Settlement Agreement and Stipulation between Santa Clarita Valley Sanitation District and
Regional Water Quality Control Board for the Los Angeles Region, dated June 28, 2013

Sections 5, 6, and 7 should be answered on separate sheets of plain 8-1/2 x 11 paper. Each sheet should include the test claim name, the claimant, the section number, and heading at the top of each page.

5. WRITTEN NARRATIVE

Under the heading "5. Written Narrative," please identify the specific sections of statutes or executive orders alleged to contain a mandate.

Include a statement that actual and/or estimated costs resulting from the alleged mandate exceeds one thousand dollars (\$1,000), and include all of the following elements for each statute or executive order alleged:

- (A) A detailed description of the new activities and costs that arise from the mandate.
- (B) A detailed description of existing activities and costs that are modified by the mandate.
- (C) The actual increased costs incurred by the claimant during the fiscal year for which the claim was filed to implement the alleged mandate.
- (D) The actual or estimated annual costs that will be incurred by the claimant to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (E) A statewide cost estimate of increased costs that all local agencies or school districts will incur to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (F) Identification of all of the following funding sources available for this program:
 - (i) Dedicated state funds
 - (ii) Dedicated federal funds
 - (iii) Other nonlocal agency funds
 - (iv) The local agency's general purpose funds
 - (v) Fee authority to offset costs
- (G) Identification of prior mandate determinations made by the Board of Control or the Commission on State Mandates that may be related to the alleged mandate.
- (H) Identification of a legislatively determined mandate pursuant to Government Code section 17573 that is on the same statute or executive order.

6. DECLARATIONS

Under the heading "6. Declarations," support the written narrative with declarations that:

- (A) declare actual or estimated increased costs that will be incurred by the claimant to implement the alleged mandate;
- (B) identify all local, state, or federal funds, and fee authority that may be used to offset the increased costs that will be incurred by the claimant to implement the alleged mandate, including direct and indirect costs;
- (C) describe new activities performed to implement specified provisions of the new statute or executive order alleged to impose a reimbursable state-mandated program (specific references shall be made to chapters, articles, sections, or page numbers alleged to impose a reimbursable state-mandated program);
- (D) If applicable, describe the period of reimbursement and payments received for full reimbursement of costs for a legislatively determined mandate pursuant to Section 17573, and the authority to file a test claim pursuant to paragraph (1) of subdivision (c) of Section 17574.
- (E) are signed under penalty of perjury, based on the declarant's personal knowledge, information or belief, by persons who are authorized and competent to do so.

7. DOCUMENTATION

Under the heading "7. Documentation," support the written narrative with copies of all of the following:

- (A) the test claim statute that includes the bill number alleged to impose or impact a mandate; and/or
- (B) the executive order, identified by its effective date, alleged to impose or impact a mandate; and
- (C) relevant portions of state constitutional provisions, federal statutes, and executive orders that may impact the alleged mandate; and
- (D) administrative decisions and court decisions cited in the narrative. Published court decisions arising from a state mandate determination by the Board of Control or the Commission are exempt from this requirement; and
- (E) statutes, chapters of original legislatively determined mandate and any amendments.

8. CLAIM CERTIFICATION

*Read, sign, and date this section and insert at the end of the test claim submission. **

This test claim alleges the existence of a reimbursable state-mandated program within the meaning of article XIII B, section 6 of the California Constitution and Government Code section 17514. I hereby declare, under penalty of perjury under the laws of the State of California, that the information in this test claim submission is true and complete to the best of my own knowledge or information or belief.

Stephen Maguin

or School District Official

Chief Engineer and General Manager
Print or Type Title

Signature of Authorized Local Agency or
School District Official

March 28, 2011
Date

** If the declarant for this Claim Certification is different from the Claimant contact identified in section 2 of the test claim form, please provide the declarant's address, telephone number, fax number, and e-mail address below.*

1. TEST CLAIM TITLE.

Test Claim Submitted by the Santa Clarita Valley Sanitation District of Los Angeles County Regarding the Upper Santa Clara River Chloride Total Maximum Daily Load Requirements Imposed by the California Regional Water Quality Control Board of Los Angeles in Resolution R4-2008-012.

2. CLAIMANT INFORMATION.

Name of Local Agency: Santa Clarita Valley Sanitation District of Los Angeles County (the "District")

Claimant Contact: Stephen R. Maguin
Title: Chief Engineer and General Manager
Street Address: 1955 Workman Mill Road
City, State, Zip: Whittier, California 90601
Telephone number: (562) 699-7411
Fax number: (562) 699-5422
E-mail address: smaguin@lacsdsd.org

3. CLAIMANT REPRESENTATIVE INFORMATION.

Claimant Contact: Daniel V. Hyde
Title: Attorney for the District
Organization: Lewis Brisbois Bisgaard & Smith LLP
Street Address: 221 N. Figueroa Street, Suite 1200
City, State, Zip: Los Angeles, California 90012
Telephone number: (213) 580-5103
Fax number: (213) 250-7900
E-mail address: hyde@lbbslaw.com

4. TEST CLAIM STATUTES OR EXECUTIVE ORDERS CITED.

Please identify all code sections, statutes, bill numbers, regulations, and/or executive orders that impose the alleged mandate. When alleging regulations or executive orders, please include the effective date of each one.

The regulations creating the mandate relate to water quality objectives for chlorides and were generated by the Los Angeles Regional Water Quality Control Board ("Regional Water Board" or "Board"), specifically Resolution No. R4-2008-012. (Regional Water Board, Resolution No. R4-2008-012: *Amendment to the Water Quality Control Plan for the Los Angeles Region to Adopt Site Specific Chloride Objectives and to Revise the Upper Santa Clara River ("USCR") Chloride Total Maximum Daily Load Requirements ("TMDL")* (Dec. 11, 2008) ("Resolution No. R4-2008-012" or "Chloride TMDL Resolution"), attached as Exhibit ("Exh.") 1). This regulation and other relevant regulations are fully described in Subsection 4(B.) of this Test Claim. Subsection 4(A.) describes the context in which these discretionary regulations were issued.

4827-7914-5737.1

Test Claim Submitted by the Santa Clarita Valley Sanitation District of Los Angeles County

A. The State Regulates Water Quality.

1. The Clean Water Act Prescribes Minimum Requirements and Permits States to Adopt Additional or More Stringent Requirements.

The Federal Water Pollution Control Act (“Clean Water Act” or “Act”), 33 U.S.C. §§1251, *et seq.*, prescribes a minimum level of regulation or “floor” for specified industrial and municipal discharges to waters of the United States, based primarily on minimum technological controls. (*See, e.g.*, 33 U.S.C. §1311(b)(1)(A), 33 U.S.C. §1311(b)(1)(B), and 33 U.S.C. §1316.) The Clean Water Act also generally requires compliance with more stringent limitations, including those adopted to meet water quality standards, treatment standards, or schedules of compliance established pursuant to state statutes or regulations. (33 U.S.C. §1311(b)(1)(C).)

The Act encourages states to play the primary role in regulating water quality. (*See, e.g.*, 33 U.S.C. §§1313, 1342(b).) If a state meets the minimum Clean Water Act program requirements, the United States Environmental Protection Agency (“US EPA”) will formally delegate authority to that state to accomplish the goals of the Act. (*See* 33 U.S.C. §1342(b); 40 C.F.R. §123.25.) In California, the State Water Resources Control Board (“State Water Board”) and the nine regional water quality control boards, including the Los Angeles Regional Water Board, are authorized to implement the requirements of the Act. (*See* Cal. Water Code §§13370 – 13389; *see also* Memorandum of Agreement Between the US EPA and the State Water Sources Control Board (“MOA”) (Sept. 28, 1989), attached as Exh. 2.)

Although the Clean Water Act ensures that more-stringent state limitations may be used to regulate matters within the purview of the Act, water quality standards, treatment standards, limitations, or schedules of compliance enacted by the states are discretionary decisions adopted under the states’ laws, regulations, or administrative policies. (*See* 40 C.F.R. §§130.0(a) and (b).) These more-stringent state requirements, while not mandated by the Act, become a part of regulation performed under the auspices of the Act so that dischargers cannot evade state requirements when pursuing federal authorization to discharge. (*See, e.g.*, 40 C.F.R. §123.25.)

Section 1313 of the Act requires states to adopt water quality standards for the beneficial uses of waters of the United States and the water quality criteria for specific uses of those waters (*e.g.*, 5 milligrams per liter (“mg/L”) of copper might be the water quality criteria to protect specified aquatic beneficial uses). (*See* 33 U.S.C. §1313(c).) States must also establish a process for continuing review and revision of the standards. (*Id.*; *see also* 40 C.F.R. §130.5.) Also, Section 303(d) of the Act requires states to continually identify those waters of the United States within their boundaries that do not meet water quality standards (the “303(d) List”), rank them in order of priority for enforcement, and prepare TMDLs for those waters that will ensure re-attainment of the standard through action by regulated dischargers. (*See* 33 U.S.C. §1313(d); 40 C.F.R. §130.7.) TMDLs contain estimates of and assign permissible loads for point and non-point source discharges, called “wasteload allocations” (“WLAs”), necessary to meet and maintain the applicable water quality standard. (*Id.*) While the Clean Water Act mandates these planning activities, it leaves to the states their evaluation and specific determination of regulatory requirements based, in part, upon site-specific factors. (*See, e.g.*, 40 C.F.R. §§131.4 and 131.6.)

4827-7914-5737.1

*Test Claim Submitted by the Santa Clarita Valley
Sanitation District of Los Angeles County*

When states adopt water quality standards that will be used to implement the Act, adopt a 303(d) List, or subsequent TMDLs under the Act, they provide the US EPA with documentation regarding these standards for the US EPA to review and approve or disapprove based upon whether the standards satisfy the Act's minimum requirements. (*See* 33 U.S.C. §§1313(c), 1313(d)(2); 40 C.F.R. §§131.21.) If the US EPA disapproves a state-generated standard because it does not meet the Act's requirements, any replacement standard promulgated by the US EPA is subject to the same policies, procedures, analyses, and public participation requirements established for the states. (40 C.F.R. §131.22(c).) Thus, a state's program for water quality regulation always remains tantamount to, if not superior, to the Act.

2. Water Quality Regulation under the Clean Water Act and California's Porter-Cologne Water Quality Control Act.

In California, the Porter-Cologne Water Quality Control Act ("Porter-Cologne Act"), codified at California Water Code ("Water Code") sections 13000, *et seq.*, establishes a comprehensive statewide program for water quality control and the regulation of discharges to waters of the state. Chapter 5.5 of the Water Code provides California's statutory framework for implementing the Clean Water Act and the National Pollutant Discharge Elimination System ("NPDES") permit program. Water Code section 13372 requires "consistency" between the Water Code's prescribed water quality program and the Clean Water Act's minimum mandates, resulting in a coordinated system that satisfies the Act's minimum requirements while including more-stringent state requirements.

Like the Clean Water Act, the Porter-Cologne Act requires the adoption of water quality standards along with a program to achieve and maintain those standards. (*See* Water Code §§13240 – 13242.) These standards and the means by which they are to be implemented are set forth in water quality control plans ("basin plans") for each of the nine regions in California. (*Id.*) The Regional Water Board is authorized to implement both the Clean Water Act and the Porter-Cologne Act in its region. The State Water Board is responsible for setting statewide policy and reviewing actions taken by the nine regional boards. (*See* Water Code §§ 13140-13197.5, 13220-13228.15, and 13320-13321.)

Section 1342 of the Porter-Cologne Act establishes the NPDES program. NPDES permits are issued to regulate point sources that discharge pollutants into waters of the United States. (33 U.S.C. §§1311(a), 1342, and 1362(12).) Discharge limitations derived from water quality standards and WLAs derived from TMDLs are implemented in NPDES permits. In California, NPDES permits are issued by the State Water Board and the Regional Water Board as part of the Clean Water Act program. (*See* Water Code §13377.) States maintain flexibility under the Clean Water Act as to the specific terms included in an NPDES permit, particularly in determining the necessity for and the type of discharge restriction that may be necessary. If the boards determine that a numerical discharge limitation is appropriate, they will determine the proper level for restriction. (*See, e.g.*, 40 C.F.R. §122.44.)

///

///

4827-7914-5737.1

*Test Claim Submitted by the Santa Clarita Valley
Sanitation District of Los Angeles County*

State permits that authorize discharges to waters of the state are issued as “Waste Discharge Requirements” (“WDRs”). (Water Code § 13263.) WDRs may be issued concurrently with NPDES permits if a discharge is to waters of both California and the United States. (Water Code §§13263 and 13377.) WDR requirements are derived from the regional basin plans and any applicable state-wide water quality plans adopted by the State Water Board. If an NPDES permit is also applicable, that permit will impose the federally-mandated minimum requirements upon dischargers to satisfy the Clean Water Act and any applicable TMDL-based requirements.

B. Los Angeles Regional Water Board’s TMDL Requirements and the District’s Mandate Test Claim.

1. The District Operates Significant Wastewater Infrastructure.

The District provides sewerage services to the Santa Clarita Valley, which is located in the northwest portion of Los Angeles County. The District’s service area includes the City of Santa Clarita and a portion of unincorporated Los Angeles County and serves approximately 250,000 residents (with roughly 70,000 homes and commercial establishments). The District’s sewer system consists of an interconnected network of more than thirty miles of trunk sewers, one pumping plant, and two interconnected water reclamation plants, the Saugus and the Valencia Water Reclamation Plants (“WRPs”).

The Saugus and Valencia WRPs are tertiary treatment plants that provide comminution, grit removal, primary sedimentation, flow equalization, conventional activated sludge biological treatment operating in nitrification denitrification (“NDN”) mode, secondary sedimentation, inert media filtration, chlorination, and dechlorination. Both plants discharge effluent into the Santa Clara River. The Saugus WRP has a design capacity of 6.5 million gallons per day (“mgd”), and the Valencia WRP has a design capacity of 21.6 mgd. While the Saugus and Valencia WRPs produce water that generally meets California’s primary Drinking Water Standards for chemical constituents, conventional tertiary treatment is not designed to remove chloride during the treatment process.

2. The Regional Water Board’s Setting of Chloride Objectives Was Discretionary Regulatory Activity.

In 1975, the Regional Water Board established water quality objectives for chloride, a component of salinity, in most of the region’s bodies of water, including the Santa Clara River. The 1975 Basin Plan adopted a water quality objective for chloride (based on flow-weighted annual average values) of 90 and 80 mg/L for Reaches 7 and 8 of the Santa Clara River, respectively. These objectives were intended to protect what the Board assumed were background water quality conditions along with the beneficial uses identified in the 1975 Basin Plan, including off-stream agricultural irrigation. (Exh. 1 at p. 2, ¶5.) The water quality objectives were modified to 100 mg/L as a flow-weighted annual average in the 1978 Basin

4827-7914-5737.1

*Test Claim Submitted by the Santa Clarita Valley
Sanitation District of Los Angeles County*

Plan.¹ (See Memorandum re: 1975 Chloride Objective and 1978 and 1994 Revisions to Chloride Objectives for Reaches 5 and 6 (Oct. 7, 2007) at p. 3, attached as Exh. 3.) The upper reaches of the Santa Clara River include newly named Reaches 5 and 6 (formerly Reaches 7 and 8), which are located upstream of the Blue Cut gauging station, which is west of the Los Angeles – Ventura County line between the cities of Fillmore and Santa Clarita.

At the same time the Regional Board adopted the water quality objective for Reaches 5 and 6, the Board also adopted chloride objectives for remaining reaches of the Santa Clara River and other waters in the region. These objectives varied substantially, ranging from 50 to 150 mg/L. (See generally, 1975 Basin Plan, Water Quality Objectives for Inland Surface Waters, Santa Clara River Basin.) The Board’s designation of these varied objectives reflects its discretion over specific water quality objectives for the Santa Clara River.² Following the US EPA’s approval of the objectives, the objectives became effective to implement the Clean Water Act and the NPDES Permit program.

From 1979 through 1989, neither of the WRPs’ NPDES permits included discharge limitations for chloride. Between 1990 and 2000, an intricate set of regulatory approvals modified the chloride objective to account for drought, variances, and other factors.³ (See, e.g.,

¹ A footnote in the Basin Plan identified that this objective was based on a flow weighted annual average. When the Basin Plan was amended in 1994, the footnote was deleted from the adopted version of the Basin Plan without an explanation of the modification. Since that time, the Regional Water Board had interpreted the 100 mg/L chloride water quality objective as an “instantaneous maximum” (not to be exceeded).

² Since that time, chloride concentrations set to protect industrial processing beneficial uses range from 20 to 1,000 mg/L, while protection standards for agricultural uses range from 100 to 355 mg/L. (See Water Quality Control Plan, Los Angeles Region, Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties (“1994 Basin Plan”) at p. 3-12, attached as Exh. 4.) Objectives in the 1994 Basin Plan for chloride in groundwater used specifically for agricultural irrigation range from 15 to 500 mg/L throughout the region, with the objectives for the Eastern Santa Clara and Ventura Central Basins ranging from 30-200 mg/L. (*Id.* at pp. 3-20 to 3-21.)

³ For instance, from 1990 – 1997, permit limits for wastewater treatment facilities throughout the Los Angeles region were set as water supply plus 85 mg/L, or 250 mg/L, whichever was less, under the policy that was adopted in 1990, and extended in 1993 and 1995 (Regional Water Board Resolution No. 90-04: *Effects of Drought-Induced Water Supply Changes and Water Conservation Measures on Compliance with Waste Discharge Requirements within the Los Angeles Region* (Mar. 26, 1990) (“Drought Policy”), attached to this Test Claim as Exh. 5.)

In 1997, the Regional Water Board extended the Drought Policy for the Santa Clara River, but set the interim limits at 190 mg/L to reflect the same intent. During the drought of the early 1990s, chloride levels in the water supply reached a maximum of 105 mg/L, so this was considered the maximum level likely to recur. The chloride loading contributed from sources other than potable water supply has dropped from over 100 mg/L in the Santa Clarita Valley to (footnote continued)

4827-7914-5737.1

*Test Claim Submitted by the Santa Clarita Valley
Sanitation District of Los Angeles County*

Exh. 5 [the Drought Policy, renewed and revised in 1993 and 1995 to reflect changed conditions due to water supply chloride levels]; *see also*, Regional Water Board Resolution 97-02: *Amendment to Water Quality Control Plan to Incorporate a Policy for Addressing Levels of Chloride in Discharges of Wastewater* (Jan. 27, 1997), attached as Exh. 6 to this Test Claim.) In 1998, Reaches 5 and 6 of the USCR appeared for the first time on the State's 303(d) List of impaired water bodies for chloride because the waters did not meet the Regional Water Board's 100 mg/L water quality objective.

The chloride levels contained in the waters discharged from the two WRPs also reflect the substantial amount of chlorides contained in the potable water received by the WRPs. Chloride levels in the potable water supply are connected to the state's cyclical drought conditions. Except for the period from 1997-2003, when now-banned residential self-regenerating water softeners contributed increasing levels of chloride to the sewerage system, trends for chloride levels in reclaimed water have closely tracked the trend for chloride levels in the potable water supply. Approximately 50-60% of the Santa Clarita Valley's water supply comes from the State Water Project. During droughts, the components of the water furnished through the State Water Project reflect elevated chloride levels present in the San Francisco Bay Delta.

In early 2000, the Regional Water Board proposed a Basin Plan amendment that would change the objective for chlorides from 100 mg/L instantaneous maximum to 143 mg/L based on a 12-month rolling average with 180 mg/L as a maximum not-to-exceed level. (*See Regional Water Board: Notice of Public Hearing for a proposed amendment to the California Regional Water Quality Control Plan for the Los Angeles Region, for Water Quality Objective (Chloride) Changes at Santa Paula and Santa Clarita Reaches of the Santa Clara River* ("Notice") at p. 1 (Jun. 26, 2000), attached as Exh. 7.) The Regional Water Board's Staff Report stated that new evidence demonstrated "that avocados were never grown in the Santa Clarita reaches [of the Santa Clara River], and do not represent an 'existing' (as defined in the Basin Plan) beneficial use in that reach." (*See RWQCB Staff Report Addendum: Basin Plan Amendment to Modify the Chloride Objective for Reaches at Santa Clarita and at Santa Paula in the Santa Clara River* (Jun. 6, 2000) at p. 6, attached as Exh. 8 ; *see also* Regional Water Board Public Hearing Transcript ("Hearing Transcript") re: Basin Plan Amendment for the Santa Clara River (Dec. 7, 2000) at p. 35:19-21, attached as Exh. 9 ["in the Santa Clarita reaches [7 and 8] there are and never have been avocado or strawberries grown."].) The Regional Water Board staff also determined that the proposed changes were "protective of agricultural water supplies as used in the Santa Clara River Watershed." (*See* Exh. 7 – Notice at p. 2.)

///

///

approximately 50 mg/L due to the comprehensive chloride source reduction program that has been implemented by the District over the past ten years, including unprecedented efforts in the state of California ("State") to ban the use of residential self-regenerating water softeners. (*See, e.g., Santa Clara River Chloride Reduction Ordinance of 2008* ("SCVSD Water Softener Ordinance") (Jun. 11, 2008), Exh. 10 to this Test Claim.)

4827-7914-5737.1

*Test Claim Submitted by the Santa Clarita Valley
Sanitation District of Los Angeles County*

A legal opinion from the State Water Board's Office of Chief Counsel found that:

The evidence in the record apparently indicates that water from the Santa Clarita reach of the Santa Clara River is not currently used to irrigate salt-sensitive crops, such as avocados or strawberries. Nor has it been used in the past for this purpose. Also, chloride levels in the Santa Clarita reach have apparently not changed for the past 25 years or so. They are approximately 143 mg/l. Based on this information, I conclude that the proposed chloride objective of 143 mg/l is protective of the existing agricultural beneficial use. Therefore, it is unnecessary to adopt a subcategory of the agricultural use, such as "restricted agricultural use."

(See Memorandum from Sheila Vassey, Senior Staff Counsel, State Water Board Office of Chief Counsel, to Jon Bishop, Los Angeles Regional Water Board re: Agricultural Beneficial Use in Santa Clara River (Oct. 12, 2000), attached as Exh. 11.)

Despite these determinations, the Regional Water Board's staff abruptly reversed its position at the December 7, 2000 hearing on the Basin Plan amendment. The staff now recommended against revising the chloride water quality objectives based on "new data" demonstrating that the chloride concentrations in the Santa Clara River at the LA-Ventura County line downstream of Reaches 5 and 6, and the WRPs, exceeded 100 mg/L. Based on the "new data," the staff concluded that the river's assimilative capacity for chloride downstream had been exceeded and could cause a problem for downstream agricultural users, especially those growing salt-sensitive crops like avocados. Based upon these representations, and lacking any evidence in the record to support its decision, the Regional Water Board's staff recommended that the Board instruct it to prepare a TMDL to meet the previously-adopted 100 mg/L chloride objective. (Exh. 9 – Hearing Transcript at pp. 30-31 and 44-45.)

On October 24, 2002, the Regional Water Board adopted Resolution No. 02-018, amending the Los Angeles Region's Basin Plan to include a TMDL for chloride in the Santa Clara River based on the 303(d) listing that originally occurred in 1998. In that resolution, the Board assigned final WLAs to the Valencia and Saugus WRPs of 100 mg/L to be included also in their NPDES permits. (Regional Water Board Resolution No. R02-018: *Amendment to the Water Quality Control Plan (Basin Plan) for the Los Angeles Region to Incorporate a TMDL for Chloride in the USCR*) (Oct. 24, 2002), attached as Exh. 12 to this Test Claim.) The TMDL also included interim WLAs for the plants to provide the District time to implement chloride source reduction, complete site-specific objective ("SSO") studies, and make any necessary modifications to the WRPs. At that time, the District determined that complying with this TMDL would, among other things, require it to construct costly advanced treatment facilities and would cost approximately \$500 million. The District appealed the Board's decision to the State Water Board.

The State Water Board remanded consideration of the TMDL to the Regional Water Board in 2003. (See State Water Board Resolution No. 2003-0014: *Remanding an Amendment to the Water Quality Control Plan for the Los Angeles Region to Incorporate TMDL for Chloride in USCR* (Feb. 19, 2003), attached as Exh. 13.) On remand, the Regional Water Board modified the TMDL in July 2003 in Resolution R4-2003-008. (Regional Water Board Resolution No.

4827-7914-5737.1

*Test Claim Submitted by the Santa Clarita Valley
Sanitation District of Los Angeles County*

R03-008: *Amendment to the Water Quality Control Plan for the Los Angeles Region to Incorporate TMDL for Chloride in USCR* (Jul. 10, 2003), attached as Exh. 14.) In May 2004, the Board further revised the interim WLAs and implementation plan in its Resolution No. 04-004. (Exh. 1 at p. 2, ¶9.) That resolution: (1) extended the final compliance deadline to 2018; and (2) directed studies be performed to characterize the sources, fate, transport, and specific impacts of chloride in the Santa Clara River, including impacts to downstream reaches and underlying groundwater basins. (*Id.*) This version of the TMDL was approved by the US EPA and became effective in May 2005.

The Regional Water Board has twice shortened the compliance period after the 2004 TMDL was issued. In 2006, the Board shortened the overall compliance period by two years, making the final waste load allocations for chloride operative in May 2016. (Regional Water Board Resolution No. R4-2006-016: *Amendment to the Water Quality Control Plan for the Los Angeles Region through revision to the Implementation Plan for the USCR Chloride TMDL, Resolution 04-004* (Aug. 3, 2006), attached as Exh. 15.)

On December 11, 2008, the Regional Water Board adopted Resolution No. R4-2008-012 which further reduced the compliance period, making the final waste load allocations for chloride operative in May 2015. The December 11, 2008 amendment to the Basin Plan also modified the chloride requirements. This amendment included the enactment of relaxed site specific objectives (“SSOs”) for chloride in the Santa Clara River conditioned upon the completion of activities set forth in the revised TMDL that contained new final WLAs and a detailed implementation plan. (See Exh. 1 - Resolution No. R4-2008-0012 [SSOs of 117 and 130 mg/L (for non-drought and drought conditions, respectively) in the Santa Clara River at the Los Angeles and Ventura County line and WLAs of 150 mg/L for the WRPs].) These modifications were identified as the “alternative water resources management approach” or “AWRM.” (Exh. 1 at p. 4, ¶15.)

If the AWRM program is not timely implemented, the water quality objectives for chloride will revert back from the conditional SSOs to the current levels of 100 mg/L. (*Id.* at p. 5, ¶21.) This resolution was approved by the State Water Board on October 20, 2009, and it was also approved by the State’s Office of Administrative Law and the US EPA in April 2010. Final approval from the US EPA made the revised TMDL fully effective under the Clean Water Act. The NPDES permits for the two WRPs, last updated in June 2009, reflect these terms. (See Regional Water Board Order No. R4-2009-0074 and *Letter re: Adopted Waste Discharge Requirements and NPDES for SCVSD Valencia WRP (only relevant pages from NPDES Permit) and Attachment K re: TMDL Related Tasks* (Jun. 4, 2009), attached as Exh. 16 - §§II.D and Special Provision VI.C.7 at pp. 8 and 41; see also, Regional Water Board Order No. R4-2009-0075 and *Letter re: Adopted Waste Discharge Requirements and NPDES for SCVSD Saugus WRP (only relevant pages from NPDES Permit)* (Jun. 4, 2009), attached as Exh. 17 - §§II.D and Special Provision VI.C.7 at pp. 8 and 40.)

The revised TMDL and the Saugus and Valencia WRP NPDES permits require final compliance with the conditional SSOs and final WLAs for chloride by May 4, 2015. (Exh. 1, Attachment “A” at p. 20.) To meet these requirements, the District must, among other things, implement ultra-violet light disinfection at both WRPs, construct advanced treatment

4827-7914-5737.1

*Test Claim Submitted by the Santa Clarita Valley
Sanitation District of Los Angeles County*

(desalination) facilities at the Valencia WRP (*i.e.*, microfiltration-reverse osmosis and brine disposal), and provide salt management facilities (*i.e.*, extraction wells and water supply conveyance pipelines), supplemental water (*i.e.*, water transfers and related facilities), and alternative water supplies for the protection of beneficial uses. (*See generally*, Exh. 1, Attachment “A”.) In addition, the desalinated recycled water must also be: (1) discharged to ensure compliance with water quality objectives for Reaches 4A, 4B, and 5; (2) used to protect salt-sensitive agricultural beneficial uses; (3) used to remove excess chloride load above 117 mg/L from the East Piru Basin; and, (4) used to enhance water supplies in Ventura and Los Angeles Counties. (*See, e.g.* Exh. 1 at p. 5, ¶22.)

The Regional Water Board’s modification and re-modification of the water quality objectives for chlorides, as well as the Board’s adoption of specific requirements for meeting these objectives, are discretionary technical decisions made by the Board itself and are not specifically prescribed by the Clean Water Act.

The District now faces enormous costs to “solve” a problem that it has not created and does not control, and has already substantially mitigated by implementing a comprehensive chloride source reduction program within the sewer service area. (SCVSD Automatic Water Softener Ordinance, attached as Exh. 19; SCVSD’s Variance Application for Saugus and Valencia WRPs (Oct. 21, 2003) at §3.7 at pp. 11-16 [detailing the District’s residential, commercial, and industrial source control efforts], attached as Exh. 18; *see also* SCVSD Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan/Chloride Source Control Measures (Nov. 2010) at §4, Exh. 20.)

The District’s present estimate of the cost to comply with the TMDL’s conditional SSOs and WLAs is \$250 million. (*See Report: Santa Clarita Valley Sanitation District USCR Chloride TMDL: SCR Reaches 5 & 6 Cost Estimate Summary for Conceptual Compliance Alternatives - Task 9* (June 2008) at p. 17, attached as Exh. 22.) The cost of complying with even the revised TMDL far exceeds the resources and revenues of the District. (*See, infra*, Written Narrative, Section F(v) at p. 16 below.) This estimate does not include the costs expended for the District’s existing activities to reduce chloride from entering the WRPs from commercial and residential sources, including the enactment of ordinances to remove residential self-regenerating water softeners through the SCVSD Water Softener Ordinance.

5. WRITTEN NARRATIVE.

Identify the specific sections of statutes or executive orders alleged to contain a mandate. Include a statement that actual and/or estimated costs resulting from the alleged mandate exceeds one thousand dollars (\$1,000), and include all of the following elements for each statute or executive order alleged:

(A) A detailed description of the new activities and costs that arise from the mandate.

(B) A detailed description of existing activities and costs that are modified by the mandate.

4827-7914-5737.1

*Test Claim Submitted by the Santa Clarita Valley
Sanitation District of Los Angeles County*

(C) *The actual increased costs incurred by the claimant during the fiscal year for which the claim was filed to implement the alleged mandate.*

(D) *The actual or estimated annual costs that will be incurred by the claimant to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.*

(E) *A statewide cost estimate of increased costs that all local agencies or school districts will incur to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.*

(F) *Identification of all of the following funding sources available for this program:*

- (i) Dedicated state funds*
- (ii) Dedicated federal funds*
- (iii) Other nonlocal agency funds*
- (iv) The local agency's general purpose funds*
- (v) Fee authority to offset costs*

(G) *Identification of prior mandate determinations made by the Board of Control or the Commission on State Mandates that may be related to the alleged mandate.*

(A) Detailed Description of the New Activities and Costs that Arise From the Mandate; and,

(B) Detailed Description of Existing Activities and Costs that are Modified by the Mandate.

Regional Board Resolution No. R4-2008-012, the revised TMDL, requires: (1) compliance with specific waste load allocations that will also be incorporated into the Saugus and Valencia WRPs' NPDES permits; and (2) specific "implementation tasks" necessary for compliance. These tasks, along with the final waste load allocations are the subject of this test claim. A detailed description of the implementation tasks and the costs of completing them and complying with the final WLAs follows:

Implementation Task 4

The SCVSD will convene a technical advisory committee or committees (TAC(s)) in cooperation with the Regional Board to review literature, develop a methodology for assessment, and provide recommendations with detailed timelines and task descriptions to support any needed changes to the time schedule for evaluation of appropriate chloride threshold for Task 6. The Regional Board, at a public hearing will re-evaluate the schedule for Task 6 and subsequent linked tasks based on input from the TAC(s), along with Regional Board staff analysis and assessment consistent with state and federal law, as to the types of studies needed and the time needed to conduct the necessary scientific studies to determine the appropriate chloride threshold for the protection of salt sensitive agricultural uses, and will take action to amend the schedule if there is sufficient technical justification.

4827-7914-5737.1

*Test Claim Submitted by the Santa Clarita Valley
Sanitation District of Los Angeles County*

The District retained a consulting firm to assist in leading the collaborative process required by the Regional Water Board. As part of this process, the District convened a stakeholder work group. The District has spent approximately \$800,000 on consulting services to accomplish this task.

Implementation Task 5

Groundwater/Surface Water Interaction Model: The SCVSD will solicit proposals, collect data, develop a model in cooperation with the Regional Board, obtain peer review, and report results. The impact of source waters and reclaimed water plans on achieving the water quality objective and protecting beneficial uses, including impacts on underlying groundwater quality, will also be assessed and specific recommendations for management developed for Regional Board consideration. The purpose of the modeling and sampling effort is to determine the interaction between surface water and groundwater as it may affect the loading of chloride from groundwater and its linkage to surface water quality.

The District retained a technical consulting firm to develop the groundwater/surface water interaction model, required by the TMDL, to examine the feasibility of various compliance alternatives. To date, the District has spent approximately \$3.1 million on consulting services to accomplish this task.

Implementation Task 6

Evaluation of Appropriate Chloride Threshold for the Protection of Sensitive Agricultural Supply Use and Endangered Species Protection: The SCVSD will prepare and submit a report on endangered species protection thresholds. The SCVSD will also prepare and submit a report presenting the results of the evaluation of chloride thresholds for salt sensitive agricultural uses, which shall consider the impact of drought and low rainfall conditions and the associated increase in imported water concentrations on downstream crops utilizing the result of Task 5.

The District retained technical consulting firms to complete the agricultural chloride threshold and the threatened and endangered species chloride threshold studies required by the TMDL. The District has spent approximately \$700,000 and \$100,000, respectively, for these studies.

Implementation Task 7

Develop SSO for Chloride for Sensitive Agriculture: The SCVSD will solicit proposals and develop technical analyses upon which the Regional Board may base a Basin Plan amendment.

Implementation Task 8

Develop Anti-Degradation Analysis for Revision of Chloride Objective by SSO: The SCVSD will solicit proposals and develop draft anti-degradation analysis for Regional Board consideration.

4827-7914-5737.1

Test Claim Submitted by the Santa Clarita Valley
Sanitation District of Los Angeles County

The District retained a technical consulting firm to prepare the SSOs study and anti-degradation analysis required by the TMDL. The Regional Board used information prepared for these reports as the technical basis to revise the Basin Plan to incorporate the revised TMDL under Resolution R4-2008-012. The District has spent approximately \$300,000 for consulting services to complete these tasks.

Implementation Task 9

Develop a pre-planning report on conceptual compliance measures to meet different hypothetical final conditional wasteload allocations. The SCVSD shall solicit proposals and develop and submit a report to the Regional Board that identifies potential chloride control measures and costs based on different hypothetical scenarios for chloride SSOs and final conditional wasteload allocations.

The District retained the services of a technical consulting firm to develop a report on potential compliance measures and costs. The District has spent approximately \$500,000 on this task.

Implementation Task 17a

Implementation of Compliance Measures, Complete Environmental Impact Report: The SCVSD shall complete a Wastewater Facilities Plan and Programmatic Environmental Impact Report for facilities to comply with final effluent permit limits for chloride.

The District retained technical consulting firms to prepare a facilities plan and environmental analysis to comply with the TMDL. The District has spent approximately \$1.1 million on this task to date.

Summary of the Implementation Tasks Completed to Date:

TMDL Study/Task	Cost
TMDL Collaborative Process Facilitation Services (Task 4)	\$0.8 million
Groundwater Surface Water Interaction Model (Task 5)	\$3.1 million
Agricultural Chloride Threshold Study (Task 6)	\$0.7 million
Threatened and Endangered Species Study (Task 6)	\$0.1 million
Site Specific Objectives and Anti-Degradation Study (Task 7 & 8)	\$0.3 million
Chloride Compliance Cost Study (Task 9)	\$0.5 million
Facilities Plan & EIR (Task 17a)	\$1.1 million
Total TMDL Study Costs to Date	\$6.6 million

*These costs do not include the cost of District staff time expended on these tasks.

///

///

4827-7914-5737.1

*Test Claim Submitted by the Santa Clarita Valley
 Sanitation District of Los Angeles County*

Implementation Task 20

Implementation Task 20 of the TMDL provides the schedule for compliance of WLAs that will also be incorporated into the Saugus and Valencia WRP's NPDES permits.

The interim WLAs for chloride shall remain in effect for no more than 10 years after the effective date of the TMDL. Conditional SSO for chloride in the USCR shall be achieved. Final conditional WLAs for chloride in Reaches 4B, 5, and 6 shall apply by May 5, 2015. The Regional Board may consider extending the completion date of this task as necessary to account for events beyond the control of the SCVSD.

As previously indicated, the District has implemented a comprehensive chloride source reduction program within the sewer service area designed to reduce chloride levels in the WRP discharges in order to comply with final WLAs for chloride. (See Exh. 19). Specifically, the District implemented an innovative automatic water softener public outreach and rebate program, in compliance with Senate Bill 475, to remove automatic water softeners, which contribute significant amounts of chloride to the WRP discharges. The total cost of the program for removal of automatic water softeners, not including the cost of the District's staff time, is approximately \$4.8 million.

Although the removal of automatic water softeners has reduced chloride levels in the District's recycled water discharged to the river, that reduction is not sufficient to achieve compliance with the revised TMDL without construction of additional facilities. In order to meet the chloride TMDL requirements set forth in Regional Board Resolution No. R4-2008-012, the District must also implement the AWRM program. The estimated costs of implementing that program are set forth below:

AWRM Project Element	Estimated Capital Cost *
Facilities Plan & Environmental Impact Report (EIR)	\$2.5 million
Advanced Treatment (Micro Filtration, MF & Reverse Osmosis, RO)	\$30.0 million
Brine Disposal (Deep Well Injection, DWI)	\$53.0 million
Ventura Salt Export Facilities	
(a) MF/RO Conveyance Pipeline from Valencia WRP	\$46.5 million
(b) GW Extraction Wells in Ventura County	\$5.5 million
(c) Blend Water Pipeline from Wells to River	\$52.3 million
Supplemental Water from local pumped groundwater	\$30.0 million
Supplemental Water conveyance	\$12.0 million
UV Disinfection Facilities at Saugus & Valencia WRP	\$16.5 million
Removal of Automatic Water Softeners	\$2.4 million
<hr/>	
Total Estimated Capital Cost	\$250.7 million

* Costs based on 2007 dollars.

Note: The costs listed above are capital costs and do not include operation and maintenance expenses required for continued operation of the facilities, which are estimated to be approximately \$4.5 million per year.

4827-7914-5737.1

*Test Claim Submitted by the Santa Clarita Valley
 Sanitation District of Los Angeles County*

If the District cannot comply with the AWRM program set forth in Resolution No. R4-2008-012, the chloride requirements in Regional Board Resolution No. R4-2006-016 will become effective. These include a final WLA of 100 mg/L assigned to the District's WRPs discharge. In the event that the objective is set at the 100 mg/L discharge limit, the District would need to construct advanced treatment and brine disposal facilities, resulting in a combined cost of approximately \$500 million dollars, which includes operation and maintenance expenses required for continued operation.

- (C) Actual Increased Costs Incurred by the Claimant During the Fiscal Year; and,**
- (D) Actual Increased Costs Incurred by the Claimant During the Fiscal Year Immediately Following the Fiscal Year for which the Claim was Filed.**

Eligible costs under this claim include those for the entire fiscal year 2009-2010. Actual increased costs incurred during fiscal year 2009-2010, and estimated increased costs incurred during the fiscal year 2010-2011, are as follows:

Expense (TMDL/AWRM Task)	FY 09-10 Cost	FY 10-11 Estimate
Payroll & Benefits (TMDL General Compliance)	\$ 96,750	\$ 396,000
Payroll & Benefits (Facilities Plan & EIR - Task 17)	\$ 613,530	
Legal Services (TMDL General Compliance)	\$ 19,490	\$ 220,000
Consultants (TMDL Task 5)	\$ 4,020	
Consultants (TMDL Task 4)	\$ 1,190	
Consultants (TMDL Task 17)	\$ 774,980	
Consultants (TMDL General Compliance)		\$ 65,000
Payroll & Benefits (Automatic Water Softener Program)	\$ 17,300	
Rebates (Automatic Water Softener Program)	\$ 739,400	\$ 100,000
Consultants (Automatic Water Softener Program)	\$ 363,210	\$ 100,000
Total Incurred Costs	\$ 2,629,870	\$ 881,000

- (E) Statewide Cost Estimate of Increased Costs that all Local Agencies will Incur to Implement the Alleged Mandate During the Fiscal Year Immediately Following the Fiscal Year for which the Claim was Filed.**

The proposed project is local in scope and applies only to reaches 5 and 6 of the Santa Clara River. Therefore, no information is available regarding the statewide impact of the Regional Board's mandate. The District is solely responsible for generating sufficient revenues to fund the various projects required by the Regional Water Board.

Due to the increasing financial strain on local governments imposed by state mandates, the League of Cities recently adopted a Resolution on Unfunded Mandates. The resolution demonstrates that the added financial burden on local agencies throughout the State of California is of grave concern to other local entities as well. The resolution is specific to chloride TMDL limits and is attached to this claim as Exhibit 22.

4827-7914-5737.1
*Test Claim Submitted by the Santa Clarita Valley
 Sanitation District of Los Angeles County*

(F) Identification of All Possible Funding Sources to Implement the Regional Board's TMDL Ordinance.

The District has been unable to secure any alternate local, state, or federal funding sources, or identify any other fee authority that may be used to offset the increased costs that will be incurred to implement the compliance project. The District's attempts to secure funding to comply with the mandates are outlined below.

(i) Dedicated State Funds.

During 2009 and 2010, no state funding has been available from which the District could seek to fund the mandates. It is possible that a relatively small amount (up to several million dollars) of grant funding may be sought in the future from the Department of Water Resources through the Integrated Regional Water Management Planning Program.

At the time the 2008 revised TMDL was drafted, the Regional Water Board presumed that the District would be able to partially rely on federal and state funding. However, because of subsequent budget constraints and the Legislature's general policy against appropriating funds for new projects, the Regional Water Board's assumption was incorrect. (County Sanitation District Internal Memorandum re: Chloride TMDL (proposed redlined amendment to Resolution 2008-0012) at p. 5, ¶24, emphasis added, attached as Exh. 23 ["The proposed amendment to the Basin Plan will revise SSOs in Reach 4B of the Santa Clara River and . . . allow the opportunity to secure federal and state funding for project implementation."].)

(ii) Dedicated Federal Funds.

Over the course of several years, the District has pursued outside sources of federal funding applicable to this mandate. For fiscal year 2011, the District submitted appropriations requests to Congressmen McKeon and Gallegly and Senators Boxer and Feinstein to obtain funding under the State and Tribal Assistance Grants ("STAG") Program (through the US EPA) for \$1 million. Notwithstanding its efforts, the District was not awarded any appropriation for fiscal year 2011. The District also submitted, but did not receive, funding for an appropriations request in fiscal year 2010 for STAG funding.

In the previous Congress, the District prepared and submitted requests for authorization of funding through the Water Resources Development Act ("WRDA") to several members of the House of Representatives and to California's two Senators. However, these authorization requests were not acted on by either the House or the Senate. WRDA reauthorization may be considered again in the 112th Congress.

Although the District intends to submit additional requests for STAG and WRDA funding authorization, the outlook for funding at the federal level is bleak, and any funds that become available could at best provide only a small amount towards the project's total cost. The present policy of Congress and the current administration appears to be to afford preference to funding the current backlog of authorized, but not yet funded projects, as opposed to appropriating funds for new projects. Additionally, it is unclear whether the 112th Congress will authorize any new projects under programs like WRDA, or appropriate any funds for new

4827-7914-5737.1

*Test Claim Submitted by the Santa Clarita Valley
Sanitation District of Los Angeles County*

projects under STAG or other accounts that were previously available. These developments may preclude or substantially delay the District's obtaining federal funding for this project.

(iii) Other nonlocal agency funds: Not applicable.

(iv) The local agency's general purpose funds: Not applicable.

(v) Fee authority to offset costs:

Some of the compliance project costs may be paid from service charges. Based on the SCVSD's projections, the service charge rate projections indicate that rates must increase over the next thirteen years to generate even the minimum amount of \$250 million needed to fund the TMDL project.

The District's elected officials could not support the proposed rate increases in the face of fierce public opposition. The potential consequences of future rate increase implementation include a referendum to overturn them. Therefore, this source of funding remains uncertain. A more thorough analysis of this "fee increase exemption," codified at Government Code section 17556, subdivision (d), is discussed in Section 8 below.

(G) Identification of prior mandate determinations made by the Board of Control or the Commission on State Mandates that may be related to the alleged mandate.

None.

6. DECLARATIONS.

Please see the Declaration of Stephen R. Maguin, filed concurrently herewith, and attached as Exhibit 26.

7. DOCUMENTATION.

Support the written narrative with copies of all of the following:

(A) the test claim statute that includes the bill number alleged to impose or impact a mandate; and/or

(B) the executive order, identified by its effective date, alleged to impose or impact a mandate; and

(C) relevant portions of state constitutional provisions, federal statutes, and executive orders that may impact the alleged mandate; and

(D) administrative decisions and court decisions cited in the narrative. Published court decisions arising from a state mandate determination by the Board of Control or the Commission are exempt from this requirement.

4827-7914-5737.1

*Test Claim Submitted by the Santa Clarita Valley
Sanitation District of Los Angeles County*

Copies of the relevant resolutions, background material regarding the history of the Chloride TMDL Resolution, and relevant legal authority are attached hereto as Exhibits 1 to 34, and are identified by a separate index to the exhibits provided.

8. LEGAL ANALYSIS.

The District's ratepayers have objected to the significant rate increases that are needed to fund the construction and operation of the facilities required for the TMDL compliance project. The ratepayers have inquired whether the Regional Board's chloride objectives constitute an "unfunded state mandate" reimbursable under California Constitution Article XIII B, section 6.

A. The Costs Mandated by the State are Recoverable by the District.

California Constitution, Article XIII B, section 6, requires the state to reimburse a local agency's costs to implement a "new program or higher level of service" mandated by the Legislature or any state agency, unless the legislative mandates are "requested by the local agency affected" or consist of "[l]egislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975." (Cal. Const., Art. XIII B, §6, subd. (a)(1) – (3), attached as Exh. 27.) The California Legislature ("Legislature") created the Commission on State Mandates ("Commission") to implement Article XIII B, section 6, by hearing and deciding claims by local agencies that may be entitled to reimbursement. (Cal. Gov. Code §17551.)

Government Code section 17556 provides specific criteria for the Commission to use to determine which costs are state mandated. Claims that are not "costs mandated by the state," and therefore exempt, include:

- c) Claims for federally-mandated costs, except for state mandated costs in excess of the federally-mandated costs;
- d) Claims where the local agency has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service;

(*Id.*, emphasis added, attached as Exh. 28.)

Neither of these constitutional exceptions applies to this mandate. Article XIII B, section 6, requires reimbursement of costs to implement a "new program or higher level of service" mandated by the Legislature or any state agency. The Regional Water Board, a state agency, created this mandate through its exercise of discretionary authority by adopting the water quality standards for chloride and electing to impose the WLAs and specified implementation plan requirements. These requirements are not mandated by federal law, and have fluctuated over the years as a result of decisions by the State Water Board and Regional Water Board.

The District has been unable to levy or successfully implement a rate increase due to strong ratepayer opposition. Therefore, the District ought to recover reimbursement for the costs expended to comply with the State Board's resolution. These costs include those associated with

4827-7914-5737.1

*Test Claim Submitted by the Santa Clarita Valley
Sanitation District of Los Angeles County*

the construction and implementation of the advanced wastewater treatment, along with costs for any other projects that facilitate or assist the District in its continuing efforts to comply with the Regional Water Board's requirements.

B. None of the Exceptions to the State Mandate Requirements Apply.

Government Code section 17556 does not bar the District from recovering reimbursement for mandated costs resulting from the chloride TMDL. The only two potentially applicable exceptions are set forth in subdivisions (c) and (d).

1. The TMDL is Not a Federal Mandate.

Article XIII B, section 6, applies to the State and Regional Water Boards. These boards cannot circumvent their constitutional funding obligations by arguing that they are merely implementing a federal mandate.

In *County of Los Angeles v. Commission on State Mandates* (2007) 150 Cal.App.4th 898, 906 ("*County of Los Angeles*") the Court of Appeal held California Government Code section 17516 to be unconstitutional to the extent that it exempted orders of the State Water Board or regional water quality boards from the constitutional state mandate subvention requirement. (A copy of this case is attached as Exh. 29.) Initially, Section 17516 had exempted from the definition of an "executive order," covered by the subvention requirement, "any order, plan, requirement, rule, or regulation issued by the State Water Resources Control Board or by any regional water quality control board . . ." (*Id.*, subd. (c).) Since the State and the regional water boards are state agencies, the court held that exempting the orders of these boards from coverage under Article XIII B, section 6, contravened the plain, unequivocal, and all-inclusive reference to "any state agency" in that section. (*County of Los Angeles, supra*, 150 Cal.App.4th 898 at p. 904.)

The Court of Appeal further opined that:

Section 6 was included in Article XIII B in recognition that Article XIII A of the Constitution severely restricted the taxing powers of local governments. The provision was intended to preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities that were ill equipped to handle the task. Specifically, it was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues . . . (*Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 836, fn. 6, 244 Cal.Rptr. 677, 750 P.2d 318.)

(*Id.* at p. 906, some citations omitted, emphasis added.)

The Regional Water Board contended in litigating *County of Los Angeles* that the exemption of its decisions from coverage under the state mandates law was constitutional "to the extent Division 7, Chapter 5.5' simply implements federal mandates under the Clean Water Act. . ." (*Id.* at p. 914, citations omitted, emphasis added.) However, the Court of Appeal stated

4827-7914-5737.1

*Test Claim Submitted by the Santa Clarita Valley
Sanitation District of Los Angeles County*

that it was not “convinced that the obligations imposed by a permit issued by a Regional Water Board necessarily constitute federal mandates under all circumstances.” (*Id.*) Expanding on the overlapping federal and state authority included in the regulatory scheme contemplated under the Act, the Court noted that:

There is no precise formula or rule for determining whether the “costs” are the product of a federal mandate. Our Supreme Court explained: “Given the variety of cooperative federal-state-local programs, we here attempt no final test for “mandatory” versus “optional” compliance with federal law. A determination in each case must depend on such factors as the nature and purpose of the federal program; whether its design suggests an intent to coerce; when state and/or local participation began; the penalties, if any, assessed for withdrawal or refusal to participate or comply; and any other legal and practical consequences of nonparticipation, noncompliance, or withdrawal.

(*Id.* at p. 907, fn. 2, emphasis added.)

Further, in *Hayes v. Commission on State Mandates* (1992) 11 Cal. App. 4th 1564, 1594, the Court of Appeal held that “[w]hen federal law imposes a mandate on the state, however, and the state ‘freely [chooses] to impose the costs upon the local agency as a means of implementing a federal program, then the costs are the result of a reimbursable state mandate regardless whether the costs were imposed upon the state by the federal government.’” (A copy of the *Hayes* case is attached as Exh. 30.)

The Commission recently reaffirmed the State’s role in water quality regulation:

[t]he task of accomplishing [the goal of] . . . “attain[ing] the highest water quality which is reasonable, . . . “belongs to the State Water Resources Control Board (State Board) and the nine Regional Water Quality Control Boards; together the State Board and the regional boards comprise “the principal state agencies with primary responsibility for the coordination and control of water quality.”

Whereas the State Board establishes statewide policy for water quality control, the regional boards “formulate and adopt water quality control plans for all areas within [a] region”

(Commission Stmt. of Dec. re: Discharge of Stormwater Runoff, 07-TC-09 at p. 4, citations omitted.)

Given the discretion granted to and exercised by the Regional Water Board to adopt specific water quality standards, and its adoption of standards for chloride in the Santa Clara River and WLAs, it cannot seriously be argued that the decisions made by the Board were no more than compliance with federal mandates. The State must therefore reimburse the District for the Board’s unfunded mandates.

///

///

4827-7914-5737.1

*Test Claim Submitted by the Santa Clarita Valley
Sanitation District of Los Angeles County*

2. The Regional Water Board's Discretionary Decisions in Adopting the Water Quality Standard for Chloride and Setting WLAs for the District's WRPs are Unfunded State Mandates.

Although the Regional Water Board's actions to date satisfy the minimum procedural and substantive requirements of the Clean Water Act, the Board's adoption of the chloride water quality objective of 100 mg/L, its modification of the objective via SSOs, and its assignment of specific interim and final WLAs, were discretionary decisions undertaken pursuant to authority conferred to it by the Porter-Cologne Act.⁴

a. *The Regional Board Enacted Regulations Not Mandated by the Clean Water Act to Protect Downstream Agricultural Uses.*

The Clean Water Act requires states to "take into *consideration*" the following uses of waters when adopting water quality standards: "use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes, and also taking into consideration their use and value for navigation." (33 U.S.C. §1313(c)(2)(A) (emphasis added); *see also* 40 C.F.R. §130.3⁵; 40 C.F.R. §131.10(a).) The Regional Water Board cannot assert that acts to regulate water quality to protect downstream salt-sensitive crops are mandated by the Clean Water Act. Instead, the decision to protect agricultural uses and the means adopted by the Board are state mandates. The Regional Water Board's decision as to the uses it will protect, and the level of protection provided, are discretionary state actions taken pursuant to the Porter-Cologne Act.

Further, the reference in federal regulations to the scope of protection that includes "uses actually attained in the water" does not appear to include off-stream agricultural use as an

⁴ The Regional Board's statements in the TMDL itself give some guidance on the issue:

While the Regional Board has no discretion to not establish a TMDL (the TMDL is required by federal law), the Board does exercise discretion in assigning waste load allocations and load allocations, determining the program implementation, and setting various milestones in achieving the water quality standards.

(October 8, 2009 Memorandum re Chloride TMDL at p. 7, emphasis added, Exh. 22.)

⁵ Initially set forth in the Clean Water Act are several national goals and objectives, including a "national goal that the discharge of pollutants into the navigable waters be eliminated by 1985" and a "national goal that wherever attainable, an interim goal of water quality which provides for the protection and propagation of fish, shellfish, and wildlife, and provides for recreation in and on the water be achieved by July 1, 1983." (*See* 33 U.S.C. §1251(a)(1)-(2).) Congressional declarations of policy are not binding legal mandates, evident by the fact that discharge of pollutants into the navigable waters continue to be authorized today. Nonetheless, the latter goal cited above is often referred to as the Clean Water Act's overarching mandate to protect "fishable/swimmable" beneficial uses of the nation's waters.

“existing use” that the State may elect to protect. (See 40 C.F.R §131.3(e).) The US EPA recommends water quality criteria for chloride to protect municipal and domestic supply (potable water) and aquatic species, but not for off-stream agricultural uses. The recommended numeric goal for potable water is 250 mg/L⁶, and the goal to protect aquatic life is a chronic value of 230 mg/L and an acute value of 860 mg/L⁷.

The Clean Water Act does not mandate specific protection of agricultural beneficial uses. Rather, these uses should be considered by the State when it makes its own discretionary, site-specific determinations regarding the beneficial uses it will protect through the regulatory process and water quality objectives. Here, the Regional Water Board initially adopted water quality standards for chlorides of 100 mg/L for Reaches 5 and 6 of the Santa Clara River for the purpose of protecting off-stream agricultural uses, and it also chose to protect the most salt-sensitive crops grown in the downstream region. After that, the Regional Water Board decided to further modify water quality standards, resulting in the currently-imposed AWRM program. These layers of regulation were not mandated by federal law but instead reflect ever-changing State regulatory policy decisions. These decisions are only approved for purposes of the NPDES permit program because they meet minimum federal standards. While the Clean Water Act requires TMDLs to be prepared, the Regional Water Board exercised its discretion when assigning WLAs to the Saugus and Valencia WRPs to achieve more-stringent water quality standards. (See, *infra*, fn 5 at p. 21.) Thus, these regulatory requirements are unfunded state mandates.

b. *Regional Water Quality Control Boards throughout the State Protect Similar Agricultural Uses with Higher Chloride Requirements.*

This Regional Water Board, and other regional water quality control boards, have used their discretionary decision-making power to establish water quality objectives permitting chloride concentrations higher than 100 mg/L designed to protect agricultural beneficial uses. In Reach 2 of the Santa Clara River, where salt-sensitive crops like strawberries are grown, the Regional Water Board has set the water quality objective for chlorides at 150 mg/L. The Regional Water Board has set the same water quality objective level for neighboring Calleguas Creek Watershed, where avocado crops are also commercially cultivated. (See Regional Water Board Resolution R4-2007-016, *Amendment to Water Quality Control Plan to incorporate a*

⁶ EPA secondary Maximum Contaminant Level (“MCL”), 40 C.F.R. §143.3; California Code of Regulations, Title 22, §64449, Table 64449-B (the recommended level is 250 mg/L, with an upper level of 500 mg/L and a short-term level of 600 mg/L). It should be noted that these levels all apply to finished drinking water at the tap, not to ambient surface water quality.

⁷ EPA, Ambient Water Quality Criteria for Chloride – 1988, EPA 440/5-88-001 (Feb. 1988). This EPA Chloride criteria guidance document includes a recommended chronic value is based on a 4-day average continuous concentration and the recommended acute value based on a one-hour average concentration. These values are not to be exceeded more than once every three years.

TMDL for Boron, Chloride, Sulfate, and TDS (Salts) in Calleguas Creek Watershed and Attachment "A" (Oct. 4, 2007), attached to this Test Claim as Exh. 24.)

In other regions, regional boards have established water quality objectives for chloride as high as 180 mg/L. These boards have found values higher than 100 mg/L to be protective of all types of agricultural crops, including salt-sensitive crops. For example, the Central Coast and San Francisco Bay Regional Water Boards cite 142 mg/L or less as the appropriate threshold for chloride, and the Santa Ana Regional Water Board states that "a safe value for irrigation is considered to be less than 175 mg/L of chloride," with water quality objectives for specific water bodies ranging from 55 mg/L to 180 mg/L. (*See* Central Coast, San Francisco, and Santa Ana Regions' Basin Plans, chapters re: Water Quality Objectives, attached as Exh. 25.)

Although the District provided the Regional Water Board with technical information as well as documents demonstrating the economic hardship that would accompany its chloride requirements, the Board elected to impose the water quality standards and WLAs described above. The costs to comply with the Regional Water Board's edicts fall squarely within the parameters of the State's unfunded mandate law.

3. The District Cannot Levy Service Charges, Fees, or Assessments Sufficient to Pay for the Mandated Project Costs.

The second exception from recovery for unfunded mandates, which is found in Government Code section 17556(d) (the "fee increase exception"), relates to instances where the local agency has "the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service." The fee increase exception, to the extent it even applies in view of the policy behind constitutional provisions limiting the means for revenue generation, does not bar the District's claim because the District's board has not been "authorized" to levy increased fees under the process created in Article XIIIID of the California Constitution. As discussed in further detail below, the Commission squarely addressed this issue and found that a local agency does not fall under the fee increase exception if it is unable to obtain the requisite approval under the Proposition 218 process. (Commission's Stmt. of Decision re: Discharge of Stormwater Runoff, 07-TC-09 (Mar. 26, 2010) at p. 106.)

This process requires local agencies to provide notice to the affected property owners for any proposed, new, or increased assessment. (*See generally*, Cal. Const., Art. XIIIID, §6, subd. (c), attached as Exh. 31 ["[t]he agency shall provide written notice by mail of the proposed fee or charge to the record owner of each identified parcel upon which the fee or charge is proposed for imposition, the amount of the fee or charge proposed to be imposed upon each, the basis upon which the amount of the proposed fee or charge was calculated, . . ."].) -Upon providing notice to the affected property owners, the District received strong opposition amongst its constituents. As a result, the District has been unable to successfully implement a rate increase due to public resistance.

*Test Claim Submitted by the Santa Clarita Valley
Sanitation District of Los Angeles County*

Approved by California voters in 1996 and enacted in 1997, Proposition 218 amended the California Constitution by adding Articles XIIC and XIID and significantly changed the process of local government finance by curtailing the deference traditionally accorded legislative enactments on fees, assessments, and charges. (Cal. Const., Art. XIID; *see also Silicon Valley Taxpayers Ass'n, Inc. v. Santa Clara County Open Space Authority* (2008) 187 44 Cal.4th 431, 446, emphasis added, attached hereto as Exh. 32.) The Court of Appeal recognized that Proposition 218 created a significant break with prior law, stating that “. . . the voters sought to curtail local agency discretion in raising funds, Proposition 218's preamble includes an express statement of purpose: ‘The people of the State of California hereby find and declare that Proposition 13 was intended to provide effective tax relief and to require voter approval of tax increases. However, local governments have subjected taxpayers to excessive tax, assessment, fee and charge increases that not only frustrate the purposes of voter approval for tax increases, but also threaten the economic security of all Californians and the California economy itself.’” (*Id.*)

The underlying purpose of California Constitution Articles XIIB, section 6 (specifically, the provision relating to state mandates) and XIID, section 6 (from Proposition 218) is fundamentally the same: to provide a system of checks and balances to prevent state and local governments from shifting financial responsibility, either onto local agencies of the state or onto the taxpayers of a local district, for carrying out certain governmental functions. (*County of Los Angeles, supra*, 150 Cal.App.4th at p. 906.)

Case law interpreting the applicability of the fee increase exception does not address the potential conflict between that exception and Proposition 218 because the most significant cases predate the passage of that proposition. Consequently, there is no case law that addresses this issue. This potential conflict is significant where a local agency is unable to obtain the requisite approval to implement a proposed fee increase, but is (under one narrow interpretation of the fee increase exception) required to expend exorbitant costs to comply with a state-imposed mandate. The two cases discussed below only tangentially touch upon the fee increase exception and are not factually analogous.

Although *County of Fresno v. State of California* (1991) 53 Cal.3d 482 (“*County of Fresno*”) found Government Code section 17556, subdivision (d) to be “facially” constitutional, the opinion predated the enactment of Proposition 218 by several years. (*Fresno* case attached as Exh. 33.) That opinion provides no guidance regarding the interpretation of the fee increase exception where the local agency is not authorized to levy fees and unable to secure funding through increased revenue. In practical terms, the operation of Proposition 218 and the political realities attendant to its passage limit the ability of local government to raise fees in a way that makes it impossible for a local agency to raise sufficient funding for state mandate projects if the affected property owners object.

This is precisely the situation that has occurred here. The District attempted to implement the Proposition 218 process, but the elected public officials could not to support the proposed rate increase in the face of fierce public opposition. In 2010, the District’s board declined to adopt the proposed rate increases based on the expectation that any substantive rate increase would be overturned by way of referendum due to fierce opposition from the District’s

4827-7914-5737.1

*Test Claim Submitted by the Santa Clarita Valley
Sanitation District of Los Angeles County*

ratepayers. Since that time, the likelihood that the proposed rate increases would pass muster, in light of strong disapproval of the proposed length and level of rate increases, has been reduced even further.

In the factually-distinct case of *Connell v. Superior Court of Sacramento County* (1997) 59 Cal.App.4th 382 (“*Connell*”), the Court of Appeal summarily held, without conducting a full analysis of the Proposition 218 issue, that the water districts who were the real parties in interest were not entitled to reimbursement for capital expenditures used to implement a wastewater reclamation system because the districts were authorized to levy fees to cover the costs attributable to the regulatory amendment. (*Id.* at pp. 387, 399, attached as Exh. 34.) However, the *Connell* court ignored the then-recent passage of Proposition 218. (*Id.* at p. 403.)

Though the court expressly acknowledged that “the authority of local agencies to recover costs for many services will be impacted by the requirement to secure the approval by majority vote of the property owners voting, to levy or to increase property related fees,” the court declined to address whether this limitation, or the Proposition 218 notice requirements and any resulting input from property owners, has any bearing on the fee increase exception. This may have been appropriate because that dispute long predated the passage of Proposition 218, but it makes the holding inapplicable here. Therefore, the *Connell* court did not address whether the fee increase exception bars local governments from seeking reimbursement under Article XIII B, section 6 when the agency is unable to offset costs through rate increases.

Because of the absence of applicable case law on this issue, a test claimant placed this question of “first impression” before the Commission. On March 26, 2010, the Commission issued a Statement of Final Decision finding that a local agency does not have sufficient fee authority under the fee increase exception if the fee is contingent on the outcome of the Proposition 218 process. (Commission Stmt. Of Dec. re: Discharge of Stormwater Runoff, 07-TC-09 at p. 106.) The Commission provided the following rationale in reaching its decision:

Under Proposition 218, the local agency has no authority to impose the fee without the consent of the voters or property owners. Additionally, it is possible that the local agency’s voters or property owners may never adopt the proposed fee or assessment, but the local agency would still be required to comply with the state mandate. Denying reimbursement under these circumstances would violate the purpose of article XIII B, section 6, which is to “to preclude the state from shifting financial responsibility for carrying out governmental functions to local

agencies, which are ‘ill equipped’ to assume increased financial responsibilities because of the taxing and spending limitations that articles XIII A and XIII B impose.”

(*Id.* at p. 106, citations omitted, emphasis added.)

As acknowledged by the Commission, the enactment of Proposition 218 created a paradigm shift in local government financing that severely limited an agency’s ability to operate and generate revenues given the various hurdles attributable to heightened public involvement. In conjunction with the “government spending limitation” contained in Article XIII B, section 6,

4827-7914-5737.1

Sanitation District of Los Angeles County*

the Legislature recognized that local governments should not bear the burden of mandates imposed by the state or state agencies. In light of the increasing lack of funding options, and the certain opposition of the District's ratepayers, the District ought not be forced to expend significant sums of monies that it does not have and cannot raise to implement a project that is, even in its smallest details, mandated by the State.

EXHIBIT “1”

4837-0090-6752.2

State of California
California Regional Water Quality Control Board, Los Angeles Region

RESOLUTION NO. R4-2008-012
December 11, 2008

Amendment to the Water Quality Control Plan for the Los Angeles Region to Adopt
Site Specific Chloride Objectives and to Revise the Upper Santa Clara River
Chloride TMDL

WHEREAS, the California Regional Water Quality Control Board, Los Angeles Region, finds that:

1. The federal Clean Water Act (CWA) requires the California Regional Water Quality Control Board (Regional Board) to develop water quality standards that are sufficient to protect beneficial uses designated for each water body found within its region.
2. The elements of a TMDL are described in 40 CFR 130.2 and 130.7 and section 303(d) of the CWA, as well as in USEPA guidance documents (Report No. EPA/440/4-91/001). A TMDL is defined as the sum of the individual waste load allocations for point sources, load allocations for nonpoint sources and natural background (40 CFR 130.2). Regulations further stipulate that TMDLs must be set at levels necessary to attain and maintain the applicable narrative and numeric water quality objectives (WQOs), and protect beneficial uses, with seasonal variations and a margin of safety that takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR 130.7(c)(1)).
3. Upon establishment of TMDLs by the State or USEPA, the State is required to incorporate the TMDLs along with appropriate implementation measures into the State Water Quality Management Plan (40 CFR 130.6(c)(1), 130.7). This Water Quality Control Plan for the Los Angeles Region (Basin Plan), and applicable statewide plans, serves as the State Water Quality Management Plans governing the watersheds under the jurisdiction of the Regional Board.
4. The Santa Clara River is the largest river system in southern California that remains in a relatively natural state. The River originates on the northern slope of the San Gabriel Mountains in Los Angeles County, traverses Ventura County, and flows into the Pacific Ocean between the cities of San Buenaventura (Ventura) and Oxnard. The predominant land uses in the Santa Clara River watershed include agriculture, open space, and residential uses. Revenue from the agricultural industry within the Santa Clara River watershed is estimated at over \$700 million annually, and residential use is increasing rapidly both in the upper and lower watershed.

5. The upper reaches of the Santa Clara River include Reaches 5 and 6 which are located upstream of the Blue Cut gauging station, west of the Los Angeles – Ventura County line between the cities of Fillmore and Santa Clarita. Reaches 5 and 6 of the Upper Santa Clara River (USCR) appear on the EPA 303d list of impaired waterbodies (designated on the 2002 EPA 303d list as Reaches 7 and 8, respectively). Several beneficial uses of the USCR, including agricultural supply water (AGR), groundwater recharge (GWR), and rare, threatened, or endangered species habitat (RARE), are listed as impaired due to excessive chloride concentration in the waters of the USCR. Valencia and Saugus Water Reclamation Plants (WRPs), which are owned and operated by the Santa Clarita Valley Sanitation District of Los Angeles County (SCVSD), are two major point sources that discharge to the USCR.
6. On October 24, 2002, the Regional Board adopted Resolution No. 02-018, amending the Basin Plan to include a TMDL for chloride in the USCR. Resolution 02-018 assigned waste load allocations (WLAs) to the Valencia and Saugus WRPs, minor point sources, and MS4s permittees, discharging to specified reaches of the Santa Clara River. The TMDL included interim WLAs for chloride for the WRPs. These interim WLAs provide the WRPs the necessary time to implement chloride source reduction, complete site-specific objective (SSO) studies, and make appropriate modifications to the WRP, as necessary, to meet the WQO for chloride. The interim waste load allocations proposed in the TMDL were based on a statistical evaluation of the WRPs' performance in the three years preceding October 2002.
7. On February 19, 2003 the State Water Resources Control Board (State Board) adopted State Board Resolution 2003-0014 (the "Remand Resolution") which remanded the TMDL to the Regional Board. The Remand Resolution directed the Regional Board to consider a phased implementation approach to allow SCVSD to complete special studies prior to planning and construction of advanced treatment technologies.
8. On July 10, 2003, in response to the Remand Resolution, the Regional Board adopted Resolution 03-008, revising the implementation Plan for the TMDL. The revised TMDL allowed 13 years to implement the TMDL.
9. On May 6, 2004, the Regional Board adopted Resolution 04-004 to revise the interim waste-load allocations and Implementation Plan for the chloride TMDL in the USCR. The revised Implementation Plan required the completion of several special studies that serve to characterize the sources, fate, transport, and specific impacts of chloride in the USCR, including impacts to downstream reaches and underlying groundwater basins.
10. The first of the special studies, an evaluation of the appropriate chloride threshold for the reasonable protection of salt-sensitive agriculture, was completed in September of 2005. This special study, entitled "Literature Review and Evaluation (LRE)," found that the best estimate of a chloride

hazard concentration for avocado crops falls within the range of 100 to 120 mg/L. A similar range of 100 to 117 mg/L was found by an independent technical advisory panel (TAP). An additional study completed in January 2008, entitled "Compliance Averaging Period for Chloride Threshold Guidelines in Avocado," found that a 3-month averaging period of the LRE guidelines would be protective of avocados. The TAP co-chairs reviewed this study and agreed that a 3-month averaging period is appropriate.

11. On August 3, 2006, the Regional Board revised the Implementation Schedule for the TMDL in Resolution No. 04-004 (Resolution No. 06-016). The revised TMDL accelerated the schedule from 13 years to 11 years based on findings from the LRE. The State Board approved the Regional Board amendment on May 22, 2007 (State Board Resolution No. 2007-0029). In approving the amendment, the State Board directed the Regional Board to consider variability in the SSO for chloride to account for the effects of drought on source water quality.
12. Prior to completion of the special studies, the presumed implementation plan included two options: advanced treatment of effluent from the Valencia and Saugus WRPs and disposal of brine in the ocean through an ocean outfall, or disposal of tertiary treatment effluent in the ocean through an ocean outfall. Both options entail construction of a pipeline from the Santa Clarita Valley WRPs to the ocean and an ocean outfall.
13. The second special study required by the Implementation Plan is the "Groundwater/Surface Water Interaction (GSWI) Model." The GSWI study model has been completed, reviewed and approved as an appropriate and adequate modeling tool by the stakeholders and an independent GSWI TAP. The GSWI model has been used to examine feasibility of various implementation alternatives. The GSWI study predicts that none of the alternatives, including the advanced treatment of WRP effluent and disposal of brine in a new ocean outfall or disposal of tertiary treatment effluent in an ocean outfall, would achieve compliance with the existing chloride WQO of 100 mg/L at all times and at all locations and that an alternative water resources management approach could achieve attainment for certain reaches.
14. The third special study required by the Implementation Plan is the "Evaluation of Appropriate Chloride Threshold for Endangered Species Protection (ESP)." This special study has been completed and found that the existing USEPA chloride criteria of 230 mg/L as a chronic threshold and 860 mg/L as an acute threshold are protective of aquatic life in the USCR, including Threatened and Endangered species. These conclusions indicate that endangered species can tolerate higher levels of chloride than salt-sensitive agricultural crops. The independent ESP TAP concurred with the study findings and conclusions.

15. The Santa Clarita Valley Sanitation District (SCVSD) has completed all of the necessary special studies required by the Chloride TMDL (TMDL Task Nos 3, 4, 5, 6, 7, 8, 9, 10b, and 10c). The completion of these TMDL special studies, all conducted in a facilitated stakeholder process in which stakeholders participated in scoping and reviewing the studies, has led to development of an alternative TMDL implementation plan that addresses chloride impairment of surface waters and degradation of groundwater. The alternative, termed the alternative water resources management approach (AWRM), develops site specific objectives (SSOs) for chloride while protecting beneficial uses. The AWRM provides water quality and water supply benefits in Los Angeles and Ventura Counties. The AWRM consists of chloride source reduction actions and chloride load reduction through advanced treatment (microfiltration and reverse osmosis) of a portion of the Valencia WRP effluent in conformance with SSOs.
16. To support the development of the AWRM compliance option by stakeholders, Regional Board adopted Resolution No. 07-018 on November 1, 2007. Resolution No. 07-018 modified the regulatory provisions of the Basin Plan by subdividing Reach 4 of the Santa Clara River (SCR) as two separate Reaches, Reach 4A between the confluence of Piru Creek and the A Street Bridge in the City of Fillmore and Reach 4B between the Blue Cut Gauging Station and the confluence of Piru Creek. The Regional Board stated that this action would allow the development of more geographically precise SSOs.
17. This amendment to the Basin Plan will incorporate SSOs for chloride in Reaches 4B, 5, and 6 of the Santa Clara River and the groundwater basins underlying those reaches. The SSOs are protective of beneficial uses of these waterbodies. The GSWI study found that the AWRM compliance alternative will result in timely attainment of the SSOs for Reaches 4B, 5, and 6 and reduce the chloride load to the USCR and underlying groundwater basins. The proposed implementation activities under AWRM, which will increase chloride export from the East Piru groundwater basin underlying Reach 4B, will offset any increases in chloride discharges.
18. This amendment to the Basin Plan will include implementation language, including minimum salt export requirements to ensure that excess salt loadings to the groundwater basin due to periods of elevated water supply concentrations are removed from the groundwater basin through pumping and export.
19. The adoption of SSOs for chloride is part of a comprehensive strategy for addressing the buildup of salts in the Santa Clara watershed, which includes development and implementation of Total Maximum Daily Loads and corresponding effluent and receiving water limitations in NPDES permits.

20. The TMDL numeric targets, WLAs, and Implementation Plan are based on the SSOs for chloride. The TMDL provides interim WLAs for chloride, as well as interim WLAs for sulfate and TDS to support the supplemental water and water recycling components of the AWRM.
21. The TMDL provides a ten-year schedule to attain compliance with the SSOs for chloride. The SSOs are conditioned on full and ongoing implementation of the AWRM program; if the AWRM system is not built and operated, the water quality objectives for chloride revert back to the current levels in the Basin Plan, which are 100 mg/L.
22. The SCVSD, Ventura County Agricultural Water Quality Coalition, the United Water Conservation District, and Upper Basin Water Purveyors, consisting of the Castaic Lake Water Agency (CLWA), Valencia Water Company, Newhall County Water District, Santa Clarita Water Division of the CLWA, and the Los Angeles County Waterworks District No. 36, herein referred to as the AWRM Stakeholders have entered into a memorandum of understanding (MOU) effective October 23, 2008 to implement the AWRM Program. The AWRM MOU specifies the agreed-upon responsibilities of AWRM Stakeholders for the implementation of ultra-violet light disinfection and advanced treatment facilities (i.e., microfiltration-reverse osmosis and brine disposal), salt management facilities (i.e., extraction wells and water supply conveyance pipelines), supplemental water (i.e., water transfers and related facilities), and alternative water supplies for the protection of beneficial uses. The AWRM MOU also specifies the various uses of desalinated recycled water, which include: (1) compliance with water quality objectives for Reaches 4A, 4B, and 5; (2) protection of salt-sensitive agricultural beneficial uses; (3) removal of excess chloride load above 117 mg/L from the East Piru Basin; and (4) enhancement of water supplies in Ventura and Los Angeles Counties. In addition, the AWRM MOU will implement an extension of the GSWI model to assess the groundwater and surface water interactions and impacts to surface water and groundwater quality from the AWRM program to the Fillmore and Santa Paula basins.
23. Implementation actions to achieve SSOs in Reaches 4B, 5, and 6 and the TMDL must also result in compliance with downstream water quality objectives for chloride. Surface water chloride concentrations will comply with the existing water quality objective of 100 mg/L in Reach 4A.
24. Regional Board staff prepared a detailed technical document that analyzes and describes the specific necessity and rationale for the development of this amendment. The technical document entitled "Upper Santa Clara River Chloride TMDL Reconsideration and Conditional Site Specific Objectives" (Staff Report) is an integral part of this Regional Board action and was reviewed, considered, and accepted by the Regional Board before acting on December 11, 2008. The Staff Report relies upon the scientific background and data collection and analysis documented in the TMDL special studies.

The TMDL special studies are distinguished from the Regional Board's staff report in that they do not present the recommendations of Regional Board staff.

25. The public has had a reasonable opportunity to participate in the review of the amendment to the Basin Plan. Stakeholders have participated extensively in the special studies since 2005 through a facilitated process in which meetings are held monthly in the cities of Fillmore, Santa Paula, and Santa Clarita. Technical working groups (TWGs) have executed the implementation studies and stakeholder-selected TAPs have reviewed the studies. All meetings are open to the public, and agendas and minutes from meetings are published on the Santa Clara River Chloride TMDL website: www.santaclarariver.org. A draft of the amendment was released for public comment on September 30, 2008; a Notice of Hearing and Notice of Filing were published and circulated 45 days preceding Board action; a notice of hearing published in the Los Angeles Daily News, the Santa Clarita Signal, and the Ventura County Star on September 30, 2008; Regional Board staff responded to oral and written comments received from the public; and the Regional Board held a public hearing on December 11, 2008 to consider adoption of the amendment.
26. In amending the Basin Plan to establish SSOs and to revise this TMDL, the Regional Board considered the requirements set forth in Sections 13240, 13241, and 13242 of the California Water Code. The 13241 factors are set forth and considered in the staff report.
27. The amendment is consistent with the State Antidegradation Policy (State Board Resolution No. 68-16), in that the changes to water quality objectives (i) consider maximum benefits to the people of the state, (ii) will not unreasonably affect present and anticipated beneficial use of waters, and (iii) will not result in water quality less than that prescribed in policies. Likewise, the amendment is consistent with the federal Antidegradation Policy (40 CFR 131.12).
28. Pursuant to Public Resources Code section 21080.5, the Resources Agency has approved the Regional Water Boards' basin planning process as a "certified regulatory program" that adequately satisfies the California Environmental Quality Act (CEQA) (Public Resources Code, § 21000 et seq.) requirements for preparing environmental documents (14 Cal. Code Regs. § 15251(g); 23 Cal. Code Regs. § 3782.) The Regional Water Board staff has prepared "substitute environmental documents" for this project that contains the required environmental documentation under the State Water Board's CEQA regulations. (23 Cal. Code Regs. § 3777.) The substitute environmental documents include the TMDL staff report, the environmental checklist, the comments and responses to comments, the basin plan amendment language, and this resolution. While the Regional Board has no discretion to not establish a TMDL (the TMDL is required by federal law), the Board does exercise discretion in assigning waste load allocations and load allocations,

determining the program of implementation, and setting various milestones in achieving the water quality standards. The CEQA checklist and other portions of the substitute environmental documents contain significant analysis and numerous findings related to impacts and mitigation measures.

29. A CEQA Scoping hearing was conducted on July 29, 2008 at the Council Chamber of City of Fillmore - 250 Central Avenue, Fillmore, California. A notice of the CEQA Scoping hearing was sent to interested parties. The notice of CEQA Scoping hearing was also published in the Los Angeles Daily News on July 11, 2008 and Ventura County Star on July 11, 2008.
30. In preparing the accompanying CEQA substitute documents, the Regional Board has considered the requirements of Public Resources Code section 21159 and California Code of Regulations, title 14, section 15187, and intends the substitute documents to serve as a tier 1 environmental review. Consistent with CEQA, the substitute documents do not engage in speculation or conjecture and only consider the reasonably foreseeable environmental impacts of the methods of compliance, the reasonably foreseeable feasible mitigation measures, and the reasonably foreseeable alternative means of compliance, which would avoid or eliminate the identified impacts. Nearly all of the compliance obligations will be undertaken by public agencies that will have their own obligations under CEQA. Project level impacts will need to be considered in any subsequent environmental analysis performed by other public agencies, pursuant to Public Resources Code section 21159.2.
31. The proposed amendment could have a potentially significant adverse effect on the environment. However, there are feasible alternatives, feasible mitigation measures, or both, that if employed, would substantially lessen the potentially significant adverse impacts identified in the substitute environmental documents; however such alternatives or mitigation measures are within the responsibility and jurisdiction of other public agencies, and not the Regional Board. Water Code section 13360 precludes the Regional Board from dictating the manner in which responsible agencies comply with any of the Regional Board's regulations or orders. When the agencies responsible for implementing this TMDL determine how they will proceed, the agencies responsible for those parts of the project can and should incorporate such alternatives and mitigation into any subsequent projects or project approvals. These feasible alternatives and mitigation measures are described in more detail in the substitute environmental documents. (14 Cal. Code Regs. § 15091(a)(2).)
32. From a program-level perspective, incorporation of the alternatives and mitigation measures outlined in the substitute environmental documents may not foreseeably reduce impacts to less than significant levels.

33. The substitute documents for this TMDL, and in particular the Environmental Checklist and staff's responses to comments, identify broad mitigation approaches that should be considered at the project level.
34. To the extent significant adverse environmental effects could occur, the Regional Board has balanced the economic, legal, social, technological, and other benefits of the TMDL against the unavoidable environmental risks and finds that specific economic, legal, social, technological, and other benefits of the TMDL outweigh the unavoidable adverse environmental effects, such that those effects are considered acceptable. The basis for this finding is more fully set forth in the substitute environmental documents. (14 Cal. Code Regs. § 15093.)
35. Considering the record as a whole, this Basin Plan amendment will result in no effect, either individually or cumulatively, on wildlife resources.
36. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code, section 11353, subdivision (b).
37. The Basin Plan amendment incorporating SSOs and a revision of the Santa Clara River Chloride TMDL must be submitted for review and approval by the State Board, the State Office of Administrative Law (OAL), and the U.S. EPA. The Basin Plan amendment will become effective upon approval by OAL and U.S. EPA. A Notice of Decision will be filed following these approvals.
38. Occasionally during its approval process, Regional Board staff, the State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity or consistency. Under such circumstances, the Executive Officer should be authorized to make such changes, provided she informs the Board of any such changes.

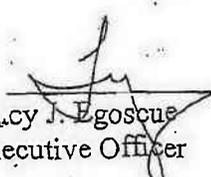

Therefore, be it resolved that:

1. Pursuant to sections 13240 and 13241 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony at the hearing, hereby adopts the amendment to Chapter 3 of the Water Quality Control Plan for the Los Angeles Region as set forth in Attachment A hereto, to incorporate SSOs for chloride for Reaches 4B, 5, and 6 in the Santa Clara River watershed and underlying groundwater basins (as identified in Tables 3-8 and 3-10), which will replace the previously applicable water quality objectives in Reaches 4B, 5, and 6 of the Santa Clara River and underlying groundwater basins.
2. Pursuant to sections 13240 and 13241 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony at the hearing, hereby adopts the amendment to Chapter 4 of the Water

Quality Control Plan for the Los Angeles Region as set forth in Attachment B hereto, to include USCR SSOs for chloride.

3. Pursuant to sections 13240 and 13242 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony at the hearing, hereby adopts the amendment to Chapter 7 the Water Quality Control Plan for the Los Angeles Region as set forth in Attachment C hereto, to incorporate the revisions to the Upper Santa Clara River Chloride TMDL.
4. The Regional Board hereby approves and adopts the CEQA substitute environmental documentation, which was prepared in accordance with Public Resources Code section 21159 and California Code of Regulations, title 14, section 15187, and directs the Executive Officer to sign the environmental checklist. To the extent significant adverse environmental effects could occur, the Regional Board has balanced the economic, legal, social, technological, and other benefits of the TMDL against the unavoidable environmental risks and finds that specific economic, legal, social, technological, and other benefits of the TMDL outweigh the unavoidable adverse environmental effects, such that those effects are considered acceptable. The basis for this finding is more fully set forth in the substitute environmental documents. (14 Cal. Code Regs. § 15093.)
5. The Executive Officer is authorized to request a "No Effect Determination" from the Department of Fish and Game, or transmit payment of the applicable fee as may be required to the Department of Fish and Game.
6. The Executive Officer is directed to forward copies of the Basin Plan amendment to the State Board in accordance with the requirements of section 13245 of the California Water Code.
7. The Regional Board requests that the State Board approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code and forward it to the OAL and U.S. EPA.
8. If during its approval process Regional Board staff, State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity, or for consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.

I, Tracy J. Egoscue, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Los Angeles Region, on December 11, 2008.

Tracy J. Egoscue
Executive Officer

Attachment A to Resolution R4-2008-012
Basin Plan Amendment Incorporating Conditional Site-Specific Objectives for Chloride in Upper Santa Clara River Watershed

The following language will be added to Chapter 3, Water Quality Objectives of the Basin Plan, under "Mineral Quality":

Add table after Table 3-8.

Table 3-8a. Conditional Site Specific Objectives for Santa Clara River Surface Waters

WATERSHED/STREAM REACH	Chloride (mg/L)
Santa Clara River Watershed:	
Between Bouquet Canyon Road Bridge and West Pier Highway 99	150 (12-month average)
Between West Pier Highway 99 and Blue Cut gaging station	150 (12-month average)
Between Blue Cut gaging station and confluence of Piru Creek	117/130 ^a (3-month average) ^b

- a. The conditional site specific objective of 130 mg/L applies only if the following conditions and implementation requirements are met:
1. Water supply chloride concentrations measured in Castaic Lake are ≥ 80 mg/L.
 2. The Santa Clarita Valley Sanitation District (SCVSD) shall provide supplemental water to salt-sensitive agricultural uses that are irrigated with surface water during periods when Reach 4B (between Blue Cut gaging station and confluence of Piru Creek) surface water exceeds 117 mg/L.
 3. By May 4, 2020, the 10-year cumulative net chloride loading above 117 mg/L (CNCI₁₁₇)ⁱ to Reach 4B of the Santa Clara River (SCR), calculated annually, from the SCVSD Water Reclamation Plants (WRPs) shall be zero or less.

$$^i \text{CNCI}_{117} = \text{Cl}_{(\text{Above } 117)} - \text{Cl}_{(\text{Below } 117)} - \text{Cl}_{(\text{Export Ews})}$$

Where:

- $\text{Cl}_{(\text{Above } 117)}$ = [WRP Cl Load¹/Reach 4B Cl Load²] * [Reach 4B Cl Load_{>117}³]
 $\text{Cl}_{(\text{Below } 117)}$ = [WRP Cl Load¹/Reach 4B Cl Load²] * [Reach 4B Cl Load_{≤117}⁴]
 $\text{Cl}_{(\text{Export Ews})}$ = Cl Load Removed by Extraction Wells

¹ WRP Cl Load is determined as the monthly average chloride (Cl) concentration multiplied by the monthly average flow measured at the Valencia WRP.

² Reach 4B Cl Load is determined as the monthly average Cl concentration at SCVSD Receiving Water Station RF multiplied by the monthly average flow measured at USGS Gauging Station 11109000 (Las Brisas Bridge).

Attachment A to Resolution R4-2008-012
Basin Plan Amendment Incorporating Conditional Site-Specific Objectives for Chloride in Upper Santa Clara River Watershed

³ Reach 4B Cl Load_{>117} means the calculated Cl load to Reach 4B when monthly average Cl concentration in Reach 4B is above 117 mg/L.

⁴ Reach 4B Cl Load_{≤117} means the calculated Cl load to Reach 4B when monthly average Cl concentration in Reach 4B is below or equal to 117 mg/L.

4. The chief engineer of the SCVSD signs under penalty of perjury and submits to the Regional Board a letter documenting the fulfillment of conditions 1, 2, and 3.

b. The averaging period for the critical condition SSO of 130 mg/L may be reconsidered based on results of chloride trend monitoring after the alternative water resources management (AWRM) system is applied.

The conditional site specific objectives for chloride in the surface water between Bouquet Canyon Road bridge and West Pier Highway 99, between West Pier Highway 99 and Blue Cut gaging station, and between Blue Cut gaging station and confluence of Piru Creek shall apply and supersede the existing water quality objectives in Table 3-8 only when chloride load reductions and/or chloride export projects are in operation by the SCVSD according to the implementation section in Table 7-6.1 of Chapter 7.

Add table after Table 3-10.

Table 3-10a. Conditional Site Specific Objectives for Selected Constituents in Regional Groundwaters

DWR Basin No.	BASIN	Chloride (mg/L)
4-4	Ventura Central^d Lower area east of Piru Creek ¹	150 (rolling 12-month average)
4-4.07	Eastern Santa Clara Santa Clara—Bouquet & San Francisquito Canyons Castaic Valley	150 (rolling 12-month average) 150 (rolling 12-month average)

1. This objective only applies to the San Pedro formation. Existing objective of 200 mg/L applies to shallow alluvium layer above San Pedro formation.

The conditional site specific objectives for chloride in the groundwater in Santa Clara--

Attachment A to Resolution R4-2008-012

**Basin Plan Amendment Incorporating Conditional Site-Specific Objectives for
Chloride in Upper Santa Clara River Watershed**

Bouquet & San Francisquito Canyons, Castaic valley, and the lower area east of Piru Creek (San Pedro Formation) shall apply and supersede the existing regional groundwater quality objectives only when chloride load reductions and/or chloride export projects are in operation by the SCVSD according to the implementation section in Table 7-6.1 of Chapter 7.

Attachment B to Resolution No. R4-2008-012

Revision of the TMDL for Chloride in the Upper Santa Clara River

Adopted by the California Regional Water Quality Control Board, Los Angeles Region on December 11, 2008.

This TMDL was approved by: The State Water Resource Control Board on May 22, 2007.

The Office of Administrative Law on July 3, 2007.

This TMDL was revised and adopted by: The Regional Water Quality Control Board on December 11, 2008.

This TMDL was approved by: The State Water Resource Control Board on xxx xx, 200x.

The Office of Administrative Law on xxx xx, 200x.

Element	Table 7-6.1. Upper Santa Clara River Chloride TMDL: Elements Santa Clara River Chloride															
Problem Statement	<p>Elevated chloride concentrations are causing impairments of the water quality objective in Reach 5 (EPA 303(d) list Reach 7) and Reach 6 (EPA 303(d) list Reach 8) of the Santa Clara River (SCR). These reaches are on the 1998 and 2002 Clean Water Act (CWA) 303(d) lists of impaired water bodies as impaired due to chloride. The objectives for these reaches were set to protect all beneficial uses; agricultural beneficial uses have been determined to be most sensitive, and not currently attained at the downstream end of Reach 5 (EPA 303(d) list Reach 7) and Reach 6 (EPA 303(d) list Reach 8) in the Upper Santa Clara River (USCR). Irrigation of salt sensitive crops such as avocados, strawberries, and nursery crops with water containing elevated levels of chloride results in reduced crop yields. Chloride levels in groundwater in Piru Basin underlying the reach downstream of Reach 5 are also rising.</p>															
Numeric Target (Interpretation of the numeric water quality objective, used to calculate the load allocations)	<p>Numeric targets are equivalent to conditional site specific objectives (SSOs) that are based on technical studies regarding chloride levels which protect salt sensitive crops and endangered and threatened species, chloride source identification, and the magnitude of assimilative capacity in the upper reaches of the Santa Clara River and underlying groundwater basin. The TMDL special study, Literature Review Evaluation, shows that the most sensitive beneficial uses can be supported with rolling averaging periods as shown in the tables below.</p> <p>1. Conditional Surface Water SSOs</p> <p>The conditional SSOs for chloride in the surface water of Reaches 4B, 5, and 6 shall apply and supersede the existing water quality objectives of 100 mg/L only when chloride load reductions and/or chloride export projects are in operation by the SCVSD according to the implementation section in Table 7-6.1. Conditional surface water SSOs for Reaches 4B, 5, and 6 of the Santa Clara River are listed as follows:</p> <table border="1" data-bbox="535 1448 1356 1791"> <thead> <tr> <th>Reach</th> <th>Conditional SSO for Chloride (mg/L)</th> <th>Rolling Averaging Period</th> </tr> </thead> <tbody> <tr> <td>6</td> <td>150</td> <td>12-month</td> </tr> <tr> <td>5</td> <td>150</td> <td>12-month</td> </tr> <tr> <td>4B</td> <td>117</td> <td>3-month</td> </tr> <tr> <td>4B Critical Conditions</td> <td>130^a</td> <td>3-month^b</td> </tr> </tbody> </table>	Reach	Conditional SSO for Chloride (mg/L)	Rolling Averaging Period	6	150	12-month	5	150	12-month	4B	117	3-month	4B Critical Conditions	130 ^a	3-month ^b

<i>Source Analysis</i>	<p>The principal source of chloride into Reaches 5 and 6 of the Santa Clara River is discharges from the Saugus WRP and Valencia WRP, which are estimated to contribute 70% of the chloride load in Reaches 5 and 6. These sources of chloride accumulate and degrade groundwater in the lower area east of Piru Creek in the basin.</p>												
<i>Linkage Analysis</i>	<p>A groundwater-surface water interaction (GSWI) model was developed to</p>												

Element	Table 7-6.1. Upper Santa Clara River Chloride TMDL Elements Santa Clara River Chloride						
	<p>assess the linkage between chloride sources and in-stream water quality and to quantify the assimilative capacity of Reaches 4A, 4B, 5, and 6 and the groundwater basins underlying those reaches. GSWI was then used to predict the effects of WRP discharges on chloride loading to surface water and groundwater under a variety of future hydrology, land use, and water use assumptions including future discharges from the Newhall Ranch WRP in order to determine appropriate wasteload allocations (WLAs) and load allocations (LAs).</p> <p>The linkage analysis demonstrates that beneficial uses can be protected through a combination of SSOs for surface water and groundwater and reduction of chloride levels from the Valencia WRP effluent through advanced treatment.</p>						
<i>Waste Load Allocations (for point sources)</i>	<p>The conditional WLAs for chloride for all point sources shall apply only when chloride load reductions and/or chloride export projects are in operation by the SCVSD according to the implementation section in Table 7-6.1. If these conditions are not met, WLAs shall be based on existing water quality objectives for chloride of 100 mg/L.</p> <p>Conditional WLAs for chloride for discharges to Reach 4B by the Saugus and Valencia WRPs are as follows:</p> <table border="1" data-bbox="613 1174 1279 1550"> <thead> <tr> <th data-bbox="613 1174 824 1322">Reach</th> <th data-bbox="824 1174 1279 1322">Concentration-based Conditional WLA for Chloride (mg/L)</th> </tr> </thead> <tbody> <tr> <td data-bbox="613 1322 824 1417">4B</td> <td data-bbox="824 1322 1279 1417">117 (3-month Average), 230 (Daily Maximum)</td> </tr> <tr> <td data-bbox="613 1417 824 1550">4B Critical Conditions</td> <td data-bbox="824 1417 1279 1550">130^a (3-month Average^b), 230 (Daily Maximum)</td> </tr> </tbody> </table> <p>a. <p>Implementation</p>	<p>Refer to Table 7-6.2.</p> <p><u><i>Implementation of Upper Santa Clara River Conditional Site Specific Objectives for Chloride</i></u></p> <p>In accordance with Regional Board resolution 97-002, the Regional Board and stakeholders have developed an integrated watershed plan to address chloride impairments and protect beneficial uses of surface waters and groundwater basins underlying Reaches 4B, 5, and 6 of the Santa Clara River. The plan involves: 1) Reducing chloride loads and/or increasing chloride exports from the USCR watershed through implementation of advanced treatment (RO) of a portion of the effluent from the Valencia WRP. The advanced treated effluent will be discharged into Reach 4B or blended with extracted groundwater from the Piru Basin underlying Reach 4B and discharged into Reach 4A. The resultant brine from the advanced treatment process will be disposed in a legal and environmentally sound manner. 2) Implementing the conditional SSOs for chloride in surface waters and underlying groundwater basins of the USCR watershed provided in Chapter 3.</p> <p>The watershed chloride reduction plan will be implemented through NPDES permits for the Valencia WRP and a new NPDES permit for discharge into Reach 4A. The conditional SSOs for chloride in the USCR watershed shall apply and supersede the regional water quality objectives only when chloride load reductions and/or chloride export projects are in operation and reduce chloride loading in accordance with the following table:</p> <table border="1" data-bbox="500 1227 1334 1581"> <thead> <tr> <th>Water Supply Chloride¹</th> <th>Chloride Load Reductions²</th> </tr> </thead> <tbody> <tr> <td>40 mg/L</td> <td>58,000 lbs per month</td> </tr> <tr> <td>50 mg/L</td> <td>64,000 lbs per month</td> </tr> <tr> <td>60 mg/L</td> <td>71,000 lbs per month</td> </tr> <tr> <td>70 mg/L</td> <td>77,000 lbs per month</td> </tr> <tr> <td>80 mg/L</td> <td>83,000 lbs per month</td> </tr> <tr> <td>90 mg/L</td> <td>90,000 lbs per month</td> </tr> <tr> <td>100 mg/L</td> <td>96,000 lbs per month</td> </tr> </tbody> </table> <p>¹ Based on measured chloride of the State Water Project (SWP) water stored in Castaic Lake. ² Chloride load reduction is based on operation of a RO treatment plant treating 3 MGD of recycled water with chloride concentration of 50 mg/L + Water Supply Chloride. Assumes operational capacity factor of 90% and RO membrane chloride rejection rate of 95%. Determination of</p>	Water Supply Chloride¹	Chloride Load Reductions²	40 mg/L	58,000 lbs per month	50 mg/L	64,000 lbs per month	60 mg/L	71,000 lbs per month	70 mg/L	77,000 lbs per month	80 mg/L	83,000 lbs per month	90 mg/L	90,000 lbs per month	100 mg/L	96,000 lbs per month
Water Supply Chloride¹	Chloride Load Reductions²																
40 mg/L	58,000 lbs per month																
50 mg/L	64,000 lbs per month																
60 mg/L	71,000 lbs per month																
70 mg/L	77,000 lbs per month																
80 mg/L	83,000 lbs per month																
90 mg/L	90,000 lbs per month																
100 mg/L	96,000 lbs per month																

chloride load based on the following:

$$ChlorideLoad = 90\% \times [(Q_{RO} \times C_{WRP} \times 8.34) \times r] \times \left(\frac{30 \text{ Days}}{\text{Month}} \right)$$

where r = % chloride rejection (95%)
 Q_{RO} = 3 MGD of recycled water treated
 with RO
 C_{WRP} = SWP Cl + 50 mg/L

Conditional WLAs

Conditional WLAs for the Saugus and Valencia WRPs will be implemented through effluent limits, receiving water limits and monitoring requirements in NPDES permits. Conditional WLAs for Reach 4B will be implemented as receiving water limits. Conditional WLAs for Reaches 5 and 6 will be implemented as effluent limits.

The implementation plan proposes that during the period of TMDL implementation, compliance for the WRPs' effluent limits will be evaluated in accordance with interim WLAs.

Saugus WRP:

The interim WLA for chloride is equal to the interim limit for chloride specified in order No. R4-04-004. The interim WLA for TDS is 1000 mg/L as an annual average. The interim WLA for sulfate is 450 mg/L as an annual average. These interim WLAs shall apply as interim end-of-pipe effluent limits, interim groundwater limits, and interim limits in the Non-NPDES WDR for recycled water uses from the Saugus WRP instead of existing water quality objectives.

Valencia WRP:

The interim WLA for chloride is equal to the interim limit for chloride specified in order No. R4-04-004. The interim WLA for TDS is 1000 mg/L as an annual average. The interim WLA for sulfate is 450 mg/L as an annual average. These interim WLAs shall apply as interim end-of-pipe effluent limits, interim groundwater limits, and interim limits in the Non-NPDES WDR for recycled water uses from the Valencia WRP instead of existing water quality objectives.

Other Major NPDES Permits (including Newhall Ranch WRP):

The Regional Board may consider assigning conditional WLAs for other major NPDES permits, including the Newhall Ranch WRP, pending implementation of a chloride mass removal quantity that is proportional to

	<p>mass based chloride removal required for the Valencia WRP.</p> <p><u>Supplemental Water released to Reach 6 of Santa Clara River:</u></p> <p>In order to accommodate the discharge of supplemental water to Reach 6, interim WLAs are provided for sulfate of 450 mg/L and TDS of 1000 mg/L as annual averages. The final WLAs are equal to the existing water quality objectives for sulfate and TDS in Table 3-8 of the Basin Plan. The Regional Board may revise the final WLA based on review of trend monitoring data as detailed in the monitoring section of this Basin Plan amendment.</p>
<p>Monitoring</p>	<p>NPDES monitoring: NPDES Permittees will conduct chloride, TDS, and sulfate monitoring to ensure that water quality objectives are being met.</p> <p>Trend monitoring: The SCVSD will submit a monitoring plan to conduct chloride, TDS, and sulfate trend monitoring to ensure that the goal of chloride export in the watershed is being achieved, water quality objectives are being met, and downstream groundwater and surface water quality is not degraded due to implementation of compliance measures. The SCVSD monitoring plan shall include plans to monitor chloride, TDS, and sulfate in groundwater and identify representative wells to be approved by the Regional Board Executive Officer in the following locations: (a) Shallow alluvium layer in east Piru Basin, (b) San Pedro Formation in east Piru Basin, and (c) groundwater basins under Reaches 5 and 6, which shall be equivalent or greater than existing groundwater monitoring required by NPDES permits for Saugus and Valencia WRPs. The monitoring plan shall also include a plan for chloride, TDS, and sulfate trend monitoring for surface water for Reaches 4B, 5 and 6. The monitoring plan shall include plans to monitor chloride, TDS, and sulfate at a minimum of once per quarter for groundwater and at a minimum of once per month for surface water. The plan should propose a monitoring schedule that extends beyond the completion date of this TMDL to evaluate impacts of compliance measures to downstream groundwater and surface water quality. This TMDL shall be reconsidered if chloride, TDS, and sulfate trend monitoring indicates degradation of groundwater or surface water due to implementation of compliance measures.</p> <p>Trend monitoring: The Reach 4A Permittee will submit a monitoring plan to conduct chloride, TDS, and sulfate trend monitoring to ensure that the goal of chloride export in the watershed is being achieved, water quality objectives are being met, and downstream groundwater and surface water quality is not degraded due to implementation of compliance measures. The Reach 4A permittee monitoring plan shall include plans to monitor chloride, TDS, and sulfate in groundwater and identify representative wells to be approved by the Regional Board Executive Officer in the</p>

	<p>following locations (a) Fillmore Basin, and (b) Santa Paula Basin. The monitoring plan shall also include a plan for chloride, TDS, and sulfate trend monitoring for surface water for Reaches 3 and 4A. The monitoring plan should include plans to monitor chloride, TDS, and sulfate at a minimum of once per quarter for groundwater and at a minimum of once per month for surface water. The plan should propose a monitoring schedule that shall extend beyond the completion date of this TMDL to evaluate impacts of compliance measures to downstream groundwater and surface water quality. This TMDL shall be reconsidered if chloride, TDS, and sulfate trend monitoring indicates degradation of groundwater or surface water due to implementation of compliance measures.</p>
<p><i>Margin of Safety</i></p>	<p>An implicit margin of safety is incorporated through conservative model assumptions and chloride mass balance analysis. The model is an integrated groundwater surface water model which shows that chloride discharged from the WRPs accumulates in the east Piru Basin. Further mass balance analysis shows that the chloride mass removed from the Piru Basin exceeds the chloride loaded into the Piru Basin from implementation of the conditional SSOs.</p>
<p><i>Seasonal Variations and Critical Conditions</i></p>	<p>During dry weather conditions, less surface flow is available to dilute effluent discharge, groundwater pumping rates for agricultural purposes are higher, groundwater discharge is lower, poorer quality groundwater may be drawn into the aquifer, and evapotranspiration effects are greater than in wet weather conditions. During drought, reduced surface flow and increased groundwater extraction continues through several seasons with greater impacts on groundwater resources and discharges. Dry and critically dry periods affecting the Sacramento and San Joaquin River Valleys reduce fresh-water flow into the Sacramento-San Joaquin Delta and result in higher than normal chloride concentrations in the State Water Project supply within the California aqueduct system. These increased chloride levels are transferred to the upper Santa Clara River. This critical condition is defined as when water supply concentrations measured in Castaic Lake are ≥ 80 mg/L.</p> <p>These critical conditions were included in the GSWI model to determine appropriate allocations and implementation scenarios for the TMDL.</p>

Table 7-6.2 Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks	Completion Date
<p>1. Alternate Water Supply</p> <p>a) Should (1) the in-river concentration at Blue Cut, the Reach 4B boundary, exceed the conditional SSO of 117 mg/L, measured for the purposes of this TMDL as a rolling three-month average, (2) each agricultural diverter provide records of the diversion dates and amounts to the Regional Board and Santa Clarita Valley County Sanitation Districts of Los Angeles County (SCVSD) for at least 2 years after the effective date of the TMDL and (3) each agricultural diverter provides photographic evidence that diverted water is applied to avocado, strawberry or other chloride sensitive crop and evidence of a water right to divert, then the SCVSD will be responsible for providing an alternative water supply, negotiating the delivery of alternative water by a third party, or providing fiscal remediation to be quantified in negotiations between the SCVSD and the agricultural diverter at the direction of the Regional Water Quality Control Board until such time as the in-river chloride concentrations do not exceed the conditional SSO.</p> <p>b) Should the instream concentration exceed 230 mg/L more than two times in the three year period, the discharger identified by the Regional Board Executive Officer shall be required to submit, within ninety days of a request by the Regional Board Executive Officer, a workplan for an accelerated schedule to reduce chloride discharges.</p>	<p>Effective Date of TMDL (05/04/2005)</p>
<p>2. Progress reports will be submitted by the SCVSD to Regional Board staff on a semiannual basis from the effective date of the TMDL for tasks 4, 6, and 7, and on an annual basis for Tasks 5 and 11.</p> <p>Progress reports will be submitted by the Reach 4A Permittee to Regional Board staff on an annual basis for Task 12.</p>	<p>Semiannually and annually</p>
<p>3. Chloride Source Identification/Reduction, Pollution Prevention and Public Outreach Plan: Six months after the effective date of the TMDL, the SCVSD will submit a plan to the Regional Board that addresses measures taken and planned to be taken to quantify and control sources of chloride, including, but not limited to: execute community-wide outreach programs, which were developed based on the pilot outreach efforts conducted by the SCVSD, assess potential incentive/disincentive programs for residential self-regenerating water softeners, and other measures that may be effective in</p>	<p>6 months after Effective Date of TMDL (11/04/2005)</p>

Table 7-6.2: Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks	Completion Date
<p>controlling chloride. The SCVSD shall develop and implement the source reduction/pollution prevention and public outreach program, and report results annually thereafter to the Regional Board. Chloride sources from imported water supplies will be assessed. The assessment will include conditions of drought and low rainfall, and will analyze the alternatives for reducing this source.</p>	
<p>4. The SCVSD will convene a technical advisory committee or committees (TAC(s)) in cooperation with the Regional Board to review literature develop a methodology for assessment, and provide recommendations with detailed timelines and task descriptions to support any needed changes to the time schedule for evaluation of appropriate chloride threshold for Task 6. The Regional Board, at a public hearing will re-evaluate the schedule for Task 6 and subsequent linked tasks based on input from the TAC(s), along with Regional Board staff analysis and assessment consistent with state and federal law, as to the types of studies needed and the time needed to conduct the necessary scientific studies to determine the appropriate chloride threshold for the protection of salt sensitive agricultural uses, and will take action to amend the schedule if there is sufficient technical justification.</p>	<p>12 months after Effective Date (05/04/2006)</p>
<p>5. Groundwater/Surface Water Interaction Model: The SCVSD will solicit proposals, collect data, develop a model in cooperation with the Regional Board, obtain peer review, and report results. The impact of source waters and reclaimed water plans on achieving the water quality objective and protecting beneficial uses, including impacts on underlying groundwater quality, will also be assessed and specific recommendations for management developed for Regional Board consideration. The purpose of the modeling and sampling effort is to determine the interaction between surface water and groundwater as it may affect the loading of chloride from groundwater and its linkage to surface water quality.</p>	<p>2.5 years after Effective Date of TMDL (11/20/2007)</p>
<p>6. Evaluation of Appropriate Chloride Threshold for the Protection of Sensitive Agricultural Supply Use and Endangered Species Protection: The SCVSD will prepare and submit a report on endangered species protection thresholds. The SCVSD will also prepare and submit a report presenting the results of the evaluation of chloride thresholds for salt sensitive agricultural uses, which shall consider the impact of drought and low rainfall conditions and the associated increase in imported water concentrations on downstream crops utilizing the result of Task 5.</p>	<p>2.5 years after Effective Date of TMDL (11/20/2007)</p>

Table 7-6.2: Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks	Completion Date
<p>7. Develop SSO for Chloride for Sensitive Agriculture: The SCVSD will solicit proposals and develop technical analyses upon which the Regional Board may base a Basin Plan amendment.</p> <p>8. Develop Anti-Degradation Analysis for Revision of Chloride Objective by SSO: The SCVSD will solicit proposals and develop draft anti-degradation analysis for Regional Board consideration.</p> <p>9. Develop a pre-planning report on conceptual compliance measures to meet different hypothetical final conditional wasteload allocations. The SCVSD shall solicit proposals and develop and submit a report to the Regional Board that identifies potential chloride control measures and costs based on different hypothetical scenarios for chloride SSOs and final conditional wasteload allocations.</p>	<p>2.8 years after Effective Date of TMDL (02/20/2008)</p>
<p>10. a) Preparation and Consideration of a Basin Plan Amendment (BPA) to revise the chloride objective by the Regional Board.</p> <p>b) Evaluation of Alternative Water Supplies for Agricultural Beneficial Uses: The SCVSD will quantify water needs, identify alternative water supplies, evaluate necessary facilities, and report results, including the long-term application of this remedy.</p> <p>c) Analysis of Feasible Compliance Measures to Meet Final Conditional Wasteload Allocations for Proposed Chloride Objective. The SCVSD will assess and report on feasible implementation actions to meet the chloride objective established pursuant to Task 10a).</p> <p>d) Reconsideration of and action taken on the Chloride TMDL and Final Conditional Wasteload Allocations for the Upper Santa Clara River by the Regional Board.</p>	<p>3.5 years after Effective Date of TMDL (12/11/2008)</p>
<p>11. Trend monitoring: The SCVSD will submit a monitoring plan to conduct chloride, TDS, and sulfate trend monitoring to ensure that the goal of chloride export in the watershed is being achieved, water quality objectives are being met, and downstream groundwater and surface water quality is not degraded due to implementation of compliance measures. The SCVSD monitoring plan shall include plans to monitor chloride, TDS, and sulfate in groundwater and identify representative wells to be approved by the Regional Board Executive Officer, in the following locations: (a) Shallow alluvium layer in east Piru Basin, (b) San Pedro Formation in east Piru Basin,</p>	<p>4 years after Effective Date of TMDL (05/04/2009)</p>

Table 7-6.2: Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks	Completion Date
<p>and (c) groundwater basins under Reaches 5 and 6, which shall be equivalent or greater than existing groundwater monitoring required by NPDES permits for Saugus and Valencia WRPs. The monitoring plan shall also include a plan for chloride, TDS, and sulfate trend monitoring for surface water for Reaches 4B, 5 and 6. The monitoring plan shall include plans to monitor chloride, TDS, and sulfate at a minimum of once per quarter for groundwater and at a minimum of once per month for surface water. The plan should propose a monitoring schedule that extends beyond the completion date of this TMDL to evaluate impacts of compliance measures to downstream groundwater and surface water quality. This TMDL shall be reconsidered if chloride, TDS, and sulfate trend monitoring indicates degradation of groundwater or surface water due to implementation of compliance measures.</p>	
<p>12. Trend monitoring: The Reach 4A Permittee will submit a monitoring plan to conduct chloride, TDS, and sulfate trend monitoring to ensure that the goal of chloride export in the watershed is being achieved, water quality objectives are being met, and downstream groundwater and surface water quality is not degraded due to implementation of compliance measures. The Reach 4A permittee monitoring plan shall include plans to monitor chloride, TDS, and sulfate in groundwater and identify representative wells to be approved by the Regional Board Executive Officer in the following locations (a) Fillmore Basin, and (b) Santa Paula Basin. The monitoring plan shall also include a plan for chloride, TDS, and sulfate trend monitoring for surface water for Reaches 3 and 4A. The monitoring plan should include plans to monitor chloride, TDS, and sulfate at a minimum of once per quarter for groundwater and at a minimum of once per month for surface water. The plan should propose a monitoring schedule that shall extend beyond the completion date of this TMDL to evaluate impacts of compliance measures to downstream groundwater and surface water quality. This TMDL shall be reconsidered if chloride, TDS, and sulfate trend monitoring indicates degradation of groundwater or surface water due to implementation of compliance measures.</p>	<p>Submitted with permit application</p>
<p>13. Begin monitoring per approved SVCSD monitoring plan completed in Task 11.</p>	<p>One year after Executive Officer approval of Task 11 monitoring plan for SVCSD</p>

Table 7-6.2. Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks	Completion Date
14. Begin monitoring per approved Reach 4A Permittee monitoring plan.	One year after Executive Officer approval of Task 12 monitoring plan for Reach 4A Permittee
15. a) Implementation of Compliance Measures, Planning: The SCVSD shall submit a report of planning activities which include but are not limited to: (1) identifying lead state/federal agencies; (2) administering a competitive bid process for the selection of EIR/EIS and Engineering Consultants; (3) Development of Preliminary Planning and Feasibility Analyses; (4) Submittal of Project Notice of Preparation/Notice of Intent; (5) Preparation of Draft Wastewater Facilities Plan and Programmatic EIR; (6) Administration of Public Review and Comment Periods; (7) Development of Final Wastewater Facilities Plan and Programmatic EIR and incorporation and response to comments; (8) Administration of final public review and certification process; and (9) Filing a Notice of Determination and Record of Decision. b) Implementation of Compliance Measures, Planning: The SCVSD shall provide a schedule of related tasks and subtasks related to Task 15a), and provide semi-annual progress reports on progress of planning activities, thereafter, until completion of Final Wastewater Facilities Plan and Programmatic EIR.	5 years after Effective Date of TMDL (05/04/2010) 5 years after Effective Date of TMDL (05/04/2010)
16. The Regional Board staff will re-evaluate the schedule to implement control measures needed to meet final conditional WLAs adopted pursuant to Task 10 d) and the schedule for Task 17. The Regional Board, at a public meeting will consider extending the completion date of Task 17 and reconsider the schedule to implement control measures to meet final conditional WLAs adopted pursuant to Task 10 d). RECEIVED

OCT 2 1989

W.D.M.
EXECUTIVE OFFICE

Dear Mr. Maughn:

It is with pleasure, today, that I can inform you of EPA's approval of the California NPDES Pretreatment Program and revisions to the existing State NPDES permit regulations.

California, as you know, was the first state to request and receive approval of its NPDES program and authorization to regulate discharges from federal facilities via the NPDES permit program. We look forward to State management of the pretreatment program with the same vigor and thoroughness that has characterized State management of the NPDES program.

The enclosed signed and approved Memorandum of Agreement and Agreement on a Conflict Resolution Process should serve to ensure that the working harmony of our agencies continues.

Sincerely,

John Wise

AGREEMENT ON A CONFLICT RESOLUTION PROCESS
BETWEEN
REGIONAL ADMINISTRATOR, EPA, REGION 9
AND
CHAIRMAN, STATE WATER RESOURCES CONTROL BOARD

I. INTRODUCTION

The State Water Resources Control Board (State Board) is the State water pollution control agency for all purposes of the Clean Water Act pursuant to Section 13160 of the California Water Code. The U.S. Environmental Protection Agency (EPA), Region 9 is under the delegation of the Administrator of EPA, responsible for implementing or over-seeing implementation of requirements of the Clean Water Act within the boundaries of Region 9. The State Board and EPA, Region 9 agree that it is desirable to define a process for resolving disagreements or conflicts between the respective agencies which have not otherwise been resolved.

II. PURPOSE

The purpose of this agreement is to define a process for resolving conflicts and disagreements where other processes or attempts at reaching agreement have failed or where other opportunities have not been available. This agreement neither supersedes nor replaces existing or prospectively developed processes for resolving disputes.

III. SCOPE

This agreement applies to all programs, activities and financial support which is authorized by the Clean Water Act. The agreement is binding on the State Board and EPA, Region 9, and is not binding on Regional Water Quality Control Boards nor on other organizational entities of EPA.

IV. PROCESS AND STANDARDS FOR DISPUTE RESOLUTION

A. General Principles

1. Whenever possible, disputes should be resolved informally at the lowest possible level.
2. Disputes should be resolved in a timely manner.
3. Attempts to resolve disputes shall be consistent with the Clean Water Act and the President's October 26, 1987 Executive Order, entitled "Federalism".
4. Both parties agree to respond to each other in writing within 30 days of receipt of requests for agreement or decisions or elevation to the next level may occur.

B. Resolution Process

Disputes which cannot be resolved at the staff level will be referred to a higher level as follows:

1. First step: Resolution at the State Board Division and EPA Branch level.
2. Second step: Resolution at the State Board Executive Director/EPA Division Director level.
3. Third step: Resolution at the State Board/EPA Regional Administrator level. This is the final step where the Regional Administrator has authority to resolve the conflict.
4. Fourth step: For disputes over requirements originating at EPA Headquarters or for programs where clear delegation of authority has not been made to the Regional Administrator, the Chairman of the State Board may seek resolution by directing the dispute to the Regional Administrator. Upon receipt of the request the Regional Administrator shall consult with or seek assistance from the appropriate office at EPA Headquarters.

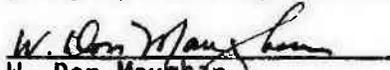

Where the Regional Administrator is unable to resolve the dispute, the Chairman of the State Board may pursue a solution to the dispute by direct contact with Headquarters. The Regional Administrator shall, upon request of the Chairman of the State Board, provide assistance to the State in contacting the appropriate managers in EPA Headquarters.

C. Review of Delegated Authority

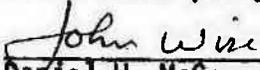

The State reserves the right to advise the Administrator of EPA by letter from the Chairman of the State Board, when it is of the opinion that authority delegated to the Regional Administrator is inappropriate at that level or has been abused.

V. TERM

This agreement may be modified from time to time as the parties may agree in order to simplify the procedures. The agreement may be rescinded by either party upon 90 days written notice to the other party.

 W. Don Maughan

NPDES MEMORANDUM OF AGREEMENT BETWEEN
THE U.S. ENVIRONMENTAL PROTECTION AGENCY AND
THE CALIFORNIA STATE WATER RESOURCES CONTROL BOARD

I. PREFACE

A. Introduction

The State Water Resources Control Board (State Board) is the State water pollution control agency for all purposes of the Clean Water Act pursuant to Section 13160 of the California Water Code. The State Board has been authorized by the U.S. Environmental Protection Agency (EPA), pursuant to Section 402 of the Clean Water Act (CWA), to administer the National Pollutant Discharge Elimination System (NPDES) program in California since 1973.

The Chairman of the State Board and the Regional Administrator of EPA, Region 9 hereby affirm that the State Board and the Regional Boards have primary authority for the issuance, compliance monitoring, and enforcement of all NPDES permits in California including NPDES general permits and permits for federal facilities; and implementation and enforcement of National Pretreatment Program requirements except for NPDES permits incorporating variances granted under Sections 301(h) or 301(m), and permits to dischargers for which EPA has assumed direct responsibility pursuant to 40 CFR 123.44. The State may apply separate requirements to these facilities under its own authority.

This Memorandum of Agreement (MOA) redefines the working relationship between the State and EPA pursuant to the Federal regulatory amendments that have been promulgated since 1973, and supersedes:

1. THE MEMORANDUM OF UNDERSTANDING REGARDING PERMIT AND ENFORCEMENT PROGRAMS BETWEEN THE STATE WATER RESOURCES CONTROL BOARD AND THE REGIONAL ADMINISTRATOR, REGION IX, ENVIRONMENTAL PROTECTION AGENCY, signed March 26, 1973; and
2. The STATE/EPA COMPLIANCE AND ENFORCEMENT AGREEMENT, dated October 31, 1986. The State's standard operating procedures for the NPDES and pretreatment programs are described in the State's Administrative Procedures Manual (APM).

The State shall implement the provision of this MOA through the APM. The State's annual workplan, which is prepared pursuant to Section 106 of the CWA, will establish priorities, activities and outputs for the implementation of specific components of the NPDES and pretreatment programs. The basic requirements of this MOA shall override any other State/EPA agreements as required by 40 CFR 123.24(c). EPA shall implement the provisions of this MOA through written EPA policy guidance and the annual State/EPA 106 agreement.

B. Definitions

The following definitions are provided to clarify the provisions of this MOA.

1. "The APM" means the State's Administrative Procedures Manual. The APM describes standard operating requirements, procedures, and guidance for internal management of the State Board and Regional Boards in the administration of the NPDES and pretreatment programs. The APM is kept current through periodic updates.
2. "Comments" means recommendations made by EPA or another party, either orally or in writing, about a draft permit.
3. "Compliance monitoring" means the review of monitoring reports, progress reports, and other reports furnished by members of the regulated community. It also means the various types of inspection activities conducted at the facilities of the regulated community.
4. "CWA" means the Clean Water Act [33 USC 1251 et. seq.].
5. "Days" mean calendar days unless specified otherwise.
6. "Prenotice draft permit" is the document reviewed by EPA, other agencies, and the applicant prior to public review.
7. "Draft permit" is the document reviewed by EPA and the public.

8. "Enforcement" means all activities that may be undertaken by the Regional Boards, the State Board, or EPA to achieve compliance with NPDES and pretreatment program requirements.
9. "EPA" means the U.S. Environmental Protection Agency (EPA) Region 9, unless otherwise stated.
10. "Formal enforcement action" means an action, order or referral to achieve compliance with NPDES and pretreatment program requirements that: (a) specifies a deadline for compliance; (b) is independently enforceable without having to prove the original violation; and (c) subjects the defendant to adverse legal consequences for failure to obey the order (see footnote #6, p.19, National Guidance for Oversight of NPDES Programs, FFY 1986, dated January 20, 1985). Time Schedule Orders, Administrative Civil Liability Orders, Cease and Desist Orders, Cleanup and Abatement Orders, and referrals to the Attorney General meet these criteria. Effective January 1, 1988, the State and Regional Boards will have authority to impose administrative civil liability, consistent with the requirements of 40 CFR 123.27(a)(3)(i), for all NPDES and pretreatment program violations.
11. "Issuance" means the issuance, reissuance, or modification of NPDES permits through the adoption of an order by a Regional Board or the State Board.
12. "Objections" means EPA objections to applications, prenotice draft permits, draft permits, or proposed permits that are based on federal law or regulation, which are filed as "objections", and which must be resolved before a NPDES permit can be issued, or reissued or modified thereto. "Objection" and "formal objection" mean the same thing.
13. "Proposed permit" means a permit adopted by the State after the close of the public comment period which may then be sent to EPA for review before final issuance by the State. The State's common terminology of "adopted permit" is equivalent to the term "proposed permit" as used at 40 CFR 122.2.

14. "Quality Assurance" means all activities undertaken by the State or EPA to determine the accuracy of the sampling data reported on Discharge Monitoring Reports (DMRs), inspection reports, and other reports.
15. "State" means the staff and members of the Regional Boards and the State Board collectively.
16. "106 Workplan" means the annual agreement that is negotiated between the State and EPA.

C. Roles and Responsibilities

1. EPA Responsibilities

EPA is responsible for:

- a. Providing financial, technical, and other forms of assistance to the State;
- b. Providing the State Board with copies of all proposed, revised, promulgated, remanded, withdrawn, and suspended federal regulations and guidelines;
- c. Advising the State Board of new case law pertaining to the NPDES and pretreatment programs;
- d. Providing the State Board with draft and final national policy and guidance documents;
- e. Monitoring the NPDES and pretreatment programs in California to assure that the program is administered in conformance with federal legislation, regulations, and policy;
- f. Intervening as necessary in specific situations (such as development of draft permits, or permit violations) to maintain program consistency throughout all states and over time;
- g. Administering the program directly to the following classes of facilities:

- (1) Dischargers granted variances under Sections 301(h) or 301(m) of the CWA; and
- (2) Dischargers which EPA has assumed direct responsibility for pursuant to 40 CFR 123.44, and

2. State Board Responsibilities

The State Board is responsible for supporting and overseeing the Regional Board's management of the NPDES and pretreatment programs in California. This responsibility includes:

- a. Evaluating Regional Board performance in the areas of permit content, procedure, compliance, monitoring and surveillance, quality assurance of sample analyses, and program enforcement;
- b. Acting on its own motion as necessary to assure that the program is administered in conformance with Federal and State legislation, regulations, policy, this MOA, and the State annual 106 Workplan;
- c. Providing technical assistance to the Regional Boards;
- d. Developing and implementing regulations, policies, and guidelines as needed to maintain consistency between State and federal policy and program operations, and to maintain consistency of program implementation throughout all nine regions and over time;
- e. Reviewing decisions of the Regional Boards upon petition from aggrieved persons or upon its own motion;
- f. Assisting the Regional Boards in the implementation of federal program revisions through the development of policies and procedures; and
- g. Performing any of the functions and responsibilities ascribed to the Regional Boards.

- h. California Pretreatment Program responsibilities as listed in Section III.B. of this MOA.

3. Regional Board Responsibilities

The following responsibilities for managing the NPDES and pretreatment programs in California have been assigned to the Regional Boards. These responsibilities include:

- a. Regulating all discharges subject to the NPDES and pretreatment programs, except those reserved to EPA, in conformance with Federal and State law, regulations, and policy;
- b. Maintaining technical expertise, administrative procedures and management control, such that implementation of the NPDES and pretreatment programs consistently conforms to State laws, regulations, and policies;
- c. Implementing federal program revisions;
- d. Providing technical assistance to the regulated community to encourage voluntary compliance with program requirements;
- e. Assuring that no one realizes an economic advantage from noncompliance;
- f. Maintaining an adequate public file at the appropriate Regional Board Office for each permittee. Such files must, at a minimum, include copies of: permit application, issued permit, public notice and fact sheet, discharge monitoring reports, all inspection reports, all enforcement actions, and other pertinent information and correspondence;
- g. Comprehensively evaluating and assessing compliance with schedules, effluent limitations, and other conditions in permits;
- h. Taking timely and appropriate enforcement actions in accordance with the CWA, applicable Federal regulations, and State Law; and

- i. California Pretreatment Program responsibilities as listed in Section III. B of this MOA.

D. Program Coordination

In order to reinforce the State Board's program policy and overview roles, EPA will normally arrange its meetings with Regional Board staff through appropriate staff of the State Board. In all cases, the State Board will be notified of any EPA meetings with Regional Boards.

E. Conflict Resolution

Disputes shall be resolved in accordance with the Agreement on a Conflict Resolution Process Between Regional Administrator, EPA, Region 9 and Chairman, State Water Resources Control Board.

II. PERMIT REVIEW, ISSUANCE, AND OBJECTIONS

A. General

The State Board and Regional Boards have primary authority for the issuance of NPDES permits. EPA may comment upon or object to the issuance of a permit or the terms or conditions therein. Neither the State Board nor the Regional Boards shall adopt or issue a NPDES permit until all objections made by EPA have been resolved pursuant to 40 CFR 123.44 and this MOA. The following procedures describe EPA permit review, comment, and objection options that may delay the permit process. These options present the longest periods allowed by 40 CFR 123.44. However, the process should normally require far less time.

The State Board, Regional Boards, and EPA agree to coordinate permit review through frequent telephone contact. Most differences over permit content should be resolved through telephone liaison. Therefore, permit review by the State and EPA should not delay issuing NPDES permits. However, if this review process causes significant delays, the Chief, Division of Water Quality (DWQ) of the State Board (or his or her designee), and the Director, Water Management Division (WMD) of EPA (or his or her designee) agree to review the circumstances of the delays. The State Board and EPA shall determine the reasons for the delays and take corrective action.

To the extent possible, all expiring NPDES permits shall be reissued on or before their expiration. If timely reissuance is not possible, the State Board will notify the Regional Administrator of the reasons for the delay. In no event will permits continued administratively beyond their expiration date be modified or revised.

In the case of the development of a general permit, the Regional Board will collect sufficient data to develop effluent limitations and prepare and draft the general permit. The Regional Board will issue and administer NPDES general permits in accordance with the California Water Code, Division 7 and federal regulations 40 CFR 122.28.

1. EPA Waiver of Review

- a. EPA waives the right to routinely review, object to, or comment upon State-issued permits under Section 402 of the CWA for all categories of discharges except those identified under II.A.2. below.
- b. Notwithstanding this waiver, the State Board and the Regional Boards shall furnish EPA with copies of any file material within 30 days of an EPA request for the material.
- c. The Regional Administrator of EPA, Region 9 may terminate this waiver at any time, in whole or in part, by sending the State Board a written notice of termination.
- d. The State shall supply EPA with copies of final permits.

2. Permits Subject to Review

- a. The Regional Boards shall send EPA copies of applications, prenotice draft permits, draft permits, adopted (proposed) permits, and associated Fact Sheets and Statements of Basis for the following categories of discharges.

- (1) Discharges from a "major" facility as defined by the current major discharger list;

- (2) Discharges to territorial seas;
- (3) Discharges from facilities within any of the industrial categories described under 40 CFR Part 122, Appendix A;
- (4) Discharges which may affect the water quality of another state;
- (5) Discharges to be regulated by a General Permit (excludes applications since they are not part of the General Permit process);
- (6) Discharges of uncontaminated cooling water with a daily average discharge exceeding 500 million gallons;
- (7) Discharges from any other source which exceeds a daily average discharge of 0.5 million gallons; and
- (8) Other categories of discharges EPA may designate which may have an environmental impact or public visibility. The Regional Boards or the State Board will consult with EPA regarding other significant discharges.

B. Applications

The provisions for EPA review of applications do not apply to General Permits, because applications are not part of the General Permit Process.

1. Initial Applications

- a. The Regional Boards shall forward a complete copy of each NPDES application to EPA and the State Board within 15 days of its receipt.

b. EPA shall have 30 days* from receipt of the application to comment upon or object to its completeness.

- (1) EPA shall initially express its comments and objections to the Regional Board through staff telephone liaison.
- (2) EPA shall send a copy of comments or objections to an application to the Regional Board, the State Board, and the applicant.
- (3) If EPA fails to send written comments or objections to an application within 30 days of receipt, EPA waives its right to comment or object.

c. An EPA objection to an application shall specify in writing:

- (1) The nature of the objection;
- (2) The sections of the CWA or the NPDES regulations that support the objection; and
- (3) The information required to eliminate the objection.

2. State Agreement with EPA Objections and Revised Applications

- a. If the State agrees with EPA's objections, the Regional Board shall forward a complete copy of the revised application to EPA within 10 days of its arrival at the Regional Board offices.

*COMPUTATION OF TIME: Pursuant to 40 CFR 124.20(d), three(3) days shall be allowed for transit of documents by mail. Therefore, the State must allow at least 36 days, from the postmark date on the application for receipt of an EPA response. If the State Board or a Regional Board delivers a document to EPA within less than three days, the number of days saved by such delivery may be subtracted from the 36 days. All of the timeframes mentioned in this MOA are in calendar days.

- b. Another 30-day review period shall begin upon EPA's receipt of the revised application; and
 - c. This application review process shall be repeated until the application complies with all NPDES regulations.
 - d. When EPA has no objections pursuant to 40 CFR 123.44, the Regional Board may complete development of a prenotice draft NPDES permit.
 - e. If an objection is filed, EPA shall advise the State Board and the Regional Board in writing when the application is complete.
 - f. The Regional Board will be responsible for notifying the applicant.
3. State Disagreement with EPA Objections and Draft Permits

If the Regional Board or the State Board disagrees with EPA's assertion that an application is incomplete, they may issue a prenotice draft permit, provided that:

- a. The Regional Board or the State Board states in a transmittal letter that the prenotice draft permit has been issued an EPA objection to the application;
- b. EPA may add comments upon or objections to the prenotice draft permit including a reiteration of its objection to the application;
- c. Objections to an application will be subject to the same procedures as an EPA objection to the prenotice draft permit, as described below except that the State shall not issue a public notice for a draft permit for which there is an unresolved EPA objection.

C. Prenotice Draft Permits

- 1. EPA Review of Individual Prenotice Draft Permits
 - a. It is the intent of the Regional Boards, or the State Board whenever it undertakes the issuance of an NPDES permit, to issue a prenotice draft NPDES permit. A copy of

associated Statement of Basis or Fact Sheet shall be sent to EPA. As a matter of urgency the Regional Board or the State Board may decide not to issue a prenotice draft NPDES permit.

- b. EPA shall have 30 days from its receipt to send comments upon, or an initial objection to, the prenotice draft permit to the Regional Board and State Board.
 - (1) If EPA mails an initial objection pursuant to 40 CFR 23.44 within 30 days from its receipt of a prenotice draft permit, EPA shall have 90 days from its receipt of the prenotice draft permit to mail a formal objection.
 - (2) If EPA requests additional information on a prenotice raft permit, a new 30-day review shall begin upon EPA's receipt of the additional information.
 - (3) If EPA mails an initial objection pursuant to 40 CFR 123.44 within 30 days from its receipt of additional information, EPA shall have 90 days from its receipt of the additional information to mail a formal objection.
- c. If a prenotice draft permit is not issued, the procedures and schedules for EPA review, comment, and objections to a prenotice draft permit, described in Section II.C.4, shall apply to the draft permit.

2. EPA Review of Prenotice Draft General Permits

- a. The Regional Boards, or the State Board whenever it undertakes the issuance of an NPDES General Permit, shall mail a copy of each prenotice draft Generalmit and Fact Permit Sheet, except for those for stormwater point sources, to:

(1) Director
Office of Water Enforcement and
Permits (EN 335)
U.S. Environmental Protection Agency
401 M Street S.W.
Washington, D.C. 20460; and

(2) EPA, Region 9.

- b. EPA, Region 9, and the Director of the Office of Water Enforcement and Permits, EPA Headquarters, shall have 90 days from their receipt of the prenotice draft General Permit to send comments upon or objections to the State Board and Regional Board.
- c. If a prenotice draft general permit is issued, the procedures and schedules for EPA review, comment, and objections to a prenotice draft permit, described in Section II.C.4 shall apply to the draft general permit.

3. EPA Comments

- a. The Regional Boards and State Board shall treat any comments made by EPA upon a prenotice draft individual permit or upon a prenotice draft General Permit as they would comments from any authoritative source.
- b. The Regional Boards or the State Board shall prepare a written response to each significant comment made by EPA that they do not accommodate by revising the draft permit.

4. EPA Objections

The discussion below describes the procedures the Regional Boards and State Board may pursue if EPA issues an objection to a prenotice draft permit. NPDES regulations restrict the resolution of an EPA objection to three alternatives, or a combination thereof: (a) the Regional Board or the State Board changes the permit, (b) EPA withdraws the objection, or (c) EPA acquires exclusive NPDES jurisdiction over the discharge.

a. Timing of EPA Objections

- (1) If the Regional Board or the State Board receives an initial objection from EPA within 36 days of the postmark on the prenotice draft permit sent to EPA, the Regional Board or the State Board shall delay issuance of the public notice until one of the following events occur:
 - (a) The Regional Board has received EPA's formal objection;
 - (b) EPA withdraws the initial objection; or
 - (c) Ninety-six (96) days have passed from the postmark on the prenotice draft (See Section II.C.2 for timing of EPA objections to prenotice general permits).
- (2) Whenever EPA files an initial objection to a prenotice draft permit, EPA shall expedite its effort to file the formal objection, in order to avoid undue delay of the permit's final issuance.
- (3) EPA may not make an initial objection to the prenotice draft permit once its 30-day review period has lapsed.
- (4) EPA may not make a formal objection to the prenotice draft permit, if it failed to make an initial objection within the 30-day period.
- (5) EPA may not make a formal objection to the Preenotice draft permit once the 90-day objection period has lapsed.
- (6) EPA may not modify the objection, after the 90-day formal objection period, to require more change to the prenotice draft permit than was required under the original objection.

(7) EPA may revise the objection within its allotted 90-day objection period to require additional changes to the prenotice draft permit than were required under its original objection. Such a change to an objection by EPA shall cause the State's allotted 90 day response period to restart upon the State's receipt of the revised objection.

(8) If the Regional Board receives an EPA formal objection within the 96 days specified above, the State Board or the Regional Board may exercise one of the options described under II.C.4.c. and II.C.4.d. below.

b. Content of EPA Objections

(1) For initial objections that must be filed within 30 days, EPA may simply identify:

(a) The name of the facility and its NPDES number; and

(b) The general nature of the objection.

(2) For formal objections that must be filed within 90 days, EPA shall specify:

(a) The reasons for the objections;

(b) The section of the CWA, the regulations or the guidelines which support the objection; and

(c) The changes to the permit that are required as a condition to elimination of the objection.

(3) Every EPA objection shall be based upon one or more of the grounds for objection described under 40 CFR 123.44(c). EPA shall:

(a) Cite each of the grounds which applies to the objection; and

(b) Explain how each citation applies to a deficiency of the prenotice draft permit.

(4) Correspondence from EPA which objects to a prenotice draft permit, but which fails to meet the substantive criteria of this part (II.C.4.b) does not constitute an objection and may be treated by the State as comments.

c. State Board Options

(1) If EPA and a Regional Board are unable to resolve a disagreement over provisions of a prenotice draft permit to which EPA has filed a formal objection, the State Board may mediate the disagreement to a resolution that is satisfactory to EPA and to the Regional Board.

(2) If the disagreement proves intractable, the State Board may:

(a) Revise and resubmit the prenotice draft permit in accordance with the required by the EPA objection (The State Board would then be obliged to continue the issuance process and adopt the permit if the Regional Board declines to do so);

(b) Request a public hearing pursuant to 40 CFR 123.44(e); or

(c) Hold a public hearing on the EPA objection.

d. Regional Board Options

(1) If the Regional Board changes the prenotice draft permit to eliminate the basis of the EPA formal objection within 90 days of the Regional Board's receipt of that objection, the permit will remain within the

Regional Board's jurisdiction (see 40 CFR 123.44(h)). The Regional Board may then continue on to the public notice of the permit.

(2) If EPA and a Regional Board are unable to resolve a disagreement over provisions of a prenotice draft permit to which EPA has filed a formal objection, the Regional Board may:

(a) Request that EPA conduct a public hearing, pursuant to 40 CFR 123.44(e); or

(b) Hold a public hearing on the EPA objection.

e. The State Board or a Regional Board Holds a Public Hearing

(1) If either the State Board or a Regional Board decide to hold a public hearing on an EPA objection, that Board shall:

(a) Prepare a written rebuttal describing the legal and environmental reasons why each provision of the prenotice draft permit should not be changed to accommodate the objection.

(b) Issue a public notice in accordance with 40 CFR 124.10 and 40 CFR 124.57(a) to open the public comment period and announce the public hearing;

(c) Make available for public review:

- o The permit application;
- o The draft permit;
- o The Fact Sheet or Statement of Basis;
- o All comments received upon the draft permit;

- o The EPA objections; and
 - o The Regional Board's rebuttal;
- (d) Conduct the hearing in accordance with 40 CFR 124.11 and 124.12; and
- (e) Decide whether to accommodate the EPA objection.
- (2) A representative of EPA shall attend the hearing to explain EPA's objection.
- f. State Board and Regional Board Failure to Respond within 90 days (see 40 CFR 123.44(h))

EPA shall acquire exclusive NPDES authority over the discharge pursuant to 40 CFR 123.44(h)(3), if within 90 days of their receipt of an EPA formal objection:

- (1) Neither the State Board nor the Regional Board changes the permit to eliminate the basis of the EPA objection;
- (2) Neither the State Board nor the Regional Board requests EPA to hold a public hearing pursuant to 40 CFR 123.44(e); and
- (3) EPA does not withdraw the objection.

This applies whether or not the State Board or a Regional Board holds a public hearing on the EPA objection.

g. EPA Public Hearing of an EPA Objection

- (1) If the State Board or a Regional Board requests a public hearing pursuant to 40 CFR 123.44(e) within the 90-day response period, EPA shall hold a public hearing in accordance with the procedures of 40 CFR Part 124.
 - (a) If the State Board or Regional Board withdraws its request for

a public hearing before EPA has issued the public notice, EPA shall cancel the hearing unless third party interest otherwise warrants a hearing pursuant to 40 CFR 123.44(e).

- (b) If the State Board or Regional Board withdraws its request for a public hearing after EPA has issued the public notice of the hearing, and EPA determines that there is not sufficient third party interest pursuant to 40 CFR 123.44(e), the State Board or Regional Board shall publish a public notice and send a cancellation to everyone on the EPA mailing list.
- (2) Within 30 days after the EPA public hearing, EPA shall:
- (a) Reaffirm, withdraw, or modify the original objection; and
 - (b) Send notice of its action to:
 - o The State Board;
 - o The Regional Board;
 - o The applicant; and
 - o Each party who submitted comments at the hearing.
- (3) If EPA does not withdraw the objection, the State Board or Regional Board shall have 30 days from its receipt of the EPA notice to change the permit to eliminate the basis of the objection.
- (4) If EPA modifies the objection to require less change to the prenotice draft permit than was required under the original objection, the State Board or Regional Board shall have 30 days from its receipt of the EPA notice to change the permit to eliminate the basis of the objection.

- (5) EPA may not modify the objection to require more change to the prenotice draft permit than was required by the original objection.
- (6) If the State Board or Regional Board fails to send a revised draft permit to EPA within 30 days of its receipt of the EPA notification, EPA acquires exclusive NPDES authority over the discharge pursuant to 40 CFR 123.44(h)(3).

h. Resolved Objections

- (1) Whenever EPA has filed a formal objection to a prenotice draft permit and the State Board or Regional Board has changed the permit to eliminate the basis of the objection, or EPA has withdrawn the objection, EPA shall send notice to:
 - (a) The State Board;
 - (b) The Regional Board;
 - (c) The applicant; and
 - (d) Every other party who has submitted comments upon the EPA objection.
- (2) EPA shall send the notice within 30 days of its receipt of the revised State permit, or upon its withdrawal of the objection.

D. Public Notice

1. If the State Board or Regional Board does not receive an EPA initial objection within 36 days of the postmark on the individual prenotice draft permit or within 96 days of the postmark of the prenotice draft general permit, the State Board or Regional Board may proceed with the public notice process.
2. The State Board or Regional Board shall issue the public notice and conduct all public

participation activities for NPDES permits in accordance with the provisions of 40 CFR Part 124 applicable to State Programs.

- (a) The Regional Boards and State Board shall make electronic or stenographic recordings of each of the EIR public hearings, pursuant to 23 California Administrative Code Section 847.4(a).
 - (b) The Regional Board or the State Board shall make a copy of all comments, including tapes or transcripts of oral comments presented at Board Hearings, and the Board's written responses to the comments, available to EPA and the public upon request, pursuant to 40 CFR 124.17(a) and (c).
3. All EPA comments upon and objections to a prenotice draft permit, draft permit or both, and all correspondence, public comments and other documents associated with any EPA objections shall become part of the administrative record/permit file and shall be available for public review.

E. Draft Permits

1. The State Board and Regional Boards shall send a copy of each draft permit and its Statement of Basis or Fact Sheet to EPA as part of the public notice process. A copy of each draft general permit, and accompanying fact sheet except those for stormwater point sources, shall be sent to EPA and:

Director
Office of Water Enforcement
and Permits (EN 335)
U.S. Environmental Protection Agency
401 M Street SW
Washington, DC 20460

2. EPA may not object to a draft permit which it had an opportunity to review as a prenotice draft permit, except to the extent that it includes changes to the prenotice draft permit, or the bases of the objection were not reasonably ascertainable during the prior review period (e.g., because of new facts, new science, or new law).

3. If EPA issues an objection to a draft permit, the procedures described under II.C.4. shall apply.

F. Final Permits

1. Final Permits Become Effective Upon Adoption

NPDES permits other than general permits, adopted by the State Board or Regional Boards shall become effective upon the adoption date only when:

- a. EPA has made no objections to the permit;
- b. There has been no significant public comment;
- c. There have been no changes made to the latest version of the draft permit that was sent to EPA for review (unless the only changes were made to accommodate EPA comments); and
- d. The State Board or Regional Board does not specify a different effective date at the time of adoption.

2. Permit Becomes Effective 50 Days after Adoption

NPDES permits, other than general permits, adopted by the State Board or Regional Board shall become effective on the 50th day after the date of adoption, if EPA has made no objection to the permit; if:

- a. There has been significant public comment; or
- b. Changes have been made to the latest version of the draft permit that was sent to EPA for review (unless the only changes were made to accommodate EPA comments).

3. Permit Becomes Effective 100 days after Adoption

General permits adopted by the State Board or the Regional Boards shall become effective on the 100th day after the date of adoption, if EPA has made no objection to the permit, if:

- a. There has been significant public comment;
or
- b. Changes have been made to the latest
version of the draft permit that was sent
to EPA for review (unless the only changes
were made to accommodate EPA comments).

4. EPA Review of Adopted Permits

a. Transmittal of Adopted Permits to EPA

The Regional Boards shall send copies of
the following documents to EPA and the
State Board, upon adoption of each NPDES
permit identified under II.A.2:

- (1) Each significant comment made upon
the draft permit, including a
transcript or tape of all comments
made at public hearings;
- (2) The response to each significant
comment made upon the draft permit;
- (3) Recommendations of any other affected
states, including any written
comments prepared by this State to
explaining the reasons for rejecting
any other states' written
recommendations.
- (4) The Executive Officer (or State Board
Executive Director) summary sheet;
- (5) The Fact Sheet or Statement of Basis,
if it has been changed; and
- (6) The final permit.

For general permits, except those for
stormwater point sources, the State
Board also shall send copies of these
documents to:

Director
Office of Water Enforcement
and Permits (EN 335)
U.S. Environmental Protection Agency
401 M Street SW
Washington, DC 20460

b. EPA Review Period

EPA shall have 30 days from its receipt of these materials to review and comment upon or object to an NPDES permit which becomes effective 50 days after the date of adoption under II.F.2.

EPA shall have 90 days from its receipt of these materials to review and comment upon or object to a general permit which becomes effective 100 days after the date of adoption under II.F.2.

c. EPA Comments upon Adopted Permits

If EPA comments upon an adopted permit pursuant to II.F.3.b. above, the State Board or Regional Board must either change the permit to accommodate the comments, or respond to the comments as follows:

- (1) If, the State Board or Regional Board changes the permit, the permit will have to be readopted unless the only changes fall within the definition of minor modifications under 40 CFR 122.63, in which case the permit may take effect as originally scheduled (at least 50 days after the date of adoption); or
- (2) If the State Board or Regional Board responds to the EPA comment instead of changing the permit, the permit may take effect as originally scheduled (at least 50 days after the date of adoption).

d. EPA Objection to Adopted Permits

If EPA mails an initial objection to an adopted permit within 30 days of its receipt pursuant to II.F.3.b., the full objection process will have begun, as described under II.C.4. and the permit effective date shall be stayed until the basis of the EPA objection has been eliminated.

e. Restrictions upon EPA Comments and Objections

- (1) EPA shall use this review period to make objections which pertain only:
 - (a) To changes made to the draft permit;
 - (b) To comments made upon the permit;
 - (c) To new information that was not reasonably ascertainable during the initial review period; or
 - (d) To objections made by EPA to the draft permit.
- (2) EPA shall not use this review period to file comments or objections which it neglected to file during the prenotice comment period or during the public notice comment period.

G. Permit Modification

1. When a Regional Board or State Board decides to modify an NPDES permit, a prenotice draft permit shall be given public notice and issued in accordance with NPDES regulations.
2. Whenever a Regional Board or State Board decides to modify an NPDES permit, the Regional Board or State Board shall follow the EPA review procedures for prenotice draft permits described under II.C. through II.F.
3. Minor permit modifications (not the same as modifications to minor permits) as described under 40 CFR 122.63 may be accomplished by letter, and are not subject to public review prior to their issuance under NPDES. However, they are subject to notice and review provisions under State law. The following protocol shall apply to "minor permit modifications":
 - a. The Regional Boards or State Board, as appropriate, shall send a copy of each

minor permit modification to EPA and the State Board.

- b. If EPA or the State Board notice that a minor modification has been issued (by either a Regional Board or the State Board) which does not conform to the criteria of 40 CFR 122.63, the State Board shall notify the permittee and the Regional Board that the minor modification was improper. The State should initiate promptly any proceedings necessary to void or rescind the modification. The Regional Board or State Board may then initiate a formal permit modification that is subject to public review as specified by NPDES regulations.

4. No NPDES permit shall be modified to extend beyond the maximum term allowed by NPDES regulations. If a Regional Board or State Board decides to extend a permit expiration date to a date more than five years from the date of issuance of the permit, the Board shall revoke and reissue the permit in accordance with NPDES regulations.

H. Administrative or Court Action

If the terms of any permit, including any permit for which review has been waived pursuant to Part II.A.1. above, are affected in any manner by administrative or court action, the Regional Board or State Board shall immediately transmit a copy of the permit, with changes identified, to EPA and shall allow 30 days for EPA to make written objections to the changed permit pursuant to Section 402(d)(2) of the CWA.

I. Variance Requests

1. State Variance Authority

- a. The State may approve applications for the following variances, subject to EPA objections under Section C.4 above:

- (1) Compliance extension based on delay of a publicly owned treatment works (POTW), under Section 301(i) of the CWA;

- (2) Compliance extension based upon the use of innovative technology, under Section 301(k) of the CWA; and
- (3) Variances from thermal pollution requirements, under Section 316(a) of the CWA.

b. Unless the State denies the variance application, the State shall adopt approved modifications as either formal modifications to active permits or as provisions of reissued permits.

2. State/EPA Shared Variance Authority

a. The State may deny or forward to EPA, with or without recommendations, applications for the following variances:

- (1) Variances based upon the presence of fundamentally different factors (FDF), under Section 301(n) of the CWA;
- (2) Variances based upon the economic capabilities of the applicant, under Section 301(c) of the CWA;
- (3) Variances based upon water quality factors, under Section 301(g) of the CWA; and
- (4) Variances based on economic and social costs or upon the economic capabilities of the applicant for achieving EPA promulgated water quality related effluent limitations, under Section 302(b)(2) of the CWA.

b. Unless the State denies the variance application at the outset, the State will subsequently issue an NPDES permit based upon EPA's final decision.

3. Certification and Concurrence in EPA Variance Decisions under Sections 301(h) and 301(m)

a. The State may deny or forward to EPA, with or without recommendations, applications for the following variances:

- (1) Variances based upon the quality of coastal marine waters under Section 301(h) of the CWA (these are addressed by a separate agreement.); and
 - (2) Variances based upon the energy and environmental costs of meeting requirements for wood processing waste discharged to the marine waters of Humboldt Bay, under Section 301(m) of the CWA.
- b. If EPA decides to prepare a draft permit on the application for a variance, the State will issue or deny waste discharge requirements under its own authority as part of the concurrence process.
- (1) The State's decision on issuance of waste discharge requirements shall constitute the State's decision on concurrence in the variance. Any amendment or rescission of the waste discharge requirements, and any State Board order finding that a Regional Board's action in issuing the waste discharge requirements was inappropriate or improper, shall constitute a modification of the State's concurrence if the amendment, rescission, or State Board order is issued before EPA issues a final permit authorizing the variance.
 - (2) Waste discharge requirements issued by the State shall require compliance with any condition EPA imposes in the final permit. Any authorization made by the waste discharge requirements to discharge under a variance will be contingent upon issuance of a permit by EPA authorizing the variance.
 - (3) EPA will not issue a final permit until the State issues waste discharge requirements. If the waste discharge requirements are issued by a Regional Board, EPA will not issue a final permit until at least 31 days after the Regional Board's decision.

While any timely petition is still pending before the State Board, EPA will not issue a final permit until after 10 months have passed without State Board action on the petition. After 10 months have passed without State Board action on the petition EPA may issue a 301(h) permit provided that the permit includes a reopener clause allowing EPA to revise the permit consistent with the State Board's order on the petition for review. If the State Board initiates action on the petition within 10 months, by notifying the parties involved that the petition is complete, EPA will not issue a 301 (h) permit until after the state Board has issued an order on the petition for review.

- (4) A permit issued by EPA shall incorporate any condition of the State's concurrence, including any provisions of the waste discharge requirements issued to the discharge, unless EPA substitutes a more stringent requirement.

III. PRETREATMENT PROGRAM

A. General

This Section defines the State Board, the Regional Boards, and EPA responsibilities for the establishment, implementation, and enforcement of the National Pretreatment Program pursuant to Sections 307 and 402(b) of the CWA, and as described in Section VI of the "NPDES Program Description, January 1988".

B. Roles and Responsibilities

EPA will oversee California Pretreatment Program operations consistent with the requirements of 40 CFR Part 403, this Section of the MOA, and Section VI of the "NPDES Program Description, January 1988".

Consistent with State and federal law, and the State Clean Water Strategy, the State will administer the California Pretreatment Program.

The State Board will have primary responsibility for:

1. Developing, implementing, and overseeing the California Pretreatment Program;
2. Providing technical and legal assistance to the Regional Boards, publicly owned treatment works (POTWs), and industrial users;
3. Developing and maintaining a data management system;
4. Providing information to EPA or other organizations as required and/or requested; and
5. Reviewing and ruling on petitions for review of Regional Board decisions.

The Regional Boards, with the assistance and oversight of the State Board, will have primary responsibility for:

1. Enforcing the National pretreatment standards: prohibited discharges, established in 40 CFR 403.5;
2. Enforcing the National categorical pretreatment standards established by the EPA in accordance with Section 307 (b) and (c) of the CWA, and promulgated in 40 CFR Subchapter N, Effluent Guidelines and Standards;
3. Review, approval, or denial of POTW Pretreatment Programs in accordance with the procedures discussed in 40 CFR 403.8, 403.9, and 403.11;
4. Requiring a Pretreatment Program as an enforceable condition in NPDES permits or waste discharge requirements issued to POTWs as required in 40 CFR 403.8, and as provided in Section 402(b)(8) of the CWA;
5. Requiring POTWs to develop and enforce local limits as set forth in 40 CFR 403.5(c);
6. Review and, as appropriate, approval of POTW requests for authority to modify categorical pretreatment standards to reflect removal of pollutants by a POTW in accordance with 40 CFR

403.7, 403.9, and 403.11, and enforcing related conditions in the POTW's NPDES permit or waste discharge requirements;

7. Overseeing POTW Pretreatment Programs to ensure compliance with requirements specified in 40 CFR 403.8, and in the POTW's NPDES permit or waste discharge requirements;
8. Performing inspection, surveillance, and monitoring activities which will determine, independent of information supplied by the POTW, compliance or noncompliance by the POTW with pretreatment requirements incorporated into the POTW permit;
9. Providing the State Board and EPA, upon request, copies of all notices received from POTWs that relate to a new or changed introduction of pollutants to the POTW; and
10. Applying and enforcing all other pretreatment regulations as required by 40 CFR Part 403.

C. POTW Pretreatment Program and Removal Credits Approval

Each Regional Board shall review and approve POTW applications for POTW pretreatment program authority and POTW applications to revise discharge limits for industrial users who are, or may in the future be, subject to categorical pretreatment standards. It shall submit its findings together with the application and supporting information to the State Board and EPA for review. No POTW Pretreatment Program or request for revised discharge limits shall be approved by the Regional Boards if the State Board or EPA objects in writing to the approval of such submission in accordance with 40 CFR 403.11(d).

Note: No removal credits can be approved until EPA promulgates sludge regulations under Section 405 of the Clean Water Act.

D. Requests for Categorical Determination

Each Regional Board shall review requests for determinations of whether an industrial user does or does not fall within a particular industrial category or subcategory. The Regional Boards will make a written determination for each request

stating the reasons for the determinations. The Regional Board shall then forward its findings, together with a copy of the request and any necessary supporting information, to the State Board and EPA for concurrence. If the State Board or EPA does not modify the Regional Board's decision within 60 days after receipt thereof, the Regional Board finding is final. A copy of the final determination shall be sent to the requestor, the State Board, and EPA Region 9.

E. Variances From Categorical Standards For Fundamentally Different Factors

Each Regional Board shall make an initial finding on all requests from industrial users for fundamentally different factors variances from the applicable categorical pretreatment standard. If the Regional Board determines that the variance request should be denied, the Regional Board will so notify the applicant and provide reasons for its determination in writing. Where the Regional Board's initial finding is to approve the request, the finding, together with the request and supporting information, shall be forwarded to the State Board. If the State Board concurs with the Regional Board's finding, it will submit it to EPA for a final determination. The Regional Board may deny but not approve and implement the fundamentally different factor(s) variance request until written approval has been received from EPA.

If EPA finds that fundamentally different factors do exist, a variance reflecting this determination shall be granted. If EPA determines that fundamentally different factors do not exist, the variance request shall be denied and the Regional Board shall so notify the applicant and provide EPA's reasons for the denial in writing.

F. Net/Gross Adjustments to Categorical Standards

If the Regional Board receives a request for a net/gross adjustment of applicable categorical pretreatment standards in accordance with 40 CFR 403.15, the Regional Board shall forward the application to EPA for a determination. A copy of the application will be provided to the State Board. Once this determination has been made, EPA shall

notify the applicant, the applicant's POTW, the Regional Board, and State Board and provide reasons for the determination and any additional monitoring requirements the EPA deems necessary, in writing.

G. Miscellaneous

The State Board, with the assistance of the Regional Boards, will submit to the EPA a list of POTWs which are required to develop their own pretreatment program or are under investigation by a Regional Board for the possible need for a local pretreatment program. The State will document its reasons for all deletions from this list. Before deleting any POTW with a design flow greater than five-million gallons per day (mgd), the State will obtain an industrial survey from the POTW and determine: (1) that the POTW is not experiencing pass through or interference problems; and (2) that there are no industrial users of the POTW that are subject either to categorical pretreatment standards or specific limits developed pursuant to 40 CFR 403.5(c). The State will document all such determinations and provide copies to EPA. For deletions of POTWs with flows less than 5 mgd, the State will first determine (with appropriate documentation) that the POTW is not experiencing treatment process upsets, violations of POTW effluent limitations, or contamination of municipal sludge due to industrial users. The State will also maintain documentation on the total design flow and the nature and amount of industrial wastes received by the POTW.

The State Board and EPA will communicate, through the Section 106 Workplan process, commitments and priorities for program implementation including commitments for inspection of POTWs and industrial users. The Section 106 Workplan will contain, at a minimum, the following: (1) a list of NPDES permits or waste discharge requirements to be issued by the Regional Boards to POTWs subject to pretreatment requirements; and (2) the number of POTWs to be audited or inspected on a quarterly basis.

H. Other Provisions

Nothing in this agreement is intended to affect any pretreatment requirement, including any standards or prohibitions established by State or local law, as long as the State or local requirements are not less stringent than any set forth in the National Pretreatment Program, or other requirements or

prohibitions established under the CWA or Federal regulations. Nothing in this MOA shall be construed to limit the authority of the EPA to take action pursuant to Sections 204, 208, 301, 304, 306, 307, 308, 309, 311, 402, 404, 405, 501, or other Sections of the CWA (33 U.S.C. Section 1251 et seq).

IV. COMPLIANCE MONITORING AND ENFORCEMENT

This Section constitutes the State/EPA Enforcement Agreement. The State Board and EPA will review this section of the MOA each year.

A. Enforcement Management Systems (EMS)

The State Board will maintain compliance monitoring and enforcement procedures in the APM which are consistent with the seven principles of the EPA Enforcement Management System Guide (listed below), and this MOA. The APM shall constitute the State Enforcement Management System for the NPDES program, and shall describe criteria for:

1. Maintaining a source inventory (of information about discharges subject to NPDES permits) that is complete and accurate;
2. Processing and assessing the flow of information available on a systematic and timely basis;
3. Completing a preenforcement screening (of compliance-related information coming into the inventory) by reviewing the information as soon as possible after it is received;
4. Performing a more formal enforcement evaluation (of the same information) where appropriate;
5. Instituting formal enforcement action and follow-up wherever necessary;
6. Initiating field investigations based upon a systematic plan; and
7. Using internal management controls to provide adequate enforcement information to all levels of the organization.

These compliance and enforcement-related provisions of the APM shall constitute the framework (within which the circumstances of

noncompliance are reviewed) for making NPDES enforcement decisions, and evaluation of those decisions by others.

B. Inspections

1. State Inspections

- a. The Regional Boards shall conduct compliance inspections to determine the status of compliance with permit requirements, including sampling and non-sampling inspections.
- b. The State Board will maintain up-to-date procedures in the APM for conducting compliance inspections, which conform to NPDES regulations.
- c. The State is responsible for inspecting annually all major dischargers. To enable this goal to be accomplished EPA may assist the State by inspecting some dischargers. The 106 workplan will specify the number of sampling inspections and the number of reconnaissance inspections to be conducted by the State each year.

2. EPA Inspections

- a. EPA retains the authority to perform compliance inspections of any permittee at any time.
- b. For those inspections scheduled more than 15 days in advance, EPA will notify the appropriate Regional Board and the State Board within 15 days in advance. For inspections scheduled less than 15 days in advance, EPA will provide as much advance notice as possible.
- c. EPA will send copies of inspection reports to the Regional Board and State Board within 30 days of the inspection if there are no effluent samples to be analyzed. EPA will usually send copies of inspection results to the State within 60 days of the inspection if there are effluent samples to be analyzed.

3. Inspection Assistance

- a. EPA and the State Board will provide technical assistance to the Regional Boards in their inspection programs whenever staff are available. This assistance may be requested at any time by the Regional Boards.
- b. If neither EPA nor the State Board are able to provide such assistance when it is requested, the State Board shall schedule the assistance at the earliest possible date, and so notify the Regional Board and EPA.

C. Discharger Reports

1. Review of Reports

The Regional Boards shall require each NPDES permittee to send copies of its Discharge Monitoring Reports (DMRs) to EPA and the Regional Boards for review.

- a. Whenever a Regional Board cannot complete the review of DMRs and other compliance reports within 30 days of their arrival, the Regional Board shall follow the "exception procedures" in the APM.
- b. For auditing and reporting purposes Regional Boards (or the State Board if it should undertake DMR review) shall track and document the date of receipt, the date of review, and the review results (i.e., compliance status) of each DMR and compliance report.

2. Quality Assurance Reviews

EPA routinely conducts technical studies of the accuracy of the reported effluent data from NPDES permittees. EPA send check samples to selected permittees for analysis as part of these studies. The permittees are required to return the results to EPA.

a. Delinquent Permittees

- (1) EPA will send the State Board a list of permittees who declined to return

the analytical results of the check samples.

- (2) The State Board shall transmit the list to the Regional Boards and assure that they require the permittee to participate in all subsequent studies.
- (3) The State Board or Regional Board shall take other appropriate enforcement action against NPDES permittees that have failed to return the analytical results of the sample.

b. Unacceptable Quality of Analysis

- (1) EPA will send the State Board and Regional Boards a list of permittees who failed the analysis study.
- (2) The Regional Boards will determine whether the causes of failure are due to clerical errors in report preparation or procedural errors in sample analysis.
 - (a) If the problem is due to clerical errors, the Regional Board will clarify the reporting procedures.
 - (b) If the problem is due to analytical errors, the Regional Board will assure that the problems are corrected immediately or that the permittee begins using another laboratory.
 - (c) If the permittee is using in-house laboratory facility, the Regional Board staff shall take action to assure compliance with NPDES requirements.

c. EPA Technical Assistance

Within the constraints of available staff time, EPA will provide technical assistance and guidance concerning acceptable analytical procedures.

D. Public Complaints

1. Telephone Complaints

- a. Telephone complaints received by EPA or the State Board pertaining to a discharge to water of the United States will be referred to the appropriate Regional Board.
- b. The Regional Boards shall maintain written documentation of each telephone complaint and its disposition.

2. Written Complaints

- a. Written complaints pertaining to a discharge to waters of the United States may be responded to by telephone or by letter. All telephone responses shall be documented by memo.
- b. Copies of each response prepared by EPA or the State Board shall be sent to the appropriate Regional Board.
- c. The Regional Boards shall retain documentation of each written complaint and its disposition.

3. Complaint Resolution

- a. The Regional Boards will investigate complaints and inform the complainant of the investigation results.
- b. The Regional Boards shall place a copy of each NPDES-related complaint and a memo of record describing the investigation results thereof into the permit file or compliance file of the appropriate facility.

E. State Enforcement

1. Basis of EPA/State Relationship

- a. The Regional Boards pursue enforcement of NPDES permit requirements, and of all other provisions of the NPDES program under State authority.

b. The State Board shall assure that enforcement of the NPDES program is exercised aggressively, fairly, and consistently by all nine Regional Boards. The staff of the State Board will review enforcement practices and inform the Regional Board is not taking appropriate enforcement actions.

(1) The State Board will assure that Federal facilities are treated the same as other NPDES facilities within the constraints of Section 313 of the Clean Water Act.

(2) The State Board will keep a record of all penalties assessed and all penalties collected in NPDES enforcement cases.

c. EPA shall monitor the State's performance, and may take enforcement action under Section 309 of the CWA, whenever the State does not take timely and appropriate enforcement action.

d. EPA shall coordinate its enforcement actions with the State Board and with the appropriate Regional Board as described below.

e. The State Board and EPA will meet periodically to discuss the status of pending and adopted enforcement actions as well as other issues of concern.

2. State Notice to EPA of Enforcement Actions

The State shall send copies of proposed and final enforcement actions, settlements, and amendments thereto, against NPDES facilities to EPA within five working days after the date of signature.

F. EPA Enforcement

1. EPA Initiation of Enforcement Action

EPA will initiate enforcement action:

a. At the request of the State;

- b. If the State response to the violation is not consistent with the APM and EPA policy or is otherwise determined by EPA not to be timely and appropriate; or
- c. If there is an overriding federal interest.

2. EPA Deferral of Enforcement Action

EPA shall defer formal enforcement action whenever the State initiates an enforcement action determined by EPA to be timely and appropriate for the violation, except when there is an overriding federal interest.

G. Enforcement Procedures

If circumstances require EPA to pursue formal enforcement, EPA, and the State shall observe the following procedures:

1. Enforcement Based on the Quarterly Noncompliance Report

- a. EPA shall notify the State Board and the appropriate Regional Boards by letter, of the facilities (the name and NPDES number) for which for which EPA policy requires formal enforcement action.
- b. The State Board shall respond to EPA by letter within 30 days of its receipt of the EPA notice.
- c. The response shall include:
 - (1) The name and NPDES number of:
 - (a) Each facility which has returned to compliance;
 - (b) Each facility for which the Regional Boards have scheduled formal enforcement actions;
 - (c) Each facility for which a Regional Board or the State Board has taken a formal enforcement action, if the

enforcement action was not shown on the QNCR as part of the response to the violation; and

- (d) Each facility against which the State Board will pursue formal enforcement.
 - (2) Identification of the type of each formal enforcement action;
 - (3) A description of how each Regional Board plans to address the violations which have not been corrected by the facilities, and for which they are not pursuing formal enforcement; and
 - (4) A description of the enforcement action State Board staff will recommend to take against any facility.
- e. EPA shall notify the State Board either that the State response to the violation is sufficient to defer a formal action by EPA, or that EPA will proceed with a formal enforcement action pursuant to Section 309 of the CWA.

2. Enforcement Based on Information Other than the Quarterly Noncompliance Report

- a. EPA shall notify the State Board and the appropriate Regional Board of each violation against which EPA intends to pursue formal enforcement. This notice shall include:
 - (1) The name and NPDES number of the facility;
 - (2) An identification of the violations which warrant formal enforcement;
 - (3) The reasons why EPA believes formal enforcement is necessary; and
 - (4) The reasons why past or pending State responses are insufficient.
- b. Within ten working days of the notification by EPA, and after

consultation with the appropriate Regional Boards, the State Board will respond to the EPA notice. The State Board's response will include:

- (1) A discussion of the circumstances of the identified violations;
 - (2) A description of the substance and timing of any past, pending, or planned responses to the violations by the Regional Board or the State Board; including identification of the office and staff responsible for the action;
 - (3) The amounts of any penalties sought or collected; and
 - (4) Whether or not the State Board believes the responses are appropriate and why.
- c. EPA shall notify the State Board either that the State response to the violation is sufficient to defer a formal action by EPA, or that EPA will proceed with a formal enforcement action pursuant to Section 309 of the CWA.
- d. Normal enforcement action until ten working days from the date of the EPA notice have passed.

3. Overriding Federal Interest:

- a. For the purposes of this MOA, an overriding federal interest exists when:
- (1) EPA enforcement can reasonably be expected to expedite the discharger's return to full compliance;
 - (2) EPA enforcement can reasonably be expected to increase program credibility; or
 - (3) The violation has significant implications for the success of the NPDES program beyond the borders of California;

- b. EPA shall notify the State Board and the appropriate Regional Board when there is an overriding federal interest;
- c. Within ten working days of the EPA notice, the State Board will inform EPA of any coordination between the federal action and a State action that the State believes to be appropriate;
- d. EPA shall either:
 - (1) Contact the Regional Board and the State Board to work out the details of coordinating the State and federal enforcement actions. Usually, such coordination will entail the exchange of draft enforcement actions for review. Comments can usually be exchanged by telephone, or in a staff meeting at the Regional Board depending upon the complexity of the enforcement action; or
 - (2) Inform the State Board that such coordination is infeasible;
- e. EPA shall not proceed with its enforcement action until ten working days after the date of the EPA notice; and
- f. In any instance of overriding federal interest and upon request by the State, EPA shall send the State Board and the appropriate Regional Board a brief, written explanation of the reasons for overriding federal interest or the reasons for infeasibility of enforcement coordination.

4. Recovery of Additional Penalties

Nothing in this MOA shall be construed to limit EPA's authority to take direct enforcement action for the recovery of additional penalties, whenever the penalties recovered by the State are less than those prescribed by the EPA penalty policy.

5. EPA Enforcement Without Notice to the State

Notwithstanding the provisions above for prior notification to the State of federal enforcement actions, nothing in this MOA limits EPA's authority to take enforcement action without any prior notice to the State. If EPA does take such an action, it shall send copies of its correspondence with the affected facility to the State Board and the appropriate Regional Board.

V. STATE REPORTING

A. The State will submit the following to EPA:

<u>Item</u>	<u>Description</u>	<u>Frequency of Submission</u>
1	A copy of all permit applications except those for which EPA has waived review	Within 5 days of receipt
2	Copies of all draft NPDES permits and permit modifications including fact sheets except those for which EPA has waived review	When placed on public notice
3	Copies of all public notices	As issued
4	A copy of all issued, draft NPDES permits and permit modifications	As issued
5	A copy of settlements and decisions in permit appeals	As issued

<u>Item</u>	<u>Description</u>	<u>Frequency of Submission</u>
6	A list of major facilities of the scheduled for compliance inspections	With submission annual program
7	Proposed revisions to the scheduled compliance inspections	As needed

8	A list of compliance inspections performed during the previous quarter	Quarterly
9	Copies of all compliance inspection reports and data and transmittal letters to major permittees	Within 30 days of inspection
10	Copies of all compliance inspection reports and data transmittal letters to all other permittees	As requested
11	For major dischargers, a quarterly noncompliance report as specified in 40 CFR 123.45(a) and further qualified in EPA guidance	Quarterly, as specified in 40 CFR 123.45(c)
12	For minor dischargers, an annual noncompliance report as specified in 40 CFR 123.45(b)	Within 60 days of the end of the calendar as specified in 40 CFR 123.45(c)
13	Copies of all enforcement actions against NPDES violators (including letters, notices of violation, administrative orders, initial determinations, and referrals to the Attorney General)	As issued
	<u>Item</u> <u>Description</u>	<u>Frequency of Submission</u>
14	Copies of correspondence required to carry out the pretreatment program	As issued or received
15	Copies of Discharge Monitoring Report (DMR) and non-	Within 10 days of receipt

compliance notifi-
cation from major
permittees

B. Major Discharger List

The State annually shall submit to EPA an updated "major dischargers" list. The list shall include those dischargers mutually defined by the State Board and EPA as major dischargers plus any additional dischargers that in the opinion of the State or EPA, have a high potential for violation of water quality standards. The major discharger list for Federal facilities shall be jointly determined by EPA and the State. The schedule for submittal of the major discharger list shall be included in the 106 workplan.

C. Emergency Notification

1. The Regional Board shall telephone, or otherwise contact, EPA and the State Board immediately if it discovers a NPDES permit violation or threatening violation:
 - a. That has significantly damaged or is likely to significantly damage the environment or the public health; or
 - b. That has or is likely to cause significant public alarm.
2. The Regional Board will describe the circumstances and magnitude of the violation

VI. CONFIDENTIALITY OF INFORMATION

- A. All information obtained or used by the State in the administration of the NPDES program shall be available to EPA upon request without restriction, and information in EPA's files which the State needs to implement its program shall be made available to the State upon request without restriction.
- B. Whenever either party furnishes information to the other that has been claimed as confidential, the party furnishing the information will also furnish the confidentiality claim and the results of any legal review of the claim.

- C. The party receiving the confidential information will treat it in accordance with the provisions of 40 CFR Part 2.
- D. The State and EPA will deny all claims of confidentiality for effluent data, permit applications, permits, and the name and address of any permittee.

VII. PROGRAM REVIEW

- A. To fulfill its responsibility for assuring the NPDES program requirements are met, EPA shall:
 - 1. Review the information submitted by the State;
 - 2. Meet with State officials from time to time to discuss and observe the data handling, permit processing, and enforcement procedures, including both manual and automated processes;
 - 3. Examine the files and documents of the State regarding selected facilities to determine:
 - (a) whether permits are processed and issued consistent with federal requirements;
 - (b) whether the State is able to discover permit violations when they occur;
 - (c) whether State reviews are timely;
 - and (d) whether State selection of enforcement actions is appropriate and effective. EPA shall notify the State in advance of any examination under this paragraph so that appropriate State officials may be available to discuss individual circumstances and problems.

EPA need not reveal to the State in advance the files and documents to be examined. A copy of the examination report shall be transmitted to the State when available;

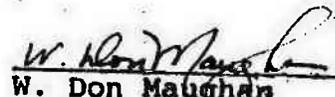

- 4. Review, from time to time, the legal authority upon which the State's program is based, including State statutes and regulations;
- 5. When appropriate, hold public hearings on the State's NPDES program; and
- 6. Review the State's public participation policies, practices and procedures.

- B. Prior to taking any action to propose or effect any substantial amendment, recision, or repeal of any statute, regulations, or form which has been approved by EPA, and prior to the adoption of any statute, regulations, or form, the State shall notify the Regional Administrator and shall transmit the text of any such change or new form to the Regional Administrator (see 40 CFR 123.62 which provides that the change may trigger a program revision, which will not become effective until approved by EPA).
- C. If an amendment, recision, or repeal of any statute, regulations, or form described in paragraph (B) above shall occur for any reason, including action by the State legislature or a court, the State shall within ten days of such event, notify the Regional Administrator and shall transmit a copy of the text of such revision to the Regional Administrator.
- D. Prior to the approval of any test method as an alternative to those specified as required for NPDES permitting, the State shall obtain the approval of the Regional Administrator.

VIII. TERM OF THE MOA

- A. This MOA shall become effective upon the date of signature of the Regional Administrator and of the Chair of the State Water Resources Control Board after State Board approval. If it is signed by the two parties on different days, the latter date shall be the effective date.
- B. This MOA shall be reviewed by EPA and the State, and revised as appropriate within five (5) years of its effective date.
- C. Either EPA or the State may initiate action to change this MOA at any time.
 - 1. No change to this MOA shall become effective without the concurrence of both agencies.
 - 2. The STATE REPORTING (V) portion may be changed by the written consent of the Chief, Division of Water Quality, SWRCB, and the Director, Water Management Division, EPA, Region 9. The Director of Permits Division (EN-336) must consent to all substantial changes.

3. All other changes to this MOA must be approved by the State Board and approved by the Regional Administrator, with the prior concurrence of the Director of the Office of Water Enforcement and Permits (EN-335) and the Associate General Counsel for Water for all substantial changes. The Director of the Office of Water Enforcement and Permits and Associate General Counsel for Water shall also determine whether changes should be deemed substantial.
 4. All changes to this MOA determined by EPA to be substantial shall be subject to public notice and comment in accordance with the requirements of 40 CFR 123.62 before being approved.
- D. Either party may terminate this MOA upon notice to other party pursuant to 40 CFR 123.64.
- E. In witness thereof, the parties execute this agreement.

W. Don Maughan
Chairman,
State Water Resources
Control Board

MEMORANDUM

County Sanitation Districts
of Los Angeles County

October 7, 20002

TO: Vicki Conway
Head, Monitoring Section

FROM: Brian Louie
Project Engineer, Monitoring Section

SUBJECT: **Basis/Data for 1975 Chloride Objective and 1978 and 1994 Revisions to the Chloride Objective for Reaches 5 and 6 of the Santa Clara River**

The purpose of this memo (and enclosed attachments) is to provide a discussion of the basis of the chloride objectives for the Santa Clara River. Attachments 1, 2, 3 and 4 contain tables and supporting data that appear in the 1975, 1978 and 1994 Basin Plans for the Santa Clara River Watershed. Attachment 5 and contains relevant pages from RWQCB Abstracts and Appendices to the Revised Basin Plan (through 1993), while Attachment 6 contains U.S. EPA approval letters of the Basin Plan and subsequent revisions. For the purpose of this discussion, Reach 5 is defined as the reach between the Old Road Bridge, Hwy 99 and the Los Angeles/Ventura County line, while Reach 6 is defined as the reach between Bouquet Canyon Bridge and the Old Road Bridge, Hwy 99. This memorandum focuses on the technical basis and to a lesser extent, the legal basis of the chloride surface water quality objectives for the Santa Clara River.

1975 Water Quality Control Plan (Basin Plan) Objectives and Background Data

In March of 1975, the Los Angeles Regional Water Quality Control Board (Regional Board) adopted the Water Quality Control Plan (Basin Plan) for the Santa Clara River (SCR) Basin (4A). The 1975 Basin Plan included the chloride surface water quality objectives for the SCR Watershed and provided background water quality data as the basis for these objectives. Table 4-1, pages I-4-10 and I-4-11 of the 1975 Basin Plan (See Attachment 1), set the chloride objectives for various reaches of the Santa Clara River. As seen in Table 4-1, the chloride objectives were set at each station (corresponding to the end of each reach) and were based on a flow-weighted annual average per footnote (a).¹ It should be reiterated that Table 4-1 is explicitly clear that the chloride objectives apply **at each station (corresponding to the end of each reach) as a flow-weighted annual average**. Each of the listed stations corresponds to current (1994) Basin Plan reach designations for Reaches 3 (SCR @ Santa Paula Bridge), 5 (SCR @ Los Angeles and Ventura County Line) and 6 (SCR @ West Pier Highway 99 [The Old Road Bridge]).

