum of ten typewritten pages. The assessment and information may only exceed that length with the approval of the lead agency. The lead agency may independently evaluate the water system's information and shall determine, based on the entire record, whether projected water supplies will be sufficient to satisfy the demands of the proposed project, in addition to existing and planned future uses. If the lead agency determines that water supplies will not be sufficient, the lead agency must include that determination in its findings for the project pursuant to Sections 15091 and 15093.

(e) For purposes of this section, "public water system" means a system as defined in Section 10912 of the Water Code with 3,000 or more service connections.

(f) This section does not apply to the County of San Diego and the cities in the county as provided in Section 10915 of the Water Code.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21151.9, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15084. Preparing the Draft EIR.

(a) The draft EIR shall be prepared directly by or under contract to the lead agency. The required contents of a draft EIR are discussed in Article beginning with Section 15120.

(b) The lead agency may require the project applicant to supply data and information both to determine whether the project may have a significant effect on the environment and to assist the lead agency in preparing the draft EIR. The requested information should include an identification of other public agencies which will have jurisdiction by law over the project.

(c) Any person, including the applicant, may submit information or comments to the lead agency to assist in the preparation of the draft EIR. The submittal may be presented in any format, including the form of a draft EIR. The lead agency must consider all information and comments received. The information or comments may be included in the draft EIR in whole or in part.

(d) The lead agency may choose one of the following arrangements or a combination of them for preparing a draft EIR.

(1) Preparing the draft EIR directly with its own staff.

(2) Contracting with another entity, public or private, to prepare the draft EIR.

(3) Accepting a draft prepared by the applicant, a consultant retained by the applicant, or any other person.

(4) Executing a third party contract or memorandum of understanding with the applicant to govern the preparation of a draft EIR by an independent contractor.

(5) Using a previously prepared EIR.

(e) Before using a draft prepared by another person, the lead agency shall subject the draft to the agency's own review and analysis. The draft EIR which is sent out for public review must reflect the independent judgment of the lead agency. The lead agency is responsible for the adequacy and objectivity of the draft EIR.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21082.1, Public Resources Code.

§ 15085. Notice of Completion.

(a) As soon as the draft EIR is completed, a notice of completion must be filed with OPR in a printed hard copy or in electronic form on a diskette or by electronic mail transmission.

(b) The notice of completion shall include:

(1) A brief description of the project,

(2) The proposed location of the project,

(3) An address where copies of the draft EIR are available, and

(4) The period during which comments will be received on the draft EIR.

(c) A form for the notice of completion is included in the appendices.

(d) Where the EIR will be reviewed through the state review process handled by the State Clearinghouse, the cover form required by the State Clearinghouse will serve as the notice of completion.

(e) Public agencies are encouraged to make copies of notices of completion filed pursuant to this section available in electronic format on the Internet.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21161, Public Resources Code.

HISTORY

1. Amendment of subsections (a) and (d) filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).
2. Amendment of subsection (a) and new subsection (c) filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15086. Consultation Concerning Draft EIR.

(a) The lead agency shall consult with and request comments on the draft EIR from:

(1) Responsible agencies,

(2) Trustee agencies with resources affected by the project, and

(3) Any other state, federal, and local agencies which have jurisdiction by law with respect to the project or which exercise authority over resources which may be affected by the project, including water agencies consulted pursuant to section 15083.5.

(4) Any city or county which borders on a city or county within which the project is located.

(5) For a project of statewide, regional, or areawide significance, the transportation planning agencies and public agencies which have transportation facilities within their jurisdictions which could be affected by the project. "Transportation facilities" includes: major local arterials and

public transit within five miles of the project site, and freeways, highways and rail transit service within 10 miles of the project site.

(6) For a state lead agency when the EIR is being prepared for a highway or freeway project, the State Air Resources Board as to the air pollution impact of the potential vehicular use of the highway or freeway and if a non-attainment area, the local air quality management district for a determination of conformity with the air quality management plan.

(7) For a subdivision project located within one mile of a facility of the State Water Resources Development System, the California Department of Water Resources.

(b) The lead agency may consult directly with:

(1) Any person who has special expertise with respect to any environmental impact involved,

(2) Any member of the public who has filed a written request for notice with the lead agency or the clerk of the governing body.

(3) Any person identified by the applicant whom the applicant believes will be concerned with the environmental effects of the project.

(c) A responsible agency or other public agency shall only make substantive comments regarding those activities involved in the project that are within an area of expertise of the agency or which are required to be carried out or approved by the responsible agency. Those comments shall be supported by specific documentation.

(d) Prior to the close of the public review period, a responsible agency or trustee agency which has identified what that agency considers to be significant environmental effects shall advise the lead agency of those effects. As to those effects relevant to its decision, if any, on the project, the responsible or trustee agency shall either submit to the lead agency complete and detailed performance objectives for mitigation measures addressing those effects or refer the lead agency to appropriate, readily available guidelines or reference documents concerning mitigation measures. If the responsible or trustee agency is not aware of mitigation measures that address identified effects, the responsible or trustee agency shall so state.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21081.6, 21092.4, 21092.5, 21104 and 21153, Public Resources Code.

HISTORY

1. Amendment of section and NOTE filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).
2. Change without regulatory effect repealing subsection (a)(6) and renumbering subsections filed 2-1-2001 pursuant to section 100, title 1, California Code of Regulations (Register 2001, No. 5).

§ 15087. Public Review of Draft EIR.

(a) The lead agency shall provide public notice of the availability of a draft EIR at the same time as it sends a notice of completion to OPR. This notice shall be given as provided under Section 15105. Notice shall be mailed to the last known name and address of all organizations and individuals who have previously requested such notice in writing, and shall also be given by at least one of the following procedures:

(1) Publication at least one time by the public agency in a newspaper of general circulation in the area affected by the proposed project. If more than one area is affected, the notice shall be published in the newspaper of largest circulation from among the newspapers of general circulation in those areas.

(2) Posting of notice by the public agency on and off the site in the area where the project is to be located.

(3) Direct mailing to the owners and occupants of property contiguous to the parcel or parcels on which the project is located. Owners of such property shall be identified as shown on the latest equalized assessment roll.

(b) The alternatives for providing notice specified in subsection (a) shall not preclude a public agency from providing additional notice by other means if such agency so desires, nor shall the requirements of this section preclude a public agency from providing the public notice required by this section at the same time and in the same manner as public notice otherwise required by law for the project.

(c) The notice shall disclose the following:

(1) A brief description of the proposed project and its location.

(2) The starting and ending dates for the review period during which the lead agency will receive comments. If the review period is shortened, the notice shall disclose that fact.

(3) The date, time, and place of any scheduled public meetings or hearings to be held by the lead agency on the proposed project when known to the lead agency at the time of notice.

(4) A list of the significant environmental effects anticipated as a result of the project, to the extent which such effects are known to the lead agency at the time of the notice.

(5) The address where copies of the EIR and all documents referenced in the EIR will be available for public review. This location shall be readily accessible to the public during the lead agency's normal working hours.

(6) The presence of the site on any of the lists of sites enumerated under Section 65962.5 of the Government Code including, but not limited to lists of hazardous waste facilities, land designated as hazardous waste property, hazardous waste disposal sites and others, and the information in the Hazardous Waste and Substances Statement required under subsection (f) of that Section.

(d) The notice required under this section shall be posted in the office of the county clerk of each county in which the project will be located for a period of at least 30 days. The county clerk shall post such notices within 24 hours of receipt.

(e) In order to provide sufficient time for public review, the review period for a draft EIR shall be as provided in Section 15105. The review period shall be combined with the consultation required under Section 15086. When a draft EIR has been submitted to the State Clearinghouse, the public review period shall be at least as long as the review period established by the Clearinghouse.

(f) Public agencies shall use the State Clearinghouse to distribute draft EIRs to state agencies for review and should use areawide clearinghouses to distribute the documents to regional and local agencies.

(g) To make copies of EIRs available to the public, lead agencies should furnish copies of draft EIRs to public library systems serving the area involved. Copies should also be available in offices of the lead agency.

(h) Public agencies should compile listings of other agencies, particularly local agencies, which have jurisdiction by law and/or special expertise with respect to various projects and project locations. Such listings should be a guide in determining which agencies should be consulted with regard to a particular project.

(i) Public hearings may be conducted on the environmental documents, either in separate proceedings or in conjunction with other proceedings of the public agency. Public hearings are encouraged, but not required as an element of the CEQA process.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21091, 21092, 21092.2, 21092.3, 21092.6, 21104, 21153 and 21161, Public Resources Code.

HISTORY

1. Amendment of subsection (a) filed 1-30-86; effective thirtieth day thereafter (Register 86, No. 5).
2. Amendment of subsection (a)(3) and NOTE filed 8-19-94; operative 9-19-94 (Register 94, No. 33).
3. Amendment of section and NOTE filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15088. Evaluation of and Response to Comments.

(a) The lead agency shall evaluate comments on environmental issues received from persons who reviewed the draft EIR and shall prepare a written response. The lead agency shall respond to comments received during the noticed comment period and any extensions and may respond to late comments.

(b) The written response shall describe the disposition of significant environmental issues raised (e.g., revisions to the proposed project to mitigate anticipated impacts or objections). In particular, the major environmental issues raised when the lead agency's position is at variance with recommendations and objections raised in the comments must be

addressed in detail giving reasons why specific comments and suggestions were not accepted. There must be good faith, reasoned analysis in response. Conclusory statements unsupported by factual information will not suffice.

(c) The response to comments may take the form of a revision to the draft EIR or may be a separate section in the final EIR. Where the response to comments makes important changes in the information contained in the text of the draft EIR, the lead agency should either:

(1) Revise the text in the body of the EIR, or

(2) Include marginal notes showing that the information is revised in the response to comments.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21104 and 21153, Public Resources Code; *People* v. *County of Kern*, (1974) 39 Cal. App. 3d 830; *Cleary v. County of Stanislaus*, (1981) 118 Cal. App. 3d 348.

§ 15088.5. Recirculation of an EIR Prior to Certification.

(a) A lead agency is required to recirculate an EIR when significant new information is added to the EIR after public notice is given of the availability of the draft EIR for public review under Section 15087 but before certification. As used in this section, the term "information" can include changes in the project or environmental setting as well as additional data or other information. New information added to an EIR is not "significant" unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement. "Significant new information" requiring recirculation include, for example, a disclosure showing that:

(1) A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.

(2) A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.

(3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the significant environmental impacts of the project, but the project's proponents decline to adopt it.

(4) The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded. (*Mountain Lion Coalition v. Fish & Game Com.* (1989) 214 Cal.App.3d 1043).

(b) Recirculation is not required where the new information added to the EIR merely clarifies or amplifies or makes insignificant modifications in an adequate EIR.

(c) If the revision is limited to a few chapters or portions of the EIR, the lead agency need only recirculate the chapters or portions that have been modified.

(d) Recirculation of an EIR requires notice pursuant to Section 15087, and consultation pursuant to Section 15086.

(e) A decision not to recirculate an EIR must be supported by substantial evidence in the administrative record.

(f) The lead agency shall evaluate and respond to comments as provided in Section 15088. Recirculating an EIR can result in the lead agency receiving more than one set of comments from reviewers. Following are two ways in which the lead agency may identify the set of comments to which it will respond. This dual approach avoids confusion over whether the lead agency must respond to comments which are duplicates or which are no longer pertinent due to revisions to the EIR. In no case shall the lead agency fail to respond to pertinent comments on significant environmental issues.

(1) When the EIR is substantially revised and the entire EIR is recirculated, the lead agency may require that reviewers submit new comments and need not respond to those comments received during the earlier circulation period. The lead agency shall advise reviewers, either within the text of the revised EIR or by an attachment to the revised EIR, that although part of the administrative record, the previous comments do not require a written response in the final EIR, and that new comments must be submitted for the revised EIR. The lead agency need only respond to those comments submitted in response to the recirculated revised EIR. The lead agency shall send directly to every agency, person, or organization that commented on the prior draft EIR a notice of the recirculation specifying that new comments must be submitted.

(2) When the EIR is revised only in part and the lead agency is recirculating only the revised chapters or portions of the EIR, the lead agency may request that reviewers limit their comments to the revised chapters or portions. The lead agency need only respond to (i) comments received during the initial circulation period that relate to chapters or portions of the document that were not revised and recirculated, and (ii) comments received during the recirculation period that relate to the chapters or portions of the earlier EIR that were revised and recirculated. The lead agency's request that reviewers limit the scope of their comments shall be included either within the text of the revised EIR or by an attachment to the revised EIR.

(g) When recirculating a revised EIR, either in whole or in part, the lead agency shall, in the revised EIR or by an attachment to the revised EIR, summarize the revisions made to the previously circulated draft EIR.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21092.1, Public Resources Code; *Laurel Heights Improvement Association v. Regents of the University of California* (1993) 6 Cal. 4th 1112.

HISTORY

1. New section filed 8–19–94; operative 9–19–94 (Register 94, No. 33).
2. New subsections (f)–(g) filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15089. Preparation of Final EIR.

(a) The lead agency shall prepare a final EIR before approving the project. The contents of a final EIR are specified in Section 15132 of these guidelines.

(b) Lead agencies may provide an opportunity for review of the final EIR by the public or by commenting agencies before approving the project. The review of a final EIR should focus on the responses to comments on the draft EIR.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21100, 21105 and 21151, Public Resources Code; *City of Carmel–by–the–Sea* v. *Board of Supervisors*, (1977) 71 Cal. App. 3d 84; State Administrative Manual, Section 1060.

§ 15090. Certification of the Final EIR.

(a) Prior to approving a project the lead agency shall certify that:

(1) The final EIR has been completed in compliance with CEQA;

(2) The final EIR was presented to the decisionmaking body of the lead agency and that the decisionmaking body reviewed and considered the information contained in the final EIR prior to approving the project; and

(3) The final EIR reflects the lead agency's independent judgment and analysis.

(b) When an EIR is certified by a non–elected decision–making body within a local lead agency, that certification may be appealed to the local lead agency's elected decision–making body, if one exists. For example, certification of an EIR for a tentative subdivision map by a city's planning commission may be appealed to the city council. Each local lead agency shall provide for such appeals.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21082.1, 21100 and 21151, Public Resources Code; *City of Carmel–by–the–Sea* v. *Board of Supervisors* (1977) 71 Cal. App. 3d 84; *Kleist* v. *City of Glendale* (1976) 56 Cal. App. 3d 770.

HISTORY

1. Amendment of section heading, section and NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22)

§ 15091. Findings.

(a) No public agency shall approve or carry out a project for which an EIR has been certified which identifies one or more significant environmental effects of the project unless the public agency makes one or more written findings for each of those significant effects, accompanied by a

brief explanation of the rationale for each finding. The possible findings are:

(1) Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the final EIR.

(2) Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency.

(3) Specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the final EIR.

(b) The findings required by subsection (a) shall be supported by substantial evidence in the record.

(c) The finding in subsection (a)(2) shall not be made if the agency making the finding has concurrent jurisdiction with another agency to deal with identified feasible mitigation measures or alternatives. The finding in subsection (a)(3) shall describe the specific reasons for rejecting identified mitigation measures and project alternatives.

(d) When making the findings required in subsection (a)(1), the agency shall also adopt a program for reporting on or monitoring the changes which it has either required in the project or made a condition of approval to avoid or substantially lessen significant environmental effects. These measures must be fully enforceable through permit conditions, agreements, or other measures.

(e) The public agency shall specify the location and custodian of the documents or other material which constitute the record of the proceedings upon which its decision is based.

(f) A statement made pursuant to Section 15093 does not substitute for the findings required by this section.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21002.1, 21081 and 21081.6, Public Resources Code; *Laurel Hills Homeowners Association* v. *City Council* (1978) 83 Cal. App. 3d 515; *Cleary* v. *County of Stanislaus* (1981) 118 Cal. App. 3d 348; *Sierra Club v. Contra Costa County* (1992) 10 Cal.App.4th 1212; *Citizens for Quality Growth v. City of Mount Shasta* (1988) 198 Cal.App.3d 433.

HISTORY

1. Amendment of subsections (a) and (a)(3), new subsections (d) and (e), and amendment of NOTE filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
2. Amendment of subsection (c), new subsection (f) and amendment of NOTE filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15092. Approval.

(a) After considering the final EIR and in conjunction with making findings under Section 15091, the lead agency may decide whether or how to approve or carry out the project.

(b) A public agency shall not decide to approve or carry out a project for which an EIR was prepared unless either:

(1) The project as approved will not have a significant effect on the environment, or

(2) The agency has:

(A) Eliminated or substantially lessened all significant effects on the environment where feasible as shown in findings under Section 15091, and

(B) Determined that any remaining significant effects on the environment found to be unavoidable under Section 15091 are acceptable due to overriding concerns as described in Section 15093.

(c) With respect to a project which includes housing development, the public agency shall not reduce the proposed number of housing units as a mitigation measure if it determines that there is another feasible specific mitigation measure available that will provide a comparable level of mitigation.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21002.1, 21081 and 21085, Public Resources Code; *Friends of Mammoth v. Board of Supervisors*, (1972) 8 Cal. App. 3d 247; San *Francisco Ecology Center v. City and County of San Francisco*, (1975) 48 Cal. App. 3d 584; *City of Carmel-by-the-Sea* v. *Board of Supervisors*, (1977) 71 Cal. App. 3d 84; *Laurel Hills Homeowners Association* v. *City Council*, (1978) 83 Cal. App. 3d 515.

§ 15093. Statement of Overriding Considerations.

(a) CEQA requires the decision-making agency to balance, as applicable, the economic, legal, social, technological, or other benefits of a proposed project against its unavoidable environmental risks when determining whether to approve the project. If the specific economic, legal, social, technological, or other benefits of a proposal project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered "acceptable."

(b) When the lead agency approves a project which will result in the occurrence of significant effects which are identified in the final EIR but are not avoided or substantially lessened, the agency shall state in writing the specific reasons to support its action based on the final EIR and/or other information in the record. The statement of overriding considerations shall be supported by substantial evidence in the record.

(c) If an agency makes a statement of overriding considerations, the statement should be included in the record of the project approval and should be mentioned in the notice of determination. This statement does not substitute for, and shall be in addition to, findings required pursuant to Section 15091.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002 and 21081, Public Resources Code; *San Francisco Ecology Center* v. *City and County of San Francisco* (1975) 48 Cal. App. 3d 584; *City of Carmel-by-the-Sea* v. *Board of Supervisors* (1977) 71 Cal. App. 3d 84; *Sierra Club v. Contra Costa County* (1992) 10 Cal.App.4th 1212; *Citizens for Quality Growth v. City of Mount Shasta* (1988) 198 Cal.App.3d 433.

HISTORY

1. Amendment of subsections (a) and (b) and amendment of NOTE filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
2. Amendment of subsections (b) and (c) and amendment of NOTE filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15094. Notice of Determination.

(a) The lead agency shall file a notice of determination within 5 working days after approval of the project by the lead agency. The notice shall include:

(1) An identification of the project including its common name where possible and its location.

(2) A brief description of the project.

(3) The date when the agency approved the project.

(4) The determination of the agency whether the project in its approved form will have a significant effect on the environment.

(5) A statement that an EIR was prepared and certified pursuant to the provisions of CEQA.

(6) Whether mitigation measures were made a condition of the approval of the project.

(7) Whether findings were made pursuant to Section 15091.

(8) Whether a statement of overriding considerations was adopted for the project.

(9) The address where a copy of the final EIR and the record of project approval may be examined.

(b) If a state agency is the lead agency, the notice of determination shall be filed with OPR.

(c) If a local agency is the lead agency, the notice of determination shall be filed with the county clerk of the county or counties in which the project will be located. If the project requires discretionary approval from a state agency, the notice of determination shall also be filed with OPR.

(d) A notice of determination filed with the county clerk is available for public inspection and shall be posted within 24 hours of receipt for a period of at least 30 days. Thereafter, the clerk shall return the notice to the local lead agency with a notation of the period during which it was posted. The local lead agency shall retain the notice for not less than 9 months.

(e) A notice of determination filed with OPR is available for public inspection and shall be posted for a period of at least 30 days.

(f) The filing of the notice of determination and the posting of such notice starts a 30-day statute of limitations on court challenges to the approval under CEQA.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21108, 21152 and 21167, Public Resources Code; *Citizens of Lake Murray Area Association* v. *City Council*, (1982) 129 Cal. App. 3d 436.

HISTORY

1. Amendment of subsections (b) and (c) filed 1-30-86; effective thirtieth day thereafter (Register 86, No. 5).
2. Amendment of subsection (a), new subsections (d) and (e), subsection relettering, and amendment of newly designated subsection (f) filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15095. Disposition of a Final EIR.

The lead agency shall:

(a) File a copy of the final EIR with the appropriate planning agency of any city, county, or city and county where significant effects on the environment may occur.

(b) Include the final EIR as part of the regular project report which is used in the existing project review and budgetary process if such a report is used.

(c) Retain one or more copies of the final EIR as public records for a reasonable period of time.

(d) Require the applicant to provide a copy of the certified, final EIR to each responsible agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21105, 21151 and 21165, Public Resources Code; *County of Inyo* v. *Yorty*, (1973) 32 Cal. App. 3d 795.

§ 15096. Process for a Responsible Agency.

(a) General. A responsible agency complies with CEQA by considering the EIR or negative declaration prepared by the lead agency and by reaching its own conclusions on whether and how to approve the project involved. This section identifies the special duties a public agency will have when acting as a responsible agency.

(b) Response to Consultation. A responsible agency shall respond to consultation by the lead agency in order to assist the lead agency in preparing adequate environmental documents for the project. By this means, the responsible agency will ensure that the documents it will use will comply with CEQA.

(1) In response to consultation, a responsible agency shall explain its reasons for recommending whether the lead agency should prepare an EIR or negative declaration for a project. Where the responsible agency disagrees with the lead agency's proposal to prepare a negative declaration for a project, the responsible agency should identify the significant environmental effects which it believes could result from the project and recommend either that an EIR be prepared or that the project be modified to eliminate the significant effects.

(2) As soon as possible, but not longer than 30 days after receiving a notice of preparation from the lead agency, the responsible agency shall send a written reply by certified mail or any other method which provides the agency with a record showing that the notice was received. The reply shall specify the scope and content of the environmental information which would be germane to the responsible agency's statutory responsibilities in connection with the proposed project. The lead agency shall include this information in the EIR.

(c) Meetings. The responsible agency shall designate employees or representatives to attend meetings requested by the lead agency to discuss the scope and content of the EIR.

(d) Comments on Draft EIRs and Negative Declarations. A responsible agency should review and comment on draft EIRs and negative declarations for projects which the responsible agency would later be asked to approve. Comments should focus on any shortcomings in the EIR, the appropriateness of using a negative declaration, or on additional alternatives or mitigation measures which the EIR should include. The comments shall be limited to those project activities which are within the agency's area of expertise or which are required to be carried out or approved by the agency or which will be subject to the exercise of powers by the agency. Comments shall be as specific as possible and supported by either oral or written documentation.

(e) Decision on Adequacy of EIR or Negative Declaration. If a responsible agency believes that the final EIR or negative declaration prepared by the lead agency is not adequate for use by the responsible agency, the responsible agency must either:

(1) Take the issue to court within 30 days after the lead agency files a notice of determination;

(2) Be deemed to have waived any objection to the adequacy of the EIR or negative declaration;

(3) Prepare a subsequent EIR if permissible under Section 15162; or

(4) Assume the lead agency role as provided in Section 15052(a)(3).

(f) Consider the EIR or Negative Declaration. Prior to reaching a decision on the project, the responsible agency must consider the environmental effects of the project as shown in the EIR or negative declaration. A subsequent or supplemental EIR can be prepared only as provided in Sections 15162 or 15163.

(g) Adoption of Alternatives or Mitigation Measures.

(1) When considering alternatives and mitigation measures, a responsible agency is more limited than a lead agency. A responsible agency has responsibility for mitigating or avoiding only the direct or indirect environmental effects of those parts of the project which it decides to carry out, finance, or approve.

(2) When an EIR has been prepared for a project, the Responsible Agency shall not approve the project as proposed if the agency finds any feasible alternative or feasible mitigation measures within its powers that would substantially lessen or avoid any significant effect the project would have on the environment. With respect to a project which includes housing development, the responsible agency shall not reduce the proposed number of housing units as a mitigation measure if it determines that there is another feasible specific mitigation measure available that will provide a comparable level of mitigation.

(h) Findings. The responsible agency shall make the findings required by Section 15091 for each significant effect of the project and shall make the findings in Section 15093 if necessary.

(i) Notice of Determination. The responsible agency should file a notice of determination in the same manner as a lead agency under Section 15075 or 15094 except that the responsible agency does not need to state that the EIR or negative declaration complies with CEQA. The responsible agency should state that it considered the EIR or negative declaration as prepared by a lead agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21165, 21080.1, 21080.3, 21080.4, 21082.1 and 21002.1(b) and (d), Public Resources Code.

HISTORY

1. Amendment of subsections (b) and (d) filed 1-30-86; effective thirtieth day thereafter (Register 86, No. 5).

§ 15097. Mitigation Monitoring or Reporting.

(a) This section applies when a public agency has made the findings required under paragraph (1) of subdivision (a) of Section 15091 relative to an EIR or adopted a mitigated negative declaration in conjunction with approving a project. In order to ensure that the mitigation measures and project revisions identified in the EIR or negative declaration are implemented, the public agency shall adopt a program for monitoring or reporting on the revisions which it has required in the project and the measures it has imposed to mitigate or avoid significant environmental effects. A public agency may delegate reporting or monitoring responsibilities to another public agency or to a private entity which accepts the delegation; however, until mitigation measures have been completed the lead agency remains responsible for ensuring that implementation of the mitigation measures occurs in accordance with the program.

(b) Where the project at issue is the adoption of a general plan, specific plan, community plan or other plan-level document (zoning, ordinance, regulation, policy), the monitoring plan shall apply to policies and any other portion of the plan that is a mitigation measure or adopted alternative. The monitoring plan may consist of policies included in plan-level documents. The annual report on general plan status required pursuant

to the Government Code is one example of a reporting program for adoption of a city or county general plan.

(c) The public agency may choose whether its program will monitor mitigation, report on mitigation, or both. "Reporting" generally consists of a written compliance review that is presented to the decision making body or authorized staff person. A report may be required at various stages during project implementation or upon completion of the mitigation measure. "Monitoring" is generally an ongoing or periodic process of project oversight. There is often no clear distinction between monitoring and reporting and the program best suited to ensuring compliance in any given instance will usually involve elements of both. The choice of program may be guided by the following:

(1) Reporting is suited to projects which have readily measurable or quantitative mitigation measures or which already involve regular review. For example, a report may be required upon issuance of final occupancy to a project whose mitigation measures were confirmed by building inspection.

(2) Monitoring is suited to projects with complex mitigation measures, such as wetlands restoration or archeological protection, which may exceed the expertise of the local agency to oversee, are expected to be implemented over a period of time, or require careful implementation to assure compliance.

(3) Reporting and monitoring are suited to all but the most simple projects. Monitoring ensures that project compliance is checked on a regular basis during and, if necessary after, implementation. Reporting ensures that the approving agency is informed of compliance with mitigation requirements.

(d) Lead and responsible agencies should coordinate their mitigation monitoring or reporting programs where possible. Generally, lead and responsible agencies for a given project will adopt separate and different monitoring or reporting programs. This occurs because of any of the following reasons: the agencies have adopted and are responsible for reporting on or monitoring different mitigation measures; the agencies are deciding on the project at different times; each agency has the discretion to choose its own approach to monitoring or reporting; and each agency has its own special expertise.

(e) At its discretion, an agency may adopt standardized policies and requirements to guide individually adopted monitoring or reporting programs. Standardized policies and requirements may describe, but are not limited to:

(1) The relative responsibilities of various departments within the agency for various aspects of monitoring or reporting, including lead responsibility for administering typical programs and support responsibilities.

(2) The responsibilities of the project proponent.

(3) Agency guidelines for preparing monitoring or reporting programs.

(4) General standards for determining project compliance with the mitigation measures or revisions and related conditions of approval.

(5) Enforcement procedures for noncompliance, including provisions for administrative appeal.

(6) Process for informing staff and decision makers of the relative success of mitigation measures and using those results to improve future mitigation measures.

(f) Where a trustee agency, in timely commenting upon a draft EIR or a proposed mitigated negative declaration, proposes mitigation measures or project revisions for incorporation into a project, that agency, at the same time, shall prepare and submit to the lead or responsible agency a draft monitoring or reporting program for those measures or revisions. The lead or responsible agency may use this information in preparing its monitoring or reporting program.

(g) When a project is of statewide, regional, or areawide importance, any transportation information generated by a required monitoring or reporting program shall be submitted to the transportation planning agency in the region where the project is located. Each transportation planning agency shall adopt guidelines for the submittal of such information.

NOTE: Authority: Sections 21083 and 21087, Public Resources Code. References: Sections 21081.6 and 21081.7, Public Resources Code.

HISTORY

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

Article 8. Time Limits

§ 15100. General.

(a) Public agencies shall adopt time limits to govern their implementation of CEQA consistent with this article.

(b) Public agencies should carry out their responsibilities for preparing and reviewing EIRs within a reasonable period of time. The requirement for the preparation of an EIR should not cause undue delays in the processing of applications for permits or other entitlements to use.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21000–21176, Public Resources Code.

HISTORY

1. Renumbering and amendment of former Article 8 (Sections 15100–15129) to Article 19 (Sections 15300–15329) and new Article 8 (Sections 15100–15112) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29). For prior history, see Register 82, No. 2.
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15101. Review of Application for Completeness.

A lead agency or responsible agency shall determine whether an application for a permit or other entitlement for use is complete within 30 days from the receipt of the application except as provided in Section 15111. If no written determination of the completeness of the application is made within that period, the application will be deemed complete on the 30th day.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21083, Public Resources Code; and Section 65943, Government Code.

§ 15102. Initial Study.

The lead agency shall determine within 30 days after accepting an application as complete whether it intends to prepare an EIR or a negative declaration or use a previously prepared EIR or negative declaration except as provided in Section 15111. The 30 day period may be extended 15 days upon the consent of the lead agency and the project applicant.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.2, Public Resources Code.

HISTORY

1. Amendment filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).

§ 15103. Response to Notice of Preparation.

Responsible agencies and trustee agencies shall provide a response to a notice of preparation to the lead agency within 30 days after receipt of the notice. If a responsible agency fails to reply within the 30 days with either a response or a well justified request for additional time, the lead agency may assume that the responsible agency has no response and any ignore a late response.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.4, Public Resources Code.

HISTORY

1. Amendment filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).

§ 15104. Convening of Meetings.

The lead agency shall convene a meeting with agency representatives to discuss the scope and content of the environmental information a responsible agency will need in the EIR as soon as possible but no later than 30 days after receiving a request for the meeting. The meeting may be requested by the lead agency, a responsible agency, a trustee agency, or by the project applicant.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.4, Public Resources Code.

§15105. Public Review Period for a Draft EIR or a Proposed Negative Declaration or Mitigated Negative Declaration.

(a) The public review period for a draft EIR shall not be less than 30 days nor should it be longer than 60 days except in unusual circumstances. When a draft EIR is submitted to the State Clearinghouse for review by state agencies, the public review period shall not be less than 45 days, unless a shorter period, not less than 30 days, is approved by the State Clearinghouse.

(b) The public review period for a proposed negative declaration or mitigated negative declaration shall be not less than 20 days. When a proposed negative declaration or mitigated negative declaration is submitted to the State Clearinghouse for review by state agencies, the public review period shall not be less than 30 days, unless a shorter period, not less than 20 days, is approved by the State Clearinghouse.

(c) If a draft EIR or proposed negative declaration or mitigated negative declaration has been submitted to the State Clearinghouse for review by state agencies, the public review period shall be at least as long as the review period established by the State Clearinghouse.

(d) A shortened Clearinghouse review period may be granted in accordance with the provisions of Appendix K and the following principles:

(1) A shortened review shall not be granted for any proposed project of statewide, areawide, or regional environmental significance.

(2) Requests for shortened review periods shall be submitted to the Clearinghouse in writing by the decision-making body of the lead agency, or a representative authorized by ordinance, resolution, or delegation of the decision-making body.

(3) The lead agency has contacted responsible and trustee agencies and they have agreed to the shortened review period.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21091 and 21092, Public Resources Code; *People* v. *County of* ..., 39 Cal. App. 3d 830.

HISTORY

1. Amendment of section heading, section and NOTE filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
2. Change without regulatory effect amending subsection (d) filed 2-1-2001 pursuant to section 100, title 1, California Code of Regulations (Register 2001, No. 5).

§ 15106. Review by State Agencies.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21104 and 21153, Public Resources Code.

HISTORY

1. Repealer filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15107. Completion of Negative Declaration for Certain Private Projects.

With private projects involving the issuance of a lease, permit, license, certificate, or other entitlement for use by one or more public agencies, the negative declaration must be completed and approved within 180 days from the date when the lead agency accepted the application as complete.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21100.2 and 21151.5, Public Resources Code.

HISTORY

1. Amendment of section heading and section filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15108. Completion and Certification of EIR.

With a private project, the lead agency shall complete and certify the final EIR as provided in Section 15090 within one year after the date when the lead agency accepted the application as complete. Lead agency procedures may provide that the one-year time limit may be extended once for a period of not more than 90 days upon consent of the lead agency and the applicant.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21100.2 and 21151.5, Public Resources Code; and Government Code Section 65950.

§ 15109. Suspension of Time Periods.

An unreasonable delay by an applicant in meeting requests by the lead agency necessary for the preparation of a negative declaration or an EIR shall suspend the running of the time periods described in Sections 15107 and 15108 for the period of the unreasonable delay. Alternatively, an agency may disapprove a project application where there is unreasonable delay in meeting requests. The agency may allow a renewed application to start at the same point in the process where the application was when it was disapproved.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21100.2 and 21151.5, Public Resources Code; *Carmel Valley View, Ltd.* v. *Maggini*, 91 Cal. App. 3d 318.

§ 15110. Projects with Federal Involvement.

(a) At the request of an applicant, the lead agency may waive the one-year time limit for completing and certifying a final EIR or the 105-day period for completing a negative declaration if:

(1) The project will be subject to CEQA and to the National Environmental Policy Act,

(2) Additional time will be required to prepare a combined EIR-EIS or combined negative declaration-finding of no significant impact as provided in Section 15221, and

(3) The time required to prepare the combined document will be shorter than the time required to prepare the documents separately.

(b) The time limits for taking final action on a permit for a development project may also be waived where a combined EIR-EIS will be prepared.

(c) The time limits for processing permits for development projects under Government Code Sections 65950-65960 shall not apply if federal statutes or regulations require time schedules which exceed the state time limits. In this event, any state agencies involved shall make a final decision on the project within the federal time limits.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.6 and 21083.7, Public Resources Code; Sections 65951 and 65954, Government Code; Public Law 91-190 as amended, 42 U.S.C.A. 4321-4347.

HISTORY

1. Amendment of subsection (a)(2) filed 1-30-86; effective thirtieth day thereafter (Register 86, No. 5).

§ 15111. Projects with Short Time Periods for Approval.

(a) A few statutes or ordinances require agencies to make decisions on permits within time limits that are so short that review of the project under CEQA would be difficult. To enable the lead agency to comply with both the permit statute and CEQA, the lead agency shall deem an application for a project not received for filing under the permit statute or ordinance until such time as progress toward completing the environmental documentation required by CEQA is sufficient to enable the lead agency to finish the CEQA process within the short permit time limit. This section will apply where all of the following conditions are met:

(1) The enabling legislation for a program, other than Chapter 4.5 (commencing with Section 65920) of Division 1 of Title 7 of the Government Code, requires the lead agency to take action on an application within a specified period of time that is six months or less, and

(2) The enabling legislation provides that the project will become approved by operation of law if the lead agency fails to take any action within such specified time period, and

(3) The project involves the issuance of a lease, permit, license, certificate, or other entitlement for use.

(b) Examples of time periods subject to this section include but are not limited to:

(1) Action on a timber harvesting plan by the Director of Forestry within 15 days pursuant to Section 4582.7 of the Public Resources Code,

(2) Action on a permit by the San Francisco Bay Conservation and Development Commission within 90 days pursuant to Section 66632(f) of the Government Code, and

decision makers in preparing findings or a statement of overriding considerations, if necessary. The statement of objectives should include the underlying purpose of the project.

(c) A general description of the project's technical, economic, and environmental characteristics, considering the principal engineering proposals if any and supporting public service facilities.

(d) A statement briefly describing the intended uses of the EIR.

(1) This statement shall include, to the extent that the information is known to the lead agency,

(A) A list of the agencies that are expected to use the EIR in their decision-making, and

(B) A list of permits and other approvals required to implement the project.

(C) A list of related environmental review and consultation requirements required by federal, state, or local laws, regulations, or policies. To the fullest extent possible, the lead agency should integrate CEQA review with these related environmental review and consultation requirements.

(2) If a public agency must make more than one decision on a project, all its decisions subject to CEQA should be listed, preferably in the order in which they will occur. On request, the Office of Planning and Research will provide assistance in identifying state permits for a project.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080.3, 21080.4, 21165, 21166 and 21167.2, Public Resources Code; *County of Inyo v. City of Los Angeles* (1977) 71 Cal. App. 3d 185.

HISTORY

1. Amendment of subsections (b) and (d)(1)(B), new subsection (d)(1)(C) and amendment of NOTE filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15125. Environmental Setting.

(a) An EIR must include a description of the physical environmental conditions in the vicinity of the project, as they exist at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, from both a local and regional perspective. This environmental setting will normally constitute the baseline physical conditions by which a lead agency determines whether an impact is significant. The description of the environmental setting shall be no longer than is necessary to an understanding of the significant effects of the proposed project and its alternatives.

(b) When preparing an EIR for a plan for the reuse of a military base, lead agencies should refer to the special application of the principle of baseline conditions for determining significant impacts contained in Section 15229.

(c) Knowledge of the regional setting is critical to the assessment of environmental impacts. Special emphasis should be placed on environmental resources that are rare or unique to that region and would be affected by the project. The EIR must demonstrate that the significant environmental impacts of the proposed project were adequately investigated and discussed and it must permit the significant effects of the project to be considered in the full environmental context.

(d) The EIR shall discuss any inconsistencies between the proposed project and applicable general plans and regional plans. Such regional plans include, but are not limited to, the applicable air quality attainment or maintenance plan or State Implementation Plan, area-wide waste treatment and water quality control plans, regional transportation plans, regional housing allocation plans, habitat conservation plans, natural community conservation plans and regional land use plans for the protection of the coastal zone, Lake Tahoe Basin, San Francisco Bay, and Santa Monica Mountains.

(e) Where a proposed project is compared with an adopted plan, the analysis shall examine the existing physical conditions at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced as well as the potential future conditions discussed in the plan.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21061 and 21100, Public Resources Code; *E.P.I.C. v. County of El Dorado*, (1982) 131 Cal. App. 3d 350; *San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus* (1994) 27 Cal.App.4th 713; *Bloom v. McGurk* (1994) 26 Cal.App.4th 1307.

HISTORY

1. Amendment of section and NOTE filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15126. Consideration and Discussion of Environmental Impacts.

All phases of a project must be considered when evaluating its impact on the environment: planning, acquisition, development, and operation. The subjects listed below shall be discussed as directed in Sections 15126.2, 15126.4 and 15126.6, preferably in separate sections or paragraphs of the EIR. If they are not discussed separately, the EIR shall include a table showing where each of the subjects is discussed.

(a) Significant Environmental Effects of the Proposed Project.

(b) Significant Environmental Effects Which Cannot be Avoided if the Proposed Project is Implemented.

(c) Significant Irreversible Environmental Changes Which Would be Involved in the Proposed Project Should it be Implemented.

(d) Growth-Inducing Impact of the Proposed Project.

(e) The Mitigation Measures Proposed to Minimize the Significant Effects.

(f) Alternatives to the Proposed Project.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21003, 21100 and 21081.6, Public Resources Code; *Citizens of Goleta Valley v. Board of Supervisors*, (1990) 52 Cal.3d 553; *Laurel Heights Improvement Association v. Regents of the University of California*, (1988) 47 Cal. 3d 376; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359; and *Laurel Heights Improvement Association v. Regents of the University of California* (1993) 6 Cal. 4th 1112.

HISTORY

1. Amendment of subsection (d), repealer and new subsections (d)(1)-(4), amendment of subsection (d)(5), new subsections (d)(5)(A)-(B)3, designation of subsection (d)(5)(C) and amendment of NOTE filed 8-19-94; operative 9-19-94 (Register 94, No. 33).
2. Amendment of section heading, repealer of subsection (e), subsection relettering, and amendment of NOTE filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
3. Amendment of first paragraph, repealer and new subsections (a)-(f) and amendment of NOTE filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15126.2. Consideration and Discussion of Significant Environmental Impacts.

(a) The Significant Environmental Effects of the Proposed Project. An EIR shall identify and focus on the significant environmental effects of the proposed project. In assessing the impact of a proposed project on the environment, the lead agency should normally limit its examination to changes in the existing physical conditions in the affected area as they exist at the time the notice of preparation is published, or where no notice of preparation is published, at the time environmental analysis is commenced. Direct and indirect significant effects of the project on the environment shall be clearly identified and described, giving due consideration to both the short-term and long-term effects. The discussion should include relevant specifics of the area, the resources involved, physical changes, alterations to ecological systems, and changes induced in population distribution, population concentration, the human use of the land (including commercial and residential development), health and safety problems caused by the physical changes, and other aspects of the resource base such as water, historical resources, scenic quality, and public services. The EIR shall also analyze any significant environmental effects the project might cause by bringing development and people into the area affected. For example, an EIR on a subdivision astride an active fault line should identify as a significant effect the seismic hazard to future occupants of the subdivision. The subdivision would have the effect of attracting people to the location and exposing them to the hazards found there.

(b) Significant Environmental Effects Which Cannot be Avoided if the Proposed Project is Implemented. Describe any significant impacts, including those which can be mitigated but not reduced to a level of insignificance. Where there are impacts that cannot be alleviated without imposing an alternative design, their implications and the reasons why the

(3) Action on an oil and gas permit by the Division of Oil and Gas within 10 days pursuant to Sections 3203 or 3724 of the Public Resources Code.

(c) In any case described in this section, the environmental document shall be completed or certified and the decision on the project shall be made within the period established under the Permit Streamlining Act (Government Code Sections 65920, et seq.).

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21100.2 and 21151.5, Public Resources Code; *N.R.D.C.* v. *Arcata National Corp.* (1976) 59 Cal. App. 3d 959.

HISTORY

1. Repealer of subsection (b)(1), subsection renumbering, amendment of subsection (c) and amendment of NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15112. Statutes of Limitations.

(a) CEQA provides unusually short statutes of limitations on filing court challenges to the approval of projects under the act.

(b) The statute of limitations periods are not public review periods or waiting periods for the person whose project has been approved. The project sponsor may proceed to carry out the project as soon as the necessary permits have been granted. The statute of limitations cuts off the right of another person to file a court action challenging approval of the project after the specified time period has expired.

(c) The statute of limitations periods under CEQA are as follows:

(1) Where the public agency filed a notice of determination in compliance with Sections 15075 or 15094, 30 days after the filing of the notice and the posting on a list of such notices.

(2) Where the public agency filed a notice of exemption in compliance with Section 15062, 35 days after the filing of the notice and the posting on a list of such notices.

(3) Where a certified state regulatory agency files a notice of decision in compliance with Public Resources Code Section 21080.5(d)(2)(v), 30 days after the filing of the notice.

(4) Where the Secretary for Resources certifies a state environmental regulatory agency under Public Resources Code Section 21080.5, the certification may be challenged only during the 30 days following the certification decision.

(5) Where none of the other statute of limitations periods in this section apply, 180 days after either:

(A) The public agency's decision to carry out or approve the project, or

(B) Commencement of the project if the project is undertaken without a formal decision by the public agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21167, 21167.3 and 21080.5, Public Resources Code; *Kriebel* v. *City Council*, 112 Cal. App. 3d 693; *Citizens of Lake Murray Area Association* v. *City Council*, (1982) 129 Cal. App. 3d 436.

Article 9. Contents of Environmental Impact Reports

§ 15120. General.

(a) Environmental Impact Reports shall contain the information outlined in this article, but the format of the document may be varied. Each element must be covered, and when these elements are not separated into distinct sections, the document shall state where in the document each element is discussed.

(b) The EIR may be prepared as a separate document, as part of a general plan, or as part of a project report. If prepared as a part of the project report, it must still contain one separate and distinguishable section providing either analysis of all the subjects required in an EIR or as a minimum, a table showing where each of the subjects is discussed. When the lead agency is a state agency, the EIR shall be included as part of the regular project report if such a report is used in the agency's existing review and budgetary process.

(c) Draft EIRs shall contain the information required by Sections 15122 through 15131. Final EIRs shall contain the same information and the subjects described in Section 15132.

(d) No document prepared pursuant to this article that is available for public examination shall include a "trade secret" as defined in Section 6254.7 of the Government Code, information about the location of archaeological sites and sacred lands, or any other information that is subject to the disclosure restrictions of Section 6254 of the Government Code.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21100, 21105 and 21160, Public Resources Code.

HISTORY

1. Repealer of Article 9 (Sections 15140–15151) and new Article 9 (Sections 15120–15132) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29). For prior history, see Registers 82, No. 2; 80, No. 19; 78, No. 5; 77, No. 1; 76, No. 41; 75, Nos. 1 and 18; and 73, No. 50.
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).
3. New subsection (d) and amendment of NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15121. Informational Document.

(a) An EIR is an informational document which will inform public agency decisionmakers and the public generally of the significant environmental effect of a project, identify possible ways to minimize the significant effects, and describe reasonable alternatives to the project. The public agency shall consider the information in the EIR along with other information which may be presented to the agency.

(b) While the information in the EIR does not control the agency's ultimate discretion on the project, the agency must respond to each significant effect identified in the EIR by making findings under Section 15091 and if necessary by making a statement of overriding considerations under Section 15093.

(c) The information in an EIR may constitute substantial evidence in the record to support the agency's action on the project if its decision is later challenged in court.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21061, Public Resources Code; *Carmel Valley View, Ltd.* v. *Board of Supervisors*, (1976) 58 Cal. App. 3d 817.

§ 15122. Table of Contents or Index.

An EIR shall contain at least a table of contents or an index to assist readers in finding the analysis of different subjects and issues.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21061, Public Resources Code.

§ 15123. Summary.

(a) An EIR shall contain a brief summary of the proposed actions and its consequences. The language of the summary should be as clear and simple as reasonably practical.

(b) The summary shall identify:

(1) Each significant effect with proposed mitigation measures and alternatives that would reduce or avoid that effect;

(2) Areas of controversy known to the lead agency including issues raised by agencies and the public; and

(3) Issues to be resolved including the choice among alternatives and whether or how to mitigate the significant effects.

(c) The summary should normally not exceed 15 pages.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21061, Public Resources Code.

§ 15124. Project Description.

The description of the project shall contain the following information but should not supply extensive detail beyond that needed for evaluation and review of the environmental impact.

(a) The precise location and boundaries of the proposed project shall be shown on a detailed map, preferably topographic. The location of the project shall also appear on a regional map.

(b) A statement of the objectives sought by the proposed project. A clearly written statement of objectives will help the lead agency develop a reasonable range of alternatives to evaluate in the EIR and will aid the

project is being proposed, notwithstanding their effect, should be described.

(c) Significant Irreversible Environmental Changes Which Would be Caused by the Proposed Project Should it be Implemented. Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible since a large commitment of such resources makes removal or nonuse thereafter unlikely. Primary impacts and, particularly, secondary impacts (such as highway improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also irreversible damage can result from environmental accidents associated with the project. Irretrievable commitments of resources should be evaluated to assure that such current consumption is justified.

(d) Growth–Inducing Impact of the Proposed Project. Discuss the ways in which the proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Included in this are projects which would remove obstacles to population growth (a major expansion of a waste water treatment plant might, for example, allow for more construction in service areas). Increases in the population may tax existing community service facilities, requiring construction of new facilities that could cause significant environmental effects. Also discuss the characteristic of some projects which may encourage and facilitate other activities that could significantly affect the environment, either individually or cumulatively. It must not be assumed that growth in any area is necessarily beneficial, detrimental, or of little significance to the environment.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21003 and 21100, Public Resources Code; *Citizens of Goleta Valley v. Board of Supervisors*, (1990) 52 Cal.3d 553; *Laurel Heights Improvement Association v. Regents of the University of California*, (1988) 47 Cal.3d 376; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359; *Laurel Heights Improvement Association v. Regents of the University of California* (1993) 6 Cal.4th 1112; and *Goleta Union School Dist. v. Regents of the Univ. Of Calif* (1995) 37 Cal. App.4th 1025.

HISTORY

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15126.4. Consideration and Discussion of Mitigation Measures Proposed to Minimize Significant Effects.

(a) Mitigation Measures in General.

(1) An EIR shall describe feasible measures which could minimize significant adverse impacts, including where relevant, inefficient and unnecessary consumption of energy.

(A) The discussion of mitigation measures shall distinguish between the measures which are proposed by project proponents to be included in the project and other measures proposed by the lead, responsible or trustee agency or other persons which are not included but the lead agency determines could reasonably be expected to reduce adverse impacts if required as conditions of approving the project. This discussion shall identify mitigation measures for each significant environmental effect identified in the EIR.

(B) Where several measures are available to mitigate an impact, each should be discussed and the basis for selecting a particular measure should be identified. Formulation of mitigation measures should not be deferred until some future time. However, measures may specify performance standards which would mitigate the significant effect of the project and which may be accomplished in more than one specified way.

(C) Energy conservation measures, as well as other appropriate mitigation measures, shall be discussed when relevant. Examples of energy conservation measures are provided in Appendix F.

(D) If a mitigation measure would cause one or more significant effects in addition to those that would be caused by the project as proposed, the effects of the mitigation measure shall be discussed but in less detail than the significant effects of the project as proposed. (*Stevens v. City of Glendale* (1981) 125 Cal.App.3d 986.)

(2) Mitigation measures must be fully enforceable through permit conditions, agreements, or other legally–binding instruments. In the case of the adoption of a plan, policy, regulation, or other public project, mitigation measures can be incorporated into the plan, policy, regulation, or project design.

(3) Mitigation measures are not required for effects which are not found to be significant.

(4) Mitigation measures must be consistent with all applicable constitutional requirements, including the following:

(A) There must be an essential nexus (i.e. connection) between the mitigation measure and a legitimate governmental interest. *Nollan v. California Coastal Commission*, 483 U.S. 825 (1987); and

(B) The mitigation measure must be "roughly proportional" to the impacts of the project. *Dolan v. City of Tigard*, 512 U.S. 374 (1994). Where the mitigation measure is an ad hoc exaction, it must be "roughly proportional" to the impacts of the project. *Ehrlich v. City of Culver City* (1996) 12 Cal.4th 854.

(5) If the lead agency determines that a mitigation measure cannot be legally imposed, the measure need not be proposed or analyzed. Instead, the EIR may simply reference that fact and briefly explain the reasons underlying the lead agency's determination.

(b) Mitigation Measures Related to Impacts on Historical Resources.

(1) Where maintenance, repair, stabilization, rehabilitation, restoration, preservation, conservation or reconstruction of the historical resource will be conducted in a manner consistent with the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings (1995), Weeks and Grimmer, the project's impact on the historical resource shall generally be considered mitigated below a level of significance and thus is not significant.

(2) In some circumstances, documentation of an historical resource, by way of historic narrative, photographs or architectural drawings, as mitigation for the effects of demolition of the resource will not mitigate the effects to a point where clearly no significant effect on the environment would occur.

(3) Public agencies should, whenever feasible, seek to avoid damaging effects on any historical resource of an archaeological nature. The following factors shall be considered and discussed in an EIR for a project involving such an archaeological site:

(A) Preservation in place is the preferred manner of mitigating impacts to archaeological sites. Preservation in place maintains the relationship between artifacts and the archaeological context. Preservation may also avoid conflict with religious or cultural values of groups associated with the site.

(B) Preservation in place may be accomplished by, but is not limited to, the following:

1. Planning construction to avoid archaeological sites;

2. Incorporation of sites within parks, greenspace, or other open space;

3. Covering the archaeological sites with a layer of chemically stable soil before building tennis courts, parking lots, or similar facilities on the site.

4. Deeding the site into a permanent conservation easement.

(C) When data recovery through excavation is the only feasible mitigation, a data recovery plan, which makes provision for adequately recovering the scientifically consequential information from and about the historical resource, shall be prepared and adopted prior to any excavation being undertaken. Such studies shall be deposited with the California Historical Resources Regional Information Center. Archaeological sites known to contain human remains shall be treated in accordance with the provisions of Section 7050.5 Health and Safety Code.

(D) Data recovery shall not be required for an historical resource if the lead agency determines that testing or studies already completed have adequately recovered the scientifically consequential information from and about the archaeological or historical resource, provided that the determination is documented in the EIR and that the studies are deposited with the California Historical Resources Regional Information Center.

NOTE: Authority: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21003, 21100 and 21084.1, Public Resources Code; *Citizens of Goleta Valley v. Board of Supervisors*, (1990) 52 Cal.3d 553; *Laurel Heights Improvement Association v. Regents of the University of California*, (1988) 47 Cal.3d 376; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359; *Laurel Heights Improvement Association v. Regents of the University of California* (1993) 6 Cal.4th 1112; and *Sacramento Old City Assn. v. City Council of Sacramento* (1991) 229 Cal.App.3d 1011.

HISTORY

1. New section filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15126.6. Consideration and Discussion of Alternatives to the Proposed Project.

(a) Alternatives to the Proposed Project. An EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. Rather it must consider a reasonable range of potentially feasible alternatives that will foster informed decisionmaking and public participation. An EIR is not required to consider alternatives which are infeasible. The lead agency is responsible for selecting a range of project alternatives for examination and must publicly disclose its reasoning for selecting those alternatives. There is no ironclad rule governing the nature or scope of the alternatives to be discussed other than the rule of reason. (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553 and *Laurel Heights Improvement Association v. Regents of the University of California* (1988) 47 Cal.3d 376).

(b) Purpose. Because an EIR must identify ways to mitigate or avoid the significant effects that a project may have on the environment (Public Resources Code Section 21002.1), the discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly.

(c) Selection of a range of reasonable alternatives. The range of potential alternatives to the proposed project shall include those that could feasibly accomplish most of the basic objectives of the project and could avoid or substantially lessen one or more of the significant effects. The EIR should briefly describe the rationale for selecting the alternatives to be discussed. The EIR should also identify any alternatives that were considered by the lead agency but were rejected as infeasible during the scoping process and briefly explain the reasons underlying the lead agency's determination. Additional information explaining the choice of alternatives may be included in the administrative record. Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are:(i) failure to meet most of the basic project objectives, (ii) infeasibility, or (iii) inability to avoid significant environmental impacts.

(d) Evaluation of alternatives. The EIR shall include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project. A matrix displaying the major characteristics and significant environmental effects of each alternative may be used to summarize the comparison. If an alternative would cause one or more significant effects in addition to those that would be caused by the project as proposed, the significant effects of the alternative shall be discussed, but in less detail than the significant effects of the project as proposed. (*County of Inyo v. City of Los Angeles* (1981) 124 Cal.App.3d 1).

(e) "No project" alternative.

(1) The specific alternative of "no project" shall also be evaluated along with its impact. The purpose of describing and analyzing a no project alternative is to allow decisionmakers to compare the impacts of approving the proposed project with the impacts of not approving the proposed project. The no project alternative analysis is not the baseline for determining whether the proposed project's environmental impacts may be significant, unless it is identical to the existing environmental setting analysis which does establish that baseline (see Section 15125).

(2) The "no project" analysis shall discuss the existing conditions at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, as well as what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services. If the environmentally superior alternative is the "no project" alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives.

(3) A discussion of the "no project" alternative will usually proceed along one of two lines:

(A) When the project is the revision of an existing land use or regulatory plan, policy or ongoing operation, the "no project" alternative will be the continuation of the existing plan, policy or operation into the future. Typically this is a situation where other projects initiated under the existing plan will continue while the new plan is developed. Thus, the projected impacts of the proposed plan or alternative plans would be compared to the impacts that would occur under the existing plan.

(B) If the project is other than a land use or regulatory plan, for example a development project on identifiable property, the "no project" alternative is the circumstance under which the project does not proceed. Here the discussion would compare the environmental effects of the property remaining in its existing state against environmental effects which would occur if the project is approved. If disapproval of the project under consideration would result in predictable actions by others, such as the proposal of some other project, this "no project" consequence should be discussed. In certain instances, the no project alternative means "no build" wherein the existing environmental setting is maintained. However, where failure to proceed with the project will not result in preservation of existing environmental conditions, the analysis should identify the practical result of the project's non-approval and not create and analyze a set of artificial assumptions that would be required to preserve the existing physical environment.

(C) After defining the no project alternative using one of these approaches, the lead agency should proceed to analyze the impacts of the no project alternative by projecting what would reasonably be expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services.

(f) Rule of reason. The range of alternatives required in an EIR is governed by a "rule of reason" that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency determines could feasibly attain most of the basic objectives of the project. The range of feasible alternatives shall be selected and discussed in a manner to foster meaningful public participation and informed decision making.

(1) Feasibility. Among the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries (projects with a regionally significant impact should consider the regional context), and whether the proponent can reasonably acquire, control or otherwise have access to the alternative site (or the site is already owned by the proponent). No one of these factors establishes a fixed limit on the scope of reasonable alternatives. (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553; see *Save Our Residential Environment v. City of West Hollywood* (1992) 9 Cal.App.4th 1745, 1753, fn. 1).

(2) Alternative locations.

(A) Key question. The key question and first step in analysis is whether any of the significant effects of the project would be avoided or substantially lessened by putting the project in another location. Only locations

that would avoid or substantially lessen any of the significant effects of the project need be considered for inclusion in the EIR.

(B) None feasible. If the lead agency concludes that no feasible alternative locations exist, it must disclose the reasons for this conclusion, and should include the reasons in the EIR. For example, in some cases there may be no feasible alternative locations for a geothermal plant or mining project which must be in close proximity to natural resources at a given location.

(C) Limited new analysis required. Where a previous document has sufficiently analyzed a range of reasonable alternative locations and environmental impacts for projects with the same basic purpose, the lead agency should review the previous document. The EIR may rely on the previous document to help it assess the feasibility of potential project alternatives to the extent the circumstances remain substantially the same as they relate to the alternative. (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 573).

(3) An EIR need not consider an alternative whose effect cannot be reasonably ascertained and whose implementation is remote and speculative. (*Residents Ad Hoc Stadium Committee v. Board of Trustees* (1979) 89 Cal. App.3d 274).

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21002.1, 21003 and 21100, Public Resources Code; *Citizens of Goleta Valley v. Board of Supervisors*, (1990) 52 Cal.3d 553; *Laurel Heights Improvement Association v. Regents of the University of California*, (1988) 47 Cal.3d 376; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359; and *Laurel Heights Improvement Association v. Regents of the University of California* (1993) 6 Cal.4th 1112.

HISTORY

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15127. Limitations on Discussion of Environmental Impact.

The information required by Section 15126.2(c) concerning irreversible changes, need be included only in EIRs prepared in connection with any of the following activities:

(a) The adoption, amendment, or enactment of a plan, policy, or ordinance of a public agency;

(b) The adoption by a local agency formation commission of a resolution making determinations; or

(c) A project which will be subject to the requirement for preparing an environmental impact statement pursuant to the requirements of the National Environmental Policy Act of 1969, 42 U.S.C. 4321–4347.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21100.1, Public Resources Code.

HISTORY

1. Amendment of first paragraph, subsection (c) and NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
2. Change without regulatory effect amending first paragraph filed 2–1–2001 pursuant to section 100, title 1, California Code of Regulations (Register 2001, No. 5).

§ 15128. Effects Not Found to Be Significant.

An EIR shall contain a statement briefly indicating the reasons that various possible significant effects of a project were determined not to be significant and were therefore not discussed in detail in the EIR. Such a statement may be contained in an attached copy of an initial study.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21100, Public Resources Code.

§ 15129. Organizations and Persons Consulted.

The EIR shall identify all federal, state, or local agencies, other organizations, and private individuals consulted in preparing the draft EIR, and the persons, firm, or agency preparing the draft EIR, by contract or other authorization.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21104 and 21153, Public Resources Code.

§ 15130. Discussion of Cumulative Impacts.

(a) An EIR shall discuss cumulative impacts of a project when the project's incremental effect is cumulatively considerable, as defined in section 15065(c). Where a lead agency is examining a project with an incremental effect that is not "cumulatively considerable," a lead agency need not consider that effect significant, but shall briefly describe its basis for concluding that the incremental effect is not cumulatively considerable.

(1) As defined in Section 15355, a cumulative impact consists of an impact which is created as a result of the combination of the project evaluated in the EIR together with other projects causing related impacts. An EIR should not discuss impacts which do not result in part from the project evaluated in the EIR.

(2) When the combined cumulative impact associated with the project's incremental effect and the effects of other projects is not significant, the EIR shall briefly indicate why the cumulative impact is not significant and is not discussed in further detail in the EIR. A lead agency shall identify facts and analysis supporting the lead agency's conclusion that the cumulative impact is less than significant.

(3) An EIR may determine that a project's contribution to a significant cumulative impact will be rendered less than cumulatively considerable and thus is not significant. A project's contribution is less than cumulatively considerable if the project is required to implement or fund its fair share of a mitigation measure or measures designed to alleviate the cumulative impact. The lead agency shall identify facts and analysis supporting its conclusion that the contribution will be rendered less than cumulatively considerable.

(4) An EIR may determine that a project's contribution to a significant cumulative impact is de minimus and thus is not significant. A de minimus contribution means that the environmental conditions would essentially be the same whether or not the proposed project is implemented.

(b) The discussion of cumulative impacts shall reflect the severity of the impacts and their likelihood of occurrence, but the discussion need not provide as great detail as is provided for the effects attributable to the project alone. The discussion should be guided by the standards of practicality and reasonableness, and should focus on the cumulative impact to which the identified other projects contribute rather than the attributes of other projects which do not contribute to the cumulative impact. The following elements are necessary to an adequate discussion of significant cumulative impacts:

(1) Either:

(A) A list of past, present, and probable future projects producing related or cumulative impacts, including, if necessary, those projects outside the control of the agency, or

(B) A summary of projections contained in an adopted general plan or related planning document, or in a prior environmental document which has been adopted or certified, which described or evaluated regional or areawide conditions contributing to the cumulative impact. Any such planning document shall be referenced and made available to the public at a location specified by the lead agency;

1. When utilizing a list, as suggested in paragraph (1) of subdivision (b), factors to consider when determining whether to include a related project should include the nature of each environmental resource being examined, the location of the project and its type. Location may be important, for example, when water quality impacts are at issue since projects outside the watershed would probably not contribute to a cumulative effect. Project type may be important, for example, when the impact is specialized, such as a particular air pollutant or mode of traffic.

2. "Probable future projects" may be limited to those projects requiring an agency approval for an application which has been received at the time the notice of preparation is released, unless abandoned by the applicant; projects included in an adopted capital improvements program, general plan, regional transportation plan, or other similar plan; projects included in a summary of projections of projects (or development areas designated) in a general plan or a similar plan; projects anticipated as later phase of a previously approved project (e.g. a subdivision); or those public agency projects for which money has been budgeted.

3. Lead agencies should define the geographic scope of the area affected by the cumulative effect and provide a reasonable explanation for the geographic limitation used.

(2) A summary of the expected environmental effects to be produced by those projects with specific reference to additional information stating where that information is available, and

(3) A reasonable analysis of the cumulative impacts of the relevant projects. An EIR shall examine reasonable, feasible options for mitigating or avoiding the project's contribution to any significant cumulative effects.

(c) With some projects, the only feasible mitigation for cumulative impacts may involve the adoption of ordinances or regulations rather than the imposition of conditions on a project-by-project basis.

(d) Previously approved land use documents such as general plans, specific plans, and local coastal plans may be used in cumulative impact analysis. A pertinent discussion of cumulative impacts contained in one or more previously certified EIRs may be incorporated by reference pursuant to the provisions for tiering and program EIRs. No further cumulative impacts analysis is required when a project is consistent with a general, specific, master or comparable programmatic plan where the lead agency determines that the regional or areawide cumulative impacts of the proposed project have already been adequately addressed, as defined in section 15152(f), in a certified EIR for that plan.

(e) If a cumulative impact was adequately addressed in a prior EIR for a community plan, zoning action, or general plan, and the project is consistent with that plan or action, then an EIR for such a project should not further analyze that cumulative impact, as provided in Section15183(j).

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083(b), 21093, 21094 and 21100, Public Resources Code; *Whitman* v. *Board of Supervisors*, (1979) 88 Cal. App. 3d 397; *San Franciscans for Reasonable Growth v. City and County of San Francisco* (1984) 151 Cal.App.3d 61; *Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal.App.3d 692; *Laurel Heights Homeowners Association v. Regents of the University of California* (1988) 47 Cal.3d 376; *Sierra Club v. Gilroy* (1990) 220 Cal.App.3d 30; *Citizens to Preserve the Ojai v. County of Ventura* (1985) 176 Cal.App.3d 421; *Concerned Citizens of South Cent. Los Angeles v. Los Angeles Unified Sch. Dist.* (1994) 24 Cal.App.4th 826; *Las Virgenes Homeowners Fed'n v. County of Los Angeles* (1986) 177 Cal.App.3d 300; *San Joaquin Raptor/Wildlife Rescue Ctr v. County of Stanislaus* (1994) 27 Cal.App.4th 713; and *Fort Mojave Indian Tribe v. Cal. Dept. Of Health Services* (1995) 38 Cal.App.4th 1574.

HISTORY

1. Amendment of section heading, new subsection (d) and amendment of NOTE filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
2. Amendment of section and NOTE filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).
3. Change without regulatory effect amending subsection (d) filed 2-1-2001 pursuant to section 100, title 1, California Code of Regulations (Register 2001, No. 5).

§ 15131. Economic and Social Effects.

Economic or social information may be included in an EIR or may be presented in whatever form the agency desires.

(a) Economic or social effects of a project shall not be treated as significant effects on the environment. An EIR may trace a chain of cause and effect from a proposed decision on a project through anticipated economic or social changes resulting from the project to physical changes caused in turn by the economic or social changes. The intermediate economic or social changes need not be analyzed in any detail greater than necessary to trace the chain of cause and effect. The focus of the analysis shall be on the physical changes.

(b) Economic or social effects of a project may be used to determine the significance of physical changes caused by the project. For example, if the construction of a new freeway or rail line divides an existing community, the construction would be the physical change, but the social effect on the community would be the basis for determining that the effect would be significant. As an additional example, if the construction of a road and the resulting increase in noise in an area disturbed existing religious practices in the area, the disturbance of the religious practices could be used to determine that the construction and use of the road and the resulting noise would be significant effects on the environment. The religious practices would need to be analyzed only to the extent to show that the increase in traffic and noise would conflict with the religious practices. Where an EIR uses economic or social effects to determine that a physical change is significant, the EIR shall explain the reason for determining that the effect is significant.

(c) Economic, social, and particularly housing factors shall be considered by public agencies together with technological and environmental factors in deciding whether changes in a project are feasible to reduce or avoid the significant effects on the environment identified in the EIR. If information on these factors is not contained in the EIR, the information must be added to the record in some other manner to allow the agency to consider the factors in reaching a decision on the project.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21001(e) and (g), 21002, 21002.1, 21060.5, 21080.1, 21083(c) and 21100, Public Resources Code.

§ 15132. Contents of Final Environmental Impact Report.

The final EIR shall consist of:

(a) The Draft EIR or a revision of the draft.

(b) Comments and recommendations received on the Draft EIR either verbatim or in summary.

(c) A list of persons, organizations, and public agencies commenting on the Draft EIR.

(d) The responses of the Lead Agency to significant environmental points raised in the review and consultation process.

(e) Any other information added by the lead agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21100, Public Resources Code.

Article 10. Considerations in Preparing EIRs and Negative Declarations

§ 15140. Writing.

EIRs shall be written in plain language and may use appropriate graphics so that decisionmakers and the public can rapidly understand the documents.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003 and 21100, Public Resources Code.

HISTORY

1. Repealer of Article 10 (Sections 15160–15167) and new Article 10 (Sections 15140–15153) filed 7-13-83; effective thirtieth day thereafter (Register 83, No. 29). For prior history, see Registers 80, No. 19; 78, No. 5; 76, No. 41; 75, No. 1; and 73, No. 50.
2. Editorial correction of 7-13-83 order redesignating effective date to 8-1-83 filed 7-14-83 (Register 83, No. 29).

§ 15141. Page Limits.

The text of draft EIRs should normally be less than 150 pages and for proposals of unusual scope or complexity should normally be less than 300 pages.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21100, Public Resources Code.

§ 15142. Interdisciplinary Approach.

An EIR shall be prepared using an interdisciplinary approach which will ensure the integrated use of the natural and social sciences and the consideration of qualitative as well as quantitative factors. The interdisciplinary analysis shall be conducted by competent individuals, but no single discipline shall be designated or required to undertake this evaluation.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21000, 21001 and 21100, Public Resources Code.

§ 15143. Emphasis.

The EIR shall focus on the significant effects on the environment. The significant effects should be discussed with emphasis in proportion to their severity and probability of occurrence. Effects dismissed in an Initial Study as clearly insignificant and unlikely to occur need not be discussed further in the EIR unless the Lead Agency subsequently receives information inconsistent with the finding in the Initial Study. A copy of the Initial Study may be attached to the EIR to provide the basis for limiting the impacts discussed.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15144. Forecasting.

Drafting an EIR or preparing a negative declaration necessarily involves some degree of forecasting. While foreseeing the unforeseeable is not possible, an agency must use its best efforts to find out and disclose all that it reasonably can.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15145. Speculation.

If, after thorough investigation, a lead agency finds that a particular impact is too speculative for evaluation, the agency should note its conclusion and terminate discussion of the impact.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code; *Topanga Beach Renters Association* v. *Department of General Services* (1976) 58 Cal. App. 3d 712.

§ 15146. Degree of Specificity.

The degree of specificity required in an EIR will correspond to the degree of specificity involved in the underlying activity which is described in the EIR.

(a) An EIR on a construction project will necessarily be more detailed in the specific effects of the project than will be an EIR on the adoption of a local general plan or comprehensive zoning ordinance because the effects of the construction can be predicted with greater accuracy.

(b) An EIR on a project such as the adoption or amendment of a comprehensive zoning ordinance or a local general plan should focus on the secondary effects that can be expected to follow from the adoption, or amendment, but the EIR need not be as detailed as an EIR on the specific construction projects that might follow.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15147. Technical Detail.

The information contained in an EIR shall include summarized technical data, maps, plot plans, diagrams, and similar relevant information sufficient to permit full assessment of significant environmental impacts by reviewing agencies and members of the public. Placement of highly technical and specialized analysis and data in the body of an EIR should be avoided through inclusion of supporting information and analyses as appendices to the main body of the EIR. Appendices to the EIR may be prepared in volumes separate from the basic EIR document, but shall be readily available for public examination and shall be submitted to all clearinghouses which assist in public review.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15148. Citation.

Preparation of EIRs is dependent upon information from many sources, including engineering project reports and many scientific documents relating to environmental features. These documents should be cited but not included in the EIR. The EIR shall cite all documents used in its preparation including, where possible, the page and section number of any technical reports which were used as the basis for any statements in the EIR.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15149. Use of Registered Professionals in Preparing EIRs.

(a) A number of statutes provide that certain professional services can be provided to the public only by individuals who have been registered by a registration board established under California law. Such statutory restrictions apply to a number of professions including but not limited to engineering, land surveying, forestry, geology, and geophysics.

(b) In its intended usage, an EIR is not a technical document that can be prepared only by a registered professional. The EIR serves as a public disclosure document explaining the effects of the proposed project on the environment, alternatives to the project, and ways to minimize adverse effects and to increase beneficial effects. As a result of information in the EIR, the lead agency should establish requirements or conditions on project design, construction, or operation in order to protect or enhance the environment. State statutes may provide that only registered professionals can prepare technical studies which will be used in or which will control the detailed design, construction, or operation of the proposed project and which will be prepared in support of an EIR.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15150. Incorporation by Reference.

(a) An EIR or negative declaration may incorporate by reference all or portions of another document which is a matter of public record or is generally available to the public. Where all or part of another document is incorporated by reference, the incorporated language shall be considered to be set forth in full as part of the text of the EIR or negative declaration.

(b) Where part of another document is incorporated by reference, such other document shall be made available to the public for inspection at a public place or public building. The EIR or negative declaration shall state where the incorporated documents will be available for inspection. At a minimum, the incorporated document shall be made available to the public in an office of the lead agency in the county where the project would be carried out or in one or more public buildings such as county offices or public libraries if the lead agency does not have an office in the county.

(c) Where an EIR or negative declaration uses incorporation by reference, the incorporated part of the referenced document shall be briefly summarized where possible or briefly described if the data or information cannot be summarized. The relationship between the incorporated part of the referenced document and the EIR shall be described.

(d) Where an agency incorporates information from an EIR that has previously been reviewed through the state review system, the state identification number of the incorporated document should be included in the summary or designation described in Subsection (c).

(e) Examples of materials that may be incorporated by reference include but are not limited to:

(1) A description of the environmental setting from another EIR.

(2) A description of the air pollution problems prepared by an air pollution control agency concerning a process involved in the project.

(3) A description of the city or county general plan that applies to the location of the project.

(f) Incorporation by reference is most appropriate for including long, descriptive, or technical materials that provide general background but do not contribute directly to the analysis of the problem at hand.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15151. Standards for Adequacy of an EIR.

An EIR should be prepared with a sufficient degree of analysis to provide decisionmakers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among the experts. The courts have looked not for perfection but for adequacy, completeness, and a good faith effort at full disclosure.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21061 and 21100, Public Resources Code; *San Francisco Ecology Center* v. *City and County of San Francisco*, 48 Cal. App. 3d 584 (1975).

§ 15152. Tiering.

(a) "Tiering" refers to using the analysis of general matters contained in a broader EIR (such as one prepared for a general plan or policy statement) with later EIRs and negative declarations on narrower projects; incorporating by reference the general discussions from the broader EIR;

and concentrating the later EIR or negative declaration solely on the issues specific to the later project.

(b) Agencies are encouraged to tier the environmental analyses which they prepare for separate but related projects including general plans, zoning changes, and development projects. This approach can eliminate repetitive discussions of the same issues and focus the later EIR or negative declaration on the actual issues ripe for decision at each level of environmental review. Tiering is appropriate when the sequence of analysis is from an EIR prepared for a general plan, policy, or program to an EIR or negative declaration for another plan, policy, or program of lesser scope, or to a site–specific EIR or negative declaration. Tiering does not excuse the lead agency from adequately analyzing reasonably foreseeable significant environmental effects of the project and does not justify deferring such analysis to a later tier EIR or negative declaration. However, the level of detail contained in a first tier EIR need not be greater than that of the program, plan, policy, or ordinance being analyzed.

(c) Where a lead agency is using the tiering process in connection with an EIR for a large–scale planning approval, such as a general plan or component thereof (e.g., an area plan or community plan), the development of detailed, site–specific information may not be feasible but can be deferred, in many instances, until such time as the lead agency prepares a future environmental document in connection with a project of a more limited geographical scale, as long as deferral does not prevent adequate identification of significant effects of the planning approval at hand.

(d) Where an EIR has been prepared and certified for a program, plan, policy, or ordinance consistent with the requirements of this section, any lead agency for a later project pursuant to or consistent with the program, plan, policy, or ordinance should limit the EIR or negative declaration on the later project to effects which:

(1) Were not examined as significant effects on the environment in the prior EIR; or

(2) Are susceptible to substantial reduction or avoidance by the choice specific revisions in the project, by the imposition of conditions, or other means.

(e) Tiering under this section shall be limited to situations where the project is consistent with the general plan and zoning of the city or county in which the project is located, except that a project requiring a rezone to achieve or maintain conformity with a general plan may be subject to tiering.

(f) A later EIR shall be required when the initial study or other analysis finds that the later project may cause significant effects on the environment that were not adequately addressed in the prior EIR. A negative declaration shall be required when the provisions of Section 15070 are met.

(1) Where a lead agency determines that a cumulative effect has been adequately addressed in the prior EIR, that effect is not treated as significant for purposes of the later EIR or negative declaration, and need not be discussed in detail.

(2) When assessing whether there is a new significant cumulative effect, the lead agency shall consider whether the incremental effects of the project would be considerable when viewed in the context of past, present, and probable future projects. At this point, the question is not whether there is a significant cumulative impact, but whether the effects of the project are cumulatively considerable. For a discussion on how to assess whether project impacts are cumulatively considerable, see Section 15064(i).

(3) Significant environmental effects have been "adequately addressed" if the lead agency determines that:

(A) they have been mitigated or avoided as a result of the prior environmental impact report and findings adopted in connection with that prior environmental report;

(B) they have been examined at a sufficient level of detail in the prior environmental impact report to enable those effects to be mitigated or avoided by site specific revisions, the imposition of conditions, or by other means in connection with the approval of the later project; or

(C) they cannot be mitigated to avoid or substantially lessen the significant impacts despite the project proponent's willingness to accept all feasible mitigation measures, and the only purpose of including analysis of such effects in another environmental impact report would be to put the agency in a position to adopt a statement of overriding considerations with respect to the effects.

(g) When tiering is used, the later EIRs or negative declarations shall refer to the prior EIR and state where a copy of the prior EIR may be examined. The later EIR or negative declaration should state that the lead agency is using the tiering concept and that it is being tiered with the earlier EIR.

(h) There are various types of EIRs that may be used in a tiering situation. These include, but are not limited to, the following:

(1) General plan EIR (Section 15166).

(2) Staged EIR (Section 15167).

(3) Program EIR (Section 15168).

(4) Master EIR (Section 15175).

(5) Multiple–family residential development/residential and commercial or retail mixed–use development (Section 15179.5).

(6) Redevelopment project (Section 15180).

(7) Housing/neighborhood commercial facilities in an urbanized area (Section 15181).

(8) Projects consistent with community plan, general plan, or zoning (Section 15183).

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061, 21093, 21094, 21100 and 21151, Public Resources Code; *Stanislaus Natural Heritage Project, Sierra Club v. County of Stanislaus* (1996) 48 Cal.App.4th 182; *Al Larson Boat Shop, Inc. v. Board of Harbor Commissioners* (1993) 18 Cal.App. 4th 729; and *Sierra Club v. County of Sonoma* (1992) 6 Cal.App. 4th 1307.

HISTORY

1. Amendment of section and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15153. Use of an EIR from an Earlier Project.

(a) The lead agency may employ a single EIR to describe more than one project, if such projects are essentially the same in terms of environmental impact. Further, the lead agency may use an earlier EIR prepared in connection with an earlier project to apply to a later project, if the circumstances of the projects are essentially the same.

(b) When a lead agency proposes to use an EIR from an earlier project as the EIR for a separate, later project, the lead agency shall use the following procedures:

(1) The lead agency shall review the proposed project with an initial study, using incorporation by reference if necessary, to determine whether the EIR would adequately describe:

(A) The general environmental setting of the project,

(B) The significant environmental impacts of the project, and

(C) Alternatives and mitigation measures related to each significant effect.

(2) If the lead agency believes that the EIR would meet the requirements of Subsection (1), it shall provide public review as provided in Section 15087 stating that it plans to use the previously prepared EIR as the draft EIR for this project. The notice shall include as a minimum:

(A) An identification of the project with a brief description;

(B) A statement that the agency plans to use a certain EIR prepared for a previous project as the EIR for this project;

(C) A listing of places where copies of the EIR may be examined; and

(D) A statement that the key issues involving the EIR are whether the EIR should be used for this project and whether there are any additional, reasonable alternatives or mitigation measures that should be considered as ways of avoiding or reducing the significant effects of the project.

(3) The lead agency shall prepare responses to comments received during the review period.

(4) Before approving the project, the decisionmaker in the lead agency shall:

(A) Consider the information in the EIR including comments received during the review period and responses to those comments,

(B) Decide either on its own or on a staff recommendation whether the EIR is adequate for the project at hand, and

(C) Make or require certification to be made as described in Section 15090.

(D) Make findings as provided in Sections 15091 and 15093 as necessary.

(5) After making a decision on the project, the lead agency shall file a notice of determination.

(c) An EIR prepared for an earlier project may also be used as part of an initial study to document a finding that a later project will not have a significant effect. In this situation a negative declaration will be prepared.

(d) An EIR prepared for an earlier project shall not be used as the EIR for a later project if any of the conditions described in Section 15162 would require preparation of a subsequent or supplemental EIR.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21100, 21151 and 21166, Public Resources Code.

§ 15154. Projects Near Airports.

(a) When a lead agency prepares an EIR for a project within the boundaries of a comprehensive airport land use plan or, if a comprehensive airport land use plan has not been adopted for a project within two nautical miles of a public airport or public use airport, the agency shall utilize the Airport Land Use Planning Handbook published by Caltrans' Division of Aeronautics to assist in the preparation of the EIR relative to potential airport–related safety hazards and noise problems.

(b) A lead agency shall not adopt a negative declaration or mitigated negative declaration for a project described in subsection (a) unless the lead agency considers whether the project will result in a safety hazard or noise problem for persons using the airport or for persons residing or working in the project area.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21096, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

Article 11. Types of EIRs

§ 15160. General.

This article describes a number of examples of variations in EIRs as the documents are tailored to different situations and intended uses. These variations are not exclusive. Lead agencies may use other variations consistent with the guidelines to meet the needs of other circumstances. All EIRs must meet the content requirements discussed in Article 9 beginning with Section 15120.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21061, 21100 and 21151, Public Resources Code.

HISTORY

1. New Article 11 (Section 15180) filed 12–14–73 as an emergency; effective upon filing. Certificate of Compliance included (Register 73, No. 50).
2. Repealer of Article 11 (Section 15180) and new Article 11 (Sections 15160–15170) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
3. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15161. Project EIR.

The most common type of EIR examines the environmental impacts of a specific development project. This type of EIR should focus primarily on the changes in the environment that would result from the development project. The EIR shall examine all phases of the project including planning, construction, and operation.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21061, 21100 and 21151, Public Resources Code.

§ 15162. Subsequent EIRs and Negative Declarations.

(a) When an EIR has been certified or a negative declaration adopted for a project, no subsequent EIR shall be prepared for that project unless the lead agency determines, on the basis of substantial evidence in the light of the whole record, one or more of the following:

(1) Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

(2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

(3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:

(A) The project will have one or more significant effects not discussed in the previous EIR or negative declaration;

(B) Significant effects previously examined will be substantially more severe than shown in the previous EIR;

(C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

(D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

(b) If changes to a project or its circumstances occur or new information becomes available after adoption of a negative declaration, the lead agency shall prepare a subsequent EIR if required under subsection (a). Otherwise the lead agency shall determine whether to prepare a subsequent negative declaration, an addendum, or no further documentation.

(c) Once a project has been approved, the lead agency's role in project approval is completed, unless further discretionary approval on that project is required. Information appearing after an approval does not require reopening of that approval. If after the project is approved, any of the conditions described in subsection (a) occurs, a subsequent EIR or negative declaration shall only be prepared by the public agency which grants the next discretionary approval for the project, if any. In this situation no other responsible agency shall grant an approval for the project until the subsequent EIR has been certified or subsequent negative declaration adopted.

(d) A subsequent EIR or subsequent negative declaration shall be given the same notice and public review as required under Section 15087 or Section 15072. A subsequent EIR or negative declaration shall state where the previous document is available and can be reviewed.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21166, Public Resources Code; *Bowman v. City of Petaluma* (1986) 185 Cal.App.3d 1065; *Benton v. Board of Supervisors* (1991) 226 Cal.App.3d 1467; and *Fort Mojave Indian Tribe v. California Department of Health Services et al.* (1995) 38 Cal.App.4th 1574.

HISTORY

1. Amendment of section heading, text and NOTE filed 8–19–94; operative 9–19–94 (Register 94, No. 33).
2. Amendment of subsection (c) and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15163. Supplement to an EIR.

(a) The lead or responsible agency may choose to prepare a supplement to an EIR rather than a subsequent EIR if:

(1) Any of the conditions described in Section 15162 would require the preparation of a subsequent EIR, and

(2) Only minor additions or changes would be necessary to make the previous EIR adequately apply to the project in the changed situation.

(b) The supplement to the EIR need contain only the information necessary to make the previous EIR adequate for the project as revised.

(c) A supplement to an EIR shall be given the same kind of notice and public review as is given to a draft EIR under Section 15087.

(d) A supplement to an EIR may be circulated by itself without recirculating the previous draft or final EIR.

(e) When the agency decides whether to approve the project, the decision-making body shall consider the previous EIR as revised by the supplemental EIR. A finding under Section 15091 shall be made for each significant effect shown in the previous EIR as revised.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21166, Public Resources Code.

§ 15164. Addendum to an EIR or Negative Declaration.

(a) The lead agency or a responsible agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred.

(b) An addendum to an adopted negative declaration may be prepared if only minor technical changes or additions are necessary or none of the conditions described in Section 15162 calling for the preparation of a subsequent EIR or negative declaration have occurred.

(c) An addendum need not be circulated for public review but can be included in or attached to the final EIR or adopted negative declaration.

(d) The decision-making body shall consider the addendum with the final EIR or adopted negative declaration prior to making a decision on the project.

(e) A brief explanation of the decision not to prepare a subsequent EIR pursuant to Section 15162 should be included in an addendum to an EIR, the lead agency's required findings on the project, or elsewhere in the record. The explanation must be supported by substantial evidence.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21166, Public Resources Code; *Bowman v. City of Petaluma* (1986) 185 Cal.App.3d 1065; and *Benton v. Board of Supervisors* (1991) 226 Cal.App.3d

HISTORY

1. Amendment of section heading, text and NOTE filed 8-19-94; operative 9-19-94 (Register 94, No. 33).
2. Amendment of subection (b) and NOTE filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15165. Multiple and Phased Projects.

Where individual projects are, or a phased project is, to be undertaken and where the total undertaking comprises a project with significant environmental effect, the lead agency shall prepare a single program EIR for the ultimate project as described in Section 15168. Where an individual project is a necessary precedent for action on a larger project, or commits the lead agency to a larger project, with significant environmental effect, an EIR must address itself to the scope of the larger project. Where one project is one of several similar projects of a public agency, but is not deemed a part of a larger undertaking or a larger project, the agency may prepare one EIR for all projects, or one for each project, but shall in either case comment upon the cumulative effect.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21061, 21100 and 21151, Public Resources Code; *Whitman v. Board of Supervisors*, 88 Cal. App. 3d 397 (1979).

§ 15166. EIR As Part of a General Plan.

(a) The requirements for preparing an EIR on a local general plan, element, or amendment thereof will be satisfied by using the general plan, or element document, as the EIR and no separate EIR will be required, if:

(1) the general plan addresses all the points required to be in an EIR by Article 9 of these guidelines and

(2) the document contains a special section or a cover sheet identifying where the general plan document addresses each of the points required.

(b) Where an EIR rather than a negative declaration has been prepared for a general plan, element, or amendment thereto, the EIR shall be forwarded to the State Clearinghouse for review. The requirement shall apply regardless of whether the EIR is prepared as a separate document or as a part of the general plan or element document.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061, 21083, 21100, 21104, 21151 and 21152, Public Resources Code.

§ 15167. Staged EIR.

(a) Where a large capital project will require a number of discretionary approvals from government agencies and one of the approvals will occur more than two years before construction will begin, a staged EIR may be prepared covering the entire project in a general form. The staged EIR shall evaluate the proposal in light of current and contemplated plans and produce an informed estimate of the environmental consequences of the entire project. The aspect of the project before the public agency for approval shall be discussed with a greater degree of specificity.

(b) When a staged EIR has been prepared, a supplement to the EIR shall be prepared when a later approval is required for the project, and the information available at the time of the later approval would permit consideration of additional environmental impacts, mitigation measures, or reasonable alternatives to the project.

(c) Where a statute such as the Warren-Alquist Energy Resources Conservation and Development Act provides that a specific agency shall be the lead agency for a project and requires the lead agency to prepare an EIR, a responsible agency which must grant an approval for the project before the lead agency has completed the EIR may prepare and consider a staged EIR.

(d) An agency requested to prepare a staged EIR may decline to act as the lead agency if it determines, among other factors, that:

(1) Another agency would be the appropriate lead agency; and

(2) There is no compelling need to prepare a staged EIR and grant an approval for the project before the appropriate lead agency will take its action on the project.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21003, Public Resources Code.

§ 15168. Program EIR.

(a) General. A program EIR is an EIR which may be prepared on a series of actions that can be characterized as one large project and are related either:

(1) Geographically,

(2) As logical parts in the chain of contemplated actions,

(3) In connection with issuance of rules, regulations, plans, or other general criteria to govern the conduct of a continuing program, or

(4) As individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects which can be mitigated in similar ways.

(b) Advantages. Use of a program EIR can provide the following advantages. The program EIR can:

(1) Provide an occasion for a more exhaustive consideration of effects and alternatives than would be practical in an EIR on an individual action,

(2) Ensure consideration of cumulative impacts that might be slighted in a case-by-case analysis,

(3) Avoid duplicative reconsideration of basic policy considerations,

(4) Allow the lead agency to consider broad policy alternatives and program wide mitigation measures at an early time when the agency has greater flexibility to deal with basic problems or cumulative impacts,

(5) Allow reduction in paperwork.

(c) Use With Later Activities. Subsequent activities in the program must be examined in the light of the program EIR to determine whether an additional environmental document must be prepared.

(1) If a later activity would have effects that were not examined in the program EIR, a new initial study would need to be prepared leading to either an EIR or a negative declaration.

(2) If the agency finds that pursuant to Section 15162, no new effects could occur or no new mitigation measures would be required, the agency can approve the activity as being within the scope of the project covered by the program EIR, and no new environmental document would be required.

(3) An agency shall incorporate feasible mitigation measures and alternatives developed in the program EIR into subsequent actions in the program.

(4) Where the subsequent activities involve site specific operations, the agency should use a written checklist or similar device to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were covered in the program EIR.

(5) A program EIR will be most helpful in dealing with subsequent activities if it deals with the effects of the program as specifically and comprehensively as possible. With a good and detailed analysis of the program, many subsequent activities could be found to be within the scope of the project described in the program EIR, and no further environmental documents would be required.

(d) Use With Subsequent EIRS and Negative Declarations. A program EIR can be used to simplify the task of preparing environmental documents on later parts of the program. The program EIR can:

(1) Provide the basis in an initial study for determining whether the later activity may have any significant effects.

(2) Be incorporated by reference to deal with regional influences, secondary effects, cumulative impacts, broad alternatives, and other factors that apply to the program as a whole.

(3) Focus an EIR on a subsequent project to permit discussion solely of new effects which had not been considered before.

(e) Notice With Later Activities. When a law other than CEQA requires public notice when the agency later proposes to carry out or approve an activity within the program and to rely on the program EIR for CEQA compliance, the notice for the activity shall include a statement that:

(1) This activity is within the scope of the program approved earlier, and

(2) The program EIR adequately describes the activity for the purposes of CEQA.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21003, Public Resources Code; *County of Inyo* v. *Yorty*, 32 Cal. App. 3d 795 (1973).

§ 15169. Master Environmental Assessment.

(a) General. A public agency may prepare a master environmental assessment, inventory, or data base for all, or a portion of, the territory subject to its control in order to provide information which may be used or referenced in EIRs or negative declarations. Neither the content, the format, nor the procedures to be used to develop a master environmental assessment are prescribed by these guidelines. The descriptions contained in this section are advisory. A master environmental assessment is suggested solely as an approach to identify and organize environmental information for a region or area of the state.

(b) Contents. A master environmental assessment may contain an inventory of the physical and biological characteristics of the area for which it is prepared and may contain such additional data and information as the public agency determines is useful or necessary to describe environmental characteristics of the area. It may include identification of existing levels of quality and supply of air and water, capacities and levels of use of existing services and facilities, and generalized incremental effects of different categories of development projects by type, scale, and location.

(c) Preparation.

(1) A master environmental assessment or inventory may be prepared in many possible ways. For example, a master environmental assessment may be prepared as a special, comprehensive study of the area involved, as part of the EIR on a general plan, or as a data base accumulated by indexing EIRs prepared for individual projects or programs in the area involved.

(2) The information contained in a master environmental assessment should be reviewed periodically and revised as needed so that it is accurate and current.

(3) When advantageous to do so, master environmental assessments may be prepared through a joint exercise of powers agreement with neighboring local agencies or with the assistance of the appropriate Council of Governments.

(d) Uses.

(1) A master environmental assessment can identify the environmental characteristics and constraints of an area. This information can be used to influence the design and location of individual projects.

(2) A master environmental assessment may provide information agencies can use in initial studies to decide whether certain environmental effects are likely to occur and whether certain effects will be significant.

(3) A master environmental assessment can provide a central source of current information for use in preparing individual EIRs and negative declarations.

(4) Relevant portions of a master environmental assessment can be referenced and summarized in EIRs and negative declarations.

(5) A master environmental assessment can assist in identifying long range, areawide, and cumulative impacts of individual projects proposed in the area covered by the assessment.

(6) A master environmental assessment can assist a city or county in formulating a general plan or any element of such a plan by identifying environmental characteristics and constraints that need to be addressed in the general plan.

(7) A master environmental assessment can serve as a reference document to assist public agencies which review other environmental documents dealing with activities in the area covered by the assessment. The public agency preparing the assessment should forward a completed copy to each agency which will review projects in the area.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21003, Public Resources Code.

§ 15170. Joint EIR–EIS.

A lead agency under CEQA may work with a federal agency to prepare a joint document which will meet the requirements of both CEQA and NEPA. Use of such a joint document is described in Article 14, beginning with Section 15220.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.5 and 21083.7, Public Resources Code.

Article 11.5. Master Environmental Impact Report

§ 15175. Master EIR.

(a) The Master EIR procedure is an alternative to preparing a project EIR, staged EIR, or program EIR for certain projects which will form the basis for later decision making. It is intended to streamline the later environmental review of projects or approval included within the project, plan or program analyzed in the Master EIR. Accordingly, a Master EIR shall, to the greatest extent feasible, evaluate the cumulative impacts, growth inducing impacts, and irreversible significant effects on the environment of subsequent projects.

(b) A lead agency may prepare a Master EIR for any of the following classes of projects:

(1) A general plan, general plan update, general plan element, general plan amendment, or specific plan.

(2) Public or private projects that will be carried out or approved pursuant to, or in furtherance of, a redevelopment plan.

(3) A project that consists of smaller individual projects which will be carried out in phases.

(4) A rule or regulation which will be implemented by later projects.

(5) Projects that will be carried out or approved pursuant to a development agreement.

(6) A state highway project or mass transit project which will be subject to multiple stages of review or approval.

(7) A plan proposed by a local agency, including a joint powers authority, for the reuse of a federal military base or reservation that has been closed or is proposed for closure by the federal government.

(8) A regional transportation plan or congestion management plan.

(9) Regulations adopted by the California Department of Fish and Game for the regulation of hunting and fishing.

(c) A lead agency may develop and implement a fee program in accordance with applicable provisions of law to generate the revenue necessary to prepare a Master EIR.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21156, 21157 and 21089, Public Resources Code.

HISTORY

1. New article 11.5 (sections 15175–15175.5) and section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15176. Contents of a Master EIR.

A lead agency shall include in a Master EIR all of the following:

(a) A detailed discussion as required by Section 15126.

(b) A description of anticipated subsequent projects that are within the scope of the Master EIR, including information with regard to the kind, size, intensity, and location of the subsequent projects, including, but not limited to all of the following:

(1) The specific type of project anticipated to be undertaken such as a single family development, office–commercial development, sewer line installation or other activities.

(2) The maximum and minimum intensity of any anticipated subsequent project, such as the number of residences in a residential development, and with regard to a public works facility, its anticipated capacity and service area.

(3) The anticipated location for any subsequent development projects, and, consistent with the rule of reason set forth in Section 15126.6(f), alternative locations for any such projects.

(4) A capital outlay or capital improvement program, or other scheduling or implementing device that governs the submission and approval of subsequent projects, or an explanation as to why practical planning considerations render it impractical to identify any such program or scheduling or other device at the time of preparing the Master EIR.

(c) A description of potential impacts of anticipated projects for which there is not sufficient information reasonably available to support a full assessment of potential impacts in the Master EIR. This description shall not be construed as a limitation on the impacts which may be considered in a focused EIR.

(d) Where a Master EIR is prepared in connection with a project identified in subdivision (b)(1) of section 15175, the anticipated subsequent projects included within a Master EIR may consist of later planning approvals, including parcel–specific approvals, consistent with the overall planning decision (e.g., general plan, or specific plan, or redevelopment plan) for which the Master EIR has been prepared. Such subsequent projects shall be adequately described for purposes of subdivision (b) or of this section (15176) if the Master EIR and any other documents embodying or relating to the overall planning decision identify the land use designations and the permissible densities and intensities of use for the affected parcel(s). The proponents of such subsequent projects shall not be precluded from relying on the Master EIR solely because that document did not specifically identify or list, by name, the subsequent project as ultimately proposed for approval.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21157, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
2. Change without regulatory effect amending subsection (b)(3) filed 2–1–2001 pursuant to section 100, title 1, California Code of Regulations (Register 2001, No. 5).

§ 15177. Subsequent Projects Within the Scope of the MEIR.

(a) After a Master EIR has been prepared and certified, subsequent projects which the lead agency determines as being within the scope of the Master EIR will be subject to only limited environmental review.

(b) Except as provided in subsection (2) of this subdivision, neither a new environmental document nor the preparation of findings pursuant to section 15091 shall be required of a subsequent project when all of the following requirements are met:

(1) The lead agency for the subsequent project is the lead agency or any responsible agency identified in the Master EIR.

(2) The lead agency for the subsequent project prepares an initial study on the proposal. The initial study shall analyze whether the subsequent project was described in the Master EIR and whether the subsequent project may cause any additional significant effect on the environment which was not previously examined in the Master EIR.

(3) The lead agency for the subsequent project determines, on the basis of written findings, that no additional significant environmental effect will result from the proposal, no new additional mitigation measures or alternatives may be required, and that the project is within the scope of the Master EIR. "Additional significant environmental effect" means any project–specific effect which was not addressed as a significant effect in the Master EIR.

(c) Whether a subsequent project is within the scope of the Master EIR is a question of fact to be determined by the lead agency based upon a review of the initial study to determine whether there are additional significant effects or new additional mitigation measures or alternatives required for the subsequent project that are not already discussed in the Master EIR.

(d) Prior to approval of the proposed subsequent project, the lead agency shall incorporate all feasible mitigation measures or feasible alternatives appropriate to the project as set forth in the Master EIR and provide notice in the manner required by Section 15087.

(e) When the lead agency approves a project pursuant to this section, the lead agency shall file a notice in the manner required by Section 15075.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21157, 21157.6 and 21158, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15178. Subsequent Projects Identified in the MEIR.

(a) When a proposed subsequent project is identified in the Master EIR, but the lead agency cannot make a determination pursuant to Section 15177 that the subsequent project is within the scope of the Master EIR, and the lead agency determines that the cumulative impacts, growth inducing impacts and irreversible significant effects analysis in the Master EIR is adequate for the subsequent project, the lead agency shall prepare a mitigated negative declaration or a focused EIR if, after preparing an initial study, the lead agency determines that the project may result in new or additional significant effects. Whether the cumulative impacts, growth inducing impacts and irreversible significant effects analyses are adequate is a question of fact to be determined by the lead agency based upon a review of the proposed subsequent project in light of the Master EIR.

(b) A lead agency shall prepare a mitigated negative declaration for any proposed subsequent project if both of the following occur:

(1) The initial study prepared pursuant to Section 15177 has identified potentially new or additional significant environmental effects that were not analyzed in the Master EIR; and

(2) Feasible mitigation measures or alternatives will be incorporated to revise the subsequent project before the negative declaration is released for public review pursuant to Section 15073 in order to avoid or mitigate the identified effects to a level of insignificance.

(c) A lead agency shall prepare a focused EIR if the subsequent project may have a significant effect on the environment and a mitigated negative declaration pursuant to subdivision (b) of this section cannot be prepared.

(1) The focused EIR shall incorporate by reference the Master EIR and analyze only the subsequent project's additional significant environmental effects and any new or additional mitigation measures or alternatives that were not identified and analyzed by the Master EIR. "Additional significant environmental effects" are those project–specific effects on the environment which were not addressed as significant in the Master EIR.

(2) A focused EIR need not examine those effects which the lead agency, prior to public release of the focused EIR, finds, on the basis of the initial study, related documents, and commitments from the proponent of a subsequent project, have been mitigated in one of the following manners:

(A) Mitigated or avoided as a result of mitigation measures identified in the Master EIR which the lead agency will require as part of the approval of the subsequent project;

(B) Examined at a sufficient level of detail in the Master EIR to enable those significant effects to be mitigated or avoided by specific revisions to the project, the imposition of conditions of approval, or by other means in connection with approval of the subsequent project; or

(C) The mitigation or avoidance of which is the responsibility of and within the jurisdiction of another public agency and is, or can and should be, undertaken by that agency.

(3) The lead agency's findings pursuant to subdivision (2) shall be included in the focused EIR prior to public release pursuant to Section 15087.

(4) A focused EIR prepared pursuant to this section shall analyze any significant environmental effects when:

(A) Substantial new or additional information shows that the adverse environmental effect may be more significant that was described in the Master EIR; or

(B) Substantial new or additional information shows that mitigation measures or alternatives which were previously determined to be infeasible are feasible and will avoid or reduce the significant effects of the subsequent project to a level of insignificance.

(d) A lead agency shall file a notice of determination shall be filed pursuant to Section 15075 if a project has been approved for which a mitigated negative declaration has been prepared pursuant to this section and a notice of determination shall be filed pursuant to Section 15094 if a project has been approved for which a focused EIR has been prepared pursuant to this section.

(e) When a lead agency determines that the cumulative impacts, growth inducing impacts and irreversible significant effects analysis in the Master EIR is inadequate for the subsequent project, the subsequent project is no longer eligible for the limited environmental review available under the Master EIR process and shall be reviewed according to Article 7 (commencing with Section 15080) of these guidelines. The lead agency shall tier the project specific EIR upon the Master EIR to the extent feasible under Section 15152.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21081(a)(2), 21157.5 and 21158, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15179. Limitations on the Use of the Master EIR.

The certified Master EIR shall not be used in accordance with this article if either (i) it was certified more than five years prior to the filing of an application for a later project, or (ii) a project not identified in the certified Master EIR as an anticipated subsequent project is approved and the approved project may affect the adequacy of the Master EIR, unless the lead agency does one of the following:

(a) Reviews the Master EIR and finds that no substantial changes have occurred with respect to the circumstances under which the Master EIR was certified, or that there is no new available information which was not known and could not have been known at the time the Master EIR was certified; or

(b) Prepares a subsequent or supplemental EIR that updates or revises the Master EIR and which either (i) is incorporated into the previously certified Master EIR, or (ii) references any deletions, additions or other modifications to the previously certified Master EIR.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21157.6, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15179.5. Focused EIRs and Small Projects.

(a) When a project is a multiple family residential development of 100 units or less or is a residential and commercial or retail mixed–use commercial development of not more then 100,000 square feet, whether or not the project is identified in the Master EIR, a focused EIR shall be prepared pursuant to this section when the following conditions are met:

(1) The project is consistent with a general plan, specific plan, community plan, or zoning ordinance for which an EIR was prepared within five years of certification of the focused EIR; and

(2) The parcel on which the project is to be developed is either:

(A) Surrounded by immediately contiguous urban development;

(B) Previously developed with urban uses; or

(C) Within one–half mile of an existing rail transit station.

(b) A focused environmental impact report prepared pursuant to this section shall be limited to a discussion of potentially significant effects on the environment specific to the project, or which substantial new information shows will be more significant than described in the prior environmental impact report. No discussion shall be required of alternatives to the project, cumulative impacts of the project, or the growth inducing impacts of the project.

(c) This section does not apply where the lead agency can make a finding pursuant to Section 15177 that the subsequent project is within the scope of the Master EIR, where the lead agency can prepare a mitigated negative declaration or focused EIR pursuant to Section 15178, or where, pursuant to Section 15162 or Section 15163, the environmental impact report referenced in subdivision (a)(1) of this section must be updated through the preparation of a subsequent environmental impact report or a supplemental environmental impact report.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21158.5, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

Article 12. Special Situations

§ 15180. Redevelopment Projects.

(a) All public and private activities or undertakings pursuant to or in furtherance of a redevelopment plan constitute a single project, which shall be deemed approved at the time of adoption of the redevelopment plan by the legislative body. The EIR in connection with the redevelopment plan shall be submitted in accordance with Section 33352 of the Health and Safety Code.

(b) An EIR on a redevelopment plan shall be treated as a program EIR with no subsequent EIRs required for individual components of the redevelopment plan unless a subsequent EIR or a supplement to an EIR would be required by Section 15162 or 15163.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21090, Public Resources Code.

HISTORY

1. New Article 12 (Sections 15190–15192) filed 1–6–76 as an emergency; effective upon filing (Register 76, No. 2).
2. Certificate of Compliance filed 4–2–76 (Register 76, No. 14).
3. Repealer of Article 12 (Sections 15190–15193) and new Article 12 (Sections 15180–15185) filed 7–13–83; effective 8–1–83 (Register 83, No. 29). For prior history, see Registers 82, No. 2; 81, Nos. 30 and 45; 80, No. 15; 79, Nos. 18, 23 and 30; and 78, No. 33.
4. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15181. Housing and Neighborhood Commercial Facilities in Urbanized Areas.

(a) A lead agency may approve a project involving the construction of housing or neighborhood commercial facilities in an urbanized area with the use of an EIR or negative declaration previously prepared for a specific plan, local coastal program, or port master plan if the lead agency complies with the requirements of this section.

(b) The procedures for complying with this section are as follows:

(1) The lead agency shall conduct an initial study to determine whether the project may have one or more significant effects on the environment.

(2) The lead agency shall give notice of its proposed use of a previously prepared EIR to all persons who had submitted a written request for notice and shall also give notice by either:

(A) Posting notice on and off the site in the area where the project would be located, or

(B) Mailing notice directly to owners of property contiguous to the project site.

(3) The lead agency shall make the following findings with regard to planning and the previously prepared EIR.

(A) That the project is consistent with either:

1. A specific plan which was adopted for the area pursuant to Article 8 (commencing with Section 65450), Article 9 (commencing with Section 65500), and Article 10 (commencing with Section 65550) of Chapter 3 of Title 7 of the Government Code, or

2. A local coastal program or port master plan certified pursuant to Article 2 (commencing with Section 30510) of Chapter 6 of Division 20 of the Public Resources Code.

(B) That the specific plan, local coastal program, or port master plan was adopted not more than five years prior to the finding made pursuant to this subsection and that the method of adoption was the procedure specified by Article 9 (commencing with Section 65500) of Chapter 3 of Title 7 of the Government Code for adopting specific plans and regulations.

(C) That the specific plan or local coastal program or port master plan was the subject of a certified environmental impact report.

(D) That the environmental impact report is sufficiently detailed so that all the significant effects of the project on the environment and measures necessary to mitigate or avoid any such effects can be determined. This examination of the previously prepared EIR shall include a further, specific finding as to:

1. Whether there would be any significant physical effects on existing structures and neighborhoods of historical or aesthetic significance if any exist in the area covered by the plan or program, and

2. Whether measures necessary to mitigate or avoid such effects are included in the EIR.

(E) That a subsequent EIR is not required pursuant to Public Resources Code Section 21166 and Guidelines Section 15162.

(4) The lead agency shall make one or more findings as required by Section 15091 with regard to mitigating or avoiding each significant effect that the project would have on the environment.

(5) The lead agency shall file a notice of determination with the county clerk if the lead agency approves the project.

(c) As used in this section, "neighborhood commercial facilities" means those commercial facilities which are an integral part of a project involving the construction of housing and which will serve the residents of such housing.

(d) As used in this section, "urbanized area" means only those areas mapped and designated as urbanized by the U.S. Bureau of the Census.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.7, Public Resources Code.

§ 15182. Residential Projects Pursuant to a Specific Plan.

(a) Exemption. Where a public agency has prepared an EIR on a specific plan after January 1, 1980, no EIR or negative declaration need be prepared for a residential project undertaken pursuant to and in conformity to that specific plan if the project meets the requirements of this section.

(b) Scope. Residential projects covered by this section include but are not limited to land subdivisions, zoning changes, and residential planned unit developments.

(c) Limitation. This section is subject to the limitation that if after the adoption of the specific plan, an event described in Section 15162 should occur, this exemption shall not apply until the city or county which adopted the specific plan completes a subsequent EIR or a supplement to an EIR on the specific plan. The exemption provided by this section shall again be available to residential projects after the lead agency has filed a Notice of Determination on the specific plan as reconsidered by the subsequent EIR or supplement to the EIR.

(d) Alternative. This section provides an alternative to the procedure described in Section 15181.

(e) Fees. The lead agency has authority to charge fees to applicants for projects which benefit from this section. The fees shall be calculated in the aggregate to defray but not to exceed the cost of developing and adopting the specific plan including the cost of preparing the EIR.

(f) Statute of Limitations. A court action challenging the approval of a project under this section for failure to prepare a supplemental EIR shall be commenced within 30 days after the lead agency's decision to carry out or approve the project in accordance with the specific plan.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 65453, Government Code.

§ 15183. Projects Consistent with a Community Plan, General Plan, or Zoning.

(a) CEQA mandates that projects which are consistent with the development density established by existing zoning, community plan, or general plan policies for which an EIR was certified shall not require additional environmental review, except as might be necessary to examine whether there are project-specific significant effects which are peculiar to the project or its site. This streamlines the review of such projects and reduces the need to prepare repetitive environmental studies.

(b) In approving a project meeting the requirements of this section, a public agency shall limit its examination of environmental effects to those which the agency determines, in an initial study or other analysis:

(1) Are peculiar to the project or the parcel on which the project would be located,

(2) Were not analyzed as significant effects in a prior EIR on the zoning action, general plan or community plan with which the project is consistent,

(3) Are potentially significant off-site impacts and cumulative impacts which were not discussed in the prior EIR prepared for the general plan, community plan or zoning action, or

(4) Are previously identified significant effects which, as a result of substantial new information which was not known at the time the EIR was certified, are determined to have a more severe adverse impact than discussed in the prior EIR.

(c) If an impact is not peculiar to the parcel or to the project, has been addressed as a significant effect in the prior EIR, or can be substantially mitigated by the imposition of uniformly applied development policies or standards, as contemplated by subdivision (e) below, then an additional EIR need not be prepared for the project solely on the basis of that impact.

(d) This section shall apply only to projects which meet the following conditions:

(1) The project is consistent with:

(A) A community plan adopted as part of a general plan,

(B) A zoning action which zoned or designated the parcel on which the project would be located to accommodate a particular density of development, or

(C) A general plan of a local agency, and

(2) An EIR was certified by the lead agency for the zoning action, the community plan, or the general plan.

(e) This section shall limit the analysis of only those significant environmental effects for which:

(1) Each public agency with authority to mitigate any of the significant effects on the environment identified in the EIR on the planning or zoning action undertakes or requires others to undertake mitigation measures specified in the EIR which the lead agency found to be feasible, and

(2) The lead agency makes a finding at a public hearing as to whether the feasible mitigation measures will be undertaken.

(f) An effect of a project on the environment shall not be considered peculiar to the project or the parcel for the purposes of this section if uniformly applied development policies or standards have been previously

adopted by the city or county with a finding that the development policies or standards will substantially mitigate that environmental effect when applied to future projects, unless substantial new information shows that the policies or standards will not substantially mitigate the environmental effect. The finding shall be based on substantial evidence which need not include an EIR. Such development policies or standards need not apply throughout the entire city or county, but can apply only within the zoning district in which the project is located, or within the area subject to the community plan on which the lead agency is relying. Moreover, such policies or standards need not be part of the general plan or any community plan, but can be found within another pertinent planning document such as a zoning ordinance. Where a city or county, in previously adopting uniformly applied development policies or standards for imposition on future projects, failed to make a finding as to whether such policies or standards would substantially mitigate the effects of future projects, the decisionmaking body of the city or county, prior to approving such a future project pursuant to this section, may hold a public hearing for the purpose of considering whether, as applied to the project, such standards or policies would substantially mitigate the effects of the project. Such a public hearing need only be held if the city or county decides to apply the standards or policies as permitted in this section.

(g) Examples of uniformly applied development policies or standards include, but are not limited to:

(1) Parking ordinances,

(2) Public access requirements,

(3) Grading ordinances.

(4) Hillside development ordinances.

(5) Flood plain ordinances.

(6) Habitat protection or conservation ordinances.

(7) View protection ordinances.

(h) An environmental effect shall not be considered peculiar to the project or parcel solely because no uniformly applied development policy or standard is applicable to it.

(i) Where the prior EIR relied upon by the lead agency was prepared for a general plan or community plan that meets the requirements of this section, any rezoning action consistent with the general plan or community plan shall be treated as a project subject to this section.

(1) "Community plan" is defined as a part of the general plan of a city or county which applies to a defined geographic portion of the total area included in the general plan, includes or references each of the mandatory elements specified in Section 65302 of the Government Code, and contains specific development policies and implementation measures which will apply those policies to each involved parcel.

(2) For purposes of this section, "consistent" means that the density of the proposed project is the same or less than the standard expressed for the involved parcel in the general plan, community plan or zoning action for which an EIR has been certified, and that the project complies with the density-related standards contained in that plan or zoning. Where the zoning ordinance refers to the general plan or community plan for its density standard, the project shall be consistent with the applicable plan.

(j) This section does not affect any requirement to analyze potentially significant offsite or cumulative impacts if those impacts were not adequately discussed in the prior EIR. If a significant offsite or cumulative impact was adequately discussed in the prior EIR, then this section may be used as a basis for excluding further analysis of that offsite or cumulative impact.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21083.3, Public Resources Code.

HISTORY

1. Amendment of section heading and subsections (a)(2) and (b) filed 1-30-86; effective thirtieth day thereafter (Register 86, No. 5).
2. Amendment of section heading and section filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15184. State Mandated Local Projects.

Whenever a state agency issues an order which requires a local agency to carry out a project subject to CEQA, the following rules apply:

(a) If an EIR is prepared for the project, the local agency shall limit the EIR to considering those factors and alternatives which will not conflict with the order.

(b) If a local agency undertakes a project to implement a rule or regulation imposed by a certified state environmental regulatory program listed in Section 15251, the project shall be exempt from CEQA with regard to the significant effects analyzed in the document prepared by the state agency as a substitute for an EIR. The local agency shall comply with CEQA with regard to any site-specific effect of the project which was not analyzed by the certified state agency as a significant effect on the environment. The local agency need not re-examine the general environmental effects of the state rule or regulation.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080, 21080.5 and 21154, Public Resources Code.

§ 15185. Administrative Appeals.

(a) Where an agency allows administrative appeals upon the adequacy of an environmental document, an appeal shall be handled according to the procedures of that agency. Public notice shall be handled in accordance with individual agency requirements and Section 15202(e).

(b) The decisionmaking body to which an appeal has been made shall consider the environmental document and make findings under Sections 15091 and 15093 if appropriate.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21082 and 21083, Public Resources Code.

§ 15186. School Facilities.

(a) CEQA establishes a special requirement for certain school projects, as well as certain projects near schools, to ensure that potential health impacts resulting from exposure to hazardous materials,wastes, and substances will be carefully examined and disclosed in a negative declaration or EIR, and that the lead agency will consult with other agencies in this regard.

(b) When a project located within one-fourth mile of a school involves the construction or alteration of a facility which might reasonably be anticipated to emit hazardous or acutely hazardous air emissions, or which would handle acutely hazardous material or a mixture containing acutely hazardous material in a quantity equal to or greater than that specified in subdivision (a) of Section 25536 of the Health and Safety Code, which may impose a health or safety hazard to persons who would attend or would be employed at the school, the lead agency must:

(1) Consult with the affected school district or districts regarding the potential impact of the project on the school when circulating the proposed negative declaration or draft EIR for review.

(2) Notify the affected school district of the project, in writing, not less than 30 days prior to approval or certification of the negative declaration or EIR. This subdivision does not apply to projects for which an application was submitted prior to January 1, 1992.

(c) When the project involves the purchase of a school site or the construction of a secondary or elementary school, the negative declaration or EIR prepared for the project shall not be approved or certified by the school board unless:

(1) The negative declaration or EIR contains sufficient information to determine whether the property is:

(A) The site of a current or former hazardous waste or solid waste disposal facility and, if so, whether wastes have been removed.

(B) A hazardous substance release site identified by the Department of Toxic Substances Control in a current list adopted pursuant to Section 25356 of the Health and Safety Code for removal or remedial action pursuant to Chapter 6.8 (commencing with Section 25300) of Division 20 of the Health and Safety Code.

(C) The site of one or more buried or above ground pipelines which carry hazardous substances, acutely hazardous materials, or hazardous wastes, as defined in Division 20 of the Health and Safety Code. This does not include a natural gas pipeline used only to supply the school or neighborhood.

(2) The lead agency has notified in writing and consulted with the county or city administering agency (as designated pursuant to Section 25502 of the Health and Safety Code) and with any air pollution control district or air quality management district having jurisdiction, to identify facilities within one-fourth mile of the proposed school site which might reasonably be anticipated to emit hazardous emissions or handle hazardous or acutely hazardous material, substances, or waste. The notice shall include a list of the school sites for which information is sought. Each agency or district receiving notice shall provide the requested information and provide a written response to the lead agency within 30 days of receiving the notification. If any such agency or district fails to respond within that time, the negative declaration or EIR shall be conclusively presumed to comply with this section as to the area of responsibility of that agency.

(3) The school board makes, on the basis of substantial evidence, one of the following written findings:

(A) Consultation identified none of the facilities specified in paragraph (2).

(B) The facilities specified in paragraph (2) exist, but one of the following conditions applies:

1. The health risks from the facilities do not and will not constitute an actual or potential endangerment of public health to persons who would attend or be employed at the proposed school.

2. Corrective measures required under an existing order by another agency having jurisdiction over the facilities will, before the school is occupied, mitigate all chronic or accidental hazardous air emissions to levels that do not constitute any actual or potential public health danger to persons who would attend or be employed at the proposed school. When the school district board makes such a finding, it shall also make a subsequent finding, prior to occupancy of the school, that the emissions have been so mitigated.

This finding shall be in addition to any findings which may be required pursuant to Sections 15074, 15091 or 15093.

(d) When the lead agency has carried out the consultation required by paragraph (2) of subdivision (b), the negative declaration or EIR shall be conclusively presumed to comply with this section, notwithstanding any failure of the consultation to identify an existing facility.

(e) The following definitions shall apply for the purposes of this section:

(1) "Acutely hazardous material," is as defined in 22 C.C.R. §66260.10.

(2) "Administering agency," is as defined in Section 25501 of the Health and Safety Code.

(3) "Hazardous air emissions," is as defined in subdivisions (a) to (f), inclusive, of Section 44321 of the Health and Safety Code.

(4) "Hazardous substance," is as defined in Section 25316 of the Health and Safety Code.

(5) "Hazardous waste," is as defined in Section 25117 of the Health and Safety Code.

(6) "Hazardous waste disposal site," is as defined in Section 25114 of the Health and Safety Code.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. References: Sections 21151.4 and 21151.8, Public Resources Code.

HISTORY

1. New section filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15187. Environmental Review of New Rules and Regulations.

At the time of the adoption of a rule or regulation requiring the installation of pollution control equipment, establishing a performance standard, or establishing a treatment requirement, the California Air Resources Board, Department of Toxic Substances Control, Integrated Waste Management Board, State Water Resources Control Board, all regional water quality control boards, and all air pollution control districts and air quality management districts, as defined in Section 39025 of the Health and Safety Code, must perform an environmental analysis of the reasonably foreseeable methods by which compliance with that rule or regulation will be achieved.

(b) If an EIR is prepared by the agency at the time of adoption of a rule or regulation, it satisfies the requirements of this section provided that the document contains the information specified in subdivision (c) below. Similarly, for those State agencies whose regulatory programs have been certified by the Resources Agency pursuant to Section 21080.5 of the Public Resources Code, an environmental document prepared pursuant to such programs satisfies the requirements of this section, provided that the document contains the information specified in subdivision (c) below.

(c) The environmental analysis shall include at least the following:

(1) An analysis of reasonably foreseeable environmental impacts of the methods of compliance;

(2) An analysis of reasonably foreseeable feasible mitigation measures relating to those impacts; and

(3) An analysis of reasonably foreseeable alternative means of compliance with the rule or regulation, which would avoid or eliminate the identified impacts.

(d) The environmental analysis shall take into account a reasonable range of environmental, economic, and technical factors, population and geographic areas, and specific sites. The agency may utilize numerical ranges and averages where specific data is not available, but is not required to, nor should it, engage in speculation or conjecture.

(e) Nothing in this section shall require the agency to conduct a project level analysis.

(f) Nothing in this section is intended, or may be used, to delay the adoption of any rule or regulation for which this section requires an environmental analysis.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21159 and 21159.4, Public Resources Code.

HISTORY

1. New section filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15188. Focused EIR for Pollution Control Equipment.

This section applies to projects consisting solely of the installation of pollution control equipment and other components necessary to the installation of that equipment which are undertaken for the purpose of complying with a rule or regulation which was the subject of an environmental analysis as described in Section 15187.

(a) The lead agency for the compliance project may prepare a focused EIR to analyze the effects of that project when the following occur:

(1) the agency which promulgated the rule or regulation certified an EIR on that rule or regulation, or reviewed it pursuant to an environmental analysis prepared under a certified regulatory program and, in either case, the review included an assessment of growth inducing impacts and cumulative impacts of, and alternatives to, the project;

(2) the focused EIR for the compliance project is certified within five years of the certified EIR or environmental analysis required by subdivision (a)(1); and

(3) the EIR prepared in connection with the adoption of the rule or regulation need not be updated through the preparation of a subsequent EIR or supplemental EIR pursuant to section 15162 or section 15163.

(b) The discussion of significant environmental effects in the focused EIR shall be limited to project-specific, potentially significant effects which were not discussed in the environmental analysis required under Section 15187. No discussion of growth-inducing or cumulative impacts is required. Discussion of alternatives shall be limited to alternative means of compliance, if any, with the rule or regulation.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21159.1, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15189. Compliance with Performance Standard or Treatment Requirement Rule or Regulation.

This section applies to projects consisting solely of compliance with a performance standard or treatment requirement which was the subject of an environmental analysis as described in Section 15187.

(a) If preparing a negative declaration, mitigated negative declaration or EIR on the compliance project the lead agency for the compliance project shall, to the greatest extent feasible, use the environmental analysis prepared pursuant to Section 15187. The use of numerical averages or ranges in the environmental analysis prepared under Section 15187 does not relieve the lead agency on the compliance project from its obligation to identify and evaluate the environmental effects of the project.

(b) Where the lead agency determines that an EIR is required for the compliance project, the EIR need address only the project–specific issues or other issues that were not discussed in sufficient detail in the environmental analysis prepared under Section 15187. The mitigation measures imposed by the lead agency shall be limited to addressing the significant effects on the environment of the compliance project. The discussion of alternatives shall be limited to a discussion of alternative means of compliance, if any, with the rule or regulation.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21159.2, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15190. Deadlines for Compliance with Sections 15188 and 15189.

(a) The lead agency for a compliance project under either Section 15188 or Section 15189 shall determine whether an EIR or negative declaration should be prepared within 30 days of its determination that the application for the project is complete.

(b) Where the EIR will be prepared under contract to the lead agency for the compliance project, the agency shall issue a request for proposal for preparation of the EIR not later than 30 days after the deadline for response to the notice of preparation has expired. The contract shall be awarded within 30 days of the response date on the request for proposals.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21159.3, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

Article 13. Review and Evaluation of EIRs and Negative Declarations

§ 15200. Purposes of Review.

The purposes of review of EIRs and negative declarations include:

(a) Sharing expertise,

(b) Disclosing agency analyses,

(c) Checking for accuracy,

(d) Detecting omissions,

(e) Discovering public concerns, and

(f) Soliciting counter proposals.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21000, 21108 and 21152, Public Resources Code; *Environmental Defense Fund* v. *Coastside County Water District* (1972) 27 Cal. App. 3d 695; *County of Inyo* v. *City of Los Angeles* (1977) 71 Cal. App. 3d 185.

HISTORY

1. New Article 13 (Sections 15201–15203) filed 2–2–78; effective thirtieth day thereafter (Register 78, No. 5).
2. Repealer of Article 13 (Sections 15201–15203) and new Article 13 (Sections 15200–15209) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
3. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15201. Public Participation.

Public participation is an essential part of the CEQA process. Each public agency should include provisions in its CEQA procedures for wide public involvement, formal and informal, consistent with its existing activities and procedures, in order to receive and evaluate public reactions to environmental issues related to the agency's activities. Such procedures should include, whenever possible, making environmental information available in electronic format on the Internet, on a web site maintained or utilized by the public agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21000, 21082, 21108 and 21152, Public Resources Code; *Environmental Defense Fund v. Coastside County Water District* (1972) 27 Cal. App. 3d 695; *People* v. *County of Kern* (1974) 39 Cal. App. 3d 830; *County of Inyo* v. *City of Los Angeles* (1977) 71 Cal. App. 3d 185.

HISTORY

1. Amendment filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15202. Public Hearings.

(a) CEQA does not require formal hearings at any stage of the environmental review process. Public comments may be restricted to written communications.

(b) If an agency provides a public hearing on its decision to carry out or approve a project, the agency should include environmental review as one of the subjects for the hearing.

(c) A public hearing on the environmental impact of a project should usually be held when the lead agency determines it would facilitate the purposes and goals of CEQA to do so. The hearing may be held in conjunction with and as a part of normal planning activities.

(d) A draft EIR or negative declaration should be used as a basis for discussion at a public hearing. The hearing may be held at a place where public hearings are regularly conducted by the lead agency or at another location expected to be convenient to the public.

(e) Notice of all public hearings shall be given in a timely manner. This notice may be given in the same form and time as notice for other regularly conducted public hearings of the public agency. To the extent that the public agency maintains an Internet web site, notice of all public hearings should be made available in electronic format on that site.

(f) A public agency may include, in its implementing procedures, procedures for the conducting of public hearings pursuant to this section. The procedures may adopt existing notice and hearing requirements of the public agency for regularly conducted legislative, planning, and other activities.

(g) There is no requirement for a public agency to conduct a public hearing in connection with its review of an EIR prepared by another public agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21000, 21082, 21108 and 21152, Public Resources Code; *Concerned Citizens of Palm Desert, Inc.* v. *Board of Supervisors* (1974) 38 Cal. App. 3d 272.

HISTORY

1. Amendment of subsection (c) filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15203. Adequate Time for Review and Comment.

The lead agency shall provide adequate time for other public agencies and members of the public to review and comment on a draft EIR or negative declaration that it has prepared.

(a) Public agencies may establish time periods for review in their implementing procedures and shall notify the public and reviewing agencies of the time for receipt of comments on EIRs. These time periods shall be consistent with applicable statutes, the State CEQA Guidelines, and applicable clearinghouse review periods.

(b) A review period for an EIR does not require a halt in other planning or evaluation activities related to a project. Planning should continue in conjunction with environmental evaluation.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21082, 21108 and 21152, Public Resources Code. Formerly Sections 15160(a) and (e).

§ 15204. Focus of Review.

(a) In reviewing draft EIRs, persons and public agencies should focus the sufficiency of the document in identifying and analyzing the possible impacts on the environment and ways in which the significant effects of the project might be avoided or mitigated. Comments are most helpful when they suggest additional specific alternatives or mitigation measures that would provide better ways to avoid or mitigate the significant environmental effects. At the same time, reviewers should be aware that the adequacy of an EIR is determined in terms of what is reasonably feasible, in light of factors such as the magnitude of the project at issue, the severity of its likely environmental impacts, and the geographic scope of the project. CEQA does not require a lead agency to conduct every test or perform all research, study, and experimentation recommended or demanded by commentors. When responding to comments, lead agencies need only respond to significant environmental issues and do not need to provide all information requested by reviewers, as long as a good faith effort at full disclosure is made in the EIR.

(b) In reviewing negative declarations, persons and public agencies should focus on the proposed finding that the project will not have a significant effect on the environment. If persons and public agencies believe that the project may have a significant effect, they should:

(1) Identify the specific effect,

(2) Explain why they believe the effect would occur, and

(3) Explain why they believe the effect would be significant.

(c) Reviewers should explain the basis for their comments, and should submit data or references offering facts, reasonable assumptions based on facts, or expert opinion supported by facts in support of the comments. Pursuant to Section 15064, an effect shall not be considered significant in the absence of substantial evidence.

(d) Reviewing agencies or organizations should include with their comments the name of a contact person who would be available for later consultation if necessary. Each responsible agency and trustee agency shall focus its comments on environmental information germane to that agency's statutory responsibility.

(e) This section shall not be used to restrict the ability of reviewers to comment on the general adequacy of a document or of the lead agency to reject comments not focused as recommended by this section.

(f) Prior to the close of the public review period for an EIR or mitigated negative declaration, a responsible or trustee agency which has identified significant effects on the environment may submit to the lead agency proposed mitigation measures which would address those significant effects. Any such measures shall be limited to impacts affecting those resources which are subject to the statutory authority of that agency. If mitigation measures are submitted, the responsible or trustee agency shall either submit to the lead agency complete and detailed performance objectives for the mitigation measures, or shall refer the lead agency to appropriate, readily available guidelines or reference documents which meet the same purpose.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080, 21081.6, 21080.4, 21104 and 21153, Public Resources Code, Formerly Section 15161; *San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus* (1996) 42 Cal.App.4th 608; and *Leonoff v. Monterey County Board of Supervisors* (1990) 222 Cal.App.3d 1337.

HISTORY

1. Amendment of section and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15205. Review by State Agencies.

(a) Draft EIRs and negative declarations to be reviewed by state agencies shall be submitted to the State Clearinghouse, 1400 Tenth Street, Sacramento, California 95814. For U.S. Mail, submit to P.O. Box 3044, Sacramento, California 95812–3044. When submitting such documents to the State Clearinghouse, the public agency shall include, in addition to the printed copy, a copy of the document in electronic form on a diskette or by electronic mail transmission, if available.

(b) The following environmental documents shall be submitted to the State Clearinghouse for review by state agencies:

(1) Draft EIRs and negative declarations prepared by a state agency where such agency is a lead agency.

(2) Draft EIRs and negative declarations prepared by a public agency where a state agency is a responsible agency, trustee agency, or otherwise has jurisdiction by law with respect to the project.

(3) Draft EIRs and negative declarations on projects identified in Section 15206 as being of statewide, regional, or areawide significance.

(4) Draft EIRs, environmental assessments, and findings of no significant impact prepared pursuant to NEPA, the Federal Guidelines (Title 40 CFR, Part 1500, commencing with Section 1500.1).

(c) Public agencies may send environmental documents to the State Clearinghouse for review where a state agency has special expertise with regard to the environmental impacts involved. The areas of statutory authorities of state agencies are identified in Appendix B. Any such environmental documents submitted to the State Clearinghouse shall include, in addition to the printed copy, a copy of the document in electronic format, on a diskette or by electronic mail transmission, if available.

(d) When an EIR or negative declaration is submitted to the State Clearinghouse for review, the review period set by the lead agency shall be at least as long as the period provided in the state review system operated by the State Clearinghouse. In the state review system, the normal review period is 45 days for EIRs and 30 days for negative declarations. In exceptional circumstances, the State Clearinghouse may set shorter review periods when requested by the lead agency.

(e) The number of copies of an EIR or negative declaration submitted to the State Clearinghouse shall not be less than ten unless the State Clearinghouse approves a lower number in advance.

(f) While the lead agency is encouraged to contact the regional and district offices of state responsible agencies, the lead agency must, in all cases, submit documents to the State Clearinghouse for distribution in order to comply with the review requirements of this section.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083, 21104 and 21153, Public Resources Code.

HISTORY

1. Amendment of subsections (a) and (c) filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).
2. Change without regulatory effect amending subsection (a) and NOTE filed 2–1–2001 pursuant to section 100, title 1, California Code of Regulations (Register 2001, No. 5).

§ 15206. Projects of Statewide, Regional, or Areawide Significance.

(a) Projects meeting the criteria in this section shall be deemed to be of statewide, regional, or areawide significance.

(1) A draft EIR or negative declaration prepared by any public agency on a project described in this section shall be submitted to the State Clearinghouse and should be submitted also to the appropriate metropolitan area council of governments for review and comment.

(2) When such documents are submitted to the State Clearinghouse, the public agency shall include, in addition to the printed copy, a copy of the document in electronic format on a diskette or by electronic mail transmission, if available.

(b) The lead agency shall determine that a proposed project is of statewide, regional, or areawide significance if the project meets any of the following criteria:

(1) A proposed local general plan, element, or amendment thereof for which an EIR was prepared. If a negative declaration was prepared for the plan, element, or amendment, the document need not be submitted for review.

(2) A project has the potential for causing significant effects on the environment extending beyond the city or county in which the project would be located. Examples of the effects include generating significant amounts of traffic or interfering with the attainment or maintenance of state or national air quality standards. Projects subject to this subsection include:

(A) A proposed residential development of more than 500 dwelling units.

(B) A proposed shopping center or business establishment employing more than 1,000 persons or encompassing more than 500,000 square feet of floor space.

(C) A proposed commercial office building employing more than 1,000 persons or encompassing more than 250,000 square feet of floor space.

(D) A proposed hotel/motel development of more than 500 rooms.

(E) A proposed industrial, manufacturing, or processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or encompassing more than 650,000 square feet of floor area.

(3) A project which would result in the cancellation of an open space contract made pursuant to the California Land Conservation Act of 1965 (Williamson Act) for any parcel of 100 or more acres.

(4) A project for which an EIR and not a negative declaration was prepared which would be located in and would substantially impact the following areas of critical environmental sensitivity:

(A) The Lake Tahoe Basin.

(B) The Santa Monica Mountains Zone as defined by Section 33105 of the Public Resources Code.

(C) The California Coastal Zone as defined in, and mapped pursuant to, Section 30103 of the Public Resources Code.

(D) An area within 1/4 mile of a wild and scenic river as defined by Section 5093.5 of the Public Resources Code.

(E) The Sacramento–San Joaquin Delta, as defined in Water Code Section 12220.

(F) The Suisun Marsh as defined in Public Resources Code Section 29101.

(G) The jurisdiction of the San Francisco Bay Conservation and Development Commission as defined in Government Code Section 66610.

(5) A project which would substantially affect sensitive wildlife habitats including but not limited to riparian lands, wetlands, bays, estuaries, marshes, and habitats for endangered, rare and threatened species as defined by Section 15380 of this Chapter.

(6) A project which would interfere with attainment of regional water quality standards as stated in the approved areawide waste treatment management plan.

(7) A project which would provide housing, jobs, or occupancy for 500 or more people within 10 miles of a nuclear power plant.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference. Section 21083, Public Resources Code.

HISTORY

1. Amendment of subsection (b)(5) filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
2. New subsection (a)(1) designator and new subsection (a)(2) filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).
3. Change without regulatory effect amending subsection (b)(4)(B) filed 2–1–2001 pursuant to section 100, title 1, California Code of Regulations (Register 2001, No. 5).

§ 15207. Failure to Comment.

If any public agency or person who is consulted with regard to an EIR or negative declaration fails to comment within a reasonable time as specified by the lead agency, it shall be assumed, absent a request for a specific extension of time, that such agency or person has no comment to make. Although the lead agency need not respond to late comments, the lead agency may choose to respond to them.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21104 and 21153, Public Resources Code; *Cleary* v. *County of Stanislaus* (1981) 118 Cal. App. 3d 348. Formerly Section 15162.

§ 15208. Retention and Availability of Comments.

Comments received through the consultation process shall be retained for a reasonable period and available for public inspection at an address given in the final EIR. Comments which may be received on a draft EIR or negative declaration under preparation shall also be considered and kept on file.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21104, 21082.1 and 21153, Public Resources Code; Section 4, Chapter 480, Statutes of 1981; *People* v. *County of Kern* (1974) 39 Cal. App. 3d 830.

§ 15209. Comments on Initiative of Public Agencies.

Every public agency may comment on environmental documents dealing with projects which affect resources with which the agency has special expertise regardless of whether its comments were solicited or whether the effects fall within the legal jurisdiction of the agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21104 and 21153, Public Resources Code.

Article 14. Projects Also Subject to the National Environmental Policy Act (NEPA)

§ 15220. General.

This article applies to projects that are subject to both CEQA and NEPA. NEPA applies to projects which are carried out, financed, or approved in whole or in part by federal agencies. Accordingly, this article applies to projects which involve one or more state or local agencies and one or more federal agencies.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.5, 21083.6 and 21083.7, Public Resources Code; National Environmental Policy Act of 1969, Public Law 91–190 as amended, 42 U.S.C.A. 4321–4347; NEPA Regulations, 40 Code of Federal Regulations (C.F.R.) Parts 1500–1508.

HISTORY

1. New Article 14 (Sections 15220–15228) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15221. NEPA Document Ready Before CEQA Document.

(a) When a project will require compliance with both CEQA and NEPA, state or local agencies should use the EIS or finding of no significant impact rather than preparing an EIR or negative declaration if the following two conditions occur:

(1) An EIS or finding of no significant impact will be prepared before an EIR or negative declaration would otherwise be completed for the project; and

(2) The EIS or finding of no significant impact complies with the provisions of these guidelines.

(b) Because NEPA does not require separate discussion of mitigation measures or growth inducing impacts, these points of analysis will need to be added, supplemented, or identified before the EIS can be used as an EIR.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.5 and 21083.7, Public Resources Code; Section 102(2)(C) of NEPA, 43 U.S.C.A. 4322(2)(C).

§ 15222. Preparation of Joint Documents.

If a lead agency finds that an EIS or finding of no significant impact for a project would not be prepared by the federal agency by the time when the lead agency will need to consider an EIR or negative declaration, the lead agency should try to prepare a combined EIR–EIS or negative declaration–finding of no significant impact. To avoid the need for the federal agency to prepare a separate document for the same project, the lead agency must involve the federal agency in the preparation of the joint document. This involvement is necessary because federal law generally prohibits a federal agency from using an EIR prepared by a state agency unless the federal agency was involved in the preparation of the document.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.5 and 21083.7, Public Resources Code; Section 102(2)(D) of NEPA, 43 U.S.C.A. 4322 (2)(D); 40 C.F.R. Part 1506.2.

§ 15223. Consultation with Federal Agencies.

When it plans to use an EIS or finding of no significant impact or to prepare such a document jointly with a federal agency, the lead agency shall consult as soon as possible with the federal agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.5 and 21083.7, Public Resources Code.

§ 15224. Time Limits.

Where a project will be subject to both CEQA and the National Environmental Policy Act, the one year time limit and the 105 day time limit may be waived pursuant to Section 15110.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21083.6, Public Resources Code.

§ 15225. Circulation of Documents.

(a) Where the federal agency circulated the EIS or finding of no significant impact for public review as broadly as state or local law may require and gave notice meeting the standards in Section 15072(a) or 15087(a), the lead agency under CEQA may use the federal document in the place of an EIR or negative declaration without recirculating the federal document for public review. One review and comment period is enough. Prior to using the federal document in this situation, the lead agency shall give notice that it will use the federal document in the place of an EIR or negative declaration and that it believes that the federal document meets the requirements of CEQA. The notice shall be given in the same manner as a notice of the public availability of a draft EIR under Section 15087.

(b) If an EIS has been prepared and filed pursuant to NEPA on the closure and reuse of a military base and the Lead Agency decides that the EIS does not fully meet the requirements of CEQA or has not been circulated for public review as state and local law may require, the Lead Agency responsible for preparation of an EIR for a reuse plan for the same base may proceed in the following manner:

(1) Prepare and circulate a notice of preparation pursuant to Section 15082. The notice shall include a description of the reuse plan, a copy of the EIS, an address to which to send comments, and the deadline for submitting comments. The notice shall state that the lead agency intends to utilize the EIS as a draft EIR and requests comments on whether the EIS provides adequate information to serve as a draft EIR and what specific additional information, if any, is necessary.

(2) Upon the close of the comment period, the lead agency may proceed with preparation and circulation for comment of the draft EIR for the reuse plan. To the greatest extent feasible, the lead agency shall avoid duplication and utilize the EIS or information in the EIS as all or part of the draft EIR. The EIR shall be completed in compliance with the provisions of CEQA.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.5, 21083.8 and 21092, Public Resources Code.

HISTORY

1. New subsection (a) designator, new subsections (b)–(b)(2), and amendment of NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15226. Joint Activities.

State and local agencies should cooperate with federal agencies to the fullest extent possible to reduce duplication between the California Environmental Quality Act and the National Environmental Policy Act. Such cooperation should, to the fullest extent possible, include:

(a) Joint planning processes,

(b) Joint environmental research and studies,

(c) Joint public hearings,

(d) Joint environmental documents.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.5 and 21083.7, Public Resources Code; 40 C.F.R. Part 1506.2.

§ 15227. State Comments on a Federal Project.

When a state agency officially comments on a proposed federal project which may have a significant effect on the environment, the comments shall include or reference a discussion of the material specified in Section 15126. An EIS on the federal project may be referenced to meet the requirements of this section.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21101, Public Resources Code.

§ 15228. Where Federal Agency Will Not Cooperate.

Where a federal agency will not cooperate in the preparation of joint document and will require separate NEPA compliance for the project at a later time, the state or local agency should persist in efforts to cooperate with the federal agency. Because NEPA expressly allows federal agencies to use environmental documents prepared by an agency of statewide jurisdiction, a local agency should try to involve a state agency in helping prepare an EIR or negative declaration for the project. In this way there will be a greater chance that the federal agency may later use the CEQA document and not require the applicant to pay for preparation of a second document to meet NEPA requirements at a later time.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21083.5, Public Resources Code; Section 102(2)(D) of NEPA, 42 U.S.C.A. 4322(2)(D).

§ 15229. Baseline Analysis for Military Base Reuse Plan EIRs.

When preparing and certifying an EIR for a plan for the reuse of a military base, including when utilizing an Environmental Impact Statement pursuant to Section 21083.5 of the Public Resources Code, in addition to the procedure authorized pursuant to subdivision (b) of Section 21083.8 of the Public Resources Code, the determination of whether the reuse plan may have a significant effect on the environment may, at the discretion of the lead agency, be based upon the physical conditions which were present at the time that the federal decision for the closure or realignment of the base or reservation became final. These conditions shall be referred to as the "baseline physical conditions." Impacts which do not exceed the baseline physical conditions shall not be considered significant.

(a) Prior to circulating a draft EIR pursuant to the provisions of this Section, the lead agency shall do all of the following, in order:

(1) Prepare proposed baseline physical conditions, identify pertinent responsible and trustee agencies and consult with those agencies prior to the public hearing required by subdivision (a)(2) as to the application of their regulatory authority and permitting standards to the proposed baseline physical conditions, the proposed reuse plan, and specific, planned future nonmilitary land uses of the base or reservation. The affected agencies shall have not less than 30 days prior to the public hearing to review the proposed baseline physical conditions and the proposed reuse plan and to submit their comments to the lead agency.

(2) Hold a public hearing at which is discussed the federal EIS prepared for, or being prepared for, the closure or realignment of the military base or reservation. The discussion shall include the significant effects on the environment, if any, examined in the EIS, potential methods of mitigating those effects, including feasible alternatives, and the mitigative effects of federal, state, and local laws applicable to future nonmilitary activities. Prior to the close of the hearing, the lead agency shall specify whether it will adopt any of the baseline physical conditions for the reuse plan EIR and identify those conditions. The lead agency shall specify particular baseline physical conditions, if any, which it will examine in greater detail than they were examined in the EIS. Notice of the hearing shall be given pursuant to Section 15087. The hearing may be continued from time to time.

(3) Prior to the close of the hearing, the lead agency shall do all of the following:

(A) Specify the baseline physical conditions which it intends to adopt for the reuse plan EIR, and specify particular physical conditions, if any, which it will examine in greater detail than were examined in the EIS.

(B) State specifically how it intends to integrate its discussion of the baseline physical conditions in the EIR with the reuse planning process, taking into account the adopted environmental standards of the community, including but not limited to, the adopted general plan, specific plan or redevelopment plan, and including other applicable provisions of adopted congestion management plans, habitat conservation or natural communities conservation plans, air quality management plans, integrated waste management plans, and county hazardous waste management plans.

(C) State the specific economic or social reasons, including but not limited to, new job creation, opportunities for employment of skilled workers, availability of low and moderate–income housing, and economic continuity which support selection of the baseline physical conditions.

(b) An EIR prepared under this section should identify any adopted baseline physical conditions in the environmental setting section. The baseline physical conditions should be cited in discussions of effects. The no–project alternative analyzed in an EIR prepared under this section shall discuss the conditions on the base as they exist at the time of preparation, as well as what could be reasonably expected to occur in the foreseeable future if the reuse plan were not approved, based on current plans and consistent with available infrastructure and services.

(c) All public and private activities taken pursuant to or in furtherance of a reuse plan for which an EIR was prepared and certified pursuant to this section shall be deemed to be a single project. A subsequent or supplemental EIR shall be required only if the lead agency determines that any of the circumstances described in Section 15162 or 15163 exist.

(d) Limitations:

(1) Nothing in this section shall in any way limit the scope of review or determination of significance of the presence of hazardous or toxic wastes, substances, and materials, including but not limited to, contaminated soils and groundwater. The regulation of hazardous or toxic wastes, substances, and materials shall not be constrained by this section.

(2) This section does not apply to hazardous waste regulation and remediation projects undertaken pursuant to Chapter 6.5 (commencing with Section 25100) or Chapter 6.8 (commencing with Section 25300) of Division 20 of the Health and Safety Code or pursuant to the Porter–Cologne Water Quality Control Act (Water Code Section 13000, et seq.)

(3) All subsequent development at the military base or reservation shall be subject to all applicable federal, state, or local laws, including but not limited to, those relating to air quality, water quality, traffic, threatened and endangered species, noise, and hazardous or toxic wastes, substances, or materials.

(e) "Reuse plan" means the initial plan for the reuse of military base adopted by a local government, including a redevelopment agency or joint powers authority, in the form of a general plan, general plan amendment, specific plan, redevelopment plan, or other planning document. For purposes of this section, a reuse plan also shall include a statement of development policies, a diagram or diagrams illustrating its provisions, including a designation of the proposed general distribution, location, and development intensity for housing, business, industry, open space, recreation, natural resources, public buildings and grounds, roads, and other transportation facilities, infrastructure, and other categories of proposed uses, whether public or private.

(f) This section may be applied to any reuse plan EIR for which a notice of preparation is issued within one year from the date that the federal record of decision was rendered for the military base or reservation closure or realignment and reuse, or prior to January 1, 1997, whichever is later, but only if the EIR is completed and certified within five years from the date that the federal record of decision was rendered.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21083.1, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

Article 15. Litigation

§ 15230. Time Limits and Criteria.

Litigation under CEQA must be handled under the time limits and criteria described in Sections 21167 et seq. of the Public Resources Code and Section 151 12 of these guidelines in addition to provisions in this article.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21167 et seq., Public Resources Code.

HISTORY

1. New Article 15 (Sections 15230–15233) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15231. Adequacy of EIR or Negative Declaration for Use by Lead and Responsible Agencies.

