Re: Joint Unfunded Mandate Test Claim by the County of Orange and  
Various Cities in Orange County Concerning California Water Quality  
Control Board San Diego Region Order No. R9-2009-0002

Enclosed you will find test claims asserting that certain provisions of the Order R9-2009-0002 issued by the California Water Quality Control Board San Diego Region (San Diego RWQCB) on December 16, 2009 (2009 Permit) are unfunded mandates (Test Claims). The 2009 Permit regulates discharges from the municipal separate storm sewer system (MS4) in south Orange County. The County of Orange, Orange County Flood Control District (OCFCD) and the incorporated cities of Orange County within San Diego RWQCB's jurisdiction are permittees under the 2009 Permit (Copermittees). These Test Claims are being filed jointly by a number of the Copermittees, namely the County of Orange, OCFCD and the following cities: City of Dana Point, City of Laguna Hills, City of Laguna Niguel, City of Lake Forest, City of Mission Viejo and City of San Juan Capistrano (Test Claimants).

Enclosed you will find the separate Test Claims of each of the Test Claimants. Because provisions of the 2009 Permit apply to all of the Copermittees and the issues raised in these Test Claims are common to all of the Test Claimants, the Copermittees are filing their Test Claims jointly as authorized by 2 CCR § 1183 (h). A single Narrative Statement in support of the Test Claims has been prepared and enclosed. Enclosed also are the required declarations of each of the Test Claimants which are intended to be in support of the joint Test Claims. The County is the contact for this joint Test Claim.

You will also find enclosed copies of the documentation required to be submitted along with Test Claims, including copies of the 2009 Permit, along with its supporting fact sheet, the previous 2002 Permit, which was renewed and superseded by the 2009 Permit and the statutes, regulations and other authorities cited in the Narrative Statement.

Ms. Heather Halsey  
Executive Director  
Commission on State Mandates  
980 9<sup>th</sup> Street, Suite 300  
Sacramento, CA 95814

Re: California Regional Water Quality Control Board, San Diego  
Region, Order No. R9-2009-0002, 10-TC-11  
Response of Joint Test Claimants to Notice of Incomplete Joint  
Test Claim Filing

Dear Ms. Halsey:

I have been designated as Claimant Representative by all test claimants in the above-referenced Joint Test Claim and am therefore responding on behalf of Joint Test Claimants County of Orange ("County") and the Cities of Dana Point, Laguna Hills, Laguna Niguel, Lake Forest, Mission Viejo and San Juan Capistrano (the "Joint Test Claimants") to the Notice of Incomplete Joint Test Claim Filing of November 18, 2016 ("Notice Letter"), which stated that the original joint test claim filing was incomplete on several grounds.<sup>1</sup>

The Joint Test Claimants were originally informed that their test claim was deemed complete as of July 13, 2011. The Notice Letter, issued more than five years later, required the Joint Test Claimants to expend significant efforts, including locating old financial records and preparing new declarations, test claim forms and revisions to the Narrative Statement. The Joint Test Claimants were thus forced to incur significant, unforeseeable costs to address the issues raised in the Notice Letter or risk having the joint test claim either denied as untimely or rejected for other reasons stated in the Notice

---

<sup>1</sup> Please note that my designation as Claimant Representative supersedes the designation of Julia C. Woo, Esq., Deputy County Counsel, County of Orange, recently made by four Joint Test Claimants.

Ms. Heather Halsey

Page 2

January 6, 2017

Letter. As previously set forth in our letter of December 2, and for the reasons stated therein, which are incorporated herein by reference, the Joint Test Claimants respectfully dispute the basis for the Notice Letter, on grounds of law and equity, and therefore reserve their right to contest the alleged deficiencies identified in the Notice Letter before the Commission.<sup>2</sup>

Notwithstanding such reservation, and subject to it, the Joint Test Claimants submit with this letter the following new or revised documents:

- (a) New Test Claim Forms;
- (b) A revised Section 5 Narrative Statement; and
- (c) New Section 6 Declarations.

As requested in the Notice Letter, the Joint Test Claimants are not re-attaching any of the supporting documentation, including exhibits.

The Notice Letter indicated that to cure the alleged deficiencies in the original test claim, the Joint Test Claimants were to provide:

1. “Evidence of the date and amount of costs *first* incurred as a result of the alleged new activities required under the Order.”
2. “A revised test claim form from each co-claimant.”

---

<sup>2</sup>More specifically, Joint Test Claimants assert for the record that the Commission cannot make a determination that the test claim is now incomplete when Commission staff notified Joint Test Claimants on July 13, 2011 that the filing was complete pursuant to 2 CCR § 1183(g). Pursuant to that regulation, within 10 days after the filing of the test claim on June 30, 2011, the Commission was required to notify “the claimant if the test claim was complete or incomplete and send a copy of these regulations unless a correct copy was previously provided.” The specific items for which a test claim may be deemed incomplete are the same items the Commission noted in its November 18 letter. The Joint Test Claimants submit that by failing to notify the claimants of the specific bases formulating the Commission’s November 18 incompleteness determination within the regulatory 10 day period, coupled with the Commission’s prior determination that the filing was complete, the Commission has waived its authority to challenge the completeness of the filing. The Joint Test Claimants further submit that the doctrine of estoppel would also bar the Commission from requiring Joint Test Claimants to substantively supplement the Joint Test Claim with new evidence and documentation concerning events occurring some 6 to 7 years ago when the claimants were in a superior position to correct any alleged deficiencies in the filing. Moreover, to the extent that the Commission is relying on regulations adopted after the date the Test Claim was filed (June 30, 2011) and the date the Commission issued its Notice of Complete Test Claim Filing (July 13, 2011), the Joint Test Claimants respectfully object.

Ms. Heather Halsey

Page 3

January 6, 2017

3. “Revised written narratives and declarations that provide a detailed description of the costs that are modified by the alleged mandate including the *actual* increased costs incurred by each co-claimant during the fiscal year for which the joint test claim was filed as well as the actual or estimated annual costs that will be incurred by each co-claimant to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the joint test claim was filed. In addition, please provide the statewide cost estimate (in this case the “statewide cost” is the cost for all of the local agency co-permittees, whether named or not, for the alleged new program or higher level of service imposed by the permit at issue) for increased costs to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the joint test claim was filed.”

Notice Letter, page 6 (emphasis in original).

In response to item 1, the Joint Test Claimants have included evidence of the date of costs first incurred in the Declarations (see paragraphs 6 and 7) and also in relevant sections of the Section 5 Narrative Statement. This information establishes that costs were first incurred for the Joint Test Claimants in FY 2009-10 or FY 2010-11, and thus, the timeliness of the Joint Test Claim filing is well established. *See* Cal. Code Regs., tit. 2, 1183.1(c) (“For purposes of claiming based on the date of first incurring costs, ‘within 12 months’ means by June 30 of the fiscal year following the fiscal year in which increased costs were first incurred.”). Additionally, information is provided in each Declaration as to the amount of the costs incurred in response to the mandates in the Permit.

In response to item 2, and notwithstanding the addition of 2 CCR 1183.1 (b) in 2014, which necessitated designation of one claimant representative for “joint” test claimants, the Joint Test Claimants are herewith filing new test claim forms signed in the case of the County, by the Auditor-Controller and in the case of the cities by their respective City Managers. The names, addresses and contact information for these individuals are also set forth in Section 2 of the forms. Additionally, as noted above, I am designated as the Claimant Representative for all Joint Test Claimants in Section 3 of each of the forms.

In response to item 3, as already noted, both the Declarations and the Section 5 Narrative Statement (in revised sections following the description of each mandated activity) state the actual costs incurred in the relevant fiscal years covered by the Joint Test Claim. Also, costs representing the Joint Test Claimants’ best estimate of total statewide costs associated with the Joint Test Claim are set forth in the Section 5 Narrative Statement and are further supported by the Declarations. We also note that while the decision of the Supreme Court in *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5<sup>th</sup> 749 is relevant to the discussion of the Los Angeles County test claim in the Narrative Statement, the decision is not discussed therein.

BURHENN & GEST LLP

Ms. Heather Halsey

Page 4

January 6, 2017

Instead, the Joint Test Claimants refer the Commission to their supplemental brief filed on October 21, 2016 and to the supplemental brief filed October 28, 2016 by the City of Dana Point.

The Joint Test Claimants wish to thank you for your courtesy in extending the deadline for the submission of this response and also for the further explanations provided in your letter of December 8. While the Joint Test Claimants are responding by the January 6 deadline, the Joint Test Claimants respectfully submit that this deadline is not jurisdictional, both because the regulatory authority cited in the Notice Letter applies only to the initial determination of test claim completeness and because the Executive Director has discretion to extend the 30-day time period within which to cure a returned test claim and still allow the test claimant to preserve the original claim filing date.

Nevertheless, we believe that the information and evidence submitted herewith fully addresses the issues identified in the Notice Letter. If there are any further concerns or issues regarding these matters, we request a prompt response from your staff concerning them.

Thank you for your consideration of these matters.

Very truly yours,

David W. Burhenn

*Please identify all code sections (include statutes, chapters, and bill numbers) (e.g., Penal Code Section 2045, Statutes 2004, Chapter 54 [AB 290]), regulations (include register number and effective date), and executive orders (include effective date) that impose the alleged mandate .*

California Regional Water Quality Control Board, San Diego Region, Order No. R9-2009-0002

*Copies of all statutes and executive orders cited are attached.*

Sections 5, 6, and 7 are attached as follows:

**5. Written Narrative:** pages \_\_\_\_ to \_\_\_\_.

**6. Declarations:** pages \_\_\_\_ to \_\_\_\_.

**7. Documentation:** pages \_\_\_\_ to \_\_\_\_.

Sections 5, 6, and 7 should be answered on separate sheets of plain 8-1/2 x 11 paper. Each sheet should include the test claim name, the claimant, the section number, and heading at the top of each page.

## 5. WRITTEN NARRATIVE

Under the heading "5. Written Narrative," please identify the specific sections of statutes or executive orders alleged to contain a mandate.

Include a statement that actual and/or estimated costs resulting from the alleged mandate exceeds one thousand dollars (\$1,000), and include all of the following elements for each statute or executive order alleged:

- (A) A detailed description of the new activities and costs that arise from the mandate.
- (B) A detailed description of existing activities and costs that are modified by the mandate.
- (C) The actual increased costs incurred by the claimant during the fiscal year for which the claim was filed to implement the alleged mandate.
- (D) The actual or estimated annual costs that will be incurred by the claimant to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (E) A statewide cost estimate of increased costs that all local agencies or school districts will incur to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (F) Identification of all of the following funding sources available for this program:
  - (i) Dedicated state funds
  - (ii) Dedicated federal funds
  - (iii) Other nonlocal agency funds
  - (iv) The local agency's general purpose funds
  - (v) Fee authority to offset costs
- (G) Identification of prior mandate determinations made by the Board of Control or the Commission on State Mandates that may be related to the alleged mandate.
- (H) Identification of a legislatively determined mandate pursuant to Government Code section 17573 that is on the same statute or executive order.

## 6. DECLARATIONS

Under the heading "6. Declarations," support the written narrative with declarations that:

- (A) declare actual or estimated increased costs that will be incurred by the claimant to implement the alleged mandate;
- (B) identify all local, state, or federal funds, and fee authority that may be used to offset the increased costs that will be incurred by the claimant to implement the alleged mandate, including direct and indirect costs;
- (C) describe new activities performed to implement specified provisions of the new statute or executive order alleged to impose a reimbursable state-mandated program (specific references shall be made to chapters, articles, sections, or page numbers alleged to impose a reimbursable state-mandated program);
- (D) If applicable, describe the period of reimbursement and payments received for full reimbursement of costs for a legislatively determined mandate pursuant to Section 17573, and the authority to file a test claim pursuant to paragraph (1) of Section 17574(c).
- (E) are signed under penalty of perjury, based on the declarant's personal knowledge, information or belief, by persons who are authorized and competent to do so.

## 7. DOCUMENTATION

Under the heading "7. Documentation," support the written narrative with copies of all of the following:

- (A) the test claim statute that includes the bill number alleged to impose or impact a mandate; and/or
- (B) the executive order, identified by its effective date, alleged to impose or impact a mandate; and
- (C) relevant portions of state constitutional provisions, federal statutes, and executive orders that may impact the alleged mandate; and
- (D) administrative decisions and court decisions cited in the narrative. Published court decisions arising from a state mandate determination by the Board of Control or the Commission are exempt from this requirement; and
- (E) statutes, chapters of original legislatively determined mandate and any amendments.

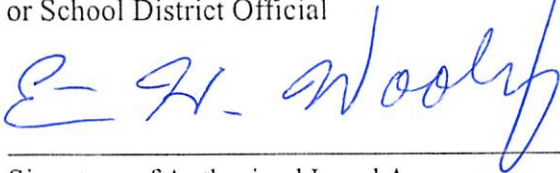

8. CLAIM CERTIFICATION

*Read, sign, and date this section and insert at the end of the test claim submission.\**

This test claim alleges the existence of a reimbursable state-mandated program within the meaning of article XIII B, section 6 of the California Constitution and Government Code section 17514. I hereby declare, under penalty of perjury under the laws of the State of California, that the information in this test claim submission is true and complete to the best of my own knowledge or information or belief.

**5. Written Narrative:** pages \_\_\_\_\_ to \_\_\_\_\_.

**6. Declarations:** pages \_\_\_\_\_ to \_\_\_\_\_.

**7. Documentation:** pages \_\_\_\_\_ to \_\_\_\_\_.

Sections 5, 6, and 7 should be answered on separate sheets of plain 8-1/2 x 11 paper. Each sheet should include the test claim name, the claimant, the section number, and heading at the top of each page.

## 5. WRITTEN NARRATIVE

Under the heading "5. Written Narrative," please identify the specific sections of statutes or executive orders alleged to contain a mandate.

Include a statement that actual and/or estimated costs resulting from the alleged mandate exceeds one thousand dollars (\$1,000), and include all of the following elements for each statute or executive order alleged:

- (A) A detailed description of the new activities and costs that arise from the mandate.
- (B) A detailed description of existing activities and costs that are modified by the mandate.
- (C) The actual increased costs incurred by the claimant during the fiscal year for which the claim was filed to implement the alleged mandate.
- (D) The actual or estimated annual costs that will be incurred by the claimant to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (E) A statewide cost estimate of increased costs that all local agencies or school districts will incur to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (F) Identification of all of the following funding sources available for this program:
  - (i) Dedicated state funds
  - (ii) Dedicated federal funds
  - (iii) Other nonlocal agency funds
  - (iv) The local agency's general purpose funds
  - (v) Fee authority to offset costs
- (G) Identification of prior mandate determinations made by the Board of Control or the Commission on State Mandates that may be related to the alleged mandate.
- (H) Identification of a legislatively determined mandate pursuant to Government Code section 17573 that is on the same statute or executive order.

## 6. DECLARATIONS

Under the heading "6. Declarations," support the written narrative with declarations that:

- (A) declare actual or estimated increased costs that will be incurred by the claimant to implement the alleged mandate;
- (B) identify all local, state, or federal funds, and fee authority that may be used to offset the increased costs that will be incurred by the claimant to implement the alleged mandate, including direct and indirect costs;
- (C) describe new activities performed to implement specified provisions of the new statute or executive order alleged to impose a reimbursable state-mandated program (specific references shall be made to chapters, articles, sections, or page numbers alleged to impose a reimbursable state-mandated program);
- (D) If applicable, describe the period of reimbursement and payments received for full reimbursement of costs for a legislatively determined mandate pursuant to Section 17573, and the authority to file a test claim pursuant to paragraph (1) of Section 17574(c).
- (E) are signed under penalty of perjury, based on the declarant's personal knowledge, information or belief, by persons who are authorized and competent to do so.

## 7. DOCUMENTATION

Under the heading "7. Documentation," support the written narrative with copies of all of the following:

- (A) the test claim statute that includes the bill number alleged to impose or impact a mandate; and/or
- (B) the executive order, identified by its effective date, alleged to impose or impact a mandate; and
- (C) relevant portions of state constitutional provisions, federal statutes, and executive orders that may impact the alleged mandate; and
- (D) administrative decisions and court decisions cited in the narrative. Published court decisions arising from a state mandate determination by the Board of Control or the Commission are exempt from this requirement; and
- (E) statutes, chapters of original legislatively determined mandate and any amendments.

## 8. CLAIM CERTIFICATION

*Read, sign, and date this section and insert at the end of the test claim submission. \**

This test claim alleges the existence of a reimbursable state-mandated program within the meaning of article XIII B, section 6 of the California Constitution and Government Code section 17514. I hereby declare, under penalty of perjury under the laws of the State of California, that the information in this test claim submission is true and complete to the best of my own knowledge or information or belief.

## 4. TEST CLAIM STATUTES OR EXECUTIVE ORDERS CITED

Please identify all code sections (include statutes, chapters, and bill numbers) (e.g., Penal Code Section 2045, Statutes 2004, Chapter 54 [AB 290]), regulations (include register number and effective date), and executive orders (include effective date) that impose the alleged mandate.

California Regional Water Quality  
Control Board, San Diego Region,  
Order No. R9-2009-0002

Copies of all statutes and executive orders cited are attached.

Sections 5, 6, and 7 are attached as follows:

- 5. Written Narrative:** pages \_\_\_\_ to \_\_\_\_.  
**6. Declarations:** pages \_\_\_\_ to \_\_\_\_.  
**7. Documentation:** pages \_\_\_\_ to \_\_\_\_.

Sections 5, 6, and 7 should be answered on separate sheets of plain 8-1/2 x 11 paper. Each sheet should include the test claim name, the claimant, the section number, and heading at the top of each page.

## 5. WRITTEN NARRATIVE

Under the heading "5. Written Narrative," please identify the specific sections of statutes or executive orders alleged to contain a mandate.

Include a statement that actual and/or estimated costs resulting from the alleged mandate exceeds one thousand dollars (\$1,000), and include all of the following elements for each statute or executive order alleged:

- (A) A detailed description of the new activities and costs that arise from the mandate.
- (B) A detailed description of existing activities and costs that are modified by the mandate.
- (C) The actual increased costs incurred by the claimant during the fiscal year for which the claim was filed to implement the alleged mandate.
- (D) The actual or estimated annual costs that will be incurred by the claimant to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (E) A statewide cost estimate of increased costs that all local agencies or school districts will incur to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (F) Identification of all of the following funding sources available for this program:
  - (i) Dedicated state funds
  - (ii) Dedicated federal funds
  - (iii) Other nonlocal agency funds
  - (iv) The local agency's general purpose funds
  - (v) Fee authority to offset costs
- (G) Identification of prior mandate determinations made by the Board of Control or the Commission on State Mandates that may be related to the alleged mandate.
- (H) Identification of a legislatively determined mandate pursuant to Government Code section 17573 that is on the same statute or executive order.

## 6. DECLARATIONS

Under the heading "6. Declarations," support the written narrative with declarations that:

- (A) declare actual or estimated increased costs that will be incurred by the claimant to implement the alleged mandate;
- (B) identify all local, state, or federal funds, and fee authority that may be used to offset the increased costs that will be incurred by the claimant to implement the alleged mandate, including direct and indirect costs;
- (C) describe new activities performed to implement specified provisions of the new statute or executive order alleged to impose a reimbursable state-mandated program (specific references shall be made to chapters, articles, sections, or page numbers alleged to impose a reimbursable state-mandated program);
- (D) If applicable, describe the period of reimbursement and payments received for full reimbursement of costs for a legislatively determined mandate pursuant to Section 17573, and the authority to file a test claim pursuant to paragraph (1) of Section 17574(c).
- (E) are signed under penalty of perjury, based on the declarant's personal knowledge, information or belief, by persons who are authorized and competent to do so.

## 7. DOCUMENTATION

Under the heading "7. Documentation," support the written narrative with copies of all of the following:

- (A) the test claim statute that includes the bill number alleged to impose or impact a mandate; and/or
- (B) the executive order, identified by its effective date, alleged to impose or impact a mandate; and
- (C) relevant portions of state constitutional provisions, federal statutes, and executive orders that may impact the alleged mandate; and
- (D) administrative decisions and court decisions cited in the narrative. Published court decisions arising from a state mandate determination by the Board of Control or the Commission are exempt from this requirement; and
- (E) statutes, chapters of original legislatively determined mandate and any amendments.

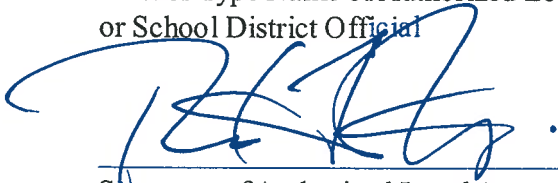

**8. CLAIM CERTIFICATION**

- (E) A statewide cost estimate of increased costs that all local agencies or school districts will incur to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (F) Identification of all of the following funding sources available for this program:
  - (i) Dedicated state funds
  - (ii) Dedicated federal funds
  - (iii) Other nonlocal agency funds
  - (iv) The local agency's general purpose funds
  - (v) Fee authority to offset costs
- (G) Identification of prior mandate determinations made by the Board of Control or the Commission on State Mandates that may be related to the alleged mandate.
- (H) Identification of a legislatively determined mandate pursuant to Government Code section 17573 that is on the same statute or executive order.

## 6. DECLARATIONS

Under the heading "6. Declarations," support the written narrative with declarations that:

- (A) declare actual or estimated increased costs that will be incurred by the claimant to implement the alleged mandate;
- (B) identify all local, state, or federal funds, and fee authority that may be used to offset the increased costs that will be incurred by the claimant to implement the alleged mandate, including direct and indirect costs;
- (C) describe new activities performed to implement specified provisions of the new statute or executive order alleged to impose a reimbursable state-mandated program (specific references shall be made to chapters, articles, sections, or page numbers alleged to impose a reimbursable state-mandated program);
- (D) If applicable, describe the period of reimbursement and payments received for full reimbursement of costs for a legislatively determined mandate pursuant to Section 17573, and the authority to file a test claim pursuant to paragraph (1) of Section 17574(c).
- (E) are signed under penalty of perjury, based on the declarant's personal knowledge, information or belief, by persons who are authorized and competent to do so.

## 7. DOCUMENTATION

Under the heading "7. Documentation," support the written narrative with copies of all of the following:

- (A) the test claim statute that includes the bill number alleged to impose or impact a mandate; and/or
- (B) the executive order, identified by its effective date, alleged to impose or impact a mandate; and
- (C) relevant portions of state constitutional provisions, federal statutes, and executive orders that may impact the alleged mandate; and
- (D) administrative decisions and court decisions cited in the narrative. Published court decisions arising from a state mandate determination by the Board of Control or the Commission are exempt from this requirement; and
- (E) statutes, chapters of original legislatively determined mandate and any amendments.

**8. CLAIM CERTIFICATION**

*Read, sign, and date this section and insert at the end of the test claim submission.\**

This test claim alleges the existence of a reimbursable state-mandated program within the meaning of article XIII B, section 6 of the California Constitution and Government Code section 17514. I hereby declare, under penalty of perjury under the laws of the State of California, that the information in this test claim submission is true and complete to the best of my own knowledge or information or belief.

## **NARRATIVE STATEMENT IN SUPPORT OF TEST CLAIM**

### **I. INTRODUCTION**

On December 16, 2009, the California Water Quality Control Board, San Diego Region (“San Diego RWQCB” or “Regional Board”) issued Order No. R9-2009-0002, National Pollutant Discharge Elimination System (“NPDES”) NPDES No. CAS0108740 (hereinafter the “2009 Permit” or “Permit”) regulating discharges from the municipal separate storm sewer systems (“MS4s”) in south Orange County, California.<sup>1</sup> The 2009 Permit reissued NPDES Permit No. CAS0108740, which was first adopted by the Regional Board on July 16, 1990 (Order No. 90-38), and then reissued on August 8, 1996 (Order No. 96-03) and February 13, 2002 (Order No. R9-2002-01). The County of Orange, Orange County Flood Control District and the cities in Orange County within the jurisdiction of the San Diego RWQCB are all permittees under the 2009 Permit (“Copermittees”).

The 2009 Permit contains a number of unfunded State mandates for which the Permittees<sup>2</sup> are entitled to reimbursement under Article XIII B section 6 of the California Constitution. This Test Claim identifies the activities that are unfunded mandates and sets forth the basis for reimbursement for such activities. These new unfunded programs and activities are described in detail below, but are generally described as follows:

- A. New requirements involving “Non-Storm Water Discharges” as set forth in Section B of the 2009 Permit.
- B. New Total Maximum Daily Loads and Water Quality Based Effluent Limitation requirements as set forth in Section I of the 2009 Permit.
- C. New requirements involving implementation of non-storm water dry weather numeric action levels (“NAL”) as set forth in Section C of the 2009 Permit.
- D. New requirements involving implementation of storm water numeric action levels (“SAL”) as set forth in Section D of the 2009 Permit.
- E. New “Low Impact Development” (“LID”) and “Hydromodification” requirements including a Hydromodification Management Plan (“HMP”) as set forth in Sections F.1.d and F.1.h of the 2009 Permit.
- F. New reporting requirements including an annual assessment of the effectiveness of the Jurisdictional Runoff Management Program and a work plan demonstrating

---

<sup>1</sup> A copy of the 2009 Permit is included under Section 7 - Documentation to these Test Claims.

<sup>2</sup> The Permittees are the cities of Aliso Viejo, Dana Point, Laguna Beach, Laguna Hills, Laguna Niguel, Laguna Woods, Lake Forest, Mission Viejo, Rancho Santa Margarita, San Clemente, San Juan Capistrano, the County of Orange, and the Orange County Flood Control District.

a responsive and adaptive approach for the use of resources as set forth in Section J of the 2009 Permit.

- G. New reporting requirements related to the Watershed Workplan report as set forth in Section K.1.b of the 2009 Permit.
- H. New reporting requirements, including describing all activities a Copermittee will undertake pursuant to the 2009 Permit and an individual Jurisdictional Runoff Management Report as set forth in Sections K.1.a and K.3 of the 2009 Permit.
- I. New requirements mandating the use of geographical information system (GIS) maps.
- J. New retrofitting requirements involving developing and implementing a retrofitting program for existing development as set forth in Section F.3.d of the 2009 Permit.
- K. New BMP maintenance tracking requirements in Section F.1.f of the 2009 Permit.

**A. STATEMENT OF INTEREST OF JOINT TEST CLAIMANTS**

This test claim is being filed by the County of Orange (“County”) and the Cities of Dana Point, Laguna Hills, Laguna Niguel, Lake Forest, Mission Viejo and San Juan Capistrano (collectively, “Joint Test Claimants”). The Joint Test Claimants are filing this Test Claim jointly and, pursuant to 2 Cal. Code Reg. § 1183.1(g), attest to the following:

- 1. The Joint Test Claimants allege state-mandated costs resulting from the same Executive Order, i.e., the 2009 Permit;
- 2. The Joint Test Claimants agree on all issues of the Test Claim;
- 3. The Joint Test Claimants have designated one contact person to act as a resource for information regarding the test claim in Section 3 of their Test Claim Forms; and
- 4. All Test Claim forms have been executed by either the Auditor-Controller (on behalf of the County) or by City Managers (or equivalent personnel) of the city Joint Test Claimants.

**B. STATEMENT OF ACTUAL AND/OR ESTIMATED COSTS EXCEEDING \$1,000**

The Joint Test Claimants further state that, as set forth below and in the attached Section 6 Declarations filed herewith in support, the actual and/or estimated costs from the state mandates set forth in this Test Claim exceed \$1,000 for each of the Joint Test Claimants. This Narrative Statement sets forth specific amounts expended by the Joint Test Claimants as determined from the perusal of pertinent records and as disclosed in the Section 6 Declarations filed herewith, including in the Declaration (Second) of Chris Crompton. The Joint Test Claimants respectfully reserve the right to modify such amounts when or if additional information is received.

### C. THE TEST CLAIM IS TIMELY FILED

As set forth in the Declarations attached in Section 6, Paragraphs 6(a)-(i) and 7, the Joint Test Claimants first began incurring increased costs under the 2009 Permit in Fiscal Year (FY) 2009-10, which commenced on July 1, 2009.

The 2009 Permit was adopted by the San Diego RWQCB on December 16, 2009, within FY 2009-10. This is a fact which may be administratively noticed by the Commission, pursuant to Evidence Code §452(c) (records of executive bodies, such as the RWQCB). Thus, any costs incurred pursuant to such executive order (the 2009 Permit) could not have been incurred prior to that date. Nevertheless, as set forth above, the Joint Test Claimants are presenting evidence of the date of first incurrence of costs within FY 2009-10. The Commission's regulations provide that a test claim must be filed with the Commission "not later than 12 months following the effective date of a statute or executive order, or within 12 months of first incurring increased costs as a result of a statute or executive order, whichever is later. For purposes of claiming based on the date of first incurring costs, 'within 12 months' means by June 30 of the fiscal year following the fiscal year in which increased costs were first incurred by the test claimant." Because the Joint Test Claimants first incurred such costs during FY 2009-10 and this Test Claim was filed on June 30, 2011, prior to the end of FY 2010-11, the Test Claim is, under the Commission's regulations, timely filed.<sup>3</sup>

## II. PROGRAM BACKGROUND

California adopted the Porter Cologne Water Quality Control Act ("Porter-Cologne") in 1969, three years prior to the adoption of the federal Clean Water Act (the "CWA") and eighteen years before federal law expressly regulated MS4s. When Congress enacted the CWA, it modeled the Act in part on Porter-Cologne, but scaled back many requirements to meet the needs of a national program. As a result, the comprehensive statewide program enacted through Porter-Cologne exceeds the more limited regulatory scope of the CWA, including the CWA's National Pollutant Discharge Elimination System ("NPDES") program.

One primary difference between Porter-Cologne and the CWA is the role Congress intended the CWA to play in the state regulatory scheme. When adopting the CWA, Congress preserved the states' ability to impose more stringent water quality controls, allowing the Act to be a federal baseline for water quality.<sup>4</sup> California quickly elected to incorporate the CWA's NPDES program into its existing regulatory structure, becoming the first state in the nation authorized to issue NPDES permits. The California Legislature ("Legislature") determined that assuming the responsibility was "in the interest of the people of the state, *in order to avoid direct regulation by the federal government of persons already subject to state law* pursuant to this division . . . ."<sup>5</sup>

---

<sup>3</sup> 2 Cal. Code Reg. § 1183.1(c).

<sup>4</sup> Section 510 of the CWA, which is codified at Title 33 U.S.C. § 1370, acknowledges the states' authority to adopt or enforce standards or limitations regarding the discharge of pollutants provided such standards are not less stringent than the "effluent limitation, or other limitation, effluent standard, prohibition pretreatment standard or standard of performance" under the CWA.

<sup>5</sup> Cal Water Code § 13370(c) [emphasis added].

## A. FEDERAL LAW

The principal federal law regulating water quality is the CWA, found at 33 U.S.C. § 1251 *et seq.* The CWA, was enacted in 1972, and amended in 1987 to implement a permitting system for all discharges of pollutants from point sources to waters of the United States. In 1987, the CWA was amended to make clear that such discharges include discharges from MS4s. Following the 1987 amendments, NPDES permits are required for discharges from MS4s serving a population of more than 100,000 or from systems that the United States Environmental Protection Agency (“US EPA”) or the state determine contribute to a violation of a water quality standard or represent a significant contribution of pollutants to waters of the United States.<sup>6</sup> Pursuant to the CWA, the MS4 permits:

- (i) may be issued on a system or jurisdiction-wide basis;
- (ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and
- (iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.<sup>7</sup>

In 1990, US EPA issued regulations to implement Phase 1 of the NPDES program, defining which entities need to apply for permits and the information to include in the permit application. The permit application must propose management programs that the permitting authority will consider in adopting the permit including the following:

[A] comprehensive planning process which involves public participation and where necessary intergovernmental coordination, to reduce the discharge of pollutants to the maximum extent practicable using management practices, control techniques and system, design and engineering methods, and such other provisions which are appropriate.<sup>8</sup>

---

<sup>6</sup> 33 U.S.C. § 1342(p)(2) requires NPDES permits for the following discharges:

(C) A discharge from a municipal separate storm sewer system serving a population of 250,000 or more.

(D) A discharge from a municipal separate storm sewer system serving a population of 100,000 or more but less than 250,000.

(E) A discharge for which the Administrator or the State, as the case may be, determines that the stormwater discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

<sup>7</sup> 33 U.S.C. § 1342(p)(3)(B).

<sup>8</sup> 40 Code of Federal Regulations section 122.26(d)(2)(iv).

Under the CWA, each state is free to enforce its own water quality laws so long as its effluent limitations<sup>9</sup> are not less stringent than those set out in the CWA.<sup>10</sup> The California Supreme Court described the NPDES program as follows:

Part of the federal Clean Water Act is the National Pollutant Discharge Elimination System (NPDES), “[t]he primary means” for enforcing effluent limitations and standards under the Clean Water Act. (*Arkansas v. Oklahoma, supra*, 503 U.S. at p. 101, 112 S.Ct. 1046.) The NPDES sets out the conditions under which the federal EPA or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (33 U.S.C. § 1342(a) & (b).)<sup>11</sup>

## **B. CALIFORNIA LAW**

The CWA requires the EPA to issue NPDES permits to MS4 dischargers, but allows the EPA to delegate that authority to the states.<sup>12</sup> In California, the Legislature assigned that responsibility to the State Water Resources Control Board (“State Board”), and the individual Regional Water Quality Control Boards (“Regional Boards”). The permit requirements are subject to the same federal regulations, however, because the state of California has broader authority to regulate discharges than the EPA would under the CWA, requirements in NPDES permits issued by the State and Regional Boards frequently exceed the requirements of federal law.

In *City of Burbank v. State Water Resources Control Board* (2005) 35 Ca1.4th 613, the California Supreme Court expressly recognized that NPDES permits issued by the State and Regional Boards can exceed the requirements of federal law, describing the statutory scheme as follows:

In California, the controlling law is the Porter-Cologne Water Quality Control Act (Porter-Cologne Act), which was enacted in 1969. (Wat. Code, § 13000 *et seq.*, added by Stats.1969, ch. 482, § 18, p. 1051.) Its goal is “to attain the highest water quality which is reasonable, considering all demands being made and to be made on those waters and the total values involved, beneficial and detrimental, economic and social, tangible and intangible.” (§ 13000.) The task of accomplishing this belongs to the State Water Resources Control Board (State Board) and the nine Regional Water Quality Control Boards; together the State Board and the regional

---

<sup>9</sup> *Effluent limitation* means any restriction imposed by the Director on quantities, discharge rates, and concentrations of “pollutants” which are “discharged” from “point sources” into “waters of the United States,” the waters of the “contiguous zone,” or the ocean. (40 C.F.R. § 122.2.)

<sup>10</sup> 33 U.S.C. § 1370.

<sup>11</sup> *City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613, 621; Cal. Water Code, § 13263.

<sup>12</sup> Section 510 of the CWA, which is codified at Title 33 U.S.C. § 1370, acknowledges the states’ authority to adopt or enforce standards or limitations regarding the discharge of pollutants provided such standards are not less stringent than the “effluent limitation, or other limitation, effluent standard, prohibition pretreatment standard or standard of performance” under the CWA.

boards comprise “the principal state agencies with primary responsibility for the coordination and control of water quality. (§ 13001.)

Whereas the State Board establishes statewide policy for water quality control (§ 13140), the regional boards “formulate and adopt water quality control plans for all areas within [a] region” (§ 13240). The regional boards’ water quality plans, called “basin plans,” must address the beneficial uses to be protected as well as water quality objectives, and they must establish a program of implementation. (§ 13050, subd. (j).)<sup>13</sup>

With regard to the baseline role that the CWA plays in California water quality law, the Court held:

The federal Clean Water Act reserves to the states significant aspects of water quality policy (33 U.S.C. § 1251(b)), and it specifically grants the states authority to “enforce any effluent limitation” that is not “*less stringent*” than the federal standard (33 U.S.C. § 1370, italics added). It does not prescribe or restrict the factors that a state may consider when exercising this reserved authority. . .<sup>14</sup>

Porter-Cologne therefore provides California with broader authority to regulate water quality than it would have if it were operating exclusively under the CWA. The State’s authority under Porter-Cologne extends to non-point sources of pollution such as urban and agricultural runoff, discharges to ground water and discharges to land overlying ground water. It not only establishes broader regulatory authority than the CWA, but also extends that broader regulatory authority to a larger class of waters. It is under this authority that the State and Regional Boards act when issuing NPDES permits that exceed the minimum requirements set forth in federal law, namely Title 40, section 122.26 of the Code of Federal Regulations.

The courts, the State Board and the Regional Boards have repeatedly acknowledged that many aspects of NPDES permits issued in California exceed the minimum requirements of the CWA. In a decision on the merits of the 2001 NPDES permit for San Diego County, the State Board acknowledged that the since NPDES permits are adopted as waste discharge requirements in California, they can more broadly protect “waters of the state,” rather than being limited to “waters of the United States.”<sup>15</sup> As the State Board has expressed it, “the inclusion of ‘waters of the state’ allows the protection of groundwater, which is generally not considered to be ‘waters of the United States.’”<sup>16</sup>

---

<sup>13</sup> *City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613, 619.

<sup>14</sup> *Id.* at pp. 627-628.

<sup>15</sup> *In Re Building Industry Association of San Diego County and Western States Petroleum Association*, State Board Order WQ 2001-15.

<sup>16</sup> *Id.*

The Regional Boards have also acknowledged in official documents that many of the requirements of MS4 permits exceed the requirements of federal law and are based, therefore, on the broader authority of Porter-Cologne. For example, in a December 13, 2000 staff report regarding the San Diego Regional Water Quality Control Board's draft 2001 permit, it was found that 40% of the draft permit requirements "exceed the federal regulations" because they are either more numerous, more specific/detailed, or more stringent than the requirements in the regulations.<sup>17</sup>

In *Burbank v. State Board*, *supra*, 35 Cal.App.4th 613, the California Supreme Court acknowledged that NPDES permits may contain requirements that exceed federal CWA, and held that to the extent such provisions are not required by federal law, the State and Regional Boards are required to consider state law restrictions on agency action.<sup>18</sup> Implicit in the Court's decision is the requirement that orders issued by the State and Regional Boards are subject to State Constitutional restrictions, including those on funding set forth in Article XIII B section 6 of the California Constitution.

In a decision issued by California Court of Appeal in *Building Industry Association of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866, the Appellate Court specifically considered whether permit terms in an MS4 Permit issued by the San Diego Regional Board (for San Diego County and the Cities therein) involving compliance with numeric effluent limits, were either "authorized" or "required" by the CWA. The Court held that: "it is well settled that the Clean Water Act authorizes states to impose water quality controls that are more stringent than are required under federal law."<sup>19</sup> In short, the Court in *BIA v. State Board* found that the San Diego Regional Board had the "discretion" to impose certain permit terms that were not "required" by the CWA. (*Id.* at 886 ["That provision gives the EPA *discretion* to determine what pollutant controls are appropriate," *citing Defenders of Wildlife v. Browner* (9th Cir. 1999) 191 F.3d 1159, 1167-67.])

### III. STATE MANDATE LAW

Article XIII B section 6 of the California Constitution requires that the Legislature provide a subvention of funds to local agencies any time the Legislature or a state agency requires the local agency to implement a new program, or provide a higher level of service under an existing program. Article XIII B section 6 states in relevant part:

Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local governments for the cost of such program or increased level of service . . . .

The purpose of Section 6 "is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are 'ill equipped' to assume increased financial responsibilities because of the taxing and spending limitations that articles XIII

<sup>19</sup> *Id.* at 881.

A and XIII B impose.”<sup>20</sup> The section “was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues.”<sup>21</sup> In order to implement Section 6, the Legislature enacted a comprehensive administrative scheme to define and pay mandate claims.<sup>22</sup> Under this scheme, the Legislature established the parameters regarding what constitutes a state mandated cost, defining “Costs mandated by the state” to include:

any increased costs which a local agency ... is required to incur after July 1, 1980, as a result of any statute enacted on or after January 1, 1975, or any executive order implementing any statute enacted on or after January 1, 1975, which mandates a new program or higher level of service of an existing program within the meaning of Section 6 of Article XIII B of the California Constitution.<sup>23</sup>

Government Code section 17556 identifies seven exceptions to the rule requiring reimbursement for state mandated costs. The exceptions are as follows:

- (a) The claim is submitted by a local agency . . . that requested legislative authority for that local agency . . . to implement the program specified in the statute, and that statute imposes costs upon that local agency or school district requesting the legislative authority. . . .
- (b) The statute or executive order affirmed for the state a mandate that had been declared existing law or regulation by action of the courts.
- (c) The statute or executive order imposes a requirement that is mandated by a federal law or regulation and results in costs mandated by the federal government, unless the statute or executive order mandates costs that exceed the mandate in that federal law or regulation. . . .
- (d) The local agency . . . has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.
- (e) The statute, executive order, or an appropriation in a Budget Act or other bill provides for offsetting savings to local agencies . . . that result in no net costs to the local agencies or . . . , or includes additional revenue that was specifically

<sup>22</sup> Cal. Gov. Code §§ 17500, *et seq.*; *Kinlaw v. State of California* (1991) 54 Cal.3d 326, 331, 333 [statute establishes “procedure by which to implement and enforce section 6”].

<sup>23</sup> Cal. Gov. Code § 17514.

intended to fund the costs of the state mandate in an amount sufficient to fund the cost of the state mandate.

- (f) The statute or executive order imposes duties that are necessary to implement, reasonably within the scope of, or expressly included in, a ballot measure approved by the voters in a statewide or local election.
- (g) The statute created a new crime or infraction, eliminated a crime or infraction, or changed the penalty for a crime or infraction, but only for that portion of the statute relating directly to the enforcement of the crime or infraction.

When a new program or level of service is in part federally required, courts have held that the authority to impose a requirement does not equate to a direct order or mandate to impose the requirement. This principle was expressly recognized in *Long Beach Unified School Dist. v. State of California*, (1990) 225 Cal.App.3d 155. In that case, the court found that an executive order that required school districts to take specific steps to measure and address racial segregation in local public schools constituted a reimbursable mandate to the extent the order's requirements exceeded federal constitutional and case law requirements by mandating school districts to undertake defined remedial actions and measures that were merely advisory under the prior governing law.<sup>24</sup> There was no question that the State had the authority to impose the challenged requirement, and yet the authority to impose the requirement did not equate to federal mandate.

The Commission's decisions on other municipal NPDES permits have likewise recognized that the authority to impose a requirement does not equate to a federal mandate. In its decision on Test Claim 07-TC-09, regarding the San Diego County municipal NPDES permit the Commission addressed this issue in the context of the United States Supreme Court's decision in *P.U.D. No. 1 v. Washington Department of Ecology* (1994) 511 U.S. 700. The Commission held:

Staff agrees with claimants about the applicability of the P.U.D. case, which determined whether the state of Washington's environmental agency properly conditioned a permit for a federal hydroelectric project on the maintenance of specific minimum stream flows to protect salmon and steelhead runs. The U.S. Supreme Court determined that Washington could do so, but the decision was based on section 401 of the Clean Water Act, which involves certifications and wetlands. ***Even if the decision could be applied to section 402 NPDES permits, it merely recognized state authority to regulate flows. The issue here is not whether the state has authority to regulate flows, but whether a federal mandate requires it.*** This was not addressed in the P.U.D. decision.

Overall, there is nothing in the federal regulations that requires a municipality to adopt or implement a hydromodification plan. Thus,

---

<sup>24</sup> *Long Beach Unified School Dist. v. State of California, supra*, at p. 173.

the HMP requirement in the permit “exceed[s] the mandate in that federal law or regulation.” As in *Long Beach Unified School Dist. v. State of California*, the permit requires specific actions, i.e., required acts that go beyond the requirements of federal law. In adopting these permit provisions, the state has freely chosen to impose these requirements. Thus, staff finds that part D.1.g. of the permit is not a federal mandate.<sup>25</sup>

None of the challenged programs in the 2009 Permit are specifically required by the CWA or its implementing regulations, yet the Permit imposes new requirements on the Permittees that exceed the requirements of federal law, and that are unique to the local government entities such as the Permittees.<sup>26</sup> The 2009 Permit therefore represents a state mandate for which the Permittees are entitled to reimbursement pursuant to Article XIII B section 6 of the California Constitution.

#### **IV. STATE MANDATED ACTIVITIES**

##### **A. NEW REQUIREMENTS INVOLVING “NON-STORM WATER DISCHARGES” AS SET FORTH IN SECTION B OF THE 2009 PERMIT ARE UNFUNDED STATE MANDATES**

###### **1. Challenged Program Requirement**

Section B.2 (Non-Storm Water Discharges) of the 2009 Permit provides the following list of non-storm water discharges that are **not** prohibited from being discharged into the MS4:

- a) diverted stream flows;
- b) rising ground waters;
- c) uncontaminated ground water filtration to MS4s;
- d) uncontaminated pumped ground water;
- e) foundation drains;
- f) springs;
- g) water from crawl space pumps;
- h) footing drains;
- i) air conditioner condensation;

---

<sup>25</sup> Test Claim 07-TC-09, *Discharge of Stormwater Runoff – Order No. R9-2007-0001*, 45 [internal citations omitted].

<sup>26</sup> Orders issued by any Regional Water Board pursuant to Division 7 of the California Water Code (commencing at section 13000) come within the definition of “executive order”. *County of Los Angeles v. Commission on State Mandates* (2007) 150 Cal.App.4th 898, 920.

- j) flows from riparian habitats and wetlands;
- k) water line flushing;
- l) discharges from potable water sources not subject to NPDES Permit No. C AG679001, other than water main breaks;
- m) individual residential car washing; and
- n) dechlorinated swimming pool discharges.<sup>27</sup>

The 2009 Permit noticeably removes three types of non-storm water discharges from the 2002 Permit's list of exempted discharges: **landscape irrigation, irrigation water and lawn watering**. The removal of these three types of non-storm water discharges from the list of exempted discharges means that the Copermittees are now required to prohibit all discharges entering the MS4 from "landscape irrigation," irrigation water" and "lawn watering."

## 2. Requirements of Federal Law

Section B.2 of the 2009 Permit removes landscape irrigation, irrigation water and lawn watering from the list of exempted non-stormwater discharges that were in the 2002 Permit. The Regional Board provides no legal justification or authority for requiring the Copermittee to impose such an outright prohibition on all such irrigation waters. Neither the 2009 Permit, nor any of its supporting documents, identify any federal regulations as authority for prohibiting all such discharges as required in Section B.2 of the 2009 Permit. As such, the removal of these three irrigation water discharges from the list of exempted discharges is not something required anywhere by federal law.

40 C.F.R. 122.26(d)(2)(iv)(B)(1) provides that "the following categories of non-storm water discharges or flows *shall be addressed* where such discharges are identified by the *municipality* as sources of pollutants to waters of the United States: . . . landscape irrigation . . . irrigation water . . . [and] lawn watering." (Emphasis added). This section of the federal regulations thus provides that a municipality must "*address*" such categories of non-storm water discharges, but not that it must "prohibit" all such discharges regardless of the quality or quantity of the irrigation water. Further evidence of the fact that federal law does not require an outright prohibition of all such waters from entering the MS4 is the 2002 Permit which plainly did not require that such discharges "prohibited," and there has been no subsequent change in the CWA or the federal regulations in this regard since then.

Moreover, 40 C.F.R. 122.26(d)(2)(iv)(B)(1) only requires that the municipality "address" such discharges specifically where the municipality first identifies these discharges as specific sources of pollutants. Nowhere in this C.F.R. section does it state that any such discharges must be prohibited. Even if the Copermittees previously identified a specific category or subcategory of non-storm water discharges as a potential source of pollutants in one discrete geographical area,

---

<sup>27</sup> 2009 Permit, section B.2, pp. 19-20.

this does not mean that federal law requires the Regional Board to prohibit that entire category of non-storm water discharges throughout all of the Copermittees' jurisdictions. In this case, outside of possibly revising their respective municipal or county codes to provide legal authority as believed needed by the Copermittees to ensure compliance with this new 2009 Permit requirement, none of the Copermittees have determined that prohibiting "landscape irrigation," "irrigation water" in general or "lawn watering" was or is necessary as a means of addressing the alleged pollutants in such irrigation waters.

It is also important to acknowledge that there is a distinction between identifying a particular discharger as a source of pollutants and identifying the entire category as a source of pollutants. The preamble to the federal regulations makes clear that the Copermittees' illicit discharge program need not prevent discharges of the "exempt" categories into the MS4 "unless such discharges are specifically identified on a case-by-case basis as needing to be addressed." 55 Fed. Reg. at 47995. In other words, individual discharges within exempt categories must be addressed when the particular discharge is a source of pollutants to waters of the U.S. The federal regulations do not allow for removing entire categories of exempt non-storm water discharges. U.S. EPA confirmed this case-by-case approach in its Guidance Manual for the Preparation of Part 2 of the NPDES Permit Applications for Discharges from Municipal Separate Storm Sewer Systems (November 1992) ("Part 2 Guidance Manual") where it states:

If an applicant knows . . . that landscape *irrigation water from a particular site* flows through and picks up pesticides or excess nutrients from fertilizer applications, there may be a reasonable potential for a storm water discharge to result in a water quality impact. In such an event, the applicant should contact the NPDES permitting authority to request that the authority order *the discharger* to the MS4 to obtain a separate NPDES permit (or in this case, the discharge could be controlled through the storm water management program of the MS4.)<sup>28</sup>

As evidenced by the Guidance Manual, the removal of these three irrigation water discharges from the list of exempted discharges is not something required anywhere by federal law. Finally, not only does federal law not require that all irrigation waters be "prohibited" (*i.e.*, it only requires them to be "addressed"), it further does not require that "all" types of "sources" of irrigation water be "addressed" in the event that one or more types or subtypes of irrigation water, under certain conditions, are determined by that municipality to be sources of pollutants. Accordingly, removing all landscape irrigation, irrigation water and lawn watering from the list of exempted discharges, *i.e.*, in effect, requiring that no amount of irrigation runoff from any source (including residential irrigation water) enter the storm drain system, is not only unreasonable, but it is also not something required anywhere under federal law. In removing landscape irrigation, irrigation water and lawn watering from the list of exempted discharges, the Regional Board imposed a new requirement not mandated by federal law and thus imposed a new state mandated program.

---

<sup>28</sup> Exhibit "1", Part 2 Guidance Manual at p. 6-33 (emphasis added).

### **3. Requirements of Previous Orders**

The 2002 Permit included landscape irrigation, irrigation water and lawn watering in its list of exempted non-stormwater discharges. See Section B.2. of pages 8-9 of 2002 Permit.

### **4. Mandated Activities**

Section B.2 of the 2009 Permit requires Copermittees to perform the following activities that are **not** required under either federal law or the 2002 Permit:

- By removing landscape irrigation, irrigation water and lawn watering from the list of exempted non-storm water discharges, the Regional Board is now requiring that each Copermittee take steps to “prohibit” all discharges resulting from landscape irrigation, irrigation water and lawn watering of any type or quantity, from entering the Copermittees MS4, *e.g.*, from entering the public streets, gutters, or any portion of the storm water conveyance system.

To comply with the prohibition against discharges from landscape irrigation, irrigation water and lawn watering set forth in Section B.2 of the 2009 Permit, the Copermittees must do the following in order to attempt to comply with this new state mandate:

1. Create new public education and outreach materials;
2. Expend significant staff time to amend each Copermittee’s Water Quality Ordinance;
3. Expend significant staff time to coordinate with local water districts;
4. Expend significant staff time to track and respond to calls of over-irrigation, enforce, and monitor compliance; and
5. Improve, monitor and aggressively maintain municipal irrigation systems and landscaping throughout each Copermittee’s jurisdiction.

### **5. Actual Increased Costs of Mandate**

As set forth in the Declarations of the Joint Test Claimants, paragraph 6(a), Section B.2 of the 2009 Permit removes landscape irrigation, irrigation water and lawn watering from the list of discharge exceptions, exceptions that were included in the 2002 Permit. The Joint Test Claimants incurred costs to address this mandate, including with respect to the development of a new master ordinance to be adopted to address the prohibitions and requisite staff time to implement the new requirements. The Joint Test Claimants incurred increased costs of \$401 during FY 2009-10 and costs of \$46,947 in FY 2010-11 to address these requirements of the mandate.

**B. THE 2009 PERMIT SECTION I ENTITLED “TOTAL MAXIMUM DAILY LOADS” IMPOSES A SERIES OF NEW UNFUNDED STATE MANDATES ON THE PERMITTEES**

**1. Challenged Program Requirement**

Section I of the 2009 Permit, entitled “Total Maximum Daily Loads,” imposes several new State-required programs upon the Permittees that are not mandated by federal law, without the Regional Board providing funding for any of these new mandated programs. Specifically, Section I of the Permit requires as follows:

- “The Copermittees in the Baby Beach Watershed **“shall implement BMPs capable of achieving the interim and final bacteria indicator waste load allocations (“WLAs”) in discharges to Baby Beach as described in Table 6.** [TABLE 6: TMDL Waste Load Reduction Milestones.]” (2009 Permit, p. 78, § I.1.a.)
- “The Copermittees **shall conduct necessary monitoring, as described in Attachment A to Resolution No. R9-2008-0027,** and submit annual progress reports as part of their yearly reports.” (2009 Permit, p. 78, § I.1.b.)
- “**The following WLAs (Table 7) are to be met in Baby Beach receiving water** by the end of year 2019 for wet weather and 2014 for dry weather: [TABLE 7: Final Bacterial Indicator Waste Load Allocations for Baby Beach.]” (2009 Permit, p. 78, § I.1.c.) and
- “**The Copermittees must meet the following Numeric Targets (Table 8) in Baby Beach receiving waters** in order to meet the underlying assumptions of the TMDL. The Numeric Targets are to be met once 100 percent of the WLA reductions have been achieved (See Table 7 above). [TABLE 8: Final Bacterial Indicator Numeric Targets for Baby Beach.]” (2009 Permit, p. 78, § I.1.d.)

In short, the 2009 Permit imposes a series of new mandates in connection with a TMDL for Baby Beach, specifically requiring the Copermittees to meet both interim and final numeric limits (referenced as “Waste Load Allocations” or “WLAs” within the Permit) and to comply with monitoring and reporting requirements. None of these requirements (hereafter, the “TMDL-Related Mandates”) are required by federal law. Thus, all are State mandates that are required to be funded under the California Constitution.

In addition, various findings within the 2009 Permit confirm that the TMDL-Related Mandates were included in the Permit with the specific intention of compelling compliance with numeric effluent limitations. In Finding E.11, on pages 15 and 16 of the 2009 Permit, the Regional Board explains its intent in imposing the TMDL-Related Mandates, as follows:

**11. ... Approved TMDL WLAs are to be addressed using water quality-based effluent limitations (WQBELs) calculated as numeric limitations (either in the receiving water and/or at the point of MS4 discharge) and/or as BMPs. In most cases, the**

**numeric limitation must be achieved to ensure the adequacy of the BMP program.**

\* \* \*

This Order fulfills a component of the TMDL Implementation Plan adopted by this Regional Board on June 11, 2008 **for indicator bacteria in Baby Beach by establishing WQBELs expressed as both BMPs to achieve the WLAs and as numeric limitations for the City of Dana Point and the County of Orange.** The establishment of WQBELs expressed as BMPs should be sufficient to achieve the WLAs specified in the TMDL. **The Waste Load Allocations (WLAs) and Numeric Targets are the necessary metrics to ensure that the BMPs achieve appropriate concentrations of bacteria indicators in the receiving waters.** (2009 Permit, p. 15-16, Finding E.11, emphasis added.)

Accordingly, this finding confirms that the Permit requires compliance with the numeric effluent limits set forth on page 78 of said Permit (and other TMDL numeric limits to be incorporated into the Permit in the future), and that even though the Copermittees may rely upon best management practices (“BMPs”) in attempting to comply with these numeric effluent limits, implementation of such BMPs does not constitute compliance with the numeric limits. In sum, the 2009 Permit requires compliance with interim and final numeric limits, irrespective of what BMPs may or may not be implemented and regardless of how effective the BMPs may be. Under all circumstances, whether interim or final, “The Copermittees in the Baby Beach watershed *shall implement* BMPs capable of achieving the interim and final [WLAs];” “The following WLAs (Table 7) *are to be met* in Baby Beach;” “The Copermittees *must meet the following Numeric Targets* (Table 8) in Baby Beach,” and “The Copermittees *shall conduct necessary monitoring* as described in Attachment A to resolution no. R9-2008-0027, and *submit annual progress reports* as part of their yearly reports.” (2009 Permit, p. 78, § I.1.a, c, d and b.)

The Permit provisions requiring strict compliance with the Waste Load Allocations from the Baby Beach Bacteria TMDL are not compelled by federal law. Nor does federal law require the related monitoring and reporting requirements contained in the Permit. Accordingly, all such mandates require the subvention of funds before they can properly be required of the local agencies under the 2009 Permit.

## **2. TMDL Requirements of Federal Law**

The CWA was enacted in 1972 by the United States Congress as “a ‘comprehensive water quality statute designed to restore and maintain the chemical, physical, and biological integrity of the Nation’s waters.’”<sup>29</sup> “To achieve these ambitious goals, the Clean Water Act establishes distinct roles for the federal and state governments. Under the Act, [EPA] is required . . . to establish and enforce technology-based limitations on individual discharges into the Country’s navigable waters,” and each state is “to institute comprehensive water quality standards

---

<sup>29</sup> *City of Burbank v. State Water Resources Control Bd.* (2005) 135 Cal.4th 613, 620.

establishing water quality goals for all intrastate waters.” According to the California Supreme Court, “[t]hese state water quality standards provide ‘a supplementary basis . . . so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels.’”<sup>30</sup>

Under the CWA, a TMDL is to be established once a water body has been determined not to be meeting a water quality standard, *i.e.*, once the water body has been listed as being “impaired” for the particular pollutant or pollutants in issue.<sup>31</sup> A TMDL is to be established “at a level necessary to implement the applicable water quality standards.”<sup>32</sup> Under the federal regulations, a “TMDL” is defined as follows:

*Total Maximum Daily Load (TMDL).* The sum of the individual WLAs [waste load allocations] for point sources and LAs [load allocations] for nonpoint sources and natural background. If a receiving water has only one point source discharger, the TMDL is the sum of that point source WLA plus the LAs for any nonpoint sources of pollution and natural background sources, tributaries, or adjacent segments. TMDLs can be expressed in terms of either mass per time, toxicity, or other appropriate measure. If best management practices (“BMPs”) or other nonpoint source pollution controls make more stringent load allocations practicable, then wasteload allocations can be made less stringent. Thus, the TMDL process provides for nonpoint source control tradeoffs.<sup>33</sup>

The regulations then define a “wasteload allocation” or “WLA” as: “A portion of a receiving water’s loading capacity that is allocated to one of its existing or future point sources of pollution. WLAs constitute a type of water quality-based effluent limitation.”<sup>34</sup>

Finally, federal regulations require that NPDES permit terms be “***consistent with the assumptions and requirements of any available wasteload allocations*** for the discharge prepared by the State and approved by EPA pursuant to 40 CFR 130.7.”<sup>35</sup> The regulations do not require, however, that a WLA be incorporated into a stormwater permit as a strict numeric limit. Instead, how a WLA is to be incorporated into an NPDES Permit depends upon the nature of the permit itself. For industrial waste dischargers, Congress chose to require strict compliance with water quality standards pursuant to 33 U.S.C. § 1311 (b)(1)(C), *i.e.* the wasteload allocations need to be strictly enforced through the use of numeric limits in the industrial waste discharger’s NPDES Permit. However, for municipal storm-sewer dischargers, Congress chose to replace “***the requirements of § 1311 with the requirement that municipal storm-sewer dischargers ‘reduce***

---

<sup>30</sup> *PUD No. 1 of Jefferson County v. Washington Department of Ecology* (1994) 511 U.S. 700, 704.

<sup>31</sup> 33 U.S.C. § 1313(d)(1)(C) and (D).

<sup>32</sup> 33 U.S.C. § 1313(d)(1)(C); also see *Arcadia v. State Board* (2006) 135 Cal.App.4th 1392, 1404 [“A TMDL must be ‘established’ at a level necessary to implement the applicable water quality standards. . . . Once a TMDL is developed, effluent limitations in NPDES permits must be consistent with the waste load allocations in the TMDL.”].

<sup>33</sup> 40 C.F.R. § 130.2(i).

<sup>34</sup> 40 C.F.R. § 130.3(h).

<sup>35</sup> 40 C.F.R. § 122.44(d)(1)(vii)(B).

*the discharge of pollutants to the maximum extent practicable,*” and “expressly” “*did not require municipal storm-sewer dischargers to comply strictly with 33 U.S.C. § 1311(b)(a)(C).*” (*Defenders of Wildlife v. Browner* (9th Cir. 1999) (“*Defenders*”) 191 F.3d 1159, 1165.)

In sum, while “TMDLs serve as a link in an implementation chain” linking the implementation of water quality standards to the NPDES Permits,<sup>36</sup> strict compliance with WLAs in the TMDL is *not* required when incorporating a TMDL into a stormwater NPDES Permit. Rather, a stormwater permit is “consistent with the assumptions and requirements” of the WLAs in a TMDL where it contains provisions to reduce pollutants to “maximum extent practicable,” consistent with the MEP” standard.

Nonetheless, as this Commission has previously recognized, “the federal Clean Water Act authorizes states to impose more stringent measures than required by federal law.” (Test Claim 07-TC-09, Discharge of Stormwater Runoff – Order No. R9-2007-0001, p. 41.) Thus NPDES “permits may include state-imposed, in addition[] to federally required measures. Those state measures . . . may constitute a state mandate if they ‘exceed the mandate in . . . federal law.’” (*Id.* [finding individual permit terms must be analyzed “to determine whether the state requirements exceed the federal requirements imposed on local agencies”].)

Here, the Regional Board has clearly exercised its discretion “to impose more stringent measures than required by federal law.” Specifically, the provisions within the 2009 Permit that require all interim and final numeric targets to be “achieved” and “met,” as well as the monitoring and reporting obligations associated with such numeric targets, plainly go beyond what is required by federal law, and are thus State mandates. Further, the local agencies responsible for complying with such programs do not have any authority to impose fees to recover the cost of complying with these State mandates.

### **3. Federal Law Does Not Mandate That Numeric Effluent Limits Be Included In Municipal NPDES Permits, Whether From TMDLs Or Otherwise.**

The plain language of the CWA confirms that numeric effluent limits, whether from TMDLs or otherwise, are not required to be imposed upon municipal stormwater NPDES permittees. Instead, federal law provides only that controls should be included in municipal NPDES Permits as needed “to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.” In this regard, the CWA provides as follows:

#### **(B) Municipal Discharge.**

Permits for discharges from municipal storm sewers –

- (i) may be issued on a system- or jurisdiction-wide basis;

---

<sup>36</sup> *Arcadia v. EPA*, (N.D. Cal. 2003) 265 F.Supp.2d 1142, 1144-45.

(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

(iii) shall require controls to reduce the discharge of pollutants to the **maximum extent practicable**, including management practices, control techniques and in system, design and engineering methods, and such other provisions as the Administrator **or the State determines appropriate** for the control of such pollutants.<sup>37</sup>

Moreover, the law is clear that unless the CWA or the federal regulations expressly require a particular permit term, the Board has wide discretion in imposing permit requirements. (*See, e.g., Rancho Cucamonga v. Regional Water Quality Control Board, Santa Ana Region* (2006) 135 Cal.App.4th 1377, 1389 (“*Rancho Cucamonga*”).) In *Rancho Cucamonga*, the Court of Appeal held that for municipal NPDES permits: “The Act authorizes States to issue permits with conditions necessary to carry out its provisions. [Citation] ***The permitting agency has discretion to decide what practices, techniques, methods and other provisions are appropriate and necessary to control the discharge of pollutants.***”<sup>38</sup> Similarly, in *Natural Resources Defense Council v. U.S. EPA* (Ninth Cir. 1992) 966 F.2d 1292, the Ninth Circuit Court of Appeal found that when it comes to municipal stormwater dischargers, “***Congress did not mandate a minimum standards approach.***”<sup>39</sup>

In *Defenders, supra*, 191 F.3d 1159, the Ninth Circuit Court of Appeal recognized the different approach taken by Congress for stormwater, finding that “***industrial discharges must comply strictly with state water-quality standards,***” while “***Congress chose not to include a similar provision for municipal storm-sewer discharges.***”<sup>40</sup> The Court found that “33 U.S.C. § 1342(p)(3)(B) is not merely silent regarding whether municipal discharges must comply with 33 U.S.C. § 1311,” but instead Section 1342(b)(3)(B)(iii) “replaces the requirements of § 1311 with the requirement that municipal storm-sewer dischargers ‘reduce the discharge of pollutants to the maximum extent practicable.’” The *Defenders* Court thus concluded that “***the statute unambiguously demonstrates that Congress did not require municipal storm-sewer discharges to comply strictly with 33 U.S.C. § 1311(b)(1)(C).***”<sup>41</sup>

*Divers’ Environmental Conservation Organization v. State Water Resources Control Board* (2006) 145 Cal.App.4th 246 (“*Divers’ Environmental*”) is directly relevant to the principal issue in dispute regarding the TMDL-Related Mandates in this Test Claim. In *Divers’ Environmental*, the plaintiff brought suit claiming that an NPDES Permit issued to the United States Navy, by the San Diego Regional Board, was contrary to law because it did not incorporate waste load allocations (“WLAs”) from a TMDL into the Navy’s permit as numeric effluent limits. After discussing the relevant requirements of the CWA, as well as governing case authority, the Court of Appeal found that, in regulating stormwater permits, EPA “***has repeatedly expressed a***

<sup>37</sup> 33 U.S.C. § 1342(p)(3)(B), emphasis added.

<sup>38</sup> *Rancho Cucamonga v. Regional Water Quality Control Board, Santa Ana Region, supra*, at p. 1389.

<sup>39</sup> *Natural Resources Defense Council v. U.S. EPA, supra*, at p. 1308.

<sup>40</sup> *Defenders*, at 1165, emphasis added.

<sup>41</sup> *Ibid.* emphasis added.

**preference for doing so by the way of BMPs, rather than by way of imposing either technology-based or water quality-based numerical limitations.”** (*Id.* at 256.) The Court went on to find that “it is now clear that in implementing numeric water quality standards, such as those set forth in CTR [the California Toxics Rule], permitting agencies **are not required to do so** solely by means of a corresponding **numeric** WQBEL’s” (water quality based effluent limits). (*Id.* at 262, emphasis added.) Thus, *Divers’ Environmental* confirms that the TMDL-derived numeric effluent limits included in the Permit here are not mandated by federal law, but were included at the discretion of the Regional Board.

Similarly, in *Building Industry Association of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866, 874, a case, as discussed above, involving municipal NPDES Permit issued by the San Diego Regional Board, the California Court of Appeal confirmed the Ninth Circuit’s holding in *Defenders* that the CWA does not require compliance with numeric limits for storm water permittees, finding as follows:

[I]n 1987, Congress amended the Clean Water Act to add provisions that specifically concerned NPDES permit requirements for storm sewer discharges. [Citations.] In these amendments, enacted as part of the *Water Quality Act of 1987*, Congress distinguished between industrial and municipal storm water discharges. . . . **With respect to municipal storm water discharges, Congress clarified that the EPA has the authority to fashion NPDES permit requirements to meet water quality standards without specific numeric effluent limits and instead to impose “controls to reduce the discharge of pollutants to the maximum extent practicable.”**<sup>42</sup>

A recent decision from the Oregon Court of Appeal further confirms that federal law does not require WLAs from a TMDL to be incorporated into a stormwater NPDES Permit. In *Tualatin River Keepers, et al. v. Oregon Department of Environmental Quality* (2010) 235 Ore. App. 132 (“*Tualatin River*”), the court considered whether WLAs from adopted TMDLs were required to be enforced as strict numeric effluent limits within a municipal NPDES Permit. The petitioners argued that the Oregon Department of Environmental Quality (“DEQ”) had erred by issuing a permit that did not “specify wasteload allocations in the form of numeric effluent limits.” (*Id.* at 137.) Specifically, the petitioners contended that, **under State law**, numeric effluent limits were required to incorporate the wasteload allocations into the Permit “in a meaningful way.” (*Id.* at 147-148.)

Noticeably, the petitioners in the *Tualatin* case did not even argue that **federal law** required WLAs from a TMDL to be incorporated into a municipal NPDES Permit as “numeric effluent limitations.” And indeed, the Oregon Court found that under the CWA, best management practices were considered to be a “type of effluent limitation,” and that such best management practices were authorized to be used pursuant to the CWA, section 33 U.S.C. § 1342(p) as a means of controlling “storm water discharges.” (*Id.* at 141-142, citing 33 U.S.C. § 1342(p) and 40 CFR

---

<sup>42</sup> *Building Industry Association of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866, 874, emphasis in original, citing 33 U.S.C. § 1342(p)(3)(B)(iii) and *Defenders, supra*, at p. 1163.

§ 122.44(k)(2)-(3).) The Court in *Tualatin* then concluded that Oregon law did not require TMDLs to be enforced through the use of numeric effluent limits, holding as follows:

The applicable TMDLs in this case set forth specific wasteload allocations for municipal storm water. The permits at issue, in turn, indicate the bodies of water for which TMDLs and wasteload allocations have been established and reference the specific TMDL for those bodies of water. **The permits provide in the “adaptive management” section that, “[w]here TMDL wasteload allocations have been established for pollutant parameters associated with the permittee’s [municipal separate storm sewer system] discharges, the permittee must use the estimated pollutant load reductions (benchmarks) established in the [storm water management plan] to guide the adaptive management process. . . . Adequate progress toward achieving assigned wasteload allocations will be demonstrated through the implementation of best management practices that are targeted at TMDL-related pollutants.”** Pursuant to that section, permittees must evaluate progress toward reducing pollutant loads “through the use of performance measures and pollutant load reduction benchmarks developed and listed in the [stormwater management plan].”

\* \* \*

**Although the permits do not themselves include numeric wasteload allocations like those set forth in the TMDLs, the TMDL wasteload allocations are clearly referenced in the permits, and the permits require implementation of best management practices, set forth in the storm water management plans, to make progress towards meeting those wasteload allocations. Again, best management practices are a type of effluent limitation that is used in municipal storm water permits. See 40 CFR § 122.44(k)(2)-(13). Furthermore, the permits incorporate benchmarks, through incorporation of the storm water management plan, which are specific pollutant load reduction goals for the permittees. Those measures are “permit requirements” that properly incorporate the TMDL wasteload allocations.**

(*Id.* at 148-149, emphasis added.) The *Tualatin River* case thus further confirms that the CWA does not require WLAs from TMDLs to be incorporated into stormwater permits as numeric limits.

Moreover, all of the above authority confirming that federal law does not require the use of numeric effluent limits, in any fashion, within a municipal NPDES Permit is consistent with the long-held policies of the California State Water Resources Control Board (“State Board”). For example, in State Board Order No. 91-03 (Exhibit “1” hereto), in the context of considering the need for numeric effluent limitations in a municipal NPDES Permit (in the San Francisco Region),

the State Board concluded that: “*Numeric effluent limitations are not legally required.* Further, we have determined that the program of prohibitions, source control measures and ‘best management practices’ set forth in the Permit constitutes effluent limitations as required by law.” (Exhibit “2”, p. 30-31.)

Further, in a companion decision to Order No. 91-03, *i.e.* Order No. 91-04, related to the issuance of another municipal NPDES that did not contain numeric limits (this time for the Los Angeles Region), the State Board similarly found that: “*There are no numeric objectives or numeric effluent limits required at this time, either in the Basin Plan or any Statewide Plan that applied to storm water discharges.*” (Exhibit “3”, State Board Order No. 91-04, p. 14.)

The reason for the State Board’s position was explained, in part, in a February 11, 1993 State of California Memorandum regarding the “*Definition of ‘Maximum Extent Practicable*” (Exhibit “4” hereto – hereafter “MEP Memo”), the State Board’s Chief Counsel’s Office concluded as follows:

**On its face, it is possible to discern some outline of the intent of Congress in establishing the MEP standard. First, the requirement is to reduce the discharge of pollutants, rather than totally prohibit such discharge.** Presumably, the reason for this standard (and the difference from the more stringent standard applied to industrial dischargers in Section 402(p)(3)(A), **is the knowledge that it is not possible for municipal dischargers to prevent the discharge of all pollutants in storm water.** (MEP Memo, p. 2, bolding added, underlining in original.)

The Memo concluded the following factors should be considered in making a determination on whether a BMP is consistent with the “MEP” standard:

1. Effectiveness: Will a BMP address a pollutant of concern?
2. Regulatory Compliance: Is the BMP in compliance with storm water regulations as well as other environmental regulations?
3. Public acceptance: Does the BMP have public support?
4. **Cost: Will the cost of implementing the BMP have a reasonable relationship to the pollution control benefit to be achieved?**
5. **Technical feasibility: Is the BMP technically feasible considering soils, geography, water resources, etc.?**<sup>43</sup>

Given these realities, the State Board has consistently recognized not only that federal law does not require that numeric limitations be included in an NPDES permit, but that such numeric limits are generally inappropriate in such permits.

---

<sup>43</sup> Exhibit 10, MEP Memo, pp. 4-5, emphasis added.

Indeed, countless other State Board decisions and related policy and guidance documents have repeatedly reaffirmed the State Board’s position that federal law does not require the use of numeric effluent limits within municipal NPDES Permits, like the 2009 Permit in question. (See, e.g., Exhibit “5,” State Board Order No. 98-01, p. 12 [“Stormwater permits must achieve compliance with water quality standards, but they may do so by requiring implementation of BMPs *in lieu of numeric water quality-based effluent limitations.*”]; Exhibit “6,” State Board Order No. 2000-11, p. 3 [“*In prior Orders this Board has explained the need for the municipal storm water programs and the emphasis on BMPs in lieu of numeric effluent limitations.*”]; Exhibit “7,” State Board Order No. 2001-15, p. 8 [“While we continue to address water quality standards in municipal storm water permits, we also continue to believe that *the iterative approach*, which focuses on timely improvements of BMPs, is appropriate.”]; Exhibit “8,” State Board Order No. 96-13, p. 6 [“*federal law does not require* the [San Francisco Reg. Bd] to dictate the specific controls.”]; Exhibit “9,” State Board Order No. 2006-12, p. 17 [“*Federal regulations do not require numeric effluent limitations for discharges of storm water*”]; Exhibit “10,” *Stormwater Quality Panel Recommendations to The California State Water Resources Control Board – The Feasibility of Numeric Effluent Limits Applicable to Discharges of Stormwater Associated with Municipal, Industrial and Construction Activities*, June 19, 2006, p. 8 [“*It is not feasible at this time to set enforceable numeric effluent criteria for municipal BMPs and in particular urban dischargers.*”]; and Exhibit “11,” an April 18, 2008 letter from the State Board’s Chief Counsel to the Commission on State Mandates, p. 6 [“*Most NPDES Permits are largely comprised of numeric limitations for pollutants. . . . Stormwater permits, on the other hand, usually require dischargers to implement BMPs.*”].)

In *Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564 (“*Hayes*”), the Court of Appeals established the standard for the Commission to follow when determining whether a State mandate is required under federal law, particularly when a general federal requirement is imposed upon the State. Specifically, the Court found as follows:

When the federal government imposes costs on local agencies, those costs are not mandated by the State and thus would not require State subvention. Instead, such costs are exempt from local agencies’ taxing and spending limitations. **This should be true even though the State has adopted an implementation statute or regulation pursuant to the federal mandate so long as the State had *no* “true choice” in the manner of the implementation of the federal mandate. . . .**

**[T]he reasoning would not hold true where the manner of implementation was left to the true discretion of the State.**<sup>44</sup>

Here, the Board’s decision to incorporate WLAs from the Baby Beach TMDL into the 2009 Permit and to require strict compliance with such numbers was clearly the result of a “true choice” on the part of the Board, as it is well-established that federal law does not require that WLAs from a TMDL be incorporated into a stormwater permit as strict “numeric effluent limitations.” Nor does federal law require the imposition of the various related TMDL monitoring and reporting requirements imposed on the Copermitees by the 2009 Permit. To the contrary, as

---

<sup>44</sup> *Hayes v. Commission on State Mandates*, *supra*, 11 Cal.App.4th at p. 1593.

confirmed by numerous court decisions as well as by various State Board Orders and policy, the CWA only requires the application of the MEP standard, not the imposition of numeric limits. In addition, and as the State Board's Numeric Effluent Limits Expert Panel concluded in 2006, "*It is not feasible at this time to set enforceable numeric effluent criteria for municipal BMPs and, in particular, urban dischargers*" (Exhibit "12", Numeric Effluent Limits Panel, p. 8). Further, "*it is not possible for municipal dischargers to prevent the discharge of all pollutants in stormwater.*" (Exhibit 4, MEP Memo, p. 2.) A mandate that stormwater permittees comply with numeric limits, in any form, goes beyond federal law.

#### **4. There Were No TMDL-Related Mandates In The 2002 Permit**

The 2002 Permit contained none of the TMDL-Related Mandates in issue in this Test Claim. As such, all of the requirements involving TMDLs within the 2009 Permit are new requirements that go beyond what is required under federal law, and thus all such requirements constitute unfunded State mandates.

#### **5. TMDL – Related Mandates and Actual Increased Costs to the Joint Test Claimants**

2009 Permit Sections I.1.(a)-(d) impose mandates upon Copermittees County and City of Dana Point to meet the numeric effluent limits specified in Tables 6, 7 and 8 on page 78 of the 2009 Permit, along with related monitoring and reporting obligations.

Each of the TMDL-Related Mandates are new programs not contained anywhere in the 2002 Permit. Further, each obliges the various Copermittees to strictly meet interim or final numeric effluent limits, and exposes the Copermittees enforcement action or third-party citizen suits if the limits are not met. (*See* 33 U.S.C. § 1365; *also see NRDC v. County of Los Angeles et al.* (9th Circuit 2013) 725 F.3d 1194 [holding county and flood control district liable in a third-party citizen suit based upon monitoring results that showed exceedances of numeric water quality standards].) Yet, as discussed in detail above, and as confirmed in case after case and in numerous State Board Orders and policy documents, not to mention the plain language of the Act itself, the CWA does not require the imposition of numeric effluent limits within municipal NPDES Permits.

The San Diego RWQCB has therefore imposed a state mandate on the County and the City of Dana Point, who have incurred increased costs to address the requirements of the TMDL-related mandate. As set forth in the Section 6 Declarations at paragraph 6(i), the increased costs of the mandate to these Joint Test Claimants were \$28,575.91 in FY 2009-10 and \$33,646.10 in FY 2010-11.

#### **C. THE 2009 PERMIT PROVISIONS, SECTIONS C AND F, REQUIRING THE DEVELOPMENT OF MONITORING AND INVESTIGATION AND COMPLIANCE PROGRAMS TO MEET NON-STORMWATER DRY WEATHER ACTION LEVELS" OR "NALS," ARE UNFUNDED STATE MANDATES**

## 1. The Challenged Program Requirements Involving NALs

Under Section C of the 2009 Permit, entitled “Non-Stormwater Dry Weather Action Levels,” the Copermittees are required to comply with a number of new requirements triggered by specified pollutant concentration levels termed “Non-Stormwater Dry Weather Actions Levels” or “NALs” (hereafter, “NAL-Triggered Mandates”). The NAL-Triggered Mandates are contained in Section C (pages 21-24) and Section F.4(d) and (e) (pages 70-71) of the 2009 Permit. They include an elaborate and very particular set of programmatic investigation, monitoring and reporting requirements, and action items, all based on the existence, type and frequency of a NAL exceedance.

Specifically, the 2009 Permit requires as follows:

1. Each Copermittee, beginning no later than May 1, 2011, **shall implement** the non-storm water dry weather action level (NAL) **monitoring** as described in Attachment E of this Order. (2009 Permit, p. 21, Section C.1.)
2. **In response to an exceedance of an NAL, each Copermittee must investigate and identify the source of the exceedance in a timely manner. . . . Following the source investigation and identification, the Copermittees must submit an action report dependant on the source of the pollutant exceedance as follows:**
  - a. If the Copermittee identifies the source of the exceedance as natural (non-anthropogenically influenced) in origin and in conveyance into the MS4; then **the Copermittee shall report their findings and documentation** of their source investigation to the Regional Board **within fourteen days** of the source identification.
  - b. **If the Copermittee identifies the source of the exceedance as an illicit discharge or connection, then the Copermittees must eliminate the discharge to their MS4 and report the findings,** including any enforcement action(s) taken, and documentation of the source investigation to the Regional Board **within fourteen days** of the source identification. If the Copermittee is unable to eliminate the source of discharge within fourteen days, **then the Copermittee must submit, as part of their action report, their plan and timeframe to eliminate the source of the exceedance . . . .**

- c. If the Copermittee identifies the source of the exceedance as an exempted category of non-storm water discharge, then **the Copermittees must determine if this is an isolated circumstance or if the category of discharges must be addressed through the prevention or prohibition of that category of discharge as an illicit discharge. The Copermittee must submit their findings in including a description of the steps taken to address the discharge and the category of discharge, to the Regional Board for review with the next subsequent annual report.** Such description shall include relevant updates to or new ordinances, orders, or other legal means of addressing the category of discharge. The **Copermittees must also submit a summary of their findings with the Report of Waste Discharge.**
- d. If the Copermittee identifies the source of the exceedance as a non-storm water discharge in violation or potential violation of an existing separate NPDES permit (e.g. the groundwater dewatering permit), then **the Copermittee must report, within three business days, the findings to the Regional Board including all pertinent information regarding the discharger and discharge characteristics.**
- e. If the Copermittee is unable to identify the source of the exceedance after taking and documenting reasonable steps to do so, then **the Copermittee must identify the pollutant as a high priority pollutant of concern in the tributary subwatershed, perform additional focused sampling and update their programs within a year to reflect this priority.** The Copermittee's annual report shall include these updates to their programs including, where applicable, updates to their watershed workplans (Section G.2), retrofitting consideration (Section F.3.d) and program effectiveness work plans (Section J.4).
- f. The Copermittee or any interested party, may evaluate existing NALs and propose revised NALs for future Board consideration.

3. . . . **Failure to timely implement required actions specified in this Order following an exceedance of an NAL constitutes a violation of this Order.** . . . During any annual reporting period in which one or more exceedances of NALs have been documented the **Copermittee must submit with their next scheduled annual report, a report describing whether and how the observed exceedances did or did not result in a discharge from the MS4 that caused, or threatened to cause or contribute to a condition of pollution, contamination, or nuisance in the receiving waters.**
  
4. **Monitoring of effluent will occur at the end-of-pipe prior to discharge** into the receiving waters, with the focus on Major Outfalls, as outlined in 40 CFR 122.26(B5-6) and Attachment E of this Order. **The Copermittees must develop their monitoring plans** to sample a representative percentage of major outfalls and identified stations within each hydrologic subarea. **At a minimum, outfalls that exceed any NALs once during any year must be monitored** in the subsequent year. Any station that does not exceed an NAL for three years may be replaced with a different station.
  
5. **Each Copermittee shall monitor** for the non-storm water dry weather action levels, which are incorporated into this Order as follows:
  - a. **Action levels for discharger to inland surface waters:**

Table 4.a.1: General Constituents . . .

Table 4.a.2: Priority Pollutants . . .
  - b. **Action levels for discharger to bays, harbors and lagoons/estuaries:**

Table 4.b: General Constituents . . .
  - c. **Action levels for discharges to the surf zone:**

Table 4.c: General Constituents . . .

(2009 Permit, pp. 21-24, Section C, Non-Stormwater Action Levels.) Other NAL-Triggered Mandates are set forth in Section F.4 of the 2009 Permit, as follows:

- d. **Each Copermittee must conduct** dry weather field screening and analytical **monitoring** of MS4 outfalls and other portions of its MS4 within its jurisdiction to detect illicit discharges and connections in accordance with Receiving Waters and MS4 Discharge Monitoring and Reporting Program No. R9-2009-0002 in Attachment E of this Order. (2009 Permit, p. 70, Section F.4.d.)

Also under Section F.4.e. of the Permit, entitled “**Investigation/Inspection And Follow-Up**”:

**Each Copermittee must “implement procedures to investigate and inspect** portions of the MS4 that, based on the results of the field screening, analytical monitoring, or other appropriate information, indicate a reasonable potential of containing illicit discharges, illicit connections, or other sources of pollution in non-storm water.

(1) Develop response criteria data: **Each Copermittee must develop, update and use the** numeric criteria action levels (or other actions level criteria where appropriate) to determine when follow-up investigations will be performed in response to water quality monitoring. The criteria **must include the required non-stormwater action levels** (see Section C) and a consideration of 303d-listed waterbodies and environmentally sensitive areas (ESAs) as defined in Attachment C. (2009 Permit, p. 70-71, Section F.4.e.)

Furthermore, Sections F.4.e(2)(b) and (c) provide:

2. Respond to data: **Each Copermittee must investigate portions of the MS4** for which water quality data or conditions indicate a potential illegal discharge or connection . . .

(b) Field screen data: Within two business days of receiving dry weather field screening results that exceed action levels, the Copermittees **must either initiate an investigation to identify the source of the discharge or document the rationale** for why the discharge does not pose a threat to water quality and does not need further investigation. This documentation **shall be included in the Annual Report**. (2009 Permit, p. 71, Section F.4.e(2)(b).)

(c) Analytical data: Within five business days of receiving analytical laboratory results that exceed action levels, the Copermittees **must either initiate an investigation to identify the source of the discharge or document the**

**rationale** for why the discharge does not pose a threat to water quality and does not need further investigation. This documentation **shall be included in the Annual Report**. (2009 Permit, p. 71, Section F.4.e(2)(c).)

In short, Sections C and F of the Permit set forth a series of very detailed programmatic action requirements to monitor for, report on, and respond to NAL exceedances, all of which will be very costly and difficult to adhere to. Yet, NAL-Triggered Mandates are not required or even referenced anywhere in the CWA or in the federal regulations thereunder. Further, no numeric NAL-Triggered Mandates were included in the prior 2002 Permit.

## **2. There Are No NAL-Triggered Mandates Under Federal Law**

No federal statute, regulation, or policy requires that municipal stormwater permits include monitoring, reporting and/or compliance obligations in connection with NALs or any other numeric action levels. In fact, nothing under the CWA, nor the regulations thereunder, requires the inclusion of numeric NALs in any fashion in a municipal stormwater permit.

To the contrary, as discussed in detail above in connection with the TMDL-Related Mandates, the language of the CWA, as well as the relevant authority discussing federal requirements for a municipal NPDES Permit under the CWA, all confirm that no numeric limits, whether or not styled as “action levels,” are **required** to be included within a municipal storm water permit. (*See, e.g., Defenders of Wildlife, supra*, 191 F.3d 1159, 1163 and 1165 [“Industrial discharges must comply strictly with State water-quality standards,” while “Congress chose not to include a similar provision for municipal storm-sewer discharges;” “the **statute unambiguously demonstrates** that Congress did not require municipal storm-sewer dischargers to strictly comply with 33 U.S.C. § 1311(b)(1)(C).”]; *BIA v. State Board, supra*, 124 Cal.App.4th 866, 874 [“**With respect to municipal stormwater discharges, Congress clarified that the EPA has the authority to fashion NPDES Permit requirements to meet water quality standards without specific numeric effluent limits and to instead impose ‘controls to reduce the discharge of pollutants to the maximum extent practicable.’**”]; *Divers’ Environmental, supra*, 145 Cal.App.4th 246, 256 [“**In regulating stormwater permits the EPA has repeatedly expressed a preference for doing so by the way of BMPs, rather than by way of imposing either technology-based or water quality-based numerical limitations.**”]; State Board Order No. 2000-11, p. 3 [“In prior orders this Board has explained the need for the municipal stormwater programs **and the emphasis on BMPs in lieu of numeric effluent limitations.**”]; State Board Order No. 2006-12, p. 17 [“**Federal regulations do not require numeric effluent limitations for discharges of stormwater.**”]; and State Board Order No. 91-03, pgs. 30-31 [“**We . . . conclude that numeric effluent limitations are not legally required.** Further we have determined that the program of prohibitions, source control measures and ‘best management practices’ set forth in the Permit constitutes effluent limitations as required by law.”].)

While the NALs are not traditional “strict” numeric effluent limits, in that an exceedance of an NAL does not automatically constitute a permit “violation,” numeric NALs are similar to strict numeric effluent limits in that they impose new mandated requirements on the Copermittees to meet such numeric limits. If the Copermittees’ non-storm water discharges exceed the NALs, the Copermittees must thereafter implement costly measures to comply with the numeric action

levels, regardless of the feasibility of complying. (See 2009 Permit, Section C (pages 21-24) and Section F.4(d) and (e) (pages 70-71).) Thus, the “NAL-Triggered Mandates” go far beyond what is required to be imposed in an MS4 permit. Accordingly, the Board had a “true choice” in deciding to impose the “NAL-Triggered Mandates.” (*Hayes v. Commission on State Mandates*, *supra*, 11 Cal.App.4th at 1593.)

### **3. Requirements From The 2002 Permit**

Although general dry-weather monitoring and follow-up requirements were included in the 2002 Permit, all of the NAL-Triggered Mandates set forth in the 2009 Permit are specific new requirements that were not included in the 2002 Permit.

### **4. The NAL-Triggered Requirements Are Unfunded State Mandates**

None of the monitoring, reporting and compliance programs of the NALs-Triggered Mandates are compelled anywhere under federal law. In fact, the Courts and the State Board have consistently concluded that no numeric limits are *required* by federal law in any form, whether they are termed “action levels” or “numeric effluent limits.” In addition, the NAL-Triggered Mandates under the 2009 Permit are all new requirements not contained in the 2002 Permit. Moreover, no changes have been to federal law since the 2002 Permit was adopted that would support any argument that NALs are now required under federal law, when they were clearly not required under that same federal law in 2002 when the 2002 Permit was adopted.

### **5. Actual Increased Costs of Mandate**

As a result of the mandate set forth in Section C of the 2009 Permit, the Joint Test Claimants have incurred increased costs in the form of additional monitoring and the development of guidance to address NAL exceedances. In addition, certain Joint Test Claimants incurred additional costs in investigation and followup activities to address NAL exceedances. As set forth in the Section 6 Declarations, paragraph 6(b), the Joint Test Claimants incurred increased costs to address this mandate of \$13,584 in FY 2010-11 and \$63,761 in FY 2011-12.

## **D. THE 2009 PERMIT PROVISIONS UNDER SECTION D REQUIRING COMPLIANCE WITH VARIOUS PROGRAMS ASSOCIATED WITH STORMWATER ACTION LEVELS OR “SALS” ARE UNFUNDED STATE MANDATES**

### **1. The Challenged Program Requirements Involving Stormwater Action Levels – SALS**

Section D of the 2009 Permit, entitled “Stormwater Action Levels,” imposes a series of new State mandated programs concerning what are referred to in the Permit as “Stormwater Action Levels” or “SALS.” (2009 Permit, pgs. 25-26.) The SALS are purportedly applicable to discharges of “stormwater” (presumably meaning water from precipitation events that enters the MS4 and is thereafter discharged into waters of the United States). Similar to the NAL-Triggered Mandates, the “SAL-Related Mandates” include specific investigation and compliance program requirements in response to any exceedance of SAL, as well as monitoring and reporting obligations associated

with the SALs (hereafter, all such SAL related programs are collectively referred to as “SAL-Related Mandates”).

Specifically, under Section D of the 2009 Permit:

1. Beginning Year 3 after Order adoption date, a running average of twenty percent or greater of exceedances of any discharge of storm water from the MS4 to waters of the United States **that exceed the Storm Water Action Levels for the pollutants listed in Table 5 (below) will require each Copermittee to affirmatively augment and implement all necessary storm water controls and measures** to reduce the discharge of the associated class of pollutant(s) to the MEP standard. . . . Copermittees shall take the magnitude, frequency, and number of constituents exceeding the SAL(s), in addition to receiving water quality data and other information, into consideration when reacting to SAL exceedances in an iterative manner. **Failure to appropriately consider and react to SAL exceedances in an iterative manner creates a presumption that the Copermittee(s) have not complied with the MEP standard.**

[Table 5. Storm Water Action Levels. . . .]

(2009 Permit, p. 25, § D.1.) Sections D.2 and D.4 then build on those SAL requirements and impose the following mandates:

2. . . . **The Copermittees must develop their monitoring plans to sample a representative percent of the major outfalls within each hydrologic subarea.** At a minimum, **outfalls that exceed SALs must be monitored** in the subsequent year. Any station that does not exceed an SAL for 3 years may be replaced with a different station. SAL samples must be 24 hour time waited composites.”
4. . . . To be relieved of the requirements to prioritize pollutant/watershed combinations of BMP updates and to continue monitoring a station, the **Copermittee must demonstrate that the likely and expected cause of the SAL exceedance is not anthropogenic in nature.**

(2009 Permit, p. 25, § D.2 and D.4.) In short, similar to the NAL-Triggered Mandates, the 2009 Permit includes a series of new monitoring, reporting and compliance obligations associated with “SALs” that were not contained in the 2002 Permit, and that are not required by federal law.

## 2. There Are No SAL-Related Mandates Required Under Federal Law

Nothing anywhere in the CWA, nor the regulations thereunder, requires the inclusion of Storm Water Action Levels or SALs within a municipal NPDES Permit. In addition, there is no federal requirement that municipal NPDES Permits include monitoring, reporting or compliance obligations that are triggered by an exceedance of a SAL.

Contrary to any requirement to include a SAL-Related Mandate within a municipal NPDES Permit, the plain language of the CWA, as well as controlling case authority interpreting the Act, all make clear that no form of SALs or any related mandates are required to be included within a municipal NPDES Permit by federal law. (*See Defenders of Wildlife, supra*, 191 F.3d 1159, 1163 [**“Industrial discharges must strictly comply with State water-quality standards,” while “Congress chose not to include a similar provision for municipal storm-sewer discharges.”**]; *Divers’ Environmental, supra*, 145 Cal.App.4th 246, 256 [**“In regulating stormwater permits the EPA has repeatedly expressed a preference for doing so by the way of BMPs, rather than by way of imposing either technology-based or water quality-based numerical limitations.”**]; and *BIA v. State Board, supra*, 124 Cal.App.4th 866, 874 [**“With respect to municipal stormwater discharges, Congress clarified that the EPA has the authority to fashion NPDES Permit requirements to meet water quality standards *without specific numeric effluent limits* and to instead impose ‘controls to reduce the discharge of pollutants to the maximum extent practicable.’”**]; State Board Order No. 2000-11, p. 3 [**“In prior orders this Board has explained the need for the municipal stormwater programs *and the emphasis on BMPs in lieu of numeric effluent limitations.*”**]; State Board Order No. 2006-12, p. 17 [**“Federal regulations do not require numeric effluent limitations for discharges of stormwater.”**]; and State Board Order No. 91-03, pgs. 30-31 [**“We . . . conclude that numeric effluent limitations are not legally required.** Further we have determined that the program of prohibitions, source control measures and ‘best management practices’ set forth in the Permit constitutes effluent limitations as required by law.”].)

Like the NALs, the SALs are not traditional “strict” numeric effluent limits that result in violations if exceeded, but are nonetheless similar to such limits in that they are new programs imposed on the Copermitees that are tied to achieving compliance with specific numeric limits. As with the NALs, if the Copermitees exceed the SALs, they are subject to additional and costly requirements, regardless of the feasibility of complying with the SALs. (*See* 2009 Permit, pgs. 25-26.) In short, all of these new requirements are tied to determining and achieving compliance with a set of numbers, none of which is required under federal law. Thus, like the NAL-Triggered Mandates, the SAL-Related Mandates go far beyond what is required to be imposed in an MS4 permit, and the Board had a “true choice” in deciding to impose the “SAL-Related Mandates.” (*See Hayes v. Commission on State Mandates, supra*, 11 Cal.App.4th at 1593.)

## 3. There Were No SAL-Related Mandates In the 2002 Permit

All of the SAL-Related Mandates, including monitoring, investigation, reporting and compliance activities contained in the 2009 Permit are new programs that were not included in any fashion in the 2002 Permit.

#### **4. The SAL-Related Requirements are Unfunded State Mandates**

None of the monitoring, reporting, or compliance related programs imposed in connection with the SAL-Related Mandates under the 2009 Permit are required by federal law. Further, it is clear that the Courts (as well as the State Board) have consistently found, without exception, that numeric limitations of any kind are *not required* in a municipal NPDES Permit. The costs of complying with the SAL-Related Mandates will continue throughout this 2009 Permit and indefinitely with future permits, unless this new program is eliminated. As such, this new state mandate must be funded by the State in accordance with the California Constitution.

#### **5. Actual Increased Costs of Mandate**

As a result of the mandates set forth in Section D.2 of the 2009 Permit, the Joint Test Claimants have incurred increased costs in monitoring and the development of SAL protocols, as well as followup activities. As set forth in the Section 6 Declarations, paragraph 6(c), the Joint Test Claimants have incurred increased costs from this mandate of \$19,690 in FY 2010-11 and \$16,504 in FY 2011-12.

#### **E. NEW “LOW IMPACT DEVELOPMENT” (“LID”) AND HYDRO-MODIFICATION REQUIREMENTS REQUIRED BY SECTIONS F.1.D AND F.1.H OF THE 2009 PERMIT ARE UNFUNDED STATE MANDATES**

The 2009 Permit requires the Permittees to develop and implement a program to ensure that new development and significant redevelopment, as those terms are defined in the 2009 Permit, comply with strict low impact development and hydromodification prevention requirements. Specifically, the 2009 Permit imposes the following new LID requirements on Permittees: review and update the model and local Standard Storm Water Mitigation Plan (“SSMP”), add low impact development (“LID”) BMP requirements for each priority development project (“PDP”),<sup>45</sup> create a formalized review process for all PDPs, assess potential on- or off-site collection and reuse of storm water, amend local ordinances to remove barriers to LID implementation, maintain or restore natural storage reservoirs and drainage corridors, drain a portion of impervious areas into pervious areas, and construct low-traffic areas with permeable surfaces.<sup>46</sup> The 2009 Permit also requires the Permittees to collaboratively develop and implement a Hydromodification Management Plan (“HMP”).

The issue of whether these requirements exceed the requirements of federal law, and represent reimbursable state mandates was considered by the Commission in Test Claim 07-TC-09, Discharge of Stormwater Runoff – Order No. R9-2007-0001 (regarding the San Diego County Municipal Stormwater Permit). In its decision on Test Claim 07-TC-09, the Commission determined that the San Diego County NPDES permit’s LID and hydromodification requirements exceed the requirements of federal law, and as such represent state mandates. The Commission found, however, that the state mandates were not reimbursable, because the County of San Diego and the other permittees retained the ability to assess fees for new development.

---

<sup>45</sup> 2009 Permit, part D.1.d(3)-(10).

<sup>46</sup> *Id.* at part D.1d(4).

With the passage of California's Proposition 26 in November, 2010, it is clear that the costs associated with developing and implementing the LID and hydromodification programs is not recoverable through fees. Proposition 26, enacted by the voters this year to amend Article XIII C of the California Constitution, defined virtually any revenue device enacted by a local government as a tax requiring voter approval, unless it fell within certain enumerated exceptions.

Article XIII C § 2(d)<sup>47</sup> now provides that:

No local government may impose, extend, or increase any special tax unless and until that tax is submitted to the electorate and approved by a two-thirds vote. A special tax shall not be deemed to have been increased if it is imposed at a rate not higher than the maximum rate so approved.

Article XIII C § 1(d) defines special tax as

... any tax imposed for specific purposes, including a tax imposed for specific purposes, which is placed into a general fund

Article XIII C § 1(e) defines a tax as

... any levy, charge, or exaction of any kind imposed by a local government, except the following:

(1) A charge imposed for a specific benefit conferred or privilege granted directly to the payor that is not provided to those not charged, and which does not exceed the reasonable costs to the local government of conferring the benefit or granting the privilege.

(2) A charge imposed for a specific government service or product provided directly to the payor that is not provided to those not charged, and which does not exceed the reasonable costs to the local government of providing the service or product.

(3) A charge imposed for the reasonable regulatory costs to a local government for issuing licenses and permits, performing investigations, inspections, and audits, enforcing agricultural marketing orders, and the administrative enforcement and adjudication thereof.

(4) A charge imposed for entrance to or use of local government property, or the purchase, rental, or lease of local government property.

---

<sup>47</sup> All future references are to the California Constitution unless otherwise noted.

- (5) A fine, penalty, or other monetary charge imposed by the judicial branch of government or a local government, as a result of a violation of law.
- (6) A charge imposed as a condition of property development.
- (7) Assessments and property-related fees imposed in accordance with the provisions of Article XIII D.

The local government bears the burden of proving by a preponderance of the evidence that a levy, charge, or other exaction is not a tax, that the amount is no more than necessary to cover the reasonable costs of the governmental activity, and that the manner in which those costs are allocated to a payor bear a fair or reasonable relationship to the payor's burdens on, or benefits received from, the governmental activity.

In order not to be characterized as a tax subject to a voter approval, a fee must fall within the express exemptions it authorized by Article XIII C § 1(e). The fee must be such that it recovers no more than the amount necessary to recover costs of the governmental program being funded by the fee. Further the person or business being charged the fee, the payor, may only be charged a fee based on the portion of the total government costs attributable to burdens being placed on the government by that payor or an amount based on the direct benefits the payor receives from the program or facility being funded by the fee.

A fee or charge that does not fall within the seven exceptions listed in Article XIII C § 1(e) is automatically deemed a tax, which must be approved by the voters. Any fee that does not fall within one of the one of the exceptions listed in Article XIII C § 1(e) that is imposed for a specific purpose, such as funding all or portion of a program designed to comply with a local government's obligation under the MS4 Permit, would constitute a "special tax." Article XIII A § 4 and Article XIII C § 2(d) would thus require it to be approved by 2/3 of the voters of the portion of the jurisdiction subject to the fee.

With regard to municipal projects, the Commission found that the low impact development and hydromodification requirements in the San Diego County permit are not reimbursable state mandates because the permittees in that case are under no obligation to construct projects that would trigger the San Diego County permit requirements.<sup>48</sup>

In support of this determination, the Commission cited the California Supreme Court's decision in *Department of Finance v. Commission on State Mandates (Kern High School Dist.)* (2003) 30 Cal.4th 727. In *Kern High School Dist.*, the Court held that certain hearing requirements imposed upon school districts did not constitute a reimbursable state mandate because they were a requirement of voluntary program the school districts had elected to participate in. The Court held "activities undertaken at the option or discretion of a local government entity (that is, actions

---

<sup>48</sup> Test Claim 07-TC-09, *Discharge of Stormwater Runoff – Order No. R9-2007-0001*, 46, 52.

undertaken without any legal compulsion or threat of penalty for nonparticipation) do not trigger a state mandate and hence do not require reimbursement.”<sup>49</sup>

In coming to this decision, the Court relied on a lower court decision in *City of Merced v State of California* (1984) 153 Cal.App.3d 777. In that case, the city elected to take property by eminent domain, under which it was required by then recent legislation to compensate the owner for loss of “business goodwill.” The city sought reimbursement from the state, arguing that the new statutory requirement was a reimbursable state mandate. The Court of Appeal concluded that the city's increased costs flowed from its optional decision to condemn the property. The court reasoned: “whether a city or county decides to exercise eminent domain is, essentially, an option of the city or county, rather than a mandate of the state. . . Thus, payment for loss of goodwill is not a state-mandated cost.”<sup>50</sup>

The conditions that dictated the Court’s decision in *Kern High School Dist.* are not present in the 2009 Permit. For one, the 2009 Permit is not a voluntary program. The 2009 Permit nonetheless requires the Copermittees to take immediate actions related to low impact development and hydromodification, including requirements that are not triggered by any voluntary action on the part of the Copermittees. The conditions that dictated the Court’s decision in *Kern High School Dist.* are also absent with regard to project implementation. Again, the 2009 Permit is not a voluntary program, yet it requires the Copermittees to incur costs related to low impact development and hydromodification on municipal projects.<sup>51</sup> This includes recreational facilities, parking lots, streets, roads, highways, and any other project large enough to exceed the specified thresholds. The development and upkeep of these municipal land uses is not optional. They are integral to the Copermittee’s function as municipal entities, and the failure to make necessary repairs, upgrades and extensions can expose to the Copermittees to liability.

The rationale from *City of Merced* is likewise inapplicable. In that case, the city had the ability to avoid the new program by purchasing property, rather than taking it with eminent domain. Under the 2009 Permit, the Permittees have no such option. The 2009 Permit will force the Copermittees to incur new, additional costs on every municipal project. Moreover, the California Supreme Court has rejected the applicability of *City of Merced* in circumstances beyond those present in Kern High School Dist.

In *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal.4th 859, the Court considered similar regulatory requirements to those at issue in *Kern High School Dist.* The Court discussed its decision in *Kern High School Dist.*, at length, and cautioned against future reliance on *City of Merced* holding:

[W]e agree with the District and amici curiae that ***there is reason to question an extension of the holding of City of Merced so as to preclude reimbursement under article XIII B, section 6 of the state Constitution and Government Code section 17514 whenever an***

---

<sup>49</sup> *Department of Finance v. Commission on State Mandates* (Kern High School Dist.) (2003) 30 Cal.4th 727, 742.

<sup>50</sup> *City of Merced v. State of California* (1984) 153 Cal.App.3d 777, 783.

<sup>51</sup> 2009 Permit section XII.B.7 requires the Permittees to document which low impact development BMPs are included on any project in the WQMP for the project.

*entity makes an initial discretionary decision that in turn triggers mandated costs.* Indeed, it would appear that under a strict application of the language in *City of Merced*, public entities would be denied reimbursement for state-mandated costs in apparent contravention of the intent underlying article XIII B, section 6 of the state Constitution and Government Code section 17514 and contrary to past decisions in which it has been established that reimbursement was in fact proper. For example, as explained above, in *Carmel Valley*, *supra*, 190 Cal.App.3d 521, an executive order requiring that county firefighters be provided with protective clothing and safety equipment was found to create a reimbursable state mandate for the added costs of such clothing and equipment. (Id., at pp. 537–538.) The court in *Carmel Valley* apparently did not contemplate that reimbursement would be foreclosed in that setting merely because a local agency possessed discretion concerning how many firefighters it would employ—and hence, in that sense, could control or perhaps even avoid the extra costs to which it would be subjected. Yet, under a strict application of the rule gleaned from *City of Merced*, *supra*, 153 Cal.App.3d 777, such costs would not be reimbursable for the simple reason that the local agency's decision to employ firefighters involves an exercise of discretion concerning, for example, how many firefighters are needed to be employed, etc. We find it doubtful that the voters who enacted article XIII B, section 6, or the Legislature that adopted Government Code section 17514, intended that result, and hence we are reluctant to endorse, in this case, an application of the rule of *City of Merced* that might lead to such a result.<sup>52</sup>

Thus strict reliance on the *City of Merced* rationale is only appropriate in the very limited circumstances presented in the *Kern High School Dist.*, case. Those conditions are not present in the 2009 Permit, which imposes requirements on the Copermittees that are either wholly unrelated to voluntary action on the part of the Copermittees, or are triggered by municipal projects that the Copermittees implement with little to no discretion because they are integral to the Copermittees' function as municipal entities, and/or the failure to undertake them would expose the Copermittees to liability. As set forth above, and in greater detail below, these requirements exceed federal law and represent reimbursable state mandates.

### **1. Challenged Program Requirements**

The Permittees challenge parts F.1.d of the 2009 Permit as applied to municipal projects and development of program Permittees also challenge F.1.h in its entirety.

---

<sup>52</sup> *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal.4th 859, 887-888.

### **a. Challenged LID Requirements**

To comply with these parts F.1.d(4) and F.1.d(7), the Permittees must invest significant resources to review and update the model and local SSMPs and add LID BMP requirements for each priority development project (“PDP”).<sup>53</sup> Continued compliance with these sections will also require the Permittees to add requirements to municipal projects and will significantly increase the costs of design and construction.

New LID BMP requirements include creating a formalized review process for all PDPs, assessing potential on- or off-site collection and reuse of storm water, amending local ordinances to remove barriers to LID implementation, maintaining or restoring natural storage reservoirs and drainage corridors, draining a portion of impervious areas into pervious areas, and constructing low-traffic areas with permeable surfaces.<sup>54</sup> Mandatory language in the 2009 Permit, part F.1.d, creates a state mandate for Permittees to do all of the following:

#### (4) Low Impact Development BMP Requirements

Each Copermittee must require each Priority Development Project to implement LID BMPs which will collectively minimize directly connected impervious areas, limit loss of existing infiltration capacity, and protect areas that provide important water quality benefits necessary to maintain riparian and aquatic biota, and/or are particularly susceptible to erosion and sediment loss.

(a) The following LID BMPs must be implemented:

- (i) Each Copermittee must require LID BMPs or make a finding of infeasibility for each Priority Development Project in accordance with the LID waiver program in Section F.1.d.(8);
- (ii) Each Copermittee must incorporate formalized consideration, such as thorough checklists, ordinances, and/or other means, of LID BMPs into the plan review process for Priority Development Projects;
- (iii) The review of each Priority Development Project must include an assessment of potential collection of storm water for on-site or offsite reuse opportunities;
- (iv) The review of each Priority Development Project must include an assessment of techniques to infiltrate, filter, store, evaporate, or retain runoff close to the source of runoff; and

---

<sup>53</sup> 2009 Permit, part D.1.d(3)-(10).

<sup>54</sup> *Id.* at part D.1.d(4).

(v) Within 2 years after adoption of this Order, each Copermittee must review its local codes, policies, and ordinances and identify barriers therein to implementation of LID BMPs. Following the identification of these barriers to LID implementation, where feasible, the Copermittee must take, by the end of the permit cycle, appropriate actions to remove such barriers.

(b) The following LID BMPs must be implemented at all Priority Development Projects where technically feasible as required below:

(i) Maintain or restore natural storage reservoirs and drainage corridors (including depressions, areas of permeable soils, swales, and ephemeral and intermittent streams.

(ii) Projects with landscaped or other pervious areas must, where feasible, drain runoff from impervious areas (rooftops, parking lots, sidewalks, walkways, patios, etc) into pervious areas prior to discharge to the MS4. The amount of runoff from impervious areas that is to drain to pervious areas shall not exceed the total capacity of the project's pervious areas to infiltrate or treat runoff, taking into consideration the pervious areas' geologic and soil conditions, slope, and other pertinent factors.

(iii) Projects with landscaped or other pervious areas must, where feasible, properly design and construct the pervious areas to effectively receive and infiltrate or treat runoff from impervious areas, prior to discharge to the MS4. Soil compaction for these areas shall be minimized. The amount of the impervious areas that are to drain to pervious areas must be based upon the total size, soil conditions, slope, and other pertinent factors.

(iv) Projects with low traffic areas and appropriate soil conditions must construct walkways, trails, overflow parking lots, alleys, or other low-traffic areas with permeable surfaces, such as pervious concrete, porous asphalt, unit pavers, and granular materials.

(c) To protect ground water resources any infiltration LID BMPs must comply with Section F.1.(c)(6).

(d) LID BMPs sizing criteria:

(i) LID BMPs shall be sized and designed to ensure onsite retention without runoff, of the volume of runoff produced from a 24-hour 85th percentile storm event, as determined from the County of Orange's 85th Percentile Precipitation Map ("design capture volume");

(ii) If onsite retention LID BMPs are technically infeasible per section F.1.d.(7)(b), LID biofiltration BMPs may treat any volume that is not retained onsite by the LID BMPs. The LID biofiltration BMPs must be designed for an appropriate surface loading rate to prevent erosion, scour and channeling within the BMP. Due to the flow through design of biofiltration BMPs, the total volume of the BMP, including pore spaces and prefilter detention volume, must be sized to hold at least 0.75 times the design storm volume that is not retained onsite by LID retention BMPs;

(iii) If it is shown to be technically infeasible to treat the remaining volume up to and including the design capture volume using LID BMPs (retention or biofiltration), the project must implement conventional treatment control BMPs in accordance with Section F.1.d.(6) below and must participate in the LID waiver program in Section F.1.d.(7).

(e) All LID BMPs shall be designed and implemented with measures to avoid the creation of nuisance or pollution associated with vectors, such as mosquitoes, rodents, and flies.

\* \* \*

(7) Low Impact Development (LID) BMP Waiver Program.

The Copermittees must develop, collectively or individually, a LID waiver program for incorporation into local SSMPs, which would allow a Priority Development Project to substitute implementation of all or a portion of required LID BMPs in section F.1.d(4) with implementation of treatment control BMPs and a mitigation project, payment into an in-lieu funding program, and/or watershed equivalent BMP(s) consistent with Section F.1.d.(11). The Copermittees shall submit the LID waiver program as part of their updated model SSMP. At a minimum, the program must meet the requirements below:

(a) Prior to implementation, the LID waiver program must clearly exhibit that it will not allow PDPs to result in a net impact (after consideration of any mitigation and in-lieu payments) from pollutant loadings over and above the impact caused by

projects meeting LID requirements; (b) For each PDP participating, a technical feasibility analysis must be included demonstrating that it is technically infeasible to implement LID BMPs that comply with the requirements of Section F.1.(d)(4). The Copermitttee(s) must develop criteria for the technical feasibility analysis including a cost benefit analysis, examination of LID BMPs considered and alternatives chosen. Each PDP participating must demonstrate that LID BMPs were implemented as much as feasible given the site's unique conditions. Analysis must be made of the pollutant loading for each project participating in the LID substitution program. The estimated impacts from not implementing the required LID BMPs in section F.1.d.(4) must be fully mitigated. Technical infeasibility may result from conditions including, but not limited to:

(i) Locations that cannot meet the infiltration and groundwater protection requirements in section F.1.c.(6). Where infiltration is technically infeasible, the project must still examine the feasibility of other onsite retention LID BMPs;

(ii) Smart growth and infill or redevelopment locations where the density and/or nature of the project would create significant difficulty for compliance with the onsite volume retention requirements; and

(iii) Other site, geologic, soil or implementation constraints identified in the Copermitttees updated local SSMP document.

(c) The LID waiver program must include mechanisms to verify that each Priority Development Project participating in the program is in compliance with all applicable SSMP requirements;

(d) The LID waiver program must develop and implement a review process verifying that the BMPs to be implemented meet the designated design criteria. The review process must also verify that each Priority Development Project participating in the program is in compliance with all applicable SSMP requirements.

(e) The LID waiver program must include performance standards for treatment control BMPs specified in compliance with section F.1.(d)(6).

(f) Each PDP that participates in the LID waiver program must mitigate for the pollutant loads expected to be discharged due to not implementing the LID BMPs in section F.1.d.(4). Mitigation projects must be implemented within the same hydrologic subarea as the PDP. Mitigation projects outside of the hydrologic subarea but within the same hydrologic unit may be approved provided that the project proponent demonstrates that mitigation projects within the same hydrologic subarea are infeasible and that the mitigation project will address similar beneficial use impacts as expected from the PDPs pollutant load types and amount. Offsite mitigation projects may include green streets projects, existing development retrofit projects, retrofit incentive programs, regional BMPs and stream restoration. Project applicants seeking to utilize these alternative compliance provisions may propose other offsite mitigation projects, which the Copermittees may approve if they meet the requirements of this subpart.

(g) A Copermittee may choose to implement a pollutant credit system as part of the LID waiver program provided that such a credit system clearly exhibits that it will not allow PDPs to result in a net impact from pollutant loadings over and above the impact caused by projects meeting LID requirements. Any credit system that a Copermittee chooses to implement must be submitted to the Executive Officer for review and approval as part of the waiver program.

(h) The LID waiver program shall include a storm water mitigation fund developed by the Copermittee(s) to be used for water quality improvement projects which may serve in lieu of the PDP's required mitigation in section F.1.d.(8)(e). The LID waiver program's storm water mitigation fund shall, at a minimum, identify:

(i) The entity or entities that will manage the storm water mitigation fund (i.e., assume full responsibility);

(ii) The range and types of acceptable projects for which storm water mitigation funds may be expended;

(iii) The entity or entities that will assume full responsibility for each water quality improvement project, including its successful completion; and

(iv) How the dollar amount of storm water mitigation fund contributions will be determined. In-lieu payments must be

proportional to the additional pollutant load discharged by not fully implementing LID.

(i) Each Copermittee must notify the Regional Board in their annual report of each PDP choosing to participate in the LID waiver program. The annual report must include the following information:

- (i) Name of the developer of the participating PDP;
- (ii) Site location;
- (iii) Reason for LID waiver including technical feasibility analysis;
- (iv) Description of BMPs implemented;
- (v) Total amount deposited, if any, into the storm water mitigation fund described in section F.1.d.(8)(f);
- (vi) Water quality improvement project(s) proposed to be funded; and
- (vii) Timeframe for implementation of water quality improvement projects.

(8) Site Design and Treatment Control BMP Design Standards As part of its local SSMP, each Copermittee must develop and require Priority Development Projects to implement siting, design, and maintenance criteria for each site design and treatment control BMP listed in its local SSMP to determine feasibility and applicability and so that implemented site design and treatment control BMPs are constructed correctly and are effective at pollutant removal, runoff control, and vector minimization. LID techniques, such as soil amendments, must be incorporated into the criteria for appropriate treatment control BMPs. Development of BMP design worksheets which can be used by project proponents is encouraged.

(9) Implementation Process As part of its local SSMP, each Copermittee must implement a process to verify compliance with SSMP requirements. The process must identify at what point in the planning process Priority Development Projects will be required to meet SSMP requirements and at a minimum, the Priority Development Project must implement the required post-construction BMPs prior to occupancy and/or the intended use of any portion of that project. The process must also include identification of the roles and responsibilities of various municipal departments in implementing the SSMP requirements, as well as any

other measures necessary for the implementation of SSMP requirements.

By adding requirements and increasing the specificity of existing requirements, the 2009 LID requirements are new programs or higher levels of service.

### **b. Challenged Hydromodification Requirements**

Part F.1.h requires Permittees to collaboratively develop and implement a Hydromodification Management Plan (“HMP”) to manage increases in runoff discharge rates and durations from all PDPs. Permittees must then incorporate the HMP into the local SSMP. The HMP must be so designed and implemented so as to ensure that post-project runoff discharge rates and durations do not exceed pre-development discharge rates and durations. To comply with part F.1.h, the Copermittees must invest significant resources to hold public hearings, hold collaborative meetings, develop an HMP, train staff, and adopt the local SSMP. Continued compliance with these sections will also require Copermittees to add requirements to municipal projects and will significantly increase the costs of design and construction.

Within one year of the 2009 Permit, Copermittees must take interim steps to ensure all PDPs are implementing specified criteria by comparing the pre-development and post-project flow rates and durations, using a continuous simulation hydrologic model. Within two years of the 2009 Permit, Permittees must submit a draft HMP to the Regional Board. On its submission, the draft HMP must have been reviewed by the public. The HMP itself is subject to 14 separate requirements, as follows:

#### **h. Hydromodification – Limitation on Increases of Runoff Discharge Rates and Durations**

Each Copermittee shall collaborate with the other Copermittees to develop and implement a Hydromodification Management Plan (HMP) to manage increases in runoff discharge rates and durations from all Priority Development Projects. The HMP shall be incorporated into the local SSMP and implemented by each Copermittee so that estimated post-project runoff discharge rates and durations shall not exceed pre-development discharge rates and durations. Where the proposed project is located on an already developed site, the pre-project discharge rate and duration shall be that of the pre-developed, naturally occurring condition. The HMP shall be submitted to the Executive Officer within 2 years of permit adoption. The HMP will be made available for public review and comment and the Executive Officer will determine the need for a public hearing.

##### **(1) The HMP must:**

- (a) Identify a method for assessing susceptibility of channel segments which receive runoff discharges from Priority Development Projects. The geomorphic stability within the**

channel shall be assessed. A performance standard shall be created that ensures that the geomorphic stability within the channel not be compromised as a result of receiving runoff discharges from Priority Development Projects.

(b) Utilize continuous simulation of the entire rainfall record (or other analytical method proposed by the Copermittees and deemed acceptable by the Regional Board) to identify a range of runoff flows for which priority Development Project post-project runoff flow rates and durations shall not exceed pre-development (naturally occurring) runoff flow rates and durations by more than 10 percent, where the increased flow rates and durations will result in increased potential for erosion or other significant adverse impacts to beneficial uses. In addition, the identified range of runoff flow rates and durations must compensate for the loss of sediment supply due to the development. The lower boundary of the range of runoff flows identified shall correspond with the critical channel flow that produces the critical shear stress that initiates channel bed movement or that erodes the toe of channel banks. The identified range of runoff flows may be different for specific watersheds, channels, or channel reaches. In the case of an artificially hardened (concrete lined, rip rap, etc.) channel, the lower boundary of the range of runoff flows identified shall correspond with the critical channel flow that produces the critical shear stress that initiates channel bed movement or that erodes the toe of channel banks of a comparable soft-bottomed channel.

(c) Require Priority Development Projects to implement hydrologic control measures so that Priority Development Projects' post-project runoff flow rates and durations (1) do not exceed pre-project (naturally occurring) runoff flow rates and durations by more than 10 percent for the range of runoff flows identified under section F.1.h.(1)(b), where the increased flow rates and durations will result in increased potential for erosion or other significant adverse impacts to beneficial uses; (2) do not result in channel conditions which do not meet the channel standard developed under section F.1.h.(1)(a) for channel segments downstream of Priority Development Project discharge points; and (3) compensate for the loss of sediment supply due to development.

(d) Include other performance criteria (numeric or otherwise) for Priority Development Projects as necessary to prevent runoff from the projects from increasing and/or continuing unnatural rates of erosion of channel beds and banks, silt pollutants

generation, or other impacts to beneficial uses and stream habitat due to increased erosive force.

(e) Include a review of pertinent literature.

(f) Identify areas within the San Juan Hydrologic Unit where historic hydromodification has resulted in a negative impact to benthic macroinvertebrate and benthic periphyton by identifying areas with low or very low Index of Biotic Integrity (IBI) scores.

(g) Include a protocol to evaluate potential hydrograph change impacts to downstream watercourses from Priority Development Projects. This protocol must include the use of the IBI score as a metric for assessing impacts and improvements to downstream watercourses.

(h) Include a description of how the Copermittees will incorporate the HMP requirements into their local approval processes.

(i) Include criteria on selection and design of management practices and measures (such as detention, retention, and infiltration) to control flow rates and durations and address potential hydromodification impacts.

(j) Include technical information supporting any standards and criteria proposed.

(k) Include a description of inspections and maintenance to be conducted for management practices and measures to control flow rates and durations and address potential hydromodification impacts.

(l) Include a description of pre- and post-project monitoring and other program evaluation, including IBI score, to be conducted to assess the effectiveness of implementation of the HMP.

(m) Include mechanisms for assessing and addressing cumulative impacts within a watershed on channel morphology.

(n) Include information on evaluation of channel form and condition, including slope, discharge, vegetation, underlying geology, and other information, as appropriate.

(2) In addition to the hydrologic control measures that must be implemented per section F.1.h.(1)(c), the HMP must include a suite of management measures to be used on Priority Development Projects to protect and restore downstream beneficial uses and prevent or further prevent adverse physical changes to downstream

channels. The measures must be based on a prioritized consideration of the following elements in this order:

- (a) Hydrologic control measures;
- (b) On-site management controls;
- (c) Regional controls located upstream of receiving waters; and
- (d) In-stream controls. Where stream channels are adjacent to, or are to be modified as part of a Priority Development Project, management measures must include buffer zones and setbacks. Under no circumstances will in-stream controls include the use of non-naturally occurring hardscape materials such as concrete, riprap, gabions, etc. The suite of management measures shall also include stream restoration as a viable option to achieve the channel standard in section F.1.h.(1)(a).

(3) Each individual Copermittee has the discretion to not require Section F.1.h. at Priority Development Projects where the project:

- (a) Discharges storm water runoff into underground storm drains discharging directly to bays or the ocean; or
- (b) Discharges storm water runoff into conveyance channels whose bed and bank are concrete lined all the way from the point of discharge to ocean waters, enclosed bays, estuaries, or water storage reservoirs and lakes.

(4) HMP Reporting and Implementation

- (a) Within 2 years of adoption of the Order, the Copermittees shall submit to the Regional Board a draft HMP that has been reviewed by the public, including the analysis that identifies the appropriate limiting range of flow rates per section F.1.h.(1)(b).
- (b) Within 180 days of receiving Regional Board comments on the draft HMP, the Copermittees shall submit a final HMP that addressed the Regional Board's comments.
- (c) Within 90 days of receiving a finding of adequacy from the Executive Officer, each Copermittee shall incorporate and implement the HMP for all Priority Development Projects.
- (d) Prior to approval of the HMP by the Regional Board, the early implementation measures likely to be included in the HMP shall be encouraged by the Copermittees.

## (5) Interim Hydromodification Criteria

Within one year of adoption of this Order, each Copermittee must ensure that all Priority Development Projects are implementing the following criteria by comparing the pre-development (naturally occurring) and post-project flow rates and durations using a continuous simulation hydrologic model such as US EPA's Hydrograph Simulation Program-Fortran (HSPF):

(a) For flow rates from 10 percent of the 2-year storm event to the 5 year storm event, the post-project peak flows shall not exceed predevelopment (naturally occurring) peak flows.

(b) For flow rates from the 5 year storm event to the 10 year storm event the post-project peak flows may exceed pre-development (naturally occurring) flows by up to 10 percent for a 1-year frequency interval. The interim hydromodification criteria do not apply to Priority Development Projects where the project discharges (1) storm water runoff into underground storm drains discharging directly to bays or the ocean, or (2) storm water runoff into conveyance channels whose bed and bank are concrete lined all the way from the point of discharge to ocean waters, enclosed bays, estuaries, or water storage reservoirs and lakes. Within one year of adoption of this Order, each Copermittee must submit a signed, certification statement to the Regional Board verifying implementation of the interim hydromodification criteria.

(6) No part of section F.1.h shall alleviate the Copermittees responsibilities for implementing Low Impact Development BMPs as required under section F.1.d.(4).

## 2. Requirements of Federal Law

Nothing in the CWA, its regulations, or case law requires local agencies to review and update the BMP requirements listed in an SSMP, to add LID BMP requirements to PDPs, to add a waiver program to development and implement interim hydromodification protocols, or to create an HMP.<sup>55</sup> Indeed, the Commission has already considered whether the requirement to review and update BMP in local SSMPs or the requirement to submit and implement an updated Model SSMP is required by federal law or regulation.<sup>56</sup> This Commission decided “nothing in the federal regulation requires agencies to update local or model SSMPs.”<sup>57</sup> In addition, the Commission

---

<sup>55</sup> 33 U.S.C. § 1342; 40 C.F.R. § 122.26; see also Test Claim 07-TC-09, *Discharge of Stormwater Runoff – Order No. R9-2007-0001*, 51.

<sup>56</sup> Test Claim 07-TC-09, *Discharge of Stormwater Runoff – Order No. R9-2007-0001*, p. 51.

<sup>57</sup> *Ibid.*

determined that the hydromodification requirement constituted “a state-mandated, new program or higher level of service.”<sup>58</sup>

The Commission considered and decided that nothing in federal law or regulation requires an updated Model SSMP to define minimum LID and other BMP requirements for incorporation into local SSMPs.<sup>59</sup> Likewise, nothing in federal law or regulation requires a municipality to adopt or implement an HMP.<sup>60</sup> The CWA only requires MS4 permits to impose controls that reduce the discharge of pollutants to the maximum extent practicable (“MEP”).<sup>61</sup> MEP is not defined, but the CWA suggests management practices, control techniques, and system, design, and engineering methods as options for attaining the maximum reduction possible.<sup>62</sup> When suggestions are no longer merely being suggested as options for consideration “but are required acts, [t]hese requirements constitute a higher level of service.”<sup>63</sup>

Federal regulations require part of a permit application to include a plan for developing, implementing and enforcing controls to reduce the discharge from MS4s that originate in areas of new development.<sup>64</sup> Requiring post-construction controls to limit pollutant discharges originating in areas of new development may be within the requirements of Section 122.26(d)(2)(iv)(A), but the specific LID requirements contained in the 2009 Permit are not required in this Section. By adopting permit provisions that require Permittees to review and update SSMPs, to implement LID requirements and to develop an HMP, the state has freely chosen<sup>65</sup> to impose requirements and related costs that are not federally mandated and that, when mandated by the state, constitute a new program or higher level of service.<sup>66</sup>

### **3. Requirements of Previous Orders**

The 2002 Permit does not require the Copermittees to develop and implement LID permit requirements or an HMP. The most analogous section in the 2002 Permit, part F.1 “Land-Use Planning for New Development and Redevelopment Component,” requires each Copermittee to assess the general plan, modify the development project approval process, revise environmental review processes and conduct education efforts.<sup>67</sup> This part does not require review or revision of model or local SSMPs or impose LID requirements.

### **4. Mandated Activities**

To comply with the low impact development and hydromodification requirements in the 2009 Permit, the Copermittees will need to develop and impose a number of new programs. The

<sup>58</sup> *Id.* at p. 97.

<sup>59</sup> *Id.* at p. 51.

<sup>60</sup> *Id.* at p. 44.

<sup>61</sup> 33 U.S.C. § 1342(p)(3)(B)(iii).

<sup>62</sup> *Ibid.*

<sup>63</sup> Test Claim 07-TC-09, *Discharge of Stormwater Runoff – Order No. R9-2007-0001*, 51; see also *Long Beach Unified School District v. State of California* (1990) 225 Cal.App.3d 155, 173.

<sup>64</sup> 40 C.F.R. § 122.26(d)(2)(iv)(A)(2).

<sup>65</sup> *Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, 1593-1594.

<sup>66</sup> Test Claim 07-TC-09, *Discharge of Stormwater Runoff – Order No. R9-2007-0001*, 51.

<sup>67</sup> California Regional Water Quality Control Board San Diego Region Order No. R9-2002-0001, NPDES No. CAS0108740.

specific mandated activities are described in greater detail in section IV.D.1, above. In sum, within one year of the 2009 Permit, Copermittees were required to take interim steps to ensure all PDPs are implementing specified criteria by comparing the pre-development and post-project flow rates and durations, using a continuous simulation hydrologic model. Within two years of the 2009 Permit, Copermittees must develop and submit a draft HMP to the Regional Board. On its submission, the draft HMP must have been reviewed by the public.

The Copermittees are also required to develop and implement LID and hydromodification prevention design principles on municipal projects that qualify as PDPs. This will require creating a formalized review process for all PDPs, training staff on the new protocol, assessing potential on- or off-site collection and reuse of storm water, amending local ordinances to remove barriers to LID implementation, maintaining or restoring natural storage reservoirs and drainage corridors, draining a portion of impervious areas into pervious areas, and constructing low-traffic areas with permeable surfaces.<sup>68</sup> Projects that are subject to these requirements include municipal yards, recreation centers, civic centers, and road improvements, and any other municipal projects meeting the permit-specified thresholds or geographical criteria.

To date, the Copermittees have been and will continue to be required to invest significant resources to review and update the model and local SSMPs and add LID BMP requirements for each PDP.<sup>69</sup> Continued compliance with these sections will also require Copermittees to add requirements to municipal projects and will significantly increase the costs of design and construction.

## **5. Actual Increased Costs of Mandate**

To comply with the 2009 Permit's LID and HMP requirements, the Joint Test Claimants were required to expend resources to develop and administer programs relating to these requirements. The Copermittees, including the Joint Test Claimants, jointly retained consultants to develop the program on a cost-sharing basis, and have been required to expend resources on an individual jurisdictional basis to comply with the LID and HMP requirements within their jurisdictions. As set forth in the Section 6 Declarations, paragraph 6(d), the Joint Test Claimants incurred increased costs of \$125,988 in FY 2009-10 and \$54,715 in FY 2010-11.

## **F. NEW REPORTING REQUIREMENTS INCLUDING AN ANNUAL ASSESSMENT OF THE EFFECTIVENESS OF THE JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM AND A WORK PLAN DEMONSTRATING A RESPONSIVE AND ADAPTIVE APPROACH FOR THE USE OF RESOURCES AS SET FORTH IN SECTION J OF THE 2009 PERMIT ARE UNFUNDED STATE MANDATES**

### **1. Challenged Program Requirement**

Sections J.1.b, J.2, J.3 and J.4 of the 2009 Permit require the Copermittees to develop a new system of assessing the effectiveness of its stormwater management program and impose new requirements to annually report that assessment to the Regional Board. These requirements are all

---

<sup>68</sup> 2009 Permit, part D.1.d(4)

<sup>69</sup> *Id.* at part D.1.d(3)-(10).

new requirements and go beyond the requirements of federal law and are being challenged as unfunded mandates.

## **2. Requirements of Federal Law**

The assessment methodology that the Regional Board is requiring in the 2009 Permit is not required by federal regulation. The relevant federal regulation setting forth requirements concerning the assessment of the effectiveness of the MS4 Permittees' stormwater program can be found in 40 CFR § 122.26(d)(2)(v) and 40 CFR §§ 122.42 (c)(3).

40 CFR § 122.26(d)(2)(v) requires a Copermittee to include the following in its application for a MS4 Permit:

*Assessment of controls.* Estimated reductions in loadings of pollutants from discharges of municipal storm sewer constituents from municipal storm sewer systems expected as the result of the municipal storm water quality management program. The assessment shall also identify known impacts of storm water controls on ground water.

40 CFR §§ 122.42 (c)(3) requires the Copermittees to submit an Annual Report that includes:

Revisions, if necessary, to the assessment of controls ... reported in the permit application under §122.26(d)(2)(iv) and (d)(2)(v) of this part;

The federal requirements are extremely general and leave a Copermittee great latitude in the method they adopt to evaluate the effectiveness of the pollution controls they propose as part of their stormwater program. The federal regulation allows a Copermittee to develop its methodology for the assessment of the effectiveness of its stormwater program.

The federal regulations also require very limited reporting of a Copermittee's proposed assessment activities. The MS4 Permittee's initial application must include an assessment of estimated reductions in pollutants as a result of a Copermittee's proposed watershed management program. The annual reporting requirements in federal regulations related to that assessment are also very limited. A Permittee is required to include in its Annual Report only revisions to its assessment that prove necessary. The federal regulations do not require a formalized ongoing annual reassessment of the entire stormwater program.

## **3. Requirements of Previous Orders**

The program assessment requirements in the 2002 Permits are in Section F.8 of the 2002 Permit. Those provisions are as follows:

a. As part of its individual [Jurisdictional Urban Runoff Management Plan (Jurisdictional URMP)], each Copermittee shall develop a long-term strategy for assessing the effectiveness of its

individual Jurisdictional URMP. The long-term assessment strategy shall identify specific direct and indirect measurements that each Copermittee will use to track the long-term progress of its individual Jurisdictional URMP towards achieving improvements in receiving water quality. Methods used for assessing effectiveness shall include the following or their equivalent: surveys, pollutant loading estimations, and receiving water quality monitoring. The long-term strategy shall also discuss the role of monitoring data in substantiating or refining the assessment.

b. As part of its individual Jurisdictional URMP Annual Report, each Copermittee shall include an assessment of the effectiveness of its Jurisdictional URMP using the direct and indirect assessment measurements and methods developed in its long-term assessment strategy.

Section H.9.1.a.(9).(a) required the Copermittees to submit a written report to the Regional Board describing their Jurisdictional URMP. One of the elements that needed to be included in that report was a description of the strategy that the Copermittee proposed to use to assess the effectiveness of its Jurisdictional URMP. It provided:

At a minimum, the individual Jurisdictional URMP document shall contain the following information for the following components: ...  
A description of strategies to be used for assessing the long-term effectiveness of the individual Jurisdictional URMP.

The requirements in the 2002 Permit were much less prescriptive and gave the Copermittees latitude in developing procedures for assessing the effectiveness of their stormwater management program and were much more in line with federal regulatory requirements.

#### **4. Mandated Activities in the 2009 Permit**

Section J of the 2009 Permit requires all of the Copermittees to develop a system for assessing the effectiveness of their individual Jurisdictional Runoff Management Plan (JRMP). The Copermittees are required under this permit to develop a method for measuring how effective the Copermittees JRMP is in meeting certain objectives. The objectives that must be tracked and measured are

- The effectiveness of the JRMP in reducing discharges of storm water pollutants from its MS4 into each downstream 303(d)-listed water body for which that waterbody is impaired. Assessment measures must be developed for each of the six outcome levels described by CASQA.<sup>70</sup>
- the effectiveness of its management measures in the JRMP for protecting downstream ESAs from adverse effects caused by discharges from its MS4.

---

<sup>70</sup> *Id.* at section J.1.a(1), p. 79 of 92.

Assessment measures must be developed for each of the six outcome levels described by CASQA.<sup>71</sup>

- The effectiveness of each individual element of the JRMP that Permittees are required to develop by the 2009 Permit<sup>72</sup>.
- The effectiveness of “each measure conducted in response to a determination to implement the “iterative” approach to prevent or reduce any storm water pollutants that are causing or contributing to the exceedance of water quality standards as outlined in this Order.”<sup>73</sup>

Annually the Copermittees are required to utilize the methodology developed under Section J of the Permit to review its activities conducted to comply with the requirements of this permit and review any BMPs implemented and evaluate the effectiveness of those activities and BMPs to meet the objectives set forth above<sup>74</sup>. The Copermittees must also annually evaluate the methodology itself.<sup>75</sup> The Copermittees must then propose and implements changes to their activities and modifications of BMPs to better meet the objectives set forth above.<sup>76</sup>

Section J also adds significant new reporting requirements that were not in prior permits. Section J.3.a of the 2009 Permit<sup>77</sup> now requires the following:

Each Copermittee must include a description and summary of its annual and long-term effectiveness assessments within each Annual Report. Beginning with the Annual Report due in 2011, the Program Effectiveness reporting must include:

- (1) 303(d) waterbodies: A description and results of the annual assessment measures or methods specifically for reducing discharges of storm water pollutants from its MS4 into each 303(d)-listed waterbody;
- (2) ESAs: A description and results of the annual assessment measures or methods specifically for managing discharges of pollutants from its MS4 into each downstream ESA;
- (3) Other Program Components: A description of the objectives and corresponding assessment measures and results used to evaluate the effectiveness of each general program component. The results must include findings from both program implementation and water quality assessment where applicable;

---

<sup>71</sup> *Id.* at section J.1.a(2), p. 79 of 92.

<sup>72</sup> *Id.* at section J.1.a(3), pp. 79-80 of 92.

<sup>73</sup> *Id.* at section J.1.a(4), p. 80 of 92.

<sup>74</sup> *Id.* at section J.1.b(1), p. 80 of 92.

<sup>75</sup> *Id.* at section J.1.b(2), p. 80 of 92.

<sup>76</sup> *Id.* at section J.2, pp. 80-81 of 92.

<sup>77</sup> *Id.* at section J.3, p. 81 of 92.

(4) Receiving water protection: A description and results of the annual assessment measures or methods employed specifically for actions taken to protect receiving water limitations in accordance with Section A.3 of this Order;

(5) A description of the steps taken to use dry-weather and wet-weather monitoring data to assess the effectiveness of the programs for 303(d) impairments, ESAs, and general program components;

(6) A description of activities conducted in response to investigations of illicit discharge and illicit connection activities, including how each investigation was resolved and the pollutant(s) involved;

(7) Responses to effectiveness assessments: A description of each program modification, made in response to the results of effectiveness assessments conducted pursuant to Section J.1.a, and the basis for determining (pursuant to Section J.2.b.) that each modified activity and/or BMP represents an improvement with respect to reducing the discharge of storm water pollutants from the MS4.

(8) A description of the steps that will be taken to improve the Copermittee's ability to assess program effectiveness using measurable targeted outcomes, assessment measures, assessment methods, and outcome levels 1-6. Include a time schedule for when improvement will occur; and

(9) A description of the steps that will be taken to identify aspects of the Copermittee's Jurisdictional Runoff Management Program that will be changed based on the results of the effectiveness assessment

In addition to the information mentioned above, Section J.4 of the 2009 Permit requires the Copermittees to develop a Work Plan. This Work Plan Requirement is a new requirement and was not in prior permits. Section J.4 of the 2009 Permit<sup>78</sup> provides:

Each Copermittee must develop a work plan to address their high priority water quality problems in an iterative manner over the life of the permit. The goal of the work plan is to demonstrate a responsive and adaptive approach for the judicious and effective use of available resources to attack the highest priority problems. The work plan shall include, at a minimum, the following:

---

<sup>78</sup> *Id.* at section J.4, p. 82 of 92.

- a.** The problems and priorities identified during the assessment;
- b.** A list of priority pollutants and known or suspected sources;
- c.** A brief description of the strategy employed to reduce, eliminate or mitigate the negative impacts;
- d.** A description and schedule for new and/or modified BMPs. The schedule is to include dates for significant milestones;
- e.** A description of how the selected activities will address an identified high priority problem. This will include a description of the expected effectiveness and benefits of the new and/or modified BMPs;
- f.** A description of implementation effectiveness metrics;
- g.** A description of how efficacy results will be used to modify priorities and implementation; and
- h.** A review of past activities implemented, progress in meeting water quality standards, and planned program adjustments. The Copermittee shall submit the work plan to the Regional Board within 365 days of adoption of the Order. Annual updates are also required and shall be included with the annual JRMP report. The Regional Board will assess the work plan for compliance with the specific and overall requirements of the Order. To increase effectiveness and efficiencies, Copermittees may combine their implementation efforts and work plans within a hydrologic area or sub area. Each Copermittee, however, maintains individual responsibility for developing and implementing an acceptable work plan.

The requirements in Section J of the 2009 Permit go beyond federal law in a number of significant ways. The assessment methodology set forth in Section J is a methodology created in whole by the Regional Board. This was not a methodology that was proposed by the Copermittees nor is it a methodology that is found in any federal regulation. The 2009 Permit sets forth the objectives that the Copermittees' assessment methodology should measure as well as every element that must be included in that assessment methodology. The Copermittee must develop an assessment methodology that meets those prescriptive requirements.

The 2009 Permit also requires the development of a Work Plan with very specific elements. The formal Work Plan requirement is not found in any federal regulation. Section J of the 2009 Permit requires an annual assessment of the Claimants' stormwater program, the JRMP, be done

and included in reports provided to the Regional Board. That annual assessment covers every aspect of JRMP. That annual assessment must not only assess the effectiveness of elements of the JRMP but also must assess the assessment methodology itself. The Work Plan required by Section J.4 must also be updated annually. These annual reporting requirements and annual requirements to revise the Copermittees original assessment go well beyond anything found in federal regulations.

## **5. Actual Increased Costs of Mandate**

As set forth in the Section 6 Declarations at paragraph 6(h)(i), the Joint Test Claimants have incurred increased costs to address the assessment methodology and criteria required by the mandates in Sections F and J of the 2009 Permit, including development of reporting templates and conducting assessments. The increased costs to the Joint Test Claimants from these mandates were \$1,750 in FY 2009-10, \$34,439 in FY 2010-11 and \$14,990 in FY 2011-12. These increased costs also included the reporting requirements of Sections F, K and Attachment D, discussed in Section IV.H. below.

## **6. Conclusion**

Section J of the 2009 Permit creates a highly prescriptive and highly bureaucratic system for evaluating the JRMP that each of the Copermittees is required to develop. The assessment requirements in the 2002 Permit were contained in three paragraphs that took up one half of a page of the prior permit. The assessment requirements of the 2009 Permit now take up almost four full pages of the new permit. The assessment method required by the 2009 Permit goes well beyond what is required by federal law and significantly different than what was contained in the prior 2002 Permit issued by the Regional Board. These changes are not an incremental changes to existing programs that simply increase the cost of providing existing activities but rather represent a significant increase in the actual level and type of activities required of them by the Regional Board and therefore constitutes a requirement for a “higher level of service” within the meaning of Article XIII B § 6 of the California Constitution.<sup>79</sup> None of the costs that will be incurred by Copermittees in complying with these new requirements can be recouped through fees given the legal restrictions on local government’s power to charge fees. The additional program elements described above, therefore constitute unfunded mandates. Copermittees are constitutionally entitled to be reimbursed for the cost of implementing these mandates.

## **G. NEW REPORTING REQUIREMENTS, INCLUDING A WATERSHED WORKPLAN REPORT AS SET FORTH IN SECTION K.1.B OF THE 2009 PERMIT ARE UNFUNDED STATE MANDATES**

### **1. Challenged Program Requirement**

The Public Meeting requirements found in sections G.6, and K.1.b.(4).(n) of the 2009 Permit are being challenged as unfunded state mandates.

---

<sup>79</sup>*San Diego Unified School District v. Commission on State Mandates* (2004) 33 Ca1.4th 859, 877.

## **2. Requirements of Federal Law**

The federal regulations that dictate the essential elements of a MS4 Permittee's program for the management of stormwater is found in 40 CFR § 122.26(d)(2)(iv). Although this regulation spells out certain elements that must be included in a Permittee's stormwater management program, the federal regulations do not set out any procedural requirements that must be followed by a Permittee in developing its program. Specifically there are no provisions in the relevant federal regulations that require a Permittee to conduct a public meeting before adopting any aspect of that management program.

## **3. Requirements of Previous Orders**

The Watershed Urban Runoff Management Program requirements of the 2002 Permit were found in sections J – M of the previous permit. Sections L and M of the 2002 Permit contained the Permittees' reporting requirements related to the Watershed Urban Runoff Management Program.

Although the requirement to develop a Watershed Workplan is similar to reporting requirements in Sections L and M of the 2002 Permit, there are significant additional requirements in the 2009 Permit related to the development of the Watershed Workplan. The most significant of those new requirements is the requirement that Copermittees conduct an annual Watershed Workplan Review at a noticed public meeting<sup>80</sup>

## **4. Mandated Activities in the 2009 Permit**

The requirement to conduct annual public meetings when developing any aspect of a Copermittee's stormwater management program is a new requirement and is not a requirement found in federal regulations.

Section K.1.b and sections G.2 of the 2010 Permit require the preparation of a Watershed Water Quality Workplan (Watershed Workplan) that describes

... the Permittees' development and implementation of a collective watershed strategy to assess and prioritize the water quality problems within the watershed's receiving waters, identify and model sources of the highest priority water quality problem(s), develop a watershed-wide BMP implementation strategy to abate highest priority water quality problems, and a monitoring strategy to evaluate BMP effectiveness and changing water quality prioritization in the WMA.<sup>81</sup>

Section G of the 2009 Permit also sets forth the procedure that the Copermittees must follow when performing the required annual update to the Watershed Workplan. Specifically the Copermittees are required to conduct a noticed public hearing in each watershed. The permit requirements are as follows:

---

<sup>80</sup> 2009 Permit, sections G.6, p. 74 of 91 and K.1.b.4. n, p. 84 of 91.

<sup>81</sup> *Id.* at section G.2, p. 73 of 91.

Watershed Copermittees shall review and update the Watershed Workplan annually to identify needed changes to the prioritized water quality problem(s) listed in the workplan. All updates to the Watershed Workplan shall be presented during an Annual Watershed Review Meeting. Annual Watershed Review Meetings shall occur once every calendar year and be conducted by the Watershed Copermittees. Annual Watershed Review Meetings shall be open to the public and adequately noticed. Individual Watershed Copermittees shall also review and modify their jurisdictional programs and JRMP.

Section K.1.b.4. of the permit requires:

Each Watershed Workplan shall, at a minimum, include: ... A scheduled annual Watershed Workplan Review Meeting once every calendar year. This meeting shall be open to the public.

## **5. Actual Increased Costs of Mandate**

The public meeting requirements of sections G.6 and K.1.b.4 caused the Joint Test Claimants to incur costs in implementing this requirement, which was new to the 2009 Permit. As set forth in the Section 6 Declarations, paragraph (h)(ii), the Joint Test Claimants incurred increased costs of \$823 in FY 2011-12 and costs of \$256 in FY 2012-13 to address this mandate.

## **6. Conclusion**

The new public hearing requirement for the Watershed Workplan Review in the 2009 Permit is a significant new requirement being required of the Copermittees. This change is not just an incremental change to an existing program that simply increases the cost of providing existing activities but rather represents a significant increase in the actual level and type of activities required of the Copermittees by the Regional Board and therefore constitutes a requirement for a “higher level of service” within the meaning of Article XIII B § 6 of the California Constitution.<sup>82</sup> As explained above this higher level of service is not mandated by federal regulations. None of the costs associated with conducting these public meetings can be recouped through fees given the legal restrictions on local government’s power to charge fees. The additional program elements described above, therefore constitute unfunded mandates. Copermittees are constitutionally entitled to be reimbursed for the cost of implementing these mandates.

## **H. NEW REPORTING REQUIREMENTS, INCLUDING DESCRIBING ALL ACTIVITIES A COPERMITTEE WILL UNDERTAKE PURSUANT TO THE 2009 PERMIT AND AN INDIVIDUAL JURISDICTIONAL RUNOFF MANAGEMENT REPORT AS SET FORTH IN SECTIONS K.1.a AND K.3 OF THE 2009 PERMIT ARE UNFUNDED STATE MANDATES**

---

<sup>82</sup>*San Diego Unified School District v. Commission on State Mandates* (2004) 33 Ca1.4th 859, 877.

## **1. Challenged Program Requirement**

2009 Permit sections F.1.d.(7).(i), F.3.a.(4).(c);, section K.3.a.(3), 1 and Attachment D of the 2009 Permit are unfunded mandates being challenged.

## **2. Requirements of Federal Law**

The federal requirement relating to the Annual Report can be found in 40 CFR §122.42(c) which requires the following:

The operator of a large or medium municipal separate storm sewer system or a municipal separate storm sewer that has been designated by the Director under §122.26(a)(1)(v) of this part must submit an annual report by the anniversary of the date of the issuance of the permit for such system. The report shall include:

- (1) The status of implementing the components of the storm water management program that are established as permit conditions;
- (2) Proposed changes to the storm water management programs that are established as permit condition. Such proposed changes shall be consistent with §122.26(d)(2)(iii) of this part; and
- (3) Revisions, if necessary, to the assessment of controls and the fiscal analysis reported in the permit application under §122.26(d)(2)(iv) and (d)(2)(v) of this part;
- (4) A summary of data, including monitoring data, that is accumulated throughout the reporting year;
- (5) Annual expenditures and budget for year following each annual report;
- (6) A summary describing the number and nature of enforcement actions, inspections, and public education programs;
- (7) Identification of water quality improvements or degradation;

The relevant federal regulations governing the reporting of the impact of Permittee's flood control faculties and other structural controls can be found in 40 CFR §§122.26(d)(iv)(A)(1) and 122.26(d)(iv)(A)(4) which requires a Permittee to include in its stormwater management plan the following:

- (A) A description of structural and source control measures to reduce pollutants from runoff from commercial and residential areas that are discharged from the municipal storm sewer system that are to be implemented during the life of the permit, accompanied with an estimate of the expected reduction of pollutant loads and a

proposed schedule for implementing such controls. At a minimum, the description shall include:

( 1 ) A description of maintenance activities and a maintenance schedule for structural controls to reduce pollutants (including floatables) in discharges from municipal separate storm sewers; ...

( 4 ) A description of procedures to assure that flood management projects assess the impacts on the water quality of receiving water bodies and that existing structural flood control devices have been evaluated to determine if retrofitting the device to provide additional pollutant removal from storm water is feasible; ...

### **3. Requirements of Previous Orders**

The reporting requirements under the 2002 Permit are found in sections H and I of that permit. Although Annual Reports were required in the 2002 Permit, the 2009 Permit adds a number of new reporting requirements.

### **4. Mandated Activities**

Section K.3.a of the 2009 Permit requires that each Copermittee prepare an individual JRMP Annual Report which cover implementation of its jurisdictional activities during the past annual reporting period<sup>83</sup> and specify the contents of the JRMP Annual Reports.<sup>84</sup>

New requirements of the Annual Report include:

- The report of priority development projects choosing to participate in the LID waiver program, including details of the feasibility analysis, BMPs implemented and funding details.<sup>85</sup>
- An evaluation of the Copermittees' existing flood control devices, identify devices causing or contributing to a condition of pollution, identify measures to reduce or eliminate the structure's effect on pollution, and evaluate the feasibility of retrofitting the structural flood control device as well as submit this inventory and evaluation to the Regional Board.<sup>86</sup>
- A Reporting Checklist.<sup>87</sup>

None of these new requirements can be found in the requirements for the Annual Report set forth in 40 CFR §122.42(c).

<sup>86</sup> *Id.* at section F.3.a.(4).(c), p. 55 of 91.

<sup>87</sup> *Id.* at section K.3.a.(3), p. 86 of 91 and Attachment D of the 2009 Permit.

As discussed previously in this Narrative, the LID requirements in the section F.1.d. (4) of the 2009 Permit go beyond the requirements of federal regulations. The reporting requirements related to the waiver program required as part of those LID requirements, also go beyond requirements of federal law.

The requirements in section F.3.a.(4).(c) of the 2009 Permit to inventory all of a Permittees' flood control devices also goes beyond the requirements of federal law. 40 CFR §122.26(d)(iv)(A)(1) and 122.26(d)(iv)(A)(4) require that a Permittees application include a description of a Permittee's maintenance practices for its flood control facilities and require a Permittee to develop a procedure to assess the impacts of flood control projects on water quality of receiving waters as well as a procedure to evaluate the feasibility of retrofitting those identified facilities. The federal regulations do not require a full inventory of these facilities and don't require that a Permittee submit such an inventory to the Regional Board.

Finally the Checklist requirement found in section K.3.a.(3), and Attachment D of the 2009 Permit are not required by 40 CFR §122.42(c) requirements for the Annual Report.

## **5. Actual Increased Costs of Mandate**

Please see Section IV.F.5 above with respect to the amounts and dates of the increased costs required by this mandate, which is discussed in the Section 6 Declarations at paragraph (h)(i).

## **6. Conclusion**

The new reporting requirements in the 2009 Permit are significant new requirements being required of the Copermittees. These changes are not just incremental changes to existing programs that simply increase the cost of providing existing activities but rather represent a significant increase in the actual level and type of activities required of them by the Regional Board and therefore constitute a requirement for a "higher level of service" within the meaning of Article XIII B § 6 of the California Constitution.<sup>88</sup> As explained above, this higher level of service is not mandated by federal regulations. None of the costs associated with conducting these activities can be recouped through fees given the legal restrictions on local government's power to charge fees. The additional program elements describe above, therefore constitute unfunded mandates. Copermittees are constitutionally entitled to be reimbursed for the cost of implementing these mandates.

### **I. THE 2009 PERMIT, SECTION F.4, IMPOSES NEW REQUIREMENTS MANDATING THE USE OF GEOGRAPHICAL INFORMATION SYSTEM (GIS) MS4 MAPS**

#### **1. Challenged Program Requirement**

Section F.4.b. of the 2009 Permit provides as follows:

##### **“b. Maintain MS4 Map**

---

<sup>88</sup>*San Diego Unified School District v. Commission on State Mandates* (2004) 33 Ca1.4th 859, 877.

Each Copermittee must maintain an updated map of its entire MS4 and the corresponding drainage areas within its jurisdiction. *The use of GIS is required.* The accuracy of the MS4 map must be confirmed during dry weather field screening and analytical monitoring and must be updated at least annually. The GIS layers of the MS4 map must be submitted with the updated Jurisdictional Runoff Management Plan within 365 days after adoption of this Order.”<sup>89</sup>

## **2. Requirements of Federal Law**

Neither the 2009 Permit, nor any of its supporting documents, specifically identify any federal regulations as specific authority for imposition of the GIS requirement set forth in Section F.4.b of the 2009 Permit. Moreover, the CWA and the federal regulations do not specifically require the inclusion of a MS4 map with GIS layers. 40 C.F.R. 122.26(d)(2)(iv) (B)(4) requires a description of procedures to prevent, contain and respond to spills that may discharge into the municipal separate storm sewer. 40 C.F.R. 122.26(d)(2)(iv) (B)(4) does not, however, expressly require or mention the use of a GIS MS4 map or layer as part of this program. Federal law does not require the Regional Board to impose this GIS requirement, and thus, the 2009 Permit’s requirement for the inclusion of a GIS MS4 map is an unfunded state mandate.

## **3. Requirements from 2002 Permit**

The 2002 Permit provided that each Copermittee develop or obtain an up-to-date labeled map of its entire MS4 and the corresponding drainage watershed within its jurisdiction. Although the use of GIS was recommended, the 2002 Permit did not require that Copermittees use GIS to develop their MS4 maps. *See* Section E.4.a of page E-1 of the 2002 Permit for complete text.

## **4. Mandated Activities**

Section F.4.b of the 2009 Permit requires Copermittees to use GIS in maintaining an updated map of the entire MS4 and the corresponding drainage areas within its jurisdiction, which is **not** required under either federal law or the 2002 Permit. To comply with the GIS requirement set forth in Section F.4.b the Copermittees have or will perform the following activities to comply with the new GIS requirement:

- 1) Procure GIS field equipment;
- 2) Digitize storm drains systems and develop a GIS storm drain layer using field equipment; and
- 3) Maintain an updated map in the GIS system on Copermittee computer system.

---

<sup>89</sup> 40 C.F.R. § 122.26(d)(2)(iv)(A)(4).

## **5. Actual Increased Costs of Mandate**

To comply with Section F.4.b of the 2009 Permit, the Joint Test Claimants were required to expend time in FY 2009-10 and thereafter to develop, administer and maintain a GIS storm drain layer. As set forth in the Section 6 Declarations, paragraph 6(g), the Joint Test Claimants participated in a cost-sharing effort to achieve this mapping. The Joint Test Claimants incurred costs of \$7,570 in FY 2009-10 and \$48,639 in FY 2010-11 to address this mandate.

### **J. NEW REQUIREMENTS FOR DEVELOPING AND IMPLEMENTING A RETROFITTING PROGRAM FOR EXISTING DEVELOPMENT IN SECTION F.3.D OF THE 2009 PERMIT ARE UNFUNDED STATE MANDATES**

#### **1. Challenged Program Requirement**

The 2009 Permit requires Copermittees to develop and implement a new program, which is not required under federal law or previous Permits, to retrofit existing development. Specifically, the 2009 Permit requires Copermittees to identify existing developments, including municipal developments, as candidates for retrofitting, evaluate and rank candidates according to preestablished criteria, prioritize work plans for implementation according to the evaluation, cooperate with landowners to retrofit private improvements, and track and inspect retrofitting projects. Copermittees will be required to invest significant staff time and other valuable resources into developing and implementing this new and costly program. The retrofitting provisions of the 2009 Permit at issue in this claim are as follows:

##### **d. Retrofitting Existing Development**

Each Copermittee must develop and implement a retrofitting program which meets the requirements of this section. The goals of the existing development retrofitting program are to reduce impacts from hydromodification, promote LID, support riparian and aquatic habitat restoration, reduce the discharges of storm water pollutants from the MS4 to the MEP, and prevent discharges from the MS4 from causing or contributing to a violation of water quality standards. Where feasible, at the discretion of the Copermittee, the existing development retrofitting program may be coordinated with flood control projects and infrastructure improvement programs.

##### **(1) Source Identification**

The Copermittee must identify and inventory existing developments (i.e. municipal, industrial, commercial, residential) as candidates for retrofitting. Potential retrofitting candidates must include but are not limited to:

- (a) Development that contributes pollutants of concern to a TMDL or a ESA;**

- (b) Receiving waters channelized or otherwise hardened;
- (c) Development tributary to receiving waters that are channelized or otherwise hardened;
- (d) Developments tributary to receiving waters that are significantly eroded;
- (e) Developments tributary to an ASBS or SWQPA; and
- (f) Development that causes hydraulic constriction.

(2) Each Copermittee shall evaluate and rank the inventoried existing developments to prioritize retrofitting. Criteria for evaluation must include but is not limited to:

- (a) Feasibility;
- (b) Cost effectiveness;
- (c) Pollutant removal effectiveness;
- (d) Impervious area potentially treated;
- (e) Maintenance requirements;
- (f) Landowner cooperation;
- (g) Neighborhood acceptance;
- (h) Aesthetic qualities; and
- (i) Efficacy at addressing concern.

(3) Each Copermittee must consider the results of the evaluation in prioritizing work plans for the following year. Highly feasible projects expected to benefit water quality should be given a high priority to implement source control and treatment control BMPs. Where feasible, the retrofit projects should be designed in accordance with the SSMP requirements within sections F.1.d.(3) through F.1.d.(8). In addition, the Copermittee shall encourage retrofit projects to implement where feasible the Hydromodification requirements in Section F.1.h.

(4) When requiring retrofitting on existing development, the Copermittees will cooperate with private landowners to encourage retrofitting projects. The Copermittee may consider the following practices in cooperating and encouraging private landowners to retrofit their existing development:

- (a) Demonstration retrofit projects;
  - (b) Retrofits on public land and easements;
  - (c) Education and outreach;
  - (d) Subsidies for retrofit projects;
  - (e) Requiring retrofit projects as mitigation or ordinance compliance;
  - (f) Public and private partnerships; and
  - (g) Fees for existing discharges to the MS4.
- (5) The completed retrofit BMPs shall be tracked and inspected in accordance with section F.1.f.
- (6) Where constraints on retrofitting preclude effective BMP deployment on existing developments at locations critical to protect receiving waters, a Copermittee may propose a regional mitigation project to improve water quality. Such regional projects may include but are not limited to:
- (a) Regional water quality treatment BMPs;
  - (b) Urban creek or wetlands restoration and preservation;
  - (c) Daylighting and restoring underground creeks;
  - (d) Localized rainfall storage and reuse to the extent such projects are fully protective of downstream water rights;
  - (e) Hydromodification project; and
  - (f) Removal of invasive plant species.
- (7) A retrofit project or regional mitigation project may qualify as a Watershed Water Quality Activity provided it meets the requirements in section G. Watershed Runoff Management Program.

## **2. Requirements of Federal Law**

Nothing in the CWA, its regulations, or case law requires local agencies to develop, fund, and implement a retrofitting program. US EPA regulations require municipal NPDES permits to include “[a] description of procedures to assure that flood management projects assess the impacts on the water quality of receiving water bodies and that existing structural flood control devices have been evaluated to determine if retrofitting the device to provide additional pollutant removal

from storm water is feasible.”<sup>90</sup> This requirement however applies only to structural flood control devices and simply would not apply to the type of comprehensive program required in the 2009 Permit.

### **3. Requirements from Previous Orders**

Nothing in the 2002 Order requires a retrofit program. The most analogous section in the 2002 Permit, part F.3.a.(4)(b)(i) stated, in its entirety, “Each Permittee shall evaluate feasibility of retrofit existing structural flood control devices and retrofit where needed.” Developing, funding, and implementing a retrofit program on existing development is extensively broader and more detailed than simply retrofit flood control devices as needed. Indeed, the 2009 Permit contains multiple requirements in comparison with the 2002 Permit’s single sentence.

### **4. Mandated Activities**

The 2009 Permit imposes at least six new requirements on Copermittees. These requirements are not required by federal law and represent state mandates for which Copermittees are entitled to reimbursement. The costs of developing and implementing the retrofit program for existing development for which Copermittees should be reimbursed arise from the extensive list of requirements in the 2009 Permit. These requirements include:

- Identifying potential retrofit candidates by researching and locating developments that contribute to a TMDL or ESA, that are channelized or hardened, that are tributary to receiving waters which are an ASBS, SWQPA, or are significantly eroded, or that cause hydraulic constriction;
- Evaluating the feasibility, cost effectiveness, pollutant removal effectiveness, impervious area, maintenance requirements, landowner cooperation, neighborhood acceptance, aesthetic qualities, and efficacy for each potential retrofit candidate and then ranking each candidate accordingly;
- Prioritizing retrofit projects in the following year’s municipal work plan and designing retrofit projects according to the SSMP requirements and hydromodification where feasible;
- Cooperating with and encouraging private landowners to retrofit;
- Tracking and inspecting retrofit BMPs;
- Considering regional mitigation projects where retrofitting is precluded.

### **5. Actual Increased Costs of Mandate**

As set forth in the Section 6 Declarations, paragraph 6(f), the requirements to develop, fund and implement a retrofit program involved work by Joint Test Claimants to review land areas

---

<sup>90</sup> 40 C.F.R. 122.26(d)(2)(iv)(A)(1).

within their jurisdictions for potential retrofitting possibilities. The increased cost associated with these efforts for the Joint Test Claimants was \$9,125 in FY 2010-11 and \$158,508 in FY 2011-12, plus additional costs as set forth in the Declarations.

**K. NEW BMP MAINTENANCE TRACKING REQUIREMENTS IN SECTION F.1.f OF THE 2009 PERMIT ARE UNFUNDED STATE MANDATES**

**1. Challenged Program Requirement**

The 2009 Permit requires Copermittees to develop and implement a new program, which is not required under federal law or previous Permits, to retrofit existing development. Specifically, the 2009 Permit requires Copermittees to inventory and track maintenance of recently existing and future BMPs. Copermittees will be required to invest significant staff time and other valuable resources into developing and implementing this new program. The challenged requirements from the 2009 Permit are as follows:

**f. BMP MAINTENANCE TRACKING**

(1) Each Copermittee must develop and maintain a watershed-based database to track and inventory all approved post-construction BMPs and BMP maintenance within its jurisdiction since July 2001. LID BMPs implemented on a lot by lot basis at a single family residential home, such as rainbarrels, are not required to be tracked or inventoried. At a minimum, the database must include information on BMP type, location, watershed, date of construction, party responsible for maintenance, maintenance certifications or verifications, inspections, inspection findings, and corrective actions, including whether the site was referred to the Vector Control District.

(2) Each Copermittee must establish a mechanism not only to track post-construction BMPs, but also to ensure that appropriate easements and ownerships are properly recorded in public records and the information is conveyed to all appropriate parties when there is a change in project or site ownership.

(3) Each Copermittee must verify that approved post-construction BMPs are operating effectively and have been adequately maintained by implementing the following measures:

(a) An annual inventory of all approved BMPs within the Copermittee's jurisdiction. LID BMPs implemented on a lot by lot basis at a single family residential home, such as rainbarrels, are not required to be tracked or inventoried. The inventory must also include all BMPs approved for Priority Development Projects since July 2001;

(b) The designation of high priority BMPs. High-priority designation must include consideration of BMP size, recommended maintenance frequency, likelihood of operational and maintenance issues, location, receiving water quality, and other pertinent factors;

(c) Verify implementation, operation, and maintenance of BMPs by inspection, self-certification, surveys, or other equally effective approaches with the following conditions:

(i) The implementation, operation, and maintenance of at least 90 percent of approved and inventoried final project public and private SSMPs (a.k.a. WQMPs) must be verified annually. All post-construction BMPs shall be verified within every four year period;

(ii) Operation and maintenance verifications must be required prior to each rainy season;

(iii) All (100 percent) projects with BMPs that are high priority must be inspected by the Copermittee annually prior to each rainy season;

(iv) All (100 percent) public agency projects with BMPs must be inspected by the Copermittee annually;

(v) At least 50 percent of projects with drainage insert treatment control BMPs must be inspected by the Copermittee annually;

(vi) Appropriate follow-up measures (including re-inspections, enforcement, maintenance, etc.) must be conducted to ensure the treatment BMPs continue to reduce storm water pollutants as originally designed;

(vii) All inspections must verify effective operation and maintenance of the treatment control BMPs, as well as compliance with all ordinances, permits, and this Order; and

(viii) Inspections must note observations of vector conditions, such as mosquitoes. Where conditions are identified as contributing to mosquito production, the Copermittee must notify the Orange County Vector Control District.

## **2. Requirements of Federal Law**

Nothing in the CWA, its regulations, or case law requires local agencies to develop, fund, and implement a retroactive BMP maintenance tracking database and inspection program. US EPA regulations require municipal NPDES permits to include “[a] description of maintenance activities and a maintenance schedule for structural controls to reduce pollutants (including floatables) in discharges from municipal separate storm sewers”.<sup>91</sup> This general requirement is nowhere near the specificity included in the 2009 Permit. Pursuant to the court’s decision in *Long Beach Unified School Dist. v. State of California*, (1990) 225 Cal.App.3d 155, when the state exercises its discretion to impose requirements that exceed the express requirements of a federal law or program, it imposes a state mandate.

## **3. Requirements from Previous Orders**

Nothing in the 2002 Permit requires the comprehensive BMP maintenance tracking program included in the 2009 Permit.

## **4. Mandated Activities**

The 2009 Permit imposes several new requirements on Copermittees. These requirements are not required by federal law and represent state mandates for which Copermittees are entitled to reimbursement. The costs of developing the retrofitting program for existing development for which Copermittees should be reimbursed arise from the extensive list of requirements in the 2009 Permit. These requirements include:

- developing and maintaining a watershed-based database to track and inventory all approved post-construction BMPs and BMP maintenance within its jurisdiction since July 2001, including information on BMP type, location, watershed, date of construction, party responsible for maintenance, maintenance certifications or verifications, inspections, inspection findings, and corrective actions, including whether the site was referred to the Vector Control District;
- verifying that approved post-construction BMPs are operating effectively and have been adequately maintained;
- conducting an annual inventory of all approved BMPs within the Copermittee’s jurisdiction installed since 2001;
- designating high priority BMPs for inspection and verification; and
- verifying implementation, operation, and maintenance of BMPs by inspection, self-certification, surveys, or other equally effective means.

---

<sup>91</sup> 40 C.F.R. 122.26(d)(2)(iv)(A)(1).

## **5. Actual Increased Costs of Mandate**

As set forth in the Section 6 Declarations, paragraph 6(e), to implement the mandates set forth in the above-described requirements, the Joint Test Claimants were required to undertake activities within their jurisdictions to inspect and verify the operation and maintenance of BMPs. The Joint Test Claimants incurred increased costs of \$34,175 in FY 2010-11 and \$45,717 in FY 2011-12 with respect to this mandate.

## **V. STATEWIDE COST ESTIMATE**

This Joint Test Claim concerns a municipal stormwater permit applicable only to local agencies located in the portion of Orange County within the jurisdiction of the San Diego RWQCB. Therefore, any statewide cost estimate must, by virtue of this limitation, apply only to costs incurred by such local agencies. The Joint Test Claimants estimate that, for all requirements set forth in the 2009 Permit that are the subject of this Joint Test Claim applicable to all Copermittees, the amount of \$295,100 was expended in FY 2009-10, \$349,062 in FY 2010-11 and \$369,344 in FY 2011-12. See Section 6 Declarations of the Joint Test Claimants, paragraphs (a-i) and the Declaration (Second) of Chris Crompton, paragraph 9.

## **VI. FUNDING SOURCES**

### **A. THE COPERMITTEES DO NOT HAVE FEE AUTHORITY TO OFFSET THESE COSTS.**

The ability of a local government to impose fees or taxes on individuals residing, owning property or conducting business within its jurisdiction is limited by various provisions within the California Constitution. Any fee or tax imposed by the Copermittees would have to comply with the relevant constitutional requirements. As explained below, those constitutional provisions would effectively prevent Copermittees from recouping the costs of implementing any of the challenged provisions by imposing fees. Any tax or property related fee to fund costs associated with the Copermittees' stormwater management program could only be imposed if approved by a vote of the electorate and would likely require approval by a supermajority or 2/3 vote.

### **1. Copermittees' Activities Mandated by the 2009 Permit Do Not Convey Unique Benefits on or Deal with Unique Burdens Being Imposed on the MS4 by Individual Persons, Businesses or Property Owners.**

The provisions of the 2009 Permit that are the subject of this claim involve requirements to develop programs and perform activities that apply throughout the jurisdiction and are not related to services being performed directly for individual businesses property owners, or residents. The programs are intended to improve the overall water quality of receiving water which benefits all persons within the jurisdiction. It would be impossible to identify benefits that any individual resident, business or property owner within the jurisdiction is receiving that are distinct from benefits that all persons within the jurisdictions are receiving. The Copermittees, therefore, cannot develop a fee structure that allocates the total costs of complying with the mandates in the 2009 Permit to individuals that would be based on the unique benefit that such individuals are receiving from that program or activity.

The 2009 Permit is intended to deal with water quality impacts from stormwater that is being conveyed by the Copermittees' MS4 System and reduce pollutants being discharged from the MS4 to the maximum extent practicable. Most of the requirements in the 2009 Permit involve developing programs to minimize the likelihood of pollutants being carried by runoff into the MS4 and to otherwise reduce those pollutants before being discharged into receiving waters.

The vast majority of the water that enters MS4 enters as runoff after flowing over properties being put to a vast array of uses. Except in rare cases, it would be difficult to identify the volume of water or amount of pollutants attributable to an individual property owner. Unlike a sanitary sewer system, where water is being discharged directly into the sanitary sewer and the operator of a sanitary sewer can measure or reasonably approximate the volume being discharged into its conveyance system and thus approximate the burden being placed on its system by an individual property, the operator of an MS4 cannot approximate the individual burden being placed on the MS4 by an individual property owner. It is therefore difficult, if not impossible, for the Copermittees to develop a fee structure that is based on the burden that an individual property is placing on the MS4.

As explained below, because of the impossibility to develop a fee structure based on the benefits enjoyed or burdens imposed by prospective payors, and because none of the activities being performed in response to the 2009 Permit requirements at issue in this claim are being provided directly to any prospective payor, the Copermittees would not have the authority to charge a fee to recoup the costs of complying with the mandates in the 2009 Permit.

## **2. Article XIII C of the California Constitution Limits Copermittees' Power To Impose Fees**

Proposition 26 enacted by the voters this year to amend Article XIII C of the California Constitution defines virtually any revenue device enacted by a local government as a tax requiring voter approval, unless it falls within certain enumerated exceptions.

Article XIII C § 2(d)<sup>92</sup> now provides that:

No local government may impose, extend, or increase any special tax unless and until that tax is submitted to the electorate and approved by a two-thirds vote. A special tax shall not be deemed to have been increased if it is imposed at a rate not higher than the maximum rate so approved.

Article XIII C § 1(d) defines special tax as:

... any tax imposed for specific purposes, including a tax imposed for specific purposes, which is placed into a general fund...

Article XIII C § 1(e) defines a tax as:

---

<sup>92</sup> All future references are to the California Constitution unless otherwise noted.

... any levy, charge, or exaction of any kind imposed by a local government, except the following:

- (1) A charge imposed for a specific benefit conferred or privilege granted directly to the payor that is not provided to those not charged, and which does not exceed the reasonable costs to the local government of conferring the benefit or granting the privilege.
- (2) A charge imposed for a specific government service or product provided directly to the payor that is not provided to those not charged, and which does not exceed the reasonable costs to the local government of providing the service or product.
- (3) A charge imposed for the reasonable regulatory costs to a local government for issuing licenses and permits, performing investigations, inspections, and audits, enforcing agricultural marketing orders, and the administrative enforcement and adjudication thereof.
- (4) A charge imposed for entrance to or use of local government property, or the purchase, rental, or lease of local government property.
- (5) A fine, penalty, or other monetary charge imposed by the judicial branch of government or a local government, as a result of a violation of law.
- (6) A charge imposed as a condition of property development.
- (7) Assessments and property-related fees imposed in accordance with the provisions of Article XIII D.

The local government bears the burden of proving by a preponderance of the evidence that a levy, charge, or other exaction is not a tax, that the amount is no more than necessary to cover the reasonable costs of the governmental activity, and that the manner in which those costs are allocated to a payor bear a fair or reasonable relationship to the payor's burdens on, or benefits received from, the governmental activity.

Valid fees therefore must recover no more than the amount necessary to recover costs of the governmental program being funded by the fee. The person or business being charged the fee, the payor, may only be charged a fee based on the portion of the total government costs attributable to burdens being placed on the government by that payor or an amount based on the direct benefits the payor receives from the program or facility being funded by the fee. The services and work products produced by the Copermittees in response to the requirements of the 2009 Permit are not being provided directly to any individual or are related to a specific benefit conferred on any individual. Any fee charged by the Copermittees for costs related to the requirements of the 2009

Permit at issue in this claim, therefore would not meet the requirement of Article XIII C, sections 1(e) (1) and 1(e) (2) and would not be a valid fee.

### **3. Any Fee or Tax Charged By Copermitees Not Based On Benefits Received or Burdens Imposed By Payor Must Be Approved By a Vote of the Electorate**

A fee or charge that does not fall within the seven exceptions listed in Article XIII C section 1(e) and does not meet the other requirements of Article XIII C is automatically deemed a tax, which must be approved by the voters.

Any tax that is intended to fund a specific program such as a stormwater management program is a “special tax” subject to the requirements of Article XIII A section 4, and Article XIII C section 2(d). If a fee were imposed on owners or occupants of real property that is triggered by their ownership or use of property within the jurisdiction, it would constitute a property related fee governed by Article XIII D of the California Constitution.

Article XIII A section 4 and Article XIII C section 2(d) require Special Taxes be approved by 2/3 of the voters of the portion of the jurisdiction subject to the fee.

Article XIII D requires voter approval of most property related fees. Relevant portions of Article XIII D section 3(a) provides that:

(a) No tax, assessment, fee, or charge shall be assessed by any agency upon any parcel of property or upon any person as an incident of property ownership except ... (2) Any special tax receiving a two-thirds vote pursuant to § 4 of Article XIII A ... (4) Fees or charges for property related services as provided by this article....”

Article XIII D § 2(e) defines fee or charge as:

“... any levy other than an ad valorem tax, a special tax, or an assessment, imposed by an agency upon a parcel or upon a person as an incident of property ownership, including a user fee or charge for a property related service.”

Article XIII D section 2(h) defines property-related service as “... a public service having a direct relationship to property ownership.”

Article XIII D section 6(c) requires voter approval for most new or increased fees and charges. It provides that “[e]xcept for fees or charges for sewer, water, and refuse collection services, no property related fee or charge shall be imposed or increased unless and until that fee or charge is submitted and approved by a majority vote of the property owners of the property subject to the fee or charge or, at the option of the agency, by a two-thirds vote of the electorate residing in the affected area. ...”

The case of *Howard Jarvis Taxpayers Association v. City of Salinas* (2002) 98 Cal.App.4th 1351 struck down a fee that the City of Salinas attempted to enact to fund the city’s stormwater

program. The court held in that case that a stormwater fee was a property related fee governed by Article XIII D and that such a fee could not be imposed unless it was approved by the voters.

The fee at issue in that case was a storm drainage fee enacted by the Salinas City Council (City). It was enacted by the City Council but not approved by the voters of that city. The purpose of the fee was to fund and maintain a program put in place to comply with the city's obligations under its MS4 Permit. The fee would be imposed on "users of the storm water drainage system," and the City characterized the fee as a user fee recovering the costs incurred by the City for the use of the City's storm and surface water management system by property owners and occupants.

The City attempted to develop a methodology that based the fee on the amount of runoff leaving certain classes of property. The fee was charged to the owners and occupiers of all developed parcels and the amount of the fee was based on the impervious area of the parcel. The rationale used by the City for basing the fee on impervious area was that the impervious area of a property most accurately measured the degree to which the property contributed runoff to the City's drainage facilities. Undeveloped parcels and developed parcels that maintained their own storm water management facilities or only partially contributed storm or surface water to the City's storm drainage facilities, were required to pay in proportion to the amount they did contribute runoff or used the City's treatment services.

The City asserted that the fee did not require voter approval requirements of Article XIII D section 6(c) on two grounds. The first ground was that the fee was not a "property related" fee but rather a "user fee" which the property owner could avoid simply by maintaining a storm water management facility on the property. The City argued that because it was possible to own property without being subject to the fee that it was not a fee imposed "as an incident of property ownership."<sup>93</sup> The second ground asserted by the City was that, even if the fee could be characterized as a property related fee, it was exempted from the voter approval requirements by provisions of Article XIII D § 6(c) that allow local governments to enact fees for sewer and water services without prior voter approval.<sup>94</sup> The court rejected both arguments.

The *Salinas* Court found that because the fee was not directly based on or measured by use, comparable to the metered use of water or the operation of a business, it could not be characterized as a use fee. Rather the fee was based on ownership or occupancy of a parcel and was based on the size of the parcel and therefore must be viewed as a property related fee.<sup>95</sup>

The Court also found that the "Proportional Reduction" provision of the City's fee did not alter the nature of the fee as a property related fee. A property owner's operation of a private storm drain system reduced the amount owed to the City to the extent that runoff into the City's system is reduced but did not eliminate the need to pay a fee. The reduction was not proportional to the amount of services requested or used by the occupant, but rather was based on the physical properties of the parcel. Thus, the court determined that the fee was ultimately a fee for a public service having a direct relationship to the ownership of developed property. The court concluded that the storm drainage fee "burden[s] landowners *as landowners*," and thus it was in reality a

---

<sup>93</sup> *Howard Jarvis Taxpayers Association v. City of Salinas, supra*, at p. 1354.

<sup>94</sup> *Ibid.*

<sup>95</sup> *Id.* at p. 1355.

property related fee subject to the requirements of Article XIII D and not a user fee. The fee was therefore subject to the voter-approval requirements of Article XIII D unless one of the exceptions in section 6(c) of that section applied.<sup>96</sup>

The Court then went on to reject that the City's contention that the fee fell within exemption from the voter-approval requirement applicable to fees for sewer or water services. The court concluded that that the term "sewer services" was ambiguous in the context of both section 6(c) and Article XIII D as a whole. The court found that, because Article XIII D was enacted through the initiative process, the rule of judicial construction that an enactment must be strictly construed required the court to take a narrow reading of the sewer exemption. The court went on to hold that the sewer services exception in Article XIII D § 6(c) was applicable only to sanitary sewerage and *not* to services related to stormwater.<sup>97</sup>

The Court observed:

The City itself treats storm drainage differently from its other sewer systems. The stated purpose of [the City storm drainage fee ordinance] was to comply with federal law by reducing the amount of pollutants discharged into the storm water, and by preventing the discharge of "non-storm water" into the storm drainage system, which channels storm water into state waterways ... the City's storm drainage fee was to be used not just to provide drainage service to property owners, but to monitor and control pollutants that might enter the storm water before it is discharged into natural bodies of water..<sup>98</sup>

The Court likewise rejected the argument that the storm drainage fee fell within provisions of Article XIII D section 6(c) exempting fees for water services from the voter approval requirements. The court held:

...[W]e cannot subscribe to the City's suggestion that the storm drainage fee is "for . . . water services." *Government Code section 53750*, enacted to explain some of the terms used in articles XIII C and XIII D, defines "[w]ater" as "any system of public improvements intended to provide for the production, storage, supply, treatment, or distribution of water." (Gov. Code, § 53750, subd. (m).) The average voter would envision "water service" as the supply of water for personal, household, and commercial use, not a system or program that monitors storm water for pollutants, carries it away, and discharges it into the nearby creeks, river, and ocean.<sup>99</sup>

<sup>98</sup> *Id.* at p. 1358.

<sup>99</sup> *Ibid.*

#### **4. Conclusion**

In summary, Articles XIII A, XIII C, and XIII D of the California Constitution severely limit the Copermitees' power to impose fees. Any fees developed by the Copermitees to fund the portions of the MS4 Permit that are the subject of this unfunded mandate claim could only be imposed by some form of special tax or property related fee that would require approval by either a 2/3 vote of the electorate subject to the tax; or a majority vote of the property owners subject to the property related fee.

#### **B. FUNDING SOURCES**

The Permittees are not aware of any state, federal or non-local agency funds that are available to completely fund these new activities. To the extent such funding was received, the Declarations reflect General Fund costs not covered by any such funds. In the case of the County, funding that was additional to the General Fund, including from road, parks and Flood District funding, was available for certain Permit obligations. See Section 6 Declarations, paragraph 8.

### **VII. PRIOR MANDATE DETERMINATIONS**

#### **A. LOS ANGELES COUNTY**

In 2003 and 2007, the County of Los Angeles and 14 cities within the county (the Los Angeles claimants) submitted test claims 03-TC-04, 03-TC-19, 03-TC-20, and 03-TC-21. The test claims asserted that provisions of Los Angeles Water Board Order 01 -1 82 constitute reimbursable state mandates. As is the case with the Regional Board Order that is the subject of this Test Claim, Order 01-182 was the 2001 renewal of the existing MS4 Permit. Order 01-182 is the MS4 Permit for Los Angeles County and most of its incorporated cities, and serves as an NPDES permit. The permit provisions require the Los Angeles claimants to install and maintain trash receptacles at specified transit stops and to inspect certain industrial, construction, and commercial facilities for compliance with local and/or state storm water requirements.

On September 3, 2009, the Commission issued a final decision entitled In re Test Claim On: Los Angeles Regional Quality Control Board Order No. 01-182, Case Nos.: 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21 ("Los Angeles Decision"). The Los Angeles Decision partially approved the test claims. The Commission found the trash receptacle requirement to be a reimbursable state mandate.

#### **B. SAN DIEGO COUNTY**

In 2007, the County of San Diego and 21 cities within the county (the San Diego claimants) submitted test claim 07-TC-09. The test claim asserted that many provisions of San Diego Water Board Order R9-2007-0001 constitute reimbursable state mandates. Order R9-2007-0001 is the 2007 renewal of the municipal storm water permit for San Diego County and many of its incorporated cities, and serves as an NPDES permit. The challenged permit provisions require the San Diego claimants to: (1) conduct and report on street sweeping activities; (2) clean and report on storm sewer cleaning; (3) implement a regional urban runoff management program; (4) assess program effectiveness; (5) conduct public education and outreach; (6) collaborate among

Permittees to implement the program; (7) implement hydromodification management plans; and (8) implement plans for low impact development.

On March 30, 2010, the Commission issued a final decision entitled In re Test Claim on: San Diego Regional Water Quality Control Board Order No. R9-2007-0001, Case No. 07-TC-09 (San Diego Decision). The San Diego Decision partially approved the test claim. The Commission's decision took the relatively narrow Los Angeles Decision to its logical conclusion. The Commission found the following permit requirements to be reimbursable state mandates:

1. Street Sweeping
2. Street Sweeping Reporting
3. Conveyance System Cleaning
4. Conveyance System Cleaning Reporting
5. Public Education Requirements with Specific Target Communities and Specified Topics
6. Mandatory Watershed Activities and Collaboration in Watershed Urban Management Program
7. Regional Urban Runoff Management Program
8. Program Effectiveness Assessment
9. Long-term Effectiveness Assessment
10. Permittee Collaboration

The Commission also found the hydromodification and low impact development requirements in the San Diego Permit to be state mandates, but not reimbursable mandates because the local agencies could charge fees to pay for these programs.

## **VIII. CONCLUSION**

The 2009 Permit imposes many new mandated activities and programs on the Copermittees that are not required to be imposed on local governments under federal law. As detailed above the costs to develop and implement these new programs and activities are substantial. Yet, the Copermittees do not have the ability/authority to develop and impose fees to fund any of these new State mandated programs. The costs incurred and to be incurred to comply with these state mandated programs all satisfy the criteria for reimbursable mandates, and the Copermittees respectfully request that the Commission make such findings as to each of the mandated programs and activities set forth herein, and find that they require funding under the State Constitution.

**SECTION 6 DECLARATIONS  
IN SUPPORT OF**

**CALIFORNIA REGIONAL WATER  
QUALITY CONTROL BOARD,  
SAN DIEGO REGION, ORDER NO.  
R9-2009-0002, 10-TC-11**

**DECLARATION OF CHRIS CROMPTON ON BEHALF OF THE COUNTY OF  
ORANGE IN SUPPORT OF TEST CLAIM**

I, Chris Crompton, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I would and would competently testify to the matters set forth herein under oath.

2. I am employed by the County of Orange (hereafter, "County") as Manager, Water Quality Compliance in OC Public Works. I have knowledge of the County's funding for the programs and activities set forth in this declaration.

3. I have held my current position for approximately 25 years and have managed compliance with the municipal stormwater permit program for the County of Orange and its role as Principal Permittee for the entire time.

4. I have reviewed California Regional Water Quality Control Board San Diego Region ("RWQCB"), Order No. R9-2009-0002 issued by the RWQCB on December 16, 2009 (the "Permit") and am familiar with the requirements of the Permit as it applies to the County. The County was a copermittee under that permit.

5. I have also reviewed and I am familiar with the requirements of the Order No. R9-2002-0001 issued by the San Diego RWQCB on February 13, 2002 (the "2002 Permit"). The County was a copermittee under that permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I believe that the Permit required the copermittees to perform the

following new activities, among others, that were not required by the 2002 Permit, and which are unique to local government entities:

a. Non-Stormwater Discharges: Permit Section B removes from the list of exempted discharges all landscape irrigation, irrigation water, and lawn watering discharges originating from any location or source, including residential irrigation discharges from potable water sources, which was previously included in the category of exempted discharges in the 2002 Permit. The removal of this discharge exemption required the copermittees, including the County, to undertake various tasks, which could include adoption of new ordinances to address these flows, expending staff time to create new public education and outreach materials, the tracking, monitoring, and response to and investigate of incidents and complaints of irrigation runoff and improvement of municipal irrigation systems and landscaping. In addition to these direct costs, the copermittees, including the County, participated in a cost-sharing effort to develop a model ordinance addressing the new discharges. I am informed and believe and therefore state that the County share of these costs was \$163 in Fiscal Year (FY) 2009-10 and \$3,099 in FY 2010-11. I am further informed and believe and therefore state that the County first incurred these costs on or about April 2, 2010. In addition, I am informed and believe and therefore state that the County incurred direct costs in response to this mandate in the amount of \$16,935.95 in FY 2010-11. I am further informed and believe and therefore state that the County first incurred these costs on or about July 9, 2010.

b. Non-Stormwater Dry Weather Action Levels: Permit Sections C and F.4.(d) and (e) required the copermittees, including the County, to implement new follow-up investigation and source tracking activities triggered by exceedances of dry-weather non-stormwater action levels (NALs) according to newly established, prescriptive concentration levels, and also

required testing of new and expanded numbers of constituents as compared to the 2002 Permit. In the 2002 Permit, the copermittees, including the County, were allowed to set their own criteria for investigative and source tracking actions in the previously implemented dry weather program to meet basin standards. As a consequence of this expanded NAL monitoring and follow-up investigation program, an exceedance of any NAL required each copermittee, including the County, to investigate and identify the source of the exceedance in a timely manner. If this was not possible, the copermittees, including the County, were required to submit a prioritization plan and timeline that identified the timeframe and planned actions to investigate and report their findings on all of the exceedances. Following the source investigation and identification, the copermittees were required to submit an action report dependent on the source of the pollutant exceedances following the identification process set forth in Permit Section C.2. The copermittees, including the County, collectively retained consultants on a cost-sharing basis to develop guidance on implementing the required compliance actions and to evaluate the action levels in Permit Tables 4 a-c. I am informed and believe and therefore state that the County's share of the cost for such consultant support was \$5,511 in FY 2010-11 and \$22,490 in FY 2011-12. I am further informed and believed and therefore state that the County first incurred costs for these mandated activities on or about July 9, 2010. In addition to these shared costs, I am informed and believe and therefore state that the County incurred additional direct increased costs of \$40,148.72 in FY 2011-12 as the result of followup activities following monitoring which recorded NAL exceedances.

c. Stormwater Action Levels: Permit Section D required the copermittees, including the County, to conduct end-of-pipe assessments during wet weather monitoring to determine stormwater action level (SAL) compliance metrics at major outfalls. The copermittees were

required to develop their monitoring plans to sample a representative percentage of the major outfalls within each hydrologic subarea. At a minimum, outfalls that exceeded SALs would trigger additional monitoring in the subsequent year. Any station that did not exceed a SAL for 3 years were required to be replaced with a different station. SAL samples were required to be 24-hour time weighted composites. Future requirements included, beginning in Year 3 after the Permit adoption date, a running average of twenty percent or greater of exceedances of any discharge of storm water from the MS4 to waters of the United States that exceeded the SALs for the pollutants listed in Table 5 of the Permit would require the copermittees, including the County, to affirmatively augment and implement all necessary storm water controls and measures to reduce the discharge of the associated class of pollutant(s). Additionally, the copermittees, including the County, were required to utilize the exceedance information when adjusting and executing annual work plans. To address these requirements, the County was part of a copermittee program to share the costs for monitoring elements of this mandated program and the initial development of SAL protocols. I am informed and believe and therefore state that the County share of such costs was \$6,905 in FY 2010-11 and \$5,198 in FY 2011-12. I am further informed and believed and therefore state that the County first incurred costs for these mandated activities on or about July 9, 2010.

d. Low Impact Development (LID) and Hydromodification Requirements: Permit Sections F.1.d and F.1.h required the copermittees, including the County, to ensure that new development and significant redevelopment comply with low impact development (“LID”) and hydromodification prevention requirements. These sections required the copermittees, including the County, to develop and implement LID principals set forth in the Permit and structural features into public agency Priority Development Projects (PDPs). In addition, the copermittees,

including the County, were required under Permit Section F.1.d.4 to establish a land development program whereby each PDP was required to implement LID BMPs. This program required County staff to undertake various steps, including to develop this program and to train municipal staff on implementation requirements. Further Permit Section F.1.d.7 required the copermittees, including the County, to develop a LID waiver program for incorporation into local SSMPs which met specific Permit requirements. Further, under Permit Section F.1.h, the copermittees, including the County, were required to collaborate to develop and implement a Hydromodification Management Plan (HMP) to manage increases in runoff discharge rates and durations from all PDPs. Further, Permit Section F.1.h.5 required the copermittees, including the County, to implement interim hydromodification criteria prior to the development of the HMP. The copermittees, including the County, participated in a cost-sharing program with outside consultants and County staff to address these requirements. I am informed and believe and therefore state that the County's share of the cost of this program in FY 2009-10 was \$62,319 and in FY 2010-11 was \$18,006. I am further informed and believe and therefore state that the County first incurred these costs on or about January 22, 2010. I am further informed and believe and therefore state that most of the costs described above cannot be recouped through fees charged to private entities.

e. BMP Maintenance Tracking: Permit Section F.1.f required the copermittees, including the County, to develop and maintain a watershed-based database to track and inventory all approved post-construction BMPs and BMP maintenance activities conducted within its jurisdiction since July 2001. This program required staff time to contact property owners for permission to inspect on-site BMPs or process self-certification statements. I am informed and believe and therefore state that the cost to the County for these requirements was \$17,765.27 in

FY 2010-11 and \$29,979.88 in FY 2011-12. I am further informed and believe and therefore state that the County first incurred these costs on or about July 9, 2010. I am further informed and believe and therefore state that most of the costs described above regarding previously installed BMPs cannot be recouped through fees charged to private entities.

f. Retrofitting Existing Development: Permit Section F.3.d required the copermittees, including the County, to develop and implement a retrofitting program to meet the requirements set forth in that section. This new mandated program required the copermittees, including the County, to identify and inventory areas of existing development (i.e. municipal, industrial, commercial, residential) as candidates for retrofitting; evaluate and rank the inventoried existing developments to prioritize retrofitting; consider the results of the evaluation in prioritizing work plans for the following year; and track and inspect completed retrofit BMPs. I am informed and believe and therefore state that while the County did not incur direct costs for these requirements in FY 2010-11 or FY 2011-12, the County incurred costs in subsequent fiscal years during the term of the Permit.

g. Maintain MS4 Map: Permit Section F.4.b required the copermittees, including the County, to maintain an updated map of its entire MS4 and the corresponding drainage areas within its jurisdiction, including the use of Geographical Information System (GIS) technology. The Copermittees, including the County, engaged in a cost-sharing effort to achieve this mapping. I am informed and believe, and therefore state, that the County's share of such costs in FY 2009-10 was \$3,071 and that the County's share of such costs in FY 2010-11 was \$2,753. I am further informed and believe and therefore state that the County first incurred these costs on or about January 8, 2010.

h. Reporting Requirements

(i) Program Effectiveness Assessment and Reporting and Jurisdictional Runoff Management Program (JRMP) Annual Reports: In addition to what was required in the 2002 Permit, Permit Section J required the copermitees, including the County, to develop a work plan, an effectiveness assessment system based on CASQA outcome levels, and an annual assessment review to address their high priority water quality problems in an iterative manner over the life of the Permit. The minimum requirements of this provision are set forth in pages Permit Section J at 79-82. Further, Permit Section F.1.d(7)(i) required the copermitees, including the County, to generate upgraded individual JRMP Annual Reports which cover implementation of their jurisdictional activities during the past annual reporting period. Additional requirements in the Permit compared to the 2002 Permit included: reporting of PDPs choosing to participate in the LID waiver program, including details of the feasibility analysis, implemented BMPs and funding details with the second year JRMP Annual Report. In addition, pursuant to Permit Section F.3.a.(4)(c), each copermitee, including the County, was required to evaluate its existing flood control devices, identify devices causing or contributing to a condition of pollution, identify measures to reduce or eliminate the structure's effect on pollution, and evaluate the feasibility of retrofitting the structural flood control device, and to submit this inventory and evaluation to the RWQCB. Such evaluation was also required to include a Reporting Checklist (Permit Section K.3.a.(3) and Attachment D). The copermitees, including the County, participated in a cost-sharing program to develop updated reporting templates, conduct assessments for the Unified Annual Report and to develop watershed workplans. I am informed and believe and therefore state that the County's share of such costs in FY 2010-11 was \$5,801 and that the costs in FY

2011-12 were \$3,748. I am further informed and believe and therefore state that the County first incurred costs for these mandates on or about July 9, 2010.