As the surface water chloride objective was set based on data from each station, it should also then be mentioned that no WRP effluent discharge data, reflecting surface water quality conditions immediately downstream of the WRP outfalls, were used to characterize background water quality conditions with respect to chlorides.² Historic Saugus and Valencia WRP effluent chloride concentrations are shown in Figure 1.

¹ Footnote (a) states: "The objective at each station is of the *weighted annual average*. Samples shall be collected at monthly intervals preferably but at least at quarterly intervals. *Flow rate* shall be determined at the time of sampling [emphasis added]."

² The background water quality samples at these stations were also not reflective of the variability in chlorides associated with a drought condition, where water supply and subsequent WRP effluent chloride concentrations increased in magnitude significantly.

Basis of the Chloride Objective

It appears that, instead of basing the objective on the need to protect a specific beneficial use, the Regional Board used the maximum background³ chloride values as the basis for setting the chloride objectives for the Reaches 3, 5 and 6 of the SCR. Tables 14-3 and 14-9, pages II-14-5 and II-14-15 of Chapter 14 of the 1975 Basin Plan (see Attachment 2) provide the background water quality data that are the basis for the setting of the original objectives for reaches 5 and 6 of the SCR. Table 14-3 provides data for reach 5, while Table 14-9 provides data for reach 6.

Chloride Objectives for Reach 5

As seen in Table 14-3 of the 1975 Basin Plan (see Attachment 2), a maximum chloride concentration of 75 mg/L was measured on September 15, 1970, while on October 20, 1969 and April 15, 1970, chloride concentrations of 58 and 60 mg/L were measured, respectively. It is unclear how the Regional Board ultimately set a 90 mg/L chloride objective for the end of Reach 5, based on this existing background data published in the 1975 Basin Plan. However, these chloride concentrations are below the recommended chloride thresholds for the protection of agriculture, which was referenced in the 1975 Basin Plan. Thus, the objective was likely based on background water quality conditions, with only these 3 chloride samples (taken over a 12-month period beginning in October 1969) being published in the 1975 Basin Plan.⁴ It is quite possible that the Regional Board erroneously applied the chloride concentration observed at the end of Reach 5 to determine the chloride water quality objective for the end of reach 6 (80 mg/L).

Chloride Objectives for Reach 6

As seen in Table 14-9 of the 1975 Basin Plan (See Attachment 2), a maximum chloride concentration of 89 mg/L (sampled during dry weather flow conditions) was measured at the end of Reach 6. The number of samples taken at this location is unknown, but the samples were taken over a 12-month period beginning in August 1971. It is unclear how the Regional Board ultimately set an 80 mg/L chloride objective for the end of Reach 5, based on this existing background data published in the 1975 Basin Plan. However, as mentioned previously, the chloride concentrations in Table 14-9 are below the recommended chloride thresholds for the protection of agriculture, which was referenced in the 1975 Basin Plan.⁵ Thus, the objective was likely based on background water quality conditions, with only these chloride samples (taken over a 12-month period beginning in August 1971) being published in the 1975 Basin Plan. It is quite possible that the Regional Board erroneously applied the chloride concentration observed at the end of Reach 6 to determine the chloride water quality objective for the end of reach 5 (90 mg/L).

³ The Water Code recognizes that water quality can be changed to some degree without unreasonably affecting beneficial uses. See Water Code §13241. Even the State's Anti-degradation Policy allows deviations from existing background water quality so long as the change is "consistent with maximum benefit to the people of the State." SWRCB Res. No. 68-16 (Oct. 28, 1968). Thus, setting objectives based upon background levels alone is of questionable legal validity.

⁴ See University of California Committee of Consultants, *Guidelines for Interpretation of Water Quality for Agriculture*, University of California Cooperative Extension, 1975. The UC Cooperative Extension guidelines recommended a 106 mg/L Cl threshold for crops sensitive to foliar (leaf) absorption; they recommend a 142 mg/L Cl threshold for crops sensitive to root absorption of chloride. These thresholds are well above the chloride objectives set in 1975. Thus, the chloride objectives were likely set to reflect background conditions. The most chloride sensitive crop grown in the Upper SCR Watershed is avocado, which is documented to be sensitive to chlorides via root absorption. Therefore, if the chloride objective had been established to protect the most sensitive agricultural beneficial use, it should have been established at 142 mg/L based on the 1975 UC Cooperative Extension guidelines, though in a 1968 study published by Bingham and Finn, a chronic chloride threshold of 180 mg/L is stated to be protective of avocados, with effects on yield.

⁵ *Ibid.*

1978 Amendments to the Basin Plan

In March of 1978, the Regional Board amended the 1975 Basin Plan to revise certain mineral objectives and to add or revise reach designations of the SCR. Attachment 3 includes the revision pages taken from the Regional Board's Administrative Record that discuss the 1978 revisions to the Basin Plan. As seen in Attachment 3, the chloride objectives were revised from 80 and 90 mg/L to 100 mg/L for reaches 5 and 6, respectively, to "correct errors in the Basin Plan made by the original contractor and/or to reflect existing water quality based on more, newer, and better data." The basis/reasoning for all revisions of the Basin Plan were documented in the Administrative Record and are summarized in Table 1. As these revised surface water chloride objective were set based on new data from each station, it should also then be mentioned that no WRP effluent discharge data during the 1975-1977 period, reflecting surface water quality conditions immediately downstream of the WRP outfalls, were used to characterize background water quality conditions with respect to chlorides.⁶

Table 1. Summary of Changes to 1975/1978 Basin Plans

Reach	Description	1975 Cl Objective	Basis for 1975 Cl Objective	Reference
5	Santa Clara River at Los Angeles and Ventura County Line	90 mg/L	Maximum chloride concentration rounded upwards (76 mg/L rounded to 80 mg/L) of 3 samples taken 10/20/69 (58 mg/L), 3/5/70 (60 mg/L) and 9/15/70 (76 mg/L) at Blue Cut Gauging Station. Could be error as it appears that Reach 5 data was used to determine Reach 6 objective. <u>Chloride objective likely set to reflect existing conditions for 1975 Basin Plan.</u>	1975 Basin Plan Table 14-3, pg II-14-5 (see Attachment 2)
6	Santa Clara River at West Pier Highway 99	80 mg/L	Maximum chloride concentration rounded upwards (87 mg/L rounded to 90 mg/L) of Dry weather flow samples taken between 8/4/71 and 8/4/72 at West Pier Hwy 99 (The Old Road Bridge). Number of samples taken is unknown. Could be error as it appears that Reach 6 data might have been used to determine Reach 5 objective. <u>Chloride objective likely set to reflect existing conditions for 1975 Basin Plan.</u>	1975 Basin Plan Table 14-9, pg II-14-15 (see Attachment 2)
Reach	Description	1978 Revised Cl Objective	Basis for 1978 Revised Cl Objective	Reference
7	Reach Bounded by West Pier Hwy 99 (The Old Road Bridge) and Blue Cut Gauging Station	100 mg/L	"the proposed objective would conform with the quality of the natural inflow and outflow." Regional Board references data in Table 2 (Attachment 3).	Attachment 3
8	Reach Bounded by Bouquet Canyon Bridge and West Pier Hwy 99 (The Old Road Bridge)	100 mg/L	Revised chloride objective "...reflects water quality conditions found to exist at West Pier Hwy 99 and at <u>L.A.-Ventura County Line.</u> " Regional Board references data in Table 2 (Attachment 3).	Attachment 3

Other pertinent changes in the 1978 Basin Plan Amendment included the following:

- 1) The reaches that were formerly designated/described as particular locations, now included bounded descriptions. The reach designations were changed as follows:

⁶ The background water quality samples at these stations were also not reflective of the variability in chlorides associated with a drought condition, where water supply and subsequent WRP effluent chloride concentrations were observed to increase in magnitude significantly.

1975 Basin Plan	1978 Amendments to the Basin Plan
At United States Highway 101	No Reach Designation
At Saticoy Diversion Dam	Reach bounded by Santa Paula Bridge and Saticoy Diversion Dam
Santa Paula Bridge	Reach bounded by A street, Fillmore and Santa Paula Bridge
At A Street, Fillmore	Reach bounded by Los Angeles-Ventura County Line and A street, Fillmore
1975 Basin Plan	1978 Amendments to the Basin Plan
At Los Angeles and Ventura County line	Reach bounded by West Pier Hwy 99 and Los Angeles-Ventura County line
At West Pier Highway 99	Reach bounded by Lang and West Pier Hwy 99
None	Above Lang

- 2) The addition of one reach ("Above Lang") upstream of Reach 6; and
- 3) The station "At United States Highway 101" was given no specific designation.

It is important to note that while the reach designations/description changed, footnote (a) still applied to each reach in the 1978 amendments and thus, the objectives' averaging period did not change. Rather, the 1978 Amendments merely resulted in new reach boundary designations, whereby each of the revised mineral water quality objectives (Chloride, Sulfate, TDS, Boron, SAR and NO₃-N + NO₂-N) would be determined as a flow-weighted average at the end of each reach. (i.e., at the receiving water stations where the background data were collected).

Attachment 4 also includes notes taken from the 1978 Basin Plan Administrative Record that had erroneously identified the Valencia WRP as a point source that discharges into Reach 6 as opposed to Reach 5, which is where the Valencia WRP actually discharges.

1994 Amendments to the Basin Plan

In 1994, the Regional Board again amended the Basin Plan. In the 1994 amendments, the reaches set forth in the 1978 Basin Plan were formally numbered; however, no changes were made to the numeric water quality objectives for chloride.

The most significant change in the 1994 Basin Plan (which may well have been a typographical error since there was no backup documentation in the administrative record discussing this change) with respect to all the mineral objectives, was the omission of footnote (a), which described the basis of all mineral objectives and how compliance with these objectives would be determined. It should be noted that even up through 1993, the Regional Board acknowledged that the mineral objectives were based on a flow-weighted annual average at the end of each reach at specific receiving water stations.⁷ Attachment 4 includes Table 3-8 of the 1994 Basin Plan and its accompanying footnotes. Table 3-8 (1994 Basin Plan) is virtually identical to Table 4-1 (in 1975 and 1978 Basin Plans), with the exception that footnote (a), found in the 1975 and 1978 versions of Basin Plan, was omitted. Again, based on a review of the 1994 Basin Plan administrative record, no explanation or supporting documentation was provided as the basis for the deletion of footnote (a).

This omission of footnote (a) effectively changes the chloride objective itself. The original intent of the Basin Plan as adopted in 1975 and amended in 1978 was for the objective to be a flow-weighted annual average as determined at the furthest downstream end of each reach. Now, with the omission of footnote

⁷ See Attachment 5, which contains relevant pages from the Regional Board's *Abstracts and Appendices of 1975 Plans: Santa Clara River Basin (4A) and Los Angeles River Basin (4B)*. As seen in Table 7, footnote (a) still applied for all mineral objectives for the SCR. Also, Table 8, shows that the groundwater chloride objective for groundwater between Bouquet Canyon and Castaic Creek, was set at 150 mg/L. The chloride objective for this groundwater reach appeared to be revised to 100 mg/L in 1994, though the Regional Board then acknowledged in the chloride TMDL Staff Report (page 17) that this revision was "never incorporated into the Basin Plan."

(a), the objective appears to be an instantaneous maximum that has to be met at any given location within the applicable reach. Because of this change, intended or not, Regional Board now interprets the mineral water quality objectives as instantaneous maximums and intends to apply end-of-pipe discharge limits for all water quality objectives listed in Table 3-8 (Attachment 4). It is important to note that historically, as well as when the Districts' permits were re-issued in 1995 (i.e., following the 1994 Basin Plan update), the Water Reclamation Plants that discharge into these reaches have had discharge limits for chloride higher than the chloride objectives shown in Table 3-8. Furthermore, Figure 1 shows that the historical final effluent chloride concentrations for both the Saugus and Valencia WRPs, which both began operating in the mid to late 1960's. The data show that while the Saugus and Valencia WRPs have consistently complied with discharge limits for chloride, both WRPs have also consistently discharged effluent at chloride concentrations to the receiving water at chloride concentrations greater than the 100 mg/L objective that is listed in the 1994 Basin Plan for Reaches 5 and 6. Figure 2 provides some perspective on the 1975 average Saugus and Valencia final effluent chloride concentrations compared to 1975 average chloride concentrations at the LA/VC line and West Pier Highway 99 (The Old Road Bridge). Figure 2 also shows the effluent-dependent nature of Reaches 5 and 6 of the SCR, and the general gradient in chloride concentrations that has always existed between Saugus and Valencia WRP outfalls and West Pier Highway 99 and the LA/VC line, respectively. All of these data underscore the fact that the chloride objectives were never intended to be applied as an instantaneous maximum for any location within the reach, which is how the objectives are currently being applied.

Implications of 1994 Basin Plan Amendments to 2002 Chloride TMDL

Selection of Numeric Target for SCR Chloride TMDL

In light of the information provided above about the basis of the original chloride objective, it is believed that the 1994 modification of the objective, from a flow-weighted annual average as measured at the end of the reach to an instantaneous maximum applicable at all locations within the reach, is invalid because this modification of the objective was not adopted in accordance with the legal and procedural requirements of, among other things, the Porter-Cologne Water Quality Act and California Administrative Procedures Act. Accordingly, the setting of a numeric target for chloride for the 2002 SCR Chloride TMDL should not be based on the objectives as amended in 1994.

The primary goal of the Basin Plan and water quality objectives is to protect the beneficial use of the water body and to maintain the existing instream uses as determined in 1975.⁸ The numeric target to protect the most sensitive beneficial "in-stream" use in the SCR Watershed would be 230 mg/L Cl, which is the threshold to protect aquatic life under chronic exposure conditions. It is questionable whether, water diverted from the surface water of the SCR for irrigation purposes can be considered an "in-stream" use.

As previously stated, it appears that the 100 mg/L chloride objective was not based on protecting a beneficial use, but was established to reflect background conditions.⁹ Therefore, the use of this objective for TMDL calculation purposes is questionable. However, even if the objective was based on protecting a beneficial use, for the reasons provided above, the appropriate numeric target for the chloride TMDL would be the chloride objective of 100 mg/L Cl as a flow-weighted annual average measured at the end of each reach, not as an instantaneous maximum value throughout the reach, the adoption of which was never properly noticed or promulgated.

⁸ See Water Code §13241; see also 40 C.F.R. § 131.12(a)(1).

⁹ The manner by which the Regional Board determined background conditions may also very well be incorrect. The chloride objective was set based on limited data collected at one location, ignoring effluent chloride concentration at the Saugus and Valencia WRP outfalls, and not taking into account the cyclic variation in chloride concentrations due to drought conditions.

Introduction

The Clean Water Act (§303) requires states to develop water quality standards for all waters and to submit to the USEPA for approval all new or revised water quality standards which are established for inland surface and ocean waters. Water quality standards consist of a combination of beneficial

uses (designated in Chapter 2) and water quality objectives (contained in this Chapter).

In addition to the federal mandate, the California Water Code (§13241) specifies that each Regional Water Quality Control Board shall establish water quality objectives. The Water Code defines water quality objectives as "the allowable limits or levels of water quality constituents or characteristics which are established for the reasonable protection of beneficial uses of water or the prevention of nuisance within a specific area." Thus, water quality objectives are intended (i) to protect the public health and welfare and (ii) to maintain or enhance water quality in relation to the designated existing and potential beneficial uses of the water. Water quality objectives are achieved through Waste Discharge Requirements and other programs outlined in Chapter 4, Strategic Planning and Implementation. These objectives, when compared with future water quality data, also provide the basis for identifying trends toward degradation or enhancement of regional waters.

These water quality objectives supersede those contained in all previous Basin Plans and amendments adopted by the Los Angeles Regional Board. As new information becomes available, the Regional Board will review the objectives contained herein and develop new objectives as necessary. In addition, this Plan will be reviewed every three years (triennial review) to determine the need for modification.

Statement of Policy with Respect to Maintaining High Quality of Waters in California

A key element of California's water quality standards is the state's Antidegradation Policy. This policy, formally referred to as the *Statement of Policy with Respect to Maintaining High Quality Waters in California* (State Board Resolution No. 68-16), restricts degradation of surface or ground waters. In particular, this policy protects waterbodies where existing quality is higher than is necessary for the protection of beneficial uses.

Table 3-8. Water Quality Objectives for Selected Constituents in Inland Surface Waters^a.

Reaches are in upstream to downstream order.

WATERSHED/STREAM REACH ^a	TDS (mg/L)	Sulfate (mg/L)	Chloride (mg/L)	Boron ^c (mg/L)	Nitrogen ^d (mg/L)	SAR ^e (mg/L)

	Santa Barbara Island	--	--	--	--

- a. Objectives for ground waters outside of the major basins listed on this table and outlined in Figure 1-9 have not been specifically listed. However, ground waters outside of the major basins are, in many cases, significant sources of water. Furthermore, ground waters outside of the major basins are either potential or existing sources of water for downgradient basins and, as such, objectives in the downgradient basins shall apply to these areas.
- b. Basins are numbered according to Bulletin 118-80 (Department of Water Resources, 1980).
- c. Ground waters in the Pitas Point area (between the lower Ventura River and Rincon Point) are not considered to comprise a major basin, and accordingly have not been designated a basin number by the California Department of Water Resources (DWR) or outlined on Figure 1-9.
- d. The Santa Clara River Valley (4-4), Pleasant Valley (4-6), Arroyo Santa Rosa Valley (4-7) and Las Posas Valley (4-8) Ground Water Basins have been combined and designated as the Ventura Central Basin (DWR, 1980).
- e. The category for the Foothill Wells area in previous Basin Plan incorrectly groups ground water in the Foothill area with ground water in the Sunland-Tujunga area. Accordingly, the new categories, Foothill area and Sunland-Tujunga area, replace the old Foothill Wells area.
- f. All of the ground water in the Main San Gabriel Basin is covered by the objectives listed under Main San Gabriel Basin - Eastern area and Western area. Walnut Creek, Big Dalton Wash, and Little Dalton Wash separate the Eastern area from the Western area (see dashed line on Figure 2-17). Any ground water upgradient of these areas is subject to downgradient beneficial uses and objectives, as explained in Footnote a.
- g. The border between Regions 4 and 8 crosses the Upper Santa Ana Valley Ground Water Basin.
- h. Ground water in the Conejo-Tierra Rejada Volcanic Area occurs primarily in fractured volcanic rocks in the western Santa Monica Mountains and Conejo Mountain areas. These areas have not been delineated on Figure 1-9.
- i. With the exception of ground water in Malibu Valley (DWR Basin No. 4-22), ground waters along the southern slopes of the Santa Monica Mountains are not considered to comprise a major basin and accordingly have not been designated a basin number by the California Department of Water Resources (DWR) or outlined on Figure 1-9.
- j. DWR has not designated basins for ground waters on the San Pedro Channel Islands.

EFFECTS OF DROUGHT INDUCED WATER SUPPLY CHANGES AND WATER
CONSERVATION MEASURES ON COMPLIANCE WITH WASTE DISCHARGE
REQUIREMENTS

In accordance with administrative procedures this Regional Board,
at a public meeting held on March 26, 1990, adopted Resolution
No. 90-004 (copy enclosed) on the above subject.

Unless your discharge is in full compliance with chloride
limitations in your waste discharge requirements, please notify the
Executive Officer by May 1, 1990, if it is your intent to comply
with the provisions of Resolution No. 90-004 so that your discharge
will not be considered by the Board to be in violation of the
chloride requirements.

If you have any questions on this matter, please call me at (213)
266-7520.

STATE OF CALIFORNIA
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION

Resolution No. 90-004

EFFECTS OF DROUGHT INDUCED WATER SUPPLY CHANGES AND
WATER CONSERVATION MEASURES ON COMPLIANCE WITH WASTE DISCHARGE
REQUIREMENTS WITHIN THE LOS ANGELES REGION

- WHEREAS, each Regional Board shall formulate and adopt water quality control plans for all areas within the region and shall establish such water quality objectives in those water quality control plans as in its judgment will ensure the reasonable protection of beneficial uses, while at the same time recognizing that it may be possible for the quality of water to be changed to some degree without unreasonably affecting beneficial uses; and
- WHEREAS, this Regional Board has adopted water quality control plans for all areas within the Los Angeles Region, and has established water quality objectives in those plans; and
- WHEREAS, each Regional Board, with respect to its region, shall prescribe waste discharge requirements for disposal of wastes; and
- WHEREAS, it is now clear that 1988 and 1989 have been years of severe drought in California, with no current indication that conditions will improve markedly during 1990; and
- WHEREAS, the concentrations of chlorides and other mineral constituents in waters imported from Northern California have been increasing substantially as the smaller flows through the Sacramento-San Joaquin Delta allow salt waters from San Francisco Bay to encroach much further upstream than normal; and
- WHEREAS, the waste discharge requirements adopted by this Regional Board for many dischargers within the Los Angeles Region include limitations on chloride concentrations in the discharge, and the recent change in the quality of the imported water supply may result in delivery of water to the discharger which already exceeds, or will exceed with the increment added by normal use, the chloride limitations prescribed in the waste discharge requirements; and

-1-

February 26, 1990

WHEREAS, the increase in chloride concentration in the discharge in cases where the discharger has not changed any factors in the waste disposal system is beyond the discharger's control, being due solely to the change in the quality of the water supply; and

WHEREAS, use of the more highly mineralized imported waters over the short term will not affect the long range water quality objectives established in the water quality control plans adopted by this Regional Board for areas within the Los Angeles Region; and

WHEREAS, the Los Angeles Regional Board is already on record as encouraging water conservation and water reclamation to decrease the overall fresh water demand within the Los Angeles Region; and

WHEREAS, a Regional Board may direct the Executive Officer to take action on any water quality matter within its purview;

NOW, THEREFORE BE IT RESOLVED, that the existing waste discharge requirements relative to chlorides shall not be considered by this Board to be violated unless effluent supply concentrations of chlorides exceed 250 mg/l or supply concentrations plus 85 mg/l, whichever is less, with comparable adjustments for mass emission rates in lbs/day, if warranted,

1. for any waste discharger whose water supply has high concentrations of chlorides due solely to the increased mineralization of imported water, or

2. for any sewage treatment plant whose influent has high chloride concentrations due solely to the increased mineralization of imported water or to water conservation measures implemented within the area tributary to the plant, or to some combination thereof; and

BE IT FURTHER RESOLVED, that any waste discharge which exceeds the chloride limitations contained in its waste discharge requirements is in noncompliance with those requirements unless the discharger demonstrates to the satisfaction of the Executive Officer by July 1, 1990, and quarterly thereafter, that the increased chloride concentrations are due solely to:

1. changes in the character of the water supply related to drought conditions, or

2. for a sewage treatment plant discharge, changes in the character of the water supply related to drought conditions or to water conservation measures taken in the plant service area or to some combination thereof; and

BE IT FURTHER RESOLVED, that every waste discharger in compliance with the above shall also demonstrate to the satisfaction of the Executive Officer not later than October 1, 1990:

1. that the discharge will not cause the appropriate long range chloride objective to be exceeded, and
2. that the historical discharge has not caused the long range chloride objective to be exceeded in the past (provided there is a sufficiently long-term record which includes at least one drought period); and

BE IT FURTHER RESOLVED, that every sewage treatment plant waste discharger in compliance with all of the above shall in addition:

1. by October 1, 1990, identify major sources of chloride in its discharge, including but not limited to water softener regeneration brines; determine the average chloride contribution of each major source; determine the best available options for reducing chloride levels in the discharge; identify any negative effects on the potential for water reclamation that would result from failure to control chloride levels in the discharge; and
2. by January 1, 1991, identify proposed actions, together with their timetable of implementation, to reduce chloride levels in the discharge as necessary to assure that the potential for water reclamation will be realized to the maximum extent practicable; and

BE IT FURTHER RESOLVED, that the Board will reconsider this action within one year after source water supplies return to pre-drought conditions, or within 3 years, whichever is earlier; and

BE IT FURTHER RESOLVED, that the Executive Officer of this Board is authorized, and he is hereby directed, to certify and submit copies of this Resolution to such individuals and governmental agencies as may have need therefor, or as may request same.

I, Robert P. Ghirelli, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Los Angeles Region, March 26, 1990.

Robert P. Ghirelli, D.Env.
Executive Officer

EXHIBIT “6”

4837-0090-6752.2

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION
January 27, 1997
Resolution No. 97-02**

***Amendment to the Water Quality Control Plan to incorporate a
Policy for Addressing Levels of Chloride In Discharges of Wastewaters***

WHEREAS, the California Regional Water Quality Control Board, Los Angeles Region finds that:

1. In 1975, the Regional Board established water quality objectives for chloride in most of the Region's waterbodies based on background concentrations of chloride, in accordance with the *Statement of Policy with Respect to Maintaining High Quality Water in California* (State Board Resolution No. 68-16, commonly known as the *State Antidegradation Policy*) and the federal *Antidegradation Policy* (as set forth in 40 CFR 131.12). Water quality objectives are the basis for limits in Waste Discharge Requirements that are prescribed by the Regional Board.
2. When water quality objectives for chloride were set in accordance with the *State Antidegradation Policy* and the federal *Antidegradation Policy*, the Regional Board assumed that chloride concentrations in imported waters would remain relatively low. Since 1975, however, chloride concentrations in supply waters imported into the Region have been increasing. During the late 1980s, drought in watersheds that are sources of imported supply waters made it difficult for many dischargers in the Los Angeles Region to comply with water quality limits for chloride.
3. In addition to relatively high chloride levels in supply waters, chloride levels in wastewaters in the Region can be affected by salt loading that occurs during beneficial use and treatment of supply waters and wastewaters. In some areas of the Region, a significant amount of loading may occur from the use of water softeners.
4. In 1990, the Regional Board adopted Resolution No. 90-04: *Effects of Drought-Induced Water Supply Changes and Water Conservation Measures on Compliance with Waste Discharge Requirements within the Los Angeles Region*. This resolution, commonly referred to as the *Drought Policy*, was intended to provide short-term and temporary relief to dischargers who were unable to comply with limits for chloride due to the effects of drought on chloride levels in supply waters imported into the Region.

For those dischargers who applied for relief under the *Drought Policy*, the Regional Board temporarily reset limits on concentrations of chloride at the lesser of: (i) 250 mg/L, or (ii) the chloride concentrations in supply waters plus 85 mg/L. An important condition of this relief was that dischargers demonstrate that high chloride concentrations in their discharges of wastewaters are due to increased salinity levels in supply waters imported into their service areas. Several dischargers provided data that confirm that supply waters imported into the Region are the cause of exceedances of chloride limits in discharges of wastewaters. However, many other dischargers have not yet adequately assessed the source(s) of relatively high levels of chloride in wastewaters and the extent to which exceedances are due to factors such as chloride in supply waters and/or significant chloride loading during beneficial use and treatment of supply waters and wastewaters.

Revised January 14, 1997
Revised January 27, 1997

0000369

Resolution No. 97-02
Page Two

5. The drought ended before the *Drought Policy* was due to expire in 1993. However, because water supply reservoirs still had high chloride concentrations in 1993 and because water suppliers estimated that it would take 12 to 18 months for complete replenishment of imported waters in reservoirs, the Regional Board renewed the *Drought Policy* in June 1993 and again in February 1995. The *Drought Policy* currently is due to expire on the earlier of February 27, 1997 or at that point in time when it has been determined that chloride levels in water supplies imported into the Region have returned to pre-drought conditions.
6. Chloride levels in supply waters imported into the Region and in reservoirs are no longer impacted by drought. However, chloride levels in supply waters imported into the Region are generally higher than they were before drought conditions in the late 1980. The higher levels of chloride in imported waters appear to be the result of intensifying demands for and utilization of water resources in watersheds that are the sources of supply waters. In addition, future droughts may affect levels of chloride in supply waters imported into the Region.
7. The Regional Board recognizes the shortage of water in the Region and the need to conserve supplies of fresh water for protection of beneficial uses. Accordingly, the Regional Board supports water reclamation, as described in State Board Resolution No 77-01: *Policy with Respect to Water Reclamation in California*. However, achievements in water conservation and reclamation can increase levels of chloride and other ionic constituents in reclaimed waters and wastewaters that are ultimately discharged to waterbodies in the Region.
8. In order to develop a long-term solution to the chloride compliance problems stemming from elevated levels of chloride in supply waters imported into the Region, the Regional Board has been working with a group of technical advisors, formerly known as the Chloride Subcommittee of the Surface Water Technical Review Committee. This group of technical advisors represents a variety of interests, including: water supply, reclamation, and wastewater management; environmental protection; and water softener industry interests. The group concurs with:
 - (a) an approach to permanently reset water quality objectives for chloride in certain surface waters, using levels of chloride in water supply plus a chloride loading factor.
 - (b) a need to assess long-term loading trends for chloride and other saline constituents.

Furthermore, due to concerns expressed about the potential for future adverse impacts to agricultural resources in Ventura County, the Regional Board proposes to work with a local group of agencies, municipalities, representatives of the agricultural community, and other interested parties in order to clarify chloride objectives needed to protect waters used for irrigation in the Santa Clara River and Calleguas Creek watersheds. In addition, this local group concurs with the need to undertake assessments of significant sources of chloride loading and—contingent upon results—identify methods that could control chloride loading and the costs and effectiveness of the various loading control methods.

0000370

Resolution No. 97-02
Page Three

9. The Secretary of Resources has certified the basin planning process exempt from certain requirements under the California Environmental Quality Act (CEQA), including preparation an initial study, a negative declaration and environmental impact report (Title 14, California Code of Regulations, Section 15251). As per this certification, an amendment to the *Basin Plan* is considered 'functionally equivalent' to an initial study, negative declaration, and environmental impact report.

Any regulatory program of the Regional Board certified as functionally equivalent, however, must satisfy the documentation requirements of Title 23, California Code of Regulations, Section 377(a), which requires an environmental checklist with a description of the proposed activity, and a determination with respect to significant environmental impacts. On November 15, 1996, the Regional Board distributed information regarding a proposed amendment to the *Basin Plan* to incorporate a *Policy for Addressing Levels of Chloride in Discharges of Wastewaters (Chloride Policy)*. This information included an environmental checklist, a description of the proposed amendment to the *Basin Plan*, and a determination that the proposed amendment could not have a significant effect on the environment.

10. The public has had reasonable opportunity to participate in review of the amendment to the *Basin Plan*. Efforts to solicit public review and comment include: public notification, more than 45 days preceding Board action; public workshops, held on December 2, 1996, December 3, 1996, and January 6, 1997; responses from the Regional Board to oral and written comments received from the public, and a public hearing held on January 27, 1997.
11. In amending the *Basin Plan*, the Regional Board considered factors set forth in section 13241 of the Porter-Cologne Water Quality Control Act (California Water Code, Division 1, Chapter 2, Article 3, et seq., plus others).
12. The amendment is consistent with the State *Antidegradation Policy* (State Board Resolution No. 68-16), in that the changes to water quality objectives (i) consider maximum benefits to the people of the state, (ii) will not unreasonably affect present and anticipated beneficial use of waters, and (iii) will not result in water quality less than that prescribed in policies. Likewise, the amendment is consistent with the federal *Antidegradation Policy* (40 CFR 131.12).
13. Revision of water quality objectives for chloride is subject to approval by the State Water Resources Control Board, the State Office of Administrative Law, and the US Environmental Protection Agency.

0000371

THEREFORE, BE IT RESOLVED THAT:

1. Water quality objectives for chloride for certain surface waters will be revised as specified below.

Waterbody	New Objective
Los Angeles River—between Sepulveda Flood Control Basin and Figueroa Street (including Burbank Western Channel only)	190 mg/L
Los Angeles River—between Figueroa Street and estuary (including Rio Hondo below Santa Ana Freeway only)	190 mg/L
Rio Hondo—between Whittier Narrows Flood Control Basin and Santa Ana Fwy	180 mg/L
San Gabriel River—between Valley Blvd. and Firestone Blvd. (including Whittier Narrows Flood Control Basin, and San Jose Creek downstream of 71 Fwy only)	180 mg/L

These new objectives are set at the lower of (i) levels needed to protect beneficial uses, or (ii) chloride levels in supply waters imported into the Region plus a chloride loading factor of 85 mg/L. The levels at which the new water quality objectives have been set are expected to accommodate fluctuations in chloride concentrations that may be due to future drought. Although the new water quality objectives do not match background levels of chloride, they nevertheless are expected to be fully protective of drinking water and freshwater aquatic life.

2. Due to concerns expressed about the potential for future adverse impacts to agricultural resources in Ventura County, water quality objectives for chloride in the Santa Clara River and Calleguas Creek watersheds will not be revised at this time. To address compliance problems with chloride limits based on existing water quality objectives, the Regional Board hereby grants variances (interim relief) to existing dischargers identified on Attachment A. The Executive Officer is directed to notify these dischargers that they are subject to surface water interim limits specified below.

Waterbody Segments for which Existing Dischargers Are Subject to Interim Chloride Limits	Interim Chloride Limit
Santa Clara River—between Bouquet Canyon Road Bridge and West Pier Highway 99	190 mg/L
Santa Clara River—between West Pier Highway 99 and Blue Cut gaging station	190 mg/L
Santa Clara River—between Blue Cut gaging station and A Street (Falmore)	190 mg/L
Arroyo Simi and tributaries—upstream Madera Road	160 mg/L
Arroyo Simi—downstream Madera Road, Arroyo Las Posas, and tributaries	190 mg/L
Calleguas Creek and tributaries—between Potrero Road and Arroyo Las Posas (including Conejo Creek, Arroyo Conejo, and Arroyo Santa Rosa)	190 mg/L

The variance period for interim relief will extend for three years following final approval of the amendment. During this period, the Regional Board expects that the local group of agencies, municipalities, representatives of the agricultural community, and other interested parties which have commented upon this policy will work together to: (i) clarify water quality objectives needed to protect waters used for irrigation in the Santa Clara River and Calleguas Creek

0000372

Resolution No. 97-02
Page Six

8. Resolution No. 90-04: *Effects of Drought-Induced Water Supply Changes and Water Conservation Measures on Compliance with Waste Discharge Requirements within the Los Angeles Region (Drought Policy)*, which was intended to provide short-term and temporary relief to dischargers who were unable to comply with limits for chloride due to the effects of drought on chloride levels in supply waters, is hereby rescinded with the adoption of this resolution.

While this resolution and amendment to the *Basin Plan* are under review by the State Water Resources Control Board, Office of Administrative Law, and the US Environmental Protection Agency, the Regional Board will evaluate compliance consistent with provisions set forth in this resolution.

I, John Norton, Acting Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Los Angeles Region, on January 27, 1997.

Subject: Notice of Continued Public Hearing for a proposed amendment to the California Regional Water Quality Control Plan for the Los Angeles Region, for Water Quality Objective (Chloride) Changes at Santa Paula and Santa Clarita Reaches of the Santa Clara River

The California Regional Water Quality Control Board, Los Angeles Region (Regional Board) will continue the hearing to consider a proposed amendment to the California Regional Water Quality Control Plan for the Los Angeles Region, to incorporate revised water quality objectives for chloride in the reaches at Santa Paula and Santa Clarita of the Santa Clara River.

*A Public Hearing will be held on July 27, 2000
at 9 a.m. at the Richard H. Chambers U.S. Court of Appeals Building
125 South Grand Avenue
Pasadena, California*

Background:

The Santa Clara River is located in Los Angeles and Ventura Counties, California. It extends from McGrath State Beach to east of the town of Santa Clarita.

The Regional Board previously determined that the level of chloride in the reaches between the Los Angeles/Ventura County line and Bouquet Canyon of the Santa Clara River exceeded water quality standards (WQS). This determination was made after reviewing data collected by Regional Board staff, other agencies, and from NPDES receiving water monitoring reports. Based upon Regional Board staff findings, the Santa Clara River was listed on California's 1998 Clean Water Act (CWA) Section 303(d) list as water quality impaired due to chloride.

The proposed Basin Plan amendment was developed after assessing the impairments described in the 1998 303(d) list. The draft amendment proposes to revise the chloride objective from 80 mg/l to 100 mg/l for the reach at Santa Paula and from 100 mg/l to 143 mg/l for the reaches between the Los Angeles/Ventura county line and Bouquet Canyon.

If adopted, the Basin Plan would be amended to add a footnote to Table 3-8 Water Quality Objectives for Selected Constituents in Inland Surface Waters, Recommended Objective for Beneficial Use Categories. The footnote would read "crop sensitivity to chloride varies so that objectives set to be protective of agriculture may be higher than the lowest recommended objective of 100 mg/l."

The Basin Plan would also be amended to add a footnote to Table 3-8 Water Quality Objectives for Selected Constituents in Inland Surface Waters. The footnote would read "compliance with this objective may be measured as an instantaneous maximum or as a rolling 12 month average."

California Environmental Protection Agency

Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations.

- 2 -

The proposed Basin Plan amendment was first presented to the Board on April 13, 2000. Additional information on the cost of the proposed action was requested by the Regional Board and the item was continued. In addition, new information became available on water rights and endangered species which will be presented for the Board's consideration.

Attached is an addendum to the staff report for this amendment to be considered at the July 27, 2000 hearing.

Synopsis

Board members will recall from the April 13, 2000 Board meeting that the interim chloride limits of 190 mg/L will expire in January 2001. These limits were intended to provide temporary relief to dischargers while the issue was researched in detail. At the time, these increasing levels were thought to be due to increasing levels of chloride in imported water, primarily the result of prolonged drought conditions. In 1997, the Board instructed staff to assess chloride objectives in the Santa Clara and Calleguas Creek watersheds. Agricultural water supply is a designated beneficial use in these watersheds, and depending on the crops grown, this beneficial use can be especially sensitive to chloride. Staff's presentation at the April 13 Board meeting was

in response to the Board's earlier directive, and represents the results of nearly 2 years of meetings with stakeholders and supporting studies.

During the April 13, 2000 Board meeting staff recommended that the existing chloride objectives for reaches at Santa Clarita be increased from 100 mg/L to 143 mg/L, and that the objective for the reach at Santa Paula be increased from 80 mg/L to 100 mg/L. Compliance with the objectives was to be based on a rolling 12-month average. In addition, a maximum, not-to-exceed concentration of 180 mg/L would apply to both the Santa Clarita and Santa Paula reaches. At that meeting, the Board directed staff to review in more detail the cost implications of the recommended actions.

Staff's review confirmed the earlier findings that the cost of meeting the proposed objectives in the Santa Clarita and Santa Paula reaches is affordable. This is in part due to the low sewage rates currently enjoyed by area residents.¹ Staff also found that although it will be more expensive to meet the existing objectives, these costs also are affordable for the Santa Clarita reach communities, but less so for Santa Paula. In addition, staff identified treatment strategies that may be less costly than those proposed by the Los Angeles County Sanitation District (LACSD).

Santa Paula's average sewage rates will soon be increasing to \$14 per month to pay for plant upgrades unrelated to the chloride objective. Should additional treatment be required to meet the existing or proposed chloride objectives, rates could increase to levels that are relatively high when compared to other cities in California and other western states. When assessing the affordability, it is important to note that the median income of ratepayers in Santa Paula is lower than in the Santa Clarita reach communities.

It is possible that the Santa Paula POTW will meet the proposed objective of 100 mg/L without additional treatment. The discharge is located downstream from the confluence with Sespe Creek. If the permit allows for a mixing zone, it is likely that Santa Paula will be able to meet the proposed objective without chloride removal. It is uncertain whether a mixing zone will be allowed in future permits.

¹ The average sewage rate for the Santa Clarita reach communities is approximately \$9 per month.

Since the April 13, 2000 Board meeting the following new information has become available:

- Questions Regarding Assimilative Capacity Estimates. Testimony before the Public Utilities Commission and a recent Superior Court ruling (County of Ventura vs. County of Los Angeles et al., issued on May 31) raises questions regarding whether sufficient water supplies exist to support the proposed Newhall Ranch project. Overdrafts of the groundwater aquifers could reduce the surface water flow in the Santa Clara River and thus its capacity to assimilate chloride loading. This was one of the underlying assumptions of the initial staff recommendations.
- New Finding of an Endangered Species. On May 30, 2000 the United States Forest Service (USFS) confirmed the presence of an endangered species, the unarmored three-spine stickleback, in the lower part of Bouquet Canyon. Neither staff nor the stickleback experts consulted, identified any salt-tolerance work for this sub-species. Therefore, at this time any impacts from raising the objective are unknown.
- Required Change in Designated Beneficial Use. The State Water Resources Control Board (SWRCB) staff and counsel have advised the Regional Board staff that, in their opinion, a change in the chloride objective to 143 mg/L in the Santa Clarita reaches would necessitate a change in the designated beneficial use in the *Basin Plan* to "Restricted Agricultural Water Supply." This would be a new designated beneficial use category in the *Basin Plan*. This would require an additional Basin Plan amendment for the initial staff recommendation to be approved.

Recommendations

Staff recommends that the Board still consider changing the chloride *Basin Plan* objective at Santa Clarita from 100 mg/L to 143 mg/L, and at Santa Paula from 80 mg/L to 100 mg/L when the interim objectives expire next January. These objectives would be based on a rolling 12-month average. In addition, a maximum, not-to-exceed chloride concentration of 180 mg/L would be applied to both the Santa Clarita and Santa Paula reaches.

Alternative actions that the Board may wish to consider include:

- No Action. The result of this alternative will be that the existing objectives of 80 mg/L for the Santa Paula reach and 100 mg/L for the Santa Clarita reaches will be effective when the Chloride Policy expires in January 2001.
- Maintain the existing objective of 100 mg/L at the Santa Clarita reaches and adopt the proposed objective of 100 mg/L at the Santa Paula reach.

The likely consequences associated with the existing and proposed chloride objectives are summarized in Table 1 and Table 2 for the Santa Clarita reaches and the Santa Paula reach, respectively.

Table 1
Alternatives for Santa Clarita Reaches

Alternatives	Pros	Cons	Further Work Required
Revise Objective to 143 mg/l	Supports Agriculture Beneficial Use with existing practices.	Does not support direct use of surface water for agriculture, unless soils are periodically leached with an alternate water supply with a lower chloride concentration.	Need to develop restricted agricultural beneficial use and "downgrade" beneficial use.
	Minimal treatment costs to control short periods of high discharge concentration.	Only a temporary solution in the event that groundwater volume and resultant surface water flows decrease due to growth.	
	Increased sewage rates are below statewide average.		
Maintain Existing Objective 100 mg/l	Supports direct use of surface water for agriculture.	Treatment will require an increase in sewage rates.	TMDL will need to be completed (although most of the work has been done).
	Increased sewage rates are close to statewide average.		

Table 2
Alternatives for Santa Paula Reach

Alternatives	Pros	Cons	Further Work Required
Revise Objective to 100mg/l	Supports direct use of surface water for agriculture.		
	No additional treatment costs.		
Maintain Existing Objective 80mg/l	Supports direct use of surface water for agriculture.	Increase in sewage rates to among the highest in California.	TMDL will need to be developed (although most of the work has been done).

Cost Analysis

Per the Board's direction on April 13, 2000, staff conducted a more detailed economic analysis. Based on new information received since the Board meeting (see pages 14-16 herein), staff now believes that chloride removal will be required in the future due to the impacts of growth. Therefore, the new cost analysis includes estimates for near-term and delayed chloride removal treatment. The exact year by which chloride removal will be required is unknown. However, the need for treatment will be influenced by the overdrafts of groundwater aquifers that are in communication with the Santa Clara River. Although there is no clear agreement as to when an overdraft of groundwater aquifers will occur, the year 2015 was selected for the delayed treatment cost analysis.

Verification of the Sanitation Districts' Cost Estimates

The cost estimates provided by the dischargers were verified by comparison with those reported for existing reverse osmosis plants in California and those reported in a three-year Metropolitan Water District (MWD) salinity management study completed in 1998. The capital costs varied with plant flow, cost to dispose of the brine, and to a lesser extent, salinity of the influent. Actual costs may be less because of potential alternative funding sources (e.g., MWD) and revenues from the sale of the treated effluent which were not considered here.

Alternative Treatment Cost Analysis

In an attempt to think "outside of the box," staff identified alternatives to the conventional reverse osmosis treatment process, on which LACSD based its costs analysis. First, staff considered the various sources of chloride in the POTWs' effluent. As shown in Figure 1, these sources include imported water; brine from home water softeners; chlorides contained in soaps, detergents, and other cleaning products; and disinfection of effluent with sodium hypochlorite and other reagents containing chlorine (identified as "treatment" in Figure 1).

Recognizing the large chloride contribution from home water softeners, staff initially focused on a means for eliminating this source. A method for "softening" water supplies before distribution was evaluated. It was theorized that if optimally conditioned water was available at the tap, residents would have no incentive to invest in the expense of installing new water softeners. Furthermore, with an education campaign and an aggressive rebate program, water districts could effectively remove many in-place water softeners. However, due to the expense of constructing a piping system to bring the supply water to a central treatment facility, the cost of softening the water supply made this approach more costly than other alternatives.

Other approaches, including moving the outfall in an attempt to secure an effective mixing zone and blending of water supplies, were not considered to be viable. These approaches were found to have limited applications and/or to be more costly. Moving the outfall of Santa Paula to below the point of agricultural diversion was not particularly costly, but success in ensuring compliance through mixing was not assured. Furthermore, in the case of Santa Clarita, maintaining stream flow for protection of aquatic species and riparian habitat precludes moving the outfall to the ocean or to downstream tributaries. Blending of water from groundwater supplies was not considered to be a viable alternative. The groundwater in Santa Paula is very hard, and the groundwater in Santa Clarita is already allocated.

Ultra-violet (UV) disinfection of the discharge, which eliminates the chloride contribution from some traditional chlorine disinfection processes, would likely result in near-term compliance with the proposed objective (143 mg/L), but not the existing objective (100 mg/L) in Santa Clarita.

Agenda Item #10
Basin Plan Amendment
for the
Santa Clara River
Public Hearing
Dec. 7, 2000

DOC #999223

1 CHAIRMAN NAHAI: I shall.

2 Would all those who are going to provide
3 testimony in connection with this matter please rise and
4 repeat after me:

5 I do solemnly swear.

6 ALL PERSONS: I do solemnly swear.

7 CHAIRMAN NAHAI: That the testimony I'm about
8 to give.

9 ALL PERSONS: That the testimony I'm about to
10 give.

11 CHAIRMAN NAHAI: Will be the truth.

12 ALL PERSONS: Will be the truth.

13 CHAIRMAN NAHAI: The whole truth.

14 ALL PERSONS: The whole truth.

15 CHAIRMAN NAHAI: And nothing but the truth.

16 ALL PERSONS: And nothing but the truth.

17 CHAIRMAN NAHAI: Under penalty of perjury.

18 ALL PERSONS: Under penalty of perjury.

19 CHAIRMAN NAHAI: Thank you.

20 We have the staff presentation.

21 MR. BISHOP: Good morning, board members. My
22 name is Jonathan Bishop. I'm the Chief of the Regional
23 Program Section of the Regional Board.

24 Items 10.1 and 10.2 are closely related items
25 that deal with longstanding solidity issues in our
26 region. Up until a couple of days ago, staff was fully
27 intending to recommend an increase in the chloride
28 objectives for the Santa Clara reach -- Santa Clarita

30

BARNEY, UNGERMANN & ASSOCIATES, INC. (888) 326-5900

1 reach of the Santa Clara River from 100 milligrams per
2 liter to 143 milligrams per liter and believed there was
3 a firm, scientific and legal basis for this
4 recommendation.

5 On November 29th, we received a letter from the
6 United Water Conservation District which supported in
7 general the proposed modification of the chloride
8 objective but stated that the sample they had collected
9 in September recorded a chloride concentration of 137
10 milligrams per liter in the reach directly downstream of
11 the Santa Clarita reach. The chloride objective in this
12 reach, which is between Santa Clarita and Santa Paula
13 reaches, is 100 milligrams per liter and was not being
14 considered for change.

15 The information was a concern to staff. Staff
16 followed up with United Water Conservation District and
17 requested additional data that they had collected over
18 the past two years. After careful review of this data,
19 which I will cover later in the presentation, staff must
20 now reconsider the recommendation to increase the
21 objective in the Santa Clarita reach.

22 I'd like to spend a few minutes to describe the
23 history of this issue before we get into the new
24 information.

25 Okay. To orient you, here's a map depicting
26 the Santa Clara River Watershed. The watershed spans
27 across both Ventura and Los Angeles County. See the
28 County Line right here.

31

BARNEY, UNGERMANN & ASSOCIATES, INC. (888) 326-5900

1 April.

2 As you recall, staff proposed to increase the
3 chloride objective in the Santa Clara reaches from 100
4 milligrams per liter to 143 and in the Santa Paula
5 reaches increase the objective from 80 to 100 milligrams
6 per liter. The new objective were to be the average
7 concentration in the river measured based on a rolling
8 12-month average. In addition, a maximum not to exceed
9 a limit of 180 milligrams per liter would apply.

10 These limits were justified as the absolute
11 maximum that could be allowed and still support the most
12 sensitive beneficial uses, which is downstream
13 agriculture supply. It was determined that the local
14 crops grown, avocados and strawberries, were the most
15 sensitive.

16 The consensus among the agricultural experts
17 consulted was that these crops require irrigated water
18 with a maximum chloride concentration of between 100 and
19 120 milligrams per liter. However, in the Santa Clarita
20 reaches there are and have never been avocado or
21 strawberries grown. The intermediate reaches do have
22 sensitive crops, but this proposal assumes that the
23 intermixing of groundwater provides enough assimilative
24 capacity to reduce concentration to 100 milligrams per
25 liter prior to use by agriculture. The recent
26 information brings this assumption into question.

27 In Santa Paula, however, the surface water is
28 being used directly within the reach. Therefore, the

35

BARNEY, UNGERMANN & ASSOCIATES, INC. (888) 326-5900

1 the accompanying resolution to extend the interim limits
2 for chloride contained in this accompanying resolution
3 to allow time for the development of the TMDL.

4 And I'm happy to answer any questions and try
5 and explain issues.

6 CHAIRMAN NAHAI: Thank you, Jon. And I think
7 I'd like to comment that the tremendous effort and
8 outreach that has accompanied this debate on the part of
9 the board staff is very much appreciated by the Board,
10 and I'm sure it's appreciated by the community as well.

11 Do you have any comments, questions for Jon at
12 this time?

13 MS. CLOKE: I just had a question about the
14 difference.

15 MR. LEON: Miss Cloke, hello. I'm sorry. For
16 the board members in general, I had a comment -- a
17 couple of comments during the break that some of the
18 audience members particularly could not hear the board
19 members. If you would make an effort to get closer to
20 the mic. Okay. Thank you.

21 MS. CLOKE: How's that? Can you hear me in the
22 back? If you can't, do this or something and I'll get
23 the message.

24 All right. In one of the slides that you
25 showed us you had a seventies average and eighties
26 average and nineties average. Can you describe to us or
27 explain to us what you think made or what staff knows
28 made the change in those numbers?

44

BARNEY, UNGERMANN & ASSOCIATES, INC. (888) 326-5900

1 MR. BISHOP: Yeah. I don't think that there is
2 one answer to say it's been the increase -- it's been a
3 number of things. It's been increase in population,
4 which means we have increase in imported water and
5 increase in sewage, treated sewage.

6 I think we also have a change that we've had a
7 large aquifer system that's been the buffer for this
8 chloride over a long period of time, and you look at the
9 earlier data and it looks very -- it's variable but it
10 keeps going up and down. I think you're going to hear a
11 lot about things haven't really changed over time.

12 But, in my view, if you look at that data in
13 that way, in the seventies, eighties and nineties, there
14 is a change, and what that change shows to me is that
15 the assimilative capacity is no longer there. The
16 groundwater is slowly being saturated with more salts
17 and that feeds back and forth between the surface and
18 groundwater.

19 MS. CLOKE: And the other question I have on
20 this is can you put a value on what -- how much of this
21 comes from water softeners?

22 MR. BISHOP: I can only give you an estimate
23 that 40 percent of the chloride load in the waste water
24 treatment effluent is from residential, and a portion of
25 that residential load is from water softeners. But how
26 much of that, I can't give you.

27 MS. CLOKE: And if that -- if you could take
28 even a portion of that 40 percent out, would that bring

45

**SANTA CLARA RIVER
CHLORIDE REDUCTION ORDINANCE OF 2008**

The Board of Directors of the Santa Clarita Valley Sanitation District of Los Angeles County ordains as follows:

1. **AUTHORIZATION**

This Ordinance is enacted pursuant to authority contained in the County Sanitation District Act, California Health and Safety Code Sections 4700 *et seq.*, and exercises authority conferred by law including, but not limited to, Chapter 5, Part 12, Division 104 of the California Health and Safety Code, and Article 4, Chapter 1, Part 1, Division 2 beginning with Section 53069.4 of the Government Code.

2. **SHORT TITLE**

This Ordinance shall be known and referred to as the *Santa Clara River Chloride Reduction Ordinance of 2008*.

3. **PURPOSE**

The purpose of this Ordinance is to limit the discharge of chlorides to the Santa Clara River thereby improving the potential for the Santa Clarita Valley Sanitation District of Los Angeles County to comply with requirements of the California Regional Water Quality Control Board, Los Angeles Region. It is also the purpose of this Ordinance to reduce the expenditure of public funds and mitigate rate increases by lessening the need for new capital facilities.

4. **DEFINITIONS**

The following definitions shall apply to the terms used in this Ordinance:

(a.) "District" means the Santa Clarita Valley Sanitation District of Los Angeles County. The District owns and operates a sewer system that conveys wastewater to the Saugus and Valencia Water Reclamation Plants.

(b.) "Person" means any person, firm, association, organization, partnership, business, trust, corporation, company, district, county, city and county, city, town, the state, the federal government, and any of the agencies and political subdivisions of such entities.

(c.) "Plants" means the District's Saugus and Valencia Water Reclamation Plants.

(d.) "Community Sewer System" means the network of facilities owned and operated by the District or that are tributary to the District-owned and operated facilities that convey wastewater from within the District's service area to the Plants.

(e.) "Regional Board" means the California Regional Water Quality Control Board, Los Angeles Region, created and exercising its powers pursuant to the Porter-Cologne Water Quality Control Act, California Water Code Sections 13000 *et seq.*

(f.) "Brine" means a heavily saturated salt solution containing chloride.

(g.) "Residence" means a structure that is, or is intended to be, in whole or in part, a place of dwelling, whether occupied or not, whether fully constructed or not, and includes, without limitation, homes, whether attached to another structure or not, apartments, condominiums, and mobile homes.

(h.) "Residential self-regenerating water softener" and/or "appliance" means residential water softening or conditioning appliances that discharge Brine into the Community Sewer System. Residential self-regenerating water softeners are also more commonly known as "automatic" water softeners. Residential self-regenerating water softeners only include water softening or conditioning devices that renew their capability to remove hardness from water by the on-site application of a chloride solution to the active softening or conditioning material contained therein, followed by a subsequent rinsing of the active softening or conditioning material.

5. FINDINGS

The Board of Directors of the District finds and declares the following:

- a) The Santa Clara River is one of the only remaining natural rivers in Southern California, supporting fish and wildlife, recreation and agriculture in Los Angeles and Ventura Counties.
- b) The District's Plants discharge to the Santa Clara River.
- c) Use of residential self-regenerating water softeners installed prior to 2003 is the most significant controllable source of chloride entering the Community Sewer System and the Plants. Residential self-regenerating water softeners use salt to renew their capacity to remove hardness, and then discharge Brine to the Community Sewer System. Residential self-regenerating water softeners account for approximately 30% of all chloride in the Plant's discharge. Although wastewater is treated to a high level at the District's Plants, the Plants are not designed to remove chloride.
- d) The Regional Board has determined that chloride levels in the Santa Clara River must be reduced, and pursuant to a Total Maximum Daily Load ("TMDL") for chloride established by the Regional Board for Reaches 5 and 6 of the Santa Clara River in Los Angeles County, which became effective May 4, 2005, has required the District to reduce the chloride levels in its Plants' discharge.
- e) The District has adopted and is enforcing regulatory requirements that limit the volume and concentrations of chloride discharges from non-residential sources to the Community Sewer System to the extent technologically and economically feasible.
- f) The District has adopted and is enforcing an ordinance prohibiting the prospective installation of residential self-regenerating water softeners pursuant to Health & Safety Code Section 116786.
- g) To further reduce chloride in the Plants' discharge, the District must either reduce sources of chloride in wastewater discharged to the Community Sewer System, remove chloride from wastewater at the Plants through construction and operation of expensive and energy-intensive advanced treatment facilities, or both. Construction and operation of advanced treatment facilities for chloride removal at the Plants will result in the production of Brine, which will also require disposal. If residential self-regenerating water softeners are not removed, the incremental present worth of construction and operation of advanced treatment

and Brine disposal facilities to remove chloride contributed by residential self-regenerating water softeners is approximately \$73 million.

- h) Reducing chloride levels by requiring the removal of all remaining installed residential self-regenerating water softeners discharging to the Community Sewer System will cost the District approximately \$2-3 million.
- i) Reducing chloride levels by requiring the removal of all installed residential self-regenerating water softeners would save the District's ratepayers approximately \$70 million, based on the difference between the cost of residential self-regenerating water softener removal and the incremental cost of new advanced treatment and Brine disposal facilities to remove the same amount of chloride.
- j) Removal of residential self-regenerating water softeners within the District is estimated to take approximately one year after the effective date of this Ordinance. Under the TMDL, the District must perform environmental review, permitting, design and construction of new advanced treatment and Brine disposal facilities for the removal of chloride by May 4, 2016. Therefore, removing residential self-regenerating water softeners will reduce chloride in discharges to the Santa Clara River sooner than installing advanced treatment and Brine disposal facilities to achieve an equivalent level of chloride reduction.
- k) The removal of all installed residential self-regenerating water softeners is a necessary and cost-effective means of achieving timely compliance with a TMDL issued by the Regional Board for the Santa Clara River.
- l) Residents within the District will maintain the ability to soften or condition their water by using water softening or conditioning devices that do not discharge Brine to the Community Sewer System. Among these are portable exchange water softeners, which use a removable tank to soften water. These tanks are serviced by facilities located outside the District's service area that are permitted to treat and dispose of the Brine used to regenerate them. Based on available information, sufficient capacity to treat Brine exists in Los Angeles County, and therefore, portable exchange water softeners remain available as a water softening option for residents affected by this Ordinance.
- m) Based on available information, the adoption and implementation of this Ordinance will avoid or significantly reduce the costs associated with advanced treatment for chloride removal and Brine disposal that otherwise would be necessary to meet the TMDL.
- n) The District has established a voluntary program to compensate owners of residential self-regenerating water softeners within its service area for 100% of the reasonable value of each removed residential self-regenerating water softener and the reasonable cost of the removal and disposal of that residential self-regenerating water softener. This program shall remain in effect until the Effective Date of this Ordinance. The program is expected to result in the removal of 3,300 self-regenerating water softeners. The reduction in chloride levels resulting from the voluntary program is expected to be 4,400 pounds per day.
- o) On and after the Effective Date of this Ordinance, the District will continue a program to compensate owners of residential self-regenerating water softeners within its service area for 75% of the reasonable value of each removed residential self-regenerating water softener and the reasonable cost of the removal and disposal of that residential self-regenerating water

softener. Approximately 3,200 self-regenerating water softeners are expected to be removed. The potential reduction in chloride levels expected as a result of the program is 4,300 pounds per day.

6. REQUIREMENT FOR REMOVAL OF RESIDENTIAL SELF-REGENERATING WATER SOFTENERS

Every person who has a residential self-regenerating water softener that is installed upon his or her property or premises, and every person occupying or leasing the property or premises of another who has a residential self-regenerating water softener installed thereon, that discharges into the Community Sewer System shall remove and dispose of the installed residential self-regenerating water softener within 180 days after the Effective Date of this Ordinance.

7. ADMINISTRATIVE ENFORCEMENT

- a) The Chief Engineer and General Manager of the District ("Chief Engineer") shall administer, implement, and enforce the provisions of this Ordinance. Any powers granted to or duties imposed upon the Chief Engineer may be delegated to persons acting in the beneficial interest of or in the employ of the District. The Chief Engineer shall enforce this Ordinance by (1) performing public outreach to inform residents of the terms of this Ordinance and to encourage voluntary compliance, (2) withholding administrative enforcement actions until 180 days after the Effective Date of the Ordinance have passed to allow all affected residents adequate time to remove their installed residential self-regenerating water softeners, (3) monitoring flows within the Community Sewer System to determine the locations of residential self-regenerating water softeners, and/or (4) conducting inspections upon reasonable notice of any residence that discharges to the Community Sewer System.
- b) The Chief Engineer may issue a Notice of Violation to any Person who fails to remove a residential self-regenerating water softener as required by this Ordinance. A Notice of Violation shall allow a period of 60 days to correct the violation and to remove and dispose of the installed residential self-regenerating water softener. Any Person violating this Ordinance after issuance of Notice of Violation and the subsequent 60-day period shall pay an administrative fine to the District in an amount not to exceed \$1,000.00 for such violation.
- c) Any Person who has received a Notice of Violation may within 30 days request a hearing and review by a hearing officer of the District. The hearing shall be held within 30 days of the request. Following the hearing, the District's hearing officer may dismiss the violation or issue an Administrative Order for the imposition of an administrative fine and the removal of any installed appliance. Service of the Administrative Order may be made by personal delivery or by first class mail addressed to the Person at the address listed in the notice. An Administrative Order may be appealed in accordance with the provisions of Government Code Section 53069.4.
- d) The owner of a residential self-regenerating water softener subject to administrative enforcement under this section may elect to have the District remove the residential self-regenerating water softener from the residence. The owner retains the right to compensation for 75% of the reasonable value of the residential self-regenerating water softener.

8. **VIOLATION**

Any Person who violates any of the provisions of this Ordinance following the issuance of a final Administrative Order under Section 7 is guilty of a misdemeanor punishable by a fine of not to exceed \$1,000.00 or by imprisonment not to exceed 30 days or by both such fine and imprisonment. The amount of any such fine shall be first allocated to pay the District's costs of enforcement.

9. **SEVERABILITY**

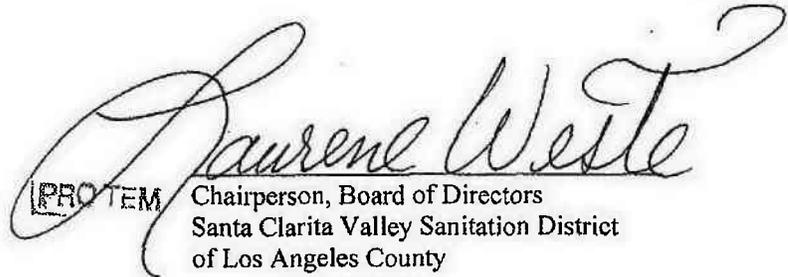

If any provision of this Ordinance or the applicability thereof to any person or circumstances is held invalid, that invalidity shall not affect other provisions or applications of this Ordinance that can be given effect without the invalid portion or application, and to that end the provisions of this Ordinance are severable.

10. **REFERENDUM**

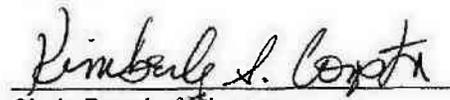

Pursuant to California Health & Safety Code Section 116787(b), this Ordinance shall not be effective until it is approved by a majority vote of the qualified votes cast in a regularly scheduled election, held in the District's service area, in a referendum in accordance with applicable provisions of the Elections Code.

11. **EFFECTIVE DATE**

This Ordinance shall become effective 30 days from the date of final passage by the Board of Directors and subsequent approval by the voters pursuant to referendum, but no earlier than January 1, 2009.

SUBJECT: AGRICULTURAL BENEFICIAL USE IN SANTA CLARA RIVER

This memorandum confirms our telephone discussion on October 3, 2000, regarding the Los Angeles Regional Water Quality Control Board's proposed water quality control plan amendment for the Santa Clara River. In that conversation I concluded that the proposed chloride objective of 143 milligrams per liter (mg/l) for the Santa Clarita reach will protect the existing agricultural use for that stretch of the Santa Clara River. The reasons are explained below.

The evidence in the record apparently indicates that water from the Santa Clarita reach of the Santa Clara River is not currently used to irrigate salt-sensitive crops, such as avocados and strawberries. Nor has it been used in the past for this purpose. Also, chloride levels in the Santa Clarita reach have apparently not changed for the past 25 years or so. They are approximately 143 mg/l. Based on this information, I conclude that the proposed chloride objective of 143 mg/l is protective of the existing agricultural beneficial use. Therefore, it is unnecessary to adopt a subcategory of the agricultural use, such as a "restricted agricultural use".

My previous conclusion that the proposed objective would not be protective of the existing designated agricultural use was based on the assumption that waters from the Santa Clarita reach are used, or were used in the past, to irrigate salt-sensitive crops. Information in the staff report indicates that irrigation waters with a chloride level of 143 mg/l could damage these crops, unless certain measures are taken to avoid the damaging effects. For these reasons, I concluded that the proposed objective would protect only a "restricted agricultural use."

4837-0090-6752.2

State of California
California Regional Water Quality Control Board, Los Angeles Region

RESOLUTION NO. R02-018

October 24, 2002

Amendment to the Water Quality Control Plan (Basin Plan) for the Los Angeles Region
to Incorporate a Total Maximum Daily Load for Chloride in the Upper Santa Clara River

WHEREAS, the California Regional Water Quality Control Board, Los Angeles Region, finds that:

1. The federal Clean Water Act (CWA) requires the California Regional Water Quality Control Board, Los Angeles Region (Regional Board) to develop water quality standards which include beneficial use designations and criteria to protect beneficial uses for each water body found within its region.

The Regional Board carries out its CWA responsibilities through California's Porter-Cologne Water Quality Control Act and establishes water quality objectives designed to protect beneficial uses contained in the Water Quality Control Plan for the Los Angeles Region (Basin Plan).

3. Section 303(d) of the CWA requires states to identify and to prepare a list of water bodies that do not meet water quality standards and then to establish load and waste load allocations, or a total maximum daily load (TMDL), for each water body that will ensure attainment of water quality standards and then to incorporate those allocations into their water quality control plans.
4. The Upper Santa Clara River was listed on California's 1998 section 303(d) list, due to impairment for chloride, which is present at levels that exceed the water quality standard and do not protect the most sensitive beneficial uses of the water body.
5. A consent decree between the U.S. Environmental Protection Agency (USEPA), Heal the Bay, Inc. and BayKeeper, Inc. was approved on March 22, 1999. This court order directs the USEPA to complete TMDLs for all the Los Angeles Region's impaired waters within 13 years.
6. The elements of a TMDL are described in 40 CFR 130.2 and 130.7 and section 303(d) of the CWA, as well as in USEPA guidance documents (e.g., USEPA, 1991). A TMDL is defined as "the sum of the individual waste load allocations for point sources and load allocations for nonpoint sources and natural background" (40 CFR 130.2). Regulations further stipulate that TMDLs must be set at "levels necessary to attain and maintain the applicable narrative and numeric water quality standards with seasonal variations and a margin of safety that takes into account any lack of knowledge concerning the relationship between effluent limitations

October 24, 2002

9-149

and water quality" (40 CFR 130.7(c)(1)). The provisions in 40 CFR 130.7 also state that TMDLs shall take into account critical conditions for stream flow, loading and water quality parameters.

7. Upon establishment of TMDLs by the State or USEPA, the State is required to incorporate the TMDLs along with appropriate implementation measures into the State Water Quality Management Plan (40 CFR 130.6(c)(1), 130.7). The Basin Plan and applicable statewide plans serve as the State Water Quality Management Plans governing the watersheds under the jurisdiction of the Regional Board.
8. The Santa Clara River is located in Los Angeles and Ventura Counties, California. The proposed TMDL addresses documented chloride water quality impairments in Reach 5 (EPA 303(d) list Reach 7) and Reach 6 (EPA303(d) list Reach 8) of the Santa Clara River that are located upstream of the United States Geological Survey Blue Cut Gauging Station near the Los Angeles/Ventura County line.
9. The Regional Board's goal in establishing the above-mentioned TMDL is to restore and maintain the agricultural supply (AGR) and groundwater recharge (GWR) beneficial uses of the Santa Clara River as established in the Basin Plan. Literature studies have documented a relationship between agricultural supply water quality and chloride concentration. At a public hearing on December 7, 2000, the Regional Board considered modifying the water quality objective for chloride of 100 milligrams per liter (mg/L) above the Blue Cut Gauging Station in Reach 5 (EPA 303(d) list Reach 7) and Reach 6 (EPA303(d) list Reach 8). The Regional Board maintained the water quality objective of 100 mg/L (measured instantaneously).
10. Interested persons and the public have had reasonable opportunity to participate in review of the amendment to the Basin Plan. Efforts to solicit public review and comment include twelve public workshops held between January 1999 and September 2002; public notification 45 days preceding the Board hearing; and responses from the Regional Board staff to oral and written comments received from the public. Additionally, Regional Board staff distributed a preliminary draft of the Staff Report for the Upper Santa Clara River Chloride TMDL on July 19, 2002 to interested parties. A public meeting was held in Santa Clarita on August 1, 2002, where staff received comments on the preliminary draft and answered questions for interested parties and the public. A final draft of the Upper Santa Clara River Chloride TMDL along with a Notice of Hearing and Notice of Filing were published and circulated 45 days preceding Board action; Regional Board staff responded to oral and written comments received from the public; and the Regional Board held a public hearing on October 24, 2002 to consider adoption of the Upper Santa Clara River Chloride TMDL.
11. The amendment is consistent with the State Antidegradation Policy (State Board Resolution No. 68-16), in that the changes to water quality objectives (i) consider maximum benefits to the people of the state, (ii) will not unreasonably affect present and anticipated beneficial use of waters, and (iii) will not result in water quality less than that prescribed in policies. Likewise, the amendment is consistent with the federal Antidegradation Policy (40 CFR 131.12).
12. The basin planning process has been certified as functionally equivalent to the California Environmental Quality Act (CEQA) requirements for preparing environmental documents

(Public Resources Code, section 21000 et seq.) and as such, the required environmental documentation and CEQA environmental checklist have been prepared.

13. The proposed amendment results in no potential for adverse effect (de minimis finding), either individually or cumulatively, on wildlife.
14. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code section 11353, subdivision (b).
15. The Basin Plan amendment incorporating a TMDL for chloride at the Upper Santa Clara River must be submitted for review and approval by the State Water Resources Control Board (State Board), the State Office of Administrative Law (OAL), and the USEPA. The Basin Plan amendment will become effective upon approval by OAL and USEPA. A Notice of Decision will be filed.

THEREFORE, be it resolved that pursuant to sections 13240 and 13242 of the Water Code, the Regional Board hereby amends the Basin Plan as follows:

Pursuant to sections 13240 and 13242 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony at the hearing, hereby adopts the amendment to Chapter 7 of the Water Quality Control Plan for the Los Angeles Region to incorporate the elements of the Upper Santa Clara River Chloride TMDL as set forth in Attachment A hereto.

2. The Executive Officer is directed to forward copies of the Basin Plan amendment to the State Board in accordance with the requirements of section 13245 of the California Water Code.
3. The Regional Board requests that the State Board approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code and forward it to OAL and the USEPA.
4. If during its approval process the State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity or consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.

The Executive Officer is authorized to sign a Certificate of Fee Exemption.

I, Dennis A. Dickerson, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Los Angeles Region, on October 24, 2002.

State Water Resources Control Board

FROM: Dennis A. Dickerson 
Executive Officer

DATE: January 16, 2003

SUBJECT: MINOR MODIFICATIONS TO THE BASIN PLAN AMENDMENT
INCORPORATING A TOTAL MAXIMUM DAILY LOAD FOR CHLORIDE
IN THE UPPER SANTA CLARA RIVER

The California Regional Water Quality Control Board, Los Angeles Region (Regional Board) has received comments from your staff concerning issues of clarity in the above-referenced basin planning action. Pursuant to Regional Board Resolution No. R02-018, I make the following non-substantive changes as detailed below to the amendment language for clarity and ask that the State Water Resources Control Board and the Office of Administrative Law incorporate these changes into the administrative record for this basin plan amendment.

1. Page 5. The statement "The following table summarizes the key elements of this TMDL" lacks clarity in that it indicates that additional unspecified regulatory requirements exist in another document. The statement should be deleted.

The statement is deleted to provide clarity.

2. Page 5, Table 7-6.1, Numeric Target. The actual numeric target was omitted from this section.

The numeric target is added to provide clarity.

3. Page 5, Table 7-6.1, Numeric Target. The initialization "CSDLAC" should be spelled out.

CSDLAC is "County Sanitation Districts of Los Angeles County." CSDLAC is spelled out for clarity.

4. Page 8, Table 7-6.2, Implementation Tasks. The following sentence lacks clarity: "a) Should the monthly average in-river concentration at Blue Cut, the reach boundary, exceed the water

California Environmental Protection Agency

January 16, 2003

quality objective of 100 mg/L, measured as a rolling twelve month average, for three months of any 12 months, the discharger will be responsible for providing an alternative water supply that meets the irrigation requirements of Camulos Ranch and/or other impacted agricultural diversions. . .". Elsewhere in this amendment the 100 mg/L water quality objective is declared an "instantaneous maximum".

4.1 As written, the above implementation language (100 mg/L, as a rolling twelve month average) is not consistent with the objective.

This inconsistency is addressed by inserting the phrase "for the purposes of this TMDL " after the word "measured".

4.2 The amendment indicates that there are two wastewater treatment plants discharging to the river. The above language lacks clarity in that it does not state how the responsible discharger will be identified and when the alternative supply is to be provided.

This statement is changed by adding the phrase "identified by the Regional Board Executive Officer" after the word "discharger".

4.3 The phrase "and/or" allows the discharger the choice of supplying water to the specified ranch or to an alternative ranch. There is no requirement that the affected ranch be supplied with the alternative supply.

The intent of the requirement is clarified by deleting the words "of Camulos Ranch and/or other" so that the phrase reads: ". . . an alternative water supply that meets the irrigation requirements of impacted agricultural diverters . . .".

5. Page 8, Table 7-6.2, Implementation Tasks. The following sentence lacks clarity: "b) should the instream concentration ~ exceed 230 mg/L more than two times in a three year period, the discharger shall be required to submit a work plan within ninety days for an accelerated schedule to reduce chloride discharge."

The amendment is clarified by inserting the phrase "identified by the Regional Board Executive Officer", after the word "discharger" and modifying the final phrase to read "shall be required to submit a work plan for an accelerated schedule to reduce chloride discharge within ninety days of a request by the Regional Board Executive Officer." The above changes are made to the amendment for clarity.

6. Page 8, Table 7-6.2, Implementation Tasks. The following sentence lacks clarity: "3. Groundwater/Surface Water Interaction Model: County Sanitation Districts of Los Angeles

California Environmental Protection Agency

(CSDLAC) will solicit proposals, collect data, develop a model in cooperation with the Regional Board, obtain peer review and report results." The purpose or subject of the proposal, data collection, etc. is not given. We suggest that a sentence is added regarding the model's purpose.

The following sentence is added for clarity: "The purpose of the modeling and sampling effort is to determine the interaction between surface water and groundwater as it may affect the loading of chloride from groundwater and its linkage to surface water quality."

7. Page 8, Table 7-6.2, Implementation Tasks, Task 3. The following sentence lacks clarity: "The impact of source waters and reclaimed water plans on the WQO and beneficial uses..."

The sentence has been replaced with the following sentence. "The impact of source waters and reclaimed water plans on achieving the water quality objective and protecting beneficial uses, including impacts on underlying groundwater quality, will also be assessed and specific recommendations for chloride management in the watershed will be developed for Regional Board consideration."

The changes discussed in this memorandum appear in the revised basin plan amendment provided in Attachment A hereto. These changes are not substantive and are included to provide clarity.

If you have any questions or require additional information, please call me at (213) 576-6605

**Chapter 7. Total Maximum Daily Loads (TMDLs) Summaries
Upper Santa Clara River TMDL**

This TMDL was adopted by:

The Regional Water Quality Control Board on October 24, 2002.

This TMDL was approved by:

The State Water Resources Control Board on [Insert Date].

The Office of Administrative Law on [Insert Date].

The U.S. Environmental Protection Agency on [Insert Date].

Element	<p>Table 7-6.1. Upper Santa Clara River Chloride TMDL: Elements</p> <p style="text-align: center;">Santa Clara River Chloride</p>
<i>Problem Statement</i>	<p>Elevated chloride concentrations are causing impairments of the water quality objective in Reach 5 (EPA 303(d) list Reach 7) and Reach 6 (EPA 303(d) list Reach 8) of the Santa Clara River. This objective was set to protect all beneficial uses; agricultural beneficial uses have been determined to be most sensitive and are not currently attained at the downstream end of Reach 5 (EPA 303(d) list Reach 7) and Reach 6 (EPA 303(d) list Reach 8) in the Upper Santa Clara River. Irrigation of salt sensitive crops such as avocados and strawberries with water containing elevated levels of chloride results in reduced crop yields. Chloride levels in groundwater are also rising.</p>
<i>Numeric Target (Interpretation of the numeric water quality objective, used to calculate the load allocations)</i>	<p>This TMDL has a numeric target of 100 mg/L, measured instantaneously and expressed as a chloride concentration, required to attain the water quality objective and protect agricultural supply beneficial use. These objectives are set forth in Chapter 3 of the Basin Plan.</p> <p>The numeric target for this TMDL pertains to Reaches 5 and 6 of the Santa Clara River and is based on achieving the existing water quality objective of 100 mg/L, measured instantaneously, throughout the impaired reaches. A subsequent Basin Plan amendment will be considered by the Regional Board to adjust the chloride objective based on technical studies about the chloride levels, including levels that are protective of salt sensitive crops, chloride source identification, and the magnitude of assimilative capacity in the upper reaches of the Santa Clara River, provided that County Sanitation Districts of Los Angeles County choose to submit timely and complete studies in accordance with tasks 2 through 6 of Table 7.6.2.</p>
<i>Source Analysis</i>	<p>The principal source of chloride into Reaches 5 and 6 of the Santa Clara River is discharges from the Saugus Water Reclamation Plant (WRP) and Valencia WRP, which are estimated to contribute 70% of the chloride load in Reaches 5 and 6.</p>
<i>Linkage Analysis</i>	<p>Linkage between chloride sources and the in-stream water quality was established through a statistical analysis of the WRP effluent and water quality data at Blue Cut and Highway 99. The analysis</p>

-6-

Element	<p>Table 7-6.1. Upper Santa Clara River Chloride TMDL: Elements</p> <p style="text-align: center;">Santa Clara River Chloride</p>
	<p>shows that additional assimilative capacity is usually added to Reaches 5 and 6 from groundwater discharge, but the magnitude of the assimilative capacity is not well quantified. Consequently, the Implementation Plan includes a hydrological study (Surface Water/Groundwater Interaction) of the upper reaches of the Santa Clara River.</p>
<p><i>Waste Load Allocations (for point sources)</i></p>	<p>The numeric target is based on the water quality objective for chloride. The proposed waste load allocations (WLAs) are 100 mg/L for Valencia WRP and 100 mg/L for Saugus WRP. The waste load allocations are expressed as a concentration limit derived from the existing WQO, thereby accommodating future growth. Other NPDES discharges contribute a minor chloride load. The waste load allocation for these point sources is 100 mg/L.</p>
<p><i>Load Allocation (for non point sources)</i></p>	<p>The source analysis indicates nonpoint sources are not a major source of chloride. The load allocations for these nonpoint sources is 100 mg/L.</p>
<p><i>Implementation</i></p>	<p>Refer to Table 7-6.2</p> <p>The implementation plan proposes that during the period of TMDL implementation, compliance for the WRP effluent will be evaluated in accordance with interim limits based on 2000 - 2001 performance (i.e., effluent chloride concentration at the Valencia and Saugus WRPs). Using the USEPA protocol described in Table 5-1 of the Technical Support Document for Water Quality-based Toxics Control (USEPA, 1991), the average monthly interim limits are 200 mg/L and 187 mg/L, and the maximum daily limits are 218 mg/L and 196mg/L for the Saugus and Valencia WRPs, respectively. Notwithstanding anything to the contrary contained in this Basin Plan Amendment, the foregoing monthly and daily interim limits for chloride shall expire 2-1/2 years from the effective date of this Basin Plan Amendment, whereupon the existing water quality objective of 100 mg/L shall continue in effect. At its discretion, the Regional Board can review the results from Tasks 2 through 6 after 2 and 1/2 years from the effective date of the TMDL and consider reissuing interim limits.</p>
<p><i>Margin of Safety</i></p>	<p>An implicit margin of safety is incorporated through conservative</p>

-7-

<p>Element</p>	<p>Table 7-6.1. Upper Santa Clara River Chloride TMDL: Elements</p> <p style="text-align: center;">Santa Clara River Chloride</p>
<p><i>Seasonal Variations and Critical Conditions</i></p>	<p>model assumptions and statistical analysis.</p> <p>Three critical conditions are identified for this TMDL. The driest six months of the year is the first critical condition for chloride because less surface flow is available to dilute effluent discharge, pumping rates for agricultural purposes are higher, groundwater discharge is less, poorer quality groundwater may be drawn into the aquifer and evapotranspiration effects are greater in warm weather. During drought, the second critical condition, reduced surface flow and increased groundwater extraction continues through several seasons with greater impact on groundwater resource and discharge. The third critical condition is based on the recent instream chloride concentration increases such as those that occurred in 1999, a year of average flow, when 9 of 12 monthly averages exceeded the objective. Data from all three critical conditions were used in the statistical model described. Hydrological modeling will be completed to evaluate whether additional loading will impact the WQO or beneficial uses during non-critical conditions.</p>

-8-

<p align="center">Table 7-6.2. Upper Santa Clara River Chloride TMDL: Implementation</p> <p>Implementation Tasks</p>	<p>Completion Date</p>
<p>1. Alternative Water Supply</p> <p>a) Should the monthly average in-river concentration at Blue Cut, the reach boundary, exceed the water quality objective of 100 mg/L, measured for the purposes of this TMDL as a rolling twelve month average, for three months of any 12 months, the discharger identified by the Regional Board Executive Officer will be responsible for providing an alternative water supply that meets the irrigation requirements of impacted agricultural diverters, which may be identified during Task III of the implementation plan, until such time as the in-river values do not exceed the water quality objective.</p> <p>b) Should the instream concentration exceed 230 mg/L more than two times in a three year period, the discharger identified by the Regional Board Executive Officer shall be required to submit a work plan for an accelerated schedule to reduce chloride discharges within ninety days of a request by the Regional Board Executive Officer.</p> <p>2. Progress reports will be submitted by CSDLAC and Regional Board staff on a semiannual basis from the effective date of the TMDL for tasks 3, 4, 5 and 6.</p>	<p>Effective Date of TMDL</p>
<p>3. Groundwater/Surface Water Interaction Model: County Sanitation Districts of Los Angeles (CSDLAC) will solicit proposals, collect data, develop a model in cooperation with the Regional Board, obtain peer review, and report results. The impact of source waters and reclaimed water plans on achieving the water quality objective and protecting beneficial uses, including impacts on underlying groundwater quality, will also be assessed and specific recommendations for chloride management in the watershed developed for Regional Board consideration. The purpose of the modeling and sampling effort is to determine the interaction between surface water and groundwater as it may affect the loading of chloride from groundwater and its linkage to surface water quality.</p> <p>4. Chloride Source Identification/Reduction, Pollution Prevention and Public Outreach Plan: CSDLAC will quantify sources, execute pilot outreach programs, assess pilots, develop and implement source</p>	<p>2 years after Effective Date of TMDL</p>

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2003 - 0014

REMANDING AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN FOR
THE LOS ANGELES REGION TO INCORPORATE A TOTAL MAXIMUM
DAILY LOAD FOR CHLORIDE IN THE UPPER SANTA CLARA RIVER

WHEREAS:

1. The Los Angeles Regional Water Quality Control Board (Regional Board) adopted a revised Basin Plan for the Los Angeles Region on June 13, 1994 which was approved by the State Water Resources Control Board (SWRCB) on November 17, 1994 and by the Office of Administrative Law (OAL) on February 23, 1995.
2. On October 24, 2002, the Regional Board adopted Resolution No. R02-018 (Attachment 1) amending the Basin Plan to incorporate a Total Maximum Daily Load (TMDL) for chloride in the Upper Santa Clara River.
3. SWRCB finds that provisions of the amendment as adopted warranted minor clarification of the language of various provisions.
4. Regional Board Resolution No. R02-018 delegated to the Regional Board Executive Officer authority to make minor, non-substantive corrections to the adopted amendment if needed for clarity or consistency. The Regional Board Executive Officer has made the necessary corrections to the amendment.
5. Regional Board staff prepared documents and followed procedures satisfying environmental documentation requirements in accordance with the California Environmental Quality Act, scientific peer review, and other State laws and regulations.
6. SWRCB finds that the amendment as corrected does not adequately resolve issues regarding the appropriateness of the compliance time schedules for implementation tasks.
7. A Basin Plan amendment does not become effective until approved by SWRCB and until the regulatory provisions are approved by OAL.

THEREFORE BE IT RESOLVED THAT:

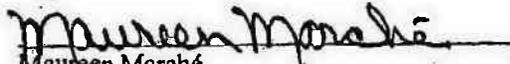

SWRCB:

1. Remands the amendment to the Basin Plan to incorporate a TMDL for chloride for the Upper Santa Clara River as adopted under Regional Board Resolution No. R02-018 as corrected by the Regional Board Executive Officer (Attachment 2).
2. Directs the Regional Board to consider:
 - (a) Expansion of the current phased-TMDL approach so that County Sanitation Districts of Los Angeles County can complete their implementation tasks by Regional Board-specified dates sequentially and within 13 years of the effective date of the TMDL. If advanced treatment facilities and disposal facilities are found to be necessary for compliance with the TMDL, the Regional Board may consider extending the implementation schedule as necessary to account for events beyond the control of the County Sanitation Districts of Los Angeles County.

- (b) Extension of the interim effluent limits beyond the currently proposed 2½ years so that these limits may remain in effect during the planning construction and execution portions of the TMDL's implementation tasks.
- (c) Whether provision of a long-term alternate water supply to agricultural diverters of surface water by the County Sanitation Districts of Los Angeles County would be appropriate; and consider re-evaluation of the agricultural water quality objective and the agricultural beneficial use designation if such alternate supply is provided. The reevaluation of the alternative water supply should consider re-examining and modifying the trigger and compliance schedule for providing the alternative water supply. The Regional Board's re-evaluation of the objective should consider accounting for the beneficial use(s) to be protected, the quality of the imported water supply to the Upper Santa Clara River watershed and the impacts of periods of drought or low rainfall.
- (d) An integrated solution, which may be a single comprehensive TMDL, for all water quality pollutants in the Santa Clara River basin listed on the Clean Water Act section 303(d) list.

CERTIFICATION

The undersigned, Clerk to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on February 19, 2003.

Maureen Marché
Clerk to the Board

**State of California
California Regional Water Quality Control Board, Los Angeles Region**

RESOLUTION NO. R03-008

July 10, 2003

Amendment to the Water Quality Control Plan (Basin Plan) for the Los Angeles Region to Incorporate a Total Maximum Daily Load for Chloride in the Upper Santa Clara River

WHEREAS:

1. The California Regional Water Quality Control Board Los Angeles Region (Regional Board) adopted a revised Basin Plan for the Los Angeles Region on June 13, 1994 which was approved by the State Water Resources Control Board (SWRCB) on November 17, 1994 and by the Office of Administrative Law (OAL) on February 23, 1995.
2. Section 303(d) of the Clean Water Act requires states to identify and to prepare a list of water bodies that do not meet water quality standards and then to establish load and waste load allocations, or a total maximum daily load (TMDL), for each water body that will ensure attainment of water quality standards and then to incorporate those allocations into their water quality control plans. Two reaches of the Santa Clara River near the City of Santa Clarita ("Upper Santa Clara River") were listed on California's 1998 section 303(d) list, due to impairment by chloride, which is present at levels that exceed the water quality objective.
3. Regional Board staff prepared a TMDL analysis and the associated documents to address the chloride impairment of the Upper Santa Clara River. The documents were issued for peer and public review. At a public hearing on October 24, 2002, the Regional Board adopted Resolution No. R02-018 amending the Basin Plan to incorporate a TMDL for chloride in the Upper Santa Clara River.
4. A Basin Plan amendment does not become effective until approved by the SWRCB and until the regulatory provisions are approved by the OAL and USEPA.
5. On February 19, 2003, the SWRCB adopted SWRCB Resolution 2003-0014 (the "Remand Resolution") finding that the Regional Board staff prepared the documents and followed procedures satisfying environmental documentation requirements in accordance with the California Environmental Quality Act, scientific peer review, and other State laws and regulations to develop a TMDL.

July 24, 2003

6. In the Remand Resolution, the SWRCB also found that provisions of the amendment as adopted by the Regional Board warranted minor clarification of the language of various provisions. Regional Board Resolution No. R02-018 delegates to the Regional Board Executive Officer authority to make minor, non-substantive corrections to the adopted amendment if needed for clarity or consistency. The Regional Board Executive Officer made the necessary corrections to the amendment.
7. In the Remand Resolution, the SWRCB further found that the amendment as corrected does not adequately resolve issues regarding the appropriateness of the compliance time schedules for implementation tasks. Consequently, the SWRCB remanded to the Regional Board the amendment to the Basin Plan to incorporate a TMDL for chloride for the Upper Santa Clara River.
8. The Remand Resolution directed the Regional Board to consider:
 - a. Expansion of the current phased TMDL approach so that County Sanitation Districts of Los Angeles County can complete their implementation tasks by Regional Board-specified dates sequentially and within 13 years of the effective date of the TMDL. If advanced treatment facilities and disposal facilities are found to be necessary for compliance with the TMDL, the Regional Board may consider extending the implementation schedule as necessary to account for events beyond the control of the County Sanitation Districts of Los Angeles County.
 - b. Extension of the interim effluent limits beyond the currently proposed 2½ years so that these limits may remain in effect during the planning, construction and execution portions of the TMDL's implementation tasks.
 - c. Whether provision of a long-term alternate water supply to agricultural diverters of surface water by the County Sanitation Districts of Los Angeles County would be appropriate; and consider re-evaluation of the agricultural water quality objective and the agricultural beneficial use designation if such alternate supply is provided. The re-evaluation of the alternative water supply should consider re-examining and modifying the trigger and compliance schedule for providing the alternative water supply. The Regional Board's re-evaluation of the objective should consider accounting for the beneficial use(s) to be protected, the quality of the imported water supply to the Upper Santa Clara River watershed and the impacts of periods of drought or low rainfall.
 - d. An integrated solution, which may be a single comprehensive TMDL, for all water quality pollutants in the Santa Clara River basin listed on the Clean Water Act section 303(d) list.

9. Regional Board staff considered the State Board recommendations contained in the Remand Resolution and evaluated options for amending the Implementation Plan in consideration of the remand. The evaluations and recommendations of Regional Board staff are provided in a memo to file entitled, "Options Considered for Revision of Remanded Upper Santa Clara River Chloride TMDL" dated March 27, 2003. The results of Regional Board staff evaluation are shown in the redline version of Attachment A.

10. Since adoption of the Upper Santa Clara Chloride TMDL, the Regional Board, County Sanitation Districts of Los Angeles County, and the City of Santa Clarita have been proactively pursuing chloride source reduction. Specifically, the agencies have conducted extensive public outreach and County Sanitation Districts of Los Angeles County has enacted an ordinance banning the installation of self-regenerating water softeners.

11. At a public hearing on July 10, 2003, the Regional Board reconsidered Resolution No. R02-018 in light of the Remand Resolution.
 - a. The Regional Board expanded the phased-TMDL approach adopted by the Regional Board in Resolution R02-018 to allow County Sanitation Districts of Los Angeles County (CSDLAC) to complete the implementation tasks sequentially and within 13 years. Specifically, the due date of Task 9, (Evaluation of Alternative Water Supplies for Agricultural Beneficial Uses) is extended to 4 years after the effective date of the TMDL. This will allow the results of studies to be conducted under tasks 3, 4 and 5 of the Implementation Plan (Ground/Surface Water Interaction Model, Chloride Source Identification/Reduction Pollution Prevention and Public Outreach Plan, and Evaluation of Appropriate Chloride Threshold for the Protection of Sensitive Agricultural Supply Use and Endangered Species Protection) to be considered before Task 9 is completed. The issues of beneficial uses, quality of imported water and impacts of periods of drought or low rainfall will be analyzed in Tasks 3, 4 and 5, which are due two years after the effective date of the TMDL. Table 7-6.2 was revised to reflect these schedule modifications.

 - b. The Regional Board extended the currently proposed 2-1/2 years period for interim effluent limits so that the interim limits may remain in effect during the planning, construction, and execution portions of the TMDL's implementation tasks. Further, the Regional Board evaluated recent discharge data and a revision of the interim limit proposed by CSDLA, but did not find sufficient change in the performance data to justify a revision of the interim limit value. Table 7-6.1 was revised to explicitly state that the interim limit remains in effect during the planning, construction, and execution portion of the TMDL's implementation tasks, a period not to extend beyond 13 years from the effective date of the TMDL. Table 7-6.2, was modified to remove the 2-1/2 year period for interim effluent limits.

c. The Regional Board considered whether a long-term alternate water supply to agricultural diverters would be appropriate. The Regional Board modified the task for Evaluation of Alternative Water Supplies for Agricultural Beneficial Uses to include this assessment. Task 9 of Table 7-6.2 has been modified to reflect this additional analysis.

d. The Regional Board chose not to incorporate the chloride TMDL into a single comprehensive TMDL addressing all water quality impairments of the Santa Clara River on the 303(d) list. The forthcoming nutrient TMDL for the Santa Clara River has undergone extensive development work and is scheduled to be finalized in 2003. The chloride and forthcoming nitrogen TMDLs address most of the water quality impairments on the 303(d) list for the Santa Clara River.

12. In all other respects, the findings and provisions of Regional Board Resolution R02-018 remain valid and are carried forward. The revisions to the Basin Plan Amendment to incorporate a TMDL for chloride in the Upper Santa Clara River adopted by Resolution R02-018 are shown in attachment A.
13. The revisions proposed to address the Remand Resolution do not alter the environmental analysis, necessity conclusion, and de minimis findings of Regional Board Resolution R02-018.

THEREFORE, be it resolved that pursuant to sections 13240 and 13242 of the Water Code, the Regional Board hereby amends the Basin Plan as follows:

1. Pursuant to sections 13240 and 13242 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony at the hearing, hereby adopts the amendment to Chapter 7 of the Water Quality Control Plan for the Los Angeles Region to incorporate the elements of the Upper Santa Clara River Chloride TMDL as set forth in Attachment A hereto.
2. The Executive Officer is directed to forward copies of the Basin Plan amendment to the State Board in accordance with the requirements of section 13245 of the California Water Code.
3. The Regional Board requests that the State Board approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code and forward it to OAL and the USEPA.

4. If during its approval process the State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity or consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.

5. The Executive Officer is authorized to sign a Certificate of Fee Exemption.

I, Dennis A. Dickerson, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Los Angeles Region, on July 10, 2003.

Dennis A. Dickerson
Executive Officer

**State of California
California Regional Water Quality Control Board, Los Angeles Region**

**RESOLUTION NO. R4-2006-016
August 3, 2006**

**Amendment to the Water Quality Control Plan for the Los Angeles Region through
revision of the Implementation Plan for the Upper Santa Clara River Chloride
TMDL, Resolution 04-004**

WHEREAS, the California Regional Water Quality Control Board, Los Angeles Region, finds that:

- 1 The federal Clean Water Act (CWA) requires the California Regional Water Quality Control Board (Regional Board) to develop water quality standards that are sufficient to protect beneficial uses designated for each water body found within its region.**
- 2. A consent decree between the U.S. Environmental Protection Agency (USEPA), Heal the Bay, Inc. and BayKeeper, Inc. was approved on March 22, 1999. This court order directs the USEPA to complete Total Maximum Daily Loads (TMDLs) for all impaired waters within 13 years.**
- 3. The elements of a TMDL are described in 40 CFR 130.2 and 130.7 and section 303(d) of the CWA, as well as in USEPA guidance documents (Report No. EPA/440/4-91/001). A TMDL is defined as the sum of the individual waste load allocations for point sources, load allocations for nonpoint sources and natural background (40 CFR 130.2). Regulations further stipulate that TMDLs must be set at levels necessary to attain and maintain the applicable narrative and numeric water quality objectives (WQOs), and protect beneficial uses, with seasonal variations and a margin of safety that takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR 130.7(c)(1)).**
- 4. Upon establishment of TMDLs by the State or USEPA, the State is required to incorporate the TMDLs along with appropriate implementation measures into the State Water Quality Management Plan (40 CFR 130.6(c)(1), 130.7). This Water Quality Control Plan for the Los Angeles Region (Basin Plan), and applicable statewide plans, serves as the State Water Quality Management Plans governing the watersheds under the jurisdiction of the Regional Board.**
- 5. The Santa Clara River is the largest river system in southern California that remains in a relatively natural state. The River originates on the northern slope of the San Gabriel Mountains in Los Angeles County, traverses Ventura County, and flows into the Pacific Ocean between the cities of San**

Buenaventura (Ventura) and Oxnard. The predominant land uses in the Santa Clara River watershed include agriculture, open space, and residential uses. Revenue from the agricultural industry within the Santa Clara River watershed is estimated at over \$700 million annually, and residential use is increasing rapidly both in the upper and lower watershed.

6. The upper reaches of the Santa Clara River include Reaches 5 and 6 which are located upstream of the Blue Cut gauging station, west of the Los Angeles – Ventura County line between the cities of Fillmore and Santa Clarita. Reaches 5 and 6 of the Upper Santa Clara River (USCR) appear on the EPA 303d list of impaired waterbodies (designated on the 2002 EPA 303d list as Reaches 7 and 8, respectively). Several beneficial uses of the USCR, including agricultural supply water (AGR), groundwater recharge (GWR), and rare, threatened, or endangered species habitat (RARE), are listed as impaired due to excessive chloride concentration in the waters of the USCR. Valencia and Saugus Water Reclamation Plants (WRPs), which are owned and operated by the County Sanitation Districts of Los Angeles County (CSDLAC), are two major point sources that discharge to the USCR.
7. At a public meeting on October 24, 2002, the Regional Board considered amending the Basin Plan to include a TMDL for chloride in the USCR. The proposed TMDL included interim waste load allocations for chloride for the WRPs. These interim waste load allocations provide the discharger the necessary time to implement chloride source reduction, complete site specific objective (SSO) studies, and make appropriate modifications to the WRP, as necessary, to meet the WQO for chloride. The interim waste load allocations proposed in the TMDL were based on a statistical evaluation of the WRPs' performance in the three years preceding October 2002.
8. The Regional Board considered the entire record, including written and oral comments received from the public and the Regional Board staff's response to the written comments. Resolution 02-018, the TMDL for chloride in the USCR, was adopted by Regional Board on October 24, 2002. Resolution 02-018 assigned waste load allocations (WLAs) to major publicly owned treatment works (POTWs), minor point sources, and MS4s permittees, discharging to specified reaches of the Santa Clara River.
9. At a public workshop on February 4, 2003, the State Board considered the TMDL for chloride in the USCR, the entire record, including written and oral comments received from the public and the State Board staff's response to the written comments. At a public meeting on February 19, 2003 the State Board adopted SWRCB Resolution 2003-0014 (the "Remand Resolution") which remanded the TMDL to the Regional Board.

10. In response to the Remand Resolution, Regional Board staff revised the TMDL Implementation Plan to address issues identified in the Remand Resolution. On July 10, 2003, the Regional Board adopted Resolution 03-008 to revise the Basin Plan to include a TMDL in the USCR. Resolution 03-008 contained interim waste load allocations for the Saugus and Valencia WRPs and assigned waste load allocations (WLAs) to major POTWs, minor point sources, and MS4s permittees discharging to specified reaches of the Santa Clara River.
11. During the time that the State and Regional Boards were considering the chloride TMDL, the National Pollutant Discharge Elimination System (NPDES) permits for the Valencia and Saugus Water Reclamation Plants (WRPs) were under consideration for renewal by the Regional Board. The NPDES permits also included interim discharge limits for chloride which differed from the TMDL interim waste load allocations. The NPDES interim limits are based on the chloride concentration of the water served from Castaic Lake for municipal supply in the Santa Clarita Valley plus a loading factor of 134 mg/L for the Valencia WRP and 114 mg/L for the Saugus WRP, measured as a twelve month rolling average. The loading values are the highest measured at each plant in the last 5 years.
12. On May 6, 2004, the Regional Board adopted Resolution 04-004 to revise the interim waste-load allocations and Implementation Plan for the chloride TMDL in the USCR. The revised Implementation Plan in attachment A of Resolution No. 04-004 supersedes the Implementation Plan contained in Resolution No. 03-008.
13. The Implementation Plan as specified in attachment A of Resolution No. 04-004 requires the completion of several special studies that serve to characterize the sources, fate, transport, and specific impacts of chloride in the USCR, including impacts to downstream reaches and underlying groundwater basins.
14. The first of the special studies, an evaluation of the appropriate chloride threshold for the reasonable protection of salt-sensitive agriculture, was completed in September of 2005. This special study, entitled "Literature Review and Evaluation (LRE)," was reviewed and largely corroborated by a Technical Advisory Panel (TAP) that issued a "Critical Review Report" of the LRE.
15. The LRE found that the best estimate of a chloride hazard concentration for avocado crops falls within the range of 100 to 117 mg/L. A similar range of 100 to 120 mg/L was found by the TAP. The existing WQO of 100 mg/L is within the recommended range for the reasonable protection of salt-sensitive crops.

16. In addition to the LRE special study, a collaborative report entitled "Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan (Chloride Source Report)," was completed in November of 2005. This report, led by the CSDLAC, identifies sources of chloride in the USCR as well as strategies for reducing those sources. The potable water supply was identified as the largest source of chloride loading to the USCR. Self-Regenerating Water Softeners (SRWS) in the Saugus and Valencia service area were identified as the second largest source of chloride loading.
17. The second special study required by the Implementation Plan is the "Groundwater/Surface Water Interaction (GSWI) Model." The Regional Board and CSDLAC are working in cooperation to complete this model. Under existing TMDL, the GSWI is due May 4, 2007.
18. At a public hearing on November 3, 2005, the Regional Board was provided with an update on the status of the chloride TMDL and the results of the LRE study. The Board directed staff to evaluate whether revising the TMDL Implementation Plan is appropriate, and to consider the possible impacts of the high chloride level in surface water to groundwater quality.
19. Based on the conclusions of the LRE and the chloride source report, staff proposes four alternatives for the amendment to the Upper Santa Clara River Chloride TMDL: (1) a no-action alternative in which the Regional Board takes no action to revise the schedule, (2) an alternative that does not revise the 13-year TMDL implementation schedule but includes implementation milestones in years 6-13 of the TMDL schedule, (3) an alternative that extends the 13-year schedule, and (4) an alternative that accelerates the 13-year schedule. Staff recommends Alternative 4. Under this alternative, the Regional Board will consider a TMDL amendment to both accelerate the final compliance date and include time-certain tasks for tasks related to the design and treatment of chloride removal processes to reduce chloride loading if deemed necessary. Staff notes there is potential for additional chloride loading of 4 million to 7 million lbs per year while the interim limit (approximately 200 mg/L) is in effect instead of discharge at the WQO (100 mg/L). Staff however believes this discharge can be mitigated by accelerating the TMDL schedule.
20. The Remand Resolution directed the Regional Board to consider a phased approach so that the Districts can complete their implementation tasks by Regional Board specified dates sequentially and within 13 years. This direction was born of concerns expressed by stakeholders to the State Board that they should not be required to expend resources planning and constructing new technologies that the special studies could render unnecessary. The Regional Board, therefore, readopted the TMDL with a 13 year implementation plan. That 13-year period included five years for special studies, feasibility analysis and WQO revisions, if warranted, followed by

eight years for planning, design, and construction of the selected remedy. The eight year time schedule for planning, design, and construction was based on comments submitted by the Districts on October 7, 2002, with a supporting engineering study (Cost Impacts for Compliance with a 100 mg/L Instantaneous Chloride Discharge Limit at the Santa Clara Valley Water Reclamation Plants, Prepared by MWH, October 2002), that eight years is required to plan, design and construct advanced treatment for chloride.

21. With completion of the LRE, and the anticipated completion of the GSWI model by November 20, 2007, the Board finds that sufficient information will be available such that there is no prejudice to the Districts in initiating the feasibility tasks when the GSWI model is completed. Specifically, the LRE studies reveal that at most the WQO could be relaxed up to 117 mg/L, from 100mg/L. These results, coupled with the results of the GSWI modeling, will demonstrate whether the AGR and GWR beneficial uses could still be protected with SSOs that are sufficiently less stringent such that construction of advanced treatment systems would not be necessary. Subsequent TMDL tasks, such as development of SSOs, development of the antidegradation analysis, development of a preplanning report on conceptual measures to meet different hypothetical final wasteload allocations, and preparation and consideration of a Basin Plan Amendment to revise the chloride objective by the Regional Board, can be accomplished in a shorter timeframe than originally contemplated because the range of chloride values identified by the LRE as necessary to protect AGR and GWR is significantly smaller than the potential range of chloride objectives contemplated during development of the TMDL schedule. This action does not require the Districts to complete the planning and design tasks before the Regional Board considers revision of the chloride WQO, preserves the current eight year schedule for planning, design and construction that is currently contained in the TMDL, and also preserves the requirements for the Board to reconsider the schedule twice during the planning, design and construction phase. The Board finds the proposed action complies with State Board Resolution 2003-0014.
22. The Staff Report, as well as a Notice of Exemption, and tentative Basin Plan Amendment were released for public comment on May 5, 2006. The revised Implementation Plan is proposed in Attachment A to this resolution.
23. The amendment is consistent with the State Antidegradation Policy (State Board Resolution No. 68-16), in that the revisions of the Implementation Plan for the Upper Santa Clara River Chloride TMDL do not include revisions to WQOs, and are intended to shorten the time until compliance with standards. Likewise, the amendment is consistent with the federal Antidegradation Policy (40 CFR 131.12).
24. The proposed amendment results in no potential for adverse environmental effects (de minimis finding), either individually or cumulatively, on wildlife

because shortening the time to implementation will not result in different processes from those already contemplated, but will merely advance those processes.

25. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code, section 11353, subdivision (b).
26. The Basin Plan amendment incorporating a revision for the Implementation Plan in the Santa Clara River Chloride TMDL must be submitted for review and approval by the State Water Resources Control Board (State Board), the State Office of Administrative Law (OAL), and the U.S. Environmental Protection Agency (U.S. EPA). The Basin Plan amendment will become effective upon approval by OAL and U.S. EPA. A Notice of Decision will be filed following these approvals.

Therefore, be it resolved that:

Pursuant to Section 13240 and 13242 of the Water Code, the Regional Board hereby amends the Basin Plan by replacing the Implementation Plan contained in Resolution 04-004 with the revised Implementation Plan in Attachment A of this Resolution.

2. Pursuant to sections 13240 and 13242 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony at the hearing, hereby adopts the amendment to Chapter 7 the Water Quality Control Plan for the Los Angeles Region to incorporate the revisions of the Implementation Plan in the Upper Santa Clara River Chloride TMDL, Table 7-6.2, Implementation Section as set forth in Attachment A hereto.
3. The Executive Officer is directed to forward copies of the Basin Plan amendment to the SWRCB in accordance with the requirements of section 13245 of the California Water Code.
4. The Regional Board requests that the SWRCB approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code and forward it to the Office of Administrative Law (OAL) and the United State Environmental Protection Agency (U.S. EPA).
5. If during its approval process Regional Board staff, State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity, or for consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.
6. The Executive Officer is authorized to sign a Certificate of Fee Exemption.

7. The text in the Basin Plan, Plans and Policies (Chapter 5), is hereby amended to add:

“Resolution No. 06-0XX. Adopted by the Regional Water Quality Control Board on August 3, 2006.

‘Amendment to revise the Implementation Plan in the TMDL for Chloride in the Upper Santa Clara River, Resolution 04-004’.

The resolution proposes revisions to the Implementation Plan for the Upper Santa Clara River Chloride TMDL.”

I, Jonathan Bishop, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Los Angeles Region, on August 3, 2006.

Jonathan Bishop
Executive Officer

EXHIBIT “15”

4837-0090-6752.2

**State of California
California Regional Water Quality Control Board, Los Angeles Region**

RESOLUTION NO. R4-2006-016

August 3, 2006

**Amendment to the Water Quality Control Plan for the Los Angeles Region through
revision of the Implementation Plan for the Upper Santa Clara River Chloride
TMDL, Resolution 04-004**

WHEREAS, the California Regional Water Quality Control Board, Los Angeles Region, finds that:

- 1 The federal Clean Water Act (CWA) requires the California Regional Water Quality Control Board (Regional Board) to develop water quality standards that are sufficient to protect beneficial uses designated for each water body found within its region.**
- 2. A consent decree between the U.S. Environmental Protection Agency (USEPA), Heal the Bay, Inc. and BayKeeper, Inc. was approved on March 22, 1999. This court order directs the USEPA to complete Total Maximum Daily Loads (TMDLs) for all impaired waters within 13 years.**
- 3. The elements of a TMDL are described in 40 CFR 130.2 and 130.7 and section 303(d) of the CWA, as well as in USEPA guidance documents (Report No. EPA/440/4-91/001). A TMDL is defined as the sum of the individual waste load allocations for point sources, load allocations for nonpoint sources and natural background (40 CFR 130.2). Regulations further stipulate that TMDLs must be set at levels necessary to attain and maintain the applicable narrative and numeric water quality objectives (WQOs), and protect beneficial uses, with seasonal variations and a margin of safety that takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR 130.7(c)(1)).**
- 4. Upon establishment of TMDLs by the State or USEPA, the State is required to incorporate the TMDLs along with appropriate implementation measures into the State Water Quality Management Plan (40 CFR 130.6(c)(1), 130.7). This Water Quality Control Plan for the Los Angeles Region (Basin Plan), and applicable statewide plans, serves as the State Water Quality Management Plans governing the watersheds under the jurisdiction of the Regional Board.**
- 5. The Santa Clara River is the largest river system in southern California that remains in a relatively natural state. The River originates on the northern slope of the San Gabriel Mountains in Los Angeles County, traverses Ventura County, and flows into the Pacific Ocean between the cities of San**

Buenaventura (Ventura) and Oxnard. The predominant land uses in the Santa Clara River watershed include agriculture, open space, and residential uses. Revenue from the agricultural industry within the Santa Clara River watershed is estimated at over \$700 million annually, and residential use is increasing rapidly both in the upper and lower watershed.

6. The upper reaches of the Santa Clara River include Reaches 5 and 6 which are located upstream of the Blue Cut gauging station, west of the Los Angeles – Ventura County line between the cities of Fillmore and Santa Clarita. Reaches 5 and 6 of the Upper Santa Clara River (USCR) appear on the EPA 303d list of impaired waterbodies (designated on the 2002 EPA 303d list as Reaches 7 and 8, respectively). Several beneficial uses of the USCR, including agricultural supply water (AGR), groundwater recharge (GWR), and rare, threatened, or endangered species habitat (RARE), are listed as impaired due to excessive chloride concentration in the waters of the USCR. Valencia and Saugus Water Reclamation Plants (WRPs), which are owned and operated by the County Sanitation Districts of Los Angeles County (CSDLAC), are two major point sources that discharge to the USCR.
7. At a public meeting on October 24, 2002, the Regional Board considered amending the Basin Plan to include a TMDL for chloride in the USCR. The proposed TMDL included interim waste load allocations for chloride for the WRPs. These interim waste load allocations provide the discharger the necessary time to implement chloride source reduction, complete site specific objective (SSO) studies, and make appropriate modifications to the WRP, as necessary, to meet the WQO for chloride. The interim waste load allocations proposed in the TMDL were based on a statistical evaluation of the WRPs' performance in the three years preceding October 2002.
8. The Regional Board considered the entire record, including written and oral comments received from the public and the Regional Board staff's response to the written comments. Resolution 02-018, the TMDL for chloride in the USCR, was adopted by Regional Board on October 24, 2002. Resolution 02-018 assigned waste load allocations (WLAs) to major publicly owned treatment works (POTWs), minor point sources, and MS4s permittees, discharging to specified reaches of the Santa Clara River.
9. At a public workshop on February 4, 2003, the State Board considered the TMDL for chloride in the USCR, the entire record, including written and oral comments received from the public and the State Board staff's response to the written comments. At a public meeting on February 19, 2003 the State Board adopted SWRCB Resolution 2003-0014 (the "Remand Resolution") which remanded the TMDL to the Regional Board.

10. In response to the Remand Resolution, Regional Board staff revised the TMDL Implementation Plan to address issues identified in the Remand Resolution. On July 10, 2003, the Regional Board adopted Resolution 03-008 to revise the Basin Plan to include a TMDL in the USCR. Resolution 03-008 contained interim waste load allocations for the Saugus and Valencia WRPs and assigned waste load allocations (WLAs) to major POTWs, minor point sources, and MS4s permittees discharging to specified reaches of the Santa Clara River.
11. During the time that the State and Regional Boards were considering the chloride TMDL, the National Pollutant Discharge Elimination System (NPDES) permits for the Valencia and Saugus Water Reclamation Plants (WRPs) were under consideration for renewal by the Regional Board. The NPDES permits also included interim discharge limits for chloride which differed from the TMDL interim waste load allocations. The NPDES interim limits are based on the chloride concentration of the water served from Castaic Lake for municipal supply in the Santa Clarita Valley plus a loading factor of 134 mg/L for the Valencia WRP and 114 mg/L for the Saugus WRP, measured as a twelve month rolling average. The loading values are the highest measured at each plant in the last 5 years.
12. On May 6, 2004, the Regional Board adopted Resolution 04-004 to revise the interim waste-load allocations and Implementation Plan for the chloride TMDL in the USCR. The revised Implementation Plan in attachment A of Resolution No. 04-004 supersedes the Implementation Plan contained in Resolution No. 03-008.
13. The Implementation Plan as specified in attachment A of Resolution No. 04-004 requires the completion of several special studies that serve to characterize the sources, fate, transport, and specific impacts of chloride in the USCR, including impacts to downstream reaches and underlying groundwater basins.
14. The first of the special studies, an evaluation of the appropriate chloride threshold for the reasonable protection of salt-sensitive agriculture, was completed in September of 2005. This special study, entitled "Literature Review and Evaluation (LRE)," was reviewed and largely corroborated by a Technical Advisory Panel (TAP) that issued a "Critical Review Report" of the LRE.
15. The LRE found that the best estimate of a chloride hazard concentration for avocado crops falls within the range of 100 to 117 mg/L. A similar range of 100 to 120 mg/L was found by the TAP. The existing WQO of 100 mg/L is within the recommended range for the reasonable protection of salt-sensitive crops.

16. In addition to the LRE special study, a collaborative report entitled "Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan (Chloride Source Report)," was completed in November of 2005. This report, led by the CSDLAC, identifies sources of chloride in the USCR as well as strategies for reducing those sources. The potable water supply was identified as the largest source of chloride loading to the USCR. Self-Regenerating Water Softeners (SRWS) in the Saugus and Valencia service area were identified as the second largest source of chloride loading.
17. The second special study required by the Implementation Plan is the "Groundwater/Surface Water Interaction (GSWI) Model." The Regional Board and CSDLAC are working in cooperation to complete this model. Under existing TMDL, the GSWI is due May 4, 2007.
18. At a public hearing on November 3, 2005, the Regional Board was provided with an update on the status of the chloride TMDL and the results of the LRE study. The Board directed staff to evaluate whether revising the TMDL Implementation Plan is appropriate, and to consider the possible impacts of the high chloride level in surface water to groundwater quality.
19. Based on the conclusions of the LRE and the chloride source report, staff proposes four alternatives for the amendment to the Upper Santa Clara River Chloride TMDL: (1) a no-action alternative in which the Regional Board takes no action to revise the schedule, (2) an alternative that does not revise the 13-year TMDL implementation schedule but includes implementation milestones in years 6-13 of the TMDL schedule, (3) an alternative that extends the 13-year schedule, and (4) an alternative that accelerates the 13-year schedule. Staff recommends Alternative 4. Under this alternative, the Regional Board will consider a TMDL amendment to both accelerate the final compliance date and include time-certain tasks for tasks related to the design and treatment of chloride removal processes to reduce chloride loading if deemed necessary. Staff notes there is potential for additional chloride loading of 4 million to 7 million lbs per year while the interim limit (approximately 200 mg/L) is in effect instead of discharge at the WQO (100 mg/L). Staff however believes this discharge can be mitigated by accelerating the TMDL schedule.
20. The Remand Resolution directed the Regional Board to consider a phased approach so that the Districts can complete their implementation tasks by Regional Board specified dates sequentially and within 13 years. This direction was born of concerns expressed by stakeholders to the State Board that they should not be required to expend resources planning and constructing new technologies that the special studies could render unnecessary. The Regional Board, therefore, readopted the TMDL with a 13 year implementation plan. That 13-year period included five years for special studies, feasibility analysis and WQO revisions, if warranted, followed by

eight years for planning, design, and construction of the selected remedy. The eight year time schedule for planning, design, and construction was based on comments submitted by the Districts on October 7, 2002, with a supporting engineering study (Cost Impacts for Compliance with a 100 mg/L Instantaneous Chloride Discharge Limit at the Santa Clara Valley Water Reclamation Plants, Prepared by MWH, October 2002), that eight years is required to plan, design and construct advanced treatment for chloride.

21. With completion of the LRE, and the anticipated completion of the GSWI model by November 20, 2007, the Board finds that sufficient information will be available such that there is no prejudice to the Districts in initiating the feasibility tasks when the GSWI model is completed. Specifically, the LRE studies reveal that at most the WQO could be relaxed up to 117 mg/L, from 100mg/L. These results, coupled with the results of the GSWI modeling, will demonstrate whether the AGR and GWR beneficial uses could still be protected with SSOs that are sufficiently less stringent such that construction of advanced treatment systems would not be necessary. Subsequent TMDL tasks, such as development of SSOs, development of the antidegradation analysis, development of a preplanning report on conceptual measures to meet different hypothetical final wasteload allocations, and preparation and consideration of a Basin Plan Amendment to revise the chloride objective by the Regional Board, can be accomplished in a shorter timeframe than originally contemplated because the range of chloride values identified by the LRE as necessary to protect AGR and GWR is significantly smaller than the potential range of chloride objectives contemplated during development of the TMDL schedule. This action does not require the Districts to complete the planning and design tasks before the Regional Board considers revision of the chloride WQO, preserves the current eight year schedule for planning, design and construction that is currently contained in the TMDL, and also preserves the requirements for the Board to reconsider the schedule twice during the planning, design and construction phase. The Board finds the proposed action complies with State Board Resolution 2003-0014.
22. The Staff Report, as well as a Notice of Exemption, and tentative Basin Plan Amendment were released for public comment on May 5, 2006. The revised Implementation Plan is proposed in Attachment A to this resolution.
23. The amendment is consistent with the State Antidegradation Policy (State Board Resolution No. 68-16), in that the revisions of the Implementation Plan for the Upper Santa Clara River Chloride TMDL do not include revisions to WQOs, and are intended to shorten the time until compliance with standards. Likewise, the amendment is consistent with the federal Antidegradation Policy (40 CFR 131.12).
24. The proposed amendment results in no potential for adverse environmental effects (de minimis finding), either individually or cumulatively, on wildlife

because shortening the time to implementation will not result in different processes from those already contemplated, but will merely advance those processes.

25. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code, section 11353, subdivision (b).
26. The Basin Plan amendment incorporating a revision for the Implementation Plan in the Santa Clara River Chloride TMDL must be submitted for review and approval by the State Water Resources Control Board (State Board), the State Office of Administrative Law (OAL), and the U.S. Environmental Protection Agency (U.S. EPA). The Basin Plan amendment will become effective upon approval by OAL and U.S. EPA. A Notice of Decision will be filed following these approvals.

Therefore, be it resolved that:

Pursuant to Section 13240 and 13242 of the Water Code, the Regional Board hereby amends the Basin Plan by replacing the Implementation Plan contained in Resolution 04-004 with the revised Implementation Plan in Attachment A of this Resolution.

2. Pursuant to sections 13240 and 13242 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony at the hearing, hereby adopts the amendment to Chapter 7 the Water Quality Control Plan for the Los Angeles Region to incorporate the revisions of the Implementation Plan in the Upper Santa Clara River Chloride TMDL, Table 7-6.2, Implementation Section as set forth in Attachment A hereto.
3. The Executive Officer is directed to forward copies of the Basin Plan amendment to the SWRCB in accordance with the requirements of section 13245 of the California Water Code.
4. The Regional Board requests that the SWRCB approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code and forward it to the Office of Administrative Law (OAL) and the United State Environmental Protection Agency (U.S. EPA).
5. If during its approval process Regional Board staff, State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity, or for consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.
6. The Executive Officer is authorized to sign a Certificate of Fee Exemption.

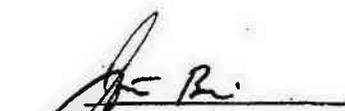

7. The text in the Basin Plan, Plans and Policies (Chapter 5), is hereby amended to add:

“Resolution No. 06-0XX. Adopted by the Regional Water Quality Control Board on August 3, 2006.

'Amendment to revise the Implementation Plan in the TMDL for Chloride in the Upper Santa Clara River, Resolution 04-004'.

The resolution proposes revisions to the Implementation Plan for the Upper Santa Clara River Chloride TMDL.”

I, Jonathan Bishop, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Los Angeles Region, on August 3, 2006.

Jonathan Bishop
Executive Officer

Attachment A to Resolution No. ~~04-004~~ R4-2006-016

**Revision of the Implementation Plan
for the TMDL for Chloride in the Upper Santa Clara River, Resolution ~~04-0043-008~~**

Proposed for adoption by the California Regional Water Quality Control Board, Los Angeles Region on ~~May-August 3, 2006~~, 2004.

Chapter 7. Total Maximum Daily Loads (TMDLs) Upper Santa Clara River TMDL

This TMDL was adopted by: The Regional Water Quality Control Board on October 24, 2002.

This TMDL was remanded by: The State Water Resources Control Board on February 19, 2003

This TMDL was adopted by: The Regional Water Quality Control Board on July 10, 2003.

This TMDL was revised and adopted by: The Regional Water Quality Control Board on May 6, 2004.

This TMDL was approved by: The State Water Resource Control Board on July 22, 2004

The Office of Administrative Law on November 15, 2004

The U.S. Environmental Protection Agency on April 28, 2005

This TMDL was revised and adopted by: The Regional Water Quality Control Board on August 3, 2006.

Table 7-6.1. Upper Santa Clara River Chloride TMDL: Elements	
Element	Santa Clara River Chloride
<i>Problem Statement</i>	Elevated chloride concentrations are causing impairments of the water quality objective in Reach 5 (EPA 303(d) list Reach 7) and Reach 6 (EPA 303(d) list Reach 8) of the Santa Clara River. This objective was set to protect all beneficial uses; agricultural beneficial uses have been determined to be most sensitive, and not currently attained at the downstream end of Reach 5 (EPA 303(d) list Reach 7) and Reach 6 (EPA 303(d) list Reach 8) in the Upper Santa Clara River. Irrigation of salt sensitive crops such as avocados and strawberries with water containing elevated levels of chloride results in reduced crop yields. Chloride levels in groundwater are also rising.
<i>Numeric Target (Interpretation of the numeric water quality objective, used to calculate the load allocations)</i>	<p>This TMDL has a numeric target of 100mg/L, measured instantaneously and expressed as a chloride concentration, required to attain the water quality objective and protect agricultural supply beneficial use. These objectives are set forth in Chapter 3 of the Basin Plan.</p> <p>The numeric target for this TMDL pertains to Reaches 5 and 6 of the Santa Clara River and is based on achieving the existing water quality objective of 100 mg/L, measured instantaneously, throughout the impaired reaches. A subsequent Basin Plan amendment will be considered by the Regional Board to adjust the chloride objective based on technical studies about the chloride levels, including levels that are protective of salt sensitive crops, chloride source identification, and the magnitude of assimilative capacity in the upper reaches of the Santa Clara River, provided that County Sanitation Districts of Los Angeles County choose to submit timely and complete studies in accordance with tasks 2 through 6 of Table 7.6.2.</p>
<i>Source Analysis</i>	The principal source of chloride into Reaches 5 and 6 of the Santa Clara River is discharges from the Saugus Water Reclamation Plant (WRP) and Valencia WRP, which are estimated to contribute 70% of the chloride load in Reaches 5 and 6.
<i>Linkage Analysis</i>	Linkage between chloride sources and the in-stream water quality was established through a statistical analysis of the WRP effluent and water quality data at Blue Cut and Highway 99. The analysis shows that additional assimilative capacity is usually added to Reaches 5 and 6 from groundwater discharge, but the magnitude of the assimilative capacity is not well quantified. Consequently, the Implementation Plan includes a hydrological study (Surface Water/Groundwater Interaction? Of the upper reaches of the Santa Clara River.
<i>Waste Load Allocations (for</i>	The numeric target is based on the water quality objective for chloride. The proposed waste load allocations (WLAs) are 100 mg/L for Valencia

Table 7-6.1. Upper Santa Clara River Chloride TMDL: Elements	
Element	Santa Clara River Chloride
<i>point sources</i>	WRP and 100 mg/L Saugus WRP. The waste load allocations are expressed as a concentration limit derived from the existing WQO, thereby accommodating future growth. Other NPDES discharges contribute a minor chloride load. The waste load allocation for these point sources is 100 mg/L.
<i>Load Allocation (for non point sources)</i>	The source analysis indicates nonpoint sources are not a major source of chloride. The load allocations for these nonpoint sources is 100 mg/L.
<i>Implementation</i>	<p>Refer to Table 7-6.2.</p> <p>The implementation plan proposes that during the period of TMDL implementation, compliance for the WRPs' effluents will be evaluated in accordance with interim waste load allocations.</p> <p>Saugus WRP: The interim waste load allocation for chloride is the sum of State Water Project treated water supply concentration plus 114 mg/L, as a twelve month rolling average. At no time shall the interim wasteload allocation exceed 230mg/L.</p> <p style="padding-left: 40px;">Interim Waste Load Allocation=Treated Potable Water Supply + 114 mg/L, not to exceed 230 mg/L.</p> <p style="padding-left: 40px;">(114 mg/L is the maximum difference in chloride concentration between the State Water Project treated water and the Saugus WRP treated effluent over the last five years.)</p> <p>Valencia WRP: The interim waste load allocation for chloride is the sum of State Water Project treated water supply concentration plus 134 mg/L, as a twelve month rolling average. At no time shall the interim wasteload allocation exceed 230 mg/L.</p> <p style="padding-left: 40px;">Interim Waste Load Allocation=Treated potable Water Supply + 134 mg/L, not to exceed 230 mg/L.</p> <p style="padding-left: 40px;">(134 mg/L, is the maximum difference in chloride concentration between the State Water Project treated water and the Valencia WRP treated effluent over the last five years.)</p>
<i>Margin of Safety</i>	An implicit margin of safety is incorporated through conservative model assumptions and statistical analysis.
<i>Seasonal Variations and Critical Conditions</i>	Three critical conditions are identified for this TMDL. The driest six months of the year is the first critical condition for chloride because less surface flow is available to dilute effluent discharge, pumping rates for agricultural purposes are higher, groundwater discharge is less, poorer

Table 7-6.1. Upper Santa Clara River Chloride TMDL: Elements	
Element	Santa Clara River Chloride
	<p>quality groundwater may be drawn into the aquifer and evapotranspiration effects are greater in warm weather. During drought, the second critical condition reduced surface flow and increased groundwater extraction continues through several seasons with greater impact on groundwater resource and discharge. The third critical conditions is based on the recent instream chloride concentration increases such as those that occurred in 1999, a year of average flow, when 9 of 12 monthly averages exceeded the objective. Data from all three critical conditions were used in the statistical model described. Hydrological modeling will be completed to evaluate whether additional loading will impact the WQO or beneficial uses during non-critical conditions.</p>

Table 7-6.2. Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks – Alternative 4	Completion Date
<p>1. Alternate Water Supply</p> <p>a) Should (1) the monthly average in-river concentration at Blue Cut, the reach boundary, exceed the water quality objective of 100mg/L, measured for the purposes of this TMDL as a rolling twelve month average, for three months of any 12 months, (2) each agricultural diverter provide records of the diversion dates and amounts to the Regional Board and County Sanitation Districts of Los Angeles County (CSDLAC) for at least 2 years after the effective date of the TMDL and (3) each agricultural diverter provide photographic evidence that diverted water is applied to avocado, strawberry or other chloride sensitive crop and evidence of a water right to divert, then CSDLAC will be responsible for providing an alternative water supply, negotiating the delivery of alternative water by a third party, or providing fiscal remediation to be quantified in negotiations between CSDLAC and the agricultural diverter at the direction of the Regional Water Quality Control Board until such as time as the in-river chloride concentrations do not exceed the water quality objective.</p> <p>b) Should the instream concentration exceed 230 mg/L more than two times in thea three year period, the discharger identified by the Regional Board Executive Officer shall be required to submit, within ninety days of a request by the Regional Board Executive Officer, a workplan for an accelerated schedule to reduce chloride discharges.</p> <p>2. Progress reports will be submitted by CSDLAC to Regional Board staff on a semiannual basis from the effective date of the TMDL for tasks 4,6, and 7, and on an annual basis for Task 5.</p>	<p>Effective Date of TMDL <u>(05/04/2005)</u></p>
<p>3. Chloride Source Identification/Reduction, Pollution Prevention and Public Outreach Plan: Six months after the effective date of the TMDL, CSDLAC will submit a plan to the Regional Board that addresses measures taken and planned to be taken to quantify and control sources of chloride, including, but not limited to: execute community-wide outreach programs, which were developed based on the pilot outreach efforts conducted by CSDLAC, assess potential incentive/disincentive programs for residential self-regenerating water softeners, and other measures that may be effective in controlling chloride. CSDLAC shall develop and implement the source reduction/pollution prevention and public outreach program, and report results annually thereafter to the Regional Board. Chloride sources from imported water supplies will be assessed. The assessment will include conditions of drought and low rainfall, and will analyze the alternatives for reducing this source.</p>	<p>6 months after Effective Date of TMDL <u>(11/04/2005)</u></p>

<p>Table 7-6.2. Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks – Alternative 4</p>	<p>Completion Date</p>
<p>4. CSDLAC will convene a technical advisory committee or committees (TAC(s)) in cooperation with the Regional Board to review literature develop a methodology for assessment, and provide recommendations with detailed timelines and task descriptions to support any needed changes to the time schedule for evaluation of appropriate chloride threshold for Task 6. The Regional Board, at a public hearing will re-evaluate the schedule for Task 6 and subsequent linked tasks based on input from the TAC(s), along with Regional Board staff analysis and assessment consistent with state and federal law, as to the types of studies needed and the time needed to conduct the necessary scientific studies to determine the appropriate chloride threshold for the protection of salt sensitive agricultural uses, and will take action to amend the schedule if there is sufficient technical justification.</p>	<p>12 months after Effective Date <u>(05/04/2006)</u></p>
<p>5. Groundwater/Surface Water Interaction Model: CSDLAC will solicit proposals, collect data, develop a model in cooperation with the Regional Board, obtain peer review, and report results. The impact of source waters and reclaimed water plans on achieving the water quality objective and protecting beneficial uses, including impacts on underlying groundwater quality, will also be assessed and specific recommendations for management developed for Regional Board consideration. The purpose of the modeling and sampling effort is to determine the interaction between surface water and groundwater as it may affect the loading of chloride from groundwater and its linkage to surface water quality.</p>	<p>2.5 years after Effective Date of TMDL <u>(11/20/2007)</u></p>
<p>6. Evaluation of Appropriate Chloride Threshold for the Protection of Sensitive Agricultural Supply Use and Endangered Species Protection: CSDLAC will prepare and submit a report on endangered species protection thresholds. CSDLAC will also prepare and submit a report presenting the results of the evaluation of chloride thresholds for salt sensitive agricultural uses, which shall consider the impact of drought and low rainfall conditions and the associated increase in imported water concentrations on downstream crops utilizing the result of Task 5.</p>	<p>2.5-3 years after Effective Date of TMDL <u>(11/20/2007)</u></p>
<p>7. Develop Site Specific Objectives (SSO) for Chloride for Sensitive Agriculture: CSDLAC will solicit proposals and develop technical analyses upon which the Regional Board may base a Basin Plan amendment.</p>	<p>2.84 years after Effective Date of TMDL <u>(02/20/2008)</u></p>
<p>8. Develop Anti-Degradation Analysis for Revision of Chloride Objective by SSO: CSDLAC will solicit proposals and develop draft anti-degradation analysis for Regional Board consideration.</p>	

Table 7-6.2. Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks – <u>Alternative 4</u>	Completion Date
<p>9. Develop a pre-planning report on conceptual compliance measures to meet different hypothetical final wasteload allocations. CSDLAC shall solicit proposals and develop and submit a report to the Regional Board that identifies potential chloride control measures and costs based on different hypothetical scenarios for chloride water quality objectives and final wasteload allocations.</p>	
<p>10. a) Preparation and Consideration of a Basin Plan Amendment (BPA) to revise the chloride objective by the Regional Board.</p> <p>b) Evaluation of Alternative Water Supplies for Agricultural Beneficial Uses: CSDLAC will quantify water needs, identify alternative water supplies, evaluate necessary facilities, and report results, including the long-term application of this remedy.</p> <p>c) Analysis of Feasible Compliance Measures to Meet Final Wasteload Allocations for Proposed Chloride Objective. CSDLAC will assess and report on feasible implementation actions to meet the chloride objective established pursuant to Task 10a).</p> <p>d) Reconsideration of and action taken on the Chloride TMDL and Final Wasteload Allocations for the Upper Santa Clara River by the Regional Board.</p>	<p><u>35</u> years after Effective Date of TMDL <u>(05/04/2008)</u></p>
<p>11. <u>a) Implementation of Compliance Measures, Planning: CSDLAC to submit a report of planning activities which include but are not limited to: (1) identifying lead state/federal agencies; (2) administering a competitive bid process for the selection of EIR/EIS and Engineering Consultants; (3) Development of Preliminary Planning and Feasibility Analyses; (4) Submittal of Project Notice of Preparation/Notice of Intent; (5) Preparation of Draft Facilities Plan and EIR; (6) Administration of Public Review and Comment Periods; (7) Development of Final Facilities Plan and EIR and incorporation and response to comments; (8) Administration of final public review and certification process; and (9) Filing a Notice of Determination and Record of Decision.</u></p> <p><u>b) Implementation of Compliance Measures, Planning: CSDLAC to provide a schedule of related tasks and subtasks related to Task 11a), and provide semi-annual progress reports on progress of planning activities, thereafter, until completion of Final Facilities Plan and EIR.</u></p>	<p><u>5</u> years after Effective Date of TMDL <u>(05/04/2010)</u></p> <p><u>5</u> years after Effective Date of TMDL <u>(05/04/2010)</u></p>

Table 7-6.2. Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks – <u>Alternative 4</u>	Completion Date
<p>11.12. The Regional Board staff will re-evaluate the schedule to implement control measures needed to meet Final Wasteload Allocations adopted pursuant to Task 10 d) and the schedule for Task 132. The Regional Board, at a public meeting will consider extending the completion date of Task 132 and reconsider the schedule to implement control measures to meet Final Wasteload Allocations adopted pursuant to Task 10 d). CSDLAC will provide the justification for the need for an extension to the Regional Board executive Officer at least 6 months in advance of the deadline for this task.</p>	<p>69 years after Effective Date of TMDL <u>(05/04/2011)</u></p>
<p>12.13. a) <u>Implementation of Compliance Measures. Complete Environmental Impact Report:</u> CSDLAC shall have complete a Facilities Plan and Environmental Impact Report for advanced treatment facilities to comply with final effluent permit limits for chloride.</p> <p>b) <u>Implementation of Compliance Measures. Engineering Design:</u> CSDLAC will begin the engineering design of the recommended project.</p> <p>c) <u>Implementation of Compliance Measures. Engineering Design:</u> CSDLAC will provide a design schedule of related tasks and sub-tasks, and provide semi-annual progress reports on progress of design activities, thereafter, until completion of Final Design. In addition CSDLAC will provide a construction schedule of related tasks and sub-tasks, and provide semi-annual progress reports on progress of construction activities, thereafter, until completion of recommended project.</p> <p>d) <u>Implementation of Compliance Measures. Construction:</u> CSDLAC shall have applied and received all appropriate permits and have completed construction of the recommended project.</p>	<p>6 years after Effective Date of TMDL <u>(05/04/2011)</u></p> <p>6 years after Effective Date of TMDL <u>(05/04/2011)</u></p> <p>7 years after Effective Date of TMDL <u>(05/04/2012)</u></p> <p>11 years after Effective Date of TMDL <u>(05/04/2016)</u></p>
<p>12.14. The interim effluent limits for chloride shall remain in effect for no more than 113 years after the effective date of the TMDL. Water Quality Objective for chloride in the Upper Santa Clara River shall be achieved. The Regional Board may consider extending the completion date of this task as necessary to account for events beyond the control of the CSDLAC.</p>	<p>13-11 years after Effective Date of TMDL <u>(05/04/2016)</u></p>

ORDER NO. R4-2009-0074
NPDES NO. CA0054216

**WASTE DISCHARGE REQUIREMENTS
 FOR THE SANTA CLARITA VALLEY SANITATION DISTRICT OF LOS ANGELES COUNTY,
 VALENCIA WATER RECLAMATION PLANT
 DISCHARGE TO SANTA CLARA RIVER**

The following Discharger is subject to waste discharge requirements as set forth in this Order:

Table 1. Discharger Information

Discharger	Santa Clarita Valley Sanitation District of Los Angeles County
Name of Facility	Valencia Water Reclamation Plant
Facility Address	28185 The Old Road
	Santa Clarita, CA 91355
	Los Angeles County
The U.S. Environmental Protection Agency (USEPA) and the Regional Water Quality Control Board (Regional Water Board) have classified this discharge as a major discharge.	

The discharge by the Santa Clarita Valley Sanitation District of Los Angeles County from the discharge points identified below is subject to waste discharge requirements as set forth in this Order:

Table 2. Discharge Location

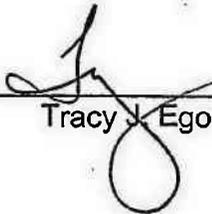

Discharge Point	Effluent Description	Discharge Point Latitude	Discharge Point Longitude	Receiving Water
001	Tertiary treated effluent	34 °, 25', 49.6" N	118°, 35',33.37" W	Santa Clara River
002	Tertiary treated effluent	34 °, 25', 48.27" N	118°, 35',31.95" W	Santa Clara River

February 25, 2009
 Revised: 04/07/09, 4/20/09, 5/14/09, and 6/4/09

Table 3. Administrative Information

This Order was adopted by the Regional Water Board on:	June 4, 2009
This Order shall become effective on:	July 24, 2009
This Order shall expire on:	May 10, 2014
The Discharger shall file a Report of Waste Discharge in accordance with title 23, California Code of Regulations, as application for issuance of new waste discharge requirements no later than:	180 days prior to the Order expiration date (Title 40, Code of Federal Regulations, part 122.21(d))

I, Tracy J. Egoscue, Executive Officer, do hereby certify that this Order with all attachments is a full, true, and correct copy of an Order adopted by the California Regional Water Board, Los Angeles Region, on June 4, 2009.

Tracy J. Egoscue, Executive Officer

February 25, 2009
Revised: 04/07/09, 4/20/09, 5/14/09, and 6/4/09

7. Compliance Schedules

The compliance schedules and the interim limit in Section IV.A.2.a of this Order are authorized under TMDLs (Basin Plan Amendments) which have been adopted by the Regional Water Board and approved by USEPA. However, interim limits and compliance schedules may be provided in an administratively issued Time Schedule Order if the permit effective date precedes the TMDL effective date.

8. TMDL Tasks

The discharger shall comply with the applicable TMDL-related tasks, and future revisions thereto, in Attachment K of this Order.

VII. COMPLIANCE DETERMINATION

Compliance with the effluent limitations contained in section IV of this Order will be determined as specified below:

A. General.

Compliance with effluent limitations for priority pollutants shall be determined using sample reporting protocols defined in the MRP and Attachment A of this Order. For purposes of reporting and administrative enforcement by the Regional and State Water Boards, the Discharger shall be deemed out of compliance with effluent limitations if the concentration of the priority pollutant in the monitoring sample is greater than the effluent limitation and greater than or equal to the reporting level (RL).

B. Multiple Sample Data

When determining compliance with a measure of central tendency (arithmetic mean, geometric mean, median, etc.) of multiple sample analyses and the data set contains one or more reported determinations of "Detected, but Not Quantified" (DNQ) or "Not Detected" (ND). In those cases, the Discharger shall compute the median in place of the arithmetic mean in accordance with the following procedure:

1. The data set shall be ranked from low to high, ranking the reported ND determinations lowest, DNQ determinations next, followed by quantified values (if any). The order of the individual ND or DNQ determinations is unimportant.
2. The median value of the data set shall be determined. If the data set has an odd number of data points, then the median is the middle value. If the data set has an even number of data points, then the median is the average of the two values around the middle unless one or both of the points are ND or DNQ, in which case the median value shall be the lower of the two data points where DNQ is lower than a value and ND is lower than DNQ.

This Order was adopted by the Regional Water Quality Control Board on:	June 4, 2009
This Order shall become effective on:	July 24, 2009
This Order shall expire on:	May 10, 2014
The Discharger shall file a Report of Waste Discharge in accordance with title 23, California Code of Regulations, as application for issuance of new waste discharge requirements no later than:	180 days prior to the Order expiration date (Title 40, Code of Federal Regulations, part 122.21(d))

Adopted: June 4, 2009

I, Tracy J. Egoscue, Executive Officer, do hereby certify that this Order with all attachments is a full, true, and correct copy of an Order adopted by the California Regional Water Quality Control Board, Los Angeles Region, on June 4, 2009.

Chief Deputy ED
Tracy J. Egoscue, Executive Officer
fe-

Adopted: June 4, 2009

D. Background and Rationale for Requirements. The Regional Water Board developed the requirements in this Order based on information submitted as part of the application, through monitoring and reporting programs, and other available information. The Fact Sheet (Attachment F), which contains background information and rationale for Order requirements, is hereby incorporated into this Order and constitutes part of the Findings for this Order. Attachments A through K are also incorporated into this Order.

E. California Environmental Quality Act (CEQA). Under California Water Code (CWC) section 13389, this action to adopt an NPDES permit is exempt from the provisions of CEQA, Public Resources Code sections 21100-21177.

F. Technology-based Effluent Limitations. Section 301(b) of the CWA and implementing USEPA permit regulations at part 122.44, title 40 of the Code of Federal Regulations, require that permits include conditions meeting applicable technology-based requirements at a minimum, and any more stringent effluent limitations necessary to meet applicable water quality standards. The discharge authorized by this Order must meet minimum federal technology-based requirements based on Secondary Treatment Standards at part 133 and Best Professional Judgment (BPJ) in accordance with Part 125.3. A detailed discussion of the technology-based effluent limitations development is included in the Fact Sheet (Attachment F).

G. Water Quality-Based Effluent Limitations. Section 301(b) of the CWA and part 122.44(d) require that permits include limitations more stringent than applicable federal technology-based requirements where necessary to achieve applicable water quality standards. This Order contains requirements for BOD and TSS, expressed as a technology equivalence requirement, more stringent than secondary treatment requirements that are necessary to meet applicable water quality standards. The rationale for these requirements, which consist of tertiary treatment, is discussed in the Fact Sheet.

Part 122.44(d)(1)(i) mandates that permits include effluent limitations for all pollutants that are or may be discharged at levels that have the reasonable potential to cause or contribute to an exceedance of a water quality standard, including numeric and narrative objectives within a standard. Where reasonable potential has been established for a pollutant, but there is no numeric criterion or objective for the pollutant, water quality-based effluent limitations (WQBELs) must be established using: (1) USEPA criteria guidance under CWA section 304(a), supplemented where necessary by other relevant information; (2) an indicator parameter for the pollutant of concern; or (3) a calculated numeric water quality criterion, such as a proposed state criterion or policy interpreting the state's narrative criterion, supplemented with other relevant information, as provided in Part 122.44(d)(1)(vi).

H. Water Quality Control Plans. The Regional Water Board adopted a Water Quality Control Plan for the Los Angeles Region: Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties (hereinafter Basin Plan) on June 13, 1994 that designates beneficial uses, establishes water quality objectives, and contains implementation programs and policies to achieve those objectives for all waters

7. Compliance Schedules

The compliance schedules and the interim limit in Section IV.A.2.a of this Order are authorized under TMDLs (Basin Plan Amendments) which have been adopted by the Los Angeles Regional Water Board and approved by USEPA. However, interim limits and compliance schedules may be provided in an administratively issued Time Schedule Order if the permit effective date precedes the TMDL effective date.

8. The discharger shall comply with the applicable TMDL-related tasks, and future revisions thereto, in Attachment K of this Order.

VII. COMPLIANCE DETERMINATION

Compliance with the effluent limitations contained in section IV of this Order will be determined as specified below:

A. General.

Compliance with effluent limitations for priority pollutants shall be determined using sample reporting protocols defined in the MRP and Attachment A of this Order. For purposes of reporting and administrative enforcement by the Regional and State Water Boards, the Discharger shall be deemed out of compliance with effluent limitations if the concentration of the priority pollutant in the monitoring sample is greater than the effluent limitation and greater than or equal to the reporting level (RL).

B. Multiple Sample Data

When determining compliance with a measure of central tendency (arithmetic mean, geometric mean, median, etc.) of multiple sample analyses, if the data set contains one or more reported determinations of "Detected, but Not Quantified" (DNQ) or "Not Detected" (ND), the Discharger shall compute the median in place of the arithmetic mean in accordance with the following procedure:

1. The data set shall be ranked from low to high, ranking the reported ND determinations lowest, DNQ determinations next, followed by quantified values (if any). The order of the individual ND or DNQ determinations is unimportant.
2. The median value of the data set shall be determined. If the data set has an odd number of data points, then the median is the middle value. If the data set has an even number of data points, then the median is the average of the two values around the middle unless one or both of the points are ND or DNQ, in which case the median value shall be the lower of the two data points where DNQ is lower than a value and ND is lower than DNQ.

3.6 Saugus and Valencia WRPs' Chloride Effluent Levels

During 2001, the Saugus and Valencia WRPs collectively discharged approximately 16.9 MGD of tertiary effluent to the Santa Clara River with an average chloride concentration of 168 mg/L. In 2002, the Saugus and Valencia WRPs collectively discharged approximately 18 MGD of tertiary effluent to the Santa Clara River with an average chloride concentration of 183 mg/L. Chloride concentrations discharged from these two WRPs for the period January 1971 through December 2001 are shown in Figure 3.6-1 along with the corresponding surface water chloride objectives and the numeric effluent chloride limits.

As shown in Figure 3.6-1, effluent chloride concentrations are highly variable from month to month and year to year. These variations can be caused by a number of factors including the concentration of chloride in the drinking water supply (both local groundwater and imported surface water and the resulting blending ratios), loadings from the residential, commercial and industrial sectors, and by contributions from the use of chemicals in the wastewater treatment process. As described in the following section, the Districts can regulate discharges of chloride from industrial and commercial sources and to a lesser degree, residential sources. The Districts have no authority to regulate chloride levels in potable water supplies, which constitutes a major portion of the WRPs' influent chloride load. In the past several years the Districts have eliminated the use of chloride containing chemicals to the maximum extent possible to reduce treatment plant loadings. The in-plant reductions are discussed in more detail in Section 3.7.1.5. At present the only chloride added during the treatment process is sodium hypochlorite for disinfection purposes, which contributes on average approximately 7 mg/L to effluent chloride concentrations. It should be noted that the current treatment processes at these two WRPs do not have the capability of removing chloride from the wastewater.

3.7 Source Control and Local Restrictions on Self-Regenerating Water Softeners

3.7.1 History of Districts' Source Control Efforts in the SCVJSS

The Districts have undertaken extensive efforts to limit the discharge of chlorides to wastewater in the SCVJSS. These efforts were summarized in two submittals to the Regional Board (see Attachment 3.7-1). A summary of some of the highlights of these efforts is provided below.

3.7.1.1 Source Control of Chloride from Residences

Source control of chlorides from residences in the SCVJSS began in 1961 with adoption of resolutions by the Districts that prohibited the connection of laterals or other sewer lines to the Districts' sewerage system that included salt brines produced by the regeneration of water softeners (e.g., self-regenerating water softeners or SRWS). The prohibition applied to all users of the sewerage system including residential, commercial and industrial users. However, in 1997 the portions of the resolutions applicable to residences were invalidated based on the outcome of several lawsuits that impacted the ability of local agencies to control residential SRWS. In particular, the California Courts of Appeals ruled in two different districts that local ordinances restricting the use of residential SRWS were not allowed due to superceding state statutes. The Court suggested that state statutes be amended if local control of SRWS was desired.

limits in the TSOs prevail, which do not provide protection from third party lawsuits seeking to enforce the underlying final limits contained in the permits themselves. The liability for noncompliance with final limits over an extended period of time is considerable, and unacceptable, given that the Regional Board is itself acknowledging that a given period of time will be necessary before compliance with final limits will be possible.

In response, Senate Bill 1006 was enacted in 1999. It amended the California Health and Safety Code (Section 116786) to establish conditions under which a local agency could regulate the installation of new residential SRWS. It did not provide authority to regulate SRWS installed before the effective date of a new local ordinance, and required that certain stringent conditions be met prior to passage of any ordinance. These conditions include non-compliance with an NPDES permit or water reclamation requirements, limitation of the saline discharges from non-residential sources to the extent technologically and economically feasible, determination that restrictions on residential SRWS is the only available means of achieving compliance with permit or water reclamation requirements, and completion of an independent study to quantify all sources of salinity to the sewer system. The provisions of Senate Bill 1006 became effective on January 1, 2003. A more thorough discussion of the history of the legal and legislative actions can be found in Attachment 3.7-2.

The Districts began preparation to enact ordinances restricting the use of residential SRWS in early 2001. To prepare a report on sources of chloride in the SCVJSS, extensive sampling of wastewater from residential, commercial, industrial, and hauled waste sources began in February 2001 and continued throughout the year. This effort involved collection and analysis of over two thousand chloride samples. A study was also conducted on a residential SRWS to quantify salt discharges from the unit. A comprehensive report on sources of chloride in the SCVJSS was released in October 2002 (See Attachment 3.7-3).

During preparation of the report, the Districts initiated public outreach efforts to reduce the usage of residential SRWS. The Districts hired a public relations firm to develop an outreach program and to test the program in two pilot areas. Elements of the program included two mailings of letters, plus frequently-asked-questions sheets to all 500 residents of the two pilot neighborhoods. An additional letter, authored by the Regional Board, was also mailed to the pilot-area residents. Opinion leaders in the community, such as elected officials and environmental group leaders, also received the mailings. Real estate agents were mailed information on the environmental impacts of SRWS, and asked to share the information with new homebuyers. An Internet web site was developed on chloride and SRWS. Pre- and post- outreach surveys were conducted of the target residents, to determine the effectiveness of the program, in August 2002 and February 2003, respectively. The program was found to be successful in increasing awareness of the environmental impacts of SRWS and in influencing the decisions of people who had not yet purchased water conditioning systems. It was not successful, however, at convincing residents with existing SRWS to remove them.

In early 2003, the Districts undertook final preparations to enact an ordinance to prohibit the installation of SRWS in the SCVJSS. In early February 2003, notices were mailed to every residence with a sewer connection in the SCVJSS regarding a public hearing on a rate increase. Included in the mailing was notification that the Districts also would be considering ordinances banning the installation of SRWS. The ordinances were introduced by the Boards of Sanitation District Nos. 26 and 32 on February 12, 2003 and adopted on February 25, 2003. The ordinances took effect on March 27, 2003. (See Attachment 3.7-4)

Several press releases were issued about the ordinances, resulting in local news coverage as well as coverage in the *Los Angeles Times*. The Districts were the first agency in the state to restrict SRWS under the provisions of Senate Bill 1006. Developers, plumbers, contractors, water conditioning companies, and realtors were all informed about passage of the ordinances. A letter was also sent to every residence in the SCVJSS informing them of the ordinances. A brochure was printed about the ordinances; over fifteen hundred copies have been distributed to date. Additionally, all eight of the local retailers selling SRWS agreed to voluntarily stop selling the units. The chloride web site was updated to include information on the SRWS ordinances.

Public outreach about the environmental impacts of SRWS continues in the SCVJSS service area. The Districts have hired a social marketing firm to conduct a three-year program in the SCVJSS to encourage residents to move away from the use of SRWS. The firm is currently in the process of developing outreach messages and strategies for the social marketing program, and plans to test its ideas with focus groups in November and December 2003. In the meantime, the Districts have participated in several environmental fairs in the area to pass out educational information and the Districts continue to field calls from Santa Clarita Valley residents with questions about the SRWS ordinances.

Because the pilot-scale public outreach project indicated that outreach alone was not sufficient to convince residents to give up their existing SRWS, the Districts are currently investigating incentives and disincentives that could be used in addition to public outreach. Options being investigated include rebates, buy-back programs, implementation of a differential rate structure, and demonstration projects. A consulting firm was hired to conduct a quantitative analysis of the various options available and make recommendations as to which options could be implemented based on legal and technical feasibility, and plans to conduct focus groups in November 2003 to explore the options in more depth. The analysis will build upon a study conducted earlier this year by the National Water Research Institute, with funding from the Districts and several other organizations, to explore consumer behavior toward different types of incentive programs to reduce salinity contributions to wastewater from water softener usage.

3.7.1.2 Source Control of Chloride at Industrial Facilities

Since the Santa Clarita Valley is primarily a bedroom community, it hosts only a limited amount of industry. The Districts regulate approximately sixty industrial wastewater dischargers³⁶ in the SCVJSS, including several cosmetics manufacturers, eight metal finishers, four printers, two correctional facilities, a large theme park, and a hospital.

The Districts began source control of chloride at industrial facilities in 1961 with the adoption of resolutions prohibiting the discharge to the sewerage system of salt brines produced by the regeneration of water softening units. This prohibition is still in place and is strictly enforced. Although two industries in the SCVJSS have on-site regenerable water softeners, the brines are removed for off-site disposal or evaporated on-site. On-site inspections and manifest reviews are used to verify proper brine disposal.

The Districts supplemented the salinity source control program beginning in the mid-1990s by imposing numerical limitations on total dissolved solids (TDS) and non-volatile TDS at industrial dischargers in the SCVJSS. These limitations were applied as existing permits were renewed and as new permits were issued. Limits for these two parameters were set at 1,000 mg/L, which is equivalent to the limitations for TDS in the Saugus and Valencia NPDES permits.³⁷ In the late 1990s, chloride limitations of 180 mg/L were imposed on industrial dischargers as their permits were issued or renewed. This limit was based on the interim chloride water quality objective then in effect for the Santa Clara River to protect designated agricultural beneficial uses in the receiving waters downstream of the Districts' SCVJSS treatment plants.

In April 2001, the Districts alerted all industrial users about upcoming chloride limitations that would be imposed, pending the finalization of the Chloride TMDL and the imposition of new permit requirements for the Saugus and Valencia WRPs. In September 2002, all industrial dischargers in the SCVJSS were assigned a chloride limit or required to develop a chloride reduction work plan, or both. The target chloride limit for every industry is 100 mg/L, which is currently the most stringent water quality objective

³⁶ The SCVJSS currently has a total of 65 industrial wastewater connections to the sewerage system.

³⁷ It is important to point out that any local limit implemented by a publicly owned treatment works (POTW) must be technically based. One means of setting a technically based local limit, particularly when a stringent discharge limit has to be met at the POTW, is to make the industrial discharge limit equivalent to the POTW discharge limit. This assures that industrial dischargers will not cause or contribute to POTW limit exceedances.

for the Upper Santa Clara River. As this concentration is only 40 to 50 mg/L above the long-term average potable water supply chloride concentration, it also represents a concentration at which no significant saline discharges can be present. A 100 mg/L chloride limitation was imposed on the 31 industrial waste sewer connections that had chloride discharge concentrations at 100 mg/L or below. The purpose of the limit is to ensure that these industries maintain their current discharge levels. The 34 industrial connections with chloride concentrations above the 100 mg/L target were required to submit a Chloride Reduction Workplan detailing the steps necessary to reach the target chloride concentration of 100 mg/L. Each facility has been required to implement all technologically and economically feasible means of reducing chlorides. Ten of these industrial waste connections currently have an interim chloride limit of 230 mg/L, which will automatically convert to a 100 mg/L limit in November 2003. The remaining 24 facilities either have been or will be assigned a site-specific chloride limit that takes into account implementation of all technologically and economically feasible means of reducing chloride discharges.

3.7.1.3 Source Control of Chloride at Commercial Facilities

Numerous commercial businesses serve the SCVJSS, such as restaurants, movie theaters, and dry cleaners. Source control for chloride at these businesses began in 1961 with passage of resolutions prohibiting the discharge of brines from SRWS. These resolutions are still in effect for commercial businesses.

Until 2002, the focus of chloride source control efforts at commercial businesses was enforcement of the SRWS brine prohibition. Starting in 1997, the Districts began increased inspections of commercial business in the SCVJSS to ensure that no SRWS were used. Over 400 such inspections have been conducted to date, including inspection of every restaurant using non-disposable serving utensils and every hotel in the SCVJSS in early 2003. Letters reminding businesses of the SRWS prohibition were sent to restaurants, dry cleaners, gyms, car washes, and beauty salons during the 1999-2001 period, regardless of whether or not the facility had a water softening system currently in place. Facilities with SRWS were required to remove the systems immediately, and the Districts have conducted follow-up inspections to confirm removal of all SRWS.

The Districts have continued to review business listings in the SCVJSS to identify new businesses or existing businesses under new ownership that might not be aware of the prohibition on SRWS. When a new business or existing business under new ownership in a sector of concern³⁸ is identified, the business is provided with information on the SRWS ban and a Districts' Industrial Waste Inspector visits the facility, notifies the business owner/site manager of the brine discharge prohibition, and conducts an inspection of the premises. In August 2002, the scope of notification was broadened and letters were sent to all commercial businesses in the SCVJSS, regardless of business type, to remind them of the prohibition on the discharge of SRWS brines.

In 2002, the Districts began efforts to further reduce chloride discharges from commercial businesses. The Districts used a contractor to investigate available means of reducing saline discharges at commercial businesses to the extent technologically and economically feasible. The investigation found that the only technologically and economically feasible means of reducing saline discharges from commercial businesses was to require best management practices (BMPs) to be implemented for swimming pool operation. The investigation also identified voluntary BMPs for chloride reduction that could be employed for sanitizing, laundering, and janitorial cleaning.

In December 2002, the Districts sent a letter to all commercial businesses in the SCVJSS, to encourage the use of voluntary BMPs for sanitizing, laundering, and janitorial cleaning. The letter also informed pool owners that mandatory BMPs would be issued, and reminded businesses of the prohibition on use of

³⁸ Including restaurants, car washes, hotels, and laundromats.

SRWS. In January 2003 letters were sent to all potential owners of swimming pools,³⁹ requiring implementation of BMPs to reduce chloride in swimming pool discharges. BMP certifications have now been completed for all 249 regulated swimming pools.

3.7.1.4 Source Control of Chlorides at the Saugus Liquid Waste Disposal Station

In addition to wastewater directly discharged to the sewerage system from industrial, commercial, and residential sources, the Districts accept a small amount of wastewater in the SCVJSS that is delivered by truck (hailed waste). The Districts operate the Saugus Liquid Waste Disposal Station (LWDS), which accepts trucked loads of portable toilet, septic tank, and cesspool wastes. Wastes brought to the station are treated at the Saugus WRP and only contribute less than 1% of the chloride loading to the effluent chloride concentration. Nevertheless, the Districts have undertaken chloride source control efforts for this facility.

Chemical toilet waste generally has significantly higher chloride concentrations than septic waste, so source control efforts for chloride at the LWDS have focused on reduction of chemical toilet waste acceptance. In June 2001 all haulers using the Saugus Liquid Waste Disposal Station were notified by letter regarding additional restrictions on the use of the disposal station. Chemical toilet services using the deodorizer Para dichlorobenzene were informed that they could no longer bring chemical waste to the station if they continued to use this chemical, as the resulting liquid waste contained excessive concentrations of Para dichlorobenzene. The haulers were also informed that chemical toilet loads would no longer be accepted at the station when the NPDES permits for the Saugus and Valencia WRPs were reissued to include chloride limits. As a result of the chloride and Para dichlorobenzene notifications, most chemical toilet services in the area elected to stop using the Saugus LWDS. Only two chemical toilet services continue to use the station.

3.7.1.5 Source Control of In-Plant WRP Sources of Chloride

There are two primary in-plant sources of chlorides to the SCVJSS WRPs: disinfection and chemical addition to enhance treatment. Historically, chloride was added to wastewater at the Saugus and Valencia WRPs from the use of chlorine gas (Cl_2) and later sodium hypochlorite (NaOCl) for disinfection of final effluent.⁴⁰ Chlorine gas/sodium hypochlorite has also been periodically used in the operation of the primary sedimentation bio-scrubbers, although the chloride contribution from this process is very small. In addition, chloride was added at both plants from the use of ferric chloride (FeCl_3) for primary sedimentation (to enhance settling). At the Valencia WRP, FeCl_3 was used to enhance the dewatering of biosolids (filter press coagulation) and maintain odor control. Ferrous chloride (FeCl_2) has also been used in the operation of the anaerobic digesters. Finally, the Valencia WRP utilized a self-regenerating water softening system for the water feed to the boilers used for the anaerobic digestion process. This system had a small brine wastestream that was discharged to the headworks of the Valencia WRP.

Due to concerns over the in-plant loading of chloride from WRP chemical usage, in 2000, the Districts initiated a study to evaluate the use of ferric sulfate (FeSO_4) as an alternative to FeCl_3 . The study showed that in terms of performance, FeSO_4 could successfully replace FeCl_3 . In May 2000, FeCl_3 was replaced with FeSO_4 for primary sedimentation at the Saugus WRP. In November 2000, FeCl_3 was replaced with FeSO_4 for primary sedimentation and biosolids processing/odor control at the Valencia WRP. In August 2001, the Valencia WRP also replaced the self-regenerating water softening system that was necessary to reduce scale formation in the hot water boilers used for the anaerobic digestion process. The Valencia

³⁹ Except those owned by individual households and those permitted under the Industrial Wastewater Discharge program.

⁴⁰ The use of chlorine gas was discontinued in 1998 for safety reasons. The NPDES permits for the two WRPs require compliance with a final effluent coliform limit of less than 2.2/100 mL based on a seven-day median.

WRP now uses a water softening service that replaces the spent ion-exchange media with new media, and regenerates the spent media off-site.

4.0 BASIS FOR VARIANCE REQUEST

As noted in Section 1.3, both the State and EPA guidance provides that an applicant submitting a variance request must demonstrate that attaining the water quality standard is not feasible because of one or more of the use attainability factors as discussed in 40 CFR §131.10 (g). Of the six factors listed in Section 1.3, the following three use attainability factors are considered in this variance application:

- (1) Naturally occurring pollutant concentrations prevent the attainment of the use [40 CFR §131.10 (g)(1)];
- (2) Human caused conditions or sources of pollution prevent the attainment of the use and cannot be remedied or would cause more environmental damage to correct than to leave in place [40 CFR §131.10 (g)(3)]; and
- (3) Controls more stringent than those required by §301 (b) and §306 of the Act would result in substantial and widespread economic and social impact [40 CFR §131.10 (g)(6)].

Each of these factors and the scientific and technical evidence supporting the need for the variance are discussed more extensively in Section 4.1. Further evidence as recommended by State and EPA guidance documents is also provided in Sections 4.2, 4.3, 4.4 and 4.5 in support of this variance application.

4.1 Justification for the Exception per 40 CFR §131.10 (g)(1-6)

4.1.1 Naturally Occurring Pollutant Concentrations Prevent Attainment of Water Quality Standard [40 CFR §131.10 (g)(1)]

The Districts believe that naturally occurring pollutant concentrations, namely the increased chloride concentrations that occur in the imported State Water Project (SWP) water during drought and/or drier-than-normal conditions, prevent the attainment of the 100 mg/L chloride objectives for Reaches 4, 5 and 6 of the Santa Clara River. The Districts believe that this conclusion is justified for the following reasons:

- 1) Past Drought Policies enacted by the Regional Board during the last two state-wide droughts set a precedent acknowledging that the existing chloride water quality standards were unattainable during drought conditions; and
- 2) Analyses of historic chloride data in the imported SWP and blended water supply in the Santa Clara Valley during drought and/or drier than normal conditions, show that the potable water supply can exceed the 100 mg/L objective, thus preventing attainment of this water quality standard.

4.1.1.1 Past Drought Policies

During the last two major statewide droughts in 1976-77 and 1987-1991, the Regional Board enacted policies to provide regulatory relief to POTWs in meeting TDS and chloride limits, respectively, during drought conditions, acknowledging that the water quality standard for chloride is unattainable during these conditions. For example, on September 26, 1977, the Regional Board unanimously passed a motion not to bring enforcement actions against POTWs that failed to meet TDS effluent requirements because of drought-related circumstances (*See Attachment 3.3-2*).⁴¹ In 1990, after two years of severe drought and

⁴¹ Drought-related circumstances included: "where the sole reason for the increased mineral content is the change in water supply [due to drought conditions]," as well as "when the reason for increased mineral content is a decrease in

ORDINANCE PROHIBITING THE INSTALLATION OF CERTAIN WATER SOFTENING APPLIANCES

The Board of Directors of County Sanitation District No. 32 of Los Angeles County ordain as follows:

1. AUTHORIZATION

This Ordinance is enacted pursuant to authority contained in the County Sanitation District Act, California Health and Safety Code Sections 4700 et seq. and exercises authority conferred by law including, but not limited to, Chapter 5, Part 12, Division 104 of the California Health and Safety Code.

2. PURPOSE

The purpose of this Ordinance is to protect the quality of the waters of the State including, but not limited to, protecting beneficial uses of the Santa Clara River downstream of the County Sanitation District No. 32 of Los Angeles County's Valencia Water Reclamation Plant.

3. DEFINITIONS

The following definitions shall apply to the terms used in this Ordinance:

(a) "District" means County Sanitation District No. 32 of Los Angeles County.

(b) "Person" includes any person, firm, association, organization, partnership, business, trust, corporation, company, district, county, city and county, city, town, the state, the federal government and any of the agencies and political subdivisions of such entities.

(c) "Regional Board" means the California Regional Water Quality Control Board, Los Angeles Region, created and exercising its powers pursuant to the Porter-Cologne Water Quality Control Act, California Water Code Sections 13000 et seq.

(d) "Residence" means a structure which is or is intended to be, in whole or in part, a place of dwelling, whether occupied or not, whether fully constructed or not, and includes, without limitation, homes, whether attached to another structure or not, apartments, condominiums and mobile homes.

(e) "Residential self-regenerating water softening appliance" means a water softening device located within or adjacent to a residence located within the District or which discharges into a community sewer system that is tributary to the sewer system owned and operated by the District, whereby the capability of the appliance to remove hardness from water is renewed by the on-site application of a chloride salt-containing brine solution to the active softening or conditioning material contained therein, followed by a subsequent rinsing of the active softening or conditioning material.

4. FINDINGS

(a) The state legislature has found and declared that pollution prevention should be the first step in a hierarchy for reducing pollution and managing wastes, and to achieve environmental stewardship for society.

(b) The District is not in compliance with waste discharge requirements issued by the Regional Board pursuant to Chapter 5.5 (commencing with Section 13370) of Division 7 of the Water Code.

(c) Limiting the availability, or prohibiting the installation, of self-regenerating water softening appliances is the only available means of achieving compliance with waste discharge requirements issued by the Regional Board.

(d) The District has adopted and is enforcing regulatory requirements that limit the volumes and the concentrations of saline discharges from nonresidential sources in the community waste disposal system to the extent technologically and economically feasible.

Findings 4 (b), (c), and (d) have been substantiated by an independent study of discharges from all sources of salinity, including, but not limited to, residential water softening or conditioning appliances, residential consumptive use, industrial and commercial discharges, and seawater or brackish water infiltration and inflow into the sewer collection system. This study has been made in accordance with the requirements of Section 116786(c) of the California Health and Safety Code. A copy of said study is on file at the District's Joint Administration Office, 1955 Workman Mill Road, Whittier, California 90601-1400.

5. PROHIBITION

No person shall install or in any manner assist in the installation of a residential self-regenerating water softening appliance that discharges into the community sewer system owned and operated by the District or that discharges into a community sewer system that is tributary to the sewer system owned and operated by the District.

6. VIOLATION

A violation of this Ordinance, is a misdemeanor punishable by a fine not to exceed \$1,000, imprisonment not to exceed thirty days, or both.

7. ENFORCEMENT

The Chief Engineer and General Manager of the District shall administer, implement and enforce the provisions of this Ordinance. Any powers granted to or duties imposed upon the Chief Engineer and General Manager may be delegated to persons acting in the beneficial interest of or in the employ of the District.

8. SEVERABILITY

If any provision of this Ordinance or the applicability thereof to any person or circumstances is held invalid, that invalidity shall not affect other provisions or applications of this Ordinance which can be given effect without the invalid portion or application, and to that end the provisions of this Ordinance are severable.

9. EFFECTIVE DATE

This Ordinance shall become effective thirty days from the date of final passage and shall be prospective in nature.

Chairperson, Board of Directors
County Sanitation District No. 32
of Los Angeles County

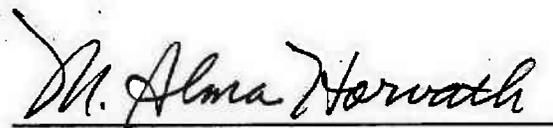

ATTEST:

Clerk, Board of Directors
County Sanitation District No. 32
of Los Angeles County

PASSED AND ADOPTED by the Board of Directors of County Sanitation District No. 32 of Los Angeles County on February 25, 2003, by the following vote:

AYES: Directors Weste and Smyth
NOES: None
ABSTAIN: None
ABSENT: Director Burke

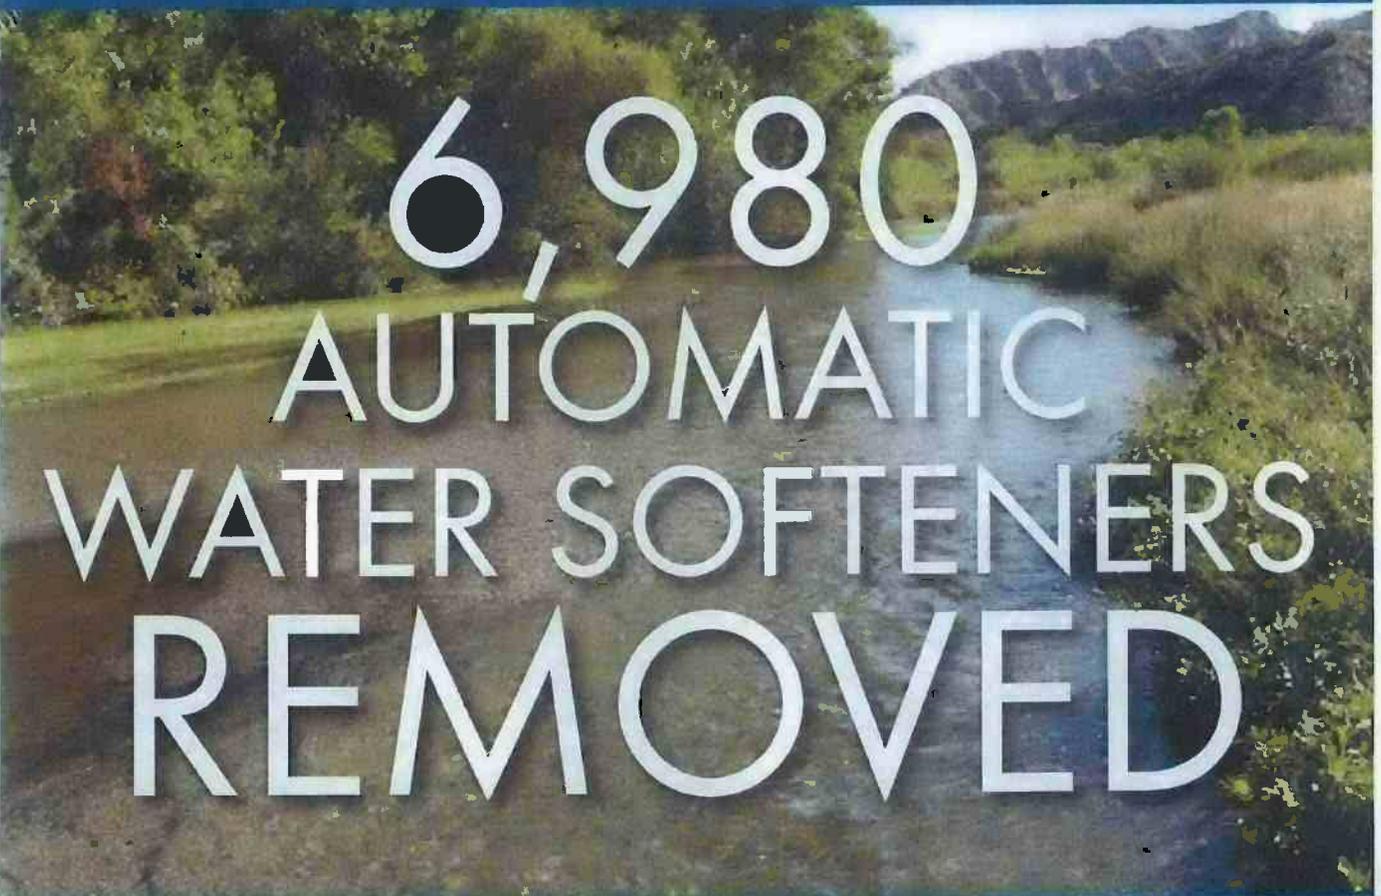

Secretary of the Board of Directors of
County Sanitation District No. 32

Section 1. Executive Summary

EXECUTIVE SUMMARY

1.1 Introduction

The purpose of this report is to address measures taken and planned to be taken by the Santa Clarita Valley Sanitation District (District) to quantify and control sources of chloride in the Santa Clarita Valley from July 2009 to June 2010. The District operates two water reclamation plants (WRPs) in the Santa Clarita Valley, the Saugus and Valencia WRPs, along with more than thirty miles of District's operated trunk lines and one pumping plant.

The Saugus and Valencia WRPs discharge treated wastewater into the upper reaches of the Santa Clara River. The District is currently facing significant water quality and regulatory challenges regarding the concentration of chloride being discharged to the river from the Saugus and Valencia WRPs. The discharges contain chloride in excess of the water quality objective for the upper Santa Clara River of 100 mg/L, which was established by the California Regional Water Quality Control Board, Los Angeles Region (Regional Board) in 1978 to reflect existing water quality conditions.

To address chloride in the upper reaches of the Santa Clara River, the Regional Board adopted Resolution 04-004 on May 6, 2004. This resolution is known as the Upper Santa Clara River Chloride Total Maximum Daily Load (TMDL), and it sets forth a comprehensive Implementation Plan for evaluating and attaining the water quality objective for the upper Santa Clara River. It became effective May 4, 2005. One of the tasks required under the TMDL Implementation Plan, Task 3, requires a plan to be submitted annually addressing measures that have been taken, and are planned, to quantify and control sources of chloride in the District's sewerage system. This report was prepared in accordance with the requirements under Task 3 of the Upper Santa Clara River Chloride TMDL Implementation Plan.

1.2 Sources of Chloride Loadings

This report addresses chloride sources from July 2009 to June 2010. Chloride loadings from 2001 to mid-2009 were fully characterized in previous reports by the District, *Santa Clarita Valley Joint Sewerage System Chloride Source Report, October 2002*; *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2005*; *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2006*; *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2007*; *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2008*; and the *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2009*. The last report, the *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2009*, contained information for the first half of 2009. In this report data have been updated to reflect the entire 2009 calendar year (January 2009 to December 2009) and information from the first half of the current year, January 2010 to June 2010. This report builds upon the methodologies established in the previous six reports. The reader should bear in mind that the data presented herein are, in many cases, estimates based on numerous assumptions and best professional judgment. Many inputs are difficult to quantify and this analysis represents the best available information at this time.

The primary source of chloride in the District's sewerage system is chloride present in potable water served to the community. Potable water in the area is derived from two sources: imported water delivered under the State Water Project (SWP) and local groundwater. The chloride concentration in these two sources varies depending on a number of factors, most notably precipitation patterns. To

Section 1. Executive Summary

estimate chloride loading in the potable water supply, water quality and quantity data from the local water suppliers were used.

The residential sector also contributes a substantial chloride loading. The flow volume for residential discharges was estimated using a differential method, whereby other known flow volumes were subtracted from the total system flow volume to obtain the residential wastewater flow rate. This method was validated in the *Santa Clarita Valley Joint Sewerage System Chloride Source Report, October 2002*, in which residential flow volumes were determined using both this differential method and a rigorous modeling technique based on extensive field data collection. There was excellent agreement between the two methods. The chloride loading contributed from self-regenerating water softeners (SRWS) was also estimated using a differential method, whereby all other chloride loadings were subtracted from the total chloride loading and the difference was assumed to be contributed by SRWS. Residential non-SRWS chloride contributions were estimated using concentration data taken from the *Santa Clarita Valley Joint Sewerage System Chloride Source Report, October 2002*.

Other sources of chloride in the District's sewerage system include disinfection at the WRPs, the industrial sector, the commercial sector, and hauled waste. Chloride introduced at the Saugus and Valencia WRPs during disinfection of wastewater using sodium hypochlorite and use of ferrous chloride in the raw sludge line at Valencia WRP was quantified using the District's operational records. Industrial loadings of chloride were estimated using chloride sampling data from industrial dischargers, combined with flow information from District's permit and surcharge records. Commercial loadings of chloride were estimated using concentration data taken from the *Santa Clarita Valley Joint Sewerage System Chloride Source Report, October 2002*, along with flow information taken from the District's service charge records. The contribution of chloride from hauled waste was determined using sample data to characterize concentration and waste manifests to determine volume.

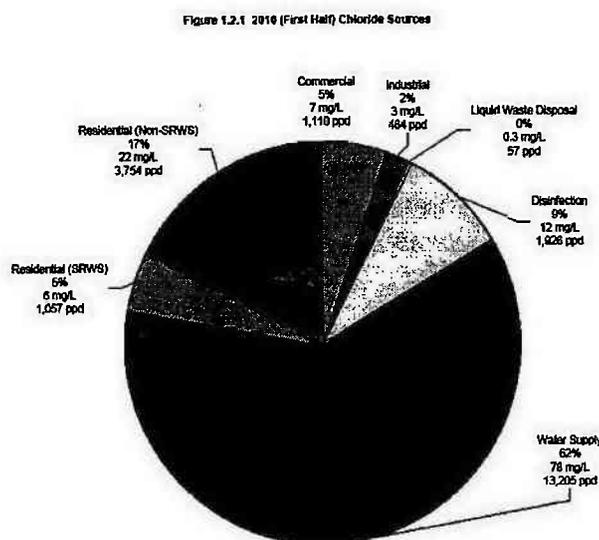

The results of the updated quantification of chloride sources in the District's sewerage system from July 2009 to June 2010 indicate that the largest source of chloride in the system continues to be the potable water supply. The estimated chloride from water supply peaked in 2009 at 13,219 pounds per day of chloride, representing 78 mg/L chloride in the system effluent. The 2009 peak coincided with drought conditions in both northern and southern California contributing to high chloride content in the SWP and the Alluvial Aquifer. In the first half of 2010, the potable water supply contributed 13,205 pounds per day of chloride, representing 78 mg/L in the effluent, and 62 percent of the chloride load in the District's sewerage system.