A final EIR prepared by a lead agency or a negative declaration adopted by a lead agency shall be conclusively presumed to comply with CEQA for purposes of use by responsible agencies which were consulted pursuant to Sections 15072 or 15082 unless one of the following conditions occurs:

(a) The EIR or negative declaration is finally adjudged in a legal proceeding not to comply with the requirements of CEQA, or

(b) A subsequent EIR is made necessary by Section 15162 of these guidelines.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080.1, 21166, 21167.2 and 21167.3, Public Resources Code.

HISTORY

1. Amendment of section heading filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15232. Request for Hearing.

In a writ of mandate proceeding challenging approval of a project under CEQA, the petitioner shall, within 90 days of filing the petition, request a hearing or otherwise be subject to dismissal on the court's own motion or on the motion of any party to the suit.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21167.4, Public Resources Code.

§ 15233. Conditional Permits.

If a lawsuit is filed challenging an EIR or negative declaration for noncompliance with CEQA, responsible agencies shall act as if the EIR or negative declaration complies with CEQA and continue to process the application for the project according to the time limits for responsible agency action contained in Government Code Section 65952.

(a) If an injunction or a stay has been granted in the lawsuit prohibiting the project from being carried out, the responsible agency shall have authority only to disapprove the project or to grant a conditional approval of the project. A conditional approval shall constitute permission to proceed with a project only when the court action results in a final determination that the EIR or negative declaration does comply with the provisions of CEQA (Public Resources Code Section 21167.3a).

(b) If no injunction or stay is granted in the lawsuit, the responsible agency shall assume that the EIR or negative declaration fully meets the requirements of CEQA. The responsible agency shall approve or disapprove the project within the time limits described in Article 8, commencing with Section 15100, of these guidelines and described in Government Code Section 65952. An approval granted by a responsible agency in this situation provides only permission to proceed with the project at the applicant's risk prior to a final decision in the lawsuit (Public Resources Code Section 21167.3b).

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21167.3, Public Resources Code; *Kriebel* v. *City Council* (1980) 112 Cal. App. 3d 693.

Article 16. EIR Monitor

§ 15240. EIR Monitor.

The Secretary for Resources may provide for publication of a bulletin entitled "California EIR Monitor" on a subscription basis to provide public notice of amendments to the guidelines, the completion of draft EIRs, and other matters as deemed appropriate. Inquiries and subscription requests should be sent to the following address:

SECRETARY FOR RESOURCES
ATTENTION: CALIFORNIA EIR MONITOR
1416 NINTH STREET, ROOM 1311
SACRAMENTO, CALIFORNIA 95814

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21088, Public Resources Code.

HISTORY

1. New Article 16 (Section 15240) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

Article 17. Exemption for Certified State Regulatory Programs

§ 15250. General.

Section 21080.5 of the Public Resources Code provides that a regulatory program of a state agency shall be certified by the Secretary for Resources as being exempt from the requirements for preparing EIRs, negative declarations, and initial studies if the Secretary finds that the program meets the criteria contained in that code section. A certified program remains subject to other provisions in CEQA such as the policy of avoiding significant adverse effects on the environment where feasible. This article provides information concerning certified programs.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.5, Public Resources Code.

HISTORY

1. New Article 17 (Sections 15250–15253) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15251. List of Certified Programs.

The following programs of state regulatory agencies have been certified by the Secretary for Resources as meeting the requirements of Section 21080.5:

(a) The regulation of timber harvesting operations by the California Department of Forestry and the State Board of Forestry pursuant to Chapter 8, commencing with Section 4511 of Part 2 of Division 4 of the Public Resources Code.

(b) The regulatory program of the Fish and Game Commission pursuant to the Fish and Game Code.

(c) The regulatory program of the California Coastal Commission and regional coastal commissions dealing with the consideration and granting of coastal development permits under the California Coastal Act of 1976, Division 20 (commencing with Section 30000) of the Public Resources Code.

(d) That portion of the regulatory program of the Air Resources Board which involves the adoption, approval, amendment, or repeal of standards, rules, regulations, or plans to be used in the regulatory program for the protection and enhancement of ambient air quality in California.

(e) The regulatory program of the State Board of Forestry in adopting, amending, or repealing standards, rules, regulations, or plans under the Z'berg–Nejedly Forest Practice Act, Chapter 8 (commencing with Section 4511) of Part 2 of Division 4 of the Public Resources Code.

(f) The program of the California Coastal Commission involving the preparation, approval, and certification of local coastal programs as provided in Sections 30500 through 30522 of the Public Resources Code.

(g) The Water Quality Control (Basin)/208 Planning Program of the State Water Resources Control Board and the Regional Water Quality Control Boards.

(h) The permit and planning programs of the San Francisco Bay Conservation and Development Commission under the McAteer–Petris Act, Title 7.2 (commencing with Section 66600) of the Government Code and the Suisun Marsh Preservation Act, Division 19 (commencing with Section 29000) of the Public Resources Code.

(i) The pesticide regulatory program administered by the Department of Pesticide Regulation and the county agricultural commissioners insofar as the program consists of:

(1) The registration, evaluation, and classification of pesticides.

(2) The adoption, amendment, or repeal of regulations and standards for the licensing and regulation of pesticide dealers and pest control operators and advisors.

(3) The adoption, amendment, or repeal of regulations for standards dealing with the monitoring of pesticides and of the human health and environmental effects of pesticides.

(4) The regulation of the use of pesticides in agricultural and urban areas of the state through the permit system administered by the county agricultural commissioners.

(j) The regulations of weather resources management projects through the issuance of operating permits by the State Department of Water Resources pursuant to the California Weather Resources Management Act of 1978 (Water Code Sections 400 et seq.).

(k) The power plant site certification program of the State Energy Resources Conservation and Development Commission under Chapter 6 of the Warren–Alquist Act, commencing with Public Resources Code Section 25500.

(l) The regulatory program of the State Water Resources Control Board to establish instream beneficial use protection programs.

(m) That portion of the regulatory program of the South Coast Air Quality Management District which involves the adoption, amendment, and repeal of regulations pursuant to the provisions of the Health and Safety Code.

(n) The program of the Delta Protection Commission involving the preparation and adoption of a Resource Management Plan for the Sacramento–San Joaquin Delta (Pub. Resources Code § 29760 ff.), and the Commission's review and action on general plan amendments proposed by local governments to make their plans consistent with the provisions of the Commission's Resource Management Plan (Pub. Resources Code § 29763.5).

(o) The program of the Department of Fish and Game for the adoption of regulations under the Fish and Game Code.

(p) The program of the Department of Fish and Game implementing the incidental take permit application process under the California Endangered Species Act ("CESA"), Fish and Game Code sections 2080 and 2081, and specifically the regulation governing the Department of Fish and Game's role as a "lead agency" when issuing incidental take permits, found at California Code of Regulations, Title 14, section 783.5(d).

NOTE: Authority cited: Sections 21083 and 21080.5, Public Resources Code. Reference: Section 21080.5, Public Resources Code.

HISTORY

1. New subsection (m) filed 3–1–89; operative 3–31–89 (Register 89, No. 10).
2. New subsection (n) filed 11–9–94; operative 12–9–94 (Register 94, No. 45).
3. New subsection (o) filed 8–27–98; operative 8–27–98 pursuant to Government Code section 11343.4(d) (Register 98, No. 35).
4. New subsection (p) and amendment of NOTE filed 3–29–99; operative 3–29–99 pursuant to Government Code section 11343.4(d) (Register 99, No. 14).
5. Change without regulatory effect amending subsection (i) and NOTE filed 2–1–2001 pursuant to section 100, title 1, California Code of Regulations (Register 2001, No. 5).

§ 15252. Substitute Document.

The document used as a substitute for an EIR or negative declaration in a certified program shall include at least the following items:

(a) A description of the proposed activity, and

(b) Either:

(1) Alternatives to the activity and mitigation measures to avoid or reduce any significant or potentially significant effects that the project might have on the environment, or

(2) A statement that the agency's review of the project showed that the project would not have any significant or potentially significant effects on the environment and therefore no alternatives or mitigation measures are proposed to avoid or reduce any significant effects on the environment. This statement shall be supported by a checklist or other documentation to show the possible effects that the agency examined in reaching this conclusion.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.5, Public Resources Code.

§ 15253. Use of an EIR Substitute by a Responsible Agency.

(a) An environmental analysis document prepared for a project under a certified program listed in Section 15251 shall be used by another agency granting an approval for the same project where the conditions in Subsection (b) have been met. In this situation, the certified agency shall act as lead agency, and the other permitting agencies shall act as responsible agencies using the certified agency's document.

(b) The conditions under which a public agency shall act as a responsible agency when approving a project using an environmental analysis document prepared under a certified program in the place of an EIR or negative declaration are as follows:

(1) The certified agency is the first agency to grant a discretionary approval for the project.

(2) The certified agency consults with the responsible agencies, but the consultation need not include the exchange of written notices.

(3) The environmental analysis document identifies:

(A) The significant environmental effects within the jurisdiction or special expertise of the responsible agency.

(B) Alternatives or mitigation measures that could avoid or reduce the severity of the significant environmental effects.

(4) Where written notices were not exchanged in the consultation process, the responsible agency was afforded the opportunity to participate in the review of the property by the certified agency in a regular manner designed to inform the certified agency of the concerns of the responsible agency before release of the EIR substitute for public review.

(5) The certified agency established a consultation period between the certified agency and the responsible agency that was at least as long as the period allowed for public review of the EIR substitute document.

(6) The certified agency exercised the powers of a lead agency by considering all the significant environmental effects of the project and making a finding under Section 15091 for each significant effect.

(c) Certified agencies are not required to adjust their activities to meet the criteria in Subsection (b). Where a certified agency does not meet the criteria in Subsection (b):

(1) The substitute document prepared by the agency shall not be used by other permitting agencies in the place of an EIR or negative declaration, and

(2) Any other agencies granting approvals for the project shall comply with CEQA in the normal manner. A permitting agency shall act as a lead agency and prepare an EIR or a negative declaration. Other permitting agencies, if any, shall act as responsible agencies and use the EIR or negative declaration prepared by the lead agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002.1(d), 21080.5 and 21165, Public Resources Code.

Article 18. Statutory Exemptions

§ 15260. General.

This article describes the exemptions from CEQA granted by the Legislature. The exemptions take several forms. Some exemptions are complete exemptions from CEQA. Other exemptions apply to only part of the requirements of CEQA, and still other exemptions apply only to the timing of CEQA compliance.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b), Public Resources Code.

HISTORY

1. New Article 18 (Sections 15260–15277) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15261. Ongoing Project.

(a) If a project being carried out by a public agency was approved prior to November 23, 1970, the project shall be exempt from CEQA unless either of the following conditions exists:

(1) A substantial portion of public funds allocated for the project have not been spent, and it is still feasible to modify the project to mitigate potentially adverse environmental effects, or to choose feasible alternatives to the project, including the alternative of "no project" or halting the project; provided that a project subject to the National Environmental Policy Act (NEPA) shall be exempt from CEQA as an on–going project if, under regulations promulgated under NEPA, the project would be too far advanced as of January 1, 1970, to require preparation of an EIS.

(2) A public agency proposes to modify the project in such a way that the project might have a new significant effect on the environment.

(b) A private project shall be exempt from CEQA if the project received approval of a lease, license, certificate, permit, or other entitlement for use from a public agency prior to April 5, 1973, subject to the following provisions:

(1) CEQA does not prohibit a public agency from considering environmental factors in connection with the approval or disapproval of a project, or from imposing reasonable fees on the appropriate private person or entity for preparing an environmental report under authority other than CEQA. Local agencies may require environmental reports for projects covered by this paragraph pursuant to local ordinances during this interim period.

(2) Where a project was approved prior to December 5, 1972, and prior to that date the project was legally challenged for noncompliance with CEQA, the project shall be bound by special rules set forth in Section 21170 of CEQA.

(3) Where a private project has been granted a discretionary governmental approval for part of the project before April 5, 1973, and another or additional discretionary governmental approvals after April 5, 1973, the project shall be subject to CEQA only if the approval or approvals after April 5, 1973, involve a greater degree of responsibility or control over the project as a whole than did the approval or approvals prior to that date.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21169, 21170 and 21171, Public Resources Code; *County of Inyo* v. *Yorty*, 32 Cal. App. 3d 795.

§ 15262. Feasibility and Planning Studies.

A project involving only feasibility or planning studies for possible future actions which the agency, board, or commission has not approved, adopted, or funded does not require the preparation of an EIR or negative declaration but does require consideration of environmental factors. This section does not apply to the adoption of a plan that will have a legally binding effect on later activities.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21102 and 21150, Public Resources Code.

§ 15263. Discharge Requirements.

The State Water Resources Control Board and the regional boards are exempt from the requirement to prepare an EIR or a negative declaration prior to the adoption of waste discharge requirements, except requirements for new sources as defined in the Federal Water Pollution Control Act or in other acts which amend or supplement the Federal Water Pollution Control Act. The term "waste discharge requirements" as used in this section is the equivalent of the term "permits" as used in the Federal Water Pollution Control Act.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 13389, Water Code.

§ 15264. Timberland Preserves.

Local agencies are exempt from the requirement to prepare an EIR or negative declaration on the adoption of timberland preserve zones under Government Code Sections 51100 et seq. (Gov. Code, Sec. 51119).

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 51119, Government Code.

§ 15265. Adoption of Coastal Plans and Programs.

(a) CEQA does not apply to activities and approvals pursuant to the California Coastal Act (commencing with Section 30000 of the Public Resources Code) by:

(1) Any local government, as defined in Section 30109 of the Public Resources Code, necessary for the preparation and adoption of a local coastal program, or

(2) Any state university or college, as defined in Section 30119, as necessary for the preparation and adoption of a long–range land use development plan.

(b) CEQA shall apply to the certification of a local coastal program or long–range land use development plan by the California Coastal Commission.

(c) This section shifts the burden of CEQA compliance from the local agency or the state university or college to the California Coastal Commission. The Coastal Commission's program of certifying local coastal

programs and long-range land use development plans has been certified under Section 21080.5, Public Resources Code. See Section 15192.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.9, Public Resources Code.

§ 15266. General Plan Time Extension.

CEQA shall not apply to the granting of an extension of time by the Office of Planning and Research to a city or county for the preparation and adoption of one or more elements of a city or county general plan.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.10(a), Public Resources Code.

§ 15267. Financial Assistance to Low or Moderate Income Housing.

CEQA does not apply to actions taken by the Department of Housing and Community Development to provide financial assistance for the development and construction of residential housing for persons and families of low or moderate income, as defined in Section 50093 of the Health and Safety Code. The residential project which is the subject of the application for financial assistance will be subject to CEQA when approvals are granted by another agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.10(b), Public Resources Code.

§ 15268. Ministerial Projects.

(a) Ministerial projects are exempt from the requirements of CEQA. The determination of what is "ministerial" can most appropriately be made by the particular public agency involved based upon its analysis of its own laws, and each public agency should make such determination either as a part of its implementing regulations or on a case-by-case basis.

(b) In the absence of any discretionary provision contained in the local ordinance or other law establishing the requirements for the permit, license, or other entitlement for use, the following actions shall be presumed to be ministerial:

(1) Issuance of building permits.

(2) Issuance of business licenses.

(3) Approval of final subdivision maps.

(4) Approval of individual utility service connections and disconnections.

(c) Each public agency should, in its implementing regulations or ordinances, provide an identification or itemization of its projects and actions which are deemed ministerial under the applicable laws and ordinances.

(d) Where a project involves an approval that contains elements of both a ministerial action and a discretionary action, the project will be deemed to be discretionary and will be subject to the requirements of CEQA.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b)(1), Public Resources Code; *Day* v. *City of Glendale*, 51 Cal. App. 3d 817.

§ 15269. Emergency Projects.

The following emergency projects are exempt from the requirements of CEQA.

(a) Projects to maintain, repair, restore, demolish, or replace property or facilities damaged or destroyed as a result of a disaster in a disaster stricken area in which a state of emergency has been proclaimed by the Governor pursuant to the California Emergency Services Act, commencing with Section 8550 of the Government Code. This includes projects that will remove, destroy, or significantly alter an historical resource when that resource represents an imminent threat to the public of bodily harm or of damage to adjacent property or when the project has received a determination by the State Office of Historic Preservation pursuant to Section 5028(b) of Public Resources Code.

(b) Emergency repairs to publicly or privately owned service facilities necessary to maintain service essential to the public health, safety or welfare.

(c) Specific actions necessary to prevent or mitigate an emergency. This does not include long-term projects undertaken for the purpose of preventing or mitigating a situation that has a low probability of occurrence in the short-term.

(d) Projects undertaken, carried out, or approved by a public agency to maintain, repair, or restore an existing highway damaged by fire, flood, storm, earthquake, land subsidence, gradual earth movement, or landslide, provided that the project is within the existing right of way of that highway and is initiated within one year of the damage occurring. This exemption does not apply to highways designated as official state scenic highways, nor any project undertaken, carried out, or approved by a public agency to expand or widen a highway damaged by fire, flood, storm, earthquake, land subsidence, gradual earth movement, or landslide.

(e) Seismic work on highways and bridges pursuant to Section180.2 of the Streets and Highways Code, Section 180 et seq.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080(b)(2), (3), and (4), 21080.33 and 21172, Public Resources Code; *Castaic Lake Water Agency v. City of Santa Clarita* (1995) 41 Cal.App.4th 1257; and *Western Municipal Water District of Riverside County v. Superior Court of San Bernardino County* (1987) 187 Cal.App.3d 1104.

HISTORY

1. Amendment of section and NOTE filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15270. Projects Which Are Disapproved.

(a) CEQA does not apply to projects which a public agency rejects or disapproves.

(b) This section is intended to allow an initial screening of projects on the merits for quick disapprovals prior to the initiation f the CEQA process where the agency can determine that the project cannot be approved.

(c) This section shall not relieve an applicant from paying the costs for an EIR or negative declaration prepared for his project prior to the lead agency's disapproval of the project after normal evaluation and processing.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b)(5), Public Resources Code.

§ 15271. Early Activities Related to Thermal Power Plants.

(a) CEQA does not apply to actions undertaken by a public agency relating to any thermal power plant site or facility, including the expenditure, obligation, or encumbrance of funds by a public agency for planning, engineering, or design purposes, or for the conditional sale or purchase of equipment, fuel, water (except groundwater), steam, or power for such a thermal power plant, if the thermal power plant site and related facility will be the subject of an EIR or negative declaration or other document or documents prepared pursuant to a regulatory program certified pursuant to Public Resources Code Section 21080.5, which will be prepared by:

(1) The State Energy Resources Conservation and Development Commission,

(2) The Public Utilities Commission, or

(3) The city or county in which the power plant and related facility would be located.

(b) The EIR, negative declaration, or other document prepared for the thermal power plant site or facility, shall include the environmental impact, if any, of the early activities described in this section.

(c) This section acts to delay the timing of CEQA compliance from the early activities of a utility to the time when a regulatory agency is requested to approve the thermal power plant and shifts the responsibility for preparing the document to the regulatory agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 15080(b)(6), Public Resources Code.

§ 15272. Olympic Games.

CEQA does not apply to activities or approvals necessary to the bidding for, hosting or staging of, and funding or carrying out of, Olympic Games under the authority of the International Olympic Committee, except for the construction of facilities necessary for such Olympic Games. If the facilities are required by the International Olympic Committee as a condition of being awarded the Olympic Games, the lead agency need not discuss the "no project" alternative in an EIR with respect to those facilities.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b)(7), Public Resources Code.

§ 15273. Rates, Tolls, Fares, and Charges.

(a) CEQA does not apply to the establishment, modification, structuring, restructuring, or approval of rates, tolls, fares, and other charges by public agencies which the public agency finds are for the purpose of:

(1) Meeting operating expenses, including employee wage rates and fringe benefits,

(2) Purchasing or leasing supplies, equipment, or materials,

(3)Meeting financial reserve needs and requirements,

(4) Obtaining funds for capital projects, necessary to maintain service within existing service areas, or

(5) Obtaining funds necessary to maintain such intra–city transfers as are authorized by city charter.

(b) Rate increases to fund capital projects for the expansion of a system remain subject to CEQA. The agency granting the rate increase shall act either as the lead agency if no other agency has prepared environmental documents for the capital project or as a responsible agency if another agency has already complied with CEQA as the lead agency.

(c) The public agency shall incorporate written findings in the record of any proceeding in which an exemption under this section is claimed setting forth with specificity the basis for the claim of exemption.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b)(8), Public Resources Code.

§ 15274. Family Day Care Homes.

(a) CEQA does not apply to establishment or operation of a large family day care home, which provides in–home care for up to fourteen children, as defined in Section 1596.78 of the Health and Safety Code.

(b) Under the Health and Safety Code, local agencies cannot require use permits for the establishment or operation of a small family day care home, which provides in–home care for up to eight children, and the establishment or operation of a small family day care home is a ministerial action which is not subject to CEQA.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21083, Public Resources Code.

HISTORY

1. Amendment of section heading, repealer and new section, and amendment of NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

2. Change without regulatory effect amending section filed 2–1–2001 pursuant to section 100, title 1, California Code of Regulations (Register 2001, No. 5).

§ 15275. Specified Mass Transit Projects.

CEQA does not apply to the following mass transit projects:

(a) The institution or increase of passenger or commuter service on rail lines or high–occupancy vehicle lanes already in use, including the modernization of existing stations and parking facilities;

(b) Facility extensions not to exceed four miles in length which are required for transfer of passengers from or to exclusive public mass transit guideway or busway public transit services.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b)(11), (12), and (13), Public Resources Code.

§ 15276. Transportation Improvement and Congestion Management Programs.

(a) CEQA does not apply to the development or adoption of a regional transportation improvement program or the state transportation improvement program. Individual projects developed pursuant to these programs shall remain subject to CEQA.

(b) CEQA does not apply to preparation and adoption of a congestion management program by a county congestion management agency pursuant to Government Code Section 65089, et seq.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080(b)(13), Public Resources Code.

HISTORY

1. Amendment of section heading, section and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15277. Projects Located Outside California.

CEQA does not apply to any project or portion thereof located outside of California which will be subject to environmental impact review pursuant to the National Environmental Policy Act of 1969 or pursuant to a law of that state requiring preparation of a document containing essentially the same points of analysis as in an environmental impact statement prepared under the National Environmental Policy Act of 1969. Any emissions or discharges that would have a significant effect on the environment in the State of California are subject to CEQA where a California public agency has authority over the emissions or discharges.

NOTE: Authority cited: Sections 21083 and 2187, Public Resources Code. Reference: Section 21080(b)(1.5), Public Resources Code; 58 Opinions of the California Attorney General 614 (S.O. 75/50).

§ 15278. Application of Coatings.

(a) CEQA does not apply to a discretionary decision by an air quality management district for a project consisting of the application of coatings within an existing facility at an automotive manufacturing plant if the district finds all of the following:

(1) The project will not cause a net increase in any emissions of any pollutant for which a national or state ambient air quality standard has been established after the internal emission accounting for previous emission reductions achieved at the facility and recognized by the district.

(2) The project will not cause a net increase in adverse impacts of toxic air contaminants as determined by a health risk assessment. The term "net increase in adverse impacts of toxic air contaminants as determined by a health risk assessment" shall be determined in accordance with the rules and regulations of the district.

(3) The project will not cause any other adverse effect on the environment.

(b) The district shall provide a 10–day notice, at the time of the issuance of the permit, of any such exemption. Notice shall be published in two newspapers of general circulation in the area of the project and shall be mailed to any person who makes a written request for such a notice. The notice shall state that the complete file on the project and the basis for the district's findings of exemption are available for inspection and copying at the office of the district.

(c) Any person may appeal the issuance of a permit based on an exemption under subdivision (a) to the hearing board as provided in Section 42302.1 of the Health and Safety Code. The permit shall be revoked by the hearing board if there is substantial evidence in light of the whole record before the board that the project may not satisfy one or more of the criteria established pursuant to subdivision (a). If there is no such substantial evidence, the exemption shall be upheld. Any appeal under this subdivision shall be scheduled for hearing on the calendar of the hearing board within 10 working days of the appeal being filed. The hearing board shall give the appeal priority on its calendar and shall render a decision on the appeal within 21 working days of the appeal being filed. The hearing board may delegate the authority to hear and decide such an appeal to a subcommittee of its body.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Chapter 1131, Statutes of 1993, Section 1.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15279. Housing for Agricultural Employees.

(a) CEQA does not apply to any development project which consists of the construction, conversion, or use of residential housing for agricultural employees, as defined below, provided the development is either:

(1) Affordable to lower income households, as defined in Section 50079.5 of the Health and Safety Code, there is no public financial assistance for the development project, and the developer provides sufficient legal commitments to the appropriate local agency to ensure that the housing units will continue to be available to lower–income households for a period of at least 15 years; or

(2) Affordable to low and moderate–income households, as defined in paragraph (2) of subdivision (h) of Section 65589.5 of the Government

Code, at monthly housing costs determined pursuant to paragraph (2) of subdivision (h) of Section 65589.5 of the Government Code, there is public financial assistance for the project, and the developer provides sufficient legal commitments to the appropriate local agency to ensure that the housing units will continue to be available to low and moderate-income households for a period of at least 15 years.

(b) The development must also meet all the following criteria:

(1) It is consistent with the applicable city, county, or city and county general plan as it existed on the date the project application was deemed complete.

(2) It is consistent with the local zoning, as it existed on the date the project application was deemed complete, unless the zoning is inconsistent with the general plan because the city, county, or city and county has not rezoned the property to bring it into consistency with the general plan.

(3) If the project is proposed in an urbanized area, it does not exceed 45 dwelling units, or if it consists of dormitories, barracks or other group living facilities houses not more than 45 agricultural employees, and its site is adjacent on at least two sides to land that has been previously developed.

(4) If the project is proposed in a nonurbanized area, its site is zoned for general agricultural use and the project consists of not more than 20 dwelling units or, if it consists of dormitories, barracks or other group living facilities, it houses not more than 20 agricultural employees.

(5) Its site is not more than five acres in area, except that a project located in an area with a population density of at least 1000 persons per square mile shall not be more than two acres in area.

(6) Its site is, or can be, adequately served by utilities.

(7) Its site has no value as wildlife habitat.

(8) Its site is not included on any list of hazardous waste or other facilities and sites compiled pursuant to Section 65962 of the Government Code.

(9) It will not involve the demolition of, or any substantial adverse change in, any structure that is listed, or determined to be eligible for listing in the California Register of Historical Resources.

(c) As used in this section, "residential housing for agricultural employees" means housing accommodations for an agricultural employee, as defined in subdivision (b) of Section 1140.4 of the Labor Code.

(d) As used in this section, "urbanized area" means either of the following:

(1) an area with a population density of at least 1000 persons per square mile; or

(2) an area with a population density of less than 1000 persons per square mile that is identified as an urban area in the general plan adopted by the applicable city, county, or city and county and was not designated at the time the application was deemed complete as an area reserved for future urban growth.

(e) This section does not apply if the public agency which is carrying out or approving the development project determines that there is a reasonable possibility that the project would have a significant effect on the environment due to unusual circumstances or that the cumulative impact of successive projects of the same type in the same area over time would be significant.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.10, Public Resources Code.

HISTORY

1. New section filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15280. Lower-Income Housing Projects.

(a) CEQA does not apply to any development project which consists of the construction, conversion, or use of residential housing consisting of not more than 100 units in an urbanized area, provided that it is either:

(1) Affordable to lower-income households, as defined in Section 50079.5 of the Health and Safety Code, and the developer provides sufficient legal commitments to the appropriate local agency to ensure that the housing units will continue to be available to lower income households for a period of at least 15 years; or

(2) Affordable to low and moderate-income households, as defined in paragraph (2) of subdivision (h) of Section 65589.5 of the Government Code, at monthly housing costs determined pursuant to paragraph (2) of subdivision (h) of Section 65589.5 of the Government Code.

(b) The development must also meet all the following criteria:

(1) It is consistent with the local jurisdiction's general plan as it existed on the date the project application was deemed complete.

(2) It is consistent with the local zoning as it existed on the date the project application was deemed complete, unless the zoning is inconsistent with the general plan because the city, county, or city and county has not rezoned the property to bring it into consistency with the general plan.

(3) Its site has been previously developed or is currently developed with urban uses, or the immediately contiguous properties surrounding the site are or have been previously developed with urban uses.

(4) Its site is not more than two acres in area.

(5) Its site is, or can be, adequately served by utilities.

(6) Its site has no value as wildlife habitat.

(7) It will not involve the demolition of, or any substantial adverse change in, any district, landmark, object, building, structure, site, area, or place that is listed, or determined to be eligible for listing in the California Register of Historical Resources.

(8) Its site is not included on any list of hazardous waste or other facilities and sites compiled pursuant to Section 65962.5 of the Government Code, and the site has been subject to an assessment by a California registered environmental assessor to determine both the presence of hazardous contaminants, if any, and the potential for exposure of site occupants to significant health hazards from nearby properties and activities.

(c) For purposes of this section, "urbanized area" means an area that has a population density of at least 1000 persons per square mile.

(d) If hazardous contaminants are found on the site, they must be removed or any significant effects mitigated to a level of insignificance in order to apply this exemption. If a potential for exposure to significant health hazards from nearby properties and activities is found to exist, the effects of the potential exposure must be mitigated to a level of insignificance in order to apply this exemption. Any removal or mitigation to insignificance must be completed prior to any residential occupancy of the project.

(e) This section does not apply if there is a reasonable possibility that the project would have a significant effect on the environment due to unusual circumstances or due to the related or cumulative impacts of reasonably foreseeable other projects in the vicinity.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.14, Public Resources Code.

HISTORY

1. New section filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
2. Change without regulatory effect amending subsection (a) filed 2-1-2001 pursuant to section 100, title 1, California Code of Regulations (Register 2001, No. 5).

§ 15281. Air Quality Permits.

CEQA does not apply to the issuance, modification, amendment, or renewal of any permit by an air pollution control district or air quality management district pursuant to Title V, as defined in Section 39053.3 of the Health and Safety Code, or pursuant to an air district Title V program established under Sections 42301.10, 42301.11, and 42301.12 of the Health and Safety Code, unless the issuance, modification, amendment, or renewal authorizes a physical or operational change to a source or facility.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.24, Public Resources Code.

HISTORY

1. New section filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15282. Other Statutory Exemptions

The following is a list of existing statutory exemptions. Each subsection summarizes statutory exemptions found in the California Code. Lead agencies are not to rely on the language contained in the summaries

below but must rely on the actual statutory language that creates the exemption. This list is intended to assist lead agencies in finding them, but not as a substitute for them. This section is merely a reference tool.

(a) The notification of discovery of Native American burial sites as set forth in Section 5097.98(c) of the Public Resources Code.

(b) Specified prison facilities as set forth in Sections 21080.01, 21080.02, 21080.03 and 21080.07 of the Public Resources Code.

(c) The lease or purchase of the rail right-of-way used for the San Francisco Peninsula commute service between San Francisco and San Jose as set forth in Section 21080.05 of the Public Resources Code.

(d) Any activity or approval necessary for or incidental to project funding or authorization for the expenditure of funds for the project, by the Rural Economic Development Infrastructure Panel as set forth in Section 21080.08 of the Public Resources Code.

(e) The construction of housing or neighborhood commercial facilities in an urbanized area pursuant to the provisions of Section 21080.7 of the Public Resources Code.

(f) The conversion of an existing rental mobilehome park to a resident initiated subdivision, cooperative, or condominium for mobilehomes as set forth in Section 21080.8 of the Public Resources Code.

(g) Settlements of title and boundary problems by the State Lands Commission and to exchanges or leases in connection with those settlements as set forth in Section 21080.11 of the Public Resources Code.

(h) Any railroad grade separation project which eliminates an existing grade crossing or which reconstructs an existing grade separation as set forth in Section 21080.13 of the Public Resources Code.

(i) The adoption of an ordinance regarding second units in a single-family or multifamily residential zone by a city or county to implement the provisions of Sections 65852.1 and 65852.2 of the Government Code as set forth in Section 21080.17 of the Public Resources Code.

(j) The closing of any public school or the transfer of students from that public school to another school in which kindergarten or any grades 1 through 12 is maintained as set forth in 21080.18 of the Public Resources Code.

(k) A project for restriping streets or highways to relieve traffic congestion as set forth in Section 21080.19 of the Public Resources Code.

(l) The installation of new pipeline or maintenance, repair, restoration, removal, or demolition of an existing pipeline as set forth in Section 21080.21 of the Public Resources Code, as long as the project does not exceed one mile in length.

(m) The activities and approvals by a local government necessary for the preparation of general plan amendments pursuant to Public Resources Code § 29763 as set forth in Section 21080.22 of the Public Resources Code. Section 29763 of the Public Resources Code refers to local government amendments made for consistency with the Delta Protection Commission's regional plan.

(n) Minor alterations to utilities made for the purposes of complying with Sections 4026.7 and 4026.8 of the Health and Safety Code as set forth in Section 21080.26 of the Public Resources Code.

(o) The adoption of an ordinance exempting a city or county from the provisions of the Solar Shade Control Act as set forth in Section 25985 of the Public Resources Code.

(p) The acquisition of land by the Department of Transportation if received or acquired within a statewide or regional priority corridor designated pursuant to Section 65081.3 of the Government Code as set forth in Section 33911 of the Public Resources Code.

(q) The adoption or amendment of a nondisposal facility element as set forth in Section 41735 of the Public Resources Code.

(r) Cooperative agreements for the development of Solid Waste Management Facilities on Indian country as set forth in Section 44203(g) of the Public Resources Code.

(s) Determinations made regarding a city or county's regional housing needs as set forth in Section 65584 of the Government Code.

(t) Any action necessary to bring a general plan or relevant mandatory element of the general plan into compliance pursuant to a court order as set forth in Section 65759 of the Government Code.

(u) Industrial Development Authority activities as set forth in Section 91543 of the Government Code.

(v) Temporary changes in the point of diversion, place of use, of purpose of use due to a transfer or exchange of water or water rights as set forth in Section 1729 of the Water Code.

(w) The preparation and adoption of Urban Water Management Plans pursuant to the provisions of Section 10652 of the Water Code.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 5097.98(c), 21080.01, 21080.02, 21080.03, 21080.05, 21080.07, 21080.08, 21080.7, 21080.8, 21080.11, 21080.13, 21080.17, 21080.18, 21080.19, 21080.21, 21080.22, 21080.26, 25985, 33911, 41735 and 44203(g), Public Resources Code.

HISTORY

1. New section filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15283. Housing Needs Allocation.

CEQA does not apply to regional housing needs determinations made by the Department of Housing and Community Development, a council of governments, or a city or county pursuant to Section 65584 of the Government Code.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 65584, Government Code.

HISTORY

1. New section filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15284. Pipelines.

(a) CEQA does not apply to any project consisting of the inspection, maintenance, repair, restoration, reconditioning, relocation, replacement, or removal of an existing hazardous or volatile liquid pipeline or any valve, flange, meter, or other piece of equipment that is directly attached to the pipeline.

(b) To qualify for this exemption, the diameter of the affected pipeline must not be increased and the project must be located outside the boundaries of an oil refinery. The project must also meet all of the following criteria:

(1) The affected section of pipeline is less than eight miles in length and actual construction and excavation activities are not undertaken over a length of more than one-half mile at a time.

(2) The affected section of pipeline is not less than eight miles distance from any section of pipeline that had been subject to this exemption in the previous 12 months.

(3) The project is not solely for the purpose of excavating soil that is contaminated by hazardous materials.

(4) To the extent not otherwise required by law, the person undertaking the project has, in advance of undertaking the project, prepared a plan that will result in notification of the appropriate agencies so that they may take action, if necessary, to provide for the emergency evacuation of members of the public who may be located in close proximity to the project, and those agencies, including but not limited to the local fire department, police, sheriff, and California Highway Patrol as appropriate, have reviewed and agreed to that plan.

(5) Project activities take place within an existing right-of-way and that right-of-way will be restored to its pre-project condition upon completion of the project.

(6) The project applicant will comply with all conditions otherwise authorized by law, imposed by the city or county as part of any local agency permit process, and to comply with the Keene-Nejedly California Wetlands Preservation Act (Public Resources Code Section 5810, et seq.), the California Endangered Species Act (Fish and Game Code Section 2050, et seq.), other applicable state laws, and all applicable federal laws.

(c) When the lead agency determines that a project meets all of the criteria of subdivisions (a) and (b), the party undertaking the project shall all of the following:

(1) Notify in writing all responsible and trustee agencies, as well as any public agency with environmental, public health protection, or emergency response authority, of the lead agency's invocation of this exemption.

(2) Mail notice of the project to the last known name and address of all organizations and individuals who have previously requested such notice and notify the public in the affected area by at least one of the following procedures:

(A) Publication at least one time in a newspaper of general circulation in the area affected by the proposed project. If more than one area is affected, the notice shall be published in the newspaper of largest circulation from among the newspapers of general circulation in those areas.

(B) Posting of notice on and off site in the area where the project is to be located.

(C) Direct mailing to the owners and occupants of contiguous property shown on the latest equalized assessment roll.

The notice shall include a brief description of the proposed project and its location, and the date, time, and place of any public meetings or hearings on the proposed project. This notice may be combined with the public notice required under other law, as applicable, but shall meet the preceding minimum requirements.

(3) In the case of private rights–of–way over private property, receive from the underlying property owner permission for access to the property.

(4) Immediately inform the lead agency if any soil contaminated with hazardous materials is discovered.

(5) Comply with all conditions otherwise authorized by law, imposed by the city or county as part of any local agency permit process, and to comply with the Keene–Nejedly California Wetlands Preservation Act (Public Resources Code Section 5810, et seq.), the California Endan-ed Species Act (Fish and Game Code Section 2050, et seq.), other icable state laws, and all applicable federal laws.

(d) For purposes of this section, "pipeline" is used as defined in subdivision (a) of Government Code Section 51010.5. This definition includes every intrastate pipeline used for the transportation of hazardous liquid substances or highly volatile liquid substances, including a common carrier pipeline, and all piping containing those substances located within a refined products bulk loading facility which is owned by a common carrier and is served by a pipeline of that common carrier, and the common carrier owns and serves by pipeline at least five such facilities in California.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.23, Public Resources Code.

HISTORY

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15285. Transit Agency Responses to Revenue Shortfalls.

(a) CEQA does not apply to actions taken on or after July 1,1995 to implement budget reductions made by a publicly owned transit agency as a result of a fiscal emergency caused by the failure of agency revenues to adequately fund agency programs and facilities. Actions shall be limited to those directly undertaken by or financially supported in whole or in part by the transit agency pursuant to Section 15378(a)(1) or (2), including actions which reduce or eliminate the availability of an existing publicly owned transit service, facility, program, or activity.

(b) When invoking this exemption, the transit agency shall make a specific finding that there is a fiscal emergency. Before taking its proposed budgetary actions and making the finding of fiscal emergency, the transit agency shall hold a public hearing. After this public hearing, the transit ncy shall respond within 30 days at a regular public meeting to sug-lions made by the public at that initial hearing. The transit agency may make the finding of fiscal emergency only after it has responded to public suggestions.

(c) For purposes of this subdivision, "fiscal emergency" means that the transit agency is projected to have negative working capital within one year from the date that the agency finds that a fiscal emergency exists. "Working capital" is defined as the sum of all unrestricted cash, unrestricted short–term investments, and unrestricted short–term accounts receivable, minus unrestricted accounts payable. Employee retirements funds, including deferred compensation plans and Section 401(k) plans, health insurance reserves, bond payment reserves, worker's compensation reserves, and insurance reserves shall not be included as working capital.

(d) This exemption does not apply to the action of any publicly owned transit agency to reduce or eliminate a transit service, facility, program, or activity that was approved or adopted as a mitigation measure in any environmental document certified or adopted by any public agency under either CEQA or NEPA. Further, it does not apply to actions of the Los Angeles County Metropolitan Transportation Authority.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080 and 21080.32, Public Resources Code.

HISTORY

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

Article 19. Categorical Exemptions

§ 15300. Categorical Exemptions.

Section 21084 of the Public Resources Code requires these guidelines to include a list of classes of projects which have been determined not to have a significant effect on the environment and which shall, therefore, be exempt from the provisions of CEQA.

In response to that mandate, the Secretary for Resources has found that the following classes of projects listed in this article do not have a significant effect on the environment, and they are declared to be categorically exempt from the requirement for the preparation of environmental documents.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21084, Public Resources Code.

HISTORY

1. Renumbering and amendment of former Article 8 (Sections 15100–15129) to Article 19 (Sections 15300–15329) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29).
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15300.1. Relation to Ministerial Projects.

Section 21080 of the Public Resources Code exempts from the application of CEQA those projects over which public agencies exercise only ministerial authority. Since ministerial projects are already exempt, Categorical Exemptions should be applied only where a project is not ministerial under a public agency's statutes and ordinances. The inclusion of activities which may be ministerial within the classes and examples contained in this article shall not be construed as a finding by the Secretary for resources that such an activity is discretionary.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21084, Public Resources Code.

§ 15300.2. Exceptions.

(a) Location. Classes 3, 4, 5, 6, and 11 are qualified by consideration of where the project is to be located—a project that is ordinarily insignificant in its impact on the environment may in a particularly sensitive environment be significant. Therefore, these classes are considered to apply in all instances, except where the project may impact on an environmental resource of hazardous or critical concern where designated, precisely mapped, and officially adopted pursuant to law by federal, state, or local agencies.

(b) Cumulative Impact. All exemptions for these classes are inapplicable when the cumulative impact of successive projects of the same type in the same place, over time is significant.

(c) Significant Effect. A categorical exemption shall not be used for an activity where there is a reasonable possibility that the activity will

Title 14, CCR, Register 2003-30

§ 15053

§ 15064

§ 15130

§ 15152

(2) The making of findings as required by Sections 15091 and 15093.

(c) Where an advisory body such as a planning commission is required to make a recommendation on a project to the decisionmaking body, the advisory body shall also review and consider the EIR or negative declaration in draft or final form.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21082, Public Resources Code; *Kleist v. City of Glendale* (1976) 56 Cal. App. 3d 770.

Article 3. Authorities Granted to Public Agencies by CEQA

§ 15040. Authority Provided by CEQA.

(a) CEQA is intended to be used in conjunction with discretionary powers granted to public agencies by other laws.

(b) CEQA does not grant an agency new powers independent of the powers granted to the agency by other laws.

(c) Where another law grants an agency discretionary powers, CEQA supplements those discretionary powers by authorizing the agency to use the discretionary powers to mitigate or avoid significant effects on the environment when it is feasible to do so with respect to projects subject to the powers of the agency. Prior to January 1, 1983, CEQA provided implied authority for an agency to use its discretionary powers to mitigate or avoid significant effects on the environment. Effective January 1, 1983, CEQA provides express authority to do so.

(d) The exercise of the discretionary powers may take forms that had not been expected before the enactment of CEQA, but the exercise must be within the scope of the power.

(e) The exercise of discretionary powers for environmental protection shall be consistent with express or implied limitations provided by other laws.

NOTE: Authority cited: Sections 21083 and 2187, Public Resources Code. Reference: Sections 21000, 21001, 21002, 21002.1 and 21004, Public Resources Code; Section 4, Chapter 1438, Statutes of 1982; *Golden Gate Bridge, Etc., Dist.* v. *Muzzi*, (1978) 83 Cal. App. 3d 707; *E.D.F.* v. *Mathews*, 410 F. Supp. 336, 339 (D.D.C., 1976); *Friends of Mammoth* v. *Board of Supervisors*, (1972) 8 Cal. 3d 247; *Pinewood Investors* v. *City of Oxnard* (1982) 133 Cal. App. 3d 1030.

HISTORY

1. Repealer of Article 3 (Sections 15010–15016) and new Article 3 (Sections 15040–15045) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29). For prior history, see Registers 82, No. 2; 80, No. 19; 78, No. 5; 76, No. 41; 75, Nos. 1 and 18; 74, Nos. 3 and 4; and 73, No. 50.
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15041. Authority to Mitigate.

Within the limitations described in Section 15040:

(a) A lead agency for a project has authority to require feasible changes in any or all activities involved in the project in order to substantially lessen or avoid significant effects on the environment, consistent with applicable constitutional requirements such as the "nexus" and "rough proportionality" standards established by case law (Nollan v. California Coastal Commission (1987) 483 U.S. 825, Dolan v. City of Tigard, (1994) 512 U.S. 374, Ehrlich v. City of Culver City, (1996) 12 Cal. 4th 854.).

(b) When a public agency acts as a responsible agency for a project, the agency shall have more limited authority than a lead agency. The responsible agency may require changes in a project to lessen or avoid only the effects, either direct or indirect, of that part of the project which the agency will be called on to carry out or approve.

(c) With respect to a project which includes housing development, a lead or responsible agency shall not reduce the proposed number of housing units as a mitigation measure or alternative to lessen a particular significant effect on the environment if that agency determines that there is another feasible, specific mitigation measure or alternative that would provide a comparable lessening of the significant effect.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21002.1 and 21085, Public Resources Code; *Golden Gate Bridge, Etc., District* v. *Muzzi* (1978) 83 Cal. App. 3d 707; and *Laurel Hills Homeowners Assn. v. City Council of City of Los Angeles* (1978) 83 Cal.App.3d 515.

HISTORY

1. Amendment of first paragraph, subsection (a) and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15042. Authority to Disapprove Projects.

A public agency may disapprove a project if necessary in order to avoid one or more significant effects on the environment that would occur if the project were approved as proposed. A lead agency has broader authority to disapprove a project than does a responsible agency. A responsible agency may refuse to approve a project in order to avoid direct or indirect environmental effects of that part of the project which the responsible agency would be called on to carry out or approve. For example, an air quality management district acting as a responsible agency would not have authority to disapprove a project for water pollution effects that were unrelated to the air quality aspects of the project regulated by the district.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002 and 21002.1, Public Resources Code; *Friends of Mammoth* v. *Mono County*, 8 Cal. App 3d 247; *San Diego Trust and Savings Bank* v. *Friends of Gill*, 121 Cal. App. 3d 203.

§ 15043. Authority to Approve Projects Despite Significant Effects.

A public agency may approve a project even though the project would cause a significant effect on the environment if the agency makes a fully informed and publicly disclosed decision that:

(a) There is no feasible way to lessen or avoid the significant effect (see Section 15091); and

(b) Specifically identified expected benefits from the project outweigh the policy of reducing or avoiding significant environmental impacts of the project. (See Section 15093.)

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002 and 21002.1, Public Resources Code; *San Francisco Ecology Center* v. *City and County of San Francisco*, (1975) 48 Cal. App. 3d 584; *San Diego Trust & Savings Bank* v. *Friends of Gill*, (1981) 121 Cal. App. 3d 203.

§ 15044. Authority to Comment.

Any person or entity other than a responsible agency may submit comments to a lead agency concerning any environmental effects of a project being considered by the lead agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21000, 21001, 21002.1, 21104 and 21153, Public Resources Code.

HISTORY

1. Amendment filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).

§ 15045. Fees.

(a) For a project to be carried out by any person or entity other than the lead agency, the lead agency may charge and collect a reasonable fee from the person or entity proposing the project in order to recover the estimated costs incurred in preparing environmental documents and for procedures necessary to comply with CEQA on the project. Litigation expenses, costs and fees incurred in actions alleging noncompliance with CEQA are not recoverable under this section.

(b) Public agencies may charge and collect a reasonable fee from members of the public for a copy of an environmental document not to exceed the actual cost of reproducing a copy.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21089 and 21105, Public Resources Code.

HISTORY

1. Amendment of subsection (a) and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

Article 4. Lead Agency

§ 15050. Lead Agency Concept.

(a) Where a project is to be carried out or approved by more than public agency, one public agency shall be responsible for preparing EIR or negative declaration for the project. This agency shall be called the lead agency.

(b) Except as provided in subsection (c), the decisionmaking body of each responsible agency shall consider the lead agency's EIR or negative declaration prior to acting upon or approving the project. Each responsible agency shall certify that its decisionmaking body reviewed and considered the information contained in the EIR or negative declaration on the project.

(c) The determination of the lead agency of whether to prepare an EIR or a negative declaration shall be final and conclusive for all persons, including responsible agencies, unless:

(1) The decision is successfully challenged as provided in Section 21167 of the Public Resources Code,

(2) Circumstances or conditions change as provided in Section 15162, or

(3) A responsible agency becomes a lead agency under Section 15052.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080.1, 21165 and 21167.2, Public Resources Code.

HISTORY

1. Repealer of Article 4 (Sections 15020–15043) and new Article 4 (Sections 15050–15053) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29). For prior history, see Registers 82, No. 2; 80, No. 19; 78, No. 5; 76, No. 41; 75, Nos. 1, 5 and 22; 74, Nos. 13 and 26; and 73, No. 50.
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15051. Criteria for Identifying the Lead Agency.

Where two or more public agencies will be involved with a project, the determination of which agency will be the lead agency shall be governed by the following criteria:

(a) If the project will be carried out by a public agency, that agency shall be the lead agency even if the project would be located within the jurisdiction of another public agency.

(b) If the project is to be carried out by a nongovernmental person or entity, the lead agency shall be the public agency with the greatest responsibility for supervising or approving the project as a whole.

(1) The lead agency will normally be the agency with general governmental powers, such as a city or county, rather than an agency with a single or limited purpose such as an air pollution control district or a district which will provide a public service or public utility to the project.

(2) Where a city prezones an area, the city will be the appropriate lead agency for any subsequent annexation of the area and should prepare the appropriate environmental document at the time of the prezoning. The local agency formation commission shall act as a responsible agency.

(c) Where more than one public agency equally meet the criteria in subsection (b), the agency which will act first on the project in question shall be the lead agency.

(d) Where the provisions of subsections (a), (b), and (c) leave two or more public agencies with a substantial claim to be the lead agency, the public agencies may by agreement designate an agency as the lead agency. An agreement may also provide for cooperative efforts by two or more agencies by contract, joint exercise of powers, or similar devices.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21165, Public Resources Code.

§ 15052. Shift in Lead Agency Designation.

(a) Where a responsible agency is called on to grant an approval for a project subject to CEQA for which another public agency was the appropriate lead agency, the responsible agency shall assume the role of the lead agency when any of the following conditions occur:

(1) The lead agency did not prepare any environmental documents for the project, and the statute of limitations has expired for a challenge to the action of the appropriate lead agency.

(2) The lead agency prepared environmental documents for the project but the following conditions occur:

(A) A subsequent EIR is required pursuant to Section 15162,

(B) The lead agency has granted a final approval for the project, and

(C) The statute of limitations for challenging the lead agency's action under CEQA has expired.

(3) The lead agency prepared inadequate environmental documents without consulting with the responsible agency as required by Sections 15072 or 15082, and the statute of limitations has expired for a challenge to the action of the appropriate lead agency.

(b) When a responsible agency assumes the duties of a lead agency under this section, the time limits applicable to a lead agency shall apply to the actions of the agency assuming the lead agency duties.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21165, Public Resources Code.

§ 15053. Designation of Lead Agency by Office of Planning and Research.

(a) If there is a dispute over which of several agencies should be the lead agency for a project, the disputing agencies should consult with each other in an effort to resolve the dispute prior to submitting it to OPR. If an agreement cannot be reached, any public agency, or the applicant if a private project is involved, may submit the dispute to OPR for resolution.

(b) OPR shall designate a lead agency within 21 days after receiving a completed request to resolve a dispute.

(c) Regulations adopted by OPR for resolving lead agency disputes may be found in Title 14, California Code of Regulations, Sections 16000 et seq.

(d) Designation of a lead agency by OPR shall be based on consideration of the criteria in Section 15051 as well as the capacity of the agency to adequately fulfill the requirements of CEQA.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21165, Public Resources Code; and California Code of Regulations, Title 14, Sections 16000–16041.

HISTORY

1. Change without regulatory effect amending subsections (c) and (d) and amending NOTE filed 7–22–2003 pursuant to section 100, title 1, California Code of Regulations (Register 2003, No. 30).

Article 5. Preliminary Review of Projects and Conduct of Initial Study

§ 15060. Preliminary Review.

(a) A lead agency is allowed 30 days to review for completeness applications for permits or other entitlements for use. While conducting this review for completeness, the agency should be alert for environmental issues that might require preparation of an EIR or that may require additional explanation by the applicant. Accepting an application as complete does not limit the authority of the lead agency to require the applicant to submit additional information needed for environmental evaluation of the project. Requiring such additional information after the application is complete does not change the status of the application.

(b) Except as provided in Section 15111, the lead agency shall begin the formal environmental evaluation of the project after accepting an application as complete and determining that the project is subject to CEQA.

(c) Once an application is deemed complete, a lead agency must first determine whether an activity is subject to CEQA before conducting an initial study. An activity is not subject to CEQA if:

(1) The activity does not involve the exercise of discretionary powers by a public agency;

(2) The activity will not result in a direct or reasonably foreseeable indirect physical change in the environment; or

(3) The activity is not a project as defined in Section 15378.

(d) If the lead agency can determine that an EIR will be clearly required for a project, the agency may skip further initial review of the project and begin work directly on the EIR process described in Article 9, commencing with Section 15080. In the absence of an initial study, the lead agency shall still focus the EIR on the significant effects of the project and indicate briefly its reasons for determining that other effects would not be significant or potentially significant.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080(b), 21080.2 and 21160, Public Resources Code.

HISTORY

1. Repealer of Article 5 (Sections 15050–15056) and new Article 5 (Sections 15060–15065) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29). For prior history, see Registers 80, No. 19; 78, No. 5; 76, No. 41; 75, Nos. 1, 5 and 22; and 73, No. 50.
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).
3. Amendment of section and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15060.5. Preapplication Consultation.

(a) For a potential project involving the issuance of a lease, permit, license, certificate, or other entitlement for use by one or more public agencies, the lead agency shall, upon the request of a potential applicant and prior to the filing of a formal application, provide for consultation with the potential applicant to consider the range of actions, potential alternatives, mitigation measures, and any potential significant effects on the environment of the potential project.

(b) The lead agency may include in the consultation one or more responsible agencies, trustee agencies, and other public agencies who in the opinion of the lead agency may have an interest in the proposed project. The lead agency may consult the Office of Permit Assistant in the Trade and Commerce Agency for help in identifying interested agencies.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.1, Public Resources Code.

HISTORY

1. New section filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15061. Review for Exemption.

(a) Once a lead agency has determined that an activity is a project subject to CEQA, a lead agency shall determine whether the project is exempt from CEQA.

(b) A project is exempt from CEQA if:

(1) The project is exempt by statute (see, e.g. Article 18, commencing with Section 15260).

(2) The project is exempt pursuant to a categorical exemption (see Article 19, commencing with Section 15300) and the application of that categorical exemption is not barred by one of the exceptions set forth in Section 15300.2.

(3) The activity is covered by the general rule that CEQA applies only to projects which have the potential for causing a significant effect on the environment. Where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, the activity is not subject to CEQA.

(4) The project will be rejected or disapproved by a public agency. (See Section 15270(b)).

(c) Each public agency should include in its implementing procedures a listing of the projects often handled by the agency that the agency has determined to be exempt. This listing should be used in preliminary review.

(d) After determining that a project is exempt, the agency may prepare a notice of exemption as provided in Section 15062. Although the notice may be kept with the project application at this time, the notice shall not be filed with OPR or the county clerk until the project has been approved.

HISTORY

1. Amendment of subsection (d) filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).
2. Amendment of section and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15062. Notice of Exemption.

(a) When a public agency decides that a project is exempt from CEQA and the public agency approves or determines to carry out the project, the agency may file a notice of exemption. The notice shall be filed, if at all, after approval of the project. Such a notice shall include:

(1) A brief description of the project,

(2) A finding that the project is exempt from CEQA, including a citation to the State Guidelines section or statute under which it is found to be exempt, and

(3) A brief statement of reasons to support the finding.

(b) A notice of exemption may be filled out and may accompany the project application through the approval process. The notice shall not be filed with the county clerk or OPR until the project has been approved.

(c) When a public agency approves an applicant's project, either the agency or the applicant may file a notice of exemption.

(1) When a state agency files this notice, the notice of exemption is filed with OPR. A form for this notice is provided in Appendix E. A list of all such notices shall be posted on a weekly basis at the Office of Planning and Research, 1400 Tenth Street, Sacramento, California. The list shall remain posted for at least 30 days.

(2) When a local agency files this notice, the notice of exemption is filed with the county clerk of each county in which the project will be located. Copies of all such notices will be available for public inspection and such notices shall be posted within 24 hours of receipt in the office of the county clerk. Each notice shall remain posted for a period of 30 days. Thereafter, the clerk shall return the notice to the local agency with a notation of the period it was posted. The local agency shall retain the notice for not less than 9 months.

(3) All public agencies are encouraged to make postings pursuant to this section available in electronic format on the Internet. Such electronic postings are in addition to the procedures required by these guidelines and the Public Resources Code.

(4) When an applicant files this notice, special rules apply.

(A) The notice filed by an applicant is filed in the same place as if it were filed by the agency granting the permit. If the permit was granted by a state agency, the notice is filed with OPR. If the permit was granted by a local agency, the notice is filed with the county clerk of the county or counties in which the project will be located.

(B) The notice of exemption filed by an applicant shall contain the information required in subdivision (a) together with a certified document issued by the public agency stating that the agency has found the project to be exempt. The certified document may be a certified copy of an existing document or record of the public agency.

(C) A notice filed by an applicant is subject to the same posting and time requirements as a notice filed by a public agency.

(d) The filing of a Notice of Exemption and the posting on the list of notices start a 35 day statute of limitations period on legal challenges to the agency's decision that the project is exempt from CEQA. If a Notice of Exemption is not filed, a 180 day statute of limitations will apply.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21108 and 21152, Public Resources Code.

HISTORY

1. Amendment of subsections (b) and (c) filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).
2. Amendment of subsections (a)(2), (c)(1), (c)(2), (c)(3)(A) and (c)(3)(C) filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
3. New subsection (c)(3) and subsection renumbering filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15063. Initial Study.

(a) Following preliminary review, the lead agency shall conduct an initial study to determine if the project may have a significant effect on the environment. If the lead agency can determine that an EIR will clearly be required for the project, an initial study is not required but may still be desirable.

(1) All phases of project planning, implementation, and operation must be considered in the initial study of the project.

(2) To meet the requirements of this section, the lead agency may use an environmental assessment or a similar analysis prepared pursuant to the National Environmental Policy Act.

(3) An initial study may rely upon expert opinion supported by facts, technical studies or other substantial evidence to document its findings.

However, an initial study is neither intended nor required to include the of detail included in an EIR.

Results.

) If the agency determines that there is substantial evidence that any aspect of the project, either individually or cumulatively, may cause a significant effect on the environment, regardless of whether the overall effect of the project is adverse or beneficial, the lead agency shall do one of the following:

(A) Prepare an EIR or

(B) Use a previously prepared EIR which the lead agency determines would adequately analyze the project at hand, or

(C) Determine, pursuant to a program EIR, tiering, or another appropriate process, which of a project's effects were adequately examined by an earlier EIR or negative declaration. Another appropriate process may include, for example, a master EIR, a master environmental assessment, approval of housing and neighborhood commercial facilities in urban areas as described in section 15181, approval of residential projects pursuant to a specific plan as described in section 15182, approval of residential projects consistent with a community plan, general plan or zoning as described in section 15183, or an environmental document prepared under a State certified regulatory program. The lead agency shall then ascertain which effects, if any, should be analyzed in a later EIR or negative declaration.

(2) The lead agency shall prepare a negative declaration if there is no substantial evidence that the project or any of its aspects may cause a significant effect on the environment.

(c) Purposes. The purposes of an initial study are to:

(1) Provide the lead agency with information to use as the basis for deciding whether to prepare an EIR or negative declaration;

(2) Enable an applicant or lead agency to modify a project, mitigating adverse impacts before an EIR is prepared, thereby enabling the project to qualify for a negative declaration;

(3) Assist the preparation of an EIR, if one is required, by:

) Focusing the EIR on the effects determined to be significant,

(B) Identifying the effects determined not to be significant,

(C) Explaining the reasons for determining that potentially significant effects would not be significant, and

(D) Identifying whether a program EIR, tiering, or another appropriate process can be used for analysis of the project's environmental effects.

(4) Facilitate environmental assessment early in the design of a project;

(5) Provide documentation of the factual basis for the finding in a negative declaration that a project will not have a significant effect on the environment;

(6) Eliminate unnecessary EIRs;

(7) Determine whether a previously prepared EIR could be used with the project.

(d) Contents. An initial study shall contain in brief form:

(1) A description of the project including the location of the project;

(2) An identification of the environmental setting;

(3) An identification of environmental effects by use of a checklist, matrix, or other method, provided that entries on a checklist or other form are briefly explained to indicate that there is some evidence to support the entries. The brief explanation may be either through a narrative or a reference to another information source such as an attached map, photographs, or an earlier EIR or negative declaration. A reference to another document should include, where appropriate, a citation to the page or pages where the information is found.

(4) A discussion of ways to mitigate the significant effects identified, if any;

(5) An examination of whether the project would be consistent with ng zoning, plans, and other applicable land use controls;

The name of the person or persons who prepared or participated in nitial study.

(e) Submission of Data. If the project is to be carried out by a private person or private organization, the lead agency may require such person or organization to submit data and information which will enable the lead agency to prepare the initial study. Any person may submit any information in any form to assist a lead agency in preparing an initial study.

(f) Format. Sample forms for an applicant's project description and a review form for use by the lead agency are contained in Appendices G and H. When used together, these forms would meet the requirements for an initial study, provided that the entries on the checklist are briefly explained pursuant to subsection (d)(3). These forms are only suggested, and public agencies are free to devise their own format for an initial study. A previously prepared EIR may also be used as the initial study for a later project.

(g) Consultation. As soon as a lead agency has determined that an initial study will be required for the project, the lead agency shall consult informally with all responsible agencies and all trustee agencies responsible for resources affected by the project to obtain the recommendations of those agencies as to whether an EIR or a negative declaration should be prepared. During or immediately after preparation of an initial study for a private project, the lead agency may consult with the applicant to determine if the applicant is willing to modify the project to reduce or avoid the significant effects identified in the initial study.

Monterey County Board of Supervisors* (1990) 222 Cal.App.3d 1337.

HISTORY

1. Amendment filed 8–19–94; operative 9–19–94 (Register 94, No. 33).
2. Amendment of subsection (a)(2), new subsection (b)(3) and amendment of NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15064. Determining the Significance of the Environmental Effects Caused by a Project.

(a) Determining whether a project may have a significant effect plays a critical role in the CEQA process.

(1) If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, the agency shall prepare a draft EIR.

(2) When a final EIR identifies one or more significant effects, the lead agency and each responsible agency shall make a finding under Section 15091 for each significant effect and may need to make a statement of overriding considerations under Section 15093 for the project.

(b) The determination of whether a project may have a significant effect on the environment calls for careful judgment on the part of the public agency involved, based to the extent possible on scientific and factual data. An ironclad definition of significant effect is not always possible because the significance of an activity may vary with the setting. For example, an activity which may not be significant in an urban area may be significant in a rural area.

(c) In determining whether an effect will be adverse or beneficial, the lead agency shall consider the views held by members of the public in all areas affected as expressed in the whole record before the lead agency. Before requiring the preparation of an EIR, the lead agency must still determine whether environmental change itself might be substantial.

(d) In evaluating the significance of the environmental effect of a project, the lead agency shall consider direct physical changes in the environment which may be caused by the project and reasonably foreseeable indirect physical changes in the environment which may be caused by the project.

(1) A direct physical change in the environment is a physical change in the environment which is caused by and immediately related to the project. Examples of direct physical changes in the environment are the dust, noise, and traffic of heavy equipment that would result from con-

struction of a sewage treatment plant and possible odors from operation of the plant.

(2) An indirect physical change in the environment is a physical change in the environment which is not immediately related to the project, but which is caused indirectly by the project. If a direct physical change in the environment in turn causes another change in the environment, then the other change is an indirect physical change in the environment. For example, the construction of a new sewage treatment plant may facilitate population growth in the service area due to the increase in sewage treatment capacity and may lead to an increase in air pollution.

(3) An indirect physical change is to be considered only if that change is a reasonably foreseeable impact which may be caused by the project. A change which is speculative or unlikely to occur is not reasonably foreseeable.

(e) Economic and social changes resulting from a project shall not be treated as significant effects on the environment. Economic or social changes may be used, however, to determine that a physical change shall be regarded as a significant effect on the environment. Where a physical change is caused by economic or social effects of a project, the physical change may be regarded as a significant effect in the same manner as any other physical change resulting from the project. Alternatively, economic and social effects of a physical change may be used to determine that the physical change is a significant effect on the environment. If the physical change causes adverse economic or social effects on people, those adverse effects may be used as a factor in determining whether the physical change is significant. For example, if a project would cause overcrowding of a public facility and the overcrowding causes an adverse effect on people, the overcrowding would be regarded as a significant effect.

(f) The decision as to whether a project may have one or more significant effects shall be based on substantial evidence in the record of the lead agency.

(1) If the lead agency determines there is substantial evidence in the record that the project may have a significant effect on the environment, the lead agency shall prepare an EIR (*Friends of B Street* v. *City of Hayward* (1980) 106 Cal. App. 3d 988). Said another way, if a lead agency is presented with a fair argument that a project may have a significant effect on the environment, the lead agency shall prepare an EIR even though it may also be presented with other substantial evidence that the project will not have a significant effect (*No Oil, Inc.* v. *City of Los Angeles* (1974) 13 Cal. 3d 68).

(2) If the lead agency determines there is substantial evidence in the record that the project may have a significant effect on the environment but the lead agency determines that revisions in the project plans or proposals made by, or agreed to by, the applicant would avoid the effects or mitigate the effects to a point where clearly no significant effect on the environment would occur and there is no substantial evidence in light of the whole record before the public agency that the project, as revised, may have a significant effect on the environment then a mitigated negative declaration shall be prepared.

(3) If the lead agency determines there is no substantial evidence that the project may have a significant effect on the environment, the lead agency shall prepare a negative declaration (*Friends of B Street* v. *City of Hayward* (1980) 106 Cal. App. 3d 988).

(4) The existence of public controversy over the environment effects of a project will not require preparation of an EIR if there is no substantial evidence before the agency that the project may have a significant effect on the environment.

(5) Argument, speculation, unsubstantiated opinion or narrative, or evidence that is clearly inaccurate or erroneous, or evidence that is not credible, shall not constitute substantial evidence. Substantial evidence shall include facts, reasonable assumptions predicated upon facts, and expert opinion support by facts.

(6) Evidence of economic and social impacts that do not contribute to or are not caused by physical changes in the environment is not substantial evidence that the project may have a significant effect on the environment.

(7) The provisions of sections 15162, 15163, and 15164 apply when the project being analyzed is a change to, or further approval for, a project for which an EIR or negative declaration was previously certified or adopted (e.g. a tentative subdivision, conditional use permit). Under case law, the fair argument standard does not apply to determinations of significance pursuant to sections 15162, 15163, and 15164.

(g) After application of the principles set forth above in Section 15064(f), and in marginal cases where it is not clear whether there is substantial evidence that a project may have a significant effect on the environment, the lead agency shall be guided by the following principle: If there is disagreement among expert opinion supported by facts over the significance of an effect on the environment, the Lead Agency shall treat the effect as significant and shall prepare an EIR.

(h)(1) When assessing whether a cumulative effect requires an EIR, the lead agency shall consider whether the cumulative impact is significant and whether the effects of the project are cumulatively considerable. An EIR must be prepared if the cumulative impact may be significant and the project's incremental effect, though individually limited, is cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.

(2) A lead agency may determine in an initial study that a project's contribution to a significant cumulative impact will be rendered less than cumulatively considerable and thus is not significant. When a project might contribute to a significant cumulative impact, but the contribution will be rendered less than cumulatively considerable through mitigation measures set forth in a mitigated negative declaration, the initial study shall briefly indicate and explain how the contribution has been rendered less than cumulatively considerable.

(3) A lead agency may determine that a project's incremental contribution to a cumulative effect is not cumulatively considerable if the project will comply with the requirements in a previously approved plan or mitigation program which provides specific requirements that will avoid or substantially lessen the cumulative problem (e.g. water quality control plan, air quality plan, integrated waste management plan) within the geographic area in which the project is located. Such plans or programs must be specified in law or adopted by the public agency with jurisdiction over the affected resources through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency.

(4) The mere existence of significant cumulative impacts caused by other projects alone shall not constitute substantial evidence that the proposed project's incremental effects are cumulatively considerable.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21065, 21068, 21080, 21082, 21082.1, 21082.2, 21083 and 21100, Public Resources Code; *No Oil, Inc.* v. *City of Los Angeles* (1974) 13 Cal.3d 68; *San Joaquin Raptor/Wildlife Center* v. *County of Stanislaus* (1996) 42 Cal.App.4th 608; *Gentry* v. *City of Murrieta* (1995) 36 Cal.App.4th 1359; *Laurel Heights Improvement Assn.* v. *Regents of the University of California* (1993) 6 Cal.4th 1112; and *Communities for a Better Environment* v. *California Resources Agency* (2002) 103 Cal.App.4th 98.

HISTORY

1. Amendment of section heading, section and NOTE filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
2. Repealer of subsection (i) and new subsections (i)(1)(A)–(i)(4) filed 8-24-98; operative 8-24-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 35).
3. Repealer of subsection (e), subsection relettering, new subsections (f)(7) and (i)(1)–(i)(5) and amendment of NOTE filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).
4. Change without regulatory effect amending subsections (g), (h)(1)(A)–(h)(1)(C) and (h)(2) filed 2-1-2001 pursuant to section 100, title 1, California Code of Regulations (Register 2001, No. 5).
5. Change without regulatory effect repealing subsections (h)–(h)(4) and (i)(4), relettering and renumbering subsections, amending newly designated subsection

Y(1) and amending NOTE filed 7-22-2003 pursuant to section 100, title 1, lifornia Code of Regulations (Register 2003, No. 30).

064.5. Determining the Significance of Impacts to Archaeological and Historical Resources.

(a) For purposes of this section, the term "historical resources" shall include the following:

(1) A resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources (Pub. Res. Code §5024.1, Title 14 CCR, Section 4850 et seq.).

(2) A resource included in a local register of historical resources, as defined in section 5020.1(k) of the Public Resources Code or identified as significant in an historical resource survey meeting the requirements section 5024.1(g) of the Public Resources Code, shall be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.

(3) Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be an historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register of Historical Resources (Pub. Res. Code § 5024.1, Title 14 CCR, Section 4852) including the following:

(A) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;

(B) Is associated with the lives of persons important in our past;

(C) Embodies the distinctive characteristics of a type, period, region, ethod of construction, or represents the work of an important cre- individual, or possesses high artistic values; or

(D) Has yielded, or may be likely to yield, information important in prehistory or history.

(4) The fact that a resource is not listed in, or determined to be eligible for listing in the California Register of Historical Resources, not included in a local register of historical resources (pursuant to section 5020.1(k) of the Public Resources Code), or identified in an historical resources survey (meeting the criteria in section 5024.1(g) of the Public Resources Code) does not preclude a lead agency from determining that the resource may be an historical resource as defined in Public Resources Code sections 5020.1(j) or 5024.1.

(b) A project with an effect that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment.

(1) Substantial adverse change in the significance of an historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired.

(2) The significance of an historical resource is materially impaired when a project:

(A) Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register of Historical Resources; or

(B) Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to section 5020.1(k) of the Public Resources Code or its identification in an historical resources survey meeting the requirements of section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or

(C) Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register of Historical Resources as determined by a lead agency for purposes of CEQA.

(3) Generally, a project that follows the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings or the Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings (1995), Weeks and Grimmer, shall be considered as mitigated to a level of less than a significant impact on the historical resource.

(4) A lead agency shall identify potentially feasible measures to mitigate significant adverse changes in the significance of an historical resource. The lead agency shall ensure that any adopted measures to mitigate or avoid significant adverse changes are fully enforceable through permit conditions, agreements, or other measures.

(5) When a project will affect state-owned historical resources, as described in Public Resources Code Section 5024, and the lead agency is a state agency, the lead agency shall consult with the State Historic Preservation Officer as provided in Public Resources Code Section 5024.5. Consultation should be coordinated in a timely fashion with the preparation of environmental documents.

(c) CEQA applies to effects on archaeological sites.

(1) When a project will impact an archaeological site, a lead agency shall first determine whether the site is an historical resource, as defined in subsection (a).

(2) If a lead agency determines that the archaeological site is an historical resource, it shall refer to the provisions of Section 21084.1 of the Public Resources Code, and this section, Section 15126.4 of the Guidelines, and the limits contained in Section 21083.2 of the Public Resources Code do not apply.

(3) If an archaeological site does not meet the criteria defined in subsection (a), but does meet the definition of a unique archeological resource in Section 21083.2 of the Public Resources Code, the site shall be treated in accordance with the provisions of section 21083.2. The time and cost limitations described in Public Resources Code Section 21083.2 (c-f) do not apply to surveys and site evaluation activities intended to de-

brief explanation of the rationale for each finding. The possible findings are:

(1) Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the final EIR.

(2) Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency.

(3) Specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the final EIR.

(b) The findings required by subsection (a) shall be supported by substantial evidence in the record.

(c) The finding in subsection (a)(2) shall not be made if the agency making the finding has concurrent jurisdiction with another agency to deal with identified feasible mitigation measures or alternatives. The finding in subsection (a)(3) shall describe the specific reasons for rejecting identified mitigation measures and project alternatives.

(d) When making the findings required in subsection (a)(1), the agency shall also adopt a program for reporting on or monitoring the changes which it has either required in the project or made a condition of approval to avoid or substantially lessen significant environmental effects. These measures must be fully enforceable through permit conditions, agreements, or other measures.

(e) The public agency shall specify the location and custodian of the documents or other material which constitute the record of the proceedings upon which its decision is based.

(f) A statement made pursuant to Section 15093 does not substitute for the findings required by this section.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21002.1, 21081 and 21081.6, Public Resources Code; *Laurel Hills Homeowners Association* v. *City Council* (1978) 83 Cal. App. 3d 515; *Cleary* v. *County of Stanislaus* (1981) 118 Cal. App. 3d 348; *Sierra Club v. Contra Costa County* (1992) 10 Cal.App.4th 1212; *Citizens for Quality Growth v. City of Mount Shasta* (1988) 198 Cal.App.3d 433.

HISTORY

1. Amendment of subsections (a) and (a)(3), new subsections (d) and (e), and amendment of NOTE filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
2. Amendment of subsection (c), new subsection (f) and amendment of NOTE filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15092. Approval.

(a) After considering the final EIR and in conjunction with making findings under Section 15091, the lead agency may decide whether or how to approve or carry out the project.

(b) A public agency shall not decide to approve or carry out a project for which an EIR was prepared unless either:

(1) The project as approved will not have a significant effect on the environment, or

(2) The agency has:

(A) Eliminated or substantially lessened all significant effects on the environment where feasible as shown in findings under Section 15091, and

(B) Determined that any remaining significant effects on the environment found to be unavoidable under Section 15091 are acceptable due to overriding concerns as described in Section 15093.

(c) With respect to a project which includes housing development, the public agency shall not reduce the proposed number of housing units as a mitigation measure if it determines that there is another feasible specific mitigation measure available that will provide a comparable level of mitigation.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21002.1, 21081 and 21159.26, Public Resources Code; *Friends of Mammoth* v. *Board of Supervisors*, (1972) 8 Cal. App. 3d 247; *San Francisco Ecology Center* v. *City and County of San Francisco*, (1975) 48 Cal. App. 3d 584; *City of Carmel-by-the-Sea* v. *Board of Supervisors*, (1977) 71 Cal. App. 3d 84; *Laurel Hills Homeowners Association* v. *City Council*, (1978) 83 Cal. App. 3d 515.

HISTORY

1. Change without regulatory effect amending NOTE filed 7-22-2003 pursuant to section 100, title 1, California Code of Regulations (Register 2003, No. 30).

§ 15093. Statement of Overriding Considerations.

(a) CEQA requires the decision-making agency to balance, as applicable, the economic, legal, social, technological, or other benefits of a proposed project against its unavoidable environmental risks when determining whether to approve the project. If the specific economic, legal, social, technological, or other benefits of a proposal project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered "acceptable."

(b) When the lead agency approves a project which will result in the occurrence of significant effects which are identified in the final EIR but are not avoided or substantially lessened, the agency shall state in writing the specific reasons to support its action based on the final EIR and/or other information in the record. The statement of overriding considerations shall be supported by substantial evidence in the record.

(c) If an agency makes a statement of overriding considerations, the statement should be included in the record of the project approval and should be mentioned in the notice of determination. This statement does not substitute for, and shall be in addition to, findings required pursuant to Section 15091.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. City of Mount Shasta* (1988) 198 Cal.App.3d 433.

HISTORY

1. Amendment of subsections (a) and (b) and amendment of NOTE filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
2. Amendment of subsections (b) and (c) and amendment of NOTE filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15094. Notice of Determination.

(a) The lead agency shall file a notice of determination within 5 working days after approval of the project by the lead agency. The notice shall include:

(1) An identification of the project including its common name where possible and its location.

(2) A brief description of the project.

(3) The date when the agency approved the project.

(4) The determination of the agency whether the project in its approved form will have a significant effect on the environment.

(5) A statement that an EIR was prepared and certified pursuant to the provisions of CEQA.

(6) Whether mitigation measures were made a condition of the approval of the project.

(7) Whether findings were made pursuant to Section 15091.

(8) Whether a statement of overriding considerations was adopted for the project.

(9) The address where a copy of the final EIR and the record of project approval may be examined.

(b) If a state agency is the lead agency, the notice of determination shall be filed with OPR.

(c) If a local agency is the lead agency, the notice of determination shall be filed with the county clerk of the county or counties in which the project will be located. If the project requires discretionary approval from a state agency, the notice of determination shall also be filed with OPR.

(d) A notice of determination filed with the county clerk is available for public inspection and shall be posted within 24 hours of receipt for a period of at least 30 days. Thereafter, the clerk shall return the notice to the local lead agency with a notation of the period during which it was posted. The local lead agency shall retain the notice for not less than 9 months.

(c) A notice of determination filed with OPR is available for public inspection and shall be posted for a period of at least 30 days.

The filing of the notice of determination and the posting of such notice starts a 30–day statute of limitations on court challenges to the approval under CEQA.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21108, 21152 and 21167, Public Resources Code; *Citizens of Lake Murray Area Association v. City Council*, (1982) 129 Cal. App. 3d 436.

HISTORY

1. Amendment of subsections (b) and (c) filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).
2. Amendment of subsection (a), new subsections (d) and (e), subsection relettering, and amendment of newly designated subsection (f) filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15095. Disposition of a Final EIR.

The lead agency shall:

(a) File a copy of the final EIR with the appropriate planning agency of any city, county, or city and county where significant effects on the environment may occur.

(b) Include the final EIR as part of the regular project report which is used in the existing project review and budgetary process if such a report is used.

(c) Retain one or more copies of the final EIR as public records for a reasonable period of time.

(d) Require the applicant to provide a copy of the certified, final EIR to each responsible agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21105, 21151 and 21165, Public Resources Code; *County of Inyo v. Yorty*, (1973) 32 Cal. App. 3d 795.

§ 15096. Process for a Responsible Agency.

(a) General. A responsible agency complies with CEQA by considering the EIR or negative declaration prepared by the lead agency and by reaching its own conclusions on whether and how to approve the project involved. This section identifies the special duties a public agency will have when acting as a responsible agency.

(b) Response to Consultation. A responsible agency shall respond to consultation by the lead agency in order to assist the lead agency in preparing adequate environmental documents for the project. By this means, the responsible agency will ensure that the documents it will use will comply with CEQA.

(1) In response to consultation, a responsible agency shall explain its reasons for recommending whether the lead agency should prepare an EIR or negative declaration for a project. Where the responsible agency disagrees with the lead agency's proposal to prepare a negative declaration for a project, the responsible agency should identify the significant environmental effects which it believes could result from the project and recommend either that an EIR be prepared or that the project be modified to eliminate the significant effects.

(2) As soon as possible, but not longer than 30 days after receiving a notice of preparation from the lead agency, the responsible agency shall send a written reply by certified mail or any other method which provides the agency with a record showing that the notice was received. The reply shall specify the scope and content of the environmental information which would be germane to the responsible agency's statutory responsibilities in connection with the proposed project. The lead agency shall include this information in the EIR.

(c) Meetings. The responsible agency shall designate employees or representatives to attend meetings requested by the lead agency to discuss the scope and content of the EIR.

(d) Comments on Draft EIRs and Negative Declarations. A responsible agency should review and comment on draft EIRs and negative declarations for projects which the responsible agency would later be asked to approve. Comments should focus on any shortcomings in the EIR, the appropriateness of using a negative declaration, or on additional alternatives or mitigation measures which the EIR should include. The comments shall be limited to those project activities which are within the agency's area of expertise or which are required to be carried out or approved by the agency or which will be subject to the exercise of powers by the agency. Comments shall be as specific as possible and supported by either oral or written documentation.

(e) Decision on Adequacy of EIR or Negative Declaration. If a responsible agency believes that the final EIR or negative declaration prepared by the lead agency is not adequate for use by the responsible agency, the responsible agency must either:

(1) Take the issue to court within 30 days after the lead agency files a notice of determination;

(2) Be deemed to have waived any objection to the adequacy of the EIR or negative declaration;

(3) Prepare a subsequent EIR if permissible under Section 15162; or

(4) Assume the lead agency role as provided in Section 15052(a)(3).

(f) Consider the EIR or Negative Declaration. Prior to reaching a decision on the project, the responsible agency must consider the environmental effects of the project as shown in the EIR or negative declaration. A subsequent or supplemental EIR can be prepared only as provided in Sections 15162 or 15163.

(g) Adoption of Alternatives or Mitigation Measures.

(1) When considering alternatives and mitigation measures, a responsible agency is more limited than a lead agency. A responsible agency has responsibility for mitigating or avoiding only the direct or indirect environmental effects of those parts of the project which it decides to carry out, finance, or approve.

(2) When an EIR has been prepared for a project, the Responsible Agency shall not approve the project as proposed if the agency finds any feasible alternative or feasible mitigation measures within its powers that would substantially lessen or avoid any significant effect the project would have on the environment. With respect to a project which includes housing development, the responsible agency shall not reduce the proposed number of housing units as a mitigation measure if it determines that there is another feasible specific mitigation measure available that will provide a comparable level of mitigation.

(h) Findings. The responsible agency shall make the findings required by Section 15091 for each significant effect of the project and shall make the findings in Section 15093 if necessary.

(i) Notice of Determination. The responsible agency should file a notice of determination in the same manner as a lead agency under Section 15075 or 15094 except that the responsible agency does not need to state that the EIR or negative declaration complies with CEQA. The responsible agency should state that it considered the EIR or negative declaration as prepared by a lead agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21165, 21080.1, 21080.3, 21080.4, 21082.1 and 21002.1(b) and (d), Public Resources Code.

HISTORY

1. Amendment of subsections (b) and (d) filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).

§ 15097. Mitigation Monitoring or Reporting.

(a) This section applies when a public agency has made the findings required under paragraph (1) of subdivision (a) of Section 15091 relative to an EIR or adopted a mitigated negative declaration in conjunction with approving a project. In order to ensure that the mitigation measures and project revisions identified in the EIR or negative declaration are implemented, the public agency shall adopt a program for monitoring or reporting on the revisions which it has required in the project and the measures it has imposed to mitigate or avoid significant environmental effects. A public agency may delegate reporting or monitoring responsibilities to another public agency or to a private entity which accepts the delegation; however, until mitigation measures have been completed the lead agency remains responsible for ensuring that implementation of the mitigation measures occurs in accordance with the program.

(b) Where the project at issue is the adoption of a general plan, specific plan, community plan or other plan–level document (zoning, ordinance, regulation, policy), the monitoring plan shall apply to policies and any other portion of the plan that is a mitigation measure or adopted alterna-

tive. The monitoring plan may consist of policies included in plan-level documents. The annual report on general plan status required pursuant to the Government Code is one example of a reporting program for adoption of a city or county general plan.

(c) The public agency may choose whether its program will monitor mitigation, report on mitigation, or both. "Reporting" generally consists of a written compliance review that is presented to the decision making body or authorized staff person. A report may be required at various stages during project implementation or upon completion of the mitigation measure. "Monitoring" is generally an ongoing or periodic process of project oversight. There is often no clear distinction between monitoring and reporting and the program best suited to ensuring compliance in any given instance will usually involve elements of both. The choice of program may be guided by the following:

(1) Reporting is suited to projects which have readily measurable or quantitative mitigation measures or which already involve regular review. For example, a report may be required upon issuance of final occupancy to a project whose mitigation measures were confirmed by building inspection.

(2) Monitoring is suited to projects with complex mitigation measures, such as wetlands restoration or archeological protection, which may exceed the expertise of the local agency to oversee, are expected to be implemented over a period of time, or require careful implementation to assure compliance.

(3) Reporting and monitoring are suited to all but the most simple projects. Monitoring ensures that project compliance is checked on a regular basis during and, if necessary after, implementation. Reporting ensures that the approving agency is informed of compliance with mitigation requirements.

(d) Lead and responsible agencies should coordinate their mitigation monitoring or reporting programs where possible. Generally, lead and responsible agencies for a given project will adopt separate and different monitoring or reporting programs. This occurs because of any of the following reasons: the agencies have adopted and are responsible for reporting on or monitoring different mitigation measures; the agencies are deciding on the project at different times; each agency has the discretion to choose its own approach to monitoring or reporting; and each agency has its own special expertise.

(e) At its discretion, an agency may adopt standardized policies and requirements to guide individually adopted monitoring or reporting programs. Standardized policies and requirements may describe, but are not limited to:

(1) The relative responsibilities of various departments within the agency for various aspects of monitoring or reporting, including lead responsibility for administering typical programs and support responsibilities.

(2) The responsibilities of the project proponent.

(3) Agency guidelines for preparing monitoring or reporting programs.

(4) General standards for determining project compliance with the mitigation measures or revisions and related conditions of approval.

(5) Enforcement procedures for noncompliance, including provisions for administrative appeal.

(6) Process for informing staff and decision makers of the relative success of mitigation measures and using those results to improve future mitigation measures.

(f) Where a trustee agency, in timely commenting upon a draft EIR or a proposed mitigated negative declaration, proposes mitigation measures or project revisions for incorporation into a project, that agency, at the same time, shall prepare and submit to the lead or responsible agency a draft monitoring or reporting program for those measures or revisions. The lead or responsible agency may use this information in preparing its monitoring or reporting program.

(g) When a project is of statewide, regional, or areawide importance, any transportation information generated by a required monitoring or reporting program shall be submitted to the transportation planning agency in the region where the project is located. Each transportation planning agency shall adopt guidelines for the submittal of such information.

NOTE: Authority: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21081.6 and 21081.7, Public Resources Code.

HISTORY

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

Article 8. Time Limits

§ 15100. General.

(a) Public agencies shall adopt time limits to govern their implementation of CEQA consistent with this article.

(b) Public agencies should carry out their responsibilities for preparing and reviewing EIRs within a reasonable period of time. The requirement for the preparation of an EIR should not cause undue delays in the processing of applications for permits or other entitlements to use.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21000–21176, Public Resources Code.

HISTORY

1. Renumbering and amendment of former Article 8 (Sections 15100–15129) to Article 19 (Sections 15300–15329) and new Article 8 (Sections 15100–15112) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29). For prior history, see Register 82, No. 2.
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).

§ 15101. Review of Application for Completeness.

A lead agency or responsible agency shall determine whether an application for a permit or other entitlement for use is complete within 30 days from the receipt of the application except as provided in Section 15111. If no written determination of the completeness of the application is made within that period, the application will be deemed complete on the 30th day.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21083, Public Resources Code; and Section 65943, Government Code.

§ 15102. Initial Study.

The lead agency shall determine within 30 days after accepting an application as complete whether it intends to prepare an EIR or a negative declaration or use a previously prepared EIR or negative declaration except as provided in Section 15111. The 30 day period may be extended 15 days upon the consent of the lead agency and the project applicant.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.2, Public Resources Code.

HISTORY

1. Amendment filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).

§ 15103. Response to Notice of Preparation.

Responsible agencies and trustee agencies shall provide a response to a notice of preparation to the lead agency within 30 days after receipt of the notice. If a responsible agency fails to reply within the 30 days with either a response or a well justified request for additional time, the lead agency may assume that the responsible agency has no response and any ignore a late response.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.4, Public Resources Code.

HISTORY

1. Amendment filed 1–30–86; effective thirtieth day thereafter (Register 86, No. 5).

§ 15104. Convening of Meetings.

The lead agency shall convene a meeting with agency representatives to discuss the scope and content of the environmental information a responsible agency will need in the EIR as soon as possible but no later than 30 days after receiving a request for the meeting. The meeting may be requested by the lead agency, a responsible agency, a trustee agency, or the project applicant.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21080.4, Public Resources Code.

05. Public Review Period for a Draft EIR or a Proposed Negative Declaration or Mitigated Negative Declaration.

(a) The public review period for a draft EIR shall not be less than 30 days nor should it be longer than 60 days except in unusual circumstances. When a draft EIR is submitted to the State Clearinghouse for review by state agencies, the public review period shall not be less than 45 days, unless a shorter period, not less than 30 days, is approved by the State Clearinghouse.

(b) The public review period for a proposed negative declaration or mitigated negative declaration shall be not less than 20 days. When a proposed negative declaration or mitigated negative declaration is submitted to the State Clearinghouse for review by state agencies, the public review period shall not be less than 30 days, unless a shorter period, not less than 20 days, is approved by the State Clearinghouse.

(c) If a draft EIR or proposed negative declaration or mitigated negative declaration has been submitted to the State Clearinghouse for review by state agencies, the public review period shall be at least as long as the review period established by the State Clearinghouse.

(d) A shortened Clearinghouse review period may be granted in accordance with the provisions of Appendix K and the following principles:

(1) A shortened review shall not be granted for any proposed project of statewide, areawide, or regional environmental significance.

(2) Requests for shortened review periods shall be submitted to the Clearinghouse in writing by the decision-making body of the lead agency, or a representative authorized by ordinance, resolution, or delegation of the decision-making body.

(3) The lead agency has contacted responsible and trustee agencies and they have agreed to the shortened review period.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21091 and 21092, Public Resources Code; *People* v. *County of* [illegible]9 Cal. App. 3d 830.

HISTORY

[illegible]endment of section heading, section and NOTE filed 5-27-97; operative [illegible]7-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

2. Change without regulatory effect amending subsection (d) filed 2-1-2001 pursuant to section 100, title 1, California Code of Regulations (Register 2001, No. 5).

§ 15106. Review by State Agencies.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21104 and 21153, Public Resources Code.

HISTORY

1. Repealer filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).

§ 15107. Completion of Negative Declaration for Certain Private Projects.

With private projects involving the issuance of a lease, permit, license, certificate, or other entitlement for use by one or more public agencies, the negative declaration must be completed and approved within 180 days from the date when the lead agency accepted the application as complete.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21100.2 and 21151.5, Public Resources Code.

HISTORY

1. Amendment of section heading and section filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15108. Completion and Certification of EIR.

With a private project, the lead agency shall complete and certify the final EIR as provided in Section 15090 within one year after the date when the lead agency accepted the application as complete. Lead agency [illegible]dures may provide that the one-year time limit may be extended [illegible] for a period of not more than 90 days upon consent of the lead [illegible]cy and the applicant.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21100.2 and 21151.5, Public Resources Code; and Government Code Section 65950.

§ 15109. Suspension of Time Periods.

An unreasonable delay by an applicant in meeting requests by the lead agency necessary for the preparation of a negative declaration or an EIR shall suspend the running of the time periods described in Sections 15107 and 15108 for the period of the unreasonable delay. Alternatively, an agency may disapprove a project application where there is unreasonable delay in meeting requests. The agency may allow a renewed application to start at the same point in the process where the application was when it was disapproved.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21100.2 and 21151.5, Public Resources Code; *Carmel Valley View, Ltd.* v. *Maggini*, 91 Cal. App. 3d 318.

§ 15110. Projects with Federal Involvement.

(a) At the request of an applicant, the lead agency may waive the one-year time limit for completing and certifying a final EIR or the 105-day period for completing a negative declaration if:

(1) The project will be subject to CEQA and to the National Environmental Policy Act,

(2) Additional time will be required to prepare a combined EIR-EIS or combined negative declaration-finding of no significant impact as provided in Section 15221, and

(3) The time required to prepare the combined document will be shorter than the time required to prepare the documents separately.

(b) The time limits for taking final action on a permit for a development project may also be waived where a combined EIR-EIS will be prepared.

(c) The time limits for processing permits for development projects under Government Code Sections 65950-65960 shall not apply if federal statutes or regulations require time schedules which exceed the state time limits. In this event, any state agencies involved shall make a final decision on the project within the federal time limits.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21083.6 and 21083.7, Public Resources Code; Sections 65951 and 65954, Government Code; Public Law 91-190 as amended, 42 U.S.C.A. 4321-4347.

HISTORY

1. Amendment of subsection (a)(2) filed 1-30-86; effective thirtieth day thereafter (Register 86, No. 5).

§ 15111. Projects with Short Time Periods for Approval.

(a) A few statutes or ordinances require agencies to make decisions on permits within time limits that are so short that review of the project under CEQA would be difficult. To enable the lead agency to comply with both the permit statute and CEQA, the lead agency shall deem an application for a project not received for filing under the permit statute or ordinance until such time as progress toward completing the environmental documentation required by CEQA is sufficient to enable the lead agency to finish the CEQA process within the short permit time limit. This section will apply where all of the following conditions are met:

(1) The enabling legislation for a program, other than Chapter 4.5 (commencing with Section 65920) of Division 1 of Title 7 of the Government Code, requires the lead agency to take action on an application within a specified period of time that is six months or less, and

(2) The enabling legislation provides that the project will become approved by operation of law if the lead agency fails to take any action within such specified time period, and

(3) The project involves the issuance of a lease, permit, license, certificate, or other entitlement for use.

(b) Examples of time periods subject to this section include but are not limited to:

(1) Action on a timber harvesting plan by the Director of Forestry within 15 days pursuant to Section 4582.7 of the Public Resources Code,

(2) Action on a permit by the San Francisco Bay Conservation and Development Commission within 90 days pursuant to Section 66632(f) of the Government Code, and

(3) Action on an oil and gas permit by the Division of Oil and Gas within 10 days pursuant to Sections 3203 or 3724 of the Public Resources Code.

(c) In any case described in this section, the environmental document shall be completed or certified and the decision on the project shall be made within the period established under the Permit Streamlining Act (Government Code Sections 65920, et seq.).

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21100.2 and 21151.5, Public Resources Code; *N.R.D.C.* v. *Arcata National Corp.* (1976) 59 Cal. App. 3d 959.

HISTORY

1. Repealer of subsection (b)(1), subsection renumbering, amendment of subsection (c) and amendment of NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15112. Statutes of Limitations.

(a) CEQA provides unusually short statutes of limitations on filing court challenges to the approval of projects under the act.

(b) The statute of limitations periods are not public review periods or waiting periods for the person whose project has been approved. The project sponsor may proceed to carry out the project as soon as the necessary permits have been granted. The statute of limitations cuts off the right of another person to file a court action challenging approval of the project after the specified time period has expired.

(c) The statute of limitations periods under CEQA are as follows:

(1) Where the public agency filed a notice of determination in compliance with Sections 15075 or 15094, 30 days after the filing of the notice and the posting on a list of such notices.

(2) Where the public agency filed a notice of exemption in compliance with Section 15062, 35 days after the filing of the notice and the posting on a list of such notices.

(3) Where a certified state regulatory agency files a notice of decision in compliance with Public Resources Code Section 21080.5(d)(2)(E), 30 days after the filing of the notice.

(4) Where the Secretary for Resources certifies a state environmental regulatory agency under Public Resources Code Section 21080.5, the certification may be challenged only during the 30 days following the certification decision.

(5) Where none of the other statute of limitations periods in this section apply, 180 days after either:

(A) The public agency's decision to carry out or approve the project, or

(B) Commencement of the project if the project is undertaken without a formal decision by the public agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21167, 21167.3 and 21080.5, Public Resources Code; *Kriebel* v. *City Council*, 112 Cal. App. 3d 693; *Citizens of Lake Murray Area Association* v. *City Council*, (1982) 129 Cal. App. 3d 436.

HISTORY

1. Change without regulatory effect amending subsection (c)(3) filed 7–22–2003 pursuant to section 100, title 1, California Code of Regulations (Register 2003, No. 30).

Article 9. Contents of Environmental Impact Reports

§ 15120. General.

(a) Environmental Impact Reports shall contain the information outlined in this article, but the format of the document may be varied. Each element must be covered, and when these elements are not separated into distinct sections, the document shall state where in the document each element is discussed.

(b) The EIR may be prepared as a separate document, as part of a general plan, or as part of a project report. If prepared as a part of the project report, it must still contain one separate and distinguishable section providing either analysis of all the subjects required in an EIR or as a minimum, a table showing where each of the subjects is discussed. When the lead agency is a state agency, the EIR shall be included as part of the regular project report if such a report is used in the agency's existing review and budgetary process.

(c) Draft EIRs shall contain the information required by Sections 15122 through 15131. Final EIRs shall contain the same information and the subjects described in Section 15132.

(d) No document prepared pursuant to this article that is available for public examination shall include a "trade secret" as defined in Section 6254.7 of the Government Code, information about the location of archaeological sites and sacred lands, or any other information that is subject to the disclosure restrictions of Section 6254 of the Government Code.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21100, 21105 and 21160, Public Resources Code.

HISTORY

1. Repealer of Article 9 (Sections 15140–15151) and new Article 9 (Sections 15120–15132) filed 7–13–83; effective thirtieth day thereafter (Register 83, No. 29). For prior history, see Registers 82, No. 2; 80, No. 19; 78, No. 5; 77, No. 1; 76, No. 41; 75, Nos. 1 and 18; and 73, No. 50.
2. Editorial correction of 7–13–83 order redesignating effective date to 8–1–83 filed 7–14–83 (Register 83, No. 29).
3. New subsection (d) and amendment of NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15121. Informational Document.

(a) An EIR is an informational document which will inform public agency decisionmakers and the public generally of the significant environmental effect of a project, identify possible ways to minimize the significant effects, and describe reasonable alternatives to the project. The public agency shall consider the information in the EIR along with other information which may be presented to the agency.

(b) While the information in the EIR does not control the agency's ultimate discretion on the project, the agency must respond to each significant effect identified in the EIR by making findings under Section 15091 and if necessary by making a statement of overriding considerations under Section 15093.

(c) The information in an EIR may constitute substantial evidence in the record to support the agency's action on the project if its decision is later challenged in court.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21061, Public Resources Code; *Carmel Valley View, Ltd.* v. *Board of Supervisors*, (1976) 58 Cal. App. 3d 817.

§ 15122. Table of Contents or Index.

An EIR shall contain at least a table of contents or an index to assist readers in finding the analysis of different subjects and issues.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21061, Public Resources Code.

§ 15123. Summary.

(a) An EIR shall contain a brief summary of the proposed actions and its consequences. The language of the summary should be as clear and simple as reasonably practical.

(b) The summary shall identify:

(1) Each significant effect with proposed mitigation measures and alternatives that would reduce or avoid that effect;

(2) Areas of controversy known to the lead agency including issues raised by agencies and the public; and

(3) Issues to be resolved including the choice among alternatives and whether or how to mitigate the significant effects.

(c) The summary should normally not exceed 15 pages.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21061, Public Resources Code.

§ 15124. Project Description.

The description of the project shall contain the following information but should not supply extensive detail beyond that needed for evaluation and review of the environmental impact.

(a) The precise location and boundaries of the proposed project shall be shown on a detailed map, preferably topographic. The location of the project shall also appear on a regional map.

(b) A statement of the objectives sought by the proposed project. A clearly written statement of objectives will help the lead agency develop a reasonable range of alternatives to evaluate in the EIR and will aid the

ion makers in preparing findings or a statement of overriding considerations, if necessary. The statement of objectives should include the underlying purpose of the project.

(c) A general description of the project's technical, economic, and environmental characteristics, considering the principal engineering proposals if any and supporting public service facilities.

(d) A statement briefly describing the intended uses of the EIR.

(1) This statement shall include, to the extent that the information is known to the lead agency,

(A) A list of the agencies that are expected to use the EIR in their decision–making, and

(B) A list of permits and other approvals required to implement the project.

(C) A list of related environmental review and consultation requirements required by federal, state, or local laws, regulations, or policies. To the fullest extent possible, the lead agency should integrate CEQA review with these related environmental review and consultation requirements.

(2) If a public agency must make more than one decision on a project, all its decisions subject to CEQA should be listed, preferably in the order in which they will occur. On request, the Office of Planning and Research will provide assistance in identifying state permits for a project.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21080.3, 21080.4, 21165, 21166 and 21167.2, Public Resources Code; *County of Inyo* v. *City of Los Angeles* (1977) 71 Cal. App. 3d 185.

HISTORY

1. Amendment of subsections (b) and (d)(1)(B), new subsection (d)(1)(C) and amendment of NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15125. Environmental Setting.

(a) An EIR must include a description of the physical environmental conditions in the vicinity of the project, as they exist at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, from both a local and regional perspective. This environmental setting will normally constitute the baseline physical conditions by which a lead agency determines whether an impact is significant. The description of the environmental setting shall be no longer than is necessary to an understanding of the significant effects of the proposed project and its alternatives.

(b) When preparing an EIR for a plan for the reuse of a military base, lead agencies should refer to the special application of the principle of baseline conditions for determining significant impacts contained in Section 15229.

(c) Knowledge of the regional setting is critical to the assessment of environmental impacts. Special emphasis should be placed on environmental resources that are rare or unique to that region and would be affected by the project. The EIR must demonstrate that the significant environmental impacts of the proposed project were adequately investigated and discussed and it must permit the significant effects of the project to be considered in the full environmental context.

(d) The EIR shall discuss any inconsistencies between the proposed project and applicable general plans and regional plans. Such regional plans include, but are not limited to, the applicable air quality attainment or maintenance plan or State Implementation Plan, area–wide waste treatment and water quality control plans, regional transportation plans, regional housing allocation plans, habitat conservation plans, natural community conservation plans and regional land use plans for the protection of the coastal zone, Lake Tahoe Basin, San Francisco Bay, and Santa Monica Mountains.

(e) Where a proposed project is compared with an adopted plan, the analysis shall examine the existing physical conditions at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced as well as the potential future conditions discussed in the plan.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21061 and 21100, Public Resources Code; *E.P.I.C.* v. *County of El Dorado*, (1982) 131 Cal. App. 3d 350; *San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus* (1994) 27 Cal.App.4th 713; *Bloom v. McGurk* (1994) 26 Cal.App.4th 1307.

HISTORY

1. Amendment of section and NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15126. Consideration and Discussion of Environmental Impacts.

All phases of a project must be considered when evaluating its impact on the environment: planning, acquisition, development, and operation. The subjects listed below shall be discussed as directed in Sections 15126.2, 15126.4 and 15126.6, preferably in separate sections or paragraphs of the EIR. If they are not discussed separately, the EIR shall include a table showing where each of the subjects is discussed.

(a) Significant Environmental Effects of the Proposed Project.

(b) Significant Environmental Effects Which Cannot be Avoided if the Proposed Project is Implemented.

(c) Significant Irreversible Environmental Changes Which Would be Involved in the Proposed Project Should it be Implemented.

(d) Growth–Inducing Impact of the Proposed Project.

(e) The Mitigation Measures Proposed to Minimize the Significant Effects.

(f) Alternatives to the Proposed Project.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21003, 21100 and 21081.6, Public Resources Code; *Citizens of Goleta Valley v. Board of Supervisors*, (1990) 52 Cal.3d 553; *Laurel Heights Improvement Association v. Regents of the University of California*, (1988) 47 Cal. 3d 376; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359; and *Laurel Heights Improvement Association v. Regents of the University of California* (1993) 6 Cal. 4th 1112.

HISTORY

1. Amendment of subsection (d), repealer and new subsections (d)(1)–(4), amendment of subsection (d)(5), new subsections (d)(5)(A)–(B)3, designation of subsection (d)(5)(C) and amendment of NOTE filed 8–19–94; operative 9–19–94 (Register 94, No. 33).
2. Amendment of section heading, repealer of subsection (c), subsection relettering, and amendment of NOTE filed 5–27–97; operative 5–27–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
3. Amendment of first paragraph, repealer and new subsections (a)–(f) and amendment of NOTE filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15126.2. Consideration and Discussion of Significant Environmental Impacts.

(a) The Significant Environmental Effects of the Proposed Project. An EIR shall identify and focus on the significant environmental effects of the proposed project. In assessing the impact of a proposed project on the environment, the lead agency should normally limit its examination to changes in the existing physical conditions in the affected area as they exist at the time the notice of preparation is published, or where no notice of preparation is published, at the time environmental analysis is commenced. Direct and indirect significant effects of the project on the environment shall be clearly identified and described, giving due consideration to both the short–term and long–term effects. The discussion should include relevant specifics of the area, the resources involved, physical changes, alterations to ecological systems, and changes induced in population distribution, population concentration, the human use of the land (including commercial and residential development), health and safety problems caused by the physical changes, and other aspects of the resource base such as water, historical resources, scenic quality, and public services. The EIR shall also analyze any significant environmental effects the project might cause by bringing development and people into the area affected. For example, an EIR on a subdivision astride an active fault line should identify as a significant effect the seismic hazard to future occupants of the subdivision. The subdivision would have the effect of attracting people to the location and exposing them to the hazards found there.

(b) Significant Environmental Effects Which Cannot be Avoided if the Proposed Project is Implemented. Describe any significant impacts, including those which can be mitigated but not reduced to a level of insignificance. Where there are impacts that cannot be alleviated without imposing an alternative design, their implications and the reasons why the

project is being proposed, notwithstanding their effect, should be described.

(c) Significant Irreversible Environmental Changes Which Would be Caused by the Proposed Project Should it be Implemented. Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible since a large commitment of such resources makes removal or nonuse thereafter unlikely. Primary impacts and, particularly, secondary impacts (such as highway improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also irreversible damage can result from environmental accidents associated with the project. Irretrievable commitments of resources should be evaluated to assure that such current consumption is justified.

(d) Growth–Inducing Impact of the Proposed Project. Discuss the ways in which the proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Included in this are projects which would remove obstacles to population growth (a major expansion of a waste water treatment plant might, for example, allow for more construction in service areas). Increases in the population may tax existing community service facilities, requiring construction of new facilities that could cause significant environmental effects. Also discuss the characteristic of some projects which may encourage and facilitate other activities that could significantly affect the environment, either individually or cumulatively. It must not be assumed that growth in any area is necessarily beneficial, detrimental, or of little significance to the environment.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21003 and 21100, Public Resources Code; *Citizens of Goleta Valley v. Board of Supervisors*, (1990) 52 Cal.3d 553; *Laurel Heights Improvement Association v. Regents of the University of California*, (1988) 47 Cal.3d 376; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359; *Laurel Heights Improvement Association v. Regents of the University of California* (1993) 6 Cal.4th 1112; and *Goleta Union School Dist. v. Regents of the Univ. Of Calif* (1995) 37 Cal. App.4th 1025.

HISTORY

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15126.4. Consideration and Discussion of Mitigation Measures Proposed to Minimize Significant Effects.

(a) Mitigation Measures in General.

(1) An EIR shall describe feasible measures which could minimize significant adverse impacts, including where relevant, inefficient and unnecessary consumption of energy.

(A) The discussion of mitigation measures shall distinguish between the measures which are proposed by project proponents to be included in the project and other measures proposed by the lead, responsible or trustee agency or other persons which are not included but the lead agency determines could reasonably be expected to reduce adverse impacts if required as conditions of approving the project. This discussion shall identify mitigation measures for each significant environmental effect identified in the EIR.

(B) Where several measures are available to mitigate an impact, each should be discussed and the basis for selecting a particular measure should be identified. Formulation of mitigation measures should not be deferred until some future time. However, measures may specify performance standards which would mitigate the significant effect of the project and which may be accomplished in more than one specified way.

(C) Energy conservation measures, as well as other appropriate mitigation measures, shall be discussed when relevant. Examples of energy conservation measures are provided in Appendix F.

(D) If a mitigation measure would cause one or more significant effects in addition to those that would be caused by the project as proposed, the effects of the mitigation measure shall be discussed but in less detail than the significant effects of the project as proposed. (*Stevens v. City of Glendale* (1981) 125 Cal.App.3d 986.)

(2) Mitigation measures must be fully enforceable through permit conditions, agreements, or other legally–binding instruments. In the case of the adoption of a plan, policy, regulation, or other public project, mitigation measures can be incorporated into the plan, policy, regulation, or project design.

(3) Mitigation measures are not required for effects which are not found to be significant.

(4) Mitigation measures must be consistent with all applicable constitutional requirements, including the following:

(A) There must be an essential nexus (i.e. connection) between the mitigation measure and a legitimate governmental interest. *Nollan v. California Coastal Commission*, 483 U.S. 825 (1987); and

(B) The mitigation measure must be "roughly proportional" to the impacts of the project. *Dolan v. City of Tigard*, 512 U.S. 374 (1994). Where the mitigation measure is an ad hoc exaction, it must be "roughly proportional" to the impacts of the project. *Ehrlich v. City of Culver City* (1996) 12 Cal.4th 854.

(5) If the lead agency determines that a mitigation measure cannot be legally imposed, the measure need not be proposed or analyzed. Instead, the EIR may simply reference that fact and briefly explain the reasons underlying the lead agency's determination.

(b) Mitigation Measures Related to Impacts on Historical Resources.

(1) Where maintenance, repair, stabilization, rehabilitation, restoration, preservation, conservation or reconstruction of the historical resource will be conducted in a manner consistent with the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings (1995), Weeks and Grimmer, the project's impact on the historical resource shall generally be considered mitigated below a level of significance and thus is not significant.

(2) In some circumstances, documentation of an historical resource, by way of historic narrative, photographs or architectural drawings, as mitigation for the effects of demolition of the resource will not mitigate the effects to a point where clearly no significant effect on the environment would occur.

(3) Public agencies should, whenever feasible, seek to avoid damaging effects on any historical resource of an archaeological nature. The following factors shall be considered and discussed in an EIR for a project involving such an archaeological site:

(A) Preservation in place is the preferred manner of mitigating impacts to archaeological sites. Preservation in place maintains the relationship between artifacts and the archaeological context. Preservation may also avoid conflict with religious or cultural values of groups associated with the site.

(B) Preservation in place may be accomplished by, but is not limited to, the following:

1. Planning construction to avoid archaeological sites;

2. Incorporation of sites within parks, greenspace, or other open space;

3. Covering the archaeological sites with a layer of chemically stable soil before building tennis courts, parking lots, or similar facilities on the site.

4. Deeding the site into a permanent conservation easement.

(C) When data recovery through excavation is the only feasible mitigation, a data recovery plan, which makes provision for adequately recovering the scientifically consequential information from and about the historical resource, shall be prepared and adopted prior to any excavation being undertaken. Such studies shall be deposited with the California Historical Resources Regional Information Center. Archaeological sites known to contain human remains shall be treated in accordance with the provisions of Section 7050.5 Health and Safety Code.

(D) Data recovery shall not be required for an historical resource if the lead agency determines that testing or studies already completed have adequately recovered the scientifically consequential information from and about the archaeological or historical resource, provided that the determination is documented in the EIR and that the studies are deposited with the California Historical Resources Regional Information Center.

; Authority: Sections 21083 and 21087, Public Resources Code. Reference: ns 21002, 21003, 21100 and 21084.1, Public Resources Code; *Citizens of a Valley v. Board of Supervisors*, (1990) 52 Cal.3d 553; *Laurel Heights Im- ment Association v. Regents of the University of California*, (1988) 47 Cal.3d 376; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359; *Laurel Heights Improvement Association v. Regents of the University of California* (1993) 6 Cal.4th 1112; and *Sacramento Old City Assn. v. City Council of Sacramento* (1991) 229 Cal.App.3d 1011.

HISTORY

1. New section filed 10–26–98; operative 10–26–98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15126.6. Consideration and Discussion of Alternatives to the Proposed Project.

(a) Alternatives to the Proposed Project. An EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. Rather it must consider a reasonable range of potentially feasible alternatives that will foster informed decisionmaking and public participation. An EIR is not required to consider alternatives which are infeasible. The lead agency is responsible for selecting a range of project alternatives for examination and must publicly disclose its reasoning for selecting those alternatives. There is no ironclad rule governing the nature or scope of the alternatives to be discussed other than the rule of reason. (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553 and *Laurel Heights Improvement Association v. Regents of the University of California* (1988) 47 Cal.3d 376).

(b) Purpose. Because an EIR must identify ways to mitigate or avoid the significant effects that a project may have on the environment (Public Resources Code Section 21002.1), the discussion of alternatives shall fo- on alternatives to the project or its location which are capable of ing or substantially lessening any significant effects of the project, f these alternatives would impede to some degree the attainment of roject objectives, or would be more costly.

(c) Selection of a range of reasonable alternatives. The range of potential alternatives to the proposed project shall include those that could feasibly accomplish most of the basic objectives of the project and could avoid or substantially lessen one or more of the significant effects. The EIR should briefly describe the rationale for selecting the alternatives to be discussed. The EIR should also identify any alternatives that were considered by the lead agency but were rejected as infeasible during the scoping process and briefly explain the reasons underlying the lead agency's determination. Additional information explaining the choice of alternatives may be included in the administrative record. Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are:(i) failure to meet most of the basic project objectives, (ii) infeasibility, or (iii) inability to avoid significant environmental impacts.

(d) Evaluation of alternatives. The EIR shall include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project. A matrix displaying the major characteristics and significant environmental effects of each alternative may be used to summarize the comparison. If an alternative would cause one or more significant effects in addition to those that would be caused by the project as proposed, the significant effects of the alternative shall be discussed, but in less detail than the significant effects of the project as proposed. (*County of Inyo v. City of Los Angeles* (1981) 124 Cal.App.3d 1).

(e) "No project" alternative.

(1) The specific alternative of "no project" shall also be evaluated along with its impact. The purpose of describing and analyzing a no proj- lternative is to allow decisionmakers to compare the impacts of ap- ing the proposed project with the impacts of not approving the pro- ed project. The no project alternative analysis is not the baseline for determining whether the proposed project's environmental impacts may be significant, unless it is identical to the existing environmental setting analysis which does establish that baseline (see Section 15125).

(2) The "no project" analysis shall discuss the existing conditions at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, as well as what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services. If the environmentally superior alternative is the "no project" alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives.

(3) A discussion of the "no project" alternative will usually proceed along one of two lines:

(A) When the project is the revision of an existing land use or regulatory plan, policy or ongoing operation, the "no project" alternative will be the continuation of the existing plan, policy or operation into the future. Typically this is a situation where other projects initiated under the existing plan will continue while the new plan is developed. Thus, the projected impacts of the proposed plan or alternative plans would be compared to the impacts that would occur under the existing plan.

(B) If the project is other than a land use or regulatory plan, for example a development project on identifiable property, the "no project" alternative is the circumstance under which the project does not proceed. Here the discussion would compare the environmental effects of the property remaining in its existing state against environmental effects which would occur if the project is approved. If disapproval of the project under consideration would result in predictable actions by others, such as the proposal of some other project, this "no project" consequence should be discussed. In certain instances, the no project alternative means "no build" wherein the existing environmental setting is maintained. However, where failure to proceed with the project will not result in preservation of existing environmental conditions, the analysis should identify the practical result of the project's non–approval and not create and analyze a set of artificial assumptions that would be required to preserve the existing physical environment.

(C) After defining the no project alternative using one of these approaches, the lead agency should proceed to analyze the impacts of the no project alternative by projecting what would reasonably be expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services.

(f) Rule of reason. The range of alternatives required in an EIR is governed by a "rule of reason" that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency determines could feasibly attain most of the basic objectives of the project. The range of feasible alternatives shall be selected and discussed in a manner to foster meaningful public participation and informed decision making.

(1) Feasibility. Among the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries (projects with a regionally significant impact should consider the regional context), and whether the proponent can reasonably acquire, control or otherwise have access to the alternative site (or the site is already owned by the proponent). No one of these factors establishes a fixed limit on the scope of reasonable alternatives. (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553; see *Save Our Residential Environment v. City of West Hollywood* (1992) 9 Cal.App.4th 1745, 1753, fn. 1).

(2) Alternative locations.

(A) Key question. The key question and first step in analysis is whether any of the significant effects of the project would be avoided or substantially lessened by putting the project in another location. Only locations

that would avoid or substantially lessen any of the significant effects of the project need be considered for inclusion in the EIR.

(B) None feasible. If the lead agency concludes that no feasible alternative locations exist, it must disclose the reasons for this conclusion, and should include the reasons in the EIR. For example, in some cases there may be no feasible alternative locations for a geothermal plant or mining project which must be in close proximity to natural resources at a given location.

(C) Limited new analysis required. Where a previous document has sufficiently analyzed a range of reasonable alternative locations and environmental impacts for projects with the same basic purpose, the lead agency should review the previous document. The EIR may rely on the previous document to help it assess the feasibility of potential project alternatives to the extent the circumstances remain substantially the same as they relate to the alternative. (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 573).

(3) An EIR need not consider an alternative whose effect cannot be reasonably ascertained and whose implementation is remote and speculative. (*Residents Ad Hoc Stadium Committee v. Board of Trustees* (1979) 89 Cal. App.3d 274).

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21002, 21002.1, 21003 and 21100, Public Resources Code; *Citizens of Goleta Valley v. Board of Supervisors*, (1990) 52 Cal.3d 553; *Laurel Heights Improvement Association v. Regents of the University of California*, (1988) 47 Cal.3d 376; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359; and *Laurel Heights Improvement Association v. Regents of the University of California* (1993) 6 Cal.4th 1112.

HISTORY

1. New section filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).

§ 15127. Limitations on Discussion of Environmental Impact.

The information required by Section 15126.2(c) concerning irreversible changes, need be included only in EIRs prepared in connection with any of the following activities:

(a) The adoption, amendment, or enactment of a plan, policy, or ordinance of a public agency;

(b) The adoption by a local agency formation commission of a resolution making determinations; or

(c) A project which will be subject to the requirement for preparing an environmental impact statement pursuant to the requirements of the National Environmental Policy Act of 1969, 42 U.S.C. 4321-4347.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21100.1, Public Resources Code.

HISTORY

1. Amendment of first paragraph, subsection (c) and NOTE filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
2. Change without regulatory effect amending first paragraph filed 2-1-2001 pursuant to section 100, title 1, California Code of Regulations (Register 2001, No. 5).

§ 15128. Effects Not Found to Be Significant.

An EIR shall contain a statement briefly indicating the reasons that various possible significant effects of a project were determined not to be significant and were therefore not discussed in detail in the EIR. Such a statement may be contained in an attached copy of an initial study.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21100, Public Resources Code.

§ 15129. Organizations and Persons Consulted.

The EIR shall identify all federal, state, or local agencies, other organizations, and private individuals consulted in preparing the draft EIR, and the persons, firm, or agency preparing the draft EIR, by contract or other authorization.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21104 and 21153, Public Resources Code.

§ 15130. Discussion of Cumulative Impacts.

(a) An EIR shall discuss cumulative impacts of a project when the project's incremental effect is cumulatively considerable, as defined in section 15065(c). Where a lead agency is examining a project with an incremental effect that is not "cumulatively considerable," a lead agency need not consider that effect significant, but shall briefly describe its basis for concluding that the incremental effect is not cumulatively considerable.

(1) As defined in Section 15355, a cumulative impact consists of an impact which is created as a result of the combination of the project evaluated in the EIR together with other projects causing related impacts. An EIR should not discuss impacts which do not result in part from the project evaluated in the EIR.

(2) When the combined cumulative impact associated with the project's incremental effect and the effects of other projects is not significant, the EIR shall briefly indicate why the cumulative impact is not significant and is not discussed in further detail in the EIR. A lead agency shall identify facts and analysis supporting the lead agency's conclusion that the cumulative impact is less than significant.

(3) An EIR may determine that a project's contribution to a significant cumulative impact will be rendered less than cumulatively considerable and thus is not significant. A project's contribution is less than cumulatively considerable if the project is required to implement or fund its fair share of a mitigation measure or measures designed to alleviate the cumulative impact. The lead agency shall identify facts and analysis supporting its conclusion that the contribution will be rendered less than cumulatively considerable.

(b) The discussion of cumulative impacts shall reflect the severity of the impacts and their likelihood of occurrence, but the discussion need not provide as great detail as is provided for the effects attributable to the project alone. The discussion should be guided by the standards of practicality and reasonableness, and should focus on the cumulative impact to which the identified other projects contribute rather than the attributes of other projects which do not contribute to the cumulative impact. The following elements are necessary to an adequate discussion of significant cumulative impacts:

(1) Either:

(A) A list of past, present, and probable future projects producing related or cumulative impacts, including, if necessary, those projects outside the control of the agency, or

(B) A summary of projections contained in an adopted general plan or related planning document, or in a prior environmental document which has been adopted or certified, which described or evaluated regional or areawide conditions contributing to the cumulative impact. Any such planning document shall be referenced and made available to the public at a location specified by the lead agency.

(2) When utilizing a list, as suggested in paragraph (1) of subdivision (b), factors to consider when determining whether to include a related project should include the nature of each environmental resource being examined, the location of the project and its type. Location may be important, for example, when water quality impacts are at issue since projects outside the watershed would probably not contribute to a cumulative effect. Project type may be important, for example, when the impact is specialized, such as a particular air pollutant or mode of traffic.

(3) Lead agencies should define the geographic scope of the area affected by the cumulative effect and provide a reasonable explanation for the geographic limitation used.

(4) A summary of the expected environmental effects to be produced by those projects with specific reference to additional information stating where that information is available, and

(5) A reasonable analysis of the cumulative impacts of the relevant projects. An EIR shall examine reasonable, feasible options for mitigating or avoiding the project's contribution to any significant cumulative effects.

(c) With some projects, the only feasible mitigation for cumulative impacts may involve the adoption of ordinances or regulations rather than the imposition of conditions on a project-by-project basis.

(d) Previously approved land use documents such as general plans, specific plans, and local coastal plans may be used in cumulative impact analysis. A pertinent discussion of cumulative impacts contained in one

...re previously certified EIRs may be incorporated by reference pur-...to the provisions for tiering and program EIRs. No further cumula-...mpacts analysis is required when a project is consistent with a gener-...pecific, master or comparable programmatic plan where the lead agency determines that the regional or areawide cumulative impacts of the proposed project have already been adequately addressed, as defined in section 15152(f), in a certified EIR for that plan.

(e) If a cumulative impact was adequately addressed in a prior EIR for a community plan, zoning action, or general plan, and the project is consistent with that plan or action, then an EIR for such a project should not further analyze that cumulative impact, as provided in Section15183(j).

HISTORY

1. Amendment of section heading, new subsection (d) and amendment of NOTE filed 5-27-97; operative 5-27-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 22).
2. Amendment of section and NOTE filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).
3. Change without regulatory effect amending subsection (d) filed 2-1-2001 pursuant to section 100, title 1, California Code of Regulations (Register 2001, No. 5).
4. Change without regulatory effect repealing subsection (a)(4), amending subsec-...(b)(1)(B), redesignating former subsection (b)(1)(B)1. as subsection (b)(2), ...aling former subsection (b)(1)(B)2., renumbering subsections and amend-... NOTE filed 7-22-2003 pursuant to section 100, title 1, California Code of ...gulations (Register 2003, No. 30).

§ 15131. Economic and Social Effects.

Economic or social information may be included in an EIR or may be presented in whatever form the agency desires.

(a) Economic or social effects of a project shall not be treated as significant effects on the environment. An EIR may trace a chain of cause and effect from a proposed decision on a project through anticipated economic or social changes resulting from the project to physical changes caused in turn by the economic or social changes. The intermediate economic or social changes need not be analyzed in any detail greater than necessary to trace the chain of cause and effect. The focus of the analysis shall be on the physical changes.

(b) Economic or social effects of a project may be used to determine the significance of physical changes caused by the project. For example, if the construction of a new freeway or rail line divides an existing community, the construction would be the physical change, but the social effect on the community would be the basis for determining that the effect would be significant. As an additional example, if the construction of a road and the resulting increase in noise in an area disturbed existing religious practices in the area, the disturbance of the religious practices could be used to determine that the construction and use of the road and the resulting noise would be significant effects on the environment. The religious practices would need to be analyzed only to the extent to show that the increase in traffic and noise would conflict with the religious practices. Where an EIR uses economic or social effects to determine that a physical change is significant, the EIR shall explain the reason for determining that the effect is significant.

(c) Economic, social, and particularly housing factors shall be considered by public agencies together with technological and environmental factors in deciding whether changes in a project are feasible to reduce or avoid the significant effects on the environment identified in the EIR. If information on these factors is not contained in the EIR, the information must be added to the record in some other manner to allow the agency to consider the factors in reaching a decision on the project.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21001(e) and (g), 21002, 21002.1, 21060.5, 21080.1, 21083(c) and 21100, Public Resources Code.

§ 15132. Contents of Final Environmental Impact Report.

The final EIR shall consist of:

(a) The Draft EIR or a revision of the draft.

(b) Comments and recommendations received on the Draft EIR either verbatim or in summary.

(c) A list of persons, organizations, and public agencies commenting on the Draft EIR.

(d) The responses of the Lead Agency to significant environmental points raised in the review and consultation process.

(e) Any other information added by the lead agency.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21100, Public Resources Code.

Article 10. Considerations in Preparing EIRs and Negative Declarations

§ 15140. Writing.

EIRs shall be written in plain language and may use appropriate graphics so that decisionmakers and the public can rapidly understand the documents.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003 and 21100, Public Resources Code.

HISTORY

1. Repealer of Article 10 (Sections 15160-15167) and new Article 10 (Sections 15140-15153) filed 7-13-83; effective thirtieth day thereafter (Register 83, No. 29). For prior history, see Registers 80, No. 19; 78, No. 5; 76, No. 41; 75, No. 1; and 73, No. 50.
2. Editorial correction of 7-13-83 order redesignating effective date to 8-1-83 filed 7-14-83 (Register 83, No. 29).

§ 15141. Page Limits.

The text of draft EIRs should normally be less than 150 pages and for proposals of unusual scope or complexity should normally be less than 300 pages.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Section 21100, Public Resources Code.

§ 15142. Interdisciplinary Approach.

An EIR shall be prepared using an interdisciplinary approach which will ensure the integrated use of the natural and social sciences and the consideration of qualitative as well as quantitative factors. The interdisciplinary analysis shall be conducted by competent individuals, but no single discipline shall be designated or required to undertake this evaluation.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21000, 21001 and 21100, Public Resources Code.

§ 15143. Emphasis.

The EIR shall focus on the significant effects on the environment. The significant effects should be discussed with emphasis in proportion to their severity and probability of occurrence. Effects dismissed in an Initial Study as clearly insignificant and unlikely to occur need not be discussed further in the EIR unless the Lead Agency subsequently receives information inconsistent with the finding in the Initial Study. A copy of the Initial Study may be attached to the EIR to provide the basis for limiting the impacts discussed.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15144. Forecasting.

Drafting an EIR or preparing a negative declaration necessarily involves some degree of forecasting. While foreseeing the unforeseeable is not possible, an agency must use its best efforts to find out and disclose all that it reasonably can.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15145. Speculation.

If, after thorough investigation, a lead agency finds that a particular impact is too speculative for evaluation, the agency should note its conclusion and terminate discussion of the impact.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code; *Topanga Beach Renters Association* v. *Department of General Services* (1976) 58 Cal. App. 3d 712.

§ 15146. Degree of Specificity.

The degree of specificity required in an EIR will correspond to the degree of specificity involved in the underlying activity which is described in the EIR.

(a) An EIR on a construction project will necessarily be more detailed in the specific effects of the project than will be an EIR on the adoption of a local general plan or comprehensive zoning ordinance because the effects of the construction can be predicted with greater accuracy.

(b) An EIR on a project such as the adoption or amendment of a comprehensive zoning ordinance or a local general plan should focus on the secondary effects that can be expected to follow from the adoption, or amendment, but the EIR need not be as detailed as an EIR on the specific construction projects that might follow.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15147. Technical Detail.

The information contained in an EIR shall include summarized technical data, maps, plot plans, diagrams, and similar relevant information sufficient to permit full assessment of significant environmental impacts by reviewing agencies and members of the public. Placement of highly technical and specialized analysis and data in the body of an EIR should be avoided through inclusion of supporting information and analyses as appendices to the main body of the EIR. Appendices to the EIR may be prepared in volumes separate from the basic EIR document, but shall be readily available for public examination and shall be submitted to all clearinghouses which assist in public review.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15148. Citation.

Preparation of EIRs is dependent upon information from many sources, including engineering project reports and many scientific documents relating to environmental features. These documents should be cited but not included in the EIR. The EIR shall cite all documents used in its preparation including, where possible, the page and section number of any technical reports which were used as the basis for any statements in the EIR.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15149. Use of Registered Professionals in Preparing EIRs.

(a) A number of statutes provide that certain professional services can be provided to the public only by individuals who have been registered by a registration board established under California law. Such statutory restrictions apply to a number of professions including but not limited to engineering, land surveying, forestry, geology, and geophysics.

(b) In its intended usage, an EIR is not a technical document that can be prepared only by a registered professional. The EIR serves as a public disclosure document explaining the effects of the proposed project on the environment, alternatives to the project, and ways to minimize adverse effects and to increase beneficial effects. As a result of information in the EIR, the lead agency should establish requirements or conditions on project design, construction, or operation in order to protect or enhance the environment. State statutes may provide that only registered professionals can prepare technical studies which will be used in or which will control the detailed design, construction, or operation of the proposed project and which will be prepared in support of an EIR.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15150. Incorporation by Reference.

(a) An EIR or negative declaration may incorporate by reference all or portions of another document which is a matter of public record or generally available to the public. Where all or part of another document is incorporated by reference, the incorporated language shall be considered to be set forth in full as part of the text of the EIR or negative declaration.

(b) Where part of another document is incorporated by reference, such other document shall be made available to the public for inspection at a public place or public building. The EIR or negative declaration shall state where the incorporated documents will be available for inspection. At a minimum, the incorporated document shall be made available to the public in an office of the lead agency in the county where the project would be carried out or in one or more public buildings such as county offices or public libraries if the lead agency does not have an office in the county.

(c) Where an EIR or negative declaration uses incorporation by reference, the incorporated part of the referenced document shall be briefly summarized where possible or briefly described if the data or information cannot be summarized. The relationship between the incorporated part of the referenced document and the EIR shall be described.

(d) Where an agency incorporates information from an EIR that has previously been reviewed through the state review system, the state identification number of the incorporated document should be included in the summary or designation described in Subsection (c).

(e) Examples of materials that may be incorporated by reference include but are not limited to:

(1) A description of the environmental setting from another EIR.

(2) A description of the air pollution problems prepared by an air pollution control agency concerning a process involved in the project.

(3) A description of the city or county general plan that applies to the location of the project.

(f) Incorporation by reference is most appropriate for including long descriptive, or technical materials that provide general background but do not contribute directly to the analysis of the problem at hand.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061 and 21100, Public Resources Code.

§ 15151. Standards for Adequacy of an EIR.

An EIR should be prepared with a sufficient degree of analysis to provide decisionmakers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among the experts. The courts have looked not for perfection but for adequacy, completeness, and a good faith effort at full disclosure.

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21061 and 21100, Public Resources Code; *San Francisco Ecology Center* v. *City and County of San Francisco*, 48 Cal. App. 3d 584 (1975).

§ 15152. Tiering.

(a) "Tiering" refers to using the analysis of general matters contained in a broader EIR (such as one prepared for a general plan or policy statement) with later EIRs and negative declarations on narrower projects; incorporating by reference the general discussions from the broader EIR; and concentrating the later EIR or negative declaration solely on the issues specific to the later project.

(b) Agencies are encouraged to tier the environmental analyses which they prepare for separate but related projects including general plans, zoning changes, and development projects. This approach can eliminate repetitive discussions of the same issues and focus the later EIR or negative declaration on the actual issues ripe for decision at each level of environmental review. Tiering is appropriate when the sequence of analysis is from an EIR prepared for a general plan, policy, or program to an EIR or negative declaration for another plan, policy, or program of lesser scope, or to a site-specific EIR or negative declaration. Tiering does not

'se the lead agency from adequately analyzing reasonably foreseeable significant environmental effects of the project and does not justify deferring such analysis to a later tier EIR or negative declaration. However, the level of detail contained in a first tier EIR need not be greater than that of the program, plan, policy, or ordinance being analyzed.

(c) Where a lead agency is using the tiering process in connection with an EIR for a large-scale planning approval, such as a general plan or component thereof (e.g., an area plan or community plan), the development of detailed, site-specific information may not be feasible but can be deferred, in many instances, until such time as the lead agency prepares a future environmental document in connection with a project of a more limited geographical scale, as long as deferral does not prevent adequate identification of significant effects of the planning approval at hand.

(d) Where an EIR has been prepared and certified for a program, plan, policy, or ordinance consistent with the requirements of this section, any lead agency for a later project pursuant to or consistent with the program, plan, policy, or ordinance should limit the EIR or negative declaration on the later project to effects which:

(1) Were not examined as significant effects on the environment in the prior EIR; or

(2) Are susceptible to substantial reduction or avoidance by the choice of specific revisions in the project, by the imposition of conditions, or other means.

(e) Tiering under this section shall be limited to situations where the project is consistent with the general plan and zoning of the city or county in which the project is located, except that a project requiring a rezone to achieve or maintain conformity with a general plan may be subject to tiering.

(f) A later EIR shall be required when the initial study or other analysis finds that the later project may cause significant effects on the environment that were not adequately addressed in the prior EIR. A negative declaration shall be required when the provisions of Section 15070 are met.

(g) Where a lead agency determines that a cumulative effect has been adequately addressed in the prior EIR, that effect is not treated as significant for purposes of the later EIR or negative declaration, and need not be discussed in detail.

(2) When assessing whether there is a new significant cumulative effect, the lead agency shall consider whether the incremental effects of the project would be considerable when viewed in the context of past, present, and probable future projects. At this point, the question is not whether there is a significant cumulative impact, but whether the effects of the project are cumulatively considerable. For a discussion on how to assess whether project impacts are cumulatively considerable, see Section 15064(i).

(3) Significant environmental effects have been "adequately addressed" if the lead agency determines that:

(A) they have been mitigated or avoided as a result of the prior environmental impact report and findings adopted in connection with that prior environmental report; or

(B) they have been examined at a sufficient level of detail in the prior environmental impact report to enable those effects to be mitigated or avoided by site specific revisions, the imposition of conditions, or by other means in connection with the approval of the later project.

(g) When tiering is used, the later EIRs or negative declarations shall refer to the prior EIR and state where a copy of the prior EIR may be examined. The later EIR or negative declaration should state that the lead agency is using the tiering concept and that it is being tiered with the earlier EIR.

(h) There are various types of EIRs that may be used in a tiering situation. These include, but are not limited to, the following:

(1) General plan EIR (Section 15166).

(2) Staged EIR (Section 15167).

(3) Program EIR (Section 15168).

(4) Master EIR (Section 15175).

(5) Multiple-family residential development/residential and commercial or retail mixed-use development (Section 15179.5).

(6) Redevelopment project (Section 15180).

(7) Housing/neighborhood commercial facilities in an urbanized area (Section 15181).

(8) Projects consistent with community plan, general plan, or zoning (Section 15183).

NOTE: Authority cited: Sections 21083 and 21087, Public Resources Code. Reference: Sections 21003, 21061, 21093, 21094, 21100 and 21151, Public Resources Code; *Stanislaus Natural Heritage Project, Sierra Club v. County of Stanislaus* (1996) 48 Cal.App.4th 182; *Al Larson Boat Shop, Inc. v. Board of Harbor Commissioners* (1993) 18 Cal.App. 4th 729; and *Sierra Club v. County of Sonoma* (1992) 6 Cal.App. 4th 1307.

HISTORY

1. Amendment of section and NOTE filed 10-26-98; operative 10-26-98 pursuant to Public Resources Code section 21087 (Register 98, No. 44).
2. Change without regulatory effect amending subsections (f)(3)(A)-(B) and repealing subsection (f)(3)(C) filed 7-22-2003 pursuant to section 100, title 1, California Code of Regulations (Register 2003, No. 30).

§ 15153. Use of an EIR from an Earlier Project.

(a) The lead agency may employ a single EIR to describe more than one project, if such projects are essentially the same in terms of environmental impact. Further, the lead agency may use an earlier EIR prepared in connection with an earlier project to apply to a later project, if the circumstances of the projects are essentially the same.

(b) When a lead agency proposes to use an EIR from an earlier project as the EIR for a separate, later project, the lead agency shall use the following procedures:

(1) The lead agency shall review the proposed project with an initial study, using incorporation by reference if necessary, to determine whether the EIR would adequately describe:

(A) The general environmental setting of the project,

(B) The significant environmental impacts of the project, and

(C) Alternatives and mitigation measures related to each significant effect.

(2) If the lead agency believes that the EIR would meet the requirements of Subsection (1), it shall provide public review as provided in Section 15087 stating that it plans to use the previously prepared EIR as the draft EIR for this project. The notice shall include as a minimum:

(A) An identification of the project with a brief description;

(B) A statement that the agency plans to use a certain EIR prepared for a previous project as the EIR for this project;

(C) A listing of places where copies of the EIR may be examined; and

(D) A statement that the key issues involving the EIR are whether the EIR should be used for this project and whether there are any additional, reasonable alternatives or mitigation measures that should be considered as ways of avoiding or reducing the significant effects of the project.

(3) The lead agency shall prepare responses to comments received during the review period.

(4) Before approving the project, the decisionmaker in the lead agency shall:

Re: CSM 03-TC-17
California Environmental Quality Act (CEQA)

Dear Ms. Higashi:

On March 31, 2008, I submitted to the Commission, on behalf of the test claimant, a supplement to the test claim filing, specifically, the histories of the Titles 5 and 14, CCR, sections included in the test claim, at the request of the Commission staff.

This letter transmits, on behalf of the test claimant, the list of registers and relevant section numbers, in the form of an amended attachment page to the CSM 2 form.

Sincerely,

Keith B. Petersen

California State Clearinghouse Handbook
Governor's Office of Planning and Research (January 2000)

California Environmental Quality Act

03-TC-17

Clovis Unified School District, Claimant

EXECUTIVE SUMMARY

This test claim addresses the activities required of school districts, county offices of education and community college districts pursuant to the California Environmental Quality Act (CEQA) and related statutes and regulations.[1] To assist the reader, there is a glossary of frequently used CEQA related terms and acronyms on page 54.

CEQA provides a process for evaluating the environmental effects of a project, and includes statutory exemptions, as well as categorical exemptions that can be found in CEQA and the CEQA regulations. If a project is not exempt from CEQA, an initial study is prepared to determine whether a project may have a significant effect on the environment. If the initial study shows that there would not be a significant effect on the environment, the lead agency must prepare a negative declaration (ND). If the initial study shows that the project may have a significant effect on the environment, the lead agency must prepare an environmental impact report (EIR). If the EIR includes finding of significant environmental impacts, CEQA imposes a substantive requirement to adopt feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of the project.[2] The EIR requirement, which effectively accomplishes the above purposes, is "the heart of CEQA."[3]

The project proponent is generally responsible for the costs of CEQA compliance, including the costs of preparing the EIR, if required. Generally, an EIR must accurately describe the proposed project, identify and analyze each significant environmental impact expected to result from the proposed project, identify mitigation measures to reduce those impacts to the extent feasible, and evaluate a range of reasonable alternatives to the proposed project. Prior to approving any project that has received environmental review, a lead agency must make certain findings. If mitigation measures are required or incorporated into a project, the lead agency must adopt a reporting or monitoring program to ensure compliance with those measures. If a mitigation measure would cause one or more significant effects in addition to those that would be caused by the proposed project, the effects of the mitigation measure must be discussed but in less detail than the significant effects of the proposed project.

Staff concludes that the test claim statutes, regulations and alleged executive orders do not impose a reimbursable state-mandated program within the meaning of article XIII B, section 6 of the California Constitution because:

1. The California State Clearinghouse Handbook is not an executive order subject to Article XIII B, Section 6.
2. The Commission does not have jurisdiction over statutes adopted prior to January 1, 1975.
3. The statutes and regulations listed below, which generally require compliance with the CEQA process, do not mandate school districts or community college districts to perform any activities because:

---

[1] Note that, as discussed in the staff analysis, staff finds that the California State Clearinghouse Handbook is not an executive order.

[2] Public Resources Code section 21002.

[3] *County of Inyo v. Yorty* (1973) 32 Cal. App. 3d 795.

A. The plain language of Public Resources Code section 21083 imposes requirements on OPR and the Secretary of the Resources Agency, not school districts or community college districts.

B. Although school districts and community college districts are required to undertake maintenance projects, including emergency repair projects, CEQA contains specific exemptions for maintenance projects and emergency projects.

C. For all other school district and community college district projects, CEQA is triggered by the district's voluntary decision to undertake a project or accept state funding for a project.

Education Code Section 17025 added by Statutes 1996, Chapter 1562; Government Code Sections 66031 and 66034 as amended by Statutes 1994, Chapter 300, and Statutes 1990, Chapter 1455; Public Resources Code Sections 21002.1, 21003, 21003.1, 21080.09, 21080.1, 21080.3, 21080.4, 21081, 21082.1, 21082.2, 21083, 21083.2, 21091, 21092, 21092.1, 21092.2, 21092.3, 21092.4, 21092.5, 21092.6, 21094, 21100, 21151, 21151.2, 21151.8, 21152, 21153, 21157, 21157.1, 21157.5, 21158, 21161, 21165, 21166, 21167, 21167.6, 21167.6.5, 21167.8, 21168.9 as added or amended by Statutes 1975, Chapter 222; Statutes 1976, Chapter 1312; Statutes 1977, Chapter 1200; Statutes 1983, Chapter 967; Statutes 1984, Chapter 571; Statutes 1985, Chapter 85; Statutes 1987, Chapter 1452; Statutes 1989, Chapter 626; Statutes 1989, Chapter 659; Statutes 1991, Chapter 905; Statutes 1991, Chapter 1183; Statutes 1991, Chapter 1212; Statutes 93, Chapter 375; Statutes 1993, Chapter 1130; Statutes 1993, Chapter 1131; Statutes 1994, Chapter 1230; Statutes 1994, Chapter 1294; Statutes 1995, Chapter 801; Statutes 1996, Chapter 444; Statutes 1996, Chapter 547; Statutes 1997, Chapter 415; Statutes 2000, Chapter 738; Statutes 2001, Chapter 867; Statutes 2002, Chapter 1052; Statutes 2002, Chapter 1121; California Code of Regulations, Title 5, Sections 14011 and 57121 as added or amended by Register 77, Nos. 01 & 45; Register 83, No. 18; Register 91, No. 23; Register 93, No. 46; and, Register 2000, No. 44 and California Code of Regulations, Title 14, Sections 15002, 15004, 15020, 15021, 15025, 15041, 15042, 15043, 15050, 15053, 15060, 15061, 15062, 15063, 15064 15064.5, 15064.5, 15064.7 15070, 15071, 15072, 15073, 15073.5, 15074, 15074.1, 15075, 15081.5, 15082, 15084, 15085, 15086, 15087, 15088, 15088.5, 15089, 15090, 15091, 15092, 15093, 15094, 15095, 15100, 15104, 15122, 15123, 15124, 15125, 15126, 15126.2, 15126.4, 15126.6, 15128, 15129, 15130, 15132, 15140, 15142, 15143, 15145, 15147, 15148, 15149, 15150, 15152, 15153, 15162, 15164, 15165, 15167, 51568, 15176, 15177, 15178, 15179, 15184, 15185, 15186, 15201, 15203, 15205, 15206, 15208, 15223, 15225, 15367 as added or amended by register 75, No. 01; Register 75, Nos. 05, 18 & 22; Register 76, Nos. 02, 14 & 41; Register 77, No. 01; Register 78, No. 05; Register 80, No. 19; Register 83, Nos. 29; Register 86, No. 05; Register 94, No. 33; Register 97, No. 22; Register 98, No. 35; Register 98, No. 44; Register 2001, No. 05; Register 2003, No. 30.

4. Public Resources Code section 21082, as amended by Statutes 1976, chapter 1312 and California Code of Regulations, title 14, section 15022, as amended by Register 83, No. 29 do not impose a new program or higher level of service on school districts and community college districts because:

A. The Public Resources Code section 21082 requirement for school districts and community college districts to adopt objectives, criteria, and procedures, consistent with CEQA and the CEQA regulations, for the preparation of NDs by ordinance, resolution, rule or regulation, added in 1976, was a clarification of existing law regarding "evaluation of projects" and therefore does not impose a new program or higher level of service.

B. The requirement to adopt objectives, criteria, and procedures, for the evaluation of projects and the preparation of environmental documents pursuant to CEQA was required by the law as it existed immediately prior to the date that California Code of Regulations, title 14, section 15022 was adopted and has been continuously required by the Public Resources Code Section 21082 since January 1, 1973 and therefore does not impose a new program or higher level of service.

Staff Recommendation

Staff recommends that the Commission adopt this staff analysis to deny the test claim.

STAFF ANALYSIS

Claimant

Clovis Unified School District

Chronology

09/25/2003	Claimant, Clovis Unified School District, filed test claim with the Commission on State Mandates ("Commission")[4]
10/08/2003	Commission staff issued completeness review letter and requested comments from state agencies
10/28/2003	Department of Finance (DOF) requested an extension from the November 11, 2003 deadline to file comments in February, 2004
11/07/2003	The Commission granted DOF's request allowing an extension to February 7, 2004 to file comments on test claim
02/13/2004	DOF requested an additional 30-day extension to file comments
02/18/2004	The Commission granted DOF's request for an extension to March 19, 2004 to file comments on test claim
03/08/2004	DOF submitted comments on the test claim
03/31/2004	Claimant submitted a response to DOF's comments on the test claim
06/30/2008	Claimant submitted a supplement to the test claim filing (i.e. the history of Title 5 and 14 CCR sections pled in the test claim)

Background

This test claim addresses the activities required of school districts, county offices of education and community college districts pursuant to the California Environmental Quality Act (CEQA) and related statutes and regulations.[5]

CEQA OVERVIEW

CEQA was enacted in 1970 and is currently contained in Public Resources Code sections 21000-21177. There are also numerous statutory provisions relating to CEQA that are contained in other codes. Those pled in this test claim include Education Code section 17025 as added by Statutes 1996, chapter 1562 and Government Code sections 66031 and 66034 as amended by Statutes 1994, chapter 300, and Statutes 1990, chapter 1455. In addition to these code sections, interpretive regulations for implementing CEQA, officially known as "the CEQA Guidelines," were first adopted in 1973 and have been amended numerous times since then. The CEQA Guidelines are located in California Code of Regulations, title 14, sections 15000-15387. This

[4] Based on the filing date of September 25, 2003, the potential period of reimbursement for this test claim begins on July 1, 2002.

[5] Note that, as discussed in the analysis below, staff finds that the California State Clearinghouse Handbook is not an executive order.

analysis will refer to the Public Resources Code sections 21000-21177 collectively as "CEQA" and the CEQA Guidelines (i.e. California Code of Regulations, title 14, sections 15000-15387) collectively as "the CEQA regulations."