(ii) Watershed Workplan Public Meetings: Permit Sections K.1.b.4 and G.6 required the copermittees, including the County, to hold an annual public Watershed Workplan Review Meetings to present updates to the Watershed Workplan. This public meeting requirement was not contained in the 2002 Permit. The copermittees, including the County, participated in a cost-sharing effort to undertake these activities. I am informed and believe and therefore state that the County's cost share for such requirements was \$334 in FY 2011-12 and \$104 in FY 2012-13. I am further informed and believe and therefore state that the County first incurred costs with respect to such mandated activities on or about October 29, 2010.

i. Total Maximum Daily Loads (TMDLs): Permit Section I.1 required the County to comply with a series of new numeric effluent limits based on waste load allocations for the Baby Beach Bacterial Indicator TMDL. These new program requirements involved the imposition of numeric effluent limits from wasteload allocations from this TMDL, as set forth in Permit Tables 6, 7 and 8. This TMDL-related program was not required as a part of the 2002 Permit and thus constitutes a new program under the Permit. I am informed and believe and therefore state that the County's share of the costs for this mandated program was \$28,575.91 in FY 2009-10 and \$31,646.10 in FY 2011-12. I am further informed and believe and therefore state that the County first incurred such costs on or about January 22, 2010.

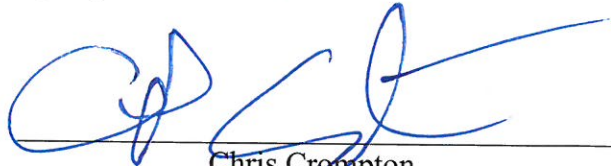

7. The County first incurred costs under the Permit in FY 2009-10, which began on July 1, 2009.

8. I am informed and believe and therefore state that there are no dedicated state, federal or regional funds that were available to pay for any of these new programs/activities. The County, in addition to its General Fund, had sources of other County funding, including from road, parks and Flood District funding, for certain Permit obligations. To the extent such fees were employed and/or such funds appropriated for such obligations, they would not be available for other County obligations. I am informed and believe and therefore state that I am not aware of any other fee or tax which the County would have the discretion to impose under California law to cover any portion of the cost of these new programs/activities.

Executed January 6 2017 at Orange, California.

I declare under penalty of perjury that the foregoing is true and correct.

Chris Crompton  
Manager, Water Quality Compliance  
OC Public Works

**DECLARATION (SECOND) OF CHRIS CROMPTON ON BEHALF OF THE  
COUNTY OF ORANGE IN SUPPORT OF TEST CLAIM**

I, Chris Crompton, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I could and would competently testify to the matters set forth herein under oath.

2. I am employed by the County of Orange (“County”) as Manager, Water Quality Compliance at OC Public Works. I have knowledge of the County’s funding for the programs and activities set forth in this declaration.

3. I have held my current position for approximately 25 years and have managed compliance with the municipal stormwater permit program for the County of Orange and its role as Principal Permittee for the entire time.

4. I am familiar with the requirements of California Regional Water Quality Control Board, Santa Ana Region (“RWQCB”) Order No. R8-2009-0030, issued by the RWQCB on May 22, 2009 (the “Permit”). The County is a permittee under that Permit.

5. I am also familiar with the matters set forth in the Test Claim filed before the Commission on State Mandates regarding the Permit and the municipalities that are Joint Test Claimants in that Test Claim.

6. The County was designated as the Principal Permittee in the Permit. In that role, the County has, among other things, responsibility for budgeting, contracting with consultants and other third parties, and the invoicing of permittees for their share of the costs of programs

subject to cost-sharing among the permittees. In my role as Manager, I am familiar with these processes and how permittees are invoiced.

7. The cost-sharing programs in which permittees under the Permit participated can be divided into two main categories: (a) compliance with Total Maximum Daily Load (“TMDL”) provisions applicable to Baby Beach, set forth in Paragraph 6(i) of my Declaration on behalf of the County in this Test Claim; and (b) non-TMDL compliance activities, including those activities identified in Paragraph 6(a)-(h) of my Declaration on behalf of the County in this Test Claim.

8. I have reviewed financial records maintained by the County in its regular business relating to the cost-sharing programs. I have also reviewed the dates on which the Joint Test Claimants submitted payment for such cost-sharing amounts. Based on that review, I understand and believe and therefore state that:

a. With regard to Baby Beach TMDL requirements, the County received payment from the City of Dana Point on or about August 12, 2011.

b. With regard to the non-TMDL requirements of the Permit that were subject to cost sharing, for requirements for which compliance efforts commenced in the second half of FY 2009-10, the County received payment from the Joint Test Claimants during a period commencing on or about December 21, 2009 and ending on or about January 21, 2010. For Permit compliance efforts which commenced in FY 2010-11, the County received payment from the Joint Test Claimants during a period commencing on or about January 18, 2011 and ending on or about March 3, 2011. For Permit compliance efforts which commenced in FY 2011-12, the County received payment from the Joint Test Claimants during a period commencing on or about January 17, 2012 and ending on or about July 22, 2013.

9. From my review of the financial records of the cost-sharing programs, I determined that the total amount paid by the permittees for the Baby Beach TMDL in FY 2009-10 was \$28,575.91, and in FY 2010-11 was \$33,652.65. For the other cost-sharing requirements at issue in the Test Claim, the total amount paid by the permittees in FY 2009-10 was \$256,350, in FY 2010-11 was \$164,535.91 and FY 2011-12 was \$124,240.65.

10. Documents reflecting the information set forth in this Declaration, including documents that I prepared or caused to be prepared, were distributed to representatives of the Joint Test Claimants in connection with the preparation of declarations in support of the Test Claim.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct.

Executed January 6, 2017 at Orange, California.

Manager, Water Quality Compliance  
OC Public Works

**DECLARATION OF LISA ZAWASKI ON BEHALF OF THE CITY OF DANA POINT**  
**IN SUPPORT OF TEST CLAIM**

I, Lisa Zawaski, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I would and would competently testify to the matters set forth herein under oath.

2. I am employed by the City of Dana Point (hereafter, "City") as the Senior Water Quality Engineer. I have knowledge of the requirements set forth in this declaration and the City's sources of funding for the programs and activities set forth in this declaration.

3. I have held my current position for approximately eleven (11) years. My duties include management of the City's storm water program.

4. I have reviewed California Regional Water Quality Control Board San Diego Region ("RWQCB"), Order No. R9-2009-0002 issued by the RWQCB on December 16, 2009 (the "Permit") and am familiar with the requirements of the Permit as it applies to the City. The City was a copermittee under that permit.

5. I have also reviewed and I am familiar with the requirements of the Order No. R9-2002-0001 issued by the San Diego RWQCB on February 13, 2002 (the "2002 Permit"). The City was a copermittee under that permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I believe that the Permit required the copermittees to perform the following new activities, among others, that were not required by the 2002 Permit, and which are unique to local government entities:

a. Non-Stormwater Discharges: Permit Section B removes from the list of exempted discharges all landscape irrigation, irrigation water, and lawn watering discharges originating from any location or source, including residential irrigation discharges from potable water sources, which was previously included in the category of exempted discharges in the 2002 Permit. The removal of this discharge exemption required the copermitees, including the City, to undertake various tasks, which could include adoption of new ordinances to address these flows, expending staff time to create new public education and outreach materials, the tracking, monitoring, and response to and investigate of incidents and complaints of irrigation runoff and improvement of municipal irrigation systems and landscaping. I am informed and believe and therefore state that the City had costs of \$21,040 in Fiscal Year (FY) 2010-11 and \$20,000 in FY2011-12 and first incurred these costs on or about July 6, 2010. In addition to these City costs, the copermitees, including the City, participated in a cost-sharing effort to develop a model ordinance addressing the new discharges. I am informed and believe and therefore state that the City's share of these costs was \$27 in Fiscal Year (FY) 2009-10 and \$519 in FY 2010-11. I am further informed and believe and therefore state that the City first incurred these costs when it was paid an invoice from the County for these and other services on or about December 21, 2009.

b. Non-Stormwater Dry Weather Action Levels: Permit Sections C and F.4.(d) and (e) required the copermitees, including the City, to implement new follow-up investigation and source tracking activities triggered by exceedances of dry-weather non-stormwater action levels (NALs) according to newly established, prescriptive concentration levels, and also required testing of new and expanded numbers of constituents as compared to the 2002 Permit. In the 2002 Permit, the copermitees, including the City, were allowed to set their own criteria for investigative and source tracking actions in the previously implemented dry weather program to meet basin

standards. As a consequence of this expanded NAL monitoring and follow-up investigation program, an exceedance of any NAL required each copermitee, including the City, to investigate and identify the source of the exceedance in a timely manner. If this was not possible, the copermitees, including the City, were required to submit a prioritization plan and timeline that identified the timeframe and planned actions to investigate and report their findings on all of the exceedances. Following the source investigation and identification, the Copermitees were required to submit an action report dependent on the source of the pollutant exceedances following the identification process set forth in Permit Section C.2. The copermitees, including the City, collectively retained consultants on a cost-sharing basis to develop guidance on implementing the required compliance actions and to evaluate the action levels in Permit Tables 4 a-c. I am informed and believe and therefore state that the City's share of the cost for such consultant support was \$922 in FY 2010-11 and \$3,764 in FY 2011-12. I am further informed and believed and therefore state that the City first incurred costs for these mandated activities when it paid an invoice from the County for these and other services on or about January 24, 2011. In addition to the cost-share costs, I am informed and believe and therefore state that the City had costs of \$3,125 in FY 2011-12 and first incurred these costs for such requirements on or about August 23, 2011.

c. Stormwater Action Levels: Permit Section D required the copermitees, including the City, to conduct end-of-pipe assessments during wet weather monitoring to determine stormwater action level (SAL) compliance metrics at major outfalls. The copermitees were required to develop their monitoring plans to sample a representative percentage of the major outfalls within each hydrologic subarea. At a minimum, outfalls that exceeded SALs would trigger additional monitoring in the subsequent year. Any station that did not exceed a SAL for 3 years were required to be replaced with a different station. SAL samples were required to be 24-hour

time weighted composites. Future requirements included, beginning in Year 3 after the Permit adoption date, a running average of twenty percent or greater of exceedances of any discharge of storm water from the MS4 to waters of the United States that exceeded the SALs for the pollutants listed in Table 5 of the Permit would require the copermittees, including the City, to affirmatively augment and implement all necessary storm water controls and measures to reduce the discharge of the associated class of pollutant(s). Additionally, the copermittees, including the City, were required to utilize the exceedance information when adjusting and executing annual work plans. To address these requirements, the City was part of a copermittee program to share the costs for monitoring elements of this mandated program and the initial development of SAL protocols. I am informed and believe and therefore state that the City's share of such costs was \$1,156 in FY 2010-11 and \$870 in FY 2011-12. I am further informed and believed and therefore state that the City first incurred costs for these mandated activities when it paid a County invoice for such activities and other requirements on or about January 24, 2011.

d. Low Impact Development (LID) and Hydromodification Requirements: Permit Sections F.1.d and F.1.h required the copermittees, including the City, to ensure that new development and significant redevelopment comply with low impact development ("LID") and hydromodification prevention requirements. These sections required the copermittees, including the City, to develop and implement LID principals set forth in the Permit and structural features into public agency Priority Development Projects (PDPs). In addition, the copermittees, including the City, were required under Permit Section F.1.d.4 to establish a land development program whereby each PDP was required to implement LID BMPs. This program required City staff to undertake various steps, including to develop this program and to train municipal staff on implementation requirements. Further Permit Section F.1.d.7 required the copermittees, including

the City, to develop an LID waiver program for incorporation into local SSMPs which met specific Permit requirements. Further, under Permit Section F.1.h, the copermittees, including the City, were required to collaborate to develop and implement a Hydromodification Management Plan (HMP) to manage increases in runoff discharge rates and durations from all PDPs. Further, Permit Section F.1.h.5 required the copermittees, including the City, to implement interim hydromodification criteria prior to the development of the HMP. The copermittees, including the City, participated in a cost-sharing program with outside consultants and County staff to address these requirements. I am informed and believe and therefore state that the City's share of the cost of this program in FY 2009-10 was \$10,431 and in FY 2011-12 was \$3,014. I am further informed and believe and therefore state that the City first incurred these costs when it paid an invoice to the County for these and other services on or about December 21, 2009. In addition to the cost-share costs, I am informed and believe and therefore state that the City had costs of \$4,500 in FY2010-11 and \$2,375 in FY2011-12 and first incurred these costs on or about August 1, 2010. I am further informed and believe and therefore state that most of the costs described above cannot be recouped through fees charged to private entities.

e. BMP Maintenance Tracking: Permit Section F.1.f required the copermittees, including the City, to develop and maintain a watershed-based database to track and inventory all approved post-construction BMPs and BMP maintenance activities conducted within its jurisdiction since July 2001. This program required staff time to contact property owners for permission to inspect on-site BMPs or process self-certification statements. I am informed and believe and therefore state that the cost to the City for these requirements was \$8,125 in FY 2010-11 and \$7,375 in FY 2011-12. I am further informed and believe and therefore state that the City first incurred these costs on or about June 1, 2010. I am further informed and believe and therefore

state that most of the costs described above regarding previously installed BMPs cannot be recouped through fees charged to private entities.

f. Retrofitting Existing Development: Permit Section F.3.d required the copermittees, including the City, to develop and implement a retrofitting program to meet the requirements set forth in that section. This new mandated program required the copermittees, including the City, to identify and inventory areas of existing development (i.e. municipal, industrial, commercial, residential) as candidates for retrofitting; evaluate and rank the inventoried existing developments to prioritize retrofitting; consider the results of the evaluation in prioritizing work plans for the following year; and track and inspect completed retrofit BMPs. I am informed and believe and therefore state that the City's costs for these requirements was \$38,250 in FY 2012-13. I am further informed and believe and therefore state that the City first incurred costs for these mandated activities on or about June 30, 2013.

g. Maintain MS4 Map: Permit Section F.4.b required the copermittees, including the City, to maintain an updated map of its entire MS4 and the corresponding drainage areas within its jurisdiction, including the use of Geographical Information System (GIS) technology. The Copermittees, including the City, engaged in a cost-sharing effort to achieve this mapping. I am informed and believe, and therefore state that the City's share of such costs in FY 2009-10 was \$514 and that the City's share of such costs in FY 2010-11 was \$461. I am further informed and believe and therefore state that the City first incurred these costs on or about December 21, 2009 when it paid an invoice from the County for those services and others. In addition to the cost-share costs, I am informed and believe and therefore state, that the City had costs of \$5,000 in FY 2010-11 and \$4,000 in FY 2011-12 and first incurred these costs on or about July 27, 2010.

h. Reporting Requirements

(i) Program Effectiveness Assessment and Reporting and Jurisdictional Runoff Management Program (JRMP) Annual Reports: In addition to what was required in the 2002 Permit, Permit Section J required the copermitees, including the City, to develop a work plan, an effectiveness assessment system based on CASQA outcome levels, and an annual assessment review to address their high priority water quality problems in an iterative manner over the life of the Permit. The minimum requirements of this provision are set forth in pages Permit Section J at 79-82. Further, Permit Section F.1.d(7)(i) required the copermitees, including the City, to generate upgraded individual JRMP Annual Reports which cover implementation of their jurisdictional activities during the past annual reporting period. Additional requirements in the Permit compared to the 2002 Permit included: reporting of PDPs choosing to participate in the LID waiver program, including details of the feasibility analysis, implemented BMPs and funding details with the second year JRMP Annual Report. In addition, pursuant to Permit Section F.3.a.(4)(c), each copermitee, including the City, was required to evaluate its existing flood control devices, identify devices causing or contributing to a condition of pollution, identify measures to reduce or eliminate the structure's effect on pollution, and evaluate the feasibility of retrofitting the structural flood control device, and to submit this inventory and evaluation to the RWQCB. Such evaluation was also required to include a Reporting Checklist (Permit Section K.3.a.(3) and Attachment D). I am informed and believe and therefore state that the City had costs of \$1,750 in FY 2009-10 and \$4,375 in FY 2010-11 and first incurred these costs on or about April 29, 2010. In addition to the City costs, the copermitees, including the City, participated in a cost-sharing program to develop updated

reporting templates, conduct assessments for the Unified Annual Report and to develop watershed workplans. I am informed and believe and therefore state that the City's share of such costs in FY 2010-11 was \$971 and that the costs in FY 2011-12 were \$627. I am further informed and believe and therefore state that the City first incurred costs for these mandates when it paid an invoice from the County for these and other services on or about January 24, 2011.

(ii) Watershed Workplan Public Meetings: Permit Sections K.1.b.4 and G.6 required the copermittees, including the City, to hold an annual public Watershed Workplan Review Meetings to present updates to the Watershed Workplan. This public meeting requirement was not contained in the 2002 Permit. I am informed and believe and therefore state that the City had costs of \$2,500 in FY 2011-12 and first incurred these costs on or about November 1, 2011. The copermittees, including the County, also participated in a cost-sharing effort to undertake these activities. I am informed and believe and therefore state that the city's cost share for such requirements was \$56 in FY 2011-12 and \$17 in FY 2012-13. I am further informed and believe and therefore state that the City first incurred costs with respect to such mandated activities when it paid an invoice from the County for these and other services on or about July 22, 2013.

i. Total Maximum Daily Loads (TMDLS): Permit Section I.1 required the City to comply with a series of new numeric effluent limits based on waste load allocations for the Baby Beach Bacterial Indicator TMDL. These new program requirements involved the imposition of numeric effluent limits from wasteload allocations from this TMDL, as set forth in Permit Tables 6, 7 and 8. This TMDL-related program was not required as a part of the 2002 Permit and thus constitutes a new program under the Permit. I am informed and believe and therefore state that

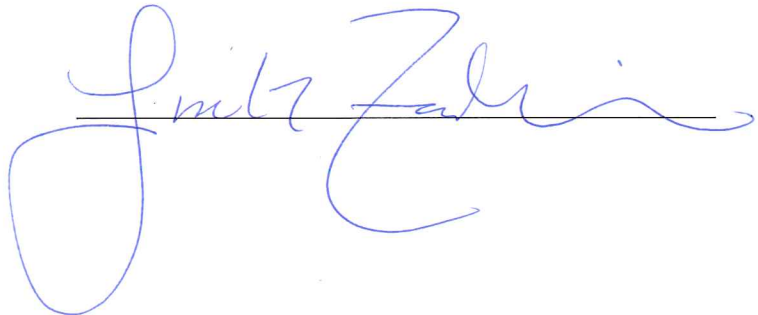

the City had costs of \$3,125 in FY 2010-11 and first incurred these costs on or about November 1, 2010. The Baby Beach Watershed Agencies, including the City and County, also participated in a cost-sharing effort to undertake these activities. I am informed and believe and therefore state that the City's share of the costs for this mandated program was \$2,006.54 in FY 2010-11 and \$1,719.20 in FY 2011-12. I am further informed and believe and therefore state that the City first incurred such costs when it paid an invoice from the County for such costs on or about August 12, 2011.

7. The City first incurred costs under the Permit in FY 2009-10, which began on July 1, 2009.

8. I am informed and believe that there are no dedicated State, Federal or regional funds that are or will be available to pay for any of these new programs or activities. I am not aware of any fee or tax which the City would have the discretion to impose under California law in order to recover any portion of these new programs or activities. I am further informed and believe that the only available sources to pay for these new programs or activities are and will be the City's General Fund.

Executed January 4, 2017 at Dana Point, California.

**DECLARATION OF KENNETH H. ROSENFELD, P.E.**

**FOR THE CITY OF LAGUNA HILLS**

**DECLARATION OF KENNETH H. ROSENFELD ON BEHALF OF THE CITY OF  
LAGUNA HILLS, CALIFORNIA IN SUPPORT OF TEST CLAIM**

I, Kenneth H. Rosenfield, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I would and would competently testify to the matters set forth herein under oath.

2. I am employed by the City of Laguna Hills (hereafter, "City") as Director of Public Services and City Engineer and I have knowledge of the requirements set forth in this declaration and the City's sources of funding for the programs and activities set forth in this declaration.

3. I have held my current position for approximately 21 years. My duties include the implementation of the NPDES program, maintenance of all public facilities, traffic engineering, civil engineering and capital improvement construction programs.

4. I have reviewed California Regional Water Quality Control Board San Diego Region ("RWQCB"), Order No. R9-2009-0002 issued by the RWQCB on December 16, 2009 (the "Permit") and am familiar with the requirements of the Permit as it applies to the City. The City was a copermittee under that permit.

5. I have also reviewed and I am familiar with the requirements of the Order No. R9-2002-0001 issued by the San Diego RWQCB on February 13, 2002 (the "2002 Permit"). The City was a copermittee under that permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I believe that the Permit required the copermittees to perform the

following new activities, among others, that were not required by the 2002 Permit, and which are unique to local government entities:

a. Non-Stormwater Discharges: Permit Section B removes from the list of exempted discharges all landscape irrigation, irrigation water, and lawn watering discharges originating from any location or source, including residential irrigation discharges from potable water sources, which was previously included in the category of exempted discharges in the 2002 Permit. The removal of this discharge exemption required the copermitees, including the City, to undertake various tasks, which could include adoption of new ordinances to address these flows, expending staff time to create new public education and outreach materials, the tracking, monitoring, and response to and investigate of incidents and complaints of irrigation runoff and improvement of municipal irrigation systems and landscaping. In addition to these direct costs, the copermitees, including the City, participated in a cost-sharing effort to develop a model ordinance addressing the new discharges. I am informed and believe and therefore state that the City's share of these costs was \$21 in Fiscal Year (FY) 2009-10 and \$406 in FY 2010-11. I am further informed and believe and therefore state that the City first incurred these costs when it was paid an invoice from the County for these and other services on or about January 19, 2010.

b. Non-Stormwater Dry Weather Action Levels: Permit Sections C and F.4.(d) and (e) required the copermitees, including the City, to implement new follow-up investigation and source tracking activities triggered by exceedances of dry-weather non-stormwater action levels (NALs) according to newly established, prescriptive concentration levels, and also required testing of new and expanded numbers of constituents as compared to the 2002 Permit. In the 2002 Permit, the copermitees, including the City, were allowed to set their own criteria for investigative and source tracking actions in the previously implemented dry weather program to meet basin

standards. As a consequence of this expanded NAL monitoring and follow-up investigation program, an exceedance of any NAL required each copermitee, including the City, to investigate and identify the source of the exceedance in a timely manner. If this was not possible, the copermitees, including the City, were required to submit a prioritization plan and timeline that identified the timeframe and planned actions to investigate and report their findings on all of the exceedances. Following the source investigation and identification, the Copermitees were required to submit an action report dependent on the source of the pollutant exceedances following the identification process set forth in Permit Section C.2. The copermitees, including the City, collectively retained consultants on a cost-sharing basis to develop guidance on implementing the required compliance actions and to evaluate the action levels in Permit Tables 4 a-c. I am informed and believe and therefore state that the City's share of the cost for such consultant support was \$721 in FY 2010-11 and \$2,943 in FY 2011-12. I am further informed and believed and therefore state that the City first incurred costs for these mandated activities when it paid an invoice from the County for these and other services on or about January 31, 2011.

c. Stormwater Action Levels: Permit Section D required the copermitees, including the City, to conduct end-of-pipe assessments during wet weather monitoring to determine stormwater action level (SAL) compliance metrics at major outfalls. The copermitees were required to develop their monitoring plans to sample a representative percentage of the major outfalls within each hydrologic subarea. At a minimum, outfalls that exceeded SALs would trigger additional monitoring in the subsequent year. Any station that did not exceed a SAL for 3 years were required to be replaced with a different station. SAL samples were required to be 24-hour time weighted composites. Future requirements included, beginning in Year 3 after the Permit adoption date, a running average of twenty percent or greater of exceedances of any discharge of

storm water from the MS4 to waters of the United States that exceeded the SALs for the pollutants listed in Table 5 of the Permit would require the copermitees, including the City, to affirmatively augment and implement all necessary storm water controls and measures to reduce the discharge of the associated class of pollutant(s). Additionally, the copermitees, including the City, were required to utilize the exceedance information when adjusting and executing annual work plans. To address these requirements, the City was part of a copermitee program to share the costs for monitoring elements of this mandated program and the initial development of SAL protocols. I am informed and believe and therefore state that the City's share of such costs was \$904 in FY 2010-11 and \$680 in FY 2011-12. I am further informed and believed and therefore state that the City first incurred costs for these mandated activities when it paid a County invoice for such activities and other requirements on or about January 31, 2011.

d. Low Impact Development (LID) and Hydromodification Requirements: Permit Sections F.1.d and F.1.h required the copermitees, including the City, to ensure that new development and significant redevelopment comply with low impact development ("LID") and hydromodification prevention requirements. These sections required the copermitees, including the City, to develop and implement LID principals set forth in the Permit and structural features into public agency Priority Development Projects (PDPs). In addition, the copermitees, including the City, were required under Permit Section F.1.d.4 to establish a land development program whereby each PDP was required to implement LID BMPs. This program required City staff to undertake various steps, including to develop this program and to train municipal staff on implementation requirements. Further Permit Section F.1.d.7 required the copermitees, including the City, to develop an LID waiver program for incorporation into local SSMPs which met specific Permit requirements. Further, under Permit Section F.1.h, the copermitees, including the City,

were required to collaborate to develop and implement a Hydromodification Management Plan (HMP) to manage increases in runoff discharge rates and durations from all PDPs. Further, Permit Section F.1.h.5 required the copermittees, including the City, to implement interim hydromodification criteria prior to the development of the HMP. The copermittees, including the City, participated in a cost-sharing program with outside consultants and County staff to address these requirements. I am informed and believe and therefore state that the City's share of the cost of this program in FY 2009-10 was \$8,155 and in FY 2011-12 was \$2,356. I am further informed and believe and therefore state that the City first incurred these costs when it paid an invoice to the County for these and other services on or about January 19, 2010. I am further informed and believe and therefore state that most of the costs described above cannot be recouped through fees charged to private entities.

e. BMP Maintenance Tracking: Permit Section F.1.f required the copermittees, including the City, to develop and maintain a watershed-based database to track and inventory all approved post-construction BMPs and BMP maintenance activities conducted within its jurisdiction since July 2001. This program required staff time to contact property owners for permission to inspect on-site BMPs or process self-certification statements. I am informed and believe and therefore state that the City did not incur any costs pertaining to these requirements in FY 2010-11 or in FY 2011-12, but that the City did incur costs pertaining to these items in subsequent fiscal years during the Permit term. I am further informed and believe and therefore state that most of the costs incurred by the City during the Permit term regarding previously installed BMPs cannot be recouped through fees charged to private entities.

f. Retrofitting Existing Development: Permit Section F.3.d required the copermittees, including the City, to develop and implement a retrofitting program to meet the requirements set

forth in that section. This new mandated program required the copermittees, including the City, to identify and inventory areas of existing development (i.e. municipal, industrial, commercial, residential) as candidates for retrofiting; evaluate and rank the inventoried existing developments to prioritize retrofiting; consider the results of the evaluation in prioritizing work plans for the following year; and track and inspect completed retrofit BMPs. I am informed and believe and therefore state that the City did not incur any costs pertaining to these requirements in FY 2010-11 or in FY 2011-12, but that the City did incur costs pertaining to these items in subsequent fiscal years during the Permit term.

g. Maintain MS4 Map: Permit Section F.4.b required the copermittees, including the City, to maintain an updated map of its entire MS4 and the corresponding drainage areas within its jurisdiction, including the use of Geographical Information System (GIS) technology. The Copermittees, including the City, engaged in a cost-sharing effort to achieve this mapping. I am informed and believe, and therefore state, that the City's share of such costs in FY 2009-10 was \$402 and that the City's share of such costs in FY 2010-11 was \$360. I am further informed and believe and therefore state that the City first incurred these costs on or about January 19, 2010 when it paid an invoice from the County for those services and others.

h. Reporting Requirements

(i) Program Effectiveness Assessment and Reporting and Jurisdictional Runoff Management Program (JRMP) Annual Reports: In addition to what was required in the 2002 Permit, Permit Section J required the copermittees, including the City, to develop a work plan, an effectiveness assessment system based on CASQA outcome levels, and an annual assessment review to address their high priority water quality problems in an iterative manner over the life of the Permit. The minimum requirements of this provision

are set forth in pages Permit Section J at 79-82. Further, Permit Section F.1.d(7)(i) required the copermittees, including the City, to generate upgraded individual JRMP Annual Reports which cover implementation of their jurisdictional activities during the past annual reporting period. Additional requirements in the Permit compared to the 2002 Permit included: reporting of PDPs choosing to participate in the LID waiver program, including details of the feasibility analysis, implemented BMPs and funding details with the second year JRMP Annual Report. In addition, pursuant to Permit Section F.3.a.(4)(c), each copermittee, including the City, was required to evaluate its existing flood control devices, identify devices causing or contributing to a condition of pollution, identify measures to reduce or eliminate the structure's effect on pollution, and evaluate the feasibility of retrofitting the structural flood control device, and to submit this inventory and evaluation to the RWQCB. Such evaluation was also required to include a Reporting Checklist (Permit Section K.3.a.(3) and Attachment D). The copermittees, including the City, participated in a cost-sharing program to develop updated reporting templates, conduct assessments for the Unified Annual Report and to develop watershed workplans. I am informed and believe and therefore state that the City's share of such costs in FY 2010-11 was \$759 and that the share in FY 2011-12 was \$490. I am further informed and believe and therefore state that the City first incurred costs for these mandates when it paid an invoice from the County for these and other services on or about January 31, 2011.

(ii) Watershed Workplan Public Meetings: Permit Sections K.1.b.4 and G.6 required the copermittees, including the City, to hold an annual public Watershed Workplan Review Meetings to present updates to the Watershed Workplan. This public meeting requirement was not contained in the 2002 Permit. The copermittees, including

the County, participated in a cost-sharing effort to undertake these activities. I am informed and believe and therefore state that the city's cost share for such requirements was \$44 in FY 2011-12 and \$14 in FY 2012-13. I am further informed and believe and therefore state that the City first incurred costs with respect to such mandated activities when it paid an invoice from the County for these and other services on or about January 30, 2012.

7. The City first incurred costs under the Permit in FY 2009-10, which commenced on July 1, 2009.

8. I am informed and believe that there are no dedicated State, Federal or regional funds that are or will be available to pay for any of these new programs or activities. I am not aware of any fee or tax which the City would have the discretion to impose under California law in order to recover any portion of these new programs or activities. I am further informed and believe that the only available sources to pay for these new programs or activities are and will be the City's General Fund.

Executed this 4th day of January, 2017 at Laguna Hills, California.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct.

---

Kenneth H. Rosenfield, P.E.  
Director of Public Services and City Engineer  
City of Laguna Hills, California

**DECLARATION OF NANCY PALMER ON BEHALF OF THE**  
**CITY OF LAGUNA NIGUEL IN SUPPORT OF TEST CLAIM**

I, Nancy Palmer, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I could and would competently testify to the matters set forth herein under oath.

2. I am employed by the City of Laguna Niguel (hereafter, "City") as the City Landscape Architect/Environmental Programs Manager. I have knowledge of the requirements set forth in this declaration and the City's sources of funding for the programs and activities set forth in this declaration.

3. I have held my current position for approximately 10 years. My duties include oversight of the City's National Pollutant Discharge Elimination system activities, and managing of capital improvement projects relating to urban runoff and environmental restoration .

4. I have reviewed California Regional Water Quality Control Board San Diego Region ("RWQCB"), Order No. R9-2009-0002 issued by the RWQCB on December 16, 2009 (the "Permit") and am familiar with the requirements of the Permit as it applies to the City. The City was a copermittee under that permit.

5. I have also reviewed and I am familiar with the requirements of the Order No. R9-2002-0001 issued by the San Diego RWQCB on February 13, 2002 (the "2002 Permit"). The City was a copermittee under that permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I believe that the Permit required the copermittees to perform the

following new activities, among others, that were not required by the 2002 Permit, and which are unique to local government entities:

a. Non-Stormwater Discharges: Permit Section B removes from the list of exempted discharges all landscape irrigation, irrigation water, and lawn watering discharges originating from any location or source, including residential irrigation discharges from potable water sources, which was previously included in the category of exempted discharges in the 2002 Permit. The removal of this discharge exemption required the copermittees, including the City, to undertake various tasks, which could include adoption of new ordinances to address these flows; expending of staff time to create new public education and outreach programs; tracking, monitoring, responding to and investigation of incidents and complaints of irrigation runoff; and improvement of municipal irrigation systems and landscaping. I am informed and believe and therefore state that efforts to address such requirements resulted in direct expenditures by the City of \$9,161 in increased staff allocation costs in Fiscal Year (FY) 2010-11, \$22,432 in increased staff allocation time and design costs for the Crown Valley Parkway Medians Runoff Elimination Project in FY 2011-12, and \$28,206 in design costs for the Crown Valley Parkway Medians Runoff Elimination Project in FY 2012-13. The City first incurred direct costs under the Permit in FY 2010-11, which commenced on July 1, 2010. In addition to these direct costs, the copermittees, including the City, participated in a cost-sharing effort to develop a model ordinance addressing the new discharges. I am informed and believe and therefore state that the City's share of these costs was \$55 in FY 2009-10 and \$1,052 in FY 2010-11. I am further informed and believe and therefore state that the City first incurred these shared costs when it paid an invoice from the County for these and other services on or about January 11, 2010.

b. Non-Stormwater Dry Weather Action Levels: Permit Sections C and F.4.(d) and (e) required the copermittees, including the City, to implement new follow-up investigation and source tracking activities triggered by exceedances of dry-weather non-stormwater action levels (NALs) according to newly established, prescriptive concentration levels; and also required testing of new and expanded numbers of constituents as compared to the 2002 Permit. In the 2002 Permit, the copermittees, including the City, were allowed to set their own criteria for investigative and source tracking actions in the previously implemented dry weather program to meet Basin Plan standards. As a consequence of this expanded NAL monitoring and follow-up investigation program, an exceedance of any NAL required each copermittee, including the City, to investigate and identify the source of the exceedance in a timely manner. If this was not possible, the copermittees, including the City, were required to submit a prioritization plan and timeline that identified the timeframe and planned actions to investigate and report their findings on all of the exceedances. Following the source investigation and identification, the Copermittees were required to submit an action report dependent on the source of the pollutant exceedances following the identification process set forth in Permit Section C.2. I am informed and believe and therefore state that efforts to address such requirements have resulted in direct expenditures by the City of \$914 in increased staff allocation costs in FY 2010-11, and in direct expenditures by the City of \$479 in increased staff allocation costs and \$600 in laboratory analytical costs in FY 2011-12. The City first incurred direct costs under the Permit in FY 2010-11, which commenced on July 1, 2010. In addition to these direct costs, the copermittees, including the City, collectively retained consultants on a cost-sharing basis to develop guidance on implementing the required compliance actions and to evaluate the action levels in Permit Tables 4 a-c. I am informed and believe and therefore state that the City's share of the cost for

such consultant support was \$1,870 in FY 2010-11 and \$7,634 in FY 2011-12. I am further informed and believed and therefore state that the City first incurred shared costs for these mandated activities when it paid an invoice from the County for these and other services on or about December 23, 2010.

c. Stormwater Action Levels: Permit Section D required the copermittees, including the City, to conduct end-of-pipe assessments during wet weather monitoring to determine stormwater action level (SAL) compliance metrics at major outfalls. The copermittees were required to develop their monitoring plans to sample a representative percentage of the major outfalls within each hydrologic subarea. At a minimum, outfalls that exceeded SALs would trigger additional monitoring in the subsequent year. Any station that did not exceed a SAL for 3 years were required to be replaced with a different station. SAL samples were required to be 24-hour time weighted composites. Future requirements included, beginning in Year 3 after the Permit adoption date, a running average of twenty percent or greater of exceedances of any discharge of storm water from the MS4 to waters of the United States that exceeded the SALs for the pollutants listed in Table 5 of the Permit would require the copermittees, including the City, to affirmatively augment and implement all necessary storm water controls and measures to reduce the discharge of the associated class of pollutant(s). Additionally, the copermittees, including the City, were required to utilize the exceedance information when adjusting and executing annual work plans. To address these requirements, the City was part of a copermittee program to share the costs for monitoring elements of this mandated program and the initial development of SAL protocols. I am informed and believe and therefore state that the City's share of such costs was \$2,344 in FY 2010-11 and \$1,764 in FY 2011-12. I am further informed and believed and therefore state that the City first incurred shared costs for these mandated

activities when it paid a County invoice for such activities and other requirements on or about December 23, 2010.

d. Low Impact Development (LID) and Hydromodification Requirements: Permit Sections F.1.d and F.1.h required the copermittees, including the City, to ensure that new development and significant redevelopment comply with low impact development (“LID”) and hydromodification prevention requirements. These sections required the copermittees, including the City, to develop and implement LID principals set forth in the Permit and structural features into public agency Priority Development Projects (PDPs). In addition, the copermittees, including the City, were required under Permit Section F.1.d.4 to establish a land development program whereby each PDP was required to implement LID BMPs. This program required City staff to undertake various steps, including to develop this program and to train municipal staff on implementation requirements. Further Permit Section F.1.d.7 required the copermittees, including the City, to develop an LID waiver program for incorporation into local SSMPs which met specific Permit requirements. Further, under Permit Section F.1.h, the copermittees, including the City, were required to collaborate to develop and implement a Hydromodification Management Plan (HMP) to manage increases in runoff discharge rates and durations from all PDPs. Further, Permit Section F.1.h.5 required the copermittees, including the City, to implement interim hydromodification criteria prior to the development of the HMP. I am informed and believe and therefore state that efforts to address such requirements have resulted in direct expenditures by the City of \$4,966 in increased staff allocation costs in FY 2010-11. The City first incurred direct costs under the Permit in FY 2010-11, which commenced on July 1, 2010. In addition to these direct costs, the copermittees, including the City, participated in a cost-sharing program with outside consultants and County staff to address these requirements. I

am informed and believe and therefore state that the City's share of the cost of this program in FY 2009-10 was \$21,153 and in FY 2011-12 was \$6,112. I am further informed and believe and therefore state that the City first incurred these shared costs when it paid an invoice to the County for these and other services on or about January 11, 2010. I am further informed and believe and therefore state that most of the costs described above cannot be recouped through fees charged to private entities.

e. BMP Maintenance Tracking: Permit Section F.1.f required the copermittees, including the City, to develop and maintain a watershed-based database to track and inventory all approved post-construction BMPs and BMP maintenance activities conducted within its jurisdiction since July 2001. This program required staff time to contact property owners for permission to inspect on-site BMPs or process self-certification statements, and costs for contract inspectors to conduct BMP maintenance inspections. I am informed and believe and therefore state that the direct expenditures by the City to implement these requirements was \$750 in increased staff allocation costs in FY 2010-11 and \$4,880 in contract inspector costs in FY 2011-12. I am further informed and believe and therefore state that the City first incurred these costs on or about July 1, 2010. I am further informed and believe and therefore state that most of the costs described above regarding previously installed BMPs cannot be recouped through fees charged to private entities.

f. Retrofitting Existing Development: Permit Section F.3.d required the copermittees, including the City, to develop and implement a retrofitting program to meet the requirements set forth in that section. This new mandated program required the copermittees, including the City, to identify and inventory areas of existing development (i.e. municipal, industrial, commercial, residential) as candidates for retrofitting; evaluate and rank the

inventoried existing developments to prioritize retrofitting; consider the results of the evaluation in prioritizing work plans for the following year; and track and inspect completed retrofit BMPs. I am informed and believe and therefore state that the City's direct costs for these requirements was \$3,342 in increased staff allocation costs in FY 2010-11. I am further informed and believe and therefore state that the City first incurred costs for these mandated activities in FY 2010-11, which began on July 1, 2010.

g. Maintain MS4 Map: Permit Section F.4.b required the copermittees, including the City, to maintain an updated map of its entire MS4 and the corresponding drainage areas within its jurisdiction, including the use of Geographical Information System (GIS) technology. The Copermittees, including the City, engaged in a cost-sharing effort to achieve this mapping. I am informed and believe, and therefore state, that the City's share of such costs in FY 2009-10 was \$1,042 and that the City's share of such costs in FY 2010-11 was \$934. I am further informed and believe and therefore state that the City first incurred these shared costs on or about January 11, 2010 when it paid an invoice from the County for those services and others.

h. Reporting Requirements

(i) Program Effectiveness Assessment and Reporting and Jurisdictional Runoff Management Program (JRMP) Annual Reports: In addition to what was required in the 2002 Permit, Permit Section J required the copermittees, including the City, to develop a work plan, an effectiveness assessment system based on CASQA outcome levels, and an annual assessment review to address their high priority water quality problems in an iterative manner over the life of the Permit. The minimum requirements of this provision are set forth in Permit Section J at pages 79-82. Further, Permit Section F.1.d(7)(i) required the copermittees, including the City, to generate upgraded individual

JRMP Annual Reports which cover implementation of their jurisdictional activities during the past annual reporting period. Additional requirements in the Permit compared to the 2002 Permit included: reporting of PDPs choosing to participate in the LID waiver program, including details of the feasibility analysis, implemented BMPs and funding details with the second year JRMP Annual Report. In addition, pursuant to Permit Section F.3.a.(4)(c), each copermitee, including the City, was required to evaluate its existing flood control devices, identify devices causing or contributing to a condition of pollution, identify measures to reduce or eliminate the structure's effect on pollution, and evaluate the feasibility of retrofitting the structural flood control device, and to submit this inventory and evaluation to the RWQCB. Such evaluation was also required to include a Reporting Checklist (Permit Section K.3.a.(3) and Attachment D). I am informed and believe and therefore state that efforts required to address such requirements have resulted in direct expenditures by the City of \$10,464 in increased staff allocation time in FY 2010-11, and in expenditures by City of \$450 in increased staff allocation in FY 2011-12. The City first incurred direct costs under the Permit in FY 2010-11, which commenced on July 1, 2010. In addition to these direct costs, the copermitees, including the City, participated in a cost-sharing program to develop updated reporting templates, conduct assessments for the Unified Annual Report and to develop watershed workplans. I am informed and believe and therefore state that the City's share of such costs in FY 2010-11 were \$1,969 and that the costs in FY 2011-12 were \$1,272. I am further informed and believe and therefore state that the City first incurred shared costs for these mandates when it paid an invoice from the County for these and other services on or about December 23, 2010.

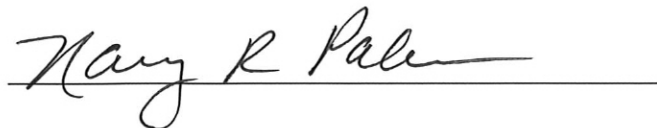

(ii) Watershed Workplan Public Meetings: Permit Sections K.1.b.4 and G.6 required the copermitees, including the City, to hold an annual public Watershed Workplan Review Meetings to present updates to the Watershed Workplan. This public meeting requirement was not contained in the 2002 Permit. The copermitees, including the County, participated in a cost-sharing effort to undertake these activities. I am informed and believe and therefore state that the City's cost share for such requirements was \$113 in FY 2011-12 and \$35 in FY 2012-13. I am further informed and believe and therefore state that the City first incurred shared costs with respect to such mandated activities when it paid an invoice from the County for these and other services on or about January 19, 2012.

7. The City first incurred costs under the Permit in FY 2009-10, which commenced on July 1, 2009.

8. I am informed and believe that there are no dedicated State, Federal or regional funds that are or will be available to pay for any of these new programs or activities. I am not aware of any fee or tax which the City would have the discretion to impose under California law in order to recover any portion of these new programs or activities. I am further informed and believe that the only available sources to pay for these new programs or activities are and will be the City's General Fund.

Executed January 5, 2017 at Laguna Niguel, California.

I declare under penalty of perjury that the foregoing is true and correct.

A handwritten signature in cursive script, reading "Mary R. Pale", is written over a solid horizontal line.

**DECLARATION OF DEVIN SLAVEN ON BEHALF OF THE CITY OF LAKE FOREST**  
**IN SUPPORT OF TEST CLAIM**

I, Devin Slaven, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I would and would competently testify to the matters set forth herein under oath.

2. I am employed by the City of Lake Forest (hereafter, "City") as the Environmental Manager. I have knowledge of the requirements set forth in this declaration and the City's sources of funding for the programs and activities set forth in this declaration.

3. I have held my current position for approximately twelve years. My duties include management of the City's Water Quality Division and directing the pollution prevention and enforcement program.

4. I have reviewed California Regional Water Quality Control Board San Diego Region ("RWQCB"), Order No. R9-2009-0002 issued by the RWQCB on December 16, 2009 (the "Permit") and am familiar with the requirements of the Permit as it applies to the City. The City was a copermittee under that permit.

5. I have also reviewed and I am familiar with the requirements of the Order No. R9-2002-0001 issued by the San Diego RWQCB on February 13, 2002 (the "2002 Permit"). The City was a copermittee under that permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I believe that the Permit required the copermittees to perform the

following new activities, among others, that were not required by the 2002 Permit, and which are unique to local government entities:

a. Non-Stormwater Discharges: Permit Section B removes from the list of exempted discharges all landscape irrigation, irrigation water, and lawn watering discharges originating from any location or source, including residential irrigation discharges from potable water sources, which was previously included in the category of exempted discharges in the 2002 Permit. The removal of this discharge exemption required the copermittees, including the City, to undertake various tasks, which included adoption of a new ordinance to address these flows, expending staff time to create new public education and outreach materials, the tracking, monitoring, and response to and investigation of incidents and complaints of irrigation runoff and improvement of municipal irrigation systems and landscaping. I am informed and believe and therefore state that the City's direct costs were at least \$450 in Fiscal Year (FY) 2010-11 and \$360 in FY 2011-12. I am informed and believe and therefore state that the City first incurred these costs in January 2010. In addition to these direct costs, the copermittees, including the City, participated in a cost-sharing effort to develop a model ordinance addressing the new discharges. The copermittees, including the City, participated in a cost-sharing effort to develop a model ordinance addressing the new discharges. I am informed and believe and therefore state that the City's share of these costs was \$21 in FY 2009-10 and \$392 in FY 2010-11. I am further informed and believe and therefore state that the City first incurred these costs when it was paid an invoice from the County for these and other services on or about January 21, 2010.

b. Non-Stormwater Dry Weather Action Levels: Permit Sections C and F.4.(d) and (e) required the copermittees, including the City, to implement new follow-up investigation and source tracking activities triggered by exceedances of dry-weather non-stormwater action levels

(NALs) according to newly established, prescriptive concentration levels, and also required testing of new and expanded numbers of constituents as compared to the 2002 Permit. In the 2002 Permit, the copermittees, including the City, were allowed to set their own criteria for investigative and source tracking actions in the previously implemented dry weather program to meet basin standards. As a consequence of this expanded NAL monitoring and follow-up investigation program, an exceedance of any NAL required each copermittee, including the City, to investigate and identify the source of the exceedance in a timely manner. If this was not possible, the copermittees, including the City, were required to submit a prioritization plan and timeline that identified the timeframe and planned actions to investigate and report their findings on all of the exceedances. Following the source investigation and identification, the Copermittees were required to submit an action report dependent on the source of the pollutant exceedances following the identification process set forth in Permit Section C.2. I am informed and believe and therefore state that the City's direct costs were approximately \$2,250 in FY 2011-12. I am informed and believe and therefore state that the City first incurred these costs on or about August 16, 2011. In addition, the copermittees, including the City, collectively retained consultants on a cost-sharing basis to develop guidance on implementing the required compliance actions and to evaluate the action levels in Permit Tables 4 a-c. I am informed and believe and therefore state that the City's share of the cost for such consultant support was \$698 in FY 2010-11 and \$2,848 in FY 2011-12. I am further informed and believe and therefore state that the City first incurred costs for these mandated activities when it paid an invoice from the County for these and other services on or about March 3, 2011.

c. Stormwater Action Levels: Permit Section D required the copermittees, including the City, to conduct end-of-pipe assessments during wet weather monitoring to determine

stormwater action level (SAL) compliance metrics at major outfalls. The copermittees were required to develop their monitoring plans to sample a representative percentage of the major outfalls within each hydrologic subarea. At a minimum, outfalls that exceeded SALs would trigger additional monitoring in the subsequent year. Any station that did not exceed a SAL for 3 years were required to be replaced with a different station. SAL samples were required to be 24-hour time weighted composites. Future requirements included, beginning in Year 3 after the Permit adoption date, a running average of twenty percent or greater of exceedances of any discharge of storm water from the MS4 to waters of the United States that exceeded the SALs for the pollutants listed in Table 5 of the Permit would require the copermittees, including the City, to affirmatively augment and implement all necessary storm water controls and measures to reduce the discharge of the associated class of pollutant(s). Additionally, the copermittees, including the City, were required to utilize the exceedance information when adjusting and executing annual work plans. To address these requirements, the City was part of a copermittee program to share the costs for monitoring elements of this mandated program and the initial development of SAL protocols. I am informed and believe and therefore state that the City's share of such costs was \$874 in FY 2010-11 and \$658 in FY 2011-12. I am further informed and believe and therefore state that the City first incurred costs for these mandated activities when it paid a County invoice for such activities and other requirements on or about March 3, 2011.

d. Low Impact Development (LID) and Hydromodification Requirements: Permit Sections F.1.d and F.1.h required the copermittees, including the City, to ensure that new development and significant redevelopment comply with low impact development ("LID") and hydromodification prevention requirements. These sections required the copermittees, including the City, to develop and implement LID principals set forth in the Permit and structural features

into public agency Priority Development Projects (PDPs). In addition, the copermittees, including the City, were required under Permit Section F.1.d.4 to establish a land development program whereby each PDP was required to implement LID BMPs. This program required City staff to undertake various steps, including to develop this program and to train municipal staff on implementation requirements. Further, Permit Section F.1.d.7 required the copermittees, including the City, to develop an LID waiver program for incorporation into local SSMPs which met specific Permit requirements. Further, under Permit Section F.1.h, the copermittees, including the City, were required to collaborate to develop and implement a Hydromodification Management Plan (HMP) to manage increases in runoff discharge rates and durations from all PDPs. Further, Permit Section F.1.h.5 required the copermittees, including the City, to implement interim hydromodification criteria prior to the development of the HMP. I am informed and believe and therefore state that the City's direct costs were at least \$1,350 in FY 2011-12. I am informed and believe and therefore state that the City first incurred these costs in on or about August 2, 2012. The copermittees, including the City, participated in a cost-sharing program with outside consultants and County staff to address these requirements. I am informed and believe and therefore state that the City's share of the cost of this program in FY 2009-10 was \$7,891 and in FY 2011-12 was \$2,280. I am further informed and believe and therefore state that the City first incurred these costs when it paid an invoice to the County for these and other services on or about January 21, 2010. I am further informed and believe and therefore state that most of the costs described above cannot be recouped through fees charged to private entities.

e. BMP Maintenance Tracking: Permit Section F.1.f required the copermittees, including the City, to develop and maintain a watershed-based database to track and inventory all

approved post-construction BMPs and BMP maintenance activities conducted within its jurisdiction since July 2001. This program required staff time to contact property owners for permission to inspect on-site BMPs or process self-certification statements. I am informed and believe and therefore state that the cost to the City for these requirements was \$2,208 in FY 2010-11 and \$552 in FY 2011-12. I am further informed and believe and therefore state that the City first incurred these costs on or about July 31, 2010. I am further informed and believe and therefore state that most of the costs described above regarding previously installed BMPs cannot be recouped through fees charged to private entities.

f. Retrofitting Existing Development: Permit Section F.3.d required the copermittees, including the City, to develop and implement a retrofitting program to meet the requirements set forth in that section. This new mandated program required the copermittees, including the City, to identify and inventory areas of existing development (i.e. municipal, industrial, commercial, residential) as candidates for retrofitting; evaluate and rank the inventoried existing developments to prioritize retrofitting; consider the results of the evaluation in prioritizing work plans for the following year; and track and inspect completed retrofit BMPs. The City received partial funding through a grant from the Orange County Transportation Authority. I am informed and believe and therefore state that the City's direct General Fund costs for these requirements were \$900 in FY 2010-11 and approximately \$155,852 in FY 2011-12. I am further informed and believe and therefore state that the City first incurred costs for these mandated activities on or about July 11, 2010.

g. Maintain MS4 Map: Permit Section F.4.b required the copermittees, including the City, to maintain an updated map of its entire MS4 and the corresponding drainage areas within its jurisdiction, including the use of Geographical Information System (GIS) technology.

The Copermittees, including the City, engaged in a cost-sharing effort to achieve this mapping. I am informed and believe, and therefore state, that the City's share of such costs in FY 2009-10 was \$389 and that the City's share of such costs in FY 2010-11 was \$349. I am further informed and believe and therefore state that the City first incurred these costs on or about January 21, 2010 when it paid an invoice from the County for those services and others.

h. Reporting Requirements

(i) Program Effectiveness Assessment and Reporting and Jurisdictional Runoff Management Program (JRMP) Annual Reports: In addition to what was required in the 2002 Permit, Permit Section J required the copermittees, including the City, to develop a work plan, an effectiveness assessment system based on CASQA outcome levels, and an annual assessment review to address their high priority water quality problems in an iterative manner over the life of the Permit. The minimum requirements of this provision are set forth in pages Permit Section J at 79-82. Further, Permit Section F.1.d(7)(i) required the copermittees, including the City, to generate upgraded individual JRMP Annual Reports which cover implementation of their jurisdictional activities during the past annual reporting period. Additional requirements in the Permit compared to the 2002 Permit included: reporting of PDPs choosing to participate in the LID waiver program, including details of the feasibility analysis, implemented BMPs and funding details with the second year JRMP Annual Report. In addition, pursuant to Permit Section F.3.a.(4)(c), each copermittee, including the City, was required to evaluate its existing flood control devices, identify devices causing or contributing to a condition of pollution, identify measures to reduce or eliminate the structure's effect on pollution, and evaluate the feasibility of retrofitting the structural flood control device, and to submit

this inventory and evaluation to the RWQCB. Such evaluation was also required to include a Reporting Checklist (Permit Section K.3.a.(3) and Attachment D). The copermittees, including the City, participated in a cost-sharing program to develop updated reporting templates, conduct assessments for the Unified Annual Report and to develop watershed workplans. I am informed and believe and therefore state that the City's share of such costs in FY 2010-11 were \$735 and that the costs in FY 2011-12 were \$475. I am further informed and believe and therefore state that the City first incurred costs for these mandates when it paid an invoice from the County for these and other services on or about March 3, 2011.

(ii) Watershed Workplan Public Meetings: Permit Sections K.1.b.4 and G.6 required the copermittees, including the City, to hold an annual public Watershed Workplan Review Meetings to present updates to the Watershed Workplan. This public meeting requirement was not contained in the 2002 Permit. The copermittees, including the County, participated in a cost-sharing effort to undertake these activities. I am informed and believe and therefore state that the city's cost share for such requirements was \$42 in FY 2011-12 and \$13 in FY 2012-13. I am further informed and believe and therefore state that the City first incurred costs with respect to such mandated activities when it paid an invoice from the County for these and other services on or about February 10, 2012.

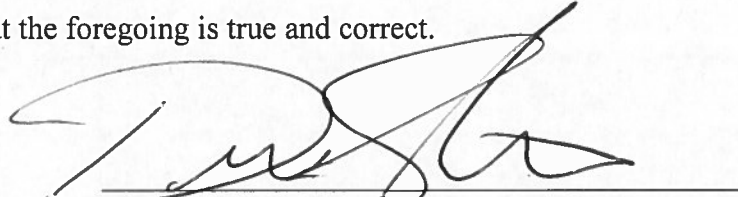

7. The City first incurred costs under the Permit in FY 2009-10, which commenced on July 1, 2009.

8. I am informed and believe that there are no dedicated State, Federal or regional funds that are or will be available to pay for any of these new programs or activities. I am not

aware of any fee or tax which the City would have the discretion to impose under California law in order to recover any portion of these new programs or activities. I am further informed and believe that the only available sources to pay for these new programs or activities are and will be the City's General Fund.

Executed January 6, 2017 at Lake Forest, California.

I declare under penalty of perjury that the foregoing is true and correct.

Devin Slaven, Environmental Manager  
City of Lake Forest

**DECLARATION OF RICHARD SCHLESINGER ON BEHALF OF THE CITY OF  
MISSION VIEJO IN SUPPORT OF TEST CLAIM**

I, Richard Schlesinger, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I would and would competently testify to the matters set forth herein under oath.

2. I am employed by the City of Mission Viejo (hereafter, "City") as the City Engineer. I have knowledge of the requirements set forth in this declaration and the City's sources of funding for the programs and activities set forth in this declaration.

3. I have held my current position for approximately 12 years. My duties include managing the Public Works Department and overseeing divisional supervisors in Engineering Services and Water Quality.

4. I have reviewed California Regional Water Quality Control Board San Diego Region ("RWQCB"), Order No. R9-2009-0002 issued by the RWQCB on December 16, 2009 (the "Permit") and am familiar with the requirements of the Permit as it applies to the City. The City was a copermittee under that permit.

5. I have also reviewed and I am familiar with the requirements of the Order No. R9-2002-0001 issued by the San Diego RWQCB on February 13, 2002 (the "2002 Permit"). The City was a copermittee under that permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I believe that the Permit required the copermittees to perform the following new activities, among others, that were not required by the 2002 Permit, and which are unique to local government entities:

a. Non-Stormwater Discharges: Permit Section B removes from the list of exempted discharges all landscape irrigation, irrigation water, and lawn watering discharges originating from any location or source, including residential irrigation discharges from potable water sources, which was previously included in the category of exempted discharges in the 2002 Permit. The removal of this discharge exemption required the copermitees, including the City, to undertake various tasks, which could include adoption of new ordinances to address these flows, expending staff time to create new public education and outreach materials, the tracking, monitoring, and response to and investigate of incidents and complaints of irrigation runoff and improvement of municipal irrigation systems and landscaping. The direct cost to the City to comply with these requirements was \$30,000 in Fiscal Year (FY) 2010-11 and \$30,000 in FY 2011-12. The City first incurred costs for these mandated activities on August 16, 2010. In addition, the copermitees, including the City, participated in a cost-sharing effort to develop a model ordinance addressing the new discharges. I am informed and believe and therefore state that the City's share of these costs was \$76 in FY 2009-10 and \$1,449 in FY 2010-11. I am further informed and believe and therefore state that the City first incurred these costs when it was paid an invoice from the County for these and other services on or about December 22, 2009.

b. Non-Stormwater Dry Weather Action Levels: Permit Sections C and F.4.(d) and (e) required the copermitees, including the City, to implement new follow-up investigation and source tracking activities triggered by exceedances of dry-weather non-stormwater action levels (NALs) according to newly established, prescriptive concentration levels, and also required testing of new and expanded numbers of constituents as compared to the 2002 Permit. In the 2002 Permit, the copermitees, including the City, were allowed to set their own criteria for investigative and source tracking actions in the previously implemented dry weather program to meet basin

standards. As a consequence of this expanded NAL monitoring and follow-up investigation program, an exceedance of any NAL required each copermitee, including the City, to investigate and identify the source of the exceedance in a timely manner. If this was not possible, the copermitees, including the City, were required to submit a prioritization plan and timeline that identified the timeframe and planned actions to investigate and report their findings on all of the exceedances. Following the source investigation and identification, the Copermitees were required to submit an action report dependent on the source of the pollutant exceedances following the identification process set forth in Permit Section C.2. The copermitees, including the City, collectively retained consultants on a cost-sharing basis to develop guidance on implementing the required compliance actions and to evaluate the action levels in Permit Tables 4 a-c. I am informed and believe and therefore state that the City's share of the cost for such consultant support was \$2,577 in FY 2010-11 and \$10,517 in FY 2011-12. I am further informed and believed and therefore state that the City first incurred costs for these mandated activities when it paid an invoice from the County for these and other services on or about January 19, 2011. In addition, the City was required to incur additional direct costs to implement this program, including staff costs to identify the source of pollutants, documenting their findings and reporting them to the RWQCB, analytical costs incurred to aid in source identification and evaluation of NALs, and the costs of discharge abatement and other compliance efforts to attempt to comply with the new mandated program. I am informed and therefore state that the City incurred costs of \$1,875 during FY 2010-11 and \$1,875 during FY 2011-12 to address these requirements. The City first incurred costs for these mandated activities on July 1, 2010.

c. Stormwater Action Levels: Permit Section D required the copermitees, including the City, to conduct end-of-pipe assessments during wet weather monitoring to determine

stormwater action level (SAL) compliance metrics at major outfalls. The copermittees were required to develop their monitoring plans to sample a representative percentage of the major outfalls within each hydrologic subarea. At a minimum, outfalls that exceeded SALs would trigger additional monitoring in the subsequent year. Any station that did not exceed a SAL for 3 years were required to be replaced with a different station. SAL samples were required to be 24-hour time weighted composites. Future requirements included, beginning in Year 3 after the Permit adoption date, a running average of twenty percent or greater of exceedances of any discharge of storm water from the MS4 to waters of the United States that exceeded the SALs for the pollutants listed in Table 5 of the Permit would require the copermittees, including the City, to affirmatively augment and implement all necessary storm water controls and measures to reduce the discharge of the associated class of pollutant(s). Additionally, the copermittees, including the City, were required to utilize the exceedance information when adjusting and executing annual work plans. To address these requirements, the City was part of a copermittee program to share the costs for monitoring elements of this mandated program and the initial development of SAL protocols. I am informed and believe and therefore state that the City's share of such costs was \$3,229 in FY 2010-11 and \$2,431 in FY 2011-12. I am further informed and believed and therefore state that the City first incurred costs for these mandated activities when it paid a County invoice for such activities and other requirements on or about January 19, 2011. Additionally, the City incurred direct costs to implement this new mandated program, including the follow up, exceedance triggered compliance actions, and staff costs to conduct field investigations, and to evaluate, abate, and take other actions to comply with this program. I am informed and believe and therefore state that the City first incurred costs of \$1,875 in FY 2010-11 and \$1,875 in FY 2011-12 for these

direct costs. I am informed and believe and thereon state that the City first incurred costs for these mandated activities on December 10, 2010.

d. Low Impact Development (LID) and Hydromodification Requirements: Permit Sections F.1.d and F.1.h required the copermittees, including the City, to ensure that new development and significant redevelopment comply with low impact development (“LID”) and hydromodification prevention requirements. These sections required the copermittees, including the City, to develop and implement LID principals set forth in the Permit and structural features into public agency Priority Development Projects (PDPs). In addition, the copermittees, including the City, were required under Permit Section F.1.d.4 to establish a land development program whereby each PDP was required to implement LID BMPs. This program required City staff to undertake various steps, including to develop this program and to train municipal staff on implementation requirements. Further Permit Section F.1.d.7 required the copermittees, including the City, to develop an LID waiver program for incorporation into local SSMPs which met specific Permit requirements. Further, under Permit Section F.1.h, the copermittees, including the City, were required to collaborate to develop and implement a Hydromodification Management Plan (HMP) to manage increases in runoff discharge rates and durations from all PDPs. Further, Permit Section F.1.h.5 required the copermittees, including the City, to implement interim hydromodification criteria prior to the development of the HMP. The copermittees, including the City, participated in a cost-sharing program with outside consultants and County staff to address these requirements. I am informed and believe and therefore state that the City’s share of the cost of this program in FY 2009-10 was \$29,141 and in FY 2011-12 was \$8,420. I am further informed and believe and therefore state that the City first incurred these costs when it paid an invoice to the County for these and other services on or about December 22, 2009. In addition, the City incurred

direct increased costs to implement these mandated requirements. I am informed and believe and therefore state that the direct cost to the City in FY 2010-11 for these requirements was \$1,875 and in FY 2011-12 was \$1,875. I am further informed and believe and therefore state that the City first incurred this cost on or about August 1, 2010. I am further informed and believe and therefore state that most of the costs described above cannot be recouped through fees charged to private entities.

e. BMP Maintenance Tracking: Permit Section F.1.f required the copermitees, including the City, to develop and maintain a watershed-based database to track and inventory all approved post-construction BMPs and BMP maintenance activities conducted within its jurisdiction since July 2001. This program required staff time to contact property owners for permission to inspect on-site BMPs or process self-certification statements, maintain a database, and write letters of violation for property owners that did not respond to City requests for information. I am informed and believe and therefore state that the cost to the City for these requirements was \$1,900 in FY 2010-11 and \$1,900 in FY 2011-12. I am further informed and believe and therefore state that the City first incurred these costs on or about August 1, 2010. I am further informed and believe and therefore state that most of the costs described above relating to previously installed BMPs cannot be recouped through fees charged to private entities.

f. [Reserved]

g. Maintain MS4 Map: Permit Section F.4.b required the copermitees, including the City, to maintain an updated map of its entire MS4 and the corresponding drainage areas within its jurisdiction, including the use of Geographical Information System (GIS) technology. The Copermitees, including the City, engaged in a cost-sharing effort to achieve this mapping. I am informed and believe, and therefore state, that the City's share of such costs in FY 2009-10 was

\$1,436 and that the City's share of such costs in FY 2010-11 was \$1,287. I am further informed and believe and therefore state that the City first incurred these costs on or about December 22, 2009 when it paid an invoice from the County for those services and others. I am informed and believe and therefore state that the City's direct costs to develop, implement and initially comply with these mandated requirements were \$30,000 for FY 2010-11. I am further informed and believe and therefore state that the City first incurred these costs for these mandated activities on or about July 1, 2009.

h. Reporting Requirements

(i) Program Effectiveness Assessment and Reporting and Jurisdictional Runoff Management Program (JRMP) Annual Reports: In addition to what was required in the 2002 Permit, Permit Section J required the copermitees, including the City, to develop a work plan, an effectiveness assessment system based on CASQA outcome levels, and an annual assessment review to address their high priority water quality problems in an iterative manner over the life of the Permit. The minimum requirements of this provision are set forth in pages Permit Section J at 79-82. Further, Permit Section F.1.d(7)(i) required the copermitees, including the City, to generate upgraded individual JRMP Annual Reports which cover implementation of their jurisdictional activities during the past annual reporting period. Additional requirements in the Permit compared to the 2002 Permit included: reporting of PDPs choosing to participate in the LID waiver program, including details of the feasibility analysis, implemented BMPs and funding details with the second year JRMP Annual Report. In addition, pursuant to Permit Section F.3.a.(4)(c), each copermitee, including the City, was required to evaluate its existing flood control devices, identify devices causing or contributing to a condition of pollution, identify measures to

reduce or eliminate the structure's effect on pollution, and evaluate the feasibility of retrofitting the structural flood control device, and to submit this inventory and evaluation to the RWQCB. Such evaluation was also required to include a Reporting Checklist (Permit Section K.3.a.(3) and Attachment D). The copermittees, including the City, participated in a cost-sharing program to develop updated reporting templates, conduct assessments for the Unified Annual Report and to develop watershed workplans. I am informed and believe and therefore state that the City's share of such costs in FY 2010-11 were \$2,712 and that the costs in FY 2011-12 were \$1,753. I am further informed and believe and therefore state that the City first incurred costs for these mandates when it paid an invoice from the County for these and other services on or about January 19, 2011. The City also incurred direct increased costs to implement these requirements. I am informed and believe and therefore state that the cost to the City of these mandated requirements in FY 2010-11 was \$1,875 and that the cost in FY 2011-12 was \$1,875. I am further informed and believe and therefore state that the City first incurred costs for these mandates on or about July 1, 2010.

(ii) Watershed Workplan Public Meetings: Permit Sections K.1.b.4 and G.6 required the copermittees, including the City, to hold an annual public Watershed Workplan Review Meetings to present updates to the Watershed Workplan. This public meeting requirement was not contained in the 2002 Permit. The copermittees, including the County, participated in a cost-sharing effort to undertake these activities. I am informed and believe and therefore state that the city's cost share for such requirements was \$156 in FY 2011-12 and \$49 in FY 2012-13. I am further informed and believe and therefore state that the City first incurred costs with respect to such mandated activities when it paid an

invoice from the County for these and other services on or about January 18, 2012.

7. The City first incurred costs under the Permit in FY 2009-10, which commenced on July 1, 2009.

8. I am informed and believe that there are no dedicated State, Federal or regional funds that are or will be available to pay for any of these new programs or activities. I am not aware of any fee or tax which the City would have the discretion to impose under California law in order to recover any portion of these new programs or activities. I am further informed and believe that the only available sources to pay for these new programs or activities are and will be the City's General Fund.

Executed January 5, 2017 at Mission Viejo, California.

I declare under penalty of perjury that the foregoing is true and correct.

A handwritten signature in black ink, appearing to read "Richard Schlesinger", written over a horizontal line.

Richard Schlesinger  
City Engineer

**DECLARATION OF BENJAMIN SIEGEL ON BEHALF OF THE CITY OF SAN JUAN**  
**CAPISTRANO IN SUPPORT OF TEST CLAIM**

I, Benjamin Siegel, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I would and would competently testify to the matters set forth herein under oath.

2. I am employed by the City of San Juan Capistrano (hereafter, "City") as the City Manager. I have knowledge of the requirements set forth in this declaration and the City's sources of funding for the programs and activities set forth in this declaration.

3. I have held my current position for approximately one year. My duties include overseeing all departments in the City, including the Public Works Department and its stormwater management duties.

4. I have reviewed California Regional Water Quality Control Board San Diego Region ("RWQCB"), Order No. R9-2009-0002 issued by the RWQCB on December 16, 2009 (the "Permit") and am familiar with the requirements of the Permit as it applies to the City. The City was a copermitttee under that permit.

5. I have also reviewed and I am familiar with the requirements of the Order No. R9-2002-0001 issued by the San Diego RWQCB on February 13, 2002 (the "2002 Permit"). The City was a copermitttee under that permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I believe that the Permit required the copermitttees to perform the

following new activities, among others, that were not required by the 2002 Permit, and which are unique to local government entities:

a. Non-Stormwater Discharges: Permit Section B removes from the list of exempted discharges all landscape irrigation, irrigation water, and lawn watering discharges originating from any location or source, including residential irrigation discharges from potable water sources, which was previously included in the category of exempted discharges in the 2002 Permit. The removal of this discharge exemption required the copermittees, including the City, to undertake various tasks, which could include adoption of new ordinances to address these flows, expending staff time to create new public education and outreach materials, the tracking, monitoring, and response to and investigation of incidents and complaints of irrigation runoff and improvement of municipal irrigation systems and landscaping. In addition to these direct costs, the copermittees, including the City, participated in a cost-sharing effort to develop a model ordinance addressing the new discharges. The copermittees, including the City, participated in a cost-sharing effort to develop a model ordinance addressing the new discharges. I am informed and believe and therefore state that the City's share of these costs was \$38 in Fiscal Year (FY) 2009-10 and \$722 in FY 2010-11. I am further informed and believe and therefore state that the City first incurred these costs when it paid an invoice from the County for these and other services on or about December 21, 2009. In addition, the City incurred direct costs in connection with this mandate. I am informed and believe and therefore state that the cost to the City to comply with these requirements in FY 2010-11 was \$8,567 and in FY 2011-12 was \$4,283. I am further informed and believe and therefore state that the City first incurred costs for these activities in October 2010.

b. Non-Stormwater Dry Weather Action Levels: Permit Sections C and F.4.(d) and (e) required the copermitees, including the City, to implement new follow-up investigation and source tracking activities triggered by exceedances of dry-weather non-stormwater action levels (NALs) according to newly established, prescriptive concentration levels, and also required testing of new and expanded numbers of constituents as compared to the 2002 Permit. In the 2002 Permit, the copermitees, including the City, were allowed to set their own criteria for investigative and source tracking actions in the previously implemented dry weather program to meet basin standards. As a consequence of this expanded NAL monitoring and follow-up investigation program, an exceedance of any NAL required each copermitee, including the City, to investigate and identify the source of the exceedance in a timely manner. If this was not possible, the copermitees, including the City, were required to submit a prioritization plan and timeline that identified the timeframe and planned actions to investigate and report their findings on all of the exceedances. Following the source investigation and identification, the Copermitees were required to submit an action report dependent on the source of the pollutant exceedances following the identification process set forth in Permit Section C.2. The copermitees, including the City, collectively retained consultants on a cost-sharing basis to develop guidance on implementing the required compliance actions and to evaluate the action levels in Permit Tables 4 a-c. I am informed and believe and therefore state that the City's share of the cost for such work was \$1,285 in FY 2010-11 and \$5,243 in FY 2011-12. I am further informed and believe and therefore state that the City first incurred costs for these mandated activities when it paid an invoice from the County for those and other services on or about January 18, 2011. In addition, the City incurred direct costs to implement this new mandated program, including staff costs to identify the source of pollutants, documenting their findings and

reporting them to the RWQCB, analytical costs incurred to aid in source identification and evaluation of NALs, and the costs of discharge abatement and other compliance efforts to attempt to comply with the new mandated program. I am informed and believe and therefore state that the City incurred costs of \$4,197 during FY 2011-12 to address these requirements. I am further informed and believe and therefore state that the City first incurred costs for these activities on or about August 29, 2011.

c. Stormwater Action Levels: Permit Section D required the copermitees, including the City, to conduct end-of-pipe assessments during wet weather monitoring to determine stormwater action level (SAL) compliance metrics at major outfalls. The copermitees were required to develop their monitoring plans to sample a representative percentage of the major outfalls within each hydrologic subarea. At a minimum, outfalls that exceeded SALs would trigger additional monitoring in the subsequent year. Any station that did not exceed a SAL for 3 years were required to be replaced with a different station. SAL samples were required to be 24-hour time weighted composites. Future requirements included, beginning in Year 3 after the Permit adoption date, a running average of twenty percent or greater of exceedances of any discharge of storm water from the MS4 to waters of the United States that exceeded the SALs for the pollutants listed in Table 5 of the Permit would require the copermitees, including the City, to affirmatively augment and implement all necessary storm water controls and measures to reduce the discharge of the associated class of pollutant(s). Additionally, the copermitees, including the City, were required to utilize the exceedance information when adjusting and executing annual work plans. To address these requirements, the City was part of a copermitee program to share the costs for monitoring elements of this mandated program and the initial development of SAL protocols. I am informed and believe and therefore state that the City's

share of such costs was \$1,610 in FY 2010-11 and \$1,212 in FY 2011-12. I am further informed and believe and therefore state that the City first incurred costs for these mandated activities when it paid a County invoice for those and other services on or about January 18, 2011. Additionally, the City incurred direct costs to implement this new mandated program, including followup, exceedance-triggered compliance actions, and staff costs to conduct field investigations, and to evaluate, abate and take other actions to comply with this program. I am informed and believe and therefore state that the City incurred costs of \$343 in FY 2010-11 and \$1,456 in FY 2011-12 for these direct costs. I am further informed and believe and therefore state that the City first incurred these costs on or about November 21, 2010.

d. Low Impact Development (LID) and Hydromodification Requirements: Permit Sections F.1.d and F.1.h required the copermittees, including the City, to ensure that new development and significant redevelopment comply with low impact development (“LID”) and hydromodification prevention requirements. These sections required the copermittees, including the City, to develop and implement LID principals set forth in the Permit and structural features into public agency Priority Development Projects (PDPs). In addition, the copermittees, including the City, were required under Permit Section F.1.d.4 to establish a land development program whereby each PDP was required to implement LID BMPs. This program required City staff to undertake various steps, including to develop this program and to train municipal staff on implementation requirements. Further Permit Section F.1.d.7 required the copermittees, including the City, to develop an LID waiver program for incorporation into local SSMPs which met specific Permit requirements. Further, under Permit Section F.1.h, the copermittees, including the City, were required to collaborate to develop and implement a Hydromodification Management Plan (HMP) to manage increases in runoff discharge rates and durations from all

PDPs. Further, Permit Section F.1.h.5 required the copermittees, including the City, to implement interim hydromodification criteria prior to the development of the HMP. The copermittees, including the City, participated in a cost-sharing program with outside consultants and County staff to address these requirements. I am informed and believe and therefore state that the City's share of the cost of this program in FY 2009-10 was \$14,527 and in FY 2011-12 was \$4,197. I am further informed and believe and therefore state that the City first incurred these costs when it paid an invoice to the County for these and other services on or about December 21, 2009. I am further informed and believe and therefore state that the City incurred direct costs in response to these mandated activities, including the development of these programs in the City. I am informed and believe and therefore state that the cost to the City in FY 2010-11 for these requirements was \$5,996 and in FY 2011-12 was \$5,139. I am further informed and believe and therefore state that the City first incurred these direct costs on or about May 19, 2011. I am further informed and believe and therefore state that most of the costs described above cannot be recouped through fees charged to private entities.

e. BMP Maintenance Tracking: Permit Section F.1.f required the copermittees, including the City, to develop and maintain a watershed-based database to track and inventory all approved post-construction BMPs and BMP maintenance activities conducted within its jurisdiction since July 2001. This program required staff time to contact property owners for permission to inspect on-site BMPs or process self-certification statements. I am informed and believe and therefore state that the cost to the City for these requirements was \$3,427 in FY 2010-11 and \$1,071 in FY 2011-12. I am further informed and believe and therefore state that the City first incurred these costs on or about September 14, 2010. I am further informed and

believe and therefore state that most of the costs described above regarding previously installed BMPs cannot be recouped through fees charged to private entities.

f. Retrofitting Existing Development: Permit Section F.3.d required the copermittees, including the City, to develop and implement a retrofitting program to meet the requirements set forth in that section. This new mandated program required the copermittees, including the City, to identify and inventory areas of existing development (i.e. municipal, industrial, commercial, residential) as candidates for retrofitting; evaluate and rank the inventoried existing developments to prioritize retrofitting; consider the results of the evaluation in prioritizing work plans for the following year; and track and inspect completed retrofit BMPs. I am informed and believe and therefore state that the City's direct costs for these requirements were \$4,883 in FY 2010-11 and \$2,656 in FY 2011-12. I am further informed and believe and therefore state that the City first incurred costs for these mandated activities on or about December 7, 2010.

g. Maintain MS4 Map: Permit Section F.4.b required the copermittees, including the City, to maintain an updated map of its entire MS4 and the corresponding drainage areas within its jurisdiction, including the use of Geographical Information System (GIS) technology. The Copermittees, including the City, engaged in a cost-sharing effort to achieve this mapping. I am informed and believe, and therefore state, that the City's share of such costs in FY 2009-10 was \$716 and that the City's share of such costs in FY 2010-11 was \$642. I am further informed and believe and therefore state that the City first incurred these costs on or about December 21, 2009 when it paid an invoice from the County for those services and others. In addition, the City incurred direct costs in the implementation of this mandate. I am informed and believe and therefore state that the City's direct costs to develop, implement and comply with these

mandated requirements were \$6,853 for FY 2010-11 and \$1,285 for FY 2011-12. I am further informed and believe and therefore state that the City first incurred these costs for these mandated activities on or about September 14, 2010.

h. Reporting Requirements

(i) Program Effectiveness Assessment and Reporting and Jurisdictional Runoff Management Program (JRMP) Annual Reports: In addition to what was required in the 2002 Permit, Permit Section J required the copermittees, including the City, to develop a work plan, an effectiveness assessment system based on CASQA outcome levels, and an annual assessment review to address their high priority water quality problems in an iterative manner over the life of the Permit. The minimum requirements of this provision are set forth in pages Permit Section J at 79-82. Further, Permit Section F.1.d(7)(i) required the copermittees, including the City, to generate upgraded individual JRMP Annual Reports which cover implementation of their jurisdictional activities during the past annual reporting period. Additional requirements in the Permit compared to the 2002 Permit included: reporting of PDPs choosing to participate in the LID waiver program, including details of the feasibility analysis, implemented BMPs and funding details with the second year JRMP Annual Report. In addition, pursuant to Permit Section F.3.a.(4)(c), each copermittee, including the City, was required to evaluate its existing flood control devices, identify devices causing or contributing to a condition of pollution, identify measures to reduce or eliminate the structure's effect on pollution, and evaluate the feasibility of retrofitting the structural flood control device, and to submit this inventory and evaluation to the RWQCB. Such evaluation was also required to include a Reporting Checklist (Permit Section K.3.a.(3) and Attachment D). The copermittees, including the City, participated in a cost-sharing program to develop updated reporting templates, conduct assessments for the Unified Annual Report and to develop watershed workplans. I am informed and believe and therefore state that the

City's share of such costs in FY 2010-11 were \$1,352 and that the costs in FY 2011-12 were \$874. I am further informed and believe and therefore state that the City first incurred costs for these mandates when it paid an invoice from the County for these and other services on or about January 18, 2011. In addition, the City incurred direct costs with respect to the JRMP annual reports of \$3,426 in FY 2010-11 and \$3,426 in FY 2011-12. I am further informed and believe and therefore state that the City first incurred these direct costs on or about October 1, 2010.

(ii) Watershed Workplan Public Meetings: Permit Sections K.1.b.4 and G.6 required the copermitees, including the City, to hold an annual public Watershed Workplan Review Meetings to present updates to the Watershed Workplan. This public meeting requirement was not contained in the 2002 Permit. The copermitees, including the County, participated in a cost-sharing effort to undertake these activities. I am informed and believe and therefore state that the city's cost share for such requirements was \$78 in FY 2011-12 and \$24 in FY 2012-13. I am further informed and believe and therefore state that the City first incurred costs with respect to such mandated activities when it paid an invoice from the County for these and other services on or about January 17, 2012.

7. The City first incurred costs under the Permit in FY 2009-10, which commenced on July 1, 2009.

8. I am informed and believe that there are no dedicated State, Federal or regional funds that are or will be available to pay for any of these new programs or activities. I am not aware of any fee or tax which the City would have the discretion to impose under California law in order to recover any portion of these new programs or activities. I am further informed and

believe that the only available sources to pay for these new programs or activities are and will be the City's General Fund.

Executed January 4, 2017 at San Juan Capistrano, California.

503 U.S. 91, \*, 112 S. Ct. 1046, \*\*;  
117 L. Ed. 2d 239, \*\*\*; 1992 U.S. LEXIS 1373

*Environmental Law > Federal & State Interrelationships > Federal Preemption*

*Environmental Law > Water Quality > General Overview*

[HN2]The Clean Water Act, 33 U.S.C.S. § 1251 et seq., preempts an action based on the law of the affected state and that the only state law applicable to an interstate discharge is the law of the state in which the point source is located.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > General Overview*

[HN3]When a new permit is being issued by the source state's permit-granting agency, the downstream state does not have the authority to block the issuance of the permit if it is dissatisfied with the proposed standards. An affected state's only recourse is to apply to the Environmental Protection Agency Administrator, who then has the discretion to disapprove the permit if he concludes that the discharges will have an undue impact on interstate waters. 33 U.S.C.S. § 1342(d)(2). Thus the Clean Water Act, 33 U.S.C.S. § 1251 et seq., makes it clear that affected states occupy a subordinate position to source states in the federal regulatory program.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations*

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN4]If the Environmental Protection Agency (EPA) recommends changes to the standards and the state fails to comply with that recommendation, the Clean Water Act, 33 U.S.C.S. § 1251 et seq., authorizes the EPA to promulgate water quality standards for the state. 33 U.S.C.S. § 1313(c).

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > General Overview*

[HN5]Section 402(b) of the Clean Water Act authorizes each state to establish its own permit program for discharges into navigable waters within its jurisdiction. 33 U.S.C.S. § 1342(b). Although these provisions do not authorize the downstream state to veto the issuance of a permit for a new point source in another state, the Administrator retains authority to block the issuance of any state-issued permit that is outside the guidelines and requirements of the Act. 33 U.S.C.S. § 1342(d)(2).

*Environmental Law > Water Quality > General Overview*

[HN6]See 33 U.S.C.S. § 1342(b).

*Environmental Law > Water Quality > Ocean Dumping*

[HN7]See 33 U.S.C.S. § 1442(d)(2).

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > State Water Quality Certifications*

[HN8]In the absence of an approved state program, the Environmental Protection Agency (EPA) may issue a National Pollution Discharge Elimination System permit under 33 U.S.C.S. § 1341(a). The EPA's permit program is subject to the same terms, conditions, and requirements as a state permit program. 33 U.S.C.S. § 1342(a)(3).

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > State Water Quality Certifications*

[HN9]See 33 U.S.C.S. § 1341(a)(2).

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > General Overview*

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN10]Environmental Protection Agency regulations have provided that a National Pollution Discharge Elimination System permit shall not be issued when the imposition of conditions cannot ensure compliance with the applicable water quality requirements of all affected States. 40 C.F.R. § 122.4(d)(1991).

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > General Overview*

[HN11]Section 402(a)(2) of the Clean Water Act provides that for Environmental Protection Agency-issued permits the Administrator shall prescribe conditions to assure compliance with the requirements of § 402(a)(1) of the Clean Water Act and such other requirements as he deems appropriate. 33 U.S.C.S. § 1342(a)(2).

*Environmental Law > Water Quality > General Overview*

[HN12]See 33 U.S.C.S. § 1342(d)(2).

*Administrative Law > Judicial Review > Standards of Review > Substantial Evidence*

*Environmental Law > Litigation & Administrative Proceedings > Judicial Review*

[HN13]A court reviewing an agency's adjudicative action should accept the agency's factual findings if those findings are supported by substantial evidence on the record as a whole. The court should not supplant the agency's findings merely by identifying alternative findings that could be supported by substantial evidence.

*Administrative Law > Judicial Review > Reviewability > Factual Determinations*

*Administrative Law > Judicial Review > Standards of Review > Arbitrary & Capricious Review*

[HN14]An agency ruling is arbitrary and capricious if the agency has entirely failed to consider an important aspect of the problem.

**DECISION:**

EPA's issuance of discharge permit to sewage plant, based on finding that discharges would not cause detectable violation of downstream state's water quality standards, held authorized by Clean Water Act.

**SUMMARY:**

An Arkansas city, in an application to the United States Environmental Protection Agency (EPA), sought a permit for the city's new sewage treatment plant under the National Pollution Discharge Elimination System (NPDES). The EPA, pursuant to 402(a)(1) of the Clean Water Act (33 USCS 1342(a)(1)), issued a permit which (1) authorized the plant to discharge up to half of its effluent into a stream whose waters ultimately entered a river which flowed into Oklahoma, but (2) imposed various conditions, including a provision that the permit would be modified if a pending study determined that more stringent limitations were necessary to insure compliance with Oklahoma's water quality standards. Oklahoma authorities, challenging the permit before the EPA, alleged that the plant's discharge violated Oklahoma standards prohibiting any degradation of water quality in the river in question. An administrative law judge (ALJ) affirmed the issuance of the permit on the ground that the discharge would not have an "undue impact" on Oklahoma waters; but the EPA's Chief Judicial Officer (CJO), remanding for application of a different standard of review, interpreted Oklahoma's ban on degradation of the river in question as allowing the permit to be upheld if the record showed by a preponderance of the evidence that the authorized discharges would not cause an actual detectable violation of Oklahoma water quality standards. On remand, the ALJ made detailed factual findings and determined that the CJO's standard had been met. The CJO sustained the issuance of the permit.

However, the United States Court of Appeals for the Tenth Circuit, on judicial review, reversed the issuance of the permit, as the court (1) interpreted the Act as providing that a proposed source may not be permitted where it would discharge effluent that would contribute to conditions currently constituting a violation of applicable water quality standards, (2) found that the river in question was already degraded in water quality and that effluent from the sewage treatment plant could be expected to contribute to the river's ongoing deterioration even though it would not detectably affect water quality, and (3) determined that the EPA's decision was arbitrary and capricious because the EPA had misinterpreted Oklahoma water quality standards and failed to consider the important and relevant fact of the river's degraded status (908 F2d 595).

On certiorari, the United States Supreme Court reversed. In an opinion by Stevens, J., expressing the unanimous view of the court, it was held that the EPA's decision to issue the NPDES permit was authorized by the Clean Water Act, as (1) the Act did not prohibit any discharge of effluent that would reach waters already in violation of existing water quality standards; (2) the CJO's interpretation of the Oklahoma water quality standards was reasonable and consistent with the purposes and principles of the Act, and the EPA's reasonable, consistently held interpretation of the Oklahoma standards was entitled to substantial deference since the standards had been incorporated into EPA regulations, and thus had a federal character at least insofar as they affected the issuance of a permit in another state; (3) the ALJ's findings that the sewage plant discharge would not lead to a detectable change in four primary measures of water quality under the Oklahoma standards were supported by substantial evidence; and (4) although it might arguably be wise to prohibit any discharge into the river in question, it was not arbitrary for the EPA to conclude, given perceived benefits to the river and in Arkansas, that allowing the discharge would be even wiser, and such policy decisions were properly made by the EPA rather than by the courts.

**LAWYERS' EDITION HEADNOTES:**

[\*\*\*LEdHN1]

ENVIRONMENTAL LAW §30

Clean Water Act -- discharge permit --

Headnote:[1A][1B][1C][1D][1E]

A decision by the United States Environmental Protection Agency (EPA) to issue a National Pollution Discharge Elimination System (NPDES) permit, pursuant to 402(a)(1) of the Clean Water Act (33 USCS 1341(a)(1)), to an Arkansas city for a sewage treatment plant located

upstream from Oklahoma, based on the EPA's finding that discharges from the new source would not cause a detectable violation of Oklahoma's water quality standards, is authorized by the Act, notwithstanding a Federal Court of Appeals' findings on judicial review that effluent from the plant would reach a river in Oklahoma which was already "degraded" in water quality and that such effluent could be expected to contribute to the deterioration of the river, as (1) the Act does not prohibit any discharge of effluent that would reach waters already in violation of existing water quality standards; (2) the interpretation of the Oklahoma standards by the EPA's Chief Judicial Officer, who ruled that the standard requiring no degradation of the river in question would be violated only if the discharge effected an actual detectable or measurable change in water quality, is reasonable and consistent with the purposes and principles of the Act, and the EPA's reasonable, consistently held interpretation of the Oklahoma standards is entitled to substantial deference, since the standards, at least insofar as they affect the issuance of a permit in another state, have a federal character; (3) an administrative law judge's findings that the sewage plant discharge would not lead to a detectable change in four primary measures of water quality under the Oklahoma standards are supported by substantial evidence; and (4) although it might arguably be wise to prohibit any discharge into the river in question, even if that discharge would have no adverse impact on water quality, it is not arbitrary for the EPA to conclude--given the benefits to the river from the increased flow of relatively clean water and the benefits achieved in Arkansas by allowing the new plant to operate as designed--that allowing the discharge would be even wiser, and such policy decisions are properly made by the EPA rather than by the courts.

[\*\*\*LEdHN2]

ENVIRONMENTAL LAW §32

Clean Water Act -- state and federal standards --

Headnote:[2]

Water quality standards, which are generally promulgated by the states, supplement the effluent limitations promulgated by the United States Environmental Protection Agency under 301 and 304 of the Clean Water Act (33 USCS 1311, 1314), so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels.

[\*\*\*LEdHN3]

ENVIRONMENTAL LAW §18

scope of judicial review --

Headnote:[3A][3B]

In determining the propriety of the issuance of a discharge permit by the United States Environmental Protection Agency (EPA) to a sewage treatment plant pursuant to 402(a)(1) of the Clean Water Act (33 USCS 1341(a)(1)), it is neither necessary nor prudent for the United States Supreme Court to resolve the question whether the Act requires the EPA, in crafting and issuing a permit to a point source in one state, to apply the water quality standards of a downstream state, where (1) in issuing the permit in question, the EPA assumed that it was obligated by both the Act and its own regulation to insure that the sewage plant discharge would not violate a downstream state's standards, (2) this assumption was permissible and reasonable, and therefore, there is no need for the Supreme Court to address whether the Act requires as much, and (3) much of the analysis and argument in the parties' briefs relied on statutory provisions which govern not only federal permits issued pursuant to 401(a) and 402(a) of the Act (33 USCS 1341(a), 1342(a)), but also state permits issued under 402(b) of the Act (33 USCS 1342(b)), and it would be unwise to evaluate those arguments in a case which involves only a federal permit; the Supreme Court's decision not to determine the scope of the EPA's statutory obligations, however, does not affect the Supreme Court's resolution of a question concerning the EPA's statutory authority to mandate compliance with a downstream state's water quality standards.

[\*\*\*LEdHN4]

ENVIRONMENTAL LAW §30

Clean Water Act -- discharge permits -- enforcement of state standards --

Headnote:[4A][4B][4C]

The Clean Water Act (33 USCS 1251-1376) does not limit the authority of the United States Environmental Protection Agency (EPA) to mandate that point sources receiving National Pollution Discharge Elimination System (NPDES) permits from the EPA pursuant to 402(a)(1) of the Act (33 USCS 1341(a)(1)) comply with a downstream state's water quality standards; an EPA regulation (40 CFR 122.4(d)) which provides that NPDES permits shall not be issued when the imposition of conditions cannot insure compliance with the applicable water quality requirements of all affected states constitutes a reasonable exercise of the EPA's statutory authority, as (1) the application of state water quality standards in the interstate context is wholly consistent with the Act's broad purpose of restoring and maintaining the chemical, physical, and biological integrity of the nation's waters, and (2) 301(b)(1)(C) of the Act (33 USCS 1311(b)(1)(C)) expressly identifies the achievement of

state water quality standards as one of the Act's central objectives; the EPA's requirement, as a condition of issuing an NPDES permit to an Arkansas sewage treatment plant located upstream from Oklahoma, that the discharge from the plant comply with Oklahoma water quality standards is a reasonable exercise of the EPA's substantial statutory discretion.

[\*\*\*LEdHN5]

ENVIRONMENTAL LAW §30

Clean Water Act -- discharge permits --

Headnote:[5]

The Administrator of the United States Environmental Protection Agency (EPA) is vested by Congress with (1) broad discretion to establish conditions for National Pollution Discharge Elimination System (NPDES) permits issued by the EPA pursuant to 402(a)(1) of the Clean Water Act (33 USCS 1341(a)(1)), and (2) broad authority to oversee state permit programs.

[\*\*\*LEdHN6]

ENVIRONMENTAL LAW §30

Clean Water Act -- state and federal authority --

Headnote:[6]

The Clean Water Act (33 USCS 1251-1376) vests in the United States Environmental Protection Agency and in the states broad authority to develop long-range, area-wide programs to alleviate and eliminate existing pollution.

[\*\*\*LEdHN7]

APPEAL §1535

harmless error -- EPA decisions --

Headnote:[7A][7B]

The error of an administrative law judge (ALJ) and of the Chief Judicial Officer of the United States Environmental Protection Agency (EPA) in misinterpreting a provision of Oklahoma's water quality standards as governing only the discharge of phosphorus into lakes, rather than the discharge of phosphorus into lakes and into all perennial and intermittent streams--which misinterpretation was made in the course of a determination that a National Pollution Discharge Elimination System (NPDES) permit was properly issued by the EPA to an Arkansas sewage treatment plant upstream from Oklahoma based on a finding that discharges from the plant would not cause a detectable violation of Oklahoma water quality standards--is harmless, because (1) the ALJ found that the discharge into a particular lake would

comply with the Oklahoma phosphorus standard, and (2) it was undisputed that such discharge produced a greater threat to the slow-moving water of the lake than to the rapid flow in an affected river.

[\*\*\*LEdHN8]

APPEAL §1535

harmless error -- EPA decisions --

Headnote:[8A][8B]

The error of an administrative law judge (ALJ) and of the Chief Judicial Officer of the United States Environmental Protection Agency (EPA) in relying on the 1985 version of Oklahoma's water quality standards, rather than the 1982 version, for purposes of a determination that an Arkansas municipality's 1985 application for a National Pollution Discharge Elimination System (NPDES) permit for a sewage treatment plant located upstream from Oklahoma was properly granted by the EPA based on a finding that discharges from the plant would not cause a detectable violation of Oklahoma water quality standards, is harmless, because the portions of the two versions relevant to the determination did not differ materially.

[\*\*\*LEdHN9]

ENVIRONMENTAL LAW §18

scope of judicial review --

Headnote:[9A][9B][9C][9D][9E]

A Federal Court of Appeals' determination that the United States Environmental Protection Agency (EPA) acted arbitrarily and capriciously in granting an Arkansas city's 1985 application for a National Pollution Discharge Elimination System (NPDES) permit for a sewage treatment plant located upstream from Oklahoma exceeds the legitimate scope of judicial review of an agency adjudication, in that the Court of Appeals (1) in finding that the EPA had misinterpreted water quality standards promulgated by the state of Oklahoma, failed to give due regard and deference to the EPA's interpretation of its own regulations, as those regulations incorporated the Oklahoma standards by providing ( 40 CFR 122.4(d)) that NPDES permits shall not be issued when the imposition of conditions cannot insure compliance with the applicable water quality requirements of all affected states; (2) in reviewing the EPA's findings that the sewage plant effluent would not cause a detectable violation of Oklahoma water quality standards, disregarded established standards for reviewing the factual findings of agencies and improperly made its own factual findings by determining that there was substantial evidence to support findings which the Court of Appeals thought were appropriate but

which were contrary to those made by an administrative law judge; and (3) incorrectly concluded that the EPA's decision was arbitrary and capricious due to the EPA's failure to consider the allegedly important and relevant fact that the affected Oklahoma river was, by the Court of Appeals' assessment, already degraded in water quality, a circumstance which was an "important aspect" of the case only because of the Court of Appeals' novel and erroneous interpretation of the controlling law as banning any effluent sources that would contribute to conditions constituting a violation of applicable water quality standards.

[\*\*\*LEdHN10]

ENVIRONMENTAL LAW §30

Clean Water Act -- incorporating state regulations --

Headnote:[10]

A United States Environmental Protection Agency (EPA) regulation ( 40 CFR 122.4(d)), which provides that National Pollution Discharge Elimination System permits shall not be issued pursuant to 402(a)(1) of the Clean Water Act (33 USCS 1341(a)(1)) when the imposition of conditions cannot insure compliance with the applicable water quality requirements of all affected states, effectively incorporates into federal law those state-law standards which the EPA determines to be applicable.

[\*\*\*LEdHN11]

ADMINISTRATIVE LAW §265

judicial review -- factual findings --

Headnote:[11]

A court reviewing an administrative agency's adjudicative action should accept the agency's factual findings if those findings are supported by substantial evidence on the record as a whole; the court should not supplant the agency's findings merely by identifying alternative findings that could be supported by substantial evidence.

[\*\*\*LEdHN12]

ADMINISTRATIVE LAW §250

judicial review --

Headnote:[12]

An administrative agency ruling is arbitrary and capricious, for purposes of judicial review, if the agency has entirely failed to consider an important aspect of the problem.

SYLLABUS

The Clean Water Act provides for two sets of water quality measures: effluent limitations, which are promulgated by the Environmental Protection Agency (EPA or Agency), and water quality standards, which are promulgated by the States. The Act generally prohibits the discharge of effluent into a navigable body of water unless the point source obtains a National Pollution Discharge Elimination System (NPDES) permit from a State with an EPA-approved permit program or from the EPA itself. A Fayetteville, Arkansas, sewage treatment plant received an EPA-issued permit, authorizing it to discharge effluent into a stream that ultimately reaches the Illinois River upstream from the Oklahoma border. Respondents, Oklahoma and other Oklahoma parties, challenged the permit before the EPA, alleging, *inter alia*, that the discharge violated Oklahoma water quality standards, which allow no degradation of water quality in the upper Illinois River. The EPA's Chief Judicial Officer remanded the initial affirmance of the permit by the Administrative Law Judge (ALJ), ruling that the Act requires an NPDES permit to impose any effluent limitations necessary to comply with applicable state water quality standards, and that those standards would be violated only if the record shows by a preponderance of the evidence that the discharge would cause an actual *detectable* violation of Oklahoma's water quality standards. The ALJ then made detailed findings of fact, concluding that Fayetteville had satisfied the Chief Judicial Officer's standard, and the Chief Judicial Officer sustained the permit's issuance. The Court of Appeals reversed, ruling that the Act does not allow a permit to be issued where a proposed source would discharge effluent that would contribute to conditions currently constituting a violation of applicable water quality standards. It concluded that the Illinois River was already degraded, that the Fayetteville effluent would reach the river in Oklahoma, and that the effluent would contribute to the river's deterioration even though it would not detectably affect the river's water quality.

*Held:* The EPA's action was authorized by the Clean Water Act. Pp. 98-114.

(a) Where interstate discharge is involved, both federal common law of nuisance, *Milwaukee v. Illinois*, 451 U.S. 304, 68 L. Ed. 2d 114, 101 S. Ct. 1784, and an affected State's common law, *International Paper Co. v. Ouellette*, 479 U.S. 481, 493, 93 L. Ed. 2d 883, 107 S. Ct. 805, are pre-empted. Affected States may not block a permit, but must apply to the EPA Administrator, who may disapprove a plan if he concludes that the discharge will have an undue impact on interstate waters. *Id.* at 490-491. Pp. 98-101.

503 U.S. 91, \*, 112 S. Ct. 1046, \*\*;  
117 L. Ed. 2d 239, \*\*\*; 1992 U.S. LEXIS 1373

(b) The EPA has construed the Act as requiring that EPA-issued permits comply with the requirements for a permit issued under an approved state plan and with § 401(a) of the Act, which appears to prohibit the issuance of a federal permit over the objection of an affected State unless compliance with the affected State's water quality requirements can be insured. Pp. 101-103.

(c) The EPA's requirement that the Fayetteville discharge comply with Oklahoma's water quality standards is a reasonable exercise of the substantial statutory discretion Congress has vested in the Agency. There is no need to address the question whether the Act requires compliance with affected States' standards, for it clearly does not limit the EPA's authority to mandate such compliance. EPA regulations, which since 1973 have required that an NPDES permit not be issued when compliance with affected States' water quality standards cannot be insured, are a reasonable exercise of the Agency's discretion and are a well-tailored means of reaching the Act's goal of achieving state water quality standards. The EPA's authority is not constrained by the limits in *Ouellette, supra*, concerning an affected State's direct input into the permit process, does not conflict with the Act's legislative history and statutory scheme, and is not incompatible with the balance among competing policies and interests that Congress struck in the Act. Pp. 104-107.

(d) Contrary to the Court of Appeals' interpretation, nothing in the Act mandates a complete ban on discharges into a waterway that is in violation of existing water quality standards. Instead, the Act vests in the EPA and the States broad authority to develop long-range, areawide programs to alleviate and eliminate existing pollution. Pp. 107-108.

(e) The Court of Appeals exceeded the legitimate scope of judicial review of an agency adjudication when it invalidated the EPA's issuance of the permit on the ground that the Agency misinterpreted Oklahoma's water quality standards. It substituted its own reading of the law for the EPA's. Thus, it failed to give substantial deference to the Agency's reasonable, consistently held interpretation of its own regulations, which incorporate the Oklahoma standards. It also disregarded well-established standards for reviewing factual findings of agencies by making its own factual findings when the ALJ's findings were supported by substantial evidence. See generally *Universal Camera Corp. v. NLRB*, 340 U.S. 474, 95 L. Ed. 456, 71 S. Ct. 456. As a result, the court's conclusion that the river's degradation was an important and relevant factor which the EPA failed to consider was based on its own erroneous interpretation of the controlling law. Had it been properly respectful of the EPA's permissible reading of the Act -- that what matters is not the river's current status, but whether the

proposed discharge will have a detectable effect on that status -- it would not have adjudged the Agency's decision arbitrary and capricious. Pp. 109-114.

**COUNSEL:** Edward W. Warren argued the cause for petitioners in No. 90-1262. With him on the briefs were Winston Bryant, Attorney General of Arkansas, Mary B. Stallcup, Angela S. Jegley, David G. Norrell, James N. McCord, Walter R. Niblock, and Nancy L. Hamm. Deputy Solicitor General Wallace argued the cause for petitioner in No. 90-1266. With him on the briefs were Solicitor General Starr, Assistant Attorney General Stewart, Harriet S. Shapiro, Michael A. McCord, Anne S. Almy, Gary S. Guzy, and E. Donald Elliott.

Robert A. Butkin, Assistant Attorney General of Oklahoma, argued the cause for respondents in both cases. With him on the brief for respondents State of Oklahoma et al. were Susan B. Loving, Attorney General, Brita Haugland Cantrell, Assistant Attorney General, and Julian Fite. Theodore E. Dinsmoor and Susan Hedman filed a brief for respondent Oklahoma Wildlife Federation. \*

**JUDGES:** STEVENS, J., delivered the opinion for a unanimous Court.

**OPINION BY:** STEVENS

### OPINION

[\*94] [\*\*\*247] [\*\*1050] JUSTICE STEVENS delivered the opinion of the Court.

[\*\*\*LEdHR1A] [1A] Pursuant to the Clean Water Act, 86 Stat. 816, as amended, 33 U. S. C. § 1251 et seq., the Environmental Protection Agency (EPA or Agency) issued a discharge permit to a new point source in Arkansas, about 39 miles upstream from the Oklahoma state line. The question presented in this litigation is whether the EPA's finding that discharges from the new source would not cause a detectable [\*\*1051] violation of Oklahoma's [\*95] water quality standards satisfied the EPA's duty to protect the interests of the downstream State. Disagreeing with the Court of Appeals, we hold that the Agency's action was authorized by the statute.

#### I

In 1985, the city of Fayetteville, Arkansas, applied to the EPA, seeking a permit for the city's new sewage treatment plant under the National Pollution Discharge Elimination System (NPDES). After the appropriate

procedures, the EPA, pursuant to § 402(a)(1) of the Act, 33 U. S. C. § 1342(a)(1), issued a permit authorizing the plant to discharge up to half of its effluent (to a limit of 6.1 million gallons per day) into an unnamed [\*\*\*248] stream in northwestern Arkansas. <sup>1</sup> That flow passes through a series of three creeks for about 17 miles, and then enters the Illinois River at a point 22 miles upstream from the Arkansas-Oklahoma border.

<sup>1</sup> The permit also authorized the plant to discharge the remainder of its effluent into the White River, a river that does not flow into Oklahoma; this aspect of the permit is not at issue in this litigation.

The permit imposed specific limitations on the quantity, content, and character of the discharge and also included a number of special conditions, including a provision that if a study then underway indicated that more stringent limitations were necessary to ensure compliance with Oklahoma's water quality standards, the permit would be modified to incorporate those limits. App. 84.

Respondents challenged this permit before the EPA, alleging, *inter alia*, that the discharge violated the Oklahoma water quality standards. Those standards provide that "no degradation [of water quality] shall be allowed" in the upper Illinois River, including the portion of the river immediately downstream from the state line. <sup>2</sup>

<sup>2</sup> Section 5 of the Oklahoma water quality standards provides:

"All streams and bodies of water designated as (a) are protected by prohibition of any new point source discharge of wastes or increased load from an existing point source except under conditions described in Section 3.

"All streams designated by the State as 'scenic river areas,' and such tributaries of those streams as may be appropriate will be so designated. Best management practices for control of nonpoint source discharge should be initiated when feasible." App. 46-47.

Oklahoma has designated the portion of the Illinois River immediately downstream from the state line as a "scenic river." Okla. Stat., Tit. 82, § 1452(b)(1) (Supp. 1989); see also App. 54.

Section 3 of the Oklahoma water quality standards provides, in relevant part:

"The intent of the Anti-degradation Policy is to protect all waters of the State from quality degradation. Existing instream water uses shall be

503 U.S. 91, \*, 112 S. Ct. 1046, \*\*;  
117 L. Ed. 2d 239, \*\*\*; 1992 U.S. LEXIS 1373

maintained and protected. No further water quality degradation which would interfere with or become injurious to existing instream water uses shall be allowed. Oklahoma's waters constitute a valuable State resource and shall be protected, maintained and improved for the benefit of all the citizens.

....

"No degradation shall be allowed in high quality waters which constitute an outstanding resource or in waters of exceptional recreational or ecological significance. These include water bodies located in national and State parks, Wildlife Refuges, and those designated 'Scenic Rivers' in Appendix A." App. 27-28.

[\*96] Following a hearing, the Administrative Law Judge (ALJ) concluded that the Oklahoma standards would not be implicated unless the contested discharge had "something more than a mere *de minimis* impact" on the State's waters. He found that the discharge would not have an "undue impact" on Oklahoma's waters and, accordingly, affirmed the issuance of the permit. App. to Pet. for Cert. in No. 90-1262, pp. 101a-103a (emphasis deleted).

On a petition for review, the EPA's Chief Judicial Officer first ruled that § 301(b)(1)(C) of the Clean Water Act "requires an NPDES permit to impose any effluent limitations necessary to comply with applicable state water quality standards." <sup>3</sup> *Id.*, at 116a-117a. He [**\*\*1052**] then held that [**\*\*\*249**] the Act [**\*97**] and EPA regulations offered greater protection for the downstream State than the ALJ's "undue impact" standard suggested. He explained the proper standard as follows:

"[A] mere theoretical impairment of Oklahoma's water quality standards -- *i. e.*, an infinitesimal impairment predicted through modeling but not expected to be actually detectable or measurable -- should not by itself block the issuance of the permit. In this case, the permit should be upheld if the record shows by a preponderance of the evidence that the authorized discharges would not cause an actual *detectable* violation of Oklahoma's water quality standards." *Id.*, at 117a (emphasis in original).

3 Section 301(b)(1)(C) provides, in relevant part, that

"there shall be achieved --

....

"(C) not later than July 1, 1977, any more stringent limitation, including those necessary to meet *water quality standards . . . established pursuant to any State law or regulations . . .* or required to implement any applicable water quality standard established pursuant to this chapter." 33 U. S. C. § 1311(b)(1)(C) (emphasis added).

On remand, the ALJ made detailed findings of fact and concluded that the city had satisfied the standard set forth by the Chief Judicial Officer. Specifically, the ALJ found that there would be no detectable violation of any of the components of Oklahoma's water quality standards. *Id.*, at 127a-143a. The Chief Judicial Officer sustained the issuance of the permit. *Id.*, at 145a-153a.

Both the petitioners in No. 90-1262 (collectively Arkansas) and the respondents in this litigation sought judicial review. <sup>4</sup> Arkansas argued that the Clean Water Act did not require an Arkansas point source to comply with Oklahoma's water quality standards. Oklahoma challenged the EPA's determination that the Fayetteville discharge would not produce a detectable violation of the Oklahoma standards.

4 The Arkansas petition was filed in the Court of Appeals for the Eighth Circuit and transferred to the Tenth Circuit where it was consolidated with the petition filed by the respondents.

The Court of Appeals did not accept either of these arguments. The court agreed with the EPA that the statute required compliance with Oklahoma's water quality standards, [**\*98**] see 908 F.2d 595, 602-615 (CA10 1990), and did not disagree with the Agency's determination that the discharges from the Fayetteville plant would not produce a detectable violation of those standards. *Id.*, at 631-633. Nevertheless, relying on a theory that neither party had advanced, the Court of Appeals reversed the Agency's issuance of the Fayetteville permit. The court first ruled that the statute requires that "where a proposed source would discharge effluents that would contribute to conditions currently constituting a violation of applicable water quality standards, such [a] proposed source may not be permitted." *Id.*, at 620. Then the court found that the Illinois River in Oklahoma was "already degraded," that the Fayetteville effluent would reach the Illinois River in Oklahoma, and that that effluent could "be expected to contribute to the ongoing deterioration of the scenic [Illinois R]iver" in Oklahoma even though it

503 U.S. 91, \*; 112 S. Ct. 1046, \*\*;  
117 L. Ed. 2d 239, \*\*\*; 1992 U.S. LEXIS 1373

would not detectably affect the river's water quality. *Id.*, at 621-629.

The importance and the novelty of the Court of Appeals' decision persuaded us to grant certiorari. 499 U.S. 946 (1991). We now reverse.

## II

Interstate waters have been a font [\*\*\*250] of controversy since the founding of the Nation. *E. g.*, *Gibbons v. Ogden*, 22 U.S. 1, 9 Wheat. 1, 6 L. Ed. 23 (1824). This Court has frequently resolved disputes between States that are separated by a common river, see, *e. g.*, *Ohio v. Kentucky*, 444 U.S. 335, 62 L. Ed. 2d 530, 100 S. Ct. 588 (1980), that border the same body of water, see, *e. g.*, *New York v. New Jersey*, 256 U.S. 296, 65 L. Ed. 937, 41 S. Ct. 492 [\*\*1053] (1921), or that are fed by the same river basin, see, *e. g.*, *New Jersey v. New York*, 283 U.S. 336, 75 L. Ed. 1104, 51 S. Ct. 478 (1931).

Among these cases are controversies between a State that introduces pollutants to a waterway and a downstream State that objects. See, *e. g.*, *Missouri v. Illinois*, 200 U.S. 496, 50 L. Ed. 572, 26 S. Ct. 268 (1906). In such cases, this Court has applied principles of common law tempered by a respect for the sovereignty of the States. Compare *id.*, at 521, with *Georgia v. Tennessee Copper Co.*, 206 U.S. 230, 237, 51 L. Ed. 1038, 27 S. Ct. 618 (1907). In forging what "may [\*\*99] not improperly be called interstate common law," *Illinois v. Milwaukee*, 406 U.S. 91, 105-106, 31 L. Ed. 2d 712, 92 S. Ct. 1385 (1972) (*Milwaukee I*), however, we remained aware "that new federal laws and new federal regulations may in time pre-empt the field of federal common law of nuisance." *Id.*, at 107.

In *Milwaukee v. Illinois*, 451 U.S. 304, 68 L. Ed. 2d 114, 101 S. Ct. 1784 (1981) (*Milwaukee II*), we held that the Federal Water Pollution Control Act Amendments of 1972 did just that. In addressing Illinois' claim that Milwaukee's discharges into Lake Michigan constituted a nuisance, we held that the comprehensive regulatory regime created by the 1972 amendments pre-empted Illinois' federal common law remedy. We observed that Congress had addressed many of the problems we had identified in *Milwaukee I* by providing a downstream State with an opportunity for a hearing before the source State's permitting agency, by requiring the latter to explain its failure to accept any recommendations offered by the downstream State, and by authorizing the EPA, in its discretion, to veto a source State's issuance of any permit if the waters of another State may be affected. *Milwaukee II*, 451 U.S. at 325-326.

In *Milwaukee II*, the Court did not address whether the 1972 amendments had supplanted *state* common law

remedies as well as the federal common law remedy. See *id.*, at 310, n. 4. On remand, Illinois argued that § 510 of the Clean Water Act, 33 U.S.C. § 1370, expressly preserved the State's right to adopt and enforce rules that are more stringent than federal standards. The Court of Appeals accepted Illinois' reading of § 510, but held that that section did "no more than [\*100] to save the right and jurisdiction [\*\*\*251] of a state to regulate activity occurring within the confines of its boundary waters." *Illinois v. Milwaukee*, 731 F.2d 403, 413 (CA7 1984), cert. denied, 469 U.S. 1196 (1985).

5 [HN1]Section 510 provides in relevant part:

"Except as expressly provided in this [Act], nothing in this [Act] shall (1) preclude or deny the right of any State or political subdivision thereof or interstate agency to adopt or enforce (A) any standard or limitation respecting discharges of pollutants, or (B) any requirement respecting control or abatement of pollution [with exceptions]; or (2) be construed as impairing or in any manner affecting any right or jurisdiction of the States with respect to the waters (including boundary waters) of such States." 33 U.S.C. § 1370 (emphasis added).

This Court subsequently endorsed that analysis in *International Paper Co. v. Ouellette*, 479 U.S. 481, 93 L. Ed. 2d 883, 107 S. Ct. 805 (1987), in which Vermont property owners claimed that the pollution discharged into Lake Champlain by a paper company located in New York constituted a nuisance under Vermont law. The Court held [HN2]the Clean Water Act taken "as a whole, its purposes and its history" pre-empted an action based on the law of the affected State and that the only state law applicable to an interstate discharge is "the law of the State in which the point source is located." *Id.*, at 493, 487. Moreover, in reviewing § 402(b) of the Act, the Court pointed out that [HN3]when a new permit is being issued by the source State's permit-granting agency, the downstream State

" [\*\*1054] does not have the authority to block the issuance of the permit if it is dissatisfied with the proposed standards. An affected State's only recourse is to apply to the EPA Administrator, who then has the discretion to disapprove the permit if he concludes that the discharges will have an undue impact on interstate waters. § 1342(d)(2). . . . Thus the Act makes it clear that affected States occupy a subordinate position to source States in the federal regulatory program." *Id.*, at 490-491.<sup>6</sup>

503 U.S. 91, \*; 112 S. Ct. 1046, \*\*;  
117 L. Ed. 2d 239, \*\*\*; 1992 U.S. LEXIS 1373

6 This description of the downstream State's role in the issuance of a new permit by a source State was apparently consistent with the EPA's interpretation of the Act at the time. The Government's *amicus curiae* brief in *Ouellette* stated that "the affected neighboring state [has] only an advisory role in the formulation of applicable effluent standards or limitations. The affected state may try to persuade the federal government or the source state to increase effluent requirements, but ultimately possesses no statutory authority to compel that result, even when its waters are adversely affected by out-of-state pollution. See 33 U. S. C. § 1341(a)(2), 1342(b)(3) and (5) . . ." Brief for United States as *Amicus Curiae*, O. T. 1986, No. 85-1233, p. 19 (emphasis added; footnote omitted).

[\*101] Unlike the foregoing cases, this litigation involves not a state-issued permit, but a federally issued permit. To explain the significance of this distinction, we comment further on the statutory scheme before addressing the specific issues raised by the parties.

### III

[\*\*LEdHR2] [2]The Clean Water Act anticipates a partnership between the States and the Federal Government, animated by a shared objective: "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters." 33 U. S. C. § 1251(a). Toward this end, the Act provides for two sets of water quality measures. "Effluent limitations" are promulgated by the EPA and restrict the quantities, rates, and concentrations of specified substances which are discharged from point sources. See §§ 1311, 1314. "Water quality standards" are, in general, promulgated by the States and establish the desired condition of a waterway. [\*\*\*252] See § 1313. These standards supplement effluent limitations "so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels." *EPA v. California ex rel. State Water Resources Control Bd.*, 426 U.S. 200, 205, n. 12, 48 L. Ed. 2d 578, 96 S. Ct. 2022 (1976).

The EPA provides States with substantial guidance in the drafting of water quality standards. See generally 40 CFR pt. 131 (1991) (setting forth model water quality standards). Moreover, § 303 of the Act requires, *inter alia*, that state authorities periodically review water qual-

ity standards and secure the EPA's approval of any revisions in the standards. [HN4]If the EPA recommends changes to the standards and the State fails to comply with that recommendation, the Act authorizes the EPA to promulgate water quality standards for the State. 33 U. S. C. § 1313(c).

The primary means for enforcing these limitations and standards is the NPDES, enacted in 1972 as a critical part of Congress' "complete rewriting" of federal water pollution [\*102] law. *Milwaukee II*, 451 U.S. at 317. Section 301(a) of the Act, 33 U. S. C. § 1311(a), generally prohibits the discharge of any effluent into a navigable body of water unless the point source has obtained an NPDES permit. Section 402 establishes the NPDES permitting regime, and describes two types of permitting systems: state permit programs that must satisfy federal requirements and be approved by the EPA, and a federal program administered by the EPA.

[HN5]Section 402(b) authorizes each State to establish "its own permit program for discharges into navigable waters within its jurisdiction." 33 U. S. C. § 1342(b). Among the requirements the state program must satisfy [\*\*1055] are the procedural protections for downstream States discussed in *Ouellette* and *Milwaukee II*. See §§ 1342(b)(3), (5).<sup>7</sup> Although these provisions do not authorize the downstream State to veto the issuance of a permit for a new point source in another State, the Administrator retains authority to block the issuance of any state-issued permit that is " [\*\*\*253] outside the guidelines and requirements" of the Act. § 1342(d)(2).<sup>8</sup>

7 [HN6]Section 402(b) requires state permit programs

"(3) to insure that . . . any other State the waters of which may be affected . . . receive notice of each application for a permit and to provide an opportunity for public hearing before a ruling on each such application;

....

"(5) to insure that any State (other than the permitting State), whose waters may be affected by the issuance of a permit may submit written recommendations to the permitting State (and the Administrator) with respect to any permit application and, if any part of such written recommendations are not accepted by the permitting State, that the permitting State will notify such affected State (and the Administrator) in writing of its failure to so accept such recommendations together with its reasons for so doing." 33 U. S. C. § 1342(b).

Although § 402(b) focuses on state-issued permits, § 402(a)(3) requires that, in issuing an NPDES permit, the Administrator follow the same procedures required of state permit programs. See 33 U. S. C. § 1342(a)(3); see also § 1341(a)(2).

8 [HN7]Section 402(d)(2) provides:

"(2) No permit shall issue (A) if the Administrator within ninety days of the date of his notification under subsection (b)(5) of this section objects in writing to the issuance of such permit, or (B) if the Administrator within ninety days of the date of transmittal of the proposed permit by the State objects in writing to the issuance of such permit as being outside the guidelines and requirements of this chapter. Whenever the Administrator objects to the issuance of a permit under this paragraph such written objection shall contain a statement of the reasons for such objection and the effluent limitations and conditions which such permit would include if it were issued by the Administrator." 33 U. S. C. § 1342(d)(2).

[\*103] [HN8]In the absence of an approved state program, the EPA may issue an NPDES permit under § 402(a) of the Act. (In these cases, for example, because Arkansas had not been authorized to issue NPDES permits when the Fayetteville plant was completed, the permit was issued by the EPA itself.) The EPA's permit program is subject to the "same terms, conditions, and requirements" as a state permit program. 33 U. S. C. § 1342(a)(3). Notwithstanding this general symmetry, the EPA has construed the Act as requiring that EPA-issued NPDES permits also comply with § 401(a). That section, which predates § 402 and the NPDES, applies to a broad category of federal licenses, and sets forth requirements for "any applicant for a Federal license or permit to conduct any activity including, but not limited to, the construction or operation of facilities, which may result in any discharge into the navigable waters." 33 U. S. C. § 1341(a). Section 401(a)(2) appears to prohibit the issuance of any federal license or permit over the objection of an affected State unless compliance with the affected State's water quality requirements can be ensured.<sup>9</sup>

9 [HN9]Section 401(a)(2) provides, in relevant part:

"Whenever such a discharge may affect, as determined by the Administrator, the quality of the waters of any other State, the Administrator . . . shall so notify such other State, the licensing or permitting agency, and the applicant. If, within sixty days after receipt of such notification, such other State determines that such discharge will affect the quality of its waters so as to violate any

water quality requirements in such State, and within such sixty-day period notifies the Administrator and the licensing or permitting agency in writing of its objection to the issuance of such license or permit and requests a public hearing on such objection, the licensing or permitting agency shall hold such a hearing. The Administrator shall at such hearing submit his evaluation and recommendations with respect to any such objection to the licensing or permitting agency. Such agency, based upon the recommendations of such State, the Administrator, and upon any additional evidence, if any, presented to the agency at the hearing, shall condition such license or permit in such manner as may be necessary to insure compliance with applicable water quality requirements. If the imposition of conditions cannot insure such compliance such agency shall not issue such license or permit." 33 U. S. C. § 1341(a)(2).

[\*104] [\*\*1056] IV

The parties have argued three analytically distinct questions concerning the interpretation of the Clean Water Act. First, does the Act require the EPA, in crafting and issuing a permit to a point source in one State, to apply the water quality standards of downstream States? Second, even if the Act does not *require* as much, does the Agency have the statutory authority to mandate such compliance? Third, does the Act provide, as the Court of Appeals held, that once a body of [\*\*\*254] water fails to meet water quality standards no discharge that yields effluent that reach the degraded waters will be permitted?

[\*\*\*LEdHR3A] [3A]In these cases, it is neither necessary nor prudent for us to resolve the first of these questions. In issuing the Fayetteville permit, the EPA assumed it was obligated by both the Act and its own regulations to ensure that the Fayetteville discharge would not violate Oklahoma's standards. See App. to Pet. for Cert. in No. 90-1262, pp. 116a-117a, and n. 14. As we discuss below, this assumption was permissible and reasonable and therefore there is no need for us to address whether the Act requires as much. Moreover, much of the analysis and argument in the briefs of the parties relies on statutory provisions that govern not only federal permits issued pursuant to §§ 401(a) and 402(a), but also state permits issued under § 402(b). It seems unwise to evaluate those arguments in a case such as these, which only involve a federal permit.

[\*105] [\*\*\*LEdHR3B] [3B] [\*\*\*LEdHR4A] [4A]Our decision not to determine at this time the scope of the Agency's statutory *obligations* does not affect our

503 U.S. 91, \*; 112 S. Ct. 1046, \*\*;  
117 L. Ed. 2d 239, \*\*\*, 1992 U.S. LEXIS 1373

resolution of the second question, which concerns the Agency's statutory *authority*. Even if the Clean Water Act itself does not require the Fayetteville discharge to comply with Oklahoma's water quality standards, the statute clearly does not limit the EPA's authority to mandate such compliance.

[\*\*LEdHR4B] [4B] Since 1973, [HN10] EPA regulations have provided that an NPDES permit shall not be issued "when the imposition of conditions cannot ensure compliance with the applicable water quality requirements of all affected States." <sup>10</sup> 40 CFR § 122.4(d) (1991); see also 38 Fed. Reg. 13533 (1973); 40 CFR § 122.44(d) (1991). Those regulations -- relied upon by the EPA in the issuance of the Fayetteville permit -- constitute a reasonable exercise of the Agency's statutory authority.

10 This restriction applies whether the permit is issued by the EPA or by an approved state program. See 40 CFR § 123.25 (1991).

[\*\*LEdHR5] [5] Congress has vested in the Administrator broad discretion to establish conditions for NPDES permits. [HN11] Section 402(a) (2) provides that for EPA-issued permits "the Administrator shall prescribe conditions . . . to assure compliance with the requirements of [§ 402(a)(1)] and *such other requirements as he deems appropriate*." 33 U.S.C. § 1342(a)(2) (emphasis added). Similarly, Congress preserved for the Administrator broad authority to oversee state permit programs:

[HN12] "No permit shall issue . . . if the Administrator . . . objects in writing to the issuance of such permit as being outside the guidelines and requirements of this chapter." § 1342(d)(2).

[\*\*LEdHR4C] [4C] The regulations relied on by the EPA were a perfectly reasonable exercise of the Agency's statutory discretion. The application of state water quality standards in the interstate context is wholly consistent with the Act's broad purpose "to restore and maintain the chemical, physical, and [\*106] biological integrity of the Nation's waters." 33 U.S.C. § 1251(a). Moreover, as noted above, § 301(b)(1)(C) expressly identifies the achievement of state water quality standards as [\*\*255] one of the Act's central objectives. The Agency's regulations conditioning NPDES permits are a well-tailored means of achieving this goal.

Notwithstanding this apparent reasonableness, Arkansas argues that our description [\*\*1057] in *Ouellette* of the role of affected States in the permit process

and our characterization of the affected States' position as "subordinate," see 479 U.S. at 490-491, indicates that the EPA's application of the Oklahoma standards was error. We disagree. Our statement in *Ouellette* concerned only an affected State's input into the permit process; that input is clearly limited by the plain language of § 402(b). Limits on an affected State's direct participation in permitting decisions, however, do not in any way constrain the EPA's authority to require a point source to comply with downstream water quality standards.

Arkansas also argues that regulations requiring compliance with downstream standards are at odds with the legislative history of the Act and with the statutory scheme established by the Act. Although we agree with Arkansas that the Act's legislative history indicates that Congress intended to grant the Administrator discretion in his oversight of the issuance of NPDES permits, <sup>11</sup> we find nothing in that history to indicate that Congress intended to preclude the EPA from establishing a general requirement that such permits be conditioned to ensure compliance with downstream water quality standards.

11 See, e.g., 1 Legislative History of Water Pollution Control Act Amendments of 1972 (Committee Print compiled for the Senate Committee on Public Works by the Library of Congress), Ser. No. 93-1, pp. 322, 388-389, 814 (1973); see also 33 U.S.C. § 1342(d)(3).

Similarly, we agree with Arkansas that in the Clean Water Act Congress struck a careful balance among competing policies and interests, but do not find the EPA regulations concerning [\*107] the application of downstream water quality standards at all incompatible with that balance. Congress, in crafting the Act, protected certain sovereign interests of the States; for example, § 510 allows States to adopt more demanding pollution-control standards than those established under the Act. Arkansas emphasizes that § 510 preserves such state authority only as it is applied to the waters of the regulating State. Even assuming Arkansas' construction of § 510 is correct, cf. *id.*, at 493, that section only concerns *state* authority and does not constrain the EPA's authority to promulgate reasonable regulations requiring point sources in one State to comply with water quality standards in downstream States.

For these reasons, we find the EPA's requirement that the Fayetteville discharge comply with Oklahoma's water quality standards to be a reasonable exercise of the Agency's substantial statutory discretion. Cf. *Chevron U.S.A. Inc. v. Natural Resources Defense Council, Inc.*, 467 U.S. 837, 842-845, 81 L. Ed. 2d 694, 104 S. Ct. 2778 (1984).

V

503 U.S. 91, \*; 112 S. Ct. 1046, \*\*;  
117 L. Ed. 2d 239, \*\*\*; 1992 U.S. LEXIS 1373

[\*\*LEdHR1B] [1B]The Court of Appeals construed the Clean Water Act to prohibit any discharge of effluent that would reach waters already in violation of existing water quality standards. <sup>12</sup> [\*\*256] We find nothing in the Act to support this reading.

12 "We hold that the Clean Water Act prohibits granting an NPDES permit under the circumstances of this case (i. e., where applicable water quality standards have already been violated) and reverse EPA's decision to permit Fayetteville to discharge any part of its effluent to the Illinois River Basin." 908 F.2d 595, 616 (CA10 1990).

"Congress cannot reasonably be presumed to have intended to exclude from the CWA's 'all-encompassing program,' 451 U.S. at 318, a permitting decision arising in circumstances such as those of this case. It is even more unfathomable that Congress fashioned a 'comprehensive . . . policy for the elimination of water pollution,' *id.*, which sanctions continued pollution once minimum water quality standards have been transgressed. More likely, Congress simply never contemplated that EPA or a state would consider it permissible to authorize further pollution under such circumstances. We will not ascribe to the Act either the gaping loophole or the irrational purpose necessary to uphold EPA's action in this case." *Id.*, at 632 (footnotes omitted).

[\*108] [\*\*1058] The interpretation of the statute adopted by the court had not been advanced by any party during the Agency or court proceedings. Moreover, the Court of Appeals candidly acknowledged that its theory "has apparently never before been addressed by a federal court." 908 F.2d at 620, n. 39. The only statutory provision the court cited to support its legal analysis was § 402(h), see *id.*, at 633, which merely authorizes the EPA (or a state permit program) to prohibit a publicly owned treatment plant that is violating a condition of its NPDES permit from accepting any additional pollutants for treatment until the ongoing violation has been corrected. See 33 U. S. C. § 1342(h).

[\*\*LEdHR1C] [1C] [\*\*LEdHR6] [6]Although the Act contains several provisions directing compliance with state water quality standards, see, e. g., § 1311(b)(1)(C), the parties have pointed to nothing that mandates a complete ban on discharges into a waterway that is in violation of those standards. The statute does, however, contain provisions designed to remedy existing water quality violations and to allocate the burden of reducing undesirable discharges between existing sources and new sources. See, e. g., § 1313(d). Thus, rather than establishing the categorical ban announced by the Court of Appeals -- which might frustrate the con-

struction of new plants that would improve existing conditions -- the Clean Water Act vests in the EPA and the States broad authority to develop long-range, areawide programs to alleviate and eliminate existing pollution. See, e.g., § 1288(b)(2).

To the extent that the Court of Appeals relied on its interpretation of the Act to reverse the EPA's permitting decision, that reliance was misplaced.

[\*109] VI

[\*\*LEdHR7A] [7A] [\*\*LEdHR8A] [8A] [\*\*LEdHR9A] [9A]The Court of Appeals also concluded that the EPA's issuance of the Fayetteville permit was arbitrary and capricious because the Agency misinterpreted Oklahoma's water quality standards. The primary difference <sup>13</sup> between the court's [\*\*257] and the Agency's interpretation of the standards derives from the court's construction of the Act. Contrary to the EPA's interpretation of the Oklahoma standards, the Court of Appeals read those standards as containing the same categorical ban on new discharges that the court had found in the Clean Water Act itself. Although we do not believe the text of the Oklahoma standards supports the court's reading (indeed, we note that Oklahoma itself had not advanced that interpretation in its briefs in the Court of Appeals), we reject it for a more fundamental reason -- namely, that the Court of Appeals exceeded the legitimate scope of judicial review of an agency adjudication. To emphasize the importance of this point, we shall first briefly assess the soundness of the EPA's interpretation and application of the Oklahoma [\*110] standards and then comment more specifically on the Court of Appeals' approach.

[\*\*LEdHR7B] [7B]

13 The court identified three errors in the EPA's reading of the Oklahoma standards. First, the court correctly observed that the ALJ and the Chief Judicial Officer misinterpreted § 4.10(c) of the standards as governing only the discharge of phosphorus into lakes, rather than the discharge of phosphorus into lakes and into all "perennial and intermittent streams." *Id.*, at 617 (emphasis omitted). This error was harmless because the ALJ found that the discharge into Lake Francis would comply with § 4.10(c) and it is undisputed that that discharge produced a greater threat to the slow-moving water of the lake than to the rapid flow in the river.

[\*\*LEdHR8B] [8B]

The second flaw identified by the court was the ALJ's mistaken reliance on the 1985, rather than the 1982 version, of the Oklahoma stan-

503 U.S. 91, \*; 112 S. Ct. 1046, \*\*;  
117 L. Ed. 2d 239, \*\*\*; 1992 U.S. LEXIS 1373

dards. We agree with the Chief Judicial Officer, who also noted this error, that the portions of the two versions relevant to this case "do not differ materially." App. to Pet. for Cert. in No. 90-1262, p. 150a. Therefore, this error was also harmless.

Because these two errors were harmless, we have focused in the text on the major difference between the court's and the EPA's readings of the Oklahoma standards: the "no degradation" provision.

[\*\*\*LEdHR10] [10]As discussed above, an EPA regulation requires an NPDES permit to comply "with the applicable water quality requirements of [\*\*1059] all affected States." 40 CFR § 122.4(d) (1991). This regulation effectively incorporates into federal law those state-law standards the Agency reasonably determines to be "applicable." In such a situation, then, state water quality standards -- promulgated by the States with substantial guidance from the EPA<sup>14</sup> and approved by the Agency -- are part of the federal law of water pollution control.

14 See *supra*, at 101. Oklahoma's water quality standards closely track the EPA's model standards in effect at that time. Compare § 3 of the Oklahoma standards with 40 CFR § 35.1550(e)(1) (1981).

Two features of the body of law governing water pollution support this conclusion. First, as discussed more thoroughly above, we have long recognized that interstate water pollution is controlled by *federal law*. See *supra*, at 98-100. Recognizing that the system of federally approved state standards as applied in the interstate context constitutes federal law is wholly consistent with this principle. Second, treating state standards in interstate controversies as federal law accords with the Act's purpose of authorizing the EPA to create and manage a uniform system of interstate water pollution regulation.

[\*\*\*LEdHR1D] [1D]Because we recognize that, at least insofar as they affect the issuance of a permit in another State, the Oklahoma standards have a federal character, the EPA's reasonable, consistently held interpretation of those standards is entitled to substantial deference. Cf. *INS v. National Center for Immigrants' Rights*, 502 U.S. 183, 189-190, 116 L. Ed. 2d 546, 112 S. Ct. 551 (1991); *Chevron U. S. A. Inc. v. Natural Resources Defense [\*\*\*258] Council, Inc.*, 467 U.S. 837, 81 L. Ed. 2d 694, 104 S. Ct. 2778 (1984). In these cases, the Chief Judicial Officer ruled that the Oklahoma standards -- which require that there be "no degradation" of the upper Illinois River -- would [\*111] only be violated if the discharge effected an "actually detectable or

measurable" change in water quality. App. to Pet. for Cert. in No. 90-1262, p. 117a.

This interpretation of the Oklahoma standards is certainly reasonable and consistent with the purposes and principles of the Clean Water Act. As the Chief Judicial Officer noted, "unless there is some method for measuring compliance, there is no way to ensure compliance." *Id.*, at 118a, n. 16 (internal quotation marks omitted; citation omitted). Moreover, this interpretation of the Oklahoma standards makes eminent sense in the interstate context: If every discharge that had some theoretical impact on a downstream State were interpreted as "degrading" the downstream waters, downstream States might wield an effective veto over upstream discharges.

The EPA's application of those standards in these cases was also sound. On remand, the ALJ scrutinized the record and made explicit factual findings regarding four primary measures of water quality under the Oklahoma standards: eutrophication,<sup>15</sup> esthetics,<sup>16</sup> dissolved oxygen,<sup>17</sup> and [\*\*1060] metals.<sup>18</sup> [\*112] In each case, the ALJ found that the Fayetteville discharge would not lead to a detectable change in water quality. He therefore concluded that the Fayetteville discharge would not violate the Oklahoma water quality standards. Because we agree with the Agency's Chief Judicial Officer that these findings are supported by substantial evidence, we conclude that the Court of Appeals should have affirmed both the EPA's construction of the regulations and the issuance of the Fayetteville permit.

15 Eutrophication is the "normally slow aging process by which a lake evolves into a bog or marsh . . . . During eutrophication the lake becomes so rich in nutritive compounds (especially nitrogen and phosphorus) that algae and other microscopic plant life become superabundant, thereby 'choking' the lake . . ." App. 57-58. With regard to eutrophication, the ALJ found that the Fayetteville plant would discharge 30 pounds of phosphorus per day, only about 6 pounds of which would reach the Arkansas/Oklahoma border, and that such a small amount would not result in an increase in eutrophication. App. to Pet. for Cert. in No. 90-1262, p. 129a.

16 With regard to esthetics, the ALJ concluded that the only discharged compound that would affect esthetics was phosphorus and that, again, the amount of that substance crossing the border would not affect the esthetic quality of Oklahoma's waters. *Id.*, at 135a-136a.

17 With regard to dissolved oxygen, the ALJ found that in the 39 miles between discharge and the border the effluent would experience "complete oxygen recovery" and therefore would not

affect the dissolved oxygen levels in the river. Id., at 140a.

18 With regard to metals, the ALJ concluded that the concentrations of metals would be so low as not to violate the Oklahoma standards. Id., at 143a.

\*\*\*LEdHR9B] [9B]In its review of the EPA's interpretation and application of the Oklahoma standards, the Court of Appeals committed three mutually compounding errors.

First, the court failed to give due regard to the EPA's interpretation of its own regulations, as those regulations incorporate the Oklahoma standards. Instead the court voiced its own interpretation of the governing law and concluded that "where a [\*\*\*259] proposed source would discharge effluents that would contribute to conditions currently constituting a violation of applicable water quality standards, such [a] proposed source may not be permitted." 908 F.2d at 620. As we have already pointed out, that reading of the law is not supported by the statute or by any EPA regulation. The Court of Appeals sat in review of an agency action and should have afforded the EPA's interpretation of the governing law an appropriate level of deference. See generally Chevron, supra, at 842-844.

\*\*\*LEdHR9C] [9C] [\*\*\*LEdHR11] [11]Second, the court disregarded well-established standards for reviewing the factual findings of agencies and instead made its own factual findings. The troubling nature of the court's analysis appears on the face of the opinion itself: At least four times, the court concluded that "there was substantial evidence before the ALJ to support" particular findings which the court thought appropriate, but which were [\*113] contrary to those actually made by the ALJ. 908 F.2d at 620, 625, 627, 629. Although we have long recognized the "substantial evidence" standard in administrative law, the court below turned that analysis on its head. [HN13]A court reviewing an agency's adjudicative action should accept the *agency's* factual findings if those findings are supported by substantial evidence on the record as a whole. See generally Universal Camera Corp. v. NLRB, 340 U.S. 474, 95 L. Ed. 456, 71 S. Ct. 456 (1951). The court should not supplant the agency's findings merely by identifying alternative findings that could be supported by substantial evidence.

\*\*\*LEdHR9D] [9D]Third, the court incorrectly concluded that the EPA's decision was arbitrary and capricious. This error is derivative of the court's first two errors. Having substituted its reading of the governing law for the Agency's, and having made its own factual findings, the Court of Appeals concluded that the EPA erred in not considering an important and relevant fact --

namely, that the upper Illinois River was (by the court's assessment) already degraded.

\*\*\*LEdHR9E] [9E] [\*\*\*LEdHR12] [12]As we have often recognized, [HN14]an agency ruling is "arbitrary and capricious if the agency has . . . entirely failed to consider an important aspect of the problem." Motor Vehicle Mfrs. Assn. of United States, Inc. v. State Farm Mut. Automobile Ins. Co., 463 U.S. 29, 43, 77 L. Ed. 2d 443, 103 S. Ct. 2856 (1983). However, in these cases, the degraded status of the river is only an "important aspect" because of the Court of Appeals' novel and erroneous interpretation of the controlling law. Under the EPA's interpretation of that law, what matters is not the river's current status, but rather whether the proposed discharge will have a "detectable effect" on that status. If the Court of Appeals had been properly respectful of the Agency's permissible reading of the Act and [\*\*1061] the Oklahoma standards, the court would not have adjudged the Agency's decision arbitrary and capricious for this reason.

\*\*\*LEdHR1E] [1E]In sum, the Court of Appeals made a policy choice that it was not authorized to make. Arguably, as that court suggested, [\*114] it might be wise to prohibit any discharge into the Illinois River, even if that discharge would have no adverse impact on water quality. But it was surely not arbitrary for the EPA to conclude -- given the benefits to the river from the increased flow of relatively [\*\*\*260] clean water<sup>19</sup> and the benefits achieved in Arkansas by allowing the new plant to operate as designed -- that allowing the discharge would be even wiser. It is not our role, or that of the Court of Appeals, to decide which policy choice is the better one, for it is clear that Congress has entrusted such decisions to the Environmental Protection Agency.

19 Justice Holmes recognized this potential benefit years ago:

"There is no pretence that there is a nuisance of the simple kind that was known to the older common law. There is nothing which can be detected by the unassisted senses -- no visible increase of filth, no new smell. On the contrary, it is proved that the great volume of pure water from Lake Michigan which is mixed with the sewage at the start has improved the Illinois River in these respects to a noticeable extent. Formerly it was sluggish and ill smelling. Now it is a comparatively clear stream to which edible fish have returned. Its water is drunk by the fisherman, it is said, without evil results." Missouri v. Illinois, 200 U.S. 496, 522, 50 L. Ed. 572, 26 S. Ct. 268 (1906).

503 U.S. 91, \*; 112 S. Ct. 1046, \*\*;  
117 L. Ed. 2d 239, \*\*\*; 1992 U.S. LEXIS 1373

Accordingly, the judgment of the Court of Appeals  
is

*Reversed.*

**CITY OF ARCADIA, et al., Plaintiffs, v. UNITED STATES ENVIRONMENTAL  
PROTECTION AGENCY, et al., Defendants, - and - NATURAL RESOURCES  
DEFENSE COUNCIL, et al., Defendants-Intervenors.**

No. C 02-5244 SBA

**UNITED STATES DISTRICT COURT FOR THE NORTHERN DISTRICT OF  
CALIFORNIA**

265 F. Supp. 2d 1142; 2003 U.S. Dist. LEXIS 9044

May 16, 2003, Decided  
May 16, 2003, Filed

**SUBSEQUENT HISTORY:** Affirmed by City of Arcadia v. United States EPA, 411 F.3d 1103, 2005 U.S. App. LEXIS 11240 (9th Cir. Cal., 2005)

Related proceeding at City of Arcadia v. State Water Res. Control Bd., 2006 Cal. App. LEXIS 92 (Cal. App. 4th Dist., Jan. 26, 2006)

**DISPOSITION:** **[\*\*1]** Defendants' motion to dismiss granted; plaintiffs' motion for partial summary judgment denied, and objections overruled. Action dismissed in its entirety, without leave to amend in part and with prejudice in part. Intervenors' evidentiary objections overruled as moot.

**CASE SUMMARY:**

**PROCEDURAL POSTURE:** Plaintiffs, California cities, sued defendants, including the United States Environmental Protection Agency (EPA), for declarative and injunctive relief under, inter alia, 5 U.S.C.S. § 706 of the Administrative Procedure Act (APA), 5 U.S.C.S. § 551 et seq. Defendants sought dismissal of the operative complaint. The cities sought partial summary judgment.

**OVERVIEW:** The first claim for relief alleged APA violations. Generally, it alleged that numerous EPA actions were arbitrary and capricious, and contrary to law, such as the EPA's establishing the EPA Trash Total Daily Maximum Loads (TMDLs) prior to receiving for review the California Trash TMDLs. Violations alleged in

the second claim appeared to relate mostly to procedural requirements under the Regulatory Flexibility Act, 5 U.S.C.S. § 601 et seq., and the Small Business Regulatory Enforcement Fairness Act of 1996, 5 U.S.C.S. § 801 et seq. The third claim sought a declaration as to which party's interpretation of the law was correct and a judicial determination of the cities' rights and duties. The court concluded that all of the cities' claims were moot, meritless, or unripe. The cities' challenges to the EPA Trash TMDLs were obviously mooted the minute that EPA approved the State Trash TMDLs. The cities' challenge to EPA's authority to approve the State Trash TMDLs following its establishment of the EPA Trash TMDLs and their challenge to the "de facto TMDL procedure" were patently meritless. Finally, the cities' challenges to the "merits" of the State Trash TMDLs were premature.

**OUTCOME:** The EPA's motion to dismiss, in which intervenor environmental organizations joined, was granted. The cities' motion for summary adjudication of issues was denied as moot. Various objections to declarations made by the parties were either overruled or overruled as moot.

**CORE TERMS:** epa, trash, regional, declaration, approve, de facto, moot, water quality, agency actions, partial, summary judgment, consent decree, monitoring, pollutant, pollution, leave to amend, capriciously, reduction, npdes, intervenors, waterbody, deadline, heading, reply, declaratory relief, acted arbitrarily, injunctive, wasteload, hardship, matter jurisdiction

LexisNexis(R) Headnotes

*Civil Procedure > Jurisdiction > Subject Matter Jurisdiction > Jurisdiction Over Actions > General Overview*  
*Civil Procedure > Pleading & Practice > Defenses, Demurrers & Objections > Motions to Dismiss*

[HN1]"Extra-record evidence" may be considered by the court in connection with a motion to dismiss for lack of subject matter jurisdiction.

*Civil Procedure > Jurisdiction > Subject Matter Jurisdiction > Jurisdiction Over Actions > General Overview*  
*Civil Procedure > Pleading & Practice > Defenses, Demurrers & Objections > Motions to Dismiss*

[HN2]Fed. R. Civ. P. 12(b)(1) authorizes a party to seek dismissal of an action for lack of subject matter jurisdiction. When subject matter jurisdiction is challenged under Fed. R. Civ. P. 12(b)(1), the plaintiff has the burden of proving jurisdiction in order to survive the motion. A plaintiff suing in a federal court must show in his pleading, affirmatively and distinctly, the existence of whatever is essential to federal jurisdiction, and, if he does not do so, the court, on having the defect called to its attention or on discovering the same, must dismiss the case, unless the defect be corrected by amendment. In adjudicating such a motion, the court is not limited to the pleadings, and may properly consider extrinsic evidence. The court presumes lack of jurisdiction until the plaintiff proves otherwise.

*Civil Procedure > Pleading & Practice > Defenses, Demurrers & Objections > Failures to State Claims*

[HN3]A motion to dismiss pursuant to Fed. R. Civ. P. 12(b)(6) tests the legal sufficiency of a claim. A motion to dismiss should not be granted unless it appears beyond doubt that the plaintiff can prove no set of facts in support of his claim which would entitle him to relief. The complaint is construed in the light most favorable to the plaintiff, and all properly pleaded factual allegations are taken as true. Dismissal is proper only where there is no cognizable legal theory or an absence of sufficient facts alleged to support a cognizable legal theory. In adjudicating a motion to dismiss, the court need not accept as true unreasonable inferences or conclusory legal allegations cast in the form of factual allegations.

*Civil Procedure > Pleading & Practice > Defenses, Demurrers & Objections > Failures to State Claims*

*Civil Procedure > Pleading & Practice > Pleadings > Amended Pleadings > Leave of Court*

*Civil Procedure > Dismissals > Involuntary Dismissals > Failures to State Claims*

[HN4]When the complaint is dismissed for failure to state a claim, leave to amend should be granted unless the court determines that the allegation of other facts consistent with the challenged pleading could not possibly cure the deficiency. Leave to amend is properly denied where the amendment would be futile.

*Environmental Law > Water Quality > General Overview*

[HN5]No authority supports the conclusion that the Environmental Protection Agency (EPA) lacks authority to approve state-submitted Total Daily Maximum Loads (TMDLs) after EPA has established its own TMDLs, nor does this conclusion logically follow from the proposition that EPA is required to approve or disapprove a state-submitted TMDL within 30 days of submission.

*Administrative Law > Judicial Review > Reviewability > Final Order Requirement*

*Civil Procedure > Judgments > Relief From Judgment > General Overview*

[HN6]See 5 U.S.C.S. § 551(13).

*Administrative Law > Judicial Review > Reviewability > Ripeness*

*Civil Procedure > Jurisdiction > Subject Matter Jurisdiction > Jurisdiction Over Actions > General Overview*  
*Constitutional Law > The Judiciary > Case or Controversy > Ripeness*

[HN7]The ripeness doctrine is drawn both from Article III limitations on judicial power and from prudential reasons for refusing to exercise jurisdiction. Unripe claims are subject to dismissal for lack of subject matter jurisdiction. In determining whether a case is ripe for review, a court must consider two main issues: the fitness of the issues for judicial decision and the hardship to the parties of withholding court consideration. To address these issues in the context of a challenge to the lawfulness of administrative action, the United States Supreme Court has identified three factors to consider: (1) whether delayed review would cause hardship to the plaintiffs; (2) whether judicial intervention would inappropriately interfere with further administrative action; and (3) whether the courts would benefit from further factual development of the issues presented.

*Civil Procedure > Justiciability > Ripeness > General Overview*

*Civil Procedure > Justiciability > Standing > General Overview*

[HN8] Injury-in-fact is a concept that relates to the issue of standing, not ripeness.

**COUNSEL:** For Plaintiff: Noam I. Duzman, Richard Montevideo, Robert S. Bower, Rutan & Tucker LLP, Costa Mesa, CA.

For USA, Defendant: Charles M. O'Connor, AUSA & Chief, Environment & Natural Resources, United States Attorney's Office, San Francisco, CA. AND-- S. Randall Humm - Trial Attorney, Pamela Tonglao - Trial Attorney, U.S. Dept. of Justice, Washington, DC.

**JUDGES:** SAUNDRA BROWN ARMSTRONG, United States District Judge.

**OPINION BY:** SAUNDRA BROWN ARMSTRONG

**OPINION**

**[\*1143] ORDER GRANTING DEFENDANTS' MOTION TO DISMISS, DENYING AS MOOT PLAINTIFFS' MOTION FOR PARTIAL SUMMARY JUDGMENT, AND DISMISSING ACTION**

[Docket Nos. 18, 28, 31, 43, 47]

Plaintiffs City of Arcadia and other California cities (collectively, "Plaintiffs") bring this action against defendants United States Environmental Protection Agency ("EPA"), the EPA Administrator, and the EPA Region IX Administrator (collectively, "Defendants") for injunctive and declaratory relief. The Natural Resources Defense Council, Santa Monica BayKeeper, and Heal the Bay (collectively, "Intervenors") have intervened as defendants.

Now before the Court are Defendants' **[\*\*2]** Motion to Dismiss Second Amended Complaint (the "Motion to Dismiss"), in which Intervenors join, and Plaintiffs' Motion for Summary Adjudication of Issues (the "Motion for Partial Summary Judgment"). Having read and considered the papers submitted and being fully informed, the Court **GRANTS** the Motion to Dismiss, **DENIES AS MOOT** the Motion for Partial Summary Judgment, and **DISMISSES** this action. <sup>1</sup>

<sup>1</sup> These matters are suitable for disposition without a hearing. See Fed. R. Civ. P. 78; Civ. L.R. 7-1(b).

## **I. BACKGROUND**

2

2 Over the years the Court has had the pleasure and privilege of reading some excellent moving papers. Some of these submissions stand out as truly superlative. Defendants' opening and reply briefs for their Motion to Dismiss are shining examples of such superlative submissions. In these briefs Defendants discuss three areas of federal law generally regarded as highly complex--environmental regulation, administrative law, and justiciability--in direct, succinct, well-supported, and powerfully illuminating fashion. Whereas a poor presentation of the statutory and regulatory framework and Defendants' arguments might have required the Court to spend hours to apprehend their arguments, the high quality of Defendants' writing enabled the Court to grasp them in a matter of minutes. Defendants' briefs also thankfully avoid leveling the sorts of thinly veiled (or, at times, not-at-all-veiled) *ad hominem* attacks that unfortunately pervade too much legal writing nowadays. The Court thus commends Defendants' counsel for their outstanding writing and expresses its appreciation for it.

### **[\*\*3] A. Statutory and Regulatory Background**

#### **1. Water Pollution Control Under the Clean Water Act**

The Clean Water Act ("CWA"), 33 U.S.C. §§ 1251-1387, utilizes two fundamental approaches to control water pollution: technology-based regulations and water quality standards. Technology-based [\*1144] regulations seek to reduce pollution by requiring a discharger to effectuate equipment or process changes, without reference to the effect on the receiving water; water quality standards fix the permissible level of pollution in a specific body of water regardless of the source of pollution.

The National Pollutant Discharge Elimination System ("NPDES") permit program is a key means of implementing both technology-based requirements and water quality standards. 33 U.S.C. §§ 1311(b)(1)(C), 1342(a)(1); 40 C.F.R. § 122.44(a), (d)(1). An NPDES permit establishes specific limits of pollution for an individual discharger. A discharge of pollutants (other than dredged or fill material) from any "point source," which is defined as "any discernible, confined and discrete conveyance . . . from which pollutants are or may **[\*\*4]** be discharged," 33 U.S.C. § 1362(14), into the waters of the United States is prohibited unless that discharge complies with the discharge limits and other requirements of an NPDES permit. *Id.* §§ 1311(a), 1362(12). At

present, 45 states, including California, are authorized to administer the NPDES permit program. State Program Status, [http://cfpub.epa.gov/npdes/statestats.cfm?program\\_id=45&view=general](http://cfpub.epa.gov/npdes/statestats.cfm?program_id=45&view=general). In the remaining states, EPA issues the permits. 33 U.S.C. § 1342(a).

## 2. Total Maximum Daily Loads ("TMDLs")

Section 303(d) of the CWA and EPA's implementing regulations require states to identify and prioritize waterbodies where technology-based effluent limitations and other required controls are insufficiently stringent to attain water quality standards. See 33 U.S.C. § 1313(d); 40 C.F.R. § 130.7(b). States must develop a "total maximum daily load," or "TMDL," for each pollutant of concern in each waterbody so identified. A TMDL represents the maximum amount of pollutant "loading" that a waterbody can receive from all combined sources without exceeding applicable [\*\*5] state water quality standards. Although the term "total maximum daily load" is not expressly defined in the CWA, EPA's regulations define a TMDL for a pollutant as the sum of: (1) the "wasteload allocations," which is the amount of pollutant that can be discharged to a waterbody from point sources, (2) the "load allocations," which represent the amount of a pollutant in a waterbody attributable to nonpoint sources or natural background, and (3) a margin of safety. 40 C.F.R. §§ 130.2(g)-(i), 130.7(c)(1).

Under CWA Section 303(d)(2), EPA is required to review and approve or disapprove TMDLs established by states for impaired waters within thirty days of submission. 33 U.S.C. § 1313(d)(2). If EPA disapproves a state TMDL submission, EPA must issue its own TMDL for that waterbody within thirty days. *Id.*

## 3. Implementation of TMDLs

TMDLs established under Section 303(d)(1) of the CWA function primarily as planning devices and are not self-executing. *Pronsolino v. Nastri*, 291 F.3d 1123, 1129 (9th Cir. 2002) ("TMDLs are primarily informational tools that allow the states to proceed from the identification of [\*\*6] waters requiring additional planning to the required plans.") (citing *Alaska Ctr. for the Env't v. Browner*, 20 F.3d 981, 984-85 (9th Cir. 1994)). A TMDL does not, by itself, prohibit any conduct or require any actions. Instead, each TMDL represents a goal that may be implemented by adjusting pollutant discharge requirements in individual NPDES permits or establishing nonpoint source controls. See, e.g., *Sierra Club v. Meiburg*, 296 F.3d 1021, 1025 (11th Cir. 2002) ("Each TMDL serves as the goal for the level of that pollutant in the waterbody to which that TMDL applies. . . . The theory is that individual-discharge permits [\*\*1145] will be adjusted and other measures taken so that the sum of that pollutant in the waterbody is reduced

to the level specified by the TMDL."); *Idaho Sportsmen's Coalition v. Browner*, 951 F. Supp. 962, 966 (W.D. Wash. 1996) ("TMDL development in itself does not reduce pollution. . . . TMDLs inform the design and implementation of pollution control measures."); *Pronsolino*, 291 F.3d at 1129 ("TMDLs serve as a link in an implementation chain that includes . . . state or local plans for point and nonpoint [\*\*7] source pollution reduction . . ."); *Idaho Conservation League v. Thomas*, 91 F.3d 1345, 1347 (9th Cir. 1996) (noting that a TMDL sets a goal for reducing pollutants). Thus, a TMDL forms the basis for further administrative actions that may require or prohibit conduct with respect to particularized pollutant discharges and waterbodies.

For point sources, limitations on pollutant loadings may be implemented through the NPDES permit system. 40 C.F.R. § 122.44(d)(1)(vii)(B). EPA regulations require that effluent limitations in NPDES permits be "consistent with the assumptions and requirements of any available wasteload allocation" in a TMDL. *Id.* For nonpoint sources, limitations on loadings are not subject to a federal nonpoint source permitting program, and therefore any nonpoint source reductions can be enforced against those responsible for the pollution only to the extent that a state institutes such reductions as regulatory requirements pursuant to state authority. *Pronsolino v. Marcus*, 91 F. Supp. 2d 1337, 1355-56 (N.D. Cal. 2000), *aff'd sub nom. *Prosolino v. Nastri*, 291 F.3d 1123 (9th Cir. 2002)*. [\*\*8]

## 4. California Water Quality Control Statutory and Regulatory Framework

California effectuates the foregoing requirements of the CWA primarily through institutions and procedures set out in certain provisions of the California Water Code (the "Water Code"), including those of the California Porter-Cologne Water Quality Control Act (the "Porter-Cologne Act"), Cal. Water Code § 13000 et seq. These Water Code provisions established the State Water Resources Control Board (the "State Board") within the California Environmental Protection Agency to formulate and adopt state policy for water quality control. Cal. Water Code §§ 174-186, 13100, 13140. The State Board is designated as the state water pollution control agency for all purposes stated in the CWA and is the agency authorized to exercise powers delegated to it under the CWA. 33 U.S.C. § 1313; Cal. Water Code § 13160.

The Porter-Cologne Act established nine California Regional Water Quality Control Boards (individually, a "Regional Board"; collectively, the "Regional Boards"), Cal. Water Code §§ 13200, 13201, which operate under the purview of the State Board, see *id.* § 13225. Each Regional [\*\*9] Board is comprised of nine members, *id.* § 13201, and is required to appoint an executive of-

ficer, *id.* § 13220(c), to whom the Regional Board may delegate all but some of its powers and duties, *id.* § 13223. Each Regional Board is required to formulate and adopt water quality control plans for all areas within the region. *Id.* § 13240. The State Board may approve such plan, or it may return it to the Regional Board for further submission and resubmission to the State Board. *Id.* § 13245. It must act on any water quality control plan within 60 days of a Regional Board's submission of such plan to the State Board, or 90 days after resubmission of such plan. *Id.* § 13246. A water quality control plan will not become effective unless and until it is approved by the State Board, followed by approval by the state's Office of Administrative Law ("OAL") in accordance with the appropriate procedures. [\*1146] *Id.* § 13245; Cal. Gov't Code §§ 11340.2, 11349.3, 11353(b)(5).

The State Board is required to formulate, adopt, and revise general procedures for the formulation, adoption, and implementation of water quality control plans by the Regional Boards. Cal. Water Code §13164. [\*110] The State Board may adopt water quality control plans for purposes of the CWA that include the regional water quality control plans submitted by the Regional Boards. *See id.* § 13170. Such plans, when adopted by the State Board, supersede any regional water quality control plans for the same waters to the extent of any conflict. *Id.*

## B. Factual Summary and Procedural History

### 1. The Consent Decree

The events underlying the instant action were set in motion by the disposition of *Heal the Bay, Inc., et al. v. Browner, et al.*, No. C 98-4825 SBA ("*Heal the Bay*"), an action previously before this Court. In *Heal the Bay*, an individual and two environmental groups (which groups are now two of the three Intervenor in the instant action) brought a civil action against EPA, the EPA Administrator, and the EPA Region IX Administrator. Their suit primarily concerned EPA's alleged failure to perform its alleged duty under the CWA either to approve or to disapprove TMDLs submitted to EPA by the state of California.

On March 23, 1999, the Court filed an Amended Consent Decree (the "Consent Decree")<sup>3</sup> in which "EPA agreed to ensure that a TMDL [would] [\*11] be completed for each and every pairing of a [Water Quality Limited Segment, as defined in 40 C.F.R. 130.2(j)], and an associated pollutant in the Los Angeles Region" set forth in an attachment to the Consent Decree by specified deadlines. (Consent Decree PP2a, 2b, 3, 3c.)<sup>4</sup> Pursuant to the Consent Decree, for each pairing EPA was required either to approve a TMDL submitted by California by a specified deadline or, if it did not approve a TMDL by the date specified, to establish a TMDL within one year of the deadline, unless California submitted and

EPA approved a TMDL prior to EPA's establishing the TMDL within the one-year period. (*Id.* P3a.) By March 24, 2002, EPA was required either to have approved a state-submitted TMDL for trash in the Los Angeles River or to have established the TMDL itself. (*Id.* PP2d, 3a; *id.* Att. 2, 3.)<sup>5</sup>

3 No original consent decree was entered. Rather, according to Defendants' representations in their opening brief, the Consent Decree incorporated amendments from an original proposal at the urging of proposed intervenors California Association of Sanitation Agencies and California Alliance of POTWs. (*See* Mot. to Dismiss at 6.)

[\*\*12]

4 The Court takes judicial notice of the existence of the Consent Decree and the contents thereof. *See, e.g., Egan v. Teets*, 251 F.2d 571, 577 n.10 (9th Cir. 1957) (holding that district court was entitled to take judicial notice of prior proceedings involving same petitioner before same district court). The Consent Decree is filed as Docket No. 25 in *Heal the Bay*, No. C 98-4825 SBA.

5 Defendants contend that the relevant deadline was March 22, 2002, (Mot. to Dismiss at 6), and Plaintiffs echo this contention in their Second Amended Complaint, (Second Am. Compl. P25). Review of the terms of the Consent Decree, however, reveal that the deadline was a different date. The Consent Decree defines "effective date" as the date on which the Consent Decree is entered. (*Id.* P2d.) Although the Court signed the Consent Decree on March 22, 1999, (*id.* at 29), it was not entered on the docket until March 24, 1999. Under the terms of Attachments 2 and 3 of the Consent Decree, TMDLs for trash for all Water Quality Limited Segments the Los Angeles River were to be submitted by California within two years of the effective date--March 24, 2001. (*Id.* Atts. 2, 3.) Since EPA was required to ensure that a TMDL was in place within one year of California's deadline to submit a proposed TMDL, (*id.* P3a), the deadline for final approval or establishment of a TMDL was March 24, 2002.

Nevertheless, based on the evidence tendered by EPA, it is clear that EPA believed that the deadline was March 22, 2002. (*See* Decl. of David W. Smith in Supp. of EPA's Mot. to Dismiss, Ex. B at 2.) As is evident from the discussion below, this discrepancy is immaterial to the Court's analysis of the merits of the Motion to Dismiss.

[\*\*13] [\*1147] **2. EPA's Issuance of TMDLs and Approval of State-submitted TMDLs**

One of the responsibilities of the Regional Board for the Los Angeles region (the "Los Angeles Regional Board") is to develop TMDLs under the CWA for waterbodies in Los Angeles and Ventura Counties. (Decl. of Dennis Dickerson in Supp. of EPA's Mot. to Dismiss (the "Dickerson Declaration") P2.) With few exceptions, TMDLs are developed as draft TMDLs by Los Angeles Regional Board staff and then submitted to the board to be adopted as amendments to the Los Angeles Regional Board's Water Quality Control Plan, which is known as the Basin Plan. (*Id.*) Basin Plan amendments are then submitted to the State Board, and then subsequently to the OAL; after they have been approved by both of these agencies, they are submitted to EPA. (*Id.*)

On September 19, 2001, the Los Angeles Regional Board adopted TMDLs for trash for the Los Angeles River watershed. (*Id.* P3.) "Trash" was defined as man-made litter, as defined in California Government Code § 68055.1(g). (*Id.* Ex. A at 2.) These TMDLs (the "State Trash TMDLs") were approved by the State Board on February 19, 2002, by OAL on July 16, 2002, and ultimately [\*\*14] by EPA by letter dated August 1, 2002. (*Id.* P3, Ex. C; Second Am. Compl. for Injunctive & Declaratory Relief ("SAC") PF27, 30.) Prior to its approval of the State Trash TMDLs, however, EPA issued its own TMDLs for trash for the Los Angeles River Basin (the "EPA Trash TMDLs") on March 19, 2002. (SAC P26; Decl. of David W. Smith in Supp. of EPA's Mot. to Dismiss (the "Smith Declaration") Ex. B.) The EPA's August 1, 2002, letter approving the State Trash TMDLs announced that they "superceded" the EPA Trash TMDLs. (SAC P31; Smith Decl. P7, Ex. C.)

**3. TMDLs Now in Effect and Implementation Provisions**

Under the provisions of the TMDLs now in effect--the State Trash TMDLs--the numeric target is zero trash in the Los Angeles River. (Dickerson Decl. Ex. A at 16, 29.) Based on this target, California has determined that the wasteload allocations for trash in the Los Angeles River also must be zero. (*Id.*)

To achieve this goal, California has provided, along with the State Trash TMDLs, implementation provisions that specify a phasing-in of progressive reductions in municipal stormwater wasteload allocations over a ten-year period, following completion of a two-year initial [\*\*15] baseline monitoring period. (*Id.* Ex. A at 21.) While the baseline monitoring program is taking place, cities will be deemed to be in compliance with the wasteload allocations provided that all of the trash that is collected during this period is disposed of in compliance with all applicable regulations. (*Id.* Ex. A at 27.) A base-

line monitoring report is due to the Los Angeles Regional Board by February 15, 2004. (*Id.* P6.)<sup>6</sup>

6 Plaintiffs have filed Plaintiffs' Objections to Declarations of David W. Smith and Dennis Dickerson Offered by Defendants in Support of Defendants' Motion to Dismiss Second Amended Complaint ("Plaintiffs' Objections"). Plaintiffs' Objections challenge the admissibility of, *inter alia*, the statements in paragraph 6 of the Dickerson Declaration. The Court considers and resolves the objections to these statements in note 20, *infra*. Although Plaintiffs have objected to all the statements in paragraph 6, careful review of the arguments advanced in these objections reveals that they are not in fact objecting to the statement in paragraph 6 that "the baseline monitoring report is due to the [Los Angeles] Regional Board by February 15, 2004." (Dickerson Decl. P6; *see* Pls.' Objections at 3-4.) To the extent that Plaintiffs are in fact objecting to this statement, however, the Court OVERRULES their objections to this statement for the reasons set forth in note 20, *infra*.

[\*\*16] [\*1148] The State Trash TMDLs and incremental wasteload allocations will be implemented through the Los Angeles stormwater permit, which the Los Angeles Regional Board will need to amend to incorporate specific, enforceable permit requirements. (*Id.* P8.)<sup>7</sup> The implementation provisions in the TMDLs allow permittees to "employ a variety of strategies to meet the progressive reductions in their Waste Load Allocations" and maintain that they "are free to implement trash reduction in any manner they choose." (*Id.* Ex. A at 29.) The wasteload reduction strategies are broadly classified as either end-of-pipe full capture structural controls, partial capture control systems, and/or institutional controls. (*Id.*) The provisions state that permittees will be deemed to be in compliance with the final wasteload allocation for their associated drainage areas if they utilize "full capture systems" that are adequately sized and maintained and maintenance records are available for inspection by the Los Angeles Regional Board. (*Id.* Ex. A at 30.)

7 Under heading II.2 of Plaintiffs' Objections, Plaintiffs object to the statements in paragraph 8 of the Dickerson Declaration relating to the Los Angeles Regional Board's understanding of how the State Trash TMDLs will be implemented. (Pls.' Objections at 4.) All of the grounds on which Plaintiffs object are meritless. First, Plaintiffs contend that the statements are objectionable as [HN1]"extra-record evidence." Such evidence, however, may be considered by the Court in

connection with a motion to dismiss for lack of subject matter jurisdiction. See *Ass'n of Am. Med. Colleges v. United States*, 217 F.3d 770, 778 (9th Cir. 2000). Since Defendants contend that Plaintiffs' challenges to the merits of EPA's approval of the State Trash TMDLs are unripe, and since the Court considers how these TMDLs will be implemented at least in part for this purpose, this evidence is properly before the Court. Second, Plaintiffs contend that the statements constitute inadmissible hearsay. These statements, however, do not contain or even implicitly rely on any out-of-court statement by one other than Mr. Dickerson for the truth of the matter stated.

Third, Plaintiffs claim that the statements lack foundation, although they do not explain what they mean by this. To the extent Plaintiffs are asserting that the declarant lacks personal knowledge of the Los Angeles Regional Board's intentions, that assertion is refuted by the fact that Mr. Dickerson has been Executive Officer of the board since 1997. (Dickerson Decl. P1.) Fourth, Plaintiffs insist that "the statements are objectionable and inadmissible as the best evidence of the implementation requirements vis-a-vis the TMDLs, is set forth in the TMDLs themselves, as well as in the terms of other enforceable documents, documenting the actions taken by the [Los Angeles] Regional Board, such as the terms of the Municipal Storm Water Permit referenced in the declaration." (Pls.' Objections at 4.) This objection misunderstands the nature of the "best evidence" rule: that rule applies *only* where the witness attempts to testify as to the *contents of a writing, recording, or photograph*. See *Fed. R. Evid. 1002*. Such is not the case here. Moreover, this objection reflects a fundamental misunderstanding of the nature of TMDLs. TMDLs are *not* self-executing; they require the appropriate state to issue regulations implementing them. It is also not clear what Plaintiffs mean by their assertion that documents "documenting the actions taken by the Regional Board" constitute "enforceable documents." Finally, Plaintiffs assail the statements at issue as "not competent." (*Id.*) Plaintiffs do not explain what they mean by this objection. The Court thus disregards it. Accordingly, the Court OVERRULES the objections under Heading II.2 of Plaintiffs' Objections.

[\*\*17] [\*1149] 4. *The Instant Action*

Plaintiffs filed their initial complaint on June 28, 2002, in the United States District Court for the Central District of California. On August 30, 2002, they filed an amended complaint. On October 30, 2002, the case was

transferred to this Court, the United States District Court for the Northern District of California. Pursuant to the parties' stipulation and the Court's Order thereon, Plaintiffs filed a Second Amended Complaint for Injunctive and Declaratory Relief (the "SAC" or "Complaint") on December 12, 2002.

The SAC is the operative complaint for purposes of the Motion to Dismiss and the Motion for Partial Summary Judgment. The SAC purports to assert three claims for relief. The First Claim for Relief is ostensibly brought pursuant to a provision of the Administrative Procedure Act (the "APA"), 5 U.S.C. § 706, (SAC at 34), although certain allegations thereunder also invoke the CWA, the Regulatory Flexibility Act (the "RFA"), and the Small Business Regulatory Enforcement Fairness Act of 1996 (the "SBREFA"), (*id.* PP84-85).<sup>8</sup> The First Claim for Relief alleges several violations of the APA: (1) EPA acted without authority [\*\*18] and acted arbitrarily and capriciously by establishing the EPA Trash TMDLs prior to receiving for review the State Trash TMDLs, (SAC PP78-79); (2) EPA acted without authority and arbitrarily and capriciously by reviewing and approving the State Trash TMDLs because EPA had already established the EPA Trash TMDLs, (*id.* PP80, 83); (3) EPA acted arbitrarily and capriciously and in excess of its jurisdiction with regard to the manner by which it established the EPA Trash TMDLs, (*id.* PP81-82); (4) the collective actions of California and EPA relating to issuance of the EPA Trash TMDLs and subsequent approval of the State Trash TMDLs constitute a "*de facto* TMDL procedure" that is arbitrary, capricious, and contrary to law, (*id.* PP84-86);<sup>9</sup> and (5) EPA acted arbitrarily and capriciously by approving the State Trash TMDLs because those TMDLs were "patently defective" and established not in accordance with the procedures of the CWA and California law, (*id.* P87).<sup>10</sup> The Second Claim for Relief challenges [\*1150] the validity of two alleged agency actions, the EPA Trash TMDLs and the "*de facto* TMDL procedure," under the APA, 5 U.S.C. § 551 *et seq.*; the [\*\*19] RFA, 5 U.S.C. § 601 *et seq.*; and the SBREFA, 5 U.S.C. § 801 *et seq.* (SAC at 40; *id.* PP89-99.) The violations alleged under the Second Claim for Relief, however, appear to relate mostly to procedural requirements under the RFA and the SBREFA. (See *id.* PP91-93, 95-98 (invoking 5 U.S.C. §§ 601(5), 601(6), 603, 604(a), 604(b), 605(b), and 611).) The Third Claim for Relief is derivative of the first two claims. It seeks a declaration under the Declaratory Judgment Act, 28 U.S.C. §§ 2201-2202, as to which party's interpretation of the law is correct and a judicial determination of Plaintiffs' rights and duties. (*Id.* PP100-105.)

<sup>8</sup> With respect to the First Claim for Relief, the SAC comes perilously close to violating Federal

Rule of Civil Procedure 8(a)'s mandate of providing "a *short and plain* statement of the claim showing that the pleader is entitled to relief...." Fed. R. Civ. P. 8(a) (emphasis added). In particular, Plaintiffs' practice of indicating that the First Claim for Relief is based exclusively on the APA, (SAC at 34), yet at the same time claiming in the allegations thereunder that the actions at issue violate other statutes, (*id.* PP84-85), is confusing. Aside from potentially misleading Defendants as to the nature of the claims against them, it has required the Court to spend needless additional time and effort scrutinizing the allegations of the SAC because the Court cannot trust the accuracy of the headings of the SAC. The practice is especially reprehensible because the Court has already been forced to spend undue time and effort identifying and parsing out the five independent, discrete claims for relief that are set out in stream-of-consciousness fashion in the allegations underlying the "First Claim for Relief"--which heading necessarily suggests a *single* claim. *See infra.*

[\*\*20]

9 This alleged *de facto* TMDL procedure is also claimed to violate the CWA, the RFA, and the SBREFA. (*Id.* PP84-85.)

10 Although not clearly stated, this last claim (claim (5)) within the First Claim for Relief appears to challenge the *merits* of EPA's approval of the State Trash TMDLs, as opposed to, for example, challenging EPA's authority to approve *any* state-submitted TMDLs after it issued the EPA Trash TMDLs, (*see id.* PP80, 83). Presumably, this last claim encompasses challenges to, for example, EPA's approval of the State Trash TMDLs where these TMDLs covered "unlisted" waters. (*See id.* PP42, 49, 62.) Defendants appear to have also construed this claim as challenging the merits of EPA's approval of the State Trash TMDLs, and they move to dismiss this claim as unripe. (*See Mot. to Dismiss at 20-24.*) Plaintiffs appear to concur in Defendants' construction of this claim. (*See Pls.' Opp. Br. at 16-20.*) Accordingly, the Court construes this last claim as challenging the merits of EPA's approval of the State Trash TMDLs.

11 This is yet another example of Plaintiffs' objectionable drafting of the SAC. In particular, the paragraph alleging improper agency action supposedly giving rise to the Second Claim for Relief, paragraph 96, identifies four bases on which the CWA, the APA, the RFA, and the SBREFA were violated. (*Id.* P96.) Of these four bases, however, only the first (denoted reason

"(a)") appears to have anything to do with the APA; the remaining three ("(b)," "(c)," and "(d)") appear to relate solely to provisions of the RFA and SBREFA, at least based on the allegations of the previous paragraphs under the heading "Second Claim for Relief." (*Id.*; compare *id.* (e.g., alleging that EPA failed to perform an initial screening of the EPA Trash TMDLs to determine whether they would have a significant economic impact on a substantial number of small entities) with *id.* PP91-93, 95 (e.g., alleging that RFA requires agencies to screen all proposed rules and identify whether such rules would have such an impact, (*id.* P92))).

The Court is thus left with the distinct impression that either Plaintiffs have been careless in drafting the Second Claim for Relief or they have invoked various statutes and inserted a number of allegations in scattershot fashion in the hope that something will slip by Defendants undetected and "stick." Aside from arguably violating Rule 8(a), this practice is unfair not only to Defendants, but also to the Court, because it makes the Court's resolution of Defendants' arguments considerably more difficult. (Nor is the Court interested in any supporting evidence or clarification from Plaintiffs' counsel regarding the nature of their claims that is not in the four corners of the SAC or incorporated therein by reference. The SAC speaks for itself on that score.) Based on its review of the SAC, the Court construes the allegations underlying the Second Claim for Relief as alleging violation of the APA, the RFA, and the SBREFA only with respect to EPA's alleged failure to provide Plaintiffs with notice and an opportunity for comment with regard to the *de facto* TMDL procedure, discussed *infra*, and the establishment of the EPA Trash TMDLs; the Court construes them to allege violation of the RFA and the SBREFA, but not the APA, with regard to the remaining allegations under the heading of "Second Claim for Relief." (*See SAC P96.*)

[\*\*21] On January 13, 2003, Defendants and Intervenors filed answers to the SAC. On that same day, Defendants also filed the instant Motion to Dismiss, which seeks dismissal of the entire action pursuant to Federal Rules of Civil Procedure 12(b)(1) and 12(b)(6). Intervenors filed Intervenors' Notice in Support of Defendants' Motion to Dismiss on February 3, 2003, indicating in brief fashion that they agreed with the arguments in the Motion to Dismiss and therefore supported the motion. On March 10, 2003, Plaintiffs filed their Motion for Partial Summary Judgment.

Most of the plaintiffs in the instant action are currently plaintiffs in a California state court action against the Los Angeles Regional Board and the State Board challenging the legality of the State Trash TMDLs. (*Id.* P33.) Three other lawsuits have similarly been filed challenging either [\*1151] California's establishment of the State Trash TMDLs or EPA's approval of the same. (*Id.*)

## II. LEGAL STANDARD

### A. Rule 12(b)(1)

[HN2]Federal Rule of Civil Procedure 12(b)(1) authorizes a party to seek dismissal of an action for lack of subject matter jurisdiction. "When subject matter jurisdiction is challenged under [\*\*22] Federal Rule of Procedure 12(b)(1), the plaintiff has the burden of proving jurisdiction in order to survive the motion." Tosco Corp. v. Communities for a Better Env't, 236 F.3d 495, 499 (9th Cir. 2001). "A plaintiff suing in a federal court must show in his pleading, affirmatively and distinctly, the existence of whatever is essential to federal jurisdiction, and, if he does not do so, the court, on having the defect called to its attention or on discovering the same, must dismiss the case, unless the defect be corrected by amendment." Id. (quoting Smith v. McCullough, 270 U.S. 456, 459, 70 L. Ed. 682, 46 S. Ct. 338 (1926)). In adjudicating such a motion, the court is not limited to the pleadings, and may properly consider extrinsic evidence. See Ass'n of Am. Med. Colleges v. United States, 217 F.3d 770, 778 (9th Cir. 2000). The court presumes lack of jurisdiction until the plaintiff proves otherwise. See Stock West, Inc. v. Confederated Tribes, 873 F.2d 1221, 1225 (9th Cir. 1989).

### B. Rule 12(b)(6)

[HN3]A motion to dismiss pursuant to Federal Rule of Civil Procedure 12(b)(6) tests the legal sufficiency of a claim. [\*\*23] Navarro v. Block, 250 F.3d 729, 731 (9th Cir. 2001). A motion to dismiss should not be granted "unless it appears beyond doubt that the plaintiff can prove no set of facts in support of his claim which would entitle him to relief." Conley v. Gibson, 355 U.S. 41, 45-46, 2 L. Ed. 2d 80, 78 S. Ct. 99 (1957); accord Johnson v. Knowles, 113 F.3d 1114, 1117 (9th Cir. 1997). The complaint is construed in the light most favorable to the plaintiff, and all properly pleaded factual allegations are taken as true. Jenkins v. McKeithen, 395 U.S. 411, 421, 23 L. Ed. 2d 404, 89 S. Ct. 1843 (1969); see also Everest & Jennings, Inc. v. Am. Motorists Ins. Co., 23 F.3d 226, 228 (9th Cir. 1994). "Dismissal is proper only where there is no cognizable legal theory or an absence of sufficient facts alleged to support a cognizable legal theory." Navarro, 250 F.3d at 731. In adjudicating a motion to dismiss, the court need not accept as

true unreasonable inferences or conclusory legal allegations cast in the form of factual allegations. W. Mining Council v. Watt, 643 F.2d 618, 624 (9th Cir. 1981). [\*\*24]

[HN4]When the complaint is dismissed for failure to state a claim, "leave to amend should be granted unless the court determines that the allegation of other facts consistent with the challenged pleading could not possibly cure the deficiency." Schreiber Distrib. Co. v. Serv-Well Furniture Co., 806 F.2d 1393, 1401 (9th Cir. 1986). Leave to amend is properly denied "where the amendment would be futile." DeSoto v. Yellow Freight Sys., Inc., 957 F.2d 655, 658 (9th Cir. 1992).

## III. DISCUSSION

Defendants have filed a Motion to Dismiss; Plaintiffs have filed a Motion for Partial Summary Judgment. The Motion for Partial Summary Judgment seeks adjudication of issues pertaining to Plaintiffs' challenge to the procedural legitimacy of the State Trash TMDLs. Because the Court grants the Motion to Dismiss (as discussed below), it does not reach the merits of the Motion for Partial Summary Judgment and therefore denies it as moot. Accordingly, the following discussion pertains [\*\*1152] only to the Motion to Dismiss, except where noted.

At the outset, the Court notes that it need not analyze all the arguments presented in Defendants' opening brief because Plaintiffs [\*\*25] concede that certain of their claims are moot. In particular, Defendants contend in their opening brief for the Motion to Dismiss that the EPA Trash TMDLs no longer have any force or effect because EPA has announced that the State Trash TMDLs "supercede" the EPA Trash TMDLs; consequently, Defendants maintain, Plaintiffs' claims that EPA lacked authority to establish the EPA Trash TMDLs, (SAC P78-79), and that the procedures by which EPA established them were unlawful, (*id.* PP81-82, 90, 94, 96-97, 99), are moot. (Mot. to Dismiss at 12-15.) In their opposition brief, Plaintiffs express satisfaction with Defendants' assurances that the EPA Trash TMDLs are no longer (and can never be) in effect and therefore "withdraw their claims directly challenging the validity of EPA's TMDLs . . ." (Pls.' Opp. Br. at 4 n.6.) Defendants acknowledge this withdrawal in their reply brief. (Defs.' Reply Br. at 1.) As a result, the Court GRANTS the Motion to Dismiss pursuant to Federal Rule of Civil Procedure 12(b)(1) with regard to claims (1) and (3) (SAC PP78-79 and SAC PP81-82, respectively) within the First Claim for Relief of the SAC identified in Part I.B.4 of this Order, *supra*. The Court [\*\*26] also GRANTS the Motion to Dismiss pursuant to Rule 12(b)(1) with regard to the Second Claim for Relief of the SAC to the extent it challenges the validity of the EPA Trash

TMDLs. (See SAC PP90, 94, 96-97, 99.) The Court now addresses the parties' arguments in relation to the remaining claims.

**A. Challenge to EPA's Authority to Approve the State Trash TMDLs**

Plaintiffs claim that EPA lacked authority to approve the State Trash TMDLs because it had already established the EPA Trash TMDLs. (SAC PP80, 83.) Defendants move to dismiss this claim pursuant to Rule 12(b)(6) for failure to state a claim upon which relief can be granted. (Mot. to Dismiss at 19-20.) Defendants contend that EPA in fact has a statutory *obligation* under 33 U.S.C. § 1313 to review any proposed TMDLs submitted by a state and either approve them or disapprove them. (*Id.*) Defendants assert that nothing in the CWA or otherwise divests EPA of jurisdiction to approve a state-submitted TMDL once EPA has issued its own TMDLs, and in fact, recognizing such a principle would thwart Congressional intent to vest states with the primary responsibility of implementing the CWA's provisions. [\*\*27] (*Id.* at 20.) Plaintiffs counter (in less than straightforward fashion) that by allowing California to submit the State Trash TMDLs to EPA after EPA established the EPA Trash TMDLs, EPA effectively "remanded" a "TMDL submission" to California, and EPA lacked authority to "remand" this submission and subsequently approve California's "resubmission." (See Pls.' Opp. Br. at 15-16.)<sup>12</sup>

12 Plaintiffs also argue that EPA lacked authority to approve the State Trash TMDLs because these TMDLs cover "unlisted" waters; according to Plaintiffs, EPA has authority only to approve TMDLs for "listed" waters. (*Id.* at 14-15.) As Defendants correctly point out, this argument goes to the merits of EPA's approval of the State Trash TMDLs, not to the issue of whether EPA had any authority to approve any state-submitted TMDLs after issuing its own TMDLs--the issue raised by this claim. (Defs.' Reply Br. at 10 n.9.) Plaintiffs' argument is relevant only to their own Motion for Partial Summary Judgment, not to the arguments raised in the Motion to Dismiss.

[\*\*28] Plaintiffs' counterargument is meritless. [HN5]No authority supports the conclusion that EPA lacks authority to approve [\*1153] state-submitted TMDLs after EPA has established its own TMDLs, nor does this conclusion logically follow from the proposition that EPA is required to approve or disapprove a state-submitted TMDL within 30 days of submission. Moreover, as Defendants astutely note, recognizing such a principle "would lead to absurd results. Under this scenario, once EPA establishes a TMDL, the State could

never update it or modify it based on changed circumstances." (Mot. to Dismiss at 20.) Finally, like Defendants, (see Defs.' Reply Br. at 10), the Court is at a loss to understand what Plaintiffs mean by their contention that EPA "remanded" the EPA Trash TMDLs to California for revision and resubmission. Nothing in the allegations of the Complaint remotely suggest any sort of sending back of TMDLs to California for revision or additional development. And even if there were such a "remand," it does not follow that EPA lacked authority to approve the State Trash TMDLs.

For these reasons, the Court GRANTS the Motion to Dismiss with respect to claim (2) within the First Claim for Relief, [\*\*29] (SAC PP80, 83), see *supra* Part I.B.4. Additionally, it is evident that Plaintiffs cannot amend the SAC to allege facts sufficient to rehabilitate this claim because it is meritless as a matter of law. Accordingly, this claim is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE.

**B. The "De Facto TMDL Procedure"**

Under claim (4) within their First Claim for Relief, see *supra* Part I.B.4, and the Second Claim for Relief, Plaintiffs challenge the "de facto TMDL procedure,"<sup>13</sup> which they consider to consist of:

the establishment by the [Los Angeles] Regional Board of the TMDL, followed by the preparation and notice of the TMDL by USEPA, followed by the approval of the TMDL by the State Board, followed by the "establishment" by USEPA of the EPA TMDL, followed by the determination by USEPA to review and/or approve the subsequently submitted State TMDL, and to thereafter find the USEPA established TMDL is "superceded" . . . .

(SAC P85.) Plaintiffs assert that this procedure violates the APA, the RFA, and the SBREFA. (*Id.* PP84-85, 96-98.) Plaintiffs allege not only that they have previously suffered from the effectuation of the *de facto* [\*\*30] TMDL procedure, but also that they will suffer from the effectuation of the procedure in the future. (See *id.* PP84-86.)

13 Plaintiffs do not expressly use the phrase "de facto TMDL procedure" in the SAC. Instead, they refer to this procedure as the "TMDL Procedure" and contend that EPA has effected a "de facto adoption" of the "TMDL Procedure." (SAC P85.) For ease of reference, the Court will refer to

what Plaintiffs call the "TMDL Procedure" as the "*de facto* TMDL procedure."

Defendants move to dismiss these claims by pointing out that the APA and the RFA, which was amended by the SBREFA, permit challenges *only* to "final agency action." (Mot. to Dismiss at 16-19.)<sup>14</sup> They explain that the APA defines [HN6]"agency action" to include "the whole or a part of any agency rule, order, license, sanction, relief, or the equivalent or denial thereof, or failure to act." (*Id.* at 16 (quoting 5 U.S.C. § 551(13).) (They do not indicate whether this definition applies to the RFA and [\*\*31] SBREFA as well.) Defendants assert that what Plaintiffs characterize as a *de* [\*1154] *facto* TMDL procedure is not an "agency action," much less a final agency action, but in fact a sequence of events; as such, they maintain, the procedure cannot give rise to a challenge under the APA or under the RFA, as amended by the SBREFA.

14 Defendants also contend that the RFA, as amended by the SBREFA, provides a narrow and exclusive means of judicial review that is not available here due to the nature of Plaintiffs' challenge to the *de facto* TMDL procedure. (*See id.* at 16.)

Plaintiffs respond to Defendants' arguments somewhat curiously. Despite vehemently asserting that Defendants' arguments are incorrect, they do not dispute that a challenge will lie only to final agency action. Instead, they contend that the *de facto* TMDL procedure "led up to and resulted in 'final agency action,'" (Pls.' Opp. Br. at 22), namely the August 1, 2002, approval of the State Trash TMDLs. Plaintiffs also argue at great length that [\*\*32] their challenge to this procedure is not moot because it falls under the "capable of repetition, yet evading review" exception to the mootness doctrine. (*Id.* at 22-25.)

Defendants' arguments are persuasive, and Plaintiffs' responses are both unconvincing and nonresponsive. As Defendants correctly note, (*see* Defs.' Reply Br. at 4-5), Plaintiffs' suggestion that they are challenging EPA's approval of the State Trash TMDLs, as opposed to the so-called "TMDL procedure," is belied by the allegations of the SAC: by their plain language, the allegations of paragraphs 84 through 86 and paragraphs 96 through 98 challenge the "TMDL procedure," (SAC 84-86, 96-98); Plaintiffs' challenge to EPA's approval of the State Trash TMDLs is set out in paragraph 87, (*see id.* P87), the justiciability of which challenge is discussed in Part III.C of this Order, *infra*. Plaintiffs do not demonstrate how the "procedure" is "the whole or a part of any agency rule, order, license, sanction, relief, or the equivalent or denial thereof, or failure to act" or falls within any other definition, statutory or otherwise, of final agency action.<sup>15</sup> In-

deed, as Defendants also correctly note, (*see* [\*\*33] Defs.' Reply Br. at 4-5), Plaintiffs' assertion that the TMDL procedure *consummated* in final agency action, namely EPA's approval of the State Trash TMDLs, is an implicit admission that the "procedure" itself is not final agency action. Nor do Plaintiffs make any effort to distinguish or refute any of the authorities cited by Defendants in support of their arguments. Finally, as Defendants yet again correctly point out, Plaintiffs' mootness argument is nonresponsive because Defendants do not contend that this claim is moot. (*Id.* at 8.)<sup>16</sup>

15 Even though the Court has not been able to locate a statutory definition of "agency action" for purposes of the RFA and SBREFA, Plaintiffs have put forward no argument to suggest that it should be given a meaning substantially different than that provided in the APA. The Court sees no reason to conclude that "agency action" should be given a significantly more expansive definition than that provided for purposes of the APA.

16 Plaintiffs do not respond to Defendants' argument that judicial review is unavailable under the RFA, as amended by the SBREFA, for alleged violations of 5 U.S.C. § 603. (Mot. to Dismiss at 18.) The Court agrees with Defendants that the implication of this lack of response is that any opposition to this argument is waived. (*See* Defs.' Reply Br. at 3-4.) The Court disagrees with Defendants, however, that Plaintiffs have failed to respond to Defendants' arguments that the *de facto* TMDL procedure does not constitute "final agency action" under the RFA, as amended by the SBREFA; but the Court finds their response to this argument meritless for the reasons stated above.

[\*\*34] In sum, it is apparent that the alleged *de facto* TMDL procedure, consisting of the various events identified in paragraph 85 of the SAC, is not subject to challenge under the APA, RFA, or SBREFA because it is not final agency action within the meaning of those statutes. *Cf. Lujan v. Nat'l Wildlife Fed'n*, 497 U.S. 871, 890, 111 L. Ed. 2d 695, 110 S. Ct. 3177 (1990) (rejecting challenge to alleged land withdrawal [\*\*1155] review program on grounds that alleged program was not final agency action within meaning of APA). Accordingly, the Court GRANTS Defendants' motion to dismiss pursuant to Federal Rule of Civil Procedure 12(b)(6) with respect to claim (4) within the First Claim for Relief, (SAC PP84-86). The Court also GRANTS Defendants' motion pursuant to Rule 12(b)(6) with regard to the Second Claim for Relief. Given that the Second Claim for Relief challenges the validity of the EPA Trash TMDLs and the alleged *de facto* TMDL procedure alone, and given that Plaintiffs have withdrawn their challenge to the validity

of the EPA Trash TMDLs, the Second Claim for Relief is now dismissed in its entirety.

It is further evident that Plaintiffs cannot amend the SAC to allege [\*\*35] facts sufficient to rehabilitate these claims because they are not actionable as a matter of law. Accordingly, both claim (4) within the First Claim for Relief and the Second Claim for Relief are DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE.

**C. Ripeness of Plaintiffs' Challenge to EPA's Approval of State Trash TMDLs**

Plaintiffs' remaining claim (aside from the Third Claim for Relief, which is dependent on the First and Second Claims for Relief) challenges the merits of EPA's approval of the State Trash TMDLs. (*See id.* P87.) Defendants move to dismiss this claim as unripe for judicial review. Specifically, Defendants contend that the issues are not yet sufficiently developed to be fit for judicial review under the APA because Plaintiffs' existing NPDES permit imposes no obligations on Plaintiffs in connection with the State Trash TMDLs and because the Los Angeles Regional Board intends to revisit these TMDLs at the end of the monitoring period. (Mot. to Dismiss at 21-23.) Defendants further contend that Plaintiffs will not suffer any immediate hardship if review is withheld because EPA's approval of the State Trash TMDLs imposes no present, affirmative duties on [\*\*36] Plaintiffs and requires no immediate changes in Plaintiffs' conduct. (*Id.* at 23-24.)

