 - v. The claim that EPA acted arbitrarily and capriciously by approving the State Trash TMDLs because those TMDLs were "patently defective" and established not in accordance with the procedures of the CWA and California law, (SAC ¶ 87), is DISMISSED WITHOUT LEAVE TO AMEND in this action and WITHOUT PREJUDICE as unripe and, thus, for lack of subject matter jurisdiction;

b. The Second Claim for Relief in the Second Amended Complaint for Injunctive and Declaratory Relief is DISMISSED, as follows:

i. To the extent the Second Claim for Relief challenges the validity of the EPA Trash TMDLs, the claim is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE as moot and; thus, for lack of subject matter jurisdiction;

ii. To the extent the Second Claim for Relief challenges the validity of the alleged *de facto* TMDL procedure, the claim is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE for failure to state a claim upon which relief can be granted;

c. The Third Claim for Relief in the Second Amended Complaint for Injunctive and Declaratory Relief is DISMISSED on the same bases, and to the same extent, as the First and Second Claims for Relief are dismissed, given that the Third Claim for Relief is derivative of the first two claims.

2. Plaintiffs' Motion for Summary Adjudication of Issues [Docket No. 28] is DENIED AS MOOT.

3. Plaintiffs' Objections to Declarations of David W. Smith and Dennis Dickerson Offered by Defendants in Support of Defendants' Motion to Dismiss Second Amended Complaint [Docket No. 31] are OVERRULED on the merits with respect to the objections under headings II.1 and II.2 therein and OVERRULED AS MOOT with respect to all remaining objections.

4. Intervenors' Evidentiary Objections to Declaration of Richard Montevideo in Support of Plaintiffs' Motion for Summary Adjudication of Issues, and in Opposition to Defendants' Motion to Dismiss [Docket No. 43] are OVERRULED AS MOOT.

5. Plaintiffs' Objections to Declaration of Anjali I. Jaiswal and Exhibits [Docket No. 47] are OVERRULED AS MOOT.

IT IS FURTHER ORDERED THAT this action is DISMISSED in its entirety. The Clerk shall enter judgment in favor of defendants accordingly. All deadlines and events presently calendared are VACATED. *1162 The Clerk shall close the file and terminate any pending matters.

IT IS SO ORDERED.

v.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY; Christine Todd Whitman, USEPA Administrator; Wayne Nastri, USEPA Region IX Administrator, Defendants-Appellees, Natural Resources Defense Council, Inc.; Heal the Bay, Inc.; Santa Monica Baykeeper, Inc., Defendants-Intervenors-Appellees.

No. 03-16309. Argued and Submitted
Feb. 10, 2005. Filed June 15, 2005.

Synopsis

Background: California cities sought review of decision of Environmental Protection Agency (EPA) which established a total maximum daily load (TMDL) that limited amount of trash that could be discharged into Los Angeles River. The United States District Court for the Northern District of California, Sandra B. Armstrong, J., dismissed the claim. Cities appealed.

Holding: The Court of Appeals, Canby, Circuit Judge, held that EPA acted within the scope of its authority in approving California's TMDL.

Affirmed.

David S. Beckman, Natural Resources Defense Council, Inc., Santa Monica, CA, for the defendants-intervenors-appellees.

Appeal from the United States District Court for the Northern District of California; Sandra B. Armstrong, District Judge, Presiding. D.C. No. CV-02-05244-SBA.

Before: PREGERSON, CANBY, JR., and TALLMAN, Circuit Judges.

Opinion

*1105 CANBY, Circuit Judge:

Several municipalities in the Los Angeles area ("Cities") challenge administrative actions taken by the Environmental Protection Agency ("EPA") pursuant to section 303(d) of the Clean Water Act, 33 U.S.C. § 1313(d). The EPA established a total maximum daily load ("TMDL") that limited the amount of trash that can be discharged into the Los Angeles River. The EPA subsequently approved the State of California's separately established TMDL, which was deemed to supersede the federal standard. The Cities challenge the EPA's authority to approve the State TMDL.¹ The district court dismissed this claim pursuant to rule 12(b)(6) of the Federal Rules of Civil Procedure for failure to state a claim upon which relief can be granted. We affirm because we conclude that the Clean Water Act permits the EPA's action.

1 We address the other issues raised on appeal in a separate, unpublished disposition filed contemporaneously with this opinion.

I. Regulatory Background

In an effort "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters," Congress enacted the Clean Water Act with the stated "goal that the discharge of pollutants into the navigable waters be eliminated by 1985." 33 U.S.C. § 1251(a), (a)(1).

The Clean Water Act offers two approaches for controlling water pollution: technology-based regulations and water quality standards. Technology-based regulations reduce levels of pollution by requiring a discharger to make equipment or process changes, without reference to the effect on the receiving water. Water quality standards set the permissible level of pollution in a specific body of water without direct regulation of the individual sources of pollution.

The National Pollutant Discharge Elimination System ("NPDES") permit program governs implementation of both technology-based requirements and water quality standards. 33 U.S.C. §§ 1311(b)(1)(C), 1342(a)(1); 40 C.F.R. § 122.44(a), (d)(1). An NPDES permit sets specific limits that apply to individual polluters. Discharges from any "point source" into the waters of the United States are prohibited unless that discharge complies with the limits and requirements of the NPDES permit. 33 U.S.C. §§ 1311(a), 1362(12), (14).

States are required to identify waters where technology-based effluent limitations and other required controls fail to achieve water quality standards. 33 U.S.C. § 1313(d); 40 C.F.R. § 130.7(b). This list of substandard waters is known as the "303(d) list" (section 303 of the Clean Water Act having been codified as section 1313). States are required to develop a TMDL for each pollutant of concern. A TMDL is not self-enforcing, but serves as an informational tool or goal for the establishment of further pollution controls. *See Pronsolino v. Nastri*, 291 F.3d 1123, 1128-29 (9th Cir.2002).

1 The EPA is required to approve or disapprove a State's TMDL within thirty days of its submission. 33 U.S.C. § 1313(d)(2). If the EPA disapproves a State TMDL submission, the EPA must issue its own within thirty days of the disapproval. *Id.* The EPA is also under a mandatory duty to establish a TMDL when a State fails over a long period of time to submit a TMDL; this "prolonged" failure can amount to the "constructive submission" of an inadequate TMDL, thus triggering the EPA's duty to issue its own. *1106 *See San Francisco BayKeeper v. Whitman*, 297 F.3d 877, 880-84(9th Cir.2002).

II. Procedural History

In 1997, several environmental groups (including Heal the Bay and Santa Monica BayKeeper) sued the EPA for failure to satisfy its mandatory duty to establish a TMDL for the Los Angeles region when California failed to do so. This litigation resulted in the entry of a consent decree, which required the establishment of TMDLs to account for all significant sources of water pollution, including storm water and urban runoff. The consent decree required EPA either to approve a State-submitted TMDL for trash in the Los Angeles River watershed by March 2001 or, if California failed to make a timely submission, to establish the EPA's own TMDL by March 2002.

California failed to submit a TMDL by March 2001, and the EPA subsequently established its own trash TMDL for the Los Angeles River in March 2002. Five months later, California submitted a trash TMDL, and the EPA subsequently approved it, causing it to supersede the EPA's TMDL. It is this approval of California's superseding TMDL that the Cities now challenge.²

2 The Cities originally challenged the EPA's TMDL, but that challenge was withdrawn as moot when it was made clear that California's TMDL superseded and nullified EPA's earlier TMDL.

The Cities brought this action in the United States District Court for the Northern District of California. The Cities claimed that the EPA lacked authority to approve the State TMDL after having established its own TMDL. The district court dismissed this challenge pursuant to Fed.R.Civ.P. 12(b)(6) for failure to state a claim.

III. Discussion

2 We conclude that the EPA acted within the scope of its statutory and regulatory authority in approving the State TMDL.³ Neither the Clean Water Act nor its implementing regulations specify or imply that the EPA is barred from approving a State submitted TMDL after the EPA has established its own. *See* 33 U.S.C. § 1313(d); 40 C.F.R. § 130.7. In fact, the States are authorized to submit waters identified and TMDLs "from time to time" and the EPA is *required* either to approve or disapprove a TMDL upon submission by a State. 33 U.S.C. § 1313(d)(2) ("The Administrator shall either approve or disapprove such identification and load not later than thirty days after the date of submission.").

3 We review de novo a dismissal for failure to state a claim pursuant to rule 12(b)(6) of the Federal Rules of Civil Procedure. *Decker v. Advantage Fund, Ltd.*, 362 F.3d 593, 595-96 (9th Cir.2004). Dismissal is proper when there is a "lack of a cognizable legal theory" to support a claim. *Balistreri v. Pacifica Police Dep't*, 901 F.2d 696, 699 (9th Cir.1988).

This plain reading of section 1313 is consistent with the basic goals and policies that underlie the Clean Water Act—namely, that States remain at the front line in combating pollution. *See* 33 U.S.C. § 1251(b) ("It is the policy of the Congress to recognize, preserve, and protect the primary responsibilities and rights of States to prevent, reduce, and eliminate pollution...."); 33 U.S.C. § 1370 (stating that "nothing in this

chapter shall [] preclude or deny the right of any State or political subdivision thereof ... to adopt or enforce [] any standard or limitation respecting discharges of pollutants" unless the standard is less stringent than an existing standard). Even if the language of the statute were not clear, we would uphold as reasonable the EPA's interpretation of the Clean Water Act to require approval or *1107 disapproval of California's TMDL. See *Dioxin/Organochlorine Ctr. v. Clarke*, 57 F.3d 1517, 1525 (9th Cir.1995) ("A court should accept the 'reasonable' interpretation of a statute chosen by an administrative agency except when it is clearly contrary to the intent of Congress.") (citing *Chevron U.S.A., Inc. v. Natural Res. Def. Council*, 467 U.S. 837, 842-44, 104 S.Ct. 2778, 81 L.Ed.2d 694 (1984)).

The Cities' reliance on the "constructive submission" doctrine is misplaced. It is certainly correct that a State's failure to act may trigger the EPA's duty to establish a TMDL on its own accord. Nothing in the constructive submission cases, however, suggests that the establishment of a TMDL by the EPA divests a State of the ability subsequently to submit a TMDL on the same subject. See *San Francisco BayKeeper*, 297 F.3d at 881-83 (discussing the constructive submission doctrine). Nor does anything in section 1313 suggest that the EPA is powerless to approve such a submission. See 33 U.S.C. § 1313.

End of Document.

The Cities also argue that the duplicative TMDL process violates public policy. There is no legal support for this argument. The potential for action on both the state and federal level inheres in the structure of the statutory scheme. So long as the State does not attempt to adopt more lenient pollution control measures than those already in place under the Act, the Clean Water Act does not prohibit state action. See 33 U.S.C. § 1370.

IV. Conclusion

The EPA acted within its authority in approving California's TMDL despite EPA's earlier promulgation of its own TMDL when California originally failed to make a timely submission. We therefore reject the Cities' challenge to this EPA action. By contemporaneous memorandum disposition, we have rejected the Cities' other claims against the EPA. We therefore affirm the judgment of the district court dismissing the Cities' action.

AFFIRMED.

STATE OF CALIFORNIA
COMMISSION ON STATE MANDATES

446 F.3d 140
United States Court of Appeals,
District of Columbia Circuit.

FRIENDS OF THE EARTH, INC., Appellant

v.

ENVIRONMENTAL PROTECTION
AGENCY, et al., Appellees.

No. 05-5015. Argued March 2,
2006. Decided April 25, 2006.

Synopsis

Background: Environmental group petitioned for review of decision of Environmental Protection Agency (EPA) to approve certain total maximum daily loads (TMDLs) for pollutants discharged into river, alleging that disputed TMDLs, which did not limit daily discharges, violated Clean Water Act (CWA) and implementing regulations. The Court of Appeals, 333 F.3d 184, dismissed petitions and transferred case. The United States District Court for the District of Columbia, 346 F.Supp.2d 182, granted EPA's motion for summary judgment. Environmental group appealed.

Holdings: The Court of Appeals, TATEL, Circuit Judge, held that:

- 1 CWA unambiguously required establishment of daily loads, and therefore EPA could not approve seasonal or annual loads;
- 2 EPA could not avoid literal interpretation of statutory term "daily" on grounds of absurdity;
- 3 purported tension between Combined Sewer Overflow Control (CSO) Policy and TMDLs did not provide basis for interpreting "daily" to mean timeframe other than daily; and
- 4 District of Columbia's recent revisions to water quality standards for river did not render action moot.

Reversed and remanded with instructions.

*142 Appeal from the United States District Court for the District of Columbia (No. 04cv00092).

Attorneys and Law Firms

Howard I. Fox argued the cause and filed the briefs for appellant.

John A. Bryson, Attorney, U.S. Department of Justice, argued the cause for federal appellees. With him on the brief were Greer S. Goldman, Attorney, and James H. Curtin and Stefania D. Shamet, Counsels, U.S. Environmental Protection Agency.

David E. Evans argued the cause for appellee District of Columbia Water and Sewer Authority. With him on the brief was Stewart T. Leeth.

F. Paul Calamita, John A. Sheehan, and Alexandra Dapolito Dunn were on the brief for amici curiae Combined Sewer Overflow Partnership and National Association of Clean Water Act Agencies in support of appellees.

Before: TATEL, BROWN, and GRIFFITH, Circuit Judges.

Opinion

TATEL, Circuit Judge.

**3 This case poses the question whether the word "daily," as used in the Clean Water Act, is sufficiently pliant to mean a measure of time other than daily. Specifically, the Environmental Protection Agency (EPA) takes the position that Congress, in requiring the establishment of "total maximum daily loads" to cap effluent discharges of "suitable" pollutants into highly polluted waters, left room for EPA to establish seasonal or annual loads for those same pollutants. The district court found EPA's contextual and policy arguments sufficiently persuasive to disregard the plain meaning of "daily," but we do not. Daily means daily, nothing else. If EPA believes using daily loads for certain types of pollutants has undesirable consequences, then it must either amend its regulation designating all pollutants as "suitable" for daily loads or take its concerns to Congress. We therefore reverse and remand with instructions to vacate the non-daily "daily" loads.

I.

Flowing from Maryland through the northeast and southeast quadrants of Washington, D.C. and a stone's throw away from the site for the Washington Nationals' new stadium, the Anacostia River has "the dubious distinction of being one of the ten most polluted rivers in the country." *Kingman Park Civic Ass'n v. EPA*, 84 F.Supp.2d 1, 4 (D.D.C.1999). As such, it falls far short of meeting water quality standards set pursuant to the Clean Water Act (CWA) and designed to protect designated recreational uses like fishing and swimming. 33 U.S.C. § 1311(b)(1)(C) (mandating the

achievement of water quality standards); 47 D.C.Reg. 284, 284-85 (Jan. 21, 2000) (to be codified at D.C. Mun. Regs., tit. 21, § 1101.1) (establishing water quality standards **4 *143 based on uses including "primary contact recreation" and "consumption of fish & shellfish").

For bodies of water, like the Anacostia River, that fail to meet applicable water quality standards, the CWA requires states (defined by the Act to include the District of Columbia, 33 U.S.C. § 1362(3)) to establish a "total maximum daily load," or TMDL,

for those pollutants which the Administrator identifies ... as suitable for such calculation. Such load shall be established at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality.

Id. § 1313(d)(1)(C). In 1978, EPA issued a regulation deeming "[a]ll pollutants ... suitable for the calculation of total maximum daily loads." Total Maximum Daily Loads Under Clean Water Act, 43 Fed.Reg. 60,662, 60,665 (Dec. 28, 1978) (emphasis added). This regulation remains unchanged today.

Once approved by EPA, TMDLs must be incorporated into permits allocating effluent discharges among all pollution sources, including point sources (like factories) and non-point sources (like storm-water run-off). *See* 33 U.S.C. § 1342(a)(1) (authorizing EPA to issue effluent discharge permits "upon condition that such discharge will meet ... [among other requirements] all applicable requirements under section[] 1311"); *id.* § 1311(b)(1)(C) (mandating the achievement of "any more stringent limitation, including those necessary to meet water quality standards"); *see also* 40 C.F.R. § 122.44(d)(1)(vii)(B) (requiring permitting authority to set effluent limits "consistent with the assumptions and requirements of any available wasteload allocation for the discharge prepared by the State and approved by EPA"). If pollution loads stay below the applicable TMDLs for a given body of water, then in theory the body of water should achieve its water quality standards.

This case arises from the violation of two of the Anacostia's key water quality standards. First, because the river contains many biochemical pollutants that consume oxygen, its dissolved oxygen level has sunk below the applicable water quality standard, putting the river's aquatic life at risk of suffocation. Second, the river is murkier than the applicable

turbidity standard allows, stunting the growth of plants that rely on sunlight and impairing recreational use.

To remedy these violations, EPA approved one TMDL limiting the *annual* discharge of oxygen-depleting pollutants, and a second limiting the *seasonal* discharge of pollutants contributing to turbidity. *See* Letter from Rebecca Hanmer, Dir., Water Prot. Div., EPA, to James R. Collier, Chief, Bureau of Env'tl. Quality (Dec. 14, 2001) (oxygen-depleting substances); EPA, Total Suspended Solids, Total Maximum Daily Loads for the Anacostia River, D.C. (Mar.2002) (total suspended solids). Neither TMDL limited daily discharges.

Appellant Friends of the Earth (FoE) petitioned this court for review of the TMDL approvals, arguing (among other things) that the CWA requires the establishment of "total maximum daily loads," not seasonal or annual loads. Concluding that we lacked subject matter jurisdiction, we transferred the case to the U.S. District Court, *Friends of the Earth v. EPA*, 333 F.3d 184 (D.C.Cir.2003), which granted EPA's motion for summary judgment, *Friends of the Earth v. EPA*, 346 F.Supp.2d 182 (D.D.C.2004). The court held that "the text of the CWA does not **5 *144 reveal a clear congressional intent to require EPA to calculate only daily TMDLs," *id.* at 189, found EPA's resolution of the resulting ambiguity reasonable, and concluded that the TMDL approvals were neither arbitrary nor capricious. This appeal followed.

II.

1 2 Because Congress has charged EPA with the CWA's implementation, we review the agency's interpretation of the phrase "total maximum daily load" under *Chevron U.S.A. Inc. v. Natural Resources Defense Council, Inc.*, 467 U.S. 837, 842-43, 104 S.Ct. 2778, 81 L.Ed.2d 694 (1984). *See Natural Res. Def. Council, Inc. v. EPA*, 859 F.2d 156, 202 (D.C.Cir.1988) (applying *Chevron* to EPA's interpretation of the CWA). Critically, if "Congress has directly spoken to the precise question at issue ..., that is the end of the matter." *Chevron*, 467 U.S. at 842-43, 104 S.Ct. 2778. So here.

3 We begin, as always, with the statute's language. For waters that fail to achieve water quality standards, *see* 33 U.S.C. § 1313(d)(1)(A), the CWA provides that "[e]ach state shall establish ... the total maximum *daily* load, for those pollutants which the Administrator identifies ... as suitable for such calculation," *id.* § 1313(d)(1)(C) (emphasis added). Because EPA has found "[a]ll pollutants ... suitable for the calculation of total maximum daily loads," 43 Fed.Reg. at 60,665, it follows that the CWA requires the District of

Columbia to establish a “total maximum daily load” for each pollutant that contributes to the Anacostia’s violation of the dissolved oxygen and turbidity standards.

4 Nothing in this language even hints at the possibility that EPA can approve total maximum “seasonal” or “annual” loads. The law says “daily.” We see nothing ambiguous about this command. “Daily” connotes “every day.” See *Webster’s Third New International Dictionary* 570 (1993) (defining “daily” to mean “occurring or being made, done, or acted upon every day”). Doctors making daily rounds would be of little use to their patients if they appeared seasonally or annually. And no one thinks of “[g]ive us this day our daily bread” as a prayer for sustenance on a seasonal or annual basis. *Matthew* 6:11 (King James).

When asked at oral argument how Congress could have spoken more clearly, EPA’s counsel responded that “one way it could do that ... is to say that the ... total maximum daily load shall be expressed as a quantity per day or average per day or something like that.” Tr. of Oral Arg. at 19. But a load expressed as a quantity per day is no different from a daily load, and we have never held that Congress must repeat itself or use extraneous words before we acknowledge its unambiguous intent. See *New York v. EPA*, 443 F.3d 880, 883 (D.C.Cir.2006) (refusing to require Congress “to use superfluous words”). If Congress wanted seasonal or annual loads, it could easily have authorized them by calling for “total maximum daily, seasonal, or annual loads.” Or by providing for the establishment of “total maximum loads,” Congress could have left a gap for EPA to fill. Instead, Congress specified “total maximum *daily* loads.” We cannot imagine a clearer expression of intent.

EPA urges us to read the phrase in context, emphasizing that TMDLs must “be established at a level necessary to implement the applicable water quality standards.” 33 U.S.C. § 1313(d)(1)(C). According to EPA, “[t]hat Congress took the step of elaborating on what a TMDL should be is a strong indication that it was not using the word ‘daily’ as the exclusive ^{**6} ^{*145} expression of its intent on the question of how a TMDL should be established.” Fed. Appellees’ Br. 26-27. This cannot be right. As written, the statute requires states to establish daily loads that *also* meet applicable water quality standards. The existence of two conditions does not authorize EPA to disregard one of them.

As additional context-albeit context appearing nowhere in the TMDL approvals themselves-EPA tells us that some pollutants are poorly suited to daily load regulation.

Discharges of such pollutants, EPA explains, might not immediately affect water quality, but could instead inflict environmental damage over a longer period. For example, oxygen-demanding pollutants could deplete dissolved oxygen quite slowly, perhaps over the course of an entire year. Similarly, turbidity-increasing pollutants could impede plant growth if they block sunlight over the course of a growing season. In EPA’s view, bodies of water can therefore sometimes tolerate large one-day discharges of certain pollutants without violating water quality standards or causing undue environmental harm, so long as seasonal or annual discharges remain relatively low. According to EPA, the many ways in which pollutants damage the environment call for a more flexible understanding of “daily.”

5 Even if we assume the validity of this argument, EPA must address it to Congress, which, by using the word “daily,” settled the question of what period a “total maximum load” should cover. EPA may not “avoid the Congressional intent clearly expressed in the text simply by asserting that its preferred approach would be better policy.” *Engine Mfrs. Ass’n v. EPA*, 88 F.3d 1075, 1089 (D.C.Cir.1996). The agency’s claim might have more force if, for some class of pollutants, daily load limits conflicted with the requirement that TMDLs “implement the applicable water quality standards.” 33 U.S.C. § 1313(d)(1)(C). But all water bodies can achieve water quality standards if their TMDLs are set low enough-if all else fails, they can be set to zero-and the two requirements therefore never conflict with each other.

6 Nor can we set aside a statute’s plain language simply because the agency thinks it leads to undesirable consequences in some applications. We made this abundantly clear in *Sierra Club v. EPA*, 294 F.3d 155 (D.C.Cir.2002), where EPA took a strikingly similar position to the one it advances here. There, we considered a challenge to EPA’s extension of the District of Columbia’s attainment deadline for achieving the Clean Air Act’s ozone standards. *Id.* at 158. Justifying the extension, EPA asserted that because the District’s ozone pollution came entirely from upwind states, holding the District to a strict statutory deadline would be unnecessarily punitive and run counter to the Act’s purposes. *Id.* at 160. “[A]s a matter of logic and statutory structure,” EPA argued, “Congress almost surely could not have meant to require the Agency to treat the Washington Area as one of severe nonattainment merely because its attainment has been temporarily stalled due to transported pollution.” *Id.* at 161 (internal quotation marks and citations omitted).

Roundly rejecting this argument, we explained:

The most reliable guide to congressional intent is the legislation the Congress enacted and, as we have seen, the Act itself reveals no intention to allow for an extension in circumstances like those affecting the Washington Area. Similarly, it is of no moment that the extension may be, as the Agency claims, “a reasonable accommodation of ... the statutory attainment date and interstate transport **7 *146 provisions”; it is not the accommodation the Congress made.

Id. (omission in original). Here, as in *Sierra Club*, EPA advances a reasonable policy justification for deviating from an environmental statute's plain language. Our answer is the same: “[t]he most reliable guide to congressional intent is the legislation the Congress enacted.” *Id.* Just as EPA may not extend a deadline in contravention of a plain congressional mandate, the agency may not fulfill its obligation to establish daily loads by approving non-daily loads, whatever the wisdom of that “accommodation.”

We have even less sympathy for EPA's argument given that the agency's predicament is largely of its own creation. The CWA requires the establishment of TMDLs only for “suitable” pollutants, 33 U.S.C. § 1313(d)(1) (C), and although a 1978 EPA regulation provides that “[a]ll pollutants ... are suitable for the calculation of total maximum daily loads,” 43 Fed.Reg. at 60,665, EPA conceded at oral argument that nothing forecloses the agency from reconsidering that position. Given that EPA's entire justification for establishing non-daily loads is that certain pollutants are unsuitable for daily load limits, we are at a loss as to why it neglected this straightforward regulatory fix in favor of the tortured argument that “daily” means something other than daily. At any rate, EPA can change its regulation; we cannot rewrite the Clean Water Act.

7 8 As a fallback, EPA asks us to adopt the reasoning in *Natural Resources Defense Council, Inc. v. Muszynski*, 268 F.3d 91 (2d Cir.2001), in which the Second Circuit held that reading “daily” to mean daily would be “absurd, especially given that for some pollutants, effective regulation may best occur by some other periodic measure than a diurnal one.” *Id.* at 99. In this circuit, however, agencies seeking to demonstrate absurdity have an exceptionally high burden: “for the EPA to avoid a literal interpretation ..., it must show either that, as a matter of historical fact, Congress did not mean what it appears to have said, or that, as a matter of logic and statutory structure, it almost surely could not have meant it.” *Engine Mfrs. Ass'n*, 88 F.3d at 1089. Here, EPA has failed to make such a showing for a simple reason: as counsel

conceded at oral argument, establishing daily loads makes perfect sense for many pollutants. Given this concession, we see no way to conclude that “as a matter of logic and statutory structure, [Congress] almost surely could not have meant” to require daily loads.

9 We next consider the argument raised by intervenor District of Columbia Water and Sewer Authority (WASA), which operates sewers and wastewater treatment facilities in the District. As background, WASA explains that, as in many older municipalities, part of the District has a “combined sewer system” in which stormwater and sewage travel through the same pipes to the same treatment plants. While this system effectively minimizes pollution discharges most of the time, heavy storms cause it to overflow. When that happens, as it does with some regularity in the District, raw sewage spills from the overtaxed sewer system into nearby waters, including the Anacostia River.

Acknowledging that combined sewer systems pose delicate water quality problems, Congress amended the CWA in 2000 to provide that every permit issued “for a discharge from a municipal combined storm and sanitary sewer shall conform to the Combined Sewer Overflow Control Policy [CSO Policy] signed by the Administrator on April 11, 1994.” Consolidated Appropriations Act, 2001, Pub.L. No. 106-554, app. D § 112(a) (2000), 114 Stat. **8 *147 2763, 2763A-224 (codified at 33 U.S.C. § 1342(q)). The CSO Policy, in turn, represents EPA's effort to guide municipalities seeking to minimize effluent discharge from their existing sewage infrastructure. To that end, the CSO Policy requires municipalities with combined sewer systems to develop long-term control plans reflecting hard-nosed assessments of cost-effective ways to regulate overflow discharges. Combined Sewer Overflow (CSO) Control Policy, 59 Fed.Reg. 18,688, 18,691-94 (Apr. 19, 1994). The CSO Policy explicitly “recognizes the site-specific nature of [combined sewer overflows] and their impacts and provides the necessary flexibility to tailor controls to local situations. Major elements of the Policy ensure that CSO controls are cost effective and meet the objectives and requirements of the CWA.” *Id.* at 18,688.

As WASA sees it, the tension between the CSO Policy's flexible approach and the rigid mandates imposed by daily loads forms part of the context within which we must interpret the word “daily.” Indeed, WASA asserts, insisting on daily loads would require the “complete separation” of the sewer system—that is, the prohibitively expensive construction of independent stormwater and sewage pipes. WASA Br. 22

(emphasis omitted). It is for this reason that WASA, like EPA, urges us to interpret the word “daily” more flexibly than normally permitted in the English language.

10 WASA's argument suffers from at least three defects. First, we fail to see the relevance of the 106th Congress's opinion about what the 92nd Congress meant by “daily.” While we agree that we must read the phrase “total maximum daily load” in context, see *FDA v. Brown & Williamson Tobacco Corp.*, 529 U.S. 120, 132-33, 120 S.Ct. 1291, 146 L.Ed.2d 121 (2000), the context here is the Clean Water Act Amendments of 1972, Pub.L. No. 92-500, 86 Stat. 816, not amendments enacted almost three decades later. “[P]ost-enactment legislative history,” after all, “is not only oxymoronic but inherently entitled to little weight.” *Cobell v. Norton*, 428 F.3d 1070, 1075 (D.C.Cir.2005); see also *United States v. Price*, 361 U.S. 304, 313, 80 S.Ct. 326, 4 L.Ed.2d 334 (1960) (holding that “the views of a subsequent Congress form a hazardous basis for inferring the intent of an earlier one”). Second, the tension between the CSO Policy's flexibility and the perceived rigidity of daily loads exists only if daily loads must of necessity be set so low that any storm-event discharge would violate them—a premise unsupported anywhere in the record. And third, even if the record did support the premise, nothing in the CSO Policy validates interpreting “daily” to mean something other than daily. Quite to the contrary, the policy expressly states that following it must “ultimately result in compliance with the requirements of the CWA,” 59 Fed.Reg. at 18,691, and one of those requirements is establishing daily loads for waters failing to meet water quality standards.

11 12 We come next to EPA's last-ditch contention—raised only the day before oral argument—that the District of Columbia's recent revisions to the Anacostia's water quality standards moot this case. See 52 D.C.Reg. 9621, 9628-29 (Oct. 28, 2005) (to be codified at D.C. Mun. Regs., tit. 21, § 1104.8). Both WASA and FoE disagree, as do we. The TMDLs at issue here have never been repealed or superseded, and EPA regulations require discharge permits to incorporate effluent limitations “consistent with the assumptions and requirements of *any available wasteload allocation* for the discharge prepared by the State and approved by EPA” pursuant to its authority to approve TMDLs. 40 C.F.R. § 122.44(d)(1)(vii)(B) **9 *148 (emphasis added). Because we assume agencies follow their own regulations, see *Citizens to Preserve Overton Park, Inc. v. Volpe*, 401 U.S. 402, 415, 91 S.Ct. 814, 28 L.Ed.2d 136 (1971) (agencies are “entitled to a presumption of regularity”), the case is hardly moot.

III.

For the foregoing reasons, we remand to the district court with instructions to vacate EPA's approvals. See 5 U.S.C. § 706(2) (providing that “the reviewing court shall ... hold unlawful and set aside agency action, findings, and conclusions found to be ... arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law”). In doing so, we recognize that neither FoE nor EPA wants the Anacostia River to go without dissolved oxygen and turbidity TMDLs. The district court retains some remedial discretion, however, and the parties may move to stay the district court's order on remand to give either the District of Columbia a reasonable opportunity to establish daily load limits or EPA a chance to amend its regulation declaring “all pollutants ... suitable” for daily loads. See *Cement Kiln Recycling Coal v. EPA*, 255 F.3d 855, 872 (D.C.Cir.2001) (“Because this decision leaves EPA without standards regulating [hazardous waste conductor] emissions, EPA ... may file a motion to delay issuance of the mandate to request either that the current standards remain in place or that EPA be allowed reasonable time to develop interim standards.”); *Nat'l Treasury Employees Union v. Horner*, 854 F.2d 490, 501 (D.C.Cir.1988) (“Because we are not in the best position to determine the shortest reasonable timetable ..., we remand the case for [the] district court to establish, in consultation with the parties, an expedited schedule for further rulemaking proceedings consistent with this opinion.”); Kristina Daugirdas, Note, *Evaluating Remand Without Vacatur*, 80 N.Y.U. L.Rev. 278, 307 & n.141 (2005) (recommending as a remedial option “vacating the agency rules upon remand, but delaying issuance of the mandate for a limited period of time”). The merits of any such motion are of course the district court's to evaluate.

IV.

To sum up, nothing in this record tempts us to substitute EPA's policy preference for the CWA's plain language. While Congress almost assuredly never considered combined sewer systems when enacting the CWA, it spoke unambiguously in requiring daily loads. If adherence to this mandate leads to unintended consequences for water quality or for municipal pocketbooks, interested parties should direct their concerns to EPA or to Congress, either of which can take steps to mitigate any fallout from the CWA's unambiguous directive. We, however, have no such authority.

So ordered.

IDAHO CONSERVATION LEAGUE; and The
Wilderness Society, Plaintiffs-Appellants,

v.

Jack Ward THOMAS, in his official capacity as
Chief of the United States Forest Service; Dan
Glickman, in his official capacity as Secretary of
the U.S. Department of Agriculture; and United
States Forest Service, an agency of the U.S.
Department of Agriculture, Defendants-Appellees,
and

Intermountain Forest Industry
Association, Intervenor-Appellee.

No. 95-36293. Argued and Submitted
May 10, 1996. Decided Aug. 6, 1996.

Environmental groups brought action pursuant to Emergency Supplemental Appropriations for Disaster Relief and Rescissions Act, challenging Forest Service's decision to proceed with timber salvage sale as component of wildfire recovery project. The United States District Court for the District of Idaho, Edward J. Lodge, Chief Judge, 917 F.Supp. 1458, granted summary judgment in favor of chief of Forest Service, and granted defense motion to strike documents. Environmental groups appealed. The Court of Appeals, Leavy, Circuit Judge, held that: (1) Forest Service did not act arbitrarily or capriciously in deciding to proceed with sale; (2) Rescissions Act does not require Secretary of Agriculture to personally authorize salvage timber sales; and (3) district court did not abuse its discretion in striking documents which were authored by agencies other than Forest Service and which were not sent or released to Service.

Affirmed.

Appeal from the United States District Court for the District of Idaho, Edward J. Lodge, District Judge, Presiding. D.C. No. CV-95-00425-EJL.

Before: LAY, * FERGUSON, and LEAVY, Circuit Judges.

* The Honorable Donald P. Lay, Senior United States Circuit Judge for the Eighth Circuit, sitting by designation.

Opinion

LEAVY, Circuit Judge:

OVERVIEW

The Idaho Conservation League and The Wilderness Society (ICL) appeal from the district court's summary judgment in favor of Jack Ward Thomas, Chief of the United States Forest Service, in its action seeking a permanent injunction preventing the Forest Service from proceeding with the Thunderbolt timber salvage sale. We affirm the judgment of the district court.

*1347 FACTS AND PRIOR PROCEEDINGS

The Thunderbolt timber salvage sale is located in the South Fork Salmon River (SFSR) drainage in the Boise and Payette National Forests in central Idaho. Historically, the river was the single largest producer of spring/summer chinook in the Columbia River Basin. However, since the 1950s, the drainage has suffered severe erosion and stream sedimentation caused by mining, grazing, logging, and associated road building. This degradation has been exacerbated by the geological formation underlying the drainage, the Idaho Batholith, which is characterized by steep, highly dissected topography and shallow soils. As a consequence, the spring/summer chinook population has suffered a drastic decline.

State and federal agencies took action to correct the problems in the SFSR. In the late 1980s, the Forest Service convened a group of scientists, timber industry officials, federal and state agencies, Indian tribes, and environmental organizations to develop a management plan for the SFSR. The group developed a set of management guidelines (South Fork Guidelines) which the Forest Service incorporated into the Payette and Boise National Forest Land Resource Management Plans (LRMPs) in 1988 and 1990, respectively.

The South Fork Guidelines established an interim fine sediment objective with a goal of fishable populations by 1997 and set forth an aggressive restoration and monitoring program. Under the guidelines, any new major land-disturbing actions are prohibited until restoration actions have improved in-river conditions. The guidelines also considered the effects of fire and the appropriate response:

Impacts from a fire, or other natural events may be unavoidable and stabilizing the source of natural disturbance is not always biologically desirable for aquatic ecosystems. More important is maintaining natural stream dynamics.

The SFSR was identified as a Stream Segment of Concern by the Idaho Division of Environmental Quality. This designation occurred because the beneficial uses of salmonid spawning and cold water biota were impaired by poor water quality. In a related action, the SFSR was designated as Water Quality Limited under § 303(d) of the Clean Water Act because it failed to meet water quality standards. In 1992 the Environmental Protection Agency (EPA) set Total Maximum Daily Loads (TMDLs), which limit sediment discharges into the South Fork Salmon River. The purpose of the TMDL is to improve spawning and rearing habitat by reducing sediment load caused by human activities. The TMDL sets a goal of 25% reduction in the sediment load attributable to human activities.

The Snake River spring/summer chinook salmon was listed under the Endangered Species Act as a threatened species in 1992, and subsequently listed to endangered in 1994. The South Fork Salmon River provides critical habitat, as designated by the National Marine Fisheries Service (NMFS), for the Snake River spring/summer chinook.

In 1994 wildfires burned over 150,000 acres in the SFSR drainage. In particular, the Thunderbolt wildfire burned 18,827 acres. According to the Forest Service, the magnitude and extent of the wildfires experienced in the summer of 1994 were significantly greater than what they had anticipated.

The Forest Service initiated an assessment of effects of the fires and possible responses, and proposed the Thunderbolt Wildfire Recovery Project, which includes the Thunderbolt timber salvage sale. The purpose of the Thunderbolt sale is:

to improve the long term fish habitat, rehabilitate existing sediment sources, improve hydrologic conditions of affected watershed, protect long term soil productivity, promote revegetation of trees on burned acres, and recover the

economic value of dead and imminently dead trees as a means of financing the ecosystem restoration and sediment reduction projects.

In March of 1995, the Forest Service issued its Draft Environmental Impact Statement (DEIS) and biological assessment for endangered species of fish and wildlife, as *1348 required by¹ Section 7 of the Endangered Species Act (ESA), 16 U.S.C. § 1536(a)(2). The response of other state and federal agencies to the proposed salvage was almost uniformly negative. As stated by the district court in its thorough memorandum decision and order:

- 1 The Rescissions Act, which superceded these laws for timber salvage sales, was not signed into law until July 25, 1995.

The Project's proposed alternative, particularly the component that proposed the Salvage Sale to finance recovery actions, drew harsh and substantial criticism from the other federal agencies having jurisdiction over the resource: the Environmental Protection Agency (EPA), the National Marine Fisheries Service (NMFS), and the U.S. Fish and Wildlife Service (USFWS) and the Idaho Department of Fish and Game. In the unanimous opinion of these agencies, the environmental risks posed by using salvage logging to finance restoration projects were too great to render the Project acceptable.

The EPA recommended against the Project, noting that the proposed action was inconsistent with collective agency decisions and resource protection goals for the South Fork Salmon River watershed. The EPA concluded that the logging sale would further aggravate the already critically degraded habitat for threatened salmon. NMFS also strongly opposed the Project, concluding that the Recovery Project, and the logging activity in particular, will likely jeopardize the continued existence of the endangered salmon and will likely result in the destruction or adverse modification of their critical habitat. The USFWS similarly opposed the salvage sale on the ground that it would likely result in adverse impacts to fish and wildlife. The USFWS opined that the proposed salvage actions would generate additional sediment in the already-impacted watershed, negating or delaying the benefits from the restoration actions. The Idaho Department of Fish and Game also criticized the proposal to use logging to fund restoration projects.

Idaho Conservation League v. Thomas, 917 F.Supp. 1458, 1461-62 (D.Idaho 1995).

The Forest Service considered and responded to the concerns expressed by these agencies, particularly EPA and NMFS. In addition, the Forest Service convened a panel² of its own experts to "review the scientific merit of the material presented on sediment yield, sediment routing, and fisheries habitat" in the DEIS. While the panel concluded that the Forest Service used "the best analytical methods available for estimating erosion and sediment delivery," the panel was "unable to conclude that the analysis performed could support the conclusion of long term improvement in the spawning and rearing habitat of anadromous fish," and made recommendations for improving the analysis.

2 According to the district court, a federal interagency science panel met first to review the science applied in the soil and fisheries analysis. This panel could not reach a consensus. *Id.* at 1462 n. 4.

The Forest Service responded to the panel's recommendations and revised its DEIS (as reflected in the FEIS) to incorporate the additional data and analysis suggested. The panel reviewed the changes and, on September 1, 1995, concluded in a memorandum that the revisions in the FEIS responded to its major recommendations.

On September 12, 1995, the Forest Service released its FEIS. On October 5, 1995, the Forest Service issued its record of decision (ROD), stating that it planned to proceed with the Thunderbolt sale under a modified version of the recommended sale. On October 13, 1995, the Forest Service advertised the Thunderbolt sale. As required by § 2001(f)(1) of the Rescissions Act, Pub.L. No. 104-19, 1995 U.S.C.A.N. 109 Stat. 240, 241 (to be codified at 16 U.S.C. § 1611 Note), ICL filed its challenge to the Thunderbolt sale with the district court within 15 days of its initial advertisement. On December 11, 1995, within the 45 day time period mandated by § 2001(f)(5) of the Rescissions Act, the district court denied ICL's motion for summary judgment and injunctive relief, granted the Forest Service's motion for summary judgment and granted in part and denied in part the Forest Service's motion to strike *1349 certain exhibits submitted by ICL. The district court reviewed the record under the arbitrary and capricious standard mandated by § 2001(f)(4) of the Rescissions Act and found that (1) "notwithstanding substantial interagency disagreement, the Forest Service was entitled to rely on the opinions and analysis of its own experts;" (2) the fires of 1994 caused a changed circumstance which justified the Forest Service's decision to alter its management of the South Forest Salmon

River; and (3) the sale, together with other funds, would raise enough money to fund restoration projects. The district court also ruled as a matter of law that Secretary Glickman did not have to personally authorize the Thunderbolt salvage sale, and the district court struck several exhibits that ICL argued should have been part of the record. ICL timely appealed.

ANALYSIS

On appeal ICL makes two arguments: (1) the Forest Service acted arbitrarily and capriciously in deciding to proceed with the Thunderbolt sale because the sale was against overwhelming expert agency opposition, was in contradiction of long-standing Forest Service policy, and the purpose of the sale-to raise money for restoration projects-would not be met; and (2) the Forest Service violated Section 2001(c)(1)(A) of the Rescissions Act because the Secretary of Agriculture had no role in the decision to proceed with the sale. ICL also contends that the district court erred in striking the exhibits from consideration when it ruled on the motion for summary judgment.

I. Arbitrary and Capricious Review.

1 While we review a grant of summary judgment de novo, *Warren v. City of Carlsbad*, 58 F.3d 439, 441 (9th Cir.1995), in *Inland Empire Public Lands Council v. Glickman*, 88 F.3d 697 (9th Cir.1996) we set forth the applicable standard of review under the Rescissions Act:

The Rescissions Act provides for extremely limited judicial review.... Review of salvage timber sales is ... limited in that (1) review is based on the administrative record only; (2) the standard of review is arbitrary and capricious or otherwise not in accordance with applicable law; and (3) the sale is not subject to any federal environmental or natural resources laws. *Id.* at 701 (quotations and citations omitted).

2 Applying this standard of review, we conclude that the Forest Service did not act arbitrarily or capriciously when it decided to proceed with the Thunderbolt salvage sale. We agree with the district court's findings, that, first:

the Forest Service clearly was entitled to rely on the opinions and studies of its own experts. While it properly considered the commenting agency's opposing views, the Forest Service was free to disagree with those views and to rely on its own expertise. The expert analysis referenced in the ROD [Record of Decision] and relied on by the Forest Service provides the rational connection to the Forest Service's decision to

proceed, and convinces the court that the decision was not arbitrary and capricious[;]

second,

in deciding to go forward with the restoration projects and the salvage sale, the Forest Service explained that “[m]uch of the more than 150,000 acres that burned were contiguous areas adjacent to the river,” and that the impacts from these fires “resulted in a changed condition to the South Fork Salmon River basin that was unforeseen in the Boise and Payette Forest Plans.”

.....

Upon this record, the court has little difficulty deferring to the Forest Service's view that the 150,000 acres that burned in 1994 resulted in a changed condition not foreseen in the forest plans. Accordingly, the court cannot conclude that the Forest Service's decision to alter its management to adapt to that change was arbitrary and capricious[;]

and, third,

[t]he court has reviewed the financial information and calculations submitted by the parties, and the information contained *1350 in the [Final Environmental Impact Statement], ROD, and the Forest Service's declarations and discovery responses in particular. Based on that review, the court is persuaded that using the anticipated revenues from the Salvage Sale, together with the financing identified in the ROD, the Forest Service will be able to fund the specific projects to which it committed in the ROD. Accordingly, the court finds that the Forest Service's decision to use the Salvage Sale to finance the restoration projects was not arbitrary and capricious.

Idaho Conservation League v. Thomas, 917 F.Supp. at 1464-67.

2. Role of Secretary of Agriculture.

End of Document

3 In *Inland Empire*, we held that § 2001(c)(1)(A) of the Rescissions Act does not require the Secretary of Agriculture, Dan Glickman, *personally* to authorize salvage timber sales. 88 F.3d 697, 702 (9th Cir.1996). Thus, ICL's second argument is without merit.

3. Exhibits.

4 ICL also argues that certain extra-record materials were improperly excluded from consideration by the district court. The district court granted, in part, a Forest Service motion to strike certain documents submitted by ICL in its motion for summary judgment on the ground that they were not part of the administrative record. The Forest Service contended that the documents were never sent to or received by the Forest Service. ICL maintained that the documents were in existence before the final decision and should be part of the record. The district court found that “documents which were authored by agencies other than the Forest Service and which were not sent or released to the Forest Service should be stricken as such writings were not before the decision maker at the time of the decision.” *Idaho Conservation League*, 917 F.Supp. at 1469 (footnote omitted). On this basis, the district court excluded eleven exhibits and the declaration of ICL's expert Cindy Williams. The district court denied the motion to strike as to four other exhibits, finding that these were part of the record. The district court did not abuse its discretion in granting the motion to strike.

CONCLUSION

The district court's grant of summary judgment in favor of Jack Ward Thomas, Chief of the United States Forest Service, is AFFIRMED.

IDAHO SPORTSMEN'S
COALITION, et al., Plaintiffs,

v.

Carol M. BROWNER, et al., Defendants.

No. C93-943WD. Sept. 26, 1996.

In citizen's suit brought under Clean Water Act (CWA) and Administrative Procedure Act (APA) for declaratory and injunctive relief compelling Environmental Protection Agency (EPA) to perform duties required by CWA as steps toward ridding Idaho's water bodies of pollution, EPA moved to dismiss and plaintiffs moved for order establishing total maximum daily load (TMDL) schedule. The District Court, Dwyer, J., held that: (1) proposed schedule for TMDL development violated CWA both in its extreme slowness and in its failure to provide for TMDL development for full list of water quality limited segments (WQLS) in Idaho, and (2) appropriate remedy was to remand to EPA for exercise of its discretion to revise and reissue proper schedule.

Ordered accordingly.

Opinion

ORDER ON EPA'S MOTION TO DISMISS AND PLAINTIFFS' MOTION FOR ORDER ESTABLISHING TMDL SCHEDULE

DWYER, District Judge.

I. BACKGROUND

This is a citizen suit brought under the Clean Water Act ("CWA"), 33 U.S.C. § 1251 *et seq.*, and the Administrative Procedure Act ("APA"), 5 U.S.C. § 501 *et seq.*, for declaratory and injunctive relief compelling the defendants (collectively the Environmental Protection Agency or "EPA") to perform certain duties required by the CWA as steps toward ridding Idaho's rivers, streams, and other waterbodies of pollution. In their first amended complaint, plaintiffs Idaho Sportsmen's Coalition and Idaho Conservation League sought judgment directing the EPA to compile a list of "water quality limited segments" ("WQLSs"), *i.e.*, waterbodies in Idaho that do not, or may not, comply with applicable water quality standards. Plaintiffs now seek judgment requiring the EPA to develop a "total maximum daily load" ("TMDL") of pollutants for each WQLS. Four parties have been granted leave to intervene: Clean Water for Idaho, Inc.; Intermountain Forest Industry Assn.; Potlatch Corp., Inc.; and Shearer Lumber Products. In addition, the State of Idaho and Associated Logging Contractors, Inc., have appeared as *amici curiae*.

On April 14, 1994, an order was entered granting plaintiffs' motion for partial summary judgment on the WQLS listing issue (Dkt. # 140). The order noted that Idaho submitted no WQLS list to the EPA until 1989, seventeen years after the Clean Water Act became law and ten years after the statutory due date. The EPA neither approved nor disapproved the 1989 list. In 1992 Idaho submitted a second list; a year later—although action within thirty days was required by statute—the EPA approved it. The court determined that the EPA's approval of Idaho's 1992 WQLS list, which included only thirty-six threatened and degraded waters although hundreds manifestly existed, was contrary to law. The order directed the EPA to promulgate a WQLS list for Idaho. In compliance

with the order, the EPA in October 1994 identified 962 Idaho WQLSs.

The next step under the CWA was to be the development of TMDLs for the WQLSs. In 1995, both sides moved for summary judgment on that issue. The court, granting plaintiffs' motion in part, found that "the EPA has failed to perform its statutory and regulatory duty to determine, with Idaho, a reasonable schedule for the development of TMDLs for all waterbodies designated as WQLSs." Order dated May 19, 1995 (Dkt. # 233), at 14. The court declined to order the EPA to develop the TMDLs without Idaho's participation; instead, the EPA was directed to perform its statutory duty in cooperation with Idaho and to file "a complete and duly-adopted reasonable schedule" within one year.

EPA now moves for dismissal of the case, contending that it has complied with the May 1995 order by approving a "complete and reasonable" schedule for the development of "all necessary TMDLs" in Idaho. The proposed schedule is set out in an exchange of letters between the EPA and the State of Idaho. It calls for the TMDL process to go on until at least the year 2021—that is, for twenty-five more years. Plaintiffs oppose the motion to dismiss, contending that the proposed schedule complies neither with the *965 court's order nor with the Clean Water Act. They seek an order requiring EPA to develop TMDLs for all Idaho's WQLSs by December 31, 2000. This request is, in substance, a cross-motion for partial summary judgment, and has been fully briefed. Intervenor Clean Water for Idaho, an industry-sponsored entity, supports the EPA's proposal in general, but opposes any deadline for completion of the TMDL listing process. The other intervenors have not filed briefs on the present motions. The State of Idaho, as *amicus curiae*, supports the EPA's position.

There is no genuine issue of material fact for trial within the meaning of Fed.R.Civ.P. 56, and summary judgment may be entered. All materials filed, and the arguments of counsel presented in open court, have been fully considered. The plaintiffs' standing to sue, and the standard of review, have been discussed in the April 1994 and May 1995 orders. Accordingly, this order will deal with the applicable provisions of the Clean Water Act, the EPA's proposed schedule, whether the EPA has complied with the law, and the remedy.

II. THE CLEAN WATER ACT

In *Alaska Center for the Environment v. Reilly*, 762 F.Supp. 1422 (W.D.Wash.1991) ("ACE I"), dealing with the same

Clean Water Act provisions, the district court wrote a summary that was later adopted by the Ninth Circuit in *Alaska Center for the Environment v. Browner*, 20 F.3d 981 (9th Cir.1994) ("ACE III"). It is worth repeating here:

Congress passed the Federal Water Pollution Control Act (commonly referred to as the CWA) in 1972 to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters." Sec. 101(a), 33 U.S.C. § 1251. In order to achieve that objective, Congress declared as a "national goal" that "the discharge of pollutants into the navigable waters be eliminated by 1985." *Id.*, § 101(a)(1).

EPA's regulatory program for water protection focuses on two potential sources of pollution: point sources and nonpoint sources. Point source pollution was addressed in the 1972 amendments to the Act, where Congress prohibited the discharge of any pollutant from any point source into certain waters unless that discharge complies with the Act's specific requirements. Secs. 301(a) and 502(12), 33 U.S.C. §§ 1311(a) and 1362(12). Under this approach, compliance is focused on technology-based controls for limiting the discharge of pollutants through the National Pollution Discharge Elimination System ("NPDES") permit process.

When these requirements are found insufficient to clean up certain rivers, streams or smaller water segments, the Act requires use of a water-quality based approach. States are required to identify such waters and designate them as "water quality limited." The states are then to establish a priority ranking for these waters, and in accordance with that ranking, to establish more stringent pollution limits called "total maximum daily loads" or "TMDLs." 33 U.S.C. §§ 1313(d)(1)(A), (C). TMDLs are the greatest amount of a pollutant the water body can receive daily without violating a state's water quality standard.

The TMDL calculations help ensure that the cumulative impacts of multiple point source discharges are accounted for, and are evaluated in conjunction with pollution from other nonpoint sources. States are then required to take whatever additional cleanup actions are necessary, which can include further controls on both point and nonpoint pollution sources.

* * * * *

Under § 303(d), states are required to submit lists of water quality limited segments and TMDLs to the EPA at certain times; the first such submission was due by June 26,

1979. Once such a submission is made, certain mandatory duties by EPA are triggered. *Within 30 days*, the EPA Administrator must review the state's submissions of the identified waters and the load allocations established under § 303(d)(1). Once approved by EPA, the identified waters and TMDLs are incorporated by the state into its continuing planning process established under § 303(e)(3).

If EPA disapproves the identification and/or TMDL, the agency has 30 days after disapproval to make its own identification *966 of waters and establish TMDLs necessary to implement the applicable water quality standards. § 303(d)(2).

* * * * *

Section 505(a) of the CWA authorizes citizens to bring suit in federal court against the EPA for failing to perform an "act or duty" under the CWA which is not discretionary. 33 U.S.C. § 1365(a).

ACE I at 1424-26 (emphasis in original).

The citizen suit provision is meant to "aid in enforcement of the Act." *ACE III* at 983.

III. THE PROPOSED SCHEDULE

TMDL development in itself does not reduce pollution. It is only a step toward bringing WQLSs into compliance with water quality standards; TMDLs inform the design and implementation of pollution control measures. The EPA describes TMDLs as "a tool for implementing State water quality standards.... [that provides] the basis for States to establish water quality-based controls." "Guidance for Water Quality Based Decisions: The TMDL Process," EPA Office of Water Regulations, April 1991 at 1. The TMDL process provides "[a] rational method for weighing the competing pollution concerns and developing an integrated pollution reduction strategy for point and non-point sources." *Id.* at 15.

Under the EPA's proposed schedule, Idaho would develop "all necessary TMDLs" by the year 2021. The EPA and Idaho argue that to develop TMDLs for all WQLSs would be premature because the state has not monitored and assessed most of them. The proposed schedule thus contains short-term goals for developing TMDLs for certain high priority waters (while omitting others), and calls for monitoring and assessment of other listed waters. Idaho would prepare TMDLs for forty-three waters between now and 1999. It would submit twelve more TMDLs, two for each of the

state's six basins, to the EPA every two years beginning in 1997. Idaho would monitor WQLSs, remove those in attainment of water quality standards from the WQLS list, and evaluate impaired waters to determine whether existing pollution controls would implement water quality standards. It would develop TMDLs only for WQLSs that it found would not attain standards through application of existing pollution controls. The EPA would evaluate Idaho's progress at five-year intervals. Reliance is placed upon other Idaho programs meant to improve water quality, e.g., nutrient management plans, an agricultural water quality program, and lake management plans. These would be treated, in effect, as substitutes for TMDL development.

Even though the proposed schedule would extend over a quarter-century, it would not assure "all necessary" TMDL development unless hundreds of WQLSs were to fall off the list.

IV. LEGAL DEFICIENCIES

The EPA's proposed schedule for TMDL development in Idaho violates the CWA because of two flaws.

1 The first is its extreme slowness. The CWA declares as a national goal the elimination of pollutant discharges into navigable waters by the year 1985. 33 U.S.C. § 1251(a)(1). The first TMDLs were due from states in 1979. *See* 33 U.S.C. § 1313(d)(2). The EPA was given thirty days to review state submissions, and thirty more days to promulgate substitute TMDLs if necessary. *Id.* Congress provided that TMDLs might incorporate "a margin of safety which takes into account any lack of knowledge," 33 U.S.C. § 1313(d)(1)(C), showing that a lack of precise information must not be a pretext for delay:

Although these tight deadlines might mean that initially established TMDLs would be based on less than ideal data, that fact was considered and addressed by Congress, as demonstrated by the statutory direction to use "a margin of safety which takes into account any lack of knowledge." [33 U.S.C.] § 1313(d)(1)(C). As expressed by an EPA employee, "In other words, Congress says ignorance is no excuse for inaction. Just add a margin of safety to compensate for the lack of knowledge and keep moving." *ACE*, 762 F.Supp. at 1429 (quoting Thomas Wilson, Chief of the Office of Water Planning, EPA Region X, EPA Nonpoint Source News-Notes, October 1990, at 20).

*967 *Natural Resources Defense Council, Inc. v. Fox*, 909 F.Supp. 153, 157-58 (S.D.N.Y.1995).

The role of TMDLs in the CWA strategy for improving water quality confirms that they were to be developed quickly. TMDLs provide a basis for developing other pollution control measures where technology-based point source controls prove inadequate. 33 U.S.C. §§ 1313(d)(1)(A), (C). To serve their intended purpose, they must be available early in the development of a state's program.

In the seventeen years since 1979, Idaho has completed only three TMDLS. Under the proposed schedule at least twenty-five more years would go by before the remaining TMDLS were developed. The net result would be to put off for another generation a step that Congress required be taken years ago. And even the twenty-five-year marker could well be missed. The schedule sets only "expected" times and "targets," not firm dates. Even recognizing that a TMDL may cover more than one WQLS, at Idaho's proposed submission rate the twenty-five years could easily turn into fifty or seventy-five. Although courts have allowed additional time when CWA deadlines are missed, nothing in the law could justify so glacial a pace.

The EPA relies upon a statement in *ACE II*, quoted in the May 1995 order herein, that "a schedule may provide more specific deadlines for the establishment of a few TMDLs for well-studied water quality limited segments in the short-term, and set only general planning goals for long-term development of TMDLs for water quality limited segments about which little is known...." *Alaska Center for the Environment v. Reilly*, 796 F.Supp. 1374, 1380 (W.D.Wash.1992), *aff'd*, 20 F.3d 981 (9th Cir.1994). But the context must be borne in mind. Congress prescribed early deadlines for the TMDL process. "Short-term" and "long-term" at most can mean months and a few years, not decades. Nothing could justify a schedule so slow as to defeat the CWA's goals; yet that is what the EPA's proposal for Idaho would do.

2 The second flaw is that the proposed schedule makes no provision for TMDL development for the full list of Idaho WQLSs. Instead, the schedule simply assumes that the list is wrong, i.e., that monitoring and evaluation will massively reduce it.

But WQLSs are, by definition, waterbodies that are not expected to attain applicable water quality standards through application of existing pollution controls. 33 U.S.C. § 1313(d)(1)(A), 40 C.F.R. § 130.7(b). The CWA requires that a

TMDL be proposed for every WQLS. 33 U.S.C. § 1313(d)(1)(C); *Scott v. City of Hammond*, 741 F.2d 992, 996-97 (7th Cir.1984); *ACE II*, 796 F.Supp. at 1378. Accordingly, the May 1995 order herein required that the schedule "encompass all listed water quality limited segments." (Dkt. # 233 at 4). That has not been done.

It is true that WQLS lists are dynamic and that states may delist waters that attain standards. It is possible that some of the 962 Idaho WQLSs will drop off the list as knowledge is gained and conditions change. But that possibility does not entitle the EPA or the state simply to assume that the list will dwindle by hundreds of waterbodies, or to treat the hoped-for results of state programs as a substitute for CWA compliance. The CWA requires that the full WQLS list, even though it may be amended later, be the basis for TMDL development. The proposed schedule manifestly fails to meet that requirement.

3 As noted above, the plaintiffs have sued under both the CWA and the APA. Under the CWA, the EPA has a mandatory duty, if it disapproves a state's TMDL submission, to establish the TMDLs itself within thirty days. Under the APA, the court may compel agency action unlawfully withheld or unreasonably delayed, and a discretionary act may be set aside if found to be arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law. 5 U.S.C. §§ 706(1) and (2); *Friends of Endangered Species, Inc. v. Jantzen*, 760 F.2d 976, 980-81 (9th Cir.1985). Here, the EPA's approval of Idaho's proposed TMDL schedule is arbitrary, capricious, and an abuse of discretion.

V. REMEDY

4 The EPA remains in dereliction of its statutory and regulatory duty to determine, with Idaho, a reasonable schedule for the development of TMDLs for all waterbodies designated as WQLSs. The question is what the remedy should be. As stated in *ACE II*:

*968 Congress established an accelerated schedule for the first identification of water quality limited segments and for the adoption of the first TMDLs. 33 U.S.C. §§ 1313(d)(1)(A), 1313(d)(2).... Congress also expressly stated that TMDLs were to be established for all waters designated as water quality limited segments. 33 U.S.C. § 1313(d)(1)(C). The responsibility of the court is to ensure prompt and attentive adherence to the mandate of the CWA.

Id. at 1379.

5 6 When an agency "does not reasonably accommodate the policies of a statute or reaches a decision that is 'not one that Congress would have sanctioned,' ... a reviewing court must intervene to enforce the policy decisions made by Congress." *Environmental Defense Fund v. EPA*, 852 F.2d 1316, 1326 (D.C.Cir.1988) (citations omitted), *cert. denied*, 489 U.S. 1011, 109 S.Ct. 1120, 103 L.Ed.2d 183 (1989). The Supreme Court has held that the citizen suit provisions of the Clean Water Act allow a district court to "order the relief it considers necessary to secure prompt compliance with the Act." *Weinberger v. Romero-Barcelo*, 456 U.S. 305, 320, 102 S.Ct. 1798, 1807, 72 L.Ed.2d 91 (1982). As the Ninth Circuit noted in *ACE III*, "[t]he district court has broad latitude in fashioning equitable relief when necessary to remedy an established wrong." 20 F.3d at 986. Relief should be tailored to serve congressional objectives, but the court must be careful not to intrude upon the agency's realm of discretionary decision making. *Id.* at 986-87.

Intervenor Clean Water for Idaho argues that the EPA is powerless to set any schedule for a state's TMDL submissions, since the CWA contains no final TMDL deadline. An EPA regulation requires that "[s]chedules for submission of TMDLs shall be determined by the Regional Administrator and the State." 40 C.F.R. § 130.7(d)(1). This regulation derives from Congress's direction that states submit TMDLs "from time to time" under 33 U.S.C. § 1313(d). The Ninth Circuit has recognized that the EPA's authority under the CWA is not circumscribed by the Act's explicit requirements. *See Dioxin/Organochlorine Ctr. v. Clarke*, 57 F.3d 1517, 1527-28 & n. 14 (9th Cir.1995) ("[T]he Clean Water Act vests in the EPA and the States broad authority to develop long-range, area-wide programs to alleviate and eliminate existing pollution."). *Id.* at 1528 (citation omitted). The EPA has authority to set, with the state, a schedule to complete the TMDL process; the CWA's enforcement history makes clear that a firm schedule is vital.

Plaintiffs contend that Idaho's proposed schedule, and the state's weak performance to date, are so deficient as to constitute a "constructive submission" of no TMDLs, thus triggering EPA's mandatory duty to develop the TMDLs itself. *See Scott, supra* (constructive submission found where the states of Illinois and Indiana failed to submit any TMDLs for Lake Michigan); *ACE I, supra* (constructive submission found where Alaska failed to submit any TMDLs for over a decade); *cf. Sierra Club v. Browner*, 843 F.Supp. 1304 (D.Minn.1993) (no constructive submission where EPA had

approved forty-three TMDLs submitted by Minnesota, and the state had implemented some TMDLs).

7 8 9 10 On the present record a "constructive submission" has not yet occurred. A remedy must nevertheless be ordered. In devising a remedy the court faces "the difficult task of avoiding both remedies that may be too intrusive ... and those that may prove to be ineffective." *N.A.A.C.P. v. Secretary of Housing & Urban Dev.*, 817 F.2d 149, 159 (1st Cir.1987). Generally, when an agency has abused its discretion the appropriate remedy is a remand for further proceedings consistent with the court's ruling. *See Federal Power Comm'n v. Idaho Power Co.*, 344 U.S. 17, 20, 73 S.Ct. 85, 86-87, 97 L.Ed. 15 (1952). The plaintiffs urge that the court order the EPA to adopt a judicially-decided schedule for TMDL development. They propose a detailed and prioritized schedule calling for all TMDLs in Idaho to be developed by December 31, 2000. The EPA counters with declarations showing the difficulties and complexities of TMDL development; it does not, however, show that plaintiffs' schedule is impossible.¹ The available *969 remedies are to order a specific schedule now, or to remand. The EPA argues for the latter in its reply brief, stating:

1 Each side relies on expert declarations prepared for this litigation after the administrative action was taken. Under the APA, the focal point for judicial review is the administrative record in existence, not a new record made initially in the reviewing court. *Asarco, Inc. v. EPA*, 616 F.2d 1153, 1159 (9th Cir.1980). Evidence outside the record may be considered for certain limited purposes, e.g., to explain the agency's action or to determine whether its course of inquiry was inadequate. *Love v. Thomas*, 858 F.2d 1347, 1356 (9th Cir.1988), *cert. denied*, 490 U.S. 1035, 109 S.Ct. 1932, 104 L.Ed.2d 403 (1989); *Animal Defense Council v. Hodel*, 840 F.2d 1432, 1436 (9th Cir.1988). Those purposes are present here and the declarations may be considered.

Should the Court determine that EPA's schedule does not comply with the Court's Order, the appropriate remedy is to remand to EPA, so that EPA can exercise its discretion to revise and reissue a proper schedule.
 EPA's Reply Memorandum at 20.

The court agrees. Accordingly, it is ordered that:

1. The EPA's motion for dismissal is denied.
2. Plaintiffs' cross-motion for partial summary judgment is granted to the extent that the EPA's approval of Idaho's

proposal for TMDL development, to extend over twenty-five years or more, is held to be arbitrary and capricious, an abuse of discretion, and contrary to law, and is hereby set aside.

3. Plaintiffs' motion for a ruling that a "constructive submission" of no TMDLs be found to have occurred is denied without prejudice to its renewal. The matter is remanded to the EPA with directions to establish with Idaho and file herein, within six months of the date of this order, a complete and duly adopted reasonable schedule for the development of TMDLs for all waterbodies designated as WQLSs in Idaho. The present record, which includes a recognition by all parties that a single TMDL may apply

to several WQLSs in the same watershed, suggests that a completion time of approximately five years would be reasonable.

4. The court retains jurisdiction pending compliance with this order.

The clerk is directed to send copies of this order to all counsel of record.

IN THE MATTER OF STAR-KIST CARIBE, INC. PETITIONER

National Pollutant Discharge Elimination System

NPDES Permit No. PR0022012

NPDES Appeal No. 88-5

April 16, 1990

ORDER ON PETITION FOR RECONSIDERATION

*1 On June 1, 1989, EPA Region II filed a Petition for Reconsideration of the Chief Judicial Officer's (CJO's) March 8, 1989 Order Denying Petition for Review.¹ In that order, the CJO upheld the Regional Administrator's denial of an evidentiary hearing on the issue of whether Star-Kist Caribe was entitled to a schedule of compliance in its NPDES permit that would allow it to delay compliance with applicable water-quality-based effluent limitations, i.e., those established pursuant to §301(b)(1)(C) of the Clean Water Act to ensure that pollutant discharges from the facility will meet state water quality standards. The Regional Administrator had refused Star-Kist's request to include such a schedule in the permit. In its petition for reconsideration, Region II does not contest the CJO's ultimate conclusion -- i.e., that the Regional Administrator's denial of the request for the schedule of compliance was proper. Instead, Region II argues that the CJO's ruling was too broad and went beyond the arguments presented in the case. Specifically, the CJO had ruled that §301(b)(1)(C) of the Act barred EPA from including such a schedule in the permit, since it would extend compliance with applicable water quality standards beyond the July 1, 1977 statutory deadline. That section of the Act provides as follows:

[§301] (b) Timetable for achievement of objectives

In order to carry out the objective of this chapter there shall be achieved --

[(1)](C) not later than July 1, 1977, any more stringent limitation, including those necessary to meet water quality standards, treatment standards, or schedules of compliance, established pursuant to any State law or regulations (under authority preserved by section 1370 of this title) or any other Federal law or regulation, or required to implement any applicable water quality standard established pursuant to this chapter.

33 U.S.C. §1311(b)(1)(C). Region II requests that the CJO's opinion be modified to delete the discussion concerning compliance dates for post-July 1, 1977 state water quality standards or, alternatively, that the opinion be modified to make it clear that the Clean Water Act does not categorically prohibit schedules of compliance for meeting such standards. In its response to Region II's Petition for Reconsideration, Star-Kist concurs with Region II's assertion that the March 8, 1989 ruling was too broad, and argues further that upon reconsideration its request for an evidentiary hearing should be granted.²

Based on Region II's Petition for Reconsideration and attachments, it has become apparent that, for some time now, the policy and practice of the Agency's Office of Water has been to include, in some permits, so-called "schedules of compliance"³ containing interim effluent limitations that do not "meet" applicable, post-July 1, 1977 state water quality standards. These schedules allow the discharger to postpone immediate compliance with more stringent effluent limitations specifically tailored to meet the applicable state water quality standards. By allowing the discharger to phase in compliance over time, the interim limitations implicitly sanction pollutant discharges that violate applicable state water quality standards.

*2 The only direct legal authority relied upon by the Office of Water in support of these schedules of compliance is a 1978 memorandum from an EPA Associate General Counsel (Water and Waste Division).⁴ The following excerpt from the memorandum (at 4-5), as quoted by the Region, contains the entire analysis of the issue: The Act establishes the end date [July 1, 1977] for the first stages of WQS [water quality standard] compliance, but for subsequent levels of possibly more stringent WQS, the Act defers to State planning determinations * * *. However, if the State plans do not contain specific compliance schedules, the EPA permit writer must establish the source's Phase II WQS compliance schedule.

The Act supplies no express guidance as to what the EPA-determined, post-1977 WQS compliance schedule should be. In general, Congress intended compliance with the Act's requirements to occur at the earliest practicable time. One option, therefore, might be for EPA simply to establish the policy that post-1977 compliance must be achieved by the earliest practicable time.

The conclusion reached in the memorandum thus rests on a single proposition, namely, that the Act does not specify a fixed deadline for compliance with state water quality standards after July 1, 1977, and therefore EPA should be free to add schedules as it sees fit, subject only to a self-imposed "earliest practicable time" deadline. The Region's reconsideration request, although more detailed than the memorandum, basically relies on the same reasoning for its analysis and defense of post-July 1, 1977 compliance schedules.

Despite the long-standing practice of the Office of Water and the reliance it has placed on the memorandum, I cannot concur in either the practice or the memorandum. I agree with the CJO's conclusion that the Clean Water Act does not authorize EPA to establish schedules of compliance in the permit that would sanction pollutant discharges that do not meet applicable state water quality standards. In my opinion, the only instance in which the permit may lawfully authorize a permittee to delay compliance after July 1, 1977, pursuant to a schedule of compliance, is when the water quality standard itself (or the State's implementing regulations) can be fairly construed as authorizing a schedule of compliance. The Agency's powers in this respect, as discussed below, are no greater than the States'. Thus, the Associate General Counsel was in error in concluding that EPA could establish schedules of compliance "if the State plans do not contain specific compliance schedules * * *." If, on the other hand, a schedule of compliance is authorized by the State program, EPA's inclusion of interim limitations pursuant to the schedule would be fully consistent with, and therefore "meet," the requirements of the state water quality standard as contemplated by §301(b)(1)(C).⁵ In the present case, however, there is no indication from the record before me that Puerto Rico's water quality standards authorize any such schedules of compliance.⁶

A.

*3 The Region's belief that §301(b)(1)(C) does not bar EPA from establishing schedules of compliance for meeting state water quality standards after July 1, 1977, is based on an incomplete and, ultimately, erroneous reading of the Act. The Region takes the position that a literal reading of the section produces an illogical result: it argues that "since standards adopted after [July 1, 1977] obviously cannot be complied with 'no later than July 1, 1977,' that deadline cannot be applied literally." Pet. for Recon. at 3 (emphasis added). Because a literal reading is illogical in its view, the Region argues we should look elsewhere in the statute for indications of Congressional intent. It then proceeds to argue that the results of such a search lead to the conclusion that EPA is not barred from establishing schedules of compliance as it deems necessary and appropriate in the exercise of its own discretion.

The flaw in this reasoning is that it omits a step. Rather than immediately looking elsewhere in the statute for indications of Congressional intent, more time should be spent concentrating on the language of the section in question. The caption, "Timetable for achievement of objectives," provides two keys to construing §301(b)(1)(C). First, the section is part of a timetable and should be understood as such, and second, the timetable is designed to achieve the objectives of the Act. As for the timetable, it serves to ensure that state water quality standards are attained by a specified date. It is like any other timetable in the sense that it specifies a date by which something is to be achieved. The date itself is unambiguous: it is July 1, 1977. The "something" to be achieved is also unambiguous in most respects. For example, when discussing the pre-July 1, 1977 period, it is clear that §301(b)(1)(C) required all permittees to meet, by no later than July 1, 1977, any more stringent limitation necessary to meet

state water quality standards in existence at the time of permit issuance. Thus, schedules of compliance were allowed during that period, and they could be established by either EPA or the State where the discharge was occurring (depending on which entity was the permit issuing authority at the time of permit issuance). By including the July 1, 1977 deadline in the statute, Congress was, in effect, establishing a "grace period" as part of its timetable for implementation of the Act.

As for the post-July 1, 1977 period, there is no dispute that §301(b)(1)(C) continues to have regulatory force and applicability.⁷ It is clear, therefore, that permits must prescribe limitations derived from state water quality standards in effect at the time of permit issuance, even if the standards did not come into existence until the post-July 1, 1977 period. Less clear, however, is whether there are any limitations on schedules of compliance after July 1, 1977. The answer lies in what Congress intended when it established the timetable, which in turn requires us to focus on the objectives Congress had in mind in creating the timetable.

*4 First, however, one point alluded to earlier merits emphasis since it narrows the focus of the issue under consideration. Specifically, since the Clean Water Act provides ample, direct authority for the States to adopt schedules of compliance under appropriate circumstances,⁸ EPA may add a schedule of compliance to a permit when EPA is the permit issuer if a State has laid the necessary groundwork in its standards or regulations. In such circumstances, the schedule would be meeting the requirements of the state water quality standards, and therefore no basis would exist for challenging its validity. Thus, the real question raised by the Region's petition for reconsideration is whether EPA can add these schedules after July 1, 1977, if the necessary enabling language is missing from the applicable state water quality standards or regulations. This is where an analysis of the Act's objectives enters the discussion.

The overarching objective of the Clean Water Act is to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters," as Congress provided in its declaration of goals and policy contained in §101(a) of the Act, 33 U.S.C. §1251(a). When read in context with §301(b)(1)(C), this objective, with its implicit censure of "backsliding,"⁹ would appear to rule out schedules of compliance after July 1, 1977, if they would delay attainment of pre-July 1, 1977 state water quality standards. In other words, if a pre-July 1, 1977 water quality standard remains on the books after that date, full and immediate compliance with the standard is mandatory.¹⁰ Neither the States nor EPA would be permitted to use schedules of compliance under those circumstances, since to do so would completely undo what § 301(b)(1)(C), inter alia, unambiguously set out to accomplish, i.e., to ensure full compliance with pre-July 1, 1977 state water quality standards no later than July 1, 1977.

The above recited objective does not, however, provide any definitive direction in deciding whether EPA, as permit issuer, can establish schedules of compliance for new or revised post-July 1, 1977 state water quality standards (in the absence of enabling language in the state standards). The answer to this question is found in §402(a)(3) of the Act, which embodies another major objective of the Act and says that the Agency's powers as permit issuer are no greater than the States':

[§402] National pollutant discharge elimination system

(a) permits for discharge of pollutants

(3) The permit program of the Administrator *** and permits issued thereunder, shall be subject to the same terms, conditions, and requirements as apply to a State permit program and permits issued thereunder ***.

33 U.S.C. §1342(a)(3). Thus, if a State lacks authority to establish schedules of compliance (for instance, if it elected not to include the necessary enabling language in its water quality standards), EPA would also lack that authority because of its derivative relationship to the State under §402(a)(3).

*5 The latter section furthers the Act's objective of assigning a major role to the States in managing water quality within their own borders. The Congressional declaration of goals and policy contained in §101 of the Clean Water Act, 33 U.S.C. §1251, demonstrates that Congress intended the individual States to play a leading part in formulating their own water quality policies and that Congress did not want EPA to preempt the States' rights to impose and enforce stringent state water quality requirements:

[§101](b) Congressional recognition, preservation, and protection of primary responsibilities and rights of States

It is the policy of the Congress to recognize, preserve, and protect the primary responsibilities and rights of States to prevent, reduce, and eliminate pollution * * *.

33 U.S.C. §1251(b). The policy announced in §101(b) is given prescriptive force in §510 of the Act, as follows:

[§510] State Authority

[N]othing in this chapter shall (1) preclude or deny the right of any State * * * to adopt or enforce (A) any standard or limitation respecting discharges of pollutants, or (B) any requirement respecting control or abatement of pollution; except * * * [one] which is less stringent than the effluent limitation * * * in this chapter * * *.

33 U.S.C. §1370. With respect to schedules of compliance specifically, the Act keeps them in the hands of the States, not EPA, as part of a continuing planning process for water quality under §303(e) of the Act (subject only to EPA review and approval):

[§303](e) Continuing planning process

(3) The Administrator shall approve any continuing planning process submitted to him under this section which will result in plans for all navigable waters within such State, which include, but are not limited to, the following:

(A) effluent limitations and schedules of compliance at least as stringent as those required by section 1311(b)(1) * * * and at least as stringent as any requirements contained in any applicable water quality standards in effect under authority of this section;

(F) adequate implementation, including schedules of compliance, for revised or new water quality standards, under subsection (c) of this section * * *.

33 U.S.C. §1313(e) (emphasis added).¹¹

Section 301(b)(1)(C) draws on all three of the preceding provisions of the Act by requiring EPA, when it is the permit issuer, to include any limitations that will be necessary to meet state water quality standards, thus deferring to the reserved rights of the States to impose more stringent requirements than the technology-based standards of the Act would otherwise mandate.¹² This requirement extends to schedules of compliance. Specifically, in directing EPA to prescribe more stringent limitations necessary to meet applicable state water quality standards, §301(b)(1)(C) also directs EPA to “includ[e] those necessary to meet * * * schedules of compliance [] established pursuant to any State law or regulations * * *.” 33 U.S.C. §1311(b)(1)(C) (emphasis added). Except for this language (and the pre-July 1, 1977 authority also in the same section), nowhere else in the Act is EPA authorized to establish schedules of compliance where state standards or regulations do not provide for them.¹³

*6 To further promote the form of federalism envisioned by the Act, and to ensure that all permits contain limitations necessary to meet all state water quality standards, the Act establishes a certification system for EPA-issued permits. Under §401(a)(1), EPA cannot issue an NPDES permit without first receiving a certification (or a waiver of certification) from the State in which the discharge is to occur, certifying, inter alia, that the permit complies with §301(b)(1)(C).¹⁴ Once the state certifies that a permit limitation is necessary to meet state water quality standards, EPA is without authority to modify the limitation. The legislative history of the Act leaves no doubt as to this interpretation:

[T]he provision makes clear that any water quality requirements established under State law, more stringent than those requirements established under this Act, also shall through certification become conditions on any Federal license permit. The purpose of that certification mechanism provided in this law is to assure that Federal licensing or permitting agencies cannot override State water quality requirements.

S. Rep. No. 92-414, 92nd Cong., 2nd Sess., reprinted in, 1972 U.S. Code Cong. & Adm. News 3735 (emphasis added). This Congressional injunction against “overriding” state water quality standards logically extends to a State's timetable for implementing its water quality standards. Not surprisingly, the legislative history also supports this modest extension:

If a State establishes more stringent limitations and/or time schedules pursuant to Section 303, they should be set forth in a certification under Section 401. Of course, any more stringent requirements imposed by a State pursuant to this section shall be enforced by the Administrator.

Report of the Conference Committee on S. 2770, October 4, 1972, reprinted in A Legislative History of the Water Pollution Control Act Amendments of 1972 at 171 (1973) (emphasis added).

In sum, the language, structure, and objectives of the Act, as set forth in §§ 101(a) and (b), 402(a)(3), and 510, all support an interpretation of § 301(b)(1)(C) that Congress intended the States, not EPA, to become the proper authorities to define appropriate deadlines for complying with their own state law requirements. Just how stringent such limitations are, or whether limited forms of relief such as variances, mixing zones, and compliance schedules should be granted are purely matters of state law, which EPA has no authority to override. Consequently, if a State elects not to include a provision for a schedule of compliance in a water quality standard, EPA has no authority to override the State's authority by adding a schedule of compliance of its own invention.¹⁵ It is well established in federal case law that the Clean Water Act preserves a State's right to enact its own anti-pollution measures even if they are more stringent than necessary to comply with the Clean Water Act. Roosevelt-Campobello International Park Commission, 684 F.2d 1041, 1056 (1st Cir. 1982). The Region's interpretation makes no mention of the States' role in carrying out the timetable and objectives of the Act and is fatally flawed for that reason.

B.

*7 To buttress its position, the Region makes a plea on grounds of practical necessity. The Region asserts that because water quality standards, unlike technology-based standards, depend on the quality of the receiving waters and other factors that make it difficult for a permittee to plan ahead and predict what its limitations will be, EPA should have the authority to “define appropriate deadlines for complying with post-1977 standards.” Pet. for Recon. at 7-8. This argument fails for the reasons previously stated, and more particularly because the States have full authority to make appropriate accommodations for dischargers needing additional time for compliance, and it is up to the States, not EPA, to decide whether their water quality standards should be applied in a flexible manner.¹⁶ If a State does not provide for compliance schedules in its water quality standards, it may be assumed that the omission was deliberate.¹⁷ Cases interpreting the Clean Water Act make it clear that States have a right to make this type of decision even at the cost of forcing companies out of business. See, e.g., United States Steel Corp. v. Train, 556 F. 2d 822, 838 (7th Cir. 1977) (“[T]he states are free to force technology” and “[i]f the states wish to achieve better water quality, they may [do so], even at the cost of economic and social dislocations * * *”). The “practical necessity” argument also misses the mark on other grounds. For example, where the Agency determines that, despite good faith efforts, a permittee cannot come into immediate compliance with a newly adopted, revised, or interpreted state water quality standard, EPA may bring an enforcement action against the discharger pursuant to §309 of the Act¹⁸ and issue an administrative compliance order giving the permittee a reasonable amount of time to comply.¹⁹

Also lacking merit is the Region's argument that EPA needs to establish compliance schedules because water quality standards are revised periodically. When a water quality standard is revised to be more stringent, the holder of an existing permit is not required to meet the new standard until the term of the existing permit expires and the permittee applies for a renewed permit.²⁰ In addition, the Clean Water Act requires States to allow for public participation in setting water quality standards. See 33 U.S.C. §1313(c); 40 CFR §131.20. Thus, dischargers may convince States that newly adopted and revised water quality standards should provide for grace periods for compliance. Therefore, contrary to the Region's contentions, strict compliance with the July 1, 1977 deadline need not lead to harsh or inequitable results.

C.

In conclusion, EPA does not have the authority to establish schedules of compliance in NPDES permits that will postpone compliance with state water quality standards beyond the July 1, 1977 statutory deadline, unless the schedule is added pursuant to authorization contained in the state water quality standards or the State's regulations implementing the standards. In the absence of such authorization, state water quality standards, like the great majority of laws and regulations, take effect immediately in accordance with their terms, and EPA is not empowered to postpone their effectiveness even temporarily through use of compliance schedules, no matter the justification. For the reasons stated above, the Region's assertion that the deadline in § 301(b)(1)(C) applies only to state water quality standards adopted prior to July 1, 1977, is rejected. By including the July 1, 1977 deadline in the statute, Congress was, in effect, providing a "grace period" as part of a timetable for implementation of the requirements of the Act. Once the grace period has lapsed, EPA must ensure that all permits contain limitations necessary to meet whatever state water quality standards are in effect at the time of permit issuance, regardless of when the standards were adopted or revised.²¹ Reconsideration of the Chief Judicial Officer's March 8, 1989 Order Denying Petition for Review is therefore denied. The Office of Water is directed to take immediate action to ensure that the States are aware of their responsibilities under the Clean Water Act vis a vis schedules of compliance and of the consequences of omitting enabling language for such schedules from their regulations and water quality standards.²²

*8 So ordered.²³

William K. Reilly
Administrator

- 1 The petition for reconsideration is signed by representatives of the Agency's Office of the General Counsel (Headquarters) and Region II's Office of Regional Counsel.
- 2 On June 27, 1989, the Region filed a reply to Star-Kist's response, opposing Star-Kist's argument that its request for an evidentiary hearing should be granted. In its reply, Region II contends that compliance schedules may be considered only where the water quality standards at issue are adopted, or in some instances, newly interpreted, after the statutory deadline. Because the standards at issue here were not newly adopted or interpreted after the July 1, 1977 deadline, Region II reasons, it may not consider a schedule of compliance. I do not concur with Region II's unqualified assertion that the Clean Water Act allows it to establish compliance schedules for post-July 1, 1977 standards. Nevertheless, as this decision intends to make clear, the Region is correct that it would not be appropriate to establish a schedule of compliance here because the water quality standards at issue are virtually identical to those that existed prior to July 1, 1977.
- 3 The Clean Water Act defines "schedule of compliance" in Section 502(17):
The term "schedule of compliance" means a schedule of remedial measures including an enforceable sequence of actions or operations leading to compliance with an effluent limitation, other limitation, prohibition, or standard.
33 U.S.C.A. §1362(17). It is unclear whether the Office of Water is intending to use the term in any strict statutory sense.
- 4 Memorandum from James A. Rogers, Associate General Counsel, Water and Solid Waste Division, to the Deputy Assistant Administrator for Water Enforcement (December 28, 1978).
- 5 For that reason it is incorrect to read the CJO's decision as barring all schedules of compliance in permits issued after July 1, 1977. The CJO did not rule that schedules of compliance consistent with a State's water quality standards (or implementing regulations) are nevertheless barred by the July 1, 1977 deadline. What he did was hold that schedules of compliance not meeting the requirements of state water quality standards are barred after July 1, 1977. As stated in the decision:
The EQB is likewise without authority to extend the July 1, 1977 deadline, particularly by including a vague statement in a water quality certification that it has no objection to a compliance schedule. Star-Kist has not shown that Puerto Rico's water quality standards contain a provision that could be read to allow a delay in implementation.
Order Denying Petition for Review at 6 (emphasis added). Because the CJO's decision should not be read as barring all post-July 1, 1977 schedules of compliance, the Region's arguments respecting §§303(e) and 304(1) are not pertinent.

- 6 The Puerto Rico Environmental Quality Board stated that it would have “no objections” if EPA included a schedule of compliance in the permit containing interim effluent limitations for pollutant parameters not in compliance with state water quality standards. Water Quality Certificate, page 16, Special Condition #17 (Puerto Rico Environmental Quality Board, June 29, 1987). The Board, however, did not specify what interim limitations the schedule must contain, or what the duration of the interim limitations must be to comply with state water quality standards. More importantly, neither the Board nor Star-Kist has shown that the Puerto Rico water quality standards allow compliance schedules under the circumstances of this case.
- 7 See Opinion of the General Counsel, **Memorandum from Robert M. Perry, General Counsel, to John E. Daniel, Chief of Staff** (February 23, 1982).
- 8 See, e.g., §303(e)(3)(A) and (F) of the Clean Water Act, 33 U.S.C. § 1313(e)(3)(A) and (F) (discussed in text, *infra*).
- 9 The term “backsliding” refers to the renewal or reissuance of a permit containing less stringent limitations than the comparable limitations in the previous permit. EPA’s regulatory backsliding prohibition, 40 CFR §122.44(1), was given explicit statutory recognition (in a specific context) in 1987 by the enactment of §402(o), 33 U.S.C. §1342(o).
- 10 Of course, post-July 1, 1977 readoption of a pre-July 1, 1977 standard without any substantive changes would not open the door to schedules of compliance because the standard would still be one that was in effect prior to July 1, 1977.
- 11 See also 40 CFR §130.5 (continuing planning process).
- 12 By enacting §301(b) of the Clean Water Act, Congress sought to put into place certain technology-based controls on water pollution while simultaneously requiring attainment of state water quality standards. The basic scheme of the [Clean Water Act] * * * is to require all dischargers to meet uniform technology-based effluent standards as a minimum. However, each body of water also has water quality standards, and a discharger may be required to achieve a greater reduction in his effluent than the applicable effluent standard would require if such a reduction is necessary to meet the water quality standards applicable to the body of water that receives his effluent.
R. Zener, The Federal Law of Water Pollution Control, in **Federal Environmental Law** 694 (1974).
- 13 EPA’s rights are coextensive with the States’ insofar as writing a water quality standard is concerned. Thus, if EPA is prescribing a federal water quality standard to take effect in lieu of a state water quality standard, it would have authority, like the States, to establish schedules of compliance in the water quality standard. See 40 CFR §131.22.
- 14 Section 401(a)(1) of the Clean Water Act provides in relevant part as follows:
Any applicant for a Federal license or permit to conduct any activity including, but not limited to, the construction or operation of facilities, which may result in any discharge into the navigable waters, shall provide the licensing or permitting agency a certification from the State in which the discharge originates or will originate * * * that any such discharge will comply with the applicable provisions of section[] 1311 [CWA §301] * * * of this title.
33 U.S.C. §1341(a)(1).
- 15 Although §401 of the Clean Water Act gives the States an effective veto power over any EPA-issued permit not meeting the requirements of state water quality standards, EPA’s long-standing practice of adding schedules of compliance under the aegis of the 1978 legal opinion may have misled the States into believing they lack this authority insofar as the schedules are concerned.
- 16 Section 131.13 of the regulations, 40 CFR §131.13, authorizes the States, at their discretion (but subject to EPA approval), to include in their water quality standards “policies generally affecting their application and implementation, such as mixing zones, low flows and variances.” Logically, schedules of compliance fall within the category of “policies” listed in this regulation. Moreover, as noted in the text, the Act itself contemplates schedules of compliance being established by the States. See §§301(b)(1)(C) and 303(e)(3)(A) and (F).
- 17 In preparing a “continuing planning process” under §303(e) of the Act, EPA regulations direct the States to include schedules of compliance in the process:
§130.5 Continuing planning process.
(a) General. Each State shall establish and maintain a continuing planning process (CPP) as described under section 303(e)(3)(A)-(H) of the Act.

(b) Content. * * * The following processes must be described in each State CPP, and the State may include other processes at its discretion.

(1) The process for developing effluent limitations and schedules of compliance at least as stringent as those required by sections 301(b)(1) and (2), 306 and 307, and at least as stringent as any requirements contained in applicable water quality standards in effect under authority of section 303 of the Act.

(6) The process for establishing and assuring adequate implementation of new or revised water quality standards, including schedules of compliance, under section 303(c) of the Act.

40 CFR §130.5 (emphasis added).

- 18 EPA has the authority under §309 of the Act to deal in a flexible manner, through use of compliance orders, with deserving permittees who are unable come into immediate compliance with the Act:
- (3) Whenever * * * the Administrator finds that any person is in violation of section 1311 * * * or is in violation of any permit condition or limitation implementing * * * such section[] * * * he shall issue an order requiring such person to comply with such section or requirement * * *.
- (5) [A]ny order issued under this subsection * * * shall specify a time for compliance not to exceed 30 days in the case of a violation of an interim compliance schedule * * * and not to exceed a time the Administrator determines to be reasonable in the case of a final deadline, taking into account the seriousness of the violation and any good faith efforts to comply with applicable requirements.
- 33 U.S.C. §1319(a)(3) & (5)(A).
- 19 The Region acknowledges the existence of this method of establishing schedules of compliance but argues that it should not be restricted to this single option. Pet. for Recon. at 7 (“in some circumstances a schedule of compliance in the permit itself may be a reasonable alternative to a schedule in an administrative order”).
- 20 permit applicants need only comply with water quality standards that are in the permit, not with standards adopted or revised subsequent to permit issuance. Once issued, the permits are valid for a fixed term not to exceed five years. 33 U.S.C. §1342(b)(1)(B); 40 CFR §122.46(a). During the term of the permit, compliance with the permit and effluent limitations in it constitute compliance with section 301. 33 U.S.C. §1342(k). In fact, EPA cannot modify existing permits to require compliance with newly adopted or revised water quality standards unless the permit applicant requests such a modification. 40 CFR §122.62(3)(i)(C).
- 21 In other words, after the grace period has run, the statute would be read and applied in the same manner as if the deadline had never appeared in the statute. (Had the Clean Water Act contained a provision identical to § 301(b)(1)(C) but omitted the July 1, 1977 deadline, the clear meaning of the statute would be that, as of the effective date of the statute, EPA must ensure that all permits contain limitations necessary to meet whatever state water quality standards are in effect at the time of permit issuance. Also, if the State subsequently revised or adopted new water quality standards, a renewed permit would have to meet the new or revised standards, unless the State granted some form of relief, such as a variance or compliance schedule.) Thus, contrary to Region II's contentions (see, e.g., page 7, supra), the July 1, 1977 “deadline” can be literally applied to future water quality standards in the same manner that a statute with no grace period can require EPA to ensure compliance with future standards.
- 22 The Region suggested rulemaking as a potential alternative to deciding the merits of its petition for reconsideration. It did not explain, however, why rulemaking is either necessary or desirable. The need for it is not readily apparent in view of the clear statutory and regulatory basis for schedules of compliance, and in view of EPA's considerable authority respecting approval of state water quality standards and regulations. Public comment on any proposed policies the Office of Water might adopt can be solicited independently of rulemaking.
- 23 This decision shall have no retroactive effect on existing permits. Schedules of compliance in those permits shall be enforceable in accordance with the terms of the permits for the remainder of the permit term. See note 20 supra.

ATTACHMENT 41

568 F.2d 1369

United States Court of Appeals,
District of Columbia Circuit.

* For convenience the court will refer to this case
hereafter as NRDC v. Costle (Runoff Point Sources).

NATURAL RESOURCES
DEFENSE COUNCIL, INC. *

v.

Douglas M. COSTLE, Administrator,
Environmental Protection Agency, et al.,
National Forest Products Association, Appellant.

NATURAL RESOURCES
DEFENSE COUNCIL, INC., etc.

v.

Douglas M. COSTLE, Administrator,
Environmental Protection Agency, et al.,
National Milk Producers Federation, Appellant.

NATURAL RESOURCES
DEFENSE COUNCIL, INC., etc.

v.

Douglas M. COSTLE, Administrator, and
Environmental Protection Agency, et al., Appellants.
NATURAL RESOURCES DEFENSE COUNCIL, INC.

v.

Douglas M. COSTLE, Administrator,
Environmental Protection Agency, Colorado
River Water Conservation District, Appellant.

Nos. 75-2056, 75-2066, 75-2067
and 75-2235. Argued Dec. 3,
1976. Decided Nov. 16, 1977.

The National Resources Defense Council, Inc. challenged authority of the Environmental Protection Agency Administrator to exempt categories of point sources from permit requirements of the Federal Water Pollution Control Act Amendments of 1972. The United States District Court for the District of Columbia, Thomas A. Flannery, J., 396 F.Supp. 1393, granted summary judgment to the NRDC and the Administrator and others appealed. The Court of Appeals, Leventhal, Circuit Judge, held that: (1) legislative history shows that National Pollution Discharge Elimination System permit is the only means by which discharger may escape total prohibition of discharges from point sources found in FWPCA; (2) national effluent limitations need not

be uniform as precondition for NPDES program to include pollution from agricultural, silvicultural, and storm runoff point sources, and while technological or administrative infeasibility of such limitations may warrant adjustments in permit program it does not authorize Administrator to exclude relevant point sources; (3) where numeric effluent limitations are infeasible, permit conditions may proscribe industry practices that aggravate problems of point source pollution as well as require monitoring and reporting of effluent level; and (4) a number of administrative devices, including general or area permits are available to aid EPA in practical administration of NPDES program, and FWPCA, however tight in some respects, leaves some leeway to EPA in interpretation of that statute and affords agency some means to consider matters of feasibility.

Affirmed in accordance with opinion.

MacKinnon, Circuit Judge, filed a concurring opinion.

**1370 **148 Syllabus by the Court*

The National Resources Defense Council, Inc. (NRDC) challenged the authority of the EPA Administrator to exempt categories of point sources from the permit requirements of s 402 of the Federal Water Pollution Control Act Amendments of 1972, 33 U.S.C. s 1342 (Supp. V 1975). On appeal from a grant of summary judgment to NRDC, held:

1. The legislative history makes clear that Congress intended the National Pollution Discharge Elimination System (NPDES) permit to be the only means by which a discharger may escape the total prohibition of discharges from point sources found in FWPCA s 301(a), 33 U.S.C. s 1311(a) (Supp. V 1975).
2. It is not necessary that national effluent limitations be uniform as a precondition for the NPDES program to include pollution from agricultural, silvicultural, and storm water runoff point sources. The technological or administrative infeasibility **1371 **149* of such limitations may warrant adjustments in the permit program, but it does not authorize the Administrator to exclude the relevant point source from the NPDES program.
3. Where numeric effluent limitations are infeasible, permit conditions may proscribe industry practices that aggravate the problems of point source pollution as well as require monitoring and reporting of effluent levels.

4. A number of administrative devices, including general or area permits, are available to aid EPA in the practical administration of the NPDES program. The FWPCA, however tight in some respects, leaves some leeway to EPA in the interpretation of that statute and, in that regard, affords the agency some means to consider matters of feasibility.

Appeals from the United States District Court for the District of Columbia (D.C. Civil 1629-73).

Before BAZELON, Chief Judge, and LEVENTHAL and MacKINNON, Circuit Judges.

Opinion

Opinion for the Court filed by LEVENTHAL, Circuit Judge.

Concurring Opinion filed by MacKINNON, Circuit Judge.

LEVENTHAL, Circuit Judge:

In 1972 Congress passed the Federal Water Pollution Control Act Amendments (hereafter referred to as the "FWPCA" or the "Act"¹). It was a dramatic response to accelerating environmental degradation of rivers, lakes and streams in this country. The Act's stated goal is to eliminate the discharge of pollutants into the Nation's waters by 1985. This goal is to be achieved through the enforcement of the strict timetables and technology-based effluent limitations established by the Act.

1 33 U.S.C. ss 1251-1376 (Supp. V 1975). Although characterized in the official title as "amendments", the 1972 FWPCA actually substitutes its provisions for those of the pre-1972 Federal Water Pollution Control Act as amended, id. ss 1151-1175 (1970).

The FWPCA sets up a permit program, the National Pollutant Discharge Elimination System (NPDES), as the primary means of enforcing the Act's effluent limitations.² At issue in this case is the authority *1372 **150 of the Administrator of the Environmental Protection Agency to make exemptions from this permit component of the FWPCA.

2 This case deals with s 402 of the FWPCA, 33 U.S.C. s 1342 (Supp. V 1975), which sets out the permitting authority of the EPA Administrator as well as that of the states under EPA-approved state permit programs. The Secretary of the Army also has a permitting authority in certain circumstances. Under s 404 of the FWPCA, 33 U.S.C. s 1344 (Supp. V 1975), he may issue permits for the discharge of dredged or fill material into navigable waters.

Section 402 of the FWPCA, 33 U.S.C. s 1342 (Supp. V 1975), provides that under certain circumstances the EPA Administrator "may . . . issue a permit for the discharge of any pollutant" notwithstanding the general proscription of pollutant discharges found in s 301 of the Act. 33 U.S.C. s 1311 (Supp. V 1975). The discharge of a pollutant is defined in the FWPCA as "any addition of any pollutant to navigable waters from any point source" or "any addition of any pollutant to the waters of the contiguous zone or the ocean from any point source other than a vessel or floating craft." 33 U.S.C. s 1362(12) (Supp. V 1975). In 1973 the EPA Administrator issued regulations that exempted certain categories of "point sources" of pollution from the permit requirements of s 402.³ The Administrator's purported

authority to make such exemptions turns on the proper interpretation of s 402.

- 3 40 C.F.R. s 125.4 (1975). See 38 Fed.Reg. 18000-04 (1973).

A "point source" is defined in s 502(14) as "any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged."⁴

- 4 33 U.S.C. s 1362(14) (Supp. V 1975).

The 1973 regulations exempted discharges from a number of classes of point sources from the permit requirements of s 402, including all silvicultural point sources; all confined animal feeding operations below a certain size; all irrigation return flows from areas of less than 3,000 contiguous acres or 3,000 noncontiguous acres that use the same drainage system; all nonfeedlot, nonirrigation agricultural point sources; and separate storm sewers containing only storm runoff uncontaminated by any industrial or commercial activity.⁵ The EPA's *1373 **151 rationale for these exemptions is that in order to conserve the Agency's enforcement resources for more significant point sources of pollution, it is necessary to exclude these smaller sources of pollutant discharges from the permit program.

- 5 40 C.F.R. s 125.4 (1975):

The following do not require an NPDES permit:

- (f) Uncontrolled discharges composed entirely of storm runoff when these discharges are uncontaminated by any industrial or commercial activity, unless the particular storm runoff discharge has been identified by the Regional Administrator, the State water pollution control agency or an interstate agency as a significant contributor of pollution. (It is anticipated that significant contributors of pollution will be identified in connection with the development of plans pursuant to section 303(e) of the Act. This exclusion applies only to separate storm sewers. Discharges from combined sewers and bypass sewers are not excluded.)
- (j) Discharges of pollutants from agricultural and silvicultural activities, including irrigation return flow and runoff from orchards, cultivated crops, pastures, rangelands, and forest lands, except that this exclusion shall not apply to the following:
- (1) Discharges from animal confinement facilities, if such facility or facilities contain, or at any time during the previous 12 months contained, for a total of 30 days

or more, any of the following types of animals at or in excess of the number listed for each type of animal:

- (i) 1,000 slaughter and feeder cattle;
- (ii) 700 mature dairy cattle (whether milkers or dry cows);
- (iii) 2,500 swine weighing over 55 pounds;
- (iv) 10,000 sheep;
- (v) 55,000 turkeys;
- (vi) If the animal confinement facility has continuous overflow watering, 100,000 laying hens and broilers;
- (vii) If the animal confinement facility has liquid manure handling systems, 30,000 laying hens and broilers;
- (viii) 5,000 ducks;
- (2) Discharges from animal confinement facilities, if such facility or facilities contain, or any time during the previous 12 months contained for a total of 30 days or more, a combination of animals such that the sum of the following numbers is 1,000 or greater: the number of slaughter and feeder cattle multiplied by 1.0, plus the number of mature dairy cattle multiplied by 1.4, plus the number of swine weighing over 55 pounds multiplied by 0.4, plus the number of sheep multiplied by 0.1;
- (3) Discharges from aquatic animal production facilities;
- (4) Discharges of irrigation return flow (such as tailwater, tile drainage, surfaced ground water flow or bypass water), operated by public or private organizations or individuals, if: (1) There is a point source of discharge (e. g., a pipe, ditch, or other defined or discrete conveyance, whether natural or artificial) and; (2) the return flow is from land areas of more than 3,000 contiguous acres, or 3,000 non-contiguous acres which use the same drainage system; and
- (5) Discharges from any agricultural or silvicultural activity which have been identified by the Regional Administrator or the Director of the State water pollution control agency or interstate agency as a significant contributor of pollution.

The National Resources Defense Council, Inc. (NRDC) sought a declaratory judgment that the regulations are unlawful under the FWPCA. Specifically, NRDC contended that the Administrator does not have authority to exempt any class of point source from the permit requirements of s 402. It argued that Congress in enacting ss 301, 402 of the FWPCA intended to prohibit the discharge of pollutants from all point sources unless a permit had been issued to the discharger under s 402 or unless the point source was explicitly exempted from the permit requirements by statute. The District Court granted NRDC's motion for summary judgment. It held that the FWPCA does not authorize the Administrator to exclude

any class of point sources from the permit program. NRDC v. Train, 396 F.Supp. 1393 (D.D.C.1975). The EPA has appealed to this court. It is joined on appeal by a number of defendant-intervenors, National Forest Products Association (NFPA), National Milk Producers Federation (NMPPF), and the Colorado River Conservation District.⁶

⁶ Briefs as amicus curiae were filed by the American Iron and Steel Institute, the State of Texas, and the State of Washington, Department of Natural Resources.

This case thus presents principally a question of statutory interpretation. EPA also argues that even if Congress intended to include the pertinent categories in the permit program, the regulations exempting them should be upheld on a doctrine of administrative infeasibility, i. e., the regulations should be upheld as a deviation from the literal terms of the FWPCA that is necessary to permit the Agency to realize the principal objectives of the Act.

I. LEGISLATIVE HISTORY

The principal purpose of the FWPCA is "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters."⁷ The Act's ultimate objective, to eliminate the discharge of pollutants into navigable waters by 1985, is to be achieved by means of two intermediate steps. As of July 1, 1977, all point sources other than publicly owned treatment works were to have achieved effluent limitations that require application of the "best practicable control technology."⁸ These same point sources must reduce their effluent discharges by July 1, 1983, to meet limitations determined by application of the "best available technology economically achievable" for each category of point source.⁹

⁷ 33 U.S.C. s 1251(a) (Supp. V 1975).

⁸ 33 U.S.C. s 1311(b)(1)(A) (Supp. V 1975).

⁹ Id. s 1311(b)(2)(A).

The technique for enforcing these effluent limitations is straightforward. Section 301(a) of the FWPCA provides:

Except as in compliance with this section and sections 302, 306, 307, 318, 402, and 404 of this Act, the discharge of any pollutant by any person shall be unlawful.¹⁰

¹⁰ Id. s 1311(a).

Appellants concede that if the regulations are valid, it must be because they are authorized *1374 **152 by s 402; none of the other sections listed in s 301(a) afford grounds for relieving the exempted point sources from the prohibition of s 301.¹¹

¹¹ Section 302, 33 U.S.C. s 1312 (Supp. V 1975), permits the Administrator to set water quality related effluent limitations or control strategies where technology-based limitations are inadequate. Section 306, 33 U.S.C. s 1316 (Supp. V 1975), instructs the EPA Administrator to promulgate standards of performance for new sources of pollution constructed after those standards are proposed. Section 307, 33 U.S.C. s 1317 (Supp. V 1975), gives the EPA Administrator the authority to issue generally applicable effluent standards with respect to toxic substances and to require pretreatment of some pollutants before their introduction into treatment works. By virtue of s 318, 33 U.S.C. s 1328 (Supp. V 1975), the Administrator may "permit the discharge of a specific pollutant or pollutants under controlled conditions associated with an approved aquaculture project under Federal or State supervision." Section 404, 33 U.S.C. s 1344 (Supp. V 1975), gives the Secretary of the Army authority to issue permits for the discharge of dredged or fill material into the navigable waters at specified disposal sites.

Section 402 provides in relevant part that the Administrator may, after opportunity for public hearing, issue a permit for the discharge of any pollutant, or combination of pollutants, notwithstanding section 301(a), upon condition that such discharge will meet either all applicable requirements under sections 301, 302, 306, 307, 308, and 403 of this Act, or prior to the taking of the necessary implementing actions relating to all such requirements, such conditions as the Administrator determines are necessary to carry out the provisions of this Act.