The purposes of CEQA are:

- to inform decisionmakers and the public about project impacts;
- identify ways to avoid or significantly reduce environmental damage;
- prevent environmental damage by requiring feasible alternatives or mitigation measures;
- disclose to the public reasons why an agency approved a project if significant environmental effects are involved, involve public agencies in the process; and,
- increase public participation in the environmental review and the planning processes.[6]

CEQA provides a process for evaluating the environmental effects of a project, and includes statutory exemptions, as well as categorical exemptions that can be found in CEQA and the CEQA regulations. If a project is not exempt from CEQA, an initial study is prepared to determine whether a project may have a significant effect on the environment. If the initial study shows that there would not be a significant effect on the environment, the lead agency must prepare a negative declaration (ND). If the initial study shows that the project may have a significant effect on the environment, the lead agency must prepare an environmental impact report (EIR). If the EIR includes finding of significant environmental impacts, CEQA imposes a substantive requirement to adopt feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of the project.[7] The EIR requirement, which effectively accomplishes the above purposes, is "the heart of CEQA."[8]

The project proponent is generally responsible for the costs of CEQA compliance, including the costs of preparing the EIR, if required. Generally, an EIR must accurately describe the proposed project, identify and analyze each significant environmental impact expected to result from the proposed project, identify mitigation measures to reduce those impacts to the extent feasible, and evaluate a range of reasonable alternatives to the proposed project. Prior to approving any project that has received environmental review, a lead agency must make certain findings. If mitigation measures are required or incorporated into a project, the lead agency must adopt a reporting or monitoring program to ensure compliance with those measures. If a mitigation measure would cause one or more significant effects in addition to those that would be caused by the proposed project, the effects of the mitigation measure must be discussed but in less detail than the significant effects of the proposed project.

PUBLIC AGENCY ROLES IN THE CEQA PROCESS

Lead Agencies

Existing law, pursuant to CEQA, requires public and private projects to be subject to the same level of environmental review.[9] In keeping with the recognition of the diverse conditions throughout the state and out of deference to local control over local land use decisions,[10] CEQA generally provides for a local agency to take responsibility for CEQA compliance for projects within its jurisdiction. Specifically, CEQA requires a local agency, such as a school district or a community college district,[11] to conduct an analysis of the environmental impacts associated with projects within its jurisdiction. A district acting in this capacity would be referred to as the "lead agency." A lead agency for a private project is the agency with the greatest responsibility for supervising or approving the project; usually the city or county.[12] However, in the case of public projects, such as a school project, the lead agency is the project proponent,[13] in this case, the school district or community college district. This is true even when the project is in another agency's jurisdiction.[14]

Responsible Agencies

A public agency, other than the lead agency, that has some discretionary power to approve or carry out a project (usually the authority to grant a needed permit) for which the lead agency is preparing an EIR or ND is known as a "responsible agency."[15] With few exceptions, responsible agencies are bound by the lead agency's determination of whether to prepare an EIR or ND and by the document prepared by the lead agency.[16] In certain instances, responsible agencies can

---

[9] Public Resources Code section 21001.1; California Code of Regulations, title 14, 15002.

[10] Note that most of California's environmental laws (see e.g. the California Clean Air Act and the Planning and Zoning Law) specifically recognize local agency control over land use decisions and impose mainly procedural requirements on local agency decision making. See also *Bownds v. City of Glendale* (1980) 113 Cal.App.3d 875, 879 [""Land use regulation in California has historically been a function of local government under the grant of police power contained in California Constitution, article XI, section 7." (We have recognized that a city's or county's power to control its own land use decisions derives from this inherent police power, not from the delegation of authority by the state. [Citations]".]

[11] The CEQA regulations define "local agency" to mean "any public agency other than a state agency, board, or commission. Local agency includes but is not limited to cities, counties, charter cities and counties, *districts*, *school districts*, special districts, redevelopment agencies, local agency formation commissions, and any board, commission, or organizational subdivision of a local agency when so designated by order or resolution of the governing legislative body of the local agency." (Tit. 14, Cal. Code of Regs., § 15368, emphasis added.)

[12] California Code of Regulations, title 14, section 15051(b).

[13] California Code of Regulations, title 14, section 15051(a).

[14] Id.

[15] California Code of Regulations, title 14, section 15381.

[16] See Public Resources Code section 21080.1(a); California Code of Regulations, title 14, section 15050(c).

challenge lead agency determinations, assume the lead agency role, or participate in other ways in the CEQA process. Generally, responsible agencies have two sets of responsibilities:

(1) responding to the lead agency's request for information or comments as the lead agency determines whether to prepare an EIR or ND and commenting on any CEQA documents that are prepared; and,

(2) responsibilities related to approving or acting on the project.[17]

Specifically, in its role as consultant to the lead agency, the responsible agency:

(1) Makes a recommendation on whether to prepare an EIR or ND.[18]

(2) Sends a written reply within 30 days after receiving a notice of preparation (NOP) of an EIR specifying the scope and content of information, germane to the responsible agency's statutory responsibilities, which should be included in the EIR.[19]

(3) Designates a representative to attend meetings requested by the lead agency regarding scope and content of the EIR.[20]

(4) Provides comments, limited to the project activities within the responsible agency's area of expertise, on the draft EIR (DEIR) or ND focusing on any shortcomings in the document or any additional alternatives or mitigation measures that should be considered.[21] The comments must be specific as possible and supported by specific oral or written documentation.[22]

(5) Provides the lead agency with performance standards for mitigation measures proposed by the responsible agency. The responsible agency may also request project changes or specific mitigation measures but then must also prepare the mitigation monitoring or reporting program for those changes if requested to do so by the lead agency.[23]

With regard to its responsibilities related to approving or acting on its own project, the responsible agency must:

---

[18] California Code of Regulations, title 14, section 15096, subdivision (b)(1).

[19] Public Resources Code section 21080.4, subdivision (a); California Code of Regulations, title 14, section 15096, subdivision (b)(1).

[20] California Code of Regulations, title 14, section 15096, subdivision (c).

[21] Public Resources Code section 21153(c); California Code of Regulations, title 14, sections 15086, subdivision (c) and 15096, subdivision (d).

[22] Id.

[23] Public Resources Code section 21081.6, subdivision (c); California Code of Regulations, title 14, 15086, subdivision (d).

(1) Consider environmental effects of the project as shown in the EIR or ND and feasible mitigation measures within the responsible agency's powers.[24]

(2) Decide whether the EIR or ND is adequate for its use and, if not:

a. take the issue to court within 30-days after the lead agency has filed the notice of determination (NOD);

b. prepare a subsequent EIR if permissible under California Code of Regulations, title 14, section 15162; or,

c. assume the lead agency role if permissible under California Code of Regulations, title 14, section 15052, subdivision (a)(3).[25]

(3) Make findings, adopt a reporting or monitoring program (if required) and file a NOD with the Office of Planning and Research (OPR) if a state agency, or the county clerk if a local agency.[26]

Trustee Agencies

A "trustee agency" is a state agency that has jurisdiction by law over natural resources affected by a project that are held in trust for the people of the State of California. Trustee agencies include:

a. The California Department of Fish and Game with regard to the fish and wildlife of the state, to designated rare or endangered native plants, and to game refuges, ecological reserves, and other areas administered by the department.

b. The State Lands Commission with regard to state owned "sovereign" lands such as the beds of navigable waters and state school lands.

c. The State Department of Parks and Recreation with regard to units of the State Park System.

All of the lead agency consultation requirements that apply with regard to responsible agencies also apply to trustee agencies and trustee agencies may only make substantive comments regarding project activities within their area of expertise.[27] For any project where a ND is proposed and a state agency is a trustee agency, the draft ND must be sent to OPR for state agency review.[28]

[28] Public Resources Code section 21091; California Code of Regulations, title 14, sections 15073, subdivision (c) and 15205, subdivision (b).

Other Agencies That Must be Consulted

a. The University of California with regard to sites within the Natural Land and Water Reserves System.[29]

b. Transportation planning agencies, for projects of statewide, regional or areawide significance.[30]

c. Planning commissions, for school site acquisition projects.[31]

d. Air quality agencies, for school construction projects.[32]

The Office of Planning and Research

The CEQA regulations are unique in that they are prepared by OPR and then adopted by the Resources Agency pursuant to Public Resources Code section 21083. Therefore, the regulations are actually regulations of the Resources Agency. However, OPR is responsible for carrying out various state level environmental review activities pursuant to CEQA, including:

(1) Preparing and developing proposed CEQA Guidelines and reviewing the adopted CEQA Guidelines, at least once every two years, and recommending proposed changes or amendments to the Secretary of Resources.[33]

(2) Receiving, evaluating and making recommendations to the Secretary of the Resources Agency for changes to the list of categorically exempt projects.[34]

(3) Upon request from a lead agency, assisting the lead agency in determining which agencies are responsible agencies.[35]

(4) Upon request from a lead agency, assisting the lead agency in determining which public agencies have responsibility for carrying out or approving a proposed project and notifying responsible agencies regarding meetings requested by the lead agency.[36]

(5) Resolving disputes over which agency is the lead agency.[37]

[37] Public Resources Code section 21165.

(6) Receiving for filing the following notices and CEQA documents:

a. A state agency notice of exemption (NOE).[38]

b. DEIRs, NDs and other environmental documents to be reviewed by state agencies.[39]

c. Notices of Completion (NOCs) for state or local agency DEIRs and final EIRs (FEIRs).[40]

d. NODs if:

i. a state agency is the lead agency and the project was approved using an ND or an EIR;[41] or,

ii. a local agency is the lead agency but the project requires a discretionary approval from a state agency.[42]

(7) Coordinating state-level review of CEQA documents including:

a. Receiving for filing the following notices and CEQA documents:

i. A state agency NOE.[43]

ii. NOPs for projects where a state agency is a responsible or trustee agency.[44]

iii. DEIRs, NDs and other environmental documents to be reviewed by state agencies or for projects of statewide, regional or areawide significance.[45]

iv. NOCs for state or local agency DEIRs and FEIRs.[46]

v. NODs if:

- A state agency is the lead agency and the project was approved using an ND or an EIR;[47] or,
- A local agency is the lead agency but the project requires a discretionary approval from a state agency.[48]

b. Receiving certain CEQA documents and notices from state and local agencies and distributing them to appropriate state agencies (i.e. responsible and trustee agencies) for review and comment.[49]

c. Ensuring that responsible and trustee agencies provide necessary information in response to NOPs.[50]

(8) Establishing, maintaining, and making available through the Internet, a central repository for NOEs, NOPs, NOCs, and NODs.[51]

(9) Providing the California State Library with copies of any CEQA documents submitted in electronic format to OPR. The California State Library serves as the repository for such electronic documents and must make them available for viewing to the general public, upon request.[52]

The Resources Agency

The Secretary of the Resources Agency is responsible for fulfilling the following duties:

(1) Adopting and amending the CEQA Guidelines.[53]

(2) Adopting categorical exemptions from CEQA.[54]

(3) Certifying state environmental programs that qualify as certified regulatory programs and receiving and filing notices filed by certified regulatory programs.[55]

ADOPTION OF AGENCY PROCEDURES TO IMPLEMENT CEQA

---

[47] Public Resources Code section 21108, subdivision (a); California Code of Regulations, title 14, section 15075, and 15094.

[48] California Code of Regulations, title 14, sections 15075 and 15094.

[49] Public Resources Code section 21091; California Code of Regulations, title 14, section 15023, subdivision (c).

[50] Public Resources Code sections 21080.4 subdivision (d); California Code of Regulations, title 14, section 15023.

[51] Public Resources Code section 21159.9, subdivision (c); California Code of Regulations, title 14, section 15023, subdivision (h). These notices may be found at www.ceqanet.ca.gov.

[52] Public Resources Code section 21159.9, subdivision (d).

[53] Public Resources Code section 21083; California Code of Regulations, title 14, section 15024.

[54] Public Resources Code section 21084; California Code of Regulations, title 14, section 15024.

[55] Public Resources Code section 21080.5; California Code of Regulations, title 14, section 15024.

Both CEQA and the CEQA regulations require public agencies to adopt their own objectives, criteria, and procedures, consistent with CEQA and the CEQA regulations, for implementing CEQA by ordinance, resolution, rule or regulation.[56] In adopting its procedures, the public agency has a choice of the following approaches:

(1) Adopting the CEQA regulations by reference.

(2) Adopting the CEQA regulations by reference and adopting some of its own provisions, specifically tailored to the agency's criteria that are consistent with CEQA and the CEQA regulations.

(3) Adopting a detailed set of its own objectives, criteria and procedures that are consistent with CEQA and the CEQA regulations.[57]

If the agency adopts its own procedures without incorporating the CEQA regulations by reference, the agency's objectives, criteria and procedures must incorporate all of the necessary requirements.[58] A school district, community college district, or any other district, whose boundaries are coterminous with a city, county, or city and county, may utilize the objectives, criteria, and procedures of the city, county, or city and county, as may be applicable, in which case, the school district or other district need not adopt objectives, criteria, and procedures of its own.[59]

THE CEQA PROCESS[60]

Types of Projects Subject to CEQA

Under CEQA, "project" means an activity which may cause either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment, *and* which is any of the following:

(a) An activity directly undertaken by any public agency.

(b) An activity undertaken by a person which is supported, in whole or in part, through contracts, grants, subsidies, loans, or other forms of assistance from one or more public agencies.

(c) An activity that involves the issuance to a person of a lease, permit, license, certificate, or other entitlement for use by one or more public agencies.[61]

---

[56] Public Resources Code section 21082, California Code of Regulations, title 14, section 15022, subdivision (a).

[57] California Code of Regulations, title 14, section 15022, subdivision (d).

[58] Id.

[59] Public Resources Code section 21082.

[60] Note that this background on the CEQA process is based upon the current requirements of CEQA and the CEQA regulations/CEQA Guidelines and is meant only to provide the reader with an overview of the CEQA process. It in no way distinguishes the test claim statutes and regulations from the requirements of pre-1975 law or from any changes that have been made to those statutes and regulations since the filing of the test claim.

[61] Public Resources Code section 21065.

A CEQA analysis is required only for discretionary projects, that is, projects that may or may not be approved at the district's discretion. Ministerial projects, meaning projects that must be approved if all applicable legal criteria are met, do not require CEQA analysis.[62] Under CEQA, a project is "ministerial" if it "involv[es] little or no personal judgment by the public official as to the wisdom or manner of carrying out the project."[63]

Additionally, a project is not subject to CEQA if it can be seen with certainty that there is no possibility of a significant effect on the environment.[64] ""Significant effect on the environment" means a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project, including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance.[65]

Preliminary Review

The lead agency must complete a preliminary review of a proposed activity to determine:

(1) Whether the application (for a private project) is complete.

(2) Whether the activity is subject to CEQA.

(3) Whether the activity is exempt from CEQA, and if so, whether to prepare and file an optional notice of exemption (NOE).[66] The filing of an NOE has no significance except that it triggers a 35-day statute of limitations.[67] Note that K-12 school districts are required, as a condition of receipt of state funding, to self-certify that they have filed the appropriate CEQA document.

Initial Study

If the lead agency determines that no exemptions apply to a project subject to CEQA and decides not to proceed directly to the preparation of an EIR, it must conduct an initial study which considers all phases of project planning, implementation, and operation to determine whether the project may have a significant effect on the environment.[68] Before making this determination,

[63] California Code of Regulations, title 14, section 15369.

[64] California Code of Regulations, title 14, section 15060.

[65] Public Resources Code section 21068; California Code of Regulations, title 14, section 15382.

[66] Public Resources Code Sections 21108 and 21152; California Code of Regulations, title 14, sections 15060, 15061 and 15062. See also *San Lorenzo Valley Community Advocates for Responsible Education v. San Lorenzo Valley Unified School District* (2006) 139 Cal.App.4th 1356, 1385 (A school district need not: prepare a detailed written evaluation to determine whether project is exempt, provide any notice or opportunity to review or comment on the exemption to any other agency or to the public, and, it need not hold a hearing on its exemption determination.)

[67] Id.

[68] California Code of Regulations, title 14, section 15063.

the lead agency must consult with responsible agencies and trustee agencies.[69] The purposes of an initial study are to provide the lead agency with information to use as the basis for deciding whether to prepare an EIR or negative declaration; enable an applicant or lead agency to modify a project, mitigating adverse impacts before an EIR is prepared, thereby enabling the project to qualify for a mitigated negative declaration (MND); assist in the preparation of an EIR, if one is required, by focusing the EIR on the effects determined to be significant, identifying the effects determined not to be significant, explaining the reasons for determining that potentially significant effects would not be significant, and identifying whether a program EIR, tiering, or another appropriate process can be used for analysis of the project's environmental effects; facilitate environmental assessment early in the design of a project; provide documentation of the factual basis for the finding in a negative declaration (ND) that a project will not have a significant effect on the environment; eliminate unnecessary EIRs; and, determine whether a previously prepared EIR could be used with the project.[70]

Negative Declaration

If the lead agency proposes to adopt an ND or an MND, it must:

(1) Prepare and distribute a notice of intent (NOI) to adopt an ND or MND.[71]

(2) Prepare the proposed ND and distribute it, together with the initial study for public and agency review.[72]

(3) Consider the proposed ND and comments and approve or disapprove the ND.[73]

---

[69] Public Resources Code section 21080.3, subdivision (a). Note also that under CEQA and related statutes, school districts have additional special consultation requirements which include: Public Resources Code section 21151.2 (requirement to give the planning commission with jurisdiction over the site written notice of the district's intent to acquire title to property for a new or expanded school site); Public Resources Code section 21151.8 and Education Code section 17213 (requirement to include in any ND or EIR an analysis of hazardous substances on the site and requirement to consult with administering agency for hazardous material [generally the county health department]); Public Resources Code section 21151.8, subdivision (a)(2) and California Code of Regulations, title 14, section 15186, subdivision (c) (requirement to consult with local air pollution control district to ascertain whether any facilities within a quarter mile of the proposed site might emit hazardous materials, substances or waste; Education Code section 17213.1 (as a condition of receiving state funds, the requirement to consult with an environmental assessor to conduct a Phase I environmental assessment (and potentially a Phase II to determine whether hazardous materials are present, the extent of their release or threat of release) before acquiring an school site or before beginning construction of a project.

[70] California Code of Regulations, title 14, section 15063.

[71] Public Resources Code section 21092(a); California Code of Regulations, title 14, section 15072, subdivision (a).

[72] California Code of Regulations, title 14, section 15073.

[73] California Code of Regulations, title 14, section 15074.

(4) File and post a NOD, if the ND is adopted.[74] The filing and posting of the NOD triggers a 30-day statute of limitations, if it is not properly filed and posted, the statute of limitations is 180-days.

A lead agency may hold public hearings regarding the proposed ND at its option, but such hearings must be properly noticed.[75]

Prepare Draft Environmental Impact Report (DEIR)

A lead agency that determines that an EIR is required must complete the following steps:

(1) Draft and distribute a NOP stating that an EIR will be prepared.[76]

(2) Receive information and comments on the NOP and consider incorporating them into the DEIR.[77]

(3) Consult with other agencies and hold scoping meetings (scoping meetings can be voluntary or mandatory depending on the situation) with responsible and trustee agencies, other interested state and local agencies, and, with members of the public.[78]

(4) Consult with and request comments on the DEIR from:

a. Responsible agencies.

b. Trustee agencies with resources affected by the project.

c. Any other state, federal, and local agencies which have jurisdiction by law with respect to the project or which exercise authority over resources which may be affected by the project.

d. Any city or county which borders on a city or county within which the project is located.

e. For a project of statewide, regional, or areawide significance, the transportation planning agencies and public agencies which have transportation facilities within their jurisdictions which could be affected by the project. "Transportation facilities" includes: major local arterials and public transit within five miles of the project site, and freeways, highways and rail transit service within 10 miles of the project site.[79]

---

[74] See generally Public Resources Code section 21080, subdivision (c); California Code of Regulations, title 14, section 15075.

[75] Public Resources Code section 21092.5, subdivision (b).

[76] Public Resources Code section 21080.4, subdivision (a); California Code of Regulations, title 14, section 15082, subdivision (a).

[77] California Code of Regulations, title 14, section 15084, subdivision (c).

[78] Public Resources Code section 21080.4, subdivision (b)

[79] Public Resources Code section 21081.7; California Code of Regulations, title 14, section 15086.

(5) Prepare or hire a consultant to prepare the DEIR.[80]

(6) Prepare a NOC when the DEIR is complete, file it with OPR, provide public notice in a newspaper of general circulation that the DEIR is available for review and comment, and, distribute the DEIR.[81]

Prepare Final Environmental Impact Report (FEIR)

(1) Receive and review comments on the DEIR, prepare written responses to each public agency that commented and to all comments on significant environmental issues for inclusion in the FEIR.[82]

(2) Determine whether any new "significant" information (including any new findings of significant impact) have been added to the FEIR after the DEIR was circulated and, if so, re-circulate the EIR for public review and comment.[83]

(3) Certify that the FEIR:

a. Has been completed in compliance with CEQA.

b. Was presented to the decision-making body of the lead agency, and that the decision-making body reviewed and considered the information contained in the final EIR prior to approving the project.

c. Reflects the lead agency's independent judgment and analysis.[84]

Project Approval Decision-making Process

(B) Once the FEIR has been certified the lead agency must consider the FEIR and decide whether or how to approve or carry out the project.[85]

(C) CEQA prohibits the approval of a project for which the EIR has identified one or more significant effects[86] on the environment unless it makes one of the following findings supported by substantial evidence in the record:

a. Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as

[85] California Code of Regulations, title 14, section 15092, subdivision (a).

[86] Note that CEQA and the CEQA regulations use the words "effects" and "impacts" interchangeably.

identified in the final EIR. (Note: If this finding is made, a mitigation monitoring reporting program must also be adopted.)

b. Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency.

c. Specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the final EIR.[87]

(D) If there are unavoidable significant impacts, and the lead agency wants to approve the project anyway, it must adopt a statement of overriding considerations supported by substantial evidence in the record.[88]

Post Project Approval Requirements

(1) After approving the project the lead agency must:

a. File a copy of the FEIR with the appropriate planning agency of any cities or counties where significant effects on the environment may occur.

b. Retain one or more copies of the FEIR as public records for a reasonable period of time.

c. Require the applicant to provide a copy of the certified, FEIR to each responsible agency.[89]

(2) If mitigation measures were adopted for the project, the lead agency is responsible for implementing the mitigation monitoring or reporting program.[90]

(3) If there are substantial changes in the project or certain types of new information become available, a supplemental or subsequent EIR may be required.[91]

Special Rules Related to CEQA Litigation

(1) Any action brought in the superior court relating to any act or decision of a public agency made pursuant to CEQA may be subject to a mediation proceeding.[92]

---

[87] Public Resources Code section 21002; California Code of Regulations, title 14, section 15091.

[88] California Code of Regulations, title 14, section 15093.

[89] California Code of Regulations, title 14, section 15095.

[90] Public Resources Code section 21081.6, subdivision (a); California Code of Regulations, title 14, section 15097.

[91] Public Resources Code section 21166; California Code of Regulations, title 14, sections 15162-15164.

[92] Government Code section 66031.

(2) If the mediation does not resolve the action, the court may, in its discretion, schedule a settlement conference before a judge of the superior court. If the action is later heard on its merits, the judge hearing the action shall not be the same judge who conducted the settlement conference, except in counties with only one judge of the superior court.[93]

Costs of CEQA Compliance

In general, the project proponent (also known as the applicant) bears 100 percent of the lead agency's costs for CEQA compliance, which often includes the cost of hiring a consultant to prepare the CEQA document. A lead agency is authorized to "charge and collect a reasonable fee from any person proposing a project subject to [CEQA] in order to recover the estimated costs incurred by the lead agency" for preparing a ND or an EIR for the project and for procedures necessary to comply with CEQA on the project.[94] Additionally, the lead agency may require an applicant to provide data and information for CEQA compliance purposes.[95] These costs are generally considered a part of the cost of the project. For public projects, the cost is born by the public project proponent unless the project proponent has fee authority or qualifies for one of the many state or federal construction grants which authorize CEQA expenses as part of the cost of the project.

Claimant's Position

Claimant alleges reimbursable state-mandated costs to school districts and community college districts for "developing, adopting and implementing policies and procedures, and periodically revising those policies and procedures, to comply with the requirements of [CEQA], and related statutes and regulations."[96] Claimant additionally asserts that the test claim statutes and regulations impose a list, approximately 100 pages long, of reimbursable state-mandated activities relating to CEQA compliance. The specific activities claimed can be found in the test claim filing and the declarations of William C. McGuire, Clovis Unified School District and Thomas J. Donner, Santa Monica Community College District.[97]

In claimant's response to DOF's comments, claimant asserts that "DOF is mistaken" in its interpretation that CEQA is entirely a law of general application. Specifically, claimant cites to Education Code section 17025, subdivision (b) which provides that the applicant district is the lead agency for purposes of CEQA with regard to projects funded under the State School Building Lease-Purchase Law of 1976.[98] Thus, the claimant asserts, a school district, "when

[97] See Test Claim filing, pp. 4-185 and Declarations of William C. McGuire, Clovis Unified School District and Thomas J. Donner, Santa Monica Community College District, pp. 2-101.

[98] Claimant, Response to DOF Comments, March 31, 2004, p.2. Note also that claimant asserts on page 1 that "[t]he comments of DOF are incompetent and should be excluded." However,

constructing any new school or reconstructing or altering any existing building, is not only required to comply with CEQA, it is also required to fulfill the governmental duties of a lead agency. Other persons and entities are not required to do so."[99]

Claimant also disputes DOF's argument that school districts are not compelled to construct additional school facilities or acquire any site for the purposes of constructing a school building. Claimant cites to the following:

1. *Butt v. State of California*, which discusses the duty of the Legislature to "provide for a system of common schools, by which a school be kept up and supported in each district."[100]

2. A report of the California Research Bureau which states in part that one challenge public schools face ". . . .is the anticipated growth of nearly 2 million K-12 students during the next decade that will require many districts to build new schools to meet burgeoning student demand." [101] That report also discusses the shortfall of available funds to meet the need for public school construction and rehabilitation.

3. The March 2004 Proposition 55 ballot information pamphlet which discusses the "need to construct new schools to house nearly 1 million pupils and modernize schools for an additional 1.1 million pupils.[102]

Claimant states that "a finding of legal compulsion is not an absolute prerequisite to a finding of a reimbursable mandate"[103] and discusses the case law regarding practical compulsion. Claimant concludes that "[i]n light of the finding that there is a need to construct new schools to house 1.1 million pupils and the need to modernize schools for an additional 1.1 million pupils, it is beyond the realm of practical reason to opportunistically argue that there is no state law or regulation which requires a school district to construct additional school facilities or acquire any site for the purpose of constructing a school building."[104]

Claimant also disputes DOF's argument that the costs incurred under CEQA are allowable costs for the use of new construction grants provided by the State Allocation Board under the School Facilities Program (SFP). Specifically, Claimant argues:

DOF's comments on the test claim do not make any factual assertion and, in any event, are supported by the declaration of Walt Schaff. (See DOF, Comments on the Test Claim, dated March 8, 2004, p. 4.

[99] Claimant, Response to DOF Comments, supra, p.2

[100] Claimant, Response to DOF Comments, supra, p.2, citing *Butt v. State of California* (1992) 4 Cal. 4th 668, p. 680.

[101] Id, p.3, citing *School Facility Financing – A History of the Role of the State allocation Board and Options for the Distribution of Proposition 1A Funds* (Cohen, Joel, February 1999).

[102] Id.

[103] Id, p. 4.

[104] Id, p. 7.

> The district's necessary costs of CEQA are not funded out of the [State's share of] 50 percent given to school districts to construct or modernize schools. CEQA is a separate statutory program. In fact, Education Code section 17025, subdivision (a) provides that the State Allocation Board shall not authorize a contract for the construction of any new school, or for the addition to, or reconstruction or alteration of, any existing building, for lease-purchase to any school district unless the applicant district has submitted plans therefor [sic] to the Department of General Services and obtained the written approval of the department pursuant to Article 3 (commencing with Section 17280) of Chapter 3 of part 10.5.
>
> DOF's argument in this regard is bereft of logic or legal foundation.[105]

Finally, claimant disagrees with DOF's position that Education Code Part 1, Chapter 6, Title 1, Division, 1 provides schools with authority to impose development fees and that therefore Government Code section 17556, subdivision (d) prohibits reimbursement for any state-mandated activities. Claimant argues: "Government Code section 17556(d) refers to 'service charges, fees or assessments.' Education Code 17620 refers to a 'fee, charge, dedication or other requirement.' They are not the same."[106] Claimant includes a discussion of the limitations on the purposes for which a "fee, charge or dedication" may be used (i.e. to fund the construction or reconstruction of school facilities but not for maintenance) pursuant to Government Code section 17620, subdivision (a) (1).

Department of Finance's Position

DOF, in its comments on the test claim, states that "[CEQA] requirements are not unique to local government.[107] In support of this argument DOF cites to Public Resources Code section 21001.1 and California Code of Regulations, title 14, section 15002. Public Resources Code section 21001.1 provides:

> The Legislature further finds and declares that it is the policy of the state that projects to be carried out by public agencies be subject to the same level of review and consideration under this division as that of private projects required to be approved by public agencies.

Moreover, DOF argues, CEQA applies to discretionary, school district proposed, projects and school facilities construction projects.[108] In support of this assertion DOF writes:

> Nothing in State law or regulation requires a school district to construct additional school facilities or to acquire any site for the purpose of constructing a school building. Instead, the law provides school districts with flexibility, discretion, and choice over the manner in which districts elect to house their student populations. For example, school districts have the discretion to operate year round multi-track schools or two kindergarten sessions per day, use portable classrooms or transport

[106] Claimant, Response to DOF Comments, supra, p. 9.

[107] DOF, Comments on the Test Claim, March 8, 2004, p.1.

[108] DOF, Comments on the Test Claim, supra, p. 2.

students to underused schools. It is the district's voluntary decision to construct a school facility rather than using the aforementioned alternative that forced the district to carry out the activities required under CEQA.[109]

DOF also cites to the *Kern*[110] case for the proposition that "where a local government entity voluntarily participates in a statutory program, the State may require the entity to comply with reasonable conditions without providing additional funds to reimburse the entity for [the] increased level of activity."[111]

Next, DOF argues that the costs incurred under CEQA are allowable costs for the use of new construction grants provided by the State Allocation Board.[112] Specifically, DOF states "[t]he State Allocation Board provides new construction grants through the State School Facilities Program (SFP) to cover the State's share of all necessary project costs, which include costs incurred under CEQA. According to DOF, the State's share "is typically 50 percent, but may be up to 100 percent if a district receives hardship funding. Therefore, any necessary costs of CEQA are, in fact, funded through voluntary participation in the SFP."[113]

Finally, DOF argues that "school districts have the authority to charge development fees to finance construction projects."[114] Specifically, DOF asserts that Education Code sections 17620-17626 "authorize school districts to levy fees against any construction within its district boundaries for the purpose of funding school construction."[115] DOF concludes with a discussion of the prohibition against finding a reimbursable mandate in a statute or executive order ". . . .if the affected local agencies have authority to levy service charges, fees, or assessments sufficient to pay for the mandated program in the statute or executive order."[116]

Discussion

The courts have found that article XIII B, section 6, of the California Constitution recognizes the state constitutional restrictions on the powers of local government to tax and spend. "Its purpose is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are 'ill equipped' to assume increased financial responsibilities because of the taxing and spending limitations that articles XIII A and XIII B impose."[117] A test claim statute or executive order may impose a reimbursable state-mandated program if it orders or commands a local agency or school district to engage in an activity or

[117] *County of San Diego v. State of California* (1997) 15 Cal.4th 68, 81.

task.[118] In addition, the required activity or task must be new, constituting a "new program," or it must create a "higher level of service" over the previously required level of service.[119]

The courts have defined a "program" subject to article XIII B, section 6, of the California Constitution, as one that carries out the governmental function of providing public services, or a law that imposes unique requirements on local agencies or school districts to implement a state policy, but does not apply generally to all residents and entities in the state.[120] To determine if the program is new or imposes a higher level of service, the test claim statutes and executive orders must be compared with the legal requirements in effect immediately before the enactment.[121] A "higher level of service" occurs when the new "requirements were intended to provide an enhanced service to the public."[122] Finally, the newly required activity or increased level of service must impose costs mandated by the state.[123]

The Commission is vested with exclusive authority to adjudicate disputes over the existence of state-mandated programs within the meaning of article XIII B, section 6.[124] In making its decisions, the Commission must strictly construe article XIII B, section 6, and not apply it as an "equitable remedy to cure the perceived unfairness resulting from political decisions on funding priorities."[125]

This analysis addresses the following issues:

1. Is the California State Clearinghouse Handbook an executive order subject to Article XIII B, section 6 of the California Constitution?
2. Does the Commission have jurisdiction over statutes adopted prior to January 1, 1975?
3. Do the test claim statutes and executive orders impose state-mandated duties on school districts and community college districts within the meaning of Article XIII B, section 6 of the California Constitution?

4. Do the activities mandated by the test claim statutes and executive orders impose a new program or higher level of service on school districts and community college districts?

Issue 1: The California State Clearinghouse Handbook is Not an Executive Order Subject to Article XIIIB, Section 6

At the outset, staff finds that the California State Clearinghouse Handbook (Handbook) is not an executive order. An executive order is "any order, plan, requirement, rule or regulation" issued by the Governor or any official serving at the pleasure of the Governor.[126] Although the Handbook is issued by the Governor's Office of Planning and Research (OPR) and the director of OPR serves at the pleasure of the Governor, the Handbook does not impose an "order, plan, requirement, rule or regulation." Because the Handbook does not require districts to do anything and is not a plan, it is not an executive order. The Handbook merely explains the functions of the State Clearinghouse under CEQA and provides an overview of the environmental review process, summarizing requirements that have been established pursuant to statutory and regulatory provisions, including the test claim statutes and test claim regulations. The Handbook does not add any additional requirements above what is required by the relevant statutes and regulations but rather provides a tool to make compliance easier. Specifically, the Handbook is designed to make CEQA compliance easier for local agencies and school districts by laying things out in a simple step-by-step process. However, local agencies and school districts are free to refer solely to CEQA, the CEQA regulations and related statutes and regulations and to consult with their attorneys to determine how to navigate the CEQA process if that is their preference. Nonetheless, given the fact that courts have cited to the Handbook as a guide to how the CEQA process works in practice,[127] it has value as a guide to the process.

Issue 2: The Commission Does Not Have Jurisdiction and Reimbursement is Not Required for Statutes Enacted Prior to January 1, 1975

Before beginning a mandates analysis on the test-claim statutes and regulations, a determination of which statutes the Commission has jurisdiction over must be made. California Constitution Article XIII B, section 6, subdivision (a) requires the state to reimburse local governments for any state-mandated new program or higher level of service imposed on any local government with few exceptions. One of the exceptions to the reimbursement requirement provided in article XIII B, section 6 of the California Constitution is for "[l]egislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to 1975."[128]

Staff finds that the Commission does not have jurisdiction over Public Resources Code sections 21082, 21083, 21100, 21102, 21150, 21151, 21152, 21153, 21154, 21165, 21166, or 21167 as added or amended by Statutes 1970, chapter 1433; and, Statutes 1972, chapter 1154 since these statutes were enacted prior to January 1, 1975. Staff also finds that Public Resources Code sections 21102, 21150 and 21154 have not been amended since 1972. Therefore, no

---

[126] Government Code section 17516.

[127] *Citizens Assn. for Sensible Development of Bishop Area v. County of Inyo* (1985) 172 Cal.App.3d 151. (Cited to show how the CEQA process works in practice.)

[128] California Constitution Article XIII B, Section 6 subdivision (a)(3); see also Government Code Section 17514.

constitutional or statutory provision mandates reimbursement to local governments for costs incurred in complying with these statutes.

Issue 3: Do the Remaining Test Claim Statutes and Regulations Impose State-Mandated Duties on School Districts and Community College Districts Within the Meaning of Article XIII B, Section 6 of the California Constitution?

For the test claim statutes or regulations to impose a state-mandated program, the language must order or command a school district or community college district to engage in an activity or task. If the language does not do so, then article XIII B, section 6 is not triggered. Moreover, where program requirements are only invoked after the district has made an underlying discretionary decision causing the requirements to apply, or where participation in the underlying program is voluntary, courts have held that resulting new requirements do not constitute a reimbursable state mandate.[129] Stated another way, a reimbursable state mandate is created when the test claim statutes or regulations establish conditions under which the state, rather than a local entity, has made the decision requiring the district to incur the costs of the new program.[130]

Staff finds that the statutes and regulations listed below, which generally require compliance with the CEQA process discussed at length in the background above on pages 5-19 do not mandate school districts or community college districts to perform any activities because:

A. The plain language of Public Resources Code section 21083 imposes requirements on OPR and the Secretary of the Resources Agency, not school districts or community college districts.

B. Although school districts and community college districts are required to undertake maintenance projects, including emergency repair projects, CEQA contains specific exemptions for maintenance projects and emergency projects.

C. For all other school district and community college district projects, CEQA is triggered by the district's voluntary decision to undertake a project or accept state funding for a project.

Education Code Section 17025 added by Statutes 1996, Chapter 1562; Government Code Sections 66031 and 66034 as amended by Statutes 1994, Chapter 300, and Statutes 1990, Chapter 1455; Public Resources Code Sections 21002.1, 21003, 21003.1, 21080.09, 21080.1, 21080.3, 21080.4, 21081, 21082.1, 21082.2, 21083, 21083.2, 21091, 21092, 21092.1, 21092.2, 21092.3, 21092.4, 21092.5, 21092.6, 21094, 21100, 21151, 21151.2, 21151.8, 21152, 21153, 21157, 21157.1, 21157.5, 21158, 21161, 21165, 21166, 21167, 21167.6, 21167.6.5, 21167.8, 21168.9 as added or amended by Statutes 1975, Chapter 222; Statutes 1976, Chapter 1312; Statutes 1977, Chapter 1200; Statutes 1983, Chapter 967; Statutes 1984, Chapter 571; Statutes 1985, Chapter 85; Statutes 1987, Chapter 1452; Statutes 1989, Chapter 626; Statutes 1989, Chapter 659; Statutes 1991, Chapter 905; Statutes 1991, Chapter 1183; Statutes 1991, Chapter 1212; Statutes 93, Chapter 375; Statutes 1993, Chapter 1130; Statutes

However, staff finds that Public Resources Code section 21082, as amended by Statutes of 1976, chapter 1312 and California Code of Regulations, title 14 section 15022 as amended by Register 83, No. 29 mandate school districts and community college districts to adopt objectives, criteria, and procedures, consistent with CEQA and the CEQA regulations, for the preparation of NDs, by ordinance, resolution, rule or regulation, no later than 60 days after the Secretary of the Resources Agency adopts the CEQA regulations or amendments thereto. This requirement to adopt objectives, criteria, and procedures for NDs is not triggered by an underlying voluntary decision of a school district or community college district.

A. The plain language of Public Resources Code section 21083 imposes requirements on OPR and the Secretary of the Resources Agency, but does not impose mandated duties on school districts or community college districts.

Public Resources Code section 21083 provides:

(a) The Office of Planning and Research shall prepare and develop proposed guidelines for the implementation of this division by public agencies. The guidelines shall include objectives and criteria for the orderly evaluation of projects and the preparation of environmental impact reports and negative declarations in a manner consistent with this division.

(b) The guidelines shall specifically include criteria for public agencies to follow in determining whether or not a proposed project may have a "significant effect on the environment." The criteria shall require a finding that a project may have a "significant effect on the environment" if one or more of the following conditions exist:

(1) A proposed project has the potential to degrade the quality of the environment, curtail the range of the environment, or to achieve short-term, to the disadvantage of long-term, environmental goals.

(2) The possible effects of a project are individually limited but cumulatively considerable. As used in this paragraph, "cumulatively considerable" means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.

(3) The environmental effects of a project will cause substantial adverse effects on human beings, either directly or indirectly.

(c) The guidelines shall include procedures for determining the lead agency pursuant to Section 21165.

(d) The guidelines shall include criteria for public agencies to use in determining when a proposed project is of sufficient statewide, regional, or areawide environmental significance that a draft environmental impact report, a proposed negative declaration, or a proposed mitigated negative declaration shall be submitted to appropriate state agencies, through the State Clearinghouse, for review and comment prior to completion of the environmental impact report, negative declaration, or mitigated negative declaration.

(e) The Office of Planning and Research shall develop and prepare the proposed guidelines as soon as possible and shall transmit them immediately to the Secretary of the Resources Agency. The Secretary of the Resources Agency shall certify and adopt the guidelines pursuant to Chapter 3.5 (commencing with Section 11340) of Part 1 of Division 3 of Title 2 of the Government Code, which shall become effective upon the filing thereof. However, the guidelines shall not be adopted without compliance with Sections 11346.4, 11346.5, and 11346.8 of the Government Code.

(f) The Office of Planning and Research shall, at least once every two years, review the guidelines adopted pursuant to this section and shall recommend proposed changes or amendments to the Secretary of the Resources Agency. The Secretary of the Resources Agency shall certify and adopt guidelines, and any amendments thereto, at least once every two years, pursuant to Chapter 3.5 (commencing with Section 11340) of Part 1 of Division 3 of Title 2 of the Government Code, which shall become effective upon the filing thereof. However, guidelines may not be adopted or amended without compliance with Sections 11346.4, 11346.5, and 11346.8 of the Government Code.

Based on the plain language of this statute, Public Resources Code section 21083 requires OPR and the Secretary of Resources to perform activities but it does not mandate school districts or community college districts to perform any activities.

B. Although school districts and community college districts are required to undertake maintenance projects, including emergency repair projects, CEQA contains specific exemptions for maintenance projects and emergency projects.

Maintenance projects, including emergency repair projects, are the only projects over which districts do not have discretion. However, maintenance projects and emergency projects are among the many exemptions from CEQA that have been provided for school projects. School districts enjoy many exemptions from CEQA not only for maintenance and emergencies, but also for major reconstruction projects and additions to schools that include up to ten new class rooms.[131] Although school districts and community college districts are required to keep schools and colleges in good repair, staff finds that school and community college projects to maintain facilities in good repair, including emergency repair projects, are statutorily or categorically exempt from CEQA.

1. *School Districts and Community College Districts are Required to Keep Schools in Good Repair Which Includes Making Emergency Repairs*

Education Code section 17593 requires school districts to keep schools in repair:

> The clerk of each district except a district governed by a city or city and county board of education shall, under the direction of the governing board, keep the schoolhouses in repair during the time school is taught therein, and exercise a general care and supervision over the school premises and property during the vacations of the school.

Moreover, Education Code section 17565 requires the governing board of any school district to "furnish, repair, insure against fire, and in its discretion rent the school property of its districts."

Prior to 2006, "good repair" was not defined in statute. Education Code section 17002 was amended by Statutes 2006, chapter 704 to define "good repair" to mean:

> [T]he facility is maintained in a manner that assures that it is clean, safe, and functional as determined pursuant to an interim evaluation instrument developed by the Office of Public School Construction and approved by the board or a local evaluation instrument that meets the same criteria. . . .In order to provide that school facilities are reviewed to be clean, safe, and functional, the school facility inspection and evaluation instrument and local evaluation instruments shall include at least the following criteria:

---

[131] There are also several exceptions available for discretionary school projects including: Statutory exceptions: Public Resources Code section 21102 and 21150; California Code of Regulations, title 14, section 15262 (feasibility and planning studies); Government Code section 65995.6 (school facilities needs analysis); Categorical exceptions: California Code of Regulations, title 14, section 15323 (normal operations of existing facilities for public gatherings); California Code of Regulations, title 14, section 15322 (educational or training programs involving no physical changes); California Code of Regulations, title 14, section 15312 (sales of surplus government property); California Code of Regulations, title 14, section 15327 (leasing of new facilities); California Code of Regulations, title 14, 21080, subdivision (b)(5); California Code of Regulations, title 14, section 15270 (disapproved projects).

(A) Gas systems and pipes appear and smell safe, functional, and free of leaks.

(B) (i) Mechanical systems, including heating, ventilation, and air-conditioning systems, are functional and unobstructed.

(ii) Appear to supply adequate amount of air to all classrooms, work spaces, and facilities.

(iii) Maintain interior temperatures within normally acceptable ranges.

(C) Doors and windows are intact, functional and open, close, and lock as designed, unless there is a valid reason they should not function as designed.

(D) Fences and gates are intact, functional, and free of holes and other conditions that could present a safety hazard to pupils, staff, or others. Locks and other security hardware function as designed.

(E) Interior surfaces, including walls, floors, and ceilings, are free of safety hazards from tears, holes, missing floor and ceiling tiles, torn carpet, water damage, or other cause. Ceiling tiles are intact. Surfaces display no evidence of mold or mildew.

(F) Hazardous and flammable materials are stored properly. No evidence of peeling, chipping, or cracking paint is apparent. No indicators of mold, mildew, or asbestos exposure are evident. There is no apparent evidence of hazardous materials that may pose a threat to the health and safety of pupils or staff.

(G) Structures, including posts, beams, supports for portable classrooms and ramps, and other structural building members appear intact, secure, and functional as designed. Ceilings and floors are not sloping or sagging beyond their intended design. There is no visible evidence of severe cracks, dry rot, mold, or damage that undermines structural components.

(H) Fire sprinklers, fire extinguishers, emergency alarm systems, and all emergency equipment and systems appear to be functioning properly. Fire alarm pull stations are clearly visible. Fire extinguishers are current and placed in all required areas, including every classroom and assembly area. Emergency exits are clearly marked and unobstructed.

(I) Electrical systems, components, and equipment, including switches, junction boxes, panels, wiring, outlets, and light fixtures, are securely enclosed, properly covered and guarded from pupil access, and appear to be working properly.

(J) Lighting appears to be adequate and working properly. Lights do not flicker, dim, or malfunction, and there is no unusual hum or noise from light fixtures. Exterior lights onsite appear to be working properly.

(K) No visible or odorous indicators of pest or vermin infestation are evident.

(L) Interior and exterior drinking fountains are functional, accessible, and free of leaks. Drinking fountain water pressure is adequate. Fountain water is clear

and without unusual taste or odor, and moss, mold, or excessive staining is not evident.

(M) (i) Restrooms and restroom fixtures are functional.

(ii) Appear to be maintained and stocked with supplies regularly.

(iii) Appear to be accessible to pupils during the school day.

(iv) Appear to be in compliance with Education Code Section 35292.5.

(N) The sanitary sewer system controls odor as designed, displays no signs of stoppage, backup, or flooding, in the facilities or on school grounds, and appears to be functioning properly.

(O) Roofs, gutters, roof drains, and downspouts appear to be functioning properly and are free of visible damage and evidence of disrepair when observed from the ground inside and outside of the building.

(P) The school grounds do not exhibit signs of drainage problems, such as visible evidence of flooded areas, eroded soil, water damage to asphalt playgrounds or parking areas, or clogged storm drain inlets.

(Q) Playground equipment and exterior fixtures, seating, tables, and equipment are functional and free of significant cracks, trip hazards, holes, deterioration that affects functionality or safety, and other health and safety hazards.

(R) School grounds, fields, walkways, and parking lot surfaces are free of significant cracks, trip hazards, holes, deterioration that affects functionality or safety, and other health and safety hazards.

(S) Overall cleanliness of the school grounds, buildings, common areas, and individual rooms demonstrates that all areas appear to have been cleaned regularly, and are free of accumulated refuse and unabated graffiti. Restrooms, drinking fountains, and food preparation or serving areas appear to have been cleaned each day that the school is in session.

With regard to community college districts, Education Code section 81601 states:

> The governing board of a community college district shall furnish, repair, insure against fire, and in its discretion rent the school property of its districts. ...

Education Code section 81601 does not define "good repair" nor is it defined elsewhere under Title 3 of the Education Code, which contains the provisions regarding community college districts. However, since "property" includes "any external thing over which the rights of possession, use, and enjoyment are exercised,"[132] the requirement to repair includes real property as well as facilities owned by the district. Moreover, because the term "repair" is defined as "to restore to sound condition after damage or injury" and "to renew or refresh,"[133] staff finds that "repair" includes "maintenance" for purposes of these provisions. Thus, both school districts

[132] Black's Law Dictionary, Seventh Edition, 1999, page 1232, column 2.

[133] Webster's II, New Collegiate Dictionary, 1999, page 939, column 2.

and community college districts are required by statute to maintain their property.[134] The requirement to keep school facilities in good repair necessarily includes making necessary emergency repairs, such as those caused by, among other things, earthquakes, floods, and fires.

Moreover, school and community college maintenance projects, including emergency repair projects, are projects subject to CEQA. Note also that, as will be discussed in greater detail below, though emergency repairs are part of "maintenance" for the purposes of Education Code sections 17002, 17565, 17593 and 81601, "maintenance" and "emergency" projects are treated differently from one another, for purposes of CEQA.

2. *But Emergency Projects and Other Projects Related to Maintenance are Statutorily Exempt From CEQA.*

There are two kinds of exemptions from CEQA: statutory and categorical. Statutory exemptions describe types of projects which the Legislature has decided are not subject to CEQA procedures and policies and these exemptions are absolute. Statutory exemptions are found in various places in the California Code and are comprehensively listed in Article 18 of the CEQA Guidelines. Categorical exemptions, on the other hand, are descriptions of types of projects which the Secretary of the Resources Agency has determined do not usually have a significant effect on the environment. These exemptions are not absolute; there are exceptions to categorical exemptions. Under CEQA the filing of a NOE is discretionary; however, it triggers a 35-day, statute of limitations for a legal challenge to the lead agency's decision that the project is exempt.[135]

Statutory exemptions take several forms. Most statutory exemptions are complete exemptions from CEQA. Other exemptions apply to only part of the requirements of CEQA, and still other exemptions apply only to the timing of CEQA compliance. Examples of some of the statutory exemptions potentially applicable to school projects include:

- THE CLOSING OF OR THE TRANSFER OF STUDENTS FROM ANY PUBLIC SCHOOL. This includes the transfer of K-12 grade students to another school as set forth in section 21080.18 of the Public Resources Code so long as the resulting physical changes are categorically exempt from CEQA.[136]
- ESTABLISHING OR MODIFYING FEES.[137]
- ISSUING OR REFUNDING BONDS UNDER THE CALIFORNIA EDUCATIONAL FACILITIES AUTHORITY ACT. Note though that development projects funded by these bonds are still subject to CEQA unless they fall under an exemption.
- EMERGENCY PROJECTS.
    - Projects to maintain, repair, restore, demolish, or replace property or facilities damaged or destroyed as a result of a disaster in a disaster stricken area in which a state of emergency has been proclaimed by the Governor pursuant to the

[134] Note that this analysis uses the words "maintenance" and "repair" interchangeably.

[135] California Code of Regulations, title 14, section 15062.

[136] California Code of Regulations, title 14, section 15282.

[137] Public Resources Code section 21080, subdivision (b)(8).

California Emergency Services Act, commencing with Section 8550 of the Government Code. This includes projects that will remove, destroy, or significantly alter an historical resource when that resource represents an imminent threat to the public of bodily harm or of damage to adjacent property or when the project has received a determination by the State Office of Historic Preservation pursuant to Public Resources Code section 5028, subdivision (b).

- Emergency repairs to publicly or privately owned service facilities necessary to maintain service essential to the public health, safety or welfare.
- Specific actions necessary to prevent or mitigate an emergency. This does not include long-term projects undertaken for the purpose of preventing or mitigating a situation that has a low probability of occurrence in the short-term.[138]

3. *Maintenance Projects Are Categorically Exempt from CEQA.*

The following are some of the categorical exemptions that can be utilized by school districts and community college districts for maintenance projects:

- OPERATION, REPAIR, MAINTENANCE, AND RECONSTRUCTION. This exemption covers the operation, repair, permitting, leasing, licensing, or minor alteration of existing structures or facilities, mechanical equipment, or topographical features. This exemption is limited to negligible or no expansion of previous use and may includes among other things:
  - Interior or exterior repairs and alterations
  - Facilities used to provide public utilities services
  - Small additions
  - Addition of safety or health protection devices
  - Maintenance of certain facilities to protect fish and wildlife resources.[139]
- REPLACEMENT OR RECONSTRUCTION OF EXISTING FACILITIES OR STRUCTURES. This exemption is limited to structures on the same site with substantially the same purpose and capacity as the existing structure. One example given is the replacement or reconstruction of schools with earthquake resistant structures that do not increase the structural capacity by more that 50 percent.[140]
- CONSTRUCTION OR PLACEMENT OF ACCESSORY STRUCTURES. Examples are on-premises signs, small parking lots, and seasonal or temporary use structures in facilities designed for public use such as lifeguard towers, mobile

---

[138] Public Resources Code sections 21080(b)(2), (3), and (4), 21080.33 and 21172; California Code of Regulations, title 14, section 15269; See also *Castaic Lake Water Agency v. City of Santa Clarita* (1995) 41 Cal.App.4th 1257; and *Western Municipal Water District of Riverside County v. Superior Court of San Bernardino County* (1987) 187 Cal.App.3d 1104.

[139] California Code of Regulations, title 14, section 15301.

[140] California Code of Regulations, title 14, section 15302.

food units and portable restrooms.[141]

- MINOR ALTERATIONS TO LAND, WATER, OR VEGETATION. The alterations may not involve removal of mature, scenic trees. Examples include grading on land with less than 10 percent slope that does not involve an environmentally sensitive area or severe geological hazards; new landscaping or gardening; minor trenching or backfilling of previously excavated earth with compatible material; minor temporary uses of land having negligible effects on the environment (e.g. carnivals and Christmas tree sales).[142]
- MINOR ADDITIONS TO SCHOOLS. Limited to additions (including permanent or temporary classrooms) within current school grounds and must not increase student capacity by more than 25 percent or ten classrooms, whichever is less.[143]
- COMMON SENSE EXCEPTION. This exemption is based on the general rule that CEQA only applies to projects which have a potential for causing a significant effect on the environment. Under this exemption a lead agency may find a project exempt if "it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment."[144] This exemption acts as a "catchall" exception in that projects that do not fit under any of the statutory or categorical exemptions may nonetheless be exempt under this provision.

There is no evidence in the record to dispute the conclusion that school district and community college district maintenance projects and emergency repair projects are exempt from CEQA. Moreover, staff searched the CEQAnet database maintained by OPR at www.ceqanet.ca.gov, for school district and community college district environmental documents filed between 1982 to the present and did not find an instance in which a school has prepared an ND or EIR for an emergency or maintenance project.

Based upon the forgoing discussion of the applicable exemptions, staff finds that for school district and community college district maintenance and emergency projects, CEQA does not impose a state-mandated program.

C. For all other school district and community college district projects, CEQA is triggered by the district's voluntary decision to undertake a project or accept state funding for a project.

As discussed in the background, under CEQA a "project" is an activity which may cause either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment, and which is, in the context of school district and community college district projects:

---

[141] California Code of Regulations, title 14, section 15311.

[142] California Code of Regulations, title 14, section 15304.

[143] California Code of Regulations, title 14, section 15314.

[144] California Code of Regulations, title 14, section 15061, subdivision (b)(3).

- an activity directly undertaken by the district, or,
- an activity undertaken by a district which is supported, in whole or in part, through contracts, grants, subsidies, loans, or other forms of assistance from one or more public agencies.

The decision to undertake such projects could arise in a myriad of ways, from a district-level decision to an initiative enacted by the voters. Likewise, there are a number of funding sources that a school district or community college district might utilize to fund discretionary school construction projects. When a state funding source is used, proof of compliance with CEQA is a condition of funding.

1. *All non-maintenance, non-emergency school projects are at the discretion of the school districts or community college districts and thus, compliance with CEQA for these projects is not legally compelled by the state.*

Aside from the statutory requirement to maintain school and college facilities in good repair, the state has not required districts to undertake other construction projects that *do not* involve repair or maintenance. In comments filed March 31, 2004, however, claimant argues that "constructing new school facilities is not optional."[145] In support of this contention, claimant cites to *Butt v. State of California*[146] for the propositions that the state has a responsibility to "provide for a system of common schools, by which a school shall be kept up and supported in each district" and that those schools are required to be "free."

Staff disagrees with the claimant's argument that "constructing new school facilities is not optional." With regard to new construction of school buildings, the Second District Court of Appeal has stated: "[w]here, when or how, if at all, a school district shall construct school buildings is within the sole competency of its governing board to determine."[147]

It is true, as claimant states, that courts have consistently held public education to be a matter of statewide rather than a local or municipal concern, and that the Legislature's power over the public school system is plenary.[148] These conclusions are true for every Education Code statute that comes before the Commission on the question of reimbursement under article XIII B, section 6 of the California Constitution. It is also true that the state is the beneficial owner of all school properties and that local school districts hold title as trustee for the state.[149]

Nevertheless, article IX, section 14 of the California Constitution allows the Legislature to authorize the governing boards of all school districts to initiate and carry on any program or activity, or to act in any manner that is not in conflict with state law. In this respect, it has been and continues to be the legislative policy of the state to strengthen and encourage local

---

[146] *Butt v. State of California* (1992) 4 Cal. 4th 688.

[147] *People v. Oken* (1958)159 Cal.App.2d 456, 460.

[148] See *Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, 1579, fn. 5; *California Teachers Assn. v. Hayes* (1992) 5 Cal.App.4th 1513, 1524 (formerly known as *California Teachers Assn. v. Huff*); *Hall v. City of Taft* (1956) 47 Cal.2d 177, 179.

[149] *Hayes v. Commission on State Mandates, supra*, 11 Cal.App.4th 1564, 1579, fn. 5.

responsibility for control of public education through local school districts.[150] The governing boards of K-12 school districts may hold and convey property for the use and benefit of the school district.[151] Governing boards of K-12 school districts have also been given broad authority by the Legislature to decide when to build and maintain a schoolhouse and, "when desirable, may establish additional schools in the district."[152] Governing boards of community college districts are required to manage and control all school property within their districts, and have the power to acquire and improve property for school purposes.[153] Thus, under state law, the decision to construct a school facility lies with the governing boards of school districts and community college districts, and is not legally compelled by the state.

Additionally, there are no statutes or regulations requiring the governing boards of school districts to construct new buildings or reconstruct unsafe buildings. The decision to reconstruct, or even abandon an unsafe building, is a decision left to the discretion of a school district. In *Santa Barbara School District v. Superior Court*, the California Supreme Court addressed a school district's decision to abandon two of its schools that were determined unsafe, instead of reconstructing a new building, as part of its desegregation plan.[154] The court held that absent proof that there were no school facilities to absorb the students, the school district, "in the reasonable exercise of its discretion, could lawfully take this action."[155] The court describes the facts and the district's decision as follows:

> On August 12, 1971, the Board received a report that the Jefferson school was structurally unsafe within the requirements of section 15503 [a former statute with language similar to Education Code sections 17367 and 81162]. The report recommended that a structural engineer be retained to determine whether the school should be repaired or abandoned, since if it cannot be repaired, it must be abandoned pursuant to section 15516. On May 15, 1972, three days before the final meeting of the Board, the superintendent received a report concerning the rehabilitation or replacement costs of the Jefferson school. The report found that it would cost $621,800 to make the existing structure safe and $655,000 to build an entirely new building. Accordingly, in fashioning the Administration Plan, the superintendent made provision therein for closing the Jefferson school. The Board would certainly be properly exercising its discretion in a reasonable

[154] *Santa Barbara School District v. Superior Court* (1975) 13 Cal.3d 315, 337-338. As a side note, the decision to abandon or reconstruct a school is exempt from CEQA. See Public Resources Code section 21080.17, California Code of Regulations, title 14, sections 15282, subdivision (i) and 15302. See also *San Lorenzo Valley Community Advocates for Responsible Educ. v. San Lorenzo Valley Unified School District* (2006) 139 Cal.App.4th 1356 (decision to close school and transfer students exempt from CEQA).

[155] Id, p. 338.

> manner were it to approve abandoning this building in view of the extreme cost. The determination of the questions whether a new school was needed to replace this structure or whether existing facilities could handle the Jefferson school students due to an expected drop in elementary enrollment, was properly within the Board's discretion.[156]

Thus, school districts are not legally compelled to construct new school facilities in these circumstances. Based on the above analysis, staff finds that CEQA is triggered by the district's voluntary decision to undertake a project or accept state funding for a project subject to CEQA and thus, school districts and community college districts are not legally compelled to comply with CEQA.

2. *Although CEQA compliance is a downstream activity required as a condition of receipt of state funding, school districts and community college districts are not required or legally compelled by the state to request or accept state funding or to comply with CEQA under these circumstances.*

Since 1972, Public Resources Code section 21102 has specifically prohibited a state agency, board or commission from authorizing expenditure of funds for any project, except feasibility or planning studies, which may have a significant effect on the environment unless such request or authorization is accompanied by an EIR. Public Resources Code section 21102, which has not been amended since 1972 specifies:

> No state agency, board, or commission shall request funds, nor shall any state agency, board, or commission which authorizes expenditures of funds, other than funds appropriated in the Budget Act, authorize funds for expenditure for any project, other than a project involving only feasibility or planning studies for possible future actions which the agency, board, or commission has not approved, adopted or funded, which may have a significant effect on the environment unless such request or authorization is accompanied by an environmental impact report.
>
> Feasibility and planning studies exempted by this section from the preparation of an environmental impact report shall nevertheless include consideration of environmental factors.

Additionally, and also since 1972, Public Resources Code section 21150 has specified that:

> State agencies, boards, and commissions, responsible for allocating state or federal funds on a project-by-project basis to local agencies for any project which may have a significant effect on the environment, shall require from the responsible local governmental agency a detailed statement setting forth the matters specified in Section 21100 prior to the allocation of any funds other than funds solely for projects involving only feasibility or planning studies for possible future actions which the agency, board, or commission has not approved, adopted, or funded.

Thus, if a school district or community college district wishes to receive state or federal funding through the state for a project, compliance with CEQA is a prerequisite.

---

[156] Id, p. 337.

Consistent with the Public Resource Code 21102 and 21150 requirements, Education Code section 17025, subdivision (b) requires certification of CEQA compliance as a condition of bond funding for K-12 school districts. Similarly, Education Code section 17268, subdivision (b) requires school districts to comply with CEQA as a condition of receiving state funds for the construction of new school buildings.

Public Resources Code sections 21102 and 21150 make clear that state agencies must require compliance with CEQA and the CEQA regulations (i.e. the requirements of the test claim statutes and regulations) as a condition of providing state funding for any school district or community college district project that is subject to CEQA. However, there is no requirement that a school district or community college district seek funding from the state.

In 2003, the California Supreme Court decided the *Kern High School Dist.* case and considered the meaning of the term "state mandate" as it appears in article XIII B, section 6 of the California Constitution. The school district claimants in *Kern* participated in various funded programs each of which required the use of school site councils and other advisory committees. The claimants sought reimbursement for the costs from subsequent statutes which required that such councils and committees provide public notice of meetings, and post agendas for those meetings.[157]

When analyzing the term "state mandate," the court reviewed the ballot materials for article XIII B, which provided that "a state mandate comprises something that a local government entity is required or forced to do."[158] The ballot summary by the Legislative Analyst further defined "state mandates" as "requirements imposed on local governments by legislation or executive orders."[159] The court also reviewed and affirmed the holding of *City of Merced,*[160] determining that, when analyzing state-mandate claims, the underlying program must be reviewed to determine if the claimant's participation in the underlying program is voluntary or legally compelled.[161] The court stated the following:

> In *City of Merced*, the city was under no legal compulsion to resort to eminent domain-but when it elected to employ that means of acquiring property, its obligation to compensate for lost business goodwill was not a reimbursable state mandate, because the city was not required to employ eminent domain in the first place. Here as well, if a school district elects to participate in or continue participation in any underlying *voluntary* education-related funded program, the district's obligation to comply with the notice and agenda requirements related to that program does not constitute a reimbursable state mandate.[162] (Emphasis in original.)

Thus, the Supreme Court held as follows:

---

[157] *Kern High School Dist., supra*, 30 Cal.4th 727.

[158] Id. at p. 737.

[159] Ibid.

[160] *City of Merced v. State of California* (1984) 153 Cal.App.3d 777.

[161] *Kern High School Dist., supra*, 30 Cal.4th 727, 743.

[162] Ibid.

> [W]e reject claimants' assertion that they have been legally compelled to incur notice and agenda costs, and hence are entitled to reimbursement from the state, based merely upon the circumstance that notice and agenda provisions are mandatory elements of education-related programs in which claimants have participated, *without regard to whether claimant's participation in the underlying program is voluntary or compelled.* [Emphasis added.][163]

Based on the plain language of the statutes creating the underlying education programs in *Kern*, the court determined that school districts were not legally compelled by the state to establish school site councils and advisory bodies, or to participate in eight of the nine underlying state and federal programs and, hence, not legally compelled to incur the notice and agenda costs required under the open meeting laws. Rather, the districts elected to participate in the school site council programs to receive funding associated with the programs.[164]

Similarly here, school districts and community college districts are not legally compelled to request and accept state funds for discretionary construction projects. However, if districts choose to receive state funds then, based upon the plain language of Public Resources Code section 21150, the state must require compliance with CEQA and the CEQA regulations as a condition of receiving state funding for school district and community college district projects. Public Resources Code section 21150 states: "State agencies. . . .responsible for allocating state or federal funds . . . . to local agencies for any project which may have a significant effect on the environment, *shall require from the responsible local governmental agency a detailed statement setting forth the matters specified in Section 21100 prior to the allocation of any funds* other than funds solely for projects involving only feasibility or planning studies for possible future actions." (Emphasis added.)

The financing of school facilities has traditionally been the responsibility of local government, with *assistance* provided by the state. In 1985, the California Supreme Court decided *Candid Enterprises, Inc. v. Grossmont Union High School District*, which provides a good historical summary of school facility funding up until that time.[165]

> In California the financing of public school facilities has traditionally been the responsibility of local government. "Before the *Serrano v. Priest* decision in 1971, school districts supported their activities mainly by levying ad valorem taxes on real property within their districts." [Citation omitted.] Specifically, although school districts had received some state assistance since 1947, and especially since 1952 with the enactment of the State School Building Aid Law of 1952 (Ed. Code, § 16000 et seq.), they financed the construction and maintenance of school facilities through the issuance of local bonds repaid from real property taxes.
>
> After the *Serrano* decision [citation omitted] and to the present day, local government remained primarily responsible for school facility financing, but has often been thrust into circumstances in which it has been able to discharge its responsibility, if at all, only with the greatest difficulty. In these years, the burden

---

[163] Id. at p. 731.

[164] Id. at pp. 744-745.

[165] *Candid Enterprises, Inc. v. Grossmont Union High School Dist.* (1985) 39 Cal.3d 878.

on different localities has been different: extremely heavy on those that have experienced growth in enrollment, light on those that have experienced decline, and somewhere in between on those that have remained stable.

In the early 1970's, because of resistance to increasing real property taxes, localities throughout the state began to experience greater difficulty in obtaining voter approval of bond issues to finance school facility construction and maintenance. As a result, a number of communities chose to impose on developers school-impact fees ... in order to make new development cover the costs of school facilities attributable to it. [Citation omitted.]

With the passage of Proposition 13 in 1978 the burden of school financing became even heavier. "Proposition 13 prohibits ad valorem property taxes in excess of 1% except to finance previously authorized indebtedness. Since most localities have reached this 1% limit, school districts cannot raise property taxes even if two-thirds of a district's voters wanted to finance school construction." [Citation omitted.] Moreover, although Proposition 13 authorizes the imposition of "special taxes" by a vote of two-thirds of the electorate, such special taxes have rarely been imposed, remain novel, and as consequence are evidently not perceived as a practical method of school facility financing – especially in view of the need for a two-thirds vote of the electorate to approve them. [Citation omitted.]

In the face of such difficulties besetting local governments, the state has not taken over any substantial part of the responsibility of financing school facilities, less still full responsibility. To be sure, in order to implement the *Serrano* decision the Legislature has significantly increased assistance to education. But it has channeled by far the greater part of such assistance into educational programs and the lesser part into school facilities; in fiscal year 1981-1982, for example, only 3.6 percent went for such facilities. [Citation omitted.][166]

State assistance for construction of school facilities comes almost exclusively from statewide general obligation bonds, and is implemented through the State Allocation Board.[167] Before Proposition 13, the state bond funds provided to school districts were provided through loan programs in which districts were required to repay their assistance with property tax revenues or local bond funds. After Proposition 13, the State Allocation Board shifted its policy of providing bond fund assistance from a loan-based program to a grant-based program.[168] Today, the grant funds are provided through the School Facility Program (SFP), under the provisions of the Leroy F. Greene School Facilities Act of 1998.[169] Under the SFP, state bond funding is provided in the form of per pupil grants, with supplemental grants for site development, site acquisition, and

[169] Education Code, section 17170.10 et seq.

other project specific costs when warranted.[170] New construction grants provide funding on a 50/50 state and local match basis. Modernization grants provide funding on a 60/40 basis. Districts that are unable to provide local matching funds and are able to meet the financial hardship provisions may be eligible for state funding of up to 100 percent.[171]

Though there is substantial funding made available to school districts through state grants, not all school districts elect to receive assistance from state funds for construction of school buildings. The "School Facility Financing" handbook prepared in February 1999 states, that:

> If a school district wants state funding for construction or repair of a school, it must apply to the State Allocation Board for the money. *There are school districts that repair and construct school buildings without the assistance from the State Allocation Board* (i.e., San Diego Unified School District, San Luis Unified School District). (Emphasis added.)[172]

Therefore, staff finds that school districts are not legally compelled to request or accept state funding or to comply with CEQA requirements under these circumstances.

3. *There is no evidence in the record that school districts or community college districts are practically compelled to undertake non-maintenance or non-emergency projects or receive state funding.*

In comments filed March 31, 2004, claimant notes that "a finding of legal compulsion is not an absolute prerequisite to a finding of a reimbursable mandate" and cites to *Sacramento II* as controlling case law.[173] Claimant relies on a study and Proposition 55 ballot language, both of which state a need to build more schools in California, to demonstrate that school districts are practically compelled to construct new school facilities when existing facilities become inadequate.[174] However, the question before the Commission is not whether additional school facilities are needed, but whether school districts are legally compelled by a state statute or regulation or practically compelled to build them and thus mandated by the state to comply with CEQA. As discussed above, staff finds that school districts and community college districts are not legally compelled to build new facilities or receive state funding for such facilities.

Claimant argues that school districts and community college districts are practically compelled to construct new facilities. Staff finds that school districts are not practically compelled by the state to construct new facilities or use state funds. The proper standard for determining whether

---

[171] Id. p. 61.

[172] School Facility Program Handbook, February 1999, endnote 2, p. 39.

[173] Claimant's Response to DOF Comments, supra, p. 4, citing *City of Sacramento v. State of California* (1990) 50 Cal.3rd. 51 (*Sacramento II*).

[174] Claimant's Response to DOF Comments, supra, pp. 3-4, citing "School Facility Financing-A History of the Role of the State Allocation Board and Options for the Distribution of Proposition 1A Funds" (Cohen, Joel, February 1999.) and Proposition 55 Ballot Pamphlet from 2004, which identified a need to construct schools to house one million pupils and modernize schools for an additional 1.1 million students.

school districts and community college districts are practically compelled to undertake school construction projects is the *Kern*[175] standard.

Absent legal compulsion, the courts have ruled that at times, based on the particular circumstances, "practical" compulsion might be found. The Supreme Court in *Kern* addressed the issue of "practical" compulsion in the context of a school district that had participated in optional funded programs in which new requirements were imposed. In *Kern,* the court determined there was no "practical" compulsion to participate in the underlying programs, since a district that elects to discontinue participation in a program does not face "certain and severe ... penalties" such as "double ... taxation" or other "draconian" consequences.[176] Rather, local entities that have discretion will make the choices that are ultimately the most beneficial for the entity and its community:

> As to each of the optional funded programs here at issue, school districts are, and have been, free to decide whether to (i) continue to participate and receive program funding, even though the school district also must incur program-related costs associated with the [new] requirements or (ii) decline to participate in the funded program. Presumably, a school district will continue to participate only if it determines that the best interests of the district and its students are served by participation – in other words, if, *on balance*, the funded program, even with strings attached, is deemed beneficial. And, presumably, a school district will decline participation if and when it determines that the costs of program compliance outweigh the funding benefits. (Emphasis in original.)[177]

Here, there is no evidence in the law or in the record that school districts or community college districts that elect not to construct new facilities or use state funds, which would trigger the requirement to comply with CEQA, face certain and severe penalties such as double taxation or other draconian consequences. Instead, school and college facilities projects that are undertaken for purposes other than repair and maintenance are discretionary decisions of the district, analogous to the situation in *City of Merced.* There, the issue before the court was whether reimbursement was required for new statutory costs imposed on the local agency to pay a property owner for loss of goodwill, when a local agency exercised the power of eminent domain.[178] The court stated:

> Whether a city or county decides to exercise eminent domain is, essentially, an option of the city or county, rather than a mandate of the state. The fundamental concept is that the city or county is not required to exercise eminent domain. If, however, the power of eminent domain is exercised,

---

[175] *Department of Finance v. Commission on State Mandates* (2003) 30 Cal.4th 727, hereinafter "*Kern*".

[176] *Kern,* supra, 30 Cal.4th 727, 754.

[177] Id, p. 753.

[178] *City of Merced, supra,* (1984) 153 Cal.App.3d 777, 777.

> then the city will be required to pay for loss of goodwill. Thus, payment for loss of goodwill is not a state-mandated cost.[179]

The Supreme Court in *Kern* reaffirmed the *City of Merced* rule in applying it to voluntary education-related funded programs:

> The truer analogy between [*Merced*] and the present case is this: In *City of Merced*, the city was under no legal compulsion to resort to eminent domain – but when it elected to employ that means of acquiring property, its obligation to compensate for lost business goodwill was not a reimbursable state mandate, because the city was not required to employ eminent domain in the first place. Here as well, if a school district elects to participate in or continue participation in any underlying *voluntary* education-related funded program, the district's obligation to comply with the notice and agenda requirements related to that program does not constitute a reimbursable state mandate.[180]

The Code of Civil Procedure provision that was cited in *City of Merced* states:

> Nothing in this title requires that the power of eminent domain be exercised to acquire property necessary for public use. Whether property necessary for public use is to be acquired by purchase or other means or by eminent domain is a decision left to the discretion of the person authorized to acquire the property.[181]

The Law Revision Commission's comment on this provision stated:

> Section 1230.030 makes clear that whether property is to be acquired by purchase or other means, or by exercise of the power of eminent domain, is a discretionary decision. Nothing in this title requires that the power of eminent domain be exercised; but, if the decision is that the power of eminent domain is to be used to acquire property for public use, the provisions of this title apply except as otherwise specifically provided by statute. ...[182]

The holding in *City of Merced* applies in this instance. Any costs incurred under CEQA or the CEQA regulations sections pled (excepting Public Resources Code section 21082, as amended by Statutes 1976, chapter 1312 and California Code of Regulations, title 14, section 15022, as amended by Register 83, No. 29) result from the school district's or community college district's decision to undertake a project to construct or reconstruct school facilities, rather than from a decision made by the state. Under such circumstances, reimbursement is not required.[183]

---

[179] Id. at 783.

[181] Code of Civil Procedure section 1230.030.

[182] California Law Revision Commission comment on Code of Civil Procedure section 1230.030, 2009 Thomson Reuters.

[183] *San Diego Unified School Dist.*, supra, 33 Cal.4th 859, 880.

Therefore, based on the above discussion, staff finds that the state has required school districts and community college districts are not practically compelled to undertake discretionary projects subject to CEQA.

D. The Plain Language of Public Resources Code Section 21082, as Amended by Statutes of 1976, chapter 1312 and California Code of Regulations, Title 14 Section 15022, Subdivision (a), as Amended by Register 83, No. 29, Imposes a State-Mandated Activity.

Staff finds that Public Resources Code section 21082, as amended by Statutes of 1976, chapter 1312, and California Code of Regulations, title 14 section 15022, subdivision (a), as amended by Register 83, No. 29, mandate school districts and community college districts to adopt objectives, criteria, and procedures, consistent with CEQA and the CEQA regulations, for the preparation of NDs, by ordinance, resolution, rule or regulation, no later than 60 days after the Secretary of the Resources Agency adopts regulations (i.e. the CEQA Guidelines) pursuant to Public Resources Code section 21083.

As stated under Issue 2, above, the Commission does not have jurisdiction over Public Resources Code section 21082, as added by Statutes of 1972, chapter 1154 which provided:

> All public agencies shall adopt by ordinance, resolution, rule, or regulation, objectives, criteria, and procedures for the evaluation of projects and the preparation of environmental impact reports pursuant to this division. The objectives, criteria, and procedures shall be consistent with the provisions of this division and with the guidelines adopted by the Secretary of the Resources Agency pursuant to Section 21083. Such objectives, criteria, and procedures shall be adopted by each public agency no later than 60 days after the Secretary of the Resources Agency has adopted guidelines pursuant to Section 21083.

Current law, Public Resources Code section 21082, as amended by Statutes of 1976, chapter 1312, provides:

> All public agencies shall adopt by ordinance, resolution, rule, or regulation, objectives, criteria, and procedures for the evaluation of projects and the preparation of environmental impact reports *and negative declarations* pursuant to this division. A school district, or any other district, whose boundaries are coterminous with a city, county, or city and county, may utilize the objectives, criteria, and procedures of the city, county, or city and county, as may be applicable, in which case, the school district or other district need not adopt objectives, criteria, and procedures of its own. The objectives, criteria, and procedures shall be consistent with the provisions of this division and with the guidelines adopted by the Secretary of the Resources Agency pursuant to Section 21083. Such objectives, criteria, and procedures shall be adopted by each public agency no later than 60 days after the Secretary of the Resources Agency has adopted guidelines pursuant to Section 21083. (Italics added to indicate amended language.)

Public Resources Code section 21082 has been amended twice since its enactment in 1972: in 1975 and 1976. Statutes 1975, chapter 242, which was not pled in this test claim, amended Public Resources Code section 21082, adding the second full sentence which allows districts

(including school districts and community college districts) whose boundaries are coterminous with a city, county, or city and county, to utilize the objectives, criteria, and procedures of the city, county, or city and county, in lieu of adopting its own. The 1975 amendment merely provides an optional alternate means of compliance, and does not mandate any new activities. However, Public Resources Code section 21082 was amended by Statutes 1976, chapter 1312, which has been pled in this test claim and which the Commission does have jurisdiction over, to add the words "and negative declarations" to what must be included in a public agency's objectives, criteria and procedures.

Similarly current California Code of Regulations, title 14 section 15022, subdivision (a), as amended by Register 83, No. 29, states:

> Each public agency shall adopt objectives, criteria, and specific procedures consistent with CEQA and these Guidelines for administering its responsibilities under CEQA, including the orderly evaluation of projects and preparation of environmental documents. The implementing procedures *should* contain at least provisions for: . . . .

(List of subjects recommended for inclusion omitted; emphasis added.)

CEQA has required OPR to review the CEQA regulations and prepare amendments to CEQA regulations and has required the Secretary of the Resources Agency to adopt the regulations since 1972.[184] Public Resources Code section 21083 requires OPR to review the CEQA regulations at least every two years and to prepare amendments to the regulations. It also requires the Secretary of Resources to adopt the regulations which triggers the requirement of Public Resources Code section 21082 as amended by Statutes of 1976, chapter 1312, for school districts and community college districts to adopt objectives, criteria, and procedures for NDs. This continuing requirement is not triggered by any action of a school district or community college and is not dependant on the existence of any development project.[185]

However, the California Code of Regulations, title 14, section 15022, subdivision (a) list of what the implementing procedures "should" include is advisory and thus does not impose any mandated activities. California Code of Regulations, title 14, section 15005 defines words as "mandatory, advisory or permissive." Specifically, it defines "must" or "shall" as mandatory, "should" as advisory and "may" as permissive for purposes of the CEQA regulations. With regard to the word "should" California Code of Regulations, title 14, section 15005, subdivision (b) provides:

---

[184] See the requirements of Public Resources Code section 21087, as adopted by Statutes of 1972, chapter 1154 which were amended into Public Resources Code section 21083 by Statutes 2004, chapter 945; note that the amendment to Public Resources Code section 21087 requiring review at least every two years (rather than periodic review) was adopted by Statutes of 1993, chapter 1130.

[185] Note however, that the Public Resources Code section 21083 requirement for OPR to review and propose amendments to the CEQA regulations at least every two years was supported by local agencies because of concerns that the regulations were not being revised often enough to keep up with the statutory changes and case law developments that local agencies are required to comply with. (See Senate Floor Analysis, Assembly Bill 1888 (Sher), September 9, 1993.)

"Should" identifies *guidance* provided by the Secretary of Resources based on policy considerations contained in CEQA, in the legislative history of the statute, or in federal court decisions which California courts can be expected to follow. Public agencies are *advised* to follow this guidance in the absence of compelling, countervailing considerations.

"Advisory" means "counseling, suggesting, or advising, but not imperative or conclusive."[186] Therefore, because the list provided by 15022, subdivision (a) of what the implementing procedures "should" include is advisory, it does not impose any mandated activities.

Staff finds that the plain language of Public Resources Code section 21082 as amended by Statutes of 1976, chapter 1312 and California Code of Regulations, title 14, section 15022, subdivision (a) as amended by Register 83, No. 29, imposes the following state-mandated activity on school districts and community college districts:

Adopting objectives, criteria, and procedures, consistent with CEQA and the CEQA regulations, for the preparation of NDs, by ordinance, resolution, rule or regulation, no later than 60 days after the Secretary of the Resources Agency adopts the CEQA regulations pursuant to Public Resources Code section 21083.

Issue 4: Do Public Resources Code Section 21082, as Amended by Statutes of 1976, Chapter 1312, or California Code of Regulations, Title 14, Section 15022 as Amended by Register 83, No. 29 Impose a New Program or Higher Level of Service on School Districts or Community College Districts Within the Meaning of Article XIII B, Section 6 of the California Constitution?

Staff finds that the plain language of Public Resources Code section 21082 as amended by Statutes of 1976, chapter 1312 and California Code of Regulations, title 14, section 15022, subdivision (a), as amended by Register 83, No. 29 mandate school districts and community college districts to adopt objectives, criteria, and procedures, consistent with CEQA and the CEQA Guidelines, for the preparation NDs, by ordinance, resolution, rule or regulation, no later than 60 days after the Secretary of the Resources Agency adopts the CEQA regulations (i.e. the CEQA Guidelines) pursuant to Public Resources Code section 21083. However, staff finds that Public Resources Code section 21082, as amended by Statutes of 1976, chapter 1312, and California Code of Regulations, title 14, section 15022, as amended by Register 83, No. 29 do not impose a new program or higher level of service on school districts and community college districts because:

- The Public Resources Code Section 21082 requirement for school districts and community college districts to adopt objectives, criteria, and procedures, consistent with CEQA and the CEQA regulations, for the preparation of NDs by ordinance, resolution, rule or regulation, added in 1976, was a clarification of existing law regarding "evaluation of projects" and therefore does not impose a new program or higher level of service.
- The requirement of California Code of Regulations, title 14, section 15022, as amended by Register 83, No. 29, for school districts and community college districts to adopt objectives, criteria, and procedures, for the evaluation of projects and the preparation of

[186] Black's Law Dictionary, Sixth edition.

environmental documents pursuant to CEQA was required by CEQA before January 1, 1975 and therefore does not impose a new program or higher level of service.

In 1987, the California Supreme Court in *County of Los Angeles v. State of California* expressly stated that the term "higher level of service" must be read in conjunction with the phrase "new program." Both are directed at *state-mandated increases in the services* provided by local agencies.[187] In 1990, the Second District Court of Appeal decided the *Long Beach Unified School District* case, which challenged a test claim filed with the Board of Control on executive orders issued by the Department of Education to alleviate racial and ethnic segregation in schools.[188] The court determined that the executive orders did not constitute a "new program" since schools had an existing constitutional obligation to alleviate racial segregation.[189] However, the court found that the executive orders constituted a "higher level of service" because the requirements imposed by the state went beyond constitutional and case law requirements. The court stated in relevant part the following:

> The phrase "higher level of service" is not defined in article XIII B or in the ballot materials. [Citation omitted.] A mere increase in the cost of providing a service which is the result of a requirement mandated by the state is not tantamount to a higher level of service. [Citation omitted.] However, a review of the Executive Order and guidelines shows that a higher level of service is mandated because the requirements go beyond constitutional and case law requirements. . . .While these steps fit within the "reasonably feasible" description of [case law], the point is that these steps are no longer merely being suggested as options which the local school district may wish to consider but are *required acts. These requirements constitute a higher level of service*. We are supported in our conclusion by the report of the Board to the Legislature regarding its decision that the Claim is reimbursable: "Only those costs that are above and beyond the regular level of service for like pupils in the district are reimbursable."[190] [191]

Thus, in order for Public Resources Code section 21082 as amended by Statutes of 1976, chapter 1312, or California Code of Regulations, title 14, section 15022, as amended by Register 83, No. 29, to impose a new program or higher level of service, the Commission must find that the state is imposing new required acts or activities on school districts and community college districts to adopt objectives, criteria and procedures for NDs beyond those already required by law.

A. The Statutes of 1976, Chapter 1312 Amendment of Public Resources Code Section 21082, Adding "Negative Declarations," Was A Clarification of Existing Law

[187] *County of Los Angeles, supra*, 43 Cal.3d at page 56.

[188] *Long Beach Unified School District, supra,* 225 Cal.App.3rd 155.

[189] Id, p. 173.

[190] Ibid, emphasis added.

[191] See also, *County of Los Angeles v. Commission on State Mandates* (2003) 110 Cal.App.4th 1176, 1193-1194, where the Second District Court of Appeal followed the earlier rulings and held that in the case of an existing program, reimbursement is required only when the state is divesting itself of its responsibility to provide fiscal support for a program, or is forcing a new program on a locality for which it is ill-equipped to allocate funding.

Regarding "Evaluation of Projects" and Therefore Does Not Impose a New Program or Higher Level of Service.

Current law, Public Resources Code section 21082, as amended by Statutes of 1976, chapter 1312, provides:

> All public agencies shall adopt by ordinance, resolution, rule, or regulation, objectives, criteria, and procedures for the evaluation of projects and the preparation of environmental impact reports *and negative declarations* pursuant to this division. A school district, or any other district, whose boundaries are coterminous with a city, county, or city and county, may utilize the objectives, criteria, and procedures of the city, county, or city and county, as may be applicable, in which case, the school district or other district need not adopt objectives, criteria, and procedures of its own. The objectives, criteria, and procedures shall be consistent with the provisions of this division and with the guidelines adopted by the Secretary of the Resources Agency pursuant to Section 21083. Such objectives, criteria, and procedures shall be adopted by each public agency no later than 60 days after the Secretary of the Resources Agency has adopted guidelines pursuant to Section 21083. (Italics added to indicate amended language.)

This amendment added the words "and negative declarations" which requires school districts and community college districts to address NDs in the objectives, criteria and procedures that they must adopt by ordinance, resolution, rule, or regulation.

In order for the Statutes of 1976, chapter 1312 amendment, which requires school districts and community college districts to address NDs in the objectives, criteria and procedures that they must adopt by ordinance, resolution, rule, or regulation to impose a new program or higher level of service, the Commission must find that the state is imposing new required acts or activities on school districts and community college districts beyond those already required by law. For the reasons described below, staff finds that school districts and community college districts have been required to adopt objectives, criteria, and procedures, consistent with CEQA and the CEQA regulations, for the preparation of NDs by ordinance, resolution, rule or regulation under CEQA since 1972, before the enactment of the Statutes of 1976, chapter 1312.

The intent to change the law may not always be presumed by an amendment. The courts have recognized that changes in statutory language can be intended to clarify the law, rather than change it.

> We assume the Legislature amends a statute for a purpose, but that purpose need not necessarily be to change the law. [Citation.] Our consideration of the surrounding circumstances can indicate that the Legislature made ... changes in statutory language in an effort only to clarify a statute's true meaning. [Citations omitted.][192]

Under the rules of statutory construction, the first step is to look at the statute's words and give them their plain and ordinary meaning. Where the words of the statute are not ambiguous, they must be applied as written and may not be altered in any way. Moreover, the intent must be

---

[192] *Western Security Bank v. Superior Court* (1997) 15 Cal.4th 232, 243.

gathered with reference to the whole system of law of which it is a part so that all may be harmonized and have effect.[193]

Public Resources Code section 21082, as added by Statutes of 1972, imposed the requirement to "adopt by ordinance, resolution, rule, or regulation, objectives, criteria, and procedures for the evaluation of projects and the preparation of environmental impact reports pursuant to [CEQA]."[194] Section 21082 does not specify exactly what is meant by "the evaluation of projects." However, when read in context with the whole system of law, of which this statute is a part, it becomes clear that under prior law, preparation of NDs was a required activity when a lead agency evaluated a project which was not exempt from CEQA, but which the lead agency determined would not have a significant effect on the environment.

To "evaluate" means "to determine the value of."[195] In the context of CEQA, the possible values assigned to activities or approvals of the lead agency are:[196]

- Project or not.[197]
- If a project, exempt or not.[198]
- If not exempt, whether it may have a significant effect on the environment or will not have a significant effect on the environment.[199]
- ND or EIR.[200]

Thus, the determination regarding whether to prepare an EIR or an ND is a part of project evaluation. In *No Oil,* the California Supreme Court, in a decision regarding a 1972 project approval by the Los Angeles City Council, held that:

- an agency must determine whether a project may have a significant environmental impact, and thus whether an EIR is required, before it approves the project; and,
- a determination that a project does not require an EIR, when that project is not exempt from CEQA, must take the form of a written ND.[201]

[199] Public Resources Code sections 21080, 21080.1; California Code of Regulations, title 14, sections 15060 subdivision (c), 15063, 15064, 15064.7, 15065, 15365.

[200] Public Resources Code section 21080; California Code of Regulations, title 14, section 15070.

[201] *No Oil Inc. v. City of Los Angeles* (1974) 13 Cal.3d 68, pp. 79-80. (Hereinafter, *No Oil*).

In reaching these holdings, the *No Oil* court considered federal court opinions construing the National Environmental Policy Act (NEPA) on which CEQA was modeled, the federal NEPA guidelines, and California Code of Regulations, title 14, section 15083, regarding NDs, which did not take effect until 1973. The *No Oil* court stated that these holdings were consistent with "the unanimous view of the federal courts construing [NEPA], and the explicit requirement of both federal and state guidelines."[202] With regard to consideration of the CEQA regulations, the court stated "we do not apply these [regulations] retroactively to the decisions of the court or the city council rendered before the [regulations] went into effect. We make use of the [regulations], however, as a suggested interpretation of the statute, and as an illustration of the procedures which the resources agency finds necessary to the enforcement of the statute."[203] Moreover, the court stated, "the requirement that a finding of no significant impact take the form of an express written determination, however, is implicit in the act itself, and could have been deduced in October of 1972 from examination of the act, from our decision in *Friends of Mammoth* [citations] and from the federal cases cited in that decision."[204]

Additionally, California Code of Regulations, title 14, Article 7 (entitled Evaluating Projects), section 15083 (Register 73, No. 50) was adopted in 1973. Section 15083 addressed the requirement to prepare a negative declaration and the procedures that must be followed for projects that are not exempt from CEQA which the lead agency finds will not have a significant effect on the environment.[205] Thus, the requirement to address NDs is not new. In fact, if a school district or community college district prior to the 1976 amendment of Public Resources Code section 21083, had prepared objectives, criteria, and procedures, for the evaluation of projects preparation of EIRs by ordinance, resolution, rule or regulation, without addressing NDs, its objectives, criteria, and procedures would not have been consistent with CEQA and the CEQA regulations. Therefore, because the requirement for school districts and community college districts to address NDs in their objectives, criteria, and procedures, for the evaluation of projects preparation of EIRs by ordinance, resolution, rule or regulation clarifies existing law that pre-dates January 1, 1975, Public Resources Code section 21082 as amended by Statutes of 1976, chapter 1312 does not impose a new program or higher level of service.

B. California Code of Regulations, Title 14, Section 15022 Does Not Impose a New Program or Higher Level of Service.

The current interpretative regulation for Public Resources Code section 21082, California Code of Regulations, title 14, section 15022, subdivision (a), as adopted by Register 83, No. 29, provides:

> Each public agency shall adopt objectives, criteria, and specific procedures consistent with CEQA and these Guidelines for administering its responsibilities under CEQA, including the orderly evaluation of projects and preparation of

---

[202] Id, p. 80.

[203] Id, p. 80.

[204] Id, p. 81.

[205] Title 14 California Code of Regulations, Article 7 (Evaluating Projects), section 15083 (Register 73, No. 50.)

> environmental documents. The implementing procedures *should* contain at least provisions for: . . . . [List of what the procedures should contain omitted.]

To determine whether California Code of Regulations, title 14, section 15022, as amended by Register 83, No. 29 imposes a new program or higher level of service, we must first look at the law as it existed immediately prior to July 16, 1983, the effective date of that amendment, to determine whether the amendment mandates new activities.[206] Utilizing the same principles of statutory construction and analysis as applied under "A." above, staff finds that school districts and community college districts have been continuously required to adopt objectives, criteria, and procedures that are consistent with CEQA and the CEQA regulations, by ordinance, resolution, rule, or regulation, for the evaluation of projects and the preparation of EIRs pursuant to CEQA since January 1, 1972.

The requirements of California Code of Regulations, title 14, section 15022, were originally adopted in Register 73, No. 50 in California Code of Regulations, title 14, section 15050. California Code of Regulations, title 14, section 15050, as originally adopted in Register 73, No. 50 simply said:

> All public agencies are responsible for complying with the CEQA according to these Guidelines. They must develop their own procedures consistent with these Guidelines. Where a public agency is a lead agency and prepares an EIR itself or contracts for the preparation, that public agency is responsible entirely for the adequacy and objectivity of the EIR.

California Code of Regulations, title 14, section 15050 was subsequently amended several times, each time adding more specificity. (See Registers 75, No.1; 76, No. 41; and, 80, No. 19.) The following language, which, with minor, non-substantive modifications appears in the current California Code of Regulations, title 14, section 15022, was amended into section 15050 by Register 76, No. 41:[207]

> Public agenc[ies] shall adopt objectives, criteria, and specific procedures consistent with CEQA and these Guidelines for . . .the orderly evaluation of projects and preparation of environmental documents. The[se] implementing procedures *should* contain at least [the following] provisions. . . . [List of what the procedures should contain omitted.]

As discussed in "A." above, the CEQA statutory provisions in place prior to January 1, 1975, required a school district or community college district to adopt objectives, criteria, and procedures consistent with CEQA and the CEQA regulations for administering its responsibilities under CEQA, including the orderly evaluation of projects and preparation of environmental documents. Therefore the requirement to adopt objectives, criteria, and procedures consistent to address the evaluation of projects and preparation of environmental documents (i.e. NDs and EIRs) is not new. The addition of the language "objectives, criteria, and specific procedures" and "evaluation of projects and preparation of environmental documents" though adding greater specificity to the regulation, simply reflects the language of

[207] Note that the prior iterations of California Code of Regulations, title 14, section 15050 as amended by Registers 75, No.1; 76, No. 41; and, 80, No. 19 were also pled in this test claim.

the pre-existing statutory requirement under 21082 and thus does not impose a new program or higher level of service.

CONCLUSION

Staff concludes that the test claim statutes, regulations and alleged executive orders do not impose a reimbursable state mandated program within the meaning of article XIII B, section 6 of the California Constitution because:

1. The California State Clearinghouse Handbook is not an executive order subject to Article XIII B, Section 6.
2. The Commission does not have jurisdiction over statutes adopted prior to January 1, 1975.
3. The statutes and regulations listed below, which generally require compliance with the CEQA process, do not mandate school districts or community college districts to perform any activities because:
   A. The plain language of Public Resources Code section 21083 imposes requirements on OPR and the Secretary of the Resources Agency, not school districts or community college districts.
   B. Although school districts and community college districts are required to undertake maintenance projects, including emergency repair projects, CEQA contains specific exemptions for maintenance projects and emergency projects.
   C. For all other school district and community college district projects, CEQA is triggered by the district's voluntary decision to undertake a project or accept state funding for a project.

   Education Code Section 17025 added by Statutes 1996, Chapter 1562; Government Code Sections 66031 and 66034 as amended by Statutes 1994, Chapter 300, and Statutes 1990, Chapter 1455; Public Resources Code Sections 21002.1, 21003, 21003.1, 21080.09, 21080.1, 21080.3, 21080.4, 21081, 21082.1, 21082.2, 21083, 21083.2, 21091, 21092, 21092.1, 21092.2, 21092.3, 21092.4, 21092.5, 21092.6, 21094, 21100, 21151, 21151.2, 21151.8, 21152, 21153, 21157, 21157.1, 21157.5, 21158, 21161, 21165, 21166, 21167, 21167.6, 21167.6.5, 21167.8, 21168.9 as added or amended by Statutes 1975, Chapter 222; Statutes 1976, Chapter 1312; Statutes 1977, Chapter 1200; Statutes 1983, Chapter 967; Statutes 1984, Chapter 571; Statutes 1985, Chapter 85; Statutes 1987, Chapter 1452; Statutes 1989, Chapter 626; Statutes 1989, Chapter 659; Statutes 1991, Chapter 905; Statutes 1991, Chapter 1183; Statutes 1991, Chapter 1212; Statutes 93, Chapter 375; Statutes 1993, Chapter 1130; Statutes 1993, Chapter 1131; Statutes 1994, Chapter 1230; Statutes 1994, Chapter 1294; Statutes 1995, Chapter 801; Statutes 1996, Chapter 444; Statutes 1996, Chapter 547; Statutes 1997, Chapter 415; Statutes 2000, Chapter 738; Statutes 2001, Chapter 867; Statutes 2002, Chapter 1052; Statutes 2002, Chapter 1121; California Code of Regulations, Title 5, Sections 14011 and 57121 as added or amended by Register 77, Nos. 01 & 45; Register 83, No. 18; Register 91, No. 23; Register 93, No. 46; and, Register 2000, No. 44 and California Code of Regulations, Title 14, Sections 15002, 15004, 15020, 15021, 15025, 15041, 15042, 15043, 15050, 15053, 15060, 15061, 15062, 15063, 15064 15064.5, 15064.5,

15064.7 15070, 15071, 15072, 15073, 15073.5, 15074, 15074.1, 15075, 15081.5, 15082, 15084, 15085, 15086, 15087, 15088, 15088.5, 15089, 15090, 15091, 15092, 15093, 15094, 15095, 15100, 15104, 15122, 15123, 15124, 15125, 15126, 15126.2, 15126.4, 15126.6, 15128, 15129, 15130, 15132, 15140, 15142, 15143, 15145, 15147, 15148, 15149, 15150, 15152, 15153, 15162, 15164, 15165, 15167, 51568, 15176, 15177, 15178, 15179, 15184, 15185, 15186, 15201, 15203, 15205, 15206, 15208, 15223, 15225, 15367 as added or amended by register 75, No. 01; Register 75, Nos. 05, 18 & 22; Register 76, Nos. 02, 14 & 41; Register 77, No. 01; Register 78, No. 05; Register 80, No. 19; Register 83, Nos. 29; Register 86, No. 05; Register 94, No. 33; Register 97, No. 22; Register 98, No. 35; Register 98, No. 44; Register 2001, No. 05; Register 2003, No. 30.

4. Public Resources Code Section 21082, as amended by Statutes 1976, chapter 1312 and California Code of Regulations, title 14, section 15022, as amended by Register 83, No. 29 Do Not Impose a New Program or Higher Level of Service on School Districts and Community College Districts because:

   A. The Public Resources Code Section 21082 requirement for school districts and community college districts to adopt objectives, criteria, and procedures, consistent with CEQA and the CEQA regulations, for the preparation of NDs by ordinance, resolution, rule or regulation, added in 1976, was a clarification of existing law regarding "evaluation of projects" and therefore does not impose a new program or higher level of service.

   B. The requirement to adopt objectives, criteria, and procedures, for the evaluation of projects and the preparation of environmental documents pursuant to CEQA was required by the law as it existed immediately prior to the date that California Code of Regulations, title 14, section 15022 was adopted and has been continuously required by the Public Resources Code Section 21082 since January 1, 1973 and therefore does not impose a new program or higher level of service.

Staff Recommendation

Staff recommends that the Commission adopt this staff analysis to deny the test claim.

Glossary of Frequently Used CEQA Related Terms and Acronyms:

CEQA: California Environmental Quality Act	An Act with the purposes of informing decisionmakers and the public about project impacts, identifying ways to avoid or significantly reduce environmental damage, preventing environmental damage by requiring feasible alternatives or mitigation measures, disclosing to the public reasons why an agency approved a project if significant environmental effects are involved, involving public agencies in the process, and increasing public participation in the environmental review and the planning processes.
Categorical Exemption	An exemption from the requirement to prepare an EIR or negative declaration for classes of projects based on a finding that the listed classes of projects do not have a significant effect on the environment. See also statutory exemption below. (Pub. Resources Code §§ 21080(b)(10) and 21084; Cal. Code Regs., tit. 14, § 15354.)
Certification	The lead agency's determination that an EIR has been completed in compliance with CEQA, was reviewed and considered by the lead agency's decision-making body before action on the project, and reflects the agency's independent judgment and analysis.
Cumulative Impacts	Two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts. The individual effects may be changes resulting from a single project or a number of separate projects. The cumulative impact from several projects is the change in the environment which results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects. (Pub. Resources Code § 21083(b); Cal. Code Regs., tit. 14, § 15355.)
EIR: Environmental Impact Report	A detailed statement prepared in accordance with CEQA whenever it is established that a project may have a potentially significant effect on the environment. The EIR describes a proposed project, analyzes potentially significant environmental effects of the proposed project, identifies a reasonable range of alternatives, and discusses possible ways to mitigate or avoid the significant environmental effects. EIR can refer to the draft EIR (DEIR) or the final EIR (FEIR) depending on context.

	(Pub. Resources Code §§ 21061, 21100 and 21151; Cal. Code Regs., tit. 14, § 15362.)
Initial Study	A lead agency's preliminary analysis of a project to determine whether it may have a significant effect on the environment. If it may have a significant effect, an EIR is required. If not, the project may be approved based on a negative declaration. (Pub. Resources Code §§ 21080.1, 21080.2, 21080.3 and 21100; Cal. Code Regs., tit. 14, § 15365.)
Lead Agency	The agency with primary responsibility for approving or carrying out a project. (Pub. Resources Code § Section 21165; Cal. Code Regs., tit. 14, § 15367.)
Local Agency	Any public agency other than a state agency, board, or commission. Local agency includes but is not limited to cities, counties, charter cities and counties, districts, *school districts*, special districts, redevelopment agencies, local agency formation commissions, and any board, commission, or organizational subdivision of a local agency when so designated by order or resolution of the governing legislative body of the local agency. (Pub. Resources Code § 21062 and 21151; Cal. Code Regs., tit. 14, § 15368.)
MND: Mitigated Negative Declaration	A negative declaration prepared when a project will not have a significant effect on the environment because the project's adverse effects have been mitigated by measures incorporated into the project. (Pub. Resources Code § 21064.5; Cal. Code Regs., tit. 14, § 15369.5.)
ND: Negative Declaration	A written statement by the lead agency that briefly states why a project subject to CEQA will not have a significant effect on the environment. A ND precludes the need for an EIR. (Pub. Resources Code § 21064; Cal. Code Regs., tit. 14, § 15371.)
NOC: Notice of Completion	A brief notice filed with the Office of Planning and Research (OPR) by a lead agency when it completes preparation of the DEIR and is prepared to make it available for public review. The filing of the NOC begins the public review period for the DEIR. (Pub. Resources Code § 21161; Cal. Code Regs., tit. 14, § 15372.)

NOD: Notice of Determination	A brief notice (usually 1 page) filed by the lead agency with the clerk of the county in which the project will be located and OPR. The notice is posted in the County Clerk's office for 30-days after an agency approves or determines to carry out a project subject to CEQA. The NOD is perhaps the most important notice under CEQA since it triggers the short statute of limitations for challenging a project for failure to comply with CEQA. (Pub. Resources Code §§ 21108(a) and 21152; Cal. Code Regs., tit. 14, § 15373.)
NOE: Notice of Exemption	A notice filed after the lead agency has determined that a project is exempt from CEQA and has approved that project. The filing of the NOE is not required, however, it triggers a short statute of limitations for a challenge to the decision that the project is exempt. Otherwise, the statute does not begin to run until the project has commenced (i.e. ground is broken). (Pub. Resources Code §§ 21108(b) and 21152(b); Cal. Code Regs., tit. 14, § 15374.)
NOP: Notice of Preparation	A notice by a lead agency that it plans to prepare an EIR for a project. This notice is sent to various state and federal agencies to seek guidance from those agencies on the scope and content of the EIR. (Pub. Resources Code § 21080.4; Cal. Code Regs., tit. 14, §§ 15082(a) and 15375.)
Project	The whole of an action that may result in either a direct physical change in the environment, or a reasonable foreseeable indirect physical chance in the environment. (Public Resources Code Guideline § 15378(a).) Projects include activities directly undertaken by public agencies as well as private projects that have any public funding or are permitted or approved by public agencies. (Pub. Resources Code § 21065; Cal. Code Regs., tit. 14, § 15378.)
Public Agency	All executive branch agencies and all local government agencies in California. The state legislature, courts and federal agencies are not public agencies for the purposes of CEQA. (Pub. Resources Code § 21063; Cal. Code Regs., tit. 14, § 15379.)
Responsible Agency	A public agency, other than the lead agency, that has some discretionary power to approve or carry out a project (usually has authority to grant a needed permit) for which the lead agency is preparing an EIR or ND. With few exceptions, responsible agencies are bound by the lead

	agency's determination of whether to prepare an EIR or ND and by the document prepared by the lead agency. (See Pub. Resources Code §§ 21002.1, 21069, 21080.1, 21080.3, 21080.4, 21167.2 and 21167.3; Cal. Code Regs., tit. 14, § 15381.)
Significant Effect on the Environment	A substantial or potentially substantial adverse change in the physical conditions of the area affected by the project. (Public Resources Code § 21068.) A substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the environment. A social or economic change related to a physical change may be considered in determining whether the physical change is significant. (Pub. Resources Code §§ 21068, 21083, 21100 and 21151; Cal. Code Regs., tit. 14, § 15382.)

November 12, 2009

RECEIVED
NOV 16 2009
COMMISSION ON
STATE MANDATES

Ms. Paula Higashi
Executive Director
Commission on State Mandates
980 Ninth Street, Suite 300
Sacramento, CA 95814

Dear Ms. Higashi:

As requested in your letter of October 23, 2009, the Department of Finance has reviewed the draft staff analysis for the test claim submitted by the Clovis Unified School District (claimant) asking the Commission to determine whether specified costs incurred under various statutes and executive orders cited in the test claim are reimbursable State mandated costs (Claim No. CSM-03-TC-17 "California Environmental Quality Act").

We concur with the staff analysis for this claim, which finds that the proposed activities do not impose a new program or higher level of service, and therefore does not impose reimbursable costs mandated by the State.

As required by the Commission's regulations, we are including a "Proof of Service" indicating that the parties included on the mailing list which accompanied your October 23, 2009, letter have been provided with copies of this letter via either United States Mail or, in the case of other state agencies, Interagency Mail Service.

If you have any questions regarding this letter, please contact Ryan Storm, Principal Program Budget Analyst, at (916) 445-0328.

Sincerely,

Jeannie Oropeza

DECLARATION OF RYAN STORM
DEPARTMENT OF FINANCE
CLAIM NO. CSM-03-TC-17

1. I am currently employed by the State of California, Department of Finance (Finance), am familiar with the duties of Finance, and am authorized to make this declaration on behalf of Finance.

2. We concur that the sections relevant to this claim are accurately quoted in the test claim submitted by claimants and, therefore, we do not restate them in this declaration.

I certify under penalty of perjury that the facts set forth in the foregoing are true and correct of my own knowledge except as to the matters therein stated as information or belief and, as to those matters, I believe them to be true.

November 12, 2009
at Sacramento, CA

Ryan Storm

PROOF OF SERVICE

Test Claim Name: California Environmental Quality Act
Test Claim Number: CSM-03-TC-17

I, the undersigned, declare as follows:
I am employed in the County of Sacramento, State of California, I am 18 years of age or older and not a party to the within entitled cause; my business address is 915 L Street, 7 Floor, Sacramento, CA 95814.

On November 12, 2009, I served the attached recommendation of the Department of Finance in said cause, by facsimile to the Commission on State Mandates and by placing a true copy thereof: (1) to claimants and nonstate agencies enclosed in a sealed envelope with postage thereon fully prepaid in the United States Mail at Sacramento, California; and (2) to state agencies in the normal pickup location at 915 L Street, 7 Floor, for Interagency Mail Service, addressed as follows:

RE: *California Environment Quality Act, 03-TC -17*

Dear Ms. Higashi:

Claimant provides the following comments in response to the draft staff analysis (DSA).

The DSA states on page 41:

> Here, there is no evidence in the law or in the record that school districts or community college districts that elect not to construct new facilities or use state funds, which would trigger the requirement to comply with CEQA, face certain and severe penalties such as double taxation or other draconian consequences. Instead, school and college facilities projects that are undertaken for purposes other than repair and maintenance are discretionary decisions of the district...

The DSA incorrectly asserts the decision by a school district to construct or improve facilities is discretionary as oppose to legal compulsion. As will be discussed the application of the *City of Merced* [1] is also misplaced as the state is mandating local agencies to provide education to its resident students.

THE STATE MANDATES LOCAL AGENCIES PROVIDE EDUCATION

Proposition 55 appeared on the March 2, 2004 ballot which enacted the Kindergarten-University Public Education Facilities Bond Act of 2004. According to the official ballot information pamphlet prepared by the California Attorney General and published by the California Secretary of State, school districts identified a need to construct new schools to house nearly 1 million pupils and modernize schools for an additional 1.1 million pupils. For the DSA to conclude that school districts need not acquire new school sites or construct additional school facilities ignores the reality and the California Constitution that requires pupils be housed and educated.

[1] *City of Merced, supra,* (1984) 153 Cal.App.3d 777, 777.

1450 Herndon Avenue · Clovis, CA 93611-0599

Legislative history shows repeated and consistent recognition that school districts are unable to meet the school construction needs of their pupils and that the education of school children is the primary responsibility of the state. The history of the inability of school districts and the obligation of the state to educate children results in the above recited litany of state money for school construction at low or no interest rates, repayment requirements of less than the amounts apportioned, and repayment terms unavailable anywhere else. Education of children is an obligation and function of the state. Classrooms are required to provide that education. Therefore, building classrooms is, primarily, a state obligation.

The California Research Bureau has published a study entitled "School Facility Financing - A History of the Role of the State Allocation Board and Options for the Distribution of Proposition 1A Funds." (Cohen, Joel, February 1999) In the study, the plight of school districts is described therein as follows:

> "As California enters the 21st Century, its public schools face many challenges. One significant challenge is the serious disrepair of an aging school facility infrastructure. Another challenge is the anticipated growth of nearly 2 million K-12 students during the next decade that will require many districts to build new schools to meet burgeoning student demand." [2]

This independent study does not conclude school districts will have the discretion to build new schools, it concludes that districts will be required to build them to meet burgeoning demand.

The Department of Finance has estimated that $16 billion is needed over the next decade for public school construction and rehabilitation.... However, while the amount (provided by Proposition 1A) appears to be generous, it will not be enough to meet the entire anticipated need of the state. Based on the Department of Finance projections, the six years following this bond issue will require roughly an additional $10 billion in State money.[3]

Chapter 4 of Part 10 of Division 1 of Title 1 of the Education Code sets forth the State School Building Aid Law of 1949, commencing with Education Code Section 15700. Section 15700 provides:

> The Legislature hereby declares that it is in the interest of the state and of the people thereof for the state to aid school districts of the state in providing necessary and adequate school sites and buildings for the pupils of the public school system, the system being a matter of general concern inasmuch as the education of the children of the state is an obligation and function of the state. (Emphasis added)
>
> In adopting this act, the Legislature considers that the great need in school construction is for adequate classrooms for the education of the pupils of the public school system. To the end that school classrooms may be made available at once and to all school districts in need of such classrooms...

[2] Cohen, Joel, "School Facility Financing - A History of the Role of the State Allocation Board and Options for the Distribution of Proposition 1A Funds", California Research Bureau (February 1999)

[3] *Id.*

Chapter 6 contains the State School Building Aid Law of 1952, commencing with Education Code Section 16000. Section 16001 provides:

> The Legislature hereby declares that it is in the interest of the state and of the people thereof for the state to aid school districts of the state in providing necessary school sites and buildings for the pupils of the public school system, this system being a matter of general concern inasmuch as the education of the children of the state is an obligation and function of the state. (Emphasis added.)
>
> In adopting this chapter, the Legislature considers that the great need in school construction is for classrooms for the education of the pupils of the public school system. To the end that school classrooms may be made available at once and to all school districts in need of such classrooms...

Article 9 of Chapter 6, commencing with Education Code Section 16310, is entitled School Housing Aid for Rehabilitation and Replacement of Structurally Inadequate School Facilities. Section 16312 states:

> The Legislature hereby declares that it is in the interest of the state and the people thereof to provide assistance to school districts in rehabilitating or replacing structurally unsafe school facilities inasmuch as the education of children is an obligation of the state, and the obligation carries with it a corresponding responsibility for the physical safety of children while attending school. (Emphasis added.)

Chapter 8 of Part 10 contains the Urban School Construction Aid Law of 1968, commencing with Education Code Section 16700. Section 16701 provides:

> The Legislature hereby declares that it is in the interest of the state and of the people thereof for the state to aid urban school districts of the state in reconstructing, modernizing, or replacing school sites and buildings for pupils of the public school system who are now housed in substandard schools...

Chapter 12 of Part 10 establishes the "Leroy F. Greene State School Building Lease-Purchase Law of 1976", commencing with Section 17000. Section 17001 states:

> (a) The Legislature hereby declares that it is in the interest of the state and the people thereof for the state to reconstruct, remodel, or replace existing school buildings that are educationally inadequate or that do not meet present-day structural safety requirements, and to acquire new school sites and buildings for the purpose of making them available to local school districts for the pupils of the public school system, that system being a matter of general concern inasmuch as the education of the children of the state is an obligation and function of the state. (Emphasis added.)

Chapter 15 of Part 10, commencing with Section 17100, established the School District Revenue Bond Act. This Act is based on the finding of the legislature that:

> The Legislature hereby finds and declares that the State School Building Lease-Purchase Fund, pursuant to Section 17008, and the proceeds from the sale or lease of surplus school property are the two sources available to school districts to finance the construction of school facilities to relieve overcrowding. However, these sources are still insufficient to meet the construction needs statewide of school districts. (Emphasis added.)

LOCAL AGENCIES ARE COMPELLED TO PROVIDE FACILITIES FOR EDUCATION

Article IX, Section 5, of the California Constitution requires the Legislature to ". . . provide for a system of common schools by which a free school shall be kept up and supported in each district . . ." The Constitution makes public education a matter of statewide rather than local concern. (*Levi v. O'Connell* (2006) 144 Cal.App.4th 700, 706 fn.3.) The Legislature's power over the public school system is plenary, subject only to constitutional restraints. (*Wilson v. State Bd. Of Educ.* (1999) 75 Cal.App.4th 1125, 1134) "Where the Legislature delegates the local functioning of the school system to local boards, districts or municipalities, it does so, always, with its constitutional power and responsibility for ultimate control for the common welfare in reserve." (*Id.* at p.1135 quoting *Phelps v. Prussia* (1943) 60 Cal.App.2d 732, 738)

School districts are determined by geographic boundaries, and must accommodate students within their boundaries as required by the free school guarantee. Children are required to attend school by Education Code Sections 48200 et al, which set the parameters of compulsory education. Therefore, children are compelled to attend school, school districts are compelled to enroll children and provide facilities for their instruction.

There are also specific statutory requirements for providing school facilities. Governing boards are legally required to build new school facilities when there is a vote by the district directing them to do so, as required by Education Code Section 17340. Section 17573 requires the governing board to provide a "warm, healthful place" for children to eat their lunches. Section 17576 requires that sufficient restrooms are provided. If a school facility is found to be unsafe, Education Code Sections 17367 and 81162 (pertaining to K-12 school districts and community college districts respectively) require that the governing board adopt a plan to repair, reconstruct, *or replace* the unsafe school building.

The DSA (34) relied on a statement in *People v. Oken* for the proposition that school district governing boards have wide discretion in constructing school facilities. However, this statement must be viewed in context of the facts of that case. It concerned a private citizen attempting to require a school district to build a school building on a specific piece of property. Therefore, despite the broad language used, the holding of the court was only that a private individual could not maintain an action to dictate where or when a school must be built. The court did not even consider whether school districts were required to supply sufficient school facilities. "... [A] decision is not authority for what is said in the opinion but only for the points actually involved and actually decided." (*Childers v. Childers* (1946) 74 Cal.App.2d 56, 61) Thus, this case is misplaced for the proposition that there is no legal compulsion on K-12 school districts to provide adequate school facilities.

Contrary to the conclusion of the DSA, school districts are also practically compelled to construct new school facilities when existing facilities become inadequate. The decision to build new school facilities is *not* analogous to the decision to exercise eminent domain in *City of Merced.* In that case, the court determined that the city's choice of eminent domain *as a method to obtain property* was discretionary. It did not consider the

city's determination that it needed to obtain property in the first place, only the discretionary action of choosing eminent domain as the preferred method. In *Kern High School District*, the focus of the court was on the fact that the underlying programs were voluntary and extracurricular. The district could simply stop participating and the only consequence would be the loss of related funding.

If the decision to build new school facilities is truly voluntary, then school districts or community college districts would have multiple ways of responding to the need, as in *City of Merced*, or may simply choose not to respond, as in *Kern*. If this were true, K-12 schools would be able to turn away students within their geographic boundaries once existing facilities had met their capacity. Therefore, K-12 school districts are legally and practically compelled to construct new facilities, replace existing facilities when needed, and repair and maintain current facilities. Accordingly school districts must comply with the mandates required by CEQA.[4]

CERTIFICATION

I certify by my signature below, under penalty of perjury under the laws of the State of California, that the statements made in this document are true and complete to the best of my own personal knowledge or information and belief.

Sincerely,

Michael Johnston
Assistant Superintendent

CHARLES BOWNDS et al., Plaintiffs and Appellants
v.
CITY OF GLENDALE et al., Defendants and Respondents; STEVENSON-DILBECK DEVELOPMENT COMPANY, etc., et al., Real Parties in Interest and Respondents.
Civ. No. 58910.

Court of Appeal, Second District, Division 2, California.
Dec 23, 1980.

SUMMARY

A tenant in an apartment building which was approved by a city for conversion to condominium ownership brought proceedings in mandamus to compel the city council to vacate and set aside all approvals granted after a certain date for the conversion of existing apartment houses to condominium ownership and to declare a moratorium on such conversion pending certain actions by the city in the area of planning. The trial court entered judgment denying the petition for mandate. (Superior Court of Los Angeles County, No. C 248344, Charles H. Phillips, Judge.)

The Court of Appeal affirmed. With respect to petitioner's contention that the general plan adopted by the city was inadequate because the housing element of the plan did not discuss in specific terms the subject of condominium conversion and did not comport with the guidelines of the State Department of Housing and Community Development, the court held the decision-making power in the area of land use and planning rested with the local governmental agencies to be exercised within the constraints prescribed by enactments of the state Legislature. The court held that guidelines promulgated by the department were not self-executing and did not have the binding effect of law. The court also held that when any attack is made on the exercise of a local government's decision-making power and the adequacy of the general plan within which it is to be exercised a presumption of validity attaches to the actions of the governmental agency. The court held the subject of conversion of condominiums is of such importance that the authority of the local government to regulate in the area should not hinge on subjective interpretation by courts or administrative boards of the vague or general language to be found in the planning and land use law. The court noted that since the commencement of the action, the Legislature amended Gov. Code, § 65302, specifically providing that any guidelines or findings adopted by the department are advisory only, and that judicial review of a local plan is limited to a determination of whether there is "reasonable compliance" with the statutes. (Opinion by Compton, J., with Fleming, Acting P. J., and Beach, J., concurring.)

HEADNOTES

Classified to California Digest of Official Reports

(1) Zoning and Planning § 5--Constitutional and Statutory Provisions--Land Use Plans.
The State Planning and Zoning Law (Gov. Code, § 65000 et seq.) requires that cities and counties adopt a general plan for the future development, configuration and character of the city and county, and require that future land use decisions be made in harmony with that general plan. Except for mandating the development of a plan, specifying the elements to be included therein, and imposing on the cities and counties the general requirement that land use decisions be guided by that plan, the Legislature has not preempted the decision-making power of local legislative bodies as to the specific contours of the general plan or actions taken thereunder. The thrust of the statutory scheme is to insure that decisions made by local governmental entities, which affect future growth of their communities, will be the result of considered judgment in which due consideration is given to the various interrelated elements of community life. The statutes make clear, however, that local control is at the heart of the process.
[See **Cal.Jur.3d**, Zoning and Other Land Controls, § 6; **Am.Jur. 2d**, Zoning and Planning, § 69.]
(2a, 2b, 2c) Zoning and Planning § 13--Content and Validity of Zoning Ordinances, Planning Enactments and Orders--Legislative Discretion and Judicial Re-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

view--General Plans.
In mandamus proceedings brought by a tenant in an apartment building which was approved by a city for conversion to condominium ownership, seeking to vacate all approvals granted after a certain date for condominium conversion and to declare a moratorium on such conversions on the ground the housing element of the city's general plan did not discuss in specific terms the subject of condominium conversions and did not comport with guidelines of the State Department of Housing and Community Development, the trial court properly denied relief, where the housing element of the city's master plan contained an extremely comprehensive analysis of the present housing inventory and future needs, and where the overall plan and its ordinances in the area of land use regulation represented an honest and reasonable effort to comply with the state's statutory requirements (State Planning and Zoning Law, Gov. Code, § 65000 et seq.). Moreover, the decision-making power in the area of land use and planning rests with the local governmental agencies to be exercised within the constraints prescribed by enactments of the state Legislature. When any attack is made on the exercise of that decision-making power and the adequacy of the general plan within which it is to be exercised, a presumption of validity attaches to the actions of the local governmental agency. Guidelines promulgated by the State Department of Housing and Community Development are not self-executing and do not have the binding effect of law.

(3) Zoning and Planning § 13--Content and Validity of Zoning Ordinances, Planning Enactments and Orders--Legislative Discretion and Judicial Review--Local Plans.
While a reviewing court may conclude that in form and general content a local plan fails to meet the general requirements of the State Planning and Zoning Law (Gov. Code, § 65000 et seq.), the court cannot and should not involve itself in a detailed analysis of whether the elements of the plan are adequate to achieve its purpose. To do so would involve the court in the writing of the plan. That issue is one for determination by the political process and not by the judicial process.

(4a, 4b) Constitutional Law § 68--Property and Occupation--Right to Sell, Acquire, and Hold Property--Condominium Conversion--Police Power.
In regulating condominium conversion or land use generally, the police power is in direct confrontation with Cal. Const., art. I, § 1, concerning the right to acquire or possess property, and Cal. Const., art. I, § 19, prohibiting the taking of private property without just compensation. In areas of such critical importance and sensitivity as impairing private property rights and mandating the expenditure of public funds, the delegation of legislative authority to an administrative agency would violate the doctrine of separation of powers in Cal. Const., art. III, § 3, and would be invalid. Accordingly, guidelines promulgated by the State Department of Housing and Community Development concerning land use and housing are not self-executing and do not have the binding effect of law. The subject of conversion of condominiums is of such importance to property owners and tenants alike that the authority of the local government to regulate in the area should not hinge on subjective interpretation by courts or administrative boards of vague or general language to be found in the planning and land use law (Gov. Code, § 65000 et seq.)

White, Philip W. Green and Drummy, Garrett, King & Harrison and Allan M. Kassirer for Real Parties in Interest and Respondents.

COMPTON, J.

Proceedings in mandamus to compel the City Council of the City of Glendale (City), inter alia, to vacate and set aside all approvals granted subsequent to July 20, 1978, for the conversion of existing apartment houses to condominium ownership and to declare a moratorium on such conversions pending certain actions by the City in the area of planning which, according to petitioner, are required by law.***879** The State Department of Housing and Community Development (Department) and the Sierra Club have filed amicus curiae briefs in support of petitioner. An amicus brief in support of City and real parties in interest has been filed on behalf of the City of Irvine and 45 other California cities.

Petitioner is a tenant in an apartment building which was approved by City on July 20, 1978, for conversion to condominium ownership. In this action he purports to represent an unincorporated association of tenants who are similarly situated.

The real parties in interest are owners of apartment buildings who, subsequent to July 20, 1978, have applied for and received approval for conversion to condominiums. The trial court entered judgment denying the petition for mandate. Petitioner has appealed. We affirm.

Code of Civil Procedure section 1085 provides that a writ of mandate may be issued to compel a public official to perform an act which the law specifically requires him to perform. Petitioner contends that City is required by law and should be mandated to perfect what he describes as an "inadequate" general plan and that the failure to take such action renders the City powerless to approve condominium conversions. Hence, according to petitioner, such previously granted approvals must be vacated.

While the immediate goal of petitioner is to prevent the accomplishment of a number of specific condominium conversion projects, the fundamental issue involved is the decision-making power in the area of land use and planning.

Land use regulation in California has historically been a function of local government under the grant of police power contained in California Constitution, article XI, section 7. [FN1] The exercise of that power has traditionally been accomplished through zoning ordinances and regulation of subdivisions under the Subdivision Map Act (formerly Bus. & Prof. Code, § 11500 et seq., now Gov. Code, §§ 66410 through 66499.30).***880**

> FN1 California Constitution, article XI, section 7 provides: "A county or city may make and enforce within its limits all local, police, sanitary, and other ordinances and regulations not in conflict with general laws."

(1)In recent years the Legislature has enacted a number of statutes as part of the State Planning and Zoning Law, (Gov. Code, § 65000 et seq.) the combined effect of which is to require that cities and counties adopt a general plan for the future development, configuration and character of the city or county and require that future land use decisions be made in harmony with that general plan.

The general plan is required to contain elements dealing with specific areas such as housing, land use and circulation. (Gov. Code, § 65302.)Subdivision map approval and zoning decisions must be consistent with the general plan. (Gov. Code, §§ 66473.5, 66479 and 65860.)

The Department is authorized to develop and publish guidelines for the preparation of the housing element of the plan (Gov. Code, § 65040.2; Health & Saf. Code, § 50459) and the Office of Planning and Research is authorized to do the same for other elements of the plan (Gov. Code, § 65040.2). The Department's guidelines were promulgated in 1973 and codified in California Administrative Code, title 25, sections 6300 through 6350.

Except for mandating the development of a plan, specifying the elements to be included in the plan, and imposing on the cities and counties the general re-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

quirement that land use decisions be guided by that plan, the Legislature has not preempted the decision making power of local legislative bodies as to the specific contours of the general plan or actions taken thereunder.

As we will discuss, petitioner's contentions in this case, as supported by amicus curiae, if accepted, would result in that decision making power being usurped by the Department or the courts.

These contentions are that the guidelines promulgated by the Department are binding on local governments and have the force of law and that the courts should assume the role of determining the "adequacy" with which a local plan addresses all of the various societal factors.

The thrust of the statutory scheme embodied in the state planning and zoning law is to insure that decisions made by local governmental entities, which affect future growth of their communities, will be the result of considered judgment in which due consideration is given to the various interrelated elements of community life. The statutes make clear, however, that local control is at the heart of process. ***881**

Government Code section 65030.1 provides in part: "The Legislature also finds that decisions involving the future growth of the state, *most of which are made and will continue to be made at the local level*, should be *guided* by an effective planning process, including the local general plan, and should proceed within the *framework* of officially approved statewide goals and policies...to land use, population growth and distribution, development, open space, resource preservation and utilization, air and water quality, and other related physical, social and economic development factors." (Italics added.)

Government Code section 66411 provides in part: "Regulation and control of the design and improvement of subdivisions are vested in the legislative bodies of local agencies. *Each local agency shall by ordinance, regulate and control subdivisions for which this division requires a tentative and final or parcel map....*" (Italics added.)

The general plan which a city or county is required to adopt is simply a statement of policy. A general plan or policy, whether it be adopted by governmental entity or private organization serves to provide a standing consistent answer to recurring questions and to act as a guide for specific plans or programs. (*O'Loane v. O'Rourke* (1965) 231 Cal.App.2d 774 [42 Cal.Rptr. 283].)

Here the City has adopted a master plan and the housing element, which became mandatory by virtue of an amendment to Government Code section 65302, subdivision (c), effective January 1, 1972, was completed by mid-1975. That element was undergoing study and revision commencing in early 1978 and a revision was adopted August 1, 1978. The instant action was not commenced until August 21, 1978.

Since 1954, City has also had an ordinance regulating the design and construction of all phases of subdivision development. In December of 1978, it adopted a specific ordinance dealing with condominium development which is applicable to both new development and conversions.

(2a)Petitioner's contention is that the City ordinance regulating condominium conversion is invalid and that any approval of such conversions pursuant thereto is void because the housing element of the *general plan* is "inadequate." The argument goes that any subdivision regulation, including regulation of condominium conversion, cannot be consistent with the general plan as required by ***882**Government Code tions 66473.5 [FN2] and 66474, [FN3] if the general plan itself is defective or inadequate.

FN2 Government Code section 66473.5 reads as follows: "No local agency shall approve a map unless the legislative body shall find that the proposed subdivision, together with the provisions for its design and improvement, is consistent with the general plan required by Article 5 (commencing with Section 65300) of Chapter 3 of Division 1 of this title, or any specific plan adopted pursuant to Article 8 (commencing with Section 65450) of Chapter 3 of Division 1 of this title. ¶ A proposed subdivision shall be consistent with a general plan or a specific plan only if

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

the local agency has officially adopted such a plan and the proposed subdivision or land use is compatible with the objectives, policies, general land uses and programs specified in such a plan."

FN3 Government Code section 66474 reads in part as follows: "A legislative body of a city or county shall deny approval of a final or tentative map if it makes any of the following findings: (a) That the proposed map is not consistent with applicable general and specific plans. (b) That the design or improvement of the proposed subdivision is not consistent with applicable general and specific plans."

Both petitioner and amicus rely heavily on *Save El Toro Assn. v. Days* (1977) 74 Cal.App.3d 64 [141 Cal.Rptr. 282]. In that case the Court of Appeal invalidated a city's approval of a subdivision map because the court determined that the city had adopted neither a general plan nor a local open space plan. It was there held that a subdivision could not be consistent with a nonexistent plan.

Here, there is no question but what the City of Glendale has adopted a general plan with all of the required elements. The claim is simply that, according to petitioner, it is "inadequate" because the housing element of the plan does not discuss in specific terms the subject of condominium conversion and that it does not comport with the Department's guidelines, which, in our opinion, are nothing more than the Department's interpretation of the Legislature's desires. We think it important to note that with one exception neither the statutes themselves nor the guidelines make any specific mention of condominium conversion.

While condominiums, since their recent advent in California, have been treated as subdivisions of airspace and thus subject to the same general type of regulation as traditional land subdivision, it is apparent that conversion of an existing apartment building to condominium ownership does not involve the land use considerations inherent in the traditional land subdivision.

In obvious recognition of this distinction the Legislature has exempted condominium conversions from certain requirements applicable to ***883** other types of subdivisions. Government Code section 66427.2 provides that condominium conversions, which do not include the addition of new units, are *not* required to be consonant with the general plan unless that plan contains "definite objectives and policies" relating thereto.

Government Code section 66427, a part of the Subdivision Map Act, exempts condominium projects from a requirement of providing detailed maps of the building being subdivided.

Petitioner and the Department concede that an otherwise adequate general plan need not contain any reference to condominium conversions because such silence implies a finding that conversions pose no obstacle to implementation of the general plan and to require such reference and the procedure that would flow therefrom would be simply a bureaucratic exercise.

What then is the basis for the claim that the City's plan is not otherwise adequate? In short, it is that the City's plan fails to comport with the Department's guidelines which it interprets as requiring an exhaustive inventory of available housing and an "action" program to insure adequate housing for all economic segments of the community, and which in light of the housing situation in Glendale, must necessarily include reference to the subject of condominium conversions.

The trial court found, on the basis of evidence presented, that the plan, and more specifically the housing element, was adequate and that no special conditions existed which would make it mandatory for the City to include specific provisions concerning condominium conversions. The trial court also found that in each case the approval of the specific conversion project was consistent with the general plan.

The actions of the City are presumed to be valid and a regular performance of official duty. The burden is on petitioner to demonstrate that the City has failed to perform a specific duty mandated by law.

Planning is at best an inexact science. General plans or

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

policy statements are often semantical exercises which require considerable interpretation on the part of persons charged with implementing them.

In the area of planning and land use the Legislature has promulgated its own general policies and mandated that local governments in turn adopt plans which comport with the Legislature's policies. ***884**

Absent a complete failure or at least substantial failure on the part of a local governmental agency to adopt a plan which approximates the Legislature's expressed desires, the courts are ill-equipped to determine whether the language used in a local plan is "adequate" to achieve the broad general goals of the Legislature. (3)In short, while a court, such as in *Save El Toro Assn. v. Days, supra.*, 74 Cal.App.3d 64, may conclude that in form and general content, a local plan fails to meet the general requirements of the statute, a court cannot and should not involve itself in a detailed analysis of whether the elements of the plan are adequate to achieve its purpose. To do so would involve the court in the writing of the plan. That issue is one for determination by the political process and not by the judicial process.

A perfect example of the problem is presented in this case. Government Code section 65302, subdivision (c) states in part that the housing element should contain "...standards and plans for the improvement of housing and for provision of adequate sites for housing. This element of the plan shall make adequate provision for the housing needs of all economic segments of the community. Such element shall consider all aspects of current housing technology, to include provisions for not only site-built housing, but also manufactured housing, including mobile-homes and modular homes."

Petitioner and the Department interpret that language as requiring the cities and counties to affirmatively plan in terms of "who, what and when" for the *creation* of housing. Implicit in this is the requirement of the expenditure of public funds for the purpose. The City contends there is no legislative mandate to affirmatively acquire or produce housing.

In the absence of more specific legislation, it would ill-behoove any court to indirectly mandate such a specific "action" program under the guise of declaring an otherwise complete and comprehensive plan to be inadequate, basing its decision on nothing more than a subjective interpretation of such nonspecific language.

(2b)Contrary to the contention of petitioner, we conclude that the housing element of the City's master plan contains an extremely comprehensive analysis of the present housing inventory and future needs. The City's overall plan and its ordinances in the area of land use regulation represent an honest and reasonable effort to comply with the state's statutory requirements. ***885**

Finally, we turn to the contention that the guidelines promulgated by the department have the effect of law, are binding on the cities and counties and thereby limit the legislative prerogative of the city councils and boards of supervisors.

In our opinion, this is a startling concept indeed. As noted earlier, planning guidelines are developed by two bodies under two separate statutory authorizations. Government Code section 65040.2 specifically provides that the guidelines promulgated by the Office of Planning and Research are advisory only.

Health and Safety Code section 50459, which provides for the authority of the Department to promulgate guidelines concerning the housing element in local planning, does not, however, specifically declare such guidelines to be advisory only. The statute does, however, authorize that department to review local housing elements for conformity with Government Code section 65302 and *report its findings*. The clear implication is that the Department has no authority on its own to compel compliance according to its own notion of what constitutes compliance. The term "guidelines" itself suggests an absence of compulsion.

To carry the argument to its logical extreme, if the Department could promulgate regulations or guidelines having the effect of law it could simply adopt a regulation banning all condominium conversions or spelling out the Department's own regulatory scheme. Further, the Department could, according to its interpretation of the statute, require public funding for housing developments.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

(4a)In regulating condominium conversion or, in fact, in regulating land use generally, the police power is in direct confrontation with article I, section 1 of the California Constitution (right to acquire or possess property) and article I, section 19 (prohibition against the taking of private property without just compensation). In areas of such critical importance and sensitivity as impairing private property rights and mandating the expenditure of public funds, a delegation of legislative authority to an administrative agency would violate the doctrine of separation of powers, article III, section 3 and would be invalid.

(2c)In summary, the decision making power in the area of land use and planning still rests with the local governmental agencies to be exercised within the constraints prescribed by enactments of the state *886 Legislature. When any attack is made upon the exercise of that decision making power and the adequacy of the general plan within which it is to be exercised, a presumption of validity attaches to the actions of the local governmental agency.

(4b)Guidelines promulgated by the Department are not self-executing and do not have the binding effect of law. The subject of conversion of condominiums is of such importance to property owners and tenants alike that the authority of the local government to regulate in the area should not hinge upon subjective interpretation by courts or administrative boards of the vague or general language to be found in the planning and land use law. If the Legislature desires to preempt the decision making power of local governments in the field, it should specifically say so.

Our conclusion is borne out by the fact that since the commencement of this action, the Legislature has enacted Assem. Bill No. 2853, which amends Government Code section 65302 and adds article 10.6 to chapter 3 of division 1 of title 7 of the Government Code.

The effect of this legislation is to codify many of the provisions of the Department's former guidelines, and to require compliance by October 1, 1981. The new enactment specifically provides that any guidelines or findings adopted by the Department are advisory only, and that judicial review of a local plan be limited to a determination of whether there is "reasonable compliance" with the statutes.

This indicates to us a recognition by the Legislature that the Department's guidelines have always been advisory only, that any such drastic impairment of the legislative prerogative of local government should be undertaken only by specific legislative action and judicial review for compliance be limited in scope.

The judgment is affirmed.

Fleming, Acting P. J., and Beach, J., concurred.
Petitions for a rehearing were denied January 9, 1981, and appellant's petition for a hearing by the Supreme Court was denied March 11, 1981. *887

CANDID ENTERPRISES, INC., Plaintiff and Respondent,
v.
GROSSMONT UNION HIGH SCHOOL DISTRICT et al., Defendants and Appellants
L.A. No. 31877.

Supreme Court of California
Sep 26, 1985.

SUMMARY

The trial court granted a condominium developer's petition for a writ of mandate ordering a school district to refund fees for construction of additional school facilities, imposed as a condition of granting building permits, and prohibiting the district from collection of further fees. (Superior Court of San Diego County, No. 474776, Joseph A. Kilgarif, Judge.)

The Supreme Court reversed, holding that the School Facilities Act (Gov. Code, § 65970 et seq.), which encourages local school boards to identify and local governments to deal with the problem of overcrowding, and to that end permits the imposition of school-impact fees to finance certain temporary facilities, did not preempt local governments from imposing such fees to finance both temporary and permanent facilities. The court held the school-impact fees did not contradict or duplicate the provisions of the act, and that such fees have not entered an area fully occupied by state law. It further held that, because the act both permitted and recognized local measures, such as the school-impact fees, it did not have implied preemptive effect. The court further held the imposition of the fees did not violate equal protection. (Opinion by Mosk, J., expressing the unanimous view of the court.)

HEADNOTES

Classified to California Digest of Official Reports

(1) Mandamus and Prohibition § 6--Mandamus--Conditions Affecting Issuance-- Acts and Duties Enforceable--Legislation.
The writ of mandate may be used to challenge the validity of a legislative measure.

(2a, 2b, 2c, 2d) Schools § 4--School Districts; Financing; Funds-- School-impact Fees Imposed on Developers--State Preemption.
The imposition by a local government of otherwise valid fees on real property development ("school-impact fees") to cover the cost of constructing and maintaining school facilities attributable to such development, was not preempted by the School Facilities Act (Gov. Code, § 65970 et seq.), where the school-impact fees did not contradict or duplicate the provisions of the act, and where the fees did not enter an area fully occupied by state law. The act does not even purport to deal with the construction of permanent facilities, and does not fully and completely cover the construction of temporary facilities. Moreover, the act recognizes alternative, local financing arrangements.
[See **Cal.Jur.3d**, Municipalities, § 200; **Am.Jur.2d**, Municipal Corporations, Counties, and Other Political Subdivisions, § 375.]
(3) Municipalities § 26--Powers--Police Power--Scope.
Under the police power granted by the Constitution, counties and cities have plenary authority to govern, subject only to the limitation that they exercise this power within their territorial limits and subordinate to state law. (Cal. Const., art. XI, § 7.) Apart from this limitation, the police power of a county or city is as broad as the police power exercised by the Legislature itself.

(4) Municipalities § 55--Ordinances, Bylaws and Resolutions--Validity-- Conflict With Statutes or Charter.
If otherwise valid local legislation conflicts with state law, it is preempted by such law and is void. A conflict exists if the local legislation duplicates, contradicts, or enters an area fully occupied by the general law, either expressly or by legislative implication.

(5) Municipalities § 56--Ordinances, Bylaws and Resolutions--Validity-- Conflict With Statutes or

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

Charter--Test for Preemption.
In determining whether the Legislature has preempted by implication to the exclusion of local regulation, courts must look to the whole purpose and scope of the legislative scheme. There are three tests: the subject matter has been so fully and completely covered by general law as to clearly indicate that it has become explicitly a matter of state concern; the subject matter has been partially covered by general law couched in such terms as to indicate clearly that a paramount state concern will not tolerate further or additional local action; or the subject matter has been partially covered by general law, and the subject is of such a nature that the adverse effect of a local ordinance on the transient citizens of the state outweighs the possible benefit to the municipality.

(6) Municipalities § 55--Ordinances, Bylaws and Resolutions--Validity-- Conflict With Statutes or Charter--Preemption by Implication.
Preemption of local laws by implication of legislative intent may not be found when the Legislature has expressed its intent to permit local regulations. Similarly, it should not be found when the statutory scheme recognizes local regulations.

(7) Schools § 4--School Districts; Financing; Funds--Fees Imposed on Developers--Validity.
The imposition by the local government of otherwise valid fees on real property development to cover the cost of constructing and maintaining school facilities attributable to such development did not violate equal protection. As an instance of economic regulation, the fees were presumptively constitutional and were validated by their rational relationship to a legitimate public purpose.

MOSK, J.

The major question we must decide in this case concerns what are commonly referred to as "school-impact fees" - i.e., fees that local ***881** governments impose on real property development to cover the costs of constructing and maintaining school facilities attributable to such development. The precise question is whether the School Facilities Act (sometimes hereafter the Act) (Gov. Code, § 65970 et seq.) [FN1] - which encourages local school boards to identify and local governments to deal with the problem of overcrowding, and to that end permits the imposition of school-impact fees to finance certain temporary facilities - preempts local governments from imposing such fees to finance both temporary and permanent facilities. We answer this question in the negative, and therefore reverse the judgment.

FN1 Unless otherwise noted, all statutory references are to the Government Code.

I

In California the financing of public school facilities has traditionally been the responsibility of local government. "Before the *Serrano* v. *Priest* decision in 1971, school districts supported their activities mainly by levying ad valorem taxes on real property within their districts." (Cal. Building Industry Assn., Financing School Facilities (Apr. 1983) p. 3 (hereafter Financing School Facilities).) Specifically, although school districts had received some state assistance since 1947, and especially since 1952 with the enactment of the State School Building Aid Law of

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

1952 (Ed. Code, § 16000 et seq.), they financed the construction and maintenance of school facilities mainly through the issuance of local bonds repaid from real property taxes.

After the *Serrano* decision (5 Cal.3d 584 [96 Cal.Rptr. 601, 487 P.2d 1241, 41 A.L.R.3d 1187]) and to the present day, local government has remained primarily responsible for school facility financing, but has often been thrust into circumstances in which it has been able to discharge its responsibility, if at all, only with the greatest difficulty. In these years, the burden on different localities has been different: extremely heavy on those that have experienced growth in enrollment, light on those that have experienced decline, and somewhere in between on those that have remained stable.

In the early 1970's, because of resistance to increasing real property taxes, localities throughout the state began to experience greater difficulty in obtaining voter approval of bond issues to finance school facility construction and maintenance. As a result, a number of communities chose to impose on developers school-impact fees - such as those at issue here - in order to make new development cover the costs of school facilities attributable to ***882** it. (See, e.g., *Builders Assn. of Santa Clara-Santa Cruz Counties v. Superior Court* (1974) 13 Cal.3d 225 [118 Cal.Rptr. 158, 529 P.2d 582].)

With the passage of Proposition 13 in 1978 the burden of school financing became even heavier. "Proposition 13 prohibits ad valorem property taxes in excess of 1%, except to finance previously authorized indebtedness. Since most localities have reached this 1% limit, school districts cannot raise property taxes even if two-thirds of a district's voters wanted to finance school construction." (Financing School Facilities, *supra*, at p. 4; see Ed. Code, § 17786 ["the Legislature recognizes that the ad valorem tax is no longer available as a source of revenue for the construction of necessary school facilities"].) Moreover, although Proposition 13 authorizes the imposition of "special taxes" by a vote of two-thirds of the electorate, such special taxes have rarely been imposed, remain novel, and as consequence are evidently not perceived as a practical method of school facility financing - especially in view of the need for a two-thirds vote of the electorate to approve them. (Financing School Facilities, *supra*, at pp. 4, 14.)

In the face of such difficulties besetting local governments, the state has not taken over any substantial part of the responsibility of financing school facilities, less still full responsibility. To be sure, in order to implement the *Serrano* decision the Legislature has significantly increased assistance to education. But it has channeled by far the greater part of such assistance into educational programs and the lesser part into school facilities; in fiscal year 1981-1982, for example, only 3.6 percent went for such facilities. (Financing School Facilities, *supra*, at pp. 3, 4, 6.) The Legislature has developed "no long-term, comprehensive solution to the acute and chronic facilities financing needs of local school districts," but rather has enacted merely "a series of stop-gap, patchwork measures." (*Id.* at p. 6.) Moreover, because of, among other things, the state budget crisis in the early 1980's and other factors the Legislature has not adequately funded such measures as it has enacted - indeed, "[i]n the past several years, state-supported construction finance has waned ...." (*Id.* at pp. 6, 16.) Thus, although the burden of financing school facilities appears too heavy for some localities to bear, they continue to bear it in large part alone.

II

In 1974 the Board of Supervisors of San Diego County adopted in the form relevant here a land-use policy, designated Policy I-43 (sometimes hereafter the Policy), to help assure orderly growth in the face of widespread and rapid development and a consequent general increase in population. In the Policy, the board of supervisors described the basic problem: ***883** "In many cases, ... the required public services have not ... been installed by the time the development shows a need. The result has been that residents in the newly developed areas have been inadequately served with schools." It then went on to frame a solution: "Before giving approval to development proposals involving a special use permit or a rezoning, ... the proponent of the development proposal ... [must] make certain provisions, in conjunction with appropriate governmental agencies, to insure: [¶] That the proponent of the development present evidence satisfactory to the Planning Commission, at the time of its consideration

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

of the matter, and to the Board of Supervisors at the time of its consideration of the matter that public school services will in fact be provided concurrent with the need." As evidence that such services and facilities would be provided, the county accepted so-called "school-availability" letters from the local school districts.

In 1977 respondents Grossmont Union High School District (the District) and its governing board (the Board) recognized that developments being proposed at that time might cause overcrowding, and sent letters to that effect to the county. On the basis of such letters, the planning commission concluded that the District could not in fact provide adequate school facilities concurrent with the need created by the proposed developments, and accordingly permitted few if any such developments to proceed.

In the fall of 1977 the predecessor of petitioner Candid Enterprises, Inc. expressed its willingness to enter into an agreement with the District to permit its development to proceed: it would agree to pay fees for school facilities and the District would issue a school-availability letter to the county indicating that such facilities would be provided. [FN2] The District approved the agreement in principle and, in order to facilitate it and others like it, adopted Revised Policy FF, which allowed for assessment, under Policy I-43, of school-impact fees from developers, to be used for temporary or permanent facilities. In the spring of 1978 the District entered into an agreement with petitioner's predecessor secured by the real property under development. By its terms the developer agreed to pay the established fees at the time it sought building permits, and the District issued a school-availability letter advising the county of the agreement and of its ability to provide adequate school facilities through use of the fees.

FN2 The president of petitioner and its predecessor is one and the same person.