Plaintiffs respond by arguing that they have suffered "injury in fact," both economic and non-economic. (Pls.' Opp. Br. at 16-17.) Citing to the text of the State Trash TMDLs, a copy of which is appended to the Declaration of Richard Montevideo in Support of Plaintiffs' Motion for Summary Adjudication of Issues, and in Opposition to Defendants' Motion to Dismiss (the "Montevideo Declaration") as Exhibit 3, Plaintiffs claim that they are impacted by these TMDLs:

By the terms of the TMDL itself, most Plaintiffs are directly impacted by its terms and presently have express monitoring obligations to comply with, not to mention pending compliance dates requiring annual reductions in trash. Moreover, the TMDL calls out very specific and expensive implementation measures, including possible implementation through full capture vortex systems totaling \$ 109.3 million for all affected entities within the County [of Los Angeles] by the end of Year 1, and a total of \$ 2,053,100,000 for the first 12 years of im-

plementation. Even the Trash TMDL itself concludes that "Trash abatement in the Los Angeles [\*\*37] River system may be expensive."

(Pls.' Opp. Br. at 18 (citing Montevideo Decl., Ex. 3 (State Trash TMDLs)) (internal citations and emphasis omitted).) Similarly, Plaintiffs maintain that "to come into compliance by the Compliance Dates, [they] must begin employing strategies now to meet the progressive reductions in Waste Load Allocations required by the State Trash TMDL[s]." (*Id.* at 19.) [\*\*1156] Plaintiffs further allege that the NPDES permit that applies to all of Plaintiffs provides that the State Trash TMDLs are "effective and enforceable." (*Id.* at 18 (citing Montevideo Decl., Ex. 5, at 10 P14).) Citing paragraph 36 of the SAC, they also contend that they have suffered from the TMDLs' being in effect because they are exposed to "unwarranted enforcement action and third party citizen suits." (*Id.*) Finally, Plaintiffs contend that they have suffered "procedural injuries," to wit, their being "forced to submit comments to two different levels of government (the State of California and the EPA) on two sets of TMDL over a series of many months and several hearings." (*Id.* at 20.)

Defendants dispute all of Plaintiffs' arguments in their reply. Defendants note that [\*\*38] "Plaintiffs point to no present effect of the TMDLs on their day-to-day conduct." (Defs.' Reply Br. at 12.) They point out that, contrary to Plaintiffs' contention, Plaintiffs in fact have no monitoring obligations with which to comply because the Los Angeles County Department of Public Works has assumed that responsibility for all of Plaintiffs. (*Id.*) Defendants clarify that the first compliance date under the TMDLs is not until 2006, and the TMDLs identify several potential compliance options without mandating the use of any particular measure. (*Id.*) They further note that Plaintiffs fail to respond to the record evidence that the Los Angeles Regional Board will revisit the TMDLs at the conclusion of the monitoring period, that is, prior to the first compliance deadline, and that such reconsideration has been considered a rational basis for delaying judicial review. (*Id.* at 13 (citing Ohio Forestry Ass'n v. Sierra Club, 523 U.S. 726, 735, 140 L. Ed. 2d 921, 118 S. Ct. 1665 (1998), and Municipality of Anchorage v. United States, 980 F.2d 1320, 1323 (9th Cir. 1992)).) Finally, Defendants assail Plaintiffs' reliance on the aforementioned [\*\*39] statement in Plaintiffs' NPDES permit because this statement does not establish that the State Trash TMDLs are effective or enforceable against Plaintiffs. (*Id.*)

[HN7]The "ripeness doctrine is drawn both from Article III limitations on judicial power and from prudential

reasons for refusing to exercise jurisdiction." Reno v. Catholic Social Services, Inc., 509 U.S. 43, 57 n.18, 125 L. Ed. 2d 38, 113 S. Ct. 2485 (1993). Unripe claims are subject to dismissal for lack of subject matter jurisdiction. See Ass'n of Am. Med. Colleges v. United States, 217 F.3d 770, 784 n.9 (9th Cir. 2000). In determining whether a case is ripe for review, a court must consider two main issues: "the fitness of the issues for judicial decision" and "the hardship to the parties of withholding court consideration." Abbott Labs. v. Gardner, 387 U.S. 136, 149, 18 L. Ed. 2d 681, 87 S. Ct. 1507 (1967). To address these issues in the context of a challenge to the lawfulness of administrative action, the Supreme Court has identified three factors to consider: "(1) whether delayed review would cause hardship to the plaintiffs; (2) whether judicial intervention would inappropriately interfere with further [\*\*40] administrative action; and (3) whether the courts would benefit from further factual development of the issues presented." Ohio Forestry Ass'n, Inc. v. Sierra Club, 523 U.S. 726, 733, 140 L. Ed. 2d 921, 118 S. Ct. 1665 (1998).

In light of these three factors, the Court finds this claim unripe for review. First, delayed review would cause, at most, minimal hardship to the parties. Indeed, Plaintiffs have not demonstrated that they will suffer any hardship if review is delayed. Despite their preoccupation with various official pronouncements that the State Trash TMDLs are "effective" and "enforceable," Plaintiffs cannot point to a single future event or condition that is fairly certain to occur and will adversely [\*1157] impact Plaintiffs themselves. <sup>17</sup> That is because the TMDLs do not presently impose any obligations on Plaintiffs and because they are subject to revision before such obligations will be imposed. Nor do Plaintiffs provide any evidence or explanation whatever of the "unwarranted enforcement action and third party citizen suits" to which they claim to be exposed.

<sup>17</sup> The Court notes parenthetically that Plaintiffs' invocation of "injury in fact" in their opposition brief, (Pls.' Opp. Br. at 16-17), is inapposite. [HN8] Injury-in-fact is a concept that relates to the issue of standing, not ripeness. See Lujan v. Defenders of Wildlife, 504 U.S. 555, 560-61, 119 L. Ed. 2d 351, 112 S. Ct. 2130 (1992). Plaintiffs appear to confuse Defendants' arguments as relating to standing, not ripeness. (Pls.' Opp. Br. at 20 ("Federal courts have long recognized procedural injuries, as well as actual injuries, as an alternative basis for standing.")) Nevertheless, the Court construes Plaintiffs' allegations of "injury in fact" as allegations of hardship.

[\*\*41] Equally unsupported is Plaintiffs' contention that they will bear economic costs in complying with

the State Trash TMDLs. The sole evidentiary basis of this allegation, set out in paragraph 35 of the SAC and discussed more thoroughly in Plaintiffs' Opposition, is the estimates provided in the text of the TMDLs themselves. (See SAC P35; Pls.' Opp. Br. at 18.) But this matter is inadmissible hearsay because it is offered by an out-of-court declarant, *i.e.*, the Los Angeles Regional Board, for the truth of the matter stated, *i.e.*, that the TMDLs will in fact impose these costs. <sup>18</sup> Yet even if this evidence were admissible, it would be insufficient to support Plaintiffs' contention that they will suffer economic injury: the cited portions of the State Trash TMDLs provide estimates of costs to be borne by "permittees"; there is no indication that these costs will be borne by Plaintiffs in particular. (See Montevideo Decl., Ex. 3, at 37, 40, cited in Pls.' Opp. Br. at 18.) Similarly, Plaintiffs provide no evidentiary support for the bald contention in their opposition brief that Plaintiffs must begin employing "strategies" now to meet the progressive reductions [\*\*42] in wasteload allocations required by the State Trash TMDLs. (Pls.' Opp. Br. at 19.)

<sup>18</sup> The author of the State Trash TMDLs appears to be the Los Angeles Regional Board. (See Montevideo Decl., Ex. 3.) Since the Los Angeles Regional Board is an entity created by state law and is subordinate to a state agency, the State Board, the text of the State Trash TMDLs is arguably ascribable to the State Board and the state of California as well.

But these statements cannot be attributed to EPA by virtue of its approval of the State Trash TMDLs. Plaintiffs have laid no legal or evidentiary foundation tending to show that EPA's mere approval of the TMDLs themselves implies that EPA further agreed with or endorsed as accurate California's estimates of the costs of compliance provided with those TMDLs.

Even if Plaintiffs will be forced to comply with obligations imposed by the State Trash TMDLs and will suffer costs therefrom, the first Compliance Point is not until Year 3 of the implementation period, which runs [\*\*43] from October 1, 2005, to September 30, 2006. (See Montevideo Decl., Ex. 3, at 28.) Thus, as a practical matter, Plaintiffs have three years to reach the specified Compliance Point. They have "ample opportunity later to bring [their] legal challenge at a time when harm is more imminent and more certain." Ohio Forestry Ass'n, 523 U.S. at 734. Accordingly, Plaintiffs cannot be heard to complain that they will suffer hardship if review is withheld at the present time. <sup>19</sup>

<sup>19</sup> To the extent that Plaintiffs identify past events that are not alleged to recur in the future,

such as Plaintiffs' allegedly having to submit comments to two levels of government, for the purpose of demonstrating hardship, those events are irrelevant because Plaintiffs are solely seeking *prospective* relief (aside from attorney's fees and costs of suit).

[\*1158] Second, judicial intervention would likely interfere with further administrative action on the part of the state of California. Plaintiffs have not refuted Defendants' [\*\*44] evidence that the Los Angeles Regional Board will be revisiting the State Trash TMDLs at the end of the monitoring period.<sup>20</sup> It is thus possible that the compliance [\*1159] dates or compliance points will be altered or abolished altogether. The State Board may submit new TMDLs to EPA for review and potential approval well before the compliance dates in the State Trash TMDLs. And even if the State Trash TMDLs remain mostly intact, it is certainly possible that the State Board will approve additional regulations that alleviate much of the burden on Plaintiffs. Again, Plaintiffs must bear in mind that it is the state of California, not the federal government, that is charged with implementing the State Trash TMDLs.

20 Plaintiffs' Objections challenge the admissibility of, *inter alia*, the portion of Defendants' evidence tending to show that the Los Angeles Regional Board will be revisiting the State Trash TMDLs at the end of the monitoring period, namely relevant statements in paragraphs 6 and 12 of the Dickerson Declaration. (The statements in paragraph 7 of the Dickerson Declaration and Exhibit C thereto also constitute such evidence, (see Mot. to Dismiss at 22), although Plaintiffs do not object to those statements.)

Plaintiffs challenge the statements in paragraph 6 of the Dickerson Declaration on five grounds. First, Plaintiffs contend that these statements are irrelevant "to the issue in question." (Pls.' Objections at 3.) The Court is unclear about what Plaintiffs mean by "the issue in question," but at any rate, the Court overrules this objection because these statements are indeed relevant to an important issue relating to ripeness: whether the Los Angeles Regional Board will revisit the State Trash TMDLs at the end of the monitoring period. Second, Plaintiffs assert that the statements are inadmissible hearsay because they seek "to introduce statements from parties other than the declarant, into evidence." (*Id.*) This argument fails because the statements are not offered for the truth of the matter stated by persons or parties other than Mr. Dickerson. That the Los Angeles Regional Board's *discussed* (*i.e.*, verbal-

ly articulated) the possibility of reopening the TMDLs in the future does not implicate hearsay concerns, see *United States v. Ballis*, 28 F.3d 1399, 1405 (5th Cir. 1994); and the board's orders to its staff are more akin to written or verbal acts.

Third, Plaintiffs assail the statements as "incompetent" because "the opinions and views of individual Regional Board members is [*sic*] not relevant or admissible evidence of the actions or positions of the entire Board." (Pls.' Objections at 3 (emphasis omitted).) But nowhere are the "opinions and views" of the individual Regional Board members set out in the statements in paragraph 6. Fourth, Plaintiffs claim that these statements are "not the best evidence of the position of the entire Regional Board, as the views and positions of an entire Board can only be discerned from the meeting minutes and resolutions which confirm the actions of the public body." (*Id.* (emphasis omitted).) But the "views and positions" of the board are not set out therein. Fifth, Plaintiffs argue that the statements should be excluded as "extra-record evidence." This objection is meritless because the statements are relevant to the ripeness of Plaintiffs' challenge to EPA's approval of the State Trash TMDLs, and the Court may appropriately look beyond the pleadings in evaluating a motion to dismiss pursuant to Rule 12(b)(1).

In sum, Plaintiffs appear to have construed the statements in paragraph 6 of the Dickerson Declaration as stating that the Los Angeles Regional Board intends to *revise* the State Trash TMDLs after completion of the monitoring period, and they have evidently made their objections with this understanding in mind. Careful review of these statements reveals, however, that these statements demonstrate only that board staff have been ordered to report on the TMDLs and make recommendations on whether or not to revise the TMDLs based on the result of the monitoring. Thus, the import of the statements in paragraph 6 is that *the board will be in a position to revisit, and potentially reconsider, the TMDLs at the end of the monitoring period*, not that they have actually decided to revise the TMDLs. Accordingly, and for the reasons stated above, the Court **OVERRULES** the objections under heading II.1 in Plaintiffs' Objections.

Although Plaintiffs have objected to the admissibility of the statements in paragraph 12 of the Dickerson Declaration, the Court does not rely on those statements in evaluating issues of ripeness. The Court finds that the statements in

paragraphs 6 and 7 of the Dickerson Declaration are sufficient to support a conclusion that the Los Angeles Regional Board will be revisiting--which is not to be confused with an intent to revise--the State Trash TMDLs at the end of the monitoring period. Accordingly, the Court **OVERRULES AS MOOT** the objections under heading II.5 in Plaintiffs' Objections.

Finally, the Court has reviewed the remaining objections in Plaintiffs' Objections. The Court does not rely on any of the matter to which Plaintiffs have objected other than those under headings II.1 and II.2 in evaluating the Motion to Dismiss. Accordingly, the Court **OVERRULES AS MOOT** the remaining objections in Plaintiffs' Objections.

[\*\*45] Finally, the Court would benefit from further factual development of the issues presented. For example, Plaintiffs allege that in approving the State Trash TMDLs, EPA failed "to use 'best science' and [failed] to carefully consider suggestions on how to structure the TMDL program to be more effective and flexible to ensure workable solutions, with such failure resulting in an inequitable share of the burden [of pollution reduction] being placed on municipalities, such as Plaintiffs herein, to attain water quality standards." (SAC P47.) Since TMDLs are not self-executing, but require issuance of state regulations for implementation, delaying review will enable the Court to determine more easily and accurately whether the TMDL program could in fact have been structured more flexibly and whether Plaintiffs are bearing an inequitable share of the burden of pollution reduction.

In light of the Court's evaluation of the foregoing three factors, the Court concludes that Plaintiffs' claim is unripe for judicial review. Accordingly, Plaintiffs' claim (5) within the First Claim for Relief, (*id.* P87), is **DISMISSED** pursuant to Rule 12(b)(1) due to the Court's lack of subject matter jurisdiction. [\*\*46] Since the Court lacks jurisdiction over this claim, it lacks authority to grant Plaintiffs leave to amend the claim; accordingly, the claim is dismissed **WITHOUT LEAVE TO AMEND** in this action. Finally, because the Court necessarily does not reach the merits of the claim, the dismissal is **WITHOUT PREJUDICE**.

#### **D. Third Claim for Relief**

Plaintiffs' Third Claim for Relief is wholly predicated on their first two claims for relief. Because these two claims for relief are dismissed, the Third Claim for Relief is **DISMISSED** on the same bases, and to the same extent, as the two claims (and sub-claims thereunder) are dismissed.

#### **E. Motion for Partial Summary Judgment**

Plaintiffs' Motion for Partial Summary Judgment seeks summary judgment in Plaintiffs' favor on the issues of (1) whether Defendants had authority and jurisdiction to approve the State Trash TMDLs to the extent that they covered unlisted waters and (2) whether Defendants had authority and jurisdiction to approve the State Trash TMDLs given that they had previously established the EPA Trash TMDLs. For the reasons stated above, the Court grants the Motion to Dismiss. Accordingly, the Motion for Partial Summary Judgment [\*\*47] is **DE-NIED AS MOOT**. For the same reason, the Court **OVERRULES AS MOOT** Intervenor's Evidentiary Objections to Declaration of Richard Montevideo in Support of Plaintiffs' Motion for Summary Adjudication of Issues, and in Opposition to Defendants' Motion to Dismiss<sup>21</sup> and Plaintiffs' Objections to [\*\*1160] Declaration of Anjali I. Jaiswal and Exhibits.

21 Although the Montevideo Declaration relates both to Plaintiffs' opposition to the Motion to Dismiss and to Plaintiffs' Motion for Partial Summary Judgment, Intervenor's objections to the Montevideo Declaration are made in connection with their opposition to the Motion for Partial Summary Judgment. Accordingly, the Court considers their objections solely for that purpose.

#### **IV. CONCLUSION**

Plaintiffs have no reason or right to be before this Court, at least at this time. All of their claims are moot, meritless, or unripe. Plaintiffs' challenges to the EPA Trash TMDLs were quite obviously mooted out the minute that EPA approved the State Trash TMDLs. Indeed, given [\*\*48] that Plaintiffs readily withdrew these challenges based solely on Defendants' representations in their moving papers that the EPA Trash TMDLs are void, (Pls.' Opp. Br. at 4 n.6), the Court wonders why Plaintiffs proceeded to file a lawsuit on this basis. Plaintiffs' challenge to EPA's authority to approve the State Trash TMDLs following its establishment of the EPA Trash TMDLs and their challenge to the "*de facto* TMDL procedure" are so patently meritless that the Court fails to understand why Plaintiffs decided to assert these claims in the first place. Finally, Plaintiffs' challenges to the "merits" of the State Trash TMDLs may very well be valid, but in the absence of any indication that they will suffer imminent hardship, these claims are premature.

The Court does not suggest by any means that Plaintiffs have acted in bad faith by continuing to prosecute this action after EPA approved the State Trash TMDLs. But after receiving Defendants' opening brief for their Motion to Dismiss, Plaintiffs should have recognized

that their claims could not be maintained at present, if at all. The arguments in their opposition brief appear to reflect more of a "win at all costs" approach than [\*\*49] considered judgment. And while the Court does not doubt that Plaintiffs would appreciate a judicial declaration as to the validity of the State Trash TMDLs, the Court lacks jurisdiction to grant such relief where Plaintiffs are not in jeopardy of imminent harm and future events could obviate the controversy.

Accordingly,

IT IS HEREBY ORDERED THAT:

1. The Motion to Dismiss Second Amended Complaint [Docket No. 18] is GRANTED, such that:

a. The First Claim for Relief in the Second Amended Complaint for Injunctive and Declaratory Relief is DISMISSED, as follows:

i. The claim that EPA acted without authority and acted arbitrarily and capriciously by establishing the EPA Trash TMDLs prior to receiving for review the State Trash TMDLs, (SAC PP78-79), is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE as moot and, thus, for lack of subject matter jurisdiction;

ii. The claim that EPA acted without authority and arbitrarily and capriciously by reviewing and approving the State Trash TMDLs because EPA had already established the EPA Trash TMDLs, (SAC PP80, 83), is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE for failure to state a claim upon which relief [\*\*50] can be granted;

iii. The claim that EPA acted arbitrarily and capriciously and in excess

of its jurisdiction with regard to the manner by which it established the EPA Trash TMDLs, (SAC PP81-82), is DISMISSED WITHOUT LEAVE TO AMEND and [\*\*1161] WITH PREJUDICE as moot and, thus, for lack of subject matter jurisdiction;

iv. The claim that the collective actions of California and EPA relating to issuance of the EPA Trash TMDLs and subsequent approval of the State Trash TMDLs constitute a "*de facto* TMDL procedure" that is arbitrary, capricious, and contrary to law, (SAC PP84-86), is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE for failure to state a claim upon which relief can be granted;

v. The claim that EPA acted arbitrarily and capriciously by approving the State Trash TMDLs because those TMDLs were "patently defective" and established not in accordance with the procedures of the CWA and California law, (SAC P87), is DISMISSED WITHOUT LEAVE TO AMEND in this action and WITHOUT PREJUDICE as unripe and, thus, for lack of subject matter jurisdiction;

b. The Second Claim for Relief in the Second Amended Complaint for Injunctive and Declaratory Relief is DISMISSED, as [\*\*51] follows:

i. To the extent the Second Claim for Relief challenges the validity of the EPA Trash TMDLs, the claim is DISMISSED

WITHOUT LEAVE TO AMEND and WITH PREJUDICE as moot and, thus, for lack of subject matter jurisdiction;

ii. To the extent the Second Claim for Relief challenges the validity of the alleged *de facto* TMDL procedure, the claim is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE for failure to state a claim upon which relief can be granted;

c. The Third Claim for Relief in the Second Amended Complaint for Injunctive and Declaratory Relief is DISMISSED on the same bases, and to the same extent, as the First and Second Claims for Relief are dismissed, given that the Third Claim for Relief is derivative of the first two claims.

2. Plaintiffs' Motion for Summary Adjudication of Issues [Docket No. 28] is DENIED AS MOOT.

3. Plaintiffs' Objections to Declarations of David W. Smith and Dennis Dickerson Offered by Defendants in Support of Defendants' Motion to Dismiss Second Amended Complaint [Docket No. 31] are OVERRULED on the merits with respect to the objections under headings II.1 and II.2 therein and OVERRULED AS MOOT with respect [\*\*52] to all remaining objections.

4. Intervenor's Evidentiary Objections to Declaration of Richard Montevideo in Support of Plaintiffs' Motion for Summary Adjudication of Issues, and in Opposition to Defendants' Motion to Dismiss [Docket No. 43] are OVERRULED AS MOOT.

5. Plaintiffs' Objections to Declaration of Anjali I. Jaiswal and Exhibits

[Docket No. 47] are OVERRULED AS MOOT.

IT IS FURTHER ORDERED THAT this action is DISMISSED in its entirety. The Clerk shall enter judgment in favor of defendants accordingly. All deadlines and events presently calendared are VACATED. [\*1162] The Clerk shall close the file and terminate any pending matters.

IT IS SO ORDERED.

Dated: May 16, 2003

SAUNDRA BROWN ARMSTRONG

United States District Judge

#### JUDGMENT

In accordance with the Court's Order Granting Defendants' Motion to Dismiss, Denying as Moot Plaintiffs' Motion for Partial Summary Judgment, and Dismissing Action,

IT IS HEREBY ORDERED THAT judgment is entered in favor of defendants and defendants-intervenors, and against plaintiffs, on all of plaintiffs' claims for relief as follows:

1. The First Claim for Relief in the Second Amended Complaint for Injunctive and [\*\*53] Declaratory Relief ("SAC") is DISMISSED, such that:

a. The claim that EPA acted without authority and acted arbitrarily and capriciously by establishing the EPA Trash TMDLs prior to receiving for review the State Trash TMDLs, (SAC PP78-79), is DISMISSED WITH PREJUDICE;

b. The claim that EPA acted without authority and arbitrarily and capriciously by reviewing and approving the State Trash TMDLs because EPA had already established the EPA Trash TMDLs, (SAC PP80, 83), is DISMISSED WITH PREJUDICE;

c. The claim that EPA acted arbitrarily and capri-

ciously and in excess of its jurisdiction with regard to the manner by which it established the EPA Trash TMDLs, (SAC PP81-82), is DISMISSED WITH PREJUDICE;

d. The claim that the collective actions of California and EPA relating to issuance of the EPA Trash TMDLs and subsequent approval of the State Trash TMDLs constitute a "*de facto* TMDL procedure" that is arbitrary, capricious, and contrary to law, (SAC PP84-86), is DISMISSED WITH PREJUDICE;

e. The claim that EPA acted arbitrarily and capriciously by approving the State Trash TMDLs because those TMDLs were "patently defective" and established not in accordance [\*\*54] with the

procedures of the CWA and California law, (SAC P87), is DISMISSED WITHOUT PREJUDICE;

2. The Second Claim for Relief in the Second Amended Complaint for Injunctive and Declaratory Relief is DISMISSED WITH PREJUDICE in its entirety; and

3. The Third Claim for Relief in the Second Amended Complaint for Injunctive and Declaratory Relief is DISMISSED to the same extent as the First and Second Claims for Relief are dismissed.

IT IS SO ORDERED.

Dated: May 16, 2003

**UNITED STATES COURT OF APPEALS FOR THE NINTH CIRCUIT**

191 F.3d 1159; 1999 U.S. App. LEXIS 22212; 99 Cal. Daily Op. Service 7618; 99 Daily Journal DAR 9661; 30 ELR 20116

August 11, 1999, Argued and Submitted, San Francisco, California  
September 15, 1999, Filed

**SUBSEQUENT HISTORY:**    [\*\*1] As Amended  
December 7, 1999.

**PRIOR HISTORY:**    Petition to Review a Decision  
of the Environmental Protection Agency. EPA No. 97-3.

**DISPOSITION:**    PETITION DENIED.

**CASE SUMMARY:**

**PROCEDURAL POSTURE:** Petitioners appealed decision of the Environmental Appeals Board denying reconsideration of the Environmental Protection Agency's decision issuing five municipalities National Pollution Discharge System permits, without requiring numeric limitations to ensure compliance with state water-quality standards.

**OVERVIEW:** The Environmental Protection Agency (EPA) issued permits to municipalities without requiring limitations on storm-sewer discharges. Petitioners alleged that the Water Quality Act (WQA), 33 U.S.C.S. § 1311(b)(1)(C), required municipalities to strictly comply with state water-quality standards. Court concluded that EPA's decision was not arbitrary or capricious. Court determined that WQA unambiguously expressed Congress' intent that municipal storm-sewer discharges did not have to strictly comply with WQA. Congress expressly put in provision for industrial storm-water dis-

charges requiring compliance with WQA, but there was no similar provision in WQA for municipal storm-sewer discharges. The plain language of WQA thus exempted municipal storm-sewer discharges from strict compliance. Court found other provisions in WQA excluded certain discharges from permit altogether. Based on that fact, court concluded exemption of municipal storm-sewer discharges from strict compliance with WQA was not so unusual that the court should not interpret the statute as written.

**OUTCOME:** Court denied petition for reconsideration, because Environmental Protection Agency did not act arbitrarily or capriciously in issuing permits. In examining Water Quality Act, court determined that it was Congress' specific intent to exempt municipal storm-sewer discharges from strict compliance with the statute.

**CORE TERMS:** municipal, water quality, storm, water-quality, industrial, pollutant, administrator, storm-sewer, strict compliance, storm-water, environmental, quotation marks omitted, unambiguously, numeric, storm sewers, practicable, dischargers, effluent, entity, exempt, statutory construction, engineering, capricious, stringent, maximum, runoff, Clean Water Act, decision to issue, permit requirements, ensure compliance

LexisNexis(R) Headnotes

*Environmental Law > Water Quality > Clean Water Act  
> Discharge Permits > Public Participation*

[HN1] 26 U.S.C.S. § 1342(a)(1) authorizes the Environmental Protection Agency to issue National Pollution Discharge Elimination System permits, thereby allowing entities to discharge some pollutants.

*Administrative Law > Judicial Review > Reviewability  
> Standing*

*Civil Procedure > Justiciability > General Overview*

*Environmental Law > Litigation & Administrative  
Proceedings > Judicial Review*

[HN2] 33 U.S.C.S. § 1369(b)(1)(F) authorizes any interested person to seek review in court of an Environmental Protection Agency decision issuing or denying any permit under 26 U.S.C.S. § 1342(a)(1). Any interested person means any person that satisfies the injury-in-fact requirement for U.S. Const. art. III standing.

*Environmental Law > Litigation & Administrative  
Proceedings > Nuisances, Trespasses & Strict Liability*

[HN3] A plaintiff claiming injury from environmental damage must use the area affected by the challenged activity.

*Administrative Law > Judicial Review > Standards of  
Review > Abuse of Discretion*

*Administrative Law > Judicial Review > Standards of  
Review > Arbitrary & Capricious Review*

*Environmental Law > Litigation & Administrative  
Proceedings > Judicial Review*

[HN4] The Administrative Procedures Act, 5 U.S.C.S. § 701, et seq., provides the standard of review for the Environmental Protection Agency's decision to issue a permit. Under the Administrative Procedures Act, the court generally reviews such a decision to determine whether it was arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law.

*Administrative Law > Agency Rulemaking > Rule Ap-  
plication & Interpretation > Validity*

*Administrative Law > Judicial Review > Standards of  
Review > General Overview*

*Governments > Legislation > Interpretation*

[HN5] The court has established a two-step process for reviewing an agency's construction of a statute it administers. Under the first step, the court employs traditional tools of statutory construction to determine whether

Congress has expressed its intent unambiguously on the question before the court. If the intent of Congress is clear, that is the end of the matter; for the court, as well as the agency, must give effect to the unambiguously expressed intent of Congress. If, instead, Congress has left a gap for the administrative agency to fill, the court proceeds to step two. At step two, the court must uphold the administrative regulation unless it is arbitrary, capricious, or manifestly contrary to the statute.

*Environmental Law > Water Quality > Clean Water Act  
> Coverage & Definitions > Discharges*

*Environmental Law > Water Quality > Clean Water Act  
> Discharge Permits > Effluent Limitations*

[HN6] The Clean Water Act, 33 U.S.C.S. § 1251, et seq., generally prohibits the discharge of any pollutant from a point source into the navigable waters of the United States. An entity can, however, obtain a National Pollution Discharge Elimination System permit that allows for the discharge of some pollutants.

*Environmental Law > Water Quality > Clean Water Act  
> Discharge Permits > Effluent Limitations*

*Environmental Law > Water Quality > Clean Water Act  
> Water Quality Standards*

[HN7] A National Pollution Discharge Elimination System permit imposes effluent limitations on discharges. First, a permit-holder shall achieve effluent limitations which shall require the application of the best practicable control technology currently available. Second, a permit-holder shall achieve any more stringent limitation, including those necessary to meet water quality standards, treatment standards or schedules of compliance, established pursuant to any state law or regulations.

*Environmental Law > Water Quality > Clean Water Act  
> Discharge Permits > Storm Water Discharges*

[HN8] See 33 U.S.C.S. § 1342(p)(3).

*Governments > Legislation > Interpretation*

[HN9] Questions of congressional intent that can be answered with traditional tools of statutory construction are still firmly within the province of the courts. Using traditional tools of statutory construction, when interpreting a statute, the court looks first to the words that Congress used. Rather than focusing just on the word or phrase at issue, the court looks to the entire statute to determine congressional intent.

*Governments > Legislation > Interpretation*

[HN10]Where Congress includes particular language in one section of a statute but omits it in another section of the same Act, it is generally presumed that Congress acts intentionally and purposely in the disparate inclusion or exclusion.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges Governments > Legislation > Interpretation*

[HN11]The court generally refuses to interpret a statute in a way that renders a provision superfluous.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges Governments > Local Governments > Licenses*

[HN12]The Water Quality Act contains other provisions that undeniably exempt certain discharges from the permit requirement altogether, and therefore from 33 U.S.C.S. § 1311. For example, the Administrator shall not require a permit under this section for discharges composed entirely of return flows from irrigated agriculture. 33 U.S.C.S. § 1342(1)(1). Similarly, a permit is not required for certain storm-water runoff from oil, gas, and mining operations. See 33 U.S.C.S. § 1342(1)(2).

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges*

[HN13]Congress gave the administrator discretion to determine what controls are necessary. Under that discretionary provision, the Environmental Protection Agency (EPA) has the authority to determine that ensuring strict compliance with state water-quality standards is necessary to control pollutants. The EPA also has the authority to require less than strict compliance with state water-quality standards. The EPA has adopted an interim approach, which uses best management practices (BMPs) in first-round storm water permits to provide for the attainment of water quality standards.

**COUNSEL:** Jennifer Anderson and David Baron, Arizona Center for Law in the Public Interest, Phoenix, Arizona, for the petitioners.

Alan Greenberg, Attorney, U.S. Department of Justice, Environment & Natural Resources Division, Denver, Colorado, for the respondent.

Craig Reece, Phoenix City Attorney's Office, Phoenix, Arizona; Stephen J. Burg, Mesa City Attorney's Office, Mesa, Arizona; Timothy Harrison, Tucson City Attor-

ney's Office, Tucson, Arizona; and Harlan C. Agnew, Deputy County Attorney, Tucson, Arizona, for the intervenors-respondents.

David Burchmore, Squire, Sanders & Dempsey, Cleveland, Ohio, for the amici curiae.

**JUDGES:** Before: John T. Noonan, David R. Thompson, and Susan P. Graber, Circuit Judges. Opinion by Judge Graber.

**OPINION BY: SUSAN P. GRABER**

**OPINION**

[\*1161] AMENDED OPINION

GRABER, Circuit Judge:

Petitioners challenge the Environmental Protection Agency's (EPA) decision to issue National Pollution Discharge Elimination System (NPDES) permits to five municipalities, for their separate storm sewers, without requiring numeric limitations [\*\*2] to ensure compliance with state water-quality standards. Petitioners sought administrative review of the decision within the EPA, which the Environmental Appeals Board (EAB) denied. This timely petition for review ensued. For the reasons that follow, we deny the petition.

**FACTUAL AND PROCEDURAL BACKGROUND**

Title [HN1] 26 U.S.C. § 1342(a)(1) authorizes the EPA to issue NPDES permits, thereby allowing entities to discharge some pollutants. In 1992 and 1993, the cities of Tempe, Tucson, Mesa, and Phoenix, Arizona, and Pima County, Arizona (Intervenors), submitted applications for NPDES permits. The EPA prepared draft permits for public comment; those draft permits did not attempt to ensure compliance with Arizona's water-quality standards.

Petitioner Defenders of Wildlife objected to the permits, arguing that they must contain numeric limitations to ensure strict compliance with state water-quality standards. The State of Arizona also objected.

Thereafter, the EPA added new requirements:

To ensure that the permittee's activities achieve timely compliance with applicable water quality standards (Arizona Administrative Code, Title 18, Chapter 11, Article 1), the [\*\*3] permittee shall implement the [Storm Water Management Program], monitoring, reporting and other requirements of this permit in accordance with the time frames established in the

[Storm Water Management Program] referenced in Part I.A.2, and elsewhere in the permit. This timely implementation of the requirements of this permit shall constitute a schedule of compliance authorized by Arizona Administrative Code, section R18-11-121(C).

The Storm Water Management Program included a number of structural environmental controls, such as storm-water detention basins, retention basins, and infiltration ponds. It also included programs to remove illegal discharges.

With the inclusion of those "best management practices," the EPA determined that the permits ensured compliance with state water-quality standards. The Arizona Department of Environmental Quality agreed:

The Department has reviewed the referenced municipal NPDES storm-water permit pursuant to Section 401 of the Federal Clean Water Act to ensure compliance with State water quality standards. We have determined that, based on the information provided in the permit, and the fact sheet, adherence to provisions and [\*\*4] requirements set forth in the final municipal permit, will protect the water quality of the receiving water.

On February 14, 1997, the EPA issued final NPDES permits to Intervenor. Within 30 days of that decision, Petitioners requested an evidentiary hearing with the regional administrator. See 40 C.F.R. § 124.74. Although Petitioners requested a hearing, they conceded that they raised only a legal issue and that a hearing was, in fact, unnecessary. Specifically, Petitioners raised only the legal question whether the Clean Water Act (CWA) requires numeric limitations to ensure strict compliance with state water-quality standards; they did not raise the factual question whether the management practices that the EPA chose would be effective.

[\*1162] On June 16, 1997, the regional administrator summarily denied Petitioners' request. Petitioners then filed a petition for review with the EAB. See 40 C.F.R. § 124.91(a). On May 21, 1998, the EAB denied the petition, holding that the permits need not contain numeric limitations to ensure strict compliance with state water-quality standards. Petitioners then moved for reconsideration, see 40 C.F.R. § 124.91(i), which the EAB denied.

#### [\*\*5] JURISDICTION

[HN2] Title 33 U.S.C. § 1369(b)(1)(F) authorizes "any interested person" to seek review in this court of an EPA decision "issuing or denying any permit under section 1342 of this title." "Any interested person" means any person that satisfies the injury-in-fact requirement for Article III standing. See *Natural Resources Defense Council, Inc. v. EPA*, 966 F.2d 1292, 1297 (9th Cir. 1992) [NRDC II]. It is undisputed that Petitioners satisfy that requirement. Petitioners allege that "members of Defenders and the Club use and enjoy ecosystems affected by storm water discharges and sources thereof governed by the above-referenced permits," and no other party disputes those facts. See *Lujan v. Defenders of Wildlife*, 504 U.S. 555, 565-66, 119 L. Ed. 2d 351, 112 S. Ct. 2130 (1992) [HN3] ("[A] plaintiff claiming injury from environmental damage must use the area affected by the challenged activity."); see also *NRDC II*, 966 F.2d at 1297 ("NRDC claims, inter alia, that [the] EPA has delayed unlawfully promulgation of storm water regulations and that its regulations, as published, inadequately control storm water [\*\*6] contaminants. NRDC's allegations . . . satisfy the broad standing requirement applicable here.").

Intervenors argue, however, that they were not parties when this action was filed and that this court cannot redress Petitioners' injury without them. Their real contention appears to be that they are indispensable parties under *Federal Rule of Civil Procedure 19*. We need not consider that contention, however, because in fact Intervenor has been permitted to intervene in this action and to present their position fully. In the circumstances, Intervenor has suffered no injury.

#### DISCUSSION

##### A. Standard of Review

[HN4] The Administrative Procedures Act (APA), 5 U.S.C. §§ 701-06, provides our standard of review for the EPA's decision to issue a permit. See *American Mining Congress v. EPA*, 965 F.2d 759, 763 (9th Cir. 1992). Under the APA, we generally review such a decision to determine whether it was "arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law." 5 U.S.C. § 706(2)(A).

On questions of statutory interpretation, we follow the approach from *Chevron U.S.A. Inc. v. Natural Resources Defense Council, Inc.*, 467 U.S. 837, 81 L. Ed. 2d 694, 104 S. Ct. 2778 (1984). [\*\*7] See *NRDC II*, 966 F.2d at 1297 (so holding). In *Chevron*, 467 U.S. at 842-44, the Supreme Court devised a two-step process for reviewing an administrative agency's interpretation of a statute that it administers. See also *Bicycle Trails Council of Marin v. Babbitt*, 82 F.3d 1445, 1452 (9th Cir.

1996) ("The [HN5]Supreme Court has established a two-step process for reviewing an agency's construction of a statute it administers."). Under the first step, we employ "traditional tools of statutory construction" to determine whether Congress has expressed its intent unambiguously on the question before the court. Chevron, 467 U.S. at 843 n.9. "If the intent of Congress is clear, that is the end of the matter; for the court, as well as the agency, must give effect to the unambiguously expressed intent of Congress." *Id.* at 842-43 (footnote omitted). If, instead, Congress has left a gap for the administrative agency to fill, we proceed to step two. *See id.* at 843. At step two, we must uphold the administrative regulation unless it is "arbitrary, capricious, or manifestly contrary to the statute." *Id.* at 844.

[\*\*8] [\*1163] B. Background

[HN6]The CWA generally prohibits the "discharge of any pollutant," 33 U.S.C. § 1311(a), from a "point source" into the navigable waters of the United States. *See* 33 U.S.C. § 1362(12)(A). An entity can, however, obtain an NPDES permit that allows for the discharge of some pollutants. *See* 33 U.S.C. § 1342(a)(1).

[HN7]Ordinarily, an NPDES permit imposes effluent limitations on such discharges. *See* 33 U.S.C. § 1342(a)(1) (incorporating effluent limitations found in 33 U.S.C. § 1311). First, a permit-holder "shall . . . achieve . . . effluent limitations . . . which shall require the application of the best practicable control technology [BPT] currently available." 33 U.S.C. § 1311(b)(1)(A). Second, a permit-holder "shall . . . achieve . . . any more stringent limitation, including those necessary to meet water quality standards, treatment standards or schedules of compliance, established pursuant to any State law or regulations (under authority preserved by section 1370 of this title)." 33 U.S.C. § 1311 [\*\*9] (b)(1)(C) (emphasis added). Thus, although the BPT requirement takes into account issues of practicability, *see Rybachek v. EPA*, 904 F.2d 1276, 1289 (9th Cir. 1990), the EPA also "is under a specific obligation to require that level of effluent control which is needed to implement existing water quality standards without regard to the limits of practicability," *Oklahoma v. EPA*, 908 F.2d 595, 613 (10th Cir. 1990) (internal quotation marks omitted), *rev'd on other grounds sub nom. Arkansas v. Oklahoma*, 503 U.S. 91, 117 L. Ed. 2d 239, 112 S. Ct. 1046 (1992). *See also Ackels v. EPA*, 7 F.3d 862, 865-66 (9th Cir. 1993) (similar).

The EPA's treatment of storm-water discharges has been the subject of much debate. Initially, the EPA determined that such discharges generally were exempt from the requirements of the CWA (at least when they were uncontaminated by any industrial or commercial activity). *See* 40 C.F.R. § 125.4 (1975).

The Court of Appeals for the District of Columbia, however, invalidated that regulation, holding that "the EPA Administrator does not have authority to exempt categories of point sources from [\*\*10] the permit requirements of § 402 [33 U.S.C. § 1342]." *Natural Resources Defense Council, Inc. v. Costle*, 186 U.S. App. D.C. 147, 568 F.2d 1369, 1377 (D.C. Cir. 1977). "Following this decision, [the] EPA issued proposed and final rules covering storm water discharges in 1980, 1982, 1984, 1985 and 1988. These rules were challenged at the administrative level and in the courts." *American Mining Congress*, 965 F.2d at 763.

Ultimately, in 1987, Congress enacted the Water Quality Act amendments to the CWA. *See NRDC II*, 966 F.2d at 1296 ("Recognizing both the environmental threat posed by storm water runoff and [the] EPA's problems in implementing regulations, Congress passed the Water Quality Act of 1987 containing amendments to the CWA.") (footnotes omitted). Under the Water Quality Act, from 1987 until 1994, most entities discharging storm water did not need to obtain a permit. *See* 33 U.S.C. § 1342(p).

1 As enacted, the Water Quality Act extended the exemption to October 1, 1992. Congress later amended the Act to change that date to October 1, 1994. *See* Pub. L. No. 102-580.

[\*\*11] Although the Water Quality Act generally did not require entities discharging storm water to obtain a permit, it did require such a permit for discharges "with respect to which a permit has been issued under this section before February 4, 1987," 33 U.S.C. § 1342(p)(2)(A); discharges "associated with industrial activity," 33 U.S.C. § 1342(p)(2)(B); discharges from a "municipal separate sewer system serving a population of [100,000] or more," 33 U.S.C. § 1342(p)(2)(C) & (D); and "[a] discharge for which the Administrator . . . determines that the stormwater discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States," 33 U.S.C. § 1342(p)(2)(E).

[\*1164] When a permit is required for the discharge of storm water, the Water Quality Act sets two different standards:

(A) Industrial discharges

Permits for discharges associated with industrial activity shall meet all applicable provisions of this section and section 1311 of this title.

(B) Municipal discharge

Permits for discharges from municipal **[\*\*12]** storm sewers -

(i) may be issued on a system- or jurisdiction-wide basis;

(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator . . . determines appropriate for the control of such pollutants.

[HN8] 33 U.S.C. § 1342(p)(3) (emphasis added).

#### C. Application of Chevron

The EPA and Petitioners argue that the Water Quality Act is ambiguous regarding whether Congress intended for municipalities to comply strictly with state water-quality standards, under 33 U.S.C. § 1311(b)(1)(C). Accordingly, they argue that we must proceed to step two of *Chevron* and defer to the EPA's interpretation that the statute does require strict compliance. See *Zimmerman v. Oregon Dep't of Justice*, 170 F.3d 1169, 1173 (9th Cir. 1999) ("At step two, we must uphold the administrative regulation unless it is arbitrary, capricious, or **[\*\*13]** manifestly contrary to the statute.") (citation and internal quotation marks omitted), *petition for cert. filed*, No. 99-243 (Aug. 10, 1999).

Intervenors and *amici*, on the other hand, argue that the Water Quality Act expresses Congress' intent unambiguously and, thus, that we must stop at step one of *Chevron*. See, e.g., *National Credit Union Admin. v. First Nat'l Bank & Trust Co.*, 522 U.S. 479, 118 S. Ct. 927, 938-39, 140 L. Ed. 2d 1 (1998) ("Because we conclude that Congress has made it clear that the same common bond of occupation must unite each member of an occupationally defined federal credit union, we hold that the NCUA's contrary interpretation is impermissible under the first step of *Chevron*."). (emphasis in original); *Sierra Club v. EPA*, 118 F.3d 1324, 1327 (9th Cir. 1997) ("Congress has spoken clearly on the subject and the regulation violates the provisions of the statute. Our inquiry ends at the first prong of *Chevron*."). We agree with Intervenors and *amici*: For the reasons discussed below, the Water Quality Act unambiguously demonstrates that Congress did not require municipal storm-sewer discharges to comply **[\*\*14]** strictly with

33 U.S.C. § 1311(b)(1)(C). That being so, we end our inquiry at the first step of the *Chevron* analysis.

"Questions [HN9] of congressional intent that can be answered with 'traditional tools of statutory construction' are still firmly within the province of the courts" under *Chevron*. *NRDC II*, 966 F.2d at 1297 (citation omitted). "Using our 'traditional tools of statutory construction,' *Chevron*, 467 U.S. at 843 n.9, 104 S. Ct. 2778, when interpreting a statute, we look first to the words that Congress used." *Zimmerman*, 170 F.3d at 1173 (alterations, citations, and internal quotation marks omitted). "Rather than focusing just on the word or phrase at issue, we look to the entire statute to determine Congressional intent." *Id.* (alterations, citations, and internal quotation marks omitted).

As is apparent, Congress expressly required industrial storm-water discharges to comply with the requirements of 33 U.S.C. § 1311. See 33 U.S.C. § 1342(p)(3)(A) ("Permits for discharges associated with industrial activity shall meet all applicable **[\*\*15]** provisions of this section and section 1311 of this title.") (emphasis added). By incorporation, then, industrial **[\*1165]** storm-water discharges "shall . . . achieve . . . any more stringent limitation, including those necessary to meet water quality standards, treatment standards or schedules of compliance, established pursuant to any State law or regulation (under authority preserved by section 1370 of this title)." 33 U.S.C. § 1311(b)(1)(C) (emphasis added); see also Sally A. Longroy, *The Regulation of Storm Water Runoff and its Impact on Aviation*, 58 J. Air. L. & Com. 555, 565-66 (1993) ("Congress further singled out industrial storm water dischargers, all of which are on the high-priority schedule, and requires them to satisfy all provisions of section 301 of the CWA [33 U.S.C. § 1311]. . . . Section 301 further mandates that NPDES permits include requirements that receiving waters meet water quality based standards.") (emphasis added). In other words, industrial discharges must comply strictly with state water-quality standards.

Congress chose not to include a similar provision for municipal **[\*\*16]** storm-sewer discharges. Instead, Congress required municipal storm-sewer discharges "to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator . . . determines appropriate for the control of such pollutants." 33 U.S.C. § 1342(p)(3)(B)(iii).

The EPA and Petitioners argue that the difference in wording between the two provisions demonstrates ambiguity. That argument ignores precedent respecting the reading of statutes. Ordinarily, "where [HN10] Congress includes particular language in one section of a statute

but omits it in another section of the same Act, it is generally presumed that Congress acts intentionally and purposely in the disparate inclusion or exclusion." *Russello v. United States*, 464 U.S. 16, 23, 78 L. Ed. 2d 17, 104 S. Ct. 296 (1983) (citation and internal quotation marks omitted); see also *United States v. Hanousek*, 176 F.3d 1116, 1121 (9th Cir. 1999) (stating the same principle), petition for cert. filed, No. 98-323 (Aug. 23, 1999). Applying that familiar [\*\*17] and logical principle, we conclude that Congress' choice to require industrial storm-water discharges to comply with 33 U.S.C. § 1311, but not to include the same requirement for municipal discharges, must be given effect. When we read the two related sections together, we conclude that 33 U.S.C. § 1342(p)(3)(B)(iii) does not require municipal storm-sewer discharges to comply strictly with 33 U.S.C. § 1311(b)(1)(C).

Application of that principle is significantly strengthened here, because 33 U.S.C. § 1342(p)(3)(B) is not merely silent regarding whether municipal discharges must comply with 33 U.S.C. § 1311. Instead, § 1342(p)(3)(B)(iii) replaces the requirements of § 1311 with the requirement that municipal storm-sewer dischargers "reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator . . . determines appropriate for the control of such pollutants." 33 U.S.C. § 1342(p)(3)(B)(iii). [\*\*18] In the circumstances, the statute unambiguously demonstrates that Congress did not require municipal storm-sewer discharges to comply strictly with 33 U.S.C. § 1311(b)(1)(C).

Indeed, the EPA's and Petitioners' interpretation of 33 U.S.C. § 1342(p)(3)(B)(iii) would render that provision superfluous, a result that we prefer to avoid so as to give effect to all provisions that Congress has enacted. See *Government of Guam ex rel. Guam Econ. Dev. Auth. v. United States*, 179 F.3d 630, 634 (9th Cir. 1999) ("This [HN11] court generally refuses to interpret a statute in a way that renders a provision superfluous."), as amended, 1999 U.S. App. LEXIS 18691, 1999 WL 604218 (9th Cir. Aug. 12, 1999). Section 1342(p)(3)(B)(iii) creates a lesser standard than § 1311. Thus, if § 1311 continues to apply to municipal storm-sewer discharges, [\*\*1166] the more stringent requirements of that section always would control.

Contextual clues support the plain meaning of § 1342(p)(3)(B)(iii), which we have described above. [HN12] The Water Quality Act contains other provisions that undeniably exempt certain discharges from the permit requirement altogether (and therefore from [\*\*19] § 1311). For example, "the Administrator shall not require a permit under this section for discharges composed en-

tirely of return flows from irrigated agriculture." 33 U.S.C. § 1342(l)(1). Similarly, a permit is not required for certain storm-water runoff from oil, gas, and mining operations. See 33 U.S.C. § 1342(l)(2). Read in the light of those provisions, Congress' choice to exempt municipal storm-sewer discharges from strict compliance with § 1311 is not so unusual that we should hesitate to give effect to the statutory text, as written.

Finally, our interpretation of § 1342(p)(3)(B)(iii) is supported by this court's decision in *NRDC II*. There, the petitioner had argued that "the EPA has failed to establish substantive controls for municipal storm water discharges as required by the 1987 amendments." *NRDC II*, 966 F.2d at 1308. This court disagreed with the petitioner's interpretation of the amendments:

Prior to 1987, municipal storm water dischargers were subject to the same substantive control requirements as industrial and other types of storm water. In the 1987 amendments, Congress retained the [\*\*20] existing, stricter controls for industrial storm water dischargers but prescribed new controls for municipal storm water discharge.

*Id.* (emphasis added). The court concluded that, under 33 U.S.C. § 1342(p)(3)(B)(iii), "Congress did not mandate a minimum standards approach." *Id.* (emphasis added). The question in *NRDC II* was not whether § 1342(p)(3)(B)(iii) required strict compliance with state water-quality standards, see 33 U.S.C. § 1311(b)(1)(C). Nonetheless, the court's holding applies equally in this action and further supports our reading of 33 U.S.C. § 1342(p).

In conclusion, the text of 33 U.S.C. § 1342(p)(3)(B), the structure of the Water Quality Act as a whole, and this court's precedent all demonstrate that Congress did not require municipal storm-sewer discharges to comply strictly with 33 U.S.C. § 1311(b)(1)(C).

#### D. Required Compliance with 33 U.S.C. § 1311(b)(1)(C)

We are left with Intervenor's contention that the EPA may not, under the CWA, require strict compliance with state water-quality [\*\*21] standards, through numerical limits or otherwise. We disagree.

Although Congress did not require municipal storm-sewer discharges to comply strictly with § 1311(b)(1)(C), § 1342(p)(3)(B)(iii) states that "permits for discharges from municipal storm sewers . . . shall require . . . such other provisions as the Administrator . . . determines appropriate for the control of such pollu-

*tants.*" (Emphasis added.) That provision gives the EPA discretion to determine what pollution controls are appropriate. As this court stated in *NRDC II*, "Congress [HN13] gave the administrator discretion to determine what controls are necessary. . . . NRDC's argument that the EPA rule is inadequate cannot prevail in the face of the clear statutory language." 966 F.2d at 1308.

Under that discretionary provision, the EPA has the authority to determine that ensuring strict compliance with state water-quality standards is necessary to control pollutants. The EPA also has the authority to require less than strict compliance with state water-quality standards. The EPA has adopted an interim approach, which "uses

best management practices (BMPs) in first-round storm water permits . . . to provide [\*\*22] for the attainment of water quality standards." The EPA applied that approach to the permits at issue here. Under 33 U.S.C. § 1342(p)(3)(B)(iii), the EPA's choice to include [\*1167] either management practices or numeric limitations in the permits was within its discretion. See *NRDC II*, 966 F.2d at 1308 ("Congress did not mandate a minimum standards approach or specify that [the] EPA develop minimal performance requirements."). In the circumstances, the EPA did not act arbitrarily or capriciously by issuing permits to Intervenors.

PETITION DENIED.

Nos. 90-70671, 91-70200

**UNITED STATES COURT OF APPEALS FOR THE NINTH CIRCUIT**

*966 F.2d 1292; 1992 U.S. App. LEXIS 12517; 34 ERC (BNA) 2017; 92 Cal. Daily Op. Service 4703; 92 Daily Journal DAR 7542; 22 ELR 20950*

**October 9, 1991, Argued and Submitted, San Francisco, California  
June 4, 1992, Filed**

**PRIOR HISTORY:** **[\*\*1]** Petition for Review of a Rule Promulgated by the Environmental Protection Agency.

**CASE SUMMARY:**

**PROCEDURAL POSTURE:** Petitioner environmental action group challenged regulations implemented by respondent Environmental Protection Agency under § 402(1), (p) of the Clean Water Act (CWA), 33 U.S.C.S. § 1342(l), (p). Petitioner argued that those regulations, to be codified at 40 C.F.R. §§ 122.26, 122.26(e), established deadlines for a storm water discharge rule that exceeded the scope of the CWA's coverage and were otherwise unlawful.

**OVERVIEW:** Under amendments to the Clean Water Act (CWA), 33 U.S.C.S. § 1251 *et seq.*, respondent Environmental Protection Agency promulgated rules to establish a national pollutant discharge elimination system under § 402 of the CWA, 33 U.S.C.S. § 1342. Petitioner environmental action group challenged the implementation of those rules. The court granted declaratory relief because of the importance of the interests and principles at stake, but it denied injunctive relief. The court denied petitioner's request to place all municipalities, no matter what their size, on the same permitting schedule, but it found that respondent's failure to include deadlines

for permit approval or denial was arbitrary and capricious. The court upheld certain definitions and disapproved others, including the portion of the regulation regulating light industry. The use of incorporation as a factor was not arbitrary or capricious and was consistent with the CWA. The rule as to oil and gas operations and storm water control was upheld. Respondent's approval of a group application for an industrial discharger was not a rule requiring notice and comment from the public.

**OUTCOME:** The court granted partial relief to petitioner environmental action group in a challenge to regulations under the Clean Water Act. Declaratory relief was granted, but injunctive relief was denied. All municipalities were not placed on one schedule, the lack of deadlines for permit approval was erroneous, the gas operation rules were upheld, and group application approvals did not require notice and comment.

**LexisNexis(R) Headnotes**

*Environmental Law > Water Quality > Clean Water Act > Coverage & Definitions > Point Sources  
Environmental Law > Water Quality > Clean Water Act > Discharge Permits > General Overview  
[HM] One major focus of the Clean Water Act (CWA), 33 U.S.C.S. § 1251 *et seq.*, is the control of point source*

pollution. A point source is any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel from which pollutants are or may be discharged. 33 U.S.C.S. § 1362(14). The CWA also established a national pollutant discharge elimination system (NPDES), requiring permits for any discharge of pollutants from a point source pursuant to § 402 of the CWA, 33 U.S.C.S. § 1342. The CWA empowers the Environmental Protection Agency (EPA) or an authorized state to conduct an NPDES permitting program. 33 U.S.C.S. § 1342(a), (b). Under the program, as long as the permit issued contains conditions that implement the requirements of the CWA, the EPA may issue a permit for discharge of any pollutant. 33 U.S.C.S. § 1342(a)(1).

***Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges***

[HN2] Congress passed the Water Quality Act, codified in scattered sections of 33 U.S.C.S., portions of which set up a new scheme for regulation of storm water runoff. Section 402(p) of the Water Quality Act establishes deadlines by which certain storm water dischargers must apply for permits. The environmental protection agency or states must act on permits and dischargers must implement their permits. The Water Quality Act also set up a moratorium on permitting requirements for most storm water discharges which ends on October 1, 1992.

***Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges***

[HN3] See 33 U.S.C.S. § 1342(p)(2).

***Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges***

[HN4] Section 402(p) of the Water Quality Act, codified in scattered sections of 33 U.S.C.S., outlines an incremental or phase-in approach to issuance of storm water discharge permits.

***Administrative Law > Judicial Review > Reviewability > Jurisdiction & Venue***

***Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Public Participation***

[HN5] Section 509(b)(1) of the Clean Water Act (CWA), 33 U.S.C.S. § 1369(b)(1), describes six types of actions by the environmental protection agency administrator that are subject to review in the court of appeals. Section § 509(b)(1)(F) of the CWA, 33 U.S.C.S. § 1369(b)(1)(F), allows the court to review the issuance or denial of a permit under § 402 of the CWA, 33 U.S.C.S. § 1342. The

court also has the power to review rules that regulate the underlying permit procedures.

***Administrative Law > Judicial Review > Reviewability > Jurisdiction & Venue***

***Administrative Law > Judicial Review > Reviewability > Standing***

***Environmental Law > Water Quality > General Overview***

[HN6] Any interested person may seek review of designated actions of the environmental protection agency administrator under 33 U.S.C.S. § 1369(b)(1). The injury-in-fact rule for standing covers the interested person language.

***Administrative Law > Judicial Review > Standards of Review > Abuse of Discretion***

***Administrative Law > Judicial Review > Standards of Review > Arbitrary & Capricious Review***

[IIN7] 5 U.S.C.S. § 706(2)(A) authorizes the court to set aside agency action found to be arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law. Under this standard a court must find a rational connection between the facts found and the choice made. The court must decide whether the agency considered the relevant factors and whether there has been a clear error of judgment.

***Administrative Law > Separation of Powers > Legislative Controls > Implicit Delegation of Authority Governments > Federal Government > U.S. Congress Governments > Legislation > Interpretation***

[IIN8] On questions of statutory construction, courts must carry out the unambiguously expressed intent of Congress. If a statute is silent or ambiguous with respect to the specific issue, the question for the court is whether the agency's answer is based on a permissible construction of the statute. Congress may leave an explicit gap, thus delegating legislative authority to an agency subject to the arbitrary and capricious standard. If legislative delegation is implicit, courts must defer to an agency's statutory interpretation as long as it is reasonable. This is because an agency has technical expertise as well as the authority to reconcile conflicting policies. Nevertheless, questions of congressional intent that can be answered with traditional tools of statutory construction are still firmly within the province of the courts.

***Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges Governments > Local Governments > Licenses***

966 F.2d 1292, \*; 1992 U.S. App. LEXIS 12517, \*\*;  
34 ERC (BNA) 2017; 92 Cal. Daily Op. Service 4703

[HN9] The Clean Water Act (CWA), 33 U.S.C.S. § 1251 *et seq.*, calls for the Environmental Protection Agency (EPA) to consider permit applications from the most serious sources of pollutants first: industrial dischargers and large municipal separate storm sewer systems (large systems). The CWA requires the EPA to establish regulations for permit application requirements for these two groups by February 4, 1989; to receive applications for permits one year later, February 4, 1990; and to approve or deny the permits by February 4, 1991. Permittees may be given up to three years to comply with their permits. 33 U.S.C.S. § 1342(p)(4)(A). Medium sized municipal separate storm sewer systems, those serving a population of 100,000 or more but less than 250,000, are on a similar schedule, except that the deadlines are two years later. 33 U.S.C.S. § 1342(4)(B).

**Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges**

[HN10] The temporary exemption under the Clean Water Act (CWA), 33 U.S.C.S. § 1251 *et seq.*, for all storm water sources expires on October 1, 1992. 33 U.S.C.S. § 1342(p)(1).

**Administrative Law > Judicial Review > Reviewability > Ripeness**

**Civil Procedure > Declaratory Judgment Actions > State Judgments > Appellate Review**

[IN11] A request for declaratory relief in a challenge to an agency action is ripe for review if the action at issue is final and the questions involved are legal ones.

**Civil Procedure > Declaratory Judgment Actions > State Judgments > Discretion**

[HN12] The granting of declaratory relief rests in the sound discretion of the court exercised in the public interest. The guiding principles are whether a judgment will clarify and settle the legal relations at issue and whether it will afford relief from the uncertainty and controversy giving rise to the proceedings. A court declaration delineates important rights and responsibilities and can be a message not only to the parties but also to the public and has significant educational and lasting importance.

**Environmental Law > Water Quality > Clean Water Act > Enforcement > Injunctive Relief**

[HN13] The Environmental Protection Agency does not have the authority to ignore unambiguous deadlines set by Congress in the Clean Water Act, 33 U.S.C.S. § 1251 *et seq.* The deadlines are not aspirational. Congress set them and expected compliance. The court must uphold adher-

ence to the law, and cannot condone the failure of an executive agency to conform to express statutory requirements.

**Civil Procedure > Remedies > Injunctions > Elements > General Overview**

[HN14] Injunctions are an extraordinary remedy issued at a court's discretion when there is a compelling need.

**Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges > Governments > Local Governments > Licenses**

[HN15] Section 402(p)(4)(A) of the Clean Water Act (CWA), 33 U.S.C.S. § 1251 *et seq.*, calls for the Environmental Protection Agency to issue or deny permits for industrial and large municipalities by February 4, 1991, which is one year after the applications are submitted, and states that any such permit shall provide for compliance as expeditiously as practicable, but in no event later than three years after the date of the issuance of such permit. 33 U.S.C.S. § 1342(p)(4)(A). The CWA sets out a similar schedule for medium municipalities, except that the deadlines are two years later. 33 U.S.C.S. § 1342(p)(4)(B).

**Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges > Governments > Public Improvements > General Overview**

[HN16] The temporary exemption under the Clean Water Act (CWA), 33 U.S.C.S. § 1251 *et seq.*, for all storm water sources expires on October 1, 1992. The CWA requires the Environmental Protection Agency to establish a comprehensive program to regulate point sources subject to the moratorium, such as small municipalities, by that date. 33 U.S.C.S. § 1342(p)(1), (6). Section 402(p)(1) of the CWA forbids requiring a permit for entities not listed as exceptions, such as small municipalities, before October 1, 1992. Yet the deadline for part one of the application for medium systems is currently May 18, 1992.

**Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges**

[HN17] Section 402(p) of the Clean Water Act, 33 U.S.C.S. § 1251 *et seq.*, refers to municipal separate storm sewer systems serving a population of a specified size. 33 U.S.C.S. § 1342.

**Environmental Law > Water Quality > Clean Water Act > Coverage & Definitions > General Overview**

**Governments > Native Americans > Authority & Jurisdiction**

[HN18] The 1987 amendments to the Clean Water Act (CWA), 33 U.S.C.S. § 1251 *et seq.*, do not contain definitions of municipal or separate storm sewer system, but the CWA amendments enacted in 1972 defined municipality. Except as otherwise specifically provided, the term municipality means a city, town, borough, county, parish, district, association, or other public body created by or pursuant to state law and having jurisdiction over disposal of sewage, industrial wastes, or other wastes, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under § 1288 of the CWA, 33 U.S.C.S. § 1288. 33 U.S.C.S. § 1362.

**Administrative Law > Judicial Review > Standards of Review > Arbitrary & Capricious Review**

[HN19] An agency rule would be arbitrary and capricious if the agency has relied on factors which Congress has not intended it to consider, entirely failed to consider an important aspect of the problem, offered an explanation for its decision that runs counter to the evidence before the agency, or is so implausible that it could not be ascribed to a difference in view or the product of agency expertise.

**Administrative Law > Judicial Review > Standards of Review > General Overview**

**Environmental Law > Water Quality > General Overview**

[HN20] The court's role is not to determine whether the environmental protection agency, under the authority of the Clean Water Act, 33 U.S.C.S. § 1254 *et seq.*, has chosen the best among all possible methods. The court can only determine if its choices are rational.

**Environmental Law > Water Quality > General Overview**

[HN21] Under § 402(p)(2)(B) of the Clean Water Act, 33 U.S.C.S. § 1254 *et seq.*, a discharge associated with industrial activity is an exception to the permit moratorium.

**Environmental Law > Water Quality > General Overview**

**Governments > Legislation > Interpretation**

[HN22] The de minimis exemption inherent in statutory schemes to make categorical exemptions when the result is de minimis is only available where a regulation would yield a gain of trivial or no value. The de minimis concept is based on the principle that the law does not concern itself with trifling matters. Its applicability is questionable

in a situation where the gains from application of the statute are being weighed against administrative burdens to the regulated community.

**Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges**

[HN23] The 1987 amendments to the Clean Water Act (CWA), 33 U.S.C.S. § 1251 *et seq.*, created an exemption from the permit requirement for uncontaminated runoff from mining, oil and gas facilities. 33 U.S.C.S. § 1342(1)(2). Section 402(1)(2) of the CWA states that a permit is not required for discharges of storm water runoff from mining, oil or gas operations composed entirely of flows from conveyance systems used for collecting precipitation runoff and which are not contaminated by contact with, or do not come into contact with any overburden, raw material, intermediate products, finished product, byproduct, or waste products.

**Environmental Law > Hazardous Wastes & Toxic Substances > CERCLA & Superfund > Enforcement > Cost Recovery Actions > Potentially Responsible Parties > Owners & Operators**

**Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations**

**Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges**

[HN24] Under the Clean Water Act (CWA), 33 U.S.C.S. § 1251 *et seq.*, reportable quantities (RQs) are not effluent guidelines setting up permissible limits for pollutants. Rather, they are quantities the discharge of which may be harmful to the public health or welfare of the United States. 33 U.S.C.S. § 1321(b)(4). The environmental protection agency has established RQs for a large number of substances, pursuant to both § 311 of the CWA, 33 U.S.C.S. § 1321, and § 102 of the Comprehensive Environmental Response, Compensation and Liability Act, 42 U.S.C.S. § 9602. 40 C.F.R. §§ 110, 117, 302. The operator of any vessel or facility which releases the RQ of any substance must immediately notify the national response center.

**Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges**

[HN25] Under the Clean Water Act, 33 U.S.C.S. § 1251 *et seq.*, the environmental protection agency administrator has discretion to determine whether or not storm water runoff at an oil, gas, or mining operation is contaminated with materials. They are overburden, raw material, product, or process wastes and oil, grease or hazardous substances. The report sets out factors for the adminis-

966 F.2d 1292, \*, 1992 U.S. App. LEXIS 12517, \*\*;  
34 ERC (BNA) 2017; 92 Cal. Daily Op. Service 4703

trator to consider in determining contamination for the latter group of pollutants.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges*  
[HN26] Prior to 1987, municipal storm water dischargers were subject to the same substantive control requirements as industrial and other types of storm water under the Clean Water Act (CWA), 33 U.S.C. § 1251 *et seq.* In the 1987 amendments, Congress retained the existing, stricter controls for industrial storm water dischargers but prescribed new controls for municipal storm water discharge. 33 U.S.C. § 1342(p)(3)(A), (B).

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges*  
[HN27] See 33 U.S.C. § 1342(p)(3)(B).

*Administrative Law > Agency Rulemaking > Rule Application & Interpretation > General Overview*  
[HN28] See 5 U.S.C. § 551(4).

*Environmental Law > Water Quality > General Overview*  
[HN29] See 33 U.S.C. § 1342.

COUNSEL: Robert W. Adler, Natural Resources Defense Council, Washington, D.C., for the petitioner.

Daniel S. Goodman, United States Department of Justice, Washington, D.C., for the respondent.

Dennis J. Whittsley, Collier, Shannon & Scott, Washington, D.C., for intervenors-respondents American Association of Airport Executives, Chemical Specialties Manufacturers Association, Institute of Scrap Recycling Industries, Inc., Leather Industries of America, National Tank Truck Carriers, Inc., Rubber Manufacturers Association, and Specialty Steel Industry of the United States.

William T. O'Neil, Covington & Burling, Washington, D.C., for intervenors-respondents National Food Processors Association and Chemical Manufacturers Association.

JUDGES: Before: Harry Pregerson, Warren J. Ferguson, and Diarmuid F. O'Scannlain, Circuit Judges. Opinion by Judge Ferguson; Partial Concurrence, Partial Dissent by Judge O'Scannlain.

OPINION BY: FERGUSON

OPINION

[\*1295] OPINION

FERGUSON, Circuit Judge:

The Natural Resources Defense Council ("NRDC") challenges aspects of the Environmental Protection Agency's ("EPA") recent Clean Water Act storm water discharge rule. NRDC argues that the deadlines contained in the rule and the scope of its coverage are unlawful under section 402(1), (p) of the Clean Water Act, [\*\*3] 33 U.S.C. § 1342(l), (p). We grant partial relief.

1 National Pollutant Discharge Elimination System Permit Application Regulations for Storm Water Discharges, 55 Fed. Reg. 47,990 (1990) (to be codified at 40 C.F.R. § 122.26); National Pollutant Discharge Elimination System Permit Application Regulations for Storm Water Discharges; Application Deadline for Group Applications, 56 Fed. Reg. 12,098 (1991) (to be codified at 40 C.F.R. § 122.26(e)).

I. BACKGROUND

966 F.2d 1292, \*; 1992 U.S. App. LEXIS 12517, \*\*;  
34 ERC (BNA) 2017; 92 Cal. Daily Op. Service 4703

In 1972 Congress enacted significant amendments to the Clean Water Act ("CWA"),<sup>2</sup> 33 U.S.C. §§ 1251-1387 (1988), "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters." 33 U.S.C. § 1251(a). [HN1] One major focus of the CWA is the control of "point source" pollution. A "point source" is "any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel from which pollutants are or may be discharged." 33 U.S.C. § 1362(14). The CWA also established [\*\*4] the National Pollutant Discharge Elimination System ("NPDES"), requiring permits for any discharge of pollutants from a point source pursuant to section 402 of the CWA, 33 U.S.C. § 1342. The CWA empowers EPA or an authorized state to conduct an NPDES permitting program. 33 U.S.C. § 1342(a)-(b). Under the program, as long as the permit issued contains conditions that implement the requirements of the CWA, the EPA may issue a permit for discharge of any pollutant. 33 U.S.C. § 1342(a)(1).

<sup>2</sup> The Act is popularly known as the Clean Water Act or the Federal Water Pollution Control Act. 33 U.S.C. § 1251. For more background on the CWA, see *EPA v. State Water Resources Control Bd.*, 426 U.S. 200, 202-209, 96 S. Ct. 2022, 48 L. Ed. 2d 578 (1976); *Sierra Club v. Union Oil of California*, 813 F.2d 1480, 1483 (9th Cir. 1987), vacated on other grounds, 485 U.S. 931, 108 S. Ct. 1102, 99 L. Ed. 2d 264 (1988); and *Natural Resources Defense Council v. Train*, 166 App. D.C. 312, 510 F.2d 692, 695-97 (D.C. Cir. 1975).

This case involves runoff [\*\*5] from diffuse sources that eventually passes through storm sewer systems and is thus subject to the NPDES permit program. See National Pollutant Discharge Elimination System Permit Application Regulations for Storm Water Discharges; Application Deadlines, 56 Fed. Reg. 56,548 (1991). One recent study concluded that pollution from such sources, including runoff from urban areas, construction sites, and agricultural land, is now a leading cause of water quality impairment. 55 Fed. Reg. at 47,991.<sup>3</sup>

<sup>3</sup> The Nationwide Urban Runoff Program (NURP) conducted from 1978 through 1983 found that urban runoff from residential, commercial and industrial areas produces a quantity of suspended solids and chemical oxygen demand that is equal to or greater than that from secondary treatment sewage plants. 55 Fed. Reg. at 47,991. A significant number of samples tested exceeded water quality criteria for one or more pollutants. *Id.* at 47,992. Urban runoff is adversely affecting 39% to 59% of the harvest-limited shellfish beds in the

waters off the East Coast, West Coast and in the Gulf of Mexico. 56 Fed. Reg. at 56,548.

[\*\*6] *A. Efforts to Regulate Storm Water Discharge.*

Following the enactment of the CWA amendments in 1972, EPA promulgated NPDES permit regulations exempting a number of classes of point sources, including uncontaminated storm water discharge, on the basis of "administrative infeasibility," i.e., the extraordinary administrative burden imposed on EPA should it have to issue permits for possibly millions of point sources of runoff. *Natural Resources Defense Council v. Costle*, 186 App. D.C. 147, 568 F.2d 1369, 1372 & n.5, 1377 (D.C. Cir. 1977). NRDC [\*1296] challenged the exemptions. Relying on the language of the statute, its legislative history and precedent, the D.C. Circuit held that the EPA Administrator did not have the authority to create categorical exemptions from regulation. *Id.* at 1379. However, the court acknowledged the agency's discretion to shape permits in ways "not inconsistent with the clear terms of the Act." *Id.* at 1382.

Following this litigation, EPA promulgated regulations covering storm water discharges in 1979, 1980 and 1984. 56 Fed. Reg. 56,548. NRDC challenged various aspects of these rules both at the administrative [\*\*7] level as well as in the courts.

Recognizing both the environmental threat posed by storm water runoff and EPA's problems in implementing regulations,<sup>4</sup> [HN2] Congress passed the Water Quality Act of 1987<sup>5</sup> containing amendments to the CWA ("the 1987 amendments"), portions of which set up a new scheme for regulation of storm water runoff. Section 402(p), as amended, established deadlines by which certain storm water dischargers must apply for permits, the EPA or states must act on permits and dischargers must implement their permits. See Appendix A. The Act also set up a moratorium on permitting requirements for most storm water discharges, which ends on October 1, 1992. There are five exceptions that are required to obtain permits before that date:

<sup>4</sup> See 132 Cong. Rec. 32,381 (1986).

<sup>5</sup> Senator Stafford, speaking in favor of the conference report for the Water Quality Act, noted that "EPA should have developed this program long ago. Unfortunately, it did not. The conference substitute provides a short grace period during which EPA and the States generally may not require permits for municipal separate storm sewers." 132 Cong. Rec. 32,381 (1986). Senator Chafee stated "the Agency has been unable to move forward with a [storm water discharge control] program, because the current law did not give enough guidance to the Agency. This provision

966 F.2d 1292, \*; 1992 U.S. App. LEXIS 12517, \*\*;  
34 ERC (BNA) 2017; 92 Cal. Daily Op. Service 4703

provides such guidance, and I expect EPA to move rapidly to implement this control program." 133 Cong. Rec. 1,264 (1987).

[\*\*8]

6 Pub. L. No. 100-4, 101 Stat. 7 (1987) (codified as amended in scattered sections of 33 U.S.C.).

[HN3] (A) A discharge with respect to which a permit has been issued under this section before February 4, 1987.

(B) A discharge associated with industrial activity.

(C) A discharge from a municipal separate storm sewer system serving a population of 250,000 or more.

(D) A discharge from a municipal separate storm sewer system serving a population of 100,000 or more but less than 250,000.

(E) A discharge for which the Administrator or the State, . . . determines that the storm water discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to the waters of the United States.

CWA § 402(p)(2); 33 U.S.C. § 1342(p)(2).

[H1\14] Section 402(p) also outlines an incremental or "phase-in" approach to issuance of storm water discharge permits. The purpose of this approach was to allow EPA and the states to focus their attention on the most serious problems first. 133 Cong. Rec. 991 (1987). Section 402(p) requires EPA to promulgate rules regulating permit application [\*\*9] procedures in a staggered fashion.

Responding to the 1987 amendments requiring the EPA to issue permit application requirements for storm water discharges associated with industrial activities and large municipalities, the EPA issued final rules on November 16, 1990, almost two years after its deadline ("the November 1990 rule"). 55 Fed. Reg. at 47,990c. EPA issued amended rules on March 21, 1991 ("the March 1991 rule"). 56 Fed. Reg. at 12,098. It is to portions of these rules that NRDC objects.

#### B. Jurisdiction.

We have jurisdiction pursuant to CWA § 509(b)(1), 33 U.S.C. § 1369(b)(1). [FINS] Section 509(b)(1) describes six types of actions by the EPA administrator that are subject to review in the court of appeals. Although the parties do not specify the section upon which they rely, § 509(b)(1)(F), 33 U.S.C. § 1369(b)(1)(F) allows the court to review [\*1297] the issuance or denial of a permit under CWA § 402, 33 U.S.C. § 1342. The court also has the power to review rules that regulate the underlying permit procedures. *NRDC v. EPA*, 211 App. D. C. 179, 656 F.2d 768, 775 (D.C. Cir. 1981); cf. *E.I. duPont de Nemours & Co. v. Train*, 430 U.S. 112, 136, 51 L. Ed. 2d

204, 97 S. Ct. 965 (1976). [\*\*10] NRDC filed timely petitions for review of the final rules at issue here pursuant to CWA § 509(b)(1), 33 U.S.C. 1369(b)(1).

#### C. Standing.

[HN6] Any "interested person" may seek review of designated actions of the EPA Administrator. 33 U.S.C. § 1369(b)(1). This court has held that the injury-in-fact rule for standing of *Sierra Club v. Morton*, 405 U.S. 727, 733, 31 L. Ed. 2d 636, 92 S. Ct. 1361 (1972) covers the "interested person" language. *Trustees for Alaska v. EPA*, 749 F.2d 549, 554 (9th Cir. 1984) (adopting the analysis in *Montgomery Environmental Coalition v. Costle*, 207 App. D.C. 233, 646 F.2d 568, 578 (D.C. Cir. 1980)). A petitioner under *Sierra Club* must suffer adverse affects to her economic interests or "aesthetic and environmental well-being." *Sierra Club*, 405 U.S. at 734. Intervenor are various industry and trade groups subject to regulation under the rules at issue. NRDC claims, inter alia, that EPA has delayed unlawfully promulgation of storm water regulations and that its regulations, as published, inadequately control storm water contaminants. NRDC's allegations and the potential economic impact of the rules on the intervenors satisfy the [\*\*11] broad standing requirement applicable here.

#### H. DISCUSSION

##### A. Standard of Review.

[HN7] 5 U.S.C. § 706(2)(A) (1988) authorizes the court to "set aside agency action . . . found to be . . . arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law." Under this standard a court must find a "rational connection between the facts found and the choice made." *Sierra Pacific Indus.*, 866 F.2d 1099, 1105 (9th Cir. 1989) (citing *Motor Vehicle Mfrs. Ass'n v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 43, 77 L. Ed. 2d 443, 103 S. Ct. 2856 (1983)). The court must decide whether the agency considered the relevant factors and whether there has been a clear error of judgment. *Citizens to Preserve Overton Park, Inc. v. Volpe*, 401 U.S. 402, 416, 28 L. Ed. 2d 136, 91 S. Ct. 814 (1971).

[HN8] On questions of statutory construction, courts must carry out the unambiguously expressed intent of Congress. If a statute is "silent or ambiguous with respect to the specific issue, the question for the court is whether the agency's answer is based on a permissible construction of the statute." *Chevron U.S.A. Inc. v. Natural Resources Defense Council Inc.*, 467 U.S. 837, 843, 81 L. Ed. 2d 694, 104 S. Ct. 2778 (1984). [\*\*12] Congress may leave an explicit gap, thus delegating legislative authority to an agency subject to the arbitrary and capricious standard. *Id.* at 843-44. If legislative delegation is implicit, courts must defer to an agency's statutory interpretation as long as it is

reasonable. *Id. at 844*. This is because an agency has technical expertise as well as the authority to reconcile conflicting policies. *See id.* Nevertheless, questions of congressional intent that can be answered with "traditional tools of statutory construction" are still firmly within the province of the courts. *INS v. Cardoza-Fonseca*, 480 U.S. 421, 447-48, 107 S. Ct. 1207, 94 L. Ed. 2d 434 (1987).

*B. EPA's Extension of Statutory Deadlines.*

*1. Background.*

NRDC challenges EPA's extension of certain statutory deadlines in the November 1990 and March 1991 rules. [HN9] The statutory scheme calls for EPA to consider permit applications from the most serious sources of pollutants first: industrial dischargers and large municipal separate storm sewer systems ("large systems"). The statute required EPA to establish regulations [\* 1298] for permit application requirements for these two groups by February [\*\*13] 4, 1989; to receive applications for

permits one year later, February 4, 1990; and to approve or deny the permits by February 4, 1991. Permittees may be given up to three years to comply with their permits. CWA § 402(p)(4)(A), 33 U.S.C. § 1342(p)(4)(A). Medium sized municipal separate storm sewer systems ("medium systems") (those serving a population of 100,000 or more but less than 250,000) are on a similar schedule, except that the deadlines are two years later. CWA § 402(p)(4)(B), 33 U.S.C. § 1342(p)(4)(B). [HN10] The temporary statutory exemption for all storm water sources expires on October 1, 1992. CWA § 402(p)(1), 33 U.S.C. § 1342(p)(1). EPA states that discharges from municipal separate storm sewer systems serving a population of under 100,000 are to be regulated after that date.

7 Large municipal systems are those serving a population of 250,000 or more. § 402(p)(2)(C).

The EPA rules at issue changed the statutory deadlines as follows:

| Deadlines pursuant to CWA § 402(p) <sup>8</sup>                        |                                  | EPA Deadlines <sup>9</sup>                         |                       |
|--|----------------------------------|--|-----------------------|
| Discharge type   | Deadline to issue rules          | Deadline for application and approval of permits   | Application deadlines |
| Industrial   | 2/4/89                           | 2/4/90 - applications due<br>2/4/91 - approval due | see below             |
| Large municipal systems  | 08/04/89                         | 2/4/90 - applications due                          | Part 1 - 11/18/91     |
|  |                                  | 2/4/91 - approval                                  | Part 2 - 11/16/92     |
| Medium municipal systems   | 08/04/91                         | 2/4/92 - applications due                          | Part 1 - 5/18/92      |
|  |                                  | 2/4/93 - approval due                              | Part 2 - 5/17/93      |
| <b>EPA Application Deadlines for "Industrial Activity" Dischargers</b> |                                  |  |                       |
| Individual   | Group                            |  |                       |
| due 11/18/91   | Part 1 9/30/91; Part 2 - 10/1/92 |  |                       |

8 Since NRDC filed this action, Congress has passed certain legislation affecting some of the deadlines at issue. Congress ratified the date of September 30, 1991 for part 1 of group applications for industrial dischargers. *See* Dire Emergency Supplemental Appropriations Act of 1991, Pub. L. No. 102-27, § 307, 105 Stat. 130, 152 (1991).

Section 1068 of the Intermodal Surface Transportation Efficiency Act of 1991 ("ISTEA") clarifies the deadlines for storm water discharges associated with industrial activity from facilities

owned or operated by a municipality. Pub. L. No. 102-240, § 1068, 105 Stat. 1914, 2007 (1991). ISTEA deadlines are being reviewed in a separate case. Nothing in this opinion should be viewed as requiring EPA to comply with deadlines that have been altered or superseded by the ISTEA.

9 *See 55 Fed. Reg. at 48,071-72* (to be codified at 40 C.F.R. § 122.26(e)); *56 Fed. Reg. at 12,100* (to be codified at 40 C.F.R. § 122.26(e)(2)(iii)). EPA changed certain of these deadlines after this case was submitted. These changes are the subject of a separate case.

The EPA rules at issue set no date for final approval or denial of applications from municipal or industrial dischargers, nor for compliance by these regulated entities. *See 55 Fed. Reg. at 48,072.*

[\*\*14] As the chart illustrates, EPA made other elaborations on the statutory scheme in addition to extending the deadlines. Medium and large municipal systems and industrial dischargers are now subject to a two-part application process. *55 Fed. Reg. at 48,072.* The November 1990 rules allow industrial dischargers to apply for either individual or group permits. *Id. at 48,066-67.* [\*1299] The March 1991 rules further extended the deadline for part 1 of the group industrial discharger permits to September 30, 1991. *56 Fed. Reg. at 12,098.* A final rule published on April 2, 1992 extended the deadline for the part 2 group application for industrial dischargers from May 18, 1992 to October 1, 1992. *57 Fed. Reg. at 11,394.* The EPA rules at issue contain neither deadlines for final EPA or state approval of permits nor deadlines for compliance with the permit terms.

10 NRDC initially claimed that this extension was unlawful because it was granted without proper notice and comment. However, Congress approved this extended deadline in a supplemental appropriations bill. Dire Emergency Supplemental Appropriations Act of 1991, Pub.L. No. 102-27 § 307, 105 Stat. 130, 152 (1991). This Act moots the procedural and substantive challenge to this extended deadline.

[\*\*15] Seeking to compel the EPA to conform to the statutory scheme, NRDC asks this court:

a) to declare unlawful EPA's failure to issue certain of the storm water permitting regulations by February 4, 1989 and EPA's extension of certain statutory deadlines;

b) to enjoin EPA from granting future extensions of the deadlines;

c) to compel EPA to include deadlines for permit approval or denial and permit compliance consistent with the statute; and

d) to compel EPA to require that medium and small municipal systems meet the same deadlines as large systems.

## 2. Discussion.

### a. Request for Declaratory Relief.

NRDC asks the court to (1) declare unlawful EPA's failure to issue storm water permitting regulations by February 4, 1989; and (2) declare unlawful EPA's exten-

sion of deadlines for submission of permit applications by large and medium systems and individual industrial dischargers.

[HN I 1] A request for declaratory relief in a challenge to an agency action is ripe for review if the action at issue is final and the questions involved are legal ones. *Public Util. Dist. No. 1 v. Bonneville Power Admin.*, 947 F.2d 386, 390 n. 1 (9th Cir. 1991) (citations omitted), cert. denied, [\*16] U.S. , 112 S. Ct. 1759, 118 L. Ed. 2d 422, 60 U.S.L.W. 3537 (1992). Here, the agency regulations are final. *See 55 Fed. Reg. at 47,990, 56 Fed. Reg. at 12,096.* The question of whether the EPA is bound by the statutory scheme set by Congress is a legal one. The request for declaratory relief is therefore ripe for consideration by this court.

[HN12] The granting of declaratory relief "rests in the sound discretion of the [] court exercised in the public interest." 10A Charles A. Wright, Arthur R. Miller & Mary K. Kane, *Federal Practice & Civil Procedure* § 2759, at 645 (1983). The guiding principles are whether a judgment will clarify and settle the legal relations at issue and whether it will afford relief from the uncertainty and controversy giving rise to the proceedings. *McGraw Edison Co. v. Preformed Line Products Co.*, 362 F.2d 339, 342 (9th Cir.) (citing Borchard, *Declaratory Judgments* 299 (2d ed. 1941)), cert. denied, 385 U.S. 919, 87 S. Ct. 229, 17 L. Ed. 2d 143 (1966). A court declaration delineates important rights and responsibilities and can be "a message not only to the parties but also to the public and has significant educational and lasting importance." [\*17] *Bilbrey by Bilbrey v. Brown*, 738 F.2d 1462, 1471 (9th Cir. 1984). Because of the importance of the interests and the principles at stake, we grant declaratory relief.

[HN13] EPA does not have the authority to ignore unambiguous deadlines set by Congress. *Delaney v. EPA*, 898 F.2d 687, 691 (9th Cir.), cert. denied, 111 S. Ct. 556, 112 L. Ed. 2d 563 (1990). In arguing against injunctive relief, EPA points to cases recognizing factors indicating that equitable relief may be inappropriate. *See, e.g., In re Barr Laboratories, Inc.*, 289 App. D.C. 187, 930 F.2d 72, 74 (D.C. Cir.) (agency's choice of priorities is an important factor in considering whether to grant equitable relief), cert. denied, 116 L. Ed. 2d 241, 112 S. Ct. 297, 112 S. Ct. 298 (1991); *Natural Resources Defense Council v. Train*, 166 App. D.C. 312, 510 F.2d 692, 712 (D.C. Cir. 1975) (court may need to give [\*1300] agency some leeway due to budgetary commitments or technological problems); *Environmental Defense Fund v. Thomas*, 627 F. Supp. 566, 569-70 (D.D. C. 1986) (EPA's good faith is a factor). None of these factors militates against an award of declaratory relief. They do not grant an executive [\*18] agency the authority to bypass explicit congressional deadlines. The deadlines are not aspirational - Congress set them and expected compliance. *See 132 Cong. Rec.*

32,381-82 (remarks of Senator Stafford, commenting on EPA delay and the establishment of statutory deadlines as "outside dates.") This court must uphold adherence to the law, and cannot condone the failure of an executive agency to conform to express statutory requirements. For these reasons, we grant NRDC's request for declaratory relief. EPA's failure to abide by the statutory deadlines is unlawful.

b. Request for Injunction.

NRDC asks the Court to enjoin the EPA from further extensions for permit applications from municipal and industrial dischargers. [HN14] Injunctions are an extraordinary remedy issued at a court's discretion when there is a compelling need. 11 Charles A. Wright & Arthur R. Miller, *Federal Practice & Procedure* § 2942, at 365, 368-69 (1973). We decline to enjoin the EPA on discretionary grounds.

Injunctive relief could involve extraordinary supervision by this court. Injunctive relief may be inappropriate where it requires constant supervision. *Id.* at 376. At issue are deadlines for the three major [\*\*19] categories of dischargers, each of which has a two-part application. The permitting process will go on for several years. While recognizing the importance of the interests involved, we nevertheless decline to engage in the active management of such a remedy.

In this situation, we must operate on the assumption that an agency will follow the dictates of Congress and the court. As noted above, the EPA does not have the authority to predicate future rules or deadlines in disagreement with this opinion. *See Allegheny General Hosp. v. NLRB*, 608 F.2d 965, 970 (3rd Cir. 1979). We presume that the EPA will duly perform its statutory duties. *See Upholstered Furniture Action Council v. California Bureau of Home Furnishings*, 442 F. Supp. 565, 568 (E.D. Cal. 1977) (three judge court). Because we decline to take on potentially extensive supervision of the EPA, Congress may need to find other ways to ensure compliance if the agency is recalcitrant.

c. Deadlines for Permit Approval and Compliance.

NRDC requests that the court compel EPA to revise the rules to include deadlines for permit approval or denial and permit compliance consistent with the statute. [HN15] Section [\*\*20] 402(p)(4)(A) calls for the EPA to issue or deny permits for industrial and large municipalities by February 4, 1991, which is one year after the applications are submitted, and states that "any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of the issuance of such permit." CWA § 402(p)(4)(A), 33 U.S.C. § 1342(p)(4)(A). The statute sets out a similar schedule for medium municipalities, except that the deadlines are two

years later. CWA § 402(p)(4)(B), 33 U.S.C. § 1342(p)(4)(B).

The regulations promulgated by the EPA contain neither final approval deadlines nor compliance deadlines for industrial dischargers or medium and large municipalities. 55 *Fed. Reg.* at 48,072. By failing to regulate final approval and compliance, EPA has omitted a key component of the statutory scheme. To ensure adherence to the statutory time frame, especially in the face of deadlines already missed, the regulated community must be informed of these deadlines. EPA's failure to include these important deadlines is an arbitrary and capricious exercise of its responsibility to issue regulations pursuant to the statute.

[\*\*21] We see no need for additional delay while supplemental regulations are issued. Given the extraordinary delays already encountered, EPA must avoid further delay. [\*1301] The regulations should inform the regulated community of the statute's outside dates for compliance. " *See* CWA § 402(p)(4)(A)-(B), 33 U.S.C. § 1342(p)(4)(A)-(b).

11 In addition, pursuant to the statute, compliance deadlines applicable to each facility shall be contained in its permit.

d. Timeline for Small and Medium Systems.

The parties disagree on when small systems (those serving a population of less than 100,000) should be regulated. As noted above, [HN16] the temporary statutory exemption for all storm water sources expires on October 1, 1992. The statute requires EPA to establish a comprehensive program to regulate point sources subject to the moratorium, such as small municipalities, by that date. CWA § 401(p)(1), (6), 33 U.S.C. § 1342(p)(1), (6).

Pointing to a perceived statutory gap, NRDC argues that small systems should be subject to the same permitting [\*\*22] schedule applicable to medium systems, to assure that they are regulated when the permitting moratorium ends on October 1, 1992. However, the plain language of the statute prohibits this. Section 402(p)(1) forbids requiring a permit for entities not listed as exceptions (such as small municipalities) before October 1, 1992. Yet the deadline for part 1 of the application for medium systems is currently May 18, 1992. 55 *Fed. Reg.* at 48,072.

Even if NRDC is correct that EPA is not proceeding so that regulations will be in place on October 1, 1992, we cannot ignore the plain language of the statute by adopting NRDC's solution. The CWA does not require regulation of such systems prior to expiration of the moratorium. We therefore reject NRDC's proposal that small systems be put on the same schedule as medium ones.

966 F.2d 1292, \*, 1992 U.S. App. LEXIS 12517, \*\*;  
34 ERC (BNA) 2017; 92 Cal. Daily Op. Service 4703

NRDC asks the court to put the medium systems on the same schedule as the large systems, in order to achieve closer compliance with the timeline set out in § 402(p)(4)(B). However, EPA's current schedule for medium systems, although delayed, is still within the statutory scheme in its relation to the schedule for large systems. That is, Congress placed the medium [\*\*23] systems on a staggered permitting schedule to start two years after the large systems and industrial users. The EPA schedule now has medium municipal system applications due six months after the applications for the large municipal systems. *55 Fed. Reg. at 48,072*. For this reason, the current deadline for medium municipalities does not appear to be unreasonable despite the unlawful delay.

### C. Exclusion of Certain Sources from Regulation.

#### 1. Definition of "Municipal Separate Storm Sewer System."

[HN17] Section 402(p) refers to "municipal separate storm sewer systems serving a population" of a specified size. CWA § 402(p)(2)(C), (D), 33 U.S.C. § 1342 §§ 402(p)(2)(C), (D). NRDC contends that EPA's definition of this term violates the plain language of the statute, fails to take into account the statutory definition of the word "municipality" and is arbitrary and capricious because the agency considered improper factors when it defined the term. All of this, according to NRDC, results in an impermissible narrowing of the municipalities covered by the first two rounds of permitting.

[HN18] The 1987 amendments to the CWA did not contain definitions of "municipal" or "separate storm [\*\*24] sewer system," but the CWA amendments enacted in 1972 defined "municipality" as follows:

except as otherwise specifically provided, when used in this chapter. . . . (4) The term "municipality" means a city, town, borough, county, parish, district, association, or other public body created by or pursuant to State law and having jurisdiction over disposal of sewage, industrial wastes, or other wastes, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved [\*1302] management agency under section 1288 of this title [33 U.S.C. § 1288].

33 U.S.C. § 1362.

In the November 1990 regulations, the EPA defined "municipal separate storm sewer" as: "a conveyance or system of conveyances . . . owned or operated by a State, city, town, borough, county, parish, district, association or other public body. . . ." *55 Fed. Reg. at 48,065* (to be codified at 40 C.F.R. § 122.26(b)(8)). This definition echoes the language of 33 U.S.C. § 1362(4). However, when defining large and medium municipal separate storm sewer systems serving a population of a specified size, EPA brought in other factors. *55 Fed. Reg. at 48,064*

(to be codified [\*\*25] at 40 C.F.R. § 122.26(b)(4), (7)). EPA defines medium and large separate storm sewer systems using two main categories:

1) separate storm sewer systems located in an incorporated place with the requisite population, and

2) separate storm sewer systems located in unincorporated, urbanized portions of counties containing the requisite population (as listed in Appendices H and I to the rule), excluding those municipal separate sewers located in incorporated places, townships or towns within such counties. <sup>12</sup> *55 Fed. Reg. at 48,064*. NRDC opposes this definition for municipal separate storm sewer systems for the reasons explained below.

12 The rule also permits the Administrator to include certain other systems as part of a medium or large system due to the physical interconnections between the systems, their locations, or certain other factors. *See 40 C.F.R. § 122.26(b)(4)(iii), (iv) and (b)(7)(iii), (iv)*.

First, NRDC argues that according to the definitional section cited above and principles of [\*\*26] statutory construction, general definitions apply wherever the defined term appears elsewhere in the law. *See 33 U.S.C. § 1362* ("except as otherwise specifically provided" the definitions apply throughout the act); *Sierra Club v. Clark*, 755 F.2d 608, 613 (8th Cir. 1985). NRDC argues that the scope of the statutory definition of "municipality" in 33 U.S.C. § 1362(4) and the scope of the phrase "municipal separate storm sewer system serving a population" are the same. NRDC thus proposes that the correct definition is a system of conveyances owned or operated by the full range of entities described at 33 U.S.C. § 1362(4), (cities, towns, etc.) with populations within the ranges designated at § 402(p)(2), i.e., 250,000 or more for large systems and between 100,000 and 250,000 for medium systems.

However, we do not believe that the entire phrase used in the act, "municipal separate storm sewer system serving a population of [a specified size]" can be equated with the term "municipality" in the manner that NRDC proposes. The act contains no definition of either "system" or "serving a population." The word "system" is particularly ambiguous in the context of storm [\*\*27] sewers. <sup>13</sup> We therefore agree with EPA that there is no single, plain meaning for the disputed words.

13 Storm sewers located within the boundaries of a city might be part of a state highway system, a flood control district, or a system operated by the state or county. *See 55 Fed. Reg. at 48,041*.

Because the term is ambiguous, we must look first to whether Congress addressed the issue in another way. *See*

*Abourezk v. Reagan*, 251 App. D.C. 355, 785 F.2d 1043, 1053 (D.C. Cir. 1986) ("if the court finds that Congress had a specific intent . . . , the court stops there and enforces that intent regardless of the agency's interpretation") (citing *Chevron U.S.A. Inc. v. Natural Resources Defense Council Inc.*, 467 U.S. 837, 842-43, 81 L. Ed. 2d 694, 104 S. Ct. 2778 & n. 9 (1984)), *aff'd* by an equally divided court, 484 U.S. 1, 108 S. Ct. 252, 98 L. Ed. 2d 1 (1987). The legislative history is not illuminating. Although it explains that a purpose of the permitting scheme was to attack the most serious sources of discharge first, [\*28] this general goal is not helpful in discerning the specific meaning of "municipal separate storm sewer system serving a population." Without clear guidance from Congress, we turn to the agency's justifications [\* 1303] for its choices in the face of NRDC's objections.

14 See, e.g., 133 Cong. Rec. 991 (1987) (statement of Rep. Stangeland).

NRDC claims that EPA's definition is arbitrary and capricious because EPA considered improper factors, including its own work load, the incorporation status of municipalities, and urban density. " [HN19] An agency rule would be arbitrary and capricious if the agency has relied on factors which Congress has not intended it to consider, entirely failed to consider an important aspect of the problem, offered an explanation for its decision that runs counter to the evidence before the agency, or is so implausible that it could not be ascribed to a difference in view or the product of agency expertise." *Motor Vehicle Mfrs. Ass'n v. State Farm Mut. Auto Ins.*, 463 U.S. 29, 43, 77 L. Ed. 2d 443, 103 S. Ct. 2856 (1983). [\*29]

EPA's final definition took into account many issues and concerns of the regulated community See 55 Fed. Reg. at 48,039. EPA considered eight different options for defining large and medium municipal separate storm sewer systems. 55 Fed. Reg. at 48,038-43. EPA considered focusing on ownership or operation of a system by an incorporated place, but found that this approach did not take into account systems operated by flood control districts, state transportation systems, or concerns relating to watershed management. It instead fashioned a multi-faceted approach. This choice of approach is not unreasonable.

NRDC challenges EPA's consideration of incorporation as a factor. It claims that limiting regulation to incorporated places of the appropriate size excludes portions of 378 counties that contain over 100,000 people. NRDC essentially contends that because counties are a type of municipality, storm water conveyances in all counties with populations over 100,000 should come within the definition of either medium or large municipal separate storm sewer systems. We have already rejected

NRDC's claim that the definition of regulated "systems" must include [\*30] conveyances in all "municipalities."

EPA's use of incorporation as a factor is not arbitrary and capricious or inconsistent with the statute. The agency proceeded on the reasonable assumption that cities possess the police powers needed effectively to control land use within their borders. See 55 Fed. Reg. at 48,039, 48,043. The first major category within the definition of regulated "systems," municipal separate storm sewers located within incorporated places having the requisite population, is reasonable.

NRDC questions EPA's second major category, which covers storm sewers located in unincorporated urbanized areas of counties with the designated population, but excludes conveyances located in incorporated places with populations under 100,000 within those counties. The exclusion, however, has a legitimate statutory basis. The statute prohibits EPA from requiring permits for systems serving under 100,000 persons prior to October 1, 1992. CWA § 402(p)(1), 33 U.S.C. § 1342(p)(1). EPA reasonably concluded that conveyances within small incorporated places should be considered parts of small systems limited to those incorporated places, rather than parts of larger [\*31] systems serving whole counties. EPA's definition attempts to capture population centers of over 100,000 (by including urbanized, unincorporated areas) without violating the congressional stricture against regulation of areas with populations under 100,000 (thus excluding incorporated areas of less than 100,000 within a county).

In arriving at its definition of "municipal separate storm sewer systems serving" a designated population, EPA investigated numerous options and considered comments from a range of viewpoints. We find "a rational connection between the facts found and the choices made." *Motor Vehicle Mfrs. Ass'n*, 463 U.S. at 43.

NRDC objects to EPA's use of 1980 census data and EPA's definition of urban density. While it appears that NRDC has solid arguments as to why it would be preferable to use 1990 census figures and adopt its method of determining urban density, [HN20] our role is not to determine whether EPA has chosen the best among all possible [\*1304] methods. We can only determine if its choices are rational. EPA chose the 1980 census data because it was the most widely available decennial census data at the time of rule formulation and promulgation. Neither [\*32] this choice nor its use of the Census Bureau's definition of urbanized area is arbitrary and capricious.

EPA took agency work load into account in arriving at its definition. 55 Fed. Reg. at 48,039. NRDC objects on the basis that Congress considered the issue of work load when it developed the "phase-in" approach and allowed

permit applications on a system- or jurisdiction-wide basis. However, this broad congressional scheme does not prohibit further consideration of EPA's work load as one among many factors in its attempt to fashion a workable program.

In summary, NRDC's argument that the phrase "municipal separate storm sewer system serving a population" has the plain meaning NRDC proposes is not persuasive. Although EPA's definition in the face of the statute's ambiguity is complex, if not convoluted, it is not arbitrary and capricious, and we therefore reject NRDC's request that the definition be declared invalid.

## 2. EPA Exemption for Light Industry.

NRDC challenges the portion of the EPA rule excluding various types of "light industry" from the definition of "discharge associated with industrial activity."

[HN21] Under CWA § 402(p)(2)(B), a "discharge associated with [\*33] industrial activity" is an exception to the permit moratorium. In the November rule, EPA modified the statutory scheme by drawing distinctions among light and heavy industry and considering actual exposure to industrial materials. Although the statute does not define "associated with industrial activity," the EPA definition excludes industries it considers more comparable to retail, commercial or service industries. The excluded categories are manufacturers of pharmaceuticals, paints, varnishes, lacquers, enamels, machinery, computers, electrical equipment, transportation equipment, glass products, fabrics, furniture, paper board, food processors, printers, jewelry, toys and tobacco products. *55 Fed. Reg. at 48,008*. These types of facilities need apply for permits only if certain work areas or actual materials are exposed to storm water. *Id.* EPA justifies these exemptions on the assumption that most of the activity at these types of manufacturers takes place indoors, and that emissions from stacks, use of unhooded manufacturing equipment, outside material storage or disposal, and generation of large amounts of dust and particles will all be minimal. *55 Fed. Reg. at 48,008c. [\*34]*

Thus, EPA considers actual exposure to certain materials or stormwater for the light industry categories, but does not consider actual exposure for the other industrial categories. After careful review of the statutory language and the record, we conclude that this distinction is impermissible.

We note that the language "discharges associated with industrial activity" is very broad. The operative word is "associated." It is not necessary that storm water be contaminated or come into direct contact with pollutants; only association with any type of industrial activity is necessary.

There is a brief discussion of the issue in the legislative history: "[a] discharge is associated with industrial activity if it is directly related to manufacturing, processing or raw materials storage areas at an industrial plant. Discharges which do not meet this definition include those discharges associated with parking lots and administrative and employee buildings." 133 Cong. Rec. 985 (1987); *see also* 132 Cong. Rec. 31,968 (1986) (same). EPA argues that the words "directly related" indicate Congress's intent to require permits for only those materials that come in contact with industrial materials. [\*35] *See 55 Fed. Reg. at 48,007*. However, the examples given - parking lots and administrative buildings - indicate that the intent was to exclude only those facilities or parts of a facility that are completely non-industrial.

EPA's definition follows the language quoted above: "Storm water discharge associated with industrial activity means the [\*1305] discharge from any conveyance which is used for collecting and conveying stormwater and which is directly related to manufacturing, processing or raw materials storage areas at an industrial plant." 40 C.F.R. § 122.26(b)(14). EPA applies this definition differently depending on type of industry. EPA bases its regulation of industrial activity on Standard Industrial Classification ("SIC") categories. For most of the industrial SIC categories (identified at 40 C.F.R. § 122.26(b)(i-x)), the EPA definition includes all stormwater discharges from plant yards, access roads and rail lines, material handling sites, storage and disposal sites, shipping and receiving areas, and manufacturing buildings. 40 C.F.R. § 122.26(b)(14). However, for the "light industry" categories identified in 40 C.F.R. § 122.26(b)(14)(xi), stormwater must [\*36] be actually exposed to raw materials, by-products, waste, etc., before permitting is required.

EPA justifies this difference on the ground that for "light industry," industrial activity will take place indoors, and that generation of large amounts of particles and emissions will be minimal. There is nothing in the record submitted to the Court however, which supports this assumption. *See, e.g., 55 Fed. Reg. at 48,008*. Without supportable facts, we are unable to rely on our usual assumption that the EPA has rationally exercised the duties delegated to it by Congress. To exempt these industries from the normal permitting process based on an unsubstantiated assumption about the this group of facilities is arbitrary and capricious.

In addition, by designating these light industries as a group that need only apply for permits if actual exposure occurs, EPA impermissibly alters the statutory scheme. The statute did set up a similar approach for oil, gas, and mining industries. However, no other classes of industrial activities are subject to the more lenient "actual exposure" test. To require actual exposure entirely shifts the burden

in the permitting scheme. Most industrial [\*\*37] facilities will have to apply for permits and show the EPA or state that they are in compliance. Light industries will be relieved from applying for permits unless actual exposure occurs. The permitting scheme then will work only if these facilities self-report, or the EPA searches out the sources and shows that exposure is occurring. We do not know the likelihood of either self-reporting or EPA inspection and monitoring of light industries, and the regulations appear to contemplate neither for these industries. For this reason, the proposed regulation is also arbitrary and capricious.

In conclusion, we hold that the rule for light industries is arbitrary and capricious, vacate the rule, and remand for further proceedings.

### 3. Exclusion of Construction Sites of Less than Five Acres.

NRDC challenges the exemption for construction sites of less than five acres. EPA concedes that the construction industry should be subject to storm water permitting because at a high level of intensity, construction is equivalent to other regulated industrial activities. *55 Fed. Reg. at 48,033*. Construction sites can pollute with soil sediments, phosphorus, nitrogen, nutrients from [\*\*38] fertilizers, pesticides, petroleum products, construction chemicals and solid wastes. *Id.* EPA states that such substances can be toxic to aquatic organisms, and affect water used for drinking and recreation. *Id.*

Following its characterization of construction sites as suitable for regulation, EPA defined its task as determining "an acreage limit [] appropriate for identifying sites that amount are (sic) to industrial activity." *55 Fed. Reg. at 48,036*. EPA originally proposed regulations that exempted operations that disturb less than one acre of land and are not part of a common plan of development or sale. *55 Fed. Reg. at 48,035-36*. In response to comments by the regulated community about the administrative burden presented by the regulation, EPA increased the exemption to five acres. *55 Fed. Reg. at 48,036*. EPA also noted that larger sites will involve heavier equipment for removing vegetation and bedrock than smaller sites. *Id. at 48,036*. [\*1306]

We find that EPA's rationale for increasing the limit from one to five acres inadequate and therefore arbitrary and capricious. EPA cites no information to support its [\*\*39] perception that construction activities on less than five acres are non-industrial in nature.

EPA also claims agency power, inherent in statutory schemes, to make categorical exemptions when the result is *de minimis*. *Alabama Power Co. v. Costle*, 204 App. D.C. 51, 636 F.2d 323, 360 (D.C. Cir. 1979). However, if construction activity is industrial in nature, and EPA

concedes that it is, EPA is not free to create exemptions from permitting requirements for such activity. See *Natural Resources Defense Council, Inc. v. Costle*, 568 F.2d at 1369, 1377 (D.C. Cir. 1977) (once Congress has delineated an area that requires permits, EPA is not free to create exemptions).

Further, we find the *de minimis* principle inapplicable here. [HN22] The *de minimis* exemption is only available where a regulation would "yield a gain of trivial or no value." *Alabama Power Co., supra*, at 361. Because of the lack of data, we cannot know whether exempting sites of less than five acres will indeed have only a *de minimis* effect.

The *de minimis* concept is based on the principle that the law does not concern itself with trifling matters. *Id. at 360*. [\*\*40] We question its applicability in a situation such as this where the gains from application of the statute are being weighed against administrative burdens to the regulated community. See *id. at 360-361* (implied authority to make cost-benefit decisions must derive from statute, and not general *de minimis* doctrine).

Further, EPA's claim that the five-acre exemption is *de minimis* is contradicted by the admission that even small construction sites can have a significant impact on local water quality. The EPA acknowledges that "over a short period of time, construction sites can contribute more sediment to streams than was previously deposited over several decades." *55 Fed. Reg. at 48,033*. Without data supporting the expanded exemption, we owe no deference to EPA's line-drawing. We thus hold that EPA's choice of a five-acre limit is arbitrary and capricious, invalidate that portion of the rule exempting construction sites of five acres or less from permitting requirements, and remand for further proceedings.

### 4. Exemption for oil and gas activities.

[HN23] The 1987 amendments created an exemption from the permit requirement for uncontaminated runoff [\*\*41] from mining, oil and gas facilities. See Appendix, CWA § 402(1)(2), 33 U.S.C. §§ 1342(1)(2). Section 402(1)(2) states that a permit is not required for discharges of storm water runoff from mining, oil or gas operations composed entirely of flows from conveyance systems used for collecting precipitation runoff and "which are not contaminated by contact with, or do not come into contact with any overburden, raw material, intermediate products, finished product, byproduct, or waste products". NRDC claims that the November 1990 rule sets up an impermissible standard for determining contamination at oil and gas facilities. The relevant portion of the rule states that at these facilities, an operator is not required to submit a permit application unless the facility has had a discharge of a reportable quantity<sup>15</sup> since November 1987, or contributes to a violation of a water quality standard. *55 Fed.*

966 F.2d 1292, \*, 1992 U.S. App. LEXIS 12517, \*\*;  
34 ERC (BNA) 2017; 92 Cal. Daily Op. Service 4703

*Reg. 48,067* (to be codified at *40 C.F.R. § 122.26(c)(1)(iii)*). A facility which has had a release of oil or a hazardous substance in excess of RQs since [\*1307] 1987 must submit a permit application. *Id.*; *55 Fed. Reg. at 48,029-30*.

15 "[HN24] Reportable Quantities" (RQs) are not effluent guidelines setting up permissible limits for pollutants. Rather, they are quantities the discharge of which "may be harmful to the public health or welfare of the United States." CWA § 311(b)(4), *33 U.S.C. § 1321(b)(4)*. EPA has established RQs for a large number of substances, pursuant to both CWA section 311, *33 U.S.C. § 1321*, and the Comprehensive Environmental Response, Compensation and Liability Act ("CERCLA") section 102, *42 U.S.C. § 9602*. See 40 C.F.R. Parts 110, 117, 302. The operator of any vessel or facility which releases the RQ of any substance must immediately notify the National Response Center. See, e.g., 40 C.F.R. § 110.10.

[\*\*42] NRDC claims that oil and gas operations should be subject to the stricter standards which apply to mining operations.<sup>16</sup> It also objects to EPA's use of RQs as the only test for contamination of runoff from oil and gas storm water dischargers, claiming it is inconsistent with the legislative history. We conclude that the legislative history does not support NRDC's position.

16 Operators of mines must submit permit applications whenever storm water discharges come into contact with overburden, waste products, etc. *40 C.F.R. § 122.26(c)(1)(iv)*.

The conference report states:

Permits are not required where stormwater runoff is diverted around mining operations or oil and gas operations and does not come in contact with overburden, raw material, product, or process wastes. In addition, where stormwater runoff is not contaminated by contact with such materials, *as determined by the administrator*, permits are also not required. With respect to oil or grease or hazardous substances, the determination of whether stormwater [\*43] is "contaminated by contact with such materials, *as established by the Administrator*, shall take into consideration whether these materials are present in such stormwater runoff in excess of reportable quantities under section 311 of the Clean Water Act . . . , or in the case of mining operations, above natural background levels.

H.R. Rep. No. 1004, 99th Cong., 2d Sess., at 151 (emphasis added).

Thus, [HN25] the EPA Administrator has discretion to determine whether or not storm water runoff at an oil,

gas or mining operation is contaminated with two types of materials: (1) overburden, raw material, product, or process wastes and (2) oil, grease or hazardous substances. The report sets out factors for the Administrator to consider in determining contamination for the latter group of pollutants.

NRDC first claims that because section 402(1)(2) treats oil, gas and mining together, the EPA rule must do the same. NRDC's second objection is based on its interpretation of the language in the conference report. Because the conference report lists RQs as only one factor to be taken into consideration, NRDC insists EPA cannot make it the only factor to measure contamination for oil and gas [\*44] facilities.

Both of these arguments must fail in light of the conference report, which gives the Administrator discretion to determine when contamination has occurred with respect to the substances listed in the statute, i.e., overburden, raw materials, waste products, etc. See CWA § 402(1)(2). The conference report states that the Administrator shall take certain factors into account, but the report is clear that the determination of whether storm water is contaminated is within the Administrator's discretion.

NRDC argues that the remarks of certain congressmen during congressional debate show that the mining, oil, and gas exemptions were to apply only if the discharges were entirely free of contaminants. We find these examples less persuasive than the clear language of the conference report. Moreover, in light of the discretion granted the Administrator in the conference report, we cannot say that the rule as promulgated is an arbitrary and capricious exercise of that discretion.

NRDC also contends that Congress intended that EPA consider reportable quantities only in determining if a discharge is contaminated with oil, grease, or hazardous substances. Other pollutants, according [\*45] to NRDC, must be found to contaminate the discharge if they exceed background levels.

EPA did not, in fact, limit itself to reportable quantities in determining which oil or gas facilities must apply for a permit. The rule requires a permit for any facility which "contributes to a violation of a water quality standard." *40 C.F.R. § 122.26(c)(1)(iii)(C)*. This requirement addresses contamination with substances other than oil and hazardous substances. We find no support in the statute or the legislative history for NRDC's claim that, with respect [\*1308] to these substances, levels above background must be considered "contamination." The conference report quoted above requires consideration of background levels of any pollutant only with respect to mining operations.

*D. Lack of Controls for Municipal Storm Water Discharge.*

NRDC contends that EPA has failed to establish substantive controls for municipal storm water discharges as required by the 1987 amendments. Because Congress gave the administrator discretion to determine what controls are necessary, NRDC's argument fails.

[HN26] Prior to 1987, municipal storm water dischargers were subject to the same substantive control requirements as industrial [\*\*46] and other types of storm water. In the 1987 amendments, Congress retained the existing, stricter controls for industrial storm water dischargers but prescribed new controls for municipal storm water discharge. CWA § 402(p)(3)(A), (B), 33 U.S.C. § 1342(p)(3)(A)-(B). [HN27] The Act states that permits for discharges from municipal storm sewers:

(i) may be issued on a system- or jurisdiction-wide basis;

(ii) shall include a requirement to effectively prohibit non-storm water discharges into the storm sewers; and

(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.

Section 402(p)(3)(B), 33 U.S.C. § 1342(p)(3)(B) (emphasis added).

NRDC charges that the EPA regulations accomplish neither of the goals above, i.e., they do not effectively prohibit non-storm water discharges nor do they require the controls described in Par. (iii), above. NRDC argues that Congress granted the moratorium precisely to give EPA the opportunity to develop [\*\*47] new, substantive standards for storm water control of municipal sources and instead EPA wrote vague regulations containing no minimum criteria or performance standards. However, the language in Par. (iii), above, requires the Administrator or a state to design controls. Congress did not mandate a minimum standards approach or specify that EPA develop minimal performance requirements. NRDC also claims that the testing requirements are inadequate because there is only limited sampling at a limited number of sites. However, we must defer to EPA on matters such as this, where EPA has supplied a reasoned explanation of its choices. See 55 Fed. Reg. at 48,049.

17 The requirements for permit applications are set forth at 40 C.F.R. § 122.26(d). Individual NPDES permit writers (EPA or state officials) will decide whether application proposals are adequate. Applicants must submit information on source

control methods and estimate the annual pollutant load reduction to be achieved from their proposed management programs, but they are not required to achieve any specified level of reduction of any pollutants. See 55 Fed. Reg. at 48,070-71.

[\*\*48] NRDC's argument that the EPA rule is inadequate cannot prevail in the face of the clear statutory language and our standard of review. Congress could have written a statute requiring stricter standards, and it did not. We therefore reject NRDC's argument that EPA's storm water control regulations fail to comply with the statute. "

18 We base our holding on NRDC's challenge to the regulations at issue. Whether a specific permit complies with the requirements of section 402(p)(3)(B) would, of course, be another matter not controlled by this decision.

*E. Lack of Notice and Comment on the Approval of Part 1 of Industrial Group Storm Water Applications.*

NRDC objects to the lack of opportunity for notice and comment before EPA approval of part 1 of group applications for industrial dischargers. Each member of a proposed group must submit part 1 of the application. "If EPA approves part 1, only [\*\*1309] a small subset of the member facilities need submit part 2 of the application. 55 Fed. Reg. at 48,072 (to [\*\*49] be codified at 40 C.F.R. 122.26(e)(2)). NRDC claims that because approval of part 1 waives the requirement of filing part 2 for most members of a group, EPA's decision on part 1 is equivalent to a "rule" requiring notice and comment from the public. The issue thus presented is whether EPA's decision on a part 1 group permit application is a "rule" as defined in 5 U.S.C. § 551(4) (1988) <sup>20</sup> requiring public notice and opportunity to comment under 5 U.S.C. § 553 (1988), or is otherwise subject to the notice and comment requirement.

19 Part 1 must include the identity of the group's participants, a description of the participants' industrial activities, a list of significant materials exposed to precipitation and the identity of the subset of the group's members who will submit quantitative data in part 2 of the application. 55 Fed. Reg. at 48,067.

20 [HN28] A rule means "the whole or part of an agency statement of general or particular applicability and future effect designed to implement, interpret, or prescribe law or policy or describing the organization, procedure, or practice requirements of an agency. . . ." 5 U.S.C. § 551(4).

[\*\*50] NRDC argues that approval or disapproval of a part 1 application requires public comment because it has "general applicability" pursuant to 5 U.S.C. § 551(4) and because it will have a "palpable effect" in that it will

966 F.2d 1292, \*, 1992 U.S. App. LEXIS 12517, \*\*,  
34 ERC (BNA) 2017; 92 Cal. Daily Op. Service 4703

relieve the majority of entities in the group from submitting data in part 2 of the application. NRDC cites *NRDC v. EPA*, 683 F.2d 752 (3rd Cir. 1982) and *Council of Southern Mountains, Inc. v. Donovan*, 209 App. D.C. 318, 653 F.2d 573 (D.C. Cir. 1981) in support of its argument. Both cases involved the postponement of regulations. See *NRDC*, 683 F.2d at 753-54, 764 (indefinite postponement of effective date of final amendments to regulations dealing with the discharge of toxic pollutants requires notice and comment because it has a substantial impact on the public and the industry); *Council of Southern Mountains, Inc.*, 653 F.2d at 575, 580 n. 28 (deferral of implementation of regulations requiring coal operators to supply life-saving equipment ordinarily would require notice and comment because it has a "palpable effect" upon the industry and the public).

We find these cases to be distinguishable. Both involve [\*\*51] the postponement of rules of general applicability to an entire industry, or to a large class of pollutants. In contrast, although the part 1 application process will relieve some entities from the need to furnish further data, the decision is specific to a particular permit application and approval of a preliminary application will not implement, interpret or prescribe any general law or policy pursuant to 5 U.S.C. § 551(4). Rulemaking ordinarily involves "broad judgments, legislative in nature rather than the resolution of a particular dispute of facts." *Washington Utilities & Transportation Com'n v. Federal Communication Commission*, 513 F.2d 1142, 1160 (9th Cir. 1975), cert. denied, 423 U.S. 836, 96 S. Ct. 62, 46 L. Ed. 2d 54 (1975). The decision to approve a part 1 permit application, although it may affect a large number of applicants, is nevertheless focused on a specific factual question: whether the application adequately designates a representative smaller group subject to the more extensive data gathering requirements in part 2 of the application. See 55 Fed. Reg. at 48,028. Because the decision involves a discrete, factual issue, the better view [\*\*52] is that it is neither a rule nor otherwise subject to the notice and comment requirement.

Because approval of a part 1 application is essentially a factual determination, we hold that EPA's group permit application process for industrial dischargers is not invalid by its failure to provide for notice and comment.

### HI. CONCLUSION

In summary, we grant and deny relief as follows:

1. "Deadlines" issue. We grant the request for declaratory relief and deny the request for injunctive relief. We deny the request to place small, medium and large municipalities on the same permitting schedule. We hold that EPA's failure to include deadlines for permit approval

or denial and compliance consistent with CWA § 402(p) is arbitrary and capricious.

2. *Exclusion of Sources from Regulation.* We uphold the definition of "municipal [\*1310] separate storm sewers serving a population." We hold that the exemption for construction sites of less than five acres is arbitrary and capricious and remand for further proceedings. Based on the record before us, we vacate that portion of the rule regulating "light industry" and remand for further proceedings.

3. *Other issues.* We uphold the rule as to oil and [\*\*53] gas operations and storm water control. We further hold that EPA approval of part 1 of a group application for an industrial discharger is not a rule requiring notice and comment from the public.

Petition for Review GRANTED IN PART and DENIED IN PART.

#### APPENDIX A

[HN29] CWA § 402, 33 USCA § 1342

(1) *Limitation on permit requirement*

(2) *Stormwater runoff from oil, gas, and mining operations*

The Administrator shall not require a permit under this section, nor shall the Administrator directly or indirectly require any State to require a permit, for discharges of stormwater runoff from mining operations or oil and gas exploration, production, processing, or treatment operations or transmission facilities, composed entirely of flows which are from conveyances or systems of conveyances (including but not limited to pipes, conduits, ditches, and channels) used for collecting and conveying precipitation runoff and which are not contaminated by contact with, or do not come into contact with, any overburden, raw material, intermediate products, finished product, byproduct, or waste products located on the site of such operations.

(p) *Municipal and industrial [\*\*54] stormwater discharges*

(1) *General rule*

Prior to October 1, 1992, the Administrator or the State (in the case of a permit program approved under this section) shall not require a permit under this section for discharges composed entirely of stormwater.

(2) *Exceptions*

Paragraph (1) shall not apply with respect to the following stormwater discharges:

(A) A discharge with respect to which a permit has been issued under this section before February 4, 1987.

(B) A discharge associated with industrial activity.

(C) A discharge from a municipal separate storm sewer system serving a population of 250,000 or more.

(D) A discharge from a municipal separate storm sewer system serving a population of 100,000 or more but less than 250,000.

(E) A discharge for which the Administrator or the State, as the case may be, determines that the stormwater discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

*(3) Permit requirements*

*(A) Industrial discharges*

Permits for discharges associated with industrial activity shall meet all applicable provisions of this section and section 1311 of this title.

*[\*\*55] (B) Municipal discharge*

Permits for discharges from municipal storm sewers -

(i) may be issued on a system- or jurisdiction-wide basis;

(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or [\*1311] the State determines appropriate for the control of such pollutants.

*(4) Permit application requirements*

*(A) Industrial and large municipal discharges*

Not later than 2 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraphs (2)(B) and (2)(C). Applications for permits for such discharges shall be filed no later than 3 years after February 4, 1987. Not later than 4 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but **[\*\*56]** in no event later than 3 years after the date of issuance of such permit.

*(B) Other municipal discharges*

Not later than 4 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraph (2)(D). Applications for permits for such discharges shall be filed no later than 5 years after February 4, 1987. Not later than 6 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

*(5) Studies*

The Administrator, in consultation with the States, shall conduct a study for the purposes of -

(A) identifying those stormwater discharges or classes of stormwater discharges for which permits are not required pursuant to paragraphs (1) and (2) of this subsection;

(B) determining, to the maximum extent practicable, the nature and extent of pollutants in such discharges; and

(C) establishing procedures and methods to control stormwater discharges to the extent necessary **[\*\*57]** to mitigate impacts on water quality.

Not later than October 1, 1988, the Administrator shall submit to Congress a report on the results of the study described in subparagraphs (A) and (B). Not later than October 1, 1989, the Administrator shall submit to Congress a report on the results of the study described in subparagraph (C).

*(6) Regulations*

Not later than October 1, 1992, the Administrator, in consultation with State and local officials, shall issue regulations (based on the results of the studies conducted under paragraph (5)) which designate stormwater discharges, other than those discharges described in paragraph (2), to be regulated to protect water quality and shall establish a comprehensive program to regulate such designated sources. The program shall, at a minimum, (A) establish priorities, (B) establish requirements for State stormwater management programs, and (C) establish expeditious deadlines. The program may include performance standards, guidelines, guidance, and management practices and treatment requirements, as appropriate.

CONCUR BY: O'SCANNLAIN (In Part)

DISSENT BY: O'SCANNLAIN (In Part)

DISSENT

O'SCANNLAIN, Circuit Judge, concurring in part and dissenting in part:

I concur in Parts **[\*\*58]** I, H.A, II.C.1, II.C.4, II.E, and much of Part II.B of the majority opinion. I dissent from Part II.B.2.c, directing EPA to issue supplemental regulations. I dissent also from Parts II.C.2 and II.C.3, in which the court invalidates EPA's exclusion of storm water discharges from certain light industrial and small construction sites from the definition of "discharges associated with industrial activity." Finally, I concur in the result, but not the reasoning, of Part II.D, holding that EPA has not acted unlawfully by failing to include specific control requirements in the permit application regulations.

**[\*1312]** I

The majority holds that EPA has violated statutory requirements by failing to set dates for approval of, and compliance with, permits as part of its permit application program. *Ante* at 6206. Despite the holding in Part II.B.2.b that injunctive relief is inappropriate (with which I agree), the majority in Part II.B.2.c orders EPA to issue supplemental regulations setting such deadlines immediately.

I am not convinced that the statute requires EPA to set these deadlines as part of the permit application process. The provision at issue reads, in relevant part:

(4) Permit application **[\* 59]** requirements

(A) Industrial and large municipal discharges

Not later than 2 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraphs (2)(B) and (2)(C). Applications for permits for such discharges shall be filed no later than 3 years after February 4, 1987. Not later than 4 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

(B) Other municipal discharges

Not later than 4 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraph (2)(D). Applications for permits for such discharges shall be filed no later than 5 years after February 4, 1987. Not later than 6 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously **[\*\*60]** as practicable, but in no event later than 3 years after the date of issuance of such permit.

CWA § 402(p)(4); 33 U.S.C. § 1342(p)(4) (1988).

While the statute establishes a time line EPA must follow, it does not, in my view, require that EPA include the deadline for permit approval in the permit application regulations. I agree that, given EPA's past delays and the fact that the statutory dates for issuance or denial of permits are now long past, it is appropriate for this court to declare that the statute requires EPA to issue or deny permits within one year of the application deadline. I do not, however, see that any purpose is served by requiring EPA to issue supplemental regulations setting out these deadlines, and I doubt our authority to do so.

With respect to compliance deadlines, the statute contemplates that such deadlines will be set in individual permits as they are issued. *See* CWA § 402(p)(4)(A), (B) ("Any such permit shall provide for compliance. . ."). Each permit must contain a compliance deadline, which may not exceed three years from the date of issuance. Nothing in the statute requires EPA to establish compliance deadlines now, before any permits have **[\* 61]** been issued. Accordingly, in my view, NRDC's challenge to the lack of compliance deadlines in EPA's current regulations is premature. I therefore dissent from Part II.B.2.c of the majority opinion.

II

I dissent also from Parts II.C.2 and II.C.3. In my view, EPA's definition of "discharge associated with industrial activity" is a reasonable construction of an ambiguous statute, entitled to deference. While my colleagues acknowledge that we may not overturn an agency rule that represents a "permissible construction" of a statute, *ante* at 6200 (quoting *Chevron, U.S.A., Inc. v. NRDC*, 467 U.S. 837, 843, 104 S. Ct. 2778, 81 L. Ed. 2d 694 (1984)), they fail to apply that axiom.

A

EPA's rule excludes from the permitting requirement certain light industry facilities at which "areas where material handling equipment or activities, raw materials, intermediate **[\* 1313]** products, final products, waste materials, byproducts, or industrial machinery" are not exposed to storm water. *See* 40 C.F.R. § 122.26(b)(14). EPA determined that discharges from such facilities do not fall within the definition of "discharges associated with industrial activity." In my view, this determination was reasonable.

The majority concedes **[\*\*62]** that the statute does not define "discharge associated with industrial activity." *Ante* at 6213. The operative phrase, as my colleagues note, is "associated with." *See id.* For purposes of evaluating the light industry exemption, I concede that manufacturing falls within the generally accepted meaning of "industrial activity," and that many of the facilities exempted by the

EPA rule are manufacturers. Nonetheless, that concession does not compel the conclusion that discharges from such facilities are "associated with industrial activity."

The majority concludes, without explanation, that the phrase "discharges associated with industrial activity" is "very broad." *Ante* at 6214. Neither the plain meaning of the term "associated" nor the legislative history of the statute support this conclusion. "Associated with" means closely related to or connected with. *See Webster's Ninth New Collegiate Dictionary* 110 (1986). To the extent it casts any light on the subject, the legislative history supports a narrow reading of the phrase "associated with." Four members of the House, in the course of floor debates on the measure both before and after President Reagan's veto, explained [\*\*63] that:

[a] discharge is associated with industrial activity if it is *directly related to manufacturing, processing or raw materials storage areas* at an industrial plant. Discharges which do not meet this definition include those discharges associated with parking lots and administrative and employee buildings.

133 Cong. Rec. 985 (1987) (statement of Rep. Hammerschmidt) (emphasis added).<sup>1</sup> The underscored language suggests that Congress intended to regulate only discharges directly related to certain activities at industrial facilities. EPA's interpretation, that discharges are "directly related" to these activities only if storm water may reasonably be expected to come into contact with them before its discharge, is eminently logical.

1 This statement was repeated verbatim by Reps. Stangeland and Snyder. 133 Cong. Rec. at 991-92; 132 Cong. Rec. at 31,959, 31,964 (1986). Rep. Rowland offered a slight variation on the theme:

One of the discharge categories is "a discharge associated with an industrial activity." A discharge is not considered to be associated with industrial activity unless it is directly related to manufacturing, processing, or raw materials storage areas at an industrial plant. Such discharges include [sic] those from parking lots and administrative areas and employee buildings.

132 Cong. Rec. at 31,968. Rep. Rowland apparently misspoke; he probably meant, like the other legislators who addressed the topic, to say "such discharges *do not* include" those from parking lots.

[\* \*64] The majority opinion interprets the exclusion of parking lots as an expression of congressional intent "to exclude only those facilities or parts of a facility that are completely non-industrial." *Ante* at 6215. My colleagues' reliance on the second sentence of the statement quoted

above to establish this intent, however, is misplaced. The sentence relied on cannot assist us in our search for the meaning of "associated with" because it employs that very term. Moreover, it does not pretend to establish an exhaustive list of areas excluded from regulation. Legislators listed discharges from parking lots and administrative and employee buildings as *among those* not directly related to industrial activity; no one suggested that *only* discharges associated with those structures were to be excluded.

EPA's definition is consistent with the plain words of the statute and, to the extent any intent is discernible, the congressional intent. EPA has defined the term "storm water discharge associated with industrial activity" to cover only those discharges reasonably expected to come into contact with industrial activities. A large number of facilities automatically fall within EPA's [\*\*65] definition and are required to [\*1314] apply for permits. Because facilities falling within certain specified classifications under the Standard Industrial Classification manual generally conduct their operations entirely indoors, minimizing the likelihood of contact with storm water, EPA has not automatically included them within the regulations. However, these facilities *are* required to apply for permits if "areas where material handling equipment or activities, raw materials, intermediate products, final products, waste materials, byproducts, or industrial machinery at these facilities are exposed to storm water." 40 C.F.R. § 122.26(b)(14). If a storm water discharge is in fact directly related to or associated with the industrial activity carried on at a facility falling within the light industry category, the facility must obtain a permit.<sup>2</sup>

2 Thus, nothing turns on the assumption, attacked by my colleagues as unsupported by the record, *ante* at 6215, that industrial activities at this category of facilities will take place largely indoors. Where the assumption does not hold true, the permit requirement applies with full force. I also note that NRDC has pointed us to no evidence undermining EPA's assumption.

Unlike my colleagues, I decline to assume that EPA will not carry out its responsibility to identify and to require permits of facilities where industrial activities are in fact exposed to storm water, or that such facilities will ignore their statutory duty to apply for permits. Should that occur, a lawsuit challenging EPA's failure to enforce its regulations might well be in order. An unsubstantiated suspicion that EPA may not vigorously enforce its regulations, however, does not make those regulations arbitrary or capricious.

[\*\*66] In my view, the statute's treatment of oil and gas facilities supports EPA's reading of the term "associated with industrial activity." Congress specifically exempted from the permit requirement discharges from oil and gas facilities and mining operations which have not come in contact with raw materials, finished products, or waste products. CWA § 402(1)(2). This section indicates a congressional intent to exempt uncontaminated discharges which have not come into contact with "industrial activities" from regulation. For oil, gas, and mining operations, Congress in this section supplied a specific, and quite limited, definition of "industrial activities." For other facilities, that definition was left to the discretion of EPA, which has adopted a much broader definition, encompassing contact with such things as industrial machinery and materials handling equipment. See 40 C.F.R. § 122.26(b)(14).

I do not mean to suggest that the majority's construction of the statute is untenable. It may even be preferable to the reading chosen by the agency. Nonetheless, in my view the statute is ambiguous and the legislative history does not demonstrate any clear congressional intent. The question [\*\*67] before this court, therefore, is not whether "the agency construction was the only one it permissibly could have adopted" or even whether it is the "reading the court would have reached if the question initially had arisen in a judicial proceeding." *Chevron, U.S.A. v. NRDC*, 467 U.S. 837, 843, n.9, 104 S. Ct. 2778, 81 L. Ed. 2d 694 (1984). We need only inquire if the agency's construction is a permissible one. *Id.* at 843. EPA's definition falls well within permissible bounds, and should be upheld.

#### B

Although the issue is closer, I also am not persuaded that EPA's exemption for construction sites under five acres should be struck down. EPA has not conceded that "construction activity is industrial in nature." *Ante* at 6217-18. In the preamble to its final rule, EPA noted that "Construction activity at a high level of intensity is comparable to other activity that is traditionally viewed as industrial, such as natural resource extraction." 3 55 Fed. Reg. 48,033 (1990) (emphasis added). EPA explained that it was "attempting to focus [regulation] only on those construction activities [\*1315] that resemble industrial activity." 55 Fed. Reg. at 48,035 [\*\*68] (emphasis added).

3 EPA did admit that "even small construction sites may have a significant negative impact on water quality in localized areas," 55 Fed. Reg. at 48,033. In the absence of any indication of what EPA meant by "small," however, that statement does not undermine EPA's exemption of sites under five acres.

Neither NRDC nor the majority point to anything in the statute or the legislative history that would require the agency to define "industrial activity" as including all construction operations. Accordingly, I believe deference is due EPA's definition, provided it is not arbitrary, capricious, or manifestly contrary to the statute. *Chevron, U.S.A., 467 U.S. at 844.*

In trying to determine when construction should be treated as industrial activity, EPA considered a number of possible approaches. See 55 Fed. Reg. at 48,035. Exempting construction that would be completed within a certain designated time frame was deemed inappropriate, because the work [\*\*69] could be both intensive and expansive but nonetheless take place over a short period of time. Basing the limit on quantity of soil removed was also rejected as not relating to the amount of land surface disturbed. EPA finally settled on the surface area disturbed by the construction project as a feasible and appropriate mechanism for "identifying sites that are [sic] amount to industrial activity." 55 Fed. Reg. at 48,036.

Having determined that not all construction amounts to industrial activity, and that the appropriate basis for differentiation is land area disturbed, EPA then had to determine where to draw the line. Initially, EPA proposed to exempt all construction operations disturbing less than one acre of land, as well as single family residential projects disturbing less than five acres. 53 Fed. Reg. 49,431 (1988). In the final rule, however, EPA adopted a five-acre minimum for all construction projects. 55 Fed. Reg. 48,066 (1990); 40 C.F.R. § 122.26(b)(14)(c).

Admittedly, the final rule contains little in the way of justification for treating two-acre sites differently than five-acre ones, but that does not necessarily make [\*\*70] it arbitrary and capricious. Line-drawing is often difficult. NRDC was apparently willing to accept EPA's proposed one-acre/five-acre rule. Although NRDC now challenges the blanket five-acre rule, it offers no evidence that sites excluded from the permitting requirement constitute "industrial activity." In such absence of any evidence in the record undermining EPA's conclusion on an issue squarely within its expertise, I believe the rule must be upheld.

4 Because I conclude that the rule falls within the permissible bounds of the statutory definition of "discharges associated with industrial activity," I need not consider the applicability of the *de minimis* exception.

#### III

Finally, while I concur in the result reached by the majority in Part II.D, rejecting NRDC's claim that EPA has unlawfully failed to require substantive controls on municipal discharges, I disagree with the majority's rea-

soning. In my view, NRDC's claim is premature, and we should decline to address its merits.

NRDC contends that the 1987 amendments [\*\*71] require EPA to establish substantive controls for municipal storm water discharges. In support of this argument, NRDC relies on CWA § 402(p)(3)(B), 33 U.S.C. § 1342(p)(3)(B), which provides:

Permits for discharges from municipal storm sewers -  
\* \* \*

(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable. . . .

This section refers only to *permits*, and says nothing about permit applications. Because EPA has yet to issue any permits, NRDC's claim on this point is premature. In the absence of any indication to the contrary, we must

assume that any permit issued will comply with all applicable statutory requirements. The statute does not require that EPA detail the substantive controls to be imposed when establishing permit application requirements. Accordingly, I would reject NRDC's claim without [\*\*1316] reaching the issue of the Administrator's discretion in selecting those controls.

#### IV

In sum, I join much of my colleagues' opinion. However, I would not require EPA to issue supplemental regulations detailing the time line for [\*\*72] issuance of and compliance with permits, and I would uphold EPA's definition of "discharge associated with industrial activity." Finally, I would reject NRDC's claim that EPA is required to detail control measures in the permit application regulations on the grounds that the statute requires control measures only in the permits themselves.

As of: Jun 17, 2010

PUD NO. 1 OF JEFFERSON COUNTY AND CITY OF TACOMA, PETITIONERS  
v. WASHINGTON DEPARTMENT OF ECOLOGY, ET AL.

No. 92-1911

SUPREME COURT OF THE UNITED STATES

511 U.S. 700; 114 S. Ct. 1900; 128 L. Ed. 2d 716; 1994 U.S. LEXIS 4271; 62 U.S.L.W.  
4408; 38 ERC (BNA) 1593; 94 Cal. Daily Op. Service 3843; 94 Daily Journal DAR  
7236; 24 ELR 20945; 8 Fla. L. Weekly Fed. S 172

February 23, 1994, Argued  
May 31, 1994, Decided

**PRIOR HISTORY:** ON WRIT OF CERTIORARI  
TO THE SUPREME COURT OF WASHINGTON.

**DISPOSITION:** 121 Wash. 2d 179, 849 P.2d 646,  
affirmed.

**CASE SUMMARY:**

**PROCEDURAL POSTURE:** Petitioners, a city and a local utility district, desired to build a hydroelectric project on the Dosewallips River in Washington State. Respondent state environmental agency conditioned a permit for the project on the maintenance of specific minimum stream flows to protect salmon and steelhead runs. The Supreme Court of Washington upheld the agency's decision. Petitioners sought certiorari.

**OVERVIEW:** Because a Federal Energy Regulatory Commission license was required and because the project might result in discharges into the Dosewallips River, petitioners were required to obtain state certification of the project pursuant to § 401 (33 U.S.C.S. § 1341) of the Federal Water Pollution Control Act, commonly known as the Clean Water Act (Act), 33 U.S.C.S. § 1251 et seq. The principal dispute was whether the minimum stream flow requirement that the state imposed on the hydroelectric project was a permissible condition of a § 401 certification under the Act. The Court concluded that it was, upholding the state supreme court's judgment. The Court held that a state may include minimum stream flow requirements in a § 401 certification insofar as ne-

cessary to enforce a designated use contained in a state water quality standard. In so doing, the Court rejected petitioners' assertion that the Act was only concerned with water quality and did not allow the regulation of water quantity. Indeed, there was recognition in the Act itself that reduced stream flow, or diminishment of water quantity, could constitute water pollution.

**OUTCOME:** The Court affirmed the judgment of the state supreme court.

**CORE TERMS:** water quality, certification, stream, license, designated, Clean Water Act, river, antidegradation, effluent, fish, state law, navigable waters, quantity, ensure compliance, environmental, hydroelectric, pollution, wildlife, recreation, deference, organisms, impose conditions, recommendation, interfere, licensing, unrelated, spawning, fishery, habitat, Federal Power Act FPA

LexisNexis(R) Headnotes

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

*Real Property Law > Water Rights > Beneficial Use*

*Real Property Law > Water Rights > Nonconsumptive Uses > General Overview*

[HN1] Pursuant to § 303 (33 U.S.C.S. § 1313) of the Federal Water Pollution Control Act, commonly known as the Clean Water Act (Act), 33 U.S.C.S. § 1251 et seq., a state water quality standard shall consist of the desig-

nated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses. 33 U.S.C.S. § 1313(c)(2)(A). In setting standards, the state must comply with the following broad requirements: such standards shall be such as to protect the public health or welfare, enhance the quality of water and serve the purposes of the Act. Such standards shall be established taking into consideration their use and value for public water supplies, propagation of fish and wildlife, recreational, and other purposes. Section 303 also contains an "antidegradation policy," a policy requiring that state standards be sufficient to maintain existing beneficial uses of navigable waters, preventing their further degradation.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > State Water Quality Certifications*

*Environmental Law > Water Quality > Clean Water Act > Enforcement > General Overview*

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN2]States are responsible for enforcing water quality standards on intrastate waters. 33 U.S.C.S. § 1319(a). In addition to these primary enforcement responsibilities, § 401 of the Federal Water Pollution Control Act, 33 U.S.C.S. § 1341, requires states to provide a water quality certification before a federal license or permit can be issued for activities that may result in any discharge into intrastate navigable waters. Specifically, § 401 requires an applicant for a federal license or permit to conduct any activity which may result in any discharge into the navigable waters to obtain from the state a certification that any such discharge will comply with the applicable provisions of 33 U.S.C.S. §§ 1311, 1312, 1313, 1316, and 1317. 33 U.S.C.S. § 1341(a). Section 401(d) further provides that any certification shall set forth any effluent limitations and other limitations, and monitoring requirements necessary to assure that any applicant will comply with any applicable effluent limitations and other limitations, under 33 U.S.C.S. § 1311 or 1312, and with any other appropriate requirement of State law set forth in such certification. 33 U.S.C. § 1341(d). The limitations included in the certification become a condition on any federal license.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > State Water Quality Certifications*

[HN3]See 33 U.S.C.S. § 1341.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > State Water Quality Certifications*

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

*Environmental Law > Water Quality > Clean Water Act > Wetlands*

[HN4]State water quality standards adopted pursuant to § 303 (33 U.S.C.S. § 1313) of the Federal Water Pollution Control Act, commonly known as the Clean Water Act (Act), 33 U.S.C.S. § 1251 et seq., are among the "other limitations" with which a state may ensure compliance through the certification process under § 401 (33 U.S.C.S. § 1341) of the Act.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > State Water Quality Certifications*

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN5]Pursuant to § 401 (33 U.S.C.S. § 1341) of the Federal Water Pollution Control Act, commonly known as the Clean Water Act, 33 U.S.C.S. § 1251 et seq., states may condition certification upon any limitations necessary to ensure compliance with state water quality standards or any other appropriate requirement of state law.

*Environmental Law > Water Quality > Clean Water Act > Coverage & Definitions > Navigable Waters*

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > State Water Quality Certifications*

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN6]Pursuant to § 401(d) (33 U.S.C.S. § 1341(d)) of the Federal Water Pollution Control Act, commonly known as the Clean Water Act (Act), 33 U.S.C.S. § 1251 et seq., a state may require that a permit applicant comply with both the designated uses and the water quality criteria of the state standards. In granting certification pursuant to § 401(d), the state shall set forth any limitations necessary to assure that the applicant will comply with any limitations under § 303 (33 U.S.C.S. § 1313) of the Act and with any other appropriate requirement of state law. A certification requirement that an applicant operate the project consistently with state water quality standards, consistently with the designated uses of the water body and the water quality criteria, is both a "limitation" to assure compliance with limitations imposed under § 303, and an "appropriate" requirement of state law.

*Environmental Law > Water Quality > Clean Water Act  
> Coverage & Definitions > General Overview  
Real Property Law > Water Rights > Nonconsumptive  
Uses > Fishing*

[HN7]Under the Federal Water Pollution Control Act, commonly known as the Clean Water Act (Act), 33 U.S.C.S. § 1251 et seq., reduced stream flow, specifically diminishment of water quantity, can constitute water pollution. In particular, the Act's definition of pollution as the man-made or man induced alteration of the chemical, physical, biological, and radiological integrity of water encompasses the effects of reduced water quantity. 33 U.S.C.S. § 1362(19).

*Energy & Utilities Law > Electric Power Industry >  
Federal Power Act > General Overview  
Environmental Law > Water Quality > Clean Water Act  
> Discharge Permits > State Water Quality Certifica-  
tions  
Real Property Law > Water Rights > Administrative  
Allocations*

[HN8]Sections 101(g) and 510(2) (33 U.S.C.S. §§ 1251(g) and 1370(2)) of the Federal Water Pollution Control Act, commonly known as the Clean Water Act, 33 U.S.C.S. § 1251 et seq., preserve the authority of each state to allocate water quantity as between users; they do not limit the scope of water pollution controls that may be imposed on users who have obtained, pursuant to state law, a water allocation.

*Environmental Law > Water Quality > Clean Water Act  
> Discharge Permits > State Water Quality Certifica-  
tions*

*Environmental Law > Water Quality > Clean Water Act  
> Enforcement > General Overview  
Environmental Law > Water Quality > Clean Water Act  
> Water Quality Standards*

[HN9]A state may include minimum stream flow requirements in a certification issued pursuant to § 401 (33 U.S.C.S. § 1341) of the Federal Water Pollution Control Act, commonly known as the Clean Water Act, 33 U.S.C.S. § 1251 et seq., insofar as necessary to enforce a designated use contained in a state water quality standard.

**DECISION:**

State's minimum stream flow requirement held to be permissible condition of certification under 33 USCS 1341 to build hydroelectric project.

**SUMMARY:**

The Clean Water Act (33 USCS 1251 et seq.) requires (1) under 303 of the Act (33 USCS 1313), that each state, subject to federal approval, institute comprehensive water quality standards establishing water quality goals for all intrastate waters, (2) under 401 of the Act (33 USCS 1341), that states provide a water quality certification before a federal license or permit is issued for activities that might result in any discharge into intrastate navigable waters, and (3) under 401(d) of the Act (33 USCS 1341(d)), that any certification shall set forth any effluent limitations and other limitations necessary to assure that any applicant will comply with various provisions of the Act and appropriate state law requirements, which limitations will become a condition on any federal license. The state of Washington adopted comprehensive water quality standards intended to regulate all of the state's navigable waters under an administrative scheme that classified certain waters as extraordinary, which waters had characteristic uses including fish migration, rearing, and spawning. A city and a local utility district proposed to build on a river that had been classified as extraordinary a hydroelectric project that would divert water from a 1.2-mile bypass reach of the river, run the water through turbines to generate electricity, and then return the water to the river below the bypass reach. The state ecology department issued a 401 water quality certification imposing on the project conditions that included a minimum stream flow requirement of between 100 and 200 cubic feet per second, depending on the season. The state Pollution Control Hearings Board determined that the flow requirement, by being intended to enhance rather than maintain the fishery in the river, exceeded the ecology department's authority under state law, but the Thurston County Superior Court, holding that the Board had erred, reinstated the department's flow requirement. The Supreme Court of Washington, holding that the antidegradation provisions of the state water quality standards required the imposition of minimum stream flows, and that 401(d) authorized the flow requirement imposed by the ecology department, affirmed the Superior Court judgment (121 Wash 2d 179, 849 P2d 646).

On certiorari, the United States Supreme Court affirmed. In an opinion by O'Connor, J., joined by Rehnquist, Ch. J., and Blackmun, Stevens, Kennedy, Souter, and Ginsburg, JJ., it was held that the minimum flow requirement was a permissible condition of a 401 certification, because (1) pursuant to 401, states may condition certification upon any limitations necessary to insure compliance with state water quality standards or any other appropriate requirement of state law; (2) the minimum flow requirement was such a limitation; and (3) the court was unwilling to read implied limitations into 401 based on a purported conflict with the authority of the Federal Energy Regulatory Commission (FERC), under

511 U.S. 700, \*; 114 S. Ct. 1900, \*\*;  
128 L. Ed. 2d 716, \*\*\*; 1994 U.S. LEXIS 4271

the Federal Power Act (FPA) (16 USCS 791a et seq.), to license hydroelectric projects, since (a) 401's certification requirement applied to statutes and regulatory schemes other than those concerning FERC's authority under the FPA, and (b) any conflict with such authority was hypothetical, where FERC had not yet acted on the license application from the city and the local utility district.

Stevens, J., concurring, expressed the view that the Clean Water Act (1) did not purport to place any constraint on a state's power to regulate the quality of its own waters more stringently than federal law might require, and (2) explicitly recognized states' ability to impose stricter standards.

Thomas, J., joined by Scalia, J., dissenting, expressed the view that (1) the majority opinion fundamentally altered the federal-state balance Congress had carefully crafted in the Federal Power Act (16 USCS 791a et seq.), and (2) such a result was neither mandated nor supported by the text of 401.

ENERGY §30

ENVIRONMENTAL LAW §32

WATERS §20

hydroelectric power -- federal license -- state minimum flow requirement -- protection of fisheries --

Headnote:[1A][1B][1C][1D]

A minimum stream flow requirement of between 100 and 200 cubic feet per second imposed, in order to protect a river's fisheries, by a state environmental agency under a water quality certification issued, with respect to a proposed hydroelectric project on the river, pursuant to 401 of the Clean Water Act (33 USCS 1341)--which requires states to provide a water quality certification before a federal license or permit can be issued for activities that might result in any discharge into intrastate navigable waters--is a permissible condition of 401 certification, because the United States Supreme Court has determined that (1) pursuant to 401, states may condition certification upon any limitations necessary to insure compliance with state water quality standards or any other appropriate requirement of state law; (2) the minimum flow requirement is such a limitation; and (3) the court is unwilling to read implied limitations into 401 based on a purported conflict with the authority of the Federal Energy Regulatory Commission (FERC), under the Federal Power Act (FPA) (16 USCS 791a et seq.), to license hydroelectric projects, since (a) 401's certification requirement applies to other statutes and regulatory

schemes in addition to that concerning FERC's authority under the FPA, and (b) any conflict with such authority is hypothetical, where FERC has not yet acted on the license application for the project in question. (Thomas and Scalia, JJ., dissented from this holding.)

Clean Water Act -- federal license -- compliance  
with state standards --

Headnote:[3A][3B]

Although 401(d) of the Clean Water Act (33 USCS 1341(d))--providing that any certification under 401 of the Act (33 USCS 1341), which requires states to provide a water quality certification before a federal license or permit can be issued for activities that might result in any discharge into intrastate navigable waters, shall set forth any effluent limitations and other limitations necessary to assure that any applicant will comply with various provisions, including certain specified statutory provisions, of the Act, and with appropriate state law requirements--authorizes a state to place restrictions on the activity as a whole, that authority is not unbounded; however, insuring compliance with 303 of the Act (33 USCS 1313), which requires each state, subject to federal approval, to institute comprehensive standards establishing water quality goals for all intrastate waters, is a proper function of the 401 certification, because, although 303 is not one of the statutory provisions listed in 401(d), the statute allows states to impose limitations to insure compliance with 301 of the Act (33 USCS 1311), and 301 in turn incorporates 303 by reference.

[\*\*\*LEdHN4]

#### ENVIRONMENTAL LAW §32

Clean Water Act -- federal license -- state minimum  
stream flow requirement -- protection of fish habitat --

Headnote:[4A][4B]

With respect to the determination of the United States Supreme Court that pursuant to 401 of the Clean Water Act (33 USCS 1341), which requires states to provide a water quality certification before a federal license or permit can be issued for activities that might result in any discharge into intrastate navigable waters, states may condition certification upon any limitations necessary to insure compliance with state water quality standards or any other appropriate requirement of state law, a minimum stream flow requirement of between 100 and 200 cubic feet per second imposed by a state environmental agency for certification for a proposed hydroelectric project on a river with a state-designated use as a fish habitat is such a necessary limitation, because (1) the designated use directly reflects the Act's goal (stated in 33 USCS 1251(a)) of maintaining the chemical, physical, and biological integrity of the nation's waters, (2) pursuant to 401(d), the state may require that a permit applicant comply with both the designated uses and the water quality criteria of the state standards, and a certification requirement that an applicant operate the project consistently with the designated uses of the water

body and the water quality criteria is both a limitation to assure compliance with limitations imposed under 303 of the Act (33 USCS 1313), which requires each state to institute standards establishing water quality goals for intrastate waters, and an appropriate requirement of state law, (3) Environmental Protection Agency (EPA) regulations implicitly recognize that in some circumstances, criteria alone are insufficient to protect a designated use, (4) the Act permits enforcement of broad, narrative criteria which cannot reasonably be expected to anticipate all the water quality issues arising from every activity which can affect the state's hundreds of individual water bodies, (5) the minimum flow requirement is a proper application of the state and federal antidegradation regulations, as the requirement insures that an existing instream water use will be maintained and protected, (6) there is recognition in the Act itself that reduced stream flow can constitute water pollution, where the Act's definition of water pollution (under 33 USCS 1362(19)) encompasses the effects of reduced water quantity and 304 of the Act (33 USCS 1314(f)) expressly recognizes that water pollution may result from changes in the flow of navigable waters, which concern is also embodied in the EPA regulations, (7) 101(g) and 510(2) of the Act (33 USCS 1251(g), 1370(2)) preserve the authority of each state to allocate water quantity as between users, (8) the certification merely determines the nature of the use to which that proprietary right of the parties seeking to build the hydroelectric project may be put under the Act, and (9) this view is reinforced by the legislative history of the 1977 amendment to the Act adding 101(g), which history indicates that the purpose of the amendment is not to prohibit incidental effects of the requirements of the Act on individual water rights, but to insure that state allocation systems are not subverted and that any effects on individual rights are prompted by legitimate and necessary water quality standards. (Thomas and Scalia, JJ., dissented from this holding.)

#### SYLLABUS

Section 303 of the Clean Water Act requires each State, subject to federal approval, to institute comprehensive standards establishing water quality goals for all intrastate waters, and requires that such standards "consist of the designated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses." Under Environmental Protection Agency (EPA) regulations, the standards must also include an antidegradation policy to ensure that "existing instream water uses and the level of water quality necessary to protect [those] uses [are] maintained and protected." States are required by § 401 of the Act to provide a water quality certification before a federal license or permit can be issued for any activity that may result in a discharge into intrastate navigable waters. As relevant

511 U.S. 700, \*; 114 S. Ct. 1900, \*\*;  
128 L. Ed. 2d 716, \*\*\*; 1994 U.S. LEXIS 4271

here, the certification must "set forth any effluent limitations and other limitations . . . necessary to assure that any applicant" will comply with various provisions of the Act and "any other appropriate" state law requirement. § 401(d). Under Washington's comprehensive water quality standards, characteristic uses of waters classified as Class AA include fish migration, rearing, and spawning. Petitioners, a city and a local utility district, want to build a hydroelectric project on the Dosewallips River, a Class AA water, which would reduce the water flow in the relevant part of the river to a minimal residual flow of between 65 and 155 cubic feet per second (cfs). In order to protect the river's fishery, respondent state environmental agency issued a § 401 certification imposing, among other things, a minimum stream flow requirement of between 100 and 200 cfs. A state administrative appeals board ruled that the certification condition exceeded respondent's authority under state law, but the State Superior Court reversed. The State Supreme Court affirmed, holding that the antidegradation provisions of the State's water quality standards require the imposition of minimum stream flows, and that § 401 authorized the stream flow condition and conferred on States power to consider all state action related to water quality in imposing conditions on § 401 certificates.

*Held:*

Washington's minimum stream flow requirement is a permissible condition of a § 401 certification. Pp. 710-723.

(a) A State may impose conditions on certifications insofar as necessary to enforce a designated use contained in the State's water quality standard. Petitioners' claim that the State may only impose water quality limitations specifically tied to a "discharge" is contradicted by § 401(d)'s reference to an applicant's compliance, which allows a State to impose "other limitations" on a project. This view is consistent with EPA regulations providing that activities -- not merely discharges -- must comply with state water quality standards, a reasonable interpretation of § 401 which is entitled to deference. State standards adopted pursuant to § 303 are among the "other limitations" with which a State may ensure compliance through the § 401 certification process. Although § 303 is not specifically listed in § 401(d), the statute allows States to impose limitations to ensure compliance with § 301 of the Act, and § 301 in turn incorporates § 303 by reference. EPA's view supports this interpretation. Such limitations are also permitted by § 401(d)'s reference to "any other appropriate" state law requirement. Pp. 710-713.

(b) Washington's requirement is a limitation necessary to enforce the designated use of the river as a fish habitat. Petitioners err in asserting that § 303 requires

States to protect such uses solely through implementation of specific numerical "criteria." The section's language makes it plain that water quality standards contain two components and is most naturally read to require that a project be consistent with both: the designated use and the water quality criteria. EPA has not interpreted § 303 to require the States to protect designated uses exclusively through enforcement of numerical criteria. Moreover, the Act permits enforcement of broad, narrative criteria based on, for example, "aesthetics." There is no anomaly in the State's reliance on both use designations and criteria to protect water quality. Rather, it is petitioners' reading that leads to an unreasonable interpretation of the Act, since specified criteria cannot reasonably be expected to anticipate all the water quality issues arising from every activity that can affect a State's hundreds of individual water bodies. Washington's requirement also is a proper application of the state and federal antidegradation regulations, as it ensures that an existing instream water use will be "maintained and protected." Pp. 713-719.

(c) Petitioners' assertion that the Act is only concerned with water quality, not quantity, makes an artificial distinction, since a sufficient lowering of quantity could destroy all of a river's designated uses, and since the Act recognizes that reduced stream flow can constitute water pollution. Moreover, §§ 101(g) and 510(2) of the Act do not limit the scope of water pollution controls that may be imposed on users who have obtained, pursuant to state law, a water allocation. Those provisions preserve each State's authority to allocate water quantity as between users, but the § 401 certification does not purport to determine petitioners' proprietary right to the river's water. In addition, the Court is unwilling to read implied limitations into § 401 based on petitioners' claim that a conflict exists between the condition's imposition and the Federal Energy Regulatory Commission's authority to license hydroelectric projects under the Federal Power Act, since FERC has not yet acted on petitioners' license application and since § 401's certification requirement also applies to other statutes and regulatory schemes. Pp. 719-723.

**COUNSEL:** Howard E. Shapiro argued the cause for petitioners. With him on the briefs were Michael A. Swiger, Gary D. Bachman, Albert R. Malanca, and Kenneth G. Kieffer.

Christine O. Gregoire, Attorney General of Washington, argued the cause for respondents. With her on the briefs were Jay J. Manning, Senior Assistant Attorney General, and William C. Frymire, Assistant Attorney General.

Deputy Solicitor General Wallace argued the cause for the United States as amicus curiae urging affirmance.

With him on the brief were Solicitor General Days, Acting Assistant Attorney General Schiffer, James A. Feldman, and Anne S. Almy.

\* Briefs of amici curiae urging reversal were filed for the American Forest & Paper Association et al. by John R. Molm, Winifred D. Simpson, and James A. Lamberth; for Niagara Mohawk Power Corp. by Edward Berlin, Kenneth G. Jaffe, Paul J. Kaleta, Brian K. Billinson, and Timothy P. Sheehan; for the Northwest Hydroelectric Association by Richard M. Glick and Lory J. Kraut; for Pacific Northwest Utilities by Sheryllyn Peterson and R. Gerard Lutz; and for the Western Urban Water Coalition by Benjamin S. Sharp and Guy R. Martin.

Briefs of amici curiae urging affirmance were filed for the State of Vermont et al. by Jeffrey L. Amestoy, Attorney General of Vermont, and Ronald A. Shems, Assistant Attorney General, Robert Abrams, Attorney General of New York, and Kathleen Liston Morrison, Assistant Attorney General, Grant Woods, Attorney General of Arizona, Winston Bryant, Attorney General of Arkansas, Daniel E. Lungren, Attorney General of California, Richard Blumenthal, Attorney General of Connecticut, Charles M. Oberly III, Attorney General of Delaware, Robert A. Butterworth, Attorney General of Florida, Michael J. Bowers, Attorney General of Georgia, Robert A. Marks, Attorney General of Hawaii, Larry EchoHawk, Attorney General of Idaho, Roland A. Burris, Attorney General of Illinois, Pamela Fanning Carter, Attorney General of Indiana, Bonnie J. Campbell, Attorney General of Iowa, Robert T. Stephan, Attorney General of Kansas, Chris Gorman, Attorney General of Kentucky, Michael E. Carpenter, Attorney General of Maine, J. Joseph Curran, Jr., Attorney General of Maryland, Scott Harshbarger, Attorney General of Massachusetts, Frank J. Kelley, Attorney General of Michigan, Hubert H. Humphrey III, Attorney General of Minnesota, Mike Moore, Attorney General of Mississippi, Jeremiah W. Nixon, Attorney General of Missouri, Joseph P. Mazurek, Attorney General of Montana, Don Stenberg, Attorney General of Nebraska, Frankie Sue Del Papa, Attorney General of Nevada, Jeffrey R. Howard, Attorney General of New Hampshire, Fred DeVesa, Acting Attorney General of New Jersey, Tom Udall, Attorney General of New Mexico, Michael F. Easley, Attorney General of North Carolina, Heidi Heitkamp, Attorney General of North Dakota, Lee Fisher, Attorney General of Ohio, Susan B.

Loving, Attorney General of Oklahoma, Theodore R. Kulongoski, Attorney General of Oregon, Ernest D. Preate, Jr., Attorney General of Pennsylvania, Jefferey B. Pine, Attorney General of Rhode Island, T. Travis Medlock, Attorney General of South Carolina, Charles W. Burson, Attorney General of Tennessee, Dan Morales, Attorney General of Texas, Jan Graham, Attorney General of Utah, Stephen D. Rosenthal, Attorney General of Virginia, Darrell V. McGraw, Jr., Attorney General of West Virginia, James E. Doyle, Attorney General of Wisconsin, Joseph B. Meyer, Attorney General of Wyoming, and John Payton, Corporation Counsel of the District of Columbia; and for American Rivers et al. by Paul M. Smith.

**JUDGES:** O'CONNOR, J., delivered the opinion of the Court, in which REHNQUIST, C. J., and BLACKMUN, STEVENS, KENNEDY, SOUTER, and GINSBURG, JJ., joined. STEVENS, J., filed a concurring opinion, post, p. 723. THOMAS, J., filed a dissenting opinion, in which SCALIA, J., joined, post, p. 724.

#### OPINION BY: O'CONNOR

#### OPINION

[\*703] [\*\*\*723] [\*\*1905] JUSTICE O'CONNOR delivered the opinion of the Court.

[\*\*\*LEdHR1A] [1A]Petitioners, a city and a local utility district, want to build a hydroelectric project on the Dosewallips River in Washington State. We must decide whether respondent state environmental agency (hereinafter respondent) properly conditioned a permit for the project on the maintenance of specific minimum stream flows to protect salmon and steelhead runs.

[\*704] I

This case involves the complex statutory and regulatory scheme that governs our Nation's waters, a scheme that implicates both federal and state administrative responsibilities. The Federal Water Pollution Control Act, commonly known as the Clean Water Act, 86 Stat. 816, as amended, 33 U.S.C. § 1251 *et seq.*, is a comprehensive water quality statute designed to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters." § 1251(a). The Act also seeks to attain "water quality which provides for the protection and propagation of fish, shellfish, and wildlife." § 1251(a)(2).

To achieve these ambitious goals, the Clean Water Act establishes distinct roles for the Federal and State Governments. Under the Act, the Administrator of the

511 U.S. 700, \*; 114 S. Ct. 1900, \*\*;  
128 L. Ed. 2d 716, \*\*\*; 1994 U.S. LEXIS 4271

Environmental Protection Agency (EPA) is required, among other things, to establish and enforce technology-based limitations on individual discharges into the country's navigable waters from point sources. See §§ 1311, 1314. Section 303 of the Act also requires each State, subject to federal approval, to institute comprehensive water quality standards establishing water quality goals for all intrastate waters. §§ 1311(b)(1)(C), 1313. These state water quality standards provide "a supplementary basis . . . so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels." *EPA v. California ex rel. State Water Resources Control Bd.*, 426 U.S. 200, 205, n. 12, 48 L. Ed. 2d 578, 96 S. Ct. 2022 (1976).

[HN1]A state water quality standard "shall consist of the designated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses." 33 U.S.C. § 1313(c)(2)(A). In setting standards, the State must comply with the following broad requirements:

"Such standards shall be such as to protect the public health or welfare, enhance the quality of water and [\*705] serve the purposes of this chapter. Such standards shall be established taking into consideration their use and value for public water supplies, propagation of fish and wildlife, recreational [and other purposes.]" *Ibid.*

See also § 1251(a)(2).

A 1987 amendment to the Clean Water Act makes clear that § 303 also contains an "antidegradation policy" -- that is, a policy requiring [\*\*1906] that state standards be sufficient to maintain existing beneficial uses of navigable waters, preventing their further degradation. Specifically, the Act permits the revision of certain effluent limitations or water quality [\*\*\*724] standards "only if such revision is subject to and consistent with the antidegradation policy established under this section." § 1313(d)(4)(B). Accordingly, EPA's regulations implementing the Act require that state water quality standards include "a statewide antidegradation policy" to ensure that "existing instream water uses and the level of water quality necessary to protect the existing uses shall be maintained and protected." 40 CFR § 131.12 (1993). At a minimum, state water quality standards must satisfy these conditions. The Act also allows States to impose more stringent water quality controls. See 33 U.S.C. §§ 1311(b)(1)(C), 1370. See also 40 CFR § 131.4(a) (1993) ("As recognized by section 510 of the Clean Water Act,

33 U.S.C. § 1370], States may develop water quality standards more stringent than required by this regulation").

The State of Washington has adopted comprehensive water quality standards intended to regulate all of the State's navigable waters. See Washington Administrative Code (WAC) 173-201-010 to 173-201-120 (1986). The State created an inventory of all the State's waters, and divided the waters into five classes. 173-201-045. Each individual fresh surface water of the State is placed into one of these classes. 173-201-080. The Dosewallips River is classified AA, extraordinary. 173-201-080(32). The water quality [\*706] standard for Class AA waters is set forth at 173-201-045(1). The standard identifies the designated uses of Class AA waters as well as the criteria applicable to such waters. <sup>1</sup>

1 WAC 173-201-045(1) (1986) provides in pertinent part:

"(1) Class AA (extraordinary).

"(a) General characteristic. Water quality of this class shall markedly and uniformly exceed the requirements for all or substantially all uses.

"(b) Characteristic uses. Characteristic uses shall include, but not be limited to, the following:

"(i) Water supply (domestic, industrial, agricultural).

"(ii) Stock watering.

"(iii) Fish and shellfish:

"Salmonid migration, rearing, spawning, and harvesting.

"Other fish migration, rearing, spawning, and harvesting.

...

"(iv) Wildlife habitat.

"(v) Recreation (primary contact recreation, sport fishing, boating, and aesthetic enjoyment).

"(vi) Commerce and navigation.

"(c) Water quality criteria

"(i) Fecal coliform organisms.

"(A) Freshwater -- fecal coliform organisms shall not exceed a geometric mean value of 50 organisms/100 mL, with not more than 10 percent of samples exceeding 100 organisms/100 mL.

511 U.S. 700, \*; 114 S. Ct. 1900, \*\*;  
128 L. Ed. 2d 716, \*\*\*; 1994 U.S. LEXIS 4271

"(B) Marine water -- fecal coliform organisms shall not exceed a geometric mean value of 14 organisms/100 mL, with not more than 10 percent of samples exceeding 43 organisms/100 mL.

"(ii) Dissolved oxygen [shall exceed specific amounts].

...

"(iii) Total dissolved gas shall not exceed 110 percent of saturation at any point of sample collection.

"(iv) Temperature shall not exceed [certain levels].

...

"(v) pH shall be within [a specified range].

"(vi) Turbidity shall not exceed [specific levels].

"(vii) Toxic, radioactive, or deleterious material concentrations shall be less than those which may affect public health, the natural aquatic environment, or the desirability of the water for any use.

"(viii) Aesthetic values shall not be impaired by the presence of materials or their effects, excluding those of natural origin, which offend the senses of sight, smell, touch, or taste."

[\*707] In addition to these specific standards applicable to Class AA waters, the State has adopted a statewide [\*\*\*725] antidegradation policy. That policy provides:

"(a) Existing beneficial uses shall be maintained and protected and no further degradation which would interfere with or become injurious to existing beneficial uses will be allowed.

"(b) No degradation will be allowed of waters lying in national parks, national recreation areas, national wildlife refuges, national scenic rivers, and other areas of national ecological importance.

...

"(f) In no case, will any degradation of water quality be allowed if this degradation interferes with or becomes injurious to existing water uses and causes long-term [\*\*1907] and irreparable

harm to the environment."  
173-201-035(8).

As required by the Act, EPA reviewed and approved the State's water quality standards. See 33 U.S.C. § 1313(c)(3); 42 Fed. Reg. 56792 (1977). Upon approval by EPA, the state standard became "the water quality standard for the applicable waters of that State." 33 U.S.C. § 1313(c)(3).

[HN2]States are responsible for enforcing water quality standards on intrastate waters. § 1319(a). In addition to these primary enforcement responsibilities, § 401 of the Act requires States to provide a water quality certification before a federal license or permit can be issued for activities that may result in any discharge into intrastate navigable waters. 33 U.S.C. § 1341. Specifically, § 401 requires an applicant for a federal license or permit to conduct any activity "which may result in any discharge into the navigable waters" to obtain from the State a certification "that any such discharge will comply with the applicable provisions of sections [1311, 1312, 1313, 1316, and 1317 of this title]." 33 U.S.C. § 1341(a). Section 401(d) further provides that "any certification [\*708] . . . shall set forth any effluent limitations and other limitations, and monitoring requirements necessary to assure that any applicant . . . will comply with any applicable effluent limitations and other limitations, under section [1311 or 1312 of this title] . . . and with any other appropriate requirement of State law set forth in such certification." 33 U.S.C. § 1341(d). The limitations included in the certification become a condition on any federal license. *Ibid.* <sup>2</sup>

2 Section 401, as set forth in [HN3]33 U.S.C. § 1341, provides in relevant part:

"(a) Compliance with applicable requirements; application; procedures; license suspension

"(1) Any applicant for a Federal license or permit to conduct any activity including, but not limited to, the construction or operation of facilities, which may result in any discharge into the navigable waters, shall provide the licensing or permitting agency a certification from the State . . . that any such discharge will comply with the applicable provisions of sections 1311, 1312, 1313, 1316, and 1317 of this title.

...

"(d) Limitations and monitoring requirements of certification

511 U.S. 700, \*; 114 S. Ct. 1900, \*\*;  
128 L. Ed. 2d 716, \*\*\*; 1994 U.S. LEXIS 4271

"Any certification provided under this section shall set forth any effluent limitations and other limitations, and monitoring requirements necessary to assure that any applicant for a Federal license or permit will comply with any applicable effluent limitations and other limitations, under section 1311 or 1312 of this title, standard of performance under section 1316 of this title, or prohibition, effluent standard, or pretreatment standard under section 1317 of this title, and with any other appropriate requirement of State law set forth in such certification, and shall become a condition on any Federal license or permit subject to the provisions of this section."

[\*\*\*726] II

Petitioners propose to build the Elkhorn Hydroelectric Project on the Dosewallips River. If constructed as presently planned, the facility would be located just outside the Olympic National Park on federally owned land within the Olympic National Forest. The project would divert water from a 1.2-mile reach of the river (the bypass-reach), run the [\*709] water through turbines to generate electricity and then return the water to the river below the bypass reach. Under the Federal Power Act (FPA), 41 Stat. 1063, as amended, 16 U.S.C. § 791a et seq., the Federal Energy Regulatory Commission (FERC) has authority to license new hydroelectric facilities. As a result, petitioners must get a FERC license to build or operate the Elkhorn Project. Because a federal license is required, and because the project may result in discharges into the Dosewallips River, petitioners are also required to obtain state certification of the project pursuant to § 401 of the Clean Water Act, 33 U.S.C. § 1341.

The water flow in the bypass reach, which is currently undiminished by appropriation, ranges seasonally between 149 and 738 cubic feet per second (cfs). The Dosewallips supports two species of salmon, coho and chinook, as well as steelhead trout. As originally proposed, the project was to include a diversion dam which would completely block [\*\*1908] the river and channel approximately 75% of the river's water into a tunnel alongside the streambed. About 25% of the water would remain in the bypass reach, but would be returned to the original riverbed through sluice gates or a fish ladder. Depending on the season, this would leave a residual minimum flow of between 65 and 155 cfs in the river. Respondent undertook a study to determine the minimum stream flows necessary to protect the salmon and steelhead fishery in the bypass reach. On June 11, 1986, respondent issued a § 401 water quality certification imposing a variety of conditions on the project, including a minimum stream flow requirement of between 100 and 200 cfs depending on the season.

A state administrative appeals board determined that the minimum flow requirement was intended to enhance, not merely maintain, the fishery, and that the certification condition therefore exceeded respondent's authority under state law. App. to Pet. for Cert. 55a-57a. On appeal, the [\*710] State Superior Court concluded that respondent could require compliance with the minimum flow conditions. *Id.*, at 29a-45a. The Superior Court also found that respondent had imposed the minimum flow requirement to protect and preserve the fishery, not to improve it, and that this requirement was authorized by state law. *Id.*, at 34a.

The Washington Supreme Court held that the anti-degradation provisions of the State's water quality standards require the imposition of minimum stream flows. 121 Wash. 2d 179, 186-187, 849 P.2d 646, 650 (1993). [\*\*\*727] The court also found that § 401(d), which allows States to impose conditions based upon several enumerated sections of the Clean Water Act and "any other appropriate requirement of State law," 33 U.S.C. § 1341(d), authorized the stream flow condition. Relying on this language and the broad purposes of the Clean Water Act, the court concluded that § 401(d) confers on States power to "consider all state action related to water quality in imposing conditions on section 401 certificates." 121 Wash. 2d at 192, 849 P.2d at 652. We granted certiorari, 510 U.S. 810 (1993), to resolve a conflict among the state courts of last resort. See 121 Wash. 2d 179, 849 P.2d 646 (1993); Georgia Pacific Corp. v. Dept. of Environmental Conservation, 159 Vt. 639, 628 A.2d 944 (1992) (table); Power Authority of New York v. Williams, 60 N.Y.2d 315, 457 N.E.2d 726, 469 N.Y.S.2d 620 (1983). We now affirm.

III

[\*\*\*LEdHR1B] [1B]The principal dispute in this case concerns whether the minimum stream flow requirement that the State imposed on the Elkhorn Project is a permissible condition of a § 401 certification under the Clean Water Act. To resolve this dispute we must first determine the scope of the State's authority under § 401. We must then determine whether the limitation at issue here, the requirement that petitioners maintain minimum stream flows, falls within the scope of that authority.

[\*711] A

There is no dispute that petitioners were required to obtain a certification from the State pursuant to § 401. Petitioners concede that, at a minimum, the project will result in two possible discharges -- the release of dredged and fill material during the construction of the project, and the discharge of water at the end of the tailrace after the water has been used to generate electricity. Brief for Petitioners 27-28. Petitioners contend, however, that the

minimum stream flow requirement imposed by the State was unrelated to these specific discharges, and that as a consequence, the State lacked the authority under § 401 to condition its certification on maintenance of stream flows sufficient to protect the Dosewallips fishery.

[\*\*LEdHR2A] [2A] If § 401 consisted solely of subsection (a), which refers to a state certification that a "discharge" will comply with certain provisions of the Act, petitioners' assessment of the scope of the State's certification authority would have considerable force. Section 401, however, also contains subsection (d), which expands the State's authority to impose conditions on the certification of a [\*\*1909] project. Section 401(d) provides that any certification shall set forth "any effluent limitations and other limitations . . . necessary to assure that *any applicant*" will comply with various provisions of the Act and appropriate state law requirements. 33 U.S.C. § 1341(d) (emphasis added). The language of this subsection contradicts petitioners' claim that the State may only impose water quality limitations specifically tied to a "discharge." The text refers to the compliance of the applicant, not the discharge. Section 401(d) thus allows the State to impose "other limitations" on the project in general to assure compliance with various provisions of the Clean Water Act and with "any other appropriate [\*\*728] requirement of State law." Although the dissent asserts that this interpretation of § 401(d) renders § 401(a)(1) superfluous, *post*, at 726, we see no such anomaly. Section 401(a)(1) identifies the category of activities [\*\*712] subject to certification -- namely, those with discharges. And § 401(d) is most reasonably read as authorizing additional conditions and limitations on the activity as a whole once the threshold condition, the existence of a discharge, is satisfied.

Our view of the statute is consistent with EPA's regulations implementing § 401. The regulations expressly interpret § 401 as requiring the State to find that "there is a reasonable assurance that the *activity* will be conducted in a manner which will not violate applicable water quality standards." 40 CFR § 121.2(a)(3) (1993) (emphasis added). See also EPA, *Wetlands and 401 Certification* 23 (Apr. 1989) ("In 401(d), the Congress has given the States the authority to place any conditions on a water quality certification that are necessary to assure that the applicant will comply with effluent limitations, water quality standards, . . . and with 'any other appropriate requirement of State law'"). EPA's conclusion that *activities* -- not merely discharges -- must comply with state water quality standards is a reasonable interpretation of § 401, and is entitled to deference. See, e. g., Arkansas v. Oklahoma, 503 U.S. 91, 110, 117 L. Ed. 2d 239, 112 S. Ct. 1046 (1992); Chevron U.S. A. Inc. v. Natural Resources Defense Council, Inc., 467 U.S. 837, 81 L. Ed. 2d 694, 104 S. Ct. 2778 (1984).

[\*\*LEdHR3A] [3A] Although § 401(d) authorizes the State to place restrictions on the activity as a whole, that authority is not unbounded. The State can only ensure that the project complies with "any applicable effluent limitations and other limitations, under 33 U.S.C. §§ 1311, 1312" or certain other provisions of the Act, "and with any other appropriate requirement of State law." 33 U.S.C. § 1341(d). The State asserts that the minimum stream flow requirement was imposed to ensure compliance with the state water quality standards adopted pursuant to § 303 of the Clean Water Act, 33 U.S.C. § 1313.

[\*\*LEdHR2B] [2B] [\*\*LEdHR3B] [3B] We agree with the State that ensuring compliance with § 303 is a proper function of the § 401 certification. Although § 303 is not one of the statutory provisions listed in § 401(d), [\*\*713] the statute allows States to impose limitations to ensure compliance with § 301 of the Act, 33 U.S.C. § 1311. Section 301 in turn incorporates § 303 by reference. See 33 U.S.C. § 1311(b)(1)(C); see also H. R. Conf. Rep. No. 95-830, p. 96 (1977) ("Section 303 is always included by reference where section 301 is listed"). As a consequence, [HN4]state water quality standards adopted pursuant to § 303 are among the "other limitations" with which a State may ensure compliance through the § 401 certification process. This interpretation is consistent with EPA's view of the statute. See 40 CFR § 121.2(a)(3) (1992); EPA, *Wetlands and 401 Certification*, *supra*. Moreover, limitations to assure compliance with state water quality standards are also permitted by § 401(d)'s reference to "any other appropriate requirement of State law." We do not speculate on what additional state laws, if any, might be incorporated by this language. <sup>3</sup> [\*\*729] [\*\*1910] But at a minimum, limitations imposed pursuant to state water quality standards adopted pursuant to § 303 are "appropriate" requirements of state law. Indeed, petitioners appear to agree that the State's authority under § 401 includes limitations designed to ensure compliance with state water quality standards. Brief for Petitioners 9, 21.

3 The dissent asserts that § 301 is concerned solely with discharges, not broader water quality standards. *Post*, at 730, n. 2. Although § 301 does make certain discharges unlawful, see 33 U.S.C. § 1311(a), it also contains a broad enabling provision which requires States to take certain actions, to wit: "In order to carry out the objective of this chapter [viz. the chemical, physical, and biological integrity of the Nation's water] there shall be achieved . . . not later than July 1, 1977, any more stringent limitation, including those necessary to meet water quality standards, . . . established pursuant to any State law or regula-

tions . . . ." 33 U.S.C. § 1311(b)(1)(C). This provision of § 301 expressly refers to state water quality standards, and is not limited to discharges.

B

[\*\*LEdHR1C] [1C] [\*\*LEdHR4A] [4A] Having concluded that, [HN5] pursuant to § 401, States may condition certification upon any limitations necessary to ensure [\*714] compliance with state water quality standards or any other "appropriate requirement of State law," we consider whether the minimum flow condition is such a limitation. Under § 303, state water quality standards must "consist of the designated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses." 33 U.S.C. § 1313(c)(2)(A). In imposing the minimum stream flow requirement, the State determined that construction and operation of the project as planned would be inconsistent with one of the designated uses of Class AA water, namely "salmonid [and other fish] migration, rearing, spawning, and harvesting." App. to Pet. for Cert. 83a-84a. The designated use of the river as a fish habitat directly reflects the Clean Water Act's goal of maintaining the "chemical, physical, and biological integrity of the Nation's waters." 33 U.S.C. § 1251(a). Indeed, the Act defines pollution as "the man-made or man induced alteration of the chemical, physical, biological, and radiological integrity of water." § 1362(19). Moreover, the Act expressly requires that, in adopting water quality standards, the State must take into consideration the use of waters for "propagation of fish and wildlife." § 1313(c)(2)(A).

Petitioners assert, however, that § 303 requires the State to protect designated uses solely through implementation of specific "criteria." According to petitioners, the State may not require them to operate their dam in a manner consistent with a designated "use"; instead, say petitioners, under § 303 the State may only require that the project comply with specific numerical "criteria."

[\*\*LEdHR4B] [4B] We disagree with petitioners' interpretation of the language of § 303(c)(2)(A). Under the statute, a water quality standard must "consist of the designated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses." 33 U.S.C. § 1313(c)(2)(A) (emphasis added). The text makes it plain that water quality standards contain two components. We think the language [\*715] of § 303 is most naturally read to require [\*\*730] that a project be consistent with both components, namely, the designated use and the water quality criteria. Accordingly, under the literal terms of the statute, a project that does not comply with a designated use of the water does not comply with the applicable water quality standards.

Consequently, [HN6] pursuant to § 401(d) the State may require that a permit applicant comply with both the designated uses and the water quality criteria of the state standards. In granting certification pursuant to § 401(d), the State "shall set forth any . . . limitations . . . necessary to assure that [the applicant] will comply with any . . . limitations under [§ 303] . . . and with any other appropriate requirement of State law." A certification requirement that an applicant operate the project consistently with state water quality standards -- *i. e.*, consistently with the designated uses of the water body and the water quality criteria -- is both a "limitation" to assure "compl[iance] with . . . [\*\*1911] limitations" imposed under § 303, and an "appropriate" requirement of state law.

EPA has not interpreted § 303 to require the States to protect designated uses exclusively through enforcement of numerical criteria. In its regulations governing state water quality standards, EPA defines criteria as "elements of State water quality standards, expressed as constituent concentrations, levels, or narrative statements, representing a quality of water that supports a particular use." 40 CFR § 131.3(b) (1993) (emphasis added). The regulations further provide that "when criteria are met, water quality will generally protect the designated use." *Ibid.* (emphasis added). Thus, the EPA regulations implicitly recognize that in some circumstances, criteria alone are insufficient to protect a designated use.

Petitioners also appear to argue that use requirements are too open ended, and that the Act only contemplates enforcement of the more specific and objective "criteria." But this argument is belied by the open-ended nature of the criteria [\*716] themselves. As the Solicitor General points out, even "criteria" are often expressed in broad, narrative terms, such as "there shall be no discharge of toxic pollutants in toxic amounts." Brief for United States as *Amicus Curiae* 18. See *American Paper Institute, Inc. v. EPA*, 302 U.S. App. D.C. 80, 996 F.2d 346, 349 (CADC 1993). In fact, under the Clean Water Act, only one class of criteria, those governing "toxic pollutants listed pursuant to section 1317(a)(1)," need be rendered in numerical form. See 33 U.S.C. § 1313(c)(2)(B); 40 CFR § 131.11(b)(2) (1993).

Washington's Class AA water quality standards are typical in that they contain several open-ended criteria which, like the use designation of the river as a fishery, must be translated into specific limitations for individual projects. For example, the standards state that "toxic, radioactive, or deleterious material concentrations shall be less than those which may affect public health, the natural aquatic environment, or the desirability of the water for any use." WAC 173-201-045(1)(c)(vii) (1986). Similarly, the state standards specify that "aesthetic values shall not be impaired by the presence of materials or

511 U.S. 700, \*; 114 S. Ct. 1900, \*\*;  
128 L. Ed. 2d 716, \*\*\*; 1994 U.S. LEXIS 4271

their effects, excluding those of natural origin, which offend the senses of sight, smell, touch, or taste." 173-201-045(1)(c)(viii). We think petitioners' [\*\*\*731] attempt to distinguish between uses and criteria loses much of its force in light of the fact that the Act permits enforcement of broad, narrative criteria based on, for example, "aesthetics."

Petitioners further argue that enforcement of water quality standards through use designations renders the water quality criteria component of the standards irrelevant. We see no anomaly, however, in the State's reliance on both use designations and criteria to protect water quality. The specific numerical limitations embodied in the criteria are a convenient enforcement mechanism for identifying minimum water conditions which will generally achieve the requisite water quality. And, in most circumstances, satisfying the criteria will, as EPA recognizes, be sufficient to maintain the [\*717] designated use. See 40 CFR § 131.3(b) (1993). Water quality standards, however, apply to an entire class of water, a class which contains numerous individual water bodies. For example, in the State of Washington, the Class AA water quality standard applies to 81 specified fresh surface waters, as well as to all "surface waters lying within the mountainous regions of the state assigned to national parks, national forests, and/or wilderness areas," all "lakes and their feeder streams within the state," and all "unclassified surface waters that are tributaries to Class AA waters." WAC 173-201-070 (1986). While enforcement of criteria will in general protect the uses of these diverse waters, a complementary requirement that activities also comport with designated uses enables the States to ensure that each activity -- even if not foreseen by the criteria -- will be consistent with the specific uses and attributes of a particular body of water.

Under petitioners' interpretation of the statute, however, if a particular criterion, such as turbidity, were missing from the list [\*\*1912] contained in an individual state water quality standard, or even if an existing turbidity criterion were insufficient to protect a particular species of fish in a particular river, the State would nonetheless be forced to allow activities inconsistent with the existing or designated uses. We think petitioners' reading leads to an unreasonable interpretation of the Act. The criteria components of state water quality standards attempt to identify, for all the water bodies in a given class, water quality requirements generally sufficient to protect designated uses. These criteria, however, cannot reasonably be expected to anticipate all the water quality issues arising from every activity that can affect the State's hundreds of individual water bodies. Requiring the States to enforce only the criteria component of their water quality standards would in essence require the States to study to a level of great specificity each indi-

vidual surface water to ensure that the criteria applicable to that water are sufficiently detailed and individualized to fully protect the [\*718] water's designated uses. Given that there is no textual support for imposing this requirement, we are loath to attribute to Congress an intent to impose this heavy regulatory burden on the States.

The State also justified its minimum stream flow as necessary to implement the "antidegradation policy" of § 303, 33 U.S.C. § 1313(d)(4)(B). When the Clean Water Act was enacted in 1972, the water quality standards of [\*\*\*732] all 50 States had antidegradation provisions. These provisions were required by federal law. See U.S. Dept. of Interior, Federal Water Pollution Control Administration, Compendium of Department of Interior Statements on Non-degradation of Interstate Waters 1-2 (Aug. 1968); see also Hines, A Decade of Nondegradation Policy in Congress and the Courts: The Erratic Pursuit of Clean Air and Clean Water, 62 Iowa L. Rev. 643, 658-660 (1977). By providing in 1972 that existing state water quality standards would remain in force until revised, the Clean Water Act ensured that the States would continue their antidegradation programs. See 33 U.S.C. § 1313(a). EPA has consistently required that revised state standards incorporate an antidegradation policy. And, in 1987, Congress explicitly recognized the existence of an "antidegradation policy established under [§ 303]." § 1313(d)(4)(B).

EPA has promulgated regulations implementing § 303's antidegradation policy, a phrase that is not defined elsewhere in the Act. These regulations require States to "develop and adopt a statewide antidegradation policy and identify the methods for implementing such policy." 40 CFR § 131.12 (1993). These "implementation methods shall, at a minimum, be consistent with the . . . existing instream water uses and the level of water quality necessary to protect the existing uses shall be maintained and protected." *Ibid.* EPA has explained that under its antidegradation regulation, "no activity is allowable . . . which could partially or completely eliminate any existing use." EPA, Questions and [\*719] Answers on Antidegradation 3 (Aug. 1985). Thus, States must implement their antidegradation policy in a manner "consistent" with existing uses of the stream. The State of Washington's antidegradation policy in turn provides that "existing beneficial uses shall be maintained and protected and no further degradation which would interfere with or become injurious to existing beneficial uses will be allowed." WAC 173-201-035(8)(a) (1986). The State concluded that the reduced stream flows would have just the effect prohibited by this policy. The Solicitor General, representing EPA, asserts, Brief for United States as *Amicus Curiae* 18-21, and we agree, that the State's minimum stream flow condition is a proper application

511 U.S. 700, \*; 114 S. Ct. 1900, \*\*;  
128 L. Ed. 2d 716, \*\*\*; 1994 U.S. LEXIS 4271

of the state and federal antidegradation regulations, as it ensures that an "existing instream water use" will be "maintained and protected." 40 CFR § 131.12(a)(1) (1993).

Petitioners also assert more generally that the Clean Water Act is only concerned with water "quality," and does not allow the regulation of water "quantity." This is an artificial distinction. In many cases, water quantity is closely related to water quality; a sufficient lowering of the [\*\*1913] water quantity in a body of water could destroy all of its designated uses, be it for drinking water, recreation, navigation or, as here, as a fishery. In any event, [HN7] there is recognition in the Clean Water Act itself that reduced stream flow, *i. e.*, diminishment of water quantity, can constitute water pollution. First, the Act's definition of pollution as "the man-made or man induced alteration of the chemical, physical, biological, and radiological integrity of water" encompasses the effects of reduced water quantity. 33 U.S.C. § 1362(19). This broad conception of pollution -- one which [\*\*\*733] expressly evinces Congress' concern with the physical and biological integrity of water -- refutes petitioners' assertion that the Act draws a sharp distinction between the regulation of water "quantity" and water "quality." Moreover, § 304 of the Act expressly recognizes that water "pollution" may result from "changes [\*720] in the movement, flow, or circulation of any navigable waters . . . , including changes caused by the construction of dams." 33 U.S.C. § 1314(f). This concern with the flowage effects of dams and other diversions is also embodied in the EPA regulations, which expressly require existing dams to be operated to attain designated uses. 40 CFR § 131.10(g)(4) (1992).

Petitioners assert that two other provisions of the Clean Water Act, §§ 101(g) and 510(2), 33 U.S.C. §§ 1251(g) and 1370(2), exclude the regulation of water quantity from the coverage of the Act. Section 101(g) provides "that the authority of each State to allocate quantities of water within its jurisdiction shall not be superseded, abrogated or otherwise impaired by this chapter." 33 U.S.C. § 1251(g). Similarly, § 510(2) provides that nothing in the Act shall "be construed as impairing or in any manner affecting any right or jurisdiction of the States with respect to the waters . . . of such States." 33 U.S.C. § 1370. In petitioners' view, these provisions exclude "water quantity issues from direct regulation under the federally controlled water quality standards authorized in § 303." Brief for Petitioners 39 (emphasis deleted).

This language gives the States authority to allocate water rights; we therefore find it peculiar that petitioners argue that it prevents the State from regulating stream flow. In any event, we read these provisions more narrowly than petitioners. [HN8] Sections 101(g) and 510(2)

preserve the authority of each State to allocate water quantity as between users; they do not limit the scope of water pollution controls that may be imposed on users who have obtained, pursuant to state law, a water allocation. In California v. FERC, 495 U.S. 490, 498, 109 L. Ed. 2d 474, 110 S. Ct. 2024 (1990), construing an analogous provision of the Federal Power Act, <sup>4</sup> we explained that "minimum stream [\*721] flow requirements neither reflect nor establish 'proprietary rights'" to water. Cf. First Iowa Hydro-Electric Cooperative v. FPC, 328 U.S. 152, 176, 90 L. Ed. 1143, 66 S. Ct. 906, and n. 20 (1946). Moreover, the certification itself does not purport to determine petitioners' proprietary right to the water of the Dosewallips. In fact, the certification expressly states that a "State Water Right Permit (Chapters 90.03.250 RCW and 508-12 WAC) must be obtained prior to commencing construction of the project." App. to Pet. for Cert. 83a. The certification merely determines the nature of the use to which that proprietary right may be put under the Clean Water Act, if and when it is obtained from the State. Our view is reinforced by the legislative history of the 1977 [\*\*\*734] amendment to the Clean Water Act adding § 101(g). See 3 Legislative History of the Clean Water Act of 1977 (Committee Print compiled for the Committee on Environment and Public Works by the Library of Congress), Ser. No. 95-14, p. 532 (1978) ("The requirements [of the Act] may incidentally affect individual water rights. . . . [\*1914] It is not the purpose of this amendment to prohibit those incidental effects. It is the purpose of this amendment to insure that State allocation systems are not subverted, and that effects on individual rights, if any, are prompted by legitimate and necessary water quality considerations").

4 The relevant text of the Federal Power Act provides: "That nothing herein contained shall be construed as affecting or intending to affect or in any way to interfere with the laws of the respective States relating to the control, appropriation, use, or distribution of water used in irrigation or for municipal or other uses, or any vested right acquired therein." 41 Stat. 1077, 16 U.S.C. § 821.