The chloride loading from SRWS peaked in 2003/2004 at about 9,000 pounds per day, representing 59 mg/L in the system effluent. This coincided with enactment of the prohibition on installation of SRWS in the District in 2003. The SRWS contribution maintained a downward trend in the first half of 2010, as the Automatic Water Softener Rebate Program – Phase II, Santa Clara River Chloride Reduction Ordinance of 2008 (Ordinance), and community-wide public education and outreach effort convinced residents to remove existing SRWS. For the first half of 2010, the chloride loading from SRWS was approximately 1,057 pounds per day, representing about 6 mg/L in the system effluent.

Based on the SRWS chloride loading for the first half of 2010, there are an estimated 800 SRWS still active in the community. This represents a 88 percent decrease from a maximum of about 6,500 units in the 2002-2004 timeframe. This dramatic decrease highlights the success of the District's residential source control program.

Section 1. Executive Summary

A graphical depiction of the breakdown in chloride sources for the first half of 2010 is presented in Figure 1.2-1.

The District will continue to monitor and quantify chloride sources on an on-going basis. Continued efforts will include collection of data on industrial chloride concentrations and flowrates, industrial self-monitoring of chloride concentrations, quantification of commercial flowrates, tracking of treatment plant sodium hypochlorite and ferrous chloride use, tracking of volumes of wastes accepted at the Saugus Liquid Waste Disposal Station, collection of groundwater chloride data from local water purveyors, and monitoring of chloride concentrations and flowrates at the Saugus and Valencia WRPs. An update of the chloride sources will be submitted to the Regional Board each year as part of the annual progress report required under the Upper Santa Clara River Chloride TMDL Implementation Plan, Task 3.

1.3 Chloride Source Control Measures

The District has conducted a ground breaking, nationally recognized source control program for chloride in the Santa Clarita Valley. Because SRWS have been the largest controllable source of chloride, the source control efforts from July 2009 to June 2010 have continued to focus on the removal of these units. However, efforts to reduce chloride sources have also focused on the industrial sector, commercial sector, hauled waste, and treatment plant operations. Chloride in water supply is also being examined.

From July 2009 to June 2010, the District continued the Automatic Water Softener Rebate Program – Phase II and the community-wide public outreach program to encourage residents to remove SRWS. The Ordinance required all residential SRWS to be removed by June 30, 2009. Therefore, the multimedia public education and outreach program was pared down in July 2009. A brief summary of these programs is discussed below.

The Ordinance appeared as Measure S on the November 4, 2008 ballot. Voters overwhelmingly approved Measure S, with almost two-thirds of them voting in favor. Measure S received 55,502 votes, 64 percent, in favor, and 31,192 votes, 36 percent, against. The District is the first and only agency in California to have adopted such an ordinance.

Section 1. Executive Summary

In accordance with the provisions of Section 116787 of the California Health and Safety Code, the Ordinance took effect on January 1, 2009. The Ordinance required the removal and disposal of all existing SRWS installed in the District's service area by June 30, 2009, 180 days after the effective date of the Ordinance. Violations of the Ordinance following the issuance of a final Administrative Order is a misdemeanor punishable by a fine of not to exceed \$1,000.00 or by imprisonment not to exceed thirty days or by both such fine and imprisonment.

The District launched the Automatic Water Softener Rebate Program – Phase II on May 1, 2007. The program provides compensation for the reasonable value of the SRWS and removal and disposal of the SRWS at no cost to the resident if specific plumbers are used (and residents that remove the units themselves receive \$50 for removal). The reasonable value of the SRWS is determined based on the sales price, installation date of the unit, and a 12-year average service life expectancy for a unit. In order to be eligible for a rebate, the SRWS must have been installed prior to the March 27, 2003 effective date of the District's SRWS installation ban ordinance.

On January 1, 2009, the rebate amount was lowered from 100 percent to 75 percent of the reasonable value of the SRWS consistent with terms of the California Health and Safety Code Section 116787 and the Ordinance. The District is currently providing rebates of \$206 to \$2,000 for the removal and disposal of SRWS.

From May 1, 2007 to June 30, 2010, the District received 6,085 Automatic Water Softener Rebate Program – Phase II Application Forms and removed 6,547 SRWS from the Santa Clarita Valley.¹ As a result of the Automatic Water Softener Rebate Program – Phase I and II, 6,980 SRWS have been removed from the District's service area from November 30, 2005 to June 30, 2010. Approximately 60 percent of the total SRWS removed were removed between January 1, 2009, the effective date of the Ordinance, and June 30, 2010.

The District conducted a major multimedia community-wide public education and outreach campaign from March 25, 2004 to June 30, 2009. The program consisted of multiple phases and evolved significantly over the 5-year period as a result of the launch of the Automatic Water Softener Rebate Program – Phase I and II, Saltwater Pool Ordinance, and the Ordinance. Since the Ordinance required the removal of all residential SRWS by June 30, 2009, the program was pared down after that date.

From July 2009 to June 2010, the District worked successfully with local retailers to discontinue the sale of rock salt and potassium chloride. By April 2010, four Albertsons, a Do It Center, a Food 4 Less, two Home Depots, a Kmart, two Lowe's, seven Ralphs, a Sam's Club, the Sand Canyon Paint & Hardware, a Stater Bros. Market, and three Walmarts had remove rock salt and potassium chloride for SRWS from their shelves and committed to not restock the products. The District also continued to send monthly letters to new homeowners, to update the chloride website with additional alternative water conditioning units and resident reviews, to participate in community events, and to respond to residents' questions on the toll-free chloride hotline and dedicated email address.

Although many source control efforts have focused on the residential sector, the District has also conducted extensive source control efforts for other sectors. For the industrial sector, the District operates a comprehensive industrial waste source control program that includes permitting, inspections, monitoring, and enforcement. Under this program, industrial dischargers in the Santa Clarita Valley have either been assigned a chloride discharge limit of 100 mg/L or assigned a performance-based chloride limit that reflects implementation of chloride reduction practices to the extent technologically and economically feasible. For the commercial sector, the District is aggressively enforcing the prohibition

¹ Rental SRWS removed under contract with the water softening companies did not require applications forms.

Section 1. Executive Summary

on the use of SRWS. Numerous notifications about the prohibition have been made to commercial businesses, and thousands of on-site inspections have been conducted to verify compliance. In addition, the District has required implementation of best management practices to reduce chloride discharges from commercial swimming pools. The District is also investigating alternative disinfection methods for Saugus and Valencia WRPs to reduce in-plant chloride loading.

The District is firmly committed to reducing chloride sources in the sewerage system to the maximum extent technologically and economically feasible, and will continue to explore innovative and effective means to bring about this reduction.

Section 2. Introduction

INTRODUCTION

2.1 Purpose

This report has been prepared in accordance with the requirements of Task 3 of the Upper Santa Clara River Chloride Total Maximum Daily Load (TMDL) Implementation Plan, as adopted by the California Regional Water Quality Control Board, Los Angeles Region (Regional Board) on May 6, 2004.¹ Task 3 requires that "Six months after the effective date of the TMDL, CSDLAC [Districts] will submit a plan to the Regional Board that addresses measures taken and planned to be taken to quantify and control sources of chloride, including but not limited to: execute community-wide outreach programs, which were developed based on the pilot efforts conducted by CSDLAC [Districts], assess potential incentive/disincentive programs for residential self-regenerating water softeners, and other measures that may be effective in reducing chloride. CSDLAC shall develop and implement the source reduction/pollution prevention and public outreach program, and report results annually thereafter to the Regional Board. Chloride sources from imported water supplies will be assessed. The assessment will include conditions of drought and low rainfall, and will analyze the alternatives for reducing this source."

Although Task 3 requires, in part, that the Santa Clarita Valley Sanitation District (District) implement source control measures for chloride, it should be noted that such measures began well before the effective date of the TMDL. The District began source control efforts in the Santa Clarita Valley in 1961 with adoption of a resolution prohibiting the discharge of brines from self-regenerating water softeners (SRWS). The residential source control efforts include passage in February 2003 of a groundbreaking ordinance prohibiting the installation of residential SRWS, launch in March 2004 of a major, multimedia public education program, and implementation of the Automatic Water Softener Rebate Program - Phase I from November 2005 to April 2007. The District also proactively created and manages the Automatic Water Softener Rebate Program - Phase II that provides compensation to residents for reasonable value of the SRWS and provides free removal and disposal of the unit if specific plumbers are used. On November 4, 2008, voters adopted the Santa Clara River Chloride Reduction Ordinance of 2008 (Ordinance). The Ordinance required the removal of all residential SRWS in homes connected to the District's sewerage system effective January 1, 2009. As a result of the District's extensive source control efforts, 6,980 residential SRWS have been removed since 2005 and all SRWS are illegal in the District's service area. In addition to historical source control efforts, this report addresses current and planned chloride quantification and source control efforts, including assessment of chloride sources from imported water.

2.2 County Sanitation Districts of Los Angeles County

The Sanitation Districts (Districts) are a confederation of independent special districts serving the wastewater and solid waste management needs of over five million people in Los Angeles County, California. Seventeen of the districts have collectively constructed an extensive regional sewer system known as the Joint Outfall System, which conveys and treats approximately 450 million gallons per day (MGD) of wastewater from 73 cities and unincorporated county areas. The Joint Outfall System consists of seven treatment plants/water reclamation plants (WRPs) and 1,200 miles of large diameter, trunk sewers that form a network connecting the treatment plants and ocean outfalls off White Point on the Palos Verdes Peninsula. The Districts also operate four WRPs in northern Los Angeles County. Two plants serve the City of Santa Clarita and adjacent unincorporated areas in the Santa Clarita Valley.

¹ State of California, California Regional Water Quality Control Board, Los Angeles Region, Resolution No. 04-004, May 6, 2004.

Section 2. Introduction

Two other plants serve the cities of Lancaster and Palmdale. The designated beneficial uses of the receiving waters to which the Districts' WRP discharge are diverse and vary depending on location. These existing and potential use designations include groundwater recharge, agriculture, water recreation, warm fresh water habitat, wildlife habitat, commercial and sport fishing, and rare, threatened or endangered species reproduction and early development. Solid material removed during treatment is digested and dewatered. The resulting biosolids are either beneficially reused or landfilled.

2.3 Santa Clarita Valley Sanitation District

The District² owns and operates two wastewater treatment plants, Saugus and Valencia WRPs, in the Santa Clarita Valley. In addition to these two plants, the District operates more than thirty miles of trunk sewers in the area and one pumping plant. The District's service area consists of the City of Santa Clarita and a portion of unincorporated Los Angeles County in the Santa Clarita Valley. The Saugus WRP has a design capacity of 6.5 MGD and the Valencia WRP has a design capacity of 21.6 MGD (collectively the two WRPs have a design capacity of 28.1 MGD).

The Saugus WRP is a tertiary treatment plant consisting of comminution, grit removal, primary sedimentation, nitrification/denitrification activated sludge biological treatment, secondary sedimentation, coagulation, inert media filtration, chlorination, and dechlorination. No facilities for solids processing are located at the Saugus WRP. Instead, all solids are conveyed by trunk sewer and a waste activated sludge force main to the Valencia WRP for treatment. In 2009, the average effluent discharged from the Saugus WRP was 4.9 MGD. The reclaimed water is discharged from the Saugus WRP to the Santa Clara River. The Castaic Lake Water Agency (CLWA) is in the preliminary stages of evaluating using reclaimed water from Saugus WRP for beneficial reuses.

The Valencia WRP is a tertiary treatment plant with solids processing facilities. Current treatment consists of comminution, grit removal, primary sedimentation, flow equalization, nitrification/denitrification activated sludge biological treatment, secondary sedimentation, coagulation, inert media filtration, chlorination, and dechlorination. The waste activated sludge from the Saugus and Valencia WRPs is thickened using dissolved air flotation, combined with primary solids, and then anaerobically digested. The digested sludge is dewatered using plate and frame filter presses, and is beneficially reused for agricultural land application. In 2009, 15.6 MGD of reclaimed water was discharged from the Valencia WRP. The majority of the reclaimed water, 15.3 MGD, was discharged to the Santa Clara River, and 0.3 MGD was reused by CLWA.

It is important to point out that, throughout this report, chloride loadings and contributions will be addressed collectively for both the Saugus and Valencia WRPs, rather than for each individual plant. This approach is necessary because the plants are physically interconnected to allow for raw sewage from the Saugus service area to be treated at the Valencia WRP, and to allow for the solids generated from wastewater treatment processes at the Saugus WRP to be conveyed to the Valencia WRP for subsequent treatment. Consequently, it is difficult to delineate specific sectors and/or source contributions to the individual WRPs; however, source contributions can be determined jointly for the two plants in the District.

² The District was historically operated by two independent sanitation districts: County Sanitation District Number 26 of Los Angeles County and County Sanitation District Number 32 of Los Angeles County and referred to as the Santa Clarita Valley Joint Sewerage System. These two districts were merged into a single district, the Santa Clarita Valley Sanitation District of Los Angeles County, as of July 1, 2005. For simplicity in this report, actions taken by the County Sanitation District Number 26 of Los Angeles County and County Sanitation District Number 32 of Los Angeles County prior to the merger will be considered as though they were actions taken by the District.

Section 2. Introduction

Task 3 of the TMDL Implementation Plan requires an annual update to the Regional Board on the sources of chloride in the District and the District's source reduction, pollution prevention, and public outreach programs. This report describes the sources of chloride in the District's sewerage system and the District's source reduction, pollution prevention, and public outreach programs from July 2009 to June 2010 and discusses additional efforts that will be undertaken in the future.

Section 3. Sources of Chloride Loadings

SOURCES OF CHLORIDE LOADINGS

3.1 Scope

In 2002 the District conducted a detailed investigation into sources of chloride in wastewater in the Santa Clarita Valley. This investigation used the year 2001 as a basis and included collection of thousands of chloride samples to fully characterize chloride loadings from industrial, commercial, residential, liquid waste disposal station, treatment plant operations, and water supply sources. The findings are detailed in the District's *Santa Clarita Valley Joint Sewerage System Chloride Source Report, October 2002*. The thorough investigation was used in support of passage of an ordinance prohibiting the installation of residential SRWS, also known as automatic water softeners, in the Santa Clarita Valley, and was also used to choose targets for further chloride source reduction efforts.

In 2005, 2006, 2007, 2008, and 2009, the District utilized the methodologies established in the *Santa Clarita Valley Joint Sewerage System Chloride Source Report, October 2002* to analyze chloride data collected from 2002 to mid-2009. This analysis provided updated estimates of the chloride loading contributions from industrial, commercial, residential, liquid waste disposal station, treatment plant operations, and water supply sources and characterized the changes in the chloride loading from 2002 to mid-2009. The estimates of the chloride loading to the District's sewerage system during the years 2002 to mid-2009 are presented in the *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2009*.

This section of the report addresses the period from July 2009 to June 2010 and builds upon the methodologies and quantification of sources established in the *Santa Clarita Valley Joint Sewerage System Chloride Source Report, October 2002*; *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2005*; *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2006*; *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2007*; *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2008*; and *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2009*. In this report data have been updated to reflect the entire 2009 calendar year (January 2009 to December 2009) and the first half of the current year, January 2010 to June 2010. The purpose of this section is to provide an update on the changes in chloride loadings over time, so that the effectiveness of chloride source reduction measures can be evaluated and a planning level determination can be made as to how to proceed with further source control efforts. However, the reader should bear in mind that the data presented herein are, in many cases, estimates based on numerous assumptions and best professional judgment. Many inputs are difficult to quantify and this analysis represents the best available information at this time.

3.2 Santa Clarita Valley Potable Water Supplies

Potable water supplied to the community contributes a significant fraction of the chloride loading in the District's sewerage system. This section discusses sources of potable water supplied to the Santa Clarita Valley and provides a quantitative estimate of the amount of chloride present in the water. Water volume and water quality data collected from the local water purveyors in the Santa Clarita Valley were used to estimate the loadings.

Section 3. Sources of Chloride Loadings

3.2.1 Groundwater and Surface Water Volumes

The relative volumes of local groundwater and State Water Project (SWP) water delivered in the Santa Clarita Valley vary by water purveyor and vary from year-to-year. The volume of each type of water served by each of the four local water purveyors, for the period 2002 through 2009, is shown in Table 3.2-1 (see page T-1). The percentage of water supplied by the various sources (i.e., SWP water, Alluvial Aquifer, and Saugus Aquifer) is detailed in Table 3.2-2 (see page T-2) and summarized in Table 3.2-3.

Table 3.2-3 Summary of Santa Clarita Valley Potable Water Supply Sources

Year	State Water Project	Alluvial Aquifer	Saugus Aquifer
2002	61.2%	32.4%	6.4%
2003	65.9%	28.8%	5.3%
2004	65.7%	26.4%	7.9%
2005	54.1%	37.5%	8.5%
2006	55.1%	36.9%	8.0%
2007	58.9%	33.3%	7.9%
2008	55.2%	36.9%	7.9%
2009	55.3%	35.0%	9.6%

For the year 2009, the last year for which volume data are available, total potable water production for municipal use was 69,646 acre-feet. SWP water represented 55 percent of the potable water served to the Santa Clarita Valley community. Alluvial Aquifer water comprised 35 percent of water served and the Saugus Aquifer contributed ten percent of water served, for a total of 45 percent of municipal water supply from local groundwater.

The water requirements in 2009 were lower than the average projection in the 2005 Urban Water Management Plan. Compared to the previous year, total water demand in the Santa Clarita Valley was about 4.5 percent lower in 2009. The decrease in water use in 2009 is attributed to the widespread awareness of dry conditions throughout the state, aggressive conservation messaging, and the decrease in local growth.¹

3.2.2 Groundwater and Surface Water Chloride Concentrations

A variety of data sources were used to characterize source water chloride concentrations. CLWA conducts monthly analyses of the chloride content of the treated SWP water that it supplies to local water purveyors. CLWA data were therefore used to characterize the chloride content of SWP water. Well sampling data from Newhall County Water District (NCWD), the CLWA Santa Clarita Water Division, and the Valencia Water Company (VWC) were used to characterize the chloride content of the local groundwater supply. Typically, these water retailers do not sample all active supply wells for chloride every year, but rather analyze a subset of wells every three years, on a rotating basis. Beginning in mid-2001 VWC began sampling its supply wells for chloride on a monthly basis, so the chloride content of groundwater supplied by VWC is better characterized than the chloride content of groundwater supplied by the other water purveyors. Source water chloride concentrations are detailed in Table 3.2-4 (see page T-3) and summarized in Table 3.2-5.

¹ Luhdorff & Scalmanini Consulting Engineers. 2009 Santa Clarita Valley Water Report. CLWA, CLWA Santa Clarita Water Division, Los Angeles County Waterworks District 36, Newhall County Water District, and Valencia Water Company. May 2010.

Section 3. Sources of Chloride Loadings

Table 3.2-5 Summary of Santa Clarita Valley Potable Water Supply Chloride Concentrations

Year	State Water Project (mg/L)	Alluvial Aquifer (mg/L)	Saugus Aquifer (mg/L)
2002	83	87	33
2003	81	101	34
2004	69	97	34
2005	54	59	32
2006	51	66	35
2007	61	66	38
2008	75	85	38
2009	79	88	35
2010 (through June)	79	88	37

The chloride concentrations of the various sources of potable supply water varied over the period from 2002 through mid-2010. The SWP chloride concentration peaked in 2002 at 83 mg/L and decreased steadily through the 2005-2006 season², reflecting precipitation patterns in northern California. The SWP chloride concentration increased from 2006 to 2009 as a result of below normal precipitation in northern California during the 2006-2007, 2007-2008, and 2008-2009 seasons. The 2009-2010 season produced about average precipitation in northern California that resulted in the SWP chloride concentration remaining stable. Chloride concentrations in the shallow Alluvial Aquifer peaked in 2003 at 101 mg/L and decreased in 2004. There was a notable decrease in chloride concentrations from 2004 to 2005, reflecting the historic heavy rainfall in southern California during late 2004 and early 2005. Due to below normal rainfall in southern California in the 2005-2006, 2006-2007, 2007-2008, and 2008-2009 seasons, chloride concentrations in the Alluvial Aquifer increased from 2005 to 2009. The 2009-2010 season produced approximately ten percent above normal rainfall which caused the chloride in the Alluvial Aquifer to stabilize. Chloride concentrations in the deep Saugus Aquifer are not impacted by rainfall patterns and thus remained relatively constant from 2002 through the first half of 2010, at about 32 to 38 mg/L.

3.2.3 Blended Water Supply Chloride Concentration

The concentration of chloride in potable water supplied to the Santa Clarita Valley each year was estimated as a flow-weighted average of the chloride concentrations from each of the four local water purveyors. This blended water supply chloride concentration (C_{BWS}) was calculated using the equation:

$$C_{BWS} = W_{LACWD} * C_{LACWD} + W_{VWC} * C_{VWC} + W_{SCWD} * C_{SCWD} + W_{NCWD} * C_{NCWD} \quad (1)$$

where

- W_{LACWD} , W_{VWC} , W_{SCWD} , W_{NCWD} , and W_{SWP} are the water supply production ratios for Los Angeles County Waterworks District 36 (LACWD), VWC, SCWD, and NCWD (refer to Table 3.2-2 on page T-2), respectively; and

C_{LACWD} , C_{VWC} , C_{SCWD} , C_{NCWD} are calculated chloride concentrations for LACWD, VWC, SCWD, NCWD service areas, as computed using equation (2).

² Water years run from October of one calendar year to September of the following year.

Section 3. Sources of Chloride Loadings

$$C_i = W_{SWP(i)} * C_{SWP(i)} + W_{Alluvial(i)} * C_{Alluvial(i)} + W_{Saugus(i)} * C_{Saugus(i)} \quad (2)$$

where

- i represents the individual water purveyors, LACWD, VWC, SCWD or NCWD;
- $W_{SWP(i)}$, $W_{Alluvial(i)}$, and $W_{Saugus(i)}$ are the fractions of a purveyor's (i) total potable water supply associated with SWP water, the Alluvial Aquifer, and the Saugus Aquifer, respectively; and
- $C_{SWP(i)}$, $C_{Alluvial(i)}$, and $C_{Saugus(i)}$ are yearly average chloride concentrations for each source. The SWP chloride data are the same for all purveyors, and Alluvial Aquifer and Saugus Aquifer data specific to each purveyor were used. For the LACWD chloride concentration in the Alluvial Aquifer, the annual average of the Alluvial Aquifer chloride concentrations from each of the three local water purveyors was used as an estimate since data from LACWD were not available.³ For 2005, VWC data for the Saugus Aquifer were used as an estimate for the concentrations in the NCWD Saugus Aquifer since data from NCWD were not available.

The resulting estimated blended water supply chloride concentrations are presented below in Table 3.2-6. The concentration of chloride in the Santa Clarita Valley water supply peaked in 2003 at approximately 85 mg/L and decreased until 2006. The decrease was likely due to a combination of increased precipitation in northern California leading to lower chloride concentrations in SWP water and increased local rainfall leading to lower groundwater chloride concentrations in the shallow Alluvial Aquifer. For the first half of 2010, the blended water supply chloride concentration increased to 78 mg/L. The increase in blended water supply chloride concentrations from 2006 to mid-2010 is due to an increase in chloride concentrations in SWP water and the Alluvial Aquifer, likely due to below normal total precipitation received in northern and southern California during the 2006-2007, 2007-2008 and 2008-2009 seasons and near normal total precipitation in the 2009-2010 season.

Table 3.2-6 Santa Clarita Valley Estimated Blended Water Supply Chloride Concentration

Year	Blended Water Supply Chloride Concentration (mg/L)
2002	82.0
2003	84.6
2004	73.4
2005	56.2
2006	55.1
2007	61.4
2008	74.3
2009	77.6
2010 (through June)	78.2

³ A straight average of all Alluvial Aquifer chloride data for 2004 results in a chloride concentration of 90 mg/L. However, since the vast majority of the chloride data for this period are from VWC, the 90 mg/L figure is primarily representative of VWC's wells. The 97 mg/L figure is an average of the average Alluvial Aquifer chloride concentration for the three local water purveyors with such data for 2004, and thus better represents the Alluvial Aquifer chloride concentration throughout the area. From 2002 to mid-2010, LACWD only pumped from the Alluvial Aquifer in 2004 and 2005. During the other time periods, LACWD utilized water from the SWP.

Section 3. Sources of Chloride Loadings

To estimate the degree of uncertainty in the blended water supply chloride concentration calculation, an alternate method of determining the concentration was used. Under this alternate method, all chloride data for each source of water (e.g., Alluvial Aquifer and Saugus Aquifer) were averaged and combined with information on the fraction of each source of water to the total water supply. If an extensive data set were available to characterize the chloride in each source of water, this calculation method would yield the same result as the previous calculation. However, since much more data are available for VWC's wells than the other water purveyors' wells, the calculated blended water supply chloride concentration using this alternate method will be more heavily influenced by VWC data. If VWC data are representative of other wells in each aquifer, this alternate method is a better calculation method because it allows a heavier weight to the more extensive data set from VWC. However, if the chloride concentrations in the other water purveyors' wells are notably different from the chloride concentrations in VWC's wells, the original method is more accurate. Using the alternate method, the blended water supply chloride concentration is calculated using the following equation:

$$C_{BWS} = W_{SWP} * C_{SWP} + W_{Alluvial} * C_{Alluvial} + W_{Saugus} * C_{Saugus} \quad (3)$$

where

- W_{SWP} , $W_{Alluvial}$, and W_{Saugus} are the fractions of the total potable water supply associated with SWP water, the Alluvial Aquifer, and the Saugus Aquifer, respectively (see Table 3.2-3); and
- C_{SWP} , $C_{Alluvial}$, and C_{Saugus} are yearly average chloride concentrations for SWP water, the Alluvial Aquifer, and the Saugus Aquifer, respectively (see Table 3.2-5).

The results of the alternate calculations are presented in Table 3.2-7. For the first half of 2010, the resulting chloride concentration is within one percent of the concentration calculated using the original method, indicating that the results are not very sensitive to the calculation method used.

Table 3.2-7 Santa Clarita Valley Estimated Blended Water Supply Chloride Concentration, Alternate Calculation Method

Year	Blended Water Supply Chloride Concentration (mg/L)
2002	81.0
2003	83.9
2004	73.6
2005	53.9
2006	55.2
2007	60.9
2008	75.6
2009	77.7
2010 (through June)	78.0

3.3 Infiltration Contribution

In late 2004 and early 2005, the Santa Clarita Valley experienced exceptionally heavy rainfall. For the 2004-2005 water year, running from October 2004 to September 2005, the Los Angeles County Department of Public Works Santa Clarita Valley Rain Gauge 32Z (Newhall-Soledad Division Headquarters, recently renamed to Newhall-Fire Station 73) recorded a rainfall of 50.54 inches, which is the highest seasonal rainfall on record for the area. The heavy rains caused higher than normal flowrates

Section 3. Sources of Chloride Loadings

to occur at the Saugus and Valencia WRPs. The flowrates did not return to their expected values after the rains had ceased, suggesting infiltration of groundwater into the District's trunk sewer system and into local collector sewers and private laterals tributary to the District's sewerage system. Infiltration is a term indicating that shallow groundwater enters sewers in joints and cracks. Infiltration is different than inflow; inflow is intrusion of rainwater from flooded areas through manholes. Inflow occurs primarily during, but not following, rainfall events.

Wastewater flowrates in the District's sewerage system for the period 1996 through mid-2010 were evaluated. The only two years during this period where high flows were seen for extended periods after heavy seasonal rainfall were in 1998, when seasonal rainfall was 35.77 inches, and during 2005, when seasonal rainfall was 50.54 inches.⁴ Increased flows after heavy rain seasons historically have been transitory in nature, gradually abating over a period of months. Flowrates after the 1998 rain season returned to normal within six months of the end of the rainy period. However, the impact of infiltration on the District's sewerage system as a result of the 2004-2005 rainy season was considered until December 2005. The longer time period was used because flowrates to Saugus and Valencia WRPs did not decrease to approximately normal until January 2006. The longer time period for infiltration impacts to dissipate in 2005 as compared to 1998 was probably due to heavier rainfall in 2005 than in 1998.

Estimation of the impact of infiltration on 2005 flows was done by performing a linear regression on District's sewerage system flow data for the calendar years 1999 to 2004. The system was not impacted by heavy rainfalls during this period, so flows during this period reflect expected treated plant flowrates in the absence of significant infiltration. Linear regression returns the best-fit equation to describe the data as:

$$\text{Flowrate} = (0.55685 \times \text{Year}) - 1097.37, \text{ where Year is the year expressed in decimal form.}$$

Using this equation, the excess flow due to infiltration for 2005 was estimated as 1.74 MGD. The chloride load contributed to the District's sewerage system by infiltration was then estimated by combining this average infiltration flowrate with an estimate of the chloride content of infiltration water. Because infiltration is intrusion into sewers of shallow groundwater, the chloride concentration of shallow groundwater provides a good estimate of the chloride concentration of infiltration water. Shallow groundwater in the Santa Clarita Valley is part of the Alluvial Aquifer. Averaging the Alluvial Aquifer chloride concentration from each of the three local water purveyors with such data available for 2005 results in a chloride concentration of 59 mg/L.⁵ The corresponding estimated chloride loading from infiltration is 862 pounds per day for 2005. Because infiltration water has a lower chloride concentration than other sources of water entering the District's sewerage system, the presence of infiltration water reduces effluent chloride concentrations in the system.

From July 2009 to June 2010 there was no expected contribution of chloride from infiltration. Details on infiltration were included in this report in order to provide context for the 2005 chloride loading estimates.

⁴ In both high rain years, heavy rainfalls did not occur until the middle of rain year. Rain years run from October of one calendar year to September of the following year.

⁵ A straight average of all Alluvial Aquifer chloride data for 2005 results in a chloride concentration of 71 mg/L. However, since the vast majority of the chloride data for this period are from the VWC, as discussed in Section 3.2.3, the 71 mg/L figure is primarily representative of VWC's wells. The 59 mg/L figure is an average of the average Alluvial Aquifer chloride concentration for the three local water purveyors with such data for 2005, and thus better represents the Alluvial Aquifer chloride concentration throughout the area.

Section 3. Sources of Chloride Loadings

3.4 Water Reclamation Plant Operation Contribution

The operation of a WRP requires the addition of a variety of chemicals to facilitate operation of the plant, enhance treatment, and provide for disinfection of treated wastewater. When a chemical is chlorine-based, such as sodium hypochlorite, use of the chemical at the WRP results in an increase in chloride concentration in wastewater as it is treated at the plant. This section addresses chloride increases in District's wastewater resulting from operation of the Saugus and Valencia WRPs.

From July 2009 to June 2010 sodium hypochlorite and ferrous chloride were used at the Saugus and Valencia WRPs. The overwhelming majority of the sodium hypochlorite was used for disinfection of treated wastewater to protect public health. Insignificant amounts of sodium hypochlorite were also used at the Valencia WRP for odor control in a flow equalization basin. From December 22, 2009 to January 11, 2010, and from May 11, 2010 to June 30, 2010, ferrous chloride was added to the raw sludge line at Valencia WRP to control hydrogen sulfide in digester gas and prevent struvite formation in sludge piping. The ferrous chloride was added on an experimental basis in an attempt to reduce influent ferric sulfate chemical usage.

Sodium hypochlorite used for disinfection at the WRPs is measured and recorded in the Districts' mainframe computer system as gallons used per day. When preparing this report it was discovered that some of the historical data contained errors. These errors were corrected and the sodium hypochlorite data was updated from 2002 to mid-2010. Summaries of treatment plant operation chloride contributions are presented in Tables 3.4-1 and 3.4-2.

Table 3.4-1 Concentration of Treatment Plant Operation Added Chloride

Year	Valencia WRP (mg/L)					Saugus WRP (mg/L)	Flow-Weighted System Average (mg/L)
	Flow Equalization Basin	Raw Sludge Line	Scrubber	Disinfection	Total	Disinfection	
2002	0.1	0	0.3	15.5	15.9	10.6	14.2
2003	0.1	0	0.1	13.1	13.3	13.6	13.4
2004	0.0	0	0	13.8	13.8	17.8	14.7
2005	0.2	0	0	11.5	11.7	15.8	12.5
2006	0.2	0	0	12.0	12.2	10.9	11.9
2007	0.1	0	0	12.5	12.6	11.5	12.3
2008	0.1	0	0	11.4	11.5	11.3	11.4
2009	0.1	0.2	0	12.0	12.3	10.6	11.8
2010 (through June)	0.2	1.1	0	10.9	12.2	9.4	11.4

Section 3. Sources of Chloride Loadings

Table 3.4-2 Treatment Plant Operation Chloride Loading

Year	Saugus and Valencia WRP Flow (MGD)	Flow-Weighted System Average Chloride Concentration from Plant Operations (mg/L)	Treatment Plant Operation Chloride Loading (pounds per day)
2002	17.98	14.2	2,136
2003	18.12	13.4	2,018
2004	18.78	14.7	2,302
2005	21.13	12.5	2,209
2006	20.83	11.9	2,068
2007	20.91	12.3	2,150
2008	20.91	11.4	1,990
2009	20.43	11.8	2,013
2010 (through June)	20.25	11.4	1,926

Chloride containing chemicals used for wastewater treatment contribute approximately 1,900 pounds per day of chloride to the District's sewerage system. The majority of the chloride is added for wastewater disinfection. A small amount of chloride is from ferrous chloride addition into the raw sludge line and a negligible amount of chloride is added from use of sodium hypochlorite to control odors in the flow equalization basin at the Valencia WRP. In 2009 and the first half of 2010, treatment plant operations contribute approximately nine percent of the chloride loading in the final effluent.

3.5 Industrial Sector Contribution

Dischargers to the District's sewerage system can be grouped into three general categories: industrial, commercial, and residential. Industrial dischargers are those facilities that are involved in the production of goods and provision of certain services including chemical manufacturers, metal finishers, hospitals, and municipal pools. These types of facilities are regulated under the District's industrial source control program, and are issued permits to discharge industrial wastewater. Facilities that are not issued industrial wastewater discharge permits are considered to be commercial facilities.

3.5.1 Overview of Industrial Sector

The Santa Clarita Valley is primarily a bedroom community hosting only a limited amount of industry. The District currently permits 71 industrial wastewater dischargers in the District's sewerage system including the following types of facilities:

Section 3. Sources of Chloride Loadings

Table 3.5-1 Summary of Industrial Facilities Permitted in the SCVSD

Type of Industry	Number of Permitted Facilities
Bottled water manufacturing	1
Car care product manufacturing	1
Correctional facilities	1
Cosmetics manufacturing	1
Detergent manufacturing	1
Education (colleges)	2
Energy	1
Fastener manufacturing	1
Food manufacturing	6

Personal care product manufacturing	1
Pharmaceutical manufacturing	2
Photoprocessing	1
Printing	2
RV sanitary disposal station	5
Semiconductor manufacturing	1
Swimming pools	7
Theme park	1
Truck/car wash	4
Vehicle maintenance	5
Total	71

The largest industrial discharger on the District's sewerage system is the Peter Pitchess Honor Rancho. This correctional facility is operated by the Los Angeles County Sheriff's Department and houses approximately 8,000 inmates. Wastewater is generated at the facility from toilets, showers, kitchens, cleaning, on-site vehicle maintenance, and a laundry that offers services to other Los Angeles County facilities. The District receives approximately 1.3 million gallons per day of wastewater from this facility, primarily sanitary in nature. Peter Pitchess does operate a large water softener that produces approximately 5,000 gallons per day of brine, but the brines are prohibited from discharge and are instead distilled at an on-site cogeneration facility. Distilled water from this process is reused at the cogeneration facility and the concentrated brine is hauled off-site for disposal.

The District also accepts wastewater from Magic Mountain, a large amusement park that includes a seasonally operated water park. Magic Mountain discharges wastewater to the sewer through three separate connections. Overall the facility discharges about 117,000 gallons per day of wastewater, consisting primarily of sanitary waste from park employees and visitors. Wastewater is also generated from the water park's sand filters (filter backwash), vehicle maintenance operations, restaurants, and an on-site laundry for employee uniforms.

The other large discharger in the District is the Henry Mayo Newhall Memorial Hospital, which discharges wastewater from three separate connections. Smaller dischargers include various types of

Section 3. Sources of Chloride Loadings

manufacturers, printers, municipal and community pools, educational institutions, and recreational vehicle sanitary disposal stations.

3.5.2 Industrial Sector Chloride Loading

To estimate the chloride loading from the industrial sector from July 2009 to June 2010 flows and chloride concentrations from all industries in the Santa Clarita Valley were compiled. Chloride concentration data were obtained from two sources, District's sampling data and industrial self-monitoring data. District's sampling data were collected as part of routine sampling and inspection operations. The District's industrial chloride samples were analyzed by the District's Water Quality Laboratory using U.S. EPA Test Method 300.0. All appropriate sample handling and quality assurance/quality control procedures were followed.⁶ Industrial self-monitoring data are data that are collected by industries on their own effluent. The District typically requires self-monitoring for chloride at industries in the Santa Clarita Valley. The District reviews all self-monitoring data as it is received to ensure that samples were analyzed by appropriately certified laboratories.

In some cases, chloride sample data were not available for a particular facility for a particular year. In these cases, the effluent chloride concentration was usually estimated using chloride data for the company for a different year. For certain types of small dischargers, such as municipal swimming pools and recreational vehicle sanitary waste disposal stations, data were transferred from one facility to another. Because most facilities for which estimated chloride values were used have low flowrates, the uncertainty introduced by estimating chloride concentrations is relatively small.

To estimate the mass of chloride discharged from each industrial facility it was also necessary to determine the flow from each facility. Flow values were taken from District's surcharge (industrial sewer use fee) database,⁷ where available, and from permitting information when surcharge data were not available. Surcharge flows were determined by either direct measurement or calculated based on water usage information from water bills. Direct measurement was used for the two facilities in the District that discharge the largest volumes of wastewater: Peter Pitchess Honor Rancho and Magic Mountain. These facilities are required by the District to maintain continuous flow monitoring systems that are calibrated annually to ensure a high degree of accuracy in flow data. Smaller facilities that discharge less than 50,000 gallons per day are not usually required to maintain continuous flow monitoring systems. In these cases, the volume of wastewater discharged annually for surcharge purposes is determined based on annual water usage information contained in water bills. Water usage is totaled for each year, then any additions (e.g., additions through processing products) or losses of water (e.g., evaporation) are taken into consideration. Facilities that discharge less than one million gallons of wastewater per year are not required to perform annual surcharge calculations. For these facilities, flow is calculated on a one-time basis when the permit is issued. These flow calculations are also based on water bill usage adjusted for any additions or losses.

In estimating the loading of chloride from industrial sources, it was necessary to separate the loading of chloride added by industry from the loading of chloride present in the potable water supplied to industries. Potable water concentrations were assumed to be the blended water supply concentrations for the Santa Clarita Valley, as discussed in Section 3.2.

⁶ For a more complete discussion of quality assurance/quality control procedures for chloride analyses, see Appendix 3.5-A in the District's *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2005*.

⁷ This is an annual fee for wastewater collection, treatment and disposal services for industries. All industrial companies discharging more than one million gallons of wastewater during the fiscal year or that have high strength waste are required to pay an annual surcharge fee. The fee is based on flow and wastewater strength.

Section 3. Sources of Chloride Loadings

Estimated industrial loadings from 2002 to mid-2010 are presented in Tables 3.5-2 to 3.5-10 (see pages T-4 to T-12) and are summarized in Table 3.5-11. The estimated industrial chloride loading decreased from approximately 1,601 pounds per day in 2002 to 1,555 pounds per day in the first half of 2010. The estimated chloride loading added to the system by industries, above chloride present in the water supply, varied from 357 pounds per day to 707 pounds per day during the same period. In 2009, the industrial loading above blended water supply increased primarily due to increased chloride loading from Henry Mayo Newhall Memorial Hospital. In the first half of 2010, the loading decreased to 464 pounds per day. The average chloride concentration discharged by industrial facilities dropped from 131 mg/L in 2002 to 111 mg/L in the first half of 2010. The average industrial chloride concentration is lower than the concentration of chloride discharged at the District's WRPs. This means that industries may provide a diluting effect on chloride concentrations relative to other sources; if all industrial sources were removed from the District's sewerage system the effluent chloride concentration at the plants may increase.

Table 3.5-11 Summary of Estimated Industrial Chloride Loadings

Year	Industrial Flow (MGD)	Flow-Weighted Average Industrial Chloride Concentration (mg/L)	Total Industrial Chloride Loading (pounds per day)	Industrial Chloride Loading Above Blended Water Supply (pounds per day)
2002	1.46	131	1,601	608
2003	1.25	123	1,281	408
2004	1.14	111	1,047	357
2005	1.15	108	1,035	503
2006	1.25	96	1,003	433
2007	1.38	101	1,171	469
2008	1.77	110	1,631	540
2009	1.79	125	1,860	707
2010 (through June)	1.69	111	1,555	464

3.6 Commercial Sector Contribution

3.6.1 Overview of Commercial Sector

The commercial sector, as the term is used by the District, consists of all non-residential dischargers that do not hold industrial wastewater discharge permits. The commercial sector includes retail stores, restaurants, motels, offices, professional buildings, warehouses, and a number of other types of businesses.

3.6.2 Commercial Sector Flow Volume

To estimate the amount of chloride discharged from the commercial sector it was necessary to identify both the flow volume and chloride concentration of wastewater discharged from this sector.

Section 3. Sources of Chloride Loadings

Flow volumes were determined using information from internal District's service charge⁸ and connection fee⁹ databases. When a commercial business is first connected to the sewer system, the flow volume for the business is determined using a standard usage unit. The usage unit varies based on the type of business. For most business types, the usage unit is 1,000 square feet of occupied area. For motels and hotels the usage unit is the number of rooms on the property. For recreational vehicle parks the usage unit is the number of spaces, and for convalescent homes the usage unit is the number of beds.

A wastewater flow rate is then assigned to the business based on the District's standard business parcel connection fee schedule. The connection fee schedule establishes wastewater discharge rates per unit of usage for specific commercial business sectors based on studies conducted by the District in developing both the service charge and connection fee program. These studies characterized typical discharges for specific business categories. For example, office buildings are assumed to discharge 200 gallons of wastewater per day per unit of usage. The unit of usage for office buildings is 1,000 square feet of occupied area. Therefore, a 10,000 square foot office building would have ten usage units and would be assumed to discharge 2,000 gallons per day of wastewater. In some cases, however, certain commercial dischargers have applied for and received assigned wastewater flowrates lower than the standard usage units, based on reduced water usage.

Summaries of the flowrates from the various commercial business types in the Santa Clarita Valley, for the years 2002 through 2010 are presented in Tables 3.6-1 to 3.6-9 (see pages T-13 to T-21). The overall commercial wastewater flowrate increased from an estimated 2.7 MGD in 2002 to 4.0 MGD in 2010, commensurate with residential growth in the Santa Clarita Valley during this timeframe.

3.6.3 Commercial Sector Chloride Concentrations

Chloride concentrations in wastewater discharged by the commercial sector were taken from the District's *Santa Clarita Valley Joint Sewerage System Chloride Source Report, October 2002*. As part of the District's 2001 chloride source identification study, the District sampled wastewater from a number of commercial business sectors. The sectors were chosen based on the potential for the businesses in the sector to discharge non-sanitary wastes that contained elevated chloride concentrations. Business sectors that only discharged sanitary wastes, such as office buildings, were excluded from sampling. Certain other business types, such as beauty salons and florists, were excluded because inspection and investigation of typical business practices at these facilities indicated that there were no operations that added significant amounts of chloride to their wastewater.

The commercial sectors chosen for sampling were dry cleaners, car washes, dog grooming, hotels/motels, health clubs, restaurants, laundromats, movie theaters, and retail grocery stores. The District selected a single company from each business sector to collect monitoring samples. Companies within a business category were reviewed based on the following criteria to select an acceptable location:

⁸ As a special district, the District is permitted to charge an assessment for the services rendered under the applicable state law that allowed its creation. For residential and commercial uses of the District's sewerage system, this assessment is called a service charge. In accordance with state law, each fiscal year the District provides the Los Angeles County Auditor-Controller with a listing of the land parcels within its service area and the amounts to be charged to each parcel on the property tax roll.

⁹ In 1981, a District-wide Connection Fee Program was implemented to provide funds for future capital expenditures needed to accommodate additional wastewater contributions in the District's sewerage system. This program requires all new users of the sewerage system, as well as existing users who expand their wastewater discharge by more than 25 percent, to pay a connection fee to the District based upon the quantity and the strength of the wastewater discharge. This connection fee applies to residential, commercial, and industrial users of the system.

Section 3. Sources of Chloride Loadings

1. Suitability of the Sampling Point - The wastewater at the sampling location had to be representative of only that business being evaluated (e.g., no other sources of wastewater are discharged to the sewer line, which can be a problem in some shopping centers). Also the sampling location had to collect all wastewater from the business, including sanitary wastewater.
2. Representative Operating Conditions - The business, on the day of the sampling, had to be operating in a manner that reflected the normal operations of the business in that category.
3. Site Inspection - The sites were thoroughly inspected prior to sampling to ensure that unauthorized chloride sources (such as SRWS) were not present.
4. Sampling Location Access - The sampling location had to be situated in such a manner as to provide safe access for District's personnel.

The sampling program included the collection of two non-concurrent 24-hour chloride composite samples at each business type. To further ensure the validity of the data, the two composite sampling events were separated by a minimum of 40 days. Inspection of the businesses during the sampling periods confirmed the activities at the facilities were those of a typical business day. All wastewater samples collected from the commercial businesses were analyzed by the District's Water Quality Laboratory using U.S. EPA Test Method 300.0. All appropriate sampling handling and quality assurance/quality control procedures were followed.¹⁰ The results of the sampling program are presented in Table 3.6-10.

Table 3.6-10 2001 Commercial Sampling Results

Business Sector	Average Chloride Concentration (mg/L)	Chloride Concentration Above Water Supply (mg/L)
Car Washes	75	6
Dog Grooming	85	16
Hotels & Motels	106	37
Health Clubs	115	46
Restaurants	120	51
Laundromats	121	52
Movie Theaters	146	77
Grocers - Retail	148	79

**Chloride concentrations above water supply in this table are based on the average 2001 chloride water supply value of 69 mg/L.*

¹⁰ For a more complete discussion of quality assurance/quality control measures for chloride analysis, see Appendix 3.5-A in the District's *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2005*

Section 3. Sources of Chloride Loadings

Businesses not in one of the sectors listed in Table 3.6-10 were evaluated independently. For example, convenience stores were assigned a chloride value equal to local potable water plus 30 mg/L to account for sanitary and domestic wastes.¹¹ This nominal value was assigned because no operations were conducted that would add significant amounts of chloride to their wastewater.

3.6.4 Commercial Sector Chloride Loading

Flowrates and wastewater chloride data were combined to estimate the chloride loading from each commercial business type in the Santa Clarita Valley, as presented in Table 3.6-11. The estimated commercial loading of chloride above water supply contributions increased from 748 pounds per day in 2002 to 1,110 pounds per day in 2010. The increased chloride loading was due to increased flows from the commercial sector, as it grew commensurate with residential growth in the Santa Clarita Valley.

The concentration of chloride added to wastewater by the commercial sector has remained steady over the past nine years at 33 mg/L. This concentration is significantly lower than the average amount of chloride added to wastewater by other sources. Therefore, as with the industrial sector, the commercial sector provides a diluting effect on chloride concentrations in the District's sewerage system; if all commercial sources were removed from the District the effluent chloride concentration at the plants would increase.

Table 3.6-11 Summary of Estimated Commercial Chloride Loadings

Year	Commercial Flow (MGD)	Flow-Weighted Average Commercial Added Chloride Concentration (mg/L)	Commercial Chloride Loading Above Blended Water Supply (pounds per day)
2002	2.72	32.9	748
2003	2.95	32.5	800
2004	3.02	32.5	820
2005	2.99	32.7	815
2006	2.98	33.1	823
2007	3.41	33.3	945
2008	3.23	33.4	900
2009	3.92	33.1	1,082
2010 (through June)	4.02	33.1	1,110

3.7 Liquid Waste Disposal Station Contribution

In addition to wastewater directly discharged to the sewerage system from industrial, commercial, and residential sources, the District accepts a small amount of wastewater that is delivered by truck, also known as hauled waste. The District operates the Saugus Liquid Waste Disposal Station, which accepts trucked loads of portable toilet, septic tank, and cesspool wastes at the Saugus WRP. No industrial wastes are accepted at the station, which primarily serves Santa Clarita and the outlying unsewered areas of Canyon Country and Aqua Dulce.

¹¹ Metcalf and Eddy, Inc., *Wastewater Engineering Treatment and Reuse*, 4th ed., McGraw-Hill, 2003.

Section 3. Sources of Chloride Loadings

Each load arriving at the Saugus Liquid Waste Disposal Station is accompanied by a manifest. The number of loads, types of loads, and volumes of wastes arriving at the station can be determined by a review of historical manifest data. Table 3.7-1 presents a summary of the number of loads and volumes of loads arriving at the station from 2002 to mid-2010.

Table 3.7-1 Saugus Liquid Waste Disposal Station Volumes

Year	Number of Loads		Gallons	
	Chemical Toilet	Septage	Chemical Toilet	Septage
2002	523	2,270	948,339	5,731,245
2003	557	2,392	899,119	6,249,707
2004	896	2,503	1,146,404	5,784,546
2005	999	4,663	1,540,894	12,831,309
2006	1,257	3,439	1,765,512	7,367,571
2007	1,233	2,727	1,597,029	5,041,595
2008	1,367	2,860	1,637,258	5,130,228
2009	1,273	2,840	1,573,506	5,060,053
2010 (through June)	473	1,152	618,265	2,322,211

The chloride concentration of hauled waste loads arriving at the Saugus Liquid Waste Disposal Station was determined by direct measurement during the period from January 2000 through July 2004. Eighty-one randomly selected loads arriving at the station were sampled and analyzed for chloride. All samples were analyzed by the District's Water Quality Laboratory using U.S. EPA Test Method 300.0 and all appropriate quality assurance/quality control measures were followed.¹²

The results of the hauled waste sampling are detailed in Table 3.7-2 (see page T-22). Chloride concentrations in hauled waste loads varied from a minimum of 51 mg/L to a maximum of 2,650 mg/L. On average, the chloride content of chemical toilet waste was found to be 1,341 mg/L and the chloride content of septage waste was found to be 175 mg/L.

The chloride mass loading from the Saugus Liquid Waste Disposal Station was determined for the years 2002 to mid-2010 using the volumes of chemical toilet waste and septage received for each year and the average chloride concentrations of these wastes. The results are presented in Table 3.7-3. The contribution of chloride to the District's sewerage system from the Saugus Liquid Waste Disposal Station is minimal, ranging from 52 to 99 pounds per day.

¹² For a more complete discussion of quality assurance/quality control measures for chloride analyses, see Appendix 3.5-A in the District's *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2005*.

Section 3. Sources of Chloride Loadings

3.8 Residential Sector Contribution

3.8.1 Residential Sector Overview

The Santa Clarita Valley consists of the City of Santa Clarita and outlying communities in unincorporated Los Angeles County. As of January 2008, the City of Santa Clarita is the fourth largest city in Los Angeles County with a population of 177,045 and the 24th largest city in California. The City of Santa Clarita grew 17 percent from 2000 to 2008, both as a result of influx and annexations of surrounding areas into the city limits. The projected City population for the year 2010 is 181,000.¹³

The Saugus and Valencia WRPs provide wastewater treatment for the majority of residents of the Santa Clarita Valley. Based on records from the District's service charge database, as of October 2010, the District contained 40,164 detached single-family homes and 26,258 non-single family housing units (e.g., condominiums, apartments, and mobile home parks). Of the 26,258 non-single family housing units, 25,835 units were identified as condominiums/townhouses, 184 were identified as duplexes, triplexes, and fourplexes, 216 were identified as multi-unit apartment complexes, and 23 were identified as mobile homes complexes. The 26,258 non-single family housing units contained 42,508 dwelling units.

3.8.2 Residential Sector Flow Volume

The volume of flow discharged by the residential sector was estimated by finding the difference between the flow volume discharged by the Saugus and Valencia WRPs and the flow volumes from infiltration, the industrial sector, the commercial sector, and the liquid waste disposal station. Because all of these flow volumes are well characterized, this differential method should provide an accurate representation of the residential flow volume. Additionally, in the *Santa Clarita Valley Joint Sewerage System Chloride Source Report, October 2002*, residential flow volumes were determined using both this differential method and a rigorous modeling technique based on extensive field data collection. There was excellent agreement in the residential flow volumes determined using the differential method and using the more rigorous modeling technique.

Using the differential technique, residential flowrates for the years 2002 to mid-2010 were found to vary from 13.8 MGD in 2002, to 16.6 MGD in 2006, to 14.5 MGD for the first half of 2010, as presented in Table 3.8-1. The overall increase in residential flow volume from 2002 to the first half of

¹³ <http://www.santa-clarita.com/index.aspx?page=574> (Accessed September 25, 2010).

Section 3. Sources of Chloride Loadings

2010 is commensurate with the increase in the Santa Clarita Valley population during the same period. The flows attributed to residences have been decreasing since 2006 as a result of an increase in flow from the industrial and commercial sectors. In addition, the combined plant flows and residential flows from 2008 to the first half of 2010 show a decreasing trend. The decrease is most likely due to the economic downturn and water conservation efforts during this time period.

Table 3.8-1 Residential Wastewater Flowrates

Year	Combined Plant Flow (MGD)	Infiltration Flow (MGD)	Industrial Flow (MGD)	Commercial Flow (MGD)	LWDS Flow (MGD)	Residential Flow (MGD)
2002	17.98	0	1.46	2.72	0.018	13.78
2003	18.12	0	1.25	2.95	0.020	13.90
2004	18.78	0	1.14	3.02	0.019	14.60
2005	21.13	1.74	1.15	2.99	0.039	15.21
2006	20.83	0	1.25	2.98	0.025	16.57
2007	20.91	0	1.38	3.41	0.018	16.10
2008	20.91	0	1.77	3.23	0.018	15.89
2009	20.43	0	1.79	3.92	0.018	14.70
2010 (through June)	20.25	0	1.69	4.02	0.016	14.52

3.8.3 Residential Sector Chloride Concentration

To determine the chloride concentration in Santa Clarita Valley residential wastewater, exclusive of contributions from SRWS, data were used from the *Santa Clarita Valley Joint Sewerage System Chloride Source Report, October 2002*. In this report, it was noted that the typical chloride concentration above water supply that can be expected in municipal wastewater resulting from domestic usage is 20 to 50 mg/L, excluding chloride addition from domestic water softeners.¹⁴ To verify this concentration, the District examined chloride data collected as part of the corresponding commercial sampling program, which included samples from a major hotel. The operations that generate wastewater at a hotel are similar to those in a household, including toilet/faucet/shower use by guests, clothes washing (laundering of linens by hotel staff), and dishwashing (from any on-site restaurants and cleaning of glassware used in the rooms). The average chloride concentration above water supply in the hotel wastewater was 35 mg/L. To further verify domestic non-SRWS chloride additions, daytime¹⁵ chloride concentrations at four residential sites in the Santa Clarita Valley with a low incidence of SRWS were examined at the same time. The daytime chloride concentrations were believed to be representative of domestic wastewater with no SRWS regenerate, as the incidence of SRWS was low at these sites and SRWS are usually set to regenerate at night. As shown in Table 3.8-2, both the hotel data and the literature chloride value agree well with the daytime chloride concentrations above water supply found at the four residential sites with low SRWS usage in the Santa Clarita Valley.

¹⁵ 6 A.M. to midnight.

Section 3. Sources of Chloride Loadings

Table 3.8-2 Residential Chloride Concentration Above Water Supply Comparison

	Chloride Concentration Above Water Supply (mg/L)
Literature	20 to 50
Hotel Wastewater	35
Site 1	31
Site 2	26
Site 3	28
Site 4	39
Average, Sites 1 to 4	31

To further quantify residential non-SRWS chloride contributions, the *Santa Clarita Valley Joint Sewerage System Chloride Source Report, October 2002* contained a detailed study of residential non-SRWS sources of chloride. Chloride loadings for human waste, laundry products, other cleaning products, and swimming pool backwash were individually quantified. The chloride concentration in residential wastewater without SRWS was found to be 31 mg/L.¹⁶

3.8.4 Residential Sector Chloride Load

The residential sector chloride load, exclusive of SRWS contributions, was estimated using flow and chloride concentrations as described above. The results are presented in Table 3.8-3. They indicate that the residential added chloride load, exclusive of SRWS, increased from 3,562 pounds per day in 2002 to about 3,754 pounds per day in mid-2010. The amount of residential chloride load has been decreasing since 2006 due a decrease in the flowrate attributed to residences as described in Section 3.8.2.

Table 3.8-3 Estimated Residential Non-SRWS Chloride Load

Year	Residential Flowrate (MGD)	Chloride Concentration (mg/L)	Chloride Load (pounds per day)
2002	13.78	31	3,562
2003	13.90	31	3,593
2004	14.60	31	3,774
2005	15.21	31	3,932
2006	16.57	31	4,284
2007	16.10	31	4,164
2008	15.89	31	4,108
2009	14.70	31	3,800
2010 (through June)	14.52	31	3,754

From 2002 to 2008, the primary source of chloride added to residential wastewater in the Santa Clarita Valley was SRWS. The chloride contribution from residential SRWS was estimated as the difference between the total chloride mass effluent from the Saugus and Valencia WRPs and the chloride loadings from other sources (water supply, infiltration, disinfection at the treatment plants, industrial, commercial, hauled waste, and residential non-SRWS). The mass of chloride discharged from the Saugus

¹⁶ For a more complete discussion of the quantification of these sources see Section 4.6.6 in the District's *Santa Clarita Valley Joint Sewerage System Chloride Report, October 2002*. For information about the quantification of chloride concentration from residential garbage grinders/disposers, see Section 3.8.3 in the District's *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2005*.

Section 3. Sources of Chloride Loadings

and Valencia WRPs for the years 2002 to mid-2010 is presented in Table 3.8-4, and the estimated residential SRWS chloride load for the same period is presented in Table 3.8-5.

Table 3.8-4 Saugus and Valencia WRPs Chloride Load

Year	Flowrate (MGD)			Chloride Concentration (mg/L)			Chloride Load (pounds per day)

2005	24,995	9,088	862	2,209	503	815	99	3,932	7,487
2006	23,141	9,572	0	2,068	433	823	84	4,284	5,877
2007	24,621	10,708	0	2,150	469	945	69	4,164	6,116
2008	25,847	12,955	0	1,990	540	900	71	4,108	5,283
2009	23,418	13,219	0	2,013	707	1,082	68	3,800	2,529
2010 (through June)	21,573	13,205	0	1,926	464	1,110	57	3,754	1,057

The number of active residential SRWS present in the Santa Clarita Valley was estimated using the chloride loading from each SRWS. This analysis assumes that each residential SRWS contributes a daily chloride loading of 1.34 pounds per day above water supply.¹⁷ An estimate of the number of households that are using a SRWS was then made by dividing the SRWS contribution to the residential loading by the SRWS loading rate of 1.34 pounds per day per SRWS. The results are presented in Table 3.8-6.

¹⁷ See the District's *Santa Clarita Valley Joint Sewerage System Chloride Source Report, October 2002* for a complete discussion of how the chloride loading per SRWS was determined.

Section 3. Sources of Chloride Loadings

Table 3.8-6 Estimated Residential SRWS

Year	Residential SRWS Chloride Load (pounds per day)	Number of SRWS
2002	8,029	5,992
2003	8,907	6,647
2004	9,080	6,776
2005	7,487	5,588
2006	5,877	4,386
2007	6,116	4,564
2008	5,283	3,943
2009	2,529	1,888
2010 (through June)	1,057	789

According to these estimates, there were approximately 789 SRWS still in use in the community as of the middle of 2010. This represents an 88 percent decrease from a maximum of about 6,500 units in the 2002-2004 timeframe. The reduction is believed to be due to the combination of a prohibition on the installation of SRWS in the Santa Clarita Valley, which became effective in late March 2003,¹⁸ the successful community-wide education and outreach program launched in March 2004,¹⁹ the Automatic Water Softener Rebate Program – Phase I and II from November 2005 to June 2010,²⁰ and the enactment of the Santa Clara River Chloride Reduction Ordinance of 2008, which became effective January 1, 2009.²¹ It should be kept in mind, however, that the exact numbers of SRWS in the community is unknown, and these estimates represent the best available information at this time.

3.9 Chloride Trends, Loading Summary, and Future Plans

3.9.1 Chloride Trends

The flow-weighted combined effluent chloride concentrations at the District’s WRP’s from 1996 to June 2010 are presented in Figure 3.9-1 (see page F-1). Effluent chloride concentrations in the system began rising in 1997, when local ordinances prohibiting the discharge of brines from residential SRWS were invalidated by court rulings. SRWS were heavily marketed to the community, and became increasingly popular. The upward trend in chloride was exacerbated by increasing chloride concentrations in SWP water, causing the chloride loading in water supplied to the community to increase. Effluent chloride concentrations continued to rise until early 2003. In early 2003, the District enacted an ordinance prohibiting the installation of SRWS.²² At the same time, drought conditions eased in northern California and the chloride concentration in SWP water served to the community began to drop. Chloride concentrations in the District’s sewerage system exhibited a strong downward trend until 2007 due to the decrease in the chloride in the blended water supply and the District’s community-wide outreach and rebate programs. Due to precipitation patterns in northern and southern California, the chloride concentration in the SWP water and Alluvial Aquifer has increased since 2007, contributing to an increase in the amount of chloride in the effluent. The combined, flow-weighted effluent chloride concentration in the District’s sewerage system in the first half of 2010 was 128 mg/L.

¹⁸ See Section 4.1.1 for details on the ordinance.

¹⁹ See Section 4.1.5 for details on the public outreach efforts.

²⁰ See Section 4.1.4 for more information on the Automatic Water Softener Rebate Program – Phase I and II.

²¹ See Section 4.1.3 for a discussion of the ordinance.

²² See Section 4.1.1 for a discussion of the ordinance.

Section 3. Sources of Chloride Loadings

Figure 3.9-2 (see page F-2) presents a chart of trends in chloride concentrations added to the District's sewerage system by users of the system (industrial, commercial, residential, and the liquid waste disposal station). Chloride added by the system users began to increase in 1997, again commensurate with invalidation of the ordinance prohibiting installation of SRWS. Chloride added by the system users continued to rise until early 2003, when the ordinance was enacted prohibiting installation of SRWS. Chloride concentrations then leveled off, and began to drop in early 2004 when community-wide outreach efforts about SRWS were implemented. They have been on a steady downward trend since, excluding the contributions from the potable water supply and wastewater disinfection.

3.9.2 Summary of Chloride Loadings

The breakdown of chloride loadings by sector is presented in Tables 3.9-1, 3.9-2, and 3.9-3, and graphically depicted in Figures 3.9-3 to 3.9-11 (see pages F-3 to F-11).

Table 3.9-1 SCVSD Chloride Loadings, Pounds per Day

The relative contribution to chloride loadings of the industrial sector, commercial sector, liquid waste disposal station, disinfection, and residential non-SRWS has stayed relatively constant over the past several years. The industrial sector discharges one to three percent of the total loading, representing 2 to 4 mg/L of chloride in the final system effluent. The commercial sector discharges three to five percent of the total chloride loading, representing 4 to 7 mg/L chloride in the final system effluent. The liquid waste disposal station discharges less than one percent of the total chloride loading, representing about 0.4 mg/L chloride in the final system effluent. Disinfection at the WRPs contributes seven to nine percent of the total chloride loading, representing 12 to 15 mg/L in the final system effluent. Residential non-SRWS contributes 13 to 19 percent of the total chloride loading, representing approximately 22 to 25 mg/L in the final system effluent.

The two sources of chloride that have significantly varied over the past several years are chloride in the potable water supply and chloride from residential SRWS. The estimated chloride loading from water supply between 2002 and mid-2010 peaked in 2009 at 13,219 pounds per day of chloride, representing 78 mg/L chloride in the system effluent. In the first half of 2010, the potable water supply contributed 62 percent of the chloride load in the District's sewerage system. The chloride loading from SRWS peaked in 2003/2004 at about 9,000 pounds per day, representing 59 mg/L in the system effluent. This coincided with enactment of the prohibition on installation of SRWS in the District in 2003. The SRWS contribution maintained a downward trend in the first half of 2010, as the Automatic Water Softener Rebate Program – Phase II, Santa Clara River Chloride Reduction Ordinance of 2008, and community-wide public outreach effort convinced residents to remove existing SRWS. For the first half of 2010, the chloride loading from SRWS was approximately 1,057 pounds per day, representing about 6 mg/L in the system effluent.

The relative contributions of chloride sources, exclusive of potable water supply contributions, are presented in Figures 3.9-12 to 3.9-20 (see pages F-12 to F-20). The amount of added chloride loading from SRWS has dramatically reduced from 56 percent in 2003/2004 timeframe to 13 percent in mid-2010 (see Figures 3.9.13, 3.9.14, and 3.9-20). Data from the first half of 2010, Figure 3.9-20, indicates that residential SRWS continue to remain a controllable source of chloride added to wastewater in the Santa Clara Valley.

This analysis shows that residential SRWS should remain a primary target of the District's chloride source reduction efforts, and that chloride from the potable water supply should be also addressed to the maximum extent possible. The District should also consider further source control efforts for the residential, commercial, and industrial sectors and wastewater treatment.

Section 3. Sources of Chloride Loadings

3.9.3 Future Plans

The District will continue to monitor and quantify chloride sources on an on-going basis. Continued efforts will include collection of data on industrial chloride concentrations and flowrates, industrial self-monitoring of chloride concentrations, quantification of commercial flowrates, tracking of treatment plant sodium hypochlorite and ferrous chloride use, tracking of volumes of wastes accepted at the Saugus Liquid Waste Disposal Station, obtaining groundwater and SWP chloride data from local water purveyors, and monitoring chloride concentrations and flowrates at the Saugus and Valencia WRPs. It is anticipated that the loading due to SRWS will continue to decrease with the further implementation of the Santa Clara River Chloride Reduction Ordinance of 2008. An update of the chloride loading per source category and the District's pollution prevention and public outreach programs for July 2010 to June 2011 will be submitted to the Regional Board next year as part of the annual progress report required under the Upper Santa Clara River Chloride TMDL, Task 3.

Section 4. Chloride Source Control Measures

CHLORIDE SOURCE CONTROL MEASURES

4.1 Residential Sector

As detailed in Section 3, the primary controllable source of chloride in the Santa Clarita Valley has been residential SRWS, also known as automatic water softeners. Therefore, District's residential source control efforts have focused on these units. This section describes the residential source control efforts, which began in 1961. These efforts were substantially increased beginning in 2000, well in advance of deadlines required under the Upper Santa Clara River Chloride TMDL.

4.1.1 Historical Control of Self-Regenerating Water Softeners

In 1961, the District adopted resolutions that prohibited the connection of laterals or other sewer lines to the District's sewerage system that included salt brines produced by the regeneration of water softeners (e.g., SRWS). This action was taken to protect the quality of the District's wastewater and in turn to protect the quality of water discharged to the Santa Clara River and/or the quality of water beneficially reused. The prohibition applied to all users of the sewerage system: residential, commercial and industrial. In 1997, the prohibition in effect was limited to only industrial and commercial users based on the outcome of several lawsuits that impacted the ability of local agencies to control residential SRWS, as further explained below.

In the mid-1990s, the California Court of Appeals made several significant rulings regarding the ability of local agencies to enact ordinances to ban or restrict residential SRWS.¹ Each agency had adopted an ordinance that either banned or placed restrictions on the use of residential SRWS. In each case, the Courts ruled that restrictive ordinances prohibiting or significantly restricting residential use of SRWS were invalid, as the State had statutes in place that regulated softener performance on a statewide basis (and these took precedence over more stringent local regulations). Specifically, in 1978, the state Legislature adopted California Health and Safety Code Section 116775 that reads, in pertinent part as follows:

"The Legislature hereby finds and declares that the utilization of the waters of the state by residential consumers for general domestic purposes, . . . is a right that should be interfered with only when necessary for specified health and safety purposes. The Legislature further finds that variation in water quality, and *particularly in water hardness, throughout the state requires that on-site water softening or conditioning be available throughout the state* to insure to domestic consumers their right to a water supply that is effective and functional for domestic requirements of the residential household, *but that the on-site water softening or conditioning shall be available only as hereinafter set forth.*" (Emphasis added)

Health and Safety Code Sections 116785 and 116790 established minimum salt efficiency ratings for residential SRWS of 2,850 grains of hardness per pound of salt, and required that regeneration be based on clock or demand control devices. The Courts determined that the statute declared that the residential use of SRWS was a right, and that the local ordinances restricting SRWS use by residents interfered with that right. The Courts acknowledged the concerns of the agencies about impacts of salinity on water quality resulting from the discharge of brine wastes into sewers, but indicated that any desire to further restrict softeners would need to be addressed by the State Legislature.² These court decisions prevented local agencies from regulating

² 96 Daily Journal D.A.R. 4450.

Section 4. Chloride Source Control Measures

residential SRWS, even where there were adverse water quality impacts, or where salt levels contributed by water softeners posed an impediment to water recycling efforts.

In 1999, Senate Bill 1006 (Statutes of 1999, Ch. 969) was enacted, but it did not take effect until January 1, 2003. Among other things, the bill amended the California Health and Safety Code Section 116786 to establish new conditions under which a local agency could regulate SRWS.³ Health and Safety Code Section 116786 authorized a local agency to limit the availability, or prohibit the installation, of residential water softening or conditioning appliances that discharge to the sewer system through adoption of an ordinance, if three findings are made, substantiated by an independent study, and included in the ordinance. The findings must include the following:

- 1) The local agency is not in compliance with either their NPDES permit or their water reclamation requirements;
- 2) Limiting the availability, or prohibiting the installation, of the appliances is the only available means of achieving compliance with the permit or reclamation requirements; and
- 3) The local agency has adopted, and is enforcing, regulatory requirements that limit the volumes and concentrations of saline discharges from non-residential sources to the sewer system to the extent technologically and economically feasible.⁴

The independent study was required to include a quantification of all sources of salinity, including residential water softening, residential consumptive use, industrial and commercial discharges, and seawater or brackish water infiltration and inflow into the sewer collection system. The study was also required to identify remedial actions taken to reduce the discharge of salinity into the sewer system from each source, to the extent technologically and economically feasible, to bring the local agency into compliance with its permit requirements.

In addition, changes to the statute enacted through Senate Bill 1006 increased the minimum operating efficiencies for all residential SRWS sold after January 1, 2000, from 2,850 to 3,350 grains removed per pound of salt added. These minimum operating efficiencies increased to 4,000 grains removed per pound of salt added for residential SRWS sold after January 1, 2002. The amended statute also specified that the regeneration cycle of all residential SRWS sold after January 1, 2000, should be demand controlled or initiated. Historically, older SRWS were timer-controlled, meaning that the regeneration cycle was controlled by a clock, which would trigger the regeneration cycle based on a preset cycle, independent of whether or not the exchange capacity of the resin beads was exhausted.

³ Under Senate Bill 1006, new ordinances enacted by local agencies must be prospective in nature, and thus, residential water softening devices installed before the effective date of a new ordinance were automatically grandfathered in.

⁴ These provisions of Senate Bill 1006 (SB 1006) were amended by Assembly Bill 334 (AB 334), which was enacted August 4, 2003 and took effect January 1, 2004. AB 334 changed these provisions to require that limiting the availability, or prohibiting the installation, of the appliances is a necessary means of achieving compliance with waste discharge requirements or water reclamation requirements. The determination of whether it is a necessary means of compliance must include an assessment of the technological and economic feasibility of alternatives to the ordinance and an assessment of the potential saline discharge reduction as a result of the ordinance. However, the District's ordinance was adopted prior to the enactment of AB 334, so the original provisions of SB 1006 were followed.

Section 4. Chloride Source Control Measures

In 2001, the District began preparation of the independent study required for adoption of an ordinance prohibiting the installation of SRWS. The study quantified chloride contributions in the District's sewerage system for the year 2001. It examined the amount of chloride entering the system from potable water, industrial waste, commercial discharges, hauled waste, residences, and wastewater treatment plant operations. It included extensive sampling and flow monitoring in six Santa Clarita Valley neighborhoods, conducted in February, August, and October 2001. The study also detailed efforts that had been taken thus far to control and reduce chloride discharges. The report describing the study, *Santa Clarita Valley Joint Sewerage System Chloride Source Report*, was released in October 2002.

The findings of the report were reviewed by an independent panel convened by the National Water Research Institute. This panel, the National Water Research Institute Independent Review Panel (Panel), was charged with the task of independently studying the report and offering its findings and recommendations relative to making a determination of whether the District could and should regulate SRWS in accordance with state law. The panel verified the findings in the report and substantiated that the District was taking the necessary actions to restrict non-residential sources of chloride pursuant to California Health and Safety Code Section 116786.

Subsequent to the panel's determination, an ordinance was drafted and later adopted by the District's Board of Directors on February 25, 2003.⁵ It became effective thirty days after adoption, on March 27, 2003. A violation of the ordinance is a misdemeanor, punishable by a fine not to exceed \$1,000.00, imprisonment not to exceed thirty days, or both.

The District began efforts to publicize the ordinance as soon as it was introduced. During February and March 2003, the District conducted outreach to local newspapers, radio stations, home developers, plumbers, contractors, and water system conditioning vendors regarding the ordinance. The District's chloride website was also updated to include information about the ordinance. Letters were then sent to all households in the District's service area.

Because the ordinance did not prohibit the sale of SRWS,⁶ a key element of implementing the ordinance was to obtain agreement from local retailers to voluntarily stop selling the units. In March and April 2003, staff from the District, the Regional Board, and the City of Santa Clarita met with the local retailers that were selling SRWS. All eight retailers agreed to stop selling SRWS. These retailers were Sears, Costco, Lowe's, OSH, Caston's TV & Appliances, Warehouse Discount Center, and two Home Depot stores. Costco also stopped selling rock salt and potassium chloride in their local stores.

During this period the District also began compiling a list of acceptable alternatives to SRWS. Vendors were put on the list at their request. Before adding a new vendor to the list, the vendor's system was reviewed to ensure that it did not produce a high-chloride waste product. Vendors of acceptable alternative systems were sent letters stating that their systems were acceptable for installation in the Santa Clarita Valley. A list of approved alternative systems was initially only sent to residents upon their request, but was later added to the District's chloride website to provide wider distribution.

⁵ The District was historically operated by two independent sanitation districts: County Sanitation District Number 26 of Los Angeles County and County Sanitation District Number 32 of Los Angeles County and referred to as the Santa Clarita Valley Joint Sewerage System. These two districts were merged into a single district, the Santa Clarita Valley Sanitation District of Los Angeles County, as of July 1, 2005. For simplicity in this report, actions taken by the County Sanitation District Number 26 of Los Angeles County and County Sanitation District Number 32 of Los Angeles County prior to the merger will be considered as though they were actions taken by the District.

⁶ State law allowing prohibitions on the installation of SRWS does not allow for sales prohibitions.

Section 4. Chloride Source Control Measures

4.1.2 California Health and Safety Code Section 116787

As detailed in Section 4.1.1, the District adopted an ordinance in accordance with SB 1006 that prohibited the installation of new residential SRWS in the Santa Clarita Valley after March 27, 2003. However, SB 1006 did not allow a local agency to adopt an ordinance requiring the removal of SRWS that were installed prior to the effective date of the ordinance. To facilitate the timely removal of all residential SRWS, the District and the City of Santa Clarita worked with Senator George Runner (17th Senate District) on the enactment of Senate Bill 475. The bill added Section 116787 to the California Health and Safety Code⁷ to provide the District with the authority to adopt an ordinance to require the removal of all previously installed residential SRWS if specific findings are met. A copy of Section 116787 of the California Health and Safety Code is provided in Appendix 4.1-A. This is a special statute applicable only in the Santa Clarita Valley due to the unique circumstances associated with the requirements for reductions of chloride in order to attain water quality standards in the Santa Clara River. Because of concerns expressed during the legislative process about requiring residents and businesses (i.e. SRWS rental companies) to remove equipment legally purchased, installed, and operated and the attendant loss of use and capital investment that would be associated with such a new requirement, the bill carefully balances the rights of SRWS owners in the Santa Clarita Valley with the desire to expeditiously and cost-effectively reduce chloride levels in wastewater.

The statute required a phased voluntary and mandatory program to compensate residents for the reasonable value and cost of removal and disposal of the SRWS unit. Under the voluntary program offered prior to the effective date of the ordinance, residents would be compensated for 100 percent of the reasonable value of the removed appliance; under the mandatory program after the effective date of the ordinance, the compensation would be at the 75 percent level. This differential compensation rate was intended to provide an incentive for owners to remove their units sooner, prior to a mandatory removal program going into effect. Compensation is required to be made available if the owner disposes of the unit and provides written confirmation of the disposal. In determining reasonable value of residential SRWS, the statute required the District consider information provided by manufacturers of residential SRWS and providers of water softening or conditioning appliances and services in the District's service area regarding purchase price, useful life, and the cost of installation, removal, and disposal. For rental units, the statute allows owners to voluntarily waive the 100 percent or 75 percent compensation and allows them to avoid the disposal requirement (and retain ownership of the units for salvage or reuse elsewhere) if the owner provides written confirmation that the appliance has been removed from the home for use in a location outside the District's service area.

Prior to the adoption of an ordinance prohibiting SRWS, the statute required that the District make a finding that the removal of residential SRWS is a necessary and cost-effective means of achieving timely compliance with waste discharge requirements, water reclamation requirements, or a TMDL. In determining what constitutes a necessary and cost-effective means of achieving compliance, the District was required to assess all of the following:

- (1) Alternatives to the ordinance;
- (2) The cost-effectiveness and timeliness of the alternatives as compared to the adoption of the ordinance;
- (3) The reduction in chloride levels to date resulting from the voluntary compensation program implemented;

⁷ The bill was passed by the Legislature on August 31, 2006 and signed into law on September 22, 2006 (Statutes of 2006, Chapter 393).

Section 4. Chloride Source Control Measures

- (4) The potential reduction in chloride levels expected as a result of the mandatory compensation program;
- (5) Adoption and enforcement of regulatory requirements that limit the volume and concentrations of saline discharges from non-residential sources, to the extent that is technologically and economically feasible;
- (6) Based on available information, sufficient wastewater treatment capacity exists in Los Angeles County to make portable exchange water softening services available to residents affected;
- (7) Based on available information, the adoption and implementation of the ordinance will avoid or significantly reduce the costs associated with advanced treatment for salt removal and brine disposal that otherwise would be necessary to meet the TMDL.

Finally, the ordinance must be approved in a referendum by a majority vote of the qualified voters prior to taking effect and the ordinance may not take effect prior to January 1, 2009.

4.1.3 Santa Clara River Chloride Reduction Ordinance of 2008

The District's Board of Directors introduced the Santa Clara River Chloride Reduction Ordinance of 2008 (Ordinance) on May 27, 2008, and it was adopted on June 11, 2008. A copy of the Ordinance is attached as Appendix 4.1-B. The Ordinance was supported by the requisite findings detailed in the *Staff Report in Support of Findings Necessary for Adoption of an Ordinance Pursuant to California Health and Safety Code Section 116787, with Addendum*. The key findings of the report are summarized as follows:

- SRWS are a major source of chloride loading to the District's Valencia and Saugus WRPs through the sewer system, and the District estimates that the maximum active SRWS chloride loading to the WRPs prior to the District's public outreach efforts was approximately 8,700 pounds per day.
- A voluntary SRWS removal program, which provides rebates to residents, has been active since November 2005.
- The District estimates that the remaining active SRWS chloride loading is approximately 6,400 pounds per day.
- The total achievable reduction in chloride loading as a result of the voluntary rebate program is estimated at 4,400 pounds per day. Including the District's agreements for the removal of rental SRWS units, a total of 3,300 SRWS are expected to be removed prior to adoption and implementation of the Ordinance.
- Engineering design consultant(s) have assessed the various treatment-based alternatives to comply with the TMDL and have determined that advanced treatment, consisting of microfiltration and/or membrane bioreactors and reverse osmosis, and brine disposal are the only reliable and least costly treatment technologies to remove chloride.
- The estimated cost to remove the remaining active SRWS within the District's service area through the Ordinance is significantly less than removing the equivalent load of chloride through advanced treatment and brine disposal.

Section 4. Chloride Source Control Measures

- ❑ The removal of the remaining active SRWS chloride load through adoption and implementation of the Ordinance would be more timely than through the removal of the equivalent chloride loading with advanced treatment and brine disposal.
- ❑ The potential additional reduction in chloride loading (beyond the completion of the voluntary rebate program) through a mandatory program requiring removal of SRWS is estimated at 4,300 pounds per day.
- ❑ The District has limited chloride loading of non-residential discharges (commercial and industrial sources) to the extent that it is technologically and economically feasible.
- ❑ Sufficient treatment capacity exists in Los Angeles County to provide for disposal of brine wastes generated from portable exchange water softeners that may serve the Santa Clarita Valley as a result of any mandatory program requiring removal of SRWS.
- ❑ The removal of the remaining active SRWS chloride load through mandatory program requiring removal of SRWS would significantly reduce the cost of compliance with the TMDL.

In accordance with the provisions of Section 116787 of the California Health and Safety Code, the Ordinance must be approved by majority vote in a voter referendum within the District's service area before it is effective. The Ordinance appeared as Measure S on the November 4, 2008 ballot. The text of Measure S appears below:

DISTRICT
SANTA CLARITA VALLEY SANITATION DISTRICT
SPECIAL ELECTION

S	To reduce chloride levels in the Santa Clara River as required by the State of California and minimize future rate increases for the customers of the Santa Clarita Valley Sanitation District of Los Angeles County, shall an ordinance be adopted requiring the removal of, and providing a compensation program for, all installed residential "salt-based" self-regenerating water softeners within the District's service area?	158	YES ➔ <input type="radio"/>
		159	NO ➔ <input type="radio"/>

END OF BALLOT

Voters overwhelmingly approved Measure S on November 4, 2008, with almost two-thirds of them voting in favor. Measure S received 55,502 votes, 64 percent, in favor, and 31,192 votes, 36 percent, against.⁸ The District is the first and only agency in California to have adopted such an ordinance.

In accordance with the provisions of Section 116787 of the California Health and Safety Code, the Ordinance took effect on January 1, 2009. On January 1, 2009, the District began compensating owners of residential SRWS within its service area for 75 percent of the reasonable value of each removed residential SRWS and the reasonable cost of the removal and disposal of that residential SRWS.⁹ The Ordinance required the removal and disposal of all existing SRWS installed in the District's service area by June 30, 2009, 180 days after the effective date of the Ordinance.

⁸ County of Los Angeles, Department of Registrar/County Clerk, November 4, 2008 General Election, Final Official Election Returns, <http://rrcc.co.la.ca.us/elect/08110018/rr0018pl.html-ssi> (accessed October 28, 2009).

⁹ See Section 4.1.4 for more information on the Automatic Water Softener Rebate Program – Phase I and II.

Section 4. Chloride Source Control Measures

The District performed community-wide public outreach to inform residents of the terms of the Ordinance and to encourage compliance.¹⁰ The District also withheld administrative enforcement actions to allow all affected residents adequate time to remove their installed residential SRWS. The District intends to enforce the Ordinance by monitoring flows within the sewer system to determine the locations of residential SRWS and/or conducting inspections upon reasonable notice of any residence that discharges to the sewer system.

The District may issue a Notice of Violation to any person who failed to remove a residential SRWS as required by the Ordinance. A Notice of Violation shall allow a period of sixty days to correct the violation and to remove and dispose of the installed residential SRWS. Any person violating the Ordinance after issuance of Notice of Violation and the subsequent sixty day period shall pay an administrative fine to the District in an amount not to exceed \$1,000.00 for such violation. Any person who has received a Notice of Violation may within thirty days request a hearing and review by a hearing officer of the District. Violations of the provisions of the Ordinance following the issuance of a final Administrative Order is a misdemeanor punishable by a fine not to exceed \$1,000.00 or by imprisonment not to exceed thirty days or by both such fine and imprisonment.

4.1.4 Automatic Water Softener Rebate Program – Phase I and II

The District initiated the Automatic Water Softener Rebate Program – Phase I on November 30, 2005. The program provided a \$100 rebate to residents that removed their SRWS or a \$150 to residents that removed their SRWS and replaced it with a qualified alternative unit, such as portable exchange tank service or a non-salt water conditioning device. The Automatic Water Softener Rebate Program - Phase I led to the removal of 433 SRWS between December 2005 and April 2007. The total expenditure on rebates for residents that removed their SRWS was approximately \$52,000. Detailed information on the Automatic Water Softener Rebate Program – Phase I is available in Section 4.1.3 in the *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2006* and the *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2007*.

The Automatic Water Softener Rebate Program – Phase II was developed between June 2006 and April 2007 and launched on May 1, 2007. The program provides residents with compensation for the reasonable value of their SRWS and for free removal and disposal of their unit if specific plumbers are used. The program is intended to be consistent with the provisions for a voluntary and mandatory program under the terms of the California Health and Safety Code Section 116787. Detailed information about the program development is provided in Section 4.1.4 in the *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2007*.

The Automatic Water Softener Rebate Program – Phase II offered rebates for 100 percent of the reasonable value of non-rental SRWS, installed in the District's service area prior to March 2003, from May 1, 2007 to December 31, 2008. Rebates of \$325 to \$2,000 per SRWS for the removal and disposal of non-rental SRWS were available from May 1, 2007 to January 31, 2008. On February 1, 2008, the minimum value was reduced to \$275 to account for the additional depreciation of the SRWS. Rebates of \$275 to \$2,000 per SRWS were available from February 1, 2008 to December 31, 2008.

On January 1, 2009, the rebate amount was lowered to 75 percent of the reasonable value of the SRWS consistent with terms of the California Health and Safety Code Section 116787 and the Ordinance. The minimum value of the rebates was also lowered to \$206, 75 percent of \$275. The District continues to provide

¹⁰ See Section 4.1.5 for more information on community-wide public outreach efforts.

Section 4. Chloride Source Control Measures

rebates of \$206 to \$2,000 for the removal and disposal of non-rental SRWS installed in the District's service area prior to March 27, 2003.

In order to treat all community members equally, residents that participated in the Automatic Water Softener Rebate Program – Phase I are eligible for the difference between the new rebate amount and the \$100 or \$150 incentive provided under the prior program. Between May 1, 2007 and June 30, 2010, the District received 205 rebate applications from participants in the Automatic Water Softener Rebate Program – Phase I requesting consideration for an additional rebate. The last application received from an Automatic Water Softener Rebate Program - Phase I participant for a supplemental rebate was on April 8, 2008. It is unlikely that the District will receive additional Automatic Water Softener Rebate Program – Phase II Application Forms from Automatic Water Softener Rebate Program - Phase I participants.

For new participants in the Automatic Water Softener Rebate Program – Phase II, residents obtain an application form on the District's chloride website at www.lacsd.org/chloride. For residents that do not have access to the Internet, they may call the District's toll-free hotline at (877) CUT-SALT and request an application form to be mailed. Residents complete the one-page application form and mail or fax it back to the District. In order to expedite processing of the application, residents are encouraged to provide verification of the SRWS purchase using one or more of the following documents, if available: dated receipt, contract, original service agreement, or other relevant paperwork.

The District reviews the application form and attached documentation to evaluate eligibility for the program. Once the application is deemed complete, the District uses all available information to verify data provided on the application form and to determine the reasonable value of the SRWS. The reasonable value of the SRWS is based on the sales price and installation date of the unit, and a 12-year average service life expectancy for the unit. Depending on the age, make, and model of the SRWS, rebates for individual units may range from \$206 to \$2,000.¹¹ A minimum value of \$206 is offered for all non-rental SRWS installed prior to March 27, 2003.¹²

After the reasonable value of the SRWS is calculated, the District prepares an Authorization for Rebate letter that states the address at which the SRWS is installed, the make, model, and serial number of the SRWS, and the rebate offer amount. Two copies of the Authorization for Rebate letter, one copy on white paper and one copy on yellow paper, and a List of Approved and Licensed Plumbers are mailed to the resident. An example of an Authorization for Rebate letter is provided in Appendix 4.1-C.

The purpose of the Authorization for Rebate letter is to inform the resident on the rebate offer amount before the unit is disconnected and removed. This procedure was established to eliminate confusion and disagreements after the SRWS is removed. Since the rebate offer is based on a depreciated value, the rebate offer amount will be honored if the SRWS is removed within sixty days of the date on the Authorization for Rebate letter. If the SRWS is not removed within sixty days, the resident may request a recalculated Authorization for Rebate letter. The Authorization for Rebate - Recalculation letter requires the removal of the SRWS within 30 days. The Authorization for Rebate letter also states that in order for the resident to receive the rebate, the SRWS must be removed and disposed of using contractors on the List of Approved and Licensed Plumbers or by an authorized District's representative. In addition, to facilitate the removal of the SRWS the resident is asked to stop adding rock salt or potassium chloride to the unit.

¹¹ Rebates for individual units varied from \$325 to \$2,000 from May 1, 2007 to January 31, 2008 and from \$275 to \$2,000 from February 1, 2008 to December 31, 2008.

¹² A minimum value of \$325 was offered from May 1, 2007 to January 31, 2008 for all non-rental SRWS installed prior to March 27, 2003. A minimum value of \$275 was offered from February 1, 2008 to December 31, 2008.

Section 4. Chloride Source Control Measures

After the resident receives the Authorization for Rebate letter, the resident may contact a plumber on the List of Approved and Licensed Plumbers to schedule the removal and disposal of the SRWS. Removal and disposal of the unit is at no cost to the resident if a plumber on the District's List of Approved and Licensed Plumbers is used. The District has verified that the plumbers on the list are licensed and bonded per the requirements of the State of California, but the list does not constitute an endorsement by the District of any particular contractor.

For convenience, some of the contractors on the List of Approved and Licensed Plumbers offer alternative non-salt water treatment units. The contractors that offer alternative units are marked with an asterisk. The installation of a non-salt water conditioning system is not required for participation in the Automatic Water Softener Rebate Program – Phase II.

When a plumber is called to remove a SRWS, the plumber will first verify that the resident has a District's Authorization for Rebate letter and confirm that the unit is a SRWS. Then, the plumber will disconnect, disable, and remove the unit from the address stated on the Authorization for Rebate letter and return the on-site plumbing to an operable state. The plumber is required to collect the yellow copy of the Authorization for Rebate letter and document the make, model, and serial number of the SRWS and the date the unit was removed on the yellow copy. The plumber also writes the street address of the residence where the SRWS was installed in permanent marker or spray paint on the unit. The plumber then transports the SRWS to the central yard near the Saugus WRP.

If desired, a resident may disconnect the unit themselves or use a plumber not on the List of Approved and Licensed Plumbers. The District provides an additional \$50 rebate for parts and materials to these residents. The Authorization for Rebate letter states that the resident should contact the District after the unit is disconnected and schedule pickup of the unit. Currently, District staff is available to pickup units on Wednesdays and Thursdays.¹³ Before removing the SRWS from a property, District staff verifies that the unit was installed at that location and that the resident received the Authorization for Rebate letter. After confirmation of these items, District staff loads the SRWS onto the truck. In some cases, for example if they have already installed an alternative non-salt water conditioning unit, residents would like their SRWS picked up before the rebate amount is determined. In these cases, District staff requests that the resident sign a form stating that the rebate amount has not been determined at this time and once the SRWS is removed from the property, the SRWS will be destroyed.

Daily, District staff creates an inventory of the SRWS at the yard. To receive payment, the plumber is required to send to the District the yellow copy of the Authorization for Rebate letter for each SRWS removed and an invoice. District staff confirms the information on the SRWS removed matches the information provided by the resident on the application form and that the SRWS was received at the yard. Once the verification procedure is complete, the District initiates payment to the resident and the plumber.

In May 2007, the District estimated that approximately one-quarter of the SRWS installed in the District were rental units. The Automatic Water Softener Rebate Program – Phase II provided a \$100 rebate to residents that remove their rental SRWS from May 1, 2007 to January 31, 2008. The Automatic Water Softener Rebate Program – Phase II compensation to residents for rental SRWS sunset on January 31, 2008, as

¹³ Previously, District staff was available to pickup units Monday through Friday. Due to a reduction of the number SRWS pickup requests, the available pickup days were reduced to Wednesday and Thursday in May 2010. Currently, pickups are available from 8:00 a.m. to 2:30 p.m. or 11:00 a.m. to 7:00 p.m. on Wednesdays, depending on requests from residents, and from 8:00 a.m. to 2:30 p.m. on Thursdays. Additional pickup days will be added if needed.

Section 4. Chloride Source Control Measures

a result of the contractual agreements the District formed with the retail water softening companies discussed below.

To expedite removal, the District developed contractual agreements with the retail water softening companies that provide rental SRWS units to residents in the District for the removal of approximately 1,580 rental units by June 2009. The agreements provide compensation for eligible units that are removed, disabled, and surrendered to the District within the allocated time period. Rayne Dealership Corporation signed an agreement with the District on September 12, 2007 to remove approximately 530 rental SRWS from the District's service area by October 31, 2008. On December 12, 2007, Culligan Water Conditioning of Orange County signed an agreement for the removal of approximately 1,000 rental SRWS by June 30, 2009, and Guaranteed Water Systems, Incorporated agreed to remove approximately 50 rental SRWS by December 31, 2008. These three companies provide the majority of rental service for SRWS in the Santa Clarita Valley.

As of June 30, 2010, Rayne Dealership Corporation removed 529 rental SRWS, Culligan Water Conditioning of Orange County removed 260 rental SRWS, and Guaranteed Water Systems removed 37 rental SRWS. A total of 826 rental SRWS were removed by June 30, 2010, as a result of these agreements. Rayne Dealership Corporation has confirmed that they have removed all known rental SRWS. The District is currently working with Culligan Water Conditioning of Orange County and Guaranteed Water Systems, Incorporated to confirm that all known rental SRWS have been removed. The actual number of rental SRWS in the District's service area was significantly lower than originally estimated by the three companies.

High Desert Water Conditioning, Inc. in Acton contacted the District in June 2009 stating that the company had rental SRWS in the District's service area that needed to be removed per the Ordinance. The District agreed to provide the company with rebates of 75 percent of the reasonable value of each SRWS and a \$50 rebate per SRWS for parts and materials for the disconnection and removal of the units. The company delivered the removed units to the District's yard for verification and disposal. The company also provided the District with the estimated cost of each SRWS and the original installation date of the unit. All High Desert Water Conditioning, Inc. rental SRWS qualified for the minimum rebate amount of \$206 plus \$50 for parts and materials, totaling \$256 per SRWS. High Desert Water Conditioning, Inc. removed 27 rental SRWS from the District's service area in June 2009. A negligible number of SRWS units operating in the Santa Clarita Valley may be rented to customers from other companies, but no specific information about these units is available to the District at this time.

The District received 6,085 applications from new participants in the Automatic Water Softener Rebate Program – Phase II from May 1, 2007 to June 30, 2010. Figure 4.1.1 (see page F-21) shows the cumulative number of applications from new participants for the Automatic Water Softener Rebate Program – Phase II received by the District from May 2007 to June 2010. Approximately 68 percent of the applications for the Automatic Water Softener Rebate Program – Phase II were received after passage of Measure S on November 4, 2008.

From May 1, 2007 to June 30, 2010, the Automatic Water Softener Rebate Program – Phase II removed 6,547 SRWS of which 5,694 SRWS were owned by residents or rentals removed by residents, and 853 were rental SRWS removed by the retail water softening companies. Figure 4.1.2 (see page F-22) shows the cumulative number of units removed from May 1, 2007 to June 30, 2010, as a result of the Automatic Water Softener Rebate Program – Phase II. From November 30, 2005 to June 30, 2010, the Automatic Water Softener Rebate Program – Phase I and II removed 6,980 SRWS from the Santa Clarita Valley. Figure 4.1.3 (see page F-23) shows the cumulative number of units removed from November 30, 2005 to June 30, 2010, as a result of the Automatic Water Softener Rebate Program – Phase I and II.

Section 4. Chloride Source Control Measures

Approximately six percent of the total SRWS removed, 433 units, were removed during the Automatic Water Softener Rebate Program – Phase I. An additional 2,400 SRWS, 34 percent, were removed during the voluntary removal period from May 1, 2007 to December 31, 2008. Approximately 60 percent of the total SRWS removed, 4,147 units, were removed from January 1, 2009, the effective date of the Ordinance, to June 30, 2010. These statistics highlight the effectiveness of the mandatory removal provision in the Ordinance in reducing the number of SRWS from the District’s service area.

As detailed in Section 4.1.5 below, the Automatic Water Softener Rebate Program - Phase II was accompanied by a public outreach campaign in order to inform residents and encourage full community participation.

4.1.5 Public Education and Outreach Efforts

In July 2002, after research in preparation for the *Santa Clarita Valley Joint Sewerage System Chloride Source Report, October 2002* showed that SRWS were the primary controllable source of chloride beyond the potable water supply, the District conducted a pilot-scale outreach program to reduce use of residential SRWS in the Santa Clarita Valley. The program targeted two neighborhoods, Stevenson Ranch and Fair Oaks Ranch, that were identified during the District’s residential chloride sampling efforts in 2001 as neighborhoods with high usage of SRWS.¹⁴

After passage of the ordinance prohibiting the installation of SRWS in February 2003 and completion of the initial publicity in 2003,¹⁵ the District focused its residential source control efforts on a large public education and outreach program. The major multimedia community-wide components of the campaign began on March 25, 2004 and concluded on June 30, 2009. The program consisted of multiple phases and evolved significantly over the 5-year period as a result of the launch of the Automatic Water Softener Rebate Program – Phase I and II,¹⁶ Saltwater Pool Ordinance,¹⁷ and the Ordinance.¹⁸

The District used a competitive process to select a consultant for the development and implementation of the community-wide public education and outreach efforts. The social marketing firm O’Rorke, Inc. (O’Rorke) was selected and worked on the project from September 2003 to June 2009. Smaller scale public outreach efforts continued from July 2009 to June 2010 utilizing District staff.

The first phase of the public education and outreach program was geared towards increasing the awareness of the impacts of SRWS. The program was launched with a press event in March 2004. During the spring of 2004, the District developed and aired a thirty-second cable television advertisement entitled “Hard Facts.” In addition, the District mailed a postcard to all 56,000 households connected to the sewer system, updated the chloride website (www.lacsd.org/chloride), launched a dedicated toll-free hotline (877-CUT-SALT), and participated in the CLWA’s Annual Open House.

The second phase of the campaign, from fall 2004 to spring 2005, focused on encouraging residents to unplug their SRWS. During this phase the District ran two thirty-second cable television advertisements, the revised second edition “Hard Facts” commercial and a newly developed “Unplug” advertisement. In addition,

¹⁴ For additional details on the District’s pilot-scale public outreach efforts, see Section 4.1.2 in the District’s *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2005*.

¹⁵ See Section 4.1.1 for more information on the public education and outreach program from February 2003 to December 2003.

¹⁶ See Section 4.1.4 for more information on the Automatic Water Softener Rebate Program – Phase I and II.

¹⁷ See Section 4.1.6 for more information on the Saltwater Pool Ordinance.

¹⁸ See Section 4.1.3 for more information on the Ordinance.

Section 4. Chloride Source Control Measures

the District hosted a SRWS alternative vendor fair in conjunction with the City of Santa Clarita's River Rally, issued a press release promoting the vendor fair, modified the chloride website to list alternatives to SRWS and allow Santa Clarita Valley residents to submit reviews on alternative units, mailed a postcard to all 58,000 sewer households, submitted articles to homeowner's association newsletters, mailed letters to homeowner's associations, distributed brochures and postcards to the Santa Clarita Valley Realtors Association, and asked local retailers to stop selling rock salt and potassium chloride. The District also mailed a targeted outreach postcard to 11,000 households that had changed ownership since 1997 and began mailing letters monthly to new homeowners in the Santa Clarita Valley.

An updated campaign was introduced in the fall of 2005 to provide information on the Automatic Water Softener Rebate Program – Phase I and enactment of the Saltwater Pool Ordinance. This phase of the program featured an improved chloride website with new web pages for the Automatic Water Softener Rebate Program, Saltwater Pool Ordinance, and How to Remove Your Automatic Water Softener, and a more user-friendly Automatic Water Softener Alternatives webpage. In addition, the multimedia program included launch of a dedicated email address (cutsalt@lacs.org), airing of the second edition "Hard Facts" and the "Unplug" cable television advertisements; airing of the third edition "Hard Facts" advertisement on cable television and at two 21-megaplex Edwards Cinemas; mailing a letter and distributing a door hanger to all 62,000 households connected to the District; press event showing a resident participating in the Automatic Water Softener Rebate Program – Phase I; advertisements in *The Signal* newspaper; participating in the City of Santa Clarita's River Rally, CLWA's Annual Open House, and Saugus Speedway Semi-Annual Home and Garden Show; and developing and placing signs asking residents to unplug their SRWS at local grocery stores and the Valencia Town Center.

The District began the fourth phase of the multimedia community-wide public education and outreach campaign in May 2007 in conjunction with the launch of the Automatic Water Softener Rebate Program – Phase II. From May 2007 to June 2009, the District's public education and outreach efforts primarily focused on providing information and encouraging participation in the Automatic Water Softener Rebate Program – Phase II, providing factual information on Measure S¹⁹, and providing information on the mandatory removal of SRWS as required by the Ordinance. The program included conducting focus groups; issuing press releases; airing of the fourth, fifth, and sixth editions of the "Hard Fact" television commercials and movie theater advertisements; publishing newspaper, magazine, radio, billboard, bus shelter, and Money Mailer advertisements; sending direct mail pieces; mailing information in water bills; writing articles for the CLWA newsletter; using robocalls; and hanging street banners, street pole flags, and waste hauler truck signs. In addition, the District continued to update the chloride website; mail letters to new homeowners; staff the (877) CUT-SALT toll-free line and cutsalt@lacs.org email address; and participate in community events such as the City of Santa Clarita's River Rally, City of Santa Clarita's Earth Day, CLWA's Annual Open House, Saugus Speedway Semi-Annual Home and Garden Show, and College of the Canyons Environmental Conference.

From December 2007 to October 2009, the District also conducted targeted outreach to specific communities known to have a high concentration of SRWS. The goal of the program was to provide focused outreach on these neighborhoods to encourage residents to remove SRWS. The communities selected for the targeted outreach were neighborhoods that were constructed between 1997 and 2003 (when SRWS were legal to install) in Canyon Country, Copperhill, Fair Oaks Ranch, Stevenson Ranch, and Valencia. Based on information collected in 2001,²⁰ homes in Stevenson Ranch and Fair Oaks Ranch had SRWS market penetrations rates between 50 to 60 percent.

¹⁹ See Section 4.1.3 for more information on Measure S.

²⁰ See Section 4.6 in the *Santa Clarita Valley Joint Sewerage System Chloride Source Report, October 2002*.

Section 4. Chloride Source Control Measures

The targeted outreach program included a pilot project in Fair Oaks Ranch and meeting with the Stevenson Ranch Homeowner's Association in December 2007; publishing an article in the Winter 2007 Stevenson Ranch Homeowner's Association newsletter that was distributed to 3,700 homes; conducting door-to-door outreach in February and March 2008 to 3,100 homes in Canyon County, Fair Oaks Ranch, Stevenson Ranch, and Valencia; and distribution of 1,700 flags on the covers of *The Signal* newspapers in April 2008. From September 2008 to October 2009, the targeted outreach program provided support to the VWC's Pellet Softening Demonstration Project in the Copperhill community. The targeted outreach program in Copperhill included door-to-door outreach and distribution of a door hanger to 432 homes, an article in the Copperhill Homeowner's Association newsletter, direct mail postcard, focus groups, and phone surveys.

As highlighted above, the District conducted an extensive multimedia public education and outreach campaign from March 2004 to June 2009 to reduce chloride loading from residential SRWS. This program included: five direct mailings and one door hanger to all sewered households in the Santa Clarita Valley; ten cable television campaigns totaling 8,811 thirty-second advertisements; six movie theater campaigns totaling 12,852 thirty-second advertisements; 572 KHTS drive time sixty-second radio spots; 20,824 letters to new homeowners; 20 advertisements in *The Signal* and *LA Times*; nine press releases; two press events; four focus groups; and participation in 17 community events. In addition, the targeted outreach program provided focused attention to approximately 3,500 households.

Detailed information about the community-wide education and outreach program from 2003 to June 2009 is available in the *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2005*; the *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2006*; the *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2007*; the *Chloride Source Identification/Reduction, Pollution Prevention, Public Outreach Plan, November 2008*; and the *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2009*.²¹ Detailed information about the targeted public outreach program is available in the *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2008* and the *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2009*.²² Detailed information on the public outreach program for the VWC's Groundwater Softening Demonstration Project can be found in the *Valencia Water Company Groundwater Softening Demonstration Project Final Report, October 2009* written by O'Rorke.

The Ordinance required all residential SRWS to be removed by June 30, 2009. Therefore, the multimedia community-wide public education and outreach program was pared down in July 2009. From July 2009 to June 2010, the District worked with local retailers to discontinue the sale of rock salt and potassium chloride, continued to send monthly letters to new homeowners, updated the chloride website with additional alternative water conditioning units and resident reviews, participated in community events, and responded to residents' questions on the toll-free chloride hotline and dedicated email address.

²¹ For additional details on the District's community-wide public education and outreach efforts, see Sections 4.1.4 in the District's *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2005* and *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2006*, and Sections 4.1.5 in the *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2007*; *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2008*; and *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2009*.

²² For additional details on the District's targeted outreach efforts, see Section 4.1.6 in the District's *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2008* and *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2009*.

Section 4. Chloride Source Control Measures

The District began efforts to convince local retailers to stop selling rock salt and potassium chloride pellets in 2004. Discussions on this topic were initiated with several large retailers including Home Depot, Albertsons, and Walmart. The District sent a letter in April 2004 to all Santa Clarita Valley retailers selling rock salt and potassium chloride requesting that they stop selling these products. The City of Santa Clarita sent a similar letter. Follow-up phone calls were made to the retailers in the summer of 2004, requesting one-on-one meetings to discuss the cessation of rock salt and potassium chloride sales. During the phone calls it was difficult to get retailers to commit to meetings. As a result, personal visits were made to several stores without advance appointments. Three independent hardware stores were visited, but the stores were not open to the idea of removing salt from their shelves.

For the larger retail chain stores, corporate offices were contacted in an effort to get local stores to remove rock salt and potassium chloride pellets from their shelves. Corporate offices were contacted in the fall of 2004, and corporate offices and local stores were contacted again in January 2005. Sears and OSH agreed to remove rock salt and potassium chloride from their shelves. Other stores contacted included Vons, Pavilions, Lowe's, Home Depot, Albertsons, Safeway, and several independent hardware stores.

Because it was proving difficult to convince retailers to remove rock salt and potassium chloride pellets from their shelves, a decision was made to offer retailers a sign to place in their stores where rock salt and potassium chloride pellets are sold to explain the problems caused by the use of SRWS and encourage customers to unplug the units. The signs went on display beginning in October 2005 at four Albertsons, four Vons, and a Pavilions.

In the Spring 2009, a phone survey was conducted to inventory the stores that sell rock salt and potassium chloride pellets in the Santa Clarita Valley. Thirty stores were found to sell rock salt and/or potassium chloride including: four Albertsons, a Food for Less, two Home Depots, a Kmart, two Lowe's, two Smart and Final's, a Stater Bros, seven Ralphs, a Pavilions, three Vons, three Walmarts, the Agua Dulce Hardware, a Do-It Center, and an Orchard Supply Hardware (formerly known as OSH). Twenty stores with similar characteristics did not carry rock salt or potassium chloride.

On June 29, 2009, staff from the District, City of Santa Clarita, County of Los Angeles, and O'Rourke held a kick-off meeting to provide information on the District's plan to pursue a voluntary sales ban on rock salt and potassium chloride. All parties were in agreement to pursue the voluntary sales ban.

On November 3, 2009, the District sent a letter to 30 local retailers and 10 corporate offices requesting the Santa Clarita Valley stores discontinue the sale of rock salt and potassium chloride pellets. A copy of the letters is provided in Appendix 4.1-D. The letter informed the stores that voters approved Measure S which provided for the adoption of the Ordinance and that the Ordinance required the removal and disposal of all residential SRWS by June 30, 2009, in homes connected to the sewer system. It also explained that businesses in the Santa Clarita Valley have been prohibited from using SRWS since 1961. As a result, there is very little legitimate use for rock salt and potassium chloride in the Santa Clarita Valley so the District requested the stores stop selling the products as an environmentally responsible choice and to free up valuable shelf space. The District also informed the stores that since over 6,500 SRWS had been removed to date, it was anticipated that the retailers had already seen a substantial decrease in the sale of rock salt and potassium chloride. Lastly, the letter invited the retailers to one of two meetings to future discuss the issue.

The District made follow-up phone calls the second and third weeks in November 2009 in preparation for the meetings. Staff from the District and the City of Santa Clarita attended the first meeting on November 16, 2009, at 6:30 p.m. at the City of Santa Clarita City Hall. Three retailers had stated they were going to attend the meeting, but no retailers were present by 6:45 p.m. and the meeting was adjourned. The second meeting was held on November 19, 2009, at 11:00 a.m. at the same location. Staff from the District,

Section 4. Chloride Source Control Measures

City of Santa Clarita, and Los Angeles County attended this meeting. In addition, the Director of Environmental Stewardship Operations for Albertsons attended the meeting representing the four Santa Clarita Valley Albertsons' stores. The representative provided valuable information on salt and potassium chloride sales at these four stores, insight into the grocery business, and possible routes to discontinue and/or limit rock salt and potassium chloride sales.

A representative from Ralphs contacted the District on November 19, 2009. She had received a copy of the letter that the District sent to the Castaic Ralphs' store and requested the zip codes of the areas impacted. An email was sent to her listing the Ralphs and Food 4 Less stores in the District's service area on November 20, 2009.

As a result of the letters and follow up phone calls in November 2009, a Kmart, three Ralphs, and two Walmart stores stated that they no longer stock salt and potassium chloride for SRWS. To reach the remaining retailers, District staff attempted to schedule appointments with the store managers from January 25, 2010 to January 29, 2010.

During the last week of January 2010, District staff visited all stores known to sell rock salt and potassium chloride and/or that potentially sold SRWS. The District confirmed that a Do It Center, a Food 4 Less, a Kmart, seven Ralphs, a Sam's Club, a Stater Bros. Market, and three Walmart stores had removed rock salt and potassium chloride pellets for SRWS from their shelves. The District also confirmed that the Costco, Sears, and Target did not sell rock salt and potassium chloride for SRWS. No stores were selling SRWS.

In February and March 2010, the District continued to work with the remaining retailers to discontinue the sale of rock salt and potassium chloride. By April 2010, four Albertsons, a Do It Center, a Food 4 Less, two Home Depots, a Kmart, two Lowe's stores, seven Ralphs, a Sam's Club, the Sand Canyon Paint & Hardware, a Stater Bros. Market, and three Walmarts had removed rock salt and potassium chloride for SRWS from their shelves and committed to not restock the products. Rock salt and potassium chloride continues to be sold at an Orchard Supply Hardware, a Pavilions, two Smart and Finals, and four Vons stores. The District will continue to work with the store managers and the corporate offices to discontinue the sale of rock salt and potassium chloride.

The District continued reaching out to new residents of the Santa Clarita Valley from July 2009 to June 2010. New residents may be unaware of the problems caused by SRWS or restrictions on their installation. Additionally, research conducted by the Claremont Graduate University found that decisions about water conditioning are often made in the period shortly after moving into a new home.²³ To take advantage of the opportunity to influence new homeowners to remove SRWS installed by previous homeowners and prevent violations of the SRWS and saltwater pool ordinances, beginning in April 2005 letters were sent to all new homeowners in the Santa Clarita Valley. Typically the letters are sent to new owners of homes sold in the previous month. The letter explains the problems caused by chloride in the Santa Clara River, informs them of the ban on SRWS and saltwater pools, and encourages them to remove the SRWS if one came with their home and take advantage of the rebate program. From July 2009 to June 2010, the District sent a total of 4,187 letters to new households.

The District continues to allow Santa Clarita Valley residents to submit reviews on non-salt water conditioning units for the Automatic Water Softener Alternative web page. Residents that submit reviews are required to submit their names, addresses, and telephone numbers; their residency status in the Santa Clarita

²³ Knight, Kim and Kung, David. *Consumer Behaviors and Trends Surrounding the Use and Impact of Chloride-Based Water Softeners*. Claremont Graduate University, August 15, 2003.

Section 4. Chloride Source Control Measures

Valley is verified using property tax records and/or a reverse phone directory.²⁴ From July 2009 to June 2010, the number of qualified alternative water conditioning units that appear on the chloride website increased by one to 62 units. In addition, there was an increase in the number of alternative unit reviews submitted by residents, from 82 reviews in July 2009, up to 83 reviews posted as of June 2010.

As a component of the public outreach program, District staff continued to answer inquiries from the media and other sewerage entities facing chloride and/or total dissolved solids challenges. District staff also gave a presentation to Inland Empire Utilities Agency on March 2, 2010, regarding the District's residential chloride reduction programs.

The District participated in two community events from July 2009 to June 2010. The first event was the City of Santa Clarita's 15th Annual River Rally on September 12, 2009. The District also staffed a booth at the CLWA's Annual Open House on May 8, 2010. At the District's booths staff distributed information and answered questions about the problems with SRWS, alternative water conditioning options, Automatic Water Softener Rebate Program – Phase II, and the Ordinance.

In addition, from June 2009 to July 2010, the District's chloride reduction efforts, alternatives to SRWS, proposed sewer service charge rate increase, and Upper Santa Clara River Chloride TMDL received significant press coverage. These topics had coverage in: *The Signal* on July 1, 2009, "Water softener rules now consistent" by Paul Martyn; *The Signal* on July 8, 2009, "Sewer fees rise across the board" by Brian Charles; *The Signal* on October 3, 2009, "Patio and pool pavers buckle under extreme heat" by Robert Lamoureux; *The Signal* on December 12, 2009, "Tankless water heaters need maintenance" by Robert Lamoureux; *The Signal* on March 25, 2010, "Winter water brings spring spots" by Natalie Everett; *The Signal* on March 28, 2010, "Two days in the Capitol" by Lila Littlejohn; *The Signal* on April 3, 2010, "Water: Trade in your old 'illegal' water-softening equipment and receive a rebate in the process" by J. Walker; *The Signal* on April 18, 2010, "Lobbying for chlorides in the Santa Clara River" by Lynne Plambeck; *The Signal* on April 10, 2010, "Better solutions exist for chloride fix in the SCV" by Maria Gutzeit; *The Signal* on April 24, 2010, "Hard water is costly" by Doug Zabilski; *Inland Valley Daily Bulletin* on May 4, 2010, "Water plan contested: Experts lobby agency against softener ban" by Wes Woods II; *The Signal* on May 9, 2010, "Sewage rates could rise" by Jonathan Randles; *The Signal* on May 13, 2010, "District looks at sewage rate hike" by Jonathan Randles; *The Signal* on May 15, 2010, "Say 'no' to the increase" by Maria Gutzeit; *KHTS* on May 24, 2010, "City Council Considers Increasing Fees For City Services;" *The Signal* on May 27, 2010, "Sewer-fee hike meeting delayed" by Natalie Everett; *The Signal* on May 30, 2010, "Salt watter daffy in the SCV" by Diana Shaw; *The Signal* on May 31, 2010, "The search for a solution to salty water" by Natalie Everett; *The Signal* on June 4, 2010, "Hearing set for rate hike" by Natalie Everett; *The Signal* on June 6, 2010, "We could use some help here" by The Signal Editorial Board; *The Signal* on June 7, 2010, "Council to consider asking for salt strategy" by Natalie Everett; *The Signal* on June 9, 2010, "City plans rate-hike fight" by Natalie Everett; *The Signal* on June 13, 2010, "Lines drawn in salty river" by Jim Holt; *The Signal* on June 14, 2010, "Canyon Country Advisory Committee meeting set for June 16" by Canyon Country Advisory Committee; *The Signal* on June 15, 2010, "Of woolly mammoths and farming" by Jim Holt; *The Signal* on June 16, 2010, "Might as well" by David Turk; *The Signal* on June 18, 2010, "SCV pays to pass the salt" by Jim Holt; *The Signal* on June 20, 2010, "Let your voice be heard" by Linda Savadian; *KHTS* on June 21, 2010, "Santa Clarita Valley Sanitation District Proposed Sewer Charge Rate Increase;" *The Signal* on June 22, 2010, "High cost of salt wars" by Jim Holt; *The Signal* on June 27, 2010, "No hard science? No sewer-fee hike!" by Guest Commentary; *The Signal* on June 28, 2010, "The sewer-rate hike's salty effect on business" by Jim Holt; and *The Signal* on June 30, 2010, "There's more to this debate" by Rob Kerchner.

²⁴ For more information on the resident review and rating program refer to Section 4.1.4 in the *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2005* and Section 4.1.5 in the *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2007*.

Section 4. Chloride Source Control Measures

Throughout the period from January 2009 to June 2010, District staff tracked the visits to the chloride website. The web page on alternatives to SRWS²⁵ continued to be the most frequently visited part of the website with 14,860 page visits in 2009 and 6,310 page visits from January to June 2010. Other popular web pages included the home page²⁶, with 14,364 page visits in 2009 and 5,100 page visits in the first half of 2010, and the Automatic Water Softener Rebate Program web page²⁷, with 7,217 page visits in 2009 and 1,955 page visits in the first half of 2010. Visitors to the website also showed an interest in the Ordinance web page²⁸ with 708 page visits in 2009 and 459 page visits from January to June 2010.

The District also tracked responses via phone and email to the public outreach campaign. Figure 4.1-4 (see page F-24) shows the variation in the response to the community-wide outreach campaign over time from January 2006 to June 2010. Figure 4.1-5 (see page F-25) is a graphical representation of the type of responses received during the same time period. The District received the most number of responses from December 2008 to June 2009, averaging 413 inquiries per month, highlighting the interest in the Ordinance. The majority of the questions from July 2009 to June 2010 related to the Automatic Water Softener Rebate Program – Phase II.

4.1.6 Saltwater Pool Ordinance

As discussed in previous reports, one source of chloride from residences is discharge of swimming pool wastewater. Swimming pool wastewater is created from filter backwash, any overflows during rainy periods, and periodic change-outs of the swimming pool water. Although the loading of chloride from traditional residential swimming pools in the Santa Clarita Valley is small, a new popular technology could increase this contribution. The technology uses an electrolysis process to create chlorine gas in-situ at the pool from sodium chloride that has been added to the pool. The chlorine gas reacts with pathogens and organic material in the swimming pool, returning to its sodium chloride form after reaction. The sodium chloride in the pool is therefore used over and over, and is only replenished to make up for filter backwash, any overflows, and water splashed out of the pool. In order for the electrolysis process to work correctly, a chloride concentration of 1,500 to 5,500 mg/L²⁹ must be maintained in the swimming pool. Pools using this disinfection system are therefore referred to as “saltwater pools.”

To limit this new source of chloride, the District adopted an ordinance on November 9, 2005, effective on December 9, 2005, making it illegal for both new and existing saltwater swimming pools to be connected to the sewer system. The Saltwater Pool Ordinance prohibits new saltwater pool connections to the sewer system and prohibits the conversion of swimming pools already connected to the sewer system to saltwater pools.

Since many swimming pools are not connected to the sewer system and are instead drained to the storm drain system, the District continues to work with staff at the City of Santa Clarita and the County of Los Angeles to educate them on the potential chloride loading from saltwater pools. The District has also encouraged them to adopt saltwater pool ordinances prohibiting the discharge of saltwater pools into the storm drain system, which would significantly limit the potential impact to the Santa Clara River from this source.

Section 4. Chloride Source Control Measures

4.1.7 Future Residential Source Control Efforts

The District is firmly committed to continuing residential chloride source control efforts in the Santa Clarita Valley. The District will continue to offer rebates for SRWS as part of the Automatic Water Softener Rebate Program – Phase II and support the public education and outreach program. The District also intends to enforce the Ordinance by following up with residents in homes that were sold a SRWS per vendor sales records and homebuilder records, and homes that were issued building permits for SRWS but have not responded; residents that have responded they have removed a SRWS but the District did not receive the unit; residents that have applied for the Automatic Water Softener Rebate Program – Phase II but the District has not received the unit; and residents that previously applied for the Automatic Water Softener Rebate Program but were denied since their unit was installed after March 27, 2003 (these residents are not eligible for the Automatic Water Softener Rebate Program but must remove their SRWS). In addition, the District intends to monitor flows within the sewer system to determine the locations of residential SRWS and/or conduct inspections upon reasonable notice of any residence that discharges to the sewer system. These programs will be periodically reassessed to determine their value to overall chloride reduction.

The public education and outreach campaign will continue to use direct mailings, advertisements, and newspaper stories to reach the general public as needed. The District will also continue mailing letters to new homeowners. In addition, the District expects to continue to investigate and implement new outreach methods to ensure residents are aware of the bans on SRWS and saltwater pools. The chloride website will be maintained and updated with new information, vendors, and reviews of whole-house water conditioning alternatives as they become available. The District will also continue to staff the (877) CUT-SALT toll-free information number and respond to e-mail received from the public regarding the Automatic Water Softener Rebate Program – Phase II, the Ordinance, the Saltwater Pool Ordinance, and other questions related to chloride.

The District was able to successfully limit the availability of rock salt and potassium chloride by working with retailers to discontinue the sale of the products. The District will continue to work with store managers and the corporate offices for the seven stores that continue to sell rock salt and potassium chloride. In addition, the District will monitor the stores that have removed the products to ensure that they are not restocked in the future.

4.2 Industrial Sector

This section discusses on-going efforts to control chloride from industrial sources in the Santa Clarita Valley. Although the industrial sector as a whole discharges approximately one to three percent of the chloride load in the final system effluent, which is a significantly lower chloride concentration and a much smaller mass load of chloride than the residential sector, the District has strictly regulated chloride discharges from this sector since 1961.³⁰

In September 2002, the District systematically implemented more stringent chloride limitations on industry in the Santa Clarita Valley. The purpose of the new limitations was to ensure that industrial saline discharges were being controlled to the extent technologically and economically feasible. At this time, all industrial dischargers in the District's sewerage system were assigned a chloride limit or required to develop a Chloride Reduction Workplan, or both. The target chloride limit for every industrial discharger was 100 mg/L,

³⁰ For additional information on the industrial source control program and historical industrial source control efforts, see Sections 4.2.1 and 4.2.2 in the District's *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2005*.

Section 4. Chloride Source Control Measures

which is the current water quality objective for the upper Santa Clara River. A 100 mg/L chloride limitation was imposed on all industrial wastewater discharge permits (permits) that had historical chloride discharge concentrations at 100 mg/L or below. The purpose of the limit was to ensure that these facilities maintained their current discharge levels. Thirty-nine permits were initially assigned the 100 mg/L limit.

It was recognized, however, that it might not be technologically or economically feasible for all facilities to meet the target 100 mg/L limit. Therefore, facilities with a history of discharging greater than 100 mg/L were given an option. They could either meet a 100 mg/L chloride limit, or submit a Chloride Reduction Workplan detailing all technologically and economically feasible steps to reduce chloride in their discharge. This option was given to twenty-six permits. Of these permits, the fourteen historically discharging less than 230 mg/L chloride were assigned interim chloride limits of 230 mg/L during workplan development, to ensure that they continued to control chloride to the maximum extent feasible.³¹

Once submitted, District staff evaluates Chloride Reduction Workplans. Each permit is assigned a specific performance-based chloride limit, which reflects the allowable chloride concentration after all technologically and economically feasible chloride reduction measures have been implemented. Many facilities have stated that they are not adding a significant amount of chloride to the wastewater but they are unable to meet the 100 mg/L chloride limit due to the amount of chloride supplied in the potable water.³² In these cases, the permittee is asked to obtain a letter from their water purveyor stating the amount of chloride present in the potable water delivered to the facility. The District uses the information in the Chloride Reduction Workplan and from the water purveyor to calculate the performance-based chloride limit.

A list of these facilities and their current permit limits is presented in Table 4.2-1 (see page T-24). Currently, there are 40 chloride permit limits above 100 mg/L at 35 facilities.³³ To ensure compliance with the chloride limits, the District samples these facilities for chloride on an on-going basis, and requires self-monitoring at most of the facilities in the District. The only facilities for which self-monitoring for chloride is not required are municipal swimming pools and recreational vehicle sanitary waste disposal stations.

Currently, all new permits are issued a 100 mg/L chloride limit unless the company requests to submit a Chloride Reduction Workplan. If the company requests to submit a Chloride Reduction Workplan, the facility has up to 60 days to submit the plan and a performance-based chloride limit is assigned.

In 2009, 3D International LLC was found to have a SRWS connected to the sewer system. The inspector requested that the unit be disconnected immediately and removed from the property within 30 days. The facility complied. The contact stated that the unit was purchased at a trade show in Las Vegas and that they did not know about the prohibition on SRWS.

³¹ For more information on the Chloride Reduction Workplan and guidance on the preparation of the workplan, see Appendix 4.2A in the District's *Santa Clarita Valley Joint Sewerage System Chloride Source Report, October 2002*.

³² The estimated annual blended water supply chloride concentrations for the Santa Clarita Valley from 2002 to mid-2010 presented in Table 3.2-6 vary from 55 mg/L to 85 mg/L. However, the potable water supply chloride concentration at an individual location may vary significantly from these estimates. From 2002 to mid-2010, samples from the Alluvial Aquifer varied from 17 mg/L to 171 mg/L and the SWP chloride concentration varied from 44 mg/L to 95 mg/L. Therefore, for a five-year permit, it is prudent to expect variability in the chloride concentration in the potable water supplied to facilities in the Santa Clarita Valley.

³³ Two permits have two sample locations in their permit with chloride limits above 100 mg/L. In addition, three facilities have multiple permits (because the facilities connect at multiple locations to the public sewer) with chloride limits above 100 mg/L.

Section 4. Chloride Source Control Measures

In 2009, Henry Mayo Newhall Memorial Hospital submitted a self-monitoring report with an unusually high chloride sample value. The facility operates a SRWS and is required to haul all brine off-site for treatment outside of the District. An inspection of the facility revealed that the majority of brine was being hauled off, but a portion of it was being discharged to the sewer system. The facility utilized a conductivity meter to determine when to divert the brine to a holding tank and when to discharge the residual to the sewer system. The facility contact stated that the conductivity meter malfunctioned leading to the discharge of brine to the sewer system and the high chloride sample. The contact also stated that the hospital had just purchased and installed a new conductivity meter to solve the problem. The hospital was notified that all brine from the SRWS must be hauled and that the unit may not have a connection to the sewer per the 1961 ordinance. The facility promptly complied and made the necessary piping modifications.

The performance-based chloride limits ensure that all facilities introducing chloride to the system at concentrations greater than 100 mg/L have controlled their chloride discharges to the extent technologically and economically feasible. The District will continue to enforce chloride limits at all existing industrial facilities and continue to establish and enforce chloride limits at new industrial facilities.

4.3 Commercial Sector

As with the residential and industrial sectors, the District's program to control discharges of chloride from the Santa Clarita Valley commercial sector began in 1961 with adoption of resolutions prohibiting the discharge of salt brines produced by the regeneration of water softening units to the sewerage system. As detailed in this section, the District's commercial source control program has focused on enforcing the prohibition on use of SRWS and on ensuring that brine discharges from commercial sources are controlled to the extent technologically and economically feasible.

4.3.1 Enforcement of Prohibition on Use of SRWS

A key tool for enforcement of the prohibition on discharge of SRWS brines to the sewer from commercial businesses is on-site inspection of businesses to ensure that SRWS are not used. The District began site inspections of commercial facilities in 1974, concurrent with the creation of its source control program. In 1997, commercial site inspections in the Santa Clarita Valley intensified as a result of increased attention on controlling chloride in the area, and have remained at high levels since.

In 1998, the District undertook a systematic effort to identify commercial business sectors that are likely to use softened water to maximize the impact of commercial site inspections. District staff reviewed water uses at each type of business to determine if the business sector would benefit from softened water and therefore would be likely to use a SRWS. On-site inspections were also conducted to determine whether SRWS were present. These inspections revealed that the businesses most frequently using softened water were restaurants, hotels, and dry cleaners. Restaurants use softened water to prevent spots during dishwashing. Hotels use softened water in their restaurant dishwashers to prevent spots and in their laundry facilities to minimize the quantity of laundry detergent and softening agents required. Dry cleaners use softened water in their boilers to minimize scaling.³⁴ Based on the results of this systematic effort to identify commercial business sectors likely to use soft water, the District conducted inspections of all restaurants, hotels, bars, lounges, billiard halls, and dry cleaners in the Santa Clarita Valley.

³⁴ For additional information of this effort, see Section 4.3.1 in the District's *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2005*.

Section 4. Chloride Source Control Measures

Any business found during an inspection to be illegally operating a SRWS was verbally reminded of the District's ban on brine discharges. A follow-up letter was sent to the business, requiring the removal of the unit within thirty days. The District's Industrial Waste inspection staff then re-inspected the business to confirm that the unit had been removed. If the business failed to comply, the business would have been referred to the District's Enforcement group for further action. To date, all businesses that have been found to be operating a SRWS have removed them upon notification without the need for enforcement action. In most cases businesses that removed their SRWS replaced the units with exchange tank water softening systems.

In early 2010, the District thoroughly updated the commercial business inspection list. The District reviewed business listings through Yahoo Yellow Pages (<http://yp.yahoo.com/>), Google (www.google.com), Santa Clarita Valley Chamber of Commerce website (<http://www.scvchamber.com>), Santa Clarita Guide (<http://www.santaclaritaguide.com/Restaurants.html>), and District's inspection records and called businesses to identify new businesses, existing businesses operating under a new name, businesses that had moved to a new location, and closed businesses. The District will continue to review business listings annually to identify new businesses or businesses under new ownership that might not be aware of the prohibition on SRWS.

The District also obtained information on caterers in 2010. These companies have the potential to use softened water to prevent spots during dishwashing. Most caterers contacted use disposable glassware, dishware, and utensils or rent from other companies. If the District was unable to contact the caterer via the phone, the business was added to the commercial inspection list. If the company rents their equipment, information on the rental companies was requested.

In 2009 and the first half of 2010, the District continued to inspect commercial businesses in the Santa Clarita Valley. On average, approximately 250 such businesses are inspected each year. In 2009, the District conducted 260 commercial inspections. Beginning in 2010, all bars, caterers, dry cleaners, hotels, and restaurants from the updated commercial inspection list will be inspected once every two years. A District's Industrial Waste inspector will visit each business, notify the business owner/site manager of the brine discharge prohibition, and conduct an inspection of the premises. If the business is found not to have a use for softened water, such as a restaurant that uses only disposable drinking glasses, dishware, and utensils or a dry cleaning drop shop, they will be removed from the future lists. The District will also periodically inspect a few businesses from the sectors of concern that were found not to have a use for softened water to ensure these businesses have not changed their practices.

4.3.2 Control of Saline Discharges to the Extent Technologically and Economically Feasible

The District began an effort in mid-2002 to determine if additional chloride reductions could reasonably be made at commercial businesses. An outside engineering consulting firm, CGvL Engineers, was hired to identify saline discharges at commercial businesses and to determine measures to reduce any such discharges to the extent technologically and economically feasible.³⁵

As a result of the study, it was determined that some best management practices (BMPs) to reduce saline discharges from swimming pools were both technically and economically feasible. These included the addition of stabilizer³⁶ for all pools and the use of bromide disinfection for indoor pools. Implementation of the BMPs began in August 2002. At that time, all commercial businesses were sent letters informing them that the District was developing chloride reduction measures for commercial businesses. In December 2002, a

³⁵ The full results of the study are available in the document *Best Management Practices to Reduce Chlorides in Commercial Wastewater for Santa Clarita Valley Joint Sewerage System, December 2002* by CGvL Engineers.

³⁶ The stabilizer is typically cyanuric acid. Use of stabilizer helps to reduce excessive chlorine loss in pools due to the ultraviolet rays of the sun.

Section 4. Chloride Source Control Measures

follow-up was sent to all businesses. The purpose of the second letter was to inform owners of swimming pools about the upcoming mandatory pool BMPs, and to also encourage other commercial businesses to incorporate voluntary chloride reduction measures for sanitizing, laundering, and janitorial cleaning. In January 2003, letters were sent to all owners of public access swimming pools in the Santa Clarita Valley, requiring implementation of the mandatory BMPs. Included in this mailing were owners of pools at apartment buildings and homeowner's associations in the Santa Clarita Valley, informing them about the BMPs so that appropriate steps could be taken during pool maintenance. Over the next several months District's Industrial Waste inspectors visited all affected pools to help the owners prepare the certification forms required under the mandatory BMP program.

From July 2009 to June 2010, no new public access swimming pools were identified in the Santa Clarita Valley. The District will continue to issue BMP permits to new swimming pool owners as they are identified.³⁷

4.4 Liquid Waste Disposal Station

The District operates a liquid waste disposal program to ensure that hauled wastes are accepted in accordance with all laws and federal regulations³⁸ and that they do not cause adverse impacts at the Saugus WRP. Haulers must obtain a permit prior to discharging liquid wastes to the District's sewerage system. A separate permit is issued for each vehicle in which waste is hauled. The permit provides the District with information on the hauler and the vehicle. Each time a hauler discharges a waste load, a fee and manifest are required. The manifest that accompanies each waste load identifies the source³⁹ and waste type of each component of the particular load, as well as the information on the waste hauler.

When a load is brought to the Saugus Liquid Waste Disposal Station, the accompanying manifest is first reviewed. The waste hauler bringing the load must sign and certify that the liquid waste is non-hazardous and that it came from only non-industrial sources. A sample of the load is taken by the station attendant to ensure that it exhibits characteristics typical of portable toilet, septic tank, and/or cesspool waste. Every load is tested for pH and conductivity. Samples are also taken of every load and retained, and every twenty-fifth sample is subject to a more complete chemical analysis.

In June 2001, a program was put in place at the Saugus Liquid Waste Disposal Station to ensure that liquid wastes with excessive chloride concentrations were not disposed at the station. The disposal of hauled septage loads with conductivities greater than 3,000 umhos/cm was prohibited, unless the loads were accompanied by additional analytical information ensuring that the loads do not contain hazardous, industrial, and/or other non-sanitary wastes. This prohibition was put in place based on data collected by the District indicating that septage wastes have conductivities less than 3,000 umhos/cm. Although conductivity is not a direct measure of chloride concentration, liquids containing high levels of dissolved solids will have higher conductivities. This screening program therefore prevents disposal of loads that could contain excessive chloride concentrations. Since, the Saugus Liquid Waste Disposal Station represents less than one percent of the chloride loading at the WRPs and contributes less than 1 mg/L of chloride to effluent chloride concentrations at the WRPs, further restrictions on disposal of loads at the station would not have a measurable impact on effluent chloride concentrations.

³⁷ For more information about BMP permits and other documents associated with the BMP program, see Appendix 4.3-B in the District's *Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan, November 2005*.

³⁸ Including federal requirements specified at 40 CFR Part 403.5(b)(8).

Section 4. Chloride Source Control Measures

4.5 Water Reclamation Plant Processes

As discussed in Section 3.4, operation of a wastewater treatment plant requires use of a variety of chemicals. Chemicals containing chlorine and chloride increase the chloride concentration of wastewater being treated.

Chlorine, either in gaseous or sodium hypochlorite form, has been used for disinfection to deactivate pathogens at the Saugus and Valencia WRPs since they were constructed.⁴⁰ Chlorine gas was historically used for disinfection, but this practice was discontinued in 1998 for safety reasons and sodium hypochlorite has since been used. Another historical use of a chemical that contributed to the chloride loading at the Saugus and Valencia WRPs was the use of ferric chloride (FeCl_3) to enhance settling during primary sedimentation. At the Valencia WRP, FeCl_3 was also used as a filter press coagulant to enhance the dewatering of biosolids and ferrous chloride (FeCl_2) was used in the operation of its anaerobic digesters. Very small amounts of sodium hypochlorite were also used at the Valencia WRP to control odors in its flow equalization basin.

Due to concerns over the in-plant loading of chloride from WRP chemical usage, in 2000 the District's Wastewater Research Section initiated a study to consider the use of ferric sulfate (FeSO_4) as an alternative to FeCl_3 . The study showed that in terms of performance, FeSO_4 could successfully replace FeCl_3 . The increased chemical cost to switch to FeSO_4 was estimated at \$260,000 per year for the Saugus WRP and \$330,000 per year for the Valencia WRP. In May 2000, FeCl_3 was replaced with FeSO_4 for primary sedimentation at the Saugus WRP. In November 2000 and September 2001 respectively, FeCl_3 was replaced with FeSO_4 for biosolids processing/odor control and for primary sedimentation at the Valencia WRP. The primary sedimentation tank scrubber at the Valencia WRP, to which sodium hypochlorite was added for odor control, was replaced in 2003 with a biotrickling filter, eliminating this minor source of chloride in the plant's treated wastewater.

From December 22, 2009 to January 11, 2010, and from May 11, 2010 to June 30, 2010, FeCl_2 was added to the raw sludge line at Valencia WRP to control hydrogen sulfide in digester gas and prevent struvite formation in sludge piping. The FeCl_2 was added on an experimental basis in an attempt to reduce influent FeSO_4 chemical usage. The experimental addition of FeCl_2 to the raw sludge line at Valencia WRP caused an increase in Valencia WRP effluent chloride of 1.9 mg/L during the trial periods. It is expected that the ferrous chloride experiment will continue until September 2010 to collect additional data.

As a result of the change in chemicals, the total in-plant contribution of chloride has been significantly reduced at each WRP. In the first half of 2010, the average total chloride contribution from chemical usage at the Saugus and Valencia WRPs was 12.1 mg/L and 9.4 mg/L, respectively. The combined flow-weighted average was 11.4 mg/L, a reduction of 53 percent from the 1996 to 1999 average value of 24 mg/L.

The major remaining use of chloride-containing chemicals at the Saugus and Valencia WRPs is the use of sodium hypochlorite for disinfection. The District is continuing to evaluate alternative disinfection methods to replace sodium hypochlorite disinfection. An internal task force to investigate alternative disinfection methods, consisting of personnel from the District's Operations, Research, Design, Monitoring, Planning, and Laboratory Sections, continues to meet. Since 2008, the District also has been investigating alternative disinfection methods as part of the Chloride TMDL Facilities Plan and Environmental Impact Report. One option being considered is the replacement of sodium hypochlorite disinfection with the use of ultra-violet (UV) light technology.

⁴⁰ The NPDES permits for the two WRPs require compliance with a final effluent coliform limit of less than 2.2/100 mL based on a seven-day median.

Section 4. Chloride Source Control Measures

The use of UV-disinfection would reduce the in-plant chloride loading. Some sodium hypochlorite would still be necessary in the treatment process for inert filter maintenance. Additionally, initial research indicates that UV disinfection may not be fully effective in destruction of adenovirus, so a small dose of chlorine may be needed to ensure thorough disinfection. The replacement of sodium hypochlorite would not itself result in compliance with the current Basin Plan surface water chloride objective of 100 mg/L. Despite the high cost of this technology, the District is continuing to investigate UV-disinfection.

4.6 Santa Clarita Potable Water Supplies

4.6.1 Water Supply Chloride Contribution Study

As part of the TMDL, the District has developed a Groundwater and Surface Water Interaction Model (GSWI) for the Upper Santa Clara River watershed, which provides a thorough assessment of water supply chloride concentrations and their impact on WRP reclaimed water and receiving water quality. The GSWI model is being utilized to assess water supply management scenarios that could potentially minimize impacts to WRP reclaimed water and receiving water quality. A report summarizing the development and application of the GSWI model are available on the TMDL project website at www.santaclarariver.org.

The District will continue to monitor water supply chloride contributions and report updated loadings as part of annual reporting requirements as specified in Task 3 of the TMDL.

4.6.2 Wellhead Softening Demonstration Project

VWC is implementing a Groundwater Softening Demonstration Project, which evaluates the feasibility of wellhead water softening. The project will determine how improvements in potable water quality hardness may potentially reduce the usage of SRWS in VWC's service area and thus reduce the chloride loading of these units to the District's WRPs. The project has three main goals: 1) determine customer attitudes towards pre-softened water, 2) establish cost estimates and overall cost savings to customers, and 3) quantify chloride reduction in wastewater. VWC completed Phase I of the study in April 2006⁴¹ and began operating the Phase II demonstration project in September 2008.

Phase II of the VWC Groundwater Softening Demonstration Project is being implemented in the Copperhill community, within the VWC's service area, using pellet softening technology. Pellet softening utilizes a column filled with sand; by raising the pH of hard water and flowing it up through the column, the calcium carbonate precipitates out and adheres to the sand creating white pellets. The only by-product of the process are white pellets, which are considered to be environmentally safe, and can be reused in various industries.⁴²

The Groundwater Softening Demonstration Project is ongoing, with data being gathered to evaluate the project based on potable water quality improvement and reduction in chloride attributable to the reduced use of SRWS.

Executive Summary

The California Regional Water Quality Control Board – Los Angeles Region (Regional Board) adopted Upper Santa Clara River (SCR) chloride Total Maximum Daily Load (Chloride TMDL) setting water quality objectives for the Santa Clara River. The Santa Clarita Valley Sanitation District of Los Angeles County (SCVSD or District) owns and operates the Saugus and Valencia water reclamation plants (WRPs) that discharge recycled water to the SCR and must ultimately comply with the Chloride TMDL water quality objectives. The Chloride TMDL Implementation Plan contains provisions that would enable to the Regional Board to consider revising the water quality objectives for the SCR based on the results of several scientific studies to be conducted by the SCVSD in cooperation with the Regional Board and Los Angeles and Ventura County stakeholders.

Task 9 of the Chloride TMDL Implementation Plan requires the SCVSD develop of pre-planning report on conceptual TMDL compliance measures and their costs. The SCVSD, Regional Board and Los Angeles and Ventura County stakeholders have identified several potential compliance measures as part of the USCR Chloride TMDL collaborative process, specifically:

- Advanced Treatment and Brine Disposal
- Minimal Advanced Treatment and Secondary Effluent Pipeline and Outfall
- Alternative WRP Discharge Location
- Alternative Water Resource Management

These conceptual compliance measures and the results of the analysis of these alternatives utilizing the Groundwater Surface Water Interaction Model, developed as part of the Chloride TMDL Implementation Plan, are described in detail in a separate report submitted to the Regional Board by Geomatrix Consultants (2008 b). This report was prepared to provide the cost estimates developed for the conceptual compliance measures as required by the TMDL Implementation Schedule. The costs for these alternatives are summarized in Table ES-1.

Table ES-1: Conceptual TMDL Compliance Measures Cost Summary

Alternative	Capital Cost (\$ Million)	Present Worth O&M (\$ Million)	TOTAL (\$ Million)
Advanced Treatment and Brine Disposal	\$348	\$116	\$464
Minimal Advanced Treatment and Secondary Effluent Pipeline and Outfall	\$471	\$58	\$529
Alternative WRP Discharge Location	\$180	\$124	\$304
Alternative Water Resource Management	\$205	\$54	\$259

Note: All costs above are based on September 2007 dollars.

DRAFT REPORT

1.0 Introduction

This report summarizes cost estimates for potential alternatives for the Upper Santa Clara River chloride Total Maximum Daily Load (Chloride TMDL) to achieve compliance with various water quality objectives (WQOs) within the Upper Santa Clara River watershed. These potential compliance alternatives are discussed in detail in a separate report (the Task 2B-2 report) prepared by Geomatrix Consultants, Inc. (Geomatrix) as part of the Chloride TMDL collaborative process.ⁱ These reports satisfy the requirements of Task 9 of the Chloride TMDL Implementation Plan.

2.0 Chloride TMDL Background

The California Regional Water Quality Control Board – Los Angeles Region (Regional Board) adopted the Chloride TMDL in 2002, establishing chloride waste-load allocations for the SCVSD's Valencia and Saugus water reclamation plants (WRPs) at 100 mg/L. Amendments to the TMDL in 2004 and 2006ⁱⁱ established a phased TMDL approach, which allowed for the development of several scientific studies and potential site-specific objectives (SSOs) for chloride that the Regional Board may consider as part of any revisions to the existing 100-mg/L WQO. The TMDL implementation schedule specified, among other requirements, that special scientific studies be conducted to: a) evaluate the appropriate chloride threshold for the protection of sensitive agriculture; b) evaluate the appropriate chloride threshold for the protection of endangered species; and c) develop a groundwater/surface water interaction model to evaluate the impacts of chloride loading from all sources on water quality. The results of these studies would then become the technical basis by which potential SSOs for chloride could be developed for Regional Board consideration. The TMDL required development of these studies in a collaborative process through Technical Working Groups (TWG) to ensure substantial agreement between the Regional Board staff, SCVSD staff, and other stakeholders, regarding the scientific and technical basis for establishing water quality objectives for chloride. Each of the major studies conducted as part of the TMDL and their current status are summarized as follows.

Threatened and Endangered Species Chloride Threshold Study (T&Es Study) – The T&Es Study was completed in November 2007 and determined that the 1988 United States Environmental Protection Agency ambient water quality criteria for chloride for the protection of aquatic life (230 mg/L as chronic and 860 mg/L as acute) are protective of locally important T&Es (Advent-Environ, 2007). Therefore, the chloride threshold for the protection of locally important T&Es was found to be considerably higher than the threshold range for the protection of salt-sensitive agriculture.

ⁱ Geomatrix Consultants, 2008. *Task 2B-2 – Assessment of Alternatives for Compliance Options Using the Groundwater/Surface Water Interaction Model*. June.

ⁱⁱ Resolution 04-004, adopted by the California Regional Water Quality Control Board – Los Angeles Region (Regional Board) on May 6, 2004 and Resolution R4-2006-016, revising the USCR CI TMDL Implementation Schedule, adopted on August 3, 2006,

DRAFT REPORT

1

DRAFT REPORT

Agricultural Chloride Threshold Study (Ag Study) - The Ag Study was a two-part study, with a Literature Review and Evaluation (LRE) completed in September 2005 (CH2M HILL, 2005), and an evaluation of the appropriate averaging period completed in January 2008 (Newfields, 2008). The Ag Study determined that the appropriate chloride threshold for salt-sensitive agriculture (avocados, strawberries, and nursery crops) grown in the Upper Santa Clara River watershed is a guideline chloride concentration ranging between 100 and 117 mg/L, with an averaging period for chloride concentrations of approximately 3 months.

Groundwater – Surface Water Interaction Model (GSWIM) Study – The GSWIM Study developed a calibrated numerical model that was completed in March 2008 (CH2M HILL-HGLⁱⁱⁱ and Geomatrix^{iv}), to evaluate the impact of WRP recycled water discharges to the Santa Clara River on downstream surface water and groundwater in the Los Angeles and Ventura County portion of the Santa Clara River watershed.

Site Specific Objectives (SSO) and Anti Degradation Analysis (ADA) Study – The SSO and ADA Study provides the technical and regulatory basis for the Regional Board to consider potential SSOs. As part of the SSO effort, a white paper on the agricultural beneficial uses in Reaches 5 and 6 of the USCR was developed in September 2007^v, which assessed whether salt-sensitive agriculture was an existing or potential beneficial use. The white paper concluded that salt-sensitive agriculture was not an existing or potential beneficial use for surface water or underlying groundwater that could be impacted by surface water in Reaches 5 and 6. Since salt-sensitive agriculture was not an existing or potential beneficial use for the surface waters or underlying groundwater that could be impacted by surface water in these reaches, SSOs higher than the Ag Study threshold range of 100-117 mg/L are potentially possible, and are being considered as part of the potential compliance alternatives. The SSO-ADA study was completed in July 2008^{vi} and provides the technical and regulatory basis for recommending SSOs that would be required for implementation of the AWRM Program.

3.0 Chloride TMDL Implementation Plan

Task 9 of the USCR Cl TMDL Implementation Schedule requires the development of a pre-planning report on conceptual compliance measures and costs to meet potential water quality objectives in the Santa Clara River Reaches 5 and 6. Task 9 states:

CSDLAC shall solicit proposals and develop and submit a report to the Regional Board that identifies potential chloride control measures and costs based on

DRAFT REPORT

2

DRAFT REPORT

different hypothetical scenarios for chloride water quality objectives and final wasteload allocations.

In accordance with the Chloride TMDL Implementation schedule, a report on TMDL Task 9 was required by February 20, 2008. The Santa Clarita Valley Sanitation District of Los Angeles County (District) submitted reports completed to date to satisfy this requirement^{vii}. As noted in the submittal, significant progress has been made working with several stakeholders in the development of an alternative water resources management (AWRM) compliance option, requiring additional time for completion of Task 9 of the Chloride TMDL Implementation schedule.

4.0 Conceptual Compliance Alternatives

The District submitted the Task 2B-2 report, which identifies potential alternatives to achieve compliance with various WQOs within the Upper Santa Clara River watershed and describes the results of the assessment of those alternatives conducted as part of the GSWIM Study conducted as part of the Chloride TMDL collaborative process. This report was submitted to satisfy the TMDL Task 9 requirement to identify potential chloride control measures to meet different chloride WQOs and final wasteload allocations.

The report identified and assessed four general alternatives, or strategies for achieving compliance with chloride WQOs in both the East Subbasin and Piru Basin. These alternatives are:

1. **Advanced Treatment and Brine Disposal** – this alternative consists of constructing and operating MF/RO treatment facilities to remove chloride from the reclaimed water produced at the Valencia and Saugus WRPs. Sufficient advanced treatment capacity would be required to reduce all chloride concentrations in WRP reclaimed water to below the WQO of 100 mg/L for the SCR downstream of the discharges (Reaches 5 and 6). MF/RO treatment would result in a significant amount of waste brine that would require disposal, most likely through a dedicated brine conveyance pipeline from the WRPs to a new Pacific Ocean outfall in Ventura County.
2. **Minimal Advanced Treatment and Secondary Effluent Pipeline and Outfall** – this alternative consists of constructing and operating MF/RO treatment facilities for a limited amount WRP reclaimed water sized to produce sufficient reclaimed water, meeting the existing WQO of 100 mg/L, for discharge to the SCR to maintain river habitat.^{viii} The balance of the WRP recycled water would be

^{vii} Letter Re: *Submittal of Upper Santa Clara River Chloride TMDL Task 7, 8, and 9 Report*, dated February 20, 2008 to Ms Tracy Egoscue, Executive Officer, California Regional Water Quality Control Board – Los Angeles Region.

^{viii} The minimum amount of reclaimed water discharge to the SCR to maintain river habitat has not been determined. For purposes of this study, a minimum discharge from each WRP is assumed based on

DRAFT REPORT

3

DRAFT REPORT

conveyed to the Pacific Ocean in Ventura County via a dedicated pipeline and ocean outfall. The objective of this alternative is to export the chlorides in the WRP reclaimed water exceeding the existing water quality objectives directly to the ocean rather than discharging them locally to the SCR.

3. **Alternative WRP Discharge Location** – this alternative consists of relocating the Valencia WRP reclaimed water discharge location upstream to the upper extent of Reach 7 of the SCR near the United States Geological Survey (USGS) gauging station at Lang (e.g. the Lang Gauge). The objective of this alternative is to move the discharge farther away from downstream salt-sensitive agricultural beneficial uses, and utilize the potential assimilative capacity in upgradient surface water and groundwater, to minimize impacts from the chloride in the WRP reclaimed water in Ventura County where those beneficial uses occur.
4. **Alternative Water Resource Management** – this alternative consists of working with the local water supply, agricultural, and development stakeholders in Los Angeles and Ventura Counties on a regional watershed solution to help achieve compliance with USCR Chloride TMDL. The objective of this alternative is to identify the best set of options for compliance that results in the maximum net benefit for all water users along the river, while protecting the salt sensitive agricultural beneficial uses of the Santa Clara River in Ventura County.

The following sections of this report discuss cost estimates for each of these conceptual compliance alternatives and describe the general assumptions on which these cost estimates are based.

5.0 Cost Estimates for Conceptual Compliance Alternatives

Cost Estimates for each alternative include capital costs and operations and maintenance (O&M) using present worth analysis assuming a period of 20 years and an interest rate of 5.5%, consistent with District practices. Cost estimates for these alternatives presented below are based on Opinions of Probable Construction Costs developed by Trussell Technologies, Inc. (Trussell) and MWH using manufacturer's budgetary cost estimates for equipment, RSMeans Construction Cost Data, recent engineering cost estimates, recent actual construction costs, and cost curves. Opinion of Probable Construction Costs developed by Trussell are for advanced treatment facilities and are based on a hybrid Class 5 estimate per the Advancement of cost Engineering International (ACEi) Cost Estimate Classification System with accuracy of -30 percent to +50 percent. Opinion of Probable Construction Costs developed by MWH for brine disposal and secondary effluent disposal systems are based on an ACEi Class 5 estimate with accuracy of -50 percent to +100 percent.

information in the SCVSD's 2015 Santa Clarita Valley Joint Sewerage System Facilities Plan and Environmental Impact Report.

DRAFT REPORT

5.1 Maximum Advanced Treatment and Brine Disposal

The Saugus and Valencia WRPs provide primary, secondary and tertiary treatment. These conventional treatment processes remove organic compounds and pathogens and produce high quality recycled water, but are not designed for the treatment or removal of dissolved salts such as chloride from wastewater. The District retained engineering consultant(s) to assess the various advanced treatment alternatives for compliance with the Chloride TMDL. The District's consultants evaluated the various alternative desalination technologies that would remove chloride in recycled water at the Valencia and Saugus Plants, including membrane processes (reverse osmosis, nanofiltration, and electrodialysis), thermal process (multi-stage flash distillation (MFD), multi-effect distillation (MED or MEE), and mechanical vapor compression (VC) technologies), and ion exchange processes. Both Montgomery Watson Harza (2002) and Trussell Technologies (2008) evaluated potential chloride reduction technologies and concluded that reverse osmosis (RO) treatment achieves a high removal of chloride and is less costly than the other desalination technologies and was therefore the recommended treatment alternative if advanced treatment to remove chloride is necessary for compliance with the Chloride TMDL.

These studies also concluded that reverse osmosis treatment requires appropriate pretreatment of recycled water to prevent fouling of the membranes used in the reverse osmosis process, which would result in loss of treatment efficiency. The conventional treatment processes at the Saugus and Valencia WRPs are not sufficient for the direct treatment of tertiary recycled water with reverse osmosis membranes, without some form of pre-treatment. Both studies concluded that pretreatment, utilizing either micro filtration (MF) and/or a membrane bioreactor technology (MBR), which provides both biological treatment and low pressure membrane filtration, would be necessary at the Saugus and Valencia WRPs, prior to RO treatment.

In addition, RO technologies produce a brine waste that also requires disposal. Montgomery Watson Harza (2002, 2008) has identified the use of a brine line and ocean outfall and/or the use of deep well injection as potential means for the disposal of reverse osmosis brines. However, in both reports MWH indicated that deep well injection disposal options would require extensive field exploration and testing in order to determine if such a brine disposal option was technically feasible.

The maximum advanced treatment and brine disposal alternative consists of the installation and operation of advanced treatment facilities (MF/RO and/or MBR/RO) and brine disposal facilities at the Valencia and Saugus WRPs. The District would install sufficient advanced treatment capacity to discharge recycled water with chloride levels that would meet 100 mg/L for the full WRP discharge. Operation of advanced treatment at the WRPs would result in waste brine that requires disposal. Given the large volumes of brine waste generated by the maximum advanced treatment alternative, and uncertainties that such volumes of brine could be handled via deep well injection, the only feasible brine disposal alternative for the maximum advanced treatment alternative

DRAFT REPORT

5

DRAFT REPORT

would be through a new 43-mile brine conveyance pipeline and new ocean outfall off the coast in Ventura County.

Trussell Technologies evaluated chloride data for the Valencia and Saugus WRPs and for the potable water supply in the Santa Clarita Valley to determine the size of advanced treatment facilities necessary to achieve compliance with Chloride TMDL WQOs and the estimated brine waste produced as a result of these treatment processes.^{ix} The size of the advanced treatment required was based on the design flows for the Valencia and Saugus WRP^x while the brine waste flow was determined based on ultimate buildout flows of the Santa Clarita Valley^{xi} since construction of a brine conveyance pipeline is considered to be a one-time event. In order to comply with a water quality objective of 110 mg/L as a monthly average, including a 10% safety factor, Trussell determined that approximately 13.9 MGD and 3.23 MGD of RO permeate water would be required to produce a blended discharge meeting the objectives under all conditions. Assuming a 90% on-line factor for the facility this results in the construction of a 15.4 MGD MF/RO and/or MBR/RO facility at the Valencia WRP and a 3.6 MF/RO facility at the Saugus WRP.^{xii} Based on these proposed treatment processes at the Valencia and Saugus WRP, Trussell has prepared a construction cost estimate, presented in Table 1

Table 1: Project Capital Costs for Advanced Treatment

Valencia WRP (15.4 MGD MBR/RO and MF/RO)	
MBR Facility	\$28,500,000
MF Facility	\$10,000,000
RO Facility	\$32,800,000
Non-Process and General Requirements	\$20,100,000
Total Valencia	\$91,400,000
Saugus WRP (3.6 MF/RO)	
MF Facility	\$7,100,000
RO Facility	\$12,500,000
Non-Process and General Requirements	\$7,000,000
Total Saugus	\$26,600,000
TOTAL ADVANCED TREATMENT	\$118,000,000

^{ix} Trussell, 2007(c). *Technical Memorandum No. 6.002-010 - Determination of Reverse Osmosis Capacity and Brine Production for Each Scenario*. July 2007

^x Design flow for the Valencia and Saugus WRPs is assumed to be 26.8 MGD and 6.7 MGD, respectively; equivalent to the projected maximum monthly WRP recycled water flows based on the 2015 Santa Clarita Valley Joint Sewerage System Facilities Plan and EIR.

^{xi} Recycled water flow projections for the ultimate buildout of the Santa Clarita Valley of approximately 62 MGD are determined by the District based on SCAG 2004 data.

^{xii} Trussell, 2007(d). *Technical Memorandum No. 6.002-011: Preliminary Design of MF/RO Facilities at Saugus and Valencia WRPs and BMBR for Stave VI Expansion at Valencia WRP*. November 2007.

DRAFT REPORT

Because construction of brine disposal facilities is considered a one-time event, the facilities would be sized based on ultimate build-out flow projections for the Santa Clarita Valley. Therefore, in addition to the size of advanced treatment required to comply with the WQOs under design flow conditions, Trussell also determined the size of advanced treatment required to comply with the existing WQOs under ultimate buildout flow conditions for the entire Santa Clarita Valley in order to provide an estimate for the brine disposal capacity that would be required for advanced treatment facilities sized to comply with the existing WQO for the ultimate build-out flow projections for the Santa Clarita Valley and assuming an RO recovery of 85%, Trussell estimates that approximately 5.12 MGD and 0.59 MGD of brine waste would be generated at Valencia and Saugus WRPs, respectively. Based upon these estimates, MWH prepared cost estimates for several brine disposal options including disposal through a new pipeline and ocean outfall in Ventura County disposal by deep well injection in to abandoned oil fields in the Santa Clarita Valley. As noted earlier, because of the large uncertainties over whether deep well injection for quantities of brine of approximately 5.7 MGD would be feasible, the most likely brine disposal option for the maximum advanced treatment alternative is through a dedicated brine line and ocean outfall off the Ventura County coast.

As such, brine disposal through a new ocean outfall in Ventura County would require the construction of approximately 43 miles of conveyance pipeline, depending upon the final location of the new ocean outfall, from the Saugus and Valencia WRPs through portions of Los Angeles and Ventura Counties. Due to the elevation drop between the WRPs and the ocean outfall, approximately 1,000 feet, it is assumed gravity flow would be feasible for this alternative. Based on these assumptions, MWH has prepared a construction cost estimate presented in Table 2.^{xiii} It should be noted that capital costs presented in Table 2 do not include the cost of land acquisition, utility relocation, permitting or environmental assessments.

Table 2: Project Capital Costs for Brine Disposal

Facility	Cost
Conveyance Pipeline	\$200,000,000
Ocean Outfall	\$30,000,000
TOTAL BRINE DISPOSAL COST	\$230,000,000

Additionally, Trussell Technologies and MWH provided Operations and Maintenance (O&M) cost estimates for the advanced treatment and brine disposal facilities described in this alternative, assuming a 20-year period. O&M costs for advanced treatment facilities at Valencia WRP were estimated for the full capacity of the system at the end of the 20-year period and proportioned based on projected yearly flows. Advanced treatment facilities at the Saugus WRP are assumed to operate at full capacity

^{xiii} MWH, 2008. Analysis of Treatment Cost for Chloride for the Santa Clarita Valley Joint Sewerage System. April 2008

DRAFT REPORT

immediately. Cost for labor, power, replacement equipment and chemicals are based on current Districts costs and contracts. MWH estimated O&M costs for the brine disposal facilities, consisting of annual inspection and cleaning and period repairs for the conveyance pipeline. Inspection and cleaning costs are not included for the ocean outfall facility due to inaccessibility of the facility for these tasks. Cost estimates for Operations and Maintenance (O&M) for Advanced Treatment and Brine Disposals provided by Trussell and MWH, respectively are summarized in Table 3.

Table 3: Maximum Advanced Treatment Option O&M Costs

Facility	Annual Cost
Advanced Treatment	\$9,000,000
Brine Disposal	\$700,000
AVERAGE ANNUAL O&M Cost	\$9,700,000

Assuming an interest rate of 5.5% and a period of 20 years, the present worth of the estimated annual O&M costs for advanced treatment and brine disposal is approximately \$116 Million. The combined Present Worth of the estimated Capital and O&M Costs for compliance with the existing objectives by providing advanced treatment and brine disposal is approximately \$464 Million as presented on Table 4.

Table 4: Maximum Advanced Treatment Costs Summary

Project Element	Capital Cost	Present Worth O&M	TOTAL
Advanced Treatment at Saugus and Valencia	\$118,000,000	\$108,000,000	\$226,000,000
Brine Disposal	\$230,000,000	\$8,000,000	\$238,000,000
TOTAL AWRM Program	\$348,000,000	\$116,000,000	\$464,000,000

Based on modeling conducted by Geomatrix (2008b), this alternative would not achieve compliance with the existing 100 mg/L WQO at all times and all locations, even though the Saugus and Valencia WRP recycled water discharge would comply with 100 mg/L.

5.2 Minimum Advanced Treatment and Secondary Effluent Pipeline and Outfall

The Minimum Advanced Treatment Alternative would reduce and/or eliminate the amount of advanced treatment capacity needed to comply with the existing 100 mg/L WQO. This option involves the reduction of WRP recycled water discharges to the SCR and conveyance and discharge of the majority of the WRP recycled water directly to the ocean through a secondary effluent disposal pipeline and new ocean outfall in Ventura

DRAFT REPORT

County. A small portion of the WRP recycled water, approximately 10 MGD from the Saugus and Valencia WRP combined, would receive advanced treatment to meet a chloride limit of 100 mg/L, to maintain sufficient habitat for threatened and endangered species in the SCR. This alternative would require construction of a smaller amount of advanced treatment at both the Saugus and Valencia WRPs, estimated at approximately 6 MGD.^{xiv} In addition, a 43 mile disposal pipeline and ocean outfall would need to be sized with sufficient capacity to convey the remainder of the projected WRP recycled water discharges at ultimate build-out flow conditions for the Santa Clarita Valley, estimated at approximately 62 MGD total based on 2004 SCAG data. MWH prepared a cost estimate for conveyance pipeline with slightly larger flow assumptions. Therefore, costs for conveyance pipeline required for the Secondary Effluent Pipeline and Ocean Outfall are scaled from MWH's cost estimates for the flows considered in this option as follows:

Pipeline Segment	Length	Diameter
Val to Newhall	37,200 L.F.	36 inches
Newhall to Ocean	200,100 L.F.	48 inches
Assumptions		
Distance Between Manholes		500 L.F.
Cost per Manhole		\$25,000
Cost for Pipe	36 inches	175
Labor for Pipe	36 inches	575
Cost for Pipe	48 inches	250
Labor for Pipe	48 inches	750
Construction Contingency		20%
Eng, Legal, Admin Contingency		25%
Cost		
# of Manholes required		474
Cost of Manholed		\$11,850,000
Length of Pipeline	36 inches	37,200 L.F.
Cost for Pipe	36 inches	\$175
Cost for Labor	36 inches	\$575
Total Cost		\$27,900,000
Length of Pipeline	48 inches	200,100 L.F.
Cost for Pipe	48 inches	\$250
Cost for Labor	48 inches	\$750
Total Cost		\$200,100,000
Subtotal		\$239,850,000
Construction Contingency		\$48,000,000
Construction Cost		\$287,850,000
Eng, Legal, Admin Contingency		\$72,000,000
TOTAL COST		\$359,850,000
Ocean Outfall (3 miles)		15,840 L.F.

^{xiv} Cost estimate for advanced treatment at Saugus WRP is based on design and costs provided by Trussell Technologies for Maximum Advanced Treatment alternative, discharging approximately 4.25 MGD of recycled water meeting 100 mg/L. The Valencia WRP would discharge approximately 5.75 MGD or recycled water meeting 100 mg/L, which would require construction of an approximately 3 MGD advanced treatment facility at Valencia. See Section 5.4 for additional information on cost estimate for 3 MGD advanced treatment facility at Valencia WRP.

DRAFT REPORT

Assumptions	
Outfall Diameter	48 inches
Cost for Outfall (48 in Diam)	\$2,500 / L.F.
Construction Contingency	20%
Eng, Legal, Admin Contingency	25%
Cost	
Length of Pipe	15,840 L.F.
Cost of Ocean Outfall	\$2,500
Cost of Pipeline - Ocean Outfall	\$39,600,000
Construction Contingency	\$8,000,000
Construction Cost	\$47,600,000
Eng, Legal, Admin Contingency	\$12,000,000
TOTAL OUTFALL	\$59,600,000

Separate brine disposal facilities for the brine produced from the advanced treatment facilities would not be required as brine could be discharged with the recycled water discharge to the ocean. O&M cost for advanced treatment facilities are based on current District's costs and contracts for labor, power, replacement equipment and chemicals costs. O&M costs for the recycled water conveyance facilities are based on annual inspection and cleaning and period repairs for the pipeline. Inspection and cleaning costs are not included for the ocean outfall facility due to inaccessibility of the facility for these tasks. Based on these assumptions and cost estimates provided by MWH (2008), the District has prepared a construction and O&M cost estimate for the Minimum Advanced Treatment alternative, presented in Table 5. It should be noted that capital costs presented in Table 5 do not include the cost of land acquisition, utility relocation, permitting or environmental assessments.

Table 5: Minimum Advanced Treatment Capital & O& M Costs

Facility	Capital Cost	Annual O&M
Minimum Advanced Treatment Saugus	\$26,600,000	\$2,200,000
Minimum Advanced Treatment Valencia	\$25,000,000	\$2,100,000
Conveyance Pipeline	\$360,000,000	\$500,000
Ocean Outfall	\$59,600,000	N/A
TOTAL	\$471,200,000	\$4,800,000

Assuming an interest rate of 5.5% and a period of 20 years, the present worth of the estimated O&M costs for is approximately \$57.4 Million, resulting in a combined Capital and O&M cost of approximately \$528.6 Million, as shown on Table 6.

Table 6: Minimum Advanced Treatment Costs Summary

Project Element	Capital Cost	Present Worth O&M	TOTAL
Advanced Treatment at Saugus and Valencia	\$51,600,000	\$51,400,000	\$103,000,000
Secondary Effluent and Brine Disposal	\$419,600,000	\$6,000,000	\$425,600,000
TOTAL Minimum Advanced Treatment	\$471,200,000	\$57,400,000	\$528,600,000

Based on modeling conducted by Geomatrix (2008b), this alternative would not achieve compliance with the existing 100 mg/L WQO at all times and all locations, even though the Saugus and Valencia WRP recycled water minimum discharge would comply with 100 mg/L.

5.3 Alternative WRP Discharge Location

The alternative WRP Discharge Discussion would move the Valencia WRP recycled water discharge location upstream approximately 16 miles from the current location in Reach 5 of the SCR to Reach 7 of the SCR, near the USGS Lang Gauge, thus minimizing impacts from the chloride in the WRP recycled water on salt-sensitive agricultural beneficial uses downstream along Reach 4B of the SCR. Discharging the Valencia WRP recycled water in Reach 7 would potentially utilize additional assimilative capacity in SCR surface water and underlying groundwater between the USGS Lang Gauge and the Los Angeles and Ventura County line.

This alternative would require the construction of conveyance pipeline and pumping facilities designed with sufficient capacity to convey the projected ultimate build-out flows for the Santa Clarita Valley to the proposed discharge location near the USGS Lang Gauge. This alternative would require the construction of an approximately 16 mile conveyance pipeline, with capacity for the Valencia WRP design flow of 27.6 MGD, from the Valencia WRP to a new proposed discharge location near the USGS Lang gauge and pump stations to convey these flows to the that location, which is nearly 700 feet higher in elevation. MWH (2008) prepared cost estimates for conveyance of discharges from the District's WRPs to the Los Angeles County Sanitation Districts' (Districts') Joint Water Pollution Control Plant (JWPCP) in Carson, CA. This estimate assumes significantly larger flows than the Alternative WRP Discharge Location option but does have costs for pumping water over similar distances and elevations as considered in this option. Therefore, costs for pumping and conveyance facilities required for the Alternative WRP Discharge Location are scaled from MWH's cost estimates for the flows and distances considered in this option as follows:

DRAFT REPORT

Pipeline Segment	Length	Diameter
Valencia to Lang	84,480 L.F.	36 inches
Assumptions:		
Distance Between Manholes		500 L.F.
Cost per Manhole		\$25,000
Cost for Pipe	36 inches	175
Labor for Pipe	36 inches	575
Construction Contingency		20%
Eng, Legal, Admin Contingency		25%
Costs:		
# of Manholes required		168
Cost of Manhole		\$4,200,000
Length of Pipeline	36 inches	84,480 L.F.
Cost for Pipe	36 inches	\$175
Cost for Labor	36 inches	\$575
Total Cost		\$63,360,000
Subtotal		\$67,560,000
Construction Contingency		\$13,512,000
Construction Cost		\$81,072,000
Eng, Legal, Admin Contingency		\$20,268,000
TOTAL COST		\$101,340,000
<u>Determined Required Horsepower from Valencia To Lange</u>		
Segment Capacity		26.83 MGD
Distance		84,480 L.F.
Change in Elevation		700 ft
Assumptions		
C value		150
Diameter of Pipe		36 inches
Pump Efficiency		70%
Motor Efficiency		90%
TDH		2 ft/100 ft
Pump Operation		8,760 hrs/yr
Power Cost		\$0.14 / kW-hr
Calculations		
Velocity		14 fps
Head Loss (Frictional)		859 ft
Dynamic Head		2 ft/100 ft
Head Loss (Dynamic)		1689.6 ft
Head Loss (Static)		700 ft
Total System Head Loss		3248 ft
Total System Pressure		1406 psi
hp@ design head		8,490 hp
Pump Power		6,334 kW
Annual Power Consumption		55,483,429 kW-hr
Annual Power Cost		\$7,800,000.00

Capital costs for the pump stations are scaled from costs provided by MWH based on the number of pumps that would be required based on the above analysis. O&M costs for the pump stations consist primarily of energy costs, based on estimated horsepower required to operate the pumps as shown above, and routine inspection and repair, estimated at 3% of the facility cost. O&M costs for the recycled water conveyance facilities are based on

DRAFT REPORT

annual inspection and cleaning and period repairs for the pipeline. Based on these assumptions and cost estimates provided by MWH, the District has prepared a Capital and O&M cost estimates for the Alternative WRP Discharge Location option, presented in Table 7.

Table 7: Alternative WRP Discharge Capital & O&M

Facility	Capital Cost	Annual O&M
Conveyance Pipeline to Lang Station	\$101,300,000	\$200,000
Pumping Stations	\$78,500,000	\$10,200,000
TOTAL	\$179,800,000	\$24,500,000

Assuming an interest rate of 5.5% and a period of 20 years, the present worth of the estimated O&M costs for is approximately \$124 Million, resulting in a combined Capital and O&M cost of approximately \$304 Million, as shown on Table 8.

Table 8: Alternative WRP Discharge Cost Summary

Project Element	Capital Cost	Present Worth O&M	TOTAL
Conveyance Pipeline to Lang Station	\$101,300,000	\$2,400,000	\$103,700,000
Pumping Stations	\$78,500,000	\$121,900,000	\$200,400,000
TOTAL Alternative WRP Discharge	\$179,800,000	\$124,300,000	\$304,100,000

Based on modeling conducted by Geomatrix (2008b), this alternative would not achieve compliance with the existing 100 mg/L WQO, and would actually increase surface water and groundwater chloride concentrations in Reach 7 of the Santa Clara River.

5.4 Alternative Water Resources Management Program

Because the alternatives described in Section Nos. 5.1, 5.2 and 5.3, could not achieve compliance with the existing 100 mg/L WQO at all times and all locations, , an alternative water resources management (AWRM) Program was developed to achieve compliance with SSOs at all times and at all locations, while implementing mitigation measures to protect salt-sensitive agricultural beneficial uses and groundwater, when necessary. The AWRM Program consists of several key elements which include:

- Implementing source control measures at the WRPs to reduce chloride in the recycled water;
- Constructing advanced treatment for a portion of the recycled water from the Valencia WRP;
- Procuring supplemental water (i.e. local groundwater or surface water) for release to the SCR to enhance its assimilative capacity;
- Constructing water supply facilities in Ventura County; and

DRAFT REPORT

- Providing alternative water supply when necessary, to protect salt-sensitive agricultural beneficial uses of the SCR

Cost estimates were prepared by the District and its consultants for the various elements of the AWRM Program.

Source Control Measures at the WRPs

This element of the AWRM Program consists of implementing measures to reduce the chloride levels in the recycled water discharged from the Saugus and Valencia WRPs. The reduction in chloride levels would be achieved through a) enhanced source control, specifically the removal of residential self-regenerating water softeners, which are a significant source of chloride to the District's WRPs, and b) conversion of the disinfection processes at the WRPs from the current bleach based process, which contribute approximately an additional 10 mg/L of chloride to the WRP recycled water, to ultra violet disinfection technology. The District's costs estimates for these elements of the AWRM Program are presented in Table 9.

Table 9: AWRM Source Control Measures

AWRM Element	Capital Cost	Annual O&M
SRWS Removal ^{xv}	\$2,400,000	N/A
UV Disinfection Facilities ^{xvi}	\$16,500,000	\$500,000
TOTAL Source Control Measures	\$18,900,000	\$500,000

Assuming an interest rate of 5.5% and a period of 20 years, the present worth of the estimated O&M costs for UV Disinfection facilities at the Saugus and Valencia WRP is approximately \$6 Million, resulting in a combined Present Worth Capital and O&M cost of approximately \$21.5 Million for this element of the AWRM Program.

Advanced Treatment at Valencia WRP

In order to comply with the proposed water quality objectives, additional chloride reduction beyond that achieved from source control will be required. The AWRM Program contemplates achieving this additional chloride removal through construction and operation of a 3-MGD advanced treatment facility using MF/RO treatment technology at the Valencia WRP. These facilities would remove approximately 58,000 to 96,000 pounds per month of chloride from the WRP recycled water, reduce chloride levels directly in the SCR when necessary to achieve the proposed water quality

^{xv} Cost for SRWS removal is based on removal of remaining SRWS in District's service, including costs for public outreach, rebate payments, conducting a voter referendum, and implementation of an enforcement program. See District's report, *Staff Report in Support of Findings Necessary for Adoption of an Ordinance Pursuant to California Health and Safety Code Section 116787 – Santa Clara River Chloride Reduction Ordinance of 2008*, May 2008.

^{xvi} Cost for UV Disinfection Facilities is per internal District's memorandum and is based on costs for UV system for the Districts' Whittier Narrows Water Reclamation Plant.

DRAFT REPORT

DRAFT REPORT

objectives, and provide salt export from the Piru basin through operation of water supply facilities in Ventura County.

Based on the cost estimates provided by the Trussell Technologies for advanced treatment utilizing MF/RO technology to comply with the existing water quality objectives, the District has estimated the cost for construction and operation of a smaller 3-MGD MF/RO facility at the Valencia WRP to be approximately \$25 Million with O&M costs of \$2.1 per year. Trussell Technologies subsequently completed a separate memorandum to estimate the cost of a 3 MGD MF/RO facility at the Valencia WRP.^{xvii} The estimate in this subsequent memorandum is based on updated costs for materials and equipment as of June 2008, but generally supports the previous estimate by the District when accounting for increases in construction cost index since September 2007. In addition, operation of this advanced treatment facility would produce waste brine, which would require disposal. CH2M Hill has prepared a preliminary feasibility study and cost estimate for the disposal of waste brine from the proposed 3-MGD advanced treatment facility through deep well injection technology.^{xviii} CH2M Hill assumes disposal of approximately 0.5 MGD of brine waste at an individual well injection rate of 50 gpm. The estimates for the capital and O&M costs for the 3-MGD MF/RO and brine disposal facilities contemplated as part of the AWRM Program are presented in Table 10.

Table 10: AWRM Advanced Treatment and Brine Disposal

AWRM Element	Capital Cost	Annual O&M
3 MGD MF/RO Facility	\$25,400,000	\$2,100,000
Brine Disposal	\$53,000,000	\$1,600,000
TOTAL AWRM Advanced Treatment and Brine Disposal	\$78,400,000	\$3,700,000

Assuming an interest rate of 5.5% and a period of 20 years, the present worth of the estimated O&M costs for the advanced treatment and brine disposal facilities at the Valencia WRP is approximately \$44.2 Million, resulting in a combined Present Worth Capital and O&M cost of approximately \$122.6 Million for this element of the AWRM Program.

Supplemental Water

During periods of extreme drought and prior to construction and operation of the proposed 3-MGD advanced treatment facility, the AWRM Program contemplates procuring supplemental water of sufficient water quality to reduce chloride levels in the surface water in Reach 4B. In order to ensure a reliable supply of supplemental water during these periods, the AWRM proposes to develop agreements with local water purveyors that would implement a water banking program when supplemental water is

^{xvii} Trussell, 2008 (b), Technical Memorandum No. 50.001 (TM 23): *Opinion of Probable Construction Costs for 3 mgd RO Facilities*, July 2008

^{xviii} CH2M Hill, 2008(b). Technical Memorandum: Valencia WRP – Deep Injection Well Disposal of RO Concentrate – Preliminary Feasibility. April 2008.

DRAFT REPORT

not required. The water purveyors would then have this banked water supply available to deliver to their customers when the District requires supplemental water from local groundwater to enhance the assimilative capacity of the river and meet proposed water quality objectives. Through the GSWIM Study, it is estimated that approximately 30,000 AF of supplemental water would be required during the study period. Preliminary discussions with water purveyors indicate costs for banking and delivering SWP water would be approximately \$1,000 per AF, resulting in a cost of approximately \$30 Million. Additionally, it is assumed some infrastructure for conveyance of the supplemental water (extracted groundwater) would be required at a cost of approximately \$7.5 Million.