Meanwhile, the School Facilities Act had become effective on January 1, 1978. Under the Act, cities and counties were authorized to enact ordinances to require developers to pay fees for temporary school facilities. ***884** (§ 65974.) In the spring of 1978 the board of supervisors enacted such an ordinance, designated Ordinance 5120. Shortly thereafter, in order to facilitate agreements with developers for the payment of fees for temporary facilities under the Act, the District adopted a resolution finding that conditions of overcrowding existed and that it lacked financial resources to provide additional needed school facilities.

In 1978 and 1979 the District assessed some developers for fees for temporary facilities pursuant to the School Facilities Act and Ordinance 5120; with others it entered into secured agreements for the payment of fees for temporary or permanent facilities, in lieu of School Facilities Act fees, pursuant to Policy I-43 and Revised Policy FF. Because of a districtwide decline in enrollment, in February 1980 the District discontinued collecting School Facilities Act fees. At the same time it also discontinued entering into Policy I-43 secured agreements, although it stated its intent to continue to monitor proposed developments, enter into such agreements when necessary, and collect fees under existing agreements in order to provide adequate facilities concurrent with the need that the subject developments were expected to create.

Petitioner, which had purchased a three-lot condominium project from its predecessor, sought building permits late in 1980. In early 1981 it paid under protest $23,500 in Policy I-43 school-impact fees pursuant to the secured agreement between the District and its predecessor. Petitioner then unsuccessfully sought a refund by a letter to the District. Next it requested to speak to the Board on the matter, and was granted permission. At the meeting petitioner asked that in view of declining districtwide enrollment, the Board refund the fees paid under protest and cancel its secured agreement and all other similar agreements. The Board found that the District (1) discontinued collecting School Facilities Act fees and entering into Policy I-43 secured agreements "since it was projected that funds committed under existing agreements would be sufficient to mitigate future impact[,]" (2) "reserved the right to require the commitment of fees from future developments which promised to upset this condition of balance[,]" and (3) never had "any intention to disregard existing agreements, since the housing from projects covered by those agreements will adversely impact the District at their time of completion." The Board then denied petitioner's request.

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

Petitioner initiated this proceeding for a writ of mandate pursuant to Code of Civil Procedure sections 1094.5 (administrative mandate) and 1084 (ordinary mandate). Respondents filed a demurrer and an answer. After a hearing the trial court overruled the demurrer and ordered that mandate issue. ***885** From the ensuing judgment respondents appeal, arguing the substantive point that the imposition of Policy I-43 school-impact fees was not invalid on either preemption or equal protection grounds. (1)**(See fn. 3.)** As we explain below, we find their position meritorious. [FN3]

FN3 Respondents also press the procedural point that their demurrer should have been sustained. This argument, however, is untenable. Although the writ of administrative mandate does not lie because the Board was not required by law to grant petitioner a hearing on its request (Code Civ. Proc., § 1094.5, subd. (a); *Court House Plaza Co. v. City of Palo Alto* (1981) 117 Cal.App.3d 871, 880 [173 Cal.Rptr. 161]), the writ of ordinary mandate is available. Mandate requires that there be no "plain, speedy, and adequate remedy, in the ordinary course of law." (Code Civ. Proc., § 1086.) There was no such remedy here: an action on the contract for refund of fees paid and release from payment of the remainder was inadequate because there were no grounds on which to allege a breach or to seek rescission; no statutory action for a refund then existed, although one now does (§ 65913.5, subd. (e)); and an action for declaratory relief was inappropriate insofar as petitioner was attacking the local legislation as applied (*Mobil Oil Corp. v. Superior Court* (1976) 59 Cal.App.3d 293, 307 [130 Cal.Rptr. 814]). The writ of mandate may of course be used, as it is used here, to challenge the validity of a legislative measure. (E.g., *Jolicoeur v. Mihaly* (1971) 5 Cal.3d 565, 570, fn. 2 [96 Cal.Rptr. 697, 488 P.2d 1].)

III

(2a) Respondents first contend that the imposition of Policy I-43 school-impact fees is not preempted by the School Facilities Act and is accordingly valid. Petitioner concedes as it must that the imposition of school-impact fees is generally valid. (See *Builders Assn. of Santa Clara-Santa Cruz Counties v. Superior Court, supra*, 13 Cal.3d 225, 232, fn. 6.) Respondents proceed to argue successfully that the local legislation is not preempted by the Act on the ground that there is no conflict.

(3) Under the police power granted by the Constitution, counties and cities have plenary authority to govern, subject only to the limitation that they exercise this power within their territorial limits and subordinate to state law. (Cal. Const., art. XI, § 7.) Apart from this limitation, the "police power [of a county or city] under this provision ... is as broad as the police power exercisable by the Legislature itself." (*Birkenfeld v. City of Berkeley* (1976) 17 Cal.3d 129, 140 [130 Cal.Rptr. 465, 550 P.2d 1001].)

(4) If otherwise valid local legislation conflicts with state law, it is preempted by such law and is void. (*People* ex rel. *Deukmejian v. County of Mendocino* (1984) 36 Cal.3d 476, 484 [204 Cal.Rptr. 897, 683 P.2d 1150]; *Lancaster v. Municipal Court* (1972) 6 Cal.3d 805, 807 [100 Cal.Rptr. 609, 494 P.2d 681].) A conflict exists if the local legislation "'duplicates, contradicts, or enters an area fully occupied by general law, either expressly or by legislative implication.'" (Citations omitted.) (*People* ex rel. *Deukmejian v. County of Mendocino, supra*, 36 Cal.3d at p. 484.) ***886**

(2b) Respondents argue and petitioner concedes that Policy I-43 school-impact fees do not contradict or duplicate the provisions of the School Facilities Act. Respondents further assert that such fees have not entered an area fully occupied by state law. They are persuasive.

First, the area of financing of school facilities needed by new development has not been expressly occupied by state law. The Legislature has not voiced such an intent in any of its enactments, and petitioner admits as much.

Second, the area has not been impliedly occupied by state law. (5) "In determining whether the Legislature has preempted by implication to the exclusion of local

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

regulation we must look to the whole purpose and scope of the legislative scheme. There are three tests: '(1) the subject matter has been so fully and completely covered by general law as to clearly indicate that it has become exclusively a matter of state concern; (2) the subject matter has been partially covered by general law couched in such terms as to indicate clearly that a paramount state concern will not tolerate further or additional local action; or (3) the subject matter has been partially covered by general law, and the subject is of such a nature that the adverse effect of a local ordinance on the transient citizens of the state outweighs the possible benefit to the municipality.'" (*People* ex rel. *Deukmejian v. County of Mendocino, supra*, 36 Cal.3d 476, 485, quoting from *In re Hubbard* (1964) 62 Cal.2d 119, 128 [41 Cal.Rptr. 393, 396 P.2d 809]; accord, *Fisher* v. *City of Berkeley* (1984) 37 Cal.3d 644, 708 [209 Cal.Rptr. 682, 693 P.2d 261] and cases cited.)

(2c) Petitioner concedes, as it must, that the imposition of Policy I-43 school-impact fees does not satisfy the third test, and respondents successfully urge that it satisfies neither of the other two. [FN4]

> FN4 How the relevant field occupied by the allegedly preemptive state legislation is defined is often crucial to the result: "If the definition is narrow, preemption is circumscribed; if it is broad, the sweep of preemption is expanded." (*California Water & Telephone Co.* v. *County of Los Angeles* (1967) 253 Cal.App.2d 16, 27-28 [61 Cal.Rptr. 618]; see *Gregory v. City of San Juan Capistrano* (1983) 142 Cal.App.3d 72, 84 [191 Cal.Rptr. 47].) The issue of definition, however, is not crucial here. Whether the School Facilities Act is held to occupy the narrow field of the financing of temporary facilities (as it evidently should be) or the broad field of the financing of all facilities (as it evidently should not be) is of no consequence in the case before us. As we shall explain, the Act recognizes and in fact permits local action, and thereby fails to occupy either field to the exclusion of local legislation.

First, the subject matter of the local measure - the financing of the construction of both temporary and permanent school facilities to meet the demands imposed by new development - has not been so fully and completely ***887** covered by general law as to clearly indicate that it has become exclusively a matter of state concern.

Taken by itself, the School Facilities Act does not even purport to deal with the construction of permanent facilities (see §§ 65970, subd. (e), 65974), and does not fully and completely cover the construction of temporary facilities. The Act recognizes alternative, local financing arrangements: "One year after receipt of any apportionment pursuant to the Leroy F. Greene State School Building Lease-Purchase Law of 1976 ... for the construction of a school, the city or county shall not be permitted thereafter, pursuant to this chapter *or pursuant to any other school facilities financing arrangement such district may have with builders of residential development*, to levy any fee or to require the dedication of any land within the attendance area of the district." (§ 65979, italics added.) The Act, moreover, clearly permits such arrangements. The school district is required to notify the local legislative body if it finds that "(a) conditions of overcrowding exist in one or more attendance areas within the district which will impair the normal functioning of educational programs including the reason for such conditions existing; and (b) that all reasonable methods of mitigating conditions of overcrowding have been evaluated and no feasible method for reducing such conditions exist [*sic*] ...." (§ 65971.) The Act goes on to define "reasonable methods for mitigating conditions of overcrowding": they "shall include, *but are not limited to*, agreements between a subdivider and the affected school district whereby temporary-use buildings will be leased to the school district or temporary-use buildings owned by the school district will be used." (§ 65973, subd. (b), italics added.)

Even if we consider the School Facilities Act together with other related state legislation, we come to the same conclusion: the subject matter of this local measure has not been fully and completely covered by state law. Although, as petitioner correctly argues, there are several state and local programs that provide funding for the construction of school facilities, [FN5] the general situation may properly be described in the

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

words already quoted of one of petitioner's principal authorities: "Since the passage of Proposition 13, financing for school construction and facility maintenance has been a series of stop-gap, patchwork measures. There still exists no long-term, comprehensive solution to the acute and chronic facilities financing needs of local school districts." (Financing School Facilities, *supra*, at p. 6.) *888

FN5 These include, for example, the School Facilities Act, the Leroy F. Greene State School Building Lease-Purchase Law of 1976 (hereinafter the Greene Act) (Ed. Code, § 17700 et seq.), the Mello-Roos Community Facilities Act of 1982 (§ 53311 et seq.), and the New Schools Relief Act of 1979 (Ed. Code, § 39050 et seq.).

The evident absence of implied preemptive intent in the terms of the School Facilities Act - whether we consider it by itself or with other related legislation - is confirmed by the failure of the Legislature to fully cover the financing of school facilities. First, not all school districts in need of funds for permanent facilities can qualify to receive them under the Greene Act. (See Ed. Code, § 17740.) Second, for a variety of reasons the Legislature has failed to provide adequate funding for even such "stop-gap, patchwork" programs as currently exist. In such circumstances, to construe alternative, local arrangements such as that before us to be preempted would severely impede local governments and school districts in carrying out their responsibilities. It would also frustrate the intent of the Legislature in enacting the School Facilities Act: "Adequate school facilities should be available for children residing in new residential developments." (§ 65970, subd. (a).) Thus, under this test - i.e., whether the subject matter of the local measure has been so fully covered by state law as to clearly indicate that it has become exclusively a matter of state concern - the Act is shown not to be preemptive. FN6

FN6 We do not mean to imply that the Legislature may not occupy a field unless it appropriates the funds necessary to carry out its intent. We also note that in some cases the "inadequacy" of state funding may prove to be too speculative or subjective a criterion on which to base a conclusion that the Legislature has not intended to preempt local action.

Second, the subject matter of this local measure has not been partially covered by state law couched in such terms as to indicate clearly that a paramount state concern will not tolerate additional local action. The evidence on which we base our conclusion is compelling: the School Facilities Act, as we have explained, unmistakably recognizes and permits local action. Thus, under this test too the Act is shown not to be preemptive.

(6) To summarize: "Preemption by implication of legislative intent may not be found when the Legislature has expressed its intent to permit local regulations. Similarly, it should not be found when the statutory scheme recognizes local regulations." (*People* ex rel. *Deukmejian v. County of Mendocino, supra*, 36 Cal.3d 476, 485.) (2d) Accordingly, we conclude that the School Facilities Act, because it both permits and recognizes local measures such as this, does not have implied preemptive effect.

To avoid this conclusion, petitioner relies heavily on an opinion by the Attorney General. (62 Ops.Cal.Atty.Gen. 601 (1979).) Among the questions addressed in the opinion is whether the School Facilities Act preempts the imposition of school-impact fees by local government to provide permanent facilities. (*Id.* at p. 601.) To this the Attorney General answered *889 yes. (*Id.* at pp. 605-609.) The conclusion is erroneous, however, because the analysis is faulty.

First, the opinion reasons that the Act restricts the fees that may be imposed to no more than "'the amount necessary to pay five annual lease payments for the interim facilities,'" and that such a restriction "would be meaningless if a city council or board of supervisors could exact additional developer fees for permanent school facilities." (*Id.* at p. 607, quoting § 65974, subd. (d).) This position might be sound if the Act were intended to limit the authority of local government to make such exactions, but it is not. The purpose of the Act is to encourage local school districts to identify, and local governments to deal with, the effects of residential development on school facilities and to provide local government with "new and improved methods" to cope with the effects of such

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

development "within a reasonable period of time" and on a short-term basis. (See §§ 65970-65971.) Accordingly, the restriction on the amount of fees that may be imposed is properly to be construed as an attempt on the part of the Legislature to ensure that local governments not indefinitely avoid the problem of the construction of permanent facilities by agreeing to the long-term use of temporary facilities.

Second, the opinion reasons that the 1979 addition of section 65980, which expressly limits the scope of the Act to temporary facilities, when as initially enacted it "was arguably broad enough to cover permanent facilities [as well,] ... indicated an intent to restrict the amount and purpose of the fees to be collected from developers." (62 Ops.Cal.Atty.Gen., *supra*, at p. 607.) This position is undermined, however, by the conclusions we reach above: the Legislature evidently intended that local governments use fees authorized by the Act as a short-term solution - *not* that local governments be prohibited from developing and implementing long-term solutions. It is also undermined by the language of section 65979, which was added to the Act at the same time as section 65980: "One year after receipt of an apportionment pursuant to the [Greene Act] ... for the construction of a school, the city or county shall not be permitted thereafter, pursuant to this chapter *or pursuant to any other school facilities financing arrangement such district may have with builders of residential development*, to levy any fee or to require the dedication of any land within the attendance area of the district." (Italics added.) Thus, section 65979 expressly recognizes "other school facilities financing arrangement[s]" between local government and developers, and prohibits exactions pursuant to such arrangements *only* when the locality has received an apportionment for permanent facilities pursuant to the Greene Act. Had the Legislature intended the School ***890** Facilities Act to preempt such "school facilities financing arrangement[s]," the reference to them would have been meaningless.

Third, the opinion reasons by analogy to the Subdivision Map Act that "the express grant of authority to impose school impact fees and dedications upon developers under [the Act], with strict limitations as to amount, evidences an intent by the Legislature to preempt the field to the exclusion of local regulation." (62 Ops.Cal.Atty.Gen., *supra*, at p. 608.) But even if the opinion is correct in concluding that the intent of the Legislature in the Subdivision Map Act is to prohibit local government from making exactions that the Act does not expressly authorize, it errs in reading such an intent into the School Facilities Act. Here the Legislature recognizes (§ 65979) and in fact permits (§§ 65971, 65973, subd. (b)) local legislation, and has accordingly indicated its clear intent that the "new and improved methods of financing for interim school facilities" that the Act provides are merely supplementary to, and not preemptive of, local action (§ 65970, subd. (e)).

IV

(7) Respondents' other contention is that the imposition of Policy I-43 school-impact fees does not violate the equal protection clause and is accordingly valid. This claim too is successful.

The imposition of school-impact fees is an undisputed and indisputable instance of economic regulation. As such, we must review it under "the basic and conventional standard," which "invests legislation ... with a presumption of constitutionality and 'requir[es] merely that distinctions drawn by a challenged [measure] bear some rational relationship to a conceivable legitimate state purpose.'" (*D'Amico v. Board of Medical Examiners* (1974) 11 Cal.3d 1, 16 [112 Cal.Rptr. 786, 520 P.2d 10]; see *Builders Assn. of Santa Clara-Santa Cruz Counties v. Superior Court, supra*, 13 Cal.3d 225, 232-233.) As petitioner implicitly concedes, we may not review the challenged local measure under any stricter standard: developers do not constitute a "suspect class," and development is not a "fundamental interest" (see *Trent Meredith, Inc. v. City of Oxnard* (1981) 114 Cal.App.3d 317, 328 [170 Cal.Rptr. 685]). Under the conventional standard, "the burden of demonstrating the invalidity of a classification ... rests squarely upon *the party who assails it*." (*D'Amico v. Board of Medical Examiners, supra*, 11 Cal.3d at p. 17, italics in original.) Petitioner has failed to carry this burden.

If, as respondents argue and we are inclined to hold, the class of similarly situated persons comprises all developers who have entered into a secured ***891** agreement to obtain a school-availability letter, then no discrimination at all appears: the Board has col-

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

lected fees as they have become due and has stated its intent to continue to collect them. But even if, as petitioner responds, the class comprises all developers who are currently building in the district, still no unlawful discrimination emerges. The Board entered into secured agreements covering certain developments proposed in 1978 and 1979 because it expected them to cause or aggravate overcrowding in neighboring schools. The Board has not entered into such agreements covering developments proposed subsequently because it has not expected them to have such an adverse effect. Thus if developers currently building in the district are treated differently, such difference is reasonable and therefore lawful: developers who are expected to cause or aggravate overcrowding are required to mitigate it, others are not.

The judgment is reversed. [FN7]

> FN7 Because of our disposition we do not reach the question whether petitioner waived its right to the fees it paid under protest by accepting the benefits of the agreement with the District.

H

CASTAIC LAKE WATER AGENCY, Plaintiff and Appellant,
v.
CITY OF SANTA CLARITA et al., Defendants and Respondents.
No. B088277.

Court of Appeal, Second District, California.
Dec 21, 1995.

SUMMARY

A city and its redevelopment agency adopted a community recovery plan prepared by the city's staff following a major earthquake, found that adoption of the plan and all related documents was exempt as a project from the California Environmental Quality Act (CEQA) (Pub. Resources Code, § 21000 et seq.), and recommended adoption of the plan by the city council. The city council approved and adopted the plan, also finding it exempt from CEQA, as a project pursuant to Pub. Resources Code, § 21080, subd. (b)(3) and (4) (exemption for projects undertaken to repair damage from a disaster and to prevent or mitigate an emergency), and a notice of exemption was filed with the county clerk. A public agency that supplied water to the area that was subject to the plan petitioned for a writ of mandate challenging the finding by the city and agency that the project was exempt from CEQA. The trial court denied the petition. (Superior Court of Los Angeles County, No. BC101876, Robert H. O'Brien, Judge.)

The Court of Appeal reversed with directions to the trial court to grant a peremptory writ of mandate ordering the city and agency to vacate their notice of exemption. The court held that the trial court erred in allowing the city and agency to assert the defense of exhaustion of administrative remedies, as there are no administrative procedures that must first be followed before such a petition for a writ of mandate is filed. The court also held that the trial court erred in concluding that the recovery plan qualified for an emergency exemption under CEQA, since the plan unmistakably evinced a predominant focus on infrastructure and economic revitalization measures rather than the activities listed in the exemption statutes. The plan encompassed much of the city and sought to construct facilities independent from the earthquake, infrastructure improvements to alleviate deficiencies in the city's traffic and to prepare for future disasters, a storm drain and parks space system, commuter rails and bikeways, and to redevelop sites identified as important to the success of the community's economic development and revitalization efforts. (Opinion by Lillie, P. J., with Johnson and Woods (Fred), JJ., concurring.)

HEADNOTES

Classified to California Digest of Official Reports

(1) Pollution and Conservation Laws § 1.8--California Environmental Quality Act--Exemptions--Challenge to Finding of Exemption--Exhaustion of Administrative Remedies.
In a writ proceeding, brought by a public agency that supplied water to an area damaged by a major earthquake, challenging the findings of a city and a redevelopment agency that the community recovery plan adopted was exempt from the California Environmental Quality Act (CEQA) (Pub. Resources Code, § 21000 et seq.), the trial court erred in allowing the city and agency to assert the defense of exhaustion of administrative remedies. The filing of a notice of exemption from CEQA and the posting on the list of notices start a 35-day statute of limitations period on legal challenges. The public agency filed its petition for a writ of mandate within that period. There are no administrative procedures that

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

must first be followed before a petition for a writ of mandate is filed. It would be paradoxical to construe CEQA to require the public agency to present a complete explication of its objections to the claimed exemption before the filing of the notice of determination that the project is exempt.

(2) Pollution and Conservation Laws § 1.8--California Environmental Quality Act--Exemptions--Disaster Repair and Prevention.
In a writ proceeding, brought by a public agency that supplied water to an area damaged by a major earthquake, challenging the findings of a city and a redevelopment agency that the community recovery plan adopted was exempt from the California Environmental Quality Act (CEQA) (Pub. Resources Code, § 21000 et seq.), the trial court erred in concluding that the recovery plan qualified for an emergency exemption under CEQA (Pub. Resources Code, § 21080, subd. (b)(3), (b)(4)) (exemption for projects undertaken to restore or prevent damage from disaster). The plan unmistakably evinced a predominant focus on infrastructure and economic revitalization measures rather than the activities listed in the exemption statutes. The plan encompassed much of the city and sought to construct facilities independent from the earthquake, infrastructure improvements to alleviate deficiencies in the city's traffic and to prepare for future disasters, storm drain and a parks space system, commuter rails and bikeways, and to redevelop sites identified as important to the success of the community's economic development and revitalization efforts.
[See 4 **Witkin,** Summary of Cal. Law (9th ed. 1987) Real Property, § 591.]
(3) Pollution and Conservation Laws § 1.8--California Environmental Quality Act--Exemptions--Disaster Repair and Prevention--Narrow Construction.
An extremely narrow exception to the requirements of the California Environmental Quality Act (CEQA) (Pub. Resources Code, § 21000 et seq.) is accorded for emergencies (Pub. Resources Code, § 21080, subds. (b)(3), (b)(4)). "Emergency" as defined by Pub. Resources Code, § 21060.3, is an occurrence, not a condition, that involves a clear and imminent danger, demanding immediate action. The theory behind these exemptions is that if a project arises for which the lead agency simply cannot complete the requisite paperwork within the time constraints of CEQA, then pursuing the project without complying with the requirement of an environmental impact report (EIR) is justifiable. It is difficult to imagine a large-scale public works project that could not qualify for emergency exemption from an EIR on the grounds that it might ultimately mitigate the harms attendant on a major natural disaster; such a broad construction would be unmistakably opposed to the policy of construing CEQA to afford the maximum possible protection of the environment.

(4) Public Housing and Redevelopment § 5--Redevelopment--Submission of Plan--Requirement of Environmental Impact Report.
The requirement to undertake environmental review has not been deleted from the Community Redevelopment Financial Assistance and Disaster Project Law (Health & Saf. Code, §§ 34000, 34013). Health & Saf. Code, § 34013, dispenses with many prerequisites for redevelopment and urban renewal projects in "disaster areas" but compliance with the California Environmental Quality Act (Pub. Resources Code, § 21000 et seq.) is not one of them. Health & Saf. Code, § 33352, provides that every redevelopment plan submitted by the agency to the legislative body be accompanied by an environmental impact report (Pub. Resources Code, § 21151).

LILLIE, P. J.

Castaic Lake Water Agency (Castaic) appeals from judgment entered following denial of petition for writ of mandate. Castaic contends the court erred in concluding that the City of Santa Clarita (the city) and the Santa Clarita Redevelopment Agency (the agency) properly proceeded with a redevelopment plan under an exemption from the requirement of an environmental impact report pursuant to the California Environmental Quality Act (CEQA.) FN1

FN1 Public Resources Code section 21000 et seq.

Statement of Facts and Procedural History

The Northridge Earthquake occurred on January 17, 1994. On that same day, the federal government declared that a major disaster existed in the State of California, the Governor proclaimed a state of emergency in Los Angeles County and the city proclaimed a local emergency. On January 25, 1994, the city council authorized city staff to proceed with the preparation of a redevelopment plan for the disaster area. On February 8, 1994, the city council, by resolution, found that the entire city required a study to determine if a redevelopment project within the area was feasible. The resolution also noted the city had identified a critical need for economic development and community revitalization as incorporated in the general plan and deemed redevelopment to be necessary to achieve the goals and objectives contained therein. On February 11, 1994, the city and the agency each published notice of the hearing to be held on February 22, 1994, regarding the proposed adoption of the Santa Clarita Community Recovery Plan (the plan). The notice advised that the purpose of the plan was "to alleviate the damage caused by the January 17, 1994, so-called 'Northridge' earthquake, and succeeding and following aftershocks and related earthquakes and to provide for and facilitate the repair, restoration, demolition, and/or replacement of property or facilities damaged as a result of a disaster in the Project Area; to take all action necessary to prevent or mitigate emergencies arising out of the disaster; to eliminate blight in the Project Area; and to cause economic redevelopment and community revitalization of the Project Area as provided in the adopted General Plan." The notice further advised that persons interested could contact the deputy city manager for information concerning *1261 the nature and extent of the plan and other related documents and that copies of the plan and related documents were on file and available for public inspection in the office of the city clerk.

On February 22, 1994, a joint public hearing of the city council and the agency board was held to consider the plan. City Manager George A. Caravalho in his agenda report indicated that since the January 17th earthquake, "staff has followed Council direction to pursue all avenues of possible relief. One such opportunity holding the promise of significant investment in the community is the creation of a Community Recovery Plan pursuant to the State Community Redevelopment Financial Assistance and Disaster Law. The proposed Recovery Plan can provide for disaster relief and, beyond that, long-term economic development and community revitalization. The latter has been of real interest to Council and the community for some time." The

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

agenda report of Caravalho listed the primary purposes of the plan were to provide earthquake disaster relief, provide community infrastructure, conduct economic development/community revitalization activities as contained in the general plan and undertake improvements in community housing.

A report to the city council on the plan described the physical and economic conditions existing at the project site and stated that because of the age of structures, portions of the project area suffered from localized occurrences of deferred maintenance and substandard housing, which also affected housing values and rents. Estimated damage reports for the city indicated that the earthquake caused total private property damage of approximately $144,215,000. The report stated that the project area included parts of the formerly unincorporated areas of Valencia, Newhall, Canyon Country and Saugus, and that in 1988, near the date of city incorporation, a survey conducted by the county had identified infrastructure needs of the entire Santa Clarita Valley which would have required an expenditure of approximately $911 million in order to bring improvements up to typical urban standards. The report also stated that in 1992 a study of a part of the project area by GRC Redevelopment Consultants indicated that over 50 percent of the units surveyed were in need of some form of repair.

The report included a five-year implementation plan with four goals. Goal 1 was to assist in the repair and rehabilitation of damaged businesses and homes, assist homeowners and landlords with grant and loan funds to repair structural damage caused by the disaster, assist commercial, industrial and office owners to return their properties to profitable use, assist mobilehome owners and provide technical assistance to homeowners, landlords, and business owners in expediting their plans through any permit process. ***1262**

Goal 2 was to repair the infrastructure damaged by the disaster and to meet the ongoing and future needs of the community. It included repairing the estimated $20 million damage caused to the city's infrastructure, repairing storm drains, traffic signals, roadways, public buildings, parks, roadway medians and bridges, and participating in the financing of the city's uninsured losses to its public buildings and associated relocation costs of private tenants. It also included repair and structural rehabilitation in association with other public agencies if needed. Also listed was the mitigation of existing infrastructure deficiencies. It stated that "[i]n order to expedite the Community's recovery from the Disaster, it will be necessary to construct infrastructure improvements which alleviate the current severe deficiencies in the City's traffic, storm drain, and park space systems. The 1988 Daniel, Mann, Johnson and Mendenhall Study of Santa Clarita Valley infrastructure deficiencies will be used as a guide, in addition to the current City Capital Improvement Program (CIP). According to the 1993 Five-Year CIP there is over $140,000,000 of needed capital improvements which are unfunded or which require a significant City share. These improvements include San Fernando Road, the Southern Pacific Railroad Corridor and other critical east-west and north-south thoroughfares." Another program was the construction of infrastructure to prepare for future disasters, specific projects included the development of an emergency operations center on the civic center site, rehabilitation and structural reinforcement of existing bridges, abutments, critical public safety facilities and other structures which may fail during any future disasters. The plan also called for the construction of circulation improvements and stated, "The Disaster, and the resulting freeway closures, indicated a need to prepare for future Disasters through the improvement of non-vehicular transportation modes and additional thoroughfares. The Agency proposes to participate in the provision and construction of Metrolink improvements, one or more Park and Ride facilities, community bikeways, commuter rail trail, the Santa Clara River bikeway, Sierra Highway Bridge im-

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

provements, Via Princesa corridor construction and other similar circulation improvements." The plan also proposed to use the city's economic development and community revitalization element of the general plan to guide in the construction of other improvements necessary to preserve and enhance the community's economic base.

As goal 3, the agency proposed to provide for the economic development and revitalization of the community in accordance with the general plan. This included the redevelopment of various sites in the community which had been identified as important to the success of the community economic development and community revitalization efforts, including the Newhall Commercial Corridor, the Bermite Site, the Saugus Rehabilitation Center ***1263** site, Soledad Canyon Road. It also included aggressive economic development efforts essential to the creation of additional jobs and the mitigation of the effect of the disaster on the economic and investment climate of the community. The report stated "[t]hese efforts may include land assembly for major development projects, assistance with needed infrastructure which cannot be afforded by the private sector acting alone, land cost writedown in accordance with State Community Redevelopment Law, and other eligible forms of assistance. These funds may also be used for community meeting center improvements associated with tourism."

Goal 4 was to improve and expand the community's supply of lowand moderate-income housing. The most immediate need was for replacement housing for structures which had been damaged beyond economic repair, estimated to be over 133 units. Grants and loans were to be provided to qualifying families for major repairs and rehabilitation and to property owners with 50 percent or more of tenants eligible as low-income households. The plan called for implementation of the general plan housing element policy 1.g., which called for loans in association with local lending institutions to encourage the development of infill parcels. Also included in this goal was a first time home buyers program, to institute a program, in conjunction with local lenders and mortgage brokers, to provide down payment assistance and second trust deeds. The plan called for the provision of parcels for the development of self-help, sweat-equity programs for lower income households, where appropriate the provision of additional funds to target abatement of nuisance properties in lower-income neighborhoods, the allocation of funds for a program which provides grants for emergency repairs for very low income households and disabled residents, funding for projects which meet the agency's inclusionary housing requirements under the Community Redevelopment Law, and the provision of housing for senior citizens, large families and the homeless.

The report also stated that a lifetime expenditure of $1.1 billion was projected as a result of the recovery plan implementation. The report stated "[i]f the earthquake damage estimate is pegged at $210 million dollars, then a 'loan' (or bonds) issued to meet this cost would require annual payments of 13.7 million dollars over a thirty (30) year period for a total expenditure of $410 million dollars. Using the county's 1988 Daniel, Mann, Johnson, Mendenhall infrastructure deficiency study as a guide, some $911 million dollars in infrastructure deficiencies exist in our community. Financing of this cost as above would yield annual payments of $59.3 million dollars and an ultimate bottom line of $1.778 billion dollars."

The project area boundaries were drawn initially to include the entire city, 27,321 acres, as of the date of its incorporation in December 1987. Thereafter, the city removed 8,670 acres of land from the project. ***1264**

Don Duckworth, special consultant, employed by the city to assist in the development of the plan reported that while the city had just incorporated, hired staff, adopted capital improvements and operating budgets, the earthquake seemed to knock the

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

city "back to the bottom of the hill and put [it] in a position where you have to start all over." He reported, though, that they had been able to find a "silver lining." He described the silver lining as the "opportunity for the Council to recover by utilizing the Community and Redevelopment Disaster Law in order to, not only recover and provide disaster relief from the earthquake, but also to advance some principal purposes that you identified in your adopted General Plan."

By resolution, the agency adopted the plan and recommended its adoption by the city council. The agency found that the adoption of the plan and all related documents was exempt as a project from CEQA. The city council, thereafter, approved and adopted the plan and found that the plan and related documents were exempt from CEQA as a project pursuant to Public Resources Code section 21080, subdivision (b)(3) and (4).

On or about February 25, 1994, a notice of exemption was filed with the county clerk of the County of Los Angeles.

On March 31, 1994, Castaic, a public agency that supplies water to the Santa Clarita Valley, filed a petition for writ of mandate in superior court challenging the finding by the city and agency that the project was exempt from CEQA pursuant to Public Resources Code section 21080, subdivision (b)(3) and (4).

Discussion

The parties agree that the applicable standard of review is pursuant to the provisions of Public Resources Code section 21168.5. That section provides in relevant part that in an action or proceeding, other than one under section 21168, "to attack, review, set aside, void or annul a determination, finding, or decision of a public agency on the grounds of noncompliance with this division, the inquiry shall extend only to whether there was a prejudicial abuse of discretion. Abuse of discretion is established if the agency has not proceeded in a manner required by law or if the determination or decision is not supported by substantial evidence." (See *Western States Petroleum Assn. v. Superior Court* (1995) 9 Cal.4th 559, 568 [38 Cal.Rptr.2d 139, 888 P.2d 1268]; *Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal.3d 376, 392 [253 Cal.Rptr. 426, 764 P.2d 278].) " 'Substantial evidence' is defined by the Guidelines ... [and] '... means enough relevant information and reasonable inferences from this information ***1265** that a fair argument can be made to support a conclusion, even though other conclusions might also be reached. Whether a fair argument can be made is to be determined by examining the entire record. Mere uncorroborated opinion or rumor does not constitute substantial evidence.' (Guidelines, § 15384, subd. (a).)" (*City of Pasadena v. State of California* (1993) 14 Cal.App.4th 810, 821-822 [17 Cal.Rptr.2d 766].) FN2

FN2 References to Guidelines are to the state CEQA guidelines which implement CEQA. (Cal. Code Regs., tit. 14, § 15000 et seq.)

I. Exhaustion of Administrative Remedies

The Legislature has established statutory exemptions from CEQA. (See Pub. Resources Code, § 21080, subd. (b).) "The determination of whether an activity is exempt from CEQA is made as a part of the preliminary review process. That process is described in Guidelines section 15060, which makes it clear that the applicability of an exemption must be made *before* the agency begins its formal environmental evaluation of the project." (*City of Pasadena v. State of California*, *supra*, 14 Cal.App.4th at p. 820, italics in original, fn. omitted.) When a public agency decides that a project is exempt, it may file a notice of exemption. The filing of such a notice and the posting on the "list of

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

notices" start a 35-day statute of limitations period for legal challenges to the agency's decision that the project is exempt from CEQA. If a notice of exemption is not filed, a 180-day statute of limitations applies. (Guidelines, § 15062, subds. (a) and (d).) A project that is statutorily exempt is exempted from all further CEQA provisions.

(1) Appellant asserts that the trial court incorrectly allowed respondents to assert the defense of exhaustion of administrative remedies. FN3 We agree. The Guidelines provide that the filing of a notice of exemption and the posting on the list of notices start a 35-day statute of limitations period on legal challenges to the agency's decision that the project is exempt from CEQA. Castaic filed its petition for writ of mandate within that statutory ***1266** period satisfying the requirements of the guidelines. Nowhere in these guidelines are there administrative procedures that must first be followed before a petition for writ of mandate may be filed. "It would be paradoxical to construe CEQA to require [Castaic] to present a complete explication of its objections to the claimed exemption" before the notice of determination that the project is exempt is filed. (See *City of Pasadena v. State of California*, *supra*, 14 Cal.App.4th at p. 821.)

> FN3 Public Resources Code section 21177, subdivision (a) provides: "No action or proceeding may be brought pursuant to Section 21167 unless the alleged grounds for noncompliance with this division were presented to the public agency orally or in writing by any person during the public comment period provided by this division or prior to the close of the public hearing on the project before the issuance of the notice of determination." Subdivision (b) provides: "No person shall maintain an action or proceeding unless that person objected to the approval of the project orally or in writing during the public comment period provided by this division or prior to the close of the public hearing on the project before the issuance of the notice of determination." Subdivision (e) provides that this section "does not apply to any alleged grounds for noncompliance with this division for which there was no public hearing or other opportunity for members of the public to raise those objections orally or in writing prior to the approval of the project, or if the public agency failed to give the notice required by law."

To the extent that respondent argues that Castaic was present at a public hearing where the plan was adopted and should have objected to the finding that the project was exempt, the record reflects that Castaic's general manager asked for a delay in the proceedings in order to consult with its board but said request was ignored.

II. Exemption Under CEQA

(2) Appellant contends that the trial court erroneously held the recovery plan qualified for an emergency exemption under CEQA. That contention is well taken. Public Resources Code section 21080, subdivision (b)(3) exempts from CEQA "Projects undertaken, carried out, or approved by a public agency to maintain, repair, restore, demolish, or replace property or facilities damaged or destroyed as a result of a disaster in a disaster-stricken area in which a state of emergency has been proclaimed by the Governor pursuant to Chapter 7 (commencing with Section 8550) of Division 1 of Title 2 of the Government Code." Public Resources Code section 21080, subdivision (b)(4) exempts "Specific actions necessary to prevent or mitigate an emergency." Public Resources Code section 21060.3 defines emergency as "a sudden, unexpected occurrence, involving a clear and imminent danger, demanding immediate action to prevent or mitigate loss of, or damage to, life, health, property, or essential public services. 'Emergency' includes

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

such occurrences as fire, flood, earthquake, or other soil or geologic movements, as well as such occurrences as riot, accident, or sabotage."

In concluding that the project was exempt from CEQA, the trial court stated: "The fact that a pre-disaster potential redevelopment plan addressed conditions that a disaster restructuring plan also addresses is not a determinative factor. [¶] Moreover, net monetary earthquake damage (e.g., $210,790,863) does not necessarily limit the scope of a redevelopment plan properly exempted from CEQA. Simply repairing earthquake damage is not the purpose of the disaster exemption. It is within the scope and purpose of the Disaster Law (see, e.g., Health and Saf., §§ 34013, 34004) that an entire area of a potential redevelopment plan or urban renewal project may be ***1267** included in a proper exemption. Even though parts of the precise redevelopment area were not directly damaged by the disaster, so long as there is a logical synapse between the precisely damaged property, which needs immediate attention, and the other undamaged property within the plan and within the affected land use sphere of damaged property, the Disaster Law applies. Those conditions are met here."

As appellant argues, the administrative record "unmistakably shows a predominant focus" on infrastructure and economic revitalization measures rather than the activities listed in the exemption statutes. Public Resources Code section 21080, subdivision (b)(3), plainly and expressly exempts only those projects "to maintain, repair, restore, demolish, or replace property or facilities damaged or destroyed as a result of a disaster in a disaster-stricken area." The proposed plan encompasses much of the city and in addition to maintaining, repairing, restoring, demolishing or replacing property or facilities damaged or destroyed by the Northridge earthquake seeks to among other things construct facilities independent from the earthquake, infrastructure improvements to alleviate deficiencies in the city's traffic, storm drain and parks space system identified in a 1988 study, construct infrastructure to prepare for future disasters, construct commuter rails and bikeways, and to redevelop sites identified as important to the success of the community's economic development and revitalization efforts.

Additionally, the plan is not limited to those specific actions "necessary to prevent or mitigate an emergency" as required by the exemption contained in Public Resources Code section 21080, subdivision (b)(4).

(3) In *Western Mun. Water Dist. v. Superior Court* (1986) 187 Cal.App.3d 1104 [232 Cal.Rptr. 359], the court reasoned: "The 'emergency' exception of section 21080, subdivision (b)(4) is obviously extremely narrow. 'Emergency' as defined by section 21060.3 is explicit and detailed. We particularly note that the definition limits an emergency to an '*occurrence*,' not a condition, and that the occurrence must involve a '*clear and imminent danger, demanding immediate action.*' [¶] ... '... The theory behind these exemptions is that if a project arises for which the lead agency simply *cannot* complete the requisite paperwork within the time constraints of CEQA, then pursuing the project without complying with the EIR requirements is justifiable. For example, if a dam is ready to burst or a fire is raging out of control and human life is threatened as a result of delaying a project decision, application of the emergency exemption would be proper.' [Citation.] [¶] Although SBVMWD urges that 'CEQA, including its environmental impact report requirements, shall not apply to specific actions necessary ***1268** to prevent or mitigate earthquakes or other soil or geological movements,' this interpretation is unsupported by the text of the exemption. Such a construction completely ignores the limiting ideas of 'sudden,' 'unexpected,' 'clear,' 'imminent' and 'demanding immediate action' expressly included by the Legislature and would be in derogation of the canon that a construction should give

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

meaning to each word of the statute. [Citation.] Moreover, in the name of 'emergency' it would create a hole in CEQA of fathomless depth and spectacular breadth. Indeed, it is difficult to imagine a large-scale public works project, such as an extensive deforestation project or a new freeway, which could not qualify for emergency exemption from an EIR on the grounds that it might ultimately mitigate the harms attendant on a major natural disaster. The result could hardly be intended by the careful drafting of the Legislature, and is unmistakably opposed to the policy of construing CEQA to afford the maximum possible protection of the environment. [Citation.]" (187 Cal.App.3d at pp. 1111-1112, italics in original.)

Contrary to respondents' assertion, the record here does not present a situation where " '[R]ules regulating the protection of the environment ... [have been] subverted into an instrument for the oppression and delay of social, economic, or recreational development and advancement.' [Citation.]" (*Laurel Heights Improvement Assn. v. Regents of University of California* (1993) 6 Cal.4th 1112, 1132 [26 Cal.Rptr.2d 231, 864 P.2d 502].) Rather, it appears that this is an attempt to use limited exemptions contained in CEQA as a means to subvert rules regulating the protection of the environment.

(4) While the trial court stated the project was within the scope and purpose of the Community Redevelopment Financial Assistance and Disaster Project Law (Health & Saf. Code, §§ 34000, 34013) the requirement to undertake environmental review has not been deleted from that law. Health and Safety Code section 34013 dispenses with many prerequisites for redevelopment and urban renewal projects in "disaster areas" but compliance with CEQA is not one of them. Health and Safety Code section 33352 provides in pertinent part that "Every redevelopment plan submitted by the agency to the legislative body shall be accompanied by a report containing all of the following: [¶] ... [¶] (k) The report required by Section 21151 of the Public Resources Code." Public Resources Code section 21151 relates to the preparation and completion of the environmental impact report.

Based on the foregoing, we conclude that there is no substantial evidence in the record to support the determination that the adoption of the plan is exempt as a project from CEQA. ***1269**

Disposition

The judgment is reversed with directions to the trial court to grant a peremptory writ of mandate ordering respondents to vacate their notice of exemption. Each party to bear its own costs on appeal.

Johnson, J., and Woods (Fred), J., concurred.

COUNTY OF INYO, Plaintiff and Appellant,
v.
SAM YORTY, as Mayor, etc., et al., Defendants and Respondents
Civ. No. 13886.

Court of Appeal, Third District, California.
June 5, 1973.

SUMMARY

The County of Inyo filed a complaint in the trial court seeking to enjoin the City of Los Angeles from extracting subsurface water from lands in the county pending the filing of an environmental impact report as required by the Environmental Quality Act, and a determination of the environmental effect of the continued and expanded extraction of subsurface water. The city had started acquiring water rights and land in the area shortly after 1900 and began receiving water through its first aqueduct in 1913. It had continually expanded its well drilling and pumping activities and had placed a second aqueduct in operation before the effective date of the Environmental Quality Act. At the time the action was filed, however, half of the funds estimated as necessary to complete drilling activities for the extraction of additional water remained unspent. A preliminary injunction was denied and a temporary restraining order was dissolved. (Superior Court of Sacramento County, No. 228928, William A. White, Judge.)

On the county's petition for a writ of supersedeas, treated as a petition for a writ of mandate, the Court of Appeal held that the expanded tapping and extraction of water was a severable project and that the filing of an environmental impact report was therefore required. In so holding, the court referred to the guidelines for implementation of the act issued as contemplated thereby by the Secretary of the California Resources Agency. It concluded that the expanded water extraction activity was an "ongoing project" within the meaning of section 15070, of the guidelines in that it might have a significant effect on the environment and a substantial portion of the funds allocated therefor had not been spent. In view of the prior continued modification in the constantly increased intensity and scope of actual and projected ground water withdrawals, the court further concluded that the project fell within another clause of the same section referring to proposed modifications "such that the project might have a new significant effect on the environment." The objectives of the act, the court reasoned, required inclusion of the planning agencies of the county among the places for filing the report. Extensive directions for staying increased extraction of water pending the filing of an impact report and appropriate action thereon were given. No merit was found in the city's defenses of the statute of limitations and laches. (Opinion by Richardson, P. J., with Friedman and Janes, JJ., concurring.)

HEADNOTES

Classified to California Digest of Official Reports

(1) Public Works and Contracts § 1.5--Environmental Considerations.
Expanded tapping and extraction of underground water by the City of Los Angeles from lands owned by it in Inyo County required the filing of an environmental impact report as required by the Environmental Quality Act in Pub. Resources Code, § 21151, where the county asserted various harmful environmental effects arising from present and proposed increased groundwater pumping of the underground reservoir, where, though a second aqueduct constructed by the city was operative before the effective date of the act, it would only be used to capacity for transportation of subsurface water after escalation of well drilling and pumping, and where only half of the estimated cost of construction of additional wells to bring the subsurface extraction to its full projected capacity had been spent. Thus the expanded extraction of water was an "ongoing project" requiring the filing of a report within the meaning of the guidelines promulgated pursuant to the act for its implementation, as a "project which may have significant effect on the environment," having a substantial portion of its allotted funds remaining unspent, as well as a plan involving continued modification that "might have a new sig-

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

32 Cal.App.3d 795, 108 Cal.Rptr. 377, 5 ERC 1431, 3 Envtl. L. Rep. 20,513
(Cite as: 32 Cal.App.3d 795)

nificant effect on the environment."
[See **Cal.Jur.2d,** Conservation, § 2.]
(2) Public Works and Contracts § 1.5--Environmental Considerations.
The objectives of the Environmental Quality Act, including the alerting of the public and its responsible officials to environmental changes before they have reached ecological points of no return, could be met only if the places of filing of an environmental impact report required of the City of Los Angeles with respect to its expanded extraction of underground water in Inyo County included the county planning agencies.

(3) Public Works and Contracts § 1.5--Environmental Considerations.
The 180-day limitation provided by Pub. Resources Code, § 21167, subd. (a), for filing an action alleging that a public agency is carrying out or has approved a project having a significant environmental effect without the filing of an environmental impact report and a determination whether such effect exists is inapplicable to an action filed and pending before the effective date of the statute.

(4) Public Works and Contracts § 1.5--Environmental Considerations.
The defense of laches could not be raised by the City of Los Angeles in an action by Inyo County seeking to halt the city's increased extraction of subsurface waters from lands in the county pending the filing of an environmental impact report under the Environmental Quality Act and a determination of the environmental effect involved, despite the county's knowledge for some four years prior to filing the action of the city's intention to withdraw additional groundwater. In addition to the severability of the continuing activities from prior activities, the city made no showing of prejudice from the delay, and there was evidence that the county had acted with reasonable dispatch under the circumstances. Moreover, public policy requires public officials to obey statutes, and the litigation involved issues as to which the Legislature has declared a clear and all encompassing public interest.

COUNSEL

Frank H. Fowles, District Attorney, and L. H. Bray, Deputy District Attorney, for Plaintiff and Appellant.

Fredric P. Sutherland, Brent N. Rushforth, Carlyle W. Hall, Jr., Mary D. Nichols, John R. Phillips, Ralph Winter and Richard E. Gutting, Jr., as Amici Curiae on behalf of Plaintiff and Appellant.

Roger Arnebergh, City Attorney, Edward C. Farrell, Chief Assistant City Attorney, Kenneth W. Downey, Assistant City Attorney, and Gilbert W. Lee, Deputy City Attorney, for Defendants and Respondents.

RICHARDSON, P. J.

Petitioner (hereinafter "County") sought a writ of supersedeas which we treated as a petition for writ of mandate, and thereupon issued an alternative writ. Respondents filed appropriate reply to the petition and have also in the trial court interposed their demurrer and answer.

These proceedings follow the filing of a complaint by County in the County of Inyo against respondent City of Los Angeles, a municipal corporation, its department of water and power, the president and secretary of the department and commission, its chief engineer who is also *798 general manager, and Does 1 through 20 (all hereinafter "City"). The complaint sought a temporary restraining order, preliminary injunction and permanent injunction to halt the extraction of subsurface waters from the Owens Valley in Inyo County until the filing by defendants of an Environmental Impact Report (hereinafter "EIR") required by the California Environmental Quality Act of 1970 (hereinafter "CEQA"), and a determination of the environmental effect of the continued and expanded extraction of subsurface water. A temporary restraining order was issued by the Inyo County Superior Court limiting any increase in the withdrawal of water in the affected area.

Subsequently, a motion by City for change of venue from Inyo to Sacramento County was granted. A hearing was held in Sacramento County Superior Court which resulted in denial of the application for preliminary injunction and dissolution of the temporary restraining order, from which action the present petition stems. County has also filed notice of appeal.

County generally asserts "error by the trial court in

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

32 Cal.App.3d 795, 108 Cal.Rptr. 377, 5 ERC 1431, 3 Envtl. L. Rep. 20,513
(Cite as: 32 Cal.App.3d 795)

application of the Environmental Quality Act to the respondents' activities within petitioner's county." More specifically, County alleges: (1) The order dissolving the temporary restraining order is an appealable order but to await the formal resolution of the appeal, with its attendant delays, will render the substantial questions of law moot in that irreversible environmental damage will have resulted. (2) The trial court erred in its determination that CEQA did not apply to City's activities because of its view that such action was a continuation of a pre-existing activity or project born before the effective date of CEQA.

Narrowly stated, the issue before us is whether City is required to file an EIR with reference to its continued extraction of subsurface waters from the Owens Valley area of County.

Resolution of this issue and an evaluation of the conflicting legal and factual considerations bearing on it require a brief review of the geography of the area and of the history and character of the pertinent relationships between the two public entities involved.

The Owens Valley is located in east central California along the eastern edge of the Sierra Nevada Mountains, and runs in a general north and south direction through Mono and Inyo Counties. The valley is approximately 120 miles in length and from 15 to 30 miles wide, comprising a total area exceeding 3,000 square miles, approximately the size of Belgium. The valley's elevation varies from 3,500 feet to more than 10,000 feet. It is semi-arid but receives in the late spring and early summer, from both the *799 Sierra Nevada on the west and the Inyo and White Mountains on the east, substantial but varying flows of surface water from the melting snowfields. It lies in an area contiguous to and immediately south of Mono County recently described by the Supreme Court in the following manner: "[N]ature's bountiful gifts of majestic mountains, lakes, streams, trees and wildlife have produced in the area one of the nation's most spectacularly beautiful and comparatively unspoiled treasures." (*Friends of Mammoth v. Board of Supervisors* (1972) 8 Cal.3d 247, 253 [104 Cal.Rptr. 761, 502 P.2d 1049].) The Owens River is the principal drainage course in the basin, flowing in a parallel north-south axis along the westerly side of the Valley and into Owens Lake which has no natural outlet.

City, faced with the necessity of importing water to serve the needs of a growing metropolitan population in the Los Angeles Basin, began the systematic acquisition of water rights and land in the Owens Valley shortly after 1900. These acquisitions were made for the purpose of acquiring control of the water supply in the area, and at the present time City owns approximately 300,000 acres in Inyo and Mono Counties, comprising roughly 97 percent of the available privately held land. Between the years 1908 and 1913 City constructed a surface aqueduct (the "first aqueduct") between the Owens Valley and City and began receiving Owens Valley water in 1913.

In 1941 City completed what is known as the "Mono Basin Project." This project was designed to gather the natural runoff in the Mono Basin area and to direct it by gravity flow and pumping operations through the Mono Lake watershed into the Owens River system through the Tinemaha Reservoir to the Haiwee Reservoir. The project is a complex of sources, tributaries, conduits, tunnels and storage areas extending 349 miles from Lee Vining to Los Angeles. At a relatively early date, as an auxiliary to the natural precipitation in the area, City commenced the drilling of a large number of wells to tap the subsurface pools of underground water in Owens Valley. These wells were heavily used during dry years to assure, as a supplementary source, a continuous and adequate flow through the first aqueduct. Since 1917 City has drilled more than 360 wells, of which it has pumped 190. Seven of them have been placed in operation since November 1970. Of more significance, as noted below, is the recent great acceleration of pumping operations from existing wells. Further, of the 11 wells drilled since 1963, seven were pumped for public use for the first time and a number of older wells had their capacity increased after the effective date of CEQA.

By 1963 City, prompted by the increasing water needs of a continued ***800** rapidly expanding population, had caused the preparation of a long-term report entitled "Availability and Utilization of Inyo-Mono Water" ("Report"). The Report noted that as of 1963 there had been 21 separate water rights filings by the State of California on streams and lakes in Inyo and Mono Counties for the purpose of providing domestic and recreational uses of water. The Report further indi-

32 Cal.App.3d 795, 108 Cal.Rptr. 377, 5 ERC 1431, 3 Envtl. L. Rep. 20,513
(Cite as: 32 Cal.App.3d 795)

cated the growing and competing interests in Owens Valley water among various public entities and the increasing challenge to the City's beneficial utilization of it. It noted that in 1934 City had filed on 200 cubic feet per second (cfs) of water in the Mono Basin, but the first aqueduct was not of sufficient capacity to carry all such water to City. According to the Report, City had proposed in 1959 the construction of a second aqueduct to carry water from Owens Valley to the City for the purpose of completing "the development of our Inyo-Mono supply that began over fifty years ago" and to insure that City would not lose certain water rights on which it had filed primarily in the Mono Basin development.

Historically, the first aqueduct conveyed most of the available surface runoff from Owens Valley. It was planned that the second aqueduct would be filled largely from three sources: increased surface diversion from Mono Basin, reduced irrigation of City-owned lands in the affected counties and increased pumping of groundwater reservoirs in Owens Valley.

The cost of the second aqueduct was approximately $91,000,000 of which 96 percent had been expended when the operation of the aqueduct commenced in 1970. Of the approximately $2,000,000 appropriated for construction of additional wells for increased groundwater extraction about 50 percent had been expended prior to the commencement of litigation.

Both the projection and actual utilization of groundwater extraction from Mono and Inyo Counties have steadily increased in the past 40 years. Some understanding of the measure and rapidly increasing tempo at which the groundwater reservoirs have been tapped may be gained from the fact that during 1972 four new wells were constructed in the Independence Well Field alone, having an aggregate present pumping capacity exceeding 40 cfs, and in the same field during 1971-1972 the pumping capacity of existing wells was measurably increased. It appears that using as a base the 35-year period from 1930 to 1965 a long-term average of 10.3 cfs was extracted from the Owens Valley subsurface pools. In 1963 the estimated long-term average groundwater extraction was 89 cfs. This has increased to a present pumping capacity of 240 cfs. City envisions a proposed ultimate pumping capability of 485 cfs. This would result in an *801 average long-term groundwater extraction of 147 cfs. This continual upward revision of pumping capacity and long-term average extraction was directed to the constant outflow of 666 cfs - the design capacity of the two aqueducts.

The parties substantially disagree on the environmental impact, if any, of this major increase. City, while accepting the possibility of moderate falls in the water table in the affected area, considers this a seasonal and cyclical effect only, manifesting itself to a measurable degree only in excessively dry years. City in its answer to the petition for writ of mandate denied that "any irreparable harm and damage will result to the environment of Inyo County by reason of Respondents' pumping operations and ... [asserted] that the alleged harm to the environment of Inyo County, if any, is a result of an Act of God, to wit, two consecutive drought years."

County, on the other hand, insists that a series of detrimental effects upon the environment necessarily must follow City's continued implementation of the groundwater management policy. It submits an "Evaluation" prepared by its engineering staff describing such effects in the following language: "The implementation of the Department of Water and Power's groundwater management plan will reduce the available water to natural plants and wildlife habitat, with the exception of minor selected areas, to such an extent as to effectively change the natural environment of the Owens Valley. Over a longer period of time, the 'safe yield,' if there is such a quantity, will be consistently exceeded and a permanent decreasing water table will result. The benefits to the people of the Owens Valley from the pumping is negligible." Further, the "Evaluation" states "The initial program of lowering the water table to eliminate the losses due to evapo-transpiration would also eliminate a large portion of our local natural vegetation which fall into the phreatophyte classification. Many of these types of plants (willows, saltgrass, tules, cattails, cottonwoods) require a water table or capillary fringe of not deeper than 10 feet. A continuing decline of the water table would eventually eliminate sagebrush, rabbit brush, and bitter brush, which make up the remainder of our natural vegetation.

32 Cal.App.3d 795, 108 Cal.Rptr. 377, 5 ERC 1431, 3 Envtl. L. Rep. 20,513
(Cite as: 32 Cal.App.3d 795)

"Eventually, only the selected environmental areas and the areas adjacent to water courses would be able to sustain the natural vegetation of the valley.

"Bird migration - With the drop in the water table, historical ponds and areas of surface water will be eliminated, thus eliminating feed and resting areas for water fowl population. *802

"Local animal population - With the reduction of vegetation and available water, bird and animal populations will also diminish."

Although the narrow central issue presented is whether City's subsurface extraction of water requires the filing of an EIR, a number of component elements may be severally stated as follows: (1) Is City's ground water management program, i.e., its increased groundwater extraction, a "project" within the meaning of CEQA, and, if so, is it an "ongoing project" within the definition established by the Guidelines for Implementation of CEQA adopted by the Secretary of the Resources Agency? In short, is CEQA applicable? (2) As to the EIR, who are its authors and recipients, and what is its effect? (3) Is County barred in these proceedings by either a statute of limitations or the doctrine of laches?

We consider the stated elements sequentially.

The Applicability of CEQA

(1) In response to a general and growing awareness and acceptance of the importance of the natural environment in the lives of its citizens, and the vital necessity of its protection and preservation, the Legislature enacted the Environmental Quality Act of 1970. (Pub. Resources Code, § 21000 et seq. [FN1]) CEQA has been described by the Supreme Court as "a milestone in the campaign for 'maintenance of a quality environment for the people of this state now and in the future ....'" (

FN1 All code references are to the Public Resources Code unless otherwise noted. *Friends of Mammoth v. Board of Supervisors, supra*, 8 Cal.3d 247, 252.) Its preamble (§§ 21000 and 21001) contains a broad expression of legislative policy and recognition that the maintenance of a quality environment, present and prospective, "is a matter of statewide concern"; that "[i]t is necessary to provide a high-quality environment that at all times is healthful and pleasing ..."; that "[t]he capacity of the environment is limited ..."; and it is the legislative intent and policy to "take immediate steps to identify any critical thresholds for the health and safety of the people ...," to "take all action necessary to protect, rehabilitate, and enhance the environmental quality of the state," and to "[e]nsure that the long-term protection of the environment shall be the guiding criterion in public decisions." To that end the Act adopted a comprehensive plan requiring, among other things, that state and local agencies follow a broad program of governmental action designed to assure that in both the planning and construction phases of "man's activities" primary consideration be given to the effect of such activities on man's environment. In *Mammoth* these requirements were construed to cover the private sector as well. Among CEQA's requirements *803 are those contained in Public Resources Code section 21151, providing that "All local agencies shall prepare, or cause to be prepared by contract, and certify the completion of an environmental impact report on any project they intend to carry out or approve which may have a significant effect on the environment." Such a report is required to contain a detailed description of any adverse environmental impact and effect of the proposed action, together with any alternative and minimum options available. (§ 21100.)

CEQA received substantial and clarifying amendment in 1972 by the adoption, as an urgency measure, of AB 889, which was responsive to the *Friends of Mammoth* decision cited above. As contemplated by CEQA, certain "Guidelines for Implementation of the California Environmental Quality Act of 1970" ("Guidelines") were issued in 1973 by the Secretary of the California Resources Agency for the purpose of providing "public agencies with principles, objectives, criteria, and definitions ... to be used in the imple-

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

32 Cal.App.3d 795, 108 Cal.Rptr. 377, 5 ERC 1431, 3 Envtl. L. Rep. 20,513
(Cite as: 32 Cal.App.3d 795)

mentation of" CEQA. These Guidelines consider and define "ongoing projects," in terms pertinent to our consideration, as activities instituted but not completed prior to the effective date of CEQA. It has been suggested that California has a "three-tier system" - The Act, the Guidelines and local regulations, of which the first two are uniformly applied and to which the third must conform under section 21082. (See Seneker, *The Legislative Response to Friends of Mammoth* (1973) 48 State Bar J. 127.) In ascertaining whether City's activities constitute a "project" and an "ongoing project," we scrutinize the Act, the Guidelines and helpful interpretive decisions.

CEQA in section 21065 defines a project as "(a) Activities directly undertaken by any public agency." The Guidelines (§ 15037) read in pertinent part: (a) *Project* means the whole of an action, resulting in physical impact on the environment, directly or ultimately, that is any of the following:

"(1) an activity directly undertaken by any public agency including but not limited to public works construction and related activities, clearing or grading of land, improvements to existing public structures, enactment and amendment of zoning ordinances, and the adoption of local General Plans or elements thereof."

The Supreme Court in *Mammoth, supra* (8 Cal.3d at p. 259) faced the definitional problem of "project," albeit in connection with a determination whether a privately funded activity requiring a public permit was a "project" within the meaning of CEQA, and used the following significant language: "In resolving the conflict on intent, as we must, we conclude ***804** that the Legislature intended the EQA to be interpreted in such manner as to afford the fullest possible protection to the environment within the reasonable scope of the statutory language." The court continued: "As noted previously, the EQA does not attempt to define 'project.' Because the legislative intent provisions dictate that we give a broad interpretation to the act's operative language, we begin from that vantage point. Once a particular legislative intent has been ascertained, it must be given effect "'even though it may not be consistent with the strict letter of the statute.'" [Citation.] As we stated nearly a half century ago in *In re Haines* (1925) 195 Cal. 605, 613 [234 P. 883]: "'The mere literal construction of a section in a statute ought not to prevail if it is opposed to the intention of the legislature apparent by the statute; and if the words are sufficiently flexible to admit of some other construction it is to be adopted to effectuate that intention. The intent prevails over the letter, and the letter will, if possible, be so read as to conform to the spirit of the act.'"

After concluding that dictionary definitions were of no assistance to the task before it, the Supreme Court in *Friends of Mammoth v. Board of Supervisors, supra*, at page 260, resorted to the rule which it had declared in *People* ex rel. *S. F. Bay etc. Com. v. Town of Emeryville* (1968) 69 Cal.2d 533, 543-544 [72 Cal.Rptr. 790, 446 P.2d 790]: "A principle 'which must be applied in analyzing the legislative usage of the word "project," is that "the objective sought to be achieved by a statute as well as the evil to be prevented is of prime consideration in [the word's] interpretation, and where a word of common usage has more than one meaning, the one which will best attain the purposes of the statute should be adopted, even though the ordinary meaning of the word is enlarged or restricted and especially in order to avoid absurdity or to prevent injustice.'"

It is, therefore, apparent that the ascertainment of the intent of the Legislature in enacting CEQA is vital in the search for a meaningful definition of "project" within this context. The stated policy and intent of the Legislature, clearly expressed in sections 21000 and 21001, to which we have previously adverted, direct that highest priority shall be given to environmental considerations.

County has asserted a catalogue of harmful environmental effects arising from the present and proposed increased groundwater pumping of the Owens Valley underground reservoir, some of which are summarized above. It describes these effects in its "Evaluation" prepared by and attached to the declaration of Ronald Redmond, employed by County's engineering department to study the effects of implementation of City's groundwater management plan. County supports its contentions by referring ***805** to certain challenges by the California Department of Water Resources to the techniques and conclusions of City's report on Water Resources Management Plan. It also

32 Cal.App.3d 795, 108 Cal.Rptr. 377, 5 ERC 1431, 3 Envtl. L. Rep. 20,513
(Cite as: 32 Cal.App.3d 795)

supports its claims with a series of declarations by residents of Inyo County which, taken together, indicate a general drying of the natural streams and consequent damage to vegetation, foliage and wildlife in the affected area. Under the legislative mandate above expressed, while we need not accept the foregoing as factually established, neither can we ignore the allegations or implications to the environment necessarily flowing therefrom.

City urges strongly that its groundwater extraction program, involving as it does the utilization and pumping of the underground pools in question for purposes of filling the second aqueduct authorized, constructed and operative before the advent of CEQA, and that the second aqueduct and underground pumping are a single, integrated operation and thereby exempt from application of CEQA.

If the two activities are severable, we are thus presented with an issue of somewhat broader implication, namely, since the pumping admittedly has been expanded and accelerated after the effective date of CEQA, to what extent, generally, does CEQA have application to projects commenced before but not completed until after its effective date? This is a problem of first impression in California, and we find guidance in its solution from two principal sources: (1) the Guidelines promulgated February 3, 1973, by the secretary for California Resources Agency to "implement, interpret, or make specific" CEQA, and (2) certain federal cases interpreting the National Environmental Policy Act (42 U.S.C. §§ 4321-4347) (hereinafter "NEPA").

The issue is treated in section 15070 of the Guidelines, denominated "ongoing Project," as follows:

"(a) A project covered by Section 15037(a)(1) definition of project specified by these Guidelines, approved prior to November 23, 1970, shall not require an Environmental Impact Report or a Negative Declaration - unless it is a project which may have a significant effect on the environment, and

"(1) A substantial portion of public funds allocated for the project have not been spent and it is still feasible to modify the project in such a way as to mitigate against potentially adverse environmental effects, or to choose feasible alternatives to the project, including the alternative of 'no project' or halting the project; or

"(2) The responsible agency proposes a modification to the project *806 plan, such that the project might have a new significant effect on the environment."

Bearing in mind the foregoing definition of "project" appearing in section 15037, subdivision (a)(1), of the Guidelines, we observe that while it is true that the second aqueduct was planned, constructed and utilized before the effective date of CEQA, the following are equally true: (1) The water to be used in the second aqueduct has three principal sources - increased surface diversions from Mono Basin, decreased spreading and irrigation of City-owned land in Mono and Inyo Counties, and increased pumping of groundwater reservoirs in the Owens Valley. Further, both aqueducts draw from the Haiwee Reservoir at the southern extremity of the Mono Basin Development which is filled with water drawn from those sources. (2) The second aqueduct can be, and has been, filled entirely by surface runoff from Owens Valley only, without the utilization of any subsurface extraction whatever. (3) While the capacity of both aqueducts was known and presumably fixed irrevocably from the period of planning and design onward (666 cfs), the actual extraction of subsurface water has steadily increased from a long-term average 10.3 cfs during the 35-year period 1935 to 1969, to an estimated 89 cfs in 1963, to an existing capacity of 248 cfs in 1971, to an ultimate capacity of 415 cfs estimated in 1971, to an ultimate pumping capacity of 485 cfs estimated in October 1972. In short, while the capacity of the second aqueduct was fixed and known for a number of years before CEQA, the effect of its construction on subsurface water extraction has been a variable but steady escalation, dependent in large part, no doubt, upon the extent of seasonal rain and snowfall from year to year. Thus the ecological impact of the second aqueduct, viewed in conjunction with the underground pumping and measured by the quantity of extraction, has not been fixed but has substantially increased in severity in the period before, during and after its construction. (4) As of the present time, although approximately 95 percent of the estimated cost of construction of the second aqueduct has been expended, only 50 percent of the estimated cost of construction of additional wells to bring the subsurface extraction to its full

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

projected capacity has been spent.

We conclude from the foregoing that the legislative intent so strongly expressed in CEQA can be met only by considering the expanded ground-water extraction as a "project" separate and divisible from the second aqueduct, and we so treat it.

With reference to the groundwater extraction project, we note that as of the present time approximately half of the moneys appropriated for ***807** well drilling and pumping have been expended, and of this sum a substantial amount has been spent since the effective date of CEQA. We further note that the "project" to date has involved a continued "modification" in the constantly increased intensity and scope of actual and projected groundwater withdrawals. We have before us clear evidence that continuance of the subsurface extractions "might have a new significant effect on the environment." Inescapable, in our view, is the conclusion that under either subsection of section 15070 of the Guidelines an EIR is required.

The Supreme Court in *Friends of Mammoth, supra*, has pointed to the identity of purpose of NEPA and CEQA and utilized federal court rulings in reaching its conclusions, using the following language (8 Cal.3d at pp. 260-261): "Not only ... [do] the timing and the titles of the two acts tend to indicate that the EQA was patterned on the federal act, the key provision of the two acts, the environmental impact report, is the same. (Compare 42 U.S.C. § 4332, subd. (2)(C) with Pub. Resources Code, § 21100; see also Pub. Resources Code, §§ 21101, 21102, 21105, 21150, 21151.) Indeed, much of the phraseology of the EQA is either adopted verbatim from or is clearly patterned upon the federal act. As one commentator had observed, the EQA is 'much like the Federal NEPA.' (Powell, *The Courts as Protectors of the Environment* (1972) 47 L.A. Bar Bull. 215, 218.)

"Accordingly, in construing 'project' in the EQA, the definition of that word in the federal act and regulations becomes relevant. It is significant to note, in this regard, the Court of Appeals for the District of Columbia has emphasized that in construing the federal act the judicial role is active and that the NEPA must be interpreted broadly. (See *Calvert Cliffs' Coord. Com. v. United States A. E. Com'n., supra*, 449 F.2d 1109, 1111.) This is consonant with the mandate of the California Legislature that the EQA be given a liberal construction."

In interpreting NEPA several federal cases have applied the requirement of an environmental impact statement (identical to an EIR) to projects which although planned and commenced had reached a point of varying completion. (*Arlington Coalition on Transportation v. Volpe* (4th Cir. 1972) 458 F.2d 1323, highway construction, with completion of roughly 80 percent of property acquisitions, and 80 percent of acquisition moneys expended; *Keith v. Volpe* (1972) 4 ERC 1562, highway construction, $100,000,000 expended; *Morningside-Lenox Park Association* v. *Volpe* (N.D.Ga. 1971) 334 F.Supp. 132, highway construction, "substantial actions" yet to be taken; *Environmental Defense Fund v. Corps of Eng. of U.S. Army* (E.D.Ark. 1971) 325 F.Supp. 749, dam construction, approximately 65 percent completed.) ***808**

No single standard can be gleaned from the federal cases on the issue of the point in time or the degree of completion at which, in the language of *Arlington, supra* (at p. 1331), "the costs of altering or abandoning the project could so definitely outweigh whatever benefits that might accrue therefrom that it might no longer be 'possible' to change the project ...." The *Arlington* court, referring to NEPA, continues: "The congressional command that the Act be complied with 'to the fullest extent possible' means, we believe, that an ongoing project was intended to be subject to Section 102 until it has reached that stage of completion, and that doubt about whether the critical stage has been reached must be resolved in favor of applicability." We have no doubt that the project of underground-water extraction herein presented has not reached such point of effective and practical economic or ecological finality as to render meaningless any enforcement of CEQA.

It follows, accordingly, that City's expanded tapping and extraction of the underground water is an "ongoing project," requiring an EIR within the contemplation of section 15070 of the Guidelines. We think such a conclusion is consistent with the letter and spirit of the legislative purpose strongly asserted and variously expressed in CEQA.

32 Cal.App.3d 795, 108 Cal.Rptr. 377, 5 ERC 1431, 3 Envtl. L. Rep. 20,513
(Cite as: 32 Cal.App.3d 795)

The Report

(2) Concluding, as we do, that CEQA is applicable to the project in question, we review the nature of the EIR and inquire to whom it is directed, its effect and its purpose.

We consider the pertinent language of several key sections of CEQA in determining the character of EIR. It is defined in section 21061 as "an informational document," whose purpose "is to provide public agencies with detailed information about the effect which a proposed project is likely to have on the environment; to list ways in which any adverse effects of such a project might be minimized; and to suggest alternatives to such a project."

Section 21100 requires that an environmental impact report shall contain the following: "(a) The environmental impact of the proposed action. (b) Any adverse environmental effects which cannot be avoided if the proposal is implemented. (c) Mitigation measures proposed to minimize the impact. (d) Alternatives to the proposed action. (e) The relationship between local short-term uses of man's environment and the maintenance and enhancement of long-term productivity. (f) Any irreversible environmental changes which would be involved in the proposed action should it be implemented. (g) The growth-inducing impact of the proposed action." ***809**

Section 21104 mandates the responsible state agency to consult with public agencies having jurisdiction by law with respect to the project. The section further states that the responsible state agency "may consult with any person who has special expertise with respect to any environmental impact involved." Section 21153 applies similarly to local agencies. Section 15012 of the Guidelines describes the effect of the EIR as a means of informing public decision makers and the general public of the environmental byproducts of anticipated projects, and indicates in the following language the weight of force to be given to it: "The EIR process is intended to enable public agencies to evaluate a project to determine whether it may have a significant effect on the environment, examine and institute methods of reducing adverse impacts, and consider alternatives to the project as proposed. ... An EIR may not be used as an instrument to rationalize approval of a project, nor do indications of adverse impact, as enunciated in an EIR, require that a project be disapproved - public agencies retain existing authority to balance environmental objectives with economic and social objectives."

Section 21151 contains the critical language in the following form: "All local agencies shall prepare, or cause to be prepared by contract, and certify the completion of the environmental impact report on any project they intend to carry out or approve which may have a significant effect on the environment. When a report is required by Section 65402 of the Government Code, the environmental impact report may be submitted as a part of that report."

It is therefore apparent the law requires a local agency to prepare an EIR when two conditions are satisfied: (1) It is carrying out a "project," and (2) the project may have a significant effect on the environment. In the case before us, as we have indicated, the expanded groundwater extraction program is a project within the meaning of the Act. In our view, the second criterion is met by the presence of some substantial evidence that the project "may have a significant effect" environmentally.

The necessity for knowledge of the contemplated action of an agency is treated in section 21152, which provides: "Whenever a local agency approves or determines to carry out a project which is subject to the provisions of this division, it shall file notice of such approval or such determination with the county clerk of the county, or counties, in which the project will be located. Such notice shall indicate the determination of the local agency whether the project will, or will not, have a significant effect on the environment and shall indicate whether an environmental impact report has been prepared pursuant to the provisions of this division." ***810**

Several authoritative expressions indicate the purpose of EIR and the manner in which it is to be prepared. The Supreme Court in *Friends of Mammoth, supra*, has indicated: "The impact report must be specially prepared in written form before the governmental entity makes its decision. This will give members of the public and other concerned parties an opportunity

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

32 Cal.App.3d 795, 108 Cal.Rptr. 377, 5 ERC 1431, 3 Envtl. L. Rep. 20,513
(Cite as: 32 Cal.App.3d 795)

to provide input both in the making of the report and in the ultimate governmental decision based, in part, on that report." (8 Cal.3d at p. 263, fn. 8.) In this connection the paramount facts to be considered in preparation of EIR have recently been voiced by the appellate court in *Environmental Defense Fund, Inc. v. Coastside County Water Dist.*, 27 Cal.App.3d 695, 704-705 [104 Cal.Rptr. 197], as follows: "The preparation of the EIR demands thoughtful consideration of public interests transcending such necessary elements as always have been present, e.g., engineering and economic feasibility. Those who prepare the EIR may not limit their vision by the boundaries of the district, nor by purely physical auxiliaries or obstacles to a project's success which may be found beyond the borders. Moreover, the planning agency by criticism and adverse comment may persuade the directors of a district to revise an EIR. Revision of a project itself, or even abandonment, may follow, not by the use of any authority of the planning commission which is not given by the act, but by reason of thoughtful reconsideration.

"But the EIR has another function: the informing of the executive and legislative branches of government, state and local, and of the general public of the effect of the project on that revered resource which we call 'The Environment.' Obviously, the impact often must be deleterious to some extent to virgin land, to air, to beauty of unspoiled places because of the needs of the times. But the EIR must fulfill the role of disclosure of qualified estimations of the best way, all things considered, of meeting the demands of the present while preserving and, if possible, enlarging an ample inheritance for the future."

It is apparent from a review of the foregoing sections and the interpreting decisions that the Legislature in CEQA has enacted a logical and carefully devised program of wide application and broad public purpose. In many respects the EIR is the heart of CEQA. The report referred to in the sections may be viewed as an environmental "alarm bell" whose purpose it is to alert the public and its responsible officials to environmental changes before they have reached ecological points of no return.

CEQA provides no answer, however, to the question, with whom is EIR filed? Although City is required under section 21152 to file with ***811** County a "notice" of its approval of a project subject to its provisions, which notice must indicate the existence of any significant environmental effects and whether an EIR has been prepared, there is no statutory requirement that City file its EIR with County. Yet County is the site of the project, the area in which the ecological damage, if any, will occur, and in which reside those citizens most directly concerned by any such adverse effect upon the environment. The answer to the question posed is suggested by the above cited language from *Environmental Defense Fund, Inc. v. Coastside County Water Dist., supra* (27 Cal.App.3d at p. 704) that "Those who prepare the EIR may not limit their vision by the boundaries of the district, nor by purely physical auxiliaries or obstacles to a project's success which may be found beyond the borders." Furthermore, such a requirement of filing with the planning agency of the affected county is binding upon state agencies (Guidelines, § 15085, subds. (c) and (h), Pub. Resources Code, § 21105), and we observe no reasons of policy requiring a different or lesser performance by a local agency.

Pertinent sections of the Guidelines also suggest certain objectives to be followed by the public agency in preparation of its EIR. Section 15161, for example, insures that public agencies receive adequate comment on their EIR's. Section 15164 provides for public participation as follows: "[I]t is a widely accepted desirable goal of this process to encourage public participation. All public agencies adopting implementation procedures in response to these Guidelines should make provisions in their procedures for wide public involvement, formal and informal, consistent with their existing activities and procedures, in order to properly receive and evaluate public reactions, adverse and favorable, based on environmental issues."

The foregoing directives suggest the importance of the widest possible local participation in the public decision making process by those authorities charged with the administration of the project. This will be most readily assured by the filing of a copy of the EIR in the particular locality most adversely affected by the project. We think the clear objectives of CEQA, in a case where, as here, the agency required to file is outside of the county most affected, can be met only if

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

32 Cal.App.3d 795, 108 Cal.Rptr. 377, 5 ERC 1431, 3 Envtl. L. Rep. 20,513
(Cite as: 32 Cal.App.3d 795)

the filings of EIR include the planning agencies of the county or counties where the project is to be constructed and where significant ecological impact may occur.

The Statute of Limitations

(3) City asserts as an additional defense section 21167, subdivision (a), of the Public Resources Code, establishing a 180-day period from ***812** approval or commencement of a project within which an action or proceeding may be filed alleging that a public agency is carrying out or has approved a project having a significant environmental effect without a report and determination whether such effect exists. Subdivisions (b) and (c) of section 21167 impose 30-day time limitations, running from the filing of notice, on actions alleging either an improper determination whether a project may have a significant environmental effect or that the EIR does not comply with CEQA. These amending statutes were enacted in 1972, becoming effective December 5, 1972. The present action was filed on November 15, 1972, preceding the effective date of the statutes.

We note that the Legislature by these amendments specifically validated projects which, under section 21065, subdivision (c) (involving issuance of a lease, permit, license, certificate or other entitlement for use by one or more public agencies) were "undertaken, carried out or approved" by private agencies on or before the effective date of the section. (§ 21169.) It adopted no similar "saving" clause as to projects carried out by public agencies. (§ 21065, subd. (a).) Furthermore, by section 21170, subdivision (a), the amendatory statutes are expressly inapplicable to proceedings pending and undetermined on the effective date of the section.

Accordingly, we conclude that the 1972 legislation contains no express intent to protect solely public agency projects, as defined in section 21065, subdivision (a), from the application of CEQA. The limitation periods of section 21167 are not applicable to actions of the character herein presented which were filed and pending before the effective date of section 21167.

Laches

(4) City predicates its defense of laches upon the theory that the second aqueduct and the groundwater extraction were and are a single, identical project and that County had been aware since 1968 of City's intention to withdraw groundwater, yet took no affirmative action relative to it until 1972.

In addition to our conclusion that the two activities are severable, we are persuaded to the contrary view by the following:

(1) There is a general public policy in requiring public officials to obey statutes. (*Environmental Defense Fund v. TVA* (1972) 4 ERC 1850, 1861; *City of New York* v. *United States*, 337 F.Supp. 150, 160.)

(2) Laches is available as a defense to an action brought by a public entity (***813***City of Los Angeles v. County of Los Angeles* (1937) 9 Cal.2d 624, 630 [72 P.2d 138, 113 A.L.R. 370].) Indeed the Supreme Court has recognized the possible defense of laches in the application of the very act in question. (*Friends of Mammoth v. Board of Supervisors, supra*, 8 Cal.3d 247, 272.) In the circumstances before us, however, contrary to those usually presented wherein the application of laches is sought, there has been no showing of prejudice to the City by whatever delay has been occasioned. Such a disadvantage or prejudice must be present to establish laches. (*Newport v. Hatton* (1924) 195 Cal. 132 [231 P. 987]; *Environmental Defense Fund v. TVA, supra*, 4 ERC at p. 1861.)

(3) The parties before us are both public entities in litigation involving issues as to which the Legislature has declared, as previously noted, a clear and all encompassing public interest. In *Arlington Coalition on Transportation, supra* (458 F.2d 1323), the court had before it the application of NEPA relative to a freeway far advanced in its planning stages, with most of the acquisition costs expended. NEPA became effective January 1, 1970, and the action involving its requirement of an impact report was filed February 19, 1971. Defendants urged laches as a defense, but the federal court rejected such contention, using the following language: "Nevertheless, we decline to invoke laches against appellants because of the public interest status accorded ecology preservation by the Congress.

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

We believe that [the freeway] has not progressed to the point where the costs of altering or abandoning the proposed route would *certainly* outweigh the benefits that might accrue therefrom to the general public. In their reconsideration of the proposed route, the Secretary of Transportation and the Commissioner of the Virginia Department of Highways may decide, of course, that the costs do outweigh the benefits. If the opposite conclusion is a reasonable possibility, however, as it is here, the congressional declaration of policy in the relevant statutes of the importance of the benefits that might accrue demands that the merits of the question be considered by the appropriate agencies." (Pp. 1329-1330.) We find no less strong the explicit legislative expression of public interest in CEQA. The expenditures for the groundwater extraction project approximate only 50 percent of the total planned appropriation for that purpose, and of this a substantial amount, doubtless, was for construction undertaken after the effective date of CEQA.

(4) We also note a vast disparity in the population, staff, budget and research and planning resources available to the two entities before us, which, while not controlling in itself, may be considered by us as one factor in viewing an equitable defense such as laches. There is evidence that County acted with reasonable dispatch once it possessed the report prepared by City's engineers relating to the effect of City's extraction ***814** project, and when it had been able to assemble, collate and evaluate its own staff findings on the environmental effect of the augmented pumping. We therefore reject the defense of laches as a bar to County's action.

Conclusion

The very uncertainty created by the conflicting assertions made by the parties as to the environmental effect of City's expanded groundwater extraction underscores the necessity of the EIR to substitute some degree of factual certainty for tentative opinion and speculation. Where local agency activities "may have" a significant adverse effect on the environment, CEQA contemplates a sequence of formal governmental actions, commencing with an EIR. Such report presumably will stimulate public interest and discussion and the contribution and observations of interested persons and groups, both expert and lay. The major product thereof will be a careful weighing and balancing of all factors by the appropriate public officials. The bases for this process will be the EIR and the opportunity afforded for reasoned discussion. "[M]ajor consideration [will be] given to preventing environmental damage." (§ 21000, subd. (g).) The hoped for result of this process will be a considered policy judgment.

We conclude that City's underground-water extraction constitutes a project within the meaning of CEQA and the filing of an Environmental Impact Report is accordingly required. Public agencies must undertake a searching scrutiny of their action with the long term protection of the environment as the guiding criterion. In response to the legislative mandate, they must now, for the purpose of applying such criterion, pause, even though belatedly, to focus their attention upon and give primacy to ecological considerations. Only if such careful and balanced review precedes their action can they assure that the inheritance of nature from man's yesterday is not subjected to the unintended abuse of today to the irreversible loss of tomorrow.

The Stay Order

The formulation of an appropriate stay order in this matter presents problems of considerable difficulty. We are mindful, on the one hand, of the continued responsibility heavily resting upon City in assuring the continued and adequate flow of water, through fluctuating annual and seasonal changes of precipitation, to a major population center from an area presently furnishing 80 percent of its water. We are also sensitive to the legislative expression, above alluded to, indicating the public policy of this state to "[e]nsure that the long-term protection of the environment ***815** shall be the *guiding criterion* in *public decisions*". (§ 21001, subd. (d)) and to "[r]equire governmental agencies at all levels to develop standards and procedures necessary to protect environmental quality" (§ 21001, subd. (f)). (Italics added.) We have thus a classic confrontation of two competing public entities, each asserting legitimate but conflicting public interests. Furthermore, we are fully aware of the limitations on this court in terms of both its accessibility to the parties and its ability to supervise and "police" its orders in this connection and to conduct evidentiary hearings thereon.

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

We cannot speculate on the probable duration of time required in the preparation of the EIR and those procedural steps necessary to the formulation of a responsible and considered judgment in the light of the EIR. We envision the probable need for further evidentiary hearing on the nature and extent of the environmental impact occasioned by City's activities, and other related matters not presently foreseeable. For this purpose the trial court is particularly suited and equipped, and to that end we enlist its aid. We will direct the preparation and certification by City of an EIR in accordance with Public Resources Code section 21151 and will direct also the prompt filing of a copy thereof with the planning agency of Inyo County.

Meanwhile, the augmented and expanded pumping continues, and we are told that observable ecological damage is being sustained daily. County, while not asking for a cessation of Owens Valley groundwater extraction, seeks, pending the filing of an EIR, a limit to the pumping fixed by the quantity of subsurface water extracted November 23, 1970, the effective date of CEQA. A possible alternative is to fix the limit of the amount of the subsurface draw by averaging it over a period of years. Two difficulties inhere in the "averaging" approach. The expanded pumping for the second aqueduct has continued only since 1970, with the result that a mere three-year average is available. Furthermore, in the "averaging" there may be an excess of wet years when the subsurface draw was low or dry years when the extraction was high. Although we recognize that in either formula, the arbitrary selection of a year or the averaging method, standing alone, may create unfairness, we elect to utilize elements of both.

Forthwith and in aid of this court's original jurisdiction to issue its writ of mandate, we stay further extraction of underground water from the Owens Valley Ground Water Basins in excess of the average being taken on November 23, 1970, pending a determination by the trial court of that figure which is found to be the mean or average of the extraction during the years of highest and lowest precipitation from July 1, 1970, to date. When such latter ***816** figure is ascertained, it will be fixed as the maximum allowable withdrawal from the subsurface pool in Owens Valley Ground Water Basins until the filing of an EIR and appropriate action thereon as provided by law. City is directed to modify its extraction in accordance with the stay outlined above. City is further directed to proceed with the preparation and filing of an EIR in accordance with the views herein expressed. The trial court is directed, to the extent necessary or appropriate, to supervise compliance with the Act.

Let a writ of mandate issue, directing City to prepare, certify and file in accordance with law an EIR, and further directing City, pending such preparation, certification and filing to limit forthwith its underground-water extraction in the affected area to the level and for the period hereinabove described.

Friedman, J., and Janes, J., concurred.
On June 29, 1973, the opinion was modified to read as printed above. ***817**

Court of Appeal, Fourth District, Division 2, California.

CITIZENS ASSOCIATION FOR SENSIBLE DEVELOPMENT OF BISHOP AREA, et al., Plaintiffs and Appellants,

v.

COUNTY OF INYO, et al., Defendants and Respondents,

CRUMPLER AND KRUGER COMMERCIAL REAL ESTATE, INC., et al., Real Parties in Interest and Respondents.

E001138, E001340.

Sept. 13, 1985.

Citizens and association challenging proposed shopping center development under the California Environmental Quality Act appealed from judgments of the Superior Court, Inyo County, Donald L. Chapman, J., denying petitions for injunctive relief and for writ of mandate. The Court of Appeal, Morris, P.J., held that: (1) plaintiff had standing; (2) defendants were not prejudiced by addition of association as party plaintiff; (3) owner of subject property was not indispensable party; (4) administrative remedies were exhausted as to all critical substantive issues; (5) county board erred in failing to consider cumulative effect of development project; and (6) plaintiffs established colorable claim to award of attorney fees.

Reversed with directions.

OPINION

MORRIS, Presiding Justice.

Plaintiffs, Citizens Association for Sensible Development of Bishop Area, et al. (Citizens), appeal from judgments denying its petitions for injunctive relief and for a writ of mandate setting aside and vacating two actions of the Inyo County Board of Supervisors (Board or Board of Supervisors), to wit: (1) the December 6, 1983 action approving Bishop general plan amendments 83-10 and 83-11, zoning reclassification 83-23, and two negative declarations in support of these actions, and (2) the March 6, 1984 action approving tentative tract map 188, road abandonment 83.2, variance 83.4A, and a negative declaration in support of the tentative tract map and road abandonment. On appeal plaintiffs contend that an adequate environmental review pursuant to the California Environment Quality Act (CEQA) (****896**Pub. Resources Code, § 21000 et seq.) was not conducted.

FACTS

On or about September 27, 1983, Crumpler and Kruger Commercial Real Estate, Inc. (Crumpler and Kruger, Inc.), as the buyer in escrow of property located on the north side of U.S. Route 395 east of Barlow Lane in Bishop, California, filed an application with the County of Inyo for approval of a proposed shopping center. The application described the proposed 9.1 acre shopping center as regionally oriented, with an area of 86,500 square feet, which was to be built in one phase. An additional expansion of 12,000 square feet was anticipated for the Safeway store already at the proposed shopping center location. The application also stated that Inyo County approval would be needed for a general plan amendment, rezoning, a street abandonment, new street alignments, and a zoning variance, and that Caltrans authorization would be needed for an encroachment permit. A transportation study was also filed.

In considering the proposed shopping center, the County of Inyo divided the required approvals, along with corresponding environmental review, into two groups. First, it considered Bishop general plan amendments 83-10 and 83-11 and zone reclassification 83-23, which were to redesignate 3.4 acres from office/professional and highway commercial to retail commercial ***157** and rezone from retail commercial/highway commercial to retail commercial. Second, it considered tentative tract map 188, which was to resubdivide 15 lots on 7 acres into 5 lots and realign portions of 4 streets, and road abandonment 83.2. The variance requested, although not subject to an environmental analysis, was also considered in this second grouping.

Beginning with the general plan amendments and zoning reclassification, the Inyo County Planning Department completed two initial environmental studies on October 5, 1983. The studies, which generally used a check list format, found no significant environmental effects, and recommended issuance of draft negative declarations, which were posted the next day. At the end of the 15 day review and comment period as provided in article 5.6, subdivision (c) of the Inyo County Procedures for Environmental Impact Review (now art. IX, subd. (c)), the planning commission held a public hearing which culminated in its written recommendation that the board adopt the general plan amendments, zoning reclassification, and negative declarations. In the planning commission's discussion of its recommendation it expressly stated that traffic would be evaluated at the time the tentative tract map was submitted, as would the requirements for water, sewer, and fire protection. The recommendation was

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

"formally appeal[ed]" by a letter signed by seven people and received on November 14, 1983. A subsequent letter to the Board detailed the concerns that 39 signers felt justified an environmental impact report (EIR); other letters in support and against the recommendations of the planning commission were also received.

Thereafter, on December 6, 1983, the Board held a public hearing at the end of which it decided to adopt all of the planning commission's recommendations regarding the shopping center project. Notices of determination indicating the adoption of the negative declarations were posted the next day. All plaintiffs except Citizens Association for Sensible Development of Bishop Area (Citizens Association) timely filed a writ of mandate with the trial court; Citizens Association was added as a party plaintiff by amendment to the writ after the statute of limitations had passed. This describes case No. E001138.

The second group of approvals followed a similar path as the first group, only starting a short time later. On December 7, 1983, the planning department completed an initial environmental study, again generally using a check list format, of tentative tract map 188 and road abandonment 83-2. This study also recommended issuance of a draft negative declaration. The planning commission adopted the tentative tract map, road abandonment and negative declaration,**897 as well as variance 83-4, on January 25, 1984. Twenty-one*158 residents of Bishop appealed that decision, providing a lengthy statement of their reasons for that appeal.

The Board conducted a public hearing on March 6, 1984. It was advised by the planning commission that any discussion of the concurrent consideration of the general plan amendments and zoning reclassifications was irrelevant. At the end of the hearing the board of supervisors denied the appeal, with appropriate notices of determination following on May 14, 1984. All plaintiffs timely filed a second writ of mandate which was to become case No. E001340.

In both case No. E001138 and case No. E001340 the trial court denied any relief to the plaintiffs. Two appeals followed. Because of the similarity of the facts and issues in these two cases, this court ordered their consolidation prior to oral argument.

DISCUSSION

THRESHOLD ISSUES

1. *Standing*

Defendants contend that none of the approximately 20 plaintiffs had standing to apply for writs of mandate. We disagree.

[1][2][3] To have standing to apply for a writ of mandate a private citizen must be a "party beneficially interested." (Code Civ. Proc., § 1086.) Generally, a beneficial interest is established only when a plaintiff " '... has some private or particular interest to be subserved, or some particular right to be preserved or protected, independent of that which he holds with the public at large.' " (*Kappadahl v. Alcan Pacific Co.* (1963) 222 Cal.App.2d 626, 643, 35 Cal.Rptr. 354, quoting 32 Cal.Jur.2d, Mandamus, § 55, p. 238, disapproved on other grounds in *Topanga Assn. for a Scenic Community v. County of Los Angeles* (1974) 11 Cal.3d 506, 517, fn. 16, 113 Cal.Rptr. 836, 522 P.2d 12.) However, where a public right is involved, and the object of the writ of mandate is to procure enforcement of a public duty, the plaintiff is not required to have any legal or special interest in the result; it is sufficient that as a citizen he is interested in having the public duty enforced. (*Id.*, citing 35 Am.Jur. 73, § 320.) Accordingly, in a writ of mandate against a municipal entity based on alleged violations of CEQA, a property owner, taxpayer, or elector who establishes a geographical nexus with the site of the challenged project has standing. (32 Cal.Jur.2d, Mandamus, § 56, pp. 239-241; see *159*Bozung v. Local Agency Formation Com.* (1975) 13 Cal.3d 263, 272, 118 Cal.Rptr. 249, 529 P.2d 1017; *Scott v. City of Indian Wells* (1972) 6 Cal.3d 541, 549, 99 Cal.Rptr. 745, 492 P.2d 1137. Moreover, the geographical nexus can be attenuated, for instance beyond the city limits, because "[e]ffects of environmental abuse are not contained by political lines." (*Bozung v. Local Agency Formation Com., supra.*)

[4] Defendants' contention is that despite the ease of establishing standing in a case such as the instant one, plaintiffs have failed to do so. Defendants base this contention on "[t]he general rule ... that in a mandamus proceeding the burden is on the petitioner to prove every fact that is at the foundation of his proceeding excepting such allegations of the petition as

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

are admitted by the answer. [Citations.]" (*Lotus Car Ltd. v. Municipal Court* (1968) 263 Cal.App.2d 264, 270, 69 Cal.Rptr. 384. Real parties in interest assert that because their answer denied plaintiffs' allegations of standing, and plaintiffs never offered proof of this foundational fact, that plaintiffs' cause of action is fatally deficient in this regard.

In fact, some of the plaintiffs offered proof of their standing and others had their standing established by the first answer of defendants, who filed a separate answer from real parties in interest in each case. In case No. E001138 three parties, Mary Baker, Steve Votaw and Dwayne Wilson, testified as to their standing under oath before the Board. In addition, in case No. E001138 Ms. Baker and Mr. Votaw, as well ****898** as ten other plaintiffs (Russell Adams, Del Harper, Pauline Krueger, Don Lauria, Al Norris, Leslie Riccomini, Rodney Rusco, Dick Solesbee, Joe Wilkerson and Susan Wilson), had their standing established by the answer of defendants, which was filed two days after real parties in interest's less knowledgeable answer.

Moreover, the trial court appeared to have found that all plaintiffs had standing. During the hearing on case No. E001138 the court told plaintiffs' counsel that the action was not frivolous because plaintiffs had "a right to be [t]here and be heard." In a very small community like Bishop, the trial court often has personal knowledge of the standing of the parties where such standing consists merely of a taxpayer's geographical nexus with the subject matter of the dispute. (See Evid. Code, § 452, subd. (g).) The trial court's formal holdings in each case are not inconsistent with our conclusion that the court found plaintiffs to have standing.

2. *Addition of Party After Statute of Limitations had Passed*

Defendants contend that Citizens Association improperly injected itself into the litigation without leave of the court after the statute of limitations ***160** had passed. This contention lacks merit. Even if defendants were correct, the only effect would be the dismissal of Citizens Association from civil case No. E001138, the first of the two consolidated cases.

[5] It is clear that a "... court may, in furtherance of justice, ... allow a party to amend any pleading or proceeding by adding ... the name of any party, ..." (Code Civ. Proc., § 473.) When there is an attempt to add a party after the statute of limitations has run, however, relation back to the original pleadings is "dependent upon whether recovery is sought on the same general set of facts as those [originally] alleged." (*Austin v. Massachusetts Bonding & Insurance Co.* (1961) 56 Cal.2d 596, 601, 15 Cal.Rptr. 817, 364 P.2d 681; see *Lamont v. Wolfe* (1983) 142 Cal.App.3d 375, 381, 190 Cal.Rptr. 874.)

[6] When recovery is sought on the same basic set of facts, the main policy of the statute of limitations, to put defendants on notice of the need to defend against a claim in time to prepare a fair defense on the merits, is satisfied. (*Lamont v. Wolfe, supra,* 142 Cal.App.3d at pp. 380-381, 190 Cal.Rptr. 874.) Here the mere addition of a party plaintiff did not alter the general set of facts originally alleged; thus, defendants were not prejudiced and no reasonable purpose would have been served by dismissing Citizens Association from case No. E001138.

[7] Defendants do not directly contest the applicability of *Austin* and its progency, including *Lamont,* to the instant case. Instead, defendants contend that plaintiffs' first amended petition was properly denied because Citizens Association never sought permission to be included as a petitioner. In support of this contention defendants correctly state that under Code of Civil Procedure section 472 plaintiffs did not have a right to add a party plaintiff as a matter of course. (See *Phoenix of Hartford Ins. Companies v. Colony Kitchens* (1976) 57 Cal.App.3d 140, 147, 128 Cal.Rptr. 893; *Taliaferro v. Davis* (1963) 220 Cal.App.2d 793, 795, 34 Cal.Rptr. 120. Nevertheless, it does not follow from this record that plaintiffs never sought nor obtained permission to add Citizens Association. In adding Citizens Association as the named party plaintiff, by amended petition plaintiffs at least implicitly sought the appropriate judicial authorization. Further, when the trial court told plaintiffs during oral argument that they had a right to be there it appeared to confirm that permission had been granted. Finally, the fact that the trial court did not strike the amended complaint, and thus dismiss Citizens Association from the petition, in combination with the fact that the trial court's ultimate decision not to grant the petition was expressly based on other grounds, support the conclusion that the court permitted Citizens Association to be included as a party plaintiff.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

****899 *161** 3. *Indispensable Party*

[8] Defendants contend that dismissal of case No. E001138 is warranted because of plaintiffs' failure to name an indispensable party, the owner of the subject property, in its petition for writ of mandate. The trial court did not specifically rule on this issue. However, we hold that the petition, which was limited to challenging governmental actions and approvals of general plan amendments and zoning reclassifications, did not require the inclusion of the owner of the subject property.

Code of Civil Procedure section 389 sets out the pertinent law. In relevant part it states that: "(a) A person ... shall be joined as a party in the action if ... he claims an interest relating to the subject of the action and is so situated that the disposition of the action in his absence may (i) as a practical matter impair or impede his ability to protect that interest .... [¶] (b) If a person as described [above] cannot be made a party, the court shall determine whether in equity and good conscience the action should proceed among the parties before it, or should be dismissed without prejudice, the absent person being thus regarded as indispensable. The factors to be considered by the court include: (1) to what extent a judgment rendered in the person's absence might be prejudicial to him or those already parties; (2) the extent to which, by protective provisions in the judgment, by the shaping of relief, or other measures, the prejudice can be lessened or avoided; (3) whether a judgment rendered in the person's absence will be adequate; (4) whether the plaintiff or cross-complainant will have an adequate remedy if the action is dismissed for nonjoinder." (Code Civ. Proc., § 389, subd. (a), (b).)

Although the owner of the subject property would have been a proper real party in interest, such owner was not a necessary party because as a practical matter his ability to protect his interest was not impaired or impeded. Instead, that interest was ably argued by Crumpler and Kruger, Inc., as a real party in interest. Moreover, because Crumpler and Kruger, Inc. had an option to purchase the subject property from the owner and was in escrow, its interests were essentially the same as if it had been the owner for the purposes of this litigation. Thus, pursuant to the analogous reasoning of *Hollister Co. v. Cal-L Exploration Corp.* (1972) 26 Cal.App.3d 713, 721, 102 Cal.Rptr. 919, and Code of Civil Procedure section 369, which allow the nonjoinder of interested parties where their interests are adequately represented, we hold that the owner of the subject property was not a necessary party. (See also *Hebbard v. Colgrove* (1972) 28 Cal.App.3d 1017, 1027, 105 CalRptr. 172.) The case cited by real parties in interest, ***162***Sierra Club, Inc. v. California Coastal Com.* (1979) 95 Cal.App.3d 495, 501, 157 Cal.Rptr. 190, is inapposite because there the real party in interest's legal right to a permit was not represented by any party in a similar position.

Even if the owner of the subject property was impaired in his ability to protect that interest, the owner was not indispensable. The Supreme Court provided guidance in this regard when it cautioned against the common blunder of finding any necessary party as indispensable and observed that "... we should ... be careful to avoid converting a discretionary power or a rule of fairness in procedure into an arbitrary and burdensome requirement which may thwart rather than accomplish justice." (*Bank of California v. Superior Court* (1940) 16 Cal.2d 516, 521, 106 P.2d 879; see *Kraus v. Willow Park Public Golf Course* (1977) 73 Cal.App.3d 354, 368-369, 140 Cal.Rptr. 744.)

In "equity and good conscience" we find that pursuant to Code of Civil Procedure section 389 the owner of the subject property was not an indispensable party. The litigation in case No. E001138 generally involved the propriety of the government's actions in approving the general plan amendments and zoning reclassification urged by the developer (and named real party in interest) who had an option to purchase the subject property from the owner and was in escrow. Although the developer has self-servingly declared that it ****900** does not intend to exercise its option to purchase from the owner if judgment is for plaintiffs, none of the other factors listed in Code of Civil Procedure section 389, subdivision (b), favor dismissing this action for nonjoinder of the property owner. Those already parties will not be prejudiced by a judgment rendered in the owner's absence, the judgment will be adequate to fully resolve the dispute (cf. *Sierra Club, Inc. v. California Coastal Com., supra,* 95 Cal.App.3d at p. 501, 157 Cal.Rptr. 190), and plaintiffs would be without a remedy if the action is dismissed for nonjoinder (see Code Civ. Proc., § 389, subd. (b)).

4. *Exhaustion of Administrative Remedies*

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Defendants contend that before an issue may be litigated by plaintiffs it must have been raised by them before the administrative agency. Although we generally agree with this legal principle, we find it to have been satisfied here with regard to all critical substantive issues.

The Supreme Court has applied the doctrine of exhaustion of administrative remedies and its underlying reasoning to environmental legislation. In *Friends of Mammoth v. Board of Supervisors* (1972) 8 Cal.3d 247, 267, 104 Cal.Rptr. 761, 502 P.2d 1049, the Supreme Court held that: "[T]he Board is entitled to learn the contentions of interested parties before litigation is ***163** instituted. If [plaintiffs] have previously sought administrative relief ... the Board will have had its opportunity to act and to render litigation unnecessary, if it had chosen to do so." (See also *Wilke & Holzheiser, Inc. v. Dept. of Alcoholic Bev. Control* (1966) 65 Cal.2d 349, 377, fn. 23, 55 Cal.Rptr. 23, 420 P.2d 735; *Borror v. Department of Investment* (1971) 15 Cal.App.3d 531, 545, 92 Cal.Rptr. 525.)

[9] On the other hand, less specificity is required to preserve an issue for appeal in an administrative proceeding than in a judicial proceeding. This is because " '[i]n administrative proceedings, [parties] generally are not represented by counsel. To hold such parties to knowledge of the technical rules of evidence and to the penalty of waiver for failure to make a timely and specific objection would be unfair to them.' (Note (1964) Hastings L.J. 369, 371.) It is no hardship, however, to require a layman to make known what facts are contested." (*Kirby v. Alcoholic Bev. etc. Appeals Bd.* (1970) 8 Cal.App.3d 1009, 1020, 87 Cal.Rptr. 908.)

[10] Because we find that the dispositive issue and all relevant substantive issues save one were sufficiently raised before the administrative body, it is unnecessary to consider whether any exceptions to the exhaustion doctrine are applicable here.

Factually, plaintiffs raised the failure to consider the cumulative effect of the project by articulating their concerns about the deterioration of the downtown area and the increase in traffic in a letter signed by 39 people which was sent to the Board of Supervisors prior to the administrative hearing before the Board on the general plan amendments and zoning reclassification. All other substantive issues except one discussed herein were also introduced by letter or by oral comment at the administrative hearing. Resolution of the one pertinent issue not raised before the administrative body, whether Caltrans was a responsible agency and thus whether copies of any or all of the negative declarations were required to be forwarded to the Commerce Clearinghouse pursuant to California Administrative Code, title 14, section 15073, subdivision (c), is not a necessary part of the judgment of this court.

5. *Standard of Review*

[11] There are two standards of review applicable to legal controversies which involve CEQA: Public Resources Code section 21168 or 21168.5. (*No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.3d 68, 74, fn. 3, 118 Cal.Rptr. 34, 529 P.2d 66.) Despite the fact that both sides to the instant dispute initially stated that section 21168.5 was here applicable (later, in ***164** case No. E001340, plaintiffs alleged that section 21168 was controlling), we conclude that ****901** section 21168 is the correct standard of review.

Public Resources Code section 21168 states that: "Any action or proceeding to attack, review, set aside, void or annul a determination, finding, or decision of a public agency, made as a result of a proceeding in which by law a hearing is required to be given, evidence is required to be taken and discretion in the determination of facts is vested in a public agency, on the grounds of noncompliance with the provisions of this division, shall be *in accordance with the provisions of Section 1094.5 of the Code of Civil Procedure*. [¶] In any such action, the court shall not exercise its independent judgment on the evidence but shall only determine whether the act or decision is supported by substantial evidence in light of the whole record." (Emphasis added.) Here section 21168 is controlling because our review is of a decision of a public agency in which the Inyo County Procedures for Environmental Impact Review, article 7.5 (now art. XV), prescribes a hearing for the administrative appeals that here occurred. Further, CEQA requires the taking of evidence. (Cal.Admin. Code, tit. 14, § 15064.) Finally, discretion in the determination of facts is vested in the public agency. (*Id.; Newberry Springs Water Assn. v. County of San Bernardino* (1984) 150 Cal.App.3d 740, 750, 198 Cal.Rptr. 100; *Brentwood Assn. for No Drilling, Inc. v. City of Los Angeles* (1982) 134 Cal.App.3d 491, 504, 184 Cal.Rptr. 664.)

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Having found Public Resources Code section 21168 applicable, it should be noted that the distinction between that section and Public Resources Code section 21168.5 may often be immaterial. (See *Newberry Springs Water Assn. v. County of San Bernardino, supra,* 150 Cal.App.3d at p. 748, 198 Cal.Rptr. 100.) Without deciding whether the distinction is here material, we hold that pursuant to Code of Civil Procedure section 1094.5, subdivision (b), "[a]buse of discretion is established if the [administrative agency] has not proceeded in the manner required by law, the order or decision is not supported by the findings, or the findings are not supported by the evidence."

DISPOSITIVE ISSUE: FAILURE TO CONSIDER THE CUMULATIVE EFFECT OF THE PROJECT

1. *Overview*

[12] Plaintiff contends because the Board as the lead agency failed to consider the cumulative effect of the development project the trial court erred in ruling that the lead agency proceeded in the manner required by law. We agree.

***165** In evaluating the actions of the lead agency in light of the guidelines provided by CEQA, we note, in the words of the Supreme Court, " 'that the Legislature intended [CEQA] to be interpreted in such manner as to afford the fullest possible protection to the environment within the reasonable scope of the statutory language.' " (*No Oil, Inc. v. City of Los Angeles, supra,* 13 Cal.3d at p. 83, 118 Cal.Rptr. 34, 529 P.2d 66, quoting *Friends of Mammoth v. Board of Supervisors, supra,* 8 Cal.3d at p. 259, 104 Cal.Rptr. 761, 502 P.2d 1049.) Accordingly, "CEQA requires more than merely preparing environmental documents." (Cal. Admin. Code, tit. 14, § 15002, subd. (h).)

2. *Definition of a Project*

[13] Of particular relevance here, CEQA mandates "... that environmental considerations do not become submerged by chopping a large project into many little ones-each with a minimal potential impact on the environment-which cumulatively may have disastrous consequences." (*Bozung v. Local Agency Formation Com., supra,* 13 Cal.3d at pp. 283-284, 99 Cal.Rptr. 745, 492 P.2d 1137; see *Rural Landowners Assn. v. City Council* (1983) 143 Cal.App.3d 1013, 1024, 192 Cal.Rptr. 325.) In part, CEQA avoids such a result by defining the term "project" broadly. (Cal. Admin. Code, tit. 14, § 15002, subd. (d).) " 'Project' means the whole of an action, which has a potential for resulting in a physical change in the environment, directly****902** or ultimately, ..." (Cal. Admin. Code, tit. 14, § 15378, subd. (a).) "The term 'project' refers to the activity which is being approved and which may be subject to several discretionary approvals by governmental agencies. The term 'project' does not mean each separate governmental approval. [¶] ... Where the lead agency could describe the project as either the adoption of a particular regulation ... or as a development proposal which will be subject to several governmental approvals ... the lead agency shall describe the project as the development proposal for the purpose of environmental analysis." (Cal. Admin. Code, tit. 14, § 15378, subd. (c)-(d); see *Fullerton Joint Union High School Dist. v. State Bd. of Education* (1982) 32 Cal.3d 779, 795, 187 Cal.Rptr. 398, 654 P.2d 168; *Bozung v. Local Agency Formation Com., supra,* 13 Cal.3d at pp. 283-284, 99 Cal.Rptr. 745, 492 P.2d 1137; cf. *Rural Landowners Assn. v. City Council, supra,* 143 Cal.App.3d at pp. 1024-1025, 192 Cal.Rptr. 325.)

In the instant case for environmental purposes the project before the lead agency should have been described as a shopping center development for which governmental action consisting of general plan amendments, zone reclassification, tentative tract map approval, and road abandonment was required. Instead, the project was improperly described as "two projects": (1) the general plan amendments and zone reclassification, and (2) the tentative tract map approval and road abandonment. Each of the "two ***166** projects" was submitted to a separate environmental review for which separate negative declarations were approved by the Board on December 6, 1983, and March 6, 1984, respectively.

3. *Failure to Consider Cumulative Effect*

The danger of filing separate environmental documents for the same project is that consideration of the cumulative impact on the environment of the two halves of the project may not occur. This danger was here realized.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

In approving the first negative declarations the lead agency considered the general plan amendments and zoning reclassification only; it did not consider the second half of the project. The transmittal letter from the planning commission to the Board of Supervisors stated that "... the property ... is proposed for development with a shopping center....

"...

"At the time the tentative map is considered by the Commission (in December) requirements for water, sewer, fire protection, traffic circulation, curbs, gutters, sidewalks, etc. will be determined. However, at this time we are only considering the General Plan Amendments and the Zoning Reclassification." During the hearing before the Board of Supervisors, Planning Director Hilton, the first speaker, suggested the planning commission's rationale for this division of the shopping center project into two parts with separate negative declarations when he stated that "[i]t would really [be] kind of redundant to get into the details of planning for a tentative tract map and vacating the street if the basic General Plan classifications and rezoning cannot be accomplished." At the end of the hearing the Board, acting as the decision-making body (see Inyo County Procedures for Environmental Impact Review, art. 4.3 (now art. III)) and thus, the lead agency (see Pub. Resources Code, § 21067), approved the first two negative declarations.

In approving the subsequent negative declaration a few months later the same pattern was repeated as with the first two negative declarations, except in reverse. The agency considered the tentative tract map approval and road abandonment only; it did not consider the first half of the project. This time the transmittal letter from the planning commission to the Board of Supervisors stated that "[t]he project before the Planning Commission was not a shopping center since the existing zoning automatically permits that type of land use.... The appeal talks about approval of a shopping center .... The discussion **903 of the Bishop Central Business District; Regional Community Center; Community-Neighborhood Center is totally irrelevant as a *167 shopping center or any other retail commercial development is a permitted use on the site. [¶] The discussion of the concurrent consideration of general plan amendments and zone reclassifications is also irrelevant. These actions, taken by the Board on December 6, 1983 were done properly and legally and are currently under litigation. They have nothing to do with the planning commission's actions of January 25," i.e., adoption of the negative declaration for the tentative tract map and road abandonment. Finally, at the hearing before the Board of Supervisors, when some citizens raised concerns about the general plan amendments and rezoning, Mr. Hilton responded that "... this Board has already approved and the planning commission has approved the general plan change and the rezoning on the property. This is a secondary but important part of the development of the shopping center.... [However], I don't think anything can be gained by rehashing over it." Later in this hearing the Board of Supervisors approved the negative declaration for the second stage of the shopping center project.

The division of the shopping center project into two parts constituted an abuse of discretion by the lead agency. As the portions of the record above vividly demonstrate, although for the same shopping center project, the first two negative declarations and the later negative declaration were considered as mutually exclusive environmental documents. This approach is inconsistent with the mandate of CEQA that a large project shall not be divided into little ones because such division can improperly submerge the aggregate environmental considerations of the total project. (See *Bozung v. Local Agency Formation Com., supra,* 13 Cal.3d at pp. 283-284, 99 Cal.Rptr. 745, 492 P.2d 1137.)

4. *Prejudice*

We further hold that this abuse of discretion requires reversal. In an analogous situation it was held in *Rural Landowners Assn. v. City Council, supra,* 143 Cal.App.3d at p. 1023, 192 Cal.Rptr. 325,"... where that failure to comply with the law results in a subversion of the purposes of CEQA by omitting information from the environmental review process, the error is prejudicial. The trial court may not exercise its independent judgment on the omitted material by determining whether the ultimate decision of the lead agency would have been affected ahd the law been followed. The decision is for the discretion of the agency, and not the courts." The same reasoning applies to this case. The purposes of CEQA were subverted because the lead agency never considered whether the environmental effects of the total shopping center project, properly defined, was signifi-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

cantly adverse and thus required an EIR. At this juncture, as in *Rural Land Owners Assn.*, we cannot exercise our independent judgment on whether the ultimate decision of the lead agency would have been different had CEQA been properly ***168** implemented because such a decision is for the discretion of the agency. (See *Cleary v. County of Stanislaus* (1981) 118 Cal.App.3d 348, 362, 173 Cal.Rptr. 390; *People v. County of Kern* (1974) 39 Cal.App.3d 830, 842, 115 Cal.Rptr. 67.)

Nevertheless, we believe there is a reasonable probability that the lead agency would have prepared one EIR instead of two sets of negative declarations if it had properly defined the project. The Bishop community plan recommended a thorough economic-environmental analysis before development of a regional-community shopping center. One of the five Board members voted against the negative declarations for both the general plan amendments/rezoning and tentative tract map/street abandonment approvals. Both sets of negative declarations were appealed and received substantial public criticism. Finally, the aggregate concerns, including physical deterioration of the downtown business area because of business loss and closure due to competition from the new ****904** shopping center and added traffic, were not insignificant.

5. *Reasonably Foreseeable Probable Future Projects*

[14] Upon remand, defendant should also consider the reasonably foreseeable probable future projects, if any, that will be added in the shopping center area. The environmental "effects of probable future projects" are germane to determining whether the impact of the shopping center is "cumulatively considerable." (Cal.Admin. Code, tit. 14, § 15065, subd. (c); see Cal. Admin. Code, tit. 14, § 15355, subd. (b).) In formulating its list of probable future projects for review as to cumulative effects the lead agency should reasonably interpret the guidelines to afford the fullest possible protection of the environment. (See *Friends of Mammoth v. Board of Supervisors, supra,* 8 Cal.3d at p. 259, 104 Cal.Rptr. 761, 502 P.2d 1049; *San Franciscans for Reasonable Growth v. City and County of San Francisco* (1984) 151 Cal.App.3d 61, 74, 198 Cal.Rptr. 634.) There is a "... need for regional environmental consideration at the earliest stage of a planned development before it gains irreversible momentum." (*Bozung v. Local Agency Formation Com., supra,* 13 Cal.3d at p. 284, fn. 28, 104 Cal.Rptr. 761, 502 P.2d 1049.)

Related projects currently under environmental review unequivocally qualify as probable future projects to be considered in a cumulative analysis. (*San Franciscans for Reasonable Growth v. City and County of San Francisco, supra,* 151 Cal.App.3d at p. 74, fn. 13, 198 Cal.Rptr. 634.) In addition, even projects anticipated beyond the near future should be analyzed for their cumulative effect. (*Bozung v. Local Agency Formation Com., supra,* 13 Cal.3d at p. 284, 104 Cal.Rptr. 761, 502 P.2d 1049.) ***169** In the instant case it appears that probable future projects include the development of three of the five lots which will not initially be developed with the proposed shopping center, but "will eventually be developed with satellite buildings (i.e., bank, offices, service station, restaurant)," and the approximately 265 single-family dwelling units "planned for" north of the shopping center. To the extent the lead agency properly considered these projects in the negative declarations under review, this discussion is intended to affirm the need to do so again.

OTHER ISSUES TO BE CONSIDERED ON REMAND

1. *Relevance of Secondary Effects Caused by Economic and Social Changes*

[15] Plaintiffs contend that the environmental consequences of economic and social changes must be considered by the lead agency. Specifically, plaintiffs contend that the lead agency must consider whether the proposed shopping center will take business away from the downtown shopping area and thereby cause business closures and eventual physical deterioration of downtown Bishop. Although the Administrative Code is somewhat ambiguous on this issue, we conclude that it supports plaintiffs' position.

Title 14, section 15064, subdivision (d) of the California Administrative Code states that, "[i]n evaluating the significance of the environmental effect of a project, the lead agency *shall* consider both primary or direct and secondary or indirect consequences." (Emphasis added.) This is further explained as follows: "Primary consequences are immediately related to the project such as the dust, noise, and traffic of heavy equipment that would result from construction

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

of a sewage treatment plant and possible odors from operation of the plant. [¶] ... Secondary consequences are related more to effects of the primary consequences than to the project itself and may be several steps removed from the project in a chain of cause and effect. For example, the construction of a new sewage treatment plant may facilitate population growth in the service area due to the increase in sewage treatment capacity and may lead to an increase in air pollution." (*Ibid.*)

**905 The unequivocal language just cited becomes less clear in the light of a subsequent passage: "Economic and social changes resulting from a project shall not be treated as significant effects on the environment. Economic or social changes may be used, however, to determine that a physical change shall be regarded as a significant effect on the environment. Where a physical change is caused by economic or social effects of a project, the physical change may be regarded as a significant effect in the same manner as any other physical change resulting from the project. Alternatively, economic *170 and social effects of a physical change may be used to determine that the physical change is a significant effect on the environment. If the physical change causes adverse economic or social effects on people, those adverse effects may be used as the basis for determining that the physical change is significant. For example, if a project would cause overcrowding of a public facility and the overcrowding causes an adverse effect on people, the overcrowding would be regarded as a significant effect." (Cal. Admin. Code, tit. 14, § 15064, subd. (f).)

These two subsections should be interpreted consistently if possible. (58 Cal.Jur.3d, Statutes, § 106, pp. 481-482.) In this case the most reasonable consistent interpretation is that the lead agency *shall* consider the secondary or indirect environmental consequences of economic and social changes, but *may* find them to be insignificant. Such an interpretation is unequivocally consistent with the mandate that secondary consequences of projects be considered. Moreover, this interpretation is also consistent with subdivision (f). In particular two aspects of subdivision (f) support this conclusion. First, subdivision (f) expressly gives the agency discretion to determine whether the consequences of economic and social changes are significant, which is not the same as discretion to not consider these consequences at all. Indeed, "... the physical change [caused by economic or social effects of a project] may be regarded as a significant effect *in the same manner* as any other physical change resulting from the project [may be regarded as a significant effect]." (Cal. Admin. Code, tit. 14, § 15064, subd. (f), emphasis added.) Second, in the example provided in subdivision (f) of an adverse effect ultimately caused by economic or social changes, subdivision (f) concludes that the physical change "would be [rather than could be] regarded as a significant effect." (Cal. Admin. Code, tit. 14, § 15064, subd. (f).) Consistent with this example is the one provided in subdivision (d), which mandates that secondary consequences be considered, includeing added air pollution (an environmental effect) caused by the population growth (presumable a social change) facilitated by a new sewage treatment plant. (Cal. Admin. Code, tit. 14, § 15064, subd. (d).)

In the instant case plaintiffs have urged the lead agency to consider whether the proposed shopping center would deprive the downtown business district of necessary revenue, forcing business closures and eventual physical deterioration of the downtown area. Two of the four members of the Board of Supervisors who voted for the negative declarations stated that they failed to see how this was an environmental consequence they needed to consider; the other two expressed no opinion. The fifth supervisor believed that an EIR was necessary and therefore voted against the negative declarations.

*171 On remand the lead agency should consider physical deterioration of the downtown area to the extent that potential is demonstrated to be an indirect environmental effect of the proposed shopping center.

2. *Adequacy of Initial Studies*

In administering its responsibilities under CEQA the public agency should implement procedures which contain at least provisions for: conducting initial studies, preparing negative declarations or drafting final EIRs, assuring adequate opportunity and time for public review and comment, evaluating and responding to those comments, and filing documents required by **906 CEQA. (Cal. Admin. Code, tit. 14, § 15022; see Pub. Resources Code, § 21082.)

An important purpose of the initial study is to "[p]rovide documentation of the factual basis for the

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

finding in a negative declaration that a project will not have a significant effect on the environment; ..." (Cal.Admin. Code, tit. 14, § 15063, subd. (c)(5).) This purpose is particularly relevant to courts reviewing the administrative action pursuant to Public Resources Code section 21168. As discussed above, Public Resources Code section 21168, and thereby Code of Civil Procedure section 1094.5, apply to the instant case. Section 1094.5, subdivision (b), states that "[a]buse of discretion is established if the respondent has not proceeded in the manner required by law, the order or decision is not supported by the findings, *or the findings are not supported by the evidence.*" (Emphasis added.) The Supreme Court has elaborated that "... implicit in section 1094.5 is a requirement that the agency which renders the challenged decision must set forth findings to bridge the analytic gap between the *raw evidence* and ultimate decision or order." (*Topanga Assn. for a Scenic Community v. County of Los Angeles, supra,* 11 Cal.3d at p. 515, 113 Cal.Rptr. 836, 522 P.2d 12, emphasis added; see *Myers v. Board of Supervisors* (1976) 58 Cal.App.3d 413, 429-431, 129 Cal.Rptr. 902.)

[16] Therefore, although an initial study can identify environmental effects by use of a checklist (see Cal. Admin. Code, tit. 14, § 15063, subd. (d)-(f)), it must also disclose the data or evidence upon which the person(s) conducting the study relied. Mere conclusions simply provide no vehicle for judicial review. (See *Topanga Assn. for a Scenic Community v. County of Los Angeles, supra,* 11 Cal.3d at p. 516, 113 Cal.Rptr. 836, 522 P.2d 12.)

In the instant case the initial studies are far too conclusionary. It is for the most part impossible to determine whether the findings which ultimately resulted in negative declarations are supported by the evidence because it is unclear that raw evidence, if any, was relied upon in preparing the initial ***172** studies. There were three similar initial studies made, two for the general plan amendments and the zoning reclassification, and one for the tentative tract map and road abandonment. The core of the studies was a quasi-checklist format. For each subcategory (e.g., water supply, sewage disposal, fire protection) the planning department indicated by use of letters whether the impact was adverse, beneficial, or none, and then the degree, phase, linkage and duration. To the extent a negative impact was identified, mitigation measures, if any, were described in the margin and summarized later in the study. Neither the source nor the content of the information relied upon for the more than 45 subcategories which required environmental conclusions in each initial study were specifically identified. In the space that was intended to identify the "departments/agencies/groups consulted" and list "comments" the words "to be" [consulted] were added and no comments were listed in any of the three initial studies. Of course, Crumpler and Kruger, Inc., as the developer, submitted information to the planning commission with its applications for the changes eventually made, but, with the notable exception of a traffic study, even this information was conclusionary. For the most part the specific sources and content of the data the developer relied upon in its application were not disclosed. Upon remand the evidence supporting any initial studies should be disclosed.

3. *Sufficiency of Evidence Introduced During Public Review Period*

Plaintiffs and defendants disagree on whether evidence substantial enough to require an EIR was offered during the public review. Although our remand of this case for the reasons stated above makes resolving this specific dispute unnecessary, a few general comments may provide some guidance on remand.

The public comment or review period is a second important informational step to be completed by the lead agency before approving a negative declaration. (See ****907**Cal. Admin. Code, tit. 14, § 15073, subd. (a).) "[T]he lead agency shall consider ... any comments received during the public review process. The decision-making body shall approve the negative declaration if it finds on the basis of the initial study and any comments received that there is no substantial evidence that the project will have a significant effect on the environment." (Cal. Admin. Code, tit. 14, § 15074, subd. (b); see Pub. Resources Code, § 21083; *Friends of "B" Street v. City of Hayward* (1980) 106 Cal.App.3d 988, 999-1000, 165 Cal.Rptr. 514.)

[17] A court reviewing the public comment portion of the administrative record is limited to evaluating whether there is substantial evidence to support "... the county's decision regarding whether there was adequate evidence***173** produced by plaintiffs so that a fair argument could be made that a significant environmental impact may result from the project." (

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Newberry Springs Water Assn. v. County of San Bernardino, supra, 150 Cal.App.3d at p. 747, 198 Cal.Rptr. 100, see *Friends of "B" Street v. City of Hayward, supra,* 106 Cal.App.3d at p. 1002, 165 Cal.Rptr. 514.) Under this substantial evidence standard of review, the court may not substitute its own judgment for that of the local agency. (*Newberry Springs Water Assn. v. County of San Bernardino, supra,* 150 Cal.App.3d at p. 750, 198 Cal.Rptr. 100; *El Dorado Union High School Dist. v. City of Placerville* (1983) 144 Cal.App.3d 123, 130, 192 Cal.Rptr. 480.)

Nevertheless, if it is clear that considerable evidence was presented and that the evidence was not properly considered by the lead agency the reviewing court may find an abuse of discretion. (*No Oil, Inc. v. City of Los Angeles, supra,* 13 Cal.3d at p. 88, 118 Cal.Rptr. 34, 529 P.2d 66; *Brentwood Assn. for No Drilling, Inc. v. City of Los Angeles, supra,* 134 Cal.App.3d at p. 505, 184 Cal.Rptr. 664.)

[18] In this case the record does not support defendants' contention that all of the public testimony and letters in the administrative record merely represent fears unsupported by any evidence. First, relevant personal observations are evidence. For example, an adjacent property owner may testify to traffic conditions based upon personal knowledge. Although even expert opinion may ultimately be rejected because of the expert's interest in the matter or for other reasons, an agency may not refuse to consider uncontradicted testimony based upon objective data. (See *Brentwood Assn. for No Drilling, Inc. v. City of Los Angeles, supra,* 134 Cal.App.3d at pp. 504-505, 184 Cal.Rptr. 664.)

4. *Relevance of Public Controversy Standing Alone*

[19] Plaintiffs contend that an EIR is required if a substantial public controversy exists. This position is not supported by case law. (See *No Oil, Inc. v. City of Los Angeles, supra,* 13 Cal.3d at pp. 85-86, 118 Cal.Rptr. 34, 529 P.2d 66; *Newberry Springs Water Assn. v. County of San Bernardino, supra,* 150 Cal.App.3d at p. 749, 198 Cal.Rptr. 100.) Moreover, the Legislature, by enacting Public Resources Code section 21082.2, made it clear that public controversy absent substantial evidence of significant environmental effects does not mandate preparation of an EIR. Upon remand, Public Resources Code section 21082.2 is the controlling authority.

5. *State Clearinghouse Filing Requirement*

[20] Plaintiffs contend that because Caltrans is a responsible agency it was mandatory that the lead agency file its negative declarations with the State Clearinghouse. For purposes of remand, we agree.

***174** Plaintiffs failed to raise this issue at the administrative hearing. Nevertheless, because defendants must begin the environmental review process anew, some guidance in this area is appropriate.

The administrative guidelines of CEQA provide that "[w]here one or more state agencies will be a responsible agency or a trustee agency or will exercise jurisdiction ****908** by law over natural resources affected by the project, the lead agency shall send copies of the negative declaration to the State Clearinghouse for distribution to the state agencies." (Cal. Admin. Code, tit. 14, § 15073, subd. (c).) Not only does the State Clearinghouse distribute the negative declaration to the one or more responsible agencies, but also to "[r]eviewing agencies ... selected for their expertise in particular subject matters or expressed interest in particular types of projects." (State Clearinghouse Handbook, Office of Planning and Research, Mar. 1984, at p. 4.) In addition, the Clearinghouse maintains and monitors computerized records on past and current development proposals. (*Id.,* at p. 5.) Major issues monitored by the State Clearinghouse that are pertinent here include project consistency with the appropriate local general plan, and planning objectives such as renewal and maintenance of existing urban areas, cumulative effects of projects, and secondary growth impacts of regional shopping centers. (*Id.,* at p. H-1.)

Despite its importance, the parties agree that the State Clearinghouse must be consulted in this case only if Caltrans is a responsible agency. The shopping center project is planned to be constructed adjacent to U.S. route 395. The project application of Crumpler and Kruger, Inc. stated that the necessary encroachment permit would require Caltrans approval. The central question is thus whether Caltrans has "discretionary approval power over the project," the definition of responsible agency for the purposes of CEQA. (Cal. Admin. Code, tit. 14, § 15381.) Pursuant to Streets and Highways Code section 678, the county "... is entitled as a matter of right to a permit, but is otherwise subject

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

to the provisions of this article and to all reasonable conditions and provisions made by the department in any such permit." This includes such "conditions as to the location and the manner in which the work is to be done as the department finds necessary for the protection of the highway." (Streets & Hwys. Code, § 672.)

Defendants contend that the county's entitlement to a permit as a matter of right necessarily means that Caltrans does not have "discretionary approval power." Defendants' contention ignores the definition provided in the administrative guidelines to CEQA: " 'Discretionary project' means a project which requires the exercise of judgment or deliberation when the public agency or body decides to approve or disapprove a particular activity, ***175** as distinguished from situations where the public agency or body merely has to determine whether there has been conformity with applicable statutes, ordinances, or regulations." (Cal. Admin. Code, tit. 14, § 15357.) In contrast " '[m]inisterial' describes a governmental decision involving little or no personal judgment by the public official as to the wisdom or manner of carrying out the project." (*Id.*, at § 15369.) Therefore, because Caltrans can condition the right to an encroachment permit upon "the location and the manner" of the encroachment, its approval power is more discretionary than ministerial regardless of the right the county has to the permit as conditioned. (See *Johnson v. State of California* (1968) 69 Cal.2d 782, 788, 73 Cal.Rptr. 240, 447 P.2d 352.) This conclusion finds support in the holding by the Third District Court of Appeal that "doubt whether a project is ministerial or discretionary should be resolved in favor of the latter characterization." (*People v. Department of Housing & Community Dev.* (1975) 45 Cal.App.3d 185, 194, 119 Cal.Rptr. 266.)

6. *Inconsistency of Proposed Project with General Plan*

[21] Plaintiffs contend that the proposed project, which they define as a "regionally-oriented shopping center," conflicts with the express policies and land use objectives of the Bishop general plan. Although there is merit in some of the concerns underlying plaintiffs' contention, we do not agree, as plaintiffs contend, that the alleged conflict with the general plan necessarily required the preparation of an EIR.

It is true that a project would normally be considered to have a significant effect ****909** on the environment if it conflicts with the adopted environmental plans and goals of the community where it is located. (Cal. Admin. Code, tit. 14, appen. G, subd. (a).) However, "... it does not necessarily follow that the Board's decision reclassifying the property ... is inconsistent with the broad policy expressed in the general plan...." (*Environmental Council v. Board of Supervisors* (1982) 135 Cal.App.3d 428, 440, 185 Cal.Rptr. 363.) Moreover, our view of such a claim must focus on whether the lead agency acted "arbitrarily, capriciously, or without any evidentiary basis." (*Id.*, at pp. 439-440, 185 Cal.Rptr. 363; see *Karlson v. City of Camarillo* (1980) 100 Cal.App.3d 789, 801, 161 Cal.Rptr. 260.)

The broad objectives of the Bishop community plan (BCP) include (1) retaining and enhancing the downtown area as Bishop's commercial center and (2) encouraging clustering of convenient and mutually compatible commercial activities in desirable locations. It is the tension between these two objectives that is at the crux of whether the proposed shopping center on the outskirts of Bishop is consistent with the BCP. The BCP, anticipating ***176** future population growth, provides for development of four outlying commercial centers, a regional-community center by 1990, two community-neighborhood centers, and a small neighborhood facility. The relatively large regional-community center, according to the BCP, "... should only be developed after a thorough economic-environmental analysis, including a (retail category) market analysis, has concluded that such a facility can successfully co-exist with a vital downtown central business district."

Plaintiffs characterize the proposed shopping center as a regional-community center that clashes with the BCP for want of an economic-environmental analysis. However, the proposed shopping center is best described as a hybrid or regional-community-neighborhood center, because it is smaller than the regional-community center, yet larger than the community-neighborhood centers described by the BCP. Moreover, the BCP only says that an economic-environmental analysis *should* be undertaken, not that it must be.

ATTORNEYS' FEES

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

[22] Plaintiffs contend that they are entitled to a reasonable award of attorneys' fees to the extent that their appeal has been successful. Plaintiffs have clearly established a colorable claim to an award of attorneys' fees pursuant to Code of Civil Procedure section 1021.5. We remand to the trial court for that court to determine the propriety of attorneys' fees after a hearing which focuses on the criteria established by section 1021.5.

Code of Civil Procedure section 1021.5 states in pertinent part that: "Upon motion, a court may award attorneys' fees to a successful party against one or more opposing parties in any action which has resulted in the enforcement of an important right affecting the public interest if: (a) a significant benefit, whether pecuniary or nonpecuniary, has been conferred on the general public or a large class of persons, [and] (b) the necessity and financial burden of private enforcement are such as to make the award appropriate, ..." These criteria have been thoroughly discussed by the Supreme Court in *Woodland Hills Residents Assn., Inc. v. City Council* (1979) 23 Cal.3d 917, 934-942, 154 Cal.Rptr. 503, 593 P.2d 200, and its progeny.

Determining whether Code of Civil Procedure section 1021.5 is applicable, and if so, the amount of attorneys' fees that are reasonable, is generally left to the sound discretion of the trial court. (See *Woodland Hills Residents Assn., Inc. v. City Council, supra,* 23 Cal.3d at p. 941, 154 Cal.Rptr. 503, 593 P.2d 200; *Serrano v. Priest* (1977) 20 Cal.3d 25, 49, 141 Cal.Rptr. 315, 569 P.2d 1303; *177 *Brennan v. Board of Supervisors* (1984) 153 Cal.App.3d 193, 197, 200 Cal.Rptr. 192; *Friends of "B" Street v. City of Hayward, supra,* 106 Cal.App.3d at p. 994, 165 Cal.Rptr. 514; but see *Starbird v. County of San Benito* (1981) 122 Cal.App.3d 657, 665, 176 Cal.Rptr. 149.) "[R]eviewing courts are *not* in **910 a position to decide the question [of propriety of attorney fees] in the first instance,' " the trial court is best suited for this task. (*Brennan v. Board of Supervisors, supra,* 153 Cal.App.3d at p. 197, 200 Cal.Rptr. 192, quoting *Woodland Hills Residents Assn., Inc. v. City Council, supra,* 23 Cal.3d at p. 941, 154 Cal.Rptr. 503, 593 P.2d 200.)

DISPOSITION

The judgment is reversed with directions to the superior court to issue a peremptory writ of mandate directing respondent to set aside its orders of December 6, 1983 and March 6, 1984, adopting the negative declarations and related approvals. We also direct the superior court to grant any further relief that should prove appropriate, including the determination of and award of attorneys' fees.

McDANIEL and RICKLES, JJ., concur.

GUY HALL, Respondent,
v.
THE CITY OF TAFT et al., Appellants.
L. A. No. 24244.

Supreme Court of California
Oct. 19, 1956.

HEADNOTES

(1) Schools § 2--Legislative Control.
The public schools are a matter of statewide rather than local or municipal concern; their establishment, regulation and operation are covered by the Constitution, and the Legislature is given plenary powers in relation thereto, subject only to constitutional restrictions.
See **Cal.Jur.**, Schools, § 4 et seq.; **Am.Jur.**, Schools, § 7 et seq.
(2) Schools § 2--Legislative Control.
The public school system is of statewide supervision and concern, and legislative enactments thereon control over attempted regulation by local government units.

(3) Schools § 10--School Districts.
School districts are agencies of the state for local operation of the state school system.

(4) Schools § 52--School Property.
The beneficial ownership of property of public schools is in the state.

(5) Schools § 60--School Property--Buildings and Construction.
While a large degree of autonomy is granted school districts by the Legislature, no statute or constitutional provision expressly makes school buildings or their construction any more amenable to regulation by a municipal corporation than structures built and maintained by the state generally for its use.
See **Cal.Jur.**, Schools, § 70 et seq.; **Am.Jur.**, Schools, § 71 et seq.
(6) Municipal Corporations § 237--Local Regulations--Conflicts With Statute.
When the state engages in such sovereign activities as construction and maintenance of its buildings as differentiated from enacting laws for conduct of the public at large, it is not subject to local regulations unless the Constitution says it is or the Legislature has consented to such regulation; neither Const., art. XI, § 11, relating to police power of cities and other local subdivisions, nor Gov. Code, §§ 38601, 38660, empowering a city to regulate the construction of buildings within its limits, should be considered as conferring such powers on local government agencies.
See **Cal.Jur.2d**, Buildings, § 6; **Am.Jur.**, Municipal Corporations, § 287.
(7) Schools § 60--School Property--Buildings and Construction.
Construction of school buildings by school districts is not subject to building regulations of a municipal corporation in which the building is constructed, because the state has completely occupied the field by general laws and such regulations conflict with such laws.

(8) Municipal Corporations § 237--Local Regulations--Conflicts With Statute.
A city may not enact ordinances which conflict with general laws on statewide matters.

(9) Schools § 60--School Property--Buildings and Construction.
The Health and Safety Code provisions relating to structural design aimed at procuring buildings less dangerous from the standpoint of earthquakes (§§ 19150, 19151) and requiring that building permits be obtained from the proper city or county officers (§ 19120) do not limit or modify the provisions of the Education Code (§§ 5021, 5041, 18001 et seq.) which set forth a complete system for the construction of school buildings.

(10) Schools § 60--School Property--Buildings and Construction.
Rules and regulations adopted for the construction of school buildings under the Education and Health and Safety Codes (Cal. Administrative Code, tit. 21, ch. 1) may not be interpreted to mean that a city's building regulations must be met in the construction of a school

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

building; they tend more to indicate that school districts could follow such regulations as well as those of the state but are not bound to do so.

(11) Statutes § 112(1)--Construction.
The final construction of a statute is the function of courts.

SUMMARY

APPEAL from a judgment of the Superior Court of Kern County. William L. Bradshaw, Judge. Affirmed.

Action to enjoin a city from enforcing its building ordinance. Judgment for plaintiff affirmed.

COUNSEL

Henry G. Baron, City Attorney, and Allen Grimes for Appellants.

Mack, Bianco, King & Eyherabide and Dominic Bianco for Respondent.

Edmund G. Brown, Attorney General, Richard H. Perry, Deputy Attorney General, Johnson & Stanton, Gardiner Johnson and Thomas E. Stanton, Jr., as Amici Curiae on behalf of Respondent. ***179**

CARTER, J.

Defendants, Taft, a nonchartered city of the sixth class, its council and chief of police, appeal from a judgment enjoining it from enforcing against plaintiff, a building contractor, its building ordinance.

There is no dispute as to the facts. On April 22, 1955, plaintiff as contractor entered into a contract with Taft Union High School and Junior College District, hereafter called district, a school district duly organized under the state laws, to construct in Taft for the district, a school building for $614,113. The plans and specifications for the building were approved by the State Department of Education and State Division of Architecture. Plaintiff commenced construction which was to be completed in 320 days, but work was "stopped" by Taft, the city, demanding that plaintiff obtain a building permit from it involving a $300 fee and submission to the building ordinance [FN*] of Taft. The district has employed an inspector to assure that the building is constructed according to the plans and specifications. Defendants assert that plaintiff has refused to obtain a permit from the city for the construction of the building and they intend to enforce the penal and civil provisions of the building ordinance of the city.

> FN* Taft by ordinance had adopted the "Uniform Building Code 1952 edition adopted and published by the Pacific Coast Officials Conference in 1952."

The issue is whether a municipal corporation's building regulations are applicable to the construction of a public school building by a school district in the municipality. Taft argues that it had power to adopt police regulations-building construction regulations under the Constitution. [FN†]

> FN† "Any county, city, town, or township may make and enforce within its limits all such local, police, sanitary, and other regulations as are not in conflict with general laws." (Cal. Const., art. XI, § 11.)

(1) The public schools of this state are a matter of statewide rather than local or municipal concern; their establishment, regulation and operation are covered by the Constitution and the state Legislature is given comprehensive powers in relation thereto. The Legislature shall not pass local or special laws "Providing for the management of common schools." (Cal. Const., art. IV, § 25, subd. 27.) "A general diffusion of knowledge and intelligence being essential to the preservation of the rights and liberties of the people, *the Legislature* shall encourage by all suitable means the promotion of intellectual, scientific, moral, and agricultural improvement." (Emphasis added; *id.*, art. IX, § 1.) There ***180** is a State Board of Education, an elected superintendent of public instruction and there are county superintendents whose salary and qualifications are prescribed by the Legislature (*id.*, art. IX, §§ 3, 3.1, 7). The proceeds of all public lands that have been or may be granted by the United States to the state and other property is "inviolably" appropriated to the support of the common schools (*id.*, art. IX, § 4)

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

and "Out of the revenue from state taxes for which provision is made in this article, together with all other state revenues, there shall first be set apart the moneys to be applied by the State to the support of the Public School System and the State University." (*Id.*, art. XIII, § 15.) "The *Legislature* shall provide for a system of common schools by which a free school shall be kept up and supported in each district at least six months in every year, after the first year in which a school has been established." (Emphasis added; *id.*, art. IX, § 5.) "The Public School System shall include all kindergarten schools, elementary schools, secondary schools, technical schools, and state colleges, established in accordance with law and, in addition, the school districts and the other agencies authorized to maintain them. No school or college or any other part of the Public School System shall be, directly or indirectly, transferred from the Public School System *or placed under the jurisdiction of any authority* other than one included within the Public School System. ...

"The Legislature shall provide for the levying annually by the governing body of each county, and city and county, of such school district taxes, at rates not in excess of the maximum rates of school district tax fixed or authorized by the Legislature, as will produce in each fiscal year such revenue for each school district as the governing board thereof shall determine is required in such fiscal year for the support of all schools and functions of said district authorized or required by law." (Emphasis added; *id.*, art. IX, § 6.) A school district may lie in more than one county and may issue bonds. (*Id.*, art. IX, § 6 1/2.) No money shall ever be appropriated for "any school not under the exclusive control of the officers of the public schools. ..." (*Id.*, art. IX, § 8.) "The *Legislature* shall have power, by general law, to provide for the incorporation and organization of school districts, high school districts, and junior college districts, of every kind and class, and may classify such districts." (Emphasis added; *id.*, art. IX, § 14.) In harmony with those provisions it has been held that the power of the state Legislature over ***181** the public schools is plenary, subject only to any constitutional restrictions. (*Pass School Dist. v. Hollywood City School Dist.*, 156 Cal. 416, 418 [105 P. 122, 20 Ann.Cas. 87, 26 L.R.A.N.S. 485]; *Kennedy v. Miller*, 97 Cal. 429 [32 P. 558]; *Worthington School Dist. v. Eureka School Dist.*, 173 Cal. 154 [159 P. 437]; *Merrill etc. School Dist. v. Rapose*, 125 Cal.App.2d 819 [271 P.2d 522]; see *Woodcock v. Dick*, 36 Cal.2d 146 [222 P.2d 667]; *Seidel v. Waring*, 36 Cal.2d 149 [222 P.2d 669].) (2) The public school system is of statewide supervision and concern and legislative enactments thereon control over attempted regulation by local government units. (*Esberg v. Badaracco*, 202 Cal. 110 [259 P. 730]; *Cloverdale Union H. S. Dist. v. Peters*, 88 Cal.App. 731 [264 P. 273]; *Piper v. Big Pine School Dist.*, 193 Cal. 664 [226 P. 926]; *Kelso v. Board of Education*, 42 Cal.App.2d 415 [109 P.2d 29]; *Kennedy v. Miller, supra*, 97 Cal. 429; *Worthington School Dist. v. Eureka School Dist., supra*, 173 Cal. 154; *Board of Education v. Davidson*, 190 Cal. 162 [210 P. 961]; *Phelps v. Prussia*, 60 Cal.App.2d 732 [141 P.2d 440]; *Lansing v. Board of Education*, 7 Cal.App.2d 211 [45 P.2d 1021]; *People v. Mertz*, 2 Cal.2d 136 [39 P.2d 422]; *Gerth v. Dominguez*, 1 Cal.2d 239 [34 P.2d 135].) It is said in *Piper v. Big Pine School Dist., supra*, 193 Cal. 664, 669: "It [the education of the children of the state] is in a sense exclusively the function of the state which cannot be delegated to any other agency. The education of the children of the state is an obligation which the state took over to itself by the adoption of the Constitution. To accomplish the purposes therein expressed the people must keep under their exclusive control, through their representatives, the education of those whom it permits to take part in directing the affairs of state." (3) School districts are agencies of the state for the local operation of the state school system. (*Cloverdale Union H. S. Dist. v. Peters, supra*, 88 Cal.App. 731, 738; *Board of Education v. Davidson, supra*, 190 Cal. 162, 168; *Butler v. Compton Junior College Dist.*, 77 Cal.App.2d 719 [176 P.2d 417]; *Lansing v. Board of Education, supra*, 7 Cal.App.2d 211; *Merrill etc. School Dist. v. Rapose, supra*, 125 Cal.App.2d 819.) (4) The beneficial ownership of property of the public schools is in the state. It is said in *Pass School Dist. v. Hollywood City School Dist., supra*, 156 Cal. 416, 419: "To the contention that a transfer of ownership thus accomplished works the taking of property without due process of law, it should be sufficient ***182** to point out that in all such cases the beneficial owner of the fee [of public school property] is the state itself, and that its agencies and mandatories-the various public and municipal corporations in whom the title rests - are essentially nothing but trustees of the state, holding the property and devoting it to the uses which the state itself directs. The transfer of title

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

without due process of law, of which appellant so bitterly complains, is nothing more, in effect, than the naming by the state of other trustees to manage property which it owns and to manage the property for the same identical uses and purposes to which it was formerly devoted. In point of law, then, the beneficial title to the estate is not affected at all. All that is done is to transfer the legal title under the same trust from one trustee to another. In this sense the trustees of the Hollywood City School District became, by operation of law, successors to the trustees of the Pass School District, as is directly held in *Allen v. School Town of Macey*, 109 Ind. 559 [10 N.E. 578], where it is said: 'It is now a well-recognized legal inference deducible as well from general principles as from the decided cases, that under the constitution and laws of this state, public school property is held in trust for school purposes by the persons or corporations authorized for the time being to control such property, and that it is in the power of the legislature to provide for a change in the trusteeship of such property in certain contingencies presumably requiring such a change, or, indeed, to change the trustees of that class of property whenever it may choose to do so.'