#### IV

Petitioners contend that we should limit the State's authority to impose minimum flow requirements because FERC has comprehensive authority to license hydroelectric projects pursuant to the FPA, 16 U.S.C. § 791a et seq. In petitioners' view, the minimum flow requirement imposed here interferes with FERC's authority under the FPA.

[\*722] The FPA empowers FERC to issue licenses for projects "necessary or convenient . . . for the development, transmission, and utilization of power

511 U.S. 700, \*; 114 S. Ct. 1900, \*\*;  
128 L. Ed. 2d 716, \*\*\*; 1994 U.S. LEXIS 4271

across, along, from, or in any of the streams . . . over which Congress has jurisdiction." § 797(e). The FPA also requires FERC to consider a project's effect on fish and wildlife. §§ 797(e), 803(a)(1). In *California v. FERC, supra*, we held that the California Water Resources Control Board, acting pursuant to state law, could not impose a minimum stream flow which conflicted with minimum stream flows contained in a FERC license. We concluded that the FPA did not "save" to the States this authority. *Id.*, 495 U.S. at 498.

[\*\*LEdHR1D] [1D]No such conflict with any FERC licensing activity is presented here. FERC has not yet acted on petitioners' license application, and it is possible that FERC will eventually deny petitioners' application altogether. Alternatively, it is quite possible, given that FERC is required to give equal consideration to the protection of fish habitat when deciding whether to issue a license, that any FERC license would contain the same conditions as the state § 401 certification. Indeed, at oral argument the Deputy Solicitor General stated that both EPA and FERC were represented in this proceeding, and that the Government has no objection to the stream flow condition contained in the § 401 certification. Tr. of Oral Arg. 43-44.

Finally, the requirement for a state certification applies not only to applications for licenses from FERC, but to all federal licenses and permits for activities which may result in a discharge into the Nation's navigable waters. For example, a permit from the Army Corps of Engineers is required for the installation of any structure in the navigable waters which may interfere with navigation, including piers, docks, and ramps. Rivers and Harbors Appropriation Act of 1899, 30 Stat. 1151, § 10, 33 U.S.C. § 403. Similarly, a permit must be obtained from the Army Corps of Engineers [\*723] for the discharge of dredged or fill material, and from the Secretary of the Interior or Agriculture for the construction of reservoirs, canals, and other water storage systems on federal land. See 33 U.S.C. §§ 1344(a), (e); 43 U.S.C. § 1761 (1988 ed. and Supp. IV). [\*\*\*735] We assume that a § 401 certification would also be required for some licenses obtained pursuant to these statutes. Because § 401's certification requirement applies to other statutes and regulatory schemes, and because any conflict with FERC's authority under the FPA is hypothetical, we are unwilling to read implied limitations into § 401. If FERC issues a license containing a stream flow condition with which petitioners disagree, they may pursue judicial remedies at that time. Cf. *Escondido Mut. Water Co. v. La Jolla Band of Mission Indians*, 466 U.S. 765, 778, n. 20, 80 L. Ed. 2d 753, 104 S. Ct. 2105 (1984).

In summary, we hold that [HN9]the State may include minimum stream flow requirements in a certifica-

tion issued pursuant to § 401 of the Clean Water Act insofar as necessary to enforce a designated use contained in a state water quality standard. The judgment of the Supreme Court of Washington, accordingly, is affirmed.

*So ordered.*

CONCUR BY: STEVENS

CONCUR

JUSTICE STEVENS, concurring.

While I agree fully with the thorough analysis in the Court's opinion, I add this comment [\*\*1915] for emphasis. For judges who find it unnecessary to go behind the statutory text to discern the intent of Congress, this is (or should be) an easy case. Not a single sentence, phrase, or word in the Clean Water Act purports to place any constraint on a State's power to regulate the quality of its own waters more stringently than federal law might require. In fact, the Act explicitly recognizes States' ability to impose stricter standards. See, e. g., § 301(b)(1)(C), 33 U.S.C. § 1311(b)(1)(C).

DISSENT BY: THOMAS

DISSENT

[\*724] JUSTICE THOMAS, with whom JUSTICE SCALIA joins, dissenting.

The Court today holds that a State, pursuant to § 401 of the Clean Water Act, may condition the certification necessary to obtain a federal license for a proposed hydroelectric project upon the maintenance of a minimum flow rate in the river to be utilized by the project. In my view, the Court makes three fundamental errors. First, it adopts an interpretation that fails adequately to harmonize the subsections of § 401. Second, it places no meaningful limitation on a State's authority under § 401 to impose conditions on certification. Third, it gives little or no consideration to the fact that its interpretation of § 401 will significantly disrupt the carefully crafted federal-state balance embodied in the Federal Power Act. Accordingly, I dissent.

I

A

Section 401(a)(1) of the Federal Water Pollution Control Act, otherwise known as the Clean Water Act (CWA or Act), 33 U.S.C. § 1251 *et seq.*, provides that "any applicant for a Federal license or permit to conduct any activity . . ., which may result in any discharge into the navigable waters, shall provide the licensing or permitting agency a certification from the State in which the

511 U.S. 700, \*; 114 S. Ct. 1900, \*\*;  
128 L. Ed. 2d 716, \*\*\*; 1994 U.S. LEXIS 4271

discharge originates . . . that any such [\*\*\*736] discharge will comply with . . . applicable provisions of [the CWA]." 33 U.S.C. § 1341(a)(1). The terms of § 401(a)(1) make clear that the purpose of the certification process is to ensure that discharges from a project will meet the requirements of the CWA. Indeed, a State's authority under § 401(a)(1) is limited to certifying that "any discharge" that "may result" from "any activity," such as petitioners' proposed hydroelectric project, will "comply" with the enumerated provisions of the CWA; if the discharge will fail to comply, the State may "deny" the certification. *Ibid.* In addition, under § 401(d), a State may place conditions on a [\*725] § 401 certification, including "effluent limitations and other limitations, and monitoring requirements," that may be necessary to ensure compliance with various provisions of the CWA and with "any other appropriate requirement of State law." § 1341(d).

The minimum stream flow condition imposed by respondents in this case has no relation to any possible "discharge" that might "result" from petitioners' proposed project. The term "discharge" is not defined in the CWA, but its plain and ordinary meaning suggests "a flowing or issuing out," or "something that is emitted." Webster's Ninth New Collegiate Dictionary 360 (1991). Cf. 33 U.S.C. § 1362(16) ("The term 'discharge' when used without qualification includes a discharge of a pollutant, and a discharge of pollutants"). A minimum stream flow requirement, by contrast, is a limitation on the amount of water the project can take in or divert from the river. See *ante*, at 709. That is, a minimum stream flow requirement is a limitation on intake -- the opposite of discharge. Imposition of such a requirement would thus appear to be beyond a State's authority as it is defined by § 401(a)(1).

The Court remarks that this reading of § 401(a)(1) would have "considerable force," *ante*, at 711, were it not for what the Court understands to be the expansive terms of § 401(d). That subsection, as set forth in 33 U.S.C. § 1341(d), provides:

"Any certification provided under this section shall set forth any effluent limitations and other limitations, and monitoring requirements necessary to assure that any applicant for a Federal license or permit [\*\*1916] will comply with any applicable effluent limitations and other limitations, under section 1311 or 1312 of this title, standard of performance under section 1316 of this title, or prohibition, effluent standard, or pretreatment standard under section 1317 of this title, and with any other appropriate requirement of State

law set forth in such certification, and shall become a condition on any Federal [\*726] license or permit subject to the provisions of this section." (Emphasis added.)

According to the Court, the fact that § 401(d) refers to an "applicant," rather than a "discharge," complying with various provisions of the Act "contradicts petitioners' claim that the State may only impose water quality limitations specifically tied to a 'discharge.'" *Ante*, at 711. In the Court's view, § 401(d)'s reference to an applicant's compliance "expands" a State's authority beyond the limits set out in § 401(a)(1), *ibid.*, [\*\*\*737] thereby permitting the State in its certification process to scrutinize the applicant's proposed "activity as a whole," not just the discharges that may result from the activity, *ante*, at 712. The Court concludes that this broader authority allows a State to impose conditions on a § 401 certification that are unrelated to discharges. *Ante*, at 711-712.

While the Court's interpretation seems plausible at first glance, it ultimately must fail. If, as the Court asserts, § 401(d) permits States to impose conditions unrelated to discharges in § 401 certifications, Congress' careful focus on discharges in § 401(a)(1) -- the provision that describes the scope and function of the certification process -- was wasted effort. The power to set conditions that are unrelated to discharges is, of course, nothing but a conditional power to deny certification for reasons unrelated to discharges. Permitting States to impose conditions unrelated to discharges, then, effectively eliminates the constraints of § 401(a)(1).

Subsections 401(a)(1) and (d) can easily be reconciled to avoid this problem. To ascertain the nature of the conditions permissible under § 401(d), § 401 must be read as a whole. See *United Sav. Assn. of Tex. v. Timbers of Inwood Forest Associates, Ltd.*, 484 U.S. 365, 371, 98 L. Ed. 2d 740, 108 S. Ct. 626 (1988) (statutory interpretation is a "holistic endeavor"). As noted above, § 401(a)(1) limits a State's authority in the certification process to addressing concerns related to discharges and to ensuring that any discharge resulting from a project will comply with specified provisions of the Act. It is reasonable [\*727] to infer that the conditions a State is permitted to impose on certification must relate to the very purpose the certification process is designed to serve. Thus, while § 401(d) permits a State to place conditions on a certification to ensure compliance of the "applicant," those conditions must still be related to discharges. In my view, this interpretation best harmonizes the subsections of § 401. Indeed, any broader interpretation of § 401(d) would permit that subsection to swallow § 401(a)(1).

511 U.S. 700, \*; 114 S. Ct. 1900, \*\*;  
128 L. Ed. 2d 716, \*\*\*; 1994 U.S. LEXIS 4271

The text of § 401(d) similarly suggests that the conditions it authorizes must be related to discharges. The Court attaches critical weight to the fact that § 401(d) speaks of the compliance of an "applicant," but that reference, in and of itself, says little about the nature of the conditions that may be imposed under § 401(d). Rather, because § 401(d) conditions can be imposed only to ensure compliance with specified provisions of law -- that is, with "applicable effluent limitations and other limitations, under section 1311 or 1312 of this title, standard[s] of performance under section 1316 of this title, . . . prohibition[s], effluent standard[s], or pretreatment standard[s] under section 1317 of this title, [or] . . . any other appropriate requirement[s] of State law" -- one should logically turn to those provisions for guidance in determining the nature, scope, and purpose of § 401(d) conditions. Each of the four identified CWA provisions describes discharge-related limitations. See § 1311 (making it unlawful to discharge any pollutant except in compliance with enumerated provisions of the Act); § 1312 (establishing effluent limitations on point source discharges); [\*\*\*738] § 1316 (setting national standards of performance [\*\*1917] for the control of discharges); and § 1317 (setting pretreatment effluent standards and prohibiting the discharge of certain effluents except in compliance with standards).

The final term on the list -- "appropriate requirement[s] of State law" -- appears to be more general in scope. Because [\*728] this reference follows a list of more limited provisions that specifically address discharges, however, the principle *ejusdem generis* would suggest that the general reference to "appropriate" requirements of state law is most reasonably construed to extend only to provisions that, like the other provisions in the list, impose discharge-related restrictions. Cf. *Cleveland v. United States*, 329 U.S. 14, 18, 91 L. Ed. 12, 67 S. Ct. 13 (1946) ("Under the *ejusdem generis* rule of construction the general words are confined to the class and may not be used to enlarge it"); *Arcadia v. Ohio Power Co.*, 498 U.S. 73, 84, 112 L. Ed. 2d 374, 111 S. Ct. 415 (1990). In sum, the text and structure of § 401 indicate that a State may impose under § 401(d) only those conditions that are related to discharges.

## B

The Court adopts its expansive reading of § 401(d) based at least in part upon deference to the "conclusion" of the Environmental Protection Agency (EPA) that § 401(d) is not limited to requirements relating to discharges. *Ante*, at 712. The agency regulation to which the Court defers is 40 CFR § 121.2(a)(3) (1993), which provides that the certification shall contain "[a] statement that there is a reasonable assurance that the activity will be conducted in a manner which will not violate applicable water quality standards." *Ante*, at 712. According to

the Court, "EPA's conclusion that *activities* -- not merely discharges -- must comply with state water quality standards . . . is entitled to deference" under *Chevron U.S. A. Inc. v. Natural Resources Defense Council, Inc.*, 467 U.S. 837, 81 L. Ed. 2d 694, 104 S. Ct. 2778 (1984). *Ante*, at 712.

As a preliminary matter, the Court appears to resort to deference under *Chevron* without establishing through an initial examination of the statute that the text of the section is ambiguous. See *Chevron*, *supra*, 467 U.S. at 842-843. More importantly, the Court invokes *Chevron* deference to support its interpretation even though the Government does not seek [\*729] deference for the EPA's regulation in this case.<sup>1</sup> That the Government itself has not contended that an agency interpretation exists reconciling the scope of the conditioning authority under § 401(d) with the terms of § 401(a)(1) should suggest to the Court that there is no "agency construction" directly addressing the question. *Chevron*, *supra*, at 842.

1 The Government, appearing as *amicus curiae* "supporting affirmance," instead approaches the question presented by assuming, *arguendo*, that petitioners' construction of § 401 is correct: "Even if a condition imposed under Section 401(d) were valid only if it assured that a 'discharge' will comply with the State's water quality standards, the [minimum flow condition set by respondents] satisfies that test." Brief for United States as *Amicus Curiae* 11.

In fact, the regulation to which the [\*\*\*739] Court defers is hardly a definitive construction of the scope of § 401(d). On the contrary, the EPA's position on the question whether conditions under § 401(d) must be related to discharges is far from clear. Indeed, the only EPA regulation that specifically addresses the "conditions" that may appear in § 401 certifications speaks exclusively in terms of limiting discharges. According to the EPA, a § 401 certification shall contain "[a] statement of *any conditions* which the certifying agency deems necessary or desirable *with respect to the discharge of the activity*." 40 CFR § 121.2(a)(4) (1993) (emphases added). In my view, § 121.2(a)(4) should, at the very least, give the Court pause before it resorts to *Chevron* deference in this case.

## II

The Washington Supreme Court held that the State's water quality standards, promulgated [\*\*1918] pursuant to § 303 of the Act, 33 U.S.C. § 1313, were "appropriate" requirements of state law under § 401(d), and sustained the stream flow condition imposed by respondents as necessary to ensure compliance with a "use" of

511 U.S. 700, \*; 114 S. Ct. 1900, \*\*;  
128 L. Ed. 2d 716, \*\*\*; 1994 U.S. LEXIS 4271

the river as specified in those standards. As an alternative to their argument that § 401(d) conditions must be discharge related, petitioners assert that [\*730] the state court erred when it sustained the stream flow condition under the "use" component of the State's water quality standards without reference to the corresponding "water quality criteria" contained in those standards. As explained above, petitioners' argument with regard to the scope of a State's authority to impose conditions under § 401(d) is correct. I also find petitioners' alternative argument persuasive. Not only does the Court err in rejecting that § 303 argument, in the process of doing so it essentially removes all limitations on a State's conditioning authority under § 401.

The Court states that, "at a minimum, limitations imposed pursuant to state water quality standards adopted pursuant to § 303 are 'appropriate' requirements of state law" under § 401(d). *Ante*, at 713. <sup>2</sup> A water quality standard promulgated pursuant to § 303 must "consist of the designated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses." 33 U.S.C. § 1313(c)(2)(A). The Court asserts that this language "is most naturally read to require that a project be consistent with *both* components, namely, the designated use *and* the water quality criteria." *Ante*, at 715. In the Court's view, then, the "use" of a body of water is independently enforceable through § 401(d) without reference to the corresponding criteria. *Ibid*.

2 In the Court's view, § 303 water quality standards come into play under § 401(d) either as "appropriate" requirements of state law or through § 301 of the Act, which, according to the Court, "incorporates § 303 by reference." *Ante*, at 713 (citations omitted). The Court notes that through § 303, "the statute allows States to impose limitations to ensure compliance with § 301 of the Act." *Ibid*. Yet § 301 makes unlawful only "the [unauthorized] discharge of any pollutant by any person." 33 U.S.C. § 1311(a) (emphasis added); cf. *supra*, 511 U.S. at 727. Thus, the Court's reliance on § 301 as a source of authority to impose conditions unrelated to discharges is misplaced.

[\*\*\*740] The Court's reading strikes me as contrary to common sense. It is difficult to see how compliance with a "use" of a body of water could be enforced without reference to the [\*731] corresponding criteria. In this case, for example, the applicable "use" is contained in the following regulation: "Characteristic uses shall include, but not be limited to, . . . salmonid migration, rearing, spawning, and harvesting." Wash. Admin. Code (WAC) 173-201-045(1)(b)(iii) (1986). The corres-

ponding criteria, by contrast, include measurable factors such as quantities of fecal coliform organisms and dissolved gases in the water. 173-201-045(1)(c)(i) and (ii). <sup>3</sup> Although the Act does not further address (at least not expressly) the link between "uses" and "criteria," the regulations promulgated under § 303 make clear that a "use" is an aspirational goal to be attained through compliance with corresponding "criteria." Those regulations suggest that "uses" are to be "achieved and protected," and that "water quality criteria" are to be adopted to "protect the designated use[s]." 40 CFR §§ 131.10(a), 131.11(a)(1) (1993).

3 Respondents concede that petitioners' project "will likely not violate any of Washington's water quality criteria." Brief for Respondents 24.

The problematic consequences of decoupling "uses" and "criteria" become clear once the Court's interpretation of § 303 is read in the context of § 401. In the Court's view, a State may condition the § 401 certification "upon *any* limitations necessary to ensure compliance" with the "uses of the water body." *Ante*, at 713-714, 715 (emphasis added). Under the Court's interpretation, then, state environmental agencies may pursue, through § 401, their water goals in any way they choose; the conditions imposed on certifications need not relate to discharges, nor to water quality criteria, nor to any objective or quantifiable standard, so long as they tend to [\*\*\*1919] make the water more suitable for the uses the State has chosen. In short, once a State is allowed to impose conditions on § 401 certifications to protect "uses" in the abstract, § 401(d) is limitless.

To illustrate, while respondents in this case focused only on the "use" of the Dosewallips River as a fish habitat, this particular river has a number of other "characteristic uses," [\*732] including "recreation (primary contact recreation, sport fishing, boating, and aesthetic enjoyment)." WAC 173-201-045(1)(b)(v) (1986). Under the Court's interpretation, respondents could have imposed any number of conditions related to recreation, including conditions that have little relation to water quality. In *Town of Summersville*, 60 F.E.R.C. P61.291, p. 61,990 (1992), for instance, the state agency required the applicant to "construct . . . access roads and paths, low water stepping stone bridges, . . . a boat launching facility . . . , and a residence and storage building." These conditions presumably would be sustained under the approach the Court adopts today. <sup>4</sup> In the end, it is difficult to conceive of a condition that would fall outside a [\*\*\*741] State's § 401(d) authority under the Court's approach.

4 Indeed, as the § 401 certification stated in this case, the flow levels imposed by respondents

511 U.S. 700, \*, 114 S. Ct. 1900, \*\*;  
128 L. Ed. 2d 716, \*\*\*, 1994 U.S. LEXIS 4271

are "in excess of those required to maintain water quality in the bypass region," App. to Pet. for Cert. 83a, and therefore conditions not related to water quality must, in the Court's view, be permitted.

### III

The Court's interpretation of § 401 significantly disrupts the careful balance between state and federal interests that Congress struck in the Federal Power Act (FPA), 16 U.S.C. § 791 *et seq.* Section 4(e) of the FPA authorizes the Federal Energy Regulatory Commission (FERC) to issue licenses for projects "necessary or convenient . . . for the development, transmission, and utilization of power across, along, from, or in any of the streams . . . over which Congress has jurisdiction." 16 U.S.C. § 797(e). In the licensing process, FERC must balance a number of considerations: "In addition to the power and development purposes for which licenses are issued, [FERC] shall give equal consideration to the purposes of energy conservation, the protection, mitigation of damage to, and enhancement of, fish and wildlife (including related spawning grounds and habitat), the protection of recreational [\*733] opportunities, and the preservation of other aspects of environmental quality." *Ibid.* Section 10(a) empowers FERC to impose on a license such conditions, including minimum stream flow requirements, as it deems best suited for power development and other public uses of the waters. See 16 U.S.C. § 803(a); *California v. FERC*, 495 U.S. 490, 494-495, 506, 109 L. Ed. 2d 474, 110 S. Ct. 2024 (1990).

In *California v. FERC*, the Court emphasized FERC's exclusive authority to set the stream flow levels to be maintained by federally licensed hydroelectric projects. California, in order "to protect [a] stream's fish," had imposed flow rates on a federally licensed project that were significantly higher than the flow rates established by FERC. *Id.*, at 493. In concluding that California lacked authority to impose such flow rates, we stated:

"As Congress directed in FPA § 10(a), FERC set the conditions of the [project] license, including the minimum stream flow, after considering which requirements would best protect wildlife and ensure that the project would be economically feasible, and thus further power development. Allowing California to impose significantly higher minimum stream flow requirements would disturb and conflict with the balance embodied in that considered federal agency determination. FERC has indicated that the California requirements interfere with its compre-

hensive planning authority, and we agree that allowing California to impose the challenged requirements would be contrary to congressional intent regarding the Commission's licensing authority and would constitute a veto of the project that was approved and licensed by [\*\*1920] FERC." *Id.*, 495 U.S. at 506-507 (citations and internal quotation marks omitted).

*California v. FERC* reaffirmed our decision in *First Iowa Hydro-Electric Cooperative v. FPC*, 328 U.S. 152, 164, 90 L. Ed. 1143, 66 S. Ct. 906 (1946), in which we warned against "vesting in [state authorities] [\*734] a veto power" over federal hydroelectric projects. Such authority, we concluded, could "destroy the effectiveness" of the FPA and "subordinate to the control of the State the 'comprehensive' [\*\*\*742] planning" with which the administering federal agency (at that time the Federal Power Commission) was charged. *Ibid.*

Today, the Court gives the States precisely the veto power over hydroelectric projects that we determined in *California v. FERC* and *First Iowa* they did not possess. As the language of § 401(d) expressly states, any condition placed in a § 401 certification, including, in the Court's view, a stream flow requirement, "shall become a condition on any Federal license or permit." 33 U.S.C. § 1341(d) (emphasis added). Any condition imposed by a State under § 401(d) thus becomes a "term . . . of the license as a matter of law," *Department of Interior v. FERC*, 293 U.S. App. D.C. 182, 952 F.2d 538, 548 (CADC 1992) (citation and internal quotation marks omitted), regardless of whether FERC favors the limitation. Because of § 401(d)'s mandatory language, federal courts have uniformly held that FERC has no power to alter or review § 401 conditions, and that the proper forum for review of those conditions is state court.<sup>5</sup> Section 401(d) conditions imposed by States are [\*735] therefore binding on FERC. Under the Court's interpretation, then, it appears that the mistake of the State in *California v. FERC* was not that it had trespassed into territory exclusively reserved to FERC; rather, it simply had not hit upon the proper device -- that is, the § 401 certification -- through which to achieve its objectives.

<sup>5</sup> See, e. g., *Keating v. FERC*, 288 U.S. App. D.C. 344, 927 F.2d 616, 622 (CADC 1991) (federal review inappropriate because a decision to grant or deny § 401 certification "presumably turns on questions of substantive state environmental law -- an area that Congress expressly intended to reserve to the states and concerning which federal agencies have little competence");

511 U.S. 700, \*; 114 S. Ct. 1900, \*\*;  
128 L. Ed. 2d 716, \*\*\*, 1994 U.S. LEXIS 4271

Department of Interior v. FERC, 952 F.2d at 548; United States v. Marathon Development Corp., 867 F.2d 96, 102 (CA1 1989); Proffitt v. Rohm & Haas, 850 F.2d 1007, 1009 (CA3 1988). FERC has taken a similar position. See Town of Summersville, 60 F.E.R.C. P61,291, p. 61,990 (1992) ("Since pursuant to Section 401(d) . . . all of the conditions in the water quality certification must become conditions in the license, review of the appropriateness of the conditions is within the purview of state courts and not the Commission. The only alternatives available to the Commission are either to issue a license with the conditions included or to deny" the application altogether); accord, Central Maine Power Co., 52 F.E.R.C. P61,033, pp. 61,172-61,173 (1990).

Although the Court notes in passing that "the limitations included in the certification become a condition on any federal license," *ante*, at 708, it does not acknowledge or discuss the shift of power from FERC to the States that is accomplished by its decision. Indeed, the Court merely notes that "any conflict with FERC's authority under the FPA" in this case is "hypothetical" at this stage, *ante*, at 723, because "FERC has not yet acted on petitioners' license application," *ante*, at 722. We are assured that "it is quite possible . . . that any FERC license would contain the same conditions as the state § 401 certification." *Ibid*.

The Court's observations simply miss the point. Even if FERC might have no objection to the stream flow condition established by respondents *in this case*, such a happy coincidence will likely prove to be the exception, rather than the rule. In issuing licenses, FERC must balance the Nation's power needs together with the need for energy conservation, [\*\*\*743] irrigation, flood control, fish and wildlife protection, and recreation. 16 U.S.C. § 797(e). State environmental agencies, by contrast, need only consider parochial environmental interests. Cf., e. g., Wash. Rev. Code § 90.54.010(2) (1992) (goal of State's water policy is to "insure that waters of the state are protected and fully utilized for the greatest benefit to the people of the state of Washington"). As a result, it is likely that conflicts will arise between a [\*\*1921] FERC-established stream flow level and a state-imposed level.

Moreover, the Court ignores the fact that its decision nullifies the congressionally mandated process for resolving such state-federal disputes when they develop. Section 10(j)(1) of the FPA, 16 U.S.C. § 803(j)(1), which was added as part [\*\*736] of the Electric Consumers Protection Act of 1986 (ECPA), 100 Stat. 1244, provides that every FERC license must include conditions to "protect, mitigate damage to, and enhance" fish and wildlife, including "related spawning grounds and habi-

tat," and that such conditions "shall be based on recommendations" received from various agencies, including state fish and wildlife agencies. If FERC believes that a recommendation from a state agency is inconsistent with the FPA -- that is, inconsistent with what FERC views as the proper balance between the Nation's power needs and environmental concerns -- it must "attempt to resolve any such inconsistency, giving due weight to the recommendations, expertise, and statutory responsibilities" of the state agency. § 803(j)(2). If, after such an attempt, FERC "does not adopt in whole or in part a recommendation of any [state] agency," it must publish its reasons for rejecting that recommendation. *Ibid*. After today's decision, these procedures are a dead letter with regard to stream flow levels, because a State's "recommendation" concerning stream flow "shall" be included in the license when it is imposed as a condition under § 401(d).

More fundamentally, the 1986 amendments to the FPA simply make no sense in the stream flow context if, in fact, the States already possessed the authority to establish minimum stream flow levels under § 401(d) of the CWA, which was enacted years before those amendments. Through the ECPA, Congress strengthened the role of the States in establishing FERC conditions, but it did not make that authority paramount. Indeed, although Congress could have vested in the States the final authority to set stream flow conditions, it instead left that authority with FERC. See California v. FERC, 495 U.S. at 499. As the Ninth Circuit observed in the course of rejecting California's effort to give *California v. FERC* a narrow reading, "there would be no point in Congress requiring [FERC] to consider the state agency recommendations on environmental matters and [\*\*737] make its own decisions about which to accept, if the state agencies had the power to impose the requirements themselves." Savles Hydro Associates v. Maughan, 985 F.2d 451, 456 (1993).

Given the connection between § 401 and federal hydroelectric licensing, it is remarkable that the Court does not at least attempt to fit its interpretation of § 401 into the larger statutory framework governing the licensing process. At the very least, the significant impact the [\*\*744] Court's ruling is likely to have on that process should compel the Court to undertake a closer examination of § 401 to ensure that the result it reaches was mandated by Congress.

#### IV

Because the Court today fundamentally alters the federal-state balance Congress carefully crafted in the FPA, and because such a result is neither mandated nor supported by the text of § 401, I respectfully dissent.

I Pursuant to California Rules of Court, rule 976.1, this opinion is certified for publication with the exception of Discussion parts III, IV, V, VI and VII.

**SUBSEQUENT HISTORY:** Modified by, Rehearing denied by Building Industry Assn. v. State Water Resources Control Bd., 2005 Cal. App. LEXIS 7 (Cal. App. 4th Dist., Jan. 4, 2005)

Time for Granting or Denying Review Extended Building Industry Assn. of San Diego v. Calif Regional Water Qlty Bd., 2005 Cal. LEXIS 2502 (Cal., Feb. 24, 2005)

Review denied by, Request denied by Building Industry Association of San Diego County v. California Regional Water Quality Control Board. 2005 Cal. LEXIS 3489 (Cal., Mar. 30, 2005)

**PRIOR HISTORY:** Superior Court of San Diego County, No. GIC 780263, Wayne L. Peterson, Judge.

**DISPOSITION:** Affirmed.

**CASE SUMMARY:**

**PROCEDURAL POSTURE:** Plaintiff building industry association filed an administrative appeal with defendant California Water Resources Control Board (State Water Board) regarding the Board's issuance of a comprehensive municipal storm sewer permit. The Board denied the appeal. The association then petitioned for a writ of mandate, asserting numerous claims. The Superior Court of San Diego County, California, found the association failed to prove its claims.

**OVERVIEW:** The association argued that the permit violated federal law because it allowed the State Water Board and a regional water board to impose municipal storm sewer control measures more stringent than a federal standard known as "maximum extent practicable" set forth in 33 U.S.C.S. § 1342(p)(3)(B)(iii). The instant court held the language of § 1342(p)(3)(B)(iii) communicates the basic principle that the Environmental Protection Agency, and/or a state approved to issue a National Pollution Discharge Elimination System (NPDES) permit, retains the discretion to impose "appropriate" water pollution controls in addition to those that come within the definition of "maximum extent practicable." The NPDES permit did not violate federal law. The water boards had the authority to include a permit provision requiring compliance with the more stringent state water quality standards.

**OUTCOME:** The judgment was affirmed.

**CORE TERMS:** water quality, water board, storm sewer, Clean Water Act, 'practicable', pollution, maximum, pollutant, municipality, municipal, regional, federal law, environmental, effluent, stringent, challenging, runoff, storm, state laws, regulatory agency, "point sources", iterative, stormwater, entity, Conservation Laws, statutory language, waste discharge, permit requirements, strict compliance, industrial

#### LexisNexis(R) Headnotes

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations*

[HN1]The Clean Water Act employs the basic strategy of prohibiting pollutant emissions from "point sources" unless the party discharging the pollutants obtains a National Pollution Discharge Elimination System (NPDES) permit. It is unlawful for any person to discharge a pollutant without obtaining a permit and complying with its terms. 33 U.S.C.S. § 1311(a). An NPDES permit is issued by the Environmental Protection Agency or by a state that has a federally-approved water quality program. 33 U.S.C.S. § 1342(a), (b). Before an NPDES is issued, the federal or state regulatory agency must follow an extensive administrative hearing procedure. 40 C.F.R. §§ 124.3, 124.6, 124.8, 124.10. NPDES permits are valid for five years. 33 U.S.C.S. § 1342(b)(1)(B).

*Environmental Law > Water Quality > Clean Water Act > Coverage & Definitions > Point Sources*

[HN2]The Clean Water Act defines a "point source" to be any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged. 33 U.S.C.S. § 1362(14).

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations*

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

*Real Property Law > Water Rights > Beneficial Use*

[HN3]Under the Clean Water Act, the proper scope of the controls in a National Pollution Discharge Elimination System (NPDES) permit depends on the applicable state water quality standards for the affected water bodies. Each state is required to develop water quality standards that establish the desired condition of a waterway. A water quality standard for any given water segment has two components: (1) the designated beneficial

uses of the water body; and (2) the water quality criteria sufficient to protect those uses. As enacted in 1972, the Act mandated that an NPDES permit require compliance with state water quality standards and that this goal be met by setting forth a specific "effluent limitation," which is a restriction on the amount of pollutants that may be discharged at the point source. 33 U.S.C.S. §§ 1311, 1362(11).

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges*

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

*Governments > Local Governments > Licenses*

[HN4]In 1987, Congress amended the Clean Water Act to add provisions that specifically concerned National Pollution Discharge Elimination System (NPDES) permit requirements for storm sewer discharges. 33 U.S.C.S. § 1342(p). In these amendments, enacted as part of the Water Quality Act of 1987, Congress distinguished between industrial and municipal storm water discharges. With respect to municipal storm water discharges, Congress clarified that the Environmental Protection Agency had the authority to fashion NPDES permit requirements to meet water quality standards without specific numerical effluent limits and instead to impose controls to reduce the discharge of pollutants to the maximum extent practicable. 33 U.S.C.S. § 1342(p)(3)(B)(iii).

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges*

[HN5]See 33 U.S.C.S. § 1342(p)(3)(B)(iii).

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations*

[HN6]See Cal. Water Code § 13377.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations*

*Real Property Law > Water Rights > Beneficial Use*

[HN7]See Cal. Water Code § 13374.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Public Participation*

*Governments > Local Governments > Licenses*

[HN8]The waste discharge requirements issued by the regional water boards ordinarily also serve as National Pollution Discharge Elimination System permits under federal law. Cal. Water Code § 13374.

*Administrative Law > Judicial Review > Reviewability  
> Standing*

*Civil Procedure > Remedies > Writs > Common Law  
Writs > Mandamus*

*Environmental Law > Water Quality > General Over-  
view*

[HN9] See Cal. Water Code § 13330(b).

*Administrative Law > Judicial Review > Reviewability  
> Standing*

*Civil Procedure > Remedies > Writs > Common Law  
Writs > Mandamus*

*Evidence > Inferences & Presumptions > Presumption  
of Regularity*

[HN10] Where a party has been aggrieved by a final decision of a regional water board for which the California Water Resources Control Board denies review, Cal. Code Civ. Proc. § 1094.5 governs the writ of mandate proceedings, and the superior court must exercise its independent judgment in examining the evidence and resolving factual disputes. Cal. Water Code § 13330(d). In exercising its independent judgment, a trial court must afford a strong presumption of correctness concerning the administrative findings, and the party challenging the administrative decision bears the burden of convincing the court that the administrative findings are contrary to the weight of the evidence.

*Administrative Law > Judicial Review > Administrative  
Record > General Overview*

*Administrative Law > Judicial Review > Standards of  
Review > Substantial Evidence*

*Civil Procedure > Appeals > Standards of Review > De  
Novo Review*

[HN11] In reviewing the trial court's factual determinations on the administrative record, an appellate court applies a substantial evidence standard. However, in reviewing the trial court's legal determinations, an appellate court conducts a de novo review. Thus, the appellate court is not bound by the legal determinations made by the state or regional agencies or by the trial court, but it must give appropriate consideration to an administrative agency's expertise underlying its interpretation of an applicable statute.

*Environmental Law > Water Quality > General Over-  
view*

[HN12] It is well settled that the Clean Water Act authorizes states to impose water quality controls that are more stringent than are required under federal law, 33 U.S.C.S.

§ 1370, and California law specifically allows the imposition of controls more stringent than federal law, Cal. Water Code § 13377.

*Environmental Law > Water Quality > Clean Water Act  
> Discharge Permits > Storm Water Discharges*

[HN13] The language of 33 U.S.C.S. § 1342(p)(3)(B)(iii) does communicate the basic principle that the Environmental Protection Agency (and/or a state approved to issue a National Pollution Discharge Elimination System permit) retains the discretion to impose "appropriate" water pollution controls in addition to those that come within the definition of "maximum extent practicable."

*Governments > Legislation > Interpretation*

[HN14] While punctuation and grammar should be considered in interpreting a statute, neither is controlling unless the result is in harmony with the clearly expressed intent of the legislature. If the statutory language is susceptible to more than one reasonable interpretation, a court must also look to a variety of extrinsic aids, including the ostensible objects to be achieved, the evils to be remedied, the legislative history, public policy, contemporaneous administrative construction, and the statutory scheme of which the statute is a part.

*Environmental Law > Water Quality > Clean Water Act  
> Discharge Permits > Effluent Limitations*

*Environmental Law > Water Quality > Clean Water Act  
> Water Quality Standards*

*Governments > Public Improvements > General Over-  
view*

[HN15] With respect to National Pollution Discharge Elimination System (NPDES) permits, the legislative purpose underlying the Water Quality Act of 1987, and 33 U.S.C.S. § 1342(p) in particular, supports that Congress intended to provide the Environmental Protection Agency (or the regulatory agency of an approved state) the discretion to require compliance with water quality standards in a municipal storm sewer NPDES permit, particularly where that compliance will be achieved primarily through an iterative process.

*Administrative Law > Judicial Review > Standards of  
Review > Statutory Interpretation*

*Governments > Legislation > Interpretation*

[HN16] A court is required to give substantial deference to an administrative interpretation of a statute.

*Civil Procedure > Appeals > Standards of Review > Reversible Errors*

*Evidence > Inferences & Presumptions > General Overview*

[HN17]All judgments and orders are presumed correct, and persons challenging them must affirmatively show reversible error.

*Civil Procedure > Appeals > Briefs*

[HN18]A party challenging the sufficiency of evidence to support a judgment must summarize (and cite to) all of the material evidence, not just the evidence favorable to his or her appellate positions.

*Administrative Law > Judicial Review > Standards of Review > Abuse of Discretion*

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN19]The party challenging the scope of an administrative permit has the burden of showing the agency abused its discretion or its findings were unsupported by the facts.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges*

[HN20]BAT is an acronym for "best available technology economically achievable," which is a technology-based standard for industrial storm water dischargers that focuses on reducing pollutants by treatment or by a combination of treatment and best management practices.

**SUMMARY:**

**CALIFORNIA OFFICIAL REPORTS SUMMARY**

A building industry association filed an administrative appeal with the State Water Resources Control Board regarding the board's issuance of a comprehensive municipal storm sewer permit. The board denied the appeal. The association then petitioned for a writ of mandate, asserting numerous claims. Three environmental groups intervened as defendants. The trial court found the association failed to prove its claims. The association argued that the permit violated federal law because it allowed the state water board and a regional water board to impose municipal storm sewer control measures more stringent than a federal standard known as "maximum extent practicable" under 33 U.S.C. § 1342(p)(3)(B)(iii). (Superior Court of San Diego County, No. GIC 780263, Wayne L. Peterson, Judge.)

The Court of Appeal affirmed. The court held the language of § 1342(p)(3)(B)(iii) communicates the basic principle that the Environmental Protection Agency, and or a state approved to issue a National Pollution Discharge Elimination System (NPDES) permit, retains the discretion to impose "appropriate" water pollution controls in addition to those that come within the definition of "maximum extent practicable." The NPDES permit did not violate federal law. The water boards had the authority to include a permit provision requiring compliance with the more stringent state water quality standards. (Opinion by Haller, J., with Benke, Acting P. J., and Aaron, J., concurring.) [\*867]

**HEADNOTES**

**CALIFORNIA OFFICIAL REPORTS HEADNOTES**  
Classified to California Digest of Official Reports

(1) **Pollution and Conservation Laws § 5--Water Pollution--Clean Water Act--Regulatory Permit--Municipal Storm Sewer Control Measures.**--A regulatory permit issued by the State Water Resources Control Board allowing it and a regional water board to impose municipal storm sewer control measures more stringent than a federal standard known as "maximum extent practicable," set forth in 33 U.S.C. § 1342(p)(3)(B)(iii), did not violate federal law.

[4 Witkin, Summary of Cal. Law (9th ed. 1987) Real Property, § 69.]

(2) **Pollution and Conservation Laws § 5--Water Pollution--Clean Water Act--NPDES Permits.**--The Clean Water Act (33 U.S.C. 1251 et seq.) employs the basic strategy of prohibiting pollutant emissions from "point sources" unless the party discharging the pollutants obtains a National Pollution Discharge Elimination System (NPDES) permit. Pursuant to 33 U.S.C. § 1311(a), it is unlawful for any person to discharge a pollutant without obtaining a permit and complying with its terms. Pursuant to 33 U.S.C. § 1342(a) and (b) an NPDES permit is issued by the Environmental Protection Agency or by a state that has a federally-approved water quality program. Pursuant to 40 C.F.R. §§ 124.3, 124.6, 124.8, 124.10, before an NPDES is issued, the federal or state regulatory agency must follow an extensive administrative hearing procedure. Pursuant to 33 U.S.C. § 1342(b)(1)(B), NPDES permits are valid for five years.

(3) **Pollution and Conservation Laws § 5--Water Pollution--Clean Water Act--NPDES Permits.**--Under the Clean Water Act (33 U.S.C. § 1251 et seq.), the proper scope of the controls in a National Pollution Discharge Elimination System (NPDES) permit depends on the applicable state water quality standards for the affected

water bodies. Each state is required to develop water quality standards that establish the desired condition of a waterway. A water quality standard for any given water segment has two components: (1) the designated beneficial uses of the water body; and (2) the water quality criteria sufficient to protect those uses. As enacted in 1972, 33 U.S.C. §§ 1311, 1362(11) of the Act mandated that an NPDES permit require compliance with state water quality standards and that this goal be met by setting forth a specific "effluent limitation," which is a restriction on the amount of pollutants that may be discharged at the point source. [\*868]

**(4) Pollution and Conservation Laws § 5--Water Pollution--Clean Water Act--NPDES Permits.**--In 1987, Congress amended the Clean Water Act (33 U.S.C. 1251 et seq.), to add provisions, specifically, 33 U.S.C. § 1342(p), that specifically concerned National Pollution Discharge Elimination System (NPDES) permit requirements for storm sewer discharges. In these amendments, enacted as part of the Water Quality Act of 1987 (33 U.S.C. § 251 et seq.), Congress distinguished between industrial and municipal storm water discharges. With respect to municipal storm water discharges, Congress clarified in 33 U.S.C. § 1342(p)(3)(B)(iii) that the Environmental Protection Agency had the authority to fashion NPDES permit requirements to meet water quality standards without specific numerical effluent limits and instead to impose controls to reduce the discharge of pollutants to the maximum extent practicable.

**(5) Pollution and Conservation Laws § 5--Water Pollution--Waste Discharge Requirements.**--Pursuant to Wat. Code, § 13374, the waste discharge requirements issued by the regional water boards ordinarily also serve as National Pollution Discharge Elimination System permits under federal law.

**(6) Pollution and Conservation Laws § 5--Water Pollution--Writ of Mandate--Exercise of Independent Judgment.**--Where a party has been aggrieved by a final decision of a regional water board for which the State Water Resources Control Board denies review, Code Civ. Proc., § 1094.5, governs the writ of mandate proceedings, and the superior court must, pursuant to Wat. Code, § 13330, subd. (d), exercise its independent judgment in examining the evidence and resolving factual disputes. In exercising its independent judgment, a trial court must afford a strong presumption of correctness concerning the administrative findings, and the party challenging the administrative decision bears the burden of convincing the court that the administrative findings are contrary to the weight of the evidence.

**(7) Appellate Review § 144--Scope of Review--Questions of Law and Fact--Factual Determinations--Substantial Evidence Standard--De Novo Review.**--In reviewing the trial court's factual determinations on the administrative record, an appellate court applies a substantial evidence standard. However, in reviewing the trial court's legal determinations, an appellate court conducts a de novo review. Thus, the appellate court is not bound by the legal determinations made by the state or regional agencies or by the trial court, but it must give appropriate consideration to an administrative agency's expertise underlying its interpretation of an applicable statute. [\*869]

**(8) Pollution and Conservation Laws § 5--Water Pollution--Clean Water Act--More Stringent State Controls.**--It is well settled that the Clean Water Act (33 U.S.C. § 1251 et seq.) authorizes states to impose water quality controls that are more stringent than are required under federal law, 33 U.S.C. § 1370, and California law specifically allows the imposition of controls more stringent than federal law, Wat. Code, § 13377.

**(9) Pollution and Conservation Laws § 5--Water Pollution--Clean Water Act--NPDES Permits.**--The language of 33 U.S.C. § 1342(p)(3)(B)(iii) does communicate the basic principle that the Environmental Protection Agency (and/or a state approved to issue a National Pollution Discharge Elimination System permit) retains the discretion to impose "appropriate" water pollution controls in addition to those that come within the definition of "maximum extent practicable."

**(10) Statutes § 21--Construction--Legislative Intent.**--While punctuation and grammar should be considered in interpreting a statute, neither is controlling unless the result is in harmony with the clearly expressed intent of the Legislature. If the statutory language is susceptible to more than one reasonable interpretation, a court must also look to a variety of extrinsic aids, including the ostensible objects to be achieved, the evils to be remedied, the legislative history, public policy, contemporaneous administrative construction, and the statutory scheme of which the statute is a part.

**(11) Pollution and Conservation Laws § 5--Water Pollution--Clean Water Act--NPDES Permits.**--With respect to National Pollution Discharge Elimination System (NPDES) permits, the legislative purpose underlying the Water Quality Act of 1987 (33 U.S.C. § 251 et seq.), and 33 U.S.C. § 1342(p) in particular, supports that Congress intended to provide the Environmental Protection Agency (or the regulatory agency of an approved state) the discretion to require compliance with water quality standards in a municipal storm sewer NPDES

permit, particularly where that compliance will be achieved primarily through an iterative process.

(12) Statutes § 44--Construction--Administrative--Judicial Deference.--A court is required to give substantial deference to an administrative interpretation of a statute.

(13) Appellate Review § 135--Scope of Review--Presumptions.--All judgments and orders are presumed correct, and persons challenging them must affirmatively show reversible error. [\*870]

(14) Appellate Review § 108--Briefs--Requisites--Reference to Record--Party Challenging Sufficiency of Evidence--Summarization of All Material Evidence Required.--A party challenging the sufficiency of evidence to support a judgment must summarize (and cite to) all of the material evidence, not just the evidence favorable to his or her appellate positions.

(15) Administrative Law § 116--Judicial Review and Relief--Scope of Review--Abuse of Discretion--Administrative Permit.--The party challenging the scope of an administrative permit has the burden of showing the agency abused its discretion or its findings were unsupported by the facts.

(16) Pollution and Conservation Laws § 5--Water Pollution--Industrial Storm Water Dischargers--Best Available Technology Economically Achievable.--BAT is an acronym for "best available technology economically achievable," which is a technology-based standard for industrial storm water dischargers that focuses on reducing pollutants by treatment or by a combination of treatment and best management practices.

COUNSEL: Latham & Watkins, David L. Mulliken, Eric M. Katz, Paul N. Singarella, Kelly E. Richardson and Daniel P. Brunton for Plaintiffs and Appellants.

Bill Lockyer, Attorney General, Mary Hackenbracht, Assistant Attorney General, Carol A. Squire, David Robinson and Deborah Fletcher, Deputy Attorneys General, for Defendants and Respondents.

Conservancy, Heal the Bay, Environmental Defense Center, Santa Monica BayKeeper, Orange County CoastKeeper, Ventura CoastKeeper, Environmental Health Coalition, CalBeach Advocates, San Diego Audubon Society, Endangered Habitats League and Sierra Club as Amici Curiae on behalf [\*\*\*2] of Defendants and Respondents and Interveners and Respondents.

JUDGES: Haller, J., with Benke, Acting P. J., and Aaron, J., concurring.

OPINION BY: HALLER [\*871]

#### OPINION

[\*\*130] HALLER, J.--This case concerns the environmental regulation of municipal storm sewers that carry excess water runoff to lakes, lagoons, rivers, bays, and the ocean. The waters flowing through these sewer systems have accumulated numerous harmful pollutants that are then discharged into the water body without receiving any treatment. To protect against the resulting water quality impairment, federal and state laws impose regulatory controls on storm sewer discharges. In particular, municipalities and other public entities are required to obtain, and comply with, a regulatory permit limiting the quantity and quality of water runoff that can be discharged from these storm sewer systems.

In this case, the California Regional Water Control Board, San Diego Region, (Regional Water Board) conducted numerous public hearings and then issued a comprehensive municipal storm sewer permit governing 19 local public entities. Although these entities did not bring an administrative challenge to the permit, one business organization, the Building Industry [\*\*\*3] Association of San Diego County (Building Industry), filed an administrative appeal with the State Water Resources Control Board (State Water Board). After making some modifications to the permit, the State Water Board denied the appeal. Building Industry then petitioned for a writ of mandate in the superior court, asserting numerous claims, including that the permit violates state and federal law because the permit provisions are too stringent and impossible to satisfy. Three environmental groups intervened as defendants in the action. After a hearing, the trial court found Building Industry failed to prove its claims and entered judgment in favor of the administrative agencies (the Water Boards) and the intervenor environmental groups.

(1) On appeal, Building Industry's main contention is that the regulatory permit violates federal law because it allows the Water Boards to impose municipal storm sewer control measures more stringent than a federal standard known as "maximum extent practicable." (33 U.S.C. § 1342(p)(3)(B)(iii).) <sup>2</sup> [\*\*131] In the published

portion of this opinion, we reject this contention, and conclude the Water Boards had the authority to include [\*\*\*4] a permit provision requiring compliance with state water quality standards. In the unpublished portion of the opinion, we find Building Industry's additional contentions to be without merit. We affirm the judgment.

2 Further statutory references are to title 33 of the United States Code, unless otherwise specified.

#### [\*872] RELEVANT BACKGROUND INFORMATION

##### I. Summary of Relevant Clean Water Act Provisions

Before setting forth the factual background of this particular case, it is helpful to summarize the federal and state statutory schemes for regulating municipal storm sewer discharges.<sup>3</sup>

3 The systems that carry untreated urban water runoff to receiving water bodies are known as "[m]unicipal separate storm sewer" systems (40 C.F.R. § 122.26(b)(8)), and are often referred to as "MS4s" (40 C.F.R. § 122.30). For readability, we will identify these systems as municipal storm sewers. To avoid confusion in this case, we will generally use descriptive names, rather than initials or acronyms, when referring to parties and concepts.

##### [\*\*\*5] A. Federal Statutory Scheme

When the United States Congress first enacted the Federal Water Pollution Control Act in 1948, the Congress relied primarily on state and local enforcement efforts to remedy water pollution problems. (*Middlesex Cty. Sewerage Auth. v. Sea Clammers* (1981) 453 U.S. 1, 11 [69 L. Ed. 2d 435, 101 S. Ct. 2615]; *Tahoe-Sierra Preservation Council v. State Water Resources Control Bd.* (1989) 210 Cal. App. 3d 1421, 1433 [259 Cal. Rptr. 132].) However, by the early 1970's, it became apparent that this reliance on local enforcement was ineffective and had resulted in the "accelerating environmental degradation of rivers, lakes, and streams ... ." (*Natural Resources Defense Council, Inc. v. Costle* (D.C. Cir. 1977) 568 F.2d 1369, 1371 (*Costle*); see *EPA v. State Water Resources Control Board* (1976) 426 U.S. 200, 203 [48 L. Ed. 2d 578, 96 S. Ct. 2022].) In response, in 1972 Congress substantially amended this law by mandating compliance with various minimum technological effluent standards established by the federal government and creating a comprehensive regulatory scheme to implement these laws. (See *EPA v. State Water Resources Control Board, supra*, 426 U.S. at pp. 204-205.) [\*\*\*6]

The objective of this law, now commonly known as the Clean Water Act, was to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters." (§ 1251(a).)

[HN1](2) The Clean Water Act employs the basic strategy of prohibiting pollutant emissions from "point sources" <sup>4</sup> unless the party discharging the pollutants obtains a permit, known as an NPDES <sup>5</sup> permit. (See *EPA v. State Water Resources Control Board, supra*, 426 U.S. at p. 205.) It is "unlawful [\*873] for any person to discharge a pollutant without obtaining a permit and complying with its terms." (*Ibid.*; see § 1311(a); *Costle, supra*, 568 [\*\*\*132] F.2d at p. 1375.) An NPDES permit is issued by the United States Environmental Protection Agency (EPA) or by a state that has a federally approved water quality program. (§ 1342(a), (b); *EPA v. State Water Resources Control Board, supra*, 426 U.S. at p. 209.) Before an NPDES is issued, the federal or state regulatory agency must follow an extensive administrative hearing procedure. (See 40 C.F.R. §§ 124.3, 124.6, 124.8, 124.10; see generally Wardzinski et al., *National Pollutant Discharge Elimination System* [\*\*\*7] *Permit Application and Issuance Procedures*, in *The Clean Water Act Handbook* (Evans edit., 1994) pp. 72-74 (Clean Water Act Handbook).) NPDES permits are valid for five years. (§ 1342(b)(1)(B).)

4 [HN2]The Clean Water Act defines a "point source" to be "any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged." (§ 1362(14).)

5 NPDES stands for National Pollution Discharge Elimination System.

[HN3](3) Under the Clean Water Act, the proper scope of the controls in an NPDES permit depends on the applicable state water quality standards for the affected water bodies. (See *Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1092 [1 Cal. Rptr. 3d 76].) Each state is required to develop water quality standards that establish "the desired [\*\*\*8] condition of a waterway." (*Ibid.*) A water quality standard for any given water segment has two components: (1) the designated beneficial uses of the water body; and (2) the water quality criteria sufficient to protect those uses. (*Ibid.*) As enacted in 1972, the Clean Water Act mandated that an NPDES permit require compliance with state water quality standards and that this goal be met by setting forth a specific "effluent limitation," which is a restriction on the

124 Cal. App. 4th 866, \*; 22 Cal. Rptr. 3d 128, \*\*;  
2004 Cal. App. LEXIS 2073, \*\*\*; 2004 Cal. Daily Op. Service 10694

amount of pollutants that may be discharged at the point source. (§§ 1311, 1362(11).)

Shortly after the 1972 legislation, the EPA promulgated regulations exempting most municipal storm sewers from the NPDES permit requirements. (*Costle, supra*, 568 F.2d at p. 1372; see *Defenders of Wildlife v. Browner* (9th Cir. 1999) 191 F.3d 1159, 1163 (*Defenders of Wildlife*)). When environmental groups challenged this exemption in federal court, the Ninth Circuit held a storm sewer is a point source and the EPA did not have the authority to exempt categories of point sources from the Clean Water Act's NPDES permit requirements. (*Costle, supra*, 568 F.2d at pp. 1374-1383.) [\*\*\*9] The *Costle* court rejected the EPA's argument that effluent-based storm sewer regulation was administratively infeasible because of the variable nature of storm water pollution and the number of affected storm sewers throughout the country. (*Id.* at pp. 1377-1382.) Although the court acknowledged the practical problems relating to storm sewer regulation, the court found the EPA had the flexibility under the Clean Water Act to design regulations that would overcome these problems. (*Id.* at pp. 1379-1383.)

[\*874] During the next 15 years, the EPA made numerous attempts to reconcile the statutory requirement of point source regulation with the practical problem of regulating possibly millions of diverse point source discharges of storm water. (*Defenders of Wildlife, supra*, 191 F.3d at p. 1163; see Gallagher, *Clean Water Act in Environmental Law Handbook* (Sullivan edit., 2003) p. 300 (*Environmental Law Handbook*); Eisen, *Toward a Sustainable Urbanism: Lessons from Federal Regulation of Urban Stormwater Runoff* (1995) 48 Wash. U. J. Urb. & Contemp. L. 1, 40-41 (*Regulation of Urban Stormwater Runoff*)).

(4) Eventually, [HN4] in 1987, Congress amended the [\*\*\*10] Clean Water Act to add provisions that specifically concerned NPDES permit requirements for storm sewer discharges. (§ 1342(p); see *Defenders of Wildlife, supra*, [\*\*133], 191 F.3d at p. 1163; *Natural Resources Defense Council v. U.S. E.P.A.* (1992) 966 F.2d 1292, 1296.) In these amendments, enacted as part of the *Water Quality Act of 1987*, Congress distinguished between industrial and municipal storm water discharges. With respect to *industrial* storm water discharges, Congress provided that NPDES permits "shall meet all applicable provisions of this section and section 1311 [requiring the EPA to establish effluent limitations under specific timetables] ... ." (§ 1342(p)(3)(A).) With respect to *municipal* storm water discharges, Congress clarified that the EPA had the authority to fashion NPDES permit requirements to meet water quality standards without specific numerical effluent limits and instead to impose "controls to reduce the discharge of pol-

lutants to the maximum extent practicable ... ." (§ 1342(p)(3)(B)(iii); see *Defenders of Wildlife, supra*, 191 F.3d at p. 1163.) Because the statutory language pertaining to municipal [\*\*\*11] storm sewers is at the center of this appeal, we quote the relevant portion of the statute in full:

"[HN5](B) ... Permits for discharges from municipal storm sewers--

"(i) may be issued on a system- or jurisdiction-wide basis;

"(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

"(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants." (§ 1342(p)(3)(B).) To ensure this scheme would be administratively workable, Congress placed a moratorium on many new types of required stormwater permits until 1994 (§ 1342(p)(1)), and created a phased approach to necessary municipal [\*875] stormwater permitting depending on the size of the municipality (§ 1342(p)(2)(D)). (See *Environmental Defense Center, Inc. v. U.S. E.P.A.* (9th Cir. 2003) 344 F.3d 832, 841-842.)

#### B. State Statutory Scheme

Three years before the 1972 Clean Water Act, the California Legislature enacted [\*\*\*12] its own water quality protection legislation, the *Porter-Cologne Water Quality Control Act* (Porter-Cologne Act), seeking to "attain the highest water quality which is reasonable ... ." (*Wat. Code*, § 13000.) The Porter-Cologne Act created the State Water Board to formulate statewide water quality policy and established nine regional boards to prepare water quality plans (known as basin plans) and issue permits governing the discharge of waste. (*Wat. Code*, §§ 13100, 13140, 13200, 13201, 13240, 13241, 13243.) The Porter-Cologne Act identified these permits as "waste discharge requirements," and provided that the waste discharge requirements must mandate compliance with the applicable regional water quality control plan. (*Wat. Code*, §§ 13263, subd. (a), 13377, 13374.)

Shortly after Congress enacted the Clean Water Act in 1972, the California Legislature added chapter 5.5 to the Porter-Cologne Act, for the purpose of adopting the necessary federal requirements to ensure it would obtain EPA approval to issue NPDES permits. (*Wat. Code*, § 13370, subd. (c).) As part of these amendments, the Legislature provided that the state and regional water boards

"[HN6]shall, as required or authorized [\*\*\*13] by the [Clean Water Act], issue waste discharge requirements ... which apply and ensure compliance with all applicable provisions [\*\*134] [of the Clean Water Act], together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance." (Wat. Code, § 13377.) Water Code section 13374 provides that "[HN7][t]he term 'waste discharge requirements' as referred to in this division is the equivalent of the term 'permits' as used in the [Clean Water Act]."

(5) California subsequently obtained the required approval to issue NPDES permits. (Water Keepers Northern California v. State Water Resources Control Bd. (2002) 102 Cal.App.4th 1448, 1453 [126 Cal. Rptr. 2d 389].) Thus, [HN8]the waste discharge requirements issued by the regional water boards ordinarily also serve as NPDES permits under federal law. (Wat. Code, § 13374.)

## II. The NPDES Permit at Issue in this Case

Under its delegated authority and after numerous public hearings, in February 2001 the Regional Water Board issued a 52-page NPDES permit [\*876] and Waste Discharge Requirements (the Permit) governing municipal storm sewers owned [\*\*\*14] by San Diego County, the San Diego Unified Port District, and 18 San Diego-area cities (collectively, Municipalities).<sup>6</sup> The first 10 pages of the Permit contain the Regional Water Board's detailed factual findings. These findings describe the manner in which San Diego-area water runoff absorbs numerous harmful pollutants and then is conveyed by municipal storm sewers into local waters without any treatment. The findings state that these storm sewer discharges are a leading cause of water quality impairment in the San Diego region, endangering aquatic life and human health. The findings further state that to achieve applicable state water quality objectives, it is necessary not only to require municipalities to comply with existing pollution-control technologies, but also to require compliance with applicable "receiving water limits" (state water quality standards) and to employ an "iterative process" of "development, implementation, monitoring, and assessment" to improve existing technologies.

<sup>6</sup> Under the Clean Water Act, entities responsible for NPDES permit conditions pertaining to their own discharges are referred to as "copermittees." (40 C.F.R. § 122.26(b)(1).) For clarity and readability, we shall refer to these entities as Municipalities.

[\*\*\*15] Based on these factual findings, the Regional Water Board included in the Permit several over-

all prohibitions applicable to municipal storm sewer discharges. Of critical importance to this appeal, these prohibitions concern two categories of restrictions. First, the Municipalities are prohibited from discharging those pollutants "which have not been reduced to the *maximum extent practicable* ... ." <sup>7</sup> (Italics added). Second, the Municipalities [\*\*135] are prohibited from discharging pollutants "which cause or contribute to exceedances of receiving water quality objectives ... " and/or that "cause or contribute to the violation of water quality standards ... ." This second category of restrictions (referred to in this opinion as the Water Quality Standards provisions) essentially provide that a municipality may not discharge pollutants if those pollutants would cause the receiving water body to exceed the applicable water quality standard. It is these latter restrictions that are challenged by Building Industry in this appeal.

<sup>7</sup> The Permit does not precisely define this phrase, and instead, in its definition section, contains a lengthy discussion of the variable nature of the maximum extent practicable concept, referred to as MEP. A portion of this discussion is as follows: "[T]he definition of MEP is dynamic and will be defined by the following process over time: municipalities propose their definition of MEP by way of their [local storm sewer plan]. Their total collective and individual activities conducted pursuant to the [plan] becomes their proposal for MEP as it applies both to their overall effort, as well as to specific activities (e.g., MEP for street sweeping, or MEP for municipal separate storm sewer maintenance). In the absence of a proposal acceptable to the [Regional Water Board], the [Regional Water Board] defines MEP." The definition also identifies several factors that are "useful" in determining whether an entity has achieved the maximum extent practicable standard, including "Effectiveness," "Regulatory Compliance," "Public Acceptance," "Cost," and "Technical Feasibility."

[\*\*\*16] [\*877] Part C of the Permit (as amended) qualifies the Water Quality Standards provisions by detailing a procedure for enforcing violations of those standards through a step-by-step process of "timely implementation of control measures ...," known as an "iterative" process. Under this procedure, when a municipality "caus[es] or contribute[s] to an exceedance of an applicable water quality standard," the municipality must prepare a report documenting the violation and describing a process for improvement and prevention of further violations. The municipality and the regional water board must then work together at improving methods and monitoring progress to achieve compliance. But the final provision of Part C states that "Nothing in this section

124 Cal. App. 4th 866, \*; 22 Cal. Rptr. 3d 128, \*\*;  
2004 Cal. App. LEXIS 2073, \*\*\*; 2004 Cal. Daily Op. Service 10694

shall prevent the [Regional Water Board] from enforcing any provision of this Order while the [municipality] prepares and implements the above report."

In addition to these broad prohibitions and enforcement provisions, the Permit requires the Municipalities to implement, or to require businesses and residents to implement, various pollution control measures referred to as "best management practices," which reflect techniques for preventing, [\*\*\*17] slowing, retaining or absorbing pollutants produced by stormwater runoff. These best management practices include structural controls that minimize contact between pollutants and flows, and nonstructural controls such as educational and public outreach programs. The Permit also requires the Municipalities to regulate discharges associated with new development and redevelopment and to ensure a completed project will not result in significantly increased discharges of pollution from storm water runoff.

### III. Administrative and Trial Court Challenges

After the Regional Water Board issued the Permit, the Building Industry, an organization representing the interests of numerous construction-related businesses, filed an administrative challenge with the State Water Board. Although none of the Municipalities joined in the administrative appeal, Building Industry claimed its own independent standing based on its assertion that the Permit would impose indirect obligations on the regional building community. (See Wat. Code, § 13320 [permitting any "aggrieved person" to challenge regional water board action].) Among its numerous contentions, Building Industry argued that the Water [\*\*\*18] Quality Standards provisions in the Permit require strict compliance with state water quality standards beyond what is "practicable" and therefore violate federal law.

In November 2001, the State Water Board issued a written decision rejecting Building Industry's appeal after making certain modifications to the Permit. (Cal. Wat. Resources Control Bd. Order WQ2001-15 (Nov. 15, 2001).) Of particular relevance here, the State Water [\*878] Board modified the Permit to make clear that the iterative enforcement process applied to the Water Quality Standards provisions in the Permit. But the State Water Board did not delete the Permit's [\*\*136] provision stating that the Regional Water Board retains the authority to enforce the Water Quality Standards provisions even if a Municipality is engaged in this iterative process.

Building Industry then brought a superior court action against the Water Boards, challenging the Regional Board's issuance of the Permit and the State Water Board's denial of Building Industry's administrative challenge. \* Building Industry asserted numerous legal

claims, including that the Water Boards: (1) violated the Clean Water Act by imposing a standard greater [\*\*\*19] than the "maximum extent practicable" standard; (2) violated state law by failing to consider various statutory factors before issuing the Permit; (3) violated the California Environmental Quality Act (CEQA) by failing to prepare an environmental impact report (EIR); and (4) made findings that were factually unsupported.

8 Several other parties were also named as petitioners: Building Industry Legal Defense Foundation, California Business Properties Association, Construction Industry Coalition for Water Quality, San Diego County Fire Districts Association, and the City of San Marcos. However, because these entities were not parties in the administrative challenge, the superior court properly found they were precluded by the administrative exhaustion doctrine from challenging the administrative agencies' compliance with the federal and state water quality laws. Although these entities were named as appellants in the notice of appeal, they are barred by the exhaustion doctrine from asserting appellate contentions concerning compliance with federal and state water quality laws. However, as to any other claims (such as CEQA), these entities are proper appellants. For ease of reference and where appropriate, we refer to the appellants collectively as Building Industry.

Three environmental organizations, San Diego BayKeeper, Natural Resources Defense Council, and California CoastKeeper (collectively, Environmental Organizations), [\*\*\*20] requested permission to file a complaint in intervention, seeking to uphold the Permit and asserting a direct and substantial independent interest in the subject of the action. Over Building Industry's objections, the trial court permitted these organizations to file the complaint and enter the action as parties-interveners.

After reviewing the lengthy administrative record and the parties' briefs, and conducting an oral hearing, the superior court ruled in favor of the Water Boards and Environmental Organizations (collectively, respondents). Applying the independent judgment test, the court found Building Industry failed to meet its burden to establish the State Water Board abused its discretion in approving the Permit or that the administrative findings are contrary to the weight of the evidence. In particular, the court found Building Industry failed to establish the Permit requirements were "impracticable under federal law or unreasonable under state law," and noted that there was evidence showing the Regional Water Board considered many practical aspects of the regulatory [\*879] controls

before issuing the Permit. Rejecting Building Industry's legal arguments, the court also stated that [\*\*\*21] under federal law the Water Boards had the discretion "to require strict compliance with water quality standards" or "to require less than strict compliance with water quality standards." The court also sustained several of respondents' evidentiary objections, including to documents relating to the legislative history of the Clean Water Act.

Building Industry appeals, challenging the superior court's determination that the Permit did not violate the federal Clean Water Act. In its appeal, Building Industry does not reassert its claim that the Permit violates state law, except for its contentions pertaining to CEQA.

## DISCUSSION

### I. Standard of Review

[HN9](6) A party aggrieved by a final decision of the State Water Board may obtain review of the decision by filing a timely [\*\*137] petition for writ of mandate in the superior court. (Wat. Code, § 13330, subd. (a).) [HN10]Code of Civil Procedure section 1094.5 governs the proceedings, and the superior court must exercise its independent judgment in examining the evidence and resolving factual disputes. (Wat. Code, § 13330, subd. [\*\*\*22] (d).) "In exercising its independent judgment, a trial court must afford a strong presumption of correctness concerning the administrative findings, and the party challenging the administrative decision bears the burden of convincing the court that the administrative findings are contrary to the weight of the evidence." (Fukuda v. City of Angels (1999) 20 Cal.4th 805, 817 [85 Cal. Rptr. 2d 696, 977 P.2d 693].)

[HN11](7) In reviewing the trial court's factual determinations on the administrative record, a Court of Appeal applies a substantial evidence standard. (Fukuda v. City of Angels, supra, 20 Cal.4th at p. 824.) However, in reviewing the trial court's legal determinations, an appellate court conducts a de novo review. (See Alliance for a Better Downtown Millbrae v. Wade (2003) 108 Cal.App.4th 123, 129 [133 Cal. Rptr. 2d 249].) Thus, we are not bound by the legal determinations made by the state or regional agencies or by the trial court. (See Yamaha Corp. of America v. State Bd. of Equalization (1998) 19 Cal.4th 1, 7-8 [78 Cal. Rptr. 2d 1, 960 P.2d 1031].) But we must give appropriate consideration to an administrative agency's expertise underlying its interpretation of an applicable statute. <sup>9</sup> (*Ibid.*)

9 We note that in determining the meaning of the Clean Water Act and its amendments, federal courts generally defer to the EPA's statutory construction if the disputed portion of the statute is ambiguous. (See Chevron U.S.A. v. Natural Res.

Def. Council, Inc. (1984) 467 U.S. 837, 842-844 [81 L. Ed. 2d 694, 104 S. Ct. 2778] (*Chevron*.) However, the parties do not argue this same principle applies to a state agency's interpretation of the Clean Water Act. Nonetheless, under governing state law principles, we do consider and give due deference to the Water Boards' statutory interpretations in this case. (See Yamaha Corp. of America v. State Bd. of Equalization, supra, 19 Cal.4th at pp. 7-8.)

[\*\*\*23]

### [\*880] II. Water Boards' Authority to Enforce Water Quality Standards in NPDES Permit

Building Industry's main appellate contention is very narrow. Building Industry argues that two provisions in the Permit (the Water Quality Standards provisions) violate federal law because they prohibit the Municipalities from discharging runoff from storm sewers if the discharge would cause a water body to exceed the applicable water quality standard established under state law. <sup>10</sup> Building Industry contends that under federal law the "maximum extent practicable" standard is the "exclusive" measure that may be applied to municipal storm sewer discharges and a regulatory agency may not require a Municipality to comply with a state water quality standard if the required controls exceed a "maximum extent practicable" standard.

10 These challenged Permit provisions state "Discharges from [storm sewers] which cause or contribute to exceedances of receiving water quality objectives for surface water or groundwater are prohibited" (Permit, § A.2), and "Discharges from [storm sewers] that cause or contribute to the violation of water quality standards ... are prohibited" (Permit, § C.1).

[\*\*\*24] In the following discussion, we first reject respondents' contentions that Building Industry waived these arguments by failing to raise a substantial evidence challenge to the court's factual findings and/or [\*\*138] to reassert its state law challenges on appeal. We then focus on the portion of the Clean Water Act (§ 1342(p)(3)(B)(iii)) that Building Industry contends is violated by the challenged Permit provisions. On our de novo review of this legal issue, we conclude the Permit's Water Quality Standards provisions are proper under federal law, and Building Industry's legal challenges are unsupported by the applicable statutory language, legislative purpose, and legislative history.

#### A. Building Industry Did Not Waive the Legal Argument

Respondents (the Water Boards and Environmental Organizations) initially argue that Building Industry waived its right to challenge the Permit's consistency with the maximum extent practicable standard because Building Industry did not challenge the trial court's *factual* findings that Building Industry failed to prove any of the Permit requirements were "impracticable" or "unreasonable."

In taking this position, respondents misconstrue the [\*\*\*25] nature of Building Industry's appellate contention challenging the Water Quality Standards provisions. Building Industry's contention concerns the scope of the authority given to the Regional Water Board under the Permit terms. Specifically, [\*881] Building Industry argues that the Regional Water Board does not have the authority to require the Municipalities to adhere to the applicable water quality standards because federal law provides that the "maximum extent practicable" standard is the exclusive standard that may be applied to storm sewer regulation. This argument--concerning the proper scope of a regulatory agency's authority--presents a purely legal issue, and is not dependent on the court's factual findings regarding the practicality of the specific regulatory controls identified in the Permit.

Respondents alternatively contend that Building Industry waived its right to challenge the propriety of the Water Quality Standards provisions under federal law because the trial court found the provisions were valid under state law and Building Industry failed to reassert its state law challenges on appeal. Under the particular circumstances of this case, we conclude Building Industry did [\*\*\*26] not waive its rights to challenge the Permit under federal law.

(8) Although [HN12] it is well settled that the Clean Water Act authorizes states to impose water quality controls that are more stringent than are required under federal law (§ 1370; see *PUD No. 1 of Jefferson Cty. v. Washington Dept. of Ecology* (1994) 511 U.S. 700, 705 [128 L. Ed. 2d 716, 114 S. Ct. 1900]; *Northwest Environmental Advocates v. Portland* (9th Cir. 1995) 56 F.3d 979, 989), and California law specifically allows the imposition of controls more stringent than federal law (*Wat. Code, § 13377*), the Water Boards made a tactical decision in the superior court to assert the Permit's validity based solely on federal law, and repeatedly made clear they were not seeking to justify the Permit requirements based on the Boards' independent authority to act under state law. On appeal, the Water Boards continue to rely primarily on federal law to uphold the Permit requirements, and their assertions that we may decide the matter based solely on state law are in the nature of asides rather than direct arguments. On this record, it would be improper to rely solely on state law to uphold the challenged Permit provisions. [\*\*\*27]

#### B. *The Water Quality Standards Requirement Does Not Violate Federal Law*

We now turn to Building Industry's main substantive contention on appeal-- [\*\*\*139] that the Permit's Water Quality Standards provisions (fn. 10, *ante*) violate federal law. Building Industry's contention rests on its interpretation of the 1987 Water Quality Act amendments containing NPDES requirements for municipal storm sewers. The portion of the relevant statute reads: "(B) ... Permits for discharges from municipal storm sewers ... [¶] ... [¶] (iii) shall require controls to reduce the discharge of pollutants to the *maximum extent practicable*, *including* management practices, control techniques and [\*882] system, design and engineering methods, and such other provisions as the [EPA] Administrator or the State determines appropriate for the control of such pollutants." (§ 1342(p)(3)(B)(iii), italics added.)

##### 1. *Statutory Language*

Focusing on the first 14 words of subdivision (iii), Building Industry contends the statute means that the maximum extent practicable standard sets the upper limit on the type of control that can be used in an NPDES permit, and that each of the phrases following the [\*\*\*28] word "*including*" identify examples of "maximum extent practicable" controls. (§ 1342(p)(3)(B)(iii), italics added.) Building Industry thus reads the final "and such other provisions" clause as providing the EPA with the authority only to include *other* types of "maximum extent practicable" controls in an NPDES storm sewer permit.

Respondents counter that the term "*including*" refers only to the three identified types of pollution control procedures--(1) "management practices"; (2) "control techniques"; and (3) "system, design and engineering methods"--and that the last phrase, "*and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants*," provides the EPA (or the approved state regulatory agency) the specific authority to go beyond the maximum extent practicable standard to impose effluent limitations or water-quality based standards in an NPDES permit. In support, respondents argue that because the word "system" in section 1342(p)(3)(B)(iii) is singular, it necessarily follows from parallel-construction grammar principles that the word "system" is part of the phrase "system, design and engineering methods" rather [\*\*\*29] than the phrase "control techniques and system." Under this view and given the absence of a comma after the word "techniques," respondents argue that the "and such other provisions" clause cannot be fairly read as restricted by the "maximum extent practicable" phrase, and instead the "and such other provisions" clause is a separate and dis-

inct clause that acts as a second direct object to the verb "require" in the sentence. (§ 1342(p)(3)(B)(iii).)

Building Industry responds that respondents' proposed statutory interpretation is "not logical" because if the "and such other provisions" phrase is the direct object of the verb "require," the sentence would not make sense. Building Industry states that "permits" do not generally "require" provisions; they "include" or "contain" them.

(9) As a matter of grammar and word choice, respondents have the stronger position. The second part of Building Industry's proposed interpretation--"control techniques and system, design and engineering methods"--without a comma after the word "techniques" does not logically serve as a [\*883] parallel construct with the "and such other provisions" clause. Moreover, we disagree that the "and such other provisions" [\*\*\*30] clause cannot be a direct object to the word "require." (§ 1342(p)(3)(B)(iii).) Although it is not the clearest way of articulating the concept, [HN13]the language of section 1342(p)(3)(B)(iii) does communicate the [\*\*140] basic principle that the EPA (and/or a state approved to issue the NPDES permit) retains the discretion to impose "appropriate" water pollution controls in addition to those that come within the definition of "maximum extent practicable." (*Defenders of Wildlife, supra*, 191 F.3d at pp. 1165-1167.) We find unpersuasive Building Industry's reliance on several statutory interpretation concepts, *eiusdem generis*, *noscitur a sociis*, and *expressio unius est exclusio alterius*, to support its narrower statutory construction.

## 2. Purpose and History of Section 1342(p)(3)(B)(iii)

(10) Further, "[HN14][w]hile punctuation and grammar should be considered in interpreting a statute, neither is controlling unless the result is in harmony with the clearly expressed intent of the Legislature." (*In re John S.* (2001) 88 Cal.App.4th 1140, 1144, fn. 1 [106 Cal. Rptr. 2d 476]; see *Estate of Coffee* (1941) 19 Cal.2d 248, 251 [120 P.2d 66].) If the statutory language is susceptible [\*\*\*31] to more than one reasonable interpretation, a court must also "look to a variety of extrinsic aids, including the ostensible objects to be achieved, the evils to be remedied, the legislative history, public policy, contemporaneous administrative construction, and the statutory scheme of which the statute is a part." (*Nolan v. City of Anaheim* (2004) 33 Cal.4th 335, 340 [14 Cal. Rptr. 3d 857, 92 P.3d 350].)

[HN15](11) The legislative purpose underlying the Water Quality Act of 1987, and section 1342(p) in particular, supports that Congress intended to provide the EPA (or the regulatory agency of an approved state) the discretion to require compliance with water quality standards in a municipal storm sewer NPDES permit, particu-

larly where, as here, that compliance will be achieved primarily through an iterative process.

Before section 1342(p) was enacted, the courts had long recognized that the EPA had the authority to require a party to comply with a state water quality standard even if that standard had not been translated into an effluent limitation. (See *EPA v. State Water Resources Control Board, supra*, 426 U.S. at p. 205, fn. 12; *PUD No. 1 of Jefferson Cty. v. Washington Dept. of Ecology, supra*, 511 U.S. at p. 715; [\*\*\*32] *Northwest Environmental Advocates v. Portland* (9th Cir. 1995) 56 F.3d 979, 987; *Natural Resources Defense Council v. U.S.E.P.A.* (9th Cir. 1990) 915 F.2d 1314, 1316.) Specifically, section 1311(b)(1)(C) gave the regulatory agency the authority to impose "any more stringent limitation, including those necessary to meet water quality standards," and section 1342(a)(2) provided that "[t]he [EPA] Administrator shall [\*884] prescribe conditions for [NPDES] permits to assure compliance" with requirements identified in section 1342(a)(1), which encompass state water quality standards. The United States Supreme Court explained that when Congress enacted the 1972 Clean Water Act, it retained "[w]ater quality standards ... as a supplementary basis for effluent limitations, ... so that numerous point sources despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels. ..." (*EPA v. State Water Resources Control Board, supra*, 426 U.S. at p. 205, fn. 12; see also *Arkansas v. Oklahoma* (1992) 503 U.S. 91, 101 [117 L. Ed. 2d 239, 112 S. Ct. 1046].)

There [\*\*\*33] is nothing in section 1342(p)(3)(B)(iii)'s statutory language or legislative history showing that Congress intended to eliminate this discretion when it amended the Clean Water Act in 1987. [\*\*141] To the contrary, Congress added the NPDES storm sewer requirements to strengthen the Clean Water Act by making its mandate correspond to the practical realities of municipal storm sewer regulation. As numerous commentators have pointed out, although Congress was reacting to the physical differences between municipal storm water runoff and other pollutant discharges that made the 1972 legislation's blanket effluent limitations approach impractical and administratively burdensome, the primary point of the legislation was to address these administrative problems while giving the administrative bodies the tools to meet the fundamental goals of the Clean Water Act in the context of stormwater pollution. (See *Regulation of Urban Stormwater Runoff, supra*, 48 Wash. U. J. Urb. & Contemp. L. at pp. 44-46; *Environmental Law Handbook, supra*, at p. 300; *Clean Water Act Handbook, supra*, at pp. 62-63.) In the 1987 congressional debates, the Senators and Representatives emphasized the need to prevent the widespread

and escalating problems [\*\*\*34] resulting from untreated storm water toxic discharges that were threatening aquatic life and creating conditions dangerous to human health. (See Remarks of Sen. Durenberger, 133 Cong. Rec. 1279 (Jan. 14, 1987); Remarks of Sen. Chaffee, 133 Cong. Rec. S738 (daily ed. Jan 14, 1987); Remarks of Rep. Hammerschmidt, 133 Cong. Rec. 986 (Jan. 8, 1987); Remarks of Rep. Roe, 133 Cong. Rec. 1006, 1007 (Jan. 8, 1987); Remarks of Sen. Stafford, 132 Cong. Rec. 32381, 32400 (Oct. 16, 1986).) This legislative history supports that in identifying a maximum extent practicable standard Congress did not intend to substantively bar the EPA/state agency from imposing a more stringent water quality standard if the agency, based on its expertise and technical factual information and after the required administrative hearing procedure, found this standard to be a necessary and workable enforcement mechanism to achieving the goals of the Clean Water Act.

To support a contrary view, Building Industry relies on comments by Minnesota Senator David Durenberger during the lengthy-congressional [\*885] debates on the 1987 Water Quality Act amendments. <sup>11</sup> (132 Cong. Rec. 32400 (Oct. 16, 1986); 133 Cong. Rec. S752 (daily [\*\*\*35] ed. Jan. 14, 1987.)) In the cited portions of the Congressional Record, Senator Durenberger states that NPDES permits "shall require controls to reduce the discharge of pollutants to the maximum extent practicable. Such controls include management practices, control techniques and systems, design and engineering methods, and such other provisions, as the Administrator determines appropriate for the control of pollutants in the stormwater discharge." (*Ibid.*) When viewing these statements in context, it is apparent that the Senator was merely paraphrasing the words of the proposed statute and was not intending to address the issue of whether the maximum extent practicable standard was a regulatory ceiling or whether he believed the proposed amendments limited the EPA's existing discretion. <sup>12</sup>

11 We agree with Building Industry that the trial court's refusal to consider this legislative history on the basis that it was not presented to the administrative agencies was improper. However, this error was not prejudicial because we apply a de novo review standard in interpreting the relevant statutes.

[\*\*\*36]

12 In the cited remarks, Senator Durenberger in fact expressed his dissatisfaction with the EPA's prior attempts to regulate municipal storm sewers. He pointed out, for example, that "[r]unoff from municipal separate storm sewers and industrial sites contain significant values of both toxic and conventional pollutants," and that

despite the Clean Water Act's "clear directive," the EPA "has failed to require most stormwater point sources to apply for permits which would control the pollutants in their discharge." (133 Cong. Rec. 1274, 1279-1280 (daily ed. Jan. 14, 1987).)

[\*\*142] Building Industry's reliance on comments made by Georgia Representative James Rowland, who participated in drafting the 1987 Water Quality Act amendments, is similarly unhelpful. During a floor debate on the proposed amendments, Representative Rowland noted that cities have "millions of" stormwater discharge points and emphasized the devastating financial burden on cities if they were required to obtain a permit for each of these points. (133 Cong. Rec. 522 (daily ed. Feb. 3, 1987).) Representative Rowland then explained [\*\*\*37] that the amendments would address this problem by "allow[ing] communities to obtain far less costly single jurisdictionwide permits." (*Ibid.*) Viewed in context, these comments were directed at the need for statutory provisions permitting the EPA to issue jurisdiction-wide permits thereby preventing unnecessary administrative costs to the cities, and do not reflect a desire to protect cities from the cost of complying with strict water quality standards when deemed necessary by the regulatory agency.

### 3. Interpretations by the EPA and Other Courts

(12) Our conclusion that Congress intended section 1342(p)(3)(B)(iii) to provide the regulatory agency with authority to impose standards stricter than a "maximum extent practicable" standard is consistent with interpretations by [\*886] the EPA and the Ninth Circuit. In its final rule promulgated in the Federal Register, the EPA construed section 1342(p)(3)(B)(iii) as providing the administrative agency with the authority to impose water-quality standard controls in an NPDES permit if appropriate under the circumstances. Specifically, the EPA stated this statutory provision requires "controls to reduce the discharge of pollutants to the [\*\*\*38] maximum extent practicable, and where necessary water quality-based controls ... ." (55 Fed.Reg. 47990, 47994 (Nov. 16, 1990), italics added.) [HN16] We are required to give substantial deference to this administrative interpretation, which occurred after an extensive notice and comment period. (See *ibid.*; *Chevron, supra*, 467 U.S. at pp. 842-844.)

The only other court that has interpreted the "such other provisions" language of section 1342(p)(3)(B)(iii) has reached a similar conclusion. (*Defenders of Wildlife, supra*, 191 F.3d at pp. 1166-1167.) In *Defenders of Wildlife*, environmental organizations brought an action against the EPA, challenging provisions in an NPDES permit requiring several Arizona localities to adhere to

various best management practice controls without requiring numeric effluent limitations. (*Id.* at p. 1161.) The environmental organizations argued that section 1342(p) did not allow the EPA to issue NPDES permits without requiring strict compliance with effluent limitations. (*Defenders of Wildlife, supra*, at p. 1161.) Rejecting this argument, the Ninth Circuit found section 1342(p)(3)(B)(iii)'s statutory language "unambiguously [\*\*\*39] demonstrates that Congress did not require [\*\*143] municipal storm-sewer discharges to comply strictly" with effluent limitations. (*Defenders of Wildlife, supra*, at p. 1164.)

But in a separate part of the opinion, the *Defenders of Wildlife* court additionally rejected the reverse argument made by the affected municipalities (who were the interveners in the action) that "the EPA may not, under the [Clean Water Act], require strict compliance with state water-quality standards, through numerical limits or otherwise." (*Defenders of Wildlife, supra*, 191 F.3d at p. 1166.) The court stated: "Although Congress did not require municipal storm-sewer discharges to comply strictly with [numerical effluent limitations], § 1342(p)(3)(B)(iii) states that '[p]ermits for discharges from municipal storm sewers ... shall require.... such other provisions as the Administrator ... determines appropriate for the control of such pollutants.' (Emphasis added.) That provision gives the EPA discretion to determine what pollution controls are appropriate. ... [¶] Under that discretionary provision, the EPA has the authority to determine that ensuring [\*\*\*40] strict compliance with state water-quality standards is necessary to control pollutants. The EPA also has the authority to require less than strict compliance with state water-quality standards ... . Under 33 U.S.C. § 1342(p)(3)(B)(iii), the EPA's choice to include either management practices or numeric limitations in the permits was within its discretion. [Citations.]" (*Defenders of Wildlife, supra*, 191 F.3d at pp. 1166-1167, second italics added.) Although dicta, this [\*887] conclusion reached by a federal court interpreting federal law is persuasive and is consistent with our independent analysis of the statutory language. <sup>13</sup>

13 Building Industry's reliance on two other Ninth Circuit decisions to support a contrary statutory interpretation is misplaced. (See *Natural Res. Def. Council, Inc. v. U.S.E.P.A., supra*, 966 F.2d at p. 1308; *Environmental Defense Center, Inc. v. U.S. E.P.A.* (9th Cir. 2003) 344 F.3d 832.) Neither of these decisions addressed the issue of the scope of a regulatory agency's authority to exceed the maximum extent practicable standard in issuing NPDES permits for municipal storm sewers.

[\*\*\*41] To support its interpretation of section 1342(p)(3)(B)(iii), Building Industry additionally relies on the statutory provisions addressing nonpoint source runoff (a diffuse runoff not channeled through a particular source), which were also part of the 1987 amendments to the Clean Water Act. (§ 1329.) In particular, Building Industry cites to section 1329(a)(1)(C), which states, "The Governor of each State shall ... prepare and submit to the [EPA] Administrator for approval, a report which ... [¶] ... [¶] describes the process ... for identifying best management practices and measures to control each [identified] category ... of nonpoint sources and ... to reduce, to the *maximum extent practicable*, the level of pollution resulting from such category ... ." (Italics added.) Building Industry argues that because this "nonpoint source" statutory language expressly identifies only the maximum extent practicable standard, we must necessarily conclude that Congress meant to similarly limit the storm sewer point source pollution regulations to the maximum extent practicable standard.

The logic underlying this analogy is flawed because the critical language in the [\*\*\*42] two statutory provisions is different. In the nonpoint source statute, Congress chose to include only the maximum extent practicable standard (§ 1329(a)(1)(C)); whereas in the municipal storm sewer provisions, Congress elected to include the "and such other provisions" clause (§ 1342(p)(3)(B)(iii)). This difference leads to the reasonable inference that Congress had a different intent when it enacted the two statutory provisions. Moreover, because of a fundamental difference between point and nonpoint source pollution, Congress has historically treated the two types of pollution differently and has subjected each type to entirely different requirements. (See *Pronsolino v. Nastri* (9th Cir. 2002) 291 F.3d 1123, 1126-1127.) Given this different treatment, it would be improper to presume Congress intended to apply the same standard in both statutes. Building Industry's citation to comments during the 1987 congressional debates regarding nonpoint source regulation does [\*\*144] not support Building Industry's contentions.

[\*888] 4. *Contention that it is "Impossible" for Municipalities to Meet Water Quality Standards*

We also reject Building Industry's arguments woven throughout [\*\*\*43] its appellate briefs, and emphasized during oral arguments, that the Water Quality Standards provisions violate federal law because compliance with those standards is "impossible." The argument is not factually or legally supported.

(13) First, there is no showing on the record before us that the applicable water quality standards are unattainable. The trial court specifically concluded that Building Industry failed to make a factual showing to

124 Cal. App. 4th 866, \*, 22 Cal. Rptr. 3d 128, \*\*;  
2004 Cal. App. LEXIS 2073, \*\*\*; 2004 Cal. Daily Op. Service 10694

support this contention, and Building Industry does not present a proper appellate challenge to this finding sufficient to warrant our reexamining the evidence. [HN17] All judgments and orders are presumed correct, and persons challenging them must affirmatively show reversible error. (14) (Walling v. Kimball (1941) 17 Cal.2d 364, 373 [110 P.2d 58].) [HN18] A party challenging the sufficiency of evidence to support a judgment must summarize (and cite to) all of the material evidence, not just the evidence favorable to his or her appellate positions. (In re Marriage of Fink (1979) 25 Cal.3d 877, 887-888 [160 Cal. Rptr. 516, 603 P.2d 881]; People v. Dougherty (1982) 138 Cal. App. 3d 278, 282 [188 Cal. Rptr. 123].) Building Industry has made [\*\*\*44] no attempt to comply with this well-established appellate rule in its briefs.

In a supplemental brief, Building Industry attempted to overcome this deficiency by asserting that "[t]he record clearly establishes that [the Water Quality Standards provisions] are unattainable during the period the permit is in effect." This statement, however, is not supported by the proffered citation or by the evidence viewed in the light most favorable to the respondents. Further, the fact that many of the Municipalities' storm sewer discharges currently violate water quality standards does not mean that the Municipalities cannot comply with the standards during the five-year term of the Permit. Additionally, Building Industry's assertions at oral argument that the trial court never reached the impossibility issue and/or that respondents' counsel conceded the issue below are belied by the record, including the trial court's rejection of Building Industry's specific challenge to the proposed statement of decision on this very point. "

14 Because we are not presented with a proper appellate challenge, we do not address the trial court's factual determinations in this case concerning whether it is possible or practical for a Municipality to achieve any specific Permit requirement.

[\*\*\*45] (15) We reject Building Industry's related argument that it was respondents' burden to affirmatively show it is feasible to satisfy each of the applicable Water Quality Standards provisions. [HN19] The party challenging the scope of an administrative permit, such as an NPDES, has the burden of [\*889] showing the agency abused its discretion or its findings were unsupported by the facts. (See Fukuda v. City of Angels, *supra*, 20 Cal.4th at p. 817; Huntington Park Redevelopment Agency v. Duncan (1983) 142 Cal. App. 3d 17, 25 [190 Cal. Rptr. 744].) Thus, it was not respondents' burden to affirmatively demonstrate it was possible for the Municipalities to meet the Permit's requirements.

Building Industry alternatively contends it was not required to challenge the facts underlying the trial court's determination that the Permit requirements were feasible [\*\*145] because the court's determination was wrong as a matter of law. Specifically, Building Industry asserts that a Permit requirement that is more stringent than a "maximum extent practicable" standard is, by definition, "not practicable" and therefore "technologically impossible" to achieve under any circumstances. Building [\*\*\*46] Industry relies on a dictionary definition of "practicable," which provides that the word means "something that can be done; feasible," citing the 1996 version of "Webster's Encyclopedic Unabridged Dictionary."

(16) This argument is unpersuasive. The federal maximum extent practicable standard is not defined in the Clean Water Act or applicable regulations, and thus the Regional Water Board properly included a detailed description of the term in the Permit's definitions section. (See *ante*, fn. 7.) As broadly defined in the Permit, the maximum extent practicable standard is a highly flexible concept that depends on balancing numerous factors, including the particular control's technical feasibility, cost, public acceptance, regulatory compliance, and effectiveness. This definition conveys that the Permit's maximum extent practicable standard is a term of art, and is not a phrase that can be interpreted solely by reference to its everyday or dictionary meaning. Further, the Permit's definitional section states that the maximum extent practicable standard "considers economics and is generally, but not necessarily, less stringent than BAT." (Italics added.) [HN20] BAT is an acronym [\*\*\*47] for "best available technology economically achievable," which is a technology-based standard for industrial storm water dischargers that focuses on reducing pollutants by treatment or by a combination of treatment and best management practices. (See Texas Oil & Gas Ass'n v. U.S. E.P.A. (5th Cir. 1998) 161 F.3d 923, 928.) If the maximum extent practicable standard is generally "less stringent" than another Clean Water Act standard that relies on available technologies, it would be unreasonable to conclude that anything more stringent than the maximum extent practicable standard is necessarily impossible. In other contexts, courts have similarly recognized that the word "practicable" does not necessarily mean the most that can possibly be done. (See Nat. Wildlife Federation v. Norton (E.D. Cal. 2004) 306 F. Supp. 2d 920, 928, fn. 12 ["[w]hile the meaning of the term 'practicable' in the [Endangered Species Act] is not entirely clear, the term does not simply equate to 'possible' "; Primavera Familienstiftung v. Askin (S.D.N.Y. 1998) 178 F.R.D. [\*890] 405, 409 [noting that "impracticability does not mean impossibility, but rather difficulty [\*\*\*48] or inconvenience".])

We additionally question whether many of Building Industry's "impossibility" arguments are premature on the record before us. As we have explained, the record does not support that any required control is, or will be, impossible to implement. Further, the Permit allows the Regional Water Board to enforce water quality standards during the iterative process, but does not impose any obligation that the board do so. Thus, we cannot determine with any degree of certainty whether this obligation would ever be imposed, particularly if it later turns out that it is not possible for a Municipality to achieve that standard.

Finally, we comment on Building Industry's repeated warnings that if we affirm the judgment, all affected Municipalities will be in immediate violation of the Permit because they are not now complying with applicable water quality standards, subjecting them to immediate and substantial civil penalties, and leading to a potential "shut down" of public operations. These doomsday arguments are unsupported. The Permit makes clear that Municipalities [\*\*146] are required to adhere to numerous specific controls (none of which are challenged in this case) and [\*\*\*49] to comply with water quality standards through "timely implementation of control measures" by engaging in a cooperative iterative process where the Regional Water Board and Municipality work together to identify violations of water quality standards in a written report and then incorporate approved modified best management practices. Although the Permit allows the regulatory agencies to enforce the water quality standards during this process, the Water Boards have made clear in this litigation that they envision the ongoing iterative process as the centerpiece to achieving water quality standards. Moreover, the regulations provide an affected party reasonable time to comply with new permit requirements under certain circumstances. (See 40 C.F.R. § 122.47.) There is nothing in this record to show the Municipalities will be subject to immediate penalties for violation of water quality standards.

We likewise find speculative Building Industry's predictions that immediately after we affirm the judgment, citizens groups will race to the courthouse to file lawsuits against the Municipalities and seek penalties for violation of the Water Quality Standards provisions.<sup>15</sup> As noted, the applicable [\*\*\*50] laws provide time for an affected entity to comply with new standards. Moreover, although we do not reach the enforcement issue in this case, we note the [\*891] Permit makes clear that the iterative process is to be used for violations of water quality standards, and gives the Regional Water Board the discretionary authority to enforce water quality standards during that process. Thus, it is not at all clear that a citizen would have standing to compel a municipality to comply with a water quality standard despite an ongoing iterative process. (See § 1365(a)(1)(2).) [\*\*\*51]

15 The Clean Water Act allows a citizen to sue a discharger to enforce limits contained in NPDES permits, but requires the citizen to notify the alleged violator, the state, and the EPA of its intention to sue at least 60 days before filing suit, and limits the enforcement to nondiscretionary agency acts. (See § 1365(a)(1)(2).)

III.-VII.\* [NOT CERTIFIED FOR PUBLICATION]

\* See footnote, *ante*, page 866.

DISPOSITION

Judgment affirmed. Appellants to pay respondents' costs on appeal.

Benke, Acting P. J., and Aaron, J., concurred.

A petition for a rehearing was denied January 4, 2005, and the opinion was modified to read as printed above. Appellants' petition for review by the Supreme Court was denied March 30, 2005. Baxter, J., and Brown, J., were of the opinion that the petition should be granted. [\*\*\*52]

January 26, 2006, Filed

**SUBSEQUENT HISTORY:** Rehearing denied by City of Arcadia v. State Water Resources Control Board, 2006 Cal. App. LEXIS 221 (Cal. App. 4th Dist., Feb. 17, 2006)

Review denied by City of Arcadia v. State Water Res. Control Bd., 2006 Cal. LEXIS 4781 (Cal., Apr. 19, 2006)

**PRIOR HISTORY:** [\*\*\*1] Superior Court of San Diego County, No. GIC803631, Wayne L. Peterson and Linda B. Quinn, Judges.

City of Arcadia v. United States EPA, 265 F. Supp. 2d 1142, 2003 U.S. Dist. LEXIS 9044 (N.D. Cal., 2003)

**CASE SUMMARY:**

**PROCEDURAL POSTURE:** Plaintiff cities alleged that defendants, regional and state water quality boards, violated the Clean Water Act, 33 U.S.C. § 1251 et seq., or the Porter-Cologne Act, Wat. Code, § 13000 et seq., by enacting a basin plan with the levels of permissible pollution, or total maximum daily loads (TMDLs), set at zero. The Superior Court of San Diego County (California) partially granted the cities' petition for writ of mandate. Both parties appealed.

**OVERVIEW:** The cities agreed that litter discharged from storm drains into a river had to be remedied but opposed the target of zero as unattainable and inordinately expensive. The court found that the regional board's environmental checklist was deficient and that

there was sufficient evidence of a fair argument that the project might have a significant effect on the environment, thus necessitating an environmental impact report or its functional equivalent under the California Environmental Quality Act (CEQA). The trial court erred by granting declaratory relief on the cities' claim that the Trash TMDL did not apply to "nonwaters" and by substituting its own judgment for that of the boards on the issue of whether the adoption of the Trash TMDL should have been preceded by a scientific study of the assimilative capacity of the channel. The Trash TMDL sufficiently notified affected parties of its inclusion in the state's 1998 303(d) list as an impaired water body. The court rejected the cities' claim that the trial court should have invalidated the Trash TMDL on the additional ground that the boards failed to provide for deemed compliance with the target of zero trash through certain methods.

**OUTCOME:** The judgment was affirmed as to the Trash TMDL's violation of CEQA and as to the cities' appeal. The judgment was reversed insofar as it was based on the Trash TMDL's lack of an assimilative capacity study, inclusion on the impaired water body list, and a cost/benefit analysis or the consideration of economic factors, and also insofar as it granted declaratory relief regarding the purported inclusion of non-navigable waters in the Trash TMDL.

**CORE TERMS:** trash, environmental, pollution, water board', regional boards, epa, water quality, load, non-point, river, Clean Water Act, pollutant, basin, zero,

LexisNexis(R) Headnotes

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN1]The Clean Water Act places primary reliance for developing water quality standards on the states. It requires each state to develop such standards and review them at least once every three years for required modifications, pursuant to 33 U.S.C. § 1313(a), (c)(1). The standards must include designated uses such as recreation, navigation or the propagation of fish, shellfish and wildlife; water quality criteria sufficient to protect the designated uses, and an anti-degradation policy, pursuant to 40 C.F.R. §§ 131.6, 131.10-131.12 (2003). The water quality criteria can be expressed in narrative form or in a numeric form, e.g., specific pollutant concentrations. Narrative criteria are broad statements of desirable water quality goals in a water quality plan. For example, "no toxic pollutants in toxic amounts" would be a narrative description. The Clean Water Act focuses on two possible sources of pollution: point sources and nonpoint sources. "Point source" means any discernable, confined and discrete conveyance such as a pipe, ditch, channel, tunnel, or conduit, as provided in 33 U.S.C. § 1362(14). The Clean Water Act does not define nonpoint source pollution, but it has been described as nothing more than a water pollution problem not involving a discharge from a point source.

*Environmental Law > Water Quality > Clean Water Act > Coverage & Definitions > Point Sources*

*Environmental Law > Water Quality > Clean Water Act > Nonpoint Source Pollution*

[HN2]Congress has dealt with the problem of point source pollution using the National Pollution Discharge Elimination System (NPDES) permit process. Under this approach, compliance rests on technology-based controls that limit the discharge of pollution from any point source into certain waters unless that discharge complies with the Clean Water Act's specific requirements, pursuant to 33 U.S.C. § 1311(b)(1)(A). Nonpoint sources, because of their very nature, are not regulated under the NPDES program. Instead, Congress addressed nonpoint sources of pollution in a separate portion of the Clean Water Act which encourages states to develop areawide waste treatment management plans.

*Environmental Law > Water Quality > Clean Water Act > Coverage & Definitions > Discharges*

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN3]When the National Pollution Discharge Elimination System (NPDES) system fails to adequately clean up certain rivers, streams or smaller water segments, the Clean Water Act requires use of a water-quality based approach. States are required to identify such waters and rank them in order of priority, and based on that ranking, calculate levels of permissible pollution called total maximum daily loads (TMDLs) under 33 U.S.C. § 1313(d)(1)(A) and 40 C.F.R. § 130.7(b) (2003). This list of substandard waters is known as the 303(d) list (§ 303 of the Clean Water Act having been codified as 33 U.S.C. § 1313). A TMDL defines the specified maximum amount of a pollutant which can be discharged or "loaded" into the waters at issue from all combined sources. A TMDL must be established at a level necessary to implement the applicable water quality standards. A TMDL assigns a waste load allocation to each point source, which is that portion of the TMDL's total pollutant load, which is allocated to a point source for which an NPDES permit is required. Once a TMDL is developed, effluent limitations in NPDES permits must be consistent with the waste load allocations in the TMDL. Under 33 U.S.C. § 1313(d)(1)(C), a TMDL requires a margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality.

*Environmental Law > Federal & State Interrelationships > General Overview*

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > General Overview*

[HN4]The Environmental Protection Agency may allow states to adopt and administer National Pollution Discharge Elimination System permit programs, and it has authorized California to administer such a program.

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN5]California implements the Clean Water Act through the Porter-Cologne Act, Wat. Code, § 13000 et seq. Under the Porter-Cologne Act, nine regional water quality control boards regulate the quality of waters within their regions under the purview of the State Water Resources Control Board, pursuant to Wat. Code, §§ 13000, 13100, 13200, 13241, 13242. In accordance with Wat. Code, §§ 13050, subd. (j), 13240, regional boards must formulate and adopt water quality control plans, commonly called basin plans, which designate the bene-

ficial uses to be protected, water quality objectives and a program to meet the objectives. "Water quality objectives" means the limits or levels of water quality constituents or characteristics which are established for the reasonable protection of beneficial uses of water or the prevention of nuisance within a specific area, as provided in Wat. Code, § 13050, subd. (h). The Environmental Protection Agency (EPA) must approve or disapprove a state's total maximum daily load (TMDL) within 30 days of its submission, pursuant to 33 U.S.C. § 1313(d)(2). If the EPA disapproves a state's submission, it must establish its own TMDL within 30 days of the disapproval.

*Administrative Law > Judicial Review > Remedies > Mandamus*

[HN6]Code Civ. Proc., § 1094.5, the administrative mandamus statute, applies when the writ is issued for the purpose of inquiring into the validity of any final administrative order or decision made as the result of a proceeding in which by law a hearing is required to be given, evidence is required to be taken, and discretion in the determination of facts is vested in the inferior tribunal, pursuant to § 1094.5, subd. (a). Acts of an administrative agency that are quasi-legislative in nature, e.g., establishment of regulations to carry out a statutory policy or direction, are not reviewable by administrative mandamus. Rather, review of a quasi-legislative action is limited to traditional mandamus.

*Civil Procedure > Appeals > Standards of Review > General Overview*

*Civil Procedure > Appeals > Standards of Review > De Novo Review*

*Civil Procedure > Appeals > Standards of Review > Substantial Evidence > General Overview*

*Evidence > Procedural Considerations > Burdens of Proof > General Overview*

[HN7]Under Code Civ. Proc., § 1085, review is limited to an inquiry into whether the action was arbitrary, capricious or entirely lacking in evidentiary support, and the petitioner has the burden of proof to show that the decision is unreasonable or invalid as a matter of law. An appellate court reviews the record de novo except where the trial court made foundational factual findings, which are binding on appeal if supported by substantial evidence.

*Environmental Law > Litigation & Administrative Proceedings > Judicial Review*

[HN8]As to California Environmental Quality Act issues, an abuse of discretion standard applies. Abuse of discretion is established if an agency has not proceeded

in a manner required by law or if the determination or decision is not supported by substantial evidence, pursuant to Pub. Resources Code, § 21168.5. A reviewing court's task on appeal is the same as the trial court's. Thus, the court conducts its review independent of the trial court's findings.

*Administrative Law > Judicial Review > Standards of Review > Statutory Interpretation*

[HN9]Generally, considerable weight should be accorded to an executive department's construction of a statutory scheme it is entrusted to administer.

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN10]A regional water quality control board is authorized to investigate the quality of waters in its region, pursuant to Wat. Code, § 13267, subd. (a), and when it requires a polluter to furnish technical or monitoring program reports, the burden, including costs, of these reports shall bear a reasonable relationship to the need for the reports and the benefits to be obtained from the reports, pursuant to § 13267, subd. (b)(1).

*Governments > Legislation > Interpretation*

[HN11]A reviewing court's primary aim in construing any law is to determine the legislative intent. In doing so the court looks first to the words of the statute, giving them their usual and ordinary meaning.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > General Overview*

[HN12]A total maximum daily load (TMDL) does not, by itself, prohibit any conduct or require any actions. Instead, each TMDL represents a goal that may be implemented by adjusting pollutant discharge requirements in individual National Pollution Discharge Elimination System permits or establishing nonpoint source controls. A TMDL forms the basis for further administrative actions that may require or prohibit conduct with respect to particularized pollutant discharges and water bodies.

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN13]Wat. Code, § 13241, provides that each regional water quality control board shall establish such water quality objectives in water quality control plans as in its judgment will ensure the reasonable protection of beneficial uses and the prevention of nuisance. In establishing water quality objectives a regional board is required to

consider several factors, including economic considerations, pursuant to § 13241, subd. (d). Section 13241, subd. (d), does not define "economic considerations" or specify a particular manner of compliance. Thus, the matter is within a regional board's discretion.

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN14]The Clean Water Act provides that each state shall identify those waters within its boundaries for which the effluent limitations are not stringent enough to implement any water quality standards applicable to such waters. The State shall establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters under 33 U.S.C. § 1313(d)(1)(A). Further, it provides in § 1313(d)(1)(C) that each state shall establish for the waters identified in § 1313(d)(1)(A), and in accordance with the priority ranking, the total maximum daily load (TMDL). These provisions do not prohibit a regional water quality control board from identifying a water body and establishing a TMDL for it at essentially the same time, or indicate that formal designation on a state's 303(d) list is a prerequisite to a TMDL. Further, § 1313(d)(2) provides that each state shall submit to the Environmental Protection Agency (EPA) Administrator from time to time, for his or her approval the waters identified and the loads established under § 1313(d)(1)(A) and (1)(C). The EPA Administrator shall either approve or disapprove such identification and load not later than 30 days after the date of submission. This clarifies that a regional board may simultaneously identify an impaired water body and establish a TMDL for it.

*Environmental Law > Federal & State Interrelationships > General Overview*

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN15]States remain at the front line in combating pollution, and so long as the State does not attempt to adopt more lenient pollution control measures than those already in place under the Clean Water Act, it does not prohibit state action.

*Environmental Law > National Environmental Policy Act > Environmental Assessments*

[HN16]The California Environmental Quality Act (CEQA) compels the government first to identify the environmental effects of projects, and then to mitigate those adverse effects through the imposition of feasible mitigation measures or through the selection of feasible alternatives. CEQA mandates that public agencies refrain

from approving projects with significant environmental effects if there are feasible alternatives or mitigation measures that can substantially lessen or avoid those effects.

*Environmental Law > National Environmental Policy Act > Environmental Impact Statements*

[HN17]The California Environmental Quality Act (CEQA) is implemented through initial studies, negative declarations, and environmental impact reports (EIR). CEQA requires a governmental agency to prepare an EIR whenever it considers approval of a proposed project that may have a significant effect on the environment. If there is no substantial evidence a project may have a significant effect on the environment or the initial study identifies potential significant effects, but provides for mitigation revisions which make such effects insignificant, a public agency must adopt a negative declaration to such effect and, as a result, no EIR is required. CEQA requires the preparation of an EIR whenever it can be fairly argued on the basis of substantial evidence that the project may have significant environmental impact. Thus, if substantial evidence in the record supports a fair argument that significant impacts or effects may occur, an EIR is required and a negative declaration cannot be certified.

*Environmental Law > National Environmental Policy Act > Environmental Impact Statements*

[HN18]"Significant effect on the environment," for purposes of the California Environmental Quality Act requirement for preparation of an environmental impact report, means a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the environment. A social or economic change related to a physical change may be considered in determining whether the physical change is significant, pursuant to Cal. Code Regs., tit. 14, § 15382.

*Environmental Law > National Environmental Policy Act > General Overview*

[HN19]State regulatory programs that meet certain environmental standards and are certified by the Secretary of the California Resources Agency are exempt from the California Environmental Quality Act's (CEQA) requirements for preparation of environmental impact reports, negative declarations, and initial studies. Environmental review documents prepared by certified pro-

135 Cal. App. 4th 1392, \*; 38 Cal. Rptr. 3d 373, \*\*;  
2006 Cal. App. LEXIS 92, \*\*\*; 2006 Cal. Daily Op. Service 797

grams may be used instead of environmental documents that CEQA would otherwise require. Certified regulatory programs remain subject, however, to other CEQA requirements, pursuant to Pub. Resources Code, § 21080.5. Documents prepared by certified programs are considered the functional equivalent of documents CEQA would otherwise require. An agency seeking certification must adopt regulations requiring that final action on the proposed activity include written responses to significant environmental points raised during the decisionmaking process. The agency must also implement guidelines for evaluating the proposed activity consistently with the environmental protection purposes of the regulatory program. The document generated pursuant to the agency's regulatory program must include alternatives to the proposed project and mitigation measures to minimize significant adverse environmental effects, and be made available for review by other public agencies and the public.

*Environmental Law > National Environmental Policy Act > General Overview*

[HN20]The guidelines for implementation of the California Environmental Quality Act (CEQA), Cal. Code Regs., tit. 14, § 15000 et seq., do not directly apply to a certified regulatory program's environmental document. However, when conducting its environmental review and preparing its documentation, a certified regulatory program is subject to the broad policy goals and substantive standards of CEQA. In a certified program, an environmental document used as a substitute for an environmental impact report must include alternatives to the activity and mitigation measures to avoid or reduce any significant or potentially significant effects that the project might have on the environment, and a document used as a substitute negative declaration must include a statement that the agency's review of the project would not have any significant or potentially significant effects on the environment and therefore no alternatives or mitigation measures are proposed to avoid or reduce any significant effects on the environment. This statement shall be supported by a checklist or other documentation to show the possible effects that the agency examined in reaching this conclusion, pursuant to Cal. Code Regs., tit. 14, § 15252, subd. (a).

*Environmental Law > National Environmental Policy Act > Environmental Impact Statements*

[HN21]A regional water quality control board's submission of a plan for State Water Resources Control Board approval must be accompanied by a brief description of the proposed activity, a completed environmental checklist prescribed by the state board, and a written report

addressing reasonable alternatives to the proposed activity and mitigation measures to minimize any significant adverse environmental impacts, pursuant to Cal. Code Regs., tit. 23, § 3777, subd. (a).

*Environmental Law > National Environmental Policy Act > Environmental Impact Statements*

[HN22]"Tiering" refers to the coverage of general matters in broader environmental impact reports (EIRs) (such as on general plans or policy statements) with subsequent narrower EIRs or ultimately site-specific EIRs incorporating by reference the general discussions and concentrating solely on the issues specific to the EIR subsequently prepared. Tiering is appropriate when the sequence of EIRs is from a general plan, policy, or program EIR to a site-specific EIR. Courts have allowed first tier EIR's to defer detailed analysis to subsequent project EIR's.

*Environmental Law > National Environmental Policy Act > Environmental Assessments*

[HN23]Pub. Resources Code, § 21159, which allows expedited environmental review for mandated projects, provides that an agency shall perform, at the time of the adoption of a rule or regulation requiring the installation of pollution control equipment, or a performance standard or treatment requirement, an environmental analysis of the reasonably foreseeable methods of compliance. The environmental analysis shall, at a minimum, include, all of the following: (1) an analysis of the reasonably foreseeable environmental impacts of the methods of compliance; (2) an analysis of reasonably foreseeable mitigation measures; and (3) an analysis of reasonably foreseeable alternative means of compliance with the rule or regulation, pursuant to § 21159, subd. (a).

*Civil Procedure > Appeals > Reviewability > Preservation for Review*

[HN24]Issues not presented to the trial court are ordinarily waived on appeal.

*Environmental Law > National Environmental Policy Act > Environmental Impact Statements*

[HN25]Because a negative declaration ends environmental review, the fair argument test provides a low threshold for requiring an environmental impact report.

*Environmental Law > National Environmental Policy Act > Environmental Assessments*

135 Cal. App. 4th 1392, \*, 38 Cal. Rptr. 3d 373, \*\*;  
2006 Cal. App. LEXIS 92, \*\*\*; 2006 Cal. Daily Op. Service 797

[HN26] Substantial evidence is not argument, speculation, unsubstantiated opinion or narrative or evidence which is clearly inaccurate or erroneous under Pub. Resources Code, § 21082.2, subd. (c). However, letters and testimony from government officials with personal knowledge of the anticipated effects of a project on their communities supports a fair argument that the project may have a significant environmental impact.

*Civil Procedure > Justiciability > Case or Controversy Requirements > Actual Disputes*  
*Civil Procedure > Declaratory Judgment Actions > General Overview*

[HN27] The fundamental basis of declaratory relief is the existence of an actual, present controversy.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges*

[HN28] 33 U.S.C. § 1342(p)(3)(B)(iii), provides that a National Pollution Discharge Elimination System (NPDES) permit for a municipal discharge into a storm drain shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Environmental Protection Act Administrator or the State determines appropriate for the control of such pollutants. Best management practices are generally pollution control measures set forth in NPDES permits.

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN29] The statute applicable to establishing a total maximum daily load (TMDL), 33 U.S.C. § 1313(d)(1)(C), does not suggest that practicality is a consideration. To the contrary, a regional water quality control board is required to establish a TMDL at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety, pursuant to § 1313(d)(1)(C).

*Civil Procedure > Appeals > Briefs*

[HN30] Parties are required to include argument and citation to authority in their briefs, and the absence of these necessary elements allows an appellate court to treat an appellant's issue as waived.

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN31] 33 U.S.C. § 1342(p)(3)(B)(iii) does not divest a regional water quality control board's discretion to impose a National Pollution Discharge Elimination System permit condition requiring compliance with state water quality standards more stringent than the maximum extent practicable standard.

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN32] When the Environmental Protection Agency makes a total maximum daily load or permitting decision, it will make each decision on a case-by-case basis and will be guided by applicable requirements of the Clean Water Act and implementing regulations, taking into account comments and information presented at that time by interested persons regarding the appropriateness of applying these recommendations to the particular situation.

*Environmental Law > Water Quality > Clean Water Act > Coverage & Definitions > Point Sources*

*Environmental Law > Water Quality > Clean Water Act > Nonpoint Source Pollution*

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN33] Although the Clean Water Act focuses on both point and nonpoint sources of pollution, the measure does not require states to take regulatory action to limit the amount of non-point water pollution introduced into its waterways. While the Clean Water Act requires states to designate water standards and identify bodies of water that fail to meet these standards, nothing in the Clean Water Act demands that a state adopt a regulatory system for nonpoint sources.

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN34] Section 303(d)(1)(A) of the Clean Water Act, 33 U.S.C. § 1313(d)(1)(A), provides that in identifying impaired waters for its 303(d) list, states shall establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters. Wat. Code, § 13241, subd. (a), requires regional water quality control boards to establish water quality objectives in water quality control plans by considering a variety of factors, including past, present, and probable future beneficial uses of water.

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN35] See 33 U.S.C. § 1313(d)(1)(C).

135 Cal. App. 4th 1392, \*; 38 Cal. Rptr. 3d 373, \*\*;  
2006 Cal. App. LEXIS 92, \*\*\*; 2006 Cal. Daily Op. Service 797

*Administrative Law > Agency Rulemaking > General Overview*

*Administrative Law > Agency Rulemaking > Notice Requirements*

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN36]The California Administrative Procedures Act (APA), Gov. Code, §§ 11340 et seq. and 11370, establishes the procedures by which state agencies may adopt regulations. The agency must give the public notice of its proposed regulatory action; issue a complete text of the proposed regulation with a statement of the reasons for it; give interested parties an opportunity to comment on the proposed regulation; respond in writing to public comments; and forward a file of all materials on which the agency relied in the regulatory process to the Office of Administrative Law, which reviews the regulation for consistency with the law, clarity, and necessity. One purpose of the APA is to ensure that those persons or entities whom a regulation will affect have a voice in its creation, as well as notice of the law's requirements so that they can conform their conduct accordingly. The APA does not apply to the adoption or revision of state policy for water quality control unless the agency adopts a policy, plan, or guideline, or any revision thereof, pursuant to Gov. Code, § 11353, subs. (a), (b)(1).

**SUMMARY:**

**CALIFORNIA OFFICIAL REPORTS SUMMARY**

Regional and state water quality boards sought to ameliorate the problem of litter discharged from municipal storm drains into a river through the adoption and approval of a planning document. Several cities alleged that the boards violated the Clean Water Act (33 U.S.C. § 1251 et seq.), or the Porter-Cologne Act (Wat. Code, § 13000 et seq.), by setting the levels of permissible pollution, known as total maximum daily loads (TMDL's), at zero. The cities agreed that trash pollution had to be remedied but opposed the target of zero as unattainable and inordinately expensive. The trial court partially granted the cities' petition for writ of mandate. (Superior Court of San Diego County, No. GIC803631, Wayne L. Peterson and Linda B. Quinn, Judges.)

The Court of Appeal affirmed as to the trial court's judgment that the TMDL violated the California Environmental Quality Act (CEQA) and as to the cities' appeal. However, the court reversed the judgment insofar as it was based on the TMDL's lack of an assimilative capacity study, inclusion on the impaired water body list, and consideration of economic factors, and also insofar as it granted declaratory relief regarding the purported

inclusion of nonnavigable waters in the TMDL. The court found that the regional board's environmental checklist was deficient and that there was sufficient evidence of a fair argument that the project might have a significant effect on the environment, thus necessitating an environmental impact report or its functional equivalent under CEQA. The trial erred by substituting its own judgment for that of the boards on the issue of whether the adoption of the TMDL should have been preceded by a scientific study of the assimilative capacity of the river. Federal law did not require the regional board to conduct an assimilative capacity study before adopting the TMDL. By its plain terms, Wat. Code, § 13267, is inapplicable at the TMDL stage, and thus the trial court erred by invalidating the TMDL on that ground. The TMDL sufficiently notified affected parties of its inclusion in the state's 1998 "303(d) list" of substandard waters as an impaired water body. The court rejected the cities' claim that the trial court erred by not invalidating the TMDL on the additional ground that the boards [\*1393] failed to provide for deemed compliance with the target through certain methods. (Opinion by McConnell, P. J., with McIntyre and Irion, JJ., concurring.)

**HEADNOTES**

**CALIFORNIA OFFICIAL REPORTS HEADNOTES**  
Classified to California Digest of Official Reports

(1) **Pollution and Conservation Laws § 5--Clean Water Act--Effect on States.**--The federal Clean Water Act places primary reliance for developing water quality standards on the states. It requires each state to develop such standards and review them at least once every three years for required modifications, pursuant to 33 U.S.C. § 1313(a), (c)(1). The standards must include designated uses such as recreation, navigation or the propagation of fish, shellfish and wildlife; water quality criteria sufficient to protect the designated uses; and an antidegradation policy, pursuant to 40 C.F.R. §§ 131.6, 131.10-131.12 (2003). The water quality criteria can be expressed in narrative form or in a numeric form, e.g., specific pollutant concentrations. Narrative criteria are broad statements of desirable water quality goals in a water quality plan. For example, "no toxic pollutants in toxic amounts" would be a narrative description. The Clean Water Act focuses on two possible sources of pollution: point sources and nonpoint sources. "Point source" means any discernable, confined and discrete conveyance such as a pipe, ditch, channel, tunnel, or conduit, as provided in 33 U.S.C. § 1362(14). The Clean Water Act does not define nonpoint source pollution, but it has been described as nothing more than a water pollution problem not involving a discharge from a point source.

(2) **Pollution and Conservation Laws § 5--Water--National Discharge Elimination System Permits--Total Maximum Daily Loads.**--Congress has dealt with the problem of point source pollution using the National Pollution Discharge Elimination System (NPDES) permit process. Under this approach, compliance rests on technology-based controls that limit the discharge of pollution from any point source into certain waters unless that discharge complies with the Clean Water Act's specific requirements. Nonpoint sources, because of their very nature, are not regulated under the NPDES program. [\*1394] Instead, Congress has addressed nonpoint sources of pollution in a separate portion of the Clean Water Act which encourages states to develop areawide waste treatment management plans. When the NPDES system fails to adequately clean up certain rivers, streams, or smaller water segments, the Clean Water Act requires use of a water-quality-based approach. States are required to identify such waters and rank them in order of priority, and based on that ranking, calculate levels of permissible pollution called total maximum daily loads (TMDL's). This list of substandard waters is known as the 303(d) list (§ 303 of the Clean Water Act having been codified as 33 U.S.C. § 1313). A TMDL defines the specified maximum amount of a pollutant which can be discharged or "loaded" into the waters at issue from all combined sources. A TMDL must be established at a level necessary to implement the applicable water quality standards. A TMDL assigns a waste load allocation to each point source, which is that portion of the TMDL's total pollutant load, which is allocated to a point source for which an NPDES permit is required. Once a TMDL is developed, effluent limitations in NPDES permits must be consistent with the waste load allocations in the TMDL. Under 33 U.S.C. § 1313(d)(1)(C), a TMDL requires a margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality. The Environmental Protection Agency may allow states to adopt and administer NPDES permit programs, and it has authorized California to administer such a program.

(3) **Pollution and Conservation Laws § 5--Water--Porter-Cologne Act--Regional Quality Control Boards and Plans.**--California implements the Clean Water Act through the Porter-Cologne Act (Wat. Code, § 13000 et seq.). Under the Porter-Cologne Act, nine regional water quality control boards regulate the quality of waters within their regions under the purview of the State Water Resources Control Board, pursuant to Wat. Code, §§ 13000, 13100, 13200, 13241, 13242. In accordance with Wat. Code, §§ 13050, subd. (j), 13240, regional boards must formulate and adopt water quality

control plans, commonly called basin plans, which [\*1395] designate the beneficial uses to be protected, water quality objectives and a program to meet the objectives. "Water quality objectives" means the limits or levels of water quality constituents or characteristics which are established for the reasonable protection of beneficial uses of water or the prevention of nuisance within a specific area, as provided in Wat. Code, § 13050, subd. (h). The Environmental Protection Agency (EPA) must approve or disapprove a state's total maximum daily load (TMDL) within 30 days of its submission, pursuant to 33 U.S.C. § 1313(d)(2). If the EPA disapproves a state's submission, it must establish its own TMDL within 30 days of the disapproval.

(4) **Administrative Law § 95--Judicial Review and Relief--Methods--Mandamus--Quasi-legislative Acts.**--Code Civ. Proc., § 1094.5, the administrative mandamus statute, applies when the writ is issued for the purpose of inquiring into the validity of any final administrative order or decision made as the result of a proceeding in which by law a hearing is required to be given, evidence is required to be taken, and discretion in the determination of facts is vested in the inferior tribunal, pursuant to § 1094.5, subd. (a). Acts of an administrative agency that are quasi-legislative in nature, e.g., establishment of regulations to carry out a statutory policy or direction, are not reviewable by administrative mandamus. Rather, review of a quasi-legislative action is limited to traditional mandamus.

(5) **Mandamus § 74--Rehearing and Appeal--Review; Scope--Petitioner's Burden of Proof.**--Under Code Civ. Proc., § 1085, review of an administrative action is limited to an inquiry into whether the action was arbitrary, capricious or entirely lacking in evidentiary support, and the petitioner has the burden of proof to show that the decision is unreasonable or invalid as a matter of law. An appellate court reviews the record de novo except where the trial court made foundational factual findings, which are binding on appeal if supported by substantial evidence. [\*1396]

(6) **Administrative Law § 10--Powers and Functions of Agencies--Deference to Construction of Laws.**--Generally, considerable weight should be accorded to an executive department's construction of a statutory scheme it is entrusted to administer.

(7) **Statutes § 21--Construction--Legislative Intent--Examination of Language.**--A court's primary aim in construing any law is to determine the legislative intent. In doing so the court looks first to the words of the statute, giving them their usual and ordinary meaning.

135 Cal. App. 4th 1392, \*; 38 Cal. Rptr. 3d 373, \*\*;  
2006 Cal. App. LEXIS 92, \*\*\*; 2006 Cal. Daily Op. Service 797

**(8) Pollution and Conservation Laws § 5--Water--Total Maximum Daily Load and Pollutant Discharge Requirements.**--A total maximum daily load (TMDL) does not, by itself, prohibit any conduct or require any actions. Instead, each TMDL represents a goal that may be implemented by adjusting pollutant discharge requirements in individual National Pollution Discharge Elimination System permits or establishing nonpoint source controls. A TMDL forms the basis for further administrative actions that may require or prohibit conduct with respect to particularized pollutant discharges and water bodies.

**(9) Pollution and Conservation Laws § 5--Water--Environmental Checklist Requirement--Regional Quality Control Board's Basin Plan to Incorporate Trash in Total Maximum Daily Load.**--In an action challenging a regional water quality control board's basin plan, which set the levels of permissible pollution for a flood control channel, the trial court correctly concluded that an environmental impact report or its functional equivalent was necessary because the regional water board's environmental checklist and total maximum daily load were deficient and there was sufficient evidence of a fair argument that the project might have a significant effect on the environment.

[8 Witkin, Cal. Procedure (4th ed. 1997) Extraordinary Writs, § 268; 12 Witkin, Summary of Cal. Law (10th ed. 2005) Real Property, §§ 833, 893, 896; 5 Witkin, Cal. Procedure (4th ed. 1997) Pleading, § 817.]

**(10) Pollution and Conservation Laws § 2.1--California Environmental Quality Act--Impact Reports--Necessity of Preparing; Requirements.**--The California Environmental Quality Act (CEQA) compels the government first to identify the environmental effects of projects, and then to mitigate those adverse effects through the imposition of feasible mitigation measures or through the selection of feasible alternatives. CEQA mandates that public agencies refrain from approving projects with significant environmental effects if there are feasible alternatives or [\*1397] mitigation measures that can substantially lessen or avoid those effects. CEQA is implemented through initial studies, negative declarations, and environmental impact reports (EIR's). CEQA requires a governmental agency to prepare an EIR whenever it considers approval of a proposed project that may have a significant effect on the environment. If there is no substantial evidence a project may have a significant effect on the environment or the initial study identifies potential significant effects, but provides for mitigation revisions which make such effects insignificant, a public agency must adopt a negative declaration to such effect and, as a result, no EIR is required. CEQA

requires the preparation of an EIR whenever it can be fairly argued on the basis of substantial evidence that the project may have significant environmental impact. Thus, if substantial evidence in the record supports a fair argument that significant impacts or effects may occur, an EIR is required and a negative declaration cannot be certified. "Significant effect on the environment" means a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project, including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the environment. A social or economic change related to a physical change may be considered in determining whether the physical change is significant, pursuant to Cal. Code Regs., tit. 14, § 15382.

**(11) Pollution and Conservation Laws § 2.1--California Environmental Quality Act--Impact Reports--Necessity of Preparing; Exemptions.**--State regulatory programs that meet certain environmental standards and are certified by the Secretary of the California Resources Agency are exempt from the California Environmental Quality Act's (CEQA) requirements for preparation of environmental impact reports, negative declarations, and initial studies. Environmental review documents prepared by certified programs may be used instead of environmental documents that CEQA would otherwise require. Certified regulatory programs remain subject, however, to other CEQA requirements. Documents prepared by certified programs are considered the functional equivalent of documents CEQA would otherwise require. An agency seeking [\*1398] certification must adopt regulations requiring that final action on the proposed activity include written responses to significant environmental points raised during the decisionmaking process. The agency must also implement guidelines for evaluating the proposed activity consistently with the environmental protection purposes of the regulatory program. The document generated pursuant to the agency's regulatory program must include alternatives to the proposed project and mitigation measures to minimize significant adverse environmental effects, and be made available for review by other public agencies and the public.

**(12) Pollution and Conservation Laws § 2.1--California Environmental Quality Act--Impact Reports--Necessity of Preparing; Application to Certified Regulatory Program.**--The guidelines for implementation of the California Environmental Quality Act (CEQA), Cal. Code Regs., tit. 14, § 15000 et seq., do not directly apply to a certified regulatory program's environmental document. However, when conducting its en-

135 Cal. App. 4th 1392, \*; 38 Cal. Rptr. 3d 373, \*\*;  
2006 Cal. App. LEXIS 92, \*\*\*; 2006 Cal. Daily Op. Service 797

vironmental review and preparing its documentation, a certified regulatory program is subject to the broad policy goals and substantive standards of CEQA. In a certified program, an environmental document used as a substitute for an environmental impact report must include alternatives to the activity and mitigation measures to avoid or reduce any significant or potentially significant effects that the project might have on the environment, and a document used as a substitute negative declaration must include a statement that the agency's review of the project would not have any significant or potentially significant effects on the environment and therefore no alternatives or mitigation measures are proposed to avoid or reduce any significant effects on the environment. This statement shall be supported by a checklist or other documentation to show the possible effects that the agency examined in reaching this conclusion, pursuant to Cal. Code Regs., tit. 14, § 15252, subd. (a)(2)(A), (B). A regional water quality control board's submission of a plan for State Water Resources Control Board approval must be accompanied by a brief description of the proposed activity, a completed environmental checklist prescribed by the state board, and a written report addressing reasonable alternatives to the proposed activity and mitigation measures to minimize any significant adverse environmental impacts, pursuant to Cal. Code Regs., tit. 23, § 3777, subd. (a).

**(13) Pollution and Conservation Laws § 1--California Environmental Quality Act--Expedited Review for Mandated Projects--Analysis of Reasonably Foreseeable Impacts.--Pub. Resources Code, § 21159**, which allows expedited environmental review for mandated projects, provides that an agency shall perform, at the time of the adoption of a [\*1399] rule or regulation requiring the installation of pollution control equipment, or a performance standard or treatment requirement, an environmental analysis of the reasonably foreseeable methods of compliance. The environmental analysis shall, at a minimum, include all of the following: (1) an analysis of the reasonably foreseeable environmental impacts of the methods of compliance; (2) an analysis of reasonably foreseeable mitigation measures; and (3) an analysis of reasonably foreseeable alternative means of compliance with the rule or regulation, pursuant to § 21159, subd. (a). Substantial evidence is not argument, speculation, unsubstantiated opinion or narrative, or evidence which is clearly inaccurate or erroneous, as stated in Pub. Resources Code, § 21082.2, subd. (c). However, letters and testimony from government officials with personal knowledge of the anticipated effects of a project on their communities supports a fair argument that the project may have a significant environmental impact.

**(14) Declaratory Relief § 7--Actual Controversy; Fundamental Basis of Relief.--**The fundamental basis of declaratory relief is the existence of an actual, present controversy.

**(15) Pollution and Conservation Laws § 5--Water--National Discharge Elimination System Permit for Municipal Discharge into Storm Drain.--33 U.S.C. § 1342(p)(3)(B)(iii)**, provides that a National Pollution Discharge Elimination System (NPDES) permit for a municipal discharge into a storm drain shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Environmental Protection Act Administrator or the state determines appropriate for the control of such pollutants. Best management practices are generally pollution control measures set forth in NPDES permits.

**(16) Pollution and Conservation Laws § 5--Water--Regional Quality Control Board and Establishment of Total Maximum Daily Load.--**The statute applicable to establishing a total maximum daily load (TMDL), 33 U.S.C. § 1313(d)(1)(C), does not suggest that practicality is a consideration. To the contrary the statute requires a regional water quality control board to establish a TMDL at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety. [\*1400]

**(17) Appellate Review § 109--Briefs--Form and Requisites--Argument and Authority--Waiver.--**Parties are required to include argument and citation to authority in their briefs, and the absence of these necessary elements allows an appellate court to treat an appellant's issue as waived.

**(18) Pollution and Conservation Laws § 5--Water--Requirements for Total Maximum Daily Load or Permitting Decisions.--**When the Environmental Protection Agency makes a total maximum daily load or permitting decision, it will make each decision on a case-by-case basis and will be guided by applicable requirements of the Clean Water Act and implementing regulations, taking into account comments and information presented at that time by interested persons regarding the appropriateness of applying these recommendations to the particular situation.

**(19) Pollution and Conservation Laws § 5--Water--Clean Water Act and Effect on States.--**Although the Clean Water Act focuses on both point and nonpoint sources of pollution, the measure does not require states to take regulatory action to limit

the amount of nonpoint water pollution introduced into its waterways. While the Clean Water Act requires states to designate water standards and identify bodies of water that fail to meet these standards, nothing in the Clean Water Act demands that a state adopt a regulatory system for nonpoint sources.

**(20) Administrative Law § 19--Actions--Legislation or Rulemaking--Practice and Procedure.--**The California Administrative Procedure Act (APA) (Gov. Code, §§ 11340 et seq., 11370), establishes the procedures by which state agencies may adopt regulations. The agency must give the public notice of its proposed regulatory action; issue a complete text of the proposed regulation with a statement of the reasons for it; give interested parties an opportunity to comment on the proposed regulation; respond in writing to public comments; and forward a file of all materials on which the agency relied in the regulatory process to the Office of Administrative Law, which reviews the regulation for consistency with the law, clarity, and necessity. One purpose of the APA is to ensure that those persons or entities whom a regulation will affect have a voice in its creation, as well as notice of the law's requirements so that they can conform their conduct accordingly. The APA does not apply to the adoption or revision of state policy for water quality control unless the agency adopts a policy, plan, or guideline, or any revision thereof, pursuant to Gov. Code, § 11353, subs. (a), (b)(1). [\*1401]

**COUNSEL:** Rutan & Tucker, Richard Montevideo and Terence J. Gallagher for Plaintiffs and Appellants.

Downey Brand, Melissa A. Thorme; Lewis, Brisbois, Bisgaard, & Smith and B. Richard Marsh for County Sanitation Districts of Los Angeles County as Amici Curiae on behalf of Plaintiffs and Appellants.

Demetriou, Del Guercio, Springer & Francis, Stephen A. Del Guercio, Michael A. Francis and Brian D. Langa for California Contract Cities Association as Amicus Curiae on behalf of Plaintiffs and Appellants.

Richards, Watson & Gershon and John J. Harris for The League of California Cities as Amicus Curiae on behalf of Plaintiffs and Appellants.

Bill Lockyer, Attorney General, Tom Greene, Chief Assistant Attorney General, Mary E. Hackenbracht, Assistant Attorney General, Marilyn H. Levin and Gregory J. Newmark, Deputy Attorneys General, for Defendants and Appellants.

Law Office of Michael R. Lozeau, Michael R. Lozeau; and Dana P. Palmer for Santa Monica Baykeeper, Inc.,

Heal the Bay, Inc., [\*\*\*2], and Natural Resources Defense Council, Inc., as Amici Curiae on behalf of Defendants and Appellants.

**JUDGES:** McConnell, P. J., with McIntyre and Irion, JJ., concurring.

**OPINION BY:** McConnell

#### OPINION

[\*\*378] McCONNELL, P. J.--This case concerns the serious environmental problem of litter discharged from municipal storm drains into the Los Angeles River, and efforts of the California Regional Water Quality Control Board, Los Angeles Region (Regional Board) and the State Water Resources Control Board (State Board) <sup>1</sup> to ameliorate the problem through the adoption and approval of a planning document setting a target of zero trash discharge within a multi-year implementation period.

1 We refer to these entities together as the Water Boards.

The Water Boards appeal a judgment partially granting a petition for writ of mandate brought by the City of Arcadia and 21 other cities (Cities), <sup>2</sup> who [\*1402] agree trash pollution must be remedied but oppose the target of zero trash as unattainable and inordinately expensive. The Water Boards challenge [\*\*\*3] the court's findings that an assimilative capacity study is a required element of its action; a cost-benefit analysis and consideration of economic factors are required under state law and are not met; the zero trash target is inapplicable to the Los Angeles River Estuary (Estuary) because it does not appear on the state's list of impaired waters; and, the Water Boards failed to comply with the California Environmental Quality Act (CEQA) by not preparing an environmental impact report (EIR) or its functional equivalent.

2 In addition to Arcadia the Cities include Baldwin Park, Bellflower, Cerritos, Commerce, Diamond Bar, Downey, Irwindale, Lawndale, Monrovia, Montebello, Monterey Park, Pico Rivera, Rosemead, San Gabriel, Santa Fe Springs, Sierra Madre, Signal Hill, South Pasadena, Vernon, West Covina and Whittier.

The Water Boards also contend the court erred by granting the Cities declaratory relief on their claim the trash total maximum daily load (TMDL) does not apply to "nonwaters," meaning areas that do [\*\*\*4] not drain into navigable waters such as the Los Angeles River or tributaries, as the parties agreed during this proceeding that the trash TMDL applies only to navigable waters.

135 Cal. App. 4th 1392, \*, 38 Cal. Rptr. 3d 373, \*\*;  
2006 Cal. App. LEXIS 92, \*\*\*; 2006 Cal. Daily Op. Service 797

The Cities also appeal, contending the trial court erred by not invalidating the trash TMDL on the additional grounds the Water Boards failed to provide for deemed compliance with the target of zero trash through certain methods; failed to implement load allocations for nonpoint sources of trash pollution; failed to adhere to the data collection and analysis required by federal and state law; relied on nonexistent, illegal and irrational uses to be made of the Los Angeles River; and, violated the Administrative Procedures Act (APA).

We conclude the Cities' appeal lacks merit. As to the Water Boards' appeal, we conclude the court properly invalidated the planning document on the ground of noncompliance with CEQA, and we affirm the judgment insofar as it is based on that ground. We reverse the judgment to the extent it is based on other grounds. Further, we hold the court erred by granting declaratory relief on the nonwaters issue as there was no controversy when the court ruled.

#### [\*\*379] BACKGROUND INFORMATION

I

##### [\*\*5] Statutory and Regulatory Scheme

The "quality of our nation's waters is governed by a 'complex statutory and regulatory scheme ... that implicates both federal and state administrative responsibilities.'" (*City of Burbank v. State Water Resources Control Bd.* [\*1403] (2005) 35 Cal.4th 613, 619 [26 Cal. Rptr. 3d 304, 108 P.3d 862] (*City of Burbank*)). An overview of applicable law is required to place the facts here in context.

A

##### Federal Law

In 1972 Congress enacted amendments to the Federal Water Pollution Control Act (Pub.L. No. 92-500 (Oct. 18, 1972) 86 Stat. 816; 33 U.S.C. § 1251 et seq.), which, as amended in 1977, is commonly known as the Clean Water Act. (*City of Burbank, supra*, 35 Cal.4th at pp. 619-620.) Its stated goal is "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters" by eliminating the discharge of pollutants into navigable waters. (33 U.S.C. § 1251(a).)

(1) [HN1]The Clean Water Act places "primary reliance for developing water quality standards on the states." (*Scott v. Hammond* (7th Cir. 1984) 741 F.2d 992, 994.) It requires each state to develop such standards [\*\*6] and review them at least once every three years for required modifications. (33 U.S.C. § 1313(a), (c)(1).) The standards must include designated uses such as

recreation, navigation or the propagation of fish, shellfish and wildlife; water quality criteria sufficient to protect the designated uses; and an antidegradation policy. (40 C.F.R. §§ 131.6, 131.10-131.12 (2003).) The water quality criteria "can be expressed in narrative form or in a numeric form, e.g., specific pollutant concentrations." (*Florida Public Interest Research Group v. E.P.A.* (11th Cir. 2004) 386 F.3d 1070, 1073.) "Narrative criteria are broad statements of desirable water quality goals in a water quality plan. For example, 'no toxic pollutants in toxic amounts' would be a narrative description." (*City of Burbank, supra*, 35 Cal.4th at p. 622, fn. 4.)

The Clean Water Act focuses on two possible sources of pollution: point sources and nonpoint sources. "Point source" means "any discernable, confined and discrete conveyance" such as a pipe, ditch, channel, tunnel, or [\*\*7] conduit. (33 U.S.C. § 1362(14).) The Clean Water Act does not define nonpoint source pollution, but it has been described as "'nothing more [than] a [water] pollution problem not involving a discharge from a point source.'" (*Defenders of Wildlife v. U.S. Environ. Protec.* (10th Cir. 2005) 415 F.3d 1121, 1124.)<sup>3</sup>

3 According to the Environmental Protection Act (EPA), nonpoint source pollution is caused by rainfall or snowmelt moving over and through the ground, and includes excess fertilizers, herbicides, and insecticides from agricultural lands and residential areas; oil, grease and toxic chemicals from urban runoff and energy production; sediment from improperly managed construction sites, crop and forest land, and eroding stream banks; salt from irrigation practices and acid drainage from abandoned mines; and bacteria and nutrients from livestock, pet wastes and faulty septic systems. (<<http://www.epa.gov/owow/nps/qa.html>> [as of Jan. 26, 2006].)

[\*1404] [HN2](2) "Congress dealt with the problem of point source [\*\*8] pollution using the National Pollution Discharge Elimination System [NPDES] permit process. Under this approach, compliance rests on technology- [\*\*380] based controls that limit the discharge of pollution from any point source into certain waters unless that discharge complies with the [Clean Water] Act's specific requirements." (*San Francisco BayKeeper v. Whitman* (2002) 297 F.3d 877, 880; see 33 U.S.C. § 1311(b)(1)(A).) "Nonpoint sources, because of their very nature, are not regulated under the NPDES [program]. Instead, Congress addressed nonpoint sources of pollution in a separate portion of the [Clean Water] Act which encourages states to develop areawide waste treatment management plans." (*Pronsolino v. Marcus*

(N.D.Cal. 2000) 91 F. Supp. 2d 1337, 1348, citing 33 U.S.C. § 1288; see also 33 U.S.C. § 1329.)

[HN3] "When the NPDES system fails to adequately clean up certain rivers, streams or smaller water segments, the [Clean Water] Act requires use of a water-quality based approach. States are required to identify such waters ... [and] rank [them] in order of priority, and [\*\*\*9] based on that ranking, calculate levels of permissible pollution called 'total maximum daily loads' or 'TMDLs.'" (*San Francisco BayKeeper v. Whitman, supra*, 297 F.3d at p. 880; see 33 U.S.C. § 1313(d)(1)(A); 40 C.F.R. § 130.7(b) (2003).) "This list of substandard waters is known as the '303(d) list' (section 303 of the Clean Water Act having been codified as [title 33 United States Code] section 1313)." (*City of Arcadia v. U.S. Environmental* (9th Cir. 2005) 411 F.3d 1103, 1105 (*City of Arcadia II*)).

"A TMDL defines the specified maximum amount of a pollutant which can be discharged or 'loaded' into the waters at issue from all combined sources." (*Dioxin/Organochlorine Center v. Clarke* (9th Cir. 1995) 57 F.3d 1517, 1520.) "A TMDL must be 'established at a level necessary to implement the applicable water quality standards ... .' [Citation.] A TMDL assigns a *waste load allocation* ... to each point source, which is that portion of the TMDL's total pollutant load, which is allocated to a point source for which an NPDES permit is required. [Citation.] Once a TMDL is developed, effluent limitations [\*\*\*10] in NPDES permits must be consistent with the [waste load allocations] in the TMDL." (*Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1095-1096 [1 Cal. Rptr. 3d 76]; see *Dioxin/Organochlorine Center v. Clarke*, at p. 1520.) "A TMDL requires a [\*1405] "margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality." (33 U.S.C. § 1313(d)(1)(C).)

4 The Clean Water Act "does not define total maximum daily load. EPA's regulations break it into a 'waste[]load allocation' for point sources and a 'load allocation' for nonpoint sources." (*Pronsolino v. Marcus, supra*, 91 F. Supp. 2d at p. 1344, fn. 8; see 40 C.F.R. § 130.2(g)-(i) (2005).)

[HN4] The EPA may allow states to adopt and administer NPDES permit programs (*Pronsolino v. Marcus, supra*, 91 F. Supp. 2d at p. 1347, fn. 10), and it has authorized California to administer [\*\*\*11] such a program. (54 Fed.Reg. 40664 (Oct. 3, 1989).)

B

*State Law*

[HN5](3) California implements the Clean Water Act through the Porter-Cologne Act (*Wat. Code, § 13000 et seq.*), which was promulgated in 1969. Under the Porter-Cologne Act, nine regional boards regulate the quality of waters within their regions under the purview of the State Board. (*Wat. Code, §§ 13000, 13100, 13200, 13241, 13242.*)

[\*\*381] Regional boards must formulate and adopt water quality control plans, commonly called basin plans, which designate the beneficial uses to be protected, water quality objectives and a program to meet the objectives. (*Wat. Code, §§ 13050, subd. (i), 13240.*) "Water quality objectives" means the limits or levels of water quality constituents or characteristics which are established for the reasonable protection of beneficial uses of water or the prevention of nuisance within a specific area." (*Id.*, § 13050, subd. (h).)

The EPA must approve or disapprove a state's TMDL within 30 days of its submission. [\*\*\*12] (33 U.S.C. § 1313(d)(2).) If the EPA disapproves a state's submission, it must establish its own TMDL within 30 days of the disapproval. (*Ibid.*)

II

*Trash TMDL*

The Los Angeles River is a 51-mile flood control channel, largely concrete-lined, which runs through the City of Los Angeles and surrounding municipalities in Los Angeles County and terminates at the Pacific Ocean. In 1990 the Regional Board issued an NPDES storm water permit to the Los Angeles County Department of Public Works as the principal permittee and 84 cities as copermitees, to address various chemical pollutants discharged into the region's water bodies (Municipal NPDES Permit).

[\*1406] In 1994 the Regional Board adopted a revised water quality control plan, or basin plan (1994 Basin Plan), which includes narrative water quality objectives. It provides that "[w]aters shall not contain floating materials, including solids, liquids, foams, and scum, in concentrations that cause nuisance or adversely affect beneficial uses," and "[w]aters shall not contain suspended or settleable material in concentrations that cause nuisance or adversely affect beneficial uses." (Italics [\*\*\*13] omitted.) Beneficial uses of the Los Angeles River and surrounds include wildlife and marine habitat, including habitat for endangered species, and recreational activities such as fishing, walking, hiking, jogging, bicycling, horseback riding, bird watching and photography.

135 Cal. App. 4th 1392, \*, 38 Cal. Rptr. 3d 373, \*\*;  
2006 Cal. App. LEXIS 92, \*\*\*; 2006 Cal. Daily Op. Service 797

In 1996 and 1998 the Regional Board identified certain reaches of the Los Angeles River on the state's "303(d) list" as being impaired by trash, primarily through storm water runoff in thousands of municipal storm drains.<sup>5</sup> On September 19, 2001, the Regional Board adopted a resolution to amend its 1994 Basin Plan to incorporate a TMDL for trash in the Los Angeles River (Trash TMDL). Despite many objections from affected municipalities, the Trash TMDL sets a numeric target of zero trash as "even a single piece of trash can be detrimental, and no level of trash is acceptable in waters of the state."<sup>6</sup> "The numeric target is staff's interpretation of the narrative water quality objective [in [\*\*\*382] the 1994 Basin Plan], including an implicit margin of safety."

5 The Regional Board defines "trash" as "man-made litter" within the meaning of Government Code section 68055.1, subdivision (g), which provides: " 'Litter' means all improperly discarded waste material, including, but not limited to, convenience food, beverage, and other produce packages or containers constructed of steel, aluminum, glass, paper, plastic, and other natural and synthetic materials, thrown or deposited on the lands and waters of the state, but not including the properly discarded waste of the primary processing of agriculture, mining, logging, sawmilling, or manufacturing."

[\*\*\*14]

6 The Regional Board adopted a Trash TMDL in January 2001, which also had a target of zero trash. It reconsidered the matter on September 19, 2001, "to provide clarifying language and greater flexibility in implementing the [Trash] TMDL."

The reduction of trash is to be phased over a 14-year period, including an optional two-year baseline monitoring period. In lieu of baseline monitoring, cities may accept a default baseline allocation of "640 gallons of uncompressed trash per square mile per year," a value based on data the City of Calabasas provided. The Trash TMDL provides for a "review of the current target [of zero trash] ... once a reduction of 50% has been achieved and sustained," "based on the findings of future studies regarding the threshold levels needed for protecting beneficial uses."

Under the Trash TMDL, cities may use a variety of compliance methods, including "[e]nd-of-pipe full capture structural controls," "partial capture [\*\*\*1407] control systems" and "[i]nstitutional controls." Cities using a full-capture system meeting certain criteria will be deemed in compliance with [\*\*\*15] the zero target if the systems are properly maintained and maintenance records are available for the Regional Board's inspection.

On December 21, 2001, the Regional Board issued an order under Water Code section 13267 to the County of Los Angeles and copermittees under the Municipal NPDES Permit to submit baseline monitoring plans by February 1, 2002, and to monitor trash in the Los Angeles River between January 2002 and December 2003, with a final report due February 2004.<sup>7</sup> The Regional Board intends to use resulting data to "refine" the default baseline waste load allocations in the Trash TMDL.

7 In City of Arcadia v. U.S. Environ. Protection Agency (N.D. Cal. 2003) 265 F. Supp. 2d 1142, 1156 (City of Arcadia I), the court noted the Los Angeles County Department of Public Works has assumed responsibility for the baseline monitoring burden for all municipalities to which the Trash TMDL applies. The Trash TMDL states that "[e]ach of the permittees and copermittees are responsible for monitoring land uses within their jurisdiction," but "monitoring responsibilities may be delegated to a third-party monitoring entity such as the [Department of Public Works]."

[\*\*\*16] In February and July 2002, the State Board and the Office of Administrative Law, respectively, approved the Trash TMDL. In August 2002 the EPA approved it and announced it supersedes an interim TMDL for trash the EPA adopted in March 2002 as a result of a consent decree in litigation between environmental groups and the EPA. (City of Arcadia I, supra, 265 F. Supp. 2d 1142, 1147.)<sup>8</sup>

8 In City of Arcadia I, supra, 265 F. Supp. 2d at page 1153, the City of Arcadia and other cities unsuccessfully challenged the EPA's approval of the Trash TMDL on the ground it was unauthorized to do so after adopting its own TMDL. In City of Arcadia II, supra, 411 F.3d at pages 1106-1107, the court affirmed the lower court's dismissal of the case.

### III

#### *Procedural History*

The Cities are within the Regional Board's jurisdiction and are permittees under the 2001 Municipal NPDES Permit. In July 2002 the Cities filed a petition for writ of mandate and complaint for declaratory [\*\*\*17] and injunctive relief against the Water Boards. They filed the action in the Los Angeles County Superior Court, but the parties stipulated to its transfer to the San Diego County Superior Court.

The second amended petition alleges numerous grounds on which the Trash TMDL violates the Clean

Water Act or the Porter-Cologne Act, and the court adjudicated some issues in favor of each party. It found the [\*1408] Water Boards improperly (1) failed to conduct an analysis of the Los Angeles River's assimilative capacity; (2) failed to conduct a cost-benefit analysis or [\*\*383] consider economic factors under Water Code sections 13267 and 13241; (3) purported to apply the Trash TMDL to the Estuary even though it is not listed on the state's 1998 303(d) list as impaired; and (4) failed to prepare a required EIR or its functional equivalent under CEQA. The court issued a writ of mandate commanding the Water Boards to set aside the amendment to the 1994 Basin Plan and the Trash TMDL to the extent it was based on the above findings and to not take any further steps to implement it. The court denied the Water Boards' motion to vacate the judgment or grant [\*\*\*18] a new trial, and judgment was entered on December 24, 2003.

The Cities later moved for an order that the prohibitory terms of the writ of mandate and judgment not be stayed on appeal. (Code Civ. Proc., § 1110b.) The court granted the motion, and further ordered that "to preserve the status quo and prevent injustice to [the Cities], the ... implementation schedule and compliance dates, and all milestones contained in the [Trash TMDL] shall be tolled effective December 24, 2003, through and until a final determination has been rendered on the pending appeal." The Water Boards appealed that order, and in accordance with the parties' stipulation we consolidated it with the other appeals.

## DISCUSSION

### WATER BOARDS' APPEAL.

1

#### *Standard of Review*

(4) The Water Boards contend a deferential standard of review applies to our review of their action under Code of Civil Procedure section 1085, and the Cities claim an independent standard applies under Code of Civil Procedure section 1094.5. [HN6]Code of Civil Procedure section 1094.5, the administrative mandamus [\*\*\*19] statute, applies when "the writ is issued for the purpose of inquiring into the validity of any final administrative order or decision made as the result of a proceeding in which by law a hearing is required to be given, evidence is required to be taken, and discretion in the determination of facts is vested in the inferior tribunal." (Code Civ. Proc., § 1094.5, subd. (a).) "Acts of an administrative agency that are quasi-legislative in nature, e.g., establishment of regulations to carry out a statutory policy or direction, are not reviewable by administrative

mandamus." (8 Witkin, Cal. Procedure (4th ed. 1997) Extraordinary Writs, § 268, pp. 1067-1068.) Rather, review of a quasi-legislative action is limited to traditional mandamus. (*Id.* at p. 1068.)

[\*1409] (5) The trial court correctly found this proceeding is for traditional mandamus because the Regional Board's adoption and the State Water Board's approval of the Trash TMDL was quasi-legislative. [HN7]Under Code of Civil Procedure section 1085, "review is limited to an inquiry into whether the action was arbitrary, capricious or entirely lacking [\*\*\*20] in evidentiary support, ..." [and] [t]he petitioner has the burden of proof to show that the decision is unreasonable or invalid as a matter of law. [Citation.] We review the record de novo except where the trial court made foundational factual findings, which are binding on appeal if supported by substantial evidence." (*Citizens for Improved Sorrento Access, Inc. v. City of San Diego* (2004) 118 Cal.App.4th 808, 814 [13 Cal. Rptr. 3d 259], citations omitted.)

The Cities' reliance on Water Code section 13330 is misplaced. It provides that "[a]ny party aggrieved by a final decision or order of a regional board for which the state board denies review may obtain review of the decision or order of the regional [\*\*384] board in the superior court" (*id.*, § 13330, subd. (b), italics added), and "[e]xcept as otherwise provided herein, Section 1094.5 of the Code of Civil Procedure shall govern proceedings for which petitions are filed pursuant to this section" (*id.*, § 13330, subd. (d)). Given the language italicized *ante*, Water Code section 13330 necessarily applies to an administrative appeal of a quasi-judicial action [\*\*\*21] under Code of Civil Procedure section 1094.5. Here, an appeal to the State Board was unnecessary because the Trash TMDL was ineffective without its approval. (Water Code, § 13245.) Indeed, the State Board notified the Cities in March 2001 that it "lacks statutory authority to accept petitions for review of water quality control plan (basin plan) amendments adopted" by regional boards.

[HN8]As to CEQA issues, the parties agree an abuse of discretion standard applies. (*Federation of Hillside & Canyon Assns. v. City of Los Angeles* (2004) 126 Cal.App.4th 1180, 1199 [24 Cal. Rptr. 3d 543].) Abuse of discretion "is established if the agency has not proceeded in a manner required by law or if the determination or decision is not supported by substantial evidence." (Pub. Resources Code, § 21168.5.) "Our task on appeal is 'the same as the trial court's.' [Citation.] Thus, we conduct our review independent of the trial court's findings." (*Quail Botanical Gardens Foundation, Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1602, fn. 3 [35 Cal. Rptr. 2d 470].)

II

### *Assimilative Capacity Study*

The trial court [\*\*\*22] invalidated the Trash TMDL based in part on the Cities' argument an "assimilative capacity study" is a required element of a TMDL and none was performed here. In its statement of decision, the court [\*1410] explained "[i]t is unreasonable to conclude that the beneficial uses of the [Los Angeles] River could not be maintained with some 'target' other than zero. Of course, it is possible the River would not support a greater target, however, without a study it is yet undetermined."

The Water Boards contend the trial court erred by substituting its own judgment for that of the Water Boards on the issue of whether the adoption of the Trash TMDL should have been preceded by a scientific study of the assimilative capacity of the Los Angeles River. They assert the matter was best suited for their determination rather than the court's and the evidence adequately supports their decision. We agree with the Water Boards.

During the notice and comment period, the Regional Board received numerous complaints that a zero Trash TMDL is infeasible, or at least unwarranted without a scientific assimilative capacity study, or load capacity study, showing a zero limit is the only means of protecting beneficial [\*\*\*23] uses. For instance, the City of Los Angeles worried that "[i]f there's one gum wrapper in the [Los Angeles] River, you can get sued."

The Regional Board responded to one complaint as follows: "For more typical pollutants, the loading parameters are flow and pollutant concentration. For this pollutant [trash], flow does not serve to dilute the pollutant, but merely serves as a transport mechanism. Therefore, the typical loading calculation does not apply to trash." The Regional Board took the position that since littering is unlawful, a target of zero trash in the Los Angeles River is the only defensible position. It also explained that its staff "found no study to document that there is an acceptable level of trash that will cause no harm to aquatic life," and absent such a study it was compelled to adopt a zero target.

[\*\*385] At a Regional Board hearing, Dr. Mark Gold, executive director of Heal the Bay, testified he was unaware of any assimilative capacity study having been performed anywhere on trash. He explained, "Basically it's a physical object. It's trash. It's not something that breaks down and becomes part of the environment in many, many cases. And so honestly, it probably [\*\*\*24] won't reach any sort of threshold of being a scientific study of any value."

At a State Board hearing Dave Smith, an EPA team leader working with the Regional Board on the trash

issue, testified "it would be difficult to design [an assimilative capacity] study and come up with firm answers." He also explained that both the Regional Board and the State Board "have conducted pretty diligent efforts to find research studies, reports, that look at the affects of trash on the aquatic environment," and neither they nor the EPA could find any literature to support a target of more than zero trash.

[\*1411] Alex Helperin, of the Natural Resources Defense Council, testified at a Regional Board hearing that "[e]ven small quantities [of trash] can maim and kill wildlife, [which] becomes entangled in it or ingest[s] it. [Trash] [c]an obstruct and repel boaters and contract creators and compromise the aesthetic quality that's essential to the recognized aspect of non-contact recreation beneficial use for the Los Angeles River."

The administrative record includes numerous photographs of copious amounts of trash deposited in the Los Angeles River watershed through storm water drains. Dennis [\*\*\*25] Dickerson, the executive officer of the Regional Board, testified he took photographs of trash in the Long Beach area shortly after storms, and among them are photographs of "water birds foraging among the trash." One photograph is of a bird with a cigarette butt in its mouth and another is of a fish trapped in a plastic six-ring can holder.

In arguing an assimilative capacity study is required *before* adopting a TMDL, the Cities rely principally on an EPA document issued January 7, 2000, entitled "Guidance for Developing TMDLs in California" (2000 EPA Guidance). It states: "The TMDL document must describe the relationship between numeric target(s) and identified pollutant sources, and estimate total assimilative capacity (loading capacity) of the water[]body for the pollutant of concern ... . [¶] The loading capacity is the critical quantitative link between the applicable water quality standards (as interpreted through numeric targets) and the TMDL. Thus, a maximum allowable pollutant load must be estimated to address the site-specific nature of the impairment. ... [¶] The loading capacity section must discuss the methods and data used to estimate loading capacity. [\*\*\*26] A range of methods can be used ... ." (Boldface omitted.)

The 2000 EPA Guidance, however, contains the following disclaimer: "[I]t does not impose legally-binding requirements on the EPA, the State of California, or the regulated community, and may not apply to a particular situation based upon the circumstances. EPA and State decision makers retain the discretion to adopt approaches on a case-by-case basis that differ from this guidance where appropriate and consistent with the requirements of section 303(d) [of the Clean Water Act] and EPA's regulations."

(6) Smith, of the EPA, testified at a Regional Board hearing that he wrote the 2000 EPA Guidance and the Trash TMDL "fully complies with the Clean Water Act, its regulations and [the 2000 EPA Guidance]." Smith explained the "TMDL process specifically contemplates making decisions under uncertainty," and "[i]t does so by providing that a margin of safety has to be [\*\*\*386] incorporated in every TMDL to account for the uncertainty in the analysis." Smith said states are required "to move forward to make TMDL decisions [\*\*\*1412] based on available information and data, not to wait again and again and again for better information to come forward." [\*\*\*27] [HN9] Generally, "considerable weight should be accorded to an executive department's construction of a statutory scheme it is entrusted to administer." (*United States v. Mead Corp.* (2001) 533 U.S. 218, 227-228 [150 L. Ed. 2d 292, 121 S. Ct. 2164].)

In *Natural Resources Defense Council v. Muszynski* (2d Cir. 2001) 268 F.3d 91 (*Muszynski*), the plaintiff asked the court to invalidate a TMDL that the EPA had approved to control phosphorus pollution in drinking water, on the ground a margin of safety of only 10 percent was insufficient to account for uncertainty regarding the effects of phosphorus on water quality. The plaintiff argued "that no scientific or mathematical basis prescribed this percentage as opposed to any other." (*Id.* at p. 102.) The EPA countered that "because 'there is no "standard" or guideline for choosing a specific margin of safety, best professional judgment and the available information are used in setting [it].'" (*Ibid.*) The *Muszynski* court agreed with the EPA, explaining: "While the [margin of safety] may ... be set with an uncomfortable degree of discretion, requiring that EPA [or authorized regional board] show a rigorous [\*\*\*28] scientific methodology dictates one course of action as opposed to another and would effectively prevent the agency from acting in situations where action is required in the face of a clear public health or environmental danger but the magnitude of that danger cannot be effectively quantified. '[A]s long as Congress delegates power to an agency to regulate on the borders of the unknown, courts cannot interfere with reasonable interpretations of equivocal evidence.' [Citation.] ... [S]imply to reject EPA's efforts to implement the [Clean Water Act] because it must respond to real water quality problems without the guidance of a rigorously precise methodology would essentially nullify the exercise of agency discretion in the form of 'best professional judgment.'" (*Muszynski, supra*, 268 F.3d at pp. 102-103, italics added.)

Further, in *Muszynski, supra*, 268 F.3d 91, 103, the court noted "that approval of the Phase I [margin of safety] was based, in part, on the limited information available. The EPA approval contemplates revision of the [margin of safety] as more information becomes

available: 'As additional reservoir data and loading [\*\*\*29] data become available, Phase I model assumptions are being reexamined under Phase II.'"

We conclude federal law does not require the Regional Board to conduct an assimilative capacity study before adopting the Trash TMDL. Moreover, the evidence amply shows that because of the nature of trash, including Styrofoam containers and other materials that are undiluted by water, in contrast to chemical pollutants, and the dangers to wildlife of even small amounts of trash, an assimilative capacity study would be difficult to conduct and of little value at the outset. For instance, given the ill effects of trash in a [\*\*\*1413] water body it is unlikely such a study would determine the Los Angeles River may be loaded with a certain percentage of trash without affecting beneficial uses, particularly since a TMDL must include a margin of safety that "takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality." (33 U.S.C. § 1313(d)(1)(C).) In any event, the Trash TMDL requires the Regional Board to reconsider the zero trash target after a 50 percent reduction of trash is achieved, and no party suggests a trash reduction of [\*\*\*30] at least 50 percent is unwarranted or unattainable. Because of [\*\*\*387] this escape hatch, compliance with a zero trash target may never actually be mandated. The Water Boards' decision not to conduct or require an assimilative capacity study is within their expertise, not the court's, and we defer to them on the issue.

III

#### *Cost-Benefit Analysis and Economic Considerations*

The Water Boards next contend the court erred by finding the Trash TMDL is invalid because they violated state law by not conducting a cost-benefit analysis (*Wat. Code, § 13267*) or considering economic factors (*id.* at § 13241) before adopting and approving it.

A

#### *Water Code Section 13267*

[HN10] A regional board is authorized to investigate the quality of waters in its region (*Wat. Code, § 13267, subd. (a)*), and when it requires a polluter to furnish "technical or monitoring program reports," the "burden, including costs, of these reports shall bear a reasonable relationship to the need for the report[s] and the benefits to be obtained from the reports." (*Wat. Code, § 13267, subd. (b)(1)*.) The court [\*\*\*31] found the Regional Board adopted the Trash TMDL under the authority of *Water Code section 13267*, as the document mentions the statute several times and "expressly requires monitoring

135 Cal. App. 4th 1392, \*; 38 Cal. Rptr. 3d 373, \*\*;  
2006 Cal. App. LEXIS 92, \*\*\*; 2006 Cal. Daily Op. Service 797

plans and submission of data to establish baselines for trash discharges."

The Water Boards persuasively contend Water Code section 13267 is inapplicable, and references to that statute in the Trash TMDL are to contemplated future orders. For instance, the Trash TMDL states "[b]aseline monitoring will be required via [Water Code] Section 13267," and the submission of baseline monitoring plans will be due 30 days after receipt of the Executive Officer's request as authorized by [Water Code] Section 13267." [\*1414] It also states that "future storm water permits will be modified to incorporate the Waste Load Allocations and to address monitoring and implementation of this [Trash] TMDL."

Further, the Trash TMDL states "the permittee [under the Municipal NPDES permit] will submit a monitoring plan with the proposed monitoring sites and at least two alternative monitoring locations for each site. The plan must [\*\*\*32] include maps of the drainage and storm drain data for each proposed and alternate monitoring location. The monitoring plan(s) will be submitted to the Regional Board within 30 days after receipt of the Executive Officer's letter requesting such a plan. Such a request is authorized pursuant to [Water Code] section 13267. ... The Regional Board's Executive Officer will have full authority to review the monitoring plan(s), to modify the plan, to select among the alternate monitoring sites, and to approve or disapprove the plan(s)."

Additionally, the Water Boards submit that the December 21, 2001 order the Regional Board issued under Water Code section 13267 to the County of Los Angeles and copermitees under the Municipal NPDES permit regarding baseline monitoring and reporting would have been "useless and unnecessary" had the Trash TMDL itself required monitoring and reporting, and since there was no appeal of the December 21 order to the State Board within 30 days (Wat. Code, § 13320, subd. (a)) the cost-benefit analysis issue is not subject to appellate review. We note that the December 21 order, but not the Trash TMDL, warns [\*\*\*33] that under Water Code section 13268 the "failure to conduct the required monitoring and/or to provide the required information in a timely manner [\*\*388] may result in civil liability imposed by the Regional Board in an amount not to exceed ... \$ 1000."

(7) [HN11]"Our primary aim in construing any law is to determine the legislative intent. [Citation.] In doing so we look first to the words of the statute, giving them their usual and ordinary meaning." (Committee of Seven Thousand v. Superior Court (1988) 45 Cal.3d 491, 501 [247 Cal. Rptr. 362, 754 P.2d 708].) We agree that by its plain terms Water Code section 13267 is inapplicable at

the TMDL stage, and thus the court erred by invalidating the Trash TMDL on this ground. The monitoring and reports are required by the December 21, 2001 order, not the Trash TMDL, and the reduction of trash will be implemented by other NPDES permits. "TMDLs are primarily informational tools that allow the states to proceed from the identification of waters requiring additional planning to the required plans." (Pronsolino v. Nastro (9th Cir. 2002) 291 F.3d 1123, 1129.) (8) [HN12]"A TMDL does not, by itself, [\*\*\*34] prohibit any conduct or require any actions. Instead, each TMDL represents a goal that may be implemented by adjusting pollutant discharge requirements in individual NPDES permits or establishing nonpoint source [\*\*1415] controls." (City of Arcadia I, supra, 265 F. Supp. 2d at p. 1144.) A "TMDL forms the basis for further administrative actions that may require or prohibit conduct with respect to particularized pollutant discharges and water[bodies]." (Id. at p. 1145.)

B

Water Code Section 13241

[HN13]Water Code section 13241 provides that "[e]ach regional board shall establish such water quality objectives in water quality control plans as in its judgment will ensure the reasonable protection of beneficial uses and the prevention of nuisance." In establishing water quality objectives a regional board is required to consider several factors, including "[e]conomic considerations." (Wat. Code, § 13241, subd. (d).)

The Water Boards contend Water Code section 13241 is inapplicable because the Trash TMDL does not establish water quality objectives, but [\*\*\*35] merely implements, under Water Code section 13242, the existing narrative water quality objectives in the 1994 Basin Plan. It provides that waters shall not contain floating materials, including solids, or suspended or settleable materials in concentrations that adversely affect beneficial uses. The Cities counter that the Trash TMDL effectively establishes new water quality objectives, because when the 1994 Basin Plan was adopted a TMDL for trash was not contemplated and thus economic considerations of such a TMDL were not considered. Further, the Trash TMDL imposes for the first time a numeric limit for trash and significantly increases the costs of compliance.

We need not, however, decide whether the Trash TMDL adopts new or revised water quality objectives within the meaning of Water Code section 13241, because even if the statute is applicable, the Water Boards sufficiently complied with it. Water Code section 13241, subdivision (d) does not define "economic considerations" or specify a particular manner of com-

135 Cal. App. 4th 1392, \*, 38 Cal. Rptr. 3d 373, \*\*;  
2006 Cal. App. LEXIS 92, \*\*\*, 2006 Cal. Daily Op. Service 797

pliance, and thus, as the Water Boards assert, the matter is within a regional [\*\*389] board's discretion. [\*\*\*36] It appears there is no reported opinion analyzing the "economic considerations" phrase of this statute. In *City of Burbank, supra*, 35 Cal.4th at page 625, the court, without discussion, concluded that in adopting Water Code section 13241 the Legislature intended "that a regional board consider the *cost of compliance* [with numeric pollutant restrictions] when setting effluent limitations in a wastewater discharge permit." (Italics added.)

9 For the same reason, we are not required to reach the Water Boards' assertion that to any extent the California Supreme Court's recent opinion in *City of Burbank, supra*, 35 Cal.4th 613, applies to a TMDL, it precludes them from considering economic factors in establishing the Trash TMDL.

[\*1416] The Trash TMDL discusses the costs of gathering and disposing of trash at the mouth of the Los Angeles River watershed during the rainy seasons between 1995 and 1999. It also states: "Cleaning up the river, its tributaries and [\*\*\*37] the beaches is a costly endeavor. The Los Angeles County Department of Public Works contracts out the cleaning of over 75,000 catchments (catch basins) for a total cost of slightly over \$ 1 million per year, billed to 42 municipalities. ... [¶] Over 4,000 tons of trash are collected from Los Angeles County beaches annually, at a cost of \$ 3.6 million to Santa Monica Bay communities in fiscal years 1988-1989 alone. In 1994 the annual cost to clean the 31 miles of beaches (19 beaches) along Los Angeles County was \$ 4,157,388."

The Trash TMDL also discusses the costs of various types of compliance measures, and explains the "cost of implementing this TMDL will range widely, depending on the method that the Permittees select to meet the Waste Load Allocations. Arguably, enforcement of existing litter ordinances could be used to achieve the final Waste Load Allocations at minimal or no additional cost. The most costly approach in the short-term is the installation of full-capture structural treatment devices on all discharges into the river. However, in the long term this approach would result in lower labor costs and may be less expensive than some other approaches."

The Trash TMDL [\*\*\*38] defines catch basin inserts as "the least expensive structural treatment device in the short term," at a cost of approximately \$ 800 each. It cautions, however, that because catch basin inserts "are not a full capture method, they must be monitored frequently and must be used in conjunction with frequent street sweeping." The Trash TMDL estimates that if the approximately 150,000 catch basins throughout the wa-

tershed were retrofitted with inserts, capital costs would be \$ 120 million over 10 years, maintenance and operation costs would be \$ 330 million over 10 years, and maintenance and operation costs after full implementation would be \$ 60 million per year.

Further, the Trash TMDL discusses the full capture vortex separation system (VSS), which "diverts the incoming flow of storm[water and pollutants into a pollutant separation and containment chamber. Solids within the separation chamber are kept in continuous motion, and are prevented from blocking the screen so that water can pass through the screen and flow downstream. This is a permanent device that can be retrofitted for oil separation as well. Studies have shown that VSS [units] remove virtually all of the trash contained [\*\*\*39] in treated water. The cost of installing a VSS is assumed to be high, so limited funds will place a cap on the number of units which can be installed during any single fiscal year."

[\*1417] The Trash TMDL estimates the retrofitting of the entire Los Angeles River watershed with low capacity VSS units would be \$ 945 million in capital costs and \$ 813 million in operation and maintenance costs over 10 years, and \$ 148 million in annual operation and maintenance costs after full implementation. The installation of large capacity VSS units would run [\*\*\*390] approximately \$ 332 million in capital costs and \$ 41 million in operation and maintenance costs over 10 years, and \$ 7.4 million per year in operation and maintenance costs after full implementation. The yearly cost of servicing one VSS unit is estimated to be \$ 2,000. The Trash TMDL explains that "outfitting a large drainage with a number of large VSS [units] may be less costly than using a larger number of small VSS [units]. Maintenance costs decrease dramatically as the size of the system increases." The Trash TMDL also contains a cost comparison of catch basin inserts and low capacity and large capacity VSS units.

Additionally, the Trash [\*\*\*40] TMDL estimates the costs for end-of-pipe nets at between \$ 10,000 and \$ 80,000, depending on the length of the pipe network. It explains that "[r]elease nets' are a relatively economical way to monitor trash loads from municipal drainage systems. However, in general they can only be used to monitor or intercept trash at the end of a pipe and are considered to be partial capture systems, as nets are usually sized at a 1/2&inches; to 1&inches; mesh."

The Cities assert that "a 'consideration' of economics should have included a discussion of the economic *impacts* associated with the vortex separation systems. Alternatively, the Water Boards could have analyzed other methods of compliance, such as a series of [best management practices], including increased street sweeping,

catch basin inserts, release nets, or some other combination of [best management practices] that should have been evaluated for purposes of allowing the municipalities to be in deemed compliance with the zero [Trash] TMDL." (Italics added.) As stated, though, the Trash TMDL does include the estimated costs of several types of compliance methods and a cost comparison of capital costs and costs of operation and maintenance. [\*\*\*41] The Cities cite no authority for the proposition that a consideration of economic factors under Water Code section 13241 must include an analysis of every conceivable compliance method or combinations thereof or the fiscal impacts on permittees.

Given the lack of any definition for "economic considerations" as used in Water Code section 13241, and our deference to the Water Boards' expertise, we conclude the Trash TMDL's discussion of compliance costs is adequate [\*1418] and does not fulfill the arbitrary or capricious standard. Accordingly, the Trash TMDL is not invalid on this ground.<sup>10</sup>

10 The Cities also assert that under federal law an economic analysis is a prerequisite to the adoption of a TMDL. They rely on 40 Code of Federal Regulations, part 130.6(c)(4), but it pertains to nonpoint sources of pollution that need not be addressed in a TMDL, as discussed further *post*. The portion of the regulation covering TMDL's does not mention economics (*id.*, § 130.6(c)(1)). Parts 130.6(5) and (6) of 40 Code of Federal Regulations discuss economics, but in the context of the area wide planning process under section 208(b)(2) of the Clean Water Act (33 U.S.C. § 1288(b)(2)), which is inapplicable here. According to the Water Boards, the Southern California Association of Governments is the designated area-wide planning agency.

[\*\*\*42] IV

#### *Los Angeles River Estuary*

Additionally, the Water Boards challenge the court's finding they abused their discretion by attempting to include the Estuary in the Trash TMDL, as the Estuary is not on the state's 1998 303(d) list of impaired waters. The Water Boards contend a water body's formal listing on the state's 303(d) list is not a prerequisite to formulating a TMDL for it. Rather, an agency may simultaneously submit to the EPA the *identification* of a [\*\*\*39] water body as impaired and a corresponding TMDL.

[HN14]The Clean Water Act provides: "Each state shall identify those waters within its boundaries for which the effluent limitations ... are not stringent enough to implement any water quality standards applicable to

such waters. The State shall establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters." (33 U.S.C. § 1313(d)(1)(A).) Further, it provides that "[e]ach state shall establish for the waters identified in paragraph (1)(A) of this subsection, and in accordance with the priority ranking, the total maximum daily load ... ." (*Id.* at § 1313(d)(1)(C).) [\*\*\*43] These provisions do not prohibit a regional board from identifying a water body and establishing a TMDL for it at essentially the same time, or indicate that formal designation on a state's 303(d) list is a prerequisite to a TMDL.

Further, 33 United States Code section 1313(d)(2) provides: "Each State shall submit to the [EPA] Administrator from time to time, ... for his [or her] approval the waters identified *and* the loads established under paragraphs (1)(A) [and] ... (1)(C) ... of this subsection. The [EPA] Administrator shall either approve or disapprove such identification *and* load not later than thirty days after the date of submission." (Italics added.) This clarifies that a regional board may simultaneously identify an impaired water body and establish a TMDL for it.

[\*1419] In *San Francisco BayKeeper v. Whitman*, supra, 297 F.3d 877, 884-885, the court held an agency has no *duty* to submit a TMDL at the same time it identifies an impaired water body, noting the development of a TMDL "to correct the pollution is obviously a more intensive and time-consuming project than simply identifying the polluted waters, as the [\*\*\*44] EPA has indicated." (*Id.* at p. 885.) The Water Boards assert the case does not deprive an agency from exercising its *discretion* to simultaneously submit to the EPA the identification of an impaired water body and a TMDL for it. Given the plain language of 33 United States Code section 1313(d)(2), we agree. Moreover, [HN15]"[s]tates remain at the front line in combating pollution" (*City of Arcadia II, supra*, 411 F.3d at p. 1106), and "[s]o long as the [s]tate does not attempt to adopt more *lenient* pollution control measures than those already in place under the [Clean Water] Act, [it] does not prohibit state action." (*Id.* at p. 1107.)

Alternatively, the Cities complain the Regional Board did not sufficiently identify the Estuary as being impaired and included in the Trash TMDL until after its adoption and approval by the State Board and Office of Administrative Law and the completion of all public hearings. On July 29, 2002, the Regional Board sent the EPA a memorandum "to provide clarification on specific aspects" of the Trash TMDL. It stated that a "TMDL was established for the reaches of the Los [\*\*\*45] Angeles River, tributaries and lakes listed on the [state's] 1998 303(d) list," and "[i]n addition, a TMDL was established for the Los Angeles River [E]stuary in the City of Long Beach. As described on page 12, paragraph 2 of the

135 Cal. App. 4th 1392, \*; 38 Cal. Rptr. 3d 373, \*\*;  
2006 Cal. App. LEXIS 92, \*\*\*; 2006 Cal. Daily Op. Service 797

[staff] report, staff found that the impairment in the [E]stuary due to trash is 'even more acute in Long Beach where debris flushed down by the upper reaches collects.' [¶] The impairment in the [E]stuary was well documented during TMDL development," and it "would have been included in the 1998 303(d) list if the attached photographic evidence had been available at the time of the listing."

The Trash TMDL lists the reaches of the Los Angeles River "that are impaired by trash, and listed on the [state's] 303(d) [\*\*\*392] list." The list does not include the Estuary. The Water Boards assert that even so, it was always obvious the Estuary is impaired and included in the Trash TMDL. The Trash TMDL states it is "for the Los Angeles River Watershed," and "watershed" is defined as "a region or area bounded peripherally by a divide and draining ultimately to a particular watercourse or body of water." (Merriam-Webster's Collegiate Dict. (10th ed. 1996) p. [\*\*\*46] 1336.) "Estuary" is defined as "a water passage where the tide meets a river current," especially "an arm of the sea at the lower end of a river." (*Id.* at p. 397.)

The Trash TMDL describes the watershed as beginning at the "western end of the San Fernando Valley to the Queensway Bay and Pacific Ocean at Long Beach," and it also states the watershed continues from "Willow Street all [\*1420] the way through the [E]stuary." An amici curiae brief by Santa Monica BayKeeper, Inc., Heal the Bay, Inc., and Natural Resources Defense Council, Inc. (collectively BayKeeper), asserts Queensway Bay is the site of the Estuary, and no party has challenged the assertion. Further, the Trash TMDL lists and discusses the beneficial uses of the Estuary, including habitat for many species of birds, some endangered, and fish. It also states beneficial uses "are impaired by large accumulations of suspended and settled debris throughout the river system," and in particular "estuarine habitat" is impaired. Further, the administrative record contains several pictures of trash deposited in the Estuary during high flows, depicting "the variety of ways through which trash ... becomes an integral part of wildlife, [\*\*\*47] affecting all plant and animal communities in the process."

The Trash TMDL's identification of the Estuary as impaired could have been clearer, but we conclude it was sufficient to put all affected parties on notice, and does not meet the arbitrary-and-capricious standard. Further, although the identification of impaired water bodies requires a priority ranking (33 U.S.C. § 1313(d)(2)), and the Trash TMDL does not prioritize the Estuary's need for a TMDL, we agree with amici curiae BayKeeper that any error in the Water Boards' procedure was not prejudicial because the Trash TMDL shows amelioration of the trash problem in the entire Los Angeles River wa-

tershed is highly important, and it is unlikely the Water Boards would single out the Estuary for lower priority or that inclusion of the Estuary would disturb their existing priorities.

V

#### CEQA

(9) The Water Boards challenge the sufficiency of the evidence to support the trial court's finding that the amendment adding the Trash TMDL to the 1994 Basin Plan does not comport with CEQA. The court found the Regional Board's environmental checklist was deficient and there is sufficient evidence of a fair argument that [\*\*\*48] the project may have a significant effect on the environment, thus necessitating an EIR or its functional equivalent. We conclude the court was correct.

A

#### General Legal Principles

(10) [HN16]"CEQA compels government first to identify the environmental effects of projects, and then to mitigate those adverse effects through the [\*1421] imposition of feasible mitigation measures or through the selection of feasible alternatives." (*Sierra Club v. State Bd. of Forestry* (1994) 7 Cal.4th 1215, 1233 [32 Cal. Rptr. 2d 19, 876 P.2d 505].) CEQA mandates that public agencies refrain from approving projects with significant environmental effects if [\*\*393] there are feasible alternatives or mitigation measures that can substantially lessen or avoid those effects. (*Mountain Lion Foundation v. Fish & Game Com.* (1997) 16 Cal.4th 105, 134 [65 Cal. Rptr. 2d 580, 939 P.2d 1280].)

[HN17]CEQA is implemented through initial studies, negative declarations and EIR's. (*Sierra Club v. State Bd. of Forestry, supra*, 7 Cal.4th at p. 1229.) "CEQA requires a governmental agency [to] prepare an [EIR] whenever it considers approval of a proposed project that 'may have a significant effect on the environment.'" (*Ouail Botanical Gardens Foundation, Inc. v. City of Encinitas, supra*, 29 Cal.App.4th at p. 1601.) [\*\*\*49] "If there is no substantial evidence a project 'may have a significant effect on the environment' or the initial study identifies potential significant effects, but provides for mitigation revisions which make such effects insignificant, a public agency must adopt a negative declaration to such effect and, as a result, no EIR is required. [Citations.] However, the Supreme Court has recognized that CEQA requires the preparation of an EIR 'whenever it can be fairly argued on the basis of substantial evidence that the project may have significant environmental impact.' [Citations.] Thus, if substantial evidence in the record supports a 'fair argument' significant

impacts or effects may occur, an EIR is required and a negative declaration cannot be certified." (*Id.* at pp. 1601-1602.)

[HN18]" Significant effect on the environment? means a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the [\*\*\*50] environment. A social or economic change related to a physical change may be considered in determining whether the physical change is significant." (Cal. Code Regs., tit. 14, § 15382.)

B

#### *Certified Regulatory Program*

[HN19](11) "State regulatory programs that meet certain environmental standards and are certified by the Secretary of the California Resources Agency are exempt from CEQA's requirements for preparation of EIRs, negative declarations, and initial studies. [Citations.] Environmental review documents prepared by certified programs may be used instead of environmental documents that CEQA would otherwise require. [Citations.] Certified regulatory [\*1422] programs remain subject, however, to other CEQA requirements." (2 Kostka & Zischke, Practice Under the Cal. Environmental Quality Act (Cont.Ed.Bar 2005) § 21.2, p. 1076; see Pub. Resources Code, § 21080.5.) Documents prepared by certified programs are considered the "functional equivalent" of documents CEQA would otherwise require. (*Mountain Lion Foundation v. Fish & Game Com., supra*, 16 Cal.4th at p. 113; 2 Kostka & Zischke, Practice Under the Cal. Environmental [\*\*\*51] Quality Act, *supra*, § 21.10, p. 1086 ["the documentation required of a certified program essentially duplicates" that required for an EIR or negative declaration].)

An "agency seeking certification must adopt regulations requiring that final action on the proposed activity include written responses to significant environmental points raised during the decisionmaking process. [Citation.] The agency must also implement guidelines for evaluating the proposed activity consistently with the [\*\*394] environmental protection purposes of the regulatory program. [Citation.] The document generated pursuant to the agency's regulatory program must include alternatives to the proposed project and mitigation measures to minimize significant adverse environmental effects [citation], and be made available for review by other public agencies and the public [citation]." (*Mountain Lion Foundation v. Fish & Game Com., supra*, 16 Cal.4th at p. 127.)

[HN20](12) The guidelines for implementation of CEQA (Cal. Code Regs., tit. 14, § 15000 et seq.) do not directly apply to a certified regulatory program's environmental document. (2 Kostka & Zischke, [\*\*\*52] Practice Under the Cal. Environmental Quality Act, *supra*, § 21.10, p. 1086.) However, "[w]hen conducting its environmental review and preparing its documentation, a certified regulatory program is subject to the broad policy goals and substantive standards of CEQA." (*Ibid.*)

In a certified program, an environmental document used as a substitute for an EIR must include "[a]lternatives to the activity and mitigation measures to avoid or reduce any significant or potentially significant effects that the project might have on the environment," and a document used as a substitute negative declaration must include a "statement that the agency's review of the project showed that the project would not have any significant or potentially significant effects on the environment and therefore no alternatives or mitigation measures are proposed to avoid or reduce any significant effects on the environment. This statement shall be supported by a checklist or other documentation to show the possible effects that the agency examined in reaching this conclusion." (Cal. Code Regs., tit. 14, § 15252, subd. (a)(2)(A), (B).)

The basin planning process of the State Board and regional boards is [\*\*\*53] a certified regulatory program (Cal. Code Regs., tit. 14, § 15251, subd. (g)), and [\*1423] the regulations implementing the program appear in the California Code of Regulations, title 23, sections 3775 to 3782. [HN21]A regional board's submission of a plan for State Board approval must be accompanied by a brief description of the proposed activity, a completed environmental checklist prescribed by the State Board, and a written report addressing reasonable alternatives to the proposed activity and mitigation measures to minimize any significant adverse environmental impacts. (*Id.*, § 3777, subd. (a).)

C

#### *Environmental Documentation*

The Regional Board's environmental documentation in lieu of documents CEQA ordinarily requires consists of a checklist and the Trash TMDL. The checklist asked a series of questions regarding whether implementation of the Trash TMDL would cause environmental impacts, to which the Regional Board responded "yes," "maybe" or "no." "Yes" or "maybe" answers required an explanation. The checklist described beneficial impacts pertaining to plant and animal life, water quality [\*\*\*54] and recreation. The checklist denied the project would have any environmental impact on land, including soil displacement, air, noise, natural resources or traffic, and

135 Cal. App. 4th 1392, \*; 38 Cal. Rptr. 3d 373, \*\*;  
2006 Cal. App. LEXIS 92, \*\*\*; 2006 Cal. Daily Op. Service 797

thus it included no discussion of those factors. The checklist concluded "the proposed Basin Plan amendment [adding the Trash TMDL] could not have a significant effect on the environment."

The Regional Board obviously intended its documentation to be the functional equivalent of a negative declaration. Nonetheless, on appeal the Water Boards claim for the first time that the Regional [\*\*395] Board's environmental review process is tiered, and its documentation meets the requirements of a first tier EIR under Public Resources Code section 21159. They assert the court's criticism of the checklist is baseless "because it ignores the concept of tiered environmental review and specific provisions for pollution control performance standards."

[HN22]" Tiering' refers 'to the coverage of general matters in broader EIRs (such as on general plans or policy statements) with subsequent narrower EIRs or ultimately *site-specific* EIRs incorporating by reference the general discussions and concentrating solely [\*\*\*55] on the issues specific to the EIR subsequently prepared. Tiering is appropriate when the sequence of EIRs is: [¶] ... [f]rom a general plan, policy, or program EIR to a ... site-specific EIR.'" (Natural Resources Defense Council, Inc. v. City of Los Angeles (2002) 103 Cal.App.4th 268, 285 [126 Cal. Rptr. 2d 615].) "[C]ourts have allowed first tier EIR's to defer detailed analysis to subsequent project EIR's." (Friends of [\*1424] Mammoth v. Town of Mammoth Lakes Redevelopment Agency (2000) 82 Cal.App.4th 511, 532 [98 Cal. Rptr. 2d 334].)

(13) [HN23]Public Resources Code section 21159, which allows expedited environmental review for mandated projects, provides that an agency "shall perform, at the time of the adoption of a rule or regulation requiring the installation of pollution control equipment, or a performance standard or treatment requirement, an environmental analysis of the reasonably foreseeable methods of compliance. ... The environmental analysis shall, at [a] minimum, include, all of the following: [¶] (1) An analysis of the reasonably foreseeable environmental impacts of the methods of compliance. [¶] (2) An analysis of reasonably foreseeable mitigation measures. [\*\*\*56] [¶] (3) An analysis of reasonably foreseeable alternative means of compliance with the rule or regulation." (Pub. Resources Code, § 21159, subd. (a).) The Water Boards submit they complied with the statute, and the "tier two environmental review is the responsibility of the local agencies who will determine how they intend to comply with the performance standards" of the Trash TMDL.

[HN24]Issues not presented to the trial court are ordinarily waived on appeal. (Rovyster v. Montanez (1982) 134 Cal. App. 3d 362, 367 [184 Cal. Rptr. 560].) In any

event, we conclude the checklist and Trash TMDL are insufficient as either the functional equivalent of a negative declaration " or a tiered EIR. Moreover, an EIR is required since the Trash TMDL itself presents substantial evidence of a fair argument that significant environmental impacts may occur. [HN25]"Because a negative declaration ends environmental review, the fair argument test provides a low threshold for requiring an EIR." (Ocean View Estates Homeowners Assn., Inc. v. Montecito Water Dist. (2004) 116 Cal.App.4th 396, 399 [10 Cal. Rptr. 3d 451].)

11 A negative declaration may not be based on a " 'bare bones' " approach in a checklist. (Snarled Traffic Obstructs Progress v. City and County of San Francisco (1999) 74 Cal.App.4th 793, 797, fn. 2 [88 Cal. Rptr. 2d 455], and cases cited therein.) A "certified program's statement of no significant impact must be supported by documentation *showing* the potential environmental impacts that the agency examined in reaching its conclusions," and "[t]his documentation would be similar to an initial study." (2 Kostka & Zischke, Practice Under the Cal. Environmental Quality Act, *supra*, § 21.11, pp. 1088-1089, italics added.) Because we conclude an EIR is required, we need not expand on how the checklist and Trash TMDL fail to satisfy negative declaration requirements or their functional equivalent.

[\*\*\*57] [\*\*396] The Trash TMDL discusses various compliance methods or combinations thereof that permittees may employ, including the installation of catch basin inserts and VSS units. The Trash TMDL estimates that if the catch basin method is used exclusively, approximately 150,000 catch basins throughout the watershed would require retrofitting at a cost of approximately \$ 120 million. It explains, however, that the "ideal way to capture trash deposited into a storm[ ] drain system would be to install a VSS unit. This device diverts [\*1425] the incoming flow of storm[ ] water and pollutants into a pollution separation and containment chamber." Only VSS units or similar full-capture devices will be deemed fully compliant with the zero trash target. The Trash TMDL estimates the cost of installing low capacity VSS units would be \$ 945 million and the cost of installing large capacity VSS units would be \$ 332 million.

The checklist and the Trash TMDL, however, ignore the temporary impacts of the construction of these pollution controls, which logically may result in soils disruptions and displacements, an increase in noise levels and changes in traffic circulation. Further, the Trash TMDL explains that since [\*\*\*58] catch basin inserts "are not a full capture method, they must be monitored frequently

135 Cal. App. 4th 1392, \*; 38 Cal. Rptr. 3d 373, \*\*;  
2006 Cal. App. LEXIS 92, \*\*\*; 2006 Cal. Daily Op. Service 797

and must be used in conjunction with frequent street sweeping." The checklist and the Trash TMDL also ignore the effects of increased street sweeping on air quality, and possible impacts caused by maintenance of catch basin inserts, VSS units and other compliance methods.

Indeed, the County of Los Angeles wrote to the Regional Board that "cleanout of structural controls, such as [catch basin inserts] and VSSs, naturally will increase existing noise levels due to vehicle and vacuuming noises." The City of Los Angeles advised that the Trash TMDL would result in increased maintenance vehicle traffic and "substantial air emissions or deterioration of ambient air quality," increased noise, increased use of natural resources and adverse impacts on existing transportation systems.

The Water Boards contend those comments are merely "unsubstantiated opinion and speculation by biased project opponents." [HN26] Substantial evidence is not "[a]rgument, speculation, unsubstantiated opinion or narrative [or] evidence which is clearly inaccurate or erroneous." (Pub. Resources Code, § 21082.2, subd. (c).) [\*\*\*59] However, letters and testimony from government officials with personal knowledge of the anticipated effects of a project on their communities—"certainly supports a fair argument that the project may have a significant environmental impact." (*City of Livermore v. Local Agency Formation Com.* (1986) 184 Cal. App. 3d 531, 542 [230 Cal. Rptr. 867].) Again, however, the Trash TMDL itself satisfies the fair argument criterion.