Ventura Water Supply Facilities

As indicated above, in order to achieve salt export from the Piru groundwater basin, the permeate from the 3-MGD advanced treatment facilities would be conveyed to water supply facilities in Ventura County. These facilities would blend the RO permeate with saline groundwater from the Piru basin and discharge the blended water supply to the SCR at a point where the water, and therefore salt, would be exported from the basin and utilized in Ventura County. The water supply facilities would be comprised of:

- 10 groundwater extraction wells
- 12 mile RO permeate conveyance pipeline
- 6 mile blended water supply (RO permeate and Piru groundwater) conveyance pipeline

Cost estimate for construction of extraction well facilities was developed for the District by Dr. Steven Bachman.^{xix} Conveyance pipeline cost estimates were based on 6-miles of 54" pipeline and 12 miles of 24" pipeline for the blended water supply conveyance pipeline and RO permeate conveyance pipeline, respectively, and a cost of approximately \$20 per inch per foot for pipeline materials and installation, consistent with estimates provided by MWH. Cost estimates for the proposed water supply facilities are presented in Table 11.

Table 11: AWRM Ventura County Water Supply Facilities

AWRM Element	Capital Cost	Annual O&M
10 Groundwater Extraction Wells	\$5,500,000	N/A
12 Mile RO Permeate Conveyance	\$34,200,000	\$130,000
6 Mile Blended Water Conveyance	\$30,400,000	\$170,000
TOTAL AWRM Ventura Water Supply Facilities	\$70,100,000	\$300,000

Assuming an interest rate of 5.5% and a period of 20 years, the present worth of the estimated O&M costs for the Ventura County water supply facilities is approximately \$3.6 Million, resulting in a combined Present Worth Capital and O&M cost of

^{xix} Bachman, 2007. Memorandum: *Alternative Water Resources Management Santa Clara River Chloride TMDL Task 2: Piru Groundwater Extraction Wells*, January 2008.

DRAFT REPORT

approximately \$73.7 Million for this element of the AWRM Program. A summary of the cost estimate for the AWRM Program is presented in Table 12.

Table 12: AWRM Program Costs Summary

AWRM Element	Capital Cost	Present Worth O&M	TOTAL
Source Control Measures	\$18,900,000	\$6,000,000	\$24,900,000
Advanced Treatment and Brine Disposal	\$78,400,000	\$44,200,000	\$122,000,000
Supplemental Water	\$37,500,000	N/A	\$37,500,000
Ventura Water Supply Facilities	\$70,100,000	\$3,600,000	\$73,700,000
TOTAL AWRM Program	\$204,900,000	\$53,800,000	\$258,700,000

Note: All costs are as of September 2007

Therefore, the costs for the AWRM facilities required to comply with the proposed site-specific objectives is estimated at approximately \$259 Million.

activities, eliminating the sale of junk food in city, county, or school facilities, providing incentives for stores that sell fresh produce to locate in depressed neighborhoods, and providing exercise opportunities for their residents; and

WHEREAS, city officials believe there are important, long-term community benefits to be gained by encouraging healthy lifestyles, including a decrease in the rate of childhood obesity and its negative health-related impacts; and

WHEREAS, cities and other community partners can work together to understand the relationship between obesity, land-use policies, redevelopment, and community planning; and

WHEREAS, cities and other community partners can work together to ensure that there are safe places for their residents to be active such as in parks, ball fields, pools, gyms, and recreation centers; and

WHEREAS, access to healthy foods has a direct impact on the overall health of our community and planning for fresh food, open space, sidewalks, and parks should be a priority; and

WHEREAS, the League has partnered with the Healthy Eating Active Living (HEAL) Cities Campaign to provide training and technical assistance to help city officials adopt policies that improve their communities' physical activity and retail food environments; and

WHEREAS, the League wants to partner with and support the *Let's Move!* Campaign headed by the First Lady of the United States, the President's Task Force on Childhood Obesity and the Secretary of Health and Human Services, in an effort to solve the challenge of childhood obesity within a generation; now, therefore, be it

RESOLVED, by the General Assembly of the League of California Cities, assembled during the Annual Conference in San Diego, September 17, 2010, that the League encourages the existing 480 California cities to adopt preventative measures to fight obesity as set forth by the First Lady of the United States of America in the *Let's Move* campaign; and, be it further

RESOLVED, that California cities be encouraged to sign-up with the United States Department of Health and Human Services – Region IX office as a *Let's Move!* City; and, be it further

RESOLVED, that California cities are encouraged to: (1) help parents make healthy family choices; (2) create healthy schools; (3) provide access to healthy and affordable foods; and (4) promote physical activity; and, be it further

RESOLVED, that cities are encouraged to involve youth, especially middle and high school students, with city health-related programs.

//////////

5. RESOLUTION RELATING TO UNFUNDED STATE-MANDATES

Source: City of Santa Clarita

Referred to: Revenue and Taxation Policy Committee

WHEREAS, unfunded mandates imposed upon local governments, including cities, counties and special districts, by the State of California place a tremendous financial burden upon local governments; and

WHEREAS, some of the mandates placed upon local governments are the result of actions by Boards and Commissions not directly accountable to the electorate; and

WHEREAS, the State of California and many local governments within the state are under financial duress due to the continuing national economic crisis, and

WHEREAS, approximately twelve percent of Californians, are currently unemployed and struggling to pay for basic life necessities, well above the national average; and

WHEREAS, mandates enacted by the State of California may result in the need for local agencies to increase fees or taxes to satisfy the requirements of the mandate; and

WHEREAS, as cited in a 2005 report on state mandates published by the League of California Cities, the original intent of Property Tax Relief Act of 1972, which established the concept of state reimbursement of local agencies for state mandated activities, was to limit the ability of local agencies to levy taxes; and

WHEREAS, in 1979 the voters of the State of California approved Proposition 4 adding Article XIII B to the California Constitution, requiring the state to provide a subvention of funds to local governments for costs associated with state mandated programs, under specified conditions, and through subsequent legislation creating the Commission on State Mandates; and

WHEREAS, in 2004, the voters of the State of California adopted Proposition 1A expanding the constitutional protections for local governments regarding state mandates; and

WHEREAS, the State of California has struggled to balance its budget for the past several years and has chosen to borrow funds from local governments, thus reducing traditional revenues to local governments, forcing additional local program and service reductions and cutbacks; and

WHEREAS, various federal and state laws and regulations may result in the imposition of state mandates on local governments; and

WHEREAS, an example of state imposed mandates are the establishment of Total Maximum Daily Loads (TMDL's) for such things as bacteria, chloride, metals, and toxicity; and

WHEREAS, for example, in order to meet the obligations imposed by Regional Water Quality Control Boards (RWQCB) throughout California, local agencies may need to implement or increase fees and taxes to pay for new programs or facilities, in order to avoid penalties for non-compliance; now, therefore be it

RESOLVED, by the General Assembly of the League of California Cities, assembled during the Annual Conference in San Diego, September 17, 2010, that:

1. The League of California Cities work with its member cities and other local government partners to identify situations in which local governments must increase fees or taxes to meet state mandated requirements.
2. The League of California Cities reaffirms its historic stance that anytime the state imposes a new duty, responsibility, or obligation on local government it must provide an adequate source of funding to accompany the action, and not presume that the new duty, responsibility, or obligation can be covered by a new local fee, assessment, or tax.
3. That the League of California Cities work with the applicable state and federal regulatory agencies through the League's policy making process, and the National League of Cities, to

develop reasonably achievable, environmentally sound and cost-effective policy based on monitoring and sound science and addressing local water conditions and the fiscal condition of the local government.

4. That the League of California Cities will review and consider supporting through its policy committee process legislation to suspend, eliminate, or otherwise modify the negative impacts of state mandates on local agencies, particularly in which a new local tax or fee increase is necessary to implement the mandate.

6. RESOLUTION RELATED TO ENHANCING PUBLIC SAFETY WHILE DRIVING A MOTOR VEHICLE

Source: City of Elk Grove

Referred to: Transportation, Communication & Public Works Policy Committee

WHEREAS, cities throughout the State of California hold the health and safety of their residents as a paramount concern; and

WHEREAS, the use of text messages has grown exponentially in recent years; and

WHEREAS, any time a driver attempts to send an electronic text message while driving, his or her attention is diverted from the road; and

WHEREAS, a recent Virginia Tech study showed sending electronic text messages while driving makes an accident 23 times more likely; and

WHEREAS, a study conducted by The Transport Research Laboratory in the United Kingdom showed that sending text messages while driving is riskier than driving under the influence of alcohol or drugs; and

WHEREAS, Senate Bill 28 and California Vehicle Code Section 23123.5 ban writing, sending, or reading electronic text messages while operating a motor vehicle in the state of California; and

WHEREAS, the League supports this type of traffic safety enhancement as demonstrated through their support of motorcycle helmets, child restraints, seat belt and speed limit laws; now, therefore, be it

RESOLVED, by the General Assembly of the League of California Cities, assembled during the Annual Conference in San Diego, September 17, 2010, that the League encourages cities to promote safe driving across California and the education of the general public about the dangers of texting while driving.

STEPHEN R. MAGUIN
 Chief Engineer and General Manager

Memorandum

Date: October 8, 2009

To: Steve Maguin

Through: Phil Friess
 Departmental Engineer, Technical Services

From: Brian Louie
 Division Engineer, Water Quality and Soils Engineering

Subject: Red-line Version of Chloride TMDL

As requested, attached are red-line edits for the Upper Santa Clara River Chloride TMDL that are designed to reduce the upfront capital expenditures for the program through revision of conditional site-specific objectives that would allow for project implementation in phases and eliminate the need to purchase and bank supplemental water. In addition, implementation schedule extensions are being sought. The key changes to the TMDL are summarized as follows:

I. Revisions to Conditional Site-Specific Objectives by Phase

TMDL Element	Phase I	Phase II
Reach 6 SSO	Interim WLAs (a)	150
Reach 5 SSO	Interim WLAs (a)	150
Reach 4B SSO	Interim WLAs (a) 150 during stormflow conditions > 100 cfs (c)	117 / 150 (b)(c)
Advanced Treatment Requirement	1 MGD MF-RO	3 MGD MF-RO

(a) Interim WLAs for Saugus and Valencia WRPS are as follows:

WRP	By May 2017 (Pre-Phase I)	May 2017 – May 2022 (Pre-Phase II)
Saugus	80 mg/L + SWP Cl (12-mo average)	165 mg/L (12-mo average)
Valencia	100 mg/L + SWP Cl (12-mo average)	165 mg/L (12-mo average)

- (b) Critical condition SSO for Reach 4B applies when imported water is ≥ 70 mg/L, SCVSD provides Camulos Ranch with an alternative water supply, and SCVSD maintains a salt balance by salt extraction from the Piru Basin.
- (c) Applies only for groundwater extraction for direct discharge to Reach 4B during stormflow conditions exceeding 100 cfs in the river, to facilitate chloride export to the ocean and expedite removal of excess chloride in the Piru Basin.

II. Revisions to TMDL Implementation Schedule

- a. 1-year schedule extension to complete EIR (May 2012).
- b. 2-year schedule extension to construct Phase I facilities (May 2017).
- c. 7-year schedule extension to construct Phase II facilities (May 2022).
- d. TMDL Reopener (Task 19) for Regional Board to consider cost-saving modifications to the TMDL for Phase II control measures and revise interim WLAs during implementation of Phase II facilities (Nov 2016)
- e. TMDL Task 19: New Interim WLAs established for Saugus and Valencia WRP and extended to May 2022.

The Phase I and Phase II facilities are comprised of the following elements:

Phase I Elements	Phase II Elements
Phase I MF-RO (1 MGD)	Phase II MF-RO (2 MGD)
Phase I Brine Disposal (0.15 MGD)	Phase II Brine Disposal (0.30 MGD)
10 East Piru Extraction Wells	6-mile Ventura County conveyance line
12-mile RO conveyance line	UV at Valencia WRP
UV at Saugus WRP	

The implementation of these facilities in phases is subject to modification of the Alternative Compliance Plan MOU, agreements with United Water and Camulos Ranch on the operation of extraction wells during Phase I and II, and the Regional Board issuance of applicable NPDES permits to support the revised ACP.

State of California
California Regional Water Quality Control Board, Los Angeles Region

RESOLUTION NO. R4-20082009-012###
December 11, 2008 Date

Amendment to the Water Quality Control Plan for the Los Angeles Region to Adopt Site
Specific Chloride Objectives and to Revise the Upper Santa Clara River
Chloride TMDL

WHEREAS, the California Regional Water Quality Control Board, Los Angeles
Region, finds that:

1. The federal Clean Water Act (CWA) requires the California Regional Water Quality Control Board (Regional Board) to develop water quality standards that are sufficient to protect beneficial uses designated for each water body found within its region.
2. The elements of a TMDL are described in 40 CFR 130.2 and 130.7 and section 303(d) of the CWA, as well as in USEPA guidance documents (Report No. EPA/440/4-91-001). A TMDL is defined as the sum of the individual waste load allocations for point sources, load allocations for nonpoint sources and natural background (40 CFR 130.2). Regulations further stipulate that TMDLs must be set at levels necessary to attain and maintain the applicable narrative and numeric water quality objectives (WQOs), and protect beneficial uses, with seasonal variations and a margin of safety that takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR 130.7(c)(1)).
3. Upon establishment of TMDLs by the State or USEPA, the State is required to incorporate the TMDLs along with appropriate implementation measures into the State Water Quality Management Plan (40 CFR 130.6(c)(1), 130.7). This Water Quality Control Plan for the Los Angeles Region (Basin Plan), and applicable statewide plans, serves as the State Water Quality Management Plans governing the watersheds under the jurisdiction of the Regional Board.
4. The Santa Clara River is the largest river system in southern California that remains in a relatively natural state. The River originates on the northern slope of the San Gabriel Mountains in Los Angeles County, traverses Ventura County, and flows into the Pacific Ocean between the cities of San Buenaventura (Ventura) and Oxnard. The predominant land uses in the Santa Clara River watershed include agriculture, open space, and residential uses. Revenue from the agricultural industry within the Santa Clara River watershed is estimated at over \$700 million annually, and residential use is increasing rapidly both in the upper and lower watershed.

(1)

5. The upper reaches of the Santa Clara River include Reaches 5 and 6 which are located upstream of the Blue Cut gauging station, west of the Los Angeles – Ventura County line between the cities of Fillmore and Santa Clarita. Reaches 5 and 6 of the Upper Santa Clara River (USCR) appear on the EPA 303d list of impaired waterbodies (designated on the 2002 EPA 303e list as Reaches 7 and 8, respectively). Several beneficial uses of the USCR, including agricultural supply water (AGR), groundwater recharge (GWR), and rare, threatened, or endangered species habitat (RARE), are listed as impaired due to excessive chloride concentration in the waters of the USCR. Valencia and Saugus Water Reclamation Plants (WRPs), which are owned and operated by the Santa Clarita Valley Sanitation District of Los Angeles County (SCVSD), are two major point sources that discharge to the USCR.
6. On October 24, 2002, the Regional Board adopted Resolution No. 02-018, amending the Basin Plan to include a TMDL for chloride in the USCR. Resolution 02-018 assigned waste load allocations (WLAs) to the Valencia and Saugus WRPs, minor point sources, and MS4s permittees, discharging to specified reaches of the Santa Clara River. The TMDL included interim WLAs for chloride for the WRPs. These interim WLAs provide the WRPs the necessary time to implement chloride source reduction, complete site-specific objective (SSO) studies, and make appropriate modifications to the WRP, as necessary, to meet the WQO for chloride. The interim waste load allocations proposed in the TMDL were based on a statistical evaluation of the WRPs' performance in the three years preceding October 2002.
7. On February 19, 2003 the State Water Resources Control Board (State Board) adopted State Board Resolution 2003-0014 (the "Remand Resolution") which remanded the TMDL to the Regional Board. The Remand Resolution directed the Regional Board to consider a phased implementation approach to allow SCVSD to complete special studies prior to planning and construction of advanced treatment technologies.
8. On July 10, 2003, in response to the Remand Resolution, the Regional Board adopted Resolution 03-008, revising the implementation Plan for the TMDL. The revised TMDL allowed 13 years to implement the TMDL.
9. On May 6, 2004, the Regional Board adopted Resolution 04-004 to revise the interim waste-load allocations and Implementation Plan for the chloride TMDL in the USCR. The revised Implementation Plan required the completion of several special studies that serve to characterize the sources, fate, transport, and specific impacts of chloride in the USCR, including impacts to downstream reaches and underlying groundwater basins.
10. The first of the special studies, an evaluation of the appropriate chloride threshold for the reasonable protection of salt-sensitive agriculture, was completed in September of 2005. This special study, entitled "Literature Review and Evaluation (LRE)," found that the best estimate of a chloride

(2)

hazard concentration for avocado crops falls within the range of 100 to 120 mg/L. A similar range of 100 to 117 mg/L was found by an independent technical advisory panel (TAP). An additional study completed in January 2008, entitled "Compliance Averaging Period for Chloride Threshold Guidelines in Avocado," found that a 3-month averaging period of the LRE guidelines would be protective of avocados. The TAP co-chairs reviewed this study and agreed that a 3-month averaging period is appropriate.

11. On August 3, 2006, the Regional Board revised the Implementation Schedule for the TMDL in Resolution No. 04-004 (Resolution No. 06-016). The revised TMDL accelerated the schedule from 13 years to 11 years based on findings from the LRE. The State Board approved the Regional Board amendment on May 22, 2007 (State Board Resolution No. 2007-0029). In approving the amendment, the State Board directed the Regional Board to consider variability in the SSO for chloride to account for the effects of drought on source water quality.
12. Prior to completion of the special studies, the presumed implementation plan included two options: advanced treatment of effluent from the Valencia and Saugus WRPs and disposal of brine in the ocean through an ocean outfall, or disposal of tertiary treatment effluent in the ocean through an ocean outfall. Both options entail construction of a pipeline from the Santa Clarita Valley WRPs to the ocean and an ocean outfall.
13. The second special study required by the Implementation Plan is the "Groundwater/Surface Water Interaction (GSWI) Model." The GSWI study model has been completed, reviewed and approved as an appropriate and adequate modeling tool by the stakeholders and an independent GSWI TAP. The GSWI model has been used to examine feasibility of various implementation alternatives. The GSWI study predicts that none of the alternatives, including the advanced treatment of WRP effluent and disposal of brine in a new ocean outfall or disposal of tertiary treatment effluent in an ocean outfall, would achieve compliance with the existing chloride WQO of 100 mg/L at all times and at all locations and that ~~and an~~ alternative water resources management approach could achieve attainment for certain reaches.
14. The third special study required by the Implementation Plan is the "Evaluation of Appropriate Chloride Threshold for Endangered Species Protection (ESP)." This special study has been completed and found that the existing USEPA chloride criteria of 230 mg/L as a chronic threshold and 860 mg/L as an acute threshold are protective of aquatic life in the USCR, including Threatened and Endangered species. These conclusions indicate that endangered species can tolerate higher levels of chloride than salt-sensitive agricultural crops. The independent ESP TAP concurred with the study findings and conclusions.
15. The Santa Clarita Valley Sanitation District (SCVSD) has completed all of the necessary special studies required by the Chloride TMDL (TMDL Task Nos

(3)

- 3, 4, 5, 6, 7, 8, 9, 10n, and 10c). The completion of these TMDL special studies, all conducted in a facilitated stakeholder process in which stakeholders participated in scoping and reviewing the studies, has led to development of an alternative TMDL implementation plan that addresses chloride impairment of surface waters and degradation of groundwater. The alternative, termed the alternative water resources management approach (AWRM), develops site specific objectives (SSOs) for chloride while protecting beneficial uses. The AWRM provides water quality and water supply benefits in Los Angeles and Ventura Counties. The AWRM consists of chloride source reduction actions and chloride load reduction through advanced treatment (microfiltration and reverse osmosis) of a portion of the Valencia WRP effluent in conformance with SSOs.
16. To support the development of the AWRM compliance option by stakeholders, Regional Board adopted Resolution 07-018 on November 1, 2007. Resolution No. 07-018 modified the regulatory provisions of the Basin Plan by subdividing Reach 4 of the Santa Clara River (SCR) as two separate Reaches, Reach 4A between the confluence of Piru Creek and the A Street Bridge in the City of Fillmore and Reach 4B between the Blue Cut Gauging Station and the confluence of Piru Creek. The Regional Board stated that this action would allow the development of more geographically precise SSOs.
 17. On December 11, 2008, the Regional Board adopted an ~~This~~ amendment to the Basin Plan ~~will to~~ incorporate SSOs for chloride in Reaches 4B, 5, and 6 of the Santa Clara River and groundwater basins underlying those reaches. The SSOs are protective of beneficial uses of these waterbodies. The GSWI study found that the AWRM compliance alternative will result in timely attainment of the SSOs for Reaches 4B, 5, and 6 and reduce the chloride load to the USCR and underlying groundwater basins. The proposed implementation activities under AWRM, which will increase chloride export from the East Piru groundwater basin underlying Reach 4B, will offset any increases in chloride discharges.
 18. ~~This~~ The amendment to the Basin Plan ~~will~~ included implementation language, including minimum salt export requirements to ensure that excess salt loadings to the groundwater basin due to periods of elevated water supply concentrations are removed from the groundwater basin through pumping and export.
 19. The adoption of SSOs for chloride is part of a comprehensive strategy for addressing the buildup of salts in the Santa Clara watershed, which includes development and implementation of Total Maximum Daily Loads and corresponding effluent and receiving water limitations in NPDES permits.
 20. The TMDL numeric targets, WLAs, and Implementation Plan are based on the SSOs for chloride. The TMDL provides interim WLAs for chloride, as

(4)

well as interim WLAs for sulfate and TDS to support the supplemental water and water recycling components of the AWRM.

21. The TMDL ~~provides~~ provided a ten-year schedule to attain compliance with the SSOs for chloride. The SSOs are conditioned on full and ongoing implementation of the AWRM program; if the AWRM system is not built and operated, the water quality objectives for chloride revert back to the current levels in the Basin Plan, which are 100 mg/L.
22. The SCVSD, Ventura County Agricultural Water Quality Coalition, the United Water Conservation District, and Upper Basin Water Purveyors, consisting of the Castaic Lake Water Agency (CLWA), Valencia Water Company, Newhall County Water District, Santa Clarita Water Division of the CLWA, and the Los Angeles County Waterworks District NO. 36, herein referred to as the AWRM Stakeholders have entered into a memorandum of understanding (MOU), effective October 23, 2008 to implement the AWRM Program. The AWRM MOU specifies the agreed-upon responsibilities of AWRM Stakeholders for the implementation of the ultra-violet light disinfection and advanced treatment facilities (i.e., microfiltration-reverse osmosis and brine disposal), salt management facilities (i.e., extraction wells and water supply conveyance pipelines), supplemental water (i.e., water transfers and related facilities), and alternative water supplies for the protection of beneficial uses. The AWRM MOU also specifies the various uses of desalinated recycled water, which include: (1) compliance with water quality objectives for Reaches 4A, 4B, and 5; (2) protection of salt-sensitive agricultural beneficial uses; (3) removal of excess chloride load above 117 mg/L from the East Piru Basin; and (4) enhancement of water supplies in Ventura and Los Angeles Counties. In addition, the AWRM MOU will implement an extension of the GSWI model to assess the groundwater and surface water interactions and impacts to surface water and groundwater quality from the AWRM program to the Fillmore and Santa Paula basins.
23. Implementation actions to achieve SSOs in Reaches 4B, 5, and 6 and the TMDL must also result in compliance with downstream water quality objectives for chloride. Surface water chloride concentrations will comply with the existing water quality objective of 100 mg/L in Reach 4A.
24. ~~The proposed amendment to the Basin Plan will revise SSOs in Reach 4B of the Santa Clara River during critical drought periods and revise the TMDL implementation schedule to include a phased implementation of the project and to lessen the economic impact to the community during the ongoing economic downturn and allow the opportunity to secure federal and state funding for project implementation. Regional Board staff prepared a detailed technical document that analyzes and describes the specific necessity and rationale for the development of this amendment. The technical document entitled "Upper Santa Clara River Chloride TMDL Reconsideration and Conditional Site Specific Objectives" (Staff Report) is an integral part of this~~

(5)

~~Regional Board action and was reviewed, considered, and accepted by the Regional Board before acting on December 11, 2008. The Staff Report relies upon the scientific background and data collection and analysis document in the TMDL special studies.~~

~~The TMDL special studies are distinguished from the Regional Board's staff report in that they do not present recommendations of Regional Board staff.~~

25. The proposed TMDL revision provides a twelve-year and seventeen-year schedule to attain compliance with the Phase I and II SSOs for chloride, respectively. The SSOs are conditioned on phased implementation of the AWRM program; if the AWRM system is not built and operated in accordance with the implementation section in Table 7-6.1, the water quality objectives for chloride revert back to the current levels in the Basin Plan, which are 100 mg/L.

25.26. ~~The Staff Report, as well as a Notice of Exemption, and tentative Basin Plan Amendment were released for public review and comment on DATE~~The public has had a reasonable opportunity to participate in the review of the amendment to the Basin Plan. Stakeholders have participated extensively in the special studies since 2005 through a facilitated process in which meetings are held monthly in the cities of Fillmore, Santa Paula, and Santa Clarita. Technical working groups (TWGs) have executed the implementation studies and stakeholder selected TAPs have reviewed the studies. All meetings are open to the public, and agendas and minutes from meetings are published on the Santa Clara River Chloride TMDL website: www.santaclarariver.org. A draft of the amendment was released for public comment on September 30, 2008; a Notice of Hearing and Notice of Filing were published and circulated 45 days preceding Board action; a notice of hearing published in the Los Angeles Daily News, the Santa Clarita Signal, and the Ventura County Star on September 30, 2008DATE; Regional Board staff responded to oral and written comments received from the public; and the Regional Board held a public hearing on December 11, 2008DATE to consider adoption of the amendment.

26.27. In amending the Basin Plan to ~~establish~~revise SSOs during critical drought periods and to revise this TMDL Implementation Schedule, the Regional Board considered the requirements set forth in Sections 13240, 13241, and 13242 of the California Water Code. The 13241 factors are set forth and considered in the staff report.

27.28. The proposed amendment is consistent with the State Antidegradation Policy (State Board Resolution No. 68-16), in that the changes to water quality objectives and revisions to the implementation schedule (i) consider maximum benefits to the people of the state, (ii) will not unreasonably affect present and anticipated beneficial use of waters, and (iii) will not result in water quality less than that prescribed in policies. Likewise, the amendment is consistent with the federal Antidegradation Policy (40 CFR 131.12).

(6)

28.29. Pursuant to Public Resources Code section 21080.5, the Resources Agency has approved the Regional Water Boards' basin planning process as a "certified regulatory program" that adequately satisfies the California Environmental Quality Act (CEQA) (Public Resources Code, § 21000 et seq.) requirements for preparing environmental documents (14 Cal. Code Regs. § 15251 (g); 23 Cal. Code Regs. § 3782.) The Regional Water Board staff has prepared "substitute environmental documents" for this project that contains the required environmental documentation under the State Water Board's CEQA regulations. (23 Cal. Code Regs. § 3777.) The substitute environmental documents include the TMDL staff report, the environmental checklist, the comments and responses to comments, the basin plan amendment language, and this resolution. While the Regional Board has no discretion to not establish a TMDL (the TMDL is required by federal law), the Board does exercise discretion in assigning waste load allocations and load allocations, determining the program implementation, and setting various milestones in achieving the water quality standards. The CEQA checklist and other portions of the substitute environmental documents contain significant analysis and numerous findings related to impacts and mitigation measures.

29.30. A CEQA Scoping hearing was conducted on July 29, 2008DATE at the Council Chamber of City of Fillmore – 250 Central Avenue, Fillmore, California. A notice of the CEQA Scoping hearing was sent to interested parties. The notice of CEQA Scoping hearing was also published in the Los Angeles Daily News on July 11, 2008DATE and Ventura County Star on July 11, 2008DATE.

30.31. In preparing the accompanying CEQA substitute documents, the Regional Board has considered the requirements of Public Resources Code section 21159 and California Code of Regulations, title 14, section 15187, and intends the substitute documents to serve as a tier 1 environmental review. Consistent with CEQA, the substitute documents do not engage in speculation or conjecture and only consider the reasonably foreseeable environmental impacts of the methods of compliance, the reasonably foreseeable feasible mitigation measures, and the reasonably foreseeable alternative means of compliance, which would avoid or eliminate the identified impacts. Nearly all of the compliance obligations will be undertaken by public agencies that will have their own obligations under CEQA. Project level impacts will need to be considered in any subsequent environmental analysis performed by other public agencies, pursuant to Public Resources Code section 21159.2.

31.32. The propose amendment could have a potentially significant adverse effect on the environment. However, there are feasible alternatives, feasible mitigation measures, or both, that if employed, would substantially lessen the potentially significant adverse impacts identified in the substitute environmental documents; however, such alternatives or mitigation measures are within the responsibility and jurisdiction of other public agencies, and not the Regional Board. Water Code section 13360 precludes the Regional Board

(7)

form dictating the manner in which responsible agencies comply with any of the Regional Board's regulations or orders. When the agencies responsible for implementing this TMDL determine how they will proceed, the agencies responsible for those parts of the project can and should incorporate such alternatives and mitigation into any subsequent projects or project approvals. These feasible alternatives and mitigation measures are described in more detail in the substitute environmental documents. (14 Cal. Code Regs. § 15091(a)(2).)

32.33. From a program-level perspective, incorporation of the alternatives and mitigation measures outlined in the substitute environmental documents may not ~~foreseeably~~foreseeably reduce impacts to less than significant levels.

33.34. The substitute documents for this TMDL, and in particular the Environmental Checklist and staff's responses to comments, identify broad mitigation approaches that should be considered at the project level.

34.35. To the extent significant adverse environmental effects could occur, the Regional Board has balanced the economic, legal, social, technological, and other benefits of the TMDL against the unavoidable environmental risks and finds that specific economic, legal, social, technological, and other benefits of the TMDL outweigh the unavoidable adverse environmental effects, such that those effects are considered acceptable. The basis for this finding is more fully set forth in the substitute environmental documents (14 Cal. Code Regs. § 15093.)

35.36. Considering the record as a whole, this Basin Plan amendment will result in no effect, either individually or cumulatively, on wildlife resources.

36.37. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code, section 11353, subdivision (b).

37.38. The Basin Plan amendment incorporating SSOs and a revision of the Santa Clara River Chloride TMDL must be submitted for review and approval by the State Board, the State Office of Administrative Law (OAL), and the U.S. EPA. The Basin Plan amendment will become effective upon approval by OAL and U.S. EPA. A Notice of Decision will be filed following these approvals.

38.39. Occasionally during its approval process, Regional Board staff, the State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity or consistency. Under such circumstances, the Executive Officer should be authorized to make such changes, provided she informs the Board of any such changes.

Therefore, be it resolved that:

(8)

1. Pursuant to sections 13240 and 13241 of the California Water Code, the Regional Board, after considering the entire records, including oral testimony at the hearing, hereby adopts the amendment to Chapter 3 of the Water Quality Control Plan for the Los Angeles Region as set forth in Attachment A hereto, to ~~incorporate~~ revise SSOs for chloride for Reaches 4B, 5, and 6 in the Santa Clara River watershed and underlying groundwater basins (as identified in Tables 3-8 and 3-10), which will replace the previously applicable water quality objectives in Reaches 4B, 5, and 6 of the Santa Clara River and underlying groundwater basins.

~~40.2. Pursuant to sections 13240 and 13241 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony at the hearing, hereby adopts the amendment to Chapter 4 of the Water Quality Control Plan for the Los Angeles Region as set forth in Attachment B hereto, to include USCR SSOs for chloride.~~

~~41.3.~~ Pursuant to sections 13240 and 13242 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony at the hearing, hereby adopts the amendment to Chapter 7 of the Water Quality Control Plan for the Los Angeles Region as set forth in Attachment C B hereto, to incorporate the revisions to the Upper Santa Clara river Chloride TMDL.

~~42. The Regional Board hereby approves and adopts the CEQA substitute environmental documentation, which was prepared in accordance with Public resources Code section 21159 and California Code of Regulations, title 14, section 15187, and directs the Executive Officer to sign the environmental checklist. To the extent significant adverse environmental effects could occur, the Regional Board has balanced the economic, legal, social, technological, and other benefits of the TMDL against the unavoidable environmental risks and finds that specific economic, legal, social, technological, and other benefits of the TMDL outweigh the unavoidable adverse environmental effects, such that those effects are considered acceptable. The basis for this finding is more fully set forth in the substitute environmental documents. (14 Cal. Code Regs. § 15093.)~~

~~43.4.~~ The Executive Officer is authorized to request a “No Effect Determination” from the Department of Fish and Game, or transmit payment of the applicable fee as may be required to the Department of Fish and Game.

~~44.5.~~ The Executive Officer is directed to forward copies of the Basin Plan amendment to the State Board in accordance with the requirements of section 13245 of the California Water Code.

~~45.6.~~ The Regional Board requests that the State Board approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code and forward it to the OAL and U.S. EPA.

(9)

46.7. If during its approval process Regional Board staff, State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity, or for consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.

I, Tracy J. Egoscue, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Los Angeles Region, on December 11, 2008.

Tracy J. Egoscue
Executive Officer

Date

Attachment A to Resolution R4-~~20082009-012###~~

Basin Plan Amendment Incorporating Conditional Site-Specific Objectives for Chloride in Upper Santa Clara River Watershed

The following language will be added to Chapter 3, Water Quality Objectives of the Basin Plan, under “Mineral Quality”:

Add table after Table 3-8.

Table 3-8a. Conditional Site Specific Objectives for Santa Clara River Surface Waters

WATERSHED/STREAM REACH	Chloride (mg/L)
Santa Clara River Watershed:	
Between Bouquet Canyon Road Bridge and West Pier Highway 99	150 (12-month average)
Between West Pier Highway 99 and Blue Cut gaging station	150 (12-month average)
Between Blue Cut gaging station and confluence of Piru Creek	117 (3-month average) 1530 ^{a,b} (312-month average) ^b

- a. The conditional site specific objective of ~~130~~ 150 mg/L applies only if the following conditions and implementation requirements are met:
 1. Water supply chloride concentrations measured in Castaic Lake are \geq ~~780~~ mg/L.
 2. The Santa Clarita Valley Sanitation District (SCVSD) shall provide ~~supplemental-alternative~~ water supply to salt-sensitive agricultural uses that are irrigated with surface water during periods when Reach 4B (between Blue Cut gaging station and confluence of Piru Creek) surface water exceeds 117 mg/L.
 3. By May 4, ~~2020~~ 2027, the 10-year cumulative net chloride loading above 117 mg/L (CNCI117)¹ to Reach 4B of the Santa Clara River (SCR), calculated annually, from the SCVSD Water Reclamation Plants (WRPs) shall be zero or less.

$${}^1 \text{CNCI}_{117} = \text{Cl}_{(\text{Above } 117)} - \text{Cl}_{(\text{Below } 117)} - \text{Cl}_{(\text{Export Ews})}$$

Where:

- $\text{Cl}_{(\text{Above } 117)}$ = $[\text{WRP Cl Load}^1 / \text{Reach 4B Cl Load}^2] * [\text{Reach 4B Cl Load}_{>117}^3]$
- $\text{Cl}_{(\text{Below } 117)}$ = $[\text{WRP Cl Load}^1 / \text{Reach 4B Cl Load}^2] * [\text{Reach 4B Cl Load}_{\leq 117}^4]$
- $\text{Cl}_{(\text{Export EWs})}$ = Cl Load Removed by Extraction Wells

Attachment A to Resolution R4-20082009-012###

Basin Plan Amendment Incorporating Conditional Site-Specific Objectives for Chloride in Upper Santa Clara River Watershed

- ¹ WRP Cl Load is determined as the monthly average chloride (Cl) concentration multiplied by the monthly average flow measured at the Valencia WRP.
- ² Reach 4B Cl Load is determined as the monthly average Cl concentration at SCVSD Receiving Water Station RF multiplied by the monthly average flow measured at USGS Gauging Station 11109000 (Las Brisas Bridge).
- ³ Reach 4B Cl Load_{>117} means the calculated Cl load to Reach 4B when monthly average Cl concentration in Reach 4B is above 117 mg/L.
- ⁴ Reach 4B Cl Load_{≤117} means the calculated Cl load to Reach 4B when monthly average Cl concentration in Reach 4B is below or equal to 117 mg/L.

4. The chief engineer of the SCVSD signs under penalty of perjury and submits to the Regional Board a letter documenting the fulfillment of conditions 1, 2, and 3.

b. A conditional site-specific objective of 150 mg/L for storm-flow conditions shall also apply for discharges of extracted groundwater from the East Piru Basin to Reach 4B during storm flows exceeding 100 cfs in the river as measured at that USGS Gauging Station 11109000 (Las Brisas Bridge) to facilitate chloride export to the ocean. The averaging period for the critical condition SSO of 130 mg/l. may be reconsidered based on results of chloride trend monitoring after the alternative water resources management (AWRM) system is applied.

The conditional site specific objectives for chloride in the surface water between Bouquet Canyon Road bridge and West Pier Highway 99, between West Pier Highway 99 and Blue Cut gaging station, and between Blue Cut gaging station and confluence of Piru Creek shall apply and supersede the existing water quality objectives in Table 3-8 only when chloride load reductions and/or chloride export projects are in operation by the SCVSD according to the implementation section in Table 7-6.1 of Chapter 7.

Add table after Table 3-10.

Table 3-10a. Conditional Site Specific Objectives for Selected Constituents in Regional Groundwaters

DWR Basin No.	BASIN	Chloride (mg/L)
4-4	Ventura Central ^d Lower area east of Piru Creek ¹	150 (rolling 12-month average)
4-4.07	Eastern Santa Clara Santa Clara—Bouquet & San Francisquito Canyons Castaic Valley	150 (rolling 12-month average)

Attachment A to Resolution R4-~~20082009-012###~~

Basin Plan Amendment Incorporating Conditional Site-Specific Objectives for Chloride in Upper Santa Clara River Watershed

	150 (rolling 12-month average)
--	--------------------------------

1. This objective only applies to the San Pedro formation. Existing objective of 200 mg/L applies to shallow alluvium layer above San Pedro formation.

The conditional site specific objectives for chloride in the groundwater in Santa Clara--Bouquet & San Francisquito Canyons, Castaic valley, and the lower area east of Piru Creek (San Pedro Formation) shall apply and supersede the existing regional groundwater quality objectives only when chloride load reductions and/or chloride export projects are in operation by the SCVSD according to the implementation section in Table 7-6.1 of Chapter 7.

This TMDL was adopted by: The Regional Water Quality Control Board on October 24, 2002.

This TMDL was remanded by: The State Water Resources Control Board on February 19, 2003

This TMDL was adopted by: The Regional Water Quality Control Board on July 10, 2003.

This TMDL was revised and adopted by: The Regional Water Quality Control Board on May 6, 2004.

This TMDL was approved by: The State Water Resource Control Board on July 22, 2004

The Office of Administrative Law on November 15, 2004

The U.S. Environmental Protection Agency on April 28, 2005

This TMDL was revised and adopted by: The Regional Water Quality Control Board on August 3, 2006.

This TMDL was approved by: The State Water Resource Control Board on May 22, 2007.

The Office of Administrative Law on July 3, 2007.

This TMDL was revised and adopted by: The Regional Water Quality Control Board on
December 11, 2008.

This TMDL was approved by: The State Water Resource Control Board on xxx xx, 200x.

The Office of Administrative Law on xxx xx, 200x.

Element	Table 7-6.1. Upper Santa Clara River Chloride TMDL: Elements															
<i>Problem Statement</i>	<p style="text-align: center;">Santa Clara River Chloride</p> <p>Elevated chloride concentrations are causing impairments of the water quality objective in Reach 5 (EPA 303(d) list Reach 7) and Reach 6 (EPA 303(d) list Reach 8) of the Santa Clara River (SCR). These reaches are on the 1998 and 2002 Clean Water Act (CWA) 303(d) lists of impaired water bodies as impaired due to chloride. The objectives for these reaches were set to protect all beneficial uses; agricultural beneficial uses have been determined to be most sensitive, and not currently attained at the downstream end of Reach 5 (EPA 303(d) list Reach 7) and Reach 6 (EPA 303(d) list Reach 8) in the Upper Santa Clara River (USCR). Irrigation of salt sensitive crops such as avocados, strawberries, and nursery crops with water containing elevated levels of chloride results in reduced crop yields. Chloride levels in groundwater in Piru Basin underlying the reach downstream of Reach 5 are also rising.</p>															
<i>Numeric Target (Interpretation of the numeric water quality objective, used to calculate the load allocations)</i>	<p>Numeric targets are equivalent to conditional site specific objectives (SSOs) that are based on technical studies regarding chloride levels which protect salt sensitive crops and endangered and threatened species, chloride source identification, and the magnitude of assimilative capacity in the upper reaches of the Santa Clara River and underlying groundwater basin. The TMDL special study, Literature Review Evaluation, shows that the most sensitive beneficial uses can be supported with rolling averaging periods as shown in the tables below.</p> <p>1. Conditional Surface Water SSOs</p> <p>The conditional SSOs for chloride in the surface water of Reaches 4B, 5, and 6 shall apply and supersede the existing water quality objectives of 100 mg/L only when chloride load reductions and/or chloride export projects are in operation by the SCVSD according to the implementation section in Table 7-6.1. Conditional surface water SSOs for Reaches 4B, 5, and 6 of the Santa Clara River are listed as follows:</p> <table border="1" data-bbox="511 1504 1388 1847"> <thead> <tr> <th>Reach</th> <th>Conditional SSO for Chloride (mg/L)</th> <th>Rolling Averaging Period</th> </tr> </thead> <tbody> <tr> <td>6</td> <td>150</td> <td>12-month</td> </tr> <tr> <td>5</td> <td>150</td> <td>12-month</td> </tr> <tr> <td>4B</td> <td>117</td> <td>3-month</td> </tr> <tr> <td>4B Critical Conditions</td> <td>130^a 150^a</td> <td>12^b 3-month^b</td> </tr> </tbody> </table>	Reach	Conditional SSO for Chloride (mg/L)	Rolling Averaging Period	6	150	12-month	5	150	12-month	4B	117	3-month	4B Critical Conditions	130 ^a 150 ^a	12 ^b 3-month ^b

Element	Table 7-6.1. Upper Santa Clara River Chloride TMDL: Elements Santa Clara River Chloride						
Source Analysis	<p>The principal source of chloride into Reaches 5 and 6 of the Santa Clara River is discharges from the Saugus WRP and Valencia WRP, which are estimated to contribute 70% of the chloride load in Reaches 5 and 6. These sources of chloride accumulate and degrade groundwater in the lower area east of Piru Creek in the basin.</p>						
Linkage Analysis	<p>A groundwater-surface water interaction (GSWI) model was developed to assess the linkage between chloride sources and in-stream water quality and to quantify the assimilative capacity of Reaches 4A, 4B, 5, and 6 and the groundwater basins underlying those reaches. GSWI was then used to predict the effects of WRP discharges on chloride loading to surface water and groundwater under a variety of future hydrology, land use, and water use assumptions including future discharges from the Newhall Ranch WRP in order to determine appropriate wasteload allocations (WLAs) and load allocations (LAs).</p> <p>The linkage analysis demonstrates that beneficial uses can be protected through a combination of SSOs for surface water and groundwater and reduction of chloride levels from the Valencia WRP effluent through advanced treatment.</p>						
Waste Load Allocations (for point sources)	<p>The conditional WLAs for chloride for all point sources shall apply only when chloride load reductions and/or chloride export projects are in operation by the SCVSD according to the implementation section in Table 7-6.1. If these conditions are not met, WLAs shall be based on existing water quality objectives for chloride of 100 mg/L.</p> <p>Conditional WLAs for chloride for discharges to Reach 4B by the Saugus and Valencia WRPs associated with SCVSD facilities are as follows:</p> <table border="1" data-bbox="649 1504 1234 1858"> <thead> <tr> <th data-bbox="657 1515 828 1681">Reach</th> <th data-bbox="828 1515 1226 1681">Concentration-based Conditional WLA for Chloride (mg/L)</th> </tr> </thead> <tbody> <tr> <td data-bbox="657 1681 828 1791">4B</td> <td data-bbox="828 1681 1226 1791">117 (3-month Average), 230 (Daily Maximum)</td> </tr> <tr> <td data-bbox="657 1791 828 1858">4B Critical /</td> <td data-bbox="828 1791 1226 1858">130^a-150^a (312-month</td> </tr> </tbody> </table>	Reach	Concentration-based Conditional WLA for Chloride (mg/L)	4B	117 (3-month Average), 230 (Daily Maximum)	4B Critical /	130 ^a -150 ^a (312-month

Implementation

Refer to Table 7-6.2.

Implementation of Upper Santa Clara River Conditional Site Specific Objectives for Chloride

In accordance with Regional Board resolution 97-002, the Regional Board and stakeholders have developed an integrated watershed plan to address chloride impairments and protect beneficial uses of surface waters and groundwater basins underlying Reaches 4B, 5, and 6 of the Santa Clara River. The plan involves: 1) Reducing chloride loads and/or increasing chloride exports from the USCR watershed through **phased** implementation of advanced treatment (RO) of a portion of the effluent from the Valencia WRP **and the use of groundwater extraction wells.** **During Phase I, the advanced treated effluent will be discharged into Reach 4B-5 or be utilized to provide for a suitable alternative water supply for salt-sensitive crops in Reach 4B. Groundwater extractions during Phase I would be discharged to Reach 4B during storm-flow conditions greater than 100 cfs to facilitate chloride export to the ocean. During Phase II, when not needed for compliance with effluent/receiving water limits or for an alternative water supply for salt-sensitive crops in Reach 4B, the advanced treated effluent will be blended with extracted groundwater from the Piru Basin underlying Reach 4B and discharged into Reach 4A.** The resultant brine from the advanced treatment process will be disposed in a legal and environmentally sound manner. 2) Implementing the conditional SSOs for chloride in surface waters and underlying groundwater basins of the USCR watershed provided in Chapter 3.

The watershed chloride reduction plan will be implemented **in phases** through NPDES permits for the Valencia WRP and a new NPDES permit for discharge into Reach 4A. The conditional SSOs for chloride in the USCR watershed shall apply and supersede the regional water quality objectives only when chloride load reductions and/or chloride export projects are in operation and reduce chloride loading in accordance with the following table:

Water Supply Chloride¹	Phase 1 Chloride Load Reductions²	Phase 2 Chloride Load Reductions^{3,2}
40 mg/L	19,000 lbs per month	58,000 lbs per month
50 mg/L	21,000 lbs per month	64,000 lbs per month
60 mg/L	24,000 lbs per month	71,000 lbs per month
70 mg/L	26,000 lbs per month	77,000 lbs per month
80 mg/L	28,000 lbs per month	83,000 lbs per month
90 mg/L	30,000 lbs per month	90,000 lbs per month

	100 mg/L	32,000 lbs per month	96,000 lbs per month
<p>¹ Based on measured chloride of the State Water Project (SWP) water stored in Castaic Lake.</p> <p>² Chloride load reduction is based on operation of a RO treatment plant treating 3.1 MGD of recycled water with <u>annual average</u> chloride concentration of 50 mg/L + Water Supply Chloride. Assumes operational capacity factor of 90% and RO membrane chloride rejection rate of 95%. Determination of chloride load based on the following:</p> $ChlorideLoad = 90\% \times [(Q_{RO} \times C_{WRP} \times 8.34) \times r] \times \left(\frac{30 Days}{Month} \right)$ <p>where r = % chloride rejection (95%) Q_{RO} = 3.1 MGD of recycled water treated with RO C_{WRP} = SWP Cl + 50 mg/L</p> <p>³ Chloride load reduction is based on operation of a RO treatment plant treating 3 MGD of recycled water with <u>annual average</u> chloride concentration of 50 mg/L + Water Supply Chloride. Assumes operational capacity factor of 90% and RO membrane chloride rejection rate of 95%. Determination of chloride load based on the following:</p> $ChlorideLoad = 90\% \times [(Q_{RO} \times C_{WRP} \times 8.34) \times r] \times \left(\frac{30 Days}{Month} \right)$ <p>where r = % chloride rejection (95%) Q_{RO} = 3 MGD of recycled water treated with RO C_{WRP} = SWP Cl + 50 mg/L</p> <p><i>Conditional WLAs</i></p> <p>Conditional WLAs for the Saugus and Valencia WRPs will be implemented through effluent limits, receiving water limits and monitoring requirements in NPDES permits. Conditional WLAs for Reach 4B will be implemented as receiving water limits. Conditional WLAs for Reaches 5 and 6 will be implemented as effluent limits.</p> <p>The implementation plan proposes that during the period of TMDL implementation, compliance for the WRPs' effluent limits <u>and will be evaluated in accordance with interim WLAs associated with Phase I and Phase II chloride load reduction facilities.</u></p> <p><u>Saugus WRP:</u></p> <p>The <u>Phase I</u> interim WLA for chloride is equal to <u>the interim limit for chloride specified in order No. R4-04-00480 mg/L above water supply, with compliance based on a 12-month rolling average.</u> The <u>Phase II</u> interim WLA for chloride will be 165 mg/L, with compliance based on a</p>			

	<p><u>12-month rolling average.</u> The interim WLA for TDS is 1000 mg/L as an annual average. The interim WLA for sulfate is 450 mg/L as an annual average. These interim WLAs shall apply as interim end-of-pipe effluent limits, interim groundwater limits, and interim limits in the Non-NPDES WDR for recycled water uses from the Saugus WRP instead of existing water quality objectives.</p> <p><u>Valencia WRP:</u></p> <p>The Phase I interim WLA for chloride is equal 100 mg/L above water supply, with compliance based on a 12-month rolling average. The Phase II interim WLA for chloride will be 165 mg/L, with compliance based on a 12-month rolling average. to the interim limit for chloride specified in order No. R4-04-004. The interim WLA for TDS is 1000 mg/L as an annual average. The interim WLA for sulfate is 450 mg/L as an annual average. These interim WLAs shall apply as interim end-of-pipe effluent limits, interim groundwater limits, and interim limits in the Non-NPDES WDR for recycled water uses from the Valencia WRP instead of existing water quality objectives.</p> <p><u>Other Major NPDES Permits (including Newhall Ranch WRP):</u></p> <p>The Regional Board may consider assigning conditional WLAs for other major NPDES permits, including the Newhall Ranch WRP, pending implementation of a chloride mass removal quantity that is proportional to mass based chloride removal required for the Valencia WRP.</p> <p><u>Supplemental Water released to Reach 6 of Santa Clara River:</u></p> <p>In order to accommodate the discharge of supplemental water to Reach 6, interim WLAs are provided for sulfate of 450 mg/L and TDS of 1000 mg/L as annual averages. The final WLAs are equal to the existing water quality objectives for sulfate and TDS in Table 3-8 of the Basin Plan. The Regional Board may revise the final WLA based on review of trend monitoring data as detailed in the monitoring section of this Basin Plan amendment.</p>
<p>Monitoring</p>	<p>NPDES monitoring: NPDES Permittees will conduct chloride, TDS, and sulfate monitoring to ensure that water quality objectives are being met.</p> <p>Trend monitoring: The SCVSD will submit a monitoring plan to conduct chloride, TDS, and sulfate trend monitoring to ensure that the goal of chloride export in the watershed is being achieved, water quality objectives are being met, and downstream groundwater and surface water quality is not degraded due to implementation of compliance measures.</p>

	<p>The SCVSD monitoring plan shall include plans to monitor chloride, TDS, and sulfate in groundwater and identify representative wells to be approved by the Regional Board Executive Officer in the following locations: (a) Shallow alluvium layer in east Piru Basin, (b) San Pedro Formation in east Piru Basin, and (c) groundwater basins under Reaches 5 and 6, which shall be equivalent or greater than existing groundwater monitoring required by NPDES permits for Saugus and Valencia WRPs. The monitoring plan shall also include a plan for chloride, TDS, and sulfate trend monitoring for surface water for Reaches 4B, 5 and 6. The monitoring plan shall include plans to monitor chloride, TDS, and sulfate at a minimum of once per quarter for groundwater and at a minimum of once per month for surface water. The plan should propose a monitoring schedule that extends beyond the completion date of this TMDL to evaluate impacts of compliance measures to downstream groundwater and surface water quality. This TMDL shall be reconsidered if chloride, TDS, and sulfate trend monitoring indicates degradation of groundwater or surface water due to implementation of compliance measures.</p> <p>Trend monitoring: The Reach 4A Permittee will submit a monitoring plan to conduct chloride, TDS, and sulfate trend monitoring to ensure that the goal of chloride export in the watershed is being achieved, water quality objectives are being met, and downstream groundwater and surface water quality is not degraded due to implementation of compliance measures. The Reach 4A permittee monitoring plan shall include plans to monitor chloride, TDS, and sulfate in groundwater and identify representative wells to be approved by the Regional Board Executive Officer in the following locations (a) Fillmore Basin, and (b) Santa Paula Basin. The monitoring plan shall also include a plan for chloride, TDS, and sulfate trend monitoring for surface water for Reaches 3 and 4A. The monitoring plan should include plans to monitor chloride, TDS, and sulfate at a minimum of once per quarter for groundwater and at a minimum of once per month for surface water. The plan should propose a monitoring schedule that shall extend beyond the completion date of this TMDL to evaluate impacts of compliance measures to downstream groundwater and surface water quality. This TMDL shall be reconsidered if chloride, TDS, and sulfate trend monitoring indicates degradation of groundwater or surface water due to implementation of compliance measures.</p>
<p><i>Margin of Safety</i></p>	<p>An implicit margin of safety is incorporated through conservative model assumptions and chloride mass balance analysis. The model is an integrated groundwater surface water model which shows that chloride discharged from the WRPs accumulates in the east Piru Basin. Further mass balance analysis shows that the chloride mass removed from the Piru Basin exceeds the chloride loaded into the Piru Basin from implementation of the conditional SSOs.</p>

<p><i>Seasonal Variations and Critical Conditions</i></p>	<p>During dry weather conditions, less surface flow is available to dilute effluent discharge, groundwater pumping rates for agricultural purposes are higher, groundwater discharge is lower, poorer quality groundwater may be drawn into the aquifer, and evapotranspiration effects are greater than in wet weather conditions. During drought, reduced surface flow and increased groundwater extraction continues through several seasons with greater impacts on groundwater resources and discharges. Dry and critically dry periods affecting the Sacramento and San Joaquin River Valleys reduce fresh-water flow into the Sacramento-San Joaquin Delta and result in higher than normal chloride concentrations in the State Water Project supply within the California aqueduct system. These increased chloride levels are transferred to the upper Santa Clara River. This critical condition is defined as when water supply concentrations measured in Castaic Lake are $\geq 80-70$ mg/L.</p> <p>These critical conditions were included in the GSWI model to determine appropriate allocations and implementation scenarios for the TMDL.</p>
---	--

Table 7-6.2. Upper Santa Clara River Chloride TMDL Implementation	Completion Date
Implementation Tasks	
<p>1. Alternate Water Supply</p> <p>a) Should (1) the in-river concentration at Blue Cut, the Reach 4B boundary, exceed the conditional SSO of 117 mg/L, measured for the purposes of this TMDL as a rolling three-month average, (2) each agricultural diverter provide records of the diversion dates and amounts to the Regional Board and Santa Clarita Valley County Sanitation Districts of Los Angeles County (SCVSD) for at least 2 years after the effective date of the TMDL and (3) each agricultural diverter provides photographic evidence that diverted water is applied to avocado, strawberry or other chloride sensitive crop and evidence of a water right to divert, then the SCVSD will be responsible for providing an alternative water supply, negotiating the delivery of alternative water by a third party, or providing fiscal remediation to be quantified in negotiations between the SCVSD and the agricultural diverter at the direction of the Regional Water Quality Control Board until such time as the in-river chloride concentrations do not exceed the conditional SSO.</p> <p>b) Should the instream concentration exceed 230 mg/L more than two times in the three year period, the discharger identified by the Regional Board Executive Officer shall be required to submit, within ninety days of a request by the Regional Board Executive Officer, a workplan for an accelerated schedule to reduce chloride discharges.</p>	<p>Effective Date of TMDL (05/04/2005)</p>
<p>2. Progress reports will be submitted by the SCVSD to Regional Board staff on a semiannual basis from the effective date of the TMDL for tasks 4, 6, and 7, and on an annual basis for Tasks 5 and 11.</p> <p>Progress reports will be submitted by the Reach 4A Permittee to Regional Board staff on an annual basis for Task 12.</p>	<p>Semiannually and annually</p>
<p>3. Chloride Source Identification/Reduction, Pollution Prevention and Public Outreach Plan: Six months after the effective date of the TMDL, the SCVSD will submit a plan to the Regional Board that addresses measures taken and planned to be taken to quantify and control sources of chloride, including, but not limited to: execute community-wide outreach programs, which were developed based on the pilot outreach efforts conducted by the SCVSD, assess potential incentive/disincentive programs for residential self-regenerating water softeners, and other measures that may be effective in</p>	<p>6 months after Effective Date of TMDL (11/04/2005)</p>

Table 7-6.2. Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks	Completion Date
<p>controlling chloride. The SCVSD shall develop and implement the source reduction/pollution prevention and public outreach program, and report results annually thereafter to the Regional Board. Chloride sources from imported water supplies will be assessed. The assessment will include conditions of drought and low rainfall, and will analyze the alternatives for reducing this source.</p>	
<p>4. The SCVSD will convene a technical advisory committee or committees (TAC(s)) in cooperation with the Regional Board to review literature develop a methodology for assessment, and provide recommendations with detailed timelines and task descriptions to support any needed changes to the time schedule for evaluation of appropriate chloride threshold for Task 6. The Regional Board, at a public hearing will re-evaluate the schedule for Task 6 and subsequent linked tasks based on input from the TAC(s), along with Regional Board staff analysis and assessment consistent with state and federal law, as to the types of studies needed and the time needed to conduct the necessary scientific studies to determine the appropriate chloride threshold for the protection of salt sensitive agricultural uses, and will take action to amend the schedule if there is sufficient technical justification.</p>	<p>12 months after Effective Date (05/04/2006)</p>
<p>5. Groundwater/Surface Water Interaction Model: The SCVSD will solicit proposals, collect data, develop a model in cooperation with the Regional Board, obtain peer review, and report results. The impact of source waters and reclaimed water plans on achieving the water quality objective and protecting beneficial uses, including impacts on underlying groundwater quality, will also be assessed and specific recommendations for management developed for Regional Board consideration. The purpose of the modeling and sampling effort is to determine the interaction between surface water and groundwater as it may affect the loading of chloride from groundwater and its linkage to surface water quality.</p>	<p>2.5 years after Effective Date of TMDL (11/20/2007)</p>
<p>6. Evaluation of Appropriate Chloride Threshold for the Protection of Sensitive Agricultural Supply Use and Endangered Species Protection: The SCVSD will prepare and submit a report on endangered species protection thresholds. The SCVSD will also prepare and submit a report presenting the results of the evaluation of chloride thresholds for salt sensitive agricultural uses, which shall consider the impact of drought and low rainfall conditions and the associated increase in imported water concentrations on downstream crops utilizing the result of Task 5.</p>	<p>2.5 years after Effective Date of TMDL (11/20/2007)</p>

Table 7-6.2. Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks	Completion Date
<p>7. Develop SSO for Chloride for Sensitive Agriculture: The SCVSD will solicit proposals and develop technical analyses upon which the Regional Board may base a Basin Plan amendment.</p> <p>8. Develop Anti-Degradation Analysis for Revision of Chloride Objective by SSO: The SCVSD will solicit proposals and develop draft anti-degradation analysis for Regional Board consideration.</p> <p>9. Develop a pre-planning report on conceptual compliance measures to meet different hypothetical final conditional wasteload allocations. The SCVSD shall solicit proposals and develop and submit a report to the Regional Board that identifies potential chloride control measures and costs based on different hypothetical scenarios for chloride SSOs and final conditional wasteload allocations.</p>	<p>2.8 years after Effective Date of TMDL (02/20/2008)</p>
<p>10. a) Preparation and Consideration of a Basin Plan Amendment (BPA) to revise the chloride objective by the Regional Board.</p> <p>b) Evaluation of Alternative Water Supplies for Agricultural Beneficial Uses: The SCVSD will quantify water needs, identify alternative water supplies, evaluate necessary facilities, and report results, including the long-term application of this remedy.</p> <p>c) Analysis of Feasible Compliance Measures to Meet Final Conditional Wasteload Allocations for Proposed Chloride Objective. The SCVSD will assess and report on feasible implementation actions to meet the chloride objective established pursuant to Task 10a).</p> <p>d) Reconsideration of and action taken on the Chloride TMDL and Final Conditional Wasteload Allocations for the Upper Santa Clara River by the Regional Board.</p>	<p>3.5 years after Effective Date of TMDL (12/11/2008)</p>
<p>11. Trend monitoring: The SCVSD will submit a monitoring plan to conduct chloride, TDS, and sulfate trend monitoring to ensure that the goal of chloride export in the watershed is being achieved, water quality objectives are being met, and downstream groundwater and surface water quality is not degraded due to implementation of compliance measures. The SCVSD monitoring plan shall include plans to monitor chloride, TDS, and sulfate in groundwater and identify representative wells to be approved by the Regional Board Executive Officer, in the following locations: (a) Shallow alluvium layer in east Piru Basin, (b) San Pedro Formation in east Piru Basin,</p>	<p>4 years after Effective Date of TMDL (05/04/2009)</p>

Table 7-6.2. Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks	Completion Date
<p>and (c) groundwater basins under Reaches 5 and 6, which shall be equivalent or greater than existing groundwater monitoring required by NPDES permits for Saugus and Valencia WRPs. The monitoring plan shall also include a plan for chloride, TDS, and sulfate trend monitoring for surface water for Reaches 4B, 5 and 6. The monitoring plan shall include plans to monitor chloride, TDS, and sulfate at a minimum of once per quarter for groundwater and at a minimum of once per month for surface water. The plan should propose a monitoring schedule that extends beyond the completion date of this TMDL to evaluate impacts of compliance measures to downstream groundwater and surface water quality. This TMDL shall be reconsidered if chloride, TDS, and sulfate trend monitoring indicates degradation of groundwater or surface water due to implementation of compliance measures.</p>	
<p>12. Trend monitoring: The Reach 4A Permittee will submit a monitoring plan to conduct chloride, TDS, and sulfate trend monitoring to ensure that the goal of chloride export in the watershed is being achieved, water quality objectives are being met, and downstream groundwater and surface water quality is not degraded due to implementation of compliance measures. The Reach 4A permittee monitoring plan shall include plans to monitor chloride, TDS, and sulfate in groundwater and identify representative wells to be approved by the Regional Board Executive Officer in the following locations (a) Fillmore Basin, and (b) Santa Paula Basin. The monitoring plan shall also include a plan for chloride, TDS, and sulfate trend monitoring for surface water for Reaches 3 and 4A. The monitoring plan should include plans to monitor chloride, TDS, and sulfate at a minimum of once per quarter for groundwater and at a minimum of once per month for surface water. The plan should propose a monitoring schedule that shall extend beyond the completion date of this TMDL to evaluate impacts of compliance measures to downstream groundwater and surface water quality. This TMDL shall be reconsidered if chloride, TDS, and sulfate trend monitoring indicates degradation of groundwater or surface water due to implementation of compliance measures.</p>	<p>Submitted with permit application</p>
<p>13. Begin monitoring per approved SVCSD monitoring plan completed in Task 11.</p>	<p>One year after Executive Officer approval of Task 11 monitoring plan for SVCSD</p>

Table 7-6.2. Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks	Completion Date
14. Begin monitoring per approved Reach 4A Permittee monitoring plan.	One year after Executive Officer approval of Task 12 monitoring plan for Reach 4A Permittee
15. a) Implementation of Compliance Measures, Planning: The SCVSD shall submit a report of planning activities which include but are not limited to: (1) identifying lead state/federal agencies; (2) administering a competitive bid process for the selection of EIR/EIS and Engineering Consultants; (3) Development of Preliminary Planning and Feasibility Analyses; (4) Submittal of Project Notice of Preparation/Notice of Intent; (5) Preparation of Draft Wastewater Facilities Plan and Programmatic EIR; (6) Administration of Public Review and Comment Periods; (7) Development of Final Wastewater Facilities Plan and Programmatic EIR and incorporation and response to comments; (8) Administration of final public review and certification process; and (9) Filing a Notice of Determination and Record of Decision. b) Implementation of Compliance Measures, Planning: The SCVSD shall provide a schedule of related tasks and subtasks related to Task 15a), and provide semi-annual progress reports on progress of planning activities, thereafter, until completion of Final Wastewater Facilities Plan and Programmatic EIR.	5 years after Effective Date of TMDL (05/04/2010) 5 years after Effective Date of TMDL (05/04/2010)
16. The Regional Board staff will re-evaluate the schedule to implement control measures needed to meet final conditional WLAs adopted pursuant to Task 10 d) and the schedule for Task 17. The Regional Board, at a public meeting will consider extending the completion date of Task 17 and reconsider the schedule to implement control measures to meet final conditional WLAs adopted pursuant to Task 10 d). The SCVSD will provide the justification for the need for an extension to the Regional Board Executive Officer at least 6 months in advance of the deadline for this task.	6-7 years after Effective Date of TMDL (05/04/ 2011 <u>2012</u>)
17. a) Implementation of Compliance Measures, Complete Environmental Impact Report: The SCVSD shall complete a Wastewater Facilities Plan and Programmatic Environmental Impact Report for facilities to comply with final effluent permit limits for chloride. b) Implementation of Compliance Measures, Engineering Design:	6-7 years after Effective Date of TMDL (05/04/ 2011 <u>2012</u>) 6-7 years after

Table 7-6.2. Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks	Completion Date
<p>The SCVSD will begin the engineering design of the recommended project wastewater facilities.</p> <p>c) Implementation of Compliance Measures, Engineering Design: The SCVSD will provide a design schedule of related tasks and sub-tasks, and provide semi-annual progress reports on progress of design activities, thereafter, until completion of Final Design. In addition the SCVSD will provide a construction schedule of related tasks and sub-tasks, and provide semi-annual progress reports on progress of construction activities, thereafter, until completion of recommended project wastewater facilities.</p> <p>d) Phase I Implementation of Compliance Measures, Construction: The SCVSD shall have applied and received all appropriate permits and have completed construction of <u>Phase I of the recommended project wastewater facilities to meet Phase I chloride load reductions.</u></p> <p>e) Phase I Implementation of Compliance Measures, Start-Up: The SCVSD shall have completed start-up, testing and certification of <u>Phase I of the recommended project wastewater facilities to meet Phase I chloride load reductions.</u></p> <p>f) Phase 2 Implementation of Compliance Measures, Construction: <u>The SCVSD shall have applied and received all appropriate permits and have completed construction of Phase 2 of the recommended project wastewater facilities to meet Phase I chloride load reductions.</u></p> <p>g) Phase 2 Implementation of Compliance Measures, Start-Up: <u>The SCVSD shall have completed start-up, testing and certification of Phase 2 of the recommended project wastewater facilities to meet Phase II chloride load reductions.</u></p>	<p>Effective Date of TMDL (05/04/20112012)</p> <p>78 years after Effective Date of TMDL (05/04/20122013)</p> <p>911.5 years after Effective Date of TMDL (11/04/20142016)</p> <p>1012 years after Effective Date of TMDL (05/04/20152017)</p> <p><u>16.5 years after Effective Date of TMDL</u> (11/04/2021)</p> <p><u>17 years after Effective Date of TMDL</u> (05/04/2022)</p>
<p>18. 4837-0090-6752.2

State of California
California Regional Water Quality Control Board, Los Angeles Region

RESOLUTION NO. R4-2007-016
October 4, 2007

Amendment to the *Water Quality Control Plan for the Los Angeles Region* to
Incorporate a Total Maximum Daily Load for Boron, Chloride, Sulfate, and TDS
(Salts) for Calleguas Creek Watershed

WHEREAS, the California Regional Water Quality Control Board, Los Angeles Region, finds that:

1. The Federal Clean Water Act (CWA) requires the California Regional Water Quality Control Board, Los Angeles Region (Regional Board) to establish water quality standards for each water body within its region. Water quality standards include beneficial uses, water quality objectives that are established at levels sufficient to protect those beneficial uses, and an antidegradation policy to prevent degrading waters. Water bodies that do not meet water quality standards are considered impaired.
2. CWA section 303(d)(1) requires each state to identify the waters within its boundaries that do not meet water quality standards. Those waters are placed on the state's "303(d) List" or "Impaired Waters List". For each listed water, the state is required to establish the Total Maximum Daily Load (TMDL) of each pollutant impairing the water quality standards in that waterbody. Both the identification of impaired waters and TMDLs established for those water must be submitted to U.S. EPA for approval pursuant to CWA section 303(d)(2). For all waters that are not identified as impaired, the states are nevertheless required to create TMDLs pursuant to CWA section 303(d)(3).
3. A consent decree between (U.S. EPA), Heal the Bay, Inc. and BayKeeper, Inc. was approved on March 22, 1999, which resolved litigation between those parties relating the pace of TMDL development. The court order directs the U.S. EPA to ensure that TMDLs for all 1998-listed impaired waters be established within 13 years of the consent decree. The consent decree combined water body pollutant combinations in the Los Angeles Region into 92 TMDL analytical units. In accordance with the consent decree, the Calleguas Creek Salts TMDL addresses waterbodies with salts listings in analytical units 3 and 4. Based on the consent decree schedule, a TMDL for chloride was adopted by USEPA in March 2002 to address analytical unit 3. According to the consent decree, the remaining salts in analytical unit 4 (TDS, sulfate, and boron) TMDLs must be approved or established by United States Environmental Protection Agency (USEPA) by March 2012. This TMDL will supercede the chloride TMDL for analytical unit 3 previously established by EPA.
4. The elements of a TMDL are described in 40 CFR 130.2 and 130.7 and section 303(d)(1)(C) and (D) of the CWA, as well as in U.S. EPA guidance documents (Report No. EPA/440/4-91/001). A TMDL is defined as the sum of the individual waste load allocations for point sources, load allocations for nonpoint sources and natural background (40 CFR 130.2). TMDLs must be set at levels necessary to attain and maintain the applicable narrative and numeric water quality standards with seasonal

variations and a margin of safety that takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR 130.7(c)(1)). 40 CFR 130.7 also dictates that TMDLs shall take into account critical conditions for stream flow, loading and water quality parameters. TMDLs typically include one or more numeric "targets", i.e., numerical translations of the existing water quality standards, which represent attainment of those standards, contemplating the TMDL elements described above. Since a TMDL must represent the "total" load, TMDLs must account for all sources of the relevant pollutants, irrespective of whether the pollutant is discharged to impaired or unimpaired upstream reaches.

5. Neither TMDLs nor their targets or other components are water quality objectives, and thus their establishment does not implicate Water Code section 13241. Rather, under California Law, TMDLs are programs to implement existing standards (including objectives), and are thus established pursuant to Water Code section 13242. Moreover, they do not create new bases for direct enforcement against dischargers apart from the existing water quality standards they translate. The targets merely establish the bases through which load allocations (LAs) and waste load allocations (WLAs) are calculated. WLAs are only enforced for a discharger's own discharges, and then only in the context of the discharger's National Pollutant Discharge Elimination System (NPDES) permit (or other permit, waiver, or prohibition), which must contain effluent limits consistent with the assumptions and requirements of the WLAs (40 C.F.R. 122.44(d)(vii)(B)). The Regional Board will develop permit requirements through subsequent permit actions that will allow all interested persons, including but not limited to municipal storm water dischargers, to provide comments on how the WLAs should be translated into permit requirements.
6. As envisioned by Water Code section 13242, the TMDL contains a "description of surveillance to be undertaken to determine compliance with objectives." The Compliance Monitoring and Special Studies elements of the TMDL recognize that monitoring will be necessary to assess the on-going condition of the Calleguas Creek watershed and to assess the on-going effectiveness of efforts by dischargers to reduce salts loading to the Calleguas Creek. Special studies may also be appropriate to provide further information about new data, new or alternative sources, and revised scientific assumptions. The TMDL does not establish the requirements for these monitoring programs or reports, although it does recognize the type of information that will be necessary to secure. The Regional Board's Executive Officer will issue orders to appropriate entities to develop and to submit monitoring programs and technical reports. The Executive Officer will determine the scope of these programs and reports, taking into account any legal requirements, and issue the orders to the appropriate entities.
7. Upon establishment of TMDLs by the State or U.S. EPA, the State is required to incorporate the TMDLs into the State Water Quality Management Plan (40 CFR 130.6(c)(1), 130.7). This Water Quality Control Plan for the Los Angeles Region (Basin Plan) and applicable statewide plans serve as the State Water Quality Management Plans governing the watersheds under the jurisdiction of the Regional Board. Attachment A to this resolution contains the Basin Planning language for this TMDL.
8. The Calleguas Creek Watershed is located in southeast Ventura County, California, and in a small portion of western Los Angeles County, and drains an area of approximately 343 square miles from the Santa Susana Pass in the east, to Mugu Lagoon in the southwest. Current land use is approximately 26 percent agriculture, 24 percent urban,

and 50 percent open space. The tributaries and the streams of the Calleguas Creek Watershed are divided into fourteen segments, or reaches. Eleven out of fourteen reaches in the Calleguas Creek Watershed are identified on the 2002 Clean Water Act Section 303(d) list of water-quality limited segments as impaired due to elevated levels of boron, chloride, sulfate, and TDS. The listings were approved by the State Water Resources Control Board on February 4, 2003. Additionally, USEPA added listings in Revolon Slough for TDS, sulfate and boron. The proposed TMDL addresses impairments of water quality caused by these salts, and the Implementation Plan is developed to achieve water quality objectives for salts in the Calleguas Creek Watershed.

9. Over the past forty years, large volumes of salts have been imported into the Calleguas Creek watershed from the State Water Project, the Santa Clara River through the Freeman Diversion, and deep aquifers which are pumped for water supply purposes. The Calleguas Creek watershed also contains naturally occurring or background concentrations of salts because soils are derived from marine sediments. Salts become stranded on the watershed and accumulate over time. The result is a general salt imbalance on the watershed that manifests itself in higher surface water and groundwater concentrations of salts throughout the watershed. High salts concentrations have limited the beneficial uses of surface water and groundwater from unconfined aquifers of the Calleguas Creek Watershed. Therefore, salt export will be required throughout the watershed to effectively reduce the salts loads to surface and groundwater. The overall goal of this TMDL is to achieve a salt balance within each subwatershed, reduce salt load to surface water, and achieve and maintain water quality objective for salts in the watershed. All stakeholders and the Regional Board agree that an approach that integrates water supply and water quality is the preferred approach to addressing salt impairments in the Calleguas Creek Watershed. The Regional Board's endorsement of this approach is in part conditioned upon the stakeholders' agreement to ensure maintenance of in-stream flows necessary to protect beneficial uses.
10. Boron is only listed in the Simi and Pleasant Valley (Revolon) subwatershed including Revolon Slough (reach 4), Arroyo Simi (reach 7), and tributaries to Arroyo Simi (reach 9). Therefore, boron allocations are only included for the Simi Valley WWTP and not for the other POTWs that discharge to other subwatersheds.
11. Numeric targets for the TMDL are based on the specific numeric water quality objectives (WQOs) provided in the Basin Plan. Surface water quality objectives for the Calleguas Creek watershed are applicable upstream of Potrero Road. Site specific objectives have not been determined for Calleguas Creek below Potrero Road. However, the Basin Plan provides beneficial use guidelines to determine criteria for selection of effluent limits to protect sensitive beneficial uses including agricultural supply. The Basin Plan also includes objectives for groundwater basins.
12. The Regional Board's goal in establishing the TMDL for salts in Calleguas Creek Watershed is to protect the agriculture irrigation and groundwater recharge beneficial uses of the Calleguas Creek Watershed and to achieve the numeric and narrative water quality objectives set to protect those uses.
13. Calleguas Creek stakeholders have been actively engaged with USEPA and the Regional Board on a variety of watershed planning initiatives in the Calleguas Creek Watershed. Key stakeholders have formed the Calleguas Creek Watershed Management Plan

(CCWMP), an established, stakeholder-led watershed management group that has been continually operating since 1996. The CCWMP has broad participation from federal, State and county agencies, municipalities, POTWs, water purveyors, groundwater management agencies, and agricultural and environmental groups. As part of its mission to address issues of long-range comprehensive water resources, land use, economic development, open space preservation, enhancement and management, the CCWMP proposed to USEPA and Regional Board to take the lead on development of the TMDLs.

14. Regional Board staff has worked with the CCWMP and USEPA in the development of a detailed technical document that analyzes and describes the specific necessity and rationale for the development of this TMDL. The technical document entitled "Calleguas Creek Watershed Boron, Chloride, Sulfate, and TDS TMDL" (Technical Report) prepared by Larry Walker Associates is an integral part of this Regional Board action and was reviewed, and accepted by the Regional Board as a supporting technical analysis before acting. The technical document provides the detailed factual basis and analysis supporting the problem statement, numeric targets (interpretation of the narrative and numeric water quality objectives, used to calculate the pollutant allocations), source analysis, linkage analysis, waste load allocations (for point sources), load allocation (for nonpoint sources), margin of safety, and seasonal variations and critical conditions of this TMDL. Final Technical Report was submitted to the Regional Board on May 31, 2007. The Regional Board staff report for this TMDL, "Calleguas Creek Watershed Boron, Chloride, Sulfate, and TDS (Salts) TMDL", is based on the analysis in the Technical Report prepared by Larry Walker Associates.
15. On October 4, 2007, prior to the Board's action on this resolution, public hearings were conducted on the TMDL for boron, chloride, sulfate, and TDS in the Calleguas Creek Watershed. Notice of the hearing for the TMDL boron, chloride, sulfate, and TDS in the Calleguas Creek Watershed was published in accordance with the requirements of Water Code Section 13244. This notice was published in the Ventura County Stars on June 2, 2007.
16. The public has had a reasonable opportunity to participate in the review of the amendment to the Basin Plan. A draft of the TMDL was released for public comment on June 4, 2007; a Notice of Hearing and Notice of Filing were published and circulated 45 days preceding Board action; Regional Board staff responded to oral and written comments received from the public; and the Regional Board held a public hearing on October 4, 2007 to consider adoption of the TMDL.
17. In amending the Basin Plan to establish this TMDL, the Regional Board considered the requirements set forth in Sections 13240 and 13242 of the California Water Code.
18. Because the TMDL implements existing numeric water quality objectives (i.e., numeric water quality objectives in the Basin Plan), the Regional Board (along with the State Water Resources Control Board) have determined that adopting a TMDL does not require the water boards to consider the factors of Water Code section 13241. The consideration of the Water Code section 13241 factors, by section 13241's express terms, only applies "in establishing water quality objectives." Here the Regional Board is not establishing water quality objectives, but as required by section 303(d)(1)(C) of the Clean Water Act is adopting a TMDL that will implement the previously established objectives that have not been achieved. In making this determination, the Regional Board has considered and relied upon a legal memorandum from the Office of Chief Counsel to the State Water

Board's basin planning staff detailing why TMDLs cannot be considered water quality objectives. (See Memorandum from the Staff Counsel Michael J. Levy, Office of Chief Counsel, to Ken Harris and Paul Lillebo, Division of Water Quality: *The Distinction Between A TMDL's Numeric Targets and Water Quality Standards*, dated June 12, 2002.)

19. While the Regional Board is not required to consider the factors of Water Code section 13241, it, nonetheless, has developed and received significant information pertaining to the Water Code section 13241 factors and has considered that information in developing and adopting this TMDL. The past, present, and probable future beneficial uses of water have been considered in that the Calleguas Creek watershed is designated for a multitude of beneficial uses in the Basin Plan. Various living organisms (including vegetation, fish, invertebrates, and wildlife) are present in, transient through, and will be present in the Calleguas Creek. Dry weather surface water in the Calleguas Creek watershed is primarily composed of groundwater, municipal wastewater, urban non-stormwater discharges, and agricultural runoff. In the upper reaches of the watershed, upstream of any wastewater discharges, groundwater discharge from shallow surface aquifers provide a constant base flow. The environmental characteristics of the Calleguas Creek are spelled out at length in the Basin Plan and in the technical documents supporting this Basin Plan amendment, and have been considered in developing this TMDL. Water quality conditions that reasonably could be achieved through the coordinated control of implementation actions including integrating watershed-scale infrastructure projects to desalt groundwater and wastewater, and administrative programs to reduce salt loadings to the Calleguas Creek watershed. TMDL implementation will be carried out by water agencies, municipalities, POTWs, and non-point dischargers in the Calleguas Creek Watershed to desalt groundwater and wastewater. These projects focus on desalting groundwater underlying Calleguas Creek and discharging salts to the Pacific Ocean through a brineline and ocean outfall outside of southern Ventura County. Water quality in Calleguas Creek will be attained by reducing the amount of salts imported and added to water in the watershed, reducing salts loads from groundwater exfiltration, transporting salts downgradient and exporting salts out of the watershed. Responsible agencies also have several options for implementing structural and nonstructural BMPs to attain a salt balance and attain water quality objectives. Authorizing certain storm water dischargers to rely on BMPs in the first instances reflects the reasonableness of the action in terms of the ability to implement the requirements, as well as an understanding that the water quality conditions can reasonably be attained under different hydrological conditions. However, to the extent that there would be any conflict between the consideration of the factor in Water Code section 13241 subdivision (c), if the consideration were required, and the Clean Water Act, the Clean Water Act would prevail. Economic considerations were considered throughout the development of the TMDL. Some of these economic considerations arise in the context of Public Resources Code section 21159 and are equally applicable here. The implementation program for this TMDL recognizes the economic limitations on achieving immediate compliance. The TMDL also authorizes the use of BMPs, to the extent authorized by law, for various storm water dischargers. Economic considerations were considered and are reflected in an implementation program that is flexible and allows 15 years for POTWs, permitted stormwater and non-permitted stormwater dischargers, and agricultural dischargers to comply with the final allocations. The need for housing within the region has been considered, but this TMDL is unlikely to affect housing needs. Whatever housing

impacts could materialize are ameliorated by the flexible nature of this TMDL and the implementation schedule.

20. The amendment is consistent with the State Antidegradation Policy (State Board Resolution No. 68-16), in that the changes to water quality objectives (i) consider maximum benefits to the people of the state, (ii) will not unreasonably affect present and anticipated beneficial use of waters, and (iii) will not result in water quality less than that prescribed in policies. Likewise, the amendment is consistent with the federal Antidegradation Policy (40 CFR 131.12).
21. Pursuant to Public Resources Code section 21080.5, the Resources Agency has approved the Regional Water Boards' basin planning process as a "certified regulatory program" that adequately satisfies the California Environmental Quality Act (CEQA) (Public Resources Code, Section 21000 et seq.) requirements for preparing environmental documents (14 Cal. Code Regs. § 15251(g); 23 Cal. Code Regs. § 3782.) The Regional Water Board staff has prepared "substitute environmental documents" for this project that contains the required environmental documentation under the State Water Board's CEQA regulations. (23 Cal. Code Regs. § 3777.) The substitute environmental documents include the TMDL staff report entitled "Calleguas Creek Watershed Boron, Chloride, Sulfate, and TDS TMDL", the environmental checklist, the comments and responses to comments, the basin plan amendment language, and this resolution. The project itself is the establishment of a TMDL for boron, chloride, sulfate, and TDS in the Calleguas creek watershed. While the Regional Board has no discretion to not establish a TMDL (the TMDL is required by federal law), the Board does exercise discretion in assigning waste load allocations and load allocations, determining the program of implementation, and setting various milestones in achieving the water quality standards. The CEQA checklist and other portions of the substitute environmental documents contain significant analysis and numerous findings related to impacts and mitigation measures.
22. A CEQA Scoping hearing was conducted on November 15, 2006 at the City of Camarillo - City Council Chambers, 601 Carmen Drive, Camarillo, California. A notice of the CEQA Scoping hearing was sent to interested parties including cities and/or counties with jurisdiction in or bordering the watershed. The notice of CEQA Scoping hearing was also published in the Ventura County Stars on October 10, 2006
23. In preparing the substitute environmental documents, the Regional Board has considered the requirements of Public Resources Code section 21159 and California Code of Regulations, title 14, section 15187, and intends those documents to serve as a tier 1 environmental review. This analysis is not intended to be an exhaustive analysis of every conceivable impact, but an analysis of the reasonably foreseeable consequences of the adoption of this regulation, from a programmatic perspective. Many compliance obligations will be undertaken directly by public agencies that will have their own obligations under CEQA. In addition, public agencies including but not limited to Calleguas MWD, Camrosa Water District, CamSan, City of Thousand Oaks, Simi Valley, Moorpark, VCWW, and Camarillo are foreseeably expected to facilitate compliance obligations. The "Lead" agencies for such tier 2 projects, will assure compliance with project-level CEQA analysis of this programmatic project. Project level impacts will need to be considered in any subsequent environmental analysis performed by other public agencies, pursuant to Public Resources Code section 21159.2.

24. The foreseeable methods of compliance of this TMDL entail construction and operation of an infrastructure of extraction wells, surface water diversions, pipelines, reverse osmosis facilities, reclaimed water distribution facilities, a brine export pipeline, and an ocean outfall. These facilities require planning and implementation which has been underway for a number of years. Construction activities on several pipeline alignments have been completed and environmental review of the project has been completed for a key area and the ocean outfall. The above projects have already been subject to extensive environmental review. Both Camrosa Water District and Calleguas Municipal Water District have certified program level EIRs for the Renewable Water Resource Management Program for the Southern Reaches of the Calleguas Creek Watershed and the Regional Salinity Management Project that examine the foreseeable environmental impacts from constructing and operating a system to comply with the salts TMDL.
25. Consistent with the Regional Board's substantive obligations under CEQA, the substitute environmental documents do not engage in speculation or conjecture, and only consider the reasonably foreseeable environmental impacts, including those relating to the methods of compliance, reasonably foreseeable feasible mitigation measures to reduce those impacts, and the reasonably foreseeable alternative means of compliance, which would avoid or reduce the identified impacts.
26. The proposed amendment could have a potentially significant adverse effect on the environment. However, there are feasible alternatives, feasible mitigation measures, or both, that if employed, would substantially lessen the potentially significant adverse impacts identified in the substitute environmental documents; however such alternatives or mitigation measures are within the responsibility and jurisdiction of other public agencies, and not the Regional Board. Water Code section 13360 precludes the Regional Board from dictating the manner in which responsible agencies comply with any of the Regional Board's regulations or orders. When the agencies responsible for implementing this TMDL determine how they will proceed, the agencies responsible for those parts of the project can and should incorporate such alternatives and mitigation into any subsequent projects or project approvals. These feasible alternatives and mitigation measures are described in more detail in the substitute environmental documents. (14 Cal. Code Regs. § 15091(a)(2).)
27. From a program-level perspective, incorporation of the alternatives and mitigation measures outlined in the substitute environmental documents may not foreseeably reduce impacts to less than significant levels.
28. The substitute documents for this TMDL, and in particular the Environmental Checklist and staff's responses to comments, identify broad mitigation approaches that should be considered at the project level.
29. To the extent significant adverse environmental effects could occur, the Regional Board has balanced the economic, legal, social, technological, and other benefits of the TMDL against the unavoidable environmental risks and finds that specific economic, legal, social, technological, and other benefits of the TMDL outweigh the unavoidable adverse environmental effects, such that those effects are considered acceptable. The basis for this finding is more fully set forth in the substitute environmental documents. (14 Cal. Code Regs. § 15093.)

30. Health and Safety Code section 57004 requires external scientific peer review for certain water quality control policies. Prior to public notice of the draft TMDL, the Regional Board submitted the scientific basis and scientific portions of the Calleguas Creek Watershed Salts TMDL to Professor Ferdi L. Hellweger for external scientific peer review. The peer review report was received by the Regional Board on April 23, 2007. The peer review found that the proposed TMDL included an appropriate conceptual model, and reasonable allocations and implementation plan to attain water quality objectives. Minor modifications were made to the scientific portions of the TMDL to address concerns identified during the peer review process.
31. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code, Section 11353, Subdivision (b). As specified above, Federal law and regulations require that TMDLs be incorporated into the water quality management plan. The Regional Board's Basin Plan is the Regional Board's component of the water quality management plan, and the Basin Plan is how the Regional Board takes quasi-legislative, planning actions. Moreover, the TMDL is a program of implementation for existing water quality objectives, and is, therefore, appropriately a component of the Basin Plan under Water Code section 13242. The necessity of developing a TMDL is established in the TMDL staff report, the section 303(d) list, and the data contained in the administrative record documenting the salts impairments of the Calleguas Creek Watershed.
32. The Basin Plan amendment incorporating a TMDL for salts for the Calleguas Creek Watershed must be submitted for review and approval by the State Water Resources Control Board (State Board), the State Office of Administrative Law (OAL), and the U.S. EPA. The Basin Plan amendment will become effective upon approval by OAL and U.S. EPA. A Notice of Decision will be filed with the Resources Agency.
33. If during the State Board's approval process Regional Board staff, the SWRCB or State Board staff, or OAL determines that minor, non-substantive modifications to the language of the amendment are needed for clarity or consistency, the Executive Officer should make such changes consistent with the Regional Board's intent in adopting this TMDL, and should inform the Board of any such changes.

THEREFORE, be it resolved that pursuant to sections 13240 and 13242 of the Water Code, the Regional Board hereby amends the Basin Plan as follows:

1. Pursuant to Sections 13240 and 13242 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony at the hearing, hereby adopts the amendments to Chapter 7 of the Water Quality Control Plan for the Los Angeles Region, as set forth in Attachment A hereto, to incorporate the elements of the Calleguas Creek Watershed Salts TMDL.
2. The Regional Board hereby approves and adopts the CEQA substitute environmental documentation and the referenced Environmental Impact Reports entitled "Program Environmental Impact Report/Environmental Assessment for the Renewable Water Resource Management Program for the Southern Reaches of the Calleguas Creek Watershed," and "Supplemental Environmental Impact Report/Environmental Assessment for the Regional Salinity Management Project", including all findings contained therein, which was prepared

in accordance with Public Resources Code section 21159 and California Code of Regulations, title 14, section 15187, and directs the Executive Officer to sign the environmental checklist.

3. The Regional Board shall reconsider this TMDL if the Executive Officer determines that adequate flows to protect in-stream beneficial uses may not be maintained.
4. The Executive Officer is directed to forward copies of the Basin Plan amendment to the State Board in accordance with the requirements of section 13245 of the California Water Code.
5. The Regional Board requests that the State Board approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code and forward it to OAL and the U.S. EPA.

If during the State Board's approval process, Regional Board staff, the State Board or OAL determines that minor, non-substantive modifications to the language of the amendment are needed for clarity or consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.

6. The Executive Officer is authorized to sign a Certificate of Fee Exemption.

I, Deborah J. Smith, Interim Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Los Angeles Region, on October 4, 2007.

Deborah J. Smith
Interim Executive Officer

7-22 Calleguas Creek Watershed Salts TMDL

7-22.1. Calleguas Creek Watershed Salts TMDL: Elements

7-22.2. Calleguas Creek Watershed Salts TMDL: Implementation Schedule

**Chapter 7. Total Maximum Daily Loads (TMDLs)
Calleguas Creek Watershed Salts TMDL**

This TMDL was adopted by:

The Regional Water Quality Control Board on October 4, 2007.

This TMDL was approved by:

The State Water Resources Control Board on May 20, 2008.

The Office of Administrative Law on November 6, 2008.

The U.S. Environmental Protection Agency on December 2, 2008.

This TMDL is effective on December 2, 2008.

The elements of the TMDL are presented in Table 7-22.1 and the Implementation Plan in
Table 7-22.2

Attachment A to Resolution No. R4-2007-016

Table 7-22.1. Calleguas Creek Watershed Salts TMDL: Elements

TMDL Element	Key Findings and Regulatory Provisions																						
<p>Problem Statement</p>	<p>Eleven of fourteen reaches in the Calleguas Creek Watershed (CCW) are identified on the 2002 Clean Water Act Section 303(d) list of water-quality limited segments as impaired due to elevated levels of boron, chloride, sulfate, or total dissolved solids (TDS) (these constitutions are commonly referred to as salts). Salts primarily impact two beneficial uses: agricultural supply and groundwater recharge. Below is 2002 303(d) list of water quality limited segments of the Calleguas Creek watershed:</p> <table border="1" data-bbox="521 769 1377 1101"> <thead> <tr> <th data-bbox="521 769 1036 798">Reach Name</th> <th data-bbox="1036 769 1377 798">Pollutant/Stressor</th> </tr> </thead> <tbody> <tr> <td data-bbox="521 798 1036 827">▪ Calleguas Creek Reach 3</td> <td data-bbox="1036 798 1377 827">Chloride, TDS</td> </tr> <tr> <td data-bbox="521 827 1036 856">▪ Calleguas Creek Reach 6</td> <td data-bbox="1036 827 1377 856">Chloride, Sulfate, TDS</td> </tr> <tr> <td data-bbox="521 856 1036 884">▪ Calleguas Creek Reach 7</td> <td data-bbox="1036 856 1377 884">Boron, Chloride, Sulfate, TDS</td> </tr> <tr> <td data-bbox="521 884 1036 913">▪ Calleguas Creek Reach 8</td> <td data-bbox="1036 884 1377 913">Boron, Chloride, Sulfate, TDS</td> </tr> <tr> <td data-bbox="521 913 1036 942">▪ Calleguas creek Reach 9A</td> <td data-bbox="1036 913 1377 942">Sulfate, TDS</td> </tr> <tr> <td data-bbox="521 942 1036 971">▪ Calleguas Creek Reach 9B</td> <td data-bbox="1036 942 1377 971">Chloride, Sulfate, TDS</td> </tr> <tr> <td data-bbox="521 971 1036 999">▪ Calleguas Creek Reach 10</td> <td data-bbox="1036 971 1377 999">Chloride, Sulfate, TDS</td> </tr> <tr> <td data-bbox="521 999 1036 1028">▪ Calleguas Creek Reach 11</td> <td data-bbox="1036 999 1377 1028">Sulfate, TDS</td> </tr> <tr> <td data-bbox="521 1028 1036 1057">▪ Calleguas Creek Reach 12</td> <td data-bbox="1036 1028 1377 1057">Sulfate, TDS</td> </tr> <tr> <td data-bbox="521 1057 1036 1086">▪ Calleguas Creek Reach 13</td> <td data-bbox="1036 1057 1377 1086">Chloride, Sulfate, TDS</td> </tr> </tbody> </table> <p>The list of impaired segments of the Calleguas Creek watershed in the 2002 303(d) list was maintained in the 2006 303(d) list.</p> <p>The segment of Reach 4 below Laguna Road is tidally influenced and therefore not impaired for chloride, boron, sulfate, and TDS. Consequently, the waste load and load allocations developed for Reach 4 in this TMDL do not apply below Laguna Road.</p> <p>The goal of this TMDL is to protect and restore the water quality in the Calleguas Creek watershed by controlling the loading and accumulation of salts.</p>	Reach Name	Pollutant/Stressor	▪ Calleguas Creek Reach 3	Chloride, TDS	▪ Calleguas Creek Reach 6	Chloride, Sulfate, TDS	▪ Calleguas Creek Reach 7	Boron, Chloride, Sulfate, TDS	▪ Calleguas Creek Reach 8	Boron, Chloride, Sulfate, TDS	▪ Calleguas creek Reach 9A	Sulfate, TDS	▪ Calleguas Creek Reach 9B	Chloride, Sulfate, TDS	▪ Calleguas Creek Reach 10	Chloride, Sulfate, TDS	▪ Calleguas Creek Reach 11	Sulfate, TDS	▪ Calleguas Creek Reach 12	Sulfate, TDS	▪ Calleguas Creek Reach 13	Chloride, Sulfate, TDS

Source Analysis	Sources of salts in the watershed include water supply (water imported from the State Water Project or Freeman Diversion and deep aquifer groundwater pumping), water softeners that discharge to publicly owned treatment works (POTWs), POTW treatment chemicals, atmospheric deposition, pesticides and fertilizers, and indoor water use (chemicals, cleansers, food, etc.). These salts are then transported through POTW discharges and runoff to surface water, shallow groundwater, and/or stranded on the watershed in the soils. Salts transported in the surface water to the ocean are currently the only salts																																																																																													

Attachment A to Resolution No. R4-2007-016

TMDL Element	Key Findings and Regulatory Provisions
	<p>that are exported from the watershed. While the concentration of salts in the introduced water is usually below the Basin Plan Objectives, the quantity of water brought into the watershed is sufficient to rank introduced water as the greatest source of salts to the watershed.</p> <p>Salts that are transported during dry weather to the surface water are quantified via the following mechanisms: groundwater pumping, groundwater exfiltration, POTWs, dry weather urban and agricultural runoff. Wet weather loadings from each of these sources have the potential to be significant, but tend to be lower in concentration and do not occur during the critical conditions for salts. Wet weather loads are significant from the perspective of transporting stranded salts off the watershed.</p>
Linkage Analysis	<p>The linkage analysis for salts focuses on the surface water concentrations of salts. However, surface water concentrations are only one component of the watershed salts issue. Because it is difficult to model other aspects of the salt problem (i.e. surface water and groundwater interactions, stranded salts), two simplified approaches have been used to demonstrate that salts will be removed from the watershed, which should have a correspondingly positive impact on surface water and groundwater salts concentrations. First, a surface water model was developed to provide a linkage between sources and surface water quality and to demonstrate the impact of projects on receiving water quality in the watershed. Second, a salt balance was developed to quantify the removal of salts from the watershed with the goal of achieving a mass balance in which the mass of boron, sulfate, TDS and chloride imported into Calleguas Creek subwatersheds is no more than the mass of boron, sulfate, TDS and chloride exported from the Calleguas Creek subwatershed. Achieving a salt balance in the watershed will prevent additional build-up of salts in any medium in the watershed and protect ground water supplies from increasing in salt concentrations.</p> <p>The Calleguas Creek Modeling System is a mass balance based model that was developed for the surface water to provide a linkage between sources and surface water quality. To estimate the salts balance in the watershed, a simple chloride mass balance was developed by the Camrosa Water District (Hajas, 2003a) and modified to address the other salts.</p>

Attachment A to Resolution No. R4-2007-016

TMDL Element	Key Findings and Regulatory Provisions
<p>Waste Load Allocations</p>	<p><u>A. POTWs</u></p> <p>The TMDL includes waste load allocations (WLAs) for five POTWs in the Calleguas Creek watershed: Simi Valley Water Quality Control Plant (WQCP), Hill Canyon Wastewater Treatment Plan (WWTP), Moorpark WWTP, Camarillo Water Reclamation Plant (WRP), and Camrosa Water Reclamation Facility (WRF). At the end of the implementation period, only Simi Valley WQCP and the Hill Canyon WWTP are expected to discharge to surface waters. Moorpark WWTP and Camrosa WRF currently discharge directly to ponds under dry weather conditions. As part of the TMDL implementation, the Renewable Water Resources Management Program (RWRMP) will introduce treated wastewater from the Camarillo WRP into the Camrosa recycled water storage and distribution system. Surplus treated wastewater from Camarillo WRP and Camrosa WRF will be discharged at a point downstream of Potrero Road Bridge to Calleguas Creek. Dry weather WLAs are included for the case when Camarillo WRP, Camrosa WRF, and Moorpark WWTP need to discharge to the stream (for example, if there is insufficient recycled water demand during the wet season). Including WLAs for these POTWs ensures that water quality objectives are not exceeded as a result of their discharge.</p> <p>POTW mass-based WLAs are calculated as the POTW effluent flow rate multiplied by the water quality objective and include a mass-based adjustment factor (AF) that is subtracted from the product of the flow-rate and the water quality objective. The adjustment factor is used to link POTW allocations to the required reductions in background loads. The adjustment factors are implemented through mechanisms that export salts out of the subwatershed, such as groundwater pumping, to meet the salt balance requirements. To ensure that the loading capacity is achieved in surface water and the reductions in background loads are achieved, minimum salt exports shown below are required for POTWs and are included in WLAs as a component of the adjustment factors. If the background load reductions are not achieved, POTWs shall be responsible for providing additional load reductions to achieve water quality standards. The AF is set equal to the difference between the minimum salts export requirement to attain a salt balance in the subject reaches and the actual salts export. If the calculated annual dry weather salt exports from the subwatershed to which the POTW discharges are less than the minimum required exports for the previous year and the annual average receiving water concentration at the base of the subwatershed to which the POTW discharges exceeds water quality objectives for the previous year, the POTW allocations will be reduced using the adjustment factor.</p>

Attachment A to Resolution No. R4-2007-016

TMDL Element	Key Findings and Regulatory Provisions																														
	<p>The adjustment factors are also used to address unusual conditions in which the inputs to the POTWs from the water supply may challenge the POTWs ability to meet the assigned WLAs. The adjustment factor allows for the additional POTW loading only when the water quality objectives are met in the receiving waters. POTW allocations can be adjusted upwards when imported water supply chloride concentrations exceed 80 mg/L and discharges from the POTW exceed the WLA. In order to apply the AF to the assigned WLAs, the POTW is required to submit documentation of the water supply chloride concentrations, receiving water chloride concentration, the effluent mass, and evidence of increased salt exports to offset the increased discharges from the POTW to the RWQCB for approval.</p> <p>WLAs shown in table below apply to POTWS during dry weather when the flows in the receiving water are below the 86th percentile flow. During wet weather, the loading capacity of the stream is significantly increased by stormwater flows with very low salt concentrations. Any discharges from the POTWs during wet weather would be assimilated by these large storm flows and would not cause exceedances of water quality objectives.</p> <p>Boron is only listed in the Simi and Pleasant Valley (Revolon) subwatersheds and exceedances of boron do not occur in other portions of the watershed. Therefore, boron allocations are only included for the Simi Valley WQCP.</p> <p>Interim limits are included to allow time for dischargers to put in place implementation measures necessary to achieve final waste load allocations. The monthly average interim limits are set equal to the 95th percentile of available discharge data.</p> <p>1. 	Camrosa WRF ^b	150*Q-AF	850*Q-AF	250*Q-AF	N/A
	a. The allocations shown only apply during dry weather (as defined in this TMDL). During wet weather discharges from the POTWs do not cause exceedances of water quality objectives. b. These POTWs are not expected to discharge after the end of the implementation period. c. AF is the adjustment factor and equals the difference between the minimum salts export requirement and the actual salts export. d. Q represents the POTW flow at the time the water quality measurement is collected and a conversion factor to lb/day based on the units of measurement for the flow. N/A Boron is not listed in the reaches to which the POTW discharges. No WLA is required.				
	<u>B. Urban Runoff</u>				
	Permitted stormwater dischargers that are responsible parties to this TMDL include the Municipal Stormwater Dischargers (MS4s) of the Cities of Camarillo, Moorpark, Thousand Oaks, County of Ventura, Ventura County Watershed Protection District, and general industrial and construction permittees. Permitted stormwater dischargers are assigned a dry weather wasteload allocation equal to the average dry weather critical condition flow rate multiplied by the numeric target for each constituent. Waste load allocations apply in the receiving water at the base of each subwatershed. Because wet weather flows transport a large mass of salts at low concentrations, these dischargers meet water				

Attachment A to Resolution No. R4-2007-016

TMDL Element	Key Findings and Regulatory Provisions																																																				
	<p>quality objectives during wet weather. Dry weather allocations apply when instream flow rates are below the 86th percentile flow and there has been no measurable precipitation in the previous 24 hours.</p> <p>Interim limits are assigned for dry weather discharges from areas covered by NPDES stormwater permits to allow time to implement appropriate actions. The interim limits are assigned as concentration based receiving water limits set to the 95th percentile of the discharger data as a monthly average limit except for chloride. The 95th percentile for chloride was 267 mg/L which is higher than the recommended criteria set forth in the Basin Plan for protection of sensitive beneficial uses including aquatic life. Therefore, the interim limit for chloride for Permitted Stormwater Dischargers is set equal to 230 mg/L to ensure protection of sensitive beneficial uses in the Calleguas Creek watershed.</p> <p>1. 	<p><u>C. Final WLAs for Other NPDES Dischargers</u> Concentration-based WLAs are assigned at the Basin Plan objectives for other NPDES dischargers.</p> <table border="1" data-bbox="521 455 1047 637"> <thead> <tr> <th>Constituent</th> <th>Allocation (mg/L)</th> </tr> </thead> <tbody> <tr> <td>Chloride</td> <td>150</td> </tr> <tr> <td>TDS</td> <td>850</td> </tr> <tr> <td>Sulfate</td> <td>250</td> </tr> <tr> <td>Boron^a</td> <td>1.0</td> </tr> </tbody> </table> <p>Other NPDES dischargers include, but are not limited to, permitted groundwater cleanup projects that could have significant salt concentrations as a result of the stranded salts in the shallow groundwater basins being treated. To facilitate the cleanup of the basins prior to alternative discharge methods (such as the brine line) being available, interim limits for other NPDES dischargers will be developed on a case-by-case basis and calculated as a monthly average using the 95th percentile of available discharge data.</p>	Constituent	Allocation (mg/L)	Chloride	150	TDS	850	Sulfate	250	Boron ^a	1.0
Constituent	Allocation (mg/L)										
Chloride	150										
TDS	850										
Sulfate	250										
Boron ^a	1.0										
<p>Load Allocations</p>	<p>Dry weather load allocations are assigned as a group allocation to irrigated agricultural discharges. The load allocation (LA) is equal to the average dry weather critical condition flow rate multiplied by the numeric target for each constituent. Load allocations apply in the receiving water at the base of each subwatershed. Because wet weather flows transport a large mass of salts at a typically low concentration, these dischargers should meet water quality objectives during wet weather. Dry weather allocations apply when instream flow rates are below the 86th percentile flow and there has been no measurable precipitation in the previous 24 hours.</p> <p>Interim limits are assigned for dry weather discharges from irrigated agricultural areas to allow time to implement appropriate actions. The interim limits are assigned as concentration based receiving water limits set to the 95th percentile of the discharger data as a monthly average limit except for chloride. The 95th percentile for chloride was 499 mg/L which is higher than the recommended criteria set forth in the Basin Plan for protection of sensitive beneficial uses including aquatic life. Therefore, the interim limit for chloride for Irrigated Agricultural Dischargers is set equal to 230 mg/L to ensure protection of sensitive beneficial uses in the Calleguas Creek watershed.</p>

<p data-bbox="258 1052 480 1086">Margin of Safety</p>	<p data-bbox="521 1052 1398 1842">A margin of safety (MOS) for the TMDL is designed to address uncertainties in the analysis that could result in targets not being achieved in the waterbodies. The primary uncertainties associated with this TMDL include the impact of implementing a salt balance on receiving water quality. The effect of the salt balance is estimated by the mass-balance and subject to the following uncertainties: 1) the flow rates used to determine the loading capacity may change due to TMDL implementation, 2) the use of a daily load for determining allocations and an annual mass balance to attain water quality objectives, and 3) the sources of salts may not be completely known. Both implicit and explicit MOS are included for this TMDL. The implicit MOS stems from the use of conservative assumptions made during development of the TMDL. The mass of salts transported out of the watershed during wet weather is on average over 15% of the annual mass of salts introduced to the watershed for all constituents. The salt export during wet weather ranges from 7% to 41% for TDS, 9% to 48% for chloride, and 13% to 89% for sulfate of the export required to meet a salt balance in the watershed. This mass is not used to determine compliance with the salt balance and represents a significant implicit margin of safety. The model also contains a component that serves to model the impact of “stranded” salts in the watershed. The component assumes low irrigation efficiencies and the ability of all salts applied as irrigation water anywhere in the watershed to be discharged to receiving water in</p>																																													

Attachment A to Resolution No. R4-2007-016

TMDL Element	Key Findings and Regulatory Provisions
	<p>critical years. This likely overestimates the impact of “stranded” salts and results in a higher concentration of salts due to irrigation in the receiving water.</p> <p>An explicit MOS of 10% is applied to the adjustment factors for the POTWs to account for the uncertainties in the TMDL analysis. By applying the margin of safety to the adjustment factor, more salts are required to be exported than are necessary to offset the background loads in the watershed. This additional salt export provides a margin of safety on the salt balance to address uncertainties that the salt balance will result in compliance with water quality objectives. The 10% explicit MOS is determined sufficient to address the uncertainties associated with the estimated impact of the salt balance on receiving water loadings.</p>
Future Growth	<p>Ventura County accounts for slightly more than 2% of the state’s residents with a population of 753,197 (US Census Bureau, 2000). GIS analysis of the 2000 census data yields a population estimate of 334,000 for the CCW, which equals about 44% of the county population. According to the Southern California Association of Governments (SCAG), growth in Ventura County averaged about 51% per decade from 1900-2000; with growth exceeding 70% in the 1920s, 1950s, and 1960s. Significant population growth is expected to occur within and near present city limits until at least 2020. Increased growth requires additional water. Therefore, future growth could result in increased loads of salts being imported into the watershed. However, the TMDL implementation plan is designed to maintain a salts balance in the watershed. If additional salts are imported into the watershed, a larger volume of salts will also be exported out of the watershed to maintain the balance. Consequently, increased imports from future growth are not expected to result in higher concentrations in receiving waters.</p>
Seasonal Variations and Critical Conditions	<p>The critical condition for salts is during dry weather periods. During wet weather, stormwater flows dilute the salt discharges and receiving water concentrations are significantly lower than water quality objectives. Dry weather, defined as days with flows lower than the 86th percentile flow and no measurable precipitation, is a critical condition regardless of the dry weather flows in the stream. The driving conditions for exceedances of water quality objectives are the concentrations in the water supply (which is driven by surface water concentrations in Northern California) and the previous year’s annual precipitation and corresponding flows. Elevated salts concentrations during dry weather occur when stranded salts are discharged into the surface water after higher than average rainfall years. The elevated concentrations occur during years when the previous annual flow is</p>

Attachment A to Resolution No. R4-2007-016

TMDL Element	Key Findings and Regulatory Provisions
	<p>greater than the 75th percentile of the annual flows for the watershed (critical year). The higher concentrations occur during the dry periods of critical years regardless of whether the annual flow for the critical year is an average flow year, higher than average year, or lower than average year. The key parameter determining a critical year is the total annual flow volume for the previous year. Based on model results, four critical years were defined based on modeled results that resulted in receiving water concentrations greater than the 99th percentile concentration during at least 10% of the dry period. The critical years identified from the model occur with conditions similar to what occurred in 1978, 1979, 1983 and 1998.</p>
<p>Special Studies and Monitoring Plan</p>	<p><u>Special Studies</u></p> <p>Several special studies are planned to improve understanding of key aspects related to achievement of WLAs and LAs for the Salts TMDL.</p> <p><i>1. Special Study #1 (Optional) – Develop Averaging Periods and Compliance Points</i></p> <p>The TMDL technical report has provided information that shows instantaneous salts objectives may not be required to protect groundwater recharge and agricultural beneficial uses. It is possible that the beneficial uses will be protected and a salt balance achieved without achieving instantaneous water quality objectives in all reaches of the watershed. This optional special study is included to allow an investigation of averaging periods for the salts objectives in the CCW. Additionally, this study will investigate the locations of beneficial uses and the possibility of identifying compliance points for the salts objectives at the point of beneficial use impacts. The use of compliance points would alleviate the need to develop site-specific objectives for the reaches of the watershed upstream of the POTW discharges (described in Special Study #3) while still ensuring the protection of beneficial uses. Sensitive beneficial uses are not present in the upper reaches and POTW discharges dilute the salts from the upper reaches and may allow compliance with the objectives at the point of groundwater recharge downstream. This is an optional special study to be conducted if desired by the stakeholders or determined necessary or appropriate by the Executive Officer.</p> <p><i>2. Special Study #2 (Optional) – Develop Natural Background Exclusion</i></p> <p>Discharges of groundwater from upstream of the Simi Valley WQCP (Reaches 7 and 8) and Hill Canyon WWTP (Reaches 12 and 13) and</p>

Attachment A to Resolution No. R4-2007-016

TMDL Element	Key Findings and Regulatory Provisions
	<p>downstream of the Camrosa WRF (Reach 3) contain high salts concentrations. Natural marine sediments may contribute to the high concentrations in those discharges. This special study would evaluate whether or not the groundwater discharges in these areas would qualify for a natural sources exclusion. The special study could follow a 'reference system/anti-degradation approach' and/or a 'natural sources exclusion approach' for any allocations included in this TMDL that are proven unattainable due to the magnitude of natural sources. The purpose of a 'reference system/anti-degradation approach' is to ensure water quality is at least as good as an appropriate reference site and no degradation of existing water quality occurs where existing water quality is better than that of a reference site. The intention of a 'natural sources exclusion approach' is to ensure that all anthropogenic sources of salts are controlled such that they do not cause exceedances of water quality objectives. These approaches are consistent with state and federal anti-degradation policies (State Board Resolution No. 68-16 and 40 C.F.R. 131.12). This is an optional special study to be conducted if desired by the stakeholders or determined necessary for establishing a natural sources exclusion by the Executive Officer.</p> <p>3. Special Study #3 (Optional) – Develop Site-Specific Objectives</p> <p>The TMDL implementation plan provides for actions to protect the agricultural and groundwater recharge beneficial uses in the CCW. As shown in the linkage analysis, some downstream reaches may not achieve the water quality objectives through implementation of this TMDL because of the transport of salts out of the watershed through those reaches. Consequently, an optional special study is included to allow the CCW stakeholders to pursue development of site-specific objectives for salts for reaches upstream of the Hill Canyon WWTP and Simi Valley WQCP (Reaches 7, 8, 12, and 13), Calleguas Creek Reach 3, Revolon Slough (Reach 4) and Beardsley Wash (Reach 5). These alternative numeric water quality objectives would be developed based on the beneficial uses to be protected in a reach and the attainability of the current water quality objectives. This is an optional special study to be conducted if desired by the stakeholders or determined necessary or appropriate by the Executive Officer.</p> <p>4. Special Study #4 (Optional) – Develop Site-Specific Objectives for Drought Conditions</p> <p>During drought conditions, the load of salts into the watershed increases as a result of increasing concentrations in imported water. Stakeholders in the CCW cannot control the increased mass entering the watershed from the water supply. However, the stakeholders do have the ability to</p>

Attachment A to Resolution No. R4-2007-016

TMDL Element	Key Findings and Regulatory Provisions
	<p>manage the salts within the watershed to protect beneficial uses and export the additional mass of salts out of the watershed. If necessary, site-specific objectives may be developed to address situations that result in higher imported water salt concentrations to allow management of the salts and protection of beneficial uses. This special study may be combined with Special Study #3 if desired.</p> <p>This is an optional special study to be conducted if desired by the stakeholders or determined necessary or appropriate by the Executive Officer of the Regional Board.</p> <p>5. Special Study #5 (Optional) – Develop Site-Specific Objectives for Sulfate</p> <p>Sulfate is a necessary nutrient for plant growth and sulfate containing products are often applied to agriculture as fertilizers and pesticides. Therefore, site-specific objectives may be investigated and developed for sulfate that more accurately protects agricultural supply beneficial uses. Additionally, this study could evaluate whether or not a sulfate balance is necessary to maintain in the watershed. This special study may be combined with Special Study #3 and/or #4 if desired.</p> <p>This is an optional special study to be conducted if desired by the stakeholders or determined necessary or appropriate by the Executive Officer of the Regional Board.</p> <p><u>Monitoring Plan</u></p> <p>To ensure that the goal of a salts balance in the watershed is being achieved and water quality objectives are being met, a comprehensive method of tracking inputs and outputs to the watershed will be developed. A monitoring plan will be submitted to the RWQCB for Executive Officer approval within six months of the effective date of the CCW Salts TMDL. Monitoring will begin one year after Executive Officer approval of the monitoring plan to allow time for the installation of automated monitoring equipment.</p> <p>1. Input Tracking</p> <p>Inputs to the watershed are tracked through four mechanisms: 1) Information on the import of State Water Project water is readily available and provides information on the mass of salts brought into the watershed; 2) Groundwater pumping records provide information on the mass of salts imported into the watershed from deep aquifer pumping; 3) Import records of water supply from the Santa Clara River can be obtained to determine the mass of salts imported through this source; 4) Monitoring data on imported water quality can be compared to</p>

Attachment A to Resolution No. R4-2007-016

TMDL Element	Key Findings and Regulatory Provisions
	<p>monitoring of effluent quality to estimate the amount of salts added through human use of the water.</p> <p>2. <i>Output Tracking and Determining Compliance with Water Quality Objectives</i></p> <p>Outputs from the watershed will be tracked through surface water monitoring at key locations in the watershed and monitoring of discharges to the brine line. Monitoring will include both flow and quality. Compliance with water quality objectives will be determined at key locations where beneficial uses occur in the watershed. The stations used for output tracking will also be used to determine compliance with water quality objectives. The monitoring program will determine if the TMDL compliance points are protective of the beneficial uses for the subwatershed. If the monitoring determines that the compliance points are not protective of beneficial uses, an alternative compliance point will be selected. The Executive Officer may revise the TMDL compliance point based on the result of the monitoring. Additionally, if other places in the watershed are identified where sensitive beneficial uses occur, water quality monitoring stations can be added to determine compliance with water quality objectives. For the RWRMP, three new or upgraded automated flow measuring and sample collection stations will be installed at three points on the stream system to continuously record flow and various water quality parameters during dry weather. Preliminary monitoring locations include Arroyo Conejo in Hill Canyon, Conejo Creek at Baron Brothers Nursery and Calleguas Creek at University Drive. For the NRRWMP, one new or upgraded automated flow measuring and sample collection station will be added downstream of Simi Valley at the point at which groundwater recharge begins. A preliminary monitoring location is at Hitch Blvd. where an existing flow gauging station exists. However, the amount of groundwater recharge upstream of this site will need to be evaluated to determine the exact monitoring location. For Revolon Slough, the existing monitoring station at Wood Road. will be used to monitor quality and flow on Revolon Slough to determine the outputs from the Revolon portion of the Pleasant Valley subwatershed.</p> <p>Additional land use monitoring will be conducted concurrently at representative agricultural and urban runoff discharge sites as well as at POTWs in each of the subwatersheds and analyzed for chloride, TDS, sulfate, and boron. The location of the land use stations will be determined before initiation of the Calleguas Creek Watershed TMDL Monitoring Program (CCWTMP). All efforts will be made to include at least two wet weather sampling events during the wet season (October through April) during a targeted storm event.</p>

Attachment A to Resolution No. R4-2007-016

TMDL Element	Key Findings and Regulatory Provisions
	<p>3. Reporting and Modification of the Calleguas Creek Watershed TMDL Monitoring Program</p> <p>A monitoring report will be prepared annually within six months after completion of the final event of the sampling year. An adaptive management approach to the CCWTMP will be adopted as it may be necessary to modify aspects of the CCWTMP. Results of sampling carried out through the CCWTMP and other programs within the CCW may be used to modify this plan, as appropriate. These modifications will be summarized in the annual report. Possible modifications could include, but are not limited to the, following:</p> <ul style="list-style-type: none"> ▪ The inclusion of additional land use stations to accurately characterize loadings; ▪ The removal of land use stations if it is determined they are duplicative (<i>i.e.</i>, a land use site in one subwatershed accurately characterize the land use in other subwatersheds); ▪ The inclusion of additional in-stream sampling stations; and ▪ The elimination of analysis for constituents no longer identified in land use and/or instream samples. <p>If a coordinated and comprehensive monitoring plan is developed and meets the goals of this monitoring plan that plan should be considered as a replacement for the CCWTMP.</p> <p>4. Other Monitoring</p> <p>Other surface water and groundwater monitoring will be implemented as necessary to assess the impacts of the implementation actions and adjust the activities as necessary to protect beneficial uses and achieve the salts balance. Examples of additional monitoring that may be conducted include:</p> <ul style="list-style-type: none"> ▪ Monitoring under Phase 2 and 3 of the RWRMP to evaluate the effects of replenishment water releases and groundwater treatment and releases. ▪ Monitoring to assess the impacts of management of the Simi Basin groundwater dewatering wells under Phase 1 of the NRRWMP.
Implementation Plan	<p>The identified implementation actions provided in this TMDL will result in a salt balance in the stream and are expected to result in compliance with the allocations. The implementation plan is comprised of actions that directly impact discharges to the receiving water and actions that will indirectly impact discharges to receiving water. Responsible agencies and jurisdictions shall consider minimum flow</p>

Attachment A to Resolution No. R4-2007-016

TMDL Element	Key Findings and Regulatory Provisions
	<p>requirements that may be imposed by federal or state regulatory agencies when implementing actions to comply with this TMDL. Should the proposed implementation actions not result in compliance with objectives and site-specific objective are not adopted, additional implementation actions may be required to achieve the water quality objectives. Any plans or programs for implementation of the TMDL for the Southern Reaches of the CCW upstream of the Conejo Creek Diversion and the Northern Reaches of the CCW, that would result in significant reduction in instream flow, including but not limited to, an application for Water Reclamation Requirements (WRRs) shall include an analysis of potential impacts to instream beneficial uses that could result from the reclamation of wastewater or extracted groundwater. For Phase 1 of the Southern Reaches of the CCW Renewable Water Resource Management Program (RWRMP), Water Rights Decision 1638 from SWRCB satisfies these requirements and establishes the minimum flow requirements for Conejo and Calleguas Creek downstream of the Conejo Creek Diversion Project. Any WRRs shall require that timely written notice be given to the Regional Board, and to any regulatory agency whose instream flow is at issue, if diversion or reclamation of waste water or extraction of groundwater results or threatens to result in (or contributes to) insufficient flows to maintain beneficial uses. The Executive Officer shall issue an order pursuant to Water Code section 13267, which requires responsible agencies and jurisdictions to file a technical report if reclamation of waste water or extraction of groundwater results or threatens to result in (or contributes to) insufficient flows to maintain beneficial uses. The order shall require that the technical report identify the causes of the impairments or threatened impairments, and identifies options to abate the conditions. The Regional Board shall reconsider this TMDL if adequate flows to protect instream beneficial uses are not maintained.</p> <p>The implementation actions described in the TMDL represent a range of activities that could be conducted to achieve a salts balance in the watershed. Future considerations may result in other actions being implemented rather than the options presented. However, any proposed actions will be reviewed using the salt balance model to ensure the action does not adversely impact other implementation actions in the watershed or the salt balance of a downstream subwatershed.</p> <p>Currently, the implementation plan is presented in phases with a tentative schedule for each phase. The implementation of projects may occur earlier than planned or begin during an earlier phase. Additionally, many of the implementation actions require the use of the Regional Salinity Management Conveyance (RSMC or brine line). As such, the implementation schedule for those actions will be linked the</p>

Attachment A to Resolution No. R4-2007-016

TMDL Element	Key Findings and Regulatory Provisions																																																	
	<p>construction schedule for the RSMC.</p> <p>The implementation plan for the Salts TMDL includes regional and subwatershed specific implementation actions. There are four key structural elements to the regional implementation: Regional Salinity Management Conveyance (RSMC), Water Conservation, Water Softeners, and Best Management Practices for Irrigated Agriculture. Subwatershed implementation includes Renewable Water Resource Management Program (RWRMP) for the Southern Reaches and Northern Reach Renewable Water Management Plan (NRRWMP). Detailed discussion for each implementation element including description of the action, status and schedule for implementing the action, and a summary of the expected contribution to achievement of the salts balance are provided in the Staff Report and Technical Report for this TMDL. Proposed implementation actions in the watershed, responsible agencies, and the estimated completion date based on the effective date of the TMDL are summarized below.</p> <p>Summary of Proposed Implementation Actions</p> <table border="1" data-bbox="521 937 1386 1800"> <thead> <tr> <th>Action</th> <th>Responsible Agency/ies</th> <th>Schedule for Completion</th> </tr> </thead> <tbody> <tr> <td>Water Conservation</td> <td>POTWs, Permitted Stormwater Dischargers, and Other NPDES Permittees</td> <td>3 years</td> </tr> <tr> <td>Water Softeners</td> <td>POTWs and Permitted Stormwater Dischargers</td> <td>10 years</td> </tr> <tr> <td>Best Management Practice for Agricultural Dischargers</td> <td>Agricultural Dischargers</td> <td>2 years</td> </tr> <tr> <td>RMSC Phase 1</td> <td>Calleguas Municipal Water District</td> <td>2 year</td> </tr> <tr> <td>RMSC Phase 2</td> <td>Calleguas Municipal Water District</td> <td>5 year</td> </tr> <tr> <td>RMSC Phase 3</td> <td>Calleguas Municipal Water District</td> <td>10 years</td> </tr> <tr> <td>RWRMP Phase 1</td> <td>Camrosa Water District, Camarillo Sanitation District</td> <td>3 years</td> </tr> <tr> <td>RWRMP Phase 2</td> <td>Camrosa Water District, City of Thousand Oaks</td> <td>6 years</td> </tr> <tr> <td>RWRMP Phase 3</td> <td>Camrosa Water District, City of Thousand Oaks</td> <td>10 years</td> </tr> <tr> <td>RWRMP Phase 4</td> <td>To Be Determined</td> <td>15 years</td> </tr> <tr> <td>NRRWMP Phase 1</td> <td>Calleguas Municipal Water District, City of Simi Valley, Ventura County Water Work-District No.1</td> <td>3 years</td> </tr> <tr> <td>NRRWMP Phase 2</td> <td>Calleguas Municipal Water District, Ventura County Water Work-District No.1, City of Camarillo</td> <td>7 years</td> </tr> <tr> <td>NRRWMP Phase 3</td> <td>City of Camarillo, City of Simi Valley</td> <td>10 years</td> </tr> <tr> <td>NRRWMP Phase 4</td> <td>To Be Determined</td> <td>15 years</td> </tr> <tr> <td>Final Completion Date</td> <td></td> <td>15 years</td> </tr> </tbody> </table>		Action	Responsible Agency/ies	Schedule for Completion	Water Conservation	POTWs, Permitted Stormwater Dischargers, and Other NPDES Permittees	3 years	Water Softeners	POTWs and Permitted Stormwater Dischargers	10 years	Best Management Practice for Agricultural Dischargers	Agricultural Dischargers	2 years	RMSC Phase 1	Calleguas Municipal Water District	2 year	RMSC Phase 2	Calleguas Municipal Water District	5 year	RMSC Phase 3	Calleguas Municipal Water District	10 years	RWRMP Phase 1	Camrosa Water District, Camarillo Sanitation District	3 years	RWRMP Phase 2	Camrosa Water District, City of Thousand Oaks	6 years	RWRMP Phase 3	Camrosa Water District, City of Thousand Oaks	10 years	RWRMP Phase 4	To Be Determined	15 years	NRRWMP Phase 1	Calleguas Municipal Water District, City of Simi Valley, Ventura County Water Work-District No.1	3 years	NRRWMP Phase 2	Calleguas Municipal Water District, Ventura County Water Work-District No.1, City of Camarillo	7 years	NRRWMP Phase 3	City of Camarillo, City of Simi Valley	10 years	NRRWMP Phase 4	To Be Determined	15 years	Final Completion Date		15 years

Attachment A to Resolution No. R4-2007-016

TMDL Element	Key Findings and Regulatory Provisions
	<p>The sections below provide discussion of the application of the final WLAs for POTWs, specific permitted stormwater discharges, other NPDES dischargers, and agricultural dischargers.</p> <p>I. POTWs, permitted stormwater discharges, and other NPDES discharges</p> <p>The final WLAs will be included for permitted stormwater discharges, POTWs, and other NPDES discharges in accordance with the compliance schedules provided in Table 7-22.2. The Regional Board may revise these WLAs based on additional information developed through special studies and/or monitoring conducted as part of this TMDL.</p> <p>▪ POTWs</p> <p>WLAs established for the POTWs in this TMDL will be implemented through NPDES permit limits. Compliance will be determined through monitoring of final effluent discharge as defined in the NPDES permit.</p> <p>The proposed permit limits will be applied as end-of-pipe mass-based monthly average effluent limits. Daily maximum effluent limit is not required because chloride is not expected to have an immediate or acute effect on the beneficial uses. Compliance with the minimum salt export requirements for POTWs will be based on the salt export from the subwatershed to which they discharge. The mechanisms for meeting the minimum salt export requirements and for monitoring progress towards meeting those requirements will be included in the monitoring program work plan and approved by the Executive Officer.</p> <p>At the end of each year, the amount of salt exported will be compared to the minimum required salt export. POTW allocations will be reduced using the adjustment factor if both of the following conditions occur:</p> <ul style="list-style-type: none"> • The annual dry weather salt exports from the subwatershed to which the POTW discharges are below the minimum required exports for the previous year; and • The water quality objectives were exceeded in the receiving water at the base of the subwatershed <p>The POTW allocations will be reduced for the following year by</p>

Attachment A to Resolution No. R4-2007-016

TMDL Element	Key Findings and Regulatory Provisions
	<p>the difference between the minimum required salt export and the actual amount exported. The discharger shall be notified by the Regional Board that the assigned WLAs are reduced and the reduced effluent limits shall be applied for the next year. If the POTW allocations are reduced, the POTW will need to increase the amount of salt export or reduce the mass of salts discharged from the POTW before the end of the following year when the adjustment will be evaluated again.</p> <p>POTWs can only request to adjust the assigned WLAs upwards using the adjustment factor under limited conditions provided below:</p> <ul style="list-style-type: none"> • Water quality objectives are met in the receiving waters; • Imported water supply chloride concentrations exceed 80 mg/L; and • Discharges from the POTW exceed the allocation. <p>When imported water supply chloride concentrations exceed 80 mg/L, the POTW will monitor the effluent to determine if the wasteload allocation is exceeded. If the wasteload allocation is exceeded and the POTW desires an adjustment to the allocation, the POTW will submit documentation of the water supply chloride concentrations, the receiving water chloride concentration, the effluent mass, and the evidence of increased salt exports to offset the increased discharges from the POTW to the Regional Board for approval. The adjustment factor will apply for three months and the POTW must submit the evidence outlined above every three months to keep the adjustment factor active. As long as the required information is submitted, the adjustment factor will be in effect upon notification in writing from the RWQCB.</p> <p>▪ Urban Stormwater Discharger</p> <p>A group mass-based dry weather WLA has been developed for all permitted stormwater discharges, including municipal separate storm sewer systems (MS4s), and general industrial and construction stormwater permits. USEPA regulation allows allocations for NPDES-regulated stormwater discharges from multiple point sources to be expressed as a single categorical WLA when the data and information are insufficient to assign each source or outfall individual WLAs (40 CFR 130). The grouped allocation will apply to all NPDES-regulated municipal stormwater discharges in the CCW. MS4 WLAs will be incorporated into the NPDES</p>

	<p>permit as receiving water limits measured in-stream at the base of each subwatershed.</p> <ul style="list-style-type: none"> ▪ Other NPDES Dischargers <p>WLAs established for other NPDES permitted dischargers in this TMDL, including minor non-stormwater permittees (other than Camrosa WRP) and general non-stormwater permittees, will be implemented through NPDES permit limits. The proposed permit limits will be applied as end-of-pipe concentration-based effluent limits, and compliance determined through monitoring of final effluent discharge as defined in the NPDES permit.</p> <p>II. Agriculture</p> <p>Load allocations for salts will be implemented through Conditional Waiver of Discharges from Irrigated Lands (Conditional Waiver Program) adopted by the LARWQCB on November 3, 2005. Compliance with LAs will be measured in-stream at the base of the subwatersheds and will be achieved through the implementation of Best Management Practices (BMPs) consistent with the Conditional Waiver Program. The Conditional Waiver Program requires the development of an agricultural water quality management plan (AWQMP) to address pollutants that are exceeding receiving water quality objectives as a result of agricultural discharges. Therefore, implementation of the load allocations will be through the development of an agricultural management plan for salts. Implementation of the load allocations will also include the coordination of BMPs being implemented under other required programs to ensure salts discharges are considered in the implementation. Additionally, agricultural dischargers will participate in educational seminars on the implementation of BMPs as required under the Conditional Program. Studies are currently being conducted to assess the extent of BMP implementation and provide information on the effectiveness of BMPs for agriculture. This information will be integrated into the AWQMP that will guide the implementation of agricultural BMPs in the Calleguas Creek watershed. After implementation of these actions, compliance with the allocations and TMDL will be evaluated and the allocations reconsidered if necessary based on the special studies and monitoring plan section of the implementation plan.</p> <p>As shown in Table 7-22.2, implementation of LAs will be conducted over a period of time to allow for implementation of the BMPs, as well as coordination with special studies and</p>

Table 7-22.2 Calleguas Creek Watershed Salts TMDL: Implementation Schedule

Item	Implementation Action	Responsible Party	Completion Date
1	Effective date of interim Salts TMDL waste load allocations (WLAs)	POTWs, Permitted Stormwater Dischargers ¹ (PSD), and Other NPDES Permittees	Effective date of the amendment
2	Effective date of interim Salts TMDL load allocations (LAs)	Agricultural Dischargers	Effective date of the amendment
3	Responsible jurisdictions and agencies shall submit compliance monitoring plan to the Los Angeles Regional Board for Executive Officer approval.	POTWs, PSD, Other NPDES Permittees, and Agricultural Dischargers	6 months after effective date of the TMDL
4	Responsible jurisdictions and agencies shall begin monitoring as outlined in the approved monitoring plan.	POTWs, PSD, Other NPDES Permittees, and Agricultural Dischargers	1 year after monitoring plan approval by Executive Officer
5	Responsible jurisdictions and agencies shall submit workplans for the optional special studies.	POTWs, PSD, Other NPDES Permittees, and Agricultural Dischargers	Within 10 years of effective date of the TMDL
6	Responsible jurisdictions and agencies shall submit results of the special studies.	POTWs, PSD, Other NPDES Permittees, and Agricultural Dischargers	2 years after workplan approval by Executive Officer
7	Re-evaluation of the interim WLAs and interim LAs for boron, chloride, sulfate, and TDS based on new data. Responsible jurisdictions and agencies shall demonstrate that implementation actions have reduced the boron, sulfate, TDS, and chloride imbalance by 20%.	POTWs, PSD, Other NPDES Permittees, and Agricultural Dischargers	3 years after effective date of the TMDL
8	Re-evaluation of the interim WLAs and interim LAs for boron, chloride, sulfate, and TDS based on new data. Responsible jurisdictions and agencies shall demonstrate that implementation actions have reduced the boron, sulfate, TDS and chloride imbalance by 40%.	POTWs, PSD, Other NPDES Permittees, and Agricultural Dischargers	7 years after effective date of the TMDL
9	Re-evaluation of the interim WLAs and interim LAs for boron, chloride, sulfate, and TDS based on new data. Responsible jurisdictions and agencies shall demonstrate that implementation actions have reduced the boron, sulfate, TDS, and chloride imbalance by 70%.	POTWs, Permitted Stormwater Dischargers (PSD), Other NPDES Permittees, and Agricultural Dischargers	10 years after effective date of the TMDL
10	The Los Angeles Regional Board shall reconsider this TMDL to re-evaluate numeric targets, WLAs, LAs and the implementation schedule based on the results of the special studies and/or compliance monitoring.	The Regional Board	12 years after effective date of the TMDL
11	Responsible jurisdictions and agencies shall demonstrate that the watershed has achieved an annual boron, sulfate, TDS, and chloride balance.	POTWs, PSD, Other NPDES Permittees, and Agricultural Dischargers	15 years after effective date of the TMDL
12	The POTWs and non-storm water NPDES permits shall achieve WLAs, which shall be expressed as NPDES mass-based effluent limitation specified in accordance with federal regulations and state policy on water quality control.	POTWs and Other NPDES Permittees	15 years after effective date of the TMDL

¹ Permitted stormwater dischargers that are responsible parties to this TMDL include the Municipal Stormwater Dischargers (MS4s) of the Cities of Camarillo, Moorpark, Thousand Oaks, County of Ventura, Ventura County Watershed Protection District, and general industrial and construction permittees.

Attachment A to Resolution No. R4-2007-016

Item	Implementation Action	Responsible Party	Completion Date
13	Irrigated agriculture shall achieve LAs, which will be implemented through the Conditional Waiver for Irrigated Lands as mass-based receiving water limits.	Agricultural Dischargers	15 years after effective date of the TMDL
14	The permitted stormwater dischargers shall achieve WLAs, which shall be expressed as NPDES mass-based limits specified in accordance with federal regulations and state policy on water quality control.	Permitted Stormwater Dischargers	15 years after effective date of the TMDL
15	Water quality objectives will be achieved at the base of the subwatersheds designated in the TMDL.	POTWs, PSD, Other NPDES Permittees, and Agricultural Dischargers	15 years after effective date of the TMDL

CHAPTER 3. WATER QUALITY OBJECTIVES

Section 13241, Division 7 of the California Water Code specifies that each Regional Water Quality Control Board shall establish water quality objectives which, in the Regional Board's judgment, are necessary for the reasonable protection of beneficial uses and for the prevention of nuisance.

Section 303 of the 1972 Amendments to the federal Water Pollution Control Act requires the State to submit to the Administrator of the U.S. Environmental Protection Agency (U.S. EPA) for approval, all new or revised water quality standards which are established for surface and ocean waters. Under federal terminology, water quality standards consist of beneficial uses enumerated in Chapter Two and water quality objectives contained in this chapter.

Water quality objectives contained herein are designed to satisfy all State and federal requirements.

As new information becomes available, the Regional Board will review the appropriateness of objectives contained herein. These objectives are subject to public hearing at least once during each three-year period following adoption of this plan for the purpose of review and modification as appropriate.

I. CONSIDERATIONS IN SELECTING WATER QUALITY OBJECTIVES

The aforementioned 1972 Amendments to the federal Water Pollution Control Act declare that a national goal is elimination of discharge of pollutants into navigable waters.

A prerequisite to water quality control planning is the establishment of a base or reference point. The base in this instance was various general and specific water quality criteria previously found acceptable for particular beneficial uses or selected sources of waste. Current technical guidelines, available historical data, and enforcement feasibility were given full consideration in formulating water quality objectives.

A distinction is made here between the terms "water quality objectives" and "water quality standards". Water quality objectives have been adopted by the State and, when applicable, extended as federal water quality standards. Water quality standards, previously mentioned in this chapter's introduction, pertain to navigable waters and become legally enforceable criteria when accepted by the U.S. EPA Regional Administrator.

Point and nonpoint water pollution sources described herein have the same meaning as defined in the federal Water Pollution Control Act. Point sources are waste loads from identifiable sources such as municipal discharges, industrial discharges, vessels, controllable storm waters, fish hatchery discharges, confined animal operations, and agricultural drains. Nonpoint sources are waste loads resulting from land use practices where wastes are not collected and disposed of in any readily identifiable manner. Examples include: urban drainage, agricultural runoff, road construction activities, mining, grassland management, logging and other harvest activities, and natural sources such as effects of fire, flood, and landslide. The distinction between point sources and diffuse sources is not always clear but generally applies to the practicality of waste load control.

Water quality objectives for the Central Coastal Basin satisfy State and federal requirements to protect waters for the beneficial uses in Chapter Two and are consistent with all existing statewide plans and policies.

II. WATER QUALITY OBJECTIVES

The water quality objectives which follow supersede and replace those contained in the 1967 Water Quality Control Policies; the Interim Water Quality Control Plan for the Central Coastal Basin adopted by the Regional Board in 1971, including all existing revisions; and the Water Quality Control Plan Report for the Central Coastal Basin, adopted by the Regional Board in 1974.

Controllable water quality shall conform to the water quality objectives contained herein. When other conditions cause degradation of water quality beyond the levels or limits established as water quality objectives, controllable conditions shall not cause further degradation of water quality.

Controllable water quality conditions are those actions or circumstances resulting from man's activities that may influence the quality of the waters of the State and that may be reasonably controlled.

Water quality objectives are considered to be necessary to protect those present and probable future beneficial uses enumerated in Chapter Two of this plan and to protect existing high quality waters of the State. These objectives will be achieved primarily through the establishment of waste discharge requirements and through implementation of this water quality control plan.

In setting waste discharge requirements, the Regional Board will consider the potential impact on beneficial uses within the area of influence of the discharge, the existing quality of receiving waters, and the appropriate water quality objectives. The Regional Board will make a finding of beneficial uses to be protected and establish waste discharge requirements to protect those uses and to meet water quality objectives.

Several water quality objectives listed herein originate from the California Code of Regulations, Title 22. If Title 22 concentrations are amended, Basin Plan objectives are automatically amended to correspond with the new regulations.

II.A. ANTI-DEGRADATION POLICY

Wherever the existing quality of water is better than the quality of water established herein as objectives, such existing quality shall be maintained unless otherwise provided by the provisions of the State Water Resources Control Board Resolution No. 68-16, "Statement of Policy with Respect to Maintaining High Quality of Waters in California," including any revisions thereto. A copy of this policy is included in the Appendix.

II.A.1. OBJECTIVES FOR OCEAN WATERS

The provisions of the State Board's "Water Quality Control Plan for Ocean Waters of California" (Ocean Plan), "Water Quality Control Plan for Control of Temperature in the Coastal and Interstate Waters and Enclosed Bays and Estuaries of California" (Thermal Plan), and any revisions thereto shall apply in their entirety to affected waters of the basin. The Ocean and Thermal Plans shall also apply in their entirety to Monterey Bay and Carmel Bay. Copies of these plans are included verbatim in the Appendix.

In addition to provisions of the Ocean Plan and Thermal Plan, the following objectives shall also apply to all ocean waters, including Monterey and Carmel Bays:

Dissolved Oxygen

The mean annual dissolved oxygen concentration shall not be less than 7.0 mg/l, nor shall the minimum dissolved oxygen concentration be reduced below 5.0 mg/l at any time.

pH

The pH value shall not be depressed below 7.0, nor raised above 8.5.

Radioactivity

Radionuclides shall not be present in concentrations that are deleterious to human, plant, animal, or aquatic life; or result in the accumulation of radionuclides in the food web to an extent which presents a hazard to human, plant, animal, or aquatic life.

II.A.2. OBJECTIVES FOR ALL INLAND SURFACE WATERS, ENCLOSED BAYS, AND ESTUARIES

II.A.2.a. GENERAL OBJECTIVES

The following objectives apply to all inland surface waters, enclosed bays, and estuaries of the basin:

Color

Waters shall be free of coloration that causes nuisance or adversely affects beneficial uses. Coloration attributable to materials of waste origin shall not be greater than 15 units or 10 percent above natural background color, whichever is greater.

Tastes and Odors

Waters shall not contain taste or odor-producing substances in concentrations that impart undesirable tastes or odors to fish flesh or other edible products of aquatic origin, that cause nuisance, or that adversely affect beneficial uses.

Floating Material

Waters shall not contain floating material, including solids, liquids, foams, and scum, in concentrations that cause nuisance or adversely affect beneficial uses.

Suspended Material

Waters shall not contain suspended material in concentrations that cause nuisance or adversely affect beneficial uses.

Settleable Material

Waters shall not contain settleable material in concentrations that result in deposition of material that causes nuisance or adversely affects beneficial uses.

Oil and Grease

Waters shall not contain oils, greases, waxes, or other similar materials in concentrations that result in a visible film or coating on the surface of the water or on objects in the water, that cause nuisance, or that otherwise adversely affect beneficial uses.

Biostimulatory Substances

Waters shall not contain biostimulatory substances in concentrations that promote aquatic growths to the extent that such growths cause nuisance or adversely affect beneficial uses.

Sediment

The suspended sediment load and suspended sediment discharge rate of surface waters shall not be altered in such a manner as to cause nuisance or adversely affect beneficial uses.

Turbidity

Waters shall be free of changes in turbidity that cause nuisance or adversely affect beneficial uses.

Increase in turbidity attributable to controllable water quality factors shall not exceed the following limits:

1. Where natural turbidity is between 0 and 50 Jackson Turbidity Units (JTU), increases shall not exceed 20 percent.
2. Where natural turbidity is between 50 and 100 JTU, increases shall not exceed 10 JTU.
3. Where natural turbidity is greater than 100 JTU, increases shall not exceed 10 percent.

Allowable zones of dilution within which higher concentrations will be tolerated will be defined for each discharge in discharge permits.

pH

For waters not mentioned by a specific beneficial use, the pH value shall not be depressed below 7.0 or raised above 8.5.

Dissolved Oxygen

For waters not mentioned by a specific beneficial use, dissolved oxygen concentration shall not be reduced below 5.0 mg/l at any time. Median values should not fall below 85 percent saturation as a result of controllable water quality conditions.

Temperature

Temperature objectives for Enclosed Bays and Estuaries are as specified in the "Water Quality Control Plan for Control of Temperature in the Coastal and Interstate Waters and Enclosed Bays and Estuaries of California" including any revisions thereto. A copy of this plan is included in the Appendix.

Natural receiving water temperature of intrastate waters shall not be altered unless it can be demonstrated to the satisfaction of the Regional Board that such alteration in temperature does not adversely affect beneficial uses.

Toxicity

All waters shall be maintained free of toxic substances in concentrations which are toxic to, or which produce detrimental physiological responses in, human, plant, animal, or aquatic life. Compliance with this objective will be determined by use of indicator organisms, analyses of species diversity, population density, growth anomalies, toxicity bioassays of appropriate duration, or other appropriate methods as specified by the Regional Board.

Survival of aquatic life in surface waters subjected to a waste discharge or other controllable water quality conditions, shall not be less than that for the same water body in areas unaffected by the waste discharge or, when necessary, for other control water that is consistent with the requirements for "experimental water" as described in Standard Methods for the Examination of Water and Wastewater, latest edition. As a minimum, compliance with this objective shall be evaluated with a 96-hour bioassay.

In addition, effluent limits based upon acute bioassays of effluents will be prescribed where appropriate, additional numerical receiving water objectives for specific toxicants will be established as sufficient data

become available, and source control of toxic substances is encouraged.

The discharge of wastes shall not cause concentrations of unionized ammonia (NH₃) to exceed 0.025 mg/l (as N) in receiving waters.

Pesticides

No individual pesticide or combination of pesticides shall reach concentrations that adversely affect beneficial uses. There shall be no increase in pesticide concentrations found in bottom sediments or aquatic life.

For waters where existing concentrations are presently nondetectable or where beneficial uses would be impaired by concentrations in excess of nondetectable levels, total identifiable chlorinated hydrocarbon pesticides shall not be present at concentrations detectable within the accuracy of analytical methods prescribed in Standard Methods for the Examination of Water and Wastewater, latest edition, or other equivalent methods approved by the Executive Officer.

Chemical Constituents

Where wastewater effluents are returned to land for irrigation uses, regulatory controls shall be consistent with Title 22 of the California Code of Regulations and other relevant local controls.

Other Organics

Waters shall not contain organic substances in concentrations greater than the following:

Methylene Blue	
Activated Substances	0.2 mg/l
Phenols	0.1 mg/l
PCB's	0.3 µg/l
Phthalate Esters	0.002 µg/l

Radioactivity

Radionuclides shall not be present in concentrations that are deleterious to human, plant, animal, or aquatic life; or result in the accumulation of radionuclides in the food web to an extent which presents a hazard to human, plant, animal, or aquatic life.

MUNICIPAL AND DOMESTIC SUPPLY (MUN)

pH

The pH value shall neither be depressed below 6.5 nor raised above 8.3.

Organic Chemicals

All inland surface waters, enclosed bays, and estuaries shall not contain concentrations of organic chemicals in excess of the limiting concentrations set forth in California Code of Regulations, Title 22, Chapter 15, Article 5.5, Section 64444.5, Table 5 and listed in Table 3-1.

Chemical Constituents

Waters shall not contain concentrations of chemical constituents in excess of the limits specified in California Code of Regulations, Title 22, Article 4, Chapter 15, Section 64435, Tables 2 and 3 as listed in Table 3-2.

Phenol

Waters shall not contain phenol concentrations in excess of 1.0 µg/l.

Radioactivity

Waters shall not contain concentrations of radionuclides in excess of the limits specified in California Code of Regulations, Title 22, Chapter 15, Article 5, Sections 64441 and 64443, Table 4.

AGRICULTURAL SUPPLY (AGR)

pH

The pH value shall neither be depressed below 6.5 nor raised above 8.3.

Dissolved Oxygen

Dissolved oxygen concentration shall not be reduced below 2.0 mg/l at any time.

Chemical Constituents

September 8, 1994

Waters shall not contain concentrations of chemical constituents in amounts which adversely affect the agricultural beneficial use. Interpretation of adverse effect shall be as derived from the University of California Agricultural Extension Service guidelines provided in Table 3-3.

In addition, waters used for irrigation and livestock watering shall not exceed concentrations for those chemicals listed in Table 3-4. Salt concentrations for irrigation waters shall be controlled through implementation of the anti-degradation policy to the effect that mineral constituents of currently or potentially usable waters shall not be increased. It is emphasized that no controllable water quality factor shall degrade the quality of any ground water resource or adversely affect long-term soil productivity.

Where wastewater effluents are returned to land for irrigation uses, regulatory controls shall be consistent with Title 22 of the California Code of Regulations and with relevant controls for local irrigation sources.

WATER CONTACT RECREATION (REC-1)

pH

The pH value shall neither be depressed below 6.5 nor raised above 8.3.

Bacteria

Fecal coliform concentration, based on a minimum of not less than five samples for any 30-day period, shall not exceed a log mean of 200/100 ml, nor shall more than ten percent of total samples during any 30-day period exceed 400/100 ml.

NON-CONTACT WATER RECREATION (REC-2)

pH

The pH value shall neither be depressed below 6.5 nor raised above 8.3.

Table 3-3. Guidelines for Interpretation of Quality of Water for Irrigation^a

Problem and Related Constituent	Water Quality Guidelines		
	No Problem	Increasing Problems	Severe
Salinity ^b			
EC of irrigation water, mmho/cm	<0.75	0.75 - 3.0	>3.0
Permeability			
EC of irrigation water, mmho/cm	>0.5	<0.5	<0.2
SAR, adjusted ^c	<6.0	6.0 - 9.0	>9.0
Specific ion toxicity from root absorption ^d			
Sodium (evaluate by adjusted SAR)	<3	3.0 - 9.0	>9.0
Chloride			
me/l	<4	4.0 - 10	>10
mg/l	<142	142 - 355	>355
Boron, mg/l	<0.5	0.5 - 2.0	2.0 - 10.0
Specific ion toxicity from foliar absorption ^e (sprinklers)			
Sodium			
me/l	<3.0	>3.0	--
mg/l	<69	>69	--
Chloride			
me/l	<3.0	>3.0	--
mg/l	<106	>106	--
Miscellaneous ^f			
NH4 - N, mg/l for sensitive crops	<5	5 - 30	>30
NO3 - N, mg/l for sensitive crops	<5	5 - 30	>30
HCO3 (only with overhead sprinklers)			
me/l	<1.5	1.5 - 8.5	>8.5
mg/l	<90	90 - 520	>520
pH	Normal range	6.5 - 8.4	--

- a Interpretations are based on possible effects of constituents on crops and/or soils. Guidelines are flexible and should be modified when warranted by local experience or special conditions of crop, soil, and method of irrigation.
- b Assumes water for crop plus needed water for leaching requirement (LR) will be applied. Crops vary in tolerance to salinity. Refer to tables for crop tolerance and LR. The mmho/cm x 640 = approximate total dissolved solids (TDS) in mg/l or ppm; mmho x 1,000 = micromhos.
- c Adjusted SAR (sodium adsorption ratio) is calculated from a modified equation developed by U.S. Salinity Laboratory to include added effects of precipitation and dissolution of calcium in soils and related to CO₃ + HCO₃ concentrations.

To evaluate sodium (permeability) hazard: $Adjusted\ SAR = Na/[1/2(Ca + Mg)]^{1/2}[1 + (8.4 - pHc)]$.
 Refer to Appendix for calculation assistance.

SAR can be reduced if necessary by adding gypsum. Amount of gypsum required (GR) to reduce a hazardous SAR to any desired SAR (SAR desired) can be calculated as follows:

$$GR = \left[\frac{2(Na)^2}{SAR^2\ desired} (Ca + Mg) \right] 234$$

Note: Na and Ca + Mg should be in me/l. GR will be in lbs. of 100 percent gypsum per acre foot of applied water.

- d Most tree crops and woody ornamentals are sensitive to sodium and chloride (use values shown). Most annual crops are not sensitive (use salinity tolerance tables). For boron sensitivity, refer to boron tolerance tables.
- e Leaf areas wet by sprinklers (rotating heads) may show a leaf burn due to sodium or chloride absorption under low humidity/high evaporation conditions. (Evaporation increases ion concentration in water films on leaves between rotations of sprinkler heads.)
- f Excess N may affect production or quality of certain crops; e.g., sugar beets, citrus, avocados, apricots, etc. (1 mg/l NO₃ - N = 2.72 lbs. N/acre foot of applied water.) HCO₃ with overhead sprinkler irrigation may cause a white carbonate deposit to form on fruit and leaves.

Table 3-4. Water Quality Objectives for Agricultural Water Use

ELEMENT	Maximum Concentration (mg/l) ^a	
	Irrigation supply ^b	Livestock watering
Aluminum	5.0	5.0
Arsenic	0.1	0.2
Beryllium	0.1	--
Boron	0.75	5.0
Cadmium	0.01	0.05
Chromium	0.10	1.0
Cobalt	0.05	1.0
Copper	0.2	0.5
Fluoride	1.0	2.0
Iron	5.0	--
Lead	5.0	0.1 ^c
Lithium	2.5 ^d	--
Manganese	0.2	--
Mercury	--	0.01
Molybdenum	0.01	0.5
Nickel	0.2	--
Nitrate + Nitrite	--	100
Nitrite	--	10
Selenium	0.02	0.05
Vanadium	0.1	0.10
Zinc	2.0	25

- a. Values based primarily on "Water Quality Criteria 1972" National Academy of Sciences-National Academy of Engineers, Environmental Study Board, ad hoc Committee on Water Quality Criteria furnished as recommended guidelines by University of California Agriculture Extension Service, January 7, 1974; maximum values are to be considered as 90 percentile values not to be exceeded.
- b. Values provided will normally not adversely affect plants or soils; no data available for mercury, silver, tin, titanium, and tungsten.
- c. Lead is accumulative and problems may begin at threshold value (0.05 mg/l).
- d. Recommended maximum concentration for irrigation citrus is 0.075 mg/l.

Bacteria

Fecal coliform concentration, based on a minimum of not less than five samples for any 30-day period, shall not exceed a log mean of 2000/100 ml, nor shall more than ten percent of samples collected during any 30-day period exceed 4000/100 ml.

COLD FRESHWATER HABITAT (COLD)

pH

The pH value shall not be depressed below 7.0 or raised above 8.5. Changes in normal ambient pH levels shall not exceed 0.5 in fresh waters.

Dissolved Oxygen

The dissolved oxygen concentration shall not be reduced below 7.0 mg/l at any time.

Temperature

At no time or place shall the temperature be increased by more than 5°F above natural receiving water temperature.

Chemical Constituents

Waters shall not contain concentrations of chemical constituents known to be deleterious to fish or wildlife in excess of the limits listed in Table 3-5.

WARM FRESHWATER HABITAT (WARM)

pH

The pH value shall not be depressed below 7.0 or raised above 8.5.

Changes in normal ambient pH levels shall not exceed 0.5 in fresh waters.

Dissolved Oxygen

The dissolved oxygen concentration shall not be reduced below 5.0 mg/l at any time.

Temperature

At no time or place shall the temperature of any water be increased by more than 5°F above natural receiving temperature.

Chemical Constituents

Waters shall not contain concentrations of chemical constituents known to be deleterious to fish or wildlife in excess of the limits listed in Table 3-5.

FISH SPAWNING (SPWN)

Cadmium

Cadmium shall not exceed .003 mg/l in hard water or .0004 mg/l in soft water at any time. (Hard water is defined as water exceeding 100 mg/l CaCO₃.)

Dissolved Oxygen

The dissolved oxygen concentration shall not be reduced below 7.0 mg/l at any time.

MARINE HABITAT (MAR)

pH

The pH value shall not be depressed below 7.0 or raised above 8.5.

Changes in normal ambient pH levels shall not exceed 0.2 units.

Dissolved Oxygen

The dissolved oxygen concentration shall not be reduced below 7.0 mg/l at any time.

Chemical Constituents

Waters shall not contain concentrations of chemical constituents known to be deleterious to fish or wildlife in excess of limits listed in Table 3-6.

Table 3-5 Toxic Metal Concentrations not to be Exceeded in Aquatic Life Habitats, mg/l^{a,b}

Freshwater (COLD, WARM)		
METAL	HARD (> 100 mg/l CaCO ₃)	SOFT (< 100 mg/l CaCO ₃)
Cadmium ^c	.03	.004
Chromium	.05	.05
Copper	.03	.01
Lead	.03	.03
Mercury ^d	.0002	.0002
Nickel ^e	.4	.1
Zinc	.2	.004

- a. Based on limiting values recommended in the National Academy of Sciences-National Academy of Engineers "Water Quality Criteria 1972." Values are 90 percentile values except as noted in qualifying note "d."
- b. Revision of Table 3-5 is currently in progress by the Regional Board.
- c. Lower cadmium values not to be exceeded for crustaceans and waters designated SPWN are 0.003 mg/l in hard water and 0.0004 mg/l in soft water.
- d. Total mercury values should not exceed 0.05 µg/l as an average value; maximum acceptable concentration of total mercury in any aquatic organism is a total B.O.D. burden of 0.5 µg/l wet weight.
- e. Value cited as objective pertains to nickel salts (not pure metallic nickel).

Table 3-6. Toxic Metal Concentrations Not to be Exceeded in Marine Habitats, mg/l^a

METAL	MARINE (MAR)
Cadmium	.0002
Chromium	.05
Copper	.01
Lead	.01
Mercury ^c	.0001
Nickel ^d	.002
Zinc	.02

- a. Based on limiting values recommended in the National Academy of Sciences-National Academy of Engineers "Water Quality Criteria 1972." Values are 90 percentile values except as noted in qualifying note "c."
- b. Revision of Table 3-6 is currently in progress by the Regional Board.
- c. Total mercury values should not exceed 0.05 µg/l as an average value; maximum acceptable concentration of total mercury in any aquatic organism is a total B.O.D. burden of 0.05 µg/l net weight.
- d. Value cited as objective pertains to nickel salts (not pure metallic nickel).

SHELLFISH HARVESTING (SHELL)

Chromium

The maximum permissible value for waters designated SHELL shall be 0.01 mg/l.

Bacteria

At all areas where shellfish may be harvested for human consumption, the median total coliform concentration throughout the water column for any 30-day period shall not exceed 70/100 ml, nor shall more than ten percent of the samples collected during any 30-day period exceed 230/100 ml for a five-tube decimal dilution test or 330/100 ml when a three-tube decimal dilution test is used.

II.A.3. WATER QUALITY OBJECTIVES FOR SPECIFIC INLAND SURFACE WATERS, ENCLOSED BAYS AND ESTUARIES

Certain water quality objectives have been established for selected surface waters; these objectives are intended to serve as a water quality baseline for evaluating water quality management in the basin. Median values, shown in Table 3-7 for surface waters, are based on available data.

It must be recognized that the median values indicated in Table 3-7 are values representing gross areas of a water body. Specific water quality objectives for a particular area may not be directly related to the objectives indicated. Therefore, application of these objectives must be based upon consideration of the surface and ground water quality naturally present; i.e., waste discharge requirements must adhere to the previously stated objectives and issuance of requirements must be tempered by consideration of beneficial uses within the immediate influence of the discharge, the existing quality of receiving waters, and water quality objectives. Consideration of beneficial uses includes: (1) a specific enumeration of all beneficial uses potentially to be affected by the waste discharge, (2) a determination of the relative importance of competing beneficial uses, and (3) impact of the discharge on existing beneficial uses. The Regional Board will make a judgment as to the priority of dominant use and minimize the impact on competing uses while not allowing the discharge to violate receiving water quality objectives.

As part of the State's continuing planning process, data will be collected and numerical water quality objectives will be developed for those mineral and nutrient constituents where sufficient information is presently not available for the establishment of such objectives.

Table 3-7. Surface Water Quality Objectives, mg/l^a

Sub-Basin/Sub-Area	TDS	Cl	SO ₄	B	Na	
Santa Ynez						
Cachuma Reservoir	600	20	220	0.4	50

At Tait Street Check Dam		250	30	60	0.2	25

a Objectives shown are annual mean values. Objectives are based on preservation of existing quality or water quality enhancement believed attainable following control of point sources

A specific monthly mean objective for Nitrate (as NO₃) of 0.25 mg/l shall apply to both the upper and lower San Lorenzo River to protect beneficial uses from adverse biostimulatory effects. Specific biostimulant objectives for other surface waters will be added to this section in tabular form once they are determined from further studies.

II.A.4. OBJECTIVES FOR GROUND WATER

II.A.4.a. GENERAL OBJECTIVES

The following objectives apply to all ground waters of the basin.

Tastes and Odors

Ground waters shall not contain taste or odor producing substances in concentrations that adversely affect beneficial uses.

Radioactivity

Radionuclides shall not be present in concentrations that are deleterious to human, plant, animal, or aquatic life; or result in the accumulation of radionuclides in the food web to an extent which presents a hazard to human, plant, animal, or aquatic life.

MUNICIPAL AND DOMESTIC SUPPLY (MUN)

Bacteria

The median concentration of coliform organisms over any seven-day period shall be less than 2.2/100 ml.

Organic Chemicals

Ground waters shall not contain concentrations of organic chemicals in excess of the limiting concentrations set forth in California Code of Regulations, Title 22, Chapter 15, Article 5.5, Section 64444.5, Table 5 and listed in Table 3-1.

Chemical Constituents

Ground waters shall not contain concentrations of chemical constituents in excess of the limits specified in California Code of Regulations, Title 22, Chapter 15, Article 4, Section 64435, Tables 2 and 3.

Radioactivity

Ground waters shall not contain concentrations of radionuclides in excess of the limits specified in California Code of Regulations, Title 22, Chapter 15, Article 5, Section 64443, Table 4.

AGRICULTURAL SUPPLY (AGR)

Ground waters shall not contain concentrations of chemical constituents in amounts that adversely affect such beneficial use. Interpretation of adverse effect shall be as derived from the University of California Agricultural Extension Service guidelines provided in Table 3-3.

In addition, water used for irrigation and livestock watering shall not exceed the concentrations for those chemicals listed in Table 3-4. No controllable water quality factor shall degrade the quality of any ground water resource or adversely affect long-term soil productivity. The salinity control aspects of ground water management will account for effects from all sources.

II.A.5. OBJECTIVES FOR SPECIFIC GROUND WATERS

Certain water quality objectives have been established for selected ground waters; these objectives are intended to serve as a water quality baseline for evaluating water quality management in the basin. The median values for ground waters are shown in Table 3-8.

Table 3-8. Median Ground Water Objectives, mg/l^a

- a Objectives shown are median values based on data averages; objectives are based on preservation of existing quality or water quality enhancement believed attainable following control of point sources.
- b Measured as Nitrogen
- c Basis for objectives is in the "Water Quality Objectives for the Santa Maria Ground Water Basin Revised Staff Report, May 1985" and February 1986, Staff Report.
- d These are maximum objectives in accordance with Title 22 of the Code of Regulations.
- e Ground water basin currently exceeds usable mineral quality.
- f Ground water basin boundary map available in appendix.
- g Basis for objectives is in the report "A Study of the Paso Robles Ground Water Basin to Establish Best Management Practices and Establish Salt Objectives", Coastal Resources Institute, June 1993.
- h Standard exceeds California Secondary Drinking Water Standards contained in Title 22 of the Code of Regulations. Water quality standard is based upon existing water quality. If water quality degradation occurs, the Regional Board may consider salt limits on appropriate discharges.

The restrictions specified for Table 3-7 are applicable to the values indicated in Table 3-8; i.e., the values are at best representative of gross areas only. Ground waters in the Upper Valley of the Salinas River Sub-basin have average Total Dissolved Solids (TDS) concentrations that range from 300 mg/l to over 3000 mg/l. Therefore, application of these objectives must be consistent with the objectives previously stated in this chapter and synchronously reflect the actual ground water quality naturally present. The Regional Board must afford full consideration to: (1) present and probable future beneficial uses affected by the waste discharge; (2) competing beneficial uses; (3) degree of impact on existing beneficial uses; (4) receiving water quality; and (5) water quality objectives, before adjudging priority of dominant use and promulgating waste discharge requirements.

As part of the State's continuing planning process, data will be collected and numerical water quality objectives will be developed for those mineral constituents where sufficient information is presently not available for the establishment of such objectives.

CHAPTER 4

WATER QUALITY OBJECTIVES

INTRODUCTION

The Porter-Cologne Act defines water quality objectives as "...the limits or levels of water quality constituents or characteristics which are established for the reasonable protection of beneficial uses of water or the prevention of nuisance within a specific area" (§13050 (h)). Further, the Act directs (§13241) that:

"Each regional board shall establish such water quality objectives in water quality control plans as in its judgement will ensure the reasonable protection of beneficial uses as the prevention of nuisance; however, it is recognized that it may be possible for the quality of water to be changed to some degree without unreasonably affecting beneficial uses. Factors to be considered by a regional board in establishing water quality objectives shall include, but not necessarily be limited to, all of the following:

- (a) Past, present, and probable future beneficial uses of water.
- (b) Environmental characteristics of the hydrographic unit under consideration, including the quality of water available thereto.
- (c) Water quality conditions that could reasonably be achieved through the coordinated control of all factors which affect water quality in the area.
- (d) Economic considerations.
- (e) The need for developing housing within the region.
- (f) The need to develop and use recycled water."

Two important additional factors which were also considered in setting the water quality objectives in this Plan are (1) historic and present water quality, and (2) the antidegradation policies cited in Chapter 2.

The water quality objectives in this plan supersede and replace those adopted in the 1983 Basin Plan. Perhaps the most significant difference between this and the prior Plan is the inclusion of new objectives for un-ionized ammonia and site-specific objectives for the middle Santa Ana River system for copper, cadmium, and lead.

Some of these water quality objectives refer to "controllable sources" or "controllable water quality factors." Controllable sources include both point and nonpoint source discharges, such as conventional discharges from pipes, as well as discharges from land areas or other diffuse sources. Controllable water quality factors are those characteristics of the discharge and/or the receiving water which can be controlled by

treatment or management methods. Examples of other activities which may not involve waste discharges, but which also constitute controllable water quality factors, include the percolation of storm water, transport/delivery of water via natural stream channels, and stream diversions.

The water quality objectives in this Plan are specified according to waterbody type: ocean waters; enclosed bays and estuaries; inland surface waters; and groundwaters.

The narrative water quality objectives below are arranged alphabetically. They vary in applicability and scope, reflecting the variety of beneficial uses of water that have been identified (Chapter 3). Where numerical objectives are specified, they generally represent the levels that will protect beneficial uses. However, in establishing waste discharge requirements for specific discharges, the Regional Board may find that more stringent levels are necessary to protect beneficial uses. In other cases, an objective may prohibit the discharge of specific substances, may tolerate natural or "background" levels of certain substances or characteristics but no increases over those values, or may express a limit in terms of not impacting other beneficial uses. An adverse effect or impact on a beneficial use occurs where there is an actual or threatened loss or impairment of that beneficial use.

OCEAN WATERS (Amended by Resolution No. 97-20, April 18, 1997)

Water quality objectives specified in the "Water Quality Control Plan for Ocean Waters of California" (Ocean Plan) and the "Water Quality Control Plan for Control of Temperature in the Coastal and Interstate Waters and Enclosed Bays and Estuaries of California" (Thermal Plan) are incorporated into this Basin Plan by reference. The provisions of the Ocean Plan and Thermal Plan apply to the ocean waters within this Region. **(End of Resolution No. 97-20)**

ENCLOSED BAYS AND ESTUARIES

"Enclosed bays" means indentations along the coast which enclose an area of oceanic water within distinct headlands or harbor works. "Estuaries" means waters, including coastal lagoons, located at the mouths of streams which serve as areas of mixing for fresh and ocean waters. Enclosed bays and estuaries do not include ocean waters or inland surface waters (see definition in the Inland Surface Waters section).

The objectives which are included below apply to all enclosed bays and estuaries within the region. In addition to these parameter-specific objectives, the following narrative objective shall apply:

Enclosed bay and estuarine communities and populations, including vertebrate, invertebrate, and plant species, shall not be degraded as a result of the discharge of waste. Degradation is damage to an aquatic community or population with the result that a balanced community no longer exists. A balanced community is one that is (1) diverse, (2) has the ability to sustain itself through cyclic seasonal changes, (3) includes necessary food chain species, and (4) is not dominated by pollution-tolerant

species, unless that domination is caused by physical habitat limitations. A balanced community also (5) may include historically introduced non-native species, but (6) does not include species present because best available technology has not been implemented, or (7) because site-specific objectives have been adopted, or (8) because of thermal discharges.

Algae

Excessive growth of algae and/or other aquatic plants can degrade water quality. Algal blooms sometimes occur naturally, but they are often the result of excess nutrients (*i.e.*, nitrogen, phosphorus) from waste discharges or nonpoint sources. These blooms can lead to problems with tastes, odors, color, and increased turbidity and can depress the dissolved oxygen content of the water, leading to fish kills. Floating algal scum and algal mats are also an aesthetically unpleasant nuisance.

Waste discharges shall not contribute to excessive algal growth in receiving waters.

Bacteria, Coliform

Fecal bacteria are part of the intestinal flora of warm-blooded animals. Their presence in bay and estuarine waters is an indicator of pollution. Total coliform is measured in terms of the number of coliform organisms per unit volume. Total coliform numbers can include non-fecal bacteria, so additional testing is often done to confirm the presence and numbers of fecal coliform bacterial. Water quality objectives for numbers of total and fecal coliform vary with the uses of the water, as shown below.

Bays and Estuaries

REC-1 *Fecal coliform: log mean less than 200 organisms/100 mL based on five or more samples/30 day period, and not more than 10% of the samples exceed 400 organisms/100 mL for any 30-day period.*

SHEL *Fecal coliform: median concentration not more than 14 MPN (most probable number)/100 ml and not more than 10% of samples exceed 43 mpn / 100 mL*

Chlorine, Residual

Wastewater disinfection with chlorine usually produces a chlorine residual. Chlorine and its reaction products are toxic to aquatic life.

To protect aquatic life, the chlorine residual in wastewater discharged to enclosed bays and estuaries shall not exceed 0.1 mg/L.

Color

Color in water may arise naturally, such as from minerals, plant matter or algae, or may be caused by industrial pollutants. Color is primarily an aesthetic consideration.

Waste discharges shall not result in coloration of the receiving waters which causes a nuisance or adversely affects beneficial uses. The natural color of fish, shellfish or other bay and estuarine water resources used for human consumption shall not be impaired.

Floatables

Floatables are an aesthetic nuisance as well as a substrate for algae and insect vectors.

Waste discharges shall not contain floating materials, including solids, liquids, foam or scum, which cause a nuisance or adversely affect beneficial uses.

Oil and Grease

Oil and grease can be present in water as a result of the discharge of treated wastes and the accidental or intentional dumping of wastes into sinks and storm drains. Oils and related materials have a high surface tension and are not soluble in water, therefore forming a film on the water's surface. This film can result in nuisance conditions because of odors and visual impacts. Oil and grease can coat birds and aquatic organisms, adversely affecting respiration and/or thermoregulation.

Waste discharges shall not result in deposition of oil, grease, wax or other materials in concentrations which result in a visible film or in coating objects in the water, or which cause a nuisance or adversely affect beneficial uses.

Oxygen, Dissolved

Adequate dissolved oxygen (D.O.) is vital for aquatic life. Depression of D.O. levels can lead to fish kills and odors resulting from anaerobic decomposition. Dissolved oxygen content in water is a function of water temperature and salinity.

The dissolved oxygen content of enclosed bays and estuaries shall not be depressed to levels that adversely affect beneficial uses as a result of controllable water quality factors.

pH

pH is a measure of the hydrogen ion concentration of water. pH values generally range from 0 (most acidic) to 14 (most alkaline). Many pollutants can alter the pH, raising or lowering it excessively. These extremes in pH can have adverse effects on aquatic biota and can corrode pipes and concrete. Even small changes in pH can harm aquatic biota.

The pH of bay or estuary waters shall not be raised above 8.6 or depressed below 7.0 as a result of controllable water quality factors; ambient pH levels shall not be changed more than 0.2 units.

Radioactivity

Radioactive materials shall not be present in the bay or estuarine waters of the region in concentrations which are deleterious to human, plant or animal life.

Solids, Suspended and Settleable

Settleable solids are deleterious to benthic organisms and may cause anaerobic conditions to form. Suspended solids can clog fish gills and interfere with respiration in aquatic fauna. They also screen out light, hindering photosynthesis and normal aquatic plant growth and development.

Enclosed bays and estuaries shall not contain suspended or settleable solids in amounts which cause a nuisance or adversely affect beneficial uses as a result of controllable water quality factors.

Sulfides

Sulfides are generated by many industries and from the anaerobic decomposition of organic matter. In water, sulfides can react to form hydrogen sulfide (H₂S), commonly known for its "rotten egg" odor. Sulfides in ionic form are also toxic to fish.

The dissolved sulfide content of enclosed bays and estuaries shall not be increased as a result of controllable water quality factors.

Surfactants (surface-active agents)

This group of materials includes detergents, wetting agents, and emulsifiers.

Waste discharges shall not contain concentrations of surfactants which result in foam in the course of flow or the use of the receiving water, or which adversely affect aquatic life.

Taste and Odor

Undesirable tastes and odors in water may be a nuisance and may indicate the presence of a pollutant(s).

The enclosed bays and estuaries of the region shall not contain, as a result of controllable water quality factors, taste- or odor-producing substances at concentrations which cause a nuisance or adversely affect beneficial uses. The natural taste and odor of fish, shellfish or other enclosed bay and estuarine water resources used for human consumption shall not be impaired.

Temperature

Waste discharges can cause temperature changes in the receiving waters which adversely affect the aquatic biota. Discharges most likely to cause these temperature effects are cooling tower and heat exchanger blowdown.

All bay and estuary waters shall meet the objective specified in the Thermal Plan.

Toxic Substances

Toxic substances shall not be discharged at levels that will bioaccumulate in aquatic resources to level which are harmful to human health.

The concentrations of toxic substances in the water column, sediments or biota shall not adversely affect beneficial uses.

Turbidity

Turbidity is a measure of light scattered due to particulates in water.

Increases in turbidity which result from controllable water quality factors shall comply with the following:

<u>Natural Turbidity</u>	<u>Maximum Increase</u>
0-50 NTU	20%
50-100 NTU	10 NTU
Greater than 100 NTU	10%

All enclosed bay and estuaries of the region shall be free of changes in turbidity which adversely affect beneficial uses.

INLAND SURFACE WATERS

Inland surface waters include streams, rivers, lakes, and wetlands in the Region. Ocean waters and enclosed bays and estuaries are not considered inland surface waters.

The narrative objectives which are included below apply to all inland surface waters within the region, including lakes, streams, and wetlands. In addition, specific numerical objectives are listed in Table 4-1. Where more than one objective is applicable, the stricter shall apply. In addition to these objectives, the following shall apply:

Inland surface water communities and populations, including vertebrate, invertebrate, and plant species, shall not be degraded as a result of the discharge of waste. Degradation is damage to an aquatic community or population with the result that balanced community no longer exists. A balanced community is one that is (1) diverse, (2) has the ability to sustain itself through cyclic seasonal changes, (3) includes necessary food chain species, and (4) is not dominated by pollution-tolerant species, unless that domination is caused by physical habitat limitations. A balanced community also (5) may include historically introduced non-native species, but (6) does not include species present because best available technology has not been

implemented, or (7) because site-specific objectives have been adopted, or (8) because of thermal discharges.

Algae

Excessive growth of algae and/or other aquatic plants can degrade water quality. Algal blooms sometimes occur naturally, but they are often the result of excess nutrients (*i.e.*, nitrogen, phosphorous) from waste discharges or nonpoint sources. These blooms can lead to problems with tastes, odors, color, and increased turbidity and can depress the dissolved oxygen content of the water, leading to fish kills. Floating algal scum and algal mats are also an aesthetically unpleasant nuisance.

Waste discharges shall not contribute to excessive algal growth in inland surface receiving waters.

Ammonia, Un-ionized

Un-ionized ammonia (NH₃, or UIA) is toxic to fish and other aquatic organisms. In water, UIA exists in equilibrium with ammonium (NH₄⁺) and hydroxide (OH) ions. The proportions of each change as the temperature, pH, and salinity of the water change.

The 1983 Basin Plan specified an UIA objective of 0.8 mg/L for waterbodies designated **WARM**. The SWRCB directed the Regional Board to review the 0.8 mg/L objective because of concerns that it is not stringent enough to protect aquatic wildlife. The USEPA concurred that this review was necessary.

The Regional Board contracted with California State University, Fullerton to conduct a study of un-ionized ammonia in the Santa Ana River and to develop recommendations regarding the UIA objective. This study, which was conducted in 1985-87, was complemented by additional Regional Board staff analysis. The additional staff analysis focused on adjusting EPA's national criteria for **WARM** waters (published in 1984 and amended in 1992), using the recalculation procedure. With this procedure, cold and warmwater species not found in the Santa Ana Region's **WARM** designated waters were deleted from the database used to derive the national criteria, and new criteria were calculated.

Based on these analyses, this Plan specifies UIA objectives for **WARM** and **COLD** designated waterbodies in the Region. **Note:** site-specific objectives have been developed for the Santa Ana River and certain tributaries (see next page).

Acute (1-hour) UIA-N Objectives

For waterbodies designed **COLD**:
Objective = 0.822 [0.52/FT/FPH/2], where

$$\begin{array}{ll} FT = 10^{(0.03(20-T))} & 0 \leq T \leq 20^{\circ}\text{C} \\ FT = 1 & 20 \leq T \leq 30^{\circ}\text{C} \end{array}$$

$$FPH = \frac{1+10^{(7.4-pH)}}{1.25} \quad 6.5 \leq pH \leq 8$$

$$FPH = 1 \quad 8 \leq pH \leq 9$$

For waterbodies designated **WARM**:

Objective = $0.822[0.87/FT/FPH/2]$, where

$$FT = 10^{(0.03(20-T))} \quad 0 \leq T \leq 25^\circ C$$

$$FT = 0.7079 \quad 25 \leq T \leq 30^\circ C$$

$$FPH = \frac{1+10^{(7.4-pH)}}{1.25} \quad 6.5 \leq pH \leq 8$$

$$FPH = 1 \quad 8 \leq pH \leq 9$$

Chronic (4-day) UIA-N Objectives

For waterbodies designated **COLD**:

Objective = $0.822[0.52/FT/FPH/RATIO]$, where

$$FT = 10^{(0.03(20-T))} \quad 0 \leq T \leq 15^\circ C$$

$$FT = 1.4125 \quad 15 \leq T \leq 30^\circ C$$

$$FPH = \frac{1+10^{(7.4-pH)}}{1.25} \quad 6.5 \leq pH \leq 8$$

$$FPH = 1 \quad 8 \leq pH \leq 9$$

$$RATIO = \frac{24[10^{(7.7-pH)}]}{1+10^{(7.4-pH)}} \quad 6.5 \leq pH \leq 7.7$$

$$RATIO = 13.5 \quad 7.7 \leq pH \leq 9$$

For waterbodies designated **WARM**:

Objective = $0.822[0.87/FT/FPH/RATIO]$, where

$$FT = 10^{(0.03(20-T))} \quad 0 \leq T \leq 20^\circ C$$

$$FT = 1 \quad 20 \leq T \leq 30^\circ C$$

$$FPH = \frac{1+10^{(7.4-pH)}}{1.25} \quad 6.5 \leq pH \leq 8$$

$$FPH = 1 \quad 8 \leq pH \leq 9$$

$$RATIO = \frac{24[10^{(7.7-pH)}]}{1+10^{(7.4-pH)}} \quad 6.5 \leq pH \leq 7.7$$

$$RATIO = 13.5 \quad 7.7 \leq pH \leq 9$$

Calculated numerical UIA-N objectives as well as corresponding total ammonia nitrogen concentration for various pH and temperature conditions are shown in Tables 4-2 and 4-3. Table 4-4 lists the above equations in a form that can be entered into a computer or calculator program.