"Even if such well-established principles could be set aside under the plea that they work injustice in the individual case, this plea here presented is without merit. The state is profoundly interested in the education of its young, but has no deep concern over the personality of the trustees who shall administer this trust, so long as the administration is in the orderly form of law." (See *Fawcett v. Ball*, 80 Cal.App. 131, 136 [251 P. 679]; *Butler v. Compton Junior College Dist.*, 77 Cal.App.2d 719 [176 P.2d 417]; *Kennedy v. Miller*, 97 Cal. 429 [32 P. 558]; *Gridley School Dist. v. Stout*, 134 Cal. 592 [66 P. 785].) (5) While a large degree of autonomy is granted to school districts by the Legislature, we are referred to no statute or constitutional provision which, as far as the question here involved is concerned, expressly makes school buildings or their construction any more amenable to regulation by a municipal corporation than structures which are ***183** built and maintained by the state generally for its use. (6) When it engages in such sovereign activities as the construction and maintenance of its buildings, as differentiated from enacting laws for the conduct of the public at large, it is not subject to local regulations unless the Constitution says it is or the Legislature has consented to such regulation. Section 11 of article XI of the state Constitution, *supra,* should not be considered as conferring such powers on local government agencies. Nor should the Government Code sections which confer on a city the power to regulate the construction of buildings within its limits (see Gov. Code, §§ 38601, 38660) be so considered. It is said in *In re Means*, 14 Cal.2d 254, 258 [93 P.2d 105], holding that a state employee working on a state structure in a city need not meet the requirements of a city charter provision: "If one who has been employed by the state may not work on state property within a municipality without the consent of the municipality obtained after examination, the city has, in effect, added to the requirements for employment by the state, and restricted the rights of sovereignty. ...

"Turning to the contentions of the respondent that the regulation of plumbing is a municipal affair, the rule to be applied is not entirely a geographical one. Under certain circumstances, an act relating to property within a city may be of such general concern that local regulation concerning municipal affairs is inapplicable. ... For example, where one of the city's streets has been declared by an act of the legislature to be a secondary highway, the improvement of that street is not a municipal affair within the meaning of the Constitution. ... Also, regulations prescribed by charter or ordinance of a city requiring that the work of altering and improving buildings be subject to local supervision have been held inapplicable to state building. (*City of Milwaukee v. McGregor*, 140 Wis. 35 [121 N.W. 642, 17 Ann.Cas. 1002].)

"In the case of *Kentucky Institution for Education of Blind v. City of Louisville*, 123 Ky. 767 [97 S.W. 402, 8 L.R.A.N.S. 553], the city attempted to enforce an ordinance relating to fire escapes with respect to a state institution for the blind. The court held the ordinance inapplicable, stating: 'The principle is that the state, when creating municipal governments does not cede to them any control of the state's property situated within them, nor over any property which the state has authorized another body or power to control. ***184** The municipal government is but an agent of the state, not an independent body. It governs in the limited manner and territory that is expressly or by necessary implication granted to it by the state. It is

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

competent for the state to retain to itself some part of the government even within the municipality, which it will exercise directly, or through the medium of other selected and more suitable instrumentalities. How can the city ever have a superior authority to the state over the latter's own property, or in its control and management? From the nature of things it cannot have.' " (See also *Board of Education v. City of St. Louis*, 267 Mo. 356 [184 S.W. 975]; *Salt Lake City v. Board of Education*, 52 Utah 540 [175 P. 654]; 31 A.L.R. 450.)

Pasadena School Dist. v. Pasadena, 166 Cal. 7 [134 P. 985, Ann.Cas. 1915B 1039, 47 L.R.A.N.S. 892], fails to consider the factors above mentioned and insofar as it is inconsistent with this opinion it is overruled. The question here considered was not involved in *Roman Catholic etc. Corp. v. City of Piedmont*, 45 Cal.2d 325, 332-333 [289 P.2d 438].

(7) Moreover, in connection with the foregoing and as an additional ground why the construction of school buildings by school districts are not subject to the building regulations of a municipal corporation in which the building is constructed, is that the state has completely occupied the field by general laws, and such local regulations conflict with such general laws, when we consider the activity involved. (8) A city may not enact ordinances which conflict with general laws on statewide matters. (*Simpson v. City of Los Angeles*, 40 Cal.2d 271 [253 P.2d 464]; *Pulcifer v. County of Alameda*, 29 Cal.2d 258 [175 P.2d 1]; *Ex parte Daniels*, 183 Cal. 636 [192 P. 442, 21 A.L.R. 1172]; *Atlas Mixed Mortar Co. v. City of Burbank*, 202 Cal. 660 [262 P. 334]; *Ganley v. Claeys*, 2 Cal.2d 266 [40 P.2d 817]; *In re Murphy*, 190 Cal. 286 [212 P. 30]; *In re Mingo*, 190 Cal. 769 [214 P. 850]; *Natural Milk etc. Assn. v. City etc. of San Francisco*, 20 Cal.2d 101 [124 P.2d 25]; *Pipoly v. Benson*, 20 Cal.2d 366 [125 P.2d 482, 147 A.L.R. 515]; *Tolman v. Underhill*, 39 Cal.2d 708 [249 P.2d 280].) The particular situation presented and discussed in those cases is not helpful. *In re Means, supra*, 14 Cal.2d 254, herein discussed is most pertinent as it involves the attempted regulation of a state activity by a city, as distinguished from regulations of the members of the public.

The Education Code sets out a complete system for the construction of school buildings. The Legislature there declares ***185** that it is in the interest of the state to aid school districts in the construction of school buildings for the maintenance of the public school system inasmuch as the system is of general concern and the education of the children is an obligation and function of the state. (Ed. Code, §§ 5021, 5041.) The governing board of any school district shall manage and control the school property within its district (*id.*, § 18001). It (the board) shall furnish and repair the school property. (*Id.*, § 18002.) It shall provide as a part of school buildings patent flush water closets for the use of the pupils (*id.*, § 18009). It may repair old buildings by day's labor or by force account (*id.*, §§ 18055, 18057). The State Department of Education shall: "Establish standards for school buildings," review and approve all plans and specifications for buildings and disapprove those not meeting the standards, furnish plans, specifications and "building codes," and make rules and regulations to carry out those activities (*id.*, §§ 18102, 18101). "The governing board of any school district may, and when directed by a vote of the district shall, build and maintain a schoolhouse (*id.*, § 18151). Except in cities having a board of education the county superintendent shall pass upon all plans for school buildings and plans shall be submitted to him. "The Division of Architecture of the Department of Public Works under the police power of the State shall supervise the construction of any school building or, if the estimated cost exceed four thousand dollars ($4,000), the reconstruction or alteration of or addition to any school building, for the protection of life and property." (*Id.*, § 18191.) " 'Construction or alteration' as used in this article includes any construction, reconstruction, or alteration of, or addition to, any school building." (*Id.*, § 18193.) "The Division of Architecture shall pass upon and approve or reject all plans for the construction or alteration of any school building. To enable it to do so, the governing board of each school district and any other school authority before adopting any plans for a school building shall submit the plans to the Division of Architecture for approval, and shall pay the fees prescribed in this article." (*Id.*, § 18194.) "Before letting any contract for any construction or alteration of any school building, the written approval of the plans, as to safety of design and construction, by the Division of Architecture, shall be first had and obtained." (*Id.*, § 18195.) "In each case the application for approval of the plans shall be ***186** accompanied by the plans and full, complete, and accurate specifications, and structural design computations, and es-

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

timates of cost, which shall comply in every respect with any and all requirements prescribed by the Division of Architecture. " (*Id.*, § 18196.) All plans and specifications shall be prepared by a duly state licensed architect or engineer and the supervision of the work shall be by a duly licensed person. (*Id.*, § 18199.) No contract for construction is valid and no public money shall be paid for any work or materials furnished thereunder " unless the plans, specifications, and estimates comply in every particular with the provisions of this article and the requirements prescribed by the Division of Architecture and unless the approval thereof in writing has first been had and obtained from the division." (*Id.*, § 18200.) Progress reports must be made to the division (*id.*, § 18201). "The State Division of Architecture shall make such inspection of the school buildings and of the work of construction or alteration as in its judgment is necessary or proper for the enforcement of this article and the protection of the safety of the pupils, the teachers, *and the public.* The school district, city, city and county, or the political subdivision within the jurisdiction of which any school building is constructed or altered shall provide for and require competent, adequate, and continuous inspection during construction or alteration by an inspector satisfactory to the architect or structural engineer and the Division of Architecture. The inspector shall act under the direction of and be responsible to the architect or structural engineer." (Emphasis added; *id.*, § 18203.) The division may adopt rules and regulations to carry out its duties and a violation of the provisions is a felony (*id.*, §§ 18202, 18204). If the supervisor of health of any school district notes any defect in "plumbing, lighting, or heating," he shall report to the district and if it does not act, to the county superintendent. (*Id.*, § 18221.) Each building, if two or more stories, shall have fire escapes (*id.*, § 18222).

(9) It is urged, however, that the foregoing provisions must be read in the background in which they were adopted, that is, that some of them were placed in the Education Code from the Field Act adopted in 1933 (Stats. 1933, ch. 59) and must be construed with the Riley Act of 1933 (Stats. 1933, ch. 601) now in the Health and Safety Code, sections 19100- 19170. The Riley Act provides that all buildings (with certain exceptions Health & Saf. Code, § 19100) must meet certain standards which are set forth (*id.*, §§ 19150, 19151). ***187** Building permits must be obtained from the proper city or county officers charged with the enforcement of laws regulating construction (*id.*, § 19120). Any city or county may establish construction standards higher than those established by sections 19150 and 19151 of the Health and Safety Code. Plans and specifications for buildings shall be filed with the application for a building permit (*id.*, § 19132). Both the Field and Riley acts were enacted as urgency measures, the urgency being stated to be the series of earthquakes occurring shortly prior thereto (Stats. 1933, ch. 59, § 9; 1933, ch. 601, § 8.) We do not believe, however, that the Health and Safety Code provisions (Riley Act) limit or modify the provisions of the Education Code (Field Act) above discussed. The former deal with structural design aimed at procuring buildings less dangerous from the standpoint of earthquakes (Health & Saf. Code, §§ 19150, 19151) while the latter, as above pointed out, are broad and comprehensive including the whole field of construction regulations. The urgency that impelled the Legislature to enact both as urgency measures may have been the same but the scope is clearly different. Hence the provisions in the former providing for more stringent local regulations are not applicable to the latter.

Reference is made to rules and regulations, past and present, adopted for the construction of school buildings under the Education and Health and Safety Codes. (Cal. Administrative Code, tit. 21, Public Works, Division of Architecture, chap. 1, subchap. 1.) The purpose of the rules (we refer to the rules now in existence) is to protect lives and property of the people by regulating the design and construction of public school buildings so that, in addition to the normal loads to which such buildings are subjected, they shall resist future earthquakes. (Tit. 21, subchap. 1, group 1, art. I, § 1.) The rules are intended to establish "reasonable standards and minimum requirements " for the construction of such buildings in order to attain the requisite stability to withstand loads and forces "and to insure safety of construction " (*id.*, § 2). The detailed regulations set forth in sections 101 to 1206 have been adopted as a basis for the approval of plans and specifications. "It is not the intention to limit the ingenuity of the designer nor to interfere with existing building rules and regulations where such rules and regulations are more stringent. Where the designer

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

desires to depart from the methods of analysis set up by these rules and regulations, it will be necessary that he submit his method in detail ***188** together with complete information including computations and test data covering the design in question. Permission to deviate from these rules and regulations is optional with the Division of Architecture and is dependent upon the division being satisfied that the structural members or portions of the building involved would provide at least such safety as would have been obtained had these rules and regulations been adhered to strictly." (*Id.*, § 70.) "Regulations and design values established in these rules and regulations are minimum requirements. Nothing herein contained shall be interpreted to interfere with or to waive the requirements of applicable local or state building laws or ordinances where the requirements of those laws are more stringent than the requirements of these rules and regulations." (*Id.*, § 115.) However, it is also provided that: "No rule or regulation shall be construed to deprive the Division of Architecture of its right to exercise the powers conferred upon it by law, or to limit the division in such enforcement of the act as is necessary to secure safety of construction and the proper administration of the law." (*Id.*, § 5.)

(10) It is very doubtful that those rules indicate an intention to interpret the Education Code sections to mean that a city's building regulations must be met in the construction of a school building. They tend more to indicate that the school districts could follow such regulations as well as those of the state but are not bound to do so. (11) In any event, since the final construction of a statute is the function of the courts (2 Cal.Jur.2d, Administrative Law, § 17), we hold the statutes here involved should not be construed as requiring a school district to comply with the building regulations of a city.

There is no necessity for comparing in detail Taft's building code and the numerous comprehensive building regulations contained in the Education Code and the rules and regulations of the Division of Architecture, for as we have seen the state has occupied the field. As said in *In re Means, supra*, 14 Cal.2d 254, 258, 260, in speaking of the effect of a city ordinance, establishing standards for plumbers, on a state employee in a city, the state civil service system provides a comprehensive plan for the selection of state employees and although the city ordinance does not purport to prescribe the conditions for state employment, "If one who has been employed by the state may not work on state property within a ***189** municipality without the consent of the municipality obtained after examination, the city has, in effect, *added to the requirements for employment by the state, and restricted the rights of sovereignty.* ...

"Although the legislature has enacted no statute regulating plumbing, if the city's ordinance is a valid exercise of power, then one whom the state has examined and found eligible for employment as a plumber and who has later entered the state civil service may be unable to work on state property because he cannot pass the examination of a city health officer or licensing board. The result is a direct conflict of authority. Either the local regulation is ineffective or the state must bow to the requirement of its governmental subsidiary. Upon fundamental principles, that conflict must be resolved in favor of the state." (Emphasis added.) The same comments apply to the references in the instant construction contract and specifications that the building is to be constructed in compliance with local regulations.

The judgment is affirmed.

Gibson, C. J., Shenk, J., Traynor, J., Schauer, J., Spence, J., and McComb, J., concurred.

Supreme Court of California,
In Bank.
NO OIL, INC., et al., Plaintiffs and Appellants,
v.
CITY OF LOS ANGELES et al., Defendants and Respondents.
L.A. 30268.

Dec. 10, 1974.
As Modified on Denial of Rehearing Jan. 29, 1975.

Nonprofit corporations brought an action in mandamus challenging the validity of the creation by ordinance by the council of the City of Los Angeles of three informational oil drilling districts within the Pacific Palisades, subject to condition that only two test wells be drilled, without first requiring the preparation and consideration of an environmental impact report. The Superior Court, Los Angeles County, David N. Eagleson, J., entered judgment in favor of defendants, and plaintiffs appealed. The Supreme Court, Tobriner, J., held that city council in approving oil drilling project in October of 1972 without a written determination concerning environmental impact of that project failed to comply with requirements of Environmental Quality Act that agency render a written determination whether project requires an environmental impact report before it gives final approval to project, and belated council resolution in January of 1973, despite its attempt to render determination retroactively, did not suffice to comply with requirement that environmental issues be considered and resolved before project is approved; and that city's use of erroneous test which limited use of an environmental impact report to projects which may have an 'important' or 'momentous' effect of 'semi-permanent' duration constituted prejudicial abuse of discretion.

Judgment reversed and cause remanded.

Clark, J., dissented and filed an opinion in which McComb and Burke, JJ., concurred.

Opinion, Cal.App., 111 Cal.Rptr. 487, vacated.

TOBRINER, Justice.

Plaintiffs appeal from a judgment of the Los Angeles Superior Court ruling that the City of Los Angeles need not prepare an environmental impact report (EIR) before enacting ordinances to permit defendant Occidental Petroleum Corp. to sink two test oil wells in the Pacific Palisades region of the city. This appeal, the first case arising under the California Environmental Quality Act (hereafter CEQA) (Pub. Resources Code, s 21050 et seq.) to reach this court since Friends of Mammoth v. Board of Supervisors (1972) 8 Cal.3d 247, 104 Cal.Rptr. 761, 502 P.2d 1049 compels us to inquire into how an agency should decide whether a pending project requires an EIR.[FN1]

FN1. For a summary of the relationship between CEQA as enacted in 1970, Friends of Mammoth, and the 1972 amended act, see Seneker, The Legislative Response to Friends of Mammoth-Developers Chase the Will-O-The Wisp (1973) 48 State Bar J. 127.

***74** [1] In CEQA, the Legislature sought to protect the environment by the establishment of administrative procedures drafted to 'Ensure that the long-term protection of the environment shall be the guiding criterion in public decisions.' (Pub. Resources Code, s 21001, subd. (d).) To achieve these objectives, CEQA and the guidelines issued by the State Resources Agency to implement CEQA[FN2] establish a three-tiered structure. If a project falls within a category exempt by administrative regulation (see Pub.Resources Code, ss 21084, 21085), or 'it can be seen with certainty that the activity in question will not have a significant effect on the environment' (Cal.Admin.Code, tit. 14, s 15060), no further agency evaluation is required. If there is a possibility that the project may have a significant effect, the agency undertakes an initial threshold study (Cal.Admin.Code, tit. 14, s 15080); if that study demonstrates that the project 'will not have a significant effect,' the agency may so declare in a brief Negative Declaration. (Cal.Admin.Code, tit. 14, s 15083.) If the project is one 'which may have a significant effect on the environment,' an EIR is required. (Pub. Resources Code, ss 21100, 21151; see Cal.Admin.Code, tit. 14, s

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

15080.) The parties assume that the drilling project is one which may possibly have a significant effect and thus requires an initial threshold environmental study. The question is whether the city properly determined that no EIR was necessary.

> FN2. The guidelines established by the State Resources Agency took effect on February 10, 1973, shortly after completion of the trial in the present case. We do not apply these guidelines retroactively to decisions of the court or city council rendered before the guidelines went into effect. We make use of the guidelines, however, as a suggested interpretation of the statute, and as an illustration of the procedures which the resources agency finds necessary to enforcement of the statute.

[2][3] Judicial review of the city's decision is governed by Public Resources Code ***38 **70 section 21168.5, which provides that 'In any action or proceeding, other than an action or proceeding under section 21168, to attack, review, set aside, void or annul a determination or decision of a public agency on the ground of noncompliance with this division, the inquiry shall extend only to whether there was a prejudicial abuse of discretion. Abuse of discretion is established if the agency has not proceeded in a manner required by law or if the determination or decision is not supported by substantial evidence.'[FN3] Since, as we shall explain, the judgment *75 of the superior court sustaining the city's decision must be reversed because of the city's failure to proceed in the manner required by law, we do not reach the question whether that decision is supported by substantial evidence.

> FN3. Judicial review of agency action under CEQA is governed by sections 21168 and 21168.5. Section 21168 provides that review of an agency decision 'made as a result of a proceeding in which by law a hearing is required to be given, evidence is required to be taken and discretion in the determination of facts is vested in a public agency' should follow the administrative mandamus procedure of Code of Civil Procedure section 1094.5. Section 21168.5, quoted in the text, provides that other agency decisions should be reviewed by a traditional mandamus action. Since the Los Angeles City Council was not required by law to hold an evidentiary hearing before approving the ordinances establishing the oil drilling districts, section 21168.5 governs the case at bar.
>
> Sections 21168 and 21168.5 became effective on December 5, 1972-subsequent to the October city council hearings and to the filing of this action, but before the trial in the superior court and that court's remand of the matter to the city council. Fortunately the Legislature, anticipating that issues might arise concerning the retroactivity of these sections, enacted that 'Sections 21168 and 21168.5 are declaratory of existing law with respect to the judicial review of determinations or decisions of public agencies made pursuant to this division.' (Pub. Resources Code, s 21168.7.) This enactment demonstrates that the Legislature intends section 21168 and 2168.5 to apply to all proceedings under CEQA, including those pending when those sections became effective.

The city council specifically failed to comply with the requirements of CEQA in two respects. First, because an EIR serves to guide an agency in deciding whether to approve or disapprove a proposed project, CEQA impliedly requires (and the guidelines expressly require) that the agency render a written determination whether a project requires an EIR before it gives final approval to that project. The city council, however, approved the drilling project in October of 1972 without a written determination concerning the environmental impact of that project. The belated council resolution in January of 1973, despite its attempt to render a determination retroactively as of the previous October, does not suffice to comply with the requirement that environmental issues be considered and resolved before a project is approved.

[4] Second, since the preparation of an EIR is the key to environmental protection under CEQA, accomplishment of the high objectives of that act requires the preparation of an EIR whenever it can be fairly argued on the basis of substantial evidence that the project

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

may have significant environmental impact. The superior court in the present case, however, ordered the city council to follow a far more restrictive test that limited use of an EIR to projects which may have an 'important' or 'momentous' effect of semi-permanent duration. The superior court's instruction, in addition, overlooked the importance of preparing an EIR in cases, such as the present action, in which the determination of a project's environmental effect turns upon the resolution of controverted issues of fact and forms the subject of intense public concern. In the context of this case, we shall point out the bases for our conclusion that the city's use of the erroneous test stated by the trial court constitutes a prejudicial abuse of discretion.

*76 1. Chronology of events.

In 1966 Occidental Petroleum drilled the Marquez Core Hole in Santa Monica Canyon and discovered oil producing sands at a depth of 9,200 feet. Seeking to determine the extent of the oil field, Occidental ***39 **71 acquired the 'highway drillsite' in Pacific Palisades in 1969. This two-acre site lies across a state highway from Will Rogers State Beach and near the foot of a bluff which has experienced numerous landslides.

In July of 1970, the Office of Zoning Administration of the City of Los Angeles granted Occidental a conditional use permit allowing it to drill a test well at the highway drillsite. The board of zoning appeals overturned that decision, finding that the drilling might trigger a disastrous landslide, that a blowout-an uncontrolled effusion of oil under pressure-would have severe environmental consequences, and that an industrial use of the site would be aesthetically undesirable.

Seeking to circumvent the requirement for a conditional use permit, Occidental petitioned the city in 1972 to establish three oil drilling districts in the Pacific Palisades. Since the oil drilling districts proposed by Occidental would have permitted commercial oil production, the hearing examiner for the city planning commission, concerned about the environmental impact of such production, recommended disapproval of the proposal. Nevertheless the planning commission resolved to approve the proposal on condition that only two test holes be drilled.

On October 10, 1972, the council considered three ordinances which established oil drilling districts in the Pacific Palisades area, subject to the condition that only two test wells could be drilled. At the close of the hearing Councilman Wachs inquired whether the city attorney had examined the proposed ordinances in the light of our opinion in Friends of Mannoth filed three weeks earlier. The city attorney replied that since the city had not yet established procedures to ascertain the environmental impact of measures coming before the council, he had made no such examination.

At the next meeting, on October 17, Councilman Wachs moved to postpone consideration of the ordinances pending preparation of an EIR. No other councilman discussed the motion, which failed by an eight-to-six vote. The council then passed the ordinances by the same eight-to-six vote. Mayor Yorty signed the ordinances into law on October 20.

Plaintiffs, four nonprofit corporations representing persons opposed to oil drilling in Pacific Palisades, filed the instant action on October 27. Their complaint sought a declaration that the ordinances were invalid, *77 prayed for mandate to compel preparation of an EIR, and requested an injunction against the issuance of a drilling permit by the office of zoning administration.[FN4] The city, in response, contended that no EIR was necessary, supporting this contention with declarations from the eight councilmen who voted for the ordinances; each declared, in the statutory language, his opinion that the drilling project was not such as might have a significant effect on the environment. Occidental, on the other hand, maintained that the reports of the planning commission consititued a sufficient EIR.

FN4. Before beginning to drill, Occidental was required to secure drilling permits from the office of zoning administration. The office expressly found that issuance of the drilling permits would not require an EIR, and issued the requested permits on January 4, 1973. The board of zoning appeals upheld that decision on January 31, and Occidental commenced drilling operations the same day. We issued a stay order halting the drilling on

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

February 7.

Plaintiffs initially claimed that the 'project' whose impact was at issue encompassed commercial oil production in Pacific Palisades; they argued that it was evident such production would have a significant effect on the environment. The trial court, however, limited the issue to the impact of the drilling of the test wells.[FN5] Plaintiffs presented expert testimony *78 to ***40 **72 show that even this limited 'project' might have a significant environmental effect. Paul Witherspoon, a professor of petroleum geology at the University of California at Berkeley, explained that a blowout, an unavoidable hazard of exploratory drilling, might lead to oil seepage polluting the adjoining state beach and harbor. George Tauxe, a professor of soil mechanics at U.C.L.A., testified that the drilling site was located at the foot of an unstable bluff, a locale of past landslides. Plaintiffs also contend that the drilling operation would be noisy and visually unattractive.

> FN5. Plaintiffs contend that the trial court erred in limiting the scope of the 'project' at issue to the drilling of two test wells; they maintain that the scope of inquiry should include the environmental effects of commercial production and exploitation of the oil resources of the Pacific Palisades. They point out that the drilling of the test wells would be a useless waste of money unless commercial production can follow. Thus information on the environmental impact of commercial production is relevant to the council's decision to approve the test wells; if that data proved that commercial production would be harmful, the council might well decide to disapprove the test drilling. Under these circumstances, plaintiffs observe that a narrow definition of 'project' which bars inquiry into the environmental effects of commercial production defeats the objectives of the act.
>
> Defendants protest, however, that the geologic information obtained from the test wells is essential to the preparation of an accurate EIR on the impact of commercial production. As the court pointed out in Scientists' Inst. for Pub. Info., Inc. v. Atomic Energy Com'n (1973) 156 U.S.App.D.C. 395, 481 F.2d 1079, an impact statement prepared before reliable information is available would 'tend toward uninformative generalties' (481 F.2d at p. 1093), but one delayed until after key decisions have been made could not assure that such decisions reflected environmental consideration. 'Thus we are pulled in two directions. Statements must be written late enough in the development process to contain meaningful information, but they must be written early enough so that whatever in formation is contained can practically serve as an input into the decision making process.' (481 F.2d at p. 1094.)
>
> The issue thus narrows to the question whether the city, before drilling of the test wells, has sufficient reliable date to permit preparation of a meaningful and accurate report on the impact of commercial production. Unfortunately the parties have not briefed this question thoroughly, and the record contains little evidence pertinent to its resolution. Since we are persuaded by plaintiffs' other contentions to reverse the judgment against them, we need not and do not decide whether the trial court erred in limiting the scope of inquiry to exclude consideration of commercial production.

In rebuttal, Occidental presented testimony by Ted Bear, a consulting petroleum geologist, that absent human or mechanical failure, there was no danger of a blowout at the highway drillsite. Other geologists employed by Occidental described measures planned to contain a blowout. David Leeds, a consulting seismologist, testified that the drilling vibrations perceived at the base of the bluff would be of lesser magnitude than those caused by existing traffic on the highway west of the drillsite, and even less than the ambient vibrations in the vicinity of the courtroom. Occidental also presented photographs to show that a drillsite could be constructed to avoid visual blight.

On December 29, 1972, the judge announced an oral ruling. Declaring that the council's actions of October 10 and 17 were equivocal, he resolved to remand the

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

matter to the council for clarification of the council's position on the question: 'Is the present Occidental application to drill two core holes such a project that may have a significant effect on the environment?'

In remanding the matter, the court stated a test for use by the council in determining whether a project 'may have a significant effect on the environment': 'whether there is a reasonable possibility that the project will have a momentous or important effect of a permanent or long enduring nature.'

The council convened on January 8, 1973. At the conclusion of the hearing the council, by an eight-so-seven vote, adopted a resolution stating that 'the Los Angeles City Council specifically declare that at the time it adopted the subject three ordinances it believed, and now specifically finds, that such ordinances and the restricted activities permitted thereby would have no significant effect on the environment.'

[5][6] The superior court found that the council's adoption of this resolution ***41 **73 was supported by substantial evidence in the administrative *79 record both as of October 1972, and as of January 8, 1973.[FN6] It then entered judgment declaring that the council lawfully determined that no EIR was required for the drilling project, and denying plaintiffs' request for mandate and injunctive relief.

> FN6. In an action for administrative mandamus, the court reviews the administrative record, receiving additional evidence only if that evidence was unavailable at the time of the administrative hearing, or improperly excluded from the record. (Code Civ.Proc., s 1094.5.) In a traditional mandamus action, on the other hand, the court is not limited to review of the administrative record, but may receive additional evidence. (Felt v. Waughop (1924) 193 Cal. 498, 504, 225 P. 862; Lassen v. City of Alameda (1957) 150 Cal.App.2d 44, 48, 309 P.2d 520; Cal.Civil Writs (Cont.Ed.Bar 1970) s 17.9.) Hence the issue before the superior court in the present case was whether substantial evidence, on the whole record including the evidence presented to that court, supported the determination that no EIR was required. The superior court's finding-that the council's resolution was supported by substantial evidence 'in the administrative record'-is not responsive to that issue.

Plaintiffs appealed and unsuccessfully sought a stay order from the Court of Appeal.[FN7] Since the appeal presented issues of public importance, which would be mooted if Occidental completed the drilling project pending appeal, we ordered the cause transferred to this court, issued a stay order and returned the cause to the Court of Appeal. (See People ex rel. S.F. Bay etc. Com. v. Town of Emeryville (1968) 69 Cal.2d 533, 537, 72 Cal.Rptr. 790, 446 P.2d 790.) The action is now here on petition for hearing from the Court of Appeal decision.

> FN7. On January 15, 1973, the superior court entered a minute order denying plaintiffs' request for preliminary and final injunctions, declaratory relief, and mandamus. The order also denied plaintiffs' motion for stay of execution, and directed counsel for Occidental to prepare findings and judgment.
>
> Plaintiffs appealed from that minute order and any ensuing judgment. Although the order did not constitute a final judgment on the merits, plaintiffs' appeal was timely both with respect to the denial of a preliminary injunction and the denial of stay of execution (see Code Civ.Proc., s 904.1; Brydon v. City of Hermosa Beach (1928) 93 Cal.App. 615, 620, 270 P. 255). Final judgment has now been entered, rendering moot the denial of preliminary relief.

2. The council erroneously failed to render a written determination respecting the environmental effect of the drilling project before it approved that project.

[7] As the superior court recognized, CEQA requires that an agency determine whether a project may have a significant environmental impact, and thus whether an EIR is required, Before it approves that project. [FN8] *80 Finding the council's action of October 17 ambiguous, the court remanded the matter to the council for clarification. The council passed a resolution stating that it believed, as of October 1972, that

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

the drilling project was not such as might have a significant impact; the court accepted this resolution as constituting the requisite determination of environmental issues before approval of the project.

FN8. See Friends of Mammoth v. Board of Supervisors, Supra, 8 Cal.3d 247, 262, 104 Cal.Rptr. 761, 502 P.2d 1049. The statutory definition of an EIR requires that the report be considered before a project is approved (see Pub. Resources Code, s 21061), which necessarily implies that the decision whether or not to prepare a report must precede approval of the project. The CEQA guidelines expressly state that 'The EIR process is intended to enable public agencies to evaluate a project to determine whether it may have a significant effect on the environment, to examine and institute methods of reducing adverse impacts, and to consider alternatives to the project as proposed. These things must be done prior to approval or disapproval of the project.' (Cal.Admin.Code, tit. 14, s 15012.) (Emphasis added.)

[8] We conclude, however, that a determination that a project does not require an EIR, when that project is not exempt ***42 **74 from environmental study under the act or guidelines,[FN9] must take the form of a written Negative Declaration. Such is the unanimous view of the federal courts construing the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. s 4321 et seq.),[FN10] and the explicit requirement of both federal and state guidelines. (See Council on Environmental Quality, Guidelines on Preparation of Environmental Impact Statements, s 1500.5, 38 Fed.Reg. 20552 (1973); Cal.Admin.Code, tit. 14, s 15083.)[FN11] Absent such a written determination,*81 there is no way a court can determine whether agency silence represents a decision that a project does not require an EIR or a failure to decide that issue.

FN9. Public Resources Code section 21085 provides that no environmental study is required if a project comes within a category exempt by administrative regulation; the Resource Agency guidelines list seven such categorical exemptions (Cal.Admin.Code, tit. 14, ss 15101-15107.) Guideline 15060 also provides generally that no environmental study is needed if 'it can be seen with certainty that the activity in question will not have a significant effect on the environment.'

FN10. See, e.g., Hanley v. Mitchell (2 Cir. 1972) 460 F.2d 640; Hanly v. Kleindienst (2 Cir. 1972) 471 F.2d 823; cf. Environmental Defense Fund, Inc. v. Ruckelshaus (1971) 142 U.S.App.D.C. 74, 439 F.2d 584, 598.

FN11. Guideline 15083 specifies that a Negative Declaration must include a brief description of the project, a finding that the project will not have a significant effect, and a statement of reasons to support that finding. The city maintains that since section 15083 did not take effect until February of 1973, its specifications should not be applied to the decision of the city council in October of 1972. The requirement that a finding of no significant impact take the form of an express written determination, however, is implicit in the act itself, and could have been deduced in October of 1972 from examination of the act, from our decision in Friends of Mammoth v. Board of Supervisors, Supra, 8 Cal.3d 247, 108 Cal.Rptr. 761, 502 P.2d 1049 and from the federal cases cited in that decision.

Plaintiffs in turn assert that a Negative Declaration should go beyond the specifications of section 15083 and contain a full exposition of all relevant environmental factors; they contend that section 15083, which contemplates only a conclusory one-page document, is invalid under the terms of CEQA. Language in Hixon v. County of Los Angeles (1974) 38 Cal.App.3d 370, 380, 113 Cal.Rptr. 433 notwithstanding, plaintiffs' contention presents a justiciable issue. (See Desert Environment Conservation Assn. v. Public Utilities Com. 1973) 8 Cal.3d 739, 742-743, 106 Cal.Rptr. 31, 505 P.2d 223.) Its resolution, however, should await a case which arises after the effective date of the challenged regulation.

We do not question the power of a trial court to re-

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

mand a matter to an administrative agency for clarification of ambiguous findings. (See Keeler v. Superior Court (1956) 46 Cal.2d 596, 600, 297 P.2d 967.) This doctrine, however, does not apply to the present case. This is not a case in which an agency rendered ambiguous findings concerning the environmental effect of the project, but a case of total absence of any written determination on the matter; for all the record reveals, the council may have simply ignored CEQA and enacted the ordinances in the same manner to which it was accustomed before CEQA was enacted.[FN12]

> FN12. Neither CEQA nor Code of Civil Procedure section 1094.5 require rendition of findings of fact in quasi-legislative proceedings; our opinion imposes no such requirement. We hold only that when the agency makes a determination whether a project requires an EIR, as CEQA requires it to do, it should put that determination in writing.

[9] At the time of the January 8, 1973, resolution, the council had already approved the project. No resolution adopted on that date can constitute that determination of environmental impact prior to approval of the project which the act requires. The resolution adopted at that meeting represents simply an example of that 'post hoc rationalization' of a decision already made, which the courts condemned in Citizens to Preserve Overton Park v. Volpe (1971) 401 U.S. 402, 91 S.Ct. 814, 28 L.Ed.2d 136, 420 and Environmental Defense Fund, Inc. v. Coastside County Water Dist. (1972) 27 Cal.App.3d 695, 706, 104 Cal.Rptr. 197.

In failing to render a written determination of environmental impact before approving***43 **75 the project, the council proceeded in a manner contrary to the requirements of law. (See Pub. Resources Code, s 21168.5.) This failure cannot be excused on the theory that the council might have approved the drilling project anyway; 'to permit an agency to ignore its duties . . . with impunity because we have serious doubts that its ultimate decision will be affected by compliance would subvert the very purpose of the Act.' (City of New York v. United States (E.D.N.Y.1972) 337 F.Supp. 150, 160 (NEPA); Arizona Public Service Co. v. Federal Power Com'n (1973) 157 U.S.App.D.C. 272, 483 F.2d 1275, 1283; see Jones v. District of Columbia Redev. Land Agency (D.C.Cir. 1974) 499 F.2d 502, 512.)

*82 3. The city council followed an erroneous test in deciding that the drilling project did not require an environmental impact report.

As we have explained, the council's resolution of January 8, 1973, cannot be given retroactive effect to validate the council's actions of the previous October. We now point out that the council's resolution is defective on a second ground, namely, that the council employed incorrect standards in determining that the drilling project did not require an EIR.

Public Resources Code section 21151, as of October 1972, provided that local government agencies not having an officially adopted conservation element of a general plan (such as the City of Los Angeles) 'shall make an environmental impact report on any Project they intend to carry out Which may have a significant effect on the environment.' (Emphasis added.) Although section 21151 was amended effective December 5, 1972,[FN13] the italicized words, the focus of the present controversy, are identical in both the original and amended sections.[FN14]

> FN13. Section 21151 now provides that 'All local agencies shall prepare, or cause to be prepared by contract, and certify the completion of an environmental impact report on any project they intend to carry out or approve which may have a significant effect on the environment . . ..' The amendment authorized agencies to contract for preparation of an EIR instead of preparing it themselves, added the requirement for an EIR when the agency approves a private project (thus codifying the holding in Friends of Mammoth v. Board of Supervisors, Supra, 8 Cal.3d 247, 104 Cal.Rptr. 761, 502 P.2d 1049) and eliminated the exemption for cities with an officially adopted conservation element in their general plan.
>
> FN14. The defendants concede that the test wells constitute a 'project' as defined in Public Resources Code section 21065, and that the enactment of the ordinances estab-

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

lishing oil drilling districts constitutes the carrying out of such a project within the terms of section 21151. Plaintiffs maintain that the scope of the 'project' whose impact is at issue encompasses not only the drilling of the test wells but also the possibility of subsequent commercial production. (See fn. 5, Supra.)

The trial court, on remanding this cause to the city council for clarification, interpreted this section to compel preparation of an EIR only when 'there is a reasonable possibility that the project will have a momentous or important effect of a permanent or long enduring nature.' As we shall explain, this test sets far too high a barrier to the preparation of an EIR. [FN15]

FN15. We do not think this court at this time should draft a substitute test. The responsibility for formulation of such a test is expressly delegated by CEQA to the State Resources Agency. (See Pub. Resources Code, s 21083.) That agency has defined 'significant effect' as 'a substantial adverse impact on the environment' (Cal.Admin.Code, tit. 14, s 15040)-a definition which differs markedly from that advanced by the trial court-and listed those environmental consequences which ordinarily indicate that a project may have a significant effect. (Cal.Admin.Code, tit. 14, s 15081.)

The Attorney General, as amicus curiae, stated his opposition to the guideline's definition of 'significant effect' on the ground that agency action may significantly affect the environment even if the agency believes that effect to be beneficial rather than 'adverse.' (Cf. Hiram Clark Civic Club, Inc. v. Lynn (5th Cir. 1973) 476 F.2d 421, 426-427 (NEPA); Goose Hollow Foothills League v. Romney (D.or.1971) 334 F.Supp. 877, 879 (NEPA).) One writer has also suggested that the term 'substantial' imposes too high a threshold level for the preparation of EIRs. (Comment, Aftermammoth: Friends of Mammoth and the Amended California Environmental Quality Act (1973) 3 Eco.L.Q. 349, 367-368, fn. 111.) In the light of such criticism, the secretary for resources has announced that the resources agency will 'do additional work' on this guideline, and schedule public hearings at a later date. (Letter from N. B. Livermore, dated Feb. 5, 1974, accompanying the issuance of the amended CEQA guidelines.)

Under these circumstances, we believe it would be inappropriate for us to utilize the present case to determine the validity of section 15040, or to preempt the Resources Agency by drafting an alternative definition. Our conclusion that the trial court's definition is patently erroneous is sufficient to decide the present appeal.

***83 ***44 **76** CEQA requires an EIR only for projects whose environmental effect can be described as 'significant.'

[10] This key word, however, is not a term of precision but encompasses a range of meaning.[FN16] It cannot be adequately defined by a random selection of synonyms from a thesaurus. Facing a spectrum of possible meanings, describing a range extending from projects of relatively minor import to those of truly momentous proportions, the court's task is to indicate the point on this spectrum beyond which the seriousness of the foreseeable impact dictates preparation of an EIR.

FN16. As stated by Judge Friendly, construing the phrase 'significantly affecting the quality of the human environment' in NEPA (42 U.S.C. s 4332): 'While . . . determination of the meaning of 'significant' is a question of law, one must add immediately that to make this determination on the basis of the dictionary would be impossible. Although all words may be 'chameleons, which reflect the color of their environment,' C.I.R. v. National Carbide Corp., 167 F.2d 304, 306 (2d Cir. 1948) (L. Hand, J.), 'significant' has that quality more than most. It covers a spectrum ranging from 'not trivial' through 'appreciable' to 'important' and even 'momentous.'" (Hanly v. Kleindienst (2d Cir. 1972) 471 F.2d 823, 837 (dissenting opinion of Friendly, J.).)

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

(For discussion of Hanly v. Kleindienst, see fn. 18, Infra.)

Moreover, CEQA does not speak of projects which Will have a significant effect, but those which May have such effect. Although we agree with the trial court that the word 'may' connotes a 'reasonable possibility,' that phrase again encompasses a range of meaning extending from the most unlikely possibility which might influence the views of a reasonable man to events which fall but a hair short of certainty.

[11] In interpreting section 21151, our principal guide is the fact, recognized in Friends of Mammoth, 'that the Legislature intended (CEQA) to be interpreted in such manner as to afford the fullest possible protection to the environment within the reasonable scope of the statutory language.' (Friends of Mammoth v. Board of Supervisors, Supra, 8 Cal.3d at p. 259, 104 Cal.Rptr. at p. 768, 502 P.2d at p. 1056, accord, County of Inyo v. Yorty (1973) 32 Cal.App.3d 795, 804, 108 Cal.Rptr. 377; see ***84**Environmental Defense Fund, Inc. v. Coastside County Water Dist., Supra, 27 Cal.App.3d at p. 701, 104 Cal.Rptr. 197.) The EIR is the 'heart' of CEQA (County of Inyo v. Yorty, Supra, 32 Cal.App.3d at p. 810, 108 Cal.Rptr. 377), the principal method by which environmental data are brought to the attention of the agency and the public. Consequently that interpretation of section 21151 which will 'afford the fullest possible protection to the environment within the reasonable scope of the statutory language' (Friends of Mammoth v. Board of Supervisors, Supra, 8 Cal.3d at p. 259, 104 Cal.Rptr. 761, 768, 502 P.2d 1049, 1056) is one which will impose a low threshold requirement for preparation of an EIR. [FN17]

FN17. '(I)n view of the clearly expressed legislative intent to preserve and enhance the quality of the environment . . ., the courts will not countenance abuse of the 'significant effect' qualification as a subterfuge to excuse the making of impact reports otherwise required by the act.' (Friends of Mammoth v. Board of Supervisors, Supra, 8 Cal.3d at p. 271, 104 Cal.Rptr. at p. 777, 502 P.2d at p. 1065.)

As stated by Judge Friendly, discussing the federal act, 'It is not readily conceivable that Congress meant to allow agencies to avoid this central requirement by reading 'significant' to mean only 'important,' 'momentous,' or the like. One of the purposes of the impact statement is to insure that the relevant environmental data are before the agency and considered by it prior to the decision to commit Federal resources*****45 **77** to the project; the statute must not be construed so as to allow the agency to make its decision in a doubtful case without the relevant data or a detailed study of it.' (Hanly v. Kleindienst, Supra, 471 F.2d at pp. 837-838 (dissenting opinion).) [FN18]

FN18. The majority opinion in Hanly v. Kleindienst (2d Cir. 1972) 471 F.2d 823 advanced the view that an environmental impact statement is not required in merely close and arguable cases If the agency submits, in lieu of such statement, a fully detailed explanation of its reasons for concluding that the project will not have a significant environmental effect. The majority in Hanly v. Kleindienst then reviewed a 25-page 'Assessment of the Environmental Impact' prepared by a government agency to support its conclusion that a proposed jail would not significantly affect the environment, and held that this assessment was inadequate because it failed to include findings with respect to some relevant environmental considerations. (471 F.2d at p. 834.) Judge Friendly's dissent suggests that the agency could as easily have prepared an environmental impact statement.

[12] In limiting the use of EIRs to projects which may have an 'important' or 'momentous' effect, the trial court adopted a test which will necessarily bar preparation of an EIR in those close and doubtful cases to which Judge Friendly referred, and will, to that extent, defeat the Legislature's objective of ensuring that environmental protection serve as a guiding criterion in agency decisions. (Pub. Resources Code, s 21000, subd. (d).) Indeed, the trial court test of 'significant impact' imposes a far higher threshold barrier to the preparation of an EIR than any suggested in state or federal guidelines or in any reported decision; its ***85** interpretation affords not the fullest, but the least

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

possible protection to the environment within the statutory language. FN19

FN19. Anderson, NEPA in the Courts (1973) reviews the federal decisions under NEPA and concludes that they have given the act 'the widest possible scope of application' (p. 56) and imposed a 'low threshold' for preparation of an environmental impact statement (the federal equivalent of California's environmental impact report).

In addition, the trial court added the gratuitous stipulation that no EIR is required unless the environmental effect of a project is 'of a permanent or long enduring nature.' We find no statutory warrant for this restriction; although the duration of an environmental effect is one of many facts which affect its significance, nothing in the act suggests that short-term effects cannot be of such significance as to require an EIR.

The trial court's test also erred in its omission of important considerations which called for the preparation of an EIR in the instant case. Evaluation of the environmental impact of the drilling project in the instant case required resolution of a factual dispute concerning the probability that the project might cause landslides or blowouts. In such cases, an EIR-an impartial, detailed, and factual analysis of the project's effect-can perform an invaluable service in aiding the agency's resolution of the dispute. As pointed out in County of Inyo v. Yorty, Supta, 32 Cal.App.3d 795, 814, 108 Cal.Rptr. 377, 390, in such cases of factual controversy 'The very uncertainty created by the conflicting assertions made by the parties as to the environmental effect . . . underscores the necessity of the EIR to substitute some degree of factual certainty for tentative opinion and speculation.'

[13][14] Thus we conclude, as did the court in County of Inyo v. Yorty, that an agency should prepare an EIR whenever it perceives 'some substantial evidence that a project 'may have a significant effect environmentally. " (32 Cal.App.3d at p. 809, 108 Cal.Rptr. at p. 387.) As stated by Judge J. Skelly Wright in Students Challenging Reg. Agency Pro. v. United States (D.D.C.1972) 346 F.Supp. 189, 201, an environmental impact report should be prepared 'whenever the action Arguably will have an adverse environmental impact.' (Emphasis in original.) FN20

FN20. The United States Supreme Court noted jurisdiction in Students Challenging Reg. Agency Pro. v. United States, affirmed the district court's holding that the plaintiff had standing, but ruled that the district court lacked jurisdiction to enjoin the Interstate Commerce Commission. (United States v. S.C.R.A.P. (1973) 412 U.S. 669, 93 S.Ct. 2405, 37 L.Ed.2d 254.) Its opinion does not discuss the standards for preparation of an environmental impact statement.

***46 **78 [15][16][17] Furthermore, the existence of serious public controversy concerning the environmental effect of a project in itself indicates that preparation*86 of an EIR is desirable.FN21 One major purpose of an EIR is to inform other government agencies, and the public generally, of the environmental impact of a proposed project (see County of Inyo v. Yorty, Supra, 32 Cal.App.3d 795, 810, 108 Cal.Rptr. 377; Environmental Defense Fund, Inc. v. Coastside County Water Dist., Supra, 27 Cal.App.3d 695, 704-705, 104 Cal.Rptr. 197; cf. Jones v. District of Columbia Redev. Land Agency (D.C.Cir. 1974) 499 F.2d 502, 511 (NEPA)), and to demonstrate to an apprehensive citizenry that the agency has in fact analyzed and considered the ecological implications of its action. A simple resolution or Negative Declaration, stating that the project will have no significant environmental effect, cannot serve this function.

FN21. The federal guidelines for NEPA provide that 'Proposed major actions, the environmental impact of which is likely to be highly controversial, should be covered in all cases.' (Council on Environmental Quality, Guidelines on Preparation of Environmental Impact Statements, s 1500.6, 38 Fed.Reg. 20551 (1973).) These guidelines, first adopted in 1971, were in effect at the time of trial in the instant case. Since the California act was modeled on the federal statute, judicial and administrative interpretation of the latter enactment is persuasive authority in interpreting the California act. (See Environmental Defense Fund, Inc. v. Coastside County Water Dist., Supra, 27 Cal.App.3d

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

695, 701, 104 Cal.Rptr. 197.)

> The state guidelines, which took effect while this case was pending on appeal, provide that 'where there is, or anticipated to be, a substantial body of opinion that considers or will consider the effect (of the project) to be adverse, the lead agency should prepare an EIR to explore the environmental effects involved.' (Cal.Admin.Code, tit. 14, s 15081.) Although defendants suggest that this language is intended to imply by omission that public opinion is relevant to the question of whether the project's net effect is 'adverse,' but not to the question whether that effect is 'significant,' this seems a wholly illogical interpretation. The need for a full report to provide information and quiet public apprehension is at least as great in cases, such as the present action, where the controversy concerns the risk of an admittedly adverse effect as in cases in which the controversy concerns whether a predicted effect is adverse or benign.

Having decided that the trial court's instruction to the city council erred both in its definition of 'significant impact' and in its omission of considerations suggesting the need for an EIR in the instant case, we must now determine whether that error prejudicially affected the proceedings before the city council. The principal issue here is whether the city council, on remand, did in fact employ the test stated by the trial court.

Upon the remand of the matter to the council, that body scheduled a public hearing on January 8, 1973, at which it received additional testimony and argument concerning the environmental effect of the drilling project. The council then resolved, by an eight-to-seven vote, not to require an EIR. Several councilmen explained their votes; four councilmen, two who favored and two who opposed the resolution, explicitly ***87** phrased their determination in terms of the trial court's test. Another councilman, who had previously voted in favor of the drilling districts, asked the city's assistant administrative officer for petroleum matters whether the effect of a blowout would have a 'permanent long-enduring nature.' Receiving a negative reply, he stated that he had heard nothing to change his mind, and voted for the resolution.

[18] The record of the proceeding before the council on January 8 convinces us, as it did the trial court,[FN22] that the council *****47 **79** employed the trial court's test in resolving against preparation of an EIR. Since that resolution carried by a bare eight-to-seven majority, we are compelled to conclude that the use of a test which limits EIRs to projects of momentous and semi-permanent effect, and which excludes the presence of disputed factual issues of public controversy as criteria suggesting preparation of a report, prejudicially affected the council's decision. [FN23]

> FN22. On January 15, the court announced its intention to rule against plaintiffs. The judge observed that '(T)he court formulated a test to be applied in interpreting the language 'may have a significant effect on the environment,' the key phrase in these proceedings. This test is as follows: Is there a reasonable possibility that the project will have a momentous or important effect of a permanent or long-enduring nature? . . . With this test clearly in mind-it was alluded to in one form or another fourteen separate times by the city council-the council on January 8, without remand, adopted a resolution. . . . This court finds that the resolution is synonomous with a statement that the contemplated project is not one which may have a significant effect on the environment.'

> FN23. Pointing to a letter by the city attorney dated October 3, 1973, defendants argue that the council, when it approved the ordinances, was aware that the then unmodified Friends of Mammoth opinion established a test requiring an EIR for all projects with a 'non-trivial' effect. Defendants infer that the council, in approving those ordinances, silently employed that test and found that the drilling project would have only a trivial impact on the environment. Defendants also infer that the resolution of January 1973, stating the council's belief as of October 1972 that the project would not have a significant

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

> impact, referred to the definition of 'significant effect' as 'nontrivial effect' which the council inferably followed in October. Piling inference upon inference, defendants conclude that if the council consistently utilized the test of significant effect set out in the unmodified Friends of Mammoth opinion, the trial court's erroneous test could not have influenced the council's decision.
>
> We reject the inferences proposed by the defendants. Our review of the council proceedings of October 10, October 17, and January 8 reveals no instance in which a councilman who voted in favor of the ordinances indicated that he did so on the basis of the 'nontrivial effect' test of the unmodified opinion in Friends of Mammoth.

Defendants point out that the eight councilmen who voted in favor of the resolution filed declarations on December 6, prior to the trial court's pronouncement of its test of 'significant effect,' which stated that the oil drilling districts were not projects such as might have a significant environmental effect. Relying on these declarations, defendants contend that the eight councilmen had made up their minds before the *88 January 8 meeting; defendants imply that no test set out by the trial court-correct or incorrect-would have influenced them.

[19][20] The argument is certainly a strange one. As the Attorney General points out, it is analogous to a contention that an erroneous jury instruction is not prejudicial because the jurors had already resolved to convict the defendant regardless of the court's instructions. When, as here, a court remands a case to an administrative agency with directions to follow a specific legal test, we must presume that the administrators faithfully followed those instructions. (See Evid.Code, s 664.)[FN24] The presumption is rebuttable, but the declarations of the councilmen filed prior to the trial court's statement of its test fall far short of showing that the council subsequently failed to follow that test.

> FN24. Evidence Code section 664 states that 'It is presumed that official duty has been regularly performed.' This is a rebuttable presumption going to the burden of proof. (Evid.Code, s 660.)

[21] Section 21168.5 permits a court to reverse a determination of a public agency for 'prejudicial abuse of discretion.' 'Abuse of discretion is established if the agency has not proceeded in a manner required by law.' (Pub. Resources Code, s 21168.5.) The council's use of an erroneous legal standard constitutes a failure to proceed in the manner required by law. (See Gilles v. Department of Human Resources Development (1974) 11 Cal.3d 313, 329, 133 Cal.Rptr. 374, 521 P.2d 110.)

The record in this case demonstrates that this error of law was prejudicial. The present case, in fact, is an excellent example of those close and arguable cases **80 in which an EIR should be prepared. With the council confronting allegations, ***48 supported by expert testimony but controverted by opposing testimony, that the drilling projects could cause an environmental disaster, the value of an impartial environmental analysis cannot be gainsaid. The intense and continuing public concern with these hazards, and with the impact of oil drilling in the vicinity of public beaches and residential neighborhoods, equally suggests the need for a thorough and impartial study. Under these circumstances, we believe that the council, employing a proper test, would have decided to direct preparation of an EIR.

4. Conclusion.

For the reasons stated in parts 2 and 3 of this opinion, we conclude that the judgment of the superior court must be reversed. The superior court shall set aside the ordinances establishing the oil drilling districts on the ground that the city, in enacting these ordinances, failed to comply with the provisions of CEQA. The city, of course, may choose to reenact*89 these ordinances after complying with the requirements of that act.[FN25]

> FN25. Occidental suggests that an opinion requiring the trial court to set aside the ordinances will require Occidental to file new applications for the creation of the drilling districts, and compel the city to follow anew all procedural steps preparatory to the

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

enactment of the ordinance. To quiet such apprehensions, we note that our opinion does not compel the trial court to vacate any action, such as the filing of an application for an ordinance, which may lawfully precede the city's determination whether to prepare an environmental impact report. Occidental has not called our attention to any ordinance or rule of the City of Los Angeles which would, under the circumstances of this case, compel repetition of any actions which may lawfully precede that determination.

The judgment is reversed, and the cause remanded to the superior court to proceed in accordance with the views herein expressed.[FN26]

FN26. In view of our disposition of this appeal, plaintiffs' motion for leave to produce new evidence on appeal is moot.

WRIGHT, C.J., and SULLIVAN and MOLINARI,[FN*] JJ., concur.

FN* Assigned by the Chairman of the Judicial Council.

CLARK Justice.

I dissent.

When enacting a zoning ordinance in 1972, the Los Angeles City Council was not required to render a written negative declaration to evidence its determination that the ordinance would have no significant effect on the environment. There was no express requirement of such writing and no basis for implying one. The city council proceeded in a manner required by law, and the evidence before us fully supports the determination that the proposed test holes will have no significant effect on the environment.

In enacting the present zoning ordinances, the city council performed a legislative function. (Johnston v. City of Claremont (1958) 49 Cal.2d 826, 835-836; Clemons v. City of Los Angeles (1950) 36 Cal.2d 95, 98, 222 P.2d 439; Lockard v. City of Los Angeles (1949) 33 Cal.2d 453, 460, 202 P.2d 38.) As recognized by the majority (Ante, p. 38), the city council was not required to hold an evidentiary hearing, and judicial review of the council's action is governed by traditional mandamus principles rather than the administrative mandamus procedure of Code of Civil Procedure section 1094.5. (Pub. Resources Code, ss 21168, 21168.5, 21168.7.) Thus the requirement of administrative findings set forth in section 1094.5 (see Topanga Assn. for a Scenic Community v. County of Los Angeles (1974) 11 Cal.2d 506, 511, 522, 113 Cal.Rptr. 836, 522 P.2d 12) is not applicable to the adoption of the ordinances,[FN1] and no other principle of general law or charter provision has been cited***49 or found requiring the Los Angeles City Council to make findings of fact in adopting ordinances.

FN1. The statement of the majority that Occidental in seeking rezoning was circumventing the requirement of a conditional use permit is misleading and unfortunate. (Ante, p. 39.) In Topanga, this court stated that rezoning was the appropriate method to obtain a special use for a large parcel. (11 Cal.3d at p. 522, 113 Cal.Rptr. 836, 522 P.2d 12.)

*90 **81 There is no express provision in the California Environmental Quality Act (Pub. Resources Code, s 21000 et seq.) (hereinafter CEQA), [FN2] as enacted in 1970 or in its present form, requiring prior to project approval either 'findings' or any written determination that a project will not have a significant effect on the environment. To the contrary, the language of CEQA indicates that written findings were not contemplated for such a determination. Section 21168.5 provides that abuse of discretion may be established either by showing that the agency failed to proceed in a manner required by law or by showing that the 'determination or decision' is not supported by substantial evidence. (s 21168.5; italics added.) Clearly the act contemplates Only that the determination be made. If the Legislature had intended written findings, it could easily have said that abuse of discretion is established when the decision is not supported by the Findings, or the Findings are not supported by substantial evidence. (Cf. Code Civ.Proc., s 1094.5; Topanga Assn. for a Scenic Community v. County of Los Angeles, Supra, 11 Cal.3d 506, 113 Cal.Rptr. 836, 522 P.2d 12.)[FN3]

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

FN2. Unless otherwise stated, all statutory references are to the Public Resources Code.

FN3. The absence of an express statutory requirement of 'findings' distinguishes the instant case from Topanga. In Topanga we determined that the administrative mandamus procedure of Code of Civil Procedure section 1094.5, by providing that abuse of discretion is established if the administrative decision 'is not supported by the findings, or the findings are not supported by the evidence,' required that agencies subject to review by administrative mandamus must set forth specific findings. (11 Cal.3d at p. 515, 113 Cal.Rptr. at p. 841, 522 P.2d at p. 17.)

Our reasoning in Topanga was that the Legislature must have intended specific findings in view of the fact that it established the reviewing court's duty to compare the evidence and ultimate decision to "the findings' . . .' (11 Cal.3d at p. 515, 113 Cal.Rptr. 836, 522 P.2d 12, italics added.) We noted that '(i)f the Legislature had desired otherwise, it could have declared as a possible basis for issuing mandamus the absence of substantial evidence to support the administrative agency's Action.' (11 Cal.3d at p. 515, 113 Cal.Rptr. at p. 841, 522 P.2d at p. 77; italics added.) On the basis of the Topanga rationale we must conclude the Legislatue did Not intend findings in the case of CEQA, for it has provided that the evidence be compared only to the 'determination or decision' of the agency. (s 21168.5.)

The majority disclaims having imposed any requirement of findings on the legislative process, stating that it requires only that the determination of no significant effect on the environment be put in writing. (Ante, p. 42.) The majority reasons that in the absence of such writing there is no way a court can tell if the agency actually made the determination. If this is the case, the requirement would seem fully satisfied by either the declarations of the councilmen submitted prior to trial or the council resolution of 8 January 1973. These eliminate the majoirty's objection to the record, i.e., they show that a determination was in fact made prior to approval of the ordinances.

By the lengthy impeachment of the council resolution (ante, pp. 43-48), however, the majority requires more of a negative declaration than a mere wtitten statement of the fact of determination. The resolution adequately satisfied the only Formal requirement Purportedly imposed by the majority. By going behind the resolution, the majority in effect require not only that the determination be reduced to writing but also that it affirmatively evidence proper supporting reasons.

***91** Further support for the conclusion that CEQA did not require a written negative declaration is furnished by this court's decision in Friends of Mammoth v. Board of Supervisors (1972) 8 Cal.3d 247, 270, 104 Cal.Rptr. 761, 502 P.2d 1049. Friends of Mammoth expressly rejected a requirement of written findings when an agency approves a project after preparation of an environmental impact report. It appears inconsistent to imply a requirement of written findings for a determination that no environmental impact report is necessary when this court refused to imply a requirement for such findings for the more important decision whether to approve a project in light of the admitted adverse environmental effects disclosed by an environmental impact report.

*****50** Sound practical considerations militate against the implication of formalistic requirements into the legislative process. When the legislative body has complied with all substantive requirements and all express formalistic requirements, the majority's****82** will should not be frustrated by adding a formalistic requirement, the necessity for which could only be foreseen by those possessing acute clairvoyance.

The unreasonableness of implying a formalistic requirement into the legislative process is dramatically illustrated by the requirement implied by the majority today. Unless the legislative body somehow anticipated today's implied requirement of a written determination, every ordinance affecting the use of land

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

adopted between the enactment of CEQA in 1970 and the adoption of the guidelines in 1973 has been improperly adopted, including ordinances involving projects where 'it can be seen with certainty that the activity in question will not have a significant effect on the environment.' Although projects coming within the quoted term are presently exempt from the written negative declaration requirement expressly imposed by the guidelines (Cal.Admin.Code, tit. 14, s 15060,) the guidelines with the three-tiered structure relied upon by the majority were not adopted until 1973.[FN4] Probably thousands of ordinances*92 including those coming within the quoted term were not preperly adopted under today's majority opinion.[FN5]

FN4. The 1972 amendments to CEQA provide that the guidelines shall contain a list of classes of projects which the Secretary of the Resources Agency has found do not have a significant effect on the environment. (s 21084.) A project falling within these classes is exempt from the provisions of CEQA. (ss 21084, 21085.) The guidelines presently contain a list of such projects. (Cal.Admin.Code, tit. 14, ss 15100-15112.) However, CEQA itself does not exempt any projects other than ministerial ones and emergency repairs to public service facilities (ss 21080, 21085); hence there were no projects other than those mentioned in CEQA which were exempt until promulgation of the guidelines.

In general the guidelines establish a three-tiered structure-projects for which an EIR is filed; projects for which a negative declaration is filed, and categorically exempt projects. However, only a two-tiered structure is provided as to the type of ordinance before us. Activities for the purpose of 'basic data collection' or 'resource evaluation' are categorically exempt unless the activity will result in a 'serious or major disturbance to an environmental resource.' (Cal.Admin.Code, tit. 14, s 15106.) If the activity would result in a 'serious or major disturbance to an environmental resource,' it would seem perforce that an EIR is required. If not, the activity is exempt. In the instant case, if the city council finds such a disturbance, an EIR must be prepared. If it does not so find, there is not even a requirement of a negative declaration, for the guidelines do Not require filing of a negative declaration when a public agency approves a project that is categorically exempt. (Cf. Cal.Admin.Code, tit. 14, s 15035.5.)

FN5. Since the majority has implied the writing requirement, it could imply the exemption too-once the fabric is woven from thin air, it may be embellished at will. Nevertheless, implication of the requirement and the exemption in the absence of any language dealing with writing requirements or exemptions from them appears a clear invasion of the legislative process.

In imposing the requirement of a written determination on the legislative process, the majority also starts us down a dangerous path which, if followed in the future, will have unfortunate consequences. The majority implies the requirement not on the basis of language dealing with writings; the only language relied on is that set forth in the purposes of the act. However laudable or noble the purposes of a statute, the method to be followed by the city council in adopting ordinances under it should remain the same unless the statute itself or authorized regulations provide for a different method of enactment. To vary the method of enactment, depending upon judges' opinions as to the virtues of statutory purpose, is an improper interference with the legislative process and can only lead to confusion and frustration of the majority's will.

Since the city council was not required to produce written findings of fact or a written determination in the form of a negative declaration, it must be presumed ***51 **83 that official duty has been regularly performed (Evid.Code, s 664) and that the legislative body has ascertained the existence of those facts essential to its action (e.g., Orinda Homeowners Committee v. Board of Supervisors (1970) 11 Cal.App.3d 768, 775, 90 Cal.Rptr. 88). As the council passed the ordinances without preparing an EIR, it must be presumed it had determined the informational holes would not have a significant effect on the envi-

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

ronment.

Evidence of events occurring after the 17 October 1972 passage of the ordinances, including submission of declarations by the councilmen and the council resolution of 8 January 1973 (both of which stated that the ordinances were approved on 17 October 1972, because the council believed the limited drilling would have no significant effect on the environment)***93** does not establish that the council failed to make the determination. If anything the evidence tends to support the presumption that the determination was made. [FN6] In any event it was unnecessary for defendants to prove that the determination was actually made, for the issue should have been resolved in their favor when plaintiffs failed to adduce evidence sufficient to overcome the presumption.

> FN6. In a 17-page letter of 3 October 1972 the city attorney advised the city council that all projects which may have a significant effect on the environment required preparation of an EIR and specifically concluded that all Zone changes should be accompanied by an EIR if the permitted use may have a significant effect on the environment.

I conclude the council proceeded in a manner required by law. The inquiry thus is whether the council's determination is supported by substantial evidence. (s 21168.5.) There is ample evidence in the record to sustain the decision. The ordinances contemplated drilling of extremely limited scope. Only two informational test bore holes were authorized; the entire operation was to last only 90 days, with the rigs to be removed upon completion; and a number of other restrictions and conditions were imposed on the project. Under no circumstances was commercial production of oil to be permitted. With respect to the impact of the drilling vibrations, Occidental produced expert testimony that vibrations from the drilling at a point 150 feet from the drill site would be less than those caused by movement along the nearby highway, and 5 to 10 times less than the ambient vibrations outside the courtroom door. As to the possibility of a 'blowout,' there was evidence that the incidence of blowouts at urban drill sites was only 2/10 ths of 1 percent.[FN7] Occidental also introduced photographs demonstrating methods by which the drill site would be made aesthetically consonant with adjacent land uses. The foregoing represents only a sampling of the evidence marshalled by Occidental to dispel any doubts about the environmental effect of the test holes.

> FN7. The experts for plaintiffs conceded that the incidence of blowouts was 'very low' and that the petroleum industry had developed 'very sophisticated means' of preventing such accidents.

The limited drilling authorized by the ordinances is a 'basic data collection' or 'resource evaluation' activity inasmuch as the object of the drilling is to determine the size and yield of the Riviera oil field and obtain data essential to a thorough environmental assessment of oil production. Unless the city council determines that this activity will result in a 'serious or major disturbance to an environmental resource' the proposed test holes will be Categorically exempt from CEQA under the present guidelines. (Cal.Admin.Code, tit. 14, s 15106.) In the event ***94** the council concludes the drilling will not result in a serious or major disturbance to an environmental resource, the city council will Not be required to render a written negative declaration nor any writing whatsoever prior to appproval*****52** of the ordinances, for the guidelines ****84** do not require Any writing for a determination that a project is categorically exempt from CEQA. The agency 'may' file a brief notice of exemption but is not compelled to. (Cal.Admin.Code, tit. 14, s 15035.5.) This observation only highlights the futility, as well as the inappropriateness, of the requirement which he majority implies today.

I would affirm the judgment.[FN8]

> FN8. The majority balks at resolving a number of questions highly pertinent to cases arising under CEQA, which I feel leaves the disposition of this case and others uncertain to an unfair extent. Specifically, the majority does not decide what is required in a negative declaration and declines to formulate a more definite test for determining what constitutes a 'significant effect' on the environment. Thus, while the city council must now redetermine the environmental issues involved, it does not even have assurance that adherence

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

> to the standards set forth in the guidelines is the proper course to pursue. The majority remands the case without informing the council what is expected of it in future deliberations.
>
> The unwarranted aspersions cast by the majority on the application of the political process in this case perhaps explain the majority's willingness to reach its desired result without confronting the important questions of law. The record, however, provides no basis for believing the political channels were abused in any manner.

THE PEOPLE, Plaintiff,
v.
HARRY OKEN et al., Defendants; TONY ALARCON, Appellant; EL MONTE SCHOOL DISTRICT et al., Respondents.
Civ. No. 22496.

District Court of Appeal, Second District, Division 3, California.
Apr. 17, 1958.

HEADNOTES

(1) Appeal and Error § 41--Decisions Appealable--Orders on Motion to Strike.
While an order striking a pleading is not ordinarily appealable, the rule is otherwise where a cross-complaint is directed against cross-defendants not otherwise parties to the action.

(2) Pleading § 171--Amendment--On Leave of Court.
An attempted incorporation of counts or causes of action in an amended cross-complaint without leave of court is ineffective and may not be treated as a part of the pleading in the case.
See **Cal.Jur.2d,** Pleading, § 232; **Am.Jur.,** Pleading, § 291.
(3) Schools § 56, 57--Buildings and Construction.
A private citizen may not maintain an action for a judgment declaring that the public interest and necessity require the construction by a school district of a school building and "the acquisition and appropriation by said school district of a site upon which said building may be erected within that certain tract of land" described in the pleading; where, when or how, if at all, a school district shall construct school buildings is within the sole competency of its governing board to determine.

(4) Eminent Domain § 11, 150(1)--Who May Exercise Right-- IndividualsPleadings.
A private person seeking to exercise the right of eminent domain must not only allege that he proposes to devote the property sought to be acquired to one of the public uses provided in Code Civ. Proc., § 1238, but must also make it appear that he is authorized to devote the property to the public use in question or that he is a person authorized to administer or have "charge of such use."
See **Cal.Jur.2d,** Eminent Domain, §§ 229, 282; **Am.Jur.,** Eminent Domain, § 28.
(5) Pleading § 13--Subject Matter--Facts Judicially Noticed.
An allegation by way of conclusion that the pleader "is a person, competent and qualified to acquire the real property" described in his pleading "as agent of the state and/or person in charge of the uses" therein set forth, should be disregarded, where the appellate court judicially knows it is untrue.

(6) Schools § 2--Legislative Power and Duty.
Const., art. IX, §§ 5, 6, declaring that the Legislature shall provide for "a system of common schools" and "a public school system," make the school system a matter of state care and supervision; the term "system" itself imports a unity of purpose as well as entirety of operation, and the direction to the Legislature to provide "a" system of common schools means one system applicable to all common schools; this duty, so far as the state has by the adoption of the Constitution undertaken it, cannot be delegated to any agency.
See **Cal.Jur.,** Schools, §§ 2, 4.
(7) Pleading § 254--Motion to Strike--Amended Pleading.
An amended cross-complaint was properly stricken by the trial court where it wholly failed to state a cause of action and was patently frivolous and sham.

(8) Pleading § 254--Motion to Strike--Amended Pleading.
Though there is no statutory provision for striking complaints from the files as there is with respect to sham or frivolous answers (Code Civ. Proc., § 453), a court may, by virtue of its inherent power to prevent frustration or abuse of its processes, strike a purported complaint that fails to amend the previous pleading, is not filed in good faith, is filed in disregard of established procedural requirements, or is otherwise violative of orderly judicial administration.

SUMMARY

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

APPEAL from an order of the Superior Court of Los Angeles County striking a third amended cross-complaint. Aubrey N. Irwin, Judge. Affirmed.

COUNSEL

Alexander Ruiz and Manuel Ruiz, Jr., for Appellant.

Harold W. Kennedy, County Counsel (Los Angeles), and Edwin P. Martin, Deputy County Counsel, for Respondents.

PATROSSO, J. pro tem. [FN*]

FN* Assigned by Chairman of Judicial Council.

This is an appeal by cross-complainant Tony Alarcon from an order striking his third amended cross-complaint as against the cross-defendants El Monte School District and county of Los Angeles. (1) While an order striking a pleading is not ordinarily appealable, the rule is otherwise where, as here, the cross-complaint is directed against cross-defendants not otherwise parties to the action. (*Trask v. Moore* (1944), 24 Cal.2d 365, 373 [149 P.2d 854].)

The action in which the cross-complaint was filed is one instituted on behalf of the People of the State of California by ***458** the district attorney of Los Angeles County against numerous defendants, including cross-defendant, alleged to be the owners or occupants of properties within an area comprising some 24 acres located in the county of Los Angeles and commonly known as "Hick's Camp," to abate a public nuisance alleged to exist upon the properties located therein by reason of the maintenance thereon of dilapidated buildings and unsanitary conditions therein more particularly described.

A demurrer having been sustained with leave to amend to the original cross-complaint, appellant filed a second amended cross-complaint containing four separate causes of action. Demurrers interposed by the respondents to the latter complaint were sustained without leave to amend as to the first, second and fourth cause of action thereof. Thereafter appellant filed a third amended cross-complaint which was stricken upon motion of the respondents as hereinbefore stated.

The third amended cross-complaint, as is likewise true of its predecessors, is in many respects a remarkable document. It purports to incorporate therein by reference, the first, second and fourth causes of action of the second amended cross-complaint to which, as previously stated, demurrers had been sustained without leave to amend. It then alleges that the action is brought by the appellant "on behalf of apprximately [sic] 35 persons similarly situated, named defendants, in the second amended complaint of nuisance on file herein, and also as agent for the State of California, and the person in charge of the public uses hereinafter set forth and requested." It then alleges that the El Monte School District and numerous individually named cross-defendants claim an interest in the property described in Exhibit "A," attached to the cross-complaint, which apparently comprises a portion of the property described in plaintiff's complaint, whereon are located the conditions which are sought to be abated as a public nuisance. It further alleges "that the public interest and necessity require that the said property be acquired by cross complainant as agent of the State of California, as provided in section 1001 of the California Civil Code. That cross complainant, Tony Alarcon, is a person, competent and qualified to acquire the real property and improvements thereon, described herein, as agent of the State and/or person in charge of the uses hereinafter set forth. That cross complainant seeks to take and condemn private property, to wit: Real Estate and improvements, for the public uses hereinafter ***459** set forth. That the plaintiff and cross defendants, El Monte School District, Ernest Roll, District Attorney for Los Angeles County and the County of Los Angeles, are public bodies within the purview of subsection 21 of the section 1238 of the California Code of Civil Procedure, ... to wit: To demolish, clear, abate or remove buildings from the area known as 'Hicks Camp' and herein described in exhibit 'A,' for the reason that the same are detrimental to the health, safety and morals of the people, and because of dilapidation, overcrowding, faulty arrangement or design, or lack of ventilation or sanitary facilities of the dwellings predominating in said area. That the public interest and necessity require the construction by the

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

El Monte School District of a school building and also the acquisition and appropriation by said school district of a site upon which said building may be erected within that certain tract of land hereinabove described. In conjunction therewith, said public interest and necessity require, that buildings, dwellings and structures within said tract of land be demolished, cleared, abated and/or removed, in the interest of the health, safety and morals of the people, because of dilapidation, overcrowding, faulty arrangement or design, or lack of ventilation or sanitary facilities of the dwellings therein, in a manner that will be most compatible with the greatest public good and the least private injury. ... That there is grave danger of the creation of a public nuisance, unless the public uses herein referred to are provided for and the public interest and necessity stated above be adjuticated [sic]."

The cross-complaint closes with a prayer that the cross-defendants be required to set forth the nature, character, extent and value of their several estates or interest in the parcels of real property sought to be condemned and the severance damage, if any, accruing thereto; that the value of each separate interest or estate sought to be condemned and the severance damages, if any, be ascertained, and that upon payment to the defendants entitled to compensation of the several amounts so ascertained, the court make and enter a final order of condemnation, "conveying to cross complainant, as agent for the state, the properties for the public use above set forth."

We have ignored the allegations contained in the first, second and fourth causes of action, contained in the second amended cross-complaint, which were attempted to be incorporated ***460** by reference in the third amended cross-complaint in view of the fact that the demurrers interposed to these causes of action had, as noted, been sustained without leave to amend. (2) The attempted incorporation of these counts in the third amended cross-complaint without leave of the court is ineffective and they may not be treated as a part of the pleading in the case. (39 Cal.Jur.2d p. 339.) Moreover, without here undertaking to set forth in detail the voluminous allegations of said counts, we are completely satisfied that the trial court properly sustained the demurrers thereto without leave to amend. Each of these three causes of action seemingly undertakes to state a cause of action for monetary and injunctive relief against the respondents upon some undiscernible theory for damages which the cross-complainant and others similarly situated allegedly will sustain if the plaintiff prevails in its action to abate the nuisances alleged to exist upon the properties owned by them.

(3) From the allegations of appellant's pleadings which we have above summarized in some detail, it would appear that the relief which he seeks thereby as against the respondents is a judgment declaring that the public interest and necessity require the construction by the respondent El Monte School District of a school building and "the acquisition and appropriation by said school district of a site upon which said building may be erected within that certain tract of land" in the cross-complaint described. We know of no law, and none has been called to our attention, which authorizes a private citizen to maintain such an action. Where, when or how, if at all, a school district shall construct school buildings is a matter within the sole competency of its governing board to determine. (*Montebello Unified School Dist. v. Keay* (1942), 55 Cal.App.2d 839, 843-844 [131 P.2d 384].)

If, however, the third amended cross-complaint be construed as one whereby appellant as a private citizen seeks to acquire property for the purpose of constructing and operating a public school, it is likewise unauthorized by law. Section 1001 of the Civil Code, upon which appellant assertedly seeks to predicate his action, while authorizing any person, as "an agent of the State" or as "a person in charge of such use" to acquire private property under the power of eminent domain for any of the public uses provided in section 1238 of the Code of Civil Procedure is wholly without application. (4) A private person seeking to exercise the right of eminent domain must not only allege that he proposes to devote the ***461** property sought to be acquired to one of the public uses provided in section 1238, but it must likewise be made to appear that he is authorized to devote the property to the public use in question, or otherwise stated, that he is a person authorized to administer or have "charge of such use." (*Beveridge v. Lewis* (1902), 137 Cal. 619, 621 [67 P. 1040, 70 P. 1083, 92 Am.St.Rep. 188, 58 L.R.A. 581].) (5) While appellant alleges by way of conclusion that he "is a person, competent and qualified to acquire the real property" described in his pleading "as

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

agent of the State and/or person in charge of the uses" therein set forth, the allegation must be disregarded, because we judicially know it is untrue. (*Wilson v. Loew's Inc.* (1956), 142 Cal.App.2d 183, 187-188 [298 P.2d 152].) (6) "The constitution declares that the legislature shall provide 'for a system of common schools,' or, as expressed elsewhere in the organic law, 'a public school system.' " (23 Cal.Jur. p. 18; Cal. Const., art. IX, §§ 5-6.) "By these two sections, the constitution makes the school system a matter of state care and supervision. The term 'system' itself imports a unity of purpose as well as an entirety of operation, and the direction to the legislature to provide 'a' system of common schools means one system which shall be applicable to all the common schools. And this duty to provide for the education of the children of the state, so far as the state has, by the adoption of the constitution, undertaken it, cannot be delegated to any agency." (23 Cal.Jur. 21-22.) As said in *Piper v. Big Pine School Dist.*, 193 Cal. 664, 669 [226 P. 926]:

"It is in a sense exclusively the function of the state which cannot be delegated to any other agency. The education of the children of the state is an obligation which the state took over to itself by the adoption of the constitution. To accomplish the purposes therein expressed the people must keep under their exclusive control, through their representatives, the education of those whom it permits to take part in directing the affairs of state."

From the allegations of the cross-complaint, it affirmatively appears that "(i)n this case it is the school district, acting through its governing board, that is the agent of the State in charge of the use for which the land was sought." (*Montebello Unified School Dist. v. Keay, supra.*)

(7) The third amended cross-complaint wholly fails to state a cause of action and is patently frivolous and sham. ***462** It was therefore properly stricken by the trial court. (8) As said by this court in *Neal v. Bank of America* (1949), 93 Cal.App.2d 678, 682-683 [209 P.2d 825]:

"It may be conceded that there is no statutory provision for striking complaints from the files, as there is in respect to sham or frivolous answers. (Code Civ. Proc., § 453.) However, the courts have inherent power, by summary means, to prevent frustration, abuse, or disregard of their processes. (41 Am.Jur. §§ 346, 347, p. 527; anno., 13 Am.St.Rep. 640.) ... In *Santa Barbara County v. Janssens*, 44 Cal.App. 318 [186 P. 372], it was held that an order striking an amended cross-complaint from the files was within the jurisdiction of the trial court, and presumably correct in the absence of error disclosed by the record. The fundamental principle running through the cases is that a court is not required to tolerate a purported amended complaint which fails to amend the previous pleading, is not filed in good faith, is filed in disregard of established procedural requirements, or is otherwise violative of orderly judicial administration. ... It cannot be doubted that the court had jurisdiction to strike plaintiff's amended complaint on the ground that it was frivolous and a sham and the order clearly was not an abuse of discretion."

The order appealed from is affirmed.

Shinn, P. J., and Wood (Parker), J., concurred.
A petition for a rehearing was denied May 7, 1958, and appellant's petition for a hearing by the Supreme Court was denied June 11, 1958. Carter, J., was of the opinion that the petition should be granted. ***463**

THE PEOPLE, Plaintiff and Respondent,
v.
DERRICK LEON THOMAS, Defendant and Appellant.
No. S025251.

Supreme Court of California
Dec 14, 1992.

SUMMARY

A complaint charged defendant with robbery (Pen. Code, § 211), and alleged firearm use (Pen. Code, § 12022.5, subd. (a)) and probation ineligibility (Pen. Code, § 1203.06). Defendant negotiated a plea bargain, with the precise term of imprisonment conditioned on the result of his motion to strike the firearm use enhancement. The trial court denied the motion to strike without indicating whether or not it was exercising discretion under Pen. Code, § 1385 (dismissal of action in furtherance of justice). Pursuant to the terms of the plea bargain, the court sentenced defendant to a five-year term of imprisonment. (Superior Court of Santa Clara County, No. 136555, Jeremy D. Fogel, Judge.) The Court of Appeal, Sixth Dist., No. H007449, affirmed, concluding that the trial court lacked authority to entertain a motion under Pen. Code, § 1385, to strike a firearm use enhancement provided for by Pen. Code, § 12022.5.

The Supreme Court affirmed the judgment of the Court of Appeal, holding that the trial court did not err in denying the motion to strike. In amending Pen. Code, § 1170.1, subd. (h), in 1989, the Legislature deleted Pen. Code, § 12022.5, from the list of statutory enhancements that a trial court might, in its discretion, strike if sufficient "circumstances in mitigation" exist. The court held that, although the power to dismiss an "action" "in furtherance of justice" under Pen. Code, § 1385, includes the power to dismiss or strike an enhancement, the Legislature, in deleting reference to Pen. Code, § 12022.5, could not have intended to preserve a power to strike that enhancement under Pen. Code, § 1385. The court held that, at least in the context of striking firearm use enhancements, the "circumstances in mitigation" and "furtherance of justice" standards are essentially identical. (Opinion by Lucas, C. J., expressing the unanimous view of the court.)

HEADNOTES

Classified to California Digest of Official Reports

(1a, 1b) Criminal Law § 529.2--Judgment, Sentence, and Punishment-- Imprisonment--Sentence Enhancements--Firearm Use--Trial Court's Power to Strike.
In a prosecution for robbery (Pen. Code, § 211), the trial court did not err in denying defendant's motion to strike a firearm use enhancement (Pen. Code, § 12022.5, subd. (a)). In amending Pen. Code, § 1170.1, subd. (h), in 1989, the Legislature deleted Pen. Code, § 12022.5, from the list of statutory enhancements that a trial court might, in its discretion, strike if sufficient "circumstances in mitigation" exist. Although the power to dismiss an "action" "in furtherance of justice" under Pen. Code, § 1385, includes the power to dismiss or strike an enhancement, the Legislature, in deleting reference to Pen. Code, § 12022.5, could not have intended to preserve a power to strike that enhancement under Pen. Code, § 1385. At least in the context of striking firearm use enhancements, the "circumstances in mitigation" and "furtherance of justice" standards are essentially identical.
[See **Cal.Jur.3d (Rev),** Criminal Law, § 3410; 3 **Witkin & Epstein,** Cal. Criminal Law (2d ed. 1989) § 1502.]
(2) Statutes § 21--Construction--Legislative Intent.
The fundamental purpose of statutory construction is to ascertain the intent of the lawmakers so as to effectuate the purpose of the law. In order to determine this intent, a court begins by examining the language of the statute. But it is a settled principle of statutory interpretation that language of a statute should not be given a literal meaning if doing so would result in absurd consequences which the Legislature did not intend. Thus, the intent prevails over the letter, and the letter will, if possible, be so read as to conform to the spirit of the act.

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

(3) Statutes § 39--Construction--Giving Effect to Statute--Conformation of Parts.
A court does not construe statutes in isolation, but rather reads every statute with reference to the entire scheme of law of which it is part so that the whole may be harmonized and retain effectiveness.

COUNSEL

George L. Schraer, under appointment by the Supreme Court, and Winifred T. Gross, under appointment by the Court of Appeal, for Defendant and Appellant.

Daniel E. Lungren, Attorney General, George Williamson, Chief Assistant Attorney General, Ronald A. Bass and John H. Sugiyama, Assistant Attorneys General, Martin S. Kaye, Laurence K. Sullivan, Herbert F. Wilkinson ***208** and Ronald S. Matthias, Deputy Attorneys General, for Plaintiff and Respondent.

Michael R. Capizzi, District Attorney (Orange) and E. Thomas Dunn, Jr., Deputy District Attorney, as Amici Curiae on behalf of Plaintiff and Respondent.

LUCAS, C. J.

In 1989, the Legislature amended Penal Code section 1170.1, subdivision (h) (all further statutory references are to this code), by deleting section 12022.5 (firearm use enhancements) from the list of statutory enhancements that a trial court might, in its discretion, strike if sufficient "circumstances in mitigation" exist. The question arises whether trial courts nonetheless may continue to strike such firearm use enhancements "in furtherance of justice" under section 1385. Because we find clear legislative intent to withhold such authority, we conclude the Court of Appeal in the present case correctly ruled the trial court herein lacked such authority.

On January 7, 1990, defendant Derrick Leon Thomas (age 18) and his companion (age 17) robbed a store in Palo Alto. Defendant was holding a loaded .22-caliber gun borrowed from his companion, who had taken it from his mother without her knowledge. The robbers took and divided $160 in cash, fled on bicycles, and were arrested a few minutes later.

A complaint charged defendant with robbery (§ 211), and alleged a firearm use (§ 12022.5, subd. (a)) and probation ineligibility (§ 1203.06). Defendant negotiated a plea bargain, the precise term of imprisonment conditioned on the result of his motion to strike the firearm use enhancement. In support of his motion to strike, defendant submitted an evaluation of the interviewing counselor, who concluded that the robbery was an isolated and impulsive act not likely to be repeated by defendant. The People argued the trial court lacked authority to entertain the motion to strike. The court denied defendant's motion, without indicating whether or not it was exercising discretion under section 1385. Pursuant to the terms of defendant's plea bargain, he was then sentenced to a five-year term of imprisonment. Defendant appealed.

The Court of Appeal affirmed, concluding the trial court lacked authority to entertain a motion under section 1385 to strike a firearm use enhancement provided for by section 12022.5. As will appear, we agree. ***209**

1. *The applicable statutes*

Section 12022.5, subdivision (a), in pertinent part provides for an enhanced punishment of three, four or five years' imprisonment for "any person who personally uses a firearm in the commission or attempted commission of a felony ...."

Section 1170.1, subdivision (d), provides that when the court imposes a prison sentence for a felony (see generally § 1170), "the court shall also impose the additional terms provided" in 16 specified sections of the Penal Code and the Health and Safety Code, including section 12022.5, "unless the additional punishment therefor is stricken pursuant to [section 1170.1,] subdivision (h)."

Section 1170.1, subdivision (h), provides that "Notwithstanding any other provision of law, the court may strike the additional punishment for the enhancements provided" in 13 of the 16 enhancement sections set forth in section 1170.1, subdivision (d), "if it determines that there are circumstances in mitigation of the

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

additional punishment. ..."

Until 1989, section 12022.5 was one of the sections listed in section 1170.1, subdivision (h). The Legislative Counsel's Digest comment concerning the proposal to delete reference to section 12022.5 explained the amendment as follows: "Existing law relating to sentencing authorizes a court to strike the additional enhancement involving the personal use of a firearm in the commission ... of a felony .... [¶] *This bill would delete that authorization.*" (Legis. Counsel's Dig., Assem. Bill No. 566 (1989-1990 Reg. Sess.), italics added.)

Finally, section 1385, subdivision (a), permits the sentencing authority "in furtherance of justice [to] order an action to be dismissed." In its 1989 amendment to section 1170.1, subdivision (h), the Legislature deleted reference to section 12022.5, but did not alter or refer to the language of section 1385.

2. *Discussion*

(1a) Defendant contends the trial court erred in denying his motion to strike the firearm use enhancement without exercising the court's "furtherance of justice" discretion under section 1385. As defendant observes, the power to dismiss an "action" under section 1385 includes the power to dismiss or strike an enhancement. (See *People v. Fritz* (1985) 40 Cal.3d 227, 229-230 [219 Cal.Rptr. 460, 707 P.2d 833]; ***210***People v. Williams* (1981) 30 Cal.3d 470, 482-483 [179 Cal.Rptr., 637 P.2d 1029]; *People v. Burke* (1956) 47 Cal.2d 45, 50-51 [301 P.2d 241]; *People v. Dorsey* (1972) 28 Cal.App.3d 15, 18-20 [104 Cal.Rptr. 326]; cf. § 1385, subd. (b) [abrogating *Fritz*'s holding that section 1385 may be used to strike "prior serious felony" enhancements under section 667].)

The People, on the other hand, contend that by amending section 1170.1, subdivision (h), to delete the reference to section 12022.5, the Legislature expressed a clear intent to divest the courts of discretion to strike firearm use enhancements. The People suggest further that the Legislature's failure to likewise amend or refer to section 1385 was, at most, a drafting "oversight" of a kind to which we have previously referred. (See, e.g., *People v. Pieters* (1991) 52 Cal.3d 894, 900-901 [210 Cal.Rptr. 623, 694 P.2d 736]; *People v. Jackson* (1985) 37 Cal.3d 826, 837-838, and fn. 15 [276 Cal.Rptr. 918, 802 P.2d 420].)

(2) As we observed in *People v. Pieters, supra,* 52 Cal.3d at pages 898-899, "The fundamental purpose of statutory construction is to ascertain the intent of the lawmakers so as to effectuate the purpose of the law. [Citations.] In order to determine this intent, we begin by examining the language of the statute. [Citations.] But '[i]t is a settled principle of statutory interpretation that language of a statute should not be given a literal meaning if doing so would result in absurd consequences which the Legislature did not intend.' [Citations.] Thus, '[t]he intent prevails over the letter, and the letter will, if possible, be so read as to conform to the spirit of the act.' [Citation.] (3) Finally, we do not construe statutes in isolation, but rather read every statute 'with reference to the entire scheme of law of which it is part so that the whole may be harmonized and retain effectiveness.' [Citation.]"

Defendant cites cases holding that, absent a clear legislative direction to the contrary, a trial court retains its authority under section 1385 to strike an enhancement. (See *People v. Fritz, supra,* 40 Cal.3d at pp. 229-230; *People v. Williams, supra,* 30 Cal.3d at pp. 482-483; *People v. Tanner* (1979) 24 Cal.3d 514, 518 [156 Cal.Rptr. 450, 596 P.2d 328]; see also *People v. Sutton* (1985) 163 Cal.App.3d 438, 445-446 [209 Cal.Rptr. 536] [recognizing authority under section 1385 to strike deadly weapon use enhancement under section 12022.3, despite failure of Legislature to include such enhancements in section 1170.1, subdivision (h)]; *People v. Price* (1984) 151 Cal.App.3d 803, 818-820 [199 Cal.Rptr. 99] [same].) ***211**

(1b) But it is not necessary that the Legislature expressly refer to section 1385 in order to preclude its operation. (See *People v. Rodriguez* (1986) 42 Cal.3d 1005, 1019 [232 Cal.Rptr. 132, 728 P.2d 202] [section 1385 may be held inapplicable "in the face of [a] more specific proscription on the court's power"]; *People v. Tanner, supra,* 24 Cal.3d at pp. 519-521 [specific language of section 1203.06 barring probation contained sufficient indicia of legislative intent to preclude judicial exercise of discretion under section 1385]; see also *People v. Dillon* (1983) 34 Cal.3d 441,

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

467 [194 Cal.Rptr. 390, 668 P.2d 697] [deletion of provision indicates legislative intent to change law].) As we stated in *People v. Williams, supra,* 30 Cal.3d at page 482, "Section 1385 permits dismissals in the interest of justice in any situation where the Legislature has not clearly evidenced a contrary intent."

What was the intent of the Legislature in deleting from section 1170.1, subdivision (h), the former reference to section 12022.5? As previously noted, the Legislative Counsel's comment indicated the amendment was intended to "delete" the trial courts' authorization to strike the additional enhancement involving the personal use of a firearm in the commission of a felony. Could the Legislature, in deleting reference to section 12022.5, nonetheless have intended to preserve a power to strike that enhancement under section 1385? We conclude otherwise, and a comparison of the respective standards for striking or dismissing enhancements under section 1170.1, subdivision (h), and section 1385, reinforces that conclusion.

Section 1170.1, subdivision (h), permits a court to strike the punishment for an enhancement "if it determines that there are circumstances in mitigation of the additional punishment ...." Section 1385, on the other hand, permits dismissal of actions (or enhancements) "in furtherance of justice." Are there significant differences between these standards which might have induced the Legislature to leave section 1385 in place as a vehicle for striking firearm use enhancements? It is quite difficult to conceive of any such differences.

The Judicial Council adopted extensive guidelines to assist in determining whether "circumstances in mitigation" exist to justify striking enhancements or reducing sentences to a lower term. (See Cal. Rules of Court, rule 423, and Advisory Com. Comment.) Rule 423 lists a variety of such "circumstances in mitigation," including facts relating to the crime (such as defendant's minor role or laudable motive in the offense, the small likelihood of its recurrence, the presence of duress or coercion by others, or a mistaken claim of right by the defendant), and facts relating to the defendant (including his ***212** insignificant prior record, mental or physical condition reducing his culpability, or restitution or satisfactory performance on probation or parole). Rule 423's list of mitigating circumstances mirrors many of the considerations we have stated are appropriate in determining whether to dismiss an action under section 1385 in furtherance of justice. (See *People v. Superior Court (Howard)* (1968) 69 Cal.2d 491, 505 [72 Cal.Rptr. 330, 446 P.2d 138].)

Defendant suggests that the "furtherance of justice" standard is broader than the "circumstances in mitigation" standard, and would include consideration of matters extrinsic to the offense and the offender, such as protection of the public interest. (See *People v. Orin* (1975) 13 Cal.3d 937, 944 [120 Cal.Rptr. 65, 533 P.2d 193].) Although the public interest may well favor *enhancing* a defendant's sentence by reason of his firearm use, it would be quite rare when the public interest, but not "circumstances in mitigation," would justify *striking* such an enhancement. (Such cases seemingly would be limited to situations wherein the *People* seek to strike an enhancement to enable them to rely on the defendant's gun use as an aggravating sentencing factor.) In most cases, if the public interest favors such relief, that fact readily could be deemed a "circumstance in mitigation of the additional punishment." (See, e.g., *People v. Marsh* (1984) 36 Cal.3d 134, 145, fn. 8 [202 Cal.Rptr. 92, 679 P.2d 1033] [noting for purposes of remand that striking enhancements may be justified under section 1385 by number of "mitigating circumstances" in case].)

In short, we believe that, at least in the context of striking firearm use enhancements, the two standards are essentially identical. This conclusion supports the People's position that the Legislature's deletion of section 12022.5 was intended to divest the courts of their statutory authority to strike firearm use enhancements, whether such power be exercised under section 1170.1, subdivision (h), or under section 1385.

As previously stated, in determining the legislative intent underlying a new provision or amendment, we must consider the entire scheme of law of which it is a part. The 1989 amendment to section 1170.1, subdivision (h), was included in a bill (Assem. Bill No. 566 (1989-1990 Reg. Sess.), the "McClintock Firearms" bill) that contained a variety of measures *expanding or enhancing* criminal liability for unlawful firearm use or possession. These new measures included provisions (1) restricting plea bargaining when a defendant

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

personally used a firearm, (2) elevating certain firearm use or possession offenses from misdemeanor/felony ("wobbler") status to felonies, and (3) increasing the term of imprisonment for personal use of a firearm during a felony, as well as (4) the subject provision deleting section 12022.5 ***213** from section 1170.1, subdivision (h). (See Legis. Counsel's Dig., Assem. Bill No. 566 (1989-1990 Reg. Sess.).)

In light of the fact that the subject provision is included in a "package" of provisions aimed at enhancing criminal liability for unlawful firearm use, we think it highly unlikely the Legislature intended nonetheless to preserve broad judicial authority under section 1385 to strike a firearm use enhancement "in furtherance of justice."

Defendant observes that prior to the adoption of the foregoing amendment, the Attorney General's Office had urged the Legislature to modify section 1385 to preclude a court from striking a firearm use enhancement in furtherance of justice. Evidently, the Legislature did not deem an amendment to section 1385 necessary in light of its deletion of the specific reference to section 12022.5 in section 1170.1, subdivision (h). This conclusion is supported by a synopsis of Assembly Bill No. 566 prepared by the Senate Committee on the Judiciary, which synopsis referred to the prior ability of courts to strike firearm use enhancements "in the interest of justice," and commented: "This bill would provide that the enhancements shall never be stricken."

Finally, the People observe that although section 1385 provides a broad, general power to dismiss "actions" in furtherance of justice, section 1170.1, subdivision (h), provides a *specific* power to strike specified enhancements. Under well-established rules of construction, any inconsistency between the two provisions would be resolved by applying the more specific provision (and any amendments thereto). (E.g., *People v. Tanner, supra,* 24 Cal.3d at p. 521.) Moreover, to accept defendant's argument and hold that section 1385 continues to afford a broad ("furtherance of justice") basis for striking an enhancement under section 12022.5 could effectively negate the 1989 amendment to section 1170.1, subdivision (h). The "furtherance of justice" standard of section 1385 seems broad enough to permit striking an enhancement where mitigating circumstances exist, yet the Legislature in passing the 1989 amendment clearly intended to preclude the exercise of such power. As we previously indicated, a statute should not be given a literal meaning if doing so would result in absurd consequences which the Legislature could not have intended. (See *People v. Tanner, supra,* 24 Cal.3d at pp. 518-520 [construing mandatory language of section 1203.06 as precluding power to strike firearm use finding and grant probation].)

For all the foregoing reasons, we conclude the trial court had no discretion to strike the firearm use enhancement under section 12022.5, and properly ***214** denied defendant's motion for such relief. The Court of Appeal's judgment is affirmed.

Mosk, J., Panelli, J., Kennard, J., Arabian, J., Baxter, J., and George, J., concurred.
Appellant's petition for a rehearing was denied January 28, 1993. ***215**

Court of Appeal, Sixth District, California.
SAN LORENZO VALLEY COMMUNITY ADVOCATES FOR RESPONSIBLE EDUCATION, Plaintiff and Appellant,
v.
SAN LORENZO VALLEY UNIFIED **SCHOOL** DISTRICT, Defendant and Respondent.
No. H028147.

May 26, 2006.

Background: Education advocates association brought action to challenge **school** district's decision to close two elementary **schools** and to transfer students from those **schools** to district's other elementary **schools**. After bench trial, the Superior Court, Santa Cruz County, No. CV147109,Irwin Joseph, J., entered judgment for district. Association appealed.

Holdings: The Court of Appeal, McAdams, J., held that:
(1) district's closure decision constituted "project" under California Environmental Quality Act (**CEQA**);
(2) substantial evidence supported determination that district's decision was exempt from **CEQA**;
(3) district's use of proceeds from local **school** facilities bond did not violate bond law provision on ballot requirements;
(4) district's expenditures did not violate bond laws;
(5) substantial evidence did not show district violated California Public Records Act (CPRA);
(6) district did not violate community involvement statutes; and
(7) association was not entitled to attorney fees.

Affirmed.

Burton, Volkmann & Schmal, Timothy R. Volkmann, Santa Cruz, John P. Loringer, for Respondents.

McADAMS, J.

***1368** This action arises out of a decision by the defendant **school** district to close two elementary **schools** in the **San Lorenzo** Valley area of Santa Cruz County. Plaintiff seeks to overturn the closure decision, alleging that it violates various state laws, including the California Environmental Quality Act, the Public Records Act, the Brown Act, provisions of the Education Code, and **school** bond financing laws. The trial court rejected all of the plaintiff's contentions. We shall affirm.

BACKGROUND

This suit was brought by plaintiff and appellant **San Lorenzo** Valley Community Advocates for Responsible Education, an unincorporated association (SLV CARE). SLV CARE challenges a **school** closure decision made by defendant and respondent **San Lorenzo** Valley Unified **School** District (the District). At issue is the District's April 2003 decision to close two of its elementary **schools** and to transfer students from those **schools** to the District's other two elementary **school** campuses. Plaintiff SLV CARE challenges that decision on various legal grounds.

Factual Summary

The District made the challenged decision in response to declining enrollment and fiscal difficulties. The initial decision to close one or more **schools** was approved by District's Board of Trustees (Board) in December 2002. From December 2002 to June 2003, the District entertained public comment on the issue at its regular and special board meetings.

January 2003-March 2003: First Advisory Committee

The District also convened a task force-called the Superintendent's **School** Closure Committee (SSCC)-to consider the **school** closure question ***1369** and make a recommendation to the Board. The SSCC was composed of 17 people representing all of the affected **schools**; task force ****136** members included seven parents, four teachers, four classified employees, and two community members.

Between mid-January and mid-March 2003, the SSCC met formally eight times; ad hoc subcommittees also met separately. In mid-March 2003, after considering an extensive body of information about the **schools**, the SSCC recommended the closure of Redwood and Quail Hollow Elementary **Schools**. To consolidate student populations at the north end of the **San Lorenzo** Valley, in Boulder Creek, Redwood students would be transferred to Boulder Creek Elementary **School** (BCE). At the south end of the valley, in Felton, Quail Hollow students would be transferred to **San Lorenzo** Elementary **School** (SLE).

April 2003: Closure Decision

At a public meeting held on April 8, 2003, the District's Board considered and ultimately adopted the recommendation of the SSCC. Thus, as to the north valley elementary **schools**, the Board voted to close Redwood, and keep BCE open. As for the south valley, the Board voted to close Quail Hollow and keep SLE open.

In May 2003, a community group proposed private fundraising to keep Redwood Elementary **School** open for the upcoming **school** year. The Board rejected that proposal the following month.

June 2003-October 2003: Requests for Public Records

Starting in June 2003, various written requests for public records relating to the closure decision were made by attorney Steven A. Greenburg, acting as counsel for plaintiff SLV CARE.

In July 2003, the District forwarded more than 400 pages of records to Greenburg. The following month, acting through its counsel, the District provided Greenburg with additional documents. After October 2003, document requests were addressed through formal discovery.

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

An additional request for documents was e-mailed to the District by **San Lorenzo** Valley resident David Churchill, with a copy to attorney Greenburg. The principal subject of Churchill's request was the District's use of money from Measure S, a multimillion-dollar **school** facilities bond issue that had been approved by local voters in 2000.

***1370 June 2003-October 2003: Consideration of Environmental Impacts**

In early August 2003, in response to public concerns-and notwithstanding its receipt of earlier legal advice that the **school** closure decision was exempt under the California Environmental Quality Act (**CEQA**)-the District retained consultants to evaluate possible environmental impacts, including traffic. The District retained environmental consultant Stephen Graves & Associates (Graves). The District also hired traffic consultant Keith Higgins & Associates (Higgins).

Graves, the environmental consultant, confirmed that the **school** consolidation decision was exempt from **CEQA**. On August 19, 2003, the District formally approved the filing of a notice of exemption from **CEQA**. Despite the exemption, the District authorized Graves to prepare an initial study of environmental effects. The initial study concluded that the **school** closures and transfers would not create any significant environmental impacts, and that potential traffic impacts, though insignificant, could be minimized with recommended project conditions. After public comment and response, Graves stood by the conclusions in the initial study.

As for traffic, by June 2003, the Public Works Department of Santa Cruz County ****137** had advised the Board of Supervisors of the need for an ordinance to reroute traffic in the **San Lorenzo** Valley following the **school** closure decision. The initial study by environmental consultant Graves incorporated a report by traffic consultant Higgins. That report identified anticipated traffic and parking problems resulting from the **school** consolidations. Nevertheless, the traffic report concluded, mitigation measures were not mandatory because those impacts would not exceed historic levels. With respect to BCE, however, the report noted that the District was "planning on implementing several strategies to improve traffic and parking operations" as described in the report. The District implemented those strategies.

By October 2003, having considered the issues, the District was prepared to approve the adoption of a negative declaration, thus confirming the absence of significant environmental impacts. No environmental impact report was prepared.

Fall 2003: Second Advisory Committee

In August 2003, the District's Board voted to convene a Surplus Property Advisory Committee (SPAC). At the same time, it approved an application form for membership on the committee. In October 2003, the District's Board approved the proposed roster of SPAC members. The Board meeting minutes of November 4, 2003, state: "The Board has declared the District Office and ***1371** Redwood Elementary **School** surplus property as a result of the Board decision to close Redwood Elementary and Quail Hollow Elementary **Schools** and move the District Office from the Felton site to Quail Hollow." Those minutes further state that the purpose of the public hearing on the SPAC was "to provide input to the committee for the purpose of determining acceptable uses of these properties." The SPAC met three times, from late October to mid-November 2003. In December 2003, the SPAC presented its recommendations for Redwood Elementary and the District Office, which included commercial, community, and educational uses.

Procedural History

Plaintiff SLV CARE brought this action, challenging the District's closure decision. As amended in August 2004, the complaint states five causes of action, all asserting statutory violations by the District. The first cause of action is for breach of statutory duties arising out of **school** bond financing laws. The second cause of action alleges **CEQA** violations. The third cause of action asserts breach of Education Code mandates for community input on certain decisions. The final two causes of action allege violation of the California Public Records Act, which requires disclosure of public records, and of the Brown Act, which compels open public meetings.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

The court conducted a six-day bench trial, which started on August 30, 2004, and concluded on September 8, 2004. At the close of evidence and argument, the court took the matter under submission. It issued a statement of decision on September 13, 2004, finding for the District on all claims.

In November 2004, the court entered judgment for the District. This appeal by SLV CARE followed.

CONTENTIONS

On appeal, SLV CARE renews its trial court claims that the District violated **CEQA**, bond financing laws, the Public Records Act, the Brown Act, and the Education Code. In addition, SLV CARE asserts that the trial court made certain ****138** erroneous evidentiary rulings and that it demonstrated bias. Appellant SLV CARE also seeks an award of attorney fees and costs. The District opposes all of appellant's arguments.

DISCUSSION

We consider each issue in turn, beginning with the claims of statutory violation.

*1372 I. CEQA

SLV CARE asserts that the District violated **CEQA**. To establish the proper framework for assessing that contention, we begin by summarizing the governing legal principles.

A. General Principles

The California Environmental Quality Act is codified at Division 13 of the Public Resources Code, beginning with section 21000.[FN1] As an aid to carrying out the statute, the State Resources Agency has issued a set of regulations, called Guidelines for the California Environmental Quality Act (Guidelines).[FN2]

FN1. In this section of the opinion (I), which discusses **CEQA**, further unspecified statutory references are to the Public Resources Code.

FN2. The Guidelines are contained in the California Code of Regulations, Title 14, Division 6, Chapter 3, starting at section 15000. Further unspecified guideline references are to those regulations.

CEQA embodies our state's policy that "the long-term protection of the environment ... shall be the guiding criterion in public decisions." (§ 21001, subd. (d). See *Davidon Homes v. City of San Jose* (1997) 54 Cal.App.4th 106, 112, 62 Cal.Rptr.2d 612.) As this court has observed, "the overriding purpose of **CEQA** is to ensure that agencies regulating activities that may affect the quality of the environment give primary consideration to preventing environmental damage." (*Save Our Peninsula Committee v. Monterey County Bd. of Supervisors* (2001) 87 Cal.App.4th 99, 117, 104 Cal.Rptr.2d 326.) Together, the statute and accompanying regulatory guidelines protect a variety of environmental values. Human health is among them. (See Guidelines, § 15065, subd. (a)(4).)

1. The Three-Step CEQA Process

Consistent with California's strong environmental policy, whenever the approval of a project is at issue, the statute and regulations "have established a three-tiered process to ensure that public agencies inform their decisions with environmental considerations." (*Davidon Homes v. City of San Jose, supra*, 54 Cal.App.4th at p. 112, 62 Cal.Rptr.2d 612. See also *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359, 1371, 43 Cal.Rptr.2d 170.)

*a. Threshold Determination of **CEQA's** Applicability*

"The first tier is jurisdictional, requiring that an agency conduct a preliminary review in order to determine whether **CEQA** applies to a proposed activity. (Guidelines, §§ 15060, 15061.)" ***1373**(*Davidon Homes v. City of San Jose, supra*, 54 Cal.App.4th at p. 112, 62 Cal.Rptr.2d 612.) **CEQA** applies if the activity is a "project" under the statutory definition, unless the project is exempt. (See §§ 21065, 21080.) "If the agency finds the project is exempt from **CEQA** under any of the stated exemptions, no further environmental review is necessary." (*Davidon Homes*, p. 113, 62

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

Cal.Rptr.2d 612.) In such cases, the agency may file a notice of **CEQA** exemption, if it chooses to do so. (Guidelines, § 15062, subd. (a); see ****139***Apartment Assn. of Greater Los Angeles v. City of Los Angeles* (2001) 90 Cal.App.4th 1162, 1171, 109 Cal.Rptr.2d 504.)

[1] If the project is not exempt-either because it does not fall within an exempt category or because an exception makes the exemption unavailable-then the agency must proceed to the second tier and conduct an initial study. (*Santa Monica Chamber of Commerce v. City of Santa Monica* (2002) 101 Cal.App.4th 786, 792, 124 Cal.Rptr.2d 731; see Guidelines, § 15063.)

b. Initial Study

The second tier of the process, the initial study, serves several purposes. One purpose is to inform the choice between a negative declaration and an environmental impact report (EIR). (Guidelines, § 15063, subd. (c)(1); *Lighthouse Field Beach Rescue v. City of Santa Cruz* (2005) 131 Cal.App.4th 1170, 1180, 31 Cal.Rptr.3d 901.) Another of the initial study's purposes is to eliminate unnecessary environmental impact reports. (Guidelines, § 15063, subd. (c)(7).)

[2] " **CEQA** excuses the preparation of an EIR and allows the use of a negative declaration when an initial study shows that there is no substantial evidence that the project may have a significant effect on the environment." (*San Bernardino Valley Audubon Society v. Metropolitan Water Dist.* (1999) 71 Cal.App.4th 382, 389-390, 83 Cal.Rptr.2d 836, citing Guidelines, § 15070. See also Pub. Resources Code, §§ 21064, 21080, subd. (c).) In certain situations where a straightforward negative declaration is not appropriate, the agency may permit the use of a mitigated negative declaration. (See § 21064.5; Guidelines, § 15064, subd. (f)(2); *San Bernardino Valley Audubon Society*, at p. 390, 83 Cal.Rptr.2d 836.)

c. Environmental Impact Report

If the project does not qualify for a negative declaration, "the third step in the process is to prepare a full environmental impact report...." (*Davidon Homes v. City of San Jose, supra*, 54 Cal.App.4th at p. 113, 62 Cal.Rptr.2d 612, citing §§ 21100 and 21151, and Guidelines, §§ 15063, subd. (b)(1) & 15080; *Gentry v. City of Murrieta, supra*, 36 Cal.App.4th at p. 1372, 43 Cal.Rptr.2d 170.)

The California Supreme Court has "repeatedly recognized that the EIR is the 'heart of **CEQA**.' " ***1374**(*Laurel Heights Improvement Assn. v. Regents of University of California* (1993) 6 Cal.4th 1112, 1123, 26 Cal.Rptr.2d 231, 864 P.2d 502 (*Laurel Heights II*).) As the court observed more than three decades ago, "since the preparation of an EIR is the key to environmental protection under **CEQA**, accomplishment of the high objectives of that act requires the preparation of an EIR whenever it can be fairly argued on the basis of substantial evidence that the project may have significant environmental impact." (*No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.3d 68, 75, 118 Cal.Rptr. 34, 529 P.2d 66, criticized on another point in *Western States Petroleum Assn. v. Superior Court* (1995) 9 Cal.4th 559, 576, 38 Cal.Rptr.2d 139, 888 P.2d 1268.) Other cases have since confirmed the statutory preference for resolving doubts in favor of an EIR. (See, e.g., *Santa Teresa Citizen Action Group v. City of San Jose* (2003) 114 Cal.App.4th 689, 703, 7 Cal.Rptr.3d 868; *League for Protection of Oakland's etc. Historic Resources v. City of Oakland* (1997) 52 Cal.App.4th 896, 905, 60 Cal.Rptr.2d 821.)

2. Timing

"Choosing the precise time for **CEQA** compliance involves a balancing of competing factors. EIRs and negative declarations****140** should be prepared as early as feasible in the planning process to enable environmental considerations to influence project program and design and yet late enough to provide meaningful information for environmental assessment." (Guidelines, § 15004, subd. (b). See also, e.g., *Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal.3d 376, 395, 253 Cal.Rptr. 426, 764 P.2d 278.) As a general rule, "public agencies shall not undertake actions concerning the proposed public project that would have a significant adverse effect or limit the choice of alternatives or mitigation measures, before completion of **CEQA** compliance." (Guidelines, § 15004, subd. (b)(2).)

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

When a project is exempt, however, a somewhat different timing rule applies. "When a public agency decides that a project is exempt from **CEQA** ..., the agency may file a notice of exemption. The notice shall be filed, if at all, *after* approval of the project." (Guidelines, § 15062, subd. (a), italics added.) "A notice of exemption may be filled out and may accompany the project application through the approval process" but it "shall not be filed ... until the project has been approved." (*Id.*, subd. (b). See also Guidelines, § 15061, subd. (d).)

3. Judicial Review

At issue here are **CEQA** challenges to a quasi-legislative action taken by the District, in a procedural setting where no administrative hearing was required. (See *1375*No Oil, Inc. v. City of Los Angeles, supra,* 13 Cal.3d at p. 74, fn. 3, 118 Cal.Rptr. 34, 529 P.2d 66; *City of South Gate v. Los Angeles Unified* **School** *Dist.* (1986) 184 Cal.App.3d 1416, 1423-1424, 229 Cal.Rptr. 568 (*South Gate*); *Dehne v. County of Santa Clara* (1981) 115 Cal.App.3d 827, 835-836, 171 Cal.Rptr. 753.) Judicial review of such challenges is governed by well-established rules.

a. Prejudicial Abuse of Discretion

[3] Where a party seeks judicial review of a quasi-legislative decision "on the grounds of noncompliance with [**CEQA**], the inquiry shall extend only to whether there was a prejudicial abuse of discretion. Abuse of discretion is established if the agency has not proceeded in a manner required by law or if the determination or decision is not supported by substantial evidence." (§ 21168.5. See also, e.g., *No Oil, Inc. v. City of Los Angeles, supra,* 13 Cal.3d at p. 88, 118 Cal.Rptr. 34, 529 P.2d 66; *Lighthouse Field Beach Rescue v. City of Santa Cruz, supra,* 131 Cal.App.4th at p. 1182, 31 Cal.Rptr.3d 901.) Generally speaking, an agency's failure to comply with the procedural requirements of **CEQA** is prejudicial when the violation thwarts the Act's goals by precluding informed decision-making and public participation. (See, e.g., *Lighthouse Field Beach Rescue,* at pp. 1182, 1202, 31 Cal.Rptr.3d 901 [deficient initial study]; *Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184, 1198, 22 Cal.Rptr.3d 203 [deficient EIR].)

"The determinations that an agency makes during a preliminary review are subject to judicial review under the abuse of discretion standard contained in section 21168.5." (*Association for a Cleaner Environment v. Yosemite Community College Dist.* (2004) 116 Cal.App.4th 629, 636, 10 Cal.Rptr.3d 560; *City of Pasadena v. State of California* (1993) 14 Cal.App.4th 810, 821, 17 Cal.Rptr.2d 766, disapproved on another point in *Western States Petroleum Assn. v. Superior Court, supra,* 9 Cal.4th at p. 576, fn. 6, 38 Cal.Rptr.2d 139, 888 P.2d 1268.)

**141 *b. Independent Review*

[4] The foregoing review standard applies to case-specific issues of compliance with the law and sufficiency of the evidence. But "questions of interpretation or application of the requirements of **CEQA** are matters of law." (*Save Our Peninsula Committee v. Monterey County Bd. of Supervisors, supra,* 87 Cal.App.4th at p. 118, 104 Cal.Rptr.2d 326. Accord, *Bakersfield Citizens for Local Control v. City of Bakersfield, supra,* 124 Cal.App.4th at p. 1207, 22 Cal.Rptr.3d 203.) Thus, for example, interpreting the scope of a **CEQA** exemption presents "a question of law, subject to de novo review by this court." (*Fairbank v. City of Mill Valley* (1999) 75 Cal.App.4th 1243, 1251, 89 Cal.Rptr.2d 233. Accord, *Santa Monica Chamber of Commerce v. City of Santa Monica, supra,* 101 Cal.App.4th at p. 792, 124 Cal.Rptr.2d 731; see also, e.g., *Azusa Land Reclamation Co. v. Main San Gabriel Basin Watermaster* (1997) 52 Cal.App.4th 1165, 1192, 61 Cal.Rptr.2d 447.)

*1376 B. Application

Addressing the first tier of the analysis, we consider whether **CEQA** applies to the **school** consolidation decision at issue here. That inquiry involves two threshold questions: Is this a project under **CEQA**? If so, is it exempt?

1. The District's School Closure Decision Is a Project Under CEQA.

[5] At the threshold, for **CEQA** to apply, the activity

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

or decision at issue must constitute a "project" under the statute. **CEQA** applies only to "discretionary *projects* proposed to be carried out or approved by public agencies ...." (§ 21080, subd. (a), italics added.) "If there was no 'project,' there was no occasion to prepare either a negative declaration or an EIR." (*Simi Valley Recreation & Park Dist. v. Local Agency Formation Com.* (1975) 51 Cal.App.3d 648, 663, 124 Cal.Rptr. 635. Accord, *Prentiss v. Board of Education* (1980) 111 Cal.App.3d 847, 852, 169 Cal.Rptr. 5 (*Prentiss*), questioned on another point in *Fullerton Joint Union High **School** Dist. v. State Bd. of Education* (1982) 32 Cal.3d 779, 796, 187 Cal.Rptr. 398, 654 P.2d 168, fn. 16 (*Fullerton*).)

a. Definition

"A 'project' is an activity subject to **CEQA**." (Guidelines, § 15002, subd. (d).) As relevant here, "project" means activity by a public agency that "may cause either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment ...." (Pub. Resources Code, § 21065, subd. (a).) [FN3] "The word 'may' in this context connotes a reasonable possibility." (*Citizen Action to Serve All Students v. Thornley* (1990) 222 Cal.App.3d 748, 753, 272 Cal.Rptr. 83.) " 'Environment' means the physical conditions which exist within the area which will be affected by a proposed project, including land, air, water, minerals, flora, fauna, noise, objects of historic or aesthetic significance." (§ 21060.5.)

> FN3. Section 21065 provides in full as follows: " 'Project' means an activity which may cause either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment, and which is any of the following: [¶] (a) An activity directly undertaken by any public agency. [¶] (b) An activity undertaken by a person which is supported, in whole or in part, through contracts, grants, subsidies, loans, or other forms of assistance from one or more public agencies. [¶] (c) An activity that involves the issuance to a person of a lease, permit, license, certificate, or other entitlement for use by one or more public agencies."

***1377** The statutory definition of a **CEQA** project "is amplified in the Guidelines," ****142** which clarify that a project means " '*the whole of an action,* which has a potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment....' (Guidelines, § 15378, subd. (a), italics added.)" (*Association for a Cleaner Environment v. Yosemite Community College Dist., supra,* 116 Cal.App.4th at p. 637, 10 Cal.Rptr.3d 560. See also, e.g., *Lighthouse Field Beach Rescue v. City of Santa Cruz, supra,* 131 Cal.App.4th at p. 1180, 31 Cal.Rptr.3d 901.)

[6] To maximize environmental protection, the concept of a "project" is broadly defined under **CEQA**. (*Lighthouse Field Beach Rescue v. City of Santa Cruz, supra,* 131 Cal.App.4th at p. 1180, 31 Cal.Rptr.3d 901.)

b. Judicial Determination

"Exactly what constitutes a project within the meaning of **CEQA** is a question which has been addressed by California courts on several occasions since the enactment of **CEQA** in 1970." (*Kaufman & Broad-South Bay, Inc. v. Morgan Hill Unified **School** Dist.* (1992) 9 Cal.App.4th 464, 472, 11 Cal.Rptr.2d 792.)

As articulated in recent case authority, there is a two-pronged test for determining whether a public agency's action qualifies as a project under **CEQA**: The first consideration is "whether there has been an 'activity directly undertaken by any public agency.' (§ 21065, subd. (a).)" (*Association for a Cleaner Environment v. Yosemite Community College Dist., supra,* 116 Cal.App.4th at p. 639, 10 Cal.Rptr.3d 560.) "The second test for a 'project' is whether the activities have a 'potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment....' (Guidelines, § 15378, subd. (a).)" (*Ibid.*)

[7] Where the facts in the record are undisputed, the court decides as a matter of law whether the challenged activity falls within **CEQA's** definition of a project. (*Fullerton, supra,* 32 Cal.3d at pp. 794-795,

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

187 Cal.Rptr. 398, 654 P.2d 168; *Association for a Cleaner Environment v. Yosemite Community College Dist., supra,* 116 Cal.App.4th at p. 637, 10 Cal.Rptr.3d 560.)

*c. **School** Closures and Student Transfers*

Several published appellate cases have addressed the issue of **CEQA**'s applicability to decisions involving **school** closures, the transfer of students between **schools**, or both.

In *Prentiss,* a case decided in 1980, the court held that a **school** closure decision was not a project under **CEQA**. ***1378**(*Prentiss, supra,* 111 Cal.App.3d at p. 851, 169 Cal.Rptr. 5.) The *Prentiss* court reasoned that the **school** district's decision to close an elementary **school** was not "a necessary step in the development of property for a new and different use" and thus was not subject to **CEQA**. (*Id.* at p. 853, 169 Cal.Rptr. 5.) But the California Supreme Court has since questioned that holding in a plurality opinion. (See *Fullerton, supra,* 32 Cal.3d at p. 796, fn. 16, 187 Cal.Rptr. 398, 654 P.2d 168. But see *Board of Supervisors v. Local Agency Formation Com.* (1992) 3 Cal.4th 903, 918, 13 Cal.Rptr.2d 245, 838 P.2d 1198 [criticizing *Fullerton* on another point, and further noting that as a plurality opinion, it "lacks authority as precedent"].) As the plurality said in *Fullerton:* "The decision in *Prentiss* [ ], that the closure of a **school** is not a 'project' because the **school** board had not decided whether to put the land to a different use, is questionable. It may be unlikely that the closure of a single elementary ****143 school** would have a significant environmental impact apart from its effect on the use of the property-the **school** board in *Prentiss* filed a negative declaration-but the possibility cannot be rejected categorically." (*Fullerton, supra,* 32 Cal.3d at p. 796, fn. 16, 187 Cal.Rptr. 398, 654 P.2d 168.)

In a 1986 case, *South Gate,* the challenged action was the transfer of students from one campus to another, though without a **school** closure. (*South Gate, supra,* 184 Cal.App.3d at pp. 1423-1424, 229 Cal.Rptr. 568.) At issue in *South Gate* was the **school** district's use of a pupil attendance boundary adjustment, a mechanism used to "distribute student population over the District so as to relieve **school** overcrowding." (*Id.* at p. 1420, 229 Cal.Rptr. 568.) In concluding that **CEQA** did not apply to the transfer, the *South Gate* court conflated the two threshold concepts-project and exemption. As the court put it: "The District's action creating the boundary adjustment is not a project requiring an EIR because it is exempt under **CEQA** guidelines...." (*Id.* at p. 1423, 229 Cal.Rptr. 568.)

A 1989 case, *East Peninsula,* involved the decision to close a high **school** and transfer its students to other campuses. (*East Peninsula Ed. Council, Inc. v. Palos Verdes Peninsula Unified **School** Dist.* (1989) 210 Cal.App.3d 155, 258 Cal.Rptr. 147 (*East Peninsula*).) Again, both threshold issues were at issue: "whether the [**school**] closure [ ] and transfer of students is a project subject to **CEQA**" and "whether such action is statutorily exempt...." (*Id.* at p. 165, fn. 5, 258 Cal.Rptr. 147.) And again, the court conflated the two questions. In the court's view, the two issues involved "the same analysis" under the statutory language. (*Ibid.*) Furthermore, the court said: "In this case, for all practical purposes, the two concepts merge." (*Ibid.*) The court concluded that **CEQA** applied, that the **school** board used an "incorrect legal standard" in making the exemption determination, and that its failure to comply with **CEQA** was prejudicial. (*Id.* at p. 174, 258 Cal.Rptr. 147; cf., *Citizen Action to Serve All Students v. Thornley, supra,* 222 Cal.App.3d at p. 752, 272 Cal.Rptr. 83 [**school** district did not "consider the closure exempt from **CEQA**" but instead proceeded with a negative declaration]; *Fullerton, supra,* 32 Cal.3d at pp. 797, 798, 187 Cal.Rptr. 398, 654 P.2d 168 [**school** district's reconfiguration and secession plan was a project under **CEQA**; it "is an essential step leading ***1379** to ultimate environmental impact" as it "necessarily entails building a new high **school** and other actions which may have an environmental effect"].)

d. Analysis

Although some courts have conflated the issues presented in the first tier of the **CEQA** analysis, we shall separately address the first question first: Is this a project?

To answer that question, we turn to the two-pronged test for defining a project under **CEQA**, described above. (See *Association for a Cleaner Environment v. Yosemite Community College Dist., supra,* 116

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

Cal.App.4th at p. 639, 10 Cal.Rptr.3d 560.) As to the first prong, there is no dispute that the decision challenged in this case is an "activity directly undertaken by any public agency." (§ 21065, subd. (a).)

Our focus is on the second prong-"whether the activities have a 'potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment....' (Guidelines, § 15378, subd. (a).)" **144(*Association for a Cleaner Environment v. Yosemite Community College Dist., supra,* 116 Cal.App.4th at p. 639, 10 Cal.Rptr.3d 560.) As noted above, "project" is defined broadly for these purposes. (*Lighthouse Field Beach Rescue v. City of Santa Cruz, supra,* 131 Cal.App.4th at p. 1180, 31 Cal.Rptr.3d 901.) But "the broad definition of project is tempered by the requirement that **CEQA** applies only to those activities which 'may have a significant effect on the environment.' " (*Kaufman & Broad-South Bay, Inc. v. Morgan Hill Unified **School** Dist., supra,* 9 Cal.App.4th at p. 471, 11 Cal.Rptr.2d 792.) Applying those principles to the case at hand, we conclude that the District's **school** closure decision constitutes a project for **CEQA** purposes.

The consequences of the decision challenged here can be broken down into two components: (1) the closure of two **schools** (Redwood and Quail Hollow); and (2) the transfer of students from those **schools** to the District's two other campuses (BCE and SLE).

Concerning the first component, as a plurality of our state's high court recognized in *Fullerton,* while it "may be unlikely that the closure of a single elementary **school** would have a significant environmental impact apart from its effect on the use of the property ... the possibility cannot be rejected categorically." (*Fullerton, supra,* 32 Cal.3d at p. 796, fn. 16, 187 Cal.Rptr. 398, 654 P.2d 168.) As the *Fullerton* opinion stated: "Implementation of the secession Plan in the present case involves the possibility of a significant impact. Secession will likely require the construction of a new high **school** in Yorba Linda and may result in abandonment of some facilities in the remaining portion of the Fullerton HSD." (*Id.* at p. 794, 187 Cal.Rptr. 398, 654 P.2d 168, fn. omitted.)

***1380** As for the second component, transferring students may "change bus routes and schedules, and affect traffic patterns." (*Fullerton, supra,* 32 Cal.3d at p. 794, 187 Cal.Rptr. 398, 654 P.2d 168.) The transfer could increase traffic congestion and parking problems, with attendant environmental effects. (See, e.g., *Citizen Action to Serve All Students v. Thornley, supra,* 222 Cal.App.3d at pp. 755, 756, 272 Cal.Rptr. 83.) The transfer component also may pose some possibility of "increased physical harm to relocated [ ]students because of (1) the likelihood of a major earthquake ... and (2) altercations with students at **schools** receiving transferred [ ] pupils." (*Id.* at p. 757, 272 Cal.Rptr. 83 [stating party's contention].) Under the circumstances, at least at the threshold, the "possibility that the activity in question may have a significant effect on the environment" cannot be positively ruled out. (Cf., Guidelines § 15061, subd. (b)(3); *Kaufman & Broad-South Bay, Inc. v. Morgan Hill Unified **School** Dist., supra,* 9 Cal.App.4th at p. 471, 11 Cal.Rptr.2d 792.)

In sum, both tests for defining a **CEQA** project are satisfied. We thus conclude that the **school** consolidation decision falls within the broad definition of a **CEQA** project. That conclusion finds further support in the very existence of a categorical exemption for **school** closures. As a matter of logic alone, if such closures were not **CEQA** projects, there would be no need for an exemption.

2. The Project Is Exempt.

Our conclusion that the challenged decision is a project brings us to the second part of the preliminary review analysis: Is the project exempt from **CEQA**? (See § 21080, subd. (a) [**CEQA** "shall apply to discretionary projects ... unless the project is exempt"]; Guidelines, § 15061, subd. (a) [once the "agency has determined that an activity is a project subject to **CEQA**," it "shall determine whether the project is exempt from **CEQA**"]; **145*Association for a Cleaner Environment v. Yosemite Community College Dist., supra,* 116 Cal.App.4th at p. 640, 10 Cal.Rptr.3d 560 [exemption is the "second issue arising in connection with the preliminary review"].)

a. CEQA Exemptions: General Principles

CEQA does not apply to projects that are statutorily

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

or categorically exempt. (Guideline § 15061, subd. (b).) The Legislature has specified a number of statutory **CEQA** exemptions. (See, e.g., § 21080, subd. (b)(1)-(15); § 21080.18; § 21084; see *Sierra Club v. State Bd. of Forestry* (1994) 7 Cal.4th 1215, 1230-1231, 32 Cal.Rptr.2d 19, 876 P.2d 505.) The Legislature also has authorized the State Resources Agency to identify other categories of exemptions, which are contained in the Guidelines. (See *Sierra Club*, at pp. 1230-1231, 32 Cal.Rptr.2d 19, 876 P.2d 505.) As to these, **CEQA** does not apply where there is "a ***1381** categorical exemption [in the Guidelines] and the application of that categorical exemption is not barred by one of the exceptions set forth in [Guidelines] Section 15300.2." (Guideline § 15061, subd. (b)(2).)

[8] The Guidelines contain 33 classes of categorical exemptions. (Guidelines, §§ 15301-15333.) Each class embodies a "finding by the Resources Agency that the project will not have a significant environmental impact." (*Davidon Homes v. City of San Jose, supra*, 54 Cal.App.4th at p. 116, 62 Cal.Rptr.2d 612. See also, *Magan v. County of Kings* (2002) 105 Cal.App.4th 468, 475, 129 Cal.Rptr.2d 344; Pub. Resources Code, § 21084, subd. (a).) In addition to the categorical exemptions, the Guidelines also incorporate a " 'common sense exemption,' " which " 'provides a short way for agencies to deal with discretionary activities which could arguably be subject to the **CEQA** process but which common sense provides should not be subject to the Act.' " (*Davidon Homes*, at pp. 112-113, 62 Cal.Rptr.2d 612, citing Guidelines § 15061, subd. (b)(3), and quoting the accompanying discussion.)

[9] There are exceptions to the categorical exemptions. (See Guidelines § 15300.2.) Among other things, a "categorical exemption shall not be used for an activity where there is a reasonable possibility that the activity will have a significant effect on the environment due to unusual circumstances." (*Id.*, subd. (c). See *East Peninsula, supra*, 210 Cal.App.3d at p. 164, 258 Cal.Rptr. 147.) This is sometimes called either the "significant effects" exception or the "unusual circumstances" exception. (See *City of Pasadena v. State of California, supra*, 14 Cal.App.4th at p. 824, 17 Cal.Rptr.2d 766; *Santa Monica Chamber of Commerce v. City of Santa Monica, supra*, 101 Cal.App.4th at p. 795, 124 Cal.Rptr.2d 731.) "The Guidelines do not define the term 'unusual circumstances.' " (*City of Pasadena v. State of California, supra*, 14 Cal.App.4th at p. 826, 17 Cal.Rptr.2d 766.) As explicated in case law, an unusual circumstance refers to "some feature of the project that distinguishes it" from others in the exempt class. (*Fairbank v. City of Mill Valley, supra*, 75 Cal.App.4th at p. 1260, 89 Cal.Rptr.2d 233.) In other words, "whether a circumstance is '*unusual* ' is judged relative to the *typical* circumstances related to an otherwise typically exempt project." (*Santa Monica Chamber of Commerce*, at p. 801, 124 Cal.Rptr.2d 731.)

b. Judicial Determination

[10][11] As noted above, the court reviews decisions made during an agency's preliminary review for a prejudicial abuse of discretion. (*Association for a Cleaner Environment v. Yosemite Community College Dist., supra*, 116 Cal.App.4th at p. 636, 10 Cal.Rptr.3d 560 [reviewing determination that there was no project].) ****146** When faced with a challenge to an agency's exemption determination, the court considers whether the agency proceeded in the manner required by law and whether its determination is supported by substantial evidence. (§ 21168.5; see, e.g., *East Peninsula, supra*, 210 Cal.App.3d at p. 165, 258 Cal.Rptr. 147 [holding that **school** district failed to proceed in manner required by law]; ***1382** *Dehne v. County of Santa Clara, supra*, 115 Cal.App.3d at p. 837, 171 Cal.Rptr. 753 [holding that "planning commission's grant of a categorical exemption" for reconstruction of existing structures was "supported by substantial evidence"].) The scope of an exemption may be analyzed as a question of statutory interpretation and thus subject to independent review. (See e.g., *Fairbank v. City of Mill Valley, supra*, 75 Cal.App.4th at pp. 1258-1259, 89 Cal.Rptr.2d 233 [interpreting the scope of a categorical exemption]; cf., *Santa Monica Chamber of Commerce v. City of Santa Monica, supra*, 101 Cal.App.4th at p. 795, 124 Cal.Rptr.2d 731 [same]; *Centinela Hospital Assn. v. City of Inglewood* (1990) 225 Cal.App.3d 1586, 1600, 275 Cal.Rptr. 901 [finding that the proposed facility was exempt as a matter of law].) But "the substantial evidence test governs our review of the [agency's] factual determination that a project falls within a categorical exemption." (*Fairbank*, at p. 1251, 89 Cal.Rptr.2d 233.)

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

[12] Because the exemptions operate as exceptions to **CEQA**, they are narrowly construed. (See, e.g., *Santa Monica Chamber of Commerce v. City of Santa Monica, supra,* 101 Cal.App.4th at p. 793, 124 Cal.Rptr.2d 731.) "Exemption categories are not to be expanded beyond the reasonable scope of their statutory language." (*Mountain Lion Foundation v. Fish & Game Com.* (1997) 16 Cal.4th 105, 125, 65 Cal.Rptr.2d 580, 939 P.2d 1280.)

*c. **School** Closure Exemption*

At issue here is the categorical exemption applicable to public **school** closures. Pursuant to section 21080.18, **CEQA** "does not apply to the closing of any public **school** in which kindergarten or any of grades 1 through 12 is maintained or the transfer of students from that public **school** to another **school** if the only physical changes involved are categorically exempt under Chapter 3 (commencing with Section 15000)" of the Guidelines. Of the 33 classes of categorical exemptions set forth in the Guidelines, one applies to the situation presented here: "Class 14 consists of minor additions to existing **schools** within existing **school** grounds where the addition does not increase original student capacity by more than 25% or ten classrooms, whichever is less. The addition of portable classrooms is included in this exemption." (Guidelines, § 15314.)

So far as we are aware, this particular exemption has been the subject of only one prior judicial decision, *East Peninsula.*[FN4] In that case, the defendant **school** board approved a high **school** closure and transfer of students. (*East Peninsula, supra,* 210 Cal.App.3d at pp. 161-162, 258 Cal.Rptr. 147.) The board made an ***1383** express determination that its decision was exempt from **CEQA**, under section 21080.18 and Guideline section 15314. (*Id.* at p. 162, 258 Cal.Rptr. 147.) But it did so without undertaking any environmental review. ****147**(*Id.* at pp. 172, 173, 258 Cal.Rptr. 147.) The trial court issued a peremptory writ of mandate, commanding the district to void its closure decision and to suspend all related activity "until the District has first analyzed the cumulative environmental effects of this and other **school** closures and transfers in compliance with **CEQA**." (*Id.* at pp. 162-163, 258 Cal.Rptr. 147.) In the trial court's view, "the District did not properly evaluate whether its proposed action was exempt from **CEQA**, a step preliminary to a determination of whether an EIR is required." (*Id.* at p. 163, 258 Cal.Rptr. 147.)

> FN4. As to the other two **school** cases discussed above, neither reached the exemption issue. The *Prentiss* court held that the **school** closure decision was not a project under **CEQA**. (*Prentiss, supra,* 111 Cal.App.3d at p. 851, 169 Cal.Rptr. 5.) The *South Gate* case involved a transfer of students without a **school** closure. (*South Gate, supra,* 184 Cal.App.3d at pp. 1423-1424, 229 Cal.Rptr. 568.)

On appeal, the *East Peninsula* court addressed this question: Is the **school** closure categorical exemption subject to the exception for significant cumulative effects? (*East Peninsula, supra,* 210 Cal.App.3d at pp. 160, 164-165, 258 Cal.Rptr. 147.) Framing its analysis as a matter of statutory interpretation, the court answered the question in the affirmative. (*Id.* at p. 166, 258 Cal.Rptr. 147.) Thus, the court held, "the plain language of section 21080.18[ ] requires an agency to consider the issue of significant effects and cumulative impacts of a transfer of students from a closed **school** in determining whether the project is exempt from **CEQA** under that statute." (*Id.* at p. 173, 258 Cal.Rptr. 147.) As the court recognized, its "interpretation of section 21080.18 leads to a situation where the amount of analysis and study involved at the preliminary review stage of determination of whether a project is exempt from **CEQA** may be similar to that involved at the 'second' stage where the agency conducts an initial study to determine whether the project has a significant effect on the environment [citation]. However, such result is mandated by the statutory language and does not appear to be repugnant to legislative policy." (*Ibid.*) [FN5]

> FN5. As the court that decided *East Peninsula* later clarified, however, "we did not hold in *East Peninsula* an agency always must conduct an 'initial study' before declaring a project exempt from **CEQA** review. Such a holding would run counter to the three-tiered structure of **CEQA** review under which, if a project is categorically exempt

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

> 'no further agency evaluation is required' and no 'initial study' takes place." (*Apartment Assn. of Greater Los Angeles v. City of Los Angeles, supra,* 90 Cal.App.4th at p. 1172, 109 Cal.Rptr.2d 504.)

Turning to the specific case before it, the *East Peninsula* court concluded that the **school** board "used an incorrect legal standard" in making its exemption determination because it failed to consider the cumulative environmental impacts of its decision. (*East Peninsula, supra,* 210 Cal.App.3d at p. 174, 258 Cal.Rptr. 147.) Furthermore, the court held, the board's "failure to comply with **CEQA**" was "prejudicial because meaningful information and analysis of cumulative effects and significant environmental effects not occurring at the receptor **schools** were omitted from the environmental review process." (*Id.* at p. 174, 258 Cal.Rptr. 147.)

***1384** *d. Analysis*

[13] We analyze the District's preliminary determination that its decision is exempt from **CEQA** (1) for compliance with procedural requirements and (2) for evidentiary support. (§ 21168.5; *Association for a Cleaner Environment v. Yosemite Community College Dist., supra,* 116 Cal.App.4th at p. 636, 10 Cal.Rptr.3d 560.) They are distinct issues: "if a procedural violation of **CEQA** is shown, the substantial evidence prong of the statutory standard of review does not come into play." (*Laurel Heights II, supra,* 6 Cal.4th at p. 1133, 26 Cal.Rptr.2d 231, 864 P.2d 502 [stating party's contention]. See ****148***No Oil, Inc. v. City of Los Angeles, supra,* 13 Cal.3d at pp. 74-75, 118 Cal.Rptr. 34, 529 P.2d 66; *Bakersfield Citizens for Local Control v. City of Bakersfield, supra,* 124 Cal.App.4th at p. 1208, 22 Cal.Rptr.3d 203; *County of Amador v. El Dorado County Water Agency* (1999) 76 Cal.App.4th 931, 945-946, 91 Cal.Rptr.2d 66.)

SLV CARE challenges the exemption on both grounds. On the first question-procedural compliance-the key issue is timing: the District made its closure decision in April 2003; it approved the filing of a notice of **CEQA** exemption more than four months later, in August 2003. SLV CARE asserts a procedural violation of **CEQA** because the District failed to formally invoke the exemption in advance of its closure decision. As to the second question, SLV CARE challenges the evidentiary basis for the decision. We consider each point in turn.

Procedural compliance

[14][15] "In granting an exemption, the agency must proceed in the manner prescribed by law, lest it be charged with abusing its discretion." (*Dehne v. County of Santa Clara, supra,* 115 Cal.App.3d at p. 842, 171 Cal.Rptr. 753.) "That law consists of **CEQA** statutes, the Guidelines, and the judicial gloss on both." (*Id.* at pp. 842-843, 171 Cal.Rptr. 753. Cf., *Kennedy v. City of Hayward* (1980) 105 Cal.App.3d 953, 962, 165 Cal.Rptr. 132 [in quasi-adjudicatory proceeding, due process principles apply].) Generally speaking, the agency should proceed with a "considered awareness of the purposes and policy" that underlie **CEQA**; it should not undertake "a mechanical application of the exemption criteria" in reaching its decision. (*Dehne v. County of Santa Clara, supra,* 115 Cal.App.3d at p. 843, 171 Cal.Rptr. 753.)

Several legal principles are relevant to the issue of **CEQA** compliance, including requirements related to timing, documentation, and public comment. In applying these precepts, it is important to distinguish between an exemption determination such as the one made here, which is part of the agency's preliminary review, and a negative declaration or an EIR, which comes into play later in the **CEQA** analysis.

[16] As indicated above, the timing rules depend on which step of the **CEQA** process is involved. In cases involving the second and third tiers of ***1385 CEQA** analysis, where a negative declaration or an EIR is necessary, the law requires "that environmental issues be considered and resolved *before* a project is approved." (*No Oil, Inc. v. City of Los Angeles, supra,* 13 Cal.3d at p. 75, 118 Cal.Rptr. 34, 529 P.2d 66, italics added.) In such cases, courts condemn attempts at after-the-fact rationalizations. (*Id.* at p. 81, 118 Cal.Rptr. 34, 529 P.2d 66.) By contrast, determinations made as part of a preliminary, first-tier **CEQA** review are not formalized until after the project has been approved. Under the Guidelines, a notice of **CEQA** exemption "shall be filed, if at all, *after* approval of the project." (Guidelines, § 15062, subd. (a), italics added. See *County of Amador v. El Dorado*

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

County Water Agency, supra, 76 Cal.App.4th at p. 962, 91 Cal.Rptr.2d 66 [notice of exemption was not valid, where it was filed before agency approved the project]; see also, e.g., *Magan v. County of Kings, supra,* 105 Cal.App.4th at pp. 470, 472, 129 Cal.Rptr.2d 344 [notice of exemption filed one day after action taken]; *Fairbank v. City of Mill Valley, supra,* 75 Cal.App.4th at pp. 1249, 1250, 89 Cal.Rptr.2d 233 [same].) Since the District's exemption determination was made as part of a preliminary, first-tier **CEQA** review, it was not untimely.

[17] As with timing rules, documentation requirements are different for first-tier assessments than for those undertaken**149 later in the **CEQA** process. When a negative declaration or an EIR is required, it must be in writing. " **CEQA** impliedly requires (and the guidelines expressly require) that the agency render a written determination whether a project requires an EIR before it gives final approval to that project." (*No Oil, Inc. v. City of Los Angeles, supra,* 13 Cal.3d at p. 75, 118 Cal.Rptr. 34, 529 P.2d 66 [post hoc negative declaration]. See Guidelines, § 15362 [defining "environmental documents"].) By contrast, there is no requirement that the agency put its exemption decision in writing. According to the Guidelines, "the agency *may* file a notice of exemption." (Guidelines, § 15062, subd. (a), italics added.) But it is not required to do so: "A notice of exemption has no significance other than to trigger the running of the limitations period." (*Apartment Assn. of Greater Los Angeles v. City of Los Angeles, supra,* 90 Cal.App.4th at p. 1171, 109 Cal.Rptr.2d 504.) For that reason, "it is irrelevant" whether an exemption notice contains "all that it should under the **CEQA** guidelines." (*Id.* at p. 1171, fn. 23, 109 Cal.Rptr.2d 504.)

[18] There are other procedural differences between first-tier review and later **CEQA** evaluations, including the opportunity for public comment. " **CEQA** provides for public comment on a negative declaration and an EIR. (Pub. Resources Code, § 21092.) By contrast, **CEQA** does not provide for a public comment period before an agency decides a project is exempt." (*Azusa Land Reclamation Co. v. Main San Gabriel Basin Watermaster, supra,* 52 Cal.App.4th at p. 1210, 61 Cal.Rptr.2d 447.) "Similarly, where an agency approves a project and simultaneously decides that the project is exempt from **CEQA**, there is no 'public hearing ... before the issuance of the notice of determination.' " (*Ibid.* See *City of Pasadena v. State of California, supra,* 14 Cal.App.4th at p. 821, 17 Cal.Rptr.2d 766 [agency "not required to hold a hearing prior to filing the notice of exemption"].)

[19] ***1386** Underlying these differences in procedural rules is a more fundamental concept: **CEQA** does not apply to exemption decisions. By definition, a "project falling within [ ] a categorical exemption is not subject to **CEQA**." (*Mountain Lion Foundation v. Fish & Game Com., supra,* 16 Cal.4th at p. 124, 65 Cal.Rptr.2d 580, 939 P.2d 1280.) For that reason, compliance with the Act is not required. "Where a project is categorically exempt, it is not subject to **CEQA** requirements and 'may be implemented without any **CEQA** compliance whatsoever.' " (*Association for Protection etc. Values v. City of Ukiah* (1991) 2 Cal.App.4th 720, 726, 3 Cal.Rptr.2d 488 (*Ukiah*). Accord, *Magan v. County of Kings, supra,* 105 Cal.App.4th at p. 475, 129 Cal.Rptr.2d 344.) "Once this determination of threshold exemption is made, ... none of the **CEQA** requirements or procedures apply." (*Kennedy v. City of Hayward, supra,* 105 Cal.App.3d at p. 962, 165 Cal.Rptr. 132.)