Even if the Water Boards had relied on Public Resources Code section 21159 at the trial court, the environmental documents do not meet its minimum requirements. Neither the checklist nor the Trash TMDL includes an analysis of the reasonably foreseeable impacts of construction and maintenance of pollution control devices or mitigation measures, and in fact the Water Boards develop no argument as to how they ostensibly complied with the statute. While we agree a tiered environmental analysis is appropriate here, the Regional Board did not prepare a first-level EIR or its functional equivalent. We reject the Water Boards' argument the Regional Board did all it [\*1426] could because there "is no way to examine project level [\*\*\*60] impacts that are entirely dependent upon the speculative possibilities of how subsequent [\*\*\*397] decision[ ]makers may choose to comply" with the Trash TMDL. Tier two project-specific EIR's would be more detailed under Public Resources Code section 21159.2, but the Trash TMDL sets forth various compliance methods, the general impacts of which are reasonably foreseeable but not discussed.

As a matter of policy, in CEQA cases a public agency must explain the reasons for its actions to afford

the public and other agencies a meaningful opportunity to participate in the environmental review process, and to hold it accountable for its actions. (*Federation of Hillside & Canyon Assns. v. City of Los Angeles*, *supra*, 126 Cal. App. 4th 1180, 1198.) The Water Boards' CEQA documentation is inadequate, and remand is necessary for the preparation of an EIR or tiered EIR, or functional equivalent, as substantial evidence raises a fair argument the Trash TMDL may have significant impacts on the environment. The court correctly invalidated the Trash TMDL on CEQA grounds.<sup>12</sup>

12 The Water Boards also contend the trial court erred by staying the implementation schedule for the Trash TMDL pending this appeal. The matter is moot given our holding on the CEQA issue.

[\*\*\*61] VI

#### Declaratory Relief

In its statement of decision, the trial court explained the Cities "contend [the Water Boards] improperly attempted to control the watershed including the 'entire 584 square miles' of incorporated and unincorporated areas of the County [of Los Angeles], and nowhere in the [Trash] TMDL or the [1994] Basin Plan Amendment did [they] assert that the numeric Waste Load Allocations ... are to apply to the entire 584 square miles of watershed." The court, however, explained the Water Boards "concede the [Trash] TMDL only applies to navigable waters by asserting [they] didn't intend to control non-navigable waters," and it found "the parties are in agreement that the trash load allocations apply to the portion of the subject watershed as defined on pages 3575 and 3584 of the Administrative Record [pages of the Trash TMDL] and the Waste Load Allocations do not apply to non-waters."

The statement of decision nonetheless states the court granted the Cities' "relief as requested" as to "regulation of non-waters." In their third cause of action, the Cities sought a judicial declaration that the amendment to the 1994 Basin Plan and the Trash [\*\*\*62] TMDL are invalid because they violate federal and state law. The judgment declared unenforceable a July 29, 2002, letter from [\*1427] the Regional Board to the EPA that stated the "Waste Load Allocations apply to the entire urbanized portion of the watershed ... . The urbanized portion of the watershed was calculated to encompass 584 square miles of the total watershed."

(14) [HN27]"The fundamental basis of declaratory relief is the existence of an *actual, present controversy*." (5 Witkin, Cal. Procedure, *supra*, Pleadings, § 817, p. 273.) Because the parties agreed during this proceeding there was no *present controversy*, the judgment should

not have included declaratory relief on the nonwaters issue.

#### CITIES' APPEAL

I

#### *Concepts of "Maximum Extent Practicable" and "Best Management Practices"*

(15) The Cities contend a zero target for trash in the Los Angeles River is unattainable, [\*\*398] and thus the Trash TMDL violates the law by not deeming compliance through the federal "maximum extent practicable" and "best management practices" standards, which are less stringent than the numeric target of zero. The Cities rely on [HN28] 33 United States Code section 1342(p)(3)(B)(iii), [\*\*63] under which an NPDES permit for a municipal discharge into a storm drain "shall require controls to reduce the discharge of pollutants to the *maximum extent practicable*, including management practices, control techniques and system, design and engineering methods, and such other provisions as the [EPA] Administrator or the State determines appropriate for the control of such pollutants." (Italics added.)<sup>13</sup> "Best management practices" are generally pollution control measures set forth in NPDES permits. (*BIA, supra*, 124 Cal.App.4th at p. 877.)

13 The Clean Water Act and applicable regulations do not define the maximum extend practicable standard. (*Building Industry Assn. of San Diego County v. State Water Resources Control Bd.* (2004) 124 Cal.App.4th 866, 889 [22 Cal. Rptr. 3d 128] (*BIA*)). In *BIA*, the NPDES permit at issue defined the standard as "a highly flexible concept that depends on balancing numerous factors." (*Ibid.*)

The Cities assert that "as the [r]ecord [\*\*64] reflects, compliance with the 'zero' [Trash] TMDL ... is impossible," and the Water Boards "themselves recognize that 'zero' is an impossible standard to meet." Contrary to the Cities' suggestion, the Water Boards made no implied finding or concession of impossibility. Rather, the record shows that members of the Water Boards questioned whether a zero trash target is actually attainable. A zero limit on [\*1428] trash within the meaning of the Trash TMDL is attainable because there are methods of deemed compliance with the limit. The record does not show the limit is unattainable, and the burden was on the Cities as opponents of the Trash TMDL to establish impossibility. Further, the impossibility issue is not germane at this juncture, as the matter is at the planning stage with an interim goal of a 50 percent reduction in

trash, a goal everyone agrees is necessary and achievable.

In any event, the trial court found 33 United States Code section 1342(p)(3)(B)(iii) inapplicable to the adoption of a TMDL. The court also found state and federal laws authorize regional boards to "use water quality, and not be limited to practicability as the guiding principle for [\*\*65] developing limits [in a TMDL] on pollution." Further, the court noted the Cities presented no authority for their proposition the Regional Board is required to adopt a storm water TMDL that is achievable.

(16) We agree with the court's assessment. [HN29] The statute applicable to establishing a TMDL, 33 United States Code section 1313(d)(1)(C), does not suggest that practicality is a consideration. To the contrary, a regional board is required to establish a TMDL "at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety." (33 U.S.C. § 1313(d)(1)(C).) The NPDES permit provision, 33 United States Code 1342(p)(3)(B), is inapplicable because, again, we are only considering the propriety of the Trash TMDL, a precursor to NPDES permits implementing it. Under the Trash TMDL, the numeric target will be reconsidered after several years when a reduction in trash of 50 percent is achieved, and thus it is presently unknown whether compliance with a trash limit of zero will ever actually be mandated.

(17) To bolster their position the Cities rely on 33 United States Code section 1329(a)(1)(C). [\*\*66] [\*\*399] It provides, however, that in a state's assessment report for a *nonpoint* source management program, the state must "describe[] the process, including intergovernmental coordination and public participation, for identifying best management practices and measures to control each category and subcategory of nonpoint sources and, where appropriate, particular nonpoint sources identified under subparagraph (B) and to reduce, to the maximum extent practicable, the level of pollution resulting from such category, subcategory, or source." (*Ibid.*) In *BIA, supra*, 124 Cal.App.4th at page 887, we rejected the argument the statute shows Congress intended to apply a maximum extent practicable standard to point source discharges as well as nonpoint discharges. The Cities say they disagree with *BIA*, but they develop no argument revealing any flaw in the opinion. [HN30] [P]arties are required [\*1429] to include argument and citation to authority in their briefs, and the absence of these necessary elements allows this court to treat appellant's ... issue as waived." (*Interinsurance Exchange v. Collins* (1994) 30 Cal.App.4th 1445, 1448 [37 Cal. Rptr. 2d 126].)

The Cities' reliance [\*\*67] on *Defenders of Wildlife v. Browner* (9th Cir. 1999) 191 F.3d 1159, for the

proposition that municipalities, unlike private companies, may not be required to strictly comply with numeric discharge limits is likewise misplaced. *Defenders of Wildlife v. Browner* involves a challenge to an NPDES permit, not the adoption of a TMDL. Further, the court there rejected the argument that "the EPA [or authorized regional or state board] may not, under the [Clean Water Act], require strict compliance with state water-quality standards, through numerical limits or otherwise." (*Id.* at p. 1166.) The court explained: "Although Congress did not require municipal storm-sewer discharges to comply strictly with [numerical effluent limitations], [section] 1342(p)(3)(B)(iii) [of United States Code, title 33] states that '[p]ermits for discharges from municipal storm sewers ... shall require ... such other provisions as the [EPA] Administrator ... determines appropriate for the control of such pollutants.'" (Emphasis added.) That provision gives the EPA discretion to determine what pollution controls are appropriate. ... [¶] Under that [\*\*\*68] discretionary provision, the EPA has the authority to determine that ensuring strict compliance with state water-quality standards is necessary to control pollutants. The EPA also has the authority to require less than strict compliance with state water-quality standards. ... Under 33 [United States Code section] 1342(p)(3)(B)(iii), the EPA's choice to include either management practices or numeric limitations in the permits was within its discretion." (*Id.* at pp. 1166-1167.)

In *BIA*, this court similarly held that [HN31]33 United States Code section 1342(p)(3)(B)(iii) does not divest a regional board's discretion to impose an NPDES permit condition requiring compliance with state water quality standards more stringent than the maximum-extent-practicable standard. (*BIA, supra*, 124 Cal.App.4th at pp. 871, 882-885; see also *Wat. Code, § 13377* [waste discharge requirements shall meet federal standards and may also include "more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance"].) [\*\*\*69] Thus, even if the analysis in *Defenders of Wildlife v. Browner* or *BIA* arguably has any application to a TMDL, the opinions do not help the Cities.

(18) Additionally, the Cities' reliance on a November 2002 EPA memorandum on establishing TMDL's and issuing NPDES [\*\*400] permits is misplaced, as it postdates the Regional Board's adoption of the Trash TMDL and its approval by the State Board and the EPA. Further, the memorandum states it [\*1430] is not binding, and "indeed, there may be other approaches that would be appropriate in particular situations. [HN32]When EPA makes a TMDL or permitting decision, it will make each decision on a case-by-case basis and will be guided by applicable requirements of the

[Clean Water Act] and implementing regulations, taking into account comments and information presented at that time by interested persons regarding the appropriateness of applying these recommendations to the particular situation."

## II

### *Nonpoint Sources of Pollution*

The Cities contend the court should have invalidated the Trash TMDL on additional grounds, including the Water Boards' failure to identify load allocations and implementation measures for nonpoint sources of trash discharge. [\*\*\*70] The Cities assert the Water Boards are required to adopt implementation measures "for the homeless and aerial sources of trash, [and] also for the other nonpoint sources of trash consisting of State and federal facilities, and other facilities not yet subject to NPDES Permits." The Cities submit that the Clean Water Act does not allow the Water Boards "to effectively impose the burden of the load allocation from all nonpoint sources solely on municipalities."

The Cities further claim the Water Boards acted arbitrarily and capriciously by imposing a trash target of zero on municipalities, but imposing a "de minimus" requirement on non-point source discharges." The Cities cite the July 29, 2002, letter from the Regional Board to the EPA, clarifying that it identified nonpoint sources of trash pollution "as wind blown trash and direct deposit of trash into the water," but "as the non-point sources were determined to be de-minimus, we did not believe it necessary to outline a reduction schedule for non-point sources." Contrary to the Cities' position, the Regional Board did not adopt a "de minimus" load allocation for nonpoint sources. Rather, as the trial court found, the Regional [\*\*\*71] Board found the trash pollution from nonpoint sources is de minimus compared to trash pollution from point sources. The TMDL states the "major source of trash in the [Los Angeles River] results from litter, which is intentionally or accidentally discarded in the watershed drainage areas."

In arguing the Trash TMDL is required to include a specific load allocation for nonpoint sources of pollution, the Cities rely on the 2000 EPA Guidance, which provides: "Load allocations for nonpoint sources may be expressed as specific allocations for specific discharges or as 'gross allotments' to nonpoint source discharger categories. Separate nonpoint source allocations should be established for background loadings. Allocations may be based on a variety [\*1431] of technical, economic, and political factors. The methodology used to set allocations should be discussed in detail." (Italics added.)

The 2000 EPA Guidance, however, states it does not impose legally binding requirements. Further, the load allocation for nonpoint sources is implicitly zero for trash. Federal regulations define a TMDL as the sum of waste load allocations for point sources, load allocations for nonpoint sources [\*\*\*72] and natural backgrounds. (40 C.F.R. § 130.2(i) (2003).) Since "[a] TMDL defines the specified maximum amount of a pollutant which can be discharged into a body of water from all sources combined" (*American Wildlands v. Browner* (10th Cir. 2001) 260 F.3d 1192, 1194), [\*\*401] and the Trash TMDL specifies a zero numeric target for trash in Los Angeles River, load allocations are necessarily zero as well as waste load allocations.

Additionally, the Cities cite no authority for the proposition the Water Boards are required to identify an implementation program for nonpoint pollution sources. Again, "[w]here a point is merely asserted by counsel without any argument of or authority for its proposition, it is deemed to be without foundation and requires no discussion." (*People v. Ham* (1970) 7 Cal. App. 3d 768, 783 [86 Cal. Rptr. 906], disapproved on another ground in *People v. Compton* (1971) 6 Cal.3d 55, 60, fn. 3 [98 Cal. Rptr. 217, 490 P.2d 537]; see *People v. Sierra* (1995) 37 Cal.App.4th 1690, 1693, fn. 2 [44 Cal. Rptr. 2d 575].)

(19) In any event, [HN33] although the Clean Water Act focuses on both point and nonpoint sources of pollution, it is settled that [\*\*\*73] the measure "does not require states to take regulator[y] action to limit the amount of non-point water pollution introduced into its waterways. While the [Clean Water Act] requires states to designate water standards and identify bodies of water that fail to meet these standards, 'nothing in the [Clean Water Act] demands that a state adopt a regulatory system for nonpoint sources.' " (*Defenders of Wildlife v. U.S. Environ. Protec.*, *supra*, 415 F.3d at pp. 1124-1125, citing *American Wildlands v. Browner*, *supra*, 260 F.3d 1192, 1197 ["In the [Clean Water] Act, Congress has chosen not to give the EPA the authority to regulate nonpoint source pollution"]; *Appalachian Power Co. v. Train* (4th Cir. 1976) 545 F.2d 1351, 1373 ["Congress consciously distinguished between point source and nonpoint source discharges, giving EPA authority under the [Clean Water] Act to regulate only the former"]; *City of Arcadia I*, *supra*, 265 F. Supp. 2d at p. 1145 ["For nonpoint sources, limitations on loadings are not subject to a federal nonpoint source permitting program, and therefore any nonpoint source reductions can be enforced ... only to [\*\*\*74] the extent that a state institutes such reductions as regulatory requirements pursuant to state [\*1432] authority"].) "Nonpoint sources, because of their very nature, are not regulated under the NPDES [program]. Instead, Congress addressed nonpoint sources

of pollution in a separate portion of the [Clean Water] Act which encourages states to develop areawide waste treatment management plans." (*Pronsolino v. Marcus*, *supra*, 91 F. Supp. 2d at p. 1348, citing 33 U.S.C. § 1288; see also 33 U.S.C. § 1329.)

We conclude the court correctly ruled on this issue.

### III

#### *Uses To Be Made of Watershed*

The Cities next contend the Trash TMDL is invalid because the Water Boards "improperly relied on non-existent, illegal and irrational 'uses to be made' of the [Los Angeles] River." (Boldface and some capitalization omitted.) The Cities complain that the Trash TMDL states a purported beneficial use of one of numerous reaches of the river on the state's 303(d) list is "recreation and bathing, in particular by homeless people who seek shelter there," and the State Board chairman questioned the legality of such uses. The Cities also assert there is no [\*\*\*75] evidence to support the Trash TMDL's finding that swimming is an actual use of the river in any location.

The Cities rely on [HN34] section 303(d)(1)(A) of the Clean Water Act (33 U.S.C. § 1313(d)(1)(A)), which provides that in identifying impaired waters for its 303(d) list, states "shall establish a priority ranking for such waters, taking into account the severity of the pollution and the *uses to be made* of such waters." (Italics added.) [\*\*402] The Cities assert "an 'illegal' use cannot be a 'use to be made' for the water body."

Additionally, the Cities cite Water Code section 1324, which requires regional boards to establish water quality objectives in water quality control plans by considering a variety of factors, including "[p]ast, present, and probable future beneficial uses of water." (Water Code, § 13241, subd. (a).) They assert the "Water Boards acted contrary to law by basing the [Trash] TMDL on any uses of the [Los Angeles] River other than the actual 'uses to be made' of the River." (Boldface omitted.)

The Cities, however, make no showing of prejudice. Swimming and bathing by the homeless are only [\*\*\*76] two among numerous other beneficial uses that the Cities do not challenge, and there is no suggestion the numeric target of zero trash in the Los Angeles River would have been less stringent without consideration of the factors the Cities raise.

[\*1433] IV

#### *Scientific Methodology*

135 Cal. App. 4th 1392, \*, 38 Cal. Rptr. 3d 373, \*\*;  
2006 Cal. App. LEXIS 92, \*\*\*; 2006 Cal. Daily Op. Service 797

Further, the Cities contend the Trash TMDL is invalid on the additional ground that before adopting and approving it the Water Boards failed to comply with the requisite data collection and analysis. The Cities rely on a federal regulation providing that "[s]tates must establish appropriate monitoring methods and procedures (including biological monitoring) necessary to compile and analyze data on the quality of waters of the United States and, to the extent practicable, ground-waters." (40 C.F.R. § 130.4(a) (2003).) "The State's water monitoring program shall include collection and analysis of physical, chemical and biological data and quality assurance and control programs to assure scientifically valid data" in developing, among other things, TMDL's. (*Id.*, § 130.4(b).)

The trial court rejected the Cities' position, finding they failed to establish the Water Boards' [\*\*\*77] scientific data is inadequate or scientifically invalid. The court explained the Water Boards "have not failed to conduct ongoing studies, as they say, how else would [they] know the River is impaired by trash[?] And the Record reveals studies relied upon by the Boards."

This argument is a variation on the assimilative capacity study issue, and we similarly reject it. As the Water Boards point out, "trash is different than other pollutants. ... The complex modeling and analytical effort that may be necessary for typical pollutants that may be present in extremely low concentrations have no relevance to calculating a trash TMDL." Further, the Trash TMDL does discuss sources of trash in the Los Angeles River. It states the "City of Los Angeles conducted an Enhanced Catch Basin Cleaning Project in compliance with a consent decree between the [EPA], the State of California, and the City of Los Angeles. The project goals were to determine debris loading rates, characterize the debris, and find an optimal cleaning schedule through enhancing basin cleaning. The project evaluated trash loading at two drainage basins[.]" It goes on to discuss the amounts and types of trash collected [\*\*\*78] in the drainage basins between March 1992 and December 1994. The Cities cite no authority for the notion the Water Boards may not rely on data collected by another entity.

The Trash TMDL also states "[s]everal studies conclude that urban runoff is the dominant source of trash. The large amounts of trash conveyed by the urban storm water to the Los Angeles River is evidenced by the amount of ... trash that accumulates at the base of storm drains."

[\*1434] [\*\*403] Alternatively, the Cities contend a TMDL is not suitable for trash calculation. They rely on 33 United States Code section 1313(d)(1)(C), which provides: [HN35]"Each State shall establish for

[impaired] waters ... the total maximum daily load, for those pollutants which the [EPA] Administrator identifies ... as *suitable for such calculation*. Such load shall be established at a level *necessary* to implement the applicable water quality standards with seasonal variations and a margin of safety." (Italics added.)

The Cities also cite a 1978 EPA regulation that states a TMDL is "suitable for ... calculation" only under "proper technical conditions." (43 Fed.Reg. 60662, 60665 (Dec. 28, 1978) [\*\*\*79] (italics omitted).) "Proper technical conditions" require "the availability of the analytical methods, modeling techniques and data base necessary to develop a technically defensible TMDL." (*Id.* at p. 60662.) The Cities assert the proper technical conditions do not exist, referring to the Trash TMDL's comment that "[e]xtensive research has not been done on trash generation or the precise relationship between rainfall and its deposition in waterways."

The Cities ignore the EPA's determination that a TMDL *may* be calculated for trash as a pollutant. It approved the Regional Board's Trash TMDL, and had previously approved a trash TMDL for the East Fork of the San Gabriel River. (See Cal. Code Regs., tit. 23, § 3933.) Thus, the Cities' view that the 1978 EPA regulation prohibits a TMDL for trash is unfounded. TMDL's for trash are relatively new, and there is no evidence that in 1978 the EPA contemplated their establishment.

We find irrelevant the Cities' discussion of the EPA's proposed July 2000 TMDL "rule," as their federal register citation is not a regulation and merely concerns the 2003 withdrawal of a rule that never took effect. [\*\*\*80] (68 Fed.Reg. 13608, 13609 (Mar. 19, 2003) ["The July 2000 rule was controversial from the outset"].) In August 2001 the EPA delayed implementation of the July 2000 rule for further consideration, noting that some local government officials argued "some pollutants are not suitable for TMDL calculation." (66 Fed.Reg. 41817, 41819 (Aug. 9, 2001).) Nothing is said, however, about whether a trash TMDL is unsuitable for calculation, and again, the EPA has approved such TMDL's. The withdrawal of the proposed July 2000 rule left the existing rule regarding the establishment of a TMDL in place. (33 U.S.C. § 1313(d)(1)(C).)

V

#### *APA Requirements*

Lastly, the Cities contend the trial court erred by finding the Water Boards did not violate the APA. They assert the July 29, 2002, "clarification [\*1435] memorandum" from the Regional Board to the EPA makes substantive changes to the Trash TMDL regulation-the inclusion of the Estuary in the Trash TMDL and desig-

135 Cal. App. 4th 1392, \*; 38 Cal. Rptr. 3d 373, \*\*;  
2006 Cal. App. LEXIS 92, \*\*\*; 2006 Cal. Daily Op. Service 797

nating an allocation of zero for nonpoint pollution sources-violates the notice and hearing provisions of the APA. The Cities also contend the Trash TMDL and the clarification memorandum [\*\*\*81] "establish[] a regulation in violation of the APA's elements of 'clarity,' 'consistency,' and 'necessity,' as defined in [Government] Code section 11349."

[HN36](20) The APA (Gov. Code, §§ 11340 et seq., 11370) "establishes the procedures by which state agencies may adopt regulations. The agency must give the public notice of its proposed regulatory action [citations]; issue a complete text of the proposed regulation with a statement of the reasons for it [citation]; give interested parties an opportunity to comment on [\*\*404] the proposed regulation [citation]; respond in writing to public comments [citations]; and forward a file of all materials on which the agency relied in the regulatory process to the Office of Administrative Law [citation], which reviews the regulation for consistency with the law, clarity, and necessity [citations]." (*Tidewater Marine Western, Inc. v. Bradshaw* (1996) 14 Cal.4th 557, 568 [59 Cal. Rptr. 2d 186, 927 P.2d 296].) "One purpose of the APA is to ensure that those persons or entities whom a regulation will affect have a voice in its creation [citation], as well as notice of the law's requirements so [\*\*\*82] that they can conform their conduct accordingly [citation]." (*Id.* at pp. 568-569.)

The APA does not apply to "the adoption or revision of state policy for water quality control" unless the agency adopts a "policy, plan, or guideline, or any revision thereof." (Gov. Code, § 11353, subds. (a), (b)(1).) The Water Boards contend that while the Trash TMDL and amendment adding it to the 1994 Basin Plan are policies or plans covered by the APA, the clarification memorandum is not because it does not revise the terms of the Trash TMDL.

We are not required to reach the issue, because assuming the APA is applicable the Cities' position lacks merit. As to the Estuary, we have determined the Trash TMDL sufficiently notified affected parties of its inclusion in the document as an impaired water body. Further, we have determined the load allocation for nonpoint sources of trash pollution is also necessarily zero, and the Trash TMDL is not required to include implementation measures for nonpoint sources. Accordingly, the clarification memorandum is not germane. <sup>14</sup>

14 We deny the Water Boards' June 16, 2005, request for judicial notice.

[\*\*\*83]

#### [\*1436] DISPOSITION

The judgment is affirmed insofar as it is based on the Trash TMDL's violation of CEQA, and on a rejection of each of the issues the Cities raised in their appeal. The judgment is reversed insofar as it is based on the Trash TMDL's lack of an assimilative capacity study, inclusion of the Estuary as an impaired water body, and a cost-benefit analysis under Water Code section 13267 or the consideration of economic factors under Water Code section 13241, and also insofar as it grants declaratory relief regarding the purported inclusion of nonnavigable waters in the Trash TMDL.

The court's postjudgment order staying the Trash TMDL's implementation schedule is affirmed. The parties are to bear their own costs on appeal.

McIntyre, J., and Irion, J., concurred.

A petition for a rehearing was denied January 17, 2006, and the petition of plaintiffs and appellants for review by the Supreme Court was denied April 19, 2006, S141673.

Rehearing denied by, Request denied by City of Burbank v. State Water Res. Control Bd., 2005 Cal. LEXIS 7185 (Cal., June 29, 2005)

**PRIOR HISTORY:** Superior Court of Los Angeles County, Nos. BS060960, BS060957, Dzintra I. Janavs, Judge. Court of Appeal, Second Dist., Div. Three, Nos. B150912, B151175 & B152562. City of Burbank v. State Water Resources Control Bd., 111 Cal. App. 4th 245. 4 Cal. Rptr. 3d 27, 2003 Cal. App. LEXIS 1236 (Cal. App. 2d Dist., 2003)

**DISPOSITION:** Judgment affirmed in part and remanded in part..

**CASE SUMMARY:**

**PROCEDURAL POSTURE:** Plaintiff cities sought review of a judgment of the Court of Appeal of California, Second Appellate District, Division Three, holding that Cal. Water Code §§ 13241 and 13263 required a regional water control quality board to take into account economic considerations when it adopted water quality standards in a basin plan but not when the board set spe-

cific pollutant restrictions in wastewater discharge permits intended to satisfy those standards.

**OVERVIEW:** The cities owned three treatment plants that discharged wastewater under National Pollutant Discharge Elimination System permits issued by the regional board. The court held that whether the regional board should have complied with Cal. Water Code §§ 13263 and 13241 of California's Porter-Cologne Water Quality Control Act, Cal. Water Code § 13000 et seq., by taking into account "economic considerations," such as the costs the permit holder would incur to comply with the numeric pollutant restrictions set out in the permits depended on whether those restrictions met or exceeded the requirements of the federal Clean Water Act, 33 U.S.C.S. § 1251 et seq. To comport with the principles of federal supremacy, California law could not authorize California's regional boards to allow the discharge of pollutants into the navigable waters of the United States in concentrations that would exceed the mandates of federal law. The federal Clean Water Act did not prohibit a state, when imposing effluent limitations that were more stringent than required by federal law, from taking into account the economic effects of doing so.

**OUTCOME:** The court affirmed the judgment of the court of appeal, reinstating the wastewater discharge permits to the extent that the specified numeric limitations on chemical pollutants were necessary to satisfy federal Clean Water Act requirements for treated waste-

water. The court remanded for further proceedings to determine whether the pollutant limitations in the permits met or exceeded federal standards.

**CORE TERMS:** water quality, wastewater, regional boards, pollutant, Clean Water Act, effluent, federal law, basin, plant's, stringent', pollution, discharged, economic factors, narrative, federal standards, clean, Porter-Cologne Act, numeric, beneficial uses, concentration, navigable waters, regional, river, issuing, Conservation Laws, point sources, environmental, authorize, chemical, Control Act

LexisNexis(R) Headnotes

*Environmental Law > Water Quality > General Overview*

*Real Property Law > Water Rights > Beneficial Use*

[HN1]Whereas the State Water Resources Control Board establishes statewide policy for water quality control, Cal. Water Code § 13140, the regional boards formulate and adopt water quality control plans for all areas within a region. Cal. Water Code § 13240. The regional boards' water quality plans, called "basin plans," must address the beneficial uses to be protected as well as water quality objectives, and they must establish a program of implementation. Cal. Water Code § 13050(j). Basin plans must be consistent with state policy for water quality control. Cal. Water Code § 13240.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations*

*Environmental Law > Water Quality > Clean Water Act > Enforcement > General Overview*

[HN2]Under the federal Clean Water Act, 33 U.S.C.S. § 1251 et seq., each state is free to enforce its own water quality laws so long as its effluent limitations are not less stringent than those set out in the Clean Water Act. 33 U.S.C.S. § 1370.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations*

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN3]The Clean Water Act, 33 U.S.C.S. § 1251 et seq., provides for two sets of water quality measures. Effluent limitations are promulgated by the Environmental Protection Agency and restrict the quantities, rates, and concentrations of specified substances which are discharged from point sources. 33 U.S.C.S. §§ 1311, 1314. Water quality standards are, in general, promulgated by

the states and establish the desired condition of a waterway. 33 U.S.C.S. § 1313. These standards supplement effluent limitations so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels.

*Environmental Law > Water Quality > Clean Water Act > Coverage & Definitions > Point Sources*

[HN4]See 33 U.S.C.S. § 1362(14).

*Environmental Law > Water Quality > Clean Water Act > Water Quality Standards*

[HN5]The Environmental Protection Agency (EPA) provides states with substantial guidance in the drafting of water quality standards. Moreover, the Clean Water Act, 33 U.S.C.S. § 1251 et seq., requires, inter alia, that state authorities periodically review water quality standards and secure the EPA's approval of any revisions in the standards. If the EPA recommends changes to the standards and the state fails to comply with that recommendation, the Act authorizes the EPA to promulgate water quality standards for the state. 33 U.S.C.S. § 1313(c).

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations*

*Environmental Law > Water Quality > Clean Water Act > Enforcement > General Overview*

[HN6]Part of the federal Clean Water Act, 33 U.S.C.S. § 1251 et seq., is the National Pollutant Discharge Elimination System (NPDES), the primary means for enforcing effluent limitations and standards under the Clean Water Act. The NPDES sets out the conditions under which the federal Environmental Protection Agency or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. 33 U.S.C.S. § 1342(a), (b). In California, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law. Cal. Water Code § 13374.

*Environmental Law > Water Quality > General Overview*

*Real Property Law > Water Rights > Beneficial Use*

[HN7]See Cal. Water Code § 13263(a).

*Environmental Law > Water Quality > General Overview*

*Real Property Law > Water Rights > Beneficial Use*

[HN8]See Cal. Water Code § 13241.

35 Cal. 4th 613, \*; 108 P.3d 862, \*\*;  
26 Cal. Rptr. 3d 304, \*\*\*, 2005 Cal. LEXIS 3486

*Governments > Legislation > Interpretation*

[HN9]When construing any statute, the reviewing court's task is to determine the legislature's intent when it enacted the statute so that the court may adopt the construction that best effectuates the purpose of the law. In doing this, the court looks to the statutory language, which ordinarily is the most reliable indicator of legislative intent.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations*

[HN10]Cal. Water Code § 13263 directs regional boards, when issuing wastewater discharge permits, to take into account various factors including those set out in Cal. Water Code § 13241. Listed among the § 13241 factors is economic considerations. Cal. Water Code § 13241(d).

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations*

[HN11]Cal. Water Code § 13377 specifies that wastewater discharge permits issued by California's regional boards must meet the federal standards set by federal law. In effect, § 13377 forbids a regional board's consideration of any economic hardship on the part of the permit holder if doing so would result in the dilution of the requirements set by Congress in the Clean Water Act. That act prohibits the discharge of pollutants into the navigable waters of the United States unless there is compliance with federal law, 33 U.S.C.S. § 1311(a), and publicly operated wastewater treatment plants must comply with the act's clean water standards, regardless of cost. 33 U.S.C.S. §§ 1311(a), (b)(1)(B), (C), 1342(a)(1), (3).

*Constitutional Law > Supremacy Clause > General Overview*

*Environmental Law > Water Quality > General Overview*

[HN12]Because Cal. Water Code § 13263 cannot authorize what federal law forbids, it cannot authorize a regional board, when issuing a wastewater discharge permit, to use compliance costs to justify pollutant restrictions that do not comply with federal clean water standards. Such a construction of § 13263 would not only be inconsistent with federal law, it would also be inconsistent with the Legislature's declaration in Cal. Water Code § 13377 that all discharged wastewater must satisfy federal standards. Moreover, under the federal Constitution's Supremacy Clause, U.S. Const. art. VI, cl. 2, a state law that conflicts with federal law is without

effect. To comport with the principles of federal supremacy, California law cannot authorize the state's regional boards to allow the discharge of pollutants into the navigable waters of the United States in concentrations that would exceed the mandates of federal law.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations*

*Environmental Law > Water Quality > Clean Water Act > Enforcement > General Overview*

[HN13]The federal Clean Water Act, 33 U.S.C.S. § 1251 et seq., reserves to the states significant aspects of water quality policy, 33 U.S.C.S. § 1251(b), and it specifically grants the states authority to "enforce any effluent limitation" that is not "less stringent" than the federal standard, 33 U.S.C.S. § 1370. It does not prescribe or restrict the factors that a state may consider when exercising this reserved authority, and thus it does not prohibit a state when imposing effluent limitations that are more stringent than required by federal law—from taking into account the economic effects of doing so.

**SUMMARY:**

**CALIFORNIA OFFICIAL REPORTS SUMMARY**

The trial court ruled that California law required a regional water quality control board to weigh the economic burden on a wastewater treatment facility against the expected environmental benefits of reducing pollutants in the wastewater discharge. The cities owned three treatment plants that discharged wastewater under National Pollutant Discharge Elimination System permits issued by the regional board. (Superior Court of Los Angeles County, Nos. BS060960 and BS060957, Dzintra I. Janavs, Judge.) The Court of Appeal, Second Dist., Div. Three, Nos. B150912, B151175 and B152562, concluded that Wat. Code §§ 13241 and 13263, required a regional board to take into account "economic considerations" when it adopted water quality standards in a basin plan but not when the regional board set specific pollutant restrictions in wastewater discharge permits intended to satisfy those standards.

The Supreme Court affirmed the judgment of the Court of Appeal, reinstating the wastewater discharge permits in part and remanding for further proceedings. The court held that whether the regional board should have complied with Wat. Code §§ 13263 and 13241, of California's Porter-Cologne Water Quality Control Act, Wat. Code, § 13000 et seq., by taking into account "economic considerations," such as the costs the permit holder would incur to comply with the numeric pollutant restrictions set out in the permits, depended on whether those restrictions met or exceeded the requirements of

the federal Clean Water Act, 33 U.S.C. § 1251 et seq. To comport with the principles of federal supremacy, California law could not authorize California's regional boards to allow the discharge of pollutants into the navigable waters of the United States in concentrations that would exceed the mandates of federal law. The federal Clean Water Act did not prohibit a state, when imposing effluent limitations that were more stringent than required by [\*614] federal law, from taking into account the economic effects of doing so. (Opinion by Kennard, J., with George, C. J., Baxter, Werdegar, Chin, and Moreno, JJ., concurring. Concurring opinion by Brown, J. (see p. 629).)

#### HEADNOTES

#### CALIFORNIA OFFICIAL REPORTS HEADNOTES Classified to California Digest of Official Reports

(1) **Pollution and Conservation Laws § 5--Water--"Basin Plans."**--Whereas the State Water Resources Control Board establishes statewide policy for water quality control, Wat. Code, § 13140, the regional boards formulate and adopt water quality control plans for all areas within a region, Wat. Code, § 13240. Under Wat. Code, § 13050, subd. (i), the regional boards' water quality plans, called "basin plans," must address the beneficial uses to be protected as well as water quality objectives, and they must establish a program of implementation. Basin plans must be consistent with state policy for water quality control under Wat. Code, § 13240.

(2) **Pollution and Conservation Laws § 5--Water--Federal and State Standards.**--Under 33 U.S.C. § 1370, of the federal Clean Water Act, 33 U.S.C. § 1251 et seq., each state is free to enforce its own water quality laws so long as its effluent limitations are not less stringent than those set out in the Clean Water Act.

(3) **Pollution and Conservation Laws § 5--Water--Federal and State Standards.**--The Clean Water Act, 33 U.S.C. § 1251 et seq., provides for two sets of water quality measures. Pursuant to 33 U.S.C. §§ 1311 and 1314, effluent limitations are promulgated by the Environmental Protection Agency and restrict the quantities, rates, and concentrations of specified substances which are discharged from point sources. Water quality standards are, in general, promulgated by the states and establish the desired condition of a waterway under 33 U.S.C. § 1313. These standards supplement effluent limitations so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels.

(4) **Pollution and Conservation Laws § 5--Water--Federal and State Standards.**--The Environmental Protection Agency (EPA) provides states with substantial guidance in the drafting of water quality standards. Moreover, the Clean Water Act, 33 U.S.C. § 1251 et seq., requires, inter alia, that state authorities periodically review water quality [\*615] standards and secure the EPA's approval of any revisions in the standards. If the EPA recommends changes to the standards and the state fails to comply with that recommendation, 33 U.S.C. § 1313(c), authorizes the EPA to promulgate water quality standards for the state.

(5) **Pollution and Conservation Laws § 5--Water--National Pollutant Discharge Elimination System.**--Part of the federal Clean Water Act, 33 U.S.C. § 1251 et seq., is the National Pollutant Discharge Elimination System (NPDES), the primary means for enforcing effluent limitations and standards under the Clean Water Act. Title 33 U.S.C. § 1342(a), (b), of the NPDES sets out the conditions under which the federal Environmental Protection Agency or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. Under California law, Wat. Code, § 13374, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law.

(6) **Statutes § 21--Construction--Legislative Intent.**--When construing any statute, the reviewing court's task is to determine the Legislature's intent when it enacted the statute so that the court may adopt the construction that best effectuates the purpose of the law. In doing this, the court looks to the statutory language, which ordinarily is the most reliable indicator of legislative intent.

(7) **Pollution and Conservation Laws § 5--Water--Wastewater Discharge Permits--Economic Considerations.**--Wat. Code, § 13263, directs regional boards, when issuing wastewater discharge permits, to take into account various factors, including those set out in Wat. Code, § 13241. Listed among the § 13241 factors is economic considerations, in § 13241, subd. (d).

(8) **Pollution and Conservation Laws § 5--Water--Wastewater Discharge Permits--Economic Considerations.**--Wat. Code, § 13377, specifies that wastewater discharge permits issued by California's regional boards must meet the federal standards set by federal law. In effect, § 13377 forbids a regional board's consideration of any economic hardship on the part of the permit holder if doing so would result in the dilution of the requirements set by Congress in the Clean Water

35 Cal. 4th 613, \*, 108 P.3d 862, \*\*;  
26 Cal. Rptr. 3d 304, \*\*\*; 2005 Cal. LEXIS 3486

Act. That act prohibits the discharge of pollutants into the navigable waters of [\*616] the United States unless there is compliance with federal law (33 U.S.C. § 1311(a)), and publicly operated wastewater treatment plants must comply with the act's clean water standards under 33 U.S.C. §§ 1311(a), (b)(1)(B) and (C), 1342(a)(1) and (3), regardless of cost.

**(9) Pollution and Conservation Laws § 5--Water--Wastewater Discharge Permits--Economic Considerations.**--Because Wat. Code, § 13263, cannot authorize what federal law forbids, it cannot authorize a regional board, when issuing a wastewater discharge permit, to use compliance costs to justify pollutant restrictions that do not comply with federal clean water standards. Such a construction of § 13263 would not only be inconsistent with federal law, it would also be inconsistent with the Legislature's declaration in Wat. Code, § 13377, that all discharged wastewater must satisfy federal standards. Moreover, under the federal Constitution's supremacy clause, U.S. Const., art. VI, a state law that conflicts with federal law is without effect. To comport with the principles of federal supremacy, California law cannot authorize the state's regional boards to allow the discharge of pollutants into the navigable waters of the United States in concentrations that would exceed the mandates of federal law.

**(10) Pollution and Conservation Laws § 5--Water--Federal and State Standards.**--The federal Clean Water Act, 33 U.S.C. § 1251 et seq., reserves to the states significant aspects of water quality policy under 33 U.S.C. § 1251(b), and it specifically grants the states authority to enforce any effluent limitation that is not less stringent than the federal standard under 33 U.S.C. § 1370. It does not prescribe or restrict the factors that a state may consider when exercising this reserved authority, and thus it does not prohibit a state--when imposing effluent limitations that are more stringent than required by federal law--from taking into account the economic effects of doing so. Thus, a regional board, when issuing a wastewater discharge permit, may not consider economic factors to justify imposing pollutant restrictions that are less stringent than the applicable federal standards require. When, however, a regional board is considering whether to make the pollutant restrictions in a wastewater discharge permit more stringent than federal law requires, California law allows the board to take into account economic factors, including the wastewater discharger's cost of compliance.

**OPINION BY:** KENNARD [\*\*864]

#### OPINION

**KENNARD, J.**--Federal law establishes national water quality standards but allows the states to enforce their own water quality laws so long as they comply with federal standards. Operating within this federal-state framework, California's nine Regional Water Quality Control Boards establish water quality policy. They also issue permits for the discharge of treated wastewater; these permits specify the maximum allowable concentration of chemical pollutants in the discharged wastewater.

The question here is this: When a regional board issues a permit to a wastewater treatment facility, must the board take into account the facility's costs of complying with the board's restrictions on pollutants in the wastewater to be discharged? The trial court ruled that California law required a regional board to weigh the economic burden on the facility against the expected environmental benefits of reducing pollutants in the wastewater discharge. The Court of Appeal disagreed. On petitions by the municipal operators of three wastewater treatment facilities, we granted review.

We reach the following conclusions: Because both California law and federal law require regional boards to comply with federal clean water standards, and because the supremacy clause of the United States Constitution requires state law to yield to federal law, a regional board, when issuing a wastewater discharge permit, may not consider economic factors to justify imposing pollutant restrictions that are *less stringent* than the applicable federal standards require. When, however, a regional board is considering whether to make the pollutant restrictions in a wastewater discharge permit *more stringent* than federal law requires, California law allows the board to take into account economic [\*\*865] factors,

including the wastewater discharger's cost of compliance. We remand this case for further proceedings to determine whether the pollutant limitations in the permits challenged here meet or exceed federal standards.

#### [\*619] I. Statutory Background

The quality of our nation's waters is governed by a "complex statutory and regulatory scheme ... that implicates both federal and state administrative responsibilities." (*PUD No. 1 of Jefferson County v. Washington Department of Ecology* (1994) 511 U.S. 700, 704 [128 L. Ed. 2d 716, 114 S. Ct. 1900].) We first discuss California law, then federal law.

#### A. California Law

In California, the controlling law is the Porter-Cologne Water Quality Control Act (Porter-Cologne Act), which was enacted in 1969. (Wat. Code, § 13000 et seq., added by Stats. 1969, ch. 482, § 18, p. 1051.)<sup>1</sup> Its goal is "to attain the highest water [\*\*\*307] quality which is reasonable, considering all demands being made and to be made on those waters and the total values involved, beneficial and detrimental, economic and social, tangible and intangible." (§ 13000.) The task of accomplishing this belongs to the State Water Resources Control Board (State Board) and the nine Regional Water Quality Control Boards; together the State Board and the regional boards comprise "the principal state agencies with primary responsibility for the coordination and control of water quality." (§ 13001.) As relevant here, one of those regional boards oversees the Los Angeles region (the Los Angeles Regional Board).<sup>2</sup>

<sup>1</sup> Further undesignated statutory references are to the Water Code.

<sup>2</sup> The Los Angeles water region "comprises all basins draining into the Pacific Ocean between the southeasterly boundary, located in the westerly part of Ventura County, of the watershed of Rincon Creek and a line which coincides with the southeasterly boundary of Los Angeles County, from the ocean to San Antonio Peak and follows thence the divide between San Gabriel River and Lytle Creek drainages to the divide between Sheep Creek and San Gabriel River drainages." (§ 13200, subd. (d).)

(1) [HN1]Whereas the State Board establishes statewide policy for water quality control (§ 13140), the regional boards "formulate and adopt water quality control plans for all areas within [a] region" (§ 13240). The regional boards' water quality plans, called "basin plans," must address the beneficial uses to be protected as well as water quality objectives, and they must establish a program of implementation. (§ 13050, subd. (j)). Basin

35 Cal. 4th 613, \*, 108 P.3d 862, \*\*;  
26 Cal. Rptr. 3d 304, \*\*\*; 2005 Cal. LEXIS 3486

plans must be consistent with "state policy for water quality control." (§ 13240.)

## B. Federal Law

In 1972, Congress enacted amendments (Pub.L. No. 92-500 (Oct. 18, 1972) 86 Stat. 816) to the Federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.), which, as amended in 1977, is commonly known as the Clean Water Act. The Clean Water Act is a "comprehensive water quality statute designed to 'restore and maintain the chemical, physical, and biological integrity of the Nation's waters.'" (PUD No. 1 of Jefferson County v. Washington Dept. of Ecology, supra, 511 U.S. at p. 704, quoting 33 U.S.C. § 1251(a).) The act's national goal was to eliminate by the year 1985 "the discharge of pollutants into the navigable waters" of the United States. (33 U.S.C. § 1251(a)(1).) To accomplish this goal, the act established "effluent limitations," which are restrictions on the "quantities, rates, and concentrations of chemical, physical, biological, and other constituents"; these effluent limitations allow the discharge of pollutants only when the water has been satisfactorily treated to conform with federal water quality standards. (33 U.S.C. §§ 1311, 1362(11).)

(2) [HN2] Under the federal Clean Water Act, each state is free to enforce its own water quality laws so long as its effluent limitations are not "less stringent" than those set out in the Clean Water Act. (33 U.S.C. § 1370.) This led the California Legislature in 1972 to amend the state's Porter-Cologne Act "to ensure consistency with the requirements for state programs implementing the Federal Water Pollution Control Act." (§ 13372.)

[\*\*866] (3) Roughly a dozen years ago, the United States Supreme Court, in Arkansas v. Oklahoma (1992) 503 U.S. 91 [117 L. Ed. 2d 239, 112 S. Ct. 1046], described the distinct roles of the state and federal agencies in enforcing water quality: "The Clean Water Act anticipates a partnership between the States and the Federal Government, animated by a shared objective: 'to restore and maintain the chemical, physical, and biological integrity of the Nation's waters.' 33 U.S.C. § 1251(a). Toward [\*\*\*308] this end, [HN3][the Clean Water Act] provides for two sets of water quality measures. 'Effluent limitations' are promulgated by the [Environmental Protection Agency (EPA)] and restrict the quantities, rates, and concentrations of specified substances which are discharged from point sources.[] See §§ 1311, 1314. [W]ater quality standards' are, in general, promulgated by the States and establish the desired condition of a waterway. See § 1313. These standards supplement effluent limitations 'so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels.' EPA v. California ex

rel. State Water Resources Control Bd., 426 U.S. 200, 205, n. 12 [48 L. Ed. 2d 578, 96 S. Ct. 2022, 2025, n. 12] (1976).

3 A "[HN4]point source" is "any discernible, confined and discrete conveyance" and includes "any pipe, ditch, channel ... from which pollutants ... may be discharged." (33 U.S.C. § 1362 (14).)

[\*621] (4) [HN5] The EPA provides States with substantial guidance in the drafting of water quality standards. See generally 40 CFR pt. 131 (1991) (setting forth model water quality standards). Moreover, [the Clean Water Act] requires, *inter alia*, that state authorities periodically review water quality standards and secure the EPA's approval of any revisions in the standards. If the EPA recommends changes to the standards and the State fails to comply with that recommendation, the Act authorizes the EPA to promulgate water quality standards for the State. 33 U.S.C. § 1313(c). (Arkansas v. Oklahoma, supra, 503 U.S. at p. 101.)

(5) [HN6] Part of the federal Clean Water Act is the National Pollutant Discharge Elimination System (NPDES), "[t]he primary means" for enforcing effluent limitations and standards under the Clean Water Act. (Arkansas v. Oklahoma, supra, 503 U.S. at p. 101.) The NPDES sets out the conditions under which the federal EPA or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (33 U.S.C. § 1342(a) & (b).) In California, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law. (§ 13374.)

With this federal and state statutory framework in mind, we now turn to the facts of this case.

## II. Factual Background

This case involves three publicly owned treatment plants that discharge wastewater under NPDES permits issued by the Los Angeles Regional Board.

The City of Los Angeles owns and operates the Donald C. Tillman Water Reclamation Plant (Tillman Plant), which serves the San Fernando Valley. The City of Los Angeles also owns and operates the Los Angeles-Glendale Water Reclamation Plant (Los Angeles-Glendale Plant), which processes wastewater from areas within the City of Los Angeles and the independent cities of Glendale and Burbank. Both the Tillman Plant and the Los Angeles-Glendale Plant discharge wastewater directly into the Los Angeles River, now a concrete-lined flood control channel that runs through the City of Los Angeles, ending at the Pacific Ocean. The State Board and the Los Angeles Regional Board consider the Los Angeles River to be a navigable water of

35 Cal. 4th 613, \*; 108 P.3d 862, \*\*;  
26 Cal. Rptr. 3d 304, \*\*\*; 2005 Cal. LEXIS 3486

the United States for purposes of the federal Clean Water Act.

The third plant, the Burbank Water Reclamation Plant (Burbank Plant), is owned and operated by the City of Bur [\*\*\*309] bank, serving residents and businesses within that city. The Burbank Plant discharges wastewater into the Burbank Western Wash, which drains into the Los Angeles River.

[\*622] All three plants, which together process hundreds of millions of gallons of sewage [\*867] each day, are tertiary treatment facilities; that is, the treated wastewater they release is processed sufficiently to be safe not only for use in watering food crops, parks, and playgrounds, but also for human body contact during recreational water activities such as swimming.

In 1998, the Los Angeles Regional Board issued renewed NPDES permits to the three wastewater treatment facilities under a basin plan it had adopted four years earlier for the Los Angeles River and its estuary. That 1994 basin plan contained general narrative criteria pertaining to the existing and potential future beneficial uses and water quality objectives for the river and estuary.<sup>4</sup> The narrative criteria included municipal and domestic water supply, swimming and other recreational water uses, and fresh water habitat. The plan further provided: "All waters shall be maintained free of toxic substances in concentrations that are toxic to, or that produce detrimental physiological responses in human, plant, animal, or aquatic life." The 1998 permits sought to reduce these narrative criteria to specific numeric requirements setting daily maximum limitations for more than 30 pollutants present in the treated wastewater, measured in milligrams or micrograms per liter of effluent.<sup>5</sup>

4 This opinion uses the terms "narrative criteria" or descriptions, and "numeric criteria" or effluent limitations. Narrative criteria are broad statements of desirable water quality goals in a water quality plan. For example, "no toxic pollutants in toxic amounts" would be a narrative description. This contrasts with numeric criteria, which detail specific pollutant concentrations, such as parts per million of a particular substance.

5 For example, the permits for the Tillman and Los Angeles-Glendale Plants limited the amount of fluoride in the discharged wastewater to 2 milligrams per liter and the amount of mercury to 2.1 micrograms per liter.

The Cities of Los Angeles and Burbank (Cities) filed appeals with the State Board, contending that achievement of the numeric requirements would be too costly when considered in light of the potential benefit to water quality, and that the pollutant restrictions in the

NPDES permits were unnecessary to meet the narrative criteria described in the basin plan. The State Board summarily denied the Cities' appeals.

Thereafter, the Cities filed petitions for writs of administrative mandate in the superior court. They alleged, among other things, that the Los Angeles Regional Board failed to comply with sections 13241 and 13263, part of California's Porter-Cologne Act, because it did not consider the economic burden on the Cities in having to reduce substantially the pollutant content of their discharged wastewater. They also alleged that compliance with the pollutant restrictions set out in the NPDES permits issued by the regional [\*623] board would greatly increase their costs of treating the wastewater to be discharged into the Los Angeles River. According to the City of Los Angeles, its compliance costs would exceed \$ 50 million annually, representing more than 40 percent of its entire budget for operating its four wastewater treatment plants and its sewer system; the City of Burbank estimated its added costs at over \$ 9 million annually, a nearly 100 percent increase above its \$ 9.7 million annual budget for wastewater treatment.

[\*\*\*310] The State Board and the Los Angeles Regional Board responded that sections 13241 and 13263 do not require consideration of costs of compliance when a regional board issues a NPDES permit that restricts the pollutant content of discharged wastewater.

The trial court stayed the contested pollutant restrictions for each of the three wastewater treatment plants. It then ruled that sections 13241 and 13263 of California's Porter-Cologne Act required a regional board to consider costs of compliance not only when it adopts a basin or water quality plan but also when, as here, it issues an NPDES permit setting the allowable pollutant content of a treatment plant's discharged wastewater. The court found no evidence that the Los Angeles Regional Board had considered economic factors at either stage. Accordingly, the trial court granted the Cities' petitions for writs of mandate, and it ordered the Los Angeles Regional Board to vacate the contested restrictions on pollutants in the wastewater discharge permits issued to the three municipal plants here and to conduct hearings [\*\*\*868] to consider the Cities' costs of compliance before the board's issuance of new permits. The Los Angeles Regional Board and the State Board filed appeals in both the Los Angeles and Burbank cases.<sup>6</sup>

6 Unchallenged on appeal and thus not affected by our decision are the trial court's rulings that (1) the Los Angeles Regional Board failed to show how it derived from the narrative criteria in the governing basin plan the specific numeric pollutant limitations included in the permits; (2)

the administrative record failed to support the specific effluent limitations; (3) the permits improperly imposed daily maximum limits rather than weekly or monthly averages; and (4) the permits improperly specified the manner of compliance.

The Court of Appeal, after consolidating the cases, reversed the trial court. It concluded that sections 13241 and 13263 require a regional board to take into account "economic considerations" when it adopts water quality standards in a basin plan but not when, as here, the regional board sets specific pollutant restrictions in wastewater discharge permits intended to satisfy those standards. We granted the Cities' petition for review.

### [\*624] III. Discussion

#### A. Relevant State Statutes

The California statute governing the issuance of *wastewater permits* by a regional board is section 13263, which was enacted in 1969 as part of the Porter-Cologne Act. (See *ante*, at p. 619.) Section 13263 provides in relevant part: "[HN7]The regional board, after any necessary hearing, shall prescribe requirements as to the nature of any proposed discharge [of wastewater]. The requirements shall implement any relevant water quality control plans that have been adopted, and shall take into consideration the beneficial uses to be protected, the water quality objectives reasonably required for that purpose, other waste discharges, the need to prevent nuisance, and the provisions of Section 13241." (§ 13263, subd. (a), italics added.)

Section 13241 states: "[HN8]Each regional board shall establish such water quality objectives in water quality control plans as in its judgment will ensure the reasonable protection of beneficial uses and the prevention of nuisance; however, it is recognized that it may be possible for the quality of water to be changed to some degree without unreasonably affecting beneficial uses. Factors to be considered by a regional board in establishing water quality objectives shall include, but not necessarily be limited to, all of the following:

[\*\*\*311] "(a) Past, present, and probable future beneficial uses of water.

"(b) Environmental characteristics of the hydrographic unit under consideration, including the quality of water available thereto.

"(c) Water quality conditions that could reasonably be achieved through the coordinated control of all factors which affect water quality in the area.

"(d) *Economic considerations*.

"(e) The need for developing housing within the region.

"(f) The need to develop and use recycled water." (Italics added.)

The Cities here argue that section 13263's express reference to section 13241 requires the Los Angeles Regional Board to consider section 13241's listed factors, notably "[e]conomic considerations," before issuing NPDES permits requiring specific pollutant reductions in discharged effluent or treated wastewater.

[\*625] Thus, at issue is language in section 13263 stating that when a regional board "prescribe[s] requirements as to the nature of any proposed discharge" of treated wastewater it must "take into consideration" certain factors including "the provisions of Section 13241." According to the Cities, this statutory language requires that a regional board make an independent evaluation of the section 13241 factors, including "economic considerations," before restricting the pollutant content in an NPDES permit. This was the view expressed in the trial court's ruling. The Court of Appeal rejected that view. It held that a regional board need consider the section 13241 factors only when it adopts a basin or water quality plan, but not when, as in this case, it issues a wastewater discharge [\*\*869] permit that sets specific numeric limitations on the various chemical pollutants in the wastewater to be discharged. As explained below, the Court of Appeal was partly correct.

#### B. Statutory Construction

(6) [HN9]When construing any statute, our task is to determine the Legislature's intent when it enacted the statute "so that we may adopt the construction that best effectuates the purpose of the law." (*Hassan v. Mercy American River Hospital* (2003) 31 Cal.4th 709, 715 [3 Cal. Rptr. 3d 623, 74 P.3d 726]; see *Esberg v. Union Oil Co.* (2002) 28 Cal.4th 262, 268 [121 Cal. Rptr. 2d 203, 47 P.3d 1069].) In doing this, we look to the statutory language, which ordinarily is "the most reliable indicator" of legislative intent." (*Hassan, supra*, at p. 715.)

(7) As mentioned earlier, our Legislature's 1969 enactment of the Porter-Cologne Act, which sought to ensure the high quality of water in this state, predated the 1972 enactment by Congress of the precursor to the federal Clean Water Act. Included in California's original Porter-Cologne Act were sections 13263 and 13241. [HN10]Section 13263 directs regional boards, when issuing wastewater discharge permits, to take into account various factors, including those set out in section 13241. Listed among the section 13241 factors is "[e]conomic considerations." (§ 13241, subd. (d).) The plain language of sections 13263 and 13241 indicates the Legislature's intent in 1969, when these statutes were enacted, that a

35 Cal. 4th 613, \*, 108 P.3d 862, \*\*;  
26 Cal. Rptr. 3d 304, \*\*\*, 2005 Cal. LEXIS 3486

regional board consider the cost of compliance when setting effluent limitations in a wastewater discharge permit.

Our construction of sections 13263 and 13241 does not end with their plain statutory language, however. We must also analyze them in the context of the statutory scheme of which they are a part. (*State Farm Mutual Automobile Ins. Co. v. Garamendi* (2004) 32 Cal.4th 1029, 1043 [12] [\*\*\*312] Cal. Rptr. 3d 343, 88 P.3d 711.) Like sections 13263 and 13241, section 13377 is part of the Porter-Cologne Act. But unlike the former two statutes, section 13377 was [\*626] not enacted until 1972, shortly after Congress, through adoption of the Federal Water Pollution Control Act Amendments, established a comprehensive water quality policy for the nation.

(8) [HN11]Section 13377 specifies that wastewater discharge permits issued by California's regional boards must meet the federal standards set by federal law. In effect, section 13377 forbids a regional board's consideration of any economic hardship on the part of the permit holder if doing so would result in the dilution of the requirements set by Congress in the Clean Water Act. That act prohibits the discharge of pollutants into the navigable waters of the United States unless there is compliance with federal law (33 U.S.C. § 1311(a)), and publicly operated wastewater treatment plants such as those before us here must comply with the act's clean water standards, regardless of cost (see *id.*, §§ 1311(a), (b)(1)(B) & (C), 1342(a)(1) & (3)). [HN12](9) Because section 13263 cannot authorize what federal law forbids, it cannot authorize a regional board, when issuing a wastewater discharge permit, to use compliance costs to justify pollutant restrictions that do not comply with federal clean water standards.<sup>7</sup> Such a construction of section 13263 would not only be inconsistent with federal law, it would also be inconsistent with the Legislature's [\*\*870] declaration in section 13377 that all discharged wastewater must satisfy federal standards.<sup>8</sup> This was also the conclusion of the Court of Appeal. Moreover, under the federal Constitution's supremacy clause (art. VI), a state law that conflicts with federal law is "without effect." (*Cipollone v. Liggett Group, Inc.* (1992) 505 U.S. 504, 516 [120 L. Ed. 2d 407, 112 S. Ct. 2608]; see *Dowhal v. SmithKline Beecham Consumer Healthcare* (2004) 32 Cal.4th 910, 923 [12 Cal. Rptr. 3d 262, 88 P.3d 1].) To comport with the principles of federal supremacy, California law cannot authorize this [\*627] state's regional boards to allow the discharge of pollutants into the navigable waters of the United States in concentrations that would exceed the mandates of federal law.

7 The concurring opinion misconstrues both state and federal clean water law when it de-

scribes the issue here as "whether the Clean Water Act prevents or prohibits the regional water board from considering economic factors to justify pollutant restrictions that meet the clean water standards in more cost-effective and economically efficient ways." (Conc. opn. of Brown, J., *post*, at p. 629, some italics added.) This case has nothing to do with meeting federal standards in more cost effective and economically efficient ways. State law, as we have said, allows a regional board to consider a permit holder's compliance cost to *relax* pollutant concentrations, as measured by numeric standards, for pollutants in a wastewater discharge permit. (§§ 13241 & 13263.) Federal law, by contrast, as stated above in the text, "prohibits the discharge of pollutants into the navigable waters of the United States unless there is compliance with federal law (33 U.S.C. § 1311(a)), and publicly operated wastewater treatment plants such as those before us here must comply with the [federal] act's clean water standards, regardless of cost (see *id.*, §§ 1311(a), (b)(1)(B) & (C), 1342(a)(1) & (3))." (Italics added.)

8 As amended in 1978, section 13377 provides for the issuance of waste discharge permits that comply with federal clean water law "together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance." We do not here decide how this provision would affect the cost-consideration requirements of sections 13241 and 13263 when more stringent effluent standards or limitations in a permit are justified for some reason independent of compliance with federal law.

[\*\*313] Thus, in this case, whether the Los Angeles Regional Board should have complied with sections 13263 and 13241 of California's Porter-Cologne Act by taking into account "economic considerations," such as the costs the permit holder will incur to comply with the numeric pollutant restrictions set out in the permits, depends on whether those restrictions meet or exceed the requirements of the federal Clean Water Act. We therefore remand this matter for the trial court to resolve that issue.

### C. Other Contentions

The Cities argue that requiring a regional board at the wastewater discharge permit stage to consider the permit holder's cost of complying with the board's restrictions on pollutant content in the water is consistent with federal law. In support, the Cities point to certain

35 Cal. 4th 613, \*, 108 P.3d 862, \*\*;  
26 Cal. Rptr. 3d 304, \*\*\*; 2005 Cal. LEXIS 3486

provisions of the federal Clean Water Act. They cite section 1251(a)(2) of title 33 United States Code, which sets, as a national goal "*wherever attainable*," an interim goal for water quality that protects fish and wildlife, and section 1313(c)(2)(A) of the same title, which requires consideration, among other things, of waters' "*use and value for navigation*" when revising or adopting a "water quality standard." (Italics added.) These two federal statutes, however, pertain not to permits for wastewater discharge, at issue here, but to establishing water quality standards, not at issue here. Nothing in the federal Clean Water Act suggests that a state is free to disregard or to weaken the federal requirements for clean water when an NPDES permit holder alleges that compliance with those requirements will be too costly.

(10) At oral argument, counsel for amicus curiae National Resources Defense Council, which argued on behalf of California's State Board and regional water boards, asserted that the federal Clean Water Act incorporates state water policy into federal law, and that therefore a regional board's consideration of economic factors to justify greater pollutant concentration in discharged wastewater would conflict with the federal act even if the specified pollutant restrictions were not less stringent than those required under federal law. We are not persuaded. [HN13] The federal Clean Water Act reserves to the states significant aspects of water quality policy (33 U.S.C. § 1251(b)), and it specifically grants the states authority to "enforce any effluent limitation" that is not "*less stringent*" than the federal standard (33 U.S.C. § 1370, italics added). It does not prescribe or restrict the factors that a state may consider when exercising this reserved authority, and thus it does not prohibit [\*628] a state--when imposing effluent limitations that are *more stringent* than required by federal law--from taking into account the economic effects of doing so.

Also at oral argument, counsel for the Cities asserted that if the three municipal wastewater treatment facilities ceased releasing their treated wastewater into the concrete channel that makes up the Los Angeles River, it would (other than during the rainy season) contain no water at all, and thus would not be a "navigable water" of the [\*871] United States subject to the Clean Water Act. (See Solid Waste Agency v. United States Army Corps of Engineers (2001) 531 U.S. 159, 172 [148 L. Ed. 2d 576, 121 S. Ct. 675] ["The term 'navigable' has at least the import of showing us what Congress had in mind as its authority for enacting the CWA: its traditional jurisdiction over waters that were or had been navigable in fact or which could reasonably be so made."].) It is unclear when the Cities first raised this issue. The Court of Appeal did not discuss it in its opinion, and the Cities did not seek rehearing on this ground. (See Cal. Rules of

Court rule [\*\*\*314] 28(c)(2).) Concluding that the issue is outside our grant of review, we do not address it.

#### Conclusion

Through the federal Clean Water Act, Congress has regulated the release of pollutants into our national waterways. The states are free to manage their own water quality programs so long as they do not compromise the federal clean water standards. When enacted in 1972, the goal of the Federal Water Pollution Control Act Amendments was to *eliminate* by the year 1985 the discharge of pollutants into the nation's navigable waters. In furtherance of that goal, the Los Angeles Regional Board indicated in its 1994 basin plan on water quality the intent, insofar as possible, to remove from the water in the Los Angeles River toxic substances in amounts harmful to humans, plants, and aquatic life. What is not clear from the record before us is whether, in limiting the chemical pollutant content of wastewater to be discharged by the Tillman, Los Angeles-Glendale, and Burbank wastewater treatment facilities, the Los Angeles Regional Board acted only to implement requirements of the federal Clean Water Act or instead imposed pollutant limitations that exceeded the federal requirements. This is an issue of fact to be resolved by the trial court.

#### Disposition

We affirm the judgment of the Court of Appeal reinstating the wastewater discharge permits to the extent that the specified numeric limitations on chemical pollutants are necessary to satisfy federal Clean Water Act requirements for treated wastewater. The Court of Appeal is directed to remand this [\*629] matter to the trial court to decide whether any numeric limitations, as described in the permits, are "more stringent" than required under federal law and thus should have been subject to "economic considerations" by the Los Angeles Regional Board before inclusion in the permits.

George, C. J., Baxter, J., Werdegar, J., Chin, J., and Moreno, J., concurred.

CONCUR BY: BROWN

#### CONCUR

BROWN, J., Concurring.--I write separately to express my frustration with the apparent inability of the government officials involved here to answer a simple question: How do the federal clean water standards (which, as near as I can determine, are the state standards) prevent the state from considering economic factors? The majority concludes that because "the supremacy clause of the United States Constitution requires state law to yield to federal law, a regional board, when is-

35 Cal. 4th 613, \*, 108 P.3d 862, \*\*;  
26 Cal. Rptr. 3d 304, \*\*\*; 2005 Cal. LEXIS 3486

suing a wastewater discharge permit, may not consider economic factors to justify imposing pollutant restrictions that are *less stringent* than the applicable federal standards require." (Maj. opn., ante, at p. 618.) That seems a pretty self-evident proposition, but not a useful one. The real question, in my view, is whether the Clean Water Act prevents or prohibits the regional water board from considering economic factors to justify pollutant restrictions that *meet* the clean water standards in more cost-effective and economically efficient ways. I can see no reason why a federal law--which purports to be an example of cooperative federalism--would decree such a result. I do not think the majority's reasoning is at fault here. Rather, the agencies involved seemed to have worked hard to make this simple question impenetrably obscure.

A brief review of the statutory framework at issue is necessary to understand my concerns. [\*\*\*315]

#### [\*\*872] I. Federal Law

"In 1972, Congress enacted the Federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.), commonly known as the Clean Water Act (CWA) [Citation.] ... [¶] Generally, the CWA prohibits the discharge of any pollutant except in compliance with one of several statutory exceptions. [Citation.] ... The most important of those exceptions is pollution discharge under a valid NPDES [National Pollution Discharge Elimination System] permit, which can be issued either by the Environmental Protection Agency (EPA), or by an EPA-approved state permit program such as California's. [Citations.] NPDES permits are valid for five years. [Citation.] [¶] Under the CWA's NPDES permit system, the states are required to develop *water quality standards*. [Citations.] A water quality standard 'establish[es] the desired condition of a waterway.' [Citation.] A water quality standard for any [\*630] given waterway, or 'water body,' has two components: (1) the designated beneficial uses of the water body and (2) the *water quality criteria* sufficient to protect those uses. [Citations.] [¶] Water quality criteria can be either *narrative* or *numeric*. [Citation.]" (*Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1092-1093 [1 Cal. Rptr. 3d 76].)

With respect to satisfying water quality standards, "a polluter must comply with *effluent limitations*. The CWA defines an effluent limitation as 'any restriction established by a State or the [EPA] Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources into navigable waters, the waters of the contiguous zone, or the ocean, including schedules of compliance.' [Citation.] 'Effluent limitations are a means of *achieving* water quality standards.' [Citation.] [¶]

NPDES permits establish effluent limitations for the polluter. [Citations.] CWA's NPDES permit system provides for a two-step process for the establishing of effluent limitations. First, the polluter must comply with *technology-based effluent limitations*, which are limitations based on the best available or practical technology for the reduction of water pollution. [Citations.] [¶] Second, the polluter must also comply with more stringent *water quality-based effluent limitations* (WQBEL's) where applicable. In the CWA, Congress 'supplemented the "technology-based" effluent limitations with "water quality-based" limitations "so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels." ' [Citation.] [¶] The CWA makes WQBEL's applicable to a given polluter whenever WQBEL's are 'necessary to meet water quality standards, treatment standards, or schedules of compliance, established pursuant to any State law or regulations ... .' [Citations.] Generally, NPDES permits must conform to state water quality laws insofar as the state laws impose more stringent pollution controls than the CWA. [Citations.] Simply put, WQBEL's implement water quality standards." (*Communities for a Better Environment v. State Water Resources Control Bd.* supra, 109 Cal.App.4th at pp. 1093-1094, fn. omitted.)

This case involves water quality-based effluent limitations. As set forth above, "[u]nder the CWA, states have the primary role in promulgating water quality standards." (*Piney Run Preservation Ass'n v. Commrs. of Carroll Co.* (4th Cir. 2001) 268 F.3d 255, 265, fn. 9.) "Under the CWA, the water quality standards referred to in section 301 [see 33 U.S.C. § 1311] are primarily the states' handiwork." [\*\*\*316] (*American Paper Institute, Inc. v. U.S. Envtl. Protection Agency* (D.C. Cir. 1993) 302 U.S. App. D.C. 80 [996 F.2d 346, 349] (*American Paper*)). In fact, upon the 1972 passage of the CWA, "[s]tate water quality standards in effect at the time ... were deemed to be the initial water quality benchmarks for CWA purposes ... . The states were to revisit and, if [\*631] necessary, revise those initial standards at least once every three years." (*American Paper*, at p. 349.) Therefore, "once a water quality standard has been promulgated, section 301 of the CWA requires all NPDES permits for point sources to incorporate discharge limitations necessary to satisfy that standard." (*American Paper*, at p. 350.) Accordingly, it appears that in most instances, [\*\*873] state water quality standards are identical to the federal requirements for NPDES permits.

#### II. State Law

35 Cal. 4th 613, \*, 108 P.3d 862, \*\*;  
26 Cal. Rptr. 3d 304, \*\*\*; 2005 Cal. LEXIS 3486

In California, pursuant to the Porter-Cologne Water Quality Control Act (Wat. Code, § 13000 et seq.; Stats. 1969, ch. 482, § 18, p. 1051; hereafter Porter-Cologne Act), the regional water quality control boards establish water quality standards--and therefore federal requirements for NPDES permits--through the adoption of water quality control plans (basin plans). The basin plans establish water quality objectives using enumerated factors--including economic factors--set forth in Water Code section 13241.

In addition, as one court observed: "The Porter-Cologne Act ... established nine regional boards to prepare water quality plans (known as basin plans) and issue permits governing the discharge of waste. (Wat. Code, §§ 13100, 13140, 13200, 13201, 13240, 13241, 13243.) The Porter-Cologne Act identified these permits as 'waste discharge requirements,' and provided that the waste discharge requirements must mandate compliance with the applicable regional water quality control plan. (Wat. Code, §§ 13263, subd. (a), 13377, 13374.) [¶] Shortly after Congress enacted the Clean Water Act in 1972, the California Legislature added Chapter 5.5 to the Porter-Cologne Act, for the purpose of adopting the necessary federal requirements to ensure it would obtain EPA approval to issue NPDES permits. (Wat. Code, § 13370, subd. (c).) As part of these amendments, the Legislature provided that the state and regional water boards 'shall, as required or authorized by the [Clean Water Act], issue waste discharge requirements ... which apply and ensure compliance with all applicable provisions [of the Clean Water Act], together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance.' (Wat. Code, § 13377.) Water Code section 13374 provides that '[t]he term "waste discharge requirements" as referred to in this division is the equivalent of the term "permits" as used in the [Clean Water Act].' [¶] California subsequently obtained the required approval to issue NPDES permits. [Citation.] Thus, the waste discharge requirements issued by the regional water boards ordinarily also serve as NPDES permits under federal law. (Wat. Code, § 13374.)" (Building Industry Assn. of San Diego County v. State Water Resources Control Bd. (2004) 124 Cal.App.4th 866, 875 [22 Cal. Rptr. 3d 128].)

[\*632] Applying this federal-state statutory scheme, it appears that throughout this entire process, the Cities of Burbank and Los Angeles (Cities) were unable to have economic factors considered because the Los Angeles Regional Water Quality Control Board (Board)--the body responsible to enforce the statutory framework--failed to comply with its statutory mandate.

[\*\*\*317] For example, as the trial court found, the Board did not consider costs of compliance when it in-

itially established its basin plan, and hence the water quality standards. The Board thus failed to abide by the statutory requirement set forth in Water Code section 13241 in establishing its basin plan. Moreover, the Cities claim that the initial narrative standards were so vague as to make a serious economic analysis impracticable. Because the Board does not allow the Cities to raise their economic factors in the permit approval stage, they are effectively precluded from doing so. As a result, the Board appears to be playing a game of "gotcha" by allowing the Cities to raise economic considerations when it is not practical, but precluding them when they have the ability to do so.

Moreover, the Board acknowledges that it has neglected other statutory provisions that might have provided an additional opportunity to air these concerns. As set forth above, pursuant to the CWA, "[t]he states were to revisit and, if necessary, revise those initial standards at least once every three years--a process commonly known as triennial review. [Citation.] Triennial reviews consist of public hearings in which current water quality standards are examined to assure that they 'protect the public health or welfare, enhance the quality of water and serve the purposes' of the Act. [Citation.] Additionally, the CWA directs [\*\*874] states to consider a variety of competing policy concerns during these reviews, including a waterway's 'use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes.' " (American Paper, supra, 996 F.2d at p. 349.)

According to the Cities, "[t]he last time that the narrative water quality objective for toxicity contained in the Basin Plan was reviewed and modified was 1994." The Board does not deny this claim. Accordingly, the Board has failed its duty to allow public discussion--including economic considerations--at the required intervals when making its determination of proper water quality standards.

What is unclear is why this process should be viewed as a contest. State and local agencies are presumably on the same side. The costs will be paid by taxpayers and the Board should have as much interest as any other agency in fiscally responsible environmental solutions.

[\*633] Our decision today arguably allows the Board to continue to shirk its statutory duties. The majority holds that when read together, Water Code sections 13241, 13263, and 13377 do not allow the Board to consider economic factors when issuing NPDES permits to satisfy federal CWA requirements. (Maj. opn., ante, at pp. 625-627.) The majority then bifurcates the issue when it orders the Court of Appeal "to remand this mat-

35 Cal. 4th 613, \*; 108 P.3d 862, \*\*;  
26 Cal. Rptr. 3d 304, \*\*\*; 2005 Cal. LEXIS 3486

ter to the trial court to decide whether any numeric limitations, as described in the permits, are 'more stringent' than required under federal law and thus should have been subject to 'economic considerations' by the Los Angeles Regional Board before inclusion in the permits." (*Id.* at pp. 628-629.)

The majority overlooks the feedback loop established by the CWA, under which federal standards are linked to state-established water quality standards, including narrative water quality criteria. (See 33 U.S.C. § 1311 (b)(1)(C); 40 C.F.R. § 122.44(d)(1) (2004).) Under the CWA, NPDES permit requirements include the state narrative criteria, which are incorporated into the Board's basin plan under the description "no toxins in toxic amounts." As far as I can determine, NPDES permits [\*\*\*318] designed to achieve this narrative criteria (as well as designated beneficial uses) will usually implement the state's basin plan, while satisfying federal requirements as well.

If federal water quality standards are typically identical to state standards, it will be a rare instance that a state exceeds its own requirements and economic factors are taken into consideration. <sup>1</sup> In light of the Board's initial failure to consider costs of compliance and its repeated failure to conduct required triennial reviews, the result here is an unseemly bureaucratic bait-and-switch that we should not endorse. The likely outcome of the majority's decision is that the Cities will be economically burdened to meet standards imposed on them in a highly questionable manner. <sup>2</sup> In these times of tight fiscal budgets, it is difficult to imagine imposing additional financial burdens on municipalities without at least allowing them to present alternative views.

1 (But see *In the Matter of the Petition of City and County of San Francisco, San Francisco Baykeeper et al.* (Order No. WQ 95-4, Sept. 21, 1995) 1995 WL 576920.)

2 Indeed, given the fact that "water quality standards" in this case are composed of broadly worded components (i.e., a narrative criteria and "designated beneficial uses of the water body"), the Board possessed a high degree of discretion in setting NPDES permit requirements. Based on the Board's past performance, a proper exercise of this discretion is uncertain.

Based on the facts of this case, our opinion today appears to largely retain the status quo for the Board. If the Board can actually demonstrate that only the precise limitations at issue here, implemented in only one way, will achieve the desired water standards, perhaps its obduracy is justified. That case has yet to be made.

[\*634] Accordingly, I cannot conclude that the majority's decision is wrong. The analysis [\*\*875] may provide a reasonable accommodation of conflicting provisions. However, since the Board's actions "make me wanna holler and throw up both my hands," <sup>3</sup> I write separately to set forth my concerns and concur in the judgment—*dubitante*. <sup>4</sup>

**CITY OF MERCED, Plaintiff and Appellant, v. THE STATE OF CALIFORNIA et al., Defendants and Respondents**

Civ. No. 7590

Court of Appeal of California, Fifth Appellate District

153 Cal. App. 3d 777; 200 Cal. Rptr. 642; 1984 Cal. App. LEXIS 1824

March 27, 1984

**SUBSEQUENT HISTORY:** [\*\*\*1] Appellant's petition for a hearing by the Supreme Court was denied May 24, 1984.

**PRIOR HISTORY:** Superior Court of Merced County, No. 69797, George G. Murry, Judge.

**DISPOSITION:** The judgment is affirmed.

**CASE SUMMARY:**

**PROCEDURAL POSTURE:** Appellant, the city of Merced, sought review of an order of the Superior Court of Merced County (California), that denied a petition for a writ of mandamus to compel payment of the costs of business goodwill incurred in an eminent domain proceeding.

**OVERVIEW:** Appellant, the City of Merced, was ordered to pay \$ 72,350 to land owners in a condemnation action. Appellant applied to respondent, State of California, for reimbursement of that amount, and filed a petition for writ of mandamus to compel reimbursement when respondent refused to pay. The lower court denied the petition. The court affirmed the denial of the writ of mandamus and held that whether a city or county decided to exercise eminent domain was, essentially, an option of the city or county, rather than a mandate of the state. The court found that the fundamental concept was that the city or county was not required to exercise eminent domain, but if the power of eminent domain was exercised, then the city would be required to pay for loss

of goodwill and the payment for loss of goodwill was not a state-mandated cost.

**OUTCOME:** The court affirmed the order of the lower court that denied a petition for a writ of mandamus to compel respondent. State of California, to reimburse appellant, city of Merced, for the costs of business goodwill incurred in an eminent domain proceeding because the costs were not state mandated.

**CORE TERMS:** state-mandated, business goodwill, reimbursement, eminent domain, mandated, optional, goodwill, eminent domain laws, loss of goodwill, local agency, legal theory, eminent domain proceeding, writ of mandamus, line item, reasonable alternatives, discretionary, accorded, revised, incur, system of law, state agency, business conducted, statutes enacted, condemnation, acquisition, recodified, acquire, italics, executive order, question of law

**SUMMARY:**

**CALIFORNIA OFFICIAL REPORTS SUMMARY**

The trial court entered judgment denying a city's petition for a writ of mandamus to compel payment of its claim against the State of California for costs of business goodwill it incurred in an eminent domain proceeding as a result of the enactment of Stats. 1975, ch. 1275, which revised and recodified the state's eminent domain laws. The revisions included a new requirement that, upon proof of satisfaction of certain stated conditions, the owner of a business conducted on the condemned property is entitled to compensation for loss of goodwill (Code Civ. Proc., § 1263.510). In entering judgment de-

nying the writ, the court concluded that the state was liable to the city for payment of business goodwill, but that the court could not order subvention from state funds. (Superior Court of Merced County, No. 69797, George G. Murry, Judge.)

The Court of Appeal affirmed. The court held that the city's payment for business goodwill in a condemnation proceeding it elected to pursue did not constitute the payment of a state-mandated cost pursuant to Rev. & Tax. Code, § 2231, subd. (a), and Rev. & Tax. Code, § 2207. In so ruling, the court held that the Legislature made clear the discretionary nature of the acquisition of property by eminent domain by the passage of Code Civ. Proc., § 1230.030 (also included within Stats. 1975, ch. 1275). Thus, the court held that the Legislature intended for payment of business goodwill to be discretionary as well, and that such an increased cost so incurred as a result of the enactment of the revised eminent domain laws was not a cost which the city was required or mandated to incur. (Opinion by Hamlin, J., with Franson, Acting P. J., and Zenovich, J., concurring.)

**HEADNOTES**

**CALIFORNIA OFFICIAL REPORTS HEADNOTES**

Classified to California Digest of Official Reports, 3d Series

(1) Appellate Review § 55 -- Presenting and Preserving Questions in Trial Court -- Adherence to Theory of Case -- Assertion of New Legal Theory on Appeal. --On appeal from the denial of a city's petition for a writ to compel the state to pay the city for the costs of business goodwill incurred in an eminent domain proceeding, it was permissible for defendants to assert a new legal theory. Although defendants argued for the first time on appeal that in governmental-entity-initiated eminent domain proceedings, payment for business goodwill pursuant to the requirements of Stats. 1975, ch. 1275 (which revised and recodified the state's eminent domain laws), is not a state-mandated cost subject to reimbursement by the state, which argument was a change in defendants' position from its answer to the petition and its stipulation at the hearing on the petition, such issue was purely a question of law. Thus, since the appellate court is not limited by the interpretation of statutes by the trial court, on appeal defendants could correct a position mistakenly taken in the trial court that allegedly was inconsistent with the clear manifestation of the intent of the Legislature.

(2a) (2b) (2c) Eminent Domain § 22 -- Compensable Property and Rights -- Business Goodwill -- Payment by City -- Reimbursement From State --

**State-mandated Cost.** --A city's payment for business goodwill in a condemnation proceeding it elected to pursue did not constitute the payment of a state-mandated cost under Rev. & Tax. Code, § 2231, subd. (a), and Rev. & Tax. Code, § 2207. Although Stats. 1975, ch. 1275, which revised and recodified the state's eminent domain laws, included the requirement that upon proof of satisfaction of certain stated conditions the owner of a business conducted on the condemned property is entitled to compensation for a loss of goodwill (Code Civ. Proc., § 1263.510), the Legislature made clear the discretionary nature of acquisition of property by eminent domain by the passage of Code Civ. Proc., § 1230.030 (also included within Stats. 1975, ch. 1275). Thus, the Legislature intended for payment of goodwill to be discretionary, and such an increased cost so incurred as a result of the enactment of the revised eminent domain laws was not a cost which the county was required or mandated to incur.

**(3) Statutes § 28 -- Construction -- Language -- Harmony With Whole System of Law.** --The meaning of a statute must, in the first instance, be sought in the language in which it is framed, and if that is plain the sole judicial function is to enforce it according to its terms. Where the language is clear there is no room for interpretation. Moreover, courts will not determine the wisdom, desirability, or propriety of statutes enacted by the Legislature. Additionally, every statute should be construed with reference to the whole system of law of which it is a part so that all may be harmonized and have effect. Furthermore, administrative interpretations of statutes should be accorded great respect and followed if not clearly erroneous.

**(4) Appellate Review § 135 -- Review -- Presumptions -- Finding by State Agency.** --A finding by a state agency is accorded great weight unless it is shown to be clearly erroneous.

**COUNSEL:** Steven F. Nord, City Attorney, for Plaintiff and Appellant.

John K. Van de Kamp, Attorney General, N. Eugene Hill, Assistant Attorney General, and Geoffrey L. Graybill, Deputy Attorney General, for Defendants and Respondents.

**JUDGES:** Opinion by Hamlin, J., with Franson, Acting P. J., and Zenovich, J., concurring.

**OPINION BY: HAMLIN**

**OPINION**

[\*779] [\*\*643] The Case

By its petition for writ of mandamus and its complaint for declaratory judgment plaintiff sought to compel payment of its claim against the State of California (the State) for costs of business goodwill it incurred in an eminent domain proceeding as a result of the enactment of chapter 1275, Statutes of 1975. Specifically, plaintiff asked the court to order the State Controller to pay plaintiff \$ 71,350, plus interest, from a "State budget line item he deems appropriate" or, alternatively, to direct the State Controller to pay the amount from a line item the court deems appropriate. The trial court concluded that the [\*\*\*2] State was liable to plaintiff for payment of business goodwill, but that the court could not order subvention from state funds. It therefore entered judgment denying the peremptory writ of mandamus. Plaintiff filed a timely notice of appeal.

[\*780] On appeal, defendants argue for the first time, as we believe they may, that plaintiff's payment for business goodwill in a condemnation proceeding it elected to pursue does not constitute a state-mandated cost. We agree and find it unnecessary to discuss the other contentions of the parties.

#### The Facts

We include only a brief statement of the undisputed facts which are essential to resolution of the pivotal legal issue involved, i.e., whether plaintiff's payment for business goodwill in the proceeding it initiated to condemn property for its use is a state-mandated cost.

On April 8, 1980, the Merced County Superior Court entered a final order of condemnation in the case entitled City of Merced v. Rodney Barbour and Thomas L. Barbour. This order required plaintiff to pay, along with other sums, \$ 71,350 allocated to loss of goodwill pursuant to the provisions of Code of Civil Procedure section 1263.510 [\*\*\*3]. Plaintiff applied to the State for reimbursement of that amount under the provisions of Revenue and Taxation Code section 2201 et seq. Plaintiff's application for reimbursement was directed to the State Board of Control. That board approved plaintiff's claim. It was included, along with other similar claims, as a line item in chapter 1090, Statutes of 1981. [\*\*644] The Legislature deleted from chapter 1090 all claims seeking reimbursement for business goodwill under chapter 1275, Statutes of 1975 (1275 claims). Additionally, the Legislature included in chapter 1090, as amended, a direction that the Board of Control not accept, or submit to the Legislature, any more 1275 claims.

After plaintiff received notice of the above-mentioned action of the Legislature, it initiated this case.

#### Discussion

I. *The State may assert a new legal theory on appeal.*

(1) Defendants admitted in their answer to the petition for writ of mandamus that chapter 1275, Statutes of 1975, mandated a new program or increased level of service under provisions of the Revenue and Taxation Code. At the hearing on the petition, defendants stipulated to the same effect [\*\*\*4] and added that plaintiff had not requested that mandate. For the first time on appeal, defendants argue that in governmental-entity-initiated eminent domain proceedings payment for business goodwill pursuant to the requirements of chapter 1275, Statutes of 1975, is not a state-mandated cost subject to reimbursement by the State. Defendants admit this represents a change [\*781] in their position but that they mistakenly took a position in the trial court inconsistent with the clear manifestation of the intent of the Legislature.

To support their position that defendants may argue on appeal at variance with their answer and admission in the trial court, defendants rely on Barton v. Owen (1977) 71 Cal.App.3d 484 [139 Cal.Rptr. 494]. There the plaintiff sought medical treatment from defendant for acute sinusitis. After a series of unsuccessful treatments, plaintiff developed a brain abscess which resulted in a prefrontal lobotomy. The plaintiff tried the case on the theory that the physician was negligent in not taking a culture and sensitivity test as part of his diagnosis. He did not prevail. On appeal, plaintiff argued the trial court erred in instructing [\*\*\*5] the jury on contributory negligence. Additionally, plaintiff stated a new theory that failure to take the culture and sensitivity test was negligence as a matter of law. The court allowed the new legal theory on appeal.

Plaintiff points to 3 Witkin, California Procedure (2d ed. 1971) Pleadings, sections 342-344, pages 2009-2011, for the general rule that an admission of fact may not be argued differently on appeal. We agree, but that is not what defendants seek to do. Here, the question of whether a cost is state-mandated is purely a question of law. [HN1] This court is not limited by the interpretation of statutes by the trial court. (See In re Davis (1978) 87 Cal.App.3d 919, 921 [151 Cal.Rptr. 29]; Barton v. Owen, *supra*, 71 Cal.App.3d at p. 491.) Thus defendants may argue their new legal theory on appeal.

II. *Payment of goodwill is not a state-mandated cost.*

(2a) By this appeal, plaintiff seeks to compel reimbursement of its payment for business goodwill in a proceeding to acquire property under its power of eminent domain. Plaintiff can succeed only if the payment for which it seeks reimbursement was a state-mandated cost. [\*\*\*6] Our decision on this issue turns upon the meaning of various statutory provisions. (3) In examining the

relevant statutes we apply the basic rules of statutory construction stated by the court in Marin Hospital Dist. v. Rothman (1983) 139 Cal.App.3d 495, 498-499 [188 Cal.Rptr. 828]. "[HN2] The meaning of a statute must, in the first instance, be sought in the language in which it is framed, and if that is plain the sole judicial function is to enforce it according to its terms [citation]; where the language is clear there is no room for interpretation [citation]. And courts will not determine the wisdom, desirability, or propriety of statutes enacted by the Legislature. [Citation.]

"Moreover, "[HN3] every statute should be construed with reference to the whole system of law of which it is a part so [\*\*645] that all may be harmonized and [\*782] have effect." (Select Base Materials v. Board of Equal. (1959) 51 Cal.2d 640, 645 . . . ) We inquire further into 'the whole system of law of which [Government Code section 26912] is a part.'" (Italics in original.)

Also applicable in this case is [\*\*\*7] the rule that [HN4] administrative interpretations of statutes should be accorded great respect and followed if not clearly erroneous. (Norioan v. Department of Administration (1970) 11 Cal.App.3d 651, 655 [89 Cal.Rptr. 889].) We also rely on extrinsic aids such as the history of relevant statutes, committee reports, and the legislative debates. (*Ibid.*)

(2b) Revenue and Taxation Code section 2231, subdivision (a), includes a direction that: "[HN5] The state shall reimburse each local agency for all 'costs mandated by the state', as defined in Section 2207 . . ." Section 2207, in turn, provides in pertinent part: "[HN6] 'Costs mandated by the state' means any increased costs which a local agency is required to incur as a result of the following: [para. ] (a) Any law enacted after January 1, 1973, which mandates a new program or an increased level of service of an existing program; . . ."

Chapter 1275, Statutes of 1975 (Code Civ. Proc., § 1230.010 et seq.) revised and recodified the eminent domain laws of this state. The revisions included a new requirement that, upon proof of satisfaction of [\*\*\*8] four stated conditions, the owner of a business conducted on the condemned property is entitled to compensation for loss of goodwill (Code Civ. Proc., § 1263.510).<sup>1</sup>

1 Code of Civil Procedure section 1263.510 provides: "(a) [HN7] The owner of a business conducted on the property taken, or on the remainder if such property is part of a larger parcel, shall be compensated for loss of goodwill if the owner proves all of the following:

"(1) The loss is caused by the taking of the property or the injury to the remainder.

153 Cal. App. 3d 777, \*; 200 Cal. Rptr. 642, \*\*;  
1984 Cal. App. LEXIS 1824, \*\*\*

"(2) The loss cannot reasonably be prevented by a relocation of the business or by taking steps and adopting procedures that a reasonably prudent person would take and adopt in preserving the goodwill.

"(3) Compensation for the loss will not be included in payments under Section 7262 of the Government Code.

"(4) Compensation for the loss will not be duplicated in the compensation otherwise awarded to the owner.

"(b) Within the meaning of this article, 'goodwill' consists of the benefits that accrue to a business as a result of its location, reputation for dependability, skill or quality, and any other circumstances resulting in probable retention of old or acquisition of new patronage."

[\*\*\*9] The costs for which plaintiff seeks reimbursement in this proceeding were incurred by reason of this newly imposed obligation to compensate for loss of business goodwill.<sup>2</sup> This squarely presents the issue which we conclude [\*783] is dispositive of plaintiff's appeal, i.e., is the increased cost so incurred as a result of enactment of chapter 1275, Statutes of 1975, a cost which plaintiff was *required* or *mandated* to incur?

2 Until enactment of chapter 1275, Statutes of 1975, goodwill was not compensable in eminent domain proceedings. (See 5 Witkin, Summary of Cal. Law (8th ed. 1974) Constitutional Law, § 586, p. 3882.)

In support of the statutory construction it urges, plaintiff points to the Board of Control's decision in March 1981 that 1275 claims were for reimbursement of state-mandated costs. (4) Plaintiff correctly notes that such a finding by a state agency is accorded great weight unless shown to be clearly erroneous. (*Norioian v. Department of Administration, supra*, 11 Cal.App.3d at p. 655.) [\*\*\*10]

(2c) Defendants counter that the Legislature declared its intent that 1275 claims not be considered state-mandated by rejecting the line item of the budget providing funds for payment of 1275 claims and by directing that the Board of Control not approve or submit to the Legislature any more 1275 claims. (Stats. 1981, ch. 1090.) Defendants rely on *Tyler v. State of California* (1982) 134 Cal.App.3d 973, 977 [162 Cal.Rptr. 82], to support their position that, where a statute is unclear, a later expression of the Legislature bearing upon the intent of the prior statute may be properly [\*646] considered in determining the effect and meaning of the prior statute.

More significantly, defendants argue that the Legislature made clear the discretionary nature of acquisition of property by eminent domain by passage of Code of Civil Procedure section 1230.030. Section 1230.030 was included within chapter 1275, Statutes of 1975, the same legislation that changed the law of eminent domain to require compensation for business goodwill. Section 1230.030 provides: "Nothing in this title requires that the power of eminent domain [\*\*\*11] be exercised to acquire property necessary for public use. Whether property necessary for public use is to be acquired by purchase or other means or by eminent domain is a decision left to the discretion of the person authorized to acquire the property."

We agree that the Legislature intended for payment of goodwill to be discretionary. The above authorities reveal that whether a city or county decides to exercise eminent domain is, essentially, an option of the city or county, rather than a mandate of the state. The fundamental concept is that the city or county is not required to exercise eminent domain. If, however, the power of eminent domain is exercised, then the city will be required to pay for loss of goodwill. Thus, payment for loss of goodwill is not a state-mandated cost.

This construction is confirmed by subsequent legislative actions, including the enactment of Senate Bill No. 90 (Russell), 1979-1980 Regular Session. [\*784] Among other things, that bill (Sen. Bill No. 90) added Revenue and Taxation Code section 2207, subdivision (h):

"[HN8]'Costs mandated by the state' means any increased costs which a local agency is required to incur [\*\*\*12] as the result of the following:

" . . .

"(h) Any statute enacted after January 1, 1973, or executive order issued after January 1, 1973, which adds new requirements to an existing optional program or service and thereby increases the cost of such program or service if the local agencies have no reasonable alternatives other than to continue the optional program."

Senate Bill No. 90 became effective on July 1, 1981, after plaintiff incurred the cost of business goodwill for which it seeks reimbursement. Subdivision (h) appears to have been included in the bill to provide for reimbursement of increased costs in an optional program such as eminent domain when the local agency has no reasonable alternative to eminent domain. The legislative history of Senate Bill No. 90 supports the conclusion that subdivision (h) was added to Revenue and Taxation Code section 2207 to extend state liability rather than to clarify existing law. The Report of the Assembly Revenue and Taxation Committee (June 9, 1980) includes a statement:

153 Cal. App. 3d 777, \*; 200 Cal. Rptr. 642, \*\*;  
1984 Cal. App. LEXIS 1824, \*\*\*

"SB 90 further defines 'mandated costs' in Sections 4 and 5 to include the following:

". . . .

"e. Where a statute or executive [\*\*\*13] order adds *new requirements to an existing optional program*, which increases costs if the local agency has no reasonable alternative than to continue that optional program." (Rep., p. 1, italics in original.)

Additionally, the Ways and Means Committee's Staff Analysis (Aug. 4, 1980) notes that Senate Bill No. 90: "Expands the definition of *local* reimbursable costs mandated and paid by the state to include:

". . . .

"e. Statutes or executive orders adding *new requirements to an existing optional program*, which increases costs if the local agency has no reasonable alternative than to continue that optional program." (P. 2, italics in original.)

[\*785] Both reports quoted above characterize Senate Bill No. 90 as expanding the definition of local

reimbursable costs. The Legislative Analyst's Report of July 30, 1980, on Senate Bill No. 90 similarly includes a [\*\*647] statement that the bill expands the definition of state-mandated costs. Such characterizations of the purpose of Senate Bill No. 90 are consistent only with the conclusion that, until that bill was enacted, increased costs incurred in an optional program such as eminent domain were not state-mandated. [\*\*\*14] Thus the cost of business goodwill for which plaintiff was required by chapter 1275, Statutes of 1975, to pay in April 1980, was not a state-mandated cost. It follows that the trial court properly denied the petition for a writ of mandamus to compel payment of that cost. Our conclusion on this pivotal issue makes it unnecessary to consider plaintiff's contentions that article XIII B of the California Constitution requires the State to provide a subvention of funds to reimburse state-mandated costs, that there are appropriated funds available to pay plaintiff's claim, and that a peremptory writ of mandate is the appropriate remedy in this case.

The judgment is affirmed.

COUNTY OF FRESNO, Plaintiff and Appellant, v. THE STATE OF CALIFORNIA  
et al., Defendants and Respondents.

No. S015637.

Supreme Court of California

53 Cal. 3d 482; 808 P.2d 235; 280 Cal. Rptr. 92; 1991 Cal. LEXIS 1363; 91 Cal. Daily  
Op. Service 2870; 91 Daily Journal DAR 4617

April 22, 1991.

**PRIOR HISTORY:** Superior Court of Fresno  
County, No. 379518-4, Gary S. Austin, Judge.

**CASE SUMMARY:**

**PROCEDURAL POSTURE:** Appellant county sought review of a judgment from the Court of Appeal (California), which affirmed the trial court's dismissal of appellant's petition for writ of mandate that sought a declaration that the state reimbursement statute, Cal. Gov't Code § 17556(d), was facially unconstitutional under Cal. Const. art. XIII B, § 6.

**OVERVIEW:** Appellant county filed a petition for writ of mandate and a complaint for declaratory relief against respondents, state, commission, and others, that sought to vacate respondent commission's decision, and sought a declaration that Cal. Gov't Code § 17556(d) was unconstitutional under Cal. Const. art. XIII B, § 6. The trial court denied appellant's petition for writ of mandate and complaint for declaratory relief. The appellate court affirmed. The court granted review for determination on whether § 17556(d) was facially constitutional under Cal. Const. art. XIII B, § 6. The court rejected appellant's argument that the state's enactment of § 17556(d) created a new exception to the reimbursement requirement of Cal. Const. art. XIII B, § 6. The court held that the § 17556(d) was facially constitutional under Cal. Const. art. XIII B, § 6. The court affirmed the appellate court's judgment.

**OUTCOME:** The court affirmed the appellate court's judgment, and affirmed the dismissal of appellant county's petition for writ of mandate because the state's reimbursement statute was facially constitutional under the California constitution.

**CORE TERMS:** local governments, mandated, user fees, reimbursement, initiative, level of service, appropriations, facially, taxation, voter, state mandates, new program, levy, constitutional provision, tax revenues, expenditure, recoverable, excluding, statewide, ballot, subvention of funds, self-financing, implementing, subvention, reimburse, spending, duck, local agency, hazardous materials, sufficient to pay

Commission on State Mandates to hear and decide upon any claim by a local government that the local government is entitled to be reimbursed by the state for costs as required by Cal. Const. art. XIII B, § 6. Cal. Gov't. Code § 17551(a).

***Constitutional Law > Congressional Duties & Powers > Spending & Taxation***

[HN3] Costs is defined as costs mandated by the state for any increased costs that the local government is required to incur as a result of any statute, or any executive order implementing any statute, which mandates a new program or higher level of service of any existing program within the meaning of Cal. Const. art. XIII B, § 6. Cal. Gov't. Code § 17514.

***Constitutional Law > Congressional Duties & Powers > Spending & Taxation***

***Governments > Local Governments > Duties & Powers***  
[HN4] Cal. Gov't Code § 17556(d) declares that the commission shall not find costs mandated by the state if, after a hearing, the commission finds that the local government has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.

***Constitutional Law > Congressional Duties & Powers > Spending & Taxation***

[HN5] Cal. Const. arts. XIII A, XIII B work in tandem, together restricting the California government's power both to levy and to spend taxes for public purposes.

***Constitutional Law > Congressional Duties & Powers > Spending & Taxation***

***Tax Law > State & Local Taxes > General Overview***  
[HN6] Cal. Const. art. XIII B intention is to apply to taxation specifically that provides permanent protection for taxpayers from excessive taxation, and a reasonable way to provide discipline in tax spending at state and local levels.

***Constitutional Law > Congressional Duties & Powers > Spending & Taxation***

[HN7] The relevant appropriations subject to limitation is defined as any authorization to expend during a fiscal year the proceeds of taxes. Cal. Const. art. XIII B, § 8(b). Proceeds of taxes is defined as including all tax revenues and the proceeds to government from regulatory licenses, user charges, and user fees to the extent that such proceeds exceed the costs reasonably borne by govern-

ment in providing the regulation, product, or service. Cal. Const. art. XIII B, § 8(c). Excess proceeds from licenses, charges, and fees are taxes.

***Constitutional Law > Congressional Duties & Powers > Spending & Taxation***

***Governments > Local Governments > Finance***  
[HN8] Cal. Const. art. XIII B, § 6 is included in recognition that Cal. Const. art. XIII A severely restricts the taxing powers of local governments. The provision was intended to preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities that are ill equipped to handle the task.

***Constitutional Law > Congressional Duties & Powers > Spending & Taxation***

***Governments > Local Governments > Duties & Powers***  
[HN9] Cal. Gov't Code § 17556(d) provides that the commission shall not find costs mandated by the state if, after a hearing, the commission finds that the local government has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.

**SUMMARY:**

**CALIFORNIA OFFICIAL REPORTS SUMMARY**

A county filed a test claim with the Commission on State Mandates seeking, under Cal. Const. art. XIII B, § 6 (state must provide subvention of funds to reimburse local governments for costs of state-mandated programs or increased levels of service), reimbursement from the state for costs incurred in implementing the Hazardous Materials Release Response Plans and Inventory Act (Health & Saf. Code, § 25500 et seq.). The commission found the county had the authority to charge fees to pay for the program, and the program was thus not a reimbursable state-mandated program under Gov. Code, § 17556, subd. (d), which provides that costs are not state-mandated if the agency has the authority to levy a charge or fee sufficient to pay for the program. The county filed a petition for writ of mandate and a complaint for declaratory relief against the state. The trial court denied relief. (Superior Court of Fresno County, No. 379518-4, Gary S. Austin, Judge.) The Court of Appeal, Fifth Dist., No. F011925, affirmed.

The Supreme Court affirmed the decision of the Court of Appeal. The court held, as to the single issue on review, that Gov. Code, § 17556, subd. (d), was facially constitutional under Cal. Const. art. XIII B, § 6. It held art. XIII B was not intended to reach beyond taxation, and § 6 was included in art. XIII B in recognition that

53 Cal. 3d 482, \*, 808 P.2d 235, \*\*;  
280 Cal. Rptr. 92, \*\*\*; 1991 Cal. LEXIS 1363

Cal. Const., art. XIII A, severely restricted the taxing powers of local governments. It held that art. XIII B, § 6 was designed to protect the tax revenues of local governments from state mandates that would require an expenditure of such revenues and, when read in textual and historical context, requires subvention only when the costs in question can be recovered solely from tax revenues. Accordingly, the court held that Gov. Code, § 17556, subd. (d), effectively construed the term "cost" in the constitutional provision as excluding expenses that are recoverable from sources other than taxes, and that such a construction is altogether sound. (Opinion by Mosk, J., with Lucas, C. J., Broussard, Panelli, Kennard, JJ., and Best (Hollis G.), J., \* concurring. Separate concurring opinion by Arabian, J.)

(1) **State of California § 11—Reimbursement to Local Governments for State-mandated Costs—Costs for Which Fees May Be Levied—Validity of Exclusion.**—In a proceeding by a county seeking reversal of a decision by the Commission on State Mandates that the state was not required by Cal. Const., art. XIII B, § 6, to reimburse the county for costs incurred in implementing the Hazardous Materials Release Response Plans and Inventory Act (Health & Saf. Code, § 25500 et seq.), the trial court properly found that Gov. Code, § 17556, subd. (d) (costs are not state-mandated if agency has authority to levy charge or fee sufficient to pay for program), was facially constitutional. Cal. Const., art. XIII B, was intended to apply to taxation and was not intended to reach beyond taxation, as is apparent from its language and confirmed by its history. It was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues; read in its textual and historical contexts, it requires subvention only when the costs in question can be recovered solely from tax revenues. Gov. Code, § 17556, subd. (d), effectively construes the term "costs" in the constitutional provision as excluding expenses that are recoverable from sources other than taxes, and that construction is altogether sound. Accordingly, Gov. Code, § 17556, subd. (d), is facially constitutional under Cal. Const., art. XIII B, § 6.

**OPINION BY: MOSK**

#### OPINION

[\*484] [\*\*236] [\*\*\*93] MOSK, J.

We granted review in this proceeding to decide whether section 17556, subdivision (d), of the Government Code (section 17556(d)) is facially valid under article XIII B, section 6, of the California Constitution (article XIII B, section 6).

[HN1] Article XIII B, section 6, provides: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [P] (a) Legislative mandates requested by the local agency affected; [P] (b) Legislation defining a new crime or changing an existing definition of a crime; or [P] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975."

The Legislature enacted [HN2] Government Code sections 17500 through 17630 to implement article XIII B, section 6. (Gov. Code, § 17500.) It created a "quasi-judicial body" (*ibid.*) called the Commission on State Mandates (commission) (*id.*, § 17525) to "hear and decide upon [any] claim" by a local government that the

local government "is entitled to be reimbursed by the state for costs" as required by article XIII B, section 6. (Gov. Code, § 17551, subd. (a).) It defined [HN3]"costs" as "costs mandated by the state"--"any increased costs" that the local government "is required to incur . . . as a result of any statute . . . , or any executive order implementing any statute . . . , which mandates a new program or higher level of service of any existing program" within the meaning of article XIII B, section 6. (Gov. Code, § 17514.) Finally, [HN4]in section 17556(d) it declared that "The commission shall not find costs mandated by the state . . . if, after a hearing, the commission finds that" the local government "has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service."

For the reasons discussed below, we conclude that section 17556(d) is facially constitutional under article XIII B, section 6.

#### [\*485] I. FACTS AND PROCEDURAL HISTORY

The present proceeding arose after the Legislature enacted the Hazardous Materials Release Response Plans and Inventory Act (Act). (Health & Saf. Code, § 25500 et seq.) The Act establishes minimum statewide standards for business and area plans relating to the handling and release or threatened release of hazardous materials. (Id., § 25500.) It requires local governments to implement its provisions. (Id., § 25502.) To cover the costs they may incur, it authorizes them to collect fees from those who handle hazardous materials. (Id., § 25513.)

The County of Fresno (County) implemented the Act but chose not to impose the authorized fees. Instead, it filed a so-called "test" or initial claim with the commission (Gov. Code, § 17521) seeking reimbursement from the State of California (State) under article XIII B, section 6. After a hearing, the commission rejected the claim. In its statement of decision, the commission made the following findings, among others: the Act constituted a "new program"; the County did indeed incur increased [\*\*237] [\*\*\*94] costs; but because it had authority under the Act to levy fees sufficient to cover such costs, section 17556(d) prohibited a finding of reimbursable costs.

The County then filed a petition for writ of mandate and complaint for declaratory relief against the State, the commission, and others, seeking vacation of the commission's decision and a declaration that section 17556(d) is unconstitutional under article XIII B, section 6. While the matter was pending, the commission amended its statement of decision to include another basis for denial of the test claim: the Act did not constitute a "program" under the rationale of County of Los Angeles v. State of California (1987) 43 Cal.3d 46 [233

Cal.Rptr. 38, 729 P.2d 202] ( *County of Los Angeles* ), because it did not impose unique requirements on local governments.

After a hearing, the trial court denied the petition and effectively dismissed the complaint. It determined, inter alia, that mandate under Code of Civil Procedure section 1094.5 was the County's sole remedy, and that the commission was the sole properly named respondent. It also determined that section 17556(d) is constitutional under article XIII B, section 6. It did not address the question whether the Act constituted a "program" under *County of Los Angeles*. Judgment was entered accordingly.

The Court of Appeal affirmed. It held the Act did indeed constitute a "program" under *County of Los Angeles, supra*. 43 Cal.3d 46. It also held section 17556(d) is constitutional under article XIII B, section 6.

[\*486] (1) We granted review to decide a single issue, i.e., whether section 17556(d) is facially constitutional under article XIII B, section 6.

#### II. DISCUSSION

We begin our analysis with the California Constitution. At the June 6, 1978, Primary Election, article XIII A was added to the Constitution through the adoption of Proposition 13, an initiative measure aimed at controlling ad valorem property taxes and the imposition of new "special taxes." (*Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization* (1978) 22 Cal.3d 208, 231-232 [149 Cal.Rptr. 239, 583 P.2d 1281].) The constitutional provision imposes a limit on the power of state and local governments to adopt and levy taxes. (*City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 59, fn. 1 [266 Cal.Rptr. 139, 785 P.2d 522] ( *City of Sacramento* ).)

At the November 6, 1979, Special Statewide Election, article XIII B was added to the Constitution through the adoption of Proposition 4, another initiative measure. That measure places limitations on the ability of both state and local governments to appropriate funds for expenditures.

[HN5]"Articles XIII A and XIII B work in tandem, together restricting California governments' power both to levy and to spend [taxes] for public purposes." (*City of Sacramento, supra*, 50 Cal.3d at p. 59, fn. 1.)

[HN6]Article XIII B of the Constitution was intended to apply to taxation specifically, to provide "permanent protection for taxpayers from excessive taxation" and "a reasonable way to provide discipline in tax spending at state and local levels." (See *County of Placer v. Corin* (1980) 113 Cal.App.3d 443, 446 [170 Cal.Rptr. 232], quoting and following *Ballot Pamp.*,

53 Cal. 3d 482, \*; 808 P.2d 235, \*\*;  
280 Cal. Rptr. 92, \*\*\*; 1991 Cal. LEXIS 1363

Proposed Stats. and Amends. to Cal. Const. with arguments to voters, Special Statewide Elec. (Nov. 6, 1979), argument in favor of Prop. 4, p. 18.) To this end, it establishes an "appropriations limit" for both state and local governments (Cal. Const., art. XIII B, § 8, subd. (h)) and allows no "appropriations subject to limitation" in excess thereof (*id.*, § 2). (See *County of Placer v. Corin*, *supra*, 113 Cal.App.3d at p. 446.) It defines [HN7]the relevant "appropriations subject to limitation" as "any authorization to expend during a fiscal year the proceeds of taxes . . ." (Cal. Const., art. XIII B, § 8, subd. (b).) It defines "proceeds of taxes" as including "all tax revenues and the proceeds to . . . government from," *inter alia*, "regulatory licenses, user charges, and user fees to the extent that such proceeds exceed the costs reasonably borne by [government] in providing [\*\*238] [\*\*\*95] the regulation, product, or service . . ." (Cal. Const., art. XIII B, § 8, subd. (c), italics added.) Such "excess" proceeds from "licenses," "charges," and "fees" "are but [\*487] taxes" for purposes here. (*County of Placer v. Corin*, *supra*, 113 Cal.App.3d at p. 451, italics in original.)

Article XIII B of the Constitution, however, was not intended to reach beyond taxation. That fact is apparent from the language of the measure. It is confirmed by its history. In his analysis, the Legislative Analyst declared that Proposition 4 "would not restrict the growth in appropriations financed from other [i.e., nontax] sources of revenue, including federal funds, bond funds, traffic fines, user fees based on reasonable costs, and income from gifts." (Ballot Pamp., Proposed Stats. and Amends. to Cal. Const. with arguments to voters, Special Statewide Elec. (Nov. 6, 1979), analysis by Legislative Analyst, p. 16.)

[HN8]Section 6 was included in article XIII B in recognition that article XIII A of the Constitution severely restricted the taxing powers of local governments. (See *County of Los Angeles*, *supra*, 43 Cal.3d at p. 61.) The provision was intended to preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities that were ill equipped to handle the task. (*Ibid.*; see *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 836, fn. 6 [244 Cal.Rptr. 677, 750 P.2d 318].) Specifically, it was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues. Thus, although its language broadly declares that the "state shall provide a subvention of funds to reimburse . . . local government for the costs [of a state-mandated new] program or higher level of service," read in its textual and historical context section 6 of article XIII B requires subvention only when the costs in question can be recovered *solely from tax revenues*.

In view of the foregoing analysis, the question of the facial constitutionality of section 17556(d) under article XIII B, section 6, can be readily resolved. As noted, [HN9]the statute provides that "The commission shall not find costs mandated by the state . . . if, after a hearing, the commission finds that" the local government "has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service." Considered within its context, the section effectively construes the term "costs" in the constitutional provision as excluding expenses that are recoverable from sources other than taxes. Such a construction is altogether sound. As the discussion makes clear, the Constitution requires reimbursement only for those expenses that are recoverable solely from taxes. It follows that section 17556(d) is facially constitutional under article XIII B, section 6.

The County argues to the contrary. It maintains that section 17556(d) in essence creates a new exception to the reimbursement requirement of article XIII B, section 6, for self-financing programs and that the Legislature cannot create exceptions to the reimbursement requirement beyond those enumerated in the Constitution.

We do not agree that in enacting section 17556(d) the Legislature created a new exception to the reimbursement requirement of article [\*488] XIII B, section 6. As explained, the Legislature effectively and properly construed the term "costs" as excluding expenses that are recoverable from sources other than taxes. In a word, such expenses are outside of the scope of the requirement. Therefore, they need not be explicitly excepted from its reach.

The County nevertheless argues that no matter how characterized, section 17556(d) is indeed inconsistent with article XIII B, section 6. Its contention is in substance as follows: the source of section 17556(d) is former Revenue and Taxation Code section 2253.2; at the time of Proposition 4, subdivision (b)(4) of that former section stated that the State Board of Control shall not allow a claim for reimbursement of costs mandated by the state if the legislation contains a self-financing authority; the [\*\*239] [\*\*\*96] drafters of Proposition 4 incorporated some of the provisions of former Revenue and Taxation Code section 2253.2 into article XIII B, section 6, but did not incorporate former subdivision (b)(4); their failure to do so reveals an intent to treat as immaterial the presence or absence of a "self-financing" provision; and such an intent is confirmed by the "legislative history" set out at page 55 in *Spirit of 13, Inc., Summary of Proposed Implementing Legislation and Drafters' Intent*: "the state may not arbitrarily declare that it is not going to comply with Section 6 . . . if the state provides new compensating revenues."

53 Cal. 3d 482, \*, 808 P.2d 235, \*\*;  
280 Cal. Rptr. 92, \*\*\*; 1991 Cal. LEXIS 1363

In our view, the County's argument is unpersuasive. Even if we assume *arguendo* that the intent of those who drafted Proposition 4 is as claimed, what is crucial here is the intent of those who voted for the measure. (See *County of Los Angeles, supra*, 43 Cal.3d 46, 56.) There is no substantial evidence that the voters sought what the County assumes the drafters desired. Moreover, the "legislative history" cited above cannot be considered relevant; it was written and circulated after the passage of Proposition 4. As such, it could not have affected the voters in any way.

To avoid this result, the County advances one final argument: "Based on the authority of section 17556(d), the Commission on State Mandates refuses to hear mandates on the merits once it finds that the authority to charge fees is given by the Legislature. This position is taken whether or not fees can actually or legally be charged to recover the entire costs of the program."

[\*489] The County appears to be making one or both of the following arguments: (1) the commission applies section 17556(d) in an unconstitutional manner; or (2) the Act's self-financing authority is somehow lacking. Such contentions, however, miss the designated mark. They raise questions bearing on the constitutionality of section 17556(d) as applied and the legal efficacy of the authority conferred by the Act. The sole issue on review, however, is the facial constitutionality of section 17556(d).

### III. CONCLUSION

For the reasons set forth above, we conclude that section 17556(d) is facially constitutional under article XIII B, section 6.

The judgment of the Court of Appeal is affirmed.

Lucas, C. J., Broussard, J., Panelli, J., Kennard, J., and Best (Hollis G.), J., \* concurred.

\* Presiding Justice, Court of Appeal, Fifth Appellate District, assigned by the Chairperson of the Judicial Council.

CONCUR BY: ARABIAN

CONCUR

ARABIAN, J., Concurring.

I concur in the determination that Government Code section 17556, subdivision (d) (section 17556(d)), does not offend article XIII B, section 6, of the California Constitution (article XIII B, section 6). In my estimation, however, the constitutional measure of the issue before

us warrants fuller examination than the majority allow. A literalistic analysis begs the question of whether the Legislature had the authority to act statutorily upon a subject matter the electorate has spoken to constitutionally through the initiative process.

1 Unless otherwise indicated, all further statutory references are to the Government Code.

Article XIII B, section 6, unequivocally commands that "the state shall provide a subvention of funds to reimburse . . . local government for the costs of [a new] program or increased level of service" except as specified therein. Article XIII B does not define this reference to "costs." (See Cal. Const., art. XIII B, § 8.) Rather, the Legislature assumed the task of explicating the related concept of "costs mandated by the state" when it created the Commission on State Mandates and enacted procedures intended to implement article XIII B, section 6, more effectively. (See § 17500 et seq.) As part of this statutory scheme, it exempted the state from its constitutionally imposed subvention obligation under certain enumerated circumstances. Some of these exemptions the electorate expressly contemplated in approving article XIII B, section 6 (§ 17556, subs. (a), (c), & (g); see [\*\*240] [\*\*\*97] § 17514), while others are strictly of legislative formulation and derive from [\*490] former Revenue and Taxation Code section 2253.2. (§ 17556, subs. (b), (d), (e), & (f).)

The majority find section 17556 valid notwithstanding the mandatory language of article XIII B, section 6, based on the circular and conclusory rationale that "the Legislature effectively and properly construed the term 'costs' as excluding expenses that are recoverable from sources other than taxes. In a word, such expenses are outside of the scope of the [subvention] requirement. Therefore, they need not be explicitly excepted from its reach." (Maj. opn., *ante*, at p. 488.) In my view, excluding or otherwise removing something from the purview of a law is tantamount to creating an exception thereto. When an exclusionary implication is clear from the import or effect of the statutory language, use of the word "except" should not be necessary to construe the result for what it clearly is. In this circumstance, "I would invoke the folk wisdom that if an object looks like a duck, walks like a duck and quacks like a duck, it is likely to be a duck." (*In re Deborah C.* (1981) 30 Cal.3d 125, 141 [177 Cal.Rptr. 852, 635 P.2d 446] (conc. opn. by Mosk, J.).)

Of at least equal importance, section 17500 et seq. constitutes a legislative implementation of article XIII B, section 6. As such, the overall statutory scheme must comport with the express constitutional language it was designed to effectuate as well as the implicit electoral intent. Eschewing semantics, I would squarely and forth-

53 Cal. 3d 482, \*; 808 P.2d 235, \*\*;  
280 Cal. Rptr. 92, \*\*\*; 1991 Cal. LEXIS 1363

rightly address the fundamental and substantial question of whether the Legislature could lawfully enlarge upon the scope of article XIII B, section 6, to include exceptions not originally designated in the initiative.

I do not hereby seek to undermine the majority holding but rather to set it on a firmer constitutional footing. "[S]tatutes must be given a reasonable interpretation, one which will carry out the intent of the legislators and render them valid and operative rather than defeat them. In so doing, sections of the Constitution, as well as the codes, will be harmonized where reasonably possible, in order that all may stand." (*Rose v. State of California* (1942) 19 Cal.2d 713, 723 [123 P.2d 505]; see also *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 58 [233 Cal.Rptr. 38, 729 P.2d 202].) To this end, it is a fundamental premise of our form of government that "the Constitution of this State is not to be considered as a grant of power, but rather as a restriction upon the powers of the Legislature; and . . . it is competent for the Legislature to exercise all powers not forbidden . . ." (*People v. Coleman* (1854) 4 Cal. 46, 49.) "Two important consequences flow from this fact. First, the entire law-making authority of the state, except the people's right of initiative and referendum, is vested in the [\*491] Legislature, and that body may exercise any and all legislative powers which are not expressly or by necessary implication denied to it by the Constitution. [Citations.] *In other words, 'we do not look to the Constitution to determine whether the legislature is authorized to do an act, but only to see if it is prohibited.'* [Citation.] [P] Secondly, all intendments favor the exercise of the Legislature's plenary authority: 'If there is any doubt as to the Legislature's power to act in any given case, the doubt should be resolved in favor of the Legislature's action. Such restrictions and limitations [imposed by the Constitution] are to be construed strictly, and are not to be extended to include matters not covered by the language used.' [Citations.]" (*Methodist Hosp. of Sacramento v. Saylor* (1971) 5 Cal.3d 685, 691 [97 Cal.Rptr. 1, 488 P.2d 161], italics added.) "Specifically, the express enumeration of legislative powers is not an exclusion of others not named unless accompanied by negative terms. [Citations.]" (*Dean v. Kuchel* (1951) 37 Cal.2d 97, 100 [230 P.2d 811].)

As the majority opinion impliedly recognizes, neither the language nor the intent of article XIII B conflicts with the exercise of legislative prerogative we review today. Of paramount significance, neither section 6 nor any other provision of article XIII B prohibits statutory delineation of additional [\*\*241] [\*\*\*98] circumstances obviating reimbursement for state mandated programs. (See *Dean v. Kuchel*, *supra*, 37 Cal.2d at p. 101; *Roth Drugs, Inc. v. Johnson* (1936) 13 Cal.App.2d 720,

729 [57 P.2d 1022]; see also *Kehrlein v. City of Oakland* (1981) 116 Cal.App.3d 332, 338 [172 Cal.Rptr. 111].)

Furthermore, the initiative was "[b]illed as a flexible way to provide discipline in government spending" by creating appropriations limits to restrict the amount of such expenditures. (*County of Placer v. Corin* (1980) 113 Cal.App.3d 443, 447 [170 Cal.Rptr. 232]; see Cal. Const., art. XIII B, § 1.) By their nature, user fees do not affect the equation of local government spending: While they facilitate implementation of newly mandated state programs or increased levels of service, they are excluded from the "appropriations subject to limitations" calculation and its attendant budgetary constraints. (See Cal. Const., art. XIII B, § 8; see also *City Council v. South* (1983) 146 Cal.App.3d 320, 334 [194 Cal.Rptr. 110]; *County of Placer v. Corin*, *supra*, 113 Cal.App.3d at pp. 448-449; Cal. Const., art. XIII B, § 3, subd. (b); cf. *Russ Bldg. Partnership v. City and County of San Francisco* (1987) 199 Cal.App.3d 1496, 1505 [246 Cal.Rptr. 21] ["fees not exceeding the reasonable cost of providing the service or regulatory activity for which the fee is charged and which are not levied for general revenue purposes, have been considered outside the realm of "special taxes" [limited by California Constitution, article XIII A]q"]; *Terminal Plaza Corp. v. City and County of San Francisco* (1986) 177 Cal.App.3d 892, 906 [223 Cal.Rptr. 379] [same].)

This conclusion fully accommodates the intent of the voters in adopting article XIII B, as reflected in the ballot materials accompanying the proposition. (See *Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization* (1978) 22 Cal.3d 208, 245-246 [149 Cal.Rptr. 239, 583 P.2d 1281].) In general, these materials convey that "[t]he goals of article XIII B, of which section 6 is a part, were to protect residents from excessive taxation and government spending." (*County of Los Angeles v. State of California*, *supra*, 43 Cal.3d at p. 61; *Huntington Park Redevelopment Agency v. Martin* (1985) 38 Cal.3d 100, 109-110 [211 Cal.Rptr. 133, 695 P.2d 220].) To the extent user fees are not borne by the general public or applied to the general revenues, they do not bear upon this purpose. Moreover, by imputation, voter approval contemplated the continued imposition of reasonable user fees outside the scope of article XIII B. (Ballot Pamp., Proposed Amends. to Cal. Const. with arguments to voters, Limitation of Government Appropriations, Special Statewide Elec. (Nov. 6, 1979), arguments in favor of and against Prop. 4, p. 18 [initiative "WILL curb excessive user fees imposed by local government" but "will NOT eliminate user fees . . ."]; see *County of Placer v. Corin*, *supra*, 113 Cal.App.3d at p. 452.)

"The concern which prompted the inclusion of section 6 in article XIII B was the perceived attempt by the

53 Cal. 3d 482, \*, 808 P.2d 235, \*\*;  
280 Cal. Rptr. 92, \*\*\*; 1991 Cal. LEXIS 1363

state to enact legislation or adopt administrative orders creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services which the state believed should be extended to the public." (*County of Los Angeles v. State of California*, *supra*, 43 Cal.3d at p. 56; see *City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 66 [266 Cal.Rptr. 139, 785 P.2d 522].) "Section 6 had the additional purpose of precluding a shift of financial responsibility for carrying out governmental functions from the state to local agencies which had had their taxing powers restricted by the enactment of article XIII A in the preceding year and were ill equipped to take responsibility for any new programs." (*County of Los Angeles v. State of California*, *supra*, 43 Cal.3d at p. 61.) An exemption from reimbursement for state mandated programs for which local governments are authorized to charge offsetting user fees does not frustrate or compromise these goals or otherwise disturb the balance of local government financing [\*\*242] [\*\*\*99] and expenditure. <sup>3</sup> (See *County of Placer v. Corin*, *supra*, 113 Cal.App.3d at p. 452, [\*493] *fn. 7*.) Article XIII B, section 8, subdivision (c), specifically includes regulatory licenses, user charges, and user fees in the appropriations limitation equation only "to the extent that those proceeds exceed the costs reasonably borne by [the governmental] entity in providing the regulation, product, or service . . . ."

2 This conclusion also accords with the traditional and historical role of user fees in promoting the multifarious functions of local government by imposing on those receiving a service the cost of providing it. (Cf. *County of Placer v. Corin*, *supra*, 113 Cal.App.3d at p. 454 ["Special assessments, being levied only for improvements that benefit particular parcels of land, and not to raise general revenues, are simply not the type of exaction that can be used as a mechanism for circumventing these tax relief provisions. [Citation.]".])

The self-executing nature of article XIII B does not alter this analysis. "It has been uniformly held that the legislature has the power to enact statutes providing for reasonable regulation and control of rights granted under constitutional provisions. [Citations.]" (*Chesney v. Byram* (1940) 15 Cal.2d 460, 465 [101 P.2d 1106].) "Legislation may be desirable, by way of providing convenient remedies for the protection of the right secured, or of regulating the claim of the right so that its exact limits may be known and understood; but all such legislation must be subordinate to the constitutional provision, and in furtherance of its purpose, and must not in any particular attempt to narrow or embarrass it." [Citations.]" (*Id.*, at pp. 463-464; see also *County of Contra*

*Costa v. State of California* (1986) 177 Cal.App.3d 62, 75 [222 Cal.Rptr. 750].) Section 17556(d) is not "merely [a] transparent attempt[] to do indirectly that which cannot lawfully be done directly." (*Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521, 541 [234 Cal.Rptr. 795].) On the contrary, it creates no conflict with the constitutional directive it subserves. Hence, rather than pursue an interpretive expedient, this court should expressly declare that it operates as a valid legislative implementation thereof.

"[Initiative] provisions of the Constitution and of charters and statutes should, as a general rule, be liberally construed in favor of the reserved power. [Citations.] As opposed to that principle, however, 'in examining and ascertaining the intention of the people with respect to the scope and nature of those . . . powers, it is proper and important to consider what the consequences of applying it to a particular act of legislation would be, and if upon such consideration it be found that by so applying it the inevitable effect would be greatly to impair or wholly destroy the efficacy of some other governmental power, the practical application of which is essential and, perhaps, . . . indispensable, to the convenience, comfort, and well-being of the inhabitants of certain legally established districts or subdivisions of the state or of the whole state, then in such case the courts may and should assume that the people intended no such result to flow from the application of those powers and that they do not so apply.' [Citation.]" (*Hunt v. Mayor & Council of Riverside* (1948) 31 Cal.2d 619, 628-629 [191 P.2d 426].)

[\*494] This court is not infrequently called upon to resolve the tension of apparent or actual conflicts in the express will of the people. <sup>3</sup> Whether that expression emanates directly from the ballot or indirectly through legislative implementation, each deserves our fullest estimation and effectuation. Given the historical and abiding role of government by initiative, I decline to circumvent that responsibility and accept uncritically the Legislature's self-validating statutory scheme as the basis for approving [\*\*\*100] the exercise [\*\*243] of its prerogative. It is not enough to say a broader constitutional analysis yields the same result and therefore is unnecessary. We provide a higher quality of justice harmonizing rather than ignoring the divers voices of the people, for such is the nature of our office.

150 Cal. App. 4th 898; 58 Cal. Rptr. 3d 762; 2007 Cal. App. LEXIS 711; 2007 Cal. Daily Op. Service 5216; 37 ELR 20107

May 10, 2007, Filed

**PRIOR HISTORY:** [\*\*\*1] Superior Court of Los Angeles County, Nos. BS089769 and BS089785, Victoria G. Chaney, Judge.

**DISPOSITION:** Affirmed.

**CASE SUMMARY:**

**PROCEDURAL POSTURE:** The Superior Court of Los Angeles County, California, issued a writ of mandate directing defendant California Commission on State Mandates to set aside its decisions affirming its executive director's rejections of test claims presented by plaintiffs, a county and cities, and to consider fully the claims and determine whether plaintiffs were entitled to reimbursement without consideration of Gov. Code, § 17516, subd. (c). The Commission appealed.

**OVERVIEW:** Plaintiffs cross-appealed. The court held that § 17516, subd. (c), was unconstitutional to the extent it exempted regional water quality control boards from the constitutional state mandate subvention requirement. Its creation of an exception for regional boards, which were state agencies, contravened the plain, unequivocal, and all-inclusive reference to "any state agency" in Cal. Const., art. XIII B, § 6. Moreover, a contrary conclusion

was not compelled by virtue of the fact that § 17516, subd. (c), essentially mirrored the language of Rev. & Tax. Code, § 2209, subd. (c). A statute could not trump the constitution. The court found persuasive the Commission's position that should it conclude § 17516, subd. (c), was unconstitutional, the appropriate remedy was to afford the Commission the opportunity to pass on the merits of the subject test claims on the issues of whether: (1) the subject permit qualified as a state mandated program under art. XIII B, § 6; (2) the permit amounted to a new program or higher level of service; and (3) the permit imposed costs on local entities. The court concluded that plaintiffs' cross-appeal, which was simply protective in nature, was moot.

**OUTCOME:** The court affirmed the trial court's judgment.

**CORE TERMS:** regional, water boards, subvention, local governments, state mandate, reimbursement, executive order, mandated, local agencies, levels of service, new program, state agency, test claim, subvention of funds, cause of action, water quality, writ of mandate directing, federal mandate, federal law, Clean Water Act, order issued, cross-appeal, state law, pollution, pollutants, funding, statute of limitations, implementing, carrying, demurrer

LexisNexis(R) Headnotes

*Governments > Local Governments > Finance*  
*Governments > State & Territorial Governments > Finance*

[HN1] See Cal. Const., art. XIII B, § 6.

*Governments > Local Governments > Finance*  
*Governments > State & Territorial Governments > Finance*

[HN2] "Subvention" generally means a grant of financial aid or assistance, or a subsidy. As used in connection with state-mandated costs, the basic legal requirements of subvention can be easily stated; it is in the application of the rule that difficulties arise. Essentially, the constitutional rule of state subvention provides that the state is required to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. This does not mean that the state is required to reimburse local agencies for any incidental cost that may result from the enactment of a state law; rather, the subvention requirement is restricted to governmental services which the local agency is required by state law to provide to its residents. The subvention requirement is intended to prevent the state from transferring the costs of government from itself to local agencies. Reimbursement is required when the state freely chooses to impose on local agencies any peculiarly governmental cost which they were not previously required to absorb.

*Governments > Local Governments > Finance*  
*Governments > State & Territorial Governments > Finance*

[HN3] The subvention requirement of Cal. Const., art. XIII B, § 6, is triggered if the legislature or any state agency mandates a new program or higher level of service. Cal. Const., art. XIII B, § 6. Such requirement is inapplicable where the additional costs on local governments are imposed by a federal mandate, i.e., the federal government. Cal. Const., art. XIII B, § 9, subd. (b), defines federally mandated appropriations as those required to comply with mandates of the courts or the federal government which, without discretion, require an expenditure for additional services or which unavoidably make the provision of existing services more costly.

*Governments > Local Governments > Finance*

*Governments > State & Territorial Governments > Finance*

[HN4] Whether a particular cost incurred by a local government arises from carrying out a state mandate for which subvention is required under Cal. Const., art. XIII B, § 6, is a matter for the California Commission on State Mandates to determine in the first instance. A local government initiates the process for subvention under Cal. Const., art. XIII B, § 6, by filing a claim with the Commission. Gov. Code, § 17521. The initial claim is referred to as a test claim. Gov. Code, § 17521. The provisions of Gov. Code, § 17500 et seq., provide the sole and exclusive procedure by which a local agency may claim reimbursement for costs mandated by the state as required by Cal. Const., art. XIII B, § 6. Gov. Code, § 17552.

*Governments > Local Governments > Finance*  
*Governments > State & Territorial Governments > Finance*

[HN5] The legislature has created a quasi-judicial body called the California Commission on State Mandates, Gov. Code, § 17525, to hear and decide upon any claim by a local government that the local government is entitled to be reimbursed by the state for costs as required by Cal. Const., art. XIII B, § 6. Gov. Code, § 17551, subd. (a). It has defined "costs" as costs mandated by the state -- any increased costs that the local government is required to incur as a result of any statute, or any executive order implementing any statute, which mandates a new program or higher level of service of any existing program within the meaning of Cal. Const., art. XIII B, § 6. Gov. Code, § 17514. Finally, in Gov. Code, § 17556, subd. (d), it has declared that the Commission shall not find costs mandated by the state if, after a hearing, the Commission finds that the local government has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.

*Civil Procedure > Pleading & Practice > Defenses, Demurrers & Objections > Demurrers*

*Civil Procedure > Pretrial Judgments > Judgment on the Pleadings*

*Civil Procedure > Appeals > Standards of Review > De Novo Review*

[HN6] A motion for judgment on the pleadings is the equivalent of a general demurrer but is made after the time for demurrer has expired. The rules governing demurrers apply. The grounds for a motion for judgment on the pleadings must appear on the face of the challenged complaint or be based on facts which the court may judicially notice. On review, an appellate court must deter-

mine if the complaint states a cause of action as a matter of law. The appellate court reviews the complaint de novo to determine whether it alleges facts sufficient to state a cause of action under any legal theory.

*Civil Procedure > Remedies > Writs > Common Law Writs > Mandamus*

*Civil Procedure > Appeals > Standards of Review > De Novo Review*

*Civil Procedure > Appeals > Standards of Review > Substantial Evidence > General Overview*

[HN7]In reviewing a trial court's ruling on a writ of mandate, an appellate court is ordinarily confined to an inquiry as to whether the findings and judgment of the trial court are supported by substantial evidence. However, where the facts are undisputed and the issues present questions of law, the appellate court is not bound by the trial court's decision but may make its own determination.

*Constitutional Law > The Judiciary > Case or Controversy > Constitutionality of Legislation > General Overview*

*Governments > Legislation > Statutes of Limitations > Time Limitations*

[HN8]See Code Civ. Proc., § 341.5.

*Civil Procedure > Pleading & Practice > Defenses, Demurrers & Objections > Affirmative Defenses > General Overview*

*Civil Procedure > Pleading & Practice > Defenses, Demurrers & Objections > Demurrers*

[HN9]The time-bar of a statute of limitations may be raised by demurrer where the complaint discloses on its face that the statute of limitations has run on the causes of action stated in the complaint, for the reason that it fails to state facts sufficient to state a cause of action. Forfeiture of a time-bar defense transpires by the failure to raise the applicable statute of limitations in the answer.

*Civil Procedure > Remedies > Writs > Common Law Writs > Mandamus*

*Governments > Legislation > Statutes of Limitations > Equitable Estoppel*

*Governments > Legislation > Statutes of Limitations > Waivers*

[HN10]If a time limit in a mandamus proceeding is held to be jurisdictional, estoppel or waiver cannot extend the time.

*Constitutional Law > The Judiciary > Case or Controversy > Constitutionality of Legislation > General Overview*

*Governments > Legislation > Statutes of Limitations > Time Limitations*

[HN11]The time-bar of Code Civ. Proc., § 341.5, applies to a challenge to the constitutionality of any statute relating to state funding for counties and other local governmental entities, not to a challenge to an action by an administrative agency.

*Civil Procedure > Appeals > Reviewability > Preservation for Review*

*Governments > Legislation > Statutes of Limitations > Time Limitations*

[HN12]Case law does not stand for the proposition that the bar of the applicable statute of limitations may be raised for the first time on appeal.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > General Overview*

[HN13]Part of the federal Clean Water Act, 33 U.S.C. § 1251 et seq., is the National Pollutant Discharge Elimination System (NPDES), the primary means for enforcing effluent limitations and standards under the Clean Water Act. The NPDES sets out the conditions under which the federal Environmental Protection Agency or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. 33 U.S.C. § 1342(a) & (b). In California, wastewater discharge requirements established by the regional water quality control boards (regional water boards) are the equivalent of the NPDES permits required by federal law. Wat. Code, § 13374. California's Porter-Cologne Act, Wat. Code, § 13000 et seq., establishes a statewide program for water quality control. Nine regional water boards, overseen by the California Water Board, administer the program in their respective regions. Wat. Code, §§ 13140, 13200 et seq., 13240, and 13301. Wat. Code, §§ 13374 and 13377, authorize the regional water board to issue federal NPDES permits for five-year periods. 33 U.S.C. § 1342, subd. (b)(1)(B).

*Governments > Local Governments > Finance*

*Governments > State & Territorial Governments > Finance*

[HN14]See Gov. Code, § 17556, subd. (c).

*Governments > State & Territorial Governments > General Overview*

150 Cal. App. 4th 898, \*, 58 Cal. Rptr. 3d 762, \*\*;  
2007 Cal. App. LEXIS 711, \*\*\*; 2007 Cal. Daily Op. Service 5216

[HN15] See Rev. & Tax. Code, § 2209, subd. (c).

**Constitutional Law > State Constitutional Operation**

[HN16] In construing the meaning of Cal. Const., art. XIII B, § 6, a court's inquiry is not focused on what the legislature intended in adopting the former statutory reimbursement scheme, but rather on what the voters meant when they adopted art. XIII B, § 6. To determine this intent, the court must look to the language of the provision itself.

**Governments > Local Governments > Finance  
Governments > State & Territorial Governments > Finance**

[HN17] The subvention requirement of Cal. Const., art. XIII B, § 6, applies whenever the legislature or any state agency mandates a new program or higher level of service. The all-encompassing "any state agency" language defeats any perceived presumption that the electorate intended to incorporate into Cal. Const., art. XIII B, § 6, the exclusion of a particular state agency from its subvention requirement.

**Constitutional Law > The Judiciary > Case or Controversy > Constitutionality of Legislation > General Overview**

**Environmental Law > Water Quality > General Overview**

**Governments > Local Governments > Finance  
Governments > State & Territorial Governments > Finance**

[HN18] The constitutional infirmity of Gov. Code, § 17516, subd. (c), is readily apparent from its plain language that the definition of "executive order" does not include any order, plan, requirement, rule, or regulation issued by the California Water Board or by any regional water quality control board (regional water board) pursuant to Division 7 (commencing with Wat. Code, § 13000) of the California Water Code. § 17516, subd. (c). This exclusion of any order issued by any regional water board contravenes the clear, unequivocal intent of Cal. Const., art. XIII B, § 6, that subvention of funds is required whenever any state agency mandates a new program or higher level of service on any local government. § 17516, subd. (c). Therefore, § 17516, subd. (c), is unconstitutional to the extent it excludes any order issued by any regional water board pursuant to Division 7 (commencing with Wat. Code, § 13000) of the Water Code from the definition of "executive order." This conclusion leads to the further conclusion that whether one or both of the subject two obligations constitutes a state mandate necessitating subvention of funds under Cal.

Const., art. XIII B, § 6, is an issue that must in the first instance be resolved by the California Commission on State Mandates.

**SUMMARY:**

**CALIFORNIA OFFICIAL REPORTS SUMMARY**

The trial court issued a writ of mandate directing the Commission on State Mandates to set aside its decisions affirming its executive director's rejections of test claims presented by a county and several cities and to consider fully the test claims and determine whether the county and the cities were entitled to reimbursement without consideration of Gov. Code, § 17516, subd. (c). The county and the cities sought reimbursement for carrying out obligations required by a National Pollutant Discharge Elimination System Permit for municipal stormwater and urban runoff discharges that was issued by the Regional Water Quality Control Board (Regional Water Board), Los Angeles Region. (Superior Court of Los Angeles County, Nos. BS089769 and BS089785, Victoria G. Chaney, Judge.)

The Court of Appeal affirmed the judgment, holding that Gov. Code, § 17516, subd. (c), is unconstitutional to the extent that it exempts regional water boards from the constitutional state mandate subvention requirement. Its creation of an exception for regional water boards, which are state agencies, contravenes the plain, unequivocal, and all-inclusive reference to "any state agency" in Cal. Const., art. XIII B, § 6. Moreover, a contrary conclusion was not compelled by virtue of the fact that § 17516, subd. (c), essentially mirrors the language of Rev. & Tax. Code, § 2209, subd. (c). A statute cannot trump the constitution. The court found persuasive the commission's position that should the court conclude § 17516, subd. (c), was unconstitutional, the appropriate remedy was to afford the commission the opportunity to pass on the merits of the subject test claims on the issues of whether: (1) the subject permit qualified as a state mandated program under Cal. Const., art. XIII B, § 6; (2) the permit amounted to a new program or higher level of service; and (3) the permit imposed costs on local entities (Gov. Code, §§ 17514, 17556). A cross-appeal filed by the county and the cities was premised on the theory that if subvention of funds from the commission was foreclosed by § 17516, subd. (c), they were entitled to pursue an independent action against the Regional Water Board, Los Angeles Region. Accordingly, the court concluded that the cross-appeal, which was simply protective in nature, was moot. (Opinion by Aldrich, J., with Klein, P. J., and Croskey, J., concurring.)

**HEADNOTES**

CALIFORNIA OFFICIAL REPORTS HEADNOTES  
Classified to California Digest of Official Reports

(1) **State of California § 11--Fiscal Matters--Reimbursement to Local Governments--New Programs and Services--Subvention.**--"Subvention" generally means a grant of financial aid or assistance, or a subsidy. As used in connection with state-mandated costs, the basic legal requirements of subvention can be easily stated; it is in the application of the rule that difficulties arise. Essentially, the constitutional rule of state subvention provides that the state is required to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. This does not mean that the state is required to reimburse local agencies for any incidental cost that may result from the enactment of a state law; rather, the subvention requirement is restricted to governmental services which the local agency is required by state law to provide to its residents. The subvention requirement is intended to prevent the state from transferring the costs of government from itself to local agencies. Reimbursement is required when the state freely chooses to impose on local agencies any peculiarly governmental cost which they were not previously required to absorb. The subvention requirement of Cal. Const., art. XIII B, § 6, is triggered if the Legislature or any state agency mandates a new program or higher level of service (art. XIII B, § 6). Such requirement is inapplicable where the additional costs on local governments are imposed by a federal mandate, i.e., the federal government, Article XIII B, § 9, subd. (b), defines federally mandated appropriations as those required to comply with mandates of the courts or the federal government which, without discretion, require an expenditure for additional services or which unavoidably make the provision of existing services more costly. [\*900]

(2) **State of California § 11--Fiscal Matters--Reimbursement to Local Governments--New Programs and Service--Subvention--Procedure for Claims.**--Whether a particular cost incurred by a local government arises from carrying out a state mandate for which subvention is required under Cal. Const., art. XIII B, § 6, is a matter for the Commission on State Mandates to determine in the first instance. A local government initiates the process for subvention under art. XIII B, § 6, by filing a claim with the commission (Gov. Code, § 17521). The initial claim is referred to as a test claim (§ 17521). The provisions of Gov. Code, § 17500 et seq., provide the sole and exclusive procedure by which a local agency may claim reimbursement for costs mandated by the state as required by art. XIII B, § 6 (Gov. Code, § 17552). The Legislature has created a quasi-judicial body called the Commission on State Man-

dates, Gov. Code, § 17525, to hear and decide upon any claim by a local government that the local government is entitled to be reimbursed by the state for costs as required by Cal. Const., art. XIII B, § 6 (Gov. Code, § 17551, subd. (a)). It has defined "costs" as costs mandated by the state--any increased costs that the local government is required to incur as a result of any statute, or any executive order implementing any statute, which mandates a new program or higher level of service of any existing program within the meaning of Cal. Const., art. XIII B, § 6 (Gov. Code, § 17514). Finally, in Gov. Code, § 17556, subd. (d), it has declared that the commission shall not find costs mandated by the state if, after a hearing, the commission finds that the local government has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.

(3) **Limitation of Actions § 28--Defenses--Raising by Demurrer--Forfeiture.**--The time bar of a statute of limitations may be raised by demurrer where the complaint discloses on its face that the statute of limitations has run on the causes of action stated in the complaint, for the reason that it fails to state facts sufficient to constitute a cause of action. Forfeiture of a time-bar defense transpires by the failure to raise the applicable statute of limitations in the answer.

(4) **Mandamus and Prohibition § 57--Mandamus--Time Limits.**--If a time limit in a mandamus proceeding is held to be jurisdictional, estoppel or waiver cannot extend the time.

(5) **Limitation of Actions § 5--Validity, Construction, and Application of Statutes--Challenge to Constitutionality--State Funding Statute.**--The time bar of Code Civ. Proc., § 341.5, applies to a challenge to the [\*901] constitutionality of any statute relating to state funding for counties and other local governmental entities, not to a challenge to an action by an administrative agency.

(6) **Pollution and Conservation Laws § 5--Water Pollution--Statewide Program for Quality Control--Administration by Regional Water Quality Control Boards--Issuance of Discharge Permits.**--Part of the federal Clean Water Act (33 U.S.C. § 1251 et seq.) is the National Pollutant Discharge Elimination System (NPDES), the primary means for enforcing effluent limitations and standards under the Clean Water Act. The NPDES sets out the conditions under which the federal Environmental Protection Agency or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater (33 U.S.C. § 1342(a) & (b)). In California, wastewater discharge requirements established by the Regional Water Quality

Control Boards are the equivalent of the NPDES permits required by federal law (Wat. Code, § 13374). California's Porter-Cologne Act (Wat. Code, § 13000 et seq.) establishes a statewide program for water quality control. Nine regional water boards, overseen by the State Water Board, administer the program in their respective regions (Wat. Code, §§ 13140, 13200 et seq., 13240, and 13301). Wat. Code, §§ 13374 and 13377, authorize the regional water board to issue federal NPDES permits for five-year periods (33 U.S.C. § 1342, subd. (b)(1)(B)).

(7) **Constitutional Law § 13--Construction of Constitutions--Language of Enactment--Voters' Intent.**--In construing the meaning of Cal. Const., art. XIII B, § 6, a court's inquiry is not focused on what the Legislature intended in adopting the former statutory reimbursement scheme, but rather on what the voters meant when they adopted art. XIII B, § 6. To determine this intent, the court must look to the language of the provision itself.

(8) **State of California § 11--Fiscal Matters--Reimbursement to Local Governments--New Programs and Services--Subvention.**--The subvention requirement of Cal. Const., art. XIII B, § 6, applies whenever the Legislature or any state agency mandates a new program or higher level of service. The all-encompassing "any state agency" language defeats any perceived presumption that the electorate intended to incorporate into art. XIII B, § 6, the exclusion of a particular state agency from its subvention requirement. [\*902]

(9) **State of California § 11--Fiscal Matters--Reimbursement to Local Governments--New Programs and Services--Subvention--Unconstitutionality of Conflicting Statute--Order Issued by Regional Water Board.**--The constitutional infirmity of Gov. Code, § 17516, subd. (c), is readily apparent from its plain language that the definition of "executive order" does not include any order, plan, requirement, rule, or regulation issued by the State Water Board or by any regional water quality control board pursuant to division 7 (commencing with Wat. Code, § 13000) of the Water Code (§ 17516, subd. (c)). This exclusion of any order issued by any regional water board contravenes the clear, unequivocal intent of Cal. Const., art. XIII B, § 6, that subvention of funds is required whenever any state agency mandates a new program or higher level of service on any local government (§ 17516, subd. (c)). Therefore, § 17516, subd. (c), is unconstitutional to the extent it excludes any order issued by any regional water board pursuant to division 7 (commencing with Wat. Code, § 13000) of the Water Code from the definition of "executive order." This conclusion leads to the further conclu-

sion that whether one or both of the subject two obligations constitutes a state mandate necessitating subvention of funds under Cal. Const., art. XIII B, § 6, is an issue that must in the first instance be resolved by the Commission on State Mandates.

(10) **State of California § 11--Fiscal Matters--Reimbursement to Local Governments--New Programs and Services--Subvention--Unconstitutionality of Conflicting Statute--Order Issued by Regional Water Board--Remedy.**--Because Gov. Code, § 17516, subd. (c), is unconstitutional to the extent it purports to exempt orders issued by regional water quality control boards from the definition of "executive orders" for which subvention of funds to local governments for carrying out state mandates is required pursuant to Cal. Const., art. XIII B, § 6, a trial court properly issued a writ of mandate directing the Commission on State Mandates to resolve four test claims presented by a county and several cities on the merits without reference to § 17516, subd. (c).

## OPINION

[\*\*764] **ALDRICH, J.--**

### INTRODUCTION

The California Commission on State Mandates (the Commission) appeals from the judgment entered following the partial grant of cross-motions for judgment on the pleadings. The County of Los Angeles, the Los Angeles County Flood Control District, and the Cities of Commerce, Carson, Downey, Hawaiian Gardens, Montebello, Santa Fe Springs, Signal Hill, Artesia, Beverly Hills, La Mirada, Monrovia, Norwalk, Rancho Palos Verdes, San Marino and Westlake Village (collectively, County/Cities) filed a cross-appeal from the judgment.

In 2001, the Regional Water Quality Control Board (Regional Water Board), Los Angeles Region, issued a National Pollutant Discharge Elimination System (NPDES) permit for municipal stormwater and urban runoff discharges, which obligated County/Cities to inspect industrial, [\*904] commercial, and construction water treatment facilities (which obligation County/Cities claim [\*\*\*3] the state previously performed) and to install and maintain trash receptacles at transit stops.

County/Cities presented "test claims" <sup>1</sup> to the executive director of the Commission [\*\*765] seeking reimbursement for carrying out these obligations pursuant to the constitutional requirement for subvention arising from a state mandate (Cal. Const., art. XIII B, § 6). The executive director returned the claims adjudicated, because they did not involve an executive order under section 17516 of the Government Code (Section 17516(c)). In denying the appeals of County/Cities, the Commission noted it was without authority to declare a statute unconstitutional and concluded that Section 17516(c) excludes from the subvention requirement any order, which includes a permit, issued by the Regional Water Board of the State Water Resources Control Board (State Water Board).

<sup>1</sup> "Test claim" means the first claim filed with the commission alleging that a particular statute

or executive order imposes costs mandated by the state." (Gov. Code, § 17521.)

[\*\*\*4] Section 6 of article XIII B of the California Constitution (article XIII B, section 6) provides in pertinent part: [HN1]"Whenever the Legislature or *any state agency* mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service ... ." (Italics added.)

As we shall discuss, Section 17516(c) is unconstitutional to the extent it exempts Regional Water Boards from the constitutional state mandate subvention requirement. Its creation of an exception for Regional Water Boards, which are state agencies, contravenes the plain, unequivocal, and all-inclusive reference to "any state agency" in article XIII B, section 6. Moreover, a contrary conclusion is not compelled by virtue of the fact that Section 17516(c) essentially mirrors the language of section 2209, subdivision (c) (§ 2209(c)) of the Revenue and Taxation Code. A statute cannot trump the Constitution.

We decline to consider the Commission's new claim that the constitutional challenge to Section 17516(c) by County/Cities is barred by the 90-day limitation period [\*\*\*5] of section 341.5 of the Code of Civil Procedure. This statute of limitations defense, which should have been raised before the trial court, is not cognizable on this appeal. [\*905]

The Commission urges that should this court conclude Section 17516(c) is unconstitutional, the appropriate remedy is to afford the Commission the opportunity to pass on the merits of the subject test claims on the issues of whether (1) the subject permit qualifies as a state-mandated program under article XIII B, section 6; (2) the permit amounts to a new program or higher level of service; and (3) the permit imposes costs on local entities (Gov. Code, §§ 17514, 17556). We find its position persuasive.

The cross-appeal filed by County/Cities is premised on the theory that if subvention of funds from the Commission is foreclosed by Section 17516(c), County/Cities are entitled to pursue an independent action against the Regional Water Board, Los Angeles Region (LA Regional Water Board). This cross-appeal, which is simply protective in nature, is moot.

In sum, we uphold the trial court's issuance of a writ of mandate directing the Commission [\*\*\*6] to set aside its decisions affirming its executive director's rejections of the subject test claims and to consider fully these test claims and determine whether County/Cities are entitled to reimbursement without consideration of

Section 17516(c), and we affirm the judgment in its entirety.

## BACKGROUND

### 1. *Article XIII B, Section 6, Subvention of Funds for State Mandates*

"The electorate approved Proposition 4 in 1979, thus adding article XIII B to the state Constitution. [\*\*766] While the earlier Proposition 13 limited the state and local governments' power to increase taxes (see Cal. Const., art. XIII A, added by initiative measure in Primary Elec. (June 6, 1978)), Proposition 4, the so-called 'Spirit of 13,' imposed a complementary limit on the rate of growth in governmental spending." (*San Francisco Taxpayers Assn. v. Board of Supervisors* (1992) 2 Cal.4th 571, 574 [7 Cal. Rptr. 2d 245, 828 P.2d 147].) This measure also "provided [for] reimbursement to local governments for the costs of complying with certain requirements mandated by the state." (*Long Beach Unified Sch. Dist. v. State of California* (1990) 225 Cal. App. 3d 155, 172 [275 Cal. Rptr. 449].)

"[V]oters were told [\*\*\*7] that section 6 of Proposition 4 was intended to prevent state government attempts to force programs on local governments without the state paying for them.' (Ballot Pamp., Special State-wide Elec. [(Nov. 6, 1979)] p. 18.)" (*County of Sonoma v. Commission on State Mandates* (2000) 84 Cal.App.4th 1264, 1282 [101 Cal. Rptr. 2d 784]; see also *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56 [233 Cal. Rptr. 38, 729 P.2d 202] [intent was not all local costs arising from compliance with state law to be reimbursable; rather, intent was to prevent "the perceived [\*906] attempt by the state to enact legislation or adopt administrative orders creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services which the state believed should be extended to the public"].)

"Section 6 was included in article XIII B in recognition that article XIII A of the Constitution severely restricted the taxing powers of local governments. [Citation.] The provision was intended to preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities that were ill equipped [\*\*\*8] to handle the task. [Citations.] Specifically, it was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues. Thus, although its language broadly declares that the 'state shall provide a subvention of funds to reimburse ... local government for the costs [of a state-mandated new] program or higher level of service,' read in its textual and historical context section 6 of article XIII B requires subvention only when

the costs in question can be recovered *solely from tax revenues.*" (*County of Fresno v. State of California* (1991) 53 Cal.3d 482, 487 [280 Cal. Rptr. 92, 808 P.2d 235], original italics; see also *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 836, fn. 6 [244 Cal. Rptr. 677, 750 P.2d 318] [a reimbursement requirement was "enshrined in the Constitution ... to provide local entities with the assurance that state mandates would not place additional burdens on their increasingly limited revenue resources"].)

Article XIII B, section 6 provides: "(a) Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the State [\*\*\*9] shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service, except that the Legislature may, but need not, provide such a subvention of funds for the following mandates. [¶] (1) Legislative mandates requested by the local agency affected. [¶] (2) Legislation defining a new crime or changing an existing definition of a crime. [¶] (3) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975."

[HN2](1) "'Subvention' generally means a grant of financial aid or assistance, or a [\*\*767] subsidy. [Citation.] As used in connection with state-mandated costs, the basic legal requirements of subvention can be easily stated; it is in the application of the rule that difficulties arise.

"Essentially, the constitutional rule of state subvention provides that the state is required to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. [Citation.] This does not mean that the state is required to [\*907] reimburse local agencies for any incidental [\*\*\*10] cost that may result from the enactment of a state law; rather, the subvention requirement is restricted to governmental services which the local agency is required by state law to provide to its residents. [Citation.] The subvention requirement is intended to prevent the state from transferring the costs of government from itself to local agencies. [Citation.] Reimbursement is required when the state 'freely chooses to impose on local agencies any peculiarly "governmental" cost which they were not previously required to absorb.' [Citation.]" (*Haves v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, at 1577-1578 [15 Cal. Rptr. 2d 547].)

[HN3]The subvention requirement of article XIII B, section 6 is triggered if "the Legislature or any state agency" mandates a new program or higher level of service. (Art. XIII B, § 6.) Such requirement is inapplicable

150 Cal. App. 4th 898, \*, 58 Cal. Rptr. 3d 762, \*\*,  
2007 Cal. App. LEXIS 711, \*\*\*; 2007 Cal. Daily Op. Service 5216

where the additional costs on local governments are imposed by a federal mandate, i.e., the federal government. Article XIII B, section 9, subdivision (b) of the California Constitution, defines federally mandated appropriations as those "required to comply with mandates of the courts or the federal government which, *without discretion*, [\*\*\*11] require an expenditure for additional services or which *unavoidably make the provision of existing services more costly*." <sup>2</sup> (Italics added.)

2 "In 1980, after the adoption of article XIII B, [the Legislature] amended the statutory definition of 'costs mandated by the federal government' to provide that these include 'costs resulting from enactment of a state law or regulation where failure to enact such law or regulation to meet specific federal program or service requirements would result in *substantial monetary penalties or loss of funds to public or private persons* in the state. ...' (Rev. & Tax. Code, § 2206, italics added; Stats. 1980, ch. 1256, § 3, p. 4247.)" (*City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 75 [266 Cal. Rptr. 139, 785 P.2d 522].)

There is no precise formula or rule for determining whether the "costs" are the product of a federal mandate. Our Supreme Court explained: "Given the variety of cooperative federal-state-local programs, we here attempt no final test for 'mandatory' versus 'optional' compliance with federal law. A determination in each case must depend on such factors as the nature and purpose of the federal program; whether its design suggests an intent to coerce; when state and/or local participation began; the penalties, if any, assessed for withdrawal or refusal to participate or comply; and any other legal and practical consequences of nonparticipation, noncompliance, or withdrawal. Always, the courts and the Commission must respect the governing principle of article XIII B, section 9(b): neither state nor local agencies may escape their spending limits when their participation in federal programs is truly voluntary." (*City of Sacramento v. State of California*, supra, 50 Cal.3d at p. 76.)

[\*\*\*12] 2. *Existence of State Mandate Matter for the Commission*

[HN4](2) Whether a particular cost incurred by a local government arises from carrying out a state mandate for which subvention is required under article XIII B, section 6, is a matter for the Commission to determine in the first instance. [\*908]

A local government initiates the process for subvention under article XIII B, section 6 by filing a claim with the Commission. (Gov. Code, § 17521; [\*\*\*768] cf. *County of San Diego v. State of California* (1997) 15 Cal.4th 68, 89 [61 Cal. Rptr. 2d 134, 931 P.2d 312] [futility exception to exhaustion of administrative remedies doctrine applicable to failure to file claim before Commission].) The initial claim is referred to as a "test claim." (Gov. Code, § 17521.)

"The Legislature enacted Government Code sections 17500 through 17630 to implement article XIII B, section 6. (Gov. Code, § 17500.)" (*County of Fresno v. State of California*, supra, 53 Cal. 3d at p. 484.) The provisions of Government Code section 17500 et seq. "provide the sole and exclusive [\*\*\*13] procedure by which a local agency ... may claim reimbursement for costs mandated by the state as required by" article XIII B, section 6. (Gov. Code, § 17552.)

[HN5]"It created a 'quasi-judicial body' (*ibid.*) called the Commission on State Mandates ... ([Gov. Code], § 17525) to 'hear and decide upon [any] claim' by a local government that the local government 'is entitled to be reimbursed by the state for costs' as required by article XIII B, section 6. (Gov. Code, § 17551, subd. (a).) It defined 'costs' as 'costs mandated by the state'--'any increased costs' that the local government 'is required to incur ... as a result of any statute ... , or any executive order implementing any statute ... , which mandates a new program or higher level of service of any existing program' within the meaning of article XIII B, section 6. (Gov. Code, § 17514.) Finally, in section 17556(d) it declared that 'The commission shall not find costs mandated by the state ... if, after a hearing, the commission finds that' the local government 'has the authority to levy service charges, fees, [\*\*\*14] or assessments sufficient to pay for the mandated program or increased level of service.' " (*County of Fresno v. State of California*, supra, 53 Cal. 3d at p. 484.)

### 3. *Regional Water Board Order Not "Executive Order"*

Section 17516(c) defines, in pertinent part, an "[e]xecutive order" [as] any order, plan, requirement, rule, or regulation issued by ... [¶] ... [¶] ... [a]ny agency ... of state government, " except an "[e]xecutive order" does not include any order, plan, requirement, rule, or regulation issued by the State Water ... Board or by any regional water ... board pursuant to Division 7 (commencing with Section 13000) of the Water Code." <sup>3</sup> (Added by Stats. 1984, ch. 1459, § 1, p. 5113.)

3 Section 17516(c) further provides: "It is the intent of the Legislature that the State Water ... Board and regional water ... boards will not adopt enforcement orders against publicly owned dis-

150 Cal. App. 4th 898, \*; 58 Cal. Rptr. 3d 762, \*\*;  
2007 Cal. App. LEXIS 711, \*\*\*; 2007 Cal. Daily Op. Service 5216

chargers which mandate major waste water treatment facility construction costs unless federal financial assistance and state financial assistance pursuant to the Clean Water Bond Act of 1970 and 1974, is simultaneously made available. 'Major' means either a new treatment facility or an addition to an existing facility, the cost of which is in excess of 20 percent of the cost of replacing the facility."

LA Regional Water Board argues the trial court's ruling sustaining its demurrer to the fourth cause of action for a writ of mandate directing it to delete the subject two obligations under the permit as violative of Government Code section 17516 should be upheld, because section 17516 "applies to construction of major waste treatment facilities, not trash receptacles or inspections." This analysis, however, is inconsistent with the plain language of section 17516 in its entirety.

[\*909]

[\*\*\*15] In light of the above definition, the subject permit issued by an order of the LA Regional Water Board cannot constitute an "executive order implementing any statute, ... which mandates a new program or higher level of service of an existing program within the meaning of" the article XIII B, section 6 [\*\*769] requirement of subvention of funds to local governments for carrying out a state mandate. (Gov. Code, § 17514.)

#### 4. Procedural Posture

LA Regional Water Board issued order No. 01-182, which adopted NPDES permit No. CAS004001 (Permit). This Permit imposed two obligations on County/Cities for the purpose of regulating municipal stormwater and urban runoff discharges in Los Angeles County. The first required County/Cities to inspect industrial, commercial, and construction sites to ensure compliance with the law, and the other required County/Cities to install and maintain trash receptacles at transit stops.

County/Cities filed four test claims, i.e., test claims 03-TC-04, 03-TC-19, 03-TC-20, and 03-TC-21, seeking reimbursement of costs for carrying out these obligations. The executive director rejected these test claims as excluded from subvention [\*\*\*16] pursuant to Section 17516(c).

In the administrative appeals, the Commission found it was bound by Section 17516(c), upheld its executive director's decision, and denied the appeals.

In their amended and consolidated petitions and complaints, County/Cities sought, among other things: (1) An order requiring the State to reimburse them for the new programs or higher level of service under the

Permit or, alternatively, to allow them to offset payment of permit and other fees or moneys owed or to be transferred to the state against their costs; (2) an order enjoining state from refusing to reimburse them in the future; or, alternatively, (3) a peremptory writ of mandate directing the Commission to accept their test claims and find they are entitled to reimbursement; (4) a declaration that Government Code section 17516 is unconstitutional; (5) a peremptory writ of mandate directing LA Regional Water Board either to delete or not [\*910] enforce the subject obligations under the Permit; and (6) a stay of the challenged portions of the permit.

The Commission and County/Cities filed cross-motions for judgment on the pleadings. The trial court granted the Commission's motion as to the second cause of action for declaratory [\*\*\*17] relief. The court explained: "The only actual controversy between [County/Cities] and [Commission] is whether [County/Cities]' claims should be deemed reimbursable. The sole and exclusive procedure by which to adjudicate this controversy is a mandate action under Code of Civil Procedure section 1094.5. ([Government Code sections 17552, 17559].) The only pertinent relief under ... section 1094.5 is a finding that [the Commission] 'has not proceeded in the manner required by law.' Declaratory relief is not available."

After construing the motion addressed to the third cause of action as a motion to strike improper requested relief, the court granted the motion and struck that part of the third cause of action requesting an order directing the Commission to find their claims to be reimbursable on the ground "[t]he court has no power at this time to do so. [Citations.]"

Turning to County/Cities' motion for judgment on the pleadings, the trial court granted the motion as to the third cause of action for extraordinary writ relief, except as to the stricken request for improper relief.<sup>4</sup>

4 In the third cause of action, County/Cities sought a writ of mandate (Code Civ. Proc., § 1094.5) compelling a court finding that Government Code section 17516 was unconstitutional on its face or as applied in this action and directing the Commission to accept their test claims for filing and approving them for reimbursement.

[\*\*\*18] The court found that to the extent Section 17516(c) excepted the orders of Regional [\*\*770] The Water Boards from the definition of "executive orders," Section 17516(c) was unconstitutional in that it expressly contravened article XIII B, section 6. The court ordered the Commission to set aside its order affirming its executive director's rejections of the four test claims and to consider these claims on the merits.

In granting in part County/Cities' petitions for a writ of mandate, the trial court found the Commission, "though it proceeded as required by statutory law, as it was constrained to do, has not proceeded as required by superior constitutional law. (Code Civ. Proc., [§ 1094.5, subd. (a).] The question whether [County/Cities] state valid claims for reimbursement must be remanded to [C]ommission, which is ordered to consider [these] claims on their merits. [Citations.]" [\*911]

A peremptory writ of mandate was issued on May 24, 2005. Judgment was entered the same date. This appeal and cross-appeal followed.

#### STANDARD OF REVIEW

"The standard for reviewing a judgment on the pleadings is settled: [HN6]'A motion for judgment on the pleadings is the equivalent [\*\*\*19] of a general demurrer but is made after the time for demurrer has expired. The rules governing demurrers apply. [Citation.] The grounds for a motion for judgment on the pleadings must appear on the face of the challenged complaint or be based on facts which the court may judicially notice. [Citations.] On review we must determine if the complaint states a cause of action as a matter of law.' [Citation.] 'We review the complaint de novo to determine whether [it] alleges facts sufficient to state a cause of action under any legal theory. [Citation.]' [Citation.]" (*McCormick v. Travelers Ins. Co.* (2001) 86 Cal.App.4th 404, 408 [103 Cal. Rptr. 2d 258].)

[HN7]"In reviewing the trial court's ruling on a writ of mandate, the appellate court is ordinarily confined to an inquiry as to whether the findings and judgment of the trial court are supported by substantial evidence. (*Evans v. Unemployment Ins. Appeals Bd.* (1985) 39 Cal.3d 398, 407 [216 Cal. Rptr. 782, 703 P.2d 122].) However, where the facts are undisputed and the issues present questions of law, the appellate court is not bound by the trial court's decision but may make its own determination. (*Ibid.*)" (*Connell v. Superior Court* (1997) 59 Cal.App.4th 382, 394 [69 Cal. Rptr. 2d 231].)

#### [\*\*\*20] DISCUSSION

##### 1. Defense of Statute of Limitations Forfeited

On appeal for the first time, the Commission asserts the challenge of County/Cities to the constitutionality of Section 17156(c) is barred by the 90-day limitation period of section 341.5 of the Code of Civil Procedure, which governs the timeliness of actions challenging the constitutionality of state funding for municipalities, school districts, special districts, and local agencies.

Code of Civil Procedure section 341.5 provides: [HN8]"Notwithstanding any other provision of law, any

action or proceeding in which a county, city, city and county, school district, special district, or any other local agency is a plaintiff or petitioner, that is brought against the State of California challenging the constitutionality of any statute relating to state funding for counties, cities, cities and counties, school districts, special districts, or other local agencies, shall be commenced within 90 days of the effective date of the [\*912] statute at issue in the action. For purposes of this section, 'State of California' means the State of California itself, or any of its agencies, [\*\*\*21] departments, commissions, boards, or public officials." (Added by [\*\*\*771] Stats. 1994, ch. 155, § 1, p. 1601, eff. July 11, 1994; amended by Stats. 1994, ch. 156, § 1, p. 1619, eff. July 11, 1994.)

The Commission argues the constitutional challenge to Section 17516(c) is time-barred, because: "Government Code section 17500 et seq., including section 17516, relates to state funding for counties and cities relative to state-mandated local programs. ... [S]ection 17516 was enacted in 1984 and became effective January 1, 1985. The petition in this case challenging section 17516 as unconstitutional was filed April 28, 2004," which was more than 90 days after the effective date of section 17516.

[HN9](3) The time bar of a statute of limitations may be raised by demurrer "[w]here the complaint discloses on its face that the statute of limitations has run on the causes of action stated in the complaint, [for the reason that] it fails to state facts sufficient to constitute a cause of action. [Citation.]" (*ABF Capital Corp. v. Berglass* (2005) 130 Cal.App.4th 825, 833 [30 Cal. Rptr. 3d 588].) Forfeiture of a time-bar defense transpires by the failure to raise [\*\*\*22] the applicable statute of limitations in the answer. (See, e.g., *Minton v. Cavanaugh* (1961) 56 Cal.2d 576, 581 [15 Cal. Rptr. 641, 364 P.2d 473]; *Davies v. Krasna* (1975) 14 Cal.3d 502, 508 [121 Cal. Rptr. 705, 535 P.2d 1161]; *Mitchell v. County Sanitation Dist.* (1957) 150 Cal. App. 2d 366, 371 [309 P.2d 930]; see also Code Civ. Proc., § 458.)

As the Commission concedes, it did not raise "[Code of Civil Procedure] section 341.5 as an affirmative defense in its pleadings in the trial court." This omission signifies that the Commission therefore has forfeited any right it may have had to assert section 341.5 to bar, as untimely, the claims of County/Cities to the constitutionality of Section 17516(c).

(4) For a contrary conclusion, the Commission argues "the statute of limitations to challenge an administrative action is jurisdictional and should not be considered waived. (*United Farm Workers of America v. Agricultural Labor Relations Board* (1977) 74 Cal. App. 3d 347, 350 [141 Cal. Rptr. 437]; *Tietseh v. City of Anaheim* (1984) 160 Cal. App. 3d 576, 578 [206 Cal. Rptr.

150 Cal. App. 4th 898, \*, 58 Cal. Rptr. 3d 762, \*\*;  
2007 Cal. App. LEXIS 711, \*\*\*; 2007 Cal. Daily Op. Service 5216

740]; [\*\*\*23] Donnellan v. City of Novato (2001) 86 Cal.App.4th 1097, 1103 [103 Cal. Rptr. 2d 882]. [HN10] If a time limit in a mandamus proceeding is held to be jurisdictional, estoppel or waiver cannot extend the time. (Hollister Convalescent Hosp., Inc. v. Rico (1975) 15 Cal.3d 660, 666, 674 [125 Cal. Rptr. 757, 542 P.2d 1349].) [\*913]

The Commission's fallback position is that this court should exercise its discretion to determine the applicability of the time bar, because this "issue is a question of law rather than of fact" and "[t]his matter affects the public interest since [County/Cities] are seeking reimbursement from the state for costs incurred to comply with a permit" issued by the LA Regional Water Board. In other words, "taxpayers statewide could unjustly suffer the consequences of funding a local program if Code of Civil Procedure section 341.5 is not considered and ... section 17516 is held to be unconstitutional." As authority, the Commission relies primarily on City of Sacramento v. State of California, *supra*, 50 Cal.3d at pages 64-65 (where issue of law rather than fact raised, public interest exception governs over [\*\*\*24] collateral estoppel bar) and Connell v. Superior Court, *supra*, 59 Cal.App.4th at pages 387-388, 396-397 (public interest exception applicable to allow review of question of law as to whether recycled wastewater regulation constituted reimbursable state mandate.)

(5) Neither of the Commission's positions is successful. In the first instance, [HN11] the time [\*\*772] bar of section 341.5 of the Code of Civil Procedure applies to a challenge to the constitutionality of any statute relating to state funding for counties and other local governmental entities, *not* to a challenge to an action by an administrative agency. As for the second, [HN12] neither City of Sacramento nor Connell stands for the proposition that the bar of the applicable statute of limitations may be raised for the first time on appeal.

Additionally, the Commission's characterization of the public interest to be served is a non sequitur. If Government Code section 17516 were in fact unconstitutional, it does not follow that "taxpayers statewide could *unjustly* suffer the consequences of funding a local program." (Italics added.) How could such funding result in injustice when any requirement of [\*\*\*25] reimbursement to local governments would be under the constitutional compulsion of article XIII B, section 6

## 2. Existence of Federal or State Mandate Issue for the Commission

It is undisputed that a federal mandate is not subject to the subvention requirement of article XIII B, section 6 for a state mandate. Accordingly, if the Permit, including the subject two obligations thereunder, constitutes a fed-

eral mandate, the constitutionality of Section 17516(c) is not implicated, and thus, no issue as to its constitutionality is before this court to address on the merits. (See People ex rel. Lynch v. Superior Court (1970) 1 Cal.3d 910, 912 [83 Cal. Rptr. 670, 464 P.2d 126] ["The rendering of advisory opinions falls within neither the functions nor the jurisdiction of this court."].) [\*914]

In its amicus curiae brief, LA Regional Water Board takes the position that, as a matter of law, Section 17516(c) is consistent with article XIII B, section 6 (and thus not unconstitutional) "to the extent Division 7, Chapter 5.5 (commencing with Water Code section 13370)" simply implements federal mandates under the Clean Water Act (33 U.S.C. § 1342(b)). [\*\*\*26] The water boards, i.e., the State Water Board and its Regional Water Boards, implement the federal permit program under chapter 5.5, which the California Legislature enacted to bypass administration of such program directly by the federal Environmental Protection Agency.

LA Regional Water Board takes the further position that the federal mandate nature of its NPDES permits remains constant although it exercises discretion to control the discharge of pollutants through municipal stormwater programs not appearing in federal regulations. Specifically, LA Regional Water Board argues: "When a state [Regional Water Board] issues an NPDES permit requiring municipalities to inspect facilities as a means of controlling their discharge of pollutants, this is not shifting state responsibilities onto local agencies[, because federal law imposes inspection requirements upon municipal permittees."

As for the trash receptacle obligation, LA Regional Water Board points out the Clean Water Act allows the use of programs to control discharge of pollutants in connection with a municipal stormwater permit and argues one such program under the Permit is the ability of "municipalities to employ 'Best [\*\*\*27] Management Practices' (BMPs) to ... attain water quality standards." It identifies "[t]he Permit's trash receptacle requirement as one such [BMP]."

It further argues that the trash receptacle obligation cannot be deemed a state-mandated program, because it is not "an absolute requirement. Any permittee may petition the Regional Water Board to substitute another equally effective BMP for one included within the Permit.[] [For instance, i]f a permittee demonstrates that [\*\*773] a pre-existing program or level of service will be equally effective in controlling pollution, it may seek to substitute that program."

We are not convinced that the obligations imposed by a permit issued by a Regional Water Board necessarily constitute federal mandates under all circumstances.

150 Cal. App. 4th 898, \*; 58 Cal. Rptr. 3d 762, \*\*;  
2007 Cal. App. LEXIS 711, \*\*\*; 2007 Cal. Daily Op. Service 5216

As explained, *ante*, the existence of a federal, as contrasted with a state, mandate is not easily ascertainable.

By letter, we invited the parties and LA Regional Water Board to address whether an obligation under an NPDES permit by a Regional Water Board can qualify as a state mandate within the meaning of article XIII B, section 6, assuming an NPDES permit itself qualified as a federal mandate, and if so, [\*915] why each [\*\*\*28] of the subject two obligations does or does not constitute a state mandate. We have received their responses.

a. *NPDES Permits Issued by Regional Water Boards*

"California cases have repeatedly explained the complicated web of federal and state laws and regulations concerning water pollution, especially storm sewer discharge into the public waterways. (*City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613, 619-621 [26 Cal. Rptr. 3d 304, 108 P.3d 862] (*Burbank*); *Building Industry Assn. of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866, 872-875 [22 Cal. Rptr. 3d 128] ... ; *Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1092-1094 [1 Cal. Rptr. 3d 76] ... ; *WaterKeepers Northern California v. State Water Resources Control Bd.* (2002) 102 Cal.App.4th 1448, 1451-1453 [126 Cal. Rptr. 2d 389].)

(6) "For purposes of this case, the important point is described by the California Supreme Court in *Burbank*: [HN13] Part of the Federal Clean Water Act [33 U.S.C. § 1251 et seq.] is the National Pollutant Discharge Elimination System (NPDES), "[t]he primary means" for enforcing effluent limitations [\*\*\*29] and standards under the Clean Water Act. (*Arkansas v. Oklahoma* [(1992) 503 U.S. 91, 101 [117 L. Ed. 2d 239, 112 S. Ct. 1046]].) The NPDES sets out the conditions under which the federal [Environmental Protection Agency] or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (33 U.S.C. § 1342(a) & (b).) In California, wastewater discharge requirements established by the regional [water] boards are the equivalent of the NPDES permits required by federal law. (§ 13374.) (*Burbank, supra*, 35 Cal.4th at p. 621.)

"California's Porter-Cologne Act (Wat. Code, § 13000 et seq.) establishes a statewide program for water quality control. Nine regional [water] boards, overseen by the State [Water] Board, administer the program in their respective regions. (Wat. Code, §§ 13140, 13200 et seq., 13240, and 13301.) Water Code sections 13374 and 13377 authorize the Regional [Water] Board to issue federal NPDES permits for five-year periods. (33 U.S.C. § 1342, subd. (b)(1)(B).)" [\*\*\*30] ' [\*\*774] (*City of*

*Rancho Cucamonga v. Regional Water Quality Control Bd.* (2006) 135 Cal.App.4th 1377, 1380-1381 [38 Cal. Rptr. 3d 450].) In a related case, Division Five of this district upheld the authority of LA Regional Water Board to issue the Permit here. (*County of Los Angeles v. State Water Resources Control Board* (2006) 143 Cal.App.4th 985, 999-1000 [50 Cal. Rptr. 3d 619], review den. [holding the nine Regional Water Boards authorized under state law to issue NPDES permits].)

5 In pertinent part, article XIII B, section 6, provides: "[T]he Legislature may, but need not, provide a subvention of funds for the following mandates: [¶] ... [¶] (3) Legislative mandates enacted prior to January 1, 1975, or executive orders ... initially implementing legislation enacted prior to January 1, 1975." (Art. XIII B, § 6, subd. (a)(3).) LA Regional Water Board argues that subvention under article XIII B, section 6, is not required as to the Permit, because it is an executive order implementing the Porter-Cologne Water Quality Control Act (Wat. Code, § 13020 et seq.), which is legislation enacted in 1969. This argument fails for the reason that the executive order resulting in the 2001 Permit was not one "initially" implementing such pre-1975 legislation. Equally unsuccessful is LA Regional Water Board's apparent argument that Section 17516(c) should be deemed constitutional for the reason that "most of" the Porter-Cologne Act (div. 7) was enacted prior to 1975. The fatal fallacy of this position is that the exclusion of Section 17516(c) applies to all orders issued pursuant to division 7 regardless of the date the statute in question was enacted.

[\*\*\*31] b. *Potential Federal and State Components of NPDES Permit*

As expected, LA Regional Water Board contends that as in the case of NPDES "permits as a whole, the individual conditions of an NPDES permit are federally required to meet the mandates of the Clean Water Act." It argues: "The Permit is federally required. The conditions within it are federally required to implement the Clean Water Act's mandates. The two cannot be separated into a 'federal' permit with 'state' conditions. [Citation.]"

County/Cities respond, contrariwise, that "[a]n NPDES permit can contain both federal and nonfederal requirements." As case authority, they rely primarily on *City of Burbank v. State Water Resources Control Bd., supra*, 35 Cal.4th 613. Our Supreme Court concluded that under the supremacy clause of the federal Constitution, a Regional Water Board must comply with the fed-

150 Cal. App. 4th 898, \*; 58 Cal. Rptr. 3d 762, \*\*;  
2007 Cal. App. LEXIS 711, \*\*\*; 2007 Cal. Daily Op. Service 5216

eral Clean Water Act in issuing an NPDES permit. (35 Cal. 4th at pp. 626-627.) Nonetheless, "[u]nder the federal Clean Water Act, each state is free to enforce its own water quality laws so long as its effluent limitations are not 'less stringent' than those set out in the Clean Water Act. [Citation.]" (*Id.* at p. 620.) [\*\*\*32] The court thus acknowledged in *Burbank* that an NPDES permit may contain terms federally mandated and terms exceeding federal law. (See also *Burbank, supra*, at pp. 618, 628.) County/Cities also point out that the potential for non-federally mandated components of an NPDES permit is acknowledged under both federal law<sup>6</sup> and state law.<sup>7</sup>

6 In this regard, they rely on this federal statute: "Except as expressly provided in this Act [33 USCS §§ 1251 et seq.], nothing in this Act [33 USCS §§ 1251 et seq.] shall (1) preclude or deny the right of any State or political subdivision thereof or interstate agency to adopt or enforce (A) any standard or limitation respecting discharges of pollutants, or (B) any requirement respecting control or abatement of pollution; except that if an effluent limitation, or other limitation ... is in effect under this Act [33 USCS §§ 1251 et seq.], such State[, etc.] ... may not adopt or enforce any effluent limitation or other limitation ... which is less stringent than the effluent limitation, or other limitation ... ." (33 U.S.C.S. § 1370.)

[\*\*\*33]

7 On this point, they rely on this statutory provision: "Notwithstanding any other provision of this division, the state board or the regional boards shall, as required or authorized by the Federal Water Pollution Control Act, as amended, issue waste discharge requirements ... which apply and ensure compliance with all applicable provisions of the act and acts amendatory thereof or supplementary, thereto, together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance." (Wat. Code, § 13377.)

[\*917]

[\*\*775] Additionally, County/Cities argue "that an obligation imposed on a municipality arises as a result of a federal law or program does not, in and of itself, render that obligation a federal mandate." Rather, they assert that to qualify as a federal mandate, "federal law itself must impose the obligation upon the municipality." They point out Government Code section 17556 provides that costs flowing from a federal mandate may be subject [\*\*\*34] to subvention if such costs exceed such

mandate.<sup>8</sup> They also cite two cases in support of their position.

8 Government Code section 17556, subdivision (c), provides: [HN14]"The commission shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds ... [¶] ... [¶] [t]he statute or executive order imposes a requirement that is mandated by a federal law or regulation and results in costs mandated by the federal government, unless the statute or executive order mandates costs that exceed the mandate in that federal law or regulation."

In *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal.4th 859 [16 Cal. Rptr. 3d 466, 94 P.3d 589], our Supreme Court concluded the costs incurred by school districts in holding mandatory expulsion hearings under Education Code section 48915 were state mandates subject to subvention under article XIII B, section 6. [\*\*\*35] The court explained that expulsion was mandated under the Education Code, rather than federal law, and thus, the fact the costs were incurred to comport with federal due process, a federal mandate, was not controlling. (*San Diego Unified School Dist. v. Commission on State Mandates, supra*, at pp. 880-882.)

In the other case, *Hayes v. Commission on State Mandates, supra*, 11 Cal.App.4th 1564, the appellate court concluded that the finding a mandate was federal turned on whether "the state freely chose to impose the costs upon the local agency as a means of implementing a federal program" and that under these circumstances, "the costs are the result of a reimbursable state mandate regardless whether the costs were imposed upon the state by the federal government." (*Id.* at p. 1594.)

c. *Existence of State Mandates Matter for the Commission*

A review of the pleadings and the matters that may be judicially noticed (Evid. Code, §§ 451, 452, 459) leads to the inescapable conclusion that whether the two obligations in question constitute federal or state mandates [\*\*\*36] presents factual issues which must be addressed in the first instance by the [\*918] Commission if Section 17516(c) were found to be unconstitutional. Resolution of the federal or state nature of these obligations therefore is premature and, thus, not properly before this court.

In its response, the Commission argues that if this court determines Section 17516(c) is unconstitutional, the subject test claims "should be remanded to ... Com-

150 Cal. App. 4th 898, \*; 58 Cal. Rptr. 3d 762, \*\*;  
2007 Cal. App. LEXIS 711, \*\*\*; 2007 Cal. Daily Op. Service 5216

mission to 'decide in the first instance whether a local agency is entitled to reimbursement under [article XIII B.] section 6[.]' (*Lucia Mar Unified School District v. Honig*, *supra*,] 44 Cal.3d 830, 837; Gov. Code, § 17552.)"

The Commission stated that on such remand, it would apply the following cases in determining whether state mandates exist: *City of Sacramento v. State of California*, *supra*, 50 Cal.3d 51, which sets forth various factors and criteria for determining whether the federal program imposes a mandate on the state; *Hayes v. Commission on State Mandates*, *supra*, 11 Cal.App.4th 1564, [\*\*776] which it contends "provides guidance on whether the state, [\*\*\*37] in turn, has mandated a federal program on the local governments"; *Long Beach Unified Sch. Dist. v. State of California*, *supra*, 225 Cal. App. 3d 155, which analyzes whether the state-mandated activities exceed federal requirements; and *San Diego Unified School Dist. v. Commission on State Mandates*, *supra*, 33 Cal.4th 859, which also provides guidance on this same issue.

### 3. "Executive Order" Under Revenue and Taxation Code Not Probativ

The Commission contends the exclusion of orders of the Regional Water Boards from the definition of "executive order" in Section 17516(c) does not contravene article XIII B, section 6, because Government Code section 17516 derives from the definition of "executive order" in Revenue and Taxation Code section 2209,<sup>9</sup> of which the voters were presumed to have known to exist [\*919] when they adopted Proposition 4 (i.e., art. XIII B, § 6) in 1979, and thus, Proposition 4 intended to endorse and continue such exclusion from the definition of "executive order" which was later carried over to Section 17516(c). We disagree.

9 Revenue and Taxation Code section 2209(c) provides: [HN15]" 'Executive order' means any order, plan, requirement, rule or regulation issued ... [¶] ... [¶] ... [b]y any agency ... of state government; provided that the term 'executive order' shall not include any order ... issued by the State Water ... Board or by any regional water ... board pursuant to Division 7 (commencing with Section 13000) of the Water Code.

"It is the intent of the Legislature that the State Water ... Board and regional water ... boards will not adopt enforcement orders against publicly owned discharges which mandate major waste water treatment facility construction costs unless federal financial assistance and state financial assistance pursuant to the Clean Water Bond Act of 1970 and 1974, is simultaneously made available.

" 'Major' means either a new treatment facility or an addition to an existing facility, the cost of which is in excess of 20 percent of the cost of replacing the facility." (Rev. and Tax. Code, § 2209(c), added by Stats. 1974, ch. 457, § 2, p. 1079, and amended by Stats. 1975, ch. 486, § 2, p. 998, eff. Sept. 2, 1975.)

[\*\*\*38] We further disagree with the Commission's reliance on a presumption that when the voters adopted Proposition 1A in November 2004, they knew of, and thus, necessarily approved of Section 17516(c)'s exclusion of orders of Regional Water Boards from the definition of "executive order."

(7) Our focus, instead, must be on the import of article XIII B, section 6, not on the preconstitutional scheme for subvention of funds to local agencies of which section 2209 of the Revenue and Taxation Code was part. As our Supreme Court instructs: [HN16]"In construing the meaning of the constitutional provision [i.e., article XIII B, section 6], our inquiry is not focussed on what the Legislature intended in adopting the former statutory reimbursement scheme, but rather on what the voters meant when they adopted article XIII B in 1979. To determine this intent, we must look to the language of the provision itself. [Citation.]" (*County of Los Angeles v. California*, *supra*, 43 Cal.3d at p. 56.)

[HN17](8) The subvention requirement of article XIII B, section 6 applies "[w]henver the Legislature or any state agency mandates a new program or higher level of service ... ." The all-encompassing [\*\*\*39] "any state agency" language defeats any perceived presumption that the electorate intended to incorporate into article XIII B, section 6 the exclusion of a particular state agency, e.g., the Regional Water Board, from its subvention requirement.

### [\*\*777] 4. Section 17516(c) Unconstitutional as to Regional Water Boards

LA Regional Water Board argues in its amicus curiae brief that Section 17516(c) is constitutional for the additional reason that its exemption from the subvention requirement of article XIII B, section 6, is "appropriate because the Water Boards regulate water pollution with an even hand. Whether the pollution originates from a local public agency or a private industrial source, the Water Boards must assure their permits protect water quality consistent with state and federal law."

This argument is not persuasive. Whether the permit in question issued by Regional Water Boards governs both public and private pollution dischargers to the same extent presents factual issues not yet resolved. In any event, the applicability of permits to public and private dischargers does not inform us about whether a particular

150 Cal. App. 4th 898, \*; 58 Cal. Rptr. 3d 762, \*\*;  
2007 Cal. App. LEXIS 711, \*\*\*; 2007 Cal. Daily Op. Service 5216

permit or an obligation thereunder imposed on local governments constitutes [\*\*\*40] a state mandate necessitating subvention under article XIII B, section 6. (See Carmel Valley Fire Protection Dist. v. State of California (1987) 190 Cal. App. 3d 521, 530-531, 534, 537, 541 [234 Cal. Rptr. 795] [executive orders for protective fire clothing and equipment state mandated even if record, which was incomplete, revealed private sector firefighters also subject to the executive orders].)

(9) In contrast, [HN18]the constitutional infirmity of Section 17516(c) is readily apparent from its plain language that the definition of "[e]xecutive order" does not include *any* order, plan, requirement, rule, or regulation issued by the *State Water ... Board or by any regional water ... board* pursuant to Division 7 (commencing with Section 13000) of the Water Code." (§ 17516(c), italics added.) This exclusion of any order issued by any Regional Water Board contravenes the clear, unequivocal intent of article XIII B, section 6 that subvention of funds is required "[w]henever ... *any state agency* mandates a new program or higher level of service on any local government ... ." (Italics added.) We therefore conclude that Section 17516(c) [\*\*\*41] is unconstitutional to the extent it excludes "any order ... issued by ... any regional water ... board pursuant to Division 7 (commencing with Section 13000) of the Water Code" from the definition of "[e]xecutive order." (Art. XIII B, §6.)

10 At oral argument, when asked to identify the public policy or other reason that would be served by exempting Regional Water Boards from the constitutional subvention requirement, counsel for LA Regional Water Board responded exemption is warranted, because water is an important concern. No one can quarrel with the fact water plays an important role in California. Nonetheless, this reason does not compel the conclusion that an exemption should be carved out for Regional Water Boards as contrasted with those state agencies which regulate other important state interests.

This conclusion leads to the further conclusion that whether one or both of the subject two obligations constitutes a state mandate necessitating subvention of funds under [\*\*\*42] article XIII B, section 6 is an issue that must in the first instance be resolved by the Commission. Accordingly, we uphold the trial court's issuance of a writ of mandate directing the Commission to vacate its decisions affirming its executive director's rejection of the four test claims and to consider these claims on the merits.

##### 5. Cross-appeal Moot

County/Cities filed a protective cross-appeal from the judgment to the extent the trial court dismissed the portions of their writ of mandate petitions against LA Regional Water Board. " The threshold [\*\*\*778] issue raised is whether County/Cities are entitled to proceed directly in superior court against LA [\*921] Regional Water Board for reimbursement relief if they are statutorily precluded from obtaining a hearing before the Commission.

11 The trial court sustained the demurrer to the fourth cause of action for a writ of mandate directing LA Regional Water Board to delete or not enforce the inspection and trash receptacle obligations. The court granted its own motion for judgment on the pleadings without leave to amend as to LA Regional Water Board on the first cause of action for a writ of mandate directing reimbursement; the second cause of action for declaratory relief; and the fifth cause of action for a writ of mandate directing LA Regional Water Board to delete or not enforce the subject obligations.

[\*\*\*43] County/Cities' position is they are entitled to a hearing on the merits of their claims before either the Commission or LA Regional Water Board. If this court determines the Commission's jurisdiction is exclusive, the Commission must afford them a hearing and determine the merits of their subvention claim under article XIII B, section 6. If not exclusive, County/Cities must be allowed to seek relief directly against Regional Water Board before the superior court.

LA Regional Water Board argues County/Cities have no right to seek subvention relief from a Regional Water Board, because reimbursement of costs mandated by the state must be pursued through the statutory subvention scheme, which is "the sole and exclusive procedure by which a local agency ... may claim reimbursement for costs mandated by the state as required by Section 6 of Article XIII B ..." (Gov. Code, § 17552.) Their claims thus must be addressed exclusively to the Commission in first instance.

The cross-appeal against LA Regional Water Board is moot in light of our above conclusion that the Commission is to hear and determine the merits of the County/Cities' test claims. We therefore do [\*\*\*44] not reach the merits of the issues raised in the cross-appeal.

##### CONCLUSION

(10) Section 17516(c) is unconstitutional to the extent it purports to exempt orders issued by Regional Water Boards from the definition of "executive orders" for which subvention of funds to local governments for car-

150 Cal. App. 4th 898, \*; 58 Cal. Rptr. 3d 762, \*\*;  
2007 Cal. App. LEXIS 711, \*\*\*; 2007 Cal. Daily Op. Service 5216

rying out state mandates is required pursuant to article XIII B, section 6. The trial court therefore properly issued a writ of mandate directing the Commission to resolve the four test claims on the merits without reference to Section 17516(c). In light of this conclusion, we need not, and therefore do not, address the issues raised on the now moot cross-appeal. [\*922]

#### DISPOSITION

The judgment is affirmed. Each party shall bear its own costs on appeal and cross-appeal.

Klein, P. J., and Croskey, J., concurred.

COUNTY OF SAN DIEGO, Cross-complainant and Respondent, v. THE STATE  
OF CALIFORNIA et al., Cross-defendants and Appellants.

No. S046843.

SUPREME COURT OF CALIFORNIA

15 Cal. 4th 68; 931 P.2d 312; 61 Cal. Rptr. 2d 134; 1997 Cal. LEXIS 630; 97 Cal.  
Daily Op. Service 1555; 97 Daily Journal DAR 2296

March 3, 1997, Decided

**PRIOR HISTORY:** Superior Court of San Diego County, Super. Ct. No. 634931. Michael I. Greer, \* Harrison R. Hollywood and Judith McConnell, Judges.

\* Retired judge of the San Diego Superior Court assigned by the Chief Justice pursuant to article VI, section 6 of the California Constitution.