The NPDES permit program established by s 402 is central to the enforcement of the FWPCA. It translates general effluent limitations into the specific obligations of a discharger. As this court noted in NRDC v. Train, 166 U.S.App.D.C. 312, 315, 510 F.2d 692, 695 (1975), the Act "relies primarily on a permit program for the achievement of effluent limitations . . . to attain its goals." The comments in floor debates of Senator Muskie, the leading Congressional sponsor of the Act, makes this clear.¹²

¹² "The Administrator of the Environmental Protection Agency is authorized to regulate discharge of pollutants

through the use of an expanded permit program." 117 Cong.Rec. 38800 (1971) (Senator Muskie) (emphasis added), reprinted in 2 Environmental Policy Div., Congressional Reference Serv., A Legislative History of the Water Pollution Control Act Amendments of 1972, at 1259 (Senate Public Works Comm. Print 1973) (hereinafter cited as Legislative History).

The appellants argue that s 402 not only gives the Administrator the discretion to grant or refuse a permit, but also gives him the authority to exempt classes of point sources from the permit requirements entirely. They argue that this interpretation is supported by the legislative history of s 402 and the fact that unavailability of this exemption power would place unmanageable administrative burdens on the EPA.

1 Putting aside for the moment the appellants' administrative infeasibility argument, we agree with the District Court that the legislative history makes clear that Congress intended the NPDES permit to be the only means by which a discharger from a point source may escape the total prohibition of s 301(a). This intention is evident in both Committee Reports. In discussing s 301 the House Report stressed:

Any discharge of a pollutant without a permit issued by the Administrator under section 318, or by the Administrator or the State under section 402 or by the Secretary of the Army under section 404 is unlawful. Any discharge of a pollutant not in compliance with the conditions or limitations of such a permit is also unlawful.¹³

13 H.Rep.No.92-911, 92d Cong., 2d Sess. 100 (1972), reprinted in Legislative History at 787.

The Senate Report echoed this interpretation:

(Section 301) clearly establishes that the discharge of pollutants is unlawful. Unlike its predecessor program which permitted the discharge of certain amounts of pollutants under the conditions described above, this legislation would clearly establish that no one has the right *1375 **153 to pollute that pollution continues because of technological limits, not because of any inherent rights to use the nation's waterways for the purpose of disposing of wastes.

The program proposed by this Section will be implemented through permits issued in Section 402. The Administrator will have the capability and the mandate to press technology and economics to achieve those levels of effluent reduction which he believes to be practicable in the first instance and attainable in the second.¹⁴

14 S.Rep.No.92-414, 92d Cong., 1st Sess. 42 (1971), reprinted in Legislative History at 1460; U.S.Code Cong. & Admin.News 1972, pp. 3668, 3709.

2 The EPA argues that since s 402 provides that "the Administrator may . . . issue a permit for the discharge of any pollutant" (emphasis added), he is given the discretion to exempt point sources from the permit requirements altogether. This argument, as to what Congress meant by the word "may" in s 402, is insufficient to rebut the plain language of the statute and the committee reports. We say this with due awareness of the deference normally due "the construction of a new statute by its implementing agency." *NRDC v. Train*, 166 U.S.App.D.C. at 326, 510 F.2d at 706; see *Zuber v. Allen*, 396 U.S. 168, 192, 90 S.Ct. 314, 24 L.Ed.2d 345 (1969); *Udall v. Tallman*, 380 U.S. 1, 16, 85 S.Ct. 792, 13 L.Ed.2d 616 (1965). The use of the word "may" in s 402 means only that the Administrator has discretion either to issue a permit or to leave the discharger subject to the total proscription of s 301. This is the natural reading, and the one that retains the fundamental logic of the statute.

Under the EPA's interpretation the Administrator would have broad discretion to exempt large classes of point sources from any or all requirements of the FWPCA. This is a result that the legislators did not intend. Rather they stressed that the FWPCA was a tough law that relied on explicit mandates to a degree uncommon in legislation of this type. A statement of Senator Jennings Randolph of West Virginia, Chairman of the Senate Committee responsible for the Act, is illustrative.

I stress very strongly that Congress has become very specific on the steps it wants taken with regard to environmental protection. We have written into law precise standards and definite guidelines on how the environment should be protected. We have done more than just provide broad directives for administrators to follow. . . .

In the past, too many of our environmental laws have contained vague generalities. What we are attempting to do now is provide laws that can be administered with certainty and precision. I think that is what the American people expect that we do.¹⁵

15. 117 Cong.Rec. 38805 (1971), reprinted in Legislative History at 1272. See also the comments of Senator Montoya on the original Senate bill.

Your committee has placed before you a tough bill. This body and this Nation would not have it be otherwise. Our legislation contains an important principle of psychology: Men seldom draw the best from themselves

unless pressed by circumstances and deadlines. This bill contains deadlines and it imposes rather tough standards on industry, municipalities, and all other sources of pollution. Only under such conditions are we likely to press the technological threshold of invention into new and imaginative developments that will allow us to meet the objectives stated in our bill.

117 Cong.Rec. 38808 (1971), reprinted in Legislative History at 1278.

There are innumerable references in the legislative history to the effect that the Act is founded on the "basic premise that a discharge of pollutants without a permit is unlawful and that discharges not in compliance with the limitations and conditions for a permit are unlawful."¹⁶ Even when infeasibility arguments were squarely raised, *1376 **154 the legislature declined to abandon the permit requirement.¹⁷ We stand by our previous interpretation of the Act's scheme for the enforcement of effluent limitations:

16 118 Cong.Rec. 10215 (1972) (Rep. Clausen), reprinted in Legislative History at 378. See, e. g., H.R.Rep.No.92-911 92d Cong., 2d Sess. 100 (1972), reprinted in Legislative History at 787; S.Rep.No.92-414; 92d Cong., 1st Sess. 42-43 (1971), reprinted in Legislative History at 1460-61; 118 Cong.Rec. 10661 (1972) (Rep. Podell), reprinted in Legislative History at 574.

17 The House rejected an amendment designed to avoid the problems of including irrigation return flows in the permit program. Congressman Teno Roncalio of Wyoming offered an amendment on the floor of the House that would have explicitly exempted irrigated agriculture from the NPDES permit program.

Mr. RONCALIO. . . .

I offer my amendment so that a serious omission to H.R. 11896 can be corrected before we end up with a law that would be virtually impossible to enforce. My amendment would specifically exempt irrigated agriculture from sections 301(a), 302 and 304 of the Federal Water Pollution Control Act.

I think my colleagues will agree that the type of salinity problems created by irrigation runoff are simply not as alarming as the more common pollutants discharged by industrial and municipal facilities. Substantial salinity concentrations have little effect on recreational use of water or its suitability for the propagation of fish.

My amendment is necessary, Mr. Chairman, because at the present time we could not enforce pollution control on irrigation systems. It is virtually impossible to trace pollutants to specific irrigation lands, making these pollutants a nonpoint source in most cases. Second,

we do not have the technology to deal with irrigation runoff (as contrasted to industrial pollution) and if we begin making laws to control something that cannot be handled with our given technological knowledge, we will be doing many thousand farmers and ranchers a great disservice. In fact, we will be doing the Federal Government a great disservice if we actually pass a Federal water pollution control bill that cannot be fully enforced.

118 Cong.Rec. 10764-65 (1972), reprinted in Legislative History at 651. The amendment was rejected.

After dates set forth in (s 301(b)), a person must obtain a permit and comply with its terms in order to discharge any pollutant. The conditions of the permit must assure that any discharge complies with the applicable requirements of numerous sections including the effluent limitations of section 301(b).

NRDC v. Train, 166 U.S.App.D.C. at 316, 510 F.2d at 696 (emphasis added; footnotes omitted).

We also note that all the Supreme Court decisions referring to s 402 view the permit as the only means by which a point source polluter can avoid the ban on discharges found in s 301. Strictly speaking these expressions may be dicta, for they do not touch directly on the interpretation of s 402. But they are at least a considered reading of what the Act appears to mean.

In Train v. Colorado Public Interest Research Group, Inc., 426 U.S. 1, 96 S.Ct. 1938, 48 L.Ed.2d 434 (1976), Justice Marshall characterized the enforcement scheme of the FWPCA as follows:

(E)ffluent limitations are enforced through a permit program. The discharge of "pollutants" into water is unlawful without a permit issued by the Administrator of the EPA or, if a State has developed a program that complies with the FWPCA, by the State. . . .

Id. at 7, 96 S.Ct. at 1941 (footnote omitted).

In EPA v. State Water Resources Control Board, 426 U.S. 200, 96 S.Ct. 2022, 48 L.Ed.2d 578 (1976), the issue was whether federal installations were subject to state NPDES programs. Justice White's majority opinion describes NPDES at 205, 96 S.Ct. at 2025 (footnote omitted):

Under NPDES, it is unlawful for any person to discharge a pollutant without obtaining a permit and complying with its terms. An NPDES permit serves to transform generally

applicable effluent limitations and other standards including those based on water quality into the obligations (including a timetable for compliance) of the individual discharger, and the Amendments provide for direct administrative and judicial enforcement of permits.

In *E. I. du Pont de Nemours v. Train*, 430 U.S. 112, 97 S.Ct. 965, 51 L.Ed.2d 204 (1977), the Court held that under FWPCA the EPA can set uniform effluent limitations through industry-wide regulations rather than develop them on an individual basis during the permit issuance process. But the Court, per Justice Stevens, clearly indicated *1377 **155 that those limitations were translated into obligations of the discharger through their inclusion in an NPDES permit. *Id.* at 119-20, 97 S.Ct. 965.

The wording of the statute, legislative history, and precedents are clear: the EPA Administrator does not have authority to exempt categories of point sources from the permit requirements of s 402. Courts may not manufacture for an agency a revisory power inconsistent with the clear intent of the relevant statute. In holding that the FPC does not have authority to exempt the rates of small producers from regulation under the Natural Gas Act, the Supreme Court observed:

It is not the Court's role . . . to overturn congressional assumptions embedded into the framework of regulation established by the Act. This is a proper task for the Legislature where the public interest may be considered from the multifaceted points of view of the representational process.

FPC v. Texaco, Inc., 417 U.S. 380, 400, 94 S.Ct. 2315, 2327, 41 L.Ed.2d 141 (1974).

II. ADMINISTRATIVE INFEASIBILITY

The appellants have stressed in briefs and at oral argument the extraordinary burden on the EPA that will be imposed by the above interpretation of the scope of the NPDES program. The spectre of millions of applications for permits is evoked both as part of appellants' legislative history argument that Congress could not have intended to impose such burdens on the EPA and as an invitation to this court to uphold the regulations as deviations from the literal terms of the FWPCA necessary to permit the agency to realize the general objectives of that act. During oral argument we asked for supplemental briefs so that the appellants could expand on their infeasibility arguments. We consider EPA's infeasibility contentions in turn.

A. Uniform National Effluent Limitations

EPA argues that the regulatory scheme intended under Titles III and IV of the FWPCA requires, first, that the Administrator establish national effluent limitations¹⁸ and, second, that these limitations be incorporated in the individual permits of dischargers. EPA argues that the establishment of such limitations is simply not possible with the type of point sources involved in the 1973 regulations, which essentially involve the discharge of runoff i. e., wastewaters generated by rainfall that drain over terrain into navigable waters, picking up pollutants along the way.

18 See FWPCA s 502(11), 33 U.S.C. s 1362(11) (Supp. V 1975):

The term "effluent limitation" means any restriction established by a State or the Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources into navigable waters, the waters of the contiguous zone, or the ocean, including schedules of compliance.

There is an initial question, to what extent point sources are involved in agricultural, silvicultural, and storm sewer runoff. The definition of point source in s 502(14), including the concept of a "discrete conveyance", suggests that there is room here for some exclusion by interpretation. We discuss this issue subsequently. Meanwhile, we assume that even taking into account what are clearly point sources, there is a problem of infeasibility which the EPA properly opens for discussion.

EPA contends that certain characteristics of runoff pollution make it difficult to promulgate effluent limitations for most of the point sources exempted by the 1973 regulations:

The major characteristic of the pollution problem which is generated by runoff . . . is that the owner of the discharge point . . . has no control over the quantity of the flow or the nature and amounts of the pollutants picked up by the runoff. The amount of flow obviously is unpredictable because it results from the duration and intensity of the rainfall event, the topography, the type of ground cover and the saturation point of the land due to any previous *1378 **156 rainfall. Similar factors affect the types of pollutants which will be picked up by that runoff, including the type of farming practices employed, the rate and type of pesticide and fertilizer application, and the conservation practices employed . . .

An effluent limitation must be a precise number in order for it to be an effective regulatory tool; both the discharger and the regulatory agency need to have an identifiable standard upon which to determine whether the facility is in compliance. That was the principal of the passage of the 1972 Amendments.

Federal Appellants' Memorandum on "Impossibility" at 7-8 (footnote omitted). Implicit in EPA's contentions is the premise that there must be a uniform effluent limitation prior to issuing a permit. That is not our understanding of the law.

In *NRDC v. Train*, we described the interrelationship of the effluent limitations and the NPDES permit program, 166 U.S.App.D.C. at 327, 510 F.2d at 707 (footnotes omitted):

The Act relies on effluent limitations on individual point sources as the "basis of pollution prevention and elimination." . . . Section 301(b) contains a broad description of phase one and phase two effluent limitations, to be achieved by July 1, 1977 and July 1, 1983, respectively. The limitations established under section 301(b) are to be imposed upon individual point sources through permits issued under the National Pollutant Discharge Elimination System (NPDES) established by section 402. Those permits are to contain schedules which will assure phased compliance with the effluent limitations no later than the final dates set forth in section 301(b). Section 304(b) calls for the publication of regulations containing guidelines for effluent limitations for classes and categories of point sources. These guidelines are intended to assist in the establishment of section 301(b) limitations that will provide uniformity in the permit conditions imposed on similar sources within the same category by diverse state and federal permit authorities.

As noted in *NRDC v. Train*, the primary purpose of the effluent limitations and guidelines was to provide uniformity among the federal and state jurisdictions enforcing the NPDES program and prevent the "Tragedy of the Commons"¹⁹ that might result if jurisdictions can compete for industry and development by providing more liberal limitations than their neighboring states. 166 U.S.App.D.C. at 329, 510 F.2d at 709. The effluent limitations were intended to create floors that had to be respected by state permit programs.

19 As one commentator has recently written:
 The Tragedy of the Commons arises in noncentralized decisionmaking under conditions in which the rational but independent pursuit by each decisionmaker of its own self-interest leads to results that leave all

decisionmakers worse off than they would have been had they been able to agree collectively on a different set of policies.

Stewart, *Pyramids of Sacrifice? Problems of Federalism in Mandating State Implementation of National Environmental Policy*, 86 Yale L.J. 1196, 1211 (1977). The classic account of the Tragedy of the Commons can be found in Hardin, *The Tragedy of the Commons*, 162 Science 1243 (1968). Hardin makes the point in the context of sheep-grazing. Put simply, even over-simply, Hardin shows that if no one is authorized to set limits to preserve open pasture land as a whole, allowing sheep to graze on that land may lead to serious overgrazing, as each herdsman thinks only of his own advantage. The solution lies in some mandate, from above or by agreement, with sanctions to compel conformance.

But in *NRDC v. Train* it was also recognized that permits could be issued before national effluent limitations were promulgated and that permits issued subsequent to promulgation of uniform effluent limitations could be modified to take account of special characteristics of subcategories of point sources.

Prior to the promulgation of effluent limitations under section 301, the director of a state program is instructed merely to impose such terms and conditions in each permit as he determines are necessary to carry out the provisions of the Act. Once *1379 **157 an effluent limitation is established, however, the state director and the regional EPA Administrator are required to apply the specified, uniform effluent limitations, modified only as necessary to take account of fundamentally different factors pertaining to particular point sources within a given class or category. Any variation in the uniform limitations adopted for specific dischargers must be approved by the Administrator.

166 U.S.App.D.C. at 330, 510 F.2d at 710 (footnotes omitted).

Another passage in *NRDC v. Train* touches on the infeasibility problem. We noted that "(t)he statutory framework is not so tightly drawn as to require guidelines for each and every class and category of point source regardless of the need for uniform guidelines or to mandate that all guidelines be published prior to December 31 (1974) regardless of their quality or the burden that task would place upon the agency." *Id.* at 320-21, 510 F.2d at 710-11. In that case this court fully appreciated that technological and administrative constraints might prevent the Administrator from developing guidelines and corresponding uniform numeric effluent limitations for certain point sources anytime

in the near future. The Administrator was deemed to have the burden of demonstrating that the failure to develop the guidelines on schedule was due to administrative or technological infeasibility. 166 U.S.App.D.C. at 333, 510 F.2d at 713. Yet the underlying teaching was that technological or administrative infeasibility was a reason for adjusting court mandates to the minimum extent necessary to realize the general objectives of the Act.²⁰ It is a number of steps again to suggest that these problems afford the Administrator the authority to exempt categories of point sources from the NPDES program entirely.

20 In *NRDC v. Train*, this court stated:

A federal equity court may exercise its discretion to give or withhold its mandate in furtherance of the public interest, including specifically the interest in effectuating the congressional objective incorporated in regulatory legislation. We think the court may forebear the issuance of an order in those cases where it is convinced by the official involved that he has in good faith employed the utmost diligence in discharging his statutory responsibilities. The sound discretion of an equity court does not embrace enforcement through contempt of a party's duty to comply with an order that calls him "to do an impossibility."

166 U.S.App.D.C. at 333, 510 F.2d at 713 (footnotes omitted). For reasons stated in this opinion, we conclude that to require the EPA Administrator to include silvicultural, agricultural, and storm sewer point sources in the NPDES program is not to require him "to do an impossibility."

With time, experience, and technological development, more point sources in the categories that EPA has now classed as exempt may be amenable to national effluent limitations achieved through end-of-pipe technology or other means of pollution control. EPA has noted its own success with runoff from mining operations:

EPA has found that in the area of runoff from mining operations, there is sufficient predictability because of a longer history of regulation and the relatively confined nature of the operations that numerical limitations can be established. Thus, consistent with EPA's position stated earlier that it will expand the permit program where its capability of establishing effluent limitations allows, appropriate limitations have been created and the permit program expanded.

Federal Appellants' Memorandum on "Impossibility" at 8.

3 In sum, we conclude that the existence of uniform national effluent limitations is not a necessary precondition for incorporating into the NPDES program pollution from agricultural, silvicultural, and storm water runoff point sources. The technological or administrative infeasibility of such limitations may result in adjustments in the permit programs, as will be seen, but it does not authorize the Administrator to exclude the relevant point source from the NPDES program.

B. Alternative Permit Conditions under s 402(a)

EPA contends that even if it is possible to issue permits without national effluent limitations, **1380 **158* the special characteristics of point sources of runoff pollution make it infeasible to develop restrictions on a case-by-case basis. EPA's implicit premise is that whether limitations are promulgated on a class or individual source basis, it is still necessary to articulate any limitation in terms of a numerical effluent standard. That is not our understanding.

4 Section 402 provides that a permit may be issued upon condition "that such discharge will meet either all applicable requirements under sections 301, 302, 306, 307, 308 and 403 of this Act, or prior to taking of necessary implementing actions relating to all such requirements, such conditions as the Administrator determines are necessary to carry out the provisions of this Act." 33 U.S.C. s 1342(a) (Supp. V 1975) (emphasis added). This provision gives EPA considerable flexibility in framing the permit to achieve a desired reduction in pollutant discharges. The permit may proscribe industry practices that aggravate the problem of point source pollution.²¹

21 That Congress did not regard numeric effluent limitations as the only permissible limitation on a discharger is supported by s 302(a) of the Act, 33 U.S.C. s 1312(a) (Supp. V 1975):

Whenever, in the judgment of the Administrator, discharges of pollutants from a point source or group of point sources, with the application of effluent limitations required under (s 301(b) of the Act), would interfere with the attainment or maintenance of that water quality in a specific portion of the navigable waters which shall assure protection of public water supplies, agricultural and industrial uses, and the protection and propagation of a balanced population of shellfish, fish and wildlife, and allow recreational activities in and on the water, effluent limitations (including alternative effluent control strategies) for such point source or sources shall be established

which can reasonably be expected to contribute to the attainment or maintenance of such water quality. The emphasis has been added.

EPA's counsel caricatures the matter by stating that recognition of any such authority would give EPA the power "to instruct each individual farmer on his farming practices." Federal Appellants Memorandum on "Impossibility" at 12. Any limitation on a polluter forces him to modify his conduct and operations. For example, an air polluter may have a choice of installing scrubbers, burning different fuels or reducing output. Indeed, the authority to prescribe limits consistent with the best practicable technology may be tantamount to prescribing that technology. Of course, when alternative techniques are available, Congress intended to give the discharger as much flexibility as possible in choosing his mode of compliance. See, e. g., H.Rep.No.92-911, 92d Cong., 2d Sess. 107, reprinted in Legislative History at 794. We only indicate here that when numerical effluent limitations are infeasible, EPA may issue permits with conditions designed to reduce the level of effluent discharges to acceptable levels. This may well mean opting for a gross reduction in pollutant discharge rather than the fine-tuning suggested by numerical limitations. But this ambitious statute is not hospitable to the concept that the appropriate response to a difficult pollution problem is not to try at all.

It may be appropriate in certain circumstances for the EPA to require a permittee simply to monitor and report effluent levels; EPA manifestly has this authority.²² Such permit conditions might be desirable where the full extent of the pollution problem is not known.

22 FWPCA s 402(a)(3), (b)(2)(B), 33 U.S.C. s 1342(a)(3), (b)(2)(B) (Supp. V 1975). EPA concedes that it has this authority. Federal Appellants' Memorandum on "Impossibility" at 14.

C. General Permits

Finally, EPA argues that the number of permits involved in the absence of an exemption authority will simply overwhelm the Agency. Affidavits filed with the District Court indicate, for example, that the number of silviculture point sources may be over 300,000 and that there are approximately 100,000 separate storm sewer point sources.²³ We are and must be sensitive to ***1381** ****159** EPA's concerns of an intolerable permit load. But the District Court and the various parties have suggested devices to mitigate the burden to accommodate within a practical regulatory scheme

Congress's clear mandate that all point sources have permits. All that is required is that EPA makes full use of its interpretational authority. The existence of a variety of options belies EPA's infeasibility arguments.

23 Affidavit of William H. McCredie, Director, Industrial Forestry, of the NFPA; Affidavit of Walter G. Gilbert, Chief of the Municipal Operations Branch, Municipal Waste Water Systems Div., EPA Office of Air and Water Programs.

5 Section 402 does not explicitly describe the necessary scope of a NPDES permit. The most significant requirement is that the permit be in compliance with limitation sections of the Act described above. As a result NRDC and the District Court have suggested the use of area or general permits. The Act allows such techniques. Area-wide regulation is one well-established means of coping with administrative exigency. An instance is area pricing for natural gas producers, which the Supreme Court upheld in Permian Basin Area Rate Cases, 390 U.S. 747, 88 S.Ct. 1344, 20 L.Ed.2d 312 (1968).²⁴ A more dramatic example is the administrative search warrant, which may be issued on an area basis despite the normal Fourth Amendment requirement of probable cause for searching specific premises. *Camara v. Municipal Court*, 387 U.S. 523, 87 S.Ct. 1727, 18 L.Ed.2d 930 (1967).

24 In Permian Basin the Supreme Court observed: The Commission has asserted, and the history of producer regulation has confirmed, that the ultimate achievement of the Commission's regulatory purposes may easily depend upon the contrivance of more expeditious administrative methods. The Commission believes that the elements of such methods may be found in area proceedings. "(C)onsiderations of feasibility and practicality are certainly germane" to the issues before us. . . . We cannot, in these circumstances, conclude that Congress has given authority inadequate to achieve with reasonable effectiveness the purposes for which it has acted. 390 U.S. at 777, 88 S.Ct. at 1365.

In response to the District Court's order, EPA promulgated regulations that make use of the general permit device. 42 Fed.Reg. 6846-53 (Feb. 4, 1977). The general permit is addressed to a class of point source dischargers, subject to notice and opportunity for public hearing in the geographical area covered by the permit. Although we do not pass on the validity of the February, 1977, regulations, they serve to dilute an objection of wholesale infeasibility.²⁵

25 It is also of some, albeit limited, significance that the House Committee on Government Operations found EPA's administrative problems with applying the permit program to animal feedlots "grossly exaggerated." It was of the opinion that the Administrator did not have authority to exempt point sources from the NPDES program. H.Rep.No.93-1012, 93d Cong., 2d Sess. 15-30 (1974).

Our approach is not fairly subject to the criticism that it elevates form over substance that the end result will look very much like EPA's categorical exemption. It is the function of the courts to require agencies to comply with legislative intent when that intent is clear, and to leave it to the legislature to make adjustments when the result is counterproductive.²⁶ At the same time, where intent on an issue is unclear, ***1382** ****160** we are instructed to afford the administering agency the flexibility necessary to achieve the general objectives of the Act. *Weinberger v. Bentex Pharmaceuticals, Inc.*, 412 U.S. 645, 653, 93 S.Ct. 2448, 37 L.Ed.2d 235 (1973); *United States v. Southwestern Cable Co.*, 392 U.S. 157, 177-78, 88 S.Ct. 1994, 20 L.Ed.2d 1001 (1968); *Permian Basin Area Rate Cases*, 390 U.S. 747, 780, 88 S.Ct. 1344, 20 L.Ed.2d 312 (1968). These lines of authority conjoin in our approach. We insist, as the Act insists, that a permit is necessary; the Administrator has no authority to exempt point sources from the NPDES program. But we concede necessary flexibility in the shaping of the permits that is not inconsistent with the clear terms of the Act.

26 The Supreme Court recently reiterated this instruction in *Union Electric Co. v. EPA*, 427 U.S. 246, 96 S.Ct. 2518, 49 L.Ed.2d 474 (1976). There the Court held that the EPA Administrator could not consider claims of technological or economic infeasibility when approving state implementation plans under the Clean Air Act Amendments of 1970, 42 U.S.C. ss 1857a-1857i (1970). Such claims were held only to be cognizable by the states in the plan design stage or by the Administrator when drawing up compliance orders. Justice Marshall, writing for the Court, emphasized that federal courts are not to ignore clear expressions of Congressional intent in order to accommodate claims of technological or economic infeasibility. Allowing such claims to be raised by appealing the Administrator's approval of an implementation plan . . . would frustrate congressional intent. It would permit a proposed plan to be struck down as infeasible before it is given a chance to work, even though Congress clearly contemplated that some plans would be infeasible when proposed. And it would permit the Administrator or a

federal court to reject a State's legislative choices in regulating air pollution, even though Congress plainly left with the States, so long as the national standards were met, the power to determine which sources would be burdened by regulation and to what extent. Technology forcing is a concept somewhat new to our national experience and it necessarily entails certain risks. But Congress considered those risks in passing the 1970 Amendments and decided that the dangers posed by uncontrolled air pollution made them worth taking. Petitioner's theory would render that considered legislative judgment a nullity, and that is a result we refuse to reach.

427 U.S. at 268-69, 96 S.Ct. at 2531 (footnote omitted). See also *Wilderness Society v. Morton*, 156 U.S.App.D.C. 121, 171, 479 F.2d 842, 892 (1973), cert. denied, 411 U.S. 917, 93 S.Ct. 1550, 36 L.Ed.2d 309 (quoting *United States v. City and County of San Francisco*, 310 U.S. 16, 31-32, 60 S.Ct. 749, 84 L.Ed. 1050 (1940): " 'We cannot accept the contention that administrative rulings such as those relied on can thwart the plain purpose of a valid law.' ")

There is also a very practical difference between a general permit and an exemption. An exemption tends to become indefinite: the problem drops out of sight, into a pool of inertia, unlikely to be recalled in the absence of crisis or a strong political protagonist. In contrast, the general or area permit approach forces the Agency to focus on the problems of specific regions and requires that the problems of the region be reconsidered at least every five years, the maximum duration of a permit.²⁷

27 33 U.S.C. s 1342(a)(3), (b)(1)(B) (Supp. V 1975).

D. Other Interpretational Powers

6 Many of the intervenor-appellants appear to argue that the District Court should be reversed because the categories exempted by EPA are nonpoint sources and are not, in fact, point sources.²⁸ We agree with the District Court "that the power to define point and nonpoint sources is vested in EPA and should be reviewed by the court only after opportunity for full agency review and examination." 396 F.Supp. at 1396. The only issue precisely confronted by all the parties and properly framed for our consideration is whether the Administrator has authority to exempt point sources from the NPDES program. We also think that we should, for similar reasons, not consider at this time the appropriate definition of "discharge of any pollutant" as used in s 402. The American Iron and Steel Institute as amicus curiae has pressed upon

us the argument that the term "discharge" as used in s 402 was intended to encompass only "volitional flows" that add pollutants to navigable waters. Most forms of runoff, it is argued, do not involve volitional flows.

28 This appears to be the position of the Colorado River Water Conservation District and the NFPA with respect to silvicultural activities, and NMPF, less obviously, with respect to small dairy farms.

We would put in the same category EPA's contention that the exempt categories are best handled under the areawide waste treatment management planning process of s 208 of the FWPCA, 33 U.S.C. s 1288 (Supp. V 1975). By its terms that section is concerned with areawide waste treatment plans that identify and control "agriculturally and silviculturally related non-point sources of pollution." Id. s 1288(b)(2)(F).

7 We assume that FWPCA, however tight in some respects, leaves some leeway to EPA in the interpretation of that statute, and in that regard affords the Agency some means to consider matters of feasibility. However, for reasons already noted, we do not consider these particular contentions as to interpretation on the merits.

III. CONCLUSION

8 As the Supreme Court recently stated in a FWPCA case, "(t)he question . . . is ****161 *1383** not what a court thinks is generally appropriate to the regulatory process, it is what Congress intended . . ." E. I. du Pont de Nemours & Co. v. Train, 430 U.S. 112, 138, 97 S.Ct. 965, 980, 51 L.Ed.2d 204 (1977). We find a plain Congressional intent to require permits in any situation of pollution from point sources. We also discern an intent to give EPA flexibility in the structure of the permits, in the form of general or area permits. We are aware that Congress hoped that more of the NPDES permit program would be administered by the states at this point.²⁹ But it also made provision for continuing EPA administration. Imagination conjoined with determination will likely give EPA a capability for practicable administration. If not, the remedy lies with Congress.

29 See, e. g., 118 Cong.Rec. 10235 (1972) (Rep. Ichord) reprinted in Legislative History at 428.

So ordered.

MacKINNON, Circuit Judge, concurring:

I concur in the very sound and practical construction set forth in the foregoing opinion. Any person concerned with the actual application and enforcement of laws would necessarily be concerned by the application of the relevant legislation to all point sources in agriculture and particularly to irrigated agriculture. Concern would also lie in the congressional admission that present technology is inadequate to enable our citizens to meet the standards and deadlines the Act imposes; in passing the law, Congress was relying on the future "invention (of) new and imaginative developments that will allow us to meet the objectives of our bill."¹ In gambling parlance, Congress in enacting the law was "betting on the come." It is relying on our citizens in the near future to develop the complex technology to meet all the law's standards and objectives on time. The difficulty with that approach is that the hopes of Congress in this respect, like that of any gambler, might not be realized. The agency in this case, however, has shown that it takes a realistic view of both the situation and the task of meeting the difficult requirements and objectives of the Act. I sincerely hope that the ability of the agency to issue section 402 permits including general area permits² will permit it to meet the present and future compliance problems posed by the Act in a practical way.

1 Comments of Senator Montoya, 117 Cong.Rec. 38808 (1971), quoted in court's opinion at 12, reprinted in Legislative History at 1278.

2 As an example, an area permit with appropriate conditions and modifications could issue for the agricultural point sources within the Grand River Irrigation District, or the watershed of the Roaring Fork River and tributaries, etc.

v.

UNITED STATES ENVIRONMENTAL
PROTECTION AGENCY; Edwin B. Erickson,
Region III Administrator; William Reilly,
Administrator, United States Environmental
Protection Agency; Westvaco Corporation;
The American Paper Institute, Incorporated;
Chesapeake Corporation; Union Camp
Corporation; The State of Maryland, Department
of the Environment, Defendants-Appellees.

No. 92-2520. Argued June
9, 1993. Decided Dec. 22, 1993.

Environmental group sued Environmental Protection Agency (EPA) challenging EPA's dioxin criteria document and its approval of water quality standards of states of Maryland and Virginia which allowed levels of dioxin which exceeded EPA's own guidance criterion. The United States District Court for the Eastern District of Virginia, James R. Spencer, J., 770 F.Supp. 1093, dismissed original count one of complaint with leave to amend, and subsequently, 806 F.Supp. 1263, granted EPA's motion to dismiss and for partial summary judgment affirming EPA's approval of state water quality standards. Environmental groups appealed. The Court of Appeals, Britt, District Judge, sitting by designation, held that: (1) district court applied correct legal standard in reviewing EPA's approval of state dioxin standards; (2) use of 6.5 grams of maximum residue fish per day as fish consumption standard in approving state's use of 1.2 parts per quadrillion of dioxin was proper; (3) approving use of 5,000 bioconcentration factor (BCF) for dioxin by states in establishing water quality standards was not arbitrary; and (4) states were not required under Clean Water Act to adopt

single numeric criterion for dioxin that protected against all identifiable effects to human health, aquatic life and wildlife.

Affirmed.

Attorneys and Law Firms

*1397 ARGUED: David Sandburg Bailey, Environmental Defense Fund, Washington, D.C., for appellants. John Alan Bryson, United States Department of Justice, Washington, D.C., for appellees. ON BRIEF: Robert W. Adler, Senior Attorney, Natural Resources Defense Counsel, Washington, D.C., for appellants. Myles W. Flint, Acting Assistant Attorney General, Greer S. Goldman, David C. Shilton, United States Department of Justice, Washington, D.C.; Manning Gasch, Jr., Joseph M. Spivey, III, Hunton & Williams, Richmond, Virginia; Roland DuBois, Office of General Counsel, United States Environmental Protection Agency, Washington, D.C.; Andrew Duchovnay, Office of Regional Counsel, United States Environmental Protection Agency, Philadelphia, Pennsylvania, for appellees.

Before HALL and NIEMEYER, Circuit Judges, and BRITT, United States District Judge for the Eastern District of North Carolina, sitting by designation.

Opinion

OPINION

BRITT, District Judge:

This appeal arises out of consolidated suits brought by the Natural Resources Defense Council ("NRDC") and Environmental Defense Fund ("EDF") to challenge the approval by the United States Environmental Protection Agency ("EPA") of state water quality *1398 standards implemented by Maryland and Virginia.¹ Specifically, NRDC and EDF contest the approval of these state standards as they relate to dioxin.²

- 1 NRDC sued EPA challenging the Maryland water quality standards, and EDF sued EPA challenging the Virginia standards.
- 2 The term "dioxin" generally encompasses a broad range of closely-related toxic organic chemical compounds. The specific dioxin compound at issue on this appeal is 2,3,7,8-Tetrachlorodibenzo-p-dioxin ("2,3,7,8-TCDD"). It is highly probable that dioxin is a potent carcinogen. Dioxin is primarily a by-product

of the chlorine bleaching of pulp associated with paper manufacturing.

The district court below issued two published opinions regarding this action; *Natural Resources Defense Council v. EPA*, 770 F.Supp. 1093 (E.D.Va.1991) ("*NRDC I*"), and *Natural Resources Defense Council v. EPA*, 806 F.Supp. 1263 (E.D.Va.1992) ("*NRDC II*").

In *NRDC I*, the district court dismissed the original Count One of the Complaint filed in the Maryland action and held that EPA had discretion under the Clean Water Act ("CWA" or "Act"), 33 U.S.C. §§ 1251 *et seq.*, whether to include numerical criteria for all identifiable effects of dioxin and to revise criteria when the latest available scientific knowledge demanded it. However, the court allowed plaintiff NRDC an opportunity to amend Count One of the Maryland complaint to assert a claim solely under the Administrative Procedure Act ("APA"), 5 U.S.C. §§ 500 *et seq.* *NRDC I*, 770 F.Supp. at 1108-10.

In *NRDC II*, the district court granted EPA's motions to dismiss and for partial summary judgment. The court held that EPA sufficiently reviewed the Maryland and Virginia dioxin standards in accordance with the CWA and that EPA did not abuse its discretion in determining that Maryland and Virginia relied on scientifically defensible assumptions in setting dioxin standards. The district court also dismissed amended Count One of the Maryland complaint on grounds that NRDC failed to exhaust administrative remedies. *NRDC II*, 806 F.Supp. at 1277-78.

NRDC and EDF appeal the district court's decisions and make the following assignments of error: (1) that the district court applied an incorrect legal standard in deciding whether EPA properly approved the state water quality standards; (2) that the district court erred in affirming EPA's approval of the state dioxin standards; and (3) that the district court erred in dismissing both the original and amended Count One of the Maryland complaint. Finding no error, we affirm.

I. FACTS

A full account of the facts can be found in *NRDC I*, 770 F.Supp. at 1094-96, and *NRDC II*, 806 F.Supp. at 1266-72. For ease of reference, this court summarizes the facts as follows: On 11 September 1989, the Maryland Department of the Environment ("MDE") sought to revise Maryland's water quality standards to allow its waters to contain dioxin in the amount of 1.2 parts per quadrillion ("ppq"), an amount indisputably less protective than EPA's own guidance

criterion of .0013 ppq.³ However, MDE chose *1399 this 1.2 ppq criterion because it had been based on the Food and Drug Administration's ("FDA") less conservative cancer potency factor and because MDE felt that EPA's cancer potency factor overestimated the carcinogenic potential of dioxin.⁴ After public hearings were held on the matter, Maryland adopted the 1.2 ppq standard and submitted it to EPA for review and approval.

3 As explained fully by the district court, numeric water criteria, such as the 1.2 ppq and .0013 ppq standards, are based on an assessment of the dose of dioxin that may cause harm and the dose to humans that can be expected as a result of dioxin present in water. Six factors are considered in determining the numeric dioxin criteria: (1) cancer potency; (2) risk level; (3) fish consumption; (4) bioconcentration; (5) water intake; and (6) body weight. *See* discussion *infra*. Of these factors, the first four are primarily at issue on this appeal.

The .0013 ppq figure is taken from EPA's dioxin criteria guidance document, *Ambient Water Quality Criteria for 2,3,7,8-Tetrachlorodibenzo-p-dioxin*, published in 1984 ("1984 dioxin criteria document"). In this document, EPA summarized the scientific information available in 1984 regarding dioxin toxicity and provided useful information for the states to use in adopting their own water quality standards. EPA recommended that where bodies of water are used as a source for both drinking water and edible fish, a dioxin concentration of .0013 ppq is desirable. This .0013 ppq figure means, approximately speaking, that one out of every ten million individuals faces an excess risk of cancer exposure as a result of the water's dioxin content. Thus, a 1.2 ppq standard would mean that, according to EPA's assessment, roughly one out of every ten thousand individuals would face such exposure.

4 EPA relates to the court that its cancer potency factor is among the most conservative, i.e. the most protective, in the world. Other federal agencies, including the FDA and the Center for Disease Control ("CDC"), adopted less conservative dioxin potency standards because these agencies used different assumptions and risk assessment methodologies. Some foreign countries, such as Canada and the Netherlands, have developed estimates of cancer risk even less protective than that used by the FDA or CDC.

Similar events took place in Virginia. On 11 December 1989, the Virginia State Water Control Board ("VSWCB") proposed to revise its water quality standards to include

the 1.2 ppq dioxin standard. After public hearings were held, VSWCB submitted its proposal to EPA for review and approval on 27 September 1990.

EPA approved the Maryland standard on 12 September 1990, and approved the Virginia standard on 25 February 1991. Accompanying each approval, a Technical Support Document ("TSD") was issued by EPA and set out in detail EPA's scientific review of MDE's and VSWCB's analysis in deriving the 1.2 ppq standard. EPA concluded that Maryland's and Virginia's use of the 1.2 ppq standard for dioxin was scientifically defensible, protective of human health, and in full compliance with the CWA.

Plaintiffs then initiated this suit in the district court to challenge EPA's 1984 dioxin criteria document and EPA's approval of the Maryland and Virginia water quality standards. As noted above, the district court dismissed original Count One of the Maryland complaint on grounds that § 304(a) of the CWA does not impose a mandatory duty on EPA to develop numeric criteria for dioxin or to update its 1984 dioxin criteria document. *NRDC I*, 770 F.Supp. at 1107. After giving NRDC an opportunity to amend Count One, the district court dismissed the amended count for lack of finality and failure to exhaust administrative remedies. *NRDC II*, 806 F.Supp. at 1278. The district court also granted summary judgment to EPA on the remaining claims, holding that EPA had not acted arbitrarily or capriciously in approving the state water quality standards. *Id.* at 1277. This appeal followed.

II. STATUTORY SCHEME

1 The main purpose of the CWA is to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters" by reducing, and eventually eliminating, the discharge of pollutants into these waters. 33 U.S.C. § 1251(a) (Supp.1993). While the states and EPA share duties in achieving this goal, primary responsibility for establishing appropriate water quality standards is left to the states. *See id.* §§ 1251(b) (1982); *Chevron U.S.A., Inc. v. Hammond*, 726 F.2d 483 (9th Cir.1984), *cert. denied sub nom. Chevron U.S.A. Inc. v. Sheffield*, 471 U.S. 1140, 105 S.Ct. 2686, 86 L.Ed.2d 703 (1985); *District of Columbia v. Schramm*, 631 F.2d 854 (D.C.Cir.1980). EPA sits in a reviewing capacity of the state-implemented standards, with approval and rejection powers only. 33 U.S.C. § 1313(c) (1982 & Supp.1993). Water quality standards are a critical component of the CWA regulatory scheme because such standards serve as a guideline for setting applicable limitations in individual discharge permits.

In an effort to meet the CWA's primary goal, section 402 of the Act (33 U.S.C. § 1342) establishes the National Pollutant Discharge Elimination System ("NPDES") permit program.⁵ Under this program, permits are issued by either the EPA or by states that have been allocated NPDES permitting authority.⁶ *Id.* § 1342 (1982 & Supp.1993). However, a state's exercise of NPDES permitting authority is subject to EPA approval. *Id.* §§ 1342(c), (d) (1982 & Supp.1993). All NPDES permits must take *1400 into account technology-based effluent limitations that reflect the pollution reduction achievable based on specific equipment or process changes, without reference to the effect on the receiving water, and, where necessary, more stringent limitations representing the level of control necessary to ensure that the receiving waters attain and maintain state water quality standards. *Id.* §§ 1311(b) (1982), 1313(c) (1982 & Supp.1993).

5 For a more thorough explanation of the NPDES framework, see *Westvaco Corp. v. EPA*, 899 F.2d 1383 (4th Cir.1990).

6 It is undisputed that Virginia and Maryland have been given such authority.

Additionally, the CWA requires each state to adopt water quality standards for all waters of that state and to review them at least every three years. *Id.* §§ 1313(a), (b), (c)(1) (1982 & Supp.1993). To adopt these standards, states must first classify the uses for which the water is to be protected, such as fishing and swimming, and then each state must determine the level of water quality necessary to protect those uses. Thus, the following three factors are considered when adopting or evaluating a water quality standard: (1) one or more designated uses of the state waters involved; (2) certain water quality criteria, expressed as numeric pollutant concentration levels or narrative statements representing a quality of water that supports a particular designated use; and (3) an antidegradation policy to protect existing uses and high quality waters. *Id.* § 1313(c)(2)(A) (Supp.1993); 40 C.F.R. § 131.

States are directed to adopt numerical water quality criteria for specific toxic pollutants, such as dioxin, for which EPA has published numerical criteria guidance under 33 U.S.C. § 1314(a), if that pollutant can reasonably be expected to interfere with the designated uses of the states' waters. *Id.* § 1313(c)(2)(B) (Supp.1993). As mentioned previously, states must submit their new or revised water quality standards to EPA for review. *Id.* § 1313(c)(2)(A) (Supp.1993). On review, each submission must contain at least six elements: (1) use

designations consistent with the CWA; (2) a description of methods used and analyses conducted to support revisions of water quality standards; (3) water quality criteria sufficient to protect the designated uses; (4) an antidegradation policy; (5) certification of compliance with state law; and (6) general information to assist EPA in determining the adequacy of the scientific basis for standards that do not include the "fishable/swimmable" uses as set forth in 33 U.S.C. § 1251(a)(2). 40 C.F.R. § 131.6.

EPA regulations also provide that states should develop numerical criteria based on EPA's criteria guidance under § 304(a) of the CWA, EPA's criteria guidance modified to reflect site-specific conditions, or other scientifically defensible methods. 40 C.F.R. § 131.11(b)(1). Alternatively, states should establish narrative criteria or criteria based on biomonitoring methods if numerical criteria cannot be ascertained, or to supplement numerical criteria. *Id.* § 131.11(b)(2).

III. DISCUSSION

A. Standard of Review on Appeal

2 As to the first and third issues on appeal, that is, whether the district court properly applied the correct legal standard under the CWA in reviewing EPA's approval of the state water quality standards and whether the district court erred in dismissing both original and amended Count One of the Maryland complaint, this court will apply a *de novo* standard of review. *Schatz v. Rosenberg*, 943 F.2d 485, 489 (4th Cir.1991), *cert. denied sub nom. Schatz v. Weinberg & Green*, 503 U.S. 936, 112 S.Ct. 1475, 117 L.Ed.2d 619 (1992); *see also L.K. Comstock & Co. v. United Eng'rs & Constructors Inc.*, 880 F.2d 219, 221 (9th Cir.1989) (explaining that principles of law applied to facts are reviewed *de novo*).

3 Regarding the second issue on appeal, which is whether the district court erred in affirming EPA's approval of the state dioxin standards, it is undisputed that the correct standard of review is whether the agency action was arbitrary or capricious. The applicable statute provides that an agency's action, such as the EPA action at issue here, must be upheld unless that action was "arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law." 5 U.S.C. § 706(2)(A) (1977). This is, of course, a highly deferential standard which presumes the validity of the agency's action. *Ethyl Corp. v. EPA*, 541 F.2d 1, 34 (D.C.Cir.) (en banc), *cert. denied*, *1401 426 U.S. 941, 96 S.Ct. 2663, 49 L.Ed.2d 394 (1976). Thus, this court's task is to scrutinize the EPA's

activity to determine whether the record reveals that a rational basis exists for its decision. *Id.*

4 This court also is mindful that the CWA is a lengthy and complex statute and that its mandate and policy often require the evaluation of sophisticated data. *Reynolds Metal Co. v. EPA*, 760 F.2d 549, 558 (4th Cir.1985). Of course, in reviewing EPA's actions here, this court does not sit as a scientific body, meticulously reviewing all data under a laboratory microscope. *Id.* at 559. Nonetheless, EPA must fully and ably explain its course of inquiry, its analysis, and its reasoning, and show that a rational connection exists between its decision-making process and its ultimate decision. *Id.*; *Tanners' Council of Am., Inc. v. Train*, 540 F.2d 1188, 1191 (4th Cir.1976).

B. The District Court's Statutory Review of EPA's Approval of the State Water Quality Standards

5 NRDC argues that the district court applied an incorrect legal standard in reviewing EPA's approval of the state dioxin standards. To support this argument, NRDC contends that EPA's approval of the state dioxin standards is governed principally by § 303(c) of the CWA, 33 U.S.C. § 1313(c). Error was committed, so the argument goes, when the district court focused not on § 303(c), but on a policy statement contained in § 101(b) of the CWA, 33 U.S.C. § 1251(b), when it reviewed EPA's decision. NRDC argues further that the court's analysis was flawed because it extended excessive deference to EPA's decision and, accordingly, did not uphold the purposes of the CWA with respect to state-implemented water quality standards as § 101(a) and § 303(c) direct it should do. Specifically, NRDC suggests that under sections 101(a) and 303(c), EPA has an independent duty to objectively ensure that state water quality standards meet the requirements of the CWA, and that nothing in the CWA allows EPA to defer to states on this issue. Stated differently, NRDC contends that the district court misunderstood its function in reviewing EPA's approval by according undue deference to that decision. In sum, NRDC maintains that EPA, as well as the district court, had a duty under the CWA to assert a more dominant role in the review process. The court is unpersuaded.

6 At the outset it is important to note, as the district court correctly found, that *states* have the primary role, under § 303 of the CWA (33 U.S.C. § 1313), in establishing water quality standards. *Chevron U.S.A., Inc.*, 726 F.2d at 489. EPA's sole function, in this respect, is to review those standards for approval. 33 U.S.C. § 1313(c) (1982 & Supp.1993).

Appellants question the intensity of that review, arguing that EPA should not accord an overextended deference to the states' decisions with regard to its water quality standards. EPA, however, asserts that its duty under the CWA is not to determine whether the states used EPA's recommended criterion but instead to review state water quality standards and determine whether the states' decision is *scientifically defensible and protective of designated uses*. See 40 C.F.R. §§ 131.5(a), 131.6(c), 131.11(a) & (b). While the CWA admittedly is less than crystal clear on this precise issue,⁷ the court realizes that it must give due weight to EPA's interpretation and administration of this highly complex statute, particularly when its determination appears to be reasonable and is supported by substantial evidence in the administrative record. *Shanty Town Assocs. Ltd. v. EPA*, 843 F.2d 782, 790 (4th Cir.1988).

7 Section 303(c)(3) of the CWA (33 U.S.C. § 1313(c)(3)) provides that "[i]f the Administrator, within sixty days after the date of submission of the revised or new standard, determines that such standard *meets the requirements of [the Act]*, such standard shall thereafter be the water quality standard for the applicable waters of that State." 33 U.S.C. § 1313(c)(3) (1982) (emphasis added).

In each Technical Support Document ("TSD") issued by the EPA, the agency conducted an analysis regarding every assumption used by Maryland and Virginia in deriving their respective water quality standards. EPA independently found that each factor and assumption was scientifically defensible. In reviewing the criteria as a whole, EPA *1402 also found that they protected the uses that they were designed to protect.

7 In light of this extensive agency review, the court reiterates that it does not sit as a scientific body and is not called on to meticulously inspect each and every bit of technical evidence. *Reynolds Metal Co.*, 760 F.2d at 559. Rather, the court's function is to determine whether proper legal standards were applied. The court agrees with EPA that its duty, under the CWA and the accompanying regulations, is to ensure that the underlying criteria, which are used as the basis of a particular state's water quality standard, are scientifically defensible and are protective of designated uses. EPA and the district court abided by that standard, and appellants fail to cite persuasive authority to the contrary.⁸ Furthermore, EPA adequately documented and explained its reasons for approving the states' water quality standards in the Technical Support Documents attached to its final decisions, and did not merely rubber-stamp each state's proposed standard.

8 Appellants contend that the district court committed serious error in its reading and application of *Mississippi Comm'n on Natural Resources v. Costle*, 625 F.2d 1269 (5th Cir.1980). See *NRDC II*, 806 F.Supp. at 1273. We find this argument without merit particularly because the district court cited *Costle* merely as a reference and only for the proposition that "[t]he CWA does not require uniformity among states, only compliance with its statutory mandate." *Id.* While citation solely to *Costle* for this proposition may be viewed as debatable, the district court did not in any other way rely on *Costle* to ultimately conclude that EPA properly reviewed the Maryland and Virginia standards. Any perceived error therefore would be harmless. In any event, the district court's reading of *Costle* plays no part in our analysis.

We hold that the district court applied the correct legal standard under the CWA in reviewing EPA's approval of the state water quality standards at issue.

C. The District Court's Affirmance of EPA's Approval of the Maryland and Virginia Dioxin Standards

Appellants argue that the district court's affirmance of EPA's approval of the Maryland and Virginia water standards should be reversed primarily for two reasons. First, they assert that EPA's approval was arbitrary and capricious because it was not based on all relevant factors, ignored key aspects of the record before it, and failed to show a rational connection between the facts found and the choices made. Second, they maintain that EPA's action was contrary to law because it did not ensure, as required by § 303(c) of the CWA (33 U.S.C. § 1313(c)), that state standards were consistent with the CWA; that is, that the standard protected all designated water uses.

Specifically, NRDC attacks EPA's assessment of the Maryland and Virginia standards regarding the first four factors used in the numeric dioxin criteria determination, namely: (1) cancer potency,⁹ (2) risk level,¹⁰ (3) fish consumption,¹¹ and (4) bioconcentration factor ("BCF").¹² Of these four, NRDC emphasizes its challenge with respect to the latter two factors, fish consumption and BCF. NRDC contends that these two factors, when considered together, are important because they determine the ultimate "exposure" of an individual to dioxin, while the remaining factors only involve choices about risk or toxicity.

9 Cancer potency measures the "strength" of dioxin's potential to cause cancer.

- 10 Risk level is the projected risk of cancer incidence among an exposed population, ranging from one case in ten million individuals to one case in 100,000. NRDC concedes that risk level generally is a state policy choice, and thus this factor is challenged the least by NRDC.
- 11 Fish consumption predicts the amount of dioxin-exposed fish consumed by a given population.
- 12 BCF predicts how many times greater the concentration of a pollutant, such as dioxin, will be in the tissues of living organisms, such as fish, as compared to the concentration of that pollutant in the ambient water in which the fish lives. According to its 1984 dioxin criteria document, EPA calculates a dioxin BCF of 5000.

1. Fish Consumption

8 EPA estimates, on a national average, that an individual eats 6.5 grams of fish per ¹⁴⁰³ day.¹³ Maryland and Virginia used this estimate, *inter alia*, in calculating the 1.2 ppq water quality standard. Appellants argue that by affirming EPA's approval of the states' use of this estimate, the district court failed to require EPA to protect subpopulations with higher than average fish consumption, particularly recreational and subsistence fishers. Specifically, appellants contend that EPA's 6.5 grams per day fish consumption factor underestimates the actual fish consumption of subpopulations in Maryland and Virginia, and therefore is not protective of a designated use. Appellants further contend that EPA's use of the 6.5 grams per day fish consumption factor is unsupported by the record and violates EPA's own policy and regulations. They emphasize that Maryland and Virginia are coastal states and, as such, are entitled-according to EPA recommendations-to higher than average values for fish consumption.

13 This 6.5 grams per day estimate is based on a 1973-74 market survey data compiled by the National Purchase Diary and the National Marine Fisheries Service. This rate includes consumption of all freshwater and estuarine fish and shellfish, both pollutant-bearing and non-pollutant bearing. It does not include marine fish.

EPA points out that the 6.5 grams per day value is not intended to represent *total* fish consumption but, rather, that *subset* of fish containing the *maximum* residues of dioxin permissible under state law. In setting this value, EPA was establishing a national standard and was well aware that subpopulations might very well consume more than 6.5 *total*

grams of fish per day. No evidence was presented that the subpopulations referred to are consuming more than 6.5 grams per day of *maximum residue fish*.

Appellants argue that the risk is especially high for the Mattaponi and Pamunkey Native American peoples who live near a major paper mill in Virginia and who, it is argued, consume higher-than-average amounts of fish. EPA counters that the fish consumption of these subpopulations is speculative at best, that it is based on anecdotal evidence, and that there is no evidence that the fish that actually are consumed are maximum residue fish. In fact, EPA argues that the Native Americans fish in the streams primarily for shad and herring, both of which are anadromous fish that spend a large part of their lives in the oceans and migrate to the rivers only at certain stages during their lives.

The District Court concluded that the EPA, in exercising its judgment, "relied on scientifically defensible means to reach reasoned judgments regarding fish consumption levels." *NRDC II*, at 1276. We agree.

2. Bioconcentration Factor (BCF)

9 Based on EPA laboratory studies, dioxin is more soluble in fat tissues than it is in water. As a result, it tends to accumulate in fish fat tissues at concentrations higher than those present in the water. By averaging the fat content of fish likely to be eaten by an exposed population, a generic BCF can be calculated that reflects dioxin's presence in fish as some multiple of its concentration in ambient water. In its 1984 dioxin criteria document, EPA calculates a dioxin BCF of 5000 for fish of average (3%) lipid¹⁴ content. Maryland and Virginia used this BCF figure, *inter alia*, to derive their numeric water quality criteria.

14 Lipid content refers to the level of fat found in a species. Because dioxin is "lipophilic," it concentrates in fat tissue to a greater degree than in other body parts.

Appellants challenge EPA's use and approval of a 5000 BCF. They essentially contend that the 5000 BCF figure is outdated because the latest scientific research suggests that a higher BCF should be used. Citing the administrative record, appellants emphasize that: (1) EPA admits that scientific literature and research has changed significantly since preparation of the 1984 dioxin criteria document; (2) EPA further admits that BCF factors now range from 26,000 to 150,000, depending on test species; (3) Virginia conducted a state-specific study which revealed a BCF calculation of 22,000; and (4) Maryland refused to conduct such a

study. Appellants contend that, taking all of these factors into account, EPA ignored all the current scientific data and simply "defaulted" *1404 to its old BCF assumption. Appellants argue that EPA acted arbitrarily and improperly in not requiring a higher BCF, especially when Virginia and Maryland chose less stringent factors for cancer potency and risk. We disagree.

Once again, we are confronted with an area dominated by complex scientific inquiry and judgment. Although EPA is aware that some recent BCF studies suggested a higher BCF than 5000, EPA maintains that such results are inconclusive and that no compelling scientific evidence indicates that a 5000 BCF is no longer within the range of scientific defensibility. We simply are not in a position to second-guess this technical decision by administrative experts. A review of the record does indicate that several more recent BCF studies have been conducted and that some have suggested a higher BCF; however, the court concludes that the best course of action is to leave this debate to the world of science to ultimately be resolved by those with specialized training in this field. Upon a careful review of the administrative record, we find no clear evidence showing that the 5000 BCF figure is not supported by sound scientific rationale. Accordingly, we hold that EPA did not act arbitrarily in approving the BCF figure used by Maryland and Virginia, and that EPA has made a rational connection between the facts found in the administrative record and its choice to approve the BCF figure. EPA's approval of the 5000 BCF will not be disturbed.

3. Protection of All Stream Uses

10 Appellants next contend that the district court ratified EPA's approval of the state dioxin standards without ensuring protection of all stream uses. Appellants suggest that when EPA adopted the 1.2 ppq standard, it was required to demonstrate that other stream uses were protected. They maintain that EPA ignored record evidence revealing that the 1.2 ppq standard could cause serious, direct, toxic effects to aquatic life and other wildlife that consume fish tainted with dioxin. Appellants thus argue that EPA did not follow the CWA, its regulations, or its own guidelines by asserting that the water quality criteria were intended to address only one of the minimum statutory uses, human health protection. Essentially, appellants claim that states must adopt a single criterion for dioxin that protects against all identifiable effects on human health, aquatic life, and wildlife. We disagree.

Section 303(c)(2)(A) of the CWA (33 U.S.C. § 1313(c)(2)(A) (Supp.1993)) requires that new or revised water quality

standards "consist of designated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses." That section also provides:

Such standards shall be such as to protect the public health or welfare, enhance the quality of water and serve the purposes of this chapter. Such standards shall be established taking into consideration their use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes, and also taking into consideration their use and value for navigation.

Id.

Reference to the regulations also is instructive: "A water quality standard ... defines the water quality goals of a water body, or portion thereof, by designating the use or uses to be made of the water and by setting criteria necessary to protect the uses." 40 C.F.R. §§ 130.3, 131.2. The regulations define "criteria" as "elements of State water quality standards, expressed as constituent concentrations, levels, or narrative statements, representing a quality of water that supports a particular use. When criteria are met, water quality will generally protect the designated use." *Id.* § 131.3(b). Section 131.11(a) further provides that "[s]tates must adopt those water quality criteria that protect the designated use. Such criteria must be based on sound scientific rationale and must contain sufficient parameters or constituents to protect the designated use. For waters with multiple use designations, the criteria shall support the most sensitive use." *Id.* § 131.11(a).

11 As previously indicated, states should develop either numerical criteria *1405 based upon CWA guidance (or other scientific methods), or narrative criteria, if numerical criteria cannot be established. Narrative criteria might also be developed to supplement numerical criteria. *Id.* § 131.11(b). Clearly, the form of a particular state's water criteria may be either numeric or narrative,¹⁵ depending upon the designated use, as the district court correctly recognized. *NRDC II*, 806 F.Supp. at 1277.

15 EPA has not established national numeric criteria guidance for dioxin with respect to its effects on aquatic life and wildlife.

12 In view of the above, we find that use of the term "criteria" in CWA § 303(c)(2)(A) and the regulations means that states may adopt multiple criteria for the same pollutant. Thus, where multiple uses are designated for a body of water, there may be multiple criteria applicable to it, as long as the

criteria support the most sensitive use of that particular body of water. States have exclusive responsibility to designate water uses. See 40 C.F.R. § 131.10. However, in determining these use designations, states must take into account whether the body of water serves as a public water supply, its role in the protection and propagation of fish, shellfish and wildlife, recreation in and on the water, and agricultural, industrial, and other uses, including navigation. *Id.*

EPA avers that its review of the Maryland and Virginia standards was limited exclusively to protection of human health against any potential adverse effects (both cancerous and non-cancerous) caused by dioxin. The TSDs reflect this position. In reviewing the Virginia water quality standard, EPA stated:

The Virginia criterion for [dioxin] is designed to protect human health. Accordingly, EPA has limited its review to assessing the adequacy of the numeric criterion for that purpose. Virginia did not submit a criterion for [dioxin] for the protection of aquatic life. Depending on the circumstances, greater protection than is afforded by Virginia's 1.2 ppq criterion may be required for this purpose. In the absence of a numeric criterion for [dioxin] to protect aquatic life, Virginia's narrative criterion must, consistent with 40 C.F.R. § 122.44(d), be interpreted in individual permitting actions to prevent harm to aquatic life.

J.A. at 280-81 (footnote omitted). EPA's comments in the Maryland TSD are similar:

The Maryland criterion for [dioxin] is designed to protect human health. Accordingly, EPA's review is limited to assessing the adequacy of the numeric criterion for that purpose. In the absence of a numeric criterion for [dioxin] to protect aquatic life, Maryland's narrative criteria must be interpreted in individual permitting actions to prevent harm to aquatic life. See COMAR § 26.10.01.03.B.(5)(b). Depending on the circumstances, greater protection than is afforded by Maryland's 1.2 ppq criterion may be required for this purpose.

Id. at 314 (footnote omitted). Thus, EPA duly acknowledged that dioxin may have adverse effects on aquatic life. However, EPA also noted that application of existing, separate narrative criteria protecting such aquatic life and wildlife could require more stringent controls in some cases than would be required through use of the human health criteria alone.

EPA conducted an extensive review of the adequacy of the states' criteria to protect human health, aquatic life

and wildlife. Appellants have failed to cite any convincing authority showing that states have an obligation under the CWA or its accompanying regulations to adopt a *single* numeric criterion for dioxin that protects against all identifiable effects to human health, aquatic life, and wildlife.

D. Summary

We find that EPA's review of the Maryland and Virginia water quality standards was neither arbitrary nor capricious. Each review conducted by EPA was supported by lengthy, highly scientific, technical support documents explaining in detail EPA's rationale in approving the 1.2 ppq standards. EPA has satisfied this court that substantial evidence exists in the administrative record to support its decision, and that it acted **1406* rationally and in accordance with the CWA and its regulations. We therefore refuse to upset either EPA's decision to approve Maryland's and Virginia's adoption of the 1.2 ppq standard or the district court decision affirming the same.

E. The District Court's Dismissal of the Original and Amended Count One of the Maryland Complaint

In original and amended Count One of the Maryland complaint, NRDC challenges EPA's water quality criteria as a whole, alleging that EPA failed to issue and revise complete water quality criteria for dioxin.

1. Original Count One

13 Original Count One of NRDC's complaint alleged that EPA violated a nondiscretionary duty, assigned to it by § 304(a) of the CWA (33 U.S.C. § 1314(a)),¹⁶ to issue water quality criteria for dioxin that reflect the latest scientific information and that address all identifiable effects on health and welfare.¹⁷ The district court found that EPA's duty was discretionary, see *NRDC I*, 770 F.Supp. at 1107, and dismissed original Count One, ruling that the citizen's suit provision, § 505(a)(2) of the CWA (33 U.S.C. § 1365(a)(2)) (1982 & Supp.1993), did not confer jurisdiction over NRDC's claim. *Id.* at 1110.

16 Section 304(a) (33 U.S.C. § 1314(a) (1982)) provides in pertinent part that the EPA Administrator "shall develop and publish, within one year after October 18, 1972 (and from time to time thereafter revise) criteria for water quality accurately reflecting the latest scientific knowledge (A) on the kind and extent of all identifiable effects on health and welfare including[, but not limited to, various forms of plant life, wildlife, and fish]."

17 This count was brought pursuant to the citizen's suit provision, § 505(a)(2) of the CWA (33 U.S.C. § 1365(a)(2) (1982 & Supp.1993)), which permits citizens to bring suit "where there is an alleged failure of the Administrator to perform any act or duty under [the CWA] which is not discretionary."

(A) arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law....

In making the foregoing determinations, the court shall review the whole record or those parts of it cited by a party, and due account shall be taken of the rule of prejudicial error.

5 U.S.C. § 706 (1977).

On appeal, NRDC maintains that EPA has a mandatory duty to issue complete, numerical water quality criteria for dioxin, and to revise such criteria based on the latest scientific information. The district court conducted a plenary, exhaustive examination as to whether EPA had a mandatory duty to issue or revise numerical water quality criteria for dioxin and concluded that it did not. We agree and therefore affirm dismissal of original Count One for the reasons expressed by the district court in its thorough and well-reasoned opinion, *Natural Resources Defense Council v. EPA*, 770 F.Supp. 1093 (E.D.Va.1991) ("*NRDC I*").

*1407 NRDC claims that the district court's dismissal of amended Count One improperly closed the door to further judicial review of EPA's dioxin criteria. NRDC argues that the district court's analysis of this issue focused only on NRDC's claim that EPA failed to revise its dioxin criteria based on new scientific evidence. In light of this, NRDC contends that the district court erroneously failed to explain how NRDC was barred from challenging EPA's 1984 dioxin-criteria document under the APA. Having reviewed relevant provisions of the APA and corresponding case law, we are not persuaded.

2. Amended Count One

14 As part of its ruling in *NRDC I*, the district court permitted NRDC to amend Count One to challenge EPA's actions solely under the APA. *Id.* at 1110 n. 14. NRDC's amended complaint asserted such a claim under 5 U.S.C. § 706 of the APA.¹⁸ EPA moved to dismiss amended Count One on grounds that the applicable statute of limitations had run and that NRDC had failed to exhaust its administrative remedies. Although the district court found that the applicable statute of limitations had not expired, the court granted EPA's motion, holding that because EPA was in the process of reviewing its dioxin criteria, it had made a reviewable final administrative decision. *NRDC II*, 806 F.Supp. at 1278.

Section 704 of the APA provides, in pertinent part, that an "[a]gency action made reviewable by statute and [a] final agency action for which there is no other adequate remedy in a court is subject to judicial review. A preliminary, procedural, or intermediate agency action or ruling not directly reviewable is subject to review on the review of final agency action." 5 U.S.C. § 704. Thus, the key focus here is whether EPA's actions with respect to its 1984 dioxin criteria document are "final" such that federal courts may exercise their powers of review under the APA.

18 Specifically, NRDC alleged in amended Count One that EPA's failure to issue and revise current numeric criteria for dioxin "was arbitrary, capricious, an abuse of discretion, and otherwise not in accordance with law; and constituted agency action unlawfully withheld or unreasonably delayed; in violation of 5 U.S.C. § 706." Pls.' Am.Compl. at 21-22 (J.A. at 71-72). Section 706 of the APA provides in relevant part:

In *FTC v. Standard Oil Co.*, 449 U.S. 232, 239-40, 101 S.Ct. 488, 492-93, 66 L.Ed.2d 416 (1980), the Supreme Court outlined several factors to consider in determining whether an agency action is "final": (1) whether the action is a definitive statement of the agency's position; (2) whether the action had the status of law and immediate compliance with its terms was expected; (3) whether the action had a direct impact on the day-to-day business of plaintiff; and (4) whether pre-enforcement challenge was calculated to speed enforcement and prevent piecemeal litigation. An analysis of these factors reveals that EPA's actions regarding its 1984 criteria document are not "final" within the meaning of the APA.

To the extent necessary to decision and when presented, the reviewing court shall decide all relevant questions of law, interpret constitutional and statutory provisions, and determine the meaning or applicability of the terms of an agency action. The reviewing court shall-

Considering the first and second factors, EPA's 1984 criteria document is neither a "definitive" statement of its position nor does it have the status of law, compelling immediate compliance with its terms. Although this document does serve as an important reference manual to states as they develop water quality criteria for dioxin, we note that it does not

- (1) compel agency action unlawfully withheld or unreasonably delayed; and
- (2) hold unlawful and set aside agency action, findings, and conclusions found to be-

purport to create or establish rights or responsibilities for any party, nor does it mandate legal action.

EPA's interpretation of the role the criteria play in the CWA regulatory process is illustrative: "Section 304(a)(1) criteria are not rules and they have no regulatory impact. Rather, these criteria present scientific data and guidance on the environmental effect of pollutants which can be useful to derive regulatory requirements based on the considerations of water quality impacts." 45 Fed.Reg. 79,319 (1980). Also informative is the language contained in the preface to the 1984 criteria document:

[Water quality criteria] represent[] a non-regulatory, scientific assessment of ecological effects. The criteria presented in this publication are such scientific assessments.... The water quality criteria adopted in the State water quality standards could have the same numerical limits as the criteria developed under section 304. However, in many situations States may want to adjust water quality criteria developed under section 304 to reflect local environmental conditions and human exposure patterns before incorporation into water quality standards. *It is not until their adoption as part of the State water quality standards that the criteria become regulatory.*

1984 Dioxin Criteria Document at iii (J.A. at 1051) (emphasis added). No compulsory language is included in this provision of the 1984 criteria document. It specifically states that these water quality criteria are non-regulatory, and that they become regulatory only when a state adopts them. Until such time, however, a state may or may not choose to follow EPA's water quality criteria, and the preface to the 1984 dioxin criteria document expressly acknowledges this. In view of the above, we conclude that the 1984 dioxin criteria document simply serves as a useful guide to assist the states in developing their own respective water quality standards. See *American Paper Inst., Inc. v. EPA*, 882 F.2d 287 (7th Cir.1989) (holding that EPA Region's "policy statement"

does not constitute *1408 final agency action because it does not compel action).

Regarding the third factor, the 1984 criteria does not affect the day-to-day business of NRDC for the reason that any practical effects will occur only when and if state-issued standards are incorporated into enforceable NPDES permit limitations. It would therefore be entirely too speculative to presume that an EPA criteria guidance will have any impact when it may or may not serve as the basis for state adoption and subsequent EPA approval of a state water quality standard.

Finally, with respect to the fourth factor, we believe that to review EPA's actions at this stage, when it currently is engaging in a reassessment of its dioxin criteria, would be premature and would foster unnecessary piecemeal litigation. A waste of judicial resources is almost inevitable if we were to allow an exhaustive review of EPA's current water quality criteria, only to have EPA drastically overhaul its existing water criteria with a completely new and different standard. We therefore hold that EPA's action with regard to its water quality criteria for dioxin is not a reviewable "final" agency action for purposes of the APA. Nothing in the record, briefs, or oral argument leads this court to believe that EPA has not been forthright, or has otherwise proceeded in bad faith, with regard to its reassessment of dioxin criteria. We trust and expect that EPA will expedite its ongoing review of dioxin, as it has so conveyed in its briefs. We will not disturb this highly technical administrative process at this point and instead will allow it an opportunity to run its course. See *Hopewell Nursing Home, Inc. v. Heckler*, 784 F.2d 554, 557-58 (4th Cir.1986); *American Gen. Ins. Co. v. FTC*, 496 F.2d 197, 200 (5th Cir.1974).

For the foregoing reasons, the judgment of the district court is

AFFIRMED.

Landowners brought action against Environmental Protection Agency (EPA), challenging authority of EPA to determine total maximum daily load (TMDL) for river. The United States District Court for the Northern District of California, 91 F.Supp.2d 1337, William H. Alsup, J., granted summary judgment in favor of EPA. Landowners appealed. The Court of Appeals, Berzon, Circuit Judge, held that Clean Water Act (CWA) authorized EPA to determine TMDL for river polluted only by logging runoff and other nonpoint sources of pollution after state failed timely to establish TMDL for river.

Affirmed.

v.

The United States Environmental Protection Agency ("EPA") required California to identify the Garcia River as a water body with insufficient pollution controls and, as required for waters so identified, to set so-called "total maximum daily loads" ("TMDLs")—the significance of which we explain later—for pollution entering the river. Appellants challenge the EPA's authority under the Clean Water Act ("CWA" or the "Act") § 303(d), 33 U.S.C. § 1313(d), to apply the pertinent identification and TMDL requirements to the Garcia River. The district court rejected this challenge, and we do as well.

CWA § 303(d) requires the states to identify and compile a list of waters for which certain "effluent limitations" "are not stringent enough" to implement the applicable water quality standards for such waters. § 303(d)(1)(A). Effluent limitations pertain only to point sources of pollution; point sources of pollution are those *1126 from a discrete conveyance, such as a pipe or tunnel. Nonpoint sources of pollution are non-discrete sources; sediment run-off from timber harvesting, for example, derives from a nonpoint source. The Garcia River is polluted only by nonpoint sources. Therefore, neither the effluent limitations referenced in § 303(d) nor any other effluent limitations apply to the pollutants entering the Garcia River.

The precise statutory question before us is whether the phrase "are not stringent enough" triggers the identification requirement both for waters as to which effluent limitations apply but do not suffice to attain water quality standards and for waters as to which effluent limitations do not apply at all to the pollution sources impairing the water. We answer this question in the affirmative, a conclusion which triggers the application of the statutory TMDL requirement to waters such as the Garcia River.

I. STATUTORY BACKGROUND

Resolution of the statutory interpretation question before us, discrete though it is, "requires a familiarity with the history, the structure, and, alas, the jargon of the federal water pollution laws." *Natural Res. Def. Council v. EPA*, 915 F.2d 1314, 1316 (9th Cir.1990). We therefore begin with a brief overview of the Act.

A. The Major Goals and Concepts of the CWA

Congress enacted the CWA in 1972, amending earlier federal water pollution laws that had proven ineffective. *EPA v. California*, 426 U.S. 200, 202, 96 S.Ct. 2022, 48 L.Ed.2d

578 (1976). Prior to 1972, federal water pollution laws relied on "water quality standards specifying the acceptable levels of pollution in a State's interstate navigable waters as the primary mechanism ... for the control of water pollution." *Id.* The pre-1972 laws did not, however, provide concrete direction concerning how those standards were to be met in the foreseeable future.

In enacting sweeping revisions to the nation's water pollution laws in 1972, Congress began from the premise that the focus "on the tolerable effects rather than the preventable causes of pollution" constituted a major shortcoming in the pre 1972 laws. *Oregon Natural Desert Assoc. v. Dombeck*, 172 F.3d 1092, 1096 (9th Cir.1998) (quoting *EPA v. State Water Resources Control Board*, 426 U.S. 200, 202-03, 96 S.Ct. 2022, 48 L.Ed.2d 578 (1976)). The 1972 Act therefore sought to target primarily "the preventable causes of pollution," by emphasizing the use of technological controls. *Id.*; *Oregon Natural Res. Council v. United States Forest Serv.*, 834 F.2d 842, 849 (9th Cir.1987).

At the same time, Congress decidedly did *not* in 1972 give up on the broader goal of attaining acceptable water quality. CWA § 101(a), 33 U.S.C. § 1251(a). Rather, the new statute recognized that even with the application of the mandated technological controls on point source discharges, water bodies still might not meet state-set water quality standards, *Natural Res. Def. Council*, 915 F.2d at 1316-17. The 1972 statute therefore put in place mechanisms other than direct federal regulation of point sources, designed to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters." § 101(a).

In so doing, the CWA uses distinctly different methods to control pollution released from point sources and that traceable to nonpoint sources. *Oregon Natural Res. Council*, 834 F.2d at 849. The Act directly mandates technological controls to limit the pollution point sources may discharge into a body of water. *Dombeck*, 172 F.3d at 1096. On the other hand, the Act "provides no direct mechanism to control nonpoint source pollution but rather uses the 'threat and promise' of federal *1127 grants to the states to accomplish this task," *id.* at 1097 (citations omitted), thereby "recogniz [ing], preserv [ing], and protect[ing] the primary responsibilities and rights of States to prevent, reduce, and eliminate pollution, [and] to plan the development and use ... of land and water resources" § 101(b).

B. The Structure of CWA § 303, 33 U.S.C. § 1313

1. Water Quality Standards

Section 303 is central to the Act's carrot-and-stick approach to attaining acceptable water quality without direct federal regulation of nonpoint sources of pollution. Entitled "Water Quality Standards and Implementation Plans," the provision begins by spelling out the statutory requirements for water quality standards: "Water quality standards" specify a water body's "designated uses" and "water quality criteria," taking into account the water's "use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes" § 303(c)(2). The states are required to set water quality standards for *all* waters within their boundaries regardless of the sources of the pollution entering the waters. If a state does not set water quality standards, or if the EPA determines that the state's standards do not meet the requirements of the Act, the EPA promulgates standards for the state. §§ 303(b), (c) (3)-(4).

2. Section 303(d): "Identification of Areas with Insufficient Controls; Maximum Daily Load"¹

1 The complete text of sections 303(d)(1)(A) and (C) reads:

(A) Each State shall identify those waters within its boundaries for which the effluent limitations required by section 1311(b)(1)(A) and section 1311(b)(1)(B) of this title are not stringent enough to implement any water quality standard applicable to such waters. The State shall establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters.

(C) Each State shall establish for the waters identified in paragraph (1)(A) of this subsection, and in accordance with the priority ranking, the total maximum daily load, for those pollutants which the Administrator identifies under section 1314(a)(2) of this title as suitable for such calculation. Such load shall be established at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality.

§§ 303(d)(1)(A), (C).

Section 303(d)(1)(A) requires each state to identify as "areas with insufficient controls" "those waters within its boundaries

for which the effluent limitations required by section [301(b)(1)(A)] and section [301(b)(1)(B)] of this title are not stringent enough to implement any water quality standard applicable to such waters." *Id.* The CWA defines "effluent limitations" as restrictions on pollutants "discharged from point sources." CWA § 502(11), 33 U.S.C. § 1362(11). Section 301(b)(1)(A) mandates application of the "best practicable control technology" effluent limitations for most point source discharges, while § 301(b)(1)(B) mandates application of effluent limitations adopted specifically for secondary treatment at publicly owned treatment works. § 301(b)(1), 33 U.S.C. § 1311(b)(1).

1 For waters identified pursuant to § 303(d)(1)(A) (the "§ 303(d)(1) list"), the states must establish the "total maximum daily load" ("TMDL") for pollutants identified by the EPA as suitable for TMDL calculation.² § 303(d)(1)(C). "A TMDL defines *1128 the specified maximum amount of a pollutant which can be discharged or 'loaded' into the waters at issue from all combined sources." *Dioxin/Organochlorine Center v. Clarke*, 57 F.3d 1517, 1520 (9th Cir.1995).³ The TMDL "shall be established at a level necessary to implement the applicable water quality standards" § 303(d)(1)(C).

2 The EPA has identified all pollutants, under proper technical conditions, as suitable for TMDL calculation. 43 Fed.Reg. 60662(Dec. 28, 1978).

3 The CWA does not define the term "total maximum daily load." The term "discharge" refers only to pollution emanating from point sources. *Dombeck*, 172 F.3d at 1097. The term "loading" refers to the addition of pollution into a body of water from either point or nonpoint sources. 40 C.F.R. § 130.2(e) (2000).

Section 303(d)(2), in turn, requires each state to submit its § 303(d)(1) list and TMDLs to the EPA for its approval or disapproval. If the EPA approves the list and TMDLs, the state must incorporate the list and TMDLs into its "continuing planning process," the requirements for which are set forth in § 303(e). § 303(d)(2). If the EPA disapproves either the § 303(d)(1) list or any TMDLs, the EPA must itself put together the missing document or documents. *Id.* The state then incorporates any EPA-set list or TMDL into the state's continuing planning process. *Id.*

Each state must also identify all waters *not* placed on its § 303(d)(1) list (the " § 303(d)(3) list") and "estimate" TMDLs for pollutants in those waters. § 303(d)(3). There is no requirement that the EPA approve the § 303(d)(3) lists or the TMDLs estimated for those waters. *Id.*

The EPA in regulations has made more concrete the statutory requirements. Those regulations, in summary, define "water quality limited segment[s]"—those waters that must be included on the § 303(d)(1) list—as "[a]ny segment where it is known that water quality does not meet applicable water quality standards, and/or is not expected to meet applicable water quality standards, even after the application of the technology-based effluent limitations required by sections 301(b) and 306[.], 33 U.S.C. § 1316[.]" 40 C.F.R. § 130.2(j) (2000). The regulations then divide TMDLs into two types: "load allocations," for nonpoint source pollution, and "wasteload allocations," for point source pollution. § 130.2(g)-(i); see also p. 7919, *infra*. Under the regulations, states must identify those waters on the § 303(d)(1) lists as "still requiring TMDLs" if any required effluent limitation or other pollution control requirement (including those for nonpoint source pollution) will not bring the water into compliance with water quality standards. § 130.7(b) (2000).⁴

⁴ We review the regulations in greater detail below.

3. Continuing Planning Process

The final pertinent section of § 303, § 303(e), requiring each state to have a "continuing planning process," gives some operational force to the prior information-gathering provisions. The EPA may approve a state's continuing planning process only if it "will result in plans for all navigable waters within such State" that include, inter alia, effluent limitations, TMDLs, areawide waste management plans for nonpoint sources of pollution, and plans for "adequate implementation, including schedules of compliance, for revised or new water quality standards." § 303(e)(3).

The upshot of this intricate scheme is that the CWA leaves to the states the responsibility of developing plans to achieve water quality standards if the statutorily-mandated point source controls will not alone suffice, while providing federal funding to aid in the implementation of the state plans. See *1129 *Dombeck*, 172 F.3d at 1097; § 303(e); see also § 319(h), 33 U.S.C. § 1329(h) (providing for grants to states to combat nonpoint source pollution). TMDLs are primarily informational tools that allow the states to proceed from the identification of waters requiring additional planning to the required plans. See *Alaska Center for the Environment v. Browner*, 20 F.3d 981, 984-85 (9th Cir.1994). As such, TMDLs serve as a link in an implementation chain that includes federally-regulated point source controls, state or

local plans for point and nonpoint source pollution reduction, and assessment of the impact of such measures on water quality, all to the end of attaining water quality goals for the nation's waters.

II. FACTUAL AND PROCEDURAL BACKGROUND

A. The Garcia River TMDL

In 1992, California submitted to the EPA a list of waters pursuant to § 303(d)(1)(A). Pursuant to § 303(d)(2), the EPA disapproved California's 1992 list because it omitted seventeen water segments that did not meet the water quality standards set by California for those segments. Sixteen of the seventeen water segments, including the Garcia River, were impaired only by nonpoint sources of pollution.⁵ After California rejected an opportunity to amend its § 303(d)(1) list to include the seventeen sub-standard segments, the EPA, again acting pursuant to § 303(d)(2), established a new § 303(d)(1) list for California, including those segments on it. California retained the seventeen segments on its 1994, 1996, and 1998 § 303(d)(1) lists.

⁵ California had, however, previously included on its § 303(d)(1) list other waters polluted only by nonpoint sources of pollution.

California did not, however, establish TMDLs for the segments added by the EPA. Environmental and fishermen's groups sued the EPA in 1995 to require the EPA to establish TMDLs for the seventeen segments, and in a March 1997 consent decree the EPA agreed to do so. See *Pacific Coast Fishermens Assocs. v. Marcus*, No. 95-4474. According to the terms of the consent decree, the EPA set March 18, 1998, as the deadline for the establishment of a TMDL for the Garcia River. When California missed the deadline despite having initiated public comment on a draft TMDL and having prepared a draft implementation plan, the EPA established a TMDL for the Garcia River. The EPA's TMDL differed only slightly from the state's draft TMDL.

The Garcia River TMDL for sediment is 552 tons per square mile per year, a sixty percent reduction from historical loadings. The TMDL allocates portions of the total yearly load among the following categories of nonpoint source pollution: a) "mass wasting" associated with roads; b) "mass wasting" associated with timber-harvesting; c) erosion related to road surfaces; and d) erosion related to road and skid trail crossings.

B. The Appellants

In 1960, appellants Betty and Guido Pronsolino purchased approximately 800 acres of heavily logged timber land in the Garcia River watershed. In 1998, after re-growth of the forest, the Pronsolinos applied for a harvesting permit from the California Department of Forestry ("Forestry").

In order to comply with the Garcia River TMDL, Forestry and/or the state's Regional Water Quality Control Board required, among other things, that the Pronsolinos' harvesting permit provide for mitigation of 90% of controllable road-related sediment run-off and contain prohibitions *1130 on removing certain trees and on harvesting from mid-October until May 1.⁶ The Pronsolinos' forester estimates that the large tree restriction will cost the Pronsolinos \$750,000.

- 6 Specifically, the harvesting permit specified that the Pronsolinos must: "a) inventory controllable sediment sources from all roads, landings, skid trails and agricultural facilities by June 1, 2002; b) mitigate 90% of controllable sediment volume at 'road related' inventoried sites by June 1, 2012; c) prevent sediment loadings caused by road construction; d) retain five conifer trees greater than 32 inches in diameter at breast height ... per 100 feet of all Class I and Class II watercourses (if the site lacks enough trees to comply, the five largest trees per 100 feet must be retained); e) harvest only during dry, rainless periods between May 1 and October 15; f) refrain from constructing or using skid trails on slopes greater than 40 degrees within 200 feet of a watercourse; and g) forbear from removing trees from certain unstable areas which have a potential to deliver sediment to a watercourse."

Larry Mailliard, a member of the Mendocino County Farm Bureau, submitted a draft harvesting permit on February 4, 1998, for a portion of his property in the Garcia River watershed. Forestry granted a final version of the permit after incorporation of a 60.3% reduction of sediment loading, a requirement included to comply with the Garcia River TMDL. Mr. Mailliard's forester estimates that the additional restrictions imposed to comply with the Garcia River TMDL will cost Mr. Mailliard \$10,602,000.

Bill Barr, another member of the Mendocino County Farm Bureau, also applied for a harvesting permit in 1998 for his property located within the Garcia River watershed. Forestry granted the permit after incorporation of restrictions similar to those included in the Pronsolinos' permit. A forester states

that these additional restrictions, included to comply with the TMDL, will cost Mr. Barr at least \$962,000.

C. Proceedings Below

On August 12, 1999, the Pronsolinos, the Mendocino County Farm Bureau, the California Farm Bureau Federation, and the American Farm Bureau Federation brought this action pursuant to the Administrative Procedure Act, 5 U.S.C. §§ 702, 704, in the District Court for the Northern District of California against the EPA and two of its administrators. The Pronsolinos challenged the EPA's authority to impose TMDLs on rivers polluted only by nonpoint sources of pollution and sought a determination of whether the Act authorized the Garcia River TMDL.

The parties filed cross-motions for summary judgment. On August 6, 2000, the district court entered final judgment in favor of the EPA. The Pronsolinos timely filed this appeal.⁷

- 7 The American Forest & Paper Association and the California Forestry Association intervened as intervenor-appellants. The Pacific Coast Federation of Fishermen's Association and the Association of Metropolitan Sewerage Agencies intervened as intervenor-appellees. The Pacific Legal Foundation, Forest Landowners of California, and Oregon Lands Coalition filed an amici curiae brief in support of appellants. The States of California, Oregon, Washington, Delaware, Maine, Maryland, and New Jersey submitted an amici curiae brief in support of appellees. Westcas filed a brief as amicus curiae in support of neither party but supporting reversal.

III. ANALYSIS

A. Deference to the EPA

As this is a summary judgment case, our review of the district court's decision is, of course, de novo. See *Oregon Natural Res. Council*, 834 F.2d at 844. Harder to answer is the question of the degree of deference we owe the EPA's regulations and *1131 decisions interpreting and applying CWA § 303.

- 2 3 The EPA argues that we owe deference to the interpretation of § 303 embodied in its regulations, pursuant to *Chevron U.S.A., Inc. v. Natural Res. Def. Council*, 467 U.S. 837, 104 S.Ct. 2778, 81 L.Ed.2d 694 (1984). An agency's statutory interpretation is entitled to *Chevron* deference if "Congress delegated authority to the agency generally to

make rules carrying the force of law, and ... the agency interpretation claiming deference was promulgated in the exercise of that authority." *United States v. Mead*, 533 U.S. 218, 226-27, 121 S.Ct. 2164, 150 L.Ed.2d 292 (2001). If *Chevron* deference applies, we must defer to the agency's interpretation as long as it is reasonably consistent with the statute. *Id.* at 229, 121 S.Ct. 2164.

The Pronsolinos urge an approach at the opposite end of the deference spectrum, asserting that the EPA's interpretation should receive no deference at all because, they maintain, the EPA has inconsistently interpreted § 303(d) and has not included its current interpretation in a regulation that has the force of law. In between *Chevron* deference and no deference, however, lies another possibility. The Supreme Court in *Mead* recently clarified that agency interpretations that do not qualify for *Chevron* deference may nonetheless merit deference pursuant to *Skidmore v. Swift & Co.*, 323 U.S. 134, 65 S.Ct. 161, 89 L.Ed. 124 (1944), 533 U.S. at 237, 121 S.Ct. 2164. Under *Skidmore*, we defer to the agency's position according to its persuasiveness. *Mead*, 533 U.S. at 221, 121 S.Ct. 2164. Factors relevant to determining persuasiveness may include the agency's expertise, care, consistency, and formality, as well as the logic of the agency's position. *Id.* at 228, 121 S.Ct. 2164 (citing *Skidmore*, 323 U.S. at 139-40, 65 S.Ct. 161). Thus, we must consider whether the EPA's interpretation is due *Chevron* deference, as the EPA argues; no deference, as the Pronsolinos argue; or, alternatively, *Skidmore* deference (and, if so, to what extent).

4 The EPA has the statutory authority to enact a rule carrying the force of law as to the issue at hand. The CWA delegates to the EPA the general rule-making authority necessary for the agency to carry out its functions under the Act. CWA § 501(a), 33 U.S.C. § 1361(a). One of those functions is to approve or disapprove the § 303(d)(1) list and any required TMDLs. § 303(d)(2). So the EPA has the delegated authority to enact regulations carrying the force of law regarding the identification of § 303(d)(1) waters and TMDLs. *See Mead*, 533 U.S. at 229, 121 S.Ct. 2164.

The Pronsolinos do not contest the EPA's general rule-making authority but maintain that it has not been exercised, because no currently-operative EPA regulation expressly precludes the Pronsolinos' position that §§ 303(d)(1)(A) and (C) do not apply to rivers impaired only by nonpoint source pollution.⁸ The pertinent regulations do, however, reflect the EPA's interpretation—that is, that the statute requires the identification on § 303(d)(1) lists of waters impaired only

by nonpoint sources of pollution—and the EPA so reads its regulations.

8 In July 2000, the EPA published a final rule that, among many other provisions, amends its regulations expressly to require the inclusion on § 303(d)(1) lists of waters polluted only by nonpoint sources. 65 Fed.Reg. 43586 (July 13, 2000). As the EPA has published a final rule delaying until August 30, 2003, the effective date of the July 2000 final rule, 66 Fed.Reg. 53044 (Oct. 18, 2001), we do not consider the final rule's amendments in our analysis.

*1132 The EPA regulations pertinent to § 303(d)(1) lists and TMDLs focus on the attainment of water quality standards, whatever the source of any pollution. For instance, the EPA's regulations define TMDLs as the "sum of the individual WLAs [wasteload allocations] for point sources and LAs [load allocations] for nonpoint sources and natural background." 40 C.F.R. § 130.2(i). Section 130.2 also defines a "wasteload allocation" as the "portion of a receiving water's loading capacity that is allocated to one of its existing or future point sources of pollution," § 130.2(h), and a "load allocation" as the "portion of a receiving water's loading capacity that is attributed either to one of its existing or future nonpoint sources of pollution or to natural background sources," § 130.2(g). The load allocation regulation also advises that, if possible, "natural and nonpoint source loads should be distinguished." *Id.* No reason appears why, under this TMDL definition, the amount of either point source loads or nonpoint source loads cannot be zero. If the wasteload allocation is zero, then the TMDL would cover only the nonpoint sources and natural background sources. So read, the regulation provides that a TMDL can apply where there is no wasteload allocation for point source pollution. *See also, e.g.*, § 130.2 (referencing the establishment of TMDLs for non-point source pollution); 40 C.F.R. § 130.7(c)(1)(ii) (TMDLs must be established for *all* pollutants that prevent the attainment of water quality standards).

Section 130.7 evinces the same understanding. That regulation directs states to identify those waters listed pursuant to § 303(d)(1) that still require the establishment of TMDLs if:

- (i) Technology-based effluent limitations required by sections 301(b), 306, 307, or other sections of the Act;
- (ii) More stringent effluent limitations (including prohibitions) required ...; and

(iii) Other pollution control requirements (e.g., best management practices) required by local, State, or Federal authority are not stringent enough to implement any water quality standards ... applicable to such waters.

§ 130.7(b)(1). "Best management practices" pertain to non-point sources of pollution. CWA § 208, 33 U.S.C. § 1288; CWA § 319, 33 U.S.C. § 1329. So, again, § 130.7 does not distinguish between sources of pollution for purposes of applying the TMDL requirement. Instead, control requirements applicable to either type of pollution receive equal treatment in the quest to achieve water quality standards.

Also consistent with application of the § 303(d)(1) listing and TMDL requirements to waters impaired only by nonpoint sources is the regulation addressing water quality standards. Section 130.3 explains that "[s]uch standards serve the dual purposes of establishing the water quality goals for a specific water body and serving as the regulatory basis for establishment of water quality-based treatment controls and strategies beyond the technology-based level of treatment required" 40 C.F.R. § 130.3. One purpose of water quality standards therefore-and not surprisingly-is to provide federally-approved goals to be achieved *both* by state controls and by federal strategies *other* than point-source technology-based limitations. This purpose pertains to waters impaired by both point and nonpoint source pollution. The regulations addressing states' water quality management plans, intended to attain the promulgated water quality standards, confirm this understanding. Such plans must include, among other things, TMDLs, effluent limitations, and "*nonpoint* source management and control." 40 C.F.R. § 130.6 (emphasis added).

In short, the EPA's regulations concerning § 303(d)(1) lists and TMDLs apply whether a water body receives pollution **1133* from point sources only, nonpoint sources only, or a combination of the two. The EPA has issued directives concerning the states' CWA § 303(d) requirements in conformity with this understanding of its regulations. *See, e.g.,* Memorandum from Geoffrey Grubbs, Director, EPA Assessment and Watershed Protection Division, to Water Quality Branch Chiefs and TMDL Coordinators (Aug. 13, 1992) (Section 303(d)(1)(A) "applies equally to segments affected by point sources only, a combination of point and nonpoint sources, and nonpoint sources only."); EPA, *National Clarifying Guidance for 1998 State and Territory Clean Water Act Section 303(d) Listing Decisions* 6 (1997)

("Consistent with long-standing EPA policy, regulations, and practice, States should include waterbodies impaired by nonpoint sources alone on 1998 section 303(d)(1)(A) lists....").

In light of the current regulations and the agency's understanding of those regulations, as well as the delegated authority of the EPA to interpret the CWA, the EPA's interpretation is entitled to *Chevron* deference. *See Mead*, 533 U.S. at 226-27, 121 S.Ct. 2164; *see also Auer v. Robbins*, 519 U.S. 452, 461, 117 S.Ct. 905, 137 L.Ed.2d 79 (1997) (stating that an agency's interpretation of its own regulation is "controlling unless plainly erroneous or inconsistent with the regulation") (citations and internal quotation marks omitted).

5 At the least, however, we owe the agency's interpretation substantial deference under *Skidmore*. *Cf. Mead*, 533 U.S. at 237 n. 18, 121 S.Ct. 2164 ("It is, of course, true that the limit of *Chevron* deference is not marked by a hard-edged rule."). Section 303(d) is one of numerous interwoven components that together make up an intricate statutory scheme addressing technically complex environmental issues. Confronted with an issue dependent upon, and the resolution of which will affect, a complicated, science-driven statute for which the EPA has delegated regulatory authority, we consider the EPA's interpretation of the issue informative. *See Mead*, 533 U.S. at 234, 121 S.Ct. 2164 (noting the "specialized experience and broader investigations and information available" to agencies and "the value of uniformity in [] administrative and judicial understandings of what a national law requires") (citations and internal quotation marks omitted).

Appellants maintain that we should instead ignore the EPA's position, arguing that the Agency has not consistently interpreted the statute. We disagree with this characterization of the EPA's position over the thirty-year period since the enactment of the statute.

The first regulations promulgated after the enactment of the CWA in 1972 quite clearly required the identification on § 303(d)(1) lists of waters polluted only by nonpoint sources. The EPA defined as a "water quality" segment-again, those water bodies to be included on the § 303(d)(1) list, *see* 43 Fed.Reg. 60662, 60665 (Dec. 28, 1978)-any water "where it is known that water quality does not meet applicable water quality standards and/or is not expected to meet applicable water quality standards even after the application of the effluent limitations required...." 40 C.F.R. § 130.2(o)(1) (1978); *id.* (1977); *id.* (1976); 40 C.F.R. §

130.11(d)(1) (1975); *id.* (1974); *id.* (1973).⁹ In contrast, the EPA defined as an “effluent limitation” segment—those waters making up the separate § 303(d)(3) list¹⁰—any water “where *1134 it is known that water quality is meeting and will continue to meet applicable water quality standards or where there is adequate demonstration that water quality will meet applicable water quality standards after the application of the effluent limitations required” 40 C.F.R. § 130.2(o) (2) (1978); *id.* (1977); *id.* (1976); 40 C.F.R. § 130.11(d)(2) (1975); *id.* (1974); *id.* (1973).¹¹ Thus, if a water segment had not met, or would not soon meet, applicable water quality standards, regardless of the source of pollution, the EPA required its identification pursuant to § 303(d)(1)(A). In other words, the EPA initially interpreted § 303(d) exactly as it does today.¹²

9 The 1973 regulation differed in an insignificant way from the text quoted.

10 Section 303(d)(3) provides:

For the specific purpose of developing information, *each State shall identify all waters within its boundaries which it has not identified under paragraph (1)(A) and (1)(B)[waters for which controls on thermal discharges are not stringent enough for certain identified purposes] of this subsection and estimate for such waters the total maximum daily load with seasonal variations and margins of safety, for those pollutants which the Administrator identifies under section 1314(a) (2) of this title[CWA § 304(a)(2)] as suitable for such calculation and for thermal discharges, at a level that would assure protection and propagation of a balanced indigenous population of fish, shellfish and wildlife.*

§ 303(d)(3) (emphasis added).

11 Again, the 1973 regulation differed insignificantly from the quotation.

12 The EPA overhauled its regulations in 1979 and provided almost no regulatory guidance as to the requirements of § 303(d) until the enactment in 1985 of the current regulations. *See* 44 Fed.Reg. 30016 (May 23, 1979) (repealing 40 C.F.R. part 130); *see also* 40 C.F.R. § 35.1511-1(d)(2) (1979); § 35.1521-4(a) (1979).

The Pronsolinos nevertheless contend that the EPA's current interpretation is an invention of the early 1990s. They point out that until that time the EPA did not actively police the requirement that states include on their § 303(d)(1) lists waters polluted only by nonpoint source pollution. While that

is true, that agency stance reflected a more general regulatory failure to enforce the § 303(d) requirements, not a failure with regard only to waters impaired by nonpoint sources. Until the early 1990s, the EPA focused its attention almost entirely on the new point source technological controls, to the exclusion of § 303(d) and the TMDL program. *See Pronsolino v. Marcus*, 91 F.Supp.2d 1337, 1354 (N.D.Cal.2000)¹³ (citing United States General Accounting Office, *Water Pollution: More EPA Action Needed to Improve the Quality of Heavily Polluted Waters*, GAO Report to the Chairman: Subcommittee on Regulation and Business Opportunities Committee on Small Business, House of Representatives (Jan.1989)); *see also id.* at 1353-54(describing the history of EPA enforcement action with respect to § 303(d)); Oliver A. Houck, *The Clean Water Act TMDL Program: Law, Policy, and Implementation* 49-56 (1999) (“*The Clean Water Act TMDL Program*”) (same). We have not found, and the Pronsolinos have not pointed to, any statement by the EPA—either in regulations or otherwise—that is inconsistent with the interpretation the agency now espouses.

13 The district court opinion in this case explains this history, as well as many other aspects of this case, carefully and lucidly. We therefore refer to that opinion at points rather than repeating its analysis.

In short, Congress entrusted to the EPA the responsibility of approving or disapproving § 303(d)(1) lists, bestowing upon it the discretion that comes with such responsibility; the EPA has specialized experience regarding the CWA which this court lacks; and the agency has consistently interpreted the provisions at issue. We conclude that the EPA's interpretation is one to which we owe substantial *Skidmore* *1135 deference, at the very least. *See Mead*, 533 U.S. at 227-28, 121 S.Ct. 2164.

In the end, though, it does not much matter in this case whether we review the EPA's position through the *Chevron* or *Skidmore/Mead* prism. Under both the more and less rigorous versions of the judicial review standard, the Agency's position is, as the discussion below indicates, more than sufficiently supported by the statutory materials.

B. Plain Meaning and Structural Issues

1. The Competing Interpretations

Section 303(d)(1)(A) requires listing and calculation of TMDLs for “those waters within [the state's] boundaries for which the effluent limitations required by section [301(b)(1) (A)] and section [301(b)(1)(B)] of this title *are not stringent*

enough to implement any water quality standard applicable to such waters.” § 303(d) (emphasis added). The precise statutory question before us is whether, as the Pronsolinos maintain, the term “not stringent enough to implement ... water quality standard[s]” as used in § 303(d)(1)(A) must be interpreted to mean *both* that application of effluent limitations will not achieve water quality standards *and* that the waters at issue are subject to effluent limitations. As only waters with point source pollution are subject to effluent limitations, such an interpretation would exclude from the § 303(d)(1) listing and TMDL requirements waters impaired only by nonpoint sources of pollution.

The EPA, as noted, interprets “not stringent enough to implement ... water quality standard[s]” to mean “not adequate” or “not sufficient ... to implement any water quality standard,” and does not read the statute as implicitly containing a limitation to waters initially covered by effluent limitations. According to the EPA, if the use of effluent limitations will not implement applicable water quality standards, the water falls within § 303(d)(1)(A) regardless of whether it is point or nonpoint sources, or a combination of the two, that continue to pollute the water.

2. The Language and Structure of § 303(d)

6 Whether or not the appellants' suggested interpretation is entirely implausible, it is at least considerably weaker than the EPA's competing construction. The Pronsolinos' version necessarily relies upon: (1) understanding “stringent enough” to mean “strict enough” rather than “thorough going enough” or “adequate” or “sufficient”;¹⁴ and (2) reading the phrase “not stringent enough” in isolation, rather than with reference to the stated goal of implementing “any water quality standard applicable to such waters.” Where the answer to the question “not stringent enough for what?” is “to implement any [applicable] water quality standard,” the meaning of “stringent” should be determined by looking forward to the broad goal to be attained, not backwards at the inadequate effluent limitations. One might comment, for example, about a *1136 teacher that her standards requiring good spelling were not stringent enough to assure good writing, as her students still used bad grammar and poor logic. Based on the language of the contested phrase alone, then, the more sensible conclusion is that the § 303(d)(1) list must contain any waters for which the particular effluent limitations will not be adequate to attain the statute's water quality goals.

14 Stringent means “rigorous, strict, thoroughgoing; rigorously binding or coercive.” *Oxford English*

Dictionary Online (2001). Defining “stringent” as “rigorous” or “strict” would lend support to the Pronsolinos' interpretation. If “stringent” means “thoroughgoing,” however, § 303(d)(1)(A) would encompass the EPA's broader reading of the statute. Also, “stringent enough” may have a slightly different meaning from “stringent” standing alone, such as “adequate” or “sufficient.” See 1 *Legislative History of the Water Pollution Control Act Amendments of 1972 at 792* (1973) (*Legislative History*) (H.R. Rep. 92-911 to accompany H.R. 11896 (March 11, 1972)) (using the term “are inadequate” in place of “not stringent enough.”).

Placing the phrase in its statutory context supports this conclusion. Section 303(d) begins with the requirement that each state “identify those waters within its boundaries...” § 303(d)(1)(A). So the statute's starting point for the listing project is a compilation of each and every navigable water within the state. Then, only those waters that will attain water quality standards after application of the new point source technology are excluded from the § 303(d)(1) list, leaving all those waters for which that technology will not “implement any water quality standard applicable to such waters.” § 303(d)(1)(A); see *American Wildlands v. Browner*, 260 F.3d 1192, 1194 (10th Cir.2001) (“[E]ach state is required to identify all of the waters within its borders not meeting water quality standards and establish [TMDLs] for those waters.”) (citing § 303(d)); *Pronsolino*, 91 F.Supp.2d at 1347. The alternative construction, in contrast, would begin with a subset of all the state's waterways, those that have point sources subject to effluent limitations, and would result in a list containing only a subset of that subset—those waters as to which the applicable effluent limitations are not adequate to attain water quality standards.

[5] The Pronsolinos' contention to the contrary notwithstanding, no such odd reading of the statute is necessary in order to give meaning to the phrase “for which the effluent limitations required by section [301(b)(1)(A)] and section [301(b)(1)(B)] ... are not stringent enough.” The EPA interprets § 303(d)(1)(A) to require the identification of any waters not meeting water quality standards only if specified effluent limitations would not achieve those standards. 40 C.F.R. § 130.2(j). If the pertinent effluent limitations would, if implemented, achieve the water quality standards but are not in place yet, there need be no listing and no TMDL calculation. *Id.*

So construed, the meaning of the statute is different than it would be were the language recast to state only that “Each

State shall identify those waters within its boundaries ... [not meeting] any water quality standard applicable to such waters." Under the EPA's construction, the reference to effluent limitations reflects Congress' intent that the EPA focus initially on implementing effluent limitations and only later avert its attention to water quality standards. *See e.g.*, 1 *Legislative History* 171 ("The Administrator should assign secondary priority to [§ 303] to the extent limited manpower and funding may require a choice between a water quality standards process and early and effective implementation of the effluent limitation-permit program." (statement of Sen. Muskie, principal author of the CWA and the Chair of the Senate's Public Works Committee)); *see also Environmental Def. Fund, Inc. v. Costle*, 657 F.2d 275, 279 (D.C.Cir.1981) (The 1972 CWA "assigned secondary priority to the [water quality] standards and placed primary emphasis upon both a point source discharge permit program and federal technology-based effluent limitations....").¹⁵

15 The district court expressed the same point differently: "The 1972 Act superimposed the technology-driven mandate of point-source effluent limitations. To assess the impact of the new strategy on the monumental clean-up task facing the nation, Congress called for a list of the unfinished business expected to remain even after application of the new cleanup strategy." *Pronsolino*, 91 F.Supp.2d at 1347.