Site-specific Un-ionized Ammonia Objective for the Santa Ana River System

In addition to the un-ionized ammonia (UIA) objectives specified above, this Plan includes a chronic (4-day) site-specific UIA objective for the middle Santa Ana River, Chino Creek, Mill Creek (Prado Area), Temescal Creek, and San Timoteo Creek. This site-specific objective is based on carefully controlled chronic toxicity tests on Santa Ana River water conducted as part of the Santa Ana River Use-Attainability Analysis Study. The Santa Ana River water was spiked with UIA concentrations ranging from 0.0 (control) to 1.0 mg/L. The No Observed Effect Level (NOEL) was found to be at a UIA concentration of 0.24 mg/L (or 0.19 mg/L as UIA-nitrogen). Using a 50% safety factor, the UIA objective developed is 0.12 mg/L (or 0.098 mg/L UIA-nitrogen).

To prevent chronic toxicity to aquatic life in the Santa Ana River, Reaches 2, 3, and 4, Chino Creek, Mill Creek (Prado Area), Temescal Creek and San Timoteo Creek, discharges to these waterbodies shall not cause the concentration of un-ionized ammonia (as nitrogen) to exceed 0.098 mg/L) (NH₃-N) as a 4-day average.

Bacteria, Coliform

Fecal bacteria are part of the intestinal flora of warm-blooded animals. Their presence in surface waters is an indicator of pollution. Total coliform is measured in terms of the number of coliform organisms per unit volume. Total coliform numbers can include non-fecal bacteria, so additional testing is often done to confirm the presence and numbers of fecal coliform bacteria. Water quality objectives for numbers of total and fecal coliform vary with the uses of the water, as shown below.

Lakes and Streams

- MUN** *Total coliform: less than 100 organisms/100 mL*
- REC-1** *Fecal coliform: log mean less than 200 organisms/100 mL based on five or more samples/30 day period, and not more than 10% of the samples exceed 400 organisms/100 mL for any 30-day period*
- REC-2** *Fecal coliform: average less than 2000 organisms/100 mL and not more than 10% of samples exceed 4000 organisms/100 mL for any 30-day period*

Boron

Boron is not considered a problem in drinking water supplies until concentrations of 20-30 mg/L are reached. In irrigation, boron is an essential element. However, boron concentrations in excess of 0.75 mg/L may be deleterious to certain crops, particularly citrus. The maximum safe concentration of even the most tolerant plants is about 4.0mg/L of boron.

Boron concentrations shall not exceed 0.75 mg/L in inland surface waters of the region as a result of controllable water quality factors.

Chemical Oxygen Demand (COD)

COD is a measure of the total amount of oxidizable material present in a sample, including stable organic materials which are not measured by the BOD test.

Waste discharges shall not result in increases in COD levels in inland surface waters which exceed the values shown in Table 4-1 or which adversely affect beneficial uses.

Chloride

Excess chloride concentrations lead primarily to economic damage rather than public health hazards. Chlorides are considered to be among the most troublesome anions in water used for industrial or irrigation purposes since they significantly affect the corrosion rate of steel and aluminum and can be toxic to plants. A safe value for irrigation is considered to be less than 175 mg/L of chloride. Excess chlorides affect the taste of potable water, so drinking water standards are generally based on potability rather than on health. The secondary drinking water standard for chloride is 500 mg/L.

The chloride objectives listed in Table 4-1 shall not be exceeded as a result of controllable water quality factors.

Chlorine, Residual

Wastewater disinfection with chlorine usually produces a chlorine residual. Chlorine and its reaction products are toxic to aquatic life.

To protect aquatic life, the chlorine residual in wastewater discharged to inland surface waters shall not exceed 0.1 mg/L.

Color

Color in water may arise naturally, such as from minerals, plant matter, or algae, or may be caused by industrial pollutants. Color is primarily an aesthetic consideration, although it can discolor clothes and food. The secondary drinking water standard for color is 15 color units.

Waste discharges shall not result in coloration of the receiving waters which causes a nuisance or adversely affect beneficial uses. The natural color of fish, shellfish or other inland surface water resources used for human consumption shall not be impaired.

Dissolved Solids, Total (Total Filtrable Residue)

The department of Health Services recommends that the concentration of total dissolved solids (TDS) in drinking water be limited to 1000 mg/L (secondary drinking water standard) due to taste considerations. For most irrigation uses, water should have a TDS concentration under 700mg/L. Quality-related consumer cost analyses have indicated that a benefit to consumers exist if water is supplied at or below 500mg/L TDS.

The dissolved mineral content of the waters of the region, as measured by the total dissolved solids test ("Standard Methods for the Examination of Water and Wastewater, 16th Ed.," 1985: 209B (180°C), p. 95), shall not exceed the specific objectives listed in Table 4-1 as a result of controllable water quality factors.

Filtrable Residue, Total

See Dissolved Solids, Total

Floatables

Floatables are an aesthetic nuisance as well as a substrate for algae and insect vectors.

Waste discharges shall not contain floating materials, including solids, liquids, foam or scum, which cause a nuisance or adversely affect beneficial uses.

Fluoride

Fluoride in water supply used for industrial or irrigation purposes has certain detrimental effects. Fluoride in optimum concentrations in water supply (concentrations dependent upon the mean annual air temperature) is considered beneficial for preventing dental caries, but concentrations above approximately 1 mg/L, or its equivalent at a given temperature, are considered likely to increase the risk of occurrence of dental fluorosis.

*Fluoride concentrations shall not exceed values specified in the table below in inland surface waters designated **MUN** as a result of controllable water quality factors.*

Annual Average of Maximum Optimum Fluoride

<u>Daily Air Temperature (°C)</u>	<u>Concentration (mg/L)</u>
12.0 and below	1.2
12.1 to 14.6	1.1
14.7 to 17.6	1.0
17.7 to 21.4	0.9
21.5 to 26.2	0.8
26.3 to 32.5	0.7

Hardness (as CaCO₃)

The major detrimental effect of hardness is economic. Any concentration (reported as mg/L CaCO₃) greater than 100mg/L results in the increased use of soap, scale buildup in utensils, in domestic uses, and in plumbing. Hardness in industrial cooling waters is generally objectionable above 50mg/L.

The objectives listed in Table 4-1 shall not be exceeded as a result of controllable water quality factors. If no hardness objective is listed in Table 4-1, the hardness of receiving waters used for municipal supply (MUN) shall not be increased as a result of waste discharges to levels that adversely affect beneficial uses.

Inorganic Nitrogen, Total

see Nitrogen, Total Inorganic

Metals

Metals can be toxic to human and animal life.

In 1990, the Environmental Protection Agency (EPA) placed the Santa Ana River, reaches 2, 3, and 4, and Chino Creek on the §304(1) list of "Waters Not Meeting Applicable Water Quality Standards" based on its review of data on certain metals in POTW discharges to the River.

The Santa Ana River dischargers and the Regional Board disagreed with and objected to EPA's §304(1) designation. To demonstrate whether or not the §304(1) designation is correct and what effects, if any, heavy metal levels may have on aquatic life in the Region, the Santa Ana River Dischargers Association and the Santa Ana Watershed Project Authority agreed to conduct a Use-Attainability Analysis (UAA).

The purpose of a Use-Attainability Analysis is to evaluate the "physical, biological, chemical, and hydrological conditions of a river to determine what specific beneficial uses the waterbody can support." If local conditions preclude full attainment of an aquatic life beneficial use for reasons unrelated to water quality, federal and state authorities may allow variances from the generic water quality criteria.

The UAA began in February 1991 and concluded in March 1992. It provided detailed information on chemical, biological, and hydrologic conditions in the middle Santa Ana River aquatic system. Conclusions and recommendations were presented to the Board in June 1992. The information presented is reflected in the Santa Ana River discussion in Chapter 1 and in the new **LWRM** Beneficial Use designation (Chapter 3). Data provided by the UAA was also used to support the adoption of site-specific objectives for three metals, cadmium (Cd), copper (Cu), and lead (Pb) for the Santa Ana River (Reaches 2, 3, and 4) and the perennial portions of some tributaries (including Chino Creek, Cucamonga/Mill Creek, Temescal Creek, and creeks in the Riverside Narrows area).

In adopting these SSOs the Regional Board found (RWQCB Resolution No. 94-1) that:

- a. The Site-Specific Water Quality Objectives (SSOs) will protect the beneficial uses of the Santa Ana River.
- b. The SSOs are conservative.
- c. The SSOs, which represent higher quality than presently exists, will not result in degradation of water quality.
- d. Existing levels of cadmium, copper, and lead in the Santa Ana River do not contribute to toxicity in the Santa Ana River.

The toxicity of these metals varies with water hardness. No fixed hardness value is assumed; objectives are calculated using the hardness of the collected sample.

The following equations represent the SSOs which apply to these waterbodies. These SSOs are expressed as the dissolved form of the metals.

SSO for cadmium:

$$\text{Cd SSO} = 0.85[e^{(0.7852*\ln(\text{TH})-3.490)}]$$

SSO for Copper

$$\text{Cu SSO} = 0.85[e^{(0.8545*\ln(\text{TH})-1.465)}]$$

SSO for lead

$$\text{Pb SSO} = 0.25 [e^{(1.237*\ln(\text{TH})-3.958)}]$$

where TH is the total hardness (as CaCO₃) in mg/L.

The SSOs for cadmium and copper are simply the hardness-dependent formulas for calculating the objective (national criteria), corrected by the dissolved-to-total (metal) ratio. The SSO for lead is the recalculated* hardness-dependant formula, corrected by the dissolved-to-total ratio.

*Recalculation for lead was carried out by EPA-Region IX, using the lowest genus mean acute value (GMAV) as the final acute value (FAV) and an acute-to chronic ratio (ACR) of 51.29, resulting in a final chronic value (FCV) of 2.78 and the SSO formula already shown.

The Table below shows the site-specific objectives for cadmium, copper, and lead that would apply to a water sample with 200 mg/L total hardness (as CaCO₃).

Metal	Calculated WQO	Recalculated Value	EPA	
			Correction Factor	SSO
Cd	2.0	NA	0.85	1.7
Cu	21.4	NA	0.85	18.2
Pb	7.7	16.2	0.25	4.1

Toxicity testing performed as part of the Santa Ana River Use-Attainability Analysis (UAA) has demonstrated that the levels of dissolved metal shown below are safe and non-toxic in Santa Ana River water.

Cadmium	4 µg/L
Copper	37 µg/L
Lead	28 µg/L

There is also evidence that levels as much as 100% higher than those shown above do not result in chronic toxicity.

Methylene Blue-Activated Substances (MBAS)

The MBAS test is sensitive to the presence of detergents (see surfactants). Positive results may indicate the presence of wastewater. The secondary drinking water standard for MBAS is 0.05 mg/L.

*MBAS concentrations shall not exceed 0.05mg/L in inland surface waters designated **MUN** as a result of controllable water quality factors.*

Nitrate

High nitrate concentrations in domestic water supplies can be toxic to human life. Infants are particularly susceptible and may develop methemoglobinemia (blue baby syndrome). The primary drinking water standard for nitrate (as NO₃) is 45 mg/L or 10 mg/L (as N) in inland surface waters designated MUN as a result of controllable water quality factors.

*Nitrate-nitrogen concentrations shall not exceed 45 mg/L (as NO₃) or 10 mg/L (as N) in inland surface waters designated **MUN** as a result of controllable water quality factors.*

Nitrogen, Total Inorganic

The objectives listed in Table 4-1 shall not be exceeded as a result of controllable water quality factors.

Oil and Grease

Oil and grease can be present in water as a result of the discharge of treated wastes and the accidental or intentional dumping of wastes into sinks and storm drains. Oils and related materials have a high surface tension and are not soluble in water, therefore forming a film on the water's surface. This film can result in nuisance conditions because of odors and visual impacts. Oil and grease can coat birds and aquatic organisms, adversely affecting respiration and/or thermoregulation.

Waste discharges shall not result in deposition of oil, grease, wax, or other material in concentrations which result in a visible film or in coating objects in the water, or which cause a nuisance or adversely affect beneficial uses.

Oxygen, Dissolved

Adequate dissolved oxygen (D.O.) is vital for aquatic life. Depression of D.O. levels can lead to fish kills and odors resulting from anaerobic decomposition. Dissolved oxygen content in water is a function of water temperature and salinity.

*The dissolved oxygen content of surface waters shall not be depressed below 5mg/L for waters designated **WARM**, or 6mg/L for waters designated **COLD**, as a result of controllable water quality factors. In addition, waste discharges shall not cause the median dissolved oxygen concentration to fall below 85% of saturation or the 95th percentile concentration or fall below 75% of saturation within a 30-day period.*

pH

pH is a measure of the hydrogen ion concentration of water. pH values generally range from 0 (most acidic) to 14 (most alkaline). Many pollutants can alter the pH, raising or lowering it excessively. These extremes in pH can have adverse effects on aquatic biota and can corrode pipes and concrete. Even small changes in pH can harm aquatic biota.

The pH of inland surface waters shall not be raised above 8.5 or depressed below 6.5 as a result of controllable water quality factors.

Radioactivity

*Radioactivity materials shall not be present in the waters of the region in concentrations which are deleterious to human, plant or animal life. Waters designated **MUN** shall meet the limits specified in the California Code of Regulations, Title 22, and listed here:*

Combined Radium-226 and Radium-228	5	pCi/L
Gross Alpha particle activity	15	pCi/L
Tritium	20,000	pCi/L
Strontium-90	8	pCi/L
Gross Beta particle activity	50	pCi/L
Uranium	20	pCi/L

Sodium

The presence of sodium in drinking water may be harmful to persons suffering from cardiac, renal, and circulatory diseases. It can contribute to taste effects, with the taste threshold depending on the specific sodium salt. Excess concentrations of sodium in irrigation water reduce soil permeability to water and air. The deterioration of soil quality because of the presence of sodium in irrigation water is cumulative and is accelerated by poor drainage.

The sodium objectives listed in Table 4-1 shall not be exceeded as a result of controllable water quality factors.

Solids, Suspended and Settleable

Settleable solids are deleterious to benthic organisms and may cause anaerobic conditions to form. Suspended solids can clog fish gill and interfere with respiration in aquatic fauna. They also screen out light, hindering photosynthesis and normal aquatic plant growth and development.

Inland surface waters shall not contain suspended or settleable solids in amounts which cause a nuisance or adversely affect beneficial uses as a result of controllable water quality factors.

Sulfate

Excessive sulfate, particularly magnesium sulfate ($MgSO_4$) in potable waters can lead to laxative effects, but this effect is temporary. There is some taste effect from magnesium sulfate in the range of 400-600 mg/L as $MgSO_4$. The secondary drinking water standard for sulfate is 500 mg/L. Sulfate concentrations in waters native to this region are normally low, less than 40 mg/L, but imported Colorado River water contains approximately 300 mg/L of sulfate.

The objectives listed in Table 4-1 shall not be exceeded as a result of controllable water quality factors.

Sulfides

Sulfides are generated by many industries and from the anaerobic decomposition of organic matter. In water, sulfides can react to form hydrogen sulfide (H_2S), commonly known for its "rotten egg" odor. Sulfides in ionic form are also toxic to fish.

The dissolved sulfide content of inland surface waters shall not be increased as a result of controllable water quality factors.

Surfactants (surface-active agents)

This group of materials includes detergents, wetting agents, and emulsifiers. See also Methylene Blue-Activated Substances (MBAS).

Waste discharges shall not contain concentrations of surfactants which result in foam in the course of flow or use of the receiving water, or which adversely affect aquatic life.

Taste and Odor

Undesirable tastes and odors in water may be a nuisance and may indicate the presence of a pollutant(s). The secondary drinking water standard for odor (threshold) is about 3 odor units.

The inland surface waters of the region shall not contain, as a result of controllable water quality factors, taste- or odor-producing substances at concentrations which cause a nuisance or adversely affect beneficial uses. The natural taste and odor of fish, shellfish or other regional inland surface water resources used for human consumption shall not be impaired.

Temperature

Waste discharges can cause temperature changes in the receiving waters which adversely affect the aquatic biota. Discharges most likely to cause these temperature effects are cooling tower and heat exchanger blowdown.

*The natural receiving water temperature of inland surface waters shall not be altered unless it can be demonstrated to the satisfaction of the Regional Board that such alteration in temperature does not adversely affect beneficial uses. The temperature of waters designated **COLD** shall not be increased by more than 5°F as a result of controllable water quality factors. The temperature of waters designated **WARM** shall not be raised above 90°F June through October or above 78°F during the rest of the year as a result of controllable water quality factors. Lake temperatures shall not be raised more than 4°F above established normal values as a result of controllable water quality factors.*

Total Dissolved Solids

See Dissolved Solids, Total

Total Filtrable Residue

See Dissolved Solids, Total

Total Inorganic Nitrogen

See Nitrogen, Total Inorganic

Toxic Substances

Toxic substances shall not be discharged at levels that will bioaccumulate in aquatic resources to levels which are harmful to human health.

The concentrations of contaminants in waters which are existing or potential sources of drinking water shall not occur at levels that are harmful to human health.

The concentrations of toxic pollutants in the water column, sediments or biota shall not adversely affect beneficial uses.

Turbidity

Turbidity is a measure of light scattered due to particulates in water. The secondary drinking water standard for turbidity is 5 NTU (nephelometric turbidity units).

Increases in turbidity which result from controllable water quality factors shall comply with the following:

<u>Natural Turbidity</u>	<u>Maximum Increase</u>
0-5 NTU	20%
50-100 NTU	10 NTU
Greater than 100 NTU	10%

All inland surface waters of the region shall be free of changes in turbidity which adversely affect beneficial uses.

GROUNDWATERS

The narrative objectives that are included below apply to all groundwaters, as noted. In addition, specific numerical objectives are listed in Table 4-1. With the exception of the "maximum benefit" objective identified in this Table (see further discussion below and in Chapter 5), where more than one objective is applicable, the stricter shall apply.

Arsenic

*Arsenic concentrations shall not exceed 0.05 mg/L in groundwater designated **MUN** as a result of controllable water quality factors.*

Bacteria, Coliform

Fecal bacteria are part of the intestinal flora of warm-blooded animals. The presence in groundwater is an indicator of pollution. Total coliform is measured in terms of the number of coliform organisms per unit volume. Total coliform numbers can include non-fecal bacteria, so additional testing is often done to confirm the presence and numbers of fecal coliform bacteria. Water quality objectives for numbers of total fecal coliform vary with the uses of the water, as shown below.

*Total coliform numbers shall not exceed 2.2 organism/100 mL median over any seven-day period in groundwaters designated **MUN** as a result of controllable water quality factors.*

Barium

*Barium concentrations shall not exceed 1.0mg/L in groundwaters designated **MUN** as a result of controllable water quality factors.*

Boron

Boron is not considered a problem in drinking water supplies until concentrations of 20-30 mg/L are reached. In irrigation, boron is an essential element. However, boron concentrations in excess of 0.75 mg/L may be deleterious to certain crops, particularly citrus. The maximum safe concentration of even the most tolerant plants is about 4.0 mg/L of boron.

Boron concentrations shall not exceed 0.75 mg/L in groundwaters of the region as a result of controllable water quality factors.

Chloride

Excess chloride concentrations lead primarily to economic damage rather than public health hazards. Chlorides are considered to be among the most troublesome anion in water used for industrial or irrigation purposes since they significantly affect the corrosion rate of steel and aluminum and can be toxic to plants. A safe value for irrigation is considered to be less than 175 mg/L of chloride. Excess chlorides affect the taste of potable water, so drinking water standards are generally based on potability rather than on health. The secondary maximum contaminant level range - upper for chloride is 500 mg/L (CCR, Division 4, Chapter 15, Article 16, § 64449).

*Chloride concentrations shall not exceed 500 mg/L in groundwaters of the region designated **MUN** as a result of controllable water quality factors.*

Color

Color in water may arise naturally, such as from minerals, plant matter or algae, or may be caused by industrial pollutants. Color is primarily an aesthetic consideration, although it can discolor clothes and food. The secondary drinking water standard for color is 15 color units.

Waste discharges shall not result in coloration of the receiving waters which causes a nuisance or adversely affects beneficial uses.

Cyanide

*Cyanide concentrations shall not exceed 0.2mg/L in groundwaters designated **MUN** as a result of controllable water quality factors.*

Dissolved Solids, Total (Total Filtrable Residue)

The Department of Health Services recommends that the concentration of total dissolved solids (TDS) in drinking water be limited to 500 mg/L (secondary maximum contaminant level) (CCR, Division 4, Chapter 15, Article 16, § 64449), due to taste considerations. For most irrigation uses, water should have a TDS concentration under 700 mg/L. Quality-related consumer cost analyses have indicated that a benefit to consumers exists if water is supplied at or below 500 mg/L TDS².

The dissolved mineral content of the waters of the region, as measured by the total dissolved solids test ("Standard Methods for the Examination of Water and Wastewater, 20th Ed.," 1998: 2540C (180°C), p.2-56), shall not exceed the specific objectives listed in Table 4-1 as a result of controllable water quality factors. (See also discussion of management zone TDS and nitrate nitrogen water quality objectives).

Filtrable Residue, Total

See Dissolved Solids, Total

Fluoride

Fluoride in water supply used for industrial or irrigation purposes has certain detrimental effects. Fluoride in optimum concentrations in water supply (concentration dependent upon the mean annual air temperature) is considered beneficial for preventing dental caries, but concentrations above approximately 1 mg/L, or its equivalent at a given temperature, are considered likely to increase the risk of occurrence of dental fluorosis.

*Fluoride concentrations shall not exceed 1.0 mg/L in groundwaters designated **MUN** as a result of controllable water quality factors.*

Hardness (as CaCO₃)

The major detrimental effect of hardness is economic. Any concentration (reported as mg/L CaCO₃) greater than 100mg/L results in the increased use of soap, scale buildup in utensils in domestic uses, and in plumbing. Hardness in industrial cooling waters is generally objectionable above 50 mg/L.

*The hardness of receiving waters used for municipal supply (**MUN**) shall not be increased as a result of waste discharges to levels that adversely affect beneficial uses.*

Metals

Metals can be toxic to human and animal life.

*Metals concentrations shall not exceed the values listed below in groundwaters designated **MUN** as a result of controllable water quality factors.*

² These TDS values are noted for information purposes only. For some management zones, the historic ambient quality, on which the TDS objectives are largely based (see also discussion of maximum benefit objectives for specific management zones), exceeds these recommended levels.

<u>Metal</u>	<u>Concentration (mg/L)</u>
Cadmium	0.01
Chromium	0.05
Cobalt	0.2
Copper	1.0
Iron	0.3
Lead	0.05
Manganese	0.05
Mercury	0.002
Selenium	0.01
Silver	0.05

Methylene Blue-Activated Substances (MBAS)

The MBAS test is sensitive to the presence of detergents (see surfactants in inland surface waters discussion). Positive results may indicate the presence of wastewater. The secondary drinking water standard for MBAS is 0.05 mg/L.

*MBAS concentrations shall not exceed 0.05 mg/L in groundwaters designated **MUN** as a result of controllable water quality factors.*

Nitrate

High nitrate concentrations in domestic water supplies can be toxic to human life. Infants are particularly susceptible and may develop methemoglobinemia (blue baby syndrome). The primary drinking water standard for nitrate (as NO₃) is 45 mg/L or 10 mg/L (as N).

Nitrate-nitrogen concentrations listed in Table 4-1 shall not be exceeded as a result of controllable water quality factors. (See also discussion of management zone TDS and nitrate nitrogen water quality objectives below).

Oil and Grease

Oil and grease can be present in water as a result of the discharge of treated wastes and the accidental or intentional dumping of wastes into sinks and storm drains. Oils and related materials have a high surface tension and are not soluble in water, therefore forming a film on the water's surface. This film can result in nuisance conditions because of odors and visual impacts.

Waste discharges shall not result in deposition of oil, grease, wax or other materials in concentrations which cause a nuisance or adversely affect beneficial uses.

pH

pH is a measure of the hydrogen ion concentration of water. pH values generally range from 0 (most acidic) to 14 (most alkaline). Many pollutants can alter the pH,

raising or lowering it excessively. These extremes in pH can corrode pipes and concrete.

The pH of groundwater shall not be raised above 9 or depressed below 6 as a result of controllable water quality factors.

Radioactivity

*Radioactive materials shall not be present in the waters of the region in concentrations which are deleterious to human, plant or animal life. Groundwaters designated **MUN** shall meet the limits specified in the California Code of Regulations, Title 22, and listed here:*

Combined Radium-226 and Radium-228	5	pCi/L
Gross Alpha particle activity	15	pCi/L
Tritium	20,000	pCi/L
Strontium-90	8	pCi/L
Gross Beta particle activity	50	pCi/L
Uranium	20	pCi/L

Sodium

The presence of sodium in drinking water may be harmful to persons suffering from cardiac, renal and circulatory diseases. It can contribute to taste effects, with the taste threshold depending on the specific sodium salt (US Geological Survey, Resources Agency of California – State Water Resources Control Board). Excess concentrations of sodium in irrigation water reduce soil permeability to water and air. The deterioration of soil quality because of the presence of sodium in irrigation water is cumulative and is accelerated by poor drainage (California State Water Resources Control Board).

*The California Department of Health Services and the U.S. Environmental Protection Agency have not provided a limit on the concentration of sodium in drinking water. Sodium concentrations shall not exceed 180 mg/L in groundwaters designated **MUN** as a result of controllable water quality factors.*

*Groundwaters designated **AGR** shall not exceed a sodium absorption ration (**SAR**³) of 9 as a result of controllable water quality factors.*

³ Sodium absorption ratio (**SAR**)=
$$\frac{Na}{\left[\frac{1}{2}(Ca + Mg) \right]^{1/2}}$$

where Sodium (Na), Calcium (Ca) and Magnesium (Mg) are concentrations in milliequivalents per liter

Sulfate

Excessive sulfate, particularly magnesium sulfate ($MgSO_4$) in potable waters can lead to laxative effects, but this effect is temporary. There is some taste effect from magnesium sulfate in the range of 400-600mg/L as $MgSO_4$. The secondary drinking water standard for sulfate is 500mg/L (CCR, Division 4, Chapter 15, Article 16, §64449). Sulfate concentrations in waters native to this region are normally low, less than 40mg/L, but imported Colorado River water contains approximately 300mg/L of sulfate.

Sulfate concentrations shall not exceed 500 mg/L in groundwaters of the region designated MUN as a result of controllable water quality factors.

Taste and Odor

Undesirable tastes and odors in water may be a nuisance and may indicate the presence of a pollutant(s). The secondary drinking water standard for odor (threshold) is 3 odor units.

The groundwaters of the region shall not contain, as a result of controllable water quality factors, taste- or odor-producing substances at concentrations which cause a nuisance or adversely affect beneficial uses.

Total Dissolved Solids

See Dissolved Solids, Total

Total Filtrable Residue

See Dissolved Solids, Total

Total Inorganic Nitrogen

See Nitrogen, Total Inorganic

Toxic Substances

All waters of the region shall be maintained free of substances in concentrations which are toxic, or that produce detrimental physiological responses in human, plant, animal or aquatic life.

Management Zone TDS and Nitrate-nitrogen Water Quality Objectives (Amended by Resolution No. R8-2004-0001, January 22, 2004)

The TDS and nitrate-nitrogen objectives specified in the 1975 and 1984 Basin Plans, and initially in this 1995 Basin Plan, were based on an evaluation of groundwater samples from the five year period 1968 through 1972. This period represented ambient quality at the time of preparation of the 1975 Basin Plan. As part of the 2004 update of the TDS/Nitrogen management plan in the Basin Plan, historical ambient quality was reviewed using additional data and rigorous statistical procedures. This update also included characterization of current water quality. A comprehensive description of the methodology employed is published in the "Final

Technical Memorandum for Phase 2A of the Nitrogen-TDS Study” (Wildermuth Environmental Inc., July 2000). This effort, coupled with “maximum benefit” demonstrations by certain agencies in the watershed (see further discussion below and in Chapter 5), culminated in the adoption of the TDS and nitrate-nitrogen objectives specified in Table 4-1.

For the most part, the TDS and nitrate-nitrogen water quality objectives for each management zone are based on historical concentrations of TDS and nitrate-nitrogen from 1954 through 1973 and are referred to herein as the “antidegradation” objectives. This period brackets 1968, when the State Board adopted the state’s antidegradation policy in Resolution No. 68-16, “Policy with Respect to Maintaining High Quality Waters”. This Resolution establishes a benchmark for assessing and considering authorization of degradation of water quality. The 20-year period was selected in order to ensure that at least 3 data points in each management zone would be available to calculate historical ambient quality. In general, the following steps were taken to calculate the TDS and nitrate objectives:

- a. Annual average TDS and nitrate-nitrogen data from 1954 – 1973 for each well in a management zone were compiled;
- b. For each well, the data were statistically analyzed. The mean plus “t” (Student’s t) times the standard error of the mean was calculated;
- c. A rectangular grid across all management zones was overlaid. Groundwater storage within each grid was computed; and,
- d. The volume-weighted TDS and nitrate-nitrogen concentration for each management zone was computed. These concentrations are the calculated historical ambient quality for each zone.⁴

These volume-weighted TDS and nitrate-nitrogen concentrations for each management zone were typically identified as the appropriate objectives. However, it is important to note that if the calculated nitrate-nitrogen concentration exceeded 10 mg/L, the nitrate-nitrogen objective was set to 10 mg/L to be consistent with the primary drinking water standard, or to current ambient quality if less than 10 mg/L.

Finally, in some cases, certain agencies proposed alternative, less stringent TDS and nitrate-nitrogen objectives for specific management zones, based on additional consideration of antidegradation requirements and the factors specified in Water Code Section 13241 (see below and Chapter 5). Table 4-1 includes both the historical ambient quality TDS and nitrate-nitrogen objectives (the “antidegradation” objectives) and the objectives based on this additional consideration (the “maximum benefit”

⁴ In limited cases, data for ammonia-nitrogen and nitrite-nitrogen as well as nitrate-nitrogen were available and included in the analysis. The ammonia-nitrogen and nitrite-nitrogen values were insignificant. The objectives are thus expressed as nitrate-nitrogen, even where ammonia-nitrogen and nitrite-nitrogen data were included in the analysis.

objectives) for specific management zones. Chapter 5 specifies detailed requirements noticed Public Hearing, the Regional Board finds that "maximum benefit" is not being demonstrated, then the "antidegradation" objectives apply for regulatory purposes.

THE SANTA ANA RIVER

Setting objectives for the flowing portions of the Santa Ana River is a significant feature of this Basin Plan. The River provides water for recreation and for aquatic and wildlife habitat. River flows are a significant source of groundwater recharges in lower basin, which provides domestic supplies for more than two million people. These flows account for about 70% of the total recharge.

The dividing line between reaches 2 and 3 of the River, and between the upper and lower Santa Ana Basins, is Prado Dam, a flood control facility built and operated by the U.S. Army Corps of Engineers. The dam includes a subsurface groundwater barrier, and as a result all ground and surface waters from the upper basin are forced to pass through the dam (or over the spillway). For this reason, it is an ideal place to measure flows and monitor water quality.

The Prado Settlement, a stipulated court judgement (Orange County Water District vs. City of Chino, *et al*), which requires that a certain minimum amount of water be released each year from the upper basin, is overseen by the Santa Ana River Watermaster. The U.S. Geologic Survey (USGS) operates a permanent continuous monitoring station immediately below Prado Dam, and the data collected there are utilized by the Watermaster. Orange County Water District (OCWD) samples the river monthly at the USGS gage and determines the water quality. Compliance with the objective for reaches 2 and 3 is monitored by the Regional Board, using the data and information available from the USGS gage and these sources, plus the data from its own specific sampling programs. (see Chapter 6).

The quality of the Santa Ana River is a function of the quantity and quality of the various components of the flows. The two major components of total flow are storm flow and base flow. Storm flow is the water which results directly from rainfall (surface runoff) in the upper basin; it also includes the stormwater runoff from the San Jacinto Basin which may reach the River via Temescal Creek. Most storms occur during the winter rainy season (December through April). Base flow is composed of wastewater discharges, rising groundwater, and nonpoint source discharges. Wastewater discharges are the treated sewage effluents discharged by municipalities to the river and its tributaries. Rising groundwater occurs at a number of locations along the River, including the San Jacinto Fault, Riverside Narrows, and in or near the Prado flood Control Basin. Nonpoint source discharges include uncontrolled runoff from agricultural and urban areas which is not related to storm flows.

Nontributary flow is a third element of total flow. It is generally imported water released in the upper basin, for recharge in the lower basin (Santa Ana Forebay).

The Santa Ana River Watermaster calculates the amount and quality of total flow for each water year (October 1 to September 30). The Watermaster's Annual Report is used to determine compliance with the stipulated judgement referred to earlier, which set quality and quantity limits on the river. The Watermaster's report presents summary data compiled from the continuous monitoring of flow in cfs (cubic feet per second) and salinity as EC (electrical conductivity) at the USGS Prado Gaging Station. The Watermaster's annual determination of total flow quality will be used to determine compliance with the total flow objective in this Plan. In years of normal rainfall, most of the total flow of the river is percolated in the Santa Ana Forebay, and directly affects the quality of the groundwater. For that reason, compliance with the total dissolved solids (TDS) water quality objective for Reach 2 will be based on the five-year moving average of the annual TDS content of total flow. Use of this moving average allows the effects of wet and dry years to be smoothed out over the five-year period.

As was noted earlier, the three components of base flow in the river are wastewater, rising water, and nonpoint source discharges. These three components are present in varying amounts throughout the year, and the contributions and quality of each can be affected by the regulatory activities of the Regional Board. The quantity of storm flow is obviously highly variable; programs to control its quality are in their nascent stages. For these reasons, water quality objectives for controllable constituents are set based on the base flow of the river, rather than on total flow.

The regulatory activities of the Regional Board include setting waste discharge requirements on point source discharges. Waste discharges requirements are developed on the basis of the limited assimilative capacity of the river (see TDS and Nitrogen Wasteload Allocation, Chapter 5). Nonpoint source discharges, generally urban runoff (nuisance water) and agricultural tailwater, will be regulated by requiring compliance with Best Management Practices (BMPs), where appropriate. The rising water component of base flow will be affected by the extraction of brackish groundwater in several subbasins (a Basin Plan implementation action), by regulation of wastewater discharges, and other activities.

In order to determine whether the water quality and quantity objectives for base flow in Reach 3 are being met, the Regional Board will collect a series of grab and composite samples when the influence of storm flows and nontributary flows is at a minimum. This typically occurs during August and September. At this time of year, there is usually no water impounded behind Prado Dam. The volumes of storm flows, rising water and nonpoint source discharges tend to be low. The major component of base flow at this time is municipal wastewater. The results of this sampling will be compared with the continuous monitoring data collected by USGS and data from other sources. These data will be used to evaluate the efficacy of the Regional Board's regulatory approach, including the TDS and nitrogen wasteload allocations (see Chapter 5). Additional sampling in Reach 3 by the Board and other agencies will help evaluate the fate and effects of the various constituents of base flow, including the validity of the 50% nitrogen loss coefficient (discussed in Chapter 5).

Future river flows and quality (TDS and TIN) were projected by computer models. The results indicate that the objectives for TDS and total nitrogen will be met. The objectives for individual mineral constituents are expected to be met if the TDS objective is met.

Prado Basin Surface Water Management Zone

As discussed in Chapter 3 – Beneficial Uses, the Prado Basin Management Zone (PBMZ) is generally defined as a surface water feature within the Prado Basin. It is defined by the 566-foot elevation above mean sea level along the Santa Ana River and the four tributaries to the Santa Ana River in the Prado Basin (Chino Creek, Temescal Creek, Mill Creek and Cucamonga Creek). Nitrogen, TDS and other water quality objectives that have been established for these surface waters that flow within the proposed PBMZ are shown in Table 4-1. For the purpose of regulating discharges that would affect the PBMZ and downstream waters, these surface water objectives apply. This application of the existing surface water objectives assures continued water quality and beneficial use protection for waters within and downstream of the PBMZ.

“MAXIMUM BENEFIT” WATER QUALITY OBJECTIVES

As part of the 2004 update of the TDS/Nitrogen Management plan in the Basin Plan, several agencies proposed that alternative, less stringent TDS and/or nitrate-nitrogen water quality objectives be adopted for specific groundwater management zones and surface waters. These proposals were based on additional consideration of the factors specified in Water Code Section 13241 and the requirements of the State’s antidegradation policy (State Board Resolution No. 68-16). Since the less stringent objectives would allow a lowering of water quality, the agencies were required to demonstrate that their proposed objectives would protect beneficial uses, and that water quality consistent with maximum benefit to the people of the state would be maintained (thus, the use of the term “maximum benefit” water quality objectives).

Appropriate beneficial use protection/maximum benefit demonstrations were made by the Chino Basin Watermaster/Inland Empire Utilities Agency, the Yucaipa Valley Water District and the City of Beaumont/San Timoteo Watershed Management Authority to justify alternative “maximum benefit” objectives for the Chino North, Cucamonga, Yucaipa, Beaumont and San Timoteo groundwater management zones. These “maximum benefit” proposals, which are described in detail in Chapter 5 – Implementation, entail commitments by the agencies to implement specific projects and programs. While these agencies’ efforts to develop these proposals indicate their strong interest to proceed with these commitments, unforeseen circumstances may impede or preclude it. To address this possibility, this Plan includes both the “antidegradation” and “maximum benefit” objectives for the subject waters (See Table 4-1). Chapter 5 specifies the requirements for

implementation of these objectives. Provided that these agencies' commitments are met, then the agencies have demonstrated maximum benefit, and the "maximum benefit" objectives included in Table 4-1 for these waters apply for regulatory purposes. However, if the Regional Board finds that these commitments are not being met and that "maximum benefit" is thus not demonstrated, then the "antidegradation" objectives for these waters will apply. Chapter 5 also describes the mitigation requirements that will apply should discharges based on "maximum benefit" objectives occur unsupported by the demonstration of "maximum benefit".

COMPLIANCE WITH OBJECTIVES (Amended by Resolution No. 00-27, May 19, 2000)

"The Regional Board recognizes that immediate compliance with new, revised or newly interpreted water quality objectives adopted by the Regional Board or the State Water Resources Control Board, or with new, revised or newly interpreted water quality criteria promulgated by the U.S. Environmental Protection Agency, may not be feasible in all circumstances. Where the Regional Board determines that it is infeasible for a discharger to comply immediately with effluent limitations specified to implement such objectives or criteria, compliance shall be achieved in the shortest practicable period of time, not to exceed ten years after the adoption or interpretation of applicable objectives or criteria. This provision authorizes schedules of compliance for objectives and criteria that are adopted or revised or newly interpreted after the effective date of this amendment July 15, 2002.

9.00	0.175	0.170	0.170	0.175	0.187	0.146	0.119	

¹ The values may be conservative, however. If a more refined criterion is desired, EPA recommends a site-specific Criteria modification.

Table 4-4

Equations Used to Calculate UIA-N and Total Ammonia -N
 Water Quality Objectives for COLD and WARM Waterbodies

COLD-Chronic UIA-N	0 ≤ T ≤ 15	15 ≤ T ≤ 30
6.5 ≤ pH ≤ 7.7	$\frac{0.0223}{10^{(8.3-0.03T-pH)}}$	$\frac{0.0158}{10^{(7.7-pH)}}$
7.7 ≤ pH ≤ 8	$\frac{0.0396}{10^{(0.6-0.03T)}} + 10^{(8.0-0.03T-pH)}$	$\frac{0.0280}{1+10^{(7.4-pH)}}$
8 ≤ pH ≤ 9	$\frac{0.0317}{10^{(0.6-0.03T)}}$	0.0224

WARM-Chronic UIA-N	0 ≤ T ≤ 15	15 ≤ T ≤ 30
6.5 ≤ pH ≤ 7.7	$\frac{0.0372}{10^{(8.3-0.03T-pH)}}$	$\frac{0.0372}{10^{(7.7-pH)}}$
7.7 ≤ pH ≤ 8	$\frac{0.0662}{10^{(0.6-0.03T)}} + 10^{(8.0-0.03T-pH)}$	$\frac{0.0662}{1+10^{(7.4-pH)}}$
8 ≤ pH ≤ 9	$\frac{0.0530}{10^{(0.6-0.03T)}}$	0.0530

Total Ammonia-N Objectives

$$NH_3-N = UIA-N \cdot [1 + 10^{(0.09018 + \frac{2729.92}{T+273.15} - pH)}]$$

Note: For all equations, T is the temperature in °C

CHAPTER 3. WATER QUALITY OBJECTIVES

Section 13241, Division 7 of the California Water Code specifies that each Regional Water Quality Control Board shall establish water quality objectives which, in the Regional Board's judgment, are necessary for the reasonable protection of beneficial uses and for the prevention of nuisance.

Section 303 of the 1972 Amendments to the federal Water Pollution Control Act requires the State to submit to the Administrator of the U.S. Environmental Protection Agency (U.S. EPA) for approval, all new or revised water quality standards which are established for surface and ocean waters. Under federal terminology, water quality standards consist of beneficial uses enumerated in Chapter Two and water quality objectives contained in this chapter.

Water quality objectives contained herein are designed to satisfy all State and federal requirements.

As new information becomes available, the Regional Board will review the appropriateness of objectives contained herein. These objectives are subject to public hearing at least once during each three-year period following adoption of this plan for the purpose of review and modification as appropriate.

I. CONSIDERATIONS IN SELECTING WATER QUALITY OBJECTIVES

The aforementioned 1972 Amendments to the federal Water Pollution Control Act declare that a national goal is elimination of discharge of pollutants into navigable waters.

A prerequisite to water quality control planning is the establishment of a base or reference point. The base in this instance was various general and specific water quality criteria previously found acceptable for particular beneficial uses or selected sources of waste. Current technical guidelines, available historical data, and enforcement feasibility were given full consideration in formulating water quality objectives.

A distinction is made here between the terms "water quality objectives" and "water quality standards". Water quality objectives have been adopted by the State and, when applicable, extended as federal water quality standards. Water quality standards, previously mentioned in this chapter's introduction, pertain to navigable waters and become legally enforceable criteria when accepted by the U.S. EPA Regional Administrator.

Point and nonpoint water pollution sources described herein have the same meaning as defined in the federal Water Pollution Control Act. Point sources are waste loads from identifiable sources such as municipal discharges, industrial discharges, vessels, controllable storm waters, fish hatchery discharges, confined animal operations, and agricultural drains. Nonpoint sources are waste loads resulting from land use practices where wastes are not collected and disposed of in any readily identifiable manner. Examples include: urban drainage, agricultural runoff, road construction activities, mining, grassland management, logging and other harvest activities, and natural sources such as effects of fire, flood, and landslide. The distinction between point sources and diffuse sources is not always clear but generally applies to the practicality of waste load control.

Water quality objectives for the Central Coastal Basin satisfy State and federal requirements to protect waters for the beneficial uses in Chapter Two and are consistent with all existing statewide plans and policies.

II. WATER QUALITY OBJECTIVES

The water quality objectives which follow supersede and replace those contained in the 1967 Water Quality Control Policies; the Interim Water Quality Control Plan for the Central Coastal Basin adopted by the Regional Board in 1971, including all existing revisions; and the Water Quality Control Plan Report for the Central Coastal Basin, adopted by the Regional Board in 1974.

Controllable water quality shall conform to the water quality objectives contained herein. When other conditions cause degradation of water quality beyond the levels or limits established as water quality objectives, controllable conditions shall not cause further degradation of water quality.

Controllable water quality conditions are those actions or circumstances resulting from man's activities that may influence the quality of the waters of the State and that may be reasonably controlled.

Water quality objectives are considered to be necessary to protect those present and probable future beneficial uses enumerated in Chapter Two of this plan and to protect existing high quality waters of the State. These objectives will be achieved primarily through the establishment of waste discharge requirements and through implementation of this water quality control plan.

In setting waste discharge requirements, the Regional Board will consider the potential impact on beneficial uses within the area of influence of the discharge, the existing quality of receiving waters, and the appropriate water quality objectives. The Regional Board will make a finding of beneficial uses to be protected and establish waste discharge requirements to protect those uses and to meet water quality objectives.

Several water quality objectives listed herein originate from the California Code of Regulations, Title 22. If Title 22 concentrations are amended, Basin Plan objectives are automatically amended to correspond with the new regulations.

II.A. ANTI-DEGRADATION POLICY

Wherever the existing quality of water is better than the quality of water established herein as objectives, such existing quality shall be maintained unless otherwise provided by the provisions of the State Water Resources Control Board Resolution No. 68-16, "Statement of Policy with Respect to Maintaining High Quality of Waters in California," including any revisions thereto. A copy of this policy is included in the Appendix.

II.A.1. OBJECTIVES FOR OCEAN WATERS

The provisions of the State Board's "Water Quality Control Plan for Ocean Waters of California" (Ocean Plan), "Water Quality Control Plan for Control of Temperature in the Coastal and Interstate Waters and Enclosed Bays and Estuaries of California" (Thermal Plan), and any revisions thereto shall apply in their entirety to affected waters of the basin. The Ocean and Thermal Plans shall also apply in their entirety to Monterey Bay and Carmel Bay. Copies of these plans are included verbatim in the Appendix.

In addition to provisions of the Ocean Plan and Thermal Plan, the following objectives shall also apply to all ocean waters, including Monterey and Carmel Bays:

Dissolved Oxygen

The mean annual dissolved oxygen concentration shall not be less than 7.0 mg/l, nor shall the minimum dissolved oxygen concentration be reduced below 5.0 mg/l at any time.

pH

The pH value shall not be depressed below 7.0, nor raised above 8.5.

Radioactivity

Radionuclides shall not be present in concentrations that are deleterious to human, plant, animal, or aquatic life; or result in the accumulation of radionuclides in the food web to an extent which presents a hazard to human, plant, animal, or aquatic life.

II.A.2. OBJECTIVES FOR ALL INLAND SURFACE WATERS, ENCLOSED BAYS, AND ESTUARIES

II.A.2.a. GENERAL OBJECTIVES

The following objectives apply to all inland surface waters, enclosed bays, and estuaries of the basin:

Color

Waters shall be free of coloration that causes nuisance or adversely affects beneficial uses. Coloration attributable to materials of waste origin shall not be greater than 15 units or 10 percent above natural background color, whichever is greater.

Tastes and Odors

Waters shall not contain taste or odor-producing substances in concentrations that impart undesirable tastes or odors to fish flesh or other edible products of aquatic origin, that cause nuisance, or that adversely affect beneficial uses.

Floating Material

Waters shall not contain floating material, including solids, liquids, foams, and scum, in concentrations that cause nuisance or adversely affect beneficial uses.

Suspended Material

Waters shall not contain suspended material in concentrations that cause nuisance or adversely affect beneficial uses.

Settleable Material

Waters shall not contain settleable material in concentrations that result in deposition of material that causes nuisance or adversely affects beneficial uses.

Oil and Grease

Waters shall not contain oils, greases, waxes, or other similar materials in concentrations that result in a visible film or coating on the surface of the water or on objects in the water, that cause nuisance, or that otherwise adversely affect beneficial uses.

Biostimulatory Substances

Waters shall not contain biostimulatory substances in concentrations that promote aquatic growths to the extent that such growths cause nuisance or adversely affect beneficial uses.

Sediment

The suspended sediment load and suspended sediment discharge rate of surface waters shall not be altered in such a manner as to cause nuisance or adversely affect beneficial uses.

Turbidity

Waters shall be free of changes in turbidity that cause nuisance or adversely affect beneficial uses.

Increase in turbidity attributable to controllable water quality factors shall not exceed the following limits:

1. Where natural turbidity is between 0 and 50 Jackson Turbidity Units (JTU), increases shall not exceed 20 percent.
2. Where natural turbidity is between 50 and 100 JTU, increases shall not exceed 10 JTU.
3. Where natural turbidity is greater than 100 JTU, increases shall not exceed 10 percent.

Allowable zones of dilution within which higher concentrations will be tolerated will be defined for each discharge in discharge permits.

pH

For waters not mentioned by a specific beneficial use, the pH value shall not be depressed below 7.0 or raised above 8.5.

Dissolved Oxygen

For waters not mentioned by a specific beneficial use, dissolved oxygen concentration shall not be reduced below 5.0 mg/l at any time. Median values should not fall below 85 percent saturation as a result of controllable water quality conditions.

Temperature

Temperature objectives for Enclosed Bays and Estuaries are as specified in the "Water Quality Control Plan for Control of Temperature in the Coastal and Interstate Waters and Enclosed Bays and Estuaries of California" including any revisions thereto. A copy of this plan is included in the Appendix.

Natural receiving water temperature of intrastate waters shall not be altered unless it can be demonstrated to the satisfaction of the Regional Board that such alteration in temperature does not adversely affect beneficial uses.

Toxicity

All waters shall be maintained free of toxic substances in concentrations which are toxic to, or which produce detrimental physiological responses in, human, plant, animal, or aquatic life. Compliance with this objective will be determined by use of indicator organisms, analyses of species diversity, population density, growth anomalies, toxicity bioassays of appropriate duration, or other appropriate methods as specified by the Regional Board.

Survival of aquatic life in surface waters subjected to a waste discharge or other controllable water quality conditions, shall not be less than that for the same water body in areas unaffected by the waste discharge or, when necessary, for other control water that is consistent with the requirements for "experimental water" as described in Standard Methods for the Examination of Water and Wastewater, latest edition. As a minimum, compliance with this objective shall be evaluated with a 96-hour bioassay.

In addition, effluent limits based upon acute bioassays of effluents will be prescribed where appropriate, additional numerical receiving water objectives for specific toxicants will be established as sufficient data

become available, and source control of toxic substances is encouraged.

The discharge of wastes shall not cause concentrations of unionized ammonia (NH₃) to exceed 0.025 mg/l (as N) in receiving waters.

Pesticides

No individual pesticide or combination of pesticides shall reach concentrations that adversely affect beneficial uses. There shall be no increase in pesticide concentrations found in bottom sediments or aquatic life.

For waters where existing concentrations are presently nondetectable or where beneficial uses would be impaired by concentrations in excess of nondetectable levels, total identifiable chlorinated hydrocarbon pesticides shall not be present at concentrations detectable within the accuracy of analytical methods prescribed in Standard Methods for the Examination of Water and Wastewater, latest edition, or other equivalent methods approved by the Executive Officer.

Chemical Constituents

Where wastewater effluents are returned to land for irrigation uses, regulatory controls shall be consistent with Title 22 of the California Code of Regulations and other relevant local controls.

Other Organics

Waters shall not contain organic substances in concentrations greater than the following:

Methylene Blue	
Activated Substances	0.2 mg/l
Phenols	0.1 mg/l
PCB's	0.3 µg/l
Phthalate Esters	0.002 µg/l

Radioactivity

Radionuclides shall not be present in concentrations that are deleterious to human, plant, animal, or aquatic life; or result in the accumulation of radionuclides in the food web to an extent which presents a hazard to human, plant, animal, or aquatic life.

MUNICIPAL AND DOMESTIC SUPPLY (MUN)

pH

The pH value shall neither be depressed below 6.5 nor raised above 8.3.

Organic Chemicals

All inland surface waters, enclosed bays, and estuaries shall not contain concentrations of organic chemicals in excess of the limiting concentrations set forth in California Code of Regulations, Title 22, Chapter 15, Article 5.5, Section 64444.5, Table 5 and listed in Table 3-1.

Chemical Constituents

Waters shall not contain concentrations of chemical constituents in excess of the limits specified in California Code of Regulations, Title 22, Article 4, Chapter 15, Section 64435, Tables 2 and 3 as listed in Table 3-2.

Phenol

Waters shall not contain phenol concentrations in excess of 1.0 µg/l.

Radioactivity

Waters shall not contain concentrations of radionuclides in excess of the limits specified in California Code of Regulations, Title 22, Chapter 15, Article 5, Sections 64441 and 64443, Table 4.

AGRICULTURAL SUPPLY (AGR)

pH

The pH value shall neither be depressed below 6.5 nor raised above 8.3.

Dissolved Oxygen

Dissolved oxygen concentration shall not be reduced below 2.0 mg/l at any time.

Chemical Constituents

September 8, 1994

Waters shall not contain concentrations of chemical constituents in amounts which adversely affect the agricultural beneficial use. Interpretation of adverse effect shall be as derived from the University of California Agricultural Extension Service guidelines provided in Table 3-3.

In addition, waters used for irrigation and livestock watering shall not exceed concentrations for those chemicals listed in Table 3-4. Salt concentrations for irrigation waters shall be controlled through implementation of the anti-degradation policy to the effect that mineral constituents of currently or potentially usable waters shall not be increased. It is emphasized that no controllable water quality factor shall degrade the quality of any ground water resource or adversely affect long-term soil productivity.

Where wastewater effluents are returned to land for irrigation uses, regulatory controls shall be consistent with Title 22 of the California Code of Regulations and with relevant controls for local irrigation sources.

WATER CONTACT RECREATION (REC-1)

pH

The pH value shall neither be depressed below 6.5 nor raised above 8.3.

Bacteria

Fecal coliform concentration, based on a minimum of not less than five samples for any 30-day period, shall not exceed a log mean of 200/100 ml, nor shall more than ten percent of total samples during any 30-day period exceed 400/100 ml.

NON-CONTACT WATER RECREATION (REC-2)

pH

The pH value shall neither be depressed below 6.5 nor raised above 8.3.

Table 3-1. Organic Concentrations Not to be Exceeded in Domestic or Municipal Supply

Constituent	Maximum Contaminant Level (MCL), mg/l*

Table 3-3. Guidelines for Interpretation of Quality of Water for Irrigation^a

Problem and Related Constituent	Water Quality Guidelines		
	No Problem	Increasing Problems	Severe
Salinity^b			
EC of irrigation water, mmho/cm	<0.75	0.75 - 3.0	>3.0
Permeability			
EC of irrigation water, mmho/cm	>0.5	<0.5	<0.2
SAR, adjusted ^c	<6.0	6.0 - 9.0	>9.0
Specific ion toxicity from root absorption^d			
Sodium (evaluate by adjusted SAR)	<3	3.0 - 9.0	>9.0
Chloride			
me/l	<4	4.0 - 10	>10
mg/l	<142	142 - 355	>355
Boron, mg/l	<0.5	0.5 - 2.0	2.0 - 10.0
Specific ion toxicity from foliar absorption^e(sprinklers)			
Sodium			
me/l	<3.0	>3.0	--
mg/l	<69	>69	--
Chloride			
me/l	<3.0	>3.0	--
mg/l	<106	>106	--
Miscellaneous^f			
NH4 - N, mg/l for sensitive crops	<5	5 - 30	>30
NO3 - N, mg/l for sensitive crops	<5	5 - 30	>30
HCO3 (only with overhead sprinklers)			
me/l	<1.5	1.5 - 8.5	>8.5
mg/l	<90	90 - 520	>520
pH	Normal range	6.5 - 8.4	--

a Interpretations are based on possible effects of constituents on crops and/or soils. Guidelines are flexible and should be modified when warranted by local experience or special conditions of crop, soil, and method of irrigation.

b Assumes water for crop plus needed water for leaching requirement (LR) will be applied. Crops vary in tolerance to salinity. Refer to tables for crop tolerance and LR. The mmho/cm x 640 = approximate total dissolved solids (TDS) in mg/l or ppm; mmho x 1,000 = micromhos.

c Adjusted SAR (sodium adsorption ratio) is calculated from a modified equation developed by U.S. Salinity Laboratory to include added effects of precipitation and dissolution of calcium in soils and related to CO₃ + HCO₃ concentrations.

To evaluate sodium (permeability) hazard: $Adjusted\ SAR = Na/[1/2(Ca + Mg)]^{1/2}[1 + (8.4 - pHc)]$.
 Refer to Appendix for calculation assistance.

SAR can be reduced if necessary by adding gypsum. Amount of gypsum required (GR) to reduce a hazardous SAR to any desired SAR (SAR desired) can be calculated as follows:

$$GR = \left[\frac{2(Na)^2}{SAR^2_{desired}} (Ca + Mg) \right] 234$$

Note: Na and Ca + Mg should be in me/l. GR will be in lbs. of 100 percent gypsum per acre foot of applied water.

d Most tree crops and woody ornamentals are sensitive to sodium and chloride (use values shown). Most annual crops are not sensitive (use salinity tolerance tables). For boron sensitivity, refer to boron tolerance tables.

e Leaf areas wet by sprinklers (rotating heads) may show a leaf burn due to sodium or chloride absorption under low humidity/high evaporation conditions. (Evaporation increases ion concentration in water films on leaves between rotations of sprinkler heads.)

f Excess N may affect production or quality of certain crops; e.g., sugar beets, citrus, avocados, apricots, etc. (1 mg/l NO₃ - N = 2.72 lbs. N/acre foot of applied water.) HCO₃ with overhead sprinkler irrigation may cause a white carbonate deposit to form on fruit and leaves.

Table 3-4. Water Quality Objectives for Agricultural Water Use

ELEMENT	Maximum Concentration (mg/l) ^a	
	Irrigation supply ^b	Livestock watering
Aluminum	5.0	5.0
Arsenic	0.1	0.2
Beryllium	0.1	--
Boron	0.75	5.0
Cadmium	0.01	0.05
Chromium	0.10	1.0
Cobalt	0.05	1.0
Copper	0.2	0.5
Fluoride	1.0	2.0
Iron	5.0	--
Lead	5.0	0.1 ^c
Lithium	2.5 ^d	--
Manganese	0.2	--
Mercury	--	0.01
Molybdenum	0.01	0.5
Nickel	0.2	--
Nitrate + Nitrite	--	100
Nitrite	--	10
Selenium	0.02	0.05
Vanadium	0.1	0.10
Zinc	2.0	25

- a. Values based primarily on "Water Quality Criteria 1972" National Academy of Sciences-National Academy of Engineers, Environmental Study Board, ad hoc Committee on Water Quality Criteria furnished as recommended guidelines by University of California Agriculture Extension Service, January 7, 1974; maximum values are to be considered as 90 percentile values not to be exceeded.
- b. Values provided will normally not adversely affect plants or soils; no data available for mercury, silver, tin, titanium, and tungsten.
- c. Lead is accumulative and problems may begin at threshold value (0.05 mg/l).
- d. Recommended maximum concentration for irrigation citrus is 0.075 mg/l.

Bacteria

Fecal coliform concentration, based on a minimum of not less than five samples for any 30-day period, shall not exceed a log mean of 2000/100 ml, nor shall more than ten percent of samples collected during any 30-day period exceed 4000/100 ml.

COLD FRESHWATER HABITAT (COLD)

pH

The pH value shall not be depressed below 7.0 or raised above 8.5. Changes in normal ambient pH levels shall not exceed 0.5 in fresh waters.

Dissolved Oxygen

The dissolved oxygen concentration shall not be reduced below 7.0 mg/l at any time.

Temperature

At no time or place shall the temperature be increased by more than 5°F above natural receiving water temperature.

Chemical Constituents

Waters shall not contain concentrations of chemical constituents known to be deleterious to fish or wildlife in excess of the limits listed in Table 3-5.

WARM FRESHWATER HABITAT (WARM)

pH

The pH value shall not be depressed below 7.0 or raised above 8.5.

Changes in normal ambient pH levels shall not exceed 0.5 in fresh waters.

Dissolved Oxygen

The dissolved oxygen concentration shall not be reduced below 5.0 mg/l at any time.

Temperature

At no time or place shall the temperature of any water be increased by more than 5°F above natural receiving temperature.

Chemical Constituents

Waters shall not contain concentrations of chemical constituents known to be deleterious to fish or wildlife in excess of the limits listed in Table 3-5.

FISH SPAWNING (SPWN)

Cadmium

Cadmium shall not exceed .003 mg/l in hard water or .0004 mg/l in soft water at any time. (Hard water is defined as water exceeding 100 mg/l CaCO₃.)

Dissolved Oxygen

The dissolved oxygen concentration shall not be reduced below 7.0 mg/l at any time.

MARINE HABITAT (MAR)

pH

The pH value shall not be depressed below 7.0 or raised above 8.5.

Changes in normal ambient pH levels shall not exceed 0.2 units.

Dissolved Oxygen

The dissolved oxygen concentration shall not be reduced below 7.0 mg/l at any time.

Chemical Constituents

Waters shall not contain concentrations of chemical constituents known to be deleterious to fish or wildlife in excess of limits listed in Table 3-6.

Table 3-5 Toxic Metal Concentrations not to be Exceeded in Aquatic Life Habitats, mg/l^{a,b}

Freshwater (COLD, WARM)		
METAL	HARD (> 100 mg/l CaCO ₃)	SOFT (< 100 mg/l CaCO ₃)
Cadmium ^c	.03	.004
Chromium	.05	.05
Copper	.03	.01
Lead	.03	.03
Mercury ^d	.0002	.0002
Nickel ^e	.4	.1
Zinc	.2	.004

- a. Based on limiting values recommended in the National Academy of Sciences-National Academy of Engineers "Water Quality Criteria 1972." Values are 90 percentile values except as noted in qualifying note "d."
- b. Revision of Table 3-5 is currently in progress by the Regional Board.
- c. Lower cadmium values not to be exceeded for crustaceans and waters designated SPWN are 0.003 mg/l in hard water and 0.0004 mg/l in soft water.
- d. Total mercury values should not exceed 0.05 µg/l as an average value; maximum acceptable concentration of total mercury in any aquatic organism is a total B.O.D. burden of 0.5 µg/l wet weight.
- e. Value cited as objective pertains to nickel salts (not pure metallic nickel).

Table 3-6. Toxic Metal Concentrations Not to be Exceeded in Marine Habitats, mg/l^a

METAL	MARINE (MAR)
Cadmium	.0002
Chromium	.05
Copper	.01
Lead	.01
Mercury ^c	.0001
Nickel ^d	.002
Zinc	.02

- a. Based on limiting values recommended in the National Academy of Sciences-National Academy of Engineers "Water Quality Criteria 1972." Values are 90 percentile values except as noted in qualifying note "c."
- b. Revision of Table 3-6 is currently in progress by the Regional Board.
- c. Total mercury values should not exceed 0.05 µg/l as an average value; maximum acceptable concentration of total mercury in any aquatic organism is a total B.O.D. burden of 0.05 µg/l net weight.
- d. Value cited as objective pertains to nickel salts (not pure metallic nickel).

SHELLFISH HARVESTING (SHELL)

Chromium

The maximum permissible value for waters designated SHELL shall be 0.01 mg/l.

Bacteria

At all areas where shellfish may be harvested for human consumption, the median total coliform concentration throughout the water column for any 30-day period shall not exceed 70/100 ml, nor shall more than ten percent of the samples collected during any 30-day period exceed 230/100 ml for a five-tube decimal dilution test or 330/100 ml when a three-tube decimal dilution test is used.

II.A.3. WATER QUALITY OBJECTIVES FOR SPECIFIC INLAND SURFACE WATERS, ENCLOSED BAYS AND ESTUARIES

Certain water quality objectives have been established for selected surface waters; these objectives are intended to serve as a water quality baseline for evaluating water quality management in the basin. Median values, shown in Table 3-7 for surface waters, are based on available data.

It must be recognized that the median values indicated in Table 3-7 are values representing gross areas of a water body. Specific water quality objectives for a particular area may not be directly related to the objectives indicated. Therefore, application of these objectives must be based upon consideration of the surface and ground water quality naturally present; i.e., waste discharge requirements must adhere to the previously stated objectives and issuance of requirements must be tempered by consideration of beneficial uses within the immediate influence of the discharge, the existing quality of receiving waters, and water quality objectives. Consideration of beneficial uses includes: (1) a specific enumeration of all beneficial uses potentially to be affected by the waste discharge, (2) a determination of the relative importance of competing beneficial uses, and (3) impact of the discharge on existing beneficial uses. The Regional Board will make a judgment as to the priority of dominant use and minimize the impact on competing uses while not allowing the discharge to violate receiving water quality objectives.

As part of the State's continuing planning process, data will be collected and numerical water quality objectives will be developed for those mineral and nutrient constituents where sufficient information is presently not available for the establishment of such objectives.

Table 3-7. Surface Water Quality Objectives, mg/l^a

Sub-Basin/Sub-Area	TDS	Cl	SO ₄	B	Na

a Objectives shown are annual mean values. Objectives are based on preservation of existing quality or water quality enhancement believed attainable following control of point sources

A specific monthly mean objective for Nitrate (as NO₃) of 0.25 mg/l shall apply to both the upper and lower San Lorenzo River to protect beneficial uses from adverse biostimulatory effects. Specific biostimulant objectives for other surface waters will be added to this section in tabular form once they are determined from further studies.

II.A.4. OBJECTIVES FOR GROUND WATER

II.A.4.a. GENERAL OBJECTIVES

The following objectives apply to all ground waters of the basin.

Tastes and Odors

Ground waters shall not contain taste or odor producing substances in concentrations that adversely affect beneficial uses.

Radioactivity

Radionuclides shall not be present in concentrations that are deleterious to human, plant, animal, or aquatic life; or result in the accumulation of radionuclides in the food web to an extent which presents a hazard to human, plant, animal, or aquatic life.

MUNICIPAL AND DOMESTIC SUPPLY (MUN)

Bacteria

The median concentration of coliform organisms over any seven-day period shall be less than 2.2/100 ml.

Organic Chemicals

Ground waters shall not contain concentrations of organic chemicals in excess of the limiting concentrations set forth in California Code of Regulations, Title 22, Chapter 15, Article 5.5, Section 64444.5, Table 5 and listed in Table 3-1.

Chemical Constituents

Ground waters shall not contain concentrations of chemical constituents in excess of the limits specified in California Code of Regulations, Title 22, Chapter 15, Article 4, Section 64435, Tables 2 and 3.

Radioactivity

Ground waters shall not contain concentrations of radionuclides in excess of the limits specified in California Code of Regulations, Title 22, Chapter 15, Article 5, Section 64443, Table 4.

AGRICULTURAL SUPPLY (AGR)

Ground waters shall not contain concentrations of chemical constituents in amounts that adversely affect such beneficial use. Interpretation of adverse effect shall be as derived from the University of California Agricultural Extension Service guidelines provided in Table 3-3.

In addition, water used for irrigation and livestock watering shall not exceed the concentrations for those chemicals listed in Table 3-4. No controllable water quality factor shall degrade the quality of any ground water resource or adversely affect long-term soil productivity. The salinity control aspects of ground water management will account for effects from all sources.

II.A.5. OBJECTIVES FOR SPECIFIC GROUND WATERS

Certain water quality objectives have been established for selected ground waters; these objectives are intended to serve as a water quality baseline for evaluating water quality management in the basin. The median values for ground waters are shown in Table 3-8.

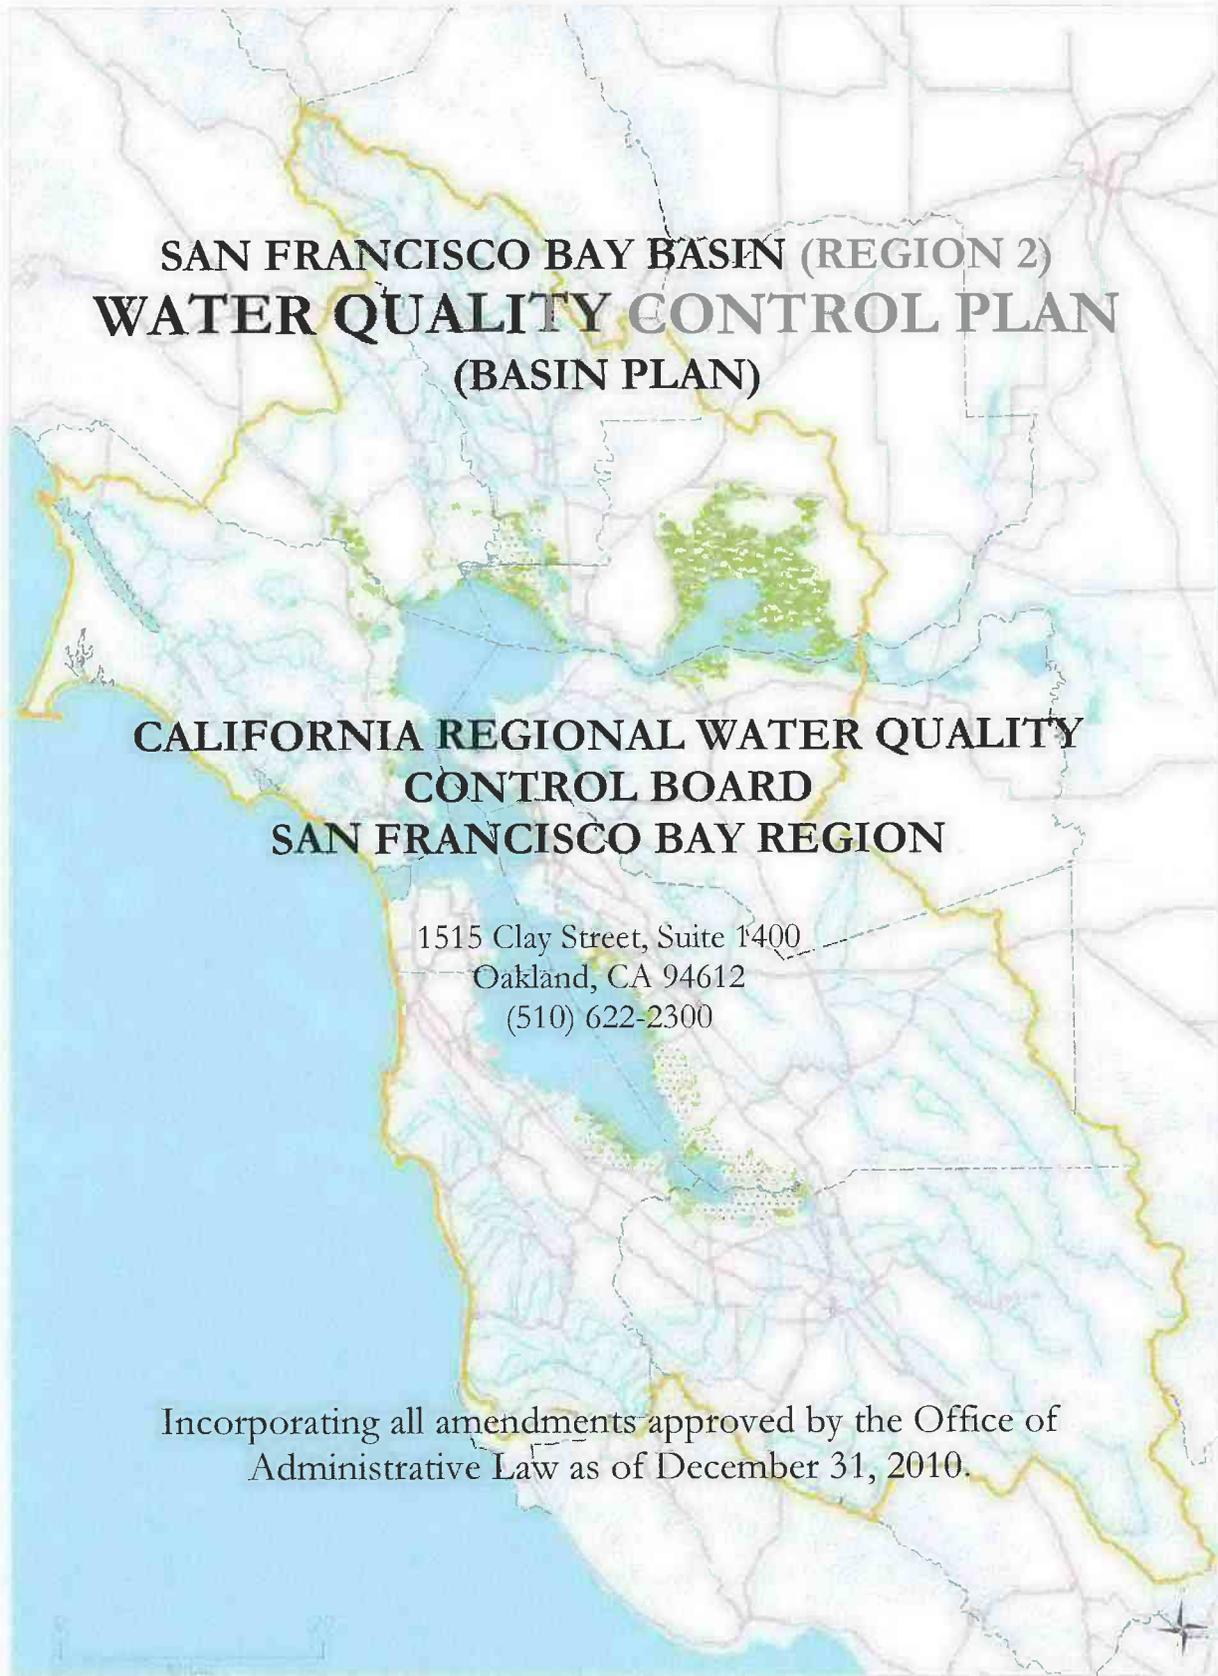

Table 3-8. Median Ground Water Objectives, mg/l^a

- a Objectives shown are median values based on data averages; objectives are based on preservation of existing quality or water quality enhancement believed attainable following control of point sources.
- b Measured as Nitrogen
- c Basis for objectives is in the "Water Quality Objectives for the Santa Maria Ground Water Basin Revised Staff Report, May 1985" and February 1986, Staff Report.
- d These are maximum objectives in accordance with Title 22 of the Code of Regulations.
- e Ground water basin currently exceeds usable mineral quality.
- f Ground water basin boundary map available in appendix.
- g Basis for objectives is in the report "A Study of the Paso Robles Ground Water Basin to Establish Best Management Practices and Establish Salt Objectives", Coastal Resources Institute, June 1993.
- h Standard exceeds California Secondary Drinking Water Standards contained in Title 22 of the Code of Regulations. Water quality standard is based upon existing water quality. If water quality degradation occurs, the Regional Board may consider salt limits on appropriate discharges.

The restrictions specified for Table 3-7 are applicable to the values indicated in Table 3-8; i.e., the values are at best representative of gross areas only. Ground waters in the Upper Valley of the Salinas River Sub-basin have average Total Dissolved Solids (TDS) concentrations that range from 300 mg/l to over 3000 mg/l. Therefore, application of these objectives must be consistent with the objectives previously stated in this chapter and synchronously reflect the actual ground water quality naturally present. The Regional Board must afford full consideration to: (1) present and probable future beneficial uses affected by the waste discharge; (2) competing beneficial uses; (3) degree of impact on existing beneficial uses; (4) receiving water quality; and (5) water quality objectives, before adjudging priority of dominant use and promulgating waste discharge requirements.

As part of the State's continuing planning process, data will be collected and numerical water quality objectives will be developed for those mineral constituents where sufficient information is presently not available for the establishment of such objectives.

Incorporating all amendments approved by the Office of
Administrative Law as of December 31, 2010.

CHAPTER 1: INTRODUCTION

1.1 THE SAN FRANCISCO BAY REGION

The San Francisco Bay Region (Region) is 4,603 square miles, roughly the size of the State of Connecticut, and characterized by its dominant feature, 1,100 square miles of the 1,600 square mile San Francisco Bay Estuary (Estuary), the largest estuary on the west coast of the United States, where fresh waters from California's Central Valley mix with the saline waters of the Pacific Ocean. The Region also includes coastal portions of Marin and San Mateo counties, from Tomales Bay in the north to Pescadero and Butano Creeks in the south.

The Estuary conveys the waters of the Sacramento and San Joaquin rivers into the Pacific Ocean. Located on the central coast of California (Figure 1-1), the Bay system functions as the only drainage outlet for waters of the Central Valley. It also marks natural topographic separation between the northern and southern coastal mountain ranges. The Region's waterways, wetlands, and bays form the centerpiece of the United States' fourth-largest metropolitan region, including all or major portions of Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, Solano, and Sonoma counties.

Because of its highly dynamic and complex environmental conditions, the Bay system supports an extraordinarily diverse and productive ecosystem. Within each section of the Bay lie deepwater areas that are adjacent to large expanses of very shallow water. Salinity levels range from hypersaline to fresh water, and water temperature varies throughout the Bay system. These factors greatly increase the number of species that can live in the Estuary and enhance its biological stability.

The Bay system's deepwater channels, tidelands, marshlands, freshwater streams, and rivers provide a wide variety of habitats that have become increasingly vital to the survival of several plant and animal species as other estuaries are reduced in size or lost to development. These areas sustain rich communities of crabs, clams, fish, birds, and other aquatic life and serve both as important wintering sites for migrating waterfowl and as spawning areas for anadromous fish.

1.2 THE BAY SYSTEM'S SURFACE WATER & GROUNDWATER

The Sacramento and San Joaquin rivers, which enter the Bay system through the Delta at the eastern end of Suisun Bay, contribute almost all the freshwater inflow to the Bay. Many small rivers and streams also convey fresh water to the Bay system. The rate and timing of these freshwater flows are among the most important factors influencing physical, chemical, and biological conditions in the Estuary. Much of the freshwater inflow, however, is trapped upstream by the dams, canals, and reservoirs of California's water diversion projects, which provide vital water to industries, farms, homes, and businesses throughout the state. This freshwater diversion has sparked statewide controversy over possible adverse effects on the Estuary's water quality, fisheries, and ecosystem.

Flows in the Region are highly seasonal, with more than 90 percent of the annual runoff occurring during the winter rainy season between October and April. Many streams go dry during the middle or late summer. For example, the Napa River, which is least affected by

upstream regulation, clearly shows the seasonal nature of runoff. Only 4-1/2 percent of this river's average annual runoff occurs during the summer months.

Groundwater is an important component of the hydrologic system in the Region. Groundwater provides excellent natural storage, distribution, and treatment systems. Groundwater also supplies high quality water for drinking, irrigation, and industrial processing and service. As an important source of freshwater replenishment, groundwater may also discharge to surface streams, wetlands, and San Francisco Bay.

A variety of historical and ongoing industrial, urban, and agricultural activities and their associated discharges degrade groundwater quality, including industrial and agricultural chemical spills, underground and above-ground tank and sump leaks, landfill leachate, septic tank failures, and chemical seepage via shallow drainage wells and abandoned wells. In addition, saltwater intrusion directly attributed to over-pumping has degraded the purity of some groundwater aquifers.

These adverse impacts on groundwater quality often have long-term effects that are costly to remediate. Consequently, as additional discharges are identified, source removal, pollution containment, and cleanup must be undertaken as quickly as possible. Activities that may potentially pollute groundwater must be managed to ensure that groundwater quality is protected.

1.3 PROTECTING SAN FRANCISCO BAY: THE WATER BOARD

Because of its unique characteristics, the San Francisco Bay estuarine system merits special protection. The adverse effects of waste discharges must be controlled. Extensive upstream water diversions must be limited, and their effects mitigated. To address these and other water issues, the California Legislature established the State Water Resources Control Board (State Water Board) and the nine Regional Water Quality Control Boards (Regional Water Boards) in 1949. Operating under the provisions of the California Water Code (Water Code), their unique relationship couples state-level coordination and regional familiarity with local needs and conditions. Their joint actions constitute a comprehensive program for managing water quality in California, as well as for effective state administration of federal water pollution control laws.

The State Water Board administers water rights, water pollution control, and water quality functions for the state as part of the California Environmental Protection Agency (Cal/EPA). It provides policy guidance and budgetary authority to the Regional Water Boards, which conduct planning, permitting, and enforcement activities. The State Water Board shares authority for implementation of the federal Clean Water Act and the state Porter-Cologne Act with the Regional Water Boards.

The San Francisco Bay Regional Water Quality Control Board (Water Board) regulates surface water and groundwater quality in the Region. The area under the Water Board's jurisdiction comprises all of the San Francisco Bay segments extending to the mouth of the Sacramento-San Joaquin Delta (Winter Island near Pittsburg).

California's governor appoints the nine-member Water Board, whose members serve for four-year terms. Water Board members must reside or maintain a place of business within the Region and must be associated with or have special knowledge of specific activities related to water quality control. Members of the Water Board serve without pay and conduct their business at regular meetings and frequent public hearings where public participation is encouraged.

The Water Board's overall mission is to protect surface waters and groundwater in the Region. The Water Board carries out its mission by:

- Addressing Region-wide water quality concerns through the creation and triennial update of a Water Quality Control Plan (Basin Plan);
- Preparing new or revised policies addressing Region-wide water quality concerns;
- Adopting, monitoring compliance with, and enforcing waste discharge requirements and National Pollutant Discharge Elimination System (NPDES) permits;
- Providing recommendations to the State Water Board on financial assistance programs, proposals for water diversion, budget development, and other statewide programs and policies;
- Coordinating with other public agencies that are concerned with water quality control; and
- Informing and involving the public on water quality issues.

1.4 WATER QUALITY CONTROL PLAN

By law, the Water Board is required to develop, adopt (after public hearing), and implement a Basin Plan for the Region. The Basin Plan is the master policy document that contains descriptions of the legal, technical, and programmatic bases of water quality regulation in the Region. The plan must include:

- A statement of beneficial water uses that the Water Board will protect;
- The water quality objectives needed to protect the designated beneficial water uses; and
- The strategies and time schedules for achieving the water quality objectives.

The Water Board first adopted a plan for waters inland from the Golden Gate in 1968. After several revisions, the first comprehensive Basin Plan for the Region was adopted by the Water Board and approved by the State Water Board in April 1975. Subsequently, major revisions were adopted in 1982, 1986, 1992, 1995, 2002, and 2004. Each proposed amendment to the Basin Plan is subject to an extensive public review process. The Water Board must then adopt the amendment, which is then subject to approval by the State Water Board. In most cases, the Office of Administrative Law and the U.S. Environmental Protection Agency (U.S. EPA) must approve the amendment as well.

The basin planning process drives the Water Board's effort to manage water quality. The Basin Plan provides a definitive program of actions designed to preserve and enhance water quality and to protect beneficial uses in a manner that will result in maximum benefit to the people of California. The Basin Plan fulfills the following needs:

- The U.S. EPA requires such a plan in order to allocate federal grants to cities and districts for construction of wastewater treatment facilities.
- The Basin Plan provides a basis for establishing priorities as to how both state and federal grants are disbursed for constructing and upgrading wastewater treatment facilities.
- The Basin Plan fulfills the requirements of the Porter-Cologne Act that call for water quality control plans in California.
- The Basin Plan, by defining the resources, services, and qualities of aquatic ecosystems to be maintained, provides a basis for the Water Board to establish or revise waste discharge requirements and for the State Water Board to establish or revise water rights permits.
- The Basin Plan establishes conditions (discharge prohibitions) that must be met at all times.
- The Basin Plan establishes or indicates water quality standards applicable to waters of the Region, as required by the federal Clean Water Act.
- The Basin Plan establishes water quality attainment strategies, including total maximum daily loads (TMDLs) required by the Clean Water Act, for pollutants and water bodies where water quality standards are not currently met.

The intent of this comprehensive planning effort is to provide positive and firm direction for future water quality control. However, adequate provision must be made for changing conditions and technology. The Water Board will review the Basin Plan at least once every three years. Unlike traditional plans, which often become obsolete within a few years after their preparation, the Basin Plan is updated as deemed necessary to maintain pace with technological, hydrological, political, and physical changes in the Region.

This Basin Plan contains water quality regulations adopted by the Water Board, and approved by the State Water Board, the Office of Administrative Law, and U.S. EPA. It also contains statewide regulations adopted by the State Water Board and other state agencies that refer to activities regulated by the Water Board. For the most recent list of statewide regulations applicable in the Region, please refer to the State Water Board's "Compendium of Current, Statewide Applicable Water Quality Regulations." Federal laws and regulations also specify water quality standards and are available at U.S. EPA's website.

1.5 WATERSHED MANAGEMENT PLANNING

In 1995, the Water Board initiated a watershed management approach to regulating water quality, expanding its primary focus from point sources of pollution to include more diffuse sources such as urban and agricultural runoff. A five-year statewide Strategic Plan was completed in 2001 and guides the water resource protection efforts by the State and Regional Water Boards. A key component of the Strategic Plan is the Watershed Management Initiative (WMI).

A watershed is the area of land drained by a stream or river system. It is where water precipitates and collects, extending from ridges down to the topographic low points where the water drains into a river, bay, ocean, or other water body. A watershed includes surface water bodies (e.g., streams, rivers, lakes, reservoirs, wetlands, and estuaries), groundwater (e.g., aquifers and

groundwater basins) and the surrounding landscape. Watershed management is a strategy for protecting water quality in all water bodies by looking at all components that make up a watershed area, including the natural environment, water supply, land uses and their effects on drainage, wastewater collection and discharges, and the ways humans interact with the water bodies.

In the Water Board's watershed management approach to water quality protection, water resource problems are identified and prioritized primarily on the basis of water quality within individual watersheds (i.e., the geographic drainage areas and groundwater basins used for management purposes). Unique solutions are developed for each watershed that consider all local conditions and pollution sources and rely on the input and involvement of local stakeholders. Major features of a watershed management approach are: targeting priority problems based on water quality information and monitoring, promoting stakeholder involvement in prioritization and management decisions, developing integrated solutions that make use of the expertise and authority of multiple agencies and organizations, and measuring success through monitoring and other collected data. The approach culminates in the creation and implementation of "watershed action plans."

The water quality of many water bodies continues to be degraded from pollutants discharged from diffuse sources, referred to as nonpoint sources, and from the cumulative impacts of multiple point sources such as drainage from urban areas, known as urban runoff. This degradation persists despite successful pollutant reduction efforts in the regulation of municipal and industrial wastewater point source discharges through the NPDES program. Watershed management represents a shift from the approach that focuses on regulation of point sources to a more regional approach that acknowledges environmental impacts from all activities, and prioritizes regulation of these activities with input from local stakeholders.

Watersheds transcend political, social, and economic boundaries. It is important to engage all affected stakeholders in designing and implementing goals for the watershed to protect water quality. Groups formed to create watershed action plans may include representatives from all levels of government, public interest groups, industry, academic institutions, private landowners, concerned citizens and others. Tasks in a watershed action plan could include a wide range of actions, such as improving coordination between regulatory and permitting agencies, increasing citizen participation in watershed planning activities, improving public education on water quality and protection issues, and enforcing current regulations on a more consistent and prioritized basis.

1.6 THE SAN FRANCISCO ESTUARY PROJECT

The Water Board has been an active participant in the San Francisco Estuary Project (Estuary Project), a cooperative program aimed at promoting effective, environmentally sound management of the San Francisco Bay Estuary while protecting and restoring its natural resources. In 1993, the Estuary Project reached its goal of developing a Comprehensive Conservation and Management Plan (CCMP). The CCMP addresses five critical concerns identified by the Estuary Project's broad-based advisory committees: decline of biological resources; increased pollutants; freshwater diversion and altered flow regime; dredging and waterway modification; and intensified land use.

Implementation of the CCMP's over 140 recommended actions has been ongoing since the early 1990s. The Water Board serves as lead state agency, undertaking responsibility for ensuring that CCMP actions are carried out. The Estuary Project's Public Involvement and Education Program, which seeks to inform and involve the public in Estuary issues, is currently housed at the Water Board office.

CHAPTER 3: WATER QUALITY OBJECTIVES

The overall goals of water quality regulation are to protect and maintain thriving aquatic ecosystems and the resources those systems provide to society and to accomplish these in an economically and socially sound manner. California's regulatory framework uses water quality objectives both to define appropriate levels of environmental quality and to control activities that can adversely affect aquatic systems.

3.1 WATER QUALITY OBJECTIVES

There are two types of objectives: narrative and numerical. Narrative objectives present general descriptions of water quality that must be attained through pollutant control measures and watershed management. They also serve as the basis for the development of detailed numerical objectives.

Historically, numerical objectives were developed primarily to limit the adverse effect of pollutants in the water column. Two decades of regulatory experience and extensive research in environmental science have demonstrated that beneficial uses are not fully protected unless pollutant levels in all parts of the aquatic system are also monitored and controlled. The Regional Board is actively working towards an integrated set of objectives, including numerical sediment objectives, that will ensure the protection of all current and potential beneficial uses.

Numerical objectives typically describe pollutant concentrations, physical/chemical conditions of the water itself, and the toxicity of the water to aquatic organisms. These objectives are designed to represent the maximum amount of pollutants that can remain in the water column without causing any adverse effect on organisms using the aquatic system as habitat, on people consuming those organisms or water, and on other current or potential beneficial uses (as described in [Chapter 2](#)).

The technical bases of the region's water quality objectives include extensive biological, chemical, and physical partitioning information reported in the scientific literature, national water quality criteria, studies conducted by other agencies, and information gained from local environmental and discharge monitoring (as described in [Chapter 6](#)). The Regional Board recognizes that limited information exists in some cases, making it difficult to establish definitive numerical objectives, but the Regional Board believes its conservative approach to setting objectives has been proper. In addition to the technical review, the overall feasibility of reaching objectives in terms of technological, institutional, economic, and administrative factors is considered at many different stages of objective derivation and implementation of the water quality control plan.

Together, the narrative and numerical objectives define the level of water quality that shall be maintained within the region. In instances where water quality is better than that prescribed by the objectives, the state Antidegradation Policy applies ([State Board Resolution 68-16: Statement of Policy With Respect to Maintaining High Quality of Waters in California](#)). This policy is aimed at protecting relatively uncontaminated aquatic systems where they exist and preventing further degradation. The state's Antidegradation Policy is consistent with the federal Antidegradation Policy, as interpreted by the State Water Resources Control Board in State Board Order No. 86-17.

When uncontrollable water quality factors result in the degradation of water quality beyond the levels or limits established herein as water quality objectives, the Regional Board will conduct a case-by-case analysis of the benefits and costs of preventing further degradation. In cases where this analysis indicates that beneficial uses will be adversely impacted by allowing further degradation, then the Regional Board will not allow controllable water quality factors to cause any further degradation of water quality. Controllable water quality factors are those actions, conditions, or circumstances resulting from human activities that may influence the quality of the waters of the state and that may be reasonably controlled.

The Regional Board establishes and enforces waste discharge requirements for point and nonpoint source of pollutants at levels necessary to meet numerical and narrative water quality objectives. In setting waste discharge requirements, the Regional Board will consider, among other things, the potential impact on beneficial uses within the area of influence of the discharge, the existing quality of receiving waters, and the appropriate water quality objectives.

In general, the objectives are intended to govern the concentration of pollutant constituents in the main water mass. The same objectives cannot be applied at or immediately adjacent to submerged effluent discharge structures. Zones of initial dilution within which higher concentrations can be tolerated will be allowed for such discharges.

For a submerged buoyant discharge, characteristic of most municipal and industrial wastes that are released from submerged outfalls, the momentum of the discharge and its initial buoyancy act together to produce turbulent mixing. Initial dilution in this case is completed when the diluting wastewater ceases to rise in the water column and first begins to spread horizontally.

For shallow water submerged discharges, surface discharges, and nonbuoyant discharges, characteristic of cooling water wastes and some individual discharges, turbulent mixing results primarily from the momentum of discharge. Initial dilution, in these cases, is considered to be completed when the momentum-induced velocity of the discharge ceases to produce significant mixing of the waste, or the diluting plume reaches a fixed distance from the discharge to be specified by the Regional Board, whichever results in the lower estimate for initial dilution.

Compliance with water quality objectives may be prohibitively expensive or technically impossible in some cases. The Regional Board will consider modification of specific water quality objectives as long as the discharger can demonstrate that the alternate objective will protect existing beneficial uses, is scientifically defensible, and is consistent with the state Antidegradation Policy. This exception clause properly indicates that the Regional Board will conservatively compare benefits and costs in these cases because of the difficulty in quantifying beneficial uses.

These water quality objectives are considered necessary to protect the present and potential beneficial uses described in Chapter 2 of this Plan and to protect existing high quality waters of the state. These objectives will be achieved primarily through establishing and enforcing waste discharge requirements and by implementing this water quality control plan.

3.2 OBJECTIVES FOR OCEAN WATERS

The provisions of the State Board's "Water Quality Control Plan for Ocean Waters of California" (Ocean Plan) and "Water Quality Control Plan for Control of Temperature in the Coastal and Interstate Waters and Enclosed Bays and Estuaries of California" (Thermal Plan) and any revision to them will apply to ocean waters. These plans describe objectives and effluent limitations for ocean waters.

3.3 OBJECTIVES FOR SURFACE WATERS

The following objectives apply to all surface waters within the region, except the Pacific Ocean.

3.3.1 BACTERIA

Table 3-1 provides a summary of the bacterial water quality objectives and identifies the sources of those objectives. Table 3-2 summarizes U.S. EPA's water quality criteria for water contact recreation based on the frequency of use a particular area receives. These criteria will be used to differentiate between pollution sources or to supplement objectives for water contact recreation.

3.3.2 BIOACCUMULATION

Many pollutants can accumulate on particles, in sediment, or bioaccumulate in fish and other aquatic organisms. Controllable water quality factors shall not cause a detrimental increase in concentrations of toxic substances found in bottom sediments or aquatic life. Effects on aquatic organisms, wildlife, and human health will be considered.

3.3.3 BIOSTIMULATORY SUBSTANCES

Waters shall not contain biostimulatory substances in concentrations that promote aquatic growths to the extent that such growths cause nuisance or adversely affect beneficial uses. Changes in chlorophyll a and associated phytoplankton communities follow complex dynamics that are sometimes associated with a discharge of biostimulatory substances. Irregular and extreme levels of chlorophyll a or phytoplankton blooms may indicate exceedance of this objective and require investigation.

3.3.4 COLOR

Waters shall be free of coloration that causes nuisance or adversely affects beneficial uses.

3.3.5 DISSOLVED OXYGEN

For all tidal waters, the following objectives shall apply:

In the Bay:

Downstream of Carquinez Bridge	5.0 mg/l minimum
Upstream of Carquinez Bridge	7.0 mg/l minimum

For nontidal waters, the following objectives shall apply:

Waters designated as:

Cold water habitat	7.0 mg/l minimum
Warm water habitat	5.0 mg/l minimum

The median dissolved oxygen concentration for any three consecutive months shall not be less than 80 percent of the dissolved oxygen content at saturation.

Dissolved oxygen is a general index of the state of the health of receiving waters. Although minimum concentrations of 5 mg/l and 7 mg/l are frequently used as objectives to protect fish life, higher concentrations are generally desirable to protect sensitive aquatic forms. In areas unaffected by waste discharges, a level of about 85 percent of oxygen saturation exists. A three-month median objective of 80 percent of oxygen saturation allows for some degradation from this level, but still requires a consistently high oxygen content in the receiving water.

3.3.6 FLOATING MATERIAL

Waters shall not contain floating material, including solids, liquids, foams, and scum, in concentrations that cause nuisance or adversely affect beneficial uses.

3.3.7 OIL AND GREASE

Waters shall not contain oils, greases, waxes, or other materials in concentrations that result in a visible film or coating on the surface of the water or on objects in the water, that cause nuisance, or that otherwise adversely affect beneficial uses.

3.3.8 POPULATION AND COMMUNITY ECOLOGY

All waters shall be maintained free of toxic substances in concentrations that are lethal to or that produce significant alterations in population or community ecology or receiving water biota. In addition, the health and life history characteristics of aquatic organisms in waters affected by controllable water quality factors shall not differ significantly from those for the same waters in areas unaffected by controllable water quality factors.

3.3.9 pH

The pH shall not be depressed below 6.5 nor raised above 8.5. This encompasses the pH range usually found in waters within the basin. Controllable water quality factors shall not cause changes greater than 0.5 units in normal ambient pH levels.

3.3.10 RADIOACTIVITY

Radionuclides shall not be present in concentrations that result in the accumulation of radionuclides in the food web to an extent that presents a hazard to human, plant, animal, or aquatic life. Waters designated for use as domestic or municipal supply shall not contain concentrations of radionuclides in excess of the limits specified in Table 4 of Section 64443 (Radioactivity) of Title 22 of the California Code of Regulations (CCR), which is incorporated by reference into this Plan. This incorporation is prospective, including future changes to the incorporated provisions as the changes take effect (see Table 3-5).

3.3.11 SALINITY

Controllable water quality factors shall not increase the total dissolved solids or salinity of waters of the state so as to adversely affect beneficial uses, particularly fish migration and estuarine habitat.

3.3.12 SEDIMENT

The suspended sediment load and suspended sediment discharge rate of surface waters shall not be altered in such a manner as to cause nuisance or adversely affect beneficial uses.

Controllable water quality factors shall not cause a detrimental increase in the concentrations of toxic pollutants in sediments or aquatic life.

3.3.13 SETTLEABLE MATERIAL

Waters shall not contain substances in concentrations that result in the deposition of material that cause nuisance or adversely affect beneficial uses.

3.3.14 SUSPENDED MATERIAL

Waters shall not contain suspended material in concentrations that cause nuisance or adversely affect beneficial uses.

3.3.15 SULFIDE

All water shall be free from dissolved sulfide concentrations above natural background levels. Sulfide occurs in Bay muds as a result of bacterial action on organic matter in an anaerobic environment.

Concentrations of only a few hundredths of a milligram per liter can cause a noticeable odor or be toxic to aquatic life. Violation of the sulfide objective will reflect violation of dissolved oxygen objectives as sulfides cannot exist to a significant degree in an oxygenated environment.

3.3.16 TASTES AND ODORS

Waters shall not contain taste- or odor-producing substances in concentrations that impart undesirable tastes or odors to fish flesh or other edible products of aquatic origin, that cause nuisance, or that adversely affect beneficial uses.

3.3.17 TEMPERATURE

Temperature objectives for enclosed bays and estuaries are as specified in the "Water Quality Control Plan for Control of Temperature in the Coastal and Interstate Waters and Enclosed Bays of California," including any revisions to the plan.

In addition, the following temperature objectives apply to surface waters:

- The natural receiving water temperature of inland surface waters shall not be altered unless it can be demonstrated to the satisfaction of the Regional Board that such alteration in temperature does not adversely affect beneficial uses.
- The temperature of any cold or warm freshwater habitat shall not be increased by more than 5°F (2.8°C) above natural receiving water temperature

3.3.18 TOXICITY

All waters shall be maintained free of toxic substances in concentrations that are lethal to or that produce other detrimental responses in aquatic organisms. Detrimental responses include, but are not limited to, decreased growth rate and decreased reproductive success of resident or indicator species. There shall be no acute toxicity in ambient waters. Acute toxicity is defined as a median of less than 90 percent survival, or less than 70 percent survival, 10 percent of the time, of test organisms in a 96-hour static or continuous flow test.

There shall be no chronic toxicity in ambient waters. Chronic toxicity is a detrimental biological effect on growth rate, reproduction, fertilization success, larval development, population abundance, community composition, or any other relevant measure of the health of an organism, population, or community.

Attainment of this objective will be determined by analyses of indicator organisms, species diversity, population density, growth anomalies, or toxicity tests (including those described in Chapter 4), or other methods selected by the Water Board. The Water Board will also consider other relevant information and numeric criteria and guidelines for toxic substances developed by other agencies as appropriate.

The health and life history characteristics of aquatic organisms in waters affected by controllable water quality factors shall not differ significantly from those for the same waters in areas unaffected by controllable water quality factors.

3.3.19 TURBIDITY

Waters shall be free of changes in turbidity that cause nuisance or adversely affect beneficial uses. Increases from normal background light penetration or turbidity relatable to waste discharge shall not be greater than 10 percent in areas where natural turbidity is greater than 50 NTU.

3.3.20 UN-IONIZED AMMONIA

The discharge of wastes shall not cause receiving waters to contain concentrations of un-ionized ammonia in excess of the following limits (in mg/l as N):

Annual Median	0.025
Maximum, Central Bay (as depicted in Figure 2-5) and upstream	0.16
Maximum, Lower Bay (as depicted in Figures 2-6 and 2-7):	0.4

The intent of this objective is to protect against the chronic toxic effects of ammonia in the receiving waters. An ammonia objective is needed for the following reasons:

- Ammonia (specifically un-ionized ammonia) is a demonstrated toxicant. Ammonia is generally accepted as one of the principle toxicants in municipal waste discharges. Some industries also discharge significant quantities of ammonia.
- Exceptions to the effluent toxicity limitations in [Chapter 4](#) of the Plan allow for the discharge of ammonia in toxic amounts. In most instances, ammonia will be diluted or degraded to a nontoxic state fairly rapidly. However, this does not occur in all cases, the South Bay being a notable example. The ammonia limit is recommended in order to preclude any build up of ammonia in the receiving water.
- A more stringent maximum objective is desirable for the northern reach of the Bay for the protection of the migratory corridor running through Central Bay, San Pablo Bay, and upstream reaches.

3.3.21 OBJECTIVES FOR SPECIFIC CHEMICAL CONSTITUENTS

Surface waters shall not contain concentrations of chemical constituents in amounts that adversely affect any designated beneficial use. Water quality objectives for selected toxic pollutants for surface waters are given in [Tables 3-3, 3-3A, 3-3B, 3-3C, 3-4](#) and [3-4A](#).

The Water Board intends to work towards the derivation of site-specific objectives for the Bay-Delta estuarine system. Site-specific objectives to be considered by the Water Board shall be developed in accordance with the provisions of the federal Clean Water Act, the State Water Code, State Board water quality control plans, and this Plan. These site-specific objectives will take into consideration factors such as all available scientific information and monitoring data and the latest U.S. EPA guidance, and local environmental conditions and impacts caused by bioaccumulation. The objectives in [Tables 3-3](#) and [3-4](#) apply throughout the region except as otherwise indicated in the tables or when site-specific objectives for the pollutant parameter have been adopted. Site-specific objectives have been adopted for copper in segments of San Francisco Bay (see [Figure 7.2-1-01](#)), for nickel in South San Francisco Bay ([Table 3-3A](#)), and for cyanide in all

San Francisco Bay segments (Table 3-3C). Objectives for mercury that apply to San Francisco Bay are listed in Table 3-3B. Objectives for mercury that apply to Walker Creek, Soulajule Reservoir, and their tributaries, and to waters of the Guadalupe River watershed are listed in Table 3-4A.

South San Francisco Bay south of the Dumbarton Bridge is a unique, water-quality-limited, hydrodynamic and biological environment that merits continued special attention by the Water Board. Controlling urban and upland runoff sources is critical to the success of maintaining water quality in this portion of the Bay. Site-specific water quality objectives have been adopted for dissolved copper and nickel in this Bay segment. Site-specific objectives may be appropriate for other pollutants of concern, but this determination will be made on a case-by-case basis, and after it has been demonstrated that all other reasonable treatment, source control and pollution prevention measures have been exhausted. The Water Board will determine whether revised water quality objectives and/or effluent limitations are appropriate based on sound technical information and scientific studies, stakeholder input, and the need for flexibility to address priority problems in the watershed.

3.3.22 CONSTITUENTS OF CONCERN FOR MUNICIPAL AND AGRICULTURAL WATER SUPPLIES

At a minimum, surface waters designated for use as domestic or municipal supply (MUN) shall not contain concentrations of constituents in excess of the maximum (MCLs) or secondary maximum contaminant levels (SMCLs) specified in the following provisions of Title 22, which are incorporated by reference into this plan: Table 64431-A (Inorganic Chemicals) of Section 64431, and Table 64433.2-A (Fluoride) of Section 64433.2, Table 64444-A (Organic Chemicals) of Section 64444, and Table 64449-A (SMCLs-Consumer Acceptance Limits) and 64449-B (SMCLs-Ranges) of Section 64449. This incorporation-by-reference is prospective, including future changes to the incorporated provisions as the changes take effect. Table 3-5 contains water quality objectives for municipal supply, including the MCLs contained in various sections of Title 22 as of the adoption of this plan.

At a minimum, surface waters designated for use as agricultural supply (AGR) shall not contain concentrations of constituents in excess of the levels specified in Table 3-6.

3.4 OBJECTIVES FOR GROUNDWATER

Groundwater objectives consist primarily of narrative objectives combined with a limited number of numerical objectives. Additionally, the Water Board will establish basin- and/or site-specific numerical groundwater objectives as necessary. For example, the Water Board has groundwater basin-specific objectives for the Alameda Creek watershed above Niles to include the Livermore-Amador Valley as shown in Table 3-7.

The maintenance of existing high quality of groundwater (i.e., "background") is the primary groundwater objective.

In addition, at a minimum, groundwater shall not contain concentrations of bacteria, chemical constituents, radioactivity, or substances producing taste and odor in excess of the objectives described below unless naturally occurring background concentrations are greater. Under existing law, the Water Board regulates waste discharges to land that could affect water quality,

including both groundwater and surface water quality. Waste discharges that reach groundwater are regulated to protect both groundwater and any surface water in continuity with groundwater. Waste discharges that affect groundwater that is in continuity with surface water cannot cause violations of any applicable surface water standards.

3.4.1 BACTERIA

In groundwater with a beneficial use of municipal and domestic supply, the median of the most probable number of coliform organisms over any seven-day period shall be less than 1.1 most probable number per 100 milliliters (MPN/100 mL) (based on multiple tube fermentation technique; equivalent test results based on other analytical techniques as specified in the National Primary Drinking Water Regulation, 40 CFR, Part 141.21 (f), revised June 10, 1992, are acceptable).

3.4.2 ORGANIC AND INORGANIC CHEMICAL CONSTITUENTS

All groundwater shall be maintained free of organic and inorganic chemical constituents in concentrations that adversely affect beneficial uses. To evaluate compliance with water quality objectives, the Water Board will consider all relevant and scientifically valid evidence, including relevant and scientifically valid numerical criteria and guidelines developed and/or published by other agencies and organizations (e.g., U.S. Environmental Protection Agency (U.S. EPA), the State Water Board, California Department of Health Services (DHS), U.S. Food and Drug Administration, National Academy of Sciences, California Environmental Protection Agency's (Cal/EPA) Office of Environmental Health Hazard Assessment (OEHHA), U.S. Agency for Toxic Substances and Disease Registry, Cal/EPA Department of Toxic Substances Control (DTSC), and other appropriate organizations.)

At a minimum, groundwater designated for use as domestic or municipal supply (MUN) shall not contain concentrations of constituents in excess of the maximum (MCLs) or secondary maximum contaminant levels (SMCLs) specified in the following provisions of Title 22, which are incorporated by reference into this plan: Tables 64431-A (Inorganic Chemicals) of Section 64431, Table 64433.2-A (Fluoride) of Section 64433.2, and Table 64444-A (Organic Chemicals) of Section 64444. This incorporation-by-reference is prospective, including future changes to the incorporated provisions as the changes take effect. (See Table 3-5.)

Groundwater with a beneficial use of agricultural supply shall not contain concentrations of chemical constituents in amounts that adversely affect such beneficial use. In determining compliance with this objective, the Water Board will consider as evidence relevant and scientifically valid water quality goals from sources such as the Food and Agricultural Organizations of the United Nations; University of California Cooperative Extension, Committee of Experts; and McKee and Wolf's "Water Quality Criteria," as well as other relevant and scientifically valid evidence. At a minimum, groundwater designated for use as agricultural supply (AGR) shall not contain concentrations of constituents in excess of the levels specified in Table 3-6.

Groundwater with a beneficial use of freshwater replenishment shall not contain concentrations of chemicals in amounts that will adversely affect the beneficial use of the receiving surface water.

Groundwater with a beneficial use of industrial service supply or industrial process supply shall not contain pollutant levels that impair current or potential industrial uses.

3.4.3 RADIOACTIVITY

At a minimum, groundwater designated for use as domestic or municipal supply (MUN) shall not contain concentrations of radionuclides in excess of the MCLs specified in Table 4 (Radioactivity) of Section 64443 of Title 22, which is incorporated by reference into this plan. This incorporation-by-reference is prospective, including future changes to the incorporated provisions as the changes take effect. (See Table 3-5.)

3.4.4 TASTE AND ODOR

Groundwater designated for use as domestic or municipal supply (MUN) shall not contain taste- or odor-producing substances in concentrations that cause a nuisance or adversely affect beneficial uses. At a minimum, groundwater designated for use as domestic or municipal supply shall not contain concentrations in excess of the SMCLs specified in Tables 64449-A (Secondary MCLs-Consumer Acceptance Limits) and 64449-B (Secondary MCLs-Ranges) of Section 64449 of Title 22, which is incorporated by reference into this plan. This incorporation-by-reference is prospective, including future changes to the incorporated provisions as the changes take effect. (See Table 3-5.)

3.5 OBJECTIVES FOR THE DELTA

The objectives contained in the State Water Board's 1995 "Water Quality Control Plan for the San Francisco Bay/Sacramento-San Joaquin Delta Estuary" and any revisions thereto shall apply to the waters of the Sacramento-San Joaquin Delta and adjacent waters as specified in that plan.

3.6 OBJECTIVES FOR ALAMEDA CREEK WATERSHED

The water quality objectives contained in Table 3-7 apply to the surface and groundwaters of the Alameda Creek watershed above Niles.

Wastewater discharges that cause the surface water limits in Table 3-7 to be exceeded may be allowed if they are part of an overall wastewater resource operational program developed by those agencies affected and approved by the Water Board.

Table 3-1: Water Quality Objectives for Coliform Bacteria^a

Beneficial Use	Fecal Coliform (MPN/100ml)	Total Coliform (MPN/100ml)
Water Contact Recreation	geometric mean < 200 90th percentile < 400	median < 240 no sample > 10,000
Shellfish Harvesting ^b	median < 14 90th percentile < 43	median < 70 90th percentile < 230 ^c
Non-contact Water Recreation ^d	mean < 2000 90th percentile < 4000	
Municipal Supply:		
- Surface Water ^e	geometric mean < 20	geometric mean < 100
- Groundwater		< 1.1 ^f

NOTES:

- a. Based on a minimum of five consecutive samples equally spaced over a 30-day period.
- b. Source: National Shellfish Sanitation Program.
- c. Based on a five-tube decimal dilution test or 300 MPN/100 ml when a three-tube decimal dilution test is used.
- d. Source: Report of the Committee on Water Quality Criteria, National Technical Advisory Committee, 1968.
- e. Source: DOHS recommendation.
- f. Based on multiple tube fermentation technique; equivalent test results based on other analytical techniques, as specified in the National Primary Drinking Water Regulation, 40 CFR, Part 141.21(f), revised June 10, 1992, are acceptable.

Table 3-2: U.S. EPA Bacteriological Criteria for Water Contact Recreation^{1,2}
 (in colonies per 100 ML)

	Fresh Water		Salt Water
	Enterococci	E. Coli	Enterococci
Steady State (all areas)	33	126	35
Maximum at:			
- designated beach	61	235	104
- moderately used area	89	298	124
- lightly used area	108	406	276
- infrequently used area	151	576	500

NOTES:

1. The criteria were published in the Federal Register, Vol. 51, No. 45 / Friday, March 7, 1986 / 8012-8016. The Criteria are based on:
 (a) Cabelli, V.J. 1983. Health Effects Criteria for Marine Recreational Waters. U.S. EPA, EPA 600/1-80-031, Cincinnati, Ohio, and
 (b) Dufour, A.P. 1984. Health Effects Criteria for Fresh Recreational Waters. U.S. EPA, EPA 600/1-84-004, Cincinnati Ohio.
2. The U.S. EPA criteria apply to water contact recreation only. The criteria provide for a level of production based on the frequency of usage of a given water contact recreation area. The criteria may be employed in special studies within this region to differentiate between pollution sources or to supplement the current coliform objectives for water contact recreation.

Table 3-3: Marine^a Water Quality Objectives for Toxic Pollutants for Surface Waters (all values in ug/l)

Compound	4-day Average	1-hr Average	24-hr Average
Arsenic ^{b, c, d}	36	69	
Cadmium ^{b, c, d}	9.3	42	
Chromium VI ^{b, c, d, e}	50	1100	
Copper ^{c, d, f}			
Cyanide ^g			
Lead ^{b, c, d}	8.1	210	
Mercury ^h	0.025	2.1	
Nickel ^{b, c, d}	8.2	74	
Selenium ⁱ			
Silver ^{b, c, d}		1.9	
Tributyltin ^j			
Zinc ^{b, c, d}	81	90	
PAHs ^k			15

NOTES:

- a. Marine waters are those in which the salinity is equal to or greater than 10 parts per thousand 95% of the time, as set forth in Chapter 4 of the Basin Plan. Unless a site-specific objective has been adopted, these objectives shall apply to all marine waters except for the South Bay south of Dumbarton Bridge (where the California Toxics Rule (CTR) applies) or as specified in note h (below). For waters in which the salinity is between 1 and 10 parts per thousand, the applicable objectives are the more stringent of the freshwater (Table 3-4) or marine objectives.
- b. Source: 40 CFR Part 131.38 (California Toxics Rule or CTR), May 18, 2000.
- c. These objectives for metals are expressed in terms of the dissolved fraction of the metal in the water column.
- d. According to the CTR, these objectives are expressed as a function of the water-effect ratio (WER), which is a measure of the toxicity of a pollutant in site water divided by the same measure of the toxicity of the same pollutant in laboratory dilution water. The 1-hr. and 4-day objectives = table value X WER. The table values assume a WER equal to one.
- e. This objective may be met as total chromium.
- f. Water quality objectives for copper were promulgated by the CTR and may be updated by U.S. EPA without amending the Basin Plan. Note: at the time of writing, the values are 3.1 ug/l (4-day average) and 4.8 ug/l (1-hr. average). The most recent version of the CTR should be consulted before applying these values.
- g. Cyanide criteria were promulgated in the National Toxics Rule (NTR) (Note: at the time of writing, the values are 1.0 µg/l (4-day average) and 1.0 µg/l (1-hr. average)) and apply, except that site-specific

marine water quality objectives for cyanide have been adopted for San Francisco Bay as set forth in Table 3-3C.

- h. Source: U.S. EPA Ambient Water Quality Criteria for Mercury (1984). The 4-day average value for mercury does not apply to San Francisco Bay; instead, the water quality objectives specified in Table 3-3B apply. The 1-hour average value continues to apply to San Francisco Bay.
- i. Selenium criteria were promulgated for all San Francisco Bay/Delta waters in the National Toxics Rule (NTR). The NTR criteria specifically apply to San Francisco Bay upstream to and including Suisun Bay and Sacramento-San Joaquin Delta. Note: at the time of writing, the values are 5.0 ug/l (4-day average) and 20 ug/l (1-hr. average).
- j. Tributyltin is a compound used as an antifouling ingredient in marine paints and toxic to aquatic life in low concentrations. U.S. EPA has published draft criteria for protection of aquatic life (Federal Register: December 27, 2002, Vol. 67, No. 249, Page 79090-79091). These criteria are cited for advisory purposes. The draft criteria may be revised.
- k. The 24-hour average aquatic life protection objective for total PAHs is retained from the 1995 Basin Plan. Source: U.S. EPA 1980.

Table 3-3A: Water Quality Objectives for Copper and Nickel in San Francisco Bay Segments (ug/L)

Compound	4-day Average (CCC) ¹	1-hr Average (CMC) ²	Extent of Applicability
Copper	6.9	10.8	The portion of Lower San Francisco Bay south of the line representing the Hayward Shoals shown on Figure 7.1. and South San Francisco Bay
Copper	6.0	9.4	The portion of the delta located in the San Francisco Bay Region, Suisun Bay, Carquinez Strait, San Pablo Bay, Central San Francisco Bay, and the portion of Lower San Francisco Bay north of the line representing the Hayward Shoals on Figure 7.1.
Nickel	11.9	62.4*	South San Francisco Bay

¹Criteria Continuous Concentration

²Criteria Maximum Concentration

*Handbook of Water Quality Standards, 2nd ed. 1994 in Section 3.7.6 states that the CMC = Final AcuteValue/2; 62.4 is the Final Acute Value (resident species database)/2; so the site-specific CMC is lower than the California Toxics Rule value because we are using the resident species database instead of the National Species Database.

Protection of Human Health	0.2 mg mercury per kg fish tissue	Average wet weight concentration measured in the edible portion of trophic level 3 and trophic level 4 fish ^c
Protection of Aquatic Organisms and Wildlife	0.03 mg mercury per kg fish	Average wet weight concentration measured in whole fish 3–5 cm in length

Notes:

- a. Marine waters are those in which the salinity is equal to or greater than 10 parts per thousand 95% of the time, as set forth in Chapter 4 of the Basin Plan. For waters in which the salinity is between 1 and 10 parts per thousand, the applicable objectives are the more stringent of the freshwater or marine objectives.
- b. Objectives apply to all segments of San Francisco Bay, including Sacramento/San Joaquin River Delta (within San Francisco Bay region), Suisun Bay, Carquinez Strait, San Pablo Bay, Richardson Bay, Central San Francisco Bay, Lower San Francisco Bay, and South San Francisco Bay (including the Lower South Bay)-
- c. Compliance shall be determined by analysis of fish tissue as described in Chapter 6, Surveillance and Monitoring.

Table 3-3C: Marine ^a Water Quality Objectives for Cyanide in San Francisco Bay ^b (values in ug/l)		
Cyanide	Chronic Objective (4-day Average)	2.9
Cyanide	Acute Objective (1-hour Average)	9.4

Notes:

- a. Marine waters are those in which the salinity is equal to or greater than 10 parts per thousand 95% of the time, as set forth in Chapter 4 of the Basin Plan. For waters in which the salinity is between 1 and 10 parts per thousand, the applicable objectives are the more stringent of the freshwater or marine objectives.
- b. Objectives apply to all segments of San Francisco Bay, including Sacramento/San Joaquin River Delta (within San Francisco Bay region), Suisun Bay, Carquinez Strait, San Pablo Bay, Central San Francisco Bay, Lower San Francisco Bay, and South San Francisco Bay.

Table 3–4: Freshwater^a Water Quality Objectives for Toxic Pollutants for Surface Waters (all values in ug/l)

Compound	4-day Average	1-hr Average
Arsenic ^{b, c, d}	150	340
Cadmium ^{b, d}	e	e
Chromium III ^f		
Chromium VI ^{b, c, d, g}	11	16
Copper ^{b, c, d}	9.0 ^h	13 ^h
Cyanide ⁱ		
Lead ^{b, c, d}	2.5 ^j	65 ^j
Mercury ^k	0.025	2.4
Nickel ^{b, c, d}	52 ^l	470 ^l
Selenium ^m		
Silver ^{b, c, d}		3.4 ⁿ
Tributyltin ^o		
Zinc ^{b, c, d}	120 ^p	120 ^p

Notes:

- a. Freshwaters are those in which the salinity is equal to or less than 1 part per thousand 95% of the time, as set forth in Chapter 4 of the Basin Plan. Unless a site-specific objective has been adopted, these objectives shall apply to all freshwaters except for the South Bay south of Dumbarton Bridge, where the California Toxics Rule (CTR) applies. For waters in which the salinity is between 1 and 10 parts per thousand, the applicable objectives are the more stringent of the marine (Table 3-3) and freshwater objectives.
- b. Source: 40 CFR Part 131.38 (California Toxics Rule or CTR), May 18, 2000.
- c. These objectives for metals are expressed in terms of the dissolved fraction of the metal in the water column.
- d. These objectives are expressed as a function of the water-effect ratio (WER), which is a measure of the toxicity of a pollutant in site water divided by the same measure of the toxicity of the same pollutant in laboratory dilution water. The 1-hr. and 4-day objectives = table value X WER. The table values assume a WER equal to one.
- e. The objectives for cadmium and other noted metals are expressed by formulas where H = ln (hardness) as CaCO₃ in mg/l: The four-day average objective for cadmium is $e^{(0.7852 H - 3.490)}$. This is 1.1 µg/l at a hardness of 100 mg/l as CaCO₃. The one-hour average objective for cadmium is $e^{(1.128 H - 3.828)}$. This is 3.9 µg/l at a hardness of 100 mg/l as CaCO₃.
- f. Chromium III criteria were promulgated in the National Toxics Rule (NTR). The NTR criteria specifically apply to San Francisco Bay upstream to and including Suisun Bay and Sacramento-San Joaquin Delta. Note: at the time of writing, the values are 180 ug/l (4-day average) and 550 ug/l (1-hr. average). The objectives for chromium III are based on hardness. The values in this footnote assume a hardness of 100 mg/l CaCO₃. At other hardnesses, the objectives must be calculated using the following formulas where H = ln (hardness): The 4-day average objective for chromium III is $e^{(0.8190H + 1.561)}$. The 1-hour average for chromium III is $e^{(0.8190 H + 3.088)}$.
- g. This objective may be met as total chromium.
- h. The objectives for copper are based on hardness. The table values assume a hardness of 100 mg/l CaCO₃. At other hardnesses, the objectives must be calculated using the following formulas where H = ln (hardness): The 4-day average objective for copper is $e^{(0.8545H - 1.702)}$. The 1-hour average for copper is $e^{(0.9422H - 1.700)}$.
- i. Cyanide criteria were promulgated in the National Toxics Rule (NTR). The NTR criteria specifically apply to San Francisco Bay upstream to and including Suisun Bay and Sacramento-San Joaquin Delta. Note: at the time of writing, the values are 5.2 ug/l (4-day average) and 22 ug/l (1-hr. average).

- j. The objectives for lead are based on hardness. The table values assume a hardness of 100 mg/l CaCO₃. At other hardnesses, the objectives must be calculated using the following formulas where H = ln (hardness): The 4-day average objective is $e^{(1.273H - 4.705)}$. The 1-hour average for lead is $e^{(1.273H - 1.460)}$.
- k. Source: U.S. EPA Quality Criteria for Water 1986 (EPA 440/5-86-001), which established a mercury criterion of 0.012 ug/l. The Basin Plan set the objective at 0.025 based on considerations of the level of detection attainable at that time. The 4-day average value for mercury does not apply to Walker Creek and Soulajule Reservoir and their tributaries nor to waters of the Guadalupe River watershed; instead, the water quality objectives specified in Table 3-4A apply. The 1-hour average value continues to apply to waters specified in Table 3-4A.
- l. The objectives for nickel are based on hardness. The table values assume a hardness of 100 mg/l CaCO₃. At other hardnesses, the objectives must be calculated using the following formulas where H = ln (hardness): The 4-day average objective is $e^{(0.8460H + 0.0584)}$. The 1-hour average objective is $e^{(0.8460H + 2.255)}$.
- m. Selenium criteria were promulgated for all San Francisco Bay/Delta waters in the National Toxics Rule (NTR). The NTR criteria specifically apply to San Francisco Bay upstream to and including Suisun Bay and Sacramento-San Joaquin Delta. Note: at the time of writing, the values are 5.0 ug/l (4-day average) and 20 ug/l (1-hr. average).
- n. The objective for silver is based on hardness. The table value assumes a hardness of 100 mg/l CaCO₃. At other hardnesses, the objective must be calculated using the following formula where H = ln (hardness): The 1-hour average objective for silver is $e^{(1.72H - 6.52)}$. U.S. EPA has not developed a 4-day criterion.
- o. Tributyltin is a compound used as an antifouling ingredient in marine paints and toxic to aquatic life in low concentrations. U.S. EPA has published draft criteria for protection of aquatic life (Federal Register: December 27, 2002, Vol. 67, No. 249, Page 79090-79091). These criteria are cited for advisory purposes. The draft criteria may be revised.
- p. The objectives for zinc are based on hardness. The table values assume a hardness of 100 mg/l CaCO₃. At other hardnesses, the objectives must be calculated using the following formulas where H = ln (hardness): The 4-day average objective for zinc is $e^{(0.8473 H + 0.884)}$. The 1-hour average for zinc is $e^{(0.8473 H + 0.884)}$.

Table 3-4A: Freshwater Water Quality Objectives for Mercury in Walker Creek, Soulajule Reservoir, and Their Tributaries; and in Waters of the Guadalupe River Watershed, Except Los Gatos Creek and its Tributaries Upstream of Vasona Dam, Lake Elsmán, Lexington Reservoir, and Vasona Lake

Protection of Aquatic Organisms and Wildlife ^a	0.05 mg methylmercury per kg fish	Average wet weight concentration measured in whole trophic level 3 fish 5–15 cm in length
	0.1 mg methylmercury per kg fish	Average wet weight concentration measured in whole trophic level 3 fish 15 – 35 cm in length

a. The freshwater water quality objectives for the protection of aquatic organisms and wildlife also protect humans who consume fish from the Walker Creek and Guadalupe River watersheds.

NOTES:

- a. For an extensive discussion of water quality for agricultural purposes, see "A Compilation of Water Quality Goals," Central Valley Regional Water Quality Control Board, May 1993.
- b. For citrus irrigation, maximum 0.075 mg/l.
- c. For sensitive crops. Values are actually for $\text{NO}_3\text{-N} + \text{NH}_4\text{-N}$.
- d. Adjusted SAR = $\{ \text{Na} / [(\text{Ca} + \text{Mg}) + 2]^{0.5} \} \{ 1 + [8.4 - \text{pHc}] \}$, where pHc is a calculated value based on total cations, Ca + Mg, and $\text{CO}_3 + \text{HCO}_3$, in me/l. Exact calculations of pHc can be found in "Guidelines for Interpretation of Water Quality for Agriculture" prepared by the Univ. of California Cooperative Extension.

Table 3-7: Water Quality Objectives for the Alameda Creek Watershed Above Niles

SURFACE WATER QUALITY OBJECTIVES (ALAMEDA CREEK AND TRIBUTARIES)

TDS: 250 mg/l (90 day-arithmetic mean)
360 mg/l (90 day-90th percentile)
500 mg/l (daily maximum)

Chlorides: 60 mg/l (90 day-arithmetic mean)
100 mg/l (90 day-90th percentile)
250 mg/l (daily maximum)

GROUNDWATER QUALITY OBJECTIVES

(Concentration not to be exceeded more than 10 percent of the time during one year.)

Central Basin

TDS: Ambient or 500 mg/l, whichever is lower
Nitrate (NO₃): 45 mg/l

Fringe Subbasins

TDS: Ambient or 1000 mg/l, whichever is lower
Nitrate (NO₃): 45 mg/l

Upland and Highland Areas

California domestic water quality standards set forth in California Code of Regulations, Title 22 and current county standards.

Ambient water quality conditions at a proposed project area will be determined by Zone 7 of the Alameda County Flood Control and Water Conservation District at the time the project is proposed, with the cost borne by the project proponents. Ambient conditions apply to the water-bearing zone with the highest quality water.

Waters designated for use as domestic or municipal water supply shall not contain concentrations of chemicals in excess of natural concentrations or the limits specified in California Code of Regulations, Title 22, Chapter 15, particularly Tables 64431-A and 64431-B of Section 64431, Table 64444-A of Section 64444, and Table 4 of Section 64443.

EXHIBIT

“26”

4837-0090-6752.2

EXHIBIT 26 TO SCVSD'S TEST CLAIM
DECLARATION OF STEPHEN R. MAGUIN

1. I, Stephen R. Maguin, am the Chief Engineer and General Manager for the County Sanitation Districts of Los Angeles County, which includes the Santa Clarita Valley Sanitation District (the "District" or "SCVSD"). I am authorized to attest to the foregoing. If called as a witness, I could and would competently testify to the assertions provided below.

Overview of the TMDL Chloride Mandate

2. In 2002, the Los Angeles Regional Water Quality Control Board ("Regional Water Board") adopted Resolution No. 02-118, which amended the Water Quality Control Plan for the Los Angeles Region ("Basin Plan") to include a Total Maximum Daily Load ("TMDL") for chloride in the Santa Clara River. (Regional Water Board Resolution No. R02-018: *Amendment to the Water Quality Control Plan (Basin Plan) for the Los Angeles Regional to Incorporate a TMDL for Chloride in the USCR*) (Oct. 24, 2002), attached as Exh. 12.)

In that resolution, the Regional Water Board restricted final waste load allocations ("WLAs") for the Valencia and Saugus Water Reclamation Plants ("WRPs") to 100 mg/L for inclusion in their National Pollutant Discharge Elimination System ("NPDES") permits. The TMDL also included interim WLAs for the plants to provide the District time to implement chloride source reduction, complete site-specific objective ("SSO") studies, and make any necessary modifications to the WRPs.

3. At that time, the District determined that complying with this TMDL would, among other things, require it to construct advanced treatment facilities that would cost approximately \$500 million. Because of the magnitude of the costs to comply with the TMDL, the District appealed the Regional Water Board's decision to the California State Water Quality Control Board ("the State Water Board").

///

///

4814-6023-3481.1

Declaration of Stephen R.

Exhibit 26 to SCVSD Test Claim

4. In 2003, the State Water Board remanded the TMDL to the Regional Water Board in State Water Board Resolution No. 2003-0014. The State Board required the Regional Water Board to “consider a phased implementation approach to allow SCVSD to complete special studies prior to planning and construction of advanced treatment technologies.” (Exh. 1 at p. 2, ¶7; *see also* Exh. 13, State Water Board Resolution No. 2003-0014: *Remanding an Amendment to the Water Quality Control Plan for the Los Angeles Region to Incorporate TMDL for Chloride in USCR* (Feb. 19, 2003).) The Regional Water Board modified the TMDL in July 2003. (Regional Water Board Resolution No. R03-008: *Amendment to the Water Quality Control Plan for the Los Angeles Region to Incorporate TMDL for Chloride in USCR* (Jul. 10, 2003), attached as Exh. 14.)

5. In May 2004, the Regional Water Board’s Resolution No. 04-004 further revised the interim WLAs and implementation plan. (Exh. 1 at p. 2, ¶9.) That resolution: (1) extended the final compliance deadline to 2018; and, (2) directed that studies be performed to characterize the sources, fate, transport, and specific impacts of chloride in the upper Santa Clarita River, including impacts to downstream reaches and underlying groundwater basins. (*See* Exh. 1 at p. 2, ¶9.) This version of the TMDL was approved by the United States Environmental Protection Agency (“US EPA”) and became effective in May 2005.

6. In 2006, the Regional Water Board shortened the overall compliance period in the implementation plan by two years. This made the WLA-based final effluent limitations for chloride operative eleven years after the May 2005 effective date of the revised TMDL. (Regional Water Board Resolution No. R4-2006-016: *Amendment to the Water Quality Control Plan for the Los Angeles Region through revision to the Implementation Plan for the USCR Chloride TMDL, Resolution 04-004* (Aug. 3, 2006), attached as Exh. 16.)

///

///

///

4814-6023-3481.1

Declaration of Stephen R.

Exhibit 26 to SCVSD Test Claim

7. The Regional Board further shortened the compliance period by another year in December 2008. This modification required the District to comply with the current TMDL and associated WLAs by May 4, 2015. The NPDES permits for the Saugus and Valencia WRPs, last updated in July 2009, reflect these terms.

8. On December 11, 2008, the Regional Water Board amended the Basin Plan to once again modify the chloride requirements. This amendment included “relaxed” SSOs for chloride in the Santa Clara River conditioned upon the completion of activities set forth in a further revised TMDL. The revised TMDL contained new final WLAs and a detailed implementation plan. The Regional Water Board referred to these modifications as the “alternative water resources management approach” or “AWRM.” (Exh. 1 at p. 4, ¶15.)

9. The revised TMDL and the Saugus and Valencia WRP NPDES permits require final compliance with the conditional SSOs and final WLAs for chloride by May 4, 2015. (*See* Exh. 1, Attachment “A” at p. 20.) In order to meet these requirements, the District must implement ultra-violet light disinfection at both WRPs, construct advanced treatment facilities at the Valencia WRP (i.e., microfiltration-reverse osmosis and brine disposal), and provide salt management facilities (i.e., extraction wells and water supply conveyance pipelines), supplemental water (i.e., water transfers and related facilities), and alternative water supplies for the protection of beneficial uses. (*See generally*, Exh. 1, Attachment “A”.)

In addition, the desalinated recycled water must also be: (1) discharged to ensure compliance with water quality objectives for Reaches 4A, 4B, and 5; (2) used to protect of salt-sensitive agricultural beneficial uses; (3) used to remove excess chloride load above 117 mg/L from the East Piru Basin; and, (4) used to enhance water supplies in Ventura and Los Angeles Counties. (*See, e.g.* Exh. 1 at p. 5, ¶22.) This lengthy “implementation” process involves great expense, particularly with respect to initial capital investments and operating costs. This expense far exceeds the District’s resources and generated revenues.

///

///

4814-6023-3481.1

Declaration of Stephen R.

Exhibit 26 to SCVSD Test Claim

10. The District's present estimate of the cost to comply with the TMDL's conditional SSOs and WLAs is \$250 million. (See Report: *Santa Clarita Valley Sanitation District USCR Chloride TMDL: SCR Reaches 5 & 6 Cost Estimate Summary for Conceptual Compliance Alternatives -Task 9* (June 2008), attached as Exh. 21 at p. 17.)

11. The District has always put forth its best efforts to facilitate and implement the Regional Water Board's regulations in an efficient and cost-effective manner. Given the large scale of the projects involved, the District has organized the implementation tasks in the phased approach described in Attachment "A" to Resolution No. R4-2008-0012, attached as Exhibit 1.

Summary of the Phased Implementation Approach

12. The implementation tasks for and the costs of complying with the final WLAs are:

Implementation Task 4

The SCVSD will convene a technical advisory committee or committees (TAC(s)) in cooperation with the Regional Board to review literature, develop a methodology for assessment, and provide recommendations with detailed timelines and task descriptions to support any needed changes to the time schedule for evaluation of appropriate chloride threshold for Task 6. The Regional Board, at a public hearing will re-evaluate the schedule for Task 6 and subsequent linked tasks based on input from the TAC(s), along with Regional Board staff analysis and assessment consistent with state and federal law, as to the types of studies needed and the time needed to conduct the necessary scientific studies to determine the appropriate chloride threshold for the protection of salt sensitive agricultural uses, and will take action to amend the schedule if there is sufficient technical justification.

The District retained a consulting firm to assist in leading the collaborative process required by the Regional Water Board. As part of this process, the District convened a stakeholder work group. To date, the District has spent approximately \$800,000 on consulting services to accomplish this task.

Implementation Task 5

Groundwater/Surface Water Interaction Model: The SCVSD will solicit proposals, collect data, develop a model in cooperation with the Regional Board, obtain peer review, and report results. The impact of source waters and reclaimed water plans

4814-6023-3481.1

Declaration of Stephen R.

Exhibit 26 to SCVSD Test Claim

on achieving the water quality objective and protecting beneficial uses, including impacts on underlying groundwater quality, will also be assessed and specific recommendations for management developed for Regional Board consideration. The purpose of the modeling and sampling effort is to determine the interaction between surface water and groundwater as it may affect the loading of chloride from groundwater and its linkage to surface water quality.

The District retained a technical consulting firm to develop the groundwater/surface water interaction model, required by the TMDL, to examine the feasibility of various compliance alternatives. As of the time this claim is submitted, the District has spent approximately \$3.1 million on consulting services to accomplish this task.

Implementation Task 6

Evaluation of Appropriate Chloride Threshold for the Protection of Sensitive Agricultural Supply Use and Endangered Species Protection: The SCVSD will prepare and submit a report on endangered species protection thresholds. The SCVSD will also prepare and submit a report presenting the results of the evaluation of chloride thresholds for salt sensitive agricultural uses, which shall consider the impact of drought and low rainfall conditions and the associated increase in imported water concentrations on downstream crops utilizing the result of Task 5.

The District retained technical consulting firms to complete the agricultural chloride threshold, and the threatened and endangered species chloride threshold studies, required by the TMDL. The District has spent approximately \$700,000 and \$100,000, respectively, for these studies.

Implementation Task 7

Develop SSO for Chloride for Sensitive Agriculture: The SCVSD will solicit proposals and develop technical analyses upon which the Regional Board may base a Basin Plan amendment.

Implementation Task 8

Develop Anti-Degradation Analysis for Revision of Chloride Objective by SSO: The SCVSD will solicit proposals and develop draft anti-degradation analysis for Regional Board consideration.

The District retained a technical consulting firm to prepare the SSOs study and anti-degradation analysis required by the TMDL. The Regional Board used information prepared for these reports as the technical basis to revise the Basin Plan. The Basin Plan incorporated the

4814-6023-3481.1

Declaration of Stephen R.

Exhibit 26 to SCVSD Test Claim

revised TMDL under Resolution R4-2008-012. The District has spent approximately \$300,000 for consulting services to complete these tasks.

Implementation Task 9

Develop a pre-planning report on conceptual compliance measures to meet different hypothetical final conditional wasteload allocations. The SCVSD shall solicit proposals and develop and submit a report to the Regional Board that identifies potential chloride control measures and costs based on different hypothetical scenarios for chloride SSOs and final conditional wasteload allocations.

The District retained the services of a technical consulting firm to develop a report on potential compliance measures and costs. The District has spent approximately \$500,000 on this task.

Implementation Task 17a

Implementation of Compliance Measures, Complete Environmental Impact Report: The SCVSD shall complete a Wastewater Facilities Plan and Programmatic Environmental Impact Report for facilities to comply with final effluent permit limits for chloride.

The District retained technical consulting firms to prepare a facilities plan and environmental to comply with the TMDL. The District has spent approximately \$1.1 million on this task to date.

Summary of the Implementation Tasks Completed to Date:

TMDL Study/Task	Cost
TMDL Collaborative Process Facilitation Services (Task 4)	\$0.8 million
Groundwater Surface Water Interaction Model (Task 5)	\$3.1 million
Agricultural Chloride Threshold Study (Task 6)	\$0.7 million
Threatened and Endangered Species Study (Task 6)	\$0.1 million
Site Specific Objectives and Anti-Degradation Study (Tasks 7 & 8)	\$0.3 million
Chloride Compliance Cost Study (Task 9)	\$0.5 million
Facilities Plan & EIR (Task 17a)	\$1.1 million
Total TMDL Study Costs to Date	\$6.6 million

*These expenditures do not include the cost of District staff time expended on these tasks.

///

///

4814-6023-3481.1

Declaration of Stephen R.

Exhibit 26 to SCVSD Test Claim

Implementation Task 20

Implementation Task 20 of the TMDL provides the schedule for compliance of WLAs that will also be incorporated into the Saugus and Valencia WRP's NPDES permits.

The interim WLAs for chloride shall remain in effect for no more than 10 years after the effective date of the TMDL. Conditional SSO for chloride in the USCR shall be achieved. Final conditional WLAs for chloride in Reaches 4B, 5, and 6 shall apply by May 5, 2015. The Regional Board may consider extending the completion date of this task as necessary to account for events beyond the control of the SCVSD.

Summary of the Phased Implementation Approach

13. In addition to its work on the implementation tasks, the District has also designed projects to comply with the final WLAs for chloride by reducing chloride levels in the WRPs' recycled water. Specifically, the District implemented an innovative automatic water softener public outreach and rebate program, in compliance with Senate Bill 475, to remove automatic water softeners, which contribute significant amounts of chloride to the recycled water produced at the District's WRPs. The total cost of the program for the removal of automatic water softeners, not including the cost of the District's staff time, is approximately \$4.8 million.

Although the removal of automatic water softeners has reduced chloride levels in the District's recycled water discharged to the river, that reduction is not sufficient to achieve compliance with the revised TMDL without additional facilities. In order to meet the chloride TMDL requirements set forth in Regional Board Resolution No. R4-2008-012, the District must also implement the AWRM program. The estimated costs of implementing that program are set forth below:

AWRM Project Element	Estimated Capital Cost *
Facilities Plan & Environmental Impact Report (EIR)	\$2.5 million
Advanced Treatment (Micro Filtration, MF & Reverse Osmosis, RO)	\$30.0 million
Brine Disposal (Deep Well Injection, DWI)	\$53.0 million
Ventura Salt Export Facilities	
(a) MF/RO Conveyance Pipeline from Valencia WRP	\$46.5 million
(b) GW Extraction Wells in Ventura County	\$5.5 million
(c) Blend Water Pipeline from Wells to River	\$52.3 million
Supplemental Water from local pumped groundwater	\$30.0 million

4814-6023-3481.1

Declaration of Stephen R.

Exhibit 26 to SCVSD Test Claim

Supplemental Water conveyance	\$12.0 million
UV Disinfection Facilities at Saugus & Valencia WRP	\$16.5 million
Removal of Automatic Water Softeners	\$2.4 million

Total Estimated Capital Cost **\$250.7 million**

* Costs based on 2007 dollars.

Note: The costs listed above are capital costs and do not include operation and maintenance expenses required for continued operation of the facilities, which are estimated to be approximately \$4.5 million per year.

Costs of the AWRM Program

14. If the District cannot comply with the AWRM program, the chloride requirements contained in Regional Board Resolution No. R4-2006-016 will become effective. These include a final WLA of 100 mg/L to assigned to the District's WRPs' discharge, which would require the District to construct advanced treatment and brine disposal facilities, resulting in a combined cost of \$500 million dollars, which includes operation and maintenance expenses required for continued operation.

Actual and Projected Costs Associated with Mandate

15. In this test claim, the District seeks all eligible costs for fiscal year 2009-2010. Actual increased costs incurred during fiscal year 2009-2010, and projected increased costs incurred during the fiscal year 2010-2011, are as follows:

Expense (TMDL/AWRM Task)	FY 09-10 Cost	FY 10-11 Estimate
Payroll & Benefits (TMDL General Compliance)	\$ 96,750	\$ 396,000
Payroll & Benefits (Facilities Plan & EIR - Task 17)	\$ 613,525	
Legal Services (TMDL General Compliance)	\$ 19,492	\$ 220,000
Consultants (TMDL Task 5)	\$ 4,022	
Consultants (TMDL Task 4)	\$ 1,192	
Consultants (TMDL Task 17)	\$ 774,980	
Consultants (TMDL General Compliance)		\$ 65,000
Payroll & Benefits (Automatic Water Softener Program)	\$ 17,300	
Rebates (Automatic Water Softener Program)	\$ 739,408	\$ 100,000
Consultants (Automatic Water Softener Program)	\$ 363,210	\$ 100,000
Total Incurred Costs	\$ 2,629,870	\$ 881,000

4814-6023-3481.1
 Declaration of Stephen R.
 Exhibit 26 to SCVSD Test Claim

Unsuccessful Attempts to Secure Other Funding Sources

16. The District has attempted to secure other sources of state and federal funding. Despite the District's good faith efforts, it has been unable to secure any alternate local, state, or federal funding sources, or identify any other fee authority that may be used to offset the increased costs that will be incurred by the District to implement the project.

17. The District's numerous efforts to secure funding to comply with the mandates are outlined below:

- a. Dedicated State Funds. During 2009 and 2010, no state funding has been available from which the District could seek to fund the mandates. It is possible that a relatively small amount (up to several million dollars) of grant funding may be sought in the future from the Department of Water Resources through the Integrated Regional Water Management Planning Program.
- b. Dedicated Federal Funds. Over the course of several years, the District has pursued outside sources of federal funding applicable to this mandate. For fiscal year 2011, the District submitted appropriations requests to Congressmen McKeon and Gallegly and Senators Boxer and Feinstein to obtain funding under the State and Tribal Assistance Grants ("STAG") Program (through the US EPA) for \$1 million. Notwithstanding its efforts, the District was not awarded any appropriation for fiscal year 2011. The District also submitted, but did not receive, funding for an appropriations request in fiscal year 2010 for STAG funding.

In the previous Congress, the District prepared and submitted requests for authorization of funding through the Water Resources Development Act ("WRDA") to several members of the House of Representatives and to California's two Senators. However, these authorization requests were not acted on by either the House or the Senate. WRDA reauthorization may be considered again in the 112th Congress.

4814-6023-3481.1

Declaration of Stephen R.

Exhibit 26 to SCVSD Test Claim

18. Although the District intends to submit additional requests for STAG and WRDA funding authorization, the outlook for funding at the federal level is bleak, and any funds that become available could at best provide only a small amount towards the project's total cost. The present policy of Congress and the current administration appears to be to afford preference to funding the current backlog of authorized, but not yet funded projects, as opposed to appropriating funds for new projects. Additionally, it is unclear whether the 112th Congress will authorize any new projects under programs like WRDA, or appropriate any funds for new projects under STAG or other accounts that were previously available. These developments may preclude or substantially delay the District's obtaining federal funding for this project.

19. In order to generate the \$250 million needed to fund the TMDL project, the District performed several service charge rate projections, which indicated that rates would be increased over the next thirteen years. After conducting service charge projections, the District initiated the Proposition 218 process, and provided notice to all affected ratepayers.

20. On June 11, 2010, the District disseminated a "Notice of Public Hearing," which outlined the various rate increases and provided a brief overview of the regulatory issues concerning the TMDL chloride requirements. (*See* Attachment "A" to this declaration.) The District's elected officials could not support the proposed rate increases in the face of fierce public opposition. The potential consequences of future rate increase implementation include a referendum to overturn them. Therefore, this source of funding remains uncertain.

As a result, the District's board declined to adopt the proposed rate increases based on the expectation that any substantive rate increase would be overturned by way of referendum. Since that time, the likelihood that the proposed rate increases would pass muster, in light of strong disapproval of the proposed length and level of rate increases, has been reduced even further.

20. The District is not aware at this time of any other local, state or federal funding that could be used to offset the increased costs that will be incurred in connection with the proposed project.

Castaic Area Town Council Meeting	July 21	7:00 pm

Public Hearing:

Location	Date	Time
Santa Clarita City Hall	July 27	6:30 pm

Protest Procedure

How To Protest The Proposed Rates

Under Proposition 218, the owner of record for a parcel that is subject to the proposed increase can submit a written protest against the proposed rate increases to the District at or before the time set for the public hearing. If a majority of affected property owners submit written protests, the proposed rate increases will not go into effect.

The written protest must identify the parcel(s) in which the party signing the protest has an interest. The best means of identifying the parcel(s) is by the Assessor's Parcel Number (APN), shown above. If the party signing the protest is not shown on the last equalized assessment roll of Los Angeles County as the owner of the parcel(s) (e.g. if you recently bought the parcel), the protest must contain or be accompanied by written evidence that such party is the owner of the parcel(s).

Using the enclosed envelope and form on page 3, please mail written protests to:

Secretary of the Board
 Santa Clarita Valley Sanitation District
 P.O. Box 4000
 Whittier, CA 90607

Basis for the Rates*

	Current	Proposed			
	FY 2009-10	FY 2010-11	FY 2011-12	FY 2012-13	FY 2013-14
Existing Facilities	\$16.58 / month (\$199 / year)	\$18.50 / month (\$222 / year)	\$19.17 / month (\$230 / year)	\$19.83 / month (\$238 / year)	\$20.50 / month (\$246 / year)
Chloride - Related Efforts	\$0 / month (\$0 / year)	\$0 / month (\$0 / year)	\$1.33 / month (\$16 / year)	\$2.75 / month (\$33 / year)	\$4.17 / month (\$50 / year)
Total Rate	\$16.58 / month (\$199 / year)	\$18.50 / month (\$222 / year)	\$20.50 / month (\$246 / year)	\$22.58 / month (\$271 / year)	\$24.67 / month (\$296 / year)

* Rate per sewage unit (equivalent to the discharge from one single family home).

Total Charge for Your Parcel*

	Current	Proposed			
	FY 2009-10	FY 2010-11	FY 2011-12	FY 2012-13	FY 2013-14
Your Charge	\$16.58 / month (\$199 / year)	\$18.50 / month (\$222 / year)	\$20.50 / month (\$246 / year)	\$22.58 / month (\$271 / year)	\$24.67 / month (\$296 / year)

* The District offers a sewer service charge rebate program for parcels that have low water usage. Details of this program, including claim forms, are available on the District's website (www.lacsd.org).

Background Information

- This notice is about a proposal to increase your wastewater service charge over the next four years as shown above.
- Santa Clarita Valley Sanitation District is the public agency responsible for managing the wastewater that is generated on your parcel.
- Approximately half of the proposed increase is for the continued operation of the existing treatment facilities. The other half is for planning and design efforts related to the facilities that are needed to comply with state-mandated chloride limits.

Regulatory Issues (Chlorides)

- In 2002, the Regional Water Quality Control Board (state regulatory agency) adopted a chloride standard that would have necessitated the construction of large-scale advanced treatment facilities costing over \$500 million.
- The District appealed that decision and, in 2004, the Regional Board agreed to allow additional studies to assess the correctness of the chloride standard as adopted.
- In 2006, the Regional Board halted the studies after the first study's conclusion supported their position and took action to reaffirm the chloride standard as adopted.
- In 2008, after lengthy negotiations, the Regional Board agreed to relax the standard in exchange for the District implementing an alternative project that included the removal of water softeners, much smaller advanced treatment facilities, and salt management facilities. The estimated cost of this alternative project is \$250 million.
- In 2008, the community took the initiative to pass Measure S to discontinue the use of self-regenerating water softeners.
- In 2009, the District's Board of Directors instructed staff to work with the Regional Board with the goal of further lowering the cost of the project.

- Based upon this direction, District's staff developed a phased approach to the project that would spread the cost of the project over significantly more years and would provide some additional relief during drought conditions, reducing the total project cost to approximately \$209 million, if ultimately approved by the Regional Board.

Recommendation

- After opposing the strict standards for over ten years, negotiating with the Regional Board, exploring all technical alternatives, and considering potential large fines and penalties for non-compliance, the Sanitation District staff is recommending the proposed increases as the lowest cost of all viable options that will allow for compliance with the adopted chloride standards.
- While the recommendation is for a four-year rate increase that will keep the District on the path to compliance, we will continue to work with the regulators to revise the adopted chloride limits and grant additional regulatory relief during drought conditions, to work with state and federal legislatures for regulatory relief during these tough economic times, and to pursue all state and federal grant funding opportunities.
- Please note that the proposed recommendation will only fund the facilities planning and design support work. Additional service charge rate increases related to compliance with the chloride standards beginning in fiscal year 2014-15 through fiscal year 2022-23 will be necessary if the project is approved and proceeds to construction.

Protest Process

- You may file a protest against the proposed rate increase following the procedure outlined on the first page. Pursuant to Proposition 218, the protest must be submitted in writing and must be received by the District prior to or at the public hearing on July 27, 2010. For your convenience, you may submit your protest using the enclosed self-addressed envelope and the form at the bottom of this page.
- Protesting the proposed rates does not negate the District's responsibility to comply with all legally adopted discharge standards. Consequently, failure to adequately fund the necessary facilities could result in the District (and, ultimately, you the ratepayer) being subject to significant fines and penalties, and potentially a much more expensive project than what is currently recommended.

More Information / Contact Us

- Telephone: (800) 388 -4602 (toll free)

Constitution of the State of California 1879 (Refs & Annos)

▣ Article XIII B. Government Spending Limitation (Refs & Annos)

→ § 6. **New programs or services mandated by legislature or state agencies; subvention; appropriation of funds or suspension of operation**

SEC. 6. (a) Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service, except that the Legislature may, but need not, provide a subvention of funds for the following mandates:

- (1) Legislative mandates requested by the local agency affected.
 - (2) Legislation defining a new crime or changing an existing definition of a crime.
 - (3) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975.
- (b)(1) Except as provided in paragraph (2), for the 2005-06 fiscal year and every subsequent fiscal year, for a mandate for which the costs of a local government claimant have been determined in a preceding fiscal year to be payable by the State pursuant to law, the Legislature shall either appropriate, in the annual Budget Act, the full payable amount that has not been previously paid, or suspend the operation of the mandate for the fiscal year for which the annual Budget Act is applicable in a manner prescribed by law.
- (2) Payable claims for costs incurred prior to the 2004-05 fiscal year that have not been paid prior to the 2005-06 fiscal year may be paid over a term of years, as prescribed by law.
 - (3) Ad valorem property tax revenues shall not be used to reimburse a local government for the costs of a new program or higher level of service.
 - (4) This subdivision applies to a mandate only as it affects a city, county, city and county, or special district.
 - (5) This subdivision shall not apply to a requirement to provide or recognize any procedural or substantive protection, right, benefit, or employment status of any local government employee or retiree, or of any local govern-

ment employee organization, that arises from, affects, or directly relates to future, current, or past local government employment and that constitutes a mandate subject to this section.

(c) A mandated new program or higher level of service includes a transfer by the Legislature from the State to cities, counties, cities and counties, or special districts of complete or partial financial responsibility for a required program for which the State previously had complete or partial financial responsibility.

Government Code (Refs & Annos)

Title 2. Government of the State of California

Division 4. Fiscal Affairs (Refs & Annos)

Part 7. State-Mandated Local Costs (Refs & Annos)

Chapter 4. Identification and Payment of Costs Mandated by the State (Refs & Annos)

Article 1. Commission Procedure (Refs & Annos)

→ § 17556. Findings; costs not mandated upon certain conditions

The commission shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds any one of the following:

(a) The claim is submitted by a local agency or school district that requests or previously requested legislative authority for that local agency or school district to implement the program specified in the statute, and that statute imposes costs upon that local agency or school district requesting the legislative authority. A resolution from the governing body or a letter from a delegated representative of the governing body of a local agency or school district that requests authorization for that local agency or school district to implement a given program shall constitute a request within the meaning of this subdivision. This subdivision applies regardless of whether the resolution from the governing body or a letter from a delegated representative of the governing body was adopted or sent prior to or after the date on which the statute or executive order was enacted or issued.

(b) The statute or executive order affirmed for the state a mandate that has been declared existing law or regulation by action of the courts. This subdivision applies regardless of whether the action of the courts occurred prior to or after the date on which the statute or executive order was enacted or issued.

(c) The statute or executive order imposes a requirement that is mandated by a federal law or regulation and results in costs mandated by the federal government, unless the statute or executive order mandates costs that exceed the mandate in that federal law or regulation. This subdivision applies regardless of whether the federal law or regulation was enacted or adopted prior to or after the date on which the state statute or executive order was enacted or issued.

(d) The local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service. This subdivision applies regardless of whether the authority to levy charges, fees, or assessments was enacted or adopted prior to or after the date on which the statute or executive order was enacted or issued.

(e) The statute, executive order, or an appropriation in a Budget Act or other bill provides for offsetting savings to local agencies or school districts that result in no net costs to the local agencies or school districts, or includes additional revenue that was specifically intended to fund the costs of the state mandate in an amount sufficient to fund the cost of the state mandate. This subdivision applies regardless of whether a statute, executive order, or appropriation in the Budget Act or other bill that either provides for offsetting savings that result in no net costs or provides for additional revenue specifically intended to fund the costs of the state mandate in an amount sufficient to fund the cost of the state mandate was enacted or adopted prior to or after the date on which the statute or executive order was enacted or issued.

(f) The statute or executive order imposes duties that are necessary to implement, or are expressly included in, a ballot measure approved by the voters in a statewide or local election. This subdivision applies regardless of whether the statute or executive order was enacted or adopted before or after the date on which the ballot measure was approved by the voters.

(g) The statute created a new crime or infraction, eliminated a crime or infraction, or changed the penalty for a crime or infraction, but only for that portion of the statute relating directly to the enforcement of the crime or infraction.

C

Court of Appeal, Second District, Division 3, California.

COUNTY OF LOS ANGELES et al., Plaintiffs and Appellants,

v.

COMMISSION ON STATE MANDATES, Defendant and Appellant;

Regional Water Quality Control Board, Los Angeles Region, Real Party in Interest and Respondent.

City of Artesia, etc., et al., Plaintiffs and Appellants,

v.

Commission on State Mandates, Defendant and Appellant;

Regional Water Quality Control Board, Los Angeles Region, Real Party in Interest and Respondent.

No. B183981.

May 10, 2007.

Background: County and cities presented test claims to California Commission on State Mandates, seeking reimbursement, pursuant to constitutional requirement for subvention arising from a state mandate, for carrying out obligations under National Pollutant Discharge Elimination System (NPDES) Permit issued by Regional Water Quality Control Board. Commission would not adjudicate claims on the ground that subvention was precluded by statute. County and cities sued Commission, seeking an order requiring State to reimburse them for carrying out new obligations, along with other relief. Commission and county and cities filed cross-motions for judgment on the pleadings. The Superior Court, Los Angeles County, Nos. BS089769 and BS089785, Victoria G. Chaney, J., entered partial grant of cross-motions. Trial court also granted in part the petitions by county and cities for a writ of mandate directing Commission to consider the test claims and determine whether

county and cities were entitled to reimbursement. Commission appealed and county and cities cross-appealed.

Holdings: The Court of Appeal, Aldrich, J., held that

(1) Commission forfeited its statute of limitations defense based on failure to raise it in trial court, and (2) question of whether obligations constituted federal or state mandates presented factual issues that had to be addressed in the first instance by Commission.

Affirmed.

ALDRICH, J.

*903 INTRODUCTION

The California Commission on State Mandates (the Commission) appeals from the judgment entered

following the partial grant of cross-motions for judgment on the pleadings. The County of Los Angeles, the Los Angeles County Flood Control District, and the Cities of Commerce, Carson, Downey, Hawaiian Gardens, Montebello, Santa Fe Springs, Signal Hill, Artesia, Beverly Hills, La Mirada, Monrovia, Norwalk, Rancho Palos Verdes, San Marino and Westlake Village (collectively, County/Cities) filed a cross-appeal from the judgment.

In 2001, the Regional Water Quality Control Board (Regional Water Board), Los Angeles Region, issued a National Pollutant Discharge Elimination System (NPDES) Permit for municipal stormwater and urban runoff discharges, which obligated County/Cities to inspect industrial, *904 commercial and construction water treatment facilities (which obligation County/Cities claim the State previously performed) and to install and maintain trash receptacles at transit stops.

County/Cities presented "test claims" FN1 to the Executive Director of the Commission**765 seeking reimbursement for carrying out these obligations pursuant to the constitutional requirement for subvention arising from a state mandate (Cal. Const., art. XIII B, § 6). The Executive Director returned the claims adjudicated, because they did not involve an executive order under section 17516 of the Government Code (Section 17516c). In denying the appeals of County/Cities, the Commission noted it was without authority to declare a statute unconstitutional and concluded that Section 17516c excludes from the subvention requirement any order, which includes a permit, issued by the Regional Water Boards of the State Water Resources Control Board (State Water Board).

FN1. " 'Test claim' means the first claim filed with the commission alleging that a particular statute or executive order imposes costs mandated by the state." (Gov.Code, § 17521.)

Section 6 of article XIII B of the California Consti-

tution (article XIII B, section 6) provides in pertinent part: "Whenever the Legislature or *any state agency* mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service...." (Italics added.)

As we shall discuss, Section 17516c is unconstitutional to the extent it exempts Regional Water Boards from the constitutional state mandate subvention requirement. Its creation of an exception for Regional Water Boards, which are state agencies, contravenes the plain, unequivocal, and all-inclusive reference to "any state agency" in article XIII B, section 6. Moreover, a contrary conclusion is not compelled by virtue of the fact that Section 17516c essentially mirrors the language of section 2209, subdivision (c) (§ 2209(c)) of the Revenue and Taxation Code. A statute cannot trump the constitution.

We decline to consider the Commission's new claim that the constitutional challenge to Section 17516c by County/Cities is barred by the 90-day limitation period of section 341.5 of the Code of Civil Procedure. This statute of limitations defense, which should have been raised before the trial court, is not cognizable on this appeal.

*905 The Commission urges that should this court conclude Section 17516c is unconstitutional, the appropriate remedy is to afford the Commission the opportunity to pass on the merits of the subject test claims on the issues of whether: (1) the subject permit qualifies as a state mandated program under article XIII B, section 6; (2) the permit amounts to a new program or higher level of service; and (3) the permit imposes costs on local entities (Gov.Code, §§ 17514, 17556). We find its position persuasive.

The cross-appeal filed by County/Cities is premised on the theory that if subvention of funds from the Commission is foreclosed by Section 17516c, County/Cities are entitled to pursue an independent action against the Regional Water Board, Los

Angeles Region (LA Regional Water Board). This cross-appeal, which is simply protective in nature, is moot.

In sum, we uphold the trial court's issuance of a writ of mandate directing the Commission to set aside its decisions affirming its Executive Director's rejections of the subject test claims and to consider fully these test claims and determine whether County/Cities are entitled to reimbursement without consideration of Section 17516c, and we affirm the judgment in its entirety.

BACKGROUND

1. *Article XIII B, section 6, Subvention of Funds for State Mandates*

"The electorate approved Proposition 4 in 1979, thus adding article XIII B to the **766 state Constitution. While the earlier Proposition 13 limited the state and local governments' power to increase taxes (see Cal. Const., art. XIII A, added by initiative measure in Primary Elec. (June 6, 1978)), Proposition 4, the so-called 'Spirit of 13,' imposed a complementary limit on the rate of growth in governmental spending." (*San Francisco Taxpayers Assn. v. Board of Supervisors* (1992) 2 Cal.4th 571, 574, 7 Cal.Rptr.2d 245, 828 P.2d 147.) This measure also "provided [for] reimbursement to local governments for the costs of complying with certain requirements mandated by the state." (*Long Beach Unified Sch. Dist. v. State of California* (1990) 225 Cal.App.3d 155, 172, 275 Cal.Rptr. 449.)

"[V]oters were told that section 6 of Proposition 4 was intended to prevent state government attempts 'to force programs on local governments without the state paying for them.' (Ballot Pamp., Special Statewide Elec. [(Nov. 6, 1979)] p. 18.)" (*County of Sonoma v. Commission on State Mandates* (2000) 84 Cal.App.4th 1264, 1282, 101 Cal.Rptr.2d 784; see also, *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56, 233 Cal.Rptr.

38, 729 P.2d 202 [intent was not all local costs arising from compliance with state law to be reimbursable; rather, intent was to prevent “the perceived *906 attempt by the state to enact legislation or adopt administrative orders creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services which the state believed should be extended to the public”].)

“Section 6 was included in article XIII B in recognition that article XIII A of the Constitution severely restricted the taxing powers of local governments. [Citation.] The provision was intended to preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities that were ill equipped to handle the task. [Citations.] Specifically, it was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues. Thus, although its language broadly declares that the ‘state shall provide a subvention of funds to reimburse ... local government for the costs [of a state-mandated new] program or higher level of service,’ read in its textual and historical context section 6 of article XIII B requires subvention only when the costs in question can be recovered *solely from tax revenues.*” (*County of Fresno v. State of California* (1991) 53 Cal.3d 482, 487, 280 Cal.Rptr. 92, 808 P.2d 235, italics original; see also, *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 836, fn. 6, 244 Cal.Rptr. 677, 750 P.2d 318 [a reimbursement requirement was “enshrined in the Constitution ... to provide local entities with the assurance that state mandates would not place additional burdens on their increasingly limited revenue resources”].)

Article XIII B, section 6 provides: “(a) Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service, except that the Legislature may, but need not,

provide such a subvention of funds for the following mandates. [¶] (1) Legislative mandates requested by the local agency affected. [¶] (2) Legislation defining a new crime or changing an existing definition of a crime. [¶] (3) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975.”

[1] “ ‘Subvention’ generally means a grant of financial aid or assistance, or a **767 subsidy. [Citation.] As used in connection with state-mandated costs, the basic legal requirements of subvention can be easily stated; it is in the application of the rule that difficulties arise.

[2][3][4] “Essentially, the constitutional rule of state subvention provides that the state is required to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. [Citation.] This does not mean that the state is required to *907 reimburse local agencies for any incidental cost that may result from the enactment of a state law; rather, the subvention requirement is restricted to governmental services which the local agency is required by state law to provide to its residents. [Citation.] The subvention requirement is intended to prevent the state from transferring the costs of government from itself to local agencies. [Citation.] Reimbursement is required when the state ‘freely chooses to impose on local agencies any peculiarly “governmental” cost which they were not previously required to absorb.’ [Citation.]” (*Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, at 1577-1578, 15 Cal.Rptr.2d 547.)

The subvention requirement of article XIII B, section 6 is triggered if “the Legislature or any state agency” mandates a new program or higher level of service. (Art. XIII B, § 6.) Such requirement is inapplicable where the additional costs on local governments are imposed by a federal mandate, i.e., the federal government. Article XIII B, section 9, subdivision (b), defines federally mandated appropri-

ations as those “required to comply with mandates of the courts or the federal government which, *without discretion*, require an expenditure for additional services or which *unavoidably make the provision of existing services more costly*.” FN2 (Italics added.)

FN2. “In 1980, after the adoption of article XIII B, [the Legislature] amended the statutory definition of ‘costs mandated by the federal government’ to provide that these include ‘costs resulting from enactment of a state law or regulation where failure to enact such law or regulation to meet specific federal program or service requirements would result in *substantial monetary penalties or loss of funds to public or private persons* in the state....’ (Rev. & Tax.Code, § 2206, italics added; Stats.1980, ch. 1256, § 3, p. 4247.)” (*City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 75, 266 Cal.Rptr. 139, 785 P.2d 522.)

There is no precise formula or rule for determining whether the “costs” are the product of a federal mandate. Our Supreme Court explained: “Given the variety of cooperative federal-state-local programs, we here attempt no final test for ‘mandatory’ versus ‘optional’ compliance with federal law. A determination in each case must depend on such factors as the nature and purpose of the federal program; whether its design suggests an intent to coerce; when state and/or local participation began; the penalties, if any, assessed for withdrawal or refusal to participate or comply; and any other legal and practical consequences of nonparticipation, noncompliance, or withdrawal. Always, the courts and the Commission must respect the governing principle of article XIII B, section 9(b): neither state nor local agencies may es-

cape their spending limits when their participation in federal programs is truly voluntary.” (*City of Sacramento v. State of California, supra*, 50 Cal.3d at p. 76, 266 Cal.Rptr. 139, 785 P.2d 522.)

2. Existence of State Mandate Matter for the Commission

Whether a particular cost incurred by a local government arises from carrying out a state mandate for which subvention is required under article XIII B, section 6, is a matter for the Commission to determine in the first instance.

*908 A local government initiates the process for subvention under article XIII B, section 6 by filing a claim with the Commission.**768 (Gov.Code, § 17521; cf. *County of San Diego v. State of California* (1997) 15 Cal.4th 68, 89, 61 Cal.Rptr.2d 134, 931 P.2d 312 [futility exception to exhaustion of administrative remedies doctrine applicable to failure to file claim before Commission].) The initial claim is referred to as a “test claim.” (Gov.Code, § 17521.)

“The Legislature enacted Government Code sections 17500 through 17630 to implement article XIII B, section 6. (Gov.Code, § 17500.)” (*County of Fresno v. State of California, supra*, 53 Cal.3d at p. 484, 280 Cal.Rptr. 92, 808 P.2d 235.) The provisions of Government Code sections 17500 et seq. “provide the sole and exclusive procedure by which a local agency ... may claim reimbursement for costs mandated by the state as required by” article XIII B, section 6. (Gov.Code, § 17552.)

“It created a ‘quasi-judicial body’ (*ibid.*) called the Commission on State Mandates ... ([Gov.Code], § 17525) to ‘hear and decide upon [any] claim’ by a local government that the local government ‘is entitled to be reimbursed by the state for costs’ as required by article XIII B, section 6. (Gov.Code, § 17551, subd. (a).) It defined ‘costs’ as ‘costs mandated by the state’-‘any increased costs’ that the local government ‘is required to incur ... as a result

of any statute ..., or any executive order implementing any statute ..., which mandates a new program or higher level of service of any existing program' within the meaning of article XIII B, section 6. (Gov.Code, § 17514.) Finally, in section 17556(d) it declared that 'The commission shall not find costs mandated by the state ... if, after a hearing, the commission finds that' the local government 'has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.' " (*County of Fresno v. State of California, supra*, 53 Cal.3d at p. 484, 280 Cal.Rptr. 92, 808 P.2d 235.)

3. Regional Water Board Order Not "Executive Order"

Section 17516c defines, in pertinent part, an "[e]xecutive order" [as] any order, plan, requirement, rule, or regulation issued by ... [a]ny agency ... of state government[,] " except an "[e]xecutive order" does not include any order, plan, requirement, rule, or regulation issued by the State Water ... Board or by any regional water ... board pursuant to Division 7 (commencing with Section 13000) of the Water Code." FN3 (Added by Stats.1984, ch. 1459, § 1.)

FN3. Section 17516c further provides: "It is the intent of the Legislature that the State Water ... Board and regional water ... boards will not adopt enforcement orders against publicly owned dischargers which mandate major waste water treatment facility construction costs unless federal financial assistance and state financial assistance pursuant to the Clean Water Bond Act of 1970 and 1974, is simultaneously made available. 'Major' means either a new treatment facility or an addition to an existing facility, the cost of which is in excess of 20 percent of the cost of replacing the facility."

LA Regional Water Board argues the tri-

al court's ruling sustaining its demurrer to the fourth cause of action for a writ of mandate directing it to delete the subject two obligations under the Permit as violative of section 17516 should be upheld, because section 17516 "applies to construction of major waste treatment facilities, not trash receptacles or inspections." This analysis, however, is inconsistent with the plain language of section 17516 in its entirety.

*909 In light of the above definition, the subject permit issued by an order of the LA Regional Water Board cannot constitute an "executive order implementing any statute[,] ... which mandates a new program or higher level of service of an existing program within the meaning of" the **769 article XIII B, section 6 requirement of subvention of funds to local governments for carrying out a state mandate. (Gov.Code, § 17514.)

4. Procedural Posture

LA Regional Water Board issued Order No. 01-182, which adopted NPDES Permit No. CAS004001 (Permit). This Permit imposed two obligations on County/Cities for the purpose of regulating municipal stormwater and urban runoff discharges in Los Angeles County. The first required County/Cities to inspect industrial, commercial and construction sites to ensure compliance with the law, and the other required County/Cities to install and maintain trash receptacles at transit stops.

County/Cities filed four test claims, i.e., Test Claims 03-TC-04, 03-TC-19, 03-TC-20, and 03-TC-21, seeking reimbursement of costs for carrying out these obligations. The Executive Director rejected these test claims as excluded from subvention pursuant to Section 17516c.

In the administrative appeals, the Commission found it was bound by Section 17516c, upheld its executive director's decision, and denied the ap-

peals.

In their amended and consolidated petitions and complaints, County/Cities sought, among other things: (1) an order requiring the State to reimburse them for the new programs or higher level of service under the permit or, alternatively, to allow them to offset payment of permit and other fees or moneys owed or to be transferred to the State against their costs; (2) an order enjoining State from refusing to reimburse them in the future; or, alternatively, (3) a preemptory writ of mandate directing the Commission to accept their test claims and find they are entitled to reimbursement; (4) a declaration that section 17516 is unconstitutional; (5) a preemptory writ of mandate directing LA Regional Water Board either to delete or not *910 enforce the subject obligations under the permit; and (6) a stay of the challenged portions of the permit.

The Commission and County/Cities filed cross-motions for judgment on the pleadings. The trial court granted the Commission's motion as to the second cause of action for declaratory relief. The court explained: "The only actual controversy between [County/Cities] and [Commission] is whether [County/Cities]' claims should be deemed reimbursable. The sole and exclusive procedure by which to adjudicate this controversy is a mandate action under Code of Civil Procedure section 1094.5. ([Government Code s]ections 17552, 17559.) The only pertinent relief under ... section 1094.5 is a finding that [the Commission] 'has not proceeded in the manner required by law.' Declaratory relief is not available."

After construing the motion addressed to the third cause of action as a motion to strike improper requested relief, the court granted the motion and struck that part of the third cause of action requesting an order directing the Commission to find their claims to be reimbursable on the ground "[t]he court has no power at this time to do so. [Citations.]"

Turning to County/Cities' motion for judgment on

the pleadings, the trial court granted the motion as to the third cause of action for extraordinary writ relief, except as to the stricken request for improper relief.^{FN4}

FN4. In the third cause of action, County/Cities sought a writ of mandate (Code Civ. Proc., § 1094.5) compelling a court finding that section 17516 was unconstitutional on its face or as applied in this action and directing the Commission to accept their test claims for filing and approving them for reimbursement.

The court found that to the extent Section 17516c excepted the orders of Regional**770 Water Boards from the definition of "executive orders," Section 17516c was unconstitutional in that it expressly contravened article XIII B, section 6. The court ordered the Commission to set aside its order affirming its executive director's rejections of the four test claims and to consider these claims on the merits.

In granting in part County/Cities' petitions for a writ of mandate, the trial court found the Commission, "though it proceeded as required by statutory law, as it was constrained to do, has not proceeded as required by superior constitutional law. (Code Civ. Proc., [§]1094.5, subd. (a).) The question whether [County/Cities] state valid claims for reimbursement must be remanded to [C]ommission, which is ordered to consider [these] claims on their merits. [Citations.]"

*911 A preemptory writ of mandate was issued on May 24, 2005. Judgment was entered the same date. This appeal and cross-appeal followed.

STANDARD OF REVIEW

[5][6][7][8] "The standard for reviewing a judgment on the pleadings is settled: 'A motion for judgment on the pleadings is the equivalent of a general demurrer but is made after the time for demurrer has expired. The rules governing demurrers

150 Cal.App.4th 898, 58 Cal.Rptr.3d 762, 07 Cal. Daily Op. Serv. 5216, 2007 Daily Journal D.A.R. 6622
 (Cite as: 150 Cal.App.4th 898, 58 Cal.Rptr.3d 762)

apply. [Citation.] The grounds for a motion for judgment on the pleadings must appear on the face of the challenged complaint or be based on facts which the court may judicially notice. [Citations.] On review we must determine if the complaint states a cause of action as a matter of law.’ [Citation.] ‘We review the complaint de novo to determine whether [it] alleges facts sufficient to state a cause of action under any legal theory. [Citation.]’ [Citation.]” (*McCormick v. Travelers Ins. Co.* (2001) 86 Cal.App.4th 404, 408, 103 Cal.Rptr.2d 258.)

[9] “In reviewing the trial court’s ruling on a writ of mandate, the appellate court is ordinarily confined to an inquiry as to whether the findings and judgment of the trial court are supported by substantial evidence. (*Evans v. Unemployment Ins. Appeals Bd.* (1985) 39 Cal.3d 398, 407, 216 Cal.Rptr. 782, 703 P.2d 122.) However, where the facts are undisputed and the issues present questions of law, the appellate court is not bound by the trial court’s decision but may make its own determination. (*Ibid.*)” (*Connell v. Superior Court* (1997) 59 Cal.App.4th 382, 394, 69 Cal.Rptr.2d 231.)

DISCUSSION

1. Defense of Statute of Limitations Forfeited

[10] On appeal for the first time, the Commission asserts the challenge of County/Cities to the constitutionality of Section 17156c is barred by the 90-day limitation period of section 341.5 of the Code of Civil Procedure, which governs the timeliness of actions challenging the constitutionality of state funding for municipalities, school districts, special districts, and local agencies.

Code of Civil Procedure section 341.5 provides: “Notwithstanding any other provision of law, any action or proceeding in which a county, city, city and county, school district, special district, or any other local agency is a plaintiff or petitioner, that is brought against the State of California challenging

the constitutionality of any statute relating to state funding for counties, cities, cities and counties, school districts, special districts, or other local agencies, shall be commenced within 90 days of the effective date of the *912 statute at issue in the action. For purposes of this section, ‘State of California’ means the State of California itself, or any of its agencies, departments, commissions, boards, or public officials.” (Added by **771 Stats.1994, ch. 155 (Assem. Bill No. 860), § 1, eff. July 11, 1994; amended by Stats.1994, ch. 156 (Sen. Bill No. 2127), § 1, eff. July 11, 1994.)

The Commission argues the constitutional challenge to Section 17516c is time-barred, because: “Government Code section 17500 et seq., including section 17516, relates to state funding for counties and cities relative to state-mandated local programs.... [S]ection 17516 was enacted in 1984 and became effective January 1, 1985. The petition in this case challenging section 17516 as unconstitutional was filed April 28, 2004[,]” which was more than 90 days after the effective date of section 17516.

[11][12] The time-bar of a statute of limitations may be raised by demurrer “[w]here the complaint discloses on its face that the statute of limitations has run on the causes of action stated in the complaint, [for the reason that] it fails to state facts sufficient to state a cause of action. [Citation.]” (*ABF Capital Corp. v. Berglass* (2005) 130 Cal.App.4th 825, 833, 30 Cal.Rptr.3d 588.) Forfeiture of a time-bar defense transpires by the failure to raise the applicable statute of limitations in the answer. (See e.g., *Minton v. Cavaney* (1961) 56 Cal.2d 576, 581, 15 Cal.Rptr. 641, 364 P.2d 473; *Davies v. Krasna* (1975) 14 Cal.3d 502, 508, 121 Cal.Rptr. 705, 535 P.2d 1161; *Mitchell v. County Sanitation District No. 1 of Los Angeles County* (1957) 150 Cal.App.2d 366, 371, 309 P.2d 930; see also, Code Civ. Proc., § 458.)

As the Commission concedes, it did not raise “[Code of Civil Procedure] section 341.5 as an affirmative defense in its pleadings in the trial court.”

This omission signifies that the Commission therefore has forfeited any right it may have had to assert section 341.5 to bar, as untimely, the claims of County/Cities to the constitutionality of Section 17516c.

For a contrary conclusion, the Commission argues “the statute of limitations to challenge an administrative action is jurisdictional and should not be considered waived. (*United Farm Workers of America v. Agricultural Labor Relations Board* (1977) 74 Cal.App.3d 347, 350, 141 Cal.Rptr. 437; *Tielsch v. City of Anaheim* (1984) 160 Cal.App.3d 576, 578, 206 Cal.Rptr. 740; *Donnellan v. City of Novato* (2001) 86 Cal.App.4th 1097, 1103, 103 Cal.Rptr.2d 882.) If a time limit in a mandamus proceeding is held to be jurisdictional, estoppel or waiver cannot extend the time. (*Hollister Convalescent Hosp., Inc. v. Rico* (1975) 15 Cal.3d 660, 666, 674, 125 Cal.Rptr. 757, 542 P.2d 1349.)”

***913** The Commission's fall-back position is that this court should exercise its discretion to determine the applicability of the time-bar, because this “issue is a question of law rather than of fact” and “[t]his matter affects the public interest since [County/Cities] are seeking reimbursement from the state for costs incurred to comply with a permit” issued by the LA Regional Water Board. In other words, “taxpayers statewide could unjustly suffer the consequences of funding a local program if Code of Civil Procedure section 341.5 is not considered and ... section 17516 is held to be unconstitutional.” As authority, the Commission relies primarily on *City of Sacramento v. State of California* (1990) 50 Cal.3d at pages 64-65, 266 Cal.Rptr. 139, 785 P.2d 522 [where issue of law rather than fact raised, public-interest exception governs over collateral estoppel bar] and *Connell v. Superior Court, supra*, 59 Cal.App.4th at pages 387-388, 396-397, 69 Cal.Rptr.2d 231 [public interest exception applicable to allow review of question of law as to whether recycled waste water regulation constituted reimbursable state mandate].)

Neither of the Commission's positions is successful.

In the first instance, the time-****772** bar of section 341.5 of the Code of Civil Procedure applies to a challenge to the constitutionality of any statute relating to state funding for counties and other local governmental entities, *not* to a challenge to an action by an administrative agency. As for the second, neither *City of Sacramento* nor *Connell* stand for the proposition that the bar of the applicable statute of limitations may be raised for the first time on appeal.

Additionally, the Commission's characterization of the public interest to be served is a non sequitur. If section 17516 were in fact unconstitutional, it does not follow that “taxpayers statewide could *unjustly* suffer the consequences of funding a local program[.]” (Italics added.) How could such funding result in injustice when any requirement of reimbursement to local governments would be under the constitutional compulsion of article XIII B, section 6?

2. Existence of Federal or State Mandate Issue for the Commission

[13] It is undisputed that a federal mandate is not subject to the subvention requirement of article XIII B, section 6 for a state mandate. Accordingly, if the Permit, including the subject two obligations thereunder, constitutes a federal mandate, the constitutionality of Section 17516c is not implicated, and thus, no issue as to its constitutionality is before this court to address on the merits. (See *People ex rel. Lynch v. Superior Court* (1970) 1 Cal.3d 910, 912, 83 Cal.Rptr. 670, 464 P.2d 126 [“The rendering of advisory opinions falls within neither the functions nor the jurisdiction of this court.”].)

***914** In its amicus curiae brief, LA Regional Water Board takes the position that, as a matter of law, Section 17516c is consistent with article XIII B, section 6 (and thus not unconstitutional) “to the extent Division 7, Chapter 5.5 (commencing with Water Code section 13370)” simply implements federal mandates under the Clean Water Act (33 U.S.C.

§ 1342(b)). The water boards, i.e., the State Water Board and its Regional Water Boards, implement the federal permit program under Chapter 5.5, which the California Legislature enacted to by-pass administration of such program directly by the federal Environmental Protection Agency.

LA Regional Water Board takes the further position that the federal mandate nature of its NPDES permits remains constant although it exercises discretion to control the discharge of pollutants through municipal stormwater programs not appearing in federal regulations. Specifically, LA Regional Water Board argues: “When a state [Regional Water Board] issues an NPDES permit requiring municipalities to inspect facilities as a means of controlling their discharge of pollutants, this is not shifting state responsibilities onto local agencies [, because f]ederal law imposes inspection requirements upon municipal permittees.”