To sum up, **CEQA** has no application to exemption determinations made during an agency's preliminary review, such as the one at issue here. Since **CEQA** does not apply, compliance with its procedural requirements is not required. Applying that principle here, there is no basis for overturning the District's exemption determination based on claims that it failed to proceed in the manner required by law.

Substantial evidence

[20] That brings us to the question of whether the challenged categorical exemption is supported by substantial evidence in the administrative record. Our analysis of that question proceeds in two steps: first, we consider the factual predicate for the **150 District's exemption determination; next, we examine evidence supporting the appellant's claim of exceptions to the exemption.

Exemption: The first step of the analysis concerns the exemption.

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

[21] At the administrative level, the agency determines whether the project qualifies for a statutory or categorical exemption from **CEQA**. (Guidelines, § 15061, subd. (a).) There must be "substantial evidence that the [activity is] within the exempt category of projects." (*Magan v. County of Kings, supra,* 105 Cal.App.4th at p. 475, 129 Cal.Rptr.2d 344.) That evidence may be found in the information submitted in connection with the project, including at any hearings that the agency chooses to hold. (See *Dehne v. County of Santa Clara, supra,* 115 Cal.App.3d at p. 843, 171 Cal.Rptr. 753 [record of **CEQA** compliance included applicant's "detailed report" and information presented at five public hearings, "none of which were required by law"].)

[22] When called upon to review an agency's exemption decision, the court's task is to "determine whether, *as a matter of law,* the [activity meets] the definition of a categorically exempt project." ***1387**(*Santa Monica Chamber of Commerce v. City of Santa Monica, supra,* 101 Cal.App.4th at p. 792, 124 Cal.Rptr.2d 731.) As to that question, "we apply a de novo standard of review, not a substantial evidence standard." (*Ibid.* See also, e.g., *Western States Petroleum Assn. v. Superior Court, supra,* 9 Cal.4th at p. 573, 38 Cal.Rptr.2d 139, 888 P.2d 1268 ["the substantiality of the evidence supporting [quasi-legislative] administrative decisions is a question of law"].) But in undertaking our independent analysis, we bear in mind the "highly deferential" review standard that applies to the agency's factual determinations. (*Western States Petroleum Assn.,* at p. 572, 38 Cal.Rptr.2d 139, 888 P.2d 1268.) As our high court has said, "the factual bases of quasi-legislative administrative decisions are entitled to the same deference as the factual determinations of trial courts...." (*Id.* at p. 573, 38 Cal.Rptr.2d 139, 888 P.2d 1268.) That deference limits the *scope* of judicial review as well. Generally speaking, the court "may consider only the administrative record in determining whether a quasi-legislative decision was supported by substantial evidence within the meaning of Public Resources Code section 21168.5." (*Ibid.,* fn. omitted.)

Turning to the case at hand, we begin by interpreting the exemption, starting with its plain language. In doing so, we keep in mind that **CEQA** is concerned only with physical changes to the environment. (Guidelines, § 15358, subd. (b); see, e.g., *City of Pasadena v. State of California, supra,* 14 Cal.App.4th at p. 829, 17 Cal.Rptr.2d 766.) The interpretation of the exemption presents a question of law. (*Fairbank v. City of Mill Valley, supra,* 75 Cal.App.4th at p. 1251, 89 Cal.Rptr.2d 233.)

By statute, **CEQA** "does not apply to the closing of [a] public **school** ... or the transfer of students from that public **school** to another **school** if the only physical changes involved are categorically exempt" under the Guidelines. (§ 21080.18.) From the Guidelines, the pertinent categorical exemption is Class 14, which covers "minor additions to existing **schools** within existing **school** grounds where the addition does not increase original student capacity by more than 25% or ten classrooms, whichever is less. The addition of portable classrooms is included in this exemption." (Guidelines, § 15314.)

[23] The critical phrase here is *original student capacity.* (Guidelines, § 15314.) Because **CEQA** is concerned solely with physical changes to the environment,***151** "student capacity" must refer to the receptor **school's** physical space for housing students. (Cf., 2 Cal.Code of Regs. § 1859.35 ["existing **school** building capacity" is determined by multiplying number of classrooms times number of students]; compare, *East Peninsula, supra,* 210 Cal.App.3d at p. 175, 258 Cal.Rptr. 147 [in dicta, equating receptor **school's** original student capacity with "previous enrollment"].) We therefore interpret "student capacity" to mean the number of students that can be accommodated physically at the receptor **school**. That interpretation is bolstered by the juxtaposition of the term "original student ***1388** capacity" with the portion of the guideline specifying the maximum number of classrooms: The exemption is available where the addition to the **school** "does not increase original student capacity by more than 25% *or* ten classrooms, *whichever is less.*" (Guidelines, § 15314, italics added.) By this juxtaposition, the guideline equates student capacity and number of classrooms. That comparison makes no sense unless "student capacity" refers to physical space for housing students. As for the modifier ("original"), we take that to mean the receptor **school's** capacity as it exists prior to any structural additions to the campus resulting from the

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

project.

To sum up our legal interpretation of the pertinent exemption: A **school** closure and accompanying transfer of students is exempt from **CEQA** so long as any resulting physical changes are categorically exempt. (§ 21080.18.) Minor additions to the receptor **school** are categorically exempt. (Guidelines, § 15314.) A minor addition is defined as the lesser of: (1) the addition of 10 or fewer classrooms; or (2) an increase in original student capacity of 25 percent or less. (*Ibid.*) In this context, original student capacity means the receptor **school's** preexisting physical ability to house students.

With that interpretation in mind, we next examine the evidence supporting the District's exemption determination. As explained above, the substantiality of that evidence presents a question of law for our independent review. (*Western States Petroleum Assn. v. Superior Court, supra,* 9 Cal.4th at p. 573, 38 Cal.Rptr.2d 139, 888 P.2d 1268; *Santa Monica Chamber of Commerce v. City of Santa Monica, supra,* 101 Cal.App.4th at p. 792, 124 Cal.Rptr.2d 731.)

To a large extent, the relevant evidence is contained in the March 2003 report of the SSCC task force, which made the closure recommendations. That report contains data about the four individual elementary **schools**, including their capacity, their student populations, and the number of additional portable classrooms that would be required at each campus for it to operate as a receptor **school**.

As for the north valley **schools**, BCE's "current capacity" was listed at 675. BCE's student population then stood at 403; adding Redwood's 288 students would bring the total to 691 pupils at the consolidated campus.[FN6] The transfer of Redwood students to BCE thus represented an increase in BCE's original student capacity amounting to less than 2.4 percent-far below the 25 percent ceiling spelled out in the Class 14 guideline. (Guidelines, ***1389** § 15314.) In terms of classrooms, BCE would need one additional portable to ****152** accommodate consolidation, plus replacements for two others in poor condition. That number likewise falls far below the ceiling of 10 additional classrooms in the guideline. (*Ibid.*)

FN6. The initial study, which was later prepared by the environmental consultant, reflects slightly different student population numbers than the SSCC reported. The initial study indicates that BCE would gain 249 students, bringing its total enrollment to 649, while SLE would add 350 pupils, for a total enrollment of 718 students. These differences do not affect the availability of the Class 14 categorical exemption.

In the south valley, SLE's indicated capacity was 700. With a student population of 338, plus the transfer of Quail Hollow's 397 students, SLE would end up with 735 pupils.[FN7] The consolidation of students at SLE thus resulted in an increase in its original student capacity of 5 percent-again, well below the 25 percent maximum set forth in the guideline. (*Ibid.*) As for classrooms, SLE would need three additional portables to accommodate consolidation, plus replacements for another three. That number likewise is below the guideline's ceiling of 10 additional classrooms. (*Ibid.*)

FN7. See footnote 6, *supra.*

As a matter of law, the foregoing constitutes substantial evidence supporting the District's determination that its closure decision qualifies for a Class 14 categorical exemption from **CEQA**. (Cf., e.g., *Fairbank v. City of Mill Valley, supra,* 75 Cal.App.4th at p. 1259, 89 Cal.Rptr.2d 233 [proposed "5,855-square-foot retail/office" qualifies for Class 3 exemption, which allows up 10,000 square feet in urban area].)

Exception: The second step in the analytic process addresses exceptions to the categorical exemption.

[24] At the administrative level, once an agency "determines, based on substantial evidence in the record, that the project falls within a categorical exemption ..., the burden shifts to the challenging party ... to ' "produce substantial evidence..." ' ... that one of the exceptions to categorical exemption applies." (*Santa Monica Chamber of Commerce v. City of Santa Monica, supra,* 101 Cal.App.4th at p. 796, 124 Cal.Rptr.2d 731, internal quotation marks and citation omitted.)

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

[25] The exceptions are contained in Guidelines section 15300.2. As relevant here, that section provides: "A categorical exemption shall not be used for an activity where there is a reasonable possibility that the activity will have a significant effect on the environment due to unusual circumstances." (Guidelines, § 15300.2, subd. (c).) Thus, a "party challenging an agency's exemption decision must produce substantial evidence that the project has the potential for a substantial adverse environmental impact." (*Ukiah, supra,* 2 Cal.App.4th at p. 728, 3 Cal.Rptr.2d 488.)

In order to warrant application of the exception, the claimed environmental impact must satisfy certain substantive requirements. First, the ***1390** impact must constitute a *change* in environmental conditions. (Guidelines, § 15382.) "When reviewing the evidence, we will not consider evidence or arguments about the impact from the *existent* [ ] plant." (*Silveira v. Las Gallinas Valley Sanitary Dist.* (1997) 54 Cal.App.4th 980, 993, 63 Cal.Rptr.2d 244 [affirming negative declaration, where there was no evidence that the project would alter the existing effects]. See also, e.g., *Ukiah, supra,* 2 Cal.App.4th at p. 735, 3 Cal.Rptr.2d 488 [affirming exemption, where there was "no evidence that construction of the house would have any additional effect on runoff"].) Second, the impact must affect the *environment.* For that reason, "we must differentiate between adverse impacts upon particular persons and adverse impacts upon the environment of persons in general." (*Ukiah, supra,* 2 Cal.App.4th at p. 734, 3 Cal.Rptr.2d 488.) For the exception to apply, there must be evidence that the project "would adversely affect the environment of ****153** persons in general." (*Ibid.*) Third, the impact must constitute a *physical* environmental change, as opposed to a social or economic one. (See, e.g., *Citizen Action to Serve All Students v. Thornley, supra,* 222 Cal.App.3d at p. 758, 272 Cal.Rptr. 83.) "The decision to close a popular [ ] **school** is a decision of educational policy with political and social overtones" but our review of that decision "is delimited by the confines of environmental law." (*Id.* at p. 759, 272 Cal.Rptr. 83.) Fourth, there must be a reasonable possibility that the environmental impact will be *significant.* As defined in the Guidelines, that means "a substantial, or potentially substantial, adverse change" resulting from the project. (Guidelines, § 15382.)

Moreover, for the exception to apply, there must be substantial evidence of qualifying environmental impacts. Under the rule generally applicable to **CEQA** issues, "substantial evidence includes fact, a reasonable assumption predicated upon fact, or expert opinion supported by fact." (§ 21080, subd. (e)(1). See also Guidelines, § 15384, subd. (b).) "Substantial evidence is not argument, speculation, unsubstantiated opinion or narrative, [or] evidence that is clearly erroneous or inaccurate ...." (§ 21080, subd. (e)(2). See also Guidelines, § 15384, subd. (a).)

When disputes over the evidentiary basis for an exception become the subject of litigation, the proper review standard must be applied. "There is a split of authority on the appropriate standard of judicial review" when the issue is "the applicability of the Guidelines section 15300.2(c) exception to a project that has been found to fall within a categorical exemption." (*Fairbank v. City of Mill Valley, supra,* 75 Cal.App.4th at p. 1259, 89 Cal.Rptr.2d 233.) "Some courts have relied on cases involving review of a negative declaration, holding that a finding of categorical exemption cannot be sustained if there is a 'fair argument' based on substantial evidence that the project will have significant environmental impacts, even where the agency is presented with substantial evidence to the contrary." (*Ibid.*) "Other courts apply an ordinary substantial evidence test ..., deferring to the express or implied findings of the local agency that has found a categorical exemption applicable." ***1391**(*Id.* at pp. 1259-1260, 89 Cal.Rptr.2d 233. See also, e.g., *Ukiah, supra,* 2 Cal.App.4th at p. 728, fn. 7, 3 Cal.Rptr.2d 488; *Santa Monica Chamber of Commerce v. City of Santa Monica, supra,* 101 Cal.App.4th at p. 796, 124 Cal.Rptr.2d 731; *Banker's Hill, Hillcrest, Park West Community Preservation Group v. City of San Diego* (2006) 139 Cal.App.4th 249, 42 Cal.Rptr.3d 537, 545-546.) We need not resolve that dispute here.

In the case at hand, regardless of what review standard we apply, we find no substantial evidence to support the exception claimed by appellant SLV CARE here. (See *Santa Monica Chamber of Commerce v. City of Santa Monica, supra,* 101 Cal.App.4th at p. 796, 124 Cal.Rptr.2d 731 [even under fair argument standard, challenger failed to demonstrate reasonable possibility

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

of significant environmental effect]; *Fairbank v. City of Mill Valley, supra,* 75 Cal.App.4th at p. 1260, 89 Cal.Rptr.2d 233 [same].)

With respect to much of the evidence cited by SLV CARE in support of its claims of environmental impacts, it is not clear that it was part of the administrative record, which confines our review. (*Western States Petroleum Assn. v. Superior Court, supra,* 9 Cal.4th at p. 573, 38 Cal.Rptr.2d 139, 888 P.2d 1268.) The scope of our review is properly limited to the administrative**154 record, even though **CEQA** procedures may limit a challenger's "opportunity to create a record evidencing potential adverse impacts on the environment." (*Magan v. County of Kings, supra,* 105 Cal.App.4th at p. 477, 129 Cal.Rptr.2d 344.) But as we now explain, even when all of appellant's evidence is considered, regardless of its source, it does not support a fair argument of significant environmental effects.

We address each ground put forth by SLV CARE as a basis for the claimed exception: (1) mold; (2) geologic hazards; (3) septic failure; and (4) traffic hazards and related issues (parking and emergency access).

(1) Mold: SLV CARE posits a potential "increase in mold due to more bodies [and] opening more rooms," as well as the "potential for adverse reactions to mold due to increase in sensitive receptors." As evidentiary support for those claims, SLV CARE points to a series of letters and reports concerning indoor air quality tests at BCE and other District **schools**, which were prepared by MACS Lab and signed by its Director of Field Services, Maheen B. Doctor. In early April 2003, Doctor confirmed "slightly elevated levels of some fungal elements," but stated that "the level of elevation is not considered significant." Acknowledging that there are "no established regulatory standards for the determination of 'acceptable' levels of mold" and that "individual sensitivities vary from person-to-person," Doctor continued to recommend "more vigilant housekeeping" to counteract the problem. The presence of mold and mildew in some portable classrooms at BCE also was noted by the SSCC task force in its report.

*1392 Having analyzed the foregoing evidence, we conclude that neither the SSCC information nor the MACS Lab correspondence supports the environmental impact claim urged by SLV CARE. The cited evidence fails on three grounds. First, there is no indication that the presence of mold is a *change* in environmental conditions. The mold was a preexisting condition at BCE, and there is no evidence that it will be exacerbated by the presence of additional pupils. A change in physical conditions is a necessary predicate for a finding of environmental impact. (See *Silveira v. Las Gallinas Valley Sanitary Dist., supra,* 54 Cal.App.4th at p. 993, 63 Cal.Rptr.2d 244; *Ukiah, supra,* 2 Cal.App.4th at p. 735, 3 Cal.Rptr.2d 488.) Second, as to the indoor air quality reports and letters, which were signed by Doctor on behalf of MACS Lab, while they suggest that particular individuals may have adverse reactions to mold, they do not demonstrate that **school** consolidation "would adversely affect the environment of persons in general." (*Ukiah,* at p. 734, 3 Cal.Rptr.2d 488.) Finally, there is no evidence that any possible environmental impact from the mold will be *significant.* In fact, the evidence is to the contrary-Doctor's letter states that the level of indoor spores "is not considered significant."

(2) Geologic Hazards: SLV CARE identifies geologic dangers as a significant environmental impact, citing a March 1990 letter to the District from a geological consultant, Woodward-Clyde. That letter acknowledges that the Ben Lomond fault lies approximately 100 feet southwest of the BCE campus. But under the heading "CONCLUSIONS," the letter states: "The information obtained during the course of our studies leading to this review appears to justify further downgrading the already minimal risk assigned to construction adjacent to the Ben Lomond fault, which traverses the general area in which the **School** District is located. We are no longer indicating it to be a potential earthquake source."

**155 Assuming that the cited 1990 letter was part of the administrative record, it does not constitute substantial evidence of environmental impact. Neither that letter nor anything else in the appellate record suggests that any geologic hazard is new, so as to constitute a change in environmental conditions. Nor is there any evidence suggesting that the closure decision amplifies any preexisting hazard, either because of the increase in student population at BCE or because of physical changes on that campus, including

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

the addition of portable classrooms. (See *Citizen Action to Serve All Students v. Thornley, supra,* 222 Cal.App.3d at p. 757, 272 Cal.Rptr. 83 [finding "no evidence in the record" that the **school** closure "might cause an increased vulnerability to earthquake-related harm" and characterizing arguments to the contrary as mere speculation that "there *might* be such a danger, without hard fact"]; *Ukiah, supra,* 2 Cal.App.4th at p. 735, 3 Cal.Rptr.2d 488 [rejecting hearsay statements "that the site was on an earthquake fault" and finding that those statements did not constitute substantial evidence to overcome the categorical exemption].)

***1393** (3) Septic: As yet another environmental impact, SLV CARE lists septic problems at both receptor **schools**. As evidentiary support, SLV CARE points to one of the District's five-year maintenance plans; it also cites a February 2002 letter to the District from the California Regional Water Quality Control Board. The maintenance plan, which covers **school** years beginning in 1997 and ending in 2002, describes the septic fields at SLE and BCE as "failing." The February 2002 letter from the Regional Water Quality Control Board refers to septic problems dating back to 1998 at the District's shared high **school** campus in Felton. But the administrative record also contains more recent information, which addresses the then-current condition of the septic systems at each of the receptor **schools**. One such document is an e-mail sent March 31, 2003, from Dave Elliott, the District's Director of Maintenance and Operations, to Julie Haff, the District's Superintendent. In that e-mail, Elliott states: "The septic system at Boulder Creek below the two-story building was replaced in August of 2001 and is working as designed." Elliott also states: "At this time, I see no need for any further improvements to the septic systems at Boulder Creek Elementary." In addition, information presented to the District's Board from the SSCC task force notes both BCE's "new septic" and SLE's "shared septic (new)."

The evidence offered by SLV CARE on this point is deficient in several regards. First, as indicated by the District's more current information, the evidence of septic problems is outmoded. As such, it is "clearly erroneous or inaccurate" and does not constitute substantial evidence. (§ 21080, subd. (e)(2); Guidelines, § 15384, subd. (a).) Second, as with appellant's other claims, the proffered evidence does not represent the requisite *change* in environmental conditions. SLV CARE argues that the District failed to "consider the impact of doubling SLE's enrollment on the already failing septic system." But it offers no *evidence* that the claimed problem would be exacerbated by the presence of additional pupils. (See *Magan v. County of Kings, supra,* 105 Cal.App.4th at p. 477, 129 Cal.Rptr.2d 344 [rejecting challenger's arguments about potential impacts, as "based entirely on speculation"].)

(4) Traffic, Parking, Emergency Access: SLV CARE posits the existence of traffic and parking hazards at both receptor **schools**, citing written public comments by parents of Redwood students. On the issue of traffic, a Redwood parent who routinely ferried children to both of the District's****156** north valley elementary **schools** wrote: "It takes longer to drop off 1 child at Boulder Creek Elementary (excluding travel time) than it does to drop off 7 children at Redwood (excluding travel time). The hills up to Boulder Creek Elementary are steep and very narrow. There are a lot of pedestrians (mostly children) walking on all sides of these roads.... I don't feel this is safe to add more children to this **school** (Boulder Creek Elementary)." On the issue ***1394** of parking, another Redwood parent wrote: "Redwood Elementary has parking for dropping off and picking up students. Parking at Boulder Creek Elementary is minimal, and the facilities for dropping off or picking up students-especially if the student body swells-are both inadequate and dangerous. I expect cars will be lined up around the block." Information from the SSCC's transportation subcommittee reflects some of these same concerns. On the issue of emergency access, SLV CARE cites a letter with attachments, dated March 25, 2003, from Sam Robustelli, Chief of the Boulder Creek Fire Department. That document includes factual comparisons between the north valley **schools** based on emergency response, fire response, and highway access.

The data and opinions proffered by SLV CARE do not support its claim to the "significant effects" exception to the categorical exemption for **school** consolidation. As explained above, that exception applies "where there is a reasonable possibility that the activity will have a significant effect on the environment *due to unusual circumstances.*" (Guidelines § 15300.2, subd.

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

(c), italics added.) To sustain the exception, the evidence must show "some feature of the project that distinguishes it" from others in the exempt class. (*Fairbank v. City of Mill Valley, supra,* 75 Cal.App.4th at p. 1260, 89 Cal.Rptr.2d 233. See also, e.g., *Santa Monica Chamber of Commerce v. City of Santa Monica, supra,* 101 Cal.App.4th at p. 801, 124 Cal.Rptr.2d 731.)

SLV CARE offers no evidence that the traffic, parking, or access problems cited here are unusual circumstances in the context of **school** consolidations. In that respect, this case resembles *Fairbank v. City of Mill Valley.* There, the plaintiff cited "various comments from the administrative record, by which project opponents voiced concerns about the existing traffic and parking problems in downtown Mill Valley, and the prospect of the project exacerbating those problems." (*Fairbank v. City of Mill Valley, supra,* 75 Cal.App.4th at p. 1260, 89 Cal.Rptr.2d 233.) The court rejected the opponent's claim to an exception, finding "no showing whatsoever of any 'unusual circumstances' surrounding the construction of this small commercial structure giving rise to any risk of 'significant' effects upon the environment. (Guidelines, § 15300.2(c).) While the addition of any small building to a fully developed downtown commercial area is likely to cause minor adverse changes in the amount and flow of traffic and in parking patterns in the area, such effects cannot be deemed 'significant' without a showing of some feature of the project that distinguishes it from any other small, run-of-the-mill commercial building or use. Otherwise, no project that satisfies the criteria set forth in Guidelines section 15303(c) could ever be found to be exempt." (*Ibid.*) As the court concluded, "in the absence of any evidence of unusual circumstances nullifying the grant of a categorical exemption, there can be no basis for a claim of exception under Guidelines section 15300.2(c)." (*Id.* at pp. 1260-1261, 89 Cal.Rptr.2d 233. See also, e.g., *Ukiah, supra,* 2 Cal.App.4th at p. 736, 3 Cal.Rptr.2d 488 [the ***1395** claimed "potential environmental impacts" were "normal and ****157** common considerations in the construction of a single-family residence" and did not constitute unusual circumstances].) The same is true here-there is no evidence of unusual circumstances setting this **school** consolidation apart from others in the exempt class.

C. Summary of Conclusions

In this case, we are required to undertake only the first tier of the **CEQA** analysis. That analysis leads us the following conclusions: (1) The **school** consolidation decision at issue here constitutes a "project" for purposes of **CEQA**. (2) The District properly determined that its decision is exempt from **CEQA**. First, in making that determination, the District did not violate any procedural requirements of **CEQA**, because none apply. Moreover, as a matter of law, substantial evidence supports the District's determination that its closure decision qualifies for categorical exemption from **CEQA** under section 21080.18 and Guideline section 15314. SLV CARE did not carry its burden of showing an exception to the categorical exemption; it failed to offer sufficient evidence of significant environmental impacts on any of the proffered grounds.

II. BOND LAW

SLV CARE next argues that the District violated constitutional and statutory provisions governing use of bond funds. At issue is the District's use of proceeds from Measure S, an $18.5 million **school** facilities bond issue approved by local voters in 2000. As before, we begin by setting forth the relevant legal principles.

A. General Principles

"The usual method of funding new **school** construction in California has been for **school** districts to obtain voter approval for the issuance of general obligation bonds. The bonds are repaid by an annual levy of an *ad valorem* tax on real (and certain personal) property located within the area of the district." (62 Ops.Cal.Atty.Gen. 209, 210 (1979), fn. and citations omitted.)

Various provisions of law govern **school** bond financing. Some are constitutional. (See, e.g., Cal. Const., art. XIIIA, § 1, subd. (b); *id.*, art XVI, § 18.) Others are statutory. (See, e.g., Ed.Code, §§ 15100 et seq.) [FN8]

FN8. In this section of the opinion (II), which discusses bond law, further unspecified sta-

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

tutory references are to the Education Code.

[26] *1396 Generally speaking, **school** bond financing is restricted to projects of a capital or permanent character. (See *Marin U. Junior College Dist. v. Gwinn* (1930) 106 Cal.App. 12, 13-14, 288 P. 799; 87 Ops.Cal.Atty.Gen. 157, 162 (2004).) That restriction is apparent from several constitutional provisions. We mention two such provisions, which are instructive because of their detail, although they do not apply directly to this case. First, under the constitutional provision added by Proposition 39, bond proceeds from voter-approved taxes or special assessments may be used only for "the construction, reconstruction, rehabilitation, or replacement of **school** facilities" and not "for any other purpose, including teacher and administrator salaries and other **school** operating expenses." (Cal. Const., art. XIIIA, § 1, subd. (b)(3).) [FN9] Similarly, bonds issued after**158 voter approval to exceed the debt limit may be used only for "the construction, reconstruction, rehabilitation, or replacement of **school** facilities, including the furnishing and equipping of **school** facilities, or the acquisition or lease of real property for **school** facilities...." (Cal. Const., art XVI, § 18, subd. (b).)

> FN9. Proposition 39, enacted in November 2000, "amended the Constitution to allow the issuance of bonds for the construction of **school** facilities if approved by 55 percent of a **school** district's voters and if specified conditions are met." (87 Ops.Cal.Atty.Gen., *supra*, at p. 157.) "Normally, approval of a **school** district's bonded indebtedness would require a two-thirds approval vote of a district's voters." (*Id.* at p. 157, fn. 1.) Legislation implementing Proposition 39 is codified at sections 15264-15284.

There are additional restrictions, including some that are statutory; for example, proceeds "shall not be applied to any other purposes than those for which the bonds were issued." (§ 15146, subd. (b).)

1. Nature of the Relationship Between the District and the Electorate

According to appellant SLV CARE: "A bond proposition submitted to the voters of a **school** district is a contract between the district and its voters."

Appellant's characterization does not find universal support in the cases. "The relationship arising out of a bond election has been defined in a number of California cases." (*Associated Students of North Peralta Community College v. Board of Trustees* (1979) 92 Cal.App.3d 672, 676, 155 Cal.Rptr. 250 (*Peralta*).) As explained in the *Peralta* case, some "early decisions" found "a contractual relationship between the public entity and individual electors." (*Ibid.*) "However, a later decision, now regarded as the leading case on the subject, retreated from this classification of the relationship as contractual." (*Ibid.*, citing *Peery v. City of Los Angeles* (1922) 187 Cal. 753, 203 P. 992.) In that later decision, the California Supreme Court "concluded that it was unnecessary to consider the relationship between public entity and electorate as strictly contractual, the status being merely *analogous* to a contract." (*Peralta*, at pp. 676-677, 155 Cal.Rptr. 250.)

*1397 In any event, precise characterization of the relationship may be academic. "It is clear that proceeds of a bond issue may be expended only for the purpose authorized by the voters in approving issue of the bonds [citation]. Whether the limitation be deemed to be contractual [citation] or of a status analogous to such relation [citation] or a restriction implied by the requirement of popular approval of the bonds [citation], it does restrict the power of the public body in the expenditure of the bond issue proceeds, and hence in the nature of the project to be completed and paid for. The statutes and ordinances under which the public body acts in submitting the bond issue proposal to the voters must be considered with the ballot proposition in determining the extent of this restriction [citations]." (*Mills v. S.F. Bay Area Rapid Transit Dist.* (1968) 261 Cal.App.2d 666, 668, 68 Cal.Rptr. 317.)

2. Elements of the Relationship

In *Peralta*, the court identified four elements that typically comprise the relationship between the entity issuing a bond and its voters. (*Peralta, supra*, 92 Cal.App.3d at pp. 677-678, 155 Cal.Rptr. 250.) First, there are the authorizing statutes, which are "presumptively within the knowledge of each elector...."

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

(*Id.* at p. 677, 155 Cal.Rptr. 250.) Second, the "resolution by which the bonding entity resolves to submit the issue to the District's electors has also been regarded as part of the 'contract' between the entity and its electors." (*Ibid.*) "A third element of the 'contract' is the ballot proposition submitted to the voters." (*Ibid.*) "The fourth and final element is assent or ratification" by the voters. (*Id.* at p. 678, 155 Cal.Rptr. 250.)

**159 Depending on the circumstances of the particular case, there may be other factors beyond the four basic elements described above. (*Peralta, supra,* 92 Cal.App.3d at p. 678, 155 Cal.Rptr. 250.) "Extrinsic documents may be added to the primary elements comprising the relationship." (*Ibid.*) But "no case or statutory authority supports the proposed incorporation into the 'bond contract' of the ballot argument submitted to the voters prior to the election." (*Id.* at pp. 678-679, 155 Cal.Rptr. 250.) To the contrary, at least one case has held that "statements 'disseminated to the general public' before the election ... cannot be deemed to modify the intentionally broad language of the proposition in fact submitted to the voters, the call of election published to them, and the statutes authorizing the procedure adopted [citation]." (*Mills v. S.F. Bay Area Rapid Transit Dist., supra,* 261 Cal.App.2d at p. 669, 68 Cal.Rptr. 317. Cf., *Los Angeles County Transportation Com. v. Richmond* (1982) 31 Cal.3d 197, 203, 182 Cal.Rptr. 324, 643 P.2d 941 [in the case of statewide voter initiatives, "ambiguities may be resolved by referring to the ballot summary, the arguments and analysis presented to the electorate, and the contemporaneous construction of the Legislature"]; *City and County of San Francisco v. Farrell* (1982) 32 Cal.3d 47, 52, 184 Cal.Rptr. 713, 648 P.2d 935 [same].)

***1398 B. Application**

The *Peralta* case provides a useful approach for assessing appellant's argument that the District violated its bond obligations. We therefore begin our analysis by applying each of the elements identified in *Peralta* to the relationship between the District and the voters arising out of the November 2000 bond election. (See *Peralta, supra,* 92 Cal.App.3d at pp. 677-679, 155 Cal.Rptr. 250.) We then discuss the specific violations claimed by SLV CARE. Because the relevant facts are not in dispute, the issues presented are questions of law, which we review de novo. (See, e.g., *Service Employees Internat. Union v. Board of Trustees* (1996) 47 Cal.App.4th 1661, 1665, 55 Cal.Rptr.2d 484 [interpreting Education Code provisions].)

1. Elements

[27] The first of the elements that make up the entity-electorate relationship is the authorizing legislation. (*Peralta, supra,* 92 Cal.App.3d at p. 677, 155 Cal.Rptr. 250.) Here, the relevant statute is section 15100, which permits **school** districts to seek bond financing for a variety of purposes, including: (a) buying **school** land; (b) buying or constructing **school** buildings; (c) making "alterations or additions" to **school** buildings other than "current maintenance, operation, or repairs"; (d) "repairing, restoring, or rebuilding [ ] any **school** building damaged, injured, or destroyed by fire or other public calamity"; (e) acquiring "furniture, equipment, or necessary apparatus of a permanent nature"; and (f) permanently improving **school** grounds. (§ 15100, subds.(a)-(f).) [FN10] The **160 statutorily authorized purposes thus are broad but not limitless, being generally restricted to capital or permanent items.

> FN10. Section 15100 provides in full as follows: "Except as otherwise provided by law, the governing board of any **school** district or community college district may, when in its judgment it is advisable, and shall, upon a petition of the majority of the qualified electors residing in the **school** district or community college district, order an election and submit to the electors of the district the question whether the bonds of the district shall be issued and sold for the purpose of raising money for the following purposes:
>
> (a) The purchasing of **school** lots.
>
> (b) The building or purchasing of **school** buildings.
>
> (c) The making of alterations or additions to the **school** building or buildings other than as may be necessary for current

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

maintenance, operation, or repairs.

(d) The repairing, restoring, or rebuilding of any **school** building damaged, injured, or destroyed by fire or other public calamity.

(e) The supplying of **school** buildings and grounds with furniture, equipment, or necessary apparatus of a permanent nature.

(f) The permanent improvement of the **school** grounds.

(g) The refunding of any outstanding valid indebtedness of the district, evidenced by bonds, or of state **school** building aid loans.

(h) The carrying out of the projects or purposes authorized in Section 17577 or 81613.

(i) The purchase of schoolbuses the useful life of which is at least 20 years.

(j) The demolition or razing of any **school** building with the intent to replace it with another **school** building, whether in the same location or in any other location.

Any one or more of the purposes enumerated, except that of refunding any outstanding valid indebtedness of the district evidenced by bonds, may, by order of the governing board entered in its minutes, be united and voted upon as one single proposition."

The second element is the District's formal resolution to submit the issue to the electors. (*Peralta, supra,* 92 Cal.App.3d at p. 677, 155 Cal.Rptr. 250; see § 5322.) In the preamble of its July 2000 resolution, the District indicated its desire "to improve **school** facilities to benefit students in the District." In the body of the resolution, the District formally determined to submit to the electorate "the question of whether the Bonds shall be issued and sold for the purpose of raising money to finance the **School** Facilities and paying costs incident thereto." The stated purpose of the election was "for the voters in the District to vote on a proposition, a copy of which is attached hereto ... containing the question of whether the District shall issue the Bonds for the purposes stated therein." The resolution thus speaks broadly of funding **school** facilities and incidental costs.

***1399** The third consideration is the ballot proposition itself. (*Peralta, supra,* 92 Cal.App.3d at p. 677, 155 Cal.Rptr. 250; see § 15122 [requirements as to the form of the ballot].) Measure S, put before the voters in the November 2000 election, was phrased as follows: "To acquire, construct, and modernize **school** facilities, build new classrooms to replace 30-year-old portables, construct a permanent Junior High at the current site, upgrade drainage, replace deteriorating plumbing and inadequate electrical systems, improve student access to classroom computers and technology, and make the District eligible to receive over $8 million in state-matching funds, shall the **San Lorenzo** Valley Unified **School** District be authorized to issue $18,500,000 of bonds at an interest rate below the legal limit?"

Those three elements-the statute, the resolution, and the ballot proposition-were before the voters considering Measure S. "The fourth and final element is assent or ratification by the electors, which, of course, is present here." (*Peralta, supra,* 92 Cal.App.3d at p. 678, 155 Cal.Rptr. 250.)

[28] In this case, there are no other factors that bear on the District-electorate relationship. (See *Peralta, supra,* 92 Cal.App.3d at pp. 678-679, 155 Cal.Rptr. 250.) More specifically, contrary to the contentions of appellant SLV CARE, ballot arguments are not part of the analysis. (*Ibid.*; *Mills v. S.F. Bay Area Rapid Transit Dist., supra,* 261 Cal.App.2d at p. 669, 68 Cal.Rptr. 317; cf., *Los Angeles County Transportation Com. v. Richmond, supra,* 31 Cal.3d at p. 203, 182 Cal.Rptr. 324, 643 P.2d 941 [state voter initiatives].)

****161 *1400 *2. Claimed Violations***

a. Promise of Matching Funds

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

[29] As set forth in the ballot, one of the purposes of Measure S was to "make the District eligible to receive over $8 million in state-matching funds...." According to appellant SLV CARE, that language triggered the application of section 15122.5, which requires a statement in the sample ballot advising voters that the project is subject to discretionary state approval. In appellant's words: "In promising that approval of the bond measure would bring 'over $8 million in state-matching funds' without the required discretionary approval language, Respondent violated [ ] § 15122.5."

To properly assess appellant's contention, we begin with the statute. In pertinent part, section 15122.5 provides: "Whenever ... the project to be funded by the bonds will require state matching funds for any phase of the project, the sample ballot shall contain a statement ... advising the voters that the project is subject to the approval of state matching funds and, therefore, passage of the bond measure is not a guarantee that the project will be completed." (§ 15122.5, subd. (a).) [FN11]

> FN11. The full text of section 15122.5 reads: "(a) Whenever an election is called on the question of whether bonds of a **school** district shall be issued and sold for the purposes specified in Section 15100 and the project to be funded by the bonds will require state matching funds for any phase of the project, the sample ballot shall contain a statement, as provided in subdivision (b), advising the voters that the project is subject to the approval of state matching funds and, therefore, passage of the bond measure is not a guarantee that the project will be completed.
>
> "(b) The words to appear in the sample ballot in satisfaction of the requirements of subdivision (a) are as follows:
>
> 'Approval of Measure _____ does not guarantee that the proposed project or projects in the _____ **School** District that are the subject of bonds under Measure _____ will be funded beyond the local revenues generated by Measure _____. The **school** district's proposal for the project or projects may assume the receipt of matching state funds, which could be subject to appropriation by the Legislature or approval of a statewide bond measure.'
>
> "(c) This section does not apply to any election to incur bonded indebtedness pursuant to the Mello-Roos Community Facilities Act of 1982 contained in Chapter 2.5 (commencing with Section 53311) of Division 2 of Title 5 of the Government Code."

Based on the statute's plain language, we reject appellant's contention. Section 15122.5 requires voter advisement when "the project to be funded by the bonds *will require state matching funds* ...." (§ 15122.5, subd. (a), italics added.) Neither the language of Measure S, nor any other evidence in the record, suggests that the bond-financed projects *required* state matching funds. Becoming "eligible to receive" state funds for Measure S projects is not the same as requiring such funds.

In short, we find no violation of section 15122.5.

***1401** *b. Expenditures*

SLV CARE challenges a number of the District's expenditures as unauthorized uses of the bond funds.[FN12] To streamline ****162** our discussion of this issue, we group the challenged expenditures into logical categories.

> FN12. In its opening brief, SLV CARE lists the following items as unauthorized expenditures: "a demographic study and 'geocoding' of student addresses used for the **school** closure project; printing the bond measure materials; deferred maintenance ... [¶] costs associated with consolidation [of] **schools** including moving and leasing portable [ ] classrooms, consultants, mold reports, and the belated **CEQA** study; the salary of the ex-Principal of Redwood Elementary, who was hired as Bond Manager, including his attendance and training at conferences, and

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

> 15% of the salary of the CFO; payments to consultants, attorneys, and other professionals; and repair of the Felton campus septic system."

[30] *Administrative costs:* The resolution adopted by the District identified the purpose of the bond as "raising money to finance the **School** Facilities and paying costs incident thereto."

Incidental costs include the expense of administering and overseeing construction projects to be funded with bond money. As stated in a 2004 Attorney General opinion, which concerned the use of Proposition 39 bond funds: "Administrative oversight work is an integral part of the construction process." (87 Ops.Cal.Atty.Gen., *supra,* at p. 163.) As the Attorney General further explained, "the phrase 'the construction, reconstruction, rehabilitation, or replacement of **school** facilities' embraces project administrative costs, such as monitoring contracts and project funding, overseeing construction progress, and performing overall project management and accounting that facilitates timely completion of the construction project. A construction project generates not only the costs of materials and equipment, architectural and engineering design work, and construction worker salaries, but also costs of project administration-work that the **school** district would not be required to undertake or to fund *but for* the existence of the construction project." (*Id.* at p. 160.)

As the Attorney General recognized, analogous statutes bolster that conclusion. (See 87 Ops.Cal.Atty.Gen., *supra,* at pp. 162-163.) Among them is Government Code section 16727, which concerns issuance of the state's general obligation bonds. (*Ibid.*) According to subdivision (a) of that section: "Proceeds from the sale of any bonds ... shall be used only for the following purposes: (a) The costs of construction or acquisition of capital assets." (Gov.Code § 16727, subd. (a).) After defining capital assets, subdivision (a) continues: "Costs allowable under this section include costs incidentally but directly related to construction or acquisition, including, but not limited to, planning, engineering, construction management, architectural, and other design work, environmental impact reports and *1402 assessments, required mitigation expenses, appraisals, legal expenses, site acquisitions, and necessary easements." (*Ibid.*) Under subdivision (d), proceeds also may be used to "pay the costs of a state agency with responsibility for administering the bond program." (*Id.,* subd. (d).)

As relevant to the challenges raised here, permissible administrative costs would include the salaries of in-house personnel acting as construction project administrators. (87 Ops.Cal.Atty.Gen., *supra,* at p. 158.) Administering the project "is an integral part of the construction process." (*Id.* at p. 163.) Administration may be provided by outside contractors or in-house personnel. " **School** district employees with the requisite expertise may be able to perform project management work at less cost to the district than if the work were performed by private consultants." (*Id.* at p. 162.) For these reasons, the prohibition against the use of "Proposition 39 **school** bond proceeds for 'teacher and administrator salaries and other **school** operating expenses' " does not apply "to the payment of salaries of **school** district employees who perform administrative oversight work on construction projects authorized by a voter approved bond measure." (*Id.* at p. 158, quoting Cal. Const., art. XIIIA, § 1, subd. (b)(3)(A). Cf., § 17074.10 [**school** modernization funds available under the Leroy F. Green **School** Facilities Act of 1998 "do not include**163 funding for administrative and overhead costs"].)

In sum, costs that are "incidentally but directly related to construction or acquisition" may be paid from proceeds of the state's general obligation bonds. (Gov.Code § 16727, subd. (a).) That includes administrative costs, such as salaries for personnel engaged in construction management and oversight. (87 Ops.Cal.Atty.Gen., *supra,* at pp. 162-163.)

Applying those concepts here, to the District's general obligation bonds, we reject the claim by SLV CARE that the salaries and associated training costs of the District's personnel were improper. There is no evidence that those expenditures were made for purposes other than management and oversight of those District construction projects that were funded by bond money. To the contrary, the unrebutted trial testimony shows that the challenged salary expenses in fact represent construction management. For example, District Superintendent Julie Haff testified that the

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

facilities manager was "paid with bond funds" because "his job is strictly to supervise the spending of the construction funds, and it's totally dedicated to construction and our efforts to acquire and modernize our **school** facilities." The facilities manager's own testimony was to the same effect: Bryan Loehr stated that his job was to "manage all of the construction and modernization projects that are funded by the general obligation bonds and by the State modernization fund." In explaining the use of bond funds to pay 15 percent of the salary of the District's assistant superintendent of business services, Edith Henden, ***1403** Superintendent Haff testified, "that's her time dedicated to the expenditure of these bond funds for acquiring and modernizing our facilities."

[31] *Bond preparation costs:* Appellant SLV CARE also challenges expenses incurred in preparing the bonds, such as printing and attorney fees. According to appellant: "Bond proceeds may not be used to pay even the 'soft costs' of the bond measure such as printing, publication and even the bond attorney's opinion."

In support of its argument, appellant relies on a 1958 opinion of the Attorney General. (32 Ops.Cal.Atty.Gen. 249 (1958).) That opinion concludes that the expenses of printing the bonds and related publications, and the cost of the bond attorney's opinion, are "payable out of the general funds of the district, not out of bond proceeds." (*Id.* at p. 249.)

We do not find the proffered authority persuasive. The 1958 Attorney General opinion cited by appellant was based on quoted language of a provision of the 1943 Education Code, which has since been repealed. (Former § 7435; see now § 15145.) Under the repealed provision, expenses incurred for preparation of the bond constituted "a legal charge against the funds of the **school** district issuing the bonds." (Former § 7435.) The Attorney General interpreted the statutory reference to funds to mean the district's *general* funds, not *bond* proceeds. (32 Ops.Cal.Atty.Gen., *supra,* at p. 250.) But the Attorney General did "concede that the matter is not free from doubt." (*Ibid.*) More to the point, subsequent changes in the statutory language completely undermine the Attorney General's interpretation.

In pertinent part, the governing statute now reads: "All expense incurred for the preparation, sale, and delivery of the **school** bonds, including but not limited to, fees of an independent financial consultant, the publication of the official notice of sale of the bonds, the preparation, printing and distribution of the official statement, the obtaining of a rating, the purchase of insurance***164** insuring the prompt payment of interest and principal, the preparation of the certified copy of the transcript for the successful bidder, the printing of the bonds, and legal fees of independent bond counsel retained by the **school** district or community college district issuing the bonds are legal charges against the funds of the district issuing the bonds and *may be paid from the proceeds of sale of the bonds.*" (§ 15145, subd. (a), italics added. Cf., Gov.Code § 16727, subd. (e) [proceeds from the state's general obligation bonds may be applied to the "costs of the Treasurer's office directly associated with the sale and payment of the bonds, including, but not limited to, underwriting discounts, costs of printing, bond counsel, registration, and fees of trustees"].)

***1404** Based on the statute's plain language, we find no merit in appellant's broad challenge to bond preparation expenses such as printing and counsel fees. Nor does SLV CARE offer evidence that particular expenditures within that category were improper. We therefore reject appellant's claim that these expenditures were unauthorized.

[32] *Construction costs:* Appellant SLV CARE takes issue with the District's use of bond funds for certain construction projects, characterizing them as unauthorized uses of the bond proceeds. Specifically, appellant cites deferred maintenance and repair of the septic system on the Felton campus.

An underlying theme of these challenges is the distinction between permanent, capital improvements on the one hand, and operation and maintenance on the other. (*Marin U. Junior College Dist. v. Gwinn, supra,* 106 Cal.App. at pp. 13-14, 288 P. 799 [**school** bonds restricted to capital projects].) In urging that distinction, appellant directs us to article XIIID of the California Constitution, which defines both concepts: " 'Capital cost' means the cost of acquisition, installation, construction, reconstruction, or replacement of a permanent public improvement by an agency." (Cal.

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

Const., art. XIIID, § 2, subd. (c).) " 'Maintenance and operation expenses' means the cost of rent, repair, replacement, rehabilitation, fuel, power, electrical current, care, and supervision necessary to properly operate and maintain a permanent public improvement." (*Id.*, subd. (f).)

Armed with those concepts, appellant SLV CARE mounts a general challenge to District expenditures that it categorizes as deferred maintenance. As authorized elsewhere in the Education Code, a **school** district "may establish a restricted fund to be known as the 'district deferred maintenance fund' for the purpose of major repair or replacement of plumbing, heating, air conditioning, electrical, roofing, and floor systems, the exterior and interior painting of **school** buildings," for removing asbestos and lead, and for "other items of maintenance approved by the State Allocation Board." (§ 17582, subd. (a).) Money deposited to the deferred maintenance fund "may be received from any source whatsoever," but it must "be accounted for separately from all other funds and accounts...." (*Ibid.*)

According to appellant, the District "made no effort to determine which, if any deferred maintenance projects might qualify for use of bond moneys. Bond money transferred into the deferred maintenance account was used indiscriminately for anything that qualified as deferred maintenance." SLV CARE does not identify specific improper items, however.

***1405** We reject appellant's unfocused substantive challenge, which fails to identify-much less support-specific improper deferred maintenance expenses. Dealing in generalities, as we must, we conclude that ****165** the expenditures for deferred maintenance were proper. First, under the governing statute, authorized bond projects include "alterations or additions to the **school** building or buildings other than as may be necessary for *current* maintenance ...." (§ 15100, subd. (c), italics added.) Appellant fails to demonstrate that the District paid for any *current* maintenance items with *deferred* maintenance bond funds. Second, as to the ballot language, Measure S specifically sought money for "modernization." There is no evidence that any deferred maintenance project falls outside that rubric.

Appellant SLV CARE also alleges the District's misuse of bond funds based on transfers between its accounts. In its opening brief, SLV CARE charges that "a large portion of the bond money transferred into the deferred maintenance account was again transferred into the general fund where it was used for general operational expenses, including salaries." In its reply brief, SLV CARE asserts that the District once "transferred $85,905 in bond money into the general fund to cover a deficit." In support of that assertion, appellant cites testimony by Edith Henden, the District's assistant superintendent of business services, who testified concerning entries in the District's June 2002 audited financial statements.

While the cited evidence does show that funds were transferred between accounts, it does not demonstrate impropriety. As SLV CARE points out, Henden did acknowledge that $104,000 in bond funds had been "transferred out of the building fund and into deferred maintenance account" and also that there had been a transfer "from the deferred maintenance fund to the general fund" amounting to nearly $86,000. But as she explained, the transfer represented an "audit adjustment" entry to avoid an impermissible year-end deficit, and the money was transferred back.[FN13] SLV CARE cites no other evidence of impropriety, and the trial court found none. Appellant's claim of statutory violations in connection with the District's transfers of deferred maintenance funds thus fails for lack of evidentiary support.

> FN13. Henden was asked: "Would it have been possible to transfer $85,905 into the general account from deferred maintenance if, in fact, this 104,000 from the bond money hadn't been there?" She responded: "I want to say yes, but I think I need to expand a little bit. You can't have-you can't end the year with a deficit in this fund. So the general fund would have-essentially, the transfer would have been made because it's an audit exception, an audit adjustment that needed to be made. So we would have booked it; then we would have transferred funds back from-to the general fund to cover it."

Apart from its deferred maintenance claims, SLV CARE also takes issue with the use of bond funds to

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

repair the septic system at the Felton campus.

***1406** We reject that contention as well. As before, we look first to the statute. Among the permissible purposes for bond funds is the "carrying out of the projects or purposes authorized in Section 17577 ...." (Ed. Code, § 15100, subd. (h).) That section in turn provides that a " **school** district may provide sewers and drains adequate to treat and/or dispose of sewage and drainage on or away from each **school** property." (§ 17577.) It further provides: "The cost thereof may be paid from the building fund, including any bond moneys therein." (*Ibid.*) Repair of the septic system thus is proper under the statute. It is also proper under the language of Measure S, either as a means to "modernize **school** facilities" or under the measure's plan to "replace deteriorating plumbing."

[33] *Consolidation costs:* Appellant's final challenge is to expenses associated with the **school** closures and consolidation: ****166** demographic and geo-coding studies; consultants; mold reports; the **CEQA** study; and the moving and leasing of portable classrooms.

With respect to the consultants and studies, we again find guidance in the state's general obligation bond law. (See Gov.Code § 16727.) It permits bond funds to be used for "costs incidentally but directly related to construction or acquisition, *including, but not limited to, planning,* engineering, construction management, architectural, and other design work, *environmental impact reports and assessments,* required mitigation expenses, appraisals, legal expenses, site acquisitions, and necessary easements." (*Id.*, subd.(a), italics added.) Applying that statute here, the costs for studies and consultants must be upheld. The demographic studies represented planning expenses, which helped the District determine where to construct or improve facilities. The mold reports served a similar planning function. And the **CEQA** study falls within the rubric of an environmental impact assessment.

As for the moving and leasing of portable classrooms, SLV CARE argues: "Bond law does not allow Measure S money to be used to *lease* anything."

That argument cannot be supported. As explained in a 1979 Attorney General opinion, there are various methods of "funding new **school** construction in California...." (62 Ops.Cal.Atty.Gen., *supra,* at p. 210.) One "alternative for constructing new **school** facilities has been the use of 'lease-purchase agreements.' " (*Ibid.*, citing Ed. Code, §§ 39300-39305 [repealed; see now Ed. Code, §§ 17400-17404, 17406].) As that opinion suggests, **school** districts may acquire new **school** facilities through leasing arrangements. Section 17400 thus authorizes "leases and agreements relating to real property and buildings." Section 17405 provides that "relocatable" structures may constitute **school** buildings, and it authorizes the lease of such structures subject to enumerated statutory requirements. ***1407** Other sections likewise implicitly recognize that "construction of a **school** building" may be accomplished with a "factory-built **school** building." (§ 17357. See also, e.g., §§ 17352, 17358.)

In short, there is no legal basis for appellant's argument that the installation of leased portable classrooms does not qualify as construction of **school** facilities. Under the statute, it constitutes the "building ... of **school** buildings." (§ 15100, subd. (b).) Under the language of Measure S, it falls within the stated purpose to "acquire [or] construct [ ] **school** facilities."

C. Summary of Conclusions

We find no violation of bond law in connection with Measure S. Contrary to the contention of appellant SLV CARE, the fact that one of the express purposes of Measure S was to "make the district eligible to receive over $8 million in state matching funds" did not trigger the advisory requirements of section 15122.5. On the separate question of the District's expenditures from bond proceeds, we likewise reject appellant's challenges to administrative costs, including salaries, bond preparation expenses, specific construction projects, and **school** consolidation expenses. Neither the law nor the record supports those claims.

III. DISCLOSURE OF PUBLIC RECORDS

SLV CARE next contends that the District violated two state statutes requiring the disclosure of public records: the California Public Records Act (CPRA) and the Ralph M. Brown Open Meeting Act ****167** (Brown Act).[FN14] As with our analysis of the preceding issues, we start by describing the governing legal principles.

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

FN14. In this section of the opinion (III), which concerns the CPRA and the Brown Act, further unspecified statutory references are to the Government Code.

A. General Principles

1. The California Public Records Act

"In 1968, the Legislature clarified the scope of the public's right to inspect public records by enacting the CPRA." (*County of Los Angeles v. Superior Court* (2000) 82 Cal.App.4th 819, 825, 98 Cal.Rptr.2d 564.) The Act is codified at sections 6250 et seq.

a. Policy and Operation

[34][35] The CPRA "was enacted for the purpose of increasing freedom of information by giving members of the public access to information in the possession ***1408** of public agencies." (*Filarsky v. Superior Court* (2002) 28 Cal.4th 419, 425-426, 121 Cal.Rptr.2d 844, 49 P.3d 194, citing *CBS, Inc. v. Block* (1986) 42 Cal.3d 646, 651, 230 Cal.Rptr. 362, 725 P.2d 470.) "The CPRA embodies a strong policy in favor of disclosure of public records...." (*California State University, Fresno Assn., Inc. v. Superior Court* (2001) 90 Cal.App.4th 810, 831, 108 Cal.Rptr.2d 870.) Public records are broadly defined. (*Id.* at p. 824, 108 Cal.Rptr.2d 870; see § 6252, subd. (e).)

"A state or local agency, upon receiving a request by any person for a copy of public records, generally must determine within 10 days whether the request seeks public records in the possession of the agency that are subject to disclosure." (*Filarsky v. Superior Court, supra,* 28 Cal.4th at p. 426, 121 Cal.Rptr.2d 844, 49 P.3d 194, citing § 6253, subd. (c).) "The Act includes protections and incentives for members of the public to seek judicial enforcement of their right to inspect public records subject to disclosure." (*Id.* at p. 427, 121 Cal.Rptr.2d 844, 49 P.3d 194. See *id.* at pp. 427-428, 121 Cal.Rptr.2d 844, 49 P.3d 194, discussing § 6259 [fee provisions].)

[36] Despite the strong legislative policy favoring access, "the public's right to disclosure of public records is not absolute. In California, the Act includes two exceptions to the general policy of disclosure of public records: (1) materials expressly exempt from disclosure pursuant to section 6254; and (2) the 'catchall exception' of section 6255, which allows a government agency to withhold records if it can demonstrate that, on the facts of a particular case, the public interest served by withholding the records clearly outweighs the public interest served by disclosure." (*City of San Jose v. Superior Court* (1999) 74 Cal.App.4th 1008, 1017, 88 Cal.Rptr.2d 552, fns. omitted.) But "unless exempted, all public records may be examined by any member of the public, often the press, but conceivably any person with no greater interest than idle curiosity." (*Marylander v. Superior Court* (2000) 81 Cal.App.4th 1119, 1125, 97 Cal.Rptr.2d 439.)

b. Judicial Review

"The Act sets forth specific procedures for seeking a judicial determination of a public agency's obligation to disclose records in the event the agency denies a request by a member of the public." (*Filarsky v. Superior Court, supra,* 28 Cal.4th at p. 426, 121 Cal.Rptr.2d 844, 49 P.3d 194, discussing § 6258.) The Act includes a provision "directing the trial court in a proceeding under the Act to reach a decision as soon as possible (§ 6258)," as well as a "provision for expedited appellate review (§ 6259, subd. (c))," which "reflect a clear legislative intent that the determination****168** of the obligation to disclose records requested from a public agency be made expeditiously." (*Id.* at p. 427, 121 Cal.Rptr.2d 844, 49 P.3d 194.)

[37][38] ***1409** As for appellate review, "an order of the trial court under the Act, which either directs disclosure of records by a public official or supports the official's refusal to disclose records, is immediately reviewable by petition to the appellate court for issuance of an extraordinary writ." (*City of San Jose v. Superior Court, supra,* 74 Cal.App.4th at p. 1016, 88 Cal.Rptr.2d 552.) "The standard for review of the order is 'an independent review of the trial court's ruling; factual findings made by the trial court will be upheld if based on substantial evidence.' " (*Ibid.*, citing *Times Mirror Co. v. Superior Court* (1991) 53 Cal.3d 1325, 1336, 283 Cal.Rptr. 893, 813 P.2d 240. Accord, *California State University, Fresno Assn.,*

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

Inc. v. Superior Court, supra, 90 Cal.App.4th at p. 824, 108 Cal.Rptr.2d 870.)

2. The Brown Act

[39] "The Brown Act (§ 54950 et seq.) provides for open meetings for local legislative bodies such as city councils, boards of supervisors and **school** boards." (*Ingram v. Flippo* (1999) 74 Cal.App.4th 1280, 1287, 89 Cal.Rptr.2d 60.)

a. Policy and Operation

[40] As the Legislature explicitly declared in enacting the Brown Act, "public agencies in this State exist to aid in the conduct of the people's business. It is the intent of the law that their actions be taken openly and that their deliberations be conducted openly." (§ 54950.) "A major objective of the Brown Act is to facilitate public participation in all phases of local government decisionmaking and to curb misuse of democratic process by secret legislation by public bodies." (*Cohan v. City of Thousand Oaks* (1994) 30 Cal.App.4th 547, 555, 35 Cal.Rptr.2d 782.)

"Numerous provisions of the Act combine to ensure public notice of and access to meetings of legislative bodies." (*Ingram v. Flippo, supra,* 74 Cal.App.4th at p. 1287, 89 Cal.Rptr.2d 60.) As relevant here, the Brown Act accords public record status to certain writings distributed for consideration at the public meeting of an agency's legislative body, including the agenda. (§ 54957.5.)

b. Judicial Review

Several avenues of judicial relief are available to address violations of the Brown Act. "To assist in enforcement of the open meeting laws, the Act provides for criminal penalties and civil injunctive or declaratory relief. (§§ 54959, 54960.)" (*Ingram v. Flippo, supra,* 74 Cal.App.4th at p. 1287, 89 Cal.Rptr.2d 60. See also, e.g., ***1410***California Alliance for Utility etc. Education v. City of San Diego* (1997) 56 Cal.App.4th 1024, 1030, 65 Cal.Rptr.2d 833 [plaintiff is entitled to declaratory relief where an actual controversy exists over "past compliance with the Brown Act"].) "In addition, actions taken in violation of the Brown Act may be declared null and void by a court. (§ 54960.1.)" (*Ingram v. Flippo, supra,* 74 Cal.App.4th at p. 1287, 89 Cal.Rptr.2d 60.)

[41] Even where a plaintiff has satisfied the threshold procedural requirements to set aside an agency's action, Brown Act violations will not necessarily "invalidate a decision. [Citation.] Appellants must show prejudice." (*Cohan v. City of Thousand Oaks, supra,* 30 Cal.App.4th at pp. 555-556, 35 Cal.Rptr.2d 782 [no prejudice shown from violation of § 54954.2, subd. (a), which "requires that an agenda be posted at least 72 hours before a regular ****169** meeting and forbids action on any item not on that agenda"].)

B. Application

With those principles in mind, we turn to the three specific contentions raised by appellant SLV CARE: (1) that the trial court erred in failing to find violations of the California Public Records Act; (2) that the trial court should have granted relief under the Brown Act; and (3) that the trial court committed prejudicial error in excluding testimony from David Churchill about those violations.

1. Background

SLV CARE made a number of written requests for public records relating to the closure decision, initially through its first attorney Steven A. Greenburg. The District responded to those requests. In its statement of decision, the trial court detailed the relevant chronology of request and response. To summarize, Greenburg wrote letters in June, July, and August 2003 requesting documents and demanding that the District cure its claimed disclosure violations. The District forwarded more than 400 pages of records to Greenburg in July, and it provided him with additional documents the following month. A separate request for documents was e-mailed to the District by David Churchill.

There was trial evidence concerning the scope of the requests and the extent of the District's compliance. SLV CARE sought to elicit Churchill's testimony about his request for public records and the District's refusal to comply, but the trial court excluded that

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

evidence because Churchill did not identify himself as a member of SLV CARE when he made the request.

*1411 In its statement of decision, the trial court observed: "There were no complaints of incomplete production in any of the correspondence except Mr. Greenburg's unexplained continued requests for the same exhibits already produced to Greenburg" and to appellant's trial counsel. After describing the District's compliance with respect to specific requested items, the trial court expressly found "insubstantial evidence of failure to produce documents in a timely manner" under either the CPRA or the Brown Act.

2. The California Public Records Act

[42] As to disclosure under the CPRA, SLV CARE asserts that there is "unrebutted evidence" that the District "refused to fully comply with its obligations."

Based on our review of the evidentiary record, we disagree.

As one example of disclosure violations, SLV CARE cites the testimony of the District's superintendent, Julie Haff, asserting: "She admitted to producing e-mails at her deposition that she had not produced in response to the Records Act request." But in the cited testimony, Haff clarified that she had "a practice of reading e-mails and deleting them." As a result of that practice, Haff believed that she "had no e-mails." But she later discovered that her laptop computer "was actually saving some e-mails that I had received that I sent a response to. Those were the only e-mails I had. I did not know that I had them."

As the trial court properly determined, the cited testimony is insubstantial evidence of failure to timely produce available documents.

As a second example, appellant SLV CARE points to testimony by Facilities Manager Loehr that "he had custody of the bond budget file" but that Superintendent Haff "did not ask him to produce that file in response to the record request." Appellant likewise asserts that the District's assistant superintendent, Don Fox, **170 "had financial documents that were responsive to the records request [ ] but he failed to produce them."

The problem with these contentions is that nothing about the bond budget file or related financial information was ever mentioned in any of the requests made by attorney Greenburg, who was the only person purporting to represent SLV CARE. (David Churchill did request information about bond expenditures, but he did so without mentioning any relationship to SLV CARE.) Initially, Greenburg specified only documents relating to two board meetings: the one in April 2003, when the Board made its closure decision, and the one in June 2003, when the Board rejected private funding to keep *1412 Redwood Elementary open for another year. His later requests sought tapes, agendas, and minutes from all meetings of the SSCC task force and of the Board held between June 2002 and August 2003. But at no time did Greenburg's correspondence indicate that he was seeking information about the bond or other financial issues. In the absence of evidence that SLV CARE requested financial documents, there can be no statutory violation with respect to this information.

SLV CARE also charges the District with unlawfully refusing to turn over available geologic reports. As evidentiary support for that claim, appellant again cites testimony by Julie Haff, the District's superintendent. As appellant characterizes that testimony, "her maintenance director had geologic reports that were responsive to Appellant's records request. She asked for these reports, but never obtained them." Haff's trial testimony does not support appellant's characterization. After being shown a 1985 geologic report, Haff was asked whether she had ever seen it before. She responded: "I don't believe I have, no." She was then asked, "where you would likely find that?" Her response was: "This would most likely be found with the Director of Maintenance." Haff then confirmed that she had asked the maintenance director to "turn over his files" prior to the **school** closures, but that he had not done so.

Significantly, however, there is no evidence that the maintenance director's files contained the requested 1985 geologic report. Haff testified only that such a report "likely" would be in those files. There is no evidence that it was.

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

The final asserted instance of violation relates to internal documents. According to appellant SLV CARE, it "sought internal documents used to evaluate the **schools** being targeted for closure. Ms. Haff testified that she did not produce any internal records in response to the record request." SLV CARE further maintains: "Not until shortly before trial were any internal records produced."

Again, however, the record fails to support appellant's contention. Turning first to the superintendent's testimony, she stated that she had no additional internal documents to produce. She was asked at trial: "Are there no internal District documents on the issue of the closure of Redwood **School** other than what's in the public record?" She answered: "No, there are no other records. I've taken what I-I mean, a year and a half ago, I took what I had and I put it into power point presentations. Those became part of the public record. That's what I maintained." Turning next to appellant's claim that responsive internal documents were available but withheld until shortly before trial, SLV CARE offers no citation to the record to support that claim, and our review of the record reveals no such evidence.

***1413** As explained above, on appellate review of claims under the California Public Records Act, we uphold the trial court's ****171** factual findings to the extent that they are based on substantial evidence. (*City of San Jose v. Superior Court, supra,* 74 Cal.App.4th at p. 1016, 88 Cal.Rptr.2d 552.) Here, the trial court determined that SLV CARE produced "insubstantial evidence" of CPRA violations. On this record, we agree.

3. The Brown Act

Appellant SLV CARE asserts Brown Act violations based on its claim that it was not provided with all of the public records given to members of the District's Board at public meetings. (See § 54957.5.)

Appellant's Brown Act claim fails for the same reasons as its CPRA claim. As just explained, the trial court determined that the District had complied with all of the relevant public records requests, and that determination finds adequate support in the record.

4. Excluded Testimony

[43] Appellant SLV challenges the trial court's decision to exclude David Churchill's proffered testimony to the extent that it concerned his requests to the District for public records.

The trial court's decision was made in response to a defense objection on relevance grounds. The District's counsel urged a "foundational requirement" that Churchill was acting on behalf of SLV CARE, asserting: "Without that, he doesn't have standing to testify here."

In sustaining the defense objection, the court explained that it considered Churchill's request "as being from an individual and not from the plaintiff in this action." The court acknowledged "that citizens have the right to invoke the protections of the statutes that we've been talking about"; but it concluded that "the evidence must be in some way related to the association [SLV CARE] or described as being from the association; and that's not the case in the instance of the e-mails." The trial court reiterated its reasoning in its statement of decision: "Mr. Churchill wrote his requests as an individual. He never identified himself as a member of SLV CARE. Any failure to produce documents pursuant to the Public Records Act may be actionable by ***1414** him as an individual. However, Mr. Churchill can't request records as an individual and then come into court as a representative of SLV CARE and complain of a failure to produce documents by the District in this action. The court's analysis had nothing to do with Mr. Churchill having to identify himself in order to obtain documents; it was merely a finding of lack of standing to pursue this action (in which he is not a party plaintiff) based on what he did individually."

Appellant assigns the trial court's decision as prejudicial error. According to appellant, its "members had no obligation to notify the District that they were representing themselves as individuals or were acting as members of SLV CARE." It further asserts: "Mr. Churchill had an absolute right to request and obtain public records." In appellant's view, the court's decision "makes sense only if Mr. Churchill had a duty to identify himself ... as an individual or as a member of

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

SLV CARE," which he did not.

[44][45][46] We review the trial court's ruling for an abuse of discretion. "Broadly speaking, an appellate court applies the abuse of discretion standard of review to any ruling by a trial court on the admissibility of evidence. Speaking more particularly, it examines for abuse of discretion a decision on admissibility that turns on the relevance of the evidence in question." (*People v. Waidla* (2000) 22 Cal.4th 690, 717-718, 94 Cal.Rptr.2d 396, 996 P.2d 46, ****172** citations omitted.) Put another way: "The trial court retains broad discretion in determining the relevance of evidence." (*People v. Garceau* (1993) 6 Cal.4th 140, 177, 24 Cal.Rptr.2d 664, 862 P.2d 664.) Relevance is statutorily defined as "having any tendency in reason to prove or disprove any disputed fact that is of consequence to the determination of the action." (Evid.Code, § 210.) Though not directly germane, a "matter collateral to an issue in the action may nevertheless be relevant to the credibility of a witness who presents evidence on an issue...." (*People v. Rodriguez* (1999) 20 Cal.4th 1, 9, 82 Cal.Rptr.2d 413, 971 P.2d 618.) But the admissibility of such collateral matter also lies within the trial court's discretion. (*Id.* at p. 10, 82 Cal.Rptr.2d 413, 971 P.2d 618.)

We first consider the factual component of the trial court's ruling. (Cf., *Johns v. City of Los Angeles* (1978) 78 Cal.App.3d 983, 998, 144 Cal.Rptr. 629 [consideration of the evidence "is essential to a proper exercise of judicial discretion"].) As to that component, "evaluating the factual basis for an exercise of discretion is similar to analyzing the sufficiency of the evidence for the ruling." (*In re Robert L.* (1993) 21 Cal.App.4th 1057, 1067, 24 Cal.Rptr.2d 654.) Here, the pertinent finding is that Churchill did not purport to act in his capacity as a member of SLV CARE when he requested the documents. Substantial evidence in the record supports that finding, in that Churchill's e-mails did not indicate that he was acting on appellant's behalf.

***1415** We next consider the legal basis for the trial court's evidentiary ruling. (Cf., *City of Sacramento v. Drew* (1989) 207 Cal.App.3d 1287, 1297, 255 Cal.Rptr. 704 [court must exercise its discretion within the "confines of the applicable principles of law"]; *In re Robert L., supra,* 21 Cal.App.4th at p. 1067, 24 Cal.Rptr.2d 654 ["scope of discretion lies in the particular law to be applied"].) Here, the trial court concluded that any failure on the part of the District to provide documents to Churchill is actionable by him, but not by SLV CARE. We agree.

In affirming the trial court's decision, we acknowledge that "any person" may enforce the CPRA. (See *Connell v. Superior Court* (1997) 56 Cal.App.4th 601, 611, 65 Cal.Rptr.2d 738.) "Thus, when section 6253 declares *every* person has a right to inspect any public record, when section 6257 commands state and local agencies to make records promptly available to *any* person on request, and when section 6258 expressly states *any* person may institute proceedings to enforce the right of inspection, they mean what they say." (*Id.* at pp. 611-612, 65 Cal.Rptr.2d 738.)

[47] By the same token, however, the relevant statutory provision authorizes a plaintiff "to enforce *his or her right* to inspect or to receive a copy of any public record or class of public records under this chapter." (§ 6258, italics added.) That provision "contemplates a declaratory relief proceeding commenced only by an individual or entity seeking disclosure of public records...." (*Filarsky v. Superior Court, supra,* 28 Cal.4th at p. 426, 121 Cal.Rptr.2d 844, 49 P.3d 194, discussing § 6258.) The statute provides neither explicit nor implicit authority for one person to enforce another's inspection rights. (Cf., § 6264 [order allowing inspection or copying of public records by district attorney].) Churchill thus could enforce his own statutory rights, but not those of appellant SLV CARE.

In light of this legal authority, we conclude, the court properly determined that the proffered testimony was irrelevant to *appellant's* claim of disclosure violations. Nor did it have relevance as impeachment evidence relating to the superintendent's ****173** credibility, since Churchill's written requests for public records were not addressed to her. (Cf., *People v. Rodriguez, supra,* 20 Cal.4th at p. 10, 82 Cal.Rptr.2d 413, 971 P.2d 618.)

In sum, the trial court had both an adequate factual basis and appropriate legal justification for its decision to exclude Churchill's testimony on this point. We therefore find no abuse of discretion in the challenged evidentiary ruling.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

*1416 C. Summary of Conclusions

Based on the evidence in the record, we affirm the trial court's determination that SLV CARE did not sustain its claim of CPRA and Brown Act violations. We also affirm the court's decision to exclude Churchill's testimony on this point.

IV. COMMUNITY INVOLVEMENT STATUTES

SLV CARE argues that the District violated provisions of the Education Code that mandate community involvement in decisions involving **school** closures and the use of surplus property. As before, we begin by summarizing the applicable law.

A. Governing Statutes

The applicable provisions are contained in the Education Code, Part 10.5 (**School** Facilities), Chapter 4 (Property: Sale, Lease, Exchange), Article 1.5 (Advisory Committees).[FN15] That article comprises sections 17387 through 17391.

> FN15. In this section of the opinion (IV), further unspecified statutory references are to the Education Code.

Section 17387 provides in pertinent part: "It is the intent of the Legislature to have the community involved before decisions are made about **school** closure or the use of surplus space, thus avoiding community conflict and assuring building use that is compatible with the community's needs and desires." (§ 17387.) Section 17388 sets forth the instances in which advisory committees may or must be used. It states: "The governing board of any **school** district may, and the governing board of each **school** district, prior to the sale, lease, or rental of any excess real property, except rentals not exceeding 30 days, shall, appoint a district advisory committee to advise the governing board in the development of districtwide policies and procedures governing the use or disposition of **school** buildings or space in **school** buildings which is not needed for **school** purposes." (§ 17388.) Requirements for the make-up of advisory committees are set forth in section *1417 17389. [FN16] The duties of such committees are described in section 17390. [FN17] Finally, **174section 17391 authorizes the decision not to appoint a committee in certain limited circumstances, which are not pertinent here.

> FN16. Section 17389 reads as follows: "A **school** district advisory committee appointed pursuant to Section 17388 shall consist of not less than seven nor more than 11 members, and shall be representative of each of the following:
>
> (a) The ethnic, age group, and socioeconomic composition of the district.
>
> (b) The business community, such as store owners, managers, or supervisors.
>
> (c) Landowners or renters, with preference to be given to representatives of neighborhood associations.
>
> (d) Teachers.
>
> (e) Administrators.
>
> (f) Parents of students.
>
> (g) Persons with expertise in environmental impact, legal contracts, building codes, and land use planning, including, but not limited to, knowledge of the zoning and other land use restrictions of the cities or cities and counties in which surplus space and real property is located."

> FN17. Section 17390 provides: "The **school** district advisory committee shall do all of the following:
>
> (a) Review the projected **school** enrollment and other data as provided by the district to determine the amount of surplus space and real property.
>
> (b) Establish a priority list of use of surplus space and real property that will be ac-

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

ceptable to the community.

(c) Cause to have circulated throughout the attendance area a priority list of surplus space and real property and provide for hearings of community input to the committee on acceptable uses of space and real property, including the sale or lease of surplus real property for child care development purposes pursuant to Section 17458.

(d) Make a final determination of limits of tolerance of use of space and real property.

(e) Forward to the district governing board a report recommending uses of surplus space and real property."

B. Application

SLV CARE asserts the violation of these provisions, based on the District's appointment of two committees: the Superintendent's **School** Closure Committee (SSCC), which was convened prior to the April 2003 **school** closure decision; and the Surplus Property Advisory Committee (SPAC), which the District's Board appointed in October 2003.

1. Superintendent's School Closure Committee

[48] SLV CARE contends that the SSCC "did not comply with [§] 17387 et seq. The Committee was directed to evaluate four **schools**, but was given incorrect and incomplete information."

We reject that contention on both procedural and substantive grounds.

First, as to procedure, appellant failed to support its argument in its opening brief. Evidentiary support for appellant's contention is offered for the ***1418** first time in its reply brief. As a matter of appellate procedure, we generally do not consider points first raised in an appellant's reply brief. (See, e.g., *Shade Foods, Inc. v. Innovative Products Sales & Marketing, Inc.* (2000) 78 Cal.App.4th 847, 894, fn. 10, 93 Cal.Rptr.2d 364.)

Second, on the merits, the contention is not persuasive. For one thing, the statute does not dictate what types or sources of information must be provided to an advisory committee. For that reason alone, SLV CARE has not shown a statutory violation. For another thing, it appears that the District made a good faith attempt to provide the committee with information that was complete and accurate. Although the SSCC might not have received every report in existence addressing the physical condition of the four **schools**, the committee's own reports demonstrate that it had evidence on some of the cited problems, such as the presence of mold in some classrooms and the current condition of the septic systems. Furthermore, with respect to particular reports that the committee did not have, SLV CARE fails to demonstrate prejudice from their absence. To the contrary, we find nothing in the cited reports to suggest that they would have affected the committee's recommendations. For example, the 1990 geotechnical report dismissed the Ben Lomond fault as "a potential earthquake source."

In short, we find no statutory violation by the District in connection with its Superintendent's **School** Closure Committee.

2. Surplus Property Advisory Committee

SLV CARE attacks the District's use of the SPAC on two grounds. First, it asserts, the District should not have made the decision to declare the property surplus; rather, that decision should have been left up to the committee. (See § 17390.) Second, it contends, the District violated the statute by failing to include representatives from all of the listed ****175** groups. (See § 17389.) On that point, SLV CARE observes, the District made a purposeful decision not to solicit socioeconomic information from the applicants.

In its statement of decision, the trial court refused to rule on the issues, concluding that the claim was not yet ripe. As the court explained: "Education Code [sections] 17387-[173]90 relate to the creation of an Advisory Committee prior to and relating to the 'sale, lease or rental of excess real property....' Those circumstances have not yet arisen."

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128, 209 Ed. Law Rep. 290, 06 Cal. Daily Op. Serv. 4493, 2006 Daily Journal D.A.R. 6509
(Cite as: 139 Cal.App.4th 1356, 44 Cal.Rptr.3d 128)

We agree with the trial court that appellant has no current cognizable claim under the statute. In pertinent part, section 17388 provides that a **school** district's governing board "*may,* and ... prior to the sale, lease, or rental of any excess real property ... *shall,* appoint a district ***1419** advisory committee ...." (§ 17388, italics added.) Given the circumstances here-with no surplus property then proposed to be sold, leased, or rented within the meaning of the statute-the District's use of the committee was discretionary, not mandatory. (See § 75 ["may" is permissive; "shall" is mandatory].) Because the SPAC was not a statutorily mandated committee, the District was not bound by the statutory requirements for its composition or duties.

C. Summary of Conclusions

As to appellant's claims concerning the Superintendent's **School** Closure Committee, even if they are not forfeited, they lack merit. The governing statute does not dictate what information must be provided to an advisory committee, and the record does not support the contention that the information provided was inaccurate or incomplete. Concerning appellant's complaints about the Surplus Property Advisory Committee, they are not cognizable under the statute. Under the circumstances presented here, the District's use of that committee was discretionary, not mandatory.

V. EVIDENTIARY RULINGS

Appellant SLV CARE next takes issue with the trial court's evidentiary rulings. It contends that the court erroneously sustained objections, by relying on grounds other than those stated in counsel's objection, and by relying on grounds that are not recognized under the Evidence Code, such as overbreadth. Taken as a whole, appellant asserts, those rulings demonstrate bias. SLV CARE also contends that the court committed error by allowing the District's bond counsel to testify to legal conclusions.

[49] As explained above, "an appellate court applies the abuse of discretion standard of review to any ruling by a trial court on the admissibility of evidence." (*People v. Waidla, supra,* 22 Cal.4th at p. 717, 94 Cal.Rptr.2d 396, 996 P.2d 46. See also, e.g., *Korsak v. Atlas Hotels, Inc.* (1992) 2 Cal.App.4th 1516, 1523, 3 Cal.Rptr.2d 833 [expert testimony].) "A trial court's exercise of discretion in admitting or excluding evidence ... will not be disturbed except on a showing the trial court exercised its discretion in an arbitrary, capricious, or patently absurd manner that resulted in a manifest miscarriage of justice...." (*People v. Rodriguez, supra,* 20 Cal.4th at pp. 9-10, 82 Cal.Rptr.2d 413, 971 P.2d 618, citations omitted. See Evid.Code, §§ 353, 354.)

Applying those principles in this case, we find no basis for reversal.

[50] We first address appellant's claim that the court sustained numerous objections on erroneous grounds. Simply put, the record does not support that claim. In nearly all of the cited instances, either the objection or the ruling ***1420** had a cognizable ****176** basis, such as hearsay or lack of foundation. In cases where a question was challenged as overbroad, the court often asked counsel to narrow or rephrase it. Nor did the court's sua sponte rulings exceed the scope of its discretion. "It is well established that where questions are asked which are improper, the court acts within the scope of its duty in refusing to allow them to be answered, even though no objection be made." (*People v. White* (1954) 43 Cal.2d 740, 747, 278 P.2d 9. See also, e.g., *Kimic v. San Jose-Los Gatos Etc. Ry. Co.* (1909) 156 Cal. 379, 390, 104 P. 986, criticized on another point in *Lane v. Pacific Greyhound Lines* (1945) 26 Cal.2d 575, 583, 160 P.2d 21.)

We next consider the assertion that the court demonstrated bias against SLV CARE. The record also belies that assertion. Far from exhibiting bias, the court showed admirable patience and even-handedness. The record is replete with instances where the court accommodated appellant's trial counsel, giving them considerable latitude, accommodating them, and occasionally even suggesting alternate approaches for presenting evidence.

[51] Finally, we turn to appellant's argument that the court erred in permitting the District's bond counsel, William Kadi, to testify about the propriety of bond expenditures. We reject that contention. In this case, "there is no basis for concluding that the trial court relied on [the witness's] alleged legal conclusions...." (*Hankins v. El Torito Restaurants, Inc.* (1998) 63

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

Cal.App.4th 510, 530, 74 Cal.Rptr.2d 684.) Instead, it appears that "the relevant portion of [his] testimony [was] his percipient testimony." (*Ibid.*) In ruling on the objection by appellant's trial counsel to the proffered testimony, the trial court acknowledged appellant's "right to object to Mr. Kadi expressing an opinion as to what I should find to be the law." But the court also noted Kadi's ability to address "factual issues in the case" and it therefore permitted his testimony. In its statement of decision, the court described Kadi's "opinions" as "somewhat self-serving" but characterized his "testimony" as "instructive to the court nonetheless." Given its comments, the trial court plainly understood its role as arbiter of the law. And because this was a bench trial, there was no danger of jury confusion. In short, we find no error in the court's decision to allow bond counsel to testify. Because we find no error, we need not consider prejudice. (*People v. Rodriguez, supra,* 20 Cal.4th at p. 10, 82 Cal.Rptr.2d 413, 971 P.2d 618.)

To sum up, this record discloses no abuse of discretion by the trial court in connection with the challenged evidentiary rulings.

*1421 VI. ATTORNEY FEES

[52] Appellant SLV CARE claims entitlement to an award of attorney fees, citing three different statutory provisions. As we now explain, none of those provisions supports appellant's claim for fees.

Appellant first relies on Code of Civil Procedure section 1021.5. That provision, sometimes called the "private attorney general" statute, authorizes an award of attorney fees to the "successful party" in certain actions resulting in the "enforcement of an important right affecting the public interest." (Code Civ. Proc., § 1021.5. See *Graham v. DaimlerChrysler Corp.* (2004) 34 Cal.4th 553, 565, 21 Cal.Rptr.3d 331, 101 P.3d 140.) Here, however, appellant is not the successful party in this litigation. For that reason, there is no basis for a fee award in its favor under this statute.

[53] SLV CARE next claims entitlement to statutory fees under a provision of the California Public Records Act: **177Government Code section 6259, subdivision (d). That provision mandates an award of fees and costs to prevailing plaintiffs in CPRA actions, and it also insulates unsuccessful plaintiffs from liability for the agency's defense costs, unless the action is "clearly frivolous." (Gov.Code, § 6259, subd. (d). See *Filarsky v. Superior Court, supra,* 28 Cal.4th at pp. 427-428, 121 Cal.Rptr.2d 844, 49 P.3d 194.) "A plaintiff prevails within the meaning of the statute 'when he or she files an action which results in defendant releasing a copy of a previously withheld document.' " (*Los Angeles Times v. Alameda Corridor Transportation Authority* (2001) 88 Cal.App.4th 1381, 1391, 107 Cal.Rptr.2d 29.) In other words, "if a public record is disclosed only because a plaintiff filed a suit to obtain it, the plaintiff has prevailed." (*Ibid.*) Conversely, for purposes of the CPRA fee statute, a plaintiff has *not* prevailed where "substantial evidence supported a finding that the 'litigation did *not* cause the [agency] to disclose any of the documents ultimately made available....' " (*Ibid.*) This case falls into the latter category. Although SLV CARE contends that its action against the District resulted in the release of previously withheld public records, it offers no citation to the evidentiary record to support that contention. We therefore affirm the trial court's implied determination that SLV CARE did not prevail on its CPRA claims. We also affirm the trial court's award of costs to the District, as SLV CARE offers no argument that the cost award was improper under the statute. (Gov.Code § 6259, subd. (d).)

In its third and final fee claim, SLV CARE seeks statutory attorney fees pursuant to Government Code section 800. The factual predicate for an award of fees under that provision is "arbitrary or capricious action or conduct by a public entity." (Gov.Code, § 800.) In light of our affirmance of *1422 the judgment in the District's favor, there is no basis for concluding that the District's actions were arbitrary or capricious, and thus no basis for an award of statutory fees under Government Code section 800.

In sum, there is no basis for any of appellant's claims to attorney fees.

DISPOSITION

The judgment is affirmed. The District shall recover its costs on appeal.

SANTA BARBARA SCHOOL DISTRICT et al., Petitioners,
v.
THE SUPERIOR COURT OF SANTA BARBARA COUNTY, Respondent; C. RAYMOND MULLIN et al., Real Parties in Interest.
C. RAYMOND MULLIN et al., Plaintiffs and Respondents,
v.
SANTA BARBARA SCHOOL DISTRICT et al., Defendants and Appellants
L.A. No. 30054., L.A. No. 30086.

Supreme Court of California
January 15, 1975.

SUMMARY

In a class action under a complaint alleging two causes of action concerning the validity of the composition and election of a city board of education and one cause challenging the validity of a desegregation plan adopted at a board meeting, the trial court filed a memorandum of intended decision declaring an intent to enjoin implementation of the plan and also expressing the court's intent with respect to the other causes. However, before findings and conclusions were filed, the Supreme Court issued an alternative writ of prohibition limited in effect to the part of the intended decision concerned with implementation of the plan. Judgment was rendered on the first two causes. (Superior Court of Santa Barbara County, No. 96260, John T. Rickard, Judge.)

The Supreme Court ordered defendants' appeal from the judgment transferred from the Court of Appeal to it for consideration simultaneously with the writ proceeding. The judgment was reversed and the cause remanded with directions to enter judgment for defendants on the two causes relating to validity of the election and composition of the board. And a peremptory writ of prohibition issued to restrain the trial court's intended action in all respects except in enjoining implementation of the desegregation plan which had purportedly been adopted. It was held that the board had been without jurisdiction to adopt the plan at the meeting as a result of the failure of the posted agenda for that meeting to give adequate notice that the particular plan would be considered at the meeting. Additionally, the court held that as enacted in Proposition 21, Ed. Code, § 1009.6, barring the assignment of pupils on the basis of race, is unconstitutional as applied to school districts manifesting segregation, but that the parts of the proposition which repealed Ed. Code, §§ 5002, 5003, declaring state policy of eliminating racial imbalance in schools, were severable from the invalid part and independently valid. And under the view that there is no constitutional right to a separate and elected elementary board of education and no unconstitutional infirmity in designating a city's board of education, elected from the full territory within its jurisdiction, to govern the lesser and wholly included elementary school district, the Supreme Court held that the Santa Barbara Board of Education, which has been designated by the Legislature to govern the city's elementary school district, may lawfully be the common governing board of the city's high and elementary school districts, even though they are not coterminous.

In Bank. (Opinion by Sullivan, J., expressing the unanimous view of the court.)

HEADNOTES

Classified to California Digest of Official Reports

(1) Schools § 10--School Districts--Assignment of Pupils on Basis of Race.
Ed. Code, § 1009.6, which bars assignment of pupils on the basis of race, is unconstitutional as applied to school districts manifesting either de jure or de facto segregation.

(2) Schools § 10--School Districts--Validity of Repealing Provisions of Initiative.
Inasmuch as a policy in favor of neighborhood schools is a reasonably conceivable one and such an expression of policy can in no way limit or affect the constitutional obligations of school districts, the provisions found in §§ 2, 3, and 4 of Proposition 21, repealing Ed. Code, §§ 5002, 5003, which had declared the state policy of eliminating racial imbalance in schools and had delineated factors to be considered in implementing the policy, and also repealing certain administrative guidelines, cannot be struck down as

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

constitutionally impermissible.

(3) Schools § 10--School Districts--Severability of Initiative Provisions.
The fact that, as enacted in Proposition 21, Ed. Code, § 1009.6, barring the assignment of pupils on the basis of race, is unconstitutional as applied to school districts manifesting segregation, does not necessarily invalidate the repealing provisions of the proposition, inasmuch as the repealing provisions are severable from the unconstitutional part not only mechanically, but also as to purpose and method, and are of independent validity and not inconsistent with the elimination of the invalid part.

(4a, 4b) Schools § 51 (5)--Administrative Officers--Boards--Meetings-- Jurisdiction.
Under Ed. Code, § 966, requiring the posting of an agenda 48 hours prior to a proposed meeting of a school board, the board cannot change its posted agenda within the 48-hour period next immediately preceding a regular meeting. If the board wishes to change the agenda substantially within that period, it must postpone a meeting at least 48 hours. Thus, where concerned parents and citizens could reasonably infer from the posted agenda that only those desegregation plans which had been previously presented would be considered at the meeting, the board had no jurisdiction to consider or approve a plan which was not presented until that meeting and which differed substantially from all the previously presented plans.

(5) Schools § 51 (5)--Administrative Officers--Boards--Meetings--Posted Agenda.
The proper posting of a school board meeting agenda, as required by Ed. Code, § 966, cannot be replaced by newspaper publicity.

(6) Schools § 51 (6)--Administrative Officers--Boards--Rights, Powers and Duties--Desegregation.
In desegregating a school system, a school board is not limited in the exercise of its powers to those acts reasonably necessary to effectuating desegregation.

(7) Schools § 77--Actions and Liability--Judicial Control Over Official Acts--Prohibition.
Prohibition was available to prevent the trial court from exceeding its jurisdiction by carrying out its memorandum of intended decision, insofar as the decision would amount to a substitution of the trial court's views for those of a school board with respect to a matter within the board's discretion concerned with the closing down of certain schools.
[See **Cal.Jur.2d, Rev.**, Schools, § 217; **Am.Jur.2d**, Schools, § 52.]
(8) Schools § 51 (1)--Administrative Officers--One Board as Governing Districts Which Are Not Coterminous.
There is no constitutional right to a separate, elected elementary board of education and no constitutional infirmity in designating a city's board of education, elected from the full territory within its jurisdiction, to govern the lesser and wholly included elementary school district. Therefore, the Santa Barbara Board of Education, which has been designated by the Legislature to be the governing board of the city's elementary school district, and which is elected in compliance with the "one man, one vote" rule, may lawfully be the common governing board of the elementary and high school districts despite the fact that they are not coterminous. And election of the board is not subject to attack on the theory that the election is also an election of the governing board of the elementary school district and that such latter election violates the "one man, one vote" rule as causing the dilution of the votes of electors residing in the elementary school district by the votes of non-resident electors.

SULLIVAN, J.

In this class action brought against two school districts and their common governing board of education, we are called upon to determine the validity of a desegregation plan for elementary schools. Our task also requires us to examine and pass upon the constitutionality of a recent initiative measure enacting certain anti-busing legislation and repealing existing statutes dealing with the prevention and elimination of racial and ethnic imbalance in pupil enrollment. Additionally we must examine the validity of the pertinent statute permitting the board of education in question to be the common governing board of the high school district and the elementary school district here involved. In essence, plaintiffs make two independent but cognate attacks - one against the board's plan and the other against the board itself. We take them up in that order, separately stating the facts proper to each. We first turn our attention to the desegregation plan.

I

Defendant Santa Barbara Board of Education (hereafter Board and referred to as defendant in the singular) is the common governing board of defendants Santa Barbara School District and Santa Barbara High School District. Defendant Norman B. Scharer is the Superintendent of Schools of Santa Barbara (superintendent).

Culminating a period of five years' planning and study aimed at correcting the racial imbalance in elementary schools, the Board on February 3, 1972, resolved "to move immediately toward the total desegregation of all Santa Barbara elementary schools beginning in September 1972." The Board adopted the following four-step procedure to effectuate this resolution: (1) the issuance by February 22, 1972, of a statement of policy on desegregation; (2) the creation of a "Task Force Committee for Desegregation," consisting of 22 members, to develop criteria for the study of proposed desegregation plans and to present such criteria to the Board no later than March 2, 1972; (3) the establishment of an "Education and Integration Study Committee," consisting of more than 100 members, under the chairmanship of the superintendent, to review various plans submitted for carrying out the desegregation-integration policy and to present to the Board, no later than May 4, 1972, two or three alternate plans; and (4) the determination that "[o]n May 18, 1972, this Board of Education will adopt one plan to be implemented as fully as possible in September 1972." *320

Both committees met numerous times and completed all work on schedule. On March 2, 1972, the Board adopted 12 criteria for guidance in reviewing the proposed desegregation plans. One of the criteria stated that any desegregation plan should "provide for optimum use of and be capable of being implemented within existing facilities."

Nine desegregation plans were received and studied initially by the "Task Force" and thereafter by the larger Education and Integration Study Committee. The latter committee by a vote of 74 to 4 recommended to the Board a specific desegregation plan known as the Hord-Mailes-Christian-Belden Plan, named after the four sponsoring elementary school principals. The committee also approved two alternate plans and prior to May 4, 1972, presented all three to the Board. These three plans, together with the West-Anderson plan not recommended by the committee, were formally presented to the Board at its meeting held on May 4, 1972.

Due to various objections raised by members of the Board in the ensuing discussion at that meeting, the superintendent decided to develop his own plan. On May 16, 1972, just two days prior to the Board meeting scheduled for final adoption of a desegregation plan, the superintendent announced, in an article appearing in the Santa Barbara News Press, that he proposed recommending a new desegregation plan at that meeting. The next day the same newspaper contained a longer article describing the general outlines of the so-called "Administration Plan." That night the plan was discussed at a meeting of the Education and Integration Study Committee. However, there was no time for study or review prior to the Board meeting the following night.

At its meeting on the next night - May 18, 1972 - the Board discussed the three plans recommended by the committee, the West-Anderson Plan and the Administration Plan. The last named plan was presented orally because it had not yet been reduced to writing. Despite two petitions signed by 3,000 people requesting a postponement for further study, the Administration Plan was adopted by the Board as orally presented. On June 8, 1972, the plan was summarized in writing and submitted to the State Department of Education for approval.

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

On June 9, 1972, C. Raymond Mullin and Howard G. Larson, on behalf of themselves and of all other voters, parents and taxpayers similarly situated, commenced the instant action seeking: (1) a writ of mandate to compel a special election of the Board and (2) declaratory ***321** and injunctive relief to prevent the implementation of the allegedly unlawful and inadequate desegregation plan. The complaint contained three causes of action: The first two which we discuss separately (see Part II, *infra*) concerned the validity of the election and composition of the Board; the third cause of action alleged that the adoption of the Administration Plan by the Board was: (1) invalid for failure to give notice as required by the Education Code and (2) an abuse of discretion, in that the Board hurriedly adopted an inadequately studied plan which failed to desegregate all the elementary schools, despite the closing of two elementary schools altogether and the changing of the kindergarten to grade six pattern in two other schools.

Following an eight-day trial, the court filed a memorandum of intended decision. In respect to the third count [FN1] which attacked the validity of the Administration Plan, the court declared its intention to enjoin implementation of the plan. It rested this contemplated action on two bases. First, the court concluded that the Board had no jurisdiction to close the schools since it had failed to include notice of the proposed closure of two schools in its published agenda as required by section 966 of the Education Code. The court determined that the closure of the schools was such an integral part of the Administration Plan that the whole plan must fall. Secondly, the court concluded that the Board abused its discretion by adopting the Administration Plan requiring the closure of two schools since such closure was not reasonably necessary to the effective desegregation of the elementary schools.

> FN1 The memorandum of intended decision also included a proposed decision on the first two causes of action as well, which is discussed in Part II of this opinion.

Before findings of fact and conclusions of law, based on the court's memorandum of intended decision were filed, defendants presented to this court a petition invoking our original jurisdiction and seeking a writ of prohibition restraining the trial court from entering judgment in accord with the memorandum of intended decision. We issued an alternative writ of prohibition. [FN2] On August 28, 1972, plaintiffs petitioned this court to modify the alternative writ so as to omit any stay of the trial court's proposed order enjoining implementation of the plan. Since in issuing the alternative writ, we had determined that the petition had made a prima facie showing that the proposed action of the trial court ***322** was in excess of its jurisdiction and therefore that its proposed enjoining of the Administration Plan must be prohibited pending our final determination of the issue, we denied the petition for modification.

> FN2 As prayed for in the petition, the alternative writ of prohibition was limited in effect to the intended decision on the third cause of action. The trial court thereafter entered judgment on the first two causes of action and defendants appealed. We ordered such appeal transferred from the Court of Appeal to this court so that we could consider it simultaneously with the writ proceeding.

Subsequently an additional factor was injected into the resolution of the above proceeding with the adoption by the electorate at the general election held on November 7, 1972, of the initiative measure denominated Proposition 21. Section 1 of that proposition added to the Education Code section 1009.6 providing: "No public school student shall, because of his race, creed, or color, be assigned to or be required to attend a particular school." Sections 2 and 3 of Proposition 21 repealed sections 5002 and 5003 [FN3] respectively of the Education Code, which had declared the state policy of eliminating racial imbalance in California schools and had delineated the various factors to be considered in implementing this policy. Section 4 of Proposition 21, repealed the administrative guidelines toward achieving racial balance in the schools adopted by the State Board of Education. (§§ 14020 and 14021 of tit. 5 of the Cal. Admin. Code.) ***323**

> FN3 Section 5002 provides: "It is the declared policy of the Legislature that persons or agencies responsible for the establishment of school attendance centers or the assignment of pupils thereto shall prevent and eliminate racial and ethnic imbalance in pupil enrollment. The prevention and elimination of such imbalance shall be given high priority in all decisions relating to school sites, school attendance areas, and school attendance practices."

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

Section 5003 provides: "(a) In carrying out the policy of Section 5002, consideration shall be given to the following factors:

"(1) A comparison of the numbers and percentages of pupils of each racial and ethnic group in the district with their numbers and percentages in each school and each grade.

"(2) A comparison of the numbers and percentages of pupils of each racial and ethnic group in certain schools with those in other schools in adjacent areas of the district.

"(3) Trends and rates of population change among racial and ethnic groups within the total district, in each school, and in each grade.

"(4) The effects on the racial and ethnic composition of each school and each grade of alternate plans for selecting or enlarging school sites, or for establishing or altering school attendance areas and school attendance practices.

"(b) The governing board of each school district shall periodically, at such time and in such form as the Department of Education shall prescribe, submit statistics sufficient to enable a determination to be made of the numbers and percentages of the various racial and ethnic groups in every public school under the jurisdiction of each such governing board.

"(c) For purposes of Section 5002 and this section, a racial or ethnic imbalance is indicated in a school if the percentage of pupils of one or more racial or ethnic groups differs significantly from the districtwide percentage.

"(d) A district shall study and consider plans which would result in alternative pupil distributions which would remedy such an imbalance upon a finding by the Department of Education that the percentage of pupils of one or more racial or ethnic groups in a school differs significantly from the district-wide percentage. A district undertaking such a study may consider among feasibility factors the following:

"(1) Traditional factors used in site selection, boundary determination, and school organization by grade level.

"(2) The factors mentioned in subdivision (a) of this section.

"(3) The high priority established in Section 5002.

"(4) The effect of such alternative plans on the educational programs in that district.

"In considering such alternative plans the district shall analyze the total educational impact of such plans on the pupils of the district. Reports of such a district study and resulting plans of action, with schedules for implementation, shall be submitted to the Department of Education, for its acceptance or rejection, at such time and in such form as the department shall prescribe. The department shall determine the adequacy of alternative district plans and implementation schedules and shall report its findings as to the adequacy of alternative district plans and implementation schedules to the State Board of Education. A summary report of the findings of the department pursuant to this section shall be submitted to the Legislature each year.

"(e) The State Board of Education shall adopt rules and regulations to carry out the intent of Section 5002 and this section."

Since the Administration Plan was adopted by the Board pursuant to and in furtherance of the repealed code sections, and since the plan involved the assignment of various ethnic minority students to certain schools in order to create a racial balance among the elementary schools in the district, Proposition 21, if valid, would provide an independent basis to support the trial court's intended invalidation of the Administration Plan. This court has, therefore, allowed various amici curiae to file briefs directed to the question of the validity and constitutionality of Proposition 21.

In 1970 the Legislature had added to the Education Code,

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

FN4 section 1009.5 which provided: "No governing board of a school district shall require any student or pupil to be transported for any purpose or for any reason without the written permission of the parent or guardian." This court in *San Francisco Unified School Dist.* v. *Johnson* (1971) 3 Cal.3d 937 [92 Cal.Rptr. 309, 479 P.2d 669] observed that this section was reasonably susceptible of two interpretations: "The ambiguity of section 1009.5 inheres in the phrase '*require*ee any student or pupil to be transported.' [Fn. omitted.] (Italics added.) One may 'require' a student to be transported by punishing a refusal or by physically forcing him onto a school bus; in a second sense, one may 'require' a student to be transported by *assigning* him to a school beyond walking distance of his home." (

> FN4 Hereafter, unless otherwise indicated, all section references are to the Education Code. *Id.* at p. 945.) We reasoned that if the section were construed to prohibit assignment of pupils to a school beyond a reasonable walking distance from the pupil's home it would be unconstitutional. Applying the doctrine that where possible a statute will be construed in a manner that would uphold its constitutionality, we accordingly held that "section 1009.5 does no more than prohibit a school district from compelling ***324** students, without parental consent, to use means of transportation furnished by the district." (*Id.* at p. 942.)

Shortly after our decision in *Johnson*, the Legislature passed the Bagley Act adding sections 5002 and 5003 (see fn. 3, *ante*) which directed school districts to "eliminate racial and ethnic imbalance in pupil enrollment" and specified certain factors to be considered in developing plans to achieve racial balance. The proponents of Proposition 21 in their published argument in support of the proposition characterized the Bagley Act as a "forced integration measure ... which could only be accomplished through forced busing ... without regard to neighborhood schools or parental consent." They asserted opposition to "mandatory busing for the sole purpose of achieving forced integration" and to "reassign[ing] pupils from their neighborhood schools to achieve racial and ethnic balance." Proposition 21 purported to eliminate this evil by repealing the Bagley Act (§§ 5002 and 5003), as well as the complementary administrative regulations, and by adding section 1009.6 which would prohibit forced integration and mandatory busing by denying the school district's power to assign pupils to schools on the basis of race.

Defendants and various amici curiae urge that Proposition 21 is unconstitutional in its entirety, both insofar as it added section 1009.6 and as it repealed sections 5002 and 5003 along with the administrative guidelines.

We declared in *Johnson* that section 1009.5, if construed to bar assignment of pupils to a school beyond reasonable walking distance "would be unconstitutional if applied to districts manifesting racial segregation, whether de jure or de facto in character." (*San Francisco Unified School Dist. v. Johnson, supra*, 3 Cal.3d at p. 954.) Section 1009.6 which bars the assignment of pupils on the basis of race is unconstitutional in the same manner and for the same reasons set forth by us in *Johnson*. We deem it unnecessary to repeat here at length our rationale in that case; our opinion speaks for itself. We merely outline here its essentials, and underscore our conclusions with reference to subsequent United States Supreme Court cases.

First: We emphasized in *Johnson* that "Often the most effective program, and at times the only program, which will eliminate segregated schools requires pupil reassignment and busing. ... Since the U.S. Supreme Court has held that under the Constitution school boards in *de jure segregated districts* are 'clearly charged with the affirmative duty to ***325** take whatever steps might be necessary' to eliminate segregation 'root and branch,' a statute which would proscribe a principal, and in some cases essential and exclusive step to achieve that end, must obviously violate constitutional requirements." (*San Francisco Unified School Dist. v. Johnson, supra*, 3 Cal.3d 937, 955.) (Italics added.)

Approximately three months after we expressed these views in *Johnson* in dealing with section 1009.5, the United States Supreme Court in *Board of Education v. Swann* (1971) 402 U.S. 43 [28 L.Ed.2d 586, 91 S.Ct. 1284] struck down a statute virtually identical with section 1009.6 FN5 (added to the code in 1972 by Proposition 21) with an unmistakably clear and forceful expression of the same constitutional mandate. "Just as the race of students must be considered in determining whether a constitutional violation has occurred, so also must race be considered in formulating a remedy. To forbid ... all assignments made on the basis of race would deprive school authorities of the one tool absolutely essential to fulfillment of their constitutional obligation to eliminate dual school systems. [¶]

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

Similarly, the flat prohibition against assignment of students for the purpose of creating a racial balance must inevitably conflict with the duty of school authorities to disestablish dual school systems. ... [¶] We likewise conclude that an absolute prohibition against transportation of students assigned on the basis of race, 'or for the purpose of creating a balance or ratio,' will similarly hamper the ability of local authorities to effectively remedy constitutional violations." (

> FN5 North Carolina General Statutes section 115-176.1 (Supp. 1969) provides in relevant part: "No student shall be assigned or compelled to attend any school on account of race, creed, color or national origin, or for the purpose of creating a balance or ratio of race, religion or national origins. Involuntary bussing of students in contravention of this article is prohibited ...." *Id.* at p. 46 [28 L.Ed.2d at p. 589].)

Second: We further held in *Johnson* that section 1009.5 was unconstitutional as applied to school districts manifesting de facto as well as de jure racial segregation. Citing a number of decisions of lower federal courts (3 Cal.3d at p. 956, fns. 21-23), we observed that they had not drawn a clear distinction between de facto and de jure segregation and that some of them had defined de facto segregation as "that resulting from residential patterns in a nonracially motivated neighborhood school system." (*Id.* at p. 956, fn. omitted; citing inter alia, *Keyes v. School District Number One, Denver, Colorado* (D.Colo. 1970) 313 F.Supp. 61, 73-75; *Swann v. Charlotte-Mecklenburg Bd. of Educ.* (4th Cir. 1970) 431 F.2d 138, 141; 3 Cal.3d at p. 956, fns. 21 and 22.) We noted the necessary ***326** influence of school board decisions on the racial composition of residential areas.

Canvassing these federal precedents we concluded: "Thus under the current pattern of court decisions, neither school districts nor lower courts can determine with any confidence whether a pattern of school segregation should be classed as de facto or de jure. Consequently, if we held section 1009.5 unconstitutional only as applied to districts of de jure segregation, no school board in California ... could ascertain whether section 1009.5 could constitutionally apply within its district. Such a holding would, therefore, entail uncertain enforcement of section 1009.5, a confusion which would inhibit and delay school boards in their efforts to bring about full equality of educational opportunity. The *Green* decision [*Green v. County School Board* (1968) 391 U.S. 430 (20 L.Ed.2d 716, 88 S.Ct. 1689)] calls for desegregation now; a statute which imports confusion and delay in the uprooting of de jure segregation violates both the rule prohibiting partial enforcement of legislation, when such enforcement entails the danger of vague future application, and the mandate of the Supreme Court of the United States." (*San Francisco Unified School Dist. v. Johnson, supra*, 3 Cal.3d at p. 957.)

(1) This reasoning has been substantially buttressed by the recent decision of the United States Supreme Court in *Keyes v. School District, No. 1, Denver, Colo.* (1973) 413 U.S. 189 [37 L.Ed.2d 548, 93 S.Ct. 2686]. In *Keyes* the high court defined de jure segregation as "current condition of segregation resulting from intentional state action." (*Id.* at p. 205 [37 L.Ed.2d at pp. 561-562].) As potentially probative of an intentional segregative action on the part of school boards, the court referred to "policies and practices with respect to schoolsite location, school size, school renovations and additions, student-attendance zones, student assignment and transfer options, mobile classroom units, transportation of students, assignment of faculty and staff etc." (*Id.* at pp. 213-214 [37 L.Ed.2d at p. 566].)

The high court further emphasized that segregatory intent on the part of the school board is not limited to actions in the immediate present. "We reject any suggestion that remoteness in time has any relevance to the issue of intent. If the actions of school authorities were to any degree motivated by segregative intent and the segregation resulting from those actions continues to exist, the fact of remoteness in time certainly does not make those actions any less 'intentional.'" (*Id.* at p. 210 [37 L.Ed.2d at p. 564].) We read this to mean that a school board therefore can ascertain ***327** whether the segregation present in its district is de jure or de facto only by examining the full history of acts by the school authorities and determining if, at any time in that course of action, some acts were undertaken with segregatory intent. We think it is clear that no school board or lower court can ascertain with any degree of confidence whether section 1009.6 can constitutionally apply in its district and we further believe that therefore a determination by this court that section 1009.6 can apply to districts manifesting de facto segregation would involve uncertain enforcement and improperly delay elimination of de jure segregation.

The Supreme Court has continuously reiterated its com-

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

mitment to eliminating de jure racial segregation and its unwillingness to accept any limitation upon procedures necessary to the resolute and thorough accomplishment of that task. To allow school authorities to rest content in the assumption that the pattern of segregation in their district is de facto and therefore to claim that section 1009.6 prohibits them from eliminating that segregation by pupil assignment on the basis of race implemented through busing, would impermissibly impede the constitutionally mandated task of rooting out de jure segregation. "[I]f a state-imposed limitation on a school authority's discretion operates to inhibit or obstruct the operation of a unitary school system or impede the disestablishing of a dual school system, it must fall; state policy must give way when it operates to hinder vindication of federal constitutional guarantees." (*Board of Education v. Swann, supra,* 402 U.S. at p. 45 [28 L.Ed.2d at p. 589].)

The high court has also recognized the discouraging fact of the "dilatory tactics of many school authorities"; the "failure of local authorities to meet their constitutional obligations [has] aggravated the massive problem of converting from the state-enforced discrimination of racially separate school [s]." (*Swann v. Board of Education* (1971) 402 U.S. 1, 14 [28 L.Ed.2d 554, 565, 91 S.Ct. 1267].) In view of this history, it is all too clear to us that the elimination of de jure segregation would be seriously impeded if school authorities could claim a legal disability to assign or bus pupils merely by asserting that the segregation in their district was de facto in origin.

Consistently with our earlier holding in *Johnson* and indeed under the compulsion of the decisions of the United States Supreme Court in *Swann* and *Keyes* which confirm our views in *Johnson*, we hold, as ***328** indeed we must, that section 1009.6 as applied to school districts manifesting either de jure or de facto segregation is unconstitutional.

We proceed to consider a related issue. It will be recalled that Proposition 21 not only added section 1009.6 but also repealed sections 5002 and 5003 as well as certain administrative guidelines. (See fn. 3, *ante.*) Various amici curiae urge that the repealing provisions of Proposition 21 (i.e., §§ 2, 3 and 4) are also unconstitutional, on two grounds: (1) the repeal of these sections significantly encourages and involves the state in racial discrimination and (2) even if constitutional in themselves, the repealing provisions are tainted by the unconstitutional portion of Proposition 21 and cannot be severed from it.

On the first point amici argue that our holding in *Mulkey v. Reitman* (1966) 64 Cal.2d 529 [50 Cal.Rptr. 881, 413 P.2d 825] compels the conclusion that the repealing provisions are themselves unconstitutional. In *Mulkey* we held unconstitutional as violative of the equal protection clause of the Fourteenth Amendment of the United States Constitution, article I, section 26 of the California Constitution, an initiative measure appearing as Proposition 14 on the statewide ballot in the general election of 1964 and adopted by the electorate. That proposition nullified state statutes aimed at eliminating racial discrimination in housing and barred the state from legislating in the future so as to limit the right of private discrimination in the sale or leasing of property. We there focused on the distinction between racial discrimination resulting from state action and that resulting from the private acts of individuals, framing the issue before us thusly: "The only real question ... is whether the discrimination results solely from the claimed private action or instead results at least in part from state action which is sufficiently involved to bring the matter within the proscription of the Fourteenth Amendment." (*Mulkey v. Reitman, supra,* 64 Cal.2d at p. 536.) Finding the requisite state action, we concluded: "Here the state has affirmatively acted to change its existing laws from a situation wherein the discrimination practiced was legally restricted to one wherein it is encouraged .... Certainly the act of which complaint is made is as much, if not more, the legislative action which authorized private discrimination as it is the final, private act of discrimination itself. ... When the electorate assumes to exercise the lawmaking function, then the electorate is as much a state agency as any of its elected officials." (*Id.* at p. 542.) Amici contend that the repealing portions of Proposition 21 (i.e., §§ 2, 3 and 4) similarly were intended to, and will result in, preserving racial discrimination and ***329** segregation, in this instance in the school systems, and thus that the very passage of Proposition 21 involves the state in racial discrimination.

However, *Mulkey* is actually of no assistance to the amici's argument. The mere fact that the initiative measures in both instances - Proposition 14 in *Mulkey* and Proposition 21 in the case at bench - represent state action proves nothing, since in the instant case, the state, *independent of the passage of Proposition 21*, is involved in education. Indeed in *Mulkey* we noted this critical difference: "[I]n *Jackson v. Pasadena City School Dist.*, ... the state, be-

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

cause it had undertaken through school districts to provide educational facilities to the youth of the state, was required to do so in a manner which avoided segregation and unreasonable racial imbalance in its schools." (*Mulkey v. Reitman, supra*, 64 Cal.2d at p. 537.) Proposition 21 by repealing the involvement of the state government in discharging the state's duty not to segregate, neither abrogated the school district's constitutional duty not to segregate nor removed the state from involvement through local school districts in the field of education. There is no problem of state involvement under the Fourteenth Amendment - it is simply a question whether the state involvement shall be solely by the local school districts or shall include involvement by the state government as well.

Amici curiae assert that, prior to the adoption of sections 14020 and 14021 of title 5 of the California Administrative Code and the passage of sections 5002 and 5003, local school districts had been very slow in seeking and achieving racial balance in the school system. As a result of the adoption of these sections and their enforcement in the courts, there was a significantly increased activity directed toward preventing, reducing and eliminating racial imbalance in the schools. It appears clear, amici argue, that the repeal pursuant to Proposition 21 (see fn. 3, *ante*, and accompanying test) of sections 5002 and 5003 will have the effect of retarding, if not reversing, this process of establishing racial balance in the schools of California. Finally, it is urged, the avowed purpose of Proposition 21 was opposition to these sections as a "forced integration measure ... which could only be accomplished through forced busing ... without regard to neighborhood schools or parental consent." (Ballot Pamphlet, argument in favor of Proposition 21, as presented to the voters of the State of California, General Election (Nov. 7, 1972).)

In one respect the gist of amici's argument is to ask this court to take judicial notice that local school districts fail to fulfill their constitutional obligation to desegregate, and thus to conclude that the passage of *330 Proposition 21 constituted state involvement in racial discrimination. Even if it were within our province to take such judicial notice, no facts have been presented to us supportive of amici's contention.

In another respect, the essence of the argument is to assert that the policy of the Legislature declared in sections 5002 and 5003 is inherently invulnerable to change through an initiative measure. On the contrary, since racial balance determined according to a precise statutory formula is not a constitutional prerequisite but a matter of state policy, the people of California through the initiative process, have the power to declare state policy. The repealing provisions of Proposition 21 can conceivably be interpreted as an expression by the people of this state of their preference for a "neighborhood school policy." (See *Keyes v. School Dist. No. 1, Denver, Colo., supra*, 413 U.S. at p. 206 [37 L.Ed.2d at p. 562].) We deem it unnecessary to the resolution of the issues now before us to determine precisely what was the intention of the electorate in this respect and accordingly intimate no views on the subject. (2) We merely conclude that since a policy in favor of neighborhood schools is a reasonably conceivable one and since such an expression of policy can in no way limit or affect the constitutional obligations of school districts, the repealing provisions found in sections 2, 3 and 4 cannot be struck down as constitutionally impermissible. It may be that our assessment of the people's desires in this respect is erroneous; if so, constitutional processes are available to the people to reinstate what has been repealed.

We turn now to the second point of the argument, namely that the repealing sections of Proposition 21 (i.e., §§ 2, 3 and 4) cannot be severed from the unconstitutional portion thereof (i.e., § 1 adding § 1009.6 to the Ed. Code) and therefore the proposition in its entirety must fall as unconstitutional.

The rule on severability is set forth in *In re Blaney* (1947) 30 Cal.2d 643, 655 [184 P.2d 892]: "But if the statute is not severable, then the void part taints the remainder and the whole becomes a nullity. It is also true that in considering the issue of severability, it must be recognized that the general presumption of constitutionality, fortified by the express statement of a severability clause, normally calls for sustaining any valid portion of a statute unconstitutional in part. *This is possible and proper where the language of the statute is mechanically severable*, that is, where the valid and invalid parts can be separated by paragraph, sentence, clause, phrase, or even single words. [Citations.] On the other hand, where there is no possibility of mechanical severance, as where the *331 language is so broad as to cover subjects within and without the legislative power, and the defect cannot be cured by excising any word or group of words, the problem is quite different and more difficult of solution." (Italics added.) (In accord: *Villa v. Hall* (1971) 6 Cal.3d 227, 236 [98 Cal.Rptr. 460, 490 P.2d 1148]; *Mulkey* v. *Reitman, supra*, 64 Cal.2d 529,

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

543-544; *In re Portnoy* (1942) 21 Cal.2d 237, 242 [131 P.2d 1]; *In re Bell* (1942) 19 Cal.2d 488, 498 [122 P.2d 22]; *Bacon Service Corporation* v. *Huss* (1926) 199 Cal. 21, 32-33 [248 P. 235]; *McCafferty* v. *Board of Supervisors* (1969) 3 Cal.App.3d 190, 193 [83 Cal.Rptr. 229].)

Proposition 21 contained a severability clause. [FN6] The valid repealing portions can easily and accurately be mechanically severed from the invalid portion enacting section 1009.6. "Although not conclusive, a severability clause normally calls for sustaining the valid part of the enactment, especially when the invalid part is mechanically severable. [Citation.]" (*McCafferty v. Board of Supervisors, supra*, 3 Cal.App.3d at p. 193.) Such a clause plus the ability to mechanically sever the invalid part while normally allowing severability, does not conclusively dictate it. The final determination depends on whether "the remainder ... is complete in itself and would have been adopted by the legislative body had the latter foreseen the partial invalidation of the statute" (*In re Bell, supra*, 19 Cal.2d 488, 498) or "constitutes a completely operative expression of the legislative intent ... [and] are [not] so connected with the rest of the statute as to be inseparable." (*In re Portnoy, supra*, 21 Cal.2d at p. 242.)

> FN6 "If any provision of this act or the application thereof to any person or circumstances is held invalid, such invalidity shall not affect other provisions or applications of the act which can be given effect without the invalid provision or application, and to this end the provisions of this act are severable."

Amici curiae merely assert that the various portions of the proposition are clearly inseparable. However, it seems that the valid and invalid portions of the proposition, while subsumed within an overall purpose to eliminate forced integration by busing without regard to the desirability of maintaining neighborhood schools, reflect separable methods of achieving this purpose. The repealing provisions (the valid part) would eliminate a commitment to achieving racial balance in the schools, leaving local school districts with sole responsibility and without direction other than constitutional mandate; the enactment of section 1009.6 (the invalid part) went further and forced upon the local school districts the neighborhood school concept without forced busing as the only acceptable policy. Even though this restriction of local school *332 district discretion is unconstitutional and therefore the full purpose of Proposition 21 cannot be realized, it seems eminently reasonable to suppose that those who favor the proposition would be happy to achieve at least some substantial portion of their purpose, namely to eliminate a state commitment to racial balance in the schools regardless of other considerations, and thereby to allow local control subject only to constitutional restriction. (3) Thus, the repealing provisions are not only mechanically severable in that they are physically separate sections of the proposition, but they are also severable as to purpose and method, of independent validity and not inconsistent with the elimination of the invalid part. We hold the repealing portions of Proposition 21 to be severable. We cannot say that these portions must necessarily fall, because we hold section 1009.6 unconstitutional. [FN7]

> FN7 Amici curiae also urge that a different test should be applied to the severability of portions of an initiative measure than the above described test applied to statutes passed by the Legislature. However, in applying settled rules of severability, we can discern no meaningful distinctions between statutes "enacted" by the people and statutes enacted by the Legislature. The cases cited by amici curiae (e.g., *Bennett v. Drullard* (1915) 27 Cal.App. 180 [149 P. 368]; *Alexander* v. *Mitchell* (1953) 119 Cal.App.2d 816 [260 P.2d 261]) involved the question of severability prior to submission to a vote and also tested severability by the degree of integration between the valid and invalid parts. However, integration is determined by the test set forth by us *supra*.

We therefore conclude that Proposition 21 does not provide an independent basis for sustaining the trial court's intended injunction of the implementation of the Administration Plan since section 1009.6 added to the Education Code by the proposition bars assignment of public school students by race and is therefore unconstitutional and void under the decisional law of the United States Supreme Court and of this court, regardless of the proposition's effective repeal of other sections of the code.

We accordingly proceed to address ourselves to the question whether entry of judgment by the trial court on the third count in accord with its memorandum of intended decision would be an act in excess of its jurisdiction. As we have already stated, the court intended to enjoin implementation of the Administration Plan on two grounds: (1)

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

that the Board had no jurisdiction to close the Garfield and Jefferson Schools because it had failed to include notice of the proposed closure of these schools in its published agenda as required by section 966; (2) that the Board abused its discretion in adopting the Administration Plan which required the closure of the above two schools, when in fact their closure was not reasonably necessary to effective desegregation. *333

Section 966 requires a school board to act at meetings open to the public, with certain exceptions relating to personnel and pupil discipline matters, and to post an agenda 48 hours prior to the meeting containing "[a] list of items that will constitute the agenda for all regular meetings." [FN8] In *Carlson v. Paradise Unified Sch. Dist.* (1971) 18 Cal.App.3d 196 [95 Cal.Rptr. 650], the court held the provisions of section 966 are mandatory, so that noncompliance therewith by failing to list an item of business on the agenda invalidates the board's action in respect thereto. In *Carlson* the school board's agenda listed as one item "Continuation school site change." The action in fact taken was to move the "continuation school" to the Canyon View school building, to discontinue elementary education at that school, and to transfer the Canyon View elementary pupils to Ponderosa School. The court held that the agenda listing "was entirely inadequate notice to a citizenry which may have been concerned over a school *closure* ... was entirely misleading and inadequate to show the whole scope of the board's intended plans." (*Carlson v. Paradise Unified Sch. Dist., supra*, 18 Cal.App.3d at p. 200.)

FN8 Section 966 provides in pertinent part: "Except as provided in Section 54957 of the Government Code or in Section 967, all meetings of the governing board of any school district shall be open to the public, and all actions ... shall be taken at such meetings and *shall* be subject to the following requirements: ... (b) A list of items that will constitute the agenda for all regular meetings *shall* be posted at a place where parents and teachers may view the same at least 48 hours prior to the time of said regular meeting ...." (Italics added.)

In the case at bench, the posted agenda of the meeting of May 18, 1972, contained under the heading "Desegregation/Integration Plans" Item No. 3a which read as set forth in the margin. [FN9] At the meeting, the Board adopted the Administration Plan, which among other things, closed the Jefferson School and discontinued elementary school education at the Garfield School.

FN9 Item 3a headed "Desegregation/Integration Plans" read as follows:

"On February 3, 1972 the Board of Education set the following timetable in regard to a Desegregation/Integration Plan for the Elementary District:

"Thursday, May 4, 1972 - Presentation of plans to the Board
"Thursday, May 18, 1972 - Adoption of a plan by the Board
"September 1972 - Implementation of plan as fully as possible

"It is expected that the Board will take action at the meeting."

The trial court in its memorandum of intended decision concluded: "There was no possible way [the Administration Plan was not written and was not on file] that the public could discern from the posted agenda that the Board was about to consider the closure of two elementary schools, namely, Jefferson and Garfield, as indispensable ingredients of *334 any desegregation plan. ... Any possible reference to such matters in a published newspaper article would in no event suffice to cure the deficiency. ... The Board did not comply with the provisions of section 966. It therefore lacked jurisdiction to adopt the Administration Plan .... The closure of the Jefferson and Garfield elementary schools is essential to this plan, and invalidates the same."

The Board contends that by listing adoption of a desegregation/integration plan, the posted agenda gave full and adequate notice of a wide range of possible Board actions including possible closure of schools. It is common knowledge that a desegregation/integration plan by its very nature involves a complete reworking of the school system and is likely to involve substantial changes in school at-

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

tendance patterns, including pupil assignment away from neighborhood schools and busing. Thus, the agenda item gave fair warning to parents of students at any of the elementary schools that the adoption of a plan might result in their children's not attending their neighborhood school, that is Jefferson, Garfield or any other elementary school, as the case might be. The fact that their children might end up attending a different school due to closure of their current school rather than to pupil assignment or school pairing is of little moment. The critical point is that parents were on notice that the Board at its meeting on May 18, 1972, might act in such a way that their children would no longer be able to attend Jefferson or Garfield schools.

This case is therefore clearly distinguishable from *Carlson*. There the item "continuation school site change" would have in no way notified parents of children attending Canyon View Elementary School that their children would be affected by such action and certainly would not have warned them that the school might be closed. It gave fair notice to parents of continuation school students as to impending changes and to people generally concerned about financial expenditures and priorities. However, the item in no way warned Canyon View Elementary School parents that their interests might be vitally affected.

In the case at bench, by contrast, the item concerning the adoption of a "Desegregation/Integration Plan," in our view gives clear notice to parents of students attending Jefferson, Garfield or any other elementary school that their interests might be vitally affected. We do not believe that the agenda item must specify the particular means by which the students involved would be sent to different schools, as for example by pupil assignment, busing, pairing of schools or closure of schools. It ***335** seems to us that all such actions are fairly contained within the comprehensive language of the notice.

Indeed, if the agenda had simply indicated the adoption of a "Desegregation/Integration Plan for the Elementary District," we would entertain no doubt that it would have given adequate notice. However, item 3a on the agenda referred to the sequence of procedures adopted by the Board for formation of an integration plan throughout the year - "Thursday, May 4, 1972 - Presentation of plans to the Board. Thursday, May 18, 1972 - Adoption of a plan by the Board." (See fn. 9, *ante*.) Concerned parents and citizens could reasonably infer from this notice that no new plans were to be presented on May 18 but rather that the Board would adopt one of the plans presented on May 4. If they had no objection to any of these plans, they might reasonably assume there was no need for them to attend the May 18 meeting.

However, the Administration Plan, which had *not* been presented at the May 4 meeting, differed radically from all the previous plans in many respects, most notably in providing for the closure of the Jefferson and Garfield schools. Parents of Jefferson and Garfield elementary school students had no notice that a plan involving closure of those two schools would be considered on May 18. Consequently we think that the notice by referring to the May 4 presentation of plans was misleading, by indicating that only those plans presented on May 4 would be considered for adoption on May 18. This is substantially confirmed by the very elaborate procedures adopted by the Board and participated in by the community in order to prepare and screen plans for presentation to the Board on May 4.

(4a) Section 966 specifies 48 hours' notice with respect to regular meetings. It is a fair construction of the section that a board cannot change its posted agenda within the 48-hour period next immediately preceding a regular meeting; in other words, if a board wishes to change substantially its agenda within that period, it must postpone a meeting at least 48 hours. Since the Administration Plan had not been presented at the May 4 meeting and since it differed substantially from all the other plans, the Board's decision to consider and act upon it represented a substantial deviation from the posted agenda and therefore required an amendment to the agenda and a postponement of the meeting for such a period of time as to provide no less than 48 hours' notice.

It is true that the Board could have adopted a plan involving the ***336** closure of schools, if it had posted an agenda merely giving general notice of intention to adopt a desegregation/integration plan. However, once the Board posted notice that it would adopt one of the plans theretofore presented at the May 4 meeting, it thereby limited its power to consider any other substantially different plan since otherwise the posted agenda would be fatally misleading. It then became necessary for the Board to amend the posted agenda and reschedule the meeting so as to afford notice for the period of time specified by the statute.

The Board contends that the misleading effect of the notice was cured by newspaper publicity indicating that a new

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

plan was to be presented at the meeting of May 18. Two newspaper articles appeared explaining some of the details of the new plan. Only one of the two articles was released 48 hours or more before the meeting. (5) Moreover, newspaper publicity cannot replace the proper posting of an agenda. Section 966 requires notice by means of an agenda posted at a specified place. The newspaper article had no official status, its contents had not been checked or authorized by the Board, and there was no guaranty that it would have been read by all persons entitled to notice. On the other hand, under the statute all persons were presumed to know when and where the agenda of a meeting was to be posted and were entitled to rely on the contents of such statutory notice without being required to scour all newspapers and other publications for possible changes.

(4b) Accordingly we conclude that the trial court properly determined, albeit for the wrong reason, that the Board had no jurisdiction to consider or approve the Administration Plan due to its noncompliance with section 966. The trial court would therefore not act in excess of its jurisdiction in enjoining the implementation of the Administration Plan, unless and until the plan was adopted by the Board at a meeting preceded by the posting of an accurate and complete agenda as required by section 966.

The trial court, however, went further in its memorandum of intended decision and purported to permanently enjoin implementation of the Administration Plan on the ground that its adoption was an abuse of discretion by the Board since the closure of the two schools was not reasonably necessary to accomplish desegregation. [FN10] (6) The major premise in the trial court's reasoning - that in desegregating a school *337 system, a school board is limited in the exercise of its powers to those acts reasonably necessary to effectuating desegregation - is utterly without support. The trial court concedes, as indeed it must, that the Board has power to close schools and convert them to other uses. It is, of course true that the Board is not free to exercise this power arbitrarily, but must act reasonably and in accordance with established procedure. "[A] court may not substitute its judgment for that of the administrative board [citation] and if reasonable minds may disagree as to the wisdom of the board's action, its determination must be upheld." (*Manjares v. Newton* (1966) 64 Cal.2d 365, 371 [49 Cal.Rptr. 805, 411 P.2d 901].) We have not found, nor have we been referred to, any authority supportive of the proposition that once a school board undertakes a desegregation/integration plan, its otherwise independent power to close schools becomes limited to closing only those schools which must reasonably be closed in order to accomplish desegregation. Acceptance of such a proposition would blind school boards to the full realities of the world about them, as for example, by directing in effect that they are powerless to close unsafe schools because desegregation might be effectuated without such closure.

> FN10 Plaintiffs also contend that the Board abused its discretion in adopting the Administration Plan because the plan does not meet the requirements of section 5003. Since we have held the repeal of this section valid, this argument must fail.

Indeed the case at bench presents exactly this situation. On August 12, 1971, the Board received a report that the Jefferson school was structurally unsafe within the requirements of section 15503. [FN11] The report recommended that a structural engineer be retained to determine whether the school should be repaired or abandoned, since if it cannot be repaired, it must be abandoned pursuant to section 15516. [FN12] On May 15, 1972, three days before the final meeting of the Board, the superintendent received a report concerning the rehabilitation or replacement costs of the Jefferson school. The report found that it would cost $621,800 to make the existing structure safe and $655,000 to build an entirely new building. Accordingly, in fashioning the Administration Plan, the superintendent made provision therein for closing the Jefferson school. The Board would certainly be properly exercising its discretion in a reasonable manner were it to approve abandoning this building in view *338 of the extreme cost. The determination of the questions whether a new school was needed to replace this structure or whether existing facilities could handle the Jefferson school students due to an expected drop in elementary enrollment, was properly within the Board's discretion. We do not think that the Board in exercising this discretion was perforce limited to determining the reasonable necessity of replacing the building and thus automatically precluded from determining the necessity of assigning students in order to achieve desegregation.

> FN11 Section 15503, added in 1959 as part of the Field Act, requires all school buildings, not constructed pursuant to the Field Act, to be examined by January 1, 1970, in order to determine whether the building is safe for school use according to the standards set forth in the Field Act (§ 15451 et

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

seq.). If a school building is found to be unsafe, the governing board of that school district must prepare an estimate of the cost necessary to make the building safe.

FN12 Section 15516 provides: "No school building examined and found to be unsafe for school use pursuant to Section 15503 and not repaired or reconstructed in accordance with the provisions of this article shall be used as a school building for elementary and secondary school or community college purposes after June 30, 1975."

In 1969 the Board adopted a master plan to guide the development of the school district. Item 6 of that plan provided: "As soon as funds become available in the Elementary District to provide housing at expanded schools elsewhere, that Garfield School be closed and converted to a Special Education Center to provide for certain parts ... of the Special Education program." The superintendent incorporated this provision into his Administration Plan. Absent proof that there were no school facilities to absorb these students or no need for a special education center, [FN13] the Board, in the reasonable exercise of its discretion, could lawfully take this action. The mere fact that this action was part of a desegregation plan did not automatically strip the Board of its otherwise subsisting authority to act in this area, so that the establishment of an education center was contingent upon it being reasonably necessary to accomplish desegregation .

FN13 School boards have the authority to provide special education programs and facilities. (§§ 6500-6742, 6750-6946.)

(7) Since the trial court proposed to so limit the discretion of the Board, it would be substituting its judgment for that of the school board and therefore acting in excess of its jurisdiction. A writ of prohibition is the appropriate remedy where a threatened judgment of the trial court will be in excess of its jurisdiction. (*City & County of S.F.* v. *Superior Court* (1959) 53 Cal.2d 236, 243 [1 Cal.Rptr. 158, 347 P.2d 294]; 5 Witkin, Cal. Procedure (2d ed. 1971) Extraordinary Writs, §§ 36, 39, pp. 3810-3811, 3813.)

As to the instant writ proceeding (L.A. 30054) which is confined to plaintiffs' third cause of action below, we arrive at these final conclusions: (1) That section 1009.6 being unconstitutional and void does not bar the Board's Administration Plan for desegregation; (2) that the Board's power to close schools exists independently of its constitutional obligation to desegregate and is not contingent upon such closure being ***339** reasonably necessary to effectuate desegregation; (3) that the posted agenda was defective insofar as it related to the closure of the two elementary schools because of the Board's failure to comply with section 966 and that, since said proposed action for closure was an inseparable part of the Administration Plan, the adoption of the plan as a whole was invalid because of such noncompliance; and (4) that in respect to the third count the trial court will not act in excess of its jurisdiction by enjoining the implementation of the Administration Plan upon the basis heretofore set forth by us, namely, for the failure of the Board to comply with section 966 but that in all other respects the intended action of the trial court as set forth in its memorandum of intended decision is in excess of the court's jurisdiction. Nothing herein, of course, shall prevent, or be deemed to prevent, the Board from adopting the Administration Plan at a new meeting held upon proper notice and in compliance with all other legal requirements.

It follows that in L. A. 30054, petitioners (defendants below) are not entitled to a peremptory writ of prohibition restraining respondent court from enjoining the implementation of the Administration Plan for failure of the Board to comply with section 966 but are entitled to such writ restraining the court's intended action in all other respects. (See *Brown v. Superior Court* (1949) 34 Cal.2d 559, 566 [212 P.2d 878]; see 5 Witkin, Cal. Procedure (2d ed. 1971) p. 3933.) The writ shall issue accordingly.

II

We now turn our attention to the appeal before us. (See fn. 2, *ante*.) This is from a judgment entered on the first two causes of action which were not stayed by our alternative writ of prohibition. The central issue here confronting us is whether the Board may lawfully be the common governing Board of both the Santa Barbara (elementary) School District and the Santa Barbara High School District despite the fact that such districts are not coterminous.

We deem it necessary to set forth the facts in some detail. The original Santa Barbara School District, which was organized sometime in the 1870's, comprised all the public schools within the city limits and conducted classes from

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

kindergarten through high school, under the leadership of the school trustees. The initial charter for the City of Santa Barbara, adopted February 20, 1899, created a school department, consisting of all the public schools in the school district, governed by a ***340** five-man board of education. The charter specified the duties and powers of the board of education in great detail and provided that the board succeeded to all the property and rights of the former school trustees.

In 1902 this single geographical school district was divided functionally into two separate districts: the elementary school district (known as the Santa Barbara School District) and the high school district (known as the Santa Barbara High School District), comprising both junior and senior high schools. The two districts were coterminous; their boundaries were the city limits. The single board of education remained responsible for the governing of all the public schools in the school districts, since the charter was not amended following this functional division into two school districts. Upon the adoption of new charters in 1918 and again in 1927, former provisions dealing with the board of education were revised and simplified by replacing the detailed enumeration of the board's duties and powers with an incorporation of provisions set forth in the general laws of the state. Despite these revisions, nevertheless, the new charters retained a *single* board of education invested with control over all schools in that city. [FN14]

> FN14 Section 83 of the Charter of the City of Santa Barbara adopted in 1927 provided:"The Board of Education shall consist of five members. ..."
>
> Section 84 provided: "The Board of Education shall have the entire control and management of the public schools in the city of Santa Barbara in accordance with the constitution and general laws of the state and said board is hereby vested with all the powers and charged with all the duties of such control and management."
>
> Sections 55 and 56 of the charter adopted in 1918 contained virtually identical provisions.

Indeed the 1927 charter specified a single board of education even though the two school districts were no longer coterminous themselves or with the city. From 1902 to 1930 while the elementary school districts remained virtually constant in size, incorporating only minor portions of adjacent unincorporated territory, the high school district annexed large portions of adjacent territory and far outstripped the elementary school district in size. By 1930 the pattern of annexations was complete. The high school district was comprised of the original high school district (i.e., coterminous with the city limits and the elementary school district) plus the geographical area of four additional elementary school districts, Montecito Union School District, Cold Springs School District, Hope School District and Goleta Union School District. These four elementary school districts were annexed solely for the purpose of becoming part of the Santa Barbara High School District. They continued to function as ***341** wholly independent elementary school districts governed by their own elementary school board.

Despite these changes in the composition and size of the elementary and high school districts no change was made in the charter. That instrument continued to direct, as it did upon its adoption in 1927 that there be a single board of education having the entire control and management of all the public schools. In 1939, section 83 of the charter (see fn. 14, *ante*) was amended to provide that the members of the board should serve staggered six-year terms.

No further changes were made in the charter provisions concerning the board of education until a new charter was adopted in 1967. The new charter retained the provision for a single elective board of education, directed that its adoption should not affect boundaries of existing school districts and generally provided that all other requirements should be "as now or hereafter prescribed by the Education Code." [FN15] Despite the changes in language the new charter provisions continued essentially the same educational scheme. The changes appear to correspond with those introduced into the Education Code in 1963, since section 900 of the charter tracks the language of section 1223 of the code. [FN16] Thus, in short the charter directs that there shall be an elective board of education and leaves other requirements to those found in the code.

> FN15 Article IX of the charter headed, Board of Education, provides: "Section 900. State Law Governs. The manner in which, the times at which, and the terms for which the members of the Board of Education shall be elected or appointed, their qualifications, compensation and removal and the number which shall constitute

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

such board shall be as now or hereafter prescribed by the Education Code of the State of California.

"Section 901. Effect of Charter on District. The adoption of this Charter shall not have the effect of creating any new school district nor shall the adoption of this Charter have any effect upon the existence or boundaries of any present school district within the City or of which the City comprises a part."

FN16 Section 1223 of the Education Code provides: "Except as provided in Section 1222, whenever the charter of any city fails to provide for the manner in which, the times at which, or the terms for which the members of the city board of education shall be elected or appointed, for their qualifications, removal, or for the number which shall constitute such board, the provisions of this division shall apply to the matter not provided for."

Section 1224 provides that the members of the board of education shall be elected at large from the territory within the boundaries of the school district or districts under the jurisdiction of the board of education, that for election purposes such territory shall include outside territory annexed to the city for school purposes, and that all qualified electors residing within the full territory shall be eligible to vote for, and ***342** to be a member of, the board of education. [FN17] Therefore all qualified electors residing within the high school district, which is geographically coterminous with the five elementary school districts - the Santa Barbara elementary school district plus the four annexed districts (Montecito, Cold Springs, Hope and Goleta) - are entitled to vote for the city board of education. At the time of trial, there were 80,203 registered voters residing within the high school district, of whom 38, 174 or 47.6 percent resided within the Santa Barbara elementary school district and 42,029 or 52.4 percent resided within the four annexed elementary school districts.

FN17 Section 1224 provides: "The members of any elective city board of education shall be elected at large from the territory within the boundaries of the school district or districts which are under the jurisdiction of the city board of education, whether sitting as a board of education, high school board, or community college board, and any qualified elector of the territory shall be eligible to be a member of such city board of education.

"When outside territory has been annexed to a city for school purposes it shall be deemed a part of the city for the purpose of holding the general municipal election, and shall form one or more election precincts, as may be determined by the legislative authority of the city. The qualified electors of the annexed territory shall vote only for the board of education or the board of school trustees."

The four annexed elementary school districts continued to be governed by four separate elementary school boards elected separately by qualified electors residing within each elementary school district. The Santa Barbara elementary school district, however, did not have its own separate elementary school board. Instead, by virtue of the charter provisions and section 1222 of the Education Code incorporated in the charter (see fn. 15, *ante*), the Santa Barbara elementary school district was governed by the city board of education. [FN18] Thus, an elector residing within one of the four annexed districts, for example Montecito, would be entitled to cast two votes - one to elect members to the Montecito Elementary School Board from the residents within that district and one to elect members to the city board of education. An elector residing within the Santa Barbara elementary school district would be entitled to cast only one vote - that one being to elect the city board of education.

FN18 Section 1222 provides: "Whenever the charter of a city comprising in whole or in part an elementary school district, fails to provide for the manner in which, the times at which, and the terms for which the members of the board of education of such city are appointed, and for the number which shall constitute such board, *the governing board of the elementary school district* within which the city is located or with which the city is coterminous *is the board of education of the city*." (Italics added.)

As mentioned earlier, plaintiffs in their first two causes of action challenge the validity of the law permitting the city board of education to govern both the high school and the elementary school districts, despite the fact that the two

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

districts are not coterminous. The first cause of *343 action alleged that this system unconstitutionally diluted the vote of each registered voter and taxpayer within the elementary school district by over 100 percent by virtue of the votes cast by that portion of the electorate who live outside the Santa Barbara elementary school district. The second cause of action alleged that this system violated the requirements of section 924 that the governing board of an elementary school district shall consist of members elected at large from the territory comprising the elementary school district.

Following trial by the court on these two causes of action, the court made findings of fact, substantially as recited above and concluded in essence that the above voting scheme was unconstitutional as being violative of the equal protection clause of the Fourteenth Amendment to the United States Constitution. We set forth in pertinent part in the margin the court's detailed conclusions. [FN19] *344

> FN19 "4. Insofar as the Board governs the affairs of the Elementary School District the scheme which permits the votes of 38,174 resident electors to be counted equally with the votes of the 42,029 non-resident electors, who are in no way concerned with the government of the Elementary District, constitutes a clear denial, dilution and debasement of the vote of the resident electors of the Elementary District and a deprivation of their constitutional right to the equal protection of the law.
>
> "
>
> . . . . .
>
> "7. The present dual function of the School Board governing a large high school district and much smaller elementary school district does not serve any governmental purpose, but is rather the result of unplanned, irregular annexations to the High School District.
>
> "
>
> . . . . .
>
> "9. The fact in this case that voters who reside outside the boundaries of the Elementary School District, who exceed in number those who reside within the district, are given the right to vote for the School Board which formulates policy for the district, even though they are in no way subject to such policy and do not contribute any tax support thereto, is contrary to the principle that the government is to be chosen by the governed.
>
> "10. The equal voting strength principle, which underlies the 'one person, one vote' doctrine, applies in this case to the electoral scheme currently employed in the election of members to the governing board of the Santa Barbara Elementary School District. That principle is violated because the votes of qualified resident electors in the plaintiffs' class are being wrongfully denied, debased and diluted by the votes of non-qualified, non-resident electors in the Elementary District election.
>
> "11. There is no State interest sufficiently compelling to justify the voting scheme described herein. That scheme is unconstitutional. It violates the Equal Protection Clause of the Fourteenth Amendment to the Constitution of the United States.
>
> "
>
> . . . . .
>
> "14. To interpret Section 1224 of the Education Code to sanction the election of a common governing board for two districts whose boundaries are not coterminous, by electing the members of such board at large from the territory of the larger district, which encompasses all of the area of the smaller district plus added territory of the larger district, is to unconstitutionally apply the statute.
>
> "15. Section 1224 of the Education Code must be interpreted to grant common governing powers to an elective city board of education over two or more districts under its jurisdiction only in cases where the boundaries of the governed districts are coterminous. In a case such as here presented, where the boundaries of the districts are not co-

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

terminous, Section 1224 may not be so interpreted to grant multiple jurisdiction to such a single elective board."

By way of remedy the court concluded that the Santa Barbara elementary school district must be governed by an independent board of resident electors of the Santa Barbara elementary school district elected at large from the territory within the elementary school district; that the present city board of education should be allowed to continue as the governing board of the high school district; that a new board consisting of five members and governing only the elementary school district should be elected on April 17, 1973, by resident electors within the Santa Barbara elementary school district and take office on July 1, 1973; that the three members with the highest vote should serve until June 30, 1977, and the remaining two members should serve until June 30, 1975, each member of the board thereafter serving a four-year term. Judgment granting a peremptory writ of mandate was entered accordingly. This appeal by defendants followed. [FN20]

FN20 See footnote 2, *ante*, where the procedural history of this appeal as related to the disposition of the third cause of action is explained.

We begin by epitomizing the respective positions of the parties on the appeal. Plaintiffs contend that the method of electing members of the Santa Barbara Board of Education is invalid under the state and federal Constitutions as violative of the "one man, one vote" principle because the votes of *qualified, resident* electors in the elementary school district are debased and diluted by the votes of *nonqualified, nonresident* electors in the elementary district election. Plaintiffs argue that there should be, and the trial court properly ordered, a separate board of education to govern the elementary school district. Defendants, on the other hand, contend that the present method of electing members of the Board complies with applicable state law, that it does not violate the "one man, one vote" rule, and that the trial court's ruling on this issue is in error. (8) As we explain, *infra*, we conclude that there is no constitutional right to a separate, elected elementary board of education, that there is no constitutional infirmity in designating the city board of education, elected from the full territory within its jurisdiction, to govern the lesser, wholly included elementary school district and that the "one man, one vote" principle has no relevancy to this case.

The city board of education is elected. Each qualified elector residing within the high school district, the largest geographical area within the ***345** jurisdiction of the board of education, is eligible to become a member of the board and is entitled to vote in the election. The members are elected at large. Each vote counts equally and is weighted equally. Each qualified elector is governed by the board, subject to the policy adopted by the board, and liable for tax to support the board. It is clear and undeniable that the city board of education is elected in full compliance with the "one man, one vote" principle.

Indeed, as they must, plaintiffs concede the election of the city board of education is valid. However, plaintiffs claim that the election of the city board of education is also an election of the governing board of the Santa Barbara elementary school district and that the *latter* election violates the "one man, one vote" principle because the votes of nonresident electors dilute the votes of the electors residing in the Santa Barbara elementary school district. There is no basis in law or fact to support this claim. There is a single city board of education which is elected in a single election by qualified resident electors. This single city board of education, by virtue of section 1222, (see fn. 18, *ante*) is the governing board of the Santa Barbara elementary school district. [FN21] The city board of education, which is elected in accordance with section 1224 (see fn. 17 *ante*) is designated by the Legislature in section 1222 to govern the Santa Barbara elementary school district.

FN21 See test accompanying footnotes 15 and 16, *ante*.

Thus, it is abundantly clear that the election of the city board of education is a single election of a single board. The real claim advanced by plaintiffs is that they, the resident voters, taxpayers and parents within the Santa Barbara elementary school district are entitled to be governed by an independent school board, comprised of members who reside within the district and elected solely by voters who reside in the district. The United States Supreme Court has held to the contrary. In *Sailors v. Board of Education* (1966) 387 U.S. 105, 108, 110-111 [18 L.Ed.2d 650, 653, 655, 87 S.Ct. 1549], the high court held that there is no constitutional right to elect members of boards of education: "We find no constitutional reason why state or local officers of the nonlegislative character involved here may not be chosen by the governor, by the legislature, or by some other appointive means rather than by an election.