*1137 Given all these language considerations, it is not surprising that the only time this court addressed the reach of § 303(d)(1)(A), it rejected a reading of § 303(d)(1)(A) similar to the one the Pronsolinos now proffer. In *Dioxin*, 57 F.3d at 1526-27, the plaintiffs argued that the phrase "not stringent enough" prohibited the EPA from listing under § 303(d)(1)(A) and establishing TMDLs for toxic pollutants, until after the implementation and proven failure of § 301(b)(1)(A) "best practicable technology" effluent limitations. Toxic pollutants, however, are not subject to "best practicable technology" controls,¹⁶ but to more demanding "best available technology," precisely because of their toxicity. *Id.*

16 Nor did the effluent limitations required by § 301(b)(1)(B) apply to the pollutants at issue.

The court in *Dioxin* held that the EPA acted within its statutory authority in setting TMDLs for toxic pollutants, even though the effluent limitations referenced by § 303(d)(1)(A) did not apply to those pollutants. *Id.* at 1528. The court explained that, since best practical technology effluent limitations do not apply to toxic pollutants, those limitations are, as a matter of law, "not stringent enough" to achieve

water quality standards. *Id.* In other words, *Dioxin* read § 303(d)(1)(A) as applying to all waters in the state, not only to the subset covered by certain kinds of effluent controls, and it understood "not stringent enough" to mean "not adequate for" or "inapplicable to."

Nothing in § 303(d)(1)(A) distinguishes the treatment of point sources and nonpoint sources as such; the only reference is to the "effluent limitations required by" § 301(b)(1). So if the effluent limitations required by § 301(b)(1) are "as a matter of law" "not stringent enough" to achieve the applicable water quality standards for waters impaired by point sources not subject to those requirements, then they are also "not stringent enough" to achieve applicable water quality standards for other waters not subject to those requirements, in this instance because they are impacted only by nonpoint sources. Additionally, the *Dioxin* court, applying *Chevron* deference, upheld the EPA's interpretation of § 303(d) "as requiring TMDLs where existing pollution controls will not lead to attainment of water standards," *id.* at 1527; *see also* 40 C.F.R. § 130.7(b), a holding that directly encompasses waters polluted only by nonpoint sources.

3. The Statutory Scheme as a Whole

The Pronsolinos' objection to this view of § 303(d), and of *Dioxin*, is, in essence, that the CWA as a whole distinguishes between the regulatory schemes applicable to point and nonpoint sources, so we must assume such a distinction in applying §§ 303(d)(1)(A) and (C). We would hesitate in any case to read into a discrete statutory provision something that is not there because it is contained elsewhere in the statute. But here, the premise is wrong: There is no such general division throughout the CWA.

Point sources are treated differently from nonpoint sources for many purposes under the statute, but not all. In particular, there is no such distinction with regard to the basic purpose for which the § 303(d) list and TMDLs are compiled, the eventual attainment of state-defined water quality standards. Water quality standards reflect a state's designated *uses* for a water body and do not depend in any way upon the source of pollution. *See* § 303(a)-(c).

Nor is there any other basis for inferring from the structure of the Act an implicit limitation in §§ 303(d)(1)(A) and (C). The statutory subsection requiring *1138 water quality segment identification and TMDLs, § 303(d), appears in the section entitled "Water Quality Standards and Implementation Plans," not in the immediately preceding section, CWA § 302, 33 U.S.C. § 1312, entitled "Water Quality Related Effluent

Limitations." So the section heading does not suggest any limitation to waters subject to effluent limitations. *Porter v. Nussle*, 534 U.S. 516, 122 S.Ct. 983, 990, 152 L.Ed.2d 12 (2002) ("[T]he title of a statute and the heading of a section are tools available for the resolution of a doubt about the meaning of a statute.") (citation omitted).

Additionally, § 303(d) follows the subsections setting forth the requirements for water quality standards, § 303(a)-(c)-which, as noted above, apply without regard to the source of pollution-and precedes the "continuing planning process" subsection, § 303(e), which applies broadly as well. Thus, § 303(d) is structurally part of a set of provisions governing an interrelated goal-setting, information-gathering, and planning process that, unlike many other aspects of the CWA, applies without regard to the source of pollution.

True, there are, as the Pronsolinos point out, two sections of the statute as amended, § 208 and § 319, that set requirements exclusively for nonpoint sources of pollution. But the structural inference we are asked to draw from those specialized sections-that no *other* provisions of the Act set requirements for waters polluted by nonpoint sources-simply does not follow. Absent some irreconcilable contradiction between the requirements contained in §§ 208 and 319, on the one hand, and the listing and TMDL requirements of § 303(d), on the other, both apply.

There is no such contradiction. Section 208 provides for federal grants to encourage the development of state "areawide waste treatment management plans" for areas with substantial water quality problems, § 208(a), (f), and requires that those plans include a process for identifying and controlling nonpoint source pollution "to the extent feasible." § 208(b)(2)(F). Section 319, added to the CWA in 1987, directs states to adopt "nonpoint source management programs"; provides grants for nonpoint source pollution reduction; and requires states to submit a report to the EPA that "identifies those navigable waters within the State which, without additional action to control nonpoint sources of pollution, cannot reasonably be expected to attain or maintain applicable water quality standards or the goals and requirements of this chapter." § 319(a)(1)(A). This report must also describe state programs for reducing nonpoint source pollution and the process "to reduce, to the maximum extent practicable, the level of pollution" resulting from particular categories of nonpoint source pollution. § 319(a)(1)(C), (D).

The CWA is replete with multiple listing and planning requirements applicable to the same waterways (quite confusingly so, indeed), so no inference can be drawn from the overlap alone. *See, e.g.*, § 208(b); § 303(d)(1)(A), (d)(1)(B), (d)(3), (e); CWA § 304(l), 33 U.S.C. § 1314(l); CWA § 314, 33 U.S.C. § 1324(a); § 319(a). Nor are we willing to draw the more discrete inference that the § 303(d) listing and TMDL requirements cannot apply to nonpoint source pollutants because the planning requirements imposed by § 208 and § 319 are qualified ones-"to the extent feasible" and "to the maximum extent practicable"-while the § 303(d) requirements are unbending. For one thing, the water quality standards set under § 303 are functional and may permit more pollution than it is "feasible" or "practicable" to eliminate, depending upon the intended use of a particular waterway. For another, with or without TMDLs, the § 303(e) plans for attaining water quality standards must, without qualification, account for **1139* elimination of nonpoint source pollution to the extent necessary to meet those standards. § 303(e)(3)(F).

The various reporting requirements that apply to nonpoint source pollution are no more impermissibly redundant than are the planning requirements. Congress specifically provided that in preparing the § 319 report, states may rely on information from § 303(e), which incorporates the TMDLs. § 319(a)(2). Moreover, states must produce a § 319 report only once, but must update the § 303(d)(1) list periodically. § 319; § 303(d)(2). Also, the § 319 report requires the identification of a plan to reduce nonpoint source pollution, without regard to the attainment of water quality standards, while the plans generated using the § 303(d)(1) lists and TMDLs are guided by the goal of achieving those standards. § 319; § 303(d), (e).

Essentially, § 319 encourages the states to institute an approach to the elimination of nonpoint source pollution similar to the federally-mandated effluent controls contained in the CWA, while § 303 encompasses a water quality based approach applicable to all sources of water pollution. As various sections of the Act encourage different, and complementary, state schemes for cleaning up nonpoint source pollution in the nation's waterways, there is no basis for reading any of those sections-including § 303(d)-out of the statute.

There is one final aspect of the Act's structure that bears consideration because it supports the EPA's interpretation of § 303(d): The list required by § 303(d)(1)(A) requires that waters be listed if they are impaired by a combination of point

sources and nonpoint sources; the language admits of no other reading. Section 303(d)(1)(C), in turn, directs that TMDLs “shall be established at a level necessary to implement the applicable water quality standards...” *Id.* (emphasis added). So, at least in blended waters, TMDLs must be calculated with regard to nonpoint sources of pollution; otherwise, it would be impossible “to implement the applicable water quality standards,” which do not differentiate sources of pollution. This court has so recognized. *Browner*, 20 F.3d at 985 (“Congress and the EPA have already determined that establishing TMDLs is an effective tool for achieving water quality standards in waters impacted by non-point source pollution.”).

Nothing in the statutory structure-or purpose-suggests that Congress meant to distinguish, as to § 303(d)(1) lists and TMDLs, between waters with one insignificant point source and substantial nonpoint source pollution and waters with only nonpoint source pollution. Such a distinction would, for no apparent reason, require the states or the EPA to monitor waters to determine whether a point source had been added or removed, and to adjust the § 303(d)(1) list and establish TMDLs accordingly. There is no statutory basis for concluding that Congress intended such an irrational regime.

Looking at the statute as a whole, we conclude that the EPA's interpretation of § 303(d) is not only entirely reasonable but considerably more convincing than the one offered by the plaintiffs in this case.¹⁷

17 It is therefore unnecessary to examine the legislative history. See *Dep't of Hous. and Urban Dev. v. Rucker*, 535 U.S. 125, ---, 122 S.Ct. 1230, 1234, 152 L.Ed.2d 258 (2002). Nonetheless, we have reviewed that history and considered the legislative history arguments put forth by the Pronsolinos. The thrust of those arguments mirrors the arguments based on the statute's language and structure, addressed above. We reject them for the same reason: That Congress meant to include waters impaired by point sources where technological controls had not attained water quality standards-as the legislative history shows, 1 *Legislative History* 792-93 (H.R. Rep. 92-911 to accompany H.R. 11896 (March 11, 1972))-does not prove that it intended to exclude nonpoint sources from the TMDL requirement.

***1140 C. Federalism Concerns**

The Pronsolinos finally contend that, by establishing TMDLs for waters impaired only by nonpoint source pollution, the EPA has upset the balance of federal-state control established in the CWA by intruding into the states' traditional control

over land use. See *Solid Waste Agency of Northern Cook County v. United States Army Corps of Eng'rs*, 531 U.S. 159, 172-73, 121 S.Ct. 675, 148 L.Ed.2d 576 (2001). That is not the case.

7 The Garcia River TMDL identifies the maximum load of pollutants that can enter the Garcia River from certain broad categories of nonpoint sources if the river is to attain water quality standards. It does not specify the load of pollutants that may be received from particular parcels of land or describe what measures the state should take to implement the TMDL. Instead, the TMDL expressly recognizes that “implementation and monitoring” “are state responsibilities” and notes that, for this reason, the EPA did not include implementation or monitoring plans within the TMDL.¹⁸ EPA, *Garcia River Sediment Total Maximum Daily Load* 43(Mar. 16, 1998).

18 The regulatory amendments scheduled to go into effect August 30, 2003, do require the inclusion of an implementation plan as part of each TMDL. 65 Fed.Reg. 43586 (July 13, 2000); see also 66 Fed.Reg. 53044 (Oct. 18, 2001) (effective date). We express no opinion as to the validity of this requirement.

Moreover, § 303(e) requires-separately from the § 303(d) (1) listing and TMDL requirements-that each state include in its continuing planning process “adequate implementation, including schedules of compliance, for revised or new water quality standards” “for all navigable waters within such State.” § 303(e)(3). The Garcia River TMDL thus serves as an informational tool for the creation of the state's implementation plan, independently-and explicitly-required by Congress.

California chose both *if* and *how* it would implement the Garcia River TMDL. States must implement TMDLs only to the extent that they seek to avoid losing federal grant money; there is no pertinent statutory provision otherwise requiring implementation of § 303 plans or providing for their enforcement. See CWA § 309, 33 U.S.C. § 1319; CWA § 505, 33 U.S.C. § 1365.¹⁹

19 See also Professor Houck's summary:

Within the statutory scheme § 319 is the carrot, funding state programs for nonpoint source abatement statewide, for all waters whether they are currently above standard or below. In keeping with its broad sweep, § 319's provisions are voluntary. States may choose to participate or not.... Section 303(d), on the other hand, addresses a narrower and more nasty job: the chronically

polluted waters of the United States. For this problem zone, enter a stick: quantified pollution load allocations. The nature of the allocations and of the implementing controls remains up to the states, but states do have to come up with them.

The Clean Water Act TMDL Program 62.

Finally, it is worth noting that the arguments that the Pronsolinos raise here would apply equally to nonpoint source pollution controls for blended waters. Yet, as discussed above, Congress definitely required that the states or the EPA establish TMDLs for all pollutants in waters on § 303(d)(1) lists, including blended waters.

We conclude that the Pronsolinos' federalism basis for reading § 303 against its own words and structure is unfounded.

IV. CONCLUSION

End of Document

For all the reasons we have surveyed, the CWA is best read to include in the § 303(d)(1) listing and TMDLs requirements *1141 waters impaired only by nonpoint sources of pollution. Moreover, to the extent the statute is ambiguous—which is not very much—the substantial deference we owe the EPA's interpretation, under either *Chevron* or *Skidmore*, requires that we uphold the agency's more than reasonable interpretation. We therefore hold that the EPA did not exceed its statutory authority in identifying the Garcia River pursuant to § 303(d)(1)(A) and establishing the Garcia River TMDL, even though the river is polluted only by nonpoint sources of pollution.

The decision of the district court is AFFIRMED.

296 F.3d 1021
United States Court of Appeals,
Eleventh Circuit.

SIERRA CLUB, Georgia Environmental
Organization, Inc., Coosa River Basin Initiative
Inc., Trout Unlimited, Ogeechee River
Valley Association, Inc., Plaintiffs-Appellees,

v.

A. Stanley MEIBURG, Acting Regional
Administrator, Christine T. Whitman,
Administrator, the United States
Environmental Protection Agency, United
States Environmental Protection Agency
("U.S.EPA"), Defendants-Appellants.

No. 01-14587. July 2, 2002.

Order was entered by the United States District Court for the Northern District of Georgia, No. 94-02501-CV-MHS-1, Marvin H. Shoob, J., allegedly interpreting consent decree previously entered in lawsuit under the Clean Water Act. Appeal was taken. The Court of Appeals, Carnes, Circuit Judge, held that: (1) district court's order was, in reality, a modification of consent decree, which Court of Appeals had jurisdiction to review; and (2) order modifying consent decree entered in prior lawsuit under the Clean Water Act, to require the Environmental Protection Agency (EPA), not just to formulate total maximum daily load (TMDL) standards for presence of particular pollutants in Georgia water bodies, but to develop implementation plans, constituted abuse of district court's discretion.

Reversed and remanded.

Appeal from the United States District Court for the Northern District of Georgia.

Before EDMONDSON, Chief Judge, and CARNES and SILER *, Circuit Judges.

* Eugene E. Siler, Jr., U.S. Circuit Judge, for the Sixth Circuit, sitting by designation.

Opinion

CARNES, Circuit Judge:

The order we have before us in this appeal is based upon either an interpretation of a consent decree or a modification of the decree. Which one of the two the order is determines whether we have jurisdiction to review it. If the order is a modification of the decree, instead of merely an interpretation, we have appellate jurisdiction and the issue we must then decide is whether the district court abused its discretion by modifying the decree as it did.

The consent decree itself resulted from a lawsuit brought by Sierra Club, along with a collection of state and local environmental organizations, against EPA.¹ The plaintiff environmental groups (for convenience we will refer to them collectively as Sierra Club), had sued EPA to force it to establish and implement pollution standards for Georgia waterways. The consent decree that was eventually entered set out a timetable for the establishment of those standards. EPA did establish the standards.

1 Those organizations include the Ogeechee River Valley Association, Trout Unlimited, Georgia Environmental Organization, and the Coosa River Basin Initiative.

A couple of years after the consent decree had been entered, none of the pollution standards EPA established as a result of the decree had actually been implemented. Upset with the lack of progress, Sierra Club moved the district court to reopen the consent decree and to take action compelling EPA to develop implementation plans for the standards. EPA took the position that the State of Georgia had the primary responsibility for implementing the standards EPA had established. The district court deferred ruling on Sierra Club's motion pending Georgia's development of the

implementation plans. Once Georgia filed with the court what it asserted were the required plans, EPA moved to have Sierra Club's motion to re-open and compel declared moot. Sierra Club responded that Georgia's implementation plans were not adequate and insisted that EPA had the responsibility under the decree for formulating them. The district court denied EPA's mootness motion because it agreed with Sierra Club that the consent decree required EPA to develop implementation plans or to ensure that those Georgia developed were adequate to satisfy the Clean Water Act.

EPA has appealed the district court's order refusing to dismiss as moot Sierra Club's motion to re-open and compel, contending *1024 that the court's decision to impose on it an implementation-plan requirement modified the decree, and that the modification was an abuse of the district court's discretion. Sierra Club takes the position that the district court, when it stated EPA was required to develop implementation plans, was not modifying but merely interpreting the consent decree. If that is so, we lack jurisdiction over this appeal, because the only possible jurisdictional basis for it is 28 U.S.C. § 1292(a)(1) which authorizes us to review interlocutorily an order modifying an injunction. Sierra Club also argues in the alternative that, even if the district court's interpretation of the decree crossed the line into modification, thereby giving us jurisdiction to review it, we should hold that in view of changed circumstances the modification was not an abuse of discretion.

Our reading of the consent decree convinces us it did not require EPA to develop an implementation plan for the water quality standards it was to set, and the clarity of the decree on the point is sufficient that the district court's later imposition of such a requirement constitutes a modification of the decree. As a result, we have jurisdiction to review the district court's action, and we conclude that the court abused its discretion by grafting onto the decree a substantial modification that was not part of the original bargain between the parties.

I. BACKGROUND

The dispute about the terms of the consent decree plays out against the background of the statutory and regulatory scheme established by the Clean Water Act, 33 U.S.C. § 1251 *et seq.*, so we will start with a description of that scheme. Congress passed the Clean Water Act (the "Act") "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters." 33 U.S.C. § 1251(a). To achieve that goal, the Act gives EPA two main roles and responsibilities. The first is issuing permits that govern individual discharges

of pollutants, and the second is setting global water quality standards for particular bodies of water.

Permits and Point Sources

Section 301(a) of the Act prohibits the discharge of any pollutants except those that are sanctioned by a permit. 33 U.S.C. § 1311(a). The statute gives EPA the authority to issue permits for point sources, and those permits are to establish technology-based effluent limitations that incorporate increasingly stringent levels of pollution control technology over time. 33 U.S.C. §§ 1311(b)(1)(A), (B), (b)(2). The limits set out in the permits are to be based on how low current technology can push pollution levels, and those limits are to be lowered as pollution-reducing technology improves. Permits are issued to individual dischargers through the National Pollutant Discharge Elimination System (NPDES) program. *Id.* at § 1342. Like most states, Georgia administers the NPDES program within its borders subject to EPA oversight of the states's permit-issuing procedures.²

- 2 Like Georgia, most states-44 of them-are in charge of their own NPDES program. In the other six states EPA runs the program.

Permits cannot control all sources of pollution. They are aimed only at pollution coming from a "point source," which is "any discernible, confined and discrete conveyance ... from which pollutants are or may be discharged," that offers a particular "point" to measure the amount of *1025 pollution being discharged. 33 U.S.C. § 1362(14).

Non-Point Sources, Water Quality Standards, and TMDLs

In addition to originating from point sources, pollution also comes from non-point sources, such as runoff from farmlands, mining activity, housing construction projects, roads, and so on. Non-point sources cannot be regulated by permits because there is no way to trace the pollution to a particular point, measure it, and then set an acceptable level for that point. Therefore, to regulate non-point pollution, the Act requires states to establish water quality standards. 33 U.S.C. §§ 1313(a)-(c). To determine the water quality standard, a state designates the use for which a given body of water is to be protected (fishing, for example), and then determines the level of water quality needed to safely allow that use. *Id.* at § 1313(c)(2)(A). That level becomes the water quality standard for that body of water.

Things can get complicated. Because of non-point source pollution, achieving the specified water quality standard in a body of water may require more stringent limitations upon point-source discharges than would otherwise be required under the permit-issuing regime we have previously described. If the regulation of point-source discharges does not achieve the necessary level of water quality, Total Maximum Daily Loads (TMDLs) come into play. *Id.* at § 1313(d)(1)(A), (C). A TMDL is a specification of the maximum amount of a particular pollutant that can pass through a waterbody each day without water quality standards being violated. *Id.* at § 1313(d)(1)(C).

TMDLs must be established for every waterbody within the state for which ordinary technology-based point-source limits will not do enough to achieve the necessary level of water quality. *Id.* at §§ 1313(d)(1)(A), (C). The state must compile a list of these bodies of water in a report and submit it to EPA for approval. *Id.* at §§ 1313(d)(1)(A), (d)(2). (This list is sometimes referred to as “the 303(d) list,” because that is the section of the Act which requires each state to prepare the list.) Each body of water on the list is known as a “water quality limited segment” (or “limited segment” for short), *see* 40 C.F.R. § 130.2(j), and the state must set a TMDL for every pollutant in each limited segment.³ 33 U.S.C. § 1313(d)(1)(C).

³ A limited segment is often referred to as a “WQLS,” but given the number of other acronyms in our discussion we will avoid that one.

Each TMDL serves as the goal for the level of that pollutant in the waterbody to which that TMDL applies, allocating the total “load”—the amount of pollutant introduced into the water, *see* 40 C.F.R. § 130.2(e)—specified in that TMDL among contributing point and non-point sources. The theory is that individual-discharge permits will be adjusted and other measures taken so that the sum of that pollutant in the waterbody is reduced to the level specified by the TMDL. As should be apparent, TMDLs are central to the Clean Water Act's water-quality scheme because, as one of the plaintiffs puts it, they tie “together point-source and nonpoint-source pollution issues in a manner that addresses the whole health of the water.” Brief of Appellee Ogeechee River Valley Association at 14.

The states are primarily responsible for preparing lists of limited segments and their corresponding TMDLs, *see* 33 U.S.C. §§ 1313(d)(1)(A), (C), but EPA has approval authority over those lists. *Id.* at § 1313(d)(2). If EPA

disapproves a state's list of limited segments, or a TMDL, EPA must issue its own list or TMDL. *Id.* Some courts have held that a state's failure to timely submit its TMDLs can be taken under certain circumstances by EPA as a constructive submission of no TMDLs, triggering EPA's responsibility to establish its own. *See Scott v. City of Hammond*, 741 F.2d 992, 996-98 (7th Cir.1984); *Kingman Park Civic Ass'n v. EPA*, 84 F.Supp.2d 1, 5 (D.D.C.1999) (holding that “[l]ike the majority of courts that have confronted this quandary, this Court holds that ‘if a state fails over a long period of time to submit proposed TMDL's, this prolonged failure may amount to constructive submission by that state of no TMDL's’ ” (omitted citation)). We have not addressed this issue of constructive submission yet, and need not do so in this case because under the consent decree EPA was obligated to issue its own TMDLs according to a prescribed timetable if Georgia continued to fail to establish them.

Once established, TMDLs are implemented through various mechanisms, some of which are provided in the Act, with responsibilities for implementation divided between EPA and the states. Point-source discharges are regulated through the federal permit regime, with TMDLs incorporated into the effluent and technological-based limitations. 40 C.F.R. § 122.44(d)(1)(vii)(B). Although EPA has the authority to issue permits, it has delegated that authority to the states, at least to the majority of them, including Georgia. Even where it has delegated that basic authority, however, EPA does retain the right to include additional limits in NPDES permits when necessary to ensure a congressionally-established standard of water quality. 33 U.S.C. §§ 1312(a), 1342(a).

The Act generally leaves regulation of non-point source discharges through the implementation of TMDLs to the states. 33 U.S.C. § 1329. It imposes on the states planning responsibilities, including the preparation of a non-point source management plan, commonly referred to as a § 319 report. *Id.* at § 1329(a). In this report, a state must, among other things, identify waters where water quality standards can reasonably be met only by additional action to control non-point source pollution, and designate the categories and subcategories of non-point sources that contribute to the pollution in those waters. *Id.* at § 1329(a)(1). States also have to prepare a management program that identifies “best management practices and measures” to reduce pollution. *Id.* at § 1329(b). EPA exercises authority over these programs and must approve them. Once the programs have been approved, EPA may make grants to the states to allow them to implement the plans. *Id.* at § 1329(h).

Finally, a state has to prepare a "continuing planning process," which is essentially a plan for how the state is going to clean up pollution. *Id.* at § 1313(e)(1). Like the best management program, EPA has to approve or disapprove each state's continuing planning process and, once it has been approved, occasionally review it to ensure it stays consistent with the Act. *Id.* at § 1313(e)(2). In preparing its continuing planning process, a state must incorporate established TMDLs. *See id.* at § 1313(e)(3)(C).

To summarize, under the Clean Water Act, Georgia has the primary authority and responsibility for issuing permits and controlling nonpoint source pollution in that state. It also has both the authority and the duty to compile the list of limited segments (the § 303(d) list), and establish TMDLs for each waterbody on the list. *1027 EPA, for its part, has supervisory authority over various reports and plans which the state is required by the Act to produce. EPA can also compile its own list of limited segments and establish its own TMDLs, if the state's efforts are either inadequate or too long delayed.

The Consent Decree and Dispute in this Appeal

By the time Sierra Club sued EPA in 1994, sixteen years after the Act had gone into effect, Georgia had established only two TMDLs for the approximately 340 limited segments identified in its 303(d) list, and the district court found that neither of those two TMDLs satisfied the requirements of the Act. In the lawsuit, Sierra Club asked the court to force EPA to establish the TMDLs and to implement them, because Georgia had not done so. The district court granted summary judgment for Sierra Club, *Sierra Club v. Hankinson*, 939 F.Supp. 865 (N.D.Ga.1996), and entered an injunction requiring the EPA to both establish and implement TMDLs for all Georgia limited segments by June 2001. *Sierra Club v. Hankinson*, 939 F.Supp. 872 (N.D.Ga.1996). The injunction directed EPA to "implement (or ensure that the State implements)" TMDLs through the modification, revocation, and re-issuance of permits. It also imposed a number of other requirements on EPA, most of which had to do with making it exercise supervision over Georgia's water quality control efforts. EPA appealed to this Court.

While EPA's appeal was still pending, in July of 1997 the parties agreed upon the terms of a consent decree and persuaded the district court to enter it, which it did in October of 1997. In the consent decree, EPA was ordered to establish TMDLs for the limited segments on Georgia's § 303(d) list

on a basin approach if Georgia continued to fail to do so. Under a schedule set out in the decree, all TMDLs were to be established by 2004, and additional, more specific deadlines were included. The decree provided that by 1998, EPA was to establish TMDLs for twenty percent of the waterways on Georgia's 1996 list of limited segments. These 1998 TMDLs are the ones that are the subject of this appeal, the ones Sierra Club says EPA should have prepared an implementation plan for, but they are only the first group of TMDLs that EPA was to establish under the terms of the consent decree. The decree also required the EPA to establish TMDLs for the remaining waterbodies on a river basin rotation schedule, if Georgia failed to do so.

The basin rotation schedule was to begin in 1999, with TMDLs proposed for all the basins by 2004.⁴ Besides establishing TMDLs, the decree imposed other responsibilities on EPA, including: (1) review of Georgia's continuing planning process, (2) proposal of specific terms for Georgia/EPA Performance Partnership Agreements, (3) biennial review of Georgia's TMDL program, and (4) submission of annual compliance reports to the court and to the plaintiff groups.

- 4 EPA's performance in establishing the TMDLs for some of the water basins has been the subject of other litigation under the consent decree, which has resulted in another decree further defining EPA's duties.

EPA proposed 124 TMDLs for Georgia's waterbodies in August of 1997 and attached them to the consent decree which the parties submitted to the district court for its approval. Under the terms of the decree, those TMDLs were to be "established, or finalized" within six months after being proposed. All but eight were timely established by EPA, and even those eight *1028 were established after Sierra Club filed a motion to force EPA to do so. Once EPA had established the TMDLs, nothing else was done with them. Georgia did not incorporate the TMDLs into any of its non-point source management plans or reports and did not implement them. As a result, two years after entering into the consent decree, only one of the 124 waterbodies on Georgia's 1996 § 303(d) list met water quality standards.

Dissatisfied with the progress made towards clean water in Georgia and with EPA action or lack of it, in February 2000 Sierra Club moved the district court to re-open the decree and to compel EPA to take further action. Specifically, Sierra Club moved the court to order EPA to prepare implementation plans for the 124 TMDLs the agency had

established in 1998.⁵ EPA argued in response that the decree did not obligate it to prepare implementation plans for or to implement TMDLs, and that the decree should not be modified to impose that responsibility on it.

5 Sierra Club moved for other relief as well, but the request that EPA be required to establish implementation plans is the only one involved in this appeal.

The district court deferred ruling on Sierra Club's motion because Georgia promised to develop implementation plans for the 124 TMDLs within nine months. Within that time period, Georgia did develop implementation plans for all 124 of those TMDLs. Because the plans which Sierra Club wanted EPA to develop had now been developed by Georgia, EPA moved the court to dismiss as moot Sierra Club's motion to reopen and compel. Sierra Club argued that its motion was not moot, because Georgia's implementation plans were flawed or otherwise unsatisfactory.

The district court denied the EPA's motion to dismiss as moot Sierra Club's motion. In its order, the court ruled that "TMDL implementation plans are required [of EPA] by the Consent Decree." As for the Georgia-prepared plans, the court ruled that EPA had "obligations" to "ensure" those plans were adequate. The order did not, however, declare the Georgia plans insufficient. Instead, it directed EPA and Sierra Club to confer about those plans and attempt to reach an agreement concerning them. If their disagreements could not be resolved by discussion, the order stated, the court would grant either party's request for an evidentiary hearing on the sufficiency of the Georgia plans.

EPA appealed the district court's order and also filed an emergency motion for stay pending appeal. In response to a jurisdictional question we issued to the parties, Sierra Club contends that we lack jurisdiction because the district court's order denying EPA's motion to dismiss on mootness grounds is not final so as to be appealable under 28 U.S.C. § 1291, is not appealable under the collateral order doctrine, and is not a modification of an injunction appealable under 28 U.S.C. § 1292(a)(1). Sierra Club also filed a motion to dismiss for lack of jurisdiction on those grounds. EPA responded that this Court does have jurisdiction and, alternatively, petitioned for a writ of mandamus.

II. DISCUSSION

A. Jurisdiction—the District Court Did Modify the Consent Decree

EPA contends that we have jurisdiction over this appeal under 28 U.S.C. § 1292(a)(1), which gives appellate courts jurisdiction to review interlocutory orders of district courts "granting, continuing, *1029 [and] modifying" injunctions.⁶ Sierra Club contends that we do not, because the district court did not modify the injunctive relief provided for by the consent decree, but only interpreted the decree.⁷ If Sierra Club is correct and the district court only interpreted the decree, we do not have jurisdiction. See *Birmingham Fire Fighters Ass'n 117 v. Jefferson County*, 280 F.3d 1289, 1292 (11th Cir.2002).

6 The parties agree that the district court's order denying EPA's motion to dismiss Sierra Club's motion to enforce or modify the consent decree is not a final order as that term is used in 28 U.S.C. § 1291, and that the order does not fall within the collateral order doctrine. We concur with them on those points. Accordingly, whether we have jurisdiction turns on 28 U.S.C. § 1292(a)(1).

7 The plaintiffs also contend that we lack jurisdiction on the ground that there is no justiciable controversy, because the issue is not yet ripe. The district court's interpretation of the decree imposed on EPA a requirement to prepare implementation plans or ensure that the ones prepared by Georgia satisfy the requirements of the Act. It ordered EPA to take action within 30 days, action that EPA insists it has no obligation to undertake. The matter is sufficiently ripe.

1 2 3 We have said that in order to decide whether a district court's order relating to a prior decree falls within the grant of appellate jurisdiction under § 1292(a)(1), we must decide whether the order modified the decree in a "jurisdictionally significant way." *Id.* at 1292. A district court's interpretation of a consent decree operates as a modification when it changes the legal relationship among the parties. *Id.* at 1293. This determination is not significantly affected by whether the district court called its order an interpretation, as this district court did, or a modification. See *Sizzler Family Steak Houses v. Western Sizzlin Steak House, Inc.*, 793 F.2d 1529, 1539 (11th Cir.1986) ("What matters, however, is not the district court's characterization of its order as amendatory or explanatory, but rather the actual effect of the order on the obligations of the parties as set forth in the original judgment.").

4 5 If the district court's order changes the legal relationship of the parties, it is a modification of the decree, regardless of what it was called. As we explained in *Birmingham Fire Fighters*, we do not engage in a fine point analysis of the original decree and the later order. Instead, we take a fairly loose focus and ask whether the district court's reading of the consent decree is "a gross misinterpretation of the decree's original command," one that "leaps from the page." *Birmingham Fire Fighters*, 280 F.3d at 1293. If so, then we have jurisdiction. Applying this test, our starting point is to determine the legal relationship among the parties that the consent decree itself established. The next step is to determine whether the district court's order changed that relationship in a "jurisdictionally significant way." *Id.* at 1292.

6 7 As this Court has explained before, "As a general matter, the rules we use to interpret a consent decree are the same ones we use to interpret a contract—since a consent decree is a form of contract." *Reynolds v. Roberts*, 202 F.3d 1303, 1312 (11th Cir.2000). With a consent decree as with a contract, the first place we look and often the last as well is to the document itself. The consent decree in this case provided that if Georgia failed to establish TMDLs, EPA was required to do so.⁸ The decree defined a TMDL as having *1030 "the meaning provided at Section 303(d)(1)(C) of the CWA, 33 U.S.C. § 1313(d)(1)(C), and 40 C.F.R. § 130.2(i), as codified as of the Effective Date of this Decree, or as subsequently amended." Neither the referenced statutory provision nor the referenced regulation includes implementation plans within the meaning of TMDLs.⁹ The two are different, and the statute and regulation incorporated into the definition part of the consent decree reflect that difference. A TMDL is defined to be a set measure or prescribed maximum quantity of a particular pollutant in a given waterbody, *see* 40 C.F.R. § 130.2(i), while an implementation plan is a formal statement of how the level of that pollutant can and will be brought down to or kept under the TMDL.¹⁰

8 EPA agreed to establish the 1998 TMDLs, the ones that are the subject of this appeal, without waiting on Georgia to fail to do so first. In July of 1997 the parties had agreed to the terms of the consent decree, one of which was that in August EPA would propose for public comment by August of 1997 TMDLs for twenty percent of the waterbodies in Georgia's 1996 303(d) list. These TMDLs were attached to the consent decree when the parties submitted the decree to the district court for its

approval. The remaining TMDLs were to be developed by EPA only after Georgia failed to do so.

9 The statutory provision says:

Each State shall establish for the waters identified in paragraph (1)(A) of this subsection, and in accordance with the priority ranking, the total maximum daily load, for those pollutants which the Administrator identifies under section 1314(a)(2) of this title as suitable for such calculation. Such load shall be established at a level necessary to implement the applicable water quality standards.... 33 U.S.C. § 1313.

The regulation defines a TMDL as: "[t]he sum of the individual [wasteload allocations] for point sources and [load allocations] for non-point sources and natural background." 40 C.F.R. § 130.2(i).

10 Sierra Club attempts to escape this clear distinction between TMDLs and implementation plans for them by arguing that implementation plans should be read into TMDLs based upon EPA guidance documents and also a proposed rule that was withdrawn before it went into effect. Putting aside any questions about whether those documents actually do define implementation plans into TMDLs, the inescapable fact is that the consent decree does not, because the decree does not define TMDLs by reference to any guidance documents or aborted rule. Instead, the decree defines the term by reference to a specific statutory provision and a specific regulation that is in effect, and neither of those two definitional sources indicates or even implies that TMDLs include implementation plans. We find no ambiguity on the point in either the statute or regulation, and because they are the sole source of the definition of TMDLs in the consent decree they are all we look at to define the term. *Cf. Babbitt v. Sweet Home Chapter of Communities for a Great Oregon*, 515 U.S. 687, 697 n. 10, 115 S.Ct. 2407, 2413, 132 L.Ed.2d 597 (1995) (refusing to apply the ordinary common-law meaning of a term when it was defined in the statute). Given the clarity of the consent decree, we also decline Sierra Club's invitations to consider any extrinsic evidence on the issue.

The consent decree clearly and explicitly places a number of duties on EPA, including the requirement to establish TMDLs on a basin approach if Georgia fails to do so, but it just as clearly does not require EPA to develop implementation plans for those TMDLs once they are established. The decree contains seven pages setting out in detail EPA's obligations under it, and conspicuously absent from the list of those obligations is any mention of implementation plans. Indeed, implementation plans are not mentioned at all anywhere in

the 28-page decree. If the parties had intended for the decree to put such an important and substantial responsibility on EPA, they would have spelled that out just they spelled out its responsibility to establish TMDLs.

The district court gave two reasons for finding that implementation plans were required by the consent decree. First, it said that “[u]nder EPA’s interpretation of the Consent Decree, TMDLs would be developed with no guarantee that they would ever be implemented. Developing TMDLs without implementing them amounts to an *1031 academic endeavor which would have no effect on water quality in Georgia.” Or, as Sierra Club restates that concern, unless implementation plans are read into TMDLs, the decree is reduced to “empty formalism.” We doubt that, because TMDLs are a necessary step before any implementation plans can be formulated. Interpreting the decree as written gives it meaning, because establishing TMDLs is a meaningful and not necessarily simple step in the process of controlling pollution in Georgia’s waterbodies. After all, in sixteen years Georgia had established only two of the hundreds of TMDLs that were necessary, and the adequacy of those two was questionable. The decree put the TMDL task with all of its difficulties on EPA. The responsibility for implementing the TMDLs once they were established was left to Georgia, as it is in the Clean Water Act itself.

8 The second reason the district court gave for its conclusion that EPA was required by the consent decree to establish implementation plans is that reading that into the decree would further the goal of the Clean Water Act, which is cleaner water. The court stated, “EPA’s interpretation is incompatible with the Clean Water Act goal of improving water quality. Specifically, among the stated objectives of the Clean Water Act is the following: ‘[I]t is the national policy that programs for the control of nonpoint sources of pollution be developed and implemented in an expeditious manner....’” Of course, the national policy and objectives relating to clean water are most reliably embodied in the Act itself which puts the responsibility for implementation of TMDLs on the states. Logically, the Act cannot be a source of authority for changing the Act’s allocation of responsibilities. Besides, the district court’s approach disregards the Supreme Court’s instruction that “any command of a consent decree or order must be found within its four corners, and not by reference to any purposes of the parties or of the underlying statutes.” *United States v. IIT Continental Baking Co.*, 420 U.S. 223, 233, 95 S.Ct. 926, 933, 43 L.Ed.2d 148 (1975) (quotations and citations omitted); see also *United States v. Atlantic Refining Co.*, 360 U.S. 19, 23, 79 S.Ct. 944, 946, 3 L.Ed.2d 1054

(1959) (rejecting a loose interpretation of the consent decree even though such an interpretation might better effectuate the purposes of the acts assertedly violated); *Hughes v. United States*, 342 U.S. 353, 356-57, 72 S.Ct. 306, 308, 96 L.Ed. 394 (1952) (rejecting an invitation to advance the asserted purpose of the consent decree through an interpretation of a consent decree not justified by the four corners of the decree).

9 The Supreme Court has observed that consent decrees generally do not have overarching purposes which can be used as guides to interpretation.¹¹ For example, in *1032 *United States v. Armour & Co.*, 402 U.S. 673, 682, 91 S.Ct. 1752, 1757, 29 L.Ed.2d 256 (1971), the Court explained that because consent decrees are normally compromises between parties with opposing positions in which each party gives up their rights to litigation and to prove their position, consent decrees should be interpreted as written, “and not as it might have been written had the plaintiff established his factual claims and legal theories in litigation.” In this case, the parties negotiated the terms of the decree and the timetable for TMDL establishment and other relief within the framework of the statutory scheme set out in the Act. The decree cannot be interpreted as requiring whatever might be necessary and appropriate to achieve cleaner water, because it was not written that way. It was written to bring about in a more expeditious and certain manner than would otherwise have occurred one important step in the process, and it appears to have achieved that goal or to have nearly done so.

11 While consent decrees should not be interpreted according to a broad, nebulous purpose, in different contexts courts are called upon to decipher the purpose of some consent decrees. For example, the Supreme Court has said that when considering whether an institutional-reform decree or other similar decree should be modified, courts are to determine whether the motion is to modify a term of the decree that is central to the basic purpose of the decree. If it is, then modification is probably not appropriate. *Rufo v. Inmates of Suffolk County Jail*, 502 U.S. 367, 387, 112 S.Ct. 748, 762, 116 L.Ed.2d 867 (1992) (“If modification of one term of a consent decree defeats the purpose of the decree, obviously modification would be all but impossible.”). See *United States v. City of Miami*, 2 F.3d 1497, 1504 (11th Cir.1993) (“Thus, a court faced with a motion to modify a consent decree in institutional reform litigation must begin by determining the ‘basic purpose’ of the decree.”). But the purpose of the decree even in that context is not to be conceived at too high a level of generality, and is not used as a basis to expansively interpret the terms of the decree. In the case before us, the district court used what is considered to be

the purpose of the decree to interpret expansively the decree's terms. That should not be done.

This, then is the original relationship between the parties as established by the consent decree: at Sierra Club's insistence EPA was obligated to develop for the State of Georgia TMDLs, as defined by the statutory and regulatory provisions. The order we have before us declared that the consent decree went beyond that and required EPA to develop not just TMDLs but implementation plans for TMDLs. Because the decree as written and entered did not require EPA to prepare implementation plans for the TMDLs, the district court's order requiring EPA to prepare them modified the decree because it changed the legal relationship of the parties by "chang[ing] the command of the earlier injunction." *Birmingham Fire Fighters*, 280 F.3d at 1293 (internal quotations omitted). If a party obtains a decree forcing another party to perform task A, and a later order adds task B, the legal relationship between the parties has been changed by the later order. That is what happened in this case. There was a change in EPA's obligations, in the tasks with which it was saddled. The law is that if the change is sufficiently obvious-if the original decree did not even arguably require the additional task or obligation, so that the district court's interpretation of the decree is "blatantly or obviously wrong"-then we have jurisdiction to review the order. *Id.* For the reasons we have set out, we conclude that this is not a close call; the error in the district court's interpretation of the consent decree is obvious enough to give us jurisdiction to review the resulting modification.

**B. The District Court Abused Its Discretion
 In Modifying the Consent Decree**

10 11 Having decided that the district court obviously modified the decree when it required EPA to prepare implementation plans, which gives us jurisdiction to review its action, we turn now to the merits issue, which is whether the modification was an abuse of discretion. Sierra Club contends that the modification was within the district court's discretion and points to several provisions in the decree which it says gives the district court the power to modify it. One of those provisions says that the court retains jurisdiction over the action and may issue orders to modify the terms of the decree and grant further relief as justice requires. The other says that nothing in the decree "shall be construed to limit the equitable *1033 powers of the Court to modify those terms upon a showing of good cause by any party." We do not read these boilerplate provisions as giving the district court any

more power to modify the decree than it already had under Rule 60(b)(5) of the Federal Rules of Civil Procedure,¹² as explicated by the Supreme Court in *Rufo v. Inmates of Suffolk County Jail*, 502 U.S. 367, 112 S.Ct. 748, 116 L.Ed.2d 867 (1992). The provisions confirm the court's authority to modify the decree, but that authority is still subject to the constraints set out in the *Rufo* decision. In that decision the Supreme said that the party seeking modification of a consent decree must show, first, "a significant change either in factual conditions or in law," *id.* at 384, 112 S.Ct. at 760, and, second, that "the proposed modification is suitably tailored to the changed circumstance." *Id.* at 391, 112 S.Ct. at 763.

12 Rule 60(b)(5) provides that a party may obtain relief from a court order when "it is no longer equitable that the judgment should have prospective application." Fed.R.Civ.P. 60(b)(5).

Sierra Club contends that there have been changes in both the law and surrounding circumstances which justify the district court's modification of the decree. It points to some guidance documents and a proposed rule published by EPA as proof that the law has changed, but none of those documents or proposals have the effect of law. As for guidance documents, they can modify neither statutes nor regulations. To legally change its regulations, EPA must comply with the rulemaking procedures set out in the Administrative Procedures Act. 5 U.S.C. §§ 551-706. The method by which guidance documents are created does not even come close to compliance with those procedures.

As for the proposed rule Sierra relies upon, it did not work a change in the law because it has never been implemented and in fact has been withdrawn. EPA proposed the new rule in 1999, *see* 64 Fed.Reg. 46012 (Aug. 23, 1999), and published it as a final rule in July of 2000, *see* 65 Fed.Reg. 43586 (July 13, 2000), but it was never implemented. Congress refused to appropriate the necessary funds for implementation, which delayed things, *see* Pub.L. No. 106-246, 114 Stat. 511, 567 (2000), and then EPA withdrew the proposed rule. *See* 66 Fed.Reg. 41817 (Aug. 9, 2001). At no time was the new rule ever applied by EPA, and as things stand, the relevant regulations related to the Act are the same as they were in 1997. The statutory and regulatory regime-the applicable law-is the same now as it was when the consent decree was entered. There has been no change.

Nor has there been a change in factual circumstances sufficient to justify the district court's modification of the decree. It is true that the state of Georgia is not currently

implementing the TMDLs established by EPA at the rate contemplated by the Act, but Georgia has never carried out its responsibilities under the Act at anywhere near the pace the Act contemplates. Georgia's governmental lethargy in this area is nothing new. Indeed, it was what Sierra Club calls "Georgia's 16 year failure and refusal to develop and implement the [TMDL] process for hundreds of Georgia's rivers, streams, lakes, and estuaries that were not meeting designated standards for fishing, swimming, and drinking," which led to the lawsuit. Brief of Appellee Sierra Club at 3. A decree cannot be justifiably modified based upon the theory of changed factual circumstances when the circumstances simply have not changed.

Sierra Club contends that the district court was within its discretion in modifying *1034 the decree because the decree had not achieved its purpose, and such a failure can itself be a changed circumstance justifying modification. See *Sizzler Family Steak Houses v. Western Sizzlin Steak House, Inc.*, 793 F.2d 1529, 1539 (11th Cir.1986); *United States v. United Shoe Machinery Corp.*, 391 U.S. 244, 251-52, 88 S.Ct. 1496, 1501, 20 L.Ed.2d 562 (1968). That contention is based upon the premise that the purpose of the decree was to achieve clean water in Georgia, a state of affairs which everyone concedes is a long way off. But the purpose of the decree was not nearly so ambitious. Clean water may have been Sierra Club's motivation, its reason for bringing the lawsuit to begin with, but the bargain it struck with EPA which produced the consent decree was much more limited.

While the Clean Water Act sets out a process composed of several steps to achieve clean water, the consent decree focuses on bringing about one of those steps, the establishment of TMDLs, and it leaves attainment of the Act's ultimate goal of cleaning up the water to the statutory and regulatory scheme which requires compliance by Georgia subject to some oversight by EPA. The consent decree does not supplant the Act itself. Under the decree, Georgia is still responsible for incorporating TMDLs, regardless of whoever establishes them, into its section 303(e) plan;

Georgia is still responsible for incorporating TMDLs into its NPDES permits; and Georgia is still responsible for implementing non-point source pollution controls. EPA agreed only to a supervisory role with respect to some of these implementation-related processes, but it did not agree to take over the implementation process. The objective of the consent decree was the establishment of TMDLs, not the much more long-term goal of clean water.

12 Nothing has changed to make the provisions of the consent decree ineffective, and experience has not shown that the decree is incapable of achieving its purpose. It is still capable of and is in fact accomplishing what the parties set out to achieve with the decree: the establishment of TMDLs. If Sierra Club wants more done to bring about clean water in Georgia, it will have to look beyond the consent decree and to the Clean Water Act and regulations, and perhaps to additional litigation, to achieve those worthy goals.

A party seeking to modify a consent decree has a high hurdle to clear and the wind in its face. See, e.g., *Reynolds*, 202 F.3d at 1312 ("Long standing precedent evinces a strong public policy against judicial rewriting of consent decrees."). Because Sierra Club has failed to clear that hurdle, the district court should not have modified the decree in the course of interpreting it. It should have granted EPA's motion to dismiss Sierra Club's motion to re-open the decree and to compel action.

III. CONCLUSION

The district court's order denying EPA's motion to dismiss Sierra Club's motion to re-open and compel action is REVERSED, and this case is REMANDED for further proceedings consistent with this opinion.

California Court Decisions

ATTACHMENT 45

38 Cal.Rptr.3d 373

Court of Appeal, Fourth District, Division 1, California.

CITY OF ARCADIA et al., Plaintiffs and Appellants,

v.

STATE WATER RESOURCES CONTROL
BOARD et al., Defendants and Appellants.

No. D043877. Jan. 26, 2006. Rehearing
Denied Feb. 17, 2006. Review Denied April 19, 2006.

Synopsis

Background: Cities filed petition for writ of mandate and complaint for declaratory and injunctive relief against state and regional water boards to challenge water boards' adoption and approval of a zero trash total maximum daily loads (TMDL) discharge from municipal storm drains into river. The Superior Court, San Diego County, No. GIC803631, Wayne L. Peterson and Linda B. Quinn, JJ., partially granted cities' petition and granted declaratory relief, but did not invalidate trash TMDL on specified grounds. Water boards and cities appealed.

Holdings: The Court of Appeal, McConnell, P.J., held that:

- 1 water boards' decision not to conduct an assimilative capacity study before adopting zero trash TMDL was within their expertise rather than trial court's;
- 2 water boards sufficiently complied with statute requiring consideration of economic factors before adopting and approving zero trash TMDL;
- 3 regional water board's environmental checklist with regard to approving zero trash TMDL was deficient for purposes of California Environmental Quality Act (CEQA);
- 4 water boards' adoption and approval of zero trash TMDL did not violate federal standards; and
- 5 adoption and approval of zero trash TMDL did not fail to comply with requisite scientific standards.

Judgment affirmed in part, reversed in part; order affirmed.

Opinion

McCONNELL, P.J.

*1401 This case concerns the serious environmental problem of litter discharged from municipal storm drains into the Los Angeles River, and efforts of the California Regional Water Quality Control Board, Los Angeles Region (Regional Board) and the State Water Resources Control Board (State Board)¹ to ameliorate the problem through the adoption and approval of a planning document setting a target of zero trash discharge within a multi-year implementation period.

1 We refer to these entities together as the Water Boards.

The Water Boards appeal a judgment partially granting a petition for writ of mandate brought by the City of Arcadia and 21 other cities (Cities),² who *1402 agree trash pollution must be remedied but oppose the target of zero trash as unattainable and inordinately expensive. The Water Boards challenge the court's findings that an assimilative capacity study is a required element of its action; a cost-benefit analysis and consideration of economic factors are required under state law and are not met; the zero trash target is inapplicable to the Los Angeles River Estuary (Estuary) because it does not appear on the state's list of impaired waters; and, the Water Boards failed to comply with the California Environmental Quality Act (CEQA) by not preparing an Environmental Impact report (EIR) or its functional equivalent.

2 In addition to Arcadia the Cities include Baldwin Park, Bellflower, Cerritos, Commerce, Diamond Bar, Downey, Irwindale, Lawndale, Monrovia, Montebello, Monterey Park, Pico Rivera, Rosemead, San Gabriel, Santa Fe Springs, Sierra Madre, Signal Hill, South Pasadena, Vernon, West Covina and Whittier.

The Water Boards also contend the court erred by granting the Cities declaratory relief on their claim the Trash total maximum daily load (TMDL) does not apply to "nonwaters," meaning areas that do not drain into navigable waters such as the Los Angeles River or tributaries, as the parties agreed during this proceeding that the trash TMDL applies only to navigable waters.

The Cities also appeal, contending the trial court erred by not invalidating the Trash TMDL on the additional grounds the Water Boards failed to provide for deemed compliance with the target of zero trash through certain methods; failed to implement load allocations for nonpoint sources of trash pollution; failed to adhere to the data collection and analysis required by federal and state law; relied on nonexistent, illegal and irrational uses to be made of the Los Angeles River; and, violated the Administrative Procedures Act (APA).

We conclude the Cities' appeal lacks merit. As to the Water Boards' appeal, we conclude the court properly invalidated the planning document on the ground of noncompliance with CEQA, and we affirm the judgment insofar as it is based on that ground. We reverse the judgment to the extent it is based on other grounds. Further, we hold the court erred by granting declaratory relief on the nonwaters issue as there was no controversy when the court ruled.

**379 BACKGROUND INFORMATION

I

Statutory and Regulatory Scheme

The "quality of our nation's waters is governed by a 'complex statutory and regulatory scheme ... that implicates both federal and state administrative responsibilities.'" *1403 (*City of Burbank v. State Water Resources Control Bd.* 2005) 35 Cal.4th 613, 619, 26 Cal.Rptr.3d 304, 108 P.3d 862 (*City of Burbank*)). An overview of applicable law is required to place the facts here in context.

A

Federal Law

In 1972 Congress enacted amendments to the Federal Water Pollution Control Act (Pub.L. No. 92-500 (Oct. 18, 1972) 86 Stat. 816; 33 U.S.C. § 1251 et seq.), which, as amended in 1977, is commonly known as the Clean Water Act. (*City of Burbank, supra*, 35 Cal.4th at pp. 619-620, 26 Cal.Rptr.3d 304, 108 P.3d 862.) Its stated goal is "to restore and maintain the chemical, physical and biological integrity of the Nation's waters" by eliminating the discharge of pollutants into navigable waters. (33 U.S.C. § 1251(a).)

The Clean Water Act places "primary reliance for developing water quality standards on the states." (*Scott v. Hammond* (7th Cir.1984) 741 F.2d 992, 994.) It requires each state to develop such standards and review them at least once every three years for required modifications. (33 U.S.C. § 1313(a), (c)(1).) The standards must include designated uses such as recreation, navigation or the propagation of fish, shellfish and wildlife; water quality criteria sufficient to protect the designated uses; and an antidegradation policy. (40 C.F.R. §§ 131.6, 131.10-131.12 (2003).) The water quality criteria "can be expressed in narrative form or in a numeric form, e.g., specific pollutant concentrations." (*Florida Public Interest Research Group Citizen Lobby, Inc. v. EPA* (11th Cir.2004) 386 F.3d 1070, 1073.) "Narrative criteria are broad statements of desirable water quality goals in a water quality plan. For example, 'no toxic pollutants in toxic amounts' would be a narrative description." (*City of Burbank, supra*, 35 Cal.4th at p. 622, fn. 4, 26 Cal.Rptr.3d 304, 108 P.3d 862.)

The Clean Water Act focuses on two possible sources of pollution: point sources and nonpoint sources. "Point source" means "any discernable, confined and discrete conveyance" such as a pipe, ditch, channel, tunnel, or conduit. (33 U.S.C. § 1362(14).) The Clean Water Act does not define nonpoint source pollution, but it has been described as "nothing more [than] a [water] pollution problem not involving a discharge from a point source." (*Defenders of Wildlife v. EPA* (10th Cir.2005) 415 F.3d 1121, 1123-1124.)³

3 According to the Environmental Protection Act (EPA), nonpoint source pollution is caused by rainfall or snowmelt moving over and through the ground, and includes excess fertilizers, herbicides, and insecticides from agricultural lands and residential areas; oil, grease and toxic chemicals from urban runoff and

energy production; sediment from improperly managed construction sites, crop and forest land, and eroding stream banks; salt from irrigation practices and acid drainage from abandoned mines; and bacteria and nutrients from livestock, pet wastes and faulty septic systems. (<http://www.epa.gov/owow/nps/qa.html>.)

*1404 “Congress dealt with the problem of point source pollution using the National Pollution Discharge Elimination System [NPDES] permit process. Under this approach, compliance rests on technology- **380 based controls that limit the discharge of pollution from any point source into certain waters unless that discharge complies with the [Clean Water] Act's specific requirements.” (*San Francisco BayKeeper v. Whitman* (2002) 297 F.3d 877, 880; 33 U.S.C. § 1311(b)(1)(A).) “ ‘Nonpoint sources, because of their very nature, are not regulated under the NPDES [program]. Instead, Congress addressed nonpoint sources of pollution in a separate portion of the [Clean Water] Act which encourages states to develop areawide waste treatment management plans.’ ” (*Pronsolino v. Marcus* (N.D.Cal.2000) 91 F.Supp.2d 1337, 1348, citing 33 U.S.C. § 1288; see also 33 U.S.C. § 1329.)

“When the NPDES system fails to adequately clean up certain rivers, streams or smaller water segments, the [Clean Water] Act requires use of a water-quality based approach. States are required to identify such waters ... [and] rank [them] in order of priority, and based on that ranking, calculate levels of permissible pollution called ‘total maximum daily loads’ or ‘TMDLs.’ ” (*San Francisco BayKeeper v. Whitman, supra*, 297 F.3d at p. 880; 33 U.S.C. § 1313(d)(1)(A); 40 C.F.R. § 130.7(b) (2003).) “This list of substandard waters is known as the ‘303(d) list’ (section 303 of the Clean Water Act having been codified as [title 33 United States Code] section 1313).” (*City of Arcadia v. EPA* (9th Cir.2005) 411 F.3d 1103, 1105 (*City of Arcadia II*)).

“A TMDL defines the specified maximum amount of a pollutant which can be discharged or ‘loaded’ into the waters at issue from all combined sources.” (*Dioxin/Organochlorine Center v. Clarke* (9th Cir.1995) 57 F.3d 1517, 1520.) “A TMDL must be ‘established at a level necessary to implement the applicable water quality standards....’ [Citation.] A TMDL assigns a *waste load allocation* ... to each point source, which is that portion of the TMDL's total pollutant load, which is allocated to a point source for which an NPDES permit is required. [Citation.] Once a TMDL is developed, effluent limitations in NPDES permits must be consistent with the [waste load allocations] in the TMDL.” (*Communities for a*

Better Environment v. State Water Resources Control Bd. (2003) 109 Cal.App.4th 1089, 1095–1096, 1 Cal.Rptr.3d 76; *Dioxin/Organochlorine Center v. Clarke*, at p. 1520.)⁴ A TMDL requires a *1405 “margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality.” (33 U.S.C. § 1313(d)(1)(C).)

- 4 The Clean Water Act “does not define total maximum daily load. EPA's regulations break it into a ‘waste[]load allocation’ for point sources and a ‘load allocation’ for nonpoint sources.” (*Pronsolino v. Marcus, supra*, 91 F.Supp.2d at p. 1344, fn. 8; 40 C.F.R. § 130.2(g)-(i) (2005).)

The EPA may allow states to adopt and administer NPDES permit programs (*Pronsolino v. Marcus, supra*, 91 F.Supp.2d at p. 1347, fn. 10), and it has authorized California to administer such a program. (54 Fed.Reg. 40664 (Oct. 3, 1989).)

B

State Law

California implements the Clean Water Act through the Porter–Cologne Act (Wat.Code, § 13000 et seq.), which was promulgated in 1969. Under the Porter–Cologne Act, nine regional boards regulate the quality of waters within their regions under the purview of the State Board. (Wat.Code, §§ 13000, 13100, 13200, 13241, 13242.)

**381 Regional boards must formulate and adopt water quality control plans, commonly called basin plans, which designate the beneficial uses to be protected, water quality objectives and a program to meet the objectives. (Wat.Code, §§ 13050, subd. (j), 13240.) “ ‘Water quality objectives’ means the limits or levels of water quality constituents or characteristics which are established for the reasonable protection of beneficial uses of water or the prevention of nuisance within a specific area.” (*Id.*, § 13050, subd. (h).)

The EPA must approve or disapprove a state's TMDL within 30 days of its submission. (33 U.S.C. § 1313(d)(2).) If the EPA disapproves a state's submission, it must establish its own TMDL within 30 days of the disapproval. (*Ibid.*)

II

Trash TMDL

The Los Angeles River is a 51-mile flood control channel, largely concrete-lined, which runs through the City of Los Angeles and surrounding municipalities in Los Angeles County and terminates at the Pacific Ocean. In 1990 the Regional Board issued an NPDES storm water permit to the Los Angeles County Department of Public Works as the principal permittee and 84 cities as copermittees, to address various chemical pollutants discharged into the region's water bodies (Municipal NPDES Permit).

**1406* In 1994 the Regional Board adopted a revised water quality control plan, or basin plan (1994 Basin Plan), which includes narrative water quality objectives. It provides that “[w]aters shall not contain floating materials, including solids, liquids, foams, and scum, in concentrations that cause nuisance or adversely affect beneficial uses,” and “[w]aters shall not contain suspended or settleable material in concentrations that cause nuisance or adversely affect beneficial uses.” (Italics omitted.) Beneficial uses of the Los Angeles River and surrounds include wildlife and marine habitat, including habitat for endangered species, and recreational activities such as fishing, walking, hiking, jogging, bicycling, horseback riding, bird watching and photography.

In 1996 and 1998 the Regional Board identified certain reaches of the Los Angeles River on the state's “303(d) list” as being impaired by trash, primarily through storm water runoff in thousands of municipal storm drains.⁵ On September 19, 2001, the Regional Board adopted a resolution to amend its 1994 Basin Plan to incorporate a TMDL for trash in the Los Angeles River (Trash TMDL). Despite many objections from affected municipalities, the Trash TMDL sets a numeric target of zero trash as “even a single piece of trash can be detrimental, and no level of trash is acceptable in waters of the state.”⁶ “The numeric target is staff's interpretation of the narrative water quality objective [in ***382* the 1994 Basin Plan], including an implicit margin of safety.”

⁵ The Regional Board defines “trash” as “man-made litter” within the meaning of Government Code section 68055.1, subdivision (g), which provides: “‘Litter’ means all improperly discarded waste material, including, but not limited to, convenience food, beverage, and other produce packages or containers constructed of steel, aluminum, glass, paper, plastic, and other natural and synthetic materials, thrown or

deposited on the lands and waters of the state, but not including the properly discarded waste of the primary processing of agriculture, mining, logging, sawmilling, or manufacturing.”

⁶ The Regional Board adopted a Trash TMDL in January 2001, which also had a target of zero trash. It reconsidered the matter on September 19, 2001, “to provide clarifying language and greater flexibility in implementing the [Trash] TMDL.”

The reduction of trash is to be phased over a 14-year period, including an optional two-year baseline monitoring period. In lieu of baseline monitoring, cities may accept a default baseline allocation of “640 gallons of uncompressed trash per square mile per year,” a value based on data the City of Calabasas provided. The Trash TMDL provides for a “review of the current target [of zero trash] ... once a reduction of 50% has been achieved and sustained,” “based on the findings of future studies regarding the threshold levels needed for protecting beneficial uses.”

Under the Trash TMDL, cities may use a variety of compliance methods, including “[e]nd-of-pipe full capture structural controls,” “partial capture **1407* control systems” and “[i]nstitutional controls.” Cities using a full-capture system meeting certain criteria will be deemed in compliance with the zero target if the systems are properly maintained and maintenance records are available for the Regional Board's inspection.

On December 21, 2001, the Regional Board issued an order under Water Code section 13267 to the County of Los Angeles and copermittees under the Municipal NPDES Permit to submit baseline monitoring plans by February 1, 2002, and to monitor trash in the Los Angeles River between January 2002 and December 2003, with a final report due February 2004.⁷ The Regional Board intends to use resulting data to “refine” the default baseline waste load allocations in the Trash TMDL.

⁷ In *City of Arcadia v. EPA* (N.D.Cal.2003) 265 F.Supp.2d 1142, 1156 (*City of Arcadia I*), the court noted the Los Angeles County Department of Public Works has assumed responsibility for the baseline monitoring burden for all municipalities to which the Trash TMDL applies. The Trash TMDL states that “[e]ach of the permittees and co-permittees are responsible for monitoring land uses within their jurisdiction,” but “monitoring responsibilities may be delegated to a third-party monitoring entity such as the [Department of Public Works].”

In February and July 2002, the State Board and the Office of Administrative Law, respectively, approved the Trash TMDL. In August 2002 the EPA approved it and announced it supersedes an interim TMDL for trash the EPA adopted in March 2002 as a result of a consent decree in litigation between environmental groups and the EPA. (*City of Arcadia I, supra*, 265 F.Supp.2d 1142, 1147.)⁸

8 In *City of Arcadia I, supra*, 265 F.Supp.2d at page 1153, the City of Arcadia and other cities unsuccessfully challenged the EPA's approval of the Trash TMDL on the ground it was unauthorized to do so after adopting its own TMDL. In *City of Arcadia II, supra*, 411 F.3d at pages 1106–1107, the court affirmed the lower court's dismissal of the case.

III

Procedural History

The Cities are within the Regional Board's jurisdiction and are permittees under the 2001 Municipal NPDES Permit. In July 2002 the Cities filed a petition for writ of mandate and complaint for declaratory and injunctive relief against the Water Boards. They filed the action in the Los Angeles County Superior Court, but the parties stipulated to its transfer to the San Diego County Superior Court.

The second amended petition alleges numerous grounds on which the Trash TMDL violates the Clean Water Act or the Porter–Cologne Act, and the court adjudicated some issues in favor of each party. It found the *1408 Water Boards improperly (1) failed to conduct an analysis of the Los Angeles River's assimilative capacity; (2) failed to conduct a cost-benefit analysis or **383 consider economic factors under Water Code sections 13267 and 13241; (3) purported to apply the Trash TMDL to the Estuary even though it is not listed on the state's 1998 303(d) list as impaired; and (4) failed to prepare a required EIR or its functional equivalent under CEQA. The court issued a writ of mandate commanding the Water Boards to set aside the amendment to the 1994 Basin Plan and the Trash TMDL to the extent it was based on the above findings and to not take any further steps to implement it. The court denied the Water Boards' motion to vacate the judgment or grant a new trial, and judgment was entered on December 24, 2003.

The Cities later moved for an order that the prohibitory terms of the writ of mandate and judgment not be stayed on appeal.

(Code Civ. Proc., § 1110b.) The court granted the motion, and further ordered that “to preserve the status quo and prevent injustice to [the Cities], the ... implementation schedule and compliance dates, and all milestones contained in the [Trash TMDL] shall be tolled effective December 24, 2003, through and until a final determination has been rendered on the pending appeal.” The Water Boards appealed that order, and in accordance with the parties' stipulation we consolidated it with the other appeals.

DISCUSSION

WATER BOARDS' APPEAL

I

Standard of Review

1 2 The Water Boards contend a deferential standard of review applies to our review of their action under Code of Civil Procedure section 1085, and the Cities claim an independent standard applies under Code of Civil Procedure section 1094.5. Code of Civil Procedure section 1094.5, the administrative mandamus statute, applies when “the writ is issued for the purpose of inquiring into the validity of any final administrative order or decision made as the result of a proceeding in which by law a hearing is required to be given, evidence is required to be taken, and discretion in the determination of facts is vested in the inferior tribunal.” (Code Civ. Proc., § 1094.5, subd. (a).) “Acts of an administrative agency that are quasi-legislative in nature, e.g., establishment of regulations to carry out a statutory policy or direction, are not reviewable by administrative mandamus.” (8 Witkin, Cal. Procedure (4th ed. 1997) Extraordinary Writs, § 268, pp. 1067–1068.) Rather, review of a quasi-legislative action is limited to traditional mandamus. (*Id.* at p. 1068.)

3 4 *1409 The trial court correctly found this proceeding is for traditional mandamus because the Regional Board's adoption and the State Water Board's approval of the Trash TMDL was quasi-legislative. Under Code of Civil Procedure section 1085, “ “review is limited to an inquiry into whether the action was arbitrary, capricious or entirely lacking in evidentiary support,” ’ ... [and][t]he petitioner has the burden of proof to show that the decision is unreasonable or invalid as a matter of law. [Citation.] We review the record de novo except where the trial court made foundational factual findings, which are binding on appeal if supported

by substantial evidence.” (*Citizens for Improved Sorrento Access, Inc. v. City of San Diego* (2004) 118 Cal.App.4th 808, 814, 13 Cal.Rptr.3d 259.)

The Cities' reliance on Water Code section 13330 is misplaced. It provides that “[a]ny party aggrieved by a final decision or order of a regional board *for which the state board denies review* may obtain review of the decision or order of the regional ****384** board in the superior court (*id.*, § 13330, subd. (b), italics added), and “[e]xcept as otherwise provided herein, Section 1094.5 of the Code of Civil Procedure shall govern proceedings for which petitions are filed pursuant to this section” (*id.*, § 13330, subd. (d)). Given the language italicized above, Water Code section 13330 necessarily applies to an administrative appeal of a quasi-judicial action under Code of Civil Procedure section 1094.5. Here, an appeal to the State Board was unnecessary because the Trash TMDL was ineffective without its approval. (Wat.Code, § 13245.) Indeed, the State Board notified the Cities in March 2001 that it “lacks statutory authority to accept petitions for review of water quality control plan (basin plan) amendments adopted” by regional boards.

5 6 As to CEQA issues, the parties agree an abuse of discretion standard applies. (*Federation of Hillside & Canyon Assns. v. City of Los Angeles* (2004) 126 Cal.App.4th 1180, 1199, 24 Cal.Rptr.3d 543.) Abuse of discretion “is established if the agency has not proceeded in a manner required by law or if the determination or decision is not supported by substantial evidence.” (Pub. Resources Code, § 21168.5.) “Our task on appeal is ‘the same as the trial court’s.’ [Citation.] Thus, we conduct our review independent of the trial court’s findings.” (*Quail Botanical Gardens Foundation, Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1602, fn. 3, 35 Cal.Rptr.2d 470.)

II

Assimilative Capacity Study

The trial court invalidated the Trash TMDL based in part on the Cities' argument an “assimilative capacity study” is a required element of a TMDL and none was performed here. In its statement of decision, the court ***1410** explained “[i]t is unreasonable to conclude that the beneficial uses of the [Los Angeles] River could not be maintained with some ‘target’ other than zero. Of course, it is possible the River would not support a greater target, however, without a study it is yet undetermined.”

7 The Water Boards contend the trial court erred by substituting its own judgment for that of the Water Boards on the issue of whether the adoption of the Trash TMDL should have been preceded by a scientific study of the assimilative capacity of the Los Angeles River. They assert the matter was best suited for their determination rather than the court's and the evidence adequately supports their decision. We agree with the Water Boards.

During the notice and comment period, the Regional Board received numerous complaints that a zero Trash TMDL is infeasible, or at least unwarranted without a scientific assimilative capacity study, or load capacity study, showing a zero limit is the only means of protecting beneficial uses. For instance, the City of Los Angeles worried that “[i]f there's one gum wrapper in the [Los Angeles] River, you can get sued.”

The Regional Board responded to one complaint as follows: “For more typical pollutants, the loading parameters are flow and pollutant concentration. For this pollutant [trash], flow does not serve to dilute the pollutant, but merely serves as a transport mechanism. Therefore, the typical loading calculation does not apply to trash.” The Regional Board took the position that since littering is unlawful, a target of zero trash in the Los Angeles River is the only defensible position. It also explained that its staff “found no study to document that there is an acceptable level of trash that will cause no harm to aquatic life,” and absent such a study it was compelled to adopt a zero target.

****385** At a Regional Board hearing, Dr. Mark Gold, executive director of Heal the Bay, testified he was unaware of any assimilative capacity study having been performed anywhere on trash. He explained, “Basically it's a physical object. It's trash. It's not something that breaks down and becomes part of the environment in many, many cases. And so honestly, it probably won't reach any sort of threshold of being a scientific study of any value.”

At a State Board hearing Dave Smith, an EPA team leader working with the Regional Board on the trash issue, testified “it would be difficult to design [an assimilative capacity] study and come up with firm answers.” He also explained that both the Regional Board and the State Board “have conducted pretty diligent efforts to find research studies, reports, that look at the affects of trash on the aquatic environment,” and neither they nor the EPA could find any literature to support a target of more than zero trash.

*1411 Alex Helperin, of the Natural Resources Defense Council, testified at a Regional Board hearing that “[e]ven small quantities [of trash] can maim and kill wildlife, [which] becomes entangled in it or ingest[s] it. [Trash] [c]an obstruct and repel boaters and contract recreators and compromise the aesthetic quality that's essential to the recognized aspect of non-contact recreation beneficial use for the Los Angeles River.”

The administrative record includes numerous photographs of copious amounts of trash deposited in the Los Angeles River watershed through storm water drains. Dennis Dickerson, the Executive Officer of the Regional Board, testified he took photographs of trash in the Long Beach area shortly after storms, and among them are photographs of “water birds foraging among the trash.” One photograph is of a bird with a cigarette butt in its mouth and another is of a fish trapped in a plastic six-ring can holder.

In arguing an assimilative capacity study is required *before* adopting a TMDL, the Cities rely principally on an EPA document issued January 7, 2000, entitled “Guidance for Developing TMDLs in California” (2000 EPA Guidance). It states: “The TMDL document must describe the relationship between numeric target(s) and identified pollutant sources, and estimate total assimilative capacity (loading capacity) of the water[]body for the pollutant of concern.... [¶] The loading capacity is the critical quantitative link between the applicable water quality standards (as interpreted through numeric targets) and the TMDL. Thus, a maximum allowable pollutant load must be estimated to address the site-specific nature of the impairment.... [¶] The loading capacity section must discuss the methods and data used to estimate loading capacity. A range of methods can be used....” (Emphasis omitted.)

The 2000 EPA Guidance, however, contains the following disclaimer: “[I]t does not impose legally-binding requirements on the EPA, the State of California, or the regulated community, and may not apply to a particular situation based upon the circumstances. EPA and State decision makers retain the discretion to adopt approaches on a case-by-case basis that differ from this guidance where appropriate and consistent with the requirements of section 303(d) [of the Clean Water Act] and EPA's regulations.”

Smith, of the EPA, testified at a Regional Board hearing that he wrote the 2000 EPA Guidance and the Trash TMDL “fully complies with the Clean Water Act, its regulations and [the 2000 EPA Guidance].” Smith explained the “TMDL

process specifically contemplates making decisions under uncertainty,” and “[i]t does so by providing that a margin of safety has to be **386 incorporated in every TMDL to account for the uncertainty in the analysis.” Smith said states are required “to move forward to make TMDL decisions *1412 based on available information and data, not to wait again and again and again for better information to come forward.” Generally, “ ‘considerable weight should be accorded to an executive department's construction of a statutory scheme it is entrusted to administer.’ ” (*United States v. Mead Corp.* (2001) 533 U.S. 218, 227–228, 121 S.Ct. 2164, 150 L.Ed.2d 292.)

In *Natural Resources Defense Council v. Muszynski* (2d Cir.2001) 268 F.3d 91 (*Muszynski*), the plaintiff asked the court to invalidate a TMDL that the EPA had approved to control phosphorus pollution in drinking water, on the ground a margin of safety of only 10 percent was insufficient to account for uncertainty regarding the effects of phosphorus on water quality. The plaintiff argued “that no scientific or mathematical basis prescribed this percentage as opposed to any other.” (*Id.* at p. 102.) The EPA countered that “because ‘there is no “standard” or guideline for choosing a specific margin of safety, best professional judgment and the available information are used in setting [it].’ ” (*Ibid.*) The *Muszynski* court agreed with the EPA, explaining: “While the [margin of safety] may ... be set with an uncomfortable degree of discretion, requiring that EPA [or authorized regional board] show a rigorous scientific methodology *dictates one course of action as opposed to another and would effectively prevent the agency from acting in situations where action is required in the face of a clear public health or environmental danger but the magnitude of that danger cannot be effectively quantified.* ‘[A]s long as Congress delegates power to an agency to regulate on the borders of the unknown, courts cannot interfere with reasonable interpretations of equivocal evidence.’ [Citation.] ... [S]imply to reject EPA's efforts to implement the [Clean Water Act] because it must respond to real water quality problems without the guidance of a rigorously precise methodology would essentially nullify the exercise of agency discretion in the form of ‘best professional judgment.’ ” (*Muszynski, supra*, 268 F.3d at pp. 102–103, italics added.)

Further, in *Muszynski, supra*, 268 F.3d 91, 103, the court noted “that approval of the Phase I [margin of safety] was based, in part, on the limited information available. The EPA approval contemplates revision of the [margin of safety] as more information becomes available: ‘As additional reservoir

data and loading data become available, Phase I model assumptions are being reexamined under Phase II.’ ”

We conclude federal law does not require the Regional Board to conduct an assimilative capacity study before adopting the Trash TMDL. Moreover, the evidence amply shows that because of the nature of trash, including Styrofoam containers and other materials that are undiluted by water, in contrast to chemical pollutants, and the dangers to wildlife of even small amounts of trash, an assimilative capacity study would be difficult to conduct and of little value at the outset. For instance, given the ill effects of trash in a *1413 water body it is unlikely such a study would determine the Los Angeles River may be loaded with a certain percentage of trash without affecting beneficial uses, particularly since a TMDL must include a margin of safety that “takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality.” (33 U.S.C. § 1313(d)(1)(C).) In any event, the Trash TMDL requires the Regional Board to reconsider the zero trash target after a 50 percent reduction of trash is achieved, and no party suggests a trash reduction of at least 50 percent is unwarranted or unattainable. Because of **387 this escape hatch, compliance with a zero trash target may never actually be mandated. The Water Boards' decision not to conduct or require an assimilative capacity study is within their expertise, not the court's, and we defer to them on the issue.

III

Cost-Benefit Analysis and Economic Considerations

8 The Water Boards next contend the court erred by finding the Trash TMDL is invalid because they violated state law by not conducting a cost-benefit analysis (Wat.Code, § 13267) or considering economic factors (*id.* at § 13241) before adopting and approving it.

A

Water Code Section 13267

A regional board is authorized to investigate the quality of waters in its region (Wat.Code, § 13267, subd. (a)), and when it requires a polluter to furnish “technical or monitoring program reports,” the “burden, including costs, of these reports shall bear a reasonable relationship to the need for the report[s] and the benefits to be obtained from

the reports.” (Wat.Code, § 13267, subd. (b)(1).) The court found the Regional Board adopted the Trash TMDL under the authority of Water Code section 13267, as the document mentions the statute several times and “expressly requires monitoring plans and submission of data to establish baselines for trash discharges.”

The Water Boards persuasively contend Water Code section 13267 is inapplicable, and references to that statute in the Trash TMDL are to contemplated future orders. For instance, the Trash TMDL states “[b]aseline monitoring will be required via [Water Code] Section 13267,” and the submission of baseline monitoring plans will be due “30 days after receipt of the Executive Officer's request as authorized by [Water Code] Section 13267.” *1414 It also states that “future storm water permits will be modified to incorporate the Waste Load Allocations and to address monitoring and implementation of this [Trash] TMDL.”

Further, the Trash TMDL states “the permittee [under the Municipal NPDES permit] will submit a monitoring plan with the proposed monitoring sites and at least two alternative monitoring locations for each site. The plan must include maps of the drainage and storm drain data for each proposed and alternate monitoring location. The monitoring plan(s) will be submitted to the Regional Board within 30 days after receipt of the Executive Officer's letter requesting such a plan. Such a request is authorized pursuant to [Water Code] [s]ection 13267.... The Regional Board's Executive Officer will have full authority to review the monitoring plan(s), to modify the plan, to select among the alternate monitoring sites, and to approve or disapprove the plan(s).”

Additionally, the Water Boards submit that the December 21, 2001, order the Regional Board issued under Water Code section 13267 to the County of Los Angeles and copermittees under the Municipal NPDES permit regarding baseline monitoring and reporting would have been “useless and unnecessary” had the Trash TMDL itself required monitoring and reporting, and since there was no appeal of the December 21 order to the State Board within 30 days (Wat.Code, § 13320, subd. (a)) the cost-benefit analysis issue is not subject to appellate review. We note that the December 21 order, but not the Trash TMDL, warns that under Water Code section 13268 the “failure to conduct the required monitoring and/or to provide the required information in a timely manner **388 may result in civil liability imposed by the Regional Board in an amount not to exceed ... \$1000.”

9 10 “Our primary aim in construing any law is to determine the legislative intent. [Citation.] In doing so we look first to the words of the statute, giving them their usual and ordinary meaning.” (*Committee of Seven Thousand v. Superior Court* (1988) 45 Cal.3d 491, 501, 247 Cal.Rptr. 362, 754 P.2d 708.) We agree that by its plain terms Water Code section 13267 is inapplicable at the TMDL stage, and thus the court erred by invalidating the Trash TMDL on this ground. The monitoring and reports are required by the December 21, 2001 order, not the Trash TMDL, and the reduction of trash will be implemented by other NPDES permits. “TMDLs are primarily informational tools that allow the states to proceed from the identification of waters requiring additional planning to the required plans.” (*Pronsolino v. Nastri* (9th Cir.2002) 291 F.3d 1123, 1129.) “A TMDL does not, by itself, prohibit any conduct or require any actions. Instead, each TMDL represents a goal that may be implemented by adjusting pollutant discharge requirements in individual NPDES permits or establishing nonpoint source *1415 controls.” (*City of Arcadia I, supra*, 265 F.Supp.2d at p. 1144.) A “TMDL forms the basis for further administrative actions that may require or prohibit conduct with respect to particularized pollutant discharges and water[]bodies.” (*Id.* at p. 1145.)

B

Water Code Section 13241

11 Water Code section 13241 provides that “[e]ach regional board shall establish such water quality objectives in water quality control plans as in its judgment will ensure the reasonable protection of beneficial uses and the prevention of nuisance.” In establishing water quality objectives a regional board is required to consider several factors, including “[e]conomic considerations.” (Wat.Code, § 13241, subd. (d).)

The Water Boards contend Water Code section 13241 is inapplicable because the Trash TMDL does not establish water quality objectives, but merely implements, under Water Code section 13242, the existing narrative water quality objectives in the 1994 Basin Plan. It provides that waters shall not contain floating materials, including solids, or suspended or settleable materials in concentrations that adversely affect beneficial uses. The Cities counter that the Trash TMDL effectively establishes new water quality objectives, because when the 1994 Basin Plan was adopted a TMDL for trash was not contemplated and thus economic considerations of

such a TMDL were not considered. Further, the Trash TMDL imposes for the first time a numeric limit for trash and significantly increases the costs of compliance.

We need not, however, decide whether the Trash TMDL adopts new or revised water quality objectives within the meaning of Water Code section 13241, because even if the statute is applicable, the Water Boards sufficiently complied with it.⁹ Water Code section 13241, subdivision (d) does not define “economic considerations” or specify a particular manner of compliance, and thus, as the Water Boards assert, the matter is within a regional **389 board's discretion. It appears there is no reported opinion analyzing the “economic considerations” phrase of this statute. In *City of Burbank, supra*, 35 Cal.4th at page 625, 26 Cal.Rptr.3d 304, 108 P.3d 862, the court, without discussion, concluded that in adopting Water Code section 13241 the Legislature intended “that a regional board consider the *cost of compliance* [with numeric pollutant restrictions] when setting effluent limitations in a wastewater discharge permit.” (Italics added.)

9 For the same reason, we are not required to reach the Water Boards' assertion that to any extent the California Supreme Court's recent opinion in *City of Burbank, supra*, 35 Cal.4th 613, 26 Cal.Rptr.3d 304, 108 P.3d 862, applies to a TMDL, it precludes them from considering economic factors in establishing the Trash TMDL.

*1416 The Trash TMDL discusses the costs of gathering and disposing of trash at the mouth of the Los Angeles River watershed during the rainy seasons between 1995 and 1999. It also states: “Cleaning up the river, its tributaries and the beaches is a costly endeavor. The Los Angeles County Department of Public Works contracts out the cleaning of over 75,000 catchments (catch basins) for a total cost of slightly over \$1 million per year, billed to 42 municipalities.... [¶] Over 4,000 tons of trash are collected from Los Angeles County beaches annually, at a cost of \$3.6 million to Santa Monica Bay communities in fiscal years 1988–1989 alone. In 1994 the annual cost to clean the 31 miles of beaches (19 beaches) along Los Angeles County was \$4,157,388.”

The Trash TMDL also discusses the costs of various types of compliance measures, and explains the “cost of implementing this TMDL will range widely, depending on the method that the Permittees select to meet the Waste Load Allocations. Arguably, enforcement of existing litter ordinances could be used to achieve the final Waste Load Allocations at minimal or no additional cost. The most costly approach in the short-term is the installation of full-capture structural treatment

devices on all discharges into the river. However, in the long term this approach would result in lower labor costs and may be less expensive than some other approaches.”

The Trash TMDL defines catch basin inserts as “the least expensive structural treatment device in the short term,” at a cost of approximately \$800 each. It cautions, however, that because catch basin inserts “are not a full capture method, they must be monitored frequently and must be used in conjunction with frequent street sweeping.” The Trash TMDL estimates that if the approximately 150,000 catch basins throughout the watershed were retrofitted with inserts, capital costs would be \$120 million over 10 years, maintenance and operation costs would be \$330 million over 10 years, and maintenance and operation costs after full implementation would be \$60 million per year.

Further, the Trash TMDL discusses the full capture vortex separation system (VSS), which “diverts the incoming flow of storm[]water and pollutants into a pollutant separation and containment chamber. Solids within the separation chamber are kept in continuous motion, and are prevented from blocking the screen so that water can pass through the screen and flow downstream. This is a permanent device that can be retrofitted for oil separation as well. Studies have shown that VSS [units] remove virtually all of the trash contained in treated water. The cost of installing a VSS is assumed to be high, so limited funds will place a cap on the number of units which can be installed during any single fiscal year.”

*1417 The Trash TMDL estimates the retrofitting of the entire Los Angeles River watershed with low capacity VSS units would be \$945 million in capital costs and \$813 million in operation and maintenance costs over 10 years, and \$148 million in annual operation and maintenance costs after full implementation. The installation of large capacity VSS units would run **390 approximately \$332 million in capital costs and \$41 million in operation and maintenance costs over 10 years, and \$7.4 million per year in operation and maintenance costs after full implementation. The yearly cost of servicing one VSS unit is estimated to be \$2,000. The Trash TMDL explains that “outfitting a large drainage with a number of large VSS [units] may be less costly than using a larger number of small VSS [units]. Maintenance costs decrease dramatically as the size of the system increases.” The Trash TMDL also contains a cost comparison of catch basin inserts and low capacity and large capacity VSS units.

Additionally, the Trash TMDL estimates the costs for end-of-pipe nets at between \$10,000 and \$80,000, depending on

the length of the pipe network. It explains that “‘[r]elease nets’ are a relatively economical way to monitor trash loads from municipal drainage systems. However, in general they can only be used to monitor or intercept trash at the end of a pipe and are considered to be partial capture systems, as nets are usually sized at a 1/2# to 1# mesh.”

The Cities assert that “a ‘consideration’ of economics should have included a discussion of the economic impacts associated with the vortex separation systems. Alternatively, the Water Boards could have analyzed other methods of compliance, such as a series of [best management practices], including increased street sweeping, catch basin inserts, release nets, or some other combination of [best management practices] that should have been evaluated for purposes of allowing the municipalities to be in deemed compliance with the zero [Trash] TMDL.” (Italics added.) As stated, though, the Trash TMDL does include the estimated costs of several types of compliance methods and a cost comparison of capital costs and costs of operation and maintenance. The Cities cite no authority for the proposition that a consideration of economic factors under Water Code section 13241 must include an analysis of every conceivable compliance method or combinations thereof or the fiscal impacts on permittees.

Given the lack of any definition for “economic considerations” as used in Water Code section 13241, and our deference to the Water Boards’ expertise, we conclude the Trash TMDL’s discussion of compliance costs is adequate *1418 and does not fulfill the arbitrary or capricious standard. Accordingly, the Trash TMDL is not invalid on this ground.¹⁰

10 The Cities also assert that under federal law an economic analysis is a prerequisite to the adoption of a TMDL. They rely on 40 Code of Federal Regulations, part 130.6(c)(4), but it pertains to nonpoint sources of pollution that need not be addressed in a TMDL, as discussed further below. The portion of the regulation covering TMDLs does not mention economics (*id.*, § 130.6(c)(1)). Parts 130.6(5) and (6) of 40 Code of Federal Regulations discuss economics, but in the context of the area wide planning process under section 208(b)(2) of the Clean Water Act (33 U.S.C. § 1288(b)(2)), which is inapplicable here. According to the Water Boards, the Southern California Association of Governments is the designated area-wide planning agency.

IV

Los Angeles River Estuary

12 Additionally, the Water Boards challenge the court's finding they abused their discretion by attempting to include the Estuary in the Trash TMDL, as the Estuary is not on the state's 1998 303(d) list of impaired waters. The Water Boards contend a water body's formal listing on the state's 303(d) list is not a prerequisite to formulating a TMDL for it. Rather, an agency may simultaneously submit to the EPA the *identification* of a ^{**391} water body as impaired and a corresponding TMDL.

The Clean Water Act provides: "Each state shall identify those waters within its boundaries for which the effluent limitations ... are not stringent enough to implement any water quality standards applicable to such waters. The State shall establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters." (33 U.S.C. § 1313(d)(1)(A).) Further, it provides that "[e]ach state shall establish for the waters identified in paragraph (1)(A) of this subsection, and in accordance with the priority ranking, the total maximum daily load...." (*Id.* at § 1313(d)(1)(C).) These provisions do not prohibit a regional board from identifying a water body and establishing a TMDL for it at essentially the same time, or indicate that formal designation on a state's 303(d) list is a prerequisite to a TMDL.

Further, 33 United States Code section 1313(d)(2) provides: "Each State shall submit to the [EPA] Administrator from time to time, ... for his [or her] approval the waters identified *and* the loads established under paragraphs (1)(A) [and] ... (1) (C) ... of this subsection. The [EPA] Administrator shall either approve or disapprove such identification *and* load not later than thirty days after the date of submission." (Italics added.) This clarifies that a regional board may simultaneously identify an impaired water body and establish a TMDL for it.

^{*1419} In *San Francisco BayKeeper v. Whitman, supra*, 297 F.3d 877, 884-885, the court held an agency has no *duty* to submit a TMDL at the same time it identifies an impaired water body, noting the development of a TMDL "to correct the pollution is obviously a more intensive and time-consuming project than simply identifying the polluted waters, as the EPA has indicated." (*Id.* at p. 885.) The Water Boards assert the case does not deprive an agency from exercising its *discretion* to simultaneously submit to the EPA the identification of an impaired water body and a TMDL for it. Given the plain language of 33 United States Code section

1313(d)(2), we agree. Moreover, "[s]tates remain at the front line in combating pollution" (*City of Arcadia II, supra*, 411 F.3d at p. 1106), and "[s]o long as the [s]tate does not attempt to adopt more *lenient* pollution control measures than those already in place under the [Clean Water] Act, [it] does not prohibit state action." (*Id.* at p. 1107.)

13 Alternatively, the Cities complain the Regional Board did not sufficiently identify the Estuary as being impaired and included in the Trash TMDL until after its adoption and approval by the State Board and Office of Administrative Law and the completion of all public hearings. On July 29, 2002, the Regional Board sent the EPA a memorandum "to provide clarification on specific aspects" of the Trash TMDL. It stated that a "TMDL was established for the reaches of the Los Angeles River, tributaries and lakes listed on the [state's] 1998 303(d) list," and "[i]n addition, a TMDL was established for the Los Angeles River [E]stuary in the City of Long Beach. As described on page 12, paragraph 2 of the [staff] report, staff found that the impairment in the [E]stuary due to trash is 'even more acute in Long Beach where debris flushed down by the upper reaches collects.' [¶] The impairment in the [E]stuary was well documented during TMDL development," and it "would have been included in the 1998 303(d) list if the attached photographic evidence had been available at the time of the listing."

The Trash TMDL lists the reaches of the Los Angeles River "that are impaired by trash, and listed on the [state's] 303(d) ^{**392} list." The list does not include the Estuary. The Water Boards assert that even so, it was always obvious the Estuary is impaired and included in the Trash TMDL. The Trash TMDL states it is "for the Los Angeles River Watershed," and "watershed" is defined as "a region or area bounded peripherally by a divide and draining ultimately to a particular watercourse or body of water." (Merriam-Webster's Collegiate Dict. (10th ed.1996) p. 1336.) "Estuary" is defined as "a water passage where the tide meets a river current," especially "an arm of the sea at the lower end of a river." (*Id.* at p. 397.)

The Trash TMDL describes the watershed as beginning at the "western end of the San Fernando Valley to the Queensway Bay and Pacific Ocean at Long Beach," and it also states the watershed continues from "Willow Street all ^{*1420} the way through the [E]stuary." An amici curiae brief by Santa Monica BayKeeper, Inc., Heal the Bay, Inc., and Natural Resources Defense Council, Inc. (collectively BayKeeper), asserts Queensway Bay is the site of the Estuary, and no party has challenged the assertion. Further, the Trash TMDL lists

and discusses the beneficial uses of the Estuary, including habitat for many species of birds, some endangered, and fish. It also states beneficial uses "are impaired by large accumulations of suspended and settled debris throughout the river system," and in particular "estuarine habitat" is impaired. Further, the administrative record contains several pictures of trash deposited in the Estuary during high flows, depicting "the variety of ways through which trash ... becomes an integral part of wildlife, affecting all plant and animal communities in the process."

The Trash TMDL's identification of the Estuary as impaired could have been clearer, but we conclude it was sufficient to put all affected parties on notice, and does not meet the arbitrary-and-capricious standard. Further, although the identification of impaired water bodies requires a priority ranking (33 U.S.C. § 1313(d)(2)), and the Trash TMDL does not prioritize the Estuary's need for a TMDL, we agree with amici BayKeeper that any error in the Water Boards' procedure was not prejudicial because the Trash TMDL shows amelioration of the trash problem in the entire Los Angeles River watershed is highly important, and it is unlikely the Water Boards would single out the Estuary for lower priority or that inclusion of the Estuary would disturb their existing priorities.

V

CEQA

14 The Water Boards challenge the sufficiency of the evidence to support the trial court's finding that the amendment adding the Trash TMDL to the 1994 Basin Plan does not comport with CEQA. The court found the Regional Board's environmental checklist was deficient and there is sufficient evidence of a fair argument that the project may have a significant effect on the environment, thus necessitating an EIR or its functional equivalent. We conclude the court was correct.

A

General Legal Principles

"CEQA compels government first to identify the environmental effects of projects, and then to mitigate those adverse effects through the *1421 imposition of feasible mitigation measures or through the selection of feasible

alternatives." (*Sierra Club v. State Bd. of Forestry* (1994) 7 Cal.4th 1215, 1233, 32 Cal.Rptr.2d 19, 876 P.2d 505.) CEQA mandates that public agencies refrain from approving projects with significant environmental effects if **393 there are feasible alternatives or mitigation measures that can substantially lessen or avoid those effects. (*Mountain Lion Foundation v. Fish & Game Com.* (1997) 16 Cal.4th 105, 134, 65 Cal.Rptr.2d 580, 939 P.2d 1280.)

15 16 17 CEQA is implemented through initial studies, negative declarations and EIR's. (*Sierra Club v. State Bd. of Forestry, supra*, 7 Cal.4th at p. 1229, 32 Cal.Rptr.2d 19, 876 P.2d 505.) "CEQA requires a governmental agency [to] prepare an [EIR] whenever it considers approval of a proposed project that 'may have a significant effect on the environment.' " (*Quail Botanical Gardens Foundation, Inc. v. City of Encinitas, supra*, 29 Cal.App.4th at p. 1601, 35 Cal.Rptr.2d 470.) "If there is no substantial evidence a project 'may have a significant effect on the environment' or the initial study identifies potential significant effects, but provides for mitigation revisions which make such effects insignificant, a public agency must adopt a negative declaration to such effect and, as a result, no EIR is required. [Citations.] However, the Supreme Court has recognized that CEQA requires the preparation of an EIR 'whenever it can be fairly argued on the basis of substantial evidence that the project may have significant environmental impact.' [Citations.] Thus, if substantial evidence in the record supports a 'fair argument' significant impacts or effects may occur, an EIR is required and a negative declaration cannot be certified." (*Id.* at pp. 1601-1602, 35 Cal.Rptr.2d 470.)

"'Significant effect on the environment' means a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the environment. A social or economic change related to a physical change may be considered in determining whether the physical change is significant." (Cal.Code Regs., tit. 14, § 15382.)

B

Certified Regulatory Program

18 “State regulatory programs that meet certain environmental standards and are certified by the Secretary of the California Resources Agency are exempt from CEQA’s requirements for preparation of EIRs, negative declarations, and initial studies. [Citations.] Environmental review documents prepared by certified programs may be used instead of environmental documents that CEQA would otherwise require. [Citations.] Certified regulatory *1422 programs remain subject, however, to other CEQA requirements.” (2 Kostka & Zischke, Practice Under the Cal. Environmental Quality Act (Cont.Ed.Bar 2005) § 21.2, p. 1076; Pub. Resources Code, § 21080.5.) Documents prepared by certified programs are considered the “functional equivalent” of documents CEQA would otherwise require. (*Mountain Lion Foundation v. Fish & Game Com.*, *supra*, 16 Cal.4th at p. 113, 65 Cal.Rptr.2d 580, 939 P.2d 1280; 2 Kostka & Zischke, Practice Under the Cal. Environmental Quality Act, *supra*, § 21.10, p. 1086 [“the documentation required of a certified program essentially duplicates” that required for an EIR or negative declaration].)

An “agency seeking certification must adopt regulations requiring that final action on the proposed activity include written responses to significant environmental points raised during the decisionmaking process. [Citation.] The agency must also implement guidelines for evaluating the proposed activity consistently with the **394 environmental protection purposes of the regulatory program. [Citation.] The document generated pursuant to the agency’s regulatory program must include alternatives to the proposed project and mitigation measures to minimize significant adverse environmental effects [citation], and be made available for review by other public agencies and the public [citation].” (*Mountain Lion Foundation v. Fish & Game Com.*, *supra*, 16 Cal.4th at p. 127, 65 Cal.Rptr.2d 580, 939 P.2d 1280.)

19 The guidelines for implementation of CEQA (Cal.Code Regs., tit. 14, § 15000 et seq.) do not directly apply to a certified regulatory program’s environmental document. (2 Kostka & Zischke, Practice Under the Cal. Environmental Quality Act, *supra*, § 21.10, p. 1086.) However, “[w]hen conducting its environmental review and preparing its documentation, a certified regulatory program is subject to the broad policy goals and substantive standards of CEQA.” (*Ibid.*)

In a certified program, an environmental document used as a substitute for an EIR must include “[a]lternatives to the activity and mitigation measures to avoid or reduce

any significant or potentially significant effects that the project might have on the environment,” and a document used as a substitute negative declaration must include a “statement that the agency’s review of the project would not have any significant or potentially significant effects on the environment and therefore no alternatives or mitigation measures are proposed to avoid or reduce any significant effects on the environment. This statement shall be supported by a checklist or other documentation to show the possible effects that the agency examined in reaching this conclusion.” (Cal.Code Regs., tit. 14, § 15252, subd. (a).)

The basin planning process of the State Board and regional boards is a certified regulatory program (Cal.Code Regs., tit. 14, § 15251, subd. (g)), and *1423 the regulations implementing the program appear in the California Code of Regulations, title 23, sections 3775 to 3782. A regional board’s submission of a plan for State Board approval must be accompanied by a brief description of the proposed activity, a completed environmental checklist prescribed by the State Board, and a written report addressing reasonable alternatives to the proposed activity and mitigation measures to minimize any significant adverse environmental impacts. (*Id.*, § 3777, subd. (a).)

C

Environmental Documentation

The Regional Board’s environmental documentation in lieu of documents CEQA ordinarily requires consists of a checklist and the Trash TMDL. The checklist asked a series of questions regarding whether implementation of the Trash TMDL would cause environmental impacts, to which the Regional Board responded “yes,” “maybe” or “no.” “Yes” or “maybe” answers required an explanation. The checklist described beneficial impacts pertaining to plant and animal life, water quality and recreation. The checklist denied the project would have any environmental impact on land, including soil displacement, air, noise, natural resources or traffic, and thus it included no discussion of those factors. The checklist concluded “the proposed Basin Plan amendment [adding the Trash TMDL] could not have a significant effect on the environment.”

The Regional Board obviously intended its documentation to be the functional equivalent of a negative declaration. Nonetheless, on appeal the Water Boards claim for the first time that the Regional **395 Board’s environmental

review process is tiered, and its documentation meets the requirements of a first tier EIR under Public Resources Code section 21159. They assert the court's criticism of the checklist is baseless "because it ignores the concept of tiered environmental review and specific provisions for pollution control performance standards."

" 'Tiering' refers 'to the coverage of general matters in broader EIRs (such as on general plans or policy statements) with subsequent narrower EIRs or ultimately *site-specific* EIRs incorporating by reference the general discussions and concentrating solely on the issues specific to the EIR subsequently prepared. Tiering is appropriate when the sequence of EIRs is: [¶] ... [f]rom a general plan, policy, or program EIR to a ... site-specific EIR.' " (*Natural Resources Defense Council, Inc. v. City of Los Angeles* (2002) 103 Cal.App.4th 268, 285, 126 Cal.Rptr.2d 615.) "[C]ourts have allowed first tier EIR's to defer detailed analysis to subsequent project EIR's." (*Friends of *1424 Mammoth v. Town of Mammoth Lakes Redevelopment Agency* (2000) 82 Cal.App.4th 511, 532, 98 Cal.Rptr.2d 334.)

Public Resources Code section 21159, which allows expedited environmental review for mandated projects, provides that an agency "shall perform, at the time of the adoption of a rule or regulation requiring the installation of pollution control equipment, or a performance standard or treatment requirement, an environmental analysis of the reasonably foreseeable methods of compliance.... The environmental analysis shall, at a minimum, include, all of the following: [¶] (1) An analysis of the reasonably foreseeable environmental impacts of the methods of compliance. [¶] (2) An analysis of reasonably foreseeable mitigation measures. [¶] (3) An analysis of reasonably foreseeable alternative means of compliance with the rule or regulation." (Pub. Resources Code, § 21159, subd. (a).) The Water Boards submit they complied with the statute, and the "tier two environmental review is the responsibility of the local agencies who will determine how they intend to comply with the performance standards" of the Trash TMDL.

Issues not presented to the trial court are ordinarily waived on appeal. (*Royster v. Montanez* (1982) 134 Cal.App.3d 362, 367, 184 Cal.Rptr. 560.) In any event, we conclude the checklist and Trash TMDL are insufficient as either the functional equivalent of a negative declaration¹¹ or a tiered EIR. Moreover, an EIR is required since the Trash TMDL itself presents substantial evidence of a fair argument that significant environmental impacts may occur. "Because a negative declaration ends environmental review, the fair

argument test provides a low threshold for requiring an EIR." (*Ocean View Estates Homeowners Assn., Inc. v. Montecito Water Dist.* (2004) 116 Cal.App.4th 396, 399, 10 Cal.Rptr.3d 451.)

11 A negative declaration may not be based on a "bare bones" approach in a checklist. (*Snarled Traffic Obstructs Progress v. City and County of San Francisco* (1999) 74 Cal.App.4th 793, 797, fn. 2, 88 Cal.Rptr.2d 455, and cases cited therein.) A "certified program's statement of no significant impact must be supported by documentation *showing* the potential environmental impacts that the agency examined in reaching its conclusions," and "[t]his documentation would be similar to an initial study." (2 Kostka & Zischke, *Practice Under the Cal. Environmental Quality Act, supra*, § 21.11, pp. 1088-1089, italics added.) Because we conclude an EIR is required, we need not expand on how the checklist and Trash TMDL fail to satisfy negative declaration requirements or their functional equivalent.

****396** The Trash TMDL discusses various compliance methods or combinations thereof that permittees may employ, including the installation of catch basin inserts and VSS units. The Trash TMDL estimates that if the catch basin method is used exclusively, approximately 150,000 catch basins throughout the watershed would require retrofitting at a cost of approximately \$120 million. It explains, however, that the "ideal way to capture trash deposited into a storm[] drain system would be to install a VSS unit. This device diverts ***1425** the incoming flow of storm[] water and pollutants into a pollution separation and containment chamber." Only VSS units or similar full-capture devices will be deemed fully compliant with the zero trash target. The Trash TMDL estimates the cost of installing low capacity VSS units would be \$945 million and the cost of installing large capacity VSS units would be \$332 million.

The checklist and the Trash TMDL, however, ignore the temporary impacts of the construction of these pollution controls, which logically may result in soils disruptions and displacements, an increase in noise levels and changes in traffic circulation. Further, the Trash TMDL explains that since catch basin inserts "are not a full capture method, they must be monitored frequently and must be used in conjunction with frequent street sweeping." The checklist and the Trash TMDL also ignore the effects of increased street sweeping on air quality, and possible impacts caused by maintenance of catch basin inserts, VSS units and other compliance methods.

Indeed, the County of Los Angeles wrote to the Regional Board that "cleanout of structural controls, such as [catch basin inserts] and VSSs, naturally will increase existing noise levels due to vehicle and vacuuming noises." The City of Los Angeles advised that the Trash TMDL would result in increased maintenance vehicle traffic and "substantial air emissions or deterioration of ambient air quality," increased noise, increased use of natural resources and adverse impacts on existing transportation systems.

The Water Boards contend those comments are merely "unsubstantiated opinion and speculation by biased project opponents." Substantial evidence is not "[a]rgument, speculation, unsubstantiated opinion or narrative [or] evidence which is clearly inaccurate or erroneous." (Pub. Resources Code, § 21082.2, subd. (c).) However, letters and testimony from government officials with personal knowledge of the anticipated effects of a project on their communities "certainly supports a fair argument that the project may have a significant environmental impact." (*City of Livermore v. Local Agency Formation Com.* (1986) 184 Cal.App.3d 531, 542, 230 Cal.Rptr. 867.) Again, however, the Trash TMDL itself satisfies the fair argument criterion.

Even if the Water Boards had relied on Public Resources Code section 21159 at the trial court, the environmental documents do not meet its minimum requirements. Neither the checklist nor the Trash TMDL includes an analysis of the reasonably foreseeable impacts of construction and maintenance of pollution control devices or mitigation measures, and in fact the Water Boards develop no argument as to how they ostensibly complied with the statute. While we agree a tiered environmental analysis is appropriate here, the Regional Board did not prepare a first-level EIR or its functional equivalent. We reject the Water Boards' argument the Regional Board did all it *1426 could because there "is no way to examine project level impacts that are entirely dependent upon the speculative possibilities of how subsequent **397 decision[]makers may choose to comply" with the Trash TMDL. Tier two project-specific EIR's would be more detailed under Public Resources Code section 21159.2, but the Trash TMDL sets forth various compliance methods, the general impacts of which are reasonably foreseeable but not discussed.

As a matter of policy, in CEQA cases a public agency must explain the reasons for its actions to afford the public and other agencies a meaningful opportunity to participate in the environmental review process, and to hold it accountable

for its actions. (*Federation of Hillside & Canyon Assns. v. City of Los Angeles, supra*, 126 Cal.App.4th 1180, 1198, 24 Cal.Rptr.3d 543.) The Water Boards' CEQA documentation is inadequate, and remand is necessary for the preparation of an EIR or tiered EIR, or functional equivalent, as substantial evidence raises a fair argument the Trash TMDL may have significant impacts on the environment. The court correctly invalidated the Trash TMDL on CEQA grounds.¹²

- 12 The Water Boards also contend the trial court erred by staying the implementation schedule for the Trash TMDL pending this appeal. The matter is moot given our holding on the CEQA issue.

VI

Declaratory Relief

20 In its statement of decision, the trial court explained the Cities "contend [the Water Boards] improperly attempted to control the watershed including the 'entire 584 square miles' of incorporated and unincorporated areas of the County [of Los Angeles], and nowhere in the [Trash] TMDL or the [1994] Basin Plan Amendment did [they] assert that the numeric Waste Load Allocations ... are to apply to the entire 584 square miles of watershed." The court, however, explained the Water Boards "concede the [Trash] TMDL only applies to navigable waters by asserting [they] didn't intend to control non-navigable waters," and it found "the parties are in agreement that the trash load allocations apply to the portion of the subject watershed as defined on pages 3575 and 3584 of the Administrative Record [pages of the Trash TMDL] and the Waste Load Allocations do not apply to non-waters."