As for the trash receptacle obligation, LA Regional Water Board points out the Clean Water Act allows the use of programs to control discharge of pollutants in connection with a municipal stormwater permit and argues one such program under the Permit is the ability of “municipalities to employ ‘Best Management Practices’ (BMPs) to ... attain water quality standards.” It identifies “[t]he Permit’s trash receptacle requirement as one such [BMP].”

It further argues that the trash receptacle obligation cannot be deemed a state-mandated program, because it is not “an absolute requirement. Any permittee may petition the Regional Water Board to substitute another equally effective BMP for one included within the Permit. [] [For instance, i]f a permittee demonstrates that **773 a pre-existing program or level of service will be equally effective in controlling pollution, it may seek to substitute that program.”

We are not convinced that the obligations imposed by a permit issued by a Regional Water Board necessarily constitute federal mandates under all circumstances. As explained ante, the existence of a

federal, as contrasted with a state, mandate is not easily ascertainable.

By letter, we invited the parties and LA Regional Water Board to address whether an obligation under an NPDES permit by a Regional Water Board can qualify as a state mandate within the meaning of article XIII B, section 6, assuming an NPDES permit itself qualified as a federal mandate, and if so, *915 why each of the subject two obligations does or does not constitute a state mandate. We have received their responses.

a. “NPDES” Permits Issued by Regional Water Boards

“California cases have repeatedly explained the complicated web of federal and state laws and regulations concerning water pollution, especially storm sewer discharge into the public waterways. (*City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613, 619-621, 26 Cal.Rptr.3d 304, 108 P.3d 862 (*Burbank*); *Building Industry Assn. of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866, 872-875, 22 Cal.Rptr.3d 128; *Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1092-1094, 1 Cal.Rptr.3d 76; *WaterKeepers Northern California v. State Water Resources Control Bd.* (2002) 102 Cal.App.4th 1448, 1451-1453, 126 Cal.Rptr.2d 389.)

For purposes of this case, the important point is described by the California Supreme Court in *Burbank*: “Part of the federal Clean Water Act [33 U.S.C. § 1251 et seq.] is the National Pollutant Discharge Elimination System (NPDES), ‘[t]he primary means’ for enforcing effluent limitations and standards under the Clean Water Act. (*Arkansas v. Oklahoma* [(1992) 503 U.S. 91, 101, 112 S.Ct. 1046, 117 L.Ed.2d 239].) The NPDES sets out the conditions under which the federal EPA or a state with an approved water quality control program can issue permits for the discharge of pollut-

ants in wastewater. (33 U.S.C. § 1342(a) & (b).) In California, wastewater discharge requirements established by the regional [water] boards are the equivalent of the NPDES permits required by federal law. (§ 13374.)” (*Burbank, supra*, 35 Cal.4th at p. 621, 26 Cal.Rptr.3d 304, 108 P.3d 862.)

“California’s Porter-Cologne Act (Wat.Code, § 13000 et seq.) establishes a statewide program for water quality control. Nine regional [water] boards, overseen by the State [Water] Board, administer the program in their respective regions. (Wat.Code, §§ 13140, 13200 et seq., 13240, and 13301.) Water Code sections 13374 and 13377 authorize the Regional [Water] Board to issue federal NPDES permits for five-year periods. (33 U.S.C. § 1342, subd. (b)(1)(B).)” FN5 **774*916(*City of Rancho Cucamonga v. Regional Water Quality Control Bd.* (2006) 135 Cal.App.4th 1377, 1380-1381, 38 Cal.Rptr.3d 450.) In a related case, Division Five of this District upheld the authority of LA Regional Water Board to issue the Permit here. (*County of Los Angeles v. State Water Resources Control Board* (2006) 143 Cal.App.4th 985, 999-1000, 50 Cal.Rptr.3d 619 [holding the nine Regional Water Boards authorized under state law to issue NPDES permits] review den.)

FN5. In pertinent part, article XIII B, section 6, provides: “[T]he Legislature may, but need not, provide a subvention of funds for the following mandates: [¶] ... [¶] (3)Legislative mandates enacted prior to January 1, 1995, or executive orders ... initially implementing legislation enacted prior to January 1, 1975.” (Art. XIII B, § 6, subd. par. (a)(3).) LA Regional Water Board argues that subvention under article XIII B, section 6, is not required as to the Permit, because it is an executive order implementing the Porter-Cologne Act, (Wat. Code, § 13020 et seq.) which is legislation enacted in 1969. This argument fails for the reason that the executive order resulting in the 2001 Permit was not one “ini-

tially ” implementing such pre-1975 legislation. Equally unsuccessful is LA Regional Water Board’s apparent argument that Section 17516c should be deemed constitutional for the reason that “most of” the Porter-Cologne Act (Division 7) was enacted prior to 1975. The fatal fallacy of this position is that the exclusion of Section 17516c applies to all orders issued pursuant to Division 7 regardless of the date the statute in question was enacted.

b. *Potential Federal and State Components of NPDES Permit*

As expected, LA Regional Water Board contends that as in the case of NPDES “permits as a whole, the individual conditions of an NPDES permit are federally required to meet the mandates of the Clean Water Act.” It argues: “The Permit is federally required. The conditions within it are federally required to implement the Clean Water Act’s mandates. The two cannot be separated into a ‘federal’ permit with ‘state’ conditions. [Citation.]”

County/Cities respond, contrariwise, that “[a]n NPDES permit can contain both federal and non[-]federal requirements.” As case authority, they rely primarily on *Burbank, supra*, 35 Cal.4th 613, 26 Cal.Rptr.3d 304, 108 P.3d 862. Our Supreme Court concluded that under the supremacy clause of the federal Constitution, a Regional Water Board must comply with the federal Clean Water Act in issuing an NPDES permit. (*Id.* at pp. 626-627, 26 Cal.Rptr.3d 304, 108 P.3d 862.) Nonetheless, “[u]nder the federal Clean Water Act, each state is free to enforce its own water quality laws so long as its effluent limitations are not ‘less stringent’ than those set out in the Clean Water Act [citation].” (*Id.* at p. 620, 26 Cal.Rptr.3d 304, 108 P.3d 862.) The Court thus acknowledged in *Burbank* that an NPDES permit may contain terms federally mandated and terms exceeding federal law. (See also, *Burbank, supra*, at pp. 618, 628, 26 Cal.Rptr.3d 304, 108 P.3d 862.) County/Cities also point out that the po-

tential for non-federally mandated components of an NPDES permit is acknowledged under both federal law^{FN6} and state law.^{FN7}

FN6. In this regard, they rely on this federal statute: "Except as expressly provided in this Act [33 USCS §§ 1251 et seq.], nothing in this Act [33 USCS §§ 1251 et seq.] shall (1) preclude or deny the right of any State or political subdivision thereof or interstate agency to adopt or enforce (A) any standard or limitation respecting discharges of pollutants, or (B) any requirement respecting control or abatement of pollution; except that if an effluent limitation, or other limitation ... is in effect under this Act [33 USCS §§ 1251 et seq.], such State [, etc.] ... may not adopt or enforce any effluent limitation or other limitation ... which is less stringent than the effluent limitation, or other limitation...." (33 U.S.C. § 1370.)

FN7. On this point, they rely on this statutory provision: "Notwithstanding any other provision of this division, the state board or the regional boards shall, as required or authorized by the Federal Water Pollution Control Act, as amended, issue waste discharge requirements ... which apply and ensure compliance with all applicable provisions of the act and acts amendatory thereof or supplementary, thereto, together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance." (Wat.Code, § 13377.)

****775 *917** Additionally, County/Cities argue "that an obligation imposed on a municipality arises as a result of a federal law or program does not, in and of itself, render that obligation a federal mandate." Rather, they assert that to qualify as a federal mandate, "federal law itself must impose the obligation upon the municipality." They point out Government

Code section 17556 provides that costs flowing from a federal mandate may be subject to subvention if such costs exceed such mandate.^{FN8} They also cite two cases in support of their position.

FN8. Government Code section 17556, subdivision (c), provides: "The commission shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds ... [¶] ... [¶][t]he statute or executive order imposes a requirement that is mandated by a federal law or regulation and results in costs mandated by the federal government, unless the statute or executive order mandates costs that exceed the mandate in that federal law or regulation."

In *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal.4th 859, 16 Cal.Rptr.3d 466, 94 P.3d 589, our Supreme Court concluded the costs incurred by school districts in holding mandatory expulsion hearings under Education Code section 48915 were state mandates subject to subvention under article XIII B, section 6. The court explained that expulsion was mandated under the Education Code, rather than federal law, and thus, the fact the costs were incurred to comport with federal due process, a federal mandate, was not controlling. (*San Diego Unified School Dist. v. Commission on State Mandates, supra*, at pp. 880-882, 16 Cal.Rptr.3d 466, 94 P.3d 589.)

In the other case, *Hayes v. Commission on State Mandates, supra*, 11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, the appellate court concluded that the finding a mandate was federal turned on whether "the state freely chose to impose the costs upon the local agency as a means of implementing a federal program" and that under these circumstances, "the costs are the result of a reimbursable state mandate regardless whether the costs were imposed upon the state by the federal government." (*Id.* at p. 1594, 15 Cal.Rptr.2d 547.)

150 Cal.App.4th 898, 58 Cal.Rptr.3d 762, 07 Cal. Daily Op. Serv. 5216, 2007 Daily Journal D.A.R. 6622
(Cite as: 150 Cal.App.4th 898, 58 Cal.Rptr.3d 762)

c. Existence of State Mandates Matter for the Commission

A review of the pleadings and the matters that may be judicially noticed (Evid.Code, §§ 451, 452, 459) leads to the inescapable conclusion that whether the two obligations in question constitute federal or state mandates presents factual issues which must be addressed in the first instance by the *918 Commission if Section 17516c were found to be unconstitutional. Resolution of the federal or state nature of these obligations therefore is premature and, thus, not properly before this court.

In its response, the Commission argues that if this court determines Section 17516c is unconstitutional, the subject test claims “should be remanded to ... Commission to ‘decide in the first instance whether a local agency is entitled to reimbursement under [article XIII B,] section 6[.]’ (*Lucia Mar Unified School District v. Honig* [, *supra*,] 44 Cal.3d 830, 837 [244 Cal.Rptr. 677, 750 P.2d 318]; Gov.Code, § 17552.)”

The Commission stated that on such remand, it would apply the following cases in determining whether state mandates exist: *City of Sacramento v. State of California*, *supra*, 50 Cal.3d 51, 266 Cal.Rptr. 139, 785 P.2d 522, which sets forth various factors and criteria for determining whether the federal program imposes a mandate on the state; **776*Hayes v. Commission on State Mandates*, *supra*, 11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, which it contends “provides guidance on whether the state, in turn, has mandated a federal program on the local governments”; *Long Beach Unified Sch. Dist. v. State of California*, *supra*, 225 Cal.App.3d 155, 275 Cal.Rptr. 449, which analyzes whether the state-mandated activities exceed federal requirements; and *San Diego Unified School Dist. v. Commission on State Mandates*, *supra*, 33 Cal.4th 859, 16 Cal.Rptr.3d 466, 94 P.3d 589, which also provides guidance on this same issue.

3. “Executive Order” under Revenue and Taxation

Code Not Probative

The Commission contends the exclusion of orders of the Regional Water Boards from the definition of “executive order” in Section 17516c does not contravene article XIII B, section 6, because section 17516 derives from the definition of “executive order” in Revenue and Taxation Code section 2209, FN9 of which the voters were presumed to have known to exist *919 when they adopted Proposition 4 (i.e., art. XIII B, § 6) in 1979, and thus, Proposition 4 intended to endorse and continue such exclusion from the definition of “executive order” which was later carried over to Section 17516c. We disagree.

FN9. Revenue and Taxation Code section 2209(c) provides: “ ‘Executive order’ means any order, plan, requirement, rule or regulation issued ... [¶] ... [¶][b]y any agency ... of state government; provided that the term ‘executive order’ shall not include any order ... issued by the State Water ... Board or by any regional water ... board pursuant to Division 7 (commencing with Section 13000) of the Water Code.

“It is the intent of the Legislature that the State Water ... Board and regional water ... boards will not adopt enforcement orders against publicly owned discharges which mandate major waste water treatment facility construction costs unless federal financial assistance and state financial assistance pursuant to the Clean Water Bond Act of 1970 and 1974, is simultaneously made available.

“ ‘Major’ means either a new treatment facility or an addition to an existing facility, the cost of which is in excess of 20 percent of the cost of replacing the facility.” (Rev. & Tax Code, § 2209(c); added by Stats.1974, ch. 457, p. 1079, § 2 and amended by Stats.1975, ch. 486, p. 998, § 2, eff. Sept. 2, 1975.)

150 Cal.App.4th 898, 58 Cal.Rptr.3d 762, 07 Cal. Daily Op. Serv. 5216, 2007 Daily Journal D.A.R. 6622
 (Cite as: 150 Cal.App.4th 898, 58 Cal.Rptr.3d 762)

We further disagree with the Commission's reliance on a presumption that when the voters adopted Proposition 1A in November 2004, they knew of, and thus, necessarily approved of Section 17516c's exclusion of orders of Regional Water Boards from the definition of "executive order."

Our focus, instead, must be on the import of article XIII B, section 6, not on the pre-constitutional scheme for subvention of funds to local agencies of which section 2209 of the Revenue and Taxation Code was part. As our Supreme Court instructs: "In construing the meaning of the constitutional provision (i.e., article XIII B, section 6), our inquiry is not focused on what the Legislature intended in adopting the former statutory reimbursement scheme, but rather on what the voters meant when they adopted article XIII B in 1979. To determine this intent, we must look to the language of the provision itself. [Citation.]" (*County of Los Angeles v. California, supra*, 43 Cal.3d 46, at p. 56, 233 Cal.Rptr. 38, 729 P.2d 202.)

The subvention requirement of article XIII B, section 6 applies "[w]henver the Legislature or any state agency mandates a new program or higher level of service...." The all-encompassing "any state agency" language defeats any perceived presumption that the electorate intended to incorporate into article XIII B, section 6 the exclusion of a particular state agency, e.g., the Regional Water Board, from its subvention requirement.

****777 4. Section 17516c Unconstitutional as to Regional Water Boards**

LA Regional Water Board argues in its amicus brief that Section 17516c is constitutional for the additional reason that its exemption from the subvention requirement of article XIII B, section 6, is "appropriate because the Water Boards regulate water pollution with an even hand. Whether the pollution originates from a local public agency or a private industrial source, the Water Boards must assure their permits protect water quality consistent

with state and federal law."

This argument is not persuasive. Whether the permit in question issued by Regional Water Boards governs both public and private pollution dischargers to the same extent presents factual issues not yet resolved. In any event, the applicability of permits to public and private discharges does not inform us about whether a particular permit or an obligation thereunder imposed on local governments constitutes a state mandate necessitating subvention under article XIII B, section 6. (See *920 *Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521, 530-531, 534, 537, 541, 234 Cal.Rptr. 795 [executive orders for protective fire clothing and equipment state mandated even if record, which was incomplete, revealed private sector firefighters also subject to the executive orders].)

In contrast, the constitutional infirmity of Section 17516c is readily apparent from its plain language that the definition of " '[e]xecutive order' does not include *any* order, plan, requirement, rule, or regulation *issued by the State Water ... Board or by any regional water ... board* pursuant to Division 7 (commencing with Section 13000) of the Water Code." (§ 17516c, italics added.) This exclusion of any order issued by any Regional Water Board contravenes the clear, unequivocal intent of article XIII B, section 6 that subvention of funds is required "[w]henver ... *any state agency* mandates a new program or higher level of service on any local government" FN10 (§ 17516c, italics added.) We therefore conclude that Section 17516c is unconstitutional to the extent it excludes "any order ... issued by ... any regional water ... board pursuant to Division 7 (commencing with Section 13000) of the Water Code" from the definition of " 'executive order.' "

FN10. At oral argument, when asked to identify the public policy or other reason that would be served by exempting Regional Water Boards from the constitutional subvention requirement, counsel for LA

Regional Water Board responded exemption is warranted, because water is an important concern. No one can quarrel with the fact water plays an important role in California. Nonetheless, this reason does not compel the conclusion that an exemption should be carved out for Regional Water Boards as contrasted with those state agencies which regulate other important state interests.

This conclusion leads to the further conclusion that whether one or both of the subject two obligations constitutes a state mandate necessitating subvention of funds under article XIII B, section 6 is an issue that must in the first instance be resolved by the Commission. Accordingly, we uphold the trial court's issuance of a writ of mandate directing the Commission to vacate its decisions affirming its executive director's rejection of the four test claims and to consider these claims on the merits.

5. Cross-Appeal Moot

County/Cities filed a protective cross-appeal from the judgment to the extent the trial court dismissed the portions of their writ of mandate petitions against LA Regional Water Board.^{FN11} The threshold **778 issue raised is whether County/Cities are entitled to proceed directly in superior court against LA *921 Regional Water Board for reimbursement relief if they are statutorily precluded from obtaining a hearing before the Commission.

FN11. The trial court sustained the demurrer to the fourth cause of action for a writ of mandate directing LA Regional Water Board to delete or not enforce the inspection and trash receptacle obligations. The court granted its own motion for judgment on the pleadings without leave to amend as to LA Regional Water Board on the first cause of action for a writ of mandate directing reimbursement; the second cause of action for declaratory relief; and the fifth

cause of action for a writ of mandate directing LA Regional Water Board to delete or not enforce the subject obligations.

County/Cities' position is they are entitled to a hearing on the merits of their claims before either the Commission or LA Regional Water Board. If this court determines the Commission's jurisdiction is exclusive, the Commission must afford them a hearing and determine the merits of their subvention claim under article XIII B, section 6. If not exclusive, County/Cities must be allowed to seek relief directly against Regional Water Board before the superior court.

LA Regional Water Board argues County/Cities have no right to seek subvention relief from a Regional Water Board, because reimbursement of costs mandated by state must be pursued through the statutory subvention scheme, which is "the sole and exclusive procedure by which a local agency ... may claim reimbursement for costs mandated by the state as required by Section 6 of Article XIII B" (Gov.Code, § 17552.) Their claims thus must be addressed exclusively to the Commission in first instance.

The cross-appeal against LA Regional Water Board is moot in light of our above conclusion that the Commission is to hear and determine the merits of the County/Cities' test claims. We therefore do not reach the merits of the issues raised in the cross-appeal.

CONCLUSION

Section 17516c is unconstitutional to the extent it purports to exempt orders issued by Regional Water Boards from the definition of "executive orders" for which subvention of funds to local governments for carrying out state mandates is required pursuant to article XIII B, section 6. The trial court therefore properly issued a writ of mandate directing the Commission to resolve the four test claims on the merits without reference to Section 17516c. In light

FOR EDUCATIONAL USE ONLY

(Cite as: 150 Cal.App.4th 898, 58 Cal.Rptr.3d 762)

of this conclusion, we need not, and therefore do not, address the issues raised on the now moot cross-appeal.

***922 DISPOSITION**

The judgment is affirmed. Each party shall bear its own costs on appeal and cross-appeal.

v.

COMMISSION ON STATE MANDATES, Defend-
ant, Cross-defendant, and Respondent; DALE S.
HOLMES, as Superintendent, etc., Real Party in In-
terest, Cross- complainant and Appellant; WILLI-
AM CIRONE, as Superintendent, etc., Real Party in
Interest and Respondent; STATE OF CALIFOR-
NIA et al., Cross- defendants and Respondents.

No. C009519.

Court of Appeal, Third District, California.

Dec 30, 1992.

SUMMARY

Two school districts filed claims with the State Board of Control for state reimbursement of alleged state-mandated costs incurred in connection with special education programs. The board determined that the costs were state mandated and subject to reimbursement by the state. In a mandamus proceeding, the trial court entered a judgment by which it issued a writ of administrative mandate directing the Commission on State Mandates (the successor to the board) to set aside the board's administrative decision and to reconsider the matter in light of an intervening decision by the California Supreme Court, and by which it denied the petition of one of the school districts for a writ of mandate that would have directed the State Controller to issue a warrant in payment of the district's claim. (Superior Court of Sacramento County, No. 352795, Eugene T. Gualco, Judge.)

The Court of Appeal affirmed. It held that the 1975 amendments to the federal Education of the Handicapped Act (20 U.S.C. § 1401 et seq.) constituted a federal mandate with respect to the state. However, even though the state had no real choice in deciding whether to comply with the act, the act did not necessarily require the state to impose all of

the costs of implementation upon local school districts. The court held that to the extent the state implemented the act by freely choosing to impose new programs or higher levels of service upon local school districts, the costs of such programs or higher levels of service are state-mandated and subject to subvention under Cal. Const., art. XIII B, § 6. Thus, on remand to the commission, the court held, the commission was required to focus on the costs incurred by local school districts and on whether those costs were imposed by federal mandate or by the state's voluntary choice in its implementation of the federal program. (Opinion by Sparks, Acting P. J., with Davis and Scotland, JJ., concurring.)

HEADNOTES

Classified to California Digest of Official Reports (1) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--State-mandated Costs:Words, Phrases, and Maxims--Subvention.

"Subvention" generally means a grant of financial aid or assistance, or a subsidy. The constitutional rule of state subvention provides that the state is required to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. This does not mean that the state is required to reimburse local agencies for any incidental cost that may result from the enactment of a state law; rather, the subvention requirement is restricted to governmental services that the local agency is required by state law to provide to its residents. The subvention requirement is intended to prevent the state from transferring the costs of government from itself to local agencies. Reimbursement is required when the state freely chooses to impose on local agencies any peculiarly governmental cost which they were not previously required to absorb.

[See Cal.Jur.3d, State of California, § 78; 9 Witkin, Summary of Cal. Law (9th ed. 1989) Taxation, §§ 123, 124.]

11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, 79 Ed. Law Rep. 924

(Cite as: 11 Cal.App.4th 1564)

(2) Schools § 4--School Districts--Relationship to State.

A school district's relationship to the state is different from that of local governmental entities such as cities, counties, and special districts. Education and the operation of the public school system are matters of statewide rather than local or municipal concern. Local school districts are agencies of the state and have been described as quasi-municipal corporations. They are not distinct and independent bodies politic. The Legislature's power over the public school system is exclusive, plenary, absolute, entire, and comprehensive, subject only to constitutional constraints. The Legislature has the power to create, abolish, divide, merge, or alter the boundaries of school districts. The state is the beneficial owner of all school properties, and local districts hold title as trustee for the state. School moneys belong to the state, and the apportionment of funds to a school district does not give the district a proprietary interest in the funds. While the Legislature has chosen to encourage local responsibility for control of public education through local school districts, that is a matter of legislative choice rather than constitutional compulsion, and the authority that the Legislature has given to local districts remains subject to the ultimate and nondelegable responsibility of the Legislature.

(3) Property Taxes § 7.8--Real Property Tax Limitation--Exemptions and Special Taxes--Federally Mandated Costs.

Pursuant to Rev. & Tax. Code, § 2271 (local agency may levy rate in addition to maximum property tax rate to pay costs mandated by federal government that are not funded by federal or state government), costs mandated by the federal government are exempt from an agency's taxing and spending limits.

(4) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--State-mandated Costs--Costs Incurred Before Effective Date of Constitutional Provision.

Since Cal. Const., art. XIII B, requiring sub-

vention for state mandates enacted after Jan. 1, 1975, had an effective date of July 1, 1980, a local agency may seek subvention for costs imposed by legislation after Jan. 1, 1975, but reimbursement is limited to costs incurred after July 1, 1980. Reimbursement for costs incurred before July 1, 1980, must be obtained, if at all, under controlling statutory law.

(5) Schools § 53--Parents and Students--Right or Duty to Attend-- Handicapped Children--Federal Rehabilitation Act--Obligations Imposed on Districts.

Section 504 of the federal Rehabilitation Act of 1973 (29 U.S.C. § 794) does not only obligate local school districts to prevent handicapped children from being excluded from school. States typically purport to guarantee all of their children the opportunity for a basic education. In California, basic education is regarded as a fundamental right. All basic educational programs are essentially affirmative action activities in the sense that educational agencies are required to evaluate and accommodate the educational needs of the children in their districts. Section 504 does not permit local agencies to accommodate the educational needs of some children while ignoring the needs of others due to their handicapped condition. The statute imposes an obligation upon local school districts to take affirmative steps to accommodate the needs of handicapped children.

(6) Schools § 53--Parents and Students--Right or Duty to Attend-- Handicapped Children--Education of the Handicapped Act.

The federal Education of the Handicapped Act (20 U.S.C. § 1401 et seq.), which since its 1975 amendment has required recipient states to demonstrate a policy that assures all handicapped children the right to a free appropriate education, is not merely a funding statute; rather, it establishes an enforceable substantive right to a free appropriate public education in recipient states. Congress intended the act to establish a basic floor of opportunity that would bring into compliance all school districts

11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, 79 Ed. Law Rep. 924

(Cite as: 11 Cal.App.4th 1564)

with the constitutional right to equal protection with respect to handicapped children. It is also apparent that Congress intended to achieve nationwide application.

(7) Civil Rights §
6--Education--Handicapped--Scope of Federal Statute.

Congress intended the Education of the Handicapped Act (20 U.S.C. § 1401 et seq.) to serve as a means by which state and local educational agencies could fulfill their obligations under the equal protection and due process provisions of the Constitution and under section 504 of the Rehabilitation Act of 1973 (29 U.S.C. § 794). Accordingly, where it is applicable, the act supersedes claims under the Civil Rights Act (42 U.S.C. § 1983) and section 504, and the administrative remedies provided by the act constitute the exclusive remedy of handicapped children and their parents or other representatives. As a result of the exclusive nature of the Education of the Handicapped Act, dissatisfied parties in recipient states must exhaust their administrative remedies under the act before resorting to judicial intervention.

(8a, 8b) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--State-mandated Costs--Special Education:Schools § 4--School Districts; Financing; Funds--Special Education Costs--Reimbursement by State.

The 1975 amendments to the federal Education of the Handicapped Act (20 U.S.C. § 1401 et seq.) constituted a federal mandate with respect to the state. However, even though the state had no real choice in deciding whether to comply with the act, the act did not necessarily require the state to impose all of the costs of implementation upon local school districts. To the extent the state implemented the act by freely choosing to impose new programs or higher levels of service upon local school districts, the costs of such programs or higher levels of service are state mandated and subject to subvention under Cal. Const., art. XIII B, § 6. Thus, on remand of a proceeding by school districts to the

Commission on State Mandates for consideration of whether special education programs constituted new programs or higher levels of service mandated by the state entitling the districts to reimbursement, the commission was required to focus on the costs incurred by local school districts and whether those costs were imposed by federal mandate or by the state's voluntary choice in its implementation of the federal program.

(9) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--Federally Mandated Costs.

The constitutional subvention provision (Cal. Const., art. XIII B, § 6) and the statutory provisions which preceded it do not expressly say that the state is not required to provide a subvention for costs imposed by a federal mandate. Rather, that conclusion follows from the plain language of the subvention provisions themselves. The constitutional provision requires state subvention when "the Legislature or any State agency mandates a new program or higher level of service" on local agencies. Likewise, the earlier statutory provisions required subvention for new programs or higher levels of service mandated by legislative act or executive regulation. When the federal government imposes costs on local agencies, those costs are not mandated by the state and thus would not require a state subvention. Instead, such costs are exempt from local agencies' taxing and spending limitations. This should be true even though the state has adopted an implementing statute or regulation pursuant to the federal mandate, so long as the state had no "true choice" in the manner of implementation of the federal mandate.

(10) Statutes §
28--Construction--Language--Consistency of Meaning Throughout Statute.

As a general rule and unless the context clearly requires otherwise, it must be assumed that the meaning of a term or phrase is consistent throughout the entire act or constitutional article of which it is a part.

(11) State of California § 11--Fiscal Matters--

11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, 79 Ed. Law Rep. 924

(Cite as: 11 Cal.App.4th 1564)

-Reimbursement to Local Governments--Federally Mandated Costs--Subvention.

Subvention principles are part of a more comprehensive political scheme. The basic purpose of the scheme as a whole was to limit the taxing and spending powers of government. The taxing and spending powers of local agencies were to be "frozen" at existing levels with adjustments only for inflation and population growth. Since local agencies are subject to having costs imposed upon them by other governmental entities, the scheme provides relief in that event. If the costs are imposed by the federal government or the courts, then the costs are not included in the local government's taxing and spending limitations. If the costs are imposed by the state, then the state must provide a subvention to reimburse the local agency. Nothing in the scheme suggests that the concept of a federal mandate should have different meanings depending upon whether one is considering subvention or taxing and spending limitations. Thus, the criteria set forth in a California Supreme Court case concerning whether costs mandated by the federal government are exempt from an agency's taxing and spending limits are applicable when subvention is the issue.

(12) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--State-mandated Costs--Special Education--Applicable Criteria in Determining Whether Subvention Required.

In a proceeding for a writ of mandate to direct the Commission on State Mandates to set aside an administrative decision by the State Board of Control (the commission's predecessor), in which the board found that all local special education costs were state mandated and thus subject to state reimbursement, the trial court did not err in determining that the board failed to consider the issues under the appropriate criteria as set forth in a California Supreme Court case concerning whether costs mandated by the federal government are exempt from an agency's taxing and spending limits. The board relied upon the "cooperative federalism" nature of

the Education of the Handicapped Act (20 U.S.C. § 1401 et seq.) without any consideration of whether the act left the state any actual choice in the matter. It also relied on litigation involving another state. However, under the criteria set forth in the Supreme Court's case, the litigation in the other state did not support the board's decision but in fact strongly supported a contrary result.

(13) Courts § 34--Decisions and Orders--Prospective and Retroactive Decisions--Opinion Elucidating Existing Law.

In a California Supreme Court case concerning whether costs mandated by the federal government are exempt from an agency's taxing and spending limits, the court elucidated and enforced existing law. Under such circumstances, the rule of retrospective operation controls. Thus, in a proceeding for a writ of mandate to direct the Commission on State Mandates to set aside an administrative decision by the State Board of Control (the commission's predecessor), in which the board found that all local special education costs were state mandated and thus subject to state reimbursement, the trial court correctly applied the Supreme Court decision to the litigation pending before it.

COUNSEL

Biddle & Hamilton, W. Craig Biddle, Christian M. Keiner and F. Richard Ruderman for Real Party in Interest, Cross-complainant and Appellant. *1570

Breon, O'Donnell, Miller, Brown & Dannis and Emi R. Uyehara as Amici Curiae on behalf of Real Party in Interest, Cross-complainant and Appellant.

No appearance for Real Party in Interest and Respondent.

Gary D. Hori for Defendant, Cross-defendant and Respondent.

Richard J. Chivaro and Patricia A. Cruz for Cross-defendants and Respondents.

SPARKS, Acting P. J.

This appeal involves a decade-long battle over claims for subvention by two county superintendents of schools for reimbursement for mandated special education programs. Section 6 of article XIII B of the California Constitution directs, with exceptions not relevant here, that “[w]henver the Legislature or any State agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, ...” The issue on appeal is whether the special education programs in question constituted new programs or higher levels of service mandated by the state entitling the school districts to reimbursement under section 6 of article XIII B of the California Constitution and related statutes for the cost of implementing them or whether these programs were instead mandated by the federal government for which no reimbursement is due.

The Santa Barbara County Superintendent of Schools and the Riverside County Superintendent of Schools each filed claims with the Board of Control for state reimbursement for alleged state-mandated costs incurred in connection with special education programs. After a lengthy administrative process, the Board of Control rendered a decision finding that all local special education costs were state mandated and subject to state reimbursement. That decision was then successfully challenged in the Sacramento County Superior Court. The superior court entered a judgment by which it: (1) issued a writ of administrative mandate (Code Civ. Proc., § 1094.5), directing the Commission on State Mandates (the successor to the Board of *1571 Control) to set aside the administrative decision and to reconsider the matter in light of the California Supreme Court’s intervening decision in *City of Sacramento v. State of California* (1990) 50 Cal.3d 51 [266 Cal.Rptr. 139, 785 P.2d 522]; and (2) denied

the Riverside County Superintendent of School’s petition for a writ of mandate (Code Civ. Proc., § 1085), which would have directed the State Controller to issue a warrant in payment of the claim. The Riverside County Superintendent of Public Schools appeals. We shall clarify the criteria to be applied by the Commission on State Mandates on remand and affirm the judgment.

I. The Parties

This action was commenced in July 1987 by Jesse R. Huff, then the Director of the California Department of Finance. Huff petitioned for a writ of administrative mandate to set aside the administrative decision which found all the special education costs to be state mandated. On appeal Huff appears as a respondent urging that we affirm the judgment.

The Commission on State Mandates (the Commission) is the administrative agency which now has jurisdiction over local agency claims for reimbursement for state-mandated costs. (Gov. Code, § 17525.) In this respect the Commission is the successor to the Board of Control. The Board of Control rendered the administrative decision which is at issue here. Since an appropriation for payment of these claims was not included in a local government claims bill before January 1, 1985, administrative jurisdiction over the claims has been transferred from the Board of Control to the Commission. (Gov. Code, § 17630.) The Commission is the named defendant in the petition for a writ of administrative mandate. In the trial court and on appeal the Commission has appeared as the agency having administrative jurisdiction over the claims, but has not expressed a position on the merits of the litigation.

The Santa Barbara County Superintendent of Schools (hereafter Santa Barbara) is a claimant for state reimbursement of special education costs incurred in the 1979-1980 fiscal year. Santa Barbara is a real party in interest in the proceeding for administrative mandate. Santa Barbara has not appealed from the judgment of the superior court and,

11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, 79 Ed. Law Rep. 924

(Cite as: 11 Cal.App.4th 1564)

although a nominal respondent on appeal, has not filed a brief in this court.

The Riverside County Superintendent of Schools (hereafter Riverside) represents a consortium of school districts which joined together to provide special education programs to handicapped students. Riverside seeks reimbursement for special education costs incurred in the 1980-1981 fiscal year. *1572 Riverside is a real party in interest in the proceeding for writ of administrative mandate. It filed a cross-petition for a writ of mandate directing the Controller to pay its claim. Riverside is the appellant in this appeal.

The State of California and the State Treasurer are named cross-defendants in Riverside's cross-petition for a writ of mandate. They joined with Huff in this litigation. The State Controller is the officer charged with drawing warrants for the payment of moneys from the State Treasury upon a lawful appropriation. (Cal. Const., art. XVI, § 7.) The State Controller is a named defendant in Riverside's petition for a writ of mandate. In the trial court and on appeal the State Controller expresses no opinion on the merits of Riverside's reimbursement claim, but asserts that the courts lack authority to compel him to issue a warrant for payment of the claim in the absence of an appropriation for payment of the claim.

In addition to the briefing by the parties on appeal, we have permitted a joint amici curiae brief to be filed in support of Riverside by the Monterey County Office of Education, the Monterey County Office of Education Special Education Local Planning Area, and 21 local school districts.

II. *Factual and Procedural Background*

The Legislature has provided an administrative remedy for the resolution of local agency claims for reimbursement for state mandates. In *County of Contra Costa v. State of California* (1986) 177 Cal.App.3d 62 [222 Cal.Rptr. 750], at pages 71 and 72, we described these procedures as follows (with footnotes deleted): "Section 2250 [Revenue &

Taxation Code] and those following it provide a hearing procedure for the determination of claims by local governments. The State Board of Control is required to hear and determine such claims. (§ 2250.) For purposes of such hearings the board consists of the members of the Board of Control provided for in part 4 (commencing with § 13900) of division 3 of title 2 of the Government Code, together with two local government officials appointed by the Governor. (§ 2251.) The board was required to adopt procedures for receiving and hearing such claims. (§ 2252.) The first claim filed with respect to a statute or regulation is considered a 'test claim' or a 'claim of first impression.' (§ 2218, subd. (a).) The procedure requires an evidentiary hearing where the claimant, the Department of Finance, and any affected department or agency can present evidence. (§ 2252.) If the board determines that costs are mandated, then it must adopt parameters and guidelines for the reimbursement of such claims. (§ 2253.2.) The claimant or the state is entitled to commence an action in administrative mandate pursuant to Code of Civil Procedure section 1094.5 to set aside a decision of the board on the grounds that the board's decision is not supported by substantial evidence. (§ 2253.5.) *1573

"At least twice each calendar year the board is required to report to the Legislature on the number of mandates it has found and the estimated statewide costs of these mandates. (§ 2255, subd. (a).) In addition to the estimate of the statewide costs for each mandate, the report must also contain the reasons for recommending reimbursement. (§ 2255, subd. (a).) Immediately upon receipt of the report a local government claims bill shall be introduced in the Legislature which, when introduced, must contain an appropriation sufficient to pay for the estimated costs of the mandates. (§ 2255, subd. (a).) In the event the Legislature deletes funding for a mandate from the local government claims bill, then it may take one of the following courses of action: (1) include a finding that the legislation or regulation does not contain a mandate; (2) include a finding that the mandate is not reimbursable; (3)

11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, 79 Ed. Law Rep. 924

(Cite as: 11 Cal.App.4th 1564)

find that a regulation contains a mandate and direct that the Office of Administrative Law repeal the regulation; (4) include a finding that the legislation or regulation contains a reimbursable mandate and direct that the legislation or regulation not be enforced against local entities until funds become available; (5) include a finding that the Legislature cannot determine whether there is a mandate and direct that the legislation or regulation shall remain in effect and be enforceable unless a court determines that the legislation or regulation contains a reimbursable mandate in which case the effectiveness of the legislation or regulation shall be suspended and it shall not be enforced against a local entity until funding becomes available; or (6) include a finding that the Legislature cannot determine whether there is a reimbursable mandate and that the legislation or regulation shall be suspended and shall not be enforced against a local entity until a court determines whether there is a reimbursable mandate. (§ 2255, subd. (b).) If the Legislature deletes funding for a mandate from a local government claims bill but does not follow one of the above courses of action or if a local entity believes that the action is not consistent with article XIII B of the Constitution, then the local entity may commence a declaratory relief action in the Superior Court of the County of Sacramento to declare the mandate void and enjoin its enforcement. (§ 2255, subd. (c).)

“Effective January 1, 1985, the Legislature has established a new commission to consider and determine claims based upon state mandates. This is known as the Commission on State Mandates and it consists of the Controller, the Treasurer, the Director of Finance, the Director of the Office of Planning and Research, and a public member with experience in public finance, appointed by the Governor and approved by the Senate. (Gov. Code, § 17525.) ‘Costs mandated by the state’ are defined as ‘any increased costs which a local agency or school district is required to incur after July 1, 1980, as a result of any statute enacted after January 1, 1975, or any executive order implementing any statute en-

acted on or after January 1, 1975, which *1574 mandates a new program or higher level of service of an existing program within the meaning of Section 6 of Article XIII B of the California Constitution.’ (Gov. Code, § 17514.) The procedures before the Commission are similar to those which were followed before the Board of Control. (Gov. Code, § 17500 et seq.) Any claims which had not been included in a local government claims bill prior to January 1, 1985, were to be transferred to and considered by the commission. (Gov. Code, § 17630; [Rev. & Tax. Code,] § 2239.)”

On October 31, 1980, Santa Barbara filed a test claim with the Board of Control seeking reimbursement for costs incurred in the 1979-1980 fiscal year in connection with the provision of special education services as required by Statutes 1977, chapter 1247, and Statutes 1980, chapter 797. Santa Barbara asserted that these acts should be considered an ongoing requirement of increased levels of service.

Santa Barbara's initial claim was based upon the “mandate contained in the two bills specified above [which require] school districts and county offices to provide full and formal due process procedures and hearings to pupils and parents regarding the special education assessment, placement and the appropriate education of the child.” Santa Barbara asserted that state requirements exceeded those of federal law as reflected in section 504 of the Rehabilitation Act of 1973 (29 U.S.C. § 794).^{FN1} Santa Barbara's initial claim was for \$10,500 in state-mandated costs for the 1979-1980 fiscal year.

FN1 Section 794 of title 29 of the United States Code will of necessity play an important part in our discussion of the issues presented in this case. That provision was enacted as section 504 of the Rehabilitation Act of 1973. (Pub.L. No. 93-112, tit. V, § 504 (Sept. 26, 1973) 87 Stat. 394.) It has been amended several times. (Pub.L. No. 95-602, tit. I, §§ 119, 122(d)(2) (Nov.

11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, 79 Ed. Law Rep. 924

(Cite as: 11 Cal.App.4th 1564)

6, 1978) 92 Stat. 2982, 2987 [Rehabilitation, Comprehensive Services, and Developmental Disabilities Act of 1978]; Pub.L. No. 99- 506, tit. I, § 103(d)(2)(B), tit. X, § 1002(e)(4) (Oct. 21, 1986) 100 Stat. 1810, 1844; Pub.L. No. 100-259, § 4 (Mar. 22, 1988) 102 Stat. 29; Pub.L. No. 100-630, tit. II, § 206(d) (Nov. 7, 1988) 102 Stat. 3312.) The decisional authorities universally refer to the statute as “section 504.” We will adhere to this nomenclature and subsequent references to section 504 will refer to title 29, United States Code, section 794.

During the administrative proceedings Santa Barbara amended its claim to reflect the following state-mandated activities alleged to be in excess of federal requirements: (1) the extension of eligibility to children younger and older than required by federal law; (2) the establishment of procedures to search for and identify children with special needs; (3) assessment and evaluation; (4) the preparation of “Individual Education Plans” (IEP’s); (5) due process hearings in placement determinations; (6) substitute teachers; and (7) staff development programs. Santa Barbara was claiming reimbursement in excess of \$520,000 for the cost of these services during the 1979- 1980 fiscal year. *1575

Also, during the administrative proceedings the focus of federally mandated requirements shifted from section 504 of the Rehabilitation Act to federal Public Law No. 94-142, which amended the Education of the Handicapped Act. (20 U.S.C. § 1401 et seq.)^{FN2}

FN2 The Education of the Handicapped Act was enacted in 1970. (Pub.L. No. 91-230, tit. VI (Apr. 13, 1970) 84 Stat. 175.) It has been amended many times. The amendment of primary interest here was enacted as the Education for All Handicapped Children Act of 1975. (Pub.L. No. 94-142 (Nov. 29, 1975) 89 Stat. 774.) The 1975 legislation significantly amended

the Education of the Handicapped Act, but did not change its short title. The Education of the Handicapped Act has now been renamed the Individuals with Disabilities Education Act. (Pub.L. No. 101-476, tit. IX, § 901(b)(21) (Oct. 30, 1990) 104 Stat. 1143; Pub.L. No. 101-476, tit. IX, § 901b; Pub.L. No. 102-119, § 25(b) (Oct. 7, 1991) 105 Stat. 607.) Since at all times relevant here the federal act was known as the Education of the Handicapped Act, we will adhere to that nomenclature.

The Board of Control adopted a decision denying Santa Barbara’s claim. The board concluded that the Education of the Handicapped Act resulted in costs mandated by the federal government, that state special education requirements exceed those of federal law, but that “the resulting mandate is not reimbursable because the Legislature already provides funding for all Special Education Services through an appropriation in the annual Budget Act.”

Santa Barbara sought judicial review by petition for a writ of administrative mandate. The superior court found the administrative record and the Board of Control’s findings to be inadequate. Judgment was rendered requiring the Board of Control to set aside its decision and to rehear the matter to establish a proper record, including findings. That judgment was not appealed.

On October 30, 1981, Riverside filed a test claim for reimbursement of \$474,477 in special education costs incurred in the 1980-1981 fiscal year. Riverside alleged that the costs were state mandated by chapter 797 of Statutes 1980. The basis of Riverside’s claim was Education Code section 56760, a part of the state special education funding formula which, according to Riverside, “mandates a 10% cap on ratio of students served by special education and within that 10% mandates the ratio of students to be served by certain services.” Riverside explained that chapter 797 of Statutes 1980 was enacted as urgency legislation effective

11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, 79 Ed. Law Rep. 924

(Cite as: 11 Cal.App.4th 1564)

July 28, 1980, and that at that time it was already "locked into" providing special education services to more than 13 percent of its students in accordance with prior state law and funding formulae.
FN3

FN3 The 1980 legislation required that a local agency adopt an annual budget plan for special education services. (Ed. Code, § 56200.) Education Code section 56760 provided that in the local budget plan the ratio of students to be served should not exceed 10 percent of total enrollment. However, those proportions could be waived for undue hardship by the Superintendent of Public Instruction. (Ed. Code, §§ 56760, 56761.) In addition, the 1980 legislation included provisions for a gradual transition to the new requirements. (Ed. Code, § 56195 et seq.) The transitional provisions included a guarantee of state funding for 1980-1981 at prior student levels with an inflationary adjustment of 9 percent. (Ed. Code, § 56195.8.) The record indicates that Riverside applied for a waiver of the requirements of Education Code section 56760, but that the waiver request was denied due to a shortage of state funding. It also appears that Riverside did not receive all of the 109 percent funding guarantee under Education Code section 56195.8. In light of the current posture of this appeal we need not and do not consider whether the failure of the state to appropriate sufficient funds to satisfy its obligations under the 1980 legislation can be addressed in a proceeding for the reimbursement of state-mandated costs or must be addressed in some other manner.

The Riverside claim, like Santa Barbara's, evolved over time with increases in the amount of reimbursement sought. Eventually the Board of *1576 Control denied Riverside's claim for the same reasons the Santa Barbara claim was denied.

Riverside sought review by petition for a writ of administrative mandate. In its decision the superior court accepted the board's conclusions that the Education of the Handicapped Act constitutes a federal mandate and that state requirements exceed those of the federal mandate. However, the court disagreed with the board that any appropriation in the state act necessarily satisfies the state's subvention obligation. The court concluded that the Board of Control had failed to consider whether the state had fully reimbursed local districts for the state-mandated costs which were in excess of the federal mandate, and the matter was remanded for consideration of that question. That judgment was not appealed.

On return to the Board of Control, the Santa Barbara claim and the Riverside claim were consolidated. The Board of Control adopted a decision holding that all special education costs under Statutes 1977, chapter 1247, and Statutes 1980, chapter 797, are state-mandated costs subject to subvention. The board reasoned that the federal Education of the Handicapped Act is a discretionary program and that section 504 of the Rehabilitation Act does not require school districts to implement any programs in response to federal law, and therefore special education programs are optional in the absence of a state mandate.

The claimants were directed to draft, and the Board of Control adopted, parameters and guidelines for reimbursement of special education costs. The board submitted a report to the Legislature estimating that the total statewide cost of reimbursement for the 1980-1981 through 1985-1986 fiscal years would be in excess of \$2 billion. Riverside's claim for reimbursement for the 1980-1981 fiscal year was now in excess of \$7 million. Proposed legislation which would have appropriated funds for reimbursement of special education costs during the 1980-1981 through 1985-1986 fiscal years failed to pass in the Legislature. (Sen. Bill No. 1082 (1985-1986 Reg. Sess.)) A separate bill which would have appropriated funds to reimburse

11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, 79 Ed. Law Rep. 924

(Cite as: 11 Cal.App.4th 1564)

Riverside *1577 for its 1980-1981 claim also failed to pass. (Sen. Bill No. 238 (1987-1988 Reg. Sess.))

At this point Huff, as Director of the Department of Finance, brought an action in administrative mandate seeking to set aside the decision of the Board of Control. Riverside cross-petitioned for a writ of mandate directing the state, the Controller and the Treasurer to issue a warrant in payment of its claim for the 1980-1981 fiscal year.

The superior court concluded that the Board of Control did not apply the appropriate standard in determining whether any portion of local special education costs are incurred pursuant to a federal mandate. The court found that the definition of a federal mandate set forth by the *Supreme Court in City of Sacramento v. State of California, supra*, 50 Cal.3d 51, “marked a departure from the narrower ‘no discretion’ test” of this court’s earlier decision in *City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182 [203 Cal.Rptr. 258]. It further found that the standard set forth in the high court’s decision in *City of Sacramento* “is to be applied retroactively.” Accordingly, the superior court issued a peremptory writ of mandate directing the Commission on State Mandates to set aside the decision of the Board of Control, to reconsider the claims in light of the decision in *City of Sacramento v. State of California, supra*, 50 Cal.3d 51, and “to ascertain whether certain costs arising from Chapter 797/80 and Chapter 1247/77 are federally mandated, and if so, the extent, if any, to which the state-mandated costs exceed the federal mandate.” Riverside’s cross-petition for a writ of mandate was denied. This appeal followed.

III. Principles of Subvention

(1) “Subvention” generally means a grant of financial aid or assistance, or a subsidy. (See Webster’s Third New Internat. Dict. (1971) p. 2281.) As used in connection with state-mandated costs, the basic legal requirements of subvention can be easily stated; it is in the application of the rule that difficulties arise.

Essentially, the constitutional rule of state subvention provides that the state is required to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. (*County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56 [233 Cal.Rptr. 38, 729 P.2d 202].) This does not mean that the state is required to reimburse local agencies for any incidental cost that may result from the enactment of a state law; rather, the subvention requirement is restricted to governmental services which the local agency is required by *1578 state law to provide to its residents. (*City of Sacramento v. State of California, supra*, 50 Cal.3d at p. 70.) The subvention requirement is intended to prevent the state from transferring the costs of government from itself to local agencies. (*Id.* at p. 68.) Reimbursement is required when the state “freely chooses to impose on local agencies any peculiarly ‘governmental’ cost which they were not previously required to absorb.” (*Id.* at p. 70, italics in original.)

The requirement of subvention for state-mandated costs had its genesis in the “Property Tax Relief Act of 1972” which is also known as “SB 90” (Senate Bill No. 90). (*City of Sacramento v. State of California, supra*, 156 Cal.App.3d at p. 188 .) That act established limitations upon the power of local governments to levy taxes and concomitantly prevented the state from imposing the cost of new programs or higher levels of service upon local governments. (*Ibid.*) The Legislature declared: “It is the intent in establishing the tax rate limits in this chapter to establish limits that will be flexible enough to allow local governments to continue to provide existing programs, that will be firm enough to insure that the property tax relief provided by the Legislature will be long lasting and that will afford the voters in each local government jurisdiction a more active role in the fiscal affairs of such jurisdictions.” (Rev. & Tax. Code, former § 2162, Stats. 1972, ch. 1406, § 14.7, p. 2961.)^{FN4} The act provided that the state would pay each county, city and county, city, and special district the sums

which were sufficient to cover the total cost of new state-mandated costs. (See Rev. & Tax. Code, former § 2164.3, Stats. 1972, ch. 1406, § 14.7, pp. 2962-2963.) New state-mandated costs would arise from legislative action or executive regulation after January 1, 1973, which mandated a new program or higher level of service under an existing mandated program. (*Ibid.*)

FN4 In addition to requiring subventions for new state programs and higher levels of service, Senate Bill No. 90 required the state to reimburse local governments for revenues lost by the repeal or reduction of property taxes on certain classes of property. In this connection the Legislature said: "It is the purpose of this part to provide property tax relief to the citizens of this state, as undue reliance on the property tax to finance various functions of government has resulted in serious detriment to one segment of the taxpaying public. The subventions from the State General Fund required under this part will serve to partially equalize tax burdens among all citizens, and the state as a whole will benefit." (Gov. Code, § 16101, Stats. 1972, ch. 1406, § 5, p. 2953.)

(2)(See fn. 5.) Senate Bill No. 90 did not specifically include school districts in the group of agencies entitled to reimbursement for state-mandated costs.^{FN5} (Rev. & Tax. Code, former § 2164.3, Stats. 1972, ch. 1406, § 14.7, pp. 2962-2963.) In fact, at that time methods of financing education in this state were *1579 undergoing fundamental reformation as the result of the litigation in *Serrano v. Priest* (1971) 5 Cal.3d 584 [96 Cal.Rptr. 601, 487 P.2d 1241, 41 A.L.R.3d 1187]. At the time of the *Serrano* decision local property taxes were the primary source of school revenue. (*Id.* at p. 592.) In *Serrano*, the California Supreme Court held that education is a fundamental interest, that wealth is a suspect classification, and that an educational system which produces disparities of

opportunity based upon district wealth would violate principles of equal protection. (*Id.* at pp. 614-615, 619.) A major portion of Senate Bill No. 90 constituted new formulae for state and local contributions to education in a legislative response to the decision in *Serrano*. (Stats. 1972, ch. 1406, §§ 1.5-2.74, pp. 2931-2953. See *Serrano v. Priest* (1976) 18 Cal.3d 728, 736- 737 [135 Cal.Rptr. 345, 557 P.2d 929].)^{FN6}

FN5 A school district's relationship to the state is different from that of local governmental entities such as cities, counties, and special districts. Education and the operation of the public school system are matters of statewide rather than local or municipal concern. (*California Teachers Assn. v. Huff* (1992) 5 Cal.App.4th 1513, 1524 [7 Cal.Rptr.2d 699].) Local school districts are agencies of the state and have been described as quasi-municipal corporations. (*Ibid.*) They are not distinct and independent bodies politic. (*Ibid.*) The Legislature's power over the public school system has been described as exclusive, plenary, absolute, entire, and comprehensive, subject only to constitutional constraints. (*Ibid.*) The Legislature has the power to create, abolish, divide, merge, or alter the boundaries of school districts. (*Id.* at p. 1525.) The state is the beneficial owner of all school properties and local districts hold title as trustee for the state. (*Ibid.*) School moneys belong to the state and the apportionment of funds to a school district does not give the district a proprietary interest in the funds. (*Ibid.*) While the Legislature has chosen to encourage local responsibility for control of public education through local school districts, that is a matter of legislative choice rather than constitutional compulsion and the authority that the Legislature has given to local districts remains subject to the ultimate and nondelegable responsibility of the Legis-

lature. (*Id.* at pp. 1523-1524.)

FN6 After the first *Serrano* decision, the United States Supreme Court held that equal protection does not require dollar-for-dollar equality between school districts. (*San Antonio School District v. Rodriguez* (1973) 411 U.S. 1, 33-34 48-56, 61-62 [36 L.Ed.2d 16, 42-43, 51-56, 59-60, 93 S.Ct. 1278].) In the second *Serrano* decision, the California Supreme Court adhered to the first *Serrano* decision on independent state grounds. (*Serrano v. Priest, supra*, 18 Cal.3d at pp. 761-766.) The court concluded that Senate Bill No. 90 and Assembly Bill No. 1267, enacted the following year (Stats. 1973, ch. 208, p. 529 et seq.), did not satisfy equal protection principles. (*Serrano v. Priest, supra*, 18 Cal.3d at pp. 776-777.) Additional complications in educational financing arose as the result of the enactment of article XIII A of the California Constitution at the June 1978 Primary Election (Proposition 13), which limited the taxes which can be imposed on real property and forced the state to assume greater responsibility for financing education (see Ed. Code, § 41060), and the enactment of Propositions 98 and 111 in 1988 and 1990, respectively, which provide formulae for minimum state funding for education. (See generally *California Teachers Assn. v. Huff, supra*, 5 Cal.App.4th 1513.)

The provisions of Senate Bill No. 90 were amended and refined in legislation enacted the following year. (Stats. 1973, ch. 358.) Revenue and Taxation Code section 2231, subdivision (a), was enacted to require the state to reimburse local agencies, including school districts, for the full costs of new programs or increased levels of service mandated by the Legislature after January 1, 1973. Local agencies except school districts were also entitled to reimbursement for costs mandated by executive

regulation after January 1, 1973. (Rev. & Tax. Code, § 2231, subd. (d), added by Stats. 1973, ch. 358, § 3, p. 783 *1580 and repealed by Stats. 1986, ch. 879, § 23, p. 3045.) In subsequent years legislation was enacted to entitle school districts to subvention for state-mandated costs imposed by legislative acts after January 1, 1973, or by executive regulation after January 1, 1978. (Rev. & Tax. Code, former § 2207.5, added by Stats. 1977, ch. 1135, § 5, p. 3646 and amended by Stats. 1980, ch. 1256, § 5, pp. 4248-4249.)

In the 1973 legislation, Revenue and Taxation Code section 2271 was enacted to provide, among other things: "A local agency may levy, or have levied on its behalf, a rate in addition to the maximum property tax rate established pursuant to this chapter (commencing with Section 2201) to pay costs mandated by the federal government or costs mandated by the courts or costs mandated by initiative enactment, which are not funded by federal or state government." (3) In this respect costs mandated by the federal government are exempt from an agency's taxing and spending limits. (*City of Sacramento v. State of California, supra*, 50 Cal.3d at p. 71, fn. 17.)

At the November 6, 1979, General Election, the voters added article XIII B to the state Constitution by enacting Proposition 4. That article imposes spending limits on the state and all local governments. For purposes of article XIII B the term "local government" includes school districts. (Cal. Const., art. XIII B, § 8, subd. (d).) The measure accomplishes its purpose by limiting a governmental entity's annual appropriations to the prior year's appropriations limit adjusted for changes in the cost of living and population growth, except as otherwise provided in the article. (Cal. Const., art. XIII B, § 1.)^{FN7} The appropriations subject to limitation do not include, among other things: "Appropriations required to comply with mandates of the courts or the federal government which, without discretion, require an expenditure for additional services or which unavoidably make the pro-

11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, 79 Ed. Law Rep. 924

(Cite as: 11 Cal.App.4th 1564)

vision of existing services more costly.” (Cal. Const., art. XIII B, § 9, subd. (b).)

FN7 As it was originally enacted, article XIII B required that all governmental entities return revenues in excess of their appropriations limits to the taxpayers through tax rate or fee schedule revisions. In Proposition 98, adopted at the November 1988 General Election, article XIII B was amended to provide that half of state excess revenues would be transferred to the state school fund for the support of school districts and community college districts. (See Cal. Const., art. XVI, § 8.5; *California Teachers Assn. v. Huff*, *supra*, 5 Cal.App.4th 1513.)

Like its statutory predecessor, the constitutional initiative measure includes a provision designed “to preclude the state from shifting to local agencies the financial responsibility for providing public services in view of these restrictions on the taxing and spending power of the local entities.” (*Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 835-836 [244 Cal.Rptr. 677, 750 P.2d 318].) Section 6 of article XIII B of the state Constitution provides: “Whenever the Legislature or any State agency mandates a new program or higher level of service on any local government, the *1581 State shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [¶] (a) Legislative mandates requested by the local agency affected; [¶] (b) Legislation defining a new crime or changing an existing definition of a crime; or [¶] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975.”

Although article XIII B of the state Constitution requires subvention for state mandates enacted after January 1, 1975, the article had an effective

date of July 1, 1980. (Cal. Const., art. XIII B, § 10.) (4) Accordingly, under the constitutional provision, a local agency may seek subvention for costs imposed by legislation after January 1, 1975, but reimbursement is limited to costs incurred after July 1, 1980. (*City of Sacramento v. State of California*, *supra*, 156 Cal.App.3d at pp. 190-193.) Reimbursement for costs incurred before July 1, 1980, must be obtained, if at all, under controlling statutory law. (See 68 Ops.Cal.Atty.Gen. 244 (1985).)

The constitutional subvention provision, like the statutory scheme before it, requires state reimbursement whenever “the Legislature or any State agency” mandates a new program or higher level of service. (Cal. Const., art. XIII B, § 6.) Accordingly, it has been held that state subvention is not required when the federal government imposes new costs on local governments. (*City of Sacramento v. State of California*, *supra*, 156 Cal.App.3d at p. 188; see also *Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521, 543 [234 Cal.Rptr. 795].) In our *City of Sacramento* decision this court held that a federal program in which the state participates is not a federal mandate, regardless of the incentives for participation, unless the program leaves state or local government with no discretion as to alternatives. (156 Cal.App.3d at p. 198.)

In its *City of Sacramento* opinion, FN8 the California Supreme Court rejected this court's earlier formulation. In doing so the high court noted that the vast bulk of cost-producing federal influence on state and local government is by inducement or incentive rather than direct compulsion. (50 Cal.3d at p. 73.) However, “certain regulatory standards imposed by the federal government *1582 under ‘cooperative federalism’ schemes are coercive on the states and localities in every practical sense.” (*Id.* at pp. 73-74.) The test for determining whether there is a federal mandate is whether compliance with federal standards “is a matter of true choice,” that is, whether participation in the federal program “is truly voluntary.” (*Id.* at p. 76.) The court went on to

11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, 79 Ed. Law Rep. 924

(Cite as: 11 Cal.App.4th 1564)

say: "Given the variety of cooperative federal-state-local programs, we here attempt no final test for 'mandatory' versus 'optional' compliance with federal law. A determination in each case must depend on such factors as the nature and purpose of the federal program; whether its design suggests an intent to coerce; when state and/or local participation began; the penalties, if any, assessed for withdrawal or refusal to participate or comply; and any other legal and practical consequences of nonparticipation, noncompliance, or withdrawal." (*Ibid.*)

FN8 The Supreme Court's decision in *City of Sacramento* was not a result of direct review of this court's decision. The Supreme Court denied a petition for review of this court's *City of Sacramento* decision. After the Board of Control had adopted parameters and guidelines for reimbursement under this court's decision, the Legislature failed to appropriate the funds necessary for such reimbursement. The litigation which resulted in the Supreme Court's *City of Sacramento* decision was commenced as an action to enforce the result on remand from this court's *City of Sacramento* decision. (See 50 Cal.3d at p. 60.)

IV. Special Education

The issues in this case cannot be resolved by consideration of a particular federal act in isolation. Rather, reference must be made to the historical and legal setting of which the particular act is a part. Our consideration begins in the early 1970's.

In considering the 1975 amendments to the Education of the Handicapped Act, Congress referred to a series of "landmark court cases" emanating from 36 jurisdictions which had established the right to an equal educational opportunity for handicapped children. (See *Smith v. Robinson* (1984) 468 U.S. 992, 1010 [82 L.Ed.2d 746, 763, 104 S.Ct. 3457].) Two federal district court cases, *Pennsylvania Ass'n, Ret'd Child. v. Commonwealth of Pa.* (E.D.Pa. 1972) 343 F.Supp. 279 (see also *Pennsylvania Ass'n, Retard. Child. v. Common-*

wealth of Pa. (E.D.Pa. 1971) 334 F.Supp. 1257), and *Mills v. Board of Education of District of Columbia* (D.D.C. 1972) 348 F.Supp. 866, were the most prominent of these judicial decisions. (See *Hendrick Hudson Dist. Bd. of Ed. v. Rowley* (1982) 458 U.S. 176, 180, fn. 2 [73 L.Ed.2d 690, 695, 102 S.Ct. 3034].)

In the Pennsylvania case, an association and the parents of certain retarded children brought a class action against the commonwealth and local school districts in the commonwealth, challenging the exclusion of retarded children from programs of education and training in the public schools. (*Pennsylvania Ass'n, Ret'd. Child. v. Commonwealth of Pa.*, *supra*, 343 F.Supp. at p. 282.) The matter was assigned to a three-judge panel which heard evidence on the plaintiffs' due process and equal protection claims. (*Id.* at p. 285.) The parties then agreed to resolve the litigation by means of a consent *1583 judgment. (*Ibid.*) The consent agreement required the defendants to locate and evaluate all children in need of special education services, to reevaluate placement decisions periodically, and to accord due process hearings to parents who are dissatisfied with placement decisions. (*Id.* at pp. 303-306.) It required the defendants to provide "a free public program of education and training appropriate to the child's capacity." (*Id.* at p. 285, italics deleted.)

In view of the consent agreement the district court was not required to resolve the plaintiffs' equal protection and due process contentions. Rather, it was sufficient for the court to find that the suit was not collusive and that the plaintiffs' claims were colorable. The court found: "Far from an indication of collusion, however, the Commonwealth's willingness to settle this dispute reflects an intelligent response to overwhelming evidence against [its] position." (*Pennsylvania Ass'n, Ret'd. Child. v. Commonwealth of Pa.*, *supra*, 343 F.Supp. at p. 291.) The court said that it was convinced the due process and equal protection claims were colorable. (*Id.* at pp. 295-296.)

11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, 79 Ed. Law Rep. 924

(Cite as: 11 Cal.App.4th 1564)

In the *Mills* case, an action was brought on behalf of a number of school-age children with exceptional needs who were excluded from the Washington, D.C., public school system. (*Mills v. Board of Education of District of Columbia, supra*, 348 F.Supp. at p. 868.) The district court concluded that equal protection entitled the children to a public-supported education appropriate to their needs and that due process required a hearing with respect to classification decisions. (*Id.* at pp. 874-875.) The court said: "If sufficient funds are not available to finance all of the services and programs that are needed and desirable in the system then the available funds must be expended equitably in such manner that no child is entirely excluded from a publicly supported education consistent with his needs and ability to benefit therefrom. The inadequacies of the District of Columbia Public School System whether occasioned by insufficient funding or administrative inefficiency, certainly cannot be permitted to bear more heavily on the 'exceptional' or handicapped child than on the normal child." (*Id.* at p. 876.)

In the usual course of events, the development of principles of equal protection and due process as applied to special education, which had just commenced in the early 1970's with the authorities represented by the *Pennsylvania* and *Mills* cases, would have been fully expounded through appellate processes. However, the necessity of judicial development was truncated by congressional action. In the Rehabilitation Act of 1973, section 504, Congress provided: "No otherwise qualified handicapped individual in the United States, as defined in section 706(7) [now 706(8)] of this title, *1584 shall, solely by reason of his handicap, be excluded from the participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance" (29 U.S.C. § 794, Pub.L. No. 93-112, tit. V, § 504 (Sept. 26, 1973) 87 Stat. 394.)^{FN9} Since federal assistance to education is pervasive (see, e.g., Ed. Code, §§ 12000-12405, 49540 et seq., 92140 et seq.), section 504 was applicable to virtu-

ally all public educational programs in this and other states.

FN9 In section 119 of the Rehabilitation, Comprehensive Services, and Developmental Disabilities Act of 1978, the application of section 504 was extended to federal executive agencies and the United States Postal Service. (Pub.L. No. 95-602, tit. I, § 119 (Nov. 6, 1978) 92 Stat. 2982.) The section is now subdivided and includes subdivision (b), which provides that the section applies to all of the operations of a state or local governmental agency, including local educational agencies, if the agency is extended federal funding for any part of its operations. (29 U.S.C. § 794.) This latter amendment was in response to judicial decisions which had limited the application of section 504 to the particular activity for which federal funding is received. (See *Consolidated Rail Corporation v. Darrone* (1984) 465 U.S. 624, 635-636 [79 L.Ed.2d 568, 577-578, 104 S.Ct. 1248].)

The Department of Health, Education and Welfare (HEW) promulgated regulations to ensure compliance with section 504 by educational agencies.^{FN10} The regulations required local educational agencies to locate and evaluate handicapped children in order to provide appropriate educational opportunities and to provide administrative hearing procedures in order to resolve disputes. The federal courts concluded that section 504 was essentially a codification of the equal protection rights of citizens with disabilities. (See *Halderman v. Pennhurst State School & Hospital* (E.D.Pa. 1978) 446 F.Supp. 1295, 1323.) Courts also held that section 504 embraced a private cause of action to enforce its requirements. (*Sherry v. New York State Ed. Dept.* (W.D.N.Y. 1979) 479 F.Supp. 1328, 1334; *Doe v. Marshall* (S.D.Tex. 1978) 459 F.Supp. 1190, 1192.) It was further held that section 504 imposed upon school districts and other public educational

11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, 79 Ed. Law Rep. 924

(Cite as: 11 Cal.App.4th 1564)

agencies “the duty of analyzing individually the needs of each handicapped student and devising a program which will enable each individual handicapped student to receive an appropriate, free public education. The failure to perform this analysis and structure a program suited to the needs of each handicapped child, constitutes discrimination against that child and a failure to provide an appropriate, free *1585 public education for the handicapped child.” (*Doe v. Marshall*, *supra*, 459 F.Supp. at p. 1191. See also *David H. v. Spring Branch Independent School Dist.* (S.D.Tex. 1983) 569 F.Supp. 1324, 1334; *Halderman v. Pennhurst State School & Hospital*, *supra*, 446 F.Supp. at p. 1323.)

FN10 HEW was later dissolved and its responsibilities are now shared by the federal Department of Education and the Department of Health and Human Services. The promulgation of regulations to enforce section 504 had a somewhat checkered history. Initially HEW determined that Congress did not intend to require it to promulgate regulations. The Senate Public Welfare Committee then declared that regulations were intended. By executive order and by judicial decree in *Cherry v. Mathews* (D.D.C. 1976) 419 F.Supp. 922, HEW was required to promulgate regulations. The ensuing regulations were embodied in title 45 Code of Federal Regulations part 84, and are now located in title 34 Code of Federal Regulations part 104. (See *Southeastern Community College v. Davis* (1979) 442 U.S. 397, 404, fn. 4 [60 L.Ed.2d 980, 987, 99 S.Ct. 2361]; *N. M. Ass'n for Retarded Citizens v. State of N. M.* (10th Cir. 1982) 678 F.2d 847, 852.)

(5) Throughout these proceedings Riverside, relying upon the decision in *Southeastern Community College v. Davis*, *supra*, 442 U.S. 397 [60 L.Ed.2d 980], has contended that section 504 cannot be considered a federal mandate because it does

not obligate local school districts to take any action to accommodate the needs of handicapped children so long as they are not excluded from school. That assertion is not correct.

In the *Southeastern Community College* case a prospective student with a serious hearing disability sought to be admitted to a postsecondary educational program to be trained as a registered nurse. As a result of her disability the student could not have completed the academic requirements of the program and could not have attended patients without full-time personal supervision. She sought to require the school to waive the academic requirements, including an essential clinical program, which she could not complete and to otherwise provide full-time personal supervision. That demand, the Supreme Court held, was beyond the scope of section 504, which did not require the school to modify its program affirmatively and substantially. (442 U.S. at pp. 409-410 [60 L.Ed.2d at pp. 990- 991].)

The *Southeastern Community College* decision is inapposite. States typically do not guarantee their citizens that they will be admitted to, and allowed to complete, specialized postsecondary educational programs. State educational institutions often impose stringent admittance and completion requirements for such programs in higher education. In the *Southeastern Community College* case the Supreme Court simply held that an institution of higher education need not lower or effect substantial modifications of its standards in order to accommodate a handicapped person. (442 U.S. at p. 413 [60 L.Ed.2d at pp. 992-993].) The court did not hold that a primary or secondary educational agency need do nothing to accommodate the needs of handicapped children. (See *Alexander v. Choate* (1985) 469 U.S. 287, 301 [83 L.Ed.2d 661, 672, 105 S.Ct. 712].)

States typically do purport to guarantee all of their children the opportunity for a basic education. In fact, in this state basic education is regarded as a fundamental right. (*Serrano v. Priest*, *supra*, 18

11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, 79 Ed. Law Rep. 924

(Cite as: 11 Cal.App.4th 1564)

Cal.3d at pp. 765-766.) All basic educational programs are essentially affirmative action activities in the sense that educational agencies are required to evaluate and accommodate *1586 the educational needs of the children in their districts. Section 504 would not appear to permit local agencies to accommodate the educational needs of some children while ignoring the needs of others due to their handicapped condition. (Compare *Lau v. Nichols* (1974) 414 U.S. 563 [39 L.Ed.2d 1, 94 S.Ct. 786], which required the San Francisco Unified School District to take affirmative steps to accommodate the needs of non-English speaking students under section 601 of the Civil Rights Act of 1964.)

Riverside's view of section 504 is inconsistent with congressional intent in enacting it. The congressional record makes it clear that section 504 was perceived to be necessary not to combat affirmative animus but to cure society's benign neglect of the handicapped. The record is replete with references to discrimination in the form of the denial of special educational assistance to handicapped children. In *Alexander v. Choate, supra*, 469 U.S. at pages 295 to 297 [83 L.Ed.2d at pages 668- 669], the Supreme Court took note of these comments in concluding that a violation of section 504 need not be proven by evidence of purposeful or intentional discrimination. With respect to the *Southeastern Community College v. Davis, supra*, 442 U.S. 397 case, the high court said: "The balance struck in *Davis* requires that an otherwise qualified handicapped individual must be provided with meaningful access to the benefit that the grantee offers. The benefit itself, of course, cannot be defined in a way that effectively denies otherwise qualified handicapped individuals the meaningful access to which they are entitled; to assure meaningful access, reasonable accommodations in the grantee's program or benefit may have to be made. ..." (*Alexander v. Choate, supra*, 469 U.S. at p. 301 [83 L.Ed.2d at p. 672], fn. omitted.)

Federal appellate courts have rejected the argument that the *Southeastern Community College* case

means that pursuant to section 504 local educational agencies need do nothing affirmative to accommodate the needs of handicapped children. (*N. M. Ass'n for Retarded Citizens v. State of N. M., supra*, 678 F.2d at pp. 852-853; *Tatro v. State of Texas* (5th Cir. 1980) 625 F.2d 557, 564 [63 A.L.R. Fed. 844].) ^{FN11} We are satisfied that section 504 does impose an obligation upon local school districts to accommodate the needs of handicapped children. However, as was the case with constitutional principles, full judicial development of section 504 as it relates to special education in elementary and secondary school districts was truncated by congressional action. *1587

FN11 Following a remand and another decision by the Court of Appeals, the *Tatro* litigation, *supra*, eventually wound up in the Supreme Court. (*Irving Independent School Dist. v. Tatro* (1984) 468 U.S. 883 [82 L.Ed.2d 664, 104 S.Ct. 3371].) However, by that time the Education of the Handicapped Act had replaced section 504 as the means for vindicating the education rights of handicapped children and the litigation was resolved, favorably for the child, under that act.

In 1974 Congress became dissatisfied with the progress under earlier efforts to stimulate the states to accommodate the educational needs of handicapped children. (*Hendrick Hudson Dist. Bd. of Ed. v. Rowley, supra*, 458 U.S. at p. 180 [73 L.Ed.2d at p. 695].) These earlier efforts had included a 1966 amendment to the Elementary and Secondary Education Act of 1965, and the 1970 version of the Education of the Handicapped Act. (*Ibid.*) The prior acts had been grant programs that did not contain specific guidelines for a state's use of grant funds. (*Ibid.*) In 1974 Congress greatly increased federal funding for education of the handicapped and simultaneously required recipient states to adopt a goal of providing full educational opportunities to all handicapped children. (*Ibid.* [73 L.Ed.2d at pp. 695-696].) The following year Congress amended

11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, 79 Ed. Law Rep. 924

(Cite as: 11 Cal.App.4th 1564)

the Education of the Handicapped Act by enacting the Education for All Handicapped Children Act of 1975. (*Ibid.* [73 L.Ed.2d at p. 696].)

Since the 1975 amendment, the Education of the Handicapped Act has required recipient states to demonstrate a policy that assures all handicapped children the right to a free appropriate education. (20 U.S.C. § 1412(1).) (6) The act is not merely a funding statute; rather, it establishes an enforceable substantive right to a free appropriate public education in recipient states. (*Smith v. Robinson, supra*, 468 U.S. at p. 1010 [82 L.Ed.2d at p. 764].) To accomplish this purpose the act incorporates the major substantive and procedural requirements of the “right to education” cases which were so prominent in the congressional consideration of the measure. (*Hendrick Hudson Dist. Bd. of Ed. v. Rowley, supra*, 458 U.S. at p. 194 [73 L.Ed.2d at p. 704].) The substantive requirements of the act have been interpreted in a manner which is “strikingly similar” to the requirements of section 504 of the Rehabilitation Act of 1973. (*Smith v. Robinson, supra*, 468 U.S. at pp. 1016-1017 [82 L.Ed.2d at p. 768].) The Supreme Court has noted that Congress intended the act to establish “ ‘a basic floor of opportunity that would bring into compliance all school districts with the constitutional right to equal protection with respect to handicapped children.’ ” (*Hendrick Hudson Dist. Bd. of Ed. v. Rowley, supra*, 458 U.S. at p. 200 [73 L.Ed.2d at p. 708] citing the House of Representatives Report.)^{FN12}

FN12 Consistent with its “basic floor of opportunity” purpose, the act does not require local agencies to maximize the potential of each handicapped child commensurate with the opportunity provided non-handicapped children. Rather, the act requires that handicapped children be accorded meaningful access to a free public education, which means access that is sufficient to confer some educational benefit. (*Ibid.*)

It is demonstrably manifest that in the view of

Congress the substantive requirements of the 1975 amendment to the Education of the Handicapped Act were commensurate with the constitutional obligations of state and local *1588 educational agencies. Congress found that “State and local educational agencies have a responsibility to provide education for all handicapped children, but present financial resources are inadequate to meet the special educational needs of handicapped children;” and “it is in the national interest that the Federal Government assist State and local efforts to provide programs to meet the educational needs of handicapped children in order to assure equal protection of the law.” (20 U.S.C. former § 1400(b)(8) & (9).)^{FN13}

FN13 That Congress intended to enforce the Fourteenth Amendment to the United States Constitution in enacting the Education of the Handicapped Act has since been made clear. In *Dellmuth v. Muth* (1989) 491 U.S. 223 at pages 231 and 232 [105 L.Ed.2d 181, 189-191, 109 S.Ct. 2397], the court noted that Congress has the power under section 5 of the Fourteenth Amendment to abrogate a state's Eleventh Amendment immunity from suit in federal court, but concluded that the Education of the Handicapped Act did not clearly evince such a congressional intent. In 1990 Congress responded by expressly abrogating state sovereign immunity under the act. (20 U.S.C. § 1403.)

It is also apparent that Congress intended the act to achieve nationwide application: “It is the purpose of this chapter to assure that all handicapped children have available to them, within the time periods specified in section 1412(2)(B) of this title, a free appropriate public education which emphasizes special education and related services designed to meet their unique needs, to assure that the rights of handicapped children and their parents or guardians are protected, to assist States and localities to provide for the education of all handicapped chil-

11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, 79 Ed. Law Rep. 924

(Cite as: 11 Cal.App.4th 1564)

dren, and to assess and assure the effectiveness of efforts to educate handicapped children.” (20 U.S.C. former § 1400(c).)

In order to gain state and local acceptance of its substantive provisions, the Education of the Handicapped Act employs a “cooperative federalism” scheme, which has also been referred to as the “carrot and stick” approach. (See *City of Sacramento v. State of California*, *supra*, 50 Cal.3d at pp. 73-74; *City of Sacramento v. State of California*, *supra*, 156 Cal.App.3d at p. 195.) As an incentive Congress made substantial federal financial assistance available to states and local educational agencies that would agree to adhere to the substantive and procedural terms of the act. (20 U.S.C. §§ 1411, 1412.) For example, the administrative record indicates that for fiscal year 1979-1980, the base year for Santa Barbara's claim, California received \$71.2 million in federal assistance, and during fiscal year 1980-1981, the base year for Riverside's claim, California received \$79.7 million. We cannot say that such assistance on an ongoing basis is trivial or insubstantial.

Contrary to Riverside's argument, federal financial assistance was not the only incentive for a state to comply with the Education of the Handicapped Act. (7) Congress intended the act to serve as a means by which state and *1589 local educational agencies could fulfill their obligations under the equal protection and due process provisions of the Constitution and under section 504 of the Rehabilitation Act of 1973. Accordingly, where it is applicable the act supersedes claims under the Civil Rights Act (42 U.S.C. § 1983) and section 504 of the Rehabilitation Act of 1973, and the administrative remedies provided by the act constitute the exclusive remedy of handicapped children and their parents or other representatives. (*Smith v. Robinson*, *supra*, 468 U.S. at pp. 1009, 1013, 1019 [82 L.Ed.2d at pp. 763, 766, 769].) ^{FN14}

FN14 In *Smith v. Robinson*, *supra*, the court concluded that since the Education of the Handicapped Act did not include a pro-

vision for attorney fees, a successful complainant was not entitled to an award of such fees even though such fees would have been available in litigation under section 504 of the Rehabilitation Act of 1973 or section 1983 of the Civil Rights Act. Congress reacted by adding a provision for attorney fees to the Education of the Handicapped Act. (20 U.S.C. § 1415(e)(4)(B).)

As a result of the exclusive nature of the Education of the Handicapped Act, dissatisfied parties in recipient states must exhaust their administrative remedies under the act before resorting to judicial intervention. (*Smith v. Robinson*, *supra*, 468 U.S. at p. 1011 [82 L.Ed.2d at p. 764].) This gives local agencies the first opportunity and the primary authority to determine appropriate placement and to resolve disputes. (*Ibid.*) If a party is dissatisfied with the final result of the administrative process then he or she is entitled to seek judicial review in a state or federal court. (20 U.S.C. § 1415(e)(2).) In such a proceeding the court independently reviews the evidence but its role is restricted to that of review of the local decision and the court is not free to substitute its view of sound educational policy for that of the local authority. (*Hendrick Hudson Dist. Bd. of Ed. v. Rowley*, *supra*, 458 U.S. at pp. 206-207 [73 L.Ed.2d at p. 712].) And since the act provides the exclusive remedy for addressing a handicapped child's right to an appropriate education, where the act applies a party cannot pursue a cause of action for constitutional violations, either directly or under the Civil Rights Act (42 U.S.C. § 1983), nor can a party proceed under section 504 of the Rehabilitation Act of 1973. (*Smith v. Robinson*, *supra*, 468 U.S. at pp. 1013, 1020 [82 L.Ed.2d at pp. 766, 770].)

Congress's intention to give the Education of the Handicapped Act nationwide application was successful. By the time of the decision in *Hendrick Hudson Dist. Bd. of Ed. v. Rowley*, *supra*, all states except New Mexico had become recipients under the act. (458 U.S. at pp. 183-184 [73 L.Ed.2d at p.

698].) It is important at this point in our discussion to consider the experience of New Mexico, both because the Board of Control relied upon that state's failure to adopt the Education of the Handicapped Act as proof that the act is not federally mandated, and because it illustrates the consequences of a failure to adopt the act. *1590

In *N. M. Ass'n for Retarded Citizens v. State of N. M.* (D.N.M. 1980) 495 F.Supp. 391, a class action was brought against New Mexico and its local school districts based upon the alleged failure to provide a free appropriate public education to handicapped children. The plaintiffs' causes of action asserting constitutional violations were severed and stayed pending resolution of the federal statutory causes of action. (*Id.* at p. 393.) The district court concluded that the plaintiffs could not proceed with claims under the Education of the Handicapped Act because the state had not adopted that act and, without more, that was a governmental decision within the state's power. (*Id.* at p. 394.)^{FN15} The court then considered the cause of action under section 504 and found that both the state and its local school districts were in violation of that section by failing to provide a free appropriate education to handicapped children within their territories. (495 F.Supp. at pp. 398-399.)

FN15 The plaintiffs alleged that the failure of the state to apply for federal funds under the Education of the Handicapped Act was itself an act of discrimination. The district court did not express a view on that question, leaving it for resolution in connection with the constitutional causes of action. (*Ibid.*)

After the district court entered an injunctive order designed to compel compliance with section 504, the matter was appealed. (*N. M. Ass'n for Retarded Citizens v. State of N. M.*, *supra*, 678 F.2d 847.) The court of appeals rejected the defendants' arguments that the plaintiffs were required to exhaust state administrative remedies before bringing their action and that the district court should have

applied the doctrine of primary jurisdiction to defer ruling until the Office of Civil Rights could complete its investigation into the charges. (*Id.* at pp. 850-851.) The court also rejected the defendants' arguments that section 504 does not require them to take action to accommodate the needs of handicapped children and that proof of disparate treatment is essential to a violation of section 504. (678 F.2d at p. 854.) The court found sufficient evidence in the record to establish discrimination against handicapped children within the meaning of section 504. (678 F.2d at p. 854.) However, the reviewing court concluded that the district court had applied an erroneous standard in reaching its decision, and the matter was remanded for further proceedings. (*Id.* at p. 855.)

On July 19, 1984, during the proceedings before the Board of Control, a representative of the Department of Education testified that New Mexico has since implemented a program of special education under the Education of the Handicapped Act. We have no doubt that after the litigation we have just recounted New Mexico saw the handwriting on the wall and realized that it could either establish a program of special education with federal financial assistance under the Education of the Handicapped Act, or be compelled through litigation to accommodate the educational needs of handicapped *1591 children without federal assistance and at the risk of losing other forms of federal financial aid. In any event, with the capitulation of New Mexico the Education of the Handicapped Act achieved the nationwide application intended by Congress. (20 U.S.C. § 1400(c).)

California's experience with special education in the time period leading up to the adoption of the Education of the Handicapped Act is examined as a case study in Kirp et al., *Legal Reform of Special Education: Empirical Studies and Procedural Proposals* (1974) 62 Cal.L.Rev. 40, at pages 96 through 115. As this study reflects, during this period the state and local school districts were struggling to create a program to accommodate ad-

11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, 79 Ed. Law Rep. 924

(Cite as: 11 Cal.App.4th 1564)

equately the educational needs of the handicapped. (*Id.* at pp. 97-110.) Individuals and organized groups, such as the California Association for the Retarded and the California Association for Neurologically Handicapped Children, were exerting pressure through political and other means at every level of the educational system. (*Ibid.*) Litigation was becoming so prevalent that the authors noted: "Fear of litigation over classification practices, prompted by the increasing number of lawsuits, is pervasive in California." (*Id.* at p. 106, fn. 295.)
FN16

FN16 Lawsuits primarily fell into three types: (1) Challenges to the adequacy or even lack of available programs and services to accommodate handicapped children. (*Id.* at p. 97, fns. 255, 257.) (2) Challenges to classification practices in general, such as an overtendency to classify minority or disadvantaged children as "retarded." (*Id.* at p. 98, fns. 259, 260.) (3) Challenges to individual classification decisions. (*Id.* at p. 106.) In the absence of administrative procedures for resolving classification disputes, dissatisfied parents were relegated to self-help remedies, such as pestering school authorities, or litigation. (*Ibid.*)

In the early 1970's the state Department of Education began working with local school officials and university experts to design a "California Master Plan for Special Education." (Kirp et al., *Legal Reform of Special Education: Empirical Studies and Procedural Proposals*, *supra*, 62 Cal.L.Rev. at p. 111.) In 1974 the Legislature enacted legislation to give the Superintendent of Public Instruction the authority to implement and administer a pilot program pursuant to a master plan adopted by State Board of Education in order to determine whether services under such a plan would better meet the needs of children with exceptional needs. (Stats. 1974, ch. 1532, § 1, p. 3441, enacting Ed. Code, § 7001.) In 1977 the Legislature acted to

further implement the master plan. (Stats. 1977, ch. 1247, especially § 10, pp. 4236-4237, enacting Ed. Code, § 56301.) In 1980 the Legislature enacted urgency legislation revising our special education laws with the express intent of complying with the 1975 amendments to the Education of the Handicapped Act. (Stats. 1980, ch. 797, especially § 9, pp. 2411-2412, enacting Ed. Code, § 56000.)

As this history demonstrates, in determining whether to adopt the requirements of the Education of the Handicapped Act as amended in 1975, our *1592 Legislature was faced with the following circumstances: (1) In the *Serrano* litigation, our Supreme Court had declared basic education to be a fundamental right and, without even considering special education in the equation, had found our educational system to be violative of equal protection principles. (2) Judicial decisions from other jurisdictions had established that handicapped children have an equal protection right to a free public education appropriate to their needs and due process rights with regard to placement decisions. (3) Congress had enacted section 504 of the Rehabilitation Act of 1973 to codify the equal protection rights of handicapped children in any school system that receives federal financial assistance and to threaten the state and local districts with the loss of all federal funds for failure to accommodate the needs of such children. (4) Parents and organized groups representing handicapped children were becoming increasingly litigious in their efforts to secure an appropriate education for handicapped children. (5) In enacting the 1975 amendments to the Education of the Handicapped Act, Congress did not intend to require state and local educational agencies to do anything more than the Constitution already required of them. The act was intended to provide a means by which educational agencies could fulfill their constitutional responsibilities and to provide substantial federal financial assistance for states that would agree to do so.

(8a) Under these circumstances we have no doubt that enactment of the 1975 amendments to

11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, 79 Ed. Law Rep. 924

(Cite as: 11 Cal.App.4th 1564)

the Education of the Handicapped Act constituted a federal mandate under the criteria set forth in *City of Sacramento v. State of California, supra*, 50 Cal.3d at page 76. The remaining question is whether the state's participation in the federal program was a matter of "true choice" or was "truly voluntary." The alternatives were to participate in the federal program and obtain federal financial assistance and the procedural protections accorded by the act, or to decline to participate and face a barrage of litigation with no real defense and ultimately be compelled to accommodate the educational needs of handicapped children in any event. We conclude that so far as the state is concerned the Education of the Handicapped Act constitutes a federal mandate.

V. Subvention for Special Education

Our conclusion that the Education of the Handicapped Act is a federal mandate with respect to the state marks the starting point rather than the end of the consideration which will be required to resolve the Santa Barbara and Riverside test claims. In *City of Sacramento v. State of California, supra*, 50 Cal.3d at pages 66 through 70, the California Supreme Court concluded that the costs at issue in that case (unemployment insurance premiums) were not subject to state subvention because they were incidental to a law of general *1593 application rather than a new governmental program or increased level of service under an existing program. The court addressed the federal mandate issue solely with respect to the question whether the costs were exempt from the local government's taxing and spending limitations. (*Id.* at pp. 70-71.) It observed that prior authorities had assumed that if a cost was federally mandated it could not be a state mandated cost subject to subvention, and said: "We here express no view on the question whether 'federal' and 'state' mandates are mutually exclusive for purposes of state subvention, but leave that issue for another day. ..." (*Id.* at p. 71, fn. 16.) The test claims of Santa Barbara and Riverside present that question which we address here for the guidance of the Commission on remand.

(9) The constitutional subvention provision and the statutory provisions which preceded it do not expressly say that the state is not required to provide a subvention for costs imposed by a federal mandate. Rather, that conclusion follows from the plain language of the subvention provisions themselves. The constitutional provision requires state subvention when "the Legislature or any State agency mandates a new program or higher level of service" on local agencies. (Cal. Const., art. XIII B, § 6.) Likewise, the earlier statutory provisions required subvention for new programs or higher levels of service mandated by legislative act or executive regulation. (See Rev. & Tax. Code, former §§ 2164.3 [Stats. 1972, ch. 1406, § 14.7, pp. 2962-2963], 2231 [Stats. 1973, ch. 358, § 3, pp. 783-784], 2207 [Stat. 1975, ch. 486, § 1.8, pp. 997-998], 2207.5 [Stats. 1977, ch. 1135, § 5, pp. 3646-3647].) When the federal government imposes costs on local agencies those costs are not mandated by the state and thus would not require a state subvention. Instead, such costs are exempt from local agencies' taxing and spending limitations. This should be true even though the state has adopted an implementing statute or regulation pursuant to the federal mandate so long as the state had no "true choice" in the manner of implementation of the federal mandate. (See *City of Sacramento v. State of California, supra*, 50 Cal.3d at p. 76.)

This reasoning would not hold true where the manner of implementation of the federal program was left to the true discretion of the state. A central purpose of the principle of state subvention is to prevent the state from shifting the cost of government from itself to local agencies. (*City of Sacramento v. State of California, supra*, 50 Cal.3d at p. 68.) Nothing in the statutory or constitutional subvention provisions would suggest that the state is free to shift state costs to local agencies without subvention merely because those costs were imposed upon the state by the federal government. In our view the determination whether certain costs were imposed upon a local agency by a federal mandate must focus upon the local agency which

11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, 79 Ed. Law Rep. 924

(Cite as: 11 Cal.App.4th 1564)

*1594 is ultimately forced to bear the costs and how those costs came to be imposed upon that agency. If the state freely chose to impose the costs upon the local agency as a means of implementing a federal program then the costs are the result of a reimbursable state mandate regardless whether the costs were imposed upon the state by the federal government.

The Education of the Handicapped Act is a comprehensive measure designed to provide all handicapped children with basic educational opportunities. While the act includes certain substantive and procedural requirements which must be included in a state's plan for implementation of the act, it leaves primary responsibility for implementation to the state. (20 U.S.C. §§ 1412, 1413.) (8b) In short, even though the state had no real choice in deciding whether to comply with the federal act, the act did not necessarily require the state to impose all of the costs of implementation upon local school districts. To the extent the state implemented the act by freely choosing to impose new programs or higher levels of service upon local school districts, the costs of such programs or higher levels of service are state mandated and subject to subvention.

We can illustrate this point with a hypothetical situation. Subvention principles are intended to prevent the state from shifting the cost of state governmental services to local agencies and thus subvention is required where the state imposes the cost of such services upon local agencies even if the state continues to perform the services. (*Lucia Mar Unified School Dist. v. Honig, supra*, 44 Cal.3d at pp. 835-836.) The Education of the Handicapped Act requires the state to provide an impartial, state-level review of the administrative decisions of local or intermediate educational agencies. (20 U.S.C. § 1415(c), (d).) Obviously, the state could not shift the actual performance of these new administrative reviews to local districts, but it could attempt to shift the costs to local districts by requiring local districts to pay the expenses of reviews in which they are involved. An attempt to do so would trig-

ger subvention requirements. In such a hypothetical case, the state could not avoid its subvention responsibility by pleading "federal mandate" because the federal statute does not require the state to impose the costs of such hearings upon local agencies. Thus, as far as the local agency is concerned, the burden is imposed by a state rather than a federal mandate.

In the administrative proceedings the Board of Control did not address the "federal mandate" question under the appropriate standard and with proper focus on local school districts. In its initial determination the board concluded that the Education of the Handicapped Act constituted a federal mandate and that the state-imposed costs on local school districts in excess of the federally imposed costs. However, the board did not consider the *1595 extent of the state-mandated costs because it concluded that any appropriation by the state satisfied its obligation. On Riverside's petition for a writ of administrative mandate the superior court remanded to the Board of Control to consider whether the state appropriation was sufficient to reimburse local school districts fully for the state-mandated costs. On remand the board clearly applied the now-discredited criteria set forth in this court's decision in *City of Sacramento v. State of California, supra*, 156 Cal.App.3d 182, and concluded that the Education of the Handicapped Act is not a federal mandate at any level of government. Under these circumstances we agree with the trial court that the matter must be remanded to the Commission for consideration in light of the criteria set forth in the Supreme Court's *City of Sacramento* decision. We add that on remand the Commission must focus upon the costs incurred by local school districts and whether those costs were imposed *on local districts* by federal mandate or by the state's voluntary choice in its implementation of the federal program.

VI. Riverside's Objections

In light of this discussion we may now consider Riverside's objections to the trial court's decision to remand the matter to the Commission for reconsid-

11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, 79 Ed. Law Rep. 924

(Cite as: 11 Cal.App.4th 1564)

eration.

Riverside asserts that the California Supreme Court opinion in *City of Sacramento* is not on point because the court did not address the federal mandate question with respect to state subvention principles. Riverside implies that the definition of a federal mandate may be different with respect to state subvention than with respect to taxing and spending limitations. (10) As a general rule and unless the context clearly requires otherwise, we must assume that the meaning of a term or phrase is consistent throughout the entire act or constitutional article of which it is a part. (*Lungren v. Davis* (1991) 234 Cal.App.3d 806, 823 [285 Cal.Rptr. 777].) (11) Subvention principles are part of a more comprehensive political scheme. The basic purpose of the scheme as a whole was to limit the taxing and spending powers of government. The taxing and spending powers of local agencies were to be "frozen" at existing levels with adjustments only for inflation and population growth. Since local agencies are subject to having costs imposed upon them by other governmental entities, the scheme provides relief in that event. If the costs are imposed by the federal government or the courts, then the costs are not included in the local government's taxing and spending limitations. If the costs are imposed by the state then the state must provide a subvention to reimburse the local agency. Nothing in this scheme suggests that the concept of a federal mandate should have different meanings depending upon whether one is considering subvention or taxing and spending limitations. Accordingly, we reject the claim that the criteria set forth in *1596 the Supreme Court's *City of Sacramento* decision do not apply when subvention is the issue.

(12) Riverside asserts that the trial court erred in concluding that the Board of Control did not consider the issues under the appropriate criteria and that the board did in fact consider the factors set forth in the Supreme Court's *City of Sacramento* decision. From our discussion above it is clear that we must reject these assertions. In its decision the

board relied upon the "cooperative federalism" nature of the Education of the Handicapped Act without any consideration whether the act left the state any actual choice in the matter. In support of its conclusion the board relied upon the New Mexico litigation which we have also discussed. However, as we have pointed out, under the criteria set forth in the Supreme Court's *City of Sacramento* decision, the New Mexico litigation does not support the board's decision but in fact strongly supports a contrary result. We are satisfied that the trial court correctly concluded that the board did not apply the appropriate criteria in reaching its decision.

Riverside asserts that the Supreme Court's *City of Sacramento* decision elucidated and enforced prior law and thus no question of retroactivity arises. (See *Donaldson v. Superior Court* (1983) 35 Cal.3d 24, 37 [196 Cal.Rptr. 704, 672 P.2d 110].) (13) We agree that in *City of Sacramento* the Supreme Court elucidated and enforced existing law. Under such circumstances the rule of retrospective operation controls. (*Ibid.* See also *Wellenkamp v. Bank of America* (1978) 21 Cal.3d 943, 953- 954 [148 Cal.Rptr. 379, 582 P.2d 970]; *County of Los Angeles v. Faus* (1957) 48 Cal.2d 672, 680-681 [312 P.2d 680].) Pursuant to that rule the trial court correctly applied the *City of Sacramento* decision to the litigation pending before it. As we have seen, that decision supports the trial court's determination to remand the matter to the Commission for reconsideration.

Riverside asserts that if further consideration under the criteria of the Supreme Court's *City of Sacramento* decision is necessary then the trial court should have, and this court must, engage in such consideration to reach a final conclusion on the question. To a limited extent we agree. In our previous discussion we have concluded that under the criteria set forth in *City of Sacramento*, the Education of the Handicapped Act constitutes a federal mandate as far as the state is concerned. We are satisfied that is the only conclusion which may be drawn and we so hold as a matter of law. However,

West's Annotated California Codes Currentness

Constitution of the State of California 1879 (Refs & Annos)

▣ Article XIIIID. [Assessment and Property Related Fee Reform] (Refs & Annos)

→ **§ 6. New or existing increased fees and charges; procedures and requirements; voter approval**

Sec. 6. Property Related Fees and Charges. (a) Procedures for New or Increased Fees and Charges. An agency shall follow the procedures pursuant to this section in imposing or increasing any fee or charge as defined pursuant to this article, including, but not limited to, the following:

(1) The parcels upon which a fee or charge is proposed for imposition shall be identified. The amount of the fee or charge proposed to be imposed upon each parcel shall be calculated. The agency shall provide written notice by mail of the proposed fee or charge to the record owner of each identified parcel upon which the fee or charge is proposed for imposition, the amount of the fee or charge proposed to be imposed upon each, the basis upon which the amount of the proposed fee or charge was calculated, the reason for the fee or charge, together with the date, time, and location of a public hearing on the proposed fee or charge.

(2) The agency shall conduct a public hearing upon the proposed fee or charge not less than 45 days after mailing the notice of the proposed fee or charge to the record owners of each identified parcel upon which the fee or charge is proposed for imposition. At the public hearing, the agency shall consider all protests against the proposed fee or charge. If written protests against the proposed fee or charge are presented by a majority of owners of the identified parcels, the agency shall not impose the fee or charge.

(b) Requirements for Existing, New or Increased Fees and Charges. A fee or charge shall not be extended, imposed, or increased by any agency unless it meets all of the following requirements:

(1) Revenues derived from the fee or charge shall not exceed the funds required to provide the property related service.

(2) Revenues derived from the fee or charge shall not be used for any purpose other than that for which the fee or charge was imposed.

(3) The amount of a fee or charge imposed upon any parcel or person as an incident of property ownership shall not exceed the proportional cost of the service attributable to the parcel.

(4) No fee or charge may be imposed for a service unless that service is actually used by, or immediately avail-

able to, the owner of the property in question. Fees or charges based on potential or future use of a service are not permitted. Standby charges, whether characterized as charges or assessments, shall be classified as assessments and shall not be imposed without compliance with Section 4.

(5) No fee or charge may be imposed for general governmental services including, but not limited to, police, fire, ambulance or library services, where the service is available to the public at large in substantially the same manner as it is to property owners. Reliance by an agency on any parcel map, including, but not limited to, an assessor's parcel map, may be considered a significant factor in determining whether a fee or charge is imposed as an incident of property ownership for purposes of this article. In any legal action contesting the validity of a fee or charge, the burden shall be on the agency to demonstrate compliance with this article.

(c) Voter Approval for New or Increased Fees and Charges. Except for fees or charges for sewer, water, and refuse collection services, no property related fee or charge shall be imposed or increased unless and until that fee or charge is submitted and approved by a majority vote of the property owners of the property subject to the fee or charge or, at the option of the agency, by a two-thirds vote of the electorate residing in the affected area. The election shall be conducted not less than 45 days after the public hearing. An agency may adopt procedures similar to those for increases in assessments in the conduct of elections under this subdivision.

(d) Beginning July 1, 1997, all fees or charges shall comply with this section.

Supreme Court of California
SILICON VALLEY TAXPAYERS ASSOCIATION, INC., Plaintiffs and Appellants,

v.

SANTA CLARA COUNTY OPEN SPACE AUTHORITY, Defendant and Respondent.

No. S136468.

July 14, 2008.

Background: Taxpayer organizations and individual taxpayers brought action challenging special assessment for open-space land levied by county open-space authority. The Superior Court, Santa Clara County, Nos. 1-02-CV804474 and 1-03-CV000705, William J. Elfving, J., entered judgment in favor of open-space authority. Taxpayers appealed. The Court of Appeal affirmed. The Supreme Court granted taxpayers' petition for review, superseding the opinion of the Court of Appeal.

Holdings: The Supreme Court, Chin, J., held that: (1) courts should exercise independent judgment in reviewing local agency decisions on constitutionality of special assessments, disapproving *Not About Water Com. v. Board of Supervisors*, 95 Cal.App.4th 982, 116 Cal.Rptr.2d 526; (2) anticipated benefits of open-space land were general benefits that could not be funded by special assessment; and (3) assessment was not proportional to benefits conferred on particular parcels.

Reversed and remanded.

Opinion, 30 Cal.Rptr.3d 853, superseded.

*437 **41 In 1996, Proposition 218^{FN1} limited local government's ability to impose real property assessments in two significant ways. An assessment can be imposed only for a "special benefit" conferred on real property (art. XIID, § 2, subd. (b)), and the assessment on any parcel must be in proportion to the **42 special benefit conferred on the particular parcel. (Art. XIID, § 4,

subd. (a))

FN1. Article XIID of the California Constitution (article XIID).

In 2001, the Santa Clara County Open Space Authority (OSA) imposed a countywide assessment to fund a program to acquire, improve, and maintain unspecified open space lands in the county. Plaintiffs sued, challenging that assessment on the grounds that it fails to satisfy the special benefit and proportionality requirements of Proposition 218. To decide whether OSA's 2001 assessment violates article XIID, we must first determine the appropriate standard of judicial review of a local governmental agency's assessment determination. We conclude that Proposition 218 requires courts to make an independent review of local agency decisions that are governed by express constitutional provisions, as in this case, and that OSA's assessment does not comply with the special benefit and proportionality requirements of article XIID.

*****318 I. FACTUAL AND PROCEDURAL HISTORY**

A. The Creation of OSA and the 1994 Special Assessment District

In 1992, the Santa Clara County Open-Space Authority Act (Pub. Res.Code, § 35100 et seq.) created OSA, with the express purpose of acquiring and preserving open space within the county to counter the conversion of land to urban uses, to preserve quality of life, and to encourage agricultural activities. (Pub.Res.Code, § 35101, subd. (a).) The act provides no particular method to fund open space acquisitions, but it authorizes OSA to levy special assessments under the Streets and Highways Code. (Pub.Res.Code, § 35173.) OSA's jurisdiction included all Santa Clara *438 County lands except those already within the boundaries of the Midpeninsula Regional Open-Space District.

In 1994, OSA formed an original assessment district under the authority of the Landscape and Lighting Act of 1972 (LLA).^{FN2} (Sts. & Hy.Code, § 22500 et seq.) OSA levied an annual special as-

essment on the district's property owners to acquire and preserve open space land under the LLA's procedures. Certain taxpayers challenged the 1994 assessment, but the Court of Appeal upheld it. The 1994 assessment raised approximately \$4 million annually and allowed OSA to purchase thousands of acres of open space lands.^{FN3}

FN2. An "[a]ssessment district" means the district of land to be benefited by the improvement and to be specially assessed to pay the costs and expenses of the improvement and the damages caused by the improvement." (Sts. & Hy.Code, § 10008.)

FN3. The 1994 special assessment is not at issue in this case.

B. The Creation of the 2001 Assessment District and the Passage of Proposition 218

In 2000, OSA determined that it needed additional annual funding to purchase open space. To raise these additional funds, OSA considered forming an additional assessment district. However, in 1996, California voters had passed Proposition 218 to "significantly tighten the kind of benefit assessments" an agency can levy on real property (Ballot Pamp., Gen. Elec. (Nov. 5, 1996) argument in favor of Prop. 218, p. 76) and to "protect [] taxpayers by limiting the methods by which local governments exact revenue from taxpayers without their consent." (Ballot Pamp., Gen. Elec., *supra*, text of Prop. 218, § 2, p. 108, reprinted in Historical Notes, 2A West's Ann. Const. (2008 supp.) foll. Cal. Const., art. XIIC, p. 85 (Historical Notes).)

To achieve these goals, Proposition 218 tightened assessment requirements and definitions, imposed stricter procedures on agencies, and shifted traditional presumptions that had favored assessment validity. (Art. XIID, §§ 2, subd. (i), 4.) Under Proposition 218's procedures, local agencies must give the record owners of all assessed parcels written notice of the proposed assessment, a voting ballot, and a statement disclosing that a majority protest will prevent the assessment's passage. (Art.

XIIID, § 4, subs. (c), (d).) The proposed assessment must be “supported by a detailed engineer's report.” (Art. XIIID, § 4, subd. (b).) At a noticed public hearing, the agencies must consider all protests, and they “shall not impose an assessment ****43** if there is a majority protest.” (Art. XIIID, § 4, subd. (e).) Voting must be weighted “according to the proportional financial obligation of the affected property.” (*Ibid.*)^{FN4}

FN4. In 1997, the Legislature codified and detailed the notice, hearing, and protest procedures in the Proposition 218 Omnibus Implementation Act. (Gov.Code § 53750 et seq., added by Stats.1997, ch. 38, § 5.) These statutory provisions expressly supersede any others that apply to the levy of a new assessment. (Gov.Code § 53753, subd. (a).) These procedures are incorporated by reference into the LLA. (Sts. & Hy.Code, § 22588.)

*****319 *439** OSA explored the possibility of creating a second assessment district that would comply with the new provisions of Proposition 218. As a first step, the OSA Board of Directors (OSA Board) authorized a poll of Santa Clara County property owners to determine whether they would support an assessment to fund the purchase of additional open space. The poll showed that approximately 55 percent of property owners would likely support up to a \$20 per year property tax increase for acquiring and maintaining open space lands.

The OSA Board hired Shilts Consultants, Inc. (SCI) to prepare the engineer's report. That report stated that the assessment would fund the “[a]cquisition, installation, maintenance and servicing” of open space lands for recreation, conservation, watersheds, easements, and similar purposes. Although the SCI report identified areas OSA was considering for potential acquisition and improvement and outlined general considerations OSA would use to identify and acquire open space lands, it identified no particular parcels to be acquired and no particular areas to be prioritized.

The proposed 2001 assessment district included all Santa Clara County lands that were in the 1994 assessment district. The proposed assessment district included approximately 314,000 parcels and over 800 square miles containing over 1,000,000 people. The SCI engineer's report identified the special benefits that would accrue to the assessed parcels, estimated the proportion of all the benefits that could be considered special, set the assessment for a single-family home at \$20 per year, and provided a formula for estimating the proportionate special benefit that other property on the tax rolls would receive. Using the \$20 property tax increase per single-family home, the SCI engineer's report calculated that the assessment would produce an approximately \$8 million increase in OSA's budget.

The OSA Board accepted and filed the engineer's preliminary report and authorized an assessment ballot proceeding. On September 1, 2001, OSA mailed an informational pamphlet to all of the approximately 314,000 property owners within the proposed district. The pamphlet described the assessment district and OSA's goal of raising about \$8 million annually to acquire open space lands within the county.

On September 14, 2001, OSA mailed a notice of the proposed assessment and an official ballot to all affected property owners. On October 25, 2001, OSA conducted an informational meeting, at which OSA's general manager ***440** and special counsel and a representative from SCI responded to numerous questions from the public. The formal public hearing was held on November 8, 2001.

On December 13, 2001, OSA reported the results of the balloting at a public hearing. Of the approximately 314,000 official ballots mailed, OSA received only 48,100 responses, a return of approximately 15 percent. Of those responses, 32,127 (66.8 percent) voted in favor of the assessment, while the rest voted “no” (33.2 percent). The returned ballots were weighted in proportion to the amount each parcel was to be assessed, making the final tally 50.9 percent in favor and 49.1 percent

opposed. Plaintiff Silicon Valley Taxpayers Association (SVTA) objected to the results on procedural grounds no longer relevant to the issues raised here. The final engineer's***320 report, which was before OSA at the December meeting, contained some changes from the draft report filed in September. In particular, the final report emphasized that the "overriding" and "most important" criterion for OSA to use in acquiring open space was that the acquired lands be distributed throughout OSA's jurisdiction. At the conclusion of the December hearing, the OSA Board approved the results,**44 accepted the final engineer's report, and established the new assessment district.

A year and a half later, the OSA Board renewed the assessment for 2003-2004 and added a cost-of-living increase of \$0.34 per parcel.

C. Procedural History

SVTA, Howard Jarvis Taxpayers Association, and several individual taxpayers (collectively plaintiffs) filed this action for a writ of mandate, declaratory relief, and an injunction, seeking to invalidate the 2001 assessment. Plaintiffs' second amended complaint contains two causes of action: the first alleges that OSA's notice and balloting procedures did not comport with Proposition 218 and the Government Code; the second challenges the substantive validity of the assessment under Proposition 218 and the Landscaping and Lighting Act.

The parties filed cross-motions for summary judgment or, in the alternative, summary adjudication. The court issued an order granting summary adjudication in favor of OSA on the second cause of action.

After the OSA Board renewed its assessment for the 2003-2004 fiscal year, plaintiffs filed a second lawsuit challenging that assessment. The new complaint contained allegations similar to those in the original lawsuit and added claims contesting the increase in the new assessment. The two cases were then consolidated. The court issued an order granting summary adjudication *441 in

OSA's favor on the remaining causes of action. Based on that order and the previous order in the first lawsuit, the court entered judgment in favor of OSA.

In a two-to-one decision, the Court of Appeal affirmed the trial court's judgment. The majority held that Proposition 218 had altered the traditionally deferential standard of review by eliminating the presumption that an assessment was valid. Nevertheless, the majority held that courts should still accord the final legislative determination substantial deference, as long as the agency had followed Proposition 218's procedural requirements in levying the challenged assessment, and as long as substantial evidence in the administrative record supported the agency's finding that the benefits were special. Using this limited scope of review, the majority determined that the engineer's report supported OSA's determination of special benefits and proportionality.

In her dissent, Justice Bamattre-Manoukian disagreed with the majority regarding the standard of review. In her view, the drafters of Proposition 218 had specifically targeted the deferential standard of review for change. Because the validity of a post-Proposition-218 assessment is now a constitutional question, she asserted that courts should exercise independent judgment in determining whether an assessment complies with article XIID's procedural *and* substantive requirements. The dissent independently analyzed the engineer's findings concerning special benefits and proportionality and concluded that the identified benefits did not comply with Proposition 218's legal requirements.

We granted plaintiffs' petition for review.

***321 II. DISCUSSION

Plaintiffs contend that because state constitutional provisions now govern assessments, courts should apply an independent standard of judicial review to determine their validity. They claim that, in this case, the \$20 flat-rate levy is an invalid assessment because it fails to satisfy several provisions of

placing analogous restrictions on assessments, fees, and charges.’ (*Howard Jarvis [Taxpayers Assn. v. City of Riverside* (1999)] 73 Cal.App.4th 679, 681-682, 86 Cal.Rptr.2d 592.)” (*Apartment Assn., supra*, 24 Cal.4th at pp. 836-837, 102 Cal.Rptr.2d 719, 14 P.3d 930.)

Proposition 218 restricts government's ability to impose assessments in several important ways. First, it tightens the definition of the two key findings necessary to support an assessment: special benefit and proportionality. An assessment can be imposed *only* for a “special benefit” conferred on a particular property. (Art. XIIIID, §§ 2, subd. (b), 4, subd. (a).) A special benefit is “a particular and distinct benefit over and above general benefits conferred on real property located in the district or to the public at large.” (Art. XIIIID, § 2, subd. (i).) The definition specifically provides that “[g]eneral enhancement of property value does not constitute ‘special benefit.’ ” (*Ibid.*) Further, an assessment on any given parcel **46 must be in proportion to the special benefit conferred on that parcel: “No assessment shall be imposed on any parcel which exceeds the reasonable cost of the proportional special benefit conferred on that parcel.” (Art. XIIIID, § 4, subd. (a).) “The proportionate special benefit derived by each identified parcel shall be determined in relationship to the entirety of the capital cost of a public improvement, the maintenance and operation expenses of a public improvement, or the cost of the property-related service being provided.” (*Ibid.*) Because only special benefits are assessable, and public improvements often provide both general benefits to the community and special benefits to a particular property, the assessing agency must first “separate the general benefits from the special benefits conferred on a parcel” and impose the assessment only for the special benefits. (Art. XIIIID, § 4, subd. (a).)

Second, as described above, Proposition 218 established strict procedural requirements for the imposition of a lawful assessment. (*Ante*, 79 Cal.Rptr.3d at 318-319, 187 P.3d at 42-43.)

A. Standard of Review

Before Proposition 218 was passed, courts reviewed quasi-legislative acts of local governmental agencies, such as the formation of an assessment district, under a deferential abuse of discretion standard. (*Knox, supra*, 4 Cal.4th at pp. 145-149, 14 Cal.Rptr.2d 159, 841 P.2d 144; *444*Dawson v. Town of Los Altos Hills* (1976) 16 Cal.3d 676, 684-685, 129 Cal.Rptr. 97, 547 P.2d 1377 (*Dawson*).) Because it was recognized that “the establishment of a special assessment district takes place as a result of a peculiarly legislative process grounded in the taxing power of the sovereign,” the scope of judicial review of such actions was ***323 “quite narrow.” (*Dawson, supra*, at pp. 683-684, 129 Cal.Rptr. 97, 547 P.2d 1377; *id.* at p. 684, 129 Cal.Rptr. 97, 547 P.2d 1377 [“ ‘The board of supervisors is the ultimate authority which is empowered to finally determine what lands are benefited and what amount of benefits shall be assessed against the several parcels benefited...’ ”].)

Accordingly, the standard of review was as follows: “A special assessment finally confirmed by a local legislative body in accordance with applicable law will not be set aside by the courts unless it clearly appears on the face of the record before [the legislative] body, or from facts which may be judicially noticed, that the assessment as finally confirmed is not proportional to the benefits to be bestowed on the properties to be assessed or that no benefits will accrue to such properties.” (*Dawson, supra*, 16 Cal.3d at p. 685, 129 Cal.Rptr. 97, 547 P.2d 1377; see also *Knox, supra*, 4 Cal.4th at p. 146, 14 Cal.Rptr.2d 159, 841 P.2d 144.) Under the *Dawson/Knox* standard of review, courts presumed an assessment was valid, and a plaintiff challenging it had to show that the record before the legislative body “clearly” did not support the underlying determinations of benefit and proportionality. (See also *Lent v. Tillson* (1887) 72 Cal. 404, 429, 14 P. 71 [judicial interference is warranted only “when the courts *can* plainly see that the legislature has not really exercised this judgment at all, or that manifestly and certainly no such benefit can or

could reasonably have been expected to result”].)

The drafters of Proposition 218 specifically targeted this deferential standard of review for change. Article XIID, section 4, subdivision (f), provides: “In any legal action contesting the validity of any assessment, the burden shall be on the agency to demonstrate that the property or properties in question receive a special benefit over and above the benefits conferred on the public at large and that the amount of any contested assessment is proportional to, and no greater than, the benefits conferred on the property or properties in question.”

[3][4][5][6] In determining the effect of article XIID, section 4, subdivision (f), we apply the familiar principles of constitutional interpretation, the aim of which is to “determine and effectuate the intent of those who enacted the constitutional provision at issue.” (*Richmond v. Shasta Community Services Dist.* (2004) 32 Cal.4th 409, 418, 9 Cal.Rptr.3d 121, 83 P.3d 518.) “The principles of constitutional interpretation are similar to those governing statutory construction.” **47(*Thompson v. Department of Corrections* (2001) 25 Cal.4th 117, 122, 105 Cal.Rptr.2d 46, 18 P.3d 1198.) If the language is clear and unambiguous, the plain meaning governs. (*People v. Lopez* (2003) 31 Cal.4th 1051, 1056, 6 Cal.Rptr.3d 432, 79 P.3d 548.) But if the language is *445 ambiguous, we consider extrinsic evidence in determining voter intent, including the Legislative Analyst's analysis and ballot arguments for and against the initiative. (*People v. Canty* (2004) 32 Cal.4th 1266, 1281, 14 Cal.Rptr.3d 1, 90 P.3d 1168; *People v. Rizo* (2000) 22 Cal.4th 681, 685, 94 Cal.Rptr.2d 375, 996 P.2d 27.)

Article XIID, section 4, subdivision (f), states that the agency has the burden of demonstrating special benefit and proportionality in any legal action contesting the validity of any assessment. Although it is clear that the voters intended to reverse the usual deference accorded governmental action and to reverse the presumption of validity by placing the “burden” on the agency, the provision does not specify the scope of that burden. Because the

language imposing a “burden” on the agency is somewhat imprecise, we look to the ballot***324 materials as further indicia of voter intent.

The Legislative Analyst explained to the voters that Proposition 218 was designed to “constrain local governments' ability to impose ... assessments” and to “place extensive requirements on local governments charging assessments.” (Ballot Pamp., Gen. Elec., *supra*, analysis of Prop. 218 by the Legis. Analyst, p. 73.) Addressing the burden of demonstration language of proposed article XIID, section 4, subdivision (f), the Legislative Analyst explained: “Currently, the courts allow local governments significant flexibility in determining fee and assessment amounts. In lawsuits challenging property fees and assessments, the taxpayer generally has the ‘burden of proof’ to show that they are not legal. This measure shifts the burden of proof in these lawsuits to local government. As a result, it would be easier for taxpayers to win lawsuits, resulting in reduced or repealed fees and assessments.” (Ballot Pamp., Gen. Elec., *supra*, at p. 74.) Or stated another way, Proposition 218 was intended to make it more difficult for an assessment to be validated in a court proceeding.

As the dissent below points out, a provision in Proposition 218 shifting the burden of demonstration was included in reaction to our opinion in *Knox*. The drafters of Proposition 218 were clearly aware of *Knox* and the deferential standard it applied based on *Dawson, supra*, 16 Cal.3d 676, 129 Cal.Rptr. 97, 547 P.2d 1377. The argument in favor of Proposition 218 referred to a “growing list of assessments imposed without voter approval” after Proposition 13 that are in fact special taxes. As one example of several named abuses of the assessment process, it specified that “[i]n Northern California, taxpayers 27 miles away from a park are assessed because their property supposedly benefits from that park.” (Ballot Pamp., Gen. Elec., *supra*, argument in favor of Prop. 218, p. 76.) The reference to 27 miles was based on the facts of *Knox*, which involved an assessment to raise funds to maintain five

existing parks serving four school districts. We upheld the assessment, deferring to the City of Orland's *446 determination that the property owners were "uniquely benefited by the proximity of these facilities to their properties" (*Knox, supra* 4 Cal.4th at p. 149, 14 Cal.Rptr.2d 159, 841 P.2d 144), although the assessment district contained 42,300 acres of land and geographically consisted of the entire city and portions of outlying areas in Glenn County. (*Id.* at p. 137, fn. 5, 14 Cal.Rptr.2d 159, 841 P.2d 144.)

Also, in *Knox*, we declined a request to reevaluate the *Dawson* deferential standard of review for special assessments, finding "no basis" for requiring the assessing agency to bear the burden of proof "in the context of benefit assessments." (*Knox, supra*, 4 Cal.4th at p. 147, 14 Cal.Rptr.2d 159, 841 P.2d 144.) The *Knox* plaintiffs argued that, as in *Beaumont Investors v. Beaumont-Cherry Valley Water Dist.* (1985) 165 Cal.App.3d 227, 235, 211 Cal.Rptr. 567, the local agency should bear the burden of proof in establishing the validity of a special assessment, and we should reassess the traditional standard of review that we reaffirmed in *Dawson*. (*Knox, supra*, 4 Cal.4th at pp. 146-147, 14 Cal.Rptr.2d 159, 841 P.2d 144.) In rejecting the argument, we distinguished **48 benefit assessments from the development fees in *Beaumont*, noted the different statutory contexts, and refused to change the deferential standard of review. (*Ibid.*) Thus, it appears that the inclusion of the burden of demonstration language was intended to supply the "basis" found lacking in *Knox*, and that the drafters of Proposition 218 particularly targeted *Knox*.

***325 As further evidence that the voters sought to curtail local agency discretion in raising funds, Proposition 218's preamble includes an express statement of purpose: "The people of the State of California hereby find and declare that Proposition 13 was intended to provide effective tax relief and to require voter approval of tax increases. However, local governments have subjected taxpayers to excessive tax, assessment, fee and charge

increases that not only frustrate the purposes of voter approval for tax increases, but also threaten the economic security of all Californians and the California economy itself. This measure protects taxpayers by limiting the methods by which local governments exact revenue from taxpayers without their consent." (Ballot Pamp., *supra*, text of Prop. 218, § 2, p. 108; Historical Notes, *supra*, p. 85; *People v. Canty, supra*, 32 Cal.4th at p. 1280, 14 Cal.Rptr.3d 1, 90 P.3d 1168 ["In considering the purpose of legislation, statements of the intent of the enacting body contained in a preamble, while not conclusive, are entitled to consideration"].) In passing Proposition 218, the voters clearly sought to limit local government's ability to exact revenue under the rubric of special assessments.

The Court of Appeal majority below recognized that the voters intended to change the deferential standard of review: "[B]y placing the burden to demonstrate special benefit and proportionality on the agency the new law must now require that which *Lent* held was not necessary, i.e., that the record contain affirmative evidence of the two substantive bases for the assessment." *447 Nevertheless, the majority maintained that courts should continue to give deference to the local agency's assessment decision (an act of a legislative body) for two reasons. First, "the constitutional separation of powers demands that we give it deference. (Cal. Const., art. III, § 3; [citations].)" Second, if the challenged assessment was levied according to Proposition 218's procedural requirements, courts will continue to accord the final legislative determination substantial deference. Otherwise, "invalidating an assessment that received the support of a majority of the property owners would frustrate the will of those property owners." The majority concluded that the scope of judicial review was "limited."

Accordingly, the majority stated the new standard of review as follows: "A special assessment finally confirmed by a local legislative body in accordance with applicable law will not be set aside by the courts so long as the local legislative body

ments; place extensive requirements on local governments charging assessments; shift the burden of demonstrating assessments' legality to local government; make it easier for taxpayers to win lawsuits; and limit the methods by which local governments exact revenue from taxpayers without their consent. Because Proposition 218's underlying purpose was to limit government's power to exact revenue and to curtail the deference that had been traditionally accorded legislative enactments on fees, assessments, and charges, a more rigorous standard of review is warranted. We construe article XIID, section 4, subdivision (f)-the "burden ... to demonstrate" provision-liberally in light of the proposition's other provisions, and conclude that courts should exercise their independent***327 judgment in reviewing local agency decisions that have determined whether benefits are special and whether assessments are proportional to special benefits within the meaning of Proposition 218. *449(*Redevelopment Agency v. County of Los Angeles* (1999) 75 Cal.App.4th 68, 74, 89 Cal.Rptr.2d 10 [courts exercise independent judgment in matters involving constitutional interpretation]; see *People v. Cromer* (2001) 24 Cal.4th 889, 894, 103 Cal.Rptr.2d 23, 15 P.3d 243 [courts use independent, de novo review for mixed questions of fact and law that implicate constitutional rights].)

[14][15] Defendants argue that because a weighted majority of property owners approved the assessment, it furthers Proposition 218's emphasis on voter consent, and we should accord deference to those voting owners' wishes. However, voter consent cannot convert an unconstitutional legislative assessment into a constitutional one. Under Proposition**50 218, all valid assessments must both clear the substantive hurdles in article XIID, section 4, subdivision (a) and be approved by a weighted majority of owners under section 4, subdivisions (c), (d), and (e). Moreover, Proposition 218 was designed to prevent a local legislative body from imposing a special tax disguised as an assessment. (*Apartment Assn.*, *supra*, 24 Cal.4th at p. 839, 102 Cal.Rptr.2d 719, 14 P.3d 930 ["The bal-

lot arguments identify what was perhaps the drafter's main concern: tax increases disguised via euphemistic relabeling as 'fees,' 'charges,' or 'assessments' ".) FN5 The judicial invalidation of an assessment does not thwart the objective of taxpayer consent; under Proposition 13, two-thirds of the voters must still approve the proposed revenue source (i.e., a special tax). (Cal. Const., art. XIII A, § 4; art. XIID, § 3, subd. (a)(2).) Neither the separation of powers nor property owner consent justifies allowing a local legislative body or property owners (both bound by the state Constitution) to usurp the judicial function of interpreting and applying the constitutional provisions that now govern assessments.

FN5. The argument in favor of Proposition 218 stated: "After voters passed Proposition 13, politicians created a loophole in the law that allows them to raise taxes without voter approval by calling taxes 'assessments' and 'fees'.... [¶] ... [¶] Proposition 218 will significantly tighten the kind of benefit assessments that can be levied." (Ballot Pamp., Gen. Elec., *supra*, argument in favor of Prop. 218, p. 76). It also declared that "Proposition 218 simply gives taxpayers the right to vote on taxes and stops politicians' end-runs around Proposition 13." (Ballot Pamp., Gen. Elec., *supra*, rebuttal to argument against Prop. 218, p. 77.)

Courts are familiar with the process of determining the constitutionality of the taxes, fees, and assessments that local governments impose. (See *Richmond v. Shasta Community Services Dist.*, *supra*, 32 Cal.4th at pp. 418-428, 9 Cal.Rptr.3d 121, 83 P.3d 518 [determination whether charge that water district imposed violated article XIID restrictions required de novo review]; *Howard Jarvis Taxpayers Assn. v. City of Roseville* (2002) 97 Cal.App.4th 637, 647-650, 119 Cal.Rptr.2d 91 [court found in-lieu fee that city imposed was unconstitutional under article XIID]; *Howard Jarvis*

Taxpayers Assn. v. City of Riverside, *supra*, 73 Cal.App.4th 679, 684-690, 86 Cal.Rptr.2d 592 [question whether existing streetlight assessment was subject to Proposition 218 limitations involved court's de novo interpretation of the constitution and voters' intent]; *450 *Howard Jarvis Taxpayers Assn. v. City of Salinas* (2002) 98 Cal.App.4th 1351, 1354-1359, 121 Cal.Rptr.2d 228 [court independently interprets constitutional amendments contained in article XIID to determine ***328 whether water fee was a property-related fee requiring property owners' vote]; *Graber v. City of Upland* (2002) 99 Cal.App.4th 424, 429, 121 Cal.Rptr.2d 649 [question whether local ordinance violated constitutional provisions relating to tax increment financing was subject to de novo review].)

Accordingly, courts should exercise their independent judgment in reviewing whether assessments that local agencies impose violate article XIID.^{FN6}

FN6. In *Not About Water Com. v. Board of Supervisors* (2002) 95 Cal.App.4th 982, 116 Cal.Rptr.2d 526), the Court of Appeal held that courts review the creation of a special assessment district under an abuse of discretion standard (*Id.* at pp. 994-995, 116 Cal.Rptr.2d 526), but at another point it references a substantial evidence standard (*Id.* at p. 986, 116 Cal.Rptr.2d 526). We disapprove *Not About Water Com. v. Board of Supervisors*, *supra*, 95 Cal.App.4th 982, 116 Cal.Rptr.2d 526, to the extent it is inconsistent with this opinion.

B. The 2001 Special Assessment

We apply this standard of review to the special assessment in this case to determine whether OSA met its burden of demonstrating that the assessed properties received a special benefit and that the assessment is proportional to that special benefit.

1. Special Benefits

[16] "Under Proposition 218, only special be-

nefits are assessable. (Cal. Const., art. XIID, § 4, subd. (a).) Local governments may not impose assessments to pay for the cost of providing a general benefit to the community...." (*City of Saratoga v. Hinz* (2004) 115 Cal.App.4th 1202, 1223, 9 Cal.Rptr.3d 791.) If a proposed project will provide **51 both general benefits to the community and special benefits to particular properties, the agency can impose an assessment based only on the special benefits. It must separate the general benefits from the special benefits and must secure other funding for the general benefits. (Art. XIID, § 4, subd. (a); *Hinz*, *supra*, 115 Cal.App.4th at p. 1223, 9 Cal.Rptr.3d 791.)

Both before and after Proposition 218 passed, special assessments were distinguished from special taxes through the concept of special benefits. (*Knox*, *supra*, 4 Cal.4th at p. 142, 14 Cal.Rptr.2d 159, 841 P.2d 144; *Ventura Group Ventures, Inc. v. Ventura Port Dist.* (2001) 24 Cal.4th 1089, 1106, 104 Cal.Rptr.2d 53, 16 P.3d 717 (*Ventura Group Ventures*).) In *Knox*, we referred to a special benefit as a benefit " 'over and above that received by the general public.' " (*Knox*, *supra*, 4 Cal.4th at p. 142, 14 Cal.Rptr.2d 159, 841 P.2d 144.) There, we presumed (in the absence of evidence to the *451 contrary) that the presence of well-maintained open park land contributed to the district's attractiveness and thus was a special benefit because it enhanced the desirability of the residential properties in that district. (*Knox*, *supra*, 4 Cal.4th at p. 149, 14 Cal.Rptr.2d 159, 841 P.2d 144.)

[17] Proposition 218 made several changes to the definition of special benefits. First, Proposition 218 defines a special benefit as "a particular and distinct benefit over and above general benefits conferred on *real property located in the district* or to the public at large," with the additional italicized requirement. (Art. XIID, § 2, subd. (i), italics added.) Correspondingly, it emphasizes that "[g]eneral enhancement of property value does not constitute 'special benefit.' " (*Ibid.*) Since the "[g]eneral enhancement of property value" is a

“general benefit[] conferred on real property located in the district” (*ibid.*), Proposition 218 clearly mandates ***329 that a special benefit cannot be synonymous with general enhancement of property value. Thus, Proposition 218 tightened the definition of special benefits and broadened the definition of general benefits to include benefits conferred generally “on real property located in the district.” (Art. XIID, § 2, subd. (i).)^{FN7}

FN7. OSA suggests that it can classify general benefits to parcels within the district as special benefits because benefit-to-property language is omitted from article XIID, section 4, subdivision (f). That subdivision requires the agency “to demonstrate that the property or properties in question receive a special benefit over and above the benefits conferred on the public at large and that the amount of any contested assessment is proportional to, and no greater than, the [special] benefits conferred on the property or properties in question.” (Art. XIID, § 4, subd. (f).) OSA disregards the fact that section 4, subdivision (f), requires OSA to prove a proportional “special benefit” to each property as that term is defined in section 2, subdivision (i), which includes the benefit-to-property component. The additional reference in section 4, subdivision (f), to the “public at large” is surplusage, because that language is already included in section 2, subdivision (i)’s definition of “special benefit.” (See *Voters for Responsible Retirement v. Board of Supervisors* (1994) 8 Cal.4th 765, 772-773, 35 Cal.Rptr.2d 814, 884 P.2d 645.)

Relying on *Harrison v. Bd. of Supervisors* (1975) 44 Cal.App.3d 852, 118 Cal.Rptr. 828 (*Harrison*), the Court of Appeal majority below commented that “[i]f there is a significant difference between the two definitions [of special benefits before and after Proposition 218], we do not detect

it.” *Harrison* simply held that an increase in property value *alone* did not amount to a special benefit. (*Harrison, supra*, 44 Cal.App.3d at pp. 858-859, 118 Cal.Rptr. 828.) This holding did not preclude a determination of special benefit based in part on the general enhancement of property value.

Moreover, while pre-Proposition 218 case law makes clear that assessments may not be levied for purposes of conferring purely general benefits, courts did not invalidate assessments simply because they provided general benefits to the public in addition to the requisite special benefits, and did not demand a strict separation of special and general benefits. (See e.g., *452Knox, supra, 4 Cal.4th at pp. 137, 149, 14 Cal.Rptr.2d 159, 841 P.2d 144 [upheld validity of assessment for park maintenance despite fact city did not separate general benefits to people outside area and to community at large from special benefits to residential parcels]; *Allen v. City of Los Angeles* (1930) 210 Cal. 235, 238, 291 P. 393 [“It would be well within the **52 power of the city council to make the cost of the entire proceeding rest upon the shoulders of the property owners of a given district especially benefited thereby”]; *Federal Construction Co. v. Ensign* (1922) 59 Cal.App. 200, 210, 210 P. 536 (*Ensign*) [“To invalidate the assessment the general public benefit must be the only result of the improvement”; 100 percent of cost of new sewage treatment plant fully assessable notwithstanding general benefits]; 51 Cal.Jur.3d (2003) Public Improvements, § 19, p. 900 [“For an assessment to be invalid because it confers a general public benefit, the general benefit must be the only result of the assessment”].)

[18][19][20] Consequently, the pre-Proposition 218 cases on which the Court of Appeal majority below and OSA relied are not instructive in determining whether a benefit is special under Proposition 218. Instead, under the plain language of article XIID, a special benefit must affect the assessed property in a way that is particular and distinct from its effect on other parcels and that real prop-

erty in general and the public at large do not share.
FN8 (Art. XIID, § 2, subd. (i).)

FN8. OSA observes that Proposition 218's definition of "special benefit" presents a paradox when considered with its definition of "district." Section 2, subdivision (i) defines a "special benefit" as "a particular and distinct benefit *over and above general benefits conferred on real property located in the district* or to the public at large." (Art. XIID, § 2, subd. (i), italics added.) Section 2, subdivision (d) defines "district" as "an area determined by an agency to contain *all parcels which will receive a special benefit* from a proposed public improvement or property-related service." (Art. XIID, § 2, subd. (d), italics added.) In a well-drawn district-limited to only parcels receiving special benefits from the improvement-every parcel within that district receives a shared special benefit. Under section 2, subdivision (i), these benefits can be construed as being general benefits since they are not "particular and distinct" and are not "over and above" the benefits received by other properties "located in the district."

We do not believe that the voters intended to invalidate an assessment district that is narrowly drawn to include only properties directly benefitting from an improvement. Indeed, the ballot materials reflect otherwise. Thus, if an assessment district is narrowly drawn, the fact that a benefit is conferred throughout the district does not make it general rather than special. In that circumstance, the characterization of a benefit may depend on whether the parcel receives a direct advantage from the improvement (e.g., proximity to a park) or receives an indirect, derivative advantage resulting from the overall public benefits of the im-

provement (e.g., general enhancement of the district's property values).

***330 Our examination of the engineer's report supporting the assessments reveals that OSA has failed to meet its burden of demonstrating that the assessment is based only on the special benefits conferred on the particular parcel and is in proportion to those benefits. Various studies supported the listed benefits in the engineer's report. But, as discussed below, the report's *453 designation of these listed benefits as "special" failed to satisfy the constitutional requirements for assessments that fund open space acquisitions.

The engineer's report enumerates seven "special benefits" that the assessment will confer on *all* residents and property owners in the district: (1) enhanced recreational activities and expanded access to recreational areas; (2) protection of views, scenery, and other resources; (3) increased economic activity; (4) expanded employment opportunity; (5) reduced costs of law enforcement, health care, fire prevention, and natural disaster response; (6) enhanced quality of life and desirability of the area; and (7) improved water quality, pollution reduction, and flood prevention.

[21] The report states that the benefit of "[e]nhanced recreational opportunities and expanded access to recreational areas" will be conferred on "all property owners, residents, employees and customers throughout the OSA" and that "[a]ll properties will benefit from the assessments...." It explains that residential properties will benefit because "[t]hese improved open space areas will be available to residents and guests of property owners within the OSA, thereby making these properties more valuable," and that nonresidential properties will benefit because additional recreation areas available to employees will "enhance an employer's ability to attract and keep quality employees." The "enhanced economic conditions benefit the [nonresidential] property by making it more valuable." The report therefore acknowledges**53 that *all* people in OSA's territory will benefit broadly,

generally, and directly from the assessment, resulting in *all* properties receiving a derivative, indirect benefit.

Similarly, the report describes the second listed “special benefit” as benefiting everyone in the district generally (“[p]rotection of views, scenery and other resources values and environmental benefits enjoyed by residents, employees, customers and guests”). The report concludes ***331 that “[t]hese benefits ultimately accrue to properties because properties are more desirable in areas that offer environmental and economic benefits.” The report makes no attempt to tie this benefit to particular properties. Instead, it concludes that all properties throughout the district will receive this benefit equally.

[22] “Increased economic activity” and “[e]xpanded employment opportunity” are also listed in the report as “special benefits.” Again, the report states that increased economic activity and expanded employment opportunity will result from the acquisition of additional open space because increased recreational opportunities will likely attract more people to the county. These people, in turn, will patronize county services and businesses, thereby fostering economic growth and “additional employment opportunities for OSA residents.” The report broadly concludes that the increased economic *454 activity in the area is “a benefit ultimately to residential, commercial, industrial and institutional property.” However, it simply assumes that the resultant increased economic activity will affect people and property throughout the county equally, but makes no direct connection to any particular properties.

[23] The remaining listed “special benefits” do not satisfy the constitutional requirements either. Relying on various studies, the report claims that because open space and parks promote good health and reduce crime and vandalism, the county can expect a reduction in health care and law enforcement costs. It reasons that “[s]uch cost reduction frees public funds for other services that benefit proper-

ties,” and “[a]ll of these factors ultimately benefit property by making the community more desirable and property, in turn, more valuable.” The report also asserts that, because open space helps protect water quality and reduce flooding, the costs of public utility services for properties in the district will decrease.

[24][25] Finally, the report emphasizes that open space areas will “enhance the overall quality of life and desirability of the area.” All the listed benefits are general benefits in this case, shared by everyone—all 1.2 million people—living within the district. The report does not even attempt to measure the benefits that accrue to particular parcels. Indeed, the report describes OSA's mission, which is “[t]o preserve, protect and manage, *for the use and enjoyment of all people*, a well-balanced system of urban and non-urban areas of scenic recreational and agricultural importance.” (Italics added.) OSA is responsible, as the report explains, “for preserving and maintaining open space for approximately 1.2 million people residing within its boundaries, representing over two-thirds of the population within Santa Clara County.” Although it is reasonable to conclude that quality-of-life benefits to *people* living in, working in, and patronizing businesses in the district will, in turn, benefit property in the district, such derivative benefits are only “general benefits conferred on real property located in the district or to the public at large.” (Art. XIID, § 2, subd. (i).) Moreover, to the extent that the value of property located in a desirable community is enhanced, this is a “[g]eneral enhancement of property value,” and is thus, by definition *not* a special benefit. (*Ibid.*)

In addition, the report's description of general benefits fails to comport with the Constitution. The engineer's report acknowledges that the acquisition, maintenance and preservation of open spaces “provide a degree of general benefit to the public at large.” But it then asserts that the ratio of general to special benefit that will be derived from OSA's open space acquisition program will be 10 percent

***332 general benefit and 90 percent special benefit, based on its determination that general benefit is measured only as *455 the benefit conferred on “individuals who are *not* residents, employees, customers or property owners” (italics added) in the assessment **54 district. This distinction finds no support in the Constitution.

[26][27] Under article XIID, general benefits are not restricted to benefits conferred only on persons and property outside the assessment district, but can include benefits both “conferred on real property located *in the district* or to the public at large.” (Art. XIID, § 2, subd. (i), italics added.) “At large” means “[n]ot limited to any particular ... person” or “[f]ully; in detail; in an extended form.” (Black’s Law Dict. (8th ed.2004) p. 136.) By its plain language, section 2, subdivision (i), does not permit OSA to choose one segment of the “public at large” to measure general benefit. The “public at large” thus means *all* members of the public-including those who live, work, and shop within the district-and not simply transient visitors. The report assumes that people and property within the district-an area covering over 800 square miles, with a population of approximately 1.2 million people-will receive *no* general benefit at all, *only* special benefits, from OSA’s acquisition of open space. But under these circumstances, “[i]f everything is special, then nothing is special.” (*Ventura Group Ventures, supra*, 24 Cal.4th at p. 1107, 104 Cal.Rptr.2d 53, 16 P.3d 717.)

Further, we note the validity of this assessment would be questionable even under the pre-Proposition 218 cases on which OSA relies. (See e.g., *Knox, supra*, 4 Cal.4th 132, 14 Cal.Rptr.2d 159, 841 P.2d 144 [assessment valid for maintenance of five existing parks in four school districts in city]; *City of San Diego v. Holodnak* (1984) 157 Cal.App.3d 759, 203 Cal.Rptr. 797 [assessment valid to fund parks and other public facilities located in new development]; *Ensign, supra*, 59 Cal.App. 200, 210 P. 536 [assessment valid to fund new sewer system].) Unlike the assessment here, the assess-

ments in the pre-Proposition 218 cases involved specific, identified improvements that directly benefited each assessed property and whose costs could be determined or estimated and then allocated to the properties assessed. Also, in *Knox* and *Holodnak*, the properties assessed received special benefits from the particular park because of their proximity to park facilities. (*Knox, supra*, 4 Cal.4th at p. 149, 14 Cal.Rptr.2d 159, 841 P.2d 144; *Holodnak, supra*, 157 Cal.App.3d at p. 763, 203 Cal.Rptr. 797.)

Here, with a district of 314,000 parcels, OSA shows no distinct benefits to particular properties above those which the general public using and enjoying the open space receives. The special benefits, if any, that may arise would likely result from factors such as proximity, expanded or improved access to the open space, or views of the open space. (See *Ensign, supra*, 59 Cal.App. at p. 217, 210 P. 536 [property which is specially benefited is “ ‘real property adjoining, or near the locality of the improvement’ ”].) But, because OSA has not identified any specific open space acquisition or planned acquisition, it cannot show any *456 specific benefits to assessed parcels through their direct relationship to the “locality of the improvement.” The improvement is only to OSA’s budget for open space acquisitions.

Based on the undisputed facts in OSA’s record (the engineer’s report), OSA has failed to demonstrate that the properties in the assessment district receive a particular and distinct special benefit not shared by the district’s property in general or by the public at large within the meaning of Proposition 218.

***333 2. *Proportionality*

For an assessment to be valid, the properties must be assessed in proportion to the special benefits received: “No assessment shall be imposed on any parcel which exceeds the reasonable cost of the proportional special benefit conferred on that parcel.” (Art. XIID, § 4, subd. (a).) “The proportionate special benefit derived by each identified parcel

shall be determined in relationship to the entirety of the *capital cost of a public improvement*, the maintenance and operation expenses of a public improvement, or the cost of the property-related service being provided.” (*Ibid.*, italics added.) Capital cost is defined as “the cost of acquisition, installation, construction, reconstruction, or replacement of a *permanent public improvement* by an agency.” (Art. XIID, § 2, subd. (c), italics added.)

****55** To satisfy the proportionality requirement, the engineer's report assigned all single-family homes in the district one single family equivalent (SFE) unit and assigned other types of property greater or lesser SFE's, depending on the estimated number of people using those properties. Condominiums received a lesser SFE because the average number of people per unit was estimated to be fewer than in an average single-family residence. Commercial properties received a higher SFE than single-family residences because greater numbers of people use them. Each SFE corresponded to an annual assessment of \$20, an amount a majority of property owners surveyed would be willing to pay.

Because all single-family homes were assessed the same \$20 amount, the engineer's report assumed that all single-family homes throughout the 800-square-mile district would receive an equal special benefit, regardless of their proximity to open space areas that might be acquired at some time in the future. The report contains no detailed analysis on how specific properties, blocks, school districts, or even cities would benefit from their proximity to open space. OSA contends that its assessment is nonetheless valid because it plans to acquire space equally throughout the district, and all properties will be equally close to and benefit from open space areas. The engineer's report ***457** lists 30 priority acquisition areas and identifies a number of other “potential acquisition and improvement areas.” This, OSA claims, is sufficient to satisfy Proposition 218's proportionality requirement. We disagree.

[28][29] The report's proportionality analysis

fails to satisfy Proposition 218 largely because the special assessment is based on OSA's projected annual budget of \$8 million for its open space program rather than on a calculation or estimation of the cost of the particular public improvement to be financed by the assessment. The figure of \$8 million was derived from the additional \$20 per year in property taxes multiplied by the number of properties on the tax rolls in the district. The \$8 million collected for the assessment annually—with an automatic cost-of-living increase—provides a continuing source of revenue for OSA's budget. However, the purpose of an assessment is to require the properties which have received a special benefit from a “public improvement” “to pay the cost of that improvement,” and not to fund an agency's ongoing budget. (*Ventura Group Ventures, supra*, 24 Cal.4th at p. 1106, 104 Cal.Rptr.2d 53, 16 P.3d 717, italics added; *Knox, supra*, 4 Cal.4th at p. 142, 14 Cal.Rptr.2d 159, 841 P.2d 144)

The engineer's report generally describes a program to acquire various properties throughout the county, as well as to provide maintenance and servicing of these public areas. Such future acquisitions include, but are not limited to, “greenbelts, hillsides, viewsheds and watersheds, baylands, *****334** riparian corridors, urban open space, parks, agricultural lands, development rights on agricultural lands and other land-use types, conservation easements, other property rights, wetlands, utility right-of-ways, surplus school sites, [and] quarries.” OSA argues its goal is to acquire open space land that is evenly distributed throughout the district. Although the report lists 30 general priority acquisition areas, it further notes this list is not exclusive. The report identifies no particular parcels or specific areas within the district that OSA plans to acquire for open space or parks. Further, the engineer's report notes that OSA “should” complete at least one acquisition of open land every five years. Notably, OSA is *not* required to do so.

Thus, the report fails to identify with sufficient specificity the “permanent public improvement”

that the assessment will finance, fails to estimate or calculate the cost of any such improvement, and fails to directly connect any proportionate costs of and benefits received from the "permanent public improvement" to the specific assessed properties. As the dissent below observed, "an assessment calculation that works backward by starting with an amount taxpayers are likely to pay, and then determines an annual spending budget based thereon, does not comply with the law governing assessments, either before or after Proposition 218."

As with its determination of special benefits, OSA has failed to demonstrate proportionality. Accordingly, we conclude that the **56 assessment is invalid *458 for failing to meet the requirements of Proposition 218. In light of this disposition, we need not reach the other arguments plaintiffs raise.

III. DISPOSITION

We reverse the judgment of the Court of Appeal and remand the matter to that court for further proceedings consistent with our opinion.

COUNTY OF FRESNO, Plaintiff and Appellant,
v.
THE STATE OF CALIFORNIA et al., Defendants
and Respondents.

No. S015637.

Supreme Court of California
Apr 22, 1991.

SUMMARY

A county filed a test claim with the Commission on State Mandates seeking, under Cal. Const., art. XIII B, § 6 (state must provide subvention of funds to reimburse local governments for costs of state-mandated programs or increased levels of service), reimbursement from the state for costs incurred in implementing the Hazardous Materials Release Response Plans and Inventory Act (Health & Saf. Code, § 25500 et seq.). The commission found the county had the authority to charge fees to pay for the program, and the program was thus not a reimbursable state-mandated program under Gov. Code, § 17556, subd. (d), which provides that costs are not state-mandated if the agency has authority to levy a charge or fee sufficient to pay for the program. The county filed a petition for writ of mandate and a complaint for declaratory relief against the state. The trial court denied relief. (Superior Court of Fresno County, No. 379518-4, Gary S. Austin, Judge.) The Court of Appeal, Fifth Dist., No. F011925, affirmed.

The Supreme Court affirmed the decision of the Court of Appeal. The court held, as to the single issue on review, that Gov. Code, § 17556, subd. (d), was facially constitutional under Cal. Const., art. XIII B, § 6. It held art. XIII B was not intended to reach beyond taxation, and § 6 was included in art. XIII B in recognition that Cal. Const., art. XIII A, severely restricted the taxing powers of local governments. It held that art. XIII B, § 6 was designed to protect the tax revenues of local governments

from state mandates that would require an expenditure of such revenues and, when read in textual and historical context, requires subvention only when the costs in question can be recovered solely from tax revenues. Accordingly, the court held that Gov. Code, § 17556, subd. (d), effectively construed the term "cost" in the constitutional provision as excluding expenses that are recoverable from sources other than taxes, and that such a construction is altogether sound. (Opinion by Mosk, J., with Lucas, C. J., Broussard, Panelli, Kennard, JJ., and Best (Hollis G.), J.,^{FN*} concurring. Separate concurring opinion by Arabian, J.)

FN* Presiding Justice, Court of Appeal, Fifth Appellate District, assigned by the Chairperson of the Judicial Council.

HEADNOTES

Classified to California Digest of Official Reports
(1) State of California § 11--Reimbursement to Local Governments for State-mandated Costs--Costs for Which Fees May Be Levied--Validity of Exclusion.

In a proceeding by a county seeking reversal of a decision by the Commission on State Mandates that the state was not required by Cal. Const., art. XIII B, § 6, to reimburse the county for costs incurred in implementing the Hazardous Materials Release Response Plans and Inventory Act (Health & Saf. Code, § 25500 et seq.), the trial court properly found that Gov. Code, § 17556, subd. (d) (costs are not state-mandated if agency has authority to levy charge or fee sufficient to pay for program), was facially constitutional. Cal. Const., art. XIII B, was intended to apply to taxation and was not intended to reach beyond taxation, as is apparent from its language and confirmed by its history. It was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues; read in its textual and historical contexts, requires subvention only when the costs in question can be recovered solely from tax revenues. Gov. Code, § 17556, subd. (d), effect-

ively construes the term “costs” in the constitutional provision as excluding expenses that are recoverable from sources other than taxes, and that construction is altogether sound. Accordingly, Gov. Code, § 17556, subd. (d), is facially constitutional under Cal. Const., art. XIII B, § 6.

COUNSEL

Max E. Robinson, County Counsel, and Pamela A. Stone, Deputy County Counsel, for Plaintiff and Appellant.

B. C. Barnum, County Counsel (Kern), and Patricia J. Randolph, Deputy County Counsel, as Amici Curiae on behalf of Plaintiff and Appellant. *484

John K. Van de Kamp and Daniel E. Lungren, Attorneys General, N. Eugene Hill, Assistant Attorney General, and Richard M. Frank, Deputy Attorney General, for Defendants and Respondents.

MOSK, J.

We granted review in this proceeding to decide whether section 17556, subdivision (d), of the Government Code (section 17556(d)) is facially valid under article XIII B, section 6, of the California Constitution (article XIII B, section 6).

Article XIII B, section 6, provides: “Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [¶] (a) Legislative mandates requested by the local agency affected; [¶] (b) Legislation defining a new crime or changing an existing definition of a crime; or [¶] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted

prior to January 1, 1975.”

The Legislature enacted Government Code sections 17500 through 17630 to implement article XIII B, section 6. (Gov. Code, § 17500.) It created a “quasi-judicial body” (*ibid.*) called the Commission on State Mandates (commission) (*id.*, § 17525) to “hear and decide upon [any] claim” by a local government that the local government “is entitled to be reimbursed by the state for costs” as required by article XIII B, section 6. (Gov. Code, § 17551, subd. (a).) It defined “costs” as “costs mandated by the state”- “any increased costs” that the local government “is required to incur ... as a result of any statute ..., or any executive order implementing any statute ..., which mandates a new program or higher level of service of any existing program” within the meaning of article XIII B, section 6. (Gov. Code, § 17514.) Finally, in section 17556(d) it declared that “The commission shall not find costs mandated by the state ... if, after a hearing, the commission finds that” the local government “has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.”

For the reasons discussed below, we conclude that section 17556(d) is facially constitutional under article XIII B, section 6. *485

I. Facts and Procedural History

The present proceeding arose after the Legislature enacted the Hazardous Materials Release Response Plans and Inventory Act (Act). (Health & Saf. Code, § 25500 et seq.) The Act establishes minimum statewide standards for business and area plans relating to the handling and release or threatened release of hazardous materials. (*Id.*, § 25500.) It requires local governments to implement its provisions. (*Id.*, § 25502.) To cover the costs they may incur, it authorizes them to collect fees from those who handle hazardous materials. (*Id.*, § 25513.)

The County of Fresno (County) implemented the Act but chose not to impose the authorized fees.

Instead, it filed a so-called “test” or initial claim with the commission (Gov. Code, § 17521) seeking reimbursement from the State of California (State) under article XIII B, section 6. After a hearing, the commission rejected the claim. In its statement of decision, the commission made the following findings, among others: the Act constituted a “new program”; the County did indeed incur increased costs; but because it had authority under the Act to levy fees sufficient to cover such costs, section 17556(d) prohibited a finding of reimbursable costs.

The County then filed a petition for writ of mandate and complaint for declaratory relief against the State, the commission, and others, seeking vacation of the commission's decision and a declaration that section 17556(d) is unconstitutional under article XIII B, section 6. While the matter was pending, the commission amended its statement of decision to include another basis for denial of the test claim: the Act did not constitute a “program” under the rationale of *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46 [233 Cal.Rptr. 38, 729 P.2d 202] (*County of Los Angeles*), because it did not impose unique requirements on local governments.

After a hearing, the trial court denied the petition and effectively dismissed the complaint. It determined, inter alia, that mandate under Code of Civil Procedure section 1094.5 was the County's sole remedy, and that the commission was the sole properly named respondent. It also determined that section 17556(d) is constitutional under article XIII B, section 6. It did not address the question whether the Act constituted a “program” under *County of Los Angeles*. Judgment was entered accordingly.

The Court of Appeal affirmed. It held the Act did indeed constitute a “program” under *County of Los Angeles, supra*, 43 Cal.3d 46. It also held section 17556(d) is constitutional under article XIII B, section 6. *486

(1) We granted review to decide a single issue, i.e., whether section 17556(d) is facially constitu-

tional under article XIII B, section 6.

II. Discussion

We begin our analysis with the California Constitution. At the June 6, 1978, Primary Election, article XIII A was added to the Constitution through the adoption of Proposition 13, an initiative measure aimed at controlling ad valorem property taxes and the imposition of new “special taxes.” (*Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization* (1978) 22 Cal.3d 208, 231-232 [149 Cal.Rptr. 239, 583 P.2d 1281].) The constitutional provision imposes a limit on the power of state and local governments to adopt and levy taxes. (*City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 59, fn. 1 [266 Cal.Rptr. 139, 785 P.2d 522] (*City of Sacramento*)).

At the November 6, 1979, Special Statewide Election, article XIII B was added to the Constitution through the adoption of Proposition 4, another initiative measure. That measure places limitations on the ability of both state and local governments to appropriate funds for expenditures.

“Articles XIII A and XIII B work in tandem, together restricting California governments' power both to levy and to spend [taxes] for public purposes.” (*City of Sacramento, supra*, 50 Cal.3d at p. 59, fn. 1.)

Article XIII B of the Constitution was intended to apply to taxation-specifically, to provide “permanent protection for taxpayers from excessive taxation” and “a reasonable way to provide discipline in tax spending at state and local levels.” (See *County of Placer v. Corin* (1980) 113 Cal.App.3d 443, 446 [170 Cal.Rptr. 232], quoting and following Ballot Pamp., Proposed Stats. and Amends. to Cal. Const. with arguments to voters, Special Statewide Elec. (Nov. 6, 1979), argument in favor of Prop. 4, p. 18.) To this end, it establishes an “appropriations limit” for both state and local governments (Cal. Const., art. XIII B, § 8, subd. (h)) and allows no “appropriations subject to limitation” in excess thereof (*id.*, § 2). (See *County of Placer v.*

Corin, supra, 113 Cal.App.3d at p. 446.) It defines the relevant “appropriations subject to limitation” as “any authorization to expend during a fiscal year the proceeds of taxes” (Cal. Const., art. XIII B, § 8, subd. (b).) It defines “proceeds of taxes” as including “all tax revenues and the proceeds to ... government from,” inter alia, “regulatory licenses, user charges, and user fees to the extent that such proceeds exceed the costs reasonably borne by [government] in providing the regulation, product, or service” (Cal. Const., art. XIII B, § 8, subd. (c), italics added.) Such “excess” proceeds from “licenses,” “charges,” and “fees” “are but *487 taxes” for purposes here. (*County of Placer v. Corin, supra*, 113 Cal.App.3d at p. 451, italics in original.)

Article XIII B of the Constitution, however, was not intended to reach beyond taxation. That fact is apparent from the language of the measure. It is confirmed by its history. In his analysis, the Legislative Analyst declared that Proposition 4 “would not restrict the growth in appropriations financed from other [i.e., nontax] sources of revenue, including federal funds, bond funds, traffic fines, user fees based on reasonable costs, and income from gifts.” (Ballot Pamp., Proposed Stats. and Amends. to Cal. Const. with arguments to voters, Special Statewide Elec. (Nov. 6, 1979), analysis by Legislative Analyst, p. 16.)

Section 6 was included in article XIII B in recognition that article XIII A of the Constitution severely restricted the taxing powers of local governments. (See *County of Los Angeles, supra*, 43 Cal.3d at p. 61.) The provision was intended to preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities that were ill equipped to handle the task. (*Ibid.*; see *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 836, fn. 6 [244 Cal.Rptr. 677, 750 P.2d 318].) Specifically, it was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues. Thus, although its language

broadly declares that the “state shall provide a subvention of funds to reimburse ... local government for the costs [of a state-mandated new] program or higher level of service,” read in its textual and historical context section 6 of article XIII B requires subvention only when the costs in question can be recovered *solely from tax revenues*.

In view of the foregoing analysis, the question of the facial constitutionality of section 17556(d) under article XIII B, section 6, can be readily resolved. As noted, the statute provides that “The commission shall not find costs mandated by the state ... if, after a hearing, the commission finds that” the local government “has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.” Considered within its context, the section effectively construes the term “costs” in the constitutional provision as excluding expenses that are recoverable from sources other than taxes. Such a construction is altogether sound. As the discussion makes clear, the Constitution requires reimbursement only for those expenses that are recoverable solely from taxes. It follows that section 17556(d) is facially constitutional under article XIII B, section 6.

The County argues to the contrary. It maintains that section 17556(d) in essence creates a new exception to the reimbursement requirement of *488 article XIII B, section 6, for self-financing programs and that the Legislature cannot create exceptions to the reimbursement requirement beyond those enumerated in the Constitution.

We do not agree that in enacting section 17556(d) the Legislature created a new exception to the reimbursement requirement of article XIII B, section 6. As explained, the Legislature effectively and properly construed the term “costs” as excluding expenses that are recoverable from sources other than taxes. In a word, such expenses are outside of the scope of the requirement. Therefore, they need not be explicitly excepted from its reach.

The County nevertheless argues that no matter how characterized, section 17556(d) is indeed inconsistent with article XIII B, section 6. Its contention is in substance as follows: the source of section 17556(d) is former Revenue and Taxation Code section 2253.2; at the time of Proposition 4, subdivision (b)(4) of that former section stated that the State Board of Control shall not allow a claim for reimbursement of costs mandated by the state if the legislation contains a self-financing authority; the drafters of Proposition 4 incorporated some of the provisions of former Revenue and Taxation Code section 2253.2 into article XIII B, section 6, but did not incorporate former subdivision (b)(4); their failure to do so reveals an intent to treat as immaterial the presence or absence of a "self-financing" provision; and such an intent is confirmed by the "legislative history" set out at page 55 in *Spirit of 13, Inc., Summary of Proposed Implementing Legislation and Drafters' Intent*: "the state may not arbitrarily declare that it is not going to comply with Section 6 ... if the state provides new compensating revenues."

In our view, the County's argument is unpersuasive. Even if we assume *arguendo* that the intent of those who drafted Proposition 4 is as claimed, what is crucial here is the intent of those who voted for the measure. (See *County of Los Angeles, supra*, 43 Cal.3d 46, 56.) There is no substantial evidence that the voters sought what the County assumes the drafters desired. Moreover, the "legislative history" cited above cannot be considered relevant; it was written and circulated after the passage of Proposition 4. As such, it could not have affected the voters in any way.

To avoid this result, the County advances one final argument: "Based on the authority of [section 17556(d)], the Commission on State Mandates refuses to hear mandates on the merits once it finds that the authority to charge fees is given by the Legislature. This position is taken whether or not fees can actually or legally be charged to recover the entire costs of the program." *489

The County appears to be making one or both of the following arguments: (1) the commission applies section 17556(d) in an unconstitutional manner; or (2) the Act's self-financing authority is somehow lacking. Such contentions, however, miss the designated mark. They raise questions bearing on the constitutionality of section 17556(d) as applied and the legal efficacy of the authority conferred by the Act. The sole issue on review, however, is the facial constitutionality of section 17556(d).

III. Conclusion

For the reasons set forth above, we conclude that section 17556(d) is facially constitutional under article XIII B, section 6.

The judgment of the Court of Appeal is affirmed.

Lucas, C. J., Broussard, J., Panelli, J., Kennard, J., and Best (Hollis G.), J., ^{FN*} concurred.

FN* Presiding Justice, Court of Appeal, Fifth Appellate District, assigned by the Chairperson of the Judicial Council.

ARABIAN, J.,
Concurring.

I concur in the determination that Government Code section 17556, subdivision (d) ^{FN1} (section 17556(d)), does not offend article XIII B, section 6, of the California Constitution (article XIII B, section 6). In my estimation, however, the constitutional measure of the issue before us warrants fuller examination than the majority allow. A literalistic analysis begs the question of whether the Legislature had the authority to act statutorily upon a subject matter the electorate has spoken to constitutionally through the initiative process.

FN1 Unless otherwise indicated, all further statutory references are to the Government Code.

Article XIII B, section 6, unequivocally commands that “the state shall provide a subvention of funds to reimburse ... local government for the costs of [a new] program or increased level of service” except as specified therein. Article XIII B does not define this reference to “costs.” (See Cal. Const., art. XIII B, § 8.) Rather, the Legislature assumed the task of explicating the related concept of “costs mandated by the state” when it created the Commission on State Mandates and enacted procedures intended to implement article XIII B, section 6, more effectively. (See § 17500 et seq.) As part of this statutory scheme, it exempted the state from its constitutionally imposed subvention obligation under certain enumerated circumstances. Some of these exemptions the electorate expressly contemplated in approving article XIII B, section 6 (§ 17556, subs. (a), (c), & (g); see § 17514), while others are strictly of legislative formulation and derive from *490 former Revenue and Taxation Code section 2253.2. (§ 17556, subs. (b), (d), (e), & (f).)

The majority find section 17556 valid notwithstanding the mandatory language of article XIII B, section 6, based on the circular and conclusory rationale that “the Legislature effectively-and properly-constructed the term ‘costs’ as excluding expenses that are recoverable from sources other than taxes. In a word, such expenses are outside of the scope of the [subvention] requirement. Therefore, they need not be explicitly excepted from its reach.” (Maj. opn., ante, at p. 488.) In my view, excluding or otherwise removing something from the purview of a law is tantamount to creating an exception thereto. When an exclusionary implication is clear from the import or effect of the statutory language, use of the word “except” should not be necessary to construe the result for what it clearly is. In this circumstance, “I would invoke the folk wisdom that if an object looks like a duck, walks like a duck and quacks like a duck, it is likely to be a duck.” (*In re Deborah C.* (1981) 30 Cal.3d 125, 141 [177 Cal.Rptr. 852, 635 P.2d 446] (conc. opn. by Mosk, J.).)

Of at least equal importance, section 17500 et seq. constitutes a legislative implementation of article XIII B, section 6. As such, the overall statutory scheme must comport with the express constitutional language it was designed to effectuate as well as the implicit electoral intent. Eschewing semantics, I would squarely and forthrightly address the fundamental and substantial question of whether the Legislature could lawfully enlarge upon the scope of article XIII B, section 6, to include exceptions not originally designated in the initiative.

I do not hereby seek to undermine the majority holding but rather to set it on a firmer constitutional footing. “[S]tatutes must be given a reasonable interpretation, one which will carry out the intent of the legislators and render them valid and operative rather than defeat them. In so doing, sections of the Constitution, as well as the codes, will be harmonized where reasonably possible, in order that all may stand.” (*Rose v. State of California* (1942) 19 Cal.2d 713, 723 [123 P.2d 505]; see also *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 58 [233 Cal.Rptr. 38, 729 P.2d 202].) To this end, it is a fundamental premise of our form of government that “the Constitution of this State is not to be considered as a grant of power, but rather as a restriction upon the powers of the Legislature; and ... it is competent for the Legislature to exercise all powers not forbidden” (*People v. Coleman* (1854) 4 Cal. 46, 49.) “Two important consequences flow from this fact. First, the entire law-making authority of the state, except the people’s right of initiative and referendum, is vested in the *491 Legislature, and that body may exercise any and all legislative powers which are not expressly or by necessary implication denied to it by the Constitution. [Citations.] *In other words, ‘we do not look to the Constitution to determine whether the legislature is authorized to do an act, but only to see if it is prohibited.’* [Citation.] [¶] Secondly, all intendments favor the exercise of the Legislature’s plenary authority: ‘If there is any doubt as to the Legislature’s power to act in any given case, the doubt should be resolved in favor of the Legis-

lature's action. Such restrictions and limitations [imposed by the Constitution] are to be construed strictly, and are not to be extended to include matters not covered by the language used.' [Citations.]" (*Methodist Hosp. of Sacramento v. Saylor* (1971) 5 Cal.3d 685, 691 [97 Cal.Rptr. 1, 488 P.2d 161], italics added.) "Specifically, the express enumeration of legislative powers is not an exclusion of others not named unless accompanied by negative terms. [Citations.]" (*Dean v. Kuchel* (1951) 37 Cal.2d 97, 100 [230 P.2d 811].)

As the majority opinion impliedly recognizes, neither the language nor the intent of article XIII B conflicts with the exercise of legislative prerogative we review today. Of paramount significance, neither section 6 nor any other provision of article XIII B prohibits statutory delineation of additional circumstances obviating reimbursement for state mandated programs. (See *Dean v. Kuchel*, *supra*, 37 Cal.2d at p. 101; *Roth Drugs, Inc. v. Johnson* (1936) 13 Cal.App.2d 720, 729 [57 P.2d 1022]; see also *Kehrlein v. City of Oakland* (1981) 116 Cal.App.3d 332, 338 [172 Cal.Rptr. 111].)

Furthermore, the initiative was "[b]illed as a flexible way to provide discipline in government spending" by creating appropriations limits to restrict the amount of such expenditures. (*County of Placer v. Corin* (1980) 113 Cal.App.3d 443, 447 [170 Cal.Rptr. 232]; see Cal. Const., art. XIII B, § 1.) By their nature, user fees do not affect the equation of local government spending: While they facilitate implementation of newly mandated state programs or increased levels of service, they are excluded from the "appropriations subject to limitations" calculation and its attendant budgetary constraints. (See Cal. Const., art. XIII B, § 8; see also *City Council v. South* (1983) 146 Cal.App.3d 320, 334 [194 Cal.Rptr. 110]; *County of Placer v. Corin*, *supra*, 113 Cal.App.3d at pp. 448-449; Cal. Const., art. XIII B, § 3, subd. (b); cf. *Russ Bldg. Partnership v. City and County of San Francisco* (1987) 199 Cal.App.3d 1496, 1505 [246 Cal.Rptr. 21] ["fees not exceeding the reasonable cost of

providing the service or regulatory activity for which the fee is charged and which are not levied for general revenue purposes, have been considered outside the realm of "special taxes" [limited by California Constitution, article XIII A]' "); *492 *Terminal Plaza Corp. v. City and County of San Francisco* (1986) 177 Cal.App.3d 892, 906 [223 Cal.Rptr. 379] [same].)

This conclusion fully accommodates the intent of the voters in adopting article XIII B, as reflected in the ballot materials accompanying the proposition. (See *Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization* (1978) 22 Cal.3d 208, 245-246 [149 Cal.Rptr. 239, 583 P.2d 1281].) In general, these materials convey that "[t]he goals of article XIII B, of which section 6 is a part, were to protect residents from excessive taxation and government spending." (*County of Los Angeles v. State of California*, *supra*, 43 Cal.3d at p. 61; *Huntington Park Redevelopment Agency v. Martin* (1985) 38 Cal.3d 100, 109- 110 [211 Cal.Rptr. 133, 695 P.2d 220].) To the extent user fees are not borne by the general public or applied to the general revenues, they do not bear upon this purpose. Moreover, by imputation, voter approval contemplated the continued imposition of reasonable user fees outside the scope of article XIII B. (Ballot Pam., Proposed Amends. to Cal. Const. with arguments to voters, Limitation of Government Appropriations, Special Statewide Elec. (Nov. 6, 1979), arguments in favor of and against Prop. 4, p. 18 [initiative "Will curb excessive user fees imposed by local government" but "will Not eliminate user fees ..."]; see *County of Placer v. Corin*, *supra*, 113 Cal.App.3d at p. 452.)

"The concern which prompted the inclusion of section 6 in article XIII B was the perceived attempt by the state to enact legislation or adopt administrative orders creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services which the state believed should be extended to the public." (*County of Los Angeles v.*

State of California, supra, 43 Cal.3d at p. 56; see *City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 66 [266 Cal.Rptr. 139, 785 P.2d 522].) “Section 6 had the additional purpose of precluding a shift of financial responsibility for carrying out governmental functions from the state to local agencies which had had their taxing powers restricted by the enactment of article XIII A in the preceding year and were ill equipped to take responsibility for any new programs.” (*County of Los Angeles v. State of California, supra*, 43 Cal.3d at p. 61.) An exemption from reimbursement for state mandated programs for which local governments are authorized to charge offsetting user fees does not frustrate or compromise these goals or otherwise disturb the balance of local government financing and expenditure.^{FN2} (See *493 *County of Placer v. Corin, supra*, 113 Cal.App.3d at p. 452, fn. 7.) Article XIII B, section 8, subdivision (c), specifically includes regulatory licenses, user charges, and user fees in the appropriations limitation equation only “to the extent that those proceeds exceed the costs reasonably borne by [the governmental] entity in providing the regulation, product, or service”

FN2 This conclusion also accords with the traditional and historical role of user fees in promoting the multifarious functions of local government by imposing on those receiving a service the cost of providing it. (Cf. *County of Placer v. Corin, supra*, 113 Cal.App.3d at p. 454 [“Special assessments, being levied only for improvements that benefit particular parcels of land, and not to raise general revenues, are simply not the type of exaction that can be used as a mechanism for circumventing these tax relief provisions. [Citation.]”].)

The self-executing nature of article XIII B does not alter this analysis. “It has been uniformly held that the legislature has the power to enact statutes providing for reasonable regulation and control of rights granted under constitutional provisions. [Citations.]” (*Chesney v. Byram* (1940) 15 Cal.2d

460, 465 [101 P.2d 1106].) “ ‘ ‘Legislation may be desirable, by way of providing convenient remedies for the protection of the right secured, or of regulating the claim of the right so that its exact limits may be known and understood; but all such legislation must be subordinate to the constitutional provision, and in furtherance of its purpose, and must not in any particular attempt to narrow or embarrass it.’ [Citations.]’ ” (*Id.*, at pp. 463-464; see also *County of Contra Costa v. State of California* (1986) 177 Cal.App.3d 62, 75 [222 Cal.Rptr. 750].) Section 17556(d) is not “merely [a] transparent attempt[] to do indirectly that which cannot lawfully be done directly.” (*Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521, 541 [234 Cal.Rptr. 795].) On the contrary, it creates no conflict with the constitutional directive it subserves. Hence, rather than pursue an interpretive expedient, this court should expressly declare that it operates as a valid legislative implementation thereof.

“[Initiative] provisions of the Constitution and of charters and statutes should, as a general rule, be liberally construed in favor of the reserved power. [Citations.] As opposed to that principle, however, ‘in examining and ascertaining the intention of the people with respect to the scope and nature of those ... powers, it is proper and important to consider what the consequences of applying it to a particular act of legislation would be, and if upon such consideration it be found that by so applying it the inevitable effect would be greatly to impair or wholly destroy the efficacy of some other governmental power, the practical application of which is essential and, perhaps, ... indispensable, to the convenience, comfort, and well-being of the inhabitants of certain legally established districts or subdivisions of the state or of the whole state, then in such case the courts may and should assume that the people intended no such result to flow from the application of those powers and that they do not so apply.’ [Citation.]” (*Hunt v. Mayor & Council of Riverside* (1948) 31 Cal.2d 619, 628-629 [191 P.2d 426].) *494

This court is not infrequently called upon to resolve the tension of apparent or actual conflicts in the express will of the people.^{FN3} Whether that expression emanates directly from the ballot or indirectly through legislative implementation, each deserves our fullest estimation and effectuation. Given the historical and abiding role of government by initiative, I decline to circumvent that responsibility and accept uncritically the Legislature's self-validating statutory scheme as the basis for approving the exercise of its prerogative. It is not enough to say a broader constitutional analysis yields the same result and therefore is unnecessary. We provide a higher quality of justice harmonizing rather than ignoring the divers voices of the people, for such is the nature of our office. *495

H
KATHLEEN CONNELL, as Controller, etc., et al.,
Petitioners,
v.
THE SUPERIOR COURT OF SACRAMENTO
COUNTY, Respondent; SANTA MARGARITA
WATER DISTRICT et al., Real Parties in Interest.
No. C024295.

Court of Appeal, Third District, California.
Nov. 20, 1997.

SUMMARY

Several Water districts brought mandamus proceedings against the State Controller to enforce a State Board of Control decision that a statewide regulatory amendment, which increases the level of purity required when reclaimed wastewater is used for certain types of irrigation, constitutes a state-mandated program for which water districts are entitled to reimbursement from the state. The trial court entered a judgment that the state mandate was a program for which reimbursement was due, and it directed the Controller to determine the amounts of reimbursement. (Superior Court of Sacramento County, Nos. CV347181, CV357155, CV357156 and CV357950, James Timothy Ford, Judge.)

The Court of Appeal ordered issuance of a writ of mandate directing the trial court to vacate its judgment and enter a new judgment denying the petitions for a writ of mandate. The court held that because the judgment plainly left matters undecided, the judgment was interlocutory and therefore was not appealable; however, the court treated the appeal as a writ petition. On the merits, the court held that the public interest exception to the doctrine of administrative collateral estoppel precluded application of the doctrine to the legal issues raised by defendant. The issues presented were not limited to the validity of any finally adjudicated individual claim, but encompassed the question of subvention obligations in general under the regulatory amend-

ment of wastewater purification standards. The court further held that even if the amendment constitutes a new program for state-mandated costs purposes, the costs are not reimbursable, since the water districts have the authority to levy fees to pay for the program (Wat. Code, § 35470). Rev. & Tax. Code, former § 2253.2 (now Gov. Code, § 17556), provides that the board shall not find a reimbursable cost if the local agency has the "authority," i.e., the right or power, to levy service charges, fees, or assessments sufficient to pay for the mandated program. The plain language of the statute precludes a construction of "authority" to mean a practical ability in light of surrounding economic circumstances. The court also held that the public interest exception to the doctrine of administrative collateral estoppel permitted the Controller to raise that issue in the trial court. (Opinion by Sims, J., with Puglia, P. J., and Nicholson, J., concurring.)

HEADNOTES

Classified to California Digest of Official Reports

(1a, 1b) Appellate Review § 17--Decisions Appealable--Final Judgment-- Necessity For Further Orders.

A judgment entered in litigation to determine whether a statewide regulatory amendment, which increases the level of purity required when reclaimed wastewater is used for certain types of irrigation, constitutes a state-mandated program for which water districts are entitled to reimbursement from the state, was not a final judgment and thus was not appealable. The challenging parties' petition sought an order directing the State Controller to issue a warrant and the State Treasurer to pay a warrant, but the judgment merely ordered the Controller to determine amounts without disposing of those matters. The record reflected the trial court's recognition that it could not order issuance or payment of warrants unless it determined appropriated funds for such expenditures were reasonably avail-

59 Cal.App.4th 382, 69 Cal.Rptr.2d 231, 97 Cal. Daily Op. Serv. 8821, 97 Daily Journal D.A.R. 14,255
(Cite as: 59 Cal.App.4th 382)

able in the state budget, but the necessary evidentiary hearing on that issue was not held. Because the judgment plainly left matters undecided, the judgment was interlocutory and therefore not appealable.

(2) Appellate Review §
10--Jurisdiction--Appealable Judgment.

An appealable judgment or order is a jurisdictional prerequisite to an appeal.

[See 9 Witkin, Cal. Procedure (4th ed. 1997) Appeal, §§ 13-14.]

(3) Appellate Review § 17--Decisions Appealable--Interlocutory Judgment.

An interlocutory judgment is not appealable; generally, a judgment is interlocutory if anything further in the nature of judicial action on the part of the trial court is essential to a final determination of the rights of the parties.

(4) Mandamus and Prohibition §
44--Mandamus--To Courts--Appeal--Scope of Review.

In reviewing a trial court's ruling on a petition for a writ of mandate, the appellate court is ordinarily confined to an inquiry as to whether the findings and judgment of the trial court are supported by substantial evidence. However, where the facts are undisputed and the issues present questions of law, the appellate court is not bound by the trial court's decision but may make its own determination.

(5) Judgments § 81--Res Judicata--Administrative Collateral Estoppel-- Public Interest Exception--Board of Control Decision.

In litigation by several water districts against the State Controller to enforce a State Board of Control decision that a statewide regulatory amendment, which increases the level of purity required when reclaimed wastewater is used for certain types of irrigation, constitutes a state-mandated program for which water districts are entitled to reimbursement from the state, the public interest exception to the doctrine of administrative collateral estoppel precluded application of the doctrine to the legal issues raised by defendant. The issues presented were not

limited to the validity of any finally adjudicated individual claim, but encompassed the question of subvention obligations in general under the regulatory amendment of wastewater purification standards. If the board's decision was wrong but unimpeachable, taxpayers statewide would suffer unjustly the consequences of a continuing obligation to fund the costs of local water districts.

[See 7 Witkin, Cal. Procedure (4th ed. 1997) Judgment, § 339.]

(6a, 6b) State of California § 11--Fiscal Matters--Reimbursement for State-mandated Costs--Standards for Reclaimed Wastewater--Authority of Water Districts to Levy Fees.

Even if a statewide regulatory amendment, which increases the level of purity required when reclaimed wastewater is used for certain types of irrigation, constitutes a new program for state-mandated costs purposes, the costs are not reimbursable, since the water districts have the authority to levy fees to pay for the program (Wat. Code, § 35470). Rev. & Tax. Code, former § 2253.2 (now Gov. Code, § 17556), provides that the Board of Control shall not find a reimbursable cost if the local agency has the "authority," i.e., the right or power, to levy service charges, fees, or assessments sufficient to pay for the mandated program. The plain language of the statute precludes a construction of "authority" to mean a practical ability in light of surrounding economic circumstances.

(7) Statutes §
29--Construction--Language--Legislative Intent.

In construing statutes, a court's primary task is to determine the lawmakers' intent. To determine intent, the court looks first to the words themselves. If the language is clear and unambiguous there is no need for construction, nor is it necessary to resort to indicia of the intent of the Legislature.

(8) Judgments § 81--Res Judicata--Administrative Collateral Estoppel-- Public Interest Exception--Legal Issue.

In litigation by several water districts against the State Controller to enforce a State Board of Control

decision that a statewide regulatory amendment, which increases the level of purity required when reclaimed wastewater is used for certain types of irrigation, constitutes a state-mandated program for which water districts are entitled to reimbursement from the state, the public interest exception to the doctrine of administrative collateral estoppel permitted defendant to raise the purely legal issue that Rev. & Tax. Code, former § 2253.2 (now Gov. Code, § 17556), precluded reimbursement. The statute provides that the Board of Control shall not find a reimbursable cost if the local agency has the "authority," i.e., the right or power, to levy service charges, fees, or assessments sufficient to pay for the mandated program, and plaintiffs have such authority. The board's finding to the contrary was thus not binding.