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

... [¶] Viable local governments may need many innovations, numerous combinations of old and new devices, great flexibility in municipal arrangements to meet changing urban conditions. We see nothing in the Constitution to prevent experimentation. At least as respects nonlegislative *346 officers, a State can appoint local officials or elect them or combine the elective and appointive system as was done here. ... For while there was an election here for the local school board, no constitutional complaint is raised respecting that election. Since the choice of members of the county school board did not involve an election and since none was required for these nonlegislative offices, the principle of 'one man, one vote' has no relevancy."

The principles announced in *Sailors* were recently applied in California in *O'Keefe v. Atascadero County Sanitation Dist.* (1971) 21 Cal.App.3d 719 [98 Cal.Rptr. 878] to a factual situation so closely analogous to the facts in this case that we regard that case as highly persuasive authority. In *O'Keefe* the residents of the Atascadero sanitation district, which was located in San Luis Obispo County, challenged the procedure by which the directors of the sanitation district were selected. The county is divided into five districts for the purpose of electing the board of supervisors. The sanitation district was located wholly within the boundaries of one of the five supervisorial districts. The population within the sanitation district was approximately 10 percent of the county population. By virtue of state law, the directors of the sanitation district were the board of supervisors. Since the residents of the sanitation district lived wholly within one supervisorial district, they were able to vote for only one director, while the other nonresident voters elected the other four directors of the sanitation district. The sanitation district residents claimed that their votes were diluted and debased by the votes of electors who resided outside the sanitation district but within the county.

The court concluded, however, that the directors of the sanitation district were not elected but designated by the Legislature and that the election of a board of supervisors was a single election of a single board. "The board of directors of a county sanitation district is not elected. Rather, the members of such board are designated in Health and Safety Code section 4730. The composition of the board is determined by the location of the district in relation to other political subdivisions within the county. ... [FN4] [¶] Since the board of directors is not chosen by election, the 'one man, one vote' principle is not applicable .... Appellant argues that the principle nevertheless is applicable under the facts alleged, *347 because the county board of supervisors is elected [fn. omitted] and the members of the board of directors of the Sanitation District are 'in effect elected once removed.' ... [¶] Under section 4730 the members of the board of directors of a sanitation district are chosen by the Legislature, a method expressly sanctioned in *Sailors*." (*O'Keefe v. Atascadero County Sanitation Dist., supra*, 21 Cal.App.3d at pp. 724-726.)

> FN4 "Health and Safety Code section 4730: 'The governing body of a sanitation district is a board of directors of not less than three members. ... If the district includes no territory which is in cities or sanitary districts, then the county board of supervisors is the board of directors of the district.'"

As in *O'Keefe*, the members of the governing board of the Santa Barbara elementary school district are designated by the Legislature. The Legislature in section 1222 (see fn. 21, *ante*, and accompanying text) designates the city board of education to be the governing board of the Santa Barbara elementary school district. This is an entirely proper procedure under *Sailors*. The fact that the city board of education is elected does not somehow constitute an election "once removed" of the governing board of the Santa Barbara elementary school district just as the election of the county board of supervisors did not constitute an election "once removed" of the directors of the sanitation district in *O'Keefe*.

We discern no constitutional infirmity in a system whereby the Legislature designates an elected city board of education to govern a lesser included elementary school district. We hold therefore that the present method of electing members of the Santa Barbara Board of Education is not violative of either the United States Constitution or the California Constitution and is in all respects valid under applicable state law. [FN22]

> FN22 The second cause of action claiming that the system whereby the city board of education is designated to serve as the governing board of the Santa Barbara elementary school district violated the provisions of section 924 has apparently been abandoned, since the trial court made no mention of it and since it has not been urged on appeal. Moreover, section 1222 rather than section 924

(Cite as: 187 Cal.App.3d 1104)

WESTERN MUNICIPAL WATER DISTRICT OF RIVERSIDE COUNTY et al., Petitioners,
v.
THE SUPERIOR COURT OF SAN BERNARDINO COUNTY, Respondent; SAN BERNARDINO VALLEY MUNICIPAL WATER DISTRICT, Real Party in Interest.
No. E003041.

Court of Appeal, Fourth District, Division 2, California.
Dec 11, 1986.

SUMMARY

Multiple plaintiffs brought a consolidated action to challenge the decision of a water district to avoid the preparation of an environmental impact report (EIR) by proceeding pursuant to the "emergency" provisions of the California Environmental Quality Act (CEQA) to drill and operate two "dewatering" wells in order to lower the water table and thereby lessen the risk of liquefaction in the event of a major earthquake. The trial court concluded that the water district's use of the emergency exemption was supported by substantial evidence and granted the district's motion to dissolve a preliminary injunction enjoining the drilling of the two wells.

The Court of Appeal issued a writ of mandate directing the court to vacate its order, and to enter an order denying the motion to dissolve the preliminary injunction. The court held that the appropriate standard for judicial review of an agency decision under CEQA to apply the emergency exception to the EIR requirement (Pub. Resources Code, §§ 21080, subd. (b)(4), 21060.3) was whether there existed substantial evidence in the record to support the agency finding of an emergency, and that a record which consisted largely of generalized assumptions regarding the incidence of earthquakes and their imminence and estimated the likelihood of such earthquakes to be between 1.4 and 5 percent per year did not amount to substantial evidence of an emergency. (Opinion by Campbell, P. J., with Kaufman, J., and Schaefer, J., FN* concurring.)

FN* Assigned by the Chairperson of the Judicial Council.

HEADNOTES

Classified to California Digest of Official Reports

(1) Pollution and Conservation Laws § 1--California Environmental Quality Act--Interpretation.
The California Environmental Quality Act is to be interpreted to afford the fullest possible protection to the environment within the reasonable scope of the statutory language.

(2a, 2b) Pollution and Conservation Laws § 1.4--California Environmental Quality Act--Exemption From Requirements of Act--Emergency Exemption.
The emergency exception to the EIR requirement under Pub. Resources Code, § 21080, subd. (b)(4) is extremely narrow, and the definition of "emergency" in § 21060.3 limits an emergency to an occurrence, not a condition, and demands that the occurrence be sudden and unexpected and involve a clear and imminent danger, demanding immediate action.
[See **Cal.Jur.3d,** Pollution and Conservation Laws, § 382.]
(3) Administrative Law § 10--Administrative Construction and Interpretation of Laws--Judicial Function.
An administrative agency charged with carrying out a particular statute must adopt some preliminary construction of the statute as a basis upon which to proceed and the administrative interpretation will

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

be accorded great respect by the courts and will be followed if not clearly erroneous. But it is the duty of the court, when a question of law is properly presented, to state the true meaning of the statute finally and conclusively, even though this requires the overthrow of an earlier erroneous administrative construction. The ultimate interpretation of a statute is an exercise of the judicial power.
[See **Am.Jur.2d**, Administrative Law, § 656.]
(4) Statutes § 38--Construction--Giving Effect to Statute--Construing Every Word.
The construction of a statute should give meaning to each word of the statute.

(5) Pollution and Conservation Laws § 1.4--California Environmental Quality Act--Exemption From Requirements of Act--Emergency Exemption--Environmental Impact.
The question of environmental impact is irrelevant to the emergency exemption to the environmental impact report (EIR) requirement provided in Pub. Resources Code, § 21080, subd. (b)(4). The text of the emergency exemption does not address the question of impact and the self-evident purpose of the exemption is to provide an escape from the EIR requirement despite a project's clear, significant impact.

(6) Pollution and Conservation Laws § 1.4--California Environmental Quality Act--Exemption From Requirements of Act--Emergency Exemption--Substantial Evidence Standard of Review.
When an agency seeks to avoid an environmental impact report (EIR) under Pub. Resources Code, § 21080, subd. (b)(4) (exempting from the EIR requirement specific actions necessary to prevent or mitigate an emergency) a reviewing court on petition for mandate must determine if there exists substantial evidence in the record to support the agency finding of an emergency. At a minimum, the administrative record must disclose substantial evidence of every element of the contended exemption as defined in Pub. Resources Code, § 21060.3 (which defines the term "emergency" for purposes of the California Environmental Quality Act).

(7) Pollution and Conservation Laws § 1.4--California Environmental Quality Act--Exemption From Requirements of Act--Emergency Exemption--Substantial Evidence.
The trial court committed reversible error in concluding that there was substantial evidence of an "emergency" to allow a water district to avoid the preparation of an environmental impact report by proceeding pursuant to the "emergency" provisions (Pub. Resources Code, § 21080, subd. (b)(4)) of the California Environmental Quality Act to drill and operate two "dewatering" wells in order to lower the water table and thereby lessen the risk of liquefaction in the event of a major earthquake, where evidence regarding the likelihood of an earthquake of a magnitude likely to cause liquefaction consisted largely of generalized assumptions regarding the incidence of earthquakes and their imminence and estimated the likelihood of such earthquakes to be between 1.4 and 5 percent per year. Such evidence, even in aggregation, did not amount to substantial evidence of an emergency.

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

This case considers the propriety of a public agency's decision to proceed under an emergency exemption from an environmental impact report (EIR) required by the California Environmental Quality Act. (CEQA; Pub. Resources Code, § 21000 et seq.) FN1

FN1 All subsequent statutory references are to the Public Resources Code unless otherwise indicated.

By petition for writ of mandate petitioners Western Municipal Water District of Riverside County (Western), East Valley Water District (East Valley), the City of Riverside, and San Bernardino Valley Conservation District (Conservation District) in consolidated actions sought to challenge the decision of real party San Bernardino Valley Municipal Water District (real party or SBVMWD) to drill and operate two "dewatering" wells. The sole purpose of these wells would be to pump groundwater from the saturated pressure zone in the aquifer beneath the City of San Bernardino and then to discharge it into the Santa Ana River channel.

Respondent trial court granted a preliminary injunction enjoining the drilling of the two wells and subsequently heard an extended motion to dissolve the injunction. The central issue on the motion to dissolve was the propriety of SBVMWD's decision to avoid the preparation of an EIR by proceeding pursuant to the "emergency" provisions of CEQA. This determination in turn focused on the evidence presented to real party regarding the purported emergency, and of the sufficiency of that evidence to support real party's decision to invoke the "emergency" exemption. (§ 21080, subd. (b)(4), 21060.3, 21168.5.)

The trial court heard evidence from one witness on each side, and reviewed the record. The court held that real party's use of the emergency exemption was supported by substantial evidence. The court granted the motion to dissolve on March 31, 1986, whereupon Western and all other petitioners came to this court for review of the order by petition for writ of mandate. ***1108** We granted a stay of the trial court's order dissolving the preliminary injunction and issued an alternative writ. The petition for the peremptory writ is now before us for disposition.

Factual Background

"Liquefaction" occurs when water-saturated, cohesionless soils become compacted by the pressure of seismic waves transmitted through the soil during an earthquake. This compaction forces the water upward and creates a top layer of virtual quicksand into which overlying structures may topple. The water table underlying a 10,000 acre area in San Bernardino County has been rising to the extent that in the event of a major earthquake, liquefaction might occur. Concern for liquefaction in an area containing public facilities and about half the population of the City of San Bernardino motivated SBVMWD to authorize the two dewatering wells.

The Bunker Hill Basin, site of the rising water table, is an aquifer of approximately 120 square miles which lies beneath the San Bernardino Valley and is bounded by two active earthquake faults, the San Jacinto and the San Andreas. The basin contains porous, alluvial soils to a depth of 1,200 feet. Soil tests, undertaken from 1982 to 1985, have determined that these soils are particularly vulnerable to liquefaction if jarred and compressed during an earthquake. The magnitude of the potential danger from liquefaction rises when there is an increase in water saturation of the soil. There is no dispute that the groundwater was high in 1985 and 1986.

From 1982, when the United States Geological Survey (USGS) first suggested that a liquefaction potential existed and recommended soil testing, until 1985, when the USGS and real party's independent

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

consultant indicated explicitly that liquefaction would occur in the event of a major earthquake, soil testing proceeded. Real party's board of directors discussed the liquefication threat intermittently since 1982. The record contains a memorandum to real party's general manager dated March 16, 1982, reporting on the conclusions of a seismologist and stating, "the single most useful thing for us to do would be to lower the water table in the pressure zone to 10-15 feet."

Although real party contends that a liquefaction emergency is impending, the only evidence of imminence in the administrative record was that in 1982, the California Division of Mines and Geology concluded that a catastrophic earthquake would take place along the southern San Andreas fault before the end of the century. In 1985, a Scientific American article stated that an earthquake of 8.3 on the Richter scale had a 2 to 5 percent annual ***1109** probability of occurring and that San Bernardino was *one of* the likeliest epicenters of such a quake.

In November of 1985, real party decided to take preventive action under CEQA's emergency exemption by drilling the two wells to dewater the aquifer. Real party concedes that it would take about six years using these two proposed wells to remove the 75,000 acre feet of water necessary to mitigate the perceived danger entirely. Nevertheless, according to real party, lowering the groundwater in any amount would significantly reduce the liquefaction threat.

Petitioners argue that real party's board did not consider alternatives to the two wells and ignored a warning from its consultant that significant adverse environmental effects of these wells needed to be studied. The parties hotly dispute this issue, but petitioners point to evidence showing that contaminated plumes of groundwater, which have already forced the closure of 11 wells in the basin, might be drawn into the domestic water supplies if the dewatering wells were drilled and operated. The trial court considered this pollution potential an "item [of] valid concern." Petitioners also argue that real party did not pursue threshold investigations of environmental impact. They stress that SBVMWD simply decided to proceed under the emergency exemption, thereby avoiding the CEQA requirement of an EIR. In so doing, real party disregarded the recommendation of its own consultant, who, on June 17, 1985, recommended that "a focused environmental impact report (EIR) be prepared to address only the significant issues and concerns listed ...." Real party filed a notice of exemption, one which the trial court termed "extremely sketchy." The notice explained real party's reason for exemption as: "This action is necessary to mitigate or prevent an emergency consisting of serious loss of life, property damage, and loss of essential public services occurring as a result of soil liquefaction in an earthquake."

The petitions in the superior court for writ of mandate followed, on which the court ultimately ruled that the record before real party did provide substantial evidence of a "pending crisis."

Discussion

Petitioners advance two contentions: (1) the evidence in the record, as a matter of law, cannot support a finding of "action needed to prevent an emergency," and (2) the trial court applied an improper standard of review.

In opposition, real party parenthetically asserts unclean hands and statute of limitations defenses against Western. However, such matters are not ***1110** properly before us in this proceeding, in that the trial court specifically ruled that Western's petition was not barred, and real party has not sought to challenge that ruling by way of its own writ. In addition, real party challenges the availability of mandate relief. On this point, it is enough to say that the

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

absence of another adequate remedy and therefore the propriety of the petition were determined adversely to real party's position when the alternative writ was authorized. (*City of Los Angeles v. Superior Court* (1959) 51 Cal.2d 423, 429 [333 P.2d 745]; *Westminster Sch. Dist. v. Superior Court* (1972) 28 Cal.App.3d 120, 126 [104 Cal.Rptr. 388].)

I. *"Emergency" Exemption Under CEQA*

Petitioners argue that the trial court failed to construe the emergency exemption, and deferred instead to real party's erroneous interpretation of the exemption as applicable to predicted earthquakes.

Section 21080 in pertinent part provides: "(a) Except as otherwise provided in this division, this division [CEQA] shall apply to discretionary projects proposed to be carried out or approved by public agencies .... [¶] (b) This division shall not apply to the following: ... [¶] (4) Specific actions necessary to prevent or mitigate an emergency ...."

"Emergency" is defined by section 21060.3: "'Emergency' means a sudden, unexpected occurrence, *involving a clear and imminent danger, demanding immediate action* to prevent or mitigate loss of, or damage to, life, health, property, or essential public services. 'Emergency' includes such occurrences as fire, flood, earthquake, or other soil or geologic movements, as well as such occurrences as riot, accident, or sabotage." (Italics added.)

(1)It is well established that CEQA is "to be interpreted ... to afford the fullest possible protection to the environment within the reasonable scope of the statutory language." (*Friends of Mammoth v. Board of Supervisors* (1972) 8 Cal.3d 247, 259 [104 Cal.Rptr. 761, 502 P.2d 1049]; accord, *People* ex rel. *Younger v. Local Agency Formation Com.* (1978) 81 Cal.App.3d 464, 476 [146 Cal.Rptr. 400].)

The trial court recognized this principle of construction for CEQA, stating that the issue of statutory construction encompassed "the crux of the conflict." We agree.

It is the courts of this state, not the parties, which have the obligation of interpreting statutes. (*Bodinson Mfg. Co. v. California Employment Com.* (1941) 17 Cal.2d 321, 326 [109 P.2d 935]; *Oakland Raiders v. City of Berkeley* (1976) 65 Cal.App.3d 623, 629 [137 Cal.Rptr. 648].) As *1111 the Supreme Court stated in *Bodinson*: *supra.*, "We recognize ... that an administrative agency charged with carrying out a particular statute must adopt some preliminary construction of the statute as a basis upon which to proceed. It is likewise true that the administrative interpretation of a statute will be accorded great respect by the courts and will be followed if not clearly erroneous. [Citations.] But such a tentative administrative interpretation makes no pretense at finality and *it is the duty of this court, when such a question of law is properly presented, to state the true meaning of the statute finally and conclusively, even though this requires the overthrow of an earlier erroneous administrative construction.* [Citations.] The ultimate interpretation of a statute is an exercise of the judicial power. [Citations.]" (*Bodinson, supra.*, 17 Cal.2d at pp. 325-326, italics added.) In the context of CEQA, therefore, courts have defined the meaning of such terms as "project" and "on-going project," despite previous, conflicting administrative interpretations. (See *Friends of Mammoth, supra.*, 8 Cal.3d at p. 259; *County of Inyo v. Yorty* (1973) 32 Cal.App.3d 795, 803-808 [108 Cal.Rptr. 377].)

(2a)The "emergency" exception of section 21080, subdivision (b)(4) is obviously extremely narrow. "Emergency" as defined by section 21060.3 is explicit and detailed. We particularly note that the definition limits an emergency to an "*occurrence*," not a condition, and that the occurrence must involve a "*clear and imminent danger, demanding*

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

immediate action."

As one commentator has noted: "At least in principle, the emergency exemptions are appropriate, common sense provisions. The theory behind these exemptions is that if a project arises for which the lead agency simply *cannot* complete the requisite paperwork within the time constraints of CEQA, then pursuing the project without complying with the EIR requirement is justifiable. For example, if a dam is ready to burst or a fire is raging out of control and human life is threatened as a result of delaying a project decision, application of the emergency exemption would be proper." (Comment, *The Application of Emergency Exemptions Under CEQA: Loopholes in Need of Amendment?* (1984) 15 Pacific L.J. 1089, 1105, fn. omitted.)

Although SBVMWD urges that "CEQA, including its environmental impact report requirements, shall not apply to specific actions necessary to prevent or mitigate earthquakes or other soil or geological movements," this interpretation is unsupported by the text of the exemption. (4, 2b)Such a construction completely ignores the limiting ideas of "sudden," "unexpected," "clear," "imminent" and "demanding immediate action" expressly included by the Legislature and would be in derogation of the canon that a construction should give meaning to each word of the statute. (See ***1112***Pacific Legal Foundation v. Unemployment Ins. Appeals Bd.* (1981) 29 Cal.3d 101, 114 [172 Cal.Rptr. 194, 624 P.2d 244].) Moreover, in the name of "emergency" it would create a hole in CEQA of fathomless depth and spectacular breadth. Indeed, it is difficult to imagine a large-scale public works project, such as an extensive deforestation project or a new freeway, which could not qualify for emergency exemption from an EIR on the grounds that it might ultimately mitigate the harms attendant on a major natural disaster. The result could hardly be intended by the careful drafting of the Legislature, and is unmistakably opposed to the policy of construing CEQA to afford the maximum possible protection of the environment. (See *Friends of Mammoth*, *supra.*, 8 Cal.3d at p. 259.)

II. *The Standard of Review*

Despite the trial court's construction of "emergency" in CEQA, the court nevertheless sanctioned real party's invocation of the emergency exemption of section 21080, subdivision (b)(4). The court ruled: "in spite of my conclusions ... I'm compelled to deny the Writs for the reasons stated: That it is not my prerogative nor do I wish the prerogative of second guessing [SBVMWD]." This ruling, therefore, confronts us with the question of the applicable standard of review.

Judicial review of an agency decision under CEQA is governed by sections 21168 and 21168.5 of that act. Section 21168.5 applies to decisions made *other than* as a result of "a proceeding in which by law a hearing is required to be given, evidence is required to be taken and discretion in the determination of facts is vested in a public agency, ..." (§ 21168, see § 21168.5; see also *No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.3d 68, at p. 79, fn. 6 [118 Cal.Rptr. 34, 529 P.2d 66].) The court reviews the decision in a traditional mandamus action, a proceeding in which the court's inquiry is not limited to the administrative record, but in which it may receive additional evidence. FN2 Moreover, footnote 6 of *No Oil* also establishes that where "the trial court has received additional evidence [as in the case at bench], the question before it is whether substantial evidence on the whole record, including the evidence presented to it, supports the determination that no EIR was required." (*Merz v. Board of Supervisors* (1983) 147 Cal.App.3d 933, 937, fn. 2 [195 Cal.Rptr. 370], citing *No Oil*, *supra.*, 13 Cal.3d at p. 79, fn. 6.) ***1113**

FN2 Section 21168.5 provides: "In any action or proceeding, other than an action or proceeding under Section 21168, to attack,

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

> review, set aside, void or annul a determination, finding, or decision of a public agency on the grounds of noncompliance with this division, the inquiry shall extend only to whether there was a prejudicial abuse of discretion. Abuse of discretion is established if the agency has not proceeded in a manner required by law or if the determination or decision is not supported by substantial evidence."

In this case real party did not proceed by filing a negative declaration (§ 21080, subd. (c); see *Christward Ministry v. Superior Court* (1986) 184 Cal.App.3d 180, 186 [228 Cal.Rptr. 868]; *Friends of "B" Street v. City of Hayward* (1980) 106 Cal.App.3d 988, 1003 [165 Cal.Rptr. 514]), but by invoking a statutory exemption from the EIR requirement (§ 21080, subd. (b)(4)).

(5)The parties in this matter have focused on whether the evidence in the record supports a fair argument the project would have a significant environmental impact or whether there need be only substantial evidence of such an impact. However, the question of impact is irrelevant to the emergency exemption. In contrast to negative declarations (§ 21080, subd. (c)) and "categorical exemptions" (see, e.g., § 21080, subd. (b)(10), 21084), the text of the emergency exemption does not address the question of impact. Indeed, the self-evident purpose of the exemption is to provide an escape from the EIR requirement despite a project's clear, significant impact.

(6)The substantial evidence inquiry prescribed by section 21168.5 must therefore apply to the question of whether an emergency exists, not of the environmental impact of a remedial project. Stated differently, we conclude that where an agency seeks to avoid an EIR under section 21080, subdivision (b)(4), a reviewing court on petition for mandate must determine if there exists substantial evidence in the record to support the agency finding of an emergency.

We observe that the emergency exemption differs from the negative declaration procedure in that there is no statutory requirement of a preliminary study attending an agency decision to use the exemption. Nevertheless, it appears that the environmentally protective bias of CEQA consistent with *Friends of Mammoth* and *No Oil* can be met by a close judicial scrutiny of each element of the Legislature's detailed definition of "emergency."

At a minimum, the administrative record must disclose substantial evidence of every element of the contended exemption as defined in section 21060.3 and construed above. (7)However, our review discloses no substantial evidence that liquefaction is an *imminent* danger or that it demands immediate action. Indeed, although the court did not explicitly articulate a construction of the statute, it concluded, "if I were deciding from the record, I would say that [the record] does not support a finding of emergency." [FN3] We agree. ***1114**

> FN3 The trial court explained: "First of all, the high groundwater level problem has been with us since the beginning of time, I guess ... it runs in cycles. It isn't something that has happened very recently. The present cycle has been with us for five years, going on six. The soil has been of the same consistency for a number of years, so that's not anything that's relatively new on the scene. And the potential for severe seismic activity has been with us for quite awhile. Ever since the last big earthquake, I guess, they have been expecting the next one.
>
> "So these factors which existed upon what [real party] considered to be an emergency situation are something that have been with us for a long period of time, and the combination has been there for a long period of

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

time.

"The only thing that is really changed is the amount of development that is going forward on the area of concern, and that's going forward apparently with some restrictions to compensate for the problem. But in any case, it is going forward. And that really is what the concern is about here, as I read the record.

"The attention of [real party] was brought to this set of conditions recently because of the severe earthquake in Mexico [in September 1985] and because of a lesser earthquake in the San Bernardino area. It was that set of circumstances, along with the evaluation of the potential damage because of extensive construction, if you will forgive me, [that] got [real party] excited.

"It is difficult for me to interpret this set of conditions or factors which have been with us for a long period of time as all of a sudden becoming an emergency ...."

The only pertinent data regarding imminence contained in the record are as follows. Exhibit 10 is a special publication of the California Department of Conservation, Division of Mines and Geology entitled "Earthquake Planning Scenario for a Magnitude 8.3 Earthquake on the San Andreas Fault in Southern California." That portion of the paper, the "purpose, approach, and design scenario" is curiously missing from the copy of the administrative record filed with this court, but SBVMWD's summary index in the record claims "Such an earthquake ... has a current annual probability of two to five percent, ..." Exhibit 11, is an article published in the February 1985 issue of Scientific American, entitled, *Predicting the Next Great Earthquake in California.* That article in part describes an "analysis [concluding] the likelihood of an earthquake of magnitude 8.3 along the southern San Andreas fault is estimated to be between 2 and 5 percent per year, or about 50 percent in the next 20 to 30 years."

At the only point in their briefs to this court that SBVMWD mentions "imminent danger," it cites only exhibits E and F. Exhibit F, "Evaluating Liquefaction Potential" is a 1985 paper of the USGS; in relevant portion it concludes that liquefaction is a potential threat in the San Bernardino-Riverside area. The generalities of its conclusions and the absence of conclusions regarding imminence are qualified, viz.: "These lower magnitude events are estimated to occur about as frequently as higher magnitude events on the San Andreas fault .... [W]e would expect shaking strong enough to induce liquefaction to occur several times [in the entire Los Angeles region] but at different sites in a 30-to-50-yr time span, perhaps once every 6 to 8 yr somewhere within the region."

Exhibit E was prepared in 1985 by independent consultants and is entitled, "Geotechnical and Seismic Hazards Report, San Bernardino Master Plan." *1115 As summarized by SBVMWD, the report "asses[es] the potential for liquefaction in downtown San Bernardino. The study concluded that liquefaction would occur in a large earthquake at many sites in San Bernardino." Our review of the report reveals only generalized assumptions regarding the incidence of earthquakes and their imminence. Conclusions regarding liquefaction in downtown San Bernardino included, for instance, "seismic shaking levels of less than 0.25g in general yield a low potential for liquefaction except possibly in localized areas of shallow groundwater and poor soil conditions." A generalized graph of seismic exposure for the downtown area (figure 11A) shows acceleration of 0.25g to range in likelihood from an average return period of 20 to about 125 years, with a "best estimate" of about 70 years. A 70-year return rate is mathematically equivalent to an annual likelihood of 1.4 percent. [FN4]

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

FN4 We are also aware of the declaration of Herbert Wessel, which asserts, "In my opinion, the high groundwater levels currently pose an emergency situation related to the occurrence of flooding, earthquake or other related geologic movements ...." However, this opinion fails to speak in specific terms regarding the elements necessary for an emergency, discussed *ante*.

We hold that this evidence, even in aggregation, does not amount to substantial evidence of a "clear and imminent danger, demanding immediate action" as the exemption requires. The trial court's reluctant conclusion of substantial evidence of "emergency" as defined by CEQA was therefore error, and its order must be reversed.

DISPOSITION

For the foregoing reasons, we conclude that the court erred in its order of March 31, 1986, in dissolving the preliminary injunction, thereby permitting bids for construction of the wells. Let a peremptory writ of mandate issue directing the court to vacate its order, and to enter a new and different order denying the motion to dissolve the preliminary injunction, consistent with the views expressed herein.

The alternative writ is discharged.

Kaufman, J., and Schaefer, J., FN* concurred.

FN* Assigned by the Chairperson of the Judicial Council.

A petition for a rehearing was denied January 7, 1987, and the petition of real party in interest for review by the Supreme Court was denied March 4, 1987.

WESTERN SECURITY BANK, N.A., Petitioner,

v.

THE SUPERIOR COURT OF LOS ANGELES COUNTY, Respondent;

BEVERLY HILLS BUSINESS BANK et al., Real Parties in Interest. VISTA PLACE ASSOCIATES et al., Petitioners,

v.

THE SUPERIOR COURT OF LOS ANGELES COUNTY, Respondent; WESTERN SECURITY BANK, N.A., et al., Real Parties in Interest.

No. S037504.

Apr 7, 1997.

SUMMARY

After a partnership went into default on a loan it had obtained from a bank, the bank and the partnership modified the terms of the loan, and the general partners obtained unconditional, irrevocable standby letters of credit in favor of the bank as additional collateral. When the partnership again went into default, the bank foreclosed nonjudicially on the real property securing the loan and then presented the letters of credit to the issuer so as to cover the unpaid deficiency. The issuer brought an action for declaratory relief, seeking a declaration that it was not obligated to accept or honor the bank's tender of the letters of credit or, alternatively, a declaration that, if it was required to honor the letters, the partners were obligated to reimburse the issuer. The trial court entered a judgment decreeing that the issuer was required to honor the letters of credit and that the issuer was not barred from severally seeking reimbursement from the partners. (Superior Court of Los Angeles County, No. BC031239, Ernest George Williams, Judge.) The Court of Appeal, Second Dist., Div. Three, No. B066488, reversed, concluding that, under Code Civ. Proc., § 580d, part of the antideficiency law, the issuer of a standby letter of credit, provided to a real property lender by a debtor as additional security, may decline to honor it after receiving notice that it is to be used to discharge a deficiency following the beneficiary-lender's nonjudicial foreclosure on real property. Thereafter, the Legislature enacted urgency legislation (Sen. Bill No. 1612), providing that an otherwise conforming draw on a letter of credit does not contravene the antideficiency laws and that those laws afford no basis for refusal to honor a draw (Code Civ. Proc., § 580.5). After the Supreme Court granted review and returned the matter to the Court of Appeal for reconsideration in light of the urgency legislation, the Court of Appeal concluded the legislation constituted a substantial change in existing law and thus was prospective only and had no impact on the Court of Appeal's earlier conclusions regarding the parties' rights and obligations.

The Supreme Court reversed the judgment of the Court of Appeal and remanded. The court held that the Court of Appeal erred in concluding that the enactment of Sen. Bill No. 1612 had no effect on this case. The Legislature explicitly intended to abrogate the Court of Appeal's prior decision to clarify the parties' obligations when letters of credit support loans also secured by real property. The Court of Appeal mistook standby letters of credit for an attempt to evade the antideficiency and foreclosure laws by seeing them only as a form of guaranty, and also overlooked that the parties specifically intended the standby letters of credit to be additional security. When viewed as additional security for a note also secured by real property, a standby letter of credit does not conflict with the statutory prohibition of deficiency judgments. Further, the Legislature manifestly intended the respective obligations of the parties to a letter of credit transaction to

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

remain unaffected by the antideficiency laws, whether those obligations arose before or after enactment of Sen. Bill No. 1612. Since the Legislature's action constituted a clarification of the state of the law before the Court of Appeal's decision, rather than a change in the law, the legislation had no impermissible retroactive consequences, and it governed this case. (Opinion by Chin, J., with George, C. J., Baxter, and Brown, JJ., concurring. Concurring and dissenting opinion by Werdegar, J. Concurring and dissenting opinion by Mosk, J., with Kennard, J., concurring.)

HEADNOTES

Classified to California Digest of Official Reports

(1a, 1b, 1c) Letters of Credit § 10--Duties and Privileges of Issuer--Letters Presented to Cover Deficiency--Following Nonjudicial Foreclosure--Retroactivity of New Legislation.
In an action brought by the issuer of letters of credit against a bank that had loaned money to a partnership secured by real property, and against the partnership and its general partners, the Court of Appeal erred in concluding that the Legislature's postjudgment enactment of urgency legislation (Sen. Bill No. 1612), providing that an otherwise conforming draw on a letter of credit does not contravene the antideficiency laws and that those laws afford no basis for refusal to honor a draw (Code Civ. Proc., § 580.5), had no effect on a prior Court of Appeal holding in this case to the effect that, under Code Civ. Proc., § 580d, the issuer of a standby letter of credit, provided to a real property lender by a debtor as additional security, may decline to honor it after receiving notice that it is to be used to discharge a deficiency following the beneficiary-lender's nonjudicial foreclosure on real property. The partners obtained the letters of credit as additional collateral for repayment of the loan and presented the letters for payment to the issuer after the bank foreclosed nonjudicially on the real property. The Legislature explicitly intended to abrogate the Court of Appeal's prior decision to clarify the parties' obligations when letters of credit support loans also secured by real property. The Court of Appeal mistook standby letters of credit for an attempt to evade the antideficiency and foreclosure laws by seeing them only as a form of guaranty, and also overlooked that the parties specifically intended the standby letters of credit to be additional security. When viewed as additional security for a note also secured by real property, a standby letter of credit does not conflict with the statutory prohibition of deficiency judgments. Further, the Legislature manifestly intended the respective obligations of the parties to a letter of credit transaction to remain unaffected by the antideficiency laws, whether those obligations arose before or after enactment of Sen. Bill No. 1612. Since the Legislature's action constituted a clarification of the state of the law before the Court of Appeal's decision, rather than a change in the law, the legislation had no impermissible retroactive consequences, and it governed this case.
[See 3 Witkin, Summary of Cal. Law (9th ed. 1987) Negotiable Instruments, § 11.]
(2) Statutes § 5--Operation and Effect--Retroactivity.
Statutes do not operate retrospectively unless the Legislature plainly intended them to do so. A statute has retrospective effect when it substantially changes the legal consequences of past events. A statute does not operate retrospectively simply because its application depends on facts or conditions existing before its enactment. When the Legislature clearly intends a statute to operate retrospectively, the courts are obliged to carry out that intent unless due process considerations prevent them from doing so.

(3) Statutes § 5--Operation and Effect--Retroactivity--Amendments-- Purpose--Change in Law or Clarification.
A statute that merely clarifies, rather than changes,

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

existing law does not operate retrospectively even if applied to transactions predating its enactment. The courts assume that the Legislature amends a statute for a purpose, but that purpose need not necessarily be to change the law. The courts' consideration of the surrounding circumstances can indicate that the Legislature made material changes in statutory language in an effort only to clarify a statute's true meaning. Such a legislative act has no retrospective effect because the true meaning of the statute remains the same. One such circumstance is when the Legislature promptly reacts to the emergence of a novel question of statutory interpretation. An amendment that in effect construes and clarifies a prior statute must be accepted as the legislative declaration of the meaning of the original act, where the amendment was adopted soon after the controversy arose concerning the proper interpretation of the statute. In such a case, the amendment may logically be regarded as a legislative interpretation of the original act-a formal change-rebutting the presumption of substantial change. Even so, a legislative declaration of an existing statute's meaning is neither binding nor conclusive in construing the statute. Ultimately, the interpretation of a statute is an exercise of the judicial power that the Constitution assigns to the courts.

(4) Statutes § 5--Operation and Effect--Retroactivity--Legislative Intent-- Change in Law or Clarification.
A subsequent expression of the Legislature as to the intent of a prior statute, although not binding on the court, may properly be used in determining the effect of a prior act. Moreover, even if the court does not accept the Legislature's assurance that an unmistakable change in the law is merely a clarification, the declaration of intent may still effectively reflect the Legislature's purpose to achieve a retrospective change. Whether a statute should apply retrospectively or only prospectively is, in the first instance, a policy question for the legislative body enacting the statute. Thus, where a statute provides that it clarifies or declares existing law, such a provision is indicative of a legislative intent that the amendment apply to all existing causes of action from the date of its enactment. In accordance with the general rules of statutory construction, the court must give effect to this intention unless there is some constitutional objection to it.

(5) Letters of Credit § 10--Duties and Privileges of Issuer--Independence Principle.
The liability of the issuer of a letter of credit to the letter's beneficiary is direct and independent of the underlying transaction between the beneficiary and the issuer's customer. Under the independence principle, a letter of credit is an independent obligation of the issuing bank rather than a form of guaranty or a surety obligation (Cal. U. Com. Code, § 5114, subd. (1)). Thus, the issuer of a letter of credit cannot refuse to pay based on extraneous defenses that might have been available to its customer. Absent fraud, the issuer must pay upon proper presentment, regardless of any defenses the customer may have against the beneficiary based in the underlying transaction.

(6) Letters of Credit § 10--Duties and Privileges of Issuer--Independence Principle--Effect of Draw on Letter of Credit.
A standby letter of credit is a security device created at the request of the customer/debtor that is an obligation owed independently by the issuing bank to the beneficiary/creditor. A creditor that draws on a letter of credit does no more than call on all of the security pledged for the debt. When it does so, it does not violate the prohibition of deficiency judgments.

CHIN, J.

This case concerns the extent to which two disparate bodies of law interact when standby letters of credit are used as additional support for *237 loan obligations secured by real property. On one side we have California's complex web of foreclosure and antideficiency laws that circumscribe enforcement of obligations secured by interests in real property. On the other side is the letter of credit law's "independence principle," the unique characteristic of letters of credit essential to their commercial utility.

The antideficiency statute invoked in this case is Code of Civil Procedure section 580d. That section precludes a judgment for any loan balance left unpaid after the lender's nonjudicial foreclosure under a power of sale in a deed of trust or mortgage on real property. (See *Roseleaf Corp. v. Chierighino* (1963) 59 Cal.2d 35, 43-44 [27 Cal.Rptr. 873, 378 P.2d 97].) [FN1] The independence principle, in summary form, makes the letter of credit issuer's obligation to pay a draw conforming to the letter's terms completely separate from, and not contingent on, any underlying contract between the issuer's customer and the letter's beneficiary. (See, e.g., Cal. U. Com. Code, § 5114, subd. (1); *San Diego Gas & Electric Co. v. Bank Leumi* (1996) 42 Cal.App.4th 928, 933-934 [50 Cal.Rptr.2d 20].) [FN2]

FN1 In pertinent part, Code of Civil Procedure section 580d provides: "No judgment shall be rendered for any deficiency upon a note secured by a deed of trust or mortgage upon real property or an estate for years therein hereafter executed in any case in which the real property or estate for years therein has been sold by the mortgagee or trustee under power of sale contained in the mortgage or deed of trust."

FN2 In 1996, the Legislature completely revised division 5 of the California Uniform Commercial Code, which pertains to letters of credit. (Stats. 1996, ch. 176.) The enactment of chapter 176 repealed the former division 5 and added a new division 5. (Stats. 1996, ch. 176, §§ 6, 7.) The new provisions apply to letters of credit issued after the statute's effective date. (Stats. 1996, ch. 176, § 14.) Letters of credit issued earlier are to be dealt with as though the repeal had not occurred. (Stats. 1996,

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

ch. 176, § 15.) We have no occasion in this case to consider the provisions of the new division 5.

The Legislature (Stats. 1996, ch. 497, § 7) later amended a statutory reference found in California Uniform Commercial Code section 5114 as it existed before chapter 176 was enacted. This second legislative action might appear to restore the prior section 5114 from the repealed former division 5 and possibly leave two sections numbered 5114 in the new division 5. (See Cal. Const., art. IV, § 9; Gov. Code, § 9605.) We have no occasion in this case to address the meaning or effect of this seeming incongruity either.

All references to section 5114 in this opinion are to California Uniform Commercial Code section 5114 as it existed before the 1996 legislation.

The Court of Appeal perceived a conflict between the public policies behind Code of Civil Procedure section 580d and the independence principle under the facts of this case. Here, after nonjudicial foreclosure of the real property security for its loan left a deficiency, the lender attempted to draw on the standby letters of credit of which it was the beneficiary. Ordinarily, the issuer's payment on a letter of credit would require the borrower to reimburse the issuer. (See § 5114, subd. (3).) The Court of Appeal considered that this result indirectly imposed on the borrower the equivalent of a *238 prohibited deficiency judgment. The court concluded the situation amounted to a "fraud in the transaction" under section 5114, subdivision (2)(b), one of the limited circumstances justifying an issuer's refusal to honor its letter of credit.

The Legislature soon acted to express a clear, contrary intent. It passed Senate Bill No. 1612 (1993-1994 Reg. Sess.) (hereafter Senate Bill No. 1612) as an urgency measure specifically meant to abrogate the Court of Appeal's holding. (Stats. 1994, ch. 611, §§ 5, 6.) In brief, the aspects of Senate Bill No. 1612 we address provided that an otherwise conforming draw on a letter of credit does not contravene the antideficiency laws and that those laws afford no basis for refusal to honor a draw. After the Legislature's action, we returned the case to the Court of Appeal for reconsideration in light of the statutory changes. On considering the point, the Court of Appeal concluded the Legislature's action was prospective only and had no impact on the court's earlier analysis of the parties' rights and obligations. Accordingly, the Court of Appeal reiterated its former conclusions.

We again granted review and now reverse. The Legislature's manifest intent was that Senate Bill No. 1612's provisions, with one exception not involved here, would apply to all existing loans secured by real property and supported by outstanding letters of credit. We conclude the Legislature's action constituted a clarification of the state of the law before the Court of Appeal's decision. The legislation therefore has no impermissible retroactive consequences, and we must give it the effect the Legislature intended.

I. Factual and Procedural Background

On October 10, 1984, Beverly Hills Savings and Loan Association, later known as Beverly Hills Business Bank (the Bank), loaned $3,250,000 to Vista Place Associates (Vista), a limited partnership, to finance the purchase of real property improved with a shopping center. Vista's general partners, Phillip F. Kennedy, Jr., John R. Bradley, and Peter M. Hillman (the Vista partners), each signed the promissory note. The loan transaction created a "purchase money mortgage," as it was secured by a "Deed of Trust and Assignment of Rents" as well as a letter of credit.

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

Vista later experienced financial difficulties, and the loan went into default. Vista asked the Bank to modify the loan's terms so Vista could continue operating the shopping center and repay the debt. The Bank and Vista agreed to a loan modification in February 1987, under which the three Vista partners each obtained an unconditional, irrevocable standby letter of *239 credit in favor of the Bank in the amount of $125,000, for a total of $375,000. These were delivered to the Bank as additional collateral security for repayment of the loan. Under the modification agreement, the Bank was entitled to draw on the letters of credit if Vista defaulted or failed to pay the loan in full at maturity.

Western Security Bank, N.A. (Western) issued the letters of credit at the Vista partners' request. Each partner agreed to reimburse Western if it ever had to honor the letters. Under the agreement, each Vista partner gave Western a $125,000 promissory note. FN3

FN3 The parties' arrangements reflected a common use of letters of credit. A letter of credit typically is an engagement by a financial institution (the issuer), made at the request of a customer (also referred to as the applicant or account party) to pay a specified sum of money to another person (the beneficiary) upon compliance with the conditions for payment stated in the letter of credit, i. e., presentation of the documents specified in the letter of credit. (See Gregora, *Letters of Credit in Real Property Finance Transactions* (Spring 1991) 9 Cal. Real Prop. J. 1, 1-2.)

A letter of credit transaction involves at least three parties and three separate and independent relationships: (1) the relationship between the issuer and the beneficiary created by the letter of credit; (2) the relationship between the customer and the beneficiary created by a contract or promissory note, with the letter of credit securing the customer's obligations to the beneficiary under the contract or note; and (3) the relationship between the customer and the issuer created by a separate contract under which the issuer agrees to issue the letter of credit for a fee and the customer agrees to reimburse the issuer for any amounts paid out under the letter of credit. (Gregora, *Letters of Credit in Real Property Finance Transactions*, *supra*, 9 Cal. Real Prop. J. at p. 2; *San Diego Gas & Electric Co. v. Bank Leumi*, *supra*, 42 Cal.App.4th at pp. 932-933; see *Voest-Alpine Intern. Corp. v. Chase Manhattan Bank* (2d Cir. 1983) 707 F.2d 680, 682; and *Colorado Nat. Bank, etc. v. Bd. of County Com'rs* (Colo. 1981) 634 P.2d 32, 36-38, for a discussion of the history and structure of letter of credit transactions.)

Letters of credit can function as payment mechanisms. For example, in sales transactions a letter of credit assures the seller of payment when parting with goods, while the conditions for payment specified in the letter of credit (often a third party's documentation, such as a bill of lading) assure the buyer the goods have been shipped before payment is made. (Gregora, *Letters of Credit in Real Property Finance Transactions*, *supra*, 9 Cal. Real Prop. J. at p. 3.) In the letter of credit's role as a payment mechanism, a payment demand occurs in the ordinary course of business and is consistent with full performance of the underlying obligations. (*Ibid.*)

The use of letters of credit has now expanded beyond that function, and they are employed in many other types of transactions in which one party requires assurances the other party will perform. (Gregora, *Letters of Credit in Real Property Finance Trans-*

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

> *actions, supra*, 9 Cal. Real Prop. J. at p. 3.) When used to support a debtor's obligations under a promissory note or other debt instrument, the so-called "standby" letter of credit typically provides that the issuer will pay the creditor when the creditor gives the issuer written certification that the debtor has failed to pay the amount due under the debtor's underlying obligation to the creditor. (*Ibid.*) Thus, a payment demand under a standby letter of credit indicates that there is a problem-either the customer is in financial difficulty, or the beneficiary and the customer are in a dispute. (*Ibid.*)

In December 1990, the Bank declared Vista in default on the modified loan. The Bank recorded a notice of default on February 13, 1991, and began ***240** nonjudicial foreclosure proceedings. (Civ. Code, § 2924.) It then filed an action against Vista seeking specific performance of the rents and profits provisions in the trust deed and appointment of a receiver.

On June 11, 1991, attorneys for the Bank and Vista signed a letter agreement settling the Bank's lawsuit. In that agreement, Vista promised it would "not take any legal action to prevent [the Bank's] drawing upon [the letters of credit] after the Trustee's Sale of the Vista Place Shopping Center, ... provided that the amount of the draw by [the Bank] does not exceed an amount equal to the difference between [Vista's] indebtedness and the successful bid of the Trustee's Sale." Vista promised as well not to take any draw-related legal action against the Bank after the Bank's draw on the letters of credit.

On June 13, 1991, the Bank concluded its nonjudicial foreclosure on the shopping center under the power of sale in its deed of trust. The Bank was the only bidder, and it purchased the property. The sale left an unpaid deficiency of $505,890.16.

That same day, the Bank delivered the three letters of credit and drafts to Western and demanded payment of their full amount, $375,000. The Bank never sought to recover the $505,890.16 deficiency from Vista or the Vista partners. About the time that Western received the Bank's draw demand, it also received a written notice from the Vista partners' attorney. The notice asserted that Code of Civil Procedure section 580d barred Western from seeking reimbursement from the Vista partners for any payment on the letters of credit, and that if Western paid, it did so at its own risk.

Western did not honor the Bank's demand for payment on the letters of credit. Instead, on June 24, 1991, Western filed this declaratory relief action against the Bank, as well as Vista and the Vista partners (collectively, the Vista defendants). Western's complaint sought: (1) a declaration that Western is not obligated to accept or honor the Bank's tender of the letters of credit; or, alternatively, (2) a declaration that, if Western must pay on the letters of credit, the Vista partners must reimburse Western according to the terms of their promissory notes.

The Vista defendants cross-complained against Western for cancellation of their promissory notes and for injunctive relief. In July 1991, the Bank filed a first amended cross-complaint, alleging Western wrongfully dishonored the letters of credit, and the Vista defendants breached the agreement not to take legal action to prevent the Bank's drawing on the letters of credit.

The Bank, Western, and the Vista defendants each sought summary judgment. After several hearings and discussions with counsel, which produced a stipulation on the key facts, the court issued its decision on January ***241** 23, 1992. By its minute order of that date, the court (l) denied the three motions for summary judgment, (2) severed the Vista defendants' cross-complaint against Western for cancellation of the promissory notes, (3) severed

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

the Bank's amended cross-complaint against the Vista defendants for breach of the letter agreement, and (4) issued a tentative decision on the trial of Western's complaint for declaratory relief and the Bank's amended cross-complaint against Western for wrongful dishonor of the letters of credit.

The trial court signed and filed the judgment on March 26, 1992. The court decreed the Bank was entitled to recover $375,000 from Western, plus interest at 10 percent from June 13, 1991, the date of the Bank's demand, and costs of suit. The court further decreed Western could seek reimbursement from the Vista partners severally, and each Vista partner was obligated to reimburse Western, pursuant to the promissory notes in favor of Western, for its payment to the Bank. Western appealed, and the Vista defendants cross-appealed.

The Court of Appeal, after granting rehearing and accepting briefing by several amici curiae, issued an opinion reversing the trial court on December 21, 1993. In that opinion, the court concluded: "We hold that, under section 580d of the Code of Civil Procedure, an integral part of California's long-established antideficiency legislation, the issuer of a standby letter of credit, provided to a real property lender by a debtor as additional security, *may* decline to honor it after receiving notice that it is to be used to discharge a deficiency following the beneficiary-lender's *nonjudicial* foreclosure on real property. Such a use of standby letters of credit constitutes a 'defect not apparent on the face of the documents' within the meaning of California Uniform Commercial Code section 5114, subdivision (2)(b), and therefore such permissive dishonor does no offense to the 'independence principle.' " (Original italics, fn. omitted.)

In that first opinion, the Court of Appeal also solicited the Legislature's attention: "To the extent that this result will present problems for real estate lenders with respect to the way they now do business (as the Bank and several amici curiae have strongly suggested), it is a matter which should be addressed to the Legislature. We have been presented with two important but conflicting statutory policies. Our reconciliation of them in this case may not prove as satisfactory in another factual context. It is therefore a matter which should receive early legislative attention." (Fn. omitted.)

We granted review, and while the matter was pending, the Legislature passed Senate Bill No. 1612, an urgency statute that the Governor signed on *242 September 15, 1994. Senate Bill No. 1612 affected four statutes. Section 1 of the bill amended Civil Code section 2787 to state that a letter of credit is not a form of suretyship obligation. (Stats. 1994, ch. 611, § 1.) Section 2 of the bill added Code of Civil Procedure section 580.5, explicitly excluding letters of credit from the purview of the antideficiency laws. (Stats. 1994, ch. 611, § 2.) Section 3 of the bill added Code of Civil Procedure section 580.7, which declares unenforceable letters of credit issued to avoid defaults on purchase money mortgages for owner-occupied real property containing one to four residential units. (Stats. 1994, ch. 611, § 3.) Section 4 of the bill made "technical, nonsubstantive changes" to section 5114. (Stats. 1994, ch. 611, § 4; Legis. Counsel's Dig., Sen. Bill No. 1612 (1993-1994 Reg. Sess.).)

The Legislature made its purpose explicit: "It is the intent of the Legislature in enacting Sections 2 and 4 of this act to confirm the independent nature of the letter of credit engagement and to abrogate the holding [of the Court of Appeal in this case] .... [¶] The Legislature also intends to confirm the expectation of the parties to a contract that underlies a letter of credit, that the beneficiary will have available the value of the real estate collateral and the benefit of the letter of credit without regard to the order in which the beneficiary may resort to either." (Stats. 1994, ch. 611, § 5.) The same purpose was echoed in the bill's statement of the facts calling for an urgency statute: "In order to confirm and clarify the law applicable to obligations which are secured by

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

real property or an estate for years therein and which also are supported by a letter of credit, it is necessary that this act take effect immediately." (Stats. 1994, ch. 611, § 6.)

After the Legislature enacted Senate Bill No. 1612, we requested the parties' views on its effect. On February 2, 1995, after considering the parties' responses, we transferred the case to the Court of Appeal with directions to vacate its decision and reconsider the cause in light of the Legislature's action.

On reconsideration, the Court of Appeal determined Senate Bill No. 1612 constituted a substantial change in existing law. Believing there was no clear evidence that the Legislature intended the statute to operate retrospectively, the Court of Appeal thought Senate Bill No. 1612 had only prospective application. Therefore, Senate Bill No. 1612 did not affect the Court of Appeal's prior conclusions on the parties' rights and obligations. The Court of Appeal filed its second opinion on September 29, 1995, mostly repeating its prior reasoning and conclusions. We granted the Bank's petition for review.

II. Discussion

(1a) As the Court of Appeal recognized, we first must determine the effect on this case of the Legislature's enactment of Senate Bill No. 1612. *243 (2) A basic canon of statutory interpretation is that statutes do not operate retrospectively unless the Legislature plainly intended them to do so. (*Evangelatos v. Superior Court* (1988) 44 Cal.3d 1188, 1207-1208 [246 Cal.Rptr. 629, 753 P.2d 585]; *Aetna Cas. & Surety Co. v. Ind. Acc. Com.* (1947) 30 Cal.2d 388, 393 [182 P.2d 159].) A statute has retrospective effect when it substantially changes the legal consequences of past events. (*Kizer v. Hanna* (1989) 48 Cal.3d 1, 7 [255 Cal.Rptr. 412, 767 P.2d 679].) A statute does not operate retrospectively simply because its application depends on facts or conditions existing before its enactment. (*Ibid.*) Of course, when the Legislature clearly intends a statute to operate retrospectively, we are obliged to carry out that intent unless due process considerations prevent us. (*In re Marriage of Bouquet* (1976) 16 Cal.3d 583, 587, 592 [128 Cal.Rptr. 427, 546 P.2d 1371].)

(3) A corollary to these rules is that a statute that merely *clarifies*, rather than changes, existing law does not operate retrospectively even if applied to transactions predating its enactment. We assume the Legislature amends a statute for a purpose, but that purpose need not necessarily be to change the law. (Cf. *Williams v. Garcetti* (1993) 5 Cal.4th 561, 568 [20 Cal.Rptr.2d 341, 853 P.2d 507].) Our consideration of the surrounding circumstances can indicate that the Legislature made material changes in statutory language in an effort only to clarify a statute's true meaning. (*Martin v. California Mut. B. & L. Assn.* (1941) 18 Cal.2d 478, 484 [116 P.2d 71]; *GTE Sprint Communications Corp. v. State Bd. of Equalization* (1991) 1 Cal.App.4th 827, 833 [2 Cal.Rptr.2d 441]; see *Balen v. Peralta Junior College Dist.* (1974) 11 Cal.3d 821, 828, fn. 8 [114 Cal.Rptr. 589, 523 P.2d 629].) Such a legislative act has no retrospective effect because the true meaning of the statute remains the same. (*Stockton Sav. & Loan Bank v. Massanet* (1941) 18 Cal.2d 200, 204 [114 P.2d 592]; *In re Marriage of Reuling* (1994) 23 Cal.App.4th 1428, 1440 [28 Cal.Rptr.2d 726]; *Tyler v. State of California* (1982) 134 Cal.App.3d 973, 976-977 [185 Cal.Rptr. 49].)

One such circumstance is when the Legislature promptly reacts to the emergence of a novel question of statutory interpretation: " 'An amendment which in effect construes and clarifies a prior statute must be accepted as the legislative declaration of the meaning of the original act, where the amendment was adopted soon after the controversy arose concerning the proper interpretation of the statute.... [¶] If the amendment was enacted soon

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

after controversies arose as to the interpretation of the original act, it is logical to regard the amendment as a legislative interpretation of the original act-a formal change-rebutting the presumption of substantial change.' (1A Singer, Sutherland Statutory Construction (5th ed. 1993) § 22.31, p. *244 279, fns. omitted.)" (*RN Review for Nurses, Inc. v. State of California* (1994) 23 Cal.App.4th 120, 125 [28 Cal.Rptr.2d 354].) FN4

FN4 The " 'presumption of substantial change' " mentioned in the quoted passage refers to the presumption that amendatory legislation accomplishing substantial change is intended to have only prospective effect. Some courts have thought changes categorized as merely formal or procedural present no problem of retrospective operation. However, as mentioned above, California has rejected this type of classification: "In truth, the distinction relates not so much to the form of the statute as to its effects. If substantial changes are made, even in a statute which might ordinarily be classified as procedural, the operation on existing rights would be retroactive because the legal effects of past events would be changed, and the statute will be construed to operate only in futuro unless the legislative intent to the contrary clearly appears." (*Aetna Cas. & Surety Co. v. Ind. Acc. Com.*, *supra*, 30 Cal.2d at p. 394; cf. *Kizer v. Hanna*, *supra*, 48 Cal.3d at pp. 7-8.)

Even so, a legislative declaration of an existing statute's meaning is neither binding nor conclusive in construing the statute. Ultimately, the interpretation of a statute is an exercise of the judicial power the Constitution assigns to the courts. (*California Emp. etc. Com. v. Payne* (1947) 31 Cal.2d 210, 213 [187 P.2d 702]; *Bodinson Mfg. Co. v. California E. Com.* (1941) 17 Cal.2d 321, 326 [109 P.2d 935]; see *Del Costello v. State of California* (1982) 135 Cal.App.3d 887, 893, fn. 8 [185 Cal.Rptr. 582].) Indeed, there is little logic and some incongruity in the notion that one Legislature may speak authoritatively on the intent of an earlier Legislature's enactment when a gulf of decades separates the two bodies. (Cf. *Peralta Community College Dist. v. Fair Employment & Housing Com.* (1990) 52 Cal.3d 40, 51-52 [276 Cal.Rptr. 114, 801 P.2d 357].) Nevertheless, the Legislature's expressed views on the prior import of its statutes are entitled to due consideration, and we cannot disregard them.

(4) "[A] subsequent expression of the Legislature as to the intent of the prior statute, although not binding on the court, may properly be used in determining the effect of a prior act." (*California Emp. etc. Com. v. Payne*, *supra*, 31 Cal.2d at pp. 213-214.) Moreover, even if the court does not accept the Legislature's assurance that an unmistakable change in the law is merely a "clarification," the declaration of intent may still effectively reflect the Legislature's purpose to achieve a retrospective change. (*Id.* at p. 214.) Whether a statute should apply retrospectively or only prospectively is, in the first instance, a policy question for the legislative body enacting the statute. (*Evangelatos v. Superior Court*, *supra*, 44 Cal.3d at p. 1206.) Thus, where a statute provides that it clarifies or declares existing law, "[i]t is obvious that such a provision is indicative of a legislative intent that the amendment apply to all existing causes of action from the date of its enactment. In accordance with the general rules of statutory construction, we must give effect to this intention unless there is some constitutional objection thereto." (*245*California Emp. etc. Com. v. Payne*, *supra*, 31 Cal.2d at p. 214; cf. *City of Sacramento v. Public Employees' Retirement System* (1994) 22 Cal.App.4th 786, 798 [27 Cal.Rptr.2d 545]; *City of Redlands v. Sorensen* (1985) 176 Cal.App.3d 202, 211 [221 Cal.Rptr. 728].)

With respect to Senate Bill No. 1612, the Legislature made its intent plain. Section 5 of the bill states, in part: "It is the intent of the Legislature in

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

enacting Sections 2 and 4 of this act [FN5] to confirm the independent nature of the letter of credit engagement and to abrogate the holding in [the Court of Appeal's earlier opinion in this case], that presentment of a draft under a letter of credit issued in connection with a real property secured loan following foreclosure violates Section 580d of the Code of Civil Procedure and constitutes a 'fraud ... or other defect not apparent on the face of the documents' under paragraph (b) of subdivision (2) of Section 5114 of the Commercial Code.... [¶] The Legislature also intends to confirm the expectation of the parties to a contract that underlies a letter of credit, that the beneficiary will have available the value of the real estate collateral and the benefit of the letter of credit without regard to the order in which the beneficiary may resort to either." (Stats. 1994, ch. 611, § 5.)

> FN5 Section 2 of Senate Bill No. 1612 added Code of Civil Procedure section 580.5, which provides in pertinent part: "(b) With respect to an obligation which is secured by a mortgage or a deed of trust upon real property or an estate for years therein and which is also supported by a letter of credit, neither the presentment, receipt of payment, or enforcement of a draft or demand for payment under the letter of credit by the beneficiary of the letter of credit nor the honor or payment of, or the demand for reimbursement, receipt of reimbursement or enforcement of any contractual, statutory or other reimbursement obligation relating to, the letter of credit by the issuer of the letter of credit shall, whether done before or after the judicial or nonjudicial foreclosure of the mortgage or deed of trust or conveyance in lieu thereof, constitute any of the following: [¶] (1) An action within the meaning of subdivision (a) of Section 726, or a failure to comply with any other statutory or judicial requirement to proceed first against security. [¶] (2) A money judgment for a deficiency or a deficiency judgment within the meaning of Section 580a, 580b, or 580d, or subdivision (b) of Section 726, or the functional equivalent of any such judgment. [¶] (3) A violation of Section 580a, 580b, 580d, or 726." (Code Civ. Proc., § 580.5, subd. (b), as added by Stats. 1994, ch. 611, § 2.)
>
> Section 4 of Senate Bill No. 1612 made certain technical, nonsubstantive changes to section 5114, which embodies the independence principle applicable to letter of credit payment obligations. (§ 5114, as amended by Stats. 1994, ch. 611, § 4.)

The Legislature's intent also was evident in its statement of the facts justifying enactment of Senate Bill No. 1612 as an urgency statute: "In order to confirm and clarify the law applicable to obligations which are secured by real property or an estate for years therein and which also are supported by a letter of credit, it is necessary that this act take effect immediately." (Stats. 1994, ch. 611, § 6.) The Legislature's unmistakable focus was the disruptive effect of the Court of Appeal's decision on the expectations of parties to transactions where a letter of credit was issued in connection with a loan secured by real property. By abrogating the Court of Appeal's decision, the ***246** Legislature intended to protect those parties' expectations and restore certainty and stability to those transactions. If the Legislature acts promptly to correct a perceived problem with a judicial construction of a statute, the courts generally give the Legislature's action its intended effect. (See, e.g., *Escalante v. City of Hermosa Beach* (1987) 195 Cal.App.3d 1009, 1020 [241 Cal.Rptr. 199]; *City of Redlands v. Sorensen*, *supra*, 176 Cal.App.3d at pp. 211-212; *Tyler v. State of California*, *supra*, 134 Cal.App.3d at pp. 976-977; but see *Del Costello v. State of California*, *supra*, 135 Cal.App.3d at p. 893, fn. 8 [courts need not accept Legislature's interpretation of statute].)

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

The plain import of Senate Bill No. 1612 is that the Legislature intended its provisions to apply immediately to existing loan transactions secured by real property and supported by outstanding letters of credit, including those in this case.

We next consider whether Senate Bill No. 1612 effected a change in the law, or instead represented a clarification of the state of the law before the Court of Appeal's decision. As mentioned earlier, Senate Bill No. 1612 amended two code sections (§ 5114; Civ. Code, § 2787) and added two sections to the Code of Civil Procedure (§§ 580.5, 580.7). The two code sections Senate Bill No. 1612 amended plainly made no substantive change in the law. The amendments to section 5114, which concerns the issuer's duty to honor a draft conforming to the letter of credit's terms, were "technical, nonsubstantive changes," as the Legislative Counsel's Digest correctly noted. (See Legis. Counsel's Dig., Sen. Bill No. 1612 (1993-1994 Reg. Sess.).)

In the other section amended, Civil Code section 2787, Senate Bill No. 1612 added a statement reflecting an established formal distinction: "A letter of credit is not a form of suretyship obligation." (Stats. 1994, ch. 611, § 1.) Civil Code section 2787 defines a surety or guarantor as "one who promises to answer for the debt, default, or miscarriage of another, or hypothecates property as security therefor." Generally, a surety's liability for an obligation is secondary to, and derivative of, the liability of the principal for that obligation. (See, e.g., Civ. Code, § 2806 et seq.)

(5) By contrast, the liability of the issuer of a letter of credit to the letter's beneficiary is direct and independent of the underlying transaction between the beneficiary and the issuer's customer. (See *San Diego Gas & Electric Co. v. Bank Leumi*, *supra*, 42 Cal.App.4th at pp. 933-934; *Paramount Export Co. v. Asia Trust Bank, Ltd.* (1987) 193 Cal.App.3d 1474, 1480 [238 Cal.Rptr. 920]; *Lumbermans Acceptance Co. v. Security Pacific Nat. Bank* (1978) 86 Cal.App.3d 175, 178 [150 Cal.Rptr. 69].) Thus, as the amendment to Civil Code section 2787 made clear, existing law viewed a *247 letter of credit as an independent obligation of the issuing bank rather than as a form of guaranty or a surety obligation. (See, e.g., Dolan, The Law of Letters of Credit: Commercial and Standby Credits (rev. ed. 1996) § 2.10[1], pp. 2-61 to 2-63 (Dolan, Letters of Credit); 3 White & Summers, Uniform Commercial Code (4th ed. 1995) Letters of Credit, § 26-2, pp. 112-117.) The issuer of a letter of credit cannot refuse to pay based on extraneous defenses that might have been available to its customer. (*San Diego Gas & Electric Co. v. Bank Leumi*, *supra*, 42 Cal.App.4th at p. 934.) Absent fraud, the issuer must pay upon proper presentment regardless of any defenses the customer may have against the beneficiary based in the underlying transaction. (*Ibid.*)

Senate Bill No. 1612's remaining statutory addition with which we are concerned, FN6 Code of Civil Procedure section 580.5, specified that letter of credit transactions do not violate the antideficiency laws contained in Code of Civil Procedure sections 580a, 580b, 580d, or 726. (Code Civ. Proc., § 580.5, subd. (b)(3).) In particular, the new section specifies that a lender's resort to a letter of credit, and the issuer's concomitant right to reimbursement, do not constitute an "action" under Code of Civil Procedure section 726, or a failure to proceed first against security, regardless of whether they come before or after a foreclosure. (Code Civ. Proc., § 580.5, subd. (b)(1).) Similarly, letter of credit draws and reimbursements do not constitute deficiency judgments "or the functional equivalent of any such judgment." (Code Civ. Proc., § 580.5, subd. (b)(2).)

FN6 We do not address the effect of section 3 of Senate Bill No. 1612, which added section 580.7 to the Code of Civil Procedure. This section provides, in pertinent part: "(b) No letter of credit shall be enforceable by any party thereto in a loan

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

> transaction in which all of the following circumstances exist: [¶] (1) The customer is a natural person. [¶] (2) The letter of credit is issued to the beneficiary to avoid a default of the existing loan. [¶] (3) The existing loan is secured by a purchase money deed of trust or purchase money mortgage on real property containing one to four residential units, at least one of which is owned and occupied, or was intended at the time the existing loan was made, to be occupied by the customer. [¶] (4) *The letter of credit is issued after the effective date of this section.*" (Code Civ. Proc., § 580.7, subd. (b), italics added, as added by Stats. 1994, ch. 611, § 3.) The italicized language, not found in the other statutory changes made by Senate Bill No. 1612, suggests the Legislature intended section 580.7 to have prospective effect only. However, this case does not involve any interpretation of this section or its effect, and so we express no view on those matters.

The Court of Appeal saw Code of Civil Procedure section 580.5 as a change in the law, in large part, because of the analogy it employed to examine the use of standby letters of credit as additional support for loans also secured by real property. The Bank argued a standby letter of credit was the functional equivalent of cash collateral. The Court of Appeal disagreed, instead analogizing standby letters of credit to guaranties and emphasizing the similarities of purpose and function: "No matter how it may be regarded ***248** by the beneficiary, a standby letter is certainly not cash or its equivalent from the perspective of the debtor; in reality, it represents his promise to provide *additional funds* in the event of his *future* default or deficiency, thus confirming its use not as a means of payment but rather as an instrument of guarantee." (Original italics.) The Court of Appeal relied on *Union Bank v. Gradsky* (1968) 265 Cal.App.2d 40 [71 Cal.Rptr. 64] (*Gradsky*) and *Commonwealth Mortgage Assurance Co. v. Superior Court* (1989) 211 Cal.App.3d 508 [259 Cal.Rptr. 425] (*Commonwealth Mortgage*).

Gradsky held that a creditor, after nonjudicial foreclosure of the real property security for a note, could not recover the note's unpaid balance from a guarantor. (*Gradsky*, *supra*, 265 Cal.App.2d at p. 41.) Significantly, the court did not find Code of Civil Procedure section 580d's prohibition of deficiency judgments barred the creditor's claim on the guarantor: "It is barred by applying the principles of estoppel. The estoppel is raised as a matter of law to prevent the creditor from recovering from the guarantor after the creditor has exercised an election of remedies which destroys the guarantor's subrogation rights against the principal debtor." (*Gradsky*, *supra*, 265 Cal.App.2d at p. 41.)

The court noted that the guarantor, after payment, ordinarily would be equitably subrogated to the rights and security formerly held by the creditor. (*Gradsky*, *supra*, 265 Cal.App.2d at pp. 44-45; cf. Civ. Code, §§ 2848, 2849.) However, where the creditor first resorts to nonjudicial foreclosure, the guarantor could not acquire any subrogation rights from the creditor because under Code of Civil Procedure section 580d, the nonjudicial sale eliminated both the security and the possibility of a deficiency judgment against the debtor. (*Gradsky*, *supra*, 265 Cal.App.2d at p. 45.) Because the creditor has a duty not to impair the guarantor's remedies against the debtor, the court held the creditor is estopped from pursuing the guarantor after electing a remedy-nonjudicial foreclosure-that eliminated the security for the debt and curtailed the possibility of the guarantor's reimbursement from the debtor. (*Id.* at pp. 46-47.)

However, the rules applicable to surety relationships do not govern the relationships between the parties to a letter of credit transaction. (See Dolan, Letters of Credit, *supra*, § 2.10[1], pp. 2-62 to

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

2-63.) At the time of this case's transactions, a majority of courts did not grant subrogation rights to an issuer that honored a draw on a credit; the issuer satisfied its own primary obligation, not the debt of another. (*Tudor Dev. Group, Inc. v. U.S. Fid. & Guar. Co.* (3d Cir. 1992) 968 F.2d 357, 361-363; see 3 White & Summers, Uniform Commercial Code, *supra*, Letters of Credit, § 26-15, pp. 211-212; but see Cal. U. Com. Code, § 5117; fn. 2, *ante*, at pp. 237-238.) Nor does the ***249** beneficiary of a credit owe any obligations to the issuer; literal compliance with the letter of credit's terms for payment is all that is required. (Cf. *Paramount Export Co. v. Asia Trust Bank, Ltd.*, *supra*, 193 Cal.App.3d at p. 1480; *Lumbermans Acceptance Co. v. Security Pacific Nat. Bank*, *supra*, 86 Cal.App.3d at p. 178.)

Gradsky contains additional language suggesting a much broader rule than its holding and analysis warranted. Going beyond the subrogation theory underlying its holding, the court observed: "If ... the guarantor ... can successfully assert an action in assumpsit against [the debtor] for reimbursement, the obvious result is to permit the recovery of a 'deficiency' judgment against the debtor following a nonjudicial sale of the security under a different label. It makes no difference to [the debtor's] purse whether the recovery is by the original creditor in a direct action following nonjudicial sale of the security, or whether the recovery is in an action by the guarantor for reimbursement of the same sum." (*Gradsky*, *supra*, 265 Cal.App.2d at pp. 45-46.) The court also said: "The Legislature clearly intended to protect the debtor from personal liability following a nonjudicial sale of the security. No liability, direct or indirect, should be imposed upon the debtor following a nonjudicial sale of the security. To permit a guarantor to recover reimbursement from the debtor would permit circumvention of the legislative purpose in enacting section 580d." (*Id.* at p. 46.) In view of the reasoning of the court's holding, these additional observations were unnecessary to the case's determination.

Commonwealth Mortgage followed *Gradsky* to hold a mortgage guaranty insurer could not enforce indemnity agreements to obtain reimbursement from the debtors for the insurer's payment to the lender after the lender's nonjudicial sale of its real property security. (*Commonwealth Mortgage*, *supra*, 211 Cal.App.3d at p. 517.) The court said the mortgage guaranty insurance policy served the same purpose as the guaranty in *Gradsky*, and thus *Gradsky* would bar the insurer from being reimbursed under subrogation principles. (*Commonwealth Mortgage*, *supra*, 211 Cal.App.3d at p. 517.) The court found the substitution of indemnity agreements for subrogation rights did not distinguish the case from *Gradsky*. Relying on the rule that a principal obligor incurs no additional liability on a note by also being a guarantor of it, the court said the agreements added nothing to the debtors' existing liability. (*Commonwealth Mortgage*, *supra*, 211 Cal.App.3d at p. 517.) Thus, the court said the indemnity agreements could not be viewed as independent obligations. (*Ibid.*) Instead, the court concluded they were invalid attempts to have the debtors waive in advance the statutory prohibition against deficiency judgments. (*Ibid.*)

As did *Gradsky*, *Commonwealth Mortgage* also inveighed against subterfuges that thwart the purposes of Code of Civil Procedure section 580d. ***250** (*Commonwealth Mortgage*, *supra*, 211 Cal.App.3d at pp. 515, 517.) "Although section 580d applies by its specific terms only to actions for 'any deficiency upon a note secured by a deed of trust' and not to actions based upon other obligations, the proscriptions of section 580d cannot be avoided through artifice [citation] .... In determining whether a particular recovery is precluded, we must consider whether the policy behind section 580d would be violated by such a recovery. [Citation.]" (*Commonwealth Mortgage*, *supra*, 211 Cal.App.3d at p. 515.) Thus, as did the *Gradsky* court, the *Commonwealth Mortgage* court augmen-

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

ted its opinion with concepts unnecessary to its determination of the case. FN7

> FN7 The precedential value of such statements in *Commonwealth Mortgage* also is clouded by a factual enigma the court left unresolved. As the Court of Appeal recognized, the lender in that case purchased the real property security at the trustee's sale for a full credit bid, which ought to have satisfied the debt. (*Commonwealth Mortgage*, *supra*, 211 Cal.App.3d at p. 512, fn. 3.) Despite the apparent absence of any deficiency, the court deemed it unnecessary to decide whether a deficiency in fact remained before discussing the effect of Code of Civil Procedure section 580d's prohibition of deficiency judgments. (*Commonwealth Mortgage*, *supra*, 211 Cal.App.3d at p. 515.)

The Court of Appeal in this case extrapolated from the *Gradsky* and *Commonwealth Mortgage* precedents a rule that swept far beyond their origins in guaranty and suretyship relationships: "Not only is a *creditor* prevented from obtaining a deficiency judgment against the debtor, but no other person is permitted to obtain what would, in effect, amount to a deficiency judgment." (Original italics.) The Court of Appeal apparently concluded a transaction has such an effect if it "has the practical consequence of requiring the debtor to pay *additional money* on the debt *after* default or foreclosure." (Original italics.) "Thus, we preserve the principle, clearly established by *Gradsky* and *Commonwealth* [*Mortgage*], that a lender should not be able to utilize a device of any kind to avoid the limitations of section 580d; and we apply that principle here to standby letters of credit." However, as we have seen, neither *Gradsky* nor *Commonwealth Mortgage* established such a principle as a rule of law. Instead, their statements accentuated the courts' vigilance regarding attempted evasions of the antideficiency and foreclosure laws.

(1b) The Court of Appeal mistook standby letters of credit for such an attempt by seeing them only as a form of guaranty. The court analogized the standby letter of credit to a guaranty because of the perceived functional similarities. One consequence of that analogy was that the court applied to standby letters of credit a rule whose legal justifications originated in the subrogation rights owed to sureties. However, as discussed before, letters of credit-standby or otherwise-are not a form of suretyship, and the rights of the parties to these transactions are not governed by suretyship principles. ***251** Further, suretyship involves no counterpart to the independence principle essential to letters of credit.

While analogies can improve our understanding of how and why letters of credit are useful, analogies cannot substitute for recognizing the letters' unique qualities. The authors of one leading treatise aptly summarized the point: "In short, a letter of credit is a letter of credit. As Bishop Butler once said, 'Everything is what it is and not another thing.' " (3 White & Summers, Uniform Commercial Code, *supra*, Letters of Credit, § 26-2, p. 117, fn. omitted.)

By focusing on analogies to guaranties, the Court of Appeal also overlooked that the parties in this case specifically intended the standby letters of credit to be additional security. FN8 The parties' stipulated facts include that the original loan agreement was secured by a letter of credit, and that "Vista caused [the subsequent letters of credit] to be issued by Western as additional collateral security ...." The Court of Appeal found the letters of credit were not security interests in personal property under California Uniform Commercial Code section 9501, subdivision (4), as the Bank had argued. However, we need not determine whether a standby letter of credit comes within the scope of division 9 of the California Uniform Commercial Code. A letter of credit is sui generis as a means of securing or supporting performance of an obligation incurred in a separate transaction. Regardless of whether this

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

idiosyncratic undertaking meets the qualifications for a security interest under the California Uniform Commercial Code, it nevertheless is a form of security for assuring another's performance.

> FN8 To the extent that resort to analogy is appropriate for such a singular legal creation as the standby letter of credit, its closest relative would seem to be cash collateral. As one commentator noted: "In view of the relative positions of the beneficiary, the [customer], and the issuing bank, the standby letter of credit is more analogous to a cash deposit left with the beneficiary than it is to the traditional letter of credit or to the performance bond. Because the beneficiary generates all the documents necessary to obtain payment, he has the power to appropriate the funds represented by the standby letter of credit at any time.... [¶] Even though the standby letter of credit is functionally equivalent to a cash deposit, it differs from a cash deposit because the customer does not have to part with its own funds until payment is made and it is forced to reimburse the issuing bank. Because the cash-flow burden might otherwise be prohibitive, this is a great advantage to a party who enters into a large number of transactions simultaneously. Moreover, the beneficiary is satisfied; while it does not actually possess the funds, as it would if a cash deposit were used, it is protected by the credit of a financial institution." (Comment, *The Independence Rule in Standby Letters of Credit* (1985) 52 U. Chi. L.Rev. 218, 225-226, fns. omitted; see Dolan, Letters of Credit, *supra*, § 1.06, pp. 1-24 to 1-25, for a discussion of cases illustrating use of standby credits in lieu of cash, bonds, and other security.)

When viewed as additional security for a note also secured by real property, a standby letter of credit does not conflict with the statutory ***252** prohibition of deficiency judgments. Code of Civil Procedure section 580d does not limit the security for notes given for the purchase of real property only to trust deeds; other security may be given as well. (*Freedland v. Greco* (1955) 45 Cal.2d 462, 466 [289 P.2d 463].) Creditors may resort to such other security in addition to nonjudicial foreclosure of the real property security. (*Ibid.*; *Hatch v. Security-First Nat. Bank* (1942) 19 Cal.2d 254, 260 [120 P.2d 869].) (6) A standby letter of credit is a security device created at the request of the customer/debtor that is an obligation owed independently by the issuing bank to the beneficiary/creditor. (See *San Diego Gas & Electric Co. v. Bank Leumi*, *supra*, 42 Cal.App.4th at pp. 933-934; *Lumbermans Acceptance Co. v. Security Pacific Nat. Bank*, *supra*, 86 Cal.App.3d at p. 178.) A creditor that draws on a letter of credit does no more than call on all the security pledged for the debt. When it does so, it does not violate the prohibition of deficiency judgments.

(1c) The Legislature plainly intended that the sections of Senate Bill No. 1612 we have addressed would apply to existing loan transactions supported by outstanding letters of credit. We conclude the Legislature's action did not effect a change in the law. Before the Legislature passed Senate Bill No. 1612, an issuer could not refuse to honor a conforming draw on a standby letter of credit-given as additional security for a real property loan-on the basis that the draw followed a nonjudicial sale of the real property security. The Court of Appeal created such a basis, but produced an unprecedented rule without solid legal underpinnings or any real connection to the actual language of the statutes involved.

Therefore, the aspects of Senate Bill No. 1612 we have discussed did not effect any change in the law, but simply clarified and confirmed the state of the law prior to the Court of Appeal's first opinion. Because the legislative action did not change the legal

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

effect of past actions, Senate Bill No. 1612 does not act retrospectively; it governs this case. The Legislature concluded that Senate Bill No. 1612 should be given immediate effect to confirm and clarify the law applicable to loans secured by real property and supported by letters of credit. This conclusion was reasonable, particularly in view of the uncertainties the financial community evidently faced after the Court of Appeal's decision. (See, e.g., Murray, What *Should I Do With This Letter of Credit?* (Cont.Ed.Bar 1994) 17 Real Prop. L. Rptr. 133, 138-140.)

In sum, the Court of Appeal erred in concluding the Legislature's enactment of Senate Bill No. 1612 had no effect on this case. The Legislature explicitly intended to abrogate the Court of Appeal's prior decision and make certain the parties' obligations when letters of credit supported loans also secured by real property. The Legislature manifestly intended the *253 respective obligations of the parties to a letter of credit transaction should remain unaffected by the antideficiency laws, whether those obligations arose before or after enactment of Senate Bill No. 1612. Accordingly, we conclude the judgment of the Court of Appeal should be reversed. FN9

FN9 Western belatedly claims it should not be liable for prejudgment interest on the amount of the letter of credit it dishonored. It argues it should not be "punished" for seeking a declaration of its rights in a novel and complex case. The Court of Appeal decided that "if it is ultimately determined that Western is liable to the Bank on the letters of credit then it must follow that it is liable for legal interest thereon from and after the day when its obligation to pay on the letters arose. (Civ. Code, § 3287, subd. (a).)" Western did not petition for review of this aspect of the Court of Appeal decision. In any event, Western's liability for prejudgment interest is clear. The award of this interest is not imposed for the sake of punishment. The award depends only on whether Western knew or could compute the amount the Bank was entitled to recover on the letters of credit. (*Fireman's Fund Ins. Co. v. Allstate Ins. Co.* (1991) 234 Cal.App.3d 1154, 1173 [286 Cal.Rptr. 146].) The Court of Appeal correctly assessed Western's liability for prejudgment interest.

Disposition

The judgment of the Court of Appeal is reversed, and the cause remanded for further proceedings consistent with this opinion.

George, C. J., Baxter, J., and Brown, J., concurred.

WERDEGAR, J.,

Concurring and Dissenting.-I concur in the majority's conclusion that California Uniform Commercial Code section 5114, subdivision (2)(b), does not excuse Western Security Bank, N.A. (Western), the issuer, from honoring its letter of credit upon demand for payment by Beverly Hills Business Bank (the Bank), the beneficiary. I would not, however, reach this conclusion under the majority's reasoning that Senate Bill No. 1612 (Stats. 1994, ch. 611) merely declared existing law and that, prior to the bill's enactment, the antideficiency law had no effect on letters of credit. Instead, I agree with Justice Mosk that section 5114 simply does not bear the interpretation that the use of a letter of credit to support an obligation secured by a mortgage or deed of trust constitutes "fraud in the transaction." (Cal. U. Com. Code, § 5114, subd. (2); see conc. & dis. opn. of Mosk, J., *post*, at pp. 262-263.) Thus, Western was obliged to honor the Bank's demand for payment.

The conclusion that the Bank may properly draw upon the letter of credit does not compel the further conclusion that the antideficiency law ultimately

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

offers no protection to Vista Place Asssociates. This is illustrated by a comparison of the majority opinion and the separate opinion of Justice Mosk, which agree on the former point but disagree on the latter. In my view, the Bank's petition for review of a decision rejecting its claim (as *254 beneficiary) against Western (as issuer) under superseded law does not present an appropriate vehicle for broader pronouncements on the antideficiency law's effect on other claims and other parties. Because the Legislature in Senate Bill No. 1612 has articulated rules that will govern all future letters of credit, and because letters of credit typically expire after a finite period, the status of residual letters of credit issued before the bill's effective date will soon become an academic question. In contrast, whether the antideficiency law should as a general matter be expansively or narrowly construed remains of vital importance, as demonstrated by the interest in this case shown by amici curiae involved in the purchase and sale of real estate. Under these circumstances, the principle of judicial restraint counsels against the majority's sweeping declaration that the reach of the antideficiency law prior to Senate Bill No. 1612 was too narrow to affect the respective obligations of the parties to a letter of credit transaction.

Underlying the broad declaration just mentioned is the majority's erroneous conclusion that Senate Bill No. 1612 merely clarified existing law and, thus, may be applied to transactions entered into before the bill's operative date. Before that date, the antideficiency law did not distinguish between residential and nonresidential real estate transactions. Now, however, as amended by Senate Bill No. 1612, the antideficiency law does distinguish between residential and nonresidential real estate transactions. New Code of Civil Procedure section 580.7, which the bill added, makes a letter of credit unenforceable when issued to avoid the default of an existing loan and "[t]he existing loan is secured by a purchase money deed of trust or purchase money mortgage on real property containing one to four residential units, at least one of which is owned and occupied, or was intended at the time the existing loan was made, to be occupied by the customer." (*Id.*, subd. (b)(3).)

In light of this provision, we may conclude that letters of credit before Senate Bill No. 1612 either were enforceable in the specified residential real estate transactions but now are not, or were not enforceable in all other real estate transactions but now are. This case does not require us to choose between these possibilities. Either way, Senate Bill No. 1612 went beyond mere clarification to change the effective scope of the antideficiency law. To apply it retroactively would change the legal consequences of past acts. Under these circumstances, it is appropriate to apply the ordinary presumption that a legislative act operates prospectively, and inappropriate to apply to this case the new set of rules articulated in Senate Bill No. 1612.

MOSK, J.,

Concurring and Dissenting.-I agree with the majority that the issue before us is not whether Senate Bill No. 1612 (1993-1994 Reg. Sess.) (hereafter Senate Bill No. 1612) has retrospective application. It does not. *255 Rather, we must determine what the law was *before* Senate Bill No. 1612 was enacted to provide, in effect, a "standby letter of credit exception" to the antideficiency statutes.

I disagree with the majority that Senate Bill No. 1612 did not change prior law. In my view, far from merely "clarifying" the "true" meaning of prior law-as the majority implausibly assert-its numerous amendments and additions to the statutes reversed what the Court of Appeal aptly referred to as "the fifty years of consistent solicitude which California courts have given to the foreclosed purchase money mortgagee." FN1

FN1 Among other things, Senate Bill No.

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

1612 amended Civil Code section 2787, added Code of Civil Procedure sections 580.5 and 580.7, and amended California Uniform Commercial Code former section 5114. (See Stats. 1994, ch. 611, §§ 1-6.) It appears, however, that our decision in this matter will have limited application. It will operate only when: (a) a lender obtained a standby letter of credit prior to September 15, 1994, the effective date of Senate Bill No. 1612, to support a transaction secured by a deed of trust against real property; (b) the creditor defaulted on the deed of trust; (c) the lender elected to foreclose on by way of trustee's sale rather than through judicial foreclosure; and (d) the lender thereafter demanded payment under the standby letter of credit. In view of the limited precedential value of this case, a better course would have been to dismiss review as improvidently granted.

As the majority concede, a legislative declaration of an existing statute's meaning is neither binding nor conclusive. "The Legislature has no authority to interpret a statute. That is a judicial task." (*Del Costello v. State of California* (1982) 135 Cal.App.3d 887, 893, fn. 8 [185 Cal.Rptr. 582]; see also *California Emp. etc. Com. v. Payne* (1947) 31 Cal.2d 210, 213 [187 P.2d 702]; *Bodinson Mfg. Co. v. California E. Com.* (1941) 17 Cal.2d 321, 326 [109 P.2d 935].) As the majority also concede, the legislative interpretation of prior law in this case is particularly unworthy of deference: Nothing in the previous legislative history of letter of credit statutes suggests an intent to create an exception to the antideficiency statutes. Indeed, it is apparently only recently that standby letters of credit have been used in real estate transactions.

Accordingly, unlike the majority, I conclude that before Senate Bill No. 1612, standby letters of credit were not exempt from the antideficiency statutes precluding creditors from obtaining a deficiency judgment from a creditor following nonjudicial foreclosure on a real property loan.

I.

As the Court of Appeal emphasized, before Senate Bill No. 1612, the potential conflict between the letters of credit statutes and the antideficiency statutes posed a question of first impression, arising from the relatively recent innovation of the use of standby letters of credit as additional security ***256** for real estate loans. Does the so-called "independence principle"-under which letters of credit stand separate and apart from the underlying transaction-constitute an exception to the antideficiency statutes that bar deficiency judgments after a nonjudicial foreclosure on real property?

The majority conclude that even before Senate Bill No. 1612, there was no restriction on the right of a creditor to demand payment on a standby letter of credit after a nonjudicial foreclosure on real property. They are wrong.

Under the so-called "independence principle," the issuer of a standby letter of credit "must honor a draft or demand for payment which complies with the terms of the relevant credit regardless of whether the goods or documents conform to the underlying contract for sale or other contract between the customer and the beneficiary." (Cal. U. Com. Code, former § 5114, subd. (1), as amended by Stats. 1994, ch. 611, § 4.) In turn, the issuer of a standby letter of credit "is entitled to immediate reimbursement of any payment made under the credit and to be put in effectively available funds not later than the day before maturity of any acceptance made under the credit." (*Id.*, subd. (3).) FN2

FN2 As the reference to "goods or documents" in the statute suggests, the drafters appear to have contemplated use of letters of credit in commercial financial transactions, not as additional security in real es-

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

tate transactions.

A standby letter of credit specifically operates as a means of guaranteeing payment in the event of a future default. "A letter of credit is an engagement by an issuer (usually a bank) to a beneficiary, made at the request of a customer, which binds the bank to honor drafts up to the amount of the credit upon the beneficiary's compliance with certain conditions specified in the letter of credit. The customer is ultimately liable to reimburse the bank. The traditional function of the letter of credit is to finance an underlying customer's beneficiary contract for the sale of goods, directing the bank to pay the beneficiary for shipment. A different function is served by the 'standby' letter of credit, which directs the bank to pay the beneficiary not for his own performance but upon the customer's default, thereby serving as a guarantee device." (Note, "*Fraud in the Transaction": Enjoining Letters of Credit During the Iranian Revolution* (1980) 93 Harv. L.Rev. 992, 992-993, fns. omitted.)

Thus, in practical effect, a standby letter of credit constitutes a promise to provide additional funds in the event of a future default or deficiency. As such, prior to passage of Senate Bill No. 1612, it potentially came up against the restrictions of the antideficiency statutes barring a creditor from obtaining additional funds from a debtor after a nonjudicial foreclosure. Indeed, as *257 the parties concede, nothing in the applicable statutes or legislative history prior to the amendments and additions enacted by Senate Bill No. 1612 created any specific exception to the antideficiency statutes for standby letters of credit. Nor did anything in the applicable statutes or legislative history "imply" that the antideficiency statutes must yield to the so-called "independence principle," based on public policy or otherwise.

We have previously summarized the history and purpose of the antideficiency statutes as follows.

"Prior to 1933, a mortgagee of real property was required to exhaust his security before enforcing the debt or otherwise to waive all rights to his security [citations]. However, having resorted to the security, whether by judicial sale or private nonjudicial sale, the mortgagee could obtain a deficiency judgment against the mortgagor for the difference between the amount of the indebtedness and the amount realized from the sale. As a consequence during the great depression with its dearth of money and declining property values, a mortgagee was able to purchase the subject real property at the foreclosure sale at a depressed price far below its normal fair market value and thereafter to obtain a double recovery by holding the debtor for a large deficiency. [Citations.] In order to counteract this situation, California in 1933 enacted fair market value limitations applicable to both judicial foreclosure sales ([Code Civ. Proc.,] § 726) and private foreclosure sales ([*id.*,] § 580a) which limited the mortgagee's deficiency judgment after exhaustion of the security to the difference between the fair [market] value of the property at the time of the sale (irrespective of the amount actually realized at the sale) and the outstanding debt for which the property was security. Therefore, if, due to the depressed economic conditions, the property serving as security was sold for less than the fair [market] value as determined under section 726 or section 580a, the mortgagee could not recover the amount of that difference in this action for a deficiency judgment. [Citation.]

"In certain situations, however, the Legislature deemed even this partial deficiency too oppressive. Accordingly, in 1933 it enacted section 580b [citation] which barred deficiency judgments altogether on purchase money mortgages. 'Section 580b places the risk of inadequate security on the purchase money mortgagee. A vendor is thus discouraged from overvaluing the security. Precarious land promotion schemes are discouraged, for the security value of the land gives purchasers a clue as to its true market value. [Citation.] If inadequacy of se-

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

curity results, not from overvaluing, but from a decline in property values during a general or local depression, section 580b prevents the aggravation of the downturn that would result if defaulting ***258** purchasers were burdened with large personal liability. Section 580b thus serves as a stabilizing factor in land sales.' [Citations.]

"Although both judicial foreclosure sales and private nonjudicial foreclosure sales provided for identical deficiency judgments in nonpurchase money situations subsequent to the 1933 enactment of the fair value limitations, one significant difference remained, namely property sold through judicial foreclosure was subject to the statutory right of redemption ([Code Civ. Proc.,] § 725a), while property sold by private foreclosure sale was not redeemable. By virtue of sections 725a and 701, the judgment debtor, his successor in interest or a junior lienor could redeem the property at any time during one year after the sale, frequently by tendering the sale price. The effect of this right of redemption was to remove any incentive on the part of the mortgagee to enter a low bid at the sale (since the property could be redeemed for that amount) and to encourage the making of a bid approximating the fair market value of the security. However, since real property purchased at a private foreclosure sale was not subject to redemption, the mortgagee by electing this remedy, could gain irredeemable title to the property by a bid substantially below the fair value and still collect a deficiency judgment for the difference between the fair value of the security and the outstanding indebtedness.

"In 1940 the Legislature placed the two remedies, judicial foreclosure sale and private nonjudicial foreclosure sale on a parity by enacting section 580d [citation]. Section 580d bars 'any deficiency judgment' following a private foreclosure sale. 'It seems clear ... that section 580d was enacted to put judicial enforcement on a parity with private enforcement. This result could be accomplished by giving the debtor a right to redeem after a sale under the power. The right to redeem, like proscription of a deficiency judgment, has the effect of making the security satisfy a realistic share of the debt. [Citation.] By choosing instead to bar a deficiency judgment after private sale, the Legislature achieved its purpose without denying the creditor his election of remedies. If the creditor wishes a deficiency judgment, his sale is subject to statutory redemption rights. If he wishes a sale resulting in nonredeemable title, he must forego the right to a deficiency judgment. In either case his debt is protected.' " (*Cornelison v. Kornbluth* (1975) 15 Cal.3d 590, 600-602 [125 Cal.Rptr. 557, 542 P.2d 981], fns. omitted.)

Over the several decades since their enactment, our courts have construed the antideficiency statutes liberally, rejecting attempts to circumvent the proscriptions against deficiency judgments after nonjudicial foreclosure. "It is well settled that the proscriptions of section 580d cannot be avoided through artifice ...." (***259***Rettner v. Shepherd* (1991) 231 Cal.App.3d 943, 952 [282 Cal.Rptr. 687]; accord, *Freedland v. Greco* (1955) 45 Cal.2d 462, 468 [289 P.2d 463] [In construing the antideficiency statutes, " 'that construction is favored which would defeat subterfuges, expediencies, or evasions employed to continue the mischief sought to be remedied by the statute, or ... to accomplish by indirection what the statute forbids.' "]; *Simon v. Superior Court* (1992) 4 Cal.App.4th 63, 78 [5 Cal.Rptr.2d 428].)

Nor can the antideficiency protections be waived by the borrower at the time the loan was made. (See Civ. Code, § 2953 [such waiver "shall be void and of no effect"]; *Valinda Builders, Inc. v. Bissner* (1964) 230 Cal.App.2d 106, 112 [40 Cal.Rptr. 735] [The debtor's waiver agreement was "contrary to public policy, void and ineffectual for any purpose."].)

In this regard, as the Court of Appeal observed, two decisions are of particular relevance here: *Union*

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

Bank v. Gradsky (1968) 265 Cal.App.2d 40 [71 Cal.Rptr. 64] (hereafter *Gradsky*), and *Commonwealth Mortgage Assurance Co. v. Superior Court* (1989) 211 Cal.App.3d 508 [259 Cal.Rptr. 425] (hereafter *Commonwealth*).

In *Gradsky*, the Court of Appeal held that Code of Civil Procedure section 580d operated to preclude a lender from collecting the unpaid balance of a promissory note from the guarantor after a nonjudicial foreclosure on the real property securing the debt. It concluded that if the guarantor could successfully assert an action against the borrower for reimbursement, "the obvious result is to permit the recovery of a 'deficiency' judgment against the [borrower] following a nonjudicial sale of the security under a different label." (*Gradsky*, *supra*, 265 Cal.App.2d at pp. 45-46.) "The Legislature clearly intended to protect the [borrower] from personal liability following a nonjudicial sale of the security. No liability, direct or indirect, should be imposed upon the [borrower] following a nonjudicial sale of the security. To permit a guarantor to recover reimbursement from the debtor would permit circumvention of the legislative purpose in enacting section 580d." (*Id.* at p. 46.)

In *Commonwealth*, borrowers purchased real property with a loan secured by promissory notes provided by a bank. At the bank's request, they obtained policies of mortgage guarantee insurance to secure payment on the promissory notes. They also signed indemnity agreements promising to reimburse the mortgage insurer for any funds it paid out under the policy. When the borrowers defaulted on the promissory notes, the bank foreclosed nonjudicially on the real property. It then collected on the mortgage insurance; the mortgage insurer then brought an action for reimbursement on the indemnity agreements. ***260**

The Court of Appeal in *Commonwealth* held that reimbursement was barred by Code of Civil Procedure section 580d. It rejected the argument that the indemnity agreements constituted separate and independent obligations: "The instant indemnity agreements add nothing to the liability [the borrowers] already incurred as principal obligors on the notes .... To splinter the transaction and view the indemnity agreements as separate and independent obligations ... is to thwart the purpose of section 580d by a subterfuge [citation], a result we cannot permit." (*Commonwealth*, *supra*, 211 Cal.App.3d at p. 517.)

The majority's attempt to distinguish *Gradsky* and *Commonwealth*, by characterizing them as grounded in subrogation law, is unpersuasive. Indeed, in *Commonwealth*, subrogation law was not directly in issue; the indemnity obligation provided a contract upon which to base collection. FN3

FN3 In any event, the analogy between standby letters of credit and guarantees is not as "forced" as the majority would suggest. As one commentator recently observed, "upon closer analysis, the borders between standby credits and contracts of guarantee are not so well settled as they may first appear." (McLaughlin, *Standby Letters of Credit and Guaranties: An Exercise in Cartography* (1993) 34 Wm. & Mary L.Rev. 1139, 1140; see also Alces, *An Essay on Independence, Interdependence, and the Suretyship Principle* (1993) 1993 U. Ill. L.Rev. 447 [rejecting distinction between letters of credit and "secondary obligations," i.e., guarantees and sureties].) Moreover, "courts have long recognized that, in a sense, issuers of credits 'must be regarded as sureties.' [Citation.] A seller of goods often insists on a commercial letter of credit because he is unsure of the buyer's ability to pay. The standby letter of credit arises out of situations in which the beneficiary wants to guard against the applicant's nonperformance. In both instances, the credit serves in

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

> the nature of a guaranty." Dolan, The Law of Letters of Credit: Commercial and Standby Credits (2d ed. 1991) § 2.10[1], pp. 2-61 to 2-62.)

The majority miss the point. As the Court of Appeal in this matter explained: "*Gradsky* and *Commonwealth* reflect the strong judicial concern about the efforts of secured real property lenders to circumvent section 580d by the use of financial transactions between debtors and third parties which involve post-nonjudicial foreclosure debt obligations for the borrowers. Their common and primary focus is on the lender's requirement that the debtor make arrangements with a third party to pay a portion or all of the mortgage debt remaining after a foreclosure, i.e., to pay the debtor's deficiency."

The Legislature, in enacting Senate Bill No. 1612, expressly abrogated the Court of Appeal decision in this matter and gave primacy to the so-called "independence principle" as against the antideficiency protections. Its additions and amendments to the statutes-lobbied for, and drafted by, the California Bankers Association-significantly altered prior law. Senate Bill No. 1612, therefore, should have prospective application only. [261]

In their strained attempt to reach the conclusion that Senate Bill No. 1612 governs this case, the majority adopt the fiction that a standby letter of credit is an "idiosyncratic" form of "security" or the "functional equivalent" of cash collateral. They offer no sound support for such an approach. There is none. [FN4]

> FN4 The principal "authority" cited by the majority for the proposition that standby letters of credit are the "functional equivalent" of cash collateral is a student law review note published over a decade ago-and apparently never cited in any case in California or elsewhere. (Comment, *The Independence Rule in Standby Letters of Credit* (1985) 52 U. Chi. L.Rev. 218.) Significantly, the note nowhere discusses the use of standby letters of credit in transactions involving purchase money mortgages or the potential conflict between the so-called "independence principle" and antideficiency statutes. Indeed, it assumes that "[t]hose who engage in standby letter of credit transactions are usually large corporate or governmental entities with access to high-quality counsel and are thus in a position to evaluate and respond to the risks involved." (*Id.* at p. 238.) Needless to say, that is often *not* the case in real property transactions, particularly those involving residential property. As a leading commentator observed: "the motivation of the parties to a real estate secured transaction is frequently other than purely commercial, and their relative bargaining power is often grossly disproportionate." (Hetland & Hansen, *The "Mixed Collateral" Amendments to California's Commercial Code-Covert Repeal of California's Real Property Foreclosure and Antideficiency Provisions or Exercise in Futility?* (1987) 75 Cal.L.Rev. 185, 188, fn. omitted.)

As the Court of Appeal observed, from the perspective of the debtor, a standby letter of credit is not cash or its equivalent. It is, instead, a promise to provide additional funds *in the event of future default or deficiency* and has the practical consequence of requiring the debtor to pay *additional* money on the debt *after* default or foreclosure. [FN5] Moreover, unlike cash, which can be pledged as collateral security only once, a standby letter of credit does not require a debtor to part with its own funds until payment is made and thus permits a borrower to use standby letters of credit in a large number of transactions separately. Cash collateral, by contrast, does not impose personal liability on the borrower following a trustee's sale and does not

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

encourage speculative lending practices.

> FN5 Although it appears to be uncommon, an issuer of a standby letter of credit may demand security from its customer in the form of cash collateral or personal property as a condition for issuing the letter of credit. In the event of a draw on the letter of credit, the issuer would then have recourse to the pledged security, up to the value of the draw, without requiring its customer to pay additional money. Whether a real estate lender's draw on a standby letter of credit backed by security, and not by a mere promise to pay, would fall within the mixed security rule is a difficult question that need not be addressed here.

As the Court of Appeal observed: "For us to conclude that such use of a standby letter of credit is the same as an increased cash investment (whether or not from borrowed funds) is to deny reality and to invite the very overvaluation and potential aggravation of an economic downturn which the antideficiency legislation was originally enacted to prevent." ***262**

II.

The Court of Appeal correctly concluded that, before Senate Bill No. 1612, there was no implied exception to the antideficiency statutes for letters of credit. It erred, however, in holding that Western Security Bank, N.A. (Western) could have refused to honor the letter of credit on the ground that the Beverly Hills Business Bank (Bank), in presenting the letters of credit after a nonjudicial foreclosure, worked an "implied" fraud on Vista Place Associates (Vista).

The Court of Appeal cited former California Uniform Commercial Code former section 5114, subdivision (2)(b), which provides that when there has been a notification from the customer of "fraud, forgery or other defect not apparent on the face of the documents," the issuer "may"-but is not obligated to-"honor the draft or demand for payment."(Cal. U. Com. Code, § 5114, subd. (2)(b) as amended by Stats. 1994, ch. 611, § 4.) FN6 The statute is inapplicable under the present facts.

> FN6 An issuer's obligations and rights are now governed by California Uniform Commercial Code section 5108, enacted in 1996 as part of Senate Bill No. 1599. (Stats. 1996, ch. 176, § 7.) The same legislation repealed section 5114, relating to the issuer's duty to honor a draft or demand for payment, as part of the repeal of division 5, Letters of Credit. (Stats. 1996, ch. 176, § 6.)

Western, presented with a demand for payment on a letter of credit, was limited to determining whether the documents presented by the beneficiary complied with the letter of credit-a purely ministerial task of comparing the documents presented against the description of the documents in the letter of credit. If the documents comply on their face, the issuer must honor the draw, regardless of disputes concerning the underlying transaction. (*Lumbermans Acceptance Co. v. Security Pacific Nat. Bank* (1978) 86 Cal.App.3d 175, 178 [150 Cal.Rptr. 69]; Cal. U. Com. Code, former § 5109, subd. (2) as added by Stats. 1963, ch. 819, § 1, p. 1934.) Thus, in this case, Western was not entitled to look beyond the documents presented by the Bank and refuse to honor the standby letter of credit based on a potential violation of the antideficiency statutes in the underlying transaction.

In my view, the concurring and dissenting opinion by Justice Kitching in the Court of Appeal correctly reconciled the policies behind standby letter of credit law and the antideficiency provisions of Code of Civil Procedure section 580d, as they existed *before* Senate Bill No. 1612. Thus, I would conclude that Western was obligated, under the so-

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

called "independence principle," to honor the standby letter of credit presented by the Bank. None of the limited exceptions to that rule applied. Western was not, however, without recourse. It was entitled to seek reimbursement from Vista, pursuant *263 to former California Uniform Commercial Code former section 5114, subdivision (3) and its promissory notes. Vista, in turn, could seek disgorgement from the Bank, if it has not legally waived its protection under Code of Civil Procedure section 580d-an issue that is not before us and should be remanded to the trial court. As Justice Kitching's concurrence and dissent concluded, "[t]his procedure would retain certainty in the California letter of credit market while implementing the policies supporting section 580d."

Kennard, J., concurred. *264

LAW REVISION COMMISSION COMMENTS

1975 Addition

Section 1230.030 makes clear that whether property is to be acquired by purchase or other means, or by exercise of the power of eminent domain, is a discretionary decision. Nothing in this title requires that the power of eminent domain be exercised; but, if the decision is that the power of eminent domain is to be used to acquire property for public use, the provisions of this title apply except as otherwise specifically provided by statute. See Section 1230.020. Compare Govt.Code § 15854 (property acquired pursuant to Property Acquisition Law).

Education Code (Refs & Annos)
Title 1. General Education Code Provisions
Division 1. General Education Code Provisions (Refs & Annos)
Part 10. School Bonds (Refs & Annos)
Chapter 12. State School Building Lease-Purchase Law of 1976 (Refs & Annos)
Article 1. General Provisions (Refs & Annos)
→ **§ 17002. Definitions**

The following terms wherever used or referred to in this chapter, shall have the following meanings, respectively, unless a different meaning appears from the context:

(a) "Apportionment" means a reservation of funds necessary to finance the cost of any project approved by the board for lease to an applicant school district.

(b) "Board" means the State Allocation Board.

(c) "Cost of project" includes, but is not limited to, the cost of all real estate property rights, and easements acquired, and the cost of developing the site and streets and utilities immediately adjacent thereto, the cost of construction, reconstruction, or modernization of buildings and the furnishing and equipping, including the purchase of educational technology hardware, of those buildings, the supporting wiring and cabling, and the technological modernization of existing buildings to support that hardware, the cost of plans, specifications, surveys, and estimates of costs, and other expenses that are necessary or incidental to the financing of the project. For purposes of this section, "educational technology hardware" includes, but is not limited to, computers, telephones, televisions, and video cassette recorders.

(d)(1) "Good repair" means the facility is maintained in a manner that assures that it is clean, safe, and functional as determined pursuant to a school facility inspection and evaluation instrument developed by the Office of Public School Construction and approved by the board or a local evaluation instrument that meets the same criteria. Until the school facility inspection and evaluation instrument is approved by the board, "good repair" means the facility is maintained in a manner that assures that it is clean, safe, and functional as determined by the interim evaluation instrument developed by the Office of Public School Construction or a local evaluation instrument that meets the same criteria as the interim evaluation instrument. The school facility inspection and evaluation instrument and local evaluation instruments that meet the minimum criteria of this subdivision shall not require capital enhancements beyond the standards to which the facility was designed and constructed. In order to provide that school facilities are reviewed to be clean, safe, and functional, the school facility inspection

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

and evaluation instrument and local evaluation instruments shall include at least the following criteria:

(A) Gas systems and pipes appear and smell safe, functional, and free of leaks.

(B)(i) Mechanical systems, including heating, ventilation, and air-conditioning systems, are functional and unobstructed.

(ii) Appear to supply adequate amount of air to all classrooms, work spaces, and facilities.

(iii) Maintain interior temperatures within normally acceptable ranges.

(C) Doors and windows are intact, functional and open, close, and lock as designed, unless there is a valid reason they should not function as designed.

(D) Fences and gates are intact, functional, and free of holes and other conditions that could present a safety hazard to pupils, staff, or others. Locks and other security hardware function as designed.

(E) Interior surfaces, including walls, floors, and ceilings, are free of safety hazards from tears, holes, missing floor and ceiling tiles, torn carpet, water damage, or other cause. Ceiling tiles are intact. Surfaces display no evidence of mold or mildew.

(F) Hazardous and flammable materials are stored properly. No evidence of peeling, chipping, or cracking paint is apparent. No indicators of mold, mildew, or asbestos exposure are evident. There is no apparent evidence of hazardous materials that may pose a threat to the health and safety of pupils or staff.

(G) Structures, including posts, beams, supports for portable classrooms and ramps, and other structural building members appear intact, secure, and functional as designed. Ceilings and floors are not sloping or sagging beyond their intended design. There is no visible evidence of severe cracks, dry rot, mold, or damage that undermines structural components.

(H) Fire sprinklers, fire extinguishers, emergency alarm systems, and all emergency equipment and systems appear to be functioning properly. Fire alarm pull stations are clearly visible. Fire extinguishers are current and placed in all required areas, including every classroom and assembly area. Emergency exits are clearly marked and unobstructed.

(I) Electrical systems, components, and equipment, including switches, junction boxes, panels, wiring, outlets, and light fixtures, are securely enclosed, properly covered and guarded from pupil access, and appear to be working properly.

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

(J) Lighting appears to be adequate and working properly. Lights do not flicker, dim, or malfunction, and there is no unusual hum or noise from light fixtures. Exterior lights onsite appear to be working properly.

(K) No visible or odorous indicators of pest or vermin infestation are evident.

(L) Interior and exterior drinking fountains are functional, accessible, and free of leaks. Drinking fountain water pressure is adequate. Fountain water is clear and without unusual taste or odor, and moss, mold, or excessive staining is not evident.

(M)(i) Restrooms and restroom fixtures are functional.

(ii) Appear to be maintained and stocked with supplies regularly.

(iii) Appear to be accessible to pupils during the schoolday.

(iv) Appear to be in compliance with Section 35292.5.

(N) The sanitary sewer system controls odor as designed, displays no signs of stoppage, backup, or flooding, in the facilities or on school grounds, and appears to be functioning properly.

(O) Roofs, gutters, roof drains, and downspouts appear to be functioning properly and are free of visible damage and evidence of disrepair when observed from the ground inside and outside of the building.

(P) The school grounds do not exhibit signs of drainage problems, such as visible evidence of flooded areas, eroded soil, water damage to asphalt playgrounds or parking areas, or clogged storm drain inlets.

(Q) Playground equipment and exterior fixtures, seating, tables, and equipment are functional and free of significant cracks, trip hazards, holes, deterioration that affects functionality or safety, and other health and safety hazards.

(R) School grounds, fields, walkways, and parking lot surfaces are free of significant cracks, trip hazards, holes, deterioration that affects functionality or safety, and other health and safety hazards.

(S) Overall cleanliness of the school grounds, buildings, common areas, and individual rooms demonstrates that all areas appear to have been cleaned regularly, and are free of accumulated refuse and unabated graffiti. Restrooms, drinking fountains, and food preparation or serving areas appear to have been cleaned each day that the school is in session.

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

(2)(A) On or before January 1, 2007, the Office of Public School Construction shall develop the school facility inspection and evaluation instrument and instructions for users. The school facility inspection and evaluation instrument and local evaluation instruments that meet the minimum criteria of this subdivision shall include a system that will evaluate each facility, based on the criteria listed in paragraph (1), on a scale of "good," "fair," or "poor," as developed by the Office of Public School Construction, and provide an overall summary of the conditions at each school on a scale of "exemplary," "good," "fair," or "poor."

(B) On or before July 1, 2007, the Office of Public School Construction, in consultation with county offices of education, shall define objective criteria for determining the overall summary of the conditions of schools.

(C) For purposes of this paragraph, "users" means local educational agencies that participate in either of the programs established pursuant to this chapter, Chapter 12.5 (commencing with Section 17070.10), or Section 17582 .

(e) "Lease" includes a lease with an option to purchase.

(f) "Project" means the facility being constructed or acquired by the state for rental to the applicant school district and may include the reconstruction or modernization of existing buildings, construction of new buildings, the grading and development of sites, acquisition of sites therefor and any easements or rights-of-way pertinent thereto or necessary for its full use including the development of streets and utilities.

(g) "Property" includes all property, real, personal or mixed, tangible or intangible, or any interest therein necessary or desirable for carrying out the purposes of this chapter.

Chapter 5. Property Maintenance and Control (Refs & Annos)
Article 1. Duties of Governing Board (Refs & Annos)

→ § 17565. Furnishing, repairing, insuring and renting of school property

The governing board of any school district shall furnish, repair, insure against fire, and in its discretion rent the school property of its districts. The governing board may also insure the property against other perils. The insurance shall be written in any admitted insurer, or in any nonadmitted insurer to the extent and subject to the conditions prescribed in Section 1763 of the Insurance Code. Insurance on property of a district may be, in the discretion of the governing board, of the deductible type of coverage. By deductible type of coverage is meant a form of insurance under which the insurance becomes operative when the loss and damage exceeds an amount stipulated in the policy or policies.

The governing board, in their notice of bid for any school district construction, may indicate that it may elect to assume the cost of fire insurance by adding the coverage to the district's existing policy and in that event bids made on the construction shall be made in the alternative, with and without the fire insurance coverage included, and the governing board shall make its election as to who shall secure and pay for the insurance at the time of accepting the bid.

CA Jur. 3d Schools § 176, Purchase of Insurance.

NOTES OF DECISIONS

Insurance 3
Preemption 2
Renting school property 4
Validity 1

1. Validity

School C. § 6.2 authorizing school districts to insure with mutual insurance company was not violative of Const. Art. 4, § 31 or Art. 12, § 13 on ground that it purported to authorize pledging of credit by political subdivision, where assessments against members of mutual insurance company were limited to five times amount of original premium, and the mutual company in which the district was insured issued no stock. Miller v. Johnson (1935) 4 Cal.2d 265, 48 P.2d 956. Schools 22

2. Preemption

The state has completely occupied the field of regulating public school building construction, and construction of such school buildings by school districts is not subject to the building regulations of a municipal corporation in which the building is constructed. Hall v. City of Taft (1956) 47 Cal.2d 177, 302 P.2d 574. Municipal Corporations 592(1)

3. Insurance

School district was a "person" within County Mutual Fire Insurance Act, and hence authorized by statute to become member of mutual insurance company, in view of authority given school trustees by statute to insure property of their districts in mutual insurance company. Miller v. Johnson (1935) 4 Cal.2d 265, 48 P.2d 956. Insurance 1145

Boards of trustees of school districts possessed no authority to place insurance of the school property other than that granted to them by statute. People ex rel. Northwestern Mut. Fire Ass'n v. Stanley (1924) 193 Cal. 428, 225 P. 1. Schools 79

Under statute, empowering boards of school trustees to insure school property, "such insurance to be written in any solvent insurance company doing business in this state or in any mutual insurance company organized under the laws of this state," a school board had no power to place fire insurance on school property with a mutual insurance company organized under the laws of another state. People ex rel. Northwestern Mut. Fire Ass'n v. Stanley (1924) 193 Cal. 428, 225 P. 1. Schools 79

© 2009 Thomson Reuters. No Claim to Orig. US Gov. Works.

Although all school districts had to obtain insurance against hazards to which property was exposed and for which insurance was available, deductible form of insurance could be obtained by those districts with average daily attendance of 50,000 or more, and deductible coverage could in board's discretion have applied to some or all of perils to school property which were covered in usual fire insurance policy applicable to that type of property, including perils of physical damage to property other than those defined as "fire insurance" by Ins.C. § 2071. 40 Op.Atty.Gen. 33 (1962).

4. Renting school property

Statute empowering the school board to rent school property, did not mean to rent property for use of schools, because such property would not be "school property." Mahoney v. Board of Ed. (App. 1909) 12 Cal.App. 293, 107 P. 584. Schools 65

Preface

Introduction

This handbook was developed by the Office of Public School Construction (OPSC) to assist school districts in applying for and obtaining "grant" funds for the new construction and modernization of schools under the provisions of the Leroy F. Greene School Facilities Act of 1998 (Senate Bill 50). It is intended to be an overview of the program for use by school districts, parents, architects, the Legislature, and other interested parties on how a district or county superintendent of schools becomes eligible and applies for State funding. This handbook provides direction on accessing the processes leading to project approvals, insight to the various features of the School Facility Program (SFP), and includes suggestions on how to make the funding system as efficient as possible. For information not contained in this handbook, districts should consult with their respective project managers for assistance; or refer to additional project specific information contained in the SFP Regulations. The SFP Regulations are located on the OPSC Web site at www.opsc.dgs.ca.gov. The OPSC project managers are assigned by county, and a complete listing of project manager assignments, including telephone numbers and e-mail addresses, are also included on our Web site.

Things to Know

This updated version of the handbook includes various regulation changes that occurred between 2005 and 2007 and include:

- Critically Overcrowded School Facilities Program Amendments (effective 10/27/2005)
- Small High School Program (effective 03/14/2006)
- Alternative Enrollment Projection Methods (effective 05/15/2006)
- Re-Designation of Energy Funds (effective 08/21/2006)
- General Site Development Additional Grant (effective 09/05/2006)
- Multi-Story Replacement of Single-Story Facilities Amendments (effective 11/03/2006)
- Modernization Handicapped Access/Fire Code Excessive Cost Hardship Grant Amendments (effective 04/25/2007)
- Charter School Facility Program Amendments (effective 05/17/2007)

Where to Begin

Section 1, "School Facility Program Overview" and Section 2, "The State Allocation Board, the Office of Public School Construction, and Other Involved Agencies" will provide general information. After reviewing these sections, the reader may want to review Section 4, "Application for Eligibility," because establishing eligibility is the first step in filing an application for either new construction or modernization funding. The remaining sections can be reviewed as the topics arise.

This page is intentionally blank.

Section 1

School Facility Program Overview

Introduction

The School Facility Program (SFP) was implemented in late 1998 and is a significant change from previous State facilities programs. The State funding is provided in the form of per pupil grants, with supplemental grants for site development, site acquisition, and other project specific costs when warranted. This process makes the calculation of the State participation quicker and less complicated. In most cases, the application can be reviewed, the appropriate grants calculated, and State Allocation Board (SAB) approval received in 60–90 days regardless of project size.

In addition to a less complicated application process, the SFP provides greater independence and flexibility to school districts to determine the scope of new construction or modernization projects. There is considerably less project oversight by State agencies than in previous State programs. In return, the program requires the school district to accept more responsibility for the outcome of the project, while allowing the district to receive the rewards of a well managed project. All State grants are considered to be the full and final apportionment by the SAB. Cost overruns, legal disputes, and other unanticipated costs are the responsibility of the district. On the other hand, all savings resulting from the district's efficient management of the project accrue to the district alone. Interest earned on the funds, both State and local, also belongs to the district. Savings and interest may be used by the district for any other capital outlay project in the district. See Section 13, "Additional SFP Requirements and Features" for more information on project savings.

The SFP provides funding grants for school districts to acquire school sites, construct new school facilities, or modernize existing school facilities. The two major funding types available are "new construction" and "modernization".[1] The new construction grant provides funding on a 50/50 State and local match basis. The modernization grant provides funding on a 60/40 basis. Districts that are unable to provide some or all of the local match requirement and are able to meet the financial hardship provisions may be eligible for additional State funding (see Section 10, "Financial Hardship").

To ensure that districts are providing adequate safe facilities to students, approval by both the Division of the State Architect (DSA) is required prior to signing a contract for any new construction, modernization and alteration projects for which State funding is requested. Education Code, Section 17072.30, requires that school districts obtain DSA approval of their project's plans and specifications prior to submitting a funding application to the OPSC. The DSA approval ensures that the plans and specifications are in compliance with California's requirements for structural safety, fire and life safety, and accessibility. Districts that sign construction contracts prior to obtaining DSA approval risk their project's eligibility for State funding. The only exception to this requirement is for relocatable buildings, for which districts may enter into a contract to acquire the plans and specifications; however construction cannot commence until DSA approval of the final plans and specifications has been obtained. The date of the DSA approval letter, not the DSA stamp, is considered a valid approval.

[1] Education Code, Sections 17072.10 and 17074.10, establish the new construction grant and modernization grant, respectively.

Implementation and Evolution of the School Facility Program

Senate Bill 50 (Greene) was chaptered into law on August 27, 1998, establishing the SFP. The legislation required that regulations be approved and in place for accepting and processing applications as soon as Proposition 1A was approved by the voters the following November. The SFP continues to evolve through legislative changes. Assembly Bill (AB) 16 and AB 14 provided for significant changes by requiring that regulations be approved and in place for accepting and processing applications as soon as Proposition 47 was approved by the voters in November 2002. These changes included funding for charter school facilities, critically overcrowded schools and joint-use projects. Some of the changes that impacted new construction funding include the suspension of Priority Points, an additional grant for energy efficiency, and several changes that impact the determination of eligibility. Some of the changes that impacted modernization funding include the change of the funding ratio between the State and the school district from 80 percent State and 20 percent district to 60 percent State and 40 percent school district, and additional grants for energy efficiency and the modernization of buildings 50 years old or older.

The passage of Proposition 55 in March 2004 provided an additional $12.3 billion for the construction and renovation of K–12 school facilities and higher education facilities. These funds made available through the School Facility Program, continue to make a difference in assisting school districts with overcrowding and accommodating future enrollment growth.

Proposition 1D provided an additional $7.3 billion in November 2006 which has already begun to assist school districts to repair and modernize older facilities. These funds will additionally assist with overcrowding and accommodate future enrollment growth.

Information on each category of funding can be found in the following sections:

SFP FUNDING CATEGORY	SECTION	PAGE
New Construction	5	23
Modernization	9	29
Financial Hardship	10	71

Funding for the School Facility Program

Helpful Hint:
A listing of school districts that have received SFP funding is available on the OPSC Web site at www.opsc.dgs.ca.gov.

Funding for projects approved in the SFP comes exclusively from statewide general obligation bonds approved by the voters of California. The first funding for the program was from Proposition 1A, approved in November 1998. That bond for $9.2 billion contained $6.7 billion for K–12 public school facilities. The second funding for the program was from Proposition 47, approved in November 2002. It was a $13.2 billion bond, the largest school bond in the history of the State. It contained $11.4 billion for K–12 public school facilities. In March 2004 a third bond was passed by California voters for another $12.3 billion. Of the $12.3 billion provided by Proposition 55, it contained $10 billion for K–12 public school facilities. At this time funds remain for new construction projects.

In November 2006 an additional $10.416 billion was passed by the voters. Of the $10.416 billion provided by Proposition 1D, $7.3 billion will be utilized by school districts to address overcrowding, provide career technical education facilities, accommodate future enrollment growth, renovate and modernize older school buildings and allow participation in community related joint-use projects. The 2006 bond measure is summarized as follows:

PROGRAM	BOND 2006
New Construction *	$ 1,900,000,000 †
Modernization *	3,300,000,000
Overcrowding Relief Grant	1,000,000,000
Joint Use	29,000,000
Career Technical Education Facilities Program	500,000,000
Charter Schools	500,000,000
High Performance Schools	100,000,000
Total K–12	$ 7,329,000,000

* Up to $200 million of the new construction and modernization funds specified for small high schools.

† Up to 10½ percent is available for seismic repairs, reconstruction, or replacement.

This page is intentionally blank.

Section 2

The State Allocation Board, the Office of Public School Construction, and Other Involved Agencies

State Allocation Board

Created in 1947 by the State Legislature, the State Allocation Board (SAB) is responsible for determining the allocation of State resources including proceeds from General Obligation Bond Issues and other designated State funds used for the new construction and modernization of public school facilities. The SAB is also charged with the responsibility for the administration of the State Relocatable Classroom Program, the Deferred Maintenance Program, and many other facilities related programs. Handbooks on these programs may be found on the Office of Public School Construction (OPSC) Web site at www.opsc.dgs.ca.gov. Printed copies may be obtained by contacting the OPSC directly.

The SAB meets monthly, typically at the State Capitol. At each meeting the SAB reviews and approves applications for eligibility and funding, acts on appeals, and adopts policies and regulations as they pertain to the programs that the SAB administers.

The SAB is comprised of ten members:

- The Director of the Department of Finance or designee (Traditional SAB Chair)
- The Director of the Department of General Services or designee
- The Superintendent of Public Instruction or designee
- One person appointed by the Governor
- Three State Senators; appointed by the Senate Rules Committee (two from the majority party and one from the minority party)
- Three State Assembly Members; appointed by the Speaker of the Assembly (two from the majority party and one from the minority party)

The current SAB members are:

- Mr. Michael Genest, Director, Department of Finance
- Mr. Will Bush, Director, Department of General Services
- Mr. Jack O'Connell, Superintendent of Public Instruction
- Ms. Rosario Girard, Governor's Appointee
- Senator Bob Margett
- Senator Jack Scott
- Senator Joe Simitian
- Assembly Member Gene Mullin
- Assembly Member Jean Fuller
- Assembly Member Kevin de León

The current SAB officers are:

- Rob Cook, Executive Officer
- Lori Morgan, Deputy Executive Officer
- Vacant, Assistant Executive Officer

SAB Implementation Committee

The SAB Implementation Committee is an informal advisory body established by the OPSC to assist the SAB and the OPSC with policy and legislation implementation. The committee membership is comprised of organizations representing the school facilities community which meets approximately once a month depending upon the workload. Committee membership, as well as the time and location of future meetings, can be found on the OPSC Web site at www.opsc.dgs.ca.gov.

Office of Public School Construction

OPSC Mission:
"As staff to the State Allocation Board, the Office of Public School Construction facilitates the processing of school applications and makes funding available to qualifying school districts. These actions enable school districts to build safe and adequate school facilities for their children in an expeditious and cost-effective manner."

The OPSC serves the 1,000 plus K–12 public school districts in California. As staff to the SAB, the OPSC is responsible for allocating State funding for eligible new construction and modernization projects to provide safe and adequate facilities for California public school children. The OPSC is also responsible for the management of these funds and the expenditures made with them. It is also incumbent on the OPSC to prepare regulations, policies, and procedures for approval by the SAB that carry out the mandates of the law.

OPSC Responsibilities

The OPSC is charged with the responsibility of verifying that all applicant school districts meet specific criteria based on the type of eligibility or funding which is being requested and to work with school districts to assist them throughout the application process. The OPSC ensures that funds are allocated properly and in accordance with the law and decisions made by the SAB. Since November of 1998, the OPSC has processed over $28.8 billion in State apportionments to the SAB. The programs, funding, and approvals over that period are shown in Appendix 5, "Summary of Bond and Deferred Maintenance Allocations."

The OPSC prepares agendas for the SAB meetings. These agendas keep the SAB members, districts, staff, and other interested parties apprised of all actions taken by the SAB. The agenda serves as the underlying source document used by the State Controller's Office for the appropriate release of funds. The agenda further provides a historical record of all SAB decisions, and is used by school districts, facilities planners, architects, consultants, and others wishing to track the progress of specific projects, the availability of funds, and SAB regulations.

Management of the Office of Public School Construction

Helpful Hint:
The Directory of Services provides information regarding project manager county assignments, including telephone numbers and other contact information.

The OPSC is directed by an Executive Officer who is appointed by the Governor. The appointee also serves as the Executive Officer to the SAB. A Deputy Executive Officer is selected by the Executive Officer subject to the approval of the Director of General Services. The Deputy oversees the daily operation of the office. An Assistant Executive Officer is appointed by the SAB. Although not technically a member of the OPSC management, the Assistant Executive Officer works directly with the OPSC management team and acts as liaison between the SAB and the OPSC.

Other Agencies Involved

School districts planning to construct or modernize existing schools require the assistance of several local, State, and federal agencies. It is essential that those dealing with the school construction process have an understanding of the role each agency plays. The three primary State agencies that will be referred to in this guidebook, in addition to the SAB and the OPSC, are the Division of the State Architect (DSA), the California Department of Education (CDE) School Facilities Planning Division (SFPD), and the Department of Toxic Substances Control (DTSC). District representatives may also come into contact with many other agencies. A listing of some of the agencies that might be involved in a school project and their role is provided in Appendix 2, "Potential State Agency Involvement".

The agency information provided in this section is meant as a tool for school district representatives to become familiar with the primary State agencies involved in the school construction process. The OPSC encourages district representatives to contact each agency to obtain more information about their procedures and processes. To contact the agencies listed below, please see Appendix 1, "State Agency Contact Information."

Department of General Services, Division of the State Architect

The primary role of the DSA in the school construction process is to review plans and specifications to ensure that they comply with California's building codes, with an emphasis on structural and seismic safety. The review commences when the school district's architect submits working drawings to the DSA. The DSA reviews the working drawings to assure that the proposed structures meet codes and requirements for structure (seismic), fire and life safety, and universal design compliance.

DSA approval of all plans and specifications is required prior to a construction contract being signed for new construction, modernization or alteration of any school building for which a district is seeking State funding. The only exception to this requirement is for relocatable buildings, for which districts may enter into a contract to acquire the plans and specifications; however construction cannot commence until DSA approval has been obtained. The date of the DSA approval letter, not the DSA stamp, is considered a valid approval. Please refer to the Education Code, Section 17072.30, for further information.

California Department of Education, School Facilities Planning Division

The role of the SFPD is to review and approve school district sites and construction plans. The SFPD review begins when a school district plans to acquire a new school construction site. Prior to approving a site for school purposes, the SFPD reviews many factors, including, but not limited to, environmental hazards, proximity to airports, freeways, and power transmission lines. The review of construction plans by the SFPD focuses mainly on the educational adequacy of the proposed facility and whether the needs of students and faculty will be met. See Section 3, "Project Development Activities."

Department of Toxic Substances Control

The role of the DTSC in the school construction process begins with the SFPD's site approval process. The DTSC will assist the district with an assessment of any possible contamination, and, if necessary, with the development and implementation of a mitigation plan.

Department of Industrial Relations

The role of DIR in the school construction process is to enforce labor laws relating to contractors and employers.

The Labor Code[1] requires, prior to receiving a SFP fund release, a district to make a certification that a labor compliance program (LCP), that has been approved by the DIR, for the project apportioned under the SFP has been initiated and enforced if both of the following conditions exist:

- The district has a project which received an apportionment from the funding provided in Proposition 47[2] or Proposition 55; and,
- The construction phase of the project commences on or after April 1, 2003, as signified by the date of the Notice to Proceed.

The DIR provides a guidebook to assist districts in developing a LCP and has model LCPs available for view on its Web site at www.dir.ca.gov. The DIR also provides public works contract information regarding:

- LCP and the Labor Code
- Classification and Scope of Work
- Prevailing Wage Determination and Special Determination for a Specific Project
- Verification of the Status of an Individual Apprentice or an Apprenticeship Program

Questions regarding these matters and LCP approval may be directed to DIR at 415.703.4810.

Section 3

Project Development Activities

Introduction

The School Facility Program (SFP) provides funding to projects that are essentially through the design phase and are ready to begin construction. With the exception of certain advanced planning and site applications for financial or environmental hardship situations, applications for funding require plans approved by the Division of the State Architect (DSA) and by the California Department of Education (CDE). Applications for new construction funding may also require CDE approval of the project site. In most cases, a great deal of time, money, and effort has already been expended before the project ever reaches the Office of Public School Construction (OPSC). Most of the tasks involved in this section are not a part of the SFP and are not under the jurisdiction of the State Allocation Board (SAB). However, it is important that the district representative is aware of the options and requirements that may affect the district's project.

Establishing Eligibility

One of the first steps a district should consider in the school construction process is establishing eligibility for SFP funding on either a district-wide or high school attendance area basis. This will provide the district with the information needed to determine the possibility and scope of State funding assistance, the types of facilities needed, and the appropriate project site size. See Section 4, "Application for Eligibility" for more information about establishing eligibility.

Selecting Professional Services

The SFP grants include funding for many professional services related to the development of the school project. Some of the most obvious and commonly used services are provided by architects, civil and structural engineers, and construction managers. Under law, these professional services are different than the services provided by general contractors, painters, site grading subcontractors, and similar construction related work. Unlike construction contracts, professional service contracts are obtained through a qualifications-based selection process rather than a competitive bid process.

Because the design professional or other service provider will be engaged long before the application for project funding is submitted to the OPSC, it is critical district representatives are aware that professional services used on projects funded through the SFP must be obtained by a competitive selection process. Failure to do so can jeopardize the project funding.

The Competitive Selection Process

The SFP requires that applicant districts certify that contracts for the services of any architect, structural engineer, or other design professional that were entered into on or after November 4, 1998 for work on the

project were obtained through a competitive process. The term competitive does not mean that the selection has been bid, but rather that a formal qualifications-based selection process has occurred that resulted in the professional services contract.[1]

Neither the SAB nor the OPSC is qualified to interpret the Government Code requirements pertaining to the selection of professional services. The district is advised to seek legal counsel assistance to ensure that the process used fully complies with this requirement as well as other legal requirements[2] such as Disabled Veterans Business Enterprise requirements, and the Public Contract Code.

Eventually, the district will be required to certify that professional design services on the project were selected using a competitive process. This certification is made on the *Application for Funding* (Form SAB 50-04).

Compliance

The competitive selection requirement applies to a new construction or modernization project if:

- » it is funded under the SFP, and
- » professional services of an architect, structural engineer, or other design professional were used to complete the work in the project, and
- » contracts for those services were signed on or after November 4, 1998.

Compliance with this requirement is very important. The law specifically mandates that the SAB shall not apportion funds to a district unless the competitive process for professional services has been used. If, during an audit at the project completion, it is determined that the competitive process was not used, the entire project grant could be found to have been attained illegally.

Districts that are unfamiliar with the process of hiring an architect should be aware that the American Institute of Architects (AIA) California Council has sample contracts available to assist districts. For more information, please contact the AIA at 916.448.9082.

Project Responsibilities

During the planning, design, and construction of a school facilities project, many individuals and firms come together to contribute to the project in specific ways. Unless responsibility is assigned by law, the decision about who should perform a given task generally rests with the district as owner. Frequently, however, the district may not be aware of the difference between the types of responsibilities, or even of the need to assign responsibilities and tasks related to the project. This lack of clarity may lead to a situation where a task is assigned to more than one individual or firm, creating a duplication of effort which can be wasteful and counterproductive.

As a result of this situation, a small working group was formed by the Joint Committee on School Facilities to address the issue. The Services Matrix is the result of the group's discussions (see Appendix 4, "Services Matrix"). District representatives may wish to consult the matrix to determine the responsibilities assigned to a project and to avoid duplication of effort.

Cost Reduction

Helpful Hint:
The SAB publication on cost reduction is available on the OPSC Web site.

The SAB has developed cost reduction guidelines to assist school districts in reducing project construction costs. In April 2000, the SAB made available the *Public School Construction Cost Reduction Guidelines*. The guidelines are a compilation of hundreds of ideas introduced and discussed at a series of statewide meetings. The input into these guidelines comes from various sources, such as school district representatives, State agencies, architects, building industry representatives, construction managers, and consultants. The guidelines provide districts with ideas and new methods to contain and reduce costs and to maximize the return on expenditures. Along with cost reduction guidelines, other incentives within the program, such as the retention of savings, exist to promote efficiency in design and construction of school facility projects. (See Section 13, "Additional SFP Requirements and Features" for more information on project savings.) The *Public School Construction Cost Reduction Guidelines* are accessible on the OPSC Web site at www.opsc.dgs.ca.gov.

Design with Flexibility in Mind

The SAB approval is based on the plans and specifications that accompany the *Application for Funding* (Form SAB 50-04) and is full and final. Therefore, it is imperative that the apportionment is used for the scope of work contained in that specific set of plans.

When it comes to classrooms and minimum essential facilities (MEF), meaning libraries, gymnasiums, multi-purpose rooms, and toilets which are necessary and support the traditional classroom environment, there are limited circumstances where a project may deviate from the scope of work outlined in the plans that were included with the application and approved by the SAB (see "Change of Scope," in Section 13, "Additional SFP Requirements and Features," for more information on this topic). Because of this, it is extremely important to structure bids with flexibility so that projects can be modified in the face of positive or negative fluctuations in the bid climate or costs of materials. By including additive and deductive alternates in your plans and specifications, you will be able to handle both situations within the budget provided for your SFP project in a way that is consistent with SAB law and regulation.

Joint-Use Projects

The language in the law which creates the SFP requires that the applicant school district consider the joint use of core facilities. The SAB's *Public School Construction Cost Reduction Guidelines* contains a number of suggestions as to how a district might investigate such joint use possibilities. Grants received under the new construction program may be used to fund school facilities related joint-use projects. Typical joint-use projects include multi-purpose rooms, libraries, gymnasiums, or any other type of facilities that can be used by both the district and the community.

Propositions 55 and 1D provide funding for joint-use projects, specific criteria to access this funding was included in AB16 (Hertzberg) (see Section 8, "Joint-Use Projects" for more information).

Reusable Plans

The SFP requires the SAB to develop recommendations regarding the use of cost-effective, efficient, and reusable facility plans. Many districts have found that reusing some part or all of a school plan previously constructed in the district or in another district can lead to efficiencies in both the time required to prepare construction plans and the cost of constructing the facility. Such plan reuse is not always feasible, and, even when possible, may require considerable redesign work for the new site; however, in many circumstances the advantages can be significant.

To assist districts with exploring the feasibility of plan reuse for their new construction project, the SAB and the OPSC have developed an Internet-based "catalog" of plans that can be searched and browsed by anyone. The link on the OPSC Web site "Prototype School Designs," contains floor plans, renderings, and vital statistics for a number of projects ranging from complete schools to single classrooms and support buildings. Districts are encouraged to download information on any of the projects on the OPSC Web site without charge. Districts may then contact the architects responsible for the original projects to pursue adaptation of the facilities to their individual needs. Arrangements for use of the plans are made by the district with the design professional. Of course, all plans on the OPSC Web site are copyrighted by the designers or firms that submitted them. The SAB and OPSC do not participate in any way, except as a clearinghouse for plans of school facilities.

Project Financing

A district has several different options available to meet its 50 percent funding requirement for new construction and 40 percent funding requirement for modernization projects. Some financing mechanisms the district may consider are:

- General obligation bond funds
- Mello-Roos
- Developer fees
- Proceeds from the sale of surplus property
- Federal grants

Once a district has received a SFP apportionment and is ready for funds to be released on a project, they will need to certify on the *Fund Release Authorization* (Form SAB 50-05) that their contribution to the project has already been expended, is on deposit, or will be expended prior to the notice of completion for the project. (See Section 13, "Additional SFP Requirements and Features" for more information on the fund release process.)

Site Selection

The SFP provides that in addition to the basic grant for a new construction project, the district may also receive up to 50 percent of the cost of site acquisition (see Section 5, "New Construction Funding" or Section 10, "Financial Hardship"). In most cases, the district must have completed the process of identifying the site and must have approval of the site by the CDE prior to applying for site acquisition funding. Some separate site applications for financial or environmental hardships do not need this approval at the time of application. See further discussion under those topics in Section 5, "New Construction Funding". The identification and approval process falls under the jurisdiction and responsibility of agencies other than the SAB and the OPSC, and is therefore outside the scope of this guidebook. However, because the processes required can be a major factor in a timely application submittal for project funding, district representatives should be aware of some of the basic requirements for site selection as follows:

Identifying a Site

Selecting a site for a new construction project to be funded under the SFP is primarily a local process. The SAB has guidelines and regulations relating only to the funding limits related to site acquisition[1]. The CDE is given the authority in law to develop standards for school site acquisition related to the educational merit and the health and safety issues of the site. The CDE uses these standards to review a site and to determine if the site is an appropriate location for a school facility. The CDE approval is a requirement before the application for funding can be submitted to the OPSC and subsequently to the SAB for funding.

Site Approval

There are many components that make up the review and approval of a proposed school site. The CDE publication, *School Site Selection and Approval Guide*, addresses these components more completely than this guidebook can. Therefore, the district representative considering an application for a site under the SFP should consult the CDE or their publications. Contact information can be found in Appendix 1, "State Agency Contact Information."

Section 4

Application for Eligibility

Introduction

The School Facility Program (SFP) provides State funding assistance for two major types of facilities construction projects: new construction and modernization. The process for accessing the State assistance for this funding is divided into two steps: an application for eligibility and an application for funding. Applications for eligibility are approved by the State Allocation Board (SAB) and this approval establishes that a school district or county office of education meets the criteria under law to receive assistance for new construction or modernization. Eligibility applications do not result in State funding. In order to receive the funding for an eligible project, the district representative must file a funding application with the Office of Public School Construction (OPSC) for approval by the SAB. See Section 5, "New Construction Funding" and Section 9, "Modernization Funding" for information on submitting applications for funding.

Helpful Hint:
Applications for eligibility may be filed in advance of applications for funding.

Applications for eligibility may be filed in advance of an application for funding, or the eligibility and funding requests may be filed concurrently at the preference of the district. In either case, an application for eligibility is the first step toward funding assistance through the SFP. The process must be done only once. Thereafter, the district need only update the eligibility information if additional new construction and modernization funding applications are submitted.

After the application for eligibility is reviewed by the OPSC, it is presented to the SAB for approval. The SAB's action establishes that the district has met the criteria set forth in law and regulation to receive State funding assistance for the construction of new facilities or the modernization of existing facilities. Throughout this section, references to the district also include a county office of education unless otherwise noted.

The discussions in this section are intended to describe the basic processes a district will encounter and use for establishing eligibility. Every possible situation cannot be dealt with in this overview. When preparing an application, the district representative should always contact the OPSC project manager to be sure that the district's approach is correct and will result in the most eligibility possible for State assistance. To learn more about the SFP, visit the OPSC Web site at www.opsc.dgs.ca.gov.

New Construction Eligibility

The underlying concept behind eligibility for new construction is straightforward. A district must demonstrate that existing seating capacity is insufficient to house the pupils existing and anticipated in the district using a five-year projection of enrollment. Once the new construction eligibility is determined, a "baseline" is created that remains in place as the basis of all future applications. The baseline is adjusted for changes in enrollment and for facilities added, and may be adjusted for other factors such as errors and omissions or amendments to the SFP Regulations. For a complete list of adjustments, refer to SFP Regulations, Section 1859.51. Except for these updates, the establishment of the eligibility baseline is a one-time process.

Establishing Eligibility on a District-Wide or High School Attendance Area Basis

Districts generally establish eligibility for new construction funding on a district-wide basis. For most districts this is the most beneficial method, and the vast majority of applications are filed in this manner. However, under certain circumstances, the district may have more eligibility if the applications are made on a High School Attendance Area (HSAA) basis using one or several attendance areas. This circumstance occurs when the building capacity in one HSAA prevents another from receiving maximum eligibility. For example, one attendance area may have surplus classroom capacity while another does not have the needed seats to meet the current and projected student enrollment. If the district were to file on a district-wide basis, there might be little or no overall eligibility, even though the students in one attendance are "unhoused" by the definitions established in the SFP. In this case, by filing on a HSAA, the eligibility would increase to allow construction of adequate facilities for the unhoused students.

The district may file using one high school attendance area, or at the district's option, it may combine two or more adjacent HSAAs, commonly called a "Super Attendance Area." In either case, the attendance areas must serve an existing, operating high school, and the district must demonstrate that at least one HSAA has negative eligibility at any grade level. Continuation or proposed high schools may not be used for this purpose. Once a district receives funding using a high school attendance area as the basis of its eligibility, it must continue to file future new construction applications on that basis for five years.

Eligibility Process

The SAB has adopted three forms to assist districts in collecting the information needed to establish eligibility. The following table outlines the three-step process a district uses to establish new construction eligibility:

Process for Establishing New Construction Eligibility

STEP	DOCUMENTATION	PURPOSE
1	Enrollment Certification/Projection Form SAB 50-01	Used to collect information about the district's current and historical enrollment and to project that data five years into the future.
2	Existing School Building Capacity Form SAB 50-02	Used to record all the teaching stations in the district that are adequate to house students.
3	Eligibility Determination Form SAB 50-03	Used to compare the information from the first two forms and to determine if the district is eligible for new construction or modernization grants.

The forms referred to in the table can be downloaded from the OPSC Web site at www.opsc.dgs.ca.gov in a format that allows them to be printed as blank forms or completed on the computer and printed for submission to the OPSC. An Excel spreadsheet titled *SAB 50-01, 02, 03 Combined Excel Worksheets* is also available on the OPSC Web site that will perform all the required calculations.

Step One—Enrollment Projections

It may take several years to take a new construction project from the initial determination of need to final completion of construction and occupancy. Because of this, the SFP provides a *projection* of enrollment five years into the future to determine eligibility for funding. The *Enrollment Certification/Projection* (Form SAB 50-01) is used to make this projection. This form assists the district with determining future needs, planning, arranging State and local funding, and constructing the project before the children to be served arrive. The method of projecting enrollment into the future involves using current and historical California Basic Educational Data System (CBEDS) enrollment data for the district. The data collected is then projected into the future for five years using a method known as a Cohort Survival Projection. A district can obtain CBEDS data from the California Department of Education (CDE).

A district may file on a HSAA basis utilizing one or more HSAA. If the district chooses to file an application on this basis the current and three previous years enrollment data in the HSAA or HSAAs (see section on High School Attendance Areas in this section) will need to be included on the Form SAB 50-01.

Once the district enters the required current and historical enrollment figures, the projection is done automatically on the Excel version of this form.

Supplemental Enrollment Figures. A district may supplement the cohort survival enrollment projection by the number of un-housed pupils that are anticipated as a result of dwelling units proposed to be built in the district or HSAA pursuant to approved and valid tentative subdivision maps. Essentially, districts that are experiencing unusual residential growth can factor in these additional students into the enrollment projection.

Helpful Hints:

- Make sure the maps being used are tentative tract maps, final maps or parcel maps (parcel maps can be used only for either apartment or condominium projects).
- Work closely with your local planning commission to ensure the maps are approved and valid.
- When reporting dwelling units on the Form SAB 50-01, be sure to reduce the number of proposed dwelling units by the number of homes that have been occupied or have had construction permits pulled that are twelve months or older from the date the permit was pulled.
- Use the dwelling unit spreadsheet provided on the OPSC Web site to ensure timely processing of the district's application.
- If you are unsure if you can include a tract map, or you have other evidence of approval not previously mentioned, please contact your Project Manager.

What is an Approved and Valid Tentative Subdivision Map? California State law provides a framework by which city or county planning authorities process residential development projects. Typically, this process begins at the Specific Map stage, then proceeds to the Tentative Tract Map stage and concludes at the Final Map stage. The OPSC recognizes that each city or county planning authority process may not entirely follow this process. However, State law requires a tentative subdivision map be approved and valid at the time of submittal for the purposes of augmenting the enrollment projection. The SAB and the OPSC will permit the use of the following maps to augment enrollment projections:

- » Tentative Tract Map
- » Final Map
- » Parcel Map—only when the construction involves an apartment complex or condominium building.
- » Other tract maps will be reviewed on a case-by-case basis.

Submittal Requirements. In order for districts to account for the additional students that will reside in new subdivisions represented by the maps listed above, a district will need to submit a Form SAB 50-01 and report the number of dwelling units to be constructed in the approved proposed subdivision. Additionally, the district must provide the approval dates of the maps by the local planning commission or approval authority; the number of dwelling units to be built in the subdivision; and one of the following:

- » an acceptable map with the local planning commission or approval authority stamp approving the map; or,
- » an acceptable map with the appropriate supporting documentation; or,
- » a spreadsheet listing all of the subdivisions reported on the Form SAB 50-01 with the appropriate supporting documentation.