The statement of decision nonetheless states the court granted the Cities' "relief as requested" as to "regulation of non-waters." In their third cause of action, the Cities sought a judicial declaration that the amendment to the 1994 Basin Plan and the Trash TMDL are invalid because they violate federal and state law. The judgment declared unenforceable a July 29, 2002, letter from *1427 the Regional Board to the EPA that stated the "Waste Load Allocations apply to the entire urbanized portion of the watershed.... The urbanized portion of the watershed was calculated to encompass 584 square miles of the total watershed."

21 "The fundamental basis of declaratory relief is the existence of an *actual, present controversy*." (5 Witkin, Cal. Procedure, *supra*, Pleadings, § 817, p. 273.) Because the parties agreed during this proceeding there was no

present controversy, the judgment should not have included declaratory relief on the nonwaters issue.

CITIES' APPEAL

I

Concepts of "Maximum Extent Practicable" and "Best Management Practices"

22 The Cities contend a zero target for trash in the Los Angeles River is unattainable, ****398** and thus the Trash TMDL violates the law by not deeming compliance through the federal "maximum extent practicable" and "best management practices" standards, which are less stringent than the numeric target of zero. The Cities rely on 33 United States Code section 1342(p)(3)(B)(iii), under which an NPDES permit for a municipal discharge into a storm drain "shall require controls to reduce the discharge of pollutants to the *maximum extent practicable*, including management practices, control techniques and system, design and engineering methods, and such other provisions as the [EPA] Administrator or the State determines appropriate for the control of such pollutants." (Italics added.)¹³ "Best management practices" are generally pollution control measures set forth in NPDES permits. (*BIA, supra*, 124 Cal.App.4th at p. 877, 22 Cal.Rptr.3d 128.)

13 The Clean Water Act and applicable regulations do not define the maximum extent practicable standard. (*Building Industry Assn. of San Diego County v. State Water Resources Control Bd.* (2004) 124 Cal.App.4th 866, 889, 22 Cal.Rptr.3d 128 (*BIA*)). In *BIA*, the NPDES permit at issue defined the standard as "a highly flexible concept that depends on balancing numerous factors." (*Ibid.*)

The Cities assert that "as the [r]ecord reflects, compliance with the 'zero' [Trash] TMDL ... is impossible," and the Water Boards "themselves recognize that 'zero' is an impossible standard to meet." Contrary to the Cities' suggestion, the Water Boards made no implied finding or concession of impossibility. Rather, the record shows that members of the Water Boards questioned whether a zero trash target is actually attainable. A zero limit on ***1428** trash within the meaning of the Trash TMDL is attainable because there are methods of deemed compliance with the limit. The record does not show the limit is unattainable, and the burden was on the Cities as opponents of the Trash TMDL

to establish impossibility. Further, the impossibility issue is not germane at this juncture, as the matter is at the planning stage with an interim goal of a 50 percent reduction in trash, a goal everyone agrees is necessary and achievable.

In any event, the trial court found 33 United States Code section 1342(p)(3)(B)(iii) inapplicable to the adoption of a TMDL. The court also found state and federal laws authorize regional boards to "use water quality, and not be limited to practicability as the guiding principle for developing limits [in a TMDL] on pollution." Further, the court noted the Cities presented no authority for their proposition the Regional Board is required to adopt a storm water TMDL that is achievable.

We agree with the court's assessment. The statute applicable to establishing a TMDL, 33 United States Code section 1313(d)(1)(C), does not suggest that practicality is a consideration. To the contrary, a regional board is required to establish a TMDL "at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety." (33 U.S.C. § 1313(d)(1)(C).) The NPDES permit provision, 33 United States Code 1342(p)(3)(B), is inapplicable because, again, we are only considering the propriety of the Trash TMDL, a precursor to NPDES permits implementing it. Under the Trash TMDL, the numeric target will be reconsidered after several years when a reduction in trash of 50 percent is achieved, and thus it is presently unknown whether compliance with a trash limit of zero will ever actually be mandated.

23 To bolster their position the Cities rely on ****399** 33 United States Code section 1329(a)(1)(C). It provides, however, that in a state's assessment report for a *nonpoint* source management program, the state must "describe[] the process, including intergovernmental coordination and public participation, for identifying best management practices and measures to control each category and subcategory of nonpoint sources and, where appropriate, particular nonpoint sources identified under subparagraph (B) and to reduce, to the maximum extent practicable, the level of pollution resulting from such category, subcategory, or source." (*Ibid.*) In *BIA, supra*, 124 Cal.App.4th at page 887, 22 Cal.Rptr.3d 128, we rejected the argument the statute shows Congress intended to apply a maximum extent practicable standard to point source discharges as well as nonpoint discharges. The Cities say they disagree with *BIA*, but they develop no argument revealing any flaw in the opinion. "[P]arties are required ***1429** to include argument and citation to authority in their briefs, and the absence of these necessary elements

allows this court to treat appellant's ... issue as waived." (*Interinsurance Exchange v. Collins* (1994) 30 Cal.App.4th 1445, 1448, 37 Cal.Rptr.2d 126.)

The Cities' reliance on *Defenders of Wildlife v. Browner* (9th Cir.1999) 191 F.3d 1159, for the proposition that municipalities, unlike private companies, may not be required to strictly comply with numeric discharge limits is likewise misplaced. *Defenders of Wildlife v. Browner* involves a challenge to an NPDES permit, not the adoption of a TMDL. Further, the court there rejected the argument that "the EPA [or authorized regional or state board] may not, under the [Clean Water Act], require strict compliance with state water-quality standards, through numerical limits or otherwise." (*Id.* at p. 1166.) The court explained: "Although Congress did not require municipal storm-sewer discharges to comply strictly with [numerical effluent limitations], [section] 1342(p)(3)(B)(iii) [of United States Code, title 33] states that '[p]ermits for discharges from municipal storm sewers ... shall require ... such other provisions as the [EPA] Administrator ... determines appropriate for the control of such pollutants.'" (Emphasis added.) That provision gives the EPA discretion to determine what pollution controls are appropriate.... [¶] Under that discretionary provision, the EPA has the authority to determine that ensuring strict compliance with state water-quality standards is necessary to control pollutants. The EPA also has the authority to require less than strict compliance with state water-quality standards.... Under 33 United States Code section 1342(p)(3)(B)(iii), the EPA's choice to include either management practices or numeric limitations in the permits was within its discretion." (*Id.* at pp. 1166-1167.)

In *BIA*, this court similarly held that 33 United States Code section 1342(p)(3)(B)(iii) does not divest a regional board's discretion to impose an NPDES permit condition requiring compliance with state water quality standards more stringent than the maximum-extent-practicable standard. (*BIA, supra*, 124 Cal.App.4th at pp. 871, 882-885, 22 Cal.Rptr.3d 128; see also Wat.Code, § 13377 [waste discharge requirements shall meet federal standards and may also include "more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance"].) Thus, even if the analysis in *Defenders of Wildlife v. Browner* or *BIA* arguably has any application to a TMDL, the opinions do not help the Cities.

Additionally, the Cities' reliance on a November 2002 EPA memorandum on establishing TMDLs and issuing NPDES **400 permits is misplaced, as it postdates the

Regional Board's adoption of the Trash TMDL and its approval by the State Board and the EPA. Further, the memorandum states it *1430 is not binding, and "indeed, there may be other approaches that would be appropriate in particular situations. When EPA makes a TMDL or permitting decision, it will make each decision on a case-by-case basis and will be guided by applicable requirements of the [Clean Water Act] and implementing regulations, taking into account comments and information presented at that time by interested persons regarding the appropriateness of applying these recommendations to the particular situation."

II

Nonpoint Sources of Pollution

24 The Cities contend the court should have invalidated the Trash TMDL on additional grounds, including the Water Boards' failure to identify load allocations and implementation measures for nonpoint sources of trash discharge. The Cities assert the Water Boards are required to adopt implementation measures "for the homeless and aerial sources of trash, [and] also for the other nonpoint sources of trash consisting of State and federal facilities, and other facilities not yet subject to NPDES Permits." The Cities submit that the Clean Water Act does not allow the Water Boards "to effectively impose the burden of the load allocation from all nonpoint sources solely on municipalities."

The Cities further claim the Water Boards acted arbitrarily and capriciously by imposing a trash target of zero on municipalities, but imposing a " 'de minimus' requirement on non-point source discharges." The Cities cite the July 29, 2002, letter from the Regional Board to the EPA, clarifying that it identified nonpoint sources of trash pollution "as wind blown trash and direct deposit of trash into the water," but "as the non-point sources were determined to be de-minimus, we did not believe it necessary to outline a reduction schedule for non-point sources." Contrary to the Cities' position, the Regional Board did not adopt a "de minimus" load allocation for nonpoint sources. Rather, as the trial court found, the Regional Board found the trash pollution from nonpoint sources is de minimus compared to trash pollution from point sources. The TMDL states the "major source of trash in the [Los Angeles River] results from litter, which is intentionally or accidentally discarded in the watershed drainage areas."

In arguing the Trash TMDL is required to include a specific load allocation for nonpoint sources of pollution, the Cities rely on the 2000 EPA Guidance, which provides: "Load allocations for nonpoint sources *may* be expressed as specific allocations for specific discharges or as 'gross allotments' to nonpoint source discharger categories. Separate nonpoint source allocations *should* be established for background loadings. Allocations may be based on a variety *1431 of technical, economic, and political factors. The methodology used to set allocations *should* be discussed in detail." (Italics added.)

The 2000 EPA Guidance, however, states it does not impose legally binding requirements. Further, the load allocation for nonpoint sources is implicitly zero for trash. Federal regulations define a TMDL as the sum of waste load allocations for point sources, load allocations for nonpoint sources and natural backgrounds. (40 C.F.R. § 130.2(i) (2003).) Since "a TMDL defines the specified maximum amount of a pollutant which can be discharged into a body of water from all sources combined" **401 (*American Wildlands v. Browner* (10th Cir.2001) 260 F.3d 1192, 1194), and the Trash TMDL specifies a zero numeric target for trash in Los Angeles River, load allocations are necessarily zero as well as waste load allocations.

Additionally, the Cities cite no authority for the proposition the Water Boards are required to identify an implementation program for nonpoint pollution sources. Again, "[w]here a point is merely asserted by counsel without any argument of or authority for its proposition, it is deemed to be without foundation and requires no discussion." (*People v. Ham* (1970) 7 Cal.App.3d 768, 783, 86 Cal.Rptr. 906, disapproved on another ground in *People v. Compton* (1971) 6 Cal.3d 55, 60, fn. 3, 98 Cal.Rptr. 217, 490 P.2d 537; *People v. Sierra* (1995) 37 Cal.App.4th 1690, 1693, fn. 2, 44 Cal.Rptr.2d 575.)

In any event, although the Clean Water Act focuses on both point and nonpoint sources of pollution, it is settled that the measure "does not require states to take regulatory action to limit the amount of non-point water pollution introduced into its waterways. While the [Clean Water Act] requires states to designate water standards and identify bodies of water that fail to meet these standards, 'nothing in the [Clean Water Act] demands that a state adopt a regulatory system for nonpoint sources.'" (Defenders of Wildlife v. EPA, *supra*, 415 F.3d at pp. 1124-1125, citing *American Wildlands v. Browner, supra*, 260 F.3d 1192, 1197 ["In the [Clean Water] Act, Congress has chosen not to give the EPA the authority

to regulate nonpoint source pollution"]; *Appalachian Power Co. v. Train* (4th Cir.1976) 545 F.2d 1351, 1373 ["Congress consciously distinguished between point source and nonpoint source discharges, giving EPA authority under the [Clean Water] Act to regulate only the former"]; *City of Arcadia I, supra*, 265 F.Supp.2d at p. 1145 ["For nonpoint sources, limitations on loadings are not subject to a federal nonpoint source permitting program, and therefore any nonpoint source reductions can be enforced ... only to the extent that a state institutes such reductions as regulatory requirements pursuant to state *1432 authority"].) "Nonpoint sources, because of their very nature, are not regulated under the NPDES [program]. Instead, Congress addressed nonpoint sources of pollution in a separate portion of the [Clean Water] Act which encourages states to develop areawide waste treatment management plans." (*Pronsolino v. Marcus, supra*, 91 F.Supp.2d at p. 1348, citing 33 U.S.C. § 1288; see also 33 U.S.C. § 1329.)

We conclude the court correctly ruled on this issue.

III

Uses To Be Made of Watershed

25 The Cities next contend the Trash TMDL is invalid because the Water Boards "improperly relied on nonexistent, illegal and irrational 'uses to be made' of the [Los Angeles] River." (Emphasis omitted.) The Cities complain that the Trash TMDL states a purported beneficial use of one of numerous reaches of the river on the state's 303(d) list is "recreation and bathing, in particular by homeless people who seek shelter there," and the State Board chairman questioned the legality of such uses. The Cities also assert there is no evidence to support the Trash TMDL's finding that swimming is an actual use of the river in any location.

The Cities rely on section 303(d)(1)(A) of the Clean Water Act (33 U.S.C. § 1313(d)(1)(A)), which provides that in identifying impaired waters for its 303(d) list, states "shall establish a priority ranking for such waters, taking into account the severity of the pollution and the *uses to be made* of such waters." (Italics added.) **402 The Cities assert "an 'illegal' use cannot be a 'use to be made' for the water body."

Additionally, the Cities cite Water Code section 13241, which requires regional boards to establish water quality objectives in water quality control plans by considering a variety of factors, including "[p]ast, present, and probable

future beneficial uses of water.” (Wat.Code, § 13241, subd. (a).) They assert the “Water Boards acted contrary to law by basing the [Trash] TMDL on any uses of the [Los Angeles] River other than the actual ‘uses to be made’ of the River.” (Emphasis omitted.)

The Cities, however, make no showing of prejudice. Swimming and bathing by the homeless are only two among numerous other beneficial uses that the Cities do not challenge, and there is no suggestion the numeric target of zero trash in the Los Angeles River would have been less stringent without consideration of the factors the Cities raise.

*1433 IV

Scientific Methodology

26 Further, the Cities contend the Trash TMDL is invalid on the additional ground that before adopting and approving it the Water Boards failed to comply with the requisite data collection and analysis. The Cities rely on a federal regulation providing that “[s]tates must establish appropriate monitoring methods and procedures (including biological monitoring) necessary to compile and analyze data on the quality of waters of the United States and, to the extent practicable, groundwaters.” (40 C.F.R. § 130.4(a) (2003).) “The State’s water monitoring program shall include collection and analysis of physical, chemical and biological data and quality assurance and control programs to assure scientifically valid data” in developing, among other things, TMDLs. (*Id.*, § 130.4(b).)

The trial court rejected the Cities’ position, finding they failed to establish the Water Boards’ scientific data is inadequate or scientifically invalid. The court explained the Water Boards “have not failed to conduct ongoing studies, as they say, how else would [they] know the River is impaired by trash[?] And the Record reveals studies relied upon by the Boards.”

This argument is a variation on the assimilative capacity study issue, and we similarly reject it. As the Water Boards point out, “trash is different than other pollutants.... The complex modeling and analytical effort that may be necessary for typical pollutants that may be present in extremely low concentrations have no relevance to calculating a trash TMDL.” Further, the Trash TMDL does discuss sources of trash in the Los Angeles River. It states the “City of Los Angeles conducted an Enhanced Catch Basin Cleaning Project in compliance with a consent decree between the [EPA], the State of California, and the City of Los Angeles.

The project goals were to determine debris loading rates, characterize the debris, and find an optimal cleaning schedule through enhancing basin cleaning. The project evaluated trash loading at two drainage basins[.]” It goes on to discuss the amounts and types of trash collected in the drainage basins between March 1992 and December 1994. The Cities cite no authority for the notion the Water Boards may not rely on data collected by another entity.

The Trash TMDL also states “[s]everal studies conclude that urban runoff is the dominant source of trash. The large amounts of trash conveyed by the urban storm water to the Los Angeles River is evidenced by the amount of ... trash that accumulates at the base of storm drains.”

**403 *1434 Alternatively, the Cities contend a TMDL is not suitable for trash calculation. They rely on 33 United States Code section 1313(d)(1)(C), which provides: “Each State shall establish for [impaired] waters ... the total maximum daily load, for those pollutants which the [EPA] Administrator identifies ... as *suitable for such calculation*. Such load shall be established at a level *necessary* to implement the applicable water quality standards with seasonal variations and a margin of safety.” (Italics added.)

The Cities also cite a 1978 EPA regulation that states a TMDL is “suitable for ... calculation” only under “proper technical conditions.” (43 Fed.Reg. 60662, 60665 (Dec. 28, 1978) (italics omitted).) “Proper technical conditions” require “the availability of the analytical methods, modeling techniques and data base necessary to develop a technically defensible TMDL.” (*Id.* at p. 60662.) The Cities assert the proper technical conditions do not exist, referring to the Trash TMDL’s comment that “[e]xtensive research has not been done on trash generation or the precise relationship between rainfall and its deposition in waterways.”

The Cities ignore the EPA’s determination that a TMDL may be calculated for trash as a pollutant. It approved the Regional Board’s Trash TMDL, and had previously approved a trash TMDL for the East Fork of the San Gabriel River. (See Cal.Code Regs., tit. 23, § 3933.) Thus, the Cities’ view that the 1978 EPA regulation prohibits a TMDL for trash is unfounded. TMDL’s for trash are relatively new, and there is no evidence that in 1978 the EPA contemplated their establishment.

We find irrelevant the Cities’ discussion of the EPA’s proposed July 2000 TMDL “rule,” as their federal register citation is not a regulation and merely concerns the 2003 withdrawal of a rule that never took effect. (68 Fed.Reg.

13608, 13609 (Mar. 19, 2003) ["The July 2000 rule was controversial from the outset"].) In August 2001 the EPA delayed implementation of the July 2000 rule for further consideration, noting that some local government officials argued "some pollutants are not suitable for TMDL calculation." (66 Fed.Reg. 41817, 41819 (Aug. 9, 2001).) Nothing is said, however, about whether a trash TMDL is unsuitable for calculation, and again, the EPA has approved such TMDLs. The withdrawal of the proposed July 2000 rule left the existing rule regarding the establishment of a TMDL in place. (33 U.S.C. § 1313(d)(1)(C).)

V

APA Requirements

Lastly, the Cities contend the trial court erred by finding the Water Boards did not violate the APA. They assert the July 29, 2002, "clarification *1435 memorandum" from the Regional Board to the EPA makes substantive changes to the Trash TMDL regulation—the inclusion of the Estuary in the Trash TMDL and designating an allocation of zero for nonpoint pollution sources—violates the notice and hearing provisions of the APA. The Cities also contend the Trash TMDL and the clarification memorandum "establish[] a regulation in violation of the APA's elements of 'clarity,' 'consistency,' and 'necessity,' as defined in [Government] Code section 11349."

The APA (Gov.Code, §§ 11340 et seq., 11370) "establishes the procedures by which state agencies may adopt regulations. The agency must give the public notice of its proposed regulatory action [citations]; issue a complete text of the proposed regulation with a statement of the reasons for it [citation]; give interested parties an opportunity to comment on **404. the proposed regulation [citation]; respond in writing to public comments [citations]; and forward a file of all materials on which the agency relied in the regulatory process to the Office of Administrative Law [citation], which reviews the regulation for consistency with the law, clarity, and necessity [citations]." (*Tidewater Marine Western, Inc. v. Bradshaw* (1996) 14 Cal.4th 557, 568, 59 Cal.Rptr.2d 186, 927 P.2d 296.) "One purpose of the APA is to ensure that those persons or entities whom a regulation will affect have a voice in its creation [citation], as well as notice of the law's requirements so that they can conform their conduct

accordingly [citation]." (*Id.* at pp. 568–569, 59 Cal.Rptr.2d 186, 927 P.2d 296.)

The APA does not apply to "the adoption or revision of state policy for water quality control" unless the agency adopts a "policy, plan, or guideline, or any revision thereof." (Gov.Code, § 11353, subds.(a), (b)(1).) The Water Boards contend that while the Trash TMDL and amendment adding it to the 1994 Basin Plan are policies or plans covered by the APA, the clarification memorandum is not because it does not revise the terms of the Trash TMDL.

We are not required to reach the issue, because assuming the APA is applicable the Cities' position lacks merit. As to the Estuary, we have determined the Trash TMDL sufficiently notified affected parties of its inclusion in the document as an impaired water body. Further, we have determined the load allocation for nonpoint sources of trash pollution is also necessarily zero, and the Trash TMDL is not required to include implementation measures for nonpoint sources. Accordingly, the clarification memorandum is not germane.¹⁴

14 We deny the Water Boards' June 16, 2005, request for judicial notice.

***1436 DISPOSITION**

The judgment is affirmed insofar as it is based on the Trash TMDL's violation of CEQA, and on a rejection of each of the issues the Cities raised in their appeal. The judgment is reversed insofar as it is based on the Trash TMDL's lack of an assimilative capacity study, inclusion of the Estuary as an impaired water body, and a cost-benefit analysis under Water Code section 13267 or the consideration of economic factors under Water Code section 13241, and also insofar as it grants declaratory relief regarding the purported inclusion of non-navigable waters in the Trash TMDL.

The court's postjudgment order staying the Trash TMDL's implementation schedule is affirmed. The parties are to bear their own costs on appeal.

Supreme Court of California

CITY OF BURBANK, Plaintiff and Appellant,

v.

~~STATE WATER RESOURCES CONTROL~~
BOARD et al., Defendants and Appellants.
City of Los Angeles, Plaintiff and Respondent,

v.

State Water Resources Control Board
et al., Defendants and Appellants.

Nos. S119248, B151175, B152562. April 4,
2005. Rehearing Denied June 29, 2005. *

* Brown, J., did not participate therein.

Synopsis

Background: Cities filed petitions for writs of mandate challenging pollutant limitations in wastewater discharge permits issued by regional water quality control boards. The Superior Court, Los Angeles County, Nos. BS060957 and BS060960, Dzintra I. Janavs, J., set aside permits. Regional board and state water resources control board appealed. The Court of Appeal consolidated the cases and reversed. The Supreme Court granted review, superseding the opinion of the Court of Appeal.

Holdings: The Supreme Court, Kennard, J., held that:

1 regional board may not consider economic factors as justification for imposing pollutant restrictions in wastewater discharge permit which are less stringent than applicable federal standards, and

2 when imposing more stringent pollutant restrictions that those required by federal law, regional board may take economic factors into account.

Judgment of Court of Appeal affirmed, and matter remanded.

Brown, J., filed concurring opinion.

Opinion, 4 Cal.Rptr.3d 27, superseded.

Opinion

KENNARD, J.

***618 **864** Federal law establishes national water quality standards but allows the states to enforce their own water quality laws so long as they comply with federal standards. Operating within this federal-state framework, California's nine Regional Water Quality Control Boards establish water quality policy. They also issue permits for the discharge of treated wastewater; these permits specify the maximum allowable concentration of chemical pollutants in the discharged wastewater.

The question here is this: When a regional board issues a permit to a wastewater treatment facility, must the board take into account the facility's costs of complying with the board's restrictions on pollutants in the wastewater to be discharged? The trial court ruled that California law required a regional board to weigh the economic burden on the facility against the expected environmental benefits of reducing pollutants in the wastewater discharge. The Court of Appeal disagreed. On petitions by the municipal operators of three wastewater treatment facilities, we granted review.

We reach the following conclusions: Because both California law and federal law require regional boards to comply with federal clean water standards, and because the supremacy clause of the United States Constitution requires state law to yield to federal law, a regional board, when issuing a wastewater discharge permit, may not consider economic factors to justify imposing pollutant restrictions that are *less stringent* than the applicable federal standards require. When, however, a regional board is considering whether to make the pollutant restrictions in a wastewater discharge permit *more stringent* than federal law requires, California law allows the board to take into account economic ****865** factors, including the wastewater discharger's cost of compliance. We remand this case for further proceedings to determine whether the pollutant limitations in the permits challenged here meet or exceed federal standards.

*619 I. STATUTORY BACKGROUND

The quality of our nation's waters is governed by a "complex statutory and regulatory scheme ... that implicates both federal and state administrative responsibilities." (*PUD No. 1 of Jefferson County v. Washington Department of Ecology* (1994) 511 U.S. 700, 704, 114 S.Ct. 1900, 128 L.Ed.2d 716.) We first discuss California law, then federal law.

A. California Law

In California, the controlling law is the Porter-Cologne Water Quality Control Act (Porter-Cologne Act), which was enacted in 1969. (Wat.Code, § 13000 et seq., added by Stats.1969, ch. 482, § 18, p. 1051.)¹ Its goal is "to attain the highest water *****307** quality which is reasonable, considering all demands being made and to be made on those waters and the total values involved, beneficial and detrimental, economic and social, tangible and intangible." (§ 13000.) The task of accomplishing this belongs to the State Water Resources Control Board (State Board) and the nine Regional Water Quality Control Boards; together the State Board and the regional boards comprise "the principal state agencies with primary responsibility for the coordination and control of water quality." (§ 13001.) As relevant here, one of those regional boards oversees the Los Angeles region (the Los Angeles Regional Board).²

1 Further undesignated statutory references are to the Water Code.

2 The Los Angeles water region "comprises all basins draining into the Pacific Ocean between the southeasterly boundary, located in the westerly part of Ventura County, of the watershed of Rincon Creek and a line which coincides with the southeasterly boundary of Los Angeles County from the ocean to San Antonio Peak and follows thence the divide between San Gabriel River and Lytle Creek drainages to the divide between Sheep Creek and San Gabriel River drainages." (§ 13200, subd. (d).)

Whereas the State Board establishes statewide policy for water quality control (§ 13140), the regional boards "formulate and adopt water quality control plans for all areas within [a] region" (§ 13240). The regional boards' water quality plans, called "basin plans," must address the beneficial uses to be protected as well as water quality objectives, and they must establish a program of implementation. (§ 13050, subd. (j).) Basin plans must be

consistent with "state policy for water quality control." (§ 13240.)

B. Federal Law

1 In 1972, Congress enacted amendments (Pub.L. No. 92-500 (Oct. 18, 1972) 86 Stat. 816) to the Federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.), which, as amended in 1977, is commonly known as the Clean *620 Water Act. The Clean Water Act is a "comprehensive water quality statute designed 'to restore and maintain the chemical, physical, and biological integrity of the Nation's waters.'" (*PUD No. 1 of Jefferson County v. Washington Dept. of Ecology*, *supra*, 511 U.S. at p. 704, 114 S.Ct. 1900, quoting 33 U.S.C. § 1251(a).) The Act's national goal was to eliminate by the year 1985 "the discharge of pollutants into the navigable waters" of the United States. (33 U.S.C. § 1251(a)(1).) To accomplish this goal, the Act established "effluent limitations," which are restrictions on the "quantities, rates, and concentrations of chemical, physical, biological, and other constituents"; these effluent limitations allow the discharge of pollutants only when the water has been satisfactorily treated to conform with federal water quality standards. (33 U.S.C. §§ 1311, 1362(11).)

Under the federal Clean Water Act, each state is free to enforce its own water quality laws so long as its effluent limitations are not "less stringent" than those set out in the Clean Water Act. (33 U.S.C. § 1370.) This led the California Legislature in 1972 to amend the state's Porter-Cologne Act "to ensure consistency with the requirements for state programs implementing the Federal Water Pollution Control Act." (§ 13372.)

866 Roughly a dozen years ago, the United States Supreme Court, in *Arkansas v. Oklahoma* (1992) 503 U.S. 91, 112 S.Ct. 1046, 117 L.Ed.2d 239, described the distinct roles of the state and federal agencies in enforcing water quality: "The Clean Water Act anticipates a partnership between the States and the Federal Government, animated by a shared objective: 'to restore and maintain the chemical, physical, and biological integrity of the Nation's waters.'" 33 U.S.C. § 1251(a). Toward *308 this end, [the Clean Water Act] provides for two sets of water quality measures. 'Effluent limitations' are promulgated by the [Environmental Protection Agency (EPA)] and restrict the quantities, rates, and concentrations of specified substances which are discharged from point sources.³ See §§ 1311, 1314. '[W]ater quality standards' are, in general, promulgated by the States and establish the desired condition of a waterway. See §

1313. These standards supplement effluent limitations 'so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels.' *EPA v. California ex rel. State Water Resources Control Bd.*, 426 U.S. 200, 205, n. 12, 96 S.Ct. 2022, 2025, n. 12, 48 L.Ed.2d 578 (1976).

3 A "point source" is "any discernable, confined and discrete conveyance" and includes "any pipe, ditch, channel ... from which pollutants ... may be discharged." (33 U.S.C. § 1362(14).)

*621 "The EPA provides States with substantial guidance in the drafting of water quality standards. See generally 40 CFR pt. 131 (1991) (setting forth model water quality standards). Moreover, [the Clean Water Act] requires, *inter alia*, that state authorities periodically review water quality standards and secure the EPA's approval of any revisions in the standards. If the EPA recommends changes to the standards and the State fails to comply with that recommendation, the Act authorizes the EPA to promulgate water quality standards for the State. 33 U.S.C. § 1313(c)." (*Arkansas v. Oklahoma*, *supra*, 503 U.S. at p. 101, 112 S.Ct. 1046.)

Part of the federal Clean Water Act is the National Pollutant Discharge Elimination System (NPDES), "[t]he primary means" for enforcing effluent limitations and standards under the Clean Water Act. (*Arkansas v. Oklahoma*, *supra*, 503 U.S. at p. 101, 112 S.Ct. 1046.) The NPDES sets out the conditions under which the federal EPA or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (33 U.S.C. § 1342(a) & (b).) In California, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law. (§ 13374.)

With this federal and state statutory framework in mind, we now turn to the facts of this case.

II. FACTUAL BACKGROUND

This case involves three publicly owned treatment plants that discharge wastewater under NPDES permits issued by the Los Angeles Regional Board.

The City of Los Angeles owns and operates the Donald C. Tillman Water Reclamation Plant (Tillman Plant), which serves the San Fernando Valley. The City of Los Angeles also owns and operates the Los Angeles-Glendale Water Reclamation Plant (Los Angeles-Glendale Plant), which

processes wastewater from areas within the City of Los Angeles and the independent cities of Glendale and Burbank. Both the Tillman Plant and the Los Angeles–Glendale Plant discharge wastewater directly into the Los Angeles River, now a concrete-lined flood control channel that runs through the City of Los Angeles, ending at the Pacific Ocean. The State Board and the Los Angeles Regional Board consider the Los Angeles River to be a navigable water of the United States for purposes of the federal Clean Water Act.

The third plant, the Burbank Water Reclamation Plant (Burbank Plant), is owned and operated by the City of Burbank, ***309 serving residents and businesses within that city. The Burbank Plant discharges wastewater into the Burbank Western Wash, which drains into the Los Angeles River.

*622 All three plants, which together process hundreds of millions of gallons of sewage **867 each day, are tertiary treatment facilities; that is, the treated wastewater they release is processed sufficiently to be safe not only for use in watering food crops, parks, and playgrounds, but also for human body contact during recreational water activities such as swimming.

In 1998, the Los Angeles Regional Board issued renewed NPDES permits to the three wastewater treatment facilities under a basin plan it had adopted four years earlier for the Los Angeles River and its estuary. That 1994 basin plan contained general narrative criteria pertaining to the existing and potential future beneficial uses and water quality objectives for the river and estuary.⁴ The narrative criteria included municipal and domestic water supply, swimming and other recreational water uses, and fresh water habitat. The plan further provided: “All waters shall be maintained free of toxic substances in concentrations that are toxic to, or that produce detrimental physiological responses in human, plant, animal, or aquatic life.” The 1998 permits sought to reduce these narrative criteria to specific numeric requirements setting daily maximum limitations for more than 30 pollutants present in the treated wastewater, measured in milligrams or micrograms per liter of effluent.⁵

4 This opinion uses the terms “narrative criteria” or descriptions, and “numeric criteria” or effluent limitations. Narrative criteria are broad statements of desirable water quality goals in a water quality plan. For example, “no toxic pollutants in toxic amounts” would be a narrative description. This contrasts with numeric

criteria, which detail specific pollutant concentrations, such as parts per million of a particular substance.

- 5 For example, the permits for the Tillman and Los Angeles–Glendale Plants limited the amount of fluoride in the discharged wastewater to 2 milligrams per liter and the amount of mercury to 2.1 micrograms per liter.

The Cities of Los Angeles and Burbank (Cities) filed appeals with the State Board, contending that achievement of the numeric requirements would be too costly when considered in light of the potential benefit to water quality, and that the pollutant restrictions in the NPDES permits were unnecessary to meet the narrative criteria described in the basin plan. The State Board summarily denied the Cities' appeals.

Thereafter, the Cities filed petitions for writs of administrative mandate in the superior court. They alleged, among other things, that the Los Angeles Regional Board failed to comply with sections 13241 and 13263, part of California's Porter–Cologne Act, because it did not consider the economic burden on the Cities in having to reduce substantially the pollutant content of their discharged wastewater. They also alleged that compliance with the pollutant restrictions set out in the NPDES permits issued by the regional *623 board would greatly increase their costs of treating the wastewater to be discharged into the Los Angeles River. According to the City of Los Angeles, its compliance costs would exceed \$50 million annually, representing more than 40 percent of its entire budget for operating its four wastewater treatment plants and its sewer system; the City of Burbank estimated its added costs at over \$9 million annually, a nearly 100 percent increase above its \$9.7 million annual budget for wastewater treatment.

***310 The State Board and the Los Angeles Regional Board responded that sections 13241 and 13263 do not require consideration of costs of compliance when a regional board issues a NPDES permit that restricts the pollutant content of discharged wastewater.

The trial court stayed the contested pollutant restrictions for each of the three wastewater treatment plants. It then ruled that sections 13241 and 13263 of California's Porter–Cologne Act required a regional board to consider costs of compliance not only when it adopts a basin or water quality plan but also when, as here, it issues an NPDES permit setting the allowable pollutant content of a treatment plant's discharged wastewater. The court found no evidence that the Los Angeles Regional Board had considered economic factors at either stage. Accordingly, the trial court granted the Cities' petitions

for writs of mandate, and it ordered the Los Angeles Regional Board to vacate the contested restrictions on pollutants in the wastewater discharge permits issued to the three municipal plants here and to conduct hearings ^{**868} to consider the Cities' costs of compliance before the board's issuance of new permits. The Los Angeles Regional Board and the State Board filed appeals in both the Los Angeles and Burbank cases. ⁶

- 6 Unchallenged on appeal and thus not affected by our decision are the trial court's rulings that (1) the Los Angeles Regional Board failed to show how it derived from the narrative criteria in the governing basin plan the specific numeric pollutant limitations included in the permits; (2) the administrative record failed to support the specific effluent limitations; (3) the permits improperly imposed daily maximum limits rather than weekly or monthly averages; and (4) the permits improperly specified the manner of compliance.

The Court of Appeal, after consolidating the cases, reversed the trial court. It concluded that sections 13241 and 13263 require a regional board to take into account "economic considerations" when it adopts water quality standards in a basin plan but not when, as here, the regional board sets specific pollutant restrictions in wastewater discharge permits intended to satisfy those standards. We granted the Cities' petition for review.

^{*624} III. DISCUSSION

A. Relevant State Statutes

The California statute governing the issuance of *wastewater permits* by a regional board is section 13263, which was enacted in 1969 as part of the Porter-Cologne Act. (See 26 Cal.Rptr.3d pp. 306-307, 108 P.3d p. 865, *ante*.) Section 13263 provides in relevant part: "*The regional board, after any necessary hearing, shall prescribe requirements as to the nature of any proposed discharge [of wastewater]. The requirements shall implement any relevant water quality control plans that have been adopted, and shall take into consideration the beneficial uses to be protected, the water quality objectives reasonably required for that purpose, other waste discharges, the need to prevent nuisance, and the provisions of Section 13241.*" (§ 13263, subd. (a), italics added.)

Section 13241 states: "Each regional board shall establish such water quality objectives in water quality control plans as in its judgment will ensure the reasonable protection of beneficial uses and the prevention of nuisance; however, it

is recognized that it may be possible for the quality of water to be changed to some degree without unreasonably affecting beneficial uses. Factors to be considered by a regional board in establishing water quality objectives shall include, but not necessarily be limited to, all of the following:

^{***311} "(a) Past, present, and probable future beneficial uses of water.

"(b) Environmental characteristics of the hydrographic unit under consideration, including the quality of water available thereto.

"(c) Water quality conditions that could reasonably be achieved through the coordinated control of all factors which affect water quality in the area.

"(d) *Economic considerations.*

"(e) The need for developing housing within the region.

"(f) The need to develop and use recycled water." (Italics added.)

The Cities here argue that section 13263's express reference to section 13241 requires the Los Angeles Regional Board to consider section 13241's listed factors, notably "[e]conomic considerations," before issuing NPDES permits requiring specific pollutant reductions in discharged effluent or treated wastewater.

2 ^{*625} Thus, at issue is language in section 13263 stating that when a regional board "prescribe[s] requirements as to the nature of any proposed discharge" of treated wastewater it must "take into consideration" certain factors including "the provisions of Section 13241." According to the Cities, this statutory language requires that a regional board make an independent evaluation of the section 13241 factors, including "economic considerations," before restricting the pollutant content in an NPDES permit. This was the view expressed in the trial court's ruling. The Court of Appeal rejected that view. It held that a regional board need consider the section 13241 factors only when it adopts a basin or water quality plan, but not when, as in this case, it issues a wastewater discharge ^{**869} permit that sets specific numeric limitations on the various chemical pollutants in the wastewater to be discharged. As explained below, the Court of Appeal was partly correct.

B. Statutory Construction

3 When construing any statute, our task is to determine the Legislature's intent when it enacted the statute "so that we may adopt the construction that best effectuates the purpose of the law." (*Hassan v. Mercy American River Hospital* (2003) 31 Cal.4th 709, 715, 3 Cal.Rptr.3d 623, 74 P.3d 726; *Esberg v. Union Oil Co.* (2002) 28 Cal.4th 262, 268, 121 Cal.Rptr.2d 203, 47 P.3d 1069.) In doing this, we look to the statutory language, which ordinarily is "the most reliable indicator of legislative intent." (*Hassan, supra*, at p. 715, 3 Cal.Rptr.3d 623, 74 P.3d 726.)

As mentioned earlier, our Legislature's 1969 enactment of the Porter-Cologne Act, which sought to ensure the high quality of water in this state, predated the 1972 enactment by Congress of the precursor to the federal Clean Water Act. Included in California's original Porter-Cologne Act were sections 13263 and 13241. Section 13263 directs regional boards, when issuing wastewater discharge permits, to take into account various factors, including those set out in section 13241. Listed among the section 13241 factors is "[e]conomic considerations." (§ 13241, subd. (d).) The plain language of sections 13263 and 13241 indicates the Legislature's intent in 1969, when these statutes were enacted, that a regional board consider the cost of compliance when setting effluent limitations in a wastewater discharge permit.

Our construction of sections 13263 and 13241 does not end with their plain statutory language, however. We must also analyze them in the context of the statutory scheme of which they are a part. ***312 (*State Farm Mutual Automobile Ins. Co. v. Garamendi* (2004) 32 Cal.4th 1029, 1043, 12 Cal.Rptr.3d 343, 88 P.3d 71.) Like sections 13263 and 13241, section 13377 is part of the Porter-Cologne Act. But unlike the former two statutes, section 13377 was *626 not enacted until 1972, shortly after Congress, through adoption of the Federal Water Pollution Control Act Amendments, established a comprehensive water quality policy for the nation.

4 Section 13377 specifies that wastewater discharge permits issued by California's regional boards must meet the federal standards set by federal law. In effect, section 13377 forbids a regional board's consideration of any economic hardship on the part of the permit holder if doing so would result in the dilution of the requirements set by Congress in the Clean Water Act. That act prohibits the discharge of pollutants into the navigable waters of the United States unless there is compliance with federal law (33 U.S.C. § 1311(a)), and publicly operated wastewater treatment plants such as those

before us here must comply with the act's clean water standards, regardless of cost (see *id.*, §§ 1311(a), (b)(1)(B) & (C), 1342(a)(1) & (3)). Because section 13263 cannot authorize what federal law forbids, it cannot authorize a regional board, when issuing a wastewater discharge permit, to use compliance costs to justify pollutant restrictions that do not comply with federal clean water standards.⁷ Such a construction of section 13263 would not only be inconsistent with federal law, it would also be inconsistent with the Legislature's **870 declaration in section 13377 that all discharged wastewater must satisfy federal standards.⁸ This was also the conclusion of the Court of Appeal. Moreover, under the federal Constitution's supremacy clause (art. VI), a state law that conflicts with federal law is "without effect." (*Cipollone v. Liggett Group, Inc.* (1992) 505 U.S. 504, 516, 112 S.Ct. 2608, 120 L.Ed.2d 407; *Dowhal v. SmithKline Beecham Consumer Healthcare* (2004) 32 Cal.4th 910, 923, 12 Cal.Rptr.3d 262, 88 P.3d 1.) To comport with the principles of federal supremacy, California law cannot authorize this *627 state's regional boards to allow the discharge of pollutants into the navigable waters of the United States in concentrations ***313 that would exceed the mandates of federal law.

7 The concurring opinion misconstrues both state and federal clean water law when it describes the issue here as "whether the Clean Water Act prevents or prohibits the regional water board from considering economic factors to justify pollutant restrictions *that meet the clean water standards in more cost-effective and economically efficient ways.*" (Conc. Opn. of Brown, J., *post*, 26 Cal.Rptr.3d p. 314, 108 P.3d at p. 871, some italics added.) This case has nothing to do with meeting federal standards in more cost effective and economically efficient ways. State law, as we have said, allows a regional board to consider a permit holder's compliance cost to *relax* pollutant concentrations, as measured by numeric standards, for pollutants in a wastewater discharge permit. (§§ 13241 & 13263.) Federal law, by contrast, as stated above in the text, "prohibits the discharge of pollutants into the navigable waters of the United States unless there is compliance with federal law (33 U.S.C. § 1311(a)), and publicly operated wastewater treatment plants such as those before us here must comply with the [federal] act's *clean water standards, regardless of cost* (see *id.*, §§ 1311(a), (b)(1)(B) & (C), 1342(a)(1) & (3))." (Italics added.)

8 As amended in 1978, section 13377 provides for the issuance of waste discharge permits that comply with federal clean water law "together with any more

stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance.” We do not here decide how this provision would affect the cost-consideration requirements of sections 13241 and 13263 when more stringent effluent standards or limitations in a permit are justified for some reason independent of compliance with federal law.

Thus, in this case, whether the Los Angeles Regional Board should have complied with sections 13263 and 13241 of California’s Porter–Cologne Act by taking into account “economic considerations,” such as the costs the permit holder will incur to comply with the numeric pollutant restrictions set out in the permits, depends on whether those restrictions meet or exceed the requirements of the federal Clean Water Act. We therefore remand this matter for the trial court to resolve that issue.

C. Other Contentions

The Cities argue that requiring a regional board at the wastewater discharge permit stage to consider the permit holder’s cost of complying with the board’s restrictions on pollutant content in the water is consistent with federal law. In support, the Cities point to certain provisions of the federal Clean Water Act. They cite section 1251(a)(2) of title 33 United States Code, which sets, as a national goal “*wherever attainable*,” an interim goal for water quality that protects fish and wildlife, and section 1313(c)(2)(A) of the same title, which requires consideration, among other things, of waters’ “*use and value for navigation*” when revising or adopting a “water quality standard.” (Italics added.) These two federal statutes, however, pertain not to permits for wastewater discharge, at issue here, but to establishing water quality standards, not at issue here. Nothing in the federal Clean Water Act suggests that a state is free to disregard or to weaken the federal requirements for clean water when an NPDES permit holder alleges that compliance with those requirements will be too costly.

5 At oral argument, counsel for amicus curiae National Resources Defense Council, which argued on behalf of California’s State Board and regional water boards, asserted that the federal Clean Water Act incorporates state water policy into federal law, and that therefore a regional board’s consideration of economic factors to justify greater pollutant concentration in discharged wastewater would conflict with the federal act even if the specified pollutant restrictions were not less stringent than those required under federal law. We are not persuaded. The federal Clean Water Act reserves to the

states significant aspects of water quality policy (33 U.S.C. § 1251(b)), and it specifically grants the states authority to “enforce any effluent limitation” that is not “*less stringent*” than the federal standard (*id.* § 1370, italics added). It does not prescribe or restrict the factors that a state may consider when exercising this reserved authority, and thus it does not prohibit *628 a state—when imposing effluent limitations that are *more stringent* than required by federal law—from taking into account the economic effects of doing so.

Also at oral argument, counsel for the Cities asserted that if the three municipal wastewater treatment facilities ceased releasing their treated wastewater into the concrete channel that makes up the Los Angeles River, it would (other than during the rainy season) contain no water at all, and thus would not be a “navigable water” of the **871 United States subject to the Clean Water Act. (See *Solid Waste Agency v. United States Army Corps of Engineers* (2001) 531 U.S. 159, 172, 121 S.Ct. 675, 148 L.Ed.2d 576 [“The term ‘navigable’ has at least the import of showing us what Congress had in mind as its authority for enacting the CWA: its traditional jurisdiction over waters that were or had been navigable in fact or which could reasonably be so made.”].) It is unclear when the Cities first raised this issue. The Court of Appeal did not discuss it in its opinion, and the Cities did not seek rehearing on this ground. (See ***314 Cal. Rules of Court, rule 28(c)(2).) Concluding that the issue is outside our grant of review, we do not address it.

CONCLUSION

Through the federal Clean Water Act, Congress has regulated the release of pollutants into our national waterways. The states are free to manage their own water quality programs so long as they do not compromise the federal clean water standards. When enacted in 1972, the goal of the Federal Water Pollution Control Act Amendments was to *eliminate* by the year 1985 the discharge of pollutants into the nation’s navigable waters. In furtherance of that goal, the Los Angeles Regional Board indicated in its 1994 basin plan on water quality the intent, insofar as possible, to remove from the water in the Los Angeles River toxic substances in amounts harmful to humans, plants, and aquatic life. What is not clear from the record before us is whether, in limiting the chemical pollutant content of wastewater to be discharged by the Tillman, Los Angeles–Glendale, and Burbank wastewater treatment facilities, the Los Angeles Regional Board acted only to implement requirements of the federal Clean Water Act or instead imposed pollutant limitations that exceeded the

federal requirements. This is an issue of fact to be resolved by the trial court.

***315 **872 I. Federal Law

DISPOSITION

We affirm the judgment of the Court of Appeal reinstating the wastewater discharge permits to the extent that the specified numeric limitations on chemical pollutants are necessary to satisfy federal Clean Water Act requirements for treated wastewater. The Court of Appeal is directed to remand this *629 matter to the trial court to decide whether any numeric limitations, as described in the permits, are “more stringent” than required under federal law and thus should have been subject to “economic considerations” by the Los Angeles Regional Board before inclusion in the permits.

WE CONCUR: GEORGE, C.J., BAXTER, WERDEGAR, CHIN, and MORENO, JJ.

Concurring Opinion by BROWN, J.

I write separately to express my frustration with the apparent inability of the government officials involved here to answer a simple question: How do the federal clean water standards (which, as near as I can determine, are the state standards) prevent the state from considering economic factors? The majority concludes that because “the supremacy clause of the United States Constitution requires state law to yield to federal law, a regional board, when issuing a wastewater discharge permit, may not consider economic factors to justify imposing pollutant restrictions that are *less stringent* than applicable federal standards require.” (Maj. opn., ante, 26 Cal.Rptr.3d at p. 306, 108 P.3d at p. 864.) That seems a pretty self-evident proposition, but not a useful one. The real question, in my view, is whether the Clean Water Act prevents or prohibits the regional water board from considering economic factors to justify pollutant restrictions that *meet* the clean water standards in more cost-effective and economically efficient ways. I can see no reason why a federal law—which purports to be an example of cooperative federalism—would decree such a result. I do not think the majority’s reasoning is at fault here. Rather, the agencies involved seemed to have worked hard to make this simple question impenetrably obscure.

A brief review of the statutory framework at issue is necessary to understand my concerns.

“In 1972, Congress enacted the Federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.), commonly known as the Clean Water Act (CWA) [Citation.] ... [¶] Generally, the CWA ‘prohibits the discharge of any pollutant except in compliance with one of several statutory exceptions. [Citation.]’ ... The most important of those exceptions is pollution discharge under a valid NPDES [National Pollution Discharge Elimination System] permit, which can be issued either by the Environmental Protection Agency (EPA), or by an EPA-approved state permit program such as California’s. [Citations.] NPDES permits are valid for five years. [Citation.] [¶] Under the CWA’s NPDES permit program, the states are required to develop *water quality standards*. [Citations.] A water quality standard ‘establish[es] the desired condition of a waterway.’ [Citation.] A water quality standard for any *630 given waterway, or ‘water body,’ has two components: (1) the designated beneficial uses of the water body and (2) the *water quality criteria* sufficient to protect those uses. [Citations.] [¶] Water quality criteria can be either *narrative* or *numeric*. [Citation.]” (*Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1092–1093, 1 Cal.Rptr.3d 76.)

With respect to satisfying water quality standards, “a polluter must comply with *effluent limitations*. The CWA defines an effluent limitation as ‘any restriction established by a State or the [EPA] Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources into navigable waters, the waters of the contiguous zone, or the ocean, including schedules of compliance.’ [Citation.] ‘Effluent limitations are a means of *achieving* water quality standards.’ [Citation.] [¶] NPDES permits establish effluent limitations for the polluter. [Citations.] CWA’s NPDES permit system provides for a two-step process for the establishing of effluent limitations. First, the polluter must comply with *technology-based effluent limitations*, which are limitations based on the best available or practical technology for the reduction of water pollution. [Citations.] [¶] Second, the polluter must also comply with more stringent *water quality-based effluent limitations* (WQBEL’s) where applicable. In the CWA, Congress ‘supplemented the “technology-based” effluent limitations with “water quality-based” limitations “so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling

below acceptable levels.' ” [Citation.] [¶] The CWA makes WQBEL's applicable to a given polluter whenever WQBEL's are 'necessary to meet water quality standards, treatment standards, or schedules of compliance, established pursuant to any State law or regulations....' [Citations.] Generally, NPDES permits must conform to state water quality laws insofar as the state laws impose more stringent pollution controls than the CWA. [Citations.] Simply put, WQBEL's implement water quality standards.” (*Communities for a Better Environment v. State Water Resources Control Bd.*, *supra*, 109 Cal.App.4th at pp. 1093–1094, 1 Cal.Rptr.3d 76, fn. omitted.)

This case involves water quality-based effluent limitations. As set forth above, “[u]nder the CWA, states have the primary role in promulgating water quality standards.” (*Piney Run Preservation Ass'n v. Comms. of Carroll Co.* (4th Cir.2001) 268 F.3d 255, 265, fn. 9.) “Under the CWA, the water quality standards referred to in section 301 [see 33 U.S.C. § 1311] are primarily the states' handiwork.” ***316 (*American Paper Institute, Inc. v. U.S. Env'tl. Protection Agency* (D.C.Cir.1993) 996 F.2d 346, 349 (*American Paper*).) In fact, upon the 1972 passage of the CWA, “[s]tate water quality standards in effect at the time ... were deemed to be the initial water quality benchmarks for CWA purposes.... The states were to revisit and, if *631 necessary, revise those initial standards at least once every three years.” (*American Paper*, at p. 349.) Therefore, “once a water quality standard has been promulgated, section 301 of the CWA requires all NPDES permits for point sources to incorporate discharge limitations necessary to satisfy that standard.” (*American Paper*, at p. 350.) Accordingly, it appears that in most instances, **873 state water quality standards are identical to the federal requirements for NPDES permits.

II. State Law

In California, pursuant to the Porter–Cologne Water Quality Control Act (Wat.Code, § 13000 et seq.; Stats.1969, ch. 482, § 18, p. 1051; hereafter Porter–Cologne Act), the regional water quality control boards establish water quality standards—and therefore federal requirements for NPDES permits—through the adoption of water quality control plans (basin plans). The basin plans establish water quality objectives using enumerated factors—including economic factors—set forth in Water Code section 13241.

In addition, as one court observed: “The Porter–Cologne Act ... established nine regional boards to prepare water quality plans (known as basin plans) and issue permits

governing the discharge of waste. (Wat.Code, §§ 13100, 13140, 13200, 13201, 13240, 13241, 13243.) The Porter–Cologne Act identified these permits as ‘waste discharge requirements,’ and provided that the waste discharge requirements must mandate compliance with the applicable regional water quality control plan. (Wat.Code, §§ 13263, subd. (a), 13377, 13374.)[¶] Shortly after Congress enacted the Clean Water Act in 1972, the California Legislature added Chapter 5.5 to the Porter–Cologne Act, for the purpose of adopting the necessary federal requirements to ensure it would obtain EPA approval to issue NPDES permits. (Wat.Code, § 13370, subd. (c).) As part of these amendments, the Legislature provided that the state and regional water boards ‘shall, as required or authorized by the [Clean Water Act], issue waste discharge requirements ... which apply and ensure compliance with all applicable provisions [of the Clean Water Act], together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance.’ (Wat.Code, § 13377.) Water Code section 13374 provides that ‘[t]he term “waste discharge requirements” as referred to in this division is the equivalent of the term “permits” as used in the [Clean Water Act].’ [¶] California subsequently obtained the required approval to issue NPDES permits. [Citation.] Thus, the waste discharge requirements issued by the regional water boards ordinarily also serve as NPDES permits under federal law. (Wat.Code, § 13374.)” (*Building Industry Assn. of San Diego County v. State Water Resources Control Bd.* (2004) 124 Cal.App.4th 866, 875, 22 Cal.Rptr.3d 128.)

*632 Applying this federal-state statutory scheme, it appears that throughout this entire process, the Cities of Burbank and Los Angeles (Cities) were unable to have economic factors considered because the Los Angeles Regional Water Quality Control Board (Board)—the body responsible to enforce the statutory framework—failed to comply with its statutory mandate.

***317 For example, as the trial court found, the Board did not consider costs of compliance when it initially established its basin plan, and hence the water quality standards. The Board thus failed to abide by the statutory requirement set forth in Water Code section 13241 in establishing its basin plan. Moreover, the Cities claim that the initial narrative standards were so vague as to make a serious economic analysis impracticable. Because the Board does not allow the Cities to raise their economic factors in the permit approval stage, they are effectively precluded from doing so. As a result, the Board appears to be playing a game of “gotcha”

by allowing the Cities to raise economic considerations when it is not practical, but precluding them when they have the ability to do so.

Moreover, the Board acknowledges that it has neglected other statutory provisions that might have provided an additional opportunity to air these concerns. As set forth above, pursuant to the CWA, “[t]he states were to revisit and, if necessary, revise those initial standards at least once every three years—a process commonly known as triennial review. [Citation.] Triennial reviews consist of public hearings in which current water quality standards are examined to assure that they ‘protect the public health or welfare, enhance the quality of water and serve the purposes’ of the Act. [Citation.] Additionally, the CWA **874 directs states to consider a variety of competing policy concerns during these reviews, including a waterway’s ‘use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes.’ ” (*American Paper, supra*, 996 F.2d at p. 349.)

According to the Cities, “[t]he last time that the narrative water quality objective for toxicity contained in the Basin Plan was reviewed and modified was 1994.” The Board does not deny this claim. Accordingly, the Board has failed its duty to allow public discussion—including economic considerations—at the required intervals when making its determination of proper water quality standards.

What is unclear is why this process should be viewed as a contest. State and local agencies are presumably on the same side. The costs will be paid by taxpayers and the Board should have as much interest as any other agency in fiscally responsible environmental solutions.

*633 Our decision today arguably allows the Board to continue to shirk its statutory duties. The majority holds that when read together, Water Code sections 13241, 13263, and 13377 do not allow the Board to consider economic factors when issuing NPDES permits to satisfy federal CWA requirements. (Maj. opn., *ante*, 26 Cal.Rptr.3d at pp. 311–312, 108 P.3d at pp. 869–870.) The majority then bifurcates the issue when it orders the Court of Appeal “to remand this matter to the trial court to decide whether any numeric limitations, as described in the permits, are ‘more stringent’ than required under federal law and thus should have been subject to ‘economic considerations’ by the Los Angeles Regional Board before inclusion in the permits.” (*Id.* at p. 314, 108 P.3d at p. 871.)

The majority overlooks the feedback loop established by the CWA, under which federal standards are linked to state-established water quality standards, including narrative water quality criteria. (See 33 U.S.C. § 1311(b)(1)(C); 40 C.F.R. § 122.44(d)(1) (2004).) Under the CWA, NPDES permit requirements include the state narrative criteria, which are incorporated into the Board’s basin plan under the description “no toxins in toxic amounts.” As far as I can determine, NPDES permits ***318 designed to achieve this narrative criteria (as well as designated beneficial uses) will usually implement the state’s basin plan, while satisfying federal requirements as well.

If federal water quality standards are typically identical to state standards, it will be a rare instance that a state exceeds its own requirements and economic factors are taken into consideration.¹ In light of the Board’s initial failure to consider costs of compliance and its repeated failure to conduct required triennial reviews, the result here is an unseemly bureaucratic bait-and-switch that we should not endorse. The likely outcome of the majority’s decision is that the Cities will be economically burdened to meet standards imposed on them in a highly questionable manner.² In these times of tight fiscal budgets, it is difficult to imagine imposing additional financial burdens on municipalities without at least allowing them to present alternative views.

1 (But see *In the Matter of the Petition of City and County of San Francisco, San Francisco Baykeeper et al.* (Order No. WQ 95–4, Sept. 21, 1995) 1995 WL 576920.)

2 Indeed, given the fact that “water quality standards” in this case are composed of broadly worded components (i.e., a narrative criteria and “designated beneficial uses of the water body”), the Board possessed a high degree of discretion in setting NPDES permit requirements. Based on the Board’s past performance, a proper exercise of this discretion is uncertain.

Based on the facts of this case, our opinion today appears to largely retain the status quo for the Board. If the Board can actually demonstrate that only the precise limitations at issue here, implemented in only one way, will achieve the desired water standards, perhaps its obduracy is justified. That case has yet to be made.

*634 Accordingly, I cannot conclude that the majority’s decision is wrong. The analysis **875 may provide a reasonable accommodation of conflicting provisions.

City of Burbank v. State Water Resources Control Bd., 35 Cal.4th 613 (2005)

108 P.3d 862, 26 Cal.Rptr.3d 304, 60 ERC 1470, 35 Envtl. L. Rep. 20,071...

However, since the Board's actions "make me wanna holler and throw up both my hands,"³ I write separately to set forth my concerns and concur in the judgment—*dubitante*.⁴

CITY OF RICHMOND, Plaintiff and Appellant,

v.

COMMISSION ON STATE MANDATES,
Defendant and Respondent; DEPARTMENT OF
FINANCE, Real Party in Interest and Respondent.

No. C026835.

Court of Appeal, Third District, California.

May 28, 1998.

SUMMARY

A city filed an administrative mandamus action against the Commission on State Mandates, seeking a determination that an amendment to Lab. Code, § 4707, making local safety members of the Public Employees' Retirement System (PERS) eligible for both PERS and workers' compensation death benefits, was a state mandate to which the city was entitled to reimbursement under Cal. Const., art. XIII B, § 6, which applies when a state law establishes a new program or higher level of service payable by local governments. The amendment eliminated local safety members of PERS from the coordination provisions for death benefits payable under workers' compensation and under PERS, whereby survivors of a local safety member of PERS who are killed in the line of duty receive both a death benefit under workers' compensation and a special death benefit under PERS, instead of only the latter. The trial court denied the petition, finding that the amendment created an increased cost but not an increased level of service by local governments. (Superior Court of Sacramento County, No. 96CS03417, James Timothy Ford, Judge.)

The Court of Appeal affirmed. The court held that although the amendment increased the cost of providing services, that could not be equated with requiring an increased level of service, and did not constitute a new program. Neither did the amendment impose a unique requirement on local governments that was not applicable to all residents and entities within the state. The amendment merely made the workers' compensation death benefit requirements as applicable to local governments as they are to private employers. Local entities are not entitled to reimbursement

for all increased costs mandated by state law, but only those costs resulting from a new program or an increased level of service imposed upon them by the state. Although a law is addressed only to local governments and imposes new costs on them, it may still not be a reimbursable state mandate. The court also held that assembly bill analyses stating that the amendment was a reimbursable state mandate (Cal. Const., art. XIII B, § 6), were irrelevant to the issue. The Legislature has entrusted the determination of what constitutes a state mandate to the Commission on State Mandates, subject to judicial review, and has provided that the initial determination by Legislative Counsel is not binding on the commission. (Opinion by Morrison, J., with Puglia, P. J., and Nicholson, J., concurring.)

HEADNOTES

Classified to California Digest of Official Reports

(1) Administrative Law § 138--Judicial Review and Relief--Appellate Court-- Standard--Decision of Commission on State Mandates.

Under Gov. Code, § 17559, a proceeding to set aside a decision of the Commission on State Mandates on a claim may be commenced on the ground that the commission's decision was not supported by substantial evidence. Where the scope of review in the trial court is whether the administrative decision is supported by substantial evidence, review on appeal is generally the same. However, the appellate court independently reviews the superior court's legal conclusions as to the meaning and effect of constitutional and statutory provisions. The question of whether a law is a state-mandated program or a higher level of service under Cal. Const., art. XIII B, § 6, is a question of law that is reviewed de novo.

(2a, 2b, 2c) State of California § 11--Fiscal Matters--Reimbursement for State Mandates--Workers' Compensation Death Benefits Payable to Local Safety Members.

An amendment to Lab. Code, § 4707, to eliminate local safety members of the Public Employees' Retirement System (PERS) from the coordination provisions for death benefits payable under workers' compensation and under PERS, whereby the survivors of a local safety member of PERS who is killed in the line of duty receive both a death benefit under workers' compensation and a special death benefit under PERS, instead of only the latter, did not mandate a new program or higher level of service on local governments, requiring a subvention of funds to reimburse the local government under Cal. Const., art. XIII B, § 6. Although

the amendment increased the cost of providing services, that could not be equated with requiring an increased level of service, and did not constitute a new program. Neither did it impose a unique requirement on local governments that was not applicable to all residents and entities within the state. The amendment merely made the workers' compensation death benefit requirements as applicable to local governments as they are to private employers.

(3a, 3b) State of California § 11--Fiscal Matters--
Reimbursement for State Mandates--Purpose.

Cal. Const., art. XIII B, § 6, which requires a subvention of funds to reimburse local governments when a state law mandates a new program or higher level of service on local governments, was intended to require reimbursement to local agencies for the costs involved in carrying out functions peculiar to government, not for expenses incurred by local agencies as an incidental impact of laws that apply generally to all state residents and entities. Although a law is addressed only to local governments and imposes new costs on them, it may still not be a reimbursable state mandate.

[See 9 Witkin, Summary of Cal. Law (9th ed. 1989) Taxation, § 123A.]

(4) Statutes § 43--Construction--Aids--Legislative
Analysis--Reimbursement for State Mandates--Legislative
Intent.

Assembly bill analyses of an amendment to Lab. Code, § 4707, making local safety members of the Public Employees' Retirement System (PERS) eligible for both PERS and workers' compensation death benefits, stating that it was a reimbursable state mandate (Cal. Const., art. XIII B, § 6), were irrelevant to the issue. The Legislature has entrusted the determination of what constitutes a state mandate to the Commission on State Mandates, subject to judicial review (Gov. Code, §§ 17500, 17559) and has provided that the initial determination by legislative counsel is not binding on the commission (Gov. Code, § 17575).

MORRISON, J.

Chapter 478 of the Statutes of 1989 (chapter 478) amended Labor Code section 4707 to eliminate local safety members of the Public Employees' Retirement System (PERS) from the coordination provisions for death benefits payable under workers' compensation and under PERS. As a result, the survivors of a local safety member of PERS who is killed in the line of duty receives both a death benefit under workers' compensation and a special death benefit under PERS, instead of only the latter. This proceeding presents the question whether chapter 478 mandates a new program or higher level of service on local governments, requiring a subvention of funds to reimburse the local government under article XIII B section 6 of the California Constitution. We conclude that chapter 478 is not a state mandate requiring reimbursement and affirm the judgment.

Factual and Procedural Background

The workers' compensation system provides for death benefits payable to the deceased employee's survivors. (Lab. Code, § 4700 et seq.) There are also preretirement death benefits under PERS. (Gov. Code, § 21530 et seq.) There is a special death benefit under PERS if the death was industrial and the deceased was a patrol, state peace officer/firefighter, state safety officer, state industrial, or local safety member. (Gov. Code, § 21537.) Labor Code section 4707 provides a coordination or offset for workers' compensation death benefits when the special death benefit under PERS is payable. In such cases, no workers' compensation death benefit, other than burial expenses, is payable, except that if the PERS special death benefit is less than the workers' compensation death benefit, the difference is paid as a workers' compensation death benefit. The total death benefit is equal to the greater of the PERS special death benefit or the workers' compensation benefit, not the combination of the two death benefits.

Prior to 1989, Labor Code section 4707 provided in part: "No benefits, except reasonable expenses of burial ... shall be awarded under this division on account of the death of an employee who is a member of the Public Employees' Retirement System unless it shall be determined that a special death benefit ... will not be paid by the Public Employees' Retirement System to the widow or children under 18 years of age, of the deceased, on account of said death, but if the total death allowance paid to said widow and children shall be less than the benefit otherwise payable under this division such widow and children shall be entitled, under this division, to the difference." (Stats. 1977, ch. 468, § 4, pp. 1528-1529.)

*1194

Chapter 478 amended Labor Code section 4707 to make technical changes, to provide the death benefit is payable to the surviving spouse rather than to the widow, and to add subdivision (b). Subdivision (b) of Labor Code section 4707 reads: "The limitation prescribed by subdivision (a) shall not apply to local safety members of the Public Employees' Retirement System." (Stats. 1989, ch. 478, § 1, p. 1689.)

In 1992, David Haynes, a police officer for the City of Richmond (Richmond), was killed in the line of duty. Officer Haynes was a local safety member of PERS. His wife and children received the PERS special death benefit; they also received a death benefit under workers' compensation.

Richmond filed a test claim with the Commission on State Mandates (the Commission), contending chapter 478 created a state-mandated local cost.¹ Richmond sought reimbursement of the cost of the workers' compensation death benefit, estimated to be \$295,432. As part of its test claim, Richmond included legislative history of chapter 478, purporting to show a legislative intent to create a reimbursable state mandate.

The Commission denied the test claim. It found that chapter 478 dealt with workers' compensation benefits and case law held that workers' compensation laws are laws of general application and not subject to section 6 of article XIII B of the California Constitution. It noted the legislative history containing analyses that chapter 478 was a state mandate had been prepared before the issuance of *City of Sacramento v. State of California* (1990) 50 Cal.3d 51 [266 Cal.Rptr. 139, 785 P.2d 522].

Richmond filed a petition for a writ of administrative mandate under Code of Civil Procedure section 1094.5, seeking to compel the Commission to approve its claim. Both the

Commission and the Department of Finance, as real parties in interest, responded. The court denied the petition, finding chapter 478 created an increased cost but not an increased level of service by local governments.

Discussion

I

(1) Under Government Code section 17559, a proceeding to set aside the Commission's decision on a claim may be commenced on the ground that the Commission's decision is not supported by substantial evidence. Where *1195 the scope of review in the trial court is whether the administrative decision is supported by substantial evidence, our review on appeal is generally the same. (*County of Los Angeles v. Commission on State Mandates* (1995) 32 Cal.App.4th 805, 814 [38 Cal.Rptr.2d 304].) However, we independently review the superior court's legal conclusions as to the meaning and effect of constitutional and statutory provisions. (*City of San Jose v. State of California* (1996) 45 Cal.App.4th 1802, 1810 [53 Cal.Rptr.2d 521].) The question of whether chapter 478 is a state-mandated program or higher level of service under article XIII B, section 6 of the California Constitution is a question of law we review de novo. (45 Cal.App.4th at p. 1810.)

With certain exceptions not relevant here, "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service" (Cal. Const. art. XIII B, § 6, (hereafter referred to as section 6).)

In *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46 [233 Cal.Rptr. 38, 729 P.2d 202], the Supreme Court considered whether laws increasing the amount employers, including local governments, had to pay in certain workers' compensation benefits were a reimbursable "higher level of service" under section 6. The court looked to the intent of the voters in adopting the constitutional provision by initiative. (43 Cal.3d at p. 56.) Noting that the phrase "higher level of service" is meaningless alone, the court found it must be read in conjunction with the phrase "new program." The court concluded, "that the drafters and the electorate had in mind the commonly understood meanings of the term-programs that carry out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on

local governments and do not apply generally to all residents and entities in the state." (*Ibid.*)

(2a) Richmond contends chapter 478 meets both tests to qualify as a program under section 6. Richmond contends increased death benefits are provided to generate a higher quality of local safety officers and thus provide the public with a higher level of service. Richmond argues that providing increased death benefits to local safety workers is analogous to providing protective clothing and equipment for fire fighters. In *Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521 [234 Cal.Rptr. 795], executive orders requiring updated protective clothing and equipment for firefighters were found to be reimbursable state mandates under section 6. The executive orders applied only to fire protection, a peculiarly governmental function. The court noted that police and fire *1196 protection are two of the most essential and basic functions of local government. (190 Cal.App.3d at p. 537.) Richmond urges that since chapter 478 applies only to local safety members, it is also a state mandate directed to a peculiarly local governmental function.

In *Carmel Valley Fire Protection Dist. v. State of California*, *supra*, 190 Cal.App.3d 521, the executive order required updated equipment for the fighting of fires. The use of this equipment would result in more effective fire protection and thus would provide a higher level of service to the public. Here chapter 478 addresses death benefits, not the equipment used by local safety members. Increasing the cost of providing services cannot be equated with requiring an increased level of service under a section 6 analysis. A higher cost to the local government for compensating its employees is not the same as a higher cost of providing services to the public. (*City of Anaheim v. State of California* (1987) 189 Cal.App.3d 1478, 1484 [235 Cal.Rptr. 101] [temporary increase in PERS benefit to retired employees which resulted in higher contribution rate by local government was not a program or service under section 6].) In *County of Los Angeles v. State of California*, *supra*, 43 Cal.3d 46, the increase in certain workers' compensation benefits resulted in an increase in the cost to local governments of providing services. Nonetheless, the Supreme Court found no "higher level of service" under section 6. Similarly, a new requirement for mandatory unemployment insurance for local government employees, an increase in the cost of providing services, was not a "new program" or "higher level of service" in *City of Sacramento v. State of California*, *supra*, 50 Cal.3d 51, 66-70. Chapter 478 fails to meet the first test of a "program" under section 6.

Richmond urges chapter 478 meets the second test of a program under section 6 because it imposed a unique requirement on local governments that was not applicable to all residents and entities within the state. (*County of Los Angeles v. State of California*, *supra*, 43 Cal.3d 46, 56.) Richmond argues that only local governments have "local safety members" and chapter 478 required double death benefits, both PERS and workers' compensation, for this specific group of employees. By requiring double death benefits for local safety members, chapter 478 imposed a unique requirement on local government.

The Commission takes a different view of chapter 478. First, it argues that chapter 478 addresses an aspect of workers' compensation law, which, under *County of Los Angeles v. State of California*, *supra*, 43 Cal.3d 46, is a law of general application to which section 6 does not apply. The Commission argues chapter 478 imposes no unique requirement; it merely *1197 eliminates the previous exemption from providing workers' compensation death benefits to local safety members. As such, chapter 478 simply puts local government employers on the same footing as all other nonexempt employers, requiring that they provide the workers' compensation death benefit. That chapter 478 affects only local government does not compel the conclusion that it imposes a unique requirement on local government. The Commission contends Richmond's view of chapter 478 is too narrow; the law must be considered in its broader context.

While Richmond's argument has surface appeal, we conclude the Commission's view is the correct one. Section 6 was designed to prevent the state from forcing programs on local government. (3a) "[T]he intent underlying section 6 was to require reimbursement to local agencies for the costs involved in carrying out functions peculiar to government, not for expenses incurred by local agencies as an incidental impact of laws that apply generally to all state residents and entities. Laws of general application are not passed by the Legislature to 'force' programs on localities." (*County of Los Angeles v. State of California*, *supra*, 43 Cal.3d at pp. 56-57.) "The goals of article XIII B, of which section 6 is a part, were to protect residents from excessive taxation and government spending. [Citation.] Section 6 had the additional purpose of precluding a shift of financial responsibility for carrying out governmental functions from the state to local agencies which had had their taxing powers restricted by the enactment of article XIII A in the preceding year and were ill equipped to take responsibility for any new programs. Neither of these goals is frustrated by requiring local agencies to provide the same protections to their employees as do private

employers. Bearing the costs of salaries, unemployment insurance, and workers' compensation coverage-costs which all employers must bear-neither threatens excessive taxation or governmental spending, nor shifts from the state to a local agency the expense of providing governmental services. ("Id. at p. 61.)

Although a law is addressed only to local governments and imposes new costs on them, it may still not be a reimbursable state mandate. In *City of Sacramento v. State of California*, *supra*, 50 Cal.3d 51, the Legislature enacted a statute requiring local governments to participate in the state's unemployment insurance system on behalf of their employees. Local entities made a claim for reimbursement. First, the Supreme Court found that like an increase in workers' compensation benefits, a requirement to provide unemployment insurance did not compel new or increased "service to the public" at the local level. (*Id.* at pp. 66-67.) The court next addressed whether the new law imposed a unique requirement on local governments.

"Here, the issue is whether costs *unrelated* to the provision of public services are *nonetheless* reimbursable costs of government, because they are *1198 imposed on local governments 'unique[ly],' and not merely as an incident of compliance with general laws. State and local governments, and nonprofit corporations, had previously enjoyed a special *exemption* from requirements imposed on most other employers in the state and nation. Chapter 2/78 merely eliminated the exemption and made these previously exempted entities subject to the general rule. By doing so, it may have imposed a requirement 'new' to local agencies, but that requirement was not 'unique.' [¶] The distinction proposed by plaintiffs would have an anomalous result. The state could avoid subvention under *County of Los Angeles* standards by imposing new obligations on the public and private sectors *at the same time*. However, if it chose to proceed by stages, extending such obligations first to private entities, and only later to local governments, it would have to pay. This was not the intent of our recent decision." (*City of Sacramento v. State of California*, *supra*, 50 Cal.3d 51, 68-69, italics in original.)

Richmond argues that Labor Code section 4707, prior to chapter 478, was not an exemption from workers' compensation, relying on *Jones v. Kaiser Industries Corp.* (1987) 43 Cal.3d 552 [237 Cal.Rptr. 568, 737 P.2d 771]. In *Jones*, the plaintiff, a city police officer, was killed in a traffic accident while on duty. His survivors brought suit against the city, contending it has created and maintained a dangerous condition at the intersection where the accident

occurred. Plaintiffs argued their suit was not barred by the exclusivity provisions of workers' compensation because they did not receive a workers' compensation death benefit under Labor Code section 4707. The court rejected this argument. First, plaintiffs did receive a benefit under workers' compensation in the form of burial expenses. Further, Labor Code section 4707 was designed not to exclude plaintiffs from receiving workers' compensation benefits, but to assure they received the maximum benefit under either PERS or workers' compensation. (43 Cal.3d at p. 558.)

Under *Jones v. Kaiser Industries Corp.*, *supra*, 43 Cal.3d 552, one receiving a special death benefit under PERS rather than the workers' compensation death benefit is not considered exempt from workers' compensation for purposes of its exclusivity provisions, precluding a suit against the employer for negligence. This conclusion does not affect the analysis that chapter 478, by removing the offset provisions for employers of local safety members, merely makes local governments "indistinguishable in this respect from private employers." (*County of Los Angeles v. State of California*, *supra*, 43 Cal.3d at p. 58.)

(2b) Richmond's error is in viewing chapter 478 from the perspective of what the final result is, rather than from the perspective of what the law mandates. (3b) "We recognize that, as is made indisputably clear from *1199 the language of the constitutional provision, local entities are not entitled to reimbursement for all increased costs mandated by state law, but only those costs resulting from a new program or an increased level of service imposed upon them by the state." (*Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 835 [244 Cal.Rptr. 677, 750 P.2d 318].) (2c) While the result of chapter 478 is that local safety members of PERS now are eligible for two death benefits and local governments will have to fund the workers' compensation benefit, chapter 478 does not mandate double death benefits. Instead, it merely eliminates the offset provisions of Labor Code section 4707. In this regard, the law makes the workers' compensation death benefit requirements as applicable to local governments as they are to private employers. It imposes no "unique requirement" on local governments.

Further, the view that the Legislature was proceeding by stages in enacting chapter 478 finds support in the history of the nearly identical predecessor to chapter 478, Assembly Bill No. 1097 (1987-1988 Reg. Sess.). Assembly Bill No. 1097 was passed in 1988, but was vetoed by the Governor. While the final version of Assembly Bill No. 1097 was virtually identical to chapter 478 in adding subdivision (b) to Labor

Code section 4707 (Assem. Bill No. 1097 (1987-1988 Reg. Sess.) as amended Mar. 22, 1988), the bill was very different when it began. The initial version of Assembly Bill No. 1097 repealed Labor Code section 4707 in its entirety. (Assem. Bill No. 1097 (1987-1988 Reg. Sess.) introduced Mar. 2, 1987.) The next version made Labor Code section 4707 applicable only to state members of PERS. (Assem. Bill No. 1097 (1987-1988 Reg. Sess.) as amended June 15, 1987.) The final version left Labor Code section 4707 applicable to all but local safety members of PERS.

II

(4) As part of its test claim, Richmond included portions of the legislative history of chapter 478 to show the Legislature intended to create a state mandate. This history includes numerous bill analyses by legislative committees that state the bill creates a state-mandated local program.

Government Code section 17575 requires the Legislative Counsel to determine if a bill mandates a new program or higher level of service under section 6. If the Legislative Counsel determines the bill will mandate a new program or higher level of service under section 6, the bill must contain a section specifying that reimbursement shall be made from the state mandate fund, that there is no mandate, or that the mandate is being disclaimed. (Gov. Code, § 17579.) The Legislative Counsel found that chapter 478 imposed *1200 a state-mandated local program. The enacted statute provided: "Notwithstanding Section 17610 of the Government Code, if the Commission on State Mandates determines that this act contains costs mandated by the state, reimbursement to local agencies and school districts for those costs shall be made pursuant to Part 7 (commencing with Section 17500) of Division 4 of Title 2 of the Government Code. If the statewide cost of the claim for reimbursement does not exceed one million dollars (\$1,000,000), reimbursement shall be made from the State Mandates Claims Fund." (Stats. 1989, ch. 478, § 2, p. 1689.)

One analysis concluded this language was technically deficient because it does not contain a specific acknowledgment that the bill is a state mandate. Reimbursement could not be made until the Commission held a hearing on a test claim. The analysis concluded it "should not be a serious problem because the information provided in this analysis could also be provided to the Commission on State Mandates if any local agency submits a claim for reimbursement to that Commission."

Another analysis suggested including an appropriation to avoid the necessity of the Commission having to determine that the bill was a mandate.

Richmond argues this legislative history shows the Legislature intended chapter 478 to be a state mandate and that it should be considered in making that determination. Amici curiae submitted a brief urging that case law holding that legislative history is irrelevant to the issue of whether there is a state-mandated new program or higher level of service under section 6 is wrongly decided.² Amici curiae argue that the intent of the Legislature should control. They further note that the legislative history of chapter 478 shows that the initial opposition of the League of California Cities was dropped after the bill was amended to ensure reimbursement, and that the Governor signed the bill after he had vetoed a similar one that was not considered a state mandate. Amici curiae argue that to ignore the widespread understanding that the bill created a state mandate would undermine the legislative process.

In *County of Los Angeles v. Commission on State Mandates*, *supra*, 32 Cal.App.4th 805, plaintiff sought reimbursement for costs incurred under Penal Code section 987.9 for providing certain services to indigent criminal defendants. Plaintiff argued the Legislature's initial appropriation of funds to cover the costs incurred under Penal Code section 987.9 was a final and *1201 unchallengeable determination that section 987.9 constituted a state mandate. The court rejected this argument. "The findings of the Legislature as to whether section 987.9 constitutes a state mandate are irrelevant." (32 Cal.App.4th at p. 818.)

The court, relying on *Kinlaw v. State of California* (1991) 54 Cal.3d 326 [285 Cal.Rptr. 66, 814 P.2d 1308], found the Legislature had created a comprehensive and exclusive procedure for implementing and enforcing section 6. (*County of Los Angeles v. Commission on State Mandates*, *supra*, 32 Cal.App.4th at pp. 818-819.) This procedure is set forth in Government Code section 17500 et seq. "[T]he statutory scheme contemplates that the Commission, as a quasi-judicial body, has the sole and exclusive authority to adjudicate whether a state mandate exists. Thus, any legislative findings are irrelevant to the issue of whether a state mandate exists, and the Commission properly determined that no state mandate existed." (32 Cal.App.4th at p. 819.)

In *City of San Jose v. State of California*, *supra*, 45 Cal.App.4th 1802, 1817-1818, the court relied upon *County of Los Angeles v. Commission on State Mandates*, *supra*,

32 Cal.App.4th 805, in rejecting the argument that the determination by Legislative Counsel that a bill imposed a state mandate was entitled to deference.

Amici curiae contend these cases are wrong because they ignore the cardinal rules of statutory construction that courts must construe statutes to conform to the purpose and intent of lawmakers and that the intent of the Legislature should be ascertained to effectuate the purpose of the law.

Amici curiae are correct that “the objective of statutory interpretation is to ascertain and effectuate legislative intent.” [Citation.]” (*Trope v. Katz* (1995) 11 Cal.4th 274, 280 [45 Cal.Rptr.2d 241, 902 P.2d 259].) Where such intent is not clear from the language of the statute, we may resort to extrinsic aids, including legislative history. (*People v. Coronado* (1995) 12 Cal.4th 145, 151 [48 Cal.Rptr.2d 77, 906 P.2d 1232].) Here, however, the issue is not the interpretation of Labor Code section 4707. The parties agree it requires that the survivors of local safety members killed due to an industrial injury receive both the special death benefit under PERS and the workers' compensation death benefit. Rather, the issue is whether section 6 requires reimbursement for the costs incurred by local governments

under chapter 478. The Legislature has entrusted that determination to the Commission, subject to judicial review. (Gov. Code, §§ 17500, 17559.) It has provided that the initial determination by Legislative Counsel is not binding on the Commission. (*Id.*, § 17575.) Indeed, the language of chapter 478 recognizes that the determination of whether the bill is a state mandate lies with ~~the~~ ^{*1202} the Commission. It reads, “if the Commission on State Mandates determines that this act contains costs mandated by the state, ...” (Stats. 1989, ch. 478, § 2, p. 1689, italics added.) While the legislative history of chapter 478 may evince the understanding or belief of the Legislature that chapter 478 created a state mandate, such understanding or belief is irrelevant to the issue of whether a state mandate exists. (*County of Los Angeles v. Commission on State Mandates, supra*, 32 Cal.App.4th 805, 819.)

Disposition

The judgment is affirmed.

Puglia, P. J., and Nicholson, J., concurred.

Appellant's petition for review by the Supreme Court was denied August 19, 1998. *1203

KATHLEEN CONNELL, as

Controller, etc., et al., Petitioners,

v.

THE SUPERIOR COURT OF SACRAMENTO
COUNTY, Respondent; SANTA MARGARITA
WATER DISTRICT et al., Real Parties in Interest.

No. C024295.

Court of Appeal, Third District, California.

Nov. 20, 1997.

SUMMARY

Several Water districts brought mandamus proceedings against the State Controller to enforce a State Board of Control decision that a statewide regulatory amendment, which increases the level of purity required when reclaimed wastewater is used for certain types of irrigation, constitutes a state-mandated program for which water districts are entitled to reimbursement from the state. The trial court entered a judgment that the state mandate was a program for which reimbursement was due, and it directed the Controller to determine the amounts of reimbursement. (Superior Court of Sacramento County, Nos. CV347181, CV357155, CV357156 and CV357950, James Timothy Ford, Judge.)

The Court of Appeal ordered issuance of a writ of mandate directing the trial court to vacate its judgment and enter a new judgment denying the petitions for a writ of mandate. The court held that because the judgment plainly left matters undecided, the judgment was interlocutory and therefore was not appealable; however, the court treated the appeal as a writ petition. On the merits, the court held that the public interest exception to the doctrine of administrative collateral estoppel precluded application of the doctrine to the legal issues raised by defendant. The issues presented were not limited to the validity of any finally adjudicated individual claim, but encompassed the question of subvention obligations in general under the regulatory amendment of wastewater purification standards. The court further held that even if the amendment constitutes a new program for state-mandated costs purposes, the costs are not reimbursable, since the water districts have the authority to levy fees to pay for the program (Wat. Code, § 35470). Rev. & Tax.

Code, former § 2253.2 (now Gov. Code, § 17556), provides that the board shall not find a reimbursable cost if the local agency has the "authority," i.e., the right or power, to levy service charges, fees, or assessments sufficient to pay for the mandated program. The plain language of the statute precludes a construction of "authority" to mean a practical ability in light of surrounding economic circumstances. The court also held that the public interest exception to the doctrine of administrative collateral estoppel permitted the Controller to raise that issue in the trial court. (Opinion by Sims, J., with Puglia, P. J., and Nicholson, J., concurring.)

HEADNOTES

Classified to California Digest of Official Reports

(1a, 1b) Appellate Review § 17--Decisions Appealable--
Final Judgment-- Necessity For Further Orders.

A judgment entered in litigation to determine whether a statewide regulatory amendment, which increases the level of purity required when reclaimed wastewater is used for certain types of irrigation, constitutes a state-mandated program for which water districts are entitled to reimbursement from the state, was not a final judgment and thus was not appealable. The challenging parties' petition sought an order directing the State Controller to issue a warrant and the State Treasurer to pay a warrant, but the judgment merely ordered the Controller to determine amounts without disposing of those matters. The record reflected the trial court's recognition that it could not order issuance or payment of warrants unless it determined appropriated funds for such expenditures were reasonably available in the state budget, but the necessary evidentiary hearing on that issue was not held. Because the judgment plainly left matters undecided, the judgment was interlocutory and therefore not appealable.

(2) Appellate Review § 10--Jurisdiction--Appealable
Judgment.

An appealable judgment or order is a jurisdictional prerequisite to an appeal.

[See 9 Witkin, Cal. Procedure (4th ed. 1997) Appeal, §§ 13-14.]

(3) Appellate Review § 17--Decisions Appealable--
Interlocutory Judgment.

An interlocutory judgment is not appealable; generally, a judgment is interlocutory if anything further in the nature of

judicial action on the part of the trial court is essential to a final determination of the rights of the parties.

(4) Mandamus and Prohibition § 44--Mandamus--To Courts--Appeal--Scope of Review.

In reviewing a trial court's ruling on a petition for a writ of mandate, the appellate court is ordinarily confined to an inquiry as to whether the findings and judgment of the trial court are supported by substantial evidence. However, where the facts are undisputed and the issues present questions of law, the appellate court is not bound by the trial court's decision but may make its own determination.

(5) Judgments § 81--Res Judicata--Administrative Collateral Estoppel-- Public Interest Exception--Board of Control Decision.

In litigation by several water districts against the State Controller to enforce a State Board of Control decision that a statewide regulatory amendment, which increases the level of purity required when reclaimed wastewater is used for certain types of irrigation, constitutes a state-mandated program for which water districts are entitled to reimbursement from the state, the public interest exception to the doctrine of administrative collateral estoppel precluded application of the doctrine to the legal issues raised by defendant. The issues presented were not limited to the validity of any finally adjudicated individual claim, but encompassed the question of subvention obligations in general under the regulatory amendment of wastewater purification standards. If the board's decision was wrong but unimpeachable, taxpayers statewide would suffer unjustly the consequences of a continuing obligation to fund the costs of local water districts.

[See 7 Witkin, Cal. Procedure (4th ed. 1997). Judgment, § 339.]

(6a, 6b) State of California § 11--Fiscal Matters--Reimbursement for State-mandated Costs--Standards for Reclaimed Wastewater--Authority of Water Districts to Levy Fees.

Even if a statewide regulatory amendment, which increases the level of purity required when reclaimed wastewater is used for certain types of irrigation, constitutes a new program for state-mandated costs purposes, the costs are not reimbursable, since the water districts have the authority to levy fees to pay for the program (Wat. Code, § 35470).

Rev. & Tax. Code, former § 2253.2 (now Gov. Code, § 17556), provides that the Board of Control shall not find a reimbursable cost if the local agency has the "authority," i.e., the right or power, to levy service charges, fees, or assessments sufficient to pay for the mandated program. The plain language of the statute precludes a construction of "authority" to mean a practical ability in light of surrounding economic circumstances.

(7) Statutes § 29--Construction--Language--Legislative Intent.

In construing statutes, a court's primary task is to determine the lawmakers' intent. To determine intent, the court looks first to the words themselves. If the language is clear and unambiguous there is no need for construction, nor is it necessary to resort to indicia of the intent of the Legislature.

(8) Judgments § 81--Res Judicata--Administrative Collateral Estoppel-- Public Interest Exception--Legal Issue.

In litigation by several water districts against the State Controller to enforce a State Board of Control decision that a statewide regulatory amendment, which increases the level of purity required when reclaimed wastewater is used for certain types of irrigation, constitutes a state-mandated program for which water districts are entitled to reimbursement from the state, the public interest exception to the doctrine of administrative collateral estoppel permitted defendant to raise the purely legal issue that Rev. & Tax. Code, former § 2253.2 (now Gov. Code, § 17556), precluded reimbursement. The statute provides that the Board of Control shall not find a reimbursable cost if the local agency has the "authority," i.e., the right or power, to levy service charges, fees, or assessments sufficient to pay for the mandated program, and plaintiffs have such authority. The board's finding to the contrary was thus not binding.

COUNSEL

Daniel E. Lungren, Attorney General, Floyd D. Shimomura, Assistant Attorney General, Linda A. Cabatic and Susan R. Oie, Deputy Attorneys General, for Petitioners.

No appearance for Respondent.

James A. Curtis for Real Parties in Interest.

SIMS, J.

This case involves a dispute as to whether a statewide regulatory amendment, increasing the level of purity required when reclaimed wastewater is used for certain types of

irrigation, constitutes a state-mandated program for which water districts are entitled to reimbursement from the state. (Cal. Const., art. XIII B, § 6 (hereafter, section 6);¹ Gov. Code, § 17500 et seq.; former Rev. & Tax. Code, § 2201 et seq.) The State Controller and State Treasurer appeal from a trial court judgment granting *386 petitions for writ of mandate brought by Santa Margarita Water District (SMWD), Marin Municipal Water District, Irvine Ranch Water District and Santa Clara Valley Water District (the Districts), seeking to enforce a State Board of Control (the Board) decision which found the regulatory amendment constituted a reimbursable state mandate.² Appellants contend the trial court erred because (1) the amendment did not constitute a new program or higher level of service in an existing program; (2) the Districts' claim was abolished when the statutory basis for their claim-former Revenue and Taxation Code section 2207-was repealed before their rights were reduced to final judgment, and (3) the Districts' authority to levy fees to pay for the increased costs defeats their claim of a reimbursable mandate. Appellants also challenge the trial court's determination that they were collaterally estopped from challenging the Board's decision (finding a reimbursable state mandate) by their failure timely to seek judicial review of the administrative decision. We shall conclude the Districts' authority to levy fees defeats their claim of a reimbursable mandate, and appellants are not collaterally estopped from raising this matter. We therefore need not address the other contentions. Treating this appeal from a nonappealable judgment as an extraordinary writ petition, we shall direct the trial court to vacate its judgment and enter a new judgment denying the Districts' petitions.

Factual and Procedural Background

In 1975, the State Department of Health Services (DHS) adopted regulations (Cal. Code Regs., tit. 22, §§ 60301-60357) implementing Water Code section 13521, which provides: "The State Department of Health Services shall establish uniform statewide recycling criteria for each varying type of use of recycled water where the use involves the protection of public health." Section 60313³ of title 22 of the California Code of Regulations prescribed the level of purity required for reclaimed water to be used for landscape irrigation. *387

In May 1976, SMWD adopted a plan to develop a wastewater reclamation system. In August 1976, SMWD filed an application with the responsible regional water quality control board (Water Control Board) for a permit to discharge wastewater from the proposed reclamation system. SMWD

also planned to provide reclaimed water for irrigation, potentially to 2,173 acres of land.

In February 1977, the Water Control Board issued SMWD a permit for operation of a reclamation system-the Oso Creek facility. The permit required SMWD to comply with all applicable wastewater reclamation regulations then in effect.

In late 1977, SMWD learned DHS might be considering modifications to the California Code of Regulations, title 22 regulations.

In August 1978, SMWD completed construction of the Oso Creek facility, at a cost of \$17 million.

In September 1978, DHS amended the regulations. The amendment to California Code of Regulations, title 22, section 60313⁴ increased the level of purity required before reclaimed wastewater could be used for the irrigation of parks, playgrounds and school yards. It is this amendment which allegedly constituted a state-mandated cost. SMWD modified its facility to comply with the amended regulations, completing the modifications in 1983. *388

On October 1, 1982, SMWD filed a "test claim"⁵ with the Board, alleging the regulatory amendment relating to the use of reclaimed wastewater constituted a new program or higher level of service. The test claim was made pursuant to former Revenue and Taxation Code section 2231,⁶ which required reimbursement to local agencies for costs mandated by the state (see now Gov. Code, § 17561⁷), and former Revenue and Taxation Code section 2207, subdivisions (a) and (b)⁸ defining "costs mandated by the state." (See now Gov. Code, § 17514.⁹) The test claim also cited section 6 (fn. 1, ante). *389

On July 28, 1983, the Board determined the amended regulations imposed state mandated costs. In so doing, the Board rejected the position of state agencies seeking denial of the claim on the ground that local agencies are not mandated to use reclaimed water and because, if local agencies do choose to use it, they can recover the cost in charges made to purchasers of the water.

On January 19, 1984, the Board adopted "Parameters and Guidelines" establishing criteria for payment of claims to water districts pursuant to this mandate. (Former Rev. & Tax. Code, § 2253.2; Stats. 1982, ch. 734, § 10, pp. 2916-2917; Gov. Code, § 17557.)

On May 31, 1984, the Board amended its Parameters and Guidelines to provide for reimbursement of SMWD's cost of preparing and presenting the test claim.

In June 1984, the Board, pursuant to former Revenue and Taxation Code section 2255,¹⁰ submitted to the Legislature a statewide cost estimate of \$14 million for this mandate. The Legislature did not appropriate any funds for the mandate in 1984.

In 1985, the Legislature included an appropriation of almost \$14 million for this state-mandated cost in the budget, but the Governor vetoed the appropriation.

In 1986, a bill including \$945,000 for the subject mandate was introduced, but the bill was not enacted.

On January 27, 1987, SMWD filed in the trial court a petition for writ of mandate pursuant to Code of Civil Procedure section 1085. The petition sought an order directing (1) the State Controller to issue a warrant "to pay the State's obligation to SMWD for its 'costs mandated by the state'" and (2) the State Treasurer to pay the Controller's warrant. *390 At a hearing, the trial court upheld the Board's decision that the amended regulations required a higher level of service and held the doctrines of waiver and collateral estoppel applied to that decision, such that the state, by failing to challenge the Board's decision within the three-year statute of limitations, was barred from challenging it now. However, the trial court did allow the state to argue that the amended regulations did not come within the definition of "program," as that word had recently been defined in *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56 [233 Cal.Rptr. 38, 729 P.2d 202].

The trial court recognized that, since there was no appropriation for this mandate in the state budget, the court could not grant the relief sought by SMWD (an order directing the Controller to issue a warrant and the Treasurer to pay it) unless the court found the existence of funds reasonably available in the state budget which could be tapped for this purpose. The trial court stated it was not prepared to find the existence of funds reasonably available without a full evidentiary hearing. Rather than use the Board's statewide estimate, the court believed it needed to know the amount to which each water district would be entitled before it could determine whether there were funds reasonably available in the budget. The trial court ruled the exact amount of money to be reimbursed to the Districts had never been determined and referred the matter to a referee to make that determination.

In February 1989, a court-appointed referee began evidentiary hearings to determine the amount of reimbursement for each water district.

In 1989, the Legislature repealed former Revenue and Taxation Code section 2207 (fn. 8, *ante*), defining "costs mandated by the state." (Stats. 1989, ch. 589, § 7, p. 1978.)

On July 29, 1994, appellants filed in the trial court a motion for judgment on the pleadings/motion to dismiss, arguing repeal of former Revenue and Taxation Code section 2207 destroyed any right to reimbursement and divested the court of jurisdiction to proceed. The motion also revisited the issue presented to and rejected by the Board, that the water districts' authority to levy fees defeated a finding that the costs were reimbursable.

In February 1995, the trial court issued its ruling denying appellants' motion for judgment on the pleadings and for dismissal. The court in its minute order determined repeal of former Revenue and Taxation Code section 2207 in 1989 had not destroyed the Districts' right to reimbursement pursuant to the Board's decision, because the Board's decision was reduced to "final judgment" before the statutory repeal. The court said the Board's *391 decision on July 28, 1983, became final in July 1986, when the applicable three-year statute of limitations for seeking judicial review lapsed. The Board's decision therefore conclusively established the Districts' right to reimbursement, and appellants were collaterally estopped from challenging the Board's decision. The court further said no discernible injustice or public interest precluded this application of collateral estoppel; rather, justice would be furthered by allowing the Districts to enforce their right to reimbursement as established by the Board.

The trial court further said the statutory authority of the Districts to levy service charges and assessments (Former Rev. & Tax. Code, § 2253.2, subd. (b)(4);¹¹ Stats. 1982, ch. 734, § 10, p. 2916; Gov. Code, § 17556¹²) did not bar reimbursement for state-mandated costs. "When the Board determined that the 1978 amendment of the regulations establishing reclamation criteria imposed reimbursable state-mandated costs, it rejected the argument of the State Departments of Health Services and Finance that the costs were not reimbursable pursuant to former Revenue and Taxation Code section 2253(b)(4) and implicitly determined, in accordance with the presentation of [Santa Margarita Water District] that [the Districts] did not have sufficient authority to

levy service charges and assessments to pay for the increased level of service mandated by the 1978 regulatory amendment. This implicit determination, resolving a mixture of legal and factual issues, became final and binding on respondents under the doctrine of collateral estoppel when they failed to seek judicial review of the Board's decision within the three-year limitations period."

At a further hearing concerning the amount owed to each water district, the trial court stated it had erred in referring the matter to a referee and should have rendered a judgment directing the Controller to determine the amounts owed.

On June 3, 1996, the trial court entered a judgment stating (1) the Board's decision was final at the time the petitions were filed in the trial court; (2) *392 the state mandate is a program for which reimbursement is due under *County of Los Angeles v. State of California, supra*, 43 Cal.3d 46; (3) the court having concluded it was inappropriate for the court to determine amounts of reimbursement, the Controller was directed to make that determination. The court directed issuance of a writ commanding the Controller to determine the amounts due to the Districts.

Appellants appeal from the judgment.

The Districts filed a cross-appeal, but we dismissed the cross-appeal pursuant to stipulation of the parties.

Discussion

I. Appealability

(1a) Because the petition sought an order directing the Controller to issue a warrant and the Treasurer to pay a warrant but the judgment merely ordered the Controller to determine amounts without disposing of those matters, and because the record reflected the trial court's recognition that it could not order issuance or payment of warrants unless it determined appropriated funds for such expenditures were reasonably available in the state budget¹³ (*Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521, 538-541 [234 Cal.Rptr. 795])-a determination requiring an evidentiary hearing which was not held-we requested supplemental briefing on the question whether the judgment was a final appealable judgment, as opposed to an interlocutory judgment.

(2) An appealable judgment or order is a jurisdictional prerequisite to an appeal. (Code Civ. Proc., § 904.1; 9 Witkin, Cal. Procedure (4th ed. 1997) Appeal, §§ 13-14, pp. 72-73.)

(3) An interlocutory judgment is not appealable; generally, a judgment is interlocutory if anything further in the nature of judicial action on the part of the trial court is essential to a final determination of the rights of the parties. (*Lyon v. Goss* (1942) 19 Cal.2d 659, 669-670 [123 P.2d 11].)

(1b) In their supplemental briefs, both sides maintain the judgment is a final appealable judgment but for different reasons. Both sides are wrong. *393

Appellants assert the judgment is final because nothing further remains to be done by the trial court. According to appellants, the Controller, after determining what amounts are due, is supposed to submit that amount to the Legislature to appropriate the funds (though the judgment contains no such direction). Appellants assert that, if the Legislature does not appropriate the funds, the Districts' remedy would be to file a new action in the superior court to enforce the court's prior order, and to compel payment out of funds already appropriated and reasonably available for the expenditures. Appellants assert it is thus premature to consider whether appropriated funds are reasonably available to pay any reimbursement due.

The Districts' supplemental brief, while agreeing the judgment is a final appealable judgment, disputes appellants' view of what happens after the Controller determines the amounts. The Districts maintain the trial court intended for appellants to pay the amounts determined by the Controller, despite the judgment's failure so to state. The Districts claim the unresolved factual question of the existence of available appropriated funds in the budget is merely "an administrative detail" which need not be addressed by the court except in a proceeding to enforce the judgment in the event appellants refuse to pay.

Both sides are wrong. Nothing in the judgment requires the Controller to submit an appropriations bill to the Legislature, and appellants cite no authority that would require such a procedure-which would duplicate steps previously undertaken in this case without success. Nor does anything in the judgment call for issuance or payment of warrants. *Carmel Valley Fire Protection Dist. v. State of California, supra*, 190 Cal.App.3d 521-a case discussed in the trial court and on appeal-recognized that a court violates the separation of powers doctrine if it purports to compel the Legislature to appropriate funds, but no such violation occurs if the court orders payment from an existing appropriation. (*Id.* at pp. 538-539.) Thus, the Districts' view of this matter as

an administrative detail for a later postjudgment enforcement proceeding is unsupported.

We recognize this litigation arises from a "test claim," which merely determines whether a state-mandated cost exists. (See fn. 5, *ante*.) Perhaps no issue of payment should arise at all at the test claim stage, though neither side so argues.

In any event, the judgment plainly leaves matters undecided.

We conclude the judgment is interlocutory and therefore not appealable.

Nevertheless, on our own motion, we shall exercise our discretion to treat the appeal as a writ petition and shall grant review on that basis. (*Morehart *394 v. County of Santa Barbara* (1994) 7 Cal.4th 725, 743-744 [29 Cal.Rptr.2d 804, 872 P.2d 143] [treating appeal as writ petition is authorized means for obtaining review of interlocutory judgments].) We shall exercise our discretion to treat the appeal as a writ petition in the interest of justice and judicial economy, because the merits of the dispositive issues have been fully briefed, both sides urge review, and the judgment compels the Controller to engage in complex factfinding determinations which may be moot if the trial court erred on the merits of the mandate issues. Given the difficulties in discerning how the former statutory process of test claims was supposed to work in practice, we believe the interests of justice and judicial economy are best served by reviewing the judgment rather than dismissing the appeal.

We stress, however, that our review is limited to contentions raised in the briefs—which do not raise issues of the propriety of the remedy sought by the Districts. We express no view on whether the remedy sought by the Districts was an available or appropriate remedy.

II. Standard of Review

(4) In reviewing the trial court's ruling on a writ of mandate, the appellate court is ordinarily confined to an inquiry as to whether the findings and judgment of the trial court are supported by substantial evidence. (*Evans v. Unemployment Ins. Appeals Bd.* (1985) 39 Cal.3d 398, 407 [216 Cal.Rptr. 782, 703 P.2d 122].) However, where the facts are undisputed and the issues present questions of law, the appellate court is not bound by the trial court's decision but may make its own determination. (*Ibid.*)

III. Collateral Estoppel

We first address the trial court's determination that appellants were collaterally estopped from challenging the Board's determination of state-mandated cost (except for the ability to address the effect of a new Supreme Court case defining "program"). The trial court stated the Board's decision became final for collateral estoppel purposes in July 1986, when the statute of limitations for judicial review expired.

Appellants contend the trial court erred in applying collateral estoppel, because there was no "final judgment" for collateral estoppel purposes, since the amount of reimbursement had yet to be determined.

(5) We conclude it is not necessary to decide the parties' dispute as to whether the requirements of administrative collateral estoppel are met, because even assuming the elements are met, the doctrine of collateral estoppel should be disregarded pursuant to the public interest exception. *395

Thus, our Supreme Court declined to apply collateral estoppel in a state-mandated costs case in *City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 64-65 [266 Cal.Rptr. 139, 785 P.2d 522] (*Sacramento II*). There, a city and a county filed claims with the Board seeking subvention of costs imposed by a statute (Stats. 1978, ch. 2, p. 6 et seq., referred to in *Sacramento II* as "chapter 2/78") which extended mandatory coverage under the state unemployment insurance law to include state and local governments. The Board found there was no state-mandated program and denied the claims. On mandamus, the trial court overruled the Board and found the costs reimbursable. We affirmed the trial court in a published opinion. (*City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182 [203 Cal.Rptr. 258] (*Sacramento I*)). On remand, the Board determined the amounts due on the claims, but the Legislature refused to appropriate the necessary funds. The city filed a class action seeking among other things payment of the state-mandated costs. The trial court granted summary judgment for the state on the grounds the statute did not impose state-mandated costs. The Supreme Court upheld the trial court's decision.

The Supreme Court in *Sacramento II* rejected the local agencies' argument that the state was collaterally estopped from relitigating the issue whether a state-mandated cost existed, because *Sacramento I* "finally" decided the matter. (*Sacramento II, supra*, 50 Cal.3d at p. 64.) The Supreme Court said: "Generally, collateral estoppel bars the party to a prior action, or one in privity with him, from relitigating issues finally decided against him in the earlier action. [Citation.] ... But when the issue is a question of law rather

than of fact, the prior determination is not conclusive either if injustice would result or if the public interest requires that relitigation not be foreclosed....' [Citation.]

"Even if the formal prerequisites for collateral estoppel are present here, the public-interest exception governs. Whether chapter 2/78 costs are reimbursable under article XIII B and parallel statutes constitutes a pure question of law. The state was the losing party in *Sacramento I*, and also the only entity legally affected by that decision. Thus, strict application of collateral estoppel would foreclose any reexamination of the holding of that case. The state would remain bound, and no other person would have occasion to challenge the precedent.

"Yet the consequences of any error transcend those which would apply to mere private parties. If the result of *Sacramento I* is wrong but unimpeachable, taxpayers statewide will suffer unjustly the consequences of the state's continuing obligation to fund the chapter 2/78 costs of local agencies...." (*Sacramento II*, *supra*, 50 Cal.3d at p. 64, original italics.) *396

The Supreme Court also rejected the argument that res judicata applied. "Of course, res judicata and the rule of final judgments bar us from disturbing individual claims or causes of action, on behalf of specific agencies, which have been finally adjudicated and are no longer subject to review. [Citations.] However, the issues presented in the current action are not limited to the validity of any such finally adjudicated individual claims. Rather, they encompass the question of defendants' subvention obligations *in general* under chapter 2/78." (*Sacramento II*, *supra*, 50 Cal.3d at p. 65, original italics.)