**DISPOSITION:** The judgment of the Court of Appeal is affirmed insofar as it holds that the exclusion of adult MIP's from Medi-Cal imposed a mandate on San Diego within the meaning of section 6. The judgment is reversed insofar as it holds that the state required San Diego to spend at least \$ 41 million on the CMS program in fiscal years 1989-1990 and 1990-1991. The matter is remanded to the Commission to determine whether, and by what amount, the statutory standards of care (e.g., Health & Saf. Code, § 1442.5, former subd. (c); Welf. & Inst. Code, § 10000, 17000) forced San Diego to incur costs in excess of the funds provided by the state, and to determine the statutory remedies to which San Diego is entitled.

**CASE SUMMARY:**

**PROCEDURAL POSTURE:** Appellant state sought review of the judgment from the Court of Appeal (California), which affirmed the trial court that reversed a decision of the state mandates commission. The state mandates commission had held that respondent county was not entitled to reimbursement under Cal. Const. art.

XIII B, § 6, for its treatment of medically indigent adults after the legislature excluded such persons from the California Medical Assistance Program.

**OVERVIEW:** The legislature excluded medically indigent adults from receiving medical care pursuant to the California Medical Assistance Program (Medi-Cal). Subsequently, respondent county provided medical care to these persons and sought reimbursement from appellant state pursuant to Cal. Const. art. XIII B, § 6. The state mandates commission held for appellant, but the trial court reversed the commission's decision, and the court of appeals affirmed the trial court. The court affirmed the court of appeal's decision in part and reversed in part. The court found that the legislature's exclusion of medically indigent adults from Medi-Cal mandated a new program within the meaning of art. XIII B, § 6. Former statutes, however, did not establish a \$ 41 million spending floor for respondent's county medical services program. The court remanded the action to the state mandates commission to determine whether, and by what amount, respondent was forced to incur costs in excess of state-provided funds to comply with the standards of care provided by the former Cal. Health & Safety Code § 1442.5(c) and Cal. Welf. & Inst. Code §§ 10000, 17000.

**OUTCOME:** The court affirmed the court of appeal's judgment that respondent county could recover costs incurred to treat medically indigent adults because the legislature mandated a new program by excluding medically indigent adults from the California Medical Assistance Program. The court reversed the court of appeal's judgment that respondent was entitled to at least \$ 41

15 Cal. 4th 68, \*, 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630

million and remanded to the state mandates commission for a cost determination.

**CORE TERMS:** medical care, adult, indigent, reimbursement, medically, funding, health care, level of service, fiscal years, new program, indigent persons, mandamus, local government, eligibility, eligible, financial responsibility, reimburse, state mandate, test claim, medical services, state-mandated, reimbursable, former subd, linked, fiscal, budget, mandated, local agencies, health services, settlement

*Public Health & Welfare Law > Social Security > Medicaid > Coverage > General Overview*

[HN1]The California Medical Assistance Program, Cal. Welf. & Inst. Code § 14063, which began operating March 1, 1966, establishes a program of basic and extended health care services for recipients of public assistance and for medically indigent persons. It represents California's implementation of the federal medicaid program, 42 U.S.C.S. §§ 1396-1396v, through which the federal government provides financial assistance to states so that they may furnish medical care to qualified indigent persons.

*Governments > Local Governments > Finance  
Healthcare Law > Insurance > Reimbursement > General Overview*

*Public Health & Welfare Law > Social Security > Medicaid > Providers > Payments & Reimbursements > Hospitals*

[HN2]Former Cal. Welf. & Inst. Code § 14150.1 provides in part that a county may elect to pay as its share of costs under the California Medical Assistance Program, Cal. Welf. & Inst. Code § 14063, 100 percent of the county cost of health care uncompensated from any source in 1964-65 for all categorical aid recipients, and all other persons in the county hospital or in a contract hospital, increases for such county for each fiscal year subsequent to 1964-65 by an amount proportionate to the increase in population for such county. If the county so elects, the county costs of health care in any fiscal year shall not exceed the total county costs of health care uncompensated from any source in 1964-65 for all categorical aid recipients, and all other persons in the county hospital or in a contract hospital, increases for such

county for each fiscal year subsequent to 1964-65 by an amount proportionate to the increase in population for such county.

*Governments > Local Governments > Finance  
Healthcare Law > Insurance > Reimbursement > General Overview*

*Public Health & Welfare Law > Social Security > Medicaid > General Overview*

[HN3]Former Cal. Welf. & Inst. Code § 14150 provides the standard method for determining the counties' share of costs under the California Medical Assistance Program, Cal. Welf. & Inst. Code § 14063. Under it, a county is required to pay the state a specific sum, in return for which the state will pay for the medical care of all categorically linked individuals. Financial responsibility for nonlinked individuals remains with the counties.

*Governments > Local Governments > Finance  
Governments > State & Territorial Governments > Finance*

[HN4]Cal. Const. art. XIII A imposes a limit on the power of state and local governments to adopt and levy taxes. Cal. Const. art. XIII B imposes a complementary limit on the rate of growth in governmental spending. These two constitutional articles work in tandem, together restricting California governments' power both to levy and to spend for public purposes.

*Governments > Local Governments > Finance  
Governments > State & Territorial Governments > Finance*

[HN5]Cal. Const. art. XIII B, § 6, provides in part that whenever the legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the legislature may, but need not, provide such subvention of funds for legislative mandates that are enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975.

*Governments > State & Territorial Governments > Finance*

[HN6]Cal. Const. art. XIII B § 6, essentially requires the state to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies.

15 Cal. 4th 68, \*, 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630

*Governments > State & Territorial Governments > Finance*

[HN7]To determine whether a statute imposes state-mandated costs on a local agency within the meaning of Cal. Const. art. XIII B, § 6, the local agency must file a test claim with the Commission on State Mandates, which, after a public hearing, decides whether the statute mandates a new program or increased level of service. Cal. Gov't Code §§ 17521, 17551, 17555. If the commission finds a claim to be reimbursable, it determines the amount of reimbursement. Cal. Gov't Code § 17557. The local agency then follows certain statutory procedures to obtain reimbursement. Cal. Gov't Code § 17558 et seq.

*Civil Procedure > Declaratory Judgment Actions > State Judgments > General Overview  
Governments > State & Territorial Governments > Finance*

[HN8]If the legislature refuses to appropriate money for a reimbursable mandate, the local agency may file an action in declaratory relief to declare the mandate unenforceable and enjoin its enforcement. Cal. Gov't Code § 17612(c). If the Commission on State Mandates finds no reimbursable mandate, the local agency may challenge this finding by administrative mandate proceedings under Cal. Civ. Proc. Code § 1094.5. Cal. Gov't Code § 17559. Cal. Gov't Code § 17552 declares that these provisions provide the sole and exclusive procedure by which a local agency may claim reimbursement for costs mandated by the state as required by Cal. Const. art. XIII B, § 6.

*Constitutional Law > The Judiciary > Case or Controversy > Standing > General Overview*

[HN9]Individual taxpayers and recipients of government benefits lack standing to enforce Cal. Const. art. XIII B, § 6, because the applicable administrative procedures, which are the exclusive means for determining and enforcing the state's § 6 obligations, are available only to local agencies and school districts directly affected by a state mandate.

*Administrative Law > Judicial Review > Remedies > Mandamus*

*Civil Procedure > Jurisdiction > Subject Matter Jurisdiction > General Overview*

*Constitutional Law > The Judiciary > Jurisdiction > General Overview*

[HN10]The power of superior courts to perform mandamus review of administrative decisions derives in part from Cal. Const. art. VI, § 10. Section 10 gives the Supreme Court, courts of appeal, and superior courts original jurisdiction in proceedings for extraordinary relief in the nature of mandamus. Cal. Const. art. VI, § 10. The jurisdiction may not lightly be deemed to be destroyed. While the courts are subject to reasonable statutory regulation of procedure and other matters, they maintain their constitutional powers in order effectively to function as a separate department of government. Consequently an intent to defeat the exercise of the court's jurisdiction is not supplied by implication.

*Administrative Law > Judicial Review > Reviewability > Jurisdiction & Venue*

*Civil Procedure > Jurisdiction > Subject Matter Jurisdiction > Jurisdiction Over Actions > General Overview*

[HN11]Under Cal. Gov't Code § 17500 et seq., the statutes governing determination of unfunded mandate claims, the court hearing the test claim has primary jurisdiction.

*Civil Procedure > Jurisdiction > Subject Matter Jurisdiction > Jurisdiction Over Actions > General Overview*

[HN12]A court that refuses to defer to another court's primary jurisdiction is not without jurisdiction.

*Administrative Law > Judicial Review > Administrative Record > General Overview*

*Civil Procedure > Appeals > Reviewability > General Overview*

[HN13]The threshold determination of whether a statute imposes a state mandate is an issue of law.

*Administrative Law > Judicial Review > Reviewability > Exhaustion of Remedies*

*Civil Procedure > Justiciability > Exhaustion of Remedies > Administrative Remedies*

*Governments > Local Governments > Claims By & Against*

[HN14]Counties seeking to pursue an unfunded mandate claim under Cal. Const. art. XIII B, § 6, must exhaust their administrative remedies. However, counties may pursue § 6 claims in superior court without first resorting to administrative remedies if they can establish an exception to the exhaustion requirement. The futility exception to the exhaustion requirement applies if a county can state with assurance that the Commission on State Mandates will rule adversely in its own particular case.

15 Cal. 4th 68, \*; 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630

*Public Health & Welfare Law > Healthcare > General Overview*

[HN15] Cal. Welf. & Inst. Code § 17000 creates the residual fund to sustain indigents who cannot qualify under any specialized aid programs. By its express terms, § 17000 requires a county to relieve and support indigent persons only when such persons are not supported and relieved by their relatives or friends, by their own means, or by state hospitals or other state or private institutions. Cal. Welf. & Inst. Code § 17000.

*Governments > State & Territorial Governments > Legislatures*

*Public Health & Welfare Law > Healthcare > General Overview*

[HN16] In adopting the California Medical Assistance Program (Medi-Cal), Cal. Welf. & Inst. Code § 14063, the state legislature, for the most part, shifted indigent medical care from being a county responsibility to a state responsibility under the Medi-Cal program.

*Governments > Legislation > Effect & Operation > General Overview*

[HN17] Cal. Const. art. XIII B, § 6, prohibits the state from shifting to counties the costs of state programs for which the state assumed complete financial responsibility before adoption of § 6.

*Governments > Local Governments > Finance*

*Public Health & Welfare Law > Healthcare > General Overview*

[HN18] As amended in 1982, Cal. Welf. & Inst. Code § 16704(c)(1), provides in part that the county board of supervisors shall assure that it will expend Medically Indigent Services Account funds only for the health services specified in Cal. Welf. & Inst. Code §§ 14132 and 14021 provided to persons certified as eligible for such services pursuant to Cal. Welf. & Inst. Code § 17000 and shall assure that it will incur no less in net costs of county funds for county health services in any fiscal year than the amount that is required to obtain the maximum allocation under Cal. Welf. & Inst. Code § 16702.

*Governments > Local Governments > Finance*

*Labor & Employment Law > Disability & Unemployment Insurance > Disability Benefits > Coverage & Definitions > General Overview*

*Public Health & Welfare Law > Healthcare > Services for Disabled & Elderly Persons > General Overview*

[HN19] Cal. Welf. & Inst. Code § 16704(c)(3) provides in part that any person whose income and resources meet the income and resource criteria for certification for services pursuant to Cal. Welf. & Inst. Code § 14005.7 other than for the aged, blind, or disabled, shall not be excluded from eligibility for services to the extent that state funds are provided. Such persons may be held financially liable for these services based upon the person's ability to pay. A county may not establish a payment requirement which will deny medically necessary services. This section shall not be construed to mandate that a county provide any specific level or type of health care service.

*Public Health & Welfare Law > Healthcare > General Overview*

[HN20] The provisions of Cal. Welf. & Inst. Code § 16704(c)(3) shall become inoperative if a court ruling is issued which decrees that the provisions of this paragraph mandate that additional state funds be provided and which requires that additional state reimbursement be made to counties for costs incurred under this paragraph. This paragraph shall be operative only until June 30, 1983, unless a later enacted statute extends or deletes that date.

*Governments > Local Governments > Charters*

*Public Health & Welfare Law > Healthcare > General Overview*

[HN21] See Cal. Welf. & Inst. Code § 17000.

*Governments > Local Governments > Duties & Powers*

[HN22] Cal. Welf. & Inst. Code § 17001 confers broad discretion upon the counties in performing their statutory duty to provide general assistance benefits to needy residents.

*Administrative Law > Agency Rulemaking > General Overview*

*Governments > Local Governments > Duties & Powers*

[HN23] When a statute confers upon a state agency the authority to adopt regulations to implement, interpret, make specific or otherwise carry out its provisions, the agency's regulations must be consistent, not in conflict with the statute, and reasonably necessary to effectuate its purpose. Cal. Gov't Code § 11374.

*Administrative Law > Judicial Review > Reviewability > Questions of Law*

[HN24] Courts have the final responsibility for the interpretation of the law.

15 Cal. 4th 68, \*; 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630

*Governments > Local Governments > Duties & Powers  
Public Health & Welfare Law > Healthcare > General  
Overview*

[HN25] Cal. Welf. & Inst. Code § 17000 requires counties to relieve and support all indigent persons lawfully resident therein, when such persons are not supported and relieved by their relatives or by some other means.

*Governments > Local Governments > Duties & Powers  
Public Health & Welfare Law > Healthcare > General  
Overview*

[HN26] Counties have no discretion to refuse to provide medical care to "indigent persons" within the meaning of Cal. Welf. & Inst. Code § 17000 who do not receive it from other sources.

*Public Health & Welfare Law > Healthcare > General  
Overview*

[HN27] Adult medically indigent persons are "indigent persons" within the meaning of Cal. Welf. & Inst. Code § 17000 for medical care purposes. Section 17000 requires counties to relieve and support all indigent persons.

*Evidence > Inferences & Presumptions > General  
Overview*

*Pensions & Benefits Law > Governmental Employees >  
County Pensions*

*Public Health & Welfare Law > Social Security > Medi-  
caid > Coverage > General Overview*

[HN28] An attorney general's opinion, although not binding, is entitled to considerable weight. Absent controlling authority, it is persuasive because the court presumes that the legislature is cognizant of the attorney general's construction of Cal. Welf. & Inst. Code § 17000 and would have taken corrective action if it disagreed with that construction.

*Governments > Local Governments > Duties & Powers  
Public Health & Welfare Law > Healthcare > General  
Overview*

[HN29] Cal. Welf. & Inst. Code § 17000 mandates that medical care is provided to indigents and Cal. Welf. & Inst. Code § 10000 requires that such care be provided promptly and humanely. The duty is mandated by statute. There is no discretion concerning whether to provide such care.

*Governments > Local Governments > Duties & Powers  
Public Health & Welfare Law > Healthcare > General  
Overview*

[HN30] Cal. Welf. & Inst. Code § 17000 imposes a mandatory duty upon all counties to provide medically necessary care, not just emergency care. It further imposes a minimum standard of care below which the provision of medical services may not fall.

*Governments > Local Governments > Duties & Powers  
Healthcare Law > Insurance > Reimbursement > Gen-  
eral Overview*

*Public Health & Welfare Law > Healthcare > General  
Overview*

[HN31] The former Cal. Health & Safety Code § 1442.5(c) provides that, whether a county's duty to provide care to all indigent people is fulfilled directly by the county or through alternative means, the availability of services, and the quality of the treatment that is received by people who cannot afford to pay for their health care, shall be the same as that available to nonindigent people receiving health care services in private facilities in that county.

*Governments > Local Governments > Duties & Powers  
Public Health & Welfare Law > Healthcare > General  
Overview*

[HN32] The Supreme Court of California disapproves Cooke v. Superior Court, 261 Cal. Rptr. 706, 213 Cal. App. 3d 401 (1989), to the extent it held that the former Cal. Health & Safety Code § 1442.5(c) was merely a limitation on a county's ability to close facilities or reduce services provided in those facilities, and was irrelevant absent a claim that a county facility was closed or that any services in the county were reduced.

*Governments > Local Governments > Duties & Powers  
Governments > Local Governments > Finance  
Public Health & Welfare Law > Healthcare > General  
Overview*

[HN33] Former Cal. Welf. & Inst. Code § 16990(a) requires counties receiving California Healthcare for the Indigent Program funds, at a minimum, to maintain a level of financial support of county funds for health services at least equal to its county match and any overmatch of county funds in the 1988-89 fiscal year, adjusted annually as provided.

*Public Health & Welfare Law > Healthcare > General  
Overview*

[HN34]See former Cal. Welf. & Inst. Code § 16991(a)(5).

*Administrative Law > Judicial Review > Remedies > Mandamus*

*Civil Procedure > Remedies > Writs > General Overview*

[HN35]Mandamus pursuant to Cal. Civ. Proc. Code § 1094.5, commonly denominated "administrative" mandamus, is mandamus still. It is not possessed of a separate and distinctive legal personality. It is not a remedy removed from the general law of mandamus or exempted from the latter's established principles, requirements and limitations. The full panoply of rules applicable to "ordinary" mandamus applies to "administrative" mandamus proceedings, except where modified by statute. Where the entitlement to mandamus relief is adequately alleged, a trial court may treat a proceeding brought under Cal. Civ. Proc. Code § 1085 as one brought under Cal. Civ. Proc. Code § 1094.5 and deny a demurrer asserting that the wrong mandamus statute is invoked.

*Civil Procedure > Appeals > Standards of Review*

[HN36]The determination whether statutes establish a mandate under Cal. Const. art. XIII B, § 6, is a question of law. Where a purely legal question is at issue, the courts exercise independent judgment, no matter whether the issue arises by traditional or administrative mandate.

*Civil Procedure > Remedies > Writs > Common Law Writs > Mandamus*

[HN37]The denial of a peremptory disqualification motion pursuant to Cal. Civ. Proc. Code § 170.6 is reviewable only by writ of mandate under Cal. Civ. Proc. Code § 170.3(d).

*Civil Procedure > Remedies > Injunctions > Preliminary & Temporary Injunctions*

*Civil Procedure > Appeals > Reviewability > General Overview*

[HN38]A preliminary injunction is immediately and separately appealable under Cal. Civ. Proc. Code § 904.1(a)(6).

**SUMMARY:**

**CALIFORNIA OFFICIAL REPORTS SUMMARY**

After a county's unsuccessful administrative attempts to obtain reimbursement from the state for expenses incurred through its County Medical Services (CMS) program, and after a class action was filed on

behalf of CMS program beneficiaries seeking to enjoin termination of the program, the county filed a cross-complaint and petition for a writ of mandate (Code Civ. Proc., § 1085) against the state, the Commission on State Mandates, and various state officers, to determine the county's rights under Cal. Const., art. XIII B, § 6 (reimbursement to local government for state-mandated new program or higher level of service). The county alleged that the Legislature's 1982 transfer to counties of responsibility for providing health care for medically indigent adults mandated a reimbursable new program. The trial court found that the state had an obligation to fund the county's CMS program. (Superior Court of San Diego County, No. 634931, Michael I. Greer, \* Harrison R. Hollywood, and Judith McConnell, Judges.) The Court of Appeal, Fourth Dist., Div. One, No. D018634, affirmed the judgment of the trial court insofar as it provided that Cal. Const., art. XIII B, § 6, required the state to fund the CMS program. The Court of Appeal also affirmed the trial court's finding that the state had required the county to spend at least \$ 41 million on the CMS program in fiscal years 1989-1990 and 1990-1991. However, the Court of Appeal reversed those portions of the judgment determining the final reimbursement amount and specifying the state funds from which the state was to satisfy the judgment. The Court of Appeal remanded to the commission to determine the reimbursement amount and appropriate statutory remedies.

\* Retired judge of the San Diego Superior Court, assigned by the Chief Justice pursuant to article VI, section 6 of the California Constitution.

The Supreme Court affirmed the judgment of the Court of Appeal insofar as it held that the exclusion of medically indigent adults from Medi-Cal imposed a mandate on the county within the meaning of Cal. Const., art. XIII B, § 6. The Supreme Court reversed the judgment insofar as it held that the state required the county to spend at least \$ 41 million on the CMS program in fiscal years 1989-1990 and 1990-1991, and remanded the matter to the commission to determine whether, and by what amount, the statutory standards of care (e.g., Health & Saf. Code, § 1442.5, former subd. (c), Welf. & Inst. Code, §§ 10000, 17000) forced the county to incur costs in excess of the funds provided by the state, and to determine the statutory remedies to which the county was entitled. The court held that the trial court had jurisdiction to adjudicate the county's mandate claim, notwithstanding that a test claim was pending in an action by a different county. The trial court should not have proceeded while the other action was pending, since one purpose of the test claim procedure is to avoid multiple proceedings addressing the same claim. However, the error was not jurisdictional; the governing

15 Cal. 4th 68, \*, 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630

statutes simply vest primary jurisdiction in the court hearing the test claim. The court also held that the Legislature's 1982 transfer to counties of responsibility for providing health care for medically indigent adults mandated a reimbursable new program. The state asserted the source of the county's obligation to provide such care was Welf. & Inst. Code, § 17000, enacted in 1965, rather than the 1982 legislation, and since Cal. Const., art. XIII B, § 6, did not apply to "mandates enacted prior to January 1, 1975," there was no reimbursable mandate. However, Welf. & Inst. Code, § 17000, requires a county to support indigent persons only in the event they are not assisted by other sources. The court further held that there was a reimbursable new program, despite the state's assertion that the county had discretion to refuse to provide the medical care. While Welf. & Inst. Code, § 17001, confers discretion on counties to provide general assistance, there are limits to this discretion. The standards must meet the objectives of Welf. & Inst. Code, § 17000, or be struck down as void by the courts. The court also held that the Court of Appeal, in reversing the damages portion of the trial court's judgment and remanding to the commission to determine the amount of any reimbursement due, erred in finding the county had a minimum required expenditure on its CMS program. (Opinion by Chin, J., with George, C. J., Mosk, and Baxter, JJ., Anderson, J., " and Aldrich, J., + concurring. Dissenting opinion by Kennard, J.)

\*\* Presiding Justice, Court of Appeal, First Appellate District, Division Four, assigned by the Chief Justice pursuant to article VI, section 6 of the California Constitution.

+ Associate Justice, Court of Appeal, Second Appellate District, Division Three, assigned by the Chief Justice pursuant to article VI, section 6 of the California Constitution.

### CALIFORNIA OFFICIAL REPORTS HEADNOTES

Classified to California Digest of Official Reports

(1) State of California § 12--Fiscal Matters--Appropriations--Reimbursement to Local Government for State-mandated Program. --Cal. Const., art. XIII A, and art. XIII B, work in tandem, together restricting California governments' power both to levy and to spend for public purposes. Their goals are to protect residents from excessive taxation and government spending. The purpose of Cal. Const., art. XIII B, § 6 (reimbursement to local government for state-mandated new program or higher level of service), is to preclude the state from shifting financial responsibility for carry-

ing out governmental functions to local agencies, which are ill equipped to assume increased financial responsibilities because of the taxing and spending limitations that Cal. Const., arts. XIII A and XIII B, impose. With certain exceptions; Cal. Const., art. XIII B, § 6, essentially requires the state to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies.

### (2a) (2b) State of California § 12--Fiscal Matters--Appropriations--Reimbursement to Local Government for State-mandated Program--County's Reimbursement for Cost of Health Care to Indigent Adults--Jurisdiction--With Pending Test Claim

--The trial court had jurisdiction to adjudicate a county's mandate claim asserting the Legislature's transfer to counties of the responsibility for providing health care for medically indigent adults constituted a new program or higher level of service that required state funding under Cal. Const., art. XIII B, § 6 (reimbursement to local government for costs of new state-mandated program), notwithstanding that a test claim was pending in an action by a different county. The trial court should not have proceeded while the other action was pending, since one purpose of the test claim procedure is to avoid multiple proceedings addressing the same claim. However, the error was not jurisdictional; the governing statutes simply vest primary jurisdiction in the court hearing the test claim. The trial court's failure to defer to the primary jurisdiction of the other court did not prejudice the state. The trial court did not usurp the Commission on State Mandates' authority, since the commission had exercised its authority in the pending action. Since the pending action was settled, no multiple decisions resulted. Nor did lack of an administrative record prejudice the state, since determining whether a statute imposes a state mandate is an issue of law. Also, attempts to seek relief from the commission would have been futile, thus triggering the futility exception to the exhaustion requirement, given that the commission rejected the other county's claim.

(3) Administrative Law § 99--Judicial Review and Relief--Administrative Mandamus--Jurisdiction--As Derived From Constitution. --The power of superior courts to perform mandamus review of administrative decisions derives in part from Cal. Const., art. VI, § 10. That section gives the Supreme Court, Courts of Appeal, and superior courts "original jurisdiction in proceedings for extraordinary relief in the nature of mandamus." The jurisdiction thus vested may not lightly be deemed to have been destroyed. While the courts are subject to reasonable statutory regulation of procedure and other matters, they will maintain their constitutional powers in

15 Cal. 4th 68, \*; 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630

order effectively to function as a separate department of government. Consequently an intent to defeat the exercise of the court's jurisdiction will not be supplied by implication.

**(4) State of California § 12--Fiscal Matters--Appropriations--Reimbursement to Local Government for State-mandated Program--County's Reimbursement for Cost of Health Care to Indigent Adults--Existence of Mandate.** --In a county's action against the state to determine the county's rights under Cal. Const., art. XIII B, § 6 (reimbursement to local government for state-mandated new program or higher level of service), the Legislature's 1982 transfer to counties of responsibility for providing health care for medically indigent adults mandated a reimbursable new program. The state asserted the source of the county's obligation to provide such care was Welf. & Inst. Code, § 17000, enacted in 1965, rather than the 1982 legislation, and since Cal. Const., art. XIII B, § 6, did not apply to "mandates enacted prior to January 1, 1975," there was no reimbursable mandate. However, Welf. & Inst. Code, § 17000, requires a county to support indigent persons only in the event they are not assisted by other sources. To the extent care was provided prior to the 1982 legislation, the county's obligation had been reduced. Also, the state's assumption of full funding responsibility prior to the 1982 legislation was not intended to be temporary. The 1978 legislation that assumed funding responsibility was limited to one year, but similar legislation in 1979 contained no such limiting language. Although the state asserted the health care program was never operated by the state, the Legislature, in adopting Medi-Cal, shifted responsibility for indigent medical care from counties to the state. Medi-Cal permitted county boards of supervisors to prescribe rules (Welf. & Inst. Code, § 14000.2), and Medi-Cal was administered by state departments and agencies.

[See 9 Witkin, Summary of Cal. Law (9th ed. 1989) Taxation, § 123.]

**(5a) (5b) State of California § 12--Fiscal Matters--Appropriations--Reimbursement to Local Government for State-mandated Program--County's Reimbursement for Cost of Health Care to Indigent Adults--Existence of Mandate--Discretion to Set Standards--Eligibility.** --In a county's action against the state to determine the county's rights under Cal. Const., art. XIII B, § 6 (reimbursement to local government for state-mandated new program or higher level of service), the Legislature's 1982 transfer to counties of responsibility for providing health care for medically indigent adults mandated a reimbursable new program, despite the state's assertion that the county had discretion to refuse to provide such care. While Welf. & Inst. Code,

§ 17001, confers discretion on counties to provide general assistance, there are limits to this discretion. The standards must meet the objectives of Welf. & Inst. Code, § 17000 (counties shall relieve and support "indigent persons"), or be struck down as void by the courts. As to eligibility standards, counties must provide care to all adult medically indigent persons (MIP's). Although Welf. & Inst. Code, § 17000, does not define "indigent persons," the 1982 legislation made clear that adult MIP's were within this category. The coverage history of Medi-Cal demonstrates the Legislature has always viewed all adult MIP's as "indigent persons" under Welf. & Inst. Code, § 17000. The Attorney General also opined that the 1971 inclusion of MIP's in Medi-Cal did not alter the duty of counties to provide care to indigents not eligible for Medi-Cal, and this opinion was entitled to considerable weight. Absent controlling authority, the opinion was persuasive since it was presumed the Legislature was cognizant of the Attorney General's construction and would have taken corrective action if it disagreed. (Disapproving Bay General Community Hospital v. County of San Diego (1984) 156 Cal.App.3d 944 [203 Cal.Rptr. 184] insofar as it holds that a county's responsibility under Welf. & Inst. Code, § 17000, extends only to indigents as defined by the county's board of supervisors, and suggests that a county may refuse to provide medical care to persons who are "indigent" within the meaning of Welf. & Inst. Code, § 17000, but do not qualify for Medi-Cal.)

**(6) Public Aid and Welfare § 4--County Assistance--Counties' Discretion.** --Counties may exercise their discretion under Welf. & Inst. Code, § 17001 (county board of supervisors or authorized agency shall adopt standards of aid and care for indigent and dependent poor), only within fixed boundaries. In administering General Assistance relief the county acts as an agent of the state. When a statute confers upon a state agency the authority to adopt regulations to implement, interpret, make specific or otherwise carry out its provisions, the agency's regulations must be consistent, not in conflict with the statute, and reasonably necessary to effectuate its purpose (Gov. Code, § 11374). Despite the counties' statutory discretion, courts have consistently invalidated county welfare regulations that fail to meet statutory requirements.

**(7) State of California § 12--Fiscal Matters--Appropriations--Reimbursement to Local Government for State-mandated Program--County's Reimbursement for Cost of Health Care to Indigent Adults--Existence of Mandate--Discretion to Set Standards--Service.** --In a county's action against the state to determine the county's rights under Cal. Const., art. XIII B, § 6 (reimbursement to local government for

15 Cal. 4th 68, \*, 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630

state-mandated new program or higher level of service), the Legislature's 1982 transfer to counties of responsibility for providing health care for medically indigent adults mandated a reimbursable new program, despite the state's assertion that the county had discretion to refuse to provide such care by setting its own service standards. Welf. & Inst. Code, § 17000, mandates that medical care be provided to indigents, and Welf. & Inst. Code, § 10000, requires that such care be provided promptly and humanely. There is no discretion concerning whether to provide such care. Courts construing Welf. & Inst. Code, § 17000, have held it imposes a mandatory duty upon counties to provide medically necessary care, not just emergency care, and it has been interpreted to impose a minimum standard of care. Until its repeal in 1992, Health & Saf. Code, § 1442.5, former subd. (c), also spoke to the level of services that counties had to provide under Welf. & Inst. Code, § 17000, requiring that the availability and quality of services provided to indigents directly by the county or alternatively be the same as that available to nonindigents in private facilities in that county. (Disapproving Cooke v. Superior Court (1989) 213 Cal.App.3d 401 [261 Cal.Rptr. 706] to the extent it held that Health & Saf. Code, § 1442.5, former subd. (c), was merely a limitation on a county's ability to close facilities or reduce services provided in those facilities, and was irrelevant absent a claim that a county facility was closed or that services in the county were reduced.)

(8) **State of California § 12--Fiscal Matters--Appropriations--Reimbursement to Local Government for State-mandated Program--County's Reimbursement for Cost of Health Care to Indigent Adults--Minimum Required Expenditure.** --In a county's action against the state to determine the county's rights under Cal. Const., art. XIII B, § 6 (reimbursement to local government for state-mandated new program or higher level of service), in which the trial court found that the Legislature's 1982 transfer to counties of the responsibility for providing health care for medically indigent adults mandated a reimbursable new program entitling the county to reimbursement, the Court of Appeal, in reversing the damages portion of the trial court's judgment and remanding to the Commission on State Mandates to determine the amount of any reimbursement due, erred in finding the county had a minimum required expenditure on its County Medical Services (CMS) program. The Court of Appeal relied on Welf. & Inst. Code, former § 16990, subd. (a), which set forth the financial maintenance-of-effort requirement for counties that received California Healthcare for the Indigent Program (CHIP) funding. However, counties that chose to seek CHIP funds did so voluntarily. Thus, Welf. & Inst. Code, former § 16990, subd. (a), did not mandate a minimum funding requirement. Nor did Welf. & Inst. Code, former

§ 16991, subd. (a)(5), establish a minimum financial obligation. That statute required the state, for fiscal years 1989-1990 and 1990-1991, to reimburse a county if its allocation from various sources was less than the funding it received under Welf. & Inst. Code, § 16703, for 1988-1989. Nothing about this requirement imposed on the county a minimum funding requirement.

(9) **State of California § 12--Fiscal Matters--Appropriations--Reimbursement to Local Government for State-mandated Program--County's Reimbursement for Cost of Health Care to Indigent Adults--Proper Mandamus Proceeding: Mandamus and Prohibition § 23--Claim Against Commission on State Mandates.** --In a county's action against the state to determine the county's rights under Cal. Const., art. XIII B, § 6 (reimbursement to local government for state-mandated new program or higher level of service), after the Commission on State Mandates indicated the Legislature's 1982 transfer to counties of the responsibility for providing health care for medically indigent adults did not mandate a reimbursable new program, a mandamus proceeding under Code Civ. Proc., § 1085, was not an improper vehicle for challenging the commission's position. Mandamus under Code Civ. Proc., § 1094.5, commonly denominated "administrative" mandamus, is mandamus still. The full panoply of rules applicable to ordinary mandamus applies to administrative mandamus proceedings, except where they are modified by statute. Where entitlement to mandamus relief is adequately alleged, a trial court may treat a proceeding under Code Civ. Proc., § 1085, as one brought under Code Civ. Proc., § 1094.5, and should overrule a demurrer asserting that the wrong mandamus statute has been invoked. In any event, the determination whether the statutes at issue established a mandate under Cal. Const., art. XIII B, § 6, was a question of law. Where a purely legal question is at issue, courts exercise independent judgment, no matter whether the issue arises by traditional or administrative mandate.

**COUNSEL:** Daniel E. Lungren, Attorney General, Charlton G. Holland III, Assistant Attorney General, John H. Sanders and Richard T. Waldow, Deputy Attorneys General, for Cross-defendants and Appellants.

Lloyd M. Harmon, Jr., County Counsel, John J. Sansone, Acting County Counsel, Diane Bardsley, Chief Deputy County Counsel, Valerie Tehan and Ian Fan, Deputy County Counsel, for Cross-complainant and Respondent.

**JUDGES:** Opinion by Chin, J., with George, C. J., Mosk, and Baxter, JJ., Anderson, J., and Aldrich, J., concurring. Dissenting opinion by Kennard, J.

\* Presiding Justice, Court of Appeal, First Appellate District, Division Four, assigned by the Chief Justice pursuant to article VI, section 6 of the California Constitution.

\*\* Associate Justice, Court of Appeal, Second Appellate District, Division Three, assigned by the Chief Justice pursuant to article VI, section 6 of the California Constitution.

#### OPINION BY: CHIN

#### OPINION

[\*75] [\*314] [\*\*\*136] CHIN, J.

Section 6 of article XIII B of the California Constitution (section 6) requires the State of California (state), subject to certain exceptions, to "provide a subvention of funds to reimburse" local governments "[w]henver the Legislature or any state agency mandates a new program or higher level of service . . . ." In this action, the County of San Diego (San Diego or the County) seeks reimbursement under section 6 from the state for the costs of providing health care services to certain adults who formerly received medical care under the California Medical Assistance Program (Medi-Cal) (see Welf. & Inst. Code, [\*315] [\*\*\*137] § 14063) ' because they were medically indigent, i.e., they had insufficient financial resources to pay for their own medical care. In 1979, when the electorate adopted section 6, the state provided Medi-Cal coverage to these medically indigent adults without requiring financial contributions from counties. Effective January 1, 1983, the Legislature excluded this population from Medi-Cal. (Stats. 1982, ch. 328, § 6, 8.3, 8.5, pp. 1574-1576; Stats. 1982, ch. 1594, § 19, 86, pp. 6315, 6357.) Since that date, San Diego has provided medical care to these individuals with varying levels of state financial assistance.

1 Except as otherwise indicated, all further statutory references are to the Welfare and Institutions Code.

To resolve San Diego's claim, we must determine whether the Legislature's exclusion of medically indigent adults from Medi-Cal "mandate[d] a new program or higher level of service" on San Diego within the meaning of section 6. The Commission on State Mandates (Commission), which the Legislature created to determine claims under section 6, has ruled that section 6 does not apply to the Legislature's action and has rejected reimbursement claims like San Diego's. (See Kinlaw v. State of California (1991) 54 Cal. 3d 326, 330, fn. 2 [285 Cal. Rptr. 66, 814 P.2d 1308] (Kinlaw)). The trial court and Court of Appeal in this case disagreed with the Commission, finding that San Diego was entitled to reimburse-

ment. The state seeks [\*76] reversal of this finding. It also argues that San Diego's failure to follow statutory procedures deprived the courts of jurisdiction to hear its claim. We reject the state's jurisdictional argument and affirm the finding that the Legislature's exclusion of medically indigent adults from Medi-Cal "mandate[d] a new program or higher level of service" within the meaning of section 6. Accordingly, we remand the matter to the Commission to determine the amount of reimbursement, if any, due San Diego under the governing statutes.

#### I. FUNDING OF INDIGENT MEDICAL CARE

Before the start of Medi-Cal, "the indigent in California were provided health care services through a variety of different programs and institutions." (Assem. Com. on Public Health, Preliminary Rep. on Medi-Cal (Feb. 29, 1968) p. 3 (Preliminary Report).) County hospitals "provided a wide range of inpatient and outpatient hospital services to all persons who met county indigency requirements whether or not they were public assistance recipients. The major responsibility for supporting county hospitals rested upon the counties, financed primarily through property taxes, with minor contributions from" other sources. (*Id.* at p. 4.)

[HN1]Medi-Cal, which began operating March 1, 1966, established "a program of basic and extended health care services for recipients of public assistance and for medically indigent persons." (Morris v. Williams (1967) 67 Cal. 2d 733, 738 [63 Cal. Rptr. 689, 433 P.2d 697] (Morris); *id.* at p. 740; see also Stats. 1966, Second Ex. Sess. 1965, ch. 4, § 2, p. 103.) It "represent[ed] California's implementation of the federal Medicaid program (42 U.S.C. § 1396-1396v), through which the federal government provide[d] financial assistance to states so that they [might] furnish medical care to qualified indigent persons. [Citation.]" (Robert F. Kennedy Medical Center v. Belsh (1996) 13 Cal. 4th 748, 751 [55 Cal. Rptr. 2d 107, 919 P.2d 721] (Belsh)). "[B]y meeting the requirements of federal law," Medi-Cal "qualif[ie]d" California for the receipt of federal funds made available under title XIX of the Social Security Act." (Morris, supra, 67 Cal. 2d at p. 738.) "Title [XIX] permitted the combination of the major governmental health care systems which provided care for the indigent into a single system financed by the state and federal governments. By 1975, this system, at least as originally proposed, would provide a wide range of health care services for all those who [were] indigent regardless of whether they [were] public assistance recipients . . ." (Preliminary Rep., *supra*, at p. 4; see also Act of July 30, 1965, Pub.L. No. 89-97, § 121(a), 79 Stat. 286, reprinted in 1965 U.S. Code [\*77] Cong. & Admin. News, p. 378 [states must make effort to [\*316] [\*\*\*138] liberalize

15 Cal. 4th 68, \*, 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630

eligibility requirements "with a view toward furnishing by July 1, 1975, comprehensive care and services to substantially all individuals who meet the plan's eligibility standards with respect to income and resources".<sup>2</sup>

2 Congress later repealed the requirement that states work towards expanding eligibility. (See Cal. Health and Welfare Agency, *The Medi-Cal Program: A Brief Summary of Major Events* (Mar. 1990) p. 1 (Summary of Major Events).)

However, eligibility for Medi-Cal was initially limited only to persons linked to a federal categorical aid program by age (at least 65), blindness, disability, or membership in a family with dependent children within the meaning of the Aid to Families with Dependent Children program (AFDC). (See Legis. Analyst, Rep. to Joint Legis. Budget Com., Analysis of 1971-1972 Budget Bill, Sen. Bill No. 207 (1971 Reg. Sess.) pp. 548, 550 (1971 Legislative Analyst's Report).) Individuals possessing one of these characteristics (categorically linked persons) received full benefits if they actually received public assistance payments. (*Id.* at p. 550.) Lesser benefits were available to categorically linked persons who were only medically indigent, i.e., their income and resources, although rendering them ineligible for cash aid, were "not sufficient to meet the cost of health care." (*Morris, supra*, 67 Cal. 2d at p. 750; see also 1971 Legis. Analyst's Rep., *supra*, at pp. 548, 550; Stats. 1966, Second Ex. Sess. 1965, ch. 4, § 2, pp. 105-106.)

Individuals not linked to a federal categorical aid program (non-categorically linked persons) were ineligible for Medi-Cal, regardless of their means. Thus, "a group of citizens, not covered by Medi-Cal and yet unable to afford medical care, remained the responsibility of" the counties. (*County of Santa Clara v. Hall* (1972) 23 Cal. App. 3d 1059, 1061 [100 Cal. Rptr. 629] (*Hall*)). In establishing Medi-Cal, the Legislature expressly recognized this fact by enacting former section 14108.5, which provided: "The Legislature hereby declares its concern with the problems which will be facing the counties with respect to the medical care of indigent persons who are not covered [by Medi-Cal] . . . and . . . whose medical care must be financed entirely by the counties in a time of heavily increasing medical costs." (Stats. 1966, Second Ex. Sess. 1965, ch. 4, § 2, p. 116.) The Legislature directed the Health Review and Program Council "to study this problem and report its findings to the Legislature no later than March 1, 1967." (*Ibid.*)

Moreover, although it required counties to contribute to the costs of Medi-Cal, the Legislature established a method for determining the amount of their contributions that would "leave them with [sufficient funds to provide hospital care for those persons not eligible for Medi-Cal." (*Hall, supra*, 23 Cal. App. 3d at p. 1061, fn.

omitted.) Former section 14150.1, [\*78] which was known as the "county option" or the "option plan," required a county "to pay the state a sum equal to 100 percent of the county's health care costs (which included both linked and nonlinked individuals) provided in the 1964-1965 fiscal year, with an adjustment for population increase; in return the state would pay the county's entire cost of medical care."<sup>3</sup> (*County of Sacramento v. Lackner* (1979) 97 Cal. App. 3d 576, 581 [159 Cal. Rptr. 1] (*Lackner*)). Under the county option, "the state agreed to assume all county health care costs . . . in excess of" the county's payment. (*Id.* at p. 586.) It "made no distinction between 'linked' and 'nonlinked' persons," and "simply guaranteed a medical cost ceiling to counties electing to come within the option plan." (*Ibid.*) "Any difference [\*\*\*317] [\*\*\*139] in actual operating costs and the limit set by the option provision [was] assumed entirely by the state." (Preliminary Rep., *supra*, at p. 10, fn. 2.) Thus, the county option "guarantee[d] state participation in the cost of care for medically indigent persons who [were] not otherwise covered by the basic Medi-Cal program or other repayment programs."<sup>4</sup> (1971 Legis. Analyst's Rep., *supra*, at p. 549.)

3 [HN2]Former section 14150.1 provided in relevant part: "[A] county may elect to pay as its share [of Medi-Cal costs] one hundred percent . . . of the county cost of health care uncompensated from any source in 1964-65 for all categorical aid recipients, and all other persons in the county hospital or in a contract hospital, increased for such county for each fiscal year subsequent to 1964-65 by an amount proportionate to the increase in population for such county . . . . If the county so elects, the county costs of health care in any fiscal year shall not exceed the total county costs of health care uncompensated from any source in 1964-65 for all categorical aid recipients, and all other persons in the county hospital or in a contract hospital, increased for such county for each fiscal year subsequent to 1964-65 by an amount proportionate to the increase in population for such county . . . ." (Stats. 1966, Second Ex. Sess. 1965, ch. 4, § 2, p. 121.)

4 [HN3]Former section 14150 provided the standard method for determining the counties' share of Medi-Cal costs. Under it, "a county was required to pay the state a specific sum, in return for which the state would pay for the medical care of all [categorically linked] individuals . . . . Financial responsibility for nonlinked individuals . . . remained with the counties." (*Lackner, supra*, 97 Cal. App. 3d at p. 581.)

Primarily through the county option, Medi-Cal caused a "significant shift in financing of health care

15 Cal. 4th 68, \*, 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630

from the counties to the state and federal government. . . . During the first 28 months of the program the state . . . paid approximately \$ 76 million for care of non-Medi-Cal indigents in county hospitals." (Preliminary Rep., *supra*, at p. 31.) These state funds paid "costs that would otherwise have been borne by counties through increases in property taxes." (Legis. Analyst, Rep. to Joint Legis. Budget Com., Analysis of 1974-1975 Budget Bill, Sen. Bill No. 1525 (1973-1974 Reg. Sess.) p. 626 (1974 Legislative Analyst's Report).) "[F]aced with escalating Medi-Cal costs, the Legislature in 1967 imposed strict guidelines on reimbursing counties electing to come under the 'option' plan. ([Former] § 14150.2.) Pursuant to subdivision (c) of [former] section 14150.2, the state imposed a limit on its obligation to pay for medical services to nonlinked persons [\*79] served by a county within the 'option' plan." (*Lackner, supra*, 97 Cal. App. 3d at p. 589; see also Stats. 1967, ch. 104, § 3, p. 1019; Stats. 1969, ch. 21, § 57, pp. 106-107; 1974 Legis. Analyst's Rep., *supra*, at p. 626.)

In 1971, the Legislature substantially revised Medi-Cal. It extended coverage to certain noncategorically linked minors and adults "who [were] financially unable to pay for their medical care." (Legis. Counsel's Dig., Assem. Bill No. 949, 3 Stats. 1971 (Reg. Sess.) Summary Dig., p. 83; see Stats. 1971, ch. 577, § 12, 23, pp. 1110-1111, 1115.) These medically indigent individuals met "the income and resource requirements for aid under [AFDC] but [did] not otherwise qualify[] as a public assistance recipient." (56 Ops. Cal. Atty. Gen. 568, 569 (1973).) The Legislature anticipated that this eligibility expansion would bring "approximately 800,000 additional medically needy Californians" into Medi-Cal. (Stats. 1971, ch. 577, § 56, p. 1136.) The 1971 legislation referred to these individuals as "[n]oncategorically related needy person[s]." (Stats. 1971, ch. 577, § 23, p. 1115.) Subsequent legislation designated them as "medically indigent person[s]" (MIP's) and provided them coverage under former section 14005.4. (Stats. 1976, ch. 126, § 7, p. 200; *id.* at § 20, p. 204.)

The 1971 legislation also established a new method for determining each county's financial contribution to Medi-Cal. The Legislature eliminated the county option by repealing former section 14150.1 and enacting former section 14150. That section specified (by amount) each county's share of Medi-Cal costs for the 1972-1973 fiscal year and set forth a formula for increasing the share in subsequent years based on the taxable assessed value of certain property. (Stats. 1971, ch. 577, § 41, 42, pp. 1131-1133.)

For the 1978-1979 fiscal year, the state assumed each county's share of Medi-Cal costs under former section 14150. (Stats. 1978, ch. 292, § 33, p. 610.) In July

1979, the Legislature repealed former section 14150 altogether, thereby eliminating the counties' responsibility to share in Medi-Cal costs. (Stats. 1979, ch. 282, § 74, p. 1043.) Thus, in November 1979, when the electorate adopted section 6, "the state was funding Medi-Cal coverage for [MIP's] without requiring any county financial contribution." (*Kinlaw, supra*, 54 Cal. 3d at p. 329.) The state continued to provide full funding for MIP medical care through 1982.

In 1982, the Legislature passed two Medi-Cal reform bills that, as of January 1, 1983, excluded from Medi-Cal most adults who had been eligible [\*80] under the MIP category [\*\*\*140] (adult [\*\*318] MIP's or Medically Indigent Adults).<sup>5</sup> (Stats. 1982, ch. 328, § 6, 8.3, 8.5, pp. 1574-1576; Stats. 1982, ch. 1594, § 19, 86, pp. 6315, 6357; *Cooke v. Superior Court* (1989) 213 Cal. App. 3d 401, 411 [261 Cal. Rptr. 706] (*Cooke*).) As part of excluding this population from Medi-Cal, the Legislature created the Medically Indigent Services Account (MISA) as a mechanism for "transfer[ing] [state] funds to the counties for the provision of health care services." (Stats. 1982, ch. 1594, § 86, p. 6357.) Through MISA, the state annually allocated funds to counties based on "the average amount expended" during the previous three fiscal years on Medi-Cal services for county residents who had been eligible as MIP's. (Stats. 1982, ch. 1594, § 69, p. 6345.) The Legislature directed that MISA funds "be consolidated with existing county health services funds in order to provide health services to low-income persons and other persons not eligible for the Medi-Cal program." (Stats. 1982, ch. 1594, § 86, p. 6357.) It further provided: "Any person whose income and resources meet the income and resource criteria for certification for [Medi-Cal] services pursuant to Section 14005.7 other than for the aged, blind, or disabled, shall not be excluded from eligibility for services to the extent that state funds are provided." (Stats. 1982, ch. 1594, § 70, p. 6346.)

5 In this opinion, the terms "adult MIP's" and "Medically Indigent Adults" refer only to those persons who were excluded from the Medi-Cal program by the 1982 legislation.

After passage of the 1982 legislation, San Diego established a county medical services (CMS) program to provide medical care to adult MIP's. According to San Diego, between 1983 and June 1989, the state fully funded San Diego's CMS program through MISA. However, for fiscal years 1989-1990 and 1990-1991, the state only partially funded San Diego's CMS program. For example, San Diego asserts that, in fiscal year 1990-1991, it exhausted state-provided MISA funds by December 24, 1990. Faced with this shortfall, San Diego's board of supervisors voted in February 1991 to

15 Cal. 4th 68, \*; 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630

terminate the CMS program unless the state agreed by March 8 to provide full funding for the 1990-1991 fiscal year. After the state refused to provide additional funding, San Diego notified affected individuals and medical service providers that it would terminate the CMS program at midnight on March 19, 1991. The response to the County's notification ultimately resulted in the unfunded mandate claim now before us.

## II. UNFUNDED MANDATES

Through adoption of Proposition 13 in 1978, the voters [HN4] added article XIII A to the California Constitution, which "imposes a limit on the power of state and local governments to adopt and levy taxes. [Citation.]" (*County of Fresno v. State of California* (1991) 53 Cal. 3d 482, 486 [280 Cal. Rptr. 92, \*81], 808 P.2d 235] (*County of Fresno*)). The next year, the voters added article XIII B to the Constitution, which "impose[s] a complementary limit on the rate of growth in governmental spending." (*San Francisco Taxpayers Assn. v. Board of Supervisors* (1992) 2 Cal. 4th 571, 574 [7 Cal. Rptr. 2d 245, 828 P.2d 147]). (1) These two constitutional articles "work in tandem, together restricting California governments' power both to levy and to spend for public purposes." (*City of Sacramento v. State of California* (1990) 50 Cal. 3d 51, 59, fn. 1 [266 Cal. Rptr. 139, 785 P.2d 522]). Their goals are "to protect residents from excessive taxation and government spending. [Citation.]" (*County of Los Angeles v. State of California* (1987) 43 Cal. 3d 46, 61 [233 Cal. Rptr. 38, 729 P.2d 202] (*County of Los Angeles*)).

[HN5] Article XIII B of the California Constitution includes section 6, which is the constitutional provision at issue here. It provides in relevant part: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [P] . . . [P] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975." Section 6 [\*\*\*319] [\*\*\*141] recognizes that articles XIII A and XIII B severely restrict the taxing and spending powers of local governments. (*County of Fresno, supra*, 53 Cal. 3d at p. 487.) Its purpose is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are "ill equipped" to assume increased financial responsibilities because of the taxing and spending limitations that articles XIII A and XIII B impose. (*County of Fresno, supra*, 53 Cal. 3d at p. 487; *County of Los Angeles, supra*, 43 Cal. 3d at p. 61.)

With certain exceptions, [HN6] section 6 "[e]ssentially" requires the state "to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. [Citation.]" (*Hayes v. Commission on State Mandates* (1992) 11 Cal. App. 4th 1564, 1577 [15 Cal. Rptr. 2d 547].)

In 1984, the Legislature created a statutory procedure for [HN7] determining whether a statute imposes state-mandated costs on a local agency within the meaning of section 6. (*Gov. Code, § 17500 et seq.*). The local agency must file a test claim with the Commission, which, after a public hearing, decides whether the statute mandates a new program or increased level of service. (*Gov. Code, § 17521, 17551, 17555.*) If the Commission finds a claim to be reimbursable, it must determine the amount of reimbursement. (*Gov. Code, § 17557.*) The local agency must then follow certain statutory procedures to [\*82] obtain reimbursement. (*Gov. Code, § 17558 et seq.*) [HN8] If the Legislature refuses to appropriate money for a reimbursable mandate, the local agency may file "an action in declaratory relief to declare the mandate unenforceable and enjoin its enforcement." (*Gov. Code, § 17612, subd. (c).*) If the Commission finds no reimbursable mandate, the local agency may challenge this finding by administrative mandate proceedings under section 1094.5 of the Code of Civil Procedure. (*Gov. Code, § 17559.*) Government Code section 17552 declares that these provisions "provide the sole and exclusive procedure by which a local agency . . . may claim reimbursement for costs mandated by the state as required by Section 6 . . . ."

## III. ADMINISTRATIVE AND JUDICIAL PROCEEDINGS

### A. The Los Angeles Action

On November 23, 1987, the County of Los Angeles (Los Angeles) filed a claim (the Los Angeles action) with the Commission asserting that the exclusion of adult MIP's from Medi-Cal constituted a reimbursable mandate under section 6. (*Kinlaw, supra*, 54 Cal. 3d at p. 330, fn. 2.) Alameda County subsequently filed a claim on November 30, 1987, but the Commission rejected it because of the pending Los Angeles claim. (*Id.* at p. 331, fn. 4.) Los Angeles refused to permit Alameda County to join as a claimant, but permitted San Bernardino County to join. (*Ibid.*)

In April 1989, the Commission rejected the Los Angeles claim, finding no reimbursable mandate. <sup>6</sup> (*Kinlaw, supra*, 54 Cal. 3d at p. 330, fn. 2.) It found that the 1982 legislation did not impose on counties a new program or a higher level of service for an existing program because counties had a "pre-existing duty" to pro-

vide medical care to the medically indigent under section 17000. That section provides in relevant part: "Every county . . . shall relieve and support all incompetent, poor, indigent persons . . . lawfully resident therein, when such persons are not supported and relieved by their relatives or friends, by their own means, or by state hospitals or other state or private institutions." Section 17000 did not impose a reimbursable mandate under section 6, the Commission further reasoned, because it "was enacted prior to January 1, 1975 . . ." Finally, the Commission found no mandate because the 1982 legislation "neither establish[ed] the level of care to be provided nor . . . define[d] the class of persons determined to be eligible for medical care since these criteria were established by boards of supervisors" pursuant to section 17001.

6 San Diego lodged with the trial court a copy of the Commission's decision in the Los Angeles action.

[\*\*320] [\*\*\*142] On March 20, 1990, the Los Angeles Superior Court filed a judgment reversing the Commission's decision and directing issuance of a peremptory [\*83] writ of mandate. On April 16, 1990, the Commission and the state filed an appeal in the Second District Court of Appeal. (*County of Los Angeles v. State of California*, No. B049625.)<sup>7</sup> In early 1992, the parties to the Los Angeles action agreed to settle their dispute and to seek dismissal. In April 1992, after learning of this agreement, San Diego sought to intervene. Explaining that it had been waiting for resolution of the action, San Diego requested that the Court of Appeal deny the dismissal request and add (or substitute in) the County as a party. The Court of Appeal did not respond. On December 15, 1992, the parties to the Los Angeles action entered into a settlement agreement that provided for vacation of the superior court judgment and dismissal of the appeal and superior court action. Consistent with the settlement agreement, on December 29, 1992, the Court of Appeal filed an order vacating the superior court judgment, dismissing the appeal, and instructing the superior court to dismiss the action without prejudice on remand. <sup>8</sup>

7 In setting forth the facts relating to the Los Angeles action, we rely in part on the appellate record from that action, of which we take judicial notice. (Evid. Code. § 452, subd. (d), 459.)

8 The settlement resulted from 1991 legislation that changed the system of health care funding as of June 30, 1991. (See § 17600 et seq.; Stats. 1991, chs. 87, 89, pp. 231-235, 243-341.) That legislation provided counties with new revenue sources, including a portion of state vehicle license fees, to fund health care programs. Howev-

er, the legislation declared that the statutes providing counties with vehicle license fees would "cease to be operative on the first day of the month following the month in which the Department of Motor Vehicles is notified by the Department of Finance of a final judicial determination by the California Supreme Court or any California court of appeal" that "[t]he state is obligated to reimburse counties for costs of providing medical services to medically indigent adults pursuant to Chapters 328 and 1594 of the Statutes of 1982." (Rev. & Tax. Code, § 10753.8, subd. (b)(2), 11001.5, subd. (d)(2); see also Stats. 1991, ch. 89, § 210, p. 340.) Los Angeles and San Bernardino Counties settled their action to avoid triggering these provisions. Unlike the dissent, we do not believe that consideration of these recently enacted provisions is appropriate in analyzing the 1982 legislation. Nor do we assume, as the dissent does, that our decision necessarily triggers these provisions. That issue is not before us.

#### B. *The San Diego Action*

##### 1. *Administrative Attempts to Obtain Reimbursement*

On March 13, 1991, San Diego submitted an invoice to the State Controller seeking reimbursement of its uncompensated expenditures on the CMS program for fiscal year 1989-1990. The Controller is a member of the Commission. (Gov. Code, § 17525.) On April 12, the Controller returned the invoice "without action," stating that "[n]o appropriation has been given to this office to allow for reimbursement" of medical costs for adult MIP's, and noting that litigation was pending regarding the state's reimbursement obligation. On December 18, 1991, San Diego submitted a similar invoice for the 1990-1991 fiscal year. The state has not acted regarding this second invoice.

##### [\*84] 2. *Court Proceedings*

Responding to San Diego's notice of intent to terminate the CMS program, on March 11, 1991, the Legal Aid Society of San Diego filed a class action on behalf of CMS program beneficiaries seeking to enjoin termination of the program. The trial court later issued a preliminary injunction prohibiting San Diego "from taking any action to reduce or terminate" the CMS program.

On March 15, 1991, San Diego filed a cross-complaint and petition for writ of mandate under Code of Civil Procedure section 1085 against the state, the Commission, and various state officers. <sup>9</sup> The cross-complaint alleged that, by excluding adult MIP's from Medi-Cal and transferring responsibility for [\*\*321] [\*\*\*143] their medical care to counties, the

15 Cal. 4th 68, \*, 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630 .

state had mandated a new program and higher level of service within the meaning of section 6. The cross-complaint further alleged that the state therefore had a duty under section 6 to reimburse San Diego for the entire cost of its CMS program, and that the state had failed to perform its duty.

9 The cross-complaint named the following state officers: (1) Kenneth W. Kizer, Director of the Department of Health Services; (2) Kim Belsh, Acting Secretary of the Health and Welfare Agency; (3) Gray Davis, the State Controller; (4) Kathleen Brown, the State Treasurer; and (5) Thomas Hayes, the Director of the Department of Finance. Where the context suggests, subsequent references in this opinion to "the state" include these officers.

Proceeding from these initial allegations, the cross-complaint alleged causes of action for indemnification, declaratory and injunctive relief, reimbursement and damages, and writ of mandate. In its first declaratory relief claim, San Diego alleged (on information and belief) that the state contended the CMS program was a nonreimbursable, county obligation. In its claim for reimbursement, San Diego alleged (again on information and belief) that the Commission had "previously denied the claims of other counties, ruling that county medical care programs for [adult MIP's] are not state-mandated and, therefore, counties are not entitled to reimbursement from the State for the costs of such programs." "Under these circumstances," San Diego asserted, "denial of the County's claim by the Commission . . . is virtually certain and further administrative pursuit of this claim would be a futile act."

For relief, San Diego requested a judgment declaring the following: (1) that the state must fully reimburse San Diego if it "is compelled to provide any CMS Program services to plaintiffs . . . after March 19, 1991"; (2) that section 6 requires the state "to fully fund the CMS Program" (or, alternatively, that the CMS program is discretionary); (3) that the state must pay San Diego for all of its unreimbursed costs for the CMS program during [\*85] the 1989-1990 and 1990-1991 fiscal years; and (4) that the state shall assume responsibility for operating any court-ordered continuation of the CMS program. San Diego also requested that the court issue a writ of mandamus requiring the state to fulfill its reimbursement obligation. Finally, San Diego requested issuance of preliminary and permanent injunctions to ensure that the state fulfilled its obligations to the County.

In April 1991, San Diego determined that it could continue operating the CMS program using previously unavailable general fund revenues. Accordingly, San

Diego and plaintiffs settled their dispute, and plaintiffs dismissed their complaint.

The matter proceeded solely on San Diego's cross-complaint. The court issued a preliminary injunction and alternative writ in May 1991. At a hearing on June 25, 1991, the court found that the state had an obligation to fund San Diego's CMS program, granted San Diego's request for a writ of mandate, and scheduled an evidentiary hearing to determine damages and remedies. On July 1, 1991, it issued an order reflecting this ruling and granting a peremptory writ of mandate. The writ did not issue, however, because of the pending hearing to determine damages. In December 1992, after an extensive evidentiary hearing and posthearing proceedings on the claim for a peremptory writ of mandate, the court issued a judgment confirming its jurisdiction to determine San Diego's claim, finding that section 6 required the state to fund the entire cost of San Diego's CMS program, determining the amount that the state owed San Diego for fiscal years 1989-1990 and 1990-1991, identifying funds available to the state to satisfy the judgment, and ordering issuance of a peremptory writ of mandate. " The court also issued a peremptory writ of mandate directing the state and various state officers to comply with the judgment.

10 The judgment dismissed all of San Diego's other claims.

The Court of Appeal affirmed the judgment insofar as it provided that section 6 requires the state to fund the CMS program. The Court of Appeal also affirmed the trial court's finding that the state had required San Diego to spend at least \$ 41 million on the CMS program in fiscal years 1989-1990 and 1990-1991. However, the Court of Appeal reversed those portions of the judgment determining the final reimbursement amount and specifying the state funds from which the state was to satisfy the judgment. It remanded the matter to the Commission to determine the reimbursement amount and appropriate statutory remedies. We then granted the state's petition for review.

[\*\*322] [\*\*\*144] IV. SUPERIOR COURT JURISDICTION

(2a) Before reaching the merits of the appeal, we must address the state's assertion that the superior court lacked jurisdiction to hear San [\*86] Diego's mandate claim. According to the state, in *Kintaw, supra*, 54 Cal. 3d 326, we "unequivocally held that the orderly determination of [unfunded] mandate questions demands that only one claim on any particular alleged mandate be entertained by the courts at any given time." Thus, if a test claim is pending, "other potential claims must be held in abeyance . . ." Applying this principle, the state asserts

that, since "the test claim litigation was pending" in the Los Angeles action when San Diego filed its cross-complaint seeking mandamus relief, "the superior court lacked jurisdiction from the outset, and the resulting judgment is a nullity. That defect cannot be cured by the settlement of the test claim, which occurred after judgment was entered herein."

In *Kinlaw*, we held that [HN9] individual taxpayers and recipients of government benefits lack standing to enforce section 6 because the applicable administrative procedures, which "are the exclusive means" for determining and enforcing the state's section 6 obligations, "are available only to local agencies and school districts directly affected by a state mandate . . ." (*Kinlaw, supra*, 54 Cal. 3d at p. 328.) In reaching this conclusion, we explained that the reimbursement right under section 6 "is a right given by the Constitution to local agencies, not individuals either as taxpayers or recipients of government benefits and services." (*Id.* at p. 334.) We concluded that "[n]either public policy nor practical necessity compels creation of a judicial remedy by which individuals may enforce the right of the county to such revenues." (*Id.* at p. 335.)

In finding that individuals do not have standing to enforce the section 6 rights of local agencies, we made several observations in *Kinlaw* pertinent to operation of the statutory process as it applies to entities that do have standing. Citing Government Code section 17500, we explained that "the Legislature enacted comprehensive administrative procedures for resolution of claims arising out of section 6 . . . because the absence of a uniform procedure had resulted in inconsistent rulings on the existence of state mandates, unnecessary litigation, reimbursement delays, and, apparently, resultant uncertainties in accommodating reimbursement requirements in the budgetary process." (*Kinlaw, supra*, 54 Cal. 3d at p. 331.) Thus, the governing statutes "establish[] procedures which exist for the express purpose of avoiding multiple proceedings, judicial and administrative, addressing the same claim that a reimbursable state mandate has been created." (*Id.* at p. 333.) Specifically, "[t]he legislation establishes a test-claim procedure to expeditiously resolve disputes affecting multiple agencies . . ." (*Id.* at p. 331.) Describing the Commission's application of the test-claim procedure to claims regarding exclusion of adult MIP's from Medi-Cal, we observed: "The test claim by the County of Los Angeles was filed prior to that [\*87] proposed by Alameda County. The Alameda County claim was rejected for that reason. (See [Gov. Code] § 17521.) Los Angeles County permitted San Bernardino County to join in its claim which the Commission accepted as a test claim intended to resolve the [adult MIP exclusion] issues . . . Los Angeles County declined a request from Alameda County

that it be included in the test claim . . ." (*Id.* at p. 331, fn. 4.)

Consistent with our observations in *Kinlaw*, we here agree with the state that the trial court should not have proceeded to resolve San Diego's claim for reimbursement under section 6 while the Los Angeles action was pending. A contrary conclusion would undermine one of "the express purpose[s]" OF THE STATUTORY PROCEDURE: to "avoid[] multiple proceedings . . . addressing the same claim that a reimbursable state mandate has been created." (*Kinlaw, supra*, 54 Cal. 3d at p. 333.)

(3) However, we reject the state's assertion that the error was jurisdictional. [HN10] The power of superior courts to perform mandamus review [\*\*\*323] [\*\*\*145] of administrative decisions derives in part from article VI, section 10 of the California Constitution. (*Bixby v. Pierno* (1971) 4 Cal. 3d 130, 138 [93 Cal. Rptr. 234, 481 P.2d 242]; *Lipari v. Department of Motor Vehicles* (1993) 16 Cal. App. 4th 667, 672 [20 Cal. Rptr. 2d 246].) That section gives "[t]he Supreme Court, courts of appeal, [and] superior courts . . . original jurisdiction in proceedings for extraordinary relief in the nature of mandamus . . ." (Cal. Const., art. VI, § 10.) "The jurisdiction thus vested may not lightly be deemed to have been destroyed." (*Garrison v. Rowke* (1948) 32 Cal. 2d 430, 435 [196 P.2d 884], overruled on another ground in *Keane v. Smith* (1971) 4 Cal. 3d 932, 939 [95 Cal. Rptr. 197, 485 P.2d 261].) "While the courts are subject to reasonable statutory regulation of procedure and other matters, they will maintain their constitutional powers in order effectively to function as a separate department of government. [Citations.] Consequently an intent to defeat the exercise of the court's jurisdiction will not be supplied by implication." (*Garrison, supra*, at p. 436.) (2b) Here, we find no statutory provision that either "expressly provide[s]" (*id.* at p. 435) or otherwise "clearly indicate[s]" (*id.* at p. 436) that the Legislature intended to divest all courts other than the court hearing the test claim of their mandamus jurisdiction.

Rather, following *Dowdall v. Superior Court* (1920) 183 Cal. 348 [191 P. 685] (*Dowdall*), we interpret the governing statutes as simply vesting primary jurisdiction in the court hearing the test claim. In *Dowdall*, we determined the jurisdictional effect of Code of Civil Procedure former section 1699 on actions to settle the account of trustees of a testamentary trust. Code of Civil Procedure former section 1699 provided in part: "Where any trust [\*88] has been created by or under any will to continue after distribution, the Superior Court shall not lose jurisdiction of the estate by final distribution, but shall retain jurisdiction thereof for the purpose of the settlement of accounts under the trust." (Stats. 1889, ch. 228, § 1, p. 337.) We explained that, under this section, "the superior court, sitting in probate upon the distribu-

15 Cal. 4th 68, \*, 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630

tion of an estate wherein the will creates a trust, retain[ed] jurisdiction of the estate for the purpose of the settlement of the accounts under the trust." (*Dowdall, supra*, 183 Cal. at p. 353.) However, we further observed that "the superior court of each county in the state has general jurisdiction in equity to settle trustees' accounts and to entertain actions for injunctions. This jurisdiction is, in a sense, concurrent with that of the superior court, which, by virtue of the decree of distribution, has jurisdiction of a trust created by will. The latter, however, is the primary jurisdiction, and if a bill in equity is filed in any other superior court for the purpose of settling the account of such trustee, that court, upon being informed of the jurisdiction of the court in probate and that an account is to be or has been filed therein for settlement, should postpone the proceeding in its own case and allow the account to be settled by the court having primary jurisdiction thereof." (*Ibid*.)

Similarly, we conclude that, [HN11]under the statutes governing determination of unfunded mandate claims, the court hearing the test claim has primary jurisdiction. Thus, if an action asserting the same unfunded mandate claim is filed in any other superior court, that court, upon being informed of the pending test claim, should postpone the proceeding before it and allow the court having primary jurisdiction to determine the test claim.

However, a court's erroneous refusal to stay further proceedings does not render those further proceedings void for lack of jurisdiction. As we explained in *Dowdall*, [HN12]a court that refuses to defer to another court's primary jurisdiction "is not without jurisdiction." (*Dowdall, supra*, 183 Cal. at p. 353.) Accordingly, notwithstanding pendency of the Los Angeles action, the trial court here did not lack jurisdiction to determine San Diego's mandamus petition. (See *Collins v. Ramish* (1920) 182 Cal. 360, 366-369 [188 P. 550] [although trial court erred in refusing to abate action because of former action pending, new trial was not warranted on issues that the trial court correctly decided]; *People ex rel. Garamendi v. American Autoplan, Inc.* (1993) 20 Cal. App. 4th 760, 772 [\*\*\*146] [25 Cal. Rptr. 2d 192] [\*\*324] (*Garamendi*) ["rule of exclusive concurrent jurisdiction is not 'jurisdictional' in the sense that failure to comply renders subsequent proceedings void"]; *Stearns v. Los Angeles City School Dist.* (1966) 244 Cal. App. 2d 696, 718 [53 Cal. Rptr. 482, 21 A.L.R.3d 164] [where trial court errs in failing to stay proceedings in [\*89] deference to jurisdiction of another court, reversal would be frivolous absent errors regarding the merits].) <sup>11</sup>

11 In *Garamendi, supra*, 20 Cal. App. 4th at pages 771-775, the court discussed procedural requirements for raising a claim that another

court has already exercised its concurrent jurisdiction. Given our conclusion that the trial court's error here was not jurisdictional, we express no opinion about this discussion in *Garamendi* or the sufficiency of the state's efforts to raise the issue in this case.

The trial court's failure to defer to the primary jurisdiction of the court hearing the Los Angeles action did not prejudice the state. Contrary to the state's assertion, the trial court did not "usurp" the Commission's "authority to determine, in the first place, whether or not legislation creates a mandate." The Commission had already exercised that authority in the Los Angeles action. Moreover, given the settlement of the Los Angeles action, which included vacating the judgment in that action, the trial court's exercise of jurisdiction here did not result in one of the principal harms that the statutory procedure seeks to prevent: multiple decisions regarding an unfunded mandate question. Finally, the lack of an administrative record specifically relating to San Diego's claim did not prejudice the state [HN13]because the threshold determination of whether a statute imposes a state mandate is an issue of law. (*County of Fresno v. Lehman* (1991) 229 Cal. App. 3d 340, 347 [280 Cal. Rptr. 310].) To the extent that an administrative record was necessary, the record developed in the Los Angeles action could have been submitted to the trial court. <sup>12</sup> (See *Los Angeles Unified School Dist. v. State of California* (1988) 199 Cal. App. 3d 686, 689 [245 Cal. Rptr. 140].)

12 Notably, in discussing the options still available to San Diego, the state asserts that San Diego "might have been able to go to superior court and file a [mandamus] petition based on the record of the prior test claim."

We also find that, on the facts of this case, San Diego's failure to submit a test claim to the Commission before seeking judicial relief did not affect the superior court's jurisdiction. [HN14]Ordinarily, counties seeking to pursue an unfunded mandate claim under section 6 must exhaust their administrative remedies. (*Central Delta Water Agency v. State Water Resources Control Bd.* (1993) 17 Cal. App. 4th 621, 641 [21 Cal. Rptr. 2d 453]; *County of Contra Costa v. State of California* (1986) 177 Cal. App. 3d 62, 73-77 [222 Cal. Rptr. 750] (*County of Contra Costa*)). However, counties may pursue section 6 claims in superior court without first resorting to administrative remedies if they "can establish an exception to" the exhaustion requirement. (*County of Contra Costa, supra*, 177 Cal. App. 3d at p. 77.) The futility exception to the exhaustion requirement applies if a county can "state with assurance that the [Commission] would rule adversely in its own particular case. [Cita-

tions.]" (*Lindeleaf v. Agricultural Labor Relations Bd.* (1986) 41 Cal. 3d 861, 870 [226 Cal. Rptr. 119, 718 P.2d 106]; see also *County of Contra Costa, supra*, 177 Cal. App. 3d at pp. 77-78.)

[\*90] We agree with the trial court and the Court of Appeal that the futility exception applied in this case. As we have previously noted, San Diego invoked this exception by alleging in its cross-complaint that the Commission's denial of its claim was "virtually certain" because the Commission had "previously denied the claims of other counties, ruling that county medical care programs for [adult MIP's] are not state-mandated and, therefore, counties are not entitled to reimbursement . . . ." Given that the Commission rejected the Los Angeles claim (which alleged the same unfunded mandate claim that San Diego alleged) and appealed the judicial reversal of its decision, the trial court correctly determined that further attempts to seek relief from the Commission would have been futile. Therefore, we reject the state's jurisdictional argument and proceed to the merits of the appeal.

[\*\*325] [\*\*\*147] V. EXISTENCE OF A MANDATE UNDER SECTION 6

(4) In determining whether there is a mandate under section 6, we turn to our decision in *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal. 3d 830 [244 Cal. Rptr. 677, 750 P.2d 318] (*Lucia Mar*). There, we discussed section 6's application to Education Code section 59300, which "requires a school district to contribute part of the cost of educating pupils from the district at state schools for the severely handicapped." (*Lucia Mar, supra*, at p. 832.) Before 1979, the Legislature had statutorily required school districts "to contribute to the education of pupils from the districts at the state schools [citations] . . . ." (*Id.* at pp. 832-833.) The Legislature repealed the statutory requirements in 1979 and, on July 12, 1979, the state assumed full-funding responsibility. (*Id.* at p. 833.) On July 1, 1980, when section 6 became effective, the state still had full-funding responsibility. On June 28, 1981, Education Code section 59300 took effect. (*Lucia Mar, supra*, at p. 833.)

Various school districts filed a claim seeking reimbursement under section 6 for the payments that Education Code section 59300 requires. The Commission denied the claim, finding that the statute did not impose on the districts a new program or higher level of service. The trial court and Court of Appeal agreed; the latter "reasoning that a shift in the funding of an existing program is not a new program or a higher level of service" under section 6. (*Lucia Mar, supra*, 44 Cal. 3d at p. 834.)

We reversed, finding that a contrary result would "violate the intent underlying section 6 . . . ." (*Lucia Mar, supra*, 44 Cal. 3d at p. 835.) That section "was intended

to preclude the state from shifting to local agencies the financial responsibility for providing public services in view of the[] [\*91] restrictions on the taxing and spending power of the local entities" that articles XIII A and XIII B of the California Constitution imposed. (*Lucia Mar, supra*, at pp. 835-836.) "The intent of the section would plainly be violated if the state could, while retaining administrative control of programs it has supported with state tax money, simply shift the cost of the programs to local government on the theory that the shift does not violate section 6 . . . because the programs are not 'new.' Whether the shifting of costs is accomplished by compelling local governments to pay the cost of entirely new programs created by the state, or by compelling them to accept financial responsibility in whole or in part for a program which was funded entirely by the state before the advent of article XIII B, the result seems equally violative of the fundamental purpose underlying section 6 . . . ." (*Id.* at p. 836, italics added, fn. omitted.) We thus concluded in *Lucia Mar* "that because Education Code section 59300 shifts partial financial responsibility for the support of students in the state-operated schools from the state to school districts--an obligation the school districts did not have at the time article XIII B was adopted--it calls for [the school districts] to support a 'new program' within the meaning of section 6." (*Ibid.*, fn. omitted.)

The similarities between *Lucia Mar* and the case before us "are striking. In *Lucia Mar*, prior to 1979 the state and county shared the cost of educating handicapped children in state schools; in the present case from 1971-197[8] the state and county shared the cost of caring for [adult MIP's] under the Medi-Cal program. . . . [F]ollowing enactment of [article XIII A], the state took full responsibility for both programs." (*Kinlaw, supra*, 54 Cal. 3d at p. 353 (dis. opn. of Broussard, J.)) As to both programs, the Legislature cited adoption of article XIII A of the California Constitution, and specifically its effect on tax revenues, as the basis for the state's assumption of full funding responsibility. (Stats. 1979, ch. 237, § 10, p. 493; Stats. 1979, ch. 282, § 106, p. 1059.) "Then in 1981 (for handicapped children) and 1982 (for [adult MIP's]), the state sought to shift some of the burden back to the counties." (*Kinlaw, supra*, [\*\*326] [\*\*\*148] 54 Cal. 3d at p. 353 (dis. opn. of Broussard, J.))

Adopting the Commission's analysis in the Los Angeles action, the state nevertheless argues that *Lucia Mar* "is inapposite." The school program at issue in *Lucia Mar* "had been wholly operated, administered and financed by the state" and "was unquestionably a 'state program.'" "In contrast," the state argues, "the program here has never been operated or administered by the State of California. The counties have always borne legal and financial responsibility for" "it under section

17000 and its predecessors. <sup>13</sup> The courts have interpreted section 17000 as "impos[ing] upon counties a duty to [\*92] provide hospital and medical services to indigent residents. [Citations.]" (*Board of Supervisors v. Superior Court* (1989) 207 Cal. App. 3d 552, 557 [254 Cal. Rptr. 905].) Thus, the state argues, the source of San Diego's obligation to provide medical care to adult MIP's is section 17000, not the 1982 legislation. Moreover, because the Legislature enacted section 17000 in 1965, and section 6 does not apply to "mandates enacted prior to January 1, 1975," there is no reimbursable mandate. Finally, the state argues that, because section 17000 give counties "complete discretion" in setting eligibility and service standards under section 17000, there is no mandate. A contrary conclusion, the state asserts, "would erroneously expand the definition of what constitutes a 'new program' under" section 6. As we explain, we reject these arguments.

13 "County General Assistance in California dates from 1855, and for many years afforded the only form of relief to indigents." (*Mooney v. Pickell* (1971) 4 Cal. 3d 669, 677 [94 Cal. Rptr. 279, 483 P.2d 1231] (*Mooney*)). Section 17000 is substantively identical to former section 2500, which was enacted in 1937. (Stats. 1937, chs. 369, 464, pp. 1097, 1406.)

#### A. The Source and Existence of San Diego's Obligation

##### 1. The Residual Nature of the Counties' Duty Under Section 17000

The state's argument that San Diego's obligation to provide medical care to adult MIP's predates the 1982 legislation contains numerous errors. First, the state misunderstands San Diego's obligation under section 17000. That [HN15]section creates "the residual fund" to sustain indigents "who cannot qualify . . . under any specialized aid programs." (*Mooney, supra*, 4 Cal. 3d at p. 681, italics added; see also *Board of Supervisors v. Superior Court, supra*, 207 Cal. App. 3d at p. 562; *Boehm v. Superior Court* (1986) 178 Cal. App. 3d 494, 499 [223 Cal. Rptr. 716] [general assistance "is a program of last resort"].) By its express terms, the statute requires a county to relieve and support indigent persons *only* "when such persons are not supported and relieved by their relatives or friends, by their own means, or by state hospitals or other state or private institutions." (§ 17000.) <sup>14</sup> "Consequently; to the extent that the state or federal governments provide[d] care for [adult MIP's], the [C]ounty's obligation to do so [was] reduced . . ." (*Kinlaw, supra*, 54 Cal. 3d at p. 354, fn. 14 (dis. opn. of Broussard, J.)) <sup>15</sup>

14 See also *County of Los Angeles v. Frisbie* (1942) 19 Cal. 2d 634, 639 [122 P.2d 526] (construing former section 2500); *Jennings v. Jones* (1985) 165 Cal. App. 3d 1083, 1091 [212 Cal. Rptr. 134] (counties must support all indigent persons "having no other means of support"); *Union of American Physicians & Dentists v. County of Santa Clara* (1983) 149 Cal. App. 3d 45, 51, fn. 10 [196 Cal. Rptr. 602]; *Rogers v. Detrich* (1976) 58 Cal. App. 3d 90, 95 [128 Cal. Rptr. 261] (counties have duty of support "where such support is not otherwise furnished").

15 In asserting that Medi-Cal coverage did not supplant San Diego's obligation under section 17000, the dissent incorrectly relies on *Madera Community Hospital v. County of Madera* (1984) 155 Cal. App. 3d 136 [201 Cal. Rptr. 768] (*Madera*) and *Cooke, supra*, 213 Cal. App. 3d 401. (Dis. opn. of Kennard, J., *post*, at p. 115.) In *Madera*, the court voided a county ordinance that extended county benefits under section 17000 only to persons "meeting all eligibility standards for the Medi-Cal program." (*Madera, supra*, 155 Cal. App. 3d at p. 150.) The court explained: "Because all funding for the Medi-Cal program comes from either the federal or the state government . . ., [c]ounty has denied any financial obligation whatsoever from county funds for the medical care of its indigent and poor residents." (*Ibid.*) Thus, properly understood, *Madera* held only that Medi-Cal does not relieve counties of their obligation to provide medical care to persons who are "indigent" within the meaning of section 17000 but who are ineligible for Medi-Cal. The limit of *Madera's* holding is apparent from the court's reliance on a 1979 opinion of the Attorney General discussing the scope of a county's authority under section 17000. (*Madera, supra*, 155 Cal. App. 3d at pp. 151-152.) The Attorney General explained that "[t]he county obligation [under section 17000] to provide general relief extends to those indigents who do not qualify under specialized aid programs, . . . including Medi-Cal." (62 Ops. Cal. Atty. Gen. 70, 71, fn. 1 (1979).) Moreover, the *Madera* court expressly recognized that state and federal programs "alleviate, to a greater or lesser extent, [a] [c]ounty's burden." (*Madera, supra*, 155 Cal. App. 3d at p. 151.) In *Cooke*, the court simply made a passing reference to *Madera* in dictum describing the coverage history of Medi-Cal. (*Cooke, supra*, 213 Cal. App. 3d at p. 411.) It neither analyzed the issue before us nor explained the meaning of the dictum that the dissent cites.

[\*\*327] [\*\*\*149] As we have explained, the state began providing adult MIP's with medical care under Medi-Cal in 1971. Although it initially required counties to [\*93] contribute generally to the costs of Medi-Cal, it did not set forth a specific amount for coverage of MIP's. The state was primarily responsible for the costs of the program, and the counties were simply required to contribute funds to defray the state's costs. Beginning with the 1978-1979 fiscal year, the state paid all costs of the Medi-Cal program, including the cost of medical care for adult MIP's. Thus, when section 6 was adopted in November 1979, to the extent that Medi-Cal provided medical care to adult MIP's, San Diego bore no financial responsibility for these health care costs. <sup>16</sup>

16 As we have previously explained, even before 1971 the state, through the county option, assumed much of the financial responsibility for providing medical care to adult MIP's.

The California Attorney General has expressed a similar understanding of Medi-Cal's effect on the counties' medical care responsibility under section 17000. After the 1971 extension of Medi-Cal coverage to MIP's, Fresno County sought an opinion regarding the scope of its duty to provide medical care under section 17000. It asserted that the 1971 repeal of former section 14108.5, which declared the Legislature's concern with the counties' problems in caring for indigents not eligible for Medi-Cal, evidenced a legislative intent to preempt the field of providing health services. (56 Ops.Cal.Atty.Gen., *supra*, at p. 571.) The Attorney General disagreed, concluding that the 1971 change "did not alter the duty of the counties to provide medical care to those indigents not eligible for Medi-Cal." (*Id.* at p. 569.) The Attorney General explained: "The statement of concern acknowledged the obligation of counties to continue to provide medical assistance under section 17000; the removal of the statement of concern was not accompanied by elimination of such duty on the part of the counties, *except as the addition of [MIP's] to the Medi-Cal program would remove the burden on the counties to provide medical care for such persons.*" (*Id.* at p. 571, italics added.)

[\*94] Indeed, the Legislature's statement of intent in an uncodified section of the 1982 legislation excluding adult MIP's from Medi-Cal suggests that it also shared our understanding of section 17000. Section 8.3 of the 1982 Medi-Cal revisions expressly declared the Legislature's intent "[i]n eliminating [M]edically [I]ndigent [A]dults from the Medi-Cal program . . ." (Stats. 1982, ch. 328, § 8.3, p. 1575; Stats. 1982, ch. 1594, § 86, p. 6357.) It stated in part: "It is further the intent of the Legislature to provide counties with as much flexibility as possible in organizing county health services to serve *the population being transferred.*" (Stats. 1982, ch. 328,

§ 8.3, p. 1576; Stats. 1982, ch. 1594, § 86, p. 6357, italics added.) If, as the state contends, counties had always been responsible under section 17000 for the medical care of adult MIP's, the description of adult MIP's as "the population being transferred" would have been inaccurate. By so describing adult MIP's, the Legislature indicated its understanding that counties did not have this responsibility while adult MIP's were eligible for Medi-Cal. These sources fully support our rejection of the state's argument that the 1982 legislation did not impose a mandate because, under section 17000, counties had always borne the responsibility for providing medical care to adult MIP's.

## 2. The State's Assumption of Full Funding Responsibility for Providing Medical Care to Adult MIP's Under Medi-Cal

To support its argument that it never relieved counties of their obligation under section [\*\*328] [\*\*\*150] 17000 to provide medical care to adult MIP's, the state characterizes as "temporary" the Legislature's assumption of full-funding responsibility for adult MIP's. According to the state, "any ongoing responsibility of the county was, at best, only temporarily, partially, alleviated (and never supplanted)." The state asserts that the Court of Appeal thus "erred by focusing on one phase in th[e] shifting pattern of arrangements" for funding indigent health care, "a focus which led to a myopic conclusion that the state alone is forever responsible for funding the health care for" adult MIP's.

A comparison of the 1978 and 1979 statutes that eliminated the counties' share of Medi-Cal costs refutes the state's claim. The Legislature expressly limited the effect of the 1978 legislation to one fiscal year, providing that the state "shall pay" each county's Medi-Cal cost share "for the period from July 1, 1978, to June 30, 1979." (Stats. 1978, ch. 292, § 33, p. 610.) The Legislative Counsel's Digest explained that this section would require the state to pay "[a]ll county costs for Medi-Cal" for "the 1978-79 fiscal year only." (Legis. Counsel's Dig., Sen. Bill No. 154, 4 Stats. 1978 (Reg. Sess.), Summary Dig., p. 71.) The digest further explained that the purpose of the bill containing this section was "the *partial* relief of local government from the *temporary* difficulties brought about by the approval of Proposition 13." [\*95] (*Id.* at p. 70, italics added.) Clearly, the Legislature knew how to include words of limitation when it intended the effects of its provisions to be temporary.

By contrast, the 1979 legislation contains no such limiting language. It simply provided: "Section 14150 of the Welfare and Institutions Code is repealed." (Stats. 1979, ch. 282, § 74, p. 1043.) In setting forth the need to enact the legislation as an urgency statute, the Legisla-

ture explained: "The adoption of Article XIII A . . . may cause the curtailment or elimination of programs and services which are vital to the state's public health, safety, education, and welfare. In order that such services not be interrupted, it is necessary that this act take effect immediately." (Stats. 1979, ch. 282, § 106, p. 1059.) In describing the effect of this legislation, the Legislative Counsel first explained that, "[u]nder existing law, the counties pay a specified annual share of the cost of" Medi-Cal. (Legis. Counsel's Dig., Assem. Bill No. 8, 4 Stats. 1979 (Reg. Sess.), Summary Dig., p. 79.) Referring to the 1978 legislation, it further explained that "[f]or the 1978-79 fiscal year only, the state pays . . . [P] . . . [a]ll county costs for Medi-Cal . . . ." (*Ibid.*) The 1979 legislation, the digest continued, "provid[ed] for state assumption of all county costs of Medi-Cal." (*Ibid.*) We find nothing in the 1979 legislation or the Legislative Counsel's summary indicating a legislative intent to eliminate the counties' cost share of Medi-Cal only temporarily.

The state budget process for the 1980-1981 fiscal year confirms that the Legislature's assumption of all Medi-Cal costs was not viewed as "temporary." In the summary of his proposed budget, then Governor Brown described Assembly Bill No. 8, 1981-1982 Regular Session, generally as "a long-term local financing measure" (Governor's Budget for 1980-1981 as submitted to Legislature (1979-1980 Reg. Sess.) Summary of Local Government Fiscal Relief, p. A-30) through which "[t]he total cost of [the Medi-Cal] program was *permanently* assumed by the State . . . ." (*Id.* at p. A-32, italics added.) Similarly, in describing to the Joint Legislative Budget Committee the Medi-Cal funding item in the proposed budget, the Legislative Analyst explained: "Item 287 includes the state cost of 'buying out' the county share of Medi-Cal expenditures. Following passage of Proposition 13, [Senate Bill No.] 154 appropriated \$ 418 million to relieve counties of all fiscal responsibility for Medi-Cal program costs. Subsequently, [Assembly Bill No.] 8 was enacted, *which made permanent state assumption of county Medi-Cal costs.*" (Legis. Analyst, Rep. to Joint Legis. Budget Com., Analysis of 1980-1981 Budget Bill, Assem. Bill No. 2020 (1979-1980 Reg. Sess.) at p. 721, italics added.) Thus, the state errs in asserting that the 1979 legislation eliminated the counties' financial support of Medi-Cal "only temporarily."

[\*96] [\*\*329] [\*\*\*151] 3. *State Administration of Medical Care for Adult MIP's Under Medi-Cal*

The state argues that, unlike the school program before us in *Lucia Mar*, *supra*, 44 Cal. 3d 830, which "had been wholly operated, administered and financed by the state," the program for providing medical care to adult MIP's "has never been operated or administered by" the state. According to the state, Medi-Cal was simply a

state "reimbursement program" for care that section 17000 required counties to provide. The state is incorrect.

One of the legislative goals of Medi-Cal was "to allow eligible persons to secure basic health care in the same manner employed by the public generally, and without discrimination or segregation based purely on their economic disability." (Stats. 1966, Second Ex. Sess. 1965, ch. 4, § 2, p. 104.) "In effect, this meant that poorer people could have access to a private practitioner of their choice, and not be relegated to a county hospital program." (*California Medical Assn. v. Brian* (1973) 30 Cal. App. 3d 637, 642 [106 Cal. Rptr. 555].) Medi-Cal "provided for reimbursement to both public and private health care providers for medical services rendered." (*Lackner*, *supra*, 97 Cal. App. 3d at p. 581.) It further directed that, "[i]nsofar as practical," public assistance recipients be afforded "free choice of arrangements under which they shall receive basic health care." (Stats. 1966, Second Ex. Sess. 1965, ch. 4, § 2, p. 115.) Finally, since its inception, Medi-Cal has permitted county boards of supervisors to "prescribe rules which authorize the county hospital to integrate its services with those of other hospitals into a system of community service which offers free choice of hospitals to those requiring hospital care. The intent of this section is to eliminate discrimination or segregation based on economic disability so that the county hospital and other hospitals in the community share in providing services to paying patients and to those who qualify for care in public medical care programs." (§ 14000.2.) Thus, "Medi-Cal eligibles were to be able to secure health care in the same manner employed by the general public (i.e., in the private sector or at a county facility)." (1974 Legis. Analyst's Rep., *supra*, at p. 625; see also Preliminary Rep., *supra*, at p. 17.) By allowing eligible persons "a choice of medical facilities for treatment," Medi-Cal placed county health care providers "in competition with private hospitals." (*Hall*, *supra*, 23 Cal. App. 3d at p. 1061.)

Moreover, administration of Medi-Cal over the years has been the responsibility of various state departments and agencies. (§ 10720-10721, 14061-14062, 14105, 14203; *Belsh*, *supra*, 13 Cal. 4th at p. 751; *Morris*, *supra*, 67 Cal. 2d at p. 741; Summary of Major Events, *supra*, at pp. 2-3, 15.) Thus, [HN16] "[i]n adopting the Medi-Cal program the state Legislature, for the most part, shifted indigent medical care from being a county responsibility to a State [\*97] responsibility under the Medi-Cal program. [Citation.]" (*Bay General Community Hospital v. County of San Diego* (1984) 156 Cal. App. 3d 944, 959 [203 Cal. Rptr. 184] (*Bay General*); see also Preliminary Rep., *supra*, at p. 18 [with certain exceptions, Medi-Cal "shifted to the state" the responsibility for administration of the medical care pro-

15 Cal. 4th 68, \*, 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630

vided to eligible persons.) We therefore reject the state's assertion that, while Medi-Cal covered adult MIP's, county facilities were the sole providers of their medical care, and counties both operated and administered the program that provided that care.

The circumstances we have discussed readily distinguish this case from *County of Los Angeles v. Commission on State Mandates* (1995) 32 Cal. App. 4th 805 [38 Cal. Rptr. 2d 304], on which the state relies. There, the court rejected the claim that Penal Code section 987.9, which required counties to provide criminal defendants with certain defense funds, imposed an unfunded state mandate. Los Angeles filed the claim after the state, which had enacted appropriations between 1977 and 1990 "to reimburse counties for their costs under" the statute, made no appropriation for the 1990-1991 fiscal year. (*County of Los Angeles v. Commission on State Mandates, supra*, at p. 812.) In rejecting the claim, [\*\*330] [\*\*\*152] the court first held that there was no state mandate because Penal Code section 987.9 merely implemented the requirements of federal law. (*County of Los Angeles v. Commission on State Mandates, supra*, at pp. 814-816.) Thus, the court stated, "[a]ssuming, arguendo, the provisions of [Penal Code] section 987.9 [constituted] a new program" under section 6, there was no state mandate. (*County of Los Angeles v. Commission on State Mandates, supra*, at p. 818.) Here, of course, it is unquestionably the state that has required San Diego to provide medical care to indigent persons.

In dictum, the court also rejected the argument that, under *Lucia Mar, supra*, 44 Cal. 3d 830, the state's "decision not to reimburse the counties for their programs under [Penal Code] section 987.9" imposed a new program by shifting financial responsibility for the program to counties. (*County of Los Angeles v. Commission on State Mandates, supra*, 32 Cal. App. 4th at p. 817.) The court explained: "In contrast [to *Lucia Mar*], the program here has never been operated or administered by the State of California. The counties have always borne legal and financial responsibility for implementing the procedures under [Penal Code] section 987.9. The state merely reimbursed counties for specific expenses incurred by the counties in their operation of a program for which they had a primary legal and financial responsibility." (*Ibid.*) Here, as we have explained, between 1971 and 1983, the state administered and bore financial responsibility for the medical care that adult MIP's received under Medi-Cal. The Medi-Cal program was not simply a [\*\*98] method of reimbursement for county costs. Thus, the state's reliance on this dictum is misplaced. <sup>17</sup>

17 Because *County of Los Angeles v. Commission on State Mandates, supra*, 32 Cal. App. 4th 805, is distinguishable, we need not (and do not)

express an opinion regarding the court's analysis in that decision or its conclusions.

In summary, our discussion demonstrates the Legislature excluded adult MIP's from Medi-Cal *knowing and intending* that the 1982 legislation would trigger the counties' responsibility to provide medical care as providers of last resort under section 17000. Thus, through the 1982 legislation, the Legislature attempted to do precisely that which the voters enacted section 6 to prevent: "transfer[] to [counties] the fiscal responsibility for providing services which the state believed should be extended to the public." <sup>18</sup> (*County of Los Angeles, supra*, 43 Cal. 3d at p. 56; see also *City of Sacramento v. State of California, supra*, 50 Cal. 3d at p. 68 [A "central purpose" of section 6 was "to prevent the state's transfer of the cost of government from itself to the local level."] ) Accordingly, we view the 1982 legislation as having mandated a "new program" on counties by "compelling them to accept financial responsibility in whole or in part for a program," i.e., medical care for adult MIP's, "which was funded entirely by the state before the advent of article XIII B." <sup>19</sup> (*Lucia Mar, supra*, 44 Cal. 3d at p. 836.)

18 The state properly does not contend that the provision of medical care to adult MIP's is not a "program" within the meaning of section 6. (See *County of Los Angeles, supra*, 43 Cal. 3d at p. 56 [section 6 applies to "programs that carry out the governmental function of providing services to the public"].)

19 Alternatively, the 1982 legislation can be viewed as having mandated an increase in the services that counties were providing through existing section 17000 programs, by adding adult MIP's to the indigent population that counties already had to serve under that section. (See *County of Los Angeles, supra*, 43 Cal. 3d at p. 56 ["subvention requirement for increased or higher level of service is directed to state mandated increases in the services provided by local agencies in existing 'programs' "].)

A contrary conclusion would defeat the purpose of section 6. Under the state's interpretation of that section, because section 17000 was enacted before 1975, the Legislature could eliminate the *entire* Medi-Cal program and shift to the counties under section 17000 complete financial responsibility for medical care that the state has been providing [\*\*331] [\*\*\*153] since 1966. However, the taxing and spending limitations imposed by articles XIII A and XIII B would greatly limit the ability of counties to meet their expanded section 17000 obligation. "County taxpayers would be forced to accept new taxes or see the county forced to cut existing pro-

15 Cal. 4th 68, \*, 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630

grams further . . . ." (*Kinlaw, supra*, 54 Cal. 3d at p. 351 (dis. opn. of Broussard, J.)) As we have previously explained, the voters, recognizing that articles XIII A and XIII B left counties "ill equipped" to assume such increased financial responsibilities, adopted section 6 precisely to avoid this result. (*County of Los Angeles, [\*99] supra*, 43 Cal. 3d at p. 61.) Thus, it was the voters who decreed that we must, as the state puts it, "focus[] on one phase in th[e] shifting pattern of [financial] arrangements" between the state and the counties. Under section 6, the state simply cannot "compel[] [counties] to accept financial responsibility in whole or in part for a program which was funded entirely by the state before the advent of article XIII B . . . ." <sup>20</sup> (*Lucia Mar, supra*, 44 Cal. 3d at p. 836.)

20 In reaching a contrary conclusion, the dissent ignores the electorate's purpose in adopting section 6. The dissent also mischaracterizes our decision. We do not hold that "whenever there is a change in a state program that has the effect of increasing a county's financial burden under section 17000 there must be reimbursement by the state." (Dis. opn. of Kennard, J., *post*, at p. 116.) Rather, we hold that [HN17]section 6 prohibits the state from shifting to counties the costs of state programs for which the state assumed complete financial responsibility before adoption of section 6. Whether the state may discontinue assistance that it initiated after section 6's adoption is a question that is not before us.

#### B. County Discretion to Set Eligibility and Service Standards

(5a) The state next argues that, because San Diego had statutory discretion to set eligibility and service standards, there was no reimbursable mandate. Citing section 16704, the state asserts that the 1982 legislation required San Diego to spend MISA funds "only on those whom the county deems eligible under § 17000," "gave the county exclusive authority to determine the level and type of benefits it would provide," and required counties "to include [adult MIP's] in their § 17000 eligibility only to the extent state funds were available and then only for 3 years." (Original emphasis.) <sup>21</sup> According to the state, under section 17001, "[t]he counties [\*100] have complete discretion over the determination of eligibility, scope of benefits and how the services will be provided." <sup>22</sup>

21 [HN18]As amended in 1982, section 16704, subdivision (c)(1), provided in relevant part: "The [county board of supervisors] shall assure that it will expend [MISA] funds only for the health services specified in Sections 14132 and 14021

provided to persons certified as eligible for such services pursuant to Section 17000 and shall assure that it will incur no less in net costs of county funds for county health services in any fiscal year than the amount required to obtain the maximum allocation under Section 16702," (Stats. 1982, ch. 1594, § 70, p. 6346.) [HN19]Section 16704, subdivision (c)(3), provided in relevant part: "Any person whose income and resources meet the income and resource criteria for certification for services pursuant to Section 14005.7 other than for the aged, blind, or disabled, shall not be excluded from eligibility for services to the extent that state funds are provided. Such persons may be held financially liable for these services based upon the person's ability to pay. A county may not establish a payment requirement which would deny medically necessary services. This section shall not be construed to mandate that a county provide any specific level or type of health care service . . . [HN20]. The provisions of this paragraph shall become inoperative if a court ruling is issued which decrees that the provisions of this paragraph mandates [*sic*] that additional state funds be provided and which requires that additional state reimbursement be made to counties for costs incurred under this paragraph. This paragraph shall be operative only until June 30, 1983, unless a later enacted statute extends or deletes that date." (Stats. 1982, ch. 1594, § 70, pp. 6346-6347.)

22 [HN21]Section 17001 provides: "The board of supervisors of each county, or the agency authorized by county charter, shall adopt standards of aid and care for the indigent and dependent poor of the county or city and county."

The state exaggerates the extent of a county's discretion under section 17001. It is true "case law . . . has recognized that [HN22]section 17001 confers broad discretion upon the counties in performing their statutory duty to provide general assistance benefits to needy residents. [Citations.]" (*Robbins v. [\*\*332] [\*\*\*154] Superior Court* (1985) 38 Cal. 3d 199, 211 [211 Cal. Rptr. 398, 695 P.2d 695] (*Robbins*)). However, there are "clear-cut limits" to this discretion. (*Ibid.*) (6) The counties may exercise their discretion "only within fixed boundaries. In administering General Assistance relief the county acts as an agent of the state. [Citation.] [HN23]When a statute confers upon a state agency the authority to adopt regulations to implement, interpret, make specific or otherwise carry out its provisions, the agency's regulations must be consistent, not in conflict with the statute, and reasonably necessary to effectuate its purpose. ( *Gov. Code, § 11374.*)" (*Mooney, supra*, 4

15 Cal. 4th 68, \*; 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630

Cal. 3d at p. 679.) Thus, the counties' eligibility and service standards must "carry out" the objectives of section 17000. (*Mooney, supra*, 4 Cal. 3d at p. 679; see also *Poverty Resistance Center v. Hart* (1989) 213 Cal. App. 3d 295, 304-305 [261 Cal. Rptr. 545]; § 11000 ["provisions of law relating to a public assistance program shall be fairly and equitably construed to effect the stated objects and purposes of the program"].) County standards that fail to carry out section 17000's objectives "are void and no protestations that they are merely an exercise of administrative discretion can sanctify them." (*Morris, supra*, 67 Cal. 2d at p. 737.) [HN24] Courts, which have "final responsibility for the interpretation of the law," must strike them down. (*Id.* at p. 748.) Indeed, despite the counties' statutory discretion, "courts have consistently invalidated . . . county welfare regulations that fail to meet statutory requirements. [Citations.]" (*Robbins, supra*, 38 Cal. 3d at p. 212.)

#### 1. Eligibility

(5b) Regarding eligibility, we conclude that counties must provide medical care to all adult MIP's. As we emphasized in *Mooney*, [HN25] section 17000 requires counties to relieve and support "all indigent persons lawfully resident therein, "when such persons are not supported and relieved by their relatives" or by some other means." (*Mooney, supra*, 4 Cal. 3d at p. 678; see also *Bernhardt v. Board of Supervisors* (1976) 58 Cal. App. 3d 806, 811 [130 Cal. Rptr. 189].) Moreover, section 10000 declares that the statutory "purpose" of division 9 of the Welfare and Institutions Code, which includes section 17000, "is to provide for protection, care, and assistance to the [\*101] people of the state in need thereof, and to promote the welfare and happiness of all of the people of the state by providing appropriate aid and services to all of its needy and distressed." (Italics added.) Thus, [HN26] counties have no discretion to refuse to provide medical care to "indigent persons" within the meaning of section 17000 who do not receive it from other sources. <sup>23</sup> (See *Bell v. Board of Supervisors* (1994) 23 Cal. App. 4th 1695, 1706 [28 Cal. Rptr. 2d 919] [eligibility standards may not "defeat the purpose of the statutory scheme by depriving qualified recipients of mandated support"]; *Washington v. Board of Supervisors* (1993) 18 Cal. App. 4th 981, 985 [22 Cal. Rptr. 2d 852] [courts have repeatedly "voided county ordinances which have attempted to redefine eligibility standards set by state statute"].)

23 We disapprove *Bay General, supra*, 156 Cal. App. 3d at pages 959-960, insofar as it (1) states that a county's responsibility under section 17000 extends only to indigents as defined by the county's board of supervisors, and (2) suggests that a county may refuse to provide medical care

to persons who are "indigent" within the meaning of section 17000 but do not qualify for Medi-Cal.

Although section 17000 does not define the term "indigent persons," the 1982 legislation made clear that all adult MIP's fall within this category for purposes of defining a county's obligation to provide medical care. <sup>24</sup> As part of its exclusion of adult MIP's, that legislation required counties to participate in the MISA program. (Stats. 1982, ch. 1594, § 68, 70, 86, pp. 6343-6347, 6357.) Regarding that program, the 1982 legislation amended section 16704, subdivision (c)(1), to require [\*\*333] [\*\*\*155] that a county board of supervisors, in applying for MISA funds, "assure that it will expend such funds only for [specified] health services . . . provided to persons certified as eligible for such services pursuant to Section 17000 . . ." (Stats. 1982, ch. 1594, § 70, p. 6346.) At the same time, the 1982 legislation amended section 16704, subdivision (c)(3), to provide that "[a]ny person whose income and resources meet the income and resource criteria for certification for services pursuant to Section 14005.7 other than for the aged, blind, or disabled, shall not be excluded from eligibility for services to the extent that state funds are provided." (Stats. 1982, ch. 1594, § 70, p. 6346.) As the state correctly explains, under this provision, "counties had to include [Medically Indigent Adults] in their [section 17000 eligibility] standards. By requiring counties to make all adult MIP's eligible for services paid for with MISA funds, while at the same time requiring counties to promise to spend such funds *only* on those certified as eligible under section 17000, the Legislature established that all adult MIP's are "indigent persons" for purposes of the counties' duty to provide medical care under section 17000. Otherwise, the counties could not comply with their promise.

24 Our conclusion is limited to this aspect of a county's duty under section 17000. We express no opinion regarding the scope of a county's duty to provide other forms of relief and support under section 17000.

[\*102] Our conclusion is not affected by language in section 16704, subdivision (c)(3), making it "operative only until June 30, 1985, unless a later enacted statute extends or deletes that date." <sup>25</sup> As we have explained, the subdivision established that [HN27] adult MIP's are "indigent persons" within the meaning of section 17000 for medical care purposes. As we have also explained, section 17000 requires counties to relieve and support all "indigent persons." Thus, even if the state is correct in asserting that section 16704, subdivision (c)(3), is now inoperative and no longer prohibits counties from excluding adult MIP's from eligibility for medical services, section 17000 has that effect. <sup>26</sup>

15 Cal. 4th 68, \*, 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630

25 The 1982 legislation made the subdivision operative until June 30, 1983. (Stats. 1982, ch. 1594, § 70, p. 6347.) In 1983, the Legislature repealed and reenacted section 16704, and extended the operative date of subdivision (c)(3) to June 30, 1985. (Stats. 1983, ch. 323, § 131.1, 131.2, pp. 1079-1080.)

26 Given our analysis, we express no opinion about the statement in Cooke, supra, 213 Cal. App. 3d at page 412, footnote 9, that the "life" of section 16704, subdivision (c)(3), "was implicitly extended" by the fact that the "paragraph remains in the statute despite three, subsequent amendments to the statute . . . ."

Additionally, the coverage history of Medi-Cal demonstrates that the Legislature has always viewed all adult MIP's as "indigent persons" within the meaning of section 17000 for medical care purposes. As we have previously explained, when the Legislature created the original Medi-Cal program, which covered only categorically linked persons, it "declar[ed] its concern with the problems which [would] be facing the counties with respect to the medical care of indigent persons who [were] not covered" by Medi-Cal, "whose medical care [had to] be financed entirely by the counties in a time of heavily increasing medical costs." (Stats. 1966, Second Ex. Sess. 1965, ch. 4, § 2, p. 116 [enacting former § 14108.5].) Moreover, to ensure that the counties' Medi-Cal cost share would not leave counties "with insufficient funds to provide hospital care for those persons not eligible for Medi-Cal," the Legislature also created the county option. (Hall, supra, 23 Cal. App. 3d at p. 1061.) Through the county option, "the state agreed to assume all county health care costs . . . in excess of county costs incurred during the 1964-1965 fiscal year, adjusted for population increases." (Lackner, supra, 97 Cal. App. 3d at p. 586.) Thus, the Legislature expressly recognized that the categorically linked persons initially eligible for Medi-Cal did not constitute all "indigent persons" entitled to medical care under section 17000, and required the state to share in the financial responsibility for providing that care.

In adding adult MIP's to Medi-Cal in 1971, the Legislature extended Medi-Cal coverage to noncategorically linked persons "who [were] financially unable to pay for their medical care." (Legis. Counsel's Dig., Assem. Bill No. 949, 3 Stats. 1971 (Reg. Sess.) Summary Dig., p. 83.) This [\*103] description was consistent with prior judicial decisions that, for purposes of a county's duty to provide "indigent persons" with hospitalization, [\*\*\*156] had [\*\*334] defined the term to include a person "who has insufficient means to pay for his maintenance in a private hospital after providing for those

who legally claim his support." (Goodall v. Brite (1936) 11 Cal. App. 2d 540, 550 [54 P.2d 510].)

Moreover, the fate of amendments to section 17000 proposed at the same time suggests that, in the Legislature's view, the category of "indigent persons" entitled to medical care under section 17000 extended even *beyond* those eligible for Medi-Cal as MIP's. The June 17, 1971, version of Assembly Bill No. 949 amended section 17000 by adding the following: "however, the health needs of such persons shall be met under [Medi-Cal]." (Assem. Bill No. 949 (1971 Reg. Sess.) § 53.3, as amended June 17, 1971.) The Assembly deleted this amendment on July 20, 1971. (Assem. Bill No. 949 (1971 Reg. Sess.) as amended July 20, 1971, p. 37.) Regarding this change, the Assembly Committee on Health explained: "The proposed amendment to Section 17000, . . . which would have removed the counties' responsibilities as health care provider of last resort, is deleted. This change was originally proposed to clarify the guarantee to hold counties harmless from additional Medi-Cal costs. It is deleted since it cannot remove the fact that counties are, by definition, a 'last resort' for any person, with or without the means to pay, who does not qualify for federal or state aid." (Assem. Com. on Health, Analysis of Assem. Bill No. 949 (1971 Reg. Sess.) as amended July 20, 1971 (July 21, 1971), p. 4.)

The Legislature's failure to amend section 17000 in 1971 figured prominently in the Attorney General's interpretation of that section only two years later. In a 1973 published opinion, the Attorney General stated that the 1971 inclusion of MIP's in Medi-Cal "did not alter the duty of the counties to provide medical care to those indigents not eligible for Medi-Cal." (56 Ops. Cal. Atty. Gen., *supra*, at p. 569.) He based this conclusion on the 1971 legislation, relevant legislative history, and "the history of state medical care programs." (*Id.* at p. 570.) The opinion concluded; "The definition of medically indigent in [the chapter establishing Medi-Cal] is applicable only to that chapter and *does not include all those enumerated in section 17000*. If the former medical care program, by providing care only for a specific group, public assistance recipients, did not affect the responsibility of the counties to provide such service under section 17000, we believe the most recent expansion of the medical assistance program does not affect, *absent an express legislative intent to the contrary*, the duty of the counties under section 17000 to continue to provide services to those eligible under section 17000 but not under [Medi-Cal]." (*Ibid.*, italics added.) [HN28] The Attorney General's opinion, although not binding, is entitled to considerable weight. [\*104] (Freedom Newspapers, Inc. v. Orange County Employees Retirement System (1993) 6 Cal. 4th 821, 829 [25 Cal. Rptr. 2d 148, 863 P.2d 218].) Absent controlling

15 Cal. 4th 68, \*, 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630

authority, it is persuasive because we presume that the Legislature was cognizant of the Attorney General's construction of section 17000 and would have taken corrective action if it disagreed with that construction. (*California Assn. of Psychology Providers v. Rank* (1990) 51 Cal. 3d 1, 17 [270 Cal. Rptr. 796, 793 P.2d 2].)

In this case, of course, we need not (and do not) decide whether San Diego's obligation under section 17000 to provide medical care extended beyond adult MIP's. Our discussion establishes, however, that the obligation extended at least that far. The Legislature has made it clear that all adult MIP's are "indigent persons" under section 17000 for purposes of San Diego's obligation to provide medical care. Therefore, the state errs in arguing that San Diego had discretion to refuse to provide medical care to this population. <sup>27</sup>

27 Although asserting that nothing required San Diego to provide "all" adult MIP's with medical care, the state never precisely identifies which adult MIP's were legally entitled to medical care and which ones were not. Nor does the state ever directly assert that some adult MIP's were not "indigent persons" under section 17000. On the contrary, despite its argument, the state seems to suggest that San Diego's medical care obligation under section 17000 extended even beyond adult MIP's. It asserts: "At no time prior to or following 1983 did Medi-Cal ever provide medical services to, or pay for medical services provided to, all persons who could not afford such services and therefore might be deemed 'medically indigent.' . . . For some period prior to 1983, Medi-Cal paid for services for some indigent adults under its 'medically indigent adults' category. . . . [A]t no time did the state ever assume financial responsibility for all adults who are too indigent to afford health care." (Original emphasis.)

[\*\*335] [\*\*\*157] 2. Service Standards

(7) A number of statutes are relevant to the state's argument that San Diego had discretion in setting service standards. Section 17000 requires in general terms that counties "relieve and support" indigent persons. Section 10000, which sets forth the purpose of the division containing section 17000, declares the "legislative intent that aid shall be administered and services provided promptly and humanely, with due regard for the preservation of family life," so "as to encourage self-respect, self-reliance, and the desire to be a good citizen, useful to society." (§ 10000.) "[HN29] Section 17000, as authoritatively interpreted, mandates that medical care be provided to indigents and section 10000 requires that such care be provided promptly and humanely. The duty is

mandated by statute. There is no discretion concerning whether to provide such care . . ." (*Tailfeather v. Board of Supervisors* (1996) 48 Cal. App. 4th 1223, 1245 [56 Cal. Rptr. 2d 255] (*Tailfeather*)).

Courts construing section 17000 have held that [HN30]it "imposes a mandatory duty upon all counties to provide 'medically necessary care,' not just [\*105] emergency care. [Citation.]" (*County of Alameda v. State Bd. of Control* (1993) 14 Cal. App. 4th 1096, 1108 [18 Cal. Rptr. 2d 487]; see also *Gardner v. County of Los Angeles* (1995) 34 Cal. App. 4th 200, 216 [40 Cal. Rptr. 2d 271]; § 16704.1 [prohibiting a county from requiring payment of a fee or charge "before [it] renders medically necessary services to . . . persons entitled to services under Section 17000"].) It further "ha[s] been interpreted . . . to impose a minimum standard of care below which the provision of medical services may not fall." (*Tailfeather, supra*, 48 Cal. App. 4th at p. 1239.) In *Tailfeather*, the court stated that "section 17000 requires provision of medical services to the poor at a level which does not lead to unnecessary suffering or endanger life and health . . ." (*Id.* at p. 1240.) In reaching this conclusion, it cited *Cooke, supra*, 213 Cal. App. 3d at page 404, which held that section 17000 requires counties to provide "dental care sufficient to remedy substantial pain and infection." (See also § 14059.5 [defining "[a] service [as] 'medically necessary' . . . when it is reasonable and necessary to protect life, to prevent significant illness or significant disability, or to alleviate severe pain".])

During the years for which San Diego sought reimbursement, Health and Safety Code section 1442.5, former subdivision (c) (former subdivision (c)), also spoke to the level of services that counties had to provide under Welfare and Institutions Code section 17000. <sup>28</sup> As enacted in September 1974, [HN31]former subdivision (c) provided that, whether a county's duty to provide care to all indigent people "is fulfilled directly by the county or through alternative means, the availability of services, and the quality of the treatment received by people who cannot afford to pay for their health care shall be the same as that available to nonindigent people receiving health care services in private facilities in that county." (Stats. 1974, ch. 810, § 3, p. 1765.) The express "purpose and intent" of the act that contained former subdivision (c) was "to insure that the duty of counties to provide health care to indigents [was] properly and continuously fulfilled." (Stats. 1974, ch. 810, § 1, p. 1764.) Thus, until its repeal in September 1992, <sup>29</sup> former subdivision (c) "[r]equire[d] that the availability and quality of services provided to indigents directly by the county or alternatively be the same as that available to nonindigents in private facilities in that county." (Legis. Counsel's Dig., Sen. Bill No. 2369, 2 Stats. 1974 (Reg. Sess.) Summary Dig., p. 130; see also *Gardner v.* [\*\*336] [\*\*\*158]

15 Cal. 4th 68, \*, 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630

*County of Los Angeles. supra.* 34 Cal. App. 4th at p. 216; [\*106] *Board of Supervisors v. Superior Court. supra.* 207 Cal. App. 3d at p. 564 [former subdivision (c) required that care provided "be comparable to that enjoyed by the nonindigent"].<sup>30</sup> "For the 1990-91 fiscal year," the Legislature qualified this obligation by providing: "nothing in [former] subdivision (c) . . . shall require any county to exceed the standard of care provided by the state Medi-Cal program. Notwithstanding any other provision of law, counties shall not be required to increase eligibility or expand the scope of services in the 1990-91 fiscal year for their programs." (Stats. 1990, ch. 457, § 23, p. 2013.)

28 The state argues that former subdivision (c) is irrelevant to our determination because, like section 17000, it "predate[d] 1975." Our previous analysis rejecting this argument in connection with section 17000 applies here as well.

29 Statutes 1992, chapter 719, section 2, page 2882, repealed former subdivision (c) and enacted a new subdivision (c) in its place. This urgency measure was approved by the Governor on September 14, 1992, and filed with the Secretary of State on September 15, 1992.

30 [HN32] We disapprove *Cooke. supra.* 213 Cal. App. 3d at page 410, to the extent it held that Health and Safety Code section 1442.5, former subdivision (c), was merely "a limitation on a county's ability to close facilities or reduce services provided in those facilities," and was irrelevant absent a claim that a "county facility was closed [or] that any services in [the] county . . . were reduced." Although former subdivision (c) was contained in a section that dealt in part with closures and service reductions, nothing limited its reach to that context.

Although we have identified statutes relevant to service standards, we need not here define the precise contours of San Diego's statutory health care obligation. The state argues generally that San Diego had discretion regarding the services it provided. However, the state fails to identify either the specific services that San Diego provided under its CMS program or which of those services, if any, were not required under the governing statutes. Nor does the state argue that San Diego could have eliminated all services and complied with statutory requirements. Accordingly, we reject the state's argument that, because San Diego had some discretion in providing services, the 1982 legislation did not impose a reimbursable mandate.<sup>31</sup>

31 During further proceedings before the Commission to determine the amount of reimbursement due San Diego, the state may argue

that particular services available under San Diego's CMS program exceeded statutory requirements.

## VI. MINIMUM REQUIRED EXPENDITURE

(8) The Court of Appeal held that, under the governing statutes, the Commission must initially determine the precise amount of any reimbursement due San Diego. It therefore reversed the damages portion of the trial court's judgment and remanded the matter to the Commission for this determination. Nevertheless, the Court of Appeal affirmed the trial court's finding that the Legislature required San Diego to spend at least \$ 41 million on its CMS program for fiscal years 1989-1990 and 1990-1991. In affirming this finding, the Court of Appeal relied primarily on section 16990, subdivision (a), as it read at all relevant times. The state contends this provision did not mandate that San Diego spend any minimum amount on the CMS program. It further asserts that the Court of Appeal's "ruling in effect sets a damages baseline, in contradiction to [its] ostensible reversal of the damage award."

[\*107] Former section 16990, subdivision (a), set forth the financial maintenance-of-effort requirement for counties that received funding under the California Healthcare for the Indigent Program (CHIP). The Legislature enacted CHIP in 1989 to implement Proposition 99, the Tobacco Tax and Health Protection Act of 1988 (codified at Rev. & Tax. Code, § 30121 et seq.). Proposition 99, which the voters approved on November 8, 1988, increased the tax on tobacco products and allocated the resulting revenue in part to medical and hospital care for certain persons who could not afford those services. (*Kennedy Wholesale, Inc. v. State Bd. of Equalization* (1991) 53 Cal. 3d 245, 248, 254 [279 Cal. Rptr. 325, 806 P.2d 1360].) During the 1989-1990 and 1990-1991 fiscal years, [HN33] former section 16990, subdivision (a), required counties receiving CHIP funds, "at a minimum," to "maintain a level of financial support of county funds for health services at least equal to its county match and any overmatch of county funds in the 1988-89 fiscal year," adjusted annually as provided. (Stats. 1989, ch. 1331, § 9, p. 5427.) Applying this provision, the Court of Appeal affirmed the trial court's finding that the state had required San Diego to spend in fiscal years 1989-1990 and 1990-1991 [\*\*\*337] [\*\*\*159] at least \$ 41 million on the CMS program.

We agree with the state that this finding is erroneous. Unlike participation in MISA, which was mandatory, participation in CHIP was voluntary. In establishing CHIP, the Legislature appropriated funds "for allocation to counties *participating in*" the program. (Stats. 1989, ch. 1331, § 10, p. 5436, italics added.) Section 16980, subdivision (a), directed the State Department of Health

15 Cal. 4th 68, \*, 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630

Services to make CHIP payments "upon application of the county assuring that it will comply with" applicable provisions. Among the governing provisions were former sections 16990, subdivision (a), and 16995, subdivision (a), which provided: "To be eligible for receipt of funds under this chapter, a county may not impose more stringent eligibility standards for the receipt of benefits under Section 17000 or reduce the scope of benefits compared to those which were in effect on November 8, 1988." (Stats. 1989, ch. 1331, § 9, p. 5431.)

However, San Diego has cited no provision, and we have found none, that *required* eligible counties to participate in the program or apply for CHIP funds. Through Revenue and Taxation Code section 30125, which was part of Proposition 99, the electorate directed that funds raised through Proposition 99 "shall be used to supplement existing levels of service and not to fund existing levels of service." (See also Stats. 1989, ch. 1331, § 1, 19, pp. 5382, 5438.) Counties not wanting to supplement their existing levels of service, and which therefore did not want CHIP funds, were not bound by the program's requirements. Those counties, including San Diego, that chose [\*108] to seek CHIP funds did so voluntarily.<sup>32</sup> Thus, the Court of Appeal erred in concluding that former section 16990, subdivision (a), mandated a minimum funding requirement for San Diego's CMS program.

32 Consistent with the electorate's direction, in its application for CHIP funds, San Diego assured the state that it would "[e]xpend [CHIP] funds only to supplement existing levels of services provided and not to fund existing levels of service . . ." Because San Diego's initial decision to seek CHIP funds was voluntary, the evidence it cites of state threats to withhold CHIP funds if it eliminated the CMS program is irrelevant.

Nor did former section 16991, subdivision (a)(5), which the trial court and Court of Appeal also cited, establish a minimum financial obligation for San Diego's CMS program. Former section 16991 generally "establish[ed] a procedure for the allocation of funds to each county receiving funds from the [MISA] . . . for the provision of services to persons meeting certain Medi-Cal eligibility requirements, based on the percentage of newly legalized individuals under the federal Immigration Reform and Control Act (IRCA)." (Legis. Counsel's Dig., Assem. Bill No. 75, 4 Stats. 1989 (Reg. Sess.) Summary Dig., p. 548.) Former section 16991, subdivision (a)(5), required the state, for fiscal years 1989-1990 and 1990-1991, to reimburse a county if its combined allocation from various sources was less than the funding it received under section 16703 for fiscal year 1988-1989.<sup>33</sup> Nothing about this state reimbursement

requirement imposed on San Diego a minimum funding requirement for its CMS program.

33 [HN34]Former section 16991, subdivision (a)(5), provided in full: "If the sum of funding that a county received from its allocation pursuant to Section 16703, the amount of reimbursement it received from federal State Legalization Impact Assistance Grant [(SLIAG)] funding for indigent care, and its share of funding provided in this section is less than the amount of funding the county received pursuant to Section 16703 in fiscal year 1988-89 the state shall reimburse the county for the amount of the difference. For the 1990-91 fiscal year, if the sum of funding received from its allocation, pursuant to Section 16703 and the amount of reimbursement it received from [SLIAG] Funding for indigent care that year is less than the amount of funding the county received pursuant to Section 16703 in the 1988-89 fiscal year, the state shall reimburse the amount of the difference. If the department determines that the county has not made reasonable efforts to document and claim federal SLIAG funding for indigent care, the department shall deny the reimbursement." (Stats. 1989, ch. 1331, § 9, p. 5428.)

Thus, we must reverse the judgment insofar as it finds that former sections 16990, subdivision (a), and 16991, subdivision (a)(5), established a \$ 41 million spending floor for San Diego's CMS program. Instead, the various statutes that we have previously discussed (e.g., § 10000, 17000, and Health & [\*338] [\*\*\*160] Saf. Code. § 1442.5, former subd. (c)), the cases construing those statutes, and any other relevant authorities must guide the Commission's determination of the level of services that San Diego had to provide and any reimbursement to which it is entitled.

#### [\*109] VII. REMAINING ISSUES

(9) The state raises a number of additional issues. It first complains that a mandamus proceeding under Code of Civil Procedure section 1085 was an improper vehicle for challenging the Commission's position. It asserts that, under Government Code section 17559, review by administrative mandamus under Code of Civil Procedure section 1094.5 is the exclusive method for challenging a Commission decision denying a mandate claim. The Court of Appeal rejected this argument, reasoning that the trial court had jurisdiction under Code of Civil Procedure section 1085 because, under section 6, the state has a ministerial duty of reimbursement when it imposes a mandate.

15 Cal. 4th 68, \*, 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630

Like the Court of Appeal, but for different reasons, we reject the state's argument. [HN35]"[M]andamus pursuant to [Code of Civil Procedure] section 1094.5, commonly denominated 'administrative' mandamus, is mandamus still. It is not possessed of 'a separate and distinctive legal personality. It is not a remedy removed from the general law of mandamus or exempted from the latter's established principles, requirements and limitations.' [Citations.] The full panoply of rules applicable to 'ordinary' mandamus applies to 'administrative' mandamus proceedings, except where modified by statute. [Citations.]" (*Woods v. Superior Court* (1981) 28 Cal. 3d 668, 673-674 [170 Cal. Rptr. 484, 620 P.2d 1032].) Where the entitlement to mandamus relief is adequately alleged, a trial court may treat a proceeding brought under Code of Civil Procedure section 1085 as one brought under Code of Civil Procedure section 1094.5 and should deny a demurrer asserting that the wrong mandamus statute has been invoked. (*Woods, supra*, 28 Cal. 3d at pp. 673-674; *Anton v. San Antonio Community Hosp.* (1977) 19 Cal. 3d 802, 813-814 [140 Cal. Rptr. 442, 567 P.2d 1162].) Thus, even if San Diego identified the wrong mandamus statute, the error did not affect the trial court's ability to grant mandamus relief.

"In any event, distinctions between traditional and administrative mandate have little impact on this appeal. . . ." (*McIntosh v. Aubry* (1993) 14 Cal. App. 4th 1576, 1584 [18 Cal. Rptr. 2d 680].) [HN36]The determination whether the statutes here at issue established a mandate under section 6 is a question of law. (*County of Fresno v. Lehman, supra*, 229 Cal. App. 3d at p. 347.) In reaching our conclusion, we have relied on no facts that are in dispute. Where, as here, a "purely legal question" is at issue, courts "exercise independent judgment . . . , no matter whether the issue arises by traditional or administrative mandate. [Citations.]" (*McIntosh, supra*, 14 Cal. App. 4th at p. 1584.) As the state concedes, even under Code of Civil Procedure section 1094.5, a judgment must "be reversed if based on erroneous conclusions of law." Thus, any differences between the two mandamus statutes have had no impact on our analysis.

[\*110] The state next contends that the trial court prejudicially erred in denying the "peremptory disqualification" motion that the Director of the Department of Finance filed under Code of Civil Procedure section 170.6. We will not review this ruling, however, because [HN37]it is reviewable only by writ of mandate under Code of Civil Procedure section 170.3, subdivision (d). (*People v. Webb* (1993) 6 Cal. 4th 494, 522-523 [24 Cal. Rptr. 2d 779, 862 P.2d 779]; *People v. Hull* (1991) 1 Cal. 4th 266 [2 Cal. Rptr. 2d 526, 820 P.2d 1036].)

Nor can we address the state's argument that the trial court erred in granting a preliminary injunction. The May 1991 order granting the [HN38]preliminary injunction

was "immediately and separately appealable" under Code of Civil Procedure section 904.1, subdivision (a)(6). (*Art Movers, Inc. v. Ni West, Inc.* (1992) 3 Cal. App. 4th 640, 645 [4 Cal. Rptr. 2d 689].) Thus, the state's attempt to challenge the order in an appeal filed after entry of final judgment in December 1992 [\*339] [\*\*\*161] was untimely. <sup>34</sup> (See *Chico Feminist Women's Health Center v. Scully* (1989) 208 Cal. App. 3d 230, 251 [256 Cal. Rptr. 194].) Moreover, the state's attempt to appeal the order granting the preliminary injunction is moot because of (1) the trial court's July 1 order granting a peremptory writ of mandate, which expressly "supersede[d] and replace[d]" the preliminary injunction order and (2) entry of final judgment. (*Sheward v. Citizens' Water Co.* (1891) 90 Cal. 635, 638-639 [27 P. 439]; *People v. Morse* (1993) 21 Cal. App. 4th 259, 264-265 [25 Cal. Rptr. 2d 816]; *Art Movers, Inc., supra*, 3 Cal. App. 4th at p. 647.)

34 Despite its argument here, when it initially appealed, the state apparently recognized that it could no longer challenge the May 1991 order. In its March 1993 notice of appeal, it appealed only from the judgment entered December 18, 1992, and did not mention the May 1991 order.

Finally, the state requests that we reverse the trial court's reservation of jurisdiction regarding an award of attorney fees. This request is premature. In the judgment, the trial court "retain[ed] jurisdiction to determine any right to and amount of attorneys' fees . . ." This provision does not declare that San Diego in fact has a right to an award of attorney fees. Nor has San Diego asserted such a right. As San Diego states, at this point, "[t]here is nothing for this Court to review." We will not give an advisory ruling on this issue.

#### VIII. DISPOSITION

The judgment of the Court of Appeal is affirmed insofar as it holds that the exclusion of adult MIP's from Medi-Cal imposed a mandate on San Diego within the meaning of section 6. The judgment is reversed insofar as it holds that the state required San Diego to spend at least \$ 41 million on the CMS program in fiscal years 1989-1990 and 1990-1991. The matter is [\*111] remanded to the Commission to determine whether, and by what amount, the statutory standards of care (e.g., *Health & Saf. Code, § 1442.5*, former subd. (c); *Welf. & Inst. Code, § 10000, 17000*) forced San Diego to incur costs in excess of the funds provided by the state, and to determine the statutory remedies to which San Diego is entitled.

#### DISSENT BY: KENNARD

#### DISSENT

KENNARD, J.

I dissent.

As part of an initiative measure placing spending limits on state and local government, the voters in 1979 added article XIII B to the California Constitution. Section 6 of this article provides that when the state "mandates a new program or higher level of service on any local government," the state must reimburse the local government for the cost of such program or service. Under subdivision (c) of this constitutional provision, however, the state "may, but need not," provide such reimbursement *if the state mandate was enacted before January 1, 1975*. (Cal. Const., art. XIII B, § 6, subd. (c).) Subdivision (c) is the critical provision here.

Because the counties have for many decades been under a state mandate to provide for the poor, a mandate that existed before the voters added article XIII B to the state Constitution, the express language of subdivision (c) of section 6 of article XIII B exempts the state from any *legal obligation* to reimburse the counties for the cost of medical care to the needy. The fact that for a certain period after 1975 the state directly paid under the state Medi-Cal program for these costs did not lead to the creation of a new mandate once the state stopped doing so. To hold to the contrary, as the majority does, is to render subdivision (c) a nullity.

The issue here is not whether the poor are entitled to medical care. They are. The issue is whether the state or the counties must pay for this care. The majority places this obligation on the state. The counties' [\*340] [\*\*\*162] win, however, may be a pyrrhic victory. For, in anticipation of today's decision, the Legislature has enacted legislation that will drastically reduce the counties' share of other state revenue, as discussed in part III below.

I

Beginning in 1855, California imposed a legal obligation on the counties to take care of their poor. (*Moon-ey v. Pickell* (1971) 4 Cal. 3d 669, 677-678, [\*112], [94 Cal. Rptr. 279, 483 P.2d 1231].) Since 1965, this obliga-

tion has been codified in Welfare and Institutions Code section 17000. (Stats. 1965, ch. 1784, § 5, p. 4090.) That statute states in full: "Every county and every city and county shall relieve and support all incompetent, poor, indigent persons, and those incapacitated by age, disease, or accident, lawfully resident therein, when such persons are not supported and relieved by their relatives or friends, by their own means, or by state hospitals or other state or private institutions." (Welf. & Inst. Code, § 17000.) Included in this is a duty to provide medical care to indigents. (*Board of Supervisors v. Superior Court* (1989) 207 Cal. App. 3d 552, 557 [254 Cal. Rptr. 905].)

A brief overview of the efforts by federal, state, and local governments to furnish medical services to the poor may be helpful.

Before March 1, 1966, the date on which California began its Medi-Cal program, medical services for the poor "were provided in different ways and were funded by the state, county, and federal governments in varying amounts." (Assem. Com. on Public Health, Preliminary Rep. on Medi-Cal (Feb. 29, 1968) p. 3.) The Medi-Cal program, which California adopted to implement the federal Medicaid program (42 U.S.C. § 1396 et seq.; see *Morris v. Williams* (1967) 67 Cal. 2d 733, 738 [63 Cal. Rptr. 689, 433 P.2d 697]), at first limited eligibility to those persons "linked" to a federal categorical aid program by being over age 65, blind, disabled, or a member of a family with dependent children. (Legis. Analyst, Rep. to Joint Legis. Budget Com., Analysis of 1971-1972 Budget Bill, Sen. Bill No. 207 (1971 Reg. Sess.), pp. 548, 550.) Persons not linked to federal programs were ineligible for Medi-Cal; they could obtain medical care from the counties. (*County of Santa Clara v. Hall* (1972) 23 Cal. App. 3d 1059, 1061 [100 Cal. Rptr. 629].)

In 1971, the Legislature revised Medi-Cal by extending coverage to certain so-called "noncategorically linked" persons, or "medically indigent persons." (Stats. 1971, ch. 577, § 12, 13, 22.5, 23, pp. 1110-1111, 1115.) The revisions included a formula for determining each county's share of Medi-Cal costs for the 1972-1973 fiscal year, with increases in later years based on the assessed value of property. (*Id.* at § 41, 42, pp. 1131-1133.)

In 1978, California voters added to the state Constitution article XIII A (Proposition 13), which severely limited property taxes. In that same year, to help the counties deal with the drastic drop in local tax revenue, the Legislature assumed the counties' share of Medi-Cal costs. (Stats. 1978, ch. 292, § 33, p. 610.) In 1979, the Legislature relieved the counties of their obligation to share in Medi-Cal costs. (Stats. 1979, ch. 282, § 106, p. 1059.) [\*113] Also in 1979, the voters added to the state Constitution article XIII B, which placed spending

15 Cal. 4th 68, \*, 931 P.2d 312, \*\*;  
61 Cal. Rptr. 2d 134, \*\*\*; 1997 Cal. LEXIS 630

limits on state and local governments and added the mandate/reimbursement provisions at issue here.

In 1982, the Legislature removed from Medi-Cal eligibility the category of "medically indigent persons" that had been added in 1971. The Legislature also transferred funds for indigent health care services from the state to the counties through the Medically Indigent Services Account. (Stats. 1982, ch. 328, § 6, 8.3, 8.5, pp. 1574-1576; Stats. 1982, ch. 1594, § 19, 86, pp. 6315, 6357.) Medically Indigent Services Account funds were then combined with county health service funds to provide health care to persons not eligible for Medi-Cal (Stats. 1982, ch. 1594, § 86, p. 6357), and counties were to provide health services to persons in this category "to the extent that state funds are provided" (*id.*, § 70, p. 6346).

From 1983 through June 1989, the state fully funded San Diego County's program for furnishing medical care to the poor. Thereafter, in fiscal years 1989-1990 and 1990-1991, the state partially funded San Diego County's program. In early 1991, however, the state refused to provide San Diego County full funding for the 1990-1991 fiscal year, prompting a threat by the county to terminate its indigent medical care program. This in turn led the Legal Aid Society of San Diego to file an action against the County of San Diego, asserting that Welfare and Institutions Code section 17000 imposed a legal obligation on the county to provide medical care to the poor. The county cross-complained against the state. The county argued that the state's 1982 removal of the category of "medically indigent persons" from Medi-Cal eligibility mandated a "new program or higher level of service" within the meaning of section 6 of article XIII B of the California Constitution, because it transferred the cost of caring for these persons to the county. Accordingly, the county contended, section 6 required the state to reimburse the county for its cost of providing such care, and prohibited the state from terminating reimbursement as it did in 1991. The county eventually reached a settlement with the Legal Aid Society of San Diego, leading to a dismissal of the latter's complaint.

While the County of San Diego's case against the state was pending, litigation was proceeding in a similar action against the state by the County of Los Angeles and the County of San Bernardino. In that action, the Superior Court for the County of Los Angeles entered a judgment in favor of Los Angeles and San Bernardino Counties. The state sought review in the Second District Court of Appeal in Los Angeles. In December 1992, the parties to the Los Angeles case entered into a settlement agreement providing for dismissal of the appeal and vacating of the superior court judgment. [\*114] The

Court of Appeal thereafter ordered that the superior court judgment be vacated and that the appeal be dismissed.

The County of San Diego's action against the state, however, was not settled. It proceeded on the county's claim against the state for reimbursement of the county's expenditures for medical care to the indigent. The majority holds that the county is entitled to such reimbursement. I disagree.

I I agree with the majority that the superior court had jurisdiction to decide this case. (Maj. opn., *ante*, at pp. 85-90.)

## II

Article XIII B, section 6 of the California Constitution provides: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, *except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [P] . . . [P] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975.*" (Italics added.)<sup>2</sup>

2 Section 6 of article XIII B pertains to two types of mandates: new programs and higher levels of service. The words "such subvention" in the first paragraph of this constitutional provision makes the subdivision (c) exemption applicable to both types of mandates.

Of importance here is Welfare and Institutions Code section 17000 (hereafter sometimes section 17000). It imposes a legal obligation on the counties to provide, among other things, medical services to the poor. (*Board of Supervisors v. Superior Court, supra*, 207 Cal. App. 3d at p. 557; *County of San Diego v. F'loria* (1969) 276 Cal. App. 2d 350, 352 [80 Cal. Rptr. 869].) Section 17000 was enacted long before, and has existed continuously since, January 1, 1975, the date set forth in subdivision (c) of section 6 of article XIII B of the California Constitution. Thus, section 17000 falls within subdivision (c)'s language of "[l]egislative mandates enacted prior to January 1, 1975," rendering it exempt from the reimbursement provision of section 6.

Contrary to the majority's conclusion, the Legislature's 1982 legislation removing the category of "medically indigent persons" from Medi-Cal did not meet California Constitution, article XIII B, section 6's requirement of imposing on local government "a new program or higher level of service," and therefore did not entitle the counties to reimbursement. [\*\*342] [\*\*\*164]

from the state under section 6 of article XIII B. The counties' legal obligation to provide medical care arises from section 17000, not from the subsequently enacted [\*115] 1982 legislation. The majority itself concedes that the 1982 legislation merely "trigger[ed] the counties' responsibility to provide medical care as providers of last resort under section 17000." (Maj. opn., ante, at p. 98.) Although certain actions by the state and the federal government during the 1970's and 1980's may have alleviated the counties' financial burden of providing medical care for the indigent, those actions did not supplant or remove the counties' existing legal obligation under section 17000 to furnish such care. (*Cooke v. Superior Court* (1989) 213 Cal. App. 3d 401, 411 [261 Cal. Rptr. 706]; *Madera Community Hospital v. County of Madera* (1984) 155 Cal. App. 3d 136, 151 [201 Cal. Rptr. 768].)

The state's reimbursement obligation under section 6 of article XIII B of the California Constitution arises only if, after January 1, 1975, the date mentioned in subdivision (c) of section 6, the state imposes on the counties "a new program or higher level of service." That did not occur here. As I pointed out above, the counties' legal obligation to provide for the poor arises from section 17000, enacted long before the January 1, 1975, cutoff date set forth in subdivision (c) of section 6. That statutory obligation remained in effect when, during a certain period after 1975, the state assumed the financial burden of providing medical care to the poor, in an effort to help the counties deal with a drastic drop in local revenue as a result of the voters' passage of Proposition 13, which severely limited property taxes. Because the counties' statutory obligation to provide health care to the poor was created before 1975 and has existed unchanged since that time, the state's 1982 termination of Medi-Cal eligibility for "medically indigent persons" did not create a "new program or higher level of service" within the meaning of section 6 of article XIII B, and therefore did not obligate the state to reimburse the counties for their expenditures in health care for the poor.

### III

In imposing on the state a legal obligation to reimburse the counties for their cost of furnishing medical services to the poor, the majority's holding appears to bail out financially strapped counties. Not so.

Today's decision will immediately result in a reduction of state funds available to the counties. Here is why. In 1991, the Legislature added section 11001.5 to the Revenue and Taxation Code, providing that 24.33 percent of the moneys collected by the Department of Motor Vehicles as motor vehicle license fees must be deposited in the State Treasury to the credit of the Local Revenue Fund. In anticipation of today's decision, the Legislature stated in subdivision (d) of this statute: "This section

shall cease to be operative on [\*116] the first day of the month following the month in which the Department of Motor Vehicles is notified by the Department of Finance of a final judicial determination by the California Supreme Court or any California court of appeal [that]: [P] . . . [P] (2) The state is obligated to reimburse counties for costs of providing medical services to medically indigent adults pursuant to Chapters 328 and 1594 of the Statutes of 1982." (*Rev. & Tax. Code*, § 11001.5, subd. (d); see also *id.*, § 10753.8, subd. (b).)

The loss of such revenue, which the Attorney General estimates at "hundreds of millions of dollars," may put the counties in a serious financial bind. Indeed, realization of the scope of this revenue loss appears to explain why the County of Los Angeles, after a superior court victory in its action seeking state reimbursement for the cost of furnishing medical care to "medically indigent persons," entered into a settlement with the state under which the superior court judgment was effectively obliterated by a stipulated reversal. (See *Nearv v. Regents of University of California* (1992) 3 Cal. 4th 273 [10 Cal. Rptr. 2d 859, 834 P.2d 119].) In a letter addressed to the Second District Court of Appeal, sent while the County of Los Angeles was engaged in settlement negotiations with the state, the county's attorney referred to the legislation mentioned above in these terms: "This legislation was quite clearly written with this case in mind. Consequently, [\*\*343] [\*\*\*165] to pursue this matter, the County of Los Angeles risks losing a funding source it must have to maintain its health services programs at current levels. The additional funding that might flow to the County from a final judgment in its favor in this matter, is several years away and is most likely of a lesser amount than this County's share of the vehicle license fees." (Italics added.) Thus, the County of Los Angeles had apparently determined that a legal victory entitling it to reimbursement from the state for the cost of providing medical care to the category of "medically indigent persons" would not in fact serve its economic interests.

I have an additional concern. According to the majority, whenever there is a change in a state program that has the effect of increasing a county's financial burden under section 17000 there must be reimbursement by the state. This means that so long as section 17000 continues to exist, an increase in state funding to a particular county for the care of the poor, once undertaken, may be irreversible, thus locking the state into perpetual financial assistance to that county for health care to the needy. This would, understandably, be a major disincentive for the Legislature to ever increase the state's funding of a county's medical care for the poor.

The rigidity imposed by today's holding will have unfortunate consequences should the state's limited fi-

nancial resources prove insufficient to [\*117] reimburse the counties under section 6 of article XIII B of the California Constitution for the "new program or higher level of service" of providing medical care to the poor under section 17000. In that event, the state may be required to modify this "new program or higher level of service" in order to reconcile the state's reimbursement obligation with its finite resources and its other financial commitments. Such modifications are likely to take the form of limitations on eligibility for medical care or on the amount or kinds of medical care that the counties must provide to the poor under section 17000. A more flexible system--one that actively encouraged shared state and county responsibility for indigent medical care, using a variety of innovative funding mechanisms--would be less likely to result in a curtailment of medical services to the poor.

And if the Legislature is unable or unwilling to appropriate funds to comply with the majority's reimbursement order, the law allows the county to file "in the Superior Court of the County of Sacramento an action in declaratory relief to declare the mandate unenforceable and enjoin its enforcement." (Gov. Code, § 17612, subd. (c)); see maj. opn., *ante*, at p. 82.) Such a declaration would do nothing to alleviate the plight of the poor.

#### Conclusion

The dispute in this case ultimately arises from a collision between the taxing limitations on the counties imposed by article XIII A of the state Constitution and the preexisting, open-ended mandate imposed on them under Welfare and Institutions Code section 17000 to provide medical care for the poor. As I have explained, the Legislature's assumption thereafter of some of the resulting financial burden to the counties did not repeal section

17000's mandate, nor did the Legislature's later termination of its financial support create a new mandate. In holding to the contrary, the majority imposes on the Legislature an obligation that the Legislature does not have under the law.

I recognize that my resolution of this issue--that under existing law the state has *no legal obligation* to reimburse the counties for health expenditures for the poor--would leave the counties in the same difficult position in which they find themselves now: providing funding for indigent medical care while maintaining other essential public services in a time of fiscal austerity. But complex policy questions such as the structuring and funding of indigent medical care are best left to the counties, the Legislature, and ultimately the electorate, rather than to the courts. It is the counties that must figure out how to allocate the limited budgets imposed on them by the electorate's adoption of articles XIII A and XIII B of the California Constitution among indigent medical care programs and a host of other pressing [\*118] and essential needs. It is the Legislature that must decide whether to furnish financial assistance to the counties so [\*\*\*166] they [\*\*344] can meet their section 17000 obligations to provide for the poor, and whether to continue to impose the obligations of section 17000 on the counties. It is the electorate that must decide whether, given the ever-increasing costs of meeting the needs of indigents under section 17000, counties should be afforded some relief from the taxing and spending limits of articles XIII A and XIII B, both enacted by voters' initiative. These are hard choices, but for the reasons just given they are better made by the representative branches of government and the electorate than by the courts.

30 Cal. 4th 727; 68 P.3d 1203; 134 Cal. Rptr. 2d 237; 2003 Cal. LEXIS 3353; 2003  
Daily Journal DAR 5463

May 22, 2003, Decided  
May 22, 2003, Filed

**PRIOR HISTORY:** Superior Court of Sacramento County, No. C037645, No. 00CS00866, Ronald B. Robie Judge.

Department of Finance v. Commission on State Mandates, 100 Cal. App. 4th 243, 2002 Cal. App. LEXIS 4406, 122 Cal. Rptr. 2d 447 (Cal. App. 3d Dist., 2002)

**DISPOSITION:** The judgment of the Court of Appeal is reversed.

**CASE SUMMARY:**

**PROCEDURAL POSTURE:** The Court of Appeal of California, Third Appellate District, Sacramento County, held that respondents, California Commission on State Mandates, representing the real parties in interest and respondent school districts, had a right to reimbursement for their costs in complying with the statutory notice and agenda requirements related to voluntary state education-related programs. Appellant, the California Department of Finance, sought review.

**OVERVIEW:** A number of statutes established various school-related educational programs. One example was the School-Based Pupil Motivation and Maintenance Program and Dropout Recovery Act, Cal. Educ. Code § 54720 et seq. Participating school districts were granted funds to operate such programs and were required to establish school site councils or advisory committees to administer the program. Subsequent legislation required

new statutory notice and agenda requirements related to public meetings concerning such programs. The department of finance asserted that, because local entities were not required to participate in the programs, the State, had not imposed a "mandate," and the State was not responsible for said notice and agenda costs. On the other hand, the commission asserted the school districts were legally "compelled" to incur such costs and were entitled to reimbursement. The appellate court held the school districts did not have a right to reimbursement from the State. The funded programs did not amount to a reimbursable state mandate, they were not "compelled" upon the districts, and a portion of the provided funds could be used for the notice and agenda costs at issue.

**OUTCOME:** The appellate court held that the claimants failed to establish that they were entitled to reimbursement with regard to any of the program costs issue. The judgment of the lower court was reversed.

**CORE TERMS:** claimant, school districts, state mandate, agenda, notice, reimbursable, reimbursement, compelled, funded, incur, compulsion, advisory committees, local governments, local entity, local agencies, italics, eminent domain, mandated, curiae, school site, funding, optional, taxation, spending, goodwill, entity's, elect, reasonable alternative, federal mandate, education programs

*Education Law > Funding > Allocation*  
*Education Law > Instruction > Curricula > Curriculum Committees*  
*Public Health & Welfare Law > Social Services > Native Americans*

[HN1] A number of statutes establish various school-related educational programs, such as the School-Based Pupil Motivation and Maintenance Program and Dropout Recovery Act, Cal. Educ. Code § 54720 et seq., Programs to Encourage Parental Involvement, Cal. Educ. Code § 11500 et seq., and the federal Indian Education Program, 20 U.S.C.S. § 7421 et seq. (former 25 U.S.C.S. § 2604 et seq.). Under these statutes, participating school districts are granted state or federal funds to operate the program, and are required to establish school site councils or advisory committees that help administer the program. Program funding often is substantial. Funding is provided by the state for school improvement programs, at least in-part, under Cal. Educ. Code §§ 52010 et seq., and Cal. Educ. Code §§ 62000, 62000.2(b) and 62002.

*Administrative Law > Governmental Information > Public Meetings > General Overview*  
*Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Proceedings*

[HN2] Cal. Educ. Code § 35147 generally exempts school district councils and advisory committees of nine specific programs from compliance with all provisions of the Brown Act, Cal. Gov't. Code § 54950.5 et seq., and imposes instead its own separately described requirement that all such councils and advisory committees related to those nine programs be open to the public, provide notice of meetings, and post meeting agendas.

*Governments > Local Governments > Administrative Boards*

[HN3] See Cal. Gov't. Code § 54952.

*Administrative Law > Governmental Information > Public Meetings > General Overview*  
*Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Proceedings*

*Governments > Local Governments > Administrative Boards*

[HN4] See Cal. Educ. Code § 35147.

*Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Proceedings*

*Education Law > Funding > Allocation*  
*Governments > State & Territorial Governments > Finance*

[HN5] The statutory notice and agenda requirements of Cal. Educ. Code § 35147 impose reimbursable state mandates for the costs of preparing meeting agendas, posting agendas, and providing the public an opportunity to address the respective school district councils or committees.

*Governments > Local Governments > Finance*  
*Governments > State & Territorial Governments > Finance*

[HN6] Cal. Const. art. XIII A limits the spending authority of state and local government.

*Governments > Local Governments > Finance*  
*Governments > State & Territorial Governments > Finance*

[HN7] See Cal. Const. art. XIII B, § 6.

*Education Law > Administration & Operation > School Districts > Financial Liabilities*

*Governments > Local Governments > Finance*  
*Governments > State & Territorial Governments > Finance*

[HN8] Cal. Const. art. XIII B, § 6 recognizes that Cal. Const. arts. XIII A and XIII B severely restrict the taxing and spending powers of local governments. Its purpose is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are "ill equipped" to assume increased financial responsibilities because of the taxing and spending limitations that Cal. Const. arts. XIII A and XIII B impose. A reimbursable state mandate does not arise merely because a local entity finds itself bearing an "additional cost" imposed by state law. The additional expense incurred by a local agency or school district arising as an incidental impact of a law which applied generally to all entities is not the type of expense that the voters had in mind when they adopted Cal. Const. art. XIII B, § 6.

134 Cal. Rptr. 2d 237, \*\*\*; 2003 Cal. LEXIS 3353

[HN9]Extension of the subvention requirements to costs "incidentally" imposed on local governments will require the legislature to assess the fiscal effect on local agencies of each law of general application. Moreover, it will subject much general legislation to the supermajority vote required to pass a companion local-government revenue bill. Each such necessary appropriation will, in turn, cut into the state's article Cal. Const. art. XIII B spending limit. Cal. Const. art. XIII B, § 8(a). Nothing in the language, history, or apparent purpose of Cal. Const. art. XIII B suggests such far-reaching limitations on legitimate state power.

[HN13]See former Cal. Rev. & Tax Code § 2207.5.

*Governments > Local Governments > Finance*

[HN14]Former Cal. Rev. and Tax. Code §§ 2231 and 2207 served as the model for Cal. Const. art. XIII B, § 6, and contemplated a narrow definition of reimbursable state mandate, and not the subsequently expanded definition of reimbursable state mandate found in the 1981 amendments to the California Revenue and Taxation Code.

*Education Law > Administration & Operation > School Districts > Financial Liabilities*

[HN15]See Cal. Gov't Code § 17514.

*Governments > Local Governments > Finance  
Governments > State & Territorial Governments > Finance*

*Tax Law > State & Local Taxes > General Overview*

[HN16]In the legislature's 1984 overhaul of the statutory scheme implementing Cal. Const. art. XIII B, § 6, the legislature embraced and codified the narrow definition of reimbursable state mandate set out in former Cal. Rev. & Tax Code § 2207 (and construed in City of Merced) as the appropriate test in implementing the constitutional provision. The legislature limited the continued use of the broader definition of a statutorily imposed reimbursable state mandate (set out in the amendments to former Cal. Rev. & Tax Code §§ 2207 and 2207.5, effective in mid-1981) to a small and ever-decreasing number of cases. Five years later, the legislature repealed former Cal. Rev. & Tax Code §§ 2207 and 2207.5, thereby finally discarding the broad definition of statutorily imposed reimbursable state mandate found in former Cal. Rev. & Tax Code §§ 2207(h) and 2207.5(h).

*Education Law > Administration & Operation > School Districts > Financial Liabilities*

*Governments > Local Governments > Finance  
Governments > State & Territorial Governments > Finance*

[HN17]Particularly in the context of school funding, based upon the language of Cal. Const. art. XIII B, § 6, and the statutory and case law history, the drafters and the electorate must have intended that a reimbursable state mandate arises only if a local entity is "required" or "commanded," that is, legally compelled to participate in a program (or to provide a service) that, in turn, leads unavoidably to increasing the costs incurred by the entity.

*Education Law > Administration & Operation > School Districts > Financial Liabilities*

*Governments > Local Governments > Finance  
Governments > State & Territorial Governments > Finance*

[HN18]Particularly in the context of school funding, activities undertaken at the option or discretion of a local government entity (that is, actions undertaken without any legal compulsion or threat of penalty for nonpartici-

30 Cal. 4th 727, \*; 68 P.3d 1203, \*\*;  
134 Cal. Rptr. 2d 237, \*\*\*; 2003 Cal. LEXIS 3353

pation) do not trigger a state mandate and hence do not require reimbursement of funds, even if the local entity is obliged to incur costs as a result of its discretionary decision to participate in a particular program or practice.

*Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Proceedings*

*Education Law > Administration & Operation > School Districts > Financial Liabilities*

*Real Property Law > Eminent Domain Proceedings > Constitutional Limits & Rights > Just Compensation*

[HN19]If a school district elects to participate in or continue participation in any underlying voluntary education-related funded program, the district's obligation to comply with the notice and agenda requirements of Cal. Educ. Code § 35147, as related to that program does not constitute a reimbursable state mandate.

*Education Law > Administration & Operation > School Districts > Financial Liabilities*

*Governments > State & Territorial Governments > Finance*

[HN20]In the context of school district financing, the proper focus under a legal compulsion inquiry is upon the nature of a claimant's participation in the underlying programs themselves.

*Education Law > Funding > Allocation*

*Governments > Local Governments > Finance*

*Public Health & Welfare Law > Social Services > Native Americans*

[HN21]The American Indian Early Childhood Education Program, Cal. Educ. Code § 52060 et seq., which implements projects designed to develop and test educational models to increase reading and math competence of students in preschool and early grades, states that school districts "may apply" to be included in the project, Cal. Educ. Code § 52063) and, if accepted to participate, will receive program funding. Cal. Educ. Code § 52062. Cal. Educ. Code § 52065 in turn states that each school district that receives funds provided by § 52062 shall establish a district wide American Indian advisory committee for American Indian early childhood education.

*Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Authority*

*Education Law > Administration & Operation > School Districts > Financial Liabilities*

*Governments > State & Territorial Governments > Finance*

[HN22]Participation in most of the programs listed in Cal. Educ. Code § 35147 is voluntary, and the obligation to establish or maintain a site council or advisory committee arises only if a district elects to participate in, or continue to participate in, the particular program.

*Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Authority*

*Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Proceedings*

*Education Law > Instruction > Curricula > Curriculum Committees*

[HN23]See Cal. Educ. Code § 52010.

*Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Authority*

*Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Proceedings*

*Education Law > Instruction > Curricula > Curriculum Committees*

[HN24]Reasonably construed, the statutory scheme require only that a school district adopt "policies" (i.e., a plan) "to ensure" that if the district elects to participate in the California School Improvement Program, a school site council will, "prior to phase-in" of the district wide program, exist at each school, so that each individual school will be able to decide whether it wishes to participate in the district's program. In other words, the statutory scheme require that districts adopt policies or plans for school site councils, but the statutes do not require that districts adopt councils themselves unless the district first elects to participate in the underlying program.

*Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Authority*

*Education Law > Instruction > Curricula > Curriculum Committees*

[HN25]Prior to a school beginning to develop a program plan, the district first must establish a local school site council that in turn will consider whether or not it wishes the local school to participate in the program. Cal. Educ. Code § 52850 et seq. and Cal. Educ. Code § 54720 et seq. The statutes make it clear that these requirements apply "only to school districts and schools which participate in" the respective programs. Cal. Educ. Code §§

30 Cal. 4th 727, \*, 68 P.3d 1203, \*\*;  
134 Cal. Rptr. 2d 237, \*\*\*; 2003 Cal. LEXIS 3353

52850, 54722. Each statutory scheme provides that school site councils shall be established at each school which participates in the program. Cal. Educ. Code §§ 52852 and 54722.

*Education Law > Funding > Allocation  
Education Law > Students > Bilingual Students  
Governments > Local Governments > Finance*

[HN26]The appellate court finds nothing to suggest that a school district is precluded from using a portion of the funds obtained from the state for the implementation of an underlying funded program to pay associated notice and agenda costs. Indeed, the Chacon-Moscone Bilingual-Bicultural Education program explicitly authorizes school districts to do so. Under Cal. Educ. Code § 52168(b) school districts may claim funds appropriated for purposes of expenditures in, but not limited to reasonable district administrative expenses. It is plain that the costs of complying with program-related notice and agenda requirements qualify as "reasonable district administrative expenses." Therefore, even if the appellate court assume for purposes of analysis that school districts are legally compelled to participate in the funded Chacon-Moscone Bilingual-Bicultural Education program, the appellate court views the state's provision of program funding as satisfying, in advance, any reimbursement requirement.

*Education Law > Administration & Operation > School Districts > Financial Liabilities  
Governments > Local Governments > Finance  
Governments > State & Territorial Governments > Finance*

[HN27]It is conceivable, with regard to some programs, that increased compliance costs imposed by the state might become so great, or funded program grants might become so diminished, that funded program benefits would not cover the compliance costs, or that expenditure of granted program funds on administrative costs might violate a spending limitation set out in applicable regulations or statutes. In those circumstances, a compulsory program participant likely would be able to establish the existence of a reimbursable state mandate under Cal. Const. art. XIII B, § 6.

*Governments > Local Governments > Finance  
Governments > State & Territorial Governments > Finance*

[HN28]See Cal. Const. art. XIII B, § 9.

*Governments > Legislation > Interpretation*

[HN29]It is well settled that constitutional enactments must receive a liberal, practical common-sense construction which will meet changed conditions and the growing needs of the people. While a constitutional amendment should be construed in accordance with the natural and ordinary meaning of its words, the literal language of enactments may be disregarded to avoid absurd results and to fulfill the apparent intent of the framers.

*Education Law > Administration & Operation > School Districts > Creation*

*Governments > Local Governments > Administrative Boards*

*Governments > State & Territorial Governments > Relations With Governments*

[HN30]Unlike the federal-state relationship, sovereignty is not an issue between state and local governments. School districts are agencies of the state, and not separate or distinct political entities.

*Governments > Local Governments > Finance  
Governments > State & Territorial Governments > Finance*

[HN31]Cal. Const. art. XIII B, § 6's purpose is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are "ill equipped" to assume increased financial responsibilities. In light of that purpose, the appellate court does not foreclose the possibility that a reimbursable state mandate under Cal. Const. art. XIII B, § 6, properly might be found in some circumstances in which a local entity is not legally compelled to participate in a program that requires it to expend additional funds.

*Education Law > Students > Bilingual Students  
Governments > Local Governments > Finance  
Public Health & Welfare Law > Social Services > Native Americans*

[HN32]Authority to use program funds obtained from the state to pay associated notice and agenda costs is explicit, or at least strongly implied in the federal Indian Education Program, 20 U.S.C.S. § 7425(d), the California School Improvement Program, Cal. Educ. Code § 63000(c) and (e), and the McAteer Act, Cal. Educ. Code § 63001.

*Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Proceedings  
Governments > State & Territorial Governments > Finance*

30 Cal. 4th 727, \*, 68 P.3d 1203, \*\*;  
134 Cal. Rptr. 2d 237, \*\*\*, 2003 Cal. LEXIS 3353

[HN33]In the context of the expenditure of granted program funds on the notice and agenda costs, applicable statutory provisions appear to set the limit for such expenses for the same program at no more than 15 percent of granted program funds. Cal. Educ. Code §§ 63000(c) and 63001.

*Education Law > Administration & Operation > School Districts > Financial Liabilities*  
*Education Law > Funding > Allocation*  
*Governments > State & Territorial Governments > Finance*

[HN34]Presumably, a school district will continue to participate in optional funded programs only if it determines that the best interests of the district and its students are served by participation. In other words, if, on balance, the funded program, even with strings attached, is deemed beneficial. And, presumably, a school district will decline participation if and when it determines that the costs of program compliance outweigh the funding benefits.

*Education Law > Administration & Operation > School Districts > Financial Liabilities*  
*Education Law > Funding > Allocation*  
*Governments > State & Territorial Governments > Finance*

[HN35]Although it is completely understandable that a participant in a funded program may be disappointed when additional requirements (with their attendant costs) are imposed as a condition of continued participation in the program, just as such a participant will be disappointed if the total amount of the annual funds provided for the program is reduced by legislative or gubernatorial action, the circumstance that the legislature has determined that the requirements of an ongoing elective program should be modified does not render a local entity's decision whether to continue its participation in the modified program any less voluntary. Cal. Const. art. XIII B, § 6, provides no right of reimbursement when the state reduces revenue granted to local government. The appellate court rejects the suggestion that the state cannot legally provide school districts with funds for voluntary programs, and then effectively reduce that funding grant by requiring school districts to incur expenses in order to meet conditions of program participation.

*Education Law > Administration & Operation > School Districts > Financial Liabilities*  
*Education Law > Funding > Allocation*  
*Governments > Local Governments > Finance*

[HN36]A claimant that elects to discontinue participation in a state optional funded program does not face certain and severe penalties such as double taxation or other "draconian" consequences, but simply must adjust to the withdrawal of grant money along with the lifting of program obligations. Such circumstances do not constitute a reimbursable state mandate for purposes of Cal. Const. art. XIII B, § 6.

#### SUMMARY:

#### CALIFORNIA OFFICIAL REPORTS SUMMARY

The Department of Finance brought an administrative mandate proceeding against the Commission on State Mandates, challenging its decision that two statutes--requiring school site councils and advisory committees for certain educational programs to provide notice of meetings and to post agendas for those meetings--constituted a reimbursable state mandate under Cal. Const. art. XIII B, § 6. The trial court denied the petition. (Superior Court of Sacramento County, No. 00CS00866, Ronald B. Robie, Judge.) The Court of Appeal, Third Dist., No. C037645, rejected the department's position, concluding that a state mandate is established when the local governmental entity has no reasonable alternative and no true choice but to participate in the program, and incurs the additional costs associated with an increased or higher level of service.

The Supreme Court reversed the judgment of the Court of Appeal. The court held that the statute do not constitute a reimbursement state mandate. Thus, the claimants (two public school districts and a county) were not entitled to reimbursement. The claimants could not show that they were legally compelled to incur notice and agenda costs, and hence entitled to reimbursement from the state, based merely upon the circumstance that the notice and agenda provisions were mandatory elements of education-related programs in which the claimants participated, without regard to whether the claimants' participation was voluntary or compelled. If a school district elects to participate in any underlying voluntary education-related funded program, the obligation to comply with the notice and agenda requirements related to that program does not constitute a reimbursement state mandate. In this case, the claimants were not legally compelled to participate in eight of the nine underlying funded programs. Even if the claimants were legally compelled to participate in one of the nine programs, they were nevertheless not entitled to reimbursement from the state for such expenses, since they were free at all relevant times to use funds provided by the state for that program to pay required program expenses, including notice and agenda costs. The court further held that the claimants failed to show that they were

compelled to participate in the underlying programs. Moreover, the costs associated with the notice and agenda requirements were modest, and nothing in the governing statutes or regulations suggested that a school district was precluded from using a portion of the program funds obtained from the state to pay associated notice and agenda costs. (Opinion by George, C.J., expressing the unanimous view of the court.)

**grams--Statutory Requirements to Provide Notice and to Post Agenda of Meetings--Participation in Programs as Compelled--As Practical Matter.** --In proceedings to determine whether statutes, requiring school site councils and advisory committees for certain educational programs to provide notice of meetings and to post agendas for those meetings, were reimbursable mandates under Cal. Const., art. XIII B, § 6, in which claimants (two public school districts and a county) failed to show that they were legally compelled to participate in the underlying funded programs and incur notice and agenda costs, the claimants also failed to show that, as a practical matter, they were compelled to participate in the underlying programs. Although the claimants sought to show that they had no true choice other than to participate in the programs, and that the absence of a reasonable alternative to participation was a de facto mandate, they did not face penalties such as double taxation or other severe consequences for not participating, and hence they were not mandated under Cal. Const., art. XIII, § 6, to incur increased costs. Moreover, the costs associated with the notice and agenda requirements were modest, and nothing in the governing statutes or regulations suggested that a school district from the state to pay associated notice and agenda costs. The asserted compulsion stemmed only from the circumstance that the claimants found the benefits of various funded programs too beneficial to refuse. However, the state is not prohibited from providing school districts with funds for voluntary programs, and then effectively reducing that grant by requiring the districts to incur expenses in order to meet conditions of program participation.

(3) **Municipalities § 23--Powers--Relationship Between State and Local Governments.** --Unlike the federal-state relationship, sovereignty is not an issue between state and local governments.

(4) **State of California § 11--Fiscal Matters--Reimbursable State Mandate--Purpose.** --The purpose of Cal. Const., art. XIII B, § 6 (reimbursable state mandates), is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are ill equipped to assume increased financial responsibilities.

#### OPINION BY: GEORGE

#### OPINION

[\*730] [\*\*1205] [\*\*\*240] Article XIII B, section 6, of the California Constitution

provides: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service . . ." (Hereafter article XIII B, § 6.)

Real parties in interest--two public school districts and a county (hereafter claimants)--participate in various education-related programs that are funded by the state and, in some instances, by the federal government. Each of these underlying funded programs in turn requires participating public school districts to establish and utilize specified school councils and advisory committees. Statutory provisions enacted in the mid-1990's require that such school councils and advisory committees provide notice of meetings, and post agendas for those meetings. (See Gov. Code, § 54952; Ed. Code, § 35147.) [\*731] We granted review to determine whether claimants have a right to reimbursement from the state for their costs in complying with these statutory notice and agenda requirements.

We conclude, contrary to the Court of Appeal, that claimants are not entitled to reimbursement under the circumstances presented here. Our conclusion is based on the following determinations:

First, we reject claimants' assertion that they have been legally compelled to incur notice and agenda costs, and hence are entitled to reimbursement from the state, based merely upon the circumstance that the notice and agenda provisions are mandatory elements of education-related programs in which claimants have participated, without regard to whether a claimant's participation in the underlying program is voluntary or compelled. Second, we conclude that as to *eight* of the nine underlying funded programs here at issue, claimants have not been legally compelled to participate in those programs, and hence cannot establish a reimbursable state mandate as to those programs based upon a theory of legal compulsion. Third, assuming (without deciding) that claimants have been legally compelled to participate in *one* of the nine programs, we conclude that claimants nonetheless have no entitlement to reimbursement from the state for such expenses, because they have been free at all relevant times to use funds provided by the state for that program to pay required program expenses--including the notice and agenda costs here at issue.

Finally, we reject claimants' alternative contention that even if they have not been *legally* compelled to participate in the underlying funded programs, as a *practical* matter they have been compelled to do so and hence to incur notice and agenda-related costs. Although we do not foreclose the possibility that a reimbursable state mandate might be found in circumstances short of legal compulsion--for example, if the state were to impose a substantial penalty (independent of the program funds at issue) upon any local entity that declined to participate in a given program--claimants here faced no such practical compulsion. Instead, although claimants argue that they have had "no true option or choice" other than to participate in the underlying funded educational programs, the asserted compulsion in this case stems only from the circumstance that claimants have found the benefits of various funded programs "too good to refuse"--even though, as a condition of program participation, they have been forced to incur some costs. On the facts presented, the [\*\*\*241] cost of compliance with conditions of participation in these funded programs does not amount to a reimbursable state mandate.

Accordingly, we shall reverse the judgment of the Court of Appeal.

I.

30 Cal. 4th 727, \*, 68 P.3d 1203, \*\*;  
134 Cal. Rptr. 2d 237, \*\*\*; 2003 Cal. LEXIS 3353

[HN1] [\*\*1206] [\*732] A number of statutes establish various school-related educational programs, such as the School-Based Pupil Motivation and Maintenance Program and Dropout Recovery Act (Ed. Code, § 54720 et seq.), Programs to Encourage Parental Involvement (Ed. Code, § 11500 et seq.), and the federal Indian Education Program (20 U.S.C. § 7421 et seq. [former 25 U.S.C. § 2604 et seq.]). Under these statutes, participating school districts are granted state or federal funds to operate the program, and are required to establish school site councils or advisory committees that help administer the program. Program funding often is substantial--for example, on a statewide basis, funding provided by the state for school improvement programs (see Ed. Code, § 52010 et seq., §§ 62000, 62000.2, subd. (b), 62002) for the 1998-1999 fiscal year totaled approximately \$ 394 million. (Cal. Dept. of Ed., Rep., Budget Act of 1998 (Nov. 1998) p. 52.)

In the mid-1990's, the Legislature passed legislation designed to make the operations of the councils and advisory committees related to such programs more open and accessible to the public. First, effective April 1, 1994, the Legislature enacted Government Code section 54952, which expanded the reach of the Ralph M. Brown Act (Brown Act) (Gov. Code, § 54950.5 et seq.)--California's general open meeting law--to apply to all such official local advisory bodies.<sup>1</sup> Second, effective July 21, 1994, Education Code section 35147 superceded Government Code section 54952, with respect to the application of the Brown Act to designated councils and advisory committees. Although the earlier (Government Code) statute had made *all* local government councils and advisory committees subject to *all* provisions of the Brown Act, [HN2]the later (Education Code) statute generally exempts councils and advisory committees of nine specific programs from compliance with all provisions of the Brown Act, and imposes instead its own separately described requirement that all such councils and advisory committees related to those nine programs be open to the public, provide notice of meetings, and post meeting agendas.<sup>2</sup>

<sup>1</sup> Government Code section 54952, a provision of the Brown Act, provides in relevant part: [HN3]"As used in this chapter, 'legislative body' means: [P] (a) The governing body of a local agency or any other local body created by state or federal statute. [P] (b) A commission, committee, board, or other body of a local agency, whether permanent or temporary, decisionmaking or advisory, created by charter, ordinance, resolution, or formal action of a legislative body. . . ."

<sup>2</sup> Education Code section 35147 provides in relevant part: [HN4]"(a) Except as specified in this section, any meeting of the councils or com-

mittees specified in subdivision (b) is exempt from . . . the Ralph M. Brown Act. . . . [P] (b) The councils and schoolsite advisory committees established pursuant to Sections 52012, 52065, 52176, and 52852, subdivision (b) of Section 54425, Sections 54444.2, 54724, and 62002.5, and committees formed pursuant to Section 11503 or Section 2604 of Title 25 of the United States Code, are subject to this section. [P] (c) Any meeting held by a council or committee specified in subdivision (b) shall be open to the public and any member of the public shall be able to address the council or committee during the meeting on any item within the subject matter jurisdiction of the council or committee. Notice of the meeting shall be posted at the schoolsite, or other appropriate place accessible to the public, at least 72 hours before the time set for the meeting. The notice shall specify the date, time, and location of the meeting and contain an agenda describing each item of business to be discussed or acted upon. The council or committee may not take any action on any item of business unless that item appeared on the posted agenda or unless the council or committee members present, by unanimous vote, find that there is a need to take immediate action and that the need for action came to the attention of the council or committee subsequent to the posting of the agenda. . . ."

The nine school site councils and advisory committees specified in subdivision (b), above, were established as part of the following programs: The school improvement program (Ed. Code, § 52010 et seq.; see *id.*, §§ 62000, 62000.2, subd. (b), 62002) [a general program that disburses funds for all aspects of school operation and performance]; the American Indian Early Childhood Education Program (Ed. Code, § 52060 et seq.); the Chacon-Moscone Bilingual-Bicultural Education Act of 1976 (Ed. Code, § 52160 et seq.; see *id.*, 62000, 62000.2, subd. (d)); the School-Based Program Coordination Act (Ed. Code, § 52850 et seq. [a program designed to coordinate various categorical aid programs]); the McAteer Act (Ed. Code, § 54400 et seq. [various compensatory education programs for "disadvantaged minors"]); the Migrant Children Education Programs (Ed. Code, § 54440 et seq.); the School-Based Pupil Motivation and Maintenance Program and Dropout Recovery Act (Ed. Code, § 54720 et seq. [a program designed to address truancy and dropout issues]); the Programs to Encourage Parental Involvement (Ed. Code, § 11500 et seq.); and the federal Indian

30 Cal. 4th 727, \*, 68 P.3d 1203, \*\*;  
134 Cal. Rptr. 2d 237, \*\*\*; 2003 Cal. LEXIS 3353

Education Program (20 U.S.C. § 7421 et seq.  
[former 25 U.S.C. § 2601 et seq.] )

[\*\*1207] [\*\*\*242] [\*733] Compliance with these notice and agenda rules in turn imposed various costs on the affected councils and committees. Claimants Kern High School District, San Diego Unified School District, and County of Santa Clara filed "test claims" (see Gov. Code, § 17521) with the Commission on State Mandates (Commission), seeking reimbursement for the costs incurred by school councils and advisory committees in complying with the new statutory notice and agenda requirements. (See generally Kinkaw v. State of California (1991) 54 Cal.3d 326, 331-333 [285 Cal. Rptr. 66, 814 P.2d 1308] [describing legislative procedures implementing California Constitution article XIII B, section 6].) <sup>3</sup> In a statement of decision issued in mid-April 2002, the Commission found in favor of claimants. It concluded that [HN5]the statutory notice and agenda requirements impose reimbursable state mandates for the costs of preparing meeting agendas, posting agendas, and providing the public an opportunity to address the respective council or committee.

3 In December 1994, Santa Clara County filed the first test claim, asserting that Government Code section 54952 imposed a reimbursable state mandate. In December 1995, Kern High School District filed a test claim asserting that Education Code section 35147 imposes a reimbursable state mandate. These two claims were consolidated, and San Diego Unified School District was added as a claimant.

[\*734] Acting through the Department of Finance, the State of California (hereafter Department of Finance or Department) thereafter brought this administrative mandate proceeding under Government Code section 17559, subdivision (b), to challenge the Commission's decision. The San Diego Unified School District took the lead role on behalf of claimants; the Kern High School District and the County of Santa Clara did not appear in the court proceedings below and have not appeared in this court.

In November 2000, the trial court, agreeing with the Commission, denied the mandate petition. <sup>4</sup> The Department of Finance [\*\*\*243] appealed, arguing that the school councils and advisory committees at issue serve categorical aid programs in which school districts participate "voluntarily," often as a condition of receiving state or federal program funds. The Department of Finance asserted that the state has not *compelled* school districts to participate in or accept funding for any of those underlying programs--and hence has not required the establishment of any of the councils and committees that serve the programs. Instead, the Department of

Finance argued, the state merely has set out reasonable conditions and rules that must be adhered to if a local entity elects to participate in a program and receive program funding. Accordingly, the Department of Finance asserted, because local entities are not required to undertake or continue to participate in the programs, the state, by enacting Government Code section 54952 and Education Code section 35147, has not imposed a "mandate," as that term is used in article XIII B, section 6. It follows, the Department of Finance asserted, that claimants have no right to reimbursement under article XIII B, section 6.

4 The trial court stated: "Two primary issues are raised in this matter. The first issue is whether the 1993 amendments to the Brown Act [that is, enactment of Government Code section 54952] and the 1994 enactment of . . . [Education Code section 35147] mandate a new program or higher level of service. The Court concludes that they do. The second issue is whether a reimbursable state mandate is created only when an advisory council or committee which is subject to the Brown Act is required by state law. The Court concludes that it is not."

In a July 2002 decision, the Court of Appeal rejected the position taken by the Department of Finance. The appellate court concluded that a state mandate is established under article XIII B, section 6, when the local governmental entity has "no reasonable alternative" and "no true choice but to participate" in the program, and incurs the additional costs associated with an increased or higher level of service. <sup>5</sup>

5 The Court of Appeal also concluded that Government Code section 54952 and Education Code section 35147 establish a "higher level of service" under article XIII B, section 6. We need not and do not review that determination here, and express no view on the validity of that conclusion.

[\*\*1208] We granted review to consider the Court of Appeal's construction of the term "state mandate" as it appears in article XIII B, section 6.

[\*735] II.

Article XIII A (adopted by the voters in 1978 as Proposition 13), [HN6]limits the *taxing* authority of state and local government. Article XIII B (adopted by the voters in 1979 as Proposition 4) limits the *spending* authority of state and local government.

Article XIII B, section 6, provides as follows: [HN7]"Whenever the Legislature or any state agency mandates a new program or higher level of service on

30 Cal. 4th 727, \*, 68 P.3d 1203, \*\*;  
134 Cal. Rptr. 2d 237, \*\*\*; 2003 Cal. LEXIS 3353

any local government, the State shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [P] (a) Legislative mandates requested by the local agency affected; [P] (b) Legislation defining a new crime or changing an existing definition of a crime; or [P] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975." Article XIII B became operative on July 1, 1980. (*Id.*, § 10.)

We have observed that article XIII B, section 6 [HN8]"recognizes that articles XIII A and XIII B severely restrict the taxing and spending powers of local governments. [Citation.] Its purpose is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are 'ill equipped' to assume increased financial responsibilities because of the taxing and spending limitations that articles XIII A and XIII B impose." [\*\*\*244] (*County of San Diego v. State of California* (1997) 15 Cal.4th 68, 81 [61 Cal. Rptr. 2d 134, 931 P.2d 312] (*County of San Diego*)). We also have observed that a reimbursable state mandate does not arise merely because a local entity finds itself bearing an "additional cost" imposed by state law. (*County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 55-57 [233 Cal. Rptr. 38, 729 P.2d 202].) The additional expense incurred by a local agency or school district arising as an "incidental impact of a law which applied generally to all . . . entities" is not the "type of expense . . . [that] the voters had in mind when they adopted section 6 of article XIII B." (*Lucia Mar Unified School Dist. v. Honig* (1999) 44 Cal. 3d 830, 835 [244 Cal. Rptr.677, 750 P.3d 318]; see also *County of Fresno v. State of California* (1991) 53 Cal.3d 482, 487 [280 Cal. Rptr. 92, 808 P.2d 235]; *City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 70 [266 Cal. Rptr. 139, 785 P.2d 522] (*City of Sacramento*).")

6 As we observed in *City of Sacramento, supra*, 50 Cal.3d at page 70, [HN9]"extension of the subvention requirements to costs 'incidentally' imposed on local governments would require the Legislature to assess the fiscal effect on local agencies of each law of general application. Moreover, it would subject much general legislation to the supermajority vote required to pass a companion local-government revenue bill. Each such necessary appropriation would, in turn, cut into the *state's* article XIII B spending limit. ([Art. XIII B.] § 8, subd. (a).)" We reaffirmed that "nothing in the language, history, or apparent purpose of article XIII B suggested such

far-reaching limitations on legitimate state power." (50 Cal.3d at p. 70.)

The focus in many of the prior cases that have addressed article XIII B, section 6, has been upon the meaning of the terms "new program" or [\*736] "increased level of service." In the present case, we are concerned with the meaning of state "mandate."

### III.

#### A.(1)

In its briefs, the Department of Finance asserts that article XIII B, section 6, reflects an intent on the part of the drafters and the electorate to limit reimbursement to costs that are forced upon local governments as a matter of legal compulsion. The Commission's briefs take a similar approach, arguing that reimbursement under the constitutional provision requires a showing that a local entity was "ordered or commanded" to incur added costs. At oral argument, both the Department and the Commission retreated somewhat from these positions, and suggested [\*\*1209] that legal compulsion may not be a necessary condition of a finding of a reimbursable state mandate in all circumstances. For the reasons explained below, although we shall analyze the legal compulsion issue, we find it unnecessary in this case to decide whether a finding of legal compulsion is *necessary* in order to establish a right to reimbursement under article XIII B, section 6, because we conclude that even if there are some circumstances in which a state mandate may be found in the absence of legal compulsion, the circumstances presented in this case do not constitute such a mandate.

#### 1.

The Department of Finance and the Commission maintain that the drafters of article XIII B, section 6, borrowed that provision's basic idea and structure--and the gist of its "state mandate" language--from then existing statutes. (See generally *Haves v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, 1577-1581 [15 Cal. Rptr. 2d 547].) At the time of [\*\*\*245] the drafting and enactment of article XIII B, section 6, former Revenue and Taxation Code section 2231, subdivision (a) (currently Gov. Code, § 17561, subd. (a)) provided: [HN10]"The state shall reimburse each local agency for all 'costs mandated by the state,' as defined in Section 2207 . . ." And at that same time, former Revenue and Taxation Code section 2207 (currently Gov. Code, § 17514) provided: " [HN11]"Costs mandated by the state' means any increased costs which a local agency is required to incur as a result of the [\*737] following: [P] (a) Any law enacted after January 1, 1973, which mandates a new program or an increased level of service of an existing program . . . ."

30 Cal. 4th 727, \*; 68 P.3d 1203, \*\*;  
134 Cal. Rptr. 2d 237, \*\*\*; 2003 Cal. LEXIS 3353

As the Department of Finance observes, we frequently have looked to ballot materials in order to inform our understanding of the terms of a measure enacted by the electorate. (See, e.g., County of Fresno v. State of California, *supra*, 53 Cal.3d 482, 487 [reviewing ballot materials concerning art. XIII B].) The Department stresses that the ballot materials pertaining to article XIII B in two places suggested that a state mandate comprises something that a local government entity is required or forced to do. The Legislative Analyst stated: " 'State mandates' are *requirements imposed* on local governments by legislation or executive orders." (Ballot Pamp., Special Statewide Elec. (Nov. 6, 1979) Prop. 4, p. 16, italics added.) Similarly, the measure's proponents stated that the provision would "not allow the state governments to *force* programs on local governments without the state paying for them." (*Id.*, arguments in favor of Prop. 4, p. 18, capitalization removed, italics added.) The Department concludes that the ballot materials fail to suggest that a reimbursable state mandate might be found to exist outside the context of legal compulsion.

The Department of Finance and the Commission also assert that subsequent judicial construction of former Revenue and Taxation Code sections 2231 and 2207—upon which, as just discussed, article XIII B, section 6, apparently was based—suggests that a narrow meaning was accorded the term "state mandate" at the time article XIII B, section 6, was enacted. The Department relies primarily upon *City of Merced v. State of California* (1984) 153 Cal. App. 3d 777 [200 Cal. Rptr. 642] (*City of Merced*). Claimants and amici curiae on their behalf assert that *City of Merced* either is distinguishable or was wrongly decided. We proceed to describe *City of Merced* at some length.

In *City of Merced*, supra, 153 Cal. App. 3d 777, the city wished either to purchase or to condemn (under its eminent domain authority) certain privately owned real property. If the city were to elect to proceed by eminent domain, it would be required by a then recent enactment (Code of Civ. Proc., § 1263.510) to compensate the property owner for loss of its "business goodwill." The city did elect to proceed by eminent domain, and in April 1980 the Merced Superior Court issued a final order in condemnation, directing the city to pay the property owner for the latter's loss of business goodwill. The city did so and then sought reimbursement from the state, arguing that the new statutory requirement that it compensate for business goodwill amounted to a reimbursable state mandate. (*City of Merced*, at p. 780.)

[\*\*1210] [\*738] The constitutional reimbursement provision contained in article XIII B, section 6, did not become operative until July 1, 1980. Accordingly, the City of Merced sought reimbursement under the then existing statutory authority—Revenue and Taxation Code

former sections 2231 and 2207—which, as noted, apparently had [\*\*\*246] served as the model for the constitutional provision.

The State Board of Control—which at the time exercised the authority now exercised by the Commission—agreed with the City of Merced and found a reimbursable state mandate. (*City of Merced*, supra, 153 Cal. App. 3d 777, 780.) The city's approved claim for reimbursement "was included, along with other similar claims, as a [budget] line item in chapter 1090, Statutes of 1981." (*Ibid.*) The Legislature, however, refused to authorize the reimbursement, and directed the board not to accept, or submit, any future claim for reimbursement for business goodwill costs. (*Ibid.*)

The City of Merced then sought a writ of mandate commanding the Legislature to provide reimbursement. The trial court denied that request, and the Court of Appeal affirmed. The court concluded that, as a matter of law, the city's increased costs flowing from its election to condemn the property did not constitute a reimbursable state mandate. (*City of Merced*, supra, 153 Cal. App. 3d 777, 781-783.) The court reasoned: "[W]hether a city or county decides to exercise eminent domain is, essentially, an option of the city or county, rather than a mandate of the state. The fundamental concept is that the city or county is not required to exercise eminent domain. If, however, the power of eminent domain is exercised, then the city will be required to pay for loss of goodwill. Thus, payment for loss of goodwill is not a state-mandated cost." (*Id.*, at p. 783.)

The court in *City of Merced*, supra, 153 Cal. App. 3d 777, found its construction of former Revenue and Taxation Code sections 2231 and 2207 as those statutory provisions read at the time they served as the model for article XIII B, section 6 to be confirmed by the subsequent legislative action amending former Revenue and Taxation Code section 2207 (and related section 2207.5). As the court explained: ". . . Senate Bill No. 90 (Russell), 1979-1980 Regular Session . . . added Revenue and Taxation Code section 2207, subdivision (h): [P] ' [HN12]"Costs mandated by the state" means any increased costs which a local agency is required to incur as the result of the following: [P] . . . [P] (h) Any statute enacted after January 1, 1973, or executive order issued after January 1, 1973, which *adds new requirements to an existing optional program or service* and thereby increases the cost of such program or service *if the local agencies have no reasonable alternatives other than to continue the optional program.*" (*City of Merced*, supra, 153 Cal. App. 3d 777, 783-784, italics added.)

[\*739] (Of relevance here, Senate Bill No. 90 (1979-1980 Reg. Sess.) also added a substantively identical provision to former Revenue and Taxation Code

section 2207.5 -a specialized section that addressed reimbursable state mandates as they related to a school district.)<sup>7</sup>

7 Revised section 2207.5 provided that "[HN13]'[c]osts mandated by the state' means any increased costs which a school district is required to incur as a result of . . . [P] . . . [P] (h) Any statute enacted after January 1, 1973, or executive order issued after January 1, 1978, which adds new requirements to an existing optional program or service and thereby increases the cost of such program or service *if the school districts have no reasonable alternatives other than to continue the optional program.*" (Stats. 1980, ch. 1256, § 5, pp. 4248-4249, eff. July 1, 1981, italics added.)

The court in *City of Merced* continued: "Senate Bill No. 90 became effective on July 1, 1981, [more than a year] after plaintiff incurred the cost of business goodwill for which it seeks reimbursement. Subdivision (h) appears to have been included [\*\*\*247] in the bill to provide for reimbursement of increased costs in an optional program such as eminent domain when the local agency has no reasonable alternative to eminent domain. The legislative history of Senate Bill No. 90 supports the conclusion that subdivision (h) was added to Revenue and Taxation Code section 2207 to extend state liability rather than to clarify [\*\*1211] existing law." (*City of Merced, supra*, 153 Cal. App. 3d 777, 784, italics added.)

After examining two legislative committee reports,<sup>8</sup> the court in *City of Merced, supra*, 153 Cal. App. 3d 777, asserted that they "characterize Senate Bill No. 90 as expanding the definition of local reimbursable costs. The Legislative Analyst's Report . . . on Senate Bill No. 90 similarly includes a statement that the bill expands the definition of state-mandated costs. Such characterizations of the purpose of Senate Bill No. 90 are consistent only with the conclusion that, *until that bill was enacted, increased costs incurred in an optional program such as eminent domain were not state mandated.* Thus the cost of business goodwill for which plaintiff was required [by Code of Civil Procedure, section 1263.510] to pay in April 1980, was not a state-mandated cost. It follows that the trial court properly denied the [\*740] petition for a writ of mandamus to compel payment of that cost." (*City of Merced, supra*, 153 Cal. App. 3d 777, 785, italics added.)

8 The court in *City of Merced* asserted: "The Report of the Assembly Revenue and Taxation Committee . . . includes a statement: 'SB 90 further defines "mandated costs" in Sections 4 and 5 to include the following: [P] . . . [P] e. Where a

statute or executive order adds *new requirements to an existing optional program*, which increases costs if the local agency has no reasonable alternative than to continue that optional program.' (Rep., p. 1, italics in original.) [P] Additionally, the Ways and Means Committee's Staff Analysis . . . notes that Senate Bill No. 90: 'Expands the definition of *local reimbursable costs* mandated and paid by the state to include: [P] . . . [P] e. Statutes or executive orders adding *new requirements to an existing optional program*, which increases costs if the local agency has no reasonable alternative than to continue that optional program.' (P. 2, italics in original.)" (*City of Merced, supra*, 153 Cal. App. 3d at p. 784.)

In other words, the court in *City of Merced* concluded that [HN14]former Revenue and Taxation Code sections 2231 and 2207, as they read at the time they served as the model for article XIII B, section 6, contemplated a narrow definition of reimbursable state mandate, and not the subsequently expanded definition of reimbursable state mandate found in the 1981 amendments to the Revenue and Taxation Code. "

9 We need not, and do not, decide whether the court in *City of Merced, supra*, 153 Cal. App. 3d 777, correctly characterized the statutory history of the 1981 amendments to the Revenue and Taxation Code.

A few months after the Court of Appeal filed its opinion in *City of Merced, supra*, 153 Cal. App. 3d 777, the Legislature overhauled the law pertaining to state mandates and reimbursements by amending both the Revenue and Taxation Code and the Government Code. (Stats. 1984, ch. 1459, p. 5113.) The Department of Finance and the Commission assert that two aspects of the legislative overhaul are particularly relevant to the issue we address here.

First, the Department of Finance and the Commission assert that the Legislature enacted a new section of the Government Code--section 17514 -in order to implement the reimbursable-state-mandate directive of article XIII B, section 6.<sup>10</sup> The [\*\*\*248] Department and the Commission assert that in enacting that provision, the Legislature readopted the original, *narrow* definition of reimbursable state mandate found in the initial versions of former Revenue and Taxation Code section 2207 -which, the Department and the Commission maintain, existed at the time article XIII B, section 6 was drafted and adopted, and which defined "costs mandated by the state" as those "which a local agency is *required* to incur." (See Stats. 1975, ch. 486, § 1.8, p. 997 [Rev. & Tax. Code, § 2207]; Stats. 1977, ch. 1135, § 5, p. 3646 [Rev. & Tax. Code, § 2207]; Stats. 1984, ch. 1459, § 1,

p. 5114 [Gov. Code, § 17514], italics added.) This same statutory language also had been recently construed at that time in City of Merced, supra, 153 Cal. App. 3d 777, as recognizing [\*\*1212] as a reimbursable state mandate only that imposed when the local entity is legally compelled to engage in the underlying practice or program.

10 Government Code section 17514 reads: [HN15]" 'Costs mandated by the state' means any increased costs which a local agency or school district is *required* to incur after July 1, 1980, as a result of any statute enacted on or after January 1, 1975, or any executive order implementing any statute enacted on or after January 1, 1975, which mandates a new program or higher level of service of an existing program within the meaning of Section 6 of Article XIII B of the California Constitution." (Italics added.)

[\*741] Second, the Department of Finance and the Commission observe, in enacting Government Code section 17514, the Legislature also provided that the use of the broader definition contained in the *amended* versions of Revenue and Taxation Code former sections 2207 and 2207.5 (which became effective July 1, 1981) should be phased out, but that the definition could be used to determine claims that arose prior to 1985. (See Stats. 1984, ch. 1459, § 1, p. 5123; 68 Ops.Cal.Atty.Gen. 224 (1985).)

In other words, the Department of Finance and the Commission assert, [HN16]in the Legislature's 1984 overhaul of the statutory scheme implementing article XIII B, section 6, the Legislature embraced and codified the narrow definition of reimbursable state mandate set out in former Revenue and Taxation Code section 2207 (and construed in City of Merced) as the appropriate test in implementing the constitutional provision. Moreover, the Department and the Commission maintain, the Legislature limited the continued use of the broader definition of a statutorily imposed reimbursable state mandate (set out in the amendments to former Revenue and Taxation Code, sections 2207 and 2207.5, effective in mid-1981) to a small and ever-decreasing number of cases. Five years later, the Legislature repealed former Revenue and Taxation Code sections 2207 and 2207.5 (see Stats. 1989, ch. 589, §§ 7 & 8, p. 1978)—thereby finally discarding the broad definition of statutorily imposed reimbursable state mandate found in subdivision (h) of each of those statutes.

As noted above, the Department of Finance and the Commission assert in their briefs that [HN17]based upon the language of article XIII B, section 6, and the statutory and case law history described above, the drafters and the electorate must have intended that a reimbursable

state mandate arises only if a local entity is "required" or "commanded" --that is, legally compelled--to participate in a program (or to provide a service) that, in turn, leads unavoidably to increasing the costs incurred by the entity. (City of Merced, supra, 153 Cal. App. 3d 777, 783; see also Long Beach Unified School District v. State of California (1990) 225 Cal. App. 3d 155, 174 [275 Cal. Rptr. 449] [construing the term "mandates," for purposes of art. XIII B, § 6, "in the ordinary sense of 'orders' or 'commands' "]; [\*\*\*249] County of Sonoma v. Commission on State Mandates (2000) 84 Cal.App.4th 1264, 1284 [101 Cal. Rptr. 2d 784] (County of Sonoma) [Legislature's interpretation of art. XIII B, § 6, in Gov. Code, 17514, as limited to "costs which a . . . school district is *required to incur*" is entitled to great weight].)