COUNSEL

Daniel E. Lungren, Attorney General, Floyd D. Shimomura, Assistant Attorney General, Linda A. Cabatic and Susan R. Oie, Deputy Attorneys General, for Petitioners.

No appearance for Respondent.

James A. Curtis for Real Parties in Interest.

SIMS, J.

This case involves a dispute as to whether a statewide regulatory amendment, increasing the level of purity required when reclaimed wastewater is used for certain types of irrigation, constitutes a state-mandated program for which water districts are entitled to reimbursement from the state. (Cal. Const., art. XIII B, § 6 (hereafter, section 6); ^{FN1} Gov. Code, § 17500 et seq.; former Rev. & Tax. Code, § 2201 et seq.) The State Controller and State Treasurer appeal from a trial court judgment granting *386 petitions for writ of mandate brought by Santa Margarita Water District (SMWD), Marin Municipal Water District, Irvine Ranch Water District and Santa Clara Valley Water District (the Districts), seeking to enforce a State Board of Control

(the Board) decision which found the regulatory amendment constituted a reimbursable state mandate. ^{FN2} Appellants contend the trial court erred because (1) the amendment did not constitute a new program or higher level of service in an existing program; (2) the Districts' claim was abolished when the statutory basis for their claim-former Revenue and Taxation Code section 2207-was repealed before their rights were reduced to final judgment, and (3) the Districts' authority to levy fees to pay for the increased costs defeats their claim of a reimbursable mandate. Appellants also challenge the trial court's determination that they were collaterally estopped from challenging the Board's decision (finding a reimbursable state mandate) by their failure timely to seek judicial review of the administrative decision. We shall conclude the Districts' authority to levy fees defeats their claim of a reimbursable mandate, and appellants are not collaterally estopped from raising this matter. We therefore need not address the other contentions. Treating this appeal from a nonappealable judgment as an extraordinary writ petition, we shall direct the trial court to vacate its judgment and enter a new judgment denying the Districts' petitions.

FN1 Section 6 provides: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [¶] (a) Legislative mandates requested by the local agency affected; [¶] (b) Legislation defining a new crime or changing an existing definition of a crime; or [¶] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975."

59 Cal.App.4th 382, 69 Cal.Rptr.2d 231, 97 Cal. Daily Op. Serv. 8821, 97 Daily Journal D.A.R. 14,255
(Cite as: 59 Cal.App.4th 382)

FN2 The trial court first held proceedings in the matter of the petition filed by the SMWD. The other three water districts had filed petitions, which were consolidated and awaiting hearing. The parties to the consolidated case filed a stipulation indicating they did not wish to relitigate the entitlement issues already decided by Judge Ford in the SMWD case, and they stipulated to assignment of their cases to Judge Ford pursuant to California Rules of Court, rule 213 (assignment to one judge for all or limited purposes), for determination of amounts as to each district. The judgment expressly covers the petitions of all four districts.

Factual and Procedural Background

In 1975, the State Department of Health Services (DHS) adopted regulations (Cal. Code Regs., tit. 22, §§ 60301-60357) implementing Water Code section 13521, which provides: "The State Department of Health Services shall establish uniform statewide recycling criteria for each varying type of use of recycled water where the use involves the protection of public health." Section 60313^{FN3} of title 22 of the California Code of Regulations prescribed the level of purity required for reclaimed water to be used for landscape irrigation. *387

FN3 California Code of Regulations, title 22, section 60313, initially provided: "Landscape Irrigation. Reclaimed water used for the irrigation of golf courses, cemeteries, lawns, parks, playgrounds, freeway landscapes, and landscapes in other areas where the public has access shall be at all times an adequately disinfected, oxidized wastewater. The wastewater shall be considered adequately disinfected if at some location in the treatment process the median number of coliform organisms does not exceed 23 per 100 milliliters, as determined from the bacteriological results

of the last 7 days for which analyses have been completed." (Former § 60313, Cal. Code Regs., tit. 22, Register 75. No. 14 (Apr. 5, 1975).)

In May 1976, SMWD adopted a plan to develop a wastewater reclamation system. In August 1976, SMWD filed an application with the responsible regional water quality control board (Water Control Board) for a permit to discharge wastewater from the proposed reclamation system. SMWD also planned to provide reclaimed water for irrigation, potentially to 2,173 acres of land.

In February 1977, the Water Control Board issued SMWD a permit for operation of a reclamation system—the Oso Creek facility. The permit required SMWD to comply with all applicable wastewater reclamation regulations then in effect.

In late 1977, SMWD learned DHS might be considering modifications to the California Code of Regulations, title 22 regulations.

In August 1978, SMWD completed construction of the Oso Creek facility, at a cost of \$17 million.

In September 1978, DHS amended the regulations. The amendment to California Code of Regulations, title 22, section 60313^{FN4} increased the level of purity required before reclaimed wastewater could be used for the irrigation of parks, playgrounds and school yards. It is this amendment which allegedly constituted a state-mandated cost. SMWD modified its facility to comply with the amended regulations, completing the modifications in 1983. *388

FN4 Section 60313 of California Code of Regulations, title 22, as amended, provides: "(a) Reclaimed water used for the irrigation of golf courses, cemeteries, freeway landscapes, and landscapes in other areas where the public has similar access or exposure shall be at all times an adequately disinfected, oxidized wastewater. The wastewater shall be considered ad-

equately disinfected if the median number of coliform organisms in the effluent does not exceed 23 per 100 milliliters, as determined from the bacteriological results of the last 7 days for which analyses have been completed, and the number of coliform organisms does not exceed 240 per 100 milliliters in any two consecutive samples.

“(b) Reclaimed water used for the irrigation of parks, playgrounds, schoolyards, and other areas where the public has similar access or exposure shall be at all times an adequately disinfected, oxidized, coagulated, clarified, filtered wastewater or a wastewater treated by a sequence of unit processes that will assure an equivalent degree of treatment and reliability. The wastewater shall be considered adequately disinfected if the median number of coliform organisms in the effluent does not exceed 2.2 per 100 milliliters, as determined from the bacteriological results of the last 7 days for which analyses have been completed, and the number of coliform organisms does not exceed 23 per 100 milliliters in any sample.”

On October 1, 1982, SMWD filed a “test claim”^{FN5} with the Board, alleging the regulatory amendment relating to the use of reclaimed wastewater constituted a new program or higher level of service. The test claim was made pursuant to former Revenue and Taxation Code section 2231,^{FN6} which required reimbursement to local agencies for costs mandated by the state (see now Gov. Code, § 17561^{FN7}), and former Revenue and Taxation Code section 2207, subdivisions (a) and (b)^{FN8} defining “costs mandated by the state.” (See now Gov. Code, § 17514.^{FN9}) The test claim also cited section 6 (fn. 1, *ante*). *389

FN5 At the time in question, “test claim” meant “the first claim filed with the State Board of Control alleging that a particular

statute or executive order imposes a mandated cost on such local agency or school district.” (Former Rev. & Tax. Code, § 2218; Stats. 1980, ch. 1256, § 7, p. 4249.) “Estimated claims” and “reimbursement claims” were used to make specific demand against an appropriation made for the purpose of paying such claims. (*Ibid.*)

A similar structure, distinguishing between “test claims” and various “reimbursement claims” or “entitlement claims” continues presently in Government Code sections 17521-17522.

At the time in question, the statutory procedure provided that if the Board found a mandate, it did not determine the amount to be reimbursed to the test claimant; rather, the Board then adopted a statewide cost estimate which was reported to the Legislature. (Stats. 1980, ch. 1256, p. 4246 et seq.; Stats. 1982, ch. 734, p. 2911 et seq.) It was the State Controller who determined specific amounts to be reimbursed, after the Legislature appropriated funds for that purpose. (*Ibid.*)

FN6 Former Revenue and Taxation Code section 2231 provided in part: “(a) The state shall reimburse each local agency for all ‘costs mandated by the state,’ as defined in Section 2207....” (Stats. 1982, ch. 1586, § 3, p. 6264.)

FN7 Government Code section 17561 provides in part: “(a) The state shall reimburse each local agency and school district for all ‘costs mandated by the state,’ as defined in Section 17514....”

FN8 Former Revenue and Taxation Code section 2207 provided in part: “ ‘Costs mandated by the state’ means any increased costs which a local agency is required to incur as a result of the following: [¶] (a)

Any law enacted after January 1, 1973, which mandates a new program or an increased level of service of an existing program; [¶] (b) Any executive order issued after January 1, 1973, which mandates a new program” (Stats. 1980, ch. 1256, § 4, pp. 4247-4248.)

The test claim did *not* invoke other subdivisions of former Revenue and Taxation Code section 2207, concerning “(c) Any executive order issued after January 1, 1973, which (i) implements or interprets a state statute and (ii), by such implementation or interpretation, increases program levels above the levels required prior to January 1, 1973. [¶] ... [¶] ... (h) Any statute enacted after January 1, 1973, or executive order issued after January 1, 1973, which adds new requirements to an existing optional program or service and thereby increases the cost of such program or service if the local agencies have no reasonable alternatives other than to continue the optional program.” (Stats. 1980, ch. 1256, § 4, pp. 4247-4248.) Since these subdivisions were not invoked, we have no need to consider them.

FN9 Government Code section 17514 provides: “ ‘Costs mandated by the state’ means any increased costs which a local agency or school district is required to incur after July 1, 1980, as a result of any statute enacted on or after January 1, 1975, or any executive order implementing any statute enacted on or after January 1, 1975, which mandates a new program or higher level of service of an existing program within the meaning of Section 6”

On July 28, 1983, the Board determined the amended regulations imposed state mandated costs. In so doing, the Board rejected the position of state agencies seeking denial of the claim on the ground that local agencies are not mandated to use re-

claimed water and because, if local agencies do choose to use it, they can recover the cost in charges made to purchasers of the water.

On January 19, 1984, the Board adopted “Parameters and Guidelines” establishing criteria for payment of claims to water districts pursuant to this mandate. (Former Rev. & Tax. Code, § 2253.2; Stats. 1982, ch. 734, § 10, pp. 2916-2917; Gov. Code, § 17557.)

On May 31, 1984, the Board amended its Parameters and Guidelines to provide for reimbursement of SMWD's cost of preparing and presenting the test claim.

In June 1984, the Board, pursuant to former Revenue and Taxation Code section 2255, ^{FN10} submitted to the Legislature a statewide cost estimate of \$14 million for this mandate. The Legislature did not appropriate any funds for the mandate in 1984.

FN10 Former Revenue and Taxation Code section 2255 provided: “At least twice each calendar year the Board of Control shall report to the Legislature on the number of mandates it has found and the estimated statewide costs of such mandates. Such report shall identify the statewide costs estimated for each such mandate and the reasons for recommending reimbursement.... Immediately on receipt of such report a local governmental claims bill shall be introduced in the Legislature. The local government claims bill, at the time of its introduction, shall provide for an appropriation sufficient to pay the estimated costs of such mandates, pursuant to the provisions of this article.” (Stats. 1980, ch. 1256, § 20, p. 4255.)

The current provision is contained in Government Code section 17600, which provides: “At least twice each calendar year the commission shall report to the Legislature on the number of mandates it has

found pursuant to Article 1 (commencing with Section 17550) and the estimated statewide costs of these mandates. This report shall identify the statewide costs estimated for each mandate and the reasons for recommending reimbursement.”

In 1985, the Legislature included an appropriation of almost \$14 million for this state-mandated cost in the budget, but the Governor vetoed the appropriation.

In 1986, a bill including \$945,000 for the subject mandate was introduced, but the bill was not enacted.

On January 27, 1987, SMWD filed in the trial court a petition for writ of mandate pursuant to Code of Civil Procedure section 1085. The petition sought an order directing (1) the State Controller to issue a warrant “to pay the State's obligation to SMWD for its 'costs mandated by the state' ” and (2) the State Treasurer to pay the Controller's warrant. *390

At a hearing, the trial court upheld the Board's decision that the amended regulations required a higher level of service and held the doctrines of waiver and collateral estoppel applied to that decision, such that the state, by failing to challenge the Board's decision within the three-year statute of limitations, was barred from challenging it now. However, the trial court did allow the state to argue that the amended regulations did not come within the definition of “program,” as that word had recently been defined in *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56 [233 Cal.Rptr. 38, 729 P.2d 202].

The trial court recognized that, since there was no appropriation for this mandate in the state budget, the court could not grant the relief sought by SMWD (an order directing the Controller to issue a warrant and the Treasurer to pay it) unless the court found the existence of funds reasonably available in the state budget which could be tapped for this purpose. The trial court stated it was not prepared to

find the existence of funds reasonably available without a full evidentiary hearing. Rather than use the Board's statewide estimate, the court believed it needed to know the amount to which each water district would be entitled before it could determine whether there were funds reasonably available in the budget. The trial court ruled the exact amount of money to be reimbursed to the Districts had never been determined and referred the matter to a referee to make that determination.

In February 1989, a court-appointed referee began evidentiary hearings to determine the amount of reimbursement for each water district.

In 1989, the Legislature repealed former Revenue and Taxation Code section 2207 (fn. 8, *ante*), defining “costs mandated by the state.” (Stats. 1989, ch. 589, § 7, p. 1978.)

On July 29, 1994, appellants filed in the trial court a motion for judgment on the pleadings/motion to dismiss, arguing repeal of former Revenue and Taxation Code section 2207 destroyed any right to reimbursement and divested the court of jurisdiction to proceed. The motion also revisited the issue presented to and rejected by the Board, that the water districts' authority to levy fees defeated a finding that the costs were reimbursable.

In February 1995, the trial court issued its ruling denying appellants' motion for judgment on the pleadings and for dismissal. The court in its minute order determined repeal of former Revenue and Taxation Code section 2207 in 1989 had not destroyed the Districts' right to reimbursement pursuant to the Board's decision, because the Board's decision was reduced to “final judgment” before the statutory repeal. The court said the Board's *391 decision on July 28, 1983, became final in July 1986, when the applicable three-year statute of limitations for seeking judicial review lapsed. The Board's decision therefore conclusively established the Districts' right to reimbursement, and appellants were collaterally estopped from challenging the Board's decision. The court further said no discern-

59 Cal.App.4th 382, 69 Cal.Rptr.2d 231, 97 Cal. Daily Op. Serv. 8821, 97 Daily Journal D.A.R. 14,255
(Cite as: 59 Cal.App.4th 382)

ible injustice or public interest precluded this application of collateral estoppel; rather, justice would be furthered by allowing the Districts to enforce their right to reimbursement as established by the Board.

The trial court further said the statutory authority of the Districts to levy service charges and assessments (Former Rev. & Tax. Code, § 2253.2, subd. (b)(4); ^{FN11} Stats. 1982, ch. 734, § 10, p. 2916; Gov. Code, § 17556 ^{FN12}) did not bar reimbursement for state-mandated costs. "When the Board determined that the 1978 amendment of the regulations establishing reclamation criteria imposed reimbursable state-mandated costs, it rejected the argument of the State Departments of Health Services and Finance that the costs were not reimbursable pursuant to former Revenue and Taxation Code section 2253(b)(4) and implicitly determined, in accordance with the presentation of [Santa Margarita Water District] that [the Districts] did not have sufficient authority to levy service charges and assessments to pay for the increased level of service mandated by the 1978 regulatory amendment. This implicit determination, resolving a mixture of legal and factual issues, became final and binding on respondents under the doctrine of collateral estoppel when they failed to seek judicial review of the Board's decision within the three-year limitations period."

FN11 At the time SMWD filed its test claim, former Revenue and Taxation Code section 2253.2 provided in part: "(b) The Board of Control shall not find a reimbursable mandate ... in any claim submitted by a local agency ... if, after a hearing, the board finds that: [¶] ... [¶] (4) The local agency ... has the authority to levy service charges, fees or assessments sufficient to pay for the mandated program or level of service." (Stats. 1982, ch. 734, § 10, p. 2916.)

FN12 Government Code section 17556 provides in part: "The [Commission on

State Mandates (formerly the Board of Control)] shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds that: [¶] ... [¶] (d) The local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service."

At a further hearing concerning the amount owed to each water district, the trial court stated it had erred in referring the matter to a referee and should have rendered a judgment directing the Controller to determine the amounts owed.

On June 3, 1996, the trial court entered a judgment stating (1) the Board's decision was final at the time the petitions were filed in the trial court; (2) *392 the state mandate is a program for which reimbursement is due under *County of Los Angeles v. State of California, supra*, 43 Cal.3d 46; (3) the court having concluded it was inappropriate for the court to determine amounts of reimbursement, the Controller was directed to make that determination. The court directed issuance of a writ commanding the Controller to determine the amounts due to the Districts.

Appellants appeal from the judgment.

The Districts filed a cross-appeal, but we dismissed the cross-appeal pursuant to stipulation of the parties.

Discussion

I. Appealability

(1a) Because the petition sought an order directing the Controller to issue a warrant and the Treasurer to pay a warrant but the judgment merely ordered the Controller to determine amounts without dis-

posing of those matters, and because the record reflected the trial court's recognition that it could not order issuance or payment of warrants unless it determined appropriated funds for such expenditures were reasonably available in the state budget^{FN13} (*Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521, 538-541 [234 Cal.Rptr. 795])-a determination requiring an evidentiary hearing which was not held-we requested supplemental briefing on the question whether the judgment was a final appealable judgment, as opposed to an interlocutory judgment.

FN13 The petition for writ of mandate alleged there was a continuously appropriated State Mandates Claims Fund upon which the Legislature had placed restrictions which on their face made the fund inapplicable to the mandate at issue in this case. The petition further alleged these restrictions were unconstitutional, such that upon a judicial declaration of their unconstitutionality, there would exist funds reasonably available to pay SMWD. The trial court made no ruling on these matters. In this appeal, we need not and do not decide the propriety of the remedy sought by the Districts.

(2) An appealable judgment or order is a jurisdictional prerequisite to an appeal. (Code Civ. Proc., § 904.1; 9 Witkin, Cal. Procedure (4th ed. 1997) Appeal, §§ 13-14, pp. 72-73.)

(3) An interlocutory judgment is not appealable; generally, a judgment is interlocutory if anything further in the nature of judicial action on the part of the trial court is essential to a final determination of the rights of the parties. (*Lyon v. Goss* (1942) 19 Cal.2d 659, 669-670 [123 P.2d 11].)

(1b) In their supplemental briefs, both sides maintain the judgment is a final appealable judgment but for different reasons. Both sides are wrong. *393

Appellants assert the judgment is final because

nothing further remains to be done by the trial court. According to appellants, the Controller, after determining what amounts are due, is supposed to submit that amount to the Legislature to appropriate the funds (though the judgment contains no such direction). Appellants assert that, if the Legislature does not appropriate the funds, the Districts' remedy would be to file a new action in the superior court to enforce the court's prior order, and to compel payment out of funds already appropriated and reasonably available for the expenditures. Appellants assert it is thus premature to consider whether appropriated funds are reasonably available to pay any reimbursement due.

The Districts' supplemental brief, while agreeing the judgment is a final appealable judgment, disputes appellants' view of what happens after the Controller determines the amounts. The Districts maintain the trial court intended for appellants to pay the amounts determined by the Controller, despite the judgment's failure so to state. The Districts claim the unresolved factual question of the existence of available appropriated funds in the budget is merely "an administrative detail" which need not be addressed by the court except in a proceeding to enforce the judgment in the event appellants refuse to pay.

Both sides are wrong. Nothing in the judgment requires the Controller to submit an appropriations bill to the Legislature, and appellants cite no authority that would require such a procedure-which would duplicate steps previously undertaken in this case without success. Nor does anything in the judgment call for issuance or payment of warrants. *Carmel Valley Fire Protection Dist. v. State of California, supra*, 190 Cal.App.3d 521-a case discussed in the trial court and on appeal-recognized that a court violates the separation of powers doctrine if it purports to compel the Legislature to appropriate funds, but no such violation occurs if the court orders payment from an existing appropriation. (*Id.* at pp. 538-539.) Thus, the Districts' view of this matter as an administrative detail for a later

postjudgment enforcement proceeding is unsupported.

We recognize this litigation arises from a “test claim,” which merely determines whether a state-mandated cost exists. (See fn. 5, *ante*.) Perhaps no issue of payment should arise at all at the test claim stage, though neither side so argues.

In any event, the judgment plainly leaves matters undecided.

We conclude the judgment is interlocutory and therefore not appealable.

Nevertheless, on our own motion, we shall exercise our discretion to treat the appeal as a writ petition and shall grant review on that basis. (*394 *Morehart v. County of Santa Barbara* (1994) 7 Cal.4th 725, 743-744 [29 Cal.Rptr.2d 804, 872 P.2d 143] [treating appeal as writ petition is authorized means for obtaining review of interlocutory judgments].) We shall exercise our discretion to treat the appeal as a writ petition in the interest of justice and judicial economy, because the merits of the dispositive issues have been fully briefed, both sides urge review, and the judgment compels the Controller to engage in complex factfinding determinations which may be moot if the trial court erred on the merits of the mandate issues. Given the difficulties in discerning how the former statutory process of test claims was supposed to work in practice, we believe the interests of justice and judicial economy are best served by reviewing the judgment rather than dismissing the appeal.

We stress, however, that our review is limited to contentions raised in the briefs-which do not raise issues of the propriety of the remedy sought by the Districts. We express no view on whether the remedy sought by the Districts was an available or appropriate remedy.

II. Standard of Review

(4) In reviewing the trial court's ruling on a writ of

mandate, the appellate court is ordinarily confined to an inquiry as to whether the findings and judgment of the trial court are supported by substantial evidence. (*Evans v. Unemployment Ins. Appeals Bd* (1985) 39 Cal.3d 398, 407 [216 Cal.Rptr. 782, 703 P.2d 122].) However, where the facts are undisputed and the issues present questions of law, the appellate court is not bound by the trial court's decision but may make its own determination. (*Ibid.*)

III. Collateral Estoppel

We first address the trial court's determination that appellants were collaterally estopped from challenging the Board's determination of state-mandated cost (except for the ability to address the effect of a new Supreme Court case defining “program”). The trial court stated the Board's decision became final for collateral estoppel purposes in July 1986, when the statute of limitations for judicial review expired.

Appellants contend the trial court erred in applying collateral estoppel, because there was no “final judgment” for collateral estoppel purposes, since the amount of reimbursement had yet to be determined.

(5) We conclude it is not necessary to decide the parties' dispute as to whether the requirements of administrative collateral estoppel are met, because even assuming the elements are met, the doctrine of collateral estoppel should be disregarded pursuant to the public interest exception. *395

Thus, our Supreme Court declined to apply collateral estoppel in a state-mandated costs case in *City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 64-65 [266 Cal.Rptr. 139, 785 P.2d 522] (*Sacramento II*). There, a city and a county filed claims with the Board seeking subvention of costs imposed by a statute (Stats. 1978, ch. 2, p. 6 et seq., referred to in *Sacramento II* as “chapter 2/78”) which extended mandatory coverage under the state unemployment insurance law to include state and

local governments. The Board found there was no state-mandated program and denied the claims. On mandamus, the trial court overruled the Board and found the costs reimbursable. We affirmed the trial court in a published opinion. (*City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182 [203 Cal.Rptr. 258] (*Sacramento I*.) On remand, the Board determined the amounts due on the claims, but the Legislature refused to appropriate the necessary funds. The city filed a class action seeking among other things payment of the state-mandated costs. The trial court granted summary judgment for the state on the grounds the statute did not impose state-mandated costs. The Supreme Court upheld the trial court's decision.

The Supreme Court in *Sacramento II* rejected the local agencies' argument that the state was collaterally estopped from relitigating the issue whether a state-mandated cost existed, because *Sacramento I* "finally" decided the matter. (*Sacramento II, supra*, 50 Cal.3d at p. 64.) The Supreme Court said: "Generally, collateral estoppel bars the party to a prior action, or one in privity with him, from relitigating issues finally decided against him in the earlier action. [Citation.] '... But when the issue is a question of law rather than of fact, the prior determination is not conclusive either if injustice would result or if the public interest requires that relitigation not be foreclosed....' [Citation.]

"Even if the formal prerequisites for collateral estoppel are present here, the public-interest exception governs. Whether chapter 2/78 costs are reimbursable under article XIII B and parallel statutes constitutes a pure question of law. The *state* was the losing party in *Sacramento I*, and also the only entity legally affected by that decision. Thus, strict application of collateral estoppel would foreclose any reexamination of the holding of that case. The state would remain bound, and no other person would have occasion to challenge the precedent.

"Yet the consequences of any error transcend those which would apply to mere private parties. If the result of *Sacramento I* is wrong but unimpeachable,

taxpayers statewide will suffer unjustly the consequences of the state's continuing obligation to fund the chapter 2/78 costs of local agencies...." (*Sacramento II, supra*, 50 Cal.3d at p. 64, original italics.) *396

The Supreme Court also rejected the argument that res judicata applied. "Of course, res judicata and the rule of final judgments bar us from disturbing individual claims or causes of action, on behalf of specific agencies, which have been finally adjudicated and are no longer subject to review. [Citations.] However, the issues presented in the current action are not limited to the validity of any such finally adjudicated individual claims. Rather, they encompass the question of defendants' subvention obligations *in general* under chapter 2/78." (*Sacramento II, supra*, 50 Cal.3d at p. 65, original italics.)

If this court's opinion finding a reimbursable mandate in *Sacramento I* did not constitute a final adjudication precluding further consideration of the matter, a fortiori the Board's decision in the instant case does not constitute a final adjudication precluding further consideration. Thus, here, as in *Sacramento II*, the issues presented are not limited to the validity of any finally adjudicated individual claim, but encompass the question of subvention obligations in general under the regulatory amendment of wastewater purification standards. If the Board's decision is wrong but unimpeachable, taxpayers statewide would suffer unjustly the consequences of a continuing obligation to fund the costs of local water districts. We reject the Districts' argument that no public interest exists in this case because only a few local entities are involved.

The Districts suggest application of the public interest exception to collateral estoppel would nullify the legislative intent to avoid multiple proceedings by creating a comprehensive and exclusive procedure for handling state mandated costs issues in the administrative forum. (E.g., Gov. Code, § 17500. FN14) However, we are bound by Supreme Court authority applying the public interest exception in a

59 Cal.App.4th 382, 69 Cal.Rptr.2d 231, 97 Cal. Daily Op. Serv. 8821, 97 Daily Journal D.A.R. 14,255
(Cite as: 59 Cal.App.4th 382)

state-mandated costs case. (*Auto Equity Sales, Inc. v. Superior Court* (1962) 57 Cal.2d 450 *397[20 Cal.Rptr. 321, 369 P.2d 937].) Moreover, contrary to the Districts' implication, the administrative decision is not the final word; the statutory scheme authorizes judicial review of the administrative decision. (Gov. Code, § 17559; former Rev. & Tax. Code, § 2253.5; Stats. 1977, ch. 1135, § 12, p. 3650.) Additionally, the instant judicial proceeding was initiated by the Districts, not by appellants. Thus, in this case application of the public interest exception to collateral estoppel is not creating multiple proceedings.

FN14 Government Code section 17500 provides in part: "The Legislature finds and declares that the existing system for reimbursing local agencies ... for the costs of state-mandated local programs has not provided for the effective determination of the state's responsibilities under Section 6 The Legislature finds and declares that the failure of the existing process to adequately and consistently resolve the complex legal questions involved in the determination of state-mandated costs has led to an increasing reliance by local agencies and school districts on the judiciary and, therefore, in order to relieve unnecessary congestion of the judicial system, it is necessary to create a mechanism which is capable of rendering sound quasi-judicial decisions and providing an effective means of resolving disputes over the existence of state-mandated local programs. [¶] It is the intent of the Legislature in enacting this part to provide for the implementation of Section 6 ... and to consolidate the procedures for reimbursement of statutes specified in the Revenue and Taxation Code with those identified in the Constitution. Further, the Legislature intends that the Commission on State Mandates, as a quasi-judicial body, will act in a deliberative manner in accordance with the require-

ments of Section 6"

In light of the Supreme Court's decision in *Sacramento II*, we disregard earlier authority of an intermediate appellate court which applied administrative collateral estoppel to a question of law in a state-mandated costs case without express discussion of the public interest exception. (*Carmel Valley Fire Protection Dist. v. State of California, supra*, 190 Cal.App.3d at p. 536.)

We conclude that, insofar as appellants' contentions present questions of law, the public interest exception to administrative collateral estoppel governs, and we shall therefore address the legal arguments raised in appellants' brief.

IV. Authority to Levy Fees

(6a) Appellants contend that, even if the regulatory amendment is a new program for state mandated costs purposes, the Districts' authority to levy fees defeats a determination that the costs are reimbursable. We agree.

At the time SMWD filed its test claim, former Revenue and Taxation Code section 2253.2 provided in part:

"(b) The Board of Control shall not find a reimbursable mandate, pursuant to either Section 2250 of this code or to Section 905.2 of the Government Code, in any claim submitted by a local agency or school district, pursuant to subdivision (a) of Section 2218, if, after a hearing, the board finds that:

.....

"(4) The local agency or school district has the authority to levy service charges, fees or assessments sufficient to pay for the mandated program or level of service." FN15 (Stats. 1982, ch. 734, § 10, p. 2917; Stats. 1980, ch. 1256, § 15, pp. 4253-4254.) *398

FN15 This case presents no issue concern-

ing any distinction between “service charges, fees or assessment,” as used in the statute. The parties on appeal frame the issue in terms of the authority to levy “fees.” We adopt their usage for the sake of simplicity.

The same provision is currently contained in Government Code section 17556.^{FN16}

FN16 Government Code section 17556 provides in part: “The commission [formerly the Board] shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds that: [¶] ... [¶] (d) The local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service....”

The facial constitutionality of this provision was upheld in *County of Fresno v. State of California* (1991) 53 Cal.3d 482 [280 Cal.Rptr. 92, 808 P.2d 235]. The *Fresno* court rejected an argument that the statute was facially unconstitutional as conflicting with section 6 (fn. 1, *ante*), which contains no exclusion of reimbursement where the local agency has authority to levy fees. Section 6 requires subvention only when the costs in question can be recovered solely from tax revenues. (53 Cal.3d at p. 487.) Government Code section 17556, subdivision (d), “effectively construes the term ‘costs’ in the constitutional provision as excluding expenses that are recoverable from sources other than taxes. Such a construction is altogether sound.” (*County of Fresno v. State of California, supra*, 53 Cal.3d at p. 487.)

Here, appellants contend that, at all pertinent times, the water districts have had *authority* to levy fees to cover the costs at issue in this case. They cite provisions such as Water Code section 35470, which provides: “Any district formed on or after July 30,

1917, may, in lieu in whole or in part of raising money for district purposes by assessment, make water available to the holders of title to land or the occupants thereon, and may fix and collect charges therefor. The charges may include standby charges to holders of title to land to which water may be made available, whether the water is actually used or not. The charges may vary in different months and in different localities of the district to correspond to the cost and value of the service, and the district may use so much of the proceeds of the charges as may be necessary to defray the ordinary operation or maintenance expenses of the district and for any other lawful district purpose.”

We agree this statute on its face authorizes the Districts to levy fees sufficient to pay the costs involved with the regulatory amendment. We thus shall conclude the Board erred in finding a right to reimbursement despite this authority to levy fees, and we shall conclude appellants are not collaterally estopped from pressing this point.

The Districts do not dispute they have authority to levy fees for the costs involved in this case. Instead they argue the real issue is whether they had *399 “sufficient” authority. They claim this issue was a mixed question of law and fact, and appellants should be collaterally estopped from raising it.^{FN17}

FN17 The Districts assert appellants are relying on evidence that was not before the Board. However, they do not explain what they mean or give us any reference to appellants' brief. We therefore disregard the assertion.

We agree with appellants that the public interest exception to collateral estoppel should be applied here, because the issue presents a pure question of law. The Districts tried to make it a factual issue, but we shall explain why the facts presented by the District were immaterial.

Thus, in proceedings before the Board (where Wa-

59 Cal.App.4th 382, 69 Cal.Rptr.2d 231, 97 Cal. Daily Op. Serv. 8821, 97 Daily Journal D.A.R. 14,255
(Cite as: 59 Cal.App.4th 382)

ter Code section 35470 was cited to the Board by state agencies), SMWD did not argue it lacked "authority" to levy fees for this purpose. Instead, SMWD argued and presented evidence that it would not be economically desirable to do so. SMWD submitted declarations stating that rates necessary to cover the increased costs would render the reclaimed water unmarketable and would encourage users to switch to potable water. SMWD maintained that imposition of higher fees on users would contravene the legislative policy expressed in Water Code section 13512, which directs the state to undertake all possible steps to encourage development of wastewater reclamation facilities.

The Board made no express finding concerning this issue. The record contains only the Board minutes, which reflect a motion was made "To find a mandate and continue the issue regarding the claimant's ability to levy a service charge, to the parameters and guidelines process." There was no second to the motion. A motion was then made to find the regulatory amendment contained a reimbursable mandate. The motion carried. The minutes then state: "Discussion: Chairperson Yost disagreed with the motion as she felt the claimant could recover their costs by levying a service charge" The Board's Parameters and Guidelines stated in part: "If service charges or assessments were levied to defray the cost of the new criteria, the claim must be reduced by the amount received from such charges or assessment."

In proceedings before the trial court, SMWD admitted the district had the authority to levy fees but argued existence of authority was not enough, and the real question was whether it was economically feasible to levy fees sufficient to pay the mandated costs. Thus, SMWD's counsel stated at the hearing in the trial court: "The state keeps focusing on the question of whether the authority to issue, to assess fees and charges exists, and we have never contested that it didn't.

"But the statute which says that the Board cannot find the existence of a mandate if there's authority

to assess fees and charges, and then the critical *400 phrase, 'sufficient to pay for the mandated costs,' that's the condition with [*sic*] which they cannot satisfy.

"We proved that, the Board of Control hearing, through economic evidence. We proved it through testimony that the market was absolutely inelastic in terms of reclaimed water and potable water, that if you raise the price of reclaimed water over the potable water, that people would then buy the potable water, and that's all in the record.

"And so we showed that even though we have the authority, it was not sufficient to pay"

We note the record also reflects comments by SMWD's counsel to the trial court, that its customers were paying the increased costs as an "advance" against the state's obligation. The court pointed out users' payment of increased costs disproved the economic evidence SMWD had presented to the Board, that it could not raise its prices without losing its customers. The record also contains indications that the Districts funded the increased costs by diverting money from other sources. As will appear, we need not address this evidence, because it is not relevant to the question of authority to levy fees sufficient to fund the increased costs imposed by the regulatory amendment, which is a question of law in this case.

The trial court's minute order stated the districts' authority to levy fees did not bar reimbursement for state-mandated costs, because the Board "implicitly determined" the districts did not have "sufficient" authority to levy fees to pay for the increased service mandated by the 1978 regulatory amendment, and this "implicit determination, resolving a mixture of legal and factual issues, became final and binding on [appellants] under the doctrine of collateral estoppel when they failed to seek judicial review of the Board's decision within the three-year limitations period."

On appeal, appellants argue the sole inquiry is

whether the local agency has “authority” to levy fees sufficient to pay the costs, and it does not matter whether the local agency, for economic reasons, finds it undesirable to exercise that authority. Appellants argue this presents a question of law, such that the public interest exception to collateral estoppel would apply (assuming the requirements of collateral estoppel are otherwise met).

We agree with appellants. (7) In construing statutes, our primary task is to determine the lawmakers' intent. (*Brown v. Kelly Broadcasting Co.* (1989) 48 Cal.3d 711, 724 [257 Cal.Rptr. 708, 771 P.2d 406].) To determine intent, we look first to the words themselves. (*Ibid.*) “If the language is clear *401 and unambiguous there is no need for construction, nor is it necessary to resort to indicia of the intent of the Legislature” (*Lungren v. Deukmejian* (1988) 45 Cal.3d 727, 735 [248 Cal.Rptr. 115, 755 P.2d 299].)

(6b) Here, the statute is clear and unambiguous. On its face the statute precludes reimbursement where the local agency has “authority” to levy fees sufficient to pay for the mandated program or level of service. The legal meaning of “authority” includes the “Right to exercise powers; ...” (Black's Law Dict. (6th ed. 1990) p. 133, col. 1.) The lay meaning of “authority” includes “the power or right to give commands [or] take action” (Webster's New World Dict. (3d college ed. 1988) p. 92.) Thus, when we commonly ask whether a police officer has the “authority” to arrest a suspect, we want to know whether the officer has the legal sanction to effect the arrest, not whether the arrest can be effected as a practical matter.

Thus, the plain language of the statute precludes reimbursement where the local agency has the authority, i.e., the right or the power, to levy fees sufficient to cover the costs of the state-mandated program.

The Districts in effect ask us to construe “authority,” as used in the statute, as a practical ability in light of surrounding economic circum-

stances. However, this construction cannot be reconciled with the plain language of the statute and would create a vague standard not capable of reasonable adjudication. Had the Legislature wanted to adopt the position advanced by the Districts, it would have used “reasonable ability” in the statute rather than “authority.”

The question is whether the Districts have authority, i.e., the right or power, to levy fees sufficient to cover the costs. The Districts clearly have authority to levy fees sufficient to cover the costs at issue in this case. Water Code section 35470 authorizes the levy of fees to “correspond to the cost and value of the service,” and the fees may be used “to defray the ordinary operation or maintenance expenses of the district and for any other lawful district purpose.” The Districts do not demonstrate that anything in Water Code section 35470 limits the authority of the Districts to levy fees “sufficient” to cover their costs.

Thus, the economic evidence presented by SMWD to the Board was irrelevant and injected improper factual questions into the inquiry.

On appeal, the Districts briefly argue economic undesirability of levying fees constitutes a lack of authority to levy fees sufficient to cover costs. They claim the evidence before the Board showed SMWD “could not” *402 increase its fees because it was already charging as much for reclaimed as it was for potable water. However, the cited portion of the record does not show SMWD “could not” increase its fees but only that an increase would render reclaimed water unmarketable and encourage users to switch to potable water. The Districts cite no authority supporting their construction of former Revenue and Taxation Code section 2253.2 (now Gov. Code, § 17556) that *authority* to levy fees sufficient to cover costs turns on economic feasibility. We have seen the plain language of the statute defeats the Districts' position.

(8) Since the issue in this case presented a question of law, we conclude the public interest exception to

collateral estoppel applies. (*Sacramento II, supra*, 50 Cal.3d at p. 64.)

The Districts argue application of the public interest exception in this case raises policy concerns about the finality of administrative decisions on state-mandated costs, because if collateral estoppel does not apply in this case, it will never apply. However, we merely hold, in accordance with Supreme Court pronouncement, that the public interest exception to collateral estoppel applies under the circumstances of this case to this state-mandated cost issue which presents solely a question of law.

The Districts argue any fees levied by the districts "cannot exceed the cost to the local agency to provide such service," because such excessive fees would constitute a special tax. However, the districts fail to explain how this is an issue. No one is suggesting the districts levy fees that exceed their costs.

The Districts cite evidence presented to the referee in the aborted hearing to determine amounts owed to each District, that SMWD's director of finance testified SMWD has other sources of revenue from other services it provides (such as sewer service), maintains separate accounts, and borrowed funds internally from other accounts to cover costs incurred as a result of the subject mandate. The Districts assert this testimony reflects that SMWD "recognized the legal limitations on its authority to impose fees for the services that it provides." However, nothing in this evidence demonstrates any legal limitations on the authority to levy the necessary fees.

The Districts say appellants appear to believe the Districts should require users of other services to subsidize the Districts' cost of reclaiming and selling wastewater, through excessive user fees. However, we do not read appellants' brief as presenting any such argument and in any event do not base our decision on that ground. *403

In a footnote, the Districts make the passing comment: "In light of the adoption of Proposition 218, which added Articles XIII C and XIII D to the California Constitution this past November [1996], the authority of local agencies to recover costs for many services will be impacted by the requirement to secure the approval by majority vote of the property owners voting, to levy or to increase property related fees. See Section 6, Article XIII D." The Districts do not contend that the services at issue in this appeal are among the "many services" impacted by Proposition 218. We therefore have no need to consider what effect, if any, Proposition 218 might have on the issues in this case.

We conclude the Districts were not entitled to reimbursement of state-mandated costs, because they had authority to levy fees sufficient to pay for the level of service mandated by the 1978 regulatory amendment. Appellants were not collaterally estopped from raising this issue in the trial court. We thus conclude the Districts' mandamus petitions should have been denied. We therefore need not address appellants' contentions that (1) the regulatory amendment did not constitute a new program or higher level of service, or (2) any right to reimbursement was abolished upon repeal of former Revenue and Taxation Code section 2207.

Disposition

Let a peremptory writ of mandate issue, directing the trial court to vacate its judgment and enter a new judgment denying the Districts' petitions for writ of mandate. Appellants shall recover their costs on appeal.

Puglia, P. J., and Nicholson, J., concurred.

The petition of real parties in interest for review by the Supreme Court was denied February 25, 1998. *404

Commission on State Mandates
980 Ninth Street, Suite 300
Sacramento, CA 95814

Dear Mr. Bohan:

LOS ANGELES REGIONAL WATER QUALITY CONTROL BOARD'S RESPONSE TO
UPPER SANTA CLARA RIVER CHLORIDE REQUIREMENTS, TEST CLAIM 10-TC-09

I. INTRODUCTION

The Santa Clara River is the largest river system in Southern California that remains in a relatively natural state. Extensive patches of high quality riparian habitat exist along the length of the river and its tributaries. The river also provides irrigation supply water for the agricultural industry, the largest industry in the watershed. Test Claim 10-TC-09, Upper Santa Clara River Chloride Requirements (Test Claim) concerns the serious environmental problem of chloride discharged from the Claimant's point sources into the Santa Clara River, as well as the efforts of the Los Angeles Regional Water Quality Control Board (Los Angeles Water Board) to ameliorate the problem through the adoption and approval of several planning documents that set targets for chloride discharges within a multi-year implementation period.

The Los Angeles Water Board files this opposition to the Test Claim that was submitted by the Santa Clarita Valley Sanitation District of Los Angeles County (SCVSD or Claimant). This Test Claim arises from Los Angeles Water Board Resolution No. R4-2008-0012, *Amendment to the Water Quality Control Plan for the Los Angeles Region to Adopt Site Specific Objectives and to Revise the Upper Santa Clara River Chloride TMDL* (2008 Resolution). The Claimant seeks reimbursement of over \$250 million in estimated costs of implementing provisions contained in the 2008 Resolution during fiscal years 2009 to 2011.

The *Water Quality Control Plan for the Los Angeles Region* (Basin Plan) contains water quality standards for waters of the United States in the Los Angeles region. The federal Clean Water Act¹ requires the states, and in this case the Los Angeles Water Board, to establish water quality standards for such waters. As part of the water quality standards required by the Clean Water Act, the board adopted water quality objectives for the Santa Clara River and established

¹ Federal Water Pollution Control Act (FWPCA; 33 U.S.C. § 1251 *et seq.*). The federal Act is referred to herein by its popular name, the Clean Water Act, and the code sections used are those for the Clean Water Act.

Drew Bohan, Executive Director

- 2 -

July 29, 2011

a numeric target of 100 mg/L of chloride based on the most sensitive beneficial use of the Santa Clara River: agricultural use. These water quality standards apply to all persons who discharge pollutants to the Santa Clara River.

The 2008 Resolution amended the Basin Plan to, among other things, adopt site-specific objectives for chloride in the Santa Clara River that are *less stringent* than the generally applicable water quality objectives that apply to other major dischargers to the Santa Clara River, provided the Claimant implements the alternative water resources management (AWRM) program² that it requested the board to approve. The 2008 Resolution also amended the Basin Plan to modify the Santa Clara River Chloride total maximum daily load (TMDL)³, which allows the Claimant to carry out its chosen alternative. Thus, the Claimant chose how it would comply with its Clean Water Act requirements. Notably absent from the Test Claim is any discussion of the fact that the Los Angeles Water Board adopted the 2008 Resolution at the Claimant's own request.

Article XIII B, Section 6 of the California Constitution provides, "[w]henver the Legislature or any state agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service."

The 2008 Resolution does not require subvention for various reasons. First, as a threshold matter, it does not require a new program or higher level of service. The Los Angeles Water Board's adoption of water quality standards for chloride and a chloride TMDL was a nondiscretionary duty required by the federal Clean Water Act, and the challenged provisions are not unique to local entities. Second, the challenged provisions are required by the federal Clean Water Act, its implementing regulations, and federal agency guidance. Even if the 2008 Resolution was interpreted as going beyond federal law, any cost increases that result solely from additional state requirements are *de minimis*. Third, the challenged provisions are not subject to reimbursement because the Claimant has the ability to comply with these provisions through charges and fees, and is not required to raise taxes. Lastly, the Claimant requested that the board adopt the 2008 Resolution; the Claimant itself developed and promoted the very provisions of the regulation that it is now claiming to be an unfunded state mandate.

The 2008 Resolution resulted from an unprecedented multi-year collaborative process involving the Claimant, several water agencies and purveyors, the Los Angeles Water Board, and other stakeholders. That process entailed numerous meetings and discussions, often led by the Claimant. Despite the complexity of the issues involved, what emerged in the 2008 Resolution was enthusiastically supported by Claimants. Therefore, the costs are not subject to reimbursement because the Claimant themselves developed and proposed the very tasks challenged by the Test Claim.

² See *infra* Section III.C. for a discussion of the AWRM program.

³ See *infra* Section III.C. for a discussion of the Chloride TMDL.

II. DESCRIPTION OF THE TEST CLAIM

The Claimant contends that the 2008 Resolution mandates the Claimant to establish and implement several new or modified programs and activities that are not required by federal law. The Claimant seeks a determination that these water quality objectives for chloride and related “implementation tasks” are unfunded state mandates for which it should receive reimbursement in the hundreds of millions of dollars.

The Claimant contends that the provisions of the 2008 Resolution are subject to reimbursement because they are not required by federal law and that the 2008 Resolution imposes new programs or existing programs that constitute a higher level of service. The Claimant also alleges that none of the exceptions in Government Code section 17556 that would bar recovery of costs apply. Finally, it claims that it lacks authority to assess service charges, fees, or assessments sufficient to pay for the mandated activities.

III. BACKGROUND AND HISTORY

This section provides background and historical information on the chloride issues in the Upper Santa Clara River watershed.

A. Environmental Setting

The Santa Clara River is the largest river system in Southern California that remains in a relatively natural state. The river originates in the San Gabriel Mountains in Los Angeles County, crosses Ventura County, and eventually flows into the Pacific Ocean between the cities of San Buenaventura (Ventura) and Oxnard. Municipalities within the Santa Clara River watershed include Santa Clarita, Newhall, Fillmore, Santa Paula, and Ventura. The Santa Clara River is divided into several segments, called “reaches,” for regulatory purposes.

Extensive patches of high quality riparian habitat exist along the length of the river and its tributaries. The river and its tributaries are home to two types of endangered and rare aquatic species, the unarmored three-spine stickleback and the steelhead trout. One of the Santa Clara River's largest tributaries, Sespe Creek, is designated a wild trout stream by the State of California and a wild and scenic river by the United States Forest Service. In addition, the Santa Clara River drains to the Pacific Ocean through a lagoon that supports a large variety of wildlife.

The predominant land uses in the Santa Clara River watershed include agriculture, open space, and residential uses. Agriculture is the largest industry in the Santa Clara River watershed, with revenue from the agricultural industry estimated at over \$700 million annually.⁴ Residential use

⁴ Final Staff Report, Upper Santa Clara River Chloride TMDL Reconsideration, and Conditional Site-Specific Objectives for Chloride, and Interim Wasteload Allocations for Sulfate and Total Dissolved Solids, California Regional Water Quality Control Board – Los Angeles Region (Jan. 2009), p. 12 (“2008 Staff Report”).

is rapidly increasing both in the upper and lower watershed. The number of housing units in the watershed is estimated to increase by 187 percent from 1997 to 2025.⁵

In the 1960's, the Sanitation Districts of Los Angeles County (LACSD) built two wastewater treatment plants in the City of Santa Clarita to cope with the demand of urban development. The Valencia Water Reclamation Plant (Valencia WRP) and the Saugus Water Reclamation Plant (Saugus WRP) are both owned and operated by the Santa Clarita Valley Sanitation District, which is part of LACSD.⁶ The Valencia and Saugus WRPs are two major point sources that discharge chloride to the Santa Clara River. The sources of the chloride are primarily contained in water imported from Northern California for the Santa Clarita Valley water supply and chloride added by domestic uses (such as water softeners) and treatment processes (such as the disinfection process). The Saugus and Valencia WRPs treat municipal sewage, but pass chlorides through their treatment systems so that the chloride discharges into the Upper Santa Clara River.⁷ Chloride levels in the Upper Santa Clara River and in underlying groundwater basins have increased over the past three decades due to increased salt loadings from these sources. As Claimants state in their Test Claim, neither the Valencia WRP nor the Saugus WRP is designed to remove chloride during the treatment process.⁸

B. Statutory and Regulatory Scheme

The "quality of our nation's water is governed by a 'complex statutory and regulatory scheme ... that implicates both federal and state administrative responsibilities.'"⁹ In order to understand the federal mandate that required the Los Angeles Water Board to adopt requirements concerning chloride in the Santa Clara River, some background of the statutory and regulatory scheme is necessary to place the facts here into context.¹⁰

1. Federal Law – The Clean Water Act

In 1972, in a "dramatic response to accelerating environmental degradation of rivers, lakes and streams in this country,"¹¹ Congress enacted amendments to the Federal Water Pollution

⁵ *Ibid.*

⁶ The Santa Clarita Valley was historically served by the County Sanitation District Number 26 of Los Angeles County (Saugus WRP) and County Sanitation District Number 32 of Los Angeles County (Valencia WRP). Both of these Districts were collectively referred to as the County Sanitation Districts of Los Angeles County or CSDLAC in previous documents related to the Upper Santa Clara River Chloride TMDL. These two districts were merged into a single district, the Santa Clarita Valley Sanitation District of Los Angeles County or SCVSD, as of July 1, 2005.

⁷ A map of the Upper Santa Clara River and location of the WRPs is included as an attachment for reference.

⁸ Test Claim, p. 4.

⁹ *City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613, 619.

¹⁰ The Commission has received a variety of test claims involving municipal stormwater permits. The laws and regulations pertaining to this Test Claim, however, are fundamentally different. Those laws and regulations involve federal requirements for point source discharges to comply with water quality standards and TMDLs. Those requirements are found in sections 301 and 303 of the federal Clean Water Act, and do not involve the "maximum extent practicable" standard pertaining to municipal stormwater permits.

¹¹ *Natural Resources Defense Council, Inc. v. Costle* (D.C. Cir. 1977) 568 F.2d 1369, 1371.

Control Act, which, as amended in 1977, is commonly known as the Clean Water Act.¹² Its stated goal is “to restore and maintain the chemical, physical and biological integrity of the Nation’s waters” by eliminating the discharge of pollutants into navigable waters.¹³

The Clean Water Act requires each state to establish water quality standards for each waterbody within its jurisdiction and review them at least once every three years for appropriate modifications.¹⁴ Water quality standards set the degree of water quality to attain or maintain.¹⁵ States must set water quality standards for all waters within their boundaries “regardless of the sources of the pollution entering the waters.”¹⁶ At a minimum, water quality standards must include designated uses (such as agricultural, recreation, navigation, or the protection and propagation of fish, shellfish and wildlife); water quality criteria that are established at levels sufficient to protect the designated uses; and an antidegradation policy to prevent degrading waters.¹⁷ In designating uses of a water body and the appropriate criteria for those uses, the state shall ensure that its water quality standards provide for the attainment and maintenance of the water quality standards of downstream waters.¹⁸ Water quality criteria are expressed in numeric (a specific amount) or narrative form.

The Clean Water Act broadly segregates water pollution into two categories: point sources and nonpoint sources.¹⁹ To control and ultimately eliminate the discharge of point source pollutants into waters, permits are issued pursuant to the National Pollutant Discharge Elimination System (NPDES) program.²⁰ Under this approach, discharges from point sources are illegal unless issued an NPDES permit that includes technology-based controls and such other requirements to implement water quality standards.²¹ Nonpoint sources are not regulated under the NPDES program. The United States Environmental Protection Agency (U.S. EPA) may allow states to adopt and administer NPDES permit programs. In California, the State Water Resources Control Board (State Water Board) and the nine regional water quality control boards (regional water board) are charged with implementing the federal NPDES program.²²

¹² See generally 33 U.S.C. § 1251 *et seq.*

¹³ *Id.* at § 1251(a).

¹⁴ *Id.* at § 1313(a), (c)(1); 40 C.F.R. § 131.4.

¹⁵ See generally 33 U.S.C. § 1313.

¹⁶ *Pronsolino v. Nastro* (9th Cir. 2002) 291 F.3d 1123, 1127.

¹⁷ 40 C.F.R. §§ 131.6, 131.10-131.12.

¹⁸ *Id.* at § 131.10(a).

¹⁹ “Point source” means “any discernable, confined and discrete conveyance” such as pipe, ditch, channel, tunnel, or conduit. The Clean Water Act does not define nonpoint source pollution, but it has been generally described as discharges that do not qualify as point sources. (33 U.S.C. § 1362(14).)

²⁰ *Id.* at § 1342.

²¹ *Id.* at § 1311(a)-(b)(1).

²² See Wat. Code, § 13370; see also Memorandum of Agreement between the U.S. Environmental Protection Agency and the California State Water Resources Control Board (Sept. 29, 1989) (attached as Exhibit 2 to the Test Claim).

NPDES permits help ensure that the discharge of pollutants does not cause or contribute to an exceedance of water quality standards for a particular body of water. Waterbodies that do not meet water quality standards are considered impaired. Therefore, under Clean Water Act section 303(d), each state must identify and rank the waters within its boundaries that do not meet water quality standards.²³ These substandard waters are placed on the state's Clean Water Act section 303(d) List of Water Quality Limited Segments, also known as the "303(d) List" or "Impaired Waters List."²⁴ For each listed waterbody, the state is required to establish a TMDL for each pollutant impairing the water quality standards in that waterbody.²⁵ In California, TMDLs are generally developed and adopted by a regional water board. Regional water board-adopted TMDLs require approval by the State Water Board and the State of California Office of Administrative Law (OAL).²⁶ In addition, both the identification of impaired waters and TMDLs established for those waters must be submitted to U.S. EPA for approval.²⁷ If U.S. EPA disapproves a state's submitted TMDL, U.S. EPA must establish its own TMDL.²⁸

A TMDL represents the maximum amount of a specific pollutant that can be discharged or "loaded" into a waterbody on a daily basis without violating water quality standards.²⁹ A TMDL considers both anthropogenic and natural background sources of the pollutant. To develop the TMDL, a state evaluates the cumulative impacts of all point and nonpoint sources of a specific pollutant, as well as natural background, and creates a "pollution budget" that allocates the loadings of the pollutant among the sources that discharge to the affected waterbody.³⁰ A TMDL assigns a wasteload allocation, a portion of the TMDL's total pollutant load, to each point source that requires an NPDES permit. A TMDL also assigns load allocations to all nonpoint sources. Thus, expressed as a calculation, a TMDL equals the sum of the individual wasteload allocations for point sources plus load allocations for nonpoint sources plus natural background levels.³¹ A TMDL must "be established at a level necessary to implement the applicable narrative and numeric water quality standards with seasonal variations and a margin of safety

²³ 33 U.S.C. § 1313(d)(1)(A); 40 C.F.R. § 130.7(b).

²⁴ Section 303(d) of the Clean Water Act is codified at 33 U.S.C. § 1313(d).

²⁵ *Id.* at § 1313(d)(1)(C). See also *Friends of the Earth, Inc. v. U.S. EPA* (D.C. Cir. 2006) 446 F.3d 140 (holding that the Clean Water Act unambiguously requires states to establish TMDLs for waters failing to achieve water quality standards).

²⁶ Gov. Code, § 11353, subd. (b).

²⁷ 33 U.S.C. § 1313(d)(2).

²⁸ *Ibid.*

²⁹ 40 C.F.R. §§ 130.2(f),(i), 130.7(c)(1).

³⁰ The Clean Water Act does not define "total maximum daily load." The U.S. EPA's regulations break it into a "wasteload allocation" for point sources and a "load allocation" for nonpoint sources. (*Id.* § 130.2(g)-(i).) If a water has only one point source discharger, the TMDL is the sum of that point source wasteload allocation plus the load allocations for any nonpoint sources of pollution and natural background sources, tributaries, or adjacent segments. TMDLs can be expressed in terms of either mass per time, toxicity, or other appropriate measure. If best management practices or other nonpoint source pollution controls make more stringent load allocations practicable, then wasteload allocations can be made less stringent. Thus, the TMDL process provides for nonpoint source control tradeoffs. (*Id.* § 130.2(i).)

³¹ *Id.* § 130.2.

which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality.”³²

Under the Clean Water Act, TMDLs are not self-implementing, meaning that U.S. EPA cannot directly enforce implementation of a TMDL once it is established.³³ However, once a TMDL is approved by U.S. EPA, NPDES permits must be consistent with the wasteload allocations,³⁴ and states may take whatever additional permitting or cleanup actions under state law that are necessary, which can include further controls on both point and nonpoint pollution sources.³⁵ TMDLs established under Clean Water Act section 303(d) function primarily as informational tools and planning devices;³⁶ the TMDL provides a quantitative assessment of water quality problems, contributing sources of pollution, and the pollutant load reductions needed to restore and protect the beneficial uses of an individual waterbody.

2. State Law – The Porter-Cologne Water Quality Control Act

California’s Porter-Cologne Water Quality Control Act (“Porter-Cologne Act”), which was enacted in 1969, establishes a statewide policy and program for water protection.³⁷ Under the Porter-Cologne Act, nine regional water boards regulate the quality of waters within their regions under the purview of the State Water Board.³⁸ The Los Angeles Water Board protects ground and surface water quality in the Los Angeles region, including the coastal watersheds of Los Angeles and Ventura counties, along with very small portions of Kern and Santa Barbara counties.³⁹

Each regional water board must adopt water quality control plans, commonly called “basin plans,” for all areas within their respective region.⁴⁰ Such plans are akin to a land use plan for waterbodies and must be periodically reviewed and may be revised when necessary.⁴¹ Basin plans must designate the beneficial uses to be protected against water quality degradation, water quality objectives, and a program of implementation needed for achieving water quality

³² 33 U.S.C. § 1313(d)(1)(C); 40 C.F.R. § 130.7(c)(1).

³³ See *City of Arcadia v. State Water Resources Control Bd.* (2006) 135 Cal.App.4th 1392, 1414-1415 (“A TMDL does not, by itself, prohibit any conduct or require any actions. Instead, each TMDL represents a goal that may be implemented by adjusting pollutant discharge requirements in individual NPDES permits or establishing nonpoint source controls. A TMDL forms the basis for further administrative actions that may require or prohibit conduct with respect to particularized pollutant discharges and water[]bodies.”)

³⁶ See *Pronsolino, supra*, 291 F.3d at p. 1129. (“TMDLs are primarily informational tools that allow the states to proceed from the identification of waters requiring additional planning to the required plans.”) (Citing *Alaska Center for the Environment v. Browner* (9th Cir. 1994) 20 F.3d 981, 984-85.)

³⁷ See generally Wat. Code, § 13000 *et seq.*

³⁸ *Id.* at §§ 13000, 13100, 13200, 13241, 13242.

³⁹ *Id.* at § 13200, subd. (d).

⁴⁰ *Id.* at § 13240.

⁴¹ *Ibid.* (requiring periodic review); 33 U.S.C. § 1313(c)(1) (requiring review every three years).

objectives.⁴² “Beneficial uses” are equivalent to “designated uses” under the Clean Water Act; “water quality objectives” are also equivalent to “water quality criteria” under the Clean Water Act. Thus, for state waters subject to the federal Clean Water Act’s jurisdiction, a basin plan’s beneficial uses and water quality objectives serve as federal water quality standards. In regulating water quality in California, a regional water board has no discretion to set limitations that are less stringent than what the Clean Water Act demands.⁴³ Because basin plans implement the Clean Water Act, any water quality standards must protect the most sensitive of any designated beneficial uses.⁴⁴

“Beneficial uses” of the waters of the state include: domestic, municipal, agricultural and industrial supply; power generation; recreation; aesthetic enjoyment; navigation; and preservation and enhancement of fish, wildlife, and other aquatic resources or preserves.⁴⁵ “Water quality objectives” are the limits or levels of water quality constituents or characteristics which are established for the reasonable protection of beneficial uses of water or the prevention of nuisance within a specific area.⁴⁶ A program of implementation for achieving water quality objectives must include, at a minimum: (a) a description of the nature of actions which are necessary to achieve the objectives, including recommendations for appropriate action by any public or private entity; (b) a time schedule for the actions to be taken; and (c) a description of surveillance to be undertaken to determine compliance with objectives.⁴⁷ A TMDL is considered such a program of implementation, as they are programs to implement existing federal water quality standards.

Basin plans are foundational water quality documents, and recognizing their quasi-legislative nature, they are subject to special rulemaking provisions of the Administrative Procedure Act (APA).⁴⁸ When a regional water board designates beneficial uses, adopts or revises water quality objectives, or adopts programs of implementations (including TMDLs), it does so by amending its basin plan. After adoption by a regional water board, a basin plan and any amendments thereto must be approved by the State Water Board and OAL before becoming effective.⁴⁹ In addition, U.S. EPA must approve any basin plan amendments involving waters of the United States.⁵⁰ Like TMDLs, water quality objectives are not self-implementing. Once set and approved, the regional water boards implement water quality objectives through waste discharge permits and other programs.

C. Regulatory History of Chloride in the Upper Santa Clara River

In 1975, the Los Angeles Water Board adopted the *Water Quality Control Plan for the Santa Clara River Basin* and the *Water Quality Control Plan for the Los Angeles River Basin*. These two plans were superseded in 1994 by adoption of a single comprehensive *Water Quality Control Plan for the Los Angeles Region* (Basin Plan). Consistent with federal and state law, the Los Angeles Water Board has reviewed and amended the Basin Plan on a regular basis, making revisions where necessary.

Regulation of chloride in the Upper Santa Clara River watershed has a long and complex history. The Los Angeles Water Board first established water quality objectives for chloride in most of the region's waterbodies, including the Santa Clara River, in 1975. For the Santa Clara River watershed, the numeric water quality objectives for surface waters for chloride were 90 mg/L for Reach 5 and 80 mg/L for Reach 6.⁵¹ At that time, the water quality objectives for chloride were based on background concentrations of chloride in accordance with the federal and state antidegradation policies.⁵² When the water quality objectives for chloride were established, the Los Angeles Water Board assumed that chloride concentrations in the imported water supply⁵³ would remain relatively low. However, after 1975, chloride concentrations in the imported water supply into the Los Angeles Region increased. In 1978, the board modified the water quality objectives for chloride in the Upper Santa Clara River from 90 and 80 mg/L for Reaches 5 and 6, respectively, to 100 mg/L for both reaches.⁵⁴ A maximum concentration of 100 mg/L remains the water quality objective for Reaches 5 and 6 today.⁵⁵

As noted above, chloride is a very serious problem in the Santa Clara River watershed. During the late 1980s, the effects of drought greatly increased the concentration of chloride in supply water imported from Northern California. In the Santa Clara River watershed, a significant amount of chloride loading also occurs from the use of water softeners by businesses and residents.⁵⁶ Because the Valencia and Saugus wastewater treatment plants are not designed

⁵¹ Los Angeles Water Board, *Water Quality Control Plan Report, Santa Clara River Basin (4A)* (March 1975), Table 4-1, p. I-4-10. The upper Santa Clara River includes Reaches 5 and 6, which are located upstream of the Blue Cut gauging station that lies west of the Los Angeles - Ventura County line between the Cities of Fillmore and Santa Clarita. The lower Santa Clara River includes Reach 4, which is near the City of Santa Paula.

⁵² California's antidegradation policy is contained in State Water Board Resolution 68-16: *Statement of Policy with Respect to Maintaining High Quality Water in California*. The federal antidegradation policy is set forth in 40 C.F.R. § 131.12.

⁵³ Santa Clarita Valley's potable water supply consists of imported surface water from Northern California and local groundwater and surface water, which is blended together and distributed to local water retailers/purveyors. The "imported water supply" is brought into the Santa Clarita Valley through complex delivery systems such as the California State Water Project and the federal Central Valley Project.

⁵⁴ See 1978 Revisions to the *Water Quality Control Plan for the Santa Clara River Basin (4A)*.

⁵⁵ Los Angeles Water Board, *Water Quality Control Plan for the Los Angeles Region: Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties* (adopted June 13, 1994), Table 3-8, pp. 3-12 (attached as Exhibit 4 to the Test Claim).

⁵⁶ Water softeners are used to treat hard water, caused by an excess of minerals like calcium and magnesium. In the Santa Clarita River watershed, the supply water is considered hard, making water softeners a popular choice for residents and businesses. However, while water softeners remove minerals like calcium and magnesium, a byproduct of the water softening process is brine water, which is very high in chloride. This brine water eventually

to treat chloride in the wastewater, elevated levels of chloride continue to persist in the Upper Santa Clara River and affect water quality. Wastewater disinfection by chlorine injection at these two WRPs further increases chloride levels in effluent.

In 1990, the Los Angeles Water Board adopted Resolution 90-04: *Effects of Drought-Induced Water Supply Changes and Water Conservation Measures on Compliance with Waste Discharge Requirements within the Los Angeles Region*. This resolution, commonly referred to as the Drought Policy, was intended to provide short-term and temporary relief to dischargers who were unable to comply with effluent limits for chloride in NPDES permits. For those dischargers who qualified for relief under the Drought Policy, the board temporarily allowed chloride concentrations in the discharger's effluent to be the lesser of: (1) 250 mg/L; or (2) the chloride concentration of supply water plus 85 mg/L.⁵⁷ This policy, however, did not modify any water quality objectives in the Basin Plan. The board renewed the Drought Policy in 1993 and again in 1995 because the chloride levels in supply waters remained higher than the chloride levels before the onset of the drought.

In 1997, the Los Angeles Water Board adopted Resolution No. 97-02: *Amendment to the Water Quality Control Plan to Incorporate a Policy for Addressing Levels of Chloride in Discharges of Wastewaters*. This resolution, known as the Chloride Policy, rescinded the Drought Policy and revised the chloride water quality objectives for the Los Angeles River, Rio Hondo, and San Gabriel River. However, the board did not revise the water quality objectives for chloride in the Santa Clara River watershed due to the potential for future adverse impacts to agricultural resources in Ventura County.⁵⁸ To address compliance problems with meeting effluent limitations for chloride, the board granted temporary variances to certain dischargers in the Santa Clara River watershed, including the Valencia and Saugus WRPs, by providing surface water interim effluent limits of 190 mg/L in the Santa Clara River.⁵⁹ These interim limits extended for three years following approval of the Chloride Policy.⁶⁰

In 1998, Reaches 5 and 6 of the Upper Santa Clara River appeared for the first time on the state's federally required 303(d) List of impaired waterbodies for chloride.⁶¹ Beneficial uses of the Upper Santa Clara River, including agricultural supply water and groundwater recharge were listed as impaired due to excessive chloride concentrations in the Upper Santa Clara River, which did not meet the 100 mg/L water quality objective for chloride.

In 2002, as required by section 303(d) of the Clean Water Act, the Los Angeles Water Board amended its Basin Plan to incorporate a TMDL for chloride in the Upper Santa Clara River

gets flushed to the sewer, which goes to one of the WRPs, and then eventually is discharged to the Santa Clara River. As noted above, neither the Valencia nor Saugus WRP is designed to remove chloride.

⁵⁷ Los Angeles Water Board Resolution 90-04, p. 2 (attached as Exhibit 5 to the Test Claim).

⁶¹ 1998 California 303(d) List and TMDL Priority Schedule (approved by U.S. EPA May 12, 1999), pp. 86-87. Reaches 5 and 6 were designated on the 1998 U.S. EPA 303(d) list as Reaches 7 and 8, respectively.

(Chloride TMDL).⁶² At the time this TMDL was adopted, there were key scientific uncertainties regarding the sensitivity of crops to chloride and the complex interactions between surface water and groundwater in the Upper Santa Clara River watershed. However, the Chloride TMDL source analysis found that the chloride sources are primarily contained in the imported water supply from the State Water Project in Northern California and chloride added by domestic uses, including water softeners. These chloride sources are loaded into the Upper Santa Clara River in effluent from the Saugus and Valencia WRPs that serve residents and businesses in the Santa Clarita Valley. Approximately 70 percent of the total chloride loading was attributable to the WRPs.⁶³ The Chloride TMDL source analysis also showed that the water quality objectives could not be met with source control alone, and that some type of advanced treatment would be necessary to protect the beneficial uses.⁶⁴ Agricultural beneficial uses were noted as being the most sensitive beneficial use to be protected.⁶⁵

The Chloride TMDL assigned final wasteload allocations to all point sources, including the Valencia and Saugus WRPs. The final wasteload allocations were equal to the chloride numeric water quality objective of 100 mg/L.⁶⁶ The Chloride TMDL established a multi-year implementation plan to attain the chloride water quality objectives.⁶⁷ Accordingly, the Los Angeles Water Board also assigned interim wasteload allocations to the Valencia and Saugus WRPs to provide the WRPs time to implement chloride source reduction, complete site-specific objective⁶⁸ studies, and make any necessary modifications or upgrades to the WRPs to meet the water quality objective for chloride. In order to provide the WRPs time to comply with the water quality objective, the Chloride TMDL established average monthly interim effluent limits of 200 mg/L and 187 mg/L, and maximum daily effluent limits of 218 mg/L and 196 mg/L for the Saugus and Valencia WRPs, respectively.⁶⁹ These monthly and daily interim effluent limits for chloride were set to expire two and a half years from the effective date of the TMDL, whereupon the existing water quality objective of 100 mg/L would continue in effect.⁷⁰ Lastly, the Chloride TMDL included a task for completion of planning, design, and construction of advanced treatment facilities to treat effluent from the WRPs to reduce the chloride load and to attain water quality standards.⁷¹

⁶² Los Angeles Water Board Resolution R02-018: *Amendment to the Water Quality Control Plan (Basin Plan) for the Los Angeles Region to Incorporate a Total Maximum Daily Load for Chloride in the Upper Santa Clara River* (Oct. 24, 2002) ("Resolution R02-018") (attached as Exhibit 12 to the Test Claim).

⁶⁷ *Id.* at pp. 8-10.

⁶⁸ If a water quality objective is inappropriate for a particular waterbody (i.e., it does not protect the beneficial uses or, based on site-specific conditions, a less stringent standard may be warranted), a water quality objective that differs from the applicable objective may be developed for the site. A regional water board may adopt site-specific objectives whenever it determines, in the exercise of its professional judgment, that it is appropriate to do so.

⁶⁹ Resolution R02-018, at Attachment 2, p. 6.

⁷⁰ *Ibid.*

⁷¹ *Id.* at 9.

The Chloride TMDL has since been revised in 2003, 2004, 2006, 2007, and again in 2008 (with the last amendment serving as the basis for the Test Claim). The reasons and necessity for each Basin Plan amendment are summarized below.

The 2003 Amendment

In February 2003, the State Water Board remanded the Chloride TMDL to the Los Angeles Water Board due to concerns about the implementation plan and duration of the interim effluent limits. The State Water Board directed the Los Angeles Water Board to consider a phased approach so that the Los Angeles Water Board and Claimant could complete their respective implementation tasks by specified dates and within 13 years from the effective date of the TMDL and to allow the Claimant to complete special studies prior to planning and construction of advanced treatment technologies.⁷² The State Water Board also directed the Los Angeles Water Board to consider extending the interim effluent limits beyond the two and a half years so that those limits could remain in effect during the planning and construction of advanced treatment technologies.⁷³

In July 2003, in response to the State Water Board's remand, the Los Angeles Water Board readopted the Chloride TMDL with a revised implementation plan. The revised implementation plan extended the interim wasteload allocations and final compliance deadline to achieve the final wasteload allocations to 13 years after the TMDL effective date.⁷⁴ It also included two additional special studies to address scientific uncertainty and several mandatory reconsiderations of the Chloride TMDL by the Los Angeles Water Board. The 13-year period included five years for special studies, feasibility analysis and water quality objective revisions, if warranted, followed by eight years for planning, design, and construction of the selected remedy.⁷⁵ The eight-year time schedule for planning, design, and construction was based on comments submitted by the Claimant in October 2002, with a supporting engineering study that eight years would be required to plan, design, and construct advanced treatment for chloride.⁷⁶

The 2004 Amendment

During the time that the State Water Board and Los Angeles Water Board were considering the Chloride TMDL, the Los Angeles Water Board was considering the renewal of NPDES permits

⁷² State Water Board Resolution 2003-0014, p. 1, Provision 2(a) (July 10, 2003) (attached as Exhibit 13 to the Test Claim).

⁷³ *Id.* at p. 2, Provision 2(b).

⁷⁴ Los Angeles Water Board Resolution R03-008: *Amendment to the Water Quality Control Plan (Basin Plan) for the Los Angeles Region to Incorporate a Total Maximum Daily Load for Chloride in the Santa Clara River* (July 10, 2003), p. 3, Finding 11.

for the Valencia and Saugus WRPs. In 2003, Time Schedule Orders⁷⁷ adopted contemporaneously with the NPDES permits also included interim effluent limits for chloride, which differed from the interim wasteload allocations in the Chloride TMDL. Thus, in May 2004, the Los Angeles Water Board revised the interim wasteload allocations assigned to the Valencia and Saugus WRPs in the Chloride TMDL to conform to the interim effluent limits in the Time Schedule Orders.⁷⁸ The board also revised the implementation plan in the Chloride TMDL to require the completion of several special studies that serve to characterize the sources, fate, transport, and specific impacts of chloride in the Upper Santa Clara River, including impacts to downstream reaches and underlying groundwater basins. The board maintained the 13-year implementation schedule.⁷⁹ This revised implementation schedule superseded the implementation plan adopted in 2003.⁸⁰ This revised Chloride TMDL was approved by the State Water Board, OAL, and U.S. EPA, and became effective in May 2005.

The 2006 Amendment

One of the first special studies, an evaluation of the appropriate chloride threshold for the reasonable protection of salt-sensitive agriculture (such as avocados, strawberries, and nursery plants) was completed in September 2005. This special study, entitled "Literature Review Evaluation (LRE)," found a guideline concentrations range for chloride sensitivity for avocado of 100 to 120 mg/L of chloride.⁸¹ An independent technical advisory panel reviewed the LRE study and the majority opinion found a similar range of 100 to 120 mg/L of chloride.⁸² Thus, the existing water quality objective of 100 mg/L was within the recommended range for the reasonable protection of salt-sensitive crops.

Another collaborative report entitled "Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan (Chloride Source Report)" was completed in November 2005. This report, which the Claimant prepared, identified sources of chloride in the Upper Santa Clara River as well as strategies for reducing those sources. The Chloride Source Report identified potable water supply as the largest source of chloride loading to the Upper

⁷⁷ The Los Angeles Water Board issues time schedule orders pursuant to California Wat. Code, § 13300. The purpose of such an order is to put a permittee on a schedule towards compliance with existing requirements.

⁷⁸ Los Angeles Water Board Resolution 04-004: *Revision of interim waste load allocation and implementation plan for chloride in the Amendment to the Water Quality Control Plan for the Los Angeles Region to include a TMDL for Chloride in the Upper Santa Clara River, Resolution 03-008* (May 6, 2004), p. 2, Finding 9. For the Saugus WRP, the interim wasteload allocation for chloride was the sum of State Water Project treated water supply concentration plus 114 mg/L, as a 12 month rolling average. For the Valencia WRP, the interim wasteload allocation for chloride is the sum of State Water Project treated water supply concentration plus 134 mg/L, as a 12 month rolling average. For both the Saugus and Valencia WRPs, at no time shall the interim wasteload allocations exceed 230 mg/L. (*Id.* at Attachment A, p. 3.)

Santa Clara River, and self-regenerating water softeners as the second largest source of chloride loading.⁸³

In 2006, the Los Angeles Water Board revised the implementation plan for the Chloride TMDL. The revised TMDL accelerated the final compliance date from 13 years to 11 years from the effective date of the Chloride TMDL (or from 2018 to 2016) based on findings from the LRE study.⁸⁴ The board shortened the phase for the completion of special studies, but did not shorten the eight-year planning, design, and construction phase.⁸⁵

At that time, stakeholders contemplated two options for implementation: (1) advanced treatment of effluent from the Valencia and Saugus WRPs and disposal of brine in the ocean through an ocean outfall; or (2) disposal of tertiary-treated effluent in the ocean through an ocean outfall. Both options entailed construction of a pipeline from the WRPs to the ocean and an ocean outfall.⁸⁶

In 2007, the Claimant completed the "Groundwater/Surface Water Interaction (GSWI) Model" special study. Stakeholders and an independent technical advisory panel reviewed and approved the GSWI study as an appropriate and adequate modeling tool.⁸⁷ The GSWI study examined the feasibility of various implementation alternatives. Based on various modeling scenarios, the GSWI study predicted that none of the contemplated alternatives, including the two options mentioned above, would achieve compliance with the existing water quality chloride objective of 100 mg/L at all times and at all locations.⁸⁸ The GSWI study further indicated that beneficial uses can be protected through a combination of site-specific objectives for surface water and groundwater and reduction of chloride levels from the Valencia WRP effluent through advanced treatment.⁸⁹

As a result of the GSWI study, and the anticipated costs of complying with the 100 mg/L chloride water quality objective, the Claimant developed an alternative water resources management (AWRM) approach that could achieve attainment of site-specific objectives for certain reaches of the Santa Clara River.⁹⁰ The Claimant first proposed the AWRM approach as part of the GSWI study to Los Angeles Water Board staff in 2007, and was further

developed and refined through a series of meetings with stakeholders and board staff. The Claimant participated extensively in, and often facilitated, weekly to bi-weekly meetings with board staff⁹¹ and technical working groups with other stakeholders.⁹² To gain support for the AWRM program it had developed, the Claimant gave numerous presentations on the AWRM to board staff, State Water Board members,⁹³ downstream water users, purveyors, and other stakeholders.⁹⁴ The AWRM program consisted of: the development of site-specific objectives for chloride while protecting beneficial uses; chloride source reduction actions through the removal of self-regenerating water softeners; a switch from chlorine-based disinfection to ultraviolet disinfection at both WRPs; chloride load reduction actions through advanced treatment (like reverse osmosis and microfiltration) of a portion of the Valencia WRP's effluent; supplemental water to enhance assimilative capacity of local groundwater or surface water; alternative water supply to protect salt-sensitive agricultural beneficial uses during drought conditions; construction of extraction wells and pipelines; and expansion of recycled water uses with the Santa Clarita Valley.⁹⁵ The Claimant demonstrated to stakeholders that the AWRM program would address the chloride impairment in surface waters as well as the degradation of groundwater downstream at a much lower cost than other implementation scenarios that had been considered to achieve the original Chloride TMDL – approximately \$250 million versus \$500 million.⁹⁶

⁹⁵ Task 2B-2 Report, pp. 19-31.

⁹⁶ Santa Clarita Valley Sanitation District Proposed Sewer Service Charge Rate Increase, Frequently Asked Questions, pp. 4-5 <<http://www.lacsd.org/civica/filebank/blobload.asp?BlobID=5589>> (as of July 28, 2011). ("These relaxed limits would provide regulatory relief to reduce the cost of compliance from over \$500 million (for large scale advanced treatment to meet original standards) to \$250 million (for the Alternative Compliance Plan facilities to meet relaxed standards)"); 2008 Staff Report, pp. 37-38.

As a result, the AWRM program had broad stakeholder support and was seen as a cost-effective solution. The 2008 Resolution estimated an increase in sewer rates of \$17.00 month to fund the AWRM, which would have brought Santa Clarita in line with the statewide average sewer rate of \$34.00 per month.⁹⁷ Based on the Claimant's data, Santa Clarita residents currently pay \$16.58 per month for service charge rates.⁹⁸ For comparison, Los Angeles residents pay \$35.24 per month, Ventura residents pay \$25.00 per month, and Ojai, Santa Paula, and Fillmore residents pay \$52.07, \$77.21, and \$82.00 per month, respectively, for sewer charge rates.⁹⁹

For the AWRM program to succeed, the Los Angeles Water Board first needed to adopt conditional site-specific objectives for chloride. Based on the significant water quality and water supply benefits in both Los Angeles and Ventura Counties and the broad stakeholder support, Board staff agreed to take the regulatory steps necessary to recommend conditional chloride site-specific objectives to the board.

The 2007 Amendment

To initially support development of the AWRM compliance option, the Los Angeles Water Board amended its Basin Plan in November 2007 to divide Reach 4¹⁰⁰ of the Santa Clara River into two separate reaches (Reaches 4A and 4B).¹⁰¹ The board found that this action would allow the development of more geographically precise site-specific objectives for chloride.¹⁰² The Claimant supported this action,¹⁰³ stating that the "action to subdivide the reach will support continued development of this [AWRM] option, which represents a potential win-win situation for water resources and water quality management in Los Angeles and Ventura County."¹⁰⁴

The Claimant, Ventura County Agricultural Water Quality Coalition, the United Water Conservation District, and Upper Basin Water Purveyors, consisting of the Castaic Lake Water Agency (CLWA), Valencia Water Company, Newhall County Water District, Santa Clarita Water Division of the CLWA, and the Los Angeles County Waterworks District No. 36 entered into a memorandum of understanding (MOU) to implement the AWRM program.¹⁰⁵ The MOU, which

¹⁰⁵ See generally Memorandum of Understandings for Implementation of an Alternative Water Resources Management Program among the Santa Clarita Valley Sanitation Districts of Los Angeles County, Upper Basin

became effective on October 23, 2008, specifies the agreed-upon responsibilities of the AWRM Stakeholders for the implementation of ultra-violet light disinfection and advanced treatment facilities (i.e., microfiltration-reverse osmosis and brine disposal), salt management facilities (i.e., extraction wells and water supply conveyance pipelines), supplemental water (i.e., water transfers and related facilities), and alternative water supplies for the protection of beneficial uses. The Los Angeles Water Board was not a party to this MOU.

The 2008 Amendment

On December 11, 2008, the Los Angeles Water Board adopted Resolution No. R4-2008-012: *Amendment to the Water Quality Control Plan for the Los Angeles Region to Adopt Site Specific Chloride Objectives and to Revise the Upper Santa Clara River Chloride TMDL* (the 2008 Resolution)¹⁰⁶ to fully support implementation of the Claimant's AWRM program. This is the resolution that is being challenged as an unfunded state mandate in this Test Claim.

The 2008 Resolution amended the Basin Plan to incorporate conditional site-specific objectives for chloride for Reaches 4B, 5, and 6 of the Santa Clara River and the groundwater basins underlying those reaches, and revised the Chloride TMDL. The Chloride TMDL's wasteload allocations and implementation plan were all based on the conditional site-specific objectives for chloride. The conditional site-specific objectives and conditional wasteload allocations are both equal to 150 mg/L in Reaches 5 and 6 and 117 mg/L in Reach 4B (this wasteload allocation goes up to 130 mg/L when the State Water Project supply has levels of chloride greater than 80 mg/L).¹⁰⁷ The Los Angeles Water Board determined that the conditional site-specific objectives and conditional wasteload allocations were protective of beneficial uses when the AWRM was implemented (such as providing supplemental water supply to growers in Reach 4B during drought conditions and exporting of chloride from the watershed such that the 10-year cumulative net chloride loading to Reach 4B above 117 mg/L be zero or less). The Chloride TMDL states that the conditional site-specific objectives for chloride shall only apply and supersede the Basin Plan water quality objectives when chloride load reductions and/or chloride export projects are in operation and are reducing chloride loading.¹⁰⁸ Chloride load reduction is based on operation of a reverse osmosis treatment plant treating 3 million gallons per day of effluent at the Valencia WRP with "chloride concentration of 50 mg/L [plus] water supply chloride."¹⁰⁹ Accordingly, the site-specific objectives are conditioned on the Claimant's full and ongoing implementation of the AWRM program. It is therefore important to note that, if the Claimant does not build and operate the AWRM system, the site-specific water quality objectives for chloride will revert back to the current levels in the Basin Plan, which are 100 mg/L.¹¹⁰ Thus, the Claimant has a choice whether to implement the AWRM or not.

Water Purveyors, United Water Conservation District, and Ventura County Agricultural Water Quality Coalition (Oct. 2008).

¹⁰⁶ Los Angeles Water Board Resolution R4-2008-012 (Dec. 11, 2008) (attached as Exhibit 1 to the Test Claim).

¹⁰⁷ *Id.* at Attachment A, pp. 2-3.

¹⁰⁸ *Id.* at Attachment B, p. 4.

¹⁰⁹ *Id.* at Attachment B, pp. 7-8.

¹¹⁰ *Id.* at p. 5.

The Los Angeles Water Board also revised the Chloride TMDL by shortening the implementation plan to 10 years from the effective date of the Chloride TMDL. Thus, the Claimant must attain compliance with the conditional site-specific objectives by May 2015.¹¹¹ In the interim, the Chloride TMDL provides interim wasteload allocations to the Claimant based on the chloride concentrations in source water and Saugus and Valencia WRPs' current performance.

At the December 2008 Board meeting, the Claimant, stakeholders, and Los Angeles Water Board staff expressed an unprecedented level of cooperation and support for the 2008 Resolution, especially given the Chloride TMDL's long and contentious history. Steve Maguin, the Claimant's Chief Engineer and General Manager, provided "unequivocal support" for adoption of the 2008 Resolution.¹¹² In his closing remarks, Mr. Maguin stated, "I think we [the Claimant] have developed something very, very good. You're going to hear a lot of people support it because it has a bright – a lot of very good ramifications."¹¹³ Phil Friess, Technical Services Department Head for the Claimant, also expressed support for the board to adopt the 2008 Resolution.¹¹⁴ In addition, when describing the Claimant's and other stakeholders commitments to the proposed AWRM program, Mr. Friess stated, "As the discharger seeking site-specific objectives, obviously the Santa Clarita Valley Sanitation District is going to fund the AWRM elements, including source control, the facility upgrades, the Ventura County salt management facilities, [and] purchase of supplemental water provision of alternative water supply to Camulos Ranch."¹¹⁵

The 2008 Resolution was approved by the State Water Board, the OAL, and U.S. EPA, and became effective on April 6, 2010.

¹¹² Los Angeles Water Board, Transcript of Proceedings, Dec. 11, 2008, p. 56 lines 24-25. See generally p. 56 line 15 to p. 70 line 11 for the comments provided by Mr. Maguin and Phil Friess, head of the Technical Services Department for the Claimant.

¹¹³ *Id.* at p. 60 lines 22-25.

¹¹⁴ *Id.* at p. 70 lines 4-6 ("We think it does the best overall job, and we hope you'll adopt site-specific objectives to support it."). Mr. Maguin and Mr. Friess also submitted a joint written comment letter on behalf of LACSD on the proposed 2008 Resolution prior to the December 2008 Board meeting. In that letter, the Claimant states, "The Sanitation District strongly supports the proposed amendment to the Basin Plan because it provides for the opportunity for the implementation of the Alternative Water Resources Management (AWRM) Program, an innovative watershed-wide and stakeholder-supported program to comply with the Upper Santa Clara River Chloride TMDL. Since November 1, 2007, various Los Angeles and Ventura County stakeholders within the Santa Clara River watershed, including the Sanitation District, have worked together to develop the AWRM Program as a viable alternative for Regional Board consideration." As evidence of its commitment, the Claimant attached a copy of the October 23, 2008 MOU to its comment letter. The Claimant also stated, "In closing, the Sanitation District would like to reiterate its strong support for the Regional Board staff's recommendation to adopt conditional site-specific objectives for chloride and urges the Regional Board to approve this important Basin Plan Amendment. The Sanitation District believes that the proposed amendment to the Basin Plan and the resultant chloride site-specific objectives necessary to implement the AWRM program, will provide an opportunity to implement a solution to the Chloride TMDL that provides the maximum benefit to the people of the State." (Letter from Stephen R. Maguin and Philip L. Friess to Tracy Egoscue, dated November 14, 2008.)

¹¹⁵ *Id.* p. at 67 lines 10-15.

Pursuant to the 2008 Resolution, the conditional wasteload allocations for the Saugus and Valencia WRPs will be implemented through effluent limits, receiving water limits, and monitoring requirements in NPDES permits. However, to date, the conditional wasteload allocations have not yet been incorporated into the most recent NPDES permits for the Saugus and Valencia WRPs, which were both renewed in 2009. The 2009 permits maintain final effluent limits for chloride in the amount of 100 mg/L.¹¹⁶

D. Claimant's Proposed Rate Increases

To date, the SCVSD Board of Directors¹¹⁷ has refused to fund the AWRM program its own staff developed, promoted, and urged the Los Angeles Water Board to implement.

At the May 26, 2009 SCVSD Board of Directors public hearing, which was about six months after the Los Angeles Water Board adopted the 2008 Resolution, the SCVSD's Board of Directors considered a service charge rate increase that would raise rates from approximately \$15 per month per single-family home to \$47 per month by FY 2015-2016.¹¹⁸ After a hearing on the matter, the SCVSD Board of Directors voted to defer adoption of the proposed rate increase to a future meeting.¹¹⁹ SCVSD Board Member Laurene Weste stated that she did not believe all options have been explored yet and that she did not support the increase because it is an unreasonable impact on homeowners.¹²⁰ Chief Engineer and General Manager Steve Maguin noted prior to the hearing that 42 protest letters were submitted with one letter containing 12 signatures. He also stated that 150 emails of protests were also received as well as seven telephone calls in protest.¹²¹

The SCVSD Board of Directors again considered a rate increase at its July 27, 2010 public hearing. The proposal was a four-year rate increase that would raise rates from \$16.58 per

¹¹⁶ See generally Los Angeles Water Board Order No. R4-2009-0074 for Valencia WRP, pp. 18, 21, and Attachment K; Los Angeles Water Board Order No. R4-2009-0075 for Saugus WRP, p. 16, 20, and Attachment K. While the final wasteload allocations for chloride based on the 2004 and 2006 amendments are incorporated into the permits, those final wasteload allocations are not yet in effect. Thus, during the period of TMDL implementation, the WRPs are assigned interim effluent limits that cannot exceed 230 mg/L. The WRPs' 2009 NPDES permits also include the implementation tasks of the Chloride TMDL, as amended in 2008, in Attachment K.

¹¹⁷ The SCVSD Board of Directors includes the mayor of Santa Clarita, a designated member of the Santa Clarita City Council, and the chairperson of the Los Angeles County Board of Supervisors.

¹¹⁸ Minutes of the Adjourned Regular Meeting of the Board of Directors of the SCVSD, May 26, 2009, p. 2. The minutes indicate that "without the [AWRM program], based on what is known today, the current service charge rate projected out over the seven-year period would be about \$23 per month per single-family home. At that point in time (2015-16), the [AWRM] is projected to add approximately \$19 in capital needs and another \$5 per month for operation and maintenance of the new facilities for a total projected monthly service charge of approximately \$47 in 2015-16." Thus, \$24 was the proposed increased rate relating to compliance with the AWRM program.

¹¹⁹ *Id.* at p. 5.

¹²⁰ *Ibid.*

¹²¹ *Id.* at p. 3.

month per single family home to \$24.67 per month by FY 2013-2014.¹²² Mr. Maguin noted that \$3.92 of the proposed \$8.09 monthly increase over four years was needed to support existing facilities.¹²³ He also stated a portion of the increase was to repay funds borrowed from the capital improvement fund over the last several years during which rates were below those recommended.¹²⁴ The other approximate half remaining was for planning and design efforts related to the facilities that are needed to comply with the chloride limits.¹²⁵ Prior to the hearing, the Claimant had received 7,732 written protests from property owners.¹²⁶ Following the public hearing, the SCVSD again rejected the proposed rate increases.¹²⁷ In letters to the Los Angeles Water Board, the SCVSD stated that the Board of Directors declined to approve the rate increases in 2009 and 2010 due to “very strong public opposition.”¹²⁸ However, in both the 2009 and 2010 hearings, while the opponents to the rate increases were likely vocal, there was not the necessary number of written protests to preclude SCVSD from passing rate increases under Proposition 218.¹²⁹ As of June 1, 2010, there were 68,897 parcels connected to the sewerage system in the SCVSD service area.¹³⁰ Thus, the Claimant needed to receive at least 34,449 written protests from parcel owners prior to each hearing. Despite the fact that there were insufficient numbers of written protests to preclude a rate increase under Proposition 218 prior to both the May 26, 2009 and July 27, 2010 hearings (203 written protests and 7,732 written protests, respectively), the SCVSD Board of Directors still rejected the proposed rates on both occasions.

On April 14, 2011, the SCVSD held another public hearing to consider a proposal to increase the sewer service charge rates over the next three years to provide, solely, for the continued

¹²⁸ Letter from Stephen R. Maguin, County Sanitation Districts of Los Angeles County, to Samuel Unger (Oct. 14, 2010), at p. 1; Letter from Stephen R. Maguin, County Sanitation Districts of Los Angeles County, to Samuel Unger (Nov. 4, 201), at p. 1.

¹²⁹ Under Proposition 218, added in 1996, no local government may impose, extend, or increase any tax (e.g., sewer rate) unless and until that tax is submitted to the electorate and approved by a majority. A property owner subject to a proposed rate increase can protest the proposed rate increase. However, the protest must be in writing and must be received by the local governmental body prior to or at the public hearing. The local governmental body can take no action on the proposed rates if written protests are submitted by more than 50 percent of the affected property owners. If sufficient protests are not received, then the local governmental body can consider an increase during a public hearing. (Cal. Const., article XIII D, § 6, subd. (c).

¹³⁰ Letter from Stephen R. Maguin, County Sanitation Districts of Los Angeles County, to Council members, *Responses to Comments Made during the May 25, 2010 City Council Meeting – Public Hearing on Proposed Rate Increases* (June 1, 2010), p. 12 (M-6), at <<http://www.lacsd.org/civica/filebank/blobdload.asp?BlobID=5563>> (as of July 28, 2011).

operation and maintenance of existing facilities and SCVSD Board-directed activities.¹³¹ The proposed rate increase for existing facilities was \$1.34 for FY 2011-12, \$1.33 for FY 2012-13, and \$1.33 for FY 2013-2014, thus totaling a \$4 increase at the end of the three years.¹³² The LACSD website explained that “Board-directed activities” included: “test claim for State reimbursement of unfunded mandates, legislative relief efforts, evaluation of the potential use of ultra-violet disinfection technology at the WRPs, studies of water supply options, and continued negotiations with State regulators to develop a workable solution for the Santa Clara community.”¹³³ The website further states, “None of the proposed rate increase is being budgeted for the development of facilities to control chloride in the Santa Clara River. Any rate increases that may be necessary to support a chloride solution will not be proposed until an acceptable plan is developed.”¹³⁴ A Proposition 218 notice was mailed to each affected property owner on February 25, 2011.¹³⁵ The SCVSD Board of Directors approved the proposed rate increase to fund existing facilities.¹³⁶

IV. THIS TEST CLAIM DOES NOT QUALIFY FOR SUBVENTION

The Claimant contends that the provisions of the 2008 Resolution are subject to reimbursement because the Los Angeles Water Board’s adoption of the chloride water quality objective of 100 mg/L, its establishment of conditional site-specific objectives, and its assignment of specific interim and final wasteload allocations are not federal mandates. The Claimant further asserts that these are new programs or existing programs that require a higher level of service, and that the Claimant has no fee authority sufficient to pay for the costs.

The Claimant’s contention that the 2008 Resolution is an unfunded state mandate is flawed on various grounds, including its misinterpretation of the law regarding unfunded mandates. The 2008 Resolution does not require subvention for four principal reasons. First, the challenged provisions of the 2008 Resolution do not mandate a new program or higher level of service. Second, the Los Angeles Water Board’s establishment of the chloride water quality objective in the Santa Clara River, its resulting establishment of the Chloride TMDL when that objective was not met, and its resulting assignment of wasteload allocations to the Claimant are all federal mandates required by the Clean Water Act and any cost increases that result solely from state law requirements are *de minimis*. Third, the Claimant not only proposed the AWRM program for which it now seeks subvention, but advocated and urged the Los Angeles Water Board to

¹³¹ Sanitation Districts of Los Angeles County, SCVSD Proposed Sewer Service Rate Charge Increase, at <http://www.lacsd.org/info/industrial_waste/chloride_in_santa_clarita/proposed_sewer_service_charge_increase/default.asp> (as of July 28, 2011).

¹³² *Ibid.* The Claimant further explained on its website that, even with the proposed rate increases, the service charge rate in the SCVSD in the fourth year would be less than what other similar wastewater agencies are currently charging. The website included a table showing the service charge rate comparison for several communities in Los Angeles and Ventura counties.

¹³⁶ Minutes of the Special Meeting of the Board of Directors of the SCVSD, Apr. 14, 2011, p. 3.

incorporate the AWRM program into the Basin Plan. Finally, the Claimant can avoid the expenditure of tax monies by raising service charges, fees, or assessments to pay for implementation of the provisions.

A. The Challenged Provisions of the 2008 Resolution Do Not Mandate a New Program or Higher Level of Service on the Claimant

Article XIII B, section 6(a) of the California Constitution provides, “[w]henever the Legislature or any state agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service.” In order to obtain reimbursement, the Claimant must therefore prove either that: (1) the program carries out the governmental function of providing services to the public; or (2) the laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state.¹³⁷ Statutes implementing Article XIII B, section 6 clarify that no subvention of funds is required if: (1) the mandate imposes a requirement that is mandated by a federal law or regulation and results in costs mandated by the federal government, unless the statute or executive order mandates costs that exceed the mandate in that federal law or regulation;¹³⁸ (2) the local agency proposed the mandate;¹³⁹ or (3) the local agency has the authority to levy service charges, fees, or assessments sufficient to pay.¹⁴⁰ For the reasons set forth below, not only has the Claimant failed to establish that the 2008 Resolution mandates a new program or higher level of service, but also each of the three exemptions apply.

1. The Provisions of the Chloride TMDL Are Mandated by the Clean Water Act

As noted above, the Clean Water Act requires the Los Angeles Water Board to establish water quality standards, which consist of designated uses and water quality criteria to protect the uses.¹⁴¹ The federal Clean Water Act requires NDPES permits for point sources to comply with the water quality standards.¹⁴² Waterbodies that do not meet water quality standards are considered impaired. For each impaired waterbody, the Los Angeles Water Board is required by the Clean Water Act to establish a TMDL, or plan for the waterbody to achieve water quality standards. The Los Angeles Water Board first established water quality objectives for chloride in the Upper Santa Clara River in 1975. Despite the various revisions to the Chloride TMDL over the years, the water quality objective of 100 mg/L for chloride designated in 1978 remains the water quality objective today. Thus, absent the 2008 Resolution, the Claimant will have to achieve compliance with the 100 mg/L wasteload allocation by 2015 and absent the Chloride TMDL they would have to comply with the water quality standard.

¹³⁷ *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56.

¹³⁸ Govt. Code, § 17556, subd. c.

¹³⁹ *Id.* at § subd. (a).

¹⁴⁰ *Id.* at § subd. (d).

¹⁴¹ As noted above, under the state’s Porter-Cologne Act nomenclature, designated uses are referred to as beneficial uses and water quality criteria are referred to as water quality objectives. The state and federal terms are used interchangeably.

¹⁴² 33 U.S.C. § 1311(b)(1)(C); see also *City of Burbank, supra*, 35 Cal.4th at p. 626.

The Claimant argues that the Los Angeles Water Board's "modification and re-modification of the water quality objectives for chlorides, as well as the board's adoption of specific requirements [in the TMDL] for meeting these objectives" were discretionary decisions made outside of the Clean Water Act.¹⁴³ This is incorrect. The Los Angeles Water Board has no such discretion; section 303 of the Clean Water Act mandates the state to adopt water quality standards and TMDLs for waterbodies that fail to meet such standards.¹⁴⁴ Earlier in its Test Claim, the Claimant even acknowledges that the adoption of water quality standards and TMDLs are a federal mandate: "Section 303(d) of the [Clean Water Act] *requires* states to continually identify those waters of the United States within their boundaries that do not meet water quality standards . . . and prepare TMDLs for those waters that will ensure re-attainment of the standards through action by regulated dischargers."¹⁴⁵ The 2008 Resolution merely continues and refines previous planning goals and objectives that were set forth in prior versions of the Basin Plan and Chloride TMDL. The California Supreme Court has held that, "[f]or purposes of ruling upon a request for reimbursement, challenged state rules or procedures that are intended to implement an applicable federal law—and whose costs are, in context, *de minimus*—should be treated as part and parcel of the underlying federal mandate."¹⁴⁶

The Claimant's insistence that the Los Angeles Water Board exercised discretion in this case fails as a matter of law. Pursuant to Clean Water Act section 303, in 1975, the Los Angeles Water Board adopted water quality standards for the Santa Clara River, which included water quality objectives for chloride. In 1998, Reaches 5 and 6 of the Santa Clara River appeared on the state's 303(d) List as impaired for chloride, because the waterbody did not meet the chloride water quality objectives. The Clean Water Act and the U.S. EPA's regulations make clear that a TMDL must be developed for impaired waterbodies, and that any TMDL must establish wasteload allocations for each discharger to the waterbody. The board therefore had no "true choice;"¹⁴⁷ it had to adopt a TMDL for chloride. True, the Chloride TMDL has been revised over time. However, just because the Los Angeles Water Board revised the implementation plan of its Chloride TMDL does not support the conclusion that the water quality objectives or the Chloride TMDL's provisions are unfunded state mandates. Water quality standards are adopted pursuant to the Clean Water Act, and *any* TMDL is required to attain and maintain the applicable water quality standards, no matter how many times these regulatory mechanisms are modified and amended.

Likewise, the fact that the Los Angeles Water Board decides how to allocate the pollutant loadings among the various dischargers, determine the program of implementation, and set

¹⁴³ Test Claim, p.9.

¹⁴⁴ 33 U.S.C. § 1313.

¹⁴⁵ Test Claim, p.2 (emphasis added).

¹⁴⁶ *San Diego Unified School District v. Commission on State Mandates* (2004) 33 Cal.4th 859, 890.

¹⁴⁷ *Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, 1581-1582. ("The test for determining whether there is a federal mandate is whether compliance with federal standards 'is a matter of true choice,' that is, whether participation in the federal program 'is truly voluntary.'" (Citing *City of Sacramento v. State of California* (1990) 50 Cal.3d 51.).

various milestones for achieving water quality standards does not mean that the TMDL's regulatory framework is an unfunded state mandate. The Claimant states that, "[w]hile the Clean Water Act requires TMDLs to be prepared, the Regional Water Board exercised its discretion when assigning [wasteload allocations] to the Saugus and Valencia WRPs" ¹⁴⁸ The Claimant ignores the relevant law, however. Title 40, section 130.2(i) of the Code of Federal Regulations defines TMDL to mean "[t]he sum of the individual [wasteload allocations] for point sources and [load allocations] for nonpoint sources and natural background." The very act of assigning allocations is what comprises the TMDL; a TMDL is not valid unless it contains wasteload and load allocations. Therefore, to protect beneficial uses, the Los Angeles Water Board had no choice but to assign wasteload allocations to each point source discharger, including the Claimant. This is especially true in light of the fact that the Claimant operates two WRPs that are the primary sources of chloride to the Santa Clara River. ¹⁴⁹

The Claimant further asserts that "acts to regulate water quality to protect downstream salt-sensitive crops" are not mandated by the Clean Water Act. ¹⁵⁰ This ignores the law. When designating uses of a waterbody and the appropriate water quality criteria/objectives to protect those uses, states are required to ensure that water quality standards are adequate to protect downstream uses. ¹⁵¹ Moreover, any water quality standards must protect the most sensitive of any designated beneficial uses. ¹⁵²

The Claimant further argues that the Clean Water Act does not even require that agricultural uses be protected at all. This also ignores the law. Clean Water Act section 303(c)(2)(A) requires that water quality standards consist of the designated uses of the water and shall be established taking into consideration their use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and *agricultural*, industrial, and other purposes ¹⁵³ The Claimant contends that the inclusion of the word "consideration" somehow makes it a discretionary, rather than mandatory, designation. This erroneous interpretation would make even uses based on the protection of fish, wildlife, and recreation discretionary, which is contrary to the Clean Water Act's stated goal that the protection and propagation of fish, shellfish, and wildlife and recreation in and on the water be achieved by 1983. ¹⁵⁴ Such an interpretation would also conflict with federal regulations, which require states to designate appropriate water uses to be achieved and protected. ¹⁵⁵ Uses are categorized into

¹⁴⁸ Test Claim, p.21.

¹⁴⁹ As further discussed below, even this argument gets the Claimant nowhere. The assignment of an allocation to the Claimant was no different than the allocation assigned other dischargers—regardless of the public nature of the discharge. All the wasteload allocations were set to implement the water quality standard of 100 mg/l of chloride and all dischargers were subject to the same wasteload allocation. In this sense, the TMDL, like the water quality standard, regulates with an even hand.

¹⁵⁰ Test Claim, p. 20.

¹⁵¹ 40 C.F.R. § 131.10(b).

¹⁵² *Id.* at § 131.11(a)(1).

¹⁵³ 33 U.S.C. § 1313(c)(2)(A) (emphasis added); See also 40 C.F.R. §§ 131.2, 131.10

¹⁵⁴ 33 U.S.C. § 1251(a)(2). Another stated goal of the Clean Water Act is for all discharges of pollutants into navigable waters be eliminated by 1985. (33 U.S.C. § 1251(a)(1).)

¹⁵⁵ 40 C.F.R. § 131.10

“existing uses” and “designated uses.” “Existing uses” are those uses actually attained in the waterbody, whether or not they are included in the water quality standards.”¹⁵⁶ “Designated uses” are those uses specific in water quality standards for each water body or segment whether or not they are being attained.”¹⁵⁷ Thus, if a use is an “existing” use for a waterbody (such as agriculture in the Santa Clara River), then the waterbody must have that use in its “designated” uses. As noted above, states must adopt water quality criteria that protect designated uses.¹⁵⁸ And for waters with multiple use designations, the water quality criteria must support the most sensitive use.¹⁵⁹ Therefore, the Los Angeles Water Board’s establishment of water quality objectives to protect salt-sensitive agricultural uses downstream of Reaches 5 and 6 of the Santa Clara River is federally mandated.

The Claimant also asserts that the Clean Water Act does not require the protection of so-called “off-stream agricultural uses” because the use must occur *in* the water itself.¹⁶⁰ The Claimant’s basis for this assertion is the definition of “existing uses.” This argument fails. Claimant’s construction would mean that protection of agricultural uses could only exist if someone is growing crops in the river itself. It would also mean that the protection of water supply uses could only exist if someone is actually drinking water in the river itself. Both results are not supported by the Clean Water Act, federal regulations, or U.S. EPA guidance. U.S. EPA regulations and guidance clearly require the protection of existing uses and the level of water quality necessary to protect those uses.¹⁶¹

The Los Angeles Water Board takes issue with the Claimant’s attempts to challenge the scientific validity of the underlying water quality objective of 100 mg/L for chloride in its Test Claim. That water quality objective was established in 1978. A test claim is not the proper forum to challenge the objective. In addition, the Claimant’s assertions regarding how other regional water boards or U.S. EPA have protected agricultural uses and the specific water quality standards that they have established for chloride for waterbodies in their jurisdictions are irrelevant to this Test Claim.¹⁶² The Los Angeles Water Board’s establishment of water quality standards for a specific waterbody based on site-specific information does not make it a discretionary action. Neither the Clean Water Act nor its implementing regulations establish a

¹⁵⁶ *Id.* at § 131.3(e).

¹⁵⁷ *Id.* at § 131.3(d).

¹⁵⁸ *Id.* at § 131.11(a).

¹⁵⁹ *Ibid.*

¹⁶⁰ Test Claim, pp. 20-21.

¹⁶¹ 40 C.F.R. § 131.12(a)(1); U.S. EPA, *Water Quality Standards Handbook: Second Edition* (Aug. 1994), § 4.4, p. 4-3.

¹⁶² For example, on page 21 of the Test Claim, Claimant points to certain numeric chloride limits that U.S. EPA has established for drinking water and the protection of aquatic life. It is true that these limits are significantly higher than the water quality objectives established by the Los Angeles Water Board. However, this is because humans and aquatic species can tolerate much higher chloride concentrations than salt-sensitive agricultural crops, such as avocados and strawberries. As noted above, the state is required to protect the most sensitive of any designated beneficial uses. In the Upper Santa Clara River, agriculture is the most sensitive use. Therefore, the levels U.S. EPA has established for state drinking water and aquatic life standards are irrelevant.

Drew Bohan, Executive Director

- 26 -

July 29, 2011

one-size-fits-all approach in establishing water quality standards.¹⁶³ Water quality standards are specific to each individual waterbody, and often to individual segments of that waterbody, so that such water quality standards are appropriately established.

Lastly, the 2008 Resolution cannot be construed as requiring a new level of service, because the chloride water quality objective for the Santa Clara River was first established in 1975. The whole purpose of the 2008 Resolution was to incorporate less-stringent site-specific objectives in order to support the Claimant's AWRM program. Thus, if anything, the 2008 Resolution imposed a *lower level of service* in order to make it less expensive for the Claimant to implement the existing 100 mg/L chloride water quality objective. In addition, the Los Angeles Water Board did not impose this program on the Claimant. The AWRM is the Claimant's chosen method of complying with the Chloride TMDL and the water quality objectives.

Moreover, if U.S. EPA were to have adopted a Chloride TMDL for the Santa Clara River, it would have done so without an implementation plan, since U.S. EPA does not include implementation plans as part of their TMDLs.¹⁶⁴ This means that final wasteload allocations and load allocations would take effect immediately upon adoption of the TMDL¹⁶⁵ and dischargers would need to comply with effluent limits based on those wasteload allocations immediately upon incorporation into an NPDES permit. For the Chloride TMDL, the Los Angeles Water Board initially allowed up to 13 years for the Claimant to achieve its wasteload allocations. Based on the results of the various special studies, that schedule was eventually shortened to 10 years. However, the Claimant most likely would not have received any time schedule at all, had U.S. EPA adopted the Chloride TMDL.

2. The 2008 Resolution Does Not Impose Requirements Unique to Local Agencies and Is Not a Mandate Peculiar to Government

In order to demonstrate that the 2008 Resolution imposes a new program or higher level of service, the Claimant has the burden of proving that the 2008 Resolution imposes requirements unique to the Claimant. However, the Claimant fails to meet this burden in its Test Claim. That is because the 2008 Resolution is a regulatory provision of general applicability and not a new program or higher level of service.

None of the challenged provisions are subject to reimbursement because the 2008 Resolution does not involve requirements imposed uniquely upon local government. Reimbursement to local agencies is required only for the costs involved in carrying out functions peculiar to government, not for expenses incurred by local agencies as an incidental impact of laws that

¹⁶³ *Natural Resources Defense Council, Inc. v. U.S. E.P.A.* (4th Cir. 1993) 16 F.3d 1395, 1400.

¹⁶⁴ See, e.g., *Pronsolino, supra*, 291 F.3d at p. 1140 (although, unlike the nonpoint source pollution subject to the TMDL in *Pronsolino*, this case involves a discharge subject to the NPDES program, and therefore, the independent federal obligations to comply with water quality standards and to implement wasteload allocations apply [33 U.S.C. § 1311(b)(1)(C) and 40 C.F.R. § 122.44(d)]).

¹⁶⁵ See, e.g., *In the Matter of Star-Kist Caribe, Inc.* (E.A.B. 1990) 3 E.A.D. 172, mod. den. 4 E.A.D. 33 (E.A.B 1992) (noting that U.S. EPA may only include compliance schedules authorizing delayed implementation of state water quality standards if the state water quality standards authorize the compliance schedules).

Drew Bohan, Executive Director

- 27 -

July 29, 2011

apply generally to all state residents and entities. Laws of general application are not entitled to subvention.¹⁶⁶ The fact that a requirement may single out local governments is not dispositive; where local agencies are required to perform the same functions as private industry, no subvention is required.¹⁶⁷

Water quality objectives apply to a waterbody as a whole, and all dischargers are subject to them.¹⁶⁸ Likewise, TMDLs must assign wasteload allocations and load allocations to all sources of the pollutant, both public agencies and private industry alike. Here, the water quality objectives for chloride apply throughout the entire affected portion of the Upper Santa Clara River. As required by the Clean Water Act, the Los Angeles Water Board established a Chloride TMDL designed to achieve water quality objectives. That regulatory mechanism analyzed all sources of chloride discharges and determined that the greatest load of chloride came from WRPs that the Claimant owns and operates. As such, the challenged provisions treat dischargers with an even hand, irrespective of status (any point or nonpoint source) and are not peculiar to local agencies such as the Claimant.

For the reasons stated above, the challenged provisions are not a new program or higher level of service, and thus the Los Angeles Water Board requests the Commission to reject the Claimant's arguments.

B. Subvention Is Not Required Because Exemptions in Government Code Section 17556 Apply

Even if the Commission views the 2008 Resolution as a state mandate, the Claimant is not entitled to subvention because all three exemptions in Government Code section 17556 apply. The 2008 Resolution is a federal mandate and any additional costs beyond the federal mandate are *de minimis*, the Claimant actually proposed the AWRM program and requested the Los Angeles Water Board to incorporate it into the 2008 Resolution, and the Claimant has the authority to levy service charges, fees, or assessments sufficient to pay for any associated costs.

1. The Establishment of Water Quality Objectives and TMDLs Is Federally Mandated and Any Additional Costs Are *De Minimis*

¹⁶⁶ *County of Los Angeles, supra*, 43 Cal.3d at 56-58.

¹⁶⁷ See *City of Richmond v. Commission on State Mandates* (1998) 64 Cal.App.4th 1190, 1197 (citing *County of Los Angeles, supra*, 43 Cal.3d at pp. 56-57).

¹⁶⁸ See 40 C.F.R. § 130.3 ("A water quality standard defines the water quality goals of a water body, or portion thereof, by designating the use or uses to be made of the water and by setting [objectives] necessary to protect the uses.").

The Claimant is not entitled to subvention because the exemption in Government Code section 17556, subdivision (c) applies.¹⁶⁹ As explained above in Sections III.B.1. and III.B.2., the Clean Water Act requires states to establish water quality standards (including the water quality objectives at issue in the Test Claim) and TMDLs. As such, the Claimant's obligations are federal mandates. Because Article XIII B, section 6 of the California Constitution only applies to state mandates, the Claimant's unfunded mandate claim must fail.

In addition, neither the chloride water quality objective nor the Chloride TMDL require the Claimant to incur any additional costs. While water quality standards and TMDLs are federally compelled, they themselves are not executive orders directly enforceable against a discharger or this Claimant. This is, as stated above, because water quality standards and TMDLs are not self-implementing under the Clean Water Act or the Porter-Cologne Act. More specifically, the site-specific objectives for chloride incorporated into the Basin Plan and the wasteload allocations and implementation tasks set forth in the Chloride TMDL do not, by themselves, require any actions or increases in the services that the Claimant provides to the public.¹⁷⁰ TMDLs established under section 303(d) of the Clean Water Act function primarily as informational tools and planning devices for the state or U.S. EPA to establish further pollution controls.¹⁷¹ Water quality objectives and TMDLs form the framework for further administrative actions with respect to particularized pollutant discharges and waterbodies.¹⁷²

Neither U.S. EPA nor the Los Angeles Water Board can directly enforce a TMDL or water quality objective against a discharger. In order to implement a TMDL or water quality objective, the applicable provisions of the TMDL or water quality objective must first be incorporated into an enforceable document. The most common administrative action to implement a water quality objective or TMDL is through the NPDES permitting process. The court in *City of Arcadia v. U.S. Environmental Protection Agency* explained that "each TMDL represents a goal that may be implemented by adjusting pollutant discharge requirements in individual NPDES permits or establishing nonpoint source controls."¹⁷³ Federal law specifies how this should be accomplished: NPDES permits must contain effluent limitations that are "consistent with the assumptions and requirements of any available wasteload allocation for the discharge prepared by the State and approved by EPA."¹⁷⁴ For point sources dischargers like the Claimant, the

¹⁶⁹ Gov. Code, § 17556, subd. (c).

¹⁷⁰ See *City of Arcadia v. U.S. Env'tl. Protection Agency* (N.D. Cal. 2003) 265 F.Supp.2d 1142, 1144-45.

¹⁷¹ See, e.g., *City of Arcadia v. U.S. Environmental Protection Agency* (9th Cir. 2005) 411 F.3d 1103, 1105 (citing *Pronsolino, supra*, 291 F.3d at p. 1129 ("TMDLs are primarily informational tools that allow states to proceed [with additional planning] . . . TMDLs serve as a link in an implementation chain that includes . . . state or local plans for point and nonpoint source pollution reduction")); *Sierra Club v. Meiburg* (11 Cir. 2002) 296 F.3d 1021, 1025 ("Each TMDL serves as the goal for the level of that pollutant in the waterbody to which that TMDL applies. . . . The theory is that individual-discharge permits will be adjusted and other measures taken so that the sum of that pollutant in the waterbody is reduced to the level specified by the TMDL"); *Idaho Conservation League v. Thomas* (9th Cir. 1996) 91 F.3d 1345, 1347 (noting that a TMDL sets a goal for reducing pollutants); *Idaho Sportsmen's Coalition v. Browner* (W.D. Wash. 1996) 951 F.Supp. 962, 966 ("TMDL development in itself does not reduce pollution. . . . TMDLs inform the design and implementation of pollution control measures.").

¹⁷² See, e.g., *City of Arcadia, supra*, 135 Cal.App.4th at 1414-15.

¹⁷³ *City of Arcadia, supra*, 265 F.Supp.2d at 1144.

¹⁷⁴ 40 C.F.R. § 122.44(d)(1)(vii)(B).

specific wasteload allocations and implementation tasks set forth in the TMDL do not become enforceable unless and until they are incorporated into the Claimant's NPDES permit. As such, neither the 100 mg/L chloride water quality objective nor the TMDL, by themselves, impose any mandatory requirements on the Claimant to incur costs to implement the goals.

Thus, as a threshold jurisdictional matter, the 2008 Resolution specifically challenged by the Claimant does not, by itself, impose any enforceable requirements. For this reason alone, the Claimant is not entitled to subvention based on the Test Claim.

2. The Claimant Proposed the AWRM Program and Requested the Board Incorporate it into the 2008 Resolution

Next, the Claimant is not entitled to reimbursement because the exemption in Government Code section 17556, subdivision (a) applies.¹⁷⁵ In its Test Claim, the Claimant states that "the Regional Water Board decided to further modify water quality standards, resulting in the currently-imposed AWRM program. These layers of regulation were not mandated by federal law but instead reflect ever-changing State regulatory policy decisions."¹⁷⁶ The Claimant ignores the fact that the Claimant itself developed and proposed the AWRM program and then requested the Los Angeles Water Board to adopt the AWRM as part of its 2008 Resolution.¹⁷⁷ Both prior to and during the December 2008 Los Angeles Water Board meeting to consider the 2008 Resolution, the Claimant strongly urged the board to adopt the 2008 Resolution.

In addition, the 2008 Resolution reduces the compliance costs the Claimant would otherwise incur. As detailed above, the 2008 Resolution was specifically adopted to incorporate relaxed site-specific objectives into the Basin Plan in order to implement the Claimant's proposed AWRM program. The Claimant correctly states that, "[i]f the AWRM program is not timely implemented, the water quality objectives for chloride will revert back from the conditional site-specific objectives to the current [and more stringent] levels of 100 mg/L."¹⁷⁸ The Los Angeles Water Board acceded to the Claimant's requests and included the AWRM in the Chloride TMDL. Therefore, subvention is not required because the Claimant specifically proposed the AWRM and requested that the board incorporate it into the 2008 Resolution.

3. The Claimant Has Authority to Levy Service Charges, Fees, or Assessments Sufficient to Pay

¹⁷⁵ Gov. Code, § 17556, subd. (a).

¹⁷⁶ Test Claim, p.21.

¹⁷⁷ See *supra* Section III.C.3. for a discussion of the AWRM program.

¹⁷⁸ Test Claim, p.8.

Finally, subvention is not required because the Claimant possesses fee authority within the meaning of section 17556, subdivision (d), of the Government Code such that no reimbursement by the state is required. Subvention is only required if expenditure of tax monies is required, and not if the costs can be reallocated or paid for with fees.¹⁷⁹

The Claimant is authorized to impose and increase fees and charges for wastewater management services under Health and Safety Code section 5471.¹⁸⁰ Thus, the Claimant can and does impose fees on its residents and businesses to fund its sewer program. Accordingly, the Claimant need not spend tax monies to comply with the 2008 Resolution, and the Claimant has failed to show that it must use tax monies to pay for these requirements.

The Claimant contends that its Board of Directors has not been authorized to levy increased fees under the Proposition 218 process. As noted above, the Claimant's Board of Directors has twice considered proposals to increase service charge rates in order to pay for implementation of the AWRM program, the first on May 26, 2009, and the second on July 27, 2010.¹⁸¹ On both dates, the Claimant's Board of Directors chose not to approve the rate increases. The Claimant contends in its Test Claim that it "attempted to implement the Proposition 218 process, but the elected public officials could not [] support the proposed increase in the face of fierce public opposition."¹⁸² Fees or charges for sewer, water, and refuse collection services are exempt from the Proposition 218 process and thus voter approval for new or increased fees and charges are not required.¹⁸³ However, assuming that Proposition 218 *does* apply to Claimant's proposals for rate increases, the Proposition 218 process did not prevent the Board of Directors from increasing rates. Even though the opponents to the rate increases were likely vocal at both the 2009 and 2010 hearings, the number of written protests necessary to preclude the Board of Directors from passing rate increases under Proposition 218 was noticeably lacking. The Claimant needed to receive at least 34,449 written protests from parcel owners prior to each hearing. That did not occur. The Claimant received only 203 written protests before the 2009 hearing and 7,732 written protests before the 2010 hearing. Thus, the Claimant was clearly not prevented from increasing rates under Proposition 218. Rather, the Claimant's Board of Directors simply chose not to increase rates because there was some public opposition. Choosing to not increase rates is very different from being constitutionally prohibited from increasing rates.

In addition, the Claimant contends that "the District's board declined to adopt the proposed rate increases based on the expectations that any substantive rate increase would be overturned by

¹⁷⁹ *County of Los Angeles v. Commission on State Mandates* (2003) 110 Cal.App.4th 1176, 1189; *Redevelopment Agency v. Commission on State Mandates* (1997) 55 Cal.App.4th 976, 987.

¹⁸⁰ Health and Safety Code, § 5471. See Test Claim, p. 16 (where the Claimant admits that compliance project costs may be paid from service charges); see also Santa Clarita Valley Sanitation District of Los Angeles County, *Response to Questions from June 2, 2010 Board Meeting*, June 10, 2010, p. 6, at <<http://www.lacsd.org/civica/filebank/blobdload.asp?BlobID=5591>> (as of July 28, 2011).

¹⁸¹ See *supra* Section III.C.D. for a discussion on the Claimant's proposed rate increases.

¹⁸² Test Claim, p. 23.

¹⁸³ California Constitution, article XIII D, sec 6, subd. (c).

way of referendum due to fierce opposition from the District's ratepayer."¹⁸⁴ This is not a cognizable defense to the "fee increase exception" in Government Code section 17556, subdivision (d). The plain language of this exception is based on the Claimant's authority, not on the Claimant's practical ability in light of surrounding economic circumstances, to levy fees.¹⁸⁵ In *Connell v. Superior Court*, local water districts argued that they lacked "sufficient" fee authority because it was not economically feasible for them to levy fees that were sufficient to pay the mandated costs.¹⁸⁶ The Court of Appeal determined that "the plain language of the statute [Gov. Code, § 17556, subd. (d)] precludes reimbursement where the local agency has authority, i.e., the right or power, to levy fees sufficient to cover the costs of the state-mandated program." The Court further determined that the authority to levy fees sufficient to cover costs does not turn on economic feasibility.¹⁸⁷ Similar to the local water districts in *Connell*, the Claimant cannot contend that it lacks authority based on the undesirability of a possible referendum due to opposition by ratepayers. For the Claimant to truly establish that it lacks the right or power to levy fees, the Claimant would have had to actually adopt the rate increases at the 2009 or 2010 hearing, and then have those rate increases actually be overturned by referendum. The Claimant cannot rely on mere speculation as to what *could* happen as a defense to the fee increase exception.

Accordingly, the Claimant has fee authority to increase sewer rates to sufficiently pay for the AWRM program and Chloride TMDL. The Claimant has simply chosen not to exercise that authority.

V. CONCLUSION

For all of the reasons set forth above, the Claimant fails to meet its burden of proof and the Test Claim must be dismissed. The Claimant has not established that the Test Claim provisions impose new programs or higher levels of service. The Clean Water Act required the Los Angeles Water Board to adopt water quality objectives for chloride in the Santa Clara River and a Chloride TMDL to ensure attainment of those objectives, and the provisions of the 2008 Resolution are not unique to the Claimant. Importantly, the chloride water quality objective and Chloride TMDL, including the challenged implementation tasks, reflect the federally mandated, federal minimum standard of developing an informational tool to attain and maintain water quality standards. Furthermore, the Claimant enthusiastically supported the inclusion of AWRM, a provision it now challenges, and the Claimant has authority to increase rates and fees to pay for costs associated with the requirements. Finally, to the extent that any portion of the claims would otherwise qualify for subvention, the associated costs are *de minimis* and therefore do not warrant subvention.

Title 33. Navigation and Navigable Waters (Refs & Annos)

Chapter 26. Water Pollution Prevention and Control (Refs & Annos)

Subchapter I. Research and Related Programs (Refs & Annos)

33 U.S.C.A. § 1251

§ 1251. Congressional declaration of goals and policy

Currentness

(a) Restoration and maintenance of chemical, physical and biological integrity of Nation's waters; national goals for achievement of objective

The objective of this chapter is to restore and maintain the chemical, physical, and biological integrity of the Nation's waters. In order to achieve this objective it is hereby declared that, consistent with the provisions of this chapter--

- (1) it is the national goal that the discharge of pollutants into the navigable waters be eliminated by 1985;
- (2) it is the national goal that wherever attainable, an interim goal of water quality which provides for the protection and propagation of fish, shellfish, and wildlife and provides for recreation in and on the water be achieved by July 1, 1983;
- (3) it is the national policy that the discharge of toxic pollutants in toxic amounts be prohibited;
- (4) it is the national policy that Federal financial assistance be provided to construct publicly owned waste treatment works;
- (5) it is the national policy that areawide waste treatment management planning processes be developed and implemented to assure adequate control of sources of pollutants in each State;
- (6) it is the national policy that a major research and demonstration effort be made to develop technology necessary to eliminate the discharge of pollutants into the navigable waters, waters of the contiguous zone, and the oceans; and
- (7) it is the national policy that programs for the control of nonpoint sources of pollution be developed and implemented in an expeditious manner so as to enable the goals of this chapter to be met through the control of both point and nonpoint sources of pollution.

(b) Congressional recognition, preservation, and protection of primary responsibilities and rights of States

It is the policy of the Congress to recognize, preserve, and protect the primary responsibilities and rights of States to prevent, reduce, and eliminate pollution, to plan the development and use (including restoration, preservation, and enhancement) of land and water resources, and to consult with the Administrator in the exercise of his authority under this chapter. It is the policy of Congress that the States manage the construction grant program under this chapter and implement the permit programs under sections 1342 and 1344 of this title. It is further the policy of the Congress to support and aid research relating to the prevention, reduction, and elimination of pollution, and to provide Federal technical services and financial aid to State and interstate agencies and municipalities in connection with the prevention, reduction, and elimination of pollution.

(c) Congressional policy toward Presidential activities with foreign countries

It is further the policy of Congress that the President, acting through the Secretary of State and such national and international organizations as he determines appropriate, shall take such action as may be necessary to insure that to the fullest extent possible all foreign countries shall take meaningful action for the prevention, reduction, and elimination of pollution in their waters and in

international waters and for the achievement of goals regarding the elimination of discharge of pollutants and the improvement of water quality to at least the same extent as the United States does under its laws.

(d) Administrator of Environmental Protection Agency to administer chapter

Except as otherwise expressly provided in this chapter, the Administrator of the Environmental Protection Agency (hereinafter in this chapter called "Administrator") shall administer this chapter.

(e) Public participation in development, revision, and enforcement of any regulation, etc.

Public participation in the development, revision, and enforcement of any regulation, standard, effluent limitation, plan, or program established by the Administrator or any State under this chapter shall be provided for, encouraged, and assisted by the Administrator and the States. The Administrator, in cooperation with the States, shall develop and publish regulations specifying minimum guidelines for public participation in such processes.

(f) Procedures utilized for implementing chapter

It is the national policy that to the maximum extent possible the procedures utilized for implementing this chapter shall encourage the drastic minimization of paperwork and interagency decision procedures, and the best use of available manpower and funds, so as to prevent needless duplication and unnecessary delays at all levels of government.

(g) Authority of States over water

It is the policy of Congress that the authority of each State to allocate quantities of water within its jurisdiction shall not be superseded, abrogated or otherwise impaired by this chapter. It is the further policy of Congress that nothing in this chapter shall be construed to supersede or abrogate rights to quantities of water which have been established by any State. Federal agencies shall co-operate with State and local agencies to develop comprehensive solutions to prevent, reduce and eliminate pollution in concert with programs for managing water resources.

EXECUTIVE ORDERS

EXECUTIVE ORDER NO. 11548

Ex. Ord. No. 11548, July 20, 1970, 35 F.R. 11677, which related to the delegation of Presidential functions, was superseded by Ex. Ord. No. 11735, Aug. 3, 1973, 38 F.R. 21243, set out as a note under section 1321 of this title.

EXECUTIVE ORDER NO. 11742

<Oct. 23, 1973, 38 F.R. 29457>

**Delegation of Functions to Secretary of State Respecting Negotiation
of International Agreements Relating to Enhancement of Environment**

Under and by virtue of the authority vested in me by section 301 of title 3 of the United States Code and as President of the United States, I hereby authorize and empower the Secretary of State, in coordination with the Council on Environmental Quality, the Environmental Protection Agency, and other appropriate Federal agencies, to perform, without the approval, ratification, or other action of the President, the functions vested in the President by Section 7 of the Federal Water Pollution Control Act Amendments of 1972 (Public Law 92-500; 86 Stat. 898) with respect to international agreements relating to the enhancement of the environment.

Currentness

(a) Illegality of pollutant discharges except in compliance with law

Except as in compliance with this section and sections 1312, 1316, 1317, 1328, 1342, and 1344 of this title, the discharge of any pollutant by any person shall be unlawful.

(b) Timetable for achievement of objectives

In order to carry out the objective of this chapter there shall be achieved--

(1)(A) not later than July 1, 1977, effluent limitations for point sources, other than publicly owned treatment works, (i) which shall require the application of the best practicable control technology currently available as defined by the Administrator pursuant to section 1314(b) of this title, or (ii) in the case of a discharge into a publicly owned treatment works which meets the requirements of subparagraph (B) of this paragraph, which shall require compliance with any applicable pretreatment requirements and any requirements under section 1317 of this title; and

(B) for publicly owned treatment works in existence on July 1, 1977, or approved pursuant to section 1283 of this title prior to June 30, 1974 (for which construction must be completed within four years of approval), effluent limitations based upon secondary treatment as defined by the Administrator pursuant to section 1314(d)(1) of this title; or,

(C) not later than July 1, 1977, any more stringent limitation, including those necessary to meet water quality standards, treatment standards, or schedules of compliance, established pursuant to any State law or regulations (under authority preserved by section 1370 of this title) or any other Federal law or regulation, or required to implement any applicable water quality standard established pursuant to this chapter.

(2)(A) for pollutants identified in subparagraphs (C), (D), and (F) of this paragraph, effluent limitations for categories and classes of point sources, other than publicly owned treatment works, which (i) shall require application of the best available technology economically achievable for such category or class, which will result in reasonable further progress toward the national goal of eliminating the discharge of all pollutants, as determined in accordance with regulations issued by the Administrator pursuant to section 1314(b)(2) of this title, which such effluent limitations shall require the elimination of discharges of all pollutants if the Administrator finds, on the basis of information available to him (including information developed pursuant to section 1325 of this title), that such elimination is technologically and economically achievable for a category or class of point sources as determined in accordance with regulations issued by the Administrator pursuant to section 1314(b)(2) of this title, or (ii) in the case of the introduction of a pollutant into a publicly owned treatment works which meets the requirements of subparagraph (B) of this paragraph, shall require compliance with any applicable pretreatment requirements and any other requirement under section 1317 of this title;

(B) Repealed. Pub.L. 97-117, § 21(b), Dec. 29, 1981, 95 Stat. 1632.

(C) with respect to all toxic pollutants referred to in table 1 of Committee Print Numbered 95-30 of the Committee on Public Works and Transportation of the House of Representatives compliance with effluent limitations in accordance with subparagraph (A) of this paragraph as expeditiously as practicable but in no case later than three years after the date such limitations are promulgated under section 1314(b) of this title, and in no case later than March 31, 1989;

(D) for all toxic pollutants listed under paragraph (1) of subsection (a) of section 1317 of this title which are not referred to in subparagraph (C) of this paragraph compliance with effluent limitations in accordance with subparagraph (A) of this paragraph as expeditiously as practicable, but in no case later than three years after the date such limitations are promulgated under section 1314(b) of this title, and in no case later than March 31, 1989;

(E) as expeditiously as practicable but in no case later than three years after the date such limitations are promulgated under section 1314(b) of this title, and in no case later than March 31, 1989, compliance with effluent limitations for categories and classes of point sources, other than publicly owned treatment works, which in the case of pollutants identified pursuant to section 1314(a)(4) of this title shall require application of the best conventional pollutant control technology as determined in accordance with regulations issued by the Administrator pursuant to section 1314(b)(4) of this title; and

(F) for all pollutants (other than those subject to subparagraphs (C), (D), or (E) of this paragraph) compliance with effluent limitations in accordance with subparagraph (A) of this paragraph as expeditiously as practicable but in no case later than 3 years after the date such limitations are established, and in no case later than March 31, 1989.

(3)(A) for effluent limitations under paragraph (1)(A)(i) of this subsection promulgated after January 1, 1982, and requiring a level of control substantially greater or based on fundamentally different control technology than under permits for an industrial category issued before such date, compliance as expeditiously as practicable but in no case later than three years after the date such limitations are promulgated under section 1314(b) of this title, and in no case later than March 31, 1989; and

(B) for any effluent limitation in accordance with paragraph (1)(A)(i), (2)(A)(i), or (2)(E) of this subsection established only on the basis of section 1342(a)(1) of this title in a permit issued after February 4, 1987; compliance as expeditiously as practicable but in no case later than three years after the date such limitations are established, and in no case later than March 31, 1989.

(c) Modification of timetable

The Administrator may modify the requirements of subsection (b)(2)(A) of this section with respect to any point source for which a permit application is filed after July 1, 1977, upon a showing by the owner or operator of such point source satisfactory to the Administrator that such modified requirements (1) will represent the maximum use of technology within the economic capability of the owner or operator; and (2) will result in reasonable further progress toward the elimination of the discharge of pollutants.

(d) Review and revision of effluent limitations

Any effluent limitation required by paragraph (2) of subsection (b) of this section shall be reviewed at least every five years and, if appropriate, revised pursuant to the procedure established under such paragraph.

(e) All point discharge source application of effluent limitations

Effluent limitations established pursuant to this section or section 1312 of this title shall be applied to all point sources of discharge of pollutants in accordance with the provisions of this chapter.

(f) Illegality of discharge of radiological, chemical, or biological warfare agents, high-level radioactive waste, or medical waste

Notwithstanding any other provisions of this chapter it shall be unlawful to discharge any radiological, chemical, or biological warfare agent, any high-level radioactive waste, or any medical waste, into the navigable waters.

(g) Modifications for certain nonconventional pollutants

(1) General authority

The Administrator, with the concurrence of the State, may modify the requirements of subsection (b)(2)(A) of this section with respect to the discharge from any point source of ammonia, chlorine, color, iron, and total phenols (4AAP) (when determined by the Administrator to be a pollutant covered by subsection (b)(2)(F) of this section) and any other pollutant which the Administrator lists under paragraph (4) of this subsection.

(2) Requirements for granting modifications

A modification under this subsection shall be granted only upon a showing by the owner or operator of a point source satisfactory to the Administrator that--

(A) such modified requirements will result at a minimum in compliance with the requirements of subsection (b)(1)(A) or (C) of this section, whichever is applicable;

(B) such modified requirements will not result in any additional requirements on any other point or nonpoint source; and

(C) such modification will not interfere with the attainment or maintenance of that water quality which shall assure protection of public water supplies, and the protection and propagation of a balanced population of shellfish, fish, and wildlife, and allow recreational activities, in and on the water and such modification will not result in the discharge of pollutants in quantities which may reasonably be anticipated to pose an unacceptable risk to human health or the environment because of bioaccumulation, persistency in the environment, acute toxicity, chronic toxicity (including carcinogenicity, mutagenicity or teratogenicity), or synergistic propensities.

(3) Limitation on authority to apply for subsection (c) modification

If an owner or operator of a point source applies for a modification under this subsection with respect to the discharge of any pollutant, such owner or operator shall be eligible to apply for modification under subsection (c) of this section with respect to such pollutant only during the same time period as he is eligible to apply for a modification under this subsection.

(4) Procedures for listing additional pollutants

(A) General authority

Upon petition of any person, the Administrator may add any pollutant to the list of pollutants for which modification under this section is authorized (except for pollutants identified pursuant to section 1314(a)(4) of this title, toxic pollutants subject to section 1317(a) of this title, and the thermal component of discharges) in accordance with the provisions of this paragraph.

(B) Requirements for listing

(i) Sufficient information

The person petitioning for listing of an additional pollutant under this subsection shall submit to the Administrator sufficient information to make the determinations required by this subparagraph.

(ii) Toxic criteria determination

The Administrator shall determine whether or not the pollutant meets the criteria for listing as a toxic pollutant under section 1317(a) of this title.

(iii) Listing as toxic pollutant

If the Administrator determines that the pollutant meets the criteria for listing as a toxic pollutant under section 1317(a) of this title, the Administrator shall list the pollutant as a toxic pollutant under section 1317(a) of this title.

(iv) Nonconventional criteria determination

If the Administrator determines that the pollutant does not meet the criteria for listing as a toxic pollutant under such section and determines that adequate test methods and sufficient data are available to make the determinations required

by paragraph (2) of this subsection with respect to the pollutant, the Administrator shall add the pollutant to the list of pollutants specified in paragraph (1) of this subsection for which modifications are authorized under this subsection.

(C) Requirements for filing of petitions

A petition for listing of a pollutant under this paragraph--

(i) must be filed not later than 270 days after the date of promulgation of an applicable effluent guideline under section 1314 of this title;

(ii) may be filed before promulgation of such guideline; and

(iii) may be filed with an application for a modification under paragraph (1) with respect to the discharge of such pollutant.

(D) Deadline for approval of petition

A decision to add a pollutant to the list of pollutants for which modifications under this subsection are authorized must be made within 270 days after the date of promulgation of an applicable effluent guideline under section 1314 of this title.

(E) Burden of proof

The burden of proof for making the determinations under subparagraph (B) shall be on the petitioner.

(5) Removal of pollutants

The Administrator may remove any pollutant from the list of pollutants for which modifications are authorized under this subsection if the Administrator determines that adequate test methods and sufficient data are no longer available for determining whether or not modifications may be granted with respect to such pollutant under paragraph (2) of this subsection.

(h) Modification of secondary treatment requirements

The Administrator, with the concurrence of the State, may issue a permit under section 1342 of this title which modifies the requirements of subsection (b)(1)(B) of this section with respect to the discharge of any pollutant from a publicly owned treatment works into marine waters, if the applicant demonstrates to the satisfaction of the Administrator that--

(1) there is an applicable water quality standard specific to the pollutant for which the modification is requested, which has been identified under section 1314(a)(6) of this title;

(2) the discharge of pollutants in accordance with such modified requirements will not interfere, alone or in combination with pollutants from other sources, with the attainment or maintenance of that water quality which assures protection of public water supplies and the protection and propagation of a balanced, indigenous population of shellfish, fish, and wildlife, and allows recreational activities, in and on the water;

(3) the applicant has established a system for monitoring the impact of such discharge on a representative sample of aquatic biota, to the extent practicable, and the scope of such monitoring is limited to include only those scientific investigations which are necessary to study the effects of the proposed discharge;

(4) such modified requirements will not result in any additional requirements on any other point or nonpoint source;

(5) all applicable pretreatment requirements for sources introducing waste into such treatment works will be enforced;

(6) in the case of any treatment works serving a population of 50,000 or more, with respect to any toxic pollutant introduced into such works by an industrial discharger for which pollutant there is no applicable pretreatment requirement in effect, sources introducing waste into such works are in compliance with all applicable pretreatment requirements, the applicant will enforce such requirements, and the applicant has in effect a pretreatment program which, in combination with the treatment of discharges from such works, removes the same amount of such pollutant as would be removed if such works were to apply secondary treatment to discharges and if such works had no pretreatment program with respect to such pollutant;

(7) to the extent practicable, the applicant has established a schedule of activities designed to eliminate the entrance of toxic pollutants from nonindustrial sources into such treatment works;

(8) there will be no new or substantially increased discharges from the point source of the pollutant to which the modification applies above that volume of discharge specified in the permit;

(9) the applicant at the time such modification becomes effective will be discharging effluent which has received at least primary or equivalent treatment and which meets the criteria established under section 1314(a)(1) of this title after initial mixing in the waters surrounding or adjacent to the point at which such effluent is discharged.

For the purposes of this subsection the phrase "the discharge of any pollutant into marine waters" refers to a discharge into deep waters of the territorial sea or the waters of the contiguous zone, or into saline estuarine waters where there is strong tidal movement and other hydrological and geological characteristics which the Administrator determines necessary to allow compliance with paragraph (2) of this subsection, and section 1251(a)(2) of this title. For the purposes of paragraph (9), "primary or equivalent treatment" means treatment by screening, sedimentation, and skimming adequate to remove at least 30 percent of the biological oxygen demanding material and of the suspended solids in the treatment works influent, and disinfection, where appropriate. A municipality which applies secondary treatment shall be eligible to receive a permit pursuant to this subsection which modifies the requirements of subsection (b)(1)(B) of this section with respect to the discharge of any pollutant from any treatment works owned by such municipality into marine waters. No permit issued under this subsection shall authorize the discharge of sewage sludge into marine waters. In order for a permit to be issued under this subsection for the discharge of a pollutant into marine waters, such marine waters must exhibit characteristics assuring that water providing dilution does not contain significant amounts of previously discharged effluent from such treatment works. No permit issued under this subsection shall authorize the discharge of any pollutant into saline estuarine waters which at the time of application do not support a balanced indigenous population of shellfish, fish and wildlife, or allow recreation in and on the waters or which exhibit ambient water quality below applicable water quality standards adopted for the protection of public water supplies, shellfish, fish and wildlife or recreational activities or such other standards necessary to assure support and protection of such uses. The prohibition contained in the preceding sentence shall apply without regard to the presence or absence of a causal relationship between such characteristics and the applicant's current or proposed discharge. Notwithstanding any other provisions of this subsection, no permit may be issued under this subsection for discharge of a pollutant into the New York Bight Apex consisting of the ocean waters of the Atlantic Ocean westward of 73 degrees 30 minutes west longitude and northward of 40 degrees 10 minutes north latitude.

(i) Municipal time extensions

(1) Where construction is required in order for a planned or existing publicly owned treatment works to achieve limitations under subsection (b)(1)(B) or (b)(1)(C) of this section, but (A) construction cannot be completed within the time required in such subsection, or (B) the United States has failed to make financial assistance under this chapter available in time to achieve such limitations by the time specified in such subsection, the owner or operator of such treatment works may request the Administrator (or if appropriate the State) to issue a permit pursuant to section 1342 of this title or to modify a permit issued pursuant to that section to extend such time for compliance. Any such request shall be filed with the Administrator (or if appropriate the State) within 180 days after February 4, 1987. The Administrator (or if appropriate the State) may grant such request and issue or modify such a permit, which shall contain a schedule of compliance for the publicly owned treatment works based on the earliest date by which such financial assistance will be available from the United States and construction can be completed, but in no event later than July 1, 1988, and shall contain such other terms and conditions, including those necessary to carry out subsections (b) through (g) of section 1281 of this title, section 1317 of this title, and such interim effluent limitations applicable to that treatment works as the Administrator determines are necessary to carry out the provisions of this chapter.

(2)(A) Where a point source (other than a publicly owned treatment works) will not achieve the requirements of subsections (b)(1)(A) and (b)(1)(C) of this section and--

(i) if a permit issued prior to July 1, 1977, to such point source is based upon a discharge into a publicly owned treatment works; or

(ii) if such point source (other than a publicly owned treatment works) had before July 1, 1977, a contract (enforceable against such point source) to discharge into a publicly owned treatment works; or

(iii) if either an application made before July 1, 1977, for a construction grant under this chapter for a publicly owned treatment works, or engineering or architectural plans or working drawings made before July 1, 1977, for a publicly owned treatment works, show that such point source was to discharge into such publicly owned treatment works,

and such publicly owned treatment works is presently unable to accept such discharge without construction, and in the case of a discharge to an existing publicly owned treatment works, such treatment works has an extension pursuant to paragraph (1) of this subsection, the owner or operator of such point source may request the Administrator (or if appropriate the State) to issue or modify such a permit pursuant to such section 1342 of this title to extend such time for compliance. Any such request shall be filed with the Administrator (or if appropriate the State) within 180 days after December 27, 1977, or the filing of a request by the appropriate publicly owned treatment works under paragraph (1) of this subsection, whichever is later. If the Administrator (or if appropriate the State) finds that the owner or operator of such point source has acted in good faith, he may grant such request and issue or modify such a permit, which shall contain a schedule of compliance for the point source to achieve the requirements of subsections (b)(1)(A) and (C) of this section and shall contain such other terms and conditions, including pretreatment and interim effluent limitations and water conservation requirements applicable to that point source, as the Administrator determines are necessary to carry out the provisions of this chapter.

(B) No time modification granted by the Administrator (or if appropriate the State) pursuant to paragraph (2)(A) of this subsection shall extend beyond the earliest date practicable for compliance or beyond the date of any extension granted to the appropriate publicly owned treatment works pursuant to paragraph (1) of this subsection, but in no event shall it extend beyond July 1, 1988; and no such time modification shall be granted unless (i) the publicly owned treatment works will be in operation and available to the point source before July 1, 1988, and will meet the requirements of subsections (b)(1)(B) and (C) of this section after receiving the discharge from that point source; and (ii) the point source and the publicly owned treatment works have entered into an enforceable contract requiring the point source to discharge into the publicly owned treatment works, the owner or operator of such point source to pay the costs required under section 1284 of this title, and the publicly owned treatment works to accept the discharge from the point source; and (iii) the permit for such point source requires that point source to meet all requirements under section 1317(a) and (b) of this title during the period of such time modification.

(j) Modification procedures

(1) Any application filed under this section for a modification of the provisions of--

(A) subsection (b)(1)(B) of this section under subsection (h) of this section shall be filed not later than the 365th day which begins after December 29, 1981, except that a publicly owned treatment works which prior to December 31, 1982, had a contractual arrangement to use a portion of the capacity of an ocean outfall operated by another publicly owned treatment works which has applied for or received modification under subsection (h) of this section, may apply for a modification of subsection (h) of this section in its own right not later than 30 days after February 4, 1987, and except as provided in paragraph (5);

(B) subsection (b)(2)(A) of this section as it applies to pollutants identified in subsection (b)(2)(F) of this section shall be filed not later than 270 days after the date of promulgation of an applicable effluent guideline under section 1314 of this title or not later than 270 days after December 27, 1977, whichever is later.

(2) Subject to paragraph (3) of this section, any application for a modification filed under subsection (g) of this section shall not operate to stay any requirement under this chapter, unless in the judgment of the Administrator such a stay or the modification sought will not result in the discharge of pollutants in quantities which may reasonably be anticipated to pose an unacceptable

risk to human health or the environment because of bioaccumulation, persistency in the environment, acute toxicity, chronic toxicity (including carcinogenicity, mutagenicity, or teratogenicity), or synergistic propensities, and that there is a substantial likelihood that the applicant will succeed on the merits of such application. In the case of an application filed under subsection (g) of this section, the Administrator may condition any stay granted under this paragraph on requiring the filing of a bond or other appropriate security to assure timely compliance with the requirements from which a modification is sought.

(3) Compliance requirements under subsection (g)

(A) Effect of filing

An application for a modification under subsection (g) of this section and a petition for listing of a pollutant as a pollutant for which modifications are authorized under such subsection shall not stay the requirement that the person seeking such modification or listing comply with effluent limitations under this chapter for all pollutants not the subject of such application or petition.

(B) Effect of disapproval

Disapproval of an application for a modification under subsection (g) of this section shall not stay the requirement that the person seeking such modification comply with all applicable effluent limitations under this chapter.

(4) Deadline for subsection (g) decision

An application for a modification with respect to a pollutant filed under subsection (g) of this section must be approved or disapproved not later than 365 days after the date of such filing; except that in any case in which a petition for listing such pollutant as a pollutant for which modifications are authorized under such subsection is approved, such application must be approved or disapproved not later than 365 days after the date of approval of such petition.

(5) Extension of application deadline

(A) In general

In the 180-day period beginning on October 31, 1994, the city of San Diego, California, may apply for a modification pursuant to subsection (h) of this section of the requirements of subsection (b)(1)(B) of this section with respect to biological oxygen demand and total suspended solids in the effluent discharged into marine waters.

(B) Application

An application under this paragraph shall include a commitment by the applicant to implement a waste water reclamation program that, at a minimum, will--

(i) achieve a system capacity of 45,000,000 gallons of reclaimed waste water per day by January 1, 2010; and

(ii) result in a reduction in the quantity of suspended solids discharged by the applicant into the marine environment during the period of the modification.

(C) Additional conditions

The Administrator may not grant a modification pursuant to an application submitted under this paragraph unless the Administrator determines that such modification will result in removal of not less than 58 percent of the biological oxygen demand (on an annual average) and not less than 80 percent of total suspended solids (on a monthly average) in the discharge to which the application applies.

(D) Preliminary decision deadline

The Administrator shall announce a preliminary decision on an application submitted under this paragraph not later than 1 year after the date the application is submitted.

(k) Innovative technology

In the case of any facility subject to a permit under section 1342 of this title which proposes to comply with the requirements of subsection (b)(2)(A) or (b)(2)(E) of this section by replacing existing production capacity with an innovative production process which will result in an effluent reduction significantly greater than that required by the limitation otherwise applicable to such facility and moves toward the national goal of eliminating the discharge of all pollutants, or with the installation of an innovative control technique that has a substantial likelihood for enabling the facility to comply with the applicable effluent limitation by achieving a significantly greater effluent reduction than that required by the applicable effluent limitation and moves toward the national goal of eliminating the discharge of all pollutants, or by achieving the required reduction with an innovative system that has the potential for significantly lower costs than the systems which have been determined by the Administrator to be economically achievable, the Administrator (or the State with an approved program under section 1342 of this title, in consultation with the Administrator) may establish a date for compliance under subsection (b)(2)(A) or (b)(2)(E) of this section no later than two years after the date for compliance with such effluent limitation which would otherwise be applicable under such subsection, if it is also determined that such innovative system has the potential for industrywide application.

(l) Toxic pollutants

Other than as provided in subsection (n) of this section, the Administrator may not modify any requirement of this section as it applies to any specific pollutant which is on the toxic pollutant list under section 1317(a)(1) of this title.

(m) Modification of effluent limitation requirements for point sources

(1) The Administrator, with the concurrence of the State, may issue a permit under section 1342 of this title which modifies the requirements of subsections (b)(1)(A) and (b)(2)(E) of this section, and of section 1343 of this title, with respect to effluent limitations to the extent such limitations relate to biochemical oxygen demand and pH from discharges by an industrial discharger in such State into deep waters of the territorial seas, if the applicant demonstrates and the Administrator finds that--

(A) the facility for which modification is sought is covered at the time of the enactment of this subsection by National Pollutant Discharge Elimination System permit number CA0005894 or CA0005282;

(B) the energy and environmental costs of meeting such requirements of subsections (b)(1)(A) and (b)(2)(E) of this section and section 1343 of this title exceed by an unreasonable amount the benefits to be obtained, including the objectives of this chapter;

(C) the applicant has established a system for monitoring the impact of such discharges on a representative sample of aquatic biota;

(D) such modified requirements will not result in any additional requirements on any other point or nonpoint source;

(E) there will be no new or substantially increased discharges from the point source of the pollutant to which the modification applies above that volume of discharge specified in the permit;

(F) the discharge is into waters where there is strong tidal movement and other hydrological and geological characteristics which are necessary to allow compliance with this subsection and section 1251(a)(2) of this title;

(G) the applicant accepts as a condition to the permit a contractual² obligation to use funds in the amount required (but not less than \$250,000 per year for ten years) for research and development of water pollution control technology, including but not limited to closed cycle technology;

(H) the facts and circumstances present a unique situation which, if relief is granted, will not establish a precedent or the relaxation of the requirements of this chapter applicable to similarly situated discharges; and

(I) no owner or operator of a facility comparable to that of the applicant situated in the United States has demonstrated that it would be put at a competitive disadvantage to the applicant (or the parent company or any subsidiary thereof) as a result of the issuance of a permit under this subsection.

(2) The effluent limitations established under a permit issued under paragraph (1) shall be sufficient to implement the applicable State water quality standards, to assure the protection of public water supplies and protection and propagation of a balanced, indigenous population of shellfish, fish, fauna, wildlife, and other aquatic organisms, and to allow recreational activities in and on the water. In setting such limitations, the Administrator shall take into account any seasonal variations and the need for an adequate margin of safety, considering the lack of essential knowledge concerning the relationship between effluent limitations and water quality and the lack of essential knowledge of the effects of discharges on beneficial uses of the receiving waters.

(3) A permit under this subsection may be issued for a period not to exceed five years, and such a permit may be renewed for one additional period not to exceed five years upon a demonstration by the applicant and a finding by the Administrator at the time of application for any such renewal that the provisions of this subsection are met.

(4) The Administrator may terminate a permit issued under this subsection if the Administrator determines that there has been a decline in ambient water quality of the receiving waters during the period of the permit even if a direct cause and effect relationship cannot be shown: *Provided*, That if the effluent from a source with a permit issued under this subsection is contributing to a decline in ambient water quality of the receiving waters, the Administrator shall terminate such permit.

(n) Fundamentally different factors

(1) General rule

The Administrator, with the concurrence of the State, may establish an alternative requirement under subsection (b)(2) of this section or section 1317(b) of this title for a facility that modifies the requirements of national effluent limitation guidelines or categorical pretreatment standards that would otherwise be applicable to such facility, if the owner or operator of such facility demonstrates to the satisfaction of the Administrator that--

(A) the facility is fundamentally different with respect to the factors (other than cost) specified in section 1314(b) or 1314(g) of this title and considered by the Administrator in establishing such national effluent limitation guidelines or categorical pretreatment standards;

(B) the application--

(i) is based solely on information and supporting data submitted to the Administrator during the rulemaking for establishment of the applicable national effluent limitation guidelines or categorical pretreatment standard specifically raising the factors that are fundamentally different for such facility; or

(ii) is based on information and supporting data referred to in clause (i) and information and supporting data the applicant did not have a reasonable opportunity to submit during such rulemaking;

(C) the alternative requirement is no less stringent than justified by the fundamental difference; and

(D) the alternative requirement will not result in a non-water quality environmental impact which is markedly more adverse than the impact considered by the Administrator in establishing such national effluent limitation guideline or categorical pretreatment standard.

(2) Time limit for applications

An application for an alternative requirement which modifies the requirements of an effluent limitation or pretreatment standard under this subsection must be submitted to the Administrator within 180 days after the date on which such limitation or standard is established or revised, as the case may be.

(3) Time limit for decision

The Administrator shall approve or deny by final agency action an application submitted under this subsection within 180 days after the date such application is filed with the Administrator.

(4) Submission of information

The Administrator may allow an applicant under this subsection to submit information and supporting data until the earlier of the date the application is approved or denied or the last day that the Administrator has to approve or deny such application.

(5) Treatment of pending applications

For the purposes of this subsection, an application for an alternative requirement based on fundamentally different factors which is pending on February 4, 1987, shall be treated as having been submitted to the Administrator on the 180th day following February 4, 1987. The applicant may amend the application to take into account the provisions of this subsection.

(6) Effect of submission of application

An application for an alternative requirement under this subsection shall not stay the applicant's obligation to comply with the effluent limitation guideline or categorical pretreatment standard which is the subject of the application.

(7) Effect of denial

If an application for an alternative requirement which modifies the requirements of an effluent limitation or pretreatment standard under this subsection is denied by the Administrator, the applicant must comply with such limitation or standard as established or revised, as the case may be.

(8) Reports

By January 1, 1997, and January 1 of every odd-numbered year thereafter, the Administrator shall submit to the Committee on Environment and Public Works of the Senate and the Committee on Transportation and Infrastructure of the House of Representatives a report on the status of applications for alternative requirements which modify the requirements of effluent limitations under section 1311 or 1314 of this title or any national categorical pretreatment standard under section 1317(b) of this title filed before, on, or after February 4, 1987.

(o) Application fees

The Administrator shall prescribe and collect from each applicant fees reflecting the reasonable administrative costs incurred in reviewing and processing applications for modifications submitted to the Administrator pursuant to subsections (c), (g), (i), (k), (m), and (n) of this section, section 1314(d)(4) of this title, and section 1326(a) of this title. All amounts collected by the Administrator under this subsection shall be deposited into a special fund of the Treasury entitled "Water Permits and Related Services" which shall thereafter be available for appropriation to carry out activities of the Environmental Protection Agency for which such fees were collected.

(p) Modified permit for coal remining operations

(1) In general

Subject to paragraphs (2) through (4) of this subsection, the Administrator, or the State in any case which the State has an approved permit program under section 1342(b) of this title, may issue a permit under section 1342 of this title which modifies the requirements of subsection (b)(2)(A) of this section with respect to the pH level of any pre-existing discharge, and with respect to pre-existing discharges of iron and manganese from the remined area of any coal remining operation or with respect to the pH level or level of iron or manganese in any pre-existing discharge affected by the remining operation. Such modified requirements shall apply the best available technology economically achievable on a case-by-case basis, using best professional judgment, to set specific numerical effluent limitations in each permit.

(2) Limitations

The Administrator or the State may only issue a permit pursuant to paragraph (1) if the applicant demonstrates to the satisfaction of the Administrator or the State, as the case may be, that the coal remining operation will result in the potential for

improved water quality from the remining operation but in no event shall such a permit allow the pH level of any discharge, and in no event shall such a permit allow the discharges of iron and manganese, to exceed the levels being discharged from the remined area before the coal remining operation begins. No discharge from, or affected by, the remining operation shall exceed State water quality standards established under section 1313 of this title.

(3) Definitions

For purposes of this subsection--

(A) Coal remining operation

The term "coal remining operation" means a coal mining operation which begins after February 4, 1987 at a site on which coal mining was conducted before August 3, 1977.

(B) Remined area

The term "remined area" means only that area of any coal remining operation on which coal mining was conducted before August 3, 1977.

(C) Pre-existing discharge

The term "pre-existing discharge" means any discharge at the time of permit application under this subsection.

(4) Applicability of strip mining laws

Nothing in this subsection shall affect the application of the Surface Mining Control and Reclamation Act of 1977 [30 U.S.C.A. § 1201 et seq.] to any coal remining operation, including the application of such Act to suspended solids.

Title 33. Navigation and Navigable Waters (Refs & Annos)

Chapter 26. Water Pollution Prevention and Control (Refs & Annos)

Subchapter III. Standards and Enforcement (Refs & Annos)

33 U.S.C.A. § 1313

§ 1313. Water quality standards and implementation plans

Effective: October 10, 2000

Currentness

(a) Existing water quality standards

(1) In order to carry out the purpose of this chapter, any water quality standard applicable to interstate waters which was adopted by any State and submitted to, and approved by, or is a waiting approval by, the Administrator pursuant to this Act as in effect immediately prior to October 18, 1972, shall remain in effect unless the Administrator determined that such standard is not consistent with the applicable requirements of this Act as in effect immediately prior to October 18, 1972. If the Administrator makes such a determination he shall, within three months after October 18, 1972, notify the State and specify the changes needed to meet such requirements. If such changes are not adopted by the State within ninety days after the date of such notification, the Administrator shall promulgate such changes in accordance with subsection (b) of this section.

(2) Any State which, before October 18, 1972, has adopted, pursuant to its own law, water quality standards applicable to intrastate waters shall submit such standards to the Administrator within thirty days after October 18, 1972. Each such standard shall remain in effect, in the same manner and to the same extent as any other water quality standard established under this chapter unless the Administrator determines that such standard is inconsistent with the applicable requirements of this Act as in effect immediately prior to October 18, 1972. If the Administrator makes such a determination he shall not later than the one hundred and twentieth day after the date of submission of such standards, notify the State and specify the changes needed to meet such requirements. If such changes are not adopted by the State within ninety days after such notification, the Administrator shall promulgate such changes in accordance with subsection (b) of this section.

(3)(A) Any State which prior to October 18, 1972, has not adopted pursuant to its own laws water quality standards applicable to intrastate waters shall, not later than one hundred and eighty days after October 18, 1972, adopt and submit such standards to the Administrator.

(B) If the Administrator determines that any such standards are consistent with the applicable requirements of this Act as in effect immediately prior to October 18, 1972, he shall approve such standards.

(C) If the Administrator determines that any such standards are not consistent with the applicable requirements of this Act as in effect immediately prior to October 18, 1972, he shall, not later than the ninetieth day after the date of submission of such standards, notify the State and specify the changes to meet such requirements. If such changes are not adopted by the State within ninety days after the date of notification, the Administrator shall promulgate such standards pursuant to subsection (b) of this section.

(b) Proposed regulations

(1) The Administrator shall promptly prepare and publish proposed regulations setting forth water quality standards for a State in accordance with the applicable requirements of this Act as in effect immediately prior to October 18, 1972, if--

(A) the State fails to submit water quality standards within the times prescribed in subsection (a) of this section.

(B) a water quality standard submitted by such State under subsection (a) of this section is determined by the Administrator not to be consistent with the applicable requirements of subsection (a) of this section.

(2) The Administrator shall promulgate any water quality standard published in a proposed regulation not later than one hundred and ninety days after the date he publishes any such proposed standard, unless prior to such promulgation, such State has adopted a water quality standard which the Administrator determines to be in accordance with subsection (a) of this section.

(c) Review; revised standards; publication

(1) The Governor of a State or the State water pollution control agency of such State shall from time to time (but at least once each three year period beginning with October 18, 1972) hold public hearings for the purpose of reviewing applicable water quality standards and, as appropriate, modifying and adopting standards. Results of such review shall be made available to the Administrator.

(2)(A) Whenever the State revises or adopts a new standard, such revised or new standard shall be submitted to the Administrator. Such revised or new water quality standard shall consist of the designated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses. Such standards shall be such as to protect the public health or welfare, enhance the quality of water and serve the purposes of this chapter. Such standards shall be established taking into consideration their use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes, and also taking into consideration their use and value for navigation.

(B) Whenever a State reviews water quality standards pursuant to paragraph (1) of this subsection, or revises or adopts new standards pursuant to this paragraph, such State shall adopt criteria for all toxic pollutants listed pursuant to section 1317(a)(1) of this title for which criteria have been published under section 1314(a) of this title, the discharge or presence of which in the affected waters could reasonably be expected to interfere with those designated uses adopted by the State, as necessary to support such designated uses. Such criteria shall be specific numerical criteria for such toxic pollutants. Where such numerical criteria are not available, whenever a State reviews water quality standards pursuant to paragraph (1), or revises or adopts new standards pursuant to this paragraph, such State shall adopt criteria based on biological monitoring or assessment methods consistent with information published pursuant to section 1314(a)(8) of this title. Nothing in this section shall be construed to limit or delay the use of effluent limitations or other permit conditions based on or involving biological monitoring or assessment methods or previously adopted numerical criteria.

(3) If the Administrator, within sixty days after the date of submission of the revised or new standard, determines that such standard meets the requirements of this chapter, such standard shall thereafter be the water quality standard for the applicable waters of that State. If the Administrator determines that any such revised or new standard is not consistent with the applicable requirements of this chapter, he shall not later than the ninetieth day after the date of submission of such standard notify the State and specify the changes to meet such requirements. If such changes are not adopted by the State within ninety days after the date of notification, the Administrator shall promulgate such standard pursuant to paragraph (4) of this subsection.

(4) The Administrator shall promptly prepare and publish proposed regulations setting forth a revised or new water quality standard for the navigable waters involved--

(A) if a revised or new water quality standard submitted by such State under paragraph (3) of this subsection for such waters is determined by the Administrator not to be consistent with the applicable requirements of this chapter, or

(B) in any case where the Administrator determines that a revised or new standard is necessary to meet the requirements of this chapter.

The Administrator shall promulgate any revised or new standard under this paragraph not later than ninety days after he publishes such proposed standards, unless prior to such promulgation, such State has adopted a revised or new water quality standard which the Administrator determines to be in accordance with this chapter.

(d) Identification of areas with insufficient controls; maximum daily load; certain effluent limitations revision

(1)(A) Each State shall identify those waters within its boundaries for which the effluent limitations required by section 1311(b)(1)(A) and section 1311(b)(1)(B) of this title are not stringent enough to implement any water quality standard applicable to such waters. The State shall establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters.

(B) Each State shall identify those waters or parts thereof within its boundaries for which controls on thermal discharges under section 1311 of this title are not stringent enough to assure protection and propagation of a balanced indigenous population of shellfish, fish, and wildlife.

(C) Each State shall establish for the waters identified in paragraph (1)(A) of this subsection, and in accordance with the priority ranking, the total maximum daily load, for those pollutants which the Administrator identifies under section 1314(a)(2) of this title as suitable for such calculation. Such load shall be established at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality.

(D) Each State shall estimate for the waters identified in paragraph (1)(B) of this subsection the total maximum daily thermal load required to assure protection and propagation of a balanced, indigenous population of shellfish, fish, and wildlife. Such estimates shall take into account the normal water temperatures, flow rates, seasonal variations, existing sources of heat input, and the dissipative capacity of the identified waters or parts thereof. Such estimates shall include a calculation of the maximum heat input that can be made into each such part and shall include a margin of safety which takes into account any lack of knowledge concerning the development of thermal water quality criteria for such protection and propagation in the identified waters or parts thereof.

(2) Each State shall submit to the Administrator from time to time, with the first such submission not later than one hundred and eighty days after the date of publication of the first identification of pollutants under section 1314(a)(2)(D) of this title, for his approval the waters identified and the loads established under paragraphs (1)(A), (1)(B), (1)(C), and (1)(D) of this subsection. The Administrator shall either approve or disapprove such identification and load not later than thirty days after the date of submission. If the Administrator approves such identification and load, such State shall incorporate them into its current plan under subsection (e) of this section. If the Administrator disapproves such identification and load, he shall not later than thirty days after the date of such disapproval identify such waters in such State and establish such loads for such waters as he determines necessary to implement the water quality standards applicable to such waters and upon such identification and establishment the State shall incorporate them into its current plan under subsection (e) of this section.

(3) For the specific purpose of developing information, each State shall identify all waters within its boundaries which it has not identified under paragraph (1)(A) and (1)(B) of this subsection and estimate for such waters the total maximum daily load with seasonal variations and margins of safety, for those pollutants which the Administrator identifies under section 1314(a)(2) of this title as suitable for such calculation and for thermal discharges, at a level that would assure protection and propagation of a balanced indigenous population of fish, shellfish, and wildlife.

(4) Limitations on revision of certain effluent limitations

(A) Standard not attained

For waters identified under paragraph (1)(A) where the applicable water quality standard has not yet been attained, any effluent limitation based on a total maximum daily load or other waste load allocation established under this section may be revised only if (i) the cumulative effect of all such revised effluent limitations based on such total maximum daily load

or waste load allocation will assure the attainment of such water quality standard, or (ii) the designated use which is not being attained is removed in accordance with regulations established under this section.

(B) Standard attained

For waters identified under paragraph (1)(A) where the quality of such waters equals or exceeds levels necessary to protect the designated use for such waters or otherwise required by applicable water quality standards, any effluent limitation based on a total maximum daily load or other waste load allocation established under this section, or any water quality standard established under this section, or any other permitting standard may be revised only if such revision is subject to and consistent with the antidegradation policy established under this section.

(e) Continuing planning process

(1) Each State shall have a continuing planning process approved under paragraph (2) of this subsection which is consistent with this chapter.

(2) Each State shall submit not later than 120 days after October 18, 1972, to the Administrator for his approval a proposed continuing planning process which is consistent with this chapter. Not later than thirty days after the date of submission of such a process the Administrator shall either approve or disapprove such process. The Administrator shall from time to time review each State's approved planning process for the purpose of insuring that such planning process is at all times consistent with this chapter. The Administrator shall not approve any State permit program under subchapter IV of this chapter for any State which does not have an approved continuing planning process under this section.

(3) The Administrator shall approve any continuing planning process submitted to him under this section which will result in plans for all navigable waters within such State, which include, but are not limited to, the following:

(A) effluent limitations and schedules of compliance at least as stringent as those required by section 1311(b)(1), section 1311(b)(2), section 1316, and section 1317 of this title, and at least as stringent as any requirements contained in any applicable water quality standard in effect under authority of this section;

(B) the incorporation of all elements of any applicable area-wide waste management plans under section 1288 of this title, and applicable basin plans under section 1289 of this title;

(C) total maximum daily load for pollutants in accordance with subsection (d) of this section;

(D) procedures for revision;

(E) adequate authority for intergovernmental cooperation;

(F) adequate implementation, including schedules of compliance, for revised or new water quality standards, under subsection (c) of this section;

(G) controls over the disposition of all residual waste from any water treatment processing;

(H) an inventory and ranking, in order of priority, of needs for construction of waste treatment works required to meet the applicable requirements of sections 1311 and 1312 of this title.

(f) Earlier compliance

Nothing in this section shall be construed to affect any effluent limitation, or schedule of compliance required by any State to be implemented prior to the dates set forth in sections 1311(b)(1) and 1311(b)(2) of this title nor to preclude any State from requiring compliance with any effluent limitation or schedule of compliance at dates earlier than such dates.

(g) Heat standards

Water quality standards relating to heat shall be consistent with the requirements of section 1326 of this title.

(h) Thermal water quality standards

For the purposes of this chapter the term "water quality standards" includes thermal water quality standards.

(i) Coastal recreation water quality criteria

(1) Adoption by States

(A) Initial criteria and standards

Not later than 42 months after October 10, 2000, each State having coastal recreation waters shall adopt and submit to the Administrator water quality criteria and standards for the coastal recreation waters of the State for those pathogens and pathogen indicators for which the Administrator has published criteria under section 1314(a) of this title.

(B) New or revised criteria and standards

Not later than 36 months after the date of publication by the Administrator of new or revised water quality criteria under section 1314(a)(9) of this title, each State having coastal recreation waters shall adopt and submit to the Administrator new or revised water quality standards for the coastal recreation waters of the State for all pathogens and pathogen indicators to which the new or revised water quality criteria are applicable.

(2) Failure of States to adopt

(A) In general

If a State fails to adopt water quality criteria and standards in accordance with paragraph (1)(A) that are as protective of human health as the criteria for pathogens and pathogen indicators for coastal recreation waters published by the Administrator, the Administrator shall promptly propose regulations for the State setting forth revised or new water quality standards for pathogens and pathogen indicators described in paragraph (1)(A) for coastal recreation waters of the State.

(B) Exception

If the Administrator proposes regulations for a State described in subparagraph (A) under subsection (c)(4)(B) of this section, the Administrator shall publish any revised or new standard under this subsection not later than 42 months after October 10, 2000.

(3) Applicability

Except as expressly provided by this subsection, the requirements and procedures of subsection (c) of this section apply to this subsection, including the requirement in subsection (c)(2)(A) of this section that the criteria protect public health and welfare.

Title 33. Navigation and Navigable Waters (Refs & Annos)

Chapter 26. Water Pollution Prevention and Control (Refs & Annos)

Subchapter IV. Permits and Licenses (Refs & Annos)

33 U.S.C.A. § 1342

§ 1342. National pollutant discharge elimination system

Effective: July 29, 2008

Currentness

(a) Permits for discharge of pollutants

(1) Except as provided in sections 1328 and 1344 of this title, the Administrator may, after opportunity for public hearing, issue a permit for the discharge of any pollutant, or combination of pollutants, notwithstanding section 1311(a) of this title, upon condition that such discharge will meet either (A) all applicable requirements under sections 1311, 1312, 1316, 1317, 1318, and 1343 of this title, or (B) prior to the taking of necessary implementing actions relating to all such requirements, such conditions as the Administrator determines are necessary to carry out the provisions of this chapter.

(2) The Administrator shall prescribe conditions for such permits to assure compliance with the requirements of paragraph (1) of this subsection, including conditions on data and information collection, reporting, and such other requirements as he deems appropriate.

(3) The permit program of the Administrator under paragraph (1) of this subsection, and permits issued thereunder, shall be subject to the same terms, conditions, and requirements as apply to a State permit program and permits issued thereunder under subsection (b) of this section.

(4) All permits for discharges into the navigable waters issued pursuant to section 407 of this title shall be deemed to be permits issued under this subchapter, and permits issued under this subchapter shall be deemed to be permits issued under section 407 of this title, and shall continue in force and effect for their term unless revoked, modified, or suspended in accordance with the provisions of this chapter.

(5) No permit for a discharge into the navigable waters shall be issued under section 407 of this title after October 18, 1972. Each application for a permit under section 407 of this title, pending on October 18, 1972, shall be deemed to be an application for a permit under this section. The Administrator shall authorize a State, which he determines has the capability of administering a permit program which will carry out the objective of this chapter to issue permits for discharges into the navigable waters within the jurisdiction of such State. The Administrator may exercise the authority granted him by the preceding sentence only during the period which begins on October 18, 1972, and ends either on the ninetieth day after the date of the first promulgation of guidelines required by section 1314(i)(2) of this title, or the date of approval by the Administrator of a permit program for such State under subsection (b) of this section, whichever date first occurs, and no such authorization to a State shall extend beyond the last day of such period. Each such permit shall be subject to such conditions as the Administrator determines are necessary to carry out the provisions of this chapter. No such permit shall issue if the Administrator objects to such issuance.

(b) State permit programs

At any time after the promulgation of the guidelines required by subsection (i)(2) of section 1314 of this title, the Governor of each State desiring to administer its own permit program for discharges into navigable waters within its jurisdiction may submit to the Administrator a full and complete description of the program it proposes to establish and administer under State

law or under an interstate compact. In addition, such State shall submit a statement from the attorney general (or the attorney for those State water pollution control agencies which have independent legal counsel), or from the chief legal officer in the case of an interstate agency, that the laws of such State, or the interstate compact, as the case may be, provide adequate authority to carry out the described program. The Administrator shall approve each such submitted program unless he determines that adequate authority does not exist:

(1) To issue permits which--

(A) apply, and insure compliance with, any applicable requirements of sections 1311, 1312, 1316, 1317, and 1343 of this title;

(B) are for fixed terms not exceeding five years; and

(C) can be terminated or modified for cause including, but not limited to, the following:

(i) violation of any condition of the permit;

(ii) obtaining a permit by misrepresentation, or failure to disclose fully all relevant facts;

(iii) change in any condition that requires either a temporary or permanent reduction or elimination of the permitted discharge;

(D) control the disposal of pollutants into wells;

(2)(A) To issue permits which apply, and insure compliance with, all applicable requirements of section 1318 of this title; or

(B) To inspect, monitor, enter, and require reports to at least the same extent as required in section 1318 of this title;

(3) To insure that the public, and any other State the waters of which may be affected, receive notice of each application for a permit and to provide an opportunity for public hearing before a ruling on each such application;

(4) To insure that the Administrator receives notice of each application (including a copy thereof) for a permit;

(5) To insure that any State (other than the permitting State), whose waters may be affected by the issuance of a permit may submit written recommendations to the permitting State (and the Administrator) with respect to any permit application and, if any part of such written recommendations are not accepted by the permitting State, that the permitting State will notify such affected State (and the Administrator) in writing of its failure to so accept such recommendations together with its reasons for so doing;

(6) To insure that no permit will be issued if, in the judgment of the Secretary of the Army acting through the Chief of Engineers, after consultation with the Secretary of the department in which the Coast Guard is operating, anchorage and navigation of any of the navigable waters would be substantially impaired thereby;

(7) To abate violations of the permit or the permit program, including civil and criminal penalties and other ways and means of enforcement;

(8) To insure that any permit for a discharge from a publicly owned treatment works includes conditions to require the identification in terms of character and volume of pollutants of any significant source introducing pollutants subject to pretreatment standards under section 1317(b) of this title into such works and a program to assure compliance with such pretreatment standards by each such source, in addition to adequate notice to the permitting agency of (A) new introductions into such works of pollutants from any source which would be a new source as defined in section 1316 of this title if such source were discharging pollutants, (B) new introductions of pollutants into such works from a source which would be subject to section 1311 of this title if it were discharging such pollutants, or (C) a substantial change in volume or character of pollutants being introduced into such works by a source introducing pollutants into such works at the time of issuance of the permit. Such notice

shall include information on the quality and quantity of effluent to be introduced into such treatment works and any anticipated impact of such change in the quantity or quality of effluent to be discharged from such publicly owned treatment works; and

(9) To insure that any industrial user of any publicly owned treatment works will comply with sections 1284(b), 1317, and 1318 of this title.

(c) Suspension of Federal program upon submission of State program; withdrawal of approval of State program; return of State program to Administrator

(1) Not later than ninety days after the date on which a State has submitted a program (or revision thereof) pursuant to subsection (b) of this section, the Administrator shall suspend the issuance of permits under subsection (a) of this section as to those discharges subject to such program unless he determines that the State permit program does not meet the requirements of subsection (b) of this section or does not conform to the guidelines issued under section 1314(i)(2) of this title. If the Administrator so determines, he shall notify the State of any revisions or modifications necessary to conform to such requirements or guidelines.

(2) Any State permit program under this section shall at all times be in accordance with this section and guidelines promulgated pursuant to section 1314(i)(2) of this title.

(3) Whenever the Administrator determines after public hearing that a State is not administering a program approved under this section in accordance with requirements of this section, he shall so notify the State and, if appropriate corrective action is not taken within a reasonable time, not to exceed ninety days, the Administrator shall withdraw approval of such program. The Administrator shall not withdraw approval of any such program unless he shall first have notified the State, and made public, in writing, the reasons for such withdrawal.

(4) Limitations on partial permit program returns and withdrawals.

A State may return to the Administrator administration,¹ and the Administrator may withdraw under paragraph (3) of this subsection approval, of--

(A) a State partial permit program approved under subsection (n)(3) of this section only if the entire permit program being administered by the State department or agency at the time is returned or withdrawn; and

(B) a State partial permit program approved under subsection (n)(4) of this section only if an entire phased component of the permit program being administered by the State at the time is returned or withdrawn.

(d) Notification of Administrator

(1) Each State shall transmit to the Administrator a copy of each permit application received by such State and provide notice to the Administrator of every action related to the consideration of such permit application, including each permit proposed to be issued by such State.

(2) No permit shall issue (A) if the Administrator within ninety days of the date of his notification under subsection (b)(5) of this section objects in writing to the issuance of such permit, or (B) if the Administrator within ninety days of the date of transmittal of the proposed permit by the State objects in writing to the issuance of such permit as being outside the guidelines and requirements of this chapter. Whenever the Administrator objects to the issuance of a permit under this paragraph such written objection shall contain a statement of the reasons for such objection and the effluent limitations and conditions which such permit would include if it were issued by the Administrator.

(3) The Administrator may, as to any permit application, waive paragraph (2) of this subsection.