If this court's opinion finding a reimbursable mandate in *Sacramento I* did not constitute a final adjudication precluding further consideration of the matter, a fortiori the Board's decision in the instant case does not constitute a final adjudication precluding further consideration. Thus, here, as in *Sacramento II*, the issues presented are not limited to the validity of any finally adjudicated individual claim, but encompass the question of subvention obligations in general under the regulatory amendment of wastewater purification standards. If the Board's decision is wrong but unimpeachable, taxpayers statewide would suffer unjustly the consequences of a continuing obligation to fund the costs of local water districts. We reject the Districts' argument that no public interest exists in this case because only a few local entities are involved.

The Districts suggest application of the public interest exception to collateral estoppel would nullify the legislative intent to avoid multiple proceedings by creating a comprehensive and exclusive procedure for handling state mandated costs issues in the administrative forum. (E.g., Gov. Code, § 17500.¹⁴) However, we are bound by Supreme Court authority applying the public interest exception in a state-mandated costs case. (*Auto Equity Sales, Inc. v. Superior Court* (1962) 57 Cal.2d 450 *397 [20 Cal.Rptr. 321, 369 P.2d 937].) Moreover, contrary to the Districts' implication, the administrative decision is not the final word; the statutory scheme authorizes judicial review of the administrative decision. (Gov. Code, § 17559; former Rev. & Tax. Code, § 2253.5; Stats. 1977, ch. 1135, § 12, p. 3650.) Additionally, the instant judicial proceeding was initiated by the Districts, not by appellants. Thus, in this case application of the public interest exception to collateral estoppel is not creating multiple proceedings.

In light of the Supreme Court's decision in *Sacramento II*, we disregard earlier authority of an intermediate appellate court which applied administrative collateral estoppel to a question of law in a state-mandated costs case without express discussion of the public interest exception. (*Carmel Valley Fire Protection Dist. v. State of California*, *supra*, 190 Cal.App.3d at p. 536.)

We conclude that, insofar as appellants' contentions present questions of law, the public interest exception to administrative collateral estoppel governs, and we shall therefore address the legal arguments raised in appellants' brief.

IV. Authority to Levy Fees

(6a) Appellants contend that, even if the regulatory amendment is a new program for state mandated costs purposes, the Districts' authority to levy fees defeats a determination that the costs are reimbursable. We agree.

At the time SMWD filed its test claim, former Revenue and Taxation Code section 2253.2 provided in part:

"(b) The Board of Control shall not find a reimbursable mandate, pursuant to either Section 2250 of this code or to Section 905.2 of the Government Code, in any claim submitted by a local agency or school district, pursuant to subdivision (a) of Section 2218, if, after a hearing, the board finds that:

.....

“(4) The local agency or school district has the authority to levy service charges, fees or assessments sufficient to pay for the mandated program or level of service.”¹⁵ (Stats. 1982, ch. 734, § 10, p. 2917; Stats. 1980, ch. 1256, § 15, pp. 4253-4254.) *398

The same provision is currently contained in Government Code section 17556.¹⁶

The facial constitutionality of this provision was upheld in *County of Fresno v. State of California* (1991) 53 Cal.3d 482 [280 Cal.Rptr. 92, 808 P.2d 235]. The *Fresno* court rejected an argument that the statute was facially unconstitutional as conflicting with section 6 (fn. 1, *ante*), which contains no exclusion of reimbursement where the local agency has authority to levy fees. Section 6 requires subvention only when the costs in question can be recovered solely from tax revenues. (53 Cal.3d at p. 487.) Government Code section 17556, subdivision (d), “effectively construes the term ‘costs’ in the constitutional provision as excluding expenses that are recoverable from sources other than taxes. Such a construction is altogether sound.” (*County of Fresno v. State of California*, *supra*, 53 Cal.3d at p. 487.)

Here, appellants contend that, at all pertinent times, the water districts have had *authority* to levy fees to cover the costs at issue in this case. They cite provisions such as Water Code section 35470, which provides: “Any district formed on or after July 30, 1917, may, in lieu in whole or in part of raising money for district purposes by assessment, make water available to the holders of title to land or the occupants thereon, and may fix and collect charges therefor. The charges may include standby charges to holders of title to land to which water may be made available, whether the water is actually used or not. The charges may vary in different months and in different localities of the district to correspond to the cost and value of the service, and the district may use so much of the proceeds of the charges as may be necessary to defray the ordinary operation or maintenance expenses of the district and for any other lawful district purpose.”

We agree this statute on its face authorizes the Districts to levy fees sufficient to pay the costs involved with the regulatory amendment. We thus shall conclude the Board erred in finding a right to reimbursement despite this authority to levy fees, and we shall conclude appellants are not collaterally estopped from pressing this point.

The Districts do not dispute they have authority to levy fees for the costs involved in this case. Instead they argue the real issue is whether they had *399 “sufficient” authority. They claim this issue was a mixed question of law and fact, and appellants should be collaterally estopped from raising it.¹⁷ We agree with appellants that the public interest exception to collateral estoppel should be applied here, because the issue presents a pure question of law. The Districts tried to make it a factual issue, but we shall explain why the facts presented by the District were immaterial.

Thus, in proceedings before the Board (where Water Code section 35470 was cited to the Board by state agencies), SMWD did not argue it lacked “authority” to levy fees for this purpose. Instead, SMWD argued and presented evidence that it would not be economically desirable to do so. SMWD submitted declarations stating that rates necessary to cover the increased costs would render the reclaimed water unmarketable and would encourage users to switch to potable water. SMWD maintained that imposition of higher fees on users would contravene the legislative policy expressed in Water Code section 13512, which directs the state to undertake all possible steps to encourage development of wastewater reclamation facilities.

The Board made no express finding concerning this issue. The record contains only the Board minutes, which reflect a motion was made “To find a mandate and continue the issue regarding the claimant’s ability to levy a service charge, to the parameters and guidelines process.” There was no second to the motion. A motion was then made to find the regulatory amendment contained a reimbursable mandate. The motion carried. The minutes then state: “Discussion: Chairperson Yost disagreed with the motion as she felt the claimant could recover their costs by levying a service charge” The Board’s Parameters and Guidelines stated in part: “If service charges or assessments were levied to defray the cost of the new criteria, the claim must be reduced by the amount received from such charges or assessment.”

In proceedings before the trial court, SMWD admitted the district had the authority to levy fees but argued existence of authority was not enough, and the real question was whether it was economically feasible to levy fees sufficient to pay the mandated costs. Thus, SMWD’s counsel stated at the hearing in the trial court: “The state keeps focusing on the question of whether the authority to issue, to assess fees and charges exists, and we have never contested that it didn’t.

"But the statute which says that the Board cannot find the existence of a mandate if there's authority to assess fees and charges, and then the critical *400 phrase, 'sufficient to pay for the mandated costs,' that's the condition with [sic] which they cannot satisfy.

"We proved that, the Board of Control hearing, through economic evidence. We proved it through testimony that the market was absolutely inelastic in terms of reclaimed water and potable water, that if you raise the price of reclaimed water over the potable water, that people would then buy the potable water, and that's all in the record.

"And so we showed that even though we have the authority, it was not sufficient to pay"

We note the record also reflects comments by SMWD's counsel to the trial court, that its customers were paying the increased costs as an "advance" against the state's obligation. The court pointed out users' payment of increased costs disproved the economic evidence SMWD had presented to the Board, that it could not raise its prices without losing its customers. The record also contains indications that the Districts funded the increased costs by diverting money from other sources. As will appear, we need not address this evidence, because it is not relevant to the question of authority to levy fees sufficient to fund the increased costs imposed by the regulatory amendment, which is a question of law in this case.

The trial court's minute order stated the districts' authority to levy fees did not bar reimbursement for state-mandated costs, because the Board "implicitly determined" the districts did not have "sufficient" authority to levy fees to pay for the increased service mandated by the 1978 regulatory amendment, and this "implicit determination, resolving a mixture of legal and factual issues, became final and binding on [appellants] under the doctrine of collateral estoppel when they failed to seek judicial review of the Board's decision within the three-year limitations period."

On appeal, appellants argue the sole inquiry is whether the local agency has "authority" to levy fees sufficient to pay the costs, and it does not matter whether the local agency, for economic reasons, finds it undesirable to exercise that authority. Appellants argue this presents a question of law, such that the public interest exception to collateral estoppel would apply (assuming the requirements of collateral estoppel are otherwise met).

We agree with appellants. (7) In construing statutes, our primary task is to determine the lawmakers' intent. (*Brown v. Kelly Broadcasting Co.* (1989) 48 Cal.3d 711, 724 [257 Cal.Rptr. 708, 771 P.2d 406].) To determine intent, we look first to the words themselves. (*Ibid.*) "If the language is clear *401 and unambiguous there is no need for construction, nor is it necessary to resort to indicia of the intent of the Legislature" (*Lungren v. Deukmejian* (1988) 45 Cal.3d 727, 735 [248 Cal.Rptr. 115, 755 P.2d 299].)

(6b) Here, the statute is clear and unambiguous. On its face the statute precludes reimbursement where the local agency has "authority" to levy fees sufficient to pay for the mandated program or level of service. The legal meaning of "authority" includes the "Right to exercise powers; ..." (Black's Law Dict. (6th ed. 1990) p. 133, col. 1.) The lay meaning of "authority" includes "the power or right to give commands [or] take action" (Webster's New World Dict. (3d college ed. 1988) p. 92.) Thus, when we commonly ask whether a police officer has the "authority" to arrest a suspect, we want to know whether the officer has the legal sanction to effect the arrest, not whether the arrest can be effected as a practical matter.

Thus, the plain language of the statute precludes reimbursement where the local agency has the authority, i.e., the right or the power, to levy fees sufficient to cover the costs of the state-mandated program.

The Districts in effect ask us to construe "authority," as used in the statute, as a practical ability in light of surrounding economic circumstances. However, this construction cannot be reconciled with the plain language of the statute and would create a vague standard not capable of reasonable adjudication. Had the Legislature wanted to adopt the position advanced by the Districts, it would have used "reasonable ability" in the statute rather than "authority."

The question is whether the Districts have authority, i.e., the right or power, to levy fees sufficient to cover the costs. The Districts clearly have authority to levy fees sufficient to cover the costs at issue in this case. Water Code section 35470 authorizes the levy of fees to "correspond to the cost and value of the service," and the fees may be used "to defray the ordinary operation or maintenance expenses of the district and for any other lawful district purpose." The Districts do not demonstrate that anything in Water Code section 35470 limits the authority of the Districts to levy fees "sufficient" to cover their costs.

Thus, the economic evidence presented by SMWD to the Board was irrelevant and injected improper factual questions into the inquiry.

On appeal, the Districts briefly argue economic undesirability of levying fees constitutes a lack of authority to levy fees sufficient to cover costs. They claim the evidence before the Board showed SMWD "could not" *402 increase its fees because it was already charging as much for reclaimed as it was for potable water. However, the cited portion of the record does not show SMWD "could not" increase its fees but only that an increase would render reclaimed water unmarketable and encourage users to switch to potable water. The Districts cite no authority supporting their construction of former Revenue and Taxation Code section 2253.2 (now Gov. Code, § 17556) that *authority* to levy fees sufficient to cover costs turns on economic feasibility. We have seen the plain language of the statute defeats the Districts' position.

(8) Since the issue in this case presented a question of law, we conclude the public interest exception to collateral estoppel applies. (*Sacramento II, supra*, 50 Cal.3d at p. 64.)

The Districts argue application of the public interest exception in this case raises policy concerns about the finality of administrative decisions on state-mandated costs, because if collateral estoppel does not apply in this case, it will never apply. However, we merely hold, in accordance with Supreme Court pronouncement, that the public interest exception to collateral estoppel applies under the circumstances of this case to this state-mandated cost issue which presents solely a question of law.

The Districts argue any fees levied by the districts "cannot exceed the cost to the local agency to provide such service," because such excessive fees would constitute a special tax. However, the districts fail to explain how this is an issue. No one is suggesting the districts levy fees that exceed their costs.

The Districts cite evidence presented to the referee in the aborted hearing to determine amounts owed to each District, that SMWD's director of finance testified SMWD has other sources of revenue from other services it provides (such as sewer service), maintains separate accounts, and borrowed funds internally from other accounts to cover costs incurred as a result of the subject mandate. The Districts assert this testimony reflects that SMWD "recognized the legal

limitations on its authority to impose fees for the services that it provides." However, nothing in this evidence demonstrates any legal limitations on the authority to levy the necessary fees.

The Districts say appellants appear to believe the Districts should require users of other services to subsidize the Districts' cost of reclaiming and selling wastewater, through excessive user fees. However, we do not read appellants' brief as presenting any such argument and in any event do not base our decision on that ground. *403

In a footnote, the Districts make the passing comment: "In light of the adoption of Proposition 218, which added Articles XIII C and XIII D to the California Constitution this past November [1996], the authority of local agencies to recover costs for many services will be impacted by the requirement to secure the approval by majority vote of the property owners voting, to levy or to increase property related fees. See Section 6, Article XIII D." The Districts do not contend that the services at issue in this appeal are among the "many services" impacted by Proposition 218. We therefore have no need to consider what effect, if any, Proposition 218 might have on the issues in this case.

We conclude the Districts were not entitled to reimbursement of state-mandated costs, because they had authority to levy fees sufficient to pay for the level of service mandated by the 1978 regulatory amendment. Appellants were not collaterally estopped from raising this issue in the trial court. We thus conclude the Districts' mandamus petitions should have been denied. We therefore need not address appellants' contentions that (1) the regulatory amendment did not constitute a new program or higher level of service, or (2) any right to reimbursement was abolished upon repeal of former Revenue and Taxation Code section 2207.

Disposition

Let a peremptory writ of mandate issue, directing the trial court to vacate its judgment and enter a new judgment denying the Districts' petitions for writ of mandate. Appellants shall recover their costs on appeal.

Puglia, P. J., and Nicholson, J., concurred.

The petition of real parties in interest for review by the Supreme Court was denied February 25, 1998. *404

Footnotes

- 1 Section 6 provides: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program

or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [¶] (a) Legislative mandates requested by the local agency affected; [¶] (b) Legislation defining a new crime or changing an existing definition of a crime; or [¶] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975.”

2 The trial court first held proceedings in the matter of the petition filed by the SMWD. The other three water districts had filed petitions, which were consolidated and awaiting hearing. The parties to the consolidated case filed a stipulation indicating they did not wish to relitigate the entitlement issues already decided by Judge Ford in the SMWD case, and they stipulated to assignment of their cases to Judge Ford pursuant to California Rules of Court, rule 213 (assignment to one judge for all or limited purposes), for determination of amounts as to each district. The judgment expressly covers the petitions of all four districts.

3 California Code of Regulations, title 22, section 60313, initially provided: “Landscape Irrigation. Reclaimed water used for the irrigation of golf courses, cemeteries, lawns, parks, playgrounds, freeway landscapes, and landscapes in other areas where the public has access shall be at all times an adequately disinfected, oxidized wastewater. The wastewater shall be considered adequately disinfected if at some location in the treatment process the median number of coliform organisms does not exceed 23 per 100 milliliters, as determined from the bacteriological results of the last 7 days for which analyses have been completed.” (Former § 60313, Cal. Code Regs., tit. 22, Register 75. No. 14 (Apr. 5, 1975).)

4 Section 60313 of California Code of Regulations, title 22, as amended, provides: “(a) Reclaimed water used for the irrigation of golf courses, cemeteries, freeway landscapes, and landscapes in other areas where the public has similar access or exposure shall be at all times an adequately disinfected, oxidized wastewater. The wastewater shall be considered adequately disinfected if the median number of coliform organisms in the effluent does not exceed 23 per 100 milliliters, as determined from the bacteriological results of the last 7 days for which analyses have been completed, and the number of coliform organisms does not exceed 240 per 100 milliliters in any two consecutive samples.

“(b) Reclaimed water used for the irrigation of parks, playgrounds, schoolyards, and other areas where the public has similar access or exposure shall be at all times an adequately disinfected, oxidized, coagulated, clarified, filtered wastewater or a wastewater treated by a sequence of unit processes that will assure an equivalent degree of treatment and reliability. The wastewater shall be considered adequately disinfected if the median number of coliform organisms in the effluent does not exceed 2.2 per 100 milliliters, as determined from the bacteriological results of the last 7 days for which analyses have been completed, and the number of coliform organisms does not exceed 23 per 100 milliliters in any sample.”

5 At the time in question, “test claim” meant “the first claim filed with the State Board of Control alleging that a particular statute or executive order imposes a mandated cost on such local agency or school district.” (Former Rev. & Tax. Code, § 2218; Stats. 1980, ch. 1256, § 7, p. 4249.) “Estimated claims” and “reimbursement claims” were used to make specific demand against an appropriation made for the purpose of paying such claims. (*Ibid.*)

A similar structure, distinguishing between “test claims” and various “reimbursement claims” or “entitlement claims” continues presently in Government Code sections 17521-17522.

At the time in question, the statutory procedure provided that if the Board found a mandate, it did not determine the amount to be reimbursed to the test claimant; rather, the Board then adopted a statewide cost estimate which was reported to the Legislature. (Stats. 1980, ch. 1256, p. 4246 et seq.; Stats. 1982, ch. 734, p. 2911 et seq.) It was the State Controller who determined specific amounts to be reimbursed, after the Legislature appropriated funds for that purpose. (*Ibid.*)

6 Former Revenue and Taxation Code section 2231 provided in part: “(a) The state shall reimburse each local agency for all ‘costs mandated by the state,’ as defined in Section 2207....” (Stats. 1982, ch. 1586, § 3, p. 6264.)

7 Government Code section 17561 provides in part: “(a) The state shall reimburse each local agency and school district for all ‘costs mandated by the state,’ as defined in Section 17514....”

8 Former Revenue and Taxation Code section 2207 provided in part: “‘Costs mandated by the state’ means any increased costs which a local agency is required to incur as a result of the following: [¶] (a) Any law enacted after January 1, 1973, which mandates a new program or an increased level of service of an existing program; [¶] (b) Any executive order issued after January 1, 1973, which mandates a new program” (Stats. 1980, ch. 1256, § 4, pp. 4247-4248.)

The test claim did *not* invoke other subdivisions of former Revenue and Taxation Code section 2207, concerning “(c) Any executive order issued after January 1, 1973, which (i) implements or interprets a state statute and (ii), by such implementation or interpretation, increases program levels above the levels required prior to January 1, 1973. [¶] ... [¶] ... (h) Any statute enacted after January 1, 1973, or executive order issued after January 1, 1973, which adds new requirements to an existing optional program or service and thereby increases the cost of such program or service if the local agencies have no reasonable alternatives other than to continue the optional program.” (Stats. 1980, ch. 1256, § 4, pp. 4247-4248.) Since these subdivisions were not invoked, we have no need to consider them.

9 Government Code section 17514 provides: “‘Costs mandated by the state’ means any increased costs which a local agency or school district is required to incur after July 1, 1980, as a result of any statute enacted on or after January 1, 1975, or any executive order

implementing any statute enacted on or after January 1, 1975, which mandates a new program or higher level of service of an existing program within the meaning of Section 6”

10 Former Revenue and Taxation Code section 2255 provided: “At least twice each calendar year the Board of Control shall report to the Legislature on the number of mandates it has found and the estimated statewide costs of such mandates. Such report shall identify the statewide costs estimated for each such mandate and the reasons for recommending reimbursement.... Immediately on receipt of such report a local governmental claims bill shall be introduced in the Legislature. The local government claims bill, at the time of its introduction, shall provide for an appropriation sufficient to pay the estimated costs of such mandates, pursuant to the provisions of this article.” (Stats. 1980, ch. 1256, § 20, p. 4255.)

The current provision is contained in Government Code section 17600, which provides: “At least twice each calendar year the commission shall report to the Legislature on the number of mandates it has found pursuant to Article I (commencing with Section 17550) and the estimated statewide costs of these mandates. This report shall identify the statewide costs estimated for each mandate and the reasons for recommending reimbursement.”

11 At the time SMWD filed its test claim, former Revenue and Taxation Code section 2253.2 provided in part: “(b) The Board of Control shall not find a reimbursable mandate ... in any claim submitted by a local agency ... if, after a hearing, the board finds that: [¶] ... [¶] (4) The local agency ... has the authority to levy service charges, fees or assessments sufficient to pay for the mandated program or level of service.” (Stats. 1982, ch. 734, § 10, p. 2916.)

12 Government Code section 17556 provides in part: “The [Commission on State Mandates (formerly the Board of Control)] shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds that: [¶] ... [¶] (d) The local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.”

13 The petition for writ of mandate alleged there was a continuously appropriated State Mandates Claims Fund upon which the Legislature had placed restrictions which on their face made the fund inapplicable to the mandate at issue in this case. The petition further alleged these restrictions were unconstitutional, such that upon a judicial declaration of their unconstitutionality, there would exist funds reasonably available to pay SMWD. The trial court made no ruling on these matters. In this appeal, we need not and do not decide the propriety of the remedy sought by the Districts.

14 Government Code section 17500 provides in part: “The Legislature finds and declares that the existing system for reimbursing local agencies ... for the costs of state-mandated local programs has not provided for the effective determination of the state's responsibilities under Section 6 The Legislature finds and declares that the failure of the existing process to adequately and consistently resolve the complex legal questions involved in the determination of state-mandated costs has led to an increasing reliance by local agencies and school districts on the judiciary and, therefore, in order to relieve unnecessary congestion of the judicial system, it is necessary to create a mechanism which is capable of rendering sound quasi-judicial decisions and providing an effective means of resolving disputes over the existence of state-mandated local programs. [¶] It is the intent of the Legislature in enacting this part to provide for the implementation of Section 6 ... and to consolidate the procedures for reimbursement of statutes specified in the Revenue and Taxation Code with those identified in the Constitution. Further, the Legislature intends that the Commission on State Mandates, as a quasi-judicial body, will act in a deliberative manner in accordance with the requirements of Section 6”

15 This case presents no issue concerning any distinction between “service charges, fees or assessment,” as used in the statute. The parties on appeal frame the issue in terms of the authority to levy “fees.” We adopt their usage for the sake of simplicity.

16 Government Code section 17556 provides in part: “The commission [formerly the Board] shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds that: [¶] ... [¶] (d) The local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service....”

17 The Districts assert appellants are relying on evidence that was not before the Board. However, they do not explain what they mean or give us any reference to appellants' brief. We therefore disregard the assertion.

L.A. No. 32106.

Supreme Court of California

Jan 2, 1987.

SUMMARY

The trial court denied a petition for writ of mandate to compel the State Board of Control to approve reimbursement claims of local government entities, for costs incurred in providing an increased level of service mandated by the state for workers' compensation benefits. The trial court found that Cal. Const., art. XIII B, § 6, requiring reimbursement when the state mandates a new program or a higher level of service, is subject to an implied exception for the rate of inflation. In another action, the trial court, on similar claims, granted partial relief and ordered the board to set aside its ruling denying the claims. The trial court, in this second action, found that reimbursement was not required if the increases in benefits were only cost of living increases not imposing a higher or increased level of service on an existing program. Thus, the second matter was remanded due to insubstantial evidence and legally inadequate findings. (Superior Court of Los Angeles County, Nos. C 424301 and C 464829, Leon Savitch and John L. Cole, Judges.) The Court of Appeal, Second Dist., Div. Five, Nos. B001713 and B003561 affirmed the first action; the second action was reversed and remanded to the State Board of Control for further and adequate findings.

The Supreme Court reversed the judgment of the Court of Appeal, holding that the petitions lacked merit and should have been denied by the trial court without the necessity of further proceedings before the board. The court held that when the voters adopted art. XIII B, § 6, their intent was not to require the state to provide subvention

whenever a newly enacted statute results incidentally in some cost to local agencies, but only to require subvention for the expense or increased cost of programs administered locally, and for expenses occasioned by laws that impose unique requirements on local governments and do not apply generally to all state residents or entities. Thus, the court held, reimbursement was not required by art. XIII B, § 6. Finally, the court held that no pro tanto repeal of Cal. Const., art. XIV, § 4 (workers' compensation), was intended or made necessary by the adoption of art. XIII B, § 6. (Opinion by Grodin, J., with Bird, C. J., Broussard, Reynoso, Lucas and Panelli, JJ., concurring. Separate concurring opinion by Mosk, J.)

HEADNOTES

Classified to California Digest of Official Reports

(1) State of California § 12--Fiscal Matters--Appropriations--Reimbursement to Local Governments--Costs to Be Reimbursed.

When the voters adopted Cal. Const., art. XIII B, § 6 (reimbursement to local agencies for new programs and services), their intent was not to require the state to provide subvention whenever a newly enacted statute resulted incidentally in some cost to local agencies. Rather, the drafters and the electorate had in mind subvention for the expense or increased cost of programs administered locally, and for expenses occasioned by laws that impose unique requirements on local governments and do not apply generally to all state residents or entities.

(2) Statutes § 18--Repeal--Effect--"Increased Level of Service."

The statutory definition of the phrase "increased level of service," within the meaning of Rev. & Tax. Code, § 2207, subd. (a) (programs resulting in increased costs which local agency is required to incur), did not continue after it was specifically repealed, even though the Legislature, in enacting the statute, explained that the definition was declaratory of existing law. It is ordinarily presumed that the Legislature, by deleting an express provision of a statute, intended a substantial change in the law.

[See **Am.Jur.2d**, Statutes, § 384.]

(3) Constitutional Law § 13--Construction of Constitutions--Language of Enactment.

In construing the meaning of an initiative constitutional provision, a reviewing court's inquiry is focused on what the

voters meant when they adopted the provision. To determine this intent, courts must look to the language of the provision itself.

(4) Constitutional Law § 13--Construction of Constitutions--Language of Enactment--"Program."

The word "program," as used in Cal. Const., art. XIII B, § 6 (reimbursement to local agencies for new programs and services), refers to programs that carry out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state.

(5) State of California § 12--Fiscal Matters--Appropriations--Reimbursement to Local Governments--Increases in Workers' Compensation Benefits.

The provisions of Cal. Const., art. XIII B, § 6 (reimbursement to local agencies for new programs and services), have no application to, and the state need not provide subvention for, the costs incurred by local agencies in providing to their employees the same increase in workers' compensation benefits that employees of private individuals or organizations receive. Although the state requires that employers provide workers' compensation for nonexempt categories of employees, increases in the cost of providing this employee benefit are not subject to reimbursement as state-mandated programs or higher levels of service within the meaning of art. XIII B, § 6. Accordingly, the State Board of Control properly denied reimbursement to local governmental entities for costs incurred in providing state-mandated increases in workers' compensation benefits. (Disapproving *City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182 [203 Cal.Rptr. 258], to the extent it reached a different conclusion with respect to expenses incurred by local entities as the result of a newly enacted law requiring that all public employees be covered by unemployment insurance.)

[See Cal.Jur.3d, State of California, § 78.]

(6) Constitutional Law § 14--Construction of Constitutions--Reconcilable and Irreconcilable Conflicts.

Controlling principles of construction require that in the absence of irreconcilable conflict among their various parts, constitutional provisions must be harmonized and construed to give effect to all parts.

(7) Constitutional Law § 14--Construction of Constitutions--Reconcilable and Irreconcilable Conflicts--Pro Tanto Repeal of Constitutional Provision.

The goals of Cal. Const., art. XIII B, § 6 (reimbursement to local agencies for new programs and services), were to protect residents from excessive taxation and government spending, and to preclude a shift of financial responsibility for governmental functions from the state to local agencies. Since these goals can be achieved in the absence of state subvention for the expense of increases in workers' compensation benefit levels for local agency employees, the adoption of art. XIII B, § 6, did not effect a pro tanto repeal of Cal. Const., art. XIV, § 4, which gives the Legislature plenary power over workers' compensation.

Green, Terrence S. Terauchi, Manatt, Phelps, Rothenberg & Tunney and Clare Bronowski as Amici Curiae on behalf of Defendants and Respondents.

GRODIN, J.

We are asked in this proceeding to determine whether legislation enacted in 1980 and 1982 increasing certain workers' compensation benefit payments is subject to the command of article XIII B of the California Constitution that local government costs mandated by the state must be funded by the state. The County of Los Angeles and the City of Sonoma sought review by this court of a decision of the Court of Appeal which held that state-mandated increases in workers' compensation benefits that do not exceed the rise in the cost of living are not costs which must be borne

by the state under article XIII B, an initiative constitutional provision, and legislative implementing statutes.

Although we agree that the State Board of Control properly denied plaintiffs' claims, our conclusion rests on grounds other than those relied upon by the Court of Appeal, and requires that its judgment be reversed. (1) We conclude that when the voters adopted article XIII B, section 6, their intent was not to require the state to provide subvention whenever a newly enacted statute resulted incidentally in some cost to local agencies. Rather, the drafters and the electorate had in mind subvention for the expense or *50 increased cost of programs administered locally and for expenses occasioned by laws that impose unique requirements on local governments and do not apply generally to all state residents or entities. In using the word "programs" they had in mind the commonly understood meaning of the term, programs which carry out the governmental function of providing services to the public. Reimbursement for the cost or increased cost of providing workers' compensation benefits to employees of local agencies is not, therefore, required by section 6.

We recognize also the potential conflict between article XIII B and the grant of plenary power over workers' compensation bestowed upon the Legislature by section 4 of article XIV, but in accord with established rules of construction our construction of article XIII B, section 6, harmonizes these constitutional provisions.

I

On November 6, 1979, the voters approved an initiative measure which added article XIII B to the California Constitution. That article imposed spending limits on the state and local governments and provided in section 6 (hereafter section 6): "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [¶] (a) Legislative mandates requested by the local agency affected; [¶] (b) Legislation defining a new crime or changing an existing definition of a crime; or [¶] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975." No definition of the phrase "higher level of service" was included in article XIII B, and the ballot materials did not explain its meaning.¹

The genesis of this action was the enactment in 1980 and 1982, after article XIII B had been adopted, of laws increasing the amounts which *51 employers, including local governments, must pay in workers' compensation benefits to injured employees and families of deceased employees.

The first of these statutes, Assembly, Bill No. 2750 (Stats. 1980, ch. 1042, p. 3328), amended several sections of the Labor Code related to workers' compensation. The amendments of Labor Code sections 4453, 4453.1 and 4460 increased the maximum weekly wage upon which temporary and permanent disability indemnity is computed from \$231 per week to \$262.50 per week. The amendment of section 4702 of the Labor Code increased certain death benefits from \$55,000 to \$75,000. No appropriation for increased state-mandated costs was made in this legislation.²

Test claims seeking reimbursement for the increased expenditure mandated by these changes were filed with the State Board of Control in 1981 by the County of San Bernardino and the City of Los Angeles. The board rejected the claims, after hearing, stating that the increased maximum workers' compensation benefit levels did not change the terms or conditions under which benefits were to be awarded, and therefore did not, by increasing the dollar amount of the benefits, create an increased level of service. The first of these consolidated actions was then filed by the County of Los Angeles, the County of San Bernardino, and the City of San Diego, seeking a writ of mandate to compel the board to approve the reimbursement claims for costs incurred in providing an increased level of service mandated by the state pursuant to Revenue and Taxation Code section 2207.³ They also sought a declaration that because the State of California and the board were obliged by article XIII B to reimburse them, they were not obligated to pay the increased benefits until the state provided reimbursement.

The superior court denied relief in that action. The court recognized that although increased benefits reflecting cost of living raises were not expressly *52 excepted from the requirement of state reimbursement in section 6 the intent of article XIII B to limit governmental expenditures to the prior year's level allowed local governments to make adjustment for changes in the cost of living, by increasing their own appropriations. Because the Assembly Bill No. 2750 changes did not exceed cost of living changes, they did not, in the view of the trial court, create an "increased level of service" in the existing workers' compensation program.

The second piece of legislation (Assem. Bill No. 684), enacted in 1982 (Stats. 1982, ch. 922, p. 3363), again changed the benefit levels for workers' compensation by increasing the maximum weekly wage upon which benefits were to be computed, and made other changes among which were: The bill increased minimum weekly earnings for temporary and permanent total disability from \$73.50 to \$168, and the maximum from \$262.50 to \$336. For permanent partial disability the weekly wage was raised from a minimum of \$45 to \$105, and from a maximum of \$105 to \$210, in each case for injuries occurring on or after January 1, 1984. (Lab. Code, § 4453.) A \$10,000 limit on additional compensation for injuries resulting from serious and willful employer misconduct was removed (Lab. Code, § 4553), and the maximum death benefit was raised from \$75,000 to \$85,000 for deaths in 1983, and to \$95,000 for deaths on or after January 1, 1984. (Lab. Code, § 4702.)

Again the statute included no appropriation and this time the statute expressly acknowledged that the omission was made "[n]otwithstanding section 6 of Article XIII B of the California Constitution and section 2231 ... of the Revenue and Taxation Code." (Stats. 1982, ch. 922, § 17, p. 3372.)⁴

Once again test claims were presented to the State Board of Control, this time by the City of Sonoma, the County of Los Angeles, and the City of San Diego. Again the claims were denied on grounds that the statute made no change in the terms and conditions under which workers' compensation benefits were to be awarded, and the increased costs incurred as a result of higher benefit levels did not create an increased level of service as defined in Revenue and Taxation Code section 2207, subdivision (a).

The three claimants then filed the second action asking that the board be compelled by writ of mandate to approve the claims and the state to pay them, and that chapter 922 be declared unconstitutional because it was not adopted in conformity with requirements of the Revenue and Taxation Code or *53 section 6. The trial court granted partial relief and ordered the board to set aside its ruling. The court held that the board's decision was not supported by substantial evidence and legally adequate findings on the presence of a state-mandated cost. The basis for this ruling was the failure of the board to make adequate findings on the possible impact of changes in the burden of proof in some workers' compensation proceedings (Lab. Code, § 3202.5); a limitation on an injured worker's right to sue his employer under the "dual capacity" exception to the exclusive remedy

doctrine (Lab. Code, §§ 3601-3602); and changes in death and disability benefits and in liability in serious and wilful misconduct cases. (Lab. Code, § 4551.)

The court also held: "[T]he changes made by chapter 922, Statutes of 1982 may be excluded from state-mandated costs if that change effects a cost of living increase which does not impose a higher or increased level of service on an existing program." The City of Sonoma, the County of Los Angeles, and the City of San Diego appeal from this latter portion of the judgment only.

II

The Court of Appeal consolidated the appeals. The court identified the dispositive issue as whether legislatively mandated increases in workers' compensation benefits constitute a "higher level of service" within the meaning of section 6, or are an "increased level of service"⁵ described in subdivision (a) of Revenue and Taxation Code section 2207. The parties did not question the proposition that higher benefit payments might constitute a higher level of "service." The dispute centered on whether higher benefit payments which do not exceed increases in the cost of living constitute a higher level of service. Appellants maintained that the reimbursement requirement of section 6 is absolute and permits no implied or judicially created exception for increased costs that do not exceed the inflation rate. The Court of Appeal addressed the problem as one of defining "increased level of service."

The court rejected appellants' argument that a definition of "increased level of service" that once had been included in section 2231, subdivision (e) of the Revenue and Taxation Code should be applied. That definition brought any law that imposed "additional costs" within the scope of "increased level of service." The court concluded that the repeal of section 2231 in 1975 (Stats. 1975, ch. 486, § 7, pp. 999-1000) and the failure of the Legislature by statute or the electorate in article XIII B to readopt the *54 definition must be treated as reflecting an intent to change the law. (*Eu v. Chacon* (1976) 16 Cal.3d 465, 470 [128 Cal.Rptr. 1, 546 P.2d 289].)⁶ On that basis the court concluded that increased costs were no longer tantamount to an increased level of service.

The court nonetheless assumed that an increase in costs mandated by the Legislature did constitute an increased level of service if the increase exceeds that in the cost of living. The judgment in the second, or "Sonoma" case was affirmed. The judgment in the first, or "Los Angeles" case, however,

was reversed and the matter "remanded" to the board for more adequate findings, with directions.⁷

III

The Court of Appeal did not articulate the basis for its conclusion that costs in excess of the increased cost of living do constitute a reimbursable increased level of service within the meaning of section 6. Our task in ascertaining the meaning of the phrase is aided somewhat by one explanatory reference to this part of section 6 in the ballot materials.

A statutory requirement of state reimbursement was in effect when section 6 was adopted. That provision used the same "increased level of service" phraseology but it also failed to include a definition of "increased level of service," providing only: "Costs mandated by the state" means any increased costs which a local agency is required to incur as a result of the following: [¶] (a) Any law ... which mandates a new program or an increased level of service of an existing program." (Rev. & Tax. Code § 2207.) As noted, however, the definition of that term which had been *55 included in Revenue and Taxation Code section 2164.3 as part of the Property Tax Relief Act of 1972 (Stats. 1972, ch. 1406, § 14.7, p. 2961), had been repealed in 1975 when Revenue and Taxation Code section 2231, which had replaced section 2164.3 in 1973, was repealed and a new section 2231 enacted. (Stats. 1975, ch. 486, §§ 6 & 7, p. 999.)⁸ Prior to repeal, Revenue and Taxation Code section 2164.3, and later section 2231, after providing in subdivision (a) for state reimbursement, explained in subdivision (e) that "'Increased level of service' means any requirement mandated by state law or executive regulation ... which makes necessary expanded or additional costs to a county, city and county, city, or special district." (Stats. 1972, ch. 1406, § 14.7, p. 2963.)

(2) Appellants contend that despite its repeal, the definition is still valid, relying on the fact that the Legislature, in enacting section 2207, explained that the provision was "declaratory of existing law." (Stats. 1975, ch. 486, § 18.6, p. 1006.) We concur with the Court of Appeal in rejecting this argument. "[I]t is ordinarily to be presumed that the Legislature by deleting an express provision of a statute intended a substantial change in the law." (*Lake Forest Community Assn. v. County of Orange* (1978) 86 Cal.App.3d 394, 402 [150 Cal.Rptr. 286]; see also *Eu v. Chacon, supra*, 16 Cal.3d 465, 470.) Here, the revision was not minor: a whole subdivision was deleted. As the Court of Appeal noted, "A change must have been intended; otherwise deletion of the preexisting definition makes no sense."

Acceptance of appellants' argument leads to an unreasonable interpretation of section 2207. If the Legislature had intended to continue to equate "increased level of service" with "additional costs," then the provision would be circular: "costs mandated by the state" are defined as "increased costs" due to an "increased level of service," which, in turn, would be defined as "additional costs." We decline to accept such an interpretation. Under the repealed provision, "additional costs" may have been deemed tantamount to an "increased level of service," but not under the post-1975 statutory scheme. Since that definition has been repealed, an act of which the drafters of section 6 and the electorate are presumed to have been *56 aware, we may not conclude that an intent existed to incorporate the repealed definition into section 6.

(3) In construing the meaning of the constitutional provision, our inquiry is not focussed on what the Legislature intended in adopting the former statutory reimbursement scheme, but rather on what the voters meant when they adopted article XIII B in 1979. To determine this intent, we must look to the language of the provision itself. (*ITT World Communications, Inc. v. City and County of San Francisco* (1985) 37 Cal.3d 859, 866 [210 Cal.Rptr. 226, 693 P.2d 811].) In section 6, the electorate commands that the state reimburse local agencies for the cost of any "new program or higher level of service." Because workers' compensation is not a new program, the parties have focussed on whether providing higher benefit payments constitutes provision of a higher level of service. As we have observed, however, the former statutory definition of that term has been incorporated into neither section 6 nor the current statutory reimbursement scheme.

(4) Looking at the language of section 6 then, it seems clear that by itself the term "higher level of service" is meaningless. It must be read in conjunction with the predecessor phrase "new program" to give it meaning. Thus read, it is apparent that the subvention requirement for increased or higher level of service is directed to state mandated increases in the services provided by local agencies in existing "programs." But the term "program" itself is not defined in article XIII B. What programs then did the electorate have in mind when section 6 was adopted? We conclude that the drafters and the electorate had in mind the commonly understood meanings of the term - programs that carry out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state.

The concern which prompted the inclusion of section 6 in article XIII B was the perceived attempt by the state to enact legislation or adopt administrative orders creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services which the state believed should be extended to the public. In their ballot arguments, the proponents of article XIII B explained section 6 to the voters: "Additionally, this measure: (1) Will not allow the state government to *force programs* on local governments without the state paying for them." (Ballot Pamph., Proposed Amend. to Cal. Const. with arguments to voters, Spec. Statewide Elec. (Nov. 6, 1979) p. 18. Italics added.) In this context the phrase "to force programs on local governments" confirms that the intent underlying section 6 was to require reimbursement to local agencies for the costs involved in carrying out functions peculiar to government, not *57 for expenses incurred by local agencies as an incidental impact of laws that apply generally to all state residents and entities. Laws of general application are not passed by the Legislature to "force" programs on localities.

The language of section 6 is far too vague to support an inference that it was intended that each time the Legislature passes a law of general application it must discern the likely effect on local governments and provide an appropriation to pay for any incidental increase in local costs. We believe that if the electorate had intended such a far-reaching construction of section 6, the language would have explicitly indicated that the word "program" was being used in such a unique fashion. (Cf. *Fuentes v. Workers' Comp. Appeals Bd.* (1976) 16 Cal.3d 1, 7 [128 Cal.Rptr. 673, 547 P.2d 449]; *Big Sur Properties v. Mott* (1976) 63 Cal.App.3d 99, 105 [132 Cal.Rptr. 835].) Nothing in the history of article XIII B that we have discovered, or that has been called to our attention by the parties, suggests that the electorate had in mind either this construction or the additional indirect, but substantial impact it would have on the legislative process.

Were section 6 construed to require state subvention for the incidental cost to local governments of general laws, the result would be far-reaching indeed. Although such laws may be passed by simple majority vote of each house of the Legislature (art. IV, § 8, subd. (b)), the revenue measures necessary to make them effective may not. A bill which will impose costs subject to subvention of local agencies must be accompanied by a revenue measure providing the subvention required by article XIII B. (Rev. & Tax. Code, §§ 2255, subd. (c).) Revenue bills must be passed by two-thirds vote of each house of the Legislature. (Art. IV, § 12, subd. (d).) Thus, were we to construe section 6 as applicable to general legislation

whenever it might have an incidental effect on local agency costs, such legislation could become effective only if passed by a supermajority vote.⁹ Certainly no such intent is reflected in the language or history of article XIII B or section 6.

(5) We conclude therefore that section 6 has no application to, and the state need not provide subvention for, the costs incurred by local agencies in providing to their employees the same increase in workers' compensation *58 benefits that employees of private individuals or organizations receive.¹⁰ Workers' compensation is not a program administered by local agencies to provide service to the public. Although local agencies must provide benefits to their employees either through insurance or direct payment, they are indistinguishable in this respect from private employers. In no sense can employers, public or private, be considered to be administrators of a program of workers' compensation or to be providing services incidental to administration of the program. Workers' compensation is administered by the state through the Division of Industrial Accidents and the Workers' Compensation Appeals Board. (See Lab. Code, § 3201 et seq.) Therefore, although the state requires that employers provide workers' compensation for nonexempt categories of employees, increases in the cost of providing this employee benefit are not subject to reimbursement as state-mandated programs or higher levels of service within the meaning of section 6.

IV

(6) Our construction of section 6 is further supported by the fact that it comports with controlling principles of construction which "require that in the absence of irreconcilable conflict among their various parts, [constitutional provisions] must be harmonized and construed to give effect to all parts. (*Clean Air Constituency v. California State Air Resources Bd.* (1974) 1 Cal.3d 801, 813-814 [114 Cal.Rptr. 577, 523 P.2d 617]; *Serrano v. Priest* (1971) 5 Cal.3d 584, 596 [96 Cal.Rptr. 601, 487 P.2d 1241, 41 A.L.R.3d 1187]; *Select Base Materials v. Board of Equal.* (1959) 51 Cal.2d 640, 645 [335 P.2d 672].)" (*Legislature v. Deukmejian* (1983) 34 Cal.3d 658, 676 [194 Cal.Rptr. 781, 669 P.2d 17].)

Our concern over potential conflict arises because article XIV, section 4,¹¹ gives the Legislature "plenary power, unlimited by any provision of *59 this Constitution" over workers' compensation. Although seemingly unrelated to workers' compensation, section 6, as we have shown, would have an indirect, but substantial impact on the ability of the

Legislature to make future changes in the existing workers' compensation scheme. Any changes in the system which would increase benefit levels, provide new services, or extend current service might also increase local agencies' costs. Therefore, even though workers' compensation is a program which is intended to provide benefits to all injured or deceased employees and their families, because the change might have some incidental impact on local government costs, the change could be made only if it commanded a supermajority vote of two-thirds of the members of each house of the Legislature. The potential conflict between section 6 and the plenary power over workers' compensation granted to the Legislature by article XIV, section 4 is apparent.

The County of Los Angeles, while recognizing the impact of section 6 on the Legislature's power over workers' compensation, argues that the "plenary power" granted by article XIV, section 4, is power over the substance of workers' compensation legislation, and that this power would be unaffected by article XIII B if the latter is construed to compel reimbursement. The subvention requirement, it is argued, is analogous to other procedural *60 limitations on the Legislature, such as the "single subject rule" (art. IV, § 9), as to which article XIV, section 4, has no application. We do not agree. A constitutional requirement that legislation either exclude employees of local governmental agencies or be adopted by a supermajority vote would do more than simply establish a format or procedure by which legislation is to be enacted. It would place workers' compensation legislation in a special classification of substantive legislation and thereby curtail the power of a majority to enact substantive changes by any procedural means. If section 6 were applicable, therefore, article XIII B would restrict the power of the Legislature over workers' compensation.

The City of Sonoma concedes that so construed article XIII B would restrict the plenary power of the Legislature, and reasons that the provision therefore either effected a pro tanto repeal of article XIV, section 4, or must be accepted as a limitation on the power of the Legislature. We need not accept that conclusion, however, because our construction of section 6 permits the constitutional provisions to be reconciled.

Construing a recently enacted constitutional provision such as section 6 to avoid conflict with, and thus pro tanto repeal of, an earlier provision is also consistent with and reflects the principle applied by this court in *Hustedt v. Workers' Comp. Appeals Bd.* (1981) 30 Cal.3d 329 [178 Cal.Rptr. 801, 636 P.2d 1139]. There, by coincidence, article XIV, section 4, was the later provision. A statute, enacted pursuant to the

plenary power of the Legislature over workers' compensation, gave the Workers' Compensation Appeals Board authority to discipline attorneys who appeared before it. If construed to include a transfer of the authority to discipline attorneys from the Supreme Court to the Legislature, or to delegate that power to the board, article XIV, section 4, would have conflicted with the constitutional power of this court over attorney discipline and might have violated the separation of powers doctrine. (Art. III, § 3.) The court was thus called upon to determine whether the adoption of article XIV, section 4, granting the Legislature plenary power over workers' compensation effected a pro tanto repeal of the preexisting, exclusive jurisdiction of the Supreme Court over attorneys.

We concluded that there had been no pro tanto repeal because article XIV, section 4, did not give the Legislature the authority to enact the statute. Article XIV, section 4, did not expressly give the Legislature power over attorney discipline, and that power was not integral to or necessary to the establishment of a complete system of workers' compensation. In those circumstances the presumption against implied repeal controlled. "It is well established that the adoption of article XIV, section 4 effected a repeal *pro tanto* of any state constitutional provisions which conflicted with that *61 amendment. (*Subsequent Etc. Fund. v. Ind. Acc. Com.* (1952) 39 Cal.2d 83, 88 [244 P.2d 889]; *Western Indemnity Co. v. Pillsbury* (1915) 170 Cal. 686, 695, [151 P. 398].) A *pro tanto* repeal of conflicting state constitutional provisions removes 'insofar as necessary' any restrictions which would prohibit the realization of the objectives of the new article. (*Methodist Hosp. of Sacramento v. Saylor* (1971) 5 Cal.3d 685, 691-692 [97 Cal.Rptr. 1, 488 P.2d 161]; cf. *City and County of San Francisco v. Workers' Comp. Appeals Bd.* (1978) 22 Cal.3d 103, 115-117 [148 Cal.Rptr. 626, 583 P.2d 151].) Thus the question becomes whether the board must have the power to discipline attorneys if the objectives of article XIV, section 4 are to be effectuated. In other words, does the achievement of those objectives compel the modification of a power - the disciplining of attorneys - that otherwise rests exclusively with this court?" (*Hustedt v. Workers' Comp. Appeals Bd.*, *supra*, 30 Cal.3d 329, 343.) We concluded that the ability to discipline attorneys appearing before it was not necessary to the expeditious resolution of workers' claims or the efficient administration of the agency. Thus, the absence of disciplinary power over attorneys would not preclude the board from achieving the objectives of article XIV, section 4, and no pro tanto repeal need be found.

(7) A similar analysis leads to the conclusion here that no pro tanto repeal of article XIV, section 4, was intended

or made necessary here by the adoption of section 6. The goals of article XIII B, of which section 6 is a part, were to protect residents from excessive taxation and government spending. (*Huntington Park Redevelopment Agency v. Martin* (1985) 38 Cal.3d 100, 109-110 [211 Cal.Rptr. 133, 695 P.2d 220].) Section 6 had the additional purpose of precluding a shift of financial responsibility for carrying out governmental functions from the state to local agencies which had had their taxing powers restricted by the enactment of article XIII A in the preceding year and were ill equipped to take responsibility for any new programs. Neither of these goals is frustrated by requiring local agencies to provide the same protections to their employees as do private employers. Bearing the costs of salaries, unemployment insurance, and workers' compensation coverage - costs which all employers must bear - neither threatens excessive taxation or governmental spending, nor shifts from the state to a local agency the expense of providing governmental services.

Therefore, since the objectives of article XIII B and section 6 can be achieved in the absence of state subvention for the expense of increases in workers' compensation benefit levels for local agency employees, section 6 did not effect a pro tanto repeal of the Legislature's otherwise plenary power over workers' compensation, a power that does not contemplate that the Legislature rather than the employer must fund the cost or increases in *62 benefits paid to employees of local agencies, or that a statute affecting those benefits must garner a supermajority vote.

Because we conclude that section 6 has no application to legislation that is applicable to employees generally, whether public or private, and affects local agencies only incidentally as employers, we need not reach the question that was the focus of the decision of the Court of Appeal - whether the state must reimburse localities for state-mandated cost increases which merely reflect adjustments for cost-of-living in existing programs.

V

It follows from our conclusions above, that in each of these cases the plaintiffs' reimbursement claims were properly denied by the State Board of Control. Their petitions for writs

Footnotes

- 1 The analysis by the Legislative Analyst advised that the state would be required to "reimburse local governments for the cost of complying with 'state mandates.' 'State mandates' are requirements imposed on local governments by legislation or executive orders." Elsewhere the analysis repeats: "[T]he initiative would establish a requirement that the state provide funds to reimburse local agencies for the cost of complying with state mandates. ...

of mandate seeking to compel the board to approve the claims lacked merit and should have been denied by the superior court without the necessity of further proceedings before the board.

In B001713, the Los Angeles case, the Court of Appeal reversed the judgment of the superior court denying the petition. In the B003561, the Sonoma case, the superior court granted partial relief, ordering further proceedings before the board, and the Court of Appeal affirmed that judgment.

The judgment of the Court of Appeal is reversed. Each side shall bear its own costs.

Bird, C. J., Broussard, J., Reynoso, J., Lucas, J., and Panelli, J., concurred.

MOSK, J.

I concur in the result reached by the majority, but I prefer the rationale of the Court of Appeal, i.e., that neither article XIII B, section 6, of the Constitution nor Revenue and Taxation Code sections 2207 and 2231 require state subvention for increased workers' compensation benefits provided by chapter 1042, Statutes of 1980, and chapter 922, Statutes of 1982, but only if the increases do not exceed applicable cost-of-living adjustments because such payments do not result in an increased level of service.

Under the majority theory, the state can order unlimited financial burdens on local units of government without providing the funds to meet those burdens. This may have serious implications in the future, and does violence to the requirement of section 2231, subdivision (a), that the state reimburse local government for "all costs mandated by the state."

In this instance it is clear from legislative history that the Legislature did not intend to mandate additional burdens, but merely to provide a cost-of-living *63 adjustment. I agree with the Court of Appeal that this was permissible.

Appellants' petition for a rehearing was denied February 26, 1987. *64

- The one ballot argument which made reference to section 6, referred only to the "new program" provision, stating, "Additionally, this measure [¶] (1) will not allow the state government to force programs on local governments without the state paying for them."
- 2 The bill was approved by the Governor and filed with the Secretary of State on September 22, 1980. Prior to this, the Assembly gave unanimous consent to a request by the bill's author that his letter to the Speaker stating the intent of the Legislation be printed in the Assembly Journal. The letter stated: (1) that the Assembly Ways and Means Committee had recommended approval without appropriation on grounds that the increases were a result of changes in the cost of living that were not reimbursable under either Revenue and Taxation Code section 2231, or article XIII B; (2) the Senate Finance Committee had rejected a motion to add an appropriation and had approved a motion to concur in amendments of the Conference Committee deleting any appropriation. Legislative history confirms only that the final version of Assembly Bill No. 2750, as amended in the Assembly on April 16, 1986, contained no appropriation. As introduced on March 4, 1980, with a higher minimum salary of \$510 on which to base benefits, an unspecified appropriation was included.
- 3 The superior court consolidated another action by the County of Butte, Novato Fire Protection District, and the Galt Unified School District with that action. Neither those plaintiffs nor the County of San Bernardino are parties to the appeal.
- 4 The same section "recognized," however, that a local agency "may pursue any remedies to obtain reimbursement available to it" under the statutes governing reimbursement for state-mandated costs in chapter 3 of the Revenue and Taxation Code, commencing with section 2201.
- 5 The court concluded that there was no legal or semantic difference in the meaning of the terms and considered the intent or purpose of the two provisions to be identical.
- 6 The Court of Appeal also considered the expression of legislative intent reflected in the letter by the author of Assembly Bill No. 2750 (see fn. 2, *ante*). While consideration of that expression of intent may have been proper in construing Assembly Bill No. 2750, we question its relevance to the proper construction of either section 6, adopted by the electorate in the prior year, or of Revenue and Taxation Code section 2207, subdivision (a) enacted in 1975. (Cf. *California Employment Stabilization Co. v. Payne* (1947) 31 Cal.2d 210, 213-214 [187 P.2d 702].) There is no assurance that the Assembly understood that its approval of printing a statement of intent as to the later bill was also to be read as a statement of intent regarding the earlier statute, and it was not relevant to the intent of the electorate in adopting section 6.
- The Court of Appeal also recognized that the history of Assembly Bill No. 2750 and Statutes 1982, chapter 922, which demonstrated the clear intent of the Legislature to omit any appropriation for reimbursement of local government expenditures to pay the higher benefits precluded reliance on reimbursement provisions included in benefit-increase bills passed in earlier years. (See e.g., Stats. 1973, chs. 1021 and 1023.)
- 7 We infer that the intent of the Court of Appeal was to reverse the order denying the petition for writ of mandate and to order the superior court to grant the petition and remand the matter to the board with directions to set aside its order and reconsider the claim after making the additional findings. (See Code Civ. Proc. § 1094.5, subd. (f).)
- 8 Pursuant to the 1972 and successor 1973 property tax relief statutes the Legislature had included appropriations in measures which, in the opinion of the Legislature, mandated new programs or increased levels of service in existing programs (see, e.g., Stats. 1973, ch. 1021, § 4, p. 2026; ch. 1022, § 2, p. 2027; Stats. 1976, ch. 1017, § 9, p. 4597) and reimbursement claims filed with the State Board of Control pursuant to Revenue and Taxation Code sections 2218-2218.54 had been honored. When the Legislature fails to include such appropriations there is no judicially enforceable remedy for the statutory violation notwithstanding the command of Revenue and Taxation Code section 2231, subdivision (a) that "[t]he state shall reimburse each local agency for all 'costs mandated by the state,' as defined in Section 2207" and the additional command of subdivision (b) that any statute imposing such costs "provide an appropriation therefor." (*County of Orange v. Flounoy* (1974) 42 Cal.App.3d 908, 913 [117 Cal.Rptr. 224].)
- 9 Whether a constitutional provision which requires a supermajority vote to enact substantive legislation, as opposed to funding the program, may be validly enacted as a Constitutional amendment rather than through revision of the Constitution is an open question. (See *Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization* (1978) 22 Cal.3d 208, 228 [149 Cal.Rptr. 239, 583 P.2d 1281].)
- 10 The Court of Appeal reached a different conclusion in *City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182 [203 Cal.Rptr. 258], with respect to a newly enacted law requiring that all public employees be covered by unemployment insurance. Approaching the question as to whether the expense was a "state mandated cost," rather than as whether the provision of an employee benefit was a "program or service" within the meaning of the Constitution, the court concluded that reimbursement was required. To the extent that this decision is inconsistent with our conclusion here, it is disapproved.
- 11 Section 4: "The Legislature is hereby expressly vested with plenary power, unlimited by any provision of this Constitution, to create, and enforce a complete system of workers' compensation, by appropriate legislation, and in that behalf to create and enforce a liability on the part of any or all persons to compensate any or all of their workers for injury or disability, and their dependents for death incurred or sustained by the said workers in the course of their employment, irrespective of the fault of any party. A

complete system of workers' compensation includes adequate provisions for the comfort, health and safety and general welfare of any and all workers and those dependent upon them for support to the extent of relieving from the consequences of any injury or death incurred or sustained by workers in the course of their employment, irrespective of the fault of any party; also full provision for securing safety in places of employment; full provision for such medical, surgical, hospital and other remedial treatment as is requisite to cure and relieve from the effects of such injury; full provision for adequate insurance coverage against liability to pay or furnish compensation; full provision for regulating such insurance coverage in all its aspects, including the establishment and management of a State compensation insurance fund; full provision for otherwise securing the payment of compensation and full provision for vesting power, authority and jurisdiction in an administrative body with all the requisite governmental functions to determine any dispute or matter arising under such legislation, to the end that the administration of such legislation shall accomplish substantial justice in all cases expeditiously, inexpensively, and without encumbrance of any character; all of which matters are expressly declared to be the social public policy of this State, binding upon all departments of the State government.

"The Legislature is vested with plenary powers, to provide for the settlement of any disputes arising under such legislation by arbitration, or by an industrial accident commission, by the courts, or by either, any, or all of these agencies, either separately or in combination, and may fix and control the method and manner of trial of any such dispute, the rules of evidence and the manner of review of decisions rendered by the tribunal or tribunals designated by it; provided, that all decisions of any such tribunal shall be subject to review by the appellate courts of this State. The Legislature may combine in one statute all the provisions for a complete system of workers' compensation, as herein defined.

"The Legislature shall have power to provide for the payment of an award to the state in the case of the death, arising out of and in the course of the employment, of an employee without dependents, and such awards may be used for the payment of extra compensation for subsequent injuries beyond the liability of a single employer for awards to employees of the employer.

"Nothing contained herein shall be taken or construed to impair or render ineffectual in any measure the creation and existence of the industrial accident commission of this State or the State compensation insurance fund, the creation and existence of which, with all the functions vested in them, are hereby ratified and confirmed." (Italics added.)

2 Cal.Rptr.3d 419
Court of Appeal, Second
District, Division 7, California.

COUNTY OF LOS ANGELES,
Plaintiff and Respondent,

v.

COMMISSION ON STATE
MANDATES, Defendant and Appellant;
Department of Finance, Real
Party in Interest and Appellant.

No. B156870. July 28, 2003.

Synopsis

Background: County petitioned for writ of mandate, seeking to vacate decision of the Commission on State Mandates which denied county's test claim for costs associated with statute requiring local law enforcement officers to participate in two hours of domestic violence training. The Superior Court, Los Angeles County, No. BS06497, Dzintra I. Janavs, J., granted the petition. Commission appealed.

Holding: The Court of Appeal, Muñoz (Aurelio), J., sitting by assignment, held that statute did not mandate any increased costs and thus Commission was not required to reimburse county for its costs.

Reversed with directions.

Opinion

MU#NOZ (AURELIO), J.*

* Judge of the Los Angeles Superior Court assigned by the Chief Justice pursuant to article VI, section 6 of the California Constitution.

A 1995 amendment to Penal Code section 13519¹ requires local law enforcement officers to participate in two hours of domestic violence training. The issue on appeal is whether this amendment resulted in a reimbursable state-mandated program within the meaning of article XIII B, section 6 of the California Constitution for the time spent by local law enforcement officers in such domestic violence training, although such officers were already required to spend 24 hours in continuing education training and the domestic violence training could be included within this total.

1 Hereafter section 13519.

This administrative mandamus proceeding was commenced by the County of Los Angeles (County) on a "test claim" filed with and denied by the *1179 Commission on State Mandates (Commission) for the County's costs incurred pursuant to section 13519. The trial court found that California Constitution article XIII B, section 6 required the state to reimburse the County for domestic violence training because the County's needs and priorities might be detrimentally affected when the state took away two hours of training by mandating that two specific hours of training occur. The trial court remanded the proceedings to the Commission to determine the amount of costs actually incurred by the County. We reverse.

**FACTUAL BACKGROUND
AND PROCEDURAL HISTORY**

Article XIII B, section 6 of the California Constitution provides: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service...." (Cal. Const., art. XIII B, § 6.) The Commission is charged with hearing and deciding local agency claims of entitlement to reimbursement under article XIII B, section 6. (Gov.Code, § 17551, subd. (a).) Pursuit of such a claim is the exclusive remedy for this purpose (Gov.Code, § 17552), but the Commission's decisions are subject to review by administrative mandamus, under Code of Civil Procedure section 1094.5. (Gov.Code, § 17559, subd. (b).) A "test claim" is "the first claim, **423 including claims joined or consolidated with the first

claim, filed with the commission alleging that a particular statute or executive order imposes costs mandated by the state." (Gov.Code, § 17521; see also *Kinlaw v. State of California* (1991) 54 Cal.3d 326, 328-329, 331-333, 285 Cal.Rptr. 66, 814 P.2d 1308.)

In 1995, section 13519, subdivision (e) was amended to provide: "(e) Each law enforcement officer below the rank of supervisor who is assigned to patrol duties and would normally respond to domestic violence calls or incidents of domestic violence shall complete, every two years, an updated course of instruction on domestic violence that is developed according to the standards and guidelines developed pursuant to subdivision (d). The instruction required pursuant to this subdivision shall be funded from existing resources available for the training required pursuant to this section. It is the intent of the Legislature not to increase the annual training costs of local government."²

2 The currently enacted version of this provision is found at section 13519, subdivision (g), and reads, "Each law enforcement officer below the rank of supervisor who is assigned to patrol duties and would normally respond to domestic violence calls or incidents of domestic violence shall complete, every two years, an updated course of instruction on domestic violence that is developed according to the standards and guidelines developed pursuant to subdivision (d). The instruction required pursuant to this subdivision shall be funded from existing resources available for the training required pursuant to this section. It is the intent of the Legislature not to increase the annual training costs of local government entities." (Stats.1998, ch. 701, § 1, designated the paragraph following subd. (a) as subd. (b) and redesignated the remaining subdivisions accordingly; in redesignated subd. (c), inserted par. (5), listing the signs of domestic violence as an instruction topic, and redesignated pars. (5) to (16) as pars. (6) to (17).)

*1180 Penal Code section 13510,³ et seq. requires the State Commission on Peace Officer Standards and Training (POST) to promulgate regulations establishing minimum state standards relating to physical, mental, and moral fitness, and minimum training standards for law enforcement officers. Compliance with POST's requirements is voluntary. (Pen.Code, § 13510 et seq.) POST has a certification program for peace officers specified in sections 13510 and 13522 and for the California Highway Patrol. (Pen.Code, §§ 13510.1, subs.(a)-(c), 13510.3.)

3 Penal Code section 13510, subdivision (a), provides in relevant part: "For the purpose of raising the level of competence of local law enforcement officers, [POST] shall adopt, and may from time to time amend, rules establishing minimum standards relating to physical, mental, and moral fitness that shall govern the recruitment of any city police officers, peace officer members of a county sheriff's office, marshals or deputy marshals of a municipal court, peace officer members of a county coroner's office...."

On or about December 26, 1996, the County filed a "test claim"⁴ pursuant to Government Code section 17522 with the Commission.⁵ The test claim alleged that **424 neither local police officers nor their agencies were given any choice with respect to compliance with section 13519. However, in order to implement the training, the County was required to redirect its officers from their normal work in order to attend the two-hour domestic violence training. The County alleged this substitution of the work agenda of the state for that of the local government violated California Constitution article XIII B, section 6. Furthermore, the County pointed to language in *1181 Penal Code section 13519, subdivision (e), providing that, "The instruction required pursuant to this subdivision shall be funded from existing resources available for the training required pursuant to this section. It is the intent of the Legislature not to increase the annual training costs of local government entities."

4 The test claim also challenged the incident-reporting requirements of Penal Code section 13730, which imposed a new program upon local law enforcement agencies to include in the domestic violence incident report additional information regarding the use of alcohol and controlled substances by the alleged abuser, and any prior domestic violence responses to the same address. The County did not contest the Commission's outcome relating to this portion of the test claim, and therefore this issue is not before us on appeal.

5 In 1984, the Legislature created a statutory procedure for determining whether a statute imposes state-mandated costs on a local agency within the meaning of California Constitution article XII B, section 6. (See Gov.Code, § 17500 et seq.) The local agency files a test claim with the Commission, which holds a public hearing and determines whether the statute mandates a new program or increased level of service. (Gov.Code, §§ 17521, 17551, 17555.) If the Commission finds that a claim is reimbursable, it then determines the amount of reimbursement. (Gov.Code, § 17557.) The local agency then follows statutory procedures to

obtain reimbursement. (See Gov.Code, § 17558 et seq.) Where the Commission finds no reimbursable mandate, the local agency can challenge this finding by administrative mandate proceedings under Code of Civil Procedure section 1094.5. (See Gov.Code, § 17552 [these provisions "provide the sole and exclusive procedure by which a local agency ... may claim reimbursement for costs mandated by the state as required by Section 6".])

The test claim alleged that although POST bore the cost of producing two-hour telecourses on domestic violence, POST did not provide for any local law enforcement salary reimbursement for attendance at any type of POST-certified training, including the state-mandated costs for domestic violence training. Adherence to POST standards is voluntary by local law enforcement agencies, but POST requires a minimum of 24 hours of training every two years, to be chosen from a menu of available courses. POST does not dictate the courses that must be taken. POST courses include training in, among other things: interviewing techniques for detectives, defensive weapons, CPR, conflict resolution, bicycle patrol, ritual crime and hate group offenders, vehicle pullover and approach, confessions, courtroom demeanor, electronic vehicle recovery systems, vehicle theft investigation, and cultural awareness.

The POST program gives local law enforcement agencies flexibility in choosing training programs to meet their differing needs. In addition to domestic violence training, certain other programs are legislatively mandated: dealing with the developmentally disabled/mentally ill training (implemented July 1992); high speed vehicle pursuits (implemented November 1994); first aid/CPR (a 21-hour initial course, with a 12-hour refresher course every three years); missing persons (implemented January 1989); racial and cultural diversity (implemented August 1983); sexual harassment (implemented November 1994); and sudden infant death syndrome (implemented July 1990). The time requirements for these other required courses vary. Some elective courses require 40 hours to complete.

However, the County alleged because there were no existing resources available for the domestic violence training, the annual training costs of the County were increased as a result of section 13519. The County Sheriff's Department incurred costs of \$170,351.45 for domestic violence training for the fiscal year 1996-1997.

In support of its test claim, the County submitted legislative materials relating to section 13519. These included: A July

5, 1995 memorandum in which the Assembly Committee on Appropriations stated that Senate Bill No. 132, proposing the changes ~~**425~~ to 13519, understood the "training requirement could have significant costs to local law enforcement in terms of expense and public safety, as most departments will be forced to backfill for offices while the officers are being trained or will have to forego the ~~*1182~~ backfilling and have fewer offices on patrol. Any monetary costs incurred by local law enforcement for the officer backfilling would be state-reimbursable." The Committee noted that, "Although this bill states that the costs of the additional domestic violence training be absorbed by POST within existing resources, the reality is that this bill would create additional non-absorbable costs to POST since POST will be unable to exclude one type of training in favor of the domestic violence training, and instead will have to add this training to their current curriculum. The current curriculum of POST training is just as important to the maintaining of public safety as is the additional domestic violence training."

In addition, the Department of Finance recognized the fiscal impact of section 13519 on local law enforcement agencies, and opposed the adoption of Senate Bill No. 132. Diane M. Cummins, Deputy Director of the State Department of Finance, wrote to Senator Diane Watson on April 20, 1995, that, "This bill also specifies that training required pursuant to this measure 'shall be funded from existing resources', as specified. In so specifying, this bill would also require law enforcement agencies to modify existing training programs by increasing training requirements. Finance believes this bill contains a local mandate without providing necessary funding, thereby being in conflict with the California Constitution, which requires the state to fund local mandate costs. Although there is no specific information available regarding the level of additional costs which would be imposed on law enforcement agencies, the Department of Finance is opposed to legislation which would result in additional General Fund expenditures, given the State's ongoing fiscal constraints." The Department of Finance recognized that, "Adding mandatory domestic violence training requirement would result in an additional unknown cost for specified state and local law enforcement agencies...."

Furthermore, Gretchen Fretter, Chair of the California Academy Directors' Association (an organization of training center directors and police academy managers throughout the state) wrote Senator Watson on March 9, 1995, to express the association's concerns with Senate Bill No. 132. Fretter's analysis indicated that the mandate would incur a

\$300,000 price tag for each training cycle. The California State Sheriffs' Association also wrote to express concerns about Senate Bill No. 132, including that POST estimated the domestic violence training would add costs to local agencies of at least \$750,000 per year. Glen Finé, the Deputy Executive Director of POST, on July 11, 1997, wrote to the Department of Finance to inform it that POST understood that the author of Senate Bill No. 132 was aware of POST's training requirements of 24 hours every two years, and it was "the author's intent ... that domestic violence update training become a statutorily required priority for inclusion within this 24 hours of training every two years."

**1183* POST issued a bulletin in February 1996 advising local law enforcement agencies of the new domestic violence training requirement.

The Department of Finance contended that the Legislature intended the domestic violence continuing education and training to be funded from existing resources. The department also contended that POST, which was charged with developing training ***426* standards for local law enforcement agencies, provided over \$21 million in existing state funds for domestic violence training. POST pointed out that the drafter of the statute recognized the 24 hours of continuing education every two years, and intended the domestic violence training to be a priority to be included within this 24-hour requirement.

At the hearing before the Commission on the test claim, representatives of the County testified that POST refused to pay for the programs, putting the burdens on local governments, and POST itself had estimated the annual cost of the program at \$750,000. A representative of the Sheriff's Department (Captain Dennis Wilson) testified that of the 24 hours required, any combination of courses could be used to meet the requirement. However, inclusion of the domestic violence training would take away two of those hours of training, resulting in only 22 hours. The Sheriff's Department would conduct domestic violence training even in the absence of the mandate; indeed, the Sheriff's Department actually conducted about 72 hours of training per officer per year. There was no funding for any of this training. The Sheriff's Department has 8,200 sworn officers, and two hours of training per officer adds up to 16,400 hours, which translates to 10 full-time officers for a year. Without funding for the domestic violence training, the Sheriff's Department therefore would lose the time equivalent of 10 officers for a year. Taking officers off the street impacts upon crime.

Martha Zavala testified on behalf of the County that the domestic violence training could not merely be subsumed within the 24 hours already required. With the training mandates already required by POST which exceed the 24-hour minimum, adding the domestic violence training only further exceeds the minimum 24 hours. There is no room to carve it out. Meeting POST requirements is not really an option. Thus, both the Sheriff's Department and the County agree they are seeking reimbursement of the costs of the training and the cost of replacing the officers on the street while in training.

A representative of POST testified that what POST provides in reimbursement to local law enforcement agencies is a small percentage of the real costs incurred. Where the training involved is through a telecourse, POST provides no reimbursement. There has been no increase in POST's budget since the amendment to section 13519. About 30 of the courses provided by POST are mandated training.

**1184* A representative of the Department of Finance testified that the Department believed section 13519 did not create state-mandated reimbursable program because the legislation indicated it was the Legislature's intent not increase the training costs of local government, and the training could be fit within the existing 24-hour requirements.

The Commission's staff prepared an analysis in advance of the hearing which found against the County. The "Staff Analysis" pointed out that section 13519 was originally added by chapter 1609, Statutes of 1984.⁶ Originally, the statute required ***427* that POST develop and implement a basic course of instruction for the training of law enforcement officers in the handling of domestic violence complaints, with local law enforcement agencies encouraged, but not required, to provide updates. These provisions of the 1984 version were the subject of a test claim filed by the City of Pasadena in 1990. That claim was denied because the original statute did not require local agencies to implement or pay for a domestic violence training program, did not increase the minimum basic training course hours or advanced officer training hours, and did not require local agencies to provide domestic violence training pursuant to the POST skills and knowledge standards.

6 The history of section 13519 is as follows: Added by Statutes 1984, chapter 1609, section 2, pages 5711-5713. Amended by Statutes 1985, chapter 281, section 1, pages 1305-1306, effective July 26, 1985; Statutes 1989, chapter 850, section 3; Statutes 1991, chapter

912 (Sen. Bill No. 421), section 1, pages 4086–4088; Statutes 1993, chapter 1098 (Assem. Bill No. 1268), section 8, pages 6162–6163; Statutes 1995, chapter 965 (Sen. Bill No. 132), section 1, pages 7377–7380; Statutes 1998, chapter 606 (Sen. Bill No.1880), section 13; Statutes 1998, chapter 701 (Assem. Bill No. 2172), section 1; Statutes 1999, chapter 659 (Sen. Bill No. 355), section 4. The 1995 amendment, at issue here, rewrote subdivision (e), which prior to amendment read: “(e) Forty thousand dollars (\$40,000) is appropriated from the Peace Officers Training Fund [POST] in augmentation of Item 8120–001–268 of the Budget Act of 1984, to support the travel, per diem, and associated costs for convening the necessary experts.” (Stats.1993, ch. 1098, § 8, p. 6188.)

Legally, the Staff Analysis pointed out that in order for a statute to impose a reimbursable state-mandated program, the statutory language must (1) direct or obligate an activity or task upon local government entities, and (2) the required activity or task must be new or it must create an increased or higher level of service over the former required level of service. (See, e.g., *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56, 233 Cal.Rptr. 38, 729 P.2d 202.) The Staff Analysis concluded that section 13519 did impose a new activity or program upon local law enforcement agencies. However, because the language of the statute requiring that the instruction be funded from existing resources, it was an open question whether the program imposed *mandated* costs. Because POST's minimum requirements remained at 24 hours before and after enactment of section 13519, there were no increased training hours and costs associated with the domestic violence training course. Instead, the course should be accommodated or absorbed by **1185* local law enforcement agencies within their existing resources available for training. Thus, the Staff Analysis recommended denial of the test claim.

After the public hearings were held, the Commission adopted the findings of the Staff Analysis. The Commission issued its own statement of decision which substantially adopted the findings of the Staff Analysis.

Subsequently, the County filed a petition for writ of mandate with the trial court, seeking vacation of the Commission's decision. The County argued that the domestic violence training constituted a state-mandated reimbursable program because it (1) was mandatory, while the POST certification training was optional; and (2) the only way local agencies could avoid the costs of the new program would be to redirect their efforts from the training they were already providing

as part of POST training, thereby losing flexibility to design programs to suit their own needs.

The Commission argued that the County's focus on “redirected” manpower costs was misplaced. Instead, the focus should be on whether the local law enforcement agencies actually experience increased expenditure of their tax revenues. (See, e.g., *County of Sonoma v. Commission on State Mandates* (2000) 84 Cal.App.4th 1264, 1283, 101 Cal.Rptr.2d 784.) In *County of Sonoma*, the court stated that California Constitution article XIII B, section 6 was designed to prevent the state from forcing programs on local governments, and such a forced program is one which results in “increased actual expenditures ***428* of limited tax proceeds that are counted against the local government's spending limit. Section 6, located within a measure aimed at limiting expenditures, is expressly concerned with ‘costs’ incurred by local governments as a result of state-mandated programs, particularly when the costs of compliance with a new program restrict local spending in other areas.” (*County of Sonoma*, at p. 1284, 101 Cal.Rptr.2d 784.) Because section 13519 did not require the County to incur “actual increased costs” because the domestic violence training could be subsumed within the 24-hour POST training requirement, no state reimbursement was required.

The Commission also argued the state had not required the County to incur increased training costs for salaries of officers to receive the two-hour training. POST's requirements did not change as a result of section 13519, and indeed, shortly after the enactment of section 13519, POST forwarded a bulletin to local law enforcement agencies suggesting they include domestic violence training within the 24-hour continuing training requirement.

**1186* The trial court heard argument, after which the trial court adopted its tentative statement of decision in which it noted that, “Although it may be reasonable in some or even most cases for a deputy to eliminate an unrequired two-hour elective in favor of the required domestic violence instruction, what about cases where the County's needs and priorities would be affected detrimentally, if two hours of electives were taken away? At what point would additional mandated courses result in increased costs? [¶] The record also shows that, for some deputies, other state-required training already amounts to 24 hours or more per two-year period. For these deputies, the two hours of mandated domestic violence training cannot be accommodated by giving up other training but must be added on, for added cost. It appears that, if domestic violence instruction is to be funded from existing

resources on a deputy-by-deputy basis, the County clearly does incur increased costs." The trial court granted the petition, and remanded the matter for consideration of the exact amount of increased costs.

DISCUSSION

I. STANDARD OF REVIEW.

1 2 3 The determination whether the statute here at issue established a mandate under California Constitution article XIII B, section 6, is a question of law. (*County of San Diego v. State of California* (1997) 15 Cal.4th 68, 109, 61 Cal.Rptr.2d 134, 931 P.2d 312.) Under Government Code section 17559,⁷ administrative mandamus is the exclusive means to challenge a decision of the Commission on a subvention claim. (*Redevelopment Agency v. Commission on State Mandates* (1997) 55 Cal.App.4th 976, 980, 64 Cal.Rptr.2d 270.) "Government Code section 17559 governs the proceeding below and requires that the trial court review the decision of the Commission under the substantial evidence standard. Where the substantial evidence test is applied by the trial court, we are generally confined to inquiring whether substantial evidence supports the court's findings and judgment. [Citation.] However, we independently review the superior court's legal **429 conclusions about the meaning and effect of constitutional and statutory provisions. [Citation.]" (*City of San Jose v. State of California* (1996) 45 Cal.App.4th 1802, 1810, 53 Cal.Rptr.2d 521.)

7 Government Code section 17559, subd. (b), provides: "A claimant or the state may commence a proceeding in accordance with the provisions of Section 1094.5 of the Code of Civil Procedure to set aside a decision of the commission on the ground that the commission's decision is not supported by substantial evidence. The court may order the commission to hold another hearing regarding the claim and may direct the commission on what basis the claim is to receive a rehearing."

*1187 II. SECTION 13519'S IMPOSITION OF A DOMESTIC VIOLENCE TRAINING COURT IS NOT A STATE-MANDATED PROGRAM WITHIN THE MEANING OF CONSTITUTION ARTICLE XIII B, SECTION 6 BECAUSE IT DOES NOT CONSTITUTE AN "INCREASED LEVEL OF SERVICE."

4 The Commission essentially makes two arguments. First, it contends that the County did not incur "increased costs." Reimbursement to the County under Constitution article XIII

B, section 6 is not required unless there is a showing of actual increased costs mandated by the state. (See, e.g., *County of Los Angeles v. State of California*, supra, 43 Cal.3d at pp. 54-55, 233 Cal.Rptr. 38, 729 P.2d 202; *City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 66-67, 266 Cal.Rptr. 139, 785 P.2d 522.) In *City of Sacramento*, the court explained that the statutory concept of "costs mandated by the state" and the constitutional concept of article XIII B, section 6, are identical. (*City of Sacramento v. State of California*, supra, 50 Cal.3d at p. 67, fn. 11, 266 Cal.Rptr. 139, 785 P.2d 522.) Because of this limited, rather than broad definition, of "costs mandated by the state," article XIII B, section 6 does not provide reimbursement for every single increased cost. Thus, the trial court's finding that reimbursement was required where a statute results in a "redirection of local effort" or a "detrimental change in a local agency's needs and priorities" is not supported by the law. Rather, it constitutes an inappropriate injection of an equitable standard into the analysis.

Secondly, the Commission argues that no "mandate" exists. To the contrary, substantial evidence supports its finding that section 13519 does not result in *increased* costs because nothing in the statute requires the County, or any other local law enforcement agency, to incur actual increased costs. The total number of hours required (the 24 minimum hours of POST training) did not increase because of the domestic violence training; rather, POST still requires 24 hours and in fact after the passage of section 13519, POST forwarded a bulletin to law enforcement agencies recommending that they include domestic violence training within the 24-hour continuing professional training requirement. Because the POST standards are voluntary, if a local law enforcement agency adds two hours of domestic violence training to either the POST requirement or its own requirements, it is doing so at its own discretion.

In response, the County points out that the Commission's conclusion is based upon the erroneous premise that local law enforcement agencies could escape increased costs simply by dropping two hours of their existing POST training and substituting the new domestic violence training. However, the evidence in the legislative history indicates that this was not the intent of the Legislature when it was considering section 13519, nor was it the position of *1188 the Department of Finance. The County also contends that local law enforcement agencies incur costs when they sacrifice their existing training programs for the new domestic violence training. Although POST does not dictate those courses for which a local law enforcement agency must offer training

and POST does pay for much of the training material, most of the cost of POST training is borne by the local law enforcement agencies in the form of personnel costs while deputies spend 24 hours of work time receiving **430 training. Furthermore, if a mere legislative directive to fund a new program with existing resources would let the state off the hook for reimbursement, then the constitutional rule of mandate reimbursement would be a nullity: any new state mandate can be funded by canceling other services. Because California Constitution article XIII B, section 6 was designed to prevent the elimination of the fiscal freedom of local governmental agencies to expend their limited available resources without being straightjacketed by state-mandated programs, the Commission's "within existing resources" rule would circumvent the purposes of article XIII B, section 6.

A. The Purposes of California Constitution Article XIII B, Section 6 Guide Our Analysis.

5 In 1978, the voters approved Proposition 13, which added article XIII A to the California Constitution. Article XIII A "imposes a limit on the power of state and local governments to adopt and levy taxes. [Citation.]" (*County of Fresno v. State of California* (1991) 53 Cal.3d 482, 486, 280 Cal.Rptr. 92, 808 P.2d 235.) In 1979, Proposition 4 added article XIII B to the Constitution, which imposed a complementary limit on governmental spending. (*San Francisco Taxpayers Assn. v. Board of Supervisors* (1992) 2 Cal.4th 571, 574, 7 Cal.Rptr.2d 245, 828 P.2d 147.) These two constitutional provisions "work in tandem, together restricting California government's power both to levy and to spend for public purposes." (*City of Sacramento v. State of California, supra*, 50 Cal.3d at p. 59, fn. 1, 266 Cal.Rptr. 139, 785 P.2d 522.) Their goal is to protect citizens from excessive taxation and government spending. (*County of Los Angeles v. State of California, supra*, 43 Cal.3d at p. 61, 233 Cal.Rptr. 38, 729 P.2d 202.)

6 California Constitution article XIII B, section 6, provides in relevant part: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service." Article XIII B, section 6, prevents the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are "ill equipped" to assume increased financial responsibilities because of the taxing and spending limitations of articles XIII A and XIII B. (*County of Fresno v. State of California, supra*, 53 Cal.3d at p. 487, 280 Cal.Rptr.

92, 808 P.2d 235.) Section 6 thus requires the state "to pay for any new *1189 governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. [Citation.]" (*Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, 1577, 15 Cal.Rptr.2d 547.)

7 8 9 10 11 12 13 State mandate jurisprudence has established that in general, local agencies are not entitled to reimbursement of all increased costs mandated by state law, but only those resulting from a "new" program or an "increased level of service" imposed upon them by the state. (*Lucia Mar Unified School District v. Honig* (1988) 44 Cal.3d 830, 835, 244 Cal.Rptr. 677, 750 P.2d 318.) A "program" is defined as a program which carries out the "governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state." (*County of Los Angeles v. State of California, supra*, 43 Cal.3d at p. 56, 233 Cal.Rptr. 38, 729 P.2d 202.) A program is "new" if the local governmental entity had not previously been required to **431 institute it. (*City of San Jose v. State of California, supra*, 45 Cal.App.4th at p. 1812, 53 Cal.Rptr.2d 521.) State mandates are requirements imposed on local governments by legislation or executive orders. (*County of Los Angeles v. State of California, supra*, 43 Cal.3d at p. 50, 233 Cal.Rptr. 38, 729 P.2d 202.) Since the purpose of California Constitution article XIII B, section 6 is to avoid governmental programs from being forced on localities by the state, programs which are not unique to the government do not qualify; the programs must involve the provision of governmental services. (*City of Sacramento v. State of California, supra*, 50 Cal.3d at p. 68, 266 Cal.Rptr. 139, 785 P.2d 522.) Further, in order for a state mandate to be found, the local governmental entity must be required to expend the proceeds of its tax revenues. (*Redevelopment Agency of the City of San Marcos v. Commission on State Mandates, supra*, 55 Cal.App.4th at p. 986, 64 Cal.Rptr.2d 270.) Lastly, there must be compulsion to expend revenue. (*City of Merced v. State of California* (1984) 153 Cal.App.3d 777, 780, 783, 200 Cal.Rptr. 642 [revisions to Code of Civil Procedure required entities exercising the power of eminent domain to compensate businesses for lost goodwill did not create state mandate, because the power of eminent domain was discretionary, and need not be exercised at all]; *Department of Finance v. Commission on State Mandates* (2003) 30 Cal.4th 727, 134 Cal.Rptr.2d 237, 68 P.3d 1203.) In *Lucia Mar*, the court explained article XIII B, section 6. "The intent of the

section would plainly be violated if the state could, while retaining administrative control of programs it has supported with state tax money, simply shift the cost of the programs to local government on the theory that the shift does not violate section 6 of article XIII B because the programs are not 'new.' ” (*Lucia Mar Unified School District v. Honig, supra*, 44 Cal.3d at p. 836, 244 Cal.Rptr. 677, 750 P.2d 318.)

However, in spite of all of the above, “increased level of service” is not defined in California Constitution article XIII B, section 6 or in the ballot materials. *1190 (*Long Beach Unified School District v. State of California* (1990) 225 Cal.App.3d 155, 173, 275 Cal.Rptr. 449.) Furthermore, “Although a law is addressed only to local governments and imposes new costs on them, it may still not be a reimbursable state mandate.” (*City of Richmond v. Commission on State Mandates* (1998) 64 Cal.App.4th 1190, 1197, 75 Cal.Rptr.2d 754.)

In *County of San Jose v. State of California, supra*, 45 Cal.App.4th 1802, 53 Cal.Rptr.2d 521, Government Code section 29550 authorized counties to charge cities and other local entities for costs of booking into county jails persons who had been arrested by employees of the cities and other entities. (45 Cal.App.4th at p. 1806, 53 Cal.Rptr.2d 521.) The State argued the measure merely reallocated booking costs, no shifting from state to local entities, therefore not within article XIII B, section 6. (45 Cal.App.4th at p. 1806, 53 Cal.Rptr.2d 521.) The city contended counties function as agents of the state, charged with enforcement of state's criminal laws; detaining and booking integral part of this process. (*Id.* at p. 1808, 53 Cal.Rptr.2d 521.) The Commission found maintenance of jails and detention of prisoners, had always been a local matter, and cities and counties were both forms of local government; therefore, there was no shift in costs between *state* and local entities.

Furthermore, the terms of Government Code section 29550 were discretionary, not mandatory. (*County of San Jose v. State of California, supra*, 45 Cal.App.4th at pp. 1808–1809, 53 Cal.Rptr.2d 521.) *County of San Jose* found no cost had been improperly transferred to the local government **432 entities because the cost of capture, detention and housing of persons charged with crimes had traditionally been borne by the counties. (*Id.* at p. 1813, 53 Cal.Rptr.2d 521.) *County of San Jose* rejected the cities' argument that the county was acting as agent of the state because it was “not supported by recent case authority, nor does it square with definitions particular to subvention analysis.” (*Id.* at p. 1814, 53 Cal.Rptr.2d 521.) California Constitution article XIII B treated cities

and counties alike; Government Code section 17514 defines “costs mandated by the state” to mean any increased costs that a “local agency” is required to incur. Because both cities and counties were to be treated alike for purposes of subvention analysis, nothing in article XIII B, section 6 prohibits the shifting of costs between local government entities. (*County of San Jose*, at p. 1815, 53 Cal.Rptr.2d 521.)

In *County of Los Angeles v. State of California, supra*, 43 Cal.3d 46, 233 Cal.Rptr. 38, 729 P.2d 202, Labor Code sections 4453, 4453.1 and 4460, increased the maximum weekly wage upon which temporary and permanent disability indemnity was computed from \$231 to \$262.50 per week. In addition, Labor Code section 4702 increased certain death benefits from \$55,000 to \$75,000. The trial court held that because the changes did not exceed costs of living changes, they did not create an “increased level of service.” (43 Cal.3d at p. 52, 233 Cal.Rptr. 38, 729 P.2d 202.) The County argued the terms of California Constitution article XIII B, section 6, do not contain an exception for increased costs which do not exceed the inflation rate. (43 Cal.3d at p. 53, 233 Cal.Rptr. 38, 729 P.2d 202.) The County relied on certain repealed Revenue and *1191 Taxation Code definitions which had equated any program which imposed “additional costs” as being within the constitutional provision of “increased level of service.” (*Id.* at p. 53, 233 Cal.Rptr. 38, 729 P.2d 202.) *County of Los Angeles* rejected this interpretation. “If the Legislature had intended to continue to equate ‘increased level of service’ with ‘additional costs,’ then the provision would be circular: ‘costs mandated by the state’ are defined as ‘increased costs’ due to an ‘increased level of service,’ which, in turn, would be defined as ‘additional costs.’ ” (*Id.* at p. 55, 233 Cal.Rptr. 38, 729 P.2d 202.) An examination of the language of California Constitution article XIII B, section 6 shows that “by itself, the term ‘higher level of service’ is meaningless.” *Id.* at p. 56, 233 Cal.Rptr. 38, 729 P.2d 202. Rather, it must be read in conjunction with the phrase “ ‘new program.’ ” *Ibid.* “Thus read, it is apparent that the subvention requirement for increased or higher level of service is directed to state mandated increases in the services provided by local agencies in existing ‘programs.’ ” (*Ibid.*) By “ ‘program,’ ” the voters meant “programs that carry out the governmental function of providing services to the public, or laws which, to implement a state policy, imposed unique requirements on local governments and do not apply generally to all residents and entities in the state.” (*Ibid.*) 233 Cal.Rptr. 38, 729 P.2d 202.) The ballot materials provided that article XIII B, section 6 would “not allow the state government to *force programs* on local governments without the state paying for them.” (43 Cal.3d at p. 56, 233

Cal.Rptr. 38, 729 P.2d 202.) "Laws of general application are not passed by the Legislature to 'force' programs on localities." (*Id.* at p. 57, 233 Cal.Rptr. 38, 729 P.2d 202.) In light of this, "[t]he language of section 6 is far too vague to support an inference that it was intended that each time the Legislature passes a law of general application it must discern the likely effect on local governments and provide an appropriation to pay **433 for any incidental increase in local costs.... If the electorate had intended such a far-reaching construction of section 6, the language would have explicitly indicated that the word 'program' was being used in such a unique fashion." (*Id.* at p. 57, 233 Cal.Rptr. 38, 729 P.2d 202.) Therefore, there was no need to pay for increase in worker's compensation, because it is not a program administered by local agencies to provide service to the general public. Local government entities are indistinguishable in this respect from private employers. (*Id.* at pp. 57-58, 233 Cal.Rptr. 38, 729 P.2d 202.)

In *City of Sacramento v. State of California*, *supra*, 50 Cal.3d 51, 266 Cal.Rptr. 139, 785 P.2d 522, chapter 2 of Statutes of 1978 extended mandatory coverage under the state's unemployment insurance laws to include state and local governments and nonprofit organizations. *City of Sacramento* held there was no obligation on the part of the state to provide funds because there was no "unique" obligation imposed upon local governments, nor was there any requirement of new or increased governmental services. (50 Cal.3d at p. 57, 266 Cal.Rptr. 139, 785 P.2d 522.) As the court stated, the measure was adopted to conform California's system to federal laws. (*Id.* at p. 58, 266 Cal.Rptr. 139, 785 P.2d 522.) Because the measure required local governments to provide unemployment benefits to their own employees, the state had not compelled provision of a new or increased level of service to the public at the local level. Rather, it had merely required local government to provide the same benefits as private *1192 employers. (*Id.* at p. 67, 266 Cal.Rptr. 139, 785 P.2d 522.) The purpose of California Constitution article XIII B, section 6 was to avoid governmental programs from being forced on localities by the state: Therefore, programs which are not unique to the government do not qualify. (50 Cal.3d at p. 67, 266 Cal.Rptr. 139, 785 P.2d 522.) The benefits at issue here have nothing to do with the provision of governmental services, and are therefore not within the scope of section 6. (50 Cal.3d at p. 68, 266 Cal.Rptr. 139, 785 P.2d 522.)

In *Lucia Mar Unified School District v. Honig*, *supra*, 44 Cal.3d 830, 244 Cal.Rptr. 677, 750 P.2d 318, Education Code section 59300 required school districts to contribute part of the cost of educating pupils from the district at state

schools for the severely handicapped. *Lucia Mar* held section 59300 constituted a "new" program of higher level of service because cost of program had been shifted from the state to a local entity. "The intent of the section would plainly be violated if the state could, while retaining administrative control of programs it has supported with state tax money, simply shift the cost of the programs to local government on the theory that the shift does not violate section 6 of [California Constitution] article XIII B because the programs are not 'new.'" (44 Cal.3d at p. 836, 244 Cal.Rptr. 677, 750 P.2d 318.)

On the other hand, in *County of San Diego v. State of California*, *supra*, 15 Cal.4th 68, 61 Cal.Rptr.2d 134, 931 P.2d 312, pursuant to 1982 legislation, the state withdrew from counties Medi-Cal funding for medically indigent persons (MIP's). (*Id.* at pp. 79-80, 61 Cal.Rptr.2d 134, 931 P.2d 312.) To offset this change in coverage, the state set up an account as a mechanism to transfer state funds to counties to pay for Medi-Cal expenses, and sufficient funds had been available in this account to enable the state to fully fund San Diego County's Medi-Cal costs. (*Id.* at p. 80, 61 Cal.Rptr.2d 134, 931 P.2d 312.) However, in fiscal year 1990-1991, insufficient funds were available. (*Ibid.*) The state argued that no mandate for reimbursement existed because the counties had always borne the responsibility of paying for indigent medical care pursuant to Welfare & Institutions Code section 17000. (*County of San Diego*, at pp. 91-92, 61 Cal.Rptr.2d 134, 931 P.2d 312.) In finding **434 reimbursement was mandated, the Supreme Court found that at the time California Constitution article XIII B, section 6 was enacted, the state was fully funding Medi-Cal for MIP's and the County bore no responsibility for those costs. (*County of San Diego*, at p. 93, 61 Cal.Rptr.2d 134, 931 P.2d 312.) Thus, in enacting Medi-Cal, the Legislature had shifted the cost of indigent medical care from the counties to the state. (*Id.* at pp. 96-97, 61 Cal.Rptr.2d 134, 931 P.2d 312.) Given this background, the Legislature excluded MIP's from Medi-Cal, knowing full well that it would trigger the counties' obligation to pay for medical care as providers of last resort. (*Id.* at p. 98, 61 Cal.Rptr.2d 134, 931 P.2d 312.) Therefore, the 1982 legislation "mandated a 'new program' on counties by 'compelling them to accept financial responsibility in whole or in part for a program,' i.e., medical care for adult MIP's, 'which was funded entirely by the state before the advent of article XIII B.'" (*County of San Diego v. State of California*, *supra*, 15 Cal.4th 68 at p. 98, 61 Cal.Rptr.2d 134, 931 P.2d 312, citing *Lucia Mar Unified School District v. Honig*, *supra*, 44 Cal.3d at p. 836, 244 Cal.Rptr. 677, 750 P.2d 318.) Otherwise, "County taxpayers would be forced

to accept new taxes or see the county *1193 forced to cut existing programs further....” (*County of San Diego v. State of California*, *supra*, 15 Cal.4th 68 at p. 98, 61 Cal.Rptr.2d 134, 931 P.2d 312.)

The Commission relies heavily on *County of Sonoma v. Commission on State Mandates*, *supra*, 84 Cal.App.4th 1264, 101 Cal.Rptr.2d 784. In *County of Sonoma*, the challenged legislation added section 97.03 to the Revenue and Taxation Code, and reduced the amount of property tax revenue to be allocated to local government pursuant to a formula, allocating an equal portion to a “Educational Revenue Augmentation Fund (ERAF)” for distribution to school districts. (84 Cal.App.4th at pp. 1269–1270, 1275, 101 Cal.Rptr.2d 784.) The net effect of the legislation was to decrease counties’ tax revenues, although school revenues remained stable, and satisfied the constitutional necessity of maintaining a minimum level of funding for schools pursuant to California Constitution article XIV, section 8. (84 Cal.App.4th at p. 1276, 101 Cal.Rptr.2d 784.) In *County of Sonoma*, the County argued that the reallocation of tax revenues constituted a state-mandated cost of a new program. (*Id.* at p. 1276, 101 Cal.Rptr.2d 784.) The court held that section 6 subvention was limited to “increases in actual costs.” Because none of the County’s tax revenues were expended, the legislation did not come within section 6. “Proposition 4 [the initiative enacting article XIII B] was aimed at controlling and capping government spending, not curbing changes in revenue allocations. Section 6 is an obvious [complement] to the goal of Proposition 4 in that it prevents the state from forcing extra programs on local governments in a manner that negates their careful budgeting of expenditures. A forced program that would negate such planning is one that results in increased actual expenditures of limited tax proceeds that are counted against the local government’s spending limit. Section 6, located within a measure aimed at limiting expenditures, is expressly concerned when ‘costs’ incurred by local government as a result of state-mandated programs, particularly with the costs of compliance with a new program *restrict local spending in other areas.*” (84 Cal.App.4th at pp. 1283–1284, 101 Cal.Rptr.2d 784 (emphasis added).)

County of Sonoma discerned a further requirement of California Constitution article XIII B, section 6: that the costs incurred must involve programs previously funded exclusively by the state. In imposing this limitation, *County of Sonoma* relied on language in **435 *County of San Diego v. State of California*, *supra*, 15 Cal.4th 68, 61 Cal.Rptr.2d 134, 931 P.2d 312 that “section 6 prohibits the

state from shifting to counties the costs of state programs for which the state assumed complete financial responsibility before adoption of section 6.” (*County of San Diego v. State of California*, *supra*, 15 Cal.4th 68 at p. 99, fn. 20, 61 Cal.Rptr.2d 134, 931 P.2d 312.) *County of Sonoma* determined that because the statute at issue only involved a reallocation of funds between entities already jointly responsible for providing a service (education), no state-mandated reimbursable program existed. (*County of Sonoma v. Commission on State Mandates*, *supra*, 84 Cal.App.4th at p. 1289, 101 Cal.Rptr.2d 784.)

14 15 16 *1194 Based upon the principles discernable from the cases discussed, we find that in the instant case, the legislation does not mandate a “higher level of service.” In the case of an existing program, an increase in existing costs does not result in a reimbursement requirement. Indeed, “costs” for purposes of California Constitution article XIII B, section 6, does not equal every increase in a locality’s budget resulting from compliance with a new state directive. Rather, the state must be attempting to divest itself of its responsibility to provide fiscal support for a program, or forcing a new program on a locality for which it is ill-equipped to allocate funding.

We agree that POST certification is, for all practical purposes, not a “voluntary” program and therefore the County must, in order to comply with section 13519, add domestic violence training to its curriculum. POST training and certification is ongoing and extensive, and local law enforcement agencies may chose from a menu of course offerings to fulfill the 24-hour requirement. Adding domestic violence training obviously may displace other courses from the menu, or require the adding of courses. Officer downtime will be incurred. However, merely by adding a course requirement to POST’s certification, the state has not shifted from itself to the County the burdens of state government. Rather, it has directed local law enforcement agencies to reallocate their training resources in a certain manner by mandating the inclusion of domestic violence training.

Furthermore, the state has not shifted from itself the cost of a program previously administered and funded by the state. Instead, the state is requiring certain courses to be placed within an already existing framework of training. This loss of “flexibility” does not, in and of itself, require the County to expend funds that previously had been expended on the POST program by the state. Instead, “[t]he purpose for which state subvention of funds was created, to protected local agencies from having the state transfer its cost of government from

itself to the local level, is therefore not brought into play” by a directive that POST-certified studies include domestic violence training. (*Redevelopment Agency of the City of San Marcos v. Commission on State Mandates*, supra, 55 Cal.App.4th at p. 986, 64 Cal.Rptr.2d 270.) Any increased costs are merely “incidental” to the cost of administering the POST certification.

domestic violence training. Every increase in cost that results from a new state directive does not automatically result in a valid subvention claim where, as here, the directive can be complied with by a minimal reallocation of resources within the entity seeking reimbursement. Thus, while there may be a mandate, there are no increased costs mandated by section 13519.

17 18 While we are mindful that legislative disclaimers, findings and budget control language are not determinative to a finding of a state-mandated reimbursable program (*Carmel Valley Fire Protection District v. State of California* (1987) 190 Cal.App.3d 521, 541, 234 Cal.Rptr. 795), our interpretation is supported by the hortatory statutory language that, “The instruction required pursuant to this subdivision shall be funded from existing resources available for the training required pursuant to this section. It is the intent of the Legislature not to increase **436 the annual training costs of local *1195 government entities.” (§ 13519.) Thus, while the County may lose some flexibility in tailoring its training programs, such loss of flexibility does not rise to the level of a state-mandated reimbursable program because the loss of flexibility is incidental to the greater goal of providing

DISPOSITION

The judgment of the trial court is reversed. The trial court is directed to enter a new and different judgment denying the County's petition for writ of mandate and reinstating the findings of the Commission.

We concur: PERLUSS, P.J., and WOODS, J.

No. C009519.
Court of Appeal, Third District, California.
Dec 30, 1992.

SUMMARY

Two school districts filed claims with the State Board of Control for state reimbursement of alleged state-mandated costs incurred in connection with special education programs. The board determined that the costs were state mandated and subject to reimbursement by the state. In a mandamus proceeding, the trial court entered a judgment by which it issued a writ of administrative mandate directing the Commission on State Mandates (the successor to the board) to set aside the board's administrative decision and to reconsider the matter in light of an intervening decision by the California Supreme Court, and by which it denied the petition of one of the school districts for a writ of mandate that would have directed the State Controller to issue a warrant in payment of the district's claim. (Superior Court of Sacramento County, No. 352795, Eugene T. Gualco, Judge.)

The Court of Appeal affirmed. It held that the 1975 amendments to the federal Education of the Handicapped Act (20 U.S.C. § 1401 et seq.) constituted a federal mandate with respect to the state. However, even though the state had no real choice in deciding whether to comply with the act, the act did not necessarily require the state to impose all of the costs of implementation upon local school districts. The court held that to the extent the state implemented the act by freely choosing to impose new programs or higher levels of service upon local school districts, the costs of

such programs or higher levels of service are state-mandated and subject to subvention under Cal. Const., art. XIII B, § 6. Thus, on remand to the commission, the court held, the commission was required to focus on the costs incurred by local school districts and on whether those costs were imposed by federal mandate or by the state's voluntary choice in its implementation of the federal program. (Opinion by Sparks, Acting P. J., with Davis and Scotland, JJ., concurring.)

HEADNOTES

Classified to California Digest of Official Reports

(1) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--State-mandated Costs: Words, Phrases, and Maxims--Subvention.

"Subvention" generally means a grant of financial aid or assistance, or a subsidy. The constitutional rule of state subvention provides that the state is required to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. This does not mean that the state is required to reimburse local agencies for any incidental cost that may result from the enactment of a state law; rather, the subvention requirement is restricted to governmental services that the local agency is required by state law to provide to its residents. The subvention requirement is intended to prevent the state from transferring the costs of government from itself to local agencies. Reimbursement is required when the state freely chooses to impose on local agencies any peculiarly governmental cost which they were not previously required to absorb.

[See **Cal.Jur.3d**, State of California, § 78; 9 **Witkin**, Summary of Cal. Law (9th ed. 1989) Taxation, §§ 123, 124.]

(2) Schools § 4--School Districts--Relationship to State.

A school district's relationship to the state is different from that of local governmental entities such as cities, counties, and special districts. Education and the operation of the public school system are matters of statewide rather than local or municipal concern. Local school districts are agencies of the state and have been described as quasi-municipal corporations. They are not distinct and independent bodies politic. The Legislature's power over the public school system is exclusive, plenary, absolute, entire, and comprehensive, subject only to constitutional constraints. The Legislature has the power to create, abolish, divide, merge, or alter the boundaries of school districts. The state is the beneficial

owner of all school properties, and local districts hold title as trustee for the state. School moneys belong to the state, and the apportionment of funds to a school district does not give the district a proprietary interest in the funds. While the Legislature has chosen to encourage local responsibility for control of public education through local school districts, that is a matter of legislative choice rather than constitutional compulsion, and the authority that the Legislature has given to local districts remains subject to the ultimate and nondelegable responsibility of the Legislature.

(3) Property Taxes § 7.8--Real Property Tax Limitation--Exemptions and Special Taxes--Federally Mandated Costs. Pursuant to Rev. & Tax. Code, § 2271 (local agency may levy rate in addition to maximum property tax rate to pay costs mandated by federal government that are not funded by federal or state government), costs mandated by the federal government are exempt from an agency's taxing and spending limits.

(4) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--State-mandated Costs--Costs Incurred Before Effective Date of Constitutional Provision.

Since Cal. Const., art. XIII B, requiring subvention for state mandates enacted after Jan. 1, 1975, had an effective date of July 1, 1980, a local agency may seek subvention for costs imposed by legislation after Jan. 1, 1975, but reimbursement is limited to costs incurred after July 1, 1980. Reimbursement for costs incurred before July 1, 1980, must be obtained, if at all, under controlling statutory law.

(5) Schools § 53--Parents and Students--Right or Duty to Attend--Handicapped Children--Federal Rehabilitation Act--Obligations Imposed on Districts.

Section 504 of the federal Rehabilitation Act of 1973 (29 U.S.C. § 794) does not only obligate local school districts to prevent handicapped children from being excluded from school. States typically purport to guarantee all of their children the opportunity for a basic education. In California, basic education is regarded as a fundamental right. All basic educational programs are essentially affirmative action activities in the sense that educational agencies are required to evaluate and accommodate the educational needs of the children in their districts. Section 504 does not permit local agencies to accommodate the educational needs of some children while ignoring the needs of others due to their handicapped condition. The statute imposes an obligation

upon local school districts to take affirmative steps to accommodate the needs of handicapped children.

(6) Schools § 53--Parents and Students--Right or Duty to Attend--Handicapped Children--Education of the Handicapped Act.

The federal Education of the Handicapped Act (20 U.S.C. § 1401 et seq.), which since its 1975 amendment has required recipient states to demonstrate a policy that assures all handicapped children the right to a free appropriate education, is not merely a funding statute; rather, it establishes an enforceable substantive right to a free appropriate public education in recipient states. Congress intended the act to establish a basic floor of opportunity that would bring into compliance all school districts with the constitutional right to equal protection with respect to handicapped children. It is also apparent that Congress intended to achieve nationwide application.

(7) Civil Rights § 6--Education--Handicapped--Scope of Federal Statute.