11 Although, as described immediately below (in pt. III.A.2.), the Commission attempts to defend on other grounds its determination below in favor of claimants, the Commission strongly disputes the Court of Appeal's broad interpretation of state mandate as encompassing circumstances in which a local entity is not "ordered or commanded" to perform a task that in turn requires it to incur additional costs. [\*742]

2.

Claimants and amici curiae on their behalf assert that even if "legal compulsion" is the governing standard, they meet that test because, they argue, claimants have been legally compelled to incur compliance costs under Government Code section 54952 and Education Code section 35147, subdivision (c). The Commission--but not the Department--supports claimants' proposed application of the legal compulsion test.

In so arguing, claimants focus upon the circumstance that a school district *that participates* in one of the underlying programs listed in Education Code section 35147, subdivision (b), must comply with program requirements, including the statutory notice and agenda obligations, set out in Government Code section 54952 and Education Code section 35147, subdivision (c). Claimants assert: "[O]nce [a district] participates in one of the educational programs at issue, it does not thereafter have the option of performing that activity in a manner that avoids incurring costs mandated by amended Government Code section 54952 and Education Code section 35147."

[\*\*1213] The Department of Finance, relying upon City of Merced, supra, 153 Cal. App. 3d 777, asserts that claimants err by focusing upon a school district's legal obligation to comply with program conditions, rather than focusing upon whether the school district has a legal obligation to participate in the underlying

program to which the conditions attach. As suggested above, the core point articulated by the court in City of Merced is that [HN18]activities undertaken at the option or discretion of a local government entity (that is, actions undertaken without any legal compulsion or threat of penalty for nonparticipation) do not trigger a state mandate and hence do not require reimbursement of funds--even if the local entity is obliged to incur costs as a result of its discretionary decision to participate in a particular program or practice. (*Id.*, at p. 783.) Claimants concede that City of Merced conflicts with their contrary view, but they assert that the opinion is distinguishable and ask us to decline to follow, or extend, that decision.

Claimants stress--as we acknowledged above--that City of Merced, *supra*, 153 Cal. App. 3d 777, was decided in the context of an eminent domain proceeding, and that the appellate court was engaged in construing the statutory reimbursement scheme rather than article XIII B, section 6. Claimants also assert that although the City of Merced had discretion whether or [\*743] not to exercise its power of eminent domain, and was under no compulsion to do so, in the present case "school site council and advisory committee meetings cannot be held in a manner that avoids application of [the requirements of] Government Code section 54952 and Education Code section 35147."

The points relied upon by claimants neither call into doubt nor persuasively distinguish [\*\*\*250] City of Merced, *supra*, 153 Cal. App. 3d 777 [200 Cal. Rptr. 642]. The truer analogy between that case and the present case is this: In City of Merced, the city was under no legal compulsion to resort to eminent domain--but when it elected to employ that means of acquiring property, its obligation to compensate for lost business goodwill was not a reimbursable state mandate, because the city was not required to employ eminent domain in the first place. Here as well, [HN19]if a school district elects to participate in or continue participation in any underlying *voluntary* education-related funded program, the district's obligation to comply with the notice and agenda requirements related to that program does not constitute a reimbursable state mandate.<sup>12</sup>

12 The Commission further attempts to distinguish City of Merced, *supra*, 153 Cal. App. 3d 777, by observing that the eminent domain statute at issue in that case made clear, in the *same* statute that imposed the requirement that an entity employing eminent domain also compensate for lost business goodwill, the discretionary nature of the decision whether to acquire property by purchase or instead by eminent domain. The Commission argues that no such express statement concerning local government discretion is set out

in the statutes here at issue. As we explain *post*, part III.A.3.a., however, the underlying program statutes at issue in this case (with one possible exception--see *post*, pt. III.A.3.b.) make it clear that school districts retain the discretion not to participate in any given underlying program--and, as we explain *post*, footnote 22, the circumstance that the notice and agenda requirements of these elective programs were enacted *after* claimants first chose to participate in the programs does not make claimants' choice to continue to participate in those programs any less voluntary.

We therefore reject claimants' assertion that merely because they participate in one or more of the various education-related funded programs here at issue, the costs they incurred in complying with program conditions have been legally compelled and hence constitute reimbursable state mandates. We instead agree with the Department of Finance, and with City of Merced, *supra*, 153 Cal. App. 3d 777, that [HN20]the proper focus under a legal compulsion inquiry is upon the nature of claimants' participation in the underlying programs themselves.

3.

Turning to that question--and without deciding whether a finding of legal compulsion to participate in an underlying program is *necessary* in order to establish a right to reimbursement under article XIII B, section 6--we [\*744] conclude, upon review of the [\*\*1214] applicable statutes, that claimants are, and have been, free from legal compulsion as to eight of the nine underlying funded programs here at issue. As to one of the funded programs, we shall assume, for purposes of analysis, that a district's participation in the program is in fact legally compelled.

a.

It appears to be conceded that, as to most of the nine education-related funded programs at issue, school districts are not legally compelled to participate in those programs. For example, [HN21]the American Indian Early Childhood Education Program (Ed. Code, § 52060 et seq.), which implements projects designed to develop and test educational models to increase reading and math competence of students in preschool and early grades, states that school districts "may apply" to be included in the project (*id.*, § 52063) and, if accepted to participate, will receive program funding (*id.*, § 52062). Education Code section 52065 in turn states that each school district that receives funds provided by section 52062 "shall establish a districtwide [\*\*\*251] American Indian advisory committee for American Indian early childhood education." Plainly, a school district's initial and continued participation in the program is voluntary, and the

obligation to establish or maintain an advisory committee arises only if the district elects to participate in, or continue to participate in, the program. Although the language of most of the other implementing statutes varies, they generally follow this same approach, with the same result: [HN22]Participation in most of the programs listed in Education Code section 35147 is voluntary, and the obligation to establish or maintain a site council or advisory committee arises only if a district elects to participate in, or continue to participate in, the particular program.

Although *claimants* do not assert that they have been legally compelled to participate in *any* underlying program for which they have sought reimbursement for their compliance costs--and, indeed, their briefing suggests the opposite<sup>13</sup>--the Commission and amicus curiae Education Legal Alliance assert that the school improvement program (a "sunsetting," but still funded, program that disburses funds for all aspects of school operation and performance; Ed. Code, § 52012 et seq., §§ 62000, 62000.2, subd. (b), 62002) legally compels school districts to establish site councils without regard to whether the district participates in the underlying funded program to which the site councils apply. The Commission and amici curiae rely upon Education Code section 52010, which states in relevant part: [HN23]"*With the exception of [\*745] subdivisions (a) and (b) of Section 52011, the provisions of this chapter shall apply only to school districts and schools which participate in school improvement programs authorized by this article.*" (Italics added.) Section 52011, subdivision (b), in turn provides that "EACH SCHOOL DISTRICT SHALL: [P] . . . [P] (b) *Adopt policies to ensure that prior to scheduled phase-in, a school site council as described in Section 52012 is established at each school site to consider whether or not it wishes the local school to participate in the school improvement program.*" (Italics added.)

13 Claimants at one point characterize themselves as having "*decided* to participate in the programs listed in Education Code section 35147." (Italics in added.)

The Commission and amici curiae read these provisions as requiring all schools and school districts throughout the state to "establish a school site council even if the school [or district] does not participate in the school improvement program." We disagree. [HN24]Reasonably construed, the statutes require only that a school district adopt "policies" (i.e., a *plan*) "to ensure" that *if* the district elects to participate in the School Improvement Program, a school site council *will*, "prior to phase-in" of the districtwide program, exist at each school, so that each individual school will be able to decide whether it wishes to participate in the district's

program. In other words, the statutes require that districts adopt policies or plans for school site councils--but the statutes do not require that districts adopt councils themselves unless the district first elects to participate in the underlying program.<sup>14</sup>

14 Amicus curiae California School Boards Association suggests that provisions of two other programs--the School-Based Program Coordination Act (Ed. Code, § 52850 et seq.) and the School-Based Pupil Motivation and Maintenance Program and Dropout Recovery Act (Ed. Code, § 54720 et seq.)--require that site councils be established, whether or not the school district participates in the underlying program. In both instances, the statutes make it clear that [HN25]"prior to a school beginning to develop a [program] plan," the district first must establish a local school site council that in turn will "consider whether or not it wishes the local school to participate in the" program. Amicus curiae misreads the statutes; in both instances, the statutes make it clear that these requirements apply "only to school districts and schools *which participate in*" the respective programs (see Ed. Code, §§ 52850, 54722, italics added), and each statutory scheme provides that school site councils "shall be established at each school *which participates in*" the program. (*Id.*, §§ 52852, 54722, italics added.)

[\*\*1215] [\*\*\*252] We therefore conclude that, as to eight of the nine funded programs, the statutory notice and agenda obligations exist and apply to claimants only because they have *elected* to participate in, or continue to participate in, the various underlying funded programs--and hence to incur notice and agenda costs that are a condition of program participation. Accordingly, no reimbursable state mandate exists with regard to any of these programs based upon a theory that such costs were incurred under legal compulsion.<sup>15</sup>

15 In this case, we have no occasion to decide whether a reimbursable state mandate would arise in a situation in which a local entity voluntarily has elected to participate in a program but also has committed to continue its participation for a specified number of years, and the state imposes additional requirements at a time when the local entity is not free to end its participation. [\*746]

b.

The Commission and amicus curiae Education Legal Alliance also assert that the Chacon-Moscone Bilingual-Bicultural Education Act of 1976 (another "sunsetting," but still funded, program; Ed. Code, § 52160 et

30 Cal. 4th 727, \*; 68 P.3d 1203, \*\*;  
134 Cal. Rptr. 2d 237, \*\*\*; 2003 Cal. LEXIS 3353

seq., 62000, 62000.2, subd. (d), 62002) legally compels school districts to establish advisory committees, regardless whether the district participates in the underlying funded program to which the advisory committees apply. The Commission and amicus curiae rely upon Education Code section 52176's command that each school district with more than 50 pupils of limited English language proficiency, and each school within that district with more than 20 pupils of such proficiency, "shall establish a districtwide [or individual school site] advisory committee on bilingual education." (*Id.*, subds. (a) & (b), italics added.)

The Department of Finance responds that because the Chacon-Moscone Bilingual-Bicultural Education program sunsetted in 1987, school districts that have participated in that program since that date have done so not as a matter of legal compulsion, but by their own choice made when they applied for and were granted such program funds.

We note some support for the Department's view. Education Code section 64000 et seq., which governs the funding application process, includes the "sunsetted" Chacon-Moscone Bilingual-Bicultural Education program as one of many optional programs for which a district may seek funding. (*Id.*, subd. (a)(4).) But, the Commission argues, another statutory provision suggests that Chacon-Moscone Bilingual-Bicultural Education program advisory committees are mandatory in any event. The Commission notes that section 62002.5 provides that advisory committees "which are in existence pursuant to statutes or regulations as of January 1, 1979, shall continue subsequent to termination of funding for the programs sunsetted by this chapter." (Italics added.)

We need not, and do not, determine whether claimants have been legally compelled to participate in the Chacon-Moscone Bilingual-Bicultural Education program, or to maintain a related advisory committee. Even if we assume for purposes of analysis that claimants have been legally compelled to participate in the Chacon-Moscone Bilingual-Bicultural Education [\*\*\*253] program, we nevertheless conclude that under the circumstances here presented, [\*747] the costs necessarily incurred in complying with the notice and agenda requirements under that funded program do not entitle claimants to obtain reimbursement under article XIII B, section 6, because the state, in providing program funds to claimants, already has provided funds that may be used to cover the necessary notice and agenda-related expenses.

[\*\*1216] We note that, based upon the evaluations made by the Commission, the costs associated with the notice and agenda requirements at issue in this case appear rather modest. <sup>16</sup> And, even more significantly,

[HN26]we have found nothing to suggest that a school district is precluded from using a portion of the funds obtained from the state for the implementation of the underlying funded program to pay the associated notice and agenda costs. Indeed, the Chacon-Moscone Bilingual-Bicultural Education program explicitly authorizes school districts to do so. (See Ed. Code, § 52168, subd. (b)) ["School districts may claim funds appropriated for purposes of this article for expenditures in, but not limited to, the following categories: [P] . . . [P] (6) Reasonable district administrative expenses . . . ."] We believe it is plain that the costs of complying with program-related notice and agenda requirements qualify as "[r]easonable district administrative expenses." Therefore, even if we assume for purposes of analysis that school districts have been legally compelled to participate in the funded Chacon-Moscone Bilingual-Bicultural Education program, we view the state's provision of program funding as satisfying, in advance, any reimbursement requirement.

16 Costs of compliance with the notice and agenda requirements have been estimated as amounting to approximately \$ 90 per meeting for the 1994-1995 fiscal year, and incrementally larger amounts in subsequent years, up to \$ 106 per meeting for the 2000-2001 fiscal year, for each committee or advisory council. (See State Controller, State Mandated Costs Claiming Instrns. No. 2001-08, School Site Councils and Brown Act Reform (June 4, 2001), Parameters and Guidelines (Mar. 29, 2001) [and implementing forms].) Under these formulae, a district that has 10 schools, each with one council or advisory committee that meets 10 times a year, would be forced to incur approximately \$ 9,000 to \$ 10,000 in costs to comply with statutory notice and agenda requirements. Presumably, such costs are minimal relative to the funds allocated by the state to the school district under these programs. (We hereby grant the Commission's request that we take judicial notice of these and related documents, and of the Commission's December 13, 2001 Statewide Cost Estimate for reimbursement to school districts of notice and agenda-related expenses.)

[HN27]It is conceivable, with regard to some programs, that increased compliance costs imposed by the state might become so great--or funded program grants might become so diminished--that funded program benefits would not cover the compliance costs, or that expenditure of granted program funds on administrative costs might violate a spending limitation set out in applicable regulations or statutes. In those circumstances, a compulsory program participant likely would be able to

30 Cal. 4th 727, \*, 68 P.3d 1203, \*\*;  
134 Cal. Rptr. 2d 237, \*\*\*; 2003 Cal. LEXIS 3353

establish the existence of a reimbursable [\*748] state mandate under article XIII B, section 6. But that certainly is not the situation faced by claimants in this case. At most, claimants, by being compelled to incur notice and agenda compliance costs--and pay those costs from program funds--have suffered a relatively minor diminution of program funds available to them for substantive program purposes. The circumstance that the program funds claimants may have wished to use exclusively for substantive program activities are [\*\*\*254] thereby reduced, does not in itself transform the related costs into a reimbursable state mandate. (See County of Sonoma, supra, 84 Cal.App.4th 1264 [art. XIII B, § 6, provides no right of reimbursement when the state reduces revenue granted to local government].) Nor is there any reason to believe that use of granted program funds to pay the relatively modest costs here at issue would violate any applicable spending limitation. "

17 With regard to the Chacon-Moscone Bilingual-Bicultural Education program, claimants assert that "[s]tate regulations place a ceiling on the amount of program funds that may be expended for indirect costs at three percent of the district's funding . . . ." (5 Cal. Code Regs., §§ 3900(g) & 3947(a).) As the Department observes, applicable statutory provisions appear to set the limit for such expenses for the same program at no more than 15 percent of granted program funds. (See Ed. Code, §§ 63000, subd. (d), 63001.) Even assuming, for purposes of analysis, that the regulation, and not the statute, applies with regard to this program, it seems clear that the notice and agenda costs here at issue fall far below 3 percent of granted program funds. Indeed, claimants concede: "The notice and agenda costs at issue are administrative costs that appear to fall within [the regulatory] provisions."

We therefore conclude that because claimants are and have been free to use funds [\*\*1217] from the Chacon-Moscone Bilingual-Bicultural Education program to pay required program expenses (including the notice and agenda costs here at issue), claimants are not entitled under article XIII B, section 6, to reimbursement from the state for such expenses.

B.(2a)

Claimants contend that even if they have not been legally compelled to participate in most of the programs listed in Education Code section 35147, subdivision (b), and hence have not been legally required to incur the related notice and agenda costs, they nevertheless have been compelled as a practical matter to participate in those programs and hence to incur such costs. Claimants assert that school districts have "had no true option or

choice but to participate in these [underlying education-related] programs. *This absence of a reasonable alternative to participation is a de facto mandate.*" As explained below, on the facts of this case, we disagree.

[\*749] 1.

Claimants and amici curiae supporting them, relying upon this court's broad interpretation of the federal mandate provision of article XIII B, section 9,<sup>18</sup> in City of Sacramento, supra, 50 Cal.3d 51, 70-76, assert that we should recognize and endorse such a broader construction of section 6 of that article--a construction that does not limit the definition of a reimbursable state mandate to circumstances of legal compulsion.

18 That provision states: [HN28]" 'Appropriations subject to limitation' for each entity of government do not include: [P] . . . [P] (b) Appropriations required to comply with mandates of the courts or the federal government which, without discretion, require an expenditure for additional services or which unavoidably make the provision of existing services more costly."

In City of Sacramento, supra, 50 Cal.3d 51, we considered whether various federal "incentives" for states to extend unemployment insurance coverage to all public employees constituted a reimbursable [\*\*\*255] state mandate under article XIII B, section 6, or a federal mandate within the meaning of article XIII B, section 9.

We concluded in City of Sacramento, supra, 50 Cal.3d 51, that there was no reimbursable state mandate under article XIII B, section 6, because the implementing state legislation did not impose any new or increased "program or service," or "unique" requirement, upon local entities. (City of Sacramento, at pp. 66-70.)

Turning to the question whether the state legislation constituted a "federal mandate" under article XIII B, section 9, we acknowledged in City of Sacramento, supra, 50 Cal.3d 51, that there was no legal compulsion requiring the states to participate in the federal plan to extend unemployment insurance coverage to all public employees. We nevertheless found that the costs related to the program constituted a federal mandate, for purposes of article XIII B, section 9. Our opinion concluded that because the financial consequences to the state and its residents of failing to participate in the federal plan were so onerous and punitive--we characterized the consequences as amounting to "certain and severe federal penalties" including "double . . . taxation" and other "draconian" measures (City of Sacramento, at p. 74)--as a practical matter, for purposes of article XIII B, section 9, the state was mandated to participate in the federal plan to extend unemployment insurance coverage.

30 Cal. 4th 727, \*, 68 P.3d 1203, \*\*;  
134 Cal. Rptr. 2d 237, \*\*\*; 2003 Cal. LEXIS 3353

[\*750] Claimants, echoing the reasoning of the Court of Appeal below, assert that because this court in City of Sacramento, supra, 50 Cal.3d 51, broadly construed the term "federal mandate"--to include not only the situation in which a state or local entity is itself legally compelled to participate in a program and thereby incur costs, but also the situation in which the governmental entity's participation in the federal program is the coerced result of severe penalties that would be imposed for noncompliance--consistency requires that we afford a similarly broad construction to the concept of a state mandate. In other words, claimants argue, the word "mandate," used in [\*\*1218] two separate sections of article XIII B, should not be given two different meanings.

The Department and the Commission disagree. They assert that, to begin with, a finding of a *federal mandate* under section 9 of article XIII B has a wholly different purpose and effect as compared with a finding of a *state mandate* under section 6 of that article. The Department and the Commission argue that although a finding of a state mandate may result in reimbursement from the state to a local entity for costs incurred by the local entity, expenditures made in order to comply with a federal mandate are excluded from the constitutional spending cap imposed by article XIII B upon any affected state or local entity, because such expenditures are not considered to be an exercise of the state or local authority's discretionary spending authority.

Moreover, the Department and the Commission assert, our conclusion in City of Sacramento, supra, 50 Cal.3d 51, regarding the proper construction of article XIII B, section 9, relied upon "crucial facts" (City of Sacramento, at p. 73) that do not pertain to the wholly separate issue that we face here--the proper interpretation of article XIII B, section 6. They observe that, as we explained in City of Sacramento, when article XIII B was enacted: "First, the power of the federal government to impose its direct regulatory will on state and local agencies was then sharply in doubt. " Second, in conformity with [\*\*\*256] this principle, the vast bulk of cost-producing federal influence on government at the state and local levels was by inducement or incentive rather than direct [legal] compulsion. That remains so to this day. [P] Thus, if article XIII B's reference to 'federal mandates' were limited to strict legal compulsion by the federal government, it would have been largely superfluous. [HN29]It is well settled that 'constitutional . . . enactments must receive a liberal, practical common-sense construction which will meet changed conditions and the growing needs of the people. [Citations.] . . . ' ( [\*751] Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization (1978) 22 Cal.3d 208, 245 [149 Cal. Rptr. 239, 583 P.2d 1281].) While '[a]

constitutional amendment should be construed in accordance with the natural and ordinary meaning of its words[,] [citation] [, t]he literal language of enactments may be disregarded to avoid absurd results and to fulfill the apparent intent of the framers. [Citations.]' (Ibid.)" (City of Sacramento, supra, 50 Cal.3d 51, 73, fn. omitted.)

19 See discussion in City of Sacramento, supra, 50 Cal.3d at pages 71-73.

The Department of Finance and the Commission argue that these factors have no bearing upon the proper interpretation of what constitutes a state mandate under article XIII B, section 6(3). They assert that, unlike the federal government, which for a time was severely restricted in its ability to directly impose legal requirements upon the states (see City of Sacramento, supra, 50 Cal.3d 51, 71-73), the State of California has suffered no such restriction, vis-a-vis local government entities, except in matters involving purely local affairs. <sup>20</sup> (2b) Accordingly, the Department and the Commission argue, in contrast with the situation we faced when construing article XIII B, section 9, we would not render superfluous the restriction in section 6 of that article, were we narrowly to interpret its term "mandate" to include only programs in which local entities are legally compelled to participate.

20 [HN30]Unlike the federal-state relationship, sovereignty is not an issue between state and local governments. Claimant school districts are agencies of the state, and not separate or distinct political entities. (See California Teachers Assn. v. Huff (1992) 5 Cal.App.4th 1513, 1524 [7 Cal. Rptr. 2d 699].)

We find it unnecessary to resolve whether our reasoning in City of Sacramento, supra, 50 Cal.3d 51, applies with regard to the proper interpretation of the term "state mandate" in section 6 of article XIII B. Even assuming, for purposes of analysis only, that our construction of the term "federal mandate" in City of Sacramento, supra, 50 Cal.3d 51, applies equally in [\*\*1219] the context of article XIII B, section 6, for reasons set out below we conclude that, contrary to the situation we described in that case, claimants here have not faced "certain and severe . . . penalties" such as "double . . . taxation" and other "draconian" consequences (City of Sacramento, supra, 50 Cal.3d at p. 74), and hence have not been "mandated," under article XIII B, section 6 to incur increased costs.

2.

(4) As we observed in County of San Diego, supra, 15 Cal.4th 68, 81, article XIII B, section 6's

[HN31]"purpose is to preclude the state from shifting [\*752] financial responsibility for carrying out governmental functions to local agencies, which are 'ill equipped' to assume increased financial responsibilities."(2c) In light of that purpose, we do not [\*\*\*257] foreclose the possibility that a reimbursable state mandate under article XIII B, section 6, properly might be found in some circumstances in which a local entity is not legally compelled to participate in a program that requires it to expend additional funds.

As noted, claimants argue that they have had "no true option or choice" but to participate in the various programs here at issue, and hence to incur the various costs of compliance, and that "the absence of a reasonable alternative to participation is a de facto [reimbursable state] mandate." In the same vein, amici curiae on behalf of claimants emphasize that as a practical matter, many school districts depend upon categorical funding for various programs. Amicus curiae California State Association of Counties asks us to interpret article XIII B, section 6, as providing state reimbursement for programs that are "*indirectly* state mandated." (Italics added.) Amicus curiae Education Legal Alliance goes so far as to assert that unless we recognize a right to reimbursement for costs such as those here at issue, "California schools could be forced to [forgo] participation in important categorical programs that supply necessary financial and educational support to those segments of the student population that need the most assistance. Alternatively, California schools could be forced to cut other student programs or services to fund these procedural requirements."

The record in the case before us does not support claimants' characterization of the circumstances in which they have been forced to operate, and provides no basis for resolving the accuracy of amici curiae's warnings and predictions. Indeed, we are skeptical of the assertions of claimants and amici curiae.

As observed *ante* (fn. 16), the costs associated with the notice and agenda requirements at issue in this case appear rather modest. Moreover, the parties have not cited, nor have we found, anything in the governing statutes or regulations, or in the record, to suggest that a school district is precluded from using a portion of the program funds obtained from the state to pay associated notice and agenda costs. As noted above, under the Chacon-Moscone Bilingual-Bicultural Education program (Ed. Code, § 52168, subd. (b)(6)), such authority has been granted. As to three of the remaining programs here at issue, [HN32]such authority also is explicit, or at least strongly implied. (See 20 U.S.C. § 7425(d) [federal Indian Education Program]; [\*753] Ed. Code, §§ 63000, subds. (c), (g), 63001 [school improvement program and McAteer Act].) We do not perceive any reason

why the Legislature would contemplate a different rule for any of the other programs here at issue, and claimants have advanced no such reason. <sup>21</sup>

21 Nor is there any reason to believe that expenditure of granted program funds on the notice and agenda costs at issue would violate any spending limitation set out in applicable regulations or statutes. Claimants assert that with regard to the school improvement programs, state regulations (Cal. Code Regs., tit. 5, §§ 3900, subd. (b), 3947 subd. (a)) limit spending on administrative expenses to no more than 3 percent of granted program funds. As the Department observes, [HN33]applicable statutory provisions appear to set the limit for such expenses for the *same* program at no more than 15 percent of granted program funds. (See Ed. Code, §§ 63000, subd. (c), 63001.) But even assuming, for purposes of analysis, that the regulations apply with regard to this program, claimants have made no showing that the notice and agenda costs here at issue exceed 3 percent of granted program funds. As noted *ante*, at page 732, statewide program grants for the school improvement programs alone amounted to approximately \$ 394 million in fiscal year 1998-1999. According to the Commission, statewide notice and agenda costs for *all nine* of the programs here at issue amounted to only \$ 5.2 million during that same period. (See Com. on State Mandates, Adopted Statewide Cost Estimate, Dec. 13, 2001, p. 1.)

Similarly, claimants have not demonstrated that the notice and agenda costs here at issue exceed the administrative costs spending limitations set for the federal Indian Education Program (see 20 U.S.C. § 7425(d) [5 percent limitation]) and for the McAteer Act's "compensatory education programs" (see Ed. Code, §§ 63000, subds. (g), 63001 [15 percent limitation].)

[\*\*1220] [\*\*\*258] As to each of the optional funded programs here at issue, school districts are, and have been, free to decide whether to (i) continue to participate and receive program funding, even though the school district also must incur program-related costs associated with the notice and agenda requirements, or (ii) decline to participate in the funded program. [HN34]Presumably, a school district will continue to participate only if it determines that the best interests of the district and its students are served by participation--in other words, if, *on balance*, the funded program, even with strings attached, is deemed beneficial. And, presumably, a school district will decline participation if and

30 Cal. 4th 727, \*, 68 P.3d 1203, \*\*;  
134 Cal. Rptr. 2d 237, \*\*\*; 2003 Cal. LEXIS 3353

when it determines that the costs of program compliance outweigh the funding benefits.

In essence, claimants assert that their participation in the education-related programs here at issue is so beneficial that, as a practical matter, they feel they must participate in the programs, accept program funds, and--by virtue of Government Code section 54952 and Education Code section 35147 -incur expenses necessary to comply with the procedural conditions imposed on program participants. [HN35] Although it is completely understandable that a participant in a funded program may be disappointed when additional requirements (with their attendant costs) are imposed as a condition of [\*754] continued participation in the program, just as such a participant would be disappointed if the total amount of the annual funds provided for the program were reduced by legislative or gubernatorial action, the circumstance that the Legislature has determined that the requirements of an ongoing elective program should be modified does not render a local entity's decision whether to continue its participation in the modified program any less voluntary. <sup>22</sup> (See County of Sonoma, supra, 84 Cal.App.4th 1264 [Art. XIII B, § 6, provides no right of reimbursement when the state reduces revenue granted to local government].) We reject the suggestion, implicit in claimants' argument, that the state cannot legally provide school districts with funds for voluntary programs, and then effectively reduce that funding grant by requiring school districts to incur expenses in order to meet conditions of program participation.

22 Claimants assert that the notice and agenda requirements were imposed for the first time by Government Code section 54952 and Education Code section 35147 in the mid-1990's--"after the school districts decided to participate in the programs listed in Education Code section 35147." Even if we assume, contrary to the opposing po-

sition of the Department of Finance, that claimants first were subjected to notice and agenda requirements only after their respective school districts elected to participate in the programs, a school district's *continued* participation in the programs would be no less voluntary. As noted above, school districts have been, and remain, legally free to decline to continue to participate in the eight programs here at issue.

In sum, the circumstances presented in the case before us do not constitute the type of nonlegal compulsion that reasonably could constitute, in claimants' phrasing, a "de facto" reimbursable state mandate. Contrary to the situation that we described in City of Sacramento, 50 Cal.3d 51 [266 Cal. Rptr. 139, 785 P.2d 522], [HN36] [\*\*\*259] a claimant that elects to discontinue participation in one of the programs here at issue does not face "certain and severe . . . penalties" such as "double . . . taxation" or other "draconian" consequences (*id.*, at p. 74), but simply must adjust to the withdrawal of grant money along with the lifting of program obligations. Such circumstances do not constitute a reimbursable [\*\*1221] state mandate for purposes of article XIII B, section 6.

#### IV

For the reasons stated, we conclude that claimants have failed to establish that they are entitled to reimbursement under article XIII B, section 6 of the California Constitution, with regard to any of the program costs here at issue.

[\*755] The judgment of the Court of Appeal is reversed.

DIVISION ONE**

*145 Cal. App. 4th 246; 51 Cal. Rptr. 3d 497; 2006 Cal. App. LEXIS 1874; 2006 Cal. Daily Op. Service 10951; 36 ELR 20237*

**November 29, 2006, Filed**

**SUBSEQUENT HISTORY:** Rehearing denied by *Divers' Environmental Conservation Organization v. State Water Resource Control Board*, 2006 Cal. App. LEXIS 2102 (Cal. App. 4th Dist., Dec. 27, 2006)

**PRIOR HISTORY:** [\*\*\*1] Superior Court of San Diego County, No. 01C819689, Ronald S. Prager, Judge.

**CASE SUMMARY:**

**PROCEDURAL POSTURE:** Appellant environmental group sought review of an order of the Superior Court of San Diego County (California), which denied the group's petition for a writ of mandate challenging the issuance of a National Pollutant Discharge Elimination System (NPDES) permit by respondent, a regional water quality control board, pursuant to the federal Clean Water Act, 33 U.S.C. § 1251 *et seq.*

**OVERVIEW:** Instead of imposing numeric limits on chemicals in storm water discharges, the regional board required that the permittee limit its storm water discharges by employing best management practices. The court held that the NPDES permit was not defective for its failure to analyze or impose numeric limits on chemicals in the storm water discharges. 40 C. F.R. § 122.44(d)(1) did not

require that in all cases a permitting authority analyze the particular pollutants in an applicant's storm water discharges when issuing a permit under 33 U.S.C. § 1342(p). Rather, the permitting authority was required only to use procedures that accounted for existing controls, the variability of the pollutants in effluent, the sensitivity of species to toxicity, and the dilution of effluent in receiving waters. While a numeric analysis of particular pollutants would in most instances be the most effective means of meeting the requirements of 40 C.F.R. § 122.44(d)(1)(ii), that was not the only means of meeting the requirements of the regulation. The best management practices authorized by § 122.44(k)(2) constituted water quality-based effluent limitations that a permitting authority could employ.

**OUTCOME:** The court affirmed the trial court's judgment.

**LexisNexis(R) Headnotes**

*Administrative Law > Judicial Review > Standards of Review > Statutory Interpretation*

[11N1] An appellate court's standard of review must extend appropriate deference to administrative agencies and

145 Cal. App. 4th 246, \*, 51 Cal. Rptr. 3d 497, \*\*;  
2006 Cal. App. LEXIS 1874, \*\*\*; 2006 Cal. Daily Op. Service 10951

their technical expertise. And while interpretation of a statute or regulation is ultimately a question of law, an appellate court must also defer to an administrative agency's interpretation of a statute or regulation involving its area of expertise, unless the interpretation flies in the face of the clear language and purpose of the interpreted provision.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > General Overview*

[HN2] The federal Water Pollution Control Act, 33 U.S.C. § 1251 *et seq.*, commonly known as the Clean Water Act (CWA), is intended to restore and maintain the chemical, physical, and biological integrity of the nation's waters. § 1251(a). Generally, the CWA prohibits the discharge of any pollutant except in compliance with one of several statutory exceptions. The most important of those exceptions is pollution discharge under a valid National Pollutant Discharge Elimination System (NPDES) permit, which can be issued either by the Environmental Protection Agency (EPA), or by an EPA-approved state permit program such as California's. NPDES permits are valid for five years.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations*

[HN3] In general terms, the federal Clean Water Act, 33 U.S.C. § 1251 *et seq.*, and governing regulations require that in addition to determining an applicant's obligations by focusing on what technology can be used on the applicant's discharges, the permitting agency must also focus on the quality of the body of water into which the applicant is discharging pollutants. Thus, under 40 C.F.R. § 122.44(d)(1)(i), water quality-based effluent limitations (WQBELs) must be imposed on applicants whenever the permitting agency determines that pollutants are or may be discharged at a level which will cause, or have the reasonable potential to cause, or contribute to an excursion above any state water quality standard. Under § 122.44(d)(1)(ii), in making the determination about whether WQBELs are required, the permitting authority shall use procedures which account for existing controls on point and nonpoint sources of pollution, the variability of the pollutant or pollutant parameter in the effluent, the sensitivity of the species to toxicity testing (when evaluating whole effluent toxicity), and where appropriate, the dilution of the effluent in the receiving water.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations*

[BN4] When, after employing the procedures and analysis required by 40 C.F.R. § 122.44(d)(1)(ii), a permitting

agency determines that an applicant's discharges have the reasonable potential to cause an in-stream excursion above a state water quality standard for an individual pollutant, the permit must contain effluent limits for that pollutant. *Section 122.44(d)(1)(iii)*.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges*  
[11N5] See 33 U.S.C. § 1342(p).

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > General Overview*  
[HN6] See 40 C.F.R. § 122.44(k).

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges*

[HN7] 40 C.F.R. § 122.44(d)(1) does not require that in all cases a permitting authority analyze the particular pollutants in an applicant's storm water discharges. The procedures a permitting agency must engage in in performing the required reasonable potential analysis are set forth in § 122.44(d)(1)(ii). By its terms that portion of the regulation does not require any analysis of particular pollutants. Rather, it only requires that the permitting authority use procedures which account for existing controls, the variability of the pollutants in effluent, the sensitivity of species to toxicity, and the dilution of effluent in receiving waters. While a numeric analysis of particular pollutants would in most instances be the most effective means of meeting the requirements of § 122.44(d)(1)(ii), that is not the only means of meeting the requirements of the regulation. Storm water consists of a variable stew of pollutants, including toxic pollutants, from a variety of sources which impact a receiving body on a basis which is only as predictable as the weather. An agency reasonably can conclude that an attempt to provide a numeric analysis of pollutants in storm water discharges is not the most effective means of determining whether water quality-based effluent limitations are needed for storm water discharges.

*Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges*

[HN8] Inherent in the flexibility in 40 C.F.R. § 122.44(d)(1)(ii) is the conclusion that the best management practices authorized by § 122.44(k)(2) are in fact water quality-based effluent limitations which a permitting authority may employ when it has found that storm water discharges may cause a receiving body to exceed state water quality standards.

145 Cal. App. 4th 246, \*, 51 Cal. Rptr. 3d 497, \*\*;  
2006 Cal. App. LEXIS 1874, \*\*\*; 2006 Cal. Daily Op. Service 10951

***Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges***

[HN9] Where, as in the case of storm water discharges, best management practices (BMPs) will be the water quality-based effluent limitations (WQBELs) employed, the study performed under 40 C.F.R. § 122.44(d)(1)(ii) must at a minimum look to the likely impact of storm water as a whole on the receiving body; however, the BMPs which may be imposed if there is a determination that state water quality standards will be exceeded are usually systemic procedures tailored to decrease the overall risk toxic pollutants from the discharger will reach storm water runoff. Because there is no direct correlation between the type and volume of toxic pollutants in storm water and the BMPs which will be employed to reduce those volumes, a permitting authority can reasonably conclude that in the case of storm water discharges such a detailed numeric analysis is not a cost effective means of performing a reasonable potential analysis.

***Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges***

[HMO] There is nothing on the face of 33 U.S.C. § 1342(p) which suggests that in making express reference to best management practices (BMPs) in particular instances Congress intended to limit use of BMPs in controlling storm water discharges in general. Indeed, there seems to be no rationale which would permit BMPs in the case of municipalities and other nonindustrial storm water discharges but bar them in the case of industrial discharges. Thus, it is reasonable to conclude that in enacting § 1342(p), Congress intended to permit the Environmental Protection Agency and permitting authorities wide discretion in regulating storm water runoff, including the use of BMPs where the agencies believed they were appropriate.

**SUMMARY:**

**CALIFORNIA OFFICIAL REPORTS SUMMARY**

The trial court denied an environmental group's petition for a writ of mandate challenging the issuance of a National Pollutant Discharge Elimination System (NPDES) permit by a regional water quality control board pursuant to the Clean Water Act, 33 U.S.C. § 1251 et seq. Instead of imposing numeric limits on chemicals in stormwater discharges, the regional board required that the permittee limit its stormwater discharges by employing best management practices. (Superior Court of San Diego County, No. GIC819689, Ronald S. Prager, Judge.)

The Court of Appeal affirmed the judgment, holding that the NPDES permit was not defective for its failure to

analyze or impose numeric limits on chemicals in the stormwater discharges. 40 C.F.R. § 122.44(d)(1) (2005) does not require that in all cases a permitting authority analyze the particular pollutants in an applicant's stormwater discharges when issuing a permit under 33 U.S.C. § 1342(p). Rather, the permitting authority is required only to use procedures that account for existing controls, the variability of the pollutants in effluent, the sensitivity of species to toxicity, and the dilution of effluent in receiving waters. While a numeric analysis of particular pollutants would in most instances be the most effective means of meeting the requirements of 40 C.F.R. § 122.44(d)(1)(ii), that is not the only means of meeting the requirements of the regulation. The best management practices authorized by § 122.44(k)(2) constitute water-quality-based effluent limitations that a permitting authority may employ. (Opinion by Benke, Acting P. J., with Nares and Haller, JJ., concurring.) [\*247]

**CALIFORNIA OFFICIAL REPORTS HEADNOTES**  
Classified to California Digest of Official Reports

**(1) Pollution and Conservation Laws § 5--Water Pollution--Clean Water Act--Discharge Permits.--The federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.), commonly known as the Clean Water Act (CWA), is intended to restore and maintain the chemical, physical, and biological integrity of the nation's waters (§ 1251(a)). Generally, the CWA prohibits the discharge of any pollutant except in compliance with one of several statutory exceptions. The most important of those exceptions is pollution discharge under a valid National Pollutant Discharge Elimination System (NPDES) permit, which can be issued either by the Environmental Protection Agency (EPA), or by an EPA-approved state permit program such as California's. NPDES permits are valid for five years.**

**(2) Pollution and Conservation Laws § 5--Water Pollution--Clean Water Act--Discharge Permits--Effluent Limitations.--In general terms, the Clean Water Act (33 U.S.C. § 1251 et seq.) and governing regulations require that in addition to determining an applicant's obligations by focusing on what technology can be used on the applicant's discharges, the permitting agency must also focus on the quality of the body of water into which the applicant is discharging pollutants. Thus, under 40 C.F.R. § 122.44(d)(1)(i) (2005), water-quality-based effluent limitations (WQBEL's) must be imposed on applicants whenever the permitting agency determines that pollutants are or may be discharged at a level which will cause, or have the reasonable potential to cause, or contribute to an excursion above any state water quality standard.**

Under 40 C.F.R. § 122.44(d)(1)(ii), in making the determination about whether WQBEL's are required, the permitting authority shall use procedures which account for existing controls on point and nonpoint sources of pollution, the variability of the pollutant or pollutant parameter in the effluent, the sensitivity of the species to toxicity testing (when evaluating whole effluent toxicity), and where appropriate, the dilution of the effluent in the receiving water.

**(3) Pollution and Conservation Laws § 5--Water Pollution--Clean Water Act--Discharge Permits--Effluent Limitations.--When,** after employing the procedures and analysis required by 40 C.F.R. § 122.44(d)(1)(ii) (2005), a permitting agency determines that an [\*248] applicant's discharges have the reasonable potential to cause an in-stream excursion above a state water quality standard for an individual pollutant, the permit must contain effluent limits for that pollutant (§ 122.44(d)(1)(iii)).

**(4) Pollution and Conservation Laws § 5--Water Pollution--Clean Water Act--Discharge Permits--Effluent Limitations--Numeric Analysis.--40 C.F.R. § 122.44(d)(1)** (2005) does not require that in all cases a permitting authority analyze the particular pollutants in an applicant's stormwater discharges. The procedures a permitting agency must engage in in performing the required reasonable potential analysis are set forth in § 122.44(d)(1)(ii). By its terms that portion of the regulation does not require any analysis of particular pollutants. Rather, it only requires that the permitting authority use procedures which account for existing controls, the variability of the pollutants in effluent, the sensitivity of species to toxicity, and the dilution of effluent in receiving waters. While a numeric analysis of particular pollutants would in most instances be the most effective means of meeting the requirements of § 122.44(d)(1)(ii), that is not the only means of meeting the requirements of the regulation. Stormwater consists of a variable stew of pollutants, including toxic pollutants, from a variety of sources which impact a receiving body on a basis which is only as predictable as the weather. An agency reasonably can conclude that an attempt to provide a numeric analysis of pollutants in stormwater discharges is not the most effective means of determining whether water-quality-based effluent limitations are needed for stormwater discharges.

**(5) Pollution and Conservation Laws § 5--Water Pollution--Clean Water Act--Discharge Permits--Effluent Limitations--Best Management Practices.--Inherent** in the flexibility in 40 C.F.R. § 122.44(d)(1)(ii) (2005) is the conclusion that the best management practices (BMP's) authorized by § 122.44(k)(2) are in fact water-quality-based effluent limitations which a permitting authority may employ when it has found that stormwater

discharges may cause a receiving body to exceed state water quality standards. There is nothing on the face of 33 U.S.C. § 1342(p) which suggests that in making express reference to BMP's in particular instances Congress intended to limit use of BMP's in controlling stormwater discharges in general. Indeed, there seems to be no rationale that would permit BMP's in the case of municipalities and other nonindustrial stormwater discharges but bar them in the case of industrial discharges. Thus, it is reasonable to conclude that in enacting 33 U.S.C. § 1342(p), Congress intended to permit the Environmental Protection Agency and permitting authorities wide discretion in regulating stormwater runoff, including the use of BMP's where the agencies believed they were appropriate. [\*249]

**(6) Pollution and Conservation Laws § 5--Water Pollution--Clean Water Act--Discharge Permits--Effluent Limitations--Numeric Analysis.--Where,** as in the case of stormwater discharges, best management practices (BMP's) will be the water-quality-based effluent limitations employed, the study performed under 40 C.F.R. § 122.44(d)(1)(ii) (2005) must at a minimum look to the likely impact of stormwater as a whole on the receiving body; however, the BMP's that may be imposed if there is a determination that state water quality standards will be exceeded are usually systemic procedures tailored to decrease the overall risk toxic pollutants from the discharger will reach stormwater runoff. Because there is no direct correlation between the type and volume of toxic pollutants in stormwater and the BMP's that will be employed to reduce those volumes, a permitting authority can reasonably conclude that in the case of stormwater discharges such a detailed numeric analysis is not a cost effective means of performing a reasonable potential analysis. Accordingly, contrary to an environmental group's contention, a regional water quality control board was not required to perform a numeric analysis of each pollutant in stormwater discharges when it issued a discharge permit.

OPINION BY: Benke [\*250]

OPINION  
[\*\*499]

BENKE, Acting P. J.--This is an appeal from an order denying a petition for a writ of mandate. The petition challenged a discharge permit respondent California Regional Water Quality Control Board, San Diego Region (the Regional Board), issued to real parties in interest United States Department of the Navy et al. (Navy). We affirm. Although the Regional Board could have issued a permit that imposed numeric limits on chemicals in the Navy's stormwater discharges into San Diego Bay, under provisions of the Federal Water Pollution Control [\*\*\*2] Act (33 U.S.C. § 1251 et seq.), commonly known as the Clean Water Act (CWA), and applicable regulations, the Regional Board was authorized to instead require that the Navy limit its stormwater chemical discharges by employing so-called "best management practices" (BMP's). Given these circumstances, we reject appellant Divers' Environmental Conservation Organization's (Divers') contention that the permit was defective for its failure to analyze or impose numeric limits on chemicals in the Navy's stormwater discharges.

#### SUMMARY

In November 2002 the Regional Board issued a National Pollutant Discharge Elimination System (NPDES) permit to the Navy governing discharges from the Naval Base San Diego Complex (the base complex) to San Diego Bay. The permit includes regulations governing stormwater discharges from the base complex to the bay. In particular, the permit requires that the Navy develop and adopt a "Storm Water Pollution Prevention Plan" (the prevention plan), which employs BMP's<sup>2</sup> designed to reduce or eliminate pollutants received into the bay from industrial activities at the base complex. The permit requires that the prevention plan identify [\*\*\*3] and evaluate sources of pollution [\*\*500] that might affect stormwater discharges from the base complex and then implement site-specific BMP's to reduce or prevent pollutants in the base complex's stormwater discharges. Under the permit the Navy is required [\*251] to consider implementing nonstructural BMP's, such as good housekeeping, preventative maintenance, spill response procedures, material handling and storage procedures, employee training programs, recycling procedures, and erosion controls. Where nonstructural BMP's are not effec-

tive, the permit requires that the Navy consider structural BMP's, such as structures which cover chemicals and other pollutants, retention ponds, berms and other devices which channel runoff away from pollutant sources and treatment facilities, such as vegetative swales, which reduce pollutants in stormwater discharges.

1 The base complex includes four installations: Naval Station, San Diego; Mission Gorge Recreational Facility; Broadway Complex; and the Naval Medical Center, San Diego.

2 The permit defines BMP's as "schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of waters of the United States. The BMP's also include treatment measures, operating procedures, and practices to control facility site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage. The BMP's may include any type of pollution prevention and pollution control measure necessary to achieve compliance with this Order."

[\*\*\*4] In addition to the prevention plan and based on the Regional Board's study of water quality, the permit contains a numeric limit on the amount of toxicity in the Navy's total effluent. This limitation requires that test organisms be able to survive in the effluent. The permit also prohibits the discharge of the first quarter-inch of runoff from "high-risk" areas.

The Regional Board's study of water quality noted that levels of copper and zinc in stormwater runoff were matters of concern. In addition to the BMP's and limitation on toxicity in the total effluent discharges, the permit set forth "benchmarks" for copper and zinc. The permit requires the Navy to measure the concentration of copper and zinc in its stormwater discharges and if they exceed the benchmark levels, the Navy must commence an iterative process of reviewing and upgrading its BMP's.

The permit requires that the Navy annually review all BMP's to determine "whether the BMP's are properly designed, implemented, and are effective in reducing and preventing pollutants in storm water discharges." In the event the Regional Board finds the prevention plan does meet the requirements of the permit, the permit requires [\*\*\*5] the plan be revised to implement additional BMP's.

Before the permit was finally adopted by the Regional Board, Divers' challenged it administratively. Divers' argued that applicable federal regulations required that instead of regulating the Navy's industrial stormwater discharges by way of a BMP's-based prevention plan, the Regional Board was required to set numeric "water qual-

145 Cal. App. 4th 246, \*, 51 Cal. Rptr. 3d 497, \*\*;  
2006 Cal. App. LEXIS 1874, \*\*\*; 2006 Cal. Daily Op. Service 10951

ity based effluent limitations" (WQBEL's) on the Navy's stormwater discharges and that before setting those [\*\*501] numeric WQBEL's the Navy was required to conduct an analysis of particular pollutants for which there was a reasonable potential the stormwater [\*252] discharges would cause or contribute to a violation of any state water quality standard. The Regional Board rejected Divers's argument and adopted the permit without numeric WQBEL's and without performing any analysis of particular pollutants in the Navy's stormwater discharges. Divers' filed an administrative petition with respondent State Water Resources Control Board (State Board). The administrative petition was dismissed on the grounds it failed to raise substantial issues appropriate for review by the State Board.

Divers' filed a petition [\*\*\*6] for a writ of administrative mandate (*Code Civ. Proc.*, § 1094.5) against the State Board and the Regional Board. The trial court dismissed the State Board as a defendant. As against the Regional Board, Divers' alleged the board abused its discretion in failing to conduct an analysis of the reasonable potential impact of particular stormwater pollutants on state water quality standards and in failing to impose numeric WQBEL's on the Navy's stormwater discharges. The trial court denied Divers's petition. Divers' filed a timely notice of appeal.

## DISCUSSION

### *Standard of Review*

[F1N1] "[O]ur standard of review must extend appropriate deference to the administrative agencies in this case, and their technical expertise. [Citations.] And while interpretation of a statute or regulation is ultimately a question of law, we must also defer to an administrative agency's interpretation of a statute or regulation involving its area of expertise, unless the interpretation flies in the face of the clear language and purpose of the interpreted provision." (*Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1103-1104 [1 Cal. Rptr. 3d 76] [\*\*\*7] (*Communities*)).

## II

### *The Clean Water Act*

(1) "In 1972, Congress enacted [HN2] the Federal Water Pollution Control Act (33 U.S.C. § 1251 *et seq.*), commonly known as the Clean Water Act (CWA). [Citation.] The goal of the CWA is to restore and maintain the chemical, [\*253] physical, and biological integrity of the Nation's waters." (33 U.S.C. § 1251(a); see *Arkansas v.*

*Oklahoma* (1992) 503 U.S. 91, 101 [117 L. Ed. 2d 239, 112 S. Ct. 1046, 1054] (*Arkansas*)). [1] Generally, the CWA 'prohibits the discharge of any pollutant except in compliance with one of several statutory exceptions. [Citation.] [Citation.] The most important of those exceptions is pollution discharge under a valid NPDES permit, which can be issued either by the Environmental Protection Agency (EPA), or by an EPA-approved state permit program such as California's. [Citations.] NPDES permits are valid for five years. [Citation.]" (*Communities, supra*, 109 Cal.App.4th at p. 1092.)

Initially, the CWA regulated permittees by requiring them to adopt technology-based effluent limitations. (33 U.S.C. § 1311(b)(1)(A).) [\*\*\*8] These are limitations based on the best available or practical technology for the reduction of water pollution.

After July 1, 1977, permittees were required to not only adopt technology-based effluent limitations but more WQBEL's. "In the CWA, Congress 'supplemented the "technology-based" effluent limitations with "water quality-based" limitations "so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels." ' [Citation.]" (*Communities, supra*, 109 Cal.App.4th at p. 1093.)

[HN3] (2) In general terms the CWA and governing regulations require that in addition to determining an applicant's obligations by focusing on what technology can be used on the applicant's discharges, the permitting agency must also focus on the quality of the body of water into which the applicant is discharging pollutants. Thus under 40 *Code of Federal Regulations part 122.44(d)(1)(i)* (2005), WQBEL's must be imposed on applicants "whenever the permitting agency determines that pollutants 'are or may be discharged [\*\*\*9] at a level which will cause, or *have the reasonable potential to cause, or contribute to an excursion above any State water quality standard ...* " (*Communities, supra*, 109 Cal.App.4th at p. 1094.) Under 40 *Code of Federal Regulations part 122.44(d)(1)(ii)* [\*\*502] in making the determination about whether WQBEL's are required "the permitting authority shall use procedures which account for existing controls on point and nonpoint sources of pollution, the variability of the pollutant or pollutant parameter in the effluent, the sensitivity of the species to toxicity testing (when evaluating whole effluent toxicity), and where appropriate, the dilution of the effluent in the receiving water." [\*254]

[HN4] (3) When, after employing the procedures and analysis required by 40 *Code of Federal Regulations part 122.44(d)(1)(ii)*, a permitting agency determines that an applicant's discharge "has the reasonable potential to cause ... an in-stream excursion above ... a State water

quality standard for an individual pollutant" the permit must contain effluent limits for that pollutant. (40 C.F.R. § 122.44(d)(1)(iii) (2005).)

[\*\*\*10] As we explain more fully below, this appeal rests in large measure on Divers's contention that 40 Code of Federal Regulations part 122.44(d)(1) mandated a numeric analysis of individual pollutants in the Navy's stormwater and numeric WQBEL's for pollutants which would cause the bay to exceed applicable water quality standards. As we explain, we do not adopt this interpretation of the regulations. Briefly, as we read the regulations, the analysis which is mandatory in all cases is the more general analysis required by part 122.44(d)(1)(ii); only if that analysis results in a finding that discharges are likely to exceed state numeric criteria for a particular pollutant are limits for that pollutant required. However, as we believe is the case here, an analysis of stormwater discharges may satisfy the requirements of part 122.44(d)(1)(ii) without any numeric analysis of individual pollutants and hence without giving rise to any obligation to impose specific pollutant limitations under part 122.44(d)(1)(iii).

### III

#### Stormwater Discharges

Before 1987 the CWA did not expressly regulate stormwater discharges. In 1987 Congress added [\*\*\*11] subdivision (p) to section 402 of the CWA [\*255] (33 U.S.C. § 1342(p)),<sup>4</sup> [\*\*\*503] which expressly requires NPDES permits [\*\*\*504] for stormwater discharges either associated with industrial activity or from municipal storm sewer systems. Section 402(p)(4)(A) of the CWA gave the administrator of the EPA until 1989 to promulgate regulations governing stormwater discharges from industrial polluters and large municipalities; [\*256] applicants for stormwater permits were given until 1990 to make applications and the EPA or state was given until 1991 to issue or deny the permit.

3 Shortly after the CWA was enacted in 1972 "the EPA promulgated regulations exempting most municipal storm sewers from the NPDES permit requirements. [Citations.] When environmental groups challenged this exemption in federal court, the Ninth Circuit held a storm sewer is a point source and the EPA did not have the authority to exempt categories of point sources from the Clean Water Act's NPDES permit requirements. [Citation.] The Costle court [(Natural Resources Defense Council, Inc. v. Costle (D. C. Cir. 1977) 568 F.2d 1369)] rejected the EPA's argument that effluent-based storm sewer regulation was administratively infeasible because of the

variable nature of storm water pollution and the number of affected storm sewers throughout the country. [Citation.] Although the court acknowledged the practical problems relating to storm sewer regulation, the court found the EPA had the flexibility under the Clean Water Act to design regulations that would overcome these problems. [Citation.]

"During the next 15 years, the EPA made numerous attempts to reconcile the statutory requirement of point source regulation with the practical problem of regulating possibly millions of diverse point source discharges of storm water. [Citations.]

"Eventually, in 1987, Congress amended the Clean Water Act to add provisions that specifically concerned NPDES permit requirements for storm sewer discharges. [Citations.]" (*Building Industry Assn. of San Diego County v. State Water Resources Control Bd.* (2004) 124 Cal.App.4th 866, 873-874 [22 Cal. Rptr. 3d 128].)

4 Section 402(p) of the CWA states:

[HN5] "(p) Municipal and industrial storm water discharges

"(1) General rule

"Prior to October 1, 1994, the Administrator or the State (in the case of a permit program approved under section 1342 of this title) shall not require a permit under this section for discharges composed entirely of storm water.

"(2) Exceptions

"Paragraph (1) shall not apply with respect to the following storm water discharges:

"(A) A discharge with respect to which a permit has been issued under this section before February 4, 1987.

"(B) A discharge associated with industrial activity.

"(C) A discharge from a municipal separate storm sewer system serving a population of 250,000 or more.

"(D) A discharge from a municipal separate storm sewer system serving a population of 100,000 or more but less than 250,000.

"(E) A discharge for which the Administrator or the State, as the case may be, determines that

the storm water discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

"(3) Permit requirements

"(A) Industrial discharges

"Permits for discharges associated with industrial activity shall meet all applicable provisions of this section and section 1311 of this title.

"(B) Municipal discharge

"Permits for discharges from municipal storm sewers--

"(i) may be issued on a system- or jurisdiction-wide basis;

"(ii) shall include a requirement to effectively prohibit non-storm water discharges into the storm sewers; and

"(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.

"(4) Permit application requirements

"(A) Industrial and large municipal discharges

"Not later than 2 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for storm water discharges described in paragraphs (2)(B) and (2)(C). Applications for permits for such discharges shall be filed no later than 3 years after February 4, 1987. Not later than 4 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

"(B) Other municipal discharges

"Not later than 4 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for storm water discharges described in paragraph (2)(D). Applications for permits for such discharges shall be filed no later than 5 years after February 4, 1987. Not later than 6 years after

February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

"(5) Studies

"The Administrator, in consultation with the States, shall conduct a study for the purposes of--

"(A) identifying those stormwater discharges or classes of stormwater discharges for which permits are not required pursuant to paragraphs (1) and (2) of this subsection;

"(B) determining, to the maximum extent practicable, the nature and extent of pollutants in such discharges; and

"(C) establishing procedures and methods to control storm water discharges to the extent necessary to mitigate impacts on water quality.

"Not later than October 1, 1988, the Administrator shall submit to Congress a report on the results of the study described in subparagraphs (A) and (B). Not later than October 1, 1989, the Administrator shall submit to Congress a report on the results of the study described in subparagraph (C).

"(6) Regulations

"Not later than October 1, 1993, the Administrator, in consultation with State and local officials, shall issue regulations (based on the results of the studies conducted under paragraph (5)) which designate storm water discharges, other than those discharges described in paragraph (2), to be regulated to protect water quality and shall establish a comprehensive program to regulate such designated sources. The program shall, at a minimum, (A) establish priorities, (B) establish requirements for State storm water management programs, and (C) establish expeditious deadlines. The program may include performance standards, guidelines, guidance, and management practices and treatment requirements, as appropriate."

[\*\*\*13] In regulating stormwater permits the EPA has repeatedly expressed a preference for doing so by way of BMP's, rather than by way of imposing either technology-based or water quality-based numerical limitations. "Unlike discharges of process wastewater where numeric effluent limitations (technology-based and/or water-quality-based) are typically used to control the discharge of pollutants from industrial facility[s], the primary permit condition used to address discharges of

pollutants in a facilities stormwater is a pollution prevention plan. The development and implementation of a site-specific stormwater pollution prevention plan is considered to be the most important requirement of the EPA and State issued stormwater general permits. Site-specific stormwater pollution prevention plans allow permittees to develop and implement best management practices', whether structural or non-structural, that are best suited for controlling stormwater discharges from their industrial facility." (U.S. EPA NPDES Permit Writers' Manual (Dec. 1996) pp. 149-150; see also *U.S. E.P.A. Interim Permitting Strategy Approach for Water Quality-Based Effluent Limitations in Storm Water Permits*, 61 *Fed. Reg.* 43761 [\*\*\*14] (Aug. 26, 1996); and *U.S. E.P.A. Questions and Answers*, 61 *Fed. Reg.* 57425 (Nov. 6, 1996).) In addition to the rationale it has expressed, the EPA also adopted 40 *Code of Federal Regulations part 122.44(k)* (2005) [\*257] so that the regulation reads, in part, as follows: [HN6] "[E]ach NPDES permit shall include conditions meeting the following requirements when applicable. [III [ 1 ]

"(k) Best management practices (BMPs) to control or abate the discharge of pollutants when:

"(1) Authorized under section 304(e) of the CWA for the control of toxic pollutants and hazardous substances from ancillary industrial activities;

"(2) Authorized under section 402(p) of the CWA for the control of stormwater discharges;

"(3) Numeric effluent limitations are infeasible; or

"(4) The practices are reasonably necessary to achieve effluent limitations and standards or to carry out the purposes and intent of the CWA."

As we explain more fully below, essentially 40 *Code of Federal Regulations part 122.44(k)(2)* (2005) allows permitting agencies to treat BMP's as the type of WQBEL's appropriate for control of stormwater discharges.

#### IV

##### [\*\*\*15] *Reasonable Potential Analysis*

In its first argument on appeal Divers' contends that because the Regional Board did not identify and analyze the numeric level of particular pollutants in the Navy's stormwater discharges, it did not perform the reasonable potential analysis required by 40 *Code of Federal Regulations part 122.44(d)(1)* (2005).

(4) Contrary to Divers's argument, [I-11\17] 40 *Code of Federal Regulations part 122.44(d)(1)* (2005) does not require that in all cases a permitting authority analyze the particular pollutants in an applicant's stormwater dis-

charges. As we have seen, [\*\*505] the procedures a permitting agency must engage in in performing the required reasonable potential analysis are set forth in 40 *Code of Federal Regulations part 122.44(d)(1)(ii)*. By its terms that portion of the regulation does not require any analysis of particular pollutants. Rather, it only requires that the permitting authority use procedures that account for existing controls, the variability of the pollutants in effluent, the sensitivity of [\*258] species to toxicity, and the dilution of effluent in receiving waters. (40 *C.F.R.* § 122.44(d)(1)(ii).) [\*\*\*16] While, as Divers' points out, a numeric analysis of particular pollutants would in most instances be the most effective means of meeting the requirements of 40 *Code of Federal Regulations part 122.44(d)(1)(ii)*, that is not the only means of meeting the requirements of the regulation. As the trial court noted, the Regional Board performed a water quality analysis and made extensive findings with respect to the toxicity of copper and zinc in the Navy's discharge and established benchmarks for concentrations of those chemicals in the Navy's discharges. The fact the studies the Regional Board performed did not produce numeric analysis of all the potential pollutants in the Navy's stormwater discharges did not prevent the Regional Board from nonetheless concluding, on the basis of the studies it did perform, that the stormwater discharges had a reasonable potential to cause or contribute to pollution in the bay above state water quality standards. As the Regional Board points out and the EPA has repeatedly noted, stormwater consists of a variable stew of pollutants, including toxic pollutants, from a variety of sources which impact a receiving body on a [\*\*\*17] basis which is only as predictable as the weather. Given these circumstances the Regional Board could reasonably conclude that any attempt to provide a numeric analysis of pollutants in stormwater discharges was not the most effective means of determining whether WQBEL's were nonetheless needed for the Navy's stormwater discharges.

[HN8] (5) Inherent in the flexibility we find in 40 *Code of Federal Regulations part 122.44(d)(1)(ii)* (2005) is our conclusion the BMP'S authorized by 40 *Code of Federal Regulations section 122.44(k)(2)* are in fact WQBEL's, which a permitting authority may employ when it has found that stormwater discharges may cause a receiving body to exceed state water quality standards. In reaching this conclusion we are persuaded by the reasoning the court adopted in *Communities*, where the opponent of a permit argued that numeric WQBEL's were required by 40 *Code of Federal Regulations part 122.44(d)(1)*. "Case law is limited. A few cases seem to assume that a WQBEL is always a number, but the cases do not squarely address and decide the issue. [Citations.] But *Natural Resources Defense Council, Inc. v. Costle* (D. C. Cir. 1977) 186 U.S. App. D.C. 147 [568 F.2d 1369] [\*\*\*18] (*Costle*), suggests that Congress did not intend

numeric effluent limitations to be the only limitation on pollution discharges under the CWA, but intended a flexible approach including alternative effluent control strategies. [Citation.]

"We find instructive a prior decision of the State Board, of which we have taken judicial notice: *In the Matter of the Petition of Citizens for a Better Environment, Save San Francisco Bay Association, and Santa Clara Valley* [\*259] *Audubon Society* (Order No. WQ 91-03, May 16, 1991) 1991 WL 135460 (Cal.St.Wat.Res.Bd.). In that order, the State Board stated: The petitioners contend that the Clean Water Act, and regulations and court decisions interpreting the Act, require the inclusion of numeric effluent limitations in NPDES permits ... . We have reviewed these authorities, and also opinions we have received [\*\*506] from EPA, and conclude that numeric effluent limitations are not legally required. Further, we have determined that the program of prohibitions, source control measures and "best management practices" set forth in the permit constitutes effluent limitations as required by law.' [Citation.]

"The State Board noted the EPA's [\*\*\*19] regulatory definition of 'effluent limitation' was broad, and noted that the *Costle* decision supported the conclusion that numeric limitations were not required—especially since CWA 'gives EPA considerable flexibility in framing the permit to achieve a desired reduction in pollutant discharges. ...' [Citation.]

"Specifically referring to *section 122.44(d)(1)*, the State Board noted the regulation did not contain 'the term "numeric" effluent limitation. ... Concededly, in most cases, the easiest and most effective chemical-specific limitation would be numeric. However, there is no legal requirement that effluent limitations be numeric.' [Citation.]" (*Communities, supra*, 109 Cal.App.4th at pp. 1104-1105.)

[HN9] (6) Where, as in the case of stormwater discharges, BMP's will be the WQBEL's employed, the study performed under *40 Code of Federal Regulations part 122.44(d)(1)(ii) (2005)* must at a minimum look to the likely impact of stormwater as a whole on the receiving body; however, as we have seen, the BMP's that may be imposed if there is a determination that state water quality standards will be exceeded are usually systemic procedures [\*\*\*20] tailored to decrease the overall risk toxic pollutants from the discharger will reach stormwater runoff. Because there is no direct correlation between the type and volume of toxic pollutants in stormwater and the BMP's that will be employed to reduce those volumes, a permitting authority can reasonably conclude that in the case of stormwater discharges such a detailed numeric analysis is not a cost-effective means of performing a "reasonable potential" analysis. In sum, contrary to Di-

vers' contention, the Regional Board was not required to perform a numeric analysis of each pollutant in the Navy's stormwater discharges. [\*260]

V.

#### *Feasibility Study*

Divers' does not accept our conclusion the Regional Board was authorized to employ BMP's in lieu of numeric WQBEL's. Instead, Divers' argues that in the case of industrial permits, such as the one the Navy obtained, BMP's are permissible only upon a finding by the permitting authority that numeric WQBEL's are not feasible. We do not read *40 Code of Federal Regulations part 122.44(k)(2) (2005)* so narrowly.

As we have noted, *40 Code of Federal Regulations part 122.44(k)(2) (2005)* [\*\*\*21] gives permitting authorities the power to impose BMP's when they are "[a]uthorized under *section 402(p) of the CWA* for the control of storm water discharges." Divers' contends that *section 402(p) of the CWA (33 U.S.C. § 1342(p))* does not authorize BMP's to control *industrial* stormwater discharges and that the only authority for use of BMP's in an industrial setting is provided by *40 Code of Federal Regulations part 122.44(k)(3)*, which permits BMP's when numeric effluent limitations are not feasible.

Divers' fundamentally misinterprets *section 402(p) of the CWA*. Before enactment of *section 402(p)* there was considerable controversy over whether and in what manner stormwater discharges were subject to permitting under the CWA. (See *Building Industry Assn. of San Diego County v. State* [\*\*507] *Water Resources Control Bd., supra*, 124 Cal.App.4th at pp. 873-874.) Enactment of *section 402(p)* made it clear that such discharges were subject to the permitting requirements of the CWA and gave the EPA broad discretion in developing and enforcing rules governing stormwater discharges. In this context BMP's are expressly mentioned in [\*\*\*22] the statute as one of the limitations a permitting authority may impose in municipal stormwater permits. (See 33 U.S.C. § 1342(p)(3)(B)(iii).) However, neither the absence of an express reference to BMP's in industrial settings nor the illustrative reference with respect to municipal stormwater permits, is very persuasive in determining whether, as the Regional Board and the EPA have found, in enacting *section 402(p)* Congress intended to authorize a wide array of controls over all stormwater discharges, including use of BMP's. In this regard we note the final paragraph of *section 402(p)* contains a further reference to BMP'S and gives the EPA the power to use management practices as a means, among others, of controlling stormwater discharges from sources other than industrial activities and municipalities. This reference to management practices, along with the reference to the use of BMP's in municipal

145 Cal. App. 4th 246, \*, 51 Cal. Rptr. 3d 497, \*\*;  
2006 Cal. App. LEXIS 1874, \*\*\*; 2006 Cal. Daily Op. Service 10951

settings, show that in enacting *section 402(p)* of the CWA, Congress clearly recognized the role of BMP's as a means of controlling pollutants in stormwater discharges. [\*261]

In sum, [HN10] there is nothing on the face of the statute that suggests that in making express [\*\*\*23] reference to BMP's in particular instances Congress intended to limit use of BMP's in controlling stormwater discharges in general. Indeed, we can discern no rationale which would permit BMP's in the case of municipalities and other nonindustrial stormwater discharges but bar them in the case of industrial discharges. Thus the EPA, along with the Regional Board, could reasonably conclude that in enacting *section 402(p)* of the CWA, Congress intended to permit the EPA and permitting authorities wide discretion in regulating stormwater runoff, including the use of BMP's where the agencies believed they were appropriate.

5 As we noted in *Building Industry Assn. of San Diego County v. State Water Resources Control Bd.*, *supra*, 124 Cal. App. 4th at page 874, under *section 402(p)(3)(B)(iii)* of the CWA municipalities are only required to reduce "pollutants to the maximum extent practicable," whereas stormwater from industrial discharges must be governed by WQBEL's. Nothing in our opinion in *Building Industry Assn. of San Diego County v. State Water Resources Control Bd.* addressed the specific question raised here: whether a permitting authority may use BMP's as a means of limiting industrial stormwater waste.

[\*\*\*24] Because the Regional Board and EPA's interpretation of *section 402(p)* of the CWA is not at odds with either the language or overall purposes of the statute, we must accept it. (See *Communities, supra*, 109 Cal. App. 4th at p. 1104.) Accordingly, read in light of that interpretation of the statute, 40 Code of Federal Regulations part 122.44(k)(2) (2005) fully authorized the Regional Board to use BMP's as the principal means of limiting the Navy's stormwater discharges.

## VI

### *Benchmarks*

As we have noted, under the permit the Navy is required to determine whether levels of zinc and copper in its stormwater discharges reach designated benchmarks, and if they do the Navy is then required to review and amend its BMP's. The benchmarks for these chemicals is higher than applicable water quality [\*\*508] standards for San Diego Bay as set forth in the EPA's California toxic rule (CTR). (See 65 Fed. Reg. 31682-31719 (May 18, 2000).) Contrary to Divers's argument, the discrep-

ancy between the benchmarks and CTR standards does not invalidate the permit.

The CTR was adopted by the EPA because California failed to adopt final water quality standards [\*\*\*25] as required by the CWA. (See 33 U.S.C. § 1313(c); 40 C. F.R. §§ 131.6, 131.12 (2005).) The standards set forth in the CTR are expressed as numeric criteria for specific toxic pollutants and apply to California's inland waters and enclosed bays and estuaries. Following the holding in *Communities*, it is now clear that in implementing numeric [\*262] water quality standards, such as those set forth in the CTR, permitting agencies are not required to do so solely by way of corresponding numeric WQBEL's. (*Communities, supra*, 109 Cal. App. 4th at pp. 1095, 1104-1105.) In *Communities* the court stated: "[A] water quality standard can be numeric; the question before us is whether a WQBEL, which implements a ... numeric water quality standard, must itself be numeric." (*Id. at p. 1095.*) The court then went on to answer this question in the negative. (*Id. at pp. 1104-1105.*)

We also note that in adopting the CTR, the EPA took note of the use of BMP's as a means of controlling municipal runoff and stated that the EPA "believes that compliance with water quality standards [\*\*\*26] through the use of Best Management Practices (BMPs) is appropriate." (65 Fed. Reg. 31703 (May 18, 2000).) This reference to BMP's, in the context of adopting the CTR, supports the Regional Board's contention that the CTR does not require it to impose the CTR's numeric water quality standards as numeric limits on toxic substances in the Navy's stormwater discharges.

In sum the Regional Board was empowered to enforce the CTR by way of the BMP's and benchmarks set forth in the permit. Although the CTR governs the entire bay, including the point of any discharge, in employing benchmarks for further action by the Navy, the permit does not in any manner authorize the Navy to violate the CTR. In this context the benchmarks only serve as a means of ensuring that the Navy will monitor toxicity of its stormwater discharges and take appropriate action in the event it discovers toxicity at designated levels. As the Regional Board points out, it is fully capable of taking enforcement action against the Navy in the event a violation of the CTR occurs.

## VII

### *Delegation of Discretion*

Finally, we note that Divers' contends that in allowing the Navy to develop a prevention [\*\*\*27] plan, including BMP's, the permit delegated too much discretion to the Navy. Our review of the record does not support this contention. The requirements of the prevention plan

145 Cal. App. 4th 246, \*, 51 Cal. Rptr. 3d 497, \*\*;  
2006 Cal. App. LEXIS 1874, \*\*\*; 2006 Cal. Daily Op. Service 10951

the Navy must develop are set forth in an 18-page attachment to the permit. The attachment sets forth in some detail what the plan must include in terms of identifying sources of pollution, monitoring, recordkeeping and reporting. In particular, we note the permit provides that "[u]pon notification by the Regional Board and/or local agency that the [prevention plan] does not meet one or more of the minimum requirements of this Section," the Navy must revise the plan and implement [\*263] additional BMP's that are effective in reducing and eliminating pollutants in its discharges. Thus the permit both carefully limits the [\*509] Navy's discretion in developing a prevention plan and provides for meaningful regulatory review of the prevention plan. (See *Environ-*

*mental Defense Center, Inc. v. U.S. E.P.A. (9th Cir. 2003)*  
344 F.3d 832, 856.)

Judgment affirmed.<sup>6</sup>

6 Amicus curiae California Coastkeeper Alliance asked that we take judicial notice of data it prepared and filed with the State Board in other proceedings and after the Regional Board issued the Navy's permit. We deny the request for judicial notice. Appellant's objection to respondents' lodgment of exhibits is overruled.

Nares, J., [\*\*\*28] and Haller, J., concurred.

A petition for a rehearing was denied December 27, 2006.

COURT OF APPEAL OF CALIFORNIA, THIRD APPELLATE DISTRICT

11 Cal. App. 4th 1564; 15 Cal. Rptr. 2d 547; 1992 Cal. App. LEXIS 1498; 93 Cal. Daily Op. Service 17; 93 Daily Journal DAR 18

December 30, 1992, Decided

**SUBSEQUENT HISTORY:** [\*\*\*1] Review Denied April 1, 1993, Reported at 1993 Cal. LEXIS 1988. Lucas, C.J., Kennard, J., and Arabian, J., are of the opinion the petition should be granted.

**PRIOR HISTORY:** Superior Court of Sacramento County, No. 352795, Eugene T. Gualco, Judge.

**DISPOSITION:** The judgment is affirmed.

**CASE SUMMARY:**

**PROCEDURAL POSTURE:** Appellant Riverside Schools sought review from a decision of the Superior Court of Sacramento County (California), which set aside an administrative decision that all local special education costs were state mandated and subject to state reimbursement and, denied appellant's writ of mandate that would have ordered respondent controller to issue a warrant in payment of its claim.

**OVERVIEW:** Appellant Riverside Schools filed claims seeking state reimbursement for alleged state-mandated costs incurred in connection with special education programs. After lengthy proceedings, the administrative agency decided that all local special education costs were state mandated and subject to reimbursement. On appeal, the lower court issued a writ of administrative mandate

directing the agency to reconsider the matter and denying appellant's petition for a writ of mandate that would have directed issuance of a warrant in payment of its claim. The court affirmed the lower court decision and clarified the criteria to be applied by the administrative agency. The court concluded that, all financial assistance or funds under the Rehabilitation Education Act, 29 U.S.C.S. § 794 (1973) or, under the Education of the Handicapped Act, 20 U.S.C.S. § 1400 et seq., were federally mandated and thus, appellant was not entitled to reimbursement from the state for these types of programs.

**OUTCOME:** The court affirmed the judgment of the lower court, which set aside an administrative decision that all local special education costs were state mandated and subject to state reimbursement because the special education costs were federally mandated and thus, appellant Riverside Schools was not entitled to reimbursement from the state for these types of programs.

**CORE TERMS:** subvention, educational, reimbursement, mandated, special education, Handicapped Act, federal mandate, handicapped children, local agencies, school district's, handicapped, levels of service, local government's, local school districts, state-mandated, federal government, spending, accommodate, taxing, state mandates, funding, local agency, new programs, appropriation, Rehabilitation Act, state subvention, entity, fiscal year, Handicapped Act, public education

Rights*

[HN3]Since the 1975 amendment, the Education of the Handicapped Act requires recipient states to demonstrate a policy that assures all handicapped children the right to a free appropriate education, 20 U.S.C.S. § 1412(1). The act is not merely a funding statute; rather, it establishes an enforceable substantive right to a free appropriate public education in recipient states.

*Civil Rights Law > Protection of Disabled Persons >  
Rehabilitation Act > Remedies*

*Constitutional Law > Supremacy Clause > General  
Overview*

*Governments > State & Territorial Governments > Re-  
lations With Governments*

[HN4]Federal financial assistance is not the only incentive for a state to comply with the Education of the Handicapped Act, 20 U.S.C.S. § 1400 et seq. Congress intends the act to serve as a means by which state and local educational agencies can fulfill their obligations under the equal protection and due process provisions of the Constitution and under § 504 of the Rehabilitation Act of 1973, 29 U.S.C.S. § 794. Accordingly, where it is appli-

cable the act supersedes claims under the Civil Rights Act, 42 U.S.C.S. § 1983 and § 504 of the Rehabilitation Act of 1973, and the administrative remedies provided by the act constitute the exclusive remedy of handicapped children and their parents or other representatives.

*Administrative Law > Judicial Review > General Over-  
view*

*Constitutional Law > Supremacy Clause > General  
Overview*

*Education Law > Discrimination > Individuals With  
Disabilities Education Act > Enforcement*

[HN5]As a result of the exclusive nature of the Education of the Handicapped Act, 20 U.S.C.S. § 1415(e)(2), dissatisfied parties in recipient states must exhaust their administrative remedies under the act before resorting to judicial intervention. This gives local agencies the first opportunity and the primary authority to determine appropriate placement and to resolve disputes. If a party is dissatisfied with the final result of the administrative process then he or she is entitled to seek judicial review in a state or federal court. In such a proceeding the court independently reviews the evidence but its role is restricted to that of review of the local decision and the court is not free to substitute its view of sound educational policy for that of the local authority.

*Constitutional Law > State Constitutional Operation*

*Education Law > Students > Right to Education*

[HN6]The constitutional provision requires state subvention when the Legislature or any State agency mandates a new program or higher level of service on local agencies. Cal. Const., art. XIII B, § 6.

*Constitutional Law > State Constitutional Operation  
Governments > Legislation > Interpretation*

[HN7]As a general rule and unless the context clearly requires otherwise, reviewing court must assume that the meaning of a term or phrase is consistent throughout the entire act or constitutional article of which it is a part.

SUMMARY:

CALIFORNIA OFFICIAL REPORTS SUMMARY

Two school districts filed claims with the State Board of Control for state reimbursement of alleged state-mandated costs incurred in connection with special education programs. The board determined that the costs were state mandated and subject to reimbursement by the state. In a mandamus proceeding, the trial court entered a judgment by which it issued a writ of administrative

11 Cal. App. 4th 1564, \*; 15 Cal. Rptr. 2d 547, \*\*;  
1992 Cal. App. LEXIS 1498, \*\*\*; 93 Cal. Daily Op. Service 17

mandate directing the Commission on State Mandates (the successor to the board) to set aside the board's administrative decision and to reconsider the matter in light of an intervening decision by the California Supreme Court, and by which it denied the petition of one of the school districts for a writ of mandate that would have directed the State Controller to issue a warrant in payment of the district's claim. (Superior Court of Sacramento County, No. 352795, Eugene T. Gualco, Judge.)

The Court of Appeal affirmed. It held that the 1975 amendments to the federal Education of the Handicapped Act (20 U.S.C. § 1401 et seq.) constituted a federal mandate with respect to the state. However, even though the state had no real choice in deciding whether to comply with the act, the act did not necessarily require the state to impose all of the costs of implementation upon local school districts. The court held that to the extent the state implemented the act by freely choosing to impose new programs or higher levels of service upon local school districts, the costs of such programs or higher levels of service are state-mandated and subject to subvention under Cal. Const., art. XIII B, § 6. Thus, on remand to the commission, the court held, the commission was required to focus on the costs incurred by local school districts and on whether those costs were imposed by federal mandate or by the state's voluntary choice in its implementation of the federal program. (Opinion by Sparks, Acting P. J., with Davis and Scotland, JJ., concurring.)

## HEADNOTES

### CALIFORNIA OFFICIAL REPORTS HEADNOTES

Classified to California Digest of Official Reports

(1) State of California § 11 -- Fiscal Matters -- Reimbursement to Local Governments -- State-mandated Costs: Words, Phrases, and Maxims -- Subvention. --"Subvention" generally means a grant of financial aid or assistance, or a subsidy. The constitutional rule of state subvention provides that the state is required to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. This does not mean that the state is required to reimburse local agencies for any incidental cost that may result from the enactment of a state law; rather, the subvention requirement is restricted to governmental services that the local agency is required by state law to provide to its residents. The subvention requirement is intended to prevent the state from transferring the costs of government from itself to local agencies. Reimbursement is required when the state freely chooses to impose on local agencies any peculiarly go-

vernmental cost which they were not previously required to absorb.

(2) Schools § 4 -- School Districts -- Relationship to State. --A school district's relationship to the state is different from that of local governmental entities such as cities, counties, and special districts. Education and the operation of the public school system are matters of statewide rather than local or municipal concern. Local school districts are agencies of the state and have been described as quasi-municipal corporations. They are not distinct and independent bodies politic. The Legislature's power over the public school system is exclusive, plenary, absolute, entire, and comprehensive, subject only to constitutional constraints. The Legislature has the power to create, abolish, divide, merge, or alter the boundaries of school districts. The state is the beneficial owner of all school properties, and local districts hold title as trustee for the state. School moneys belong to the state, and the apportionment of funds to a school district does not give the district a proprietary interest in the funds. While the Legislature has chosen to encourage local responsibility for control of public education through local school districts, that is a matter of legislative choice rather than constitutional compulsion, and the authority that the Legislature has given to local districts remains subject to the ultimate and nondelegable responsibility of the Legislature.

(3) Property Taxes § 7.8 -- Real Property Tax Limitation -- Exemptions and Special Taxes -- Federally Mandated Costs. --Pursuant to Rev. & Tax. Code, § 2271 (local agency may levy rate in addition to maximum property tax rate to pay costs mandated by federal government that are not funded by federal or state government), costs mandated by the federal government are exempt from an agency's taxing and spending limits.

(4) State of California § 11 -- Fiscal Matters -- Reimbursement to Local Governments -- State-mandated Costs -- Costs Incurred Before Effective Date of Constitutional Provision. --Since Cal. Const., art. XIII B, requiring subvention for state mandates enacted after Jan. 1, 1975, had an effective date of July 1, 1980, a local agency may seek subvention for costs imposed by legislation after Jan. 1, 1975, but reimbursement is limited to costs incurred after July 1, 1980. Reimbursement for costs incurred before July 1, 1980, must be obtained, if at all, under controlling statutory law.

(5) Schools § 53 -- Parents and Students -- Right or Duty to Attend -- Handicapped Children -- Federal Rehabilitation Act -- Obligations Imposed on Districts. --Section 504 of the federal Rehabilitation Act of 1973 (29 U.S.C. § 794) does not only obligate local

11 Cal. App. 4th 1564, \*; 15 Cal. Rptr. 2d 547, \*\*;  
1992 Cal. App. LEXIS 1498, \*\*\*; 93 Cal. Daily Op. Service 17

school districts to prevent handicapped children from being excluded from school. States typically purport to guarantee all of their children the opportunity for a basic education. In California, basic education is regarded as a fundamental right. All basic educational programs are essentially affirmative action activities in the sense that educational agencies are required to evaluate and accommodate the educational needs of the children in their districts. Section 504 does not permit local agencies to accommodate the educational needs of some children while ignoring the needs of others due to their handicapped condition. The statute imposes an obligation upon local school districts to take affirmative steps to accommodate the needs of handicapped children.

**(6) Schools § 53 -- Parents and Students -- Right or Duty to Attend -- Handicapped Children -- Education of the Handicapped Act.** --The federal Education of the Handicapped Act (20 U.S.C. § 1401 et seq.), which since its 1975 amendment has required recipient states to demonstrate a policy that assures all handicapped children the right to a free appropriate education, is not merely a funding statute; rather, it establishes an enforceable substantive right to a free appropriate public education in recipient states. Congress intended the act to establish a basic floor of opportunity that would bring into compliance all school districts with the constitutional right to equal protection with respect to handicapped children. It is also apparent that Congress intended to achieve nationwide application.

**(7) Civil Rights § 6 -- Education -- Handicapped -- Scope of Federal Statute.** --Congress intended the Education of the Handicapped Act (20 U.S.C. § 1401 et seq.) to serve as a means by which state and local educational agencies could fulfill their obligations under the equal protection and due process provisions of the Constitution and under section 504 of the Rehabilitation Act of 1973 (29 U.S.C. § 794). Accordingly, where it is applicable, the act supersedes claims under the Civil Rights Act (42 U.S.C. § 1983) and section 504, and the administrative remedies provided by the act constitute the exclusive remedy of handicapped children and their parents or other representatives. As a result of the exclusive nature of the Education of the Handicapped Act, dissatisfied parties in recipient states must exhaust their administrative remedies under the act before resorting to judicial intervention.

**(8a) (8b) State of California § 11 -- Fiscal Matters -- Reimbursement to Local Governments -- State-mandated Costs -- Special Education: Schools § 4 -- School Districts; Financing; Funds -- Special Education Costs -- Reimbursement by State.** --The 1975 amendments to the federal Education of the Han-

dicapped Act (20 U.S.C. § 1401 et seq.) constituted a federal mandate with respect to the state. However, even though the state had no real choice in deciding whether to comply with the act, the act did not necessarily require the state to impose all of the costs of implementation upon local school districts. To the extent the state implemented the act by freely choosing to impose new programs or higher levels of service upon local school districts, the costs of such programs or higher levels of service are state mandated and subject to subvention under Cal. Const., art. XIII B, § 6. Thus, on remand of a proceeding by school districts to the Commission on State Mandates for consideration of whether special education programs constituted new programs or higher levels of service mandated by the state entitling the districts to reimbursement, the commission was required to focus on the costs incurred by local school districts and whether those costs were imposed by federal mandate or by the state's voluntary choice in its implementation of the federal program.

**(9) State of California § 11 -- Fiscal Matters -- Reimbursement to Local Governments -- Federally Mandated Costs.** --The constitutional subvention provision (Cal. Const., art. XIII B, § 6) and the statutory provisions which preceded it do not expressly say that the state is not required to provide a subvention for costs imposed by a federal mandate. Rather, that conclusion follows from the plain language of the subvention provisions themselves. The constitutional provision requires state subvention when "the Legislature or any State agency mandates a new program or higher level of service" on local agencies. Likewise, the earlier statutory provisions required subvention for new programs or higher levels of service mandated by legislative act or executive regulation. When the federal government imposes costs on local agencies, those costs are not mandated by the state and thus would not require a state subvention. Instead, such costs are exempt from local agencies' taxing and spending limitations. This should be true even though the state has adopted an implementing statute or regulation pursuant to the federal mandate, so long as the state had no "true choice" in the manner of implementation of the federal mandate.

**(10) Statutes § 28 -- Construction -- Language -- Consistency of Meaning Throughout Statute.** --As a general rule and unless the context clearly requires otherwise, it must be assumed that the meaning of a term or phrase is consistent throughout the entire act or constitutional article of which it is a part.

**(11) State of California § 11 -- Fiscal Matters -- Reimbursement to Local Governments -- Federally Mandated Costs -- Subvention.** --Subvention prin-

11 Cal. App. 4th 1564, \*; 15 Cal. Rptr. 2d 547, \*\*;  
1992 Cal. App. LEXIS 1498, \*\*\*; 93 Cal. Daily Op. Service 17

ciples are part of a more comprehensive political scheme. The basic purpose of the scheme as a whole was to limit the taxing and spending powers of government. The taxing and spending powers of local agencies were to be "frozen" at existing levels with adjustments only for inflation and population growth. Since local agencies are subject to having costs imposed upon them by other governmental entities, the scheme provides relief in that event. If the costs are imposed by the federal government or the courts, then the costs are not included in the local government's taxing and spending limitations. If the costs are imposed by the state, then the state must provide a subvention to reimburse the local agency. Nothing in the scheme suggests that the concept of a federal mandate should have different meanings depending upon whether one is considering subvention or taxing and spending limitations. Thus, the criteria set forth in a California Supreme Court case concerning whether costs mandated by the federal government are exempt from an agency's taxing and spending limits are applicable when subvention is the issue.

**(12) State of California § 11 -- Fiscal Matters -- Reimbursement to Local Governments -- State-mandated Costs -- Special Education -- Applicable Criteria in Determining Whether Subvention Required.** --In a proceeding for a writ of mandate to direct the Commission on State Mandates to set aside an administrative decision by the State Board of Control (the commission's predecessor), in which the board found that all local special education costs were state mandated and thus subject to state reimbursement, the trial court did not err in determining that the board failed to consider the issues under the appropriate criteria as set forth in a California Supreme Court case concerning whether costs mandated by the federal government are exempt from an agency's taxing and spending limits. The board relied upon the "cooperative federalism" nature of the Education of the Handicapped Act (20 U.S.C. § 1401 *et seq.*) without any consideration of whether the act left the state any actual choice in the matter. It also relied on litigation involving another state. However, under the criteria set forth in the Supreme Court's case, the litigation in the other state did not support the board's decision but in fact strongly supported a contrary result.

**(13) Courts § 34 -- Decisions and Orders -- Prospective and Retroactive Decisions -- Opinion Elucidating Existing Law.** --In a California Supreme Court case concerning whether costs mandated by the federal government are exempt from an agency's taxing and spending limits, the court elucidated and enforced existing law. Under such circumstances, the rule of retrospective operation controls. Thus, in a proceeding for a writ of mandate to direct the Commission on State Mandates to

set aside an administrative decision by the State Board of Control (the commission's predecessor), in which the board found that all local special education costs were state mandated and thus subject to state reimbursement, the trial court correctly applied the Supreme Court decision to the litigation pending before it.

#### OPINION

[\*1570] [\*\*550] This appeal involves a decade-long battle over claims for subvention by two county superintendents of schools [\*\*\*2] for reimbursement for mandated special education programs. Section 6 of article XIII B of the California Constitution directs, with exceptions not relevant here, that "[w]henever the Legislature or any State agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, ..." The issue on appeal is whether the special education programs in question constituted new programs or higher levels of service mandated by the state entitling the school districts to reimbursement under section 6 of article XIII B of the California Constitution and related statutes for the cost of implementing them or whether these programs were instead mandated by the federal government for which no reimbursement is due.

11 Cal. App. 4th 1564, \*; 15 Cal. Rptr. 2d 547, \*\*;  
1992 Cal. App. LEXIS 1498, \*\*\*; 93 Cal. Daily Op. Service 17

The Santa Barbara County Superintendent of Schools and the Riverside County Superintendent of Schools each filed claims with the Board of Control for state reimbursement for alleged state-mandated costs incurred in connection with special education programs. After a lengthy administrative process, the Board of Control rendered a decision [\*\*\*3] finding that all local special education costs were state mandated and subject to state reimbursement. That decision was then successfully challenged in the Sacramento County Superior Court. The superior court entered a judgment by which it: (1) issued a writ of administrative mandate ( Code Civ. Proc., § 1094.5), directing the Commission on State Mandates (the successor to the Board of [\*1571] Control) to set aside the administrative decision and to reconsider the matter in light of the California Supreme Court's intervening decision in City of Sacramento v. State of California (1990) 50 Cal.3d 51 [266 Cal.Rptr. 139, 785 P.2d 522]; and (2) denied the Riverside County Superintendent of School's petition for a writ of mandate ( Code Civ. Proc., § 1085), which would have directed the State Controller to issue a warrant in payment of the claim. The Riverside County Superintendent of Public Schools appeals. We shall clarify the criteria to be applied by the Commission on State Mandates on remand and affirm the judgment.

## I. THE PARTIES

This action was commenced in July 1987 by Jesse R. Huff, then the Director of the [\*\*\*4] California Department of Finance. Huff petitioned for a writ of administrative mandate to set aside the administrative decision which found all the special education costs to be state mandated. On appeal Huff appears as a respondent urging that we affirm the judgment.

The Commission on State Mandates (the Commission) is the administrative agency which now has jurisdiction over local agency claims for reimbursement for state-mandated costs. ( Gov. Code, § 17525.) In this respect the Commission is the successor to the Board of Control. The Board of Control rendered the administrative decision which is at issue here. Since an appropriation for payment of these claims was not included in a local government claims bill before January 1, 1985, administrative jurisdiction over the claims has been transferred from the Board of Control to the Commission. ( Gov. Code, § 17630.) The Commission is the named defendant in the petition for a writ of administrative mandate. In the trial court and on appeal the Commission has appeared as the agency having administrative jurisdiction over the claims, but has not expressed a position on the merits of the litigation.

[\*\*551] The Santa Barbara County Superintendent [\*\*\*5] of Schools (hereafter Santa Barbara) is a

claimant for state reimbursement of special education costs incurred in the 1979-1980 fiscal year. Santa Barbara is a real party in interest in the proceeding for administrative mandate. Santa Barbara has not appealed from the judgment of the superior court and, although a nominal respondent on appeal, has not filed a brief in this court.

The Riverside County Superintendent of Schools (hereafter Riverside) represents a consortium of school districts which joined together to provide special education programs to handicapped students. Riverside seeks reimbursement for special education costs incurred in the 1980-1981 fiscal year. [\*1572] Riverside is a real party in interest in the proceeding for writ of administrative mandate. It filed a cross-petition for a writ of mandate directing the Controller to pay its claim. Riverside is the appellant in this appeal.

The State of California and the State Treasurer are named cross-defendants in Riverside's cross-petition for a writ of mandate. They joined with Huff in this litigation. The State Controller is the officer charged with drawing warrants for the payment of moneys from the State [\*\*\*6] Treasury upon a lawful appropriation. ( Cal. Const., art. XVI, § 7.) The State Controller is a named defendant in Riverside's petition for a writ of mandate. In the trial court and on appeal the State Controller expresses no opinion on the merits of Riverside's reimbursement claim, but asserts that the courts lack authority to compel him to issue a warrant for payment of the claim in the absence of an appropriation for payment of the claim.

In addition to the briefing by the parties on appeal, we have permitted a joint amici curiae brief to be filed in support of Riverside by the Monterey County Office of Education, the Monterey County Office of Education Special Education Local Planning Area, and 21 local school districts.

## II. FACTUAL AND PROCEDURAL BACKGROUND

The Legislature has provided an administrative remedy for the resolution of local agency claims for reimbursement for state mandates. In County of Contra Costa v. State of California (1986) 177 Cal.App.3d 62 [222 Cal.Rptr. 750], at pages 71 and 72, we described these procedures as follows (with footnotes deleted): "Section 2250 [Revenue & Taxation Code] and those following [\*\*\*7] it provide a hearing procedure for the determination of claims by local governments. The State Board of Control is required to hear and determine such claims. (§ 2250.) For purposes of such hearings the board consists of the members of the Board of Control provided for in part 4 (commencing with § 13900) of division 3 of title 2 of the Government Code, together

11 Cal. App. 4th 1564, \*; 15 Cal. Rptr. 2d 547, \*\*;  
1992 Cal. App. LEXIS 1498, \*\*\*, 93 Cal. Daily Op. Service 17

with two local government officials appointed by the Governor. (§ 2251.) The board was required to adopt procedures for receiving and hearing such claims. (§ 2252.) The first claim filed with respect to a statute or regulation is considered a 'test claim' or a 'claim of first impression.' (§ 2218, subd. (a).) The procedure requires an evidentiary hearing where the claimant, the Department of Finance, and any affected department or agency can present evidence. (§ 2252.) If the board determines that costs are mandated, then it must adopt parameters and guidelines for the reimbursement of such claims. (§ 2253.2.) The claimant or the state is entitled to commence an action in administrative mandate pursuant to Code of Civil Procedure section 1094.5 to set aside a decision of the board on the grounds that the board's decision [\*\*\*8] is not supported by substantial evidence. (§ 2253.5.)

[\*1573] "At least twice each calendar year the board is required to report to the Legislature on the number of mandates it has found and the estimated statewide costs of these mandates. (§ 2255, subd. (a).) In addition to the estimate of the statewide costs for each mandate, the report must also contain the reasons for recommending reimbursement. (§ 2255, subd. (a).) Immediately upon receipt of the report a local government claims bill shall be introduced in the Legislature which, when introduced, must contain an appropriation sufficient to pay for the estimated costs of the mandates. [\*\*552] (§ 2255, subd. (a).) In the event the Legislature deletes funding for a mandate from the local government claims bill, then it may take one of the following courses of action: (1) include a finding that the legislation or regulation does not contain a mandate; (2) include a finding that the mandate is not reimbursable; (3) find that a regulation contains a mandate and direct that the Office of Administrative Law repeal the regulation; (4) include a finding that the legislation or regulation contains a reimbursable mandate and direct that the [\*\*\*9] legislation or regulation not be enforced against local entities until funds become available; (5) include a finding that the Legislature cannot determine whether there is a mandate and direct that the legislation or regulation shall remain in effect and be enforceable unless a court determines that the legislation or regulation contains a reimbursable mandate in which case the effectiveness of the legislation or regulation shall be suspended and it shall not be enforced against a local entity until funding becomes available; or (6) include a finding that the Legislature cannot determine whether there is a reimbursable mandate and that the legislation or regulation shall be suspended and shall not be enforced against a local entity until a court determines whether there is a reimbursable mandate. (§ 2255, subd. (b).) If the Legislature deletes funding for a mandate from a local government claims bill but does not follow one of the above courses of ac-

tion or if a local entity believes that the action is not consistent with article XIII B of the Constitution, then the local entity may commence a declaratory relief action in the Superior Court of the County of Sacramento to declare [\*\*\*10] the mandate void and enjoin its enforcement. (§ 2255, subd. (c).)

"Effective January 1, 1985, the Legislature has established a new commission to consider and determine claims based upon state mandates. This is known as the Commission on State Mandates and it consists of the Controller, the Treasurer, the Director of Finance, the Director of the Office of Planning and Research, and a public member with experience in public finance, appointed by the Governor and approved by the Senate. (Gov. Code, § 17525.) 'Costs mandated by the state' are defined as 'any increased costs which a local agency or school district is required to incur after July 1, 1980, as a result of any statute enacted after January 1, 1975; or any executive order implementing any statute enacted on or after January 1, 1975, which [\*1574] mandates a new program or higher level of service of an existing program within the meaning of Section 6 of Article XIII B of the California Constitution.' (Gov. Code, § 17514.) The procedures before the Commission are similar to those which were followed before the Board of Control. (Gov. Code, § 17500 et seq.) Any claims which had not been included in a local government claims [\*\*\*11] bill prior to January 1, 1985, were to be transferred to and considered by the commission. (Gov. Code, § 17630; [Rev. & Tax. Code.] § 2239.)"

On October 31, 1980, Santa Barbara filed a test claim with the Board of Control seeking reimbursement for costs incurred in the 1979-1980 fiscal year in connection with the provision of special education services as required by Statutes 1977, chapter 1247, and Statutes 1980, chapter 797. Santa Barbara asserted that these acts should be considered an ongoing requirement of increased levels of service.

Santa Barbara's initial claim was based upon the "mandate contained in the two bills specified above [which require] school districts and county offices to provide full and formal due process procedures and hearings to pupils and parents regarding the special education assessment, placement and the appropriate education of the child." Santa Barbara asserted that state requirements exceeded those of federal law as reflected in section 504 of the Rehabilitation Act of 1973 (29 U.S.C. § 794). Santa [\*\*553] Barbara's initial claim was for \$ 10,500 in state-mandated costs for the 1979-1980 fiscal year.

1 Section 794 of title 29 of the United States Code will of necessity play an important part in our discussion of the issues presented in this case.

That provision was enacted as section 504 of the Rehabilitation Act of 1973. (Pub.L. No. 93-112, tit. V, § 504 (Sept. 26, 1973) 87 Stat. 394.) It has been amended several times. (Pub.L. No. 95-602, tit. I, § 119, '122(d)(2) (Nov. 6, 1978) 92 Stat. 2982, 2987 [Rehabilitation, Comprehensive Services, and Developmental Disabilities Act of 1978]; Pub.L. No. 99- 506, tit. I, § 103(d)(2)(B), tit. X, § 1002(e)(4) (Oct. 21, 1986) 100 Stat. 1810, 1844; Pub.L. No. 100-259, § 4 (Mar. 22, 1988) 102 Stat. 29; Pub.L. No. 100-630, tit. II, § 206(d) (Nov. 7, 1988) 102 Stat. 3312.) The decisional authorities universally refer to the statute as "section 504." We will adhere to this nomenclature and subsequent references to section 504 will refer to title 29, United States Code, section 794.

[\*\*\*12] During the administrative proceedings Santa Barbara amended its claim to reflect the following state-mandated activities alleged to be in excess of federal requirements: (1) the extension of eligibility to children younger and older than required by federal law; (2) the establishment of procedures to search for and identify children with special needs; (3) assessment and evaluation; (4) the preparation of "Individual Education Plans" (IEP's); (5) due process hearings in placement determinations; (6) substitute teachers; and (7) staff development programs. Santa Barbara was claiming reimbursement in excess of \$ 520,000 for the cost of these services during the 1979- 1980 fiscal year.

[\*1575] Also, during the administrative proceedings the focus of federally mandated requirements shifted from section 504 of the Rehabilitation Act to federal Public Law No. 94-142, which amended the Education of the Handicapped Act. (20 U.S.C. § 1401 et seq.)<sup>2</sup>

2 The Education of the Handicapped Act was enacted in 1970. (Pub.L. No. 91-230, tit. VI (Apr. 13, 1970) 84 Stat. 175.) It has been amended many times. The amendment of primary interest here was enacted as the Education for All Handicapped Children Act of 1975. (Pub.L. No. 94-142 (Nov. 29, 1975) 89 Stat. 774.) The 1975 legislation significantly amended the Education of the Handicapped Act, but did not change its short title. The Education of the Handicapped Act has now been renamed the Individuals with Disabilities Education Act. (Pub.L. No. 101-476, tit. IX, § 901(b)(21) (Oct. 30, 1990) 104 Stat. 1143; Pub.L. No. 101-476, tit. IX, § 901b; Pub.L. No. 102-119, § 25(b) (Oct. 7, 1991) 105 Stat. 607.) Since at all times relevant here the federal act was known as the Education of the Handicapped Act, we will adhere to that nomenclature.

[\*\*\*13] The Board of Control adopted a decision denying Santa Barbara's claim. The board concluded that the Education of the Handicapped Act resulted in costs mandated by the federal government, that state special education requirements exceed those of federal law, but that "the resulting mandate is not reimbursable because the Legislature already provides funding for all Special Education Services through an appropriation in the annual Budget Act."

Santa Barbara sought judicial review by petition for a writ of administrative mandate. The superior court found the administrative record and the Board of Control's findings to be inadequate. Judgment was rendered requiring the Board of Control to set aside its decision and to rehear the matter to establish a proper record, including findings. That judgment was not appealed.

On October 30, 1981, Riverside filed a test claim for reimbursement of \$ 474,477 in special education costs incurred in the 1980-1981 fiscal year. Riverside alleged that the costs were state mandated by chapter 797 of Statutes 1980. The basis of Riverside's claim was Education Code section 56760, a part of the state special education funding formula which, according [\*\*\*14] to Riverside, "mandates a 10%% cap on ratio of students served by special education and within that 10%% mandates the ratio of students to be served by certain services." Riverside explained that chapter 797 of Statutes 1980 was enacted as urgency legislation effective July 28, 1980, and that at that time it was already "locked into" providing special education services to more than 13 percent of its students in accordance with prior state law and funding formulae.<sup>3</sup>

3 The 1980 legislation required that a local agency adopt an annual budget plan for special education services. (Ed. Code, § 56200.) Education Code section 56760 provided that in the local budget plan the ratio of students to be served should not exceed 10 percent of total enrollment. However, those proportions could be waived for undue hardship by the Superintendent of Public Instruction. (Ed. Code, § 56760, 56761.) In addition, the 1980 legislation included provisions for a gradual transition to the new requirements. (Ed. Code, § 56195 et seq.) The transitional provisions included a guarantee of state funding for 1980-1981 at prior student levels with an inflationary adjustment of 9 percent. (Ed. Code, § 56195.8.) The record indicates that Riverside applied for a waiver of the requirements of Education Code section 56760, but that the waiver request was denied due to a shortage of state funding. It also appears that Riverside did not receive all of the 109 percent funding guarantee under

11 Cal. App. 4th 1564, \*; 15 Cal. Rptr. 2d 547, \*\*;  
1992 Cal. App. LEXIS 1498, \*\*\*; 93 Cal. Daily Op. Service 17

Education Code section 56195.8. In light of the current posture of this appeal we need not and do not consider whether the failure of the state to appropriate sufficient funds to satisfy its obligations under the 1980 legislation can be addressed in a proceeding for the reimbursement of state-mandated costs or must be addressed in some other manner.

[\*\*15] [\*\*554] The Riverside claim, like Santa Barbara's, evolved over time with increases in the amount of reimbursement sought. Eventually the Board of [\*1576] Control denied Riverside's claim for the same reasons the Santa Barbara claim was denied. Riverside sought review by petition for a writ of administrative mandate. In its decision the superior court accepted the board's conclusions that the Education of the Handicapped Act constitutes a federal mandate and that state requirements exceed those of the federal mandate. However, the court disagreed with the board that any appropriation in the state act necessarily satisfies the state's subvention obligation. The court concluded that the Board of Control had failed to consider whether the state had fully reimbursed local districts for the state-mandated costs which were in excess of the federal mandate, and the matter was remanded for consideration of that question. That judgment was not appealed.

On return to the Board of Control, the Santa Barbara claim and the Riverside claim were consolidated. The Board of Control adopted a decision holding that all special education costs under Statutes 1977, chapter 1247, and Statutes 1980, chapter [\*\*16] 797, are state-mandated costs subject to subvention. The board reasoned that the federal Education of the Handicapped Act is a discretionary program and that section 504 of the Rehabilitation Act does not require school districts to implement any programs in response to federal law, and therefore special education programs are optional in the absence of a state mandate.

The claimants were directed to draft, and the Board of Control adopted, parameters and guidelines for reimbursement of special education costs. The board submitted a report to the Legislature estimating that the total statewide cost of reimbursement for the 1980-1981 through 1985-1986 fiscal years would be in excess of \$ 2 billion. Riverside's claim for reimbursement for the 1980-1981 fiscal year was now in excess of \$ 7 million. Proposed legislation which would have appropriated funds for reimbursement of special education costs during the 1980-1981 through 1985- 1986 fiscal years failed to pass in the Legislature. (Sen. Bill No. 1082 (1985-1986 Reg. Sess.)) A separate bill which would have appropriated funds to reimburse Riverside [\*1577] for its 1980-1981 claim also failed to pass. (Sen. Bill No. 238 [\*\*17] (1987-1988 Reg. Sess.))

At this point Huff, as Director of the Department of Finance, brought an action in administrative mandate seeking to set aside the decision of the Board of Control. Riverside cross-petitioned for a writ of mandate directing the state, the Controller and the Treasurer to issue a warrant in payment of its claim for the 1980-1981 fiscal year.

The superior court concluded that the Board of Control did not apply the appropriate standard in determining whether any portion of local special education costs are incurred pursuant to a federal mandate. The court found that the definition of a federal mandate set forth by the Supreme Court in *City of Sacramento v. State of California*, supra, 50 Cal.3d 51, "marked a departure from the narrower 'no discretion' test" of this court's earlier decision in *City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182 [203 Cal.Rptr. 258]. It further found that the standard set forth in the high court's decision in *City of Sacramento* "is to be applied retroactively." Accordingly, the superior court issued a [\*\*18] peremptory writ of mandate directing the Commission on State Mandates to set aside [\*\*555] the decision of the Board of Control, to reconsider the claims in light of the decision in *City of Sacramento v. State of California*, supra, 50 Cal.3d 51, and "to ascertain whether certain costs arising from Chapter 797/80 and Chapter 1247/77 are federally mandated, and if so, the extent, if any, to which the state-mandated costs exceed the federal mandate." Riverside's cross-petition for a writ of mandate was denied. This appeal followed.

### III. PRINCIPLES OF SUBVENTION

(1) "Subvention" generally means a grant of financial aid or assistance, or a subsidy. (See Webster's Third New Internat. Dict. (1971) p. 2281.) As used in connection with state-mandated costs, the basic legal requirements of subvention can be easily stated; it is in the application of the rule that difficulties arise.

[HN1]Essentially, the constitutional rule of state subvention provides that the state is required to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. (*County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56 [233 Cal.Rptr. 38, 729 P.2d 202].) [\*\*19] This does not mean that the state is required to reimburse local agencies for any incidental cost that may result from the enactment of a state law; rather, the subvention requirement is restricted to governmental services which the local agency is required by [\*1578] state law to provide to its residents. (*City of Sacramento v. State of California*, supra, 50 Cal.3d at p. 70.) The subvention requirement is intended to prevent the state from transferring the costs of government from itself to local agen-

11 Cal. App. 4th 1564, \*; 15 Cal. Rptr. 2d 547, \*\*;  
1992 Cal. App. LEXIS 1498, \*\*\*; 93 Cal. Daily Op. Service 17

cies. (*Id.* at p. 68.) Reimbursement is required when the state "freely chooses to impose on local agencies any peculiarly 'governmental' cost which they were not previously required to absorb." (*Id.* at p. 70, italics in original.)

The requirement of subvention for state-mandated costs had its genesis in the "Property Tax Relief Act of 1972" which is also known as "SB 90" (Senate Bill No. 90). (*City of Sacramento v. State of California*, *supra*, 156 Cal.App.3d at p. 188.) That act established limitations upon the power of local governments to levy taxes and concomitantly prevented [\*\*\*20] the state from imposing the cost of new programs or higher levels of service upon local governments. (*Ibid.*) The Legislature declared: "It is the intent in establishing the tax rate limits in this chapter to establish limits that will be flexible enough to allow local governments to continue to provide existing programs, that will be firm enough to insure that the property tax relief provided by the Legislature will be long lasting and that will afford the voters in each local government jurisdiction a more active role in the fiscal affairs of such jurisdictions." (Rev. & Tax. Code, former § 2162, Stats. 1972, ch. 1406, § 14.7, p. 2961.)<sup>4</sup> The act provided that the state would pay each county, city and county, city, and special district the sums which were sufficient to cover the total cost of new state-mandated costs. (See Rev. & Tax. Code, former § 2164.3, Stats. 1972, ch. 1406, § 14.7, pp. 2962-2963.) New state-mandated costs would arise from legislative action or executive regulation after January 1, 1973, which mandated a new program or higher level of service under an existing mandated program. (*Ibid.*)

4 In addition to requiring subventions for new state programs and higher levels of service, Senate Bill No. 90 required the state to reimburse local governments for revenues lost by the repeal or reduction of property taxes on certain classes of property. In this connection the Legislature said: "It is the purpose of this part to provide property tax relief to the citizens of this state, as undue reliance on the property tax to finance various functions of government has resulted in serious detriment to one segment of the taxpaying public. The subventions from the State General Fund required under this part will serve to partially equalize tax burdens among all citizens, and the state as a whole will benefit." (*Gov. Code*, § 16101, Stats. 1972, ch. 1406, § 5, p. 2953.)

[\*\*\*21] (2) [\*\*556] (See fn. 5.) Senate Bill No. 90 did not specifically include school districts in the group of agencies entitled to reimbursement for state-mandated costs.<sup>5</sup> (Rev. & Tax. Code, former § 2164.3, Stats. 1972, ch. 1406, § 14.7, pp. 2962-2963.) In

fact, at that time methods of financing education in this state were [\*1579] undergoing fundamental reformation as the result of the litigation in *Serrano v. Priest* (1971) 5 Cal.3d 584 [96 Cal.Rptr. 601, 487 P.2d 1241, 41 A.L.R.3d 1187]. At the time of the *Serrano* decision local property taxes were the primary source of school revenue. (*Id.* at p. 592.) In *Serrano*, the California Supreme Court held that education is a fundamental interest, that wealth is a suspect classification, and that an educational system which produces disparities of opportunity based upon district wealth would violate principles of equal protection. (*Id.* at pp. 614-615, 619.) A major portion of Senate Bill No. 90 constituted new formulae for state and local contributions to education in a legislative response to the decision in *Serrano*. (Stats. 1972, ch. 1406, § 1.5-2.74, pp. 2931-2953. See *Serrano v. Priest* (1976) 18 Cal.3d 728, 736-737 [135 Cal.Rptr. 345, 557 P.2d 929].) [\*\*\*22] <sup>6</sup>

5 A school district's relationship to the state is different from that of local governmental entities such as cities, counties, and special districts. Education and the operation of the public school system are matters of statewide rather than local or municipal concern. (*California Teachers Assn. v. Huff* (1992) 5 Cal.App.4th 1513, 1524 [7 Cal.Rptr.2d 699].) Local school districts are agencies of the state and have been described as quasi-municipal corporations. (*Ibid.*) They are not distinct and independent bodies politic. (*Ibid.*) The Legislature's power over the public school system has been described as exclusive, plenary, absolute, entire, and comprehensive, subject only to constitutional constraints. (*Ibid.*) The Legislature has the power to create, abolish, divide, merge, or alter the boundaries of school districts. (*Id.* at p. 1525.) The state is the beneficial owner of all school properties and local districts hold title as trustee for the state. (*Ibid.*) School moneys belong to the state and the apportionment of funds to a school district does not give the district a proprietary interest in the funds. (*Ibid.*) While the Legislature has chosen to encourage local responsibility for control of public education through local school districts, that is a matter of legislative choice rather than constitutional compulsion and the authority that the Legislature has given to local districts remains subject to the ultimate and nondelegable responsibility of the Legislature. (*Id.* at pp. 1523-1524.)

[\*\*\*23]

6 After the first *Serrano* decision, the United States Supreme Court held that equal protection does not require dollar-for-dollar equality between school districts. (*San Antonio School*

11 Cal. App. 4th 1564, \*; 15 Cal. Rptr. 2d 547, \*\*;  
1992 Cal. App. LEXIS 1498, \*\*\*; 93 Cal. Daily Op. Service 17

District v. Rodriguez (1973) 411 U.S. 1, 33-34 48-56, 61-62 [36 L.Ed.2d 16, 42-43, 51-56, 59-60, 93 S.Ct. 1278].) In the second *Serrano* decision, the California Supreme Court adhered to the first *Serrano* decision on independent state grounds. (*Serrano v. Priest, supra*, 18 Cal.3d at pp. 761-766.) The court concluded that Senate Bill No. 90 and Assembly Bill No. 1267, enacted the following year (Stats. 1973, ch. 208, p. 529 et seq.), did not satisfy equal protection principles. (*Serrano v. Priest, supra*, 18 Cal.3d at pp. 776-777.) Additional complications in educational financing arose as the result of the enactment of article XIII A of the California Constitution at the June 1978 Primary Election (Proposition 13), which limited the taxes which can be imposed on real property and forced the state to assume greater responsibility for financing education (see Ed. Code, § 41060), and the enactment of Propositions 98 and 111 in 1988 and 1990, respectively, which provide formulae for minimum state funding for education. (See generally *California Teachers Assn. v. Huff, supra*, 5 Cal.App.4th 1513.)

[\*\*\*24] The provisions of Senate Bill No. 90 were amended and refined in legislation enacted the following year. (Stats. 1973, ch. 358.) Revenue and Taxation Code section 2231, subdivision (a), was enacted to require the state to reimburse local agencies, including school districts, for the full costs of new programs or increased levels of service mandated by the Legislature after January 1, 1973. Local agencies except school districts were also entitled to reimbursement for costs mandated by executive regulation after January 1, 1973. (Rev. & Tax. Code, § 2231, subd. (d), added by Stats. 1973, ch. 358, § 3, p. 783 [\*1580] and repealed by Stats. 1986, ch. 879, § 23, p. 3045.) In subsequent years legislation was enacted to entitle school districts to subvention for state-mandated costs imposed by legislative acts after January 1, 1973, or by executive regulation after January 1, 1978. (Rev. & Tax. Code, former § 2207.5, added by Stats. 1977, ch. 1135, § 5, p. 3646 and amended by Stats. 1980, ch. 1256, § 5, pp. 4248-4249.)

[\*\*557] In the 1973 legislation, Revenue and Taxation Code section 2271 was enacted to provide, among other things: "A local agency may levy, or have levied on its behalf, [\*\*\*25] a rate in addition to the maximum property tax rate established pursuant to this chapter (commencing with Section 2201) to pay costs mandated by the federal government or costs mandated by the courts or costs mandated by initiative enactment, which are not funded by federal or state government." (3) In this respect costs mandated by the federal government are exempt from an agency's taxing and spending limits.

(*City of Sacramento v. State of California, supra*, 50 Cal.3d at p. 71, fn. 17.)

At the November 6, 1979, General Election, the voters added article XIII B to the state Constitution by enacting Proposition 4. That article imposes spending limits on the state and all local governments. For purposes of article XIII B the term "local government" includes school districts. (Cal. Const., art. XIII B, § 8, subd. (d).) The measure accomplishes its purpose by limiting a governmental entity's annual appropriations to the prior year's appropriations limit adjusted for changes in the cost of living and population growth, except as otherwise provided in the article. (Cal. Const., art. XIII B, § 1.) ' The appropriations subject [\*\*\*26] to limitation do not include, among other things: "Appropriations required to comply with mandates of the courts or the federal government which, without discretion, require an expenditure for additional services or which unavoidably make the provision of existing services more costly." (Cal. Const., art. XIII B, § 9, subd. (b).)

7 As it was originally enacted, article XIII B required that all governmental entities return revenues in excess of their appropriations limits to the taxpayers through tax rate or fee schedule revisions. In Proposition 98, adopted at the November 1988 General Election, article XIII B was amended to provide that half of state excess revenues would be transferred to the state school fund for the support of school districts and community college districts. (See Cal. Const., art. XVI, § 8.5; *California Teachers Assn. v. Huff, supra*, 5 Cal.App.4th 1513.)

Like its statutory predecessor, the constitutional initiative measure includes a provision [\*\*\*27] designed "to preclude the state from shifting to local agencies the financial responsibility for providing public services in view of these restrictions on the taxing and spending power of the local entities." (*Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 835-836 [244 Cal.Rptr. 677, 750 P.2d 318].) Section 6 of article XIII B of the state Constitution provides: "Whenever the Legislature or any State agency mandates a new program or higher level of service on any local government, the [\*1581] State shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [P] (a) Legislative mandates requested by the local agency affected; [P] (b) Legislation defining a new crime or changing an existing definition of a crime; or [P] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or

regulations initially implementing legislation enacted prior to January 1, 1975."

Although article XIII B of the state Constitution [\*\*\*28] requires subvention for state mandates enacted after January 1, 1975, the article had an effective date of July 1, 1980. (Cal. Const., art. XIII B, § 10.) (4) Accordingly, under the constitutional provision, a local agency may seek subvention for costs imposed by legislation after January 1, 1975, but reimbursement is limited to costs incurred after July 1, 1980. (*City of Sacramento v. State of California*, supra, 156 Cal.App.3d at pp. 190-193.) Reimbursement for costs incurred before July 1, 1980, must be obtained, if at all, under controlling statutory law. (See 68 Ops. Cal. Atty. Gen. 244 (1985).)

The constitutional subvention provision, like the statutory scheme before it, requires state reimbursement whenever "the Legislature or any State agency" mandates a new program or higher level of service. (Cal. Const., art. XIII B, § 6.) Accordingly, it has been held that state [\*558] subvention is not required when the federal government imposes new costs on local governments. (*City of Sacramento v. State of California*, supra, 156 Cal.App.3d at p. 188; see also *Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521, 543 [234 Cal.Rptr. 795].) [\*\*\*29] In our *City of Sacramento* decision this court held that a federal program in which the state participates is not a federal mandate, regardless of the incentives for participation, unless the program leaves state or local government with no discretion as to alternatives. (156 Cal.App.3d at p. 198.)

In its *City of Sacramento* opinion, \* the California Supreme Court rejected this court's earlier formulation. In doing so the high court noted that the vast bulk of cost-producing federal influence on state and local government is by inducement or incentive rather than direct compulsion. (50 Cal.3d at p. 73.) However, "certain regulatory standards imposed by the federal government [\*1582] under 'cooperative federalism' schemes are coercive on the states and localities in every practical sense." (*Id.* at pp. 73-74.) The test for determining whether there is a federal mandate is whether compliance with federal standards "is a matter of true choice," that is, whether participation in the federal program "is truly voluntary." (*Id.* at p. 76.) The court went on to say: "Given the variety [\*\*\*30] of cooperative federal-state-local programs, we here attempt no final test for 'mandatory' versus 'optional' compliance with federal law. A determination in each case must depend on such factors as the nature and purpose of the federal program; whether its design suggests an intent to coerce; when state and/or local participation began; the penalties, if any, assessed for withdrawal or refusal to participate or comply; and any other legal and practical consequences

of nonparticipation, noncompliance, or withdrawal." (*Ibid.*)

8 The Supreme Court's decision in *City of Sacramento* was not a result of direct review of this court's decision. The Supreme Court denied a petition for review of this court's *City of Sacramento* decision. After the Board of Control had adopted parameters and guidelines for reimbursement under this court's decision, the Legislature failed to appropriate the funds necessary for such reimbursement. The litigation which resulted in the Supreme Court's *City of Sacramento* decision was commenced as an action to enforce the result on remand from this court's *City of Sacramento* decision. (See 50 Cal.3d at p. 60.)

#### [\*\*\*31] IV. SPECIAL EDUCATION

The issues in this case cannot be resolved by consideration of a particular federal act in isolation. Rather, reference must be made to the historical and legal setting of which the particular act is a part. Our consideration begins in the early 1970's.

In considering the 1975 amendments to the Education of the Handicapped Act, Congress referred to a series of "landmark court cases" emanating from 36 jurisdictions which had established the right to an equal educational opportunity for handicapped children. (See *Smith v. Robinson* (1984) 468 U.S. 992, 1010 [82 L.Ed.2d 746, 763, 104 S.Ct. 3457].) Two federal district court cases, *Pennsylvania Ass'n. Ret'd Child. v. Commonwealth of Pa.* (E.D.Pa. 1972) 343 F.Supp. 279 (see also *Pennsylvania Ass'n. Retard. Child. v. Commonwealth of Pa.* (E.D.Pa. 1971) 334 F.Supp. 1257), and *Mills v. Board of Education of District of Columbia* (D.D.C. 1972) 348 F.Supp. 866, were the most prominent of these judicial decisions. (See *Hendrick Hudson Dist. Bd. of Ed. v. Rowley* (1982) 458 U.S. 176, 180, fn. 2 [73 L.Ed.2d 690, 695, 102 S.Ct. 3034].) [\*\*\*32]

In the Pennsylvania case, an association and the parents of certain retarded children brought a class action against the commonwealth and local school districts in the commonwealth, challenging the exclusion of retarded children from programs of education and training in the public schools. (*Pennsylvania Ass'n. Ret'd Child. v. Commonwealth of Pa.*, supra, 343 F.Supp. at p. 282.) The matter was assigned to a three-judge panel which heard evidence on the plaintiffs' due process and equal protection claims. (*Id.* at p. 285.) The parties [\*\*\*559] then agreed to resolve the litigation by means of a consent [\*1583] judgment. (*Ibid.*) The consent agreement required the defendants to locate and evaluate all children in need of special education services, to reevaluate placement decisions periodically, and to accord due

11 Cal. App. 4th 1564, \*; 15 Cal. Rptr. 2d 547, \*\*;  
1992 Cal. App. LEXIS 1498, \*\*\*, 93 Cal. Daily Op. Service 17

process hearings to parents who are dissatisfied with placement decisions. (*Id.* at pp. 303-306.) It required the defendants to provide "a free public program of education and training appropriate to the child's capacity." (*Id.* at p. 285, italics deleted.)

In view of the consent agreement the district court was not required to resolve the plaintiffs' equal [\*\*\*33] protection and due process contentions. Rather, it was sufficient for the court to find that the suit was not collusive and that the plaintiffs' claims were colorable. The court found: "Far from an indication of collusion, however, the Commonwealth's willingness to settle this dispute reflects an intelligent response to overwhelming evidence against [its] position." (*Pennsylvania Ass'n. Ret'd. Child. v. Commonwealth of Pa.*, *supra*, 343 F.Supp. at p. 291.) The court said that it was convinced the due process and equal protection claims were colorable. (*Id.* at pp. 295-296.)

In the *Mills* case, an action was brought on behalf of a number of school-age children with exceptional needs who were excluded from the Washington, D.C., public school system. (*Mills v. Board of Education of District of Columbia*, *supra*, 348 F.Supp. at p. 868.) The district court concluded that equal protection entitled the children to a public-supported education appropriate to their needs and that due process required a hearing with respect to classification decisions. (*Id.* at pp. 874-875.) The court said: "If sufficient funds are not available to finance [\*\*\*34] all of the services and programs that are needed and desirable in the system then the available funds must be expended equitably in such manner that no child is entirely excluded from a publicly supported education consistent with his needs and ability to benefit therefrom. The inadequacies of the District of Columbia Public School System whether occasioned by insufficient funding or administrative inefficiency, certainly cannot be permitted to bear more heavily on the 'exceptional' or handicapped child than on the normal child." (*Id.* at p. 876.)

In the usual course of events, the development of principles of equal protection and due process as applied to special education, which had just commenced in the early 1970's with the authorities represented by the *Pennsylvania* and *Mills* cases, would have been fully expounded through appellate processes. However, the necessity of judicial development was truncated by congressional action. In the Rehabilitation Act of 1973, section 504, Congress provided: "No otherwise qualified handicapped individual in the United States, as defined in section 706(7) [now 706(8)] of this title, [\*1584] shall, solely by reason of his handicap, [\*\*\*35] be excluded from the participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance ...." (29

U.S.C. § 794, Pub.L. No. 93- 112, tit. V, § 504 (Sept. 26, 1973) 87 Stat. 394.)<sup>9</sup> Since federal assistance to education is pervasive (see, e.g., Ed. Code, § 12000- 12405, 49540 et seq., 92140 et seq.), section 504 was applicable to virtually all public educational programs in this and other states.

9 In section 119 of the Rehabilitation, Comprehensive Services, and Developmental Disabilities Act of 1978, the application of section 504 was extended to federal executive agencies and the United States Postal Service. (Pub.L. No. 95-602, tit. I, § 119 (Nov. 6, 1978) 92 Stat. 2982.) The section is now subdivided and includes subdivision (b), which provides that the section applies to all of the operations of a state or local governmental agency, including local educational agencies, if the agency is extended federal funding for any part of its operations. (29 U.S.C. § 794.) This latter amendment was in response to judicial decisions which had limited the application of section 504 to the particular activity for which federal funding is received. (See *Consolidated Rail Corporation v. Darrone* (1984) 465 U.S. 624, 635-636 [79 L.Ed.2d 568, 577-578, 104 S.Ct. 1248].)

[\*\*\*36] The Department of Health, Education and Welfare (HEW) promulgated regulations to ensure compliance with section 504 [\*\*560] by educational agencies.<sup>10</sup> The regulations required local educational agencies to locate and evaluate handicapped children in order to provide appropriate educational opportunities and to provide administrative hearing procedures in order to resolve disputes. The federal courts concluded that section 504 was essentially a codification of the equal protection rights of citizens with disabilities. (See *Halderman v. Pennhurst State School & Hospital* (E.D.Pa. 1978) 446 F.Supp. 1295, 1323.) Courts also held that section 504 embraced a private cause of action to enforce its requirements. (*Sherry v. New York State Ed. Dept.* (W.D.N.Y. 1979) 479 F.Supp. 1328, 1334; *Doe v. Marshall* (S.D.Tex. 1978) 459 F.Supp. 1190, 1192.) It was further held that section 504 imposed upon school districts and other public educational agencies "the duty of analyzing individually the needs of each handicapped student and devising a program which will enable each individual handicapped student to receive [\*\*\*37] an appropriate, free public education. The failure to perform this analysis and structure a program suited to the needs of each handicapped child, constitutes discrimination against that child and a failure to provide an appropriate, free [\*1585] public education for the handicapped child." (*Doe v. Marshall*, *supra*, 459 F.Supp. at p. 1191. See also *David H. v. Spring Branch Independent School Dist.* (S.D.Tex. 1983) 569 F.Supp. 1324, 1334; *Hal-*

derman v. Pennhurst State School & Hospital, supra, 446 F.Supp. at p. 1323.)

10 HEW was later dissolved and its responsibilities are now shared by the federal Department of Education and the Department of Health and Human Services. The promulgation of regulations to enforce section 504 had a somewhat checkered history. Initially HEW determined that Congress did not intend to require it to promulgate regulations. The Senate Public Welfare Committee then declared that regulations were intended. By executive order and by judicial decree in Cherry v. Mathews (D.D.C. 1976) 419 F.Supp. 922, HEW was required to promulgate regulations. The ensuing regulations were embodied in title 45 Code of Federal Regulations part 84, and are now located in title 34 Code of Federal Regulations part 104. (See Southeastern Community College v. Davis (1979) 442 U.S. 397, 404, fn. 4 [60 L.Ed.2d 980, 987, 99 S.Ct. 2361]; N. M. Ass'n for Retarded Citizens v. State of N. M. (10th Cir. 1982) 678 F.2d 847, 852.)

[\*\*\*38] (5) Throughout these proceedings Riverside, relying upon the decision in Southeastern Community College v. Davis, supra, 442 U.S. 397 [60 L.Ed.2d 980], has contended that section 504 cannot be considered a federal mandate because it does not obligate local school districts to take any action to accommodate the needs of handicapped children so long as they are not excluded from school. That assertion is not correct.

In the Southeastern Community College case a prospective student with a serious hearing disability sought to be admitted to a postsecondary educational program to be trained as a registered nurse. As a result of her disability the student could not have completed the academic requirements of the program and could not have attended patients without full-time personal supervision. She sought to require the school to waive the academic requirements, including an essential clinical program, which she could not complete and to otherwise provide full-time personal supervision. That demand, the Supreme Court held, was beyond the scope of section 504, which did not require the school to modify its program affirmatively [\*\*\*39] and substantially. (442 U.S. at pp. 409-410 [60 L.Ed.2d at pp. 990-991].)

The Southeastern Community College decision is inapposite. States typically do not guarantee their citizens that they will be admitted to, and allowed to complete, specialized postsecondary educational programs. State educational institutions often impose stringent admittance and completion requirements for such programs in higher education. In the Southeastern Community College case the Supreme Court simply held that an in-

stitution of higher education need not lower or effect substantial modifications of its standards in order to accommodate a handicapped person. (442 U.S. at p. 413 [60 L.Ed.2d at pp. 992-993].) The court did not hold that a primary or secondary [\*\*561] educational agency need do nothing to accommodate the needs of handicapped children. (See Alexander v. Choate (1985) 469 U.S. 287, 301 [83 L.Ed.2d 661, 672, 105 S.Ct. 712].)

[HN2]States typically do purport to guarantee all of their children the opportunity for a basic [\*\*\*40] education. In fact, in this state basic education is regarded as a fundamental right. (Serrano v. Priest, supra, 18 Cal.3d at pp. 765-766.) All basic educational programs are essentially affirmative action activities in the sense that educational agencies are required to evaluate and accommodate [\*1586] the educational needs of the children in their districts. Section 504 would not appear to permit local agencies to accommodate the educational needs of some children while ignoring the needs of others due to their handicapped condition. (Compare Lau v. Nichols (1974) 414 U.S. 563 [39 L.Ed.2d 1, 94 S.Ct. 786], which required the San Francisco Unified School District to take affirmative steps to accommodate the needs of non-English speaking students under section 601 of the Civil Rights Act of 1964.)

Riverside's view of section 504 is inconsistent with congressional intent in enacting it. The congressional record makes it clear that section 504 was perceived to be necessary not to combat affirmative animus but to cure society's benign neglect of the handicapped. [\*\*\*41] The record is replete with references to discrimination in the form of the denial of special educational assistance to handicapped children. In Alexander v. Choate, supra, 469 U.S. at pages 295 to 297 [83 L.Ed.2d at pages 668-669], the Supreme Court took note of these comments in concluding that a violation of section 504 need not be proven by evidence of purposeful or intentional discrimination. With respect to the Southeastern Community College v. Davis, supra, 442 U.S. 397 case, the high court said: "The balance struck in Davis requires that an otherwise qualified handicapped individual must be provided with meaningful access to the benefit that the grantee offers. The benefit itself, of course, cannot be defined in a way that effectively denies otherwise qualified handicapped individuals the meaningful access to which they are entitled; to assure meaningful access, reasonable accommodations in the grantee's program or benefit may have to be made. ..." (Alexander v. Choate, supra, 469 U.S. at p. 301 [83 L.Ed.2d at p. 672], [\*\*\*42] fn. omitted.)

Federal appellate courts have rejected the argument that the Southeastern Community College case means that pursuant to section 504 local educational agencies need do nothing affirmative to accommodate the needs

11 Cal. App. 4th 1564, \*; 15 Cal. Rptr. 2d 547, \*\*;  
1992 Cal. App. LEXIS 1498, \*\*\*; 93 Cal. Daily Op. Service 17

of handicapped children. (*N. M. Ass'n for Retarded Citizens v. State of N. M.*, *supra*, 678 F.2d at pp. 852-853; *Tatro v. State of Texas* (5th Cir. 1980) 625 F.2d 557, 564 [63 A.L.R. Fed. 844].) "We are satisfied that section 504 does impose an obligation upon local school districts to accommodate the needs of handicapped children. However, as was the case with constitutional principles, full judicial development of section 504 as it relates to special education in elementary and secondary school districts was truncated by congressional action.

11 Following a remand and another decision by the Court of Appeals, the *Tatro* litigation, *supra*, eventually wound up in the Supreme Court. (*Irving Independent School Dist. v. Tatro* (1984) 468 U.S. 883 [82 L.Ed.2d 664, 104 S.Ct. 3371].) However, by that time the Education of the Handicapped Act had replaced section 504 as the means for vindicating the education rights of handicapped children and the litigation was resolved, favorably for the child, under that act.

[\*\*\*43] [\*1587] In 1974 Congress became dissatisfied with the progress under earlier efforts to stimulate the states to accommodate the educational needs of handicapped children. (*Hendrick Hudson Dist. Bd. of Ed. v. Rowley*, *supra*, 458 U.S. at p. 180 [73 L.Ed.2d at p. 695].) These earlier efforts had included a 1966 amendment to the Elementary and Secondary Education Act of 1965, and the 1970 version of the Education of the Handicapped Act. (*Ibid.*) The prior acts had been grant programs that did not contain specific guidelines for a state's use of grant funds. (*Ibid.*) In 1974 Congress greatly increased federal funding for education of the handicapped and simultaneously required recipient [\*\*562] states to adopt a goal of providing full educational opportunities to all handicapped children. ([73 L.Ed.2d at pp. 695-696].) The following year Congress amended the Education of the Handicapped Act by enacting the Education of All Handicapped Children Act of 1975. ([73 L.Ed.2d at p. 696].)

[HN3] Since the 1975 amendment, the Education [\*\*\*44] of the Handicapped Act has required recipient states to demonstrate a policy that assures all handicapped children the right to a free appropriate education. (20 U.S.C. § 1412(1).) (6) The act is not merely a funding statute; rather, it establishes an enforceable substantive right to a free appropriate public education in recipient states. (*Smith v. Robinson*, *supra*, 468 U.S. at p. 1010 [82 L.Ed.2d at p. 764].) To accomplish this purpose the act incorporates the major substantive and procedural requirements of the "right to education" cases which were so prominent in the congressional consideration of the measure. (*Hendrick Hudson Dist. Bd. of Ed. v. Rowley*, *supra*, 458 U.S. at p. 194 [73 L.Ed.2d at p.

704].) The substantive requirements of the act have been interpreted in a manner which is "strikingly similar" to the requirements of section 504 of the Rehabilitation Act of 1973. (*Smith v. Robinson*, *supra*, 468 U.S. at pp. 1016-1017 [82 L.Ed.2d at p. 768].) The Supreme [\*\*\*45] Court has noted that Congress intended the act to establish "a basic floor of opportunity that would bring into compliance all school districts with the constitutional right to equal protection with respect to handicapped children." (*Hendrick Hudson Dist. Bd. of Ed. v. Rowley*, *supra*, 458 U.S. at p. 200 [73 L.Ed.2d at p. 708] citing the House of Representatives Report.)<sup>12</sup>

12 Consistent with its "basic floor of opportunity" purpose, the act does not require local agencies to maximize the potential of each handicapped child commensurate with the opportunity provided nonhandicapped children. Rather, the act requires that handicapped children be accorded meaningful access to a free public education, which means access that is sufficient to confer some educational benefit. (*Ibid.*)

It is demonstrably manifest that in the view of Congress the substantive requirements of the 1975 amendment to the Education of the Handicapped Act were commensurate with the [\*\*\*46] constitutional obligations of state and local [\*1588] educational agencies. Congress found that "State and local educational agencies have a responsibility to provide education for all handicapped children, but present financial resources are inadequate to meet the special educational needs of handicapped children;" and "it is in the national interest that the Federal Government assist State and local efforts to provide programs to meet the educational needs of handicapped children in order to assure equal protection of the law." (20 U.S.C. former § 1400(b)(8) & (9).)<sup>13</sup>

13 That Congress intended to enforce the Fourteenth Amendment to the United States Constitution in enacting the Education of the Handicapped Act has since been made clear. In *Dellmuth v. Muth* (1989) 491 U.S. 223 at pages 231-232 [105 L.Ed.2d 181, 189-191, 109 S.Ct. 2397], and the court noted that Congress has the power under section 5 of the Fourteenth Amendment to abrogate a state's Eleventh Amendment immunity from suit in federal court, but concluded that the Education of the Handicapped Act did not clearly evince such a congressional intent. In 1990 Congress responded by expressly abrogating state sovereign immunity under the act. (20 U.S.C. § 1403.)

[\*\*\*47] It is also apparent that Congress intended the act to achieve nationwide application: "It is the pur-

11 Cal. App. 4th 1564, \*; 15 Cal. Rptr. 2d 547, \*\*;  
1992 Cal. App. LEXIS 1498, \*\*\*; 93 Cal. Daily Op. Service 17

pose of this chapter to assure that all handicapped children have available to them, within the time periods specified in section 1412(2)(B) of this title, a free appropriate public education which emphasizes special education and related services designed to meet their unique needs, to assure that the rights of handicapped children and their parents or guardians are protected, to assist States and localities to provide for the education of all handicapped children, and to assess and assure the effectiveness of efforts to educate handicapped children." (20 U.S.C. former § 1400(c).)

[\*\*563] In order to gain state and local acceptance of its substantive provisions, the Education of the Handicapped Act employs a "cooperative federalism" scheme, which has also been referred to as the "carrot and stick" approach. (See City of Sacramento v. State of California, *supra*, 50 Cal.3d at pp. 73-74; City of Sacramento v. State of California, *supra*, 156 Cal.App.3d at p. 195.) [\*\*\*48] As an incentive Congress made substantial federal financial assistance available to states and local educational agencies that would agree to adhere to the substantive and procedural terms of the act. (20 U.S.C. § 1411, 1412.) For example, the administrative record indicates that for fiscal year 1979-1980, the base year for Santa Barbara's claim, California received \$ 71.2 million in federal assistance, and during fiscal year 1980-1981, the base year for Riverside's claim, California received \$ 79.7 million. We cannot say that such assistance on an ongoing basis is trivial or insubstantial.

Contrary to Riverside's argument, [HN4] federal financial assistance was not the only incentive for a state to comply with the Education of the Handicapped Act. (7) Congress intended the act to serve as a means by which state and [\*1589] local educational agencies could fulfill their obligations under the equal protection and due process provisions of the Constitution and under section 504 of the Rehabilitation Act of 1973. Accordingly, where it is applicable the act supersedes claims under the Civil Rights Act (42 U.S.C. § 1983) [\*\*\*49] and section 504 of the Rehabilitation Act of 1973, and the administrative remedies provided by the act constitute the exclusive remedy of handicapped children and their parents or other representatives. (Smith v. Robinson, *supra*, 468 U.S. at pp. 1009, 1013, 1019 [82 L.Ed.2d at pp. 763, 766, 769].)<sup>14</sup>

14 In Smith v. Robinson, *supra*, the court concluded that since the Education of the Handicapped Act did not include a provision for attorney fees, a successful complainant was not entitled to an award of such fees even though such fees would have been available in litigation under section 504 of the Rehabilitation Act of 1973 or section 1983 of the Civil Rights Act. Congress

reacted by adding a provision for attorney fees to the Education of the Handicapped Act. (20 U.S.C. § 1415(e)(4)(B).)

[HN5] As a result of the exclusive nature of the Education of the Handicapped [\*\*\*50] Act, dissatisfied parties in recipient states must exhaust their administrative remedies under the act before resorting to judicial intervention. (Smith v. Robinson, *supra*, 468 U.S. at p. 1011 [82 L.Ed.2d at p. 764].) This gives local agencies the first opportunity and the primary authority to determine appropriate placement and to resolve disputes. (*Ibid.*) If a party is dissatisfied with the final result of the administrative process then he or she is entitled to seek judicial review in a state or federal court. (20 U.S.C. § 1415(e)(2).) In such a proceeding the court independently reviews the evidence but its role is restricted to that of review of the local decision and the court is not free to substitute its view of sound educational policy for that of the local authority. (Hendrick Hudson Dist. Bd. of Ed. v. Rowley, *supra*, 458 U.S. at pp. 206-207 [73 L.Ed.2d at p. 712].) And since the act provides the exclusive remedy for addressing a handicapped child's right to an appropriate education, where the act applies a party [\*\*\*51] cannot pursue a cause of action for constitutional violations, either directly or under the Civil Rights Act (42 U.S.C. § 1983), nor can a party proceed under section 504 of the Rehabilitation Act of 1973. (Smith v. Robinson, *supra*, 468 U.S. at pp. 1013, 1020 [82 L.Ed.2d at pp. 766, 770].)

Congress's intention to give the Education of the Handicapped Act nationwide application was successful. By the time of the decision in Hendrick Hudson Dist. Bd. of Ed. v. Rowley, *supra*, all states except New Mexico had become recipients under the act. (458 U.S. at pp. 183-184 [73 L.Ed.2d at p. 698].) It is important at this point in our discussion to consider the experience of New Mexico, both because the Board of Control relied upon that state's failure to adopt the Education [\*\*564] of the Handicapped Act as proof that the act is not federally mandated, and because it illustrates the consequences of a failure to adopt the act. [\*1590]

In N. M. Ass'n for Retarded Citizens v. State of N. M. (D.N.M. 1980) 495 F.Supp. 391, [\*\*\*52] a class action was brought against New Mexico and its local school districts based upon the alleged failure to provide a free appropriate public education to handicapped children. The plaintiffs' causes of action asserting constitutional violations were severed and stayed pending resolution of the federal statutory causes of action. (*Id.* at p. 393.) The district court concluded that the plaintiffs could not proceed with claims under the Education of the Handicapped Act because the state had not adopted that act and, without more, that was a governmental decision within the state's power. (*Id.* at p. 394.)<sup>15</sup> The court then

11 Cal. App. 4th 1564, \*; 15 Cal. Rptr. 2d 547, \*\*;  
1992 Cal. App. LEXIS 1498, \*\*\*; 93 Cal. Daily Op. Service 17

considered the cause of action under section 504 and found that both the state and its local school districts were in violation of that section by failing to provide a free appropriate education to handicapped children within their territories. (495 F.Supp. at pp. 398-399.)

15 The plaintiffs alleged that the failure of the state to apply for federal funds under the Education of the Handicapped Act was itself an act of discrimination. The district court did not express a view on that question, leaving it for resolution in connection with the constitutional causes of action. (Ibid.)

[\*\*\*53] After the district court entered an injunctive order designed to compel compliance with section 504, the matter was appealed. (*N. M. Ass'n for Retarded Citizens v. State of N. M.*, *supra*, 678 F.2d 847.) The court of appeals rejected the defendants' arguments that the plaintiffs were required to exhaust state administrative remedies before bringing their action and that the district court should have applied the doctrine of primary jurisdiction to defer ruling until the Office of Civil Rights could complete its investigation into the charges. (*Id.* at pp. 850-851.) The court also rejected the defendants' arguments that section 504 does not require them to take action to accommodate the needs of handicapped children and that proof of disparate treatment is essential to a violation of section 504. (678 F.2d at p. 854.) The court found sufficient evidence in the record to establish discrimination against handicapped children within the meaning of section 504. (678 F.2d at p. 854.) However, the reviewing court concluded that the district court had applied an erroneous standard in reaching its decision, [\*\*\*54] and the matter was remanded for further proceedings. (*Id.* at p. 855.)

On July 19, 1984, during the proceedings before the Board of Control, a representative of the Department of Education testified that New Mexico has since implemented a program of special education under the Education of the Handicapped Act. We have no doubt that after the litigation we have just recounted New Mexico saw the handwriting on the wall and realized that it could either establish a program of special education with federal financial assistance under the Education of the Handicapped Act, or be compelled through litigation to accommodate the educational needs of handicapped [\*1591] children without federal assistance and at the risk of losing other forms of federal financial aid. In any event, with the capitulation of New Mexico the Education of the Handicapped Act achieved the nationwide application intended by Congress. (20 U.S.C. § 1400(c).)

California's experience with special education in the time period leading up to the adoption of the Education of the Handicapped Act is examined as a case study in

Kirp et al., *Legal Reform of Special Education: Empirical* [\*\*\*55] *Studies and Procedural Proposals* (1974) 62 Cal.L.Rev. 40, at pages 96 through 115. As this study reflects, during this period the state and local school districts were struggling to create a program to accommodate adequately the educational needs of the handicapped. (*Id.* at pp. 97-110.) Individuals and organized groups, such as the California Association for the Retarded and the California Association for Neurologically Handicapped Children, were exerting pressure through political and other means at every level of the educational system. (Ibid.) Litigation was becoming so prevalent [\*\*565] that the authors noted: "Fear of litigation over classification practices, prompted by the increasing number of lawsuits, is pervasive in California." (*Id.* at p. 106, fn. 295.)<sup>16</sup>

16 Lawsuits primarily fell into three types: (1) Challenges to the adequacy or even lack of available programs and services to accommodate handicapped children. (*Id.* at p. 97, fns. 255, 257.) (2) Challenges to classification practices in general, such as an overtendency to classify minority or disadvantaged children as "retarded." (*Id.* at p. 98, fns. 259, 260.) (3) Challenges to individual classification decisions. (*Id.* at p. 106.) In the absence of administrative procedures for resolving classification disputes, dissatisfied parents were relegated to self-help remedies, such as pestering school authorities, or litigation. (*Ibid.*)

[\*\*\*56] In the early 1970's the state Department of Education began working with local school officials and university experts to design a "California Master Plan for Special Education." (Kirp et al., *Legal Reform of Special Education: Empirical Studies and Procedural Proposals*, *supra*, 62 Cal.L.Rev. at p. 111.) In 1974 the Legislature enacted legislation to give the Superintendent of Public Instruction the authority to implement and administer a pilot program pursuant to a master plan adopted by State Board of Education in order to determine whether services under such a plan would better meet the needs of children with exceptional needs. (Stats. 1974, ch. 1532, § 1, p. 3441, enacting Ed. Code, § 7001.) In 1977 the Legislature acted to further implement the master plan. (Stats. 1977, ch. 1247, especially § 10, pp. 4236-4237, enacting Ed. Code, § 56301.) In 1980 the Legislature enacted urgency legislation revising our special education laws with the express intent of complying with the 1975 amendments to the Education of the Handicapped Act. (Stats. 1980, ch. 797, especially § 9, pp. 2411-2412, enacting Ed. Code, § 56000.)

As this history demonstrates, in determining whether to [\*\*\*57] adopt the requirements of the Education of the Handicapped Act as amended in 1975, our [\*1592]

Legislature was faced with the following circumstances: (1) In the *Serrano* litigation, our Supreme Court had declared basic education to be a fundamental right and, without even considering special education in the equation, had found our educational system to be violative of equal protection principles. (2) Judicial decisions from other jurisdictions had established that handicapped children have an equal protection right to a free public education appropriate to their needs and due process rights with regard to placement decisions. (3) Congress had enacted section 504 of the Rehabilitation Act of 1973 to codify the equal protection rights of handicapped children in any school system that receives federal financial assistance and to threaten the state and local districts with the loss of all federal funds for failure to accommodate the needs of such children. (4) Parents and organized groups representing handicapped children were becoming increasingly litigious in their efforts to secure an appropriate education for handicapped children. (5) In enacting the 1975 amendments to [\*\*\*58] the Education of the Handicapped Act, Congress did not intend to require state and local educational agencies to do anything more than the Constitution already required of them. The act was intended to provide a means by which educational agencies could fulfill their constitutional responsibilities and to provide substantial federal financial assistance for states that would agree to do so.

(8a) Under these circumstances we have no doubt that enactment of the 1975 amendments to the Education of the Handicapped Act constituted a federal mandate under the criteria set forth in *City of Sacramento v. State of California, supra*, 50 Cal.3d at page 76. The remaining question is whether the state's participation in the federal program was a matter of "true choice" or was "truly voluntary." The alternatives were to participate in the federal program and obtain federal financial assistance and the procedural protections accorded by the act, or to decline to participate and face a barrage of litigation with no real defense and ultimately be compelled to accommodate the educational needs of handicapped children in any event. We conclude [\*\*\*59] that so far [\*\*566] as the state is concerned the Education of the Handicapped Act constitutes a federal mandate.

#### V. SUBVENTION FOR SPECIAL EDUCATION

Our conclusion that the Education of the Handicapped Act is a federal mandate with respect to the state marks the starting point rather than the end of the consideration which will be required to resolve the Santa Barbara and Riverside test claims. In *City of Sacramento v. State of California, supra*, 50 Cal.3d at pages 66 through 70, the California Supreme Court concluded that the costs at issue in that case (unemployment insurance premiums) were not subject to state subvention because

they were incidental to a law of general [\*1593] application rather than a new governmental program or increased level of service under an existing program. The court addressed the federal mandate issue solely with respect to the question whether the costs were exempt from the local government's taxing and spending limitations. (*Id.* at pp. 70-71.) It observed that prior authorities had assumed that if a cost was federally mandated it could not be a state mandated cost subject to subvention, and [\*\*\*60] said: "We here express no view on the question whether 'federal' and 'state' mandates are mutually exclusive for purposes of state subvention, but leave that issue for another day. ..." (*Id.* at p. 71, fn. 16.) The test claims of Santa Barbara and Riverside present that question which we address here for the guidance of the Commission on remand.

(9) The constitutional subvention provision and the statutory provisions which preceded it do not expressly say that the state is not required to provide a subvention for costs imposed by a federal mandate. Rather, that conclusion follows from the plain language of the subvention provisions [HN6]themselves. The constitutional provision requires state subvention when "the Legislature or any State agency mandates a new program or higher level of service" on local agencies. (*Cal. Const.*, art. XIII B, § 6.) Likewise, the earlier statutory provisions required subvention for new programs or higher levels of service mandated by legislative act or executive regulation. (See *Rev. & Tax. Code*, former § 2164.3 [Stats. 1972, ch. 1406, § 14.7, pp. 2962-2963], 2231 [Stats. 1973, ch. 358, § 3, pp. 783-784], 2207 [Stat. 1975, ch. 486, § 1.8, pp. 997-998], 2207.5 [\*\*\*61] [Stats. 1977, ch. 1135, § 5, pp. 3646-3647].) When the federal government imposes costs on local agencies those costs are not mandated by the state and thus would not require a state subvention. Instead, such costs are exempt from local agencies' taxing and spending limitations. This should be true even though the state has adopted an implementing statute or regulation pursuant to the federal mandate so long as the state had no "true choice" in the manner of implementation of the federal mandate. (See *City of Sacramento v. State of California, supra*, 50 Cal.3d at p. 76.)

This reasoning would not hold true where the manner of implementation of the federal program was left to the true discretion of the state. A central purpose of the principle of state subvention is to prevent the state from shifting the cost of government from itself to local agencies. (*City of Sacramento v. State of California, supra*, 50 Cal.3d at p. 68.) Nothing in the statutory or constitutional subvention provisions would suggest that the state is free to shift state costs to local agencies [\*\*\*62] without subvention merely because those costs were imposed upon the state by the federal government. In our

11 Cal. App. 4th 1564, \*; 15 Cal. Rptr. 2d 547, \*\*;  
1992 Cal. App. LEXIS 1498, \*\*\*; 93 Cal. Daily Op. Service 17

view the determination whether certain costs were imposed upon a local agency by a federal mandate must focus upon the local agency which [\*1594] is ultimately forced to bear the costs and how those costs came to be imposed upon that agency. If the state freely chose to impose the costs upon the local agency as a means of implementing a federal program then the costs are the result of a reimbursable state mandate regardless whether the costs were imposed [\*\*567] upon the state by the federal government.

The Education of the Handicapped Act is a comprehensive measure designed to provide all handicapped children with basic educational opportunities. While the act includes certain substantive and procedural requirements which must be included in a state's plan for implementation of the act, it leaves primary responsibility for implementation to the state. (20 U.S.C. § 1412, 1413.) (8b) In short, even though the state had no real choice in deciding whether to comply with the federal act, the act did not necessarily require the state to impose all of [\*\*\*63] the costs of implementation upon local school districts. To the extent the state implemented the act by freely choosing to impose new programs or higher levels of service upon local school districts, the costs of such programs or higher levels of service are state mandated and subject to subvention.

We can illustrate this point with a hypothetical situation. Subvention principles are intended to prevent the state from shifting the cost of state governmental services to local agencies and thus subvention is required where the state imposes the cost of such services upon local agencies even if the state continues to perform the services. (*Lucia Mar Unified School Dist. v. Honig, supra*, 44 Cal.3d at pp. 835-836.) The Education of the Handicapped Act requires the state to provide an impartial, state-level review of the administrative decisions of local or intermediate educational agencies. (20 U.S.C. § 1415(c), (d).) Obviously, the state could not shift the actual performance of these new administrative reviews to local districts, but it could attempt to shift the costs to local districts [\*\*\*64] by requiring local districts to pay the expenses of reviews in which they are involved. An attempt to do so would trigger subvention requirements. In such a hypothetical case, the state could not avoid its subvention responsibility by pleading "federal mandate" because the federal statute does not require the state to impose the costs of such hearings upon local agencies. Thus, as far as the local agency is concerned, the burden is imposed by a state rather than a federal mandate.

In the administrative proceedings the Board of Control did not address the "federal mandate" question under the appropriate standard and with proper focus on local school districts. In its initial determination the board concluded that the Education of the Handicapped Act

constituted a federal mandate and that the state-imposed costs on local school districts in excess of the federally imposed costs. However, the board did not consider the [\*1595] extent of the state-mandated costs because it concluded that any appropriation by the state satisfied its obligation. On Riverside's petition for a writ of administrative mandate the superior court remanded to the Board of Control to consider whether [\*\*\*65] the state appropriation was sufficient to reimburse local school districts fully for the state-mandated costs. On remand the board clearly applied the now-discredited criteria set forth in this court's decision in *City of Sacramento v. State of California, supra*, 156 Cal.App.3d 182, and concluded that the Education of the Handicapped Act is not a federal mandate at any level of government. Under these circumstances we agree with the trial court that the matter must be remanded to the Commission for consideration in light of the criteria set forth in the Supreme Court's *City of Sacramento* decision. We add that on remand the Commission must focus upon the costs incurred by local school districts and whether those costs were imposed on local districts by federal mandate or by the state's voluntary choice in its implementation of the federal program.

## VI. RIVERSIDE'S OBJECTIONS

In light of this discussion we may now consider Riverside's objections to the trial court's decision to remand the matter to the Commission for reconsideration.

Riverside asserts that the California Supreme Court opinion in *City of Sacramento* is not [\*\*\*66] on point because the court did not address the federal mandate question with respect to state subvention principles. Riverside implies that the definition of a federal mandate may be different [\*\*568] with respect to state subvention than with respect to taxing and spending limitations. [HN7] (10) As a general rule and unless the context clearly requires otherwise, we must assume that the meaning of a term or phrase is consistent throughout the entire act or constitutional article of which it is a part. (*Lungren v. Davis* (1991) 234 Cal.App.3d 806, 823 [285 Cal.Rptr. 777].) (11) Subvention principles are part of a more comprehensive political scheme. The basic purpose of the scheme as a whole was to limit the taxing and spending powers of government. The taxing and spending powers of local agencies were to be "frozen" at existing levels with adjustments only for inflation and population growth. Since local agencies are subject to having costs imposed upon them by other governmental entities, the scheme provides relief in that event. If the costs are imposed by the federal government or the courts, then the costs are not included in the local government's [\*\*\*67] taxing and spending limitations. If the costs are imposed by the state then the state must provide a sub-

11 Cal. App. 4th 1564, \*; 15 Cal. Rptr. 2d 547, \*\*;  
1992 Cal. App. LEXIS 1498, \*\*\*; 93 Cal. Daily Op. Service 17

vention to reimburse the local agency. Nothing in this scheme suggests that the concept of a federal mandate should have different meanings depending upon whether one is considering subvention or taxing and spending limitations. Accordingly, we reject the claim that the criteria set forth in [\*1596] the Supreme Court's *City of Sacramento* decision do not apply when subvention is the issue.

(12) Riverside asserts that the trial court erred in concluding that the Board of Control did not consider the issues under the appropriate criteria and that the board did in fact consider the factors set forth in the Supreme Court's *City of Sacramento* decision. From our discussion above it is clear that we must reject these assertions. In its decision the board relied upon the "cooperative federalism" nature of the Education of the Handicapped Act without any consideration whether the act left the state any actual choice in the matter. In support of its conclusion the board relied upon the New Mexico litigation which we have also discussed. However, as we have pointed out, under [\*\*\*68] the criteria set forth in the Supreme Court's *City of Sacramento* decision, the New Mexico litigation does not support the board's decision but in fact strongly supports a contrary result. We are satisfied that the trial court correctly concluded that the board did not apply the appropriate criteria in reaching its decision.

Riverside asserts that the Supreme Court's *City of Sacramento* decision elucidated and enforced prior law and thus no question of retroactivity arises. (See *Donaldson v. Superior Court* (1983) 35 Cal.3d 24, 37 [196 Cal.Rptr. 704, 672 P.2d 110].) (13) We agree that in *City of Sacramento* the Supreme Court elucidated and enforced existing law. Under such circumstances the rule of retrospective operation controls. (See also *Wellenkamp v. Bank of America* (1978) 21 Cal.3d 943, 953-954 [148 Cal.Rptr. 379, 582 P.2d 970]; *County of Los Angeles v. Faus* (1957) 48 Cal.2d 672, 680-681 [312 P.2d 680].) Pursuant to that rule the trial court correctly applied the *City of Sacramento* decision to the [\*\*\*69] litigation pending before it. As we have seen, that deci-

sion supports the trial court's determination to remand the matter to the Commission for reconsideration.

Riverside asserts that if further consideration under the criteria of the Supreme Court's *City of Sacramento* decision is necessary then the trial court should have, and this court must, engage in such consideration to reach a final conclusion on the question. To a limited extent we agree. In our previous discussion we have concluded that under the criteria set forth in *City of Sacramento*, the Education of the Handicapped Act constitutes a federal mandate as far as the state is concerned. We are satisfied that is the only conclusion which may be drawn and we so hold as a matter of law. However, that conclusion does not resolve the question whether new special education costs were imposed upon local school districts by federal mandate or by state choice in the implementation of the federal program. The issues were not addressed by the parties or the Board of Control in this light. The [\*1597] Commission on State Mandates is the entity with the responsibility for considering the issues in [\*\*\*569] the first instance [\*\*\*70] and which has the expertise to do so. We agree with the trial court that it is appropriate to remand the matter to the Commission for reconsideration in light of the appropriate criteria which we have set forth in this appeal.

In view of the result we have reached we need not and do not consider whether it would be appropriate otherwise to fashion some judicial remedy to avoid the rule, based upon the separation of powers doctrine, that a court cannot compel the State Controller to make a disbursement in the absence of an appropriation. (See *Carmel Valley Fire Protection Dist. v. State of California, supra*, 190 Cal.App.3d at pp. 538-541.)

#### DISPOSITION

The judgment is affirmed.

Davis, J., and Scotland, J., concurred. The petition of plaintiff and respondent for review by the Supreme Court was denied April 1, 1993. Lucas, C.J., Kennard, J., and Arabian, J., were of the opinion that the petition should be granted.

June 3, 2002, Decided

**SUBSEQUENT HISTORY:** [\*\*\* 1] Rehearing Denied July 2, 2002.

Review Denied August 28, 2002, Reported at: *2002 Cal. LEXIS 5938*.

**PRIOR HISTORY:** Superior Court of Monterey County. Super. Ct. No. M45873. Richard M. Silver, Judge.

**DISPOSITION:** The judgment is reversed. Costs on appeal are awarded to plaintiffs.

**CASE SUMMARY:**

**PROCEDURAL POSTURE:** Plaintiff taxpayers filed a complaint under *Cal. Code Civ. Proc. § 863* to determine the validity of a storm drainage fee imposed by defendant city. The Monterey County Superior Court (California) ruled that the fee did not violate Cal. Const. art. XIIIID, § 6. The taxpayers appealed.

**OVERVIEW:** The city adopted ordinances and a resolution imposing a storm water management utility fee that was imposed on the owners of every developed parcel of land within the city. The storm drainage fee was to be used not just to provide drainage service to property owners, but to monitor and control pollutants that might enter the storm water before it was discharged into natural bodies of water. The appellate court found that: (1) Cal.

Const. art. XIIIID, § 6, required the city to subject the proposed storm drainage fee to a vote by the property owners or the voting residents of the affected area because the fee was not exempt as a water service; and (2) the trial court therefore erred in ruling that Salinas, Cal., Ordinance 2350, 2351, and Salinas, Cal., Resolution 17019 were valid exercises of authority by the city council.

**OUTCOME:** The judgment of the superior court was reversed.

**LexisNexis(R) Headnotes**

*Governments > State & Territorial Governments > Elections*

*Tax Law > State & Local Taxes > Real Property Tax > General Overview*

[I-IN1] The Right to Vote On Taxes Act, Cal. Const. art. XIIIID, § 6, requires notice of a proposed property-related fee or charge and a public hearing. If a majority of the affected owners submit written protests, the fee may not be imposed. Cal. Const. art. XIIIID, § 6 (a)(2).

*Tax Law > State & Local Taxes > Real Property Tax > General Overview*

[I-IN2] See Cal. Const. XIIIID, § 6(c).

98 Cal. App. 4th 1351, \*; 121 Cal. Rptr. 2d 228, \*\*;  
2002 Cal. App. LEXIS 4198, \*\*\*; 2002 Cal. Daily Op. Service 4853

*Communications Law > Ownership > General Overview  
Tax Law > State & Local Taxes > Real Property Tax >  
General Overview*

[HN3] Cal. Const. art. XIIIID, § 2(e), defines a "fee" under the article as a levy imposed upon a parcel or upon a person as an incident of property ownership, including a user fee or charge for a property related service.

*Communications Law > Ownership > General Overview  
Tax Law > State & Local Taxes > Real Property Tax >  
General Overview*

[HN4] A "property-related service" is a public service having a direct relationship to property ownership. Cal. Const. art. XIIIID, § 2(h).

*Tax Law > State & Local Taxes > Real Property Tax >  
General Overview*

[HN5] Salinas, Cal., Resolution 17019 plainly establishes a property-related fee for a property-related service, the management of storm water runoff from the "impervious" areas of each parcel in the city. The resolution expressly states that each owner and occupier of a developed lot or parcel of real property within the city, is served by the city's storm drainage facilities and burdens the system to a greater extent than if the property were undeveloped. Those owners and occupiers of developed property should therefore pay for the improvement, operation and maintenance of such facilities. Accordingly, the resolution makes the fee applicable to each and every developed parcel of land within the city.

*Tax Law > State & Local Taxes > Real Property Tax >  
General Overview*

[HN6] Cal. Proposition 218, § 5, specifically states that the provisions of the Right to Vote On Taxes Act, Cal. Const. art. XIIIID, § 6, shall be liberally construed to effectuate its purposes of limiting local government revenue and enhancing taxpayer consent.

*Governments > Legislation > Interpretation*

[HN7] The appellate court is obligated to construe constitutional amendments in accordance with the natural and ordinary meaning of the language used by the framers in a manner that effectuates their purpose in adopting the law.

*Tax Law > State & Local Taxes > Personal Property Tax  
> Exempt Property > General Overview*

[HN8] The exception in Cal. Const. art. XIIIID, § 6(c), applies to fees for sewer, water, and refuse collection services.

*Governments > Legislation > Interpretation*

[HN9] The popular, nontechnical sense of sewer service, particularly when placed next to "water" and "refuse collection" services, suggests the service familiar to most households and businesses, the sanitary sewerage system.

*Governments > Legislation > Interpretation*

*Tax Law > State & Local Taxes > Real Property Tax >  
General Overview*

[HN10] Exceptions to a general rule of an enactment must be strictly construed, thereby giving "sewer services" its narrower, more common meaning applicable to sanitary sewerage.

*Governments > Legislation > Interpretation*

[HN11] Cal. Gov't Code § 53750 is enacted to explain some of the terms used in Cal. Const. art. XIIIIC, XIIIID, and defines "water" as "any system of public improvements intended to provide for the production, storage, supply, treatment, or distribution of water." The average voter would envision "water service" as the supply of water for personal, household, and commercial use, not a system or program that monitors storm water for pollutants, carries it away, and discharges it into the nearby creeks, river, and ocean.

#### SUMMARY:

#### CALIFORNIA OFFICIAL REPORTS SUMMARY

A taxpayers association filed an action against a city alleging that a storm drainage fee, which was imposed by the city for the management of storm water runoff from the impervious areas of each parcel in the city, was a property-related fee that required voter approval under Prop. 218 (*Cal. Const., art. XIII D, § 6, subd. (c)*). The trial court entered judgment for the city, finding that the fee was not property related and that it was exempt from the voter-approval requirement because it was related to sewer and water services. (Superior Court of Monterey County, No. M45873, Richard M. Silver, Judge.)

The Court of Appeal reversed. The court held that the fee was property related and subject to the voter approval requirement. The resolution made the fee applicable to each and every developed parcel of land within the city. It was not a charge directly based on or measured by use so as to be exempt from the voter requirement. A proportional reduction clause did not alter the nature of the fee as

98 Cal. App. 4th 1351, \*; 121 Cal. Rptr. 2d 228, \*\*;  
2002 Cal. App. LEXIS 4198, \*\*\*; 2002 Cal. Daily Op. Service 4853

property-related. (Opinion by Elia, J., with Premo, Acting P. J., and Mihara, J., concurring.)

## HEADNOTES

### CALIFORNIA OFFICIAL REPORTS HEADNOTES Classified to California Digest of Official Reports

(1a) (1b) **Drains and Sewers § 3--Fees and Assessments--Storm Drain Fee--Application of Voter Approval Requirement for Property-related Fees: Property Taxes § 7.8--Special Taxes.** --A storm water management fee resolution established a property-related fee for a property-related service, the management of storm water runoff from the impervious areas of each parcel in the city, and thus required voter approval under Prop. 218 (*Cal. Const., art. XIII D, § 6, subd. (c)*). The resolution made the fee applicable to each and every developed parcel of land within the city. It was not a charge directly based on or measured by use, comparable to the metered use of water or the operation of a business, so as to be exempt from the voter requirement. A proportional reduction clause did not alter the nature of the fee as property related. The fee did not come within the exception related to sewer and water services. Giving the constitutional provision the required liberal construction, and applying the principle that exceptions to a general rule of an enactment must be strictly construed, "sewer services" must be given its narrower, more common meaning applicable to sanitary sewerage, thus excluding storm drainage. Also, the average voter would envision "water service" as the supply of water for personal, household, and commercial use, not a system or program that monitors storm water for pollutants and discharges it.

[See 9 Witkin, Summary of Cal. Law (9th ed. 1989) Taxation, § 109C.]

(2) **Constitutional Law § 12--Construction--Ordinary Language--Amendments.** --Courts are obligated to construe constitutional amendments in accordance with the natural and ordinary meaning of the language used by the framers in a manner that effectuates their purpose in adopting the law.

**COUNSEL:** Timothy J. Morgan; Jonathan M. Coupal and Timothy A. Bittle for Plaintiffs and Appellants.

**OPINION BY:** Elia

## OPINION

[\*1352] [\*\*229] ELIA, J.

In this "reverse validation" action, plaintiff taxpayers challenged a storm drainage fee imposed by the City of Salinas. Plaintiffs contended that the fee was a "property-related" fee requiring voter approval, pursuant to *California Constitution, article XIII D, section 6, subdivision (c)*, which was added by the passage of Proposition 218. The trial court ruled that the fee did not violate this provision because (1) it was not a property-related fee [\*1353] and (2) it met the exemption [\*\*\*2] for fees for sewer and water services. We disagree with the trial court's conclusion and therefore reverse the order.

### BACKGROUND

In an effort to comply with the 1987 amendments to the federal Clean Water Act (33 U.S.C. § 1251 *et seq.*; 40 C.F.R. § 122.26(a) *et seq.* (2001)), the Salinas City Council took measures to reduce or eliminate pollutants contained in storm water, which was channeled in a drainage system separate from the sanitary and industrial waste systems. On June 1, 1999, the city council enacted two ordinances to fund and maintain the compliance program. These measures, ordinance Nos. 2350 and 2351, added former chapters 29 and 29A, respectively, to the Salinas City Code. Former section 29A-3 allowed the city council to adopt a resolution imposing a "Storm Water Management Utility fee" to finance the improvement of storm and surface water management facilities. The fee would be imposed on "users of the storm water drainage system."

On July 20, 1999, the city council adopted resolution No. 17019, which established rates for the storm and surface water management system. The resolution specifically states: "There is hereby imposed on each [\*\*\*3] and every developed parcel of land within the City, and the owners and occupiers thereof, jointly and severally, a storm drainage fee." The fee was to be paid annually to the City "by the owner or occupier of each and every developed parcel in the City who shall be presumed to be the primary utility rate payer . . . ." The amount of the fee was to be calculated according to the degree to which the property contributed runoff to the City's drainage facilities. That contribution, in turn, would be measured by the amount of "impervious area"<sup>1</sup> on that parcel.

<sup>1</sup> "Impervious Area," according to resolution No. 17019, is "any part of any developed parcel of land that has been modified by the action of persons to reduce the land's natural ability to absorb and hold rainfall. This includes any hard surface area which either prevents or retards the entry of water into the soil mantle as it entered under natural condi-

98 Cal. App. 4th 1351, \*; 121 Cal. Rptr. 2d 228, \*\*;  
2002 Cal. App. LEXIS 4198, \*\*\*; 2002 Cal. Daily Op. Service 4853

tions pre-existent to development, and/or a hard surface area which causes water to run off the surface in greater quantities or at an increased rate of flow from the flow present under natural conditions pre-existent to development."

\*\*\*4] \*\*230] Undeveloped parcels--those that had not been altered from their natural state--were not subject to the storm drainage fee. In addition, developed parcels that maintained their own storm water management facilities or only partially contributed storm or surface water to the City's storm drainage facilities were required to pay in proportion to the amount they did contribute runoff or used the City's treatment services.

[\*1354] On September 15, 1999, plaintiffs filed a complaint under *Code of Civil Procedure section 863* to determine the validity of the fee. Plaintiffs alleged that this was a property-related fee that violated *article XIII D, section 6, subdivision (c), of the California Constitution* because it had not been approved by a majority vote of the affected property owners or a two-thirds vote of the residents in the affected area. The trial court, however, found this provision to be inapplicable on two grounds: (1) the fee was not "property related" and (2) it was exempt from the voter-approval requirement because it was "related to" sewer and water services.

2 Plaintiffs are the Howard Jarvis Taxpayers Association, the Monterey Peninsula Taxpayers Association, and two resident property owners.

#### \*\*\*5] DISCUSSION

Article XIII D was added to the California Constitution in the November 1996 election with the passage of Proposition 218, the Right to Vote on Taxes Act. Section 6 of article XIII D [HN1] requires notice of a proposed property-related fee or charge and a public hearing. If a majority of the affected owners submit written protests, the fee may not be imposed. (§ 6, subd. (a)(2).) The provision at issue is section 6, subdivision (c) (hereafter section 6(c)), [HN2] which states, in relevant part: "Except for fees or charges for sewer, water, and refuse collection services, no property-related fee or charge shall be imposed or increased unless and until that fee or charge is submitted and approved by a majority vote of the property owners of the property subject to the fee or charge or, at the option of the agency, by a two-thirds vote of the electorate residing in the affected area."

3 All further unspecified section references are to article XIII D of the California Constitution.

[HN3] Section 2 [\*\*\*6] defines a "fee" under this article as a levy imposed "upon a parcel or upon a person as an incident of property ownership, including a user fee or charge for a property-related service." (§ 2, subd. (e).)

[11N4] A "property-related service" is "a public service having a direct relationship to property ownership." (§ 2, subd. (h).) (1a) The City maintains that the storm drainage fee is not a property-related fee, but a "user fee" which the property owner can avoid simply by maintaining a storm water management facility on the property. Because it is possible to own property without being subject to the fee, the City argues this is not a fee imposed "as an incident of property ownership" or "for a property-related service" within the meaning of section 2.

We cannot agree with the City's position. Resolution No. 17019 [11N5] plainly established a property-related fee for a property-related service, the management of storm water runoff from the "impervious" areas of each parcel in the [\*1355] City. The resolution [\*\*231] expressly stated that "each owner and occupier of a developed lot or parcel of real property within the City, is served by the City's storm drainage facilities" and burdens the [\*\*\*7] system to a greater extent than if the property were undeveloped. Those owners and occupiers of developed property "should therefore pay for the improvement, operation and maintenance of such facilities." Accordingly, the resolution makes the fee applicable to "each and every developed parcel of land within the City." (Italics added.) This is not a charge directly based on or measured by use, comparable to the metered use of water or the operation of a business, as the City suggests. (See *Apartment Assn. of Los Angeles County, Inc. v. City of Los Angeles* (2001) 24 Cal. 4th 830, 838 [102 Cal. Rptr. 2d 719, 14 P.3d 930] [art. XIII D inapplicable to inspection fee imposed on private landlords; *Howard Jarvis Taxpayers Assn. v. City of Los Angeles* (2000) 85 Cal. App. 4th 79 [101 Cal. Rptr. 2d 905] [water usage rates are not within the scope of art. XIII D].)

The "Proportional Reduction" clause on which the City relies does not alter the nature of the fee as property related. A property owner's operation of a private storm drain system reduces the amount owed to the City to the extent that runoff into the City's system is reduced. The fee [\*\*\*8] nonetheless is a fee for a public service having a direct relationship to the ownership of developed property. The City's characterization of the proportional reduction as a simple "opt-out" arrangement is misleading, as it suggests the property owner can avoid the fee altogether by declining the service. Furthermore, the reduction is not proportional to the amount of services requested or used by the occupant, but on the physical properties of the parcel. Thus, a parcel with a large "impervious area" (driveway, patio, roof) would be charged more than one consisting of mostly rain-absorbing soil. Single-family residences are assumed to contain, on average, a certain amount of impervious area and are charged \$ 18.66 based on that assumption.

98 Cal. App. 4th 1351, \*; 121 Cal. Rptr. 2d 228, \*\*;  
2002 Cal. App. LEXIS 4198, \*\*\*; 2002 Cal. Daily Op. Service 4853

4 According to the public works director, proportional reductions were not anticipated to apply to a large number of people.

Proposition 218 [HN6] specifically stated that "[t]he provisions of this act shall be liberally construed to effectuate its purposes of limiting local [\*\*\*9] government revenue and enhancing taxpayer consent." (Prop. 218, § 5; reprinted at Historical Notes, 2A West's Ann. Cal. Const. (2002 supp.) foll. art. XIII C, p. 38 [hereafter Historical Notes].) (2) [HN7] We are obligated to construe constitutional amendments in accordance with the natural and ordinary meaning of the language used by the framers--in this case, the voters of California--in a manner that effectuates their purpose in adopting the law. (*Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization* (1978) 22 Cal. 3d 208, 244-245 [149 Cal. Rptr. 239, 583 P.2d 1281]; *Arden Carmichael, Inc. v. County of Sacramento* (2000) 93 Cal. App. 4th 507, 514-515 [113 Cal. Rptr. 2d 248]; *Board of Supervisors v. Lonergan* (1980) 27 Cal. 3d 855, 863 [167 [\*1356] Cal. Rptr. 820, 616 P.2d 802].) (lb) To interpret the storm drainage fee as a use-based charge would contravene one of the stated objectives of Proposition 218 by "frustrat[ing] the purposes of voter approval for tax increases." (Prop. 218, § 2.) We must conclude, therefore, that the storm drainage fee "burden[s] landowners as landowners," and is therefore subject [\*\*\*10] to the voter-approval requirements of article XIII D unless an exception applies. (*Apartment Assn. of Los Angeles County, Inc. v. City of Los Angeles, supra*, 24 Cal. 4th at p. 842.)

[\*\*232] EXCEPTION FOR "SEWER" OR "WATER" SERVICE

As an alternative ground for its decision, the trial court found that the storm drainage fee was "clearly a fee related to 'sewer' and 'water' services." [11N8] The exception in section 6(c) applies to fees "for sewer, water, and refuse collection services." Thus, the question we must next address is whether the storm drainage fee was a charge for sewer service or water service.

The parties diverge in their views as to whether the reach of *California Constitution, article XIII D, section 6(c)* extends to a storm drainage system as well as a sanitary or industrial waste sewer system. The City urges that we rely on the "commonly accepted" meaning of "sewer," noting the broad dictionary definition of this word. The City also points to *Public Utilities Code section 230.5* and the Salinas City Code, which describe storm drains as a type of sewer.

5 Webster's Third New International Dictionary, for example, defines "sewer" as "1: a ditch or surface drain 2: an artificial usu. subterranean

conduit to carry off water and waste matter (as surface water from rainfall, household waste from sinks or baths, or waste water from industrial works)." (Webster's 3d New Internat. Dict. (1993) p. 2081.) The American Heritage Dictionary also denotes the function of "carrying off sewage or rainwater." (American Heritage College Dict. (3d ed. 1997) p. 1248.) On the other hand, the Random House Dictionary of the English Language (2d ed. 1987) page 1754, does not mention storm or rainwater in defining "sewer" as "an artificial conduit, usually underground, for carrying off waste water and refuse, as in a town or city."

[\*\*\*11]

6 *Public Utilities Code section 230.5* defines "Sewer system" to encompass all property connected with "sewage collection, treatment, or disposition for sanitary or drainage purposes, including . . . all drains, conduits, and outlets for surface or storm waters, and any and all other works, property or structures necessary or convenient for the collection or disposal of sewage, industrial waste, or surface or storm waters." Salinas City Code section 36-2, subdivision (31) defines "storm drain" as "a sewer which carries storm and surface waters and drainage, but which excludes sewage and industrial wastes other than runoff water."

Plaintiffs "do not disagree that storm water is carried off in storm sewers," but they argue that we must look beyond mere definitions of "sewer" to examine the legal meaning in context. Plaintiffs note that the storm water management system here is distinct from the sanitary sewer system and the industrial waste management system. Plaintiffs' position echoes that of the [\*1357] Attorney General, who observed that several California [\*\*\*12] statutes differentiate between management of storm drainage and sewerage systems. (81 *Ops. Cal. Atty. Gen. 104, 106* (1998).) Relying extensively on the Attorney General's opinion, plaintiffs urge application of a different rule of construction than the plain-meaning rule; they invoke the maxim that "if a statute on a particular subject omits a particular provision, inclusion of that provision in another related statute indicates an intent [that] the provision is not applicable to the statute from which it was omitted." (*In re Marquis D.* (1995) 38 Cal. App. 4th 1813, 1827 [46 Cal. Rptr. 2d 198].) Thus, while section 5, which addresses assessment procedures, refers to exceptions specifically [\*\*233] for "sewers, water, flood control, [and] drainage systems" (italics added), the exceptions listed in section 6(c) pertain only to "sewer, water, and refuse collection services." Consequently, in plaintiffs' view, the voters must have intended to exclude drainage systems from the list of exceptions to the voter-approval requirement.

98 Cal. App. 4th 1351, \*; 121 Cal. Rptr. 2d 228, \*\*;  
2002 Cal. App. LEXIS 4198, \*\*\*; 2002 Cal. Daily Op. Service 4853

7 For example, *Government Code* section 63010 specifies "storm sewers" in delimiting the scope of "[d]rainage," while separately identifying the facilities and equipment used for "[s]ewage collection and treatment." ( *Gov. Code*, § 63010, subd. (q)(3), (10).) *Government Code* section 53750, part of the Proposition 218 Omnibus Implementation Act, explains that for purposes of articles XIII C and article XIII D "[d]rainage system" means "any system of public improvements that is intended to provide for erosion control, landslide abatement, or for other types of water drainage." *Health and Safety Code* section 5471 sets forth government power to collect fees for "services and facilities . . . in connection with its water, sanitation, storm drainage, or sewerage system."

[\*\*\*13] The statutory construction principles invoked by both parties do not assist us. The maxim proffered by plaintiffs, "although useful at times, is no more than a rule of reasonable inference" and cannot control over the lawmakers' intent. ( *California Fed. Savings & Loan Assn. v. City of Los Angeles* (1995) 11 Cal. 4th 342, 350 [45 Cal. Rptr. 2d 279, 902 P.2d 297]; *Murillo v. Fleetwood Enterprises, Inc.* (1998) 17 Cal. 4th 985, 991 [73 Cal. Rptr. 2d 682, 953 P.2d 858].) On the other hand, invoking the plain-meaning rule only begs the question of whether the term "sewer services" was intended to encompass the more specific sewerage with which most voters would be expected to be familiar, or all types of systems that use sewers, including storm drainage and industrial waste. [HN9] The popular, nontechnical sense of sewer service, particularly when placed next to "water" and "refuse collection" services, suggests the service familiar to most households and businesses, the sanitary sewerage system.

We conclude that the term "sewer services" is ambiguous in the context of both section 6(c) and Proposition 218 as a whole. We must keep in mind, however, the voters' [\*\*\*14] intent that the constitutional provision be construed liberally to curb the rise in "excessive" taxes, assessments, and fees exacted [\*1358] by local governments without taxpayer consent. (Prop. 218, §§ 2, 5; reprinted at Historical Notes, *supra*, p. 38.) Accordingly, we are compelled to resort to the principle that [HN10] exceptions to a general rule of an enactment must be strictly construed, thereby giving "sewer services" its narrower, more common meaning applicable to sanitary sewerage.<sup>8</sup> (Cf. *Estate of Banerjee* (1978) 21 Cal. 3d 527, 540 [147 Cal. Rptr. 157, 580 P.2d 657]; *City of Lafayette v. East Bay Mun. Utility Dist.* (1993) 16 Cal. App. 4th 1005 [20 Cal. Rptr. 2d 658].)

8 Sanitary sewerage carries "putrescible waste" from residences and businesses and discharges it into the sanitary sewer line for treatment by the Monterey Regional Water Pollution Control Agency. (*Salinas City Code*, § 36-2, subd. (26).)

The City itself treats storm drainage differently [\*\*\*15] from its other sewer systems. The stated purpose of ordinance No. 2350 was to comply with federal law by reducing the amount of pollutants discharged into the storm water, and by preventing the discharge of "non-storm water" into the storm drainage system, which channels storm water into state waterways. According to John Fair, the public works director, the City's storm drainage fee was to be used not just to provide drainage service to property owners, but to monitor and control pollutants that might enter the storm water before it is discharged into natural bodies of water.<sup>9</sup> The *Salinas City Code* contains requirements [\*\*\*234] addressed specifically to the management of storm water runoff. (See, e.g., *Salinas City Code*, §§ 31-802.2, 29-15.)

9 Resolution No. 17019 defined "Storm Drainage Facilities" as "the storm and surface water sewer drainage systems comprised [sic] of storm water control facilities and any other natural features [that] store, control, treat and/or convey surface and storm water. The Storm Drainage Facilities shall include all natural and man-made elements used to convey storm water from the first point of impact with the surface of the earth to a suitable receiving body of water or location internal or external to the boundaries of the City. . . ." The "storm drainage system" was defined to include pipes, culverts, streets and gutters, "storm water sewers," ditches, streams, and ponds. (See also *Salinas City Code*, former § 29-3, subd. (1) [defining "storm drainage system"].)

[\*\*\*16]

10 Storm water under ordinance No. 2350 includes "stormwater runoff, snowmelt runoff, and surface runoff and drainage." (*Salinas City Code*, former § 29-3, subd. (dd).)

For similar reasons we cannot subscribe to the City's suggestion that the storm drainage fee is "for . . . water services." *Government Code* section 53750, [HN11] enacted to explain some of the terms used in articles XIII C and XIII D, defines "[w]ater" as "any system of public improvements intended to provide for the production, storage, supply, treatment, or distribution of water." ( *Gov. Code*, § 53750, subd. (m).) The average voter would envision "water service" as the supply of water for personal, household, and commercial use, not a system or program that monitors storm water for pollutants, carries it away, and discharges it into the nearby creeks, river, and ocean.

98 Cal. App. 4th 1351, \*; 121 Cal. Rptr. 2d 228, \*\*;  
2002 Cal. App. LEXIS 4198, \*\*\*; 2002 Cal. Daily Op. Service 4853

We conclude that article XIII D required the City to subject the proposed storm drainage fee to a vote by the property owners or the voting residents of [\*1359] the affected area. The trial court therefore [\*\*\*171] erred in ruling that ordinance Nos. 2350 and 2351 and Resolution No. 17019 were valid exercises of authority by the city council.

*DISPOSITION*

The judgment is reversed. Costs on appeal are awarded to plaintiffs.

Premo, Acting P. J., and Mihara, J., concurred.

A petition for a rehearing was denied July 2, 2002, and respondents' petition for review by the Supreme Court was denied August 28, 2002.

FRANCES KINLAW et al., Plaintiffs and Appellants, v. THE STATE OF CALIFORNIA et al., Defendants and Respondents

No. S014349

Supreme Court of California

54 Cal. 3d 326; 814 P.2d 1308; 285 Cal. Rptr. 66; 1991 Cal. LEXIS 3745; 91 Cal. Daily Op. Service 7086; 91 Daily Journal DAR 10744

August 30, 1991

**PRIOR HISTORY:** Superior Court of Alameda County, No. 632120-4, Henry Ramsey, Jr., and Demetrios P. Agretelis, Judges.

**DISPOSITION:** The judgment of the Court of Appeal is reversed.

**SUMMARY:**

**CALIFORNIA OFFICIAL REPORTS SUMMARY**

Medically indigent adults and taxpayers brought an action pursuant to *Code Civ. Proc.*, § 526a, against the state, alleging that it had violated *Cal. Const.*, art. XIII B, § 6 (reimbursement of local governments for state-mandated new programs), by shifting its financial responsibility for the funding of health care for the poor onto the county without providing the necessary funding, and that as a result the state had evaded its constitutionally mandated spending limits. The trial court granted summary judgment for the State after concluding plaintiffs lacked standing to prosecute the action. (Superior Court of Alameda County, No. 632120-4, Henry Ramsey, Jr., and Demetrios P. Agretelis, Judges.) The Court of Appeal, First Dist., Div. Two, Nos. A041426 and A043500, reversed.

The Supreme Court reversed the judgment of the Court of Appeal, holding the administrative procedures established by the Legislature (*Gov. Code*, § 17500 et seq.), which are available only to local agencies and school districts directly affected by a state mandate, were the exclusive means by which the state's obligations under *Cal. Const.*, art. XIII B, § 6, were to be determined

and enforced. Accordingly, the court held plaintiffs lacked standing to prosecute the action. (Opinion by Baxter, J., with Lucas, C. J., Panelli, Kennard, and Arabian, JJ., concurring. Separate dissenting opinion by Broussard, J., with Mosk, J., concurring.)

**CALIFORNIA OFFICIAL REPORTS HEADNOTES**

Classified to California Digest of Official Reports, 3d Series

(1) *State of California § 7—Actions—State-mandated Costs—Reimbursement—Exclusive Statutory Remedy.* -- *Gov. Code*, § 17500 et seq., creates an administrative forum for resolution of state mandate claims arising under *Cal. Const.*, art. XIII B, § 6, and establishes procedures which exist for the express purpose of avoiding multiple proceedings, judicial and administrative, addressing the same claim that a reimbursable state mandate has been created. The statutory scheme also designates the Sacramento County Superior Court as the venue for judicial actions to declare unfunded mandates invalid. In view of the comprehensive nature of the legislative scheme, and from the expressed intent, the Legislature has created what is clearly intended to be a comprehensive and exclusive procedure by which to implement and enforce *Cal. Const.*, art. XIII B, § 6.

(2) *State of California § 7—Actions—State-mandated Costs—Reimbursement—Private Action to Enforce—Standing.* --In an action by medically indigent adults and taxpayers seeking to enforce *Cal. Const.*, art.

54 Cal. 3d 326, \*, 814 P.2d 1308, \*\*;  
285 Cal. Rptr. 66, \*\*\*; 1991 Cal. LEXIS 3745

XIII B, § 6, for declaratory and injunctive relief requiring the state to reimburse the county for the cost of providing health care services to medically indigent adults who, prior to 1983, had been included in the state Medi-Cal program, the Court of Appeal erred in holding that the existence of an administrative remedy ( *Gov. Code, § 17500 et seq.*) by which affected local agencies could enforce their constitutional right under art. XIII B, § 6 to reimbursement for the cost of state mandates did not bar the action. Because the right involved was given by the Constitution to local agencies and school districts, not individuals either as taxpayers or recipients of government benefits and services, the administrative remedy was adequate to fully implement the constitutional provision. The Legislature has the authority to establish procedures for the implementation of local agency rights under art. XIII B, § 6; unless the exercise of a constitutional right is unduly restricted, a court must limit enforcement to the procedures established by the Legislature. Plaintiffs' interest, although pressing, was indirect and did not differ from the interest of the public at large in the financial plight of local government. Relief by way of reinstatement to Medi-Cal pending further action by the state was not a remedy available under the statute, and thus was not one which a court may award.

**OPINION BY: BAXTER**

**OPINION**

[\*328] [\*\*1309] [\*\*\*67] Plaintiffs, medically indigent adults and taxpayers, seek to enforce section 6 of article XIII B (hereafter, section 6) of the California Constitution through an action for declaratory and injunctive relief. They invoked the jurisdiction of the superior court as taxpayers pursuant to *Code of Civil Procedure section 526a* and as persons affected by the alleged failure of the state to comply with section 6. The superior court granted summary judgment for defendants State of California and Director of the Department of Health Services, after concluding that plaintiffs lacked standing to prosecute the action. On appeal, the Court of Appeal held that plaintiffs have standing and that the action is not barred by the availability of administrative remedies.

[\*\*1310] [\*\*\*68] We reverse. The administrative procedures established by the Legislature, which are available only to local agencies and school districts directly affected by a state mandate, are the exclusive means by which the state's obligations under section 6 are to be determined and enforced. Plaintiffs therefore lack standing.

I

#### State Mandates

Section 6, adopted on November 6, 1979, as part of an initiative measure imposing spending limits on state and local government, also imposes on the state an obligation to reimburse local agencies for the cost of most programs and services which they must provide pursuant to a state mandate if the local agencies were not under a preexisting duty to fund the activity. It provides:

[\*329] "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates:

"(a) Legislative mandates requested by the local agency affected;

"(b) Legislation defining a new crime or changing an existing definition of a crime; or

"(c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975."

A complementary provision, section 3 of article XIII B, provides for a shift from the state to the local agency of a portion of the spending or "appropriation" limit of the state when responsibility for funding an activity is shifted to a local agency:

54 Cal. 3d 326, \*; 814 P.2d 1308, \*\*;  
285 Cal. Rptr. 66, \*\*\*; 1991 Cal. LEXIS 3745

"The appropriations limit for any fiscal year . . . shall be adjusted as follows: [para.] (a) In the event that the financial responsibility of providing services is transferred, in whole or in part, . . . from one entity of government to another, then for the year in which such transfer becomes effective the appropriations limit of the transferee entity shall be increased by such reasonable amount as the said entities shall mutually agree and the appropriations limit of the transferor entity shall be decreased by the same amount."

## II.

### Plaintiffs' Action

The underlying issue in this action is whether the state is obligated to reimburse the County of Alameda, and shift to Alameda County a concomitant portion of the state's spending limit, for the cost of providing health care services to medically indigent adults who prior to 1983 had been included in the state Medi-Cal program. Assembly Bill No. 799 (1981-1982 Reg. Sess.) (AB 799) (Stats. 1982, ch. 328, p. 1568) removed medically indigent adults from Medi-Cal effective January 1, 1983. At the time section 6 was adopted, the state was funding Medi-Cal coverage for these persons without requiring any county financial contribution.

Plaintiffs initiated this action in the Alameda County Superior Court. They sought relief on their own behalf and on behalf of a class of similarly [\*330] situated medically indigent adult residents of Alameda County. The only named defendants were the State of California, the Director of the Department of Health Services, and the County of Alameda.

In the complaint for declaratory and injunctive relief, plaintiffs sought an injunction compelling the state to restore Medi-Cal eligibility to medically indigent adults or to reimburse the County of Alameda for the cost of providing health care to those persons. They also prayed for a declaration that the transfer of responsibility from the state-financed Medi-Cal program to the counties without adequate reimbursement violated the California Constitution.<sup>1</sup>

1 The complaint also sought a declaration that the county was obliged to provide health care services to indigents that were equivalent to those available to nonindigents. This issue is not before us. The County of Alameda aligned itself with plaintiffs in the superior court and did not oppose plaintiffs' effort to enforce section 6.

[\*\*1311] [\*\*\*69] At the time plaintiffs initiated their action neither Alameda County, nor any other county or local agency, had filed a reimbursement

claim with the Commission on State Mandates (Commission).<sup>2</sup>

2 On November 23, 1987, the County of Los Angeles filed a test claim with the Commission. San Bernardino County joined as a test claimant. The Commission ruled against the counties, concluding that no state mandate had been created. The Los Angeles County Superior Court subsequently granted the counties' petition for writ of mandate (*Code Civ. Proc.*, § 1094.5), reversing the Commission, on April 27, 1989. (No. C-731033.) An appeal from that judgment is presently pending in the Court of Appeal. (*County of Los Angeles v. State of California*, No. B049625.)

Whether viewed as an action seeking restoration of Medi-Cal benefits, one to compel state reimbursement of county costs, or one for declaratory relief, therefore, the action required a determination that the enactment of AB 799 created a state mandate within the contemplation of section 6. Only upon resolution of that issue favorably to plaintiffs would the state have an obligation to reimburse the county for its increased expense and shift a portion of its appropriation limit, or to reinstate Medi-Cal benefits for plaintiffs and the class they seek to represent.

The gravamen of the action is, therefore, enforcement of section 6.<sup>3</sup>

3 Plaintiffs argue that they seek only a declaration that AB 799 created a state mandate and an injunction against the shift of costs until the state decides what action to take. This is inconsistent with the prayer of their complaint which sought an injunction requiring defendants to restore Medi-Cal eligibility to all medically indigent adults until the state paid the cost of full health services for them. It is also unavailing.

An injunction against enforcement of a state mandate is available only after the Legislature fails to include funding in a local government claims bill following a determination by the Commission that a state mandate exists. (*Gov. Code*, § 17612.) Whether plaintiffs seek declaratory relief and/or an injunction, therefore, they are seeking to enforce section 6.