(4) In any case where, after December 27, 1977, the Administrator, pursuant to paragraph (2) of this subsection, objects to the issuance of a permit, on request of the State, a public hearing shall be held by the Administrator on such objection. If the State

does not resubmit such permit revised to meet such objection within 30 days after completion of the hearing, or, if no hearing is requested within 90 days after the date of such objection, the Administrator may issue the permit pursuant to subsection (a) of this section for such source in accordance with the guidelines and requirements of this chapter.

(e) Waiver of notification requirement

In accordance with guidelines promulgated pursuant to subsection (i)(2) of section 1314 of this title, the Administrator is authorized to waive the requirements of subsection (d) of this section at the time he approves a program pursuant to subsection (b) of this section for any category (including any class, type, or size within such category) of point sources within the State submitting such program.

(f) Point source categories

The Administrator shall promulgate regulations establishing categories of point sources which he determines shall not be subject to the requirements of subsection (d) of this section in any State with a program approved pursuant to subsection (b) of this section. The Administrator may distinguish among classes, types, and sizes within any category of point sources.

(g) Other regulations for safe transportation, handling, carriage, storage, and stowage of pollutants

Any permit issued under this section for the discharge of pollutants into the navigable waters from a vessel or other floating craft shall be subject to any applicable regulations promulgated by the Secretary of the department in which the Coast Guard is operating, establishing specifications for safe transportation, handling, carriage, storage, and stowage of pollutants.

(h) Violation of permit conditions; restriction or prohibition upon introduction of pollutant by source not previously utilizing treatment works

In the event any condition of a permit for discharges from a treatment works (as defined in section 1292 of this title) which is publicly owned is violated, a State with a program approved under subsection (b) of this section or the Administrator, where no State program is approved or where the Administrator determines pursuant to section 1319(a) of this title that a State with an approved program has not commenced appropriate enforcement action with respect to such permit, may proceed in a court of competent jurisdiction to restrict or prohibit the introduction of any pollutant into such treatment works by a source not utilizing such treatment works prior to the finding that such condition was violated.

(i) Federal enforcement not limited

Nothing in this section shall be construed to limit the authority of the Administrator to take action pursuant to section 1319 of this title.

(j) Public information

A copy of each permit application and each permit issued under this section shall be available to the public. Such permit application or permit, or portion thereof, shall further be available on request for the purpose of reproduction.

(k) Compliance with permits

Compliance with a permit issued pursuant to this section shall be deemed compliance, for purposes of sections 1319 and 1365 of this title, with sections 1311, 1312, 1316, 1317, and 1343 of this title, except any standard imposed under section 1317 of this title for a toxic pollutant injurious to human health. Until December 31, 1974, in any case where a permit for discharge has been applied for pursuant to this section, but final administrative disposition of such application has not been made, such discharge shall not be a violation of (1) section 1311, 1316, or 1342 of this title, or (2) section 407 of this title, unless the Administrator or other plaintiff proves that final administrative disposition of such application has not been made because of the failure of the applicant to furnish information reasonably required or requested in order to process the application. For the 180-day period beginning on October 18, 1972, in the case of any point source discharging any pollutant or combination of pollutants immediately prior to such date which source is not subject to section 407 of this title, the discharge by such source shall not be a violation of this chapter if such a source applies for a permit for discharge pursuant to this section within such 180-day period.

(l) Limitation on permit requirement

(1) Agricultural return flows

The Administrator shall not require a permit under this section for discharges composed entirely of return flows from irrigated agriculture, nor shall the Administrator directly or indirectly, require any State to require such a permit.

(2) Stormwater runoff from oil, gas, and mining operations

The Administrator shall not require a permit under this section, nor shall the Administrator directly or indirectly require any State to require a permit, for discharges of stormwater runoff from mining operations or oil and gas exploration, production, processing, or treatment operations or transmission facilities, composed entirely of flows which are from conveyances or systems of conveyances (including but not limited to pipes, conduits, ditches, and channels) used for collecting and conveying precipitation runoff and which are not contaminated by contact with, or do not come into contact with, any overburden, raw material, intermediate products, finished product, byproduct, or waste products located on the site of such operations.

(m) Additional pretreatment of conventional pollutants not required

To the extent a treatment works (as defined in section 1292 of this title) which is publicly owned is not meeting the requirements of a permit issued under this section for such treatment works as a result of inadequate design or operation of such treatment works, the Administrator, in issuing a permit under this section, shall not require pretreatment by a person introducing conventional pollutants identified pursuant to section 1314(a)(4) of this title into such treatment works other than pretreatment required to assure compliance with pretreatment standards under subsection (b)(8) of this section and section 1317(b)(1) of this title. Nothing in this subsection shall affect the Administrator's authority under sections 1317 and 1319 of this title, affect State and local authority under sections 1317(b)(4) and 1370 of this title; relieve such treatment works of its obligations to meet requirements established under this chapter, or otherwise preclude such works from pursuing whatever feasible options are available to meet its responsibility to comply with its permit under this section.

(n) Partial permit program

(1) State submission

The Governor of a State may submit under subsection (b) of this section a permit program for a portion of the discharges into the navigable waters in such State.

(2) Minimum coverage

A partial permit program under this subsection shall cover, at a minimum, administration of a major category of the discharges into the navigable waters of the State or a major component of the permit program required by subsection (b) of this section.

(3) Approval of major category partial permit programs

The Administrator may approve a partial permit program covering administration of a major category of discharges under this subsection if--

(A) such program represents a complete permit program and covers all of the discharges under the jurisdiction of a department or agency of the State; and

(B) the Administrator determines that the partial program represents a significant and identifiable part of the State program required by subsection (b) of this section.

(4) Approval of major component partial permit programs

The Administrator may approve under this subsection a partial and phased permit program covering administration of a major component (including discharge categories) of a State permit program required by subsection (b) of this section if--

(A) the Administrator determines that the partial program represents a significant and identifiable part of the State program required by subsection (b) of this section; and

(B) the State submits, and the Administrator approves, a plan for the State to assume administration by phases of the remainder of the State program required by subsection (b) of this section by a specified date not more than 5 years

after submission of the partial program under this subsection and agrees to make all reasonable efforts to assume such administration by such date.

(o) Anti-backsliding

(1) General prohibition

In the case of effluent limitations established on the basis of subsection (a)(1)(B) of this section, a permit may not be renewed, reissued, or modified on the basis of effluent guidelines promulgated under section 1314(b) of this title subsequent to the original issuance of such permit, to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit. In the case of effluent limitations established on the basis of section 1311(b)(1)(C) or section 1313(d) or (e) of this title, a permit may not be renewed, reissued, or modified to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit except in compliance with section 1313(d)(4) of this title.

(2) Exceptions

A permit with respect to which paragraph (1) applies may be renewed, reissued, or modified to contain a less stringent effluent limitation applicable to a pollutant if--

(A) material and substantial alterations or additions to the permitted facility occurred after permit issuance which justify the application of a less stringent effluent limitation;

(B)(i) information is available which was not available at the time of permit issuance (other than revised regulations, guidance, or test methods) and which would have justified the application of a less stringent effluent limitation at the time of permit issuance; or

(ii) the Administrator determines that technical mistakes or mistaken interpretations of law were made in issuing the permit under subsection (a)(1)(B) of this section;

(C) a less stringent effluent limitation is necessary because of events over which the permittee has no control and for which there is no reasonably available remedy;

(D) the permittee has received a permit modification under section 1311(c), 1311(g), 1311(h), 1311(i), 1311(k), 1311(n), or 1326(a) of this title; or

(E) the permittee has installed the treatment facilities required to meet the effluent limitations in the previous permit and has properly operated and maintained the facilities but has nevertheless been unable to achieve the previous effluent limitations, in which case the limitations in the reviewed, reissued, or modified permit may reflect the level of pollutant control actually achieved (but shall not be less stringent than required by effluent guidelines in effect at the time of permit renewal, reissuance, or modification).

Subparagraph (B) shall not apply to any revised waste load allocations or any alternative grounds for translating water quality standards into effluent limitations, except where the cumulative effect of such revised allocations results in a decrease in the amount of pollutants discharged into the concerned waters, and such revised allocations are not the result of a discharger eliminating or substantially reducing its discharge of pollutants due to complying with the requirements of this chapter or for reasons otherwise unrelated to water quality.

(3) Limitations

In no event may a permit with respect to which paragraph (1) applies be renewed, reissued, or modified to contain an effluent limitation which is less stringent than required by effluent guidelines in effect at the time the permit is renewed, reissued, or modified. In no event may such a permit to discharge into waters be renewed, reissued, or modified to contain a less stringent effluent limitation if the implementation of such limitation would result in a violation of a water quality standard under section 1313 of this title applicable to such waters.

(p) Municipal and industrial stormwater discharges

(1) General rule

Prior to October 1, 1994, the Administrator or the State (in the case of a permit program approved under this section) shall not require a permit under this section for discharges composed entirely of stormwater.

(2) Exceptions

Paragraph (1) shall not apply with respect to the following stormwater discharges:

(A) A discharge with respect to which a permit has been issued under this section before February 4, 1987.

(B) A discharge associated with industrial activity.

(C) A discharge from a municipal separate storm sewer system serving a population of 250,000 or more.

(D) A discharge from a municipal separate storm sewer system serving a population of 100,000 or more but less than 250,000.

(E) A discharge for which the Administrator or the State, as the case may be, determines that the stormwater discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

(3) Permit requirements

(A) Industrial discharges

Permits for discharges associated with industrial activity shall meet all applicable provisions of this section and section 1311 of this title.

(B) Municipal discharge

Permits for discharges from municipal storm sewers--

(i) may be issued on a system- or jurisdiction-wide basis;

(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.

(4) Permit application requirements

(A) Industrial and large municipal discharges

Not later than 2 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraphs (2)(B) and (2)(C). Applications for permits for such discharges shall be filed no later than 3 years after February 4, 1987. Not later than 4 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

(B) Other municipal discharges

Not later than 4 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraph (2)(D). Applications for permits for such discharges shall be filed no later than 5 years after February 4, 1987. Not later than 6 years after February 4, 1987, the

Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

(5) Studies

The Administrator, in consultation with the States, shall conduct a study for the purposes of--

(A) identifying those stormwater discharges or classes of stormwater discharges for which permits are not required pursuant to paragraphs (1) and (2) of this subsection;

(B) determining, to the maximum extent practicable, the nature and extent of pollutants in such discharges; and

(C) establishing procedures and methods to control stormwater discharges to the extent necessary to mitigate impacts on water quality.

Not later than October 1, 1988, the Administrator shall submit to Congress a report on the results of the study described in subparagraphs (A) and (B). Not later than October 1, 1989, the Administrator shall submit to Congress a report on the results of the study described in subparagraph (C).

(6) Regulations

Not later than October 1, 1993, the Administrator, in consultation with State and local officials, shall issue regulations (based on the results of the studies conducted under paragraph (5)) which designate stormwater discharges, other than those discharges described in paragraph (2), to be regulated to protect water quality and shall establish a comprehensive program to regulate such designated sources. The program shall, at a minimum, (A) establish priorities, (B) establish requirements for State stormwater management programs, and (C) establish expeditious deadlines. The program may include performance standards, guidelines, guidance, and management practices and treatment requirements, as appropriate.

(q) Combined sewer overflows

(1) Requirement for permits, orders, and decrees

Each permit, order, or decree issued pursuant to this chapter after December 21, 2000 for a discharge from a municipal combined storm and sanitary sewer shall conform to the Combined Sewer Overflow Control Policy signed by the Administrator on April 11, 1994 (in this subsection referred to as the "CSO control policy").

(2) Water quality and designated use review guidance

Not later than July 31, 2001, and after providing notice and opportunity for public comment, the Administrator shall issue guidance to facilitate the conduct of water quality and designated use reviews for municipal combined sewer overflow receiving waters.

(3) Report

Not later than September 1, 2001, the Administrator shall transmit to Congress a report on the progress made by the Environmental Protection Agency, States, and municipalities in implementing and enforcing the CSO control policy.

(r) Discharges incidental to the normal operation of recreational vessels

No permit shall be required under this chapter by the Administrator (or a State, in the case of a permit program approved under subsection (b)) for the discharge of any graywater, bilge water, cooling water, weather deck runoff, oil water separator effluent, or effluent from properly functioning marine engines, or any other discharge that is incidental to the normal operation of a vessel, if the discharge is from a recreational vessel.

United States Code Annotated

Title 33. Navigation and Navigable Waters (Refs & Annos)

Chapter 26. Water Pollution Prevention and Control (Refs & Annos)

Subchapter V. General Provisions

33 U.S.C.A. § 1362

§ 1362. Definitions

Effective: July 29, 2008
Currentness

Except as otherwise specifically provided, when used in this chapter:

(1) The term "State water pollution control agency" means the State agency designated by the Governor having responsibility for enforcing State laws relating to the abatement of pollution.

(2) The term "interstate agency" means an agency of two or more States established by or pursuant to an agreement or compact approved by the Congress, or any other agency of two or more States, having substantial powers or duties pertaining to the control of pollution as determined and approved by the Administrator.

(3) The term "State" means a State, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, the Commonwealth of the Northern Mariana Islands, and the Trust Territory of the Pacific Islands.

(4) The term "municipality" means a city, town, borough, county, parish, district, association, or other public body created by or pursuant to State law and having jurisdiction over disposal of sewage, industrial wastes, or other wastes, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 1288 of this title.

(5) The term "person" means an individual, corporation, partnership, association, State, municipality, commission, or political subdivision of a State, or any interstate body.

(6) The term "pollutant" means dredged spoil, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand, cellar dirt and industrial, municipal, and agricultural waste discharged into water. This term does not mean (A) "sewage from vessels or a discharge incidental to the normal operation of a vessel of the Armed Forces" within the meaning of section 1322 of this title; or (B) water, gas, or other material which is injected into a well to facilitate production of oil or gas, or water derived in association with oil or gas production and disposed of in a well, if the well used either to facilitate production or for disposal purposes is approved by authority of the State in which the well is located, and if such State determines that such injection or disposal will not result in the degradation of ground or surface water resources.

(7) The term "navigable waters" means the waters of the United States, including the territorial seas.

(8) The term "territorial seas" means the belt of the seas measured from the line of ordinary low water along that portion of the coast which is in direct contact with the open sea and the line marking the seaward limit of inland waters, and extending seaward a distance of three miles.

(9) The term "contiguous zone" means the entire zone established or to be established by the United States under article 24 of the Convention of the Territorial Sea and the Contiguous Zone.

- (10) The term “ocean” means any portion of the high seas beyond the contiguous zone.
- (11) The term “effluent limitation” means any restriction established by a State or the Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources into navigable waters, the waters of the contiguous zone, or the ocean, including schedules of compliance.
- (12) The term “discharge of a pollutant” and the term “discharge of pollutants” each means (A) any addition of any pollutant to navigable waters from any point source, (B) any addition of any pollutant to the waters of the contiguous zone or the ocean from any point source other than a vessel or other floating craft.
- (13) The term “toxic pollutant” means those pollutants, or combinations of pollutants, including disease-causing agents, which after discharge and upon exposure, ingestion, inhalation or assimilation into any organism, either directly from the environment or indirectly by ingestion through food chains, will, on the basis of information available to the Administrator, cause death, disease, behavioral abnormalities, cancer, genetic mutations, physiological malfunctions (including malfunctions in reproduction) or physical deformations, in such organisms or their offspring.
- (14) The term “point source” means any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged. This term does not include agricultural stormwater discharges and return flows from irrigated agriculture.
- (15) The term “biological monitoring” shall mean the determination of the effects on aquatic life, including accumulation of pollutants in tissue, in receiving waters due to the discharge of pollutants (A) by techniques and procedures, including sampling of organisms representative of appropriate levels of the food chain appropriate to the volume and the physical, chemical, and biological characteristics of the effluent, and (B) at appropriate frequencies and locations.
- (16) The term “discharge” when used without qualification includes a discharge of a pollutant, and a discharge of pollutants.
- (17) The term “schedule of compliance” means a schedule of remedial measures including an enforceable sequence of actions or operations leading to compliance with an effluent limitation, other limitation, prohibition, or standard.
- (18) The term “industrial user” means those industries identified in the Standard Industrial Classification Manual, Bureau of the Budget, 1967, as amended and supplemented, under the category of “Division D--Manufacturing” and such other classes of significant waste producers as, by regulation, the Administrator deems appropriate.
- (19) The term “pollution” means the man-made or man-induced alteration of the chemical, physical, biological, and radiological integrity of water.
- (20) The term “medical waste” means isolation wastes; infectious agents; human blood and blood products; pathological wastes; sharps; body parts; contaminated bedding; surgical wastes and potentially contaminated laboratory wastes; dialysis wastes; and such additional medical items as the Administrator shall prescribe by regulation.
- (21) Coastal recreation waters**
- (A) In general**
- The term “coastal recreation waters” means--
- (i) the Great Lakes; and
 - (ii) marine coastal waters (including coastal estuaries) that are designated under section 1313(c) of this title by a State for use for swimming, bathing, surfing, or similar water contact activities.

(B) Exclusions

The term “coastal recreation waters” does not include--

- (i) inland waters; or
- (ii) waters upstream of the mouth of a river or stream having an unimpaired natural connection with the open sea.

(22) Floatable material

(A) In general

The term “floatable material” means any foreign matter that may float or remain suspended in the water column.

(B) Inclusions

The term “floatable material” includes--

- (i) plastic;
- (ii) aluminum cans;
- (iii) wood products;
- (iv) bottles; and
- (v) paper products.

(23) Pathogen indicator

The term “pathogen indicator” means a substance that indicates the potential for human infectious disease.

(24) Oil and gas exploration and production

The term “oil and gas exploration, production, processing, or treatment operations or transmission facilities” means all field activities or operations associated with exploration, production, processing, or treatment operations, or transmission facilities, including activities necessary to prepare a site for drilling and for the movement and placement of drilling equipment, whether or not such field activities or operations may be considered to be construction activities.

(25) Recreational vessel

(A) In general

The term “recreational vessel” means any vessel that is--

- (i) manufactured or used primarily for pleasure; or
- (ii) leased, rented, or chartered to a person for the pleasure of that person.

(B) Exclusion

The term “recreational vessel” does not include a vessel that is subject to Coast Guard inspection and that--

- (i) is engaged in commercial use; or
- (ii) carries paying passengers.

Federal Regulations

ATTACHMENT 6

Code of Federal Regulations
Title 40. Protection of Environment
Chapter I. Environmental Protection Agency (Refs & Annos)
Subchapter D. Water Programs
Part 122. EPA Administered Permit Programs: the National Pollutant Discharge Elimination System (Refs & Annos)
Subpart C. Permit Conditions

40 C.F.R. § 122.44

§ 122.44 Establishing limitations, standards, and other permit conditions (applicable to State NPDES programs, see § 123.25).

Effective: April 11, 2007
Currentness

In addition to the conditions established under § 122.43(a), each NPDES permit shall include conditions meeting the following requirements when applicable.

(a)(1) Technology-based effluent limitations and standards based on: effluent limitations and standards promulgated under section 301 of the CWA, or new source performance standards promulgated under section 306 of CWA, on case-by-case effluent limitations determined under section 402(a)(1) of CWA, or a combination of the three, in accordance with § 125.3 of this chapter. For new sources or new dischargers, these technology based limitations and standards are subject to the provisions of § 122.29(d) (protection period).

(2) Monitoring waivers for certain guideline-listed pollutants.

(i) The Director may authorize a discharger subject to technology-based effluent limitations guidelines and standards in an NPDES permit to forego sampling of a pollutant found at 40 CFR Subchapter N of this chapter if the discharger has demonstrated through sampling and other technical factors that the pollutant is not present in the discharge or is present only at background levels from intake water and without any increase in the pollutant due to activities of the discharger.

(ii) This waiver is good only for the term of the permit and is not available during the term of the first permit issued to a discharger.

(iii) Any request for this waiver must be submitted when applying for a reissued permit or modification of a reissued permit. The request must demonstrate through sampling or other technical information, including information generated during an earlier permit term that the pollutant is not present in the discharge or is present only at background levels from intake water and without any increase in the pollutant due to activities of the discharger.

(iv) Any grant of the monitoring waiver must be included in the permit as an express permit condition and the reasons supporting the grant must be documented in the permit's fact sheet or statement of basis.

(v) This provision does not supersede certification processes and requirements already established in existing effluent limitations guidelines and standards.

(b)(1) Other effluent limitations and standards under sections 301, 302, 303, 307, 318, and 405 of CWA. If any applicable toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is promulgated under section 307(a) of CWA for a toxic pollutant and that standard or prohibition is more stringent than any limitation on the pollutant in the permit, the Director shall institute proceedings under these regulations to modify or revoke and reissue the permit to conform to the toxic effluent standard or prohibition. See also § 122.41(a).

(2) Standards for sewage sludge use or disposal under section 405(d) of the CWA unless those standards have been included in a permit issued under the appropriate provisions of subtitle C of the Solid Waste Disposal Act, Part C of Safe Drinking Water Act, the Marine Protection, Research, and Sanctuaries Act of 1972, or the Clean Air Act, or under State permit programs approved by the Administrator. When there are no applicable standards for sewage sludge use or disposal, the permit may include requirements developed on a case-by-case basis to protect public health and the environment from any adverse effects which may occur from toxic pollutants in sewage sludge. If any applicable standard for sewage sludge use or disposal is promulgated under section 405(d) of the CWA and that standard is more stringent than any limitation on the pollutant or practice in the permit, the Director may initiate proceedings under these regulations to modify or revoke and reissue the permit to conform to the standard for sewage sludge use or disposal.

(3) Requirements applicable to cooling water intake structures under section 316(b) of the CWA, in accordance with part 125, subparts I, J, and N of this chapter.

(c) Reopener clause: For any permit issued to a treatment works treating domestic sewage (including "sludge-only facilities"), the Director shall include a reopener clause to incorporate any applicable standard for sewage sludge use or disposal promulgated under section 405(d) of the CWA. The Director may promptly modify or revoke and reissue any permit containing the reopener clause required by this paragraph if the standard for sewage sludge use or disposal is more stringent than any requirements for sludge use or disposal in the permit, or controls a pollutant or practice not limited in the permit.

(d) Water quality standards and State requirements: any requirements in addition to or more stringent than promulgated effluent limitations guidelines or standards under sections 301, 304, 306, 307, 318, and 405 of CWA necessary to:

(1) Achieve water quality standards established under section 303 of the CWA, including State narrative criteria for water quality.

(i) Limitations must control all pollutants or pollutant parameters (either conventional, nonconventional, or toxic pollutants) which the Director determines are or may be discharged at a level which will cause, have the reasonable potential to cause, or contribute to an excursion above any State water quality standard, including State narrative criteria for water quality.

(ii) When determining whether a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above a narrative or numeric criteria within a State water quality standard, the permitting authority shall use procedures which account for existing controls on point and nonpoint sources of pollution, the variability of the pollutant or pollutant parameter in the effluent, the sensitivity of the species to toxicity testing (when evaluating whole effluent toxicity), and where appropriate, the dilution of the effluent in the receiving water.

(iii) When the permitting authority determines, using the procedures in paragraph (d)(1)(ii) of this section, that a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above the allowable ambient concentration of a State numeric criteria within a State water quality standard for an individual pollutant, the permit must contain effluent limits for that pollutant.

(iv) When the permitting authority determines, using the procedures in paragraph (d)(1)(ii) of this section, that a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above the numeric criterion for whole effluent toxicity, the permit must contain effluent limits for whole effluent toxicity.

(v) Except as provided in this subparagraph, when the permitting authority determines, using the procedures in paragraph (d)(1)(ii) of this section, toxicity testing data, or other information, that a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above a narrative criterion within an applicable State water quality standard, the permit must contain effluent limits for whole effluent toxicity. Limits on whole effluent toxicity are not necessary where the permitting authority demonstrates in the fact sheet or statement of basis of the NPDES permit, using the procedures

in paragraph (d)(1)(ii) of this section, that chemical-specific limits for the effluent are sufficient to attain and maintain applicable numeric and narrative State water quality standards.

(vi) Where a State has not established a water quality criterion for a specific chemical pollutant that is present in an effluent at a concentration that causes, has the reasonable potential to cause, or contributes to an excursion above a narrative criterion within an applicable State water quality standard, the permitting authority must establish effluent limits using one or more of the following options:

(A) Establish effluent limits using a calculated numeric water quality criterion for the pollutant which the permitting authority demonstrates will attain and maintain applicable narrative water quality criteria and will fully protect the designated use. Such a criterion may be derived using a proposed State criterion, or an explicit State policy or regulation interpreting its narrative water quality criterion, supplemented with other relevant information which may include: EPA's Water Quality Standards Handbook, October 1983, risk assessment data, exposure data, information about the pollutant from the Food and Drug Administration, and current EPA criteria documents; or

(B) Establish effluent limits on a case-by-case basis, using EPA's water quality criteria, published under section 304(a) of the CWA, supplemented where necessary by other relevant information; or

(C) Establish effluent limitations on an indicator parameter for the pollutant of concern, provided:

- (1) The permit identifies which pollutants are intended to be controlled by the use of the effluent limitation;
- (2) The fact sheet required by § 124.56 sets forth the basis for the limit, including a finding that compliance with the effluent limit on the indicator parameter will result in controls on the pollutant of concern which are sufficient to attain and maintain applicable water quality standards;
- (3) The permit requires all effluent and ambient monitoring necessary to show that during the term of the permit the limit on the indicator parameter continues to attain and maintain applicable water quality standards; and
- (4) The permit contains a reopener clause allowing the permitting authority to modify or revoke and reissue the permit if the limits on the indicator parameter no longer attain and maintain applicable water quality standards.

(vii) When developing water quality-based effluent limits under this paragraph the permitting authority shall ensure that:

(A) The level of water quality to be achieved by limits on point sources established under this paragraph is derived from, and complies with all applicable water quality standards; and

(B) Effluent limits developed to protect a narrative water quality criterion, a numeric water quality criterion, or both, are consistent with the assumptions and requirements of any available wasteload allocation for the discharge prepared by the State and approved by EPA pursuant to 40 CFR 130.7.

(2) Attain or maintain a specified water quality through water quality related effluent limits established under section 302 of CWA;

(3) Conform to the conditions to a State certification under section 401 of the CWA that meets the requirements of § 124.53 when EPA is the permitting authority. If a State certification is stayed by a court of competent jurisdiction or an appropriate State board or agency, EPA shall notify the State that the Agency will deem certification waived unless a finally effective State certification is received within sixty days from the date of the notice. If the State does not forward a finally effective certification within the sixty day period, EPA shall include conditions in the permit that may be necessary to meet EPA's obligation under section 301(b)(1)(C) of the CWA;

(4) Conform to applicable water quality requirements under section 401(a)(2) of CWA when the discharge affects a State other than the certifying State;

- (5) Incorporate any more stringent limitations, treatment standards, or schedule of compliance requirements established under Federal or State law or regulations in accordance with section 301(b)(1)(C) of CWA;
 - (6) Ensure consistency with the requirements of a Water Quality Management plan approved by EPA under section 208(b) of CWA;
 - (7) Incorporate section 403(c) criteria under Part 125, Subpart M, for ocean discharges;
 - (8) Incorporate alternative effluent limitations or standards where warranted by “fundamentally different factors,” under 40 CFR Part 125, Subpart D;
 - (9) Incorporate any other appropriate requirements, conditions, or limitations (other than effluent limitations) into a new source permit to the extent allowed by the National Environmental Policy Act, 42 U.S.C. 4321 et seq. and section 511 of the CWA, when EPA is the permit issuing authority. (See § 122.29(c)).
- (e) Technology-based controls for toxic pollutants. Limitations established under paragraphs (a), (b), or (d) of this section, to control pollutants meeting the criteria listed in paragraph (e)(1) of this section. Limitations will be established in accordance with paragraph (e)(2) of this section. An explanation of the development of these limitations shall be included in the fact sheet under § 124.56(b)(1)(i).
- (1) Limitations must control all toxic pollutants which the Director determines (based on information reported in a permit application under § 122.21(g)(7) or in a notification under § 122.42(a)(1) or on other information) are or may be discharged at a level greater than the level which can be achieved by the technology-based treatment requirements appropriate to the permittee under § 125.3(c) of this chapter; or
 - (2) The requirement that the limitations control the pollutants meeting the criteria of paragraphs (e)(1) of this section will be satisfied by:
 - (i) Limitations on those pollutants; or
 - (ii) Limitations on other pollutants which, in the judgment of the Director, will provide treatment of the pollutants under paragraph (e)(1) of this section to the levels required by § 125.3(c).
- (f) Notification level. A “notification level” which exceeds the notification level of § 122.42(a)(1)(i), (ii), or (iii), upon a petition from the permittee or on the Director's initiative. This new notification level may not exceed the level which can be achieved by the technology-based treatment requirements appropriate to the permittee under § 125.3(c).
- (g) Twenty-four hour reporting. Pollutants for which the permittee must report violations of maximum daily discharge limitations under § 122.41(1)(6)(ii)(C) (24-hour reporting) shall be listed in the permit. This list shall include any toxic pollutant or hazardous substance, or any pollutant specifically identified as the method to control a toxic pollutant or hazardous substance.
- (h) Durations for permits, as set forth in § 122.46.
- (i) Monitoring requirements. In addition to § 122.48, the following monitoring requirements:
- (1) To assure compliance with permit limitations, requirements to monitor:
 - (i) The mass (or other measurement specified in the permit) for each pollutant limited in the permit;
 - (ii) The volume of effluent discharged from each outfall;
 - (iii) Other measurements as appropriate including pollutants in internal waste streams under § 122.45(i); pollutants in intake water for net limitations under § 122.45(f); frequency, rate of discharge, etc., for noncontinuous discharges under

§ 122.45(e); pollutants subject to notification requirements under § 122.42(a); and pollutants in sewage sludge or other monitoring as specified in 40 CFR Part 503; or as determined to be necessary on a case-by-case basis pursuant to section 405(d)(4) of the CWA.

(iv) According to test procedures approved under 40 CFR Part 136 for the analyses of pollutants or another method is required under 40 CFR subchapters N or O. In the case of pollutants for which there are no approved methods under 40 CFR Part 136 or otherwise required under 40 CFR subchapters N or O, monitoring must be conducted according to a test procedure specified in the permit for such pollutants.

(2) Except as provided in paragraphs (i)(4) and (i)(5) of this section, requirements to report monitoring results shall be established on a case-by-case basis with a frequency dependent on the nature and effect of the discharge, but in no case less than once a year. For sewage sludge use or disposal practices, requirements to monitor and report results shall be established on a case-by-case basis with a frequency dependent on the nature and effect of the sewage sludge use or disposal practice; minimally this shall be as specified in 40 CFR part 503 (where applicable), but in no case less than once a year.

(3) Requirements to report monitoring results for storm water discharges associated with industrial activity which are subject to an effluent limitation guideline shall be established on a case-by-case basis with a frequency dependent on the nature and effect of the discharge, but in no case less than once a year.

(4) Requirements to report monitoring results for storm water discharges associated with industrial activity (other than those addressed in paragraph (i)(3) of this section) shall be established on a case-by-case basis with a frequency dependent on the nature and effect of the discharge. At a minimum, a permit for such a discharge must require:

(i) The discharger to conduct an annual inspection of the facility site to identify areas contributing to a storm water discharge associated with industrial activity and evaluate whether measures to reduce pollutant loadings identified in a storm water pollution prevention plan are adequate and properly implemented in accordance with the terms of the permit or whether additional control measures are needed;

(ii) The discharger to maintain for a period of three years a record summarizing the results of the inspection and a certification that the facility is in compliance with the plan and the permit, and identifying any incidents of non-compliance;

(iii) Such report and certification be signed in accordance with § 122.22; and

(iv) Permits for storm water discharges associated with industrial activity from inactive mining operations may, where annual inspections are impracticable, require certification once every three years by a Registered Professional Engineer that the facility is in compliance with the permit, or alternative requirements.

(5) Permits which do not require the submittal of monitoring result reports at least annually shall require that the permittee report all instances of noncompliance not reported under § 122.41(l) (1), (4), (5), and (6) at least annually.

(j) Pretreatment program for POTWs. Requirements for POTWs to:

(1) Identify, in terms of character and volume of pollutants, any Significant Industrial Users discharging into the POTW subject to Pretreatment Standards under section 307(b) of CWA and 40 CFR part 403.

(2)(i) Submit a local program when required by and in accordance with 40 CFR part 403 to assure compliance with pretreatment standards to the extent applicable under section 307(b). The local program shall be incorporated into the permit as described in 40 CFR part 403. The program must require all indirect dischargers to the POTW to comply with the reporting requirements of 40 CFR part 403.

(ii) Provide a written technical evaluation of the need to revise local limits under 40 CFR 403.5(c)(1), following permit issuance or reissuance.

(3) For POTWs which are "sludge-only facilities," a requirement to develop a pretreatment program under 40 CFR Part 403 when the Director determines that a pretreatment program is necessary to assure compliance with Section 405(d) of the CWA.

(k) Best management practices (BMPs) to control or abate the discharge of pollutants when:

(1) Authorized under section 304(e) of the CWA for the control of toxic pollutants and hazardous substances from ancillary industrial activities;

(2) Authorized under section 402(p) of the CWA for the control of storm water discharges;

(3) Numeric effluent limitations are infeasible; or

(4) The practices are reasonably necessary to achieve effluent limitations and standards or to carry out the purposes and intent of the CWA.

Note to paragraph (k)(4): Additional technical information on BMPs and the elements of BMPs is contained in the following documents: Guidance Manual for Developing Best Management Practices (BMPs), October 1993, EPA No. 833/B-93-004, NTIS No. PB 94-178324, ERIC No. W498); Storm Water Management for Construction Activities: Developing Pollution Prevention Plans and Best Management Practices, September 1992, EPA No. 832/R-92-005, NTIS No. PB 92-235951, ERIC No. N482); Storm Water Management for Construction Activities, Developing Pollution Prevention Plans and Best Management Practices: Summary Guidance, EPA No. 833/R-92-001, NTIS No. PB 93-223550; ERIC No. W139; Storm Water Management for Industrial Activities, Developing Pollution Prevention Plans and Best Management Practices, September 1992; EPA 832/R-92-006, NTIS No. PB 92-235969, ERIC No. N477; Storm Water Management for Industrial Activities, Developing Pollution Prevention Plans and Best Management Practices: Summary Guidance, EPA 833/R-92-002, NTIS No. PB 94-133782; ERIC No. W492. Copies of those documents (or directions on how to obtain them) can be obtained by contacting either the Office of Water Resource Center (using the EPA document number as a reference) at (202) 260-7786; or the Educational Resources Information Center (ERIC) (using the ERIC number as a reference) at (800) 276-0462. Updates of these documents or additional BMP documents may also be available. A list of EPA BMP guidance documents is available on the OWM Home Page at <http://www.epa.gov/owm>. In addition, States may have BMP guidance documents.

These EPA guidance documents are listed here only for informational purposes; they are not binding and EPA does not intend that these guidance documents have any mandatory, regulatory effect by virtue of their listing in this note.

(l) Reissued permits.

(1) Except as provided in paragraph (l)(2) of this section when a permit is renewed or reissued, interim effluent limitations, standards or conditions must be at least as stringent as the final effluent limitations, standards, or conditions in the previous permit (unless the circumstances on which the previous permit was based have materially and substantially changed since the time the permit was issued and would constitute cause for permit modification or revocation and reissuance under § 122.62.)

(2) In the case of effluent limitations established on the basis of Section 402(a)(1)(B) of the CWA, a permit may not be renewed, reissued, or modified on the basis of effluent guidelines promulgated under section 304(b) subsequent to the original issuance of such permit, to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit.

(i) Exceptions--A permit with respect to which paragraph (l)(2) of this section applies may be renewed, reissued, or modified to contain a less stringent effluent limitation applicable to a pollutant, if--

(A) Material and substantial alterations or additions to the permitted facility occurred after permit issuance which justify the application of a less stringent effluent limitation;

(B)(1) Information is available which was not available at the time of permit issuance (other than revised regulations, guidance, or test methods) and which would have justified the application of a less stringent effluent limitation at the time of permit issuance; or

(2) The Administrator determines that technical mistakes or mistaken interpretations of law were made in issuing the permit under section 402(a)(1)(b);

(C) A less stringent effluent limitation is necessary because of events over which the permittee has no control and for which there is no reasonably available remedy;

(D) The permittee has received a permit modification under section 301(c), 301(g), 301(h), 301(i), 301(k), 301(n), or 316(a); or

(E) The permittee has installed the treatment facilities required to meet the effluent limitations in the previous permit and has properly operated and maintained the facilities but has nevertheless been unable to achieve the previous effluent limitations, in which case the limitations in the reviewed, reissued, or modified permit may reflect the level of pollutant control actually achieved (but shall not be less stringent than required by effluent guidelines in effect at the time of permit renewal, reissuance, or modification).

(ii) Limitations. In no event may a permit with respect to which paragraph (l)(2) of this section applies be renewed, reissued, or modified to contain an effluent limitation which is less stringent than required by effluent guidelines in effect at the time the permit is renewed, reissued, or modified. In no event may such a permit to discharge into waters be renewed, issued, or modified to contain a less stringent effluent limitation if the implementation of such limitation would result in a violation of a water quality standard under section 303 applicable to such waters.

(m) Privately owned treatment works. For a privately owned treatment works, any conditions expressly applicable to any user, as a limited copermitttee, that may be necessary in the permit issued to the treatment works to ensure compliance with applicable requirements under this part. Alternatively, the Director may issue separate permits to the treatment works and to its users, or may require a separate permit application from any user. The Director's decision to issue a permit with no conditions applicable to any user, to impose conditions on one or more users, to issue separate permits, or to require separate applications, and the basis for that decision, shall be stated in the fact sheet for the draft permit for the treatment works.

(n) Grants. Any conditions imposed in grants made by the Administrator to POWs under sections 201 and 204 of CWA which are reasonably necessary for the achievement of effluent limitations under section 301 of CWA.

(o) Sewage sludge. Requirements under section 405 of CWA governing the disposal of sewage sludge from publicly owned treatment works or any other treatment works treating domestic sewage for any use for which regulations have been established, in accordance with any applicable regulations.

(p) Coast Guard. When a permit is issued to a facility that may operate at certain times as a means of transportation over water, a condition that the discharge shall comply with any applicable regulations promulgated by the Secretary of the department in which the Coast Guard is operating, that establish specifications for safe transportation, handling, carriage, and storage of pollutants.

(q) Navigation. Any conditions that the Secretary of the Army considers necessary to ensure that navigation and anchorage will not be substantially impaired, in accordance with § 124.59 of this chapter.

(r) Great Lakes. When a permit is issued to a facility that discharges into the Great Lakes System (as defined in 40 CFR 132.2), conditions promulgated by the State, Tribe, or EPA pursuant to 40 CFR part 132.

(s) Qualifying State, Tribal, or local programs.

(1) For storm water discharges associated with small construction activity identified in § 122.26(b)(15), the Director may include permit conditions that incorporate qualifying State, Tribal, or local erosion and sediment control program requirements by reference. Where a qualifying State, Tribal, or local program does not include one or more of the elements in this paragraph (s)(1), then the Director must include those elements as conditions in the permit. A qualifying State, Tribal, or local erosion and sediment control program is one that includes:

(i) Requirements for construction site operators to implement appropriate erosion and sediment control best management practices;

(ii) Requirements for construction site operators to control waste such as discarded building materials, concrete truck washout, chemicals, litter, and sanitary waste at the construction site that may cause adverse impacts to water quality;

(iii) Requirements for construction site operators to develop and implement a storm water pollution prevention plan. (A storm water pollution prevention plan includes site descriptions, descriptions of appropriate control measures, copies of approved State, Tribal or local requirements, maintenance procedures, inspection procedures, and identification of non-storm water discharges); and

(iv) Requirements to submit a site plan for review that incorporates consideration of potential water quality impacts.

(2) For storm water discharges from construction activity identified in § 122.26(b)(14)(x), the Director may include permit conditions that incorporate qualifying State, Tribal, or local erosion and sediment control program requirements by reference. A qualifying State, Tribal or local erosion and sediment control program is one that includes the elements listed in paragraph (s)(1) of this section and any additional requirements necessary to achieve the applicable technology-based standards of "best available technology" and "best conventional technology" based on the best professional judgment of the permit writer.

ATTACHMENT 7

Code of Federal Regulations
Title 40. Protection of Environment
Chapter I. Environmental Protection Agency (Refs & Annos)
Subchapter D. Water Programs
Part 130. Water Quality Planning and Management (Refs & Annos)

40 C.F.R. § 130.2

§ 130.2 Definitions.

Currentness

- (a) The Act. The Clean Water Act, as amended, 33 U.S.C. 1251 et seq.
- (b) Indian Tribe. Any Indian Tribe, band, group, or community recognized by the Secretary of the Interior and exercising governmental authority over a Federal Indian reservation.
- (c) Pollution. The man-made or man-induced alteration of the chemical, physical, biological, and radiological integrity of water.
- (d) Water quality standards (WQS). Provisions of State or Federal law which consist of a designated use or uses for the waters of the United States and water quality criteria for such waters based upon such uses. Water quality standards are to protect the public health or welfare, enhance the quality of water and serve the purposes of the Act.
- (e) Load or Loading. An amount of matter or thermal energy that is introduced into a receiving water; to introduce matter or thermal energy into a receiving water. Loading may be either man-caused (pollutant loading) or natural (natural background loading).
- (f) Loading capacity. The greatest amount of loading that a water can receive without violating water quality standards.
- (g) Load allocation (LA). The portion of a receiving water's loading capacity that is attributed either to one of its existing or future nonpoint sources of pollution or to natural background sources. Load allocations are best estimates of the loading, which may range from reasonably accurate estimates to gross allotments, depending on the availability of data and appropriate techniques for predicting the loading. Wherever possible, natural and nonpoint source loads should be distinguished.
- (h) Wasteload allocation (WLA). The portion of a receiving water's loading capacity that is allocated to one of its existing or future point sources of pollution. WLAs constitute a type of water quality-based effluent limitation.
- (i) Total maximum daily load (TMDL). The sum of the individual WLAs for point sources and LAs for nonpoint sources and natural background. If a receiving water has only one point source discharger, the TMDL is the sum of that point source WLA plus the LAs for any nonpoint sources of pollution and natural background sources, tributaries, or adjacent segments. TMDLs can be expressed in terms of either mass per time, toxicity, or other appropriate measure. If Best Management Practices (BMPs) or other nonpoint source pollution controls make more stringent load allocations practicable, then wasteload allocations can be made less stringent. Thus, the TMDL process provides for nonpoint source control tradeoffs.
- (j) Water quality limited segment. Any segment where it is known that water quality does not meet applicable water quality standards, and/or is not expected to meet applicable water quality standards, even after the application of the technology-based effluent limitations required by sections 301(b) and 306 of the Act.
- (k) Water quality management (WQM) plan. A State or areawide waste treatment management plan developed and updated in accordance with the provisions of sections 205(j), 208 and 303 of the Act and this regulation.

(l) Areawide agency. An agency designated under section 208 of the Act, which has responsibilities for WQM planning within a specified area of a State.

(m) Best Management Practice (BMP). Methods, measures or practices selected by an agency to meet its nonpoint source control needs. BMPs include but are not limited to structural and nonstructural controls and operation and maintenance procedures. BMPs can be applied before, during and after pollution-producing activities to reduce or eliminate the introduction of pollutants into receiving waters.

(n) Designated management agency (DMA). An agency identified by a WQM plan and designated by the Governor to implement specific control recommendations.

ATTACHMENT 8

Code of Federal Regulations
Title 40. Protection of Environment
Chapter I. Environmental Protection Agency (Refs & Annos)
Subchapter D. Water Programs
Part 130. Water Quality Planning and Management (Refs & Annos)

40 C.F.R. § 130.3

§ 130.3 Water quality standards.

Currentness

A water quality standard (WQS) defines the water quality goals of a water body, or portion thereof, by designating the use or uses to be made of the water and by setting criteria necessary to protect the uses. States and EPA adopt WQS to protect public health or welfare, enhance the quality of water and serve the purposes of the Clean Water Act (CWA). "Serve the purposes of Act" (as defined in sections 101(a)(2) and 303(c) of the Act) means that WQS should, wherever attainable, provide water quality for the protection and propagation of fish, shellfish and wildlife and for recreation in and on the water and take into consideration their use and value for public water supplies, propagation of fish, shellfish, wildlife, recreation in and on the water, and agricultural, industrial and other purposes including navigation.

Such standards serve the dual purposes of establishing the water quality goals for a specific water body and serving as the regulatory basis for establishment of water quality-based treatment controls and strategies beyond the technology-based level of treatment required by sections 301(b) and 306 of the Act. States shall review and revise WQS in accordance with applicable regulations and, as appropriate, update their Water Quality Management (WQM) plans to reflect such revisions. Specific WQS requirements are found in 40 CFR Part 131.

ATTACHMENT 9

Code of Federal Regulations
Title 40. Protection of Environment
Chapter I. Environmental Protection Agency (Refs & Annos)
Subchapter D. Water Programs
Part 130. Water Quality Planning and Management (Refs & Annos)

40 C.F.R. § 130.7

§ 130.7 Total maximum daily loads (TMDL) and individual water quality-based effluent limitations.

Currentness

(a) General. The process for identifying water quality limited segments still requiring wasteload allocations, load allocations and total maximum daily loads (WLAs/LAs and TMDLs), setting priorities for developing these loads; establishing these loads for segments identified, including water quality monitoring, modeling, data analysis, calculation methods, and list of pollutants to be regulated; submitting the State's list of segments identified, priority ranking, and loads established (WLAs/LAs/TMDLs) to EPA for approval; incorporating the approved loads into the State's WQM plans and NPDES permits; and involving the public, affected dischargers, designated area-wide agencies, and local governments in this process shall be clearly described in the State Continuing Planning Process (CPP).

(b) Identification and priority setting for water quality-limited segments still requiring TMDLs.

(1) Each State shall identify those water quality-limited segments still requiring TMDLs within its boundaries for which:

(i) Technology-based effluent limitations required by sections 301(b), 306, 307, or other sections of the Act;

(ii) More stringent effluent limitations (including prohibitions) required by either State or local authority preserved by section 510 of the Act, or Federal authority (law, regulation, or treaty); and

(iii) Other pollution control requirements (e.g., best management practices) required by local, State, or Federal authority are not stringent enough to implement any water quality standards (WQS) applicable to such waters.

(2) Each State shall also identify on the same list developed under paragraph (b)(1) of this section those water quality-limited segments still requiring TMDLs or parts thereof within its boundaries for which controls on thermal discharges under section 301 or State or local requirements are not stringent enough to assure protection and propagation of a balanced indigenous population of shellfish, fish and wildlife.

(3) For the purposes of listing waters under § 130.7(b), the term "water quality standard applicable to such waters" and "applicable water quality standards" refer to those water quality standards established under section 303 of the Act, including numeric criteria, narrative criteria, waterbody uses, and antidegradation requirements.

(4) The list required under §§ 130.7(b)(1) and 130.7(b)(2) of this section shall include a priority ranking for all listed water quality-limited segments still requiring TMDLs, taking into account the severity of the pollution and the uses to be made of such waters and shall identify the pollutants causing or expected to cause violations of the applicable water quality standards. The priority ranking shall specifically include the identification of waters targeted for TMDL development in the next two years.

(5) Each State shall assemble and evaluate all existing and readily available water quality-related data and information to develop the list required by §§ 130.7(b)(1) and 130.7(b)(2). At a minimum "all existing and readily available water quality-related data and information" includes but is not limited to all of the existing and readily available data and information about the following categories of waters:

- (i) Waters identified by the State in its most recent section 305(b) report as “partially meeting” or “not meeting” designated uses or as “threatened”;
 - (ii) Waters for which dilution calculations or predictive models indicate nonattainment of applicable water quality standards;
 - (iii) Waters for which water quality problems have been reported by local, state, or federal agencies; members of the public; or academic institutions. These organizations and groups should be actively solicited for research they may be conducting or reporting. For example, university researchers, the United States Department of Agriculture, the National Oceanic and Atmospheric Administration, the United States Geological Survey, and the United States Fish and Wildlife Service are good sources of field data; and
 - (iv) Waters identified by the State as impaired or threatened in a nonpoint assessment submitted to EPA under section 319 of the CWA or in any updates of the assessment.
- (6) Each State shall provide documentation to the Regional Administrator to support the State's determination to list or not to list its waters as required by §§ 130.7(b)(1) and 130.7(b)(2). This documentation shall be submitted to the Regional Administrator together with the list required by §§ 130.7(b)(1) and 130.7(b)(2) and shall include at a minimum:
- (i) A description of the methodology used to develop the list; and
 - (ii) A description of the data and information used to identify waters, including a description of the data and information used by the State as required by § 130.7(b)(5); and
 - (iii) A rationale for any decision to not use any existing and readily available data and information for any one of the categories of waters as described in § 130.7(b)(5); and
 - (iv) Any other reasonable information requested by the Regional Administrator. Upon request by the Regional Administrator, each State must demonstrate good cause for not including a water or waters on the list. Good cause includes, but is not limited to, more recent or accurate data; more sophisticated water quality modeling; flaws in the original analysis that led to the water being listed in the categories in § 130.7(b)(5); or changes in conditions, e.g., new control equipment, or elimination of discharges.
- (c) Development of TMDLs and individual water quality based effluent limitations.
- (1) Each State shall establish TMDLs for the water quality limited segments identified in paragraph (b)(1) of this section, and in accordance with the priority ranking. For pollutants other than heat, TMDLs shall be established at levels necessary to attain and maintain the applicable narrative and numerical WQS with seasonal variations and a margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality. Determinations of TMDLs shall take into account critical conditions for stream flow, loading, and water quality parameters.
- (i) TMDLs may be established using a pollutant-by-pollutant or biomonitoring approach. In many cases both techniques may be needed. Site-specific information should be used wherever possible.
 - (ii) TMDLs shall be established for all pollutants preventing or expected to prevent attainment of water quality standards as identified pursuant to paragraph (b)(1) of this section. Calculations to establish TMDLs shall be subject to public review as defined in the State CPP.
- (2) Each State shall estimate for the water quality limited segments still requiring TMDLs identified in paragraph (b)(2) of this section, the total maximum daily thermal load which cannot be exceeded in order to assure protection and propagation of a balanced, indigenous population of shellfish, fish and wildlife. Such estimates shall take into account the normal water temperatures, flow rates, seasonal variations, existing sources of heat input, and the dissipative capacity of the identified

waters or parts thereof. Such estimates shall include a calculation of the maximum heat input that can be made into each such part and shall include a margin of safety which takes into account any lack of knowledge concerning the development of thermal water quality criteria for protection and propagation of a balanced, indigenous population of shellfish, fish and wildlife in the identified waters or parts thereof.

(d) Submission and EPA approval.

(1) Each State shall submit biennially to the Regional Administrator beginning in 1992 the list of waters, pollutants causing impairment, and the priority ranking including waters targeted for TMDL development within the next two years as required under paragraph (b) of this section. For the 1992 biennial submission, these lists are due no later than October 22, 1992. Thereafter, each State shall submit to EPA lists required under paragraph (b) of this section on April 1 of every even-numbered year. For the year 2000 submission, a State must submit a list required under paragraph (b) of this section only if a court order or consent decree, or commitment in a settlement agreement dated prior to January 1, 2000, expressly requires EPA to take action related to that State's year 2000 list. For the year 2002 submission, a State must submit a list required under paragraph (b) of this section by October 1, 2002, unless a court order, consent decree or commitment in a settlement agreement expressly requires EPA to take an action related to that State's 2002 list prior to October 1, 2002, in which case, the State must submit a list by April 1, 2002. The list of waters may be submitted as part of the State's biennial water quality report required by § 130.8 of this part and section 305(b) of the CWA or submitted under separate cover. All TMDLs established under paragraph (c) for water quality limited segments shall continue to be submitted to EPA for review and approval. Schedules for submission of TMDLs shall be determined by the Regional Administrator and the State.

(2) The Regional Administrator shall either approve or disapprove such listing and loadings not later than 30 days after the date of submission. The Regional Administrator shall approve a list developed under § 130.7(b) that is submitted after the effective date of this rule only if it meets the requirements of § 130.7(b). If the Regional Administrator approves such listing and loadings, the State shall incorporate them into its current WQM plan. If the Regional Administrator disapproves such listing and loadings, he shall, not later than 30 days after the date of such disapproval, identify such waters in such State and establish such loads for such waters as determined necessary to implement applicable WQS. The Regional Administrator shall promptly issue a public notice seeking comment on such listing and loadings. After considering public comment and making any revisions he deems appropriate, the Regional Administrator shall transmit the listing and loads to the State, which shall incorporate them into its current WQM plan.

(e) For the specific purpose of developing information and as resources allow, each State shall identify all segments within its boundaries which it has not identified under paragraph (b) of this section and estimate for such waters the TMDLs with seasonal variations and margins of safety, for those pollutants which the Regional Administrator identifies under section 304(a)(2) as suitable for such calculation and for thermal discharges, at a level that would assure protection and propagation of a balanced indigenous population of fish, shellfish and wildlife. However, there is no requirement for such loads to be submitted to EPA for approval, and establishing TMDLs for those waters identified in paragraph (b) of this section shall be given higher priority.

ATTACHMENT 10

Code of Federal Regulations
Title 40. Protection of Environment
Chapter I. Environmental Protection Agency (Refs & Annos)
Subchapter D. Water Programs
Part 131. Water Quality Standards (Refs & Annos)
Subpart A. General Provisions

40 C.F.R. § 131.2

§ 131.2 Purpose.

Currentness

A water quality standard defines the water quality goals of a water body, or portion thereof, by designating the use or uses to be made of the water and by setting criteria necessary to protect the uses. States adopt water quality standards to protect public health or welfare, enhance the quality of water and serve the purposes of the Clean Water Act (the Act). "Serve the purposes of the Act" (as defined in Sections 101(a)(2) and 303(c) of the Act) means that water quality standards should, wherever attainable, provide water quality for the protection and propagation of fish, shellfish and wildlife and for recreation in and on the water and take into consideration their use and value of public water supplies, propagation of fish, shellfish, and wildlife, recreation in and on the water, and agricultural, industrial, and other purposes including navigation.

Such standards serve the dual purposes of establishing the water quality goals for a specific water body and serve as the regulatory basis for the establishment of water-quality-based treatment controls and strategies beyond the technology-based levels of treatment required by sections 301(b) and 306 of the Act.

ATTACHMENT 11

Code of Federal Regulations
Title 40. Protection of Environment
Chapter I. Environmental Protection Agency (Refs & Annos)
Subchapter D. Water Programs
Part 131. Water Quality Standards (Refs & Annos)
Subpart A. General Provisions

40 C.F.R. § 131.3

§ 131.3 Definitions.

Currentness

- (a) The Act means the Clean Water Act (Public Law 92-500, as amended, (33 U.S.C. 1251 et seq.)).
- (b) Criteria are elements of State water quality standards, expressed as constituent concentrations, levels, or narrative statements, representing a quality of water that supports a particular use. When criteria are met, water quality will generally protect the designated use.
- (c) Section 304(a) criteria are developed by EPA under authority of Section 304(a) of the Act based on the latest scientific information on the relationship that the effect of a constituent concentration has on particular aquatic species and/or human health. This information is issued periodically to the States as guidance for use in developing criteria.
- (d) Toxic pollutants are those pollutants listed by the Administrator under Section 307(a) of the Act.
- (e) Existing uses are those uses actually attained in the water body on or after November 28, 1975, whether or not they are included in the water quality standards.
- (f) Designated uses are those uses specified in water quality standards for each water body or segment whether or not they are being attained.
- (g) Use Attainability Analysis is a structured scientific assessment of the factors affecting the attainment of the use which may include physical, chemical, biological, and economic factors as described in § 131.10(g).
- (h) Water quality limited segment means any segment where it is known that water quality does not meet applicable water quality standards, and/or is not expected to meet applicable water quality standards, even after the application of the technology-based effluent limitations required by Sections 301(b) and 306 of the Act.
- (i) Water quality standards are provisions of State or Federal law which consist of a designated use or uses for the waters of the United States and water quality criteria for such waters based upon such uses. Water quality standards are to protect the public health or welfare, enhance the quality of water and serve the purposes of the Act.
- (j) States include: The 50 States, the District of Columbia, Guam, the Commonwealth of Puerto Rico, Virgin Islands, American Samoa, the Trust Territory of the Pacific Islands, the Commonwealth of the Northern Mariana Islands, and Indian Tribes that EPA determines to be eligible for purposes of a water quality standards program.
- (k) Federal Indian Reservation, Indian Reservation, or Reservation means all land within the limits of any Indian reservation under the jurisdiction of the United States Government, notwithstanding the issuance of any patent, and including rights-of-way running through the reservation.”

(l) Indian Tribe or Tribe means any Indian Tribe, band, group, or community recognized by the Secretary of the Interior and exercising governmental authority over a Federal Indian reservation.

Code of Federal Regulations
Title 40. Protection of Environment
Chapter I. Environmental Protection Agency (Refs & Annos)
Subchapter D. Water Programs
Part 131. Water Quality Standards (Refs & Annos)
Subpart A. General Provisions

40 C.F.R. § 131.4

§ 131.4 State authority.

Currentness

(a) States (as defined in § 131.3) are responsible for reviewing, establishing, and revising water quality standards. As recognized by section 510 of the Clean Water Act, States may develop water quality standards more stringent than required by this regulation. Consistent with section 101(g) and 518(a) of the Clean Water Act, water quality standards shall not be construed to supersede or abrogate rights to quantities of water.

(b) States (as defined in § 131.3) may issue certifications pursuant to the requirements of Clean Water Act section 401. Revisions adopted by States shall be applicable for use in issuing State certifications consistent with the provisions of § 131.21(c).

(c) Where EPA determines that a Tribe is eligible to the same extent as a State for purposes of water quality standards, the Tribe likewise is eligible to the same extent as a State for purposes of certifications conducted under Clean Water Act section 401.

Part 131. Water Quality Standards (Refs & Annos)
Subpart A. General Provisions

40 C.F.R. § 131.6

§ 131.6 Minimum requirements for water quality standards submission.

Currentness

The following elements must be included in each State's water quality standards submitted to EPA for review:

- (a) Use designations consistent with the provisions of Sections 101(a)(2) and 303(c)(2) of the Act.
- (b) Methods used and analyses conducted to support water quality standards revisions.
- (c) Water quality criteria sufficient to protect the designated uses.
- (d) An antidegradation policy consistent with § 131.12.
- (e) Certification by the State Attorney General or other appropriate legal authority within the State that the water quality standards were duly adopted pursuant to State law.
- (f) General information which will aid the Agency in determining the adequacy of the scientific basis of the standards which do not include the uses specified in Section 101(a)(2) of the Act as well as information on general policies applicable to State standards which may affect their application and implementation.

ATTACHMENT 14

Code of Federal Regulations
Title 40. Protection of Environment
Chapter I. Environmental Protection Agency (Refs & Annos)
Subchapter D. Water Programs
Part 131. Water Quality Standards (Refs & Annos)
Subpart B. Establishment of Water Quality Standards

40 C.F.R. § 131.10

§ 131.10 Designation of uses.

Currentness

(a) Each State must specify appropriate water uses to be achieved and protected. The classification of the waters of the State must take into consideration the use and value of water for public water supplies, protection and propagation of fish, shellfish and wildlife, recreation in and on the water, agricultural, industrial, and other purposes including navigation. In no case shall a State adopt waste transport or waste assimilation as a designated use for any waters of the United States.

(b) In designating uses of a water body and the appropriate criteria for those uses, the State shall take into consideration the water quality standards of downstream waters and shall ensure that its water quality standards provide for the attainment and maintenance of the water quality standards of downstream waters.

(c) States may adopt sub-categories of a use and set the appropriate criteria to reflect varying needs of such sub-categories of uses, for instance, to differentiate between cold water and warm water fisheries.

(d) At a minimum, uses are deemed attainable if they can be achieved by the imposition of effluent limits required under Sections 301(b) and 306 of the Act and cost-effective and reasonable best management practices for nonpoint source control.

(e) Prior to adding or removing any use, or establishing sub-categories of a use, the State shall provide notice and an opportunity for a public hearing under § 131.20(b) of this regulation.

(f) States may adopt seasonal uses as an alternative to reclassifying a water body or segment thereof to uses requiring less stringent water quality criteria. If seasonal uses are adopted, water quality criteria should be adjusted to reflect the seasonal uses, however, such criteria shall not preclude the attainment and maintenance of a more protective use in another season.

(g) States may remove a designated use which is not an existing use, as defined in § 131.3, or establish sub-categories of a use if the State can demonstrate that attaining the designated use is not feasible because:

(1) Naturally occurring pollutant concentrations prevent the attainment of the use; or

(2) Natural, ephemeral, intermittent or low flow conditions or water levels prevent the attainment of the use, unless these conditions may be compensated for by the discharge of sufficient volume of effluent discharges without violating State water conservation requirements to enable uses to be met; or

(3) Human caused conditions or sources of pollution prevent the attainment of the use and cannot be remedied or would cause more environmental damage to correct than to leave in place; or

(4) Dams, diversions or other types of hydrologic modifications preclude the attainment of the use, and it is not feasible to restore the water body to its original condition or to operate such modification in a way that would result in the attainment of the use; or

(5) Physical conditions related to the natural features of the water body, such as the lack of a proper substrate, cover, flow, depth, pools, riffles, and the like, unrelated to water quality, preclude attainment of aquatic life protection uses; or

(6) Controls more stringent than those required by Sections 301(b) and 306 of the Act would result in substantial and widespread economic and social impact.

(h) States may not remove designated uses if:

(1) They are existing uses, as defined in Section 131.3, unless a use requiring more stringent criteria is added; or

(2) Such uses will be attained by implementing effluent limits required under Sections 301(b) and 306 of the Act and by implementing cost-effective and reasonable best management practices for nonpoint source control.

(i) Where existing water quality standards specify designated uses less than those which are presently being attained, the State shall revise its standards to reflect the uses actually being attained.

(j) A State must conduct a use attainability analysis as described in § 131.3(g) whenever:

(1) The State designates or has designated uses that do not include the uses specified in Section 101(a)(2) of the Act, or

(2) The State wishes to remove a designated use that is specified in Section 101(a)(2) of the Act or to adopt subcategories of uses specified in Section 101(a)(2) of the Act which require less stringent criteria.

(k) A State is not required to conduct a use attainability analysis under this Regulation whenever designating uses which include those specified in Section 101(a)(2) of the Act.

ATTACHMENT 15

Code of Federal Regulations
Title 40. Protection of Environment
Chapter I. Environmental Protection Agency (Refs & Annos)
Subchapter D. Water Programs
Part 131. Water Quality Standards (Refs & Annos)
Subpart B. Establishment of Water Quality Standards

40 C.F.R. § 131.11

§ 131.11 Criteria.

Currentness

(a) Inclusion of pollutants:

(1) States must adopt those water quality criteria that protect the designated use. Such criteria must be based on sound scientific rationale and must contain sufficient parameters or constituents to protect the designated use. For waters with multiple use designations, the criteria shall support the most sensitive use.

(2) Toxic Pollutants--States must review water quality data and information on discharges to identify specific water bodies where toxic pollutants may be adversely affecting water quality or the attainment of the designated water use or where the levels of toxic pollutants are at a level to warrant concern and must adopt criteria for such toxic pollutants applicable to the water body sufficient to protect the designated use. Where a State adopts narrative criteria for toxic pollutants to protect designated uses, the State must provide information identifying the method by which the State intends to regulate point source discharges of toxic pollutants on water quality limited segments based on such narrative criteria. Such information may be included as part of the standards or may be included in documents generated by the State in response to the Water Quality Planning and Management Regulations (40 CFR Part 35).

(b) Form of criteria: In establishing criteria, States should:

(1) Establish numerical values based on:

(i) 304(a) Guidance; or

(ii) 304(a) Guidance modified to reflect site-specific conditions; or

(iii) Other scientifically defensible methods;

(2) Establish narrative criteria or criteria based upon biomonitoring methods where numerical criteria cannot be established or to supplement numerical criteria.

Subpart B. Establishment of Water Quality Standards

40 C.F.R. § 131.12

§ 131.12 Antidegradation policy.

Currentness

(a) The State shall develop and adopt a statewide antidegradation policy and identify the methods for implementing such policy pursuant to this subpart. The antidegradation policy and implementation methods shall, at a minimum, be consistent with the following:

(1) Existing instream water uses and the level of water quality necessary to protect the existing uses shall be maintained and protected.

(2) Where the quality of the waters exceed levels necessary to support propagation of fish, shellfish, and wildlife and recreation in and on the water, that quality shall be maintained and protected unless the State finds, after full satisfaction of the intergovernmental coordination and public participation provisions of the State's continuing planning process, that allowing lower water quality is necessary to accommodate important economic or social development in the area in which the waters are located. In allowing such degradation or lower water quality, the State shall assure water quality adequate to protect existing uses fully. Further, the State shall assure that there shall be achieved the highest statutory and regulatory requirements for all new and existing point sources and all cost-effective and reasonable best management practices for nonpoint source control.

(3) Where high quality waters constitute an outstanding National resource, such as waters of National and State parks and wildlife refuges and waters of exceptional recreational or ecological significance, that water quality shall be maintained and protected.

(4) In those cases where potential water quality impairment associated with a thermal discharge is involved, the antidegradation policy and implementing method shall be consistent with section 316 of the Act.

Subpart C. Procedures for Review and Revision of Water Quality Standards

40 C.F.R. § 131.20

§ 131.20 State review and revision of water quality standards.

Currentness

(a) State Review: The State shall from time to time, but at least once every three years, hold public hearings for the purpose of reviewing applicable water quality standards and, as appropriate, modifying and adopting standards. Any water body segment with water quality standards that do not include the uses specified in Section 101(a)(2) of the Act shall be re-examined every three years to determine if any new information has become available. If such new information indicates that the uses specified in Section 101(a)(2) of the Act are attainable, the State shall revise its standards accordingly. Procedures States establish for identifying and reviewing water bodies for review should be incorporated into their Continuing Planning Process.

(b) Public Participation: The State shall hold a public hearing for the purpose of reviewing water quality standards, in accordance with provisions of State law, EPA's water quality management regulation (40 CFR 130.3(b)(6)) and public participation regulation (40 CFR Part 25). The proposed water quality standards revision and supporting analyses shall be made available to the public prior to the hearing.

(c) Submittal to EPA: The State shall submit the results of the review, any supporting analysis for the use attainability analysis, the methodologies used for site-specific criteria development, any general policies applicable to water quality standards and any revisions of the standards to the Regional Administrator for review and approval, within 30 days of the final State action to adopt and certify the revised standard, or if no revisions are made as a result of the review, within 30 days of the completion of the review.

[Faint, illegible text]

West's Annotated California Codes

Constitution of the State of California 1879 (Refs & Annos)

Article XIIIID. [Assessment and Property Related Fee Reform] (Refs & Annos)

West's Ann. Cal. Const. Art. 13D, § 6

§ 6. New or existing increased fees and charges; procedures and requirements; voter approval

Currentness

Sec. 6. Property Related Fees and Charges. (a) Procedures for New or Increased Fees and Charges. An agency shall follow the procedures pursuant to this section in imposing or increasing any fee or charge as defined pursuant to this article, including, but not limited to, the following:

(1) The parcels upon which a fee or charge is proposed for imposition shall be identified. The amount of the fee or charge proposed to be imposed upon each parcel shall be calculated. The agency shall provide written notice by mail of the proposed fee or charge to the record owner of each identified parcel upon which the fee or charge is proposed for imposition, the amount of the fee or charge proposed to be imposed upon each, the basis upon which the amount of the proposed fee or charge was calculated, the reason for the fee or charge, together with the date, time, and location of a public hearing on the proposed fee or charge.

(2) The agency shall conduct a public hearing upon the proposed fee or charge not less than 45 days after mailing the notice of the proposed fee or charge to the record owners of each identified parcel upon which the fee or charge is proposed for imposition. At the public hearing, the agency shall consider all protests against the proposed fee or charge. If written protests against the proposed fee or charge are presented by a majority of owners of the identified parcels, the agency shall not impose the fee or charge.

(b) Requirements for Existing, New or Increased Fees and Charges. A fee or charge shall not be extended, imposed, or increased by any agency unless it meets all of the following requirements:

(1) Revenues derived from the fee or charge shall not exceed the funds required to provide the property related service.

(2) Revenues derived from the fee or charge shall not be used for any purpose other than that for which the fee or charge was imposed.

(3) The amount of a fee or charge imposed upon any parcel or person as an incident of property ownership shall not exceed the proportional cost of the service attributable to the parcel.

(4) No fee or charge may be imposed for a service unless that service is actually used by, or immediately available to, the owner of the property in question. Fees or charges based on potential or future use of a service are not permitted. Standby charges, whether characterized as charges or assessments, shall be classified as assessments and shall not be imposed without compliance with Section 4.

(5) No fee or charge may be imposed for general governmental services including, but not limited to, police, fire, ambulance or library services, where the service is available to the public at large in substantially the same manner as it is to property owners. Reliance by an agency on any parcel map, including, but not limited to, an assessor's parcel map, may be considered a significant factor in determining whether a fee or charge is imposed as an incident of property ownership for purposes of this article. In any legal action contesting the validity of a fee or charge, the burden shall be on the agency to demonstrate compliance with this article.

(c) Voter Approval for New or Increased Fees and Charges. Except for fees or charges for sewer, water, and refuse collection services, no property related fee or charge shall be imposed or increased unless and until that fee or charge is submitted and approved by a majority vote of the property owners of the property subject to the fee or charge or, at the option of the agency, by a two-thirds vote of the electorate residing in the affected area. The election shall be conducted not less than 45 days after the public hearing. An agency may adopt procedures similar to those for increases in assessments in the conduct of elections under this subdivision.

(d) Beginning July 1, 1997, all fees or charges shall comply with this section.

Credits

(Added by Initiative Measure (Prop. 218, § 4, approved Nov. 5, 1996).)

West's Annotated California Codes

Government Code (Refs & Annos)

Title 2. Government of the State of California

Division 3. Executive Department (Refs & Annos)

Part 1. State Departments and Agencies (Refs & Annos)

Chapter 3.5. Administrative Regulations and Rulemaking (Refs & Annos)

Article 9. Special Procedures (Refs & Annos)

West's Ann.Cal.Gov.Code § 11353

§ 11353. State water quality control policies, plans, and guidelines; adoption
or revision; application of chapter; review; procedures; requirements

Effective: January 1, 2001

Currentness

(a) Except as provided in subdivision (b), this chapter does not apply to the adoption or revision of state policy for water quality control and the adoption or revision of water quality control plans and guidelines pursuant to Division 7 (commencing with Section 13000) of the Water Code.

(b)(1) Any policy, plan, or guideline, or any revision thereof, that the State Water Resources Control Board has adopted or that a court determines is subject to this part, after June 1, 1992, shall be submitted to the office.

(2) The State Water Resources Control Board shall include in its submittal to the office all of the following:

(A) A clear and concise summary of any regulatory provisions adopted or approved as part of that action, for publication in the California Code of Regulations.

(B) The administrative record for the proceeding. Proposed additions to a policy, plan, or guideline shall be indicated by underlined text and proposed deletions shall be indicated by strike-through text in documents submitted as part of the administrative record for the proceeding.

(C) A summary of the necessity for the regulatory provision.

(D) A certification by the chief legal officer of the State Water Resources Control Board that the action was taken in compliance with all applicable procedural requirements of Division 7 (commencing with Section 13000) of the Water Code.

(3) Paragraph (2) does not limit the authority of the office to review any regulatory provision which is part of the policy, plan, or guideline submitted by the State Water Resources Control Board.

(4) The office shall review the regulatory provisions to determine compliance with the standards of necessity, authority, clarity, consistency, reference, and nonduplication set forth in subdivision (a) of Section 11349.1. The office shall also review the responses to public comments prepared by the State Water Resources Control Board or the appropriate regional water quality control board to determine compliance with the public participation requirements of the Federal Water Pollution Control Act (33 U.S.C. Sec. 1251 et seq.). The office shall restrict its review to the regulatory provisions and the administrative record of

the proceeding. Sections 11349.3, 11349.4, 11349.5, and 11350.3 shall apply to the review by the office to the extent that those sections are consistent with this section.

(5) The policy, plan, guideline, or revision shall not become effective unless and until the regulatory provisions are approved by the office in accordance with subdivision (a) of Section 11349.3.

(6) Upon approval of the regulatory provisions, the office shall transmit to the Secretary of State for filing the clear and concise summary of the regulatory provisions submitted by the State Water Resources Control Board.

(7) Any proceedings before the State Water Resources Control Board or a California regional water quality control board to take any action subject to this subdivision shall be conducted in accordance with the procedural requirements of Division 7 (commencing with Section 13000) of the Water Code, together with any applicable requirements of the Federal Water Pollution Control Act (33 U.S.C. Sec. 1251 et seq.), and the requirements of this chapter, other than the requirement for review by the office in accordance with this subdivision, shall not apply.

(8) This subdivision shall not provide a basis for review by the office under this subdivision or Article 6 (commencing with Section 11349) of any such policy, plan, or guideline adopted or revised prior to June 1, 1992.

(c) Subdivision (a) does not apply to a provision of any policy, plan, guideline, or revision, as applied to any person who, as of June 1, 1992, was a party to a civil action challenging that provision on the grounds that it has not been adopted as a regulation pursuant to this chapter.

(d) Copies of the policies, plans, and guidelines to which subdivision (a) applies shall be maintained at central locations for inspection by the public. The State Water Resources Control Board shall maintain, at its headquarters in Sacramento, a current copy of each policy, plan, or guideline in effect. Each regional water quality control board shall maintain at its headquarters a current copy of each policy, plan, or guideline in effect in its respective region. Any revision of a policy, plan, or guideline shall be made available for inspection by the public within 30 days of its effective date.

LAW REVISION COMMISSION COMMENTS

2000 Amendment

Subdivision (b)(2)(B) of Section 11353 is amended to require that amendments and deletions be clearly indicated in material submitted to the Office of Administrative Law for review. For a similar provision, see Section 11354.1(d)(2)(B) (underscore and strike-through required to indicate changes in plans of San Francisco-Bay Conservation and Development Commission). [29 Cal.L.Rev.Comm.Reports 459 (2000)].

ATTACHMENT 20

West's Annotated California Codes

Government Code (Refs & Annos)

Title 2. Government of the State of California

Division 4. Fiscal Affairs (Refs & Annos)

Part 7. State-Mandated Local Costs (Refs & Annos)

Chapter 4. Identification and Payment of Costs Mandated by the State (Refs & Annos)

Article 1. Commission Procedure (Refs & Annos)

West's Ann.Cal.Gov.Code § 17556

§ 17556. Findings; costs not mandated upon certain conditions

Effective: October 19, 2010

Currentness

The commission shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds any one of the following:

(a) The claim is submitted by a local agency or school district that requests or previously requested legislative authority for that local agency or school district to implement the program specified in the statute, and that statute imposes costs upon that local agency or school district requesting the legislative authority. A resolution from the governing body or a letter from a delegated representative of the governing body of a local agency or school district that requests authorization for that local agency or school district to implement a given program shall constitute a request within the meaning of this subdivision. This subdivision applies regardless of whether the resolution from the governing body or a letter from a delegated representative of the governing body was adopted or sent prior to or after the date on which the statute or executive order was enacted or issued.

(b) The statute or executive order affirmed for the state a mandate that has been declared existing law or regulation by action of the courts. This subdivision applies regardless of whether the action of the courts occurred prior to or after the date on which the statute or executive order was enacted or issued.

(c) The statute or executive order imposes a requirement that is mandated by a federal law or regulation and results in costs mandated by the federal government, unless the statute or executive order mandates costs that exceed the mandate in that federal law or regulation. This subdivision applies regardless of whether the federal law or regulation was enacted or adopted prior to or after the date on which the state statute or executive order was enacted or issued.

(d) The local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service. This subdivision applies regardless of whether the authority to levy charges, fees, or assessments was enacted or adopted prior to or after the date on which the statute or executive order was enacted or issued.

(e) The statute, executive order, or an appropriation in a Budget Act or other bill provides for offsetting savings to local agencies or school districts that result in no net costs to the local agencies or school districts, or includes additional revenue that was specifically intended to fund the costs of the state mandate in an amount sufficient to fund the cost of the state mandate. This subdivision applies regardless of whether a statute, executive order, or appropriation in the Budget Act or other bill that either provides for offsetting savings that result in no net costs or provides for additional revenue specifically intended to fund the

costs of the state mandate in an amount sufficient to fund the cost of the state mandate was enacted or adopted prior to or after the date on which the statute or executive order was enacted or issued.

(f) The statute or executive order imposes duties that are necessary to implement, or are expressly included in, a ballot measure approved by the voters in a statewide or local election. This subdivision applies regardless of whether the statute or executive order was enacted or adopted before or after the date on which the ballot measure was approved by the voters.

(g) The statute created a new crime or infraction, eliminated a crime or infraction, or changed the penalty for a crime or infraction, but only for that portion of the statute relating directly to the enforcement of the crime or infraction.

Health and Safety Code (Refs & Annos)

Division 5. Sanitation

Part 3. Community Facilities (Refs & Annos)

Chapter 6. General Provisions with Respect to Sewers (Refs & Annos)

Article 4. Sanitation and Sewerage Systems (Refs & Annos)

West's Ann. Cal. Health & Safety Code § 5471

§ 5471. Power to prescribe and collect fees, tolls, rates, rentals or other charges;
use of revenues; continuance of charges; new, increased, or extended assessments

Effective: January 1, 2008

Currentness

(a) In addition to the powers granted in the principal act, any entity shall have power, by an ordinance approved by a two-thirds vote of the members of the legislative body thereof, to prescribe, revise and collect, fees, tolls, rates, rentals, or other charges for services and facilities furnished by it, either within or without its territorial limits, in connection with its water, sanitation, storm drainage, or sewerage system.

(b) In addition to the powers granted in the principal act, any entity shall have power, pursuant to the notice, protest, and hearing procedures in Section 53753 of the Government Code, to prescribe, revise, and collect water, sewer, or water and sewer standby or immediate availability charges for services and facilities furnished by it, either within or without its territorial limits, in connection with its water, sanitation, storm drainage, or sewerage system.

(c) The entity may provide that the charge for the service shall be collected with the rates, tolls, and charges for any other utility, and that any or all of these charges may be billed upon the same bill. Where the charge is to be collected with the charges for any other utility service furnished by a department or agency of the entity and over which its legislative body does not exercise control, the consent of the department or agency shall be obtained prior to collecting water, sanitation, storm drainage, or sewerage charges with the charges for any other utility. Revenues derived under the provisions in this section, shall be used only for the acquisition, construction, reconstruction, maintenance, and operation of water systems and sanitation, storm drainage, or sewerage facilities, to repay principal and interest on bonds issued for the construction or reconstruction of these water systems and sanitary, storm drainage, or sewerage facilities and to repay federal or state loans or advances made to the entity for the construction or reconstruction of water systems and sanitary, storm drainage, or sewerage facilities. However, the revenue shall not be used for the acquisition or construction of new local street sewers or laterals as distinguished from main trunk, interceptor and outfall sewers.

(d) If the procedures set forth in this section as it read at the time a standby charge was established were followed, the entity may, by ordinance adopted by a two-thirds vote of the members of the legislative body thereof, continue the charge pursuant to this section in successive years at the same rate. If new, increased, or extended assessments are proposed, the entity shall comply with the notice, protest, and hearing procedures in Section 53753 of the Government Code.

West's Annotated California Codes

Water Code (Refs & Annos)

Division 7. Water Quality (Refs & Annos)

Chapter 1. Policy (Refs & Annos)

West's Ann.Cal.Water Code § 13000

§ 13000. Conservation, control, and utilization of water
resources; quality; statewide program; regional administration

Currentness

The Legislature finds and declares that the people of the state have a primary interest in the conservation, control, and utilization of the water resources of the state, and that the quality of all the waters of the state shall be protected for use and enjoyment by the people of the state.

The Legislature further finds and declares that activities and factors which may affect the quality of the waters of the state shall be regulated to attain the highest water quality which is reasonable, considering all demands being made and to be made on those waters and the total values involved, beneficial and detrimental, economic and social, tangible and intangible.

The Legislature further finds and declares that the health, safety and welfare of the people of the state requires that there be a statewide program for the control of the quality of all the waters of the state; that the state must be prepared to exercise its full power and jurisdiction to protect the quality of waters in the state from degradation originating inside or outside the boundaries of the state; that the waters of the state are increasingly influenced by interbasin water development projects and other statewide considerations; that factors of precipitation, topography, population, recreation, agriculture, industry and economic development vary from region to region within the state; and that the statewide program for water quality control can be most effectively administered regionally, within a framework of statewide coordination and policy.

ATTACHMENT 23

West's Annotated California Codes

Water Code (Refs & Annos)

Division 7. Water Quality (Refs & Annos)

Chapter 2. Definitions (Refs & Annos)

West's Ann. Cal. Water Code § 13050

§ 13050. Definitions

Currentness

As used in this division:

- (a) "State board" means the State Water Resources Control Board.
- (b) "Regional board" means any California regional water quality control board for a region as specified in Section 13200.
- (c) "Person" includes any city, county, district, the state, and the United States, to the extent authorized by federal law.
- (d) "Waste" includes sewage and any and all other waste substances, liquid, solid, gaseous, or radioactive, associated with human habitation, or of human or animal origin, or from any producing, manufacturing, or processing operation, including waste placed within containers of whatever nature prior to, and for purposes of, disposal.
- (e) "Waters of the state" means any surface water or groundwater, including saline waters, within the boundaries of the state.
- (f) "Beneficial uses" of the waters of the state that may be protected against quality degradation include, but are not limited to, domestic, municipal, agricultural and industrial supply; power generation; recreation; aesthetic enjoyment; navigation; and preservation and enhancement of fish, wildlife, and other aquatic resources or preserves.
- (g) "Quality of the water" refers to chemical, physical, biological, bacteriological, radiological, and other properties and characteristics of water which affect its use.
- (h) "Water quality objectives" means the limits or levels of water quality constituents or characteristics which are established for the reasonable protection of beneficial uses of water or the prevention of nuisance within a specific area.
- (i) "Water quality control" means the regulation of any activity or factor which may affect the quality of the waters of the state and includes the prevention and correction of water pollution and nuisance.
- (j) "Water quality control plan" consists of a designation or establishment for the waters within a specified area of all of the following:
 - (1) Beneficial uses to be protected.
 - (2) Water quality objectives.
 - (3) A program of implementation needed for achieving water quality objectives.
- (k) "Contamination" means an impairment of the quality of the waters of the state by waste to a degree which creates a hazard to the public health through poisoning or through the spread of disease. "Contamination" includes any equivalent effect resulting from the disposal of waste, whether or not waters of the state are affected.

(l)(1) "Pollution" means an alteration of the quality of the waters of the state by waste to a degree which unreasonably affects either of the following:

(A) The waters for beneficial uses.

(B) Facilities which serve these beneficial uses.

(2) "Pollution" may include "contamination."

(m) "Nuisance" means anything which meets all of the following requirements:

(1) Is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property.

(2) Affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal.

(3) Occurs during, or as a result of, the treatment or disposal of wastes.

(n) "Recycled water" means water which, as a result of treatment of waste, is suitable for a direct beneficial use or a controlled use that would not otherwise occur and is therefor considered a valuable resource.

(o) "Citizen or domiciliary" of the state includes a foreign corporation having substantial business contacts in the state or which is subject to service of process in this state.

(p)(1) "Hazardous substance" means either of the following:

(A) For discharge to surface waters, any substance determined to be a hazardous substance pursuant to Section 311(b)(2) of the Federal Water Pollution Control Act (33 U.S.C. Sec. 1251 et seq.).

(B) For discharge to groundwater, any substance listed as a hazardous waste or hazardous material pursuant to Section 25140 of the Health and Safety Code, without regard to whether the substance is intended to be used, reused, or discarded, except that "hazardous substance" does not include any substance excluded from Section 311(b)(2) of the Federal Water Pollution Control Act because it is within the scope of Section 311(a)(1) of that act.

(2) "Hazardous substance" does not include any of the following:

(A) Nontoxic, nonflammable, and noncorrosive stormwater runoff drained from underground vaults, chambers, or manholes into gutters or storm sewers.

(B) Any pesticide which is applied for agricultural purposes or is applied in accordance with a cooperative agreement authorized by Section 116180 of the Health and Safety Code, and is not discharged accidentally or for purposes of disposal, the application of which is in compliance with all applicable state and federal laws and regulations.

(C) Any discharge to surface water of a quantity less than a reportable quantity as determined by regulations issued pursuant to Section 311(b)(4) of the Federal Water Pollution Control Act.

(D) Any discharge to land which results, or probably will result, in a discharge to groundwater if the amount of the discharge to land is less than a reportable quantity, as determined by regulations adopted pursuant to Section 13271, for substances listed as hazardous pursuant to Section 25140 of the Health and Safety Code. No discharge shall be deemed a discharge of a reportable quantity until regulations set a reportable quantity for the substance discharged.

(q)(1) "Mining waste" means all solid, semisolid, and liquid waste materials from the extraction, beneficiation, and processing of ores and minerals. Mining waste includes, but is not limited to, soil, waste rock, and overburden, as defined in Section 2732 of the Public Resources Code, and tailings, slag, and other processed waste materials, including cementitious materials that are managed at the cement manufacturing facility where the materials were generated.

(2) For the purposes of this subdivision, "cementitious material" means cement, cement kiln dust, clinker, and clinker dust.

(r) "Master recycling permit" means a permit issued to a supplier or a distributor, or both, of recycled water, that includes waste discharge requirements prescribed pursuant to Section 13263 and water recycling requirements prescribed pursuant to Section 13523.1.

Water Code (Refs & Annos)

Division 7. Water Quality (Refs & Annos)

Chapter 4. Regional Water Quality Control (Refs & Annos)

Article 1. Organization and Membership of Regional Boards (Refs & Annos)

West's Ann. Cal. Water Code § 13200

§ 13200. Regions

Currentness

The state is divided, for the purpose of this division, into nine regions:

(a) North Coast region, which comprises all basins including Lower Klamath Lake and Lost River Basins draining into the Pacific Ocean from the California-Oregon state line southerly to the southerly boundary of the watershed of Estero de San Antonio and Stemple Creek in Marin and Sonoma Counties.

(b) San Francisco Bay region, which comprises San Francisco Bay, Suisun Bay, from Sacramento River and San Joaquin River westerly from a line which passes between Collinsville and Montezuma Island and follows thence the boundary common to Sacramento and Solano Counties and that common to Sacramento and Contra Costa Counties to the westerly boundary of the watershed of Markley Canyon in Contra Costa County, all basins draining into the bays and rivers westerly from this line, and all basins draining into the Pacific Ocean between the southerly boundary of the north coastal region and the southerly boundary of the watershed of Pescadero Creek in San Mateo and Santa Cruz Counties.

(c) Central Coast region, which comprises all basins, including Carrizo Plain in San Luis Obispo and Kern Counties, draining into the Pacific Ocean from the southerly boundary of the watershed of Pescadero Creek in San Mateo and Santa Cruz Counties to the southeasterly boundary, located in the westerly part of Ventura County, of the watershed of Rincon Creek.

(d) Los Angeles region, which comprises all basins draining into the Pacific Ocean between the southeasterly boundary, located in the westerly part of Ventura County, of the watershed of Rincon Creek and a line which coincides with the southeasterly boundary of Los Angeles County from the ocean to San Antonio Peak and follows thence the divide between San Gabriel River and Lytle Creek drainages to the divide between Sheep Creek and San Gabriel River drainages.

(e) Santa Ana region, which comprises all basins draining into the Pacific Ocean between the southeasterly boundary of the Los Angeles region and a line which follows the drainage divide between Muddy and Moro Canyons from the ocean to the summit of San Joaquin Hills; thence along the divide between lands draining into Newport Bay and into Laguna Canyon to Niguel Road; thence along Niguel Road and Los Aliso Avenue to the divide between Newport Bay and Aliso Creek drainages; thence along that divide and the southeasterly boundary of the Santa Ana River drainage to the divide between Baldwin Lake and Mojave Desert drainages; thence along that divide to the divide between Pacific Ocean and Mojave Desert drainages.

(f) San Diego region, which comprises all basins draining into the Pacific Ocean between the southern boundary of the Santa Ana region and the California-Mexico boundary.

(g) Central Valley region, which comprises all basins including Goose Lake Basin draining into the Sacramento and San Joaquin Rivers to the easterly boundary of the San Francisco Bay region near Collinsville. The Central Valley region shall have section offices in the Sacramento Valley and the San Joaquin Valley.

(h) Lahontan region, which comprises all basins east of the Santa Ana, Los Angeles and Central Valley regions from the California-Oregon boundary to the southerly boundary located in Los Angeles and San Bernardino Counties of the watersheds draining into Antelope Valley, Mojave River Basin and Dry Lake Basin near Ivanpah.

(i) Colorado River Basin region, which comprises all basins east of the Santa Ana and San Diego regions draining into the Colorado River, Salton Sea and local sinks from the southerly boundary of the Lahontan region to the California-Mexico boundary.

The regions defined and described in this section shall be as precisely delineated on official maps of the department and include all of the areas within the boundaries of the state.

For purposes of this section the boundaries of the state extend three nautical miles into the Pacific Ocean from the line of mean lower low water marking the seaward limits of inland waters and three nautical miles from the line of mean lower low water on the mainland and each offshore island.

Nothing in this section shall limit the power conferred by this chapter to regulate the disposal of waste into ocean waters beyond the boundaries of the state.

Article 3. Regional Water Quality Control Plans (Refs & Annos)

West's Ann. Cal. Water Code § 13240

§ 13240. Adoption of plans; conformance with state policy

Currentness

Each regional board shall formulate and adopt water quality control plans for all areas within the region. Such plans shall conform to the policies set forth in Chapter 1 (commencing with Section 13000) of this division and any state policy for water quality control. During the process of formulating such plans the regional boards shall consult with and consider the recommendations of affected state and local agencies. Such plans shall be periodically reviewed and may be revised.

Chapter 4. Regional Water Quality Control (Refs & Annos)

Article 3. Regional Water Quality Control Plans (Refs & Annos)

West's Ann. Cal. Water Code § 13241

§ 13241. Water quality objectives; beneficial uses; prevention of nuisances

Currentness

Each regional board shall establish such water quality objectives in water quality control plans as in its judgment will ensure the reasonable protection of beneficial uses and the prevention of nuisance; however, it is recognized that it may be possible for the quality of water to be changed to some degree without unreasonably affecting beneficial uses. Factors to be considered by a regional board in establishing water quality objectives shall include, but not necessarily be limited to, all of the following:

- (a) Past, present, and probable future beneficial uses of water.
- (b) Environmental characteristics of the hydrographic unit under consideration, including the quality of water available thereto.
- (c) Water quality conditions that could reasonably be achieved through the coordinated control of all factors which affect water quality in the area.
- (d) Economic considerations.
- (e) The need for developing housing within the region.
- (f) The need to develop and use recycled water.

West's Ann. Cal. Water Code § 13246

§ 13246. Action on plan by state board; timeline

Effective: April 8, 2002

Currentness

(a) The state board shall act upon any water quality control plan not later than 60 days from the date the regional board submitted the plan to the state board, or 90 days from the date of resubmission of the plan.

(b) When the state board is acting upon a water quality control plan that is being amended solely for an action related to a regional board's total maximum daily load submittal, not including submittals related to listing, the state board shall not exceed the 60-day timeline, inclusive of the time spent sending the submittal back to the regional board, unless one of the following circumstances exists:

(1) The proposed amendment is for an exceedingly complex total maximum daily load. In order to determine if a total maximum daily load is exceedingly complex, the state board may consider a number of factors including, but not limited to, the volume of the record, the number of pollutants included, the number of dischargers and land uses involved, and the size of the watershed. The reason or reasons that any total maximum daily load is determined to be exceedingly complex shall be provided by the state board to the regional board in writing.

(2) The submittal by the regional board is clearly incomplete.

Chapter 5.5. Compliance with the Provisions of the Federal Water Pollution Control Act as Amended in 1972
(Refs & Annos)

West's Ann.Cal.Water Code § 13370

§ 13370. Legislative findings and declaration

Currentness

The Legislature finds and declares as follows:

- (a) The Federal Water Pollution Control Act (33 U.S.C. Sec. 1251 et seq.), as amended, provides for permit systems to regulate the discharge of pollutants and dredged or fill material to the navigable waters of the United States and to regulate the use and disposal of sewage sludge.
- (b) The Federal Water Pollution Control Act, as amended, provides that permits may be issued by states which are authorized to implement the provisions of that act.
- (c) It is in the interest of the people of the state, in order to avoid direct regulation by the federal government of persons already subject to regulation under state law pursuant to this division, to enact this chapter in order to authorize the state to implement the provisions of the Federal Water Pollution Control Act and acts amendatory thereof or supplementary thereto, and federal regulations and guidelines issued pursuant thereto, provided, that the state board shall request federal funding under the Federal Water Pollution Control Act for the purpose of carrying out its responsibilities under this program.

Chapter 5.5. Compliance with the Provisions of the Federal Water Pollution Control Act as Amended in 1972
(Refs & Annos)

West's Ann.Cal.Water Code § 13372

§ 13372. Construction and application of chapter

Effective: January 1, 2004

Currentness

(a) This chapter shall be construed to ensure consistency with the requirements for state programs implementing the Federal Water Pollution Control Act and acts amendatory thereof or supplementary thereto. To the extent other provisions of this division are consistent with the provisions of this chapter and with the requirements for state programs implementing the Federal Water Pollution Control Act and acts amendatory thereof or supplementary thereto, those provisions apply to actions and procedures provided for in this chapter. The provisions of this chapter shall prevail over other provisions of this division to the extent of any inconsistency. The provisions of this chapter apply only to actions required under the Federal Water Pollution Control Act and acts amendatory thereof or supplementary thereto.

(b) The provisions of Section 13376 requiring the filing of a report for the discharge of dredged or fill material and the provisions of this chapter relating to the issuance of dredged or fill material permits by the state board or a regional board shall be applicable only to discharges for which the state has an approved permit program, in accordance with the provisions of the Federal Water Pollution Control Act, as amended, for the discharge of dredged or fill material.

ATTACHMENT 34

762 F.Supp. 1422
United States District Court,
W.D. Washington,
at Seattle.

ALASKA CENTER FOR THE ENVIRONMENT,
Northern Alaska Environmental Center,
Southeast Alaska Conservation Council,
and Trustees for Alaska, Plaintiffs,

v.

William K. REILLY, Administrator, the U.S.
Environmental Protection Agency, EPA Region
X, and Dana A. Rasmussen, in her capacity
as Regional Administrator, Defendants.

No. C90-595R. April 15, 1991.

Citizen suit was filed to compel Environmental Protection Agency (EPA) to perform alleged mandatory duty to implement "total maximum daily load" water quality protection measures under Clean Water Act. Plaintiffs filed motion for partial summary judgment. The District Court, Rothstein, Chief Judge, held that Act set out nondiscretionary duty on part of EPA for promulgation of "total maximum daily loads" in face of over a decade of inaction by State of Alaska.

Motion granted.

Attorneys and Law Firms

*1423 Brian Faller, Seattle Law Enforcement, Utilities and Environmental Protection, Seattle, Wash., Michael Wenig, Anchorage, Alaska, for plaintiffs.

Susan L. Barnes, U.S. Attys. Office, Seattle, Wash., Christopher Scott Vaden, U.S. Dept. of Justice, Environment and Natural Resources Div., Washington, D.C., for defendants.

Opinion

ORDER GRANTING PLAINTIFFS' MOTION FOR PARTIAL SUMMARY JUDGMENT

ROTHSTEIN, Chief Judge.

THIS MATTER comes before the court on plaintiffs' motion for partial summary judgment. Having reviewed the motion,

together with all documents filed in support and in opposition, having heard oral argument and being fully advised, the court finds and rules as follows:

Plaintiffs Alaska Center for the Environment, et al. (collectively "ACE"),¹ move for partial summary judgment against defendants U.S. Environmental Protection Agency, et al. (collectively "EPA"), on the issue of liability under the Clean Water Act. If the motion is granted, plaintiffs indicate they will file a motion to compel the EPA to perform its duties under § 303(d) of the Act pursuant to a schedule developed by the court.

- 1 Plaintiffs include Alaska Center for the Environment, Northern Alaska Environmental Center, Southeast Alaska Conservation Council, and Trustees for Alaska.

I. FACTUAL BACKGROUND

Plaintiffs have filed this citizen suit to compel the EPA to perform what plaintiffs *1424 believe is a mandatory duty to implement certain water quality protection measures under the Clean Water Act ("CWA" or "the Act").

A. Water Pollution Regulation

Congress passed the Federal Water Pollution Control Act (commonly referred to as the CWA) in 1972 to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters." Sec. 101(a), 33 U.S.C. § 1251. In order to achieve that objective, Congress declared as a "national goal" that "the discharge of pollutants into the navigable waters be eliminated by 1985." *Id.*, § 101(a)(1).

EPA's regulatory program for water protection focuses on two potential sources of pollution: point sources and nonpoint sources. Point source pollution was addressed in the 1972 amendments to the Act, where Congress prohibited the discharge of any pollutant from any point source into certain waters unless that discharge complies with the Act's specific requirements. Secs. 301(a) and 502(12), 33 U.S.C. §§ 1311(a) and 1362(12). Under this approach, compliance is focused on technology-based controls for limiting the discharge of pollutants through the National Pollution Discharge Elimination System ("NPDES") permit process.

When these requirements are found insufficient to clean up certain rivers, streams or smaller water segments, the Act requires use of a water-quality based approach. States are required to identify such waters and designate them as "water quality limited." The states are then to establish a

priority ranking for these waters, and in accordance with that ranking, to establish more stringent pollution limits called "total maximum daily loads" or "TMDLs." 33 U.S.C. §§ 1313(d)(1)(A), (C). TMDLs are the greatest amount of a pollutant the water body can receive daily without violating a state's water quality standard.

The TMDL calculations help ensure that the cumulative impacts of multiple point source discharges are accounted for, and are evaluated in conjunction with pollution from other nonpoint sources. States are then required to take whatever additional cleanup actions are necessary, which can include further controls on both point and nonpoint pollution sources. As a recent GAO report concluded, the TMDLs process:

provides a comprehensive approach to identifying and resolving water pollution problems regardless of the sources of pollution. If implemented, the TMDL process can provide EPA and the states with a complete listing of key water pollutants, the source of the pollutants, information on the amount of pollutants that need to be reduced, options between point and/or nonpoint approaches, costs to clean up, and situations where it may not be feasible to meet water quality standards.²

- 2 US Government Accounting Office, "Water Pollution—More EPA Action Needed to Improve the Quality of Heavily Polluted Waters," January 1989 (GAO/RCED-89-38) at 34-5, (see Plaintiffs' Ex. C.) (hereinafter referred to as "GAO report").

It is the TMDL regulatory process upon which this lawsuit focuses. The CWA sets out a very specific timetable and description of mandatory duties on the part of states and the EPA for the TMDL process. The court is being asked to clarify the scope of the EPA's duties under this section of the Act.

B. Duties of States and the EPA

Under § 303(d), states are required to submit lists of water quality limited segments and TMDLs to the EPA at certain times; the first such submission was due by June 26, 1979.³ Once such a submission is made, certain mandatory duties by EPA are triggered. *Within 30 days*, the EPA Administrator must review the state's submissions of the identified waters and the load allocations established under § 303(d)(1). Once approved by EPA, the identified waters and TMDLs are incorporated **1425* by the state into its continuing planning process established under § 303(e)(3).

- 3 Since the EPA published its identification of suitable pollutants in December, 1978, states' first submissions were due 180 days later, or June, 1979. 33 U.S.C. § 1313(d)(2).

If EPA disapproves the identification and/or TMDL, the agency has 30 days after disapproval to make its own identification of waters and establish TMDLs necessary to implement the applicable water quality standards. § 303(d)(2). The Act is silent as to the nature of EPA's obligations if a state, such as Alaska here, fails to make any initial submission at all.

C. History of the TMDLs Process in Alaska

As indicated, the first identification of "water quality limited" waters by the State of Alaska was required in 1979. Over ten years later, it is undisputed that the State has not submitted a single TMDL to the EPA. Moreover, the State and the EPA have failed to complete even the first stage of the TMDL process. Alaska's 1988 305(b) Report⁴ categorized several hundred distinct waterbodies as either "impaired" or "threatened" by water pollution. *See* Plaintiffs' Ex. G. However, only *one* segment from all these waterbodies has been identified as "water quality limited." There is no evidence that the EPA ever approved or disapproved that submission within the 30 day deadline.

- 4 Under section 305(b) of the Act, states are required to provide the EPA with a biennial report on the status of the state's water quality management. It is commonly referred to as a "305(b) report."

The EPA directly commented on the State's failure again to include "water quality limited" segments in its 1990 305(b) report. *See* Plaintiffs' Ex. E, letter from Kriezenbeck. The EPA gave the State until June 30, 1990, to provide such a list.

Shortly after this suit was filed in April 1990, the State submitted to the EPA a revised list of 48 "water quality limited" segments. To date, the EPA does not appear to have approved or disapproved this list. Plaintiffs contend there is little hope that the State will begin to take the next step and establish TMDLs in a timely fashion. The State's 1990 305(b) Report notes that TMDLs have "not been attempted" and makes no promise to "attempt" them.

In comparison to Alaska's lack of progress in developing TMDLs, other areas of the country have a mixed record of success. In 1989, EPA Region IV approved 163 TMDLs, Region V approved 74, Region I approved 50, Region VIII

approved 16, Region X approved 11. Regions II, III, and VII, however, approved no TMDLs. Pl.Ex. K.⁵

- 5 Within Region X, Washington and Idaho are also delinquent in not developing TMDLs. Oregon is in the process of establishing 40 TMDLs as part of a consent decree resulting from a lawsuit filed in December 1986.

Plaintiffs now ask the court to direct the EPA to establish TMDLs in lieu of any meaningful action on the part of the State. Defendants oppose the motion, arguing that the EPA does not have a mandatory duty to establish TMDLs in the absence of a submission by the states. Defendants argue that in the absence of a nondiscretionary duty, plaintiffs are unable to pursue a citizen suit under § 505(a) of the Act, and therefore this court lacks jurisdiction to hear the case.

II. DISCUSSION

A. Summary Judgment Standard

1 A grant of summary judgment is appropriate if it appears, after viewing the evidence in the light most favorable to the opposing party, that there are no genuine issues of material fact and that the moving party is entitled to judgment as a matter of law. *T.W. Electrical Service, Inc. v. Pacific Electrical Contractors Assoc.*, 809 F.2d 626, 630-31 (9th Cir.1987); *Lew v. Kona Hospital*, 754 F.2d 1420, 1423 (9th Cir.1985). Here, the parties agree that there are no material facts in dispute; rather, the questions before the court are legal in nature. Thus, the matter is ripe for summary judgment.

B. Mandatory Duties of the EPA

Section 505(a) of the CWA authorizes citizens to bring suit in federal court against the EPA for failing to perform an *1426 "act or duty" under the CWA which is not discretionary. 33 U.S.C. § 1365(a). Plaintiffs invoke this section in their attempt to protect the waters of Alaska from further degradation in light of State regulatory inaction.

In determining whether the EPA has a mandatory duty under sec. 303(d) to establish TMDLs at this time, the court looks to traditional principles of statutory construction. "Proper statutory construction requires more than linguistic examination and review of the rules of statutory construction. The interpretation should be reasonable, and where the result of one interpretation is unreasonable, while the result of another interpretation is logical, the latter should prevail." *Sierra Club v. Train*, 557 F.2d 485, 490 (5th Cir.1977); *Rosado v. Wyman*, 397 U.S. 397, 414-5, 90 S.Ct. 1207,

1218-19, 25 L.Ed.2d 442 (1970). "In interpreting statutes, a court's function is to construe the language so as to give effect to the intent of Congress." *Train*, 557 F.2d at 489.

The mandatory TMDLs process requires that states identify those waters that are below certain quality limits; establish a priority ranking for those waters; and establish TMDLs in accordance with the priority ranking. 33 U.S.C. § 1313(d)(1).

The exact statutory language at issue is as follows:

(2) Each State **shall** submit to the Administrator from time to time, with the first such submission not later than 180 days after the date of publication of the first identification of pollutants ... for his approval, the waters identified and the loads established ... **The Administrator shall either approve or disapprove such identification and load not later than 30 days after the date of submission.** If the Administrator approves such identification and load, such State shall incorporate them into its current plan ... **If the Administrator disapproves such identification and load, he shall not later than 30 days after the date of such disapproval identify such waters in such State and establish such loads for such waters as he determines necessary to implement the water quality standards applicable to such waters and ... shall incorporate them into its current plan....** (emphasis added).

Id.

2 Plaintiffs' suit alleges that the State of Alaska's failure to submit proposed TMDLs over a decade amounts to a "constructive submission" of no TMDLs, thereby triggering a mandatory duty on EPA's part to promulgate those TMDLs. To this end, plaintiffs rely on the Seventh Circuit decision in *Scott v. City of Hammond, Ind.*, 741 F.2d 992 (7th Cir.1984). In this case directly on point, the court held that the EPA *did* have a duty to develop TMDLs when the appropriate states failed to comply with the statute.

The *Scott* case involved a citizen suit against the EPA Administrator for failure to prescribe TMDLs for pollutants discharged into Lake Michigan after Illinois and Indiana failed to do so. Given the lengthy delay from the State's submissions deadline in 1979, the Seventh Circuit had little difficulty in reversing the district court and concluding that the EPA *did* have an affirmative duty to treat the States' inaction as a "constructive" submission, warranting agency response. The court held,

We believe that, if a state fails over a long period of time to submit proposed TMDL's, this prolonged failure may

amount to the "constructive submission" by that state of no TMDL's. Our view of the case is quite simple, and tracks the statutory scheme set up by Congress ... The allegation of the complaint that no TMDL's are in place, coupled with the EPA's admission that the states have not made their submissions, raises the possibility that the states have determined that TMDL's for Lake Michigan are unnecessary ... (T)hen the EPA would be under a duty to either approve or disapprove the "submission."

741 F.2d at 996-7.

The *Scott* court went on to discount the EPA's argument that Congress did not intend to establish a statutory duty, saying,

None of the EPA's arguments against the existence of this statutory duty are *1427 compelling. The EPA claims that Congress did not intend that the EPA establish TMDL's if the states chose not to act. We think it unlikely that an important aspect of the federal scheme of water pollution control could be frustrated by the refusal of states to act. This is especially true in light of the short time limits both on a state's action, and on the EPA's required reaction to the state's submission....

Id. The Seventh Circuit also noted that, based on its consideration of the importance of water pollution control, the Supreme Court has rejected a similar argument to the one EPA makes here respecting the states' role in pollution control. *E.I. Du Pont De Nemours & Co. v. Train*, 430 U.S. 112, 97 S.Ct. 965, 51 L.Ed.2d 204 (1977). In construing the CWA to grant the EPA broad power, the Supreme Court wrote, "We do not believe that Congress would have failed so conspicuously to provide EPA with the authority needed to achieve the statutory goals." *Id.*

3 Congress' repeated use of the term "shall" in sec. 303(d) clearly places a mandatory duty upon the EPA to take affirmative action after disapproving a state's unacceptable submission. Read in light of common sense and the fact that Congress set out such short time lines in this section, it is strongly arguable that Congress intended that EPA's affirmative duties be triggered upon a state's failure to submit a list, or any TMDL at all. As the Seventh Circuit reasoned in *Scott*,

We cannot allow the states' refusal to act to defeat the intent of Congress that TMDLs be established promptly in accordance with the timetable provided in the statute. In addition, to construe the relevant statute (any other way)

would render it wholly ineffective. There is, of course, a strong presumption against such a construction.

741 F.2d at 998.

The Ninth Circuit has not had the opportunity to decide this exact issue. However, in a 1985 case, the Ninth Circuit recited, without questioning, the Seventh Circuit's holding in *Scott*, but held that the EPA's mandatory duties had not been triggered since there had been no claim that the waterbody at issue was water quality limited. *City of Las Vegas, Nev. v. Clark County, Nev.*, 755 F.2d 697, 703-4 (9th Cir.1985).

In *Environmental Defense Fund v. Costle*, 657 F.2d 275 (D.C.Cir.1981), plaintiff challenged the EPA's failure to develop TMDLs for salinity in the Colorado River, following inadequate submissions from the states. The court found that the EPA's duties had not yet been triggered since the State's deadline for submitting a TMDL had not yet passed. *Id.* at 295. However, the court was clear in its insistence that the EPA act promptly in administering the review and establishment of TMDLs, saying "we admonish EPA to approve or disapprove such identification, prioritization, and load limits within the requisite statutory framework and time limits ... We urge EPA to carefully heed the statutory deadlines in the future." *Id.*⁶ The court's emphasis on timely federal review of state action supports an interpretation of the Act that mandates federal intervention when states fail to perform their statutory duties.

6 In *Costle*, the court's strong language regarding attention to deadlines arose in a suit filed over a delay in TMDL development of months. Surely the same admonishment is appropriate where the delay has stretched to over a decade.

The EPA's opposition to this motion is rooted in its conclusion that the *Scott* court went too far. While agreeing with the Seventh Circuit's conclusion that prolonged state inaction may be characterized as a determination that no TMDLs are necessary, the EPA faults the *Scott* court for going beyond the clear language of the statute and creating an enforcement remedy that was not intended by Congress. The EPA appears to argue that, before its mandatory duty to establish TMDLs is triggered, the agency has discretion (1) to determine *whether* a state's failure to submit a TMDL amounts to such a constructive *1428 submission, and (2) to decide *when* to make that determination.

The EPA maintains that there is a clear distinction between a court determination that EPA has *discretionary* authority to

act in the absence of state submissions, and an "overreaching" decision that such authority is a *mandatory duty*. The EPA does not believe that its discretionary powers should be subject to citizen suit enforcement under section 505, and that it should retain the ability to decide not to enforce certain laws. Quoting the Supreme Court in *Heckler v. Chaney*, the EPA argues:

An agency decision not to enforce often involves a complicated balancing of a number of factors which are peculiarly within its expertise. Thus, the agency must not only assess whether a violation has occurred, but whether agency resources are best spent on this violation or another, whether the agency is likely to succeed if it acts, whether the particular enforcement action requested best fits the agency's overall policies, and indeed, whether the agency has enough resources to undertake the action at all.

470 U.S. 821, 831, 105 S.Ct. 1649, 1655, 84 L.Ed.2d 714 (1985).

The EPA reassures the court that the purpose of the Act is not frustrated by the agency's narrower interpretation of its mandatory duties, because EPA retains discretionary authority to take action when states fail to. This reassurance is not particularly comforting in light of the fact that EPA Region X has failed to take action on this matter for over ten years.

4 EPA implies that, because of the states' supposed "primacy" in the field of pollution control, if states fail to perform their "primary" roles, Congress did not intend to shift the responsibilities to the EPA. On the contrary, the court finds it improbable, and unsupported by case law, that if the states default, Congress intended that their roles would remain unfulfilled. The court agrees with the Seventh Circuit that it is unlikely that Congress intended an important aspect of the federal water pollution control scheme to be frustrated by the failure of a state to act. 741 F.2d at 997.⁷

7 The court also finds the EPA's analogy to "prosecutorial discretion" inapplicable here. As the court found in *NRDC v. N.Y. Dept. of Environmental Conservation*, 700 F.Supp. 173 (S.D.N.Y.1988), statutory construction based on prosecutorial discretion is inappropriate to the disputed CWA section here, because neither prosecution nor sanctions is at issue. *Id.* at 179. Interpreting § 303(d) to require the Administrator to promulgate TMDLs in the absence of state action "does no more than require the Administrator to act to ensure compliance with dates specified in the statute." *Id.*

In support of their opposition, defendants point to the short deadlines written into this section of the Act. The EPA reasons that 30 days is too short a time for Congress to have contemplated the EPA being able to complete the entire TMDL process from scratch, in the absence of state data from which to work. There would be insufficient time for the appropriate comment and review typically available in administrative rulemaking. EPA's reasoning is based on the assumption that, when a state submits a defective TMDL, it nevertheless has performed all the preliminary work necessary to establish a correct TMDL.

5 While it may be true that the EPA could be faced with a dearth of data collection on the State's part, this fact does not warrant a conclusion that the agency is therefore devoid of responsibility for initiating the fact-finding process. Absence of data is not the determinative factor in this analysis. For example, a state could submit a TMDL based on a complete lack of credible data, or affirmatively refuse to establish any TMDL at all. The EPA concedes that in this situation, it would clearly have the mandatory duty to establish a TMDL, despite its not having any of the necessary underlying data provided to them by the State.

Finally, the EPA believes that since it is charged with administration of the CWA, its judgment as to the use of certain enforcement provisions is entitled to deference.

*1429⁸ *U.S. v. Homestake Mining Co.*, 595 F.2d 421, 429 (8th Cir.1979). If Congress has not addressed the precise question at issue, the Court may not simply impose its own construction on the statute; it must determine whether the agency's answer is based on a permissible construction of the statute. *Chevron U.S.A., Inc. v. NRDC*, 467 U.S. 837, 842-43, 104 S.Ct. 2778, 2781-82, 81 L.Ed.2d 694 (1984).

8 In light of the agency's insistence on deference to its interpretation of the CWA, it is interesting to note that EPA Region X's Chief of the Office of Water Planning, Thomas Wilson, has included a statement in an October 1990 report that strongly suggests EPA views itself as having a duty to respond to state inaction on TMDLs. The report says,

... by statute, EPA is given only 30 days to identify and establish any TMDL needed because of State inaction. This short deadline, along with the margin of safety requirement discussed below, almost guarantees that any EPA-developed TMDL would be more stringent than a State-developed one ...

EPA Nonpoint Source News-Notes, October 1990, at 20, Plaintiffs' Ex. A. In this statement, Wilson extols

the *benefits* of aggressive use of the TMDLs program. In addressing concern about what happens if the State or EPA does not have enough data to establish a scientifically precise TMDL, Wilson notes that the statute builds in a margin of safety requirement to be used to account for any lack of knowledge.

In other words, Congress says ignorance is no excuse for inaction. Just add a margin of safety to compensate for the lack of knowledge and keep moving. No other program has such a strong statutory endorsement for action in the face of an incomplete database. *Id.*

The court finds here that Congress *has* addressed the question at issue. Section 303(d) expressly requires the EPA to step into the states' shoes if their TMDL submissions or lists of water quality limited segments are inadequate. It is consistent to conclude that the "inadequacy" of a submission includes deliberate, silent inaction.

There is clear legislative history and judicial support for strong enforcement of the CWA. Rather than construing EPA's mandatory duties in an overly narrow manner, traditional statutory interpretation directs that the court give life to the spirit of the Act. The EPA's interpretation of § 303(d) puts the TMDL process in "administrative purgatory", to use another court's phrase⁹, pending the agency's eventual review of the state's inaction. The court finds this unreasonable, illogical, and inconsistent with the

CWA's purpose. "State inaction amounting to a refusal to act should not stand in the way of successfully achieving the goals of federal anti-pollution policy." *Scott*, 741 F.2d at 998.

9 See *Citizens for a Better Environment v. Costle*, 515 F.Supp. 264, 274 (N.D.Ill.1981).

CONCLUSION

NOW, THEREFORE, plaintiffs' motion for partial summary judgment is GRANTED. The court finds that § 303(d) of the CWA does set out a nondiscretionary duty on the part of the EPA for promulgation of TMDLs in the face of state inaction.

The court need not make a broad, generic determination of the point in time at which a state's inaction may be deemed a "constructive submission." However, there could hardly be a more compelling case for finding a "constructive submission" than under the facts of this specific case. The court therefore finds that the State of Alaska has effectively created a "constructive submission" of no TMDLs over the past eleven years. The EPA is required, therefore, to initiate its own process of promulgating TMDLs, including any and all necessary steps needed to effectively identify the appropriate waterbodies at issue. The details of this process will be worked out with the court at a future date.

265 F.Supp.2d 1142
United States District Court,
N.D. California.

CITY OF ARCADIA, et al., Plaintiffs,
v.
UNITED STATES ENVIRONMENTAL
PROTECTION AGENCY, et al., Defendants,
and
Natural Resources Defense Council,
et al., Defendants-Intervenors.

No. C 02-5244 SBA. May 16, 2003.

Cities brought action challenging Environmental Protection Agency's (EPA) promulgation of total maximum daily load (TMDL) for trash in river and subsequent approval of state's trash TMDLs. Environmental groups intervened as parties defendant. On EPA's motion to dismiss, the District Court, Armstrong, J., held that: (1) EPA had authority to approve state-submitted TMDLs, even after EPA had established its own TMDLs; (2) procedure used by EPA in approving state's TMDLs was not itself "final agency action;" and (3) cities' action was not ripe for review.

Motion granted.

Attorneys and Law Firms

*1143 Noam I. Duzman, Richard Montevideo, Robert S. Bower, Rutan & Tucker LLP, Costa Mesa, CA, for plaintiffs. Charles M. O'Connor, AUSA & Chief, Environmental & Natural Resources, United States Attorney's Office, San Francisco, CA, S. Randall Humm, Pamela Tonglao, U.S. Department of Justice, Environmental & Natural Resources Div., Washington, DC, for defendants. David S. Beckman, Anjali I. Jaiswal for defendants-intervenors.

Opinion

**ORDER GRANTING DEFENDANTS' MOTION
TO DISMISS, DENYING AS MOOT PLAINTIFFS'
MOTION FOR PARTIAL SUMMARY
JUDGMENT, AND DISMISSING ACTION**

ARMSTRONG, District Judge.

Plaintiffs City of Arcadia and other California cities (collectively, "Plaintiffs") bring this action against defendants United States Environmental Protection Agency ("EPA"), the EPA Administrator, and the EPA Region IX Administrator (collectively, "Defendants") for injunctive and declaratory relief. The Natural Resources Defense Council, Santa Monica BayKeeper, and Heal the Bay (collectively, "Intervenors") have intervened as defendants.

Now before the Court are Defendants' Motion to Dismiss Second Amended Complaint (the "Motion to Dismiss"), in which Intervenors join, and Plaintiffs' Motion for Summary Adjudication of Issues (the "Motion for Partial Summary Judgment"). Having read and considered the papers submitted and being fully informed, the Court GRANTS the Motion to Dismiss, DENIES AS MOOT the Motion for Partial Summary Judgment, and DISMISSES this action.¹

1 These matters are suitable for disposition without a hearing. *See* Fed.R.Civ.P. 78; Civ. L.R. 7-1(b).

I. BACKGROUND²

2 Over the years the Court has had the pleasure and privilege of reading some excellent moving papers. Some of these submissions stand out as truly superlative. Defendants' opening and reply briefs for their Motion to Dismiss are shining examples of such superlative submissions. In these briefs Defendants discuss three areas of federal law generally regarded as highly complex-environmental regulation, administrative law, and justiciability-in direct, succinct, well-supported, and powerfully illuminating fashion. Whereas a poor presentation of the statutory and regulatory framework and Defendants' arguments might have required the Court to spend hours to apprehend their arguments, the high quality of Defendants' writing enabled the Court to grasp them in a matter of minutes. Defendants' briefs also thankfully avoid leveling the sorts of thinly veiled (or, at times, not-at-all-veiled) *ad hominem* attacks that unfortunately pervade too much legal writing nowadays. The Court thus commends Defendants' counsel for their outstanding writing and expresses its appreciation for it.

A. Statutory and Regulatory Background

1. Water Pollution Control Under the Clean Water Act

The Clean Water Act (“CWA”), 33 U.S.C. §§ 1251-1387, utilizes two fundamental approaches to control water pollution: technology-based regulations and water quality standards. Technology-based **1144* regulations seek to reduce pollution by requiring a discharger to effectuate equipment or process changes, without reference to the effect on the receiving water; water quality standards fix the permissible level of pollution in a specific body of water regardless of the source of pollution.

The National Pollutant Discharge Elimination System (“NPDES”) permit program is a key means of implementing both technology-based requirements and water quality standards. 33 U.S.C. §§ 1311(b)(1)(C), 1342(a)(1); 40 C.F.R. § 122.44(a), (d)(1). An NPDES permit establishes specific limits of pollution for an individual discharger. A discharge of pollutants (other than dredged or fill material) from any “point source,” which is defined as “any discernible, confined and discrete conveyance ... from which pollutants are or may be discharged,” 33 U.S.C. § 1362(14), into the waters of the United States is prohibited unless that discharge complies with the discharge limits and other requirements of an NPDES permit. *Id.* §§ 1311(a), 1362(12). At present, 45 states, including California, are authorized to administer the NPDES permit program. State Program Status, at http://cfpub.epa.gov/npdes/statestats.cfm?program_id=45&view=general. In the remaining states, EPA issues the permits. 33 U.S.C. § 1342(a).

2. Total Maximum Daily Loads (“TMDLs”)

Section 303(d) of the CWA and EPA's implementing regulations require states to identify and prioritize waterbodies where technology-based effluent limitations and other required controls are insufficiently stringent to attain water quality standards. *See* 33 U.S.C. § 1313(d); 40 C.F.R. § 130.7(b). States must develop a “total maximum daily load,” or “TMDL,” for each pollutant of concern in each waterbody so identified. A TMDL represents the maximum amount of pollutant “loading” that a waterbody can receive from all combined sources without exceeding applicable state water quality standards. Although the term “total maximum daily load” is not expressly defined in the CWA, EPA's regulations define a TMDL for a pollutant as the sum of: (1) the “wasteload allocations,” which is the amount of pollutant that can be discharged to a waterbody from point sources, (2) the “load allocations,” which represent the amount of a pollutant in a waterbody attributable to nonpoint sources or

natural background, and (3) a margin of safety. 40 C.F.R. §§ 130.2(g)-(i), 130.7(c)(1).

Under CWA Section 303(d)(2), EPA is required to review and approve or disapprove TMDLs established by states for impaired waters within thirty days of submission. 33 U.S.C. § 1313(d)(2). If EPA disapproves a state TMDL submission, EPA must issue its own TMDL for that waterbody within thirty days. *Id.*

3. Implementation of TMDLs

TMDLs established under Section 303(d)(1) of the CWA function primarily as planning devices and are not self-executing. *Pronsolino v. Nastri*, 291 F.3d 1123, 1129 (9th Cir.2002) (“TMDLs are primarily informational tools that allow the states to proceed from the identification of waters requiring additional planning to the required plans.”) (citing *Alaska Ctr. for the Env't v. Browner*, 20 F.3d 981, 984-85 (9th Cir.1994)). A TMDL does not, by itself, prohibit any conduct or require any actions. Instead, each TMDL represents a goal that may be implemented by adjusting pollutant discharge requirements in individual NPDES permits or establishing nonpoint source controls. *See, e.g., Sierra Club v. Meiburg*, 296 F.3d 1021, 1025 (11th Cir.2002) (“Each TMDL serves as the goal for the level of that pollutant in the waterbody to which that TMDL applies.... The theory is that individual-discharge permits **1145* will be adjusted and other measures taken so that the sum of that pollutant in the waterbody is reduced to the level specified by the TMDL.”); *Idaho Sportsmen's Coalition v. Browner*, 951 F.Supp. 962, 966 (W.D.Wash.1996) (“TMDL development in itself does not reduce pollution.... TMDLs inform the design and implementation of pollution control measures.”); *Pronsolino*, 291 F.3d at 1129 (“TMDLs serve as a link in an implementation chain that includes ... state or local plans for point and nonpoint source pollution reduction ...”); *Idaho Conservation League v. Thomas*, 91 F.3d 1345, 1347 (9th Cir.1996) (noting that a TMDL sets a goal for reducing pollutants). Thus, a TMDL forms the basis for further administrative actions that may require or prohibit conduct with respect to particularized pollutant discharges and waterbodies.

1 For point sources, limitations on pollutant loadings may be implemented through the NPDES permit system. 40 C.F.R. § 122.44(d)(1)(vii)(B). EPA regulations require that effluent limitations in NPDES permits be “consistent with the assumptions and requirements of any available wasteload allocation” in a TMDL. *Id.* For nonpoint sources,

limitations on loadings are not subject to a federal nonpoint source permitting program, and therefore any nonpoint source reductions can be enforced against those responsible for the pollution only to the extent that a state institutes such reductions as regulatory requirements pursuant to state authority. *Pronsolino v. Marcus*, 91 F.Supp.2d 1337, 1355-56 (N.D.Cal.2000), *aff'd sub nom. Pronsolino v. Natri*, 291 F.3d 1123 (9th Cir.2002).

4. California Water Quality Control Statutory and Regulatory Framework

California effectuates the foregoing requirements of the CWA primarily through institutions and procedures set out in certain provisions of the California Water Code (the "Water Code"), including those of the California Porter-Cologne Water Quality Control Act (the "Porter-Cologne Act"), Cal. Water Code § 13000 *et seq.* These Water Code provisions established the State Water Resources Control Board (the "State Board") within the California Environmental Protection Agency to formulate and adopt state policy for water quality control. Cal. Water Code §§ 174-186, 13100, 13140. The State Board is designated as the state water pollution control agency for all purposes stated in the CWA and is the agency authorized to exercise powers delegated to it under the CWA. 33 U.S.C. § 1313; Cal. Water Code § 13160.

The Porter-Cologne Act established nine California Regional Water Quality Control Boards (individually, a "Regional Board"; collectively, the "Regional Boards"), Cal. Water Code §§ 13200, 13201, which operate under the purview of the State Board, *see id.* § 13225. Each Regional Board is comprised of nine members, *id.* § 13201, and is required to appoint an executive officer, *id.* § 13220(c), to whom the Regional Board may delegate all but some of its powers and duties, *id.* § 13223. Each Regional Board is required to formulate and adopt water quality control plans for all areas within the region. *Id.* § 13240. The State Board may approve such plan, or it may return it to the Regional Board for further submission and resubmission to the State Board. *Id.* § 13245. It must act on any water quality control plan within 60 days of a Regional Board's submission of such plan to the State Board, or 90 days after resubmission of such plan. *Id.* § 13246. A water quality control plan will not become effective unless and until it is approved by the State Board, followed by approval by the state's Office of Administrative Law ("OAL") in accordance with the appropriate procedures. *1146 *Id.* § 13245; Cal. Gov't Code §§ 11340.2, 11349.3, 11353(b)(5).

The State Board is required to formulate, adopt, and revise general procedures for the formulation, adoption, and implementation of water quality control plans by the Regional Boards. Cal. Water Code § 13164. The State Board may adopt water quality control plans for purposes of the CWA that include the regional water quality control plans submitted by the Regional Boards. *See id.* § 13170. Such plans, when adopted by the State Board, supersede any regional water quality control plans for the same waters to the extent of any conflict. *Id.*

B. Factual Summary and Procedural History

1. The Consent Decree

The events underlying the instant action were set in motion by the disposition of *Heal the Bay, Inc., et al. v. Browner, et al.*, No. C 98-4825 SBA ("*Heal the Bay*"), an action previously before this Court. In *Heal the Bay*, an individual and two environmental groups (which groups are now two of the three Intervenor in the instant action) brought a civil action against EPA, the EPA Administrator, and the EPA Region IX Administrator. Their suit primarily concerned EPA's alleged failure to perform its alleged duty under the CWA either to approve or to disapprove TMDLs submitted to EPA by the state of California.

On March 23, 1999, the Court filed an Amended Consent Decree (the "Consent Decree")³ in which "EPA agree[d] to ensure that a TMDL [would] be completed for each and every pairing of a [Water Quality Limited Segment, as defined in 40 C.F.R. 130.2(j),] and an associated pollutant in the Los Angeles Region" set forth in an attachment to the Consent Decree by specified deadlines. (Consent Decree ¶¶ 2a, 2b, 3, 3c.)⁴ Pursuant to the Consent Decree, for each pairing EPA was required either to approve a TMDL submitted by California by a specified deadline or, if it did not approve a TMDL by the date specified, to establish a TMDL within one year of the deadline, unless California submitted and EPA approved a TMDL prior to EPA's establishing the TMDL within the one-year period. (*Id.* ¶ 3a.) By March 24, 2002, EPA was required either to have approved a state-submitted TMDL for trash in the Los Angeles River or to have established the TMDL itself. (*Id.* ¶¶ 2d, 3a; *id.* Att. 2, 3.)⁵

3 No original consent decree was entered. Rather, according to Defendants' representations in their opening brief, the Consent Decree incorporated amendments from an original proposal at the urging of proposed intervenors California Association of

Sanitation Agencies and California Alliance of POTWs.
 (See Mot. to Dismiss at 6.)

- 4 The Court takes judicial notice of the existence of the Consent Decree and the contents thereof. *See, e.g., Egan v. Teets*, 251 F.2d 571, 577 n. 10 (9th Cir.1957) (holding that district court was entitled to take judicial notice of prior proceedings involving same petitioner before same district court). The Consent Decree is filed as Docket No. 25 in *Heal the Bay*, No. C 98-4825 SBA.
- 5 Defendants contend that the relevant deadline was March 22, 2002, (Mot. to Dismiss at 6), and Plaintiffs echo this contention in their Second Amended Complaint, (Second Am. Compl. ¶ 25). Review of the terms of the Consent Decree, however, reveal that the deadline was a different date. The Consent Decree defines "effective date" as the date on which the Consent Decree is entered. (*Id.* ¶ 2d.) Although the Court signed the Consent Decree on March 22, 1999, (*id.* at 29), it was not entered on the docket until March 24, 1999. Under the terms of Attachments 2 and 3 of the Consent Decree, TMDLs for trash for all Water Quality Limited Segments the Los Angeles River were to be submitted by California within two years of the effective date-March 24, 2001. (*Id.* Atts. 2, 3.) Since EPA was required to ensure that a TMDL was in place within one year of California's deadline to submit a proposed TMDL, (*id.* ¶ 3a), the deadline for final approval or establishment of a TMDL was March 24, 2002.

Nevertheless, based on the evidence tendered by EPA, it is clear that EPA believed that the deadline was March 22, 2002. (See Decl. of David W. Smith in Supp. of EPA's Mot. to Dismiss, Ex. B at 2.) As is evident from the discussion below, this discrepancy is immaterial to the Court's analysis of the merits of the Motion to Dismiss.

***1147 2. EPA's Issuance of TMDLs and Approval of State-submitted TMDLs**

One of the responsibilities of the Regional Board for the Los Angeles region (the "Los Angeles Regional Board") is to develop TMDLs under the CWA for waterbodies in Los Angeles and Ventura Counties. (Decl. of Dennis Dickerson in Supp. of EPA's Mot. to Dismiss (the "Dickerson Declaration") ¶ 2.) With few exceptions, TMDLs are developed as draft TMDLs by Los Angeles Regional Board staff and then submitted to the board to be adopted as amendments to the Los Angeles Regional Board's Water Quality Control Plan, which is known as the Basin Plan. (*Id.*) Basin Plan amendments are then submitted to the State

Board, and then subsequently to the OAL; after they have been approved by both of these agencies, they are submitted to EPA. (*Id.*)

On September 19, 2001, the Los Angeles Regional Board adopted TMDLs for trash for the Los Angeles River watershed. (*Id.* ¶ 3.) "Trash" was defined as man-made litter, as defined in California Government Code § 68055.1(g). (*Id.* Ex. A at 2). These TMDLs (the "State Trash TMDLs") were approved by the State Board on February 19, 2002, by OAL on July 16, 2002, and ultimately by EPA by letter dated August 1, 2002. (*Id.* ¶ 3, Ex. C; Second Am. Compl. for Injunctive & Declaratory Relief ("SAC") ¶¶ 27, 30.) Prior to its approval of the State Trash TMDLs, however, EPA issued its own TMDLs for trash for the Los Angeles River Basin (the "EPA Trash TMDLs") on March 19, 2002. (SAC ¶ 26; Decl. of David W. Smith in Supp. of EPA's Mot. to Dismiss (the "Smith Declaration") Ex. B.) The EPA's August 1, 2002, letter approving the State Trash TMDLs announced that they "supercede[d]" the EPA Trash TMDLs. (SAC ¶ 31; Smith Decl. ¶ 7, Ex. C.)

3. TMDLs Now in Effect and Implementation Provisions

Under the provisions of the TMDLs now in effect-the State Trash TMDLs-the numeric target is zero trash in the Los Angeles River. (Dickerson Decl. Ex. A at 16, 29.) Based on this target, California has determined that the wasteload allocations for trash in the Los Angeles River also must be zero. (*Id.*)

To achieve this goal, California has provided, along with the State Trash TMDLs, implementation provisions that specify a phasing-in of progressive reductions in municipal stormwater wasteload allocations over a ten-year period, following completion of a two-year initial baseline monitoring period. (*Id.* Ex. A at 21.) While the baseline monitoring program is taking place, cities will be deemed to be in compliance with the wasteload allocations provided that all of the trash that is collected during this period is disposed of in compliance with all applicable regulations. (*Id.* Ex. A at 27.) A baseline monitoring report is due to the Los Angeles Regional Board by February 15, 2004. (*Id.* ¶ 6.)⁶

6 Plaintiffs have filed Plaintiffs' Objections to Declarations of David W. Smith and Dennis Dickerson Offered by Defendants in Support of Defendants' Motion to Dismiss Second Amended Complaint ("Plaintiffs' Objections"). Plaintiffs' Objections challenge the admissibility of, *inter alia*, the statements in paragraph 6 of the Dickerson Declaration. The

Court considers and resolves the objections to these statements in note 20, *infra*. Although Plaintiffs have objected to all the statements in paragraph 6, careful review of the arguments advanced in these objections reveals that they are not in fact objecting to the statement in paragraph 6 that “[t]he baseline monitoring report is due to the [Los Angeles] Regional Board by February 15, 2004.” (Dickerson Decl. ¶ 6; *see* Pls.’ Objections at 3-4.) To the extent that Plaintiffs are in fact objecting to this statement, however, the Court **OVERRULES** their objections to this statement for the reasons set forth in note 20, *infra*.

***1148** The State Trash TMDLs and incremental wasteload allocations will be implemented through the Los Angeles stormwater permit, which the Los Angeles Regional Board will need to amend to incorporate specific, enforceable permit requirements. (*Id.* ¶ 8.)⁷ The implementation provisions in the TMDLs allow permittees to “employ a variety of strategies to meet the progressive reductions in their Waste Load Allocations” and maintain that they “are free to implement trash reduction in any manner they choose.” (*Id.* Ex. A at 29.) The wasteload reduction strategies are broadly classified as either end-of-pipe full capture structural controls, partial capture control systems, and/or institutional controls. (*Id.*) The provisions state that permittees will be deemed to be in compliance with the final wasteload allocation for their associated drainage areas if they utilize “full capture systems” that are adequately sized and maintained and maintenance records are available for inspection by the Los Angeles Regional Board. (*Id.* Ex. A at 30.)

⁷ Under heading II.2 of Plaintiffs’ Objections, Plaintiffs object to the statements in paragraph 8 of the Dickerson Declaration relating to the Los Angeles Regional Board’s understanding of how the State Trash TMDLs will be implemented. (Pls.’ Objections at 4.) All of the grounds on which Plaintiffs object are meritless. First, Plaintiffs contend that the statements are objectionable as “extra-record evidence.” Such evidence, however, may be considered by the Court in connection with a motion to dismiss for lack of subject matter jurisdiction. *See Ass’n of Am. Med. Colleges v. United States*, 217 F.3d 770, 778 (9th Cir.2000). Since Defendants contend that Plaintiffs’ challenges to the merits of EPA’s approval of the State Trash TMDLs are unripe, and since the Court considers how these TMDLs will be implemented at least in part for this purpose, this evidence is properly before the Court. Second, Plaintiffs contend that the statements constitute inadmissible hearsay. These statements, however, do not contain or even implicitly rely on any out-of-court statement by

one other than Mr. Dickerson for the truth of the matter stated.

Third, Plaintiffs claim that the statements lack foundation, although they do not explain what they mean by this. To the extent Plaintiffs are asserting that the declarant lacks personal knowledge of the Los Angeles Regional Board’s intentions, that assertion is refuted by the fact that Mr. Dickerson has been Executive Officer of the board since 1997. (Dickerson Decl. ¶ 1.) Fourth, Plaintiffs insist that “the statements are objectionable and inadmissible as the best evidence of the implementation requirements vis-à-vis the TMDLs, is set forth in the TMDLs themselves, as well as in the terms of other enforceable documents, documenting the actions taken by the [Los Angeles] Regional Board, such as the terms of the Municipal Storm Water Permit referenced in the declaration.” (Pls.’ Objections at 4.) This objection misunderstands the nature of the “best evidence” rule: that rule applies *only* where the witness attempts to testify as to the *contents of a writing, recording, or photograph*. *See Fed.R.Evid.* 1002. Such is not the case here. Moreover, this objection reflects a fundamental misunderstanding of the nature of TMDLs. TMDLs are *not* self-executing; they require the appropriate state to issue regulations implementing them. It is also not clear what Plaintiffs mean by their assertion that documents “documenting the actions taken by the Regional Board” constitute “enforceable documents.” Finally, Plaintiffs assail the statements at issue as “not competent.” (*Id.*) Plaintiffs do not explain what they mean by this objection. The Court thus disregards it. Accordingly, the Court **OVERRULES** the objections under Heading II.2 of Plaintiffs’ Objections.

***1149 4. The Instant Action**

Plaintiffs filed their initial complaint on June 28, 2002, in the United States District Court for the Central District of California. On August 30, 2002, they filed an amended complaint. On October 30, 2002, the case was transferred to this Court, the United States District Court for the Northern District of California. Pursuant to the parties’ stipulation and the Court’s Order thereon, Plaintiffs filed a Second Amended Complaint for Injunctive and Declaratory Relief (the “SAC” or “Complaint”) on December 12, 2002.

The SAC is the operative complaint for purposes of the Motion to Dismiss and the Motion for Partial Summary Judgment. The SAC purports to assert three claims for relief. The First Claim for Relief is ostensibly brought

pursuant to a provision of the Administrative Procedure Act (the "APA"), 5 U.S.C. § 706, (SAC at 34), although certain allegations thereunder also invoke the CWA, the Regulatory Flexibility Act (the "RFA"), and the Small Business Regulatory Enforcement Fairness Act of 1996 (the "SBREFA"), (*id.* ¶¶ 84-85).⁸ The First Claim for Relief alleges several violations of the APA: (1) EPA acted without authority and acted arbitrarily and capriciously by establishing the EPA Trash TMDLs prior to receiving for review the State Trash TMDLs, (SAC ¶¶ 78-79); (2) EPA acted without authority and arbitrarily and capriciously by reviewing and approving the State Trash TMDLs because EPA had already established the EPA Trash TMDLs, (*id.* ¶¶ 80, 83); (3) EPA acted arbitrarily and capriciously and in excess of its jurisdiction with regard to the manner by which it established the EPA Trash TMDLs, (*id.* ¶¶ 81-82); (4) the collective actions of California and EPA relating to issuance of the EPA Trash TMDLs and subsequent approval of the State Trash TMDLs constitute a "*de facto* TMDL procedure" that is arbitrary, capricious, and contrary to law, (*id.* ¶¶ 84-86);⁹ and (5) EPA acted arbitrarily and capriciously by approving the State Trash TMDLs because those TMDLs were "patently defective" and established not in accordance with the procedures of the CWA and California law, (*id.* ¶ 87).¹⁰ The Second Claim for Relief challenges "1150 the validity of two alleged agency actions, the EPA Trash TMDLs and the "*de facto* TMDL procedure," under the APA, 5 U.S.C. § 551 *et seq.*; the RFA, 5 U.S.C. § 601 *et seq.*; and the SBREFA, 5 U.S.C. § 801 *et seq.* (SAC at 40; *id.* ¶¶ 89-99.) The violations alleged under the Second Claim for Relief, however, appear to relate mostly to procedural requirements under the RFA and the SBREFA. (*See id.* ¶¶ 91-93, 95-98 (invoking 5 U.S.C. §§ 601(5), 601(6), 603, 604(a), 604(b), 605(b), and 611).)¹¹ The Third Claim for Relief is derivative of the first two claims. It seeks a declaration under the Declaratory Judgment Act, 28 U.S.C. §§ 2201-2202, as to which party's interpretation of the law is correct and a judicial determination of Plaintiffs' rights and duties. (*Id.* ¶¶ 100-105.)

8 With respect to the First Claim for Relief, the SAC comes perilously close to violating Federal Rule of Civil Procedure 8(a)'s mandate of providing "a *short and plain* statement of the claim showing that the pleader is entitled to relief" Fed.R.Civ.P. 8(a) (emphasis added). In particular, Plaintiffs' practice of indicating that the First Claim for Relief is based exclusively on the APA, (SAC at 34), yet at the same time claiming in the allegations thereunder that the actions at issue violate other statutes, (*id.* ¶¶ 84-85), is confusing. Aside from potentially misleading Defendants as to the nature of the

claims against them, it has required the Court to spend needless additional time and effort scrutinizing the allegations of the SAC because the Court cannot trust the accuracy of the headings of the SAC. The practice is especially reprehensible because the Court has already been forced to spend undue time and effort identifying and parsing out the five independent, discrete claims for relief that are set out in stream-of-consciousness fashion in the allegations underlying the "First Claim for Relief"-which heading necessarily suggests a *single* claim. *See infra.*

9 This alleged *de facto* TMDL procedure is also claimed to violate the CWA, the RFA, and the SBREFA. (*Id.* ¶¶ 84-85.)

10 Although not clearly stated, this last claim (claim (5)) within the First Claim for Relief appears to challenge the *merits* of EPA's approval of the State Trash TMDLs, as opposed to, for example, challenging EPA's authority to approve *any* state-submitted TMDLs after it issued the EPA Trash TMDLs, (*see id.* ¶¶ 80, 83). Presumably, this last claim encompasses challenges to, for example, EPA's approval of the State Trash TMDLs where these TMDLs covered "unlisted" waters. (*See id.* ¶¶ 42, 49, 62.) Defendants appear to have also construed this claim as challenging the merits of EPA's approval of the State Trash TMDLs, and they move to dismiss this claim as unripe. (*See Mot. to Dismiss at 20-24.*) Plaintiffs appear to concur in Defendants' construction of this claim. (*See Pls.' Opp. Br. at 16-20.*) Accordingly, the Court construes this last claim as challenging the merits of EPA's approval of the State Trash TMDLs.

11 This is yet another example of Plaintiffs' objectionable drafting of the SAC. In particular, the paragraph alleging improper agency action supposedly giving rise to the Second Claim for Relief, paragraph 96, identifies four bases on which the CWA, the APA, the RFA, and the SBREFA were violated. (*Id.* ¶ 96.) Of these four bases, however, only the first (denoted reason "(a)") appears to have anything to do with the APA; the remaining three ("(b)," "(c)," and "(d)") appear to relate solely to provisions of the RFA and SBREFA, at least based on the allegations of the previous paragraphs under the heading "Second Claim for Relief." (*Id.*; compare *id.* (e.g., alleging that EPA failed to perform an initial screening of the EPA Trash TMDLs to determine whether they would have a significant economic impact on a substantial number of small entities) *with id.* ¶¶ 91-93, 95 (e.g., alleging that RFA requires agencies to screen all proposed rules and identify whether such rules would have such an impact, (*id.* ¶ 92)):

The Court is thus left with the distinct impression that either Plaintiffs have been careless in drafting the Second Claim for Relief or they have invoked various statutes and inserted a number of allegations in scattershot fashion in the hope that something will slip by Defendants undetected and "stick." Aside from arguably violating Rule 8(a), this practice is unfair not only to Defendants, but also to the Court, because it makes the Court's resolution of Defendants' arguments considerably more difficult. (Nor is the Court interested in any supporting evidence or clarification from Plaintiffs' counsel regarding the nature of their claims that is not in the four corners of the SAC or incorporated therein by reference. The SAC speaks for itself on that score.) Based on its review of the SAC, the Court construes the allegations underlying the Second Claim for Relief as alleging violation of the APA, the RFA, and the SBREFA only with respect to EPA's alleged failure to provide Plaintiffs with notice and an opportunity for comment with regard to the *de facto* TMDL procedure, discussed *infra*, and the establishment of the EPA Trash TMDLs; the Court construes them to allege violation of the RFA and the SBREFA, but not the APA, with regard to the remaining allegations under the heading of "Second Claim for Relief." (See SAC ¶ 96.)

On January 13, 2003, Defendants and Intervenors filed answers to the SAC. On that same day, Defendants also filed the instant Motion to Dismiss, which seeks dismissal of the entire action pursuant to Federal Rules of Civil Procedure 12(b)(1) and 12(b)(6). Intervenors filed Intervenors' Notice in Support of Defendants' Motion to Dismiss on February 3, 2003, indicating in brief fashion that they agreed with the arguments in the Motion to Dismiss and therefore supported the motion. On March 10, 2003, Plaintiffs filed their Motion for Partial Summary Judgment.

Most of the plaintiffs in the instant action are currently plaintiffs in a California state court action against the Los Angeles Regional Board and the State Board challenging the legality of the State Trash TMDLs. (*Id.* ¶ 33.) Three other lawsuits have similarly been filed challenging either *1151 California's establishment of the State Trash TMDLs or EPA's approval of the same. (*Id.*)

II. LEGAL STANDARD

A. Rule 12(b)(1)

2 3 Federal Rule of Civil Procedure 12(b)(1) authorizes a party to seek dismissal of an action for lack of subject matter jurisdiction. "When subject matter jurisdiction is challenged under Federal Rule of Procedure 12(b)(1), the plaintiff has the burden of proving jurisdiction in order to survive the motion." *Tosco Corp. v. Communities for a Better Env't*, 236 F.3d 495, 499 (9th Cir.2001). "A plaintiff suing in a federal court must show in his pleading, affirmatively and distinctly, the existence of whatever is essential to federal jurisdiction, and, if he does not do so, the court, on having the defect called to its attention or on discovering the same, must dismiss the case, unless the defect be corrected by amendment." *Id.* (quoting *Smith v. McCullough*, 270 U.S. 456, 459, 46 S.Ct. 338, 70 L.Ed. 682 (1926)). In adjudicating such a motion, the court is not limited to the pleadings, and may properly consider extrinsic evidence. See *Ass'n of Am. Med. Colleges v. United States*, 217 F.3d 770, 778 (9th Cir.2000). The court presumes lack of jurisdiction until the plaintiff proves otherwise. See *Stock West, Inc. v. Confederated Tribes*, 873 F.2d 1221, 1225 (9th Cir.1989).

B. Rule 12(b)(6)

A motion to dismiss pursuant to Federal Rule of Civil Procedure 12(b)(6) tests the legal sufficiency of a claim. *Navarro v. Block*, 250 F.3d 729, 731 (9th Cir.2001). A motion to dismiss should not be granted "unless it appears beyond doubt that the plaintiff can prove no set of facts in support of his claim which would entitle him to relief." *Conley v. Gibson*, 355 U.S. 41, 45-46, 78 S.Ct. 99, 2 L.Ed.2d 80 (1957); accord *Johnson v. Knowles*, 113 F.3d 1114, 1117 (9th Cir.1997). The complaint is construed in the light most favorable to the plaintiff, and all properly pleaded factual allegations are taken as true. *Jenkins v. McKeithen*, 395 U.S. 411, 421, 89 S.Ct. 1843, 23 L.Ed.2d 404 (1969); see also *Everest & Jennings, Inc. v. Am. Motorists Ins. Co.*, 23 F.3d 226, 228 (9th Cir.1994). "Dismissal is proper only where there is no cognizable legal theory or an absence of sufficient facts alleged to support a cognizable legal theory." *Navarro*, 250 F.3d at 731. In adjudicating a motion to dismiss, the court need not accept as true unreasonable inferences or conclusory legal allegations cast in the form of factual allegations. *W. Mining Council v. Watt*, 643 F.2d 618, 624 (9th Cir.1981).

When the complaint is dismissed for failure to state a claim, "leave to amend should be granted unless the court determines that the allegation of other facts consistent with the challenged pleading could not possibly cure the deficiency." *Schreiber Distrib., Co. v. Serv-Well Furniture Co.*, 806 F.2d 1393, 1401

(9th Cir.1986). Leave to amend is properly denied “where the amendment would be futile.” *DeSoto v. Yellow Freight Sys., Inc.*, 957 F.2d 655, 658 (9th Cir.1992).

III. DISCUSSION

Defendants have filed a Motion to Dismiss; Plaintiffs have filed a Motion for Partial Summary Judgment. The Motion for Partial Summary Judgment seeks adjudication of issues pertaining to Plaintiffs' challenge to the procedural legitimacy of the State Trash TMDLs. Because the Court grants the Motion to Dismiss (as discussed below), it does not reach the merits of the Motion for Partial Summary Judgment and therefore denies it as moot. Accordingly, the following discussion pertains *1152 only to the Motion to Dismiss, except where noted.

At the outset, the Court notes that it need not analyze all the arguments presented in Defendants' opening brief because Plaintiffs concede that certain of their claims are moot. In particular, Defendants contend in their opening brief for the Motion to Dismiss that the EPA Trash TMDLs no longer have any force or effect because EPA has announced that the State Trash TMDLs “supercede” the EPA Trash TMDLs; consequently, Defendants maintain, Plaintiffs' claims that EPA lacked authority to establish the EPA Trash TMDLs, (SAC ¶ 78-79), and that the procedures by which EPA established them were unlawful, (*id.* ¶¶ 81-82, 90, 94, 96-97, 99), are moot. (Mot. to Dismiss at 12-15.) In their opposition brief, Plaintiffs express satisfaction with Defendants' assurances that the EPA Trash TMDLs are no longer (and can never be) in effect and therefore “withdraw their claims directly challenging the validity of EPA's TMDLs” (Pls.' Opp. Br. at 4 n. 6.) Defendants acknowledge this withdrawal in their reply brief. (Defs.' Reply Br. at 1.) As a result, the Court GRANTS the Motion to Dismiss pursuant to Federal Rule of Civil Procedure 12(b)(1) with regard to claims (1) and (3) (SAC ¶¶ 78-79 and SAC ¶¶ 81-82, respectively) within the First Claim for Relief of the SAC identified in Part I.B.4 of this Order, *supra*. The Court also GRANTS the Motion to Dismiss pursuant to Rule 12(b)(1) with regard to the Second Claim for Relief of the SAC to the extent it challenges the validity of the EPA Trash TMDLs. (See SAC ¶¶ 90, 94, 96-97, 99.) The Court now addresses the parties' arguments in relation to the remaining claims.

A. Challenge to EPA's Authority to Approve the State Trash TMDLs

Plaintiffs claim that EPA lacked authority to approve the State Trash TMDLs because it had already established the EPA Trash TMDLs. (SAC ¶¶ 80, 83.) Defendants move to dismiss this claim pursuant to Rule 12(b)(6) for failure to state a claim upon which relief can be granted. (Mot. to Dismiss at 19-20.) Defendants contend that EPA in fact has a statutory *obligation* under 33 U.S.C. § 1313 to review any proposed TMDLs submitted by a state and either approve them or disapprove them. (*Id.*) Defendants assert that nothing in the CWA or otherwise divests EPA of jurisdiction to approve a state-submitted TMDL once EPA has issued its own TMDLs, and in fact, recognizing such a principle would thwart Congressional intent to vest states with the primary responsibility of implementing the CWA's provisions. (*Id.* at 20.) Plaintiffs counter (in less than straightforward fashion) that by allowing California to submit the State Trash TMDLs to EPA after EPA established the EPA Trash TMDLs, EPA effectively “remanded” a “TMDL submission” to California, and EPA lacked authority to “remand” this submission and subsequently approve California's “resubmission.” (See Pls.' Opp. Br. at 15-16.)¹²

12 Plaintiffs also argue that EPA lacked authority to approve the State Trash TMDLs because these TMDLs cover “unlisted” waters; according to Plaintiffs, EPA has authority only to approve TMDLs for “listed” waters. (*Id.* at 14-15.) As Defendants correctly point out, this argument goes to the merits of EPA's approval of the State Trash TMDLs, not to the issue of whether EPA had any authority to approve any state-submitted TMDLs after issuing its own TMDLs—the issue raised by this claim. (Defs.' Reply Br. at 10 n. 9.) Plaintiffs' argument is relevant only to their own Motion for Partial Summary Judgment, not to the arguments raised in the Motion to Dismiss.

4 Plaintiffs' counterargument is meritless. No authority supports the conclusion that EPA lacks authority to approve *1153 state-submitted TMDLs after EPA has established its own TMDLs, nor does this conclusion logically follow from the proposition that EPA is required to approve or disapprove a state-submitted TMDL within 30 days of submission. Moreover, as Defendants astutely note, recognizing such a principle “would lead to absurd results. Under this scenario, once EPA establishes a TMDL, the State could never update it or modify it based on changed circumstances.” (Mot. to Dismiss at 20.) Finally, like Defendants, (*see* Defs.' Reply Br. at 10), the Court is at a loss to understand what Plaintiffs mean by their contention that EPA “remanded” the EPA Trash TMDLs to California for revision and resubmission.

Nothing in the allegations of the Complaint remotely suggest any sort of sending back of TMDLs to California for revision or additional development. And even if there were such a "remand," it does not follow that EPA lacked authority to approve the State Trash TMDLs.

For these reasons, the Court GRANTS the Motion to Dismiss with respect to claim (2) within the First Claim for Relief, (SAC ¶¶ 80, 83), *see supra* Part I.B.4. Additionally, it is evident that Plaintiffs cannot amend the SAC to allege facts sufficient to rehabilitate this claim because it is meritless as a matter of law. Accordingly, this claim is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE.

B. The "De Facto TMDL Procedure"

Under claim (4) within their First Claim for Relief, *see supra* Part I.B.4, and the Second Claim for Relief, Plaintiffs challenge the "de facto TMDL procedure,"¹³ which they consider to consist of:

- 13 Plaintiffs do not expressly use the phrase "de facto TMDL procedure" in the SAC. Instead, they refer to this procedure as the "TMDL Procedure" and contend that EPA has effected a "de facto adoption" of the "TMDL Procedure." (SAC ¶ 85.) For ease of reference, the Court will refer to what Plaintiffs call the "TMDL Procedure" as the "de facto TMDL procedure."

the establishment by the [Los Angeles] Regional Board of the TMDL, followed by the preparation and notice of the TMDL by USEPA, followed by the approval of the TMDL by the State Board, followed by the "establishment" by USEPA of the EPA TMDL, followed by the determination by USEPA to review and/or approve the subsequently submitted State TMDL, and to thereafter find the USEPA established TMDL is "superceded"

(SAC ¶ 85.) Plaintiffs assert that this procedure violates the APA, the RFA, and the SBREFA. (*Id.* ¶¶ 84-85, 96-98.) Plaintiffs allege not only that they have previously suffered from the effectuation of the *de facto* TMDL procedure, but also that they will suffer from the effectuation of the procedure in the future. (*See id.* ¶¶ 84-86.)

Defendants move to dismiss these claims by pointing out that the APA and the RFA, which was amended by the SBREFA, permit challenges *only* to "final agency action." (Mot. to Dismiss at 16-19.)¹⁴ They explain that the APA defines "agency action" to include "the whole or a part of any agency rule, order, license, sanction, relief, or the equivalent or denial thereof, or failure to act." (*Id.* at 16) (quoting 5 U.S.C.

§ 551(13).) (They do not indicate whether this definition applies to the RFA and SBREFA as well.) Defendants assert that what Plaintiffs characterize as a *de facto* TMDL procedure is not an "agency action," much less a final agency action, but in fact a sequence of events; as such, they maintain, the procedure cannot give rise to a challenge under the APA or under the RFA, as amended by the SBREFA.

- 14 Defendants also contend that the RFA, as amended by the SBREFA, provides a narrow and exclusive means of judicial review that is not available here due to the nature of Plaintiffs' challenge to the *de facto* TMDL procedure. (*See id.* at 16.)

Plaintiffs respond to Defendants' arguments somewhat curiously. Despite vehemently asserting that Defendants' arguments are incorrect, they do not dispute that a challenge will lie only to final agency action. Instead, they contend that the *de facto* TMDL procedure "led up to and resulted in 'final agency action,' " (Pls.' Opp. Br. at 22), namely the August 1, 2002, approval of the State Trash TMDLs. Plaintiffs also argue at great length that their challenge to this procedure is not moot because it falls under the "capable of repetition, yet evading review" exception to the mootness doctrine. (*Id.* at 22-25.)

5 Defendants' arguments are persuasive, and Plaintiffs' responses are both unconvincing and nonresponsive. As Defendants correctly note, (*see* Defs.' Reply Br. at 4-5), Plaintiffs' suggestion that they are challenging EPA's approval of the State Trash TMDLs, as opposed to the so-called "TMDL procedure," is belied by the allegations of the SAC: by their plain language, the allegations of paragraphs 84 through 86 and paragraphs 96 through 98 challenge the "TMDL procedure," (SAC 84-86, 96-98); Plaintiffs' challenge to EPA's approval of the State Trash TMDLs is set out in paragraph 87, (*see id.* ¶ 87), the justiciability of which challenge is discussed in Part III.C of this Order, *infra*. Plaintiffs do not demonstrate how the "procedure" is "the whole or a part of any agency rule, order, license, sanction, relief, or the equivalent or denial thereof, or failure to act" or falls within any other definition, statutory or otherwise, of final agency action.¹⁵ Indeed, as Defendants also correctly note, (*see* Defs.' Reply Br. at 4-5), Plaintiffs' assertion that the TMDL procedure *consummated* in final agency action, namely EPA's approval of the State Trash TMDLs, is an implicit admission that the "procedure" itself is not final agency action. Nor do Plaintiffs make any effort to distinguish or refute any of the authorities cited by Defendants in support of their arguments. Finally, as Defendants yet again correctly

point out, Plaintiffs' mootness argument is nonresponsive because Defendants do not contend that this claim is moot.

(*Id.* at 8.)¹⁶

15 Even though the Court has not been able to locate a statutory definition of "agency action" for purposes of the RFA and SBREFA, Plaintiffs have put forward no argument to suggest that it should be given a meaning substantially different than that provided in the APA. The Court sees no reason to conclude that "agency action" should be given a significantly more expansive definition than that provided for purposes of the APA.

16 Plaintiffs do not respond to Defendants' argument that judicial review is unavailable under the RFA, as amended by the SBREFA, for alleged violations of 5 U.S.C. § 603. (Mot. to Dismiss at 18.) The Court agrees with Defendants that the implication of this lack of response is that any opposition to this argument is waived. (*See* Defs.' Reply Br. at 3-4.) The Court disagrees with Defendants, however, that Plaintiffs have failed to respond to Defendants' arguments that the *de facto* TMDL procedure does not constitute "final agency action" under the RFA, as amended by the SBREFA; but the Court finds their response to this argument meritless for the reasons stated above.

In sum, it is apparent that the alleged *de facto* TMDL procedure, consisting of the various events identified in paragraph 85 of the SAC, is not subject to challenge under the APA, RFA, or SBREFA because it is not final agency action within the meaning of those statutes. *Cf. Lujan v. Nat'l Wildlife Fed'n*, 497 U.S. 871, 890, 110 S.Ct. 3177, 111 L.Ed.2d 695 (1990) (rejecting challenge to alleged land withdrawal *1155 review program on grounds that alleged program was not final agency action within meaning of APA). Accordingly, the Court GRANTS Defendants' motion to dismiss pursuant to Federal Rule of Civil Procedure 12(b)(6) with respect to claim (4) within the First Claim for Relief, (SAC ¶¶ 84-86). The Court also GRANTS Defendants' motion pursuant to Rule 12(b)(6) with regard to the Second Claim for Relief. Given that the Second Claim for Relief challenges the validity of the EPA Trash TMDLs and the alleged *de facto* TMDL procedure alone, and given that Plaintiffs have withdrawn their challenge to the validity of the EPA Trash TMDLs, the Second Claim for Relief is now dismissed in its entirety.

It is further evident that Plaintiffs cannot amend the SAC to allege facts sufficient to rehabilitate these claims because they are not actionable as a matter of law. Accordingly, both claim (4) within the First Claim for Relief and the Second Claim

for Relief are DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE.

C. Ripeness of Plaintiffs' Challenge to EPA's Approval of State Trash TMDLs

Plaintiffs' remaining claim (aside from the Third Claim for Relief, which is dependent on the First and Second Claims for Relief) challenges the merits of EPA's approval of the State Trash TMDLs. (*See id.* ¶ 87.) Defendants move to dismiss this claim as unripe for judicial review. Specifically, Defendants contend that the issues are not yet sufficiently developed to be fit for judicial review under the APA because Plaintiffs' existing NPDES permit imposes no obligations on Plaintiffs in connection with the State Trash TMDLs and because the Los Angeles Regional Board intends to revisit these TMDLs at the end of the monitoring period. (Mot. to Dismiss at 21-23.) Defendants further contend that Plaintiffs will not suffer any immediate hardship if review is withheld because EPA's approval of the State Trash TMDLs imposes no present, affirmative duties on Plaintiffs and requires no immediate changes in Plaintiffs' conduct. (*Id.* at 23-24.)

Plaintiffs respond by arguing that they have suffered "injury in fact," both economic and non-economic. (Pls.' Opp. Br. at 16-17.) Citing to the text of the State Trash TMDLs, a copy of which is appended to the Declaration of Richard Montevideo in Support of Plaintiffs' Motion for Summary Adjudication of Issues, and in Opposition to Defendants' Motion to Dismiss (the "Montevideo Declaration") as Exhibit 3, Plaintiffs claim that they are impacted by these TMDLs:

[B]y the terms of the TMDL itself, most Plaintiffs are directly impacted by its terms and presently have express monitoring obligations to comply with, not to mention pending compliance dates requiring annual reductions in trash. Moreover, the TMDL calls out very specific and expensive implementation measures, including possible implementation through full capture vortex systems totaling \$109.3 million for all affected entities within the County [of Los Angeles] by the end of Year 1, and a total of \$2,053,100,000 for the first 12 years of implementation. Even the Trash TMDL itself concludes that "Trash abatement in the Los Angeles River system may be expensive."

(Pls.' Opp. Br. at 18 (citing Montevideo Decl., Ex. 3 (State Trash TMDLs)) (internal citations and emphasis omitted).) Similarly, Plaintiffs maintain that "to come into compliance by the Compliance Dates, [they] must begin employing strategies now to meet the progressive reductions in Waste

Load Allocations required by the State Trash TMDL[s].” (*Id.* at 19.) *1156 Plaintiffs further allege that the NPDES permit that applies to all of Plaintiffs provides that the State Trash TMDLs are “effective and enforceable.” (*Id.* at 18 (citing Montevideo Decl., Ex. 5, at 10 ¶ 14).) Citing paragraph 36 of the SAC, they also contend that they have suffered from the TMDLs’ being in effect because they are exposed to “unwarranted enforcement action and third party citizen suits.” (*Id.*) Finally, Plaintiffs contend that they have suffered “procedural injuries,” to wit, their being “forced to submit comments to two different levels of government (the State of California and the EPA) on two sets of TMDL over a series of many months and several hearings.” (*Id.* at 20.)

Defendants dispute all of Plaintiffs’ arguments in their reply. Defendants note that “Plaintiffs point to no present effect of the TMDLs on their day-to-day conduct.” (Defs.’ Reply Br. at 12.) They point out that, contrary to Plaintiffs’ contention, Plaintiffs in fact have no monitoring obligations with which to comply because the Los Angeles County Department of Public Works has assumed that responsibility for all of Plaintiffs. (*Id.*) Defendants clarify that the first compliance date under the TMDLs is not until 2006, and the TMDLs identify several potential compliance options without mandating the use of any particular measure. (*Id.*) They further note that Plaintiffs fail to respond to the record evidence that the Los Angeles Regional Board will revisit the TMDLs at the conclusion of the monitoring period, that is, prior to the first compliance deadline, and that such reconsideration has been considered a rational basis for delaying judicial review. (*Id.* at 13 (citing *Ohio Forestry Ass’n v. Sierra Club*, 523 U.S. 726, 735, 118 S.Ct. 1665, 140 L.Ed.2d 921 (1998), and *Municipality of Anchorage v. United States*, 980 F.2d 1320, 1323 (9th Cir.1992)).) Finally, Defendants assail Plaintiffs’ reliance on the aforementioned statement in Plaintiffs’ NPDES permit because this statement does not establish that the State Trash TMDLs are effective or enforceable against Plaintiffs. (*Id.*)

6 The “ripeness doctrine is drawn both from Article III limitations on judicial power and from prudential reasons for refusing to exercise jurisdiction.” *Reno v. Catholic Social Services, Inc.*, 509 U.S. 43, 57 n. 18, 113 S.Ct. 2485, 125 L.Ed.2d 38 (1993). Unripe claims are subject to dismissal for lack of subject matter jurisdiction. See *Ass’n of Am. Med. Colleges v. United States*, 217 F.3d 770, 784 n. 9 (9th Cir.2000). In determining whether a case is ripe for review, a court must consider two main issues: “the fitness of the issues for judicial decision” and “the hardship to the parties of withholding court consideration.” *Abbott Labs. v. Gardner*,

387 U.S. 136, 149, 87 S.Ct. 1507 (1967). To address these issues in the context of a challenge to the lawfulness of administrative action, the Supreme Court has identified three factors to consider: “(1) whether delayed review would cause hardship to the plaintiffs; (2) whether judicial intervention would inappropriately interfere with further administrative action; and (3) whether the courts would benefit from further factual development of the issues presented.” *Ohio Forestry Ass’n, Inc. v. Sierra Club*, 523 U.S. 726, 733, 118 S.Ct. 1665, 140 L.Ed.2d 921 (1998).

7 In light of these three factors, the Court finds this claim unripe for review. First, delayed review would cause, at most, minimal hardship to the parties. Indeed, Plaintiffs have not demonstrated that they will suffer *any* hardship if review is delayed. Despite their preoccupation with various official pronouncements that the State Trash TMDLs are “effective” and “enforceable,” Plaintiffs cannot point to a single future event or condition that is fairly certain to occur and will adversely *1157 impact Plaintiffs themselves.¹⁷ That is because the TMDLs do not presently impose any obligations on Plaintiffs and because they are subject to revision before such obligations will be imposed. Nor do Plaintiffs provide any evidence or explanation whatever of the “unwarranted enforcement action and third party citizen suits” to which they claim to be exposed.

17 The Court notes parenthetically that Plaintiffs’ invocation of “injury in fact” in their opposition brief, (Pls.’ Opp. Br. at 16-17), is inapposite. Injury-in-fact is a concept that relates to the issue of standing, not ripeness. See *Lujan v. Defenders of Wildlife*, 504 U.S. 555, 560-61, 112 S.Ct. 2130, 119 L.Ed.2d 351 (1992). Plaintiffs appear to confuse Defendants’ arguments as relating to standing, not ripeness. (Pls.’ Opp. Br. at 20 (“Federal courts have long recognized procedural injuries, as well as actual injuries, as an alternative basis for standing.”).) Nevertheless, the Court construes Plaintiffs’ allegations of “injury in fact” as allegations of hardship.

Equally unsupported is Plaintiffs’ contention that they will bear economic costs in complying with the State Trash TMDLs. The sole evidentiary basis of this allegation, set out in paragraph 35 of the SAC and discussed more thoroughly in Plaintiffs’ Opposition, is the estimates provided in the text of the TMDLs themselves. (See SAC ¶ 35; Pls.’ Opp. Br. at 18.) But this matter is inadmissible hearsay because it is offered by an out-of-court declarant, *i.e.*, the Los Angeles Regional Board, for the truth of the matter stated, *i.e.*, that the TMDLs will in fact impose these costs.¹⁸ Yet even if

this evidence were admissible, it would be insufficient to support Plaintiffs' contention that they will suffer economic injury: the cited portions of the State Trash TMDLs provide estimates of costs to be borne by "permittees"; there is no indication that these costs will be borne by Plaintiffs in particular. (See Montevideo Decl., Ex. 3, at 37, 40, cited in Pls.' Opp. Br. at 18.) Similarly, Plaintiffs provide no evidentiary support for the bald contention in their opposition brief that Plaintiffs must begin employing "strategies" now to meet the progressive reductions in wasteload allocations required by the State Trash TMDLs. (Pls.' Opp. Br. at 19.)

18 The author of the State Trash TMDLs appears to be the Los Angeles Regional Board. (See Montevideo Decl., Ex. 3.) Since the Los Angeles Regional Board is an entity created by state law and is subordinate to a state agency, the State Board, the text of the State Trash TMDLs is arguably ascribable to the State Board and the state of California as well.

But these statements cannot be attributed to EPA by virtue of its approval of the State Trash TMDLs. Plaintiffs have laid no legal or evidentiary foundation tending to show that EPA's mere approval of the TMDLs themselves implies that EPA further agreed with or endorsed as accurate California's estimates of the costs of compliance provided with those TMDLs.

Even if Plaintiffs will be forced to comply with obligations imposed by the State Trash TMDLs and will suffer costs therefrom, the first Compliance Point is not until Year 3 of the implementation period, which runs from October 1, 2005, to September 30, 2006. (See Montevideo Decl., Ex. 3, at 28.) Thus, as a practical matter, Plaintiffs have three years to reach the specified Compliance Point. They have "ample opportunity later to bring [their] legal challenge at a time when harm is more imminent and more certain." *Ohio Forestry Ass'n*, 523 U.S. at 734, 118 S.Ct. 1665. Accordingly, Plaintiffs cannot be heard to complain that they will suffer hardship if review is withheld at the present time.¹⁹

19 To the extent that Plaintiffs identify past events that are not alleged to recur in the future, such as Plaintiffs' allegedly having to submit comments to two levels of government, for the purpose of demonstrating hardship, those events are irrelevant because Plaintiffs are solely seeking prospective relief (aside from attorney's fees and costs of suit).

*1158 Second, judicial intervention would likely interfere with further administrative action on the part of the state of California. Plaintiffs have not refuted Defendants' evidence that the Los Angeles Regional Board will be revisiting the

State Trash TMDLs at the end of the monitoring period.²⁰ It is thus possible that the compliance *1159 dates or compliance points will be altered or abolished altogether. The State Board may submit new TMDLs to EPA for review and potential approval well before the compliance dates in the State Trash TMDLs. And even if the State Trash TMDLs remain mostly intact, it is certainly possible that the State Board will approve additional regulations that alleviate much of the burden on Plaintiffs. Again, Plaintiffs must bear in mind that it is the state of California, not the federal government, that is charged with implementing the State Trash TMDLs.

20 Plaintiffs' Objections challenge the admissibility of, *inter alia*, the portion of Defendants' evidence tending to show that the Los Angeles Regional Board will be revisiting the State Trash TMDLs at the end of the monitoring period, namely relevant statements in paragraphs 6 and 12 of the Dickerson Declaration. (The statements in paragraph 7 of the Dickerson Declaration and Exhibit C thereto also constitute such evidence, (see Mot. to Dismiss at 22), although Plaintiffs do not object to those statements.)

Plaintiffs challenge the statements in paragraph 6 of the Dickerson Declaration on five grounds. First, Plaintiffs contend that these statements are irrelevant "to the issue in question." (Pls.' Objections at 3.) The Court is unclear about what Plaintiffs mean by "the issue in question," but at any rate, the Court overrules this objection because these statements are indeed relevant to an important issue relating to ripeness: whether the Los Angeles Regional Board will revisit the State Trash TMDLs at the end of the monitoring period. Second, Plaintiffs assert that the statements are inadmissible hearsay because they seek "to introduce statements from parties other than the declarant, into evidence." (*Id.*) This argument fails because the statements are not offered for the truth of the matter stated by persons or parties other than Mr. Dickerson. That the Los Angeles Regional Board's *discussed* (i.e., verbally articulated) the possibility of reopening the TMDLs in the future does not implicate hearsay concerns, see *United States v. Ballis*, 28 F.3d 1399, 1405 (5th Cir.1994); and the board's orders to its staff are more akin to written or verbal acts.

Third, Plaintiffs assail the statements as "incompetent" because "the opinions and views of individual Regional Board members is [*sic*] not relevant or admissible evidence of the actions or positions of the entire Board." (Pls.' Objections at 3 (emphasis omitted).) But nowhere are the "opinions and views" of the individual Regional Board members set out in the statements in paragraph

6. Fourth, Plaintiffs claim that these statements are "not the best evidence of the position of the entire Regional Board, as the views and positions of an entire Board can only be discerned from the meeting minutes and resolutions which confirm the actions of the public body." (*Id.* (emphasis omitted).) But the "views and positions" of the board are not set out therein. Fifth, Plaintiffs argue that the statements should be excluded as "extra-record evidence." This objection is meritless because the statements are relevant to the ripeness of Plaintiffs' challenge to EPA's approval of the State Trash TMDLs, and the Court may appropriately look beyond the pleadings in evaluating a motion to dismiss pursuant to Rule 12(b)(1).

In sum, Plaintiffs appear to have construed the statements in paragraph 6 of the Dickerson Declaration as stating that the Los Angeles Regional Board intends to *revise* the State Trash TMDLs after completion of the monitoring period, and they have evidently made their objections with this understanding in mind. Careful review of these statements reveals, however, that these statements demonstrate only that board staff have been ordered to report on the TMDLs and make recommendations on whether or not to revise the TMDLs based on the result of the monitoring. Thus, the import of the statements in paragraph 6 is that *the board will be in a position to revisit, and potentially reconsider, the TMDLs at the end of the monitoring period*, not that they have actually decided to revise the TMDLs. Accordingly, and for the reasons stated above, the Court **OVERRULES** the objections under heading II.1 in Plaintiffs' Objections.

Although Plaintiffs have objected to the admissibility of the statements in paragraph 12 of the Dickerson Declaration, the Court does not rely on those statements in evaluating issues of ripeness. The Court finds that the statements in paragraphs 6 and 7 of the Dickerson Declaration are sufficient to support a conclusion that the Los Angeles Regional Board will be revisiting—which is not to be confused with an intent to revise—the State Trash TMDLs at the end of the monitoring period. Accordingly, the Court **OVERRULES AS MOOT** the objections under heading II.5 in Plaintiffs' Objections.

Finally, the Court has reviewed the remaining objections in Plaintiffs' Objections. The Court does not rely on any of the matter to which Plaintiffs have objected other than those under headings II.1 and II.2 in evaluating the Motion to Dismiss. Accordingly, the Court **OVERRULES AS MOOT** the remaining objections in Plaintiffs' Objections.

Finally, the Court would benefit from further factual development of the issues presented. For example, Plaintiffs allege that in approving the State Trash TMDLs, EPA failed "to use 'best science' and [failed] to carefully consider suggestions on how to structure the TMDL program to be more effective and flexible to ensure workable solutions, with such failure resulting in an inequitable share of the burden [of pollution reduction] being placed on municipalities, such as Plaintiffs herein, to attain water quality standards." (SAC ¶ 47.) Since TMDLs are not self-executing, but require issuance of state regulations for implementation, delaying review will enable the Court to determine more easily and accurately whether the TMDL program could in fact have been structured more flexibly and whether Plaintiffs are bearing an inequitable share of the burden of pollution reduction.

In light of the Court's evaluation of the foregoing three factors, the Court concludes that Plaintiffs' claim is unripe for judicial review. Accordingly, Plaintiffs' claim (5) within the First Claim for Relief, (*id.* ¶ 87), is **DISMISSED** pursuant to Rule 12(b)(1) due to the Court's lack of subject matter jurisdiction. Since the Court lacks jurisdiction over this claim, it lacks authority to grant Plaintiffs leave to amend the claim; accordingly, the claim is dismissed **WITHOUT LEAVE TO AMEND** in this action. Finally, because the Court necessarily does not reach the merits of the claim, the dismissal is **WITHOUT PREJUDICE**.

D. Third Claim for Relief

Plaintiffs' Third Claim for Relief is wholly predicated on their first two claims for relief. Because these two claims for relief are dismissed, the Third Claim for Relief is **DISMISSED** on the same bases, and to the same extent, as the two claims (and sub-claims thereunder) are dismissed.

E. Motion for Partial Summary Judgment

Plaintiffs' Motion for Partial Summary Judgment seeks summary judgment in Plaintiffs' favor on the issues of (1) whether Defendants had authority and jurisdiction to approve the State Trash TMDLs to the extent that they covered unlisted waters and (2) whether Defendants had authority and jurisdiction to approve the State Trash TMDLs given that they had previously established the EPA Trash TMDLs. For the reasons stated above, the Court grants the Motion to Dismiss. Accordingly, the Motion for Partial Summary Judgment is **DENIED AS MOOT**. For the same reason, the Court **OVERRULES AS MOOT** Intervenor's Evidentiary

Objections to Declaration of Richard Montevideo in Support of Plaintiffs' Motion for Summary Adjudication of Issues, and in Opposition to Defendants' Motion to Dismiss²¹ and Plaintiffs' Objections to *1160 Declaration of Anjali I. Jaiswal and Exhibits.

21 Although the Montevideo Declaration relates both to Plaintiffs' opposition to the Motion to Dismiss and to Plaintiffs' Motion for Partial Summary Judgment, Intervenor's objections to the Montevideo Declaration are made in connection with their opposition to the Motion for Partial Summary Judgment. Accordingly, the Court considers their objections solely for that purpose.

IV. CONCLUSION

Plaintiffs have no reason or right to be before this Court, at least at this time. All of their claims are moot, meritless, or unripe. Plaintiffs' challenges to the EPA Trash TMDLs were quite obviously mooted out the minute that EPA approved the State Trash TMDLs. Indeed, given that Plaintiffs readily withdrew these challenges based solely on Defendants' representations in their moving papers that the EPA Trash TMDLs are void, (Pls.' Opp. Br. at 4 n. 6), the Court wonders why Plaintiffs proceeded to file a lawsuit on this basis. Plaintiffs' challenge to EPA's authority to approve the State Trash TMDLs following its establishment of the EPA Trash TMDLs and their challenge to the "*de facto* TMDL procedure" are so patently meritless that the Court fails to understand why Plaintiffs decided to assert these claims in the first place. Finally, Plaintiffs' challenges to the "merits" of the State Trash TMDLs may very well be valid, but in the absence of any indication that they will suffer imminent hardship, these claims are premature.

The Court does not suggest by any means that Plaintiffs have acted in bad faith by continuing to prosecute this action after EPA approved the State Trash TMDLs. But after receiving Defendants' opening brief for their Motion to Dismiss, Plaintiffs should have recognized that their claims could not be maintained at present, if at all. The arguments in their opposition brief appear to reflect more of a "win at all costs" approach than considered judgment. And while the Court does not doubt that Plaintiffs would appreciate a judicial declaration as to the validity of the State Trash TMDLs, the Court lacks jurisdiction to grant such relief where Plaintiffs are not in jeopardy of imminent harm and future events could obviate the controversy.

Accordingly,

IT IS HEREBY ORDERED THAT:

1. The Motion to Dismiss Second Amended Complaint [Docket No. 18] is GRANTED, such that:
 - a. The First Claim for Relief in the Second Amended Complaint for Injunctive and Declaratory Relief is DISMISSED, as follows:
 - i. The claim that EPA acted without authority and acted arbitrarily and capriciously by establishing the EPA Trash TMDLs prior to receiving for review the State Trash TMDLs, (SAC ¶¶ 78-79), is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE as moot and, thus, for lack of subject matter jurisdiction;
 - ii. The claim that EPA acted without authority and arbitrarily and capriciously by reviewing and approving the State Trash TMDLs because EPA had already established the EPA Trash TMDLs, (SAC ¶¶ 80, 83), is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE for failure to state a claim upon which relief can be granted;
 - iii. The claim that EPA acted arbitrarily and capriciously and in excess of its jurisdiction with regard to the manner by which it established the EPA Trash TMDLs, (SAC ¶¶ 81-82), is DISMISSED WITHOUT LEAVE TO AMEND and *1161 WITH PREJUDICE as moot and, thus, for lack of subject matter jurisdiction;
 - iv. The claim that the collective actions of California and EPA relating to issuance of the EPA Trash TMDLs and subsequent approval of the State Trash TMDLs constitute a "*de facto* TMDL procedure" that is arbitrary, capricious, and contrary to law, (SAC ¶¶ 84-86), is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE for failure to state a claim upon which relief can be granted;