Congress intended the Education of the Handicapped Act (20 U.S.C. § 1401 et seq.) to serve as a means by which state and local educational agencies could fulfill their obligations under the equal protection and due process provisions of the Constitution and under section 504 of the Rehabilitation Act of 1973 (29 U.S.C. § 794). Accordingly, where it is applicable, the act supersedes claims under the Civil Rights Act (42 U.S.C. § 1983) and section 504, and the administrative remedies provided by the act constitute the exclusive remedy of handicapped children and their parents or other representatives. As a result of the exclusive nature of the Education of the Handicapped Act, dissatisfied parties in recipient states must exhaust their administrative remedies under the act before resorting to judicial intervention.

(8a, 8b) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--State-mandated Costs--Special Education:Schools § 4--School Districts; Financing; Funds--Special Education Costs--Reimbursement by State.

The 1975 amendments to the federal Education of the Handicapped Act (20 U.S.C. § 1401 et seq.) constituted a federal mandate with respect to the state. However, even though the state had no real choice in deciding whether to comply with the act, the act did not necessarily require the state to impose all of the costs of implementation upon local school districts. To the extent the state implemented

the act by freely choosing to impose new programs or higher levels of service upon local school districts, the costs of such programs or higher levels of service are state mandated and subject to subvention under Cal. Const., art. XIII B, § 6. Thus, on remand of a proceeding by school districts to the Commission on State Mandates for consideration of whether special education programs constituted new programs or higher levels of service mandated by the state entitling the districts to reimbursement, the commission was required to focus on the costs incurred by local school districts and whether those costs were imposed by federal mandate or by the state's voluntary choice in its implementation of the federal program.

(9) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--Federally Mandated Costs.

The constitutional subvention provision (Cal. Const., art. XIII B, § 6) and the statutory provisions which preceded it do not expressly say that the state is not required to provide a subvention for costs imposed by a federal mandate. Rather, that conclusion follows from the plain language of the subvention provisions themselves. The constitutional provision requires state subvention when "the Legislature or any State agency mandates a new program or higher level of service" on local agencies. Likewise, the earlier statutory provisions required subvention for new programs or higher levels of service mandated by legislative act or executive regulation. When the federal government imposes costs on local agencies, those costs are not mandated by the state and thus would not require a state subvention. Instead, such costs are exempt from local agencies' taxing and spending limitations. This should be true even though the state has adopted an implementing statute or regulation pursuant to the federal mandate, so long as the state had no "true choice" in the manner of implementation of the federal mandate.

(10) Statutes § 28--Construction--Language--Consistency of Meaning Throughout Statute.

As a general rule and unless the context clearly requires otherwise, it must be assumed that the meaning of a term or phrase is consistent throughout the entire act or constitutional article of which it is a part.

(11) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--Federally Mandated Costs--Subvention.

Subvention principles are part of a more comprehensive political scheme. The basic purpose of the scheme as a whole

was to limit the taxing and spending powers of government. The taxing and spending powers of local agencies were to be "frozen" at existing levels with adjustments only for inflation and population growth. Since local agencies are subject to having costs imposed upon them by other governmental entities, the scheme provides relief in that event. If the costs are imposed by the federal government or the courts, then the costs are not included in the local government's taxing and spending limitations. If the costs are imposed by the state, then the state must provide a subvention to reimburse the local agency. Nothing in the scheme suggests that the concept of a federal mandate should have different meanings depending upon whether one is considering subvention or taxing and spending limitations. Thus, the criteria set forth in a California Supreme Court case concerning whether costs mandated by the federal government are exempt from an agency's taxing and spending limits are applicable when subvention is the issue.

(12) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--State-mandated Costs--Special Education--Applicable Criteria in Determining Whether Subvention Required.

In a proceeding for a writ of mandate to direct the Commission on State Mandates to set aside an administrative decision by the State Board of Control (the commission's predecessor), in which the board found that all local special education costs were state mandated and thus subject to state reimbursement, the trial court did not err in determining that the board failed to consider the issues under the appropriate criteria as set forth in a California Supreme Court case concerning whether costs mandated by the federal government are exempt from an agency's taxing and spending limits. The board relied upon the "cooperative federalism" nature of the Education of the Handicapped Act (20 U.S.C. § 1401 et seq.) without any consideration of whether the act left the state any actual choice in the matter. It also relied on litigation involving another state. However, under the criteria set forth in the Supreme Court's case, the litigation in the other state did not support the board's decision but in fact strongly supported a contrary result.

(13) Courts § 34--Decisions and Orders--Prospective and Retroactive Decisions--Opinion Elucidating Existing Law.

In a California Supreme Court case concerning whether costs mandated by the federal government are exempt from an agency's taxing and spending limits, the court elucidated and enforced existing law. Under such circumstances, the rule

of retrospective operation controls. Thus, in a proceeding for a writ of mandate to direct the Commission on State Mandates to set aside an administrative decision by the State Board of Control (the commission's predecessor), in which the board found that all local special education costs were state mandated and thus subject to state reimbursement, the trial court correctly applied the Supreme Court decision to the litigation pending before it.

SPARKS, Acting P. J.

This appeal involves a decade-long battle over claims for subvention by two county superintendents of schools for reimbursement for mandated special education programs. Section 6 of article XIII B of the California Constitution directs, with exceptions not relevant here, that "[w]henver the Legislature or any State agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, ..." The issue on appeal is whether the special education programs in question constituted new programs or higher levels of service mandated by the state entitling the school districts to reimbursement under section 6 of article XIII B of the California Constitution and related statutes for the cost of implementing them or whether these programs were instead mandated by the federal government for which no reimbursement is due.

The Santa Barbara County Superintendent of Schools and the Riverside County Superintendent of Schools each filed claims with the Board of Control for state reimbursement for alleged state-mandated costs incurred in connection with

special education programs. After a lengthy administrative process, the Board of Control rendered a decision finding that all local special education costs were state mandated and subject to state reimbursement. That decision was then successfully challenged in the Sacramento County Superior Court. The superior court entered a judgment by which it: (1) issued a writ of administrative mandate (Code Civ. Proc., § 1094.5), directing the Commission on State Mandates (the successor to the Board of *1571 Control) to set aside the administrative decision and to reconsider the matter in light of the California Supreme Court's intervening decision in *City of Sacramento v. State of California* (1990) 50 Cal.3d 51 [266 Cal.Rptr. 139, 785 P.2d 522]; and (2) denied the Riverside County Superintendent of School's petition for a writ of mandate (Code Civ. Proc., § 1085), which would have directed the State Controller to issue a warrant in payment of the claim. The Riverside County Superintendent of Public Schools appeals. We shall clarify the criteria to be applied by the Commission on State Mandates on remand and affirm the judgment.

I. The Parties

This action was commenced in July 1987 by Jesse R. Huff, then the Director of the California Department of Finance. Huff petitioned for a writ of administrative mandate to set aside the administrative decision which found all the special education costs to be state mandated. On appeal Huff appears as a respondent urging that we affirm the judgment.

The Commission on State Mandates (the Commission) is the administrative agency which now has jurisdiction over local agency claims for reimbursement for state-mandated costs. (Gov. Code, § 17525.) In this respect the Commission is the successor to the Board of Control. The Board of Control rendered the administrative decision which is at issue here. Since an appropriation for payment of these claims was not included in a local government claims bill before January 1, 1985, administrative jurisdiction over the claims has been transferred from the Board of Control to the Commission. (Gov. Code, § 17630.) The Commission is the named defendant in the petition for a writ of administrative mandate. In the trial court and on appeal the Commission has appeared as the agency having administrative jurisdiction over the claims, but has not expressed a position on the merits of the litigation.

The Santa Barbara County Superintendent of Schools (hereafter Santa Barbara) is a claimant for state reimbursement of special education costs incurred in the

1979-1980 fiscal year. Santa Barbara is a real party in interest in the proceeding for administrative mandate. Santa Barbara has not appealed from the judgment of the superior court and, although a nominal respondent on appeal, has not filed a brief in this court.

The Riverside County Superintendent of Schools (hereafter Riverside) represents a consortium of school districts which joined together to provide special education programs to handicapped students. Riverside seeks reimbursement for special education costs incurred in the 1980-1981 fiscal year.

*1572 Riverside is a real party in interest in the proceeding for writ of administrative mandate. It filed a cross-petition for a writ of mandate directing the Controller to pay its claim. Riverside is the appellant in this appeal.

The State of California and the State Treasurer are named cross-defendants in Riverside's cross-petition for a writ of mandate. They joined with Huff in this litigation. The State Controller is the officer charged with drawing warrants for the payment of moneys from the State Treasury upon a lawful appropriation. (Cal. Const., art. XVI, § 7.) The State Controller is a named defendant in Riverside's petition for a writ of mandate. In the trial court and on appeal the State Controller expresses no opinion on the merits of Riverside's reimbursement claim, but asserts that the courts lack authority to compel him to issue a warrant for payment of the claim in the absence of an appropriation for payment of the claim.

In addition to the briefing by the parties on appeal, we have permitted a joint amici curiae brief to be filed in support of Riverside by the Monterey County Office of Education, the Monterey County Office of Education Special Education Local Planning Area, and 21 local school districts.

II. Factual and Procedural Background

The Legislature has provided an administrative remedy for the resolution of local agency claims for reimbursement for state mandates. In *County of Contra Costa v. State of California* (1986) 177 Cal.App.3d 62 [222 Cal.Rptr. 750], at pages 71 and 72, we described these procedures as follows (with footnotes deleted): "Section 2250 [Revenue & Taxation Code] and those following it provide a hearing procedure for the determination of claims by local governments. The State Board of Control is required to hear and determine such claims. (§ 2250.) For purposes of such hearings the board consists of the members of the Board of Control provided for in part 4 (commencing with § 13900) of division 3 of title 2 of the Government Code, together with two local government officials appointed by the Governor. (§ 2251.) The board was

required to adopt procedures for receiving and hearing such claims. (§ 2252.) The first claim filed with respect to a statute or regulation is considered a 'test claim' or a 'claim of first impression.' (§ 2218, subd. (a).) The procedure requires an evidentiary hearing where the claimant, the Department of Finance, and any affected department or agency can present evidence. (§ 2252.) If the board determines that costs are mandated, then it must adopt parameters and guidelines for the reimbursement of such claims. (§ 2253.2.) The claimant or the state is entitled to commence an action in administrative mandate pursuant to Code of Civil Procedure section 1094.5 to set aside a decision of the board on the grounds that the board's decision is not supported by substantial evidence. (§ 2253.5.) *1573

"At least twice each calendar year the board is required to report to the Legislature on the number of mandates it has found and the estimated statewide costs of these mandates. (§ 2255, subd. (a).) In addition to the estimate of the statewide costs for each mandate, the report must also contain the reasons for recommending reimbursement. (§ 2255, subd. (a).) Immediately upon receipt of the report a local government claims bill shall be introduced in the Legislature which, when introduced, must contain an appropriation sufficient to pay for the estimated costs of the mandates. (§ 2255, subd. (a).) In the event the Legislature deletes funding for a mandate from the local government claims bill, then it may take one of the following courses of action: (1) include a finding that the legislation or regulation does not contain a mandate; (2) include a finding that the mandate is not reimbursable; (3) find that a regulation contains a mandate and direct that the Office of Administrative Law repeal the regulation; (4) include a finding that the legislation or regulation contains a reimbursable mandate and direct that the legislation or regulation not be enforced against local entities until funds become available; (5) include a finding that the Legislature cannot determine whether there is a mandate and direct that the legislation or regulation shall remain in effect and be enforceable unless a court determines that the legislation or regulation contains a reimbursable mandate in which case the effectiveness of the legislation or regulation shall be suspended and it shall not be enforced against a local entity until funding becomes available; or (6) include a finding that the Legislature cannot determine whether there is a reimbursable mandate and that the legislation or regulation shall be suspended and shall not be enforced against a local entity until a court determines whether there is a reimbursable mandate. (§ 2255, subd. (b).) If the Legislature deletes funding for a mandate from a local government claims bill but does not follow one of the above courses of action or if

a local entity believes that the action is not consistent with article XIII B of the Constitution, then the local entity may commence a declaratory relief action in the Superior Court of the County of Sacramento to declare the mandate void and enjoin its enforcement. (§ 2255, subd. (c).)

“Effective January 1, 1985, the Legislature has established a new commission to consider and determine claims based upon state mandates. This is known as the Commission on State Mandates and it consists of the Controller, the Treasurer, the Director of Finance, the Director of the Office of Planning and Research, and a public member with experience in public finance, appointed by the Governor and approved by the Senate. (Gov. Code, § 17525.) ‘Costs mandated by the state’ are defined as ‘any increased costs which a local agency or school district is required to incur after July 1, 1980, as a result of any statute enacted after January 1, 1975, or any executive order implementing any statute enacted on or after January 1, 1975, which *1574 mandates a new program or higher level of service of an existing program within the meaning of Section 6 of Article XIII B of the California Constitution.’ (Gov. Code, § 17514.) The procedures before the Commission are similar to those which were followed before the Board of Control. (Gov. Code, § 17500 et seq.) Any claims which had not been included in a local government claims bill prior to January 1, 1985, were to be transferred to and considered by the commission. (Gov. Code, § 17630; [Rev. & Tax. Code,] § 2239.)”

On October 31, 1980, Santa Barbara filed a test claim with the Board of Control seeking reimbursement for costs incurred in the 1979-1980 fiscal year in connection with the provision of special education services as required by Statutes 1977, chapter 1247, and Statutes 1980, chapter 797. Santa Barbara asserted that these acts should be considered an ongoing requirement of increased levels of service.

Santa Barbara's initial claim was based upon the “mandate contained in the two bills specified above [which require] school districts and county offices to provide full and formal due process procedures and hearings to pupils and parents regarding the special education assessment, placement and the appropriate education of the child.” Santa Barbara asserted that state requirements exceeded those of federal law as reflected in section 504 of the Rehabilitation Act of 1973 (29 U.S.C. § 794).¹ Santa Barbara's initial claim was for \$10,500 in state-mandated costs for the 1979-1980 fiscal year.

During the administrative proceedings Santa Barbara amended its claim to reflect the following state-mandated activities alleged to be in excess of federal requirements:

(1) the extension of eligibility to children younger and older than required by federal law; (2) the establishment of procedures to search for and identify children with special needs; (3) assessment and evaluation; (4) the preparation of “Individual Education Plans” (IEP's); (5) due process hearings in placement determinations; (6) substitute teachers; and (7) staff development programs. Santa Barbara was claiming reimbursement in excess of \$520,000 for the cost of these services during the 1979- 1980 fiscal year. *1575

Also, during the administrative proceedings the focus of federally mandated requirements shifted from section 504 of the Rehabilitation Act to federal Public Law No. 94-142, which amended the Education of the Handicapped Act. (20 U.S.C. § 1401 et seq.)²

The Board of Control adopted a decision denying Santa Barbara's claim. The board concluded that the Education of the Handicapped Act resulted in costs mandated by the federal government, that state special education requirements exceed those of federal law, but that “the resulting mandate is not reimbursable because the Legislature already provides funding for all Special Education Services through an appropriation in the annual Budget Act.”

Santa Barbara sought judicial review by petition for a writ of administrative mandate. The superior court found the administrative record and the Board of Control's findings to be inadequate. Judgment was rendered requiring the Board of Control to set aside its decision and to rehear the matter to establish a proper record, including findings. That judgment was not appealed.

On October 30, 1981, Riverside filed a test claim for reimbursement of \$474,477 in special education costs incurred in the 1980-1981 fiscal year. Riverside alleged that the costs were state mandated by chapter 797 of Statutes 1980. The basis of Riverside's claim was Education Code section 56760, a part of the state special education funding formula which, according to Riverside, “mandates a 10% cap on ratio of students served by special education and within that 10% mandates the ratio of students to be served by certain services.” Riverside explained that chapter 797 of Statutes 1980 was enacted as urgency legislation effective July 28, 1980, and that at that time it was already “locked into” providing special education services to more than 13 percent of its students in accordance with prior state law and funding formulae.³

The Riverside claim, like Santa Barbara's, evolved over time with increases in the amount of reimbursement sought. Eventually the Board of *1576 Control denied Riverside's claim for the same reasons the Santa Barbara claim was denied. Riverside sought review by petition for a writ of administrative mandate. In its decision the superior court accepted the board's conclusions that the Education of the Handicapped Act constitutes a federal mandate and that state requirements exceed those of the federal mandate. However, the court disagreed with the board that any appropriation in the state act necessarily satisfies the state's subvention obligation. The court concluded that the Board of Control had failed to consider whether the state had fully reimbursed local districts for the state-mandated costs which were in excess of the federal mandate, and the matter was remanded for consideration of that question. That judgment was not appealed.

On return to the Board of Control, the Santa Barbara claim and the Riverside claim were consolidated. The Board of Control adopted a decision holding that all special education costs under Statutes 1977, chapter 1247, and Statutes 1980, chapter 797, are state-mandated costs subject to subvention. The board reasoned that the federal Education of the Handicapped Act is a discretionary program and that section 504 of the Rehabilitation Act does not require school districts to implement any programs in response to federal law, and therefore special education programs are optional in the absence of a state mandate.

The claimants were directed to draft, and the Board of Control adopted, parameters and guidelines for reimbursement of special education costs. The board submitted a report to the Legislature estimating that the total statewide cost of reimbursement for the 1980-1981 through 1985-1986 fiscal years would be in excess of \$2 billion. Riverside's claim for reimbursement for the 1980-1981 fiscal year was now in excess of \$7 million. Proposed legislation which would have appropriated funds for reimbursement of special education costs during the 1980-1981 through 1985-1986 fiscal years failed to pass in the Legislature. (Sen. Bill No. 1082 (1985-1986 Reg. Sess.)) A separate bill which would have appropriated funds to reimburse Riverside *1577 for its 1980-1981 claim also failed to pass. (Sen. Bill No. 238 (1987-1988 Reg. Sess.))

At this point Huff, as Director of the Department of Finance, brought an action in administrative mandate seeking to set aside the decision of the Board of Control. Riverside cross-

petitioned for a writ of mandate directing the state, the Controller and the Treasurer to issue a warrant in payment of its claim for the 1980-1981 fiscal year.

The superior court concluded that the Board of Control did not apply the appropriate standard in determining whether any portion of local special education costs are incurred pursuant to a federal mandate. The court found that the definition of a federal mandate set forth by the *Supreme Court in City of Sacramento v. State of California, supra*, 50 Cal.3d 51, "marked a departure from the narrower 'no discretion' test" of this court's earlier decision in *City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182 [203 Cal.Rptr. 258]. It further found that the standard set forth in the high court's decision in *City of Sacramento* "is to be applied retroactively." Accordingly, the superior court issued a peremptory writ of mandate directing the Commission on State Mandates to set aside the decision of the Board of Control, to reconsider the claims in light of the decision in *City of Sacramento v. State of California, supra*, 50 Cal.3d 51, and "to ascertain whether certain costs arising from Chapter 797/80 and Chapter 1247/77 are federally mandated, and if so, the extent, if any, to which the state-mandated costs exceed the federal mandate." Riverside's cross-petition for a writ of mandate was denied. This appeal followed.

III. Principles of Subvention

(1) "Subvention" generally means a grant of financial aid or assistance, or a subsidy. (See Webster's Third New Internat. Dict. (1971) p. 2281.) As used in connection with state-mandated costs, the basic legal requirements of subvention can be easily stated; it is in the application of the rule that difficulties arise.

Essentially, the constitutional rule of state subvention provides that the state is required to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. (*County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56 [233 Cal.Rptr. 38, 729 P.2d 202].) This does not mean that the state is required to reimburse local agencies for any incidental cost that may result from the enactment of a state law; rather, the subvention requirement is restricted to governmental services which the local agency is required by *1578 state law to provide to its residents. (*City of Sacramento v. State of California, supra*, 50 Cal.3d at p. 70.) The subvention requirement is intended to prevent the state from transferring the costs of government from itself to local agencies. (*Id.* at p. 68.) Reimbursement is required when

the state "freely chooses to impose on local agencies any peculiarly 'governmental' cost which they were not previously required to absorb." (*Id.* at p. 70, italics in original.)

The requirement of subvention for state-mandated costs had its genesis in the "Property Tax Relief Act of 1972" which is also known as "SB 90" (Senate Bill No. 90). (*City of Sacramento v. State of California, supra*, 156 Cal.App.3d at p. 188.) That act established limitations upon the power of local governments to levy taxes and concomitantly prevented the state from imposing the cost of new programs or higher levels of service upon local governments. (*Ibid.*) The Legislature declared: "It is the intent in establishing the tax rate limits in this chapter to establish limits that will be flexible enough to allow local governments to continue to provide existing programs, that will be firm enough to insure that the property tax relief provided by the Legislature will be long lasting and that will afford the voters in each local government jurisdiction a more active role in the fiscal affairs of such jurisdictions." (Rev. & Tax. Code, former § 2162, Stats. 1972, ch. 1406, § 14.7, p. 2961.)⁴ The act provided that the state would pay each county, city and county, city, and special district the sums which were sufficient to cover the total cost of new state-mandated costs. (See Rev. & Tax. Code, former § 2164.3, Stats. 1972, ch. 1406, § 14.7, pp. 2962-2963.) New state-mandated costs would arise from legislative action or executive regulation after January 1, 1973, which mandated a new program or higher level of service under an existing mandated program. (*Ibid.*)

(2)(See fn. 5.) Senate Bill No. 90 did not specifically include school districts in the group of agencies entitled to reimbursement for state-mandated costs.⁵ (Rev. & Tax. Code, former § 2164.3, Stats. 1972, ch. 1406, § 14.7, pp. 2962-2963.) In fact, at that time methods of financing education in this state were *1579 undergoing fundamental reformation as the result of the litigation in *Serrano v. Priest* (1971) 5 Cal.3d 584 [96 Cal.Rptr. 601, 487 P.2d 1241, 41 A.L.R.3d 1187]. At the time of the *Serrano* decision local property taxes were the primary source of school revenue. (*Id.* at p. 592.) In *Serrano*, the California Supreme Court held that education is a fundamental interest, that wealth is a suspect classification, and that an educational system which produces disparities of opportunity based upon district wealth would violate principles of equal protection. (*Id.* at pp. 614-615, 619.) A major portion of Senate Bill No. 90 constituted new formulae for state and local contributions to education in a legislative response to the decision in *Serrano*. (Stats. 1972, ch. 1406, §§ 1.5-2.74, pp. 2931-2953. See *Serrano v. Priest*

(1976) 18 Cal.3d 728, 736- 737 [135 Cal.Rptr. 345, 557 P.2d 929].)⁶

The provisions of Senate Bill No. 90 were amended and refined in legislation enacted the following year. (Stats. 1973, ch. 358.) Revenue and Taxation Code section 2231, subdivision (a), was enacted to require the state to reimburse local agencies, including school districts, for the full costs of new programs or increased levels of service mandated by the Legislature after January 1, 1973. Local agencies except school districts were also entitled to reimbursement for costs mandated by executive regulation after January 1, 1973. (Rev. & Tax. Code, § 2231, subd. (d), added by Stats. 1973, ch. 358, § 3, p. 783 *1580 and repealed by Stats. 1986, ch. 879, § 23, p. 3045.) In subsequent years legislation was enacted to entitle school districts to subvention for state-mandated costs imposed by legislative acts after January 1, 1973, or by executive regulation after January 1, 1978. (Rev. & Tax. Code, former § 2207.5, added by Stats. 1977, ch. 1135, § 5, p. 3646 and amended by Stats. 1980, ch. 1256, § 5, pp. 4248-4249.)

In the 1973 legislation, Revenue and Taxation Code section 2271 was enacted to provide, among other things: "A local agency may levy, or have levied on its behalf, a rate in addition to the maximum property tax rate established pursuant to this chapter (commencing with Section 2201) to pay costs mandated by the federal government or costs mandated by the courts or costs mandated by initiative enactment, which are not funded by federal or state government." (3) In this respect costs mandated by the federal government are exempt from an agency's taxing and spending limits. (*City of Sacramento v. State of California, supra*, 50 Cal.3d at p. 71, fn. 17.)

At the November 6, 1979, General Election, the voters added article XIII B to the state Constitution by enacting Proposition 4. That article imposes spending limits on the state and all local governments. For purposes of article XIII B the term "local government" includes school districts. (Cal. Const., art. XIII B, § 8, subd. (d).) The measure accomplishes its purpose by limiting a governmental entity's annual appropriations to the prior year's appropriations limit adjusted for changes in the cost of living and population growth, except as otherwise provided in the article. (Cal. Const., art. XIII B, § 1.)⁷ The appropriations subject to limitation do not include, among other things: "Appropriations required to comply with mandates of the courts or the federal government which, without discretion, require an expenditure for additional

services or which unavoidably make the provision of existing services more costly.” (Cal. Const., art. XIII B, § 9, subd. (b).)

Like its statutory predecessor, the constitutional initiative measure includes a provision designed “to preclude the state from shifting to local agencies the financial responsibility for providing public services in view of these restrictions on the taxing and spending power of the local entities.” (*Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 835-836 [244 Cal.Rptr. 677, 750 P.2d 318].) Section 6 of article XIII B of the state Constitution provides: “Whenever the Legislature or any State agency mandates a new program or higher level of service on any local government, the *1581 State shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [¶] (a) Legislative mandates requested by the local agency affected; [¶] (b) Legislation defining a new crime or changing an existing definition of a crime; or [¶] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975.”

Although article XIII B of the state Constitution requires subvention for state mandates enacted after January 1, 1975, the article had an effective date of July 1, 1980. (Cal. Const., art. XIII B, § 10.) (4) Accordingly, under the constitutional provision, a local agency may seek subvention for costs imposed by legislation after January 1, 1975, but reimbursement is limited to costs incurred after July 1, 1980. (*City of Sacramento v. State of California, supra*, 156 Cal.App.3d at pp. 190-193.) Reimbursement for costs incurred before July 1, 1980, must be obtained, if at all, under controlling statutory law. (See 68 Ops.Cal.Atty.Gen. 244 (1985).)

The constitutional subvention provision, like the statutory scheme before it, requires state reimbursement whenever “the Legislature or any State agency” mandates a new program or higher level of service. (Cal. Const., art. XIII B, § 6.) Accordingly, it has been held that state subvention is not required when the federal government imposes new costs on local governments. (*City of Sacramento v. State of California, supra*, 156 Cal.App.3d at p. 188; see also *Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521, 543 [234 Cal.Rptr. 795].) In our *City of Sacramento* decision this court held that a federal program in which the state participates is not a federal mandate, regardless of the incentives for participation, unless the program leaves state or

local government with no discretion as to alternatives. (156 Cal.App.3d at p. 198.)

In its *City of Sacramento* opinion,⁸ the California Supreme Court rejected this court's earlier formulation. In doing so the high court noted that the vast bulk of cost-producing federal influence on state and local government is by inducement or incentive rather than direct compulsion. (50 Cal.3d at p. 73.) However, “certain regulatory standards imposed by the federal government *1582 under 'cooperative federalism' schemes are coercive on the states and localities in every practical sense.” (*Id.* at pp. 73-74.) The test for determining whether there is a federal mandate is whether compliance with federal standards “is a matter of true choice,” that is, whether participation in the federal program “is truly voluntary.” (*Id.* at p. 76.) The court went on to say: “Given the variety of cooperative federal-state-local programs, we here attempt no final test for 'mandatory' versus 'optional' compliance with federal law. A determination in each case must depend on such factors as the nature and purpose of the federal program; whether its design suggests an intent to coerce; when state and/or local participation began; the penalties, if any, assessed for withdrawal or refusal to participate or comply; and any other legal and practical consequences of nonparticipation, noncompliance, or withdrawal.” (*Ibid.*)

IV. Special Education

The issues in this case cannot be resolved by consideration of a particular federal act in isolation. Rather, reference must be made to the historical and legal setting of which the particular act is a part. Our consideration begins in the early 1970's.

In considering the 1975 amendments to the Education of the Handicapped Act, Congress referred to a series of “landmark court cases” emanating from 36 jurisdictions which had established the right to an equal educational opportunity for handicapped children. (See *Smith v. Robinson* (1984) 468 U.S. 992, 1010 [82 L.Ed.2d 746, 763, 104 S.Ct. 3457].) Two federal district court cases, *Pennsylvania Ass'n, Ret'd Child. v. Commonwealth of Pa.* (E.D.Pa. 1972) 343 F.Supp. 279 (see also *Pennsylvania Ass'n, Retard. Child. v. Commonwealth of Pa.* (E.D.Pa. 1971) 334 F.Supp. 1257), and *Mills v. Board of Education of District of Columbia* (D.D.C. 1972) 348 F.Supp. 866, were the most prominent of these judicial decisions. (See *Hendrick Hudson Dist. Bd. of Ed. v. Rowley* (1982) 458 U.S. 176, 180, fn. 2 [73 L.Ed.2d 690, 695, 102 S.Ct. 3034].)

In the Pennsylvania case, an association and the parents of certain retarded children brought a class action against

the commonwealth and local school districts in the commonwealth, challenging the exclusion of retarded children from programs of education and training in the public schools. (*Pennsylvania Ass'n, Ret'd. Child. v. Commonwealth of Pa.*, *supra*, 343 F.Supp. at p. 282.) The matter was assigned to a three-judge panel which heard evidence on the plaintiffs' due process and equal protection claims. (*Id.* at p. 285.) The parties then agreed to resolve the litigation by means of a consent *1583 judgment. (*Ibid.*) The consent agreement required the defendants to locate and evaluate all children in need of special education services, to reevaluate placement decisions periodically, and to accord due process hearings to parents who are dissatisfied with placement decisions. (*Id.* at pp. 303-306.) It required the defendants to provide "a free public program of education and training appropriate to the child's capacity." (*Id.* at p. 285, italics deleted.)

In view of the consent agreement the district court was not required to resolve the plaintiffs' equal protection and due process contentions. Rather, it was sufficient for the court to find that the suit was not collusive and that the plaintiffs' claims were colorable. The court found: "Far from an indication of collusion, however, the Commonwealth's willingness to settle this dispute reflects an intelligent response to overwhelming evidence against [its] position." (*Pennsylvania Ass'n, Ret'd. Child. v. Commonwealth of Pa.*, *supra*, 343 F.Supp. at p. 291.) The court said that it was convinced the due process and equal protection claims were colorable. (*Id.* at pp. 295-296.)

In the *Mills* case, an action was brought on behalf of a number of school-age children with exceptional needs who were excluded from the Washington, D.C., public school system. (*Mills v. Board of Education of District of Columbia*, *supra*, 348 F.Supp. at p. 868.) The district court concluded that equal protection entitled the children to a public-supported education appropriate to their needs and that due process required a hearing with respect to classification decisions. (*Id.* at pp. 874-875.) The court said: "If sufficient funds are not available to finance all of the services and programs that are needed and desirable in the system then the available funds must be expended equitably in such manner that no child is entirely excluded from a publicly supported education consistent with his needs and ability to benefit therefrom. The inadequacies of the District of Columbia Public School System whether occasioned by insufficient funding or administrative inefficiency, certainly cannot be permitted to bear more heavily on the 'exceptional' or handicapped child than on the normal child." (*Id.* at p. 876.)

In the usual course of events, the development of principles of equal protection and due process as applied to special education, which had just commenced in the early 1970's with the authorities represented by the *Pennsylvania* and *Mills* cases, would have been fully expounded through appellate processes. However, the necessity of judicial development was truncated by congressional action. In the Rehabilitation Act of 1973, section 504, Congress provided: "No otherwise qualified handicapped individual in the United States, as defined in section 706(7) [now 706(8)] of this title, *1584 shall, solely by reason of his handicap, be excluded from the participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance" (29 U.S.C. § 794, Pub.L. No. 93- 112, tit. V, § 504 (Sept. 26, 1973) 87 Stat. 394.)⁹ Since federal assistance to education is pervasive (see, e.g., Ed. Code, §§ 12000-12405, 49540 et seq., 92140 et seq.), section 504 was applicable to virtually all public educational programs in this and other states.

The Department of Health, Education and Welfare (HEW) promulgated regulations to ensure compliance with section 504 by educational agencies.¹⁰ The regulations required local educational agencies to locate and evaluate handicapped children in order to provide appropriate educational opportunities and to provide administrative hearing procedures in order to resolve disputes. The federal courts concluded that section 504 was essentially a codification of the equal protection rights of citizens with disabilities. (See *Halderman v. Pennhurst State School & Hospital* (E.D.Pa. 1978) 446 F.Supp. 1295, 1323.) Courts also held that section 504 embraced a private cause of action to enforce its requirements. (*Sherry v. New York State Ed. Dept.* (W.D.N.Y. 1979) 479 F.Supp. 1328, 1334; *Doe v. Marshall* (S.D.Tex. 1978) 459 F.Supp. 1190, 1192.) It was further held that section 504 imposed upon school districts and other public educational agencies "the duty of analyzing individually the needs of each handicapped student and devising a program which will enable each individual handicapped student to receive an appropriate, free public education. The failure to perform this analysis and structure a program suited to the needs of each handicapped child, constitutes discrimination against that child and a failure to provide an appropriate, free *1585 public education for the handicapped child." (*Doe v. Marshall*, *supra*, 459 F.Supp. at p. 1191. See also *David H. v. Spring Branch Independent School Dist.* (S.D.Tex. 1983) 569 F.Supp. 1324,

1334; *Halderman v. Pennhurst State School & Hospital*, *supra*, 446 F.Supp. at p. 1323.)

(5) Throughout these proceedings Riverside, relying upon the decision in *Southeastern Community College v. Davis*, *supra*, 442 U.S. 397 [60 L.Ed.2d 980], has contended that section 504 cannot be considered a federal mandate because it does not obligate local school districts to take any action to accommodate the needs of handicapped children so long as they are not excluded from school. That assertion is not correct.

In the *Southeastern Community College* case a prospective student with a serious hearing disability sought to be admitted to a postsecondary educational program to be trained as a registered nurse. As a result of her disability the student could not have completed the academic requirements of the program and could not have attended patients without full-time personal supervision. She sought to require the school to waive the academic requirements, including an essential clinical program, which she could not complete and to otherwise provide full-time personal supervision. That demand, the Supreme Court held, was beyond the scope of section 504, which did not require the school to modify its program affirmatively and substantially. (442 U.S. at pp. 409-410 [60 L.Ed.2d at pp. 990- 991].)

The *Southeastern Community College* decision is inapposite. States typically do not guarantee their citizens that they will be admitted to, and allowed to complete, specialized postsecondary educational programs. State educational institutions often impose stringent admittance and completion requirements for such programs in higher education. In the *Southeastern Community College* case the Supreme Court simply held that an institution of higher education need not lower or effect substantial modifications of its standards in order to accommodate a handicapped person. (442 U.S. at p. 413 [60 L.Ed.2d at pp. 992-993].) The court did not hold that a primary or secondary educational agency need do nothing to accommodate the needs of handicapped children. (See *Alexander v. Choate* (1985) 469 U.S. 287, 301 [83 L.Ed.2d 661, 672, 105 S.Ct. 712].)

States typically do purport to guarantee all of their children the opportunity for a basic education. In fact, in this state basic education is regarded as a fundamental right. (*Serrano v. Priest*, *supra*, 18 Cal.3d at pp. 765-766.) All basic educational programs are essentially affirmative action activities in the sense that educational agencies are required to evaluate and accommodate *1586 the educational needs of the children in their districts. Section 504 would not appear to permit

local agencies to accommodate the educational needs of some children while ignoring the needs of others due to their handicapped condition. (Compare *Lau v. Nichols* (1974) 414 U.S. 563 [39 L.Ed.2d 1, 94 S.Ct. 786], which required the San Francisco Unified School District to take affirmative steps to accommodate the needs of non-English speaking students under section 601 of the Civil Rights Act of 1964.)

Riverside's view of section 504 is inconsistent with congressional intent in enacting it. The congressional record makes it clear that section 504 was perceived to be necessary not to combat affirmative animus but to cure society's benign neglect of the handicapped. The record is replete with references to discrimination in the form of the denial of special educational assistance to handicapped children. In *Alexander v. Choate*, *supra*, 469 U.S. at pages 295 to 297 [83 L.Ed.2d at pages 668- 669], the Supreme Court took note of these comments in concluding that a violation of section 504 need not be proven by evidence of purposeful or intentional discrimination. With respect to the *Southeastern Community College v. Davis*, *supra*, 442 U.S. 397 case, the high court said: "The balance struck in *Davis* requires that an otherwise qualified handicapped individual must be provided with meaningful access to the benefit that the grantee offers. The benefit itself, of course, cannot be defined in a way that effectively denies otherwise qualified handicapped individuals the meaningful access to which they are entitled; to assure meaningful access, reasonable accommodations in the grantee's program or benefit may have to be made. ..." (*Alexander v. Choate*, *supra*, 469 U.S. at p. 301 [83 L.Ed.2d at p. 672], *fn. omitted*.)

Federal appellate courts have rejected the argument that the *Southeastern Community College* case means that pursuant to section 504 local educational agencies need do nothing affirmative to accommodate the needs of handicapped children. (*N. M. Ass'n for Retarded Citizens v. State of N. M.*, *supra*, 678 F.2d at pp. 852-853; *Tatro v. State of Texas* (5th Cir. 1980) 625 F.2d 557, 564 [63 A.L.R. Fed. 844].)¹¹ We are satisfied that section 504 does impose an obligation upon local school districts to accommodate the needs of handicapped children. However, as was the case with constitutional principles, full judicial development of section 504 as it relates to special education in elementary and secondary school districts was truncated by congressional action. *1587

In 1974 Congress became dissatisfied with the progress under earlier efforts to stimulate the states to accommodate the educational needs of handicapped children. (*Hendrick Hudson Dist. Bd. of Ed. v. Rowley*, *supra*, 458 U.S. at

p. 180 [73 L.Ed.2d at p. 695].) These earlier efforts had included a 1966 amendment to the Elementary and Secondary Education Act of 1965, and the 1970 version of the Education of the Handicapped Act. (*Ibid.*) The prior acts had been grant programs that did not contain specific guidelines for a state's use of grant funds. (*Ibid.*) In 1974 Congress greatly increased federal funding for education of the handicapped and simultaneously required recipient states to adopt a goal of providing full educational opportunities to all handicapped children. (*Ibid.* [73 L.Ed.2d at pp. 695-696].) The following year Congress amended the Education of the Handicapped Act by enacting the Education for All Handicapped Children Act of 1975. (*Ibid.* [73 L.Ed.2d at p. 696].)

Since the 1975 amendment, the Education of the Handicapped Act has required recipient states to demonstrate a policy that assures all handicapped children the right to a free appropriate education. (20 U.S.C. § 1412(1).) (6) The act is not merely a funding statute; rather, it establishes an enforceable substantive right to a free appropriate public education in recipient states. (*Smith v. Robinson, supra*, 468 U.S. at p. 1010 [82 L.Ed.2d at p. 764].) To accomplish this purpose the act incorporates the major substantive and procedural requirements of the "right to education" cases which were so prominent in the congressional consideration of the measure. (*Hendrick Hudson Dist. Bd. of Ed. v. Rowley, supra*, 458 U.S. at p. 194 [73 L.Ed.2d at p. 704].) The substantive requirements of the act have been interpreted in a manner which is "strikingly similar" to the requirements of section 504 of the Rehabilitation Act of 1973. (*Smith v. Robinson, supra*, 468 U.S. at pp. 1016-1017 [82 L.Ed.2d at p. 768].) The Supreme Court has noted that Congress intended the act to establish "a basic floor of opportunity that would bring into compliance all school districts with the constitutional right to equal protection with respect to handicapped children." (*Hendrick Hudson Dist. Bd. of Ed. v. Rowley, supra*, 458 U.S. at p. 200 [73 L.Ed.2d at p. 708] citing the House of Representatives Report.)¹²

It is demonstrably manifest that in the view of Congress the substantive requirements of the 1975 amendment to the Education of the Handicapped Act were commensurate with the constitutional obligations of state and local *1588 educational agencies. Congress found that "State and local educational agencies have a responsibility to provide education for all handicapped children, but present financial resources are inadequate to meet the special educational needs of handicapped children;" and "it is in the national interest that the Federal Government assist State and local efforts to provide programs to meet the educational needs of

handicapped children in order to assure equal protection of the law." (20 U.S.C. former § 1400(b)(8) & (9).)¹³

It is also apparent that Congress intended the act to achieve nationwide application: "It is the purpose of this chapter to assure that all handicapped children have available to them, within the time periods specified in section 1412(2)(B) of this title, a free appropriate public education which emphasizes special education and related services designed to meet their unique needs, to assure that the rights of handicapped children and their parents or guardians are protected, to assist States and localities to provide for the education of all handicapped children, and to assess and assure the effectiveness of efforts to educate handicapped children." (20 U.S.C. former § 1400(c).)

In order to gain state and local acceptance of its substantive provisions, the Education of the Handicapped Act employs a "cooperative federalism" scheme, which has also been referred to as the "carrot and stick" approach. (See *City of Sacramento v. State of California, supra*, 50 Cal.3d at pp. 73-74; *City of Sacramento v. State of California, supra*, 156 Cal.App.3d at p. 195.) As an incentive Congress made substantial federal financial assistance available to states and local educational agencies that would agree to adhere to the substantive and procedural terms of the act. (20 U.S.C. §§ 1411, 1412.) For example, the administrative record indicates that for fiscal year 1979-1980, the base year for Santa Barbara's claim, California received \$71.2 million in federal assistance, and during fiscal year 1980-1981, the base year for Riverside's claim, California received \$79.7 million. We cannot say that such assistance on an ongoing basis is trivial or insubstantial.

Contrary to Riverside's argument, federal financial assistance was not the only incentive for a state to comply with the Education of the Handicapped Act. (7) Congress intended the act to serve as a means by which state and *1589 local educational agencies could fulfill their obligations under the equal protection and due process provisions of the Constitution and under section 504 of the Rehabilitation Act of 1973. Accordingly, where it is applicable the act supersedes claims under the Civil Rights Act (42 U.S.C. § 1983) and section 504 of the Rehabilitation Act of 1973, and the administrative remedies provided by the act constitute the exclusive remedy of handicapped children and their parents or other representatives. (*Smith v. Robinson, supra*, 468 U.S. at pp. 1009, 1013, 1019 [82 L.Ed.2d at pp. 763, 766, 769].)¹⁴

As a result of the exclusive nature of the Education of the Handicapped Act, dissatisfied parties in recipient states must exhaust their administrative remedies under the act before resorting to judicial intervention. (*Smith v. Robinson, supra*, 468 U.S. at p. 1011 [82 L.Ed.2d at p. 764].) This gives local agencies the first opportunity and the primary authority to determine appropriate placement and to resolve disputes. (*Ibid.*) If a party is dissatisfied with the final result of the administrative process then he or she is entitled to seek judicial review in a state or federal court. (20 U.S.C. § 1415(e)(2).) In such a proceeding the court independently reviews the evidence but its role is restricted to that of review of the local decision and the court is not free to substitute its view of sound educational policy for that of the local authority. (*Hendrick Hudson Dist. Bd. of Ed. v. Rowley, supra*, 458 U.S. at pp. 206-207 [73 L.Ed.2d at p. 712].) And since the act provides the exclusive remedy for addressing a handicapped child's right to an appropriate education, where the act applies a party cannot pursue a cause of action for constitutional violations, either directly or under the Civil Rights Act (42 U.S.C. § 1983), nor can a party proceed under section 504 of the Rehabilitation Act of 1973. (*Smith v. Robinson, supra*, 468 U.S. at pp. 1013, 1020 [82 L.Ed.2d at pp. 766, 770].)

Congress's intention to give the Education of the Handicapped Act nationwide application was successful. By the time of the decision in *Hendrick Hudson Dist. Bd. of Ed. v. Rowley, supra*, all states except New Mexico had become recipients under the act. (458 U.S. at pp. 183-184 [73 L.Ed.2d at p. 698].) It is important at this point in our discussion to consider the experience of New Mexico, both because the Board of Control relied upon that state's failure to adopt the Education of the Handicapped Act as proof that the act is not federally mandated, and because it illustrates the consequences of a failure to adopt the act. *1590

In *N. M. Ass'n for Retarded Citizens v. State of N. M.* (D.N.M. 1980) 495 F.Supp. 391, a class action was brought against New Mexico and its local school districts based upon the alleged failure to provide a free appropriate public education to handicapped children. The plaintiffs' causes of action asserting constitutional violations were severed and stayed pending resolution of the federal statutory causes of action. (*Id.* at p. 393.) The district court concluded that the plaintiffs could not proceed with claims under the Education of the Handicapped Act because the state had not adopted that act and, without more, that was a governmental decision within the state's power. (*Id.* at p. 394.)¹⁵ The court then considered the cause of action under section 504 and found that both the

state and its local school districts were in violation of that section by failing to provide a free appropriate education to handicapped children within their territories. (495 F.Supp. at pp. 398-399.)

After the district court entered an injunctive order designed to compel compliance with section 504, the matter was appealed. (*N. M. Ass'n for Retarded Citizens v. State of N. M., supra*, 678 F.2d 847.) The court of appeals rejected the defendants' arguments that the plaintiffs were required to exhaust state administrative remedies before bringing their action and that the district court should have applied the doctrine of primary jurisdiction to defer ruling until the Office of Civil Rights could complete its investigation into the charges. (*Id.* at pp. 850-851.) The court also rejected the defendants' arguments that section 504 does not require them to take action to accommodate the needs of handicapped children and that proof of disparate treatment is essential to a violation of section 504. (678 F.2d at p. 854.) The court found sufficient evidence in the record to establish discrimination against handicapped children within the meaning of section 504. (678 F.2d at p. 854.) However, the reviewing court concluded that the district court had applied an erroneous standard in reaching its decision, and the matter was remanded for further proceedings. (*Id.* at p. 855.)

On July 19, 1984, during the proceedings before the Board of Control, a representative of the Department of Education testified that New Mexico has since implemented a program of special education under the Education of the Handicapped Act. We have no doubt that after the litigation we have just recounted New Mexico saw the handwriting on the wall and realized that it could either establish a program of special education with federal financial assistance under the Education of the Handicapped Act, or be compelled through litigation to accommodate the educational needs of handicapped *1591 children without federal assistance and at the risk of losing other forms of federal financial aid. In any event, with the capitulation of New Mexico the Education of the Handicapped Act achieved the nationwide application intended by Congress. (20 U.S.C. § 1400(c).)

California's experience with special education in the time period leading up to the adoption of the Education of the Handicapped Act is examined as a case study in Kirp et al., *Legal Reform of Special Education: Empirical Studies and Procedural Proposals* (1974) 62 Cal.L.Rev. 40, at pages 96 through 115. As this study reflects, during this period the state and local school districts were struggling to create a program to accommodate adequately the educational needs

of the handicapped. (*Id.* at pp. 97-110.) Individuals and organized groups, such as the California Association for the Retarded and the California Association for Neurologically Handicapped Children, were exerting pressure through political and other means at every level of the educational system. (*Ibid.*) Litigation was becoming so prevalent that the authors noted: "Fear of litigation over classification practices, prompted by the increasing number of lawsuits, is pervasive in California." (*Id.* at p. 106, fn. 295.)¹⁶

In the early 1970's the state Department of Education began working with local school officials and university experts to design a "California Master Plan for Special Education." (Kirp et al., *Legal Reform of Special Education: Empirical Studies and Procedural Proposals*, *supra*, 62 Cal.L.Rev. at p. 111.) In 1974 the Legislature enacted legislation to give the Superintendent of Public Instruction the authority to implement and administer a pilot program pursuant to a master plan adopted by State Board of Education in order to determine whether services under such a plan would better meet the needs of children with exceptional needs. (Stats. 1974, ch. 1532, § 1, p. 3441, enacting Ed. Code, § 7001.) In 1977 the Legislature acted to further implement the master plan. (Stats. 1977, ch. 1247, especially § 10, pp. 4236-4237, enacting Ed. Code, § 56301.) In 1980 the Legislature enacted urgency legislation revising our special education laws with the express intent of complying with the 1975 amendments to the Education of the Handicapped Act. (Stats. 1980, ch. 797, especially § 9, pp. 2411-2412, enacting Ed. Code, § 56000.)

As this history demonstrates, in determining whether to adopt the requirements of the Education of the Handicapped Act as amended in 1975, our *1592 Legislature was faced with the following circumstances: (1) In the *Serrano* litigation, our Supreme Court had declared basic education to be a fundamental right and, without even considering special education in the equation, had found our educational system to be violative of equal protection principles. (2) Judicial decisions from other jurisdictions had established that handicapped children have an equal protection right to a free public education appropriate to their needs and due process rights with regard to placement decisions. (3) Congress had enacted section 504 of the Rehabilitation Act of 1973 to codify the equal protection rights of handicapped children in any school system that receives federal financial assistance and to threaten the state and local districts with the loss of all federal funds for failure to accommodate the needs of such children. (4) Parents and organized groups representing handicapped children were becoming increasingly litigious in their efforts to secure an appropriate

education for handicapped children. (5) In enacting the 1975 amendments to the Education of the Handicapped Act, Congress did not intend to require state and local educational agencies to do anything more than the Constitution already required of them. The act was intended to provide a means by which educational agencies could fulfill their constitutional responsibilities and to provide substantial federal financial assistance for states that would agree to do so.

(8a) Under these circumstances we have no doubt that enactment of the 1975 amendments to the Education of the Handicapped Act constituted a federal mandate under the criteria set forth in *City of Sacramento v. State of California*, *supra*, 50 Cal.3d at page 76. The remaining question is whether the state's participation in the federal program was a matter of "true choice" or was "truly voluntary." The alternatives were to participate in the federal program and obtain federal financial assistance and the procedural protections accorded by the act, or to decline to participate and face a barrage of litigation with no real defense and ultimately be compelled to accommodate the educational needs of handicapped children in any event. We conclude that so far as the state is concerned the Education of the Handicapped Act constitutes a federal mandate.

V. Subvention for Special Education

Our conclusion that the Education of the Handicapped Act is a federal mandate with respect to the state marks the starting point rather than the end of the consideration which will be required to resolve the Santa Barbara and Riverside test claims. In *City of Sacramento v. State of California*, *supra*, 50 Cal.3d at pages 66 through 70, the California Supreme Court concluded that the costs at issue in that case (unemployment insurance premiums) were not subject to state subvention because they were incidental to a law of general *1593 application rather than a new governmental program or increased level of service under an existing program. The court addressed the federal mandate issue solely with respect to the question whether the costs were exempt from the local government's taxing and spending limitations. (*Id.* at pp. 70-71.) It observed that prior authorities had assumed that if a cost was federally mandated it could not be a state mandated cost subject to subvention, and said: "We here express no view on the question whether 'federal' and 'state' mandates are mutually exclusive for purposes of state subvention, but leave that issue for another day. ..." (*Id.* at p. 71, fn. 16.) The test claims of Santa Barbara and Riverside present that question which we address here for the guidance of the Commission on remand.

(9) The constitutional subvention provision and the statutory provisions which preceded it do not expressly say that the state is not required to provide a subvention for costs imposed by a federal mandate. Rather, that conclusion follows from the plain language of the subvention provisions themselves. The constitutional provision requires state subvention when "the Legislature or any State agency mandates a new program or higher level of service" on local agencies. (Cal. Const., art. XIII B, § 6.) Likewise, the earlier statutory provisions required subvention for new programs or higher levels of service mandated by legislative act or executive regulation. (See Rev. & Tax. Code, former §§ 2164.3 [Stats. 1972, ch. 1406, § 14.7, pp. 2962-2963], 2231 [Stats. 1973, ch. 358, § 3, pp. 783-784], 2207 [Stat. 1975, ch. 486, § 1.8, pp. 997-998], 2207.5 [Stats. 1977, ch. 1135, § 5, pp. 3646-3647].) When the federal government imposes costs on local agencies those costs are not mandated by the state and thus would not require a state subvention. Instead, such costs are exempt from local agencies' taxing and spending limitations. This should be true even though the state has adopted an implementing statute or regulation pursuant to the federal mandate so long as the state had no "true choice" in the manner of implementation of the federal mandate. (See *City of Sacramento v. State of California*, *supra*, 50 Cal.3d at p. 76.)

This reasoning would not hold true where the manner of implementation of the federal program was left to the true discretion of the state. A central purpose of the principle of state subvention is to prevent the state from shifting the cost of government from itself to local agencies. (*City of Sacramento v. State of California*, *supra*, 50 Cal.3d at p. 68.) Nothing in the statutory or constitutional subvention provisions would suggest that the state is free to shift state costs to local agencies without subvention merely because those costs were imposed upon the state by the federal government. In our view the determination whether certain costs were imposed upon a local agency by a federal mandate must focus upon the local agency which *1594 is ultimately forced to bear the costs and how those costs came to be imposed upon that agency. If the state freely chose to impose the costs upon the local agency as a means of implementing a federal program then the costs are the result of a reimbursable state mandate regardless whether the costs were imposed upon the state by the federal government.

The Education of the Handicapped Act is a comprehensive measure designed to provide all handicapped children with basic educational opportunities. While the act includes certain substantive and procedural requirements which must be included in a state's plan for implementation of the act, it leaves primary responsibility for implementation to the state.

(20 U.S.C. §§ 1412, 1413.) (8b) In short, even though the state had no real choice in deciding whether to comply with the federal act, the act did not necessarily require the state to impose all of the costs of implementation upon local school districts. To the extent the state implemented the act by freely choosing to impose new programs or higher levels of service upon local school districts, the costs of such programs or higher levels of service are state mandated and subject to subvention.

We can illustrate this point with a hypothetical situation. Subvention principles are intended to prevent the state from shifting the cost of state governmental services to local agencies and thus subvention is required where the state imposes the cost of such services upon local agencies even if the state continues to perform the services. (*Lucia Mar Unified School Dist. v. Honig*, *supra*, 44 Cal.3d at pp. 835-836.) The Education of the Handicapped Act requires the state to provide an impartial, state-level review of the administrative decisions of local or intermediate educational agencies. (20 U.S.C. § 1415(c), (d).) Obviously, the state could not shift the actual performance of these new administrative reviews to local districts, but it could attempt to shift the costs to local districts by requiring local districts to pay the expenses of reviews in which they are involved. An attempt to do so would trigger subvention requirements. In such a hypothetical case, the state could not avoid its subvention responsibility by pleading "federal mandate" because the federal statute does not require the state to impose the costs of such hearings upon local agencies. Thus, as far as the local agency is concerned, the burden is imposed by a state rather than a federal mandate.

In the administrative proceedings the Board of Control did not address the "federal mandate" question under the appropriate standard and with proper focus on local school districts. In its initial determination the board concluded that the Education of the Handicapped Act constituted a federal mandate and that the state-imposed costs on local school districts in excess of the federally imposed costs. However, the board did not consider the *1595 extent of the state-mandated costs because it concluded that any appropriation by the state satisfied its obligation. On Riverside's petition for a writ of administrative mandate the superior court remanded to the Board of Control to consider whether the state appropriation was sufficient to reimburse local school districts fully for the state-mandated costs. On remand the board clearly applied the now-discredited criteria set forth in this court's decision in *City of Sacramento v. State of California*, *supra*, 156 Cal.App.3d 182, and concluded that the Education of the

Handicapped Act is not a federal mandate at any level of government. Under these circumstances we agree with the trial court that the matter must be remanded to the Commission for consideration in light of the criteria set forth in the Supreme Court's *City of Sacramento* decision. We add that on remand the Commission must focus upon the costs incurred by local school districts and whether those costs were imposed on local districts by federal mandate or by the state's voluntary choice in its implementation of the federal program.

VI. Riverside's Objections

In light of this discussion we may now consider Riverside's objections to the trial court's decision to remand the matter to the Commission for reconsideration.

Riverside asserts that the California Supreme Court opinion in *City of Sacramento* is not on point because the court did not address the federal mandate question with respect to state subvention principles. Riverside implies that the definition of a federal mandate may be different with respect to state subvention than with respect to taxing and spending limitations. (10) As a general rule and unless the context clearly requires otherwise, we must assume that the meaning of a term or phrase is consistent throughout the entire act or constitutional article of which it is a part. (*Lungren v. Davis* (1991) 234 Cal.App.3d 806, 823 [285 Cal.Rptr. 777].) (11) Subvention principles are part of a more comprehensive political scheme. The basic purpose of the scheme as a whole was to limit the taxing and spending powers of government. The taxing and spending powers of local agencies were to be "frozen" at existing levels with adjustments only for inflation and population growth. Since local agencies are subject to having costs imposed upon them by other governmental entities, the scheme provides relief in that event. If the costs are imposed by the federal government or the courts, then the costs are not included in the local government's taxing and spending limitations. If the costs are imposed by the state then the state must provide a subvention to reimburse the local agency. Nothing in this scheme suggests that the concept of a federal mandate should have different meanings depending upon whether one is considering subvention or taxing and spending limitations. Accordingly, we reject the claim that the criteria set forth in *1596 the Supreme Court's *City of Sacramento* decision do not apply when subvention is the issue.

(12) Riverside asserts that the trial court erred in concluding that the Board of Control did not consider the issues under the appropriate criteria and that the board did in fact consider the

factors set forth in the Supreme Court's *City of Sacramento* decision. From our discussion above it is clear that we must reject these assertions. In its decision the board relied upon the "cooperative federalism" nature of the Education of the Handicapped Act without any consideration whether the act left the state any actual choice in the matter. In support of its conclusion the board relied upon the New Mexico litigation which we have also discussed. However, as we have pointed out, under the criteria set forth in the Supreme Court's *City of Sacramento* decision, the New Mexico litigation does not support the board's decision but in fact strongly supports a contrary result. We are satisfied that the trial court correctly concluded that the board did not apply the appropriate criteria in reaching its decision.

Riverside asserts that the Supreme Court's *City of Sacramento* decision elucidated and enforced prior law and thus no question of retroactivity arises. (See *Donaldson v. Superior Court* (1983) 35 Cal.3d 24, 37 [196 Cal.Rptr. 704, 672 P.2d 110].) (13) We agree that in *City of Sacramento* the Supreme Court elucidated and enforced existing law. Under such circumstances the rule of retrospective operation controls. (*Ibid.* See also *Wellenkamp v. Bank of America* (1978) 21 Cal.3d 943, 953- 954 [148 Cal.Rptr. 379, 582 P.2d 970]; *County of Los Angeles v. Faus* (1957) 48 Cal.2d 672, 680-681 [312 P.2d 680].) Pursuant to that rule the trial court correctly applied the *City of Sacramento* decision to the litigation pending before it. As we have seen, that decision supports the trial court's determination to remand the matter to the Commission for reconsideration.

Riverside asserts that if further consideration under the criteria of the Supreme Court's *City of Sacramento* decision is necessary then the trial court should have, and this court must, engage in such consideration to reach a final conclusion on the question. To a limited extent we agree. In our previous discussion we have concluded that under the criteria set forth in *City of Sacramento*, the Education of the Handicapped Act constitutes a federal mandate as far as the state is concerned. We are satisfied that is the only conclusion which may be drawn and we so hold as a matter of law. However, that conclusion does not resolve the question whether new special education costs were imposed upon local school districts by federal mandate or by state choice in the implementation of the federal program. The issues were not addressed by the parties or the Board of Control in this light. The *1597 Commission on State Mandates is the entity with the responsibility for considering the issues in the first instance and which has the expertise to do so. We agree with the trial court that it is appropriate to remand the matter to the

Commission for reconsideration in light of the appropriate criteria which we have set forth in this appeal.

Disposition

The judgment is affirmed.

In view of the result we have reached we need not and do not consider whether it would be appropriate otherwise to fashion some judicial remedy to avoid the rule, based upon the separation-of-powers doctrine, that a court cannot compel the State Controller to make a disbursement in the absence of an appropriation. (See *Carmel Valley Fire Protection Dist. v. State of California*, *supra*, 190 Cal.App.3d at pp. 538- 541.)

Davis, J., and Scotland, J., concurred.

The petition of plaintiff and respondent for review by the Supreme Court was denied April 1, 1993. Lucas, C.J., Kennard, J., and Arabian, J., were of the opinion that the petition should be granted. *1598

Footnotes

- 1 Section 794 of title 29 of the United States Code will of necessity play an important part in our discussion of the issues presented in this case. That provision was enacted as section 504 of the Rehabilitation Act of 1973. (Pub.L. No. 93-112, tit. V, § 504 (Sept. 26, 1973) 87 Stat. 394.) It has been amended several times. (Pub.L. No. 95-602, tit. I, §§ 119, 122(d)(2) (Nov. 6, 1978) 92 Stat. 2982, 2987 [Rehabilitation, Comprehensive Services, and Developmental Disabilities Act of 1978]; Pub.L. No. 99- 506, tit. I, § 103(d) (2)(B), tit. X, § 1002(e)(4) (Oct. 21, 1986) 100 Stat. 1810, 1844; Pub.L. No. 100-259, § 4 (Mar. 22, 1988) 102 Stat. 29; Pub.L. No. 100-630, tit. II, § 206(d) (Nov. 7, 1988) 102 Stat. 3312.) The decisional authorities universally refer to the statute as "section 504." We will adhere to this nomenclature and subsequent references to section 504 will refer to title 29, United States Code, section 794.
- 2 The Education of the Handicapped Act was enacted in 1970. (Pub.L. No. 91-230, tit. VI (Apr. 13, 1970) 84 Stat. 175.) It has been amended many times. The amendment of primary interest here was enacted as the Education for All Handicapped Children Act of 1975. (Pub.L. No. 94-142 (Nov. 29, 1975) 89 Stat. 774.) The 1975 legislation significantly amended the Education of the Handicapped Act, but did not change its short title. The Education of the Handicapped Act has now been renamed the Individuals with Disabilities Education Act. (Pub.L. No. 101-476, tit. IX, § 901(b)(21) (Oct. 30, 1990) 104 Stat. 1143; Pub.L. No. 101-476, tit. IX, § 901b; Pub.L. No. 102-119, § 25(b) (Oct. 7, 1991) 105 Stat. 607.) Since at all times relevant here the federal act was known as the Education of the Handicapped Act, we will adhere to that nomenclature.
- 3 The 1980 legislation required that a local agency adopt an annual budget plan for special education services. (Ed. Code, § 56200.) Education Code section 56760 provided that in the local budget plan the ratio of students to be served should not exceed 10 percent of total enrollment. However, those proportions could be waived for undue hardship by the Superintendent of Public Instruction. (Ed. Code, §§ 56760, 56761.) In addition, the 1980 legislation included provisions for a gradual transition to the new requirements. (Ed. Code, § 56195 et seq.) The transitional provisions included a guarantee of state funding for 1980-1981 at prior student levels with an inflationary adjustment of 9 percent. (Ed. Code, § 56195.8.) The record indicates that Riverside applied for a waiver of the requirements of Education Code section 56760, but that the waiver request was denied due to a shortage of state funding. It also appears that Riverside did not receive all of the 109 percent funding guarantee under Education Code section 56195.8. In light of the current posture of this appeal we need not and do not consider whether the failure of the state to appropriate sufficient funds to satisfy its obligations under the 1980 legislation can be addressed in a proceeding for the reimbursement of state-mandated costs or must be addressed in some other manner.
- 4 In addition to requiring subventions for new state programs and higher levels of service, Senate Bill No. 90 required the state to reimburse local governments for revenues lost by the repeal or reduction of property taxes on certain classes of property. In this connection the Legislature said: "It is the purpose of this part to provide property tax relief to the citizens of this state, as undue reliance on the property tax to finance various functions of government has resulted in serious detriment to one segment of the taxpaying public. The subventions from the State General Fund required under this part will serve to partially equalize tax burdens among all citizens, and the state as a whole will benefit." (Gov. Code, § 16101, Stats. 1972, ch. 1406, § 5, p. 2953.)
- 5 A school district's relationship to the state is different from that of local governmental entities such as cities, counties, and special districts. Education and the operation of the public school system are matters of statewide rather than local or municipal concern. (*California Teachers Assn. v. Huff* (1992) 5 Cal.App.4th 1513, 1524 [7 Cal.Rptr.2d 699].) Local school districts are agencies of the state and have been described as quasi-municipal corporations. (*Ibid.*) They are not distinct and independent bodies politic. (*Ibid.*) The Legislature's power over the public school system has been described as exclusive, plenary, absolute, entire, and comprehensive, subject only to constitutional constraints. (*Ibid.*) The Legislature has the power to create, abolish, divide, merge, or alter the boundaries of school districts. (*Id.* at p. 1525.) The state is the beneficial owner of all school properties and local districts hold title as trustee for the state. (*Ibid.*) School moneys belong to the state and the apportionment of funds to a school district does not give the district a proprietary interest in the funds. (*Ibid.*) While the Legislature has chosen to encourage local responsibility for control

- of public education through local school districts, that is a matter of legislative choice rather than constitutional compulsion and the authority that the Legislature has given to local districts remains subject to the ultimate and nondelegable responsibility of the Legislature. (*Id.* at pp. 1523-1524.)
- 6 After the first *Serrano* decision, the United States Supreme Court held that equal protection does not require dollar-for-dollar equality between school districts. (*San Antonio School District v. Rodriguez* (1973) 411 U.S. 1, 33-34 48-56, 61-62 [36 L.Ed.2d 16, 42-43, 51-56, 59-60, 93 S.Ct. 1278].) In the second *Serrano* decision, the California Supreme Court adhered to the first *Serrano* decision on independent state grounds. (*Serrano v. Priest*, *supra*, 18 Cal.3d at pp. 761-766.) The court concluded that Senate Bill No. 90 and Assembly Bill No. 1267, enacted the following year (Stats. 1973, ch. 208, p. 529 et seq.), did not satisfy equal protection principles. (*Serrano v. Priest*, *supra*, 18 Cal.3d at pp. 776-777.) Additional complications in educational financing arose as the result of the enactment of article XIII A of the California Constitution at the June 1978 Primary Election (Proposition 13), which limited the taxes which can be imposed on real property and forced the state to assume greater responsibility for financing education (see Ed. Code, § 41060), and the enactment of Propositions 98 and 111 in 1988 and 1990, respectively, which provide formulae for minimum state funding for education. (See generally *California Teachers Assn. v. Huff*, *supra*, 5 Cal.App.4th 1513.)
- 7 As it was originally enacted, article XIII B required that all governmental entities return revenues in excess of their appropriations limits to the taxpayers through tax rate or fee schedule revisions. In Proposition 98, adopted at the November 1988 General Election, article XIII B was amended to provide that half of state excess revenues would be transferred to the state school fund for the support of school districts and community college districts. (See Cal. Const., art. XVI, § 8.5; *California Teachers Assn. v. Huff*, *supra*, 5 Cal.App.4th 1513.)
- 8 The Supreme Court's decision in *City of Sacramento* was not a result of direct review of this court's decision. The Supreme Court denied a petition for review of this court's *City of Sacramento* decision. After the Board of Control had adopted parameters and guidelines for reimbursement under this court's decision, the Legislature failed to appropriate the funds necessary for such reimbursement. The litigation which resulted in the Supreme Court's *City of Sacramento* decision was commenced as an action to enforce the result on remand from this court's *City of Sacramento* decision. (See 50 Cal.3d at p. 60.)
- 9 In section 119 of the Rehabilitation, Comprehensive Services, and Developmental Disabilities Act of 1978, the application of section 504 was extended to federal executive agencies and the United States Postal Service. (Pub.L. No. 95-602, tit. I, § 119 (Nov. 6, 1978) 92 Stat. 2982.) The section is now subdivided and includes subdivision (b), which provides that the section applies to all of the operations of a state or local governmental agency, including local educational agencies, if the agency is extended federal funding for any part of its operations. (29 U.S.C. § 794.) This latter amendment was in response to judicial decisions which had limited the application of section 504 to the particular activity for which federal funding is received. (See *Consolidated Rail Corporation v. Darrone* (1984) 465 U.S. 624, 635-636 [79 L.Ed.2d 568, 577-578, 104 S.Ct. 1248].)
- 10 HEW was later dissolved and its responsibilities are now shared by the federal Department of Education and the Department of Health and Human Services. The promulgation of regulations to enforce section 504 had a somewhat checkered history. Initially HEW determined that Congress did not intend to require it to promulgate regulations. The Senate Public Welfare Committee then declared that regulations were intended. By executive order and by judicial decree in *Cherry v. Mathews* (D.D.C. 1976) 419 F.Supp. 922, HEW was required to promulgate regulations. The ensuing regulations were embodied in title 45 Code of Federal Regulations part 84, and are now located in title 34 Code of Federal Regulations part 104. (See *Southeastern Community College v. Davis* (1979) 442 U.S. 397, 404, fn. 4 [60 L.Ed.2d 980, 987, 99 S.Ct. 2361]; *N. M. Ass'n for Retarded Citizens v. State of N. M.* (10th Cir. 1982) 678 F.2d 847, 852.)
- 11 Following a remand and another decision by the Court of Appeals, the *Tatro* litigation, *supra*, eventually wound up in the Supreme Court. (*Irving Independent School Dist. v. Tatro* (1984) 468 U.S. 883 [82 L.Ed.2d 664, 104 S.Ct. 3371].) However, by that time the Education of the Handicapped Act had replaced section 504 as the means for vindicating the education rights of handicapped children and the litigation was resolved, favorably for the child, under that act.
- 12 Consistent with its "basic floor of opportunity" purpose, the act does not require local agencies to maximize the potential of each handicapped child commensurate with the opportunity provided nonhandicapped children. Rather, the act requires that handicapped children be accorded meaningful access to a free public education, which means access that is sufficient to confer some educational benefit. (*Ibid.*)
- 13 That Congress intended to enforce the Fourteenth Amendment to the United States Constitution in enacting the Education of the Handicapped Act has since been made clear. In *Dellmuth v. Muth* (1989) 491 U.S. 223 at pages 231 and 232 [105 L.Ed.2d 181, 189-191, 109 S.Ct. 2397], the court noted that Congress has the power under section 5 of the Fourteenth Amendment to abrogate a state's Eleventh Amendment immunity from suit in federal court, but concluded that the Education of the Handicapped Act did not clearly evince such a congressional intent. In 1990 Congress responded by expressly abrogating state sovereign immunity under the act. (20 U.S.C. § 1403.)

- 14 In *Smith v. Robinson, supra*, the court concluded that since the Education of the Handicapped Act did not include a provision for attorney fees, a successful complainant was not entitled to an award of such fees even though such fees would have been available in litigation under section 504 of the Rehabilitation Act of 1973 or section 1983 of the Civil Rights Act. Congress reacted by adding a provision for attorney fees to the Education of the Handicapped Act. (20 U.S.C. § 1415(e)(4)(B).)
- 15 The plaintiffs alleged that the failure of the state to apply for federal funds under the Education of the Handicapped Act was itself an act of discrimination. The district court did not express a view on that question, leaving it for resolution in connection with the constitutional causes of action. (*Ibid.*)
- 16 Lawsuits primarily fell into three types: (1) Challenges to the adequacy or even lack of available programs and services to accommodate handicapped children. (*Id.* at p. 97, fns. 255, 257.) (2) Challenges to classification practices in general, such as an overtendency to classify minority or disadvantaged children as "retarded." (*Id.* at p. 98, fns. 259, 260.) (3) Challenges to individual classification decisions. (*Id.* at p. 106.) In the absence of administrative procedures for resolving classification disputes, dissatisfied parents were relegated to self-help remedies, such as pestering school authorities, or litigation. (*Ibid.*)

REDEVELOPMENT AGENCY OF THE CITY
OF SAN MARCOS, Plaintiff and Appellant,

v.

CALIFORNIA COMMISSION ON STATE
MANDATES, Defendant and Respondent;
CALIFORNIA DEPARTMENT OF
FINANCE, Intervener and Respondent.

No. D026195.

Court of Appeal, Fourth District, Division 1, California.

May 30, 1997.

SUMMARY

The trial court denied a petition for a writ of administrative mandate brought by a city's redevelopment agency that challenged the California Commission on State Mandates' denial of the agency's test claim under Gov. Code, § 17550 et seq. (reimbursement of costs mandated by the state). In its claim, the agency sought a determination that the State of California should reimburse the agency for moneys transferred into its low and moderate-income housing fund pursuant to Health & Saf. Code, §§ 33334.2 and 33334.3, of the Community Redevelopment Law. Those statutes require a 20 percent deposit of the particular form of financing received by the agency (tax increment financing generated from its project areas) for purposes of improving the supply of affordable housing. The agency claimed that this tax increment financing should not be subject to state control of the allocations made to various funds and that such control constituted a state-mandated new program or higher level of service for which reimbursement or subvention was required under Cal. Const., art. XIII B, § 6. The trial court found that the source of funds used by the agency was exempt, under Health & Saf. Code, § 33678, from the scope of Cal. Const., art. XIII B, § 6. (Superior Court of San Diego County, No. 686818, Sheridan E. Reed and Herbert B. Hoffman, Judges.)

The Court of Appeal affirmed. It held that under Health & Saf. Code, § 33678, which provides that tax increment financing is not deemed to be the "proceeds of taxes," the source of funds used by the agency was exempt from the scope of Cal. Const., art. XIII B, § 6. Although Cal. Const., art. XIII B, § 6, does not expressly discuss the source of funds used by an agency

to fund a program, the historical and contextual context of this provision demonstrates that it applies only to costs recovered solely from tax revenues. Because of the nature of the financing they receive (i.e., tax increment financing), redevelopment agencies are not subject to appropriations limitations or spending caps, they do not expend any proceeds of taxes, and they do not raise general revenues for the local entity. Also, the state is not transferring any program for which it was formerly responsible. Therefore, the purposes of state subvention laws are not furthered by requiring reimbursement when redevelopment agencies are required to allocate their tax increment financing in a particular manner, as in the operation of Health & Saf. Code, §§ 33334.2 and 33334.3. (Opinion by Huffman, J., with Work, Acting P. J., and McIntyre, J., concurring.)

HEADNOTES

Classified to California Digest of Official Reports

(1) State of California § 11--Fiscal Matters--Subvention: Words, Phrases, and Maxims--Subvention. "Subvention" generally means a grant of financial aid or assistance, or a subsidy.

(2) State of California § 11--Fiscal Matters--Subvention--Judicial Rules.

Under Gov. Code, § 17559, review by administrative mandamus is the exclusive method of challenging a decision of the California Commission on State Mandates to deny a subvention claim. The determination whether the statutes at issue established a mandate under Cal. Const., art. XIII B, § 6, is a question of law. On appellate review, the following standards apply: Gov. Code, § 17559, governs the proceeding below and requires that the trial court review the decision of the commission under the substantial evidence standard. Where the substantial evidence test is applied by the trial court, the appellate court is generally confined to inquiring whether substantial evidence supports the trial court's findings and judgment. However, the appellate court independently reviews the trial court's legal conclusions about the meaning and effect of constitutional and statutory provisions.

(3a, 3b) State of California § 11--Fiscal Matters--Subvention--State-mandated Costs--Statutory Set-aside Requirement for Local Redevelopment Agency's Tax Increment Financing.

The California Commission on State Mandates properly denied a test claim brought by a city's redevelopment agency seeking a determination that the state should reimburse the agency for moneys transferred into its low and moderate-income housing fund pursuant to Health & Saf. Code, §§ 33334.2 and 33334.3, which require a 20 percent deposit of the particular form of financing received by the agency, i.e., tax increment financing generated from its project areas. Under Health & Saf. Code, § 33678, which provides that tax increment financing is not deemed to be the "proceeds of taxes," the source of funds used by the agency was exempt from the scope of Cal. Const., art. XIII B, § 6 (subvention). Although Cal. Const., art. XIII B, § 6, does not expressly discuss the source of funds used by an agency to fund a program, the historical and contextual context of this provision demonstrates that it applies only to costs recovered solely from tax revenues. Because of the nature of the financing they receive (i.e., tax increment financing), redevelopment agencies are not subject to appropriations limitations or spending caps, they do not expend any proceeds of taxes, and they do not raise general revenues for the local entity. Also, the state is not transferring any program for which it was formerly responsible. Therefore, the purposes of state subvention laws are not furthered by requiring reimbursement when redevelopment agencies are required to allocate their tax increment financing in a particular manner, as in the operation of Health & Saf. Code, §§ 33334.2 and 33334.3.

[See 9 Witkin, Summary of Cal. Law (9th ed. 1989) Taxation, § 123.]

(4) Constitutional Law § 10--Construction of Constitutional Provisions-- Limitations on Legislative Powers.

The rules of constitutional interpretation require a strict construction of a constitutional provision that contains limitations and restrictions on legislative powers, because such limitations and restrictions are not to be extended to include matters not covered by the language used.

(5) State of California § 11--Fiscal Matters--Subvention-- Purpose of Constitutional Provisions.

The goal of Cal. Const., arts. XIII A and XIII B, is to protect California residents from excessive taxation and government spending. A central purpose of Cal. Const., art. XIII B, § 6 (reimbursement to local government of state-mandated costs), is to prevent the state's transfer of the cost of government from itself to the local level.

COUNSEL

Higgs, Fletcher & Mack and John Morris for Plaintiff and Appellant.

Gary D. Hori for Defendant and Respondent. *979

Daniel E. Lungren, Attorney General, Robert L. Mukai, Chief Assistant Attorney General, Linda A. Cabatic and Daniel G. Stone, Deputy Attorneys General, for Intervener and Respondent.

HUFFMAN, J.

The California Commission on State Mandates (the Commission) denied a test claim by the Redevelopment Agency of the City of San Marcos (the Agency) (Gov. Code, § 17550 et seq.), which sought a determination that the State of California should reimburse the Agency for moneys transferred into its Low and Moderate Income Housing Fund (the Housing Fund) pursuant to Health and Safety Code¹ sections 33334.2 and 33334.3. Those sections require a 20 percent deposit of the particular form of financing received by the Agency, tax increment financing generated from its project areas, for purposes of improving the supply of affordable housing. (1)(See fn. 2)The Agency claimed that this tax increment financing should not be subject to state control of the allocations made to various funds and that such control constituted a state-mandated new program or higher level of service for which reimbursement or subvention was required under article XIII B of the California Constitution, section 6 (hereafter section 6; all further references to articles are to the California Constitution).² (Cal. Const., art. XVI, § 16; § 33670.)

The Agency brought a petition for writ of administrative mandamus to challenge the decision of the Commission. (Code Civ. Proc., § 1094.5; Gov. Code, § 17559.) The superior court denied the petition, ruling that the source of funds used by the Agency for redevelopment, tax increment financing, was exempt pursuant to section 33678 from the scope of section 6, as not constituting "proceeds of taxes" which are governed by that section. The superior court did not rule upon the alternative grounds of decision stated by the Commission, i.e., the 20 percent set-aside requirement for low and moderate-income housing did not impose a new program or higher level of service in an existing program within the meaning of section 6, and, further, there were no costs subject to reimbursement related to the Housing Fund because there was no net increase in the aggregate program responsibilities of the Agency.

The Agency appeals the judgment denying its petition for writ of mandate. For the reasons set forth below, we affirm. *980

I. Procedural Context

This test claim was litigated before the Commission pursuant to statutory procedures for determining whether a statute imposes state-mandated costs upon a local agency which must be reimbursed, through a subvention of funds, under section 6. (Gov. Code, § 17500 et seq.)³ The Commission hearing consisted of oral argument on the points and authorities presented.

(2) Under Government Code section 17559, review by administrative mandamus is the exclusive method of challenging a Commission decision denying a subvention claim. "The determination whether the statutes here at issue established a mandate under section 6 is a question of law. [Citation.]" (*County of San Diego v. State of California* (1997) 15 Cal.4th 68, 109 [61 Cal.Rptr.2d 134, 931 P.2d 312].) On appellate review, we apply these standards: "Government Code section 17559 governs the proceeding below and requires that the trial court review the decision of the Commission under the substantial evidence standard. Where the substantial evidence test is applied by the trial court, we are generally confined to inquiring whether substantial evidence supports the court's findings and judgment. [Citation.] However, we independently review the superior court's legal conclusions about the meaning and effect of constitutional and statutory provisions. [Citation.]" (*City of San Jose v. State of California* (1996) 45 Cal.App.4th 1802, 1810 [53 Cal.Rptr.2d 521].)

II. Statutory Schemes

Before we outline the statutory provisions setting up tax increment financing for redevelopment agencies, we first set forth the Supreme Court's recent summary of the history and substance of the law applicable to state mandates, such as the Agency claims exist here: "Through adoption of Proposition 13 in 1978, the voters added article XIII A to the California Constitution, which 'imposes a limit on the power of state and local governments to *981 adopt and levy taxes. [Citation.] [Citation.] The next year, the voters added article XIII B to the Constitution, which 'impose[s] a complementary limit on the rate of growth in governmental spending.' [Citation.] These two constitutional articles 'work in tandem, together restricting California governments' power both to levy and to spend for public purposes.' [Citation.] Their goals are 'to protect residents from excessive taxation

and government spending. [Citation.] [Citation.]" (*County of San Diego v. State of California, supra*, 15 Cal.4th at pp. 80-81.)

Section 6, part of article XIII B and the provision here at issue, requires that whenever the Legislature or any state agency mandates a "new program or higher level of service" on any local government, "the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service" (*County of San Diego v. State of California, supra*, 15 Cal.4th at p. 81, italics added.) Certain exceptions are then stated, none of which is relevant here.⁴

In *County of San Diego v. State of California, supra*, 15 Cal.4th at page 81, the Supreme Court explained that section 6 represents a recognition that together articles XIII A and XIII B severely restrict the taxing and spending powers of local agencies. The purpose of the section is to preclude the state from shifting financial responsibility for governmental functions to local agencies, which are ill equipped to undertake increased financial responsibilities because they are subject to taxing and spending limitations under articles XIII A and XIII B. (*County of San Diego v. State of California, supra*, at p. 81.)

To evaluate the Agency's argument that the provisions of sections 33334.2 and 33334.3, requiring a deposit into the housing fund of 20 percent of the tax increment financing received by the Agency, impose this type of reimbursable governmental program or a higher level of service under an existing program, we first review the provisions establishing financing for redevelopment agencies. Such agencies have no independent powers of taxation (*982 *Huntington Park Redevelopment Agency v. Martin* (1985) 38 Cal.3d 100, 106 [211 Cal.Rptr. 133, 695 P.2d 220]), but receive a portion of tax revenues collected by other local agencies from property within a redevelopment project area, which may result from the following scheme: "Redevelopment agencies finance real property improvements in blighted areas. Pursuant to article XVI, section 16 of the Constitution, these agencies are authorized to use tax increment revenues for redevelopment projects. The constitutional mandate has been implemented through the Community Redevelopment Law (Health & Saf. Code, § 33000 et seq.). [¶] The Community Redevelopment Law authorizes several methods of financing; one is the issuance of tax allocation bonds. Tax increment revenue, the increase in annual property taxes attributable to redevelopment improvements, provides the security for tax allocation bonds. Tax increment revenues are computed as

follows: The real property within a redevelopment project area is assessed in the year the redevelopment plan is adopted. Typically, after redevelopment, property values in the project area increase. The taxing agencies (e.g., city, county, school or special district) keep the tax revenues attributable to the original assessed value and pass the portion of the assessed property value which exceeds the original assessment on to the redevelopment agency. (Health & Saf. Code, §§ 33640, 33641, 33670, 33675). In short, tax increment financing permits a redevelopment agency to take advantage of increased property tax revenues in the project areas without an increase in the tax rate. This scheme for redevelopment financing has been a part of the California Constitution since 1952. (Cal. Const., art. XVI, § 16.)” (*Brown v. Community Redevelopment Agency* (1985) 168 Cal.App.3d 1014, 1016-1017 [214 Cal.Rptr. 626].)⁵

In *Brown v. Community Redevelopment Agency*, *supra*, 168 Cal.App.3d at pages 1016-1018, the court determined that by enacting section 33678, the Legislature interpreted article XIII B of the Constitution as not broad enough in reach to cover the raising or spending of tax increment revenues by redevelopment agencies. Specifically, the court decided the funds a redevelopment agency receives from tax increment financing do not constitute “proceeds of taxes” subject to article XIII B appropriations limits. (*Brown v. Community Redevelopment Agency*, *supra*, at p. 1019).⁶ This ruling was based on section 33678, providing in pertinent part: “This section implements and fulfills the intent ... of Article XIII B and *983 Section 16 of Article XVI of the California Constitution. *The allocation and payment to an agency of the portion of taxes specified in subdivision (b) of Section 33670 for the purpose of paying principal of, or interest on ... indebtedness incurred for redevelopment activity ... shall not be deemed the receipt by an agency of proceeds of taxes levied by or on behalf of the agency within the meaning of or for the purposes of Article XIII B ... nor shall such portion of taxes be deemed receipt of proceeds of taxes by, or an appropriation subject to limitation of, any other public body within the meaning or for purposes of Article XIII B ... or any statutory provision enacted in implementation of Article XIII B. The allocation and payment to an agency of this portion of taxes shall not be deemed the appropriation by a redevelopment agency of proceeds of taxes levied by or on behalf of a redevelopment agency within the meaning or for purposes of Article XIII B of the California Constitution.*” (Italics added.)

In *County of Placer v. Corin* (1980) 113 Cal.App.3d 443, 451 [170 Cal.Rptr. 232], the court defined “proceeds of taxes” in this way: “Under article XIII B, with the exception of state

subventions, the items that make up the scope of ‘proceeds of taxes’ concern charges levied to raise *general revenues* for the local entity. ‘Proceeds of taxes,’ in addition to ‘all tax revenues’ includes ‘proceeds ... from ... regulatory licenses, user charges, and user fees [only] to the extent that such proceeds exceed the costs reasonably borne by such entity in providing the regulation, product or service...’ (§ 8, subd. (c).) (Italics added.) Such ‘excess’ regulatory or user fees are but *taxes* for the raising of general revenue for the entity. [Citations.] Moreover, to the extent that an assessment results in revenue above the cost of the improvement or is of general public benefit, it is no longer a special assessment but a tax. [Citation.] *We conclude ‘proceeds of taxes’ generally contemplates only those impositions which raise general tax revenues for the entity.*” (Italics added.)⁷

(3a) In light of these interrelated sections and concepts, our task is to determine whether the 20 percent Housing Fund set-aside requirement of a redevelopment agency’s tax increment financing qualifies under section 6 as a “cost” of a program. As will be explained, we agree with the trial court that the resolution of this issue is sufficient to dispose of the entire matter, and *984 accordingly we need not discuss the alternate grounds of decision stated by the Commission.⁸

III. Housing Fund Allocations: Reimbursable Costs?

1. Arguments

The Agency takes the position that the language of section 33678 is simply inapplicable to its claim for subvention of funds required to be deposited into the Housing Fund. It points out that section 6 expressly lists three exceptions to the requirement for subvention of funds to cover the costs of state-mandated programs: (a) Legislative mandates requested by the local agency affected; (b) legislation defining or changing a definition of a crime; or (c) pre-1975 legislative mandates or implementing regulations or orders. (See fn. 4, *ante*.) None of these exceptions refers to the source of the funding originally used by the agency to pay the costs incurred for which reimbursement is now being sought. Thus, the agency argues it is immaterial that under section 33678, *for purposes of appropriations limitations*, tax increment financing is not deemed to be the “proceeds of taxes.” (*Brown v. Community Redevelopment Agency*, *supra*, 168 Cal.App.3d at pp. 1017-1020.) The Agency would apply a “plain meaning” rule to section 6 (see, e.g., *Davis v. City of Berkeley* (1990) 51 Cal.3d 227, 234 [272 Cal.Rptr. 139, 794 P.2d 897]) and conclude that the source of the funds used to pay the

program costs up front, before any subvention, is not stated in the section and thus is not relevant.

As an illustration of its argument that the source of its funds is irrelevant under section 6, the Agency cites to Government Code section 17556. That section is a legislative interpretation of section 6, creating several classes of state-mandated programs for which no state reimbursement of local agencies for costs incurred is required. In *County of Fresno v. State of California* (1991) 53 Cal.3d 482, 487 [280 Cal.Rptr. 92, 808 P.2d 235], the Supreme Court upheld the facial constitutionality of Government Code section 17556, subdivision (d), which disallows state subvention of funds where the local government is authorized to collect service charges or fees in connection with a mandated program. The court explained that section 6 “was designed to protect the tax revenues of local governments from state mandates that *985 would require expenditure of such revenues.” (*County of Fresno v. State of California, supra*, at p. 487.) Based on the language and history of the measure, the court stated, “Article XIII B of the Constitution, however, was not intended to reach beyond taxation.” (*Ibid.*) The court therefore concluded that in view of its textual and historical context, section 6 “requires subvention only when the costs in question can be recovered *solely from tax revenues.*” (*Ibid.*, original italics.) Interpreting section 6, the court stated: “Considered within its context, the section effectively construes the term ‘costs’ in the constitutional provision as excluding expenses that are recoverable from sources other than taxes.” (*Ibid.*) No subvention was required where the local authority could recover its expenses through fees or assessments, not taxes.

2. Interpretation of Section 6

Here, the Agency contends the authority of *County of Fresno v. State of California, supra*, 53 Cal.3d 482, should be narrowly read to cover only self-financing programs, and the Supreme Court's broad statements defining “costs” in this context read as mere dicta. It also continues to argue for a “plain meaning” reading of section 6, which it reiterates does not expressly discuss the source of funds used by an agency to pay the costs of a program before any reimbursement is sought. We disagree with both of these arguments. The correct approach is to read section 6 in light of its historical and textual context. (4) The rules of constitutional interpretation require a strict construction of section 6, because constitutional limitations and restrictions on legislative powers are not to be extended to include matters not covered by the language used. (*City of San Jose v. State of California, supra*, 45 Cal.App.4th at pp. 1816-1817.)

(5) The goals of articles XIII A and XIII B are to protect California residents from excessive taxation and government spending. (*County of Los Angeles v. State of California, supra*, 15 Cal.4th at p. 81.) A central purpose of section 6 is to prevent the state's transfer of the cost of government from itself to the local level. (*City of Sacramento v. State of California, supra*, 50 Cal.3d at p. 68.) (3b) The related goals of these enactments require us to read the term “costs” in section 6 in light of the enactment as a whole. The “costs” for which the Agency is seeking reimbursement are its deposits of tax increment financing proceeds into the Housing Fund. Those tax increment financing proceeds are normally received pursuant to the Community Redevelopment Law (§ 33000 et seq.) when, after redevelopment, the taxing agencies collect and keep the tax revenues attributable to the original assessed value and pass on to the redevelopment agency the portion of the *986 assessed property value which exceeds the original assessment. (*Brown v. Community Redevelopment Agency, supra*, 168 Cal.App.3d at pp. 1016-1017.) Is this the type of expenditure of tax revenues of local governments, upon state mandates which require use of such revenues, against which section 6 was designed to protect? (*County of Fresno v. State of California, supra*, 53 Cal.3d at p. 487.)

3. Relationship of Appropriations Limitations and Subvention

We may find assistance in answering this question by looking to the type of appropriations limitations imposed by article XIII B. In *County of Placer v. Corin, supra*, 113 Cal.App.3d at page 447, the court described the discipline imposed by article XIII B in this way: “[A]rticle XIII B does not limit the ability to expend government funds collected from all sources. Rather, the appropriations limit is based on ‘appropriations subject to limitation,’ which consists primarily of the authorization to expend during a fiscal year the ‘proceeds of taxes.’ (§ 8, subd. (a).) As to local governments, limits are placed only on the authorization to expend the proceeds of taxes levied by that entity, in addition to proceeds of state subventions (§ 8, subd. (c)); no limitation is placed on the expenditure of those revenues that do not constitute ‘proceeds of taxes.’ ”⁹

Because of the nature of the financing they receive, tax increment financing, redevelopment agencies are not subject to this type of appropriations limitations or spending caps; they do not expend any “proceeds of taxes.” Nor do they raise, through tax increment financing, “general revenues

for the local entity.” (*County of Placer v. Corin*, *supra*, 113 Cal.App.3d at p. 451, original italics.) The purpose for which state subvention of funds was created, to protect local agencies from having the state transfer its cost of government from itself to the local level, is therefore not brought into play when redevelopment agencies are required to allocate their tax increment financing in a particular manner, as in the operation of sections 33334.2 and 33334.3. (See *City of Sacramento v. State of California*, *supra*, 50 Cal.3d at p. 68.) The state is not transferring to the Agency the operation and administration of a program for which it was formerly legally and financially *987 responsible. (*County of Los Angeles v. Commission on State Mandates* (1995) 32 Cal.App.4th 805, 817 [38 Cal.Rptr.2d 304].)¹⁰

For all these reasons, we conclude the same policies which support exempting tax increment revenues from article XIII B appropriations limits also support denying reimbursement under section 6 for this particular allocation of those revenues to the Housing Fund. Tax increment financing is not within the scope of article XIII B. (*Brown v. Community Redevelopment Agency*, *supra*, 168 Cal.App.3d

at pp. 1016-1020.) Section 6 “requires subvention only when the costs in question can be recovered *solely from tax revenues.*” (*County of Fresno v. State of California*, *supra*, 53 Cal.3d at p. 487, original italics.) No state duty of subvention is triggered where the local agency is not required to expend its proceeds of taxes. Here, these costs of depositing tax increment revenues in the Housing Fund are attributable not directly to tax revenues, but to the benefit received by the Agency from the tax increment financing scheme, which is one step removed from other local agencies' collection of tax revenues. (§ 33000 et seq.) Therefore, in light of the above authorities, this use of tax increment financing is not a reimbursable “cost” under section 6. We therefore need not interpret any remaining portions of section 6.

Disposition

The judgment is affirmed.

Work, Acting P. J., and McIntyre, J., concurred.

Appellant's petition for review by the Supreme Court was denied September 3, 1997.

Footnotes

- 1 All further statutory references are to the Health and Safety Code unless otherwise noted.
- 2 “ ‘Subvention’ generally means a grant of financial aid or assistance, or a subsidy. [Citation.]” (*Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, 1577 [15 Cal.Rptr.2d 547].)
- 3 In our prior opinion issued in this case, we determined the trial court erred when it denied the California Department of Finance (DOF) leave to intervene as an indispensable party and a real party in interest in the mandamus proceeding. (*Redevelopment Agency v. Commission on State Mandates* (1996) 43 Cal.App.4th 1188, 1194-1199 [51 Cal.Rptr.2d 100].) Thus, DOF is now a respondent on this appeal, as is the Commission (sometimes collectively referred to as respondents). However, our decision in that case was a collateral matter and does not assist us on the merits of this proceeding.
- 4 Section 6 lists the following exclusions to the requirement for subvention of funds: “(a) Legislative mandates requested by the local agency affected; [¶] (b) Legislation defining a new crime or changing an existing definition of a crime; or [¶] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975.” In *City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 69 [266 Cal.Rptr. 139, 785 P.2d 522], the Supreme Court identified these items as exclusions of otherwise reimbursable programs from the scope of section 6. (See also Gov. Code, § 17514, definition of “costs mandated by the state,” using the same “new program or higher level of service” language of section 6.)
- 5 Section 33071 in the Community Redevelopment Law provides that a fundamental purpose of redevelopment is to expand the supply of low and moderate-income housing, as well as expanding employment opportunities and improving the social environment.
- 6 The term of art, “proceeds of taxes,” is defined in article XIII B, section 8, as follows: (c) “ ‘Proceeds of taxes’ shall include, but not be restricted to, all tax revenues and the proceeds to an entity of government, from (1) regulatory licenses, user charges, and user fees to the extent that those proceeds exceed the costs reasonably borne by that entity in providing the regulation, product, or service, and (2) the investment of tax revenues. With respect to any local government, ‘proceeds of taxes’ shall include subventions received from the state, other than pursuant to Section 6, and, with respect to the state, proceeds of taxes shall exclude such subventions.” (Italics added.)
- 7 The issues before the court in *County of Placer v. Corin*, *supra*, 113 Cal.App.3d 443 were whether special assessments and federal grants should be considered proceeds of taxes; the court held they should not. Section 6 is not discussed; the court's analysis of other concepts found in article XIII B is nevertheless instructive.
- 8 The alternate grounds of the Commission's decision were that there were no costs subject to reimbursement related to the Housing Fund because there was no net increase in the aggregate program responsibilities of the Agency, and that the set-aside requirement did not constitute a mandated “new program or higher level of service” under this section.

- 9 The term of art, "appropriations subject to limitation," is defined in article XIII B, section 8, as follows: [¶] (b) " 'Appropriations subject to limitation' of an entity of local government means any authorization to expend during a fiscal year *the proceeds of taxes levied by or for that entity* and the proceeds of state subventions to that entity (other than subventions made pursuant to Section 6) exclusive of refunds of taxes." (Italics added.)
- 10 We disagree with respondents that the legislative history of sections 33334.2 and 33334.3 is of assistance here, specifically, that section 23 of the bill creating these sections provided that no appropriations were made by the act, nor was any obligation for reimbursements of local agencies created for any costs incurred in carrying out the programs created by the act. (Stats. 1976, ch. 1337, § 23, pp. 6070-6071.) As stated in *City of San Jose v. State of California*, *supra*, 45 Cal.App.4th at pages 1817-1818, legislative findings regarding mandate are irrelevant to the issue to be decided by the Commission, whether a state mandate exists.

Supreme Court of California

SAN DIEGO UNIFIED SCHOOL
DISTRICT, Plaintiff and Respondent,

v.

COMMISSION ON STATE
MANDATES, Defendant and Appellant;
California Department of Finance,
Real Party in Interest and Appellant.

No. S109125. Aug. 2, 2004.

Synopsis

Background: School district petitioned for writ of administrative mandate to require the Commission on State Mandates to approve test claim for costs of mandatory and discretionary expulsion of students. The Superior Court, San Diego County, No. GIC737638, Linda B. Quinn, J., granted the petition. Commission and Department of Finance appealed. The Court of Appeal affirmed. Review was granted, superseding opinion of Court of Appeal.

Holdings: The Supreme Court, George, C.J., held that:

1 all hearing costs incurred by district as result of mandatory actions related to expulsions for student's possession of firearm, at time relevant to this proceeding, constituted "higher level of service" within meaning of state constitutional provision, and thus were fully reimbursable, and

2 hearing costs incurred by district as result of actions related to discretionary expulsions did not constitute "new program or higher level of service," and, in any event, did not trigger right to reimbursement, as costs of procedures exceeding federal due process requirements were de minimis.

Affirmed in part and reversed in part.

Opinion, 122 Cal.Rptr.2d 614, superseded.

Opinion

**591 GEORGE, C.J.

Article XIII B, section 6, of the California Constitution provides: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service...."¹ (Hereafter article XIII B, section 6.)

1 The provision continues: "except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [¶] (a) Legislative mandates requested by the local agency affected; [¶] (b) Legislation defining a new crime or changing an existing definition of a crime; or [¶] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975." (Cal. Const., art. XIII B, § 6.)

Plaintiff San Diego Unified School District (District), like all other public school districts in the state, is, and was at the time relevant in this proceeding, governed by statutes that regulate the expulsion of students. (Ed.Code, § 48900 et seq.) Whenever an expulsion recommendation is made (and before a student may be expelled), the District is required by Education Code section 48918 to afford the student a hearing with various procedural protections—including notice of the hearing and the right to representation by ***468 counsel, preparation of findings of fact, notices related to any expulsion and the right of appeal, and preparation of a hearing record. Providing these procedural protections requires the District to expend funds, for which the District asserts a right to reimbursement from the state pursuant to article XIII B,

section 6, and implementing legislation, Government Code section 17500 et seq.

We granted review to consider two questions: (1) Are the hearing costs incurred as a result of the *mandatory* actions related to expulsions that are compelled by Education Code section 48915 fully reimbursable—or are those hearing costs reimbursable only to the extent such costs are attributable to hearing procedures that exceed the procedures required by federal law? (2) Are any hearing costs incurred in carrying out expulsions that are *discretionary* under Education Code section 48915 reimbursable? After we granted review and filed our decision in *Department of Finance v. Commission on State Mandates (Kern High School Dist.)* (2003) 30 Cal.4th 727, 134 Cal.Rptr.2d 237, 68 P.3d 1203 (*Kern High School Dist.*), we added the following preliminary question to be addressed: Do the Education Code *867 statutes cited above establish a “new program” or “higher level of service” under article XIII B, section 6? Finally, we also asked the parties to brief the effect of the decision in *Kern High School Dist.*, *supra*, 30 Cal.4th 727, 134 Cal.Rptr.2d 237, 68 P.3d 1203, on the present case.

We conclude that Education Code section 48915, insofar as it compels suspension and mandates a recommendation of expulsion for certain offenses, constitutes a “higher level of service” under article XIII B, section 6, and imposes a reimbursable state mandate for *all* resulting hearing costs—even those costs attributable to procedures required by federal law. In this respect, we shall affirm the judgment of the Court of Appeal.

We also conclude that *no* hearing costs incurred in carrying out those expulsions that are *discretionary* under Education Code section 48915—including costs related to hearing procedures claimed to exceed the requirements of federal law—are reimbursable. As we shall explain, to the extent that statute makes expulsions discretionary, it does not reflect a new program or a higher level of service related to an existing program. Moreover, even if the hearing *procedures* set forth in Education Code section 48918 constitute a new program or higher level of service, we conclude that *this* statute does not trigger any right to reimbursement, because the hearing provisions that assertedly exceed federal requirements are merely incidental to fundamental federal due process requirements and the added costs of such procedures are de minimis. For these reasons, we conclude such hearing provisions should be treated, for purposes of ruling upon a request for reimbursement, as part of the nonreimbursable underlying *federal* mandate and not as a

state mandate. Accordingly, we shall reverse the judgment of the Court of Appeal insofar as it compels reimbursement **592 of any costs incurred pursuant to discretionary expulsions.

I

A. Education Code sections 48918 and 48915

We first describe the relevant provisions of two statutes—Education Code sections 48918 and 48915—pertaining to the expulsion of students from public schools.

Education Code section 48918 specifies the right of a student to an expulsion hearing and sets forth procedures that a school district must *868 follow when conducting ***469 such a hearing. (Stats.1990, ch. 1231, § 2, pp. 5136–5139.)²

2 For purposes of our present inquiry, section 48918, at the time relevant here (mid–1993 through mid–1994) read essentially as it had for the prior decade, and as it has in the ensuing decade. That provision first was enacted in 1975 (see Stats.1975, ch. 1253, § 4, pp. 3277–3278) as Education Code, former section 10608. (This enactment apparently was a response to the United States Supreme Court’s decision in *Goss v. Lopez* (1975) 419 U.S. 565, 581, 95 S.Ct. 729, 42 L.Ed.2d 725 (*Goss*) [recognizing due process requirements applicable to public school students who are suspended for more than 10 days].) The statute was renumbered as Education Code, former section 48914 in 1976 (Stats.1976, ch. 1010, § 2, pp. 3589–3590) and was substantially augmented in 1977 (Stats.1977, ch. 965, § 24, pp. 2924–2926). After relatively minor amendments in 1978 and 1982, the section in 1983 was substantially restated, further augmented, and renumbered as Education Code section 48918 (Stats.1983, ch. 498, § 91, p. 2118). Amendments adopted in 1984 and 1988 made relatively minor changes, and further similar modifications were made in 1990, reflecting the version of the statute here at issue. Subsequent amendments in 1995, 1996, 1998, and 1999 made further changes that are irrelevant to the issue presented in the case now before us.

In identifying the right to a hearing, subdivision (a) of this statute declares that a student is “entitled” to an expulsion hearing within 30 days after the school principal determines that the student has committed an act warranting expulsion.³ *In practical effect, this means that whenever a school principal makes such a determination and recommends to the*

school board that a student be expelled, an expulsion hearing is mandated.⁴

3 The provision reads: "The pupil shall be entitled to a hearing to determine whether the pupil should be expelled. An expulsion hearing shall be held within 30 schooldays after the date the principal or the superintendent of schools determines that the pupil has committed any of the acts enumerated in Section 48900...." (Ed.Code, § 48918, subd. (a). (Subdivision (b) of § 48900 presently includes—as it did at the time relevant here—the offense of possession of a firearm.)

4 Of course, if a student does not invoke his or her entitlement to such a hearing, and instead waives the right to such a hearing, the hearing need not be held.

In specifying the substantive and procedural requirements for such an expulsion hearing, Education Code section 48918 sets forth rules and procedures, some of which, the parties agree, codify requirements of federal due process and some of which may exceed those requirements.⁵ These rules and procedures govern, among other things, notice of a hearing and the right to representation by counsel, preparation of findings of fact, notices related to the expulsion and the right of appeal, and preparation of a hearing record. (See § 48918, subds. (a) through former subd. (j) (currently subd. (k).)

5 See *Goss*, *supra*, 419 U.S. 565, 581, 95 S.Ct. 729, 42 L.Ed.2d 725; *Gonzales v. McEuen* (C.D.Cal.1977) 435 F.Supp. 460, 466–467 (concluding that former Education Code section 10608 [current § 48918] met federal due process requirements pertaining to expulsions from public schools); 7 Witkin, *Summary of California Law* (9th ed.1988), *Constitutional Law*, § 549, p. 754 (noting that Education Code section 48918 and related legislation were enacted in response to the decision in *Goss*).

*869 The second statute at issue in this matter is Education Code section 48915. Discrete subdivisions of this statute address circumstances in which a principal *must* recommend to the school board that a student be expelled, and circumstances in which a principal *may* recommend that a student be expelled.

First, there is what the parties characterize as the "mandatory expulsion provision," Education Code section 48915, former subdivision (b). As it read during the time relevant in this proceeding (mid-1993 ***470 through mid-1994), this subdivision (1) compelled a school principal to *immediately suspend* any **593 student found to be in possession of a

firearm at school or at a school activity off school grounds, and (2) mandated a *recommendation* to the school district governing board that the student be *expelled*. The provision further required the governing board, upon confirmation of the student's knowing possession of a firearm, either to expel the student or "refer" him or her to an alternative education program housed at a separate school site.⁶ (Compare this former provision with *current* Ed.Code, § 48915, subds. (c) and (d).)⁷

6 An earlier and similar, albeit broader, version of the provision—extending not only to possession of firearms but also to possession of explosives and certain knives—existed briefly and was effective for approximately two and one-half months in late 1993. That initial statute, former section 48915, subdivision (b) (as amended Stats.1993, ch. 1255, § 2, pp. 7284–7285), which was effective only from October 11, 1993 through December 31, 1993, provided: "The principal or the superintendent of schools shall immediately suspend pursuant to Section 48911, and shall recommend to the governing board the expulsion of, any pupil found to be in possession of a firearm, knife of no reasonable use to the pupil, or explosive at school or at a school activity off school grounds. The governing board shall expel that pupil or, as an alternative, refer that pupil to an alternative education program, whenever the principal or the superintendent of schools and the governing board confirm that: [¶] (1) The pupil was in knowing possession of the firearm, knife, or explosive. [¶] (2) Possession of the firearm, knife of no reasonable use to the pupil, or explosive was verified by an employee of the school district. [¶] (3) There was no reasonable cause for the pupil to be in possession of the firearm, knife, or explosive."

As subsequently amended by Statutes 1993, chapter 1256, section 2, pages 7286–7287, effective January 1, 1994, Education Code section 48915, former subdivision (b), read: "The principal or the superintendent of schools shall immediately suspend, pursuant to Section 48911, any pupil found to be in possession of a firearm at school or at a school activity off school grounds and shall recommend expulsion of that pupil to the governing board. The governing board shall expel that pupil or refer that pupil to a program of study that is appropriately prepared to accommodate students who exhibit discipline problems and is not provided at a comprehensive middle, junior, or senior high school or housed at the schoolsite attended by the pupil at the time the expulsion was recommended to the school board, whenever the principal or superintendent of schools and the governing board

confirm the following: [¶] (1) The pupil was in knowing possession of the firearm. [¶] (2) An employee of the school district verifies the pupil's possession of the firearm.”