All further statutory references are to the Government Code unless otherwise indicated.

### [\*331] III

#### Enforcement of Article XIII B, Section 6

In 1984, almost five years after the adoption of article XIII B, the Legislature enacted comprehensive ad-

54 Cal. 3d 326, \*, 814 P.2d 1308, \*\*;  
285 Cal. Rptr. 66, \*\*\*; 1991 Cal. LEXIS 3745

ministrative procedures for resolution of claims arising out of section 6. (§ 17500.) The Legislature did so because the absence of a uniform procedure had resulted in inconsistent rulings on the existence of state mandates, unnecessary litigation, reimbursement delays, and, apparently, resultant uncertainties in accommodating reimbursement requirements in the budgetary process. The necessity for the legislation was explained in *section 17500*:

"The Legislature finds and declares that the existing system for reimbursing local agencies and school districts for the costs of state-mandated local programs has not provided for the effective determination of the state's responsibilities under *Section 6 of Article XIII B of the California Constitution*. The Legislature finds and declares that the failure of the existing process to adequately and consistently resolve the complex legal questions involved in the determination of state-mandated costs has led to an increasing reliance by local agencies and school districts on the judiciary and, therefore, in order to relieve unnecessary congestion of the judicial system, *it is necessary to create a mechanism which is capable of rendering sound quasi-judicial decisions and providing an effective means of resolving disputes over the existence of state-mandated local programs.*" (Italics added.)

In part 7 of division 4 of title 2 of the Government Code, "State-Mandated Costs," which commences with *section 17500*, the Legislature created the Commission (§ 17525), to adjudicate disputes over the existence of a state mandated program (§§ 17551, 17557) and to adopt procedures for submission and adjudication of reimbursement claims (§ 17553). The five-member Commission includes the Controller, the Treasurer, the Director of Finance, the Director of the Office of Planning and [\*\*1312] [\*\*\*70] Research, and a public member experienced in public finance. (§ 17525.)

The legislation establishes a test-claim procedure to expeditiously resolve disputes affecting multiple agencies (§ 17554),<sup>4</sup> establishes the method of [\*\*332] payment of claims (§§ 17558, 17561), and creates reporting procedures which enable the Legislature to budget adequate funds to meet the expense of state mandates (§§ 17562, 17600, 17612, *subd. (a)*.)

4 The test claim by the County of Los Angeles was filed prior to that proposed by Alameda County. The Alameda County claim was rejected for that reason. (See § 17521.) Los Angeles County permitted San Bernardino County to join in its claim which the Commission accepted as a test claim intended to resolve the issues the majority elects to address instead in this proceeding. Los Angeles County declined a request from Alameda County that it be included in

the test claim because the two counties' systems of documentation were so similar that joining Alameda County would not be of any benefit. Alameda County and these plaintiffs were, of course, free to participate in the Commission hearing on the test claim. (§ 17555.)

Pursuant to procedures which the Commission was authorized to establish (§ 17553), local agencies<sup>5</sup> and school districts<sup>6</sup> are to file claims for reimbursement of state-mandated costs with the Commission (§§ 17551, 17560), and reimbursement is to be provided only through this statutory procedure. (§§ 17550, 17552.)

5 "'Local agency' means any city, county, special district, authority, or other political subdivision of the state." (§ 17518.)

6 "'School district' means any school district, community college district, or county superintendent of schools." (§ 17519.)

The first reimbursement claim filed which alleges that a state mandate has been created under a statute or executive order is treated as a "test claim." (§ 17521.) A public hearing must be held promptly on any test claim. At the hearing on a test claim or on any other reimbursement claim, evidence may be presented not only by the claimant, but also by the Department of Finance and any other department or agency potentially affected by the claim. (§ 17553.) Any interested organization or individual may participate in the hearing. (§ 17555.)

A local agency filing a test claim need not first expend sums to comply with the alleged state mandate, but may base its claim on estimated costs. (§ 17555.) The Commission must determine both whether a state mandate exists and, if so, the amount to be reimbursed to local agencies and school districts, adopting "parameters and guidelines" for reimbursement of any claims relating to that statute or executive order. (§ 17557.) Procedures for determining whether local agencies have achieved statutorily authorized cost savings and for offsetting these savings against reimbursements are also provided. (§ 17620 *et seq.*) Finally, judicial review of the Commission decision is available through petition for writ of mandate filed pursuant to *Code of Civil Procedure section 1094.5*. (§ 17559.)

The legislative scheme is not limited to establishing the claims procedure, however. It also contemplates reporting to the Legislature and to departments and agencies of the state which have responsibilities related to funding state mandates, budget planning, and payment. The parameters and guidelines adopted by the Commission must be submitted to the Controller, who is to pay subsequent claims arising out of the mandate. (§ 17558.) Executive orders mandating costs are to be ac-

54 Cal. 3d 326, \*; 814 P.2d 1308, \*\*;  
285 Cal. Rptr. 66, \*\*\*; 1991 Cal. LEXIS 3745

companied by an appropriations [\*333] bill to cover the costs if the costs are not included in the budget bill, and in subsequent years the costs must be included in the budget bill. (§ 17561, subds. (a) & (b).) Regular review of the costs is to be made by the Legislative Analyst, who must report to the Legislature and recommend whether the mandate should be continued. (§ 17562.) The Commission is also required to make semiannual reports to the Legislature of the number of mandates found and the estimated reimbursement cost to the state. (§ 17600.) The Legislature must then adopt a "local government claims bill." If that bill does not include funding for a state mandate, an affected local agency or school district may seek a declaration from the superior court for the County of Sacramento that the mandate is unenforceable, [\*\*1313] [\*\*\*71] and an injunction against enforcement. (§ 17612.)

Additional procedures, enacted in 1985, create a system of state-mandate apportionments to fund reimbursement. (§ 17615 et seq.)

(1) It is apparent from the comprehensive nature of this legislative scheme, and from the Legislature's expressed intent, that the exclusive remedy for a claimed violation of section 6 lies in these procedures. The statutes create an administrative forum for resolution of state mandate claims, and establishes procedures which exist for the express purpose of avoiding multiple proceedings, judicial and administrative, addressing the same claim that a reimbursable state mandate has been created. The statutory scheme also designates the Sacramento County Superior Court as the venue for judicial actions to declare unfunded mandates invalid (§ 17612).

The legislative intent is clearly stated in section 17500: "It is the intent of the Legislature in enacting this part to provide for the implementation of Section 6 of Article XIII B of the California Constitution and to consolidate the procedures for reimbursement of statutes specified in the Revenue and Taxation Code with those identified in the Constitution. . . ." And section 17550 states: "Reimbursement of local agencies and school districts for costs mandated by the state shall be provided pursuant to this chapter."

Finally, section 17552 provides: "This chapter shall provide the sole and exclusive procedure by which a local agency or school district may claim reimbursement for costs mandated by the state as required by Section 6 of Article XIII B of the California Constitution." (Italics added.)

In short, the Legislature has created what is clearly intended to be a comprehensive and exclusive procedure by which to implement and enforce section 6.

[\*334] IV

#### Exclusivity

(2) Plaintiffs argued, and the Court of Appeal agreed, that the existence of an administrative remedy by which affected local agencies could enforce their right under section 6 to reimbursement for the cost of state mandates did not bar this action because the administrative remedy is available only to local agencies and school districts.

The Court of Appeal recognized that the decision of the County of Alameda, which had not filed a claim for reimbursement at the time the complaint was filed, was a discretionary decision which plaintiffs could not challenge. (*Dum v. Long Beach L. & W. Co.* (1896) 114 Cal. 605, 609, 610-611 [46 P. 607]; *Silver v. Watson* (1972) 26 Cal.App.3d 905, 909 [103 Cal.Rptr. 576]; *Whitson v. City of Long Beach* (1962) 200 Cal.App.2d 486, 506 [19 Cal.Rptr. 668]; *Elliott v. Superior Court* (1960) 180 Cal.App.2d 894, 897 [5 Cal.Rptr. 116].) The court concluded, however, that public policy and practical necessity required that plaintiffs have a remedy for enforcement of section 6 independent of the statutory procedure.

The right involved, however, is a right given by the Constitution to local agencies, not individuals either as taxpayers or recipients of government benefits and services. Section 6 provides that the "state shall provide a subvention of funds to reimburse . . . local governments . . ." (Italics added.) The administrative remedy created by the Legislature is adequate to fully implement section 6. That Alameda County did not file a reimbursement claim does not establish that the enforcement remedy is inadequate. Any of the 58 counties was free to file a claim, and other counties did so. The test claim is now before the Court of Appeal. The administrative procedure has operated as intended.

The Legislature has the authority to establish procedures for the implementation of local agency rights under section 6. Unless the exercise of a constitutional right is unduly restricted, the court must limit enforcement to the procedures established by the Legislature. (*People v. [\*\*1314] [\*\*\*72] Western Air Lines, Inc.* (1954) 42 Cal.2d 621, 637 [268 P.2d 723]; *Chesney v. Byram* (1940) 15 Cal.2d 460, 463 [101 P.2d 1106]; *County of Contra Costa v. State of California* (1986) 177 Cal.App.3d 62, 75 [222 Cal.Rptr. 750].)

Plaintiffs' argument that they must be permitted to enforce section 6 as individuals because their right to adequate health care services has been compromised by the failure of the state to reimburse the county for the cost [\*335] of services to medically indigent adults is unpersuasive. Plaintiffs' interest, although pressing, is indirect and does not differ from the interest of the public at large in the financial plight of local government. AI-

54 Cal. 3d 326, \*, 814 P.2d 1308, \*\*;  
285 Cal. Rptr. 66, \*\*\*; 1991 Cal. LEXIS 3745

though the basis for the claim that the state must reimburse the county for its costs of providing the care that was formerly available to plaintiffs under Medi-Cal is that AB 799 created a state mandate, plaintiffs have no right to have any reimbursement expended for health care services of any kind. Nothing in article XIII B or other provision of law controls the county's expenditure of the funds plaintiffs claim must be paid to the county. To the contrary, *section 17563* gives the local agency complete discretion in the expenditure of funds received pursuant to section 6, providing: "Any funds received by a local agency or school district pursuant to the provisions of this chapter may be used for any public purpose."

The relief plaintiffs seek in their prayer for state reimbursement of county expenses is, in the end, a reallocation of general revenues between the state and the county. Neither public policy nor practical necessity compels creation of a judicial remedy by which individuals may enforce the right of the county to such revenues. The Legislature has established a procedure by which the county may claim any revenues to which it believes it is entitled under section 6. That test-claim statute expressly provides that not only the claimant, but also "any other interested organization or individual may participate" in the hearing before the Commission (§ 17555) at which the right to reimbursement of the costs of such mandate is to be determined. Procedures for receiving any claims must "provide for presentation of evidence by the claimant, the Department of Finance and any other affected department or agency, and any other interested person." (§ 17553. Italics added.) Neither the county nor an interested individual is without an opportunity to be heard on these questions. These procedures are both adequate and exclusive.<sup>7</sup>

<sup>7</sup> Plaintiffs' argument, that the Legislature's failure to make provision for individual enforcement of section 6 before the Commission demonstrates an intent to permit legal actions, is not persuasive. The legislative statement of intent to relegate all mandate disputes to the Commission is clear. A more likely explanation of the failure to provide for test cases to be initiated by individuals lies in recognition that (1) because section 6 creates rights only in governmental entities, individuals lack sufficient beneficial interest in either the receipt or expenditure of reimbursement funds to accord them standing; and (2) the number of local agencies having a direct interest in obtaining reimbursement is large enough to ensure that citizen interests will be adequately represented.

The alternative relief plaintiffs seek -- reinstatement to Medi-Cal pending further action by the state -- is not a remedy available under the statute, and thus is not one which this court may award. The remedy for the failure to fund a program is a declaration that the mandate is unenforceable. That relief is available only after the Commission has determined that a mandate exists [\*336] and the Legislature has failed to include the cost in a local government claims bill, and only on petition by the county. (§ 17612.)<sup>8</sup>

<sup>8</sup> Plaintiffs are not without a remedy if the county fails to provide adequate health care, however. They may enforce the obligation imposed on the county by *Welfare and Institutions Code sections 17000 and 17001*, and by judicial action. (See, e.g., *Mooney v. Pickett* (1971) 4 Cal.3d 669 [94 Cal.Rptr. 279, 483 P.2d 1231].)

Moreover, the judicial remedy approved by the Court of Appeal permits resolution of the issues raised in a state mandate claim without the participation of those officers and individuals the Legislature deems necessary to a full and fair exposition and resolution of the issues. Neither the Controller nor the Director of Finance [\*\*1315] [\*\*\*73] was named a defendant in this action. The Treasurer and the Director of the Office of Planning and Research did not participate. All of these officers would have been involved in determining the question as members of the Commission, as would the public member of the Commission. The judicial procedures were not equivalent to the public hearing required on test claims before the Commission by *section 17555*. Therefore, other affected departments, organizations, and individuals had no opportunity to be heard.<sup>9</sup>

<sup>9</sup> For this reason, it would be inappropriate to address the merits of plaintiff's claim in this proceeding. (Cf. *Dix v. Superior Court* (1991) 53 Cal.3d 442 [279 Cal.Rptr. 834, 807 P.2d 1063].) Unlike the dissent, we do not assume that in representing the state in this proceeding, the Attorney General necessarily represented the interests and views of these officials.

Finally, since a determination that a state mandate has been created in a judicial proceeding rather than one before the Commission does not trigger the procedures for creating parameters and guidelines for payment of claims, or for inclusion of estimated costs in the state budget, there is no source of funds available for compliance with the judicial decision other than the appropriations for the Department of Health Services. Payment from those funds can only be at the expense of another program which the department is obligated to fund. No public policy supports, let alone requires, this result.

54 Cal. 3d 326, \*; 814 P.2d 1308, \*\*;  
285 Cal. Rptr. 66, \*\*\*; 1991 Cal. LEXIS 3745

The superior court acted properly in dismissing this action.

The judgment of the Court of Appeal is reversed.

DISSENT BY: BROUSSARD

DISSENT

ROUSSARD, J.

I dissent. For nine years the Legislature has defied the mandate of article XIII B of the California Constitution (hereafter article XIII B). Having transferred responsibility for the care of medically indigent adults (MIA's) to county governments, the Legislature has failed to provide the counties with sufficient money to meet this responsibility, yet the [\*337] Legislature computes its own appropriations limit as if it fully funded the program. The majority, however, declines to remedy this violation because, it says, the persons most directly harmed by the violation -- the medically indigent who are denied adequate health care -- have no standing to raise the matter. I disagree, and will demonstrate that (1) plaintiffs have standing as citizens to seek a declaratory judgment to determine whether the state is complying with its constitutional duty under article XIII B; (2) the creation of an administrative remedy whereby counties and local districts can enforce article XIII B does not deprive the citizenry of its own independent right to enforce that provision; and (3) even if plaintiffs lacked standing, our recent decision in *Dix v. Superior Court* (1991) 53 Cal.3d 442 [279 Cal.Rptr. 834, 807 P.2d 1063] permits us to reach and resolve any significant issue decided by the Court of Appeal and fully briefed and argued here. I conclude that we should reach the merits of the appeal.

On the merits, I conclude that the state has not complied with its constitutional obligation under article XIII B. To prevent the state from avoiding the spending limits imposed by article XIII B, section 6 of that article prohibits the state from transferring previously state-financed programs to local governments without providing sufficient funds to meet those burdens. In 1982, however, the state excluded the medically indigent from its Medi-Cal program, thus shifting the responsibility for such care to the counties. Subvention funds provided by the state were inadequate to reimburse the counties for this responsibility, and became less adequate every year. At the same time, the state continued to compute its spending limit as if it fully financed the entire program. The result is exactly what article XIII B was intended to prevent: the state enjoys a falsely inflated spending limit; the county is compelled to assume a burden it cannot afford; and the medically indigent receive inadequate health care.

#### I. Facts and Procedural History

Plaintiffs -- citizens, taxpayers, and persons in need of medical care -- allege that [\*\*1316] [\*\*\*74] the state has shifted its financial responsibility for the funding of health care for MIA's to the counties without providing the necessary funding and without any agreement transferring appropriation limits, and that as a result the state is violating article XIII B. Plaintiffs further allege they and the class they claim to represent cannot, consequently, obtain adequate health care from the County of Alameda, which lacks the state funding to provide it. The county, although nominally a defendant, aligned [\*338] itself with plaintiffs. It admits the inadequacy of its program to provide medical care for MIA's but blames the absence of state subvention funds. <sup>1</sup>

1 The majority states that "Plaintiffs are not without a remedy if the county fails to provide adequate health care . . . . They may enforce the obligation imposed on the county by *Welfare and Institutions Code sections 17000 and 17001*, and by judicial action." (Maj. opn., ante, p. 336, fn. 8)

The majority fails to note that plaintiffs have already tried this remedy, and met with the response that, owing to the state's inadequate subvention funds, the county cannot afford to provide adequate health care.

At hearings below, plaintiffs presented uncontradicted evidence regarding the enormous impact of these statutory changes upon the finances and population of Alameda County. That county now spends about \$ 40 million annually on health care for MIA's, of which the state reimburses about half. Thus, since article XIII B became effective, Alameda County's obligation for the health care of MIA's has risen from zero to more than \$ 20 million per year. The county has inadequate funds to discharge its new obligation for the health care of MIA's; as a result, according to the Court of Appeal, uncontested evidence from medical experts presented below shows that, "The delivery of health care to the indigent in Alameda County is in a state of shambles; the crisis cannot be overstated . . . ." "Because of inadequate state funding, some Alameda County residents are dying, and many others are suffering serious diseases and disabilities, because they cannot obtain adequate access to the medical care they need . . . ." "The system is clogged to the breaking point. . . . All community clinics . . . are turning away patients." "The funding received by the county from the state for MIAs does not approach the actual cost of providing health care to the MIAs. As a consequence, inadequate resources available to county health services jeopardize the lives and health of thousands of people . . . ."

54 Cal. 3d 326, \*; 814 P.2d 1308, \*\*;  
285 Cal. Rptr. 66, \*\*\*; 1991 Cal. LEXIS 3745

The trial court acknowledged that plaintiffs had shown irreparable injury, but denied their request for a preliminary injunction on the ground that they could not prevail in the action. It then granted the state's motion for summary judgment. Plaintiffs appealed from both decisions of the trial court.

The Court of Appeal consolidated the two appeals and reversed the rulings below. It concluded that plaintiffs had standing to bring this action to enforce the constitutional spending limit of article XIII B, and that the action is not barred by the existence of administrative remedies available to counties. It then held that the shift of a portion of the cost of medical indigent care by the state to Alameda County constituted a state-mandated new program under the provisions of article XIII B, which triggered that article's provisions requiring a subvention of funds by the state to reimburse Alameda [\*339] County for the costs of such program it was required to assume. The judgments denying a preliminary injunction and granting summary judgment for defendants were reversed. We granted review.

## II. Standing

A. *Plaintiffs have standing to bring an action for declaratory relief to determine whether the state is complying with article XIII B.*

Plaintiffs first claim standing as taxpayers under *Code of Civil Procedure section 526a*, which provides that: "An action to obtain a judgment, restraining and preventing any illegal expenditure of, waste of, or injury to, the estate, funds, or other property of a county . . . , may be maintained [\*\*1317] [\*\*\*75] against any officer thereof, or any agent, or other person, acting in its behalf, either by a citizen resident therein, or by a corporation, who is assessed for and is liable to pay, or, within one year before the commencement of the action, has paid, a tax therein. . . ." As in *Common Cause v. Board of Supervisors* (1989) 49 Cal.3d 432, 439 [261 Cal.Rptr. 574, 777 P.2d 610], however, it is "unnecessary to reach the question whether plaintiffs have standing to seek an injunction under *Code of Civil Procedure section 526a*, because there is an independent basis for permitting them to proceed." Plaintiffs here seek a declaratory judgment that the transfer of responsibility for MIA's from the state to the counties without adequate reimbursement violates article XIII B. A declaratory judgment that the state has breached its duty is essentially equivalent to an action in mandate to compel the state to perform its duty. (See *California Assn. of Psychology Providers v. Rank* (1990) 51 Cal.3d 1, 9 [270 Cal.Rptr. 796, 793 P.2d 2], which said that a declaratory judgment establishing that the state has a duty to act provides relief equivalent to mandamus, and makes issuance of the writ unnecessary.) Plaintiffs further seek a mandatory injunction requiring

that the state pay the health costs of MIA's under the Medi-Cal program until the state meets its obligations under article XIII B. The majority similarly characterize plaintiffs' action as one comparable to mandamus brought to enforce section 6 of article XIII B.

We should therefore look for guidance to cases that discuss the standing of a party seeking a writ of mandate to compel a public official to perform his or her duty.<sup>2</sup> Such an action may be brought by any person "beneficially interested" in the issuance of the writ. (*Code Civ. Proc.*, § 1086.) In *Carsten* [\*340] v. *Psychology Examining Com.* (1980) 27 Cal.3d 793, 796 [166 Cal.Rptr. 844, 614 P.2d 276], we explained that the "requirement that a petitioner be 'beneficially interested' has been generally interpreted to mean that one may obtain the writ only if the person has some special interest to be served or some particular right to be preserved or protected over and above the interest held in common with the public at large." We quoted from Professor Davis, who said, "One who is in fact adversely affected by governmental action should have standing to challenge that action if it is judicially reviewable." (Pp. 796-797, quoting 3 Davis, *Administrative Law Treatise* (1st ed. 1958) p. 291.) Cases applying this standard include *Stocks v. City of Irvine* (1981) 114 Cal.App.3d 520 [170 Cal.Rptr. 724], which held that low-income residents of Los Angeles had standing to challenge exclusionary zoning laws of suburban communities which prevented the plaintiffs from moving there; *Taschner v. City Council*, *supra*, 31 Cal.App.3d 48, which held that a property owner has standing to challenge an ordinance which may limit development of the owner's property; and *Felt v. Waughop* (1924) 193 Cal. 498 [225 P. 862], which held that a city voter has standing to compel the city clerk to certify a correct list of candidates for municipal office. Other cases illustrate the limitation on standing: *Carsten v. Psychology Examining Com.*, *supra*, 27 Cal.3d 793, held that a member of the committee who was neither seeking a license nor in danger of losing one had no standing to challenge [\*\*1318] [\*\*\*76] a change in the method of computing the passing score on the licensing examination; *Parker v. Bowron* (1953) 40 Cal.2d 344 [254 P.2d 6] held that a union official who was neither a city employee nor a city resident had no standing to compel a city to follow a prevailing wage ordinance; and *Dunbar v. Governing Board* (1969) 275 Cal.App.2d 14 [79 Cal.Rptr. 662] held that a member of a student organization had standing to challenge a college district's rule barring a speaker from campus, but persons who merely planned to hear him speak did not.

<sup>2</sup> It is of no importance that plaintiffs did not request issuance of a writ of mandate. In *Taschner v. City Council* (1973) 31 Cal.App.3d 48, 56 [107 Cal.Rptr. 214] (overruled on other

54 Cal. 3d 326, \*, 814 P.2d 1308, \*\*;  
285 Cal. Rptr. 66, \*\*\*; 1991 Cal. LEXIS 3745

grounds in *Associated Home Builders etc., Inc. v. City of Livermore* (1976) 18 Cal.3d 582, 596 [135 Cal.Rptr. 41, 557 P.2d 473, 92 A.L.R.3d 1038]), the court said that "[a]s against a general demurrer, a complaint for declaratory relief may be treated as a petition for mandate [citations], and where a complaint for declaratory relief alleges facts sufficient to entitle plaintiff to mandate, it is error to sustain a general demurrer without leave to amend."

In the present case, the trial court ruled on a motion for summary judgment, but based that ruling not on the evidentiary record (which supported plaintiffs' showing of irreparable injury) but on the issues as framed by the pleadings. This is essentially equivalent to a ruling on demurrer, and a judgment denying standing could not be sustained on the narrow ground that plaintiffs asked for the wrong form of relief without giving them an opportunity to correct the defect. (See *Residents of Beverly Glen, Inc. v. City of Los Angeles* (1973) 34 Cal.App.3d 117, 127-128 [109 Cal.Rptr. 724].)

No one questions that plaintiffs are affected by the lack of funds to provide care for MIA's. Plaintiffs, except for plaintiff Rabinowitz, are not merely citizens and taxpayers; they are medically indigent persons living in Alameda County who have been and will be deprived of proper medical care if funding of MIA programs is inadequate. Like the other plaintiffs here, [\*341] plaintiff Kinlaw, a 60-year-old woman with diabetes and hypertension, has no health insurance. Plaintiff Spier has a chronic back condition; inadequate funding has prevented him from obtaining necessary diagnostic procedures and physiotherapy. Plaintiff Tsosie requires medication for allergies and arthritis, and claims that because of inadequate funding she cannot obtain proper treatment. Plaintiff King, an epileptic, says she was unable to obtain medication from county clinics, suffered seizures, and had to go to a hospital. Plaintiff "Doe" asserts that when he tried to obtain treatment for AIDS-related symptoms, he had to wait four to five hours for an appointment and each time was seen by a different doctor. All of these are people personally dependent upon the quality of care of Alameda County's MIA program; most have experienced inadequate care because the program was underfunded, and all can anticipate future deficiencies in care if the state continues its refusal to fund the program fully.

The majority, however, argues that the county has no duty to use additional subvention funds for the care of MIA's because under *Government Code section 17563* "[a]ny funds received by a local agency . . . pursuant to the provisions of this chapter may be used for any public

purpose." Since the county may use the funds for other purposes, it concludes that MIA's have no special interest in the subvention.<sup>3</sup>

3 The majority's argument assumes that the state will comply with a judgment for plaintiffs by providing increased subvention funds. If the state were instead to comply by restoring Medi-Cal coverage for MIA's, or some other method of taking responsibility for their health needs, plaintiffs would benefit directly.

This argument would be sound if the county were already meeting its obligations to MIA's under *Welfare and Institutions Code section 17000*. If that were the case, the county could use the subvention funds as it chose, and plaintiffs would have no more interest in the matter than any other county resident or taxpayer. But such is not the case at bar. Plaintiffs here allege that the county is not complying with its duty, mandated by *Welfare and Institutions Code section 17000*, to provide health care for the medically indigent; the county admits its failure but pleads lack of funds. Once the county receives adequate funds, it must perform its statutory duty under *section 17000 of the Welfare and Institutions Code*. If it refused, an action in mandamus would lie to compel performance. (See *Mooney v. Pickett* (1971) 4 Cal.3d 669 [94 Cal.Rptr. 279, 483 P.2d 1231].) In fact, the county has made clear throughout this litigation that it would use the subvention funds to provide care for MIA's. The majority's conclusion that plaintiffs lack a special, beneficial interest in the state's compliance with article XIII B ignores the practical realities of health care funding.

Moreover, we have recognized an exception to the rule that a plaintiff must be beneficially interested. "Where the question is one of public right [\*342] and the object of the mandamus is to procure the enforcement of a public duty, the relator need not show that he has any legal or special interest in the result, since it is sufficient that he is interested as a citizen in having the laws executed and the duty in question [\*\*1319] [\*\*\*77] enforced." (*Bd. of Soc. Welfare v. County of L. A.* (1945) 27 Cal.2d 98, 100-101 [162 P.2d 627].) We explained in *Green v. Obledo* (1981) 29 Cal.3d 126, 144 [172 Cal.Rptr. 206, 624 P.2d 256], that this "exception promotes the policy of guaranteeing citizens the opportunity to ensure that no governmental body impairs or defeats the purpose of legislation establishing a public right. . . . It has often been invoked by California courts. [Citations.]"

*Green v. Obledo* presents a close analogy to the present case. Plaintiffs there filed suit to challenge whether a state welfare regulation limiting deductibility of work-related expenses in determining eligibility for

54 Cal. 3d 326, \*; 814 P.2d 1308, \*\*;  
285 Cal. Rptr. 66, \*\*\*; 1991 Cal. LEXIS 3745

aid to families with dependent children (AFDC) assistance complied with federal requirements. Defendants claimed that plaintiffs were personally affected only by a portion of the regulation, and had no standing to challenge the balance of the regulation. We replied that "[t]here can be no question that the proper calculation of AFDC benefits is a matter of public right [citation], and plaintiffs herein are certainly citizens seeking to procure the enforcement of a public duty. [Citation.] It follows that plaintiffs have standing to seek a writ of mandate commanding defendants to cease enforcing [the regulation] in its entirety." (29 Cal.3d at p. 145.)

We again invoked the exception to the requirement for a beneficial interest in *Common Cause v. Board of Supervisors*, supra, 49 Cal.3d 432. Plaintiffs in that case sought to compel the county to deputize employees to register voters. We quoted *Green v. Obledo*, supra, 29 Cal.3d 126, 144, and concluded that "[t]he question in this case involves a public right to voter outreach programs, and plaintiffs have standing as citizens to seek its vindication." (49 Cal.3d at p. 439.) We should reach the same conclusion here.

B. *Government Code sections 17500-17630 do not create an exclusive remedy which bars citizen-plaintiffs from enforcing article XIII B.*

Four years after the enactment of article XIII B, the Legislature enacted *Government Code sections 17500 through 17630* to implement article XIII B, section 6. These statutes create a quasi-judicial body called the Commission on State Mandates, consisting of the state Controller, state Treasurer, state Director of Finance, state Director of the Office of Planning and Research, and one public member. The commission has authority to "hear and decide upon [any] claim" by a local government that it "is entitled to be reimbursed by the state" for costs under article XIII B. (*Gov. Code, § 17551, [\*343] subd. (a).*) Its decisions are subject to review by an action for administrative mandamus in the superior court. (See *Gov. Code, § 17559.*)

The majority maintains that a proceeding before the Commission on State Mandates is the exclusive means for enforcement of article XIII B, and since that remedy is expressly limited to claims by local agencies or school districts (*Gov. Code, § 17552*), plaintiffs lack standing to enforce the constitutional provision.<sup>4</sup> I disagree, for two reasons.

4 The majority emphasizes the statement of purpose of *Government Code section 17500*: "The Legislature finds and declares that the existing system for reimbursing local agencies and school districts for the costs of state-mandated local programs has not provided for the effective

determination of the state's responsibilities under section 6 of article XIII B of the California Constitution. The Legislature finds and declares that the failure of the existing process to adequately and consistently resolve the complex legal questions involved in the determination of state-mandated costs has led to an increasing reliance by local agencies and school districts on the judiciary, and, therefore, in order to relieve unnecessary congestion of the judicial system, it is necessary to create a mechanism which is capable of rendering sound quasi-judicial decisions and providing an effective means of resolving disputes over the existence of state-mandated local programs."

The "existing system" to which *Government Code section 17500* referred was the Property Tax Relief Act of 1972 (*Rev. & Tax. Code, §§ 2201-2327*), which authorized local agencies and school boards to request reimbursement from the state Controller. Apparently dissatisfied with this remedy, the agencies and boards were bypassing the Controller and bringing actions directly in the courts. (See, e.g., *County of Contra Costa v. State of California* (1986) 177 Cal.App.3d 62 [222 Cal.Rptr. 750].) The legislative declaration refers to this phenomena. It does not discuss suits by individuals.

[\*\*1320] [\*\*\*78] First, *Government Code section 17552* expressly addressed the question of exclusivity of remedy, and provided that "[t]his chapter shall provide the sole and exclusive procedure by which a local agency or school district may claim reimbursement for costs mandated by the state as required by Section 6 of Article XIII B of the California Constitution." (Italics added.) The Legislature was aware that local agencies and school districts were not the only parties concerned with state mandates, for in *Government Code section 17555* it provided that "any other interested organization or individual may participate" in the commission hearing. Under these circumstances the Legislature's choice of words -- "the sole and exclusive procedure by which a local agency or school district may claim reimbursement" -- limits the procedural rights of those claimants only, and does not affect rights of other persons. *Expressio unius est exclusio alterius* -- "the expression of certain things in a statute necessarily involves exclusion of other things not expressed." (*Henderson v. Mann Theatres Corp.* (1976) 65 Cal.App.3d 397, 403 [135 Cal.Rptr. 266].)

The case is similar in this respect to *Common Cause v. Board of Supervisors*, supra, 49 Cal.3d 432. Here defendants contend that the counties' right of action under *Government Code sections 17551-17552* impliedly ex-

54 Cal. 3d 326, \*; 814 P.2d 1308, \*\*;  
285 Cal. Rptr. 66, \*\*\*; 1991 Cal. LEXIS 3745

cludes [\*344] any citizen's remedy; in *Common Cause* defendants claimed the Attorney General's right of action under *Elections Code section 304* impliedly excluded any citizen's remedy. We replied that "the plain language of *section 304* contains no limitation on the right of private citizens to sue to enforce the section. To infer such a limitation would contradict our long-standing approval of citizen actions to require governmental officials to follow the law, expressed in our expansive interpretation of taxpayer standing [citations], and our recognition of a 'public interest' exception to the requirement that a petitioner for writ of mandate have a personal beneficial interest in the proceedings [citations]." (49 Cal.3d at p. 440, fn. omitted.) Likewise in this case the plain language of *Government Code sections 17551-17552* contain no limitation on the right of private citizens, and to infer such a right would contradict our long-standing approval of citizen actions to enforce public duties.

The United States Supreme Court reached a similar conclusion in *Rosado v. Wyman* (1970) 397 U.S. 397 [25 L.Ed.2d 442, 90 S.Ct. 1207]. In that case New York welfare recipients sought a ruling that New York had violated federal law by failing to make cost-of-living adjustments to welfare grants. The state replied that the statute giving the Department of Health, Education and Welfare authority to cut off federal funds to noncomplying states constituted an exclusive remedy. The court rejected the contention, saying that "[w]e are most reluctant to assume Congress has closed the avenue of effective judicial review to those individuals most directly affected by the administration of its program." (P. 420 [25 L.Ed.2d at p. 460].) The principle is clear: the persons actually harmed by illegal state action, not only some administrator who has no personal stake in the matter, should have standing to challenge that action.

Second, article XIII B was enacted to protect taxpayers, not governments. Section 1 and 2 of article XIII B establish strict limits on state and local expenditures, and require the refund of all taxes collected in excess of those limits. Section 6 of article XIII B prevents the state from evading those limits and burdening county taxpayers by transferring financial responsibility for a program to a county, yet counting the cost of that program toward the limit on state expenditures.

These provisions demonstrate a profound distrust of government and a disdain for excessive government spending. An exclusive remedy under which only governments can enforce article XIII B, and the taxpayer-citizen can appear only if a government [\*\*1321] [\*\*\*79] has first instituted proceedings, is inconsistent with the ethos that led to article XIII B. The drafters of article XIII B and the voters who enacted it would not accept that the state Legislature -- the principal body

regulated by the article -- could establish a procedure [\*345] under which the only way the article can be enforced is for local governmental bodies to initiate proceedings before a commission composed largely of state financial officials.

One obvious reason is that in the never-ending attempts of state and local government to obtain a larger proportionate share of available tax revenues, the state has the power to coerce local governments into forgoing their rights to enforce article XIII B. An example is the Brown-Presley Trial Court Funding Act (*Gov. Code, § 77000 et seq.*), which provides that the county's acceptance of funds for court financing may, in the discretion of the Governor, be deemed a waiver of the counties' rights to proceed before the commission on all claims for reimbursement for state-mandated local programs which existed and were not filed prior to passage of the trial funding legislation.<sup>5</sup> The ability of state government by financial threat or inducement to persuade counties to waive their right of action before the commission renders the counties' right of action inadequate to protect the public interest in the enforcement of article XIII B.

5 "(a) The initial decision by a county to opt into the system pursuant to Section 77300 shall constitute a waiver of all claims for reimbursement for state-mandated local programs not theretofore approved by the State Board of Control, the Commission on State Mandates, or the courts to the extent the Governor, in his discretion, determines that waiver to be appropriate; provided, that a decision by a county to opt into the system pursuant to Section 77300 beginning with the second half of the 1988-89 fiscal year shall not constitute a waiver of a claim for reimbursement based on a statute chaptered on or before the date the act which added this chapter is chaptered, which is filed in acceptable form on or before the date the act which added this chapter is chaptered. A county may petition the Governor to exempt any such claim from this waiver requirement; and the Governor, in his discretion, may grant the exemption in whole or in part. The waiver shall not apply to or otherwise affect any claims accruing after initial notification. Renewal, renegotiation, or subsequent notification to continue in the program shall not constitute a waiver. [para.] (b) The initial decision by a county to opt into the system pursuant to Section 77300 shall constitute a waiver of any claim, cause of action, or action whenever filed, with respect to the Trial Court Funding Act of 1985, Chapter 1607 of the Statutes of 1985, or Chapter 1211 of the Statutes of 1987." (*Gov. Code, § 77203.5*, italics added.)

54 Cal. 3d 326, \*; 814 P.2d 1308, \*\*;  
285 Cal. Rptr. 66, \*\*\*; 1991 Cal. LEXIS 3745

"As used in this chapter, 'state-mandated local program' means any and all reimbursements owed or owing by operation of either Section 6 of Article XIII B of the California Constitution, or Section 17561 of the Government Code, or both." (Gov. Code, § 77005, italics added.)

The facts of the present litigation also demonstrate the inadequacy of the commission remedy. The state began transferring financial responsibility for MIA's to the counties in 1982. Six years later no county had brought a proceeding before the commission. After the present suit was filed, two counties filed claims for 70 percent reimbursement. Now, nine years after the 1982 legislation, the counties' claims are pending before the Court of Appeal. After that court acts, and we decide whether to review its decision, the matter may still have to go back to the commission for hearings to [\*346] determine the amount of the mandate -- which is itself an appealable order. When an issue involves the life and health of thousands, a procedure which permits this kind of delay is not an adequate remedy.

In sum, effective, efficient enforcement of article XIII B requires that standing to enforce that measure be given to those harmed by its violation -- in this case, the medically indigent -- and not be vested exclusively in local officials who have no personal interest at stake and are subject to financial and political pressure to overlook violations.

C. Even if plaintiffs lack standing this court should nevertheless address and resolve the merits of the appeal.

Although ordinarily a court will not decide the merits of a controversy if the plaintiffs lack standing (see *McKinny v. Board of Trustees* (1982) 31 Cal.3d 79, 90 [181 Cal.Rptr. 549, 642 P.2d 460]), we recognized [\*\*1322] [\*\*\*80] an exception to this rule in our recent decision in *Dix v. Superior Court*, supra, 53 Cal.3d 442 (hereafter *Dix*). In *Dix*, the victim of a crime sought to challenge the trial court's decision to recall a sentence under *Penal Code* section 1170. We held that only the prosecutor, not the victim of the crime, had standing to raise that issue. We nevertheless went on to consider and decide questions raised by the victim concerning the trial court's authority to recall a sentence under *Penal Code* section 1170, subdivision (d). We explained that the sentencing issues "are significant. The case is fully briefed and all parties apparently seek a decision on the merits. Under such circumstances, we deem it appropriate to address [the victim's] sentencing arguments for the guidance of the lower courts. Our discretion to do so under analogous circumstances is well settled. [Citing cases explaining when an appellate court can decide an issue despite mootness.]" (53 Cal.3d

at p. 454.) In footnote we added that "Under article VI, section 12, subdivision (b) of the California Constitution . . . , we have jurisdiction to 'review the decision of a Court of Appeal in any cause.' (Italics added.) Here the Court of Appeal's decision addressed two issues -- standing and merits. Nothing in article VI, section 12(b) suggests that, having rejected the Court of Appeal's conclusion on the preliminary issue of standing, we are foreclosed from 'review[ing]' the second subject addressed and resolved in its decision." (Pp. 454-455, fn. 8.)

I see no grounds on which to distinguish *Dix*. The present case is also one in which the Court of Appeal decision addressed both standing and merits. It is fully briefed. Plaintiffs and the county seek a decision on the merits. While the state does not seek a decision on the merits in this proceeding, its appeal of the superior court decision in the mandamus proceeding brought by the County of Los Angeles (see maj. opn., ante, p. 330, fn. 2) shows that it is not opposed to an appellate decision on the merits.

[\*347] The majority, however, notes that various state officials -- the Controller, the Director of Finance, the Treasurer, and the Director of the Office of Planning and Research -- did not participate in this litigation. Then in a footnote, the majority suggests that this is the reason they do not follow the *Dix* decision. (Maj. opn., ante, p. 336, fn. 9.) In my view, this explanation is insufficient. The present action is one for declaratory relief against the state. It is not necessary that plaintiffs also sue particular state officials. (The state has never claimed that such officials were necessary parties.) I do not believe we should refuse to reach the merits of this appeal because of the nonparticipation of persons who, if they sought to participate, would be here merely as amici curiae. 6

6 It is true that these officials would participate in a proceeding before the Commission on State Mandates, but they would do so as members of an administrative tribunal. On appellate review of a commission decision, its members, like the members of the Public Utilities Commission or the Workers' Compensation Appeals Board, are not respondents and do not appear to present their individual views and positions. For example, in *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830 [244 Cal.Rptr. 677, 750 P.2d 318], in which we reviewed a commission ruling relating to subvention payments for education of handicapped children, the named respondents were the state Superintendent of Public Instruction, the Department of Education, and the Commission on State Mandates. The individual

54 Cal. 3d 326, \*; 814 P.2d 1308, \*\*;  
285 Cal. Rptr. 66, \*\*\*; 1991 Cal. LEXIS 3745

members of the commission were not respondents and did not participate.

The case before us raises no issues of departmental policy. It presents solely an issue of law which this court is competent to decide on the briefs and arguments presented. That issue is one of great significance, far more significant than any raised in *Dix*. Judges rarely recall sentencing under *Penal Code section 1170, subdivision (d)*; when they do, it generally affects only the individual defendant. In contrast, the legal issue here involves immense sums of money and affect budgetary planning for both the state and counties. State and county governments need to know, as soon as possible, what their [\*\*1323] [\*\*\*81] rights and obligations are; legislators considering proposals to deal with the current state and county budget crisis need to know how to frame legislation so it does not violate article XIII B. The practical impact of a decision on the people of this state is also of great importance. The failure of the state to provide full subvention funds and the difficulty of the county in filling the gap translate into inadequate staffing and facilities for treatment of thousands of persons. Until the constitutional issues are resolved the legal uncertainties may inhibit both levels of government from taking the steps needed to address this problem. A delay of several years until the Los Angeles case is resolved could result in pain, hardship, or even death for many people. I conclude that, whether or not plaintiffs have standing, this court should address and resolve the merits of the appeal.

#### D. Conclusion as to standing.

As I have just explained, it is not necessary for plaintiffs to have standing for us to be able to decide the merits of the appeal. Nevertheless, I conclude [\*348] that plaintiffs have standing both as persons "beneficially interested" under *Code of Civil Procedure section 1086* and under the doctrine of *Green v. Obledo, supra, 29 Cal.3d 126*, to bring an action to determine whether the state has violated its duties under article XIII B. The remedy given local agencies and school districts by *Government Code sections 17500- 17630* is, as *Government Code section 17552* states, the exclusive remedy by which those bodies can challenge the state's refusal to provide subvention funds, but the statute does not limit the remedies available to individual citizens.

### III. Merits of the Appeal

#### A. State funding of care for MIA's.

*Welfare and Institutions Code section 17000* requires every county to "relieve and support" all indigent or incapacitated residents, except to the extent that such persons are supported or relieved by other sources. <sup>7</sup> From 1971 until 1982, and thus at the time article XIII B

became effective, counties were not required to pay for the provision of health services to MIA's, whose health needs were met through the state-funded Medi-Cal program. Since the medical needs of MIA's were fully met through other sources, the counties had no duty under *Welfare and Institutions Code section 17000* to meet those needs. While the counties did make general contributions to the Medi-Cal program (which covered persons other than MIA's) from 1971 until 1978, at the time article XIII B became effective in 1980 the counties were not required to make any financial contributions to Medi-Cal. It is therefore undisputed that the counties were not required to provide financially for the health needs of MIA's when article XIII B became effective. The state funded all such needs of MIA's.

7 *Welfare and Institutions Code section 17000* provides that "[e]very county . . . shall relieve and support all incompetent, poor, indigent persons, and those incapacitated by age, disease, or accident, lawfully resident therein, when such persons are not supported and relieved by their relatives or friends, by their own means, or by state hospitals or other state or private institutions."

In 1982, the Legislature passed Assembly Bill No. 799 (1981-1982 Reg. Sess.; Stats. 1982, ch. 328, pp. 1568-1609) (hereafter AB No. 799), which removed MIA's from the state-funded Medi-Cal program as of January 1, 1983, and thereby transferred to the counties, through the County Medical Services Plan which AB No. 799 created, the financial responsibility to provide health services to approximately 270,000 MIA's. AB No. 799 required that the counties provide health care for MIA's, yet appropriated only 70 percent of what the state would have spent on MIA's had those persons remained a state responsibility under the Medi-Cal program.

Since 1983, the state has only partially defrayed the costs to the counties of providing health care to MIA's. Such state funding to counties was [\*349] initially relatively constant, generally more than \$ 400 million per year. By 1990, however, state [\*\*\*82] funding [\*\*1324] had decreased to less than \$ 250 million. The state, however, has always included the full amount of its former obligation to provide for MIA's under the Medi-Cal program in the year preceding July 1, 1980, as part of its article XIII B "appropriations limit," i.e., as part of the base amount of appropriations on which subsequent annual adjustments for cost-of-living and population changes would be calculated. About \$ 1 billion has been added to the state's adjusted spending limit for population growth and inflation *solely* because of the state's inclusion of all MIA expenditures in the appropriation limit established for its base year, 1979-1980. The state has not made proportional increases in the sums

54 Cal. 3d 326, \*, 814 P.2d 1308, \*\*;  
285 Cal. Rptr. 66, \*\*\*; 1991 Cal. LEXIS 3745

provided to counties to pay for the MIA services funded by the counties since January 1, 1983.

B. *The function of article XIII B.*

Our recent decision in *County of Fresno v. State of California* (1991) 53 Cal.3d 482, 486-487 [280 Cal.Rptr. 92, 808 P.2d 235] (hereafter *County of Fresno*), explained the function of article XIII B and its relationship to article XIII A, enacted one year earlier:

"At the June 6, 1978, Primary Election, article XIII A was added to the Constitution through the adoption of Proposition 13, an initiative measure aimed at controlling ad valorem property taxes and the imposition of new 'special taxes.' (*Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization* (1978) 22 Cal.3d 208, 231-232 [149 Cal.Rptr. 239, 583 P.2d 1281].) The constitutional provision imposes a limit on the power of state and local governments to adopt and levy taxes. (*City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 59, fn. 1 [266 Cal.Rptr. 139, 785 P.2d 522] (*City of Sacramento*).)

"At the November 6, 1979, Special Statewide Election, article XIII B was added to the Constitution through the adoption of Proposition 4, another initiative measure. That measure places limitations on the ability of both state and local governments to appropriate funds for expenditures.

"Articles XIII A and XIII B work in tandem, together restricting California governments' power both to levy and to spend [taxes] for public purposes.' (*City of Sacramento, supra*, 50 Cal.3d at p. 59, fn. 1.)

"Article XIII B of the Constitution was intended . . . to provide 'permanent protection for taxpayers from excessive taxation' and 'a reasonable way to provide discipline in tax spending at state and local levels.' (See *County of Placer v. Corin* (1980) 113 Cal.App.3d 443, 446 [170 Cal.Rptr. 232], quoting and following Ballot Pamp., Proposed Stats. and Amends. to Cal. Const. with arguments to voters, Special Statewide Elec. (Nov. 6, 1979), argument [\*350] in favor of Prop. 4, p. 18.) To this end, it establishes an 'appropriations limit' for both state and local governments (*Cal. Const., art. XIII B, § 8, subd. (h)*) and allows no 'appropriations subject to limitation' in excess thereof (*id.*, § 2). [\*] (See *County of Placer v. Corin, supra*, 113 Cal.App.3d at p. 446.) It defines the relevant 'appropriations subject to limitation' as 'any authorization to expend during a fiscal year the proceeds of taxes . . . ' (*Cal. Const., art. XIII B, § 8, subd. (b)*.)" (*County of Fresno, supra*, 53 Cal.3d at p. 486.)

8 Article XIII B, section 1 provides: "The total annual appropriations subject to limitation of the state and of each local government shall not ex-

ceed the appropriations limit of such entity of government for the prior year adjusted for changes in the cost of living and population except as otherwise provided in this Article."

Under section 3 of article XIII B the state may transfer financial responsibility for a program to a county if the state and county mutually agree that the appropriation limit of the state will be decreased and that of the county increased by the same amount. ' [\*1325] [\*\*\*83] Absent such an agreement, however, section 6 of article XIII B generally precludes the state from avoiding the spending limits it must observe by shifting to local governments programs and their attendant financial burdens which were a state responsibility prior to the effective date of article XIII B. It does so by requiring that "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the cost of such program or increased level of service . . . ." <sup>10</sup>

9 Section 3 of article XIII B reads in relevant part: "The appropriations limit for any fiscal year . . . shall be adjusted as follows:

"(a) In the event that the financial responsibility of providing services is transferred, in whole or in part . . . from one entity of government to another, then for the year in which such transfer becomes effective the appropriation limit of the transferee entity shall be increased by such reasonable amount as the said entities shall mutually agree and the appropriations limit of the transferor entity shall be decreased by the same amount. . . ."

10 Section 6 of article XIII B further provides that the "Legislature may, but need not, provide such subvention of funds for the following mandates: (a) Legislative mandates requested by the local agency affected; (b) Legislation defining a new crime or changing an existing definition of a crime; or (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975." None of these exceptions apply in the present case.

"Section 6 was included in article XIII B in recognition that article XIII A of the Constitution severely restricted the taxing powers of local governments. (See *County of Los Angeles [v. State of California]* (1987)) 43 Cal.3d 46, 61 [233 Cal.Rptr. 38, 729 P.2d 202].) The provision was intended to preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities that were ill equipped to handle the task. (*Ibid.*; see *Lucia Mar Unified School*

54 Cal. 3d 326, \*, 814 P.2d 1308, \*\*;  
285 Cal. Rptr. 66, \*\*\*; 1991 Cal. LEXIS 3745

*Dist. v. Honig, supra, 44 Cal.3d 830, 836, fn. 6.*) Specifically, it was designed to protect the tax [\*351] revenues of local governments from state mandates that would require expenditure of such revenues." (*County of Fresno, supra, 53 Cal.3d at p. 487.*)

C. *Applicability of article XIII B to health care for MIA's.*

The state argues that care of the indigent, including medical care, has long been a county responsibility. It claims that although the state undertook to fund this responsibility from 1979 through 1982, it was merely temporarily (as it turned out) helping the counties meet their responsibilities, and that the subsequent reduction in state funding did not impose any "new program" or "higher level of service" on the counties within the meaning of section 6 of article XIII B. Plaintiffs respond that the critical question is not the traditional roles of the county and state, but who had the fiscal responsibility on November 6, 1979, when article XIII B took effect. The purpose of article XIII B supports the plaintiffs' position.

As we have noted, article XIII A of the Constitution (Proposition 13) and article XIII B are complementary measures. The former radically reduced county revenues, which led the state to assume responsibility for programs previously financed by the counties. Article XIII B, enacted one year later, froze both state and county appropriations at the level of the 1978-1979 budgets -- a year when the budgets included state financing for the prior county programs, but not county financing for these programs. Article XIII B further limited the state's authority to transfer obligations to the counties. Reading the two together, it seems clear that article XIII B was intended to limit the power of the Legislature to retransfer to the counties those obligations which the state had assumed in the wake of Proposition 13.

Under article XIII B, both state and county appropriations limits are set on the basis of a calculation that begins with the budgets in effect when article XIII B was enacted. If the state could transfer to the county a program for which the state at that time had full financial responsibility, the county could be forced to assume additional financial obligations without the right to appropriate additional moneys. The state, at the same time, would get credit toward its appropriations limit for expenditures it did not pay. County taxpayers [\*\*1326] [\*\*\*84] would be forced to accept new taxes or see the county forced to cut existing programs further; state taxpayers would discover that the state, by counting expenditures it did not pay, had acquired an actual revenue surplus while avoiding its obligation to refund revenues

in excess of the appropriations limit. Such consequences are inconsistent with the purpose of article XIII B.

Our decisions interpreting article XIII B demonstrate that the state's subvention requirement under section 6 is not vitiated simply because the [\*352] "program" existed before the effective date of article XIII B. The alternate phrase of section 6 of article XIII B, "higher level of service[,]" . . . must be read in conjunction with the predecessor phrase 'new program' to give it meaning. Thus read, it is apparent that *the subvention requirement for increased or higher level of service is directed to state mandated increases in the services provided by local agencies in existing programs.*" (*County of Los Angeles v. State of California (1987) 43 Cal.3d 46, 56 [233 Cal.Rptr. 38, 729 P.2d 202]*, italics added.)

*Lucia Mar Unified School Dist. v. Honig, supra, 44 Cal.3d 830*, presents a close analogy to the present case. The state Department of Education operated schools for severely handicapped students, but prior to 1979 *school districts were required by statute to contribute to education of those students from the district at the state schools.* In 1979, in response to the restrictions on school district revenues imposed by Proposition 13, the statutes requiring such district contributions were repealed and the state assumed full responsibility for funding. The state funding responsibility continued until June 28, 1981, when *Education Code section 59300* (hereafter *section 59300*), requiring school districts to share in these costs, became effective.

The plaintiff districts filed a test claim before the commission, contending they were entitled to state reimbursement under section 6 of article XIII B. The commission found the plaintiffs were not entitled to state reimbursement, on the rationale that the increase in costs to the districts compelled by *section 59300* imposed no new program or higher level of services. The trial and intermediate appellate courts affirmed on the ground that *section 59300* called for only an "adjustment of costs" of educating the severely handicapped, and that "*a shift in the funding of an existing program is not a new program or a higher level of service*" within the meaning of article XIII B. (*Lucia Mar Unified School Dist. v. Honig, supra, 44 Cal.3d at p. 834*, italics added.)

We reversed, rejecting the state's theories that the funding shift to the county of the subject program's costs does not constitute a new program. "[There can be no] doubt that although the schools for the handicapped have been operated by the state for many years, the program was new insofar as plaintiffs are concerned, since *at the time section 59300 became effective* they were not required to contribute to the education of students from their districts at such schools. [para.] . . . To hold, under the circumstances of this case, that a shift in funding of

54 Cal. 3d 326, \*, 814 P.2d 1308, \*\*;  
285 Cal. Rptr. 66, \*\*\*; 1991 Cal. LEXIS 3745

an existing program from the state to a local entity is not a new program as to the local agency would, we think, violate the intent underlying section 6 of article XIII B. That article imposed spending limits on state and local governments, and it followed by one year the adoption by initiative of article XIII A, which severely limited the taxing [\*353] power of local governments. . . . [para.] The intent of the section would plainly be violated if the state could, while retaining administrative control [1] of programs it has supported with state [\*\*\*85] tax money, [\*\*1327] simply shift the cost of the programs to local government on the theory that the shift does not violate section 6 of article XIII B because the programs are not 'new.' Whether the shifting of costs is accomplished by compelling local governments to pay the cost of entirely new programs created by the state, or by compelling them to accept financial responsibility in whole or in part for a program which was funded entirely by the state before the advent of article XIII B, the result seems equally violative of the fundamental purpose underlying section 6 of that article." (*Lucia Mar Unified School Dist. v. Honig, supra*, 44 Cal.3d at pp. 835-836, fn. omitted, italics added.)

11 The state notes that, in contrast to the program at issue in *Lucia Mar*, it has not retained administrative control over aid to MIA's. But the quoted language from *Lucia Mar*, while appropriate to the facts of that case, was not intended to establish a rule limiting article XIII B, section 6, to instances in which the state retains administrative control over the program that it requires the counties to fund. The constitutional language admits of no such limitation, and its recognition would permit the Legislature to evade the constitutional requirement.

The state seeks to distinguish *Lucia Mar* on the ground that the education of handicapped children in state schools had never been the responsibility of the local school district, but overlooks that the local district had previously been required to contribute to the cost. Indeed the similarities between *Lucia Mar* and the present case are striking. In *Lucia Mar*, prior to 1979 the state and county shared the cost of educating handicapped children in state schools; in the present case from 1971-1979 the state and county shared the cost of caring for MIA's under the Medi-Cal program. In 1979, following enactment of Proposition 13, the state took full responsibility for both programs. Then in 1981 (for handicapped children) and 1982 (for MIA's), the state sought to shift some of the burden back to the counties. To distinguish these cases on the ground that care for MIA's is a county program but education of handicapped children a state program is to rely on arbitrary labels in place of financial realities.

The state presents a similar argument when it points to the following emphasized language from *Lucia Mar Unified School Dist. v. Honig, supra*, 44 Cal.3d 830: "[B]ecause section 59300 shifts partial financial responsibility for the support of students in the state-operated schools from the state to school districts -- an obligation the school districts did not have at the time article XIII B was adopted -- it calls for plaintiffs to support a 'new program' within the meaning of section 6." (P. 836, fn. omitted, italics added.) It urges *Lucia Mar* reached its result only because the "program" requiring school district funding in that case was not required by statute at the effective date of [\*354] article XIII B. The state then argues that the case at bench is distinguishable because it contends Alameda County had a continuing obligation required by statute antedating that effective date, which had only been "temporarily" <sup>12</sup> suspended when article XIII B became effective. I fail to see the distinction between a case -- *Lucia Mar* -- in which no existing statute as of 1979 imposed an obligation on the local government and one -- this case -- in which the statute existing in 1979 imposed no obligation on local government.

12 The state's repeated emphasis on the "temporary" nature of its funding is a form of post hoc reasoning. At the time article XIII B was enacted, the voters did not know which programs would be temporary and which permanent.

The state's argument misses the salient point. As I have explained, the application of section 6 of article XIII B does not depend upon when the program was created, but upon who had the burden of funding it when article XIII B went into effect. Our conclusion in *Lucia Mar* that the educational program there in issue was a "new" program as to the school districts was not based on the presence or absence of any antecedent statutory obligation therefor. *Lucia Mar* determined that whether the program was new as to the districts depended on when they were compelled to assume the obligation to partially fund an existing program which they had not funded at the time article XIII B became effective.

The state further relies on two decisions, *Madera Community Hospital v. County of Madera* (1984) 155 Cal.App.3d 136 [201 Cal.Rptr. 768] and *Cooke v. Superior Court* (1989) 213 Cal.App.3d 401 [261 Cal.Rptr. 706], which hold that the county has a statutory obligation to provide medical care for indigents, but that it need not provide precisely [\*\*1328] [\*\*\*86] the same level of services as the state provided under Medi-Cal. <sup>13</sup> Both are correct, but irrelevant to this case. <sup>14</sup> The county's obligation to MIA's is defined by *Welfare and Institutions Code section 17000*, not by the former Medi-Cal program. <sup>15</sup> If the [\*355] state, in transferring an

54 Cal. 3d 326, \*; 814 P.2d 1308, \*\*;  
285 Cal. Rptr. 66, \*\*\*; 1991 Cal. LEXIS 3745

obligation to the counties, permits them to provide less services than the state provided, the state need only pay for the lower level of services. But it cannot escape its responsibility entirely, leaving the counties with a state-mandated obligation and no money to pay for it.

13 It must, however, provide a *comparable* level of services. (See *Board of Supervisors v. Superior Court* (1989) 207 Cal.App.3d 552, 564 [254 Cal.Rptr. 905].)

14 Certain language in *Madera Community Hospital v. County of Madera*, *supra*, 155 Cal.App.3d 136, however, is questionable. That opinion states that the "Legislature intended that County bear an obligation to its poor and indigent residents, *to be satisfied from county funds*, notwithstanding federal or state programs which exist concurrently with County's obligation and alleviate, to a greater or lesser extent, County's burden." (P. 151.) *Welfare and Institutions Code section 17000* by its terms, however, requires the county to provide support to residents only "when such persons are not supported and relieved by their relatives or friends, by their own means, or by state hospitals or other state or private institutions." Consequently, to the extent that the state or federal governments provide care for MIA's, the county's obligation to do so is reduced pro tanto.

15 The county's right to subvention funds under article XIII B arises because its duty to care for MIA's is a state-mandated responsibility; if the county had no duty, it would have no right to funds. No claim is made here that the funding of medical services for the indigent shifted to Alameda County is not a program "mandated" by

the state; i.e., that Alameda County has any option other than to pay these costs. (*Lucia Mar Unified School Dist. v. Honig*, *supra*, 44 Cal.3d at pp. 836-837.)

The state's arguments are also undercut by the fact that it continues to use the approximately \$ 1 billion in spending authority, generated by its previous total funding of the health care program in question, as a portion of its initial *base spending limit* calculated pursuant to sections 1 and 3 of article XIII B. In short, the state may maintain here that care for MIA's is a county obligation, but when it computes its appropriation limit it treats the entire cost of such care as a state program.

#### IV. Conclusion

This is a time when both state and county governments face great financial difficulties. The counties, however, labor under a disability not imposed on the state, for article XIII A of the Constitution severely restricts their ability to raise additional revenue. It is, therefore, particularly important to enforce the provisions of article XIII B which prevent the state from imposing additional obligations upon the counties without providing the means to comply with these obligations.

The present majority opinion disserves the public interest. It denies standing to enforce article XIII B both to those persons whom it was designed to protect -- the citizens and taxpayers -- and to those harmed by its violation -- the medically indigent adults. And by its reliance on technical grounds to avoid coming to grips with the merits of plaintiffs' appeal, it permits the state to continue to violate article XIII B and postpones the day when the medically indigent will receive adequate health care.

**LONG BEACH UNIFIED SCHOOL DISTRICT, Plaintiff and Appellant, v. THE  
STATE OF CALIFORNIA et al., Defendants and Appellants; MARK H. BLOOD-  
GOOD, as Auditor-Controller, etc., et al., Defendants and Respondents**

No. B033742

Court of Appeal of California, Second Appellate District, Division Five

225 Cal. App. 3d 155; 275 Cal. Rptr. 449; 1990 Cal. App. LEXIS 1198

November 15, 1990

**SUBSEQUENT HISTORY:** [\*\*\*1] Appellants' petitions for review by the Supreme Court were denied February 28, 1991. Lucas, C. J., did not participate therein.

**PRIOR HISTORY:** Superior Court of Los Angeles County, No. C606020, Robert I. Weil, Judge.

**DISPOSITION:** We conclude that because the doctrines of collateral estoppel and waiver are inapplicable to the facts of this case, the trial court should have allowed State to challenge the decisions of the Board. However, we also determine, as a question of law, that the Executive Order requires local school boards to provide a higher level of service than is required constitutionally or by case law and that the Executive Order is a reimbursable state mandate pursuant to article XIII B, section 6 of the California Constitution. Former Revenue and Tax Code section 2234 does not provide reimbursement of the subject claim. Based on uncontradicted evidence, we modify the decision of the trial court by striking as sources of reimbursement the Special Fund for Economic Uncertainties "or similarly designated accounts." We also modify the judgment to include charging orders against certain funds appropriated through subsequent budget acts. We affirm the decision of the trial court that the Fines [\*\*\*2] and Forfeitures Funds are not "reasonably available" to satisfy the Claim. Finally, we remand the matter to the trial court to determine whether at the time of its order, unexpended, unencumbered funds sufficient to satisfy the judgment remained in the approved budget line item account numbers. The trial court is also directed to determine this

same issue with respect to the charging order. The judgment is affirmed as modified. Each party is to bear its own costs on appeal.

**CASE SUMMARY:**

**PROCEDURAL POSTURE:** Appellant state challenged an order from the Superior Court of Los Angeles County (California) stating that it was required to reimburse cross-appellant school district for mandated expenditures to integrate the schools, and cross-appellant challenged that part of the order stating that certain funds were not available for this reimbursement.

**OVERVIEW:** The California Department of Education issued an executive order mandating expenditures to integrate the schools, and when the legislature deleted the requested funding from its budget, cross-appellant school district filed a petition to compel reimbursement after the Board of Control approved the claim. The trial court stated that appellant state was required to make these reimbursements and designated specific funds as reasonably available for the payments, but also ruled that certain funds were not available for these payments. On appeal, the court affirmed the decision as modified, holding that the doctrines of collateral estoppel and waiver were inapplicable and that the trial court should have allowed appellant to challenge the initial decisions of Board of Control in this matter. However, the court concluded that as a matter of law the executive order was a reimbursable state mandate pursuant to Cal. Const. art. XIII B, § 6, not pursuant to former Cal. Rev. & Tax.

225 Cal. App. 3d 155, \*; 275 Cal. Rptr. 449, \*\*;  
1990 Cal. App. LEXIS 1198, \*\*\*

Code § 2234. The court modified the decision by striking certain funds as sources of reimbursement and affirmed that portion of the order stating that certain funds were not available for the payments.

**OUTCOME:** The court affirmed the order stating that appellant state was required to reimburse cross-appellant school district for mandated expenditures to integrate the schools because the executive order was a reimbursable state mandate under the California constitution and modified the designated funds for payment. The case was remanded to determine if unexpended, unencumbered funds existed in the approved budget line item account numbers.

**CORE TERMS:** reimbursement, executive order, school district, expenditure, mandated, reimburse, state-mandated, appropriation, state mandate, local governments, reasonably available, reimbursable, budget, levels of service, line item, segregation, funding, appropriated, alleviate, local agencies, ethnic, collateral estoppel, fiscal years, estoppel, guidelines, entity, desegregation, special fund, controller, budgets acts

LexisNexis(R) Headnotes

*Administrative Law > Judicial Review > General Overview*

*Civil Procedure > Judgments > Preclusion & Effect of Judgments > Estoppel > Collateral Estoppel*

[HN1]Collateral estoppel precludes a party from relitigating in a subsequent action matters previously litigated and determined. The traditional elements of collateral estoppel include the requirement that the prior judgment be "final."

*Administrative Law > Agency Adjudication > Decisions > Collateral Estoppel*

*Civil Procedure > Judgments > Preclusion & Effect of Judgments > Estoppel > Collateral Estoppel*

*Environmental Law > Litigation & Administrative Proceedings > Judicial Review*

[HN2]Finality for the purposes of administrative collateral estoppel may be understood as a two-step process: (1) the decision must be final with respect to action by the administrative agency ( Cal. Civ. Proc. Code § 1094.5(a)); and (2) the decision must have conclusive effect. A decision attains the requisite administrative finality when the agency has exhausted its jurisdiction and possesses no further power to reconsider or rehear the claim. Next, the decision must have conclusive effect. In other words, the decision must be free from di-

rect attack. A direct attack on an administrative decision may be made by appeal to the superior court for review by petition for administrative mandamus. Cal. Civ. Proc. Code § 1094.5. A decision will not be given collateral estoppel effect if such appeal has been taken or if the time for such appeal has not lapsed.

*Civil Procedure > Pleading & Practice > Defenses, Demurrers & Objections > Waiver & Preservation*

*Civil Procedure > Appeals > Standards of Review*

[HN3]A waiver occurs when there is an existing right, actual or constructive knowledge of its existence, and either an actual intention to relinquish it, or conduct so inconsistent with an intent to enforce the right as to induce a reasonable belief that it has been waived. ) Ordinarily, the issue of waiver is a question of fact which is binding on the appellate court if the determination is supported by substantial evidence. However, the question is one of law when the evidence is not in conflict and is susceptible of only one reasonable inference.

*Governments > State & Territorial Governments > Relations With Governments*

[HN4]See Cal. Const. art. XIII B, § 6.

*Constitutional Law > State Constitutional Operation*

[HN5]In construing the meaning of the Cal. Const. art. VIII B, § 6, the court must determine the intent of the voters by first looking to the language itself that should be construed in accordance with the natural and ordinary meaning of its words.

*Civil Procedure > Jurisdiction > Subject Matter Jurisdiction > Jurisdiction Over Actions > General Overview*  
*Civil Procedure > Remedies > Writs > Common Law Writs > Mandamus*

[HN6]Lack of subject matter jurisdiction may be raised at any time.

*Governments > Legislation > Interpretation*

[HN7]A statute should be construed with reference to the whole system of law of which it is a part in order to ascertain the intent of the legislature. The legislative history of a statute may be considered in ascertaining legislative design.

*Constitutional Law > Separation of Powers*

*Governments > Courts > Authority to Adjudicate*

225 Cal. App. 3d 155, \*; 275 Cal. Rptr. 449, \*\*;  
1990 Cal. App. LEXIS 1198, \*\*\*

[HN8]A trial court cannot compel the legislature either to appropriate funds or to pay funds not yet appropriated. Cal. Const. art. III, § 3; art. XVI, § 7. However, no violation of the separation of powers doctrine occurs when a trial court orders appropriate expenditures from already existing funds. The test is whether such funds are reasonably available for the expenditures in question. Funds are "reasonably available" for reimbursement when the purposes for which those funds were appropriated are generally related to the nature of costs incurred. There is no requirement that the appropriations specifically refer to the particular expenditure or must past administrative practice sanction coverage from a particular fund.

#### SUMMARY:

#### CALIFORNIA OFFICIAL REPORTS SUMMARY

A school district filed a claim with the state Board of Control asserting that its expenditures related to its efforts to alleviate racial and ethnic segregation in its schools had been mandated by the state through an executive order (in the form of regulations issued by the state Department of Education) and were reimbursable pursuant to former Rev. & Tax. Code, § 2234, and Cal. Const., art. XIII B, § 6. The board approved the claim, but the Legislature deleted the requested funding from an appropriations bill and enacted a "finding" that the executive order did not impose a statemandated local program. The district then filed a petition to compel reimbursement pursuant to Code Civ. Proc., § 1085, and a complaint for declaratory relief. The trial court ruled that the doctrines of administrative collateral estoppel and waiver prevented the state from challenging the board's decisions. The court's judgment in favor of the district identified certain funds previously appropriated by the Legislature as "reasonably available" for reimbursement of the claimed expenditures. (Superior Court of Los Angeles County, No. C606020, Robert I. Weil, Judge.)

The Court of Appeal modified the trial court's decision by striking as sources of reimbursement the Special Fund for Economic Uncertainties "or similarly designated accounts," and by including charging orders against certain funds appropriated through subsequent budget acts. The court affirmed the judgment as so modified and remanded to the trial court to determine whether at the time of its order, there were, in the funds from which reimbursement could properly be paid, unexpended, unencumbered funds sufficient to satisfy the judgment. The court held that since the doctrines of collateral estoppel and waiver were inapplicable to the facts of the case, the trial court should have allowed the state to challenge the board's decisions. However, the court also held that the executive order required local school boards to provide a higher level of service than is required constitutionally or

by case law and that the order was a reimbursable state mandate pursuant to Cal. Const., art. XIII B, § 6. The court further held that former Rev. & Tax. Code, § 2234, did not provide reimbursement of the subject claim. (Opinion by Lucas, P. J., with Ashby and Boren, JJ., concurring.)

#### HEADNOTES

#### CALIFORNIA OFFICIAL REPORTS HEADNOTES

Classified to California Digest of Official Reports, 3d Series

(1a) (1b) (1c) (1d) **Judgments § 88--Collateral Estoppel--Finality of Judgment--Administrative Order--Where Appeal Still Possible.** --In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the doctrine of administrative collateral estoppel was inapplicable and did not prevent the state from litigating whether the state Board of Control properly considered the subject claim and whether the claim was reimbursable. The board had approved the claim but the Legislature had deleted the requested funding from an appropriations bill. The board's decisions were administratively final, for collateral estoppel purposes, since no party requested reconsideration within the applicable 10-day period, and no statute or regulation provided for further consideration of the matter by the board. However, a decision will not be given collateral estoppel effect if an appeal has been taken or if the time for such appeal has not lapsed. The applicable statute of limitations for review of the board's decisions was three years, and the school district's action was filed before this period lapsed.

(2) **Judgments § 88--Collateral Estoppel--Finality of Judgment.** --Collateral estoppel precludes a party from relitigating in a subsequent action matters previously litigated and determined. The traditional elements of collateral estoppel include the requirement that the prior judgment be "final."

(3a) (3b) **Administrative Law § 81--Judicial Review and Relief--Finality of Administrative Action--For Collateral Estoppel Purposes.** --Finality for the purposes of administrative collateral estoppel may be understood as a two-step process: the decision must be final with respect to action by the administrative agency, and the decision must have conclusive effect. A decision attains the requisite administrative finality when the agency has exhausted its jurisdiction and possesses no further power to reconsider or rehear the claim. To have

conclusive effect, the decision must be free from direct attack.

(4) **Limitation of Actions § 30--Commencement of Period.** --A statute of limitations commences to run at the point where a cause of action accrues and a suit may be maintained thereon.

(5a) (5b) (5c) **Estoppel and Waiver § 23--Waiver--State's Right to Contest Board of Control's Findings as to State-mandated Costs.** --In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the doctrine of waiver did not preclude the state from contesting the state Board of Control's previous findings that the subject claim was reimbursable (the Legislature subsequently deleted the requested funding from an appropriations bill). The statute of limitations applicable to an appeal by the state from the board's decisions had not run at the time the state raised its affirmative defenses in the district's action, and this assertion of defenses was inconsistent with an intent on the state's part to waive its right to contest the board's decisions.

(6) **Estoppel and Waiver § 19--Waiver--Requisites.** --A waiver occurs when there is an existing right, actual or constructive knowledge of its existence, and either an actual intention to relinquish it, or conduct so inconsistent with an intent to enforce the right as to induce a reasonable belief that it has been waived. Ordinarily the issue of waiver is a question of fact that is binding on the appellate court if the determination is supported by substantial evidence. However, the question is one of law when the evidence is not in conflict and is susceptible of only one reasonable inference.

(7) **Estoppel and Waiver § 6--Equitable Estoppel--Challenge to State Board of Control's Findings as to State-mandated Costs--Absence of Confidential Relationship.** --In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the state was not equitably estopped from challenging the state Board of Control's decisions finding that the subject claim was reimbursable as a state-mandated cost (the Legislature subsequently deleted the requested funding from an appropriations bill). In the absence of a confidential relationship, the doctrine of equitable estoppel is inapplicable where there is a mistake of law. There was no confidential relationship, and since the statute of limitations did not bar the state from litigating the mandate and reimbursability issues, the doctrine was inapplicable.

(8) **Appellate Review § 145--Function of Appellate Court--Questions of Law.** --On appeal by the state in an action by a school district to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the appellate court's conclusion that the trial court erred in failing to consider the merits of the state's challenge to the state Board of Control's decisions that the subject claims were reimbursable as state-mandated costs did not require that the matter be remanded to the trial court for a full hearing, since the question of whether a cost is state-mandated is one of law.

(9a) (9b) (9c) **Schools § 4--School Districts; Financing; Funds--Reimbursement of State-mandated Costs--Desegregation Expenditures.** --A school district was entitled to reimbursement pursuant to Cal. Const., art. XIII B, § 6 (reimbursement of local governments for state-mandated costs or increased levels of service), for expenditures related to its efforts to alleviate racial and ethnic segregation in its schools, since an executive order (in the form of regulations issued by the state Department of Education) required a higher level of service and constituted a state mandate. The requirements of the order went beyond constitutional and case law requirements in that they required specific actions to alleviate segregation. Although under Cal. Const., art. XIII B, § 6, subd. (c), the state has discretion whether to reimburse pre-1975 mandates that are either statutes or executive orders implementing statutes, it cannot be inferred from this exception that reimbursability is otherwise dependent on the form of the mandate. Further, the district's claim was not defeated by Gov. Code, §§ 17561 and 17514, limiting reimbursement to certain costs incurred after July 1, 1980, the effective date of Cal. Const., art. XIII B, since the limitations contained in those sections are confined to the exception contained in Cal. Const., art. XIII B, § 6, subd. (c).

(10) **State of California § 11--Fiscal Matters--Reimbursement to Local Governments for State-mandated Costs.** --The subvention requirement of Cal. Const., art. XIII B, § 6 (reimbursement of local governments for state-mandated costs or increased levels of service), is directed to state-mandated increases in the services provided by local agencies in existing "programs." The drafters and electorate had in mind the commonly understood meaning of the term--programs that carry out the governmental function of providing services to the public, or laws that, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state.

[See 9 Witkin, Summary of Cal. Law (9th ed. 1989) Taxation, § 123.]

(11) **Constitutional Law § 13--Construction of Constitutions--Language of Enactments.** --In construing a constitutional provision enacted by the voters, a court must determine the intent of the voters by first looking to the language itself, which should be construed in accordance with the natural and ordinary meaning of its words.

(12) **State of California § 11--Fiscal Matters--Reimbursement to Local Governments for State-mandate Costs--Executive Order as Mandate.** --In Cal. Const., art. XIII B, § 6 (reimbursement of local governments for state-mandated costs or increased levels of service), "mandates" means "orders" or "commands," concepts broad enough to include executive orders as well as statutes. The concern that prompted the inclusion of § 6 in art. XIII B was the perceived attempt by the state to enact legislation or adopt administrative orders creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services that the state believed should be extended to the public. It is clear that the primary concern of the voters was the increased financial burdens being shifted to local government, not the form in which those burdens appeared.

(13) **Administrative Law § 88--Judicial Review and Relief--Exhaustion of Administrative Remedies--Claim by School District for Reimbursement of State-mandated Costs.** --A school district did not fail to exhaust its administrative remedies in seeking reimbursement for expenditures related to its efforts to alleviate racial and ethnic segregation, based on its claim that the expenditures were mandated by a state executive order, where the state Board of Control approved the district's reimbursement claim, even though the state Commission on State Mandates subsequently succeeded to the functions of the board and the district never made a claim to the commission. The board's decisions in favor of the district became administratively final before the commission was in place, and there was no evidence that the commission did not consider these decisions by the board to be final. Although the commission was given jurisdiction over all claims that had not been included in a local government claims bill enacted before January 1, 1985, the subject claim was included in such a bill (which was signed into law only after the recommended appropriation was deleted). Under the statutory scheme, the district pursued the only relief that a disappointed claimant at such a juncture could pursue--an action in declaratory relief to declare an executive order void or unenforceable and to enjoin its enforcement. There was no requirement to seek further administrative review.

(14) **Courts § 20--Subject Matter Jurisdiction--When Issue May Be Raised.** --Lack of subject matter jurisdiction may be raised at any time.

(15a) (15b) **Schools § 4--School Districts; Financing; Funds--Reimbursement of State-mandated Costs--Desegregation Expenditures--Applicability of Statute Requiring Reimbursement of Subsequently Mandated Costs.** --A school district was not entitled to reimbursement on the basis of former Rev. & Tax. Code, § 2234 (reimbursement of school district for costs it is incurring that are subsequently mandated by a state), for expenditures related to its efforts to alleviate racial and ethnic segregation in its schools, since the executive order (in the form of regulations issued by the state Department of Education) that required the district to take specific actions to alleviate segregation fell outside the purview of § 2234. The "subsequently mandated" provision of § 2234 originally was contained in sections that set forth specific date limitations, and the Legislature likewise intended to limit claims made pursuant to § 2234. The use of the language "subsequently mandated" merely describes an additional circumstance in which the state will reimburse costs. Since the executive order fell outside the January 1, 1978, limits set by Rev. & Tax. Code, § 2207.5, Rev. & Tax. Code, § 2234, did not provide reimbursement to the district.

(16) **Statutes § 39--Construction--Giving Effect to Statute--Conformation of Parts.** --A statute should be construed with reference to the whole system of law of which it is a part in order to ascertain the intent of the Legislature. The legislative history of the statute may be considered in ascertaining legislative design.

(17a) (17b) (17c) **Constitutional Law § 40--Distribution of Governmental Powers--Judicial Power--Appropriation of Funds--Reimbursement of State-mandated Costs.** --In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the trial court's award of reimbursement to the district, on the ground that the district's expenditures were mandated by an executive order, from appropriated funds and specified budgets and accounts did not constitute an invasion of the province of the Legislature or a judicial usurpation of the republican form of government guaranteed by U.S. Const., art. IV, § 4, except insofar as it designated the Special Fund for Economic Uncertainties as a source for reimbursement. The specified line item accounts for the Department of Education, the Commission on State Mandates, and the Reserve for Contingencies and Emergencies provided funds for a broad range of activities similar to those specified in the executive order and thus were reasonably

available for reimbursement. However, remand to the trial court was necessary to determine whether these sources contained sufficient unexhausted funds to cover the award.

**(18) Constitutional Law § 40--Distribution of Governmental Powers--Judicial Power--Appropriation of Funds.** --A court cannot compel the Legislature either to appropriate funds or to pay funds not yet appropriated. However, no violation of the separation of powers doctrine occurs when a court orders appropriate expenditures from already existing funds. The test is whether such funds are reasonably available for the expenditures in question. Funds are "reasonably available" for reimbursement of local government expenditures when the purposes for which those funds were appropriated are generally related to the nature of costs incurred. There is no requirement that the appropriation specifically refer to the particular expenditure, nor must past administrative practice sanction coverage from a particular fund.

**(19) Appellate Review § 162--Modification--To Add Charge Order.** --An appellate court is empowered to add a directive that a trial court order be modified to include charging orders against funds appropriated by subsequent budgets acts.

**(20) Schools § 4--School Districts; Financing; Funds--Reimbursement of State-mandated Costs--Desegregation Expenditures--Effect of Legislative Finding That Costs Not State-mandated.** --A school district was entitled to reimbursement pursuant to Cal. Const., art. XIII B, § 6 (reimbursement of local governments for state-mandated costs or increased levels of service), for expenditures related to its efforts to alleviate racial and ethnic segregation in its schools, notwithstanding that after the state Board of Control approved the district's reimbursement claim, the Legislature enacted a "finding" that the executive order requiring the district to undertake desegregation activities did not impose a state-mandated local program. Unsupported legislative disclaimers are insufficient to defeat reimbursement. The district had a constitutional right to reimbursement, and the Legislature could not limit that right.

**(21) Schools § 4--School Districts; Financing; Funds--Reimbursement of State-mandated Costs--Desegregation Expenditures--Department of Education Budget as Source.** --In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the trial court, after finding that the executive order requiring the district to undertake desegregation activities was a reim-

bursable state mandate, did not err in ordering reimbursement to take place in part from the state Department of Education budget. Logic dictated that department funding be the initial and primary source for reimbursement; given the fact that the executive order was issued by the department, the evidence overwhelmingly supported the trial court's finding of a general relationship between the department budget items and the reimbursable expenditures.

**(22) Interest § 8--Rate--Reimbursement of School District's State-mandated Costs.** --In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the trial court, after finding that the executive order requiring the district to undertake desegregation activities was a reimbursable state mandate, did not err in awarding the district interest at the legal rate (Cal. Const., art. XV, § 1, par. (2)), rather than at the rate of 6 percent per annum pursuant to Gov. Code, § 926.10. Gov. Code, § 926.10, is part of the California Tort Claims Act (Gov. Code, § 900 et seq.), which provides a statutory scheme for the filing of claims against public entities for alleged injuries. It makes no provision for claims for reimbursement for state-mandated expenditures.

**(23) Schools § 4--School Districts; Financing; Funds--Reimbursement of State-mandated Costs--Desegregation Expenditures--County Fines and Forfeitures Funds as Source.** --In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the trial court, after finding that the executive order requiring the district to undertake desegregation activities was a reimbursable state mandate, did not err in determining that moneys in the Fines and Forfeiture Funds in the custody and possession of the county auditor-controller for transfer to the state treasury were not reasonably available for reimbursement purposes. There was no evidence in the record showing the use of those funds once they were transmitted to the state, nor was there any evidence indicating that those funds were then reasonably available to satisfy the district's claim. It could not be concluded as a matter of law that a general relationship existed between the funds and the nature of the costs incurred pursuant to the executive order. Further, there was no ground on which the funds could be made available to the district while in the possession of the auditor-controller.

**OPINION BY: LUCAS**

**OPINION**

[\*163] [\*\*454] Introduction

Long Beach Unified School District (LBUSD) filed a claim with the Board of Control of the State of California [\*\*\*3] (Board), asserting that certain expenditures related to its efforts to alleviate racial and ethnic segregation in its schools had been mandated by the state through regulations (Executive Order) issued by the Department of Education (DOE) and were [\*164] reimbursable pursuant to former Revenue and Taxation Code section 2234 and article XIII B, section 6 of the California Constitution. The Board eventually approved the claim and reported to the Legislature its recommendation that funds be appropriated to cover the statewide estimated costs of compliance with the Executive Order. When the Legislature deleted the requested funding from an appropriations bill, LBUSD filed a petition to compel reimbursement (Code Civ. Proc., § 1085) and complaint for declaratory relief. The trial court held that the doctrines of administrative collateral estoppel and waiver prevented the state from challenging the decisions of the Board, and it gave judgment to LBUSD. It also ruled that certain funds previously appropriated by the Legislature were "reasonably available" for reimbursement of the claimed expenditures, subject to audit by the state Controller.

We conclude that the doctrines of collateral [\*\*\*4] estoppel and waiver are inapplicable to the facts of this case. However, we determine as a question of law that the Executive Order requires local school boards to provide a higher level of service than is required either constitutionally or by case law and that the Executive Order is a reimbursable state mandate pursuant to article XIII B, section 6 of the California Constitution. We also decide that former Revenue and Taxation Code section 2234 does not provide for reimbursement of the claim.

Based on uncontradicted evidence, we modify the decision of the trial court regarding which budget line item account numbers provide "reasonably available" funds to reimburse LBUSD for appropriate expenditures under the claim. We further modify the decision to include charging orders against funds appropriated by subsequent budget acts. Finally, we remand the matter to the trial court to determine whether at the time of its order unexpended, unencumbered funds sufficient to satisfy the judgment remained in the approved budget line item account numbers. The trial court must resolve this same issue with respect to the charging order.

[\*\*455] Background and Procedural History

The California Property [\*\*\*5] Tax Relief Act of 1972 (Stats. 1972, ch. 1406, § 1, p. 2931) limited the power of local governmental entities to levy property taxes. It also mandated that when the state requires such entities to provide a new program or higher level of service, the state must reimburse those costs. Over time, amendments to the California Constitution and numerous legislative changes impacted both the right and procedure for obtaining reimbursement.

[\*165] Sometime prior to September 8, 1977, LBUSD, at its option, voluntarily began to incur substantial costs to alleviate the racial and ethnic segregation of students within its jurisdiction.

On or about the above date, DOE adopted certain regulations which added sections 90 through 101 to title 5 of the California Administrative Code, effective September 16, 1977. We refer to these regulations as the Executive Order.

The Executive Order and related guidelines for implementation required in part that school districts which identified one or more schools as either having or being in danger of having segregation of its minority students "shall, no later than January 1, 1979, and each four years thereafter, develop and adopt a reasonably feasible [\*\*\*6] plan for the alleviation and prevention of racial and ethnic segregation of minority students in the district."

On or about June 4, 1982, LBUSD submitted a "test claim" (Claim) <sup>1</sup> to the Board for reimbursement of \$ 9,050,714 -- the total costs which LBUSD claimed it had incurred during fiscal years 1977-1978 through 1981-1982 for activities required by the Executive Order and guidelines. LBUSD cited former Revenue and Taxation Code section 2234 as authority for the requested reimbursement, asserting that the costs had been "subsequently mandated" by the state. <sup>2</sup>

1 Former Revenue and Taxation Code section 2218 defines "test claim" as "the first claim filed

225 Cal. App. 3d 155, \*; 275 Cal. Rptr. 449, \*\*;  
1990 Cal. App. LEXIS 1198, \*\*\*

with the State Board of Control alleging that a particular statute or executive order imposes a mandated cost on such local agency or school district." (Stats. 1980, ch. 1256, § 7, p. 4249.)

2 All statutory references are to the Revenue and Taxation Code unless otherwise stated.

Former section 2234 provided: "If a local agency or a school district, at its option, has been incurring costs which are subsequently mandated by the state, the state shall reimburse the local agency or school district for such costs incurred after the operative date of such mandate." (Stats. 1980, ch. 1256, § 11, pp. 4251-4252.)

[\*\*\*7] The Board denied the Claim on the grounds that it had no jurisdiction to accept a claim filed under section 2234. LBUSD petitioned superior court for review of the Board decision. (Code Civ. Proc., § 1094.5.) That court concluded the Board had jurisdiction to accept a section 2234 claim and ordered it to hear the matter on its merits. The Board did not appeal this decision.

On February 16, 1984, the Board conducted a hearing to consider the Claim. LBUSD presented written and oral argument that the Claim was reimbursable pursuant to section 2234 and, in addition, under article XIII B, section 6 of the California Constitution. DOE and the State Department [\*166] of Finance (Finance) participated in the hearing.<sup>3</sup> The Board concluded that the Executive Order constituted a state mandate. On April 26, 1984, the Board adopted parameters and guidelines proposed by LBUSD for reimbursement of the expenditures. No state entity either sought reconsideration of the Board decisions, [\*\*\*456] available pursuant to former section 633.6 of the California Administrative Code,<sup>4</sup> or petitioned for judicial review.<sup>5</sup>

3 The DOE recommended that the Claim be denied on the grounds that the requirements of the Executive Order were constitutionally mandated and court ordered and because the Executive Order was effective prior to January 1, 1978 (issues discussed *post*). However, counsel for the DOE expressed dismay that school districts which had voluntarily instituted desegregation programs had been having problems receiving funding from the Legislature, while schools which had been forced to do so had been receiving "substantial amounts of money."

A spokesman from Finance recalled there had been some doubt whether the Board had jurisdiction to hear a 2234 claim. He stated that, assuming the Board did have jurisdiction, the Executive Order contained at least one state

mandate, which possibly consisted of administrative kinds of tasks\*related to the identification of "problem areas and the like."

[\*\*\*8]

4 Former section 633.6 of the California Administrative Code (now renamed California Code of Regulations) provided in relevant part: "(b) Request for Reconsideration. [para.] (1) A request for reconsideration of a Board determination on a specific test claim . . . shall be filed, in writing, with the Board of Control, no later than ten (10) days after any determination regarding the claim by the Board . . ." (Title 2, Cal. Admin. Code)

5 Former section 2253.5 provided: "A claimant or the state may commence a proceeding in accordance with the provisions of Section 1094.5 of the Code of Civil Procedure to set aside a decision of the Board of Control on the grounds that the board's decision is not supported by substantial evidence. The court may order the board to hold another hearing regarding such claim and may direct the board on what basis the claim is to receive a rehearing." (Stats. 1978, ch. 794, § 8, p. 2551.)

In December 1984, pursuant to former section 2255, the Board reported to the Legislature the number of mandates it had found and the estimated statewide costs of each mandate. [\*\*\*9] With respect to the Executive Order mandate, the Board adopted an estimate by Finance that reimbursement of school districts, including LBUSD, for costs expended in compliance with the Executive Order would total \$ 95 million for fiscal years 1977-1978 through 1984-1985. The Board recommended that the Legislature appropriate that amount.

Effective January 1, 1985, the Commission on State Mandates (Commission) succeeded to the functions of the Board. (Gov. Code, §§ 17525, 17630.)

On March 4, 1985, Assembly Bill No. 1301 was introduced. It included an appropriation of \$ 95 million to the state controller "for payment of claims of school districts seeking reimbursable state-mandated costs incurred pursuant to [the Executive Order] . . ." On June 27, the Assembly amended the bill by deleting this \$ 95 million appropriation and adding a [\*167] "finding" that the Executive Order did not impose a state-mandated local program.<sup>6</sup> On September 28, 1985, the Governor approved the bill as amended.

6 Former Section 2255 provided in part: "(b) If the Legislature deletes from a local government claims bill funding for a mandate imposed either by legislation or by a regulation . . . , it may take one of the following courses of action: (1) In-

225 Cal. App. 3d 155, \*; 275 Cal. Rptr. 449, \*\*;  
1990 Cal. App. LEXIS 1198, \*\*\*

clude a finding that the legislation or regulation does not contain a mandate . . ." (Stats. 1982, ch. 1638, § 7, p. 6662.)

[\*\*\*10] On June 26, 1986, LBUSD petitioned for writ of mandate ( Code Civ. Proc., § 1085) and filed a complaint for declaratory relief against defendants State of California; Commission; Finance; DOE; holders of the offices of State Controller and State Treasurer and holder of the office of Auditor-Controller of the County of Los Angeles, and their successors in interest. LBUSD requested issuance of a writ of mandate commanding the respondents to comply with section 2234 (fn. 2, *ante*)<sup>7</sup> and, in an amended petition, its successor, Government Code section 17565, and with California Constitution, article XIII B, section 6.<sup>8</sup> It further requested respondents to reimburse LBUSD \$ 24,164,593 for fiscal years 1977-1978 through 1982-1983, \$ 3,850,276 for fiscal years 1983-1984 and 1984-1985, and accrued interest, for activities mandated by the Executive Order.

7 The language of Government Code section 17565 is nearly identical to that of section 2234 (fn. 2, *ante*), and provides: "If a local agency or a school district, at its option, has been incurring costs which are subsequently mandated by the state, the state shall reimburse the local agency or school district for those costs incurred after the operative date of the mandate." (Stats. 1986, ch. 879, § 10, p. 3043.)

[\*\*\*11]

8 Article XIII B, section 6 provides in pertinent part: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service . . ."

The trial court let stand the conclusion of the Board that the Executive Order constituted a reimbursable state mandate and ruled in favor of LBUSD. No party requested a statement of decision.

The judgment stated that the Executive Order constituted a reimbursable state mandate which state entities could not challenge because of the doctrines of administrative collateral estoppel and waiver. It provided that certain previously appropriated [\*\*457] funds were "reasonably available" to reimburse LBUSD for its claimed expenditures, applicable interest, and court costs. The judgment also stated that funds denominated the "Fines and Forfeitures Funds," under the custody of the Auditor-Controller of the County of Los Angeles, were not reasonably available. The judgment further decreed [\*\*\*12] that the State Controller retained the

right to audit the claims and records of LBUSD to verify the amount of the reimbursement award sum.

[\*168] State respondents (State) and DOE separately filed timely notices of appeal, and LBUSD cross-appealed.<sup>9</sup>

9 Although an "Amended Notice to Prepare Clerk's Transcript" filed by DOE on April 11, 1988, requests the clerk of the superior court to incorporate in the record its notice of appeal filed April 1, 1988, this latter document does not appear in the record before us, and the original apparently is lost within the court system. Respondent LBUSD received a copy of the notice on April 4, 1988.

#### Discussion

State asserts that neither the doctrine of collateral estoppel nor the doctrine of waiver is applicable to this case, the costs incurred by LBUSD are not reimbursable, and the remedy authorized by the trial court is inconsistent with California law and invades the province of the Legislature, a violation of article IV, section 4 of the United States Constitution.

The [\*\*\*13] thrust of the DOE appeal is that its budget is not an appropriate source of funding for the reimbursement.

LBUSD has argued in its cross-appeal that an additional source of funding, the "Fines and Forfeiture Funds," should be made available for reimbursement of its costs and, in supplementary briefing, requests this court to order a modification of the judgment to include as "reasonably available funding" specific line item accounts from the 1988-1989 and 1989-1990 state budgets.

#### *I. State Not Barred From Challenging Decisions of the Board*

##### *A. Administrative Collateral Estoppel*

(1a) State first contends that the doctrine of administrative collateral estoppel is not applicable to the facts of this case and does not prevent State from litigating whether the Board properly considered the subject claim and whether the claim is reimbursable.

(2) [HN1] Collateral estoppel precludes a party from relitigating in a subsequent action matters previously litigated and determined. (Teitelbaum Furs, Inc. v. Dominion Ins. Co., Ltd. (1962) 58 Cal.2d 601, 604 [25 Cal.Rptr. 559, 375 P.2d 439].) The traditional elements of collateral estoppel include the requirement [\*\*\*14] that the prior judgment be "final." (*Ibid.*)

225 Cal. App. 3d 155, \*; 275 Cal. Rptr. 449, \*\*;  
1990 Cal. App. LEXIS 1198, \*\*\*

(3a) [HN2]Finality for the purposes of administrative collateral estoppel may be understood as a two-step process: (1) the decision must be final with [\*169] respect to action by the administrative agency (see Code Civ. Proc., § 1094.5, subd. (a)); and (2) the decision must have conclusive effect ( Sandoval v. Superior Court (1983) 140 Cal.App.3d 932, 936-937 [190 Cal.Rptr. 291]).

A decision attains the requisite administrative finality when the agency has exhausted its jurisdiction and possesses "no further power to reconsider or rehear the claim. [Fn. omitted.]" ( Chas. L. Harney, Inc. v. State of California (1963) 217 Cal.App.2d 77, 98 [31 Cal.Rptr. 524].)

(1b) In the case at bar, former section 633.6 of the Administrative Code provided a 10-day period during which any party could request reconsideration of any Board determination (fn. 4, *ante*). The Board decided on February 16, 1984, that the Executive Order constituted a state mandate, and on April 26, 1984, it adopted parameters and guidelines for the reimbursement of the claimed expenditures. No party requested [\*\*\*15] reconsideration, no statute or regulation provided for further consideration of the matter by the Board (see, e.g., Olive Pro-ration etc. Com. v. Agri. etc. Com. (1941) 17 Cal.2d 204, 209 [109 P.2d 918]), and the decisions became administratively final on February [\*\*458] 27, 1984, and May 7, 1984, respectively <sup>10</sup> ( Ziganto v. Taylor (1961) 198 Cal.App.2d 603, 607 [18 Cal.Rptr. 229]).

10 We take judicial notice pursuant to Evidence Code section 452, subdivision (h), that February 26, 1984, and May 6, 1984, fall on Sundays.

(3b) Next, the decision must have conclusive effect. ( Sandoval v. Superior Court, supra, 140 Cal.App.3d 932, 936-937.) In other words, the decision must be free from direct attack. ( People v. Sims (1982) 32 Cal.3d 468, 486 [186 Cal.Rptr. 77, 651 P.2d 321].) A direct attack on an administrative decision may be made by appeal to the superior court for review [\*\*\*16] by petition for administrative mandamus. ( Code Civ. Proc., § 1094.5.)

(1c) A decision will not be given collateral estoppel effect if such appeal has been taken or if the time for such appeal has not lapsed. ( Sandoval v. Superior Court, supra, 140 Cal.App.3d at pp. 936-937; Producers Dairy Delivery Co. v. Sentry Ins. Co. (1986) 41 Cal.3d 903, 911 [226 Cal.Rptr. 558, 718 P.2d 920].) The applicable statute of limitations for such review in the case at bar is three years. ( Carmel Valley Fire Protection Dist. v.

State of California (1987) 190 Cal.App.3d 521, 534 [234 Cal.Rptr. 795]; Green v. Obledo (1981) 29 Cal.3d 126, 141, fn. 10 [172 Cal.Rptr. 206, 624 P.2d 256].)

(4) A statute of limitations commences to run at the point where a cause of action accrues and a suit may be maintained thereon. ( Dillon v. Board of Pension Comm'rs. (1941) 18 Cal.2d 427, 430 [116 P.2d 37, 136 A.L.R. 800].)

(1d) In the instant case, State's causes of action accrued when the Board made the two decisions [\*\*\*17] adverse to State on February 16 and April 26, 1984, [\*170] as discussed. State did not request reconsideration, and the decisions became administratively final on February 27 and May 7, 1984. <sup>11</sup> For purposes of discussion, we will assume the applicable three-year statute of limitations period for the two Board decisions commenced on February 28 and May 8, 1984, and ended on February 28 and May 8, 1987. <sup>12</sup> LBUSD filed its petition for ordinary mandamus ( Code Civ. Proc., § 1085) and complaint for declaratory relief on June 26, 1986. At that point, the limitations periods had not run against State and the Board decisions lacked the necessary finality to satisfy that requirement of the doctrine of administrative collateral estoppel. <sup>13</sup>

11 We do not address the contention of LBUSD that State failed to exhaust its administrative remedies ( Abelleira v. District Court of Appeal (1941) 17 Cal.2d 280, 292 [109 P.2d 942, 132 A.L.R. 715]; Morton v. Superior Court (1970) 9 Cal.App.3d 977, 982 [88 Cal.Rptr. 533]) and therefore State cannot assert its affirmative defenses in response to the petition and complaint of the school district. Traditionally, the doctrine has been raised as a bar only with respect to the party seeking judicial relief, not against the responding party (*ibid.*); we have found no case holding otherwise.

[\*\*\*18]

12 If State had sought reconsideration and its request been denied, or if its request had been granted but the matter again decided in favor of LBUSD, the Board decision would have been final 10 days after the Board action, and at that point the statute would have commenced to run against State.

13 State argues that its statute of limitations did not commence until the legislation was enacted without the appropriation (Sept. 28, 1985), citing Carmel Valley Fire Protection Dist. v. State of California, supra, 190 Cal.App.3d at page 548. However, Carmel Valley held that the claimant does not exhaust its administrative remedies and cannot come under the court's jurisdiction until

225 Cal. App. 3d 155, \*; 275 Cal. Rptr. 449, \*\*;  
1990 Cal. App. LEXIS 1198, \*\*\*

the legislative process is complete, which occurred in that case when the legislation was enacted without the subject appropriations. At that point, *Carmel Valley* reasoned, the state had breached its duty to reimburse, and the claimant's right of action in traditional mandamus accrued. (*Ibid.*) However, *Carmel Valley* decided, as do we in the case at bar, that the state's statute of limitations commenced on the date the Board made decisions adverse to its interests. (*Id.* at p. 534.)

In addition, we see no reason to permit State to rely on the fortuitous actions of the Legislature, an independent branch of government, to bail it out of obligations established in the distant past by state agents -- especially given the lengthy three-year statute of limitations. (Compare, e.g., Gov. Code, § 11523 [mandatory time limit within which to petition for administrative mandamus can be 30 days after last day on which administrative reconsideration can be ordered]; Lab. Code, § 1160.8, and Jackson & Perkins Co. v. Agricultural Labor Relations Board (1978) 77 Cal.App.3d 830, 834 [144 Cal.Rptr. 166] [30 days from issuance of board order even if party has filed a motion to reconsider].)

[\*\*\*19] [\*\*459] *B. Waiver*

(5a) State also asserts that the doctrine of waiver is not applicable.

(6) [HN3] A waiver occurs when there is "an existing right; actual or constructive knowledge of its existence; and either an actual intention to relinquish it, or conduct so inconsistent with an intent to enforce the right as to induce [\*171] a reasonable belief that it has been waived. [Citations.]" (*Carmel Valley Fire Protection Dist. v. State of California, supra*, 190 Cal.App.3d at p. 534.) Ordinarily, the issue of waiver is a question of fact which is binding on the appellate court if the determination is supported by substantial evidence. (*Napa Association of Public Employees v. County of Napa* (1979) 98 Cal.App.3d 263, 268 [159 Cal.Rptr. 522].) However, the question is one of law when the evidence is not in conflict and is susceptible of only one reasonable inference. (*Glendale Fed. Sav. & Loan Assn. v. Marina View Heights Dev. Co.* (1977) 66 Cal.App.3d 101, 151-152 [135 Cal.Rptr. 802].)

(5b) In the instant case, the right to contest the findings of the Board is at issue, and there is no dispute that [\*\*\*20] the state was aware of the existence of this right. As discussed, the statute of limitations had not run when State raised its affirmative defenses, and during

this time State could have filed a separate petition for administrative mandamus.

(7) (See fn. 14.)

(5c) State's assertion of its affirmative defenses during this period is inconsistent with an intent to waive its right to contest the Board decisions, and therefore the doctrine of waiver is not applicable. <sup>14</sup>

14 LBUSD contends that State should be equitably estopped from challenging the Board decisions. In the absence of a confidential relationship, the doctrine of equitable estoppel is inapplicable where there is a mistake of law. (*Gilbert v. City of Martinez* (1957) 152 Cal.App.2d 374, 378 [313 P.2d 139]; *People v. Survesant Ins. Co.* (1968) 261 Cal.App.2d 773, 784 [68 Cal.Rptr. 389].) There is no confidential relationship herein, and since we conclude as a matter of law and contrary to the trial court that the statute of limitations does not bar State from litigating the mandate and reimbursability issues, the doctrine is inapplicable.

[\*\*\*21] *II. Issue of State Mandate*

(8) Ordinarily, our conclusion that the trial court erred in failing to consider the merits of the State's challenge to the decisions of the Board would require that the matter be remanded to the trial court for a full hearing. However, because the question of whether a cost is state mandated is one of law in the instant case (cf. *Carmel Valley Fire Protection Dist. v. State of California, supra*, 190 Cal.App.3d at p. 536), we now decide that the expenditures are reimbursable pursuant to article XIII B, section 6 of the California Constitution and that no relief is available under section 2234. <sup>15</sup>

15 We invited State, DOE, and LBUSD to submit additional briefing on the following issues: "1. Can it be determined as a question of law whether sections 90 through 101 of Title 5 of the California Administrative Code [Executive Order] constitute a state mandate within the meaning of article XIII B, section 6 of the California Constitution? 2. Do the above sections constitute such mandate?" State and LBUSD submitted additional argument; DOE declined the invitation.

[\*\*\*22] [\*172] *A. Recovery Under Article XIII B, Section 6*

(9a) On November 6, 1979, California voters passed initiative measure Proposition 4, which added article XIII B to the state Constitution. This measure, a corollary to the previously passed Proposition 13 (art. XIII A, which restricts governmental taxing authority), placed limits on the growth of state and local government appropriations. It also provided reimbursement to local governments for the costs of complying with certain requirements mandated by the state. LBUSD argues that section 6 of this provision is an additional ground for reimbursement.

*1. The Executive Order Requires a Higher Level of Service*

In relevant part article XIII B, section 6 (Section 6) provides: [HN4]"Whenever the Legislature or any state agency mandates a new program or higher level of service on any [\*\*460] local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service . . . ."

(10) The subvention requirement of Section 6 "is directed to state mandated increases in the services provided by local agencies in existing 'programs.'" (*County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56 [233 Cal.Rptr. 38, 729 P.2d 202].) [\*\*\*23] "[T]he drafters and the electorate had in mind the commonly understood meanings of the term -- programs that carry out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state." (*Ibid.*)

(9b) In the instant case, although numerous private schools exist, education in our society is considered to be a peculiarly governmental function. (Cf. *Carmel Valley Fire Protection Dist. v. State of California*, *supra*, 190 Cal.App.3d at p. 537.) Further, public education is administered by local agencies to provide service to the public. Thus public education constitutes a "program" within the meaning of Section 6.

State argues that the Executive Order does not mandate a higher level of service -- or a new program -- because school districts in California have a constitutional duty to make an effort to eliminate racial segregation in the public schools. In support of its argument, State cites *Brown v. Board of Education* (1952) 347 U.S. 483, 495 [98 L.Ed. 873, 881, 74 S.Ct. 686, 38 A.L.R.2d 1180]; [\*\*\*24] *Jackson v. Pasadena City School District* (1963) 59 Cal.2d 876, 881 [31 Cal.Rptr. 606, 382 P.2d 878]; *Crawford v. Board of Education* (1976) 17

Cal.3d 280 [130 Cal.Rptr. 724, 551 P.2d 28] and cases cited therein; and *National Assn. for Advancement of Colored People v. San Bernardino* [\*173] *City Unified Sch. Dist.* (1976) 17 Cal.3d 311 [130 Cal.Rptr. 744, 551 P.2d 48]. These cases show that school districts do indeed have a constitutional obligation to alleviate racial segregation, and on this ground the Executive Order does not constitute a "new program." However, although school districts are required to "take steps, insofar as reasonably feasible, to alleviate racial imbalance in schools regardless of its cause[]" (*Crawford, supra*, at p. 305, italics omitted, citing *Jackson*), the courts have been wary of requiring specific steps in advance of a demonstrated need for intervention (*Crawford*, at pp. 305-306; *Jackson, supra*, at pp. 881-882; *Swann v. Board of Education* (1971) 402 U.S. 1, 18-21 [28 L.Ed.2d 554, 567-570, 91 S.Ct. 1267]). [\*\*\*25] On the other hand, courts have required specific factors be considered in determining whether a school is segregated (*Keyes v. School District No. 1, Denver, Colo.* (1973) 413 U.S. 189, 202-203 [37 L.Ed.2d 548, 559-560, 93 S.Ct. 2686]; *Jackson, supra*, at p. 882).

The phrase "higher level of service" is not defined in article XIII B or in the ballot materials. (*County of Los Angeles v. State of California, supra*, 43 Cal.3d 46, 50.) A mere increase in the cost of providing a service which is the result of a requirement mandated by the state is not tantamount to a higher level of service. (*Id.*, at pp. 54-56.) However, a review of the Executive Order and guidelines shows that a higher level of service is mandated because their requirements go beyond constitutional and case law requirements. Where courts have suggested that certain steps and approaches may be helpful, the Executive Order and guidelines require specific actions. For example, school districts are to conduct mandatory biennial [\*\*\*26] racial and ethnic surveys, develop a "reasonably feasible" plan every four years to alleviate and prevent segregation, include certain specific elements in each plan, and take mandatory steps to involve the community, including public hearings which have been advertised in a specific manner. While all these steps fit within the "reasonably feasible" description of *Jackson* and *Crawford*, the point is that these steps are no longer merely being suggested as options which the local school district may [\*\*461] wish to consider but are required acts. These requirements constitute a higher level of service. We are supported in our conclusion by the report of the Board to the Legislature regarding its decision that the Claim is reimbursable: "[O]nly those costs that are above and beyond the regular level of service for like pupils in the district are reimbursable."

*2. The Executive Order Constitutes a State Mandate*

For the sake of clarity we quote Section 6 in full: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to [\*174] reimburse such local government for the [\*\*\*27] costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [para.] (a) Legislative mandates requested by the local agency affected; [para.] (b) Legislation defining a new crime or changing an existing definition of a crime; or [para.] (c) *Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975.*" (Italics added.) This amendment became effective July 1, 1980. (Art. XIII B, § 10.) Again, the Executive Order became effective September 16, 1977.

State argues there is no constitutional ground for reimbursement because (a) with reference to the language of exception (c) of Section 6, the Executive Order is neither a statute nor an executive order or regulation implementing a statute; (b) recent legislation limits reimbursement to certain costs incurred after July 1, 1980, the effective date of the constitutional amendment; and (c) LBUSD failed to exhaust administrative procedures for reimbursement of Section 6 claims (Gov. Code, § 17500 et seq.). We conclude that recovery is available [\*\*\*28] under Section 6.

(a) *Form of Mandate*

State argues the Executive Order is not a state mandate because, with reference to exception (c) of Section 6, it is neither a statute nor an executive order implementing a statute.

(11) [HN5] In construing the meaning of Section 6, we must determine the intent of the voters by first looking to the language itself (County of Los Angeles v. State of California, supra, 43 Cal.3d 46, 56), which "should be construed in accordance with the natural and ordinary meaning of its words." [Citation.] (ITT World Communications, Inc. v. City and County of San Francisco (1985) 37 Cal.3d 859, 865 [210 Cal.Rptr. 226, 693 P.2d 811].) The main provision of Section 6 states that whenever the Legislature or any state agency "mandates" a new program or higher level of service, the state must provide reimbursement.

(12) We understand the use of "mandates" in the ordinary sense of "orders" or "commands," concepts broad enough to include executive orders as well as statutes. As has been noted, "[t]he concern which prompted the inclusion of section 6 in article XIII B was the perceived

[\*\*\*29] attempt by the state to enact legislation or adopt administrative orders creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services which the state believed should be extended to the public." (County of Los Angeles v. State of California, supra, 43 Cal.3d at p. 56.) It is clear that the primary concern of the voters was the increased financial [\*175] burdens being shifted to local government, not the form in which those burdens appeared.

We derive support for our interpretation by reference to the ballot summary presented to the electorate. (Cf. Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization (1978) 22 Cal.3d 208, 245-246 [149 Cal.Rptr. 239, 583 P.2d 1281].) The legislative analyst determined that the amendment would limit the rate of growth of governmental appropriations, require the return of taxes which exceeded amounts appropriated, and "[r]equire the state to reimburse local governments for the costs of complying with 'state mandates.'" [\*\*\*462] The term "state mandates" was [\*\*\*30] defined as "requirements imposed on local governments by legislation or executive orders." (Italics added; Ballot Pamp., Proposed Amend. to Cal. Const. with arguments to voters, Special Statewide Elec. (Nov. 6, 1979) p. 16.)

(9c) Although exception (c) of Section 6 gives the state discretion whether to reimburse pre-1975 mandates which are either statutes or executive orders implementing statutes, we do not infer from this exception that reimbursability is otherwise dependent on the form of the mandate. We conclude that since the voters provided for mandatory reimbursement except for the three narrowly drawn exceptions found in (a), (b), and (c), there was no intent to exclude recovery for state mandates in the form of executive orders. Further, as State sets forth in its brief, the adoption of the Executive Order was "arguably prompted" by the decision in Crawford v. Board of Education, supra, 17 Cal.3d 280, a case decided after the 1975 cutoff date of exception (c). Since case law and statutory law are of equal force, there appears to be no basis on which to exclude executive orders which implement case law or constitutional law [\*\*\*31] while permitting reimbursement for executive orders implementing statutes. We see no relationship between the proposed distinction and the described purposes of the amendment (County Los Angeles v. State of California, supra, 43 Cal.3d at p. 56; County of Los Angeles v. Department of Industrial Relations (1989) 214 Cal.App.3d 1538, 1545 [263 Cal.Rptr. 351]).

(b) *Recent Legislative Limits*

State contends that LBUSD cannot claim reimbursement under Section 6 because Government Code sections 17561 (Stats. 1986, ch. 879, § 6, p. 3041) and

17514 (Stats. 1984, ch. 1459, § 1, p. 5114) limit such recovery to mandates created by statutes or executive orders implementing statutes, and only for costs incurred after July 1, 1980.

As discussed above, the voters did not intend to limit reimbursement of costs only to those incurred pursuant to statutes or executive orders implementing [\*176] statutes except as set forth in exception (c) of Section 6. We presume that when the Legislature passed Government Code sections 17561 and 17514 it was aware of Section 6 as a related law and intended to maintain a consistent [\*\*\*32] body of rules. (*Fuentes v. Workers' Comp. Appeals Bd.* (1976) 16 Cal.3d 1, 7 [128 Cal.Rptr. 673, 547 P.2d 449].) As discussed above, the limitations suggested by State are confined to exception (c).

Further, the state must reimburse costs incurred pursuant to mandates enacted after January 1, 1975, although actual payments for reimbursement were not required to be made prior to July 1, 1980, the effective date of Section 6. (*Carmel Valley Fire Protection Dist. v. State of California*, *supra*, 190 Cal.App.3d at pp. 547-548; *City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182, 191-194 [203 Cal.Rptr. 258], disapproved on other grounds in *County of Los Angeles v. State of California*, *supra*, 43 Cal.3d at p. 58, fn. 10.)

#### (c) Administrative Procedures

The Legislature passed Government Code section 17500 et seq. (Stats. 1984, ch. 1459, § 1, p. 5113), effective January 1, 1985 (Stats. 1984, ch. 1459, § 1, p. 5123), to aid the implementation of Section 6 and to consolidate the procedures for reimbursement [\*\*\*33] under statutes found in the Revenue and Taxation Code. This legislation created the Commission, which replaced the Board, and instituted a number of procedural changes. (Gov. Code, §§ 17525, 17527, subd. (g), 17550 et seq.) The Legislature intended the new system to provide "the sole and exclusive procedure by which a local agency or school district" could claim reimbursement. (Gov. Code, § 17552.)

(13) State argues that since LBUSD never made its claim before the Commission, it failed to exhaust its administrative [\*\*463] remedies and cannot now receive reimbursement under section 6.

As discussed, the Board decisions favorable to LBUSD became administratively final in 1984. The Commission was not in place until January 1, 1985. There is no evidence in the record that the Commission did not consider these decisions to be final.

State argues the Commission was given jurisdiction over all claims which had not been included in a local

government claims bill enacted before January 1, 1985. (Gov. Code, § 17630.) State is correct. However, the subject claim was included in such a bill, but the bill was signed into law after the recommended appropriation had been deleted. Under the statutory [\*\*\*34] scheme, the only relief offered a disappointed claimant at such juncture is an action in declaratory relief to declare a subject executive order void [\*177] (former Rev. & Tax Code, § 2255, subd. (c); Stats. 1982, ch. 1638, § 7, pp. 6662-6663) or unenforceable (Gov. Code, § 17612, subd. (b); Stats. 1984, ch. 1459, § 1, p. 5121) and to enjoin its enforcement. LBUSD pursued this remedy and in addition petitioned for writ of mandate (Code Civ. Proc., § 1085) to compel reimbursement. There is no requirement to seek further administrative review. Indeed, to do so after the Legislature has spoken would appear to be an exercise in futility.

We conclude that Section 6 provides reimbursement to LBUSD because the Executive Order required a higher level of service and because the Executive Order constitutes a state mandate.

#### B. Section 2234

As set forth in the procedural history of this case, the Board originally declined to consider the Claim as a claim made under section 2234 on the ground that it lacked jurisdiction to do so. LBUSD petitioned for judicial relief, and the trial court held that the Board had jurisdiction and must consider the claim on its merits. The Board did not [\*\*\*35] appeal that decision. State raised the jurisdiction issue as an affirmative defense to the second petition for writ of mandate filed by LBUSD and presents it again for our consideration.

(14) Of course, [HN6]lack of subject matter jurisdiction may be raised at any time. (*Stuck v. Board of Medical Examiners* (1949) 94 Cal.App.2d 751, 755 [211 P.2d 389].)

Former section 2250 provided: "The State Board of Control, pursuant to the provisions of this article, shall hear and decide upon a claim by a local agency or school district that such local agency or school district has not been reimbursed for *all costs mandated by the state as required by Section 2231 or 2234.* [para.] Notwithstanding any other provision of law, this article shall provide the sole and exclusive procedure by which the Board of Control shall hear and decide upon a claim that a local agency or school district has not been reimbursed for *all costs mandated by the state as required by Section 2231 or 2234.*" (Italics added; Stats. 1978, ch. 794, § 5, p. 2549.) Given the clear, unambiguous language of the statute, there is no need for construction. (*West Covina Hospital v. Superior Court* (1986) 41 Cal.3d 846, 850 [226 Cal.Rptr. 132, 718 P.2d 119, 60 A.L.R.4th 1257].)

225 Cal. App. 3d 155, \*; 275 Cal. Rptr. 449, \*\*;  
1990 Cal. App. LEXIS 1198, \*\*\*

[\*\*36] (15a) We conclude that the Board had jurisdiction to consider a claim filed under former section 2234. However, as discussed below, the 1977 Executive Order falls outside the purview of section 2234.

Former section 2231 provided: "(a) . . . The state shall reimburse each school district only for those 'costs mandated by the state', as defined in [\*178] Section 2207.5." (Stats. 1982, ch. 1586, § 3, p. 6264.) In part, former section 2207.5 defines "costs mandated by the state" as increased costs which a school district is required to incur as a result of certain new programs or certain increased program levels or services mandated by an executive order issued *after* January 1, 1978. (Stats. 1980, ch. 1256, § 5, pp. 4248-4249.) As previously stated, the Executive Order in the case at bar was issued September 8, 1977.

Former section 2234, pursuant to which LBUSD initially filed its claim, does not itself contain language indicating a time limitation: "If a local agency or a school district, at its option, has been incurring costs which are subsequently mandated by the state, the state shall reimburse the **[\*\*464]** local agency or school district for such costs incurred after the operative **[\*\*37]** date of such mandate." (Stats. 1980, ch. 1256, § 11, p. 4251.)

State asserts that the January 1, 1978, limitation of sections 2231 and 2207.5 applies to section 2234, preventing reimbursement for costs expended pursuant to the September 8, 1977, Executive Order; LBUSD argues section 2234 is self-contained and without time limitation.

(16) It is a fundamental rule of statutory construction that [HN7] a statute should be construed with reference to the whole system of law of which it is a part in order to ascertain the intent of the Legislature. (*Moore v. Panish* (1982) 32 Cal.3d 535, 541 [186 Cal.Rptr. 475, 652 P.2d 32]; *Pitman v. City of Oakland* (1988) 197 Cal.App.3d 1037, 1042 [243 Cal.Rptr. 306].) The legislative history of a statute may be considered in ascertaining legislative design. (*Walters v. Weed* (1988) 45 Cal.3d 1, 10 [246 Cal.Rptr. 5, 752 P.2d 443].)

The earliest version of section 2234 is found in former section 2164.3, subdivision (f), which provided reimbursement to a city, county, or special district for "a service or program [provided] at its **[\*\*38]** option which is subsequently mandated by the state . . . ." Reimbursement was limited to costs mandated by statutes or executive orders enacted or issued after January 1, 1973. (Stats. 1972, ch. 1406, § 3, pp. 2962-2963.)

In 1973, section 2164.3 was amended to provide reimbursement to school districts for costs mandated by statutes enacted after January 1, 1973 (subd. (a)), *but it expressly excluded school districts from reimbursement for costs mandated by executive orders* (subd. (d)). (Stats. 1973, ch. 208, § 51, p. 565.) Later that same year, the Legislature repealed section 2164.3 (Stats. 1973, ch. 358, § 2, p. 779) and added section 2231, which took over the pertinent [\*179] reimbursement provisions of section 2164.3 virtually unchanged. (Stats. 1973, ch. 358, § 3, pp. 779, 783-784.)

In 1975, the Legislature removed the time limitation language from section 2231 and incorporated it into a new section, 2207. (Stats. 1975, ch. 486, § 1.8, pp. 997-998.) After this change, section 2231 then provided in pertinent part: "(a) The state shall reimburse each local agency for all 'costs mandated by the state', as defined in Section 2207. *The state shall reimburse each school **[\*\*39]** district only for those 'costs mandated by the state' specified in subdivision (a) of Section 2207 . . . .*" (Italics added; Stats. 1975, ch. 486, § 7, pp. 999-1000.) Subdivision (a) of section 2207 limited reimbursement solely to costs mandated by statutes enacted after January 1, 1973.

At this same juncture, the Legislature further amended section 2231 by deleting the provision for "subsequently mandated" services or programs and incorporating that provision into a new section 2234 (Stats. 1975, ch. 486, § 9, p. 1000), the section under which LBUSD would eventually make its claim. The substance of section 2234 (see fn. 2, *ante*) remained unchanged until its repeal in 1986. (Stats. 1977, ch. 1135, § 8.6, p. 3648; Stats. 1980, ch. 1256, § 11, pp. 4251-4252; Stats. 1986, ch. 879, § 25, p. 3045.)

Next, section 2231 was amended to show that with regard to school districts, "costs mandated by the state" were now defined by a new section 2207.5. (Stats. 1977, ch. 1135, § 7; pp. 3647-3648.) Section 2207.5 limited reimbursement to costs mandated by statutes enacted after January 1, 1973, and *executive orders issued after January 1, 1978*. (Stats. 1977, ch. 1135, § 5, pp. **[\*\*40]** 3646-3647.) (No further pertinent amendments to section 2231 occurred; see Stats. 1978, ch. 794, § 1.1, p. 2546; Stats. 1980, ch. 1256, § 8, pp. 4249-4250; Stats. 1982, ch. 734, § 3, p. 2912.) The distinction between statutes and executive orders was preserved when section 2207.5 was amended in 1980 (Stats. 1980, ch. 1256, § 5, pp. 4248-4249) and was in effect at the time of the Board hearing.

(15b) This survey teaches us that with respect to the reimbursement process, the Legislature has treated school districts differently than it has treated other local government entities. The Legislature initially did not

give school districts the right to recover costs mandated by executive orders; and when this option was made available, the [\*\*465] effective date differed from that applicable to other entities. The Legislature consistently limited reimbursement of costs by reference to the effective dates of statutes and executive orders and nothing indicates the state intended recovery of costs to be open-ended.

[\*180] Because the "subsequently mandated" provision of section 2234 originally was contained in sections which set forth specific date limitations (former sections 2164.3 and 2231), we conclude [\*\*\*41] the Legislature likewise intended to limit claims made pursuant to section 2234. The use of the language "subsequently mandated" merely describes an additional circumstance in which the state will reimburse costs, provided the claimant meets other requirements. Since the September 1977 Executive Order falls outside the January 1, 1978, limit set by section 2207.5, section 2234 does not provide for reimbursement to LBUSD.

### III. The Award

The full text of the award as provided by the judgment is set forth in an appendix to this opinion. In part, the judgment states that there are appropriated funds in budgets for the DOE, the Commission, the Reserve for Contingencies or Emergencies, and the Special Fund for Economic Uncertainties, "or similarly designated accounts" which are "reasonably available" to reimburse LBUSD for the state mandated costs it has incurred. (Appendix, pars. 3, 2.) The State Controller is commanded to pay the claims plus interest "at the legal rate" from the described appropriations for fiscal years 1984-1985 through 1987-1988 and "subsequently enacted State Budget Acts." (Appendix, par. 7.) The judgment declares that the deletion of funding for reimbursement [\*\*\*42] of costs incurred in compliance with the Executive Order was invalid and unconstitutional. (Appendix, par. 12.) Finally, the Fines and Forfeiture Funds in the custody of the Auditor-Controller of Los Angeles County are held to be not reasonably available for reimbursement. (Appendix, par. 5.)

#### A. State Position

(17a) State contends the trial court's award is contrary to California law, asserting that it constitutes an invasion of the province of the Legislature and therefore a judicial usurpation of the republican form of government guaranteed by the United States Constitution, Article IV, section 4.

(18) [HN8] A court cannot compel the Legislature either to appropriate funds or to pay funds not yet appropriated. (Cal. Const., art. III, § 3; art. XVI, § 7; Mandel v. Myers (1981) 29 Cal.3d 531, 540 [174 Cal.Rptr. 841, 629 P.2d 935]; Carmel Valley Fire Protection Dist. v. State of California, supra, 190 Cal.App.3d at p. 538.) However, no violation of the separation of powers doctrine occurs when a court orders appropriate expenditures from already existing funds. (Mandel, at p. 540; Carmel Valley, at [\*\*\*43] pp. 539-540.) The test is whether such funds are "reasonably available for the [\*181] expenditures in question . . . ." (Mandel, at p. 542; Carmel Valley, at pp. 540-541.) Funds are "reasonably available" for reimbursement when the purposes for which those funds were appropriated are "generally related to the nature of costs incurred . . . ." (Carmel Valley, at p. 541.) There is no requirement that the appropriation specifically refer to the particular expenditure (Mandel at pp. 543-544, Carmel Valley at pp. 540; Committee to Defend Reproductive Rights v. Cory (1982) 132 Cal.App.3d 852, 857-858 [183 Cal.Rptr. 475]), nor must past administrative practice sanction coverage from a particular fund (Carmel Valley, at p. 540.)

(17b) As previously stated, the trial court found the subject funds were "reasonably available." No party requested a statement of decision, and therefore it is implied that the trial court found all facts necessary to support its judgment. (Michael [\*\*466] U. v. Jamie B. (1985) 39 Cal.3d 787, 792-793 [218 Cal.Rptr. 39, 705 P.2d 362]; Homestead Supplies, Inc. v. Executive Life Ins. Co. (1978) 81 Cal.App.3d 978, 984 [147 Cal.Rptr. 221.] [\*\*\*44]) We now examine the record to ascertain whether substantial evidence supports the decision of the trial court.

The Board having approved reimbursement under the Executive Order, reported to the Legislature that "[t]he categories of reimbursable costs include, but are not limited to: (1) voluntary pupil assignment or reassignment programs, (2) magnet schools or centers, (3) transportation of pupils to alternative schools or programs, (5) [*sic*, no item (4)] racially isolated minority schools, (6) costs of planning, recruiting, administration and/or evaluation, and (7) overhead costs." The guidelines set out comprehensive steps to be taken by school districts in order to be in compliance with the Executive Order.

The peremptory writ of mandate, issued the same date as the judgment, designated funds in specific account numbers and, in addition, a special fund as available for reimbursement. We take judicial notice of the relevant budget enactments and Government Code sec-

tions 16418 and 16419 (Evid. Code. §§ 459, subd. (a), 452) and address these designations seriatim.

The line item account numbers for the DOE for fiscal years 1984-1985 through 1987-1988 set forth in the writ are [\*\*\*45] as follows: 6100-001-001, 6100-001-178, 6100-015-001, 6100-101-001, 6100-114-001, 6100-115-001, 6100-121-001, 6100-156-001, 6100-171-178, 6100-206-001, 6100-226-001.

An examination of the relevant budget acts Statutes 1985, chapter 111; Statutes 1986, chapter 186; Statutes 1987, chapter 135; and final budgetary changes as published by the Department of Finance for each year, shows [\*182] that appropriations in the 11 DOE line item account numbers have supported a very broad range of activities including reimbursement of costs for both mandated and voluntary integration programs, assessment programs, child nutrition, meals for needy pupils, participation in educational commissions, administration costs of various programs, proposal review, teacher recruitment, analysis of cost data, school bus driver instructor training, shipping costs for instructional materials, local assistance for school district transportation aid, summer school programs, local assistance to districts with high concentrations of limited- and non-English-speaking children, adult education, driver training, Urban Impact Aid, and cost of living increases for specific programs. Further evidence regarding the [\*\*\*46] uses of these funds is found in the deposition testimony of William C. Pieper, Deputy Superintendent for Administration with the State Department of Education, who stated that local school districts were being reimbursed for the costs of desegregation programs from line item account numbers 6100-114-001 and 6100-115-001 in the 1986 State Budget Act.

Comparing the requirements of the Executive Order and guidelines with the broad range of activities supported by the DOE budget, we conclude that the subject funds, although not specifically appropriated for the reimbursement in question, were generally related to the nature of the costs incurred.

With regard to the Commission, the writ sets out three line item account numbers: 8885-001-001; 8885-101-001; and 8885-101-214. A review of the relevant budget acts shows that the first line item provides funding for support of the Commission, and line item number 8885-101-001 provides funding specifically for local assistance "in accordance with the provisions of Section 6 of Article XIII B of the California Constitution . . . ." (Stats. 1986, ch. 186.) Line item number 8885-101-214 also provides funds for "local assistance." Since the Commission [\*\*\*47] was created specifically to effect reimbursements for qualifying claims, we con-

clude there is a general relationship between the purpose of the appropriations and the requirements of the Executive Order.

Line item 9840-001-001 of the Reserve for Contingencies or Emergencies defines "contingencies" as "proposed expenditures [\*\*467] arising from unexpected conditions or losses for which no appropriation, or insufficient appropriation, has been made by law and which, in the judgment of the Director of Finance, constitute cases of actual necessity." (All relevant budget acts.) In the instant case, previous to the issuance of the Executive Order, LBUSD could not have anticipated the expenditures necessary to bring it into compliance. Further, the Legislature refused to appropriate the necessary funds [\*183] to directly reimburse the district for these expenditures. The necessity exists by virtue of the writ and judgment issued by the trial court. Therefore, this line item, and three others which also support the reserve (9840-001-494, 9840-001-988, 9840-011-001) are generally related to the costs. <sup>16</sup>

16 The costs do not come within past or current definitions of "emergency," which are, respectively, as follows. "[P]roposed expenditures arising from unexpected conditions or losses for which no appropriation, or insufficient appropriation, has been made by law and which in the judgment of the Director of Finance require immediate action to avert undesirable consequences or to preserve the public peace, health or safety." (Fiscal years 1984-1985, 1985-1986.) "[E]xpenditure incurred in response to conditions of disaster or extreme peril which threaten the health or safety of persons or property within the state." (Fiscal years 1986-1987 forward.)

[\*\*\*48] Finally the writ lists as sources of reimbursement the Special Fund for Economic Uncertainties "or similarly designated accounts . . . ." An examination of Government Code sections 16418 and 16419 relating to the special fund shows only one use of this reserve: establishment of the Disaster Relief Fund "for purposes of funding disbursements made for response to and recovery from the earthquake, aftershocks, and any other related casualty." No evidence in the record indicates a general relationship between this purpose and the costs incurred by LBUSD. We conclude, therefore, that this source of funding cannot be used for reimbursement. This source is stricken from the judgment.

The description of further sources of funding as "similarly designated accounts" fails to sufficiently identify these sources and we therefore strike this part of the judgment.

225 Cal. App. 3d 155, \*; 275 Cal. Rptr. 449, \*\*;  
1990 Cal. App. LEXIS 1198, \*\*\*

In a supplemental brief, LBUSD requests this court to take judicial notice of the Budget Acts of 1988-1989 (Stats. 1988, ch. 313) and 1989-1990 (Stats. 1989, ch. 93) pursuant to the Evidence Code (Evid. Code, §§ 451, subd. (a), 452, subd. (a), 452, subd. (c), 459) and to order that the amounts set forth in the judgment and writ be [\*\*\*49] satisfied from specific line item accounts in these later budgets and from the Special Fund for Economic Uncertainties.<sup>17</sup>

17 LBUSD identifies the line items accounts as follows: DOE -- 6110-001-001, 6110-001-178, 6110-015-001, 6110-101-001, 6110-114-001, 6110-115-001, 6110-121-001, 6110-156-001, 6110-171-178, 6110-226-001, 6110-230-001; Commission -- 8885-001-001, 8885-101-001, 8885-101-214; Reserve for Contingencies or Emergencies -- 9840-001-001, 9840-001-494, 9840-001-988, 9840-011-001.

(19) "An appellate court is empowered to add a directive that the trial court order be modified to include charging orders against funds appropriated by subsequent budget acts. -[Citation.]" (Carmel Valley, supra, 190 Cal.App.3d at p. 557.)

(17c) We have reviewed the designated budget acts and conclude that the specified line item accounts for DOE, the Commission, [\*184] and the Reserve for Contingencies and Emergencies provide funds for a broad range of activities similar to those set out above and therefore [\*\*\*50] are generally related to the nature of the costs incurred. However, for the reasons previously discussed, we decline to designate the Special Fund for Economic Uncertainties as a source for reimbursement.

While we have concluded that certain line item accounts are generally related to the nature of the costs incurred, there must also be evidence that at the time of the order the enumerated budget items contained sufficient funds to cover the award. (Gov. Code, § 12440; Mandel v. Myers, supra, 29 Cal.3d at p. 543; Carmel Valley, supra, 190 Cal.App.3d at p. 541; cf. Baggett v. Dunn (1886) 69 Cal. 75, 78 [10 P. 125]; Marshall v. Dunn (1886) 69 Cal. 223, 225 [10 P. 399].) The record before [\*\*468] us contains evidence regarding balances at various points in time for some of the line item accounts, but that evidence is primarily in the form of uninterpreted statistical data. We have not found a clear statement which would satisfy this requirement. Furthermore, not every line item was in existence every fiscal year. In addition, those which [\*\*\*51] entered the budgetary process did not always survive it unscathed. Therefore, we remand the matter to the trial court to determine with regard to the line item account numbers

approved above whether funds sufficient to satisfy the award were available at the time of the order. (Cf. County of Sacramento v. Loeb (1984) 160 Cal.App.3d 446, 454-455 [206 Cal.Rptr. 626].) If the trial court determines that the unexhausted funds remaining in the specified appropriations are insufficient, the trial court order can be further amended to reach subsequent appropriated funds. (County of Sacramento at p. 457; Serrano v. Priest (1982) 131 Cal.App.3d 188, 198 [182 Cal.Rptr. 387].)

(20) Having concluded that certain appropriations are generally available to reimburse LBUSD, we turn to an additional issue raised by State: that the "finding" by the Legislature that the Executive Order does not impose a "state-mandated local program" prevents reimbursement.

Unsupported legislative disclaimers are insufficient to defeat reimbursement. (Carmel Valley, supra, 190 Cal.App.3d at pp. 541-544.) As discussed, [\*\*\*52] LBUSD, pursuant to Section 6, has a constitutional right to reimbursement of its costs in providing an increased service mandated by the state. The Legislature cannot limit a constitutional right. (Hale v. Bohannon (1952) 38 Cal.2d 458, 471 [241 P.2d 4].)

#### B. DOE Contentions

DOE is sympathetic to LBUSD's position. On appeal, it takes no stand on the issue whether the Executive Order constitutes a state mandate within [\*185] the meaning of Section 6.

(21) The thrust of its appeal is that, if there is a mandate, the DOE budget is an inappropriate source of funding in comparison with other budget line item accounts included in the order.

We conclude to the contrary because logic dictates that DOE funding be the initial and primary source for reimbursement. As discussed, the test set forth in Mandel and Carmel Valley is whether there is a general relationship between budget items and reimbursable expenditures. Since the Executive Order was issued by DOE, it is not surprising that the evidence overwhelmingly supports the finding of the trial court that this general relationship exists with regard to the DOE budget.

While we also have concluded [\*\*\*53] that certain line item accounts for entities other than DOE are also appropriate sources of funding, the record does not provide the statistical data necessary to determine how far the order will reach with regard to these additional sources of support.

DOE also contends that reimbursement for expenditures in fiscal years 1977-1978, 1978-1979, and 1979-1980 cannot be awarded under Section 6 because

225 Cal. App. 3d 155, \*; 275 Cal. Rptr. 449, \*\*;  
1990 Cal. App. LEXIS 1198, \*\*\*

the amendment was not effective until July 1, 1980. As discussed, this argument has been previously rejected. (*Carmel Valley Fire Protection Dist. v. State of California*, supra, 190 Cal.App.3d at pp. 547-548; *City of Sacramento v. State of California*, supra, 156 Cal.App.3d 182, 191-194, disapproved on other grounds in *County of Los Angeles v. State of California*, supra, 43 Cal.3d 46, 58, fn. 10.)

(22) Finally, DOE contends that interest should have been awarded at the rate of 6 percent per annum pursuant to Government Code section 926.10 rather than at the legal rate provided under article XV, section 1, paragraph (2) of the California Constitution.

Government Code section [\*\*\*54] 926.10 is part of the California Tort Claims Act (Gov. Code, § 900 et seq.) which provides a statutory scheme for the filing of claims against public entities for alleged injuries; it makes no provision for claims for reimbursement [\*\*469] for state mandated expenditures. In *Carmel Valley* a judgment awarding interest at the legal rate was affirmed. (*Carmel Valley Fire Protection Dist. v. State of California*, supra, 190 Cal.App.3d at p. 553.) We decline the invitation of DOE to apply another rule.

### C. Cross Appeal of LBUSD

(23) LBUSD seeks reversal of that part of the judgment holding that monies in the Fines and Forfeitures Funds in the custody and possession of [\*186] cross-respondent Auditor-Controller of the County of Los Angeles (County Controller) for transfer to the state treasury are not reasonably available for reimbursement of its state mandated expenditures.<sup>18</sup>

18 In its first amended petition, LBUSD listed the following code sections as appropriate sources of reimbursement: "Penal Code Sections 1463.02, 1463.03, 1403.5A and 1464; Government Code Sections 13967, 26822.3 and 72056; Health and Safety Code Section 11502; and Vehicle Code Sections 1660.7, 42003, and 41103.5."

[\*\*\*55] As previously stated, funds are "reasonably available" when the purposes for which those funds were appropriated are generally related to the nature of the costs incurred. (*Carmel Valley*, supra, 190 Cal.App.3d at pp. 540-541.) LBUSD does not cite, nor have we found, any evidence in the record showing the use of those funds once they are transmitted to the state and that those funds are then "reasonably available" to satisfy the Claim. We cannot conclude as a matter of law that a general relationship exists between those funds and the nature of the costs incurred pursuant to the Executive Order. LBUSD has failed to carry its burden of

proof and the trial court correctly decided these funds were not "reasonably available" for reimbursement.

Nor have we concluded that there is any ground on which the funds could be made available to LBUSD while in the possession of the county Auditor-Controller. The instant case differs from *Carmel Valley* wherein we affirmed an order which authorized a county to satisfy its claims against the state by offsetting fines and forfeitures it held which were due the state. The *Carmel Valley*, supra, 190 Cal.App.3d 521, [\*\*\*56] holding was based on the right of offset as "a long-established principle of equity." (*Id.* at p. 550.) That is a different standard than the standard of "generally related to the nature of costs incurred." In the case at bar there is no set-off relationship between county and LBUSD.

We conclude that because the doctrines of collateral estoppel and waiver are inapplicable to the facts of this case, the trial court should have allowed State to challenge the decisions of the Board. However, we also determine, as a question of law, that the Executive Order requires local school boards to provide a higher level of service than is required constitutionally or by case law and that the Executive Order is a reimbursable state mandate pursuant to article XIII B, section 6 of the California Constitution. Former Revenue and Tax Code section 2234 does not provide reimbursement of the subject claim.

[\*187] Based on uncontradicted evidence, we modify the decision of the trial court by striking as sources of reimbursement the Special Fund for Economic Uncertainties "or similarly designated accounts." We also modify the judgment to include charging orders against [\*\*\*57] certain funds appropriated through subsequent budget acts.

We affirm the decision of the trial court that the Fines and Forfeitures Funds are not "reasonably available" to satisfy the Claim.

Finally, we remand the matter to the trial court to determine whether at the time of its order, unexpended, unencumbered funds sufficient to satisfy the judgment remained in the approved budget line item account numbers. The trial court is also directed to determine this same issue with respect to the charging order.

The judgment is affirmed as modified. Each party is to bear its own costs on appeal.

[\*188] [\*\*470] Appendix

The superior court judgment provides in pertinent part: "It Is Ordered, Adjudged and Decreed That: "1. The requirements contained in Title 5, California Administrative Code, Sections 90-101 constitute a reimbursable State-mandate which cannot be challenged by State

225 Cal. App. 3d 155, \*; 275 Cal. Rptr. 449, \*\*;  
1990 Cal. App. LEXIS 1198, \*\*\*

Respondents or Respondent DOE because of the doctrines of administrative collateral estoppel and waiver.

"2. There are appropriated funds from specified line items in the 1984, 1985, 1986 and 1987 budgets which are 'reasonably available' to reimburse Petitioner for State-mandated costs it has occurred [*sic*] as [\*\*\*58] a result of its compliance with the requirements of Title 5, California Administrative Code, Sections 90-101.

"3. The funds appropriated by the Legislature for:

"(a) the support of the Department of Education, including, but not limited, to the Department's General Fund;

"(b) the Commission on State Mandates, including, but not limited to the State Mandates Claim Fund; and

"(c) the 'Reserve for Contingencies or Emergencies', 'Special Fund for Economic Uncertainties' or similarly designated accounts, are 'reasonably available' and may properly be and should be encumbered and expended for the reimbursement of State-mandated costs in the amount of \$ 28,014,869.00, plus applicable interest, as incurred by Petitioner and as computed by Petitioner in compliance with Parameters and Guidelines adopted by the State Board of Control.

"4. The law in effect at the time that Petitioner's claim was processed provided for the computation of a specific claim amount for specific fiscal years based on Parameters and Guidelines, or claiming instructions, adopted in April 1984 and a Statewide Cost Estimate adopted on August 23, 1984, both of which are administrative actions of the State Board of Control [\*\*\*59] which have not been challenged by State Respondents. The computations made pursuant to the Parameters and Guidelines and Statewide Cost Estimate are specific and ascertainable and subject to audit by the State Controller under Government Code section 17558.

"5. The Court decrees that State funds entitled the 'Fines and Forfeitures Funds' under the custody and control of Respondent Bloodgood, are not reasonably available for satisfaction of Petitioner's claim for reimbursement of State-mandated costs.

"6. A peremptory writ of mandamus shall issue under the seal of this Court, commanding State Respondents and Respondent Doe to comply with Article XIII B, Section 6 of the California Constitution and Government Code Section 17565 and reimburse petitioner for:

"(a) State-mandated costs in the amount of \$ 24,164,593.00, incurred as a result of its compliance with the requirements of Title 5, California Administrative Code, Sections 90-101 during fiscal years 1977-78 through 1982-1983, plus interest at the legal rate from September 28, 1985; and

"(b) State-mandated costs in the amount of \$ 3,850,276.00, incurred as a result of Petitioner's compliance with the requirements of Title 5, California [\*\*\*60] Administrative Code, Sections 90-101 during fiscal years 1983-84 and 1984-85, plus interest at the legal rate from September 28, 1985.

"7. Said peremptory writ shall command Respondent Gray Davis, State Controller, or his successor-in-interest, to pay the claims of Petitioner, plus interest at the legal rate from [\*189] September 28, 1985 from the appropriations in the State Budget Acts for the 1984-85, 1985-86, 1986-87 and 1987-88 fiscal years, and the subsequently enacted State Budget Acts, which include, or will include appropriations for:

"(a) the support of the Department of Education, including, but not limited to the Department's General Fund;

"(b) the Commission on State Mandates, including, but not limited to the State Mandates Claim Fund; and

"(c) the 'Reserve for Contingencies or Emergencies', Special Fund for Economic [\*\*\*471] Uncertainties' or similarly designated accounts, which are 'reasonably available' to be encumbered and expended for the reimbursement of State-mandated costs incurred by Petitioner and further shall compel Elizabeth Whitney, Acting State Treasurer, or her successor-in-interest, to make payments on the warrants drawn by Respondent Gray Davis, State Controller [\*\*\*61] upon their presentation for payment by Petitioner without offset or attempt to offset against other monies due and owing Petitioner until Petitioner is reimbursed for all such costs.

"8. Said Peremptory Writ of Mandate also shall command Respondent Jesse R. Huff, Director of the State Department of Finance, to perform such actions as may be necessary to effect reimbursement required by other portions of this Judgment, including but not limited to, those actions specified in Chapter 135, Statutes of 1987, Section 2.00, pp. 549-553, or with respect to the Special Fund for Economic Uncertainties.

"9. Pending the final disposition of this proceeding, State Respondents and Respondent DOE, and each of them, their successors in office, agents, servants and employees and all persons acting in concert or participation with them, are hereby enjoined or restrained from directly or indirectly expending from the appropriations described in Paragraph No. 7 hereinabove any sums greater than that which would leave in said appropriations at the conclusion of the respective fiscal years an amount less than the reimbursement amounts claimed by Petitioner together with interest at the legal rate through [\*\*\*62] payment of said reimbursement amount. Said

225 Cal. App. 3d 155, \*; 275 Cal. Rptr. 449, \*\*;  
1990 Cal. App. LEXIS 1198, \*\*\*

amounts are hereinafter referred to collectively as the 'reimbursement award sum'.

"10. Pending the final disposition of this proceeding State Respondents and Respondent DOE, and each of them, their successors in office, agents, servants and employees, and all persons acting in concert or participation with them, are hereby enjoined and restrained from directly or indirectly causing to revert the reimbursement award sum from the appropriations described in Paragraph No. 7 hereinabove to the general funds of the State of California and from otherwise dissipating the reimbursement award sum in a manner that would make it unavailable to satisfy this Court's judgment.

"11. The State Respondents and Respondent Doe have a continuing obligation to reimburse Petitioner for costs incurred in compliance with the requirements contained in Title 5, California Administrative Code, Section 90-101 in the fiscal years subsequent to its [*sic*] claims for expenditures in fiscal years 1977-78 through 1984-85 as set forth in the First Amended Petition, as amended,

and the accompanying Motion For the Issuance Of A Writ Of Mandate.

"12. The deletion of funding [\*\*\*63] for reimbursement of State-mandated costs incurred in compliance with Title 5, California Administrative Code, Sections 90-101 from Chapter 1175, Statutes of 1985 was invalid and unconstitutional.

"13. Respondent Gray Davis, State Controller, shall retain the right to audit the claims and records of the Petitioner pursuant to Government Code Section 17561(d) to verify the actual dollar amount of the reimbursement award sum.

"14. The Court reserves and retains jurisdiction to effect any appropriate remedy at law or equity which may be necessary to enforce its judgment or order.

[\*190] "15. Petitioner shall recover from State Respondents and Respondent DOE costs in this proceeding in the amount of 1,863.54.

No. D026195.

**COURT OF APPEAL OF CALIFORNIA, FOURTH APPELLATE DISTRICT,  
DIVISION ONE**

55 Cal. App. 4th 976; 64 Cal. Rptr. 2d 270; 1997 Cal. App. LEXIS 474; 97 Cal. Daily Op. Service 4510; 97 Daily Journal DAR 7464

May 30, 1997, Decided

**SUBSEQUENT HISTORY:** [\*\*\*1] The Publication Status of this Document has been Changed by the Court from Unpublished to Published June 12, 1997. Review Denied September 3, 1997, Reported at: 1997 Cal. LEXIS 5622.

**PRIOR HISTORY:** Superior Court of San Diego County, Super. Ct. No. 686818. Sheridan Reed and Herbert Hoffman, Judges.

**DISPOSITION:** The judgment is affirmed.

**CASE SUMMARY:**

**PROCEDURAL POSTURE:** Appellant redevelopment agency sought review of a judgment by the Superior Court of San Diego County (California), which denied appellant's petition for writ of administrative mandamus as to a decision of respondent commission on state mandates. Appellant claimed that the state should have reimbursed appellant for tax increment financing under Cal. Const. art. XIII B, § 6.

**OVERVIEW:** Appellant redevelopment agency challenged the decision of respondent commission on state mandates. Respondent denied appellant's test claim, which sought reimbursement of tax increment financing through a petition for writ of administrative mandamus. The trial court denied the petition. On appeal, appellant

contended that reimbursement for tax increment financing was required under Cal. Const. art. XIII B, § 6. The court rejected this contention, finding that the 20 percent housing fund set-aside requirement of appellant's tax increment financing did not qualify under Cal. Const. art. XIII, § 6 as a "cost" of a program because tax increment financing was not within the scope of this portion of the state constitution. The court reasoned that the same policies that supported exempting tax increment revenues from Cal. Const. art. XIII B appropriations limits also supported denying reimbursement under Cal. Const. art. XIII B, § 6 for this particular allocation of revenues. Accordingly, the court affirmed the judgment denying the petition for writ of administrative mandamus.

**OUTCOME:** The court affirmed the trial court's judgment denying appellant redevelopment agency's petition for writ of administrative mandamus as to the decision of respondent commission on state mandates that denied appellant's reimbursement of tax increment financing. The court found that appellant's tax increment financing did not qualify as a cost of a program under the state constitution and therefore was not reimbursable.

**CORE TERMS:** tax increment financing, subvention, redevelopment agency, proceeds of taxes, housing, appropriation, redevelopment, entity, reimbursement, local government, local agency, tax revenues, spending, italics, level of service, financing, expend, state mandates, state subvention, tax revenues, increment, taxation, fis-

**LexisNexis(R) Headnotes**

*Administrative Law > Judicial Review > Remedies > Mandamus*

*Administrative Law > Judicial Review > Standards of Review > Substantial Evidence*

*Civil Procedure > Appeals > Standards of Review > Substantial Evidence > General Overview*

[HN1] Under Cal. Gov't Code § 17559, review by administrative mandamus is the exclusive method of challenging the California Commission on State Mandates' decision denying a subvention claim. On appellate review, the reviewing court applies these standards: if Cal. Gov't Code § 17559 governs the proceeding below, then the trial court must review the decision of the commission under the substantial evidence standard. Where the substantial evidence test is applied by the trial court, the reviewing court is generally confined to inquiring whether substantial evidence supports the court's findings and judgment. However, the reviewing court independently reviews the superior court's legal conclusions about the meaning and effect of constitutional and statutory provisions.

*Governments > Local Governments > Finance*

*Governments > State & Territorial Governments > Finance*

[HN2] Cal. Const. art. XIII A imposes a limit on the power of state and local governments to adopt and levy taxes. Cal. Const. art. XIII B imposes a complementary limit on the rate of growth in governmental spending. These two constitutional articles work in tandem, together restricting the state governments' power both to levy and to spend for public purposes.

*Governments > Local Governments > Finance*

*Governments > State & Territorial Governments > Finance*

[HN3] Cal. Const. art. XIII B, § 6 requires that whenever the California Legislature or any state agency mandates a "new program or higher level of service" on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service.

*Governments > State & Territorial Governments > Finance*

[HN4] The funds a redevelopment agency receives from tax increment financing do not constitute "proceeds of taxes" subject to Cal. Const. art. XIII B, § 6 appropriations limits.

*Governments > State & Territorial Governments > Finance*

[HN5] See Cal. Const. art. XIII B, § 8(c).

*Constitutional Law > State Constitutional Operation*

[HN6] The rules of constitutional interpretation require a strict construction of Cal. Const. art. XIII, § 6, because constitutional limitations and restrictions on legislative powers are not to be extended to include matters not covered by the language used.

*Governments > Local Governments > Finance*

*Governments > State & Territorial Governments > Finance*

[HN7] Cal. Const. art. XIII B does not limit the ability to expend government funds collected from all sources. Rather, the appropriations limit is based on "appropriations subject to limitation," which consists primarily of the authorization to expend during a fiscal year the "proceeds of taxes." Cal. Const. art. XIII B, § 8(a).

*Governments > State & Territorial Governments > Finance*

[HN8] See Cal. Const. art. XIII B, § 8(P)(b).

**SUMMARY:**

**CALIFORNIA OFFICIAL REPORTS SUMMARY**

The trial court denied a petition for a writ of administrative mandate brought by a city's redevelopment agency that challenged the California Commission on State Mandates' denial of the agency's test claim under Gov. Code, § 17550 et seq. (reimbursement of costs mandated by the state). In its claim, the agency sought a determination that the State of California should reimburse the agency for moneys transferred into its low- and moderate-income housing fund pursuant to Health & Saf. Code, §§ 33334.2 and 33334.3, of the Community Redevelopment Law. Those statutes require a 20 percent deposit of the particular form of financing received by the agency (tax increment financing generated from its project areas) for purposes of improving the supply of affordable housing. The agency claimed that this tax increment financing should not be subject to state control

55 Cal. App. 4th 976, \*; 64 Cal. Rptr. 2d 270, \*\*;  
1997 Cal. App. LEXIS 474, \*\*\*; 97 Cal. Daily Op. Service 4510

of the allocations made to various funds and that such control constituted a statemandated new program or higher level of service for which reimbursement or subvention was required under Cal. Const., art. XIII B, § 6. The trial court found that the source of funds used by the agency was exempt, under Health & Saf. Code, § 33678, from the scope of Cal. Const., art. XIII B, § 6. (Superior Court of San Diego County, No. 686818, Sheridan E. Reed and Herbert B. Hoffman, Judges.)

The Court of Appeal affirmed. It held that under Health & Saf. Code, § 33678, which provides that tax increment financing is not deemed to be the "proceeds of taxes," the source of funds used by the agency was exempt from the scope of Cal. Const., art. XIII B, § 6. Although Cal. Const., art. XIII B, § 6, does not expressly discuss the source of funds used by an agency to fund a program, the historical and contextual context of this provision demonstrates that it applies only to costs recovered solely from tax revenues. Because of the nature of the financing they receive (i.e., tax increment financing), redevelopment agencies are not subject to appropriations limitations or spending caps, they do not expend any proceeds of taxes, and they do not raise general revenues for the local entity. Also, the state is not transferring any program for which it was formerly responsible. Therefore, the purposes of state subvention laws are not furthered by requiring reimbursement when redevelopment agencies are required to allocate their tax increment financing in a particular manner, as in the operation of Health & Saf. Code, §§ 33334.2 and 33334.3. (Opinion by Huffman, J., with Work, Acting P. J., and McIntyre, J., concurring.)

#### HEADNOTES

#### CALIFORNIA OFFICIAL REPORTS HEADNOTES

Classified to California Digest of Official Reports

(1) State of California § 11--Fiscal Matters--Subvention: Words, Phrases, and Maxims--Subvention. --"Subvention" generally means a grant of financial aid or assistance, or a subsidy.

(2) State of California § 11--Fiscal Matters--Subvention--Judicial Rules. --Under Gov. Code, § 17559, review by administrative mandamus is the exclusive method of challenging a decision of the California Commission on State Mandates to deny a subvention claim. The determination whether the statutes at issue established a mandate under Cal. Const., art. XIII B, § 6, is a question of law. On appellate review, the following standards apply: Gov. Code, § 17559, governs the proceeding below and requires that the trial court review the decision of the commission under the substantial evi-

dence standard. Where the substantial evidence test is applied by the trial court, the appellate court is generally confined to inquiring whether substantial evidence supports the trial court's findings and judgment. However, the appellate court independently reviews the trial court's legal conclusions about the meaning and effect of constitutional and statutory provisions.

(3a) (3b) State of California § 11--Fiscal Matters--Subvention--Statemandated Costs--Statutory Set-aside Requirement for Local Redevelopment Agency's Tax Increment Financing. --The California Commission on State Mandates properly denied a test claim brought by a city's redevelopment agency seeking a determination that the state should reimburse the agency for moneys transferred into its low- and moderate-income housing fund pursuant to Health & Saf. Code, §§ 33334.2 and 33334.3, which require a 20 percent deposit of the particular form of financing received by the agency, i.e., tax increment financing generated from its project areas. Under Health & Saf. Code, § 33678, which provides that tax increment financing is not deemed to be the "proceeds of taxes," the source of funds used by the agency was exempt from the scope of Cal. Const., art. XIII B, § 6 (subvention). Although Cal. Const., art. XIII B, § 6, does not expressly discuss the source of funds used by an agency to fund a program, the historical and contextual context of this provision demonstrates that it applies only to costs recovered solely from tax revenues. Because of the nature of the financing they receive (i.e., tax increment financing), redevelopment agencies are not subject to appropriations limitations or spending caps, they do not expend any proceeds of taxes, and they do not raise general revenues for the local entity. Also, the state is not transferring any program for which it was formerly responsible. Therefore, the purposes of state subvention laws are not furthered by requiring reimbursement when redevelopment agencies are required to allocate their tax increment financing in a particular manner, as in the operation of Health & Saf. Code, §§ 33334.2 and 33334.3.

[See 9 Witkin, Summary of Cal. Law (9th ed. 1989) Taxation, § 123.]

(4) Constitutional Law § 10--Construction of Constitutional Provisions--Limitations on Legislative Powers. --The rules of constitutional interpretation require a strict construction of a constitutional provision that contains limitations and restrictions on legislative powers, because such limitations and restrictions are not to be extended to include matters not covered by the language used.

(5) State of California § 11--Fiscal Matters--Subvention--Purpose of Constitutional Provi-

55 Cal. App. 4th 976, \*; 64 Cal. Rptr. 2d 270, \*\*;

**OPINION BY: HUFFMAN**

#### OPINION

[\*979] [\*\*271] HUFFMAN, J.

The California Commission on State Mandates (the Commission) denied a test claim by the Redevelopment Agency of the City of San Marcos (the Agency) (Gov. Code, § 17550 et seq.), which sought a determination that the State of California should reimburse the Agency for moneys transferred into its Low and Moderate Income Housing Fund (the Housing Fund) pursuant to Health and Safety Code<sup>1</sup> sections 33334.2 and 33334.3. Those sections [\*\*\*2] require a 20 percent deposit of the particular form of financing received by the Agency, tax increment financing generated from its project areas, for purposes of improving the supply of affordable housing. (1) (See fn. 2.) The Agency claimed that this tax increment financing should not be subject to state control of the allocations made to various funds and that such control constituted a state-mandated new program or higher level of service for which reimbursement or subvention was required under article XIII B of the California Constitution, section 6 (hereafter section 6; all further references to articles are to the California Constitution).<sup>2</sup> (Cal. Const., art. XVI, § 16; § 33670.)

1 All further statutory references are to the Health and Safety Code unless otherwise noted.

2 "'Subvention' generally means a grant of financial aid or assistance, or a subsidy. [Citation.]" (Haves v. Commission on State Mandates (1992) 11 Cal. App. 4th 1564, 1577 [15 Cal. Rptr. 2d 547].)

The Agency brought a petition [\*\*\*3] for writ of administrative mandamus to challenge the decision of the Commission. (Code Civ. Proc., § 1094.5; Gov. Code, § 17559.) The superior court denied the petition, ruling that the source of funds used by the Agency for redevelopment, tax increment financing, was exempt pursuant to section 33678 from the scope of section 6, as not constituting "proceeds of taxes" which are governed by that section. The superior court did not rule upon the alternative grounds of decision stated by the Commission, i.e., the 20 percent set-aside requirement for low and moderate-income housing did not impose a new program or higher level of service in an existing program within the meaning of section 6, and, further, there were no costs subject to reimbursement related to the Housing Fund because there was no net increase in the aggregate program responsibilities of the Agency.

[\*\*272] The Agency appeals the judgment denying its petition for writ of mandate. For the reasons set forth below, we affirm.

[\*980] I.

#### PROCEDURAL CONTEXT

This test claim was litigated before the Commission pursuant to statutory procedures for determining whether a statute imposes state-mandated costs upon a local agency [\*\*\*4] which must be reimbursed, through a subvention of funds, under section 6. (Gov. Code, § 17500 et seq.)<sup>3</sup> The Commission hearing consisted of oral argument on the points and authorities presented.

3 In our prior opinion issued in this case, we determined the trial court erred when it denied the California Department of Finance (DOF) leave to intervene as an indispensable party and a real party in interest in the mandamus proceeding. (Redevelopment Agency v. Commission on State Mandates (1996) 43 Cal. App. 4th 1188, 1194-1199 [51 Cal. Rptr. 2d 100].) Thus, DOF is now a respondent on this appeal, as is the Commission (sometimes collectively referred to as respondents). However, our decision in that case was a collateral matter and does not assist us on the merits of this proceeding.

(2) [HN1] Under Government Code section 17559, review by administrative mandamus is the exclusive method of challenging a Commission decision denying a subvention claim. "The determination whether the statutes here at issue established [\*\*\*5] a mandate under section 6 is a question of law. [Citation.]" (County of San Diego v. State of California (1997) 15 Cal. 4th 68, 109 [61 Cal. Rptr. 2d 134, 931 P.2d 312].) On appellate review, we apply these standards: "Government Code

section 17559 governs the proceeding below and requires that the trial court review the decision of the Commission under the substantial evidence standard. Where the substantial evidence test is applied by the trial court, we are generally confined to inquiring whether substantial evidence supports the court's findings and judgment. [Citation.] However, we independently review the superior court's legal conclusions about the meaning and effect of constitutional and statutory provisions. [Citation.]" (*City of San Jose v. State of California* (1996) 45 Cal. App. 4th 1802, 1810 [53 Cal. Rptr. 2d 521].)

## II.

### STATUTORY SCHEMES

Before we outline the statutory provisions setting up tax increment financing for redevelopment agencies, we first set forth the Supreme Court's recent summary of the history and substance of the law applicable to state mandates, such as the Agency claims exist here: "Through adoption of Proposition 13 in 1978, [\*\*\*6] the voters added [HN2]article XIII A to the California Constitution, which 'imposes a limit on the power of state and local governments to [\*981] adopt and levy taxes. [Citation.] [Citation.] The next year, the voters added article XIII B to the Constitution, which 'impose[s] a complementary limit on the rate of growth in governmental spending.' [Citation.] These two constitutional articles 'work in tandem, together restricting California governments' power both to levy and to spend for public purposes.' [Citation.] Their goals are 'to protect residents from excessive taxation and government spending. [Citation.] [Citation.]" (*County of San Diego v. State of California, supra*, 15 Cal. 4th at pp. 80-81.)

[HN3]Section 6, part of article XIII B and the provision here at issue, requires that whenever the Legislature or any state agency mandates a "new program or higher level of service" on any local government, "the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service . . . ." (*County of San Diego v. State of California, supra*, 15 Cal. 4th at p. 81, italics added.) Certain [\*\*\*7] exceptions are then stated, none of which is relevant here.

4 Section 6 lists the following exclusions to the requirement for subvention of funds: "(a) Legislative mandates requested by the local agency affected; [P] (b) Legislation defining a new crime or changing an existing definition of a crime; or [P] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975." In *City of Sacramento v. State of California* (1990) 50 Cal. 3d 51, 69

[266 Cal. Rptr. 139, 785 P.2d 522], the Supreme Court identified these items as exclusions of otherwise reimbursable programs from the scope of section 6. (See also Gov. Code, § 17514, definition of "costs mandated by the state," using the same "new program or higher level of service" language of section 6.)

[\*\*273] In *County of San Diego v. State of California, supra*, 15 Cal. 4th at page 81, the Supreme Court explained that section 6 represents a recognition [\*\*\*8] that together articles XIII A and XIII B severely restrict the taxing and spending powers of local agencies. The purpose of the section is to preclude the state from shifting financial responsibility for governmental functions to local agencies, which are ill equipped to undertake increased financial responsibilities because they are subject to taxing and spending limitations under articles XIII A and XIII B. (*County of San Diego v. State of California, supra*, at p. 81.)

To evaluate the Agency's argument that the provisions of sections 33334.2 and 33334.3, requiring a deposit into the housing fund of 20 percent of the tax increment financing received by the Agency, impose this type of reimbursable governmental program or a higher level of service under an existing program, we first review the provisions establishing financing for redevelopment agencies. Such agencies have no independent powers of taxation (*Huntington Park Redevelopment Agency v. Martin* (1985) 38 Cal. 3d [\*982] 100, 106 [211 Cal. Rptr. 133, 695 P.2d 220]), but receive a portion of tax revenues collected by other local agencies from property within a redevelopment project area, which may result from [\*\*\*9] the following scheme: "Redevelopment agencies finance real property improvements in blighted areas. Pursuant to article XVI, section 16 of the Constitution, these agencies are authorized to use tax increment revenues for redevelopment projects. The constitutional mandate has been implemented through the Community Redevelopment Law (Health & Saf. Code, § 33000 et seq.) [P] The Community Redevelopment Law authorizes several methods of financing; one is the issuance of tax allocation bonds. Tax increment revenue, the increase in annual property taxes attributable to redevelopment improvements, provides the security for tax allocation bonds. Tax increment revenues are computed as follows: The real property within a redevelopment project area is assessed in the year the redevelopment plan is adopted. Typically, after redevelopment, property values in the project area increase. The taxing agencies (e.g., city, county, school or special district) keep the tax revenues attributable to the original assessed value and pass the portion of the assessed property value which exceeds the original assessment on to the redevelopment agency. (Health & Saf. Code, § 33640, 33641, 33670, 33675). In

55 Cal. App. 4th 976, \*; 64 Cal. Rptr. 2d 270, \*\*;  
1997 Cal. App. LEXIS 474, \*\*\*; 97 Cal. Daily Op. Service 4510

[\*\*\*10] short, tax increment financing permits a redevelopment agency to take advantage of increased property tax revenues in the project areas without an increase in the tax rate. This scheme for redevelopment financing has been a part of the California Constitution since 1952. (Cal. Const., art. XVI, § 16.) (*Brown v. Community Redevelopment Agency* (1985) 168 Cal. App. 3d 1014, 1016-1017 [214 Cal. Rptr. 626].)<sup>5</sup>

5 Section 33071 in the Community Redevelopment Law provides that a fundamental purpose of redevelopment is to expand the supply of low and moderate-income housing, as well as expanding employment opportunities and improving the social environment.

In *Brown v. Community Redevelopment Agency, supra*, 168 Cal. App. 3d at pages 1016-1018, the court determined that by enacting section 33678, the Legislature interpreted article XIII B of the Constitution as not broad enough in reach to cover the raising or spending of tax increment revenues by redevelopment agencies. Specifically, the court decided [\*\*\*11] [HN4] the funds a redevelopment agency receives from tax increment financing do not constitute "proceeds of taxes" subject to article XIII B appropriations limits. (*Brown v. Community Redevelopment Agency, supra*, at p. 1019).<sup>6</sup> [\*\*274] This ruling was based on section 33678, providing in pertinent part: "This section implements and fulfills the intent . . . of Article XIII B and Section 16 of Article [\*\*983] XVI of the California Constitution. The allocation and payment to an agency of the portion of taxes specified in subdivision (b) of Section 33670 for the purpose of paying principal of, or interest on . . . indebtedness incurred for redevelopment activity . . . shall not be deemed the receipt by an agency of proceeds of taxes levied by or on behalf of the agency within the meaning of or for the purposes of Article XIII B . . . nor shall such portion of taxes be deemed receipt of proceeds of taxes by, or an appropriation subject to limitation of, any other public body within the meaning or for purposes of Article XIII B . . . or any statutory provision enacted in implementation of Article XIII B. The allocation and payment to an agency of this portion of taxes [\*\*\*12] shall not be deemed the appropriation by a redevelopment agency of proceeds of taxes levied by or on behalf of a redevelopment agency within the meaning or for purposes of Article XIII B of the California Constitution." (Italics added.)

6 The term of art, "proceeds of taxes," is defined in [HN5] article XIII B, section 8, as follows: (c) " 'Proceeds of taxes' shall include, but not be restricted to, all tax revenues and the proceeds to an entity of government, from (1) regulatory licenses, user charges, and user fees to

the extent that those proceeds exceed the costs reasonably borne by that entity in providing the regulation, product, or service, and (2) the investment of tax revenues. With respect to any local government, 'proceeds of taxes' shall include subventions received from the state, other than pursuant to Section 6, and, with respect to the state, proceeds of taxes shall exclude such subventions." (Italics added.)

In *County of Placer v. Corin* (1980) 113 Cal. App. 3d 443, 451 [170 Cal. Rptr. [\*\*\*13] 232], the court defined "proceeds of taxes" IN THIS WAY: "Under article XIII B, with the exception of state subventions, the items that make up the scope of 'proceeds of taxes' concern charges levied to raise *general revenues* for the local entity. 'Proceeds of taxes,' in addition to 'all tax revenues' includes 'proceeds . . . from . . . regulatory licenses, user charges, and user fees [only] to the extent that such proceeds exceed the costs reasonably borne by such entity in providing the regulation, product or service. . . .' (§ 8, subd. (c).) (Italics added.) Such 'excess' regulatory or user fees are but *taxes* for the raising of general revenue for the entity. [Citations.] Moreover, to the extent that an assessment results in revenue above the cost of the improvement or is of general public benefit, it is no longer a special assessment but a tax. [Citation.] We conclude 'proceeds of taxes' generally contemplates only those impositions which raise general tax revenues for the entity." (Italics added.)<sup>7</sup>

7 The issues before the court in *County of Placer v. Corin, supra*, 113 Cal. App. 3d 443 were whether special assessments and federal grants should be considered proceeds of taxes; the court held they should not. Section 6 is not discussed; the court's analysis of other concepts found in article XIII B is nevertheless instructive.

[\*\*\*14] (3a) In light of these interrelated sections and concepts, our task is to determine whether the 20 percent Housing Fund set-aside requirement of a redevelopment agency's tax increment financing qualifies under section 6 as a "cost" of a program. As will be explained, we agree with the trial court that the resolution of this issue is sufficient to dispose of the entire matter, and [\*\*984] accordingly we need not discuss the alternate grounds of decision stated by the Commission.<sup>8</sup>

8 The alternate grounds of the Commission's decision were that there were no costs subject to reimbursement related to the Housing Fund because there was no net increase in the aggregate program responsibilities of the Agency, and that the set-aside requirement did not constitute a

mandated "new program or higher level of service" under this section.

### III.

#### HOUSING FUND ALLOCATIONS: REIMBURSABLE COSTS?

##### 1. Arguments

The Agency takes the position that the language of section 33678 is simply inapplicable [\*\*275] to its claim for [\*\*\*15] subvention of funds required to be deposited into the Housing Fund. It points out that section 6 expressly lists three exceptions to the requirement for subvention of funds to cover the costs of state-mandated programs: (a) Legislative mandates requested by the local agency affected; (b) legislation defining or changing a definition of a crime; or (c) pre-1975 legislative mandates or implementing regulations or orders. (See fn. 4, *ante.*) None of these exceptions refers to the source of the funding originally used by the agency to pay the costs incurred for which reimbursement is now being sought. Thus, the agency argues it is immaterial that under section 33678, for purposes of appropriations limitations, tax increment financing is not deemed to be the "proceeds of taxes." (*Brown v. Community Redevelopment Agency, supra*, 168 Cal. App. 3d at pp. 1017-1020.) The Agency would apply a "plain meaning" rule to section 6 (see, e.g., *Davis v. City of Berkeley* (1990) 51 Cal. 3d 227, 234 [272 Cal. Rptr. 139, 794 P.2d 897]) and conclude that the source of the funds used to pay the program costs up front, before any subvention, is not stated in the section and thus is not [\*\*\*16] relevant.

As an illustration of its argument that the source of its funds is irrelevant under section 6, the Agency cites to Government Code section 17556. That section is a legislative interpretation of section 6, creating several classes of state-mandated programs for which no state reimbursement of local agencies for costs incurred is required. In *County of Fresno v. State of California* (1991) 53 Cal. 3d 482, 487 [280 Cal. Rptr. 92, 808 P.2d 235], the Supreme Court upheld the facial constitutionality of Government Code section 17556, subdivision (d), which disallows state subvention of funds where the local government is authorized to collect service charges or fees in connection with a mandated program. The court explained that section 6 "was designed to protect the tax revenues of local governments from state mandates that [\*985] would require expenditure of such revenues." (*County of Fresno v. State of California, supra*, at p. 487.) Based on the language and history of the measure, the court stated, "Article XIII B of the Constitution, however, was not intended to reach beyond taxation." (*Ibid.*) The court therefore concluded that in view of its textual

[\*\*\*17] and historical context, section 6 "requires subvention only when the costs in question can be recovered solely from tax revenues." (*Ibid.*, original italics.) Interpreting section 6, the court stated: "Considered within its context, the section effectively construes the term 'costs' in the constitutional provision as excluding expenses that are recoverable from sources other than taxes." (*Ibid.*) No subvention was required where the local authority could recover its expenses through fees or assessments, not taxes.

##### 2. Interpretation of Section 6

Here, the Agency contends the authority of *County of Fresno v. State of California, supra*, 53 Cal. 3d 482, should be narrowly read to cover only self-financing programs, and the Supreme Court's broad statements defining "costs" in this context read as mere dicta. It also continues to argue for a "plain meaning" reading of section 6, which it reiterates does not expressly discuss the source of funds used by an agency to pay the costs of a program before any reimbursement is sought. We disagree with both of these arguments. The correct approach is to read section 6 in light of its historical and textual context. (4) [HN6]The [\*\*\*18] rules of constitutional interpretation require a strict construction of section 6, because constitutional limitations and restrictions on legislative powers are not to be extended to include matters not covered by the language used. (*City of San Jose v. State of California, supra*, 45 Cal. App. 4th at pp. 1816-1817.)

(5) The goals of articles XIII A and XIII B are to protect California residents from excessive taxation and government spending. (*County of Los Angeles v. State of California, supra*, 15 Cal. 4th at p. 81.) A central purpose of section 6 is to prevent the state's transfer of the cost of government from itself to the local level. (*City of Sacramento v. State of California, supra*, 50 Cal. 3d at p. 68.) (3b) The related goals of these enactments require us to [\*\*276] read the term "costs" in section 6 in light of the enactment as a whole. The "costs" for which the Agency is seeking reimbursement are its deposits of tax increment financing proceeds into the Housing Fund. Those tax increment financing proceeds are normally received pursuant to the Community Redevelopment Law (§ 33000 et seq.) when, after redevelopment, the taxing agencies collect and keep the tax revenues [\*\*\*19] attributable to the original assessed value and pass on to the redevelopment agency the portion of the [\*986] assessed property value which exceeds the original assessment. (*Brown v. Community Redevelopment Agency, supra*, 168 Cal. App. 3d at pp. 1016-1017.) Is this the type of expenditure of tax revenues of local governments, upon state mandates which require use of such revenues, against which section 6 was designed to pro-

55 Cal. App. 4th 976, \*; 64 Cal. Rptr. 2d 270, \*\*;  
1997 Cal. App. LEXIS 474, \*\*\*; 97 Cal. Daily Op. Service 4510

ject? (*County of Fresno v. State of California, supra*, 53 Cal. 3d at p. 487.)

### 3. Relationship of Appropriations Limitations and Subvention

We may find assistance in answering this question by looking to the type of appropriations limitations imposed by article XIII B. In *County of Placer v. Corin, supra*, 113 Cal. App. 3d at page 447, the court described the discipline imposed by article XIII B in this way: [HN7]"[A]rticle XIII B does not limit the ability to expend government funds collected from all sources. Rather, the appropriations limit is based on 'appropriations subject to limitation,' which consists primarily of the authorization to expend during a fiscal year the 'proceeds of taxes.' (§ 8, subd. (a).) As to local governments, [\*\*\*20] limits are placed only on the authorization to expend the proceeds of taxes levied by that entity, in addition to proceeds of state subventions (§ 8, subd. (c)); no limitation is placed on the expenditure of those revenues that do not constitute 'proceeds of taxes.' " "

9 The term of art, "appropriations subject to limitation," is defined in [HN8]article XIII B, section 8, as follows: [P] (b) " 'Appropriations subject to limitation' of an entity of local government means any authorization to expend during a fiscal year *the proceeds of taxes levied by or for that entity* and the proceeds of state subventions to that entity (other than subventions made pursuant to Section 6) exclusive of refunds of taxes." (Italics added.)

Because of the nature of the financing they receive, tax increment financing, redevelopment agencies are not subject to this type of appropriations limitations or spending caps; they do not expend any "proceeds of taxes." Nor do they raise, through tax increment financing, "general [\*\*\*21] revenues for the local entity." (*County of Placer v. Corin, supra*, 113 Cal. App. 3d at p. 451, original italics.) The purpose for which state subvention of funds was created, to protect local agencies from having the state transfer its cost of government from itself to the local level, is therefore not brought into play when redevelopment agencies are required to allocate their tax increment financing in a particular manner, as in the operation of sections 33334.2 and 33334.3. (See *City of Sacramento v. State of California, supra*, 50 Cal. 3d at p. 68.) The state is not transferring to the Agency the operation and administration of a program for which it was formerly legally and financially [\*987] respon-

sible. (*County of Los Angeles v. Commission on State Mandates* (1995) 32 Cal. App. 4th 805, 817 [38 Cal. Rptr. 2d 304].) <sup>10</sup>

10 We disagree with respondents that the legislative history of sections 33334.2 and 33334.3 is of assistance here, specifically, that section 23 of the bill creating these sections provided that no appropriations were made by the act, nor was any obligation for reimbursements of local agencies created for any costs incurred in carrying out the programs created by the act. (Stats. 1976, ch. 1337, § 23, pp. 6070-6071.) As stated in *City of San Jose v. State of California, supra*, 45 Cal. App. 4th at pages 1817-1818, legislative findings regarding mandate are irrelevant to the issue to be decided by the Commission, whether a state mandate exists.

[\*\*\*22] For all these reasons, we conclude the same policies which support exempting tax increment revenues from article XIII B appropriations limits also support denying reimbursement under section 6 for this particular allocation of those revenues to the Housing Fund. Tax increment financing is not within the scope of article XIII B. (*Brown v. Community Redevelopment Agency, [\*\*277] supra*, 168 Cal. App. 3d at pp. 1016-1020.) Section 6 "requires subvention only when the costs in question can be recovered *solely from tax revenues.*" (*County of Fresno v. State of California, supra*, 53 Cal. 3d at p. 487, original italics.) No state duty of subvention is triggered where the local agency is not required to expend its proceeds of taxes. Here, these costs of depositing tax increment revenues in the Housing Fund are attributable not directly to tax revenues, but to the benefit received by the Agency from the tax increment financing scheme, which is one step removed from other local agencies' collection of tax revenues. (§ 33000 et seq.) Therefore, in light of the above authorities, this use of tax increment financing is not a reimbursable "cost" under section 6. We therefore need not [\*\*\*23] interpret any remaining portions of section 6.

### DISPOSITION

The judgment is affirmed.

**PRIOR HISTORY:** [\*\*\*1] APPEAL from the Superior Court of San Bernardino County, No. RCV 071613, Shahla Sabet, Judge.

**SUMMARY:**

**CALIFORNIA OFFICIAL REPORTS SUMMARY**

A city's action challenged the procedure by which a federal regulatory permit was adopted and also challenged the permit's conditions limiting the quantity and quality of water runoff that could be discharged from storm sewer systems. The trial court sustained demurrers by the State Water Resources Control Board and a regional water quality control board. The regional board had issued a municipal storm sewer permit governing 18 local public entities. (Superior Court of San Bernardino County, No. RCV071613, Shahla Sabet, Judge.)

The Court of Appeal affirmed the judgment. The court held that the trial court properly sustained without leave to amend the state board's demurrer. Even if the city had identified any cognizable claim against the state board, the claim would have been barred by the 30-day statute of limitations for challenging an improper-

ly-adopted state board policy or regulation. Because the city was given notice that the hearing on the permit would proceed as an informal administrative adjudication, it could not successfully argue it was relieved of the obligation to object to the administrative record at the time of the hearing. The court agreed with the regional board that the permit properly allocated some inspection duties to the permittees. Federal law, either expressly or by implication, requires permittees under the National Pollutant Discharge Elimination System to perform inspections for illicit discharge prevention and detection; landfills and other waste facilities; industrial facilities; construction sites; certifications of no discharge; non-stormwater discharges; permit compliance; and local ordinance compliance. (Opinion by Gaut J., with Hollenhorst, Acting P. J., and Richl, J., concurring.) [\*1378]

**OPINION**

[\*\*452] GAUT, J.--

1. Introduction

This case involves environmental regulation of municipal storm sewers that carry excess water runoff to the Santa Ana River as it passes through San Bernardino County on its way to the Pacific Ocean. Federal and state laws impose regulatory controls on storm sewer discharges. Municipalities are required to obtain and comply with a federal regulatory permit limiting the quantity and quality of water runoff that can be discharged from these storm sewer systems.

In this instance, the Regional Water Quality Control Board for the Santa Ana Region (the Regional Board) conducted public hearings and then issued a comprehensive 66-page [\*\*\*2] municipal storm sewer permit governing 18 local [\*1380] public entities. Two permittees, the City of Rancho Cucamonga and the City of Upland, among others, filed an administrative appeal with the State Water Resources Control Board (the State Board.) The State Board summarily dismissed the appeal. The Cities of Rancho Cucamonga and Upland<sup>1</sup> then filed a petition for writ of mandate and complaint against the State Board and the Regional Board.

1 Upland is not a party to this appeal.

The trial court sustained without leave to amend the demurrer of the State Board to the entire action. It sustained the demurrer as to four causes of action and granted the motion to strike of the Regional Board. After a hearing, the trial court denied the petition for writ of mandate.

Both procedurally and substantively, the City of Rancho Cucamonga challenges the conditions imposed

135 Cal. App. 4th 1377, \*; 38 Cal. Rptr. 3d 450, \*\*;  
2006 Cal. App. LEXIS 86, \*\*\*; 2006 Cal. Daily Op. Service 845

by the NPDES<sup>3</sup> permit and waste discharge requirements (the 2002 permit). It contends the procedure by which the 2002 permit was adopted was not legal, that [\*\*\*3] the 2002 permit's conditions are not appropriate for the area, and that the permit's requirements are too expensive. Because we conclude the permit was properly adopted and its conditions and requirements are appropriate, we reject these contentions.

## 2 The National Pollutant Discharge Elimination System.

### 2. The National Pollutant Discharge Elimination System

California cases have repeatedly explained the complicated web of federal and state laws and regulations concerning water pollution, especially storm sewer discharge into the public waterways. (*City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613, 619-621 [26 Cal. Rptr. 3d 304, 108 P.3d 862] (*Burbank*); *Building Industry Assn. of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866, 872-875 [22 Cal. Rptr. 3d 128] (*Building Industry*); *Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1092-1094 [1 Cal. Rptr. 3d 76] (*Communities*); *WaterKeepers Northern California v. State Water Resources Control Bd.* (2002) 102 Cal.App.4th 1448, 1451-1453 [\*\*453] [126 Cal. Rptr. 2d 389]).

[\*\*\*4] For purposes of this case, the important point is described by the California Supreme Court in *Burbank*: "Part of the Federal Clean Water Act [33 U.S.C. § 1251 *et seq.*] is the National Pollutant Discharge Elimination System (NPDES), '[t]he primary means' for enforcing effluent limitations and standards under the Clean Water Act. (*Arkansas v. Oklahoma* [(1992) 503 U.S. [1381] 91, 101 [117 L. Ed. 2d 239, 112 S. Ct. 1046]].) The NPDES sets out the conditions under which the federal [Environmental Protection Agency] or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (33 U.S.C. § 1342(a) & (b).) In California, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law. (§ 13374.)" (*Burbank, supra*, 35 Cal.4th at p. 621.)

California's Porter-Cologne Act (*Wat. Code*, § 13000 *et seq.*) establishes a statewide program for water quality control. Nine regional boards, overseen by the State Board, administer the program in their respective regions. (*Wat. Code*, §§ 13140, [\*\*\*5] 13200 *et seq.*, 13240, and 13301.) *Water Code sections 13374 and 13377* authorize the Regional Board to issue federal

NPDES permits for five-year periods. (33 U.S.C. § 1342, *subd.(b)(1)(B)*.)

As discussed more fully in part 6 *post*, the state-issued NPDES permits are subject to the informal hearing procedures set forth for administrative adjudications. (*Gov. Code*, § 11445.10 *et seq.*; *Cal. Code Regs.*, tit. 23, § 647 *et seq.*) The issuance of permits is specifically excluded from the procedures for administrative regulations and rulemaking. (*Gov. Code*, §§ 11340 *et seq.*, 11352.)

### 3. Factual and Procedural Background

The Regional Board issued the first NPDES permit for San Bernardino County in 1990. The principal permittee was the San Bernardino Flood Control District (the District). The 1990 permit required the permittees to develop and implement pollution control measures, using "best management practices" and monitoring programs, to eliminate illegal discharges [\*\*\*6] and connections, and to obtain any necessary legal authority to do so. The management programs could be existing or new.

In 1993, the District developed the NPDES drain area management program (DAMP).

The second NPDES permit was issued in 1996 and was based on the report of waste discharge (ROWD) prepared by the principal permittee and copermittees, including Rancho Cucamonga. The 1996 permit proposed extending the existing program, which included inspections of industrial and commercial sources; policies for development and redevelopment; better public education; and implementation of a monitoring program. It offered a commitment to reduce pollutants to the "maximum extent practicable."

In 2000, the permittees submitted another ROWD to renew their NPDES permit. The 2000 ROWD proposed continuing to implement and develop water quality management and monitoring programs.

[\*1382] Based on the 2000 ROWD, the Regional Board staff created five successive drafts of the 2002 permit, incorporating written comments by Rancho Cucamonga and others and comments made during two public workshops. Some of the comments addressed the economic considerations of anticipated prohibitive compliance costs.

[\*\*\*7] The notice of the public hearing to consider adoption of the 2002 permit hearing [\*\*454] announced: "relevant Regional Board files are incorporated into the record;" the governing procedures were those for an informal hearing procedure as set forth in "Title 23, California Code of Regulations, Section 647 *et seq.*;" and "Hearings before the Regional Water Board are not conducted pursuant to *Government Code section 11500 et*

135 Cal. App. 4th 1377, \*; 38 Cal. Rptr. 3d 450, \*\*;  
2006 Cal. App. LEXIS 86, \*\*\*; 2006 Cal. Daily Op. Service 845

seq.," the alternative formal hearing procedure for administrative adjudication. The notice was mailed to all permittees. The accompanying "fact sheet," which was publicly circulated, offered further information about the conduct and nature of the hearing and the legal and factual grounds for the Regional Board's recommendation to adopt the 2002 permit.

The informal public hearing was conducted on April 26, 2002. Neither Rancho Cucamonga nor any of the permittees objected to the form or substance of the hearing. Ultimately, after a staff presentation and testimony, including a statement from Rancho Cucamonga's counsel, the Regional Board adopted the 2002 permit. After the State Board dismissed their administrative appeal, [\*\*\*8] Rancho Cucamonga and Upland filed the instant action.

The operative pleading is the second amended petition for writ of mandate and complaint. The petition alleges that the State Board and the Regional Board acted illegally and in excess of their jurisdiction in developing, adopting and implementing the 2002 permit. Based on 26 pages of general allegations, the petition asserts eight causes of action, alleging the State Board and the Regional Board violated sections 13241, 13263, and 13360 of the Water Code (the Porter-Cologne Act); the California Environmental Quality Act (*Pub. Resources Code*, § 21000 et seq.); the California Administrative Procedure Act (*Gov. Code*, §§ 11340-11529); the California Constitution; and the federal Clean Water Act; and seeking declaratory and injunctive relief.

The State Board successfully opposed the action on demurrer. The Regional Board eliminated four causes of action, the fourth, fifth, seventh, and eighth by demurrer and motion to strike. On the remaining four causes of action, the trial court found in favor of the Regional Board.

#### [\*1383] 4. State Board's Demurrer

Rancho Cucamonga maintains the [\*\*\*9] trial court should not have sustained the demurrer of the State Board without leave to amend because the State Board is the ultimate authority on state-issued NPDES permits, and, therefore, was properly joined as a party: "Because the State Board has for all intents and purposes adopted the rules and policies of general application upon which the Permit is based, it is clearly a proper party to this action."

The difficulty with Rancho Cucamonga's theory of liability against the State Board is, to quote Gertrude Stein about the City of Oakland, "There is no there there." (Stein, *Everybody's Autobiography* (1937).) In other words, Rancho Cucamonga's allegations against the State Board lack any substance. Instead, Rancho Cucamonga

launches an unspecific attack on the State Board without identifying any particular problems. The petition makes the unexceptional allegation that the State Board formulates general water control policy which it implements and enforces through regional boards. It also alleges the State Board has not complied with the Administrative Procedure Act but it does not identify any objectionable policies or how there is no compliance. Instead the petition complains [\*\*\*10] about a State Board letter directing that all NPDES permits follow consistent principles regarding standard urban storm water mitigation plans. [\*\*455] Additionally, the petition maintains the 2002 permit included new reporting requirements and increased costs of compliance.

But the foregoing allegations did not articulate any improper State Board conduct. The 2002 permit, issued by the Regional Board and not by the State Board, is not subject to formal rulemaking procedures. (*Gov. Code*, § 11352, subd. (b).) The State Board's letter, explaining a precedential decision concerning mitigation plans, is not an example of formal rulemaking. (*Gov. Code*, § 11425.60, subd. (b).) By dismissing Rancho Cucamonga's administrative appeal concerning the 2002 permit, the State Board declined to become involved and the Regional Board's decision to issue the permit became final and subject to judicial review. (*People ex rel Cal. Regional Wat. Quality Control Bd. v. Barry* (1987) 194 Cal.App.3d 158, 177 [239 Cal. Rptr. 349].) But the State Board was not made a proper party by reason of its dismissal of the administrative appeal.

[\*\*\*11] Furthermore, even if Rancho Cucamonga had identified any cognizable claim against the State Board, it would have been barred by the 30-day statute of limitations for challenging an improperly adopted State Board regulation or order. (*Wat. Code*, § 13330; *Gov. Code*, § 11350.)

[\*1384] We hold the trial court properly sustained without leave to amend the State Board's demurrer to the second amended petition for writ of mandate and complaint.

#### 5. Standard of Review for Petition for Writ of Mandate

In deciding a petition for writ of mandate, the trial court exercises its independent judgment. (*Code Civ. Proc.*, § 1094.5, subd. (c); *Wat. Code*, § 13330, subd. (d); *Building Industry, supra*, 124 Cal.App.4th at p. 879.) But, "[i]n exercising its independent judgment, a trial court must afford a strong presumption of correctness concerning the administrative findings ... [¶] ... [¶] ... Because the trial court ultimately must exercise its own independent judgment, that court is free to substitute its own findings after first giving due respect to the agency's findings." (*Fukuda v. City of Angels* (1999) 20 Cal.4th

135 Cal. App. 4th 1377, \*; 38 Cal. Rptr. 3d 450, \*\*;  
2006 Cal. App. LEXIS 86, \*\*\*; 2006 Cal. Daily Op. Service 845

805, 817-818 [85 Cal. Rptr. 2d 696, 977 P.2d 693] (*Fukuda*).

[\*\*\*12] On appeal, the reviewing court determines whether substantial evidence supports the trial court's factual determinations. (*Fukuda, supra*, 20 Cal.4th at p. 824; *Building Industry, supra*, 124 Cal.App.4th at p. 879.) The trial court's legal determinations receive a de novo review with consideration being given to the agency's interpretations of its own statutes and regulations. (*Building Industry, supra*, at p. 879; *Nasha v. City of Los Angeles (2004)* 125 Cal.App.4th 470, 482 [22 Cal. Rptr. 3d 772].)

#### 6. Rancho Cucamonga's Objections to the Administrative Record and Lack of Notice

The notice of the administrative hearing for adoption of the 2002 permit included the statement that the Regional Board's files would be incorporated as part of the record. Before trial on the writ petition, Rancho Cucamonga attempted to raise an omnibus objection to the entire administrative record and a specific objection to four documents, three studies about marine pollution and one economic study. The trial court ruled the objections had been waived by not making them before or at the time of the hearing. Applying the presumption of administrative [\*\*\*13] regularity, we affirm the trial court's evidentiary ruling. (*Mason v. Office of Admin.* [\*\*456] *Hearings (2001)* 89 Cal.App.4th 1119, 1131 [108 Cal. Rptr. 2d 102].)

The reasons given by Rancho Cucamonga as to why the trial court should have sustained its objections to all or part of the administrative record are that it did not waive its objections to the record because Rancho Cucamonga did not know the hearing was adjudicative; the Regional Board did not provide [\*1385] notice of an informal hearing (*Gov. Code, § 11445.30*); and Rancho Cucamonga never had an opportunity to object to the administrative record.

(1) As noted previously, *Government Code section 11352, subdivision (b)*, makes the issuance of an NPDES permit exempt from the rulemaking procedures of the Administrative Procedure Act. Permit issuance is a quasi-judicial, not a quasi-legislative, rulemaking proceeding: "The exercise of discretion to grant or deny a license, permit or other type of application is a quasi-judicial function." (*Sommerfield v. Helmick (1997)* 57 Cal.App.4th 315, 320 [67 Cal. Rptr. 2d 51]; see *City of Santee v. Superior Court (1991)* 228 Cal.App.3d 713, 718 [279 Cal. Rptr. 22].)

[\*\*\*14] Instead, the Regional Board correctly followed the administrative adjudication procedures (*Gov. Code, § 11445.10 et seq.*) and the companion regulations at *California Code of Regulations, title 23, sec-*

*tions 647-648.8* for informal adjudicative public hearings. These procedures were announced in the notice of hearing which also stated that *Government Code section 11500 et seq.*, governing formal administrative adjudication hearings, would not apply, thus satisfying *Government Code section 11445.30* requiring notice of an informal hearing procedure. At the time of the hearing, Rancho Cucamonga did not object to the informal procedure. Rancho Cucamonga's effort to argue that federal notice requirements (*40 C.F.R. § 124.8, subd. (b)(6)(ii) (2005)*) should also have been followed fails because this involved a state-issued NPDES permit adopted according to California procedures.

Because Rancho Cucamonga was given notice that the hearing on the permit would proceed as an informal administrative adjudication, it cannot successfully argue it was relieved of the obligation to object to the administrative record [\*\*\*15] at the time of the hearing. An informal administrative adjudication contemplates liberality in the introduction of evidence. (*23 Cal. Code Regs., tit. 23, §§ 648, subd. (d), 648.5.1.*) If Rancho Cucamonga wished to object to the informal hearing procedures, including the liberal introduction of evidence, it should have raised its objections as provided by statute and regulation before or at the time of the hearing (*Gov. Code, §§ 11445.30, 11445.40, 11445.50; 23 Cal. Code Regs., tit. 23, § 648.7*), not a year later in the subsequent civil proceeding.

#### 7. Economic Considerations for Issuance of NPDES Permit

Rancho Cucamonga's next assignment of error is that the Regional Board failed to consider the economic impact of the requirements of the 2002 permit by not conducting a cost-benefit analysis. Rancho Cucamonga relies on the California Supreme Court's *Burbank* opinion, in which the court held: "When ... a regional board is considering whether to make the pollutant restrictions in a wastewater discharge permit *more stringent* than federal [\*\*\*16] law [\*1386] requires, California law allows the board to take into account economic factors, including the wastewater discharger's cost of compliance." (*Burbank, supra*, 35 Cal.4th at p. 618.) Rancho Cucamonga contends that the 2002 permit exceeds federal requirements and that, therefore, this case should be remanded for a consideration of [\*\*457] economic factors. (See *ibid.*; *Wat. Code, § 13241, subd. (d)*.)