When submitting supporting documentation it must include one of the following:

- » local planning commission or approval authority meeting minutes detailing the approval of the map; or,
- » a letter from the local planning commission or approval authority indicating that the tract map is approved and valid at the time of the submittal; or,
- » any other reasonable documentation from the local planning commission or approval authority that indicates the tract map is approved and valid.

The OPSC recognizes that local processes vary from county to county, thus the information provided from each planning authority varies. Districts still need to be aware that by signing the Form SAB 50-01, the district representative is certifying that the information provided meets the criteria set forth by law and regulation. If there is any confusion about the information provided by the planning authority, districts are encouraged to work with their project manager.

A yield factor from the various types of housing in the subdivision may be used to supplement the enrollment projection. As an alternative, the district may accept a state-wide average yield factor for calculation purposes. This factor is specified in the instructions on the Form SAB 50-01. Should the district wish to

use its own student yield factors, a copy of the district's study that justifies the student yield factors must be submitted with the Form SAB 50-01. The district's study should determine the elementary, middle and high school pupils generated by new residential units, in each category of pupils enrolled in the district. This study should be based on the historical student generation rates of new residential units constructed during the previous five years that are of a similar type of unit to those anticipated to be constructed in which the school district is located.

A supplement to the enrollment projection for proposed housing units is not available for county superintendent applications.

Small districts with current enrollment of less than 300 should be aware that they have an option for reporting their enrollment differently if it has decreased by more than 50 percent from the previous year enrollment. (For more information on using this option please refer to the Form SAB 50-01, Part A.)

Step Two—Existing School Building Capacity

The second part in determining the district's eligibility for new construction assistance is to document the capacity of the school district at the time the first application for eligibility is filed under the SFP. This capacity calculation is done only once. Districts may file capacity information on a district-wide basis or using a HSAA.

The Calculation of Capacity. The *Existing School Building Capacity* (Form SAB 50-02) is used to capture the information needed for the calculations, and the accompanying instructions give a detailed guide of how to complete the form. The Form SAB 50-02 is essentially a record of all the district's facilities. The SFP Regulations provide instructions on what spaces are to be included or excluded in the calculation of the district capacity.[1] It is important to understand that any project funded with local sources must be counted as existing capacity if the contract for construction of the project is signed before the original application for eligibility determination is made. There is an exception provided for projects if the contracts were signed between August 27, 1998 and November 18, 1998, and if the project did not have eligibility under the Lease-Purchase Program (LPP).

The process of calculating the districts' existing school building capacity is as follows:

1. The district completes a gross inventory of all spaces constructed or reconstructed to serve as an area to provide pupil instruction. The grade level of each classroom is also identified.
2. The gross inventory is adjusted by excluding certain spaces that are not considered available teaching stations under law or regulation. The classrooms remaining in the inventory are multiplied by a loading factor of 25 for elementary, 27 for middle and high school, 13 for non-severe, and 9 for severe classrooms to determine the pupil capacity.
3. A final calculation is done to increase the capacity by a specified amount if the district does not have a substantial number of students enrolled in multi-track year-round education. High school districts are not subject to this adjustment. The district may request a waiver from this adjustment from the CDE, School Facilities Planning Division.
4. A last adjustment occurs for those districts that receive Multi-Track Year-Round Education Operational Grants from the CDE. This increases the district capacity and reduces the final eligibility for the district in a number equivalent to the operational grants the district has most recently received from the CDE.

On-Site Reviews. The district must submit records of the teaching stations existing in the district or HSAA as part of the inventory process. These records generally consist of the following:

[1] SFP Regulations, Section 1859.30, "Gross Classroom Inventory."

» Diagrams of the facilities at each site in the district. These diagrams need not be highly detailed, but must include all permanent and relocatable classrooms at the site. Many districts use simple "fire-drill" maps for this purpose. The diagrams must be submitted with the application.
» Documentation supporting any exclusion claimed from the gross inventory. For instance, if the district claims that a portable is excluded because it has been leased for less than five years, a copy of the lease must be in the district's possession as supporting documentation.

Helpful Hints:
All of the OPSC worksheets are available on the OPSC Web site.

The district may wish to use an OPSC Site Analysis Worksheet to assist with recording all the classrooms in the gross inventory as well as recording the reasons for exclusions, if any. This document is not mandatory but may make the inventory process easier. It also streamlines the OPSC review of the eligibility application.

Step Three—Determining Eligibility

The last part in the new construction eligibility determination process is done on the *Eligibility Determination* (Form SAB 50-03). The existing school building capacity calculated in step two is subtracted from the enrollment projection determined in step one. The number of pupils left, if any, are considered "unhoused" for the purposes of the SFP. They represent the district's eligibility for new construction grant entitlement.

Eligibility Application Approval. Once the district has completed steps one through three, they are ready to submit the eligibility application package. The OPSC will conduct a preliminary review of the package to ensure that it is complete prior to adding the application to the workload list. A more detailed review will be completed prior to presentation to the SAB that may include an on-site visit to review the information included in the site diagrams. When the review is complete and the OPSC has validated the eligibility calculations, an item is presented to the SAB for consideration of approval.

In some cases, the OPSC may find that an application lacks required information. If this is the case, the district is asked to provide the needed information within a specified time. If the district is unable to comply, the application may be returned unprocessed. If this occurs, the district may resubmit the application at any time after the needed information is available.

Districts should review the SFP Application Submittal Requirements worksheet, located on the OPSC Web site, to ensure all required information is included with their application.

Alternative Enrollment Projection—AB 491, Chapter 710, Statutes of 2005 (Goldberg)

The most recent amendment to the SFP Regulations includes a provision for Alternative Enrollment Projections that can be used to supplement regular new construction eligibility determined by the Cohort Survival Projection. At the January 2006 meeting, the SAB approved the regulatory amendments and directed the OPSC to request approval of regulations from the Office of Administrative Law on an emergency basis.

This additional provision is available for school districts with two or more school sites each with a pupil population density greater than 115 pupils per acre for K–6 pupils and 90 pupils per acre for 7–12 grade pupils based on the 2004–05 school year enrollment. In addition, an applicant school district must demonstrate that it cannot meet its housing needs at the impacted school sites, after considering all existing eligibility mechanisms available from the Cohort Survival Projection.

School districts that meet the above criteria may submit a request for review of the Alternative Enrollment Projection method to the OPSC. Districts should conduct the projection in a way that best represents growth patterns of each district, and can use various data including, but not limited to, birth rates and census data. The request must include the minimum components described in SFP Regulations, Section 1859.40(b). Due to the complexity of the data that may be submitted, the law requires the Demographic Research Unit (DRU) of the Department of Finance to jointly review the Alternative Enrollment Projection methodologies with the OPSC.

Once the OPSC and the DRU approve the Alternative Enrollment Projection method, the OPSC will calculate the additional eligibility available to the district. Additional eligibility will be the difference between the Alternative Enrollment Projection and the cohort eligibility for the same enrollment reporting period, adjusted by the existing pupil capacity in excess of the projected enrollment according to the Cohort Survival Projection. In other words, alternative enrollment projection must offset any negative new construction eligibility determined under the "regular" method.

Once additional eligibility is determined, the district can utilize this eligibility on new construction projects that will relieve overcrowding, including but not limited to, the elimination of use of Concept 6 calendars, four track year-round calendars, or bussing in excess of 40 minutes. School districts may file new construction funding applications that utilize "regular" new construction eligibility as well as eligibility gained from the Alternative Enrollment Projection. The law provides up to $500 million from the remaining Proposition 55 new construction bond funds for projects that utilize Alternative Enrollment Projection eligibility.

Modernization Eligibility

Establishing eligibility for modernization in the SFP is more simplified than new construction. Applications are submitted on a site by site basis, rather than district-wide or HSAA, as is the case for new construction. To be eligible, a permanent building must be at least 25 years old and a relocatable building must be at least 20 years old. For purposes of determining the age of the building, the 20 year and the 25 year period shall begin 12 months after the plans for the building were approved by the Division of State Architect. In either case, the facility must not have been previously modernized with State funding. The district must also show that there are pupils assigned to the site who will use the facilities to be modernized. If the facility is currently unused, such as a closed school, it may also be eligible for modernization funding if the district intends to reopen it and assign students immediately.

Application Process

The SAB has adopted a single form to calculate modernization eligibility, the Form SAB 50-03. This is the same form used for new construction applications. It may be downloaded from the OPSC Web site in a format that allows it to be printed as a blank form or completed on a computer and printed for submission to the OPSC. In order to complete the Form SAB 50-03, the district representative will need a completed site diagram for the applicable school which contains the following information:

- The number of permanent classrooms.
- The number of portable classrooms.
- The ages of all permanent and portable classrooms.
- The grade level of each classroom, i.e., K–6, 7–8, 9–12, non-severe, or severe.
- The square footage for each enclosed facility on the site may be necessary (see paragraph below and the instructions on the Form SAB 50-03 for more information).

The instructions on the Form SAB 50-03 will guide the district through the process of calculating the eligibility at that site for modernization. If all the buildings are over 25/20 years old for permanent/relocatable buildings respectively and eligible for modernization, the grant eligibility is simply the number of children that are or can be housed at a site, whichever is less. However, for cases where there is a mixture of classrooms that are under and over the modernization age limits, two optional calculation methods are provided. One option is to count those facilities that are over the age requirement and the children that can be housed in them. The second option is to develop a ratio based on either the square footage or the number of classrooms by comparing the square footage of overage to underage buildings or the number of

overage to underage classrooms on the site. The ratio is then applied to the number of children enrolled at the site. If the district selects the option using a ratio of square footage, it will be necessary to provide the square footage information on the site diagrams as well.

Helpful Hints:
Did you know that the OPSC provides the current workload list on its Web site?

Eligibility Application Approval

Once the district has completed part three of the Form SAB 50-03, they are ready to submit the modernization eligibility application package. The OPSC will conduct a preliminary review of the package to ensure that it is complete before adding it to the workload list. A more detailed review will then be completed that may include an on-site visit to review the information included on the site diagrams. When the review is complete and the OPSC has validated the eligibility calculations, an item is presented to the SAB for consideration of approval.

In some cases, the OPSC may find that an application lacks required information. If this is the case, the district is asked to provide the needed information within a specified time. If the district is unable to comply, the application may be returned unprocessed. If this occurs, the district may resubmit the application at any time after the needed information is available. When the application is resubmitted it will be added to the workload list with the new receipt date.

Districts should review the SFP Application Submittal Requirements worksheet, located on the OPSC Web site, to ensure all required information is included with their application.

This page is intentionally blank.

Section 5
New Construction Funding

Introduction

After a district has established eligibility for a project as described in Section 4, the district may request funding for the design and construction of the facility. In most circumstances, the funding is approved after the district has acquired or identified a site for the project and after the plans for construction are approved by the Division of the State Architect (DSA) and the California Department of Education (CDE). The request for funding must be submitted prior to occupancy of any classroom in the construction contract for the project.

The funding for new construction projects is provided in the form of grants. The grants are made up of a new construction grant (pupil grant) and a number of supplemental grants. A brief description follows:

New Construction Grant. The new construction grant is intended to fund design, construction, testing, inspection, furniture and equipment, and other costs closely related to the actual construction of the school buildings. This amount is specified in law based on the grade level of the pupils served.

Supplemental Grants. Supplemental grants are special grants intended to recognize unique types of projects, geographic locations, and special project needs. These grants are based on formulas set forth in the School Facility Program (SFP) Regulations. There are many possible supplemental grants. All of them are discussed later in this section. Two of the most common are:

- Site Acquisition Grant—Funding for site purchase, relocation, escrow, and certain other site acquisition related costs.
- Site Development Grant—The cost related to preparing a site for construction, including grading and drainage. This grant also includes funding for certain off-site development items such as sidewalks, curbs and gutters, streets, and related improvements. General site work, such as onsite driveways, curbs and gutters, and parking are also allowable for new school projects and additions to existing school sites when additional acreage is acquired.

Each new construction project is reviewed and appropriate grants are applied by the Office of Public School Construction (OPSC). All new construction grants are matched equally by the district with local funding sources. In some cases, districts unable to contribute some or all of the local match may be eligible for financial hardship assistance. A district that intends to request financial hardship assistance, must obtain financial hardship status prior to submitting an application for funding. See Section 10, "Financial Hardship" for more information on this subject. Once the grants are determined for a project, a request is sent to the State Allocation Board (SAB) for a funding apportionment. After the apportionment is approved, the district may enter into a contract for the construction of the facility, if it has not already done so, and receive a release of the funds. To be eligible for funding, the new construction funding application must be submitted to the OPSC within 180 days of the district entering into a contract for construction of the facility.

In some cases, when a district has been approved for financial hardship assistance, the district may request a separate site or design apportionment. In this situation, the request may be made before plans are completed and approved by the DSA. Site and design funding is discussed later in this section. In addition, see Section 10, "Financial Hardship" for more information.

This section explains the funding application process, typical requirements, and how to determine the new construction grant amount. It is important to understand that the discussion in this section focuses on the most common situations. There are many variations that may apply to specific projects that can not be covered in this brief overview. As always, the district representative should meet with the OPSC project manager and discuss the district's plan in detail.

Available New Construction Funding

There are several types of funding requests that can be made under the new construction program. The district may request site and design apportionment separately when they meet Financial Hardship requirement or as a combined application when appropriate.

New Construction Adjusted Grant

A new construction adjusted grant is intended to provide the State's full share for all necessary project costs including the New Construction Grant (pupil grants), site acquisition, site utilities, off-site, and service site development. The new construction adjusted grant also includes applicable supplemental grants and adjustments as described later in this section. This grant is approved only after the site has been approved and the plans are also complete and fully approved.

Separate Design

Districts that qualify for financial hardship status may receive a separate apportionment for design costs. Design funding is intended to allow a district to hire an architect and prepare project plans for DSA approval. When the plans are complete and approved, the district may request the remaining new construction funding. The new construction adjusted grant will be reduced by the design apportionment previously made for the project.

Separate Site

Districts that qualify for financial hardship status may receive a separate apportionment for site acquisition. The site funding is intended to allow a district to acquire a site for the project. When the district is ready to request the remaining new construction funding, the new construction adjusted grant will be reduced by the site apportionment previously made for the project.

Separate Site—Environmental Hardship

If the Department of Toxic Substances Control (DTSC) certifies by letter that the time necessary to complete the remediation or removal of hazardous waste on the site to be acquired will exceed 180 days, the district may qualify as an environmental hardship. This means that the district is eligible for a separate apportionment for site acquisition, even though the district does not qualify as a financial hardship. More information is available in the SAB regulations and through the OPSC project manager.

Funding Process

After the district submits an eligibility application (see Section 4, "Application for Eligibility") the process of applying for funding is as follows:

- » the district submits a funding application package;
- » the OPSC reviews the package;
- » the SAB approves the apportionment;
- » the district requests a fund release and makes expenditures;
- » the district submits reports on expenditures;
- » the OPSC audits.

The application for new construction funding is made on a single form, the *Application for Funding* (Form SAB 50-04). The form serves as a vehicle to collect the information necessary to calculate the amount of grants applicable to the project, and also is a certification from the district regarding compliance with requirements of the law and the SFP Regulations. The district may submit the Form SAB 50-04 after the district has received approval by the CDE and the DSA of the proposed new construction project and the project site when applicable. In most cases, the district has determined its eligibility for new construction grants on the *Eligibility Determination* (Form SAB 50-03) before applying for funding. However, if the district has not established eligibility for the project previously, it may submit the eligibility package with the funding package.

The funding application is reviewed by the OPSC for completeness and placed on a statewide workload list in date received order. District representatives can view the workload list on the OPSC Web site at www.opsc.dgs.ca.gov. The applications for funding are then processed in date order for presentation to the SAB for consideration of an apportionment.

In some cases, the OPSC may find that an application lacks required information. The district is asked to provide the needed information within a specified time. If the district is unable to comply, the application may be returned unprocessed, and the district may resubmit the application at any time once the needed information is available.

When the SAB has no funds to apportion, the SAB will continue to accept and process applications based on the date the application is ready for apportionment. The applications will be placed on an unfunded list. An application for funding that is placed on an unfunded list is eligible for apportionment pending the availability of future funding. If the application is approved for a separate site apportionment for Environmental Hardship, the project will receive a date on the unfunded list based on the date the environmental hardship site apportionment was made for the project.

Preparing an Application

A complete application package is an essential element of the process of receiving funding for the district's projects. The information provided is the basis for determining the grant amounts that the district will receive. The following discussion outlines the major elements of a complete application for a new construction adjusted grant. Note that the same information is not necessary for all application types.

The complete application for new construction funding must be accepted by the OPSC prior to occupancy of any classroom in the construction contract for the project in order to be eligible for funding.

New construction and modernization funding applications require the Form SAB 50-04 and must be based on a previous eligibility approval or must have the eligibility application as a part of the package (see Sec-

tion 4, "Application for Eligibility"). Also, please note that districts requiring financial hardship assistance must receive that status before filing a funding application (see Section 10, "Financial Hardship" for further information). The table below delineates the supporting documents necessary for each type of new construction funding request.

New Construction Funding Required Documents

DOCUMENT	TYPE OF FUNDING			
	DESIGN ONLY	SITE ONLY	SITE AND DESIGN	CONSTRUCTION
Appraisal of property to be acquired when appropriate* (preliminary appraisal of property for separate site)		✖	✖	✖
Escrow closing statement or court order				✖
CDE approval of site* (contingent CDE approval of site for separate site)		✖	✖	✖
Final DSA plan approval				✖
CDE approval of plans				✖
Cost estimate for site development†				✖
Plan‡ and cost estimate for off-site development when funding is requested				✖

* If this document has been submitted previously, it need not be resubmitted.

† SFP Regulations, Section 1859.76, "Additional Grant for Site Development Costs."

‡ Plan must be approved by the local entity, see *Architectural Submittal Guidelines* for further information.

Helpful Hint:
When a district seeks SFP funding, the law stipulates that a district must hold title or an acceptable lease to all property acquired, constructed, or improved.

Application for Funding (Form SAB 50-04)

The Form SAB 50-04 serves as a vehicle for districts to request funding for design, site and/or construction for all new construction projects. The form provides the OPSC with specific project information to determine the new construction adjusted grant including, but not limited to the type of application; the grade level of the project; the number of pupils the project will house; whether or not a site is being acquired; and if any additional or supplemental grants are being requested. To complete the Form SAB 50-04 and to make the required certifications, the district representative will need at least the following supporting information:

Appraisal, Escrow Closing Statement, CDE Site Approval

An appraisal, escrow closing statement or court order, and CDE site approval letter are required if the application includes site purchase. If not, only the CDE approval letter may be required. The documents are described in detail under the heading "Site Acquisition" in the section titled "Supplemental Grants".

DSA-Approved Plans and Specifications

All new construction plans and specifications must be approved by the DSA. The DSA approval must be current and valid at the time of submittal of the application for funding to the OPSC. In addition, all final plans and specifications for new construction, modernization, or alteration of any school building for which the district is seeking State funding requires DSA approval prior to signing a construction contract. The DSA approval must be current and valid at the time of submittal of the application for funding to the OPSC. If a

district enters into a contract for construction prior to receiving DSA approval of the plans and specifications, the project may not be eligible for State funding. The date of the DSA approval letter, not the DSA stamp, is considered a valid approval. For more information, please refer to Education Code, Section 17072.30.

- » As of October 2005, all funding applications must be accomplanied by the DSA Final Plan Approval Letter.
- » Plans should include all work eligible for funding through SFP and should be approved by DSA. If plans are submitted in AutoCAD format, a copy of DSA approval letter is required.
- » Plans to be submitted include those for Site, Civil, City/County Street Development, Architectural (along with portable facilities), Structural, Electrical, Plumbing, Mechanical, and Landscape.
- » New plans will not be accepted during the review process once OPSC acknowledged the School District Project Application as a complete package.

Cost Estimate for Site Development

A detailed cost estimate is required if the district is requesting additional grants for site development in its new construction funding application. For more information, please refer to the heading "Site Development" in the section titled "Supplemental Grants", discussed later in this section.

District Certifications

As previously mentioned, the Form SAB 50-04 is also an official certification to a number of SFP requirements. The form and the instructions to the form provide specific detail about the certifications; however, some of the issues to which the district representative will have to certify are as follows:

- » The district has established a "Restricted Maintenance Account" (see Section 13, "Additional SFP Requirements and Features" for more information).
- » Contracts for the services of an architect, structural engineer, or other design professional which were signed after November 4, 1998 were obtained pursuant to a qualifications based competitive process (see Section 3, "Project Development Activities").
- » The district will fund their share of the project.
- » If this request is for a large new construction or a large modernization project, the district has consulted with the career technical advisory committee established pursuant to Education Code, Section 8070, and it has considered the need for vocational and career technical facilities to adequately meet its program needs in accordance with Education Code, Sections 51224, 51225.3(b) and 52336.1.
- » All large new construction funding applications for comprehensive high schools must be accompanied by evidence of compliance with Education Code, Section 17070.95. Documentation may include any of the following:
  - *Minutes from a public meeting by the school district's governing board documenting the discussion with and the recommendations of the local CTEAC regarding the CTE facility needs assessment.*
  - *Minutes from the meeting with the local CTEAC regarding the CTE facility needs assessment and recommendations.*
  - *Letter from the local CTEAC to the school district that identifies the subject of the discussion, the CTE facility needs assessment, and recommendations.*
- » If the district is requesting an Additional Grant for Energy Efficiency pursuant to SFP Regulations, Sections 1859.71.3 or 1859.78.5, the increased costs for the energy efficiency components in the project exceeds the amount of funding otherwise available to the district.
- » The district has or will initiate and enforce a Labor Compliance Program that has been approved by the Department of Industrial Relations, pursuant to Labor Code, Section 1771.7, if the project is funded from Proposition 47 or 55 and the Notice to Proceed for the construction phase of the project will be issued on or after April 1, 2003.
- » Beginning with the 2005/2006 fiscal year, the district has complied with Education Code, Section 17070.75(e), by establishing a facilities inspection system to ensure that each of its schools is maintained in good repair (see Section 13, "Additional SFP Requirements and Features" for more information).

Finally, to reduce the need to submit extensive supporting documentation, the OPSC will ask that the architect of record or other design professional certify to the following:

» The date that the DSA approved the plans and specifications.
» That the cost estimate as submitted to the DSA for the work in the plans and specifications is at least 60 percent of the total grant provided by the total State and district matching share excluding any site acquisition costs provided.

CDE Approval of Final Plans

The plans submitted to the OPSC must have the approval of the CDE. The final plan approval letter from CDE must accompany the funding application.

New Construction Grant Amounts

The SFP was designed as a per-pupil grant program where each pupil, depending on the grade level, would receive a specific dollar amount. The new construction adjusted grant, at minimum, will consist of the new construction grant, which is prescribed in law relative to the grade level of the pupils. The grant can be increased by certain supplemental grants for which the district may be eligible. The following are the types of grants:

» New Construction Grant (pupil grants)
» Supplemental Grants

New Construction Grant

The new construction grant is intended to provide the State's share for necessary project costs including, but not limited to, funding for design, costs related to the approval of the plans and specifications by all required agencies, the construction of the buildings, general site development, educational technology, unconventional energy, change orders, tests, inspections, and furniture and equipment. The new construction grant does not provide for site acquisition, site utilities, off-site, and service site development as these costs vary due to location, size, topography, etc. The OPSC will review and determine these costs on a case-by-case basis, as discussed later in this section.

The new construction grant is based on the number of pupils in the project. There are a number of ways that the district can determine how many pupils will be assigned to a project, and therefore what the new construction grant will be. The most obvious way is by first determining the grade level of the project and then the number of classrooms to be included. Under the SFP, K–6 classrooms are loaded with 25 pupils, 7–12 classrooms are loaded with 27 pupils, severe classrooms are loaded with 9 pupils, and non-severe classrooms are loaded with 13 pupils. Assuming that the district has enough eligibility, it might decide to construct a ten-classroom addition along with bathrooms and other support facilities at an existing elementary school. The ten classrooms will house 250 children using the loading standards specified in the program. If the district has already established eligibility for at least that number of elementary students using the Form SAB 50-03, the district could request 250 grants for the project.

There may be a situation where the district may wish to ask for less grants than the classroom capacity of the project. For instance, the project described in the previous paragraph may be of relocatable construction and may be estimated to cost less than the amount of grants that would be generated by 250 students. The district may elect either of the following strategies:

» The district may reduce the grant request to fewer grants, yet still enough to completely fund the State share of the project. The advantage is that the district will retain the unused grants for a future project, perhaps at another site.
» The district may ask for all 250 grants, and use the grant amount not only to construct classrooms at the site, but also to construct other facility needs of the district at the site, such as administration, multi-purpose rooms, gymnasium, etc.
» The district may ask for all 250 grants, and use the savings from the project for other capital facilities projects in the district, provided the project is not receiving financial hardship assistance. The advantage to the district is that the project is built as planned, while other facilities needs are also met within the State funding for the original project. In this case, the district must ensure that the amount spent on the work in the plans and specifications for the original project equals at least 60 percent of the total State and local share of the project grants excluding any site acquisition costs provided. With this condition met, the district may use the savings on other district projects.

There are many variations on these approaches to determining grant amounts for a particular project. It is important that the district consult with the OPSC project manager to be sure that a specific approach is possible and within the guidelines of the law and regulations.

New Construction Grant Calculation

The new construction grant is determined by multiplying the pupils assigned to the project by the pupil grant established in law. The new construction grant is adjusted by the SAB annually (each January) based on the change in the Class B Construction Cost Index. The current amounts are as follows:

New Construction Basic Grant Amount

CLASSIFICATION	BASIC GRANT AMOUNT	COMMENTS
Elementary Pupil	$ 8,081	
Middle School Pupil	$ 8,546	Include grade six pupils if part of a 6–8 grade school.
High School Pupil	$10,873	
Special Day Class—Non-Severe	$16,095	
Special Day Class—Severe	$24,066	

The Special Day Class grant allowances are established at a level higher than basic new construction grant allowances as a means to cover building cost items such as enhanced or added electrical and plumbing fixtures, more accessible doors and grab bars, extra sinks, casework, restrooms, changing areas, living skills space and other facilities for students with exceptional needs.

Supplemental Grants

Supplemental grants are intended to recognize unique types of projects, geographic locations and special project needs. These grants are based on formulas set forth in the SFP Regulations. There are many possible supplemental grants as follows:

» Energy Efficiency
» Fire Code Requirements
» Geographic Location
» Labor Compliance Program

» Multi-level Construction
» New School Projects
» Project Assistance
» Replacement with Multi-Story Construction
» Site Acquisition
» Site Development
» Small High School Program
» Small Size Projects
» Special Education—Therapy
» Urban Locations, Impacted Sites, Security Requirements

The following is a brief explanation of the supplemental grants:

Energy Efficiency

A supplemental grant is available to districts with projects that have increased costs associated with plan design and other project components for school facility energy efficiency. The facilities in the proposed new construction project must exceed the nonresidential building energy efficiency standards as specified in Title 24, Part 6 of the California Code of Regulations by 15 percent. Current all energy efficiency funds have been exhausted. At the September 2006 SAB the remaining modernization energy funds were re-designated to fund the new construction energy projects.

Fire Code Requirements

The new construction grant will be increased for each pupil in a project that includes an automatic fire detection and alarm system. The current increase is as follows:

New Construction Grant Increase—Automatic Fire Detection and Alarm System

CLASSIFICATION	GRANT INCREASE	CLASSIFICATION	GRANT INCREASE
Elementary Pupil	$10	Special Day Class—Non-Severe	$30
Middle School Pupil	$14	Special Day Class—Severe	$44
High School Pupil	$23		

The new construction grant will be increased for each pupil in a project that includes an automatic sprinkler system. The current increase is as follows:

New Construction Grant Increase—Automatic Sprinkler System

CLASSIFICATION	GRANT INCREASE	CLASSIFICATION	GRANT INCREASE
Elementary Pupil	$144	Special Day Class—Non-Severe	$305
Middle School Pupil	$172	Special Day Class—Severe	$454
High School Pupil	$177		

The amounts shown above are the 50 percent State share and are adjusted annually in the same manner as the New Construction Grant.

Geographic Location

A supplemental grant is available to districts with projects that are located in areas of California that are remote, difficult to access, or lack a pool of contractors. A district may qualify and request an augmentation to the new construction grant due to their geographic location.[1]

Labor Compliance Program (LCP)

A labor compliance program, as specified by Labor Code, Section 1771.5, must be initiated and enforced for each project funded wholly or in part from Propositions 47 or 55 funds if the Notice to Proceed was issued on or after April 1, 2003. Additional funding is provided for these projects. The LCP grant is calculated on a sliding scale as follows:

Labor Compliance Program Grant

IF TOTAL PROJECT COST IS...		THEN THE TOTAL LCP COST IS...
AT LEAST	UP TO	
$ 0	$ 1 million	$ 16,000
$ 1 million	$ 2 million	$ 16,000 plus 0.016 multiplied by the amount over $1 million
$ 2 million	$ 3 million	$ 32,000 plus 0.0025 multiplied by the amount over $2 million
$ 3 million	$ 4 million	$ 34,500 plus 0.0015 multiplied by the amount over $3 million
$ 4 million	$ 6 million	$ 36,000 plus 0.0032 multiplied by the amount over $4 million
$ 6 million	$ 8 million	$ 42,400 plus 0.0031 multiplied by the amount over $6 million
$ 8 million	$13 million	$ 48,600 plus 0.0046 multiplied by the amount over $8 million
$13 million	$18 million	$ 71,600 plus 0.0044 multiplied by the amount over $13 million
$18 million	$48 million	$ 93,600 plus 0.0042 multiplied by the amount over $18 million
$48 million	N/A	$219,600 plus 0.004 multiplied by the amount over $48 million

The State's share will be 50 percent of the above result.

Multi-Level Construction

The SFP recognizes that districts face additional costs to construct multi-level school facilities on small sites. A supplemental grant is available for projects in densely populated areas, where site acquisition costs are high and land is scarce, to provide funds to alleviate and mitigate the impact of these small sites. If the useable site acreage for the project is less than 75 percent of the site size recommended by the CDE for the master planned project capacity, the new construction grant can be increased by 12 percent for each pupil housed in a multi-level building that will house pupils in all levels of the building.

[1] SFP Regulations, Section 1859.83, "Excessive Cost Hardship Grant."

Site improvements associated with grading the site to a mass graded or construction-ready condition without foundation or paving and proposed utilities stubbed to the site may be included in the appraisal. Other site improvements must be finished before close of escrow or 100 percent covered by a performance bond.

The appraisal date of valuation, or an update, may not predate by more than six months of the district's funding application to the OPSC. An SFP project which had the site funded as a LPP project shall use the value funded under the LPP.

DTSC Costs. Site acquisition costs may include up to 50 percent of the cost for the review, approval and oversight of the Phase One Environmental Site Assessment (POESA) and the Preliminary Endangerment Assessment (PEA). Note that these costs are prior to the actual clean-up costs, if any. Those costs may be included under some circumstances. See the paragraph entitled "Hazardous Waste Removal" below.

Hazardous Waste Removal. Site acquisition costs may be increased by up to one-half of the costs associated with the removal or remediation of hazardous waste on the site to be acquired. These costs may include the actual implementation of the response action required in the PEA, the cost of the preparation of the Response Action, and the cost for the DTSC review and oversight of the preparation and implementation of the Response Action. The increase in site acquisition may not exceed the difference between one and one half times the appraised value of the site as if no contamination existed and the actual cost of the contaminated site.

Relocation Expenses. Reasonable and necessary costs to relocate residential occupants and businesses from the proposed new school site, including purchasing fixtures and equipment, personal property, new machinery and equipment, and the installation of any improvements at the replacement residences or business locations are permitted as site acquisition costs.

Incidental Site and Hazardous Waste Removal for Leased Sites. If the application for funding includes a vacant leased site that was never used for school purposes, the site acquisition costs may be increased by up to one-half of the costs associated with the removal or remediation of hazardous waste on the site to be leased. These costs may include approved relocation expenses, the actual implementation of the Response Action required in the PEA, the cost of the preparation of the Response Action, and the cost for the DTSC review and oversight of the preparation and implementation of the Response Action. The increase in site acquisition may not exceed one and one half times the appraised value of the site determined by an appraisal made or updated no more than six months prior to the date the application was submitted to the OPSC.

Hazardous Waste Removal Required on an Existing School Site. Site acquisition funding may be available for the evaluation and response action in connection with hazardous substances at an existing school site in advance of submittal of the DSA approved plans.

Acquiring Title. Title to all property acquired, constructed, or improved with funds made available under the SFP must be held by the school district to which the SAB grants the funds. The title to the site need not be actually held by the district before funding; however, one of the following must be demonstrated:

- Purchase will be made from one or more private parties, companies, developers, or other entities, as evidenced by an escrow showing the pending transfer of ownership to the district.
- Court orders, especially orders of condemnation through the county court where the proposed new site lies, which include a Final Judgment, Stipulated Judgment and Order of Immediate Possession to allow occupancy, or Order of Prejudgement Possession.
- An escrow for the transfer of property in lieu of other legally required payments or fees due to the district. (Example: Districts sometimes obtain proposed new school site parcels from developers, with all or part of the "purchase" price comprised of the district forbearing from collecting school mitigation fees from the developers.)

New School Projects

Districts that will construct an entirely new school on a site without existing facilities may qualify for a supplemental grant. This grant is intended to provide funds to construct core facilities such as multi-purpose rooms, gymnasiums, libraries, kitchens, etc., for projects that have a minimal amount of classrooms, but not enough to generate a sufficient new construction grant to build these essential facilities. In March 2004, the SAB approved a separate new school allowance to meet the specific facility needs of alternative education schools, which are defined as community day, county community, county community day, and continuation high schools for the purposes of the SFP. The Alternative Education New School Allowance applies to all alternative education schools for which the plans and specifications were accepted by the DSA or after March 24, 2004. Please refer to the OPSC Web site for the current grant amounts.

Project Assistance

The SAB may provide additional project grants for project assistance to small school districts with enrollment of 2,500 pupils or less. The current additional grant of $5,168 may be used for costs associated with the preparation and submission of the SFP eligibility and funding applications, including costs related to support documentation such as site diagrams. The grant amount will be adjusted each year using the Class B index.

Replacement with Multi-Story Construction

As part of a SFP new construction project, a school district may demolish a single story facility and replace it with a multi-story facility on the same site. In addition to the new construction grant allowance, the SAB will provide a supplemental grant to fund 50 percent of the replacement cost of the single story facility(s) to be replaced provided that the site size is less than 75 percent of the recommended CDE site size, the pupil capacity at the site will be increased, the cost of the demolition and replacement is less than the cost of providing a new facility at a new site to house the increased pupil capacity, and the project has CDE approval.

Site Acquisition

The site acquisition grant can be used to acquire and develop new school sites or, under some circumstances, to reimburse or credit the district for a portion of the site acquisition costs originally borne by the district or in specific circumstances the current appraised value. Eligible costs for site acquisition are:

- Fifty percent of the lesser of the actual cost or the appraised value of the site.
- Fifty percent of the relocation cost.
- Two percent of the value of the site determined above, with a minimum of $25,000.
- Fifty percent of certain costs related to the DTSC review and oversight.
- Hazardous waste removal (within one and one half times the appraised value).

Note that if the district intends to use a site that was acquired in a priority one project under the Lease-Purchase Program (LPP), the OPSC will use the appraised value of the site as established under the LPP for the appraised value of the site under the SFP. The SFP apportionment will be offset by the LPP apportionment. A project that received site acquisition funds under the LPP as a priority two project is not eligible for site acquisition funds under the SFP.

Independent Appraisal Requirement. The district is required to submit one site appraisal with the Form SAB 50-04. A California licensed and duly-qualified appraiser must issue a current appraisal report for the proposed site using the Uniform Standards of Professional Appraisal Practice. The appraisal must be impartial and prepared for the district or its legal counsel.

The site must be appraised as if it were a clean site, safe from all contaminants in accordance with SFP Regulations, Section 1859.74.1, CDE guidelines, and Title 5, California Code of Regulations. The appraisal report must evaluate both the gross and net usable acreage and any severance damages.

Funding on Leased Land. The district may utilize leased sites with governmental agencies for certain specified periods of time. To receive new construction grants for facilities that are or will be located on real property leased by the district, the property must be leased from the federal government for a period of 25 years or another governmental agency for a period of 40 years. If the lease is with a governmental agency other than the federal government, a 30-year lease may be considered if there are no other educationally adequate sites available under a 40-year lease, the cost per year for a 30-year lease is not greater than a 40-year lease, or the district can provide satisfactory evidence to the SAB that a shorter term lease is necessary.

Site Development

In addition to the new construction grant, the SFP provides a supplemental grant for the purpose of developing the site where the project is to be located. Fifty percent of the site development costs are available for both new sites and for existing sites where additional facilities are being constructed with the exception of general site development. Funding for general site is allowable for new school projects and additions to existing sites, however, only when additional acreage is acquired. These development costs fall under four categories:

- Service site development improvements are performed within school property lines and may include eligible site clearance, rough grading, soil compaction, drainage, erosion control and multi-level, single level subterraean or under building parking structures. This portion of the site preparation is accomplished prior to the general site development and construction of buildings.
- Off-site improvements are located along the perimeter of two sides of the site including street grading and paving, storm drainage lines, curbs, gutters, sidewalks, and street lighting. These improvements are commonly dedicated for public use. If a district is requesting off-site improvements, the local entities having jurisdiction of areas where the off-site development is proposed must approve the related plans and specifications. These approved plans and specifications must be submitted to the OPSC at the time the application for funding is submitted.
- Utility service developments include improvements of water, sewer, gas, electric, and telephone from the closest existing utility connection.
- General site development includes onsite driveways, walks, parking, curbs and gutters, tennis/handball courts, running tracks, baseball, football, and soccer fields, etc. Funding for general site work is limited to $27,840 per usable acre plus a percentage of the base grant including specific additional grants (multi-level, automatic fire detection/alarm system, automatic sprinkler system, and excessive cost hardship grants). Districts receive a 6 percent increase for elementary and middle school projects and a 3.75 percent increase for high school projects.

It is important to understand that site development costs have restrictions on their use. The district representative should consult the SFP Regulations and the OPSC project manager if he or she is unsure if a particular item is an allowable cost before including the work in the project.

If a district is requesting a supplemental grant associated with site development on the Form SAB 50-04, verification must be submitted to support the request with the exception of general site development. To assist in gathering the supporting detail, the OPSC has developed a "Site Development Worksheet for Additional Grants" that is located on the OPSC Web site. The district may use this worksheet or similar method to submit this information to the OPSC.

Small High School Program

A supplemental grant is available for the construction of small high schools. The Small High School Program is a pilot program that will sunset on January 1, 2008 and is intended to fund small high schools with an enrollment of 500 pupils or less. Any new small high school may not be constructed where it would have otherwise been built due to sparse population in a geographical area and the applicant district must have a minimum of 500 pupil grants of new construction eligibility.

Small high school projects may be constructed on stand alone sites. Additionally, a small high school may be built on a site adjacent to an existing school, on the site of a large high school or on separate but adjacent sites sharing core facilities with the large high school. All small high schools funded from this program must have separate administrations and toilet area on the site.

Small Size Projects

A supplemental grant is available to districts with projects that house no more than 200 pupils. The grant is intended to provide additional funds for core facilities and to make up for the lack of economies of scale when districts build small projects. The new construction grant can be increased by 12 percent for a project that will house less than 101 pupils, or by four percent if the project will house over 100, but no more than 200 pupils.

Special Education—Therapy

The new construction grant will be increased for the area of therapy rooms, not to exceed 3,000 square feet, plus 750 square feet per additional Special Day Class classroom needed for severely disabled individuals with exceptional needs. The current unit cost per square foot of therapy area is as follows:

- $252 per square foot for toilet facilities
- $139 per square foot for other facilities

The amounts shown above are the 50 percent State share and are adjusted annually in the same manner as the new construction grant.

Urban Locations, Security Requirements and Impacted Sites

Districts with projects in urban locations on impacted sites may request a supplemental grant if all of the following conditions are met:

- The useable site acreage for the project is 60 percent or less of the site size recommended by the CDE for the net school building capacity for the project plus any existing enrollment at the site, if any.
- At least 60 percent of the classrooms in the project construction plans are in multi-story facilities.
- For new construction of a new school site, the value of the site being acquired is at least $750,000 per useable acre. This condition does not apply to new construction additions to existing school sites.

Urban locations on impacted sites are generally in areas of high property values or high population density, creating an environment difficult for districts to acquire ample real property, which causes increased project costs uniquely associated with urban construction. Districts with projects on these impacted sites are also faced with extra security requirements. The supplemental grant provides funds for security fences, watchpersons, increased premiums for insurance for contractors, and storage or daily delivery of construction materials to prevent theft and vandalism. If a district requests grants due to these circumstances, the OPSC will verify the district's eligibility pursuant to the CDE Final Plan Approval letter and by OPSC's review of the project construction plans and site appraisal.

If the above criteria are met, the urban supplemental grant is calculated on a sliding scale as follows:

New Construction Urban Grant Adjustment

IF...	THEN...
the useable acres are 60 percent of the CDE recommended site size, as described above...	the urban grant adjustment is 15 percent of the New Construction Grant and of the funding for additional grants for replaced facilities*, small size projects† and new school projects‡, and a 1.166 percent increase to the urban grant adjustment for each percentage decrease in the CDE recommended site size below 60 percent.

For new construction of a new school site, the adjustment shall not exceed 50 percent of the cost avoided with the purchase of a site smaller than the CDE recommended site size for the number of the pupil grants requested in the application§. This limit does not apply to new construction additions to existing school sites.

* SFP Regulations, Section 1859.73.2, "New Construction Additional Grant for Replaced Facilities"

† SFP Regulations, Section 1859.83(b), "Excessive Cost for Projects that House No More than 200 Pupils (Small Size Project)"

‡ SFP Regulations, Section 1859.83(c), "Excessive Cost to Construct a New School Project"

§ SFP Regulations, Section 1859.83(d)(2)(A), "Excessive Cost Due to Urban Location, Security Requirements and Impacted Site"

District Project Contribution

Every new construction application is a joint funding effort between the local school district and the State through the SFP. The State grant is discussed in the section entitled "New Construction Grant Amounts", earlier in this section. The total State grant represents 50 percent of the total project cost, with the district contributing the remaining 50 percent of the total project cost. The district contribution may come from virtually any source. The sole exception is that when savings from another SFP project is used as a match, the savings must be from a new construction project only. This restriction exists due to legal requirements pertaining to the bond funds, which the State uses as a program-funding source.

The district need not have the entire 50 percent local contribution on deposit at the time that the project apportionment is made. However, when the project fund release is requested, the district must certify that the district's matching share has been deposited in the County School Facility Fund; has been expended by the district for the project; or will be expended by the district prior to the Notice of Completion for the project. Thus the district has considerable flexibility in how the local share is arranged and contributed. The district representative should be aware, however, that regardless of when the share is contributed to the project, at closeout the district must be able to show that 50 percent of the expenditures on the project were from local sources. If the district is unable to demonstrate the 50 percent expenditure requirement has been met, the apportionment will be reduced.

Unable to Meet the Contribution

Districts that are unable to contribute the 50 percent local share of a project can pursue financial assistance through the financial hardship provisions of the SFP. Districts must submit financial data to the OPSC for pre-approval of financial hardship status (see Section 10, "Financial Hardship") before submitting a funding application. In addition, this pre-approval enables districts to request a separate apportionment for site acquisition and/or design costs, if necessary, any time after the application for eligibility determination has been filed and before its financial hardship status expires.

Effects of Reorganization

Districts who are affected by a reorganization election on or after November 4, 1998, may not file a funding application for new construction until after the notification of the reorganization election. If the district had established new construction eligibility prior to reorganization, it must adjust the baseline eligibility on the *Eligibility Determination* (Form SAB 50-03) prior to filing new applications. Alternatively, the district can choose to certify that the reorganization does not result in a loss of eligibility for the project requesting funding. Districts that are newly created by the result of a reorganization can submit a funding application after approval of the election by the CDE.

SAB Approval Process

The applications for funding are presented to the SAB for approval in the order of their OPSC receipt date. The SAB approval (action) can either be an apportionment or "unfunded" approval, depending on the availability of funds for new construction.

Fund Release

After the funding application is apportioned by the SAB, the next step in the process is the actual fund release to the County School Facilities Fund for use by the district.

The SFP grant is processed for release when the district submits a *Fund Release Authorization* (Form SAB 50-05). The Form SAB 50-05 submitted by the district is an important document that cannot be altered or modified by the OPSC. Therefore, an improperly completed Form SAB 50-05 will be returned with a letter of explanation to the school district for correction.

When a properly executed form is received, the OPSC sends a School Facilities Fund Release notification to the district representative and county office of education. The notification indicates the type of grant released, amount, school district, application number, school name, and date processed. In addition, the SFP Fund Release Report is posted monthly on the OPSC Web site. This report indicates the claim schedule number, the date the funds were released, and the dollar amount released.

It is important to understand that a Form SAB 50-05 must be submitted within 18 months of the SFP grant apportionment by the SAB, or the entire new construction or modernization grant will be rescinded without further SAB action. If this should happen, the pupils housed in the project will be added back to the district's eligibility and the district may re-file the application at any future time.

The Form SAB 50-05 can be downloaded from the OPSC Web site. The properly executed Form SAB 50-05 should be submitted to:

Office of Public School Construction
Accounting
1130 K Street, Suite 400
Sacramento, CA 95814

Section 6

Charter School Facilities

Introduction

In 2002, Article 12 in Assembly Bill (AB) 14, established a pilot program to provide charter schools with funding to construct new facilities, known as the "Charter School Facilities Program" (CSFP). With the successful passage of Proposition 47, this program received $100 million in bond funding. In 2004, Senate Bill 15 was passed to make revisions to the CSFP in order to maximize the number of projects funded with an additional $300 million in bond funding made available with the passage of Proposition 55. The most recent bill, AB 127, was passed in 2006 to further revise the CSFP and an additional $500 million was made available with the passage of Proposition 1D. The CSFP permits a charter school or school district filing on behalf of a charter to apply for a preliminary apportionment (reservation of funds) for the construction of new facilities and/or rehabilitation of existing district owned facilities that are at least 15 years old. To qualify for funding, a charter must be deemed financially sound by the California School Finance Authority (CSFA).

The preliminary apportionment for a CSFP project must be converted within a four-year period to an adjusted grant apportionment meeting all the School Facilities Program (SFP) criteria, unless a single one-year extension is granted.

Eligibility

To apply for funding under Proposition 47 and 55, the school district in which the charter is physically located must have had SFP new construction eligibility. Proposition 1D removed this requirement. Now, new construction eligibility is no longer required. However, the school district in which the charter school is physically located must certify to the number of district unhoused students a charter school will house in a new construction project. A charter school applying on its own behalf may apply once it has notified the superintendent and governing board of the district, where it is physically located, of its intent to apply in writing (with proof of delivery) 30 days prior to submitting the preliminary application to the Office of Public School Construction (OPSC). The notice to the district shall include the number of pupils the charter intends to house, a request that the school district certify to the number of the district's unhoused pupils that the charter project will house and a request that the district update its new construction eligibility for current enrollment.

The $100 million provided in Proposition 47 for the program was exhausted in July 2003. The next $300 million provided in Proposition 55 was exhausted in February, 2005. To apply for the funds made available with the passage of Proposition 1D, charter schools and districts must submit an *Application for Charter School Preliminary Apportionment* (Form SAB 50-09), to the OPSC by June 5, 2007. In addition, if funds become available through over reservation of preliminary apportionment or lease payments, the State Allocation Board (SAB) may establish additional application periods.

Application Process

A complete application is an essential element in the process of receiving a preliminary apportionment for the charter school or district's project. The information provided is the basis for determining the apportionment amounts that the charter school or district on behalf of the charter school will receive. The form provides the OPSC with the general project information to determine the future new construction or rehabilitation adjusted grant; the grade level of the project, the number of SFP pupils the project will serve, whether or not a site is to be acquired, and if any supplemental grants are requested.

The applicant will need to submit a Form SAB 50-09, and all other supporting documents (i.e., supporting historical documents for allowances requested on application, architect's drawing of existing facilities to be rehabilitated, etc.).

Once the OPSC receives the preliminary application, an initial review will be conducted to ensure that the pupil grants or rehabilitation square footage requested is commensurate with the project being built. In addition, the allowance requested on the application will be subject to review. In conjunction, the CSFA will be determining the financial soundness of the applicant. For further information regarding the criteria for financial soundness, please contact CSFA at www.treasurer.ca.gov/csfa.

For additional detail, please review the general and specific instructions on the Form SAB 50-09 and the application submittal requirements available on the OPSC Web site.

Funding Criteria

If the estimated total apportionment of all financially sound applicants approved by CSFA exceed the funds available, the SAB shall provide preliminary apportionments using the following criteria:

- Representative of the various geographical regions of the State.
- Representative of urban, rural, and suburban regions of the State.
- Representative of large, medium, and small charter schools throughout the State.
- Representative of the various grade levels of the pupils served by charter school applications.

Within each category above, preference is to be given to charters in overcrowded school districts, charters in low-income areas, not-for-profit charters, and for the use of existing district facilities. A preference points calculation system, based on the criteria set above, will be used in determining the projects that will be funded from each category. If more than one application is received that has the same criteria within a category, the SAB will fund based on which project has the highest preference points.

For the purposes of determining the preference points given for projects in overcrowded districts, the applicant will need to submit an *Enrollment Certification/Projection* (Form SAB 50-01), for the school district and any supporting documents required. An *Existing School Building Capacity* (Form SAB 50-02), and *Eligibility Determination* (Form SAB 50-03), will not need to be submitted unless the school district has not established new construction eligibility under the SFP. If the eligibility has not been established, the eligibility documents necessary to establish new construction eligibility will have to be submitted prior to the end of the filing period. (See Section 4, "Application for Eligibility.")

Preliminary Apportionment Components

The grants provided at the preliminary apportionment consist of the following:

NEW CONSTRUCTION	REHABILITATION
• Per Pupil base grant amount • Multi-level Construction Grant Amount • Site Acquisition • Site Development • Supplemental Grants • Inflator Factor	• Grant based on square footage • Elevators • Supplemental Grants • Inflator Factor

This amount shall then be the recommended preliminary apportionment for the proposed CSFP project presented to the SAB for a reservation of funds.

Preliminary Apportionment Determination for New Construction

To determine the funding for a new construction project, the preliminary apportionment would be divided into "construction" costs and "site acquisition" costs, as shown below:

CONSTRUCTION COSTS (FULL GRANT)	SITE ACQUISITION COSTS
• Base Grant • Multi-level Construction • Site Development • General Site Development • Small Size Project • Urban Allowance • Geographic Percentage Factor • Inflator Factor	• Site purchase • Site other 4 Percent • Hazardous Material Clean-up • Relocation and Department of Toxic Substance Control fees

Please see Section 5, "New Construction Funding," for a full explanation of the construction costs grants. The OPSC also has a calculator on its website for estimating the CSFP grant.

The current CSFP grant amounts are as follows:

CSFP Grant Amounts

CLASSIFICATION	CSFP PUPIL GRANTS (2007)	CLASSIFICATION	CSFP PUPIL GRANTS (2007)
Elementary	$ 8,120	Special Day Class—Non-Severe	$17,304
Middle School	$ 8,597	Special Day Class—Severe	$25,874
High School	$11,229		

If a district requests a preliminary apportionment that includes a reservation for multi-level classroom construction, the CSFP pupil base grant will be increased by 12 percent to reserve the maximum allowance.

If the request for a preliminary apportionment includes estimated site development costs, the allowance shall be determined based upon either the State default amount of $70,000 per proposed net useable acre,

actual, or historical cost. The estimated site development cost shall be the amount for anticipated service-site, off-site and/or utilities for the project. For projects that are acquiring additional acreage, a general site allowance may be requested.

A district may request estimated excessive hardship costs for Geographic Location, Small Size Project or Urban Location, Security Requirements and Impacted Site.

The preliminary apportionment consisting of all applicable estimated allowances shall be increased by 32 percent in anticipation of cost increases in future years. The inflator factor is based upon the average per year Marshall Swift Class B Construction Cost Index. Site acquisition costs will not be subject to the inflator factor. This increase is not applicable to Proposition 55 apportionments.

Helpful Hint:
If you plan to file an application for the 2007 filing period, please contact your project manager for more information.

The preliminary apportionment for the estimated site acquisition shall be determined by the submittal of an appraisal or preliminary appraisal, when available. In addition, a separate allowance is available for toxic sites. The appraisal or preliminary appraisal should be made or updated no more than six months prior to the application submittal to the OPSC. In cases where a specific site has not been identified for the project, the median cost of the consummated sales transactions within the general location multiplied by the proposed net useable acreage to be acquired shall determine the property value reservation. In either case, the applicant must obtain a preliminary recommended site size letter from the California Department of Education (CDE). Before determining the median cost, the information for recorded sale transactions should be expressed in a per acre amount.

Additionally, the property value will be increased by four percent for title, escrow and survey fees. An allowance for estimated relocation and Department of Toxic Substance Control (DTSC) costs may be included.

Preliminary Apportionment Determination for Rehabilitation

The preliminary apportionment for a rehabilitation project and supplemental grants, if eligible, are shown below:

- Grant based on the square footage in the project
- Small Size Project
- Urban Allowance
- Geographic Percentage Factor
- Elevators
- Inflator Factor

The amount of funding will be determined by first adding the square footage of all the minimum essential facilities (multi-purpose room, library, gym or administration) and the square footage for the number of classrooms the charter school is entitled to use based on the State loading standards. The square footage in the project would then be multiplied by the current rehabilitation cost standard which is $140 per non-toilet area square foot and $252 for toilet square footage. This grant amount cannot exceed what a new construction project would receive based on the number and grade level of students to be served by the rehabilitation charter school project.

A district may request estimated excessive hardship costs for Geographic Location, Small Size Project, elevators or Urban Location, Security Requirements and Impacted Site.

The preliminary apportionment consisting of all applicable estimated allowances shall be increased in anticipation of cost increases in future years. The inflator factor is based upon the average per year Marshall Swift Class B Construction Cost Index.

Apportionment Conversion

The preliminary apportionment for a CSFP project must be converted within a four-year period to an adjusted grant apportionment meeting all the School Facilities Program (SFP) new construction program criteria required for such an apportionment, unless a single one-year extension is granted. A final apportionment request includes an *Application for Funding* (Form SAB 50-04) and all other documentation required for a complete adjusted grant application under the SFP provisions (see Section 5). At the time a new construction project is converted, the pupil request cannot exceed the number of pupils requested at the time of preliminary apportionment. Likewise, at the time a rehabilitation project is converted, the square footage cannot exceed the square footage requested at the time of preliminary apportionment.

Project Reductions/Increases

Once an application is submitted for a final apportionment, the project costs may be adjusted per the following:

Project Cost Adjustments

IF...	THEN...		
	PROPOSITION 47	PROPOSITION 55	PROPOSITION 1D
Preliminary apportionment sufficient to do project...	...project cost remains the same and final apportionment Board item will reflect preliminary apportionment amounts.		
Preliminary apportionment was more than needed...	...the overpayment shall be adjusted to reflect actual project costs on the final apportionment SAB item and the difference shall be returned to the unrestricted account to be used for other charter school facility purposes.		
Preliminary apportionment was insufficient and unrestricted funds remain in the account...	...a district may receive a project increase for eligible costs.	...the charter or district must come up with alternate means to complete the project. At the point of conversion, the preliminary apportionment amount will be the full and final apportionment.	...a district may receive a project increase for eligible costs.
Preliminary apportionment was insufficient and no unrestricted funds remain in the account...	...the preliminary apportionment amount will be the full and final apportionment. A district may elect to monitor the funds and wait until funds become available to convert the apportionment, provided it is before the four-year deadline.		...the preliminary apportionment amount will be the full and final apportionment. A district may elect to monitor the funds and wait until funds become available to convert the apportionment, provided it is before the four-year deadline.

Fund Release

Senate Bill 15 and AB 127 included provisions to allow advanced fund releases for site acquisition and separate design funding for the preliminary apportionments granted under Proposition 55 and Proposition 1D provided that the Charter School Agreements have been executed. The total advanced fund release for design funding can equal up to 20 percent of the preliminary apportionment total construction costs. The advanced fund release for site acquisition may be for up to the amount requested on the preliminary apportionment.

The CSFP provisions for a preliminary apportionment under Proposition 47 do not authorize any fund releases prior to submitting an application for final apportionment. Therefore, once a preliminary apportionment is received, all charter schools or districts on behalf of charter schools will need to ensure they can cover any costs incurred prior to filing an application for final apportionment.

Once a preliminary apportionment is converted to a final apportionment, the applicant has 18 months to apply for a fund release.

Closeout

When a CSFP project converts to a final apportionment, it will be subject to all SFP progress and auditing standards. A substantial progress report will be required at 18 months from the date the final apportionment was made. Annual expenditure reports will be required beginning one year from the date of the first fund release until the project is complete. The project is considered complete when 3 years elapse from the date of the final fund release for an elementary project, or 4 years for a middle or high school project, or when the school district declares the project complete, at which time final expenditure reports must be submitted. Any project savings must be returned to the State.

To learn more about the CSFP program, contact your OPSC project manager or visit the OPSC Web site at www.opsc.dgs.ca.gov.

Section 7

Critically Overcrowded School Facilities

Introduction

The Critically Overcrowded School Facilities (COS) program was created by Assembly Bill (AB) 16 (Hertzberg) in 2002 and is a significant addition to the School Facilities Program (SFP). The COS program permits school districts with critically overcrowded school sites, as determined by the California Department of Education (CDE), to apply for a preliminary apportionment (reservation of funds) for new construction projects to relieve overcrowding. The COS program's preliminary apportionment serves only as a reservation of funds for future State assistance in the form of grants. The preliminary apportionment for a COS project must be converted within a four-year period to a new construction adjusted grant apportionment meeting all the SFP new construction program criteria required for such an apportionment, unless a single one-year extension is granted.

Project Eligibility

A district with SFP new construction eligibility established as described in Section 4 and critically overcrowded school sites included on a list of source schools as determined by the CDE may apply for a preliminary apportionment for projects to relieve overcrowding. For information regarding the CDE Source School List contact Mr. Fred Yeager at 916.327.7148 or visit the CDE Web site at www.cde.ca.gov.

An *Application for Preliminary Apportionment* (Form SAB 50-08) may be submitted to the Office of Public School Construction (OPSC) between November 5, 2002 and May 1, 2003 for projects to be funded with the proceeds of the November 5, 2002 bond or 60 days prior to and 120 days after the 2004 direct primary election or the 2004 statewide general election as appropriate for projects to be funded with those bond proceeds. A critically overcrowded school facilities project must:

- Relieve overcrowding by increasing the pupil capacity of the district and may be either a stand alone new school project or an addition to an existing school site.
- Identify at least 75 percent of the proposed pupil occupancy of the project as coming from a source school(s).
- Be located within either the attendance area or a one-mile radius of an elementary source school ; or, for a secondary source school, within the attendance area or a three-mile radius. The CDE may grant a variance from the distance maximums if the district can demonstrate that the variance is necessary to adequately provide facilities for the identified source school pupils.

Source Schools

To qualify as a source school a school site utilizing the 2001/2002 California Basic Educational Data System (CBEDS) enrollment must have pupil density greater than 115 pupils per acre for grades Kindergarten to six and 90 pupils per acre for grades seven to twelve. The CDE is responsible for determining and maintaining the list of source schools. A district may report their school site information to the CDE by submitting

SFPD Form 4.16 (*Certification of School Site Net Useable Acres*). For a copy of the SFPD Form 4.16 and additional information regarding the CDE source school list, please visit the School Facilities section of the CDE Web site at www.cde.ca.gov.

Once included on the CDE source school list, determine a source school's pupil eligibility or Qualifying Pupils, by subtracting the school's site density at 150 percent of the CDE recommended pupils per acre from its latest CBEDS enrollment. The remainder is the number of Qualifying Pupils at the source school site, which may be used to meet the project eligibility requirements above. The source school Qualifying Pupils eligibility amounts will be tracked separately and adjusted for changes in future enrollment, site density, preliminary apportionments and rescinded apportionments.

Preparing An Application

A complete application is an essential element in the process of receiving a preliminary apportionment for the district's project. The information provided is the basis for determining the apportionment amounts that the district will receive. All applications must be based on a previous SFP new construction eligibility approval or must have the eligibility application as a part of the package (see Section 4, "Application for Eligibility"). Please note district's requesting financial hardship assistance must receive that status prior to filing an application (see Section 10, "Financial Hardship"). The Form SAB 50-08 serves as a vehicle for districts to request a preliminary apportionment for a new construction project. The form provides the OPSC with the general project information to determine the future new construction adjusted grant; the grade level of the project, the number of SFP and source school Qualifying Pupils the project will serve, whether or not a site is to be acquired, and if any supplemental grants are requested. To complete the Form SAB 50-08 the district representative will need some or all of the following information.

- Appraisal, Preliminary Appraisal, or Median Cost valuation of the property to be acquired.
- Relocation and Department of Toxic Substances Control cost documents.
- Cost Estimate for site development and approved site development and off-site plans (to substantiate actual or historical cost submittals).
- A copy of the certified CDE Source School List pages or CDE Source School certification letter.
- Copy of the latest information for the Source School(s) submitted approximately October 15th of each year to the California Department of Education to complete the California Basic Educational Data System (CBEDS).

For additional detail, please review the General and Specific instructions on the Form SAB 50-08 and the Application Submittal Requirements available on the OPSC Web site.

Preliminary Apportionment Components

A COS preliminary apportionment is intended to provide the estimated future State's share for all necessary project costs including site acquisition, site development and supplemental allowances. A district may request a preliminary apportionment for the following:

- COS Pupil Grants (New Construction Grant (per pupil) plus the increase for Fire Code requirements)
- Multi-level Classroom Construction
- Site Acquisition
- Site Development
- Project Increases
- Financial Hardship
- Inflation Factor

The COS Pupil Grant is calculated by multiplying the SFP pupils assigned to the project by the per-pupil grants established in law and the increase for Fire Code requirements. The COS Pupil Grants are adjusted by the State Allocation Board (SAB) annually (each January) based on the change in the Class B Construction Cost Index. The current COS grant amounts are as follows:

Current COS Grant Amounts

CLASSIFICATION	COS PUPIL GRANTS	CLASSIFICATION	COS PUPIL GRANTS
Elementary	$ 8,091	Special Day Class—Non-Severe	$16,125
Middle School	$ 8,560	Special Day Class—Severe	$24,110
High School	$10,896		

If a district requests a preliminary apportionment that includes multi-level classroom construction, the New Construction Grant will be increased by 12 percent to reserve the maximum allowance.

The preliminary apportionment for the estimated site acquisition shall be determined by the submittal of an appraisal or preliminary appraisal, when available. The appraisal or preliminary appraisal should be made or updated no more than six months prior to the application submittal to the OPSC. In cases where a specific site has not been identified for the project; the median cost of the consummated sales transactions within the general location area multiplied by the proposed net useable acreage to be acquired shall determine the property value reservation. The proposed acquisition acreage amount must be compatible with CDE standards; and, before determining the median cost, the information for recorded sale transactions should be expressed in a per acre amount. In addition the property value will be increased by four percent for title, escrow and survey fees and by one-half for hazardous material/waste removal and remediation cost. An allowance for estimated relocation and DTSC costs may be requested, this will be based on either the State's default allowance of 21 percent of the property value, actual, or historical cost information.

If the request for a preliminary apportionment includes estimated site development costs, the allowance shall be determined based upon either the State's default amount of $70,000 per proposed net useable acre, actual, or historical cost. The estimated site development cost shall be the amount for anticipated service-site, off-site and/or utilities for the project.

A district may request estimated excessive hardship costs for Geographic Location, Small New School or Urban Location, Security Requirements and Impacted Site.

If the district has a valid financial hardship status for the COS project, the estimated State share amount shall be doubled to provide a reservation for the estimated district's matching share assistance. When the financial hardship review has determined that the district has contribution amounts, the preliminary apportionment amount will be reduced by that amount. However, before the preliminary apportionment is converted to a final apportionment, the district must re-qualify financial hardship status to determine its eligibility and contribution amount.

Apportionment Conversion

Converting a preliminary apportionment to a final apportionment request includes an *Application for Funding* (Form SAB 50-04) and all other documentation required for a complete new construction adjusted grant application under the SFP provisions (see Section 5, "New Construction Funding"). In addition, the pupils requested on the Form SAB 50-04 must be no less than 75 percent of and cannot exceed the number of pupils requested on the Form SAB 50-08. When a district converts the preliminary apportionment to a final apportionment the project must still be supported by SFP new construction eligibility; however, the Source School(s) Qualifying Pupil eligibility will not be re-evaluated. If the project is not currently supported by SFP new construction eligibility, Assembly Bills 2950 (Chapter 898, Statutes 2004) and 491 (Chapter 710, Statutes 2005) provide for an "alternative eligibility method", such as current enrollment, current residency data or a projection of residency data to justify the project. A school district requesting financial hardship status must qualify for that status and have all Capital Project Fund monies analyzed to determine if the school district is able to contribute toward its project.

Project Increases

When an application for final apportionment is made, that preliminary apportionment may be adjusted for increases only if there are sufficient reserve funds available in the COS facilities account to fund the increases. If reserve funds are not available, the increase amount will be placed on a "Final Apportionment Unfunded List" until such time that funds may become available within the COS facilities account to apportion the increases. However, if funds do not become available and the maximum time frame of five years has expired, the original preliminary apportionment becomes a full and final apportionment.

SAB Approval Process

If funds are insufficient to fully fund all of the preliminary applications received during an application filing period, the SAB shall first apportion to those projects that would house pupils from source schools with the highest density levels relative to the CDE standard.

Substantial Progress

Prior to converting a preliminary apportionment to a final apportionment, the district must report annually to the SAB on the progress of the COS project. The local governing school board must hold a public hearing annually discussing the progress toward completing the project. Included in the first annual report to the SAB, the district shall certify that the CDE has determined there is at least one approvable and adequate site for the COS project within the identified general location area. If the school district cannot certify to the approvable site, then the preliminary apportionment will be rescinded.

At the end of the fourth year, if a school district is unable to submit its application for final apportionment, it may apply for a single one-year extension provided that the COS project has a CDE contingent or final site approval and the final construction plans have been submitted to DSA for review and approval; or other evidence satisfactory to the SAB that substantial progress has been made towards completing the requirements for filing an application for final apportionment.

Fund Release

After completing the substantial progress requirements for the first annual report to the SAB, a district may request an advanced release of funds from a preliminary apportionment when certain criteria are met. An advanced fund release for design and/or site acquisition may be requested by districts with approved financial hardship status. If applicable, an advanced fund release for an enviromental hardship site aquisition may be requested for any project. Advanced fund releases may be requested by submitting a complete *Fund Release Authorization* (Form SAB 50-05). If the advanced request includes the release of funds for site acquisition, the district must also submit a Form SAB 50-08 to determine eligible costs. Once a preliminary apportionment is received, all districts will need to ensure they can cover any costs incurred, taking into account any advanced fund releases, prior to filing an application for final apportionment.

Closeout

When a COS project converts to a final apportionment, it will be subject to all SFP progress and auditing standards. A substantial progress report will be required at 18 months from the date the final apportionment was made. Annual expenditure reports will be required beginning one year from the date of the first fund release until the project is complete. The project is considered complete when 3 years elapse from the date of the final fund release for an elementary project, or 4 years for a high school project, or when the school district declares the project complete, at which time final expenditure reports must be submitted.

To learn more about the COS program, contact your OPSC project manager or visit the OPSC Web site at www.opsc.dgs.ca.gov.

Section 8

Joint-Use Projects

Introduction

Senate Bill 15 amended the Joint-Use Program created by Assembly Bill 16 under the School Facility Program (SFP). Fifty million dollars was made available and partly apportioned in July 2003 for joint-use projects, and another $50 million was made available for apportionment at the August 2004 State Allocation Board (SAB), due to Proposition 55 passing in March 2004. These funds were partly apportioned in July 2005 and August 2006. An additional $29 million was made available for apportionment due to Proposition 1D passing in November 2006. Proposition 1D also provided the SAB authority to transfer up to $21 million in prior bond funds for the purpose of funding joint-use projects.

Qualifying projects will be submitted to the July 2007 SAB meeting for apportionment. If joint-use funds remain after the current funding cycle, they will be available for apportionment for qualifying joint-use projects at the July 2008 SAB meeting.

This program allows a school district to utilize funds from a joint-use partner to build a joint-use project the district would not otherwise be able to build due to lack of financial resources. There are two types of joint-use projects that the district may apply for, which are referred to as Type I and Type II.

A Type I joint-use project is part of a qualifying new construction project that will increase the size, creates extra cost, or does both beyond that necessary for school use of the:

- Multipurpose room
- Gymnasium
- Childcare facility
- Library
- Teacher Education facility

A Type II joint-use project is a stand-alone project or part of a modernization project located at a school site that does not have the type of facility or the existing facility is inadequate and will reconfigure[1] existing school buildings, construct new school buildings, or both to provide for:

- Multipurpose room
- Gymnasium
- Childcare facility
- Library

[1] Reconfigure means remodeling an existing school building within its current confines and/or the expansion of the square footage of the existing building and any necessary replacement of displaced classrooms or other Minimum Essential Facility (MEF). Reconfiguring an existing school building must not reduce the district's capacity or displace another MEF. An inadequate MEF must not be constructed to replace a reconfigured MEF. In any case involving the replacement of lost capacity or a minimum essential facility due to the reconfiguration of an existing building, the replacement must be a part of the plans submitted in support of the joint-use application, must occur concurrently, and cannot be part of a SFP new construction application.

» Teacher Education facility
» Pupil Academic Achievement facility[2]

The funding for joint-use projects is provided in the form of grants. With the exception of a Type I (Extra Cost), the grants are made up of a base grant and a number of supplemental grants. For a Type I (Extra Cost) project, the grant is a straight dollar amount based upon the cost estimate. The State share for a joint-use project is 50 percent of the eligible project costs, with the joint-use partner contributing a minimum of 25 percent of the eligible project costs and the district contributing 25 percent of the eligible project costs. If the district has passed a bond which specifies that the monies are to be used specifically for the joint-use project, the district may provide up to the full 50 percent local share.

The district must have joint-use eligibility and square footage eligibility (except for a Type I, Extra Cost) for the type of project they are applying for, before they can request joint-use funding. This section explains the eligibility requirements for each type of joint-use project, the funding application process, and how to determine the joint-use grant. This section focuses on the most common situations. Individual projects may have variations that are not covered in this section. The district representative is encouraged to contact the Office of Public School Construction (OPSC) project manager to discuss specific project details.

Project Eligibility

Before a district can submit an application for funding, the project must have project eligibility. Project eligibility is different for the two types of joint-use projects.

Type I Project Eligibility

To qualify as a Type I joint-use project, the district must meet the following criteria:

» The Joint-Use Partner is a governmental agency, an Institution of Higher Education, or a nonprofit organization.
» The project increases the size, creates extra cost, or does both for the:
  – *Multipurpose room*
  – *Gymnasium*
  – *Childcare facility*
  – *Library*
  – *Teacher Education facility*
» The district has entered into an approvable Joint-Use Agreement that meets the criteria of Education Code, Section 17077.42
» The joint-use project is part of a qualifying SFP new construction application
» The project has Square Footage Eligibility as specified in SFP Regulations, Section 1859.124 (except a Type I Extra Cost project)
» The facility is located at the school site of the SFP project
» The construction contract was executed after April 29, 2002
» The project has DSA approved plans
» The project has California Department of Education (CDE) approval of the plans

[2] Pupil Academic Achievement may be grandfathered in if the plans are accepted by the Division of the State Architect for review and approval prior to January 1, 2004.

Type II Project Eligibility

To qualify as a Type II joint-use project, the district must meet the following criteria:

- The Joint-Use Partner is a governmental agency, institution of Higher Education, or a nonprofit organization.
- The project reconfigures existing school buildings, constructs new buildings, or both to provide for the:
  - *Multipurpose room*
  - *Gymnasium*
  - *Childcare facility*
  - *Library*
  - *Teacher Education facility*
  - *Pupil Academic Achievement facility*[1]
- The district has entered into an approvable Joint-Use Agreement that meets the criteria of Education Code, Section 17077.42
- The project to reconfigure an existing building is part of a qualifying SFP modernization application located at the school site of the SFP project, or
- The project to reconfigure or construct a new school building is a stand-alone project located on the public K–12 school site
- The project has square footage eligibility as specified in SFP Regulations, Section 1859.124
- The school site does not have the type of facility or the existing facility is inadequate
- The construction contract was executed after April 29, 2002
- The project has DSA approved plans and CDE final plan approval if the project is part of a SFP modernization application, or
- The project has preliminary plans and CDE approval of the preliminary plans if it is a stand-alone project

Funding Process

Subject to available funds, applications are accepted for upcoming funding cycles from June 1st through May 31st each year.

A district may submit more than one application for each type. Type I Joint-Use projects are funded first and Type II Joint-Use projects are funded last. The district's first application within each type of joint-use project is ranked and funded with other district's first applications in date-received order. The district's second application is then ranked and funded with other district's second application in date-received order, and so on within each type of joint-use project, until funds are exhausted.

The following demonstrates the necessary steps for joint-use funding:

- The district submits an application for funding package
- The OPSC reviews the package
- The SAB approves and apportions the project in July
- The district submits DSA approved plans within one year from the date of apportionment (Type II Stand-Alone Project)
- The district requests a fund release and makes expenditures
- The district submits reports on expenditures
- The OPSC audits

[1] Only if plans and specifications were accepted by DSA prior to January 1, 2004.

The district must apply for joint-use funding on the *Application for Joint-Use Funding* (Form SAB 50-07). The Form SAB 50-07 not only provides the OPSC with the specific joint-use information such as type of joint-use project and square footage eligibility, but it also serves as a certification by the district that they meet specific criteria of the law and regulations.

The funding package will be reviewed by the OPSC for completeness and placed on a statewide workload list. District representatives can view the workload list on the OPSC Web site at www.opsc.dgs.ca.gov. If during the initial review, it is determined that information is missing, the district will be notified and given a timeframe to respond to the OPSC's request. In the event the OPSC does not receive the requested information within the given timeframe, the application will be returned to the district. The district may resubmit the application at anytime within the filing period, when they have all the components of a complete application.

Applications will be approved until there are no funds available. In this instance, all applications that do not receive funding will be returned to the district, and the district may resubmit the application in subsequent filing periods.

Preparing An Application

The following chart lists the supporting documents for each type of joint-use project that must be submitted with the Form SAB 50-07:

Joint-Use Funding Required Documents

	TYPE OF FUNDING		
DOCUMENT	TYPE I	TYPE II Part of SFP Modernization Project Reconfigure Existing School Buildings	TYPE II Stand-Alone Project Reconfigure/Construct New School Buildings
Joint-Use Agreement	✖	✖	✖
DSA Approved Plans	✖	✖	
Preliminary Plans			✖
CDE preliminary plan approval			✖
CDE final plan approval	✖	✖	
Cost estimate for site development	✖	✖	✖
Cost estimate for facility being built*	✖		

* If the project is for a Type I, Extra Cost

Joint-Use Grant Amounts

With the exception of a Type I project for Extra Cost, the joint-use grant will consist of a base grant for toilet and non-toilet facilities, which can be increased by certain supplemental grants. As of the date of this guidebook, the base grant is $252 per square for toilet area and $139 per square foot for non-toilet area. The grant amounts will be adjusted each year using the Class B index. Each project has a maximum state contribution of $1 million for an elementary school, $1.5 million for a middle school, and $2 million for a high school.

Supplemental Grants

The district can increase the joint-use grant with certain supplemental grants. The following is a brief explanation of the supplemental grants under the Joint-Use Program:

Geographic Location. A supplemental grant is available to projects located in areas of California that are remote, difficult to access, or lack a pool of contractors. The augmentation to the joint-use grant due to their geographic location can be found in Regulation Section 1859.83 (a).

Project Assistance. For a Type II stand-alone joint-use project, the SAB may provide additional project grants for project assistance to small school districts with enrollment of 2,500 pupils or less. The additional grant of $5,168 (as of the date of this guidebook) may be used for costs associated with the preparation and submission of the funding application. The grant will be adjusted each year using the Class B index.

Site Development. A supplemental grant is provided for the purpose of developing the site where the project is located. If the joint-use project is linked to a new construction project and site development costs are not covered under the new construction application because the site development is specific to the joint-use project, the district may apply for the site development under the joint-use project. If the joint-use project is a stand-alone project, the district may apply for applicable site development costs that pertain to the joint-use facility. Fifty percent of the following site development costs may be available for joint-use projects:

- Service site development improvements are performed within school property lines and may include site clearance, rough grading, soil compaction, drainage, and eligible erosion control. This portion of the site preparation is accomplished prior to the general site development and construction of buildings.
- Utility service development includes improvements of water, sewer, gas electric, and telephone from the closest existing utility connection to the project site meter or major building lateral location.

Off-site development is not an allowable expenditure under the Joint-Use Program.

Small Size Projects. A supplemental grant is available to districts with projects that house no more than 200 pupils. The grant is intended to provide additional funds for core facilities and to make up for the lack of economies of scale when districts build small projects. The joint-use grant can be increased by 12 percent if the qualifying new construction or modernization project is linked to houses less than 101 pupils, or four percent if the qualifying new construction or modernization project is linked to will house over 100, but no more than 200 pupils. If the project is a Type II stand-alone joint-use project, the district is entitled to an eight percent increase to the grant.

Type II Joint-Use Grant. A Type II joint-use project cannot have an existing facility or the existing facility must be inadequate. A facility is considered inadequate when the square footage of the existing facility is less than 60 percent of the square footage entitlement shown in the Chart of Square Footages in Regulation Section 1859.124.1. A Type II joint-use project must have square footage eligibility. If the existing facility meets the test of being inadequate, or there is not an existing facility, then the square footage eligibility for a Type II joint-use project is the amount determined using the Chart of Square Footages.

Once the square footage eligibility for a Type II is established, the grant can be determined. The base grant is calculated by adding the following:

» $252 for Toilet Square footage in the facility
» $139 for Non-toilet Square footage in the facility
» Fifty percent of applicable supplemental grants

If the district is building area beyond their square footage eligibility, the OPSC will prorate the grant by determining the percentage of the whole facility that represents the joint-use project, and the grant will be determined using that percentage.

Type I Joint-Use Grant (Extra Cost). There is no square footage eligibility for a Type I that contains Extra Cost of the facility. The grant for a Type I Extra Cost can be determined by taking 50 percent of the construction cost of the whole joint-use facility and any applicable service site development costs, and subtracting the base grant amounts of $252 for toilet area in the project and $139 for non-toilet area in the project. The difference is the extra cost.

Type I Joint-Use Grant (Increased Size). A Type I joint-use project that increases size must have square footage eligibility. The first step in determining the grant is to determine the square footage eligibility. The square footage eligibility for a Type I joint-use project that increases the size of the project is calculated by first determining what size facility the district is entitled to based upon the CBEDS and the Chart of Square Footages, located in Regulation Section 1859.124.1. Then simply subtract this amount from the actual square footage being built, and the difference is the square footage eligibility.

Once the square footage eligibility for a Type I is established, the grant can be determined. The first step in determining the grant is to take the square footage eligibility and divide it by the total square footage of the facility being built. This will determine the percentage of the whole joint-use facility that the increased size represents. The base grant then is calculated by multiplying this amount by:

» $252 for Toilet Square footage in the facility
» $139 for Non-Toilet Square footage in the facility

In addition to the above, the project may be eligible for 50 percent of applicable supplemental grants.

Type I Joint-Use Grant (Increased Size and Extra Cost). In some instances, a Type I project may be for both increased size and extra cost. The grant for a Type I project that increases the size and contains extra cost shall be calculated in the following manner:

» Start with the architect's cost estimate to construct the facility.
» Subtract the cost to build the standard size facility that the district would be entitled to based upon the Chart of Square Footages. Since this project is built beyond the standard size facility, first divide the square footage determined from the Chart of Square Footage, by the total joint-use facility. This amount will determine the percentage of the whole facility that represents the standard size facility the district would otherwise be eligible for. Once this amount is determined, multiply this amount by the toilet facility area and by $252 and by the non-toilet facility area and by $139. This amount then becomes the amount to build the standard size facility.
» The difference is the grant amount for increased size and extra cost.
» Add any applicable service site costs.

Urban Locations, Impacted Sites, Security Requirements. Districts with projects in urban locations, on impacted sites, or in areas with security issues, may request a supplemental grant. Contact your project manager for qualifying information.

Joint-Use Partner Project Contribution

The State and local contribution to a joint-use project remains 50/50. However, the Joint-Use Partner contribution has been reduced to a minimum of 25 percent of the eligible joint-use project costs with the remaining local contribution coming from any other district source that would not otherwise be available to the SAB. The district need not have the entire 25 percent joint-use partner contribution on deposit at the time that the project approval is made. However, when the project fund release is requested, the district must certify that the joint-use partner's matching share has been deposited in the County School Facility Fund; has been expended by the district for the project; or will be expended by the district prior to the Notice of Completion for the project. The district representative should be aware that regardless of when the share is contributed to the project, at closeout the district must be able to show that 25 percent of the expenditures on the project were from funds provided by the joint-use partner, unless the district has passed a local bond which specifies that the monies are to be used specifically for the joint-use project, then the district can opt to pay up to the full 50 percent local share of eligible costs. The State share will always be a maximum of 50 percent of the eligible project costs. If the district is unable to demonstrate the expenditure requirement, the apportionment will be reduced. Financial Hardship assistance towards the matching share for Financial Hardship districts will not be provided by the State.

If there are project costs beyond the eligible project costs, those costs can be paid by the district, joint-use partner, or any other local source.

Fund Release

After the funding application is approved and apportioned by the SAB, the next step in the process is the fund release to the County School Facilities Fund for use by the district.

The joint-use grant is processed for release when the district submits a *Fund Release Authorization* (Form SAB 50-05). The Form SAB 50-05 submitted by the district is an important document that cannot be altered or modified by the OPSC. Therefore, an improperly completed Form SAB 50-05 will be returned with a letter of explanation to the school district for correction.

When a properly executed form is received, the OPSC sends a School Facilities Fund Release notification to the district representative and county office of education. The notification indicates the type of grant released, amount, school district, application number, school name, and date processed.

It is important to understand that a Form SAB 50-05 must be submitted within 18 months of the joint-use grant apportionment by the SAB, or the grant will be rescinded without further SAB action. The only exception to this is if the joint-use project is a Type II (stand-alone project). If it is a Type II (stand-alone) joint-use project, the district has one year from the apportionment date to submit final DSA approved plans. Once the DSA approved plans are received by the OPSC, the district will have 18 months from that date to submit the Form SAB 50-05, or the grant will be rescinded without further SAB action.

The Form SAB 50-05 can be downloaded from the OPSC Web site. The properly executed Form SAB 50-05 should be submitted to:

Office of Public School Construction
Accounting
1130 K Street, Suite 400
Sacramento, CA 95814

Section 9

Modernization Funding

Introduction

The School Facility Program (SFP) provides funding assistance to school districts for the modernization of school facilities. The assistance is in the form of grants approved by the State Allocation Board (SAB), and requires a 40 percent local contribution. A district is eligible for grants when students are housed in permanent buildings 25 years old or older and relocatable classrooms 20 years old or older and the buildings have not been previously modernized with State funds. The grant amount is increased and funding for specific utility upgrades is allowed if permanent buildings to be modernized are 50 years old or over. See Section 4, "Application for Eligibility."

The modernization grant (pupil grant) amount is set in law and is based on the number of students housed in the over-age facilities. In addition to the basic grant amount, a district may be eligible for supplemental grants depending on the type and location of the project. In some cases, districts unable to contribute some or all of the local match may be eligible for financial hardship. See Section 10, "Financial Hardship" for more information on this subject. Once the grants are determined for a project, a request is sent to the SAB for a modernization adjusted grant apportionment.

The modernization grant can be used to fund a large variety of work at an eligible school site. Air conditioning, insulation, roof replacement, as well as the purchase of new furniture and equipment are just a few of the eligible expenditures of modernization grants. A district may even use the grants to demolish and replace existing facilities of like kind. However, modernization funding may not be spent for construction of a new facility, except in very limited cases generally related to universal design compliance issues, or for site development.

This section explains the funding application process, typical requirements, and how to determine the modernization adjusted grant amount. It is important to understand that the discussion in this section focuses on the most common situations. There are many variations that may apply to specific projects that can not be covered in this brief overview. As always, the district representative should meet with the Office of Public School Construction (OPSC) project manager and discuss the district plan in detail.

Available Modernization Funding

There are two types of funding applications which may be made under the modernization program:

Modernization Adjusted Grant. A modernization adjusted grant is intended to provide the State's full share for all necessary project costs. In a typical project, a modernization adjusted grant includes the modernization grant (pupil grant) and any applicable supplemental grants as described in this section under "Supplemental Grants".

Separate Design. A separate design apportionment is available for districts that qualify for financial hardship. This apportionment represents 25 percent of the modernization grant[1]. Separate design funding is intended to allow a district to hire an architect to prepare the project plans for Division of the State Architect (DSA) approval. When the plans are complete and approved, and the district is ready to request the remaining modernization adjusted grant, it will be reduced by the design apportionment previously made.

Funding Process

After applying for and receiving approval of modernization eligibility, the process of applying for funding is as follows:

- » the district submits a funding application package;
- » the OPSC reviews the package;
- » the SAB approves the apportionment;
- » the district requests a fund release and makes expenditures;
- » the district submits reports on expenditures to the OPSC;
- » the OPSC audits.

The application for modernization funding is made on a single form, the *Application for Funding* (Form SAB 50-04). The form serves as a vehicle to collect the information necessary to calculate the amount of grants applicable to the project, and also is a certification from the district regarding compliance with requirements of law and the SFP Regulations. The district is ready to submit the application for funding after receiving approval by the California Department of Education (CDE) and the DSA of the plans for the proposed modernization project. In most cases, the district has determined its eligibility for modernization grants on the *Eligibility Determination* (Form SAB 50-03) before applying for funding. However, if the district has not established eligibility for the project previously, it may submit the eligibility application with the funding application (see Section 4, "Application for Eligibility").

The funding application is reviewed by the OPSC for completeness and placed on a workload list by date order received. District representatives can view the status of projects from the workload list that can be found on the OPSC Web site at www.opsc.dgs.ca.gov. The funding applications are then processed in date order for presentation to the SAB for consideration of apportionment. Note that at this time, the OPSC will reduce the funding request by the amount of previous apportionments to the project made under the SFP or Lease-Purchase Program (LPP).

In some cases, the OPSC may find that an application lacks required information. If this is the case, the district is asked to provide the needed information within a specified time. If the district is unable to comply, the application may be returned unprocessed. If this occurs, the district may resubmit the application at any time after the needed information is available. When the application is resubmitted it will be added to the workload list with the new receipt date.

When the SAB has no funds to apportion, the OPSC will continue to accept and process applications based on the date the application is received. The SAB will approve the application for placement on an unfunded list. An application for funding that is placed on an unfunded list is eligible for reimbursement pending the possible availability of future funding.

[1] SFP Regulations, Section 1859.81.1, "Separate Apportionment for Site Acquisition and Design Cost."

Preparing An Application

A complete application package is an essential element of the process of receiving funding for the district's project. The information provided is the basis for determining the grant amounts that the district will receive. The following discussion outlines the major elements of a complete application. This information is not necessary for a separate design funding request, unless noted.

All applications require a complete Form SAB 50-04 and must be based on a previous eligibility approved or must have the eligibility approved as part of the package (see Section 3, "Project Development Activities"). Eligibility for 50 year old buildings is not separate from the other eligibility at the site. If the district is requesting increased funding for pupils housed in 50-year old buildings, site diagrams with the ages and square footages of the buildings in the project must be provided with the application package. Also, please note that districts requiring financial hardship assistance must receive that status before filing a funding application (see Section 10, "Financial Hardship"). To complete the Form SAB 50-04 and to make the required certifications, the district representative will need at least the following supporting information.

Final DSA Approved Plans and Specifications

Education Code Section 17072.30 requires DSA approval of all final plans and specifications for new construction, modernization, or alteration of any school building for which the district is seeking State funding. If a district enters into a construction contract prior to receiving DSA approval of the plans and specifications, the project may not be eligible for State Funding. The date of the DSA approval letter, not the DSA stamp, is considered a valid approval. The DSA approval must be current and valid at the time of submittal of the application for funding to the OPSC. Plans should include all work eligible for funding through the SFP. If plans are submitted in AutoCAD format, a copy of the DSA approval letter is required.

- As of October 2005, all funding applications must be accompanied by the DSA Final Plan Approval Letter.
- Submit all plans necessary to substantiate modernization work. In addition, submit plans for work associated with excessive cost hardship requests listed on the Application for Funding (Form SAB 50-04) for rehabilitation/mitigation, accessibility, fire code, and elevators.
- It is acceptable to submit the specifications on a diskette that is IBM compatible.

Assessibility/Fire Code Requirements Checklist

This completed checklist must be submitted to the DSA when submitting projects that contain access compliance and/or fire code work. Once the checklist has been signed by the DSA, as part of the plan approval process, districts must submit it to the OPSC as part of its complete application package.

Cost Estimate

A complete construction cost estimate signed by the architect or design professional is required for the modernization project. The construction cost as submitted to the DSA must equal at least 60 percent of the total project cost (district and State share).

CDE Plan Approval Letter

The CDE must approve plans for modernization projects before they can be considered for funding under the SFP. The district should contact the School Facilities Planning Division (SFPD) of the CDE as early as possible in the planning process.

District Certifications

As previously mentioned, the Form SAB 50-04 is also an official certification to a number of SFP requirements. The form and the instructions to the form provide specific detail about the certifications; however, some of the issues to which the district representative will have to certify are as follows:

- The district has established a "Restricted Maintenance Account" (see Section 13, "Additional SFP Requirements and Features" for more information).
- The facilities to be modernized were not previously modernized under the LPP.
- Contracts for the services of an architect, structural engineer, or other design professional which were signed after November 4, 1998 were obtained pursuant to a qualifications based competitive process (see Section 3, "Project Development Activities" for more information).
- The property to be modernized using SFP funds is either owned by the district or county superintendent or it is leased from another governmental entity. If the property is leased, the lease is for at least 40 years from a non-federal governmental agency or 25 years from a federal governmental agency. The cost of the lease is not an eligible cost under the SFP.
- If this request is for a large new construction or a large modernization project, the district has consulted with the career technical advisory committee established pursuant to Education Code, Section 8070, and it has considered the need for vocational and career technical facilities to adequately meet its program needs in accordance with Education Code, Sections 51224, 51225.3(b) and 52336.1.
- All large modernization funding applications for comprehensive high schools must be accompanied by evidence of compliance with Education Code, Section 17070.95. Documentation may include any of the following:
  - *Minutes from a public meeting by the school district's governing board documenting the discussion with and the recommendations of the local CTEAC regarding the CTE facility needs assessment.*
  - *Minutes from the meeting with the local CTEAC regarding the CTE facility needs assessment and recommendations.*
  - *Letter from the local CTEAC to the school district that identifies the subject of the discussion, the CTE facility needs assessment, and recommendations.*
- If the district is requesting an Additional Grant for Energy Efficiency pursuant to SFP Regulations, Sections 1859.71.3 or 1859.78.5, the increased costs for the energy efficiency components in the project exceeds the amount of funding otherwise available to the district.
- The district has or will initiate and enforce a Labor Compliance Program that has been approved by the Department of Industrial Relations, pursuant to Labor Code, Section 1771.7, if the project is funded from Proposition 47 or 55 and the Notice to Proceed for the construction phase of the project will be issued on or after April 1, 2003.
- Beginning with the 2005/2006 fiscal year, the district has complied with Education Code, Section 17070.75(e), by establishing a facilities inspection system to ensure that each of its schools is maintained in good repair (see Section 13, "Additional SFP Requirements and Features" for more information).
- The district has considered the potential for the presence of lead-containing materials in the modernization project and will follow all relevant federal, state, and local standards for the management of any identified lead.

Finally, to reduce the need to submit extensive supporting documentation, the OPSC will ask that the architect of record or other design professional certify to the following:

- The date that the DSA approved the plans and specifications.
- The number of classrooms demolished and not replaced and the number of classrooms constructed. (This is necessary to verify that no new construction, except the replacement of demolished facilities, is done with modernization funds.)
- That the cost estimate for the work in the plans and specifications as submitted to the DSA is at least 60 percent of the total grant provided by the State's and district's matching share.

Modernization Grant Amounts

The modernization grant is based on the number of pupils assigned to the project. This number may simply be the number of students enrolled at the site where the modernization will occur. This is usually true when all of the buildings at the site are 25 years or older for permanent buildings and 20 years or older for relocatable structures. In cases where only some of the buildings at the site are over age, and therefore eligible for modernization, the number of pupils assigned to the modernization project will probably be less than the total pupils on the site. The Form SAB 50-04 will assist the district in determining the proper number of pupils to be included in the application. When this number is determined, it is then possible to calculate the modernization grant amount as described in the next section. The following are the types of grants:

» Modernization Grant
  – *Modernization Grant for 50-Year-Old Buildings*
» Supplemental Grants

Modernization Grant

The pupil grant amount is intended to provide the State's share for all essential project costs, which include but are not limited to funding for design, the modernization of the building, education technology, unconventional energy, tests, inspections, and furniture and equipment. To calculate the district's modernization share, multiply the modernization grant by 0.6667.

Modernization Grant Calculation

The modernization grant for each pupil housed in buildings to be modernized is established by law.[2] The grant amount is adjusted every year in January, based on changes to the Class B construction cost index, by action of the SAB. As of January 2007, the modernization grants, which represent the State's 60 percent share of the project, are as follows:

Modernization Grant Amount

CLASSIFICATION	MODERNIZATION GRANT AMOUNT	COMMENTS
Elementary Pupil	$ 3,262	
Middle School Pupil	$ 3,450	Include grade six pupils if part of a 6–8 grade school.
High School Pupil	$ 4,516	
Special Day Class – Non-Severe	$ 6,953	
Special Day Class – Severe	$10,391	
State Special School	$17,325	

[2] Education Code, Section 17074.10.

Modernization Grant for 50-Year-Old Buildings

CLASSIFICATION	BASIC GRANT AMOUNT	CLASSIFICATION	BASIC GRANT AMOUNT
Elementary	$ 4,530	Special Day Class—Non-Severe	$ 9,656
Middle School	$ 4,792	Special Day Class—Severe	$14,440
High School	$ 6,274	State Special School	$24,066

A modernization grant request must be for at least 101 pupil grants, or the remaining modernization eligibility at that school site if less than 101 grants are available.

Supplemental Grants

The supplements are intended to recognize special costs associated with projects of a certain type or located in certain areas. The district also uses the Form SAB 50-04 to supply information related to the supplemental grants. There are many possible supplemental grants as follows:

- Elevators
- Energy Efficiency
- Fire Code Requirements
- Geographic Location
- Handicap Access and Fire Code Compliance
- Labor Compliance Program
- Project Assistance
- Rehabilitation
- Site Development for 50-Year-Old Buildings
- Small School High Program
- Small Size Projects
- Urban Locations, Impacted Sites, Security Requirements

The following is a brief explanation of the supplemental grants:

Elevators

If the DSA requires 2-stop elevators in the modernization project, the modernization grant will be increased by $87,121 for each two-stop elevator. The district must attach the DSA letter that requires the elevators be included in the project for handicap access compliance. The modernization grant will be increased by $15,680 for each additional stop required.[3] The grant amount will be adjusted annually using the Class B index.

Energy Efficiency

A supplemental grant is available to districts with projects that have increased costs associated with plan design and other project components for school facility energy efficiency. The facilities in the proposed project must exceed the nonresidential building energy efficiency standards as specified in Title 24, Part 6

[3] SFP Regulations, Section 1859.83(f), (1) and (3), "Excessive Cost Hardship Grant."

of the California Code of Regulations by at least 10 percent. Currently all energy efficiency funds have been exhausted. At the September 2006 SAB the remaining modernization energy funds were re-designated to fund the new construction energy projects.

Fire Code Requirements

The modernization grant will be increased for each pupil in a project that includes an automatic fire detection and alarm system. The current increase is as follows:

Modernization Grant increase—Automatic Fire Detection and Alarm System

CLASSIFICATION	GRANT INCREASE
Elementary	$104
Middle School	$104
High School	$104
Special Day Class—Non-Severe	$195
Special Day Class—Severe	$291

The amounts shown above are the 60 percent State share and are adjusted annually in the same manner as the Modernization Grant.

Geographic Location

A supplemental grant is available to districts with projects that are located in areas of California that are remote, difficult to access, or lack a pool of contractors. A district may qualify and request an augmentation to the modernization grant because of their geographic location.

Handicap Access and Fire Code Compliance

The excessive cost hardship grant for access compliance[4] is based on actual hard costs as reported by the district on the accessibility/fire code requirements checklist. These costs must be the minimum work necessary to receive approval from the Access Compliance Unit of the DSA and must be verified by the DSA and the OPSC. The grant is calculated by taking the difference of the verified actual hard costs and subtracting seven percent of the sum of the State and district share of the project's modernization base grant (when the Lease Purchase Program converted to the SFP, it was the intent that seven percent of the modernization base grant covered access compliance work). However, there is a cap that may not be exceeded.

If the construction costs of a modernization project exceed 50 percent of its replacement cost, the building must be brought into compliance with the current building code as part of the Title 24 requirements. Therefore, the maximum a district can receive for access compliance is the difference between the new construction base grant (which represents approximately 50 percent of the replacement cost) and the sum of the State and district share of the modernization project's base grant.

The chart below illustrates how the excessive cost hardship grant cap is calculated based on one pupil grant, and how the seven percent is applied:

[4] SFP Regulations, Section 1859.83(f), "Excessive Cost Hardship Grant."

Calculation of Maximum Grant (Cap)—Based on One Elementary Pupil

STATE AND DISTRICT SHARE OF NEW CONSTRUCTION BASE GRANT AT 50 PERCENT	*subtract*	STATE AND DISTRICT SHARE OF MODERNIZATION BASE GRANT	*equals*	MAXIMUM GRANT ALLOWABLE FOR ACCESSIBILITY REQUIREMENTS
$8,081		$5,437		$2,644

This chart provides examples of the calculation of the excessive cost hardship grant:

Examples of Calculation of the Excessive Cost Hardship Grant

IF THE MINIMUM ACCESSIBILITY WORK VERIFIED BY DSA IS:		7 PERCENT OF STATE AND DISTRICT SHARE OF MODERNIZATION BASE GRANT		DIFFERENCE	EXCESSIVE COST @ 100 PERCENT
$2,000	*subtract*	$ 381	*equals*	$1,619	$1,619
$3,500	*subtract*	$ 381	*equals*	$3,119	$2,644 (cap)
$ 350	*subtract*	$ 381	*equals*	–$ 31	$ 0

Modernization projects that consist of replacement of buildings in like-kind instead of modernizing them will be eligible for an excessive cost hardship grant equal to three percent of the modernization base grant only.

Labor Compliance Program (LCP)

A labor compliance program, as specified by Labor Code Section 1771.5, must be initiated and enforced for each project funded wholly or in part from Propositions 47 or 55 funds if the Notice to Proceed was issued on or after April 1, 2003. Additional funding is provided for these projects. The LCP grant is calculated on a sliding scale as follows:

Labor Compliance Program Grant

IF TOTAL PROJECT COST IS...		THEN THE TOTAL LCP COST IS...
AT LEAST	UP TO	
$ 0	$ 1 million	$ 16,000
$ 1 million	$ 2 million	$ 16,000 plus 0.016 multiplied by the amount over $1 million
$ 2 million	$ 3 million	$ 32,000 plus 0.0025 multiplied by the amount over $2 million
$ 3 million	$ 4 million	$ 34,500 plus 0.0015 multiplied by the amount over $3 million
$ 4 million	$ 6 million	$ 36,000 plus 0.0032 multiplied by the amount over $4 million
$ 6 million	$ 8 million	$ 42,400 plus 0.0031 multiplied by the amount over $6 million
$ 8 million	$13 million	$ 48,600 plus 0.0046 multiplied by the amount over $8 million
$13 million	$18 million	$ 71,600 plus 0.0044 multiplied by the amount over $13 million
$18 million	$48 million	$ 93,600 plus 0.0042 multiplied by the amount over $18 million
$48 million	N/A	$219,600 plus 0.004 multiplied by the amount over $48 million

The State's share will be 60 percent of the above result.

Project Assistance

The SAB may provide additional project grants for project assistance to small school districts with enrollment of 2,500 pupils or less. The current additional grant of $2,755 may be used for costs associated with the preparation and submission of the SFP eligibility and funding applications, including costs related to support documentation such as site diagrams. The grant amount will be adjusted each year using the Class B index. The district can find the current amount on the OPSC Web site.

Rehabilitation

A district may apply for the rehabilitation of facilities that the SAB has determined are an imminent health and safety risk to the pupils, if the cost/benefit analysis to mitigate the problem and remain in the building is less than 50 percent of the current replacement cost. If the district qualifies, the district is eligible for funding of rehabilitation costs as a modernization project.

Site Development for 50-Year-Old Buildings

A supplement grant is provided for the purpose of upgrading existing utilities as necessary for the modernization of 50 year or older permanent buildings. Sixty percent of the estimated utility costs, up to a maximum of twenty percent of the Modernization Grants (pupil grant), are available. Allowable utility cost fall under five categories:[5]

- Water
- Sewage
- Gas
- Electric
- Communication systems

It is important to understand that site development costs have restrictions on their use. The district representative should consult the SFP Regulations and the OPSC project manager if he or she is unsure if a particular item is an allowable cost before including the work in the project.

If a district is requesting a supplemental grant associated with site development on the Form SAB 50-04, verification must be submitted to support the request. To assist in gathering the supporting detail, the OPSC has developed a Site Development Worksheet for Additional Grants that is located on the OPSC Web site. The district may use this worksheet or similar method to submit this information to the OPSC.

Small High School Program

The Small High School Program is a pilot program that will sunset on January 1, 2008. A supplemental grant is available for the reconfiguration of large high schools into small high schools. The reconfiguration must result in at least two or more small high schools. Each small high school created may receive a supplemental grant up to $500,000 for costs related to the reconfiguration.

Small Size Projects

A supplemental grant is available to districts with projects that house no more than 200 pupils. The grant is intended to provide additional funds to modernize core facilities and to make up for the lack of economies of scale for small projects. The modernization grant can be increased by 12 percent for a project that will house less than 101 pupils, or by four percent if the project will house over 100, but no more than 200 pupils.

5 SFP Regulations, Section 1859.78.7, "Modernization Additional Grant for Site Development Necessary for 50 Years or Older Permanent Buildings."

Urban Locations, Security Requirements and Impacted Sites

Districts with projects in urban locations on impacted sites may request a supplemental grant if:

» The useable site acreage for the project is 60 percent or less of the site size recommended by the CDE based on current CBEDS Report at the site at the time of the CDE final plan approval for the modernization project.

Urban locations on impacted sites are generally in areas of high population density. Districts with projects on these impacted sites are also faced with extra security requirements. The supplemental grant provides funds for security fences, watchpersons, increased premiums for insurance for contractors, and storage or daily delivery of construction materials to prevent theft and vandalism. If a district requests grants due to these circumstances, the OPSC will verify the district's eligibility pursuant to the CDE Final Plan Approval letter.

If the above criterion is met, the urban supplemental grant is calculated on a sliding scale as follows:

Modernization Urban Grant Adjustment

IF...	THEN...
the useable acres are 60 percent of the CDE recommended site size, as described above...	the urban grant adjustment is 15 percent of the Modernization Grant and of the funding for small size projects† and new school projects*, and a 0.333 percent increase to the urban grant adjustment for each percentage decrease in the CDE recommended site size below 60 percent.

* SFP Regulations, Section 1859.83(b), "Excessive Cost for Projects that House No More than 200 Pupils (Small Size Project)"

District Project Contribution

Every modernization application is a joint funding effort between the local school district and the State though the SFP. The State grant is discussed in the section entitled "Modernization Grant", earlier in this section. The total State grant represents 60 percent of the total project cost, with the district contributing the remaining 40 percent of the necessary funding.

The district contribution may come from virtually any source. The sole exception is that when savings from another SFP project are used as match, it must be from a modernization project only. This restriction exists due to legal requirements pertaining to the bond funds, which the State uses as a program-funding source.

The district need not have the entire 40 percent local contribution on deposit at the time that the project approval is made. However, at the time of the project fund release, the district must certify that the district's matching share has been deposited in the County School Facility Fund; has been expended by the district for the project; or will be expended by the district prior to the Notice of Completion for the project. Thus the district has considerable flexibility in how the local share is arranged and contributed. The district representative should be aware, however, that regardless of when the share is contributed to the project, the district must be able to show at closeout that 40 percent of the expenditures on the project were from local sources. If the district is unable to demonstrate the 40 percent expenditure requirement has been met, the apportionment will be reduced.

Unable to Meet the Contribution

Districts that are unable to contribute all of the 40 percent local share of a project, can pursue financial assistance through the financial hardship provisions of the SFP. Districts must submit financial data to the OPSC for "pre-approval" of financial hardship status (see Section 10, "Financial Hardship") before submitting a funding application. In addition, this "pre-approval" enables districts to request a separate apportionment for design costs, if necessary.

SAB Approval Process

The SAB approval can either be an apportionment or "unfunded" approval, depending on the availability of funds for modernization. If there are no funds available, the project will be placed on a list of unfunded projects to await possible future funding.

Fund Release

After the funding application is apportioned by the SAB, the next step in the process is the actual fund release to the County School Facilities Fund for use by the district.

The SFP grant is processed for release when the district submits a *Fund Release Authorization* (Form SAB 50-05). The Form SAB 50-05 submitted by the district is an important document that cannot be altered or modified by the OPSC. Therefore, an improperly completed Form SAB 50-05 will be returned with a letter of explanation to the school district for correction.

When a properly executed form is received, the OPSC sends a School Facilities Fund Release notification to the district representative and county office of education. The notification indicates the type of grant released, amount, school district, application number, school name, and date processed.

It is important to understand that a Form SAB 50-05 must be submitted within 18 months of the SFP grant apportionment by the SAB, or the entire new construction or modernization adjusted grant will be rescinded without further SAB action. If this should happen, the pupils housed in the project will be added back to the district's eligibility and the district may re-file the application at any future time.

The Form SAB 50-05 can be downloaded from the OPSC Web site. The properly executed Form SAB 50-05 should be submitted to:

Office of Public School Construction
Accounting
1130 K Street, Suite 400
Sacramento, CA 95814

Section 10

Financial Hardship

Introduction

Financial hardship assistance is available for those districts that cannot provide all or part of their funding share of a School Facility Program (SFP) project. In order to receive financial hardship assistance, a district must have made all reasonable efforts to raise local funding and must also demonstrate that it is unable to contribute all or a portion of the matching share requirement.

If the district meets the financial hardship criteria, it is eligible for financial assistance for new construction or modernization projects. It may also be eligible for a separate apportionment for the following:

» For new construction or modernization projects, an early apportionment for design costs.
» For new construction projects, an early apportionment for site acquisition.

A district seeking financial assistance must have an approved financial hardship status prior to submitting an *Application for Funding* (Form SAB 50-04) for either a new construction or modernization grant request. In order to obtain this approval the district must provide verification that a reasonable effort was made to meet the district's matching share requirement, and must have confirmation from the Office of Public School Construction (OPSC) that the district is unable to contribute the entire matching share requirement. When this is accomplished, the OPSC will recommend that the district be approved as a financial hardship and will send a 'pre-approval' letter to the district.

Qualifying for Financial Hardship Assistance

To apply for financial hardship, send a letter to the OPSC Financial Hardship Audit Unit stating why the district is requesting financial hardship. Along with the letter, the district must submit the following documents:

Documentation for Financial Hardship Application

LEGAL REQUIREMENT	FINANCIAL DOCUMENTATION REQUIRED
Levy maximum developer fee allowed	School Board Resolution regarding developer fees
Demonstrate local effort to raise revenues	Evidence of at least one of the following: • Debt level at 60 percent of bonding capacity • Total district bonding capacity less than $5 million • The district had a successful registered voter bond election for at least the maximum allowed under Proposition 39 within the previous 2 years. • Other evidence which demonstrates that all reasonable local efforts have been made as approved by the State Allocation Board (SAB)

continued on following page...

Documentation for Financial Hardship Application...

LEGAL REQUIREMENT	FINANCIAL DOCUMENTATION REQUIRED
Financial inability to contribute the match	Evidence that facility funds are not available: • Financial Hardship Project Worksheet • Financial Hardship Worksheet • Latest independent audit reports • Encumbrances • Expenditure reports • Listing of the district's unused sites • Forms SAB 50-01 and SAB 50-02 for "interim housing" deduction calculation for new construction projects only • Written estimation of interim housing needs

If the financial hardship package is incomplete, a letter will be sent to the district requesting the necessary documentation to make the request complete. If the requested information is not submitted in a timely manner, the request will be returned unprocessed. The district may re-file the request whenever the missing documents become available.

County offices of education do not need to provide documentation regarding developer fees or evidence of reasonable effort to raise local funds.

Financial Hardship Assistance Request

In order to qualify for financial hardship assistance, the school district must demonstrate that it has made all reasonable efforts at the local level. The district must also provide evidence that it is unable to pay all or a portion of the district's share of the project. The process of providing the required evidence is discussed in this section.

Evidence of Reasonable Effort to Fund Matching Share

As previously mentioned, the law requires that a district seeking financial hardship assistance must demonstrate that all reasonable efforts have been made to raise local revenues for the SFP matching requirement. The SAB has adopted regulations that set criteria to determine that this requirement is met. The district must be levying developer fees at the maximum rate justified by law and must verify it meets at least one of the following:

Bonding Capacity and Indebtedness Threshold. The current outstanding indebtedness of the district, at time of financial hardship request, is at least 60 percent of the district's total bonding capacity. A district with a total bonding capacity of less than $5 million meets this requirement regardless of the level of indebtedness. Outstanding indebtedness includes General Obligation Bonds, Mello-Roos Bonds, School Facility Improvement District Bonds and Certificates of Participation (COPs) that was issued for capital outlay school facility purposes, on which the district is paying a debt service.

The required documentation needed is a certification from the county auditor controller stating the district's assessed valuation, outstanding indebtedness, and remaining bonding capacity.

Voter Bond Election. The district had a successful registered voter bond election for at least the maximum amount allowed under Proposition 39 within the previous two years from the date of request for financial hardship status. The proceeds from the bond election that represent the maximum amount allowed under the provisions of Proposition 39 must be used to fund the district's matching share requirement for SFP project(s).

The required documentation needed:

- Copy of ballot issue.
- Original bond election estimates that support the amount of bond for which the district sought election.
- Date of election; amount of bond; purpose of bond; percent of "Yes" vote on bond.
- Copy from County Auditor-Controller certifying the district's current bonding capacity and outstanding indebtedness.

County Superintendent of Schools. A county superintendent of schools automatically meets the reasonable effort. The County Superintendent must then complete a financial review to determine the level of financial assistance needed.

Other Evidence of Reasonable Effort. If the district does not meet the reasonable effort requirements outlined above, it may present to the SAB other evidence of reasonable efforts to fund its matching share. This can be done using a *School District Appeal Request* (Form SAB 189). This form and instructions for completing the form are available on the OPSC Web site. In addition to the completed Form SAB 189, the district must also submit updated Financial Hardship Worksheets for each fund within the Capital Project Funds and the latest independent audit report. If the hardship justification is approved by the SAB, the district may then file its request for financial hardship using the approved SAB item as evidence of having met the reasonable effort test to fund its matching share for its projects. The district must then submit all of the requested financial documents necessary for a final financial hardship review, as described in the table "Documentation for Financial Hardship Application" on page 71.

Financial Review

The OPSC will conduct an analysis of the district's financial information to verify that the district is unable to provide all or a portion of the necessary matching funds for an eligible project. The analysis will include the applicant's financial records including those maintained by the California Department of Education (CDE) and the county office of education. The review will determine whether available non-operational funds and savings from other SFP projects are sufficient to fund all or a portion of the matching share requirements on a project. See SFP Regulations, Section 1859.81, for more information on the financial review.

Financial Hardship Project Worksheet. This is used by the OPSC to estimate the district's share of the project. The district must submit a separate Financial Hardship Project Worksheet for each project for which it is requesting financial assistance. The worksheet can be found on the OPSC Web site.

Financial Hardship Worksheet. This worksheet is used by the OPSC to determine the amount of the cash contribution to be provided by the district. These worksheets are based on the latest independent audit report and then brought current to application date with subsequent transactions that have occurred in the funds. Detail of the expenditures made for the subsequent events must accompany this worksheet. If this is not submitted, all of the expenditures shown will be disallowed and deemed as "funds available".

On the worksheet, the district will identify restricted funds such as class size reduction, as well as the purpose for any restrictions on funds, and will identify all bonds and COPs authorized and sold to date of financial hardship request. If the district has unsold bonds or COPs, possible restrictions on the use of these funds should be noted.

Latest Independent Audit Report. The district's latest independent audit report is used by the OPSC to verify the financial condition of the district. The district must submit the entire audit report.

Developer Fee Information

The district must be levying developer fees at the maximum rate justified under law or have an alternative revenue source equal to or greater than the developer fee otherwise justified.[1] As evidence, please include a copy of the resolution from the district's school board authorizing the levying of the fee. If the district is not levying the maximum fee allowed by law in accordance with current statute, include a copy of the district's recent Implementation Study and/or the Needs Analysis to support the amount being levied or justification for an alternative revenue source.

If the district entered into an agreement with a city, county, or other government entity regarding developer fees, please submit a copy of that agreement. In addition, please submit documents showing the amount of fees that could have been collected during the time frame of the agreement versus the amount that was actually collected and shown as revenue for the district.

If the district received any benefit, building, land, etc., in lieu of developer fees please submit documentation regarding the "in lieu" received and the value of the developer fees that were negated due to the "in lieu" agreement(s). If the district did not enter into agreements regarding developer fees, please submit a statement to that effect.

The current developer fees can be found on the OPSC Web site at www.opsc.dgs.ca.gov. Developer fee amounts are adjusted every even numbered year at the January SAB meeting based on an index specified in law. In order to maintain financial hardship eligibility, districts must implement the new developer fee within six months after an index change.

Encumbrances. The district must provide contracts and all other documentation supporting any encumbrances or obligations the district is claiming. All funds identified that have not been expended or encumbered by a contractual agreement for a specific capital outlay purpose prior to the initial request for financial hardship status shall be deemed available as a matching contribution.

Interim Housing Deduction from Available District Funding. From the funds available as a matching contribution, the district may retain $28,709 per classroom in each enrollment reporting period for the cost to provide interim housing for the currently unhoused pupils of the district. In addition, from the funds available as a matching contribution, the district may also retain $28,709 per approvable portable toilet unit in each reporting period for the cost to provide interim toilet facilities for the currently unhoused pupils of the district. This amount is adjusted annually. The current amount can be found on the OPSC Web site.

If the district is requesting an "interim housing" deduction from available funds, it needs to submit in writing an estimation of the district's interim housing needs for the year. The interim housing deduction and any related expenditures will be audited in the future.

Expenditure Reports. The district must submit expenditure reports, *Summary of Expenditures and Construction Progress* (Form SAB 184) and *Detailed Listing of Warrants Issued by the District* (Form SAB 184A), for each project for which the district is requesting financial hardship. If no funds have been spent on a project, the district must submit a statement to that effect. The OPSC will review any prior apportionment and the expenditures reported. All expenditures above and beyond a prior apportionment will be considered as a matching contribution. The SAB will not reimburse the district for expenditures made prior to the financial hardship approval.

Listing of the District's Unused Sites. The district must submit a listing of the district's unused sites and intended use. If the district has no unused sites, submit a statement to that effect.

---

[1] Education Code Section 17075.10.

Approval of Financial Hardship Assistance

Once the financial hardship review is complete, the OPSC will send a letter to the district stating the available funds and expenditures that will be considered available for match purposes. If the district disagrees with the OPSC's findings, the district may submit additional information for consideration. Once the district has been approved for financial hardship (has a pre-approval letter), the district may submit its Form SAB 50-04, for the projects and specific phases listed in the financial hardship approval letter.

When a district is approved for financial hardship, the approval is valid for six months. If, within the six months, the district wishes to submit additional applications or phases of a previously approved project, it must have a pre-approval letter for those additional specific projects or subsequent phases prior to filing the Form SAB 50-04. To obtain pre-approval within the six months, the district must submit a Financial Hardship Project Worksheet for the project along with expenditure reports. The district does not need to update other financial information unless the six month period is past.

If the district's request for financial hardship status is denied by the Board, the district may be eligible for rental payments of $2,000 per year per classroom under the Emergency School Classroom Law of 1979 for a two year period when relocatable classroom buildings are available and the district provides financial documentation satisfactory to the Board that it is unable to afford the full rental amount.

Subsequent Financial Hardship Request

Once a district receives funding as a financial hardship, the district should be aware that for a period of three years, all capital facilities funding received by the district from any source will be considered available for the matching share on a future financial hardship request. The exceptions are:

- Approved interim housing expenditures;
- Funding to pay for multi-year encumbrances approved at the initial financial hardship approval;
- Funding that is transferred into a Special Reserve Fund and is used for the purpose of the Federal Renovation Program;
- School Facilities Needs Assessment Grant Program; or the
- Emergency Repair Program.

Renewal of Financial Hardship Assistance

If the district does not submit an *Application for Funding* (Form SAB 50-04) within six months of the OPSC notification of approval of financial hardship status, the district must re-qualify for financial hardship status by submitting a new request for financial hardship status.

The district will need to update its financial information by providing all required documentation as listed in the table "Documentation for Financial Hardship Application" on page 71 .

Financial Hardship Review for Financial Hardship Projects on Unfunded List

If a district's project(s) has been included on an unfunded list for more than 180 calendar days, a review of the district's funds will be made to determine if additional district funds are available to fund the district's matching share of the project(s).

This page is intentionally blank.

Section 11

Facility Hardship Grant

Introduction

Under very limited circumstances, a need to replace or construct new facilities may exist for reasons other than enrollment growth. For instance, a classroom or support facility may no longer be safe to occupy due to a structural failure or other severe health threat. To address these unusual situations, the State Allocation Board (SAB) has developed a facility hardship grant. The purpose of the grant is to assist districts with funding where it has been determined that the district has a critical need for pupil housing because the condition of the facilities, or the lack of facilities, presents an imminent threat to the health and safety of the pupils.

By definition a facility hardship is an unusual, often unique situation. It is difficult to describe a "normal" process since each request must be reviewed and analyzed on a case-by-case basis. This section outlines the process, but by no means addresses all possible facility hardship situations. When a significant and serious threat exists to the health and safety of students or staff in any public school environment or if an existing facility has been destroyed by natural disaster, the district should contact the Office of Public School Construction (OPSC) project manager for guidance.

Eligibility for Facility Hardship Grants

To be eligible for a facility hardship grant the district must demonstrate that one of two conditions exists: facilities must be replaced due to an imminent health and safety threat, or existing facilities have been lost to fire, flood, earthquake or other disaster. If the district is to qualify for a facility hardship grant under one of these two conditions, the district wide enrollment must justify a continuing need for these facilities, pursuant to the School Facility Program (SFP) Regulation, Section 1859.82.

Replacement Due to Imminent Health or Safety Hazard

In this case, existing facilities must be replaced to ensure the health and safety of the pupils because of circumstances such as the following:

- The existing facilities have serious structural deficiencies, which must be repaired or corrected as specified by the Division of the State Architect (DSA); or
- An imminent hazard exists because the existing facilities are in close proximity to a major freeway, airport, electrical facility, high power transmission lines, dam, pipeline, industrial facility, adverse air quality emission source; or
- There are existing traffic safety problems or the pupils live in a remote area and transportation to existing facilities is not possible or poses a serious threat to the health and safety of the pupils; or
- Environmental health hazards such as dangerous levels of mold contamination; or
- Other situations exist which pose a threat to the health and safety of the pupils.

A facility hardship approval to replace facilities is limited to the most severe instances of need. Clear demonstration is needed that the health and safety of the children is in jeopardy.

Documentation. Typical supporting documentation should be in the form of written statements/reports by a qualified industry expert or specialist appropriate for the specific area of concern. This documentation must then be reviewed and written concurrence provided by the appropriate State agency expert that has jurisdiction relating to the problem area. For example, air quality threats might involve a certified professional on staff at the State Department of Health; traffic problems might be supported by the California Highway Patrol, and so forth. If structural deficiencies are the basis of the health and safety threat, a licensed structural engineer's report is required that substantiates the structural deficiencies which were out of compliance with codes in place at the time of original construction. The structural report must be accompanied by a letter of concurrence by the DSA. In any case, the statement provided to the OPSC must indicate how the problem poses an immediate threat to the health and safety of the children. Refer to Appendix 2, "Potential State Agency Involvement" for possible contact information.

Cost/Benefit Analysis. If the district has substantiated a health and safety issue and wishes to replace existing facilities, a cost/benefit analysis must be prepared and submitted to the OPSC. The analysis should include only the minimum work necessary to mitigate the identified health or safety problems and compare these with the SFP standard for Current Replacement Cost. The cost/benefit analysis may include applicable site development costs.

If the request is for replacement facilities that are needed as a result of structural deficiencies, the cost/benefit analysis must also include a report from a licensed design professional identifying the minimum work necessary to obtain the DSA's approval. The cost/benefit analysis must include a narrative of the structural deficiencies and a description of the repair approach required to perform the minimum work necessary to mitigate the health and safety threat to obtain DSA approval. The analysis must also include a detailed cost estimate for the minimum work necessary described in the narrative. "Soft costs" such as architect fees, testing and inspection may be included in the cost estimate as a separate line item but should not be included in the cost/benefit analysis. The analysis and detailed cost estimate must be signed by the authoring licensed design professional.

If the total cost to mitigate the health or safety problem and remain in the facility exceeds 50 percent of the current replacement cost of the facility, it can be considered for abandonment and replacement. However, if the cost to remain in the facility is less than 50 percent of the current replacement cost, the district may qualify for rehabilitation. A qualifying replacement project will receive 50 percent of the eligible cost. A rehabilitation project will receive 60 percent of eligible costs. For more information on rehabilitation, refer to Section 9, "Modernization Funding."

Facilities Lost or Destroyed as a Result of a Disaster

A district may apply for the replacement of school facilities that were lost or destroyed as a result of a disaster, such as fire, flood or earthquake, for the following facility types:

- Classroom or related facility
- Library/media center
- Multi-purpose room
- School administration
- Gymnasium
- Toilet

Qualifying facilities must be required to ensure the health and safety of the pupils and must no longer be useable for school purposes as recommended by the California Department of Education and approved by the State Allocation Board (SAB). The district is also required to demonstrate satisfactorily to the SAB that the facility was uninsurable or the cost of insurance was prohibitive.

Documentation. Supporting documentation for facility hardship requests for the replacement of lost or destroyed facilities would include the following:

- Photos and written verification from the appropriate expert that documents the loss or the extent of damage to the school facility.
- Copy of the district's insurance policy that documents the level and type of coverage provided.
- Written verification from the district's insurance carrier that documents the amount of funds that the district has and/or will recover as a result of the disaster.
- If the facility is damaged, as opposed to entirely destroyed, the district must submit a licensed structural engineer's report, as outlined in this section, illustrating the extent of the damage and that the facility poses an immediate threat to the health and safety of the students and staff. The district would also be required to submit a cost/benefit analysis, as outlined in this section, signed by the authoring licensed design professional. The OPSC requires the district submit the DSA's concurrence with the report.

Application and Approval Process

In addition to the documentation supporting the health and safety issue and the cost/benefit analysis, as applicable, all facility hardship requests must also include the following:

- An Application for Funding (Form SAB 50-04) completed as applicable to make the initial request for conceptual approval by the State Allocation Board for the specific facility hardship type.
- A School District Appeal Request (Form SAB 189) that summarizes the district's request for a facility hardship including how the condition presents an imminent threat to the health and safety of the students and staff.
- A plot diagram that indicates the overall site layout, the facilities designation of the buildings and square footage. The diagram should indicate the specific structures at the school site for which the facility hardship request is being submitted.

After the analysis of the report(s) and review of the cost by the OPSC, an item will be prepared for presentation to the SAB for consideration of conceptual approval. If the SAB approves the district's request for new or replacement facilities, the district is eligible for funding as a new construction project. The district can then proceed with hiring an architect in order to complete plans, obtain DSA approval, and apply for funding grants. A district that receives a conceptual approval has 18 months, or 24 months if a new replacement school site is required, to submit a complete funding application (including DSA plan approvals, cost estimates, etc.). Funding for a facility hardship is subject to the availability of funds.

Interim Housing

In the event of an emergency or for districts in need of short-term interim housing to meet their facility needs, districts may seek assistance from the OPSC. Our project managers will evaluate each request on a case-by-case basis and will work with districts to find them interim housing as the SAB has approved the phase out of the State Relocatable Classroom Program. If a district is in need of immediate facilities to replace those damaged by a natural disaster, the OPSC can administratively expedite the approval of new construction funding applications through the Natural Disaster Plan, which allows districts to purchase relocatable classrooms quicker to address their facility needs. Again, our project managers will assist districts with processing these type of applications to ensure facilities are received in a timely fashion.

Section 12

Program Accountability

Introduction

The School Facility Program (SFP) has significantly increased program flexibility and responsibility at the local level, while reducing the State's oversight role. In general, the State's fiscal concerns are limited to verifying that the expenditures and certifications of program requirements made by the district for the project comply with the law, that the district followed applicable State requirements pertaining to construction and to verify that the project progresses in a timely manner as specified in statute. To assist with this oversight, a district is required to submit expenditure reports and evidence of progress during the construction of the project. On a project that requires less than a year to complete, only an expenditure report is required.

Progress Report

The SFP requires that an approved project be constructed within certain time frames. To ensure that this happens, evidence of progress is generally due after funds are released to the district for the project.[1] The specific evidence required and the timeframe for submitting such evidence depends on the type of funding received. The possible types of funding include Separate Design (Financial Hardship), Separate Site (Financial Hardship), Separate Site (Environmental Hardship), and/or Adjusted Grant. The following table defines the specific criteria for meeting the substantial progress requirement and indicates the filing time requirements based on the type of funding received.

[1] In cases where separate environmental hardship funds are involved, the due date is based on the apportionment date instead of the fund release date.

Substantial Progress Reports

FUNDING RECEIVED	EVIDENCE OF PROGRESS DUE DATE	EVIDENCE OF PROGRESS REQUIRED
Separate Design (Financial Hardship project only)	18 months from Fund Release	One of the following: • Submittal of a complete Adjusted Grant funding application package to the Office of Public School Construction (OPSC). • Submittal of a district certification that complete plans and specifications have been submitted to the Division of the State Architect (DSA). • Submittal of a complete Separate Site funding application package to the OPSC. Or: • Submittal of a narrative of evidence, satisfactory to the State Allocation Board (SAB), detailing why complete plans have not been submitted to the DSA.
Separate Site (Financial Hardship)	18 months from Fund Release*	Submittal of a progress report certifying that all of the following have been achieved: • Obtain the final site appraisal. • Complete all California Environmental Quality Act (CEQA) requirements. • Obtain final California Department of Education (CDE) site approval. • Obtain final escrow instructions or evidence the district has filed condemnation proceedings and intends to request an order of possession of the site. Or: • Submittal of a narrative of evidence, satisfactory to the SAB, detailing the circumstances (beyond district control) which precluded progress from being achieved.
Separate Site (Environmental Hardship)	12 months from the apportionment date or anniversary of conversion from Separate Site Financial Hardship, and on each subsequent anniversary if necessary.	Submittal of one of the following: • A progress report satisfying the same criteria set forth for Separate Site (Financial Hardship) funding. • A request for an extension (which is supported by written letters of concurrence from the Department of Toxic Substance Control (DTSC) and the CDE). • Other reasonable evidence of effort the district has made.
Adjusted Grant	18 months from Fund Release†	Submittal of a progress report certifying one of the following: • 75 percent of site development work necessary prior to construction is complete. • 90 percent of construction activities have been contracted for. • 50 percent of construction activities are complete. Or: • Submittal of a narrative of evidence, satisfactory to the SAB, detailing the circumstances (beyond district control) which precluded progress from being achieved.

* If toxic substance issues are delaying site progress, the district may convert the site apportionment to an Environmental Hardship apportionment. Environmental hardship projects may request annual extensions with appropriate substantiation.

† The progress-reporting requirement for Adjusted Grant funding can be suspended if one of the following occur before the reporting deadline:
- The district submits a Notice of Completion for the project. If more than one construction contractor is involved in the project, a Notice of Completion is required for each construction contract.
- The district submits an Expenditure Report (Form SAB 50-06), which shows that the project is substantially close to 100 percent completion.

Substantial Progress Audit

Upon receipt of the substantial progress report, the Office of Public School Construction (OPSC) will analyze the information and will notify the district within 60 days if it intends to recommend to the State Allocation Board (SAB) that the evidence submitted does not demonstrate substantial progress. If the OPSC does not respond to the district within 60 days of submittal, the OPSC concurs with the district that substantial progress has been made.

Expenditure Report

Throughout the construction period of a project, the district will file one or more expenditure reports. The first expenditure report is due one year after the first fund release or upon completion of the project, whichever occurs first. Additional expenditure reports are due annually from the date the first report is due until the project is complete. A project is considered complete when either of the following occur:

- The notice of completion for the project has been filed.
- Three years from the date of the final fund release for an elementary school project or four years from the date of the final fund release for a middle or high school project.

Preparing the Expenditure Report

A district submits a record of project expenditures by using the *Expenditure Report* (Form SAB 50-06). This form allows the district to report all expenditures from district and State funds in summary form. To support the Expenditure Report, the OPSC has developed an Expenditure Worksheet which is available on the OPSC Web site at www.opsc.dgs.ca.gov. The district is encouraged to use this worksheet to gather and record the expenditure detail and to accompany the Form SAB 50-06.

Expenditure Audit

Within two years of receipt of the final expenditure report from the district, the OPSC must initiate an audit of the expenditures. If the district is not notified by the OPSC within that time frame that an audit will be made, the expenditures submitted by the district and certifications made on the Forms SAB 50-04 and SAB 50-05 will be accepted. If the OPSC has notified the district that an audit will be made, the OPSC must complete the audit within six months, unless additional documentation requested from the district has not been received.

Eligible Expenditures

The following table lists those expenditures that are typically eligible costs under the SFP:

Eligible Expenditures

EXPENDITURE	NEW CONSTRUCTION	MODERNIZATION
Acquisition and installation of portable classrooms	✖	✖*
Acquisition and conversion of an existing government or privately-owned building, or privately-financed school building	✖	
Construction	✖	✖
Construction management	✖	✖
Demolition	✖	✖
Design	✖	✖
Engineering	✖	✖
Fire safety improvement		✖
Force account labor costs that comply with Public Contract Code	✖	✖
Furniture and Equipment (including telecommunication equipment to increase school security)	✖	✖
Identification, assessment, or abatement of hazardous asbestos		✖
Inspection	✖	✖
Labor Compliance Program oversight costs	✖	✖
Landscaping	✖	
Legal fees associated with the reviews of bid documents, securing a site, and site condemnation	✖	✖
Necessary utility costs	✖	✖
Plan checking	✖	✖
Playground safety improvements		✖
Purchase and installation of air-conditioning equipment and insulation materials and related costs	✖	✖
Replacement of portable classrooms		✖
Seismic safety improvements		✖
Site acquisition	✖	
Site development	✖	✖†
Testing	✖	✖
Upgrading of electrical systems or the wiring or cabling of classrooms in order to accommodate educational technology		✖
Utility connection and other fees	✖	✖

* Permissible if it is a like-kind replacement of a portable classroom.

† For 50 years or older modernization projects utilities work only, for permanent facilities, per SFP Regulations, Section 1859.78.7.

Site Closeout Reviews

Districts that obtain additional grants for sites that require hazardous waste removal substantiated by a Response Action will be eligible to receive up to 50 percent of one and one-half times the value of the site to monitor and clean the site. Additional costs beyond this new cap will be subject to provisions contained in section 1859.74.2 and following. For those projects where the *Application for Funding* (Form SAB 50-04), is received on or after January 1, 2004, additional costs beyond the cap are subject to adjustment whether or not the additional grants for hazardous waste removal were requested on the Form SAB 50-04.

Ineligible Expenditures

District representative should be aware that some expenditures are not permitted under the SFP. If the district representative is uncertain about a specific expenditure, the OPSC audit staff can assist the district accordingly.

The following is a list of the expenditures that may potentially be disallowed during an SFP final expenditure audit:

- Administrative and overhead costs.
- District force account labor that does not comply with the Public Contract Code.
- Modernization expenditures for:
  - *New building area that does not replace building area of "like kind."*
  - *New site development that is not for replacement, repair or additions to existing site development work.*
  - *Removal of hazardous waste from a modernization project that exceeds ten percent of the total modernization apportionment.*
  - *Costs on leased facilities unless owned by another district or county superintendent.*
  - *Acquisition and development of real estate.*
  - *Demolition costs not attributable to replacement of "like kind" building area.*
- Any expenditure that cannot be reasonably attributed to a project.
- Relocation costs that do not conform to Title 25, California Code of Regulations, Section 6000, et. seq. (see SFP Regulations, Section 1859.74(a)(1)).
- Expenditures associated with a "use of grant" (see SFP Regulations, Section 1859.77.2) SAB approval that were not constructed as specified in the original approval.
- Campus supervision that goes beyond construction site security.
- Expenditures on a financial hardship project that exceed the district's grant amount plus interest for the project.
- Interim housing expenditures associated with a new construction project subject to certain limitations.
- Relocation costs such as goodwill that is not court ordered, and the difference between the salvage value and new value of furniture and equipment costs when the business vendor retains the furniture and equipment.
- Legal fees not associated with securing a site and site condemnation, and contracts bid documentation.
- Expenditures associated with facility hardship SAB approvals that were not constructed as originally approved (see SFP Regulations, Section 1859.82).

Section 13

Additional SFP Requirements and Features

Introduction

There are a number of topics related to the School Facility Program (SFP) that do not fit neatly into one of the other program sections. These topics are gathered here for easy reference. They may apply to new construction, critically overcrowded school facilities, joint use, and modernization or only to one program, as noted in the discussion.

General Information

Class B Index

The grant amounts in the SFP are adjusted each January based on the change in the Class B Index. This index is developed using cost data published by the Marshall Swift Company relating to buildings of primarily steel and concrete construction.

SAB Appeal Process

In some cases a school district's application may appear to be outside the standards of the SFP and the Office of Public School Construction (OPSC) is unable to recommend approval. When this occurs, a district can appeal directly to the State Allocation Board (SAB) using a *School District Appeal Request* (Form SAB 189). On this form, the district states why the SAB should grant the district's appeal based on law, regulation, or SAB policy.

Prior to the item being scheduled for SAB consideration, the OPSC will review and analyze the appeal as to legal issues, program impact, funding ramifications, and public policy considerations. Based on the evidence submitted by the district, the OPSC may support the district's request, deny the request, or provide alternative recommendations to the SAB. In any case, all of the recommendations made by OPSC to the SAB will be based on supporting laws, regulations, or legal opinions. Districts generally have a representative available at the SAB meeting to provide testimony, if needed. This process applies to all applications.

Change of Scope

The constant fluctuation of costs of materials and labor puts a great deal of pressure on school district staff who are planning construction projects, especially for financial hardship districts that do not have other funds available to cover cost overruns. Because SAB approval is based on the accompanying plans and specifications, there are limited circumstances where a SFP project may deviate from the scope of work outlined in the plans that were included with the application (see "Design with Flexibility in Mind" in Section 3, "Project Development Activities," for more information on this topic).

Additions

It is important to keep in mind that the project may not include the addition of area not proposed in the plans approved by the SAB. This applies to classrooms, MEF and non-classroom, non-MEF space. As stipulated in Regulation Section 1859.51(i)(5), the project may include the construction of more classrooms than needed to house the pupils requested in the application as specified, but these classrooms must have been in the plans submitted with the application. The flexible structuring of the bid documents will accommodate the districts' need to make decisions based on the bid results.

If the project is *non-financial hardship*, then any project savings may be retained and used for any high priority capital facilities needs or as part of the district's contribution to a future SFP project. This approach would provide an alternative method to later add facilities, if the district had not included the additional desired facilities in the plans for the project approved by the SAB. However, the law stipulates that classrooms provided by State or local funding shall be adjusted from the districts' SFP new construction baseline.

Reductions, Deletions or Modifications

Some flexibility is a recognized part of SFP construction projects. However, to continue with a project as approved by the Board, the original intent or project scope must be maintained. If modifications are considered by a district, it is critical that the affected State agencies be part of the process and that certain project requirements continue to be met. The State agencies are coordinating efforts in this area to assist districts when these situations arise. Some extenuating circumstances may be considered by the SAB, as outlined below.

Extenuating Circumstances

CHANGE PROPOSED	PROCEDURE
Deletion of Classrooms	Permitted if: • The capacity (based on the State loading standard) is sufficient to house the pupils requested in the application • CDE and DSA have approved the change • The project meets the 60 percent commensurate requirement
Reduction of MEF Area Facility remains but the square footage is reduced	Permitted if: • The remaining area proposed meets minimum MEF square footage requirements • DSA and CDE have approved the change • The project meets the 60 percent commensurate requirement • Original intent/purpose of project is maintained
Deletion of MEF Area New School Allowance may be reduced or eliminated	Permitted if: • Case-by-case review and approval by CDE • DSA has approved the change • Case-by-case consideration and approval by the Office of Public School Construction (OPSC)/SAB • The project meets the 60 percent commensurate requirement
Deletion of Non-Classroom, Non-MEF Area	Permitted if: • DSA and CDE have approved the change • The project meets the 60 percent commensurate requirement
Permanent to Modular Construction	Permitted if: • DSA and CDE have approved the changes • The project meets the 60 percent commensurate requirement • Original intent/purpose of project is maintained

Extenuating Circumstances...

CHANGE PROPOSED	PROCEDURE
Modular to Permanent Construction	Not permitted as part of the original project, because the project would receive an inequitable funding advantage due to the timing of the DSA plan approval. Districts may consider reapplication, so the desired type of construction can be built.
Changing the Placement of a Building i.e., site conditions discovered in the footprint of construction warrant building placement alteration; however, the building size and function does not change	Permitted if: • DSA and CDE have approved the change • Original intent/purpose of project is maintained

Project Savings

Districts that do not receive financial hardship assistance may retain project savings achieved by utilizing cost saving measures and efficient project management. A district may utilize these project "savings" for other high priority facility capital outlay purposes in the district.

Savings for Non-Financial Hardship Districts

Districts may expend the savings for any of its high priority capital facility needs. A district may also use the savings as a part of the match for other SFP projects, with the only requirement being that the district's share of the savings must be used towards a project of like kind. For example, the State's share of the savings on a new construction project may only be used to match another new construction project, and the State's share of the savings from a modernization project may only be used to match another modernization project.

Savings for Financial Hardship Districts

Any savings from a project that received financial hardship assistance must be used to reduce the financial hardship grant of that project or a future financial hardship project within the district. If the district has no other financial hardship projects, the savings must be remitted to the State within a period of three years. If the district has other projects and retains the savings amount, but the savings is not applied to another financial hardship within three years from the date savings is determined through audit, the savings amount plus interest earned must be returned to the State.

If the district spends more than the State grant plus district matching share, including earned interest on a financial hardship project, the district must do one of the following:

» Reduce the financial hardship contribution on that project by submitting the overspent amount; or
» Apply the overspent amount to reduce the financial hardship contribution on a future project within three years of project closeout; or
» Retain the overspent amount if a financial hardship application is not submitted for a period of three years from the date of the last financial hardship approval.

Restricted Maintenance Account

The SFP requires participating school districts to assure that a State funded project is kept in good repair. To meet this requirement, school districts must establish and maintain a restricted maintenance account within the district's general fund to be used for ongoing and major maintenance of school buildings. Each school district must publicly approve an ongoing and major maintenance plan that outlines the use of funds deposited into the maintenance account.

Each fiscal year and for a period of 20 years after receiving funds through the SFP, the district must deposit in the maintenance account no less than three percent of the district's total general fund budget. Unified school districts with an average daily attendance (ADA) of 1200 or less, elementary school districts with an ADA of 900 or less, and high school districts with an ADA of 300 or less may deposit less than the three percent minimum by certifying that the district can reasonably maintain its facilities with a lesser dollar level maintenance account.

Verification that districts have complied with this requirement will be made through the California Department of Education (CDE) at the time of audit and beyond, and will be based upon budget information submitted by the districts to the CDE.

Facilities Inspection System (Williams Settlement Requirement)

Beginning with the 2005/2006 fiscal year, school districts and county offices of education are required to establish a Facilities Inspection System (FIS) as a condition of participation in the School Facility Program, pursuant to Senate Bill 550 which modified Education Code, Section 17070.75(e). The requirements of the FIS are not defined in law other than to state the system should ensure that each school of the district or county office of education is maintained in good repair.[1] The design of the FIS should be determined at the local level. The one exception is for the school sites meeting the requirements of Education Code, Section 17592.70(b). The needs assessments conducted at these school sites are to be the baseline for the FIS (Education Code, Section 17592.70(d)(3)). To implement this requirement, the OPSC has included certification language on the *Application for Funding* (Form SAB 50-04), the *Application for Joint-Use Funding* (Form SAB 50-07), and the *Application for Charter School Preliminary Apportionment* (Form SAB 50-09).

Appendix 2
Potential State Agency Involvement

This listing is only a sample of potential State agency involvement. There are many other agencies throughout the State that may become involved in the school construction process.

Potential State Agency Involvement List

AGENCY NAME/CONTACT INFORMATION	ROLE
California Energy Commission www.energy.ca.gov • Bright School Program Elizabeth Shirakh 916.654.4089	Helps schools identify ways to reduce energy use in school facilities.
Department of General Services **Office of Small Business Certification and Resources** www.pd.dgs.ca.gov/smbus • Disabled Veteran Business Enterprise Participation Program 916.375.4940	Provides a listing of certified DVBE firms. Note: The DVBE Program administered by the Department of General Services does not apply to school district's contracts.
Department of Health Services www.dhs.ca.gov • California Indoor Air Quality Program 510.620.2800	Provides assistance and training to school districts that have air quality problems.
Department of Transportation www.dot.ca.gov • District Transportation Planning Division 916.653.0913	Determines whether a school is likely to have an impact on the State transportation system or any of its facilities.
Office of Emergency Services Hazard Mitigation www.oes.ca.gov • Public Assistance 916.845.8200	Provides funds for school construction projects that reduce or eliminate future damage from disasters (seismic retrofit, modernization, flood control). Administer both federal and state funding for repair and replacement of eligible facilities damaged by a disaster event.
Office of Planning and Research www.opr.ca.gov • State Clearinghouse 916.445.0613 state.clearinghouse@opr.ca.gov	Distributes state required environmental documentation to various governmental agencies for review and comment as part of the CEQA process.

School Facility Program Required Forms

The following forms are used in conjunction with the School Facility Program (SFP). It is the user's responsibility to check the Office of Public School Construction (OPSC) Web site (SAB Forms) for the most current version of the form as older versions of the form may not be accepted.

» Enrollment Certification/Projection (Form SAB 50-01)
» Existing School Building Capacity (Form SAB 50-02)
» Eligibility Determination (Form SAB 50-03)
» Application for Funding (Form SAB 50-04)
» Fund Release Authorization (Form SAB 50-05)
» Expenditure Report (Form SAB 50-06)
» Application for Joint-Use Funding (Form SAB 50-07)
» Application for Preliminary Apportionment (Form SAB 50-08)
» Application for Charter School Preliminary Apportionment (Form SAB 50-09)

This page is intentionally blank.

Appendix 4
Services Matrix

During the planning, design, and construction of a school facilities project, many individuals and firms come together to contribute to the project in specific ways. Unless responsibility is assigned by law, the decision about who should perform a given task generally rests with the school district as owner. A lack of clarity regarding responsibilities may lead to a situation where a task is assigned to more than one individual or firm, creating a duplication of effort which can be wasteful and counterproductive.

The Services Matrix is the work of a small group formed by the Joint Committee on School Facilities. District representatives may wish to consult the matrix to determine all of the responsibilities to be assigned on a project and to avoid duplication of effort.

The Services Matrix attempts to accomplish four principle objectives:

- Identify those tasks in a typical school construction or renovation project which must be performed by specific team members.
- Identify the tasks which cannot be performed by certain team members.
- Identify tasks which may be assigned to any of several team members at the owner's discretion.
- Provide the owner with a tool for use in making decisions about task assignments and preparing contracts for services.

The Services Matrix addresses a project which has a construction manager as one team member. In projects where this is not the case, the tasks assigned to the construction manager could typically be performed by either the architect, inspector of record, or the owner.

Services Matrix: Pre-Design Phase

The Services Matrix addresses a project which has a construction manager as one team member. In projects where this is not the case, the tasks assigned to the construction manager could typically be performed by either the architect, inspector of record, or the owner.

Appendix 5

Summary of Bond and Deferred Maintenance Allocations

The programs, funding, and approvals over the period since 1990 are shown in the following table:

Summary of Bond Allocations

	NOVEMBER 1998	NOVEMBER 2002	MARCH 2004	NOVEMBER 2006	TOTAL
New Construction	$ 2,900,000,000	$ 6,250,000,000[1]	$ 4,960,000,000	$ 1,900,000,000[5,6]	$16,010,000,000
Modernization	2,100,000,000	3,300,000,000[2]	2,250,000,000	3,300,000,000[5]	10,950,000,000
Charter Schools	—	100,000,000	300,000,000	500,000,000	900,000,000
Career Technical Education	—	—	—	500,000,000	500,000,000
Overcrowding Relief	—	—	—	1,000,000,000	1,000,000,000
High Performance Schools	—	—	—	100,000,000	100,000,000
Hardship	1,000,000,000	—	—	—	1,000,000,000
Class-Size Reduction	700,000,000	—	—	—	700,000,000
Critically Overcrowded Schools	—	1,700,000,000	2,440,000,000	—	4,190,000,000
Joint Use	—	50,000,000	50,000,000	29,000,000	129,000,000
Total Bond Funds	$ 6,700,000,000	$11,400,000,000	$10,000,000,000[3]	$ 7,329,000,000	$35,429,000,000

[1] $14.2 million for energy efficiency.

[2] $5.8 for energy efficiency.

[3] $20 million for energy efficiency set aside for new construction and modernization.

[4] No more than $250,000,000 of the sum of the appropriations for new construction and modernization shall be used to fund the smaller learning communities and small high schools.

[5] Up to 10½ percent ($199.5 million) shall be available for purposes of seismic repair, construction, or replacement, pursuant to Education Code, Section 17075.10.

Summary of Deferred Maintenance Allocations (Millions of Dollars)

	1998–99	1999–00	2000–01	2001–02	2002–03	2003–04	2004–05	2005–06	TOTAL
Excess Repayments	$ 29.3	$ 25.7	$ 20.7	$ 18.1	$ 15.6	$ 14.0	$ 13.5	$ 276.4	$ 448.3
Legislation/Other Sources	137.6	143.7	176.1	176.3	208.0	85.5	254.0	8.0	1,289.2
Total	$ 166.9	$ 169.4	$ 196.8	$ 194.4	$ 223.6	$ 99.5	$ 267.5	$ 284.4	$1,737.5