7 The current subdivisions of Education Code section 48915 set forth a list of mandatory expulsion conduct broader than that set forth in former subdivision (b), and require a school board both to *expel and refer* to other institutions all students found to have committed such conduct. The present subdivisions read: “(c) The principal or superintendent of schools shall immediately suspend, pursuant to Section 48911, and shall recommend expulsion of a pupil that he or she determines has committed any of the following acts at school or at a school activity off school grounds: [¶] (1) Possessing, selling, or otherwise furnishing a firearm. This subdivision does not apply to an act of possessing a firearm if the pupil had obtained prior written permission to possess the firearm from a certificated school employee, which is concurred in by the principal or the designee of the principal. This subdivision applies to an act of possessing a firearm only if the possession is verified by an employee of a school district. [¶] (2) Brandishing a knife at another person. [¶] (3) Unlawfully selling a controlled substance listed in Chapter 2 (commencing with Section 11053) of Division 10 of the Health and Safety Code. [¶] (4) Committing or attempting to commit a sexual assault as defined in subdivision (n) of Section 48900 or committing a sexual battery as defined in subdivision (n) of Section 48900. [¶] (5) Possession of an explosive. [¶] (d) The governing board shall order a pupil expelled upon finding that the pupil committed an act listed in subdivision (c), and shall refer that pupil to a program of study that meets all of the following conditions: [¶] (1) Is appropriately prepared to accommodate pupils who exhibit discipline problems. [¶] (2) Is not provided at a comprehensive middle, junior, or senior high school, or at any elementary school. [¶] (3) Is not housed at the schoolsite attended by the pupil at the time of suspension.” (Stats.2001, ch. 116, § 1.)

***471 *870 This provision, as it read at the time relevant here, did not mandate expulsion per se⁸—but it *did* require immediate suspension followed by a mandatory expulsion recommendation (and it provided that a student found by the governing board to have possessed **594 a firearm would be removed from the school site by limiting disposition to either expulsion or “referral” to an alternative school). Moreover, as noted above, whenever expulsion is recommended a student has a right to an expulsion

hearing. Accordingly, it is appropriate to characterize the former provision as *mandating* immediate suspension, a recommendation of expulsion, *and hence, an expulsion hearing*. For convenience, we accept the parties' description of this aspect of Education Code section 48915 as constituting a “mandatory expulsion provision.”

8 As the Department of Finance observed in an August 22, 1994, communication to the Commission in this matter, “nothing in [Education Code section 48915] ... requires a district governing board or a county board of education to expel a pupil,” and even “unauthorized and knowing possession of a firearm, does not result in mandated expulsion. Section 48915 subdivision (b) provides for the choice of the governing board to either expel the pupil in possession of a firearm, or refer the pupil to an alternative program of study...”

The second aspect of Education Code section 48915 relevant here consists of what we shall call the “discretionary expulsion provision.” (*Id.*, former subd. (c), subsequently subd. (d), currently subd. (e).) During the period relevant in this proceeding (as well as currently), this subdivision of Education Code section 48915 recognized that a principal possesses *discretion* to recommend that a student be expelled for specified conduct other than firearm possession (conduct such as damaging or stealing school property or private property, using or selling illicit drugs, receiving stolen property, possessing tobacco or drug paraphernalia, or engaging in disruptive behavior). The former provision (like the current provision) further specified that the school district governing board “may” order a student expelled upon finding that the *871 student, while at school or at a school activity off school grounds, engaged in such conduct.⁹

9 Education Code, section 48915, former subdivision (c) (as amended Stats.1992, ch. 909, § 3, p. 4226; amended and redesignated as former subd. (d) by Stats.1993, ch. 1255, § 2, pp. 7284–7285; further amended Stats.1993, ch. 1256, § 2, p. 7287, and Stats.1994, ch. 1198, § 7, p. 7271) provided, at the time relevant here: “Upon recommendation by the principal, superintendent of schools, or by a hearing officer or administrative panel appointed pursuant to subdivision (d) of Section 48918, the governing board *may* order a pupil expelled upon finding that the pupil violated subdivision (f), (g), (h), (i), (j), (k), or (l) of Section 48900, or Section 48900.2 or 48900.3, and either of the following: [¶] (1) That other means of correction are not feasible or have repeatedly failed to bring about proper conduct. [¶] (2) That due to the nature of the violation, the presence

of the pupil causes a continuing danger to the physical safety of the pupil or others.” (Italics added.)

At the time relevant here, subdivisions (f) through (l) of section 48900 (as amended Stats.1992, ch. 909, § 1, pp. 4224–4225; Stats.1994, ch. 1198, § 5, pp. 7269–5270) provided: “A pupil shall *not* be suspended from school or recommended for expulsion *unless* the superintendent or the principal of the school in which the pupil is enrolled determines that the pupil has: [¶] ... [¶] (f) Caused or attempted to cause damage to school property or private property. [¶] (g) Stolen or attempted to steal school property or private property. [¶] (h) Possessed or used tobacco, or any products containing tobacco or nicotine products.... However, this section does not prohibit use or possession by a pupil of his or her own prescription products. [¶] (i) Committed an obscene act or engaged in habitual profanity or vulgarity. [¶] (j) Had unlawful possession of, or unlawfully offered, arranged, or negotiated to sell any drug paraphernalia, as defined in Section 11014.5 of the Health and Safety Code. [¶] (k) Disrupted school activities or otherwise willfully defied the valid authority of supervisors, teachers, administrators, school officials, or other school personnel engaged in the performance of their duties. [¶] (l) Knowingly received stolen school property or private property.” (Italics added.)

At the time relevant here, section 48900.2 (Stats.1992, ch. 909, § 2, p. 4225) provided: “In addition to the reasons specified in Section 48900, a pupil may be suspended from school or recommended for expulsion if the superintendent or the principal of the school in which the pupil is enrolled determines that the pupil has committed sexual harassment as defined in Section 212.5.[¶] For the purposes of this chapter, the conduct described in Section 212.5 must be considered by a reasonable person of the same gender as the victim to be sufficiently severe or pervasive to have a negative impact upon the individual's academic performance or to create an intimidating, hostile, or offensive educational environment. This section shall not apply to pupils enrolled in kindergarten and grades 1 to 3, inclusive.”

Section 48900.3 (Stats.1994, ch. 1198, § 6, p. 7270), at the time relevant here, provided: “In addition to the reasons specified in Sections 48900 and 48900.2, a pupil in any of grades 4 to 12, inclusive, may be suspended from school or recommended for expulsion if the superintendent or the principal of the school in which the pupil is enrolled determines that the pupil has caused, attempted to cause, threatened

to cause, or participated in an act of, hate violence, as defined in subdivision (e) of [former] Section 33032.5 [current section 233].”

In addition, section 48900.4 (Stats.1994, ch. 1017, § 1, p. 6196) provided, at the time relevant here: “In addition to the grounds specified in Sections 48900 and 48900.2, a pupil enrolled in any of grades 4 to 12, inclusive, may be suspended from school or recommended for expulsion if the superintendent or the principal of the school in which the pupil is enrolled determines that the pupil has intentionally engaged in harassment, threats, or intimidation, directed against a pupil or group of pupils, that is sufficiently severe or pervasive to have the actual and reasonably expected effect of materially disrupting classwork, creating substantial disorder, and invading the rights of that pupil or group of pupils by creating an intimidating or hostile educational environment.”

(All of these current provisions—sections 48915, subdivision (e), 48900, 48900.2, 48900.3, and 48900.4—read today substantially the same as they did at the time relevant in the present case.)

*****472 *872 **595 B. Proceedings
under Government Code section 17500 et seq.**

Procedures governing the constitutional requirement of reimbursement under article XIII B, section 6, are set forth in Government Code section 17500 et seq. The Commission on State Mandates (Commission) (Gov.Code, § 17525) is charged with the responsibility of hearing and deciding, subject to judicial review by an administrative writ of mandate, claims for reimbursement made by local governments or school districts. (Gov.Code, § 17551.) Government Code section 17561, subdivision (a), provides that the “state shall reimburse each ... school district for all ‘costs mandated by the state,’ as defined in section 17514.” Government Code section 17514, in turn, defines “costs mandated by the state” to mean, in relevant part, “any increased costs which a ... school district is required to incur ... as a result of any statute ... which mandates a new program or higher level of service of an existing program within the meaning of Section 6 of Article XIII B of the California Constitution.” Finally, Government Code section 17556 sets forth circumstances in which there shall be no reimbursement, including, under subdivision (c), circumstances in which “[t]he statute or executive order implemented a federal law or regulation and resulted in costs mandated by the federal government, unless the statute or ***473 executive order

mandates costs which exceed the mandate in that federal law or regulation.”

In March 1994, the District filed a “test claim” with the Commission, asserting entitlement to reimbursement for the costs of hearings provided with respect to both categories of cases described above—that is, those hearings triggered by mandatory expulsion recommendations, and those hearings resulting from discretionary expulsion recommendations. (See Gov. Code, § 17521; *Kinlaw v. State of California* (1991) 54 Cal.3d 326, 331–333, 285 Cal.Rptr. 66, 814 P.2d 1308.)¹⁰ The District sought reimbursement for costs incurred between July 1, 1993, and June 30, 1994, under statutes effective through the latter date.

- 10 As observed by amicus curiae California School Boards Association, a “test claim is like a class action—the Commission’s decision applies to all school districts in the state. If the district is successful, the Commission goes to the Legislature to fund the statewide costs of the mandate for that year and annually thereafter as long as the statute is in effect.”

In August 1998, after holding hearings on the District’s claim (as amended in April 1995, to reflect legislation that became effective in 1994), the Commission issued a “Corrected Statement of Decision” in which it determined that Education Code section 48915’s requirement of suspension and a *873 mandatory recommendation of expulsion for firearm possession constituted a “new program or higher level of service,” and found that because costs related to some of the resulting hearing provisions set forth in Education Code section 48918 (primarily various notice, right of inspection, and recording provisions) exceeded the requirements of federal due process, those additional hearing costs constituted reimbursable state-mandated costs.¹¹ As to the vast majority of the remaining **596 hearing procedures triggered by Education Code section 48915’s requirement of suspension and a mandatory recommendation of expulsion for firearm possession—for example, procedures governing such matters as the hearing itself and the board’s decision; a statement of facts and charges; notice of the right to representation by counsel; written findings; recording of the hearing; and the making of a record of the expulsion—the Commission found that those procedures were enacted to comply with federal due process requirements, and hence fell within the exception set forth in Government Code section 17556, subdivision (c), and ***474 did not impose a reimbursable state mandate. The Commission further found that with respect to Education Code section 48915’s *discretionary* expulsions, there was

no right to reimbursement for costs incurred in holding expulsion hearings, because such expulsions do not constitute a new program or higher level of service, and in any event such expulsions are not *mandated* by the state, but instead represent a choice by the principal and the school board.

- 11 The Commission concluded that the costs incurred in providing the following state-mandated procedures under Education Code section 48918 exceeded federal due process requirements, and were reimbursable: (i) adoption of rules and regulations pertaining to pupil expulsions (§ 48918, first par. & *passim*); (ii) inclusion in the notice of hearing of (a) a copy of the disciplinary rules of the District, (b) a notice of the parents’ obligation to notify a new school district, upon enrollment, of the pupil’s expulsion, and (c) a notice of the opportunity to inspect and obtain copies of all documents to be used at the hearing (§ 48918, subd. (b)); (iii) allowing, upon request, the pupil or parent to inspect and obtain copies of the documents to be used at the hearing (§ 48918, subd. (b)); (iv) sending of written notice concerning (a) any decision to expel or suspend the enforcement of an expulsion order during a period of probation, (b) the right to appeal the expulsion to the county board of education, and (c) the obligation of the parent to notify a new school district, upon enrollment, of the pupil’s expulsion (§ 48918, former subd. (i), currently subd. (j)); (v) maintenance of a record of each expulsion, including the cause thereof (§ 48918, former subd. (j), currently subd. (k)); and (vi) the recording of expulsion orders and the causes thereof in the pupil’s mandatory interim record (and, upon request, the forwarding of this record to any school in which the pupil subsequently enrolls) (§ 48918, former subd. (j), currently subd. (k)).

In October 1999, the District brought this proceeding for an administrative writ of mandate challenging the Commission’s decision. The trial court issued a writ commanding the Commission to render a new decision finding (i) all costs associated with hearings triggered by compulsory suspensions and mandatory expulsion recommendations are reimbursable, and (ii) hearing costs associated with discretionary expulsions are reimbursable to the limited *874 extent that required hearing procedures exceed federal due process mandates. The Commission (defendant) and the Department of Finance (real party in interest, hereafter Department) appealed, and the Court of Appeal affirmed the judgment rendered by the trial court.

II

A. Costs associated with hearings triggered by compulsory suspensions and mandatory expulsion recommendations

1. "New program or higher level of service"?

We address first the issue that we asked the parties to brief: Does Education Code section 48915, former subdivision (b) (current subs. (c) & (d)), which mandated suspension and an expulsion recommendation for those students who possess a firearm at school or at a school activity off school grounds, and which also required a school board, if it found the charge proved, either to expel or to "refer" such a student to an alternative educational program housed at a separate school site, constitute a "new program or higher level of service" under article XIII B, section 6 of the state Constitution, and under Government Code section 17514?

We addressed the meaning of the Constitution's phrase "new program or higher level of service" in *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 233 Cal.Rptr. 38, 729 P.2d 202 (*County of Los Angeles*). That case concerned whether local governments are entitled to reimbursement for costs incurred in complying with legislation that required local agencies to provide the same increased level of workers' compensation benefits for their employees as private individuals or organizations were required to provide for their employees. We stated:

"Looking at the language of [article XIII B, section 6] then, it seems clear that by itself the term 'higher level of service' is meaningless. It must be read in conjunction with the predecessor phrase 'new program' to give it meaning. Thus read, it is apparent that the subvention requirement for increased or higher level of service is directed to state mandated increases in the services provided by local agencies in existing 'programs.' But the term 'program' itself is not defined in article XIII B. What programs ^{**597} then did the electorate have in mind when section 6 was adopted? We conclude that the drafters and the electorate had in mind the commonly understood meanings of the term— [(1)] programs that carry out the governmental function of providing services to the public, or [(2)] laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents ^{***475} and entities in the state." (*County of Los Angeles, supra*, 43 Cal.3d 46, 56, 233 Cal.Rptr. 38, 729 P.2d 202.)

^{*875} We continued in *County of Los Angeles*: "The concern which prompted the inclusion of section 6 in article XIII B

was the perceived attempt by the state to enact legislation or adopt administrative orders creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services which the state believed should be extended to the public. In their ballot arguments, the proponents of article XIII B explained section 6 to the voters: 'Additionally, this measure: (1) Will not allow the state government to *force programs* on local governments without the state paying for them.' (Ballot Pamp., Proposed Amend. to Cal. Const. with arguments to voters, Spec. Statewide Elec. (Nov. 6, 1979) p. 18. Italics added.) In this context the phrase 'to force programs on local governments' confirms that *the intent underlying section 6 was to require reimbursement to local agencies for the costs involved in carrying out functions peculiar to government, not for expenses incurred by local agencies as an incidental impact of laws that apply generally to all state residents and entities.*" (*County of Los Angeles, supra*, 43 Cal.3d 46, 56–57, 233 Cal.Rptr. 38, 729 P.2d 202, italics added.)

It was clear in *County of Los Angeles, supra*, 43 Cal.3d 46, 233 Cal.Rptr. 38, 729 P.2d 202, that the law at issue did not meet the second test for a "program or higher level of service"—it did not implement a state policy by imposing unique requirements upon local governments, but instead applied workers' compensation contribution rules generally to all employers in the state. Nor, we held, did the law requiring local agencies to shoulder a general increase in workers' compensation benefits amount to a reimbursable "program or higher level of service" under the first test described above. (*Id.*, at pp. 57–58, 233 Cal.Rptr. 38, 729 P.2d 202.) The law increased the cost of employing public servants, but it did not in any tangible manner increase the level of service provided by those employees to the public.

We reaffirmed and applied the test set out in *County of Los Angeles, supra*, 43 Cal.3d 46, 233 Cal.Rptr. 38, 729 P.2d 202, in *Lucia Mar Unified School District v. Honig* (1988) 44 Cal.3d 830, 244 Cal.Rptr. 677, 750 P.2d 318 (*Lucia Mar*). The state law at issue in *Lucia Mar* required local school districts to pay a portion of the cost of educating pupils in state schools for the severely handicapped—costs that the state previously had paid in full.

We determined that the contributions called for under the law were used to fund a "program" within both definitions of that term set forth in *County of Los Angeles, supra*, 44 Cal.3d 830, 835, 244 Cal.Rptr. 677, 750 P.2d 318.) We stated: "[T]he education of handicapped children is clearly a governmental function providing a service to the

public, and the [state law] imposes requirements on school districts not imposed on all the states residents. Nor can there be any doubt that although the schools for the handicapped have been operated by the state for many years, the program was new insofar as plaintiffs are *876 concerned, since at the time [the state law] became effective they were not required to contribute to the education of students from their districts at such schools. [] ... To hold, under the circumstances of this case, that a shift in funding of an existing program from the state to a local entity is not a new program as to the local agency would, we think, violate the intent underlying section 6 of article XIII B.... Section 6 was intended to preclude the state from shifting to local ***476 agencies the financial responsibility for providing public services in view of ... restrictions on the taxing and spending power of the local entities." (*Lucia Mar, supra*, 44 Cal.3d 830, 835–836, 244 Cal.Rptr. 677, 750 P.2d 318; see also **598 *County of San Diego v. State of California* (1997) 15 Cal.4th 68, 98, 61 Cal.Rptr.2d 134, 931 P.2d 312 [legislation excluding indigents from Medi-Cal coverage transferred obligation for such costs from state to counties, and constituted a reimbursable "new program or higher level of service"].)

We again applied the alternative tests set forth in *County of Los Angeles, supra*, 43 Cal.3d 46, 233 Cal.Rptr. 38, 729 P.2d 202, in *City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 266 Cal.Rptr. 139, 785 P.2d 522 (*City of Sacramento*). In that case we considered whether a state law implementing federal "incentives" that encouraged states to extend unemployment insurance coverage to all public employees constituted a program or higher level of service under article XIII B, section 6. We concluded that it did not because, as in *County of Los Angeles*, (1) providing unemployment compensation protection to a city's own employees was not a service to the public; and (2) the statute did not apply uniquely to local governments—indeed, the same requirements previously had been applied to most employers, and extension of the requirement (by eliminating a prior exemption for local governments) merely placed local government employers on the same footing as most private employers. (*City of Sacramento, supra*, 50 Cal.3d at pp. 67–68, 266 Cal.Rptr. 139, 785 P.2d 522.)

Subsequently, the Court of Appeal in *City of Richmond v. Commission on State Mandates* (1998) 64 Cal.App.4th 1190, 75 Cal.Rptr.2d 754 (*City of Richmond*), following *County of Los Angeles, supra*, 43 Cal.3d 46, 233 Cal.Rptr. 38, 729 P.2d 202, and *City of Sacramento, supra*, 50 Cal.3d 51, 266 Cal.Rptr. 139, 785 P.2d 522, concluded that requiring local

governments to provide death benefits to local safety officers, under both the Public Employees Retirement System and the workers' compensation system, did not constitute a higher level of service to the public. The Court of Appeal arrived at that determination even though—as might also have been argued in *County of Los Angeles* and *City of Sacramento*—such benefits may "generate a higher quality of local safety officers" and thereby, in a general and indirect sense, provide the public with a "higher level of service" by its employees. (*City of Richmond, supra*, 64 Cal.App.4th 1190, 1195, 75 Cal.Rptr.2d 754.)

Viewed together, these cases (*County of Los Angeles, supra*, 43 Cal.3d 46, 233 Cal.Rptr. 38, 729 P.2d 202, *City of Sacramento, supra*, 50 Cal.3d 51, 266 Cal.Rptr. 139, 785 P.2d 522, and *City of Richmond, supra*, *877 *supra*, 64 Cal.App.4th 1190, 75 Cal.Rptr.2d 754) illustrate the circumstance that simply because a state law or order may increase the costs borne by local government in providing services, this does not necessarily establish that the law or order constitutes an increased or higher level of the resulting "service to the public" under article XIII B, section 6, and Government Code section 17514.¹²

12 Indeed, as the court in *City of Richmond, supra*, 64 Cal.App.4th 1190, 75 Cal.Rptr.2d 754, observed: "Increasing the cost of providing services cannot be equated with requiring an increased level of service under [article XIII B,] section 6.... A higher cost to the local government for compensating its employees is not the same as a higher cost of providing [an increased level of] services to the public." (*Id.*, at p. 1196, 75 Cal.Rptr.2d 754; accord, *City of Anaheim v. State of California* (1987) 189 Cal.App.3d 1478, 1484, 235 Cal.Rptr. 101 [temporary increase in PERS benefit to retired employees, resulting in higher contribution rate by local government, does not constitute a higher level of service to the public].)

***477 By contrast, Courts of Appeal have found a reimbursable "higher level of service" concerning an existing "program" when a state law or executive order mandates not merely some change that increases the cost of providing services, but an increase in the actual level or quality of governmental services provided. In *Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521, 537–538, 234 Cal.Rptr. 795 (*Carmel Valley*), for example, an executive order required that county firefighters be provided with protective clothing and safety equipment. Because this increased safety equipment apparently was designed to result in more effective fire protection, the

mandate evidently was intended to produce a higher level of service to the public, thereby satisfying the first alternative test set out in *County of Los Angeles, supra*, 43 Cal.3d 46, 56, 233 Cal.Rptr. 38, 729 P.2d 202. Similarly, in ***599 Long Beach Unified School District v. State of California* (1990) 225 Cal.App.3d 155, 173, 275 Cal.Rptr. 449 (*Long Beach*), an executive order required school districts to take specific steps to measure and address racial segregation in local public schools. The appellate court held that this constituted a “higher level of service” to the extent the order’s requirements exceeded federal constitutional and case law requirements by mandating school districts to undertake defined remedial actions and measures that were merely advisory under prior governing law.

1 The District and the Commission assert that the “mandatory” aspect of Education Code section 48915, insofar as it compels suspension and mandates an expulsion recommendation for firearm possession (and thereafter restricts the board’s options to expulsion or referral to an off-site alternative school), carries out a governmental function of providing services to the public and hence constitutes an increased or higher level of service concerning an existing program under the first alternative test of *County of Los Angeles, supra*, 43 Cal.3d 46, 56, 233 Cal.Rptr. 38, 729 P.2d 202. They argue, in essence, that the present matter is more analogous to the latter cases **878 (Carmel Valley, supra*, 190 Cal.App.3d 521, 234 Cal.Rptr. 795, and *Long Beach, supra*, 225 Cal.App.3d 155, 275 Cal.Rptr. 449)—both of which involved measures designed to increase the level of governmental service provided to the public—than to the former cases (*County of Los Angeles, supra*, 43 Cal.3d 46, 233 Cal.Rptr. 38, 729 P.2d 202, *City of Sacramento, supra*, 50 Cal.3d 51, 266 Cal.Rptr. 139, 785 P.2d 522, and *City of Richmond, supra*, 64 Cal.App.4th 1190, 75 Cal.Rptr.2d 754)—in which the cost of employment was increased but the resulting governmental services themselves were not directly enhanced or increased. As we shall explain, we agree with the District and the Commission.

The statutory requirements here at issue—immediate suspension and mandatory recommendation of expulsion for students who possess a firearm, and the limitation upon the ensuing options of the school board (expulsion or referral)—reasonably are viewed as providing a “higher level of service” to the public under the commonly understood sense of that term: (i) the requirements are new in comparison with the preexisting scheme in view of the circumstance that they did not exist prior to the enactment of Statutes of 1993, chapters 1255 (Assem. Bill No. 342 (1993–1994 Reg. Sess.)

(Assembly Bill No. 342)) and 1256 (Senate Bill ****478* No. 1198 (1993–1994 Reg. Sess.) (Senate Bill No. 1198)); and (ii) the requirements were intended to provide an enhanced service to the public—*safer schools for the vast majority of students* (that is, those who are not expelled or referred to other school sites). In other words, the legislation was premised upon the idea that by removing potentially violent students from the general school population, the safety of those students who remain thereby is increased. (See, e.g., Stats.1993, ch. 1255, § 4, pp. 7285–7286 [“In order to ensure public safety on school campuses ... it is necessary that this act take effect immediately”]; Sen. Com. on Ed. (Apr. 28, 1993), Analysis of Assem. Bill No. 342, p. 2 [noting legislative purpose to enhance public safety]; see also Assem. Com. on Ed. (July 14, 1993), Analysis of Sen. Bill No. 1198, p. 1 [noting legislative purpose to remove those who possess firearms from the general school population by increasing the frequency of expulsion for such conduct].)

In challenging this conclusion, the Department relies upon *County of Los Angeles v. Department of Industrial Relations* (1989) 214 Cal.App.3d 1538, 263 Cal.Rptr. 351 (*Department of Industrial Relations*). In that case, the state enacted enhanced statewide safety regulations that governed all public and private elevators, and thereafter the County of Los Angeles sought reimbursement for the costs of complying with the new regulations. The Court of Appeal found that the regulations constituted neither a new program nor a higher level of service concerning an existing program under either of the two alternative tests set out in *County of Los Angeles, supra*, 43 Cal.3d 46, 56, 233 Cal.Rptr. 38, 729 P.2d 202. The court concluded that the elevator regulations did not meet the first alternative test, because the regulations did not carry out a governmental function of providing services to the public; the court found instead that **879* “[p]roviding elevators equipped with fire and earthquake ***600* safety features simply is not a ‘government function of providing services to the public.’ ” (*Department of Industrial Relations, supra*, 214 Cal.App.3d at p. 1546, 263 Cal.Rptr. 351.) Moreover, the court found, the second (“uniqueness”) test was not met—the regulation applied to all elevators, not only those owned or operated by local governments.

The Department asserts that *Department of Industrial Relations, supra*, 214 Cal.App.3d 1538, 263 Cal.Rptr. 351, is analogous, and argues that the “service” afforded by mandatory suspensions followed by a required expulsion recommendation, etc., is “not qualitatively different from the safety regulations at issue in [*Department of Industrial Relations*]. School districts carrying out such expulsions

are not providing a service to the public....” We disagree. Providing public schooling clearly constitutes a governmental function, and enhancing the safety of those who attend such schools constitutes a service to the public. Moreover, here, unlike the situation in *Department of Industrial Relations*, the law implementing this state policy applies uniquely to local public schools. We conclude that *Department of Industrial Relations* does not conflict with the conclusion that the mandatory suspension and expulsion recommendation requirements, together with restrictions placed upon a district's resolution of such a case, constitute an increased or higher level of service to the public under the constitutional provision and the implementing statutes.

Of course, even if, as we have concluded above, a statute effectuates an increased or higher level of governmental service to the public concerning an existing program, this “does not necessarily lead to the conclusion that the program is a state mandate ***479 under California Constitution, article XIII B, section 6.” (*County of Los Angeles v. Commission on State Mandates* (1995) 32 Cal.App.4th 805, 818, 38 Cal.Rptr.2d 304, italics added (*County of Los Angeles II*).) We turn to the question whether the hearing costs at issue, flowing from compulsory suspensions and mandatory expulsion recommendations, are mandated by the state.

2. Are the hearing costs state mandated?

As noted above, a compulsory suspension and a mandatory recommendation of expulsion under Education Code section 48915 in turn trigger a mandatory expulsion hearing. All parties agree that any such resulting expulsion hearing must comply with basic federal due process requirements, such as notice of charges, a right to representation by counsel, an explanation of the evidence supporting the charges, and an opportunity to call and cross-examine witnesses and to present evidence. (See *ante*, fn. 5.) But as also noted above, article XIII B, section 6, and the implementing statutes *880 (Gov.Code, § 17500 et seq.), by their terms, provide for reimbursement only of state-mandated costs, not federally mandated costs. The Commission and the Department assert that this circumstance raises the question: Do all or some of a district's costs in complying with the mandatory expulsion provision of Education Code section 48915 constitute a nonreimbursable federal mandate?

In the absence of the operation of Education Code section 48915's mandatory provision (specifically, compulsory immediate suspension and a mandatory expulsion recommendation), a school district would not automatically

incur the due process hearing costs that are mandated by federal law pursuant to *Goss, supra*, 419 U.S. 565, 95 S.Ct. 729, 42 L.Ed.2d 725, and related cases, and codified in Education Code section 48918. Instead, a district would incur such hearing costs only if a school principal first were to exercise discretion to recommend expulsion. Accordingly, in its mandatory aspect, Education Code section 48915 appears to constitute a state mandate, in that it establishes conditions under which the state, rather than local officials, has made the decision requiring a school district to incur the costs of an expulsion hearing.

The Department and the Commission agree to a point, but argue that a district's costs incurred in complying with this state mandate are reimbursable only if, and to the extent that, hearing procedures set forth in Education Code section 48918 exceed the requirements of federal due process. In support, they rely upon **601 Government Code section 17556, which—in setting forth circumstances in which the Commission shall not find costs to be mandated by the state—provides that “[t]he commission shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds that: ... (c) The statute or executive order implemented a federal law or regulation and resulted in costs mandated by the federal government, unless the statute or executive order mandates costs which exceed the mandate in that federal law or regulation.”¹³

13 Government Code section 17556 reads in full: “The commission shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds that: [¶] (a) The claim is submitted by a local agency or school district which requested legislative authority for that local agency or school district to implement the program specified in the statute, and that statute imposes costs upon that local agency or school district requesting the legislative authority. A resolution from the governing body or a letter from a delegated representative of the governing body of a local agency or school district which requests authorization for that local agency or school district to implement a given program shall constitute a request within the meaning of this paragraph. [¶] (b) The statute or executive order affirmed for the state that which had been declared existing law or regulation by action of the courts. [¶] (c) The statute or executive order implemented a federal law or regulation and resulted in costs mandated by the federal government, unless the statute or executive order mandates costs which exceed the mandate in that federal law or regulation.

[¶] (d) The local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service. [¶] (e) The statute or executive order provides for offsetting savings to local agencies or school districts which result in no net costs to the local agencies or school districts, or includes additional revenue that was specifically intended to fund the costs of the state mandate in an amount sufficient to fund the cost of the state mandate. [¶] (f) The statute or executive order imposed duties which were expressly included in a ballot measure approved by the voters in a statewide election. [¶] (g) The statute created a new crime or infraction, eliminated a crime or infraction, or changed the penalty for a crime or infraction, but only for that portion of the statute relating directly to the enforcement of the crime or infraction.”

***480 *881 We agree with the District and the Court of Appeal below that, as applied to the present case, it cannot be said that Education Code section 48915's mandatory expulsion provision “*implemented a federal law or regulation.*” (Italics added.) Education Code section 48915, at the time relevant here, did not implement any federal law; as explained below, federal law did not *then* mandate an expulsion recommendation—or expulsion—for firearm possession.¹⁴ Moreover, although the Department argues that in this context Government Code section 17556, subdivision (c)'s phrase “the statute” should be viewed as referring not to Education Code section 48915's mandatory expulsion recommendation requirement, but instead to the mandatory due process hearing under Education Code section 48918 that is triggered by such an expulsion recommendation, it still cannot be said that section 48918 itself required the District to incur any costs. As noted above, Education Code section 48918 sets out requirements for expulsion hearings that must be held when a district seeks to expel a student—but neither section 48918 nor federal law requires that any such expulsion recommendation be made in the first place, and hence section 48918 does not implement any federal mandate that school districts hold such hearings and incur such costs whenever a student is found in possession of a firearm. Accordingly, we conclude that the so-called exception to reimbursement described in Government Code section 17556, subdivision (c), is inapplicable in this context.

¹⁴ Subsequent amendments to federal law may alter this conclusion with regard to future test claims concerning Education Code section 48915's mandatory expulsion provision—see *post*, 16 Cal.Rptr.3d pages 481–482, 94 P.3d pages 602–603.

Because it is state law (Education Code section 48915's mandatory expulsion provision), and not federal due process law, that requires the District to take steps that in turn require it to incur hearing costs, it follows, contrary to the view of the Commission and the Department, that we cannot characterize *any* of the hearing costs incurred by the District, triggered by the mandatory provision of Education Code section 48915, as constituting a federal mandate (and hence being nonreimbursable). We conclude ***602 that under the statutes existing at the time of the test claim in this case (state legislation in effect through ***481 mid-1994), *all* such hearing costs—those designed to satisfy the minimum requirements of federal due process, and those that may exceed *882 those requirements—are, with respect to the mandatory expulsion provision of section 48915, state mandated costs, fully reimbursable by the state.¹⁵

15 In Exhibit No. 1 to its claim, the District presented the declaration of a San Diego Unified School District official, estimating that in order to process “350 proposed expulsions” during the period spanning July 1, 1993, to June 30, 1994, the District would incur approximately \$94,200 “in staffing and other costs”—yielding an average estimated cost of approximately \$270 per hearing during the relevant period. It is unclear from the record how many of these 350 hearings would be triggered by Education Code section 48915's mandatory expulsion provision (and constitute state-mandated costs subject to reimbursement under article XIII B, section 6), and how many of these 350 hearings would be triggered by Education Code section 48915's discretionary provision (and, as explained *post*, in part II.B, constitute a nonreimbursable *federal* mandate).

We note that in the proceedings below, the Commission did not confine reimbursement only to those matters as to which the district on its own initiative would not have sought expulsion in the absence of the statutory requirement that it seek expulsion—and the Department has not raised that point in the trial court or on appeal.

Against this conclusion, the Department, in its supplemental briefing, offers a wholly new theory, not advanced in any of the proceedings below, in support of its belated claim that *all* hearing costs triggered by Education Code section 48915's mandatory expulsion provision are in fact nonreimbursable *federal* mandates, and not, as we have concluded above, reimbursable state mandates. As we shall explain, we reject the Department's contention, as applied to the test case here at issue (involving state statutes in effect through mid-1994).

The Department cites 20 United States Code section 7151, part of the federal No Child Left Behind Act of 2001, which provides, as relevant here: "Each State receiving Federal funds under any subchapter of this chapter shall have in effect a State law requiring local educational agencies to expel from school for a period of not less than 1 year a student who is determined to have brought a firearm to a school, or to have possessed a firearm at a school, under the jurisdiction of local educational agencies in that State, except that such State law shall allow the chief administering officer of a local educational agency to modify such expulsion requirement for a student on a case-by-case basis if such modification is in writing."¹⁶

¹⁶ "Firearm," as defined in 18 United States Code section 921, includes guns and explosives.

The Department further asserts that more than \$2.8 billion in federal funds under the No Child Left Behind Act are included "for local use" in the 2003–04 state budget. (Cal. State Budget, 2003–04, Budget Highlights, p. 4.) The Department argues that in light of the requirements set forth in 20 United States Code section 7151, and the amount of federal program funds at issue under the No Child Left Behind Act, the financial consequences to the state and to the school districts of failing to comply with 20 United States Code section 7151 are such that as a practical matter, *883 Education Code section 48915's mandatory expulsion provision in reality constitutes an implementation of federal law, and hence resulting costs are nonreimbursable except to the extent they exceed the requirements of federal law. (See Govt.Code, § 17556, subd. (c); see also *Kern High School Dist.*, *supra*, 30 Cal.4th 727, 749–751, 134 Cal.Rptr.2d 237, 68 P.3d 1203; *City of Sacramento*, *supra*, 50 Cal.3d 51, 70–76, 266 Cal.Rptr. 139, 785 P.2d 522.) Moreover, the Department asserts, to the extent school districts are ***482 compelled by federal law, through Education Code section 48915's mandatory expulsion provision, to hold hearings pursuant to section 48918 in cases of firearm possession on school grounds, under 20 United States Code section 7164 (defining prohibited uses of program funds), *all* costs of such hearings properly may be paid out of federal program funds, and hence we should "view the ... provision of program funding as satisfying, in advance, any reimbursement requirement." (*Kern High School Dist.*, *supra*, 30 Cal.4th 727, 747, 134 Cal.Rptr.2d 237, 68 P.3d 1203.)

**603 Although the Department asserts that this federal law and program existed at the time relevant in this matter

(that is, through mid–1994), our review of the statutes and relevant history suggests otherwise. Title 20 of the United States Code, section 7151, and the remainder of the No Child Left Behind Act, became effective on January 8, 2002. The predecessor legislation cited by the Department—the Gun-Free Schools Act of 1994 (former 20 U.S.C. § 8921(a)), although containing a substantially identical mandatory expulsion provision (*id.*, § 8921(b)(1))¹⁷—was not effective until July 1, 1995 (108 Stat. 3518, § 3). In turn, the predecessor legislation to *that* Act cited by the Department, the Elementary and Secondary Education Act of 1965 (former 20 U.S.C. § 6301 et seq.)—as it existed at the time relevant here (July 1, 1993, through June 30, 1994)—contained no such mandatory expulsion provision. Accordingly, it appears that despite the Department's late discovery of 20 United States Code section 7151, at the time relevant here (regarding legislation in effect through mid–1994), neither 20 United States Code section 7151, nor either of its predecessors, compelled states to enact a law such as Education Code section 48915's mandatory expulsion provision. Therefore, we reject the Department's assertion that, during the time period at issue in this case, Education Code section 48915's mandatory expulsion provision constituted an implementation of a federal, rather than a state, mandate.

¹⁷ The prior law stated: "Except as provided in paragraph (3), each State receiving Federal funds under this chapter shall have in effect a State law requiring local educational agencies to expel from school for a period of not less than one year a student who is determined to have brought a weapon to a school under the jurisdiction of local educational agencies in that State, except that such State law shall allow the chief administering officer of such local educational agency to modify such expulsion requirement for a student on a case-by-case basis." (Pub.L. No. 103–382, § 14601(b)(1) (Oct. 20, 1994) 108 Stat. 3518.)

Although we conclude that all hearing costs triggered by Education Code section 48915's mandatory expulsion provision constitute reimbursable state-mandated expenses under the statutes as they existed during the period *884 covered by the District's present test claim, we do not foreclose the possibility that 20 United States Code section 7151 or its predecessor, 20 United States Code section 8921, may lead to a different conclusion when applied to versions of Education Code section 48915 effective in years 1995 and thereafter. Indeed, we note that at least one subsequent test

claim that has been filed with the Commission may raise the federal statutory issue advanced by the Department.¹⁸

- 18 See Pupil Expulsions II (4th Amendment), CSM No. 01–TC–18 (filed June 3, 2002). This claim, filed by the San Juan Unified School District, asserts reimbursable state mandates with respect to, among numerous other statutes, Education Code section 48915, as amended effective in 2002.

B. Costs associated with hearings triggered by discretionary expulsion recommendations

2 We next consider whether reimbursement is required for the costs associated ~~***483~~ with hearings triggered under discretionary expulsion provisions. Again, we address first the issue that we asked the parties to brief: Does the discretionary expulsion provision of Education Code section 48915 (former subd. (c), thereafter subd. (d), currently subd. (e)), which, as noted above, recognized that a principal possesses *discretion* to recommend that a student be expelled for specified conduct other than firearm possession (conduct such as damaging or stealing property, using or selling illicit drugs, possessing tobacco or drug paraphernalia, etc.), and further specified that the school district governing board “may” order a student expelled upon finding that the student, while at school or at a school activity off school grounds, engaged in such conduct, constitute a “new program or higher level of service” under article XIII B, section 6 of the state Constitution, and under Government Code section 17514?

We answer this question in the negative. The discretionary expulsion provision of Education Code section 48915 does not constitute a “new” program or higher level of service, because provisions recognizing discretion to suspend or expel were set forth in statutes predating 1975. (See Educ.Code, former ~~***604~~ § 10601, Stats.1959, ch. 2, § 3, p. 860 [providing that a student may be suspended for good cause]; *id.*, former § 10602 (Stats.1970, ch. 102, § 102, p. 159 (defining “good cause”); *id.*, former section 10601.6 (Stats.1972, ch. 164, § 2, p. 384 (further defining “good cause”))).¹⁹ Accordingly, the discretionary expulsion provision of Education Code section 48915 is not a “new” program under article XIII B, section 6, and the implementing statutes, ~~***885~~ nor does it reflect a higher level of service related to an existing program. (*County of Los Angeles, supra*, 43 Cal.3d 46, 56, 233 Cal.Rptr. 38, 729 P.2d 202.)

- 19 As the Commission observed in its Corrected Statement of Decision in this matter: “The authorization for

governing boards to expel pupils from school for inappropriate behaviors has been in existence since before 1975. The behaviors defined as inappropriate under current law, subdivisions (a) through (l) of section 48900, 48900.2, and 48900.3, meet prior laws’ definitions of ‘good cause’ and ‘misconduct’ as reasons for expulsion.” (Italics deleted.)

The District maintains, nevertheless, that once it elects to pursue expulsion, it is obligated to abide by the procedural hearing requirements of Education Code section 48918 and accordingly is mandated by that section to incur costs associated with such compliance. The District asserts that in this respect, *section 48918* constitutes a “new program or higher level of service” related to an existing program under article XIII B, section 6 and under Government Code section 17514. We shall assume for analysis that this is so.²⁰

- 20 The requirements of Education Code section 48918 would appear to be “new” for purposes of the reimbursement provisions, in that they did not exist prior to 1975 and were enacted in that year and subsequently. (See *ante*, fn. 2.) The requirements also would appear to meet both alternative tests set forth in *County of Los Angeles, supra*, 43 Cal.3d 46, 56, 233 Cal.Rptr. 38, 729 P.2d 202—that is, by implementing procedures that direct and guide the process of expulsion from public school, the statute appears to carry out a governmental function of providing services to public school students who face expulsion; or, it would seem, section 48918 constitutes a law that, to implement state policy, imposes unique requirements on local governments.

The District recognizes, of course, that under Government Code, section 17556, subdivision (c), it is not entitled to reimbursement to the extent Education Code section 48918 merely implements federal due process law, but the District argues that it has a right to reimbursement for its costs of complying with section 48918 to ~~***484~~ the extent those costs are attributable to hearing procedures that exceed federal due process requirements. (See Govt.Code, § 17556, subd. (c).) The District asserts that its costs in complying with various notice, right of inspection, and recording requirements (see *ante*, fn. 11) fall into this category and are reimbursable.

The Department and the Commission argue in response that any right to reimbursement for hearing costs triggered by discretionary expulsions—even costs limited to those procedures that assertedly exceed federal due process hearing

requirements—is foreclosed by virtue of the circumstance that when a school pursues a discretionary expulsion, it is not acting under compulsion of any law but instead is exercising a choice. In support, the Department and the Commission rely upon *Kern High School Dist.*, *supra*, 30 Cal.4th 727, 134 Cal.Rptr.2d 237, 68 P.3d 1203, and *City of Merced v. State of California* (1984) 153 Cal.App.3d 777, 200 Cal.Rptr. 642 (*City of Merced*).

In *Kern High School Dist.*, *supra*, 30 Cal.4th 727, 134 Cal.Rptr.2d 237, 68 P.3d 1203, school districts asserted that costs incurred in complying with statutory notice and agenda requirements for committee meetings concerning various state and federally funded educational programs constituted a reimbursable state mandate, because once *886 school districts *elected* to participate in the underlying state and federal programs, the districts had no option but to hold program-related committee meetings and abide by the challenged notice and agenda requirements. (*Id.*, at p. 742, 134 Cal.Rptr.2d 237, 68 P.3d 1203.) We rejected the school districts' position, reasoning in part that because the districts' participation in the underlying programs was voluntary, the notice and agenda costs incurred as a result of that voluntary participation were not the product of legal compulsion and did not constitute a reimbursable state mandate on that basis.

**605 (*Id.*, at p. 745, 134 Cal.Rptr.2d 237, 68 P.3d 1203.)²¹

21 We also proceeded to hold that in any event, because the school districts were free to use program funds to pay for the challenged increased costs, the districts had, in practical effect, already been given funds by the Legislature to cover the challenged costs. (*Kern High School Dist.*, *supra*, 30 Cal.4th at pp. 748–754, 134 Cal.Rptr.2d 237, 68 P.3d 1203.)

In reaching that conclusion in *Kern High School Dist.*, *supra*, 30 Cal.4th 727, 134 Cal.Rptr.2d 237, 68 P.3d 1203, we discussed *City of Merced*, *supra*, 153 Cal.App.3d 777, 200 Cal.Rptr. 642. In that case, the city wished either to purchase or to condemn, pursuant to its eminent domain authority, certain privately owned real property. The city elected to proceed by eminent domain, under which it was required by then recent legislation (Code Civ. Proc., § 1263.510) to compensate the property owner for loss of “business goodwill.” The city so compensated the property owner and then sought reimbursement from the state, arguing that the new statutory requirement that it compensate for business goodwill amounted to a reimbursable state mandate. (*City of Merced*, *supra*, 153 Cal.App.3d at p. 780, 200 Cal.Rptr. 642.) The Court of Appeal concluded that the city's increased costs

flowing from its election to condemn the property did not constitute a reimbursable state mandate. (*Id.*, at pp. 781–783, 200 Cal.Rptr. 642.) The court reasoned: “[W]hether a city or county decides to exercise eminent domain is, essentially, an option of the city or county, rather than a mandate of the state. *The fundamental concept is that the city or county is not required to exercise eminent domain. If, however, the power of eminent domain is ***485 exercised, then the city will be required to pay for loss of goodwill. Thus, payment for loss of goodwill is not a state-mandated cost.*” (*Id.*, at p. 783, 200 Cal.Rptr. 642, italics added.)

Summarizing this aspect of *City of Merced*, *supra*, 153 Cal.App.3d 777, 200 Cal.Rptr. 642, in *Kern High School Dist.*, *supra*, 30 Cal.4th 727, 134 Cal.Rptr.2d 237, 68 P.3d 1203, we stated: “[T]he core point articulated by the court in *City of Merced* is that *activities undertaken at the option or discretion of a local government entity* (that is, actions undertaken without any legal compulsion or threat of penalty for nonparticipation) *do not trigger a state mandate and hence do not require reimbursement of funds—even if the local entity is obliged to incur costs as a result of its discretionary decision to participate in a particular program or practice.*” (*Kern High School Dist.*, at p. 742, 134 Cal.Rptr.2d 237, 68 P.3d 1203, italics added.)

The Department and the Commission argue that in the present case the District, like the claimants in *Kern High School Dist.*, errs by focusing upon *887 the final result—a school district's legal obligation to comply with statutory hearing procedures—rather than focusing upon whether the school district has been *compelled* to put itself in the position in which such a hearing (with resulting costs) is required.

The District and amici curiae on its behalf (consistently with the opinion of the Court of Appeal below) argue that the holding of *City of Merced*, *supra*, 153 Cal.App.3d 777, 200 Cal.Rptr. 642, should not be extended to apply to situations beyond the context presented in that case and in *Kern High School Dist.*, *supra*, 30 Cal.4th 727, 134 Cal.Rptr.2d 237, 68 P.3d 1203. The District and amici curiae note that although any particular expulsion recommendation may be discretionary, as a practical matter it is inevitable that some school expulsions will occur in the administration of any public school program.²²

22 Indeed, the Court of Appeal below suggested that the present case is distinguishable from *City of Merced*, *supra*, 153 Cal.App.3d 777, 200 Cal.Rptr. 642, in light of article I, section 28, subdivision (c), of the state Constitution. That constitutional subdivision, part

of Proposition 8 (known as the Victims' Bill of Rights initiative, adopted by the voters at the Primary Election in June 1982), states: "All students and staff of public primary, elementary, junior high and senior high schools have the inalienable right to attend campuses which are safe, secure and peaceful." The Court of Appeal below concluded: "In light of a school district's constitutional obligation to provide a safe educational environment ..., the incurring of [hearing] costs [under Education Code section 48918] cannot properly be viewed as a nonreimbursable 'downstream' consequence of a decision to [seek to] expel a student under [Education Code section 48915's discretionary provision] for damaging or stealing school or private property, using or selling illicit drugs, receiving stolen property, engaging in sexual harassment or hate violence, or committing other specified acts of misconduct ... that warrant such expulsion."

Building upon this theme, amicus curiae on behalf of the District, California School Boards Association, argues that based upon article I, section 28, subdivision (c), of the state Constitution, together with Education Code section 48200 et seq. and article IX, section 5 of the state Constitution (establishing and implementing a right of public education), no expulsion recommendation is "truly discretionary." Indeed, amicus curiae argues, school districts may not, "either as a matter of law or policy, realistically choose to [forgo] expelling [a] student [who commits one of the acts, other than firearm possession, referenced in Education Code section 48915's discretionary provision], because doing so would fail to meet that school district's legal obligations to provide a safe, secure and peaceful learning environment for the other students."

606 Upon reflection, we agree with the District and amici curiae that there is reason to question an extension of the holding of *City of Merced* so as to preclude reimbursement *486 under *888 article XIII B, section 6 of the state Constitution and Government Code section 17514, whenever an entity makes an initial discretionary decision that in turn triggers mandated costs. Indeed, it would appear that under a strict application of the language in *City of Merced*, public entities would be denied reimbursement for state-mandated costs in apparent contravention of the intent underlying article XIII B, section 6 of the state Constitution and Government Code section 17514²³ and contrary to past decisions in which it has been established that reimbursement was in fact proper. For example, as explained above, in *Carmel Valley*, *supra*, 190 Cal.App.3d 521, 234 Cal.Rptr. 795, an

executive order requiring that county firefighters be provided with protective clothing and safety equipment was found to create a reimbursable state mandate for the added costs of such clothing and equipment. (*Id.*, at pp. 537-538, 234 Cal.Rptr. 795.) The court in *Carmel Valley* apparently did not contemplate that reimbursement would be foreclosed in that setting merely because a local agency possessed discretion concerning how many firefighters it would employ—and hence, in that sense, could control or perhaps even avoid the extra costs to which it would be subjected. Yet, under a strict application of the rule gleaned from *City of Merced*, *supra*, 153 Cal.App.3d 777, 200 Cal.Rptr. 642, such costs would not be reimbursable for the simple reason that the local agency's decision to employ firefighters involves an exercise of discretion concerning, for example, how many firefighters are needed to be employed, etc. We find it doubtful that the voters who enacted article XIII B, section 6, or the Legislature that adopted Government Code section 17514, intended that result, and hence we are reluctant to endorse, in this case, an application of the rule of *City of Merced* that might lead to such a result.

23 As we observed in *Kern High School Dist.*, *supra*, 30 Cal.4th 727, 751-752, 134 Cal.Rptr.2d 237, 68 P.3d 1203, "article XIII B, section 6's 'purpose is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are 'ill equipped' to assume increased financial responsibilities.' "

In any event, we have determined that we need not address in this case the problems posed by such an application of the rule articulated in *City of Merced*, because this aspect of the present case can be resolved on an alternative basis. As we shall explain, we conclude, regarding the reimbursement claim that we face presently, that *all* hearing procedures set forth in Education Code section 48918 properly should be considered to have been adopted to implement a federal due process mandate, and hence that all such hearing costs are nonreimbursable under article XIII B, section 6, and Government Code section 17557, subdivision (c).

In this regard, we find the decision in *County of Los Angeles II*, *supra*, 32 Cal.App.4th 805, 38 Cal.Rptr.2d 304, to be instructive. That case concerned Penal Code section 987.9, which requires counties to provide indigent criminal defendants with defense funds for ancillary investigation services related to capital trials and certain other trials, and further provides related procedural protections—namely, the confidentiality of a request for funds, the right to have the request ruled upon by a judge other than the trial judge,

and the right to an in camera hearing on the request. The county in that case asserted that funds expended under the statute constituted reimbursable **607 state mandates. The Court of Appeal disagreed, finding instead that the Penal Code section merely implements the requirements of federal constitutional law, and that “even in the *889 absence of ***487 [Penal Code] section 987.9, ... counties would be responsible for providing ancillary services under the constitutional guarantees of due process ... and under the Sixth Amendment...” (32 Cal.App.4th at p. 815, 38 Cal.Rptr.2d 304.) Moreover, the Court of Appeal concluded, the procedural protections that the Legislature had built into the statute—requirements of confidentiality of a request for funds, the right to have the request ruled upon by a judge other than the trial judge, and the right to an in camera hearing on the request—were merely incidental to the federal rights codified by the statute, and their “financial impact” was de minimis. (*Id.*, at p. 817, fn. 7, 38 Cal.Rptr.2d 304.) Accordingly, the Court of Appeal concluded, the Penal Code section, in its entirety—that is, *even those incidental aspects of the statute that articulated specific procedures, not expressly set forth in federal law, for the filing and resolution of requests for funds*—constituted an implementation of federal law, and hence those costs were nonreimbursable under article XIII B, section 6.

We conclude that the same reasoning applies in the present setting, concerning the District's request for reimbursement for procedural hearing costs triggered by its discretionary decision to seek expulsion. As in *County of Los Angeles II*, *supra*, 32 Cal.App.4th 805, 38 Cal.Rptr.2d 304, the initial discretionary decision (in the former case, to file charges and prosecute a crime; in the present case, to seek expulsion) in turn triggers a federal constitutional mandate (in the former case, to provide ancillary defense services; in the present case, to provide an expulsion hearing). In both circumstances, the Legislature, in adopting specific statutory procedures to comply with the general federal mandate, reasonably articulated various incidental procedural protections. These protections are designed to make the underlying federal right enforceable and to set forth procedural details that were not expressly articulated in the case law establishing the respective rights; viewed singly or cumulatively, they did not significantly increase the cost of compliance with the federal mandate. The Court of Appeal in *County of Los Angeles II* concluded that, for purposes of ruling upon a claim for reimbursement, such incidental procedural requirements, producing at most de minimis added cost, should be viewed as part and parcel of the underlying federal mandate, and hence

nonreimbursable under Government Code, section 17556, subdivision (c). We reach the same conclusion here.

Indeed, to proceed otherwise in the context of a reimbursement claim would produce impractical and detrimental consequences. The present case demonstrates the point. The record reveals that in the extended proceedings before the Commission, the parties spent numerous hours producing voluminous pages of analysis directed toward determining whether various provisions of Education Code section 48918 exceeded federal due process requirements. That task below was complicated by the circumstance that this area of federal due process law is not well developed. The Commission, which is not a judicial body, did as best it could and concluded that in certain *890 respects the various provisions (as observed *ante*, footnote 11, predominantly concerning notice, right of inspection, and recording requirements) “exceeded” the requirements of federal due process.

Even for an appellate court, it would be difficult and problematic in this setting to categorize the various notice, right of inspection, and recording requirements here at issue as falling either within or without the general federal due process mandate. The difficulty results not only from the circumstance that, as noted, the case law ***488 in the area of due process procedures concerning expulsion matters is relatively undeveloped, but also from the circumstance that when such an issue is raised in an action for reimbursement, as opposed to its being raised in litigation challenging an actual expulsion on the ground of allegedly inadequate hearing procedures, the issue inevitably is presented in the abstract, without any factual context that might help frame the legal issue. In such circumstances, courts are—and should be — **608 wary of venturing pronouncements (especially concerning matters of constitutional law).

In light of these considerations, we agree with the conclusion reached by the Court of Appeal in *County of Los Angeles II*, *supra*, 32 Cal.App.4th 805, 38 Cal.Rptr.2d 304: for purposes of ruling upon a request for reimbursement, challenged state rules or procedures that are intended to implement an applicable federal law—and whose costs are, in context, de minimis—should be treated as part and parcel of the underlying federal mandate.

Applying that approach to the case now before us, we conclude there can be no doubt that the assertedly “excessive due process” aspects of Education Code section 48918 for which the District seeks reimbursement in connection with

hearings triggered by discretionary expulsions (see *ante*, footnote 11—primarily, as noted, various notice, right of inspection, and recording rules) fall within the category of matters that are merely incidental to the underlying federal mandate, and that produce at most a de minimis cost. Accordingly, for purposes of the District's reimbursement claim, all hearing costs incurred under Education Code section 48918, triggered by the District's exercise of discretion to seek expulsion, should be treated as having been incurred pursuant to a mandate of federal law, and hence all such costs are nonreimbursable under Government Code section 17556, subdivision (c).²⁴

24 We do not foreclose the possibility that a local government might, under appropriate facts, demonstrate that a state law, though codifying federal requirements in part, also imposes more than "incidental" or "de minimis" expenses in excess of those demanded by federal law, and thus gives rise to a reimbursable state mandate to that extent.

*891 III

The judgment of the Court of Appeal is affirmed insofar as it provides for full reimbursement of all costs related to hearings triggered by the mandatory expulsion provision of Education Code section 48915. The judgment of the Court of Appeal is reversed insofar as it provides for reimbursement of any costs related to hearings triggered by the discretionary provision of section 48915. All parties shall bear their own costs on appeal.

Thousand Oaks Subarea	1,400	700	150	1.0

a/ Shallow alluvial aquifer is of very poor quality and not used. Water quality in shallow aquifer shall be maintained existing levels in accordance with the "non-degradation" policy. This is to be accomplished on case-by-case basis as part of the requirements imposed upon dischargers to the shallow aquifer. Deeper San Pedro aquifers recharged from Oxnard Forebay and consequently its quality is dependent on the quality of replenishment water in Oxnard Forebay. Objective for deeper San Pedro Aquifers identical to that for deeper aquifers beneath the Oxnard pressure area.

- b/ Excludes aquifer in Bouquet Canyon and tributaries.
- c/ Includes aquifer in Bouquet Canyon and tributaries but excludes aquifer in Castaic Creek and the South Fork of Santa Clara River and tributaries.
- d/ Includes aquifer in Castaic Creek and tributaries.
- e/ Includes aquifer in Piru Creek and tributaries.
- f/ Excludes aquifer in Piru Creek and tributaries.
- g/ Semi-perched aquifer is of very poor quality and not used for domestic, agricultural, or industrial water supply in any significant quantity. Water quality in shallow aquifer shall be maintained existing levels in accordance with the "non-degradation" policy. This is to be accomplished on case-by-case basis as part of the requirements imposed upon dischargers to the shallow aquifer.

TO: Interested Persons

RE: Public Hearing for the Adoption of Revisions to the
Water Quality Control Plan - Basin 4A

Gentlemen:

Reference is made to our letter dated February 3, 1978, which transmitted tentative revisions to the Water Quality Control Plan for the Santa Clara River Basin (4A).

Enclosed are revised pages 00036 and 00043 of the originally transmitted material; a note has been added to each page.

If you have any questions please call us.

Very truly yours,

A handwritten signature in cursive script that reads "Raymond M. Hertel".

RAYMOND M. HERTEL
Executive Officer

MINERAL QUALITY OBJECTIVES FOR SURFACE WATERS

As part of the State's continuing planning process, data will be collected and numerical water quality objectives will be developed for those mineral and nutrient constituents where sufficient information is presently not available for the establishment of such objectives.

a/ The objective at each station is of the weighted annual average. Samples shall be collected at monthly intervals preferably but at least at quarterly intervals. Flow rate shall be determined at the time of sampling.

b/ See Figure 4-1 for location.

c/ Nitrate-N plus Nitrite-N. Eutrophication problems have not impaired the beneficial use of surface waters in the basin. The eutrophication problem of the basin is described starting on page II-14-1. The lack of phosphorus data precluded the establishment of meaningful numerical objectives for phosphorus.

Sodium Adsorption Ratio

d/ Sodium Equivalent Ratio

e/ No data available

f/ Where naturally occurring baron results in concentration higher than the stated objective requirements should be set on a case by case basis.

Note: In cases where revisions were proposed to raise certain numerical objectives, these were made to correct errors in the Basin Plan made by the original contractor and/or to reflect existing quality based on more, newer, and better data. This does not in any way represent a relaxation of standards.

Page: 34 | Santa Clara River above Lang

Recommended Change:

New Station added @ Lang

Objectives: TDS = 600 mg/L
SO₄ = 100 mg/L
Cl = 50 mg/L
B = 0.5 mg/L
N = 5 mg/L

Justification: Affords better break-down of former reach and sampling data available @ Lang. No point source discharges above Lang. Water Quality represents natural flow conditions.

see also Table 2 attached

Page: 34 | Reach bounded by Lang and West Pier Hwy 99

Recommended Change:

change TDS objective from 900 to 1200 mg/L
change Cl objective from 80 to 100 mg/L

Justification: The proposed changes to the surface water objectives correct some inconsistencies in the Basin Plan objectives between surface and ground water. There are two controllable point source discharges to this reach. They are the LACSD WRPs No. 26 and No. 32. The total volume of these discharges is 5.3 mgd (1977 average). The primary use of this wastewater is for incidental groundwater recharge; however, the natural inflow and outflow in this reach are far in excess of the total discharge volume. The Santa Clara River is largely an underground river in this reach. Analysis of groundwaters in this reach shows that TDS averages around 1200 mg/L; the proposed objectives would conform with the quality of the natural inflow and outflow. Assessment work has shown no adverse effects on beneficial uses and the proposed small increases in mineral objectives will not have a significant effect on downstream beneficial uses.

see also Table 2 attached

Page: 34 | Reach bounded by West Pier Hwy 99 and L.A.-Ventura County Line

Recommended Change:

change TDS objective from 1100 to 1200 mg/l

change Cl objective from 90 to 100 mg/l

Justification:

No significant point sources in this reach.
This reflects water quality conditions found to exist at
West Pier Hwy 99 and at L.A.-Ventura County Line.

see also Table 2 attached

Page: 34 | Reach bounded by L.A.-Ventura County Line and A Street, Fillmore

Recommended Change:

change Cl objective from 80 to 100 mg/l

Justification:

No significant point-source discharges in this reach.
This reflects current water quality and conforms
w/ the reach immediately upstream.

see also Table 2 attached

ATTACHMENT 57

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION
January 27, 1997
Resolution No. 97-02

*Amendment to the Water Quality Control Plan to incorporate a
Policy for Addressing Levels of Chloride in Discharges of Wastewaters*

WHEREAS, the California Regional Water Quality Control Board, Los Angeles Region finds that:

1. In 1975, the Regional Board established water quality objectives for chloride in most of the Region's waterbodies based on background concentrations of chloride, in accordance with the *Statement of Policy with Respect to Maintaining High Quality Water in California* (State Board Resolution No. 68-16, commonly known as the *State Antidegradation Policy*) and the federal *Antidegradation Policy* (as set forth in 40 CFR 131.12). Water quality objectives are the basis for limits in Waste Discharge Requirements that are prescribed by the Regional Board.
2. When water quality objectives for chloride were set in accordance with the State *Antidegradation Policy* and the federal *Antidegradation Policy*, the Regional Board assumed that chloride concentrations in imported waters would remain relatively low. Since 1975, however, chloride concentrations in supply waters imported into the Region have been increasing. During the late 1980s, drought in watersheds that are sources of imported supply waters made it difficult for many dischargers in the Los Angeles Region to comply with water quality limits for chloride.
3. In addition to relatively high chloride levels in supply waters, chloride levels in wastewaters in the Region can be affected by salt loading that occurs during beneficial use and treatment of supply waters and wastewaters. In some areas of the Region, a significant amount of loading may occur from the use of water softeners.
4. In 1990, the Regional Board adopted Resolution No. 90-04: *Effects of Drought-Induced Water Supply Changes and Water Conservation Measures on Compliance with Waste Discharge Requirements within the Los Angeles Region*. This resolution, commonly referred to as the *Drought Policy*, was intended to provide short-term and temporary relief to dischargers who were unable to comply with limits for chloride due to the effects of drought on chloride levels in supply waters imported into the Region.

For those dischargers who applied for relief under the Drought Policy, the Regional Board temporarily reset limits on concentrations of chloride at the lesser of: (i) 250 mg/L, or (ii) the chloride concentrations in supply waters plus 85 mg/L. An important condition of this relief was that dischargers demonstrate that high chloride concentrations in their discharges of wastewaters are due to increased salinity levels in supply waters imported into their service areas. Several dischargers provided data that confirm that supply waters imported into the Region are the cause of exceedances of chloride limits in discharges of wastewaters. However, many other dischargers have not yet adequately assessed the source(s) of relatively high levels of chloride in wastewaters and the extent to which exceedances are due to factors such as chloride in supply waters and/or significant chloride loading during beneficial use and treatment of supply waters and wastewaters.

November 15, 1996
Revised January 10, 1997
Revised January 14, 1997
Revised January 27, 1997

5. The drought ended before the *Drought Policy* was due to expire in 1993. However, because water supply reservoirs still had high chloride concentrations in 1993 and because water suppliers estimated that it would take 12 to 18 months for complete replenishment of imported waters in reservoirs, the Regional Board renewed the *Drought Policy* in June 1993 and again in February 1995. The *Drought Policy* currently is due to expire on the earlier of February 27, 1997 or at that point in time when it has been determined that chloride levels in water supplies imported into the Region have returned to pre-drought conditions.
6. Chloride levels in supply waters imported into the Region and in reservoirs are no longer impacted by drought. However, chloride levels in supply waters imported into the Region are generally higher than they were before drought conditions in the late 1980. The higher levels of chloride in imported waters appear to be the result of intensifying demands for and utilization of water resources in watersheds that are the sources of supply waters. In addition, future droughts may affect levels of chloride in supply waters imported into the Region.
7. The Regional Board recognizes the shortage of water in the Region and the need to conserve supplies of fresh water for protection of beneficial uses. Accordingly, the Regional Board supports water reclamation, as described in State Board Resolution No 77-01: *Policy with Respect to Water Reclamation in California*. However, achievements in water conservation and reclamation can increase levels of chloride and other ionic constituents in reclaimed waters and wastewaters that are ultimately discharged to waterbodies in the Region.
8. In order to develop a long-term solution to the chloride compliance problems stemming from elevated levels of chloride in supply waters imported into the Region, the Regional Board has been working with a group of technical advisors, formerly know as the Chloride Subcommittee of the Surface Water Technical Review Committee. This group of technical advisors represents a variety of interests, including: water supply, reclamation, and wastewater management; environmental protection; and water softener industry interests. The group concurs with:
 - (a) an approach to permanently reset water quality objectives for chloride in certain surface waters, using levels of chloride in water supply plus a chloride loading factor.
 - (b) a need to assess long-term loading trends for chloride and other saline constituents.

Furthermore, due to concerns expressed about the potential for future adverse impacts to agricultural resources in Ventura County, the Regional Board proposes to work with a local group of agencies, municipalities, representatives of the agricultural community, and other interested parties in order to clarify chloride objectives needed to protect waters used for irrigation in the Santa Clara River and Calleguas Creek watersheds. In addition, this local group concurs with the need to undertake assessments of significant sources of chloride loading and—contingent upon results—identify methods that could control chloride loading and the costs and effectiveness of the various loading control methods.

9. The Secretary of Resources has certified the basin planning process exempt from certain requirements under the California Environmental Quality Act (CEQA), including preparation an initial study, a negative declaration and environmental impact report (Title 14, California Code of Regulations, Section 15251). As per this certification, an amendment to the *Basin Plan* is considered 'functionally equivalent' to an initial study, negative declaration, and environmental impact report.

Any regulatory program of the Regional Board certified as functionally equivalent, however, must satisfy the documentation requirements of Title 23, California Code of Regulations, Section 377(a), which requires an environmental checklist with a description of the proposed activity, and a determination with respect to significant environmental impacts. On November 15, 1996, the Regional Board distributed information regarding a proposed amendment to the *Basin Plan* to incorporate a *Policy for Addressing Levels of Chloride in Discharges of Wastewaters (Chloride Policy)*. This information included an environmental checklist, a description of the proposed amendment to the *Basin Plan*, and a determination that the proposed amendment could not have a significant effect on the environment.
10. The public has had reasonable opportunity to participate in review of the amendment to the *Basin Plan*. Efforts to solicit public review and comment include: public notification, more than 45 days preceding Board action; public workshops, held on December 2, 1996, December 3, 1996, and January 6, 1997; responses from the Regional Board to oral and written comments received from the public, and a public hearing held on January 27, 1997.
11. In amending the *Basin Plan*, the Regional Board considered factors set forth in section 13241 of the Porter-Cologne Water Quality Control Act (California Water Code, Division 1, Chapter 2, Article 3, et seq., plus others).
12. The amendment is consistent with the *State Antidegradation Policy* (State Board Resolution No. 68-16), in that the changes to water quality objectives (i) consider maximum benefits to the people of the state, (ii) will not unreasonably affect present and anticipated beneficial use of waters, and (iii) will not result in water quality less than that prescribed in policies. Likewise, the amendment is consistent with the federal *Antidegradation Policy* (40 CFR 131.12).
13. Revision of water quality objectives for chloride is subject to approval by the State Water Resources Control Board, the State Office of Administrative Law, and the US Environmental Protection Agency.

THEREFORE, BE IT RESOLVED THAT:

1. Water quality objectives for chloride for certain surface waters will be revised as specified below.

Waterbody	New Objective
Los Angeles River—between Sepulveda Flood Control Basin and Figueroa Street (including Burbank Western Channel only)	190 mg/L
Los Angeles River—between Figueroa Street and estuary (including Rio Hondo below Santa Ana Freeway only)	190 mg/L
Rio Hondo—between Whittier Narrows Flood Control Basin and Santa Ana Frwy	180 mg/L
San Gabriel River—between Valley Blvd. and Firestone Blvd. (including Whittier Narrows Flood Control Basin, and San Jose Creek downstream of 71 Frwy only)	180 mg/L

These new objectives are set at the lower of (i) levels needed to protect beneficial uses, or (ii) chloride levels in supply waters imported into the Region plus a chloride loading factor of 85 mg/L. The levels at which the new water quality objectives have been set are expected to accommodate fluctuations in chloride concentrations that may be due to future drought. Although the new water quality objectives do not match background levels of chloride, they nevertheless are expected to be fully protective of drinking water and freshwater aquatic life.

2. Due to concerns expressed about the potential for future adverse impacts to agricultural resources in Ventura County, water quality objectives for chloride in the Santa Clara River and Calleguas Creek watersheds will not be revised at this time. To address compliance problems with chloride limits based on existing water quality objectives, the Regional Board hereby grants variances (interim relief) to existing dischargers identified on Attachment A. The Executive Officer is directed to notify these dischargers that they are subject to surface water interim limits specified below.

Waterbody Segments for which Existing Dischargers Are Subject to Interim Chloride Limits	Interim Chloride Limit
Santa Clara River—between Bouquet Canyon Road Bridge and West Pier Highway 99	190 mg/L
Santa Clara River—between West Pier Highway 99 and Blue Cut gaging station	190 mg/L
Santa Clara River—between Blue Cut gaging station and A Street (Fillmore)	190 mg/L
Arroyo Simi and tributaries—upstream Madera Road	160 mg/L
Arroyo Simi—downstream Madera Road, Arroyo Las Posas, and tributaries	190 mg/L
Calleguas Creek and tributaries—between Potrero Road and Arroyo Las Posas (including Conejo Creek, Arroyo Conejo, and Arroyo Santa Rosa)	190 mg/L

The variance period for interim relief will extend for three years following final approval of the amendment. During this period, the Regional Board expects that the local group of agencies, municipalities, representatives of the agricultural community, and other interested parties which have commented upon this policy will work together to: (i) clarify water quality objectives needed to protect waters used for irrigation in the Santa Clara River and Calleguas Creek

watersheds, (ii) assess significant sources of chloride loading, and (iii) contingent upon results of the chloride loading assessment, identify cost-effective ways that could protect beneficial uses of waters in the Santa Clara and Calleguas Creek watersheds. Should these issues not be resolved within the three-year variance period, the Regional Board intends to renew the variance.

At the end of the variance period, the Regional Board may reconsider revisions to water quality objectives for chloride in the Santa Clara River and Calleguas Creek watersheds. Future revisions of water quality objectives will consider chloride levels in supply waters (including fluctuations that may be due to future drought conditions), reasonable loading factors during beneficial use and treatment of supply waters and wastewaters, methods that could control chloride loading, and the associated costs and effectiveness of the various loading control methods.

3. To address the need to continue and, as appropriate, improve tracking and assessment of salinity loading throughout the Region, publicly-owned treatment works (POTWs) shall be required, as part of their NPDES permits, to monitor and assess salinity concentrations derived from: (i) source waters, (ii) loading that occurs during beneficial use of supply waters, and (iii) loading that occurs during treatment and disinfection of supply waters and wastewaters. Furthermore, those POTWs not already monitoring and assessing chloride loading from industrial sources shall expand their pre-treatment programs to include such assessments.

Monitoring data and assessments shall be reported by the POTWs to the Regional Board on an annual basis; the content and format of these reports shall be subject to approval by the Executive Officer of the Regional Board.

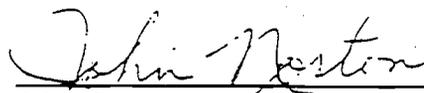

4. To address water quality problems from water softening processes throughout the Region, the Regional Board recommends that water suppliers, POTWs, and representatives of the water softener industry undertake educational campaigns, targeting residential, commercial, and industrial water consumers, on issues relating to water hardness, water quality problems associated with water softeners, and types of water softeners (encouraging the use of those types of softeners that pose less of a threat to water quality).
5. To address chloride loading that occurs during treatment and disinfection of supply waters and wastewaters, the Regional Board encourages shifts to less chlorine-intensive processes to achieve treatment and disinfection of supply waters and wastewaters, to the extent that such shifts are cost-effective and consistent with water quality and reclamation objectives.
6. Contingent upon the success of the salinity loading measures set forth in paragraphs (2) through (5) immediately above, the Regional Board may consider other salinity control measures at a later date. Such measures may include—but are not limited to—salt loading fees, bans or restrictions on inefficient water and/or "self-regenerating" types of softeners, regulatory controls of agricultural discharges, and expansion of POTW pretreatment programs to include salinity loading controls from commercial discharges.
7. Water quality objectives for chloride will not be changed for the headwaters of the Region's major stream systems. Furthermore, due to concerns over degradation of ground waters stored in the Region's basins, water quality objectives for chloride in ground waters will not be changed. In accordance with the State *Antidegradation Policy*, water quality objectives currently in effect will continue to protect the naturally-high quality of such surface and ground waters.

Resolution No. 97-02
Page Six

8. Resolution No. 90-04: *Effects of Drought-Induced Water Supply Changes and Water Conservation Measures on Compliance with Waste Discharge Requirements within the Los Angeles Region (Drought Policy)*, which was intended to provide short-term and temporary relief to dischargers who were unable to comply with limits for chloride due to the effects of drought on chloride levels in supply waters, is hereby rescinded with the adoption of this resolution.

While this resolution and amendment to the *Basin Plan* are under review by the State Water Resources Control Board, Office of Administrative Law, and the US Environmental Protection Agency, the Regional Board will evaluate compliance consistent with provisions set forth in this resolution.

I, John Norton, Acting Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Los Angeles Region, on January 27, 1997.

State of California
California Regional Water Quality Control Board, Los Angeles Region

RESOLUTION NO. R03-008

July 10, 2003

Amendment to the Water Quality Control Plan (Basin Plan) for the Los Angeles Region to Incorporate a Total Maximum Daily Load for Chloride in the Upper Santa Clara River

WHEREAS:

1. The California Regional Water Quality Control Board Los Angeles Region (Regional Board) adopted a revised Basin Plan for the Los Angeles Region on June 13, 1994 which was approved by the State Water Resources Control Board (SWRCB) on November 17, 1994 and by the Office of Administrative Law (OAL) on February 23, 1995.
2. Section 303(d) of the Clean Water Act requires states to identify and to prepare a list of water bodies that do not meet water quality standards and then to establish load and waste load allocations, or a total maximum daily load (TMDL), for each water body that will ensure attainment of water quality standards and then to incorporate those allocations into their water quality control plans. Two reaches of the Santa Clara River near the City of Santa Clarita ("Upper Santa Clara River") were listed on California's 1998 section 303(d) list, due to impairment by chloride, which is present at levels that exceed the water quality objective.
3. Regional Board staff prepared a TMDL analysis and the associated documents to address the chloride impairment of the Upper Santa Clara River. The documents were issued for peer and public review. At a public hearing on October 24, 2002, the Regional Board adopted Resolution No. R02-018 amending the Basin Plan to incorporate a TMDL for chloride in the Upper Santa Clara River.
4. A Basin Plan amendment does not become effective until approved by the SWRCB and until the regulatory provisions are approved by the OAL and USEPA.
5. On February 19, 2003, the SWRCB adopted SWRCB Resolution 2003-0014 (the "Remand Resolution") finding that the Regional Board staff prepared the documents and followed procedures satisfying environmental documentation requirements in accordance with the California Environmental Quality Act, scientific peer review, and other State laws and regulations to develop a TMDL.

July 24, 2003

6. In the Remand Resolution, the SWRCB also found that provisions of the amendment as adopted by the Regional Board warranted minor clarification of the language of various provisions. Regional Board Resolution No. R02-018 delegates to the Regional Board Executive Officer authority to make minor, non-substantive corrections to the adopted amendment if needed for clarity or consistency. The Regional Board Executive Officer made the necessary corrections to the amendment.
7. In the Remand Resolution, the SWRCB further found that the amendment as corrected does not adequately resolve issues regarding the appropriateness of the compliance time schedules for implementation tasks. Consequently, the SWRCB remanded to the Regional Board the amendment to the Basin Plan to incorporate a TMDL for chloride for the Upper Santa Clara River.
8. The Remand Resolution directed the Regional Board to consider:
 - a. Expansion of the current phased TMDL approach so that County Sanitation Districts of Los Angeles County can complete their implementation tasks by Regional Board-specified dates sequentially and within 13 years of the effective date of the TMDL. If advanced treatment facilities and disposal facilities are found to be necessary for compliance with the TMDL, the Regional Board may consider extending the implementation schedule as necessary to account for events beyond the control of the County Sanitation Districts of Los Angeles County.
 - b. Extension of the interim effluent limits beyond the currently proposed 2½ years so that these limits may remain in effect during the planning, construction and execution portions of the TMDL's implementation tasks.
 - c. Whether provision of a long-term alternate water supply to agricultural diverters of surface water by the County Sanitation Districts of Los Angeles County would be appropriate; and consider re-evaluation of the agricultural water quality objective and the agricultural beneficial use designation if such alternate supply is provided. The re-evaluation of the alternative water supply should consider re-examining and modifying the trigger and compliance schedule for providing the alternative water supply. The Regional Board's re-evaluation of the objective should consider accounting for the beneficial use(s) to be protected, the quality of the imported water supply to the Upper Santa Clara River watershed and the impacts of periods of drought or low rainfall.
 - d. An integrated solution, which may be a single comprehensive TMDL, for all water quality pollutants in the Santa Clara River basin listed on the Clean Water Act section 303(d) list.

9. Regional Board staff considered the State Board recommendations contained in the Remand Resolution and evaluated options for amending the Implementation Plan in consideration of the remand. The evaluations and recommendations of Regional Board staff are provided in a memo to file entitled, "Options Considered for Revision of Remanded Upper Santa Clara River Chloride TMDL" dated March 27, 2003. The results of Regional Board staff evaluation are shown in the redline version of Attachment A.
10. Since adoption of the Upper Santa Clara Chloride TMDL, the Regional Board, County Sanitation Districts of Los Angeles County, and the City of Santa Clarita have been proactively pursuing chloride source reduction. Specifically, the agencies have conducted extensive public outreach and County Sanitation Districts of Los Angeles County has enacted an ordinance banning the installation of self-regenerating water softeners.
11. At a public hearing on July 10, 2003, the Regional Board reconsidered Resolution No. R02-018 in light of the Remand Resolution.
 - a. The Regional Board expanded the phased-TMDL approach adopted by the Regional Board in Resolution R02-018 to allow County Sanitation Districts of Los Angeles County (CSDLAC) to complete the implementation tasks sequentially and within 13 years. Specifically, the due date of Task 9, (Evaluation of Alternative Water Supplies for Agricultural Beneficial Uses) is extended to 4 years after the effective date of the TMDL. This will allow the results of studies to be conducted under tasks 3, 4 and 5 of the Implementation Plan (Ground/Surface Water Interaction Model, Chloride Source Identification/Reduction Pollution Prevention and Public Outreach Plan, and Evaluation of Appropriate Chloride Threshold for the Protection of Sensitive Agricultural Supply Use and Endangered Species Protection) to be considered before Task 9 is completed. The issues of beneficial uses, quality of imported water and impacts of periods of drought or low rainfall will be analyzed in Tasks 3, 4 and 5, which are due two years after the effective date of the TMDL. Table 7-6.2 was revised to reflect these schedule modifications.
 - b. The Regional Board extended the currently proposed 2-1/2 years period for interim effluent limits so that the interim limits may remain in effect during the planning, construction, and execution portions of the TMDL's implementation tasks. Further, the Regional Board evaluated recent discharge data and a revision of the interim limit proposed by CSDLA, but did not find sufficient change in the performance data to justify a revision of the interim limit value. Table 7-6.1 was revised to explicitly state that the interim limit remains in effect during the planning, construction, and execution portion of the TMDL's implementation tasks, a period not to extend beyond 13 years from the effective date of the TMDL. Table 7-6.2, was modified to remove the 2-1/2 year period for interim effluent limits.

c. The Regional Board considered whether a long-term alternate water supply to agricultural diverters would be appropriate. The Regional Board modified the task for Evaluation of Alternative Water Supplies for Agricultural Beneficial Uses to include this assessment. Task 9 of Table 7-6.2 has been modified to reflect this additional analysis.

d. The Regional Board chose not to incorporate the chloride TMDL into a single comprehensive TMDL addressing all water quality impairments of the Santa Clara River on the 303(d) list. The forthcoming nutrient TMDL for the Santa Clara River has undergone extensive development work and is scheduled to be finalized in 2003. The chloride and forthcoming nitrogen TMDLs address most of the water quality impairments on the 303(d) list for the Santa Clara River.

12. In all other respects, the findings and provisions of Regional Board Resolution R02-018 remain valid and are carried forward. The revisions to the Basin Plan Amendment to incorporate a TMDL for chloride in the Upper Santa Clara River adopted by Resolution R02-018 are shown in attachment A.
13. The revisions proposed to address the Remand Resolution do not alter the environmental analysis, necessity conclusion, and de minimis findings of Regional Board Resolution R02-018.

THEREFORE, be it resolved that pursuant to sections 13240 and 13242 of the Water Code, the Regional Board hereby amends the Basin Plan as follows:

1. Pursuant to sections 13240 and 13242 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony at the hearing, hereby adopts the amendment to Chapter 7 of the Water Quality Control Plan for the Los Angeles Region to incorporate the elements of the Upper Santa Clara River Chloride TMDL as set forth in Attachment A hereto.
2. The Executive Officer is directed to forward copies of the Basin Plan amendment to the State Board in accordance with the requirements of section 13245 of the California Water Code.
3. The Regional Board requests that the State Board approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code and forward it to OAL and the USEPA.

4. If during its approval process the State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity or consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.
5. The Executive Officer is authorized to sign a Certificate of Fee Exemption.

I, Dennis A. Dickerson, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Los Angeles Region, on July 10, 2003.

Dennis A. Dickerson
Executive Officer

Attachment A to Resolution No. R03-008

Amendment to the Water Quality Control Plan (Basin Plan) for the Los Angeles Region

To Incorporate a Total Maximum Daily Load for Chloride in the Upper Santa Clara River

Proposed for adoption by the California Regional Water Quality Control Board, Los Angeles
Region on July 10, 2003.

Amendments

Chapter 7. Total Maximum Daily Loads (TMDLs) Upper Santa Clara River TMDL

This TMDL was adopted by: The Regional Water Quality Control Board on October 24, 2002.

This TMDL was remanded by: The State Water Resources Control Board on February 19, 2003

This TMDL was adopted by: The Regional Water Quality Control Board on July 10, 2003

This TMDL was approved by: The State Water Resource Control Board on [Insert Date]

The Office of Administrative Law on [Insert Date].

The U.S. Environmental Protection Agency on [Insert Date].

Table 7-6.1. Upper Santa Clara River Chloride TMDL Elements	
Element	Santa Clara River Chloride
<i>Problem Statement</i>	<p>Elevated chloride concentrations are causing impairments of the water quality objective in Reach 5 (EPA 303(d) list Reach 7) and Reach 6 (EPA 303(d) list Reach 8) of the Santa Clara River. This objective was set to protect all beneficial uses; agricultural beneficial uses have been determined to be most sensitive, and not currently attained at the downstream end of Reach 5 (EPA 303(d) list Reach 7) and Reach 6 (EPA 303(d) list Reach 8) in the Upper Santa Clara River. Irrigation of salt sensitive crops such as avocados and strawberries with water containing elevated levels of chloride results in reduced crop yields. Chloride levels in groundwater are also rising.</p>
<i>Numeric Target (Interpretation of the numeric water quality objective, used to calculate the load allocations)</i>	<p>This TMDL has a numeric target of 100 mg/L, measured instantaneously and expressed as a chloride concentration, required to attain the water quality objective and protect agricultural supply beneficial use. These objectives are set forth in Chapter 3 of the Basin Plan.</p> <p>The numeric target for this TMDL pertains to Reaches 5 and 6 of the Santa Clara River and is based on achieving the existing water quality objective of 100 mg/L, measured instantaneously, throughout the impaired reaches. A subsequent Basin Plan amendment will be considered by the Regional Board to adjust the chloride objective based on technical studies about the chloride levels, including levels that are protective of salt sensitive crops, chloride source identification, and the magnitude of assimilative capacity in the upper reaches of the Santa Clara River, provided that County Sanitation Districts of Los Angeles County choose to submit timely and complete studies in accordance with tasks 2 through 6 of Table 7.6.2.</p>
<i>Source Analysis</i>	<p>The principal source of chloride into Reaches 5 and 6 of the Santa Clara River is discharges from the Saugus Water Reclamation Plant (WRP) and Valencia WRP, which are estimated to contribute 70% of the chloride load in Reaches 5 and 6.</p>
<i>Linkage Analysis</i>	<p>Linkage between chloride sources and the in-stream water quality was established through a statistical analysis of the WRP effluent and water quality data at Blue Cut and Highway 99. The analysis shows that additional assimilative capacity is usually added to Reaches 5 and 6 from groundwater discharge, but the magnitude of the assimilative capacity is not well quantified. Consequently, the Implementation Plan includes a hydrological study (Surface Water/Groundwater Interaction) of the upper reaches of the Santa</p>

Element	<p>Table 7-6.1. Upper Santa Clara River Chloride TMDL Elements</p> <p>Santa Clara River Chloride</p>
	Clara River.
<p><i>Waste Load Allocations (for point sources)</i></p>	<p>The numeric target is based on the water quality objective for chloride. The proposed waste load allocations (WLAs) are 100 mg/L for Valencia WRP and 100 mg/L for Saugus WRP. The waste load allocations are expressed as a concentration limit derived from the existing WQO, thereby accommodating future growth. Other NPDES discharges contribute a minor chloride load. The waste load allocation for these point sources is 100 mg/L.</p>
<p><i>Load Allocation (for non point sources)</i></p>	<p>The source analysis indicates nonpoint sources are not a major source of chloride. The load allocations for these nonpoint sources is 100 mg/L.</p>
<p><i>Implementation</i></p>	<p>Refer to Table 7-6.2.</p> <p>The implementation plan proposes that during the period of TMDL implementation, compliance for the WRP effluent will be evaluated in accordance with interim limits based on 2000 – 2001 performance (i.e. effluent chloride concentration at the Valencia and Saugus WRPs). Using the USEPA protocol described in Table 5-1 of the Technical Support Document for Water Quality-based Toxics Control (USEPA, 1991), the average monthly interim limits are 200 mg/L and 187 mg/L, and the maximum daily limits are 218 mg/L and 196mg/L for the Saugus and Valencia WRPs, respectively.</p>
<p><i>Margin of Safety</i></p>	<p>An implicit margin of safety is incorporated through conservative model assumptions and statistical analysis.</p>
<p><i>Seasonal Variations and Critical Conditions</i></p>	<p>Three critical conditions are identified for this TMDL. The driest six months of the year is the first critical condition for chloride because less surface flow is available to dilute effluent discharge, pumping rates for agricultural purposes are higher, groundwater discharge is less, poorer quality groundwater may be drawn into the aquifer and evapotranspiration effects are greater in warm weather. During drought, the second critical condition, reduced surface flow and increased groundwater extraction continues through several seasons with greater impact on groundwater resource and discharge. The third critical condition is based on the recent instream chloride concentration increases such as those that occurred in 1999, a year of average flow, when 9 of 12 monthly averages exceeded the objective. Data from all three critical conditions were used in the statistical model described. Hydrological modeling will be completed to evaluate whether additional loading will</p>

Table 7-6.1. Upper Santa Clara River Chloride TMDL Elements	
Element	Santa Clara River Chloride
	impact the WQO or beneficial uses during non-critical conditions.

Table 7-6.2. Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks		Completion Date
<p>1. Alternative Water Supply</p> <p>a) Should (1) the monthly average in-river concentration at Blue Cut, the reach boundary, exceed the water quality objective of 100 mg/L, measured for the purposes of this TMDL as a rolling twelve month average, for three months of any 12 months, (2) each agricultural diverter provide records of the diversion dates and amounts to the Regional Board and CSDLAC for at least 2 years after the effective date of the TMDL and (3) each agricultural diverter provide photographic evidence that diverted water is applied to avocado, strawberry or other chloride sensitive crop and evidence of a water right to divert, then CSDLA will be responsible for providing an alternative water supply, negotiating the delivery of alternative water by a third party, or providing fiscal remediation to be quantified in negotiations between CSDLAC and the agricultural diverter at the direction of the Regional Water Quality Control Board until such time as the in-river chloride concentrations do not exceed the water quality objective.</p> <p>b) Should the instream concentration exceed 230 mg/L more than two times in a three year period, the discharger identified by the Regional Board Executive Officer shall be required to submit a work plan for an accelerated schedule to reduce chloride discharges within ninety days of a request by the Regional Board Executive Officer.</p> <p>2. Progress reports will be submitted by CSDLAC and Regional Board staff on a semiannual basis from the effective date of the TMDL for tasks 3,4,5, and 6</p>	<p>Effective Date of TMDL</p>	
<p>3. Groundwater/Surface Water Interaction Model: County Sanitation Districts of Los Angeles (CSDLAC) will solicit proposals, collect data, develop a model in cooperation with the Regional Board, obtain peer review, and report results. The impact of source waters and reclaimed water plans on achieving the water quality objective and protecting beneficial uses, including impacts on underlying groundwater quality, will also be assessed and specific recommendations for management developed for Regional Board consideration. The purpose of the modeling and sampling effort is to determine the interaction between surface water and groundwater as it may affect the loading of chloride</p>	<p>2 years after Effective Date of TMDL</p>	

<p>Table 7-62. Upper Santa Clara River Chloride TMDL: Implementation Implementation Tasks</p>	<p>Completion Date</p>
<p>from groundwater and its linkage to surface water quality.</p> <p>4.Chloride Source Identification/Reduction, Pollution Prevention and Public Outreach Plan: CSDLAC will quantify sources, execute pilot outreach programs, assess pilots, develop and implement source reduction/pollution prevention and outreach program, and report results. Chloride sources from imported water supplies will be assessed. The assessment will include conditions of drought and low rainfall and will analyze the alternatives for reducing this source.</p> <p>5.Evaluation of Appropriate Chloride Threshold for the Protection of Sensitive Agricultural Supply Use and Endangered Species Protection: CSDLAC will convene a technical advisory committee in cooperation with the Regional Board, review literature, develop methodology for assessment, execute methodology, and report results. In addition, the study shall determine the impact of drought and low rainfall conditions and the associated increase in imported water concentrations on downstream crops utilizing the results of Task 3.</p>	
<p>6.Develop Site Specific Objectives (SSO) for Chloride for Sensitive Agriculture: CSDLAC will solicit proposals and develop technical analyses upon which the Regional Board may base a Basin Plan amendment.</p> <p>7.Develop Anti-Degradation Analysis for Revision of Chloride Objective by SSO: CSDLAC will solicit proposals and develop draft anti-degradation analysis for Regional Board consideration.</p>	<p>3 years after Effective Date of TMDL</p>
<p>8.Preparation and Consideration of a Basin Plan Amendment (BPA) to revise the chloride objective by the Regional Board.</p>	<p>3.5 years after Effective Date of TMDL</p>
<p>9.Evaluation of Alternative Water Supplies for Agricultural Beneficial Uses: CSDLAC will quantify water needs, identify alternative water supplies, evaluate necessary facilities, and report results, including the long-term application of this remedy.</p>	<p>4 years after Effective Date of TMDL</p>
<p>10.Reconsideration of the Chloride TMDL for the Upper Santa Clara River by the Regional Board.</p>	<p>4.5 years after Effective Date of TMDL</p>
<p>11.Analysis of Feasible Compliance Measures to Meet Load Allocations from Revised TMDL, if necessary. CSDLAC will assess and report on feasible implementation actions to meet the chloride objective in place after Task 10.</p>	<p>5 years after Effective Date of TMDL</p>

<p>Table 7-6.2. Upper Santa Clara River Chloride TMDL: Implementation Implementation Tasks</p>	<p>Completion Date</p>
<p>12. Complete Planning, Design, and Construction of Advanced Treatment Facilities: CSDLAC will prepare CEQA documents, obtain permits, acquire easements, design system, and construct. The Regional Board may consider extending the duration of this task as necessary to account for events beyond the control of the CSDLAC.</p>	<p>13 years after Effective Date of TMDL</p>
<p>13. The interim effluent limit for chloride shall remain in effect for no more than 13 years after the effective date of the TMDL.</p>	<p>13 years after Effective Date of TMDL.</p>
<p>14. Water Quality Objective for chloride in the Upper Santa Clara River shall be achieved.</p>	<p>13 years after Effective Date of TMDL or as directed by the Regional Board based on review of Tasks 1-9.</p>

ATTACHMENT 59

**State of California
California Regional Water Quality Control Board, Los Angeles Region**

RESOLUTION 04-004

May 6, 2004

**Revision of interim waste load allocations and implementation plan for chloride in the
Amendment to the Water Quality Control Plan for the Los Angeles Region to include a
TMDL for Chloride in the Upper Santa Clara River, Resolution 03-008**

**WHEREAS, the California Regional Water Quality Control Board, Los Angeles
Region, finds that:**

1. The federal Clean Water Act (CWA) requires the California Regional Water Quality Control Board (Regional Board) to develop water quality standards which are sufficient to protect beneficial uses designated for each water body found within its region.
2. The Regional Board carries out its CWA responsibilities through California's Porter-Cologne Water Quality Control Act and establishes water quality objectives designed to protect beneficial uses contained in the Water Quality Control Plan for the Los Angeles Region (Basin Plan).
3. At a public meeting on October 24, 2002, the Regional Board considered amending the Basin Plan to include a Total Maximum Daily Load (TMDL) for chloride in the Upper Santa Clara River. The proposed TMDL included interim waste load allocations for chloride for the Valencia and Saugus Water Reclamation Plants (WRPs) which are owned and operated by the County Sanitation Districts of Los Angeles County (CSDLAC). These interim waste load allocations provide the discharger the necessary time to implement chloride source reduction, complete site specific objective studies, and make appropriate modifications to the WRP, as necessary, to meet the water quality objective for chloride. The interim waste load allocations proposed in the TMDL were based on a statistical evaluation of the WRP's performance in the three years preceding October 2002.
4. The Regional Board considered the entire record, including written and oral comments received from the public and the Regional Board staff's response to the written comments. Resolution 02-018, the TMDL for chloride in the Upper Santa Clara River, was adopted by Regional Board on October 24, 2002. Resolution 02-018 assigned waste load allocations (WLAs) to major POTWs, minor point sources, and MS4s permittees discharging to specific reaches of the Santa Clara River.
5. At a public workshop on February 4, 2003, the State Board considered the TMDL for chloride in the Upper Santa Clara River, the entire record, including written and oral comments received from the public and the State Board staff's response to the written comments. At a public meeting on February 19, 2003 the State Board adopted SWRCB Resolution 2003-0014 (the "Remand Resolution") which remanded the TMDL to the Regional Board and directed the Regional Board to

reconsider several matters associated with the TMDL implementation plan, including the duration of the interim waste load allocations. The State Board resolution did not recommend that the Regional Board consider revision of the interim waste load allocations.

6. In response to the Remand Resolution, Regional Board staff revised the TMDL Implementation Plan to address issues identified in the Remand Resolution. At a public hearing on July 10, 2003, the Regional Board considered the revised TMDL for chloride in the Upper Santa Clara River. The Regional Board considered the entire record, including written and oral comments received from the public, the Regional Board staff's response to the written comments, and the Remand Resolution. At the public hearing, the Regional Board directed staff to reconsider interim waste load allocations and evaluate how any changes would affect avocados and groundwater.
7. On July 10, 2003, the Regional Board adopted Resolution 03-008 to revise the Basin Plan to include a TMDL in the Upper Santa Clara River. Resolution 03-008 contained interim waste load allocations for the Saugus and Valencia WRPs and assigned waste load allocations (WLAs) to major POTWs, minor point sources, and MS4s permittees discharging to specified reaches of the Santa Clara River.
8. During the time that the State and Regional Boards were considering the chloride TMDL, the National Pollutant Discharge Elimination System (NPDES) permits for the Valencia and Saugus Water Reclamation Plants (WRPs) were under consideration for renewal by the Regional Board. Time Schedule Orders adopted contemporaneously with the NPDES permits also included interim discharge limits for chloride ("NPDES Interim Limits") which differed from the TMDL interim waste load allocations. The NPDES Interim Limits are based on the chloride concentration of the water served from Castaic Lake for municipal supply in the Santa Clarita Valley plus a loading factor of 134 mg/L of the Valencia WRP and 114 mg/L for the Saugus WRP, measured as a twelve month rolling average. The loading values are the highest measured at each plant in the last 5 years.
9. Staff finds that the effects of the NPDES Interim Limits relative to TMDL interim waste load allocations on groundwater and avocados are minor. Potential fiscal impacts could be addressed through the mechanisms of the TMDL. The purpose of this Basin Plan Amendment is to modify the interim waste load allocations in the Chloride TMDL to conform to those in the Saugus and Valencia Time Schedule Orders adopted by the Regional Board on November 6, 2003.
10. The item summary, as well as CEQA checklist and tentative Basin Plan Amendment were released for public comment on December 30, 2003. The revised interim waste load allocations are proposed in attachment A to this resolution.
11. The amendment is consistent with the State Antidegradation Policy (State Board Resolution No. 89-16), in that the changes to water quality objectives (i) consider maximum benefits to the people of the state, (ii) will not unreasonably affect present and anticipated beneficial use of waters, and (iii) will not result in water quality less than that prescribed in policies. Likewise, the amendment is consistent with the federal Antidegradation Policy (40 CFR 131.12).

12. The proposed amendment results in no potential for adverse effect (de minimis finding), either individually or cumulatively, on wildlife.
13. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code, section 11353, subdivision (b).
14. The Basin Plan amendment incorporating a revision for interim waste load allocations for chloride in the Santa Clara River Chloride TMDL must be submitted for review and approval by the State Water Resources Control Board (State Board), the State Office of Administrative Law (OAL), and the U.S. Environmental Protection Agency (U.S. EPA). The Basin Plan amendment will become effective upon approval by OAL and U.S. EPA. A Notice of Decision will be filed.
15. The TMDL Implementation Plan includes a task to develop site specific objectives for chloride to protect beneficial uses. The studies supporting the proposed site specific objectives are to be completed within three years after the effective date of the TMDL. The three-year timeline is reasonable in light of existing information; however, depending on the data requirements that are recommended by technical experts pursuant to Implementation Task 4, the completion dates for the development of appropriate thresholds for chloride and associated implementation tasks may need to be revised in order to provide sufficient time to complete the necessary scientific studies. The Implementation Plan has been modified to recognize that the Regional Board will re-evaluate the implementation schedule 12 months after the effective date of the TMDL, and take action to amend the schedule if there is sufficient technical justification.
16. The Regional Board recognizes that certain completion dates provided in the TMDL Implementation Plan are estimates and that there are uncertainties associated with implementation of some of the tasks, particularly for those related to the development and implementation of appropriate control measures for meeting the water quality objective. For example, should additional treatment facilities be required, the time needed for actions including, but not limited to, gaining regulatory approval for measures selected for implementation, completion of CEQA requirements, and acquisition of land and easements, are subject to uncertainties and factors outside the control of responsible parties. In recognition of these uncertainties, the implementation plan has been modified to recognize that the Regional Board will re-evaluate the schedule 9 years after the effective date of the TMDL.

THEREFORE, be it resolved that pursuant to Section 13240 and 13242 of the Water Code, the Regional Board hereby amends the Basin Plan as follows:

1. The revised implementation plan in attachment A of this Resolution supersedes the implementation plan contained in Resolution 03-008.
2. Pursuant to sections 13240 and 13242 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony at the hearing, hereby adopts the amendment to Chapter 7 the Water Quality Control Plan for the Los Angeles Region to incorporate the revisions of the interim waste load

allocations and implementation plan in the Santa Clara River Chloride TMDL, Table 7-8.1, Implementation Section as set forth in Attachment A hereto.

3. The Executive Officer is directed to forward copies of the Basin Plan amendment to the SWRCB in accordance with the requirements of section 13245 of the California Water Code.
4. The Regional Board requests that the SWRCB approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code and forward it to Office of Administrative Law (OAL) and the United State Environmental Protection Agency (U.S. EPA).
5. If during its approval process the SWRCB or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity or consistently, the Executive Officer may make such changes, and shall inform the Board of any such changes.
6. The Executive Officer is authorized to sign a Certificate of Fee Exemption.
7. Amend the text in the Basin Plan, Plans and Policies (Chapter 5) to add:

"Resolution 04-004. Adopted by the Regional Water Quality Control Board on May 6, 2004.
'Amendment to revise the interim waste load allocations and implementation plan in the TMDL for Chloride in the Upper Santa Clara River, Resolution 03-008'.
The resolution proposes revisions for the interim waste load allocations for chloride and a revised implementation plan for the Upper Santa Clara River."

I, Dennis Dickerson, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Los Angeles Region, on May 6, 2004.

Dennis A. Dickerson
Executive Officer

Attachment A to Resolution No. 04-004

**Revision of interim waste load allocations and implementation plan
for the TMDL for Chloride in the Upper Santa Clara River, Resolution 03-008**

Proposed for adoption by the California Regional Water Quality Control Board, Los Angeles
Region on May 6, 2004.

This TMDL was adopted by: The Regional Water Quality Control Board on October 24, 2002.
This TMDL was remanded by: The State Water Resources Control Board on February 19, 2003
This TMDL was adopted by: The Regional Water Quality Control Board on July 10, 2003.
This TMDL was revised and adopted by: The Regional Water Quality Control Board on May 6,
2004.

This TMDL was approved by: The State Water Resource Control Board on (Insert Date)
The Office of Administrative Law on (Insert Date).
The U.S. Environmental Protection Agency on (Insert Date).

Table 7-6.1. Upper Santa Clara River Chloride TMDL: Elements	
Element	Santa Clara River Chloride
<i>Problem Statement</i>	Elevated chloride concentrations are causing impairments of the water quality objective in Reach 5 (EPA 303(d) list Reach 7) and Reach 6 (EPA 303(d) list Reach 8) of the Santa Clara River. This objective was set to protect all beneficial uses; agricultural beneficial uses have been determined to be most sensitive, and not currently attained at the downstream end of Reach 5 (EPA 303(d) list Reach 7) and Reach 6 (EPA 303(d) list Reach 8) in the Upper Santa Clara River. Irrigation of salt sensitive crops such as avocados and strawberries with water containing elevated levels of chloride results in reduced crop yields. Chloride levels in groundwater are also rising.
<i>Numeric Target (Interpretation of the numeric water quality objective, used to calculate the load allocations)</i>	<p>This TMDL has a numeric target of 100mg/L, measured instantaneously and expressed as a chloride concentration, required to attain the water quality objective and protect agricultural supply beneficial use. These objectives are set forth in Chapter 3 of the Basin Plan.</p> <p>The numeric target for this TMDL pertains to Reaches 5 and 6 of the Santa Clara River and is based on achieving the existing water quality objective of 100 mg/L, measured instantaneously, throughout the impaired reaches. A subsequent Basin Plan amendment will be considered by the Regional Board to adjust the chloride objective based on technical studies about the chloride levels, including levels that are protective of salt sensitive crops, chloride source identification, and the magnitude of assimilative capacity in the upper reaches of the Santa Clara River, provided that County Sanitation Districts of Los Angeles County choose to submit timely and complete studies in accordance with tasks 2 through 6 of Table 7.6.2.</p>
<i>Source Analysis</i>	The principal source of chloride into Reaches 5 and 6 of the Santa Clara River is discharges from the Saugus Water Reclamation Plant (WRP) and Valencia WRP, which are estimated to contribute 70% of the chloride load in Reaches 5 and 6.
<i>Linkage Analysis</i>	Linkage between chloride sources and the in-stream water quality was established through a statistical analysis of the WRP effluent and water quality data at Blue Cut and Highway 99. The analysis shows that additional assimilative capacity is usually added to Reaches 5 and 6 from groundwater discharge, but the magnitude of the assimilative capacity is not well quantified. Consequently, the Implementation Plan includes a hydrological study (Surface Water/Groundwater Interaction? Of the upper reaches of the Santa Clara River.
<i>Waste Load Allocations (for point sources)</i>	The numeric target is based on the water quality objective for chloride. The proposed waste load allocations (WLAs) are 100 mg/L for Valencia WRP and 100 mg/L Saugus WRP. The waste load allocations are

Table 7-6.1. Upper Santa Clara River Chloride TMDL: Elements	
Element	Santa Clara River Chloride
	expressed as a concentration limit derived from the existing WQO, thereby accommodating future growth. Other NPDES discharges contribute a minor chloride load. The waste load allocation for these point sources is 100 mg/L.
Load Allocation (for non point sources)	The source analysis indicates nonpoint sources are not a major source of chloride. The load allocations for these nonpoint sources is 100 mg/L.
Implementation	<p>Refer to Table 7-6.2.</p> <p>The implementation plan proposes that during the period of TMDL implementation, compliance for the WRPs' effluents will be evaluated in accordance with interim waste load allocations.</p> <p>Saugus WRP: The interim waste load allocation for chloride is the sum of State Water Project treated water supply concentration plus 114 mg/L, as a twelve month rolling average. At no time shall the interim wasteload allocation exceed 230mg/L.</p> <p style="padding-left: 40px;">Interim Waste Load Allocation=Treated Potable Water Supply + 114 mg/L, not to exceed 230 mg/L.</p> <p style="padding-left: 40px;">(114 mg/L is the maximum difference in chloride concentration between the State Water Project treated water and the Saugus WRP treated effluent over the last five years.)</p> <p>Valencia WRP: The interim waste load allocation for chloride is the sum of State Water Project treated water supply concentration plus 134 mg/L, as a twelve month rolling average. At no time shall the interim wasteload allocation exceed 230 mg/L.</p> <p style="padding-left: 40px;">Interim Waste Load Allocation=Treated potable Water Supply + 134 mg/L, not to exceed 230 mg/L.</p> <p style="padding-left: 40px;">(134 mg/L, is the maximum difference in chloride concentration between the State Water Project treated water and the Valencia WRP treated effluent over the last five years.)</p>
Margin of Safety	An implicit margin of safety is incorporated through conservative model assumptions and statistical analysis.
Seasonal Variations and Critical Conditions	Three critical conditions are identified for this TMDL. The driest six months of the year is the first critical condition for chloride because less surface flow is available to dilute effluent discharge, pumping rates for agricultural purposes are higher, groundwater discharge is less, poorer quality groundwater may be drawn into the aquifer and evapotranspiration

Element	Table 7-6.1. Upper Santa Clara River Chloride TMDL: Elements Santa Clara River Chloride
	effects are greater in warm weather. During drought, the second critical condition reduced surface flow and increased groundwater extraction continues through several seasons with greater impact on groundwater resource and discharge. The third critical conditions is based on the recent instream chloride concentration increases such as those that occurred in 1999, a year of average flow, when 9 of 12 monthly averages exceeded the objective. Data from all three critical conditions were used in the statistical model described. Hydrological modeling will be completed to evaluate whether additional loading will impact the WQO or beneficial uses during non-critical conditions.

Table 7-6.2. Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks	Completion Date
<p>1. Alternate Water Supply</p> <p>a) Should (1) the monthly average in-river concentration at Blue Cut, the reach boundary, exceed the water quality objective of 100mg/L, measured for the purposes of this TMDL as a rolling twelve month average, for three months of any 12 months, (2) each agricultural diverter provide records of the diversion dates and amounts to the Regional Board and County Sanitation Districts of Los Angeles County (CSDLAC) for at least 2 years after the effective date of the TMDL and (3) each agricultural diverter provide photographic evidence that diverted water is applied to avocado, strawberry or other chloride sensitive crop and evidence of a water right to divert, then CSDLAC will be responsible for providing an alternative water supply, negotiating the delivery of alternative water by a third party, or providing fiscal remediation to be quantified in negotiations between CSDLAC and the agricultural diverter at the direction of the Regional Water Quality Control Board until such as time as the in-river chloride concentrations do not exceed the water quality objective.</p> <p>b) Should the instream concentration exceed 230 mg/L more than two times in the three year period, the discharger identified by the Regional Board Executive Officer shall be required to submit, within ninety days of a request by the Regional Board Executive Officer, a workplan for an accelerated schedule to reduce chloride discharges.</p> <p>2. Progress reports will be submitted by CSDLAC to Regional Board staff on a semiannual basis from the effective date of the TMDL for tasks 4,6, and 7, and on an annual basis for Task 5.</p>	
<p>3. Chloride Source Identification/Reduction, Pollution Prevention and Public Outreach Plan: Six months after the effective date of the TMDL, CSDLAC will submit a plan to the Regional Board that addresses measures taken and planned to be taken to quantify and control sources of chloride, including, but not limited to: execute community-wide outreach programs, which were developed based on the pilot outreach efforts conducted by CSDLAC, assess potential incentive/disincentive programs for residential self-regenerating water softeners, and other measures that may be effective in controlling chloride. CSDLAC shall develop and implement the source reduction/pollution prevention and public outreach program, and report results annually thereafter to the Regional Board. Chloride</p>	<p>6 months after Effective Date of TMDL</p>

Table 7-6.2. Upper Santa Clara River Chloride TMDL Implementation Tasks	Completion Date
sources from imported water supplies will be assessed. The assessment will include conditions of drought and low rainfall, and will analyze the alternatives for reducing this source.	
<p>4. CSDLAC will convene a technical advisory committee or committees (TAC(s)) in cooperation with the Regional Board to review literature develop a methodology for assessment, and provide recommendations with detailed timelines and task descriptions to support any needed changes to the time schedule for evaluation of appropriate chloride threshold for Task 6. The Regional Board, at a public hearing will re-evaluate the schedule for Task 6 and subsequent linked tasks based on input from the TAC(s), along with Regional Board staff analysis and assessment consistent with state and federal law, as to the types of studies needed and the time needed to conduct the necessary scientific studies to determine the appropriate chloride threshold for the protection of salt sensitive agricultural uses, and will take action to amend the schedule if there is sufficient technical justification.</p>	12 months after Effective Date
<p>5. Groundwater/Surface Water Interaction Model: CSDLAC will solicit proposals, collect data, develop a model in cooperation with the Regional Board, obtain peer review, and report results. The impact of source waters and reclaimed water plans on achieving the water quality objective and protecting beneficial uses, including impacts on underlying groundwater quality, will also be assessed and specific recommendations for management developed for Regional Board consideration. The purpose of the modeling and sampling effort is to determine the interaction between surface water and groundwater as it may affect the loading of chloride from groundwater and its linkage to surface water quality.</p>	2 years after Effective Date of TMDL
<p>6. Evaluation of Appropriate Chloride Threshold for the Protection of Sensitive Agricultural Supply Use and Endangered Species Protection: CSDLAC will prepare and submit a report on endangered species protection thresholds. CSDLAC will also prepare and submit a report presenting the results of the evaluation of chloride thresholds for salt sensitive agricultural uses, which shall consider the impact of drought and low rainfall conditions and the associated increase in imported water concentrations on downstream crops utilizing the result of Task 5.</p>	3 years after Effective Date of TMDL
<p>7. Develop Site Specific Objectives (SSO) for Chloride for Sensitive Agriculture: CSDLAC will solicit proposals and develop technical analyses upon which the Regional Board may base a Basin Plan amendment.</p>	4 years after Effective Date of TMDL

Table 7-6.2. Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks	Completion Date
<p>8. Develop Anti-Degradation Analysis for Revision of Chloride Objective by SSO: CSDLAC will solicit proposals and develop draft anti-degradation analysis for Regional Board consideration.</p> <p>9. Develop a pre-planning report on conceptual compliance measures to meet different hypothetical final wasteload allocations. CSDLAC shall solicit proposals and develop and submit a report to the Regional Board that identifies potential chloride control measures and costs based on different hypothetical scenarios for chloride water quality objectives and final wasteload allocations.</p>	
<p>10. a) Preparation and Consideration of a Basin Plan Amendment (BPA) to revise the chloride objective by the Regional Board.</p> <p>b) Evaluation of Alternative Water Supplies for Agricultural Beneficial Uses: CSDLAC will quantify water needs, identify alternative water supplies, evaluate necessary facilities, and report results, including the long-term application of this remedy.</p> <p>c) Analysis of Feasible Compliance Measures to Meet Final Wasteload Allocations for Proposed Chloride Objective. CSDLAC will assess and report on feasible implementation actions to meet the chloride objective established pursuant to Task 10a).</p> <p>d) Reconsideration of and action taken on the Chloride TMDL and Final Wasteload Allocations for the Upper Santa Clara River by the Regional Board.</p>	<p>5 years after Effective Date of TMDL</p>
<p>11. The Regional Board staff will re-evaluate the schedule to implement control measures needed to meet Final Wasteload Allocations adopted pursuant to Task 10 d) and the schedule for Task 12. The Regional Board, at a public meeting will consider extending the completion date of Task 12 and reconsider the schedule to implement control measures to meet Final Wasteload Allocations adopted pursuant to Task 10 d). CSDLAC will provide the justification for the need for an extension to the Regional Board executive Officer at least 6 months in advance of the deadline for this task.</p>	<p>9 years after Effective Date of TMDL</p>
<p>12. The interim effluent limits for chloride shall remain in effect for no more than 13 years after the effective date of the TMDL. Water Quality Objective for chloride in the Upper Santa Clara River shall be achieved. The Regional Board may consider extending the completion date of this task as necessary to account for events beyond the control of the CSDLAC.</p>	<p>13 years after Effective Date of TMDL</p>

ATTACHMENT 60

State of California
California Regional Water Quality Control Board, Los Angeles Region

RESOLUTION NO. R4-2006-016
August 3, 2006

Amendment to the Water Quality Control Plan for the Los Angeles Region through
revision of the Implementation Plan for the Upper Santa Clara River Chloride
TMDL, Resolution 04-004

WHEREAS, the California Regional Water Quality Control Board, Los Angeles Region, finds that:

1. The federal Clean Water Act (CWA) requires the California Regional Water Quality Control Board (Regional Board) to develop water quality standards that are sufficient to protect beneficial uses designated for each water body found within its region.
2. A consent decree between the U.S. Environmental Protection Agency (USEPA), Heal the Bay, Inc. and BayKeeper, Inc. was approved on March 22, 1999. This court order directs the USEPA to complete Total Maximum Daily Loads (TMDLs) for all impaired waters within 13 years.
3. The elements of a TMDL are described in 40 CFR 130.2 and 130.7 and section 303(d) of the CWA, as well as in USEPA guidance documents (Report No. EPA/440/4-91/001). A TMDL is defined as the sum of the individual waste load allocations for point sources, load allocations for nonpoint sources and natural background (40 CFR 130.2). Regulations further stipulate that TMDLs must be set at levels necessary to attain and maintain the applicable narrative and numeric water quality objectives (WQOs), and protect beneficial uses, with seasonal variations and a margin of safety that takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR 130.7(c)(1)).
4. Upon establishment of TMDLs by the State or USEPA, the State is required to incorporate the TMDLs along with appropriate implementation measures into the State Water Quality Management Plan (40 CFR 130.6(c)(1), 130.7). This Water Quality Control Plan for the Los Angeles Region (Basin Plan), and applicable statewide plans, serves as the State Water Quality Management Plans governing the watersheds under the jurisdiction of the Regional Board.
5. The Santa Clara River is the largest river system in southern California that remains in a relatively natural state. The River originates on the northern slope of the San Gabriel Mountains in Los Angeles County, traverses Ventura County, and flows into the Pacific Ocean between the cities of San

Buenaventura (Ventura) and Oxnard. The predominant land uses in the Santa Clara River watershed include agriculture, open space, and residential uses. Revenue from the agricultural industry within the Santa Clara River watershed is estimated at over \$700 million annually, and residential use is increasing rapidly both in the upper and lower watershed.

6. The upper reaches of the Santa Clara River include Reaches 5 and 6 which are located upstream of the Blue Cut gauging station, west of the Los Angeles – Ventura County line between the cities of Fillmore and Santa Clarita. Reaches 5 and 6 of the Upper Santa Clara River (USCR) appear on the EPA 303d list of impaired waterbodies (designated on the 2002 EPA 303d list as Reaches 7 and 8, respectively). Several beneficial uses of the USCR, including agricultural supply water (AGR), groundwater recharge (GWR), and rare, threatened, or endangered species habitat (RARE), are listed as impaired due to excessive chloride concentration in the waters of the USCR. Valencia and Saugus Water Reclamation Plants (WRPs), which are owned and operated by the County Sanitation Districts of Los Angeles County (CSDLAC), are two major point sources that discharge to the USCR.
7. At a public meeting on October 24, 2002, the Regional Board considered amending the Basin Plan to include a TMDL for chloride in the USCR. The proposed TMDL included interim waste load allocations for chloride for the WRPs. These interim waste load allocations provide the discharger the necessary time to implement chloride source reduction, complete site specific objective (SSO) studies, and make appropriate modifications to the WRP, as necessary, to meet the WQO for chloride. The interim waste load allocations proposed in the TMDL were based on a statistical evaluation of the WRPs' performance in the three years preceding October 2002.
8. The Regional Board considered the entire record, including written and oral comments received from the public and the Regional Board staff's response to the written comments. Resolution 02-018, the TMDL for chloride in the USCR, was adopted by Regional Board on October 24, 2002. Resolution 02-018 assigned waste load allocations (WLAs) to major publicly owned treatment works (POTWs), minor point sources, and MS4s permittees, discharging to specified reaches of the Santa Clara River.
9. At a public workshop on February 4, 2003, the State Board considered the TMDL for chloride in the USCR, the entire record, including written and oral comments received from the public and the State Board staff's response to the written comments. At a public meeting on February 19, 2003 the State Board adopted SWRCB Resolution 2003-0014 (the "Remand Resolution") which remanded the TMDL to the Regional Board.

10. In response to the Remand Resolution, Regional Board staff revised the TMDL Implementation Plan to address issues identified in the Remand Resolution. On July 10, 2003, the Regional Board adopted Resolution 03-008 to revise the Basin Plan to include a TMDL in the USCR. Resolution 03-008 contained interim waste load allocations for the Saugus and Valencia WRPs and assigned waste load allocations (WLAs) to major POTWs, minor point sources, and MS4s permittees discharging to specified reaches of the Santa Clara River.
11. During the time that the State and Regional Boards were considering the chloride TMDL, the National Pollutant Discharge Elimination System (NPDES) permits for the Valencia and Saugus Water Reclamation Plants (WRPs) were under consideration for renewal by the Regional Board. The NPDES permits also included interim discharge limits for chloride which differed from the TMDL interim waste load allocations. The NPDES interim limits are based on the chloride concentration of the water served from Castaic Lake for municipal supply in the Santa Clarita Valley plus a loading factor of 134 mg/L for the Valencia WRP and 114 mg/L for the Saugus WRP, measured as a twelve month rolling average. The loading values are the highest measured at each plant in the last 5 years.
12. On May 6, 2004, the Regional Board adopted Resolution 04-004 to revise the interim waste-load allocations and Implementation Plan for the chloride TMDL in the USCR. The revised Implementation Plan in attachment A of Resolution No. 04-004 supersedes the Implementation Plan contained in Resolution No. 03-008.
13. The Implementation Plan as specified in attachment A of Resolution No. 04-004 requires the completion of several special studies that serve to characterize the sources, fate, transport, and specific impacts of chloride in the USCR, including impacts to downstream reaches and underlying groundwater basins.
14. The first of the special studies, an evaluation of the appropriate chloride threshold for the reasonable protection of salt-sensitive agriculture, was completed in September of 2005. This special study, entitled "Literature Review and Evaluation (LRE)," was reviewed and largely corroborated by a Technical Advisory Panel (TAP) that issued a "Critical Review Report" of the LRE.
15. The LRE found that the best estimate of a chloride hazard concentration for avocado crops falls within the range of 100 to 117 mg/L. A similar range of 100 to 120 mg/L was found by the TAP. The existing WQO of 100 mg/L is within the recommended range for the reasonable protection of salt-sensitive crops.

16. In addition to the LRE special study, a collaborative report entitled "Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan (Chloride Source Report)," was completed in November of 2005. This report, led by the CSDLAC, identifies sources of chloride in the USCR as well as strategies for reducing those sources. The potable water supply was identified as the largest source of chloride loading to the USCR. Self-Regenerating Water Softeners (SRWS) in the Saugus and Valencia service area were identified as the second largest source of chloride loading.
17. The second special study required by the Implementation Plan is the "Groundwater/Surface Water Interaction (GSWI) Model." The Regional Board and CSDLAC are working in cooperation to complete this model. Under existing TMDL, the GSWI is due May 4, 2007.
18. At a public hearing on November 3, 2005, the Regional Board was provided with an update on the status of the chloride TMDL and the results of the LRE study. The Board directed staff to evaluate whether revising the TMDL Implementation Plan is appropriate, and to consider the possible impacts of the high chloride level in surface water to groundwater quality.
19. Based on the conclusions of the LRE and the chloride source report, staff proposes four alternatives for the amendment to the Upper Santa Clara River Chloride TMDL: (1) a no-action alternative in which the Regional Board takes no action to revise the schedule, (2) an alternative that does not revise the 13-year TMDL implementation schedule but includes implementation milestones in years 6-13 of the TMDL schedule, (3) an alternative that extends the 13-year schedule, and (4) an alternative that accelerates the 13-year schedule. Staff recommends Alternative 4. Under this alternative, the Regional Board will consider a TMDL amendment to both accelerate the final compliance date and include time-certain tasks for tasks related to the design and treatment of chloride removal processes to reduce chloride loading if deemed necessary. Staff notes there is potential for additional chloride loading of 4 million to 7 million lbs per year while the interim limit (approximately 200 mg/L) is in effect instead of discharge at the WQO (100 mg/L). Staff however believes this discharge can be mitigated by accelerating the TMDL schedule.
20. The Remand Resolution directed the Regional Board to consider a phased approach so that the Districts can complete their implementation tasks by Regional Board specified dates sequentially and within 13 years. This direction was born of concerns expressed by stakeholders to the State Board that they should not be required to expend resources planning and constructing new technologies that the special studies could render unnecessary. The Regional Board, therefore, readopted the TMDL with a 13 year implementation plan. That 13-year period included five years for special studies, feasibility analysis and WQO revisions, if warranted, followed by

eight years for planning, design, and construction of the selected remedy. The eight year time schedule for planning, design, and construction was based on comments submitted by the Districts on October 7, 2002, with a supporting engineering study (Cost Impacts for Compliance with a 100 mg/L Instantaneous Chloride Discharge Limit at the Santa Clara Valley Water Reclamation Plants, Prepared by MWH, October 2002), that eight years is required to plan, design and construct advanced treatment for chloride.

21. With completion of the LRE, and the anticipated completion of the GSWI model by November 20, 2007, the Board finds that sufficient information will be available such that there is no prejudice to the Districts in initiating the feasibility tasks when the GSWI model is completed. Specifically, the LRE studies reveal that at most the WQO could be relaxed up to 117 mg/L, from 100mg/L. These results, coupled with the results of the GSWI modeling, will demonstrate whether the AGR and GWR beneficial uses could still be protected with SSOs that are sufficiently less stringent such that construction of advanced treatment systems would not be necessary. Subsequent TMDL tasks, such as development of SSOs, development of the antidegradation analysis, development of a preplanning report on conceptual measures to meet different hypothetical final wasteload allocations, and preparation and consideration of a Basin Plan Amendment to revise the chloride objective by the Regional Board, can be accomplished in a shorter timeframe than originally contemplated because the range of chloride values identified by the LRE as necessary to protect AGR and GWR is significantly smaller than the potential range of chloride objectives contemplated during development of the TMDL schedule. This action does not require the Districts to complete the planning and design tasks before the Regional Board considers revision of the chloride WQO, preserves the current eight year schedule for planning, design and construction that is currently contained in the TMDL, and also preserves the requirements for the Board to reconsider the schedule twice during the planning, design and construction phase. The Board finds the proposed action complies with State Board Resolution 2003-0014.
22. The Staff Report, as well as a Notice of Exemption, and tentative Basin Plan Amendment were released for public comment on May 5, 2006. The revised Implementation Plan is proposed in Attachment A to this resolution.
23. The amendment is consistent with the State Antidegradation Policy (State Board Resolution No. 68-16), in that the revisions of the Implementation Plan for the Upper Santa Clara River Chloride TMDL do not include revisions to WQOs, and are intended to shorten the time until compliance with standards. Likewise, the amendment is consistent with the federal Antidegradation Policy (40 CFR 131.12).
24. The proposed amendment results in no potential for adverse environmental effects (de minimis finding), either individually or cumulatively, on wildlife

because shortening the time to implementation will not result in different processes from those already contemplated, but will merely advance those processes.

25. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code, section 11353, subdivision (b).
26. The Basin Plan amendment incorporating a revision for the Implementation Plan in the Santa Clara River Chloride TMDL must be submitted for review and approval by the State Water Resources Control Board (State Board), the State Office of Administrative Law (OAL), and the U.S. Environmental Protection Agency (U.S. EPA). The Basin Plan amendment will become effective upon approval by OAL and U.S. EPA. A Notice of Decision will be filed following these approvals.

Therefore, be it resolved that:

1. Pursuant to Section 13240 and 13242 of the Water Code, the Regional Board hereby amends the Basin Plan by replacing the Implementation Plan contained in Resolution 04-004 with the revised Implementation Plan in Attachment A of this Resolution.
2. Pursuant to sections 13240 and 13242 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony at the hearing, hereby adopts the amendment to Chapter 7 the Water Quality Control Plan for the Los Angeles Region to incorporate the revisions of the Implementation Plan in the Upper Santa Clara River Chloride TMDL, Table 7-6.2, Implementation Section as set forth in Attachment A hereto.
3. The Executive Officer is directed to forward copies of the Basin Plan amendment to the SWRCB in accordance with the requirements of section 13245 of the California Water Code.
4. The Regional Board requests that the SWRCB approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code and forward it to the Office of Administrative Law (OAL) and the United State Environmental Protection Agency (U.S. EPA).
5. If during its approval process Regional Board staff, State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity, or for consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.
6. The Executive Officer is authorized to sign a Certificate of Fee Exemption.

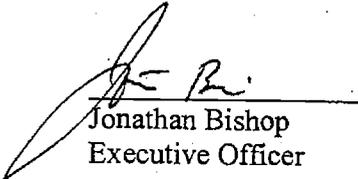

7. The text in the Basin Plan, Plans and Policies (Chapter 5), is hereby amended to add:

“Resolution No. 06-0XX. Adopted by the Regional Water Quality Control Board on August 3, 2006.

~~‘Amendment to revise the Implementation Plan in the TMDL for Chloride in the Upper Santa Clara River, Resolution 04-004’.~~

The resolution proposes revisions to the Implementation Plan for the Upper Santa Clara River Chloride TMDL.”

I, Jonathan Bishop, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Los Angeles Region, on August 3, 2006.

Jonathan Bishop
Executive Officer

This TMDL was adopted by: The Regional Water Quality Control Board on October 24, 2002.

This TMDL was remanded by: The State Water Resources Control Board on February 19, 2003

This TMDL was adopted by: The Regional Water Quality Control Board on July 10, 2003.

This TMDL was revised and adopted by: The Regional Water Quality Control Board on May 6, 2004.

This TMDL was approved by: The State Water Resource Control Board on July 22, 2004

The Office of Administrative Law on November 15, 2004

The U.S. Environmental Protection Agency on April 28, 2005

This TMDL was revised and adopted by: The Regional Water Quality Control Board on August 3, 2006.

Element	Table 7.6.1. Upper Santa Clara River Chloride TMDL Elements Santa Clara River Chloride
Problem Statement	Elevated chloride concentrations are causing impairments of the water quality objective in Reach 5 (EPA 303(d) list Reach 7) and Reach 6 (EPA 303(d) list Reach 8) of the Santa Clara River. This objective was set to protect all beneficial uses; agricultural beneficial uses have been determined to be most sensitive, and not currently attained at the downstream end of Reach 5 (EPA 303(d) list Reach 7) and Reach 6 (EPA 303(d) list Reach 8) in the Upper Santa Clara River. Irrigation of salt sensitive crops such as avocados and strawberries with water containing elevated levels of chloride results in reduced crop yields. Chloride levels in groundwater are also rising.
Numeric Target (Interpretation of the numeric water quality objective, used to calculate the load allocations)	<p>This TMDL has a numeric target of 100mg/L, measured instantaneously and expressed as a chloride concentration, required to attain the water quality objective and protect agricultural supply beneficial use. These objectives are set forth in Chapter 3 of the Basin Plan.</p> <p>The numeric target for this TMDL pertains to Reaches 5 and 6 of the Santa Clara River and is based on achieving the existing water quality objective of 100 mg/L, measured instantaneously, throughout the impaired reaches. A subsequent Basin Plan amendment will be considered by the Regional Board to adjust the chloride objective based on technical studies about the chloride levels, including levels that are protective of salt sensitive crops, chloride source identification, and the magnitude of assimilative capacity in the upper reaches of the Santa Clara River, provided that County Sanitation Districts of Los Angeles County choose to submit timely and complete studies in accordance with tasks 2 through 6 of Table 7.6.2.</p>
Source Analysis	The principal source of chloride into Reaches 5 and 6 of the Santa Clara River is discharges from the Saugus Water Reclamation Plant (WRP) and Valencia WRP, which are estimated to contribute 70% of the chloride load in Reaches 5 and 6.
Linkage Analysis	Linkage between chloride sources and the in-stream water quality was established through a statistical analysis of the WRP effluent and water quality data at Blue Cut and Highway 99. The analysis shows that additional assimilative capacity is usually added to Reaches 5 and 6 from groundwater discharge, but the magnitude of the assimilative capacity is not well quantified. Consequently, the Implementation Plan includes a hydrological study (Surface Water/Groundwater Interaction? Of the upper reaches of the Santa Clara River.
Waste Load Allocations (for point sources)	The numeric target is based on the water quality objective for chloride. The proposed waste load allocations (WLAs) are 100 mg/L for Valencia WRP and 100 mg/L Saugus WRP. The waste load allocations are

Element	Table 7-6.1. Upper Santa Clara River Chloride TMDL Elements Santa Clara River Chloride
	expressed as a concentration limit derived from the existing WQO, thereby accommodating future growth. Other NPDES discharges contribute a minor chloride load. The waste load allocation for these point sources is 100 mg/L.
Load Allocation (for non point sources)	The source analysis indicates nonpoint sources are not a major source of chloride. The load allocations for these nonpoint sources is 100 mg/L.
Implementation	<p>Refer to Table 7-6.2.</p> <p>The implementation plan proposes that during the period of TMDL implementation, compliance for the WRPs' effluents will be evaluated in accordance with interim waste load allocations.</p> <p>Saugus WRP: The interim waste load allocation for chloride is the sum of State Water Project treated water supply concentration plus 114 mg/L, as a twelve month rolling average. At no time shall the interim wasteload allocation exceed 230mg/L.</p> <p style="padding-left: 40px;">Interim Waste Load Allocation=Treated Potable Water Supply + 114 mg/L, not to exceed 230 mg/L.</p> <p style="padding-left: 40px;">(114 mg/L is the maximum difference in chloride concentration between the State Water Project treated water and the Saugus WRP treated effluent over the last five years.)</p> <p>Valencia WRP: The interim waste load allocation for chloride is the sum of State Water Project treated water supply concentration plus 134 mg/L, as a twelve month rolling average. At no time shall the interim wasteload allocation exceed 230 mg/L.</p> <p style="padding-left: 40px;">Interim Waste Load Allocation=Treated potable Water Supply + 134 mg/L, not to exceed 230 mg/L.</p> <p style="padding-left: 40px;">(134 mg/L, is the maximum difference in chloride concentration between the State Water Project treated water and the Valencia WRP treated effluent over the last five years.)</p>
Margin of Safety	An implicit margin of safety is incorporated through conservative model assumptions and statistical analysis.
Seasonal Variations and Critical Conditions	Three critical conditions are identified for this TMDL. The driest six months of the year is the first critical condition for chloride because less surface flow is available to dilute effluent discharge, pumping rates for agricultural purposes are higher, groundwater discharge is less, poorer quality groundwater may be drawn into the aquifer and evapotranspiration

Element	Table 7-6.1. Upper Santa Clara River Chloride TMDL Elements Santa Clara River Chloride
	<p>effects are greater in warm weather. During drought, the second critical condition reduced surface flow and increased groundwater extraction continues through several seasons with greater impact on groundwater resource and discharge. The third critical conditions is based on the recent instream chloride concentration increases such as those that occurred in 1999, a year of average flow, when 9 of 12 monthly averages exceeded the objective. Data from all three critical conditions were used in the statistical model described. Hydrological modeling will be completed to evaluate whether additional loading will impact the WQO or beneficial uses during non-critical conditions.</p>

Table 7-6.2. Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks	Completion Date
<p>1. Alternate Water Supply</p> <p>a) Should (1) the monthly average in-river concentration at Blue Cut, the reach boundary, exceed the water quality objective of 100mg/L, measured for the purposes of this TMDL as a rolling twelve month average, for three months of any 12 months, (2) each agricultural diverter provide records of the diversion dates and amounts to the Regional Board and County Sanitation Districts of Los Angeles County (CSDLAC) for at least 2 years after the effective date of the TMDL and (3) each agricultural diverter provide photographic evidence that diverted water is applied to avocado, strawberry or other chloride sensitive crop and evidence of a water right to divert, then CSDLAC will be responsible for providing an alternative water supply, negotiating the delivery of alternative water by a third party, or providing fiscal remediation to be quantified in negotiations between CSDLAC and the agricultural diverter at the direction of the Regional Water Quality Control Board until such as time as the in-river chloride concentrations do not exceed the water quality objective.</p> <p>b) Should the instream concentration exceed 230 mg/L more than two times in the three year period, the discharger identified by the Regional Board Executive Officer shall be required to submit, within ninety days of a request by the Regional Board Executive Officer, a workplan for an accelerated schedule to reduce chloride discharges.</p> <p>2. Progress reports will be submitted by CSDLAC to Regional Board staff on a semiannual basis from the effective date of the TMDL for tasks 4, 6, and 7, and on an annual basis for Task 5.</p>	<p>Effective Date of TMDL (05/04/2005)</p>
<p>3. Chloride Source Identification/Reduction, Pollution Prevention and Public Outreach Plan: Six months after the effective date of the TMDL, CSDLAC will submit a plan to the Regional Board that addresses measures taken and planned to be taken to quantify and control sources of chloride, including, but not limited to: execute community-wide outreach programs, which were developed based on the pilot outreach efforts conducted by CSDLAC, assess potential incentive/disincentive programs for residential self-regenerating water softeners, and other measures that may be effective in controlling chloride. CSDLAC shall develop and implement the source reduction/pollution prevention and public outreach program, and report results annually thereafter to the Regional Board. Chloride</p>	<p>6 months after Effective Date of TMDL (11/04/2005)</p>

Table 7-6.2. Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks	Completion Date
<p>sources from imported water supplies will be assessed. The assessment will include conditions of drought and low rainfall, and will analyze the alternatives for reducing this source.</p>	
<p>4. CSDLAC will convene a technical advisory committee or committees (TAC(s)) in cooperation with the Regional Board to review literature develop a methodology for assessment, and provide recommendations with detailed timelines and task descriptions to support any needed changes to the time schedule for evaluation of appropriate chloride threshold for Task 6. The Regional Board, at a public hearing will re-evaluate the schedule for Task 6 and subsequent linked tasks based on input from the TAC(s), along with Regional Board staff analysis and assessment consistent with state and federal law, as to the types of studies needed and the time needed to conduct the necessary scientific studies to determine the appropriate chloride threshold for the protection of salt sensitive agricultural uses, and will take action to amend the schedule if there is sufficient technical justification.</p>	<p>12 months after Effective Date (05/04/2006)</p>
<p>5. Groundwater/Surface Water Interaction Model: CSDLAC will solicit proposals, collect data, develop a model in cooperation with the Regional Board, obtain peer review, and report results. The impact of source waters and reclaimed water plans on achieving the water quality objective and protecting beneficial uses, including impacts on underlying groundwater quality, will also be assessed and specific recommendations for management developed for Regional Board consideration. The purpose of the modeling and sampling effort is to determine the interaction between surface water and groundwater as it may affect the loading of chloride from groundwater and its linkage to surface water quality.</p>	<p>2.5 years after Effective Date of TMDL (11/20/2007)</p>
<p>6. Evaluation of Appropriate Chloride Threshold for the Protection of Sensitive Agricultural Supply Use and Endangered Species Protection: CSDLAC will prepare and submit a report on endangered species protection thresholds. CSDLAC will also prepare and submit a report presenting the results of the evaluation of chloride thresholds for salt sensitive agricultural uses, which shall consider the impact of drought and low rainfall conditions and the associated increase in imported water concentrations on downstream crops utilizing the result of Task 5.</p>	<p>2.5 years after Effective Date of TMDL (11/20/2007)</p>
<p>7. Develop Site Specific Objectives (SSO) for Chloride for Sensitive Agriculture: CSDLAC will solicit proposals and develop technical analyses upon which the Regional Board may base a Basin Plan amendment.</p>	<p>2.8 years after Effective Date of TMDL (02/20/2008)</p>

Table 7-6.2 Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks	Completion Date
<p>8. Develop Anti-Degradation Analysis for Revision of Chloride Objective by SSO: CSDLAC will solicit proposals and develop draft anti-degradation analysis for Regional Board consideration.</p> <p>9. Develop a pre-planning report on conceptual compliance measures to meet different hypothetical final wasteload allocations. CSDLAC shall solicit proposals and develop and submit a report to the Regional Board that identifies potential chloride control measures and costs based on different hypothetical scenarios for chloride water quality objectives and final wasteload allocations.</p>	
<p>10. a) Preparation and Consideration of a Basin Plan Amendment (BPA) to revise the chloride objective by the Regional Board.</p> <p>b) Evaluation of Alternative Water Supplies for Agricultural Beneficial Uses: CSDLAC will quantify water needs, identify alternative water supplies, evaluate necessary facilities, and report results, including the long-term application of this remedy.</p> <p>c) Analysis of Feasible Compliance Measures to Meet Final Wasteload Allocations for Proposed Chloride Objective. CSDLAC will assess and report on feasible implementation actions to meet the chloride objective established pursuant to Task 10a).</p> <p>d) Reconsideration of and action taken on the Chloride TMDL and Final Wasteload Allocations for the Upper Santa Clara River by the Regional Board.</p>	<p>3 years after Effective Date of TMDL (05/04/2008)</p>
<p>11. a) Implementation of Compliance Measures, Planning: CSDLAC to submit a report of planning activities which include but are not limited to: (1) identifying lead state/federal agencies; (2) administering a competitive bid process for the selection of EIR/EIS and Engineering Consultants; (3) Development of Preliminary Planning and Feasibility Analyses; (4) Submittal of Project Notice of Preparation/Notice of Intent; (5) Preparation of Draft Facilities Plan and EIR; (6) Administration of Public Review and Comment Periods; (7) Development of Final Facilities Plan and EIR and incorporation and response to comments; (8) Administration of final public review and certification process; and (9) Filing a Notice of Determination and Record of Decision.</p> <p>b) Implementation of Compliance Measures, Planning: CSDLAC to provide a schedule of related tasks and subtasks related to Task 11a),</p>	<p>5 years after Effective Date of TMDL (05/04/2010)</p> <p>5 years after Effective Date of</p>

Table 7-6.2: Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks	Completion Date
and provide semi-annual progress reports on progress of planning activities, thereafter, until completion of Final Facilities Plan and EIR.	TMDL (05/04/2010)
12. The Regional Board staff will re-evaluate the schedule to implement control measures needed to meet Final Wasteload Allocations adopted pursuant to Task 10 d) and the schedule for Task 13. The Regional Board, at a public meeting will consider extending the completion date of Task 13 and reconsider the schedule to implement control measures to meet Final Wasteload Allocations adopted pursuant to Task 10 d). CSDLAC will provide the justification for the need for an extension to the Regional Board executive Officer at least 6 months in advance of the deadline for this task.	6 years after Effective Date of TMDL (05/04/2011)
<p>13. a) Implementation of Compliance Measures, Complete Environmental Impact Report: CSDLAC shall complete a Facilities Plan and Environmental Impact Report for advanced treatment facilities to comply with final effluent permit limits for chloride.</p> <p>b) Implementation of Compliance Measures, Engineering Design: CSDLAC will begin the engineering design of the recommended project.</p> <p>c) Implementation of Compliance Measures, Engineering Design: CSDLAC will provide a design schedule of related tasks and sub-tasks, and provide semi-annual progress reports on progress of design activities, thereafter, until completion of Final Design. In addition CSDLAC will provide a construction schedule of related tasks and sub-tasks, and provide semi-annual progress reports on progress of construction activities, thereafter, until completion of recommended project.</p> <p>d) Implementation of Compliance Measures, Construction: CSDLAC shall have applied and received all appropriate permits and have completed construction of the recommended project.</p>	<p>6 years after Effective Date of TMDL (05/04/2011)</p> <p>6 years after Effective Date of TMDL (05/04/2011)</p> <p>7 years after Effective Date of TMDL (05/04/2012)</p> <p>11 years after Effective Date of TMDL (05/04/2016)</p>
14. The interim effluent limits for chloride shall remain in effect for no more than 11 years after the effective date of the TMDL. Water Quality Objective for chloride in the Upper Santa Clara River shall be achieved. The Regional Board may consider extending the completion date of this task as necessary to account for events beyond the control of the CSDLAC.	11 years after Effective Date of TMDL (05/04/2016)

ATTACHMENT 61

State of California
California Regional Water Quality Control Board, Los Angeles Region

RESOLUTION NO. R4-2007-018
November 1, 2007

Amendment to the Water Quality Control Plan for the Los Angeles Region to
Subdivide Reach 4 of the Santa Clara River

WHEREAS, the California Regional Water Quality Control Board, Los Angeles Region, finds that:

1. The Santa Clara River (SCR) is the largest river system in southern California that remains in a relatively natural state. The River originates on the northern slope of the San Gabriel Mountains in Los Angeles County, traverses Ventura County, and flows into the Pacific Ocean between the cities of San Buenaventura (Ventura) and Oxnard. The predominant land uses in the SCR watershed include agriculture, open space, and residential uses. Revenue from the agricultural industry within the SCR watershed is estimated at over \$700 million annually and residential use is increasing rapidly both in the upper and lower watershed.
2. Reaches 5 and 6 of the SCR are located upstream of the Blue Cut gauging station, west of the Los Angeles - Ventura County line. Beneficial uses of the Upper Santa Clara River (USCR) include agricultural supply (AGR), groundwater recharge (GWR), and rare, threatened, or endangered species habitat (RARE). Reaches 5 and 6 of the USCR are listed as impaired by chloride on the United States Environmental Protection Agency (U.S. EPA) approved 303(d) list of impaired waterbodies in California due to excessive concentrations of chloride. A chloride TMDL is currently effective which assigns wasteload allocations to the Valencia and Saugus Water Reclamation Plants (WRPs) which are owned and operated by the County Sanitation Districts of Los Angeles County (Districts).
3. Reach 4 of the SCR is located downstream from Reach 5 and extends to the City of Fillmore. Reach 4 receives surface flow from Reach 5 and contains several unique hydrogeologic features that affect chloride and other water quality parameters in the upper and lower segments of Reach 4. The key hydrological feature of Reach 4 is a dry gap where surface water in the upper portion of Reach 4 infiltrates into the underlying groundwater basin, Piru Basin, under dry weather conditions. Flow resurfaces approximately six miles downstream. Flow from a major tributary, Piru Creek, also infiltrates into the Piru basin under dry weather conditions. Both the surface water and groundwater upstream of the Piru Creek confluence with Reach 4 contain greater levels of chloride than the surface and groundwater levels downstream.

from the Piru Creek confluence due to water reclamation plant discharges into Reaches 5 and 6 upstream of Reach 4. The Basin Plan recognizes the unique hydrogeology in the Piru Basin by establishing different groundwater objectives for chloride upstream and downstream of Piru Creek. The chloride objective for groundwater downstream of the Piru Creek confluence is 100 mg/l whereas the chloride objective for groundwater upstream of the Piru Creek confluence is 200 mg/L. However, the water quality objective (WQO) for chloride in surface water is 100 mg/l both upstream and downstream of Piru Creek.

4. The TMDL schedule requires completion of several special studies and Regional Board consideration of site specific objectives (SSOs) for chloride in the USCR by May 2008. The special studies include a review of technical literature relating to the chloride threshold for irrigation of salt-sensitive crops, a model of the groundwater-surface water interactions in the USCR, and a study of the chloride threshold for threatened and endangered species. The salt-sensitive crop study is complete and the studies pertaining to modeling and threatened and endangered species are scheduled for completion by November 2007.
5. The Regional Board finds that subdividing Reach 4 into two reaches that are spatially equivalent to the existing reach would better represent the unique hydraulic regime between the downstream portion of Reach 4 (i.e. Reach 4A) and the upstream portion of Reach 4 (Reach 4B). Reach 4A is different from Reach 4B in terms of channel morphology, loss in transit, and inflows from tributaries as compared to Reach 4A. All flow in Reach 4B infiltrates to groundwater during dry weather conditions, creating the beginning of the "Dry Gap", while in Reach 4A, rising groundwater resurfaces due to unique geologic conditions. Additionally, surface water quality in Reaches 4A and 4B is significantly different due to the differing groundwater-surface water interaction and contributions from wastewater discharges in these areas. Further, influence from tributary inflows to the SCR in Reach 4B are significantly smaller than influence from tributary flows in Reach 4A. The proposed reaches also better coincide with the Basin Plan descriptions of the groundwater basins underlying the reaches. Finally, the Regional Board finds that dividing Reach 4 into two separate reaches would provide the greatest benefit by limiting the geographical scope of any potential SSO for chloride to be considered by the Regional Board in the future.
6. The present Reach 4 definition is between the A Street bridge in Fillmore and the Blue Cut gauging station near the Ventura - Los Angeles County line. The proposed redefined reach consists of Reach 4A, between the confluence of Piru Creek and the A Street Bridge in the City of Fillmore, and Reach 4B between the Blue Cut gauging station and the confluence of Piru Creek. This action itself does not modify the WQO for chloride in either Reach 4A or Reach 4B, nor adopt a SSO for chloride in Reach 4A or 4B. Dividing Reach 4

is an administrative action so that the Regional Board may effectively consider the results of the forthcoming TMDL special studies.

7. The Regional Board finds it appropriate to correct an error in the 1994 Basin Plan map by changing the circled number "3" between "Sisar Creek" and "Santa Paula Creek" above the dotted line to circled number "9", and to revise Reach 4 of the SCR by dividing Reach 4 into two separate reaches, Reach 4A between the confluence of Piru Creek and the A Street bridge in the City of Fillmore and Reach 4B between the Blue Cut gauging station and the confluence of Piru Creek.
8. The Staff Report, as well as tentative Basin Plan Amendment was released for public comment on August 27, 2007. The revised reach designations are proposed in Attachment A to this resolution.
9. Notice of this hearing was published in accordance with the requirements of Water Code section 13244. This notice was published in the Santa Clarita Signal and Ventura Star, newspapers of general circulation, on August 27, 2007.
10. The public has had reasonable opportunity to participate in review of the amendment to the Basin Plan. A draft staff report was released for public comment on August 27, 2007, a Notice of Hearing and Notice of Filing were published and circulated 45 days preceding Board action; Regional Board staff responded to oral and written comments received from the public; and the Regional Board held a public hearing on November 1, 2007, to consider adoption of the TMDL.
11. The amendment is consistent with the State Antidegradation Policy (State Board Resolution No. 68-16), in that the boundary re-designation for Reach 4 of the SCR do not include revisions to WQOs. Likewise, the amendment is consistent with the federal Antidegradation Policy (40 CFR 131.12).
12. The proposed amendment results in no potential for adverse environmental effects, either individually or cumulatively, because dividing an existing reach into two reaches that are spatially equivalent to the existing reach to reflect unique hydrological characteristics of the two segments is merely an administrative task and no physical impacts on the environment are anticipated. The subdivision of Reach 4 merely facilitates a convenient and logical basis for consideration of water quality regulations in the future and does not revise any WQOs. This action distinguishes water body segments based on the technical difference associated with their distinct hydrological characteristics and the different effects of wastewater discharges on water quality in the two reaches. The action of creating administrative units has no impacts on what water quality requirements can or should be applicable at any

given location. Accordingly, this action is not a "project" within the meaning of the California Environmental Quality Act.

13. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code, Section 11353, Subdivision (b).
14. The Basin Plan amendment for re-designation of Reach 4 of the SCR must be submitted for review and approval by the State Water Resources Control Board (State Board), the State Office of Administrative Law (OAL), and the U.S. EPA. The Basin Plan amendment will become effective upon approval by OAL and U.S. EPA. A Notice of Decision will be filed following these approvals.

Therefore, be it resolved that:

1. Pursuant to Section 13240 of the Water Code, the Regional Board hereby amends the Basin Plan by dividing Reach 4 of the SCR into two separate reaches; Reach 4A between the confluence of Piru Creek and the A Street bridge in the City of Fillmore and Reach 4B between the Blue Cut gauging station and the confluence of Piru Creek.
2. Pursuant to sections 13240 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony at the hearing, hereby adopts the amendment to Chapter 2 the Water Quality Control Plan for the Los Angeles Region to incorporate the revisions of reach designation of SCR, Figure 2-3, as set forth in Attachment A hereto.
3. The Executive Officer is directed to forward copies of the Basin Plan amendment to the State Board in accordance with the requirements of section 13245 of the California Water Code.
4. The Regional Board requests that the State Board approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code and forward it to the OAL and U.S. EPA.
5. If during its approval process Regional Board staff, State Board or OAL determines that minor, non-substantive corrections to the language of the amendment, this resolution, or other relevant documentation are needed for clarity, or for consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.
6. The Executive Officer is authorized to sign a Certificate of Fee Exemption, or pay the applicable fee as may be required by the Fish and Game Code.
7. Figure 2-3. Major surface waters of the Santa Clara River watershed.

Eliminate:

"4. Between Blue Cut gaging station (approx. 1 mile west of LA/Ventura county line) and A Street, Fillmore"

Add:

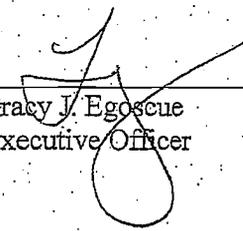

"4A. Between the confluence of Piru Creek and A Street, Fillmore

4B. Between Blue Cut gauging station and confluence of Piru Creek"

And

Change the circled number "3" between "Sisar Creek" and "Santa Paula Creek" above the dotted line to circled number "9".

I, Tracy J. Egoscue, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Los Angeles Region, on November 1, 2007.

Tracy J. Egoscue
Executive Officer

Attachment A to Resolution No. R4-2007-018

SUBDIVISION OF SANTA CLARA RIVER REACH 4

Proposed for adoption by the California Regional Water Quality Control Board, Los Angeles Region on
November 1, 2007.

Table of Contents

Chapter 2. Beneficial Uses

Figure 2-3. Major surface waters of the Santa Clara River watershed

This Basin Plan Amendment (BPA) was adopted by: The Regional Water Quality Control Board on
November 1, 2007.

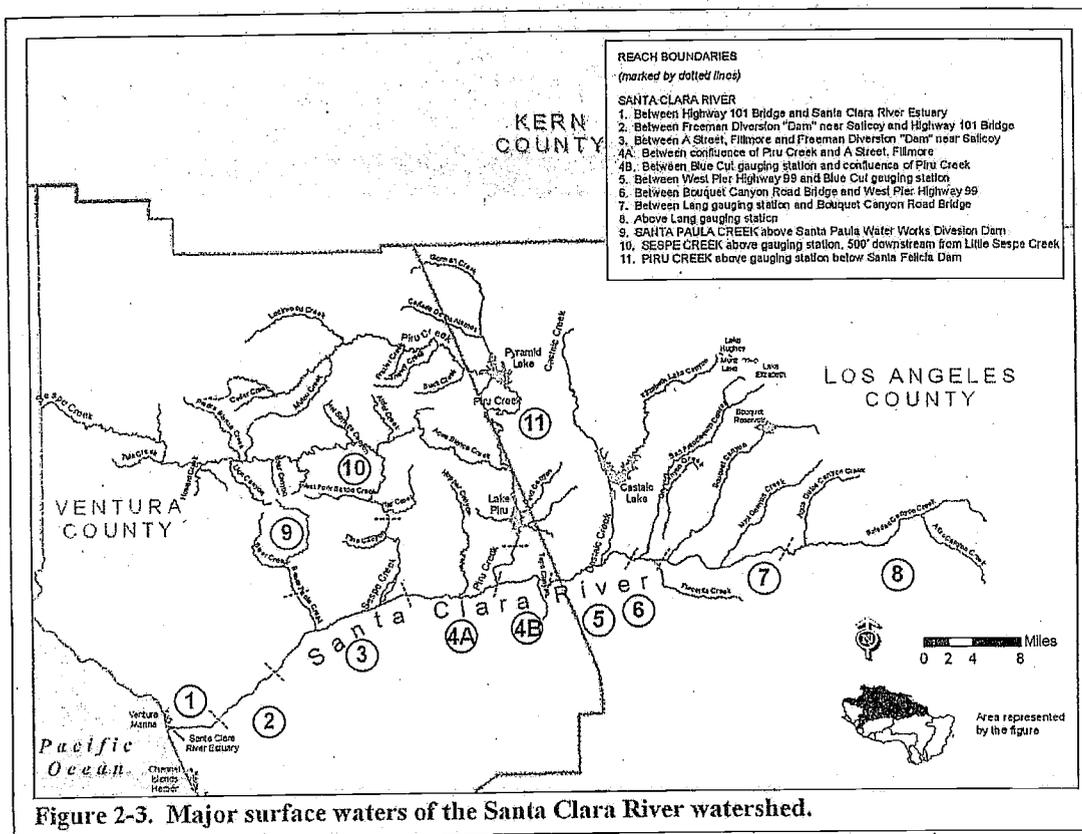

This BPA was approved by: The State Water Resource Control Board on xxxxxx xx, xxxx.

The Office of Administrative Law on xxxxxx xx, xxxx.

The U.S. Environmental Protection Agency on xxxxxx xx, xxxx.

11-1-07

18 quickly on some of the history. I mean, I may skip some
19 of the general history of the T.M.D.L. so --

20 CHAIR DIAMOND: Ms. Harris.

21 MS. HARRIS: This is the public hearing for
22 consideration of a proposed resolution in naming a Water
23 Quality Control Plan to subdivide Reach 4 of the
24 Santa Clara River into two reaches. Copies of the
25 resolution were sent to interested persons.

0268

01 Madam Chair, will you now please open the hearing
02 and administer the oath?

03 CHAIR DIAMOND: Yes. All those who are going to
04 testify in Item Number 11, please raise your right hand
05 and repeat after me.

06 (WHEREUPON ALL POTENTIAL WITNESSES WERE
07 COLLECTIVELY SWORN)

08 CHAIR DIAMOND: Thank you.

09 Mr. Unger.

10 MR. UNGER: Chair Diamond, I've been advised that I
11 should wait until Board Member Marin returns.

12 CHAIR DIAMOND: She'll be right back. Okay. Mr.
13 Unger.

14 MR. UNGER: Good afternoon, Chair Diamond, members of
15 the Regional Board. For the record, I'm Sam Unger, Chief of
16 the Regional Programs Section.

17 Today I'm presenting for your consideration a Basin
18 Plan Amendment to divide Reach 4, the reach stretching from
19 the city of Fillmore to the blue cut area near the
20 Los Angeles-Ventura County line of the Santa Clara River,
21 and we're proposing to split that into two reaches.

22 As you know, this item is part of the upper
23 Santa Clara River chloride T.M.D.L. You go to the next
24 slide. This T.M.D.L. has a long history before this Board.
25 I'm not going to go through the history, but suffice it to

0269

01 say that we are now -- the revision of the schedule that
02 took place in 2006 that this Board adopted based on the
03 results of the literature review showed 100 to
04 117 milligrams per liter was an appropriate standard for
05 avocado irrigation was approved by State Board this May, and
06 we are now working under that scheduling.

07 So what we're doing now is we're -- we're bringing
08 this in advance of completion of the other special studies.
09 The special studies shown on this slide, the chloride study
10 guideline, which has been completed. I'm just going to
11 refer to it. There is also a groundwater surface water
12 interaction study, which is a quite advanced stage right
13 now. We're running scenarios, some preliminary results are
14 coming out, and we hope to have the results of that study
15 early next year, and a study of the endangered species
16 protection, vis a vis chloride in the upper
17 Santa Clara River.

18 Due to the revised schedule, implementation now is
19 going to go very quickly next year when the results of these
20 studies are available to plan, design, and construction.
21 And so the item today is to really enhance that transition
22 from a study phase to the design phase.

23 This slide is taken from a basin plan, and it
24 depicts the entire Santa Clara River with the reaches. In
25 our work, we teach our designated -- our stretches of the

0270

01 river that share similar hydrological and water quality
02 features.

11-1-07

03 They are often broken at tributary confluences,
04 discharges of major P.O.T.W.'s, and transitions from
05 freshwater to saltwater, which occurs in the estuaries of
06 our region.

07 In our Basin Plan, all of the surface water reaches
08 are designated in a series of figures in Chapter 2, such as
09 the one you're seeing right here. Most of these reach
10 designations were originally designated in 1975 Basin Plan,
11 but over the years there have been some changes to some of
12 them when water quality or land uses were found to be
13 changed from the original designations, and that's what
14 we're proposing to do here today.

15 This slide shows Reach 4, the reach that we're
16 currently talking about and the upstream Reach 5 some of the
17 major hydrological, geographical, and jurisdictional
18 features of the upper Santa Clara River.

19 The purple forest is Los Angeles County, the yellow
20 is Ventura County, and going from upstream to downstream,
21 the yellow line represents Reach 6, the green line Reach 5,
22 and the red line is the current Reach 4.

23 Two managed reservoirs, Castaic Lake and Piru Lake
24 are tributary to the Santa Clara River to the Castaic Creek
25 and Piru Creek. The major chloride sources are the Saugus

0271 and Valencia water reclamation plants, which are also shown
02 on this slide over towards the right.

03 And the major feature of these reaches is the dry
04 gap, which is approximately six miles long. This is an
05 area where under typical conditions surface flow typically
06 infiltrates into the underlying groundwater basin, which
07 then exfiltrates back into the surface flow downstream.

08 Near the middle of the dry gap is Piru Creek
09 confluence, but this too mostly infiltrates into the
10 underlying groundwater basins. The underlying groundwater
11 basins are also shown on the map with the red, light green,
12 and the light blue, and what we're proposing to do is split
13 the reach right there between the light green and the blue
14 for reasons which I'll talk about right now.

15 This slide depicts the surface and groundwater
16 systems. A key feature on the slide, again, is Piru Creek,
17 which enters the Piru Groundwater Basin, and -- and the
18 point I'm trying to get to is -- thank you. Why is not
19 it -- there we go. Okay.

20 Piru Creek right there from Piru Lake down to this
21 area, and the water quality within the groundwater basin as
22 measured by chloride and other parameters is markedly
23 different from the east side of the Piru Basin and the west
24 side of the Piru Basin.

25 On the east side of the Piru Basin, the groundwater

0272 quality is reflective of the overlying surface flow, which
02 is influenced from the discharges from the Saugus and
03 Valencia treatment plants.

04 On the west side, the groundwater quality reflects
05 the influence of Piru Creek, which attenuates the high
06 chloride levels from the Saugus and Valencia Wastewater
07 Treatment Plants.

08 The ultimate source of Piru Creek water is the
09 state water project. And as mentioned previously, the
10 influence of Piru Creek on the groundwater quality was noted
11 in our original basin plan, which had 200 milligrams per
12 liter in the eastern reach, and 100 milligrams in the
13 western reach.

11-1-07

14 I want to stress to you today that this Basin Plan
15 Amendment does not preordain or prejudice any further
16 regulatory actions, such as water quality objective changes,
17 Site Specific Objectives or beneficial use and divisions,
18 which may be brought before the Board when the results on
19 all the special studies are complete. It's really just the
20 structure so that you can look at more alternatives to solve
21 this chloride problem.

22 I'm going to just very quickly, this is just a list
23 of the beneficial uses and water quality objectives. As we
24 all know, agricultural supply, groundwater recharge, aquatic
25 life habitat are the few beneficial uses regarding chloride.

0273
01 The surface water quality for Reaches 5 and 6,
02 excuse me, for all Reach 4 are 100 milligrams per liter, but
03 as I said, the underlying groundwater is 100 milligrams per
04 liter for chloride in western Piru and 200 milligrams per
05 liter for eastern Piru.

06 So what are we talking about? We're talking about
07 making a change to our Basin Plan by just switching out,
08 essentially this figure, which is in Chapter 2 of our Basin
09 Plan to essentially put this little reach break in the
10 figure and essentially redesignating this area as 4A and
11 this area as 4B and putting the accompanying description on
12 the legend of this map.

13 Flow in Reach 4 -- and the reason basically that we
14 want to do this is because of the difference in water
15 quality flow and the difference in hydrology between reaches
16 A and B.

17 We are bringing this action, again, for two
18 reasons. It will allow development of a more geographically
19 precise site specific objective in the future if such a site
20 specific objective is deemed appropriate based on the
21 results of the special studies. And this action will allow
22 dischargers, the Regional Board, and stakeholders to develop
23 a wider range implementation actions to obtain water quality
24 standards.

25 As we've been working since the State Board
0274
01 approval of our scheduled revision, a key new implementation
02 strategy has been brought to the table. Since that time
03 you've also heard when you considered the Newhall Ranch
04 Water Reclamation Plant permits that were months ago, that
05 they are planning on putting in reverse osmosis.

06 So there's a number of things that have just
07 changed even since over last year, and that's why we're
08 doing this today so that we can take advantage of the other
09 tools that make it available to us as we continue our
10 studies and find the best way to reach solutions to the
11 chloride issues.

12 These are just a summary of comments that have been
13 received. I'd like you to know, too, that we have --
14 this -- this item has been very well bedded through the
15 standing process that we have in the upper Santa Clara River
16 watershed with stakeholders and the discharger. We meet on
17 a monthly basis. They've all reviewed this, and we've
18 received six comment letters, basically, from the Ventura
19 County Water Quality Coalition, the Newhall Land and
20 Farming, Castaic Lake Water Agency, which is a wholesaler in
21 the Santa Clarita Valley, the City of Santa Clarita, United
22 Water Conservation District, and the Valencia Water Company.

23 Five and six letters supported this Reach 4
24 subdivision. I say the other letter from United Water

11-1-07

25 Conservation District was -- was also supportive to a
0275 degree, although they thought that we hadn't provided
01 sufficient rationale for the hydrological water quality
02 differences.
03

04 However, it was, you know, responsive to comments
05 in difference of water quality between the eastern part of
06 Reach 4 and the western part of Reach 4 is -- is significant
07 and very well-known.

08 So let's talk about, real quickly, the first is the
09 rationale for reaching -- for dividing Reach 4 is
10 unconvincing. And we'd like to say, again, I can't say it
11 enough at this time, that this item does not revise the
12 water quality objectives in any of the relevant reaches at
13 all.

14 The water quality objectives will only be proposed
15 after all of the special studies are completed. They also
16 said that this may be a prelude to degradation to water
17 quality in the eastern Reach 4 and the eastern Piru Basin,
18 and our response to that, again, is that we're not doing any
19 citation objectives, we're not doing any water quality
20 changes at this time until all the special studies are
21 completed next year, and we will -- we will -- in any
22 recommendations that we bring before you at that time, we
23 will consider protection of water quality and the
24 degradation of water quality will certainly be brought to
25 full consideration before we bring any Site Specific

0276 Objectives to your attention.

01 And, finally, it is also at the end of the day
02 special studies are complete we will bring this item back to
03 you. It is always the Board's option to maintain the
04 current objectives any way even if we split up the reaches.
05 So we feel that those are perfect responses to the concerns.
06 We recognize the concerns, we feel that they are a bit
07 premature.
08

09 And, finally, there are two comment letters, one
10 from the Ventura County Agriculture Association, for one,
11 and also from United is that the groundwater objective for
12 chloride in the eastern Piru Basin needs to be revised to a
13 level that is protective of existing agriculture sources.
14 And they go on to note that the current level of
15 200 milligrams per liter in the eastern basin was really set
16 due to historical drawing, discharge contamination in the
17 oil field, production and exploration in the upper
18 Santa Clara River Watershed.

19 Staff agrees. Staff agrees that the levels in the
20 Piru Basin basin have historically ranged in the eastern
21 part of the Piru Basin between 100 -- around 150 milligrams
22 per liter between the years 1957 and 1966.

23 When these oil field brine discharges were
24 essentially outlawed, the high chloride in the eastern
25 portion of the basin started to attenuate and came down, and

0277 now it's typical where it's hovering somewhere in the 100 to
01 120 range most recently. The -- what used to be reflective
02 of oil fields discharges is now reflective of wastewater
03 treatment plant discharges.
04

05 So it may be appropriate to do that, but, again, we
06 think it's too premature at this time, and we think that
07 this should be brought back to you with the entire package
08 of alternatives to address the chloride issue of the
09 Santa Clara River.

11-1-07

10 We have just another few minutes. So just to bring
11 you your alternatives here today, certainly you can maintain
12 the current reach definition, take no action on this item,
13 or you can divide Reach 4 into two separate reaches, 4A and
14 4B with no change to the objectives in those reaches at this
15 time. It doesn't prejudice any further Site Specific
16 Objectives, and that will be done at the confluence of
17 Piru Creek by changing the map which I've shown you before
18 in our Basin Plan and replacing the existing map.
19 Our recommendation is alternative two, and
20 basically because this is part of a set of larger actions
21 that will be taken. It's a path that we sat down
22 essentially in solving this problem, there's a study face,
23 we think that this will bring more options for your
24 consideration next year when the results of the modelling
25 and the other special studies that are complete. So with

0278 that --

02 CHAIR DIAMOND: Thank you, Mr. Unger.
03 We have two cards. Mr. Philip Brees (phonetic)?
04 Followed by Ron Smith and we need to be out of here at 5:30,
05 so give us time to deliberate.

06 MR. BREES: Madam Chair, Board members, my name is
07 Phil Brees, I'm the manager of the Technical Services
08 Department of the Los Angeles County Sanitation District,
09 difficult elephant that was referred to earlier. Today I'm
10 here to represent the Santa Clarita Valley Sanitation
11 District.

12 Now, first I'd like to express appreciation for the
13 Board staff's efforts on the Santa Clara River T.M.D.L.

14 As you may know, district staff and Board staff
15 have met on almost a weekly basis on this T.M.D.L., and it's
16 directly due to staff's concerted efforts that this item was
17 brought before the Board today, and we want to recognize
18 that effort.

19 The district supports subdivision of Reach 4 into
20 two subreaches, 4A and 4B for two reasons. One, we believe
21 there is substantial technical merit to staff's proposal.
22 There are substantial significant hydrologic and water
23 quality differences between the eastern and western portions
24 of Reach 4 that justifies subdivision of the reach.

25 And, second, this action will expand potential

0279 T.M.D.L. compliance options, which can be considered to
02 address the chloride T.M.D.L.

03 A very important option is currently under
04 development, it's an alternative water resources management
05 option, which, in concept, enjoys broad stakeholder support.
06 This option is a watershed-based solution that provides many
07 advantages that are not available from a conventional
08 concrete and steel advanced treatment approach, and it still
09 protects all existing and potential beneficial uses.

10 This action to subdivide the Reach will support
11 continued development of this option, which represents a
12 potential win-win situation for water resources and water
13 quality management in Los Angeles and Ventura County.

14 So I'd like to reiterate District support for
15 staff's recommendation, and at this late time in the day,
16 I'd be happy to answer any questions and thank you for
17 consideration.

18 CHAIR DIAMOND: Thank you very much. Mr. Rob Roy.

19 MR. ROY: Thank you, Madam Chair. I'll be one minute.
20 Sam took all my thunder from me. We basically are

Page 117

ATTACHMENT 63

State of California
California Regional Water Quality Control Board, Los Angeles Region

RESOLUTION NO. R4-2008-012
December 11, 2008

Amendment to the Water Quality Control Plan for the Los Angeles Region to Adopt
Site Specific Chloride Objectives and to Revise the Upper Santa Clara River
Chloride TMDL

WHEREAS, the California Regional Water Quality Control Board, Los Angeles Region, finds that:

1. The federal Clean Water Act (CWA) requires the California Regional Water Quality Control Board (Regional Board) to develop water quality standards that are sufficient to protect beneficial uses designated for each water body found within its region.
2. The elements of a TMDL are described in 40 CFR 130.2 and 130.7 and section 303(d) of the CWA, as well as in USEPA guidance documents (Report No. EPA/440/4-91/001). A TMDL is defined as the sum of the individual waste load allocations for point sources, load allocations for nonpoint sources and natural background (40 CFR 130.2). Regulations further stipulate that TMDLs must be set at levels necessary to attain and maintain the applicable narrative and numeric water quality objectives (WQOs), and protect beneficial uses, with seasonal variations and a margin of safety that takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR 130.7(c)(1)).
3. Upon establishment of TMDLs by the State or USEPA, the State is required to incorporate the TMDLs along with appropriate implementation measures into the State Water Quality Management Plan (40 CFR 130.6(c)(1), 130.7). This Water Quality Control Plan for the Los Angeles Region (Basin Plan), and applicable statewide plans, serves as the State Water Quality Management Plans governing the watersheds under the jurisdiction of the Regional Board.
4. The Santa Clara River is the largest river system in southern California that remains in a relatively natural state. The River originates on the northern slope of the San Gabriel Mountains in Los Angeles County, traverses Ventura County, and flows into the Pacific Ocean between the cities of San Buenaventura (Ventura) and Oxnard. The predominant land uses in the Santa Clara River watershed include agriculture, open space, and residential uses. Revenue from the agricultural industry within the Santa Clara River watershed is estimated at over \$700 million annually, and residential use is increasing rapidly both in the upper and lower watershed.

5. The upper reaches of the Santa Clara River include Reaches 5 and 6 which are located upstream of the Blue Cut gauging station, west of the Los Angeles – Ventura County line between the cities of Fillmore and Santa Clarita. Reaches 5 and 6 of the Upper Santa Clara River (USCR) appear on the EPA 303d list of impaired waterbodies (designated on the 2002 EPA 303d list as Reaches 7 and 8, respectively). Several beneficial uses of the USCR, including agricultural supply water (AGR), groundwater recharge (GWR), and rare, threatened, or endangered species habitat (RARE), are listed as impaired due to excessive chloride concentration in the waters of the USCR. Valencia and Saugus Water Reclamation Plants (WRPs), which are owned and operated by the Santa Clarita Valley Sanitation District of Los Angeles County (SCVSD), are two major point sources that discharge to the USCR.
6. On October 24, 2002, the Regional Board adopted Resolution No. 02-018, amending the Basin Plan to include a TMDL for chloride in the USCR. Resolution 02-018 assigned waste load allocations (WLAs) to the Valencia and Saugus WRPs, minor point sources, and MS4s permittees, discharging to specified reaches of the Santa Clara River. The TMDL included interim WLAs for chloride for the WRPs. These interim WLAs provide the WRPs the necessary time to implement chloride source reduction, complete site-specific objective (SSO) studies, and make appropriate modifications to the WRP, as necessary, to meet the WQO for chloride. The interim waste load allocations proposed in the TMDL were based on a statistical evaluation of the WRPs' performance in the three years preceding October 2002.
7. On February 19, 2003 the State Water Resources Control Board (State Board) adopted State Board Resolution 2003-0014 (the "Remand Resolution") which remanded the TMDL to the Regional Board. The Remand Resolution directed the Regional Board to consider a phased implementation approach to allow SCVSD to complete special studies prior to planning and construction of advanced treatment technologies.
8. On July 10, 2003, in response to the Remand Resolution, the Regional Board adopted Resolution 03-008, revising the implementation Plan for the TMDL. The revised TMDL allowed 13 years to implement the TMDL.
9. On May 6, 2004, the Regional Board adopted Resolution 04-004 to revise the interim waste-load allocations and Implementation Plan for the chloride TMDL in the USCR. The revised Implementation Plan required the completion of several special studies that serve to characterize the sources, fate, transport, and specific impacts of chloride in the USCR, including impacts to downstream reaches and underlying groundwater basins.
10. The first of the special studies, an evaluation of the appropriate chloride threshold for the reasonable protection of salt-sensitive agriculture, was completed in September of 2005. This special study, entitled "Literature Review and Evaluation (LRE)," found that the best estimate of a chloride

hazard concentration for avocado crops falls within the range of 100 to 120 mg/L. A similar range of 100 to 117 mg/L was found by an independent technical advisory panel (TAP). An additional study completed in January 2008, entitled "Compliance Averaging Period for Chloride Threshold Guidelines in Avocado," found that a 3-month averaging period of the LRE guidelines would be protective of avocados. The TAP co-chairs reviewed this study and agreed that a 3-month averaging period is appropriate.

11. On August 3, 2006, the Regional Board revised the Implementation Schedule for the TMDL in Resolution No. 04-004 (Resolution No. 06-016). The revised TMDL accelerated the schedule from 13 years to 11 years based on findings from the LRE. The State Board approved the Regional Board amendment on May 22, 2007 (State Board Resolution No. 2007-0029). In approving the amendment, the State Board directed the Regional Board to consider variability in the SSO for chloride to account for the effects of drought on source water quality.
12. Prior to completion of the special studies, the presumed implementation plan included two options: advanced treatment of effluent from the Valencia and Saugus WRPs and disposal of brine in the ocean through an ocean outfall, or disposal of tertiary treatment effluent in the ocean through an ocean outfall. Both options entail construction of a pipeline from the Santa Clarita Valley WRPs to the ocean and an ocean outfall.
13. The second special study required by the Implementation Plan is the "Groundwater/Surface Water Interaction (GSWI) Model." The GSWI study model has been completed, reviewed and approved as an appropriate and adequate modeling tool by the stakeholders and an independent GSWI TAP. The GSWI model has been used to examine feasibility of various implementation alternatives. The GSWI study predicts that none of the alternatives, including the advanced treatment of WRP effluent and disposal of brine in a new ocean outfall or disposal of tertiary treatment effluent in an ocean outfall, would achieve compliance with the existing chloride WQO of 100 mg/L at all times and at all locations and that an alternative water resources management approach could achieve attainment for certain reaches.
14. The third special study required by the Implementation Plan is the "Evaluation of Appropriate Chloride Threshold for Endangered Species Protection (ESP)." This special study has been completed and found that the existing USEPA chloride criteria of 230 mg/L as a chronic threshold and 860 mg/L as an acute threshold are protective of aquatic life in the USCR, including Threatened and Endangered species. These conclusions indicate that endangered species can tolerate higher levels of chloride than salt-sensitive agricultural crops. The independent ESP TAP concurred with the study findings and conclusions.

15. The Santa Clarita Valley Sanitation District (SCVSD) has completed all of the necessary special studies required by the Chloride TMDL (TMDL Task Nos 3, 4, 5, 6, 7, 8, 9, 10b, and 10c). The completion of these TMDL special studies, all conducted in a facilitated stakeholder process in which stakeholders participated in scoping and reviewing the studies, has led to development of an alternative TMDL implementation plan that addresses chloride impairment of surface waters and degradation of groundwater. The alternative, termed the alternative water resources management approach (AWRM), develops site specific objectives (SSOs) for chloride while protecting beneficial uses. The AWRM provides water quality and water supply benefits in Los Angeles and Ventura Counties. The AWRM consists of chloride source reduction actions and chloride load reduction through advanced treatment (microfiltration and reverse osmosis) of a portion of the Valencia WRP effluent in conformance with SSOs.
16. To support the development of the AWRM compliance option by stakeholders, Regional Board adopted Resolution No. 07-018 on November 1, 2007. Resolution No. 07-018 modified the regulatory provisions of the Basin Plan by subdividing Reach 4 of the Santa Clara River (SCR) as two separate Reaches, Reach 4A between the confluence of Piru Creek and the A Street Bridge in the City of Fillmore and Reach 4B between the Blue Cut Gauging Station and the confluence of Piru Creek. The Regional Board stated that this action would allow the development of more geographically precise SSOs.
17. This amendment to the Basin Plan will incorporate SSOs for chloride in Reaches 4B, 5, and 6 of the Santa Clara River and the groundwater basins underlying those reaches. The SSOs are protective of beneficial uses of these waterbodies. The GSWI study found that the AWRM compliance alternative will result in timely attainment of the SSOs for Reaches 4B, 5, and 6 and reduce the chloride load to the USCR and underlying groundwater basins. The proposed implementation activities under AWRM, which will increase chloride export from the East Piru groundwater basin underlying Reach 4B, will offset any increases in chloride discharges.
18. This amendment to the Basin Plan will include implementation language, including minimum salt export requirements to ensure that excess salt loadings to the groundwater basin due to periods of elevated water supply concentrations are removed from the groundwater basin through pumping and export.
19. The adoption of SSOs for chloride is part of a comprehensive strategy for addressing the buildup of salts in the Santa Clara watershed, which includes development and implementation of Total Maximum Daily Loads and corresponding effluent and receiving water limitations in NPDES permits.

20. The TMDL numeric targets, WLAs, and Implementation Plan are based on the SSOs for chloride. The TMDL provides interim WLAs for chloride, as well as interim WLAs for sulfate and TDS to support the supplemental water and water recycling components of the AWRM.
21. The TMDL provides a ten-year schedule to attain compliance with the SSOs for chloride. The SSOs are conditioned on full and ongoing implementation of the AWRM program; if the AWRM system is not built and operated, the water quality objectives for chloride revert back to the current levels in the Basin Plan, which are 100 mg/L.
22. The SCVSD, Ventura County Agricultural Water Quality Coalition, the United Water Conservation District, and Upper Basin Water Purveyors, consisting of the Castaic Lake Water Agency (CLWA), Valencia Water Company, Newhall County Water District, Santa Clarita Water Division of the CLWA, and the Los Angeles County Waterworks District No. 36, herein referred to as the AWRM Stakeholders have entered into a memorandum of understanding (MOU), effective October 23, 2008 to implement the AWRM Program. The AWRM MOU specifies the agreed-upon responsibilities of AWRM Stakeholders for the implementation of ultra-violet light disinfection and advanced treatment facilities (i.e., microfiltration-reverse osmosis and brine disposal), salt management facilities (i.e., extraction wells and water supply conveyance pipelines), supplemental water (i.e., water transfers and related facilities), and alternative water supplies for the protection of beneficial uses. The AWRM MOU also specifies the various uses of desalinated recycled water, which include: (1) compliance with water quality objectives for Reaches 4A, 4B and 5; (2) protection of salt-sensitive agricultural beneficial uses; (3) removal of excess chloride load above 117 mg/L from the East Piru Basin; and (4) enhancement of water supplies in Ventura and Los Angeles Counties. In addition, the AWRM MOU will implement an extension of the GSWI model to assess the groundwater and surface water interactions and impacts to surface water and groundwater quality from the AWRM program to the Fillmore and Santa Paula basins.
23. Implementation actions to achieve SSOs in Reaches 4B, 5, and 6 and the TMDL must also result in compliance with downstream water quality objectives for chloride. Surface water chloride concentrations will comply with the existing water quality objective of 100 mg/L in Reach 4A.
24. Regional Board staff prepared a detailed technical document that analyzes and describes the specific necessity and rationale for the development of this amendment. The technical document entitled "Upper Santa Clara River Chloride TMDL Reconsideration and Conditional Site Specific Objectives" (Staff Report) is an integral part of this Regional Board action and was reviewed, considered, and accepted by the Regional Board before acting on December 11, 2008. The Staff Report relies upon the scientific background and data collection and analysis documented in the TMDL special studies.

The TMDL special studies are distinguished from the Regional Board's staff report in that they do not present the recommendations of Regional Board staff.

25. The public has had a reasonable opportunity to participate in the review of the amendment to the Basin Plan. Stakeholders have participated extensively in the special studies since 2005 through a facilitated process in which meetings are held monthly in the cities of Fillmore, Santa Paula, and Santa Clarita. Technical working groups (TWGs) have executed the implementation studies and stakeholder-selected TAPs have reviewed the studies. All meetings are open to the public, and agendas and minutes from meetings are published on the Santa Clara River Chloride TMDL website: www.santaclarariver.org. A draft of the amendment was released for public comment on September 30, 2008; a Notice of Hearing and Notice of Filing were published and circulated 45 days preceding Board action; a notice of hearing published in the Los Angeles Daily News, the Santa Clarita Signal, and the Ventura County Star on September 30, 2008; Regional Board staff responded to oral and written comments received from the public; and the Regional Board held a public hearing on December 11, 2008 to consider adoption of the amendment.
26. In amending the Basin Plan to establish SSOs and to revise this TMDL, the Regional Board considered the requirements set forth in Sections 13240, 13241, and 13242 of the California Water Code. The 13241 factors are set forth and considered in the staff report.
27. The amendment is consistent with the State Antidegradation Policy (State Board Resolution No. 68-16), in that the changes to water quality objectives (i) consider maximum benefits to the people of the state, (ii) will not unreasonably affect present and anticipated beneficial use of waters, and (iii) will not result in water quality less than that prescribed in policies. Likewise, the amendment is consistent with the federal Antidegradation Policy (40 CFR 131.12).
28. Pursuant to Public Resources Code section 21080.5, the Resources Agency has approved the Regional Water Boards' basin planning process as a "certified regulatory program" that adequately satisfies the California Environmental Quality Act (CEQA) (Public Resources Code, § 21000 et seq.) requirements for preparing environmental documents (14 Cal. Code Regs. § 15251(g); 23 Cal. Code Regs. § 3782.) The Regional Water Board staff has prepared "substitute environmental documents" for this project that contains the required environmental documentation under the State Water Board's CEQA regulations. (23 Cal. Code Regs. § 3777.) The substitute environmental documents include the TMDL staff report, the environmental checklist, the comments and responses to comments, the basin plan amendment language, and this resolution. While the Regional Board has no discretion to not establish a TMDL (the TMDL is required by federal law), the Board does exercise discretion in assigning waste load allocations and load allocations,

determining the program of implementation, and setting various milestones in achieving the water quality standards. The CEQA checklist and other portions of the substitute environmental documents contain significant analysis and numerous findings related to impacts and mitigation measures.

29. A CEQA Scoping hearing was conducted on July 29, 2008 at the Council Chamber of City of Fillmore – 250 Central Avenue, Fillmore, California. A notice of the CEQA Scoping hearing was sent to interested parties. The notice of CEQA Scoping hearing was also published in the Los Angeles Daily News on July 11, 2008 and Ventura County Star on July 11, 2008.
30. In preparing the accompanying CEQA substitute documents, the Regional Board has considered the requirements of Public Resources Code section 21159 and California Code of Regulations, title 14, section 15187, and intends the substitute documents to serve as a tier 1 environmental review. Consistent with CEQA, the substitute documents do not engage in speculation or conjecture and only consider the reasonably foreseeable environmental impacts of the methods of compliance, the reasonably foreseeable feasible mitigation measures, and the reasonably foreseeable alternative means of compliance, which would avoid or eliminate the identified impacts. Nearly all of the compliance obligations will be undertaken by public agencies that will have their own obligations under CEQA. Project level impacts will need to be considered in any subsequent environmental analysis performed by other public agencies, pursuant to Public Resources Code section 21159.2.
31. The proposed amendment could have a potentially significant adverse effect on the environment. However, there are feasible alternatives, feasible mitigation measures, or both, that if employed, would substantially lessen the potentially significant adverse impacts identified in the substitute environmental documents; however such alternatives or mitigation measures are within the responsibility and jurisdiction of other public agencies, and not the Regional Board. Water Code section 13360 precludes the Regional Board from dictating the manner in which responsible agencies comply with any of the Regional Board's regulations or orders. When the agencies responsible for implementing this TMDL determine how they will proceed, the agencies responsible for those parts of the project can and should incorporate such alternatives and mitigation into any subsequent projects or project approvals. These feasible alternatives and mitigation measures are described in more detail in the substitute environmental documents. (14 Cal. Code Regs. § 15091(a)(2).)
32. From a program-level perspective, incorporation of the alternatives and mitigation measures outlined in the substitute environmental documents may not foreseeably reduce impacts to less than significant levels.

33. The substitute documents for this TMDL, and in particular the Environmental Checklist and staff's responses to comments, identify broad mitigation approaches that should be considered at the project level.
34. To the extent significant adverse environmental effects could occur, the Regional Board has balanced the economic, legal, social, technological, and other benefits of the TMDL against the unavoidable environmental risks and finds that specific economic, legal, social, technological, and other benefits of the TMDL outweigh the unavoidable adverse environmental effects, such that those effects are considered acceptable. The basis for this finding is more fully set forth in the substitute environmental documents. (14 Cal. Code Regs. § 15093.)
35. Considering the record as a whole, this Basin Plan amendment will result in no effect, either individually or cumulatively, on wildlife resources.
36. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code, section 11353, subdivision (b).
37. The Basin Plan amendment incorporating SSOs and a revision of the Santa Clara River Chloride TMDL must be submitted for review and approval by the State Board, the State Office of Administrative Law (OAL), and the U.S. EPA. The Basin Plan amendment will become effective upon approval by OAL and U.S. EPA. A Notice of Decision will be filed following these approvals.
38. Occasionally during its approval process, Regional Board staff, the State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity or consistency. Under such circumstances, the Executive Officer should be authorized to make such changes, provided she informs the Board of any such changes.

Therefore, be it resolved that:

1. Pursuant to sections 13240 and 13241 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony at the hearing, hereby adopts the amendment to Chapter 3 of the Water Quality Control Plan for the Los Angeles Region as set forth in Attachment A hereto, to incorporate SSOs for chloride for Reaches 4B, 5, and 6 in the Santa Clara River watershed and underlying groundwater basins (as identified in Tables 3-8 and 3-10), which will replace the previously applicable water quality objectives in Reaches 4B, 5, and 6 of the Santa Clara River and underlying groundwater basins.
2. Pursuant to sections 13240 and 13241 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony at the hearing, hereby adopts the amendment to Chapter 4 of the Water

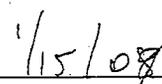

Quality Control Plan for the Los Angeles Region as set forth in Attachment B hereto, to include USCR SSOs for chloride.

3. Pursuant to sections 13240 and 13242 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony at the hearing, hereby adopts the amendment to Chapter 7 the Water Quality Control Plan for the Los Angeles Region as set forth in Attachment C hereto, to incorporate the revisions to the Upper Santa Clara River Chloride TMDL.
4. The Regional Board hereby approves and adopts the CEQA substitute environmental documentation, which was prepared in accordance with Public Resources Code section 21159 and California Code of Regulations, title 14, section 15187, and directs the Executive Officer to sign the environmental checklist. To the extent significant adverse environmental effects could occur, the Regional Board has balanced the economic, legal, social, technological, and other benefits of the TMDL against the unavoidable environmental risks and finds that specific economic, legal, social, technological, and other benefits of the TMDL outweigh the unavoidable adverse environmental effects, such that those effects are considered acceptable. The basis for this finding is more fully set forth in the substitute environmental documents. (14 Cal. Code Regs. § 15093.)
5. The Executive Officer is authorized to request a "No Effect Determination" from the Department of Fish and Game, or transmit payment of the applicable fee as may be required to the Department of Fish and Game.
6. The Executive Officer is directed to forward copies of the Basin Plan amendment to the State Board in accordance with the requirements of section 13245 of the California Water Code.
7. The Regional Board requests that the State Board approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code and forward it to the OAL and U.S. EPA.
8. If during its approval process Regional Board staff, State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity, or for consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.

I, Tracy J. Egoscue, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Los Angeles Region, on December 11, 2008.

Tracy J. Egoscue
Executive Officer

Date

Attachment A to Resolution R4-2008-012
Basin Plan Amendment Incorporating Conditional Site-Specific Objectives for Chloride in Upper Santa Clara River Watershed

The following language will be added to Chapter 3, Water Quality Objectives of the Basin Plan, under "Mineral Quality":

Add table after Table 3-8.

Table 3-8a. Conditional Site Specific Objectives for Santa Clara River Surface Waters

WATERSHED/STREAM REACH	Chloride (mg/L)
Santa Clara River Watershed:	
Between Bouquet Canyon Road Bridge and West Pier Highway 99	150 (12-month average)
Between West Pier Highway 99 and Blue Cut gaging station	150 (12-month average)
Between Blue Cut gaging station and confluence of Piru Creek	117/130 ^a (3-month average) ^b

- a. The conditional site specific objective of 130 mg/L applies only if the following conditions and implementation requirements are met:
1. Water supply chloride concentrations measured in Castaic Lake are ≥ 80 mg/L.
 2. The Santa Clarita Valley Sanitation District (SCVSD) shall provide supplemental water to salt-sensitive agricultural uses that are irrigated with surface water during periods when Reach 4B (between Blue Cut gaging station and confluence of Piru Creek) surface water exceeds 117 mg/L.
 3. By May 4, 2020, the 10-year cumulative net chloride loading above 117 mg/L (CNCI₁₁₇)ⁱ to Reach 4B of the Santa Clara River (SCR), calculated annually, from the SCVSD Water Reclamation Plants (WRPs) shall be zero or less.

$${}^i \text{CNCI}_{117} = \text{Cl}_{(\text{Above } 117)} - \text{Cl}_{(\text{Below } 117)} - \text{Cl}_{(\text{Export Ews})}$$

Where:

$$\text{Cl}_{(\text{Above } 117)} = [\text{WRP Cl Load}^1 / \text{Reach 4B Cl Load}^2] * [\text{Reach 4B Cl Load}_{>117}^3]$$

$$\text{Cl}_{(\text{Below } 117)} = [\text{WRP Cl Load}^1 / \text{Reach 4B Cl Load}^2] * [\text{Reach 4B Cl Load}_{\leq 117}^4]$$

$$\text{Cl}_{(\text{Export EWs})} = \text{Cl Load Removed by Extraction Wells}$$

¹ WRP Cl Load is determined as the monthly average chloride (Cl) concentration multiplied by the monthly average flow measured at the Valencia WRP.

² Reach 4B Cl Load is determined as the monthly average Cl concentration at SCVSD Receiving Water Station RF multiplied by the monthly average flow measured at USGS Gauging Station 11109000 (Las Brisas Bridge).

Attachment A to Resolution R4-2008-012

Basin Plan Amendment Incorporating Conditional Site-Specific Objectives for Chloride in Upper Santa Clara River Watershed

³ Reach 4B Cl Load_{>117} means the calculated Cl load to Reach 4B when monthly average Cl concentration in Reach 4B is above 117 mg/L.

⁴ Reach 4B Cl Load_{≤117} means the calculated Cl load to Reach 4B when monthly average Cl concentration in Reach 4B is below or equal to 117 mg/L.

4. The chief engineer of the SCVSD signs under penalty of perjury and submits to the Regional Board a letter documenting the fulfillment of conditions 1, 2, and 3.

b. The averaging period for the critical condition SSO of 130 mg/L may be reconsidered based on results of chloride trend monitoring after the alternative water resources management (AWRM) system is applied.

The conditional site specific objectives for chloride in the surface water between Bouquet Canyon Road bridge and West Pier Highway 99, between West Pier Highway 99 and Blue Cut gaging station, and between Blue Cut gaging station and confluence of Piru Creek shall apply and supersede the existing water quality objectives in Table 3-8 only when chloride load reductions and/or chloride export projects are in operation by the SCVSD according to the implementation section in Table 7-6.1 of Chapter 7.

Add table after Table 3-10.

Table 3-10a. Conditional Site Specific Objectives for Selected Constituents in Regional Groundwaters

DWR Basin No.	BASIN	Chloride (mg/L)
4-4	Ventura Central ^d Lower area east of Piru Creek ¹	150 (rolling 12-month average)
4-4.07	Eastern Santa Clara Santa Clara—Bouquet & San Francisquito Canyons Castaic Valley	150 (rolling 12-month average) 150 (rolling 12-month average)

1. This objective only applies to the San Pedro formation. Existing objective of 200 mg/L applies to shallow alluvium layer above San Pedro formation.

The conditional site specific objectives for chloride in the groundwater in Santa Clara--

Attachment A to Resolution R4-2008-012
**Basin Plan Amendment Incorporating Conditional Site-Specific Objectives for
Chloride in Upper Santa Clara River Watershed**

Bouquet & San Francisquito Canyons, Castaic valley, and the lower area east of Piru Creek (San Pedro Formation) shall apply and supersede the existing regional ~~groundwater quality objectives only when chloride load reductions and/or chloride export~~ projects are in operation by the SCVSD according to the implementation section in Table 7-6.1 of Chapter 7.

Attachment B to Resolution No. R4-2008-012

Revision of the TMDL for Chloride in the Upper Santa Clara River

Adopted by the California Regional Water Quality Control Board, Los Angeles Region on
December 11, 2008.

The Office of Administrative Law on xxx xx, 200x.

Element	<p>Table 7-6.1. Upper Santa Clara River Chloride TMDL Elements</p> <p style="text-align: center;">Santa Clara River Chloride</p>															
<p><i>Problem Statement</i></p>	<p>Elevated chloride concentrations are causing impairments of the water quality objective in Reach 5 (EPA 303(d) list Reach 7) and Reach 6 (EPA 303(d) list Reach 8) of the Santa Clara River (SCR). These reaches are on the 1998 and 2002 Clean Water Act (CWA) 303(d) lists of impaired water bodies as impaired due to chloride. The objectives for these reaches were set to protect all beneficial uses; agricultural beneficial uses have been determined to be most sensitive, and not currently attained at the downstream end of Reach 5 (EPA 303(d) list Reach 7) and Reach 6 (EPA 303(d) list Reach 8) in the Upper Santa Clara River (USCR). Irrigation of salt sensitive crops such as avocados, strawberries, and nursery crops with water containing elevated levels of chloride results in reduced crop yields. Chloride levels in groundwater in Piru Basin underlying the reach downstream of Reach 5 are also rising.</p>															
<p><i>Numeric Target (Interpretation of the numeric water quality objective, used to calculate the load allocations)</i></p>	<p>Numeric targets are equivalent to conditional site specific objectives (SSOs) that are based on technical studies regarding chloride levels which protect salt sensitive crops and endangered and threatened species, chloride source identification, and the magnitude of assimilative capacity in the upper reaches of the Santa Clara River and underlying groundwater basin. The TMDL special study, Literature Review Evaluation, shows that the most sensitive beneficial uses can be supported with rolling averaging periods as shown in the tables below:</p> <p>1. Conditional Surface Water SSOs</p> <p>The conditional SSOs for chloride in the surface water of Reaches 4B, 5, and 6 shall apply and supersede the existing water quality objectives of 100 mg/L only when chloride load reductions and/or chloride export projects are in operation by the SCVSD according to the implementation section in Table 7-6.1. Conditional surface water SSOs for Reaches 4B, 5, and 6 of the Santa Clara River are listed as follows:</p> <table border="1" data-bbox="532 1480 1347 1827"> <thead> <tr> <th>Reach</th> <th>Conditional SSO for Chloride (mg/L)</th> <th>Rolling Averaging Period</th> </tr> </thead> <tbody> <tr> <td>6</td> <td>150</td> <td>12-month</td> </tr> <tr> <td>5</td> <td>150</td> <td>12-month</td> </tr> <tr> <td>4B</td> <td>117</td> <td>3-month</td> </tr> <tr> <td>4B Critical Conditions</td> <td>130^a</td> <td>3-month^b</td> </tr> </tbody> </table>	Reach	Conditional SSO for Chloride (mg/L)	Rolling Averaging Period	6	150	12-month	5	150	12-month	4B	117	3-month	4B Critical Conditions	130 ^a	3-month ^b
Reach	Conditional SSO for Chloride (mg/L)	Rolling Averaging Period														
6	150	12-month														
5	150	12-month														
4B	117	3-month														
4B Critical Conditions	130 ^a	3-month ^b														

Element	<p>Table 7-6.1. Upper Santa Clara River Chloride TMDL Elements</p> <p>Santa Clara River Chloride</p>
	<p>a. The conditional SSO for chloride in Reach 4B under critical condition shall apply only if the following conditions and implementation requirements are met:</p> <ol style="list-style-type: none"> 1. Water supply chloride concentrations measured in Castaic Lake are ≥ 80 mg/L. 2. The Santa Clarita Valley Sanitation District (SCVSD) shall provide supplemental water to salt-sensitive agricultural uses that are irrigated with surface water during periods when Reach 4B surface water exceeds 117 mg/L. 3. By May 4, 2020, the 10-year cumulative net chloride loading above 117 mg/L ($CNCl_{117}$)ⁱ to Reach 4B of the SCR, calculated annually, from the SCVSD Water Reclamation Plants (WRPs) shall be zero or less. <p>ⁱ $CNCl_{117} = Cl_{(Above\ 117)} - Cl_{(Below\ 117)} - Cl_{(Export\ Ews)}$</p> <p>Where:</p> <p>$Cl_{(Above\ 117)} = [WRP\ Cl\ Load^1 / Reach\ 4B\ Cl\ Load^2] * [Reach\ 4B\ Cl\ Load_{>117}^3]$</p> <p>$Cl_{(Below\ 117)} = [WRP\ Cl\ Load^1 / Reach\ 4B\ Cl\ Load^2] * [Reach\ 4B\ Cl\ Load_{\leq 117}^4]$</p> <p>$Cl_{(Export\ Ews)} = Cl\ Load\ Removed\ by\ Extraction\ Wells$</p> <p>¹ WRP Cl Load is determined as the monthly average Cl concentration multiplied by the monthly average flow measured at the Valencia WRP.</p> <p>² Reach 4B Cl Load is determined as the monthly average Cl concentration at SCVSD Receiving Water Station RF multiplied by the monthly average flow measured at USGS Gauging Station 11109000 (Las Brisas Bridge).</p> <p>³ Reach 4B Cl Load_{>117} means the calculated Cl load to Reach 4B when monthly average Cl concentration in Reach 4B is above 117 mg/L.</p> <p>⁴ Reach 4B Cl Load_{≤117} means the calculated Cl load to Reach 4B when monthly average Cl concentration in Reach 4B is below or equal to 117 mg/L.</p> <ol style="list-style-type: none"> 4. The chief engineer of the SCVSD signs under penalty of perjury and submits to the Los Angeles Regional Water Quality Control Board (Regional Board) a letter documenting the fulfillment of conditions 1, 2, and 3.

<i>Source Analysis</i>	<p>The principal source of chloride into Reaches 5 and 6 of the Santa Clara River is discharges from the Saugus WRP and Valencia WRP, which are estimated to contribute 70% of the chloride load in Reaches 5 and 6. These sources of chloride accumulate and degrade groundwater in the lower area east of Piru Creek in the basin.</p>												
<i>Linkage Analysis</i>	<p>A groundwater-surface water interaction (GSWI) model was developed to</p>												

Element	Table 7-6.1. Upper Santa Clara River Chloride TMDL Elements Santa Clara River Chloride						
	<p>assess the linkage between chloride sources and in-stream water quality and to quantify the assimilative capacity of Reaches 4A, 4B, 5, and 6 and the groundwater basins underlying those reaches. GSWI was then used to predict the effects of WRP discharges on chloride loading to surface water and groundwater under a variety of future hydrology, land use, and water use assumptions including future discharges from the Newhall Ranch WRP in order to determine appropriate wasteload allocations (WLAs) and load allocations (LAs).</p> <p>The linkage analysis demonstrates that beneficial uses can be protected through a combination of SSOs for surface water and groundwater and reduction of chloride levels from the Valencia WRP effluent through advanced treatment.</p>						
<p><i>Waste Load Allocations (for point sources)</i></p>	<p>The conditional WLAs for chloride for all point sources shall apply only when chloride load reductions and/or chloride export projects are in operation by the SCVSD according to the implementation section in Table 7-6.1. If these conditions are not met, WLAs shall be based on existing water quality objectives for chloride of 100 mg/L.</p> <p>Conditional WLAs for chloride for discharges to Reach 4B by the Saugus and Valencia WRPs are as follows:</p> <table border="1" data-bbox="646 1228 1315 1648"> <thead> <tr> <th>Reach</th> <th>Concentration-based Conditional WLA for Chloride (mg/L)</th> </tr> </thead> <tbody> <tr> <td>4B</td> <td>117 (3-month Average), 230 (Daily Maximum)</td> </tr> <tr> <td>4B Critical Conditions</td> <td>130^a (3-month Average^b), 230 (Daily Maximum)</td> </tr> </tbody> </table> <p>a. Implementation

Refer to Table 7-6.2.

Implementation of Upper Santa Clara River Conditional Site Specific Objectives for Chloride

In accordance with Regional Board resolution 97-002, the Regional Board and stakeholders have developed an integrated watershed plan to address chloride impairments and protect beneficial uses of surface waters and groundwater basins underlying Reaches 4B, 5, and 6 of the Santa Clara River. The plan involves: 1) Reducing chloride loads and/or increasing chloride exports from the USCR watershed through implementation of advanced treatment (RO) of a portion of the effluent from the Valencia WRP. The advanced treated effluent will be discharged into Reach 4B or blended with extracted groundwater from the Piru Basin underlying Reach 4B and discharged into Reach 4A. The resultant brine from the advanced treatment process will be disposed in a legal and environmentally sound manner. 2) Implementing the conditional SSOs for chloride in surface waters and underlying groundwater basins of the USCR watershed provided in Chapter 3.

The watershed chloride reduction plan will be implemented through NPDES permits for the Valencia WRP and a new NPDES permit for discharge into Reach 4A. The conditional SSOs for chloride in the USCR watershed shall apply and supersede the regional water quality objectives only when chloride load reductions and/or chloride export projects are in operation and reduce chloride loading in accordance with the following table:

Water Supply Chloride ¹	Chloride Load Reductions ²
40 mg/L	58,000 lbs per month
50 mg/L	64,000 lbs per month
60 mg/L	71,000 lbs per month
70 mg/L	77,000 lbs per month
80 mg/L	83,000 lbs per month
90 mg/L	90,000 lbs per month
100 mg/L	96,000 lbs per month

¹ Based on measured chloride of the State Water Project (SWP) water stored in Castaic Lake.

² Chloride load reduction is based on operation of a RO treatment plant treating 3 MGD of recycled water with chloride concentration of 50 mg/L + Water Supply Chloride. Assumes operational capacity factor of 90% and RO membrane chloride rejection rate of 95%. Determination of

chloride load based on the following:

$$ChlorideLoad = 90\% \times [(Q_{RO} \times C_{WRP} \times 8.34) \times r] \times \left(\frac{30 Days}{Month} \right)$$

where r = % chloride rejection (95%)

Q_{RO} = 3 MGD of recycled water treated

with RO

C_{WRP} = SWP-Cl + 50 mg/L

Conditional WLAs

Conditional WLAs for the Saugus and Valencia WRPs will be implemented through effluent limits, receiving water limits and monitoring requirements in NPDES permits. Conditional WLAs for Reach 4B will be implemented as receiving water limits. Conditional WLAs for Reaches 5 and 6 will be implemented as effluent limits.

The implementation plan proposes that during the period of TMDL implementation, compliance for the WRPs' effluent limits will be evaluated in accordance with interim WLAs.

Saugus WRP:

The interim WLA for chloride is equal to the interim limit for chloride specified in order No. R4-04-004. The interim WLA for TDS is 1000 mg/L as an annual average. The interim WLA for sulfate is 450 mg/L as an annual average. These interim WLAs shall apply as interim end-of-pipe effluent limits, interim groundwater limits, and interim limits in the Non-NPDES WDR for recycled water uses from the Saugus WRP instead of existing water quality objectives.

Valencia WRP:

The interim WLA for chloride is equal to the interim limit for chloride specified in order No. R4-04-004. The interim WLA for TDS is 1000 mg/L as an annual average. The interim WLA for sulfate is 450 mg/L as an annual average. These interim WLAs shall apply as interim end-of-pipe effluent limits, interim groundwater limits, and interim limits in the Non-NPDES WDR for recycled water uses from the Valencia WRP instead of existing water quality objectives.

Other Major NPDES Permits (including Newhall Ranch WRP):

The Regional Board may consider assigning conditional WLAs for other major NPDES permits, including the Newhall Ranch WRP, pending implementation of a chloride mass removal quantity that is proportional to

	<p>mass based chloride removal required for the Valencia WRP.</p> <p><u>Supplemental Water released to Reach 6 of Santa Clara River:</u></p> <p>In order to accommodate the discharge of supplemental water to Reach 6, interim WLAs are provided for sulfate of 450 mg/L and TDS of 1000 mg/L as annual averages. The final WLAs are equal to the existing water quality objectives for sulfate and TDS in Table 3-8 of the Basin Plan. The Regional Board may revise the final WLA based on review of trend monitoring data as detailed in the monitoring section of this Basin Plan amendment.</p>
<p><i>Monitoring</i></p>	<p>NPDES monitoring: NPDES Permittees will conduct chloride, TDS, and sulfate monitoring to ensure that water quality objectives are being met.</p> <p>Trend monitoring: The SCVSD will submit a monitoring plan to conduct chloride, TDS, and sulfate trend monitoring to ensure that the goal of chloride export in the watershed is being achieved, water quality objectives are being met, and downstream groundwater and surface water quality is not degraded due to implementation of compliance measures. The SCVSD monitoring plan shall include plans to monitor chloride, TDS, and sulfate in groundwater and identify representative wells to be approved by the Regional Board Executive Officer in the following locations: (a) Shallow alluvium layer in east Piru Basin, (b) San Pedro Formation in east Piru Basin, and (c) groundwater basins under Reaches 5 and 6, which shall be equivalent or greater than existing groundwater monitoring required by NPDES permits for Saugus and Valencia WRPs. The monitoring plan shall also include a plan for chloride, TDS, and sulfate trend monitoring for surface water for Reaches 4B, 5 and 6. The monitoring plan shall include plans to monitor chloride, TDS, and sulfate at a minimum of once per quarter for groundwater and at a minimum of once per month for surface water. The plan should propose a monitoring schedule that extends beyond the completion date of this TMDL to evaluate impacts of compliance measures to downstream groundwater and surface water quality. This TMDL shall be reconsidered if chloride, TDS, and sulfate trend monitoring indicates degradation of groundwater or surface water due to implementation of compliance measures.</p> <p>Trend monitoring: The Reach 4A Permittee will submit a monitoring plan to conduct chloride, TDS, and sulfate trend monitoring to ensure that the goal of chloride export in the watershed is being achieved, water quality objectives are being met, and downstream groundwater and surface water quality is not degraded due to implementation of compliance measures. The Reach 4A permittee monitoring plan shall include plans to monitor chloride, TDS, and sulfate in groundwater and identify representative wells to be approved by the Regional Board Executive Officer in the</p>

	<p>following locations (a) Fillmore Basin, and (b) Santa Paula Basin. The monitoring plan shall also include a plan for chloride, TDS, and sulfate trend monitoring for surface water for Reaches 3 and 4A. The monitoring plan should include plans to monitor chloride, TDS, and sulfate at a minimum of once per quarter for groundwater and at a minimum of once per month for surface water. The plan should propose a monitoring schedule that shall extend beyond the completion date of this TMDL to evaluate impacts of compliance measures to downstream groundwater and surface water quality. This TMDL shall be reconsidered if chloride, TDS, and sulfate trend monitoring indicates degradation of groundwater or surface water due to implementation of compliance measures.</p>
<i>Margin of Safety</i>	<p>An implicit margin of safety is incorporated through conservative model assumptions and chloride mass balance analysis. The model is an integrated groundwater surface water model which shows that chloride discharged from the WRPs accumulates in the east Piru Basin. Further mass balance analysis shows that the chloride mass removed from the Piru Basin exceeds the chloride loaded into the Piru Basin from implementation of the conditional SSOs.</p>
<i>Seasonal Variations and Critical Conditions</i>	<p>During dry weather conditions, less surface flow is available to dilute effluent discharge, groundwater pumping rates for agricultural purposes are higher, groundwater discharge is lower, poorer quality groundwater may be drawn into the aquifer, and evapotranspiration effects are greater than in wet weather conditions. During drought, reduced surface flow and increased groundwater extraction continues through several seasons with greater impacts on groundwater resources and discharges. Dry and critically dry periods affecting the Sacramento and San Joaquin River Valleys reduce fresh water flow into the Sacramento-San Joaquin Delta and result in higher than normal chloride concentrations in the State Water Project supply within the California aqueduct system. These increased chloride levels are transferred to the upper Santa Clara River. This critical condition is defined as when water supply concentrations measured in Castaic Lake are ≥ 80 mg/L.</p> <p>These critical conditions were included in the GSWI model to determine appropriate allocations and implementation scenarios for the TMDL.</p>

Table 7-6.2 Upper Santa Clara River Chloride TMDL Implementation	Implementation Tasks	Completion Date
<p>1. Alternate Water Supply</p> <p>a) Should (1) the in-river concentration at Blue Cut, the Reach 4B boundary, exceed the conditional SSO of 117 mg/L, measured for the purposes of this TMDL as a rolling three-month average, (2) each agricultural diverter provide records of the diversion dates and amounts to the Regional Board and Santa Clarita Valley County Sanitation Districts of Los Angeles County (SCVSD) for at least 2 years after the effective date of the TMDL and (3) each agricultural diverter provides photographic evidence that diverted water is applied to avocado, strawberry or other chloride sensitive crop and evidence of a water right to divert, then the SCVSD will be responsible for providing an alternative water supply, negotiating the delivery of alternative water by a third party, or providing fiscal remediation to be quantified in negotiations between the SCVSD and the agricultural diverter at the direction of the Regional Water Quality Control Board until such time as the in-river chloride concentrations do not exceed the conditional SSO.</p> <p>b) Should the instream concentration exceed 230 mg/L more than two times in the three year period, the discharger identified by the Regional Board Executive Officer shall be required to submit, within ninety days of a request by the Regional Board Executive Officer, a workplan for an accelerated schedule to reduce chloride discharges.</p>	<p>Effective Date of TMDL (05/04/2005)</p>	
<p>2. Progress reports will be submitted by the SCVSD to Regional Board staff on a semiannual basis from the effective date of the TMDL for tasks 4, 6, and 7, and on an annual basis for Tasks 5 and 11.</p> <p>Progress reports will be submitted by the Reach 4A Permittee to Regional Board staff on an annual basis for Task 12.</p>	<p>Semiannually and annually</p>	
<p>3. Chloride Source Identification/Reduction, Pollution Prevention and Public Outreach Plan: Six months after the effective date of the TMDL, the SCVSD will submit a plan to the Regional Board that addresses measures taken and planned to be taken to quantify and control sources of chloride, including, but not limited to: execute community-wide outreach programs, which were developed based on the pilot outreach efforts conducted by the SCVSD, assess potential incentive/disincentive programs for residential self-regenerating water softeners, and other measures that may be effective in</p>	<p>6 months after Effective Date of TMDL (11/04/2005)</p>	

Table 7-6.2 Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks	Completion Date
controlling chloride. The SCVSD shall develop and implement the source reduction/pollution prevention and public outreach program, and report results annually thereafter to the Regional Board. Chloride sources from imported water supplies will be assessed. The assessment will include conditions of drought and low rainfall, and will analyze the alternatives for reducing this source.	
4. The SCVSD will convene a technical advisory committee or committees (TAC(s)) in cooperation with the Regional Board to review literature develop a methodology for assessment, and provide recommendations with detailed timelines and task descriptions to support any needed changes to the time schedule for evaluation of appropriate chloride threshold for Task 6. The Regional Board, at a public hearing will re-evaluate the schedule for Task 6 and subsequent linked tasks based on input from the TAC(s), along with Regional Board staff analysis and assessment consistent with state and federal law, as to the types of studies needed and the time needed to conduct the necessary scientific studies to determine the appropriate chloride threshold for the protection of salt sensitive agricultural uses, and will take action to amend the schedule if there is sufficient technical justification.	12 months after Effective Date (05/04/2006)
5. Groundwater/Surface Water Interaction Model: The SCVSD will solicit proposals, collect data, develop a model in cooperation with the Regional Board, obtain peer review, and report results. The impact of source waters and reclaimed water plans on achieving the water quality objective and protecting beneficial uses, including impacts on underlying groundwater quality, will also be assessed and specific recommendations for management developed for Regional Board consideration. The purpose of the modeling and sampling effort is to determine the interaction between surface water and groundwater as it may affect the loading of chloride from groundwater and its linkage to surface water quality.	2.5 years after Effective Date of TMDL (11/20/2007)
6. Evaluation of Appropriate Chloride Threshold for the Protection of Sensitive Agricultural Supply Use and Endangered Species Protection: The SCVSD will prepare and submit a report on endangered species protection thresholds. The SCVSD will also prepare and submit a report presenting the results of the evaluation of chloride thresholds for salt sensitive agricultural uses, which shall consider the impact of drought and low rainfall conditions and the associated increase in imported water concentrations on downstream crops utilizing the result of Task 5.	2.5 years after Effective Date of TMDL (11/20/2007)

Table 7-6.2: Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks	Completion Date
<p>7. Develop SSO for Chloride for Sensitive Agriculture: The SCVSD will solicit proposals and develop technical analyses upon which the Regional Board may base a Basin Plan amendment.</p> <p>8. Develop Anti-Degradation Analysis for Revision of Chloride Objective by SSO: The SCVSD will solicit proposals and develop draft anti-degradation analysis for Regional Board consideration.</p> <p>9. Develop a pre-planning report on conceptual compliance measures to meet different hypothetical final conditional wasteload allocations. The SCVSD shall solicit proposals and develop and submit a report to the Regional Board that identifies potential chloride control measures and costs based on different hypothetical scenarios for chloride SSOs and final conditional wasteload allocations.</p>	<p>2.8 years after Effective Date of TMDL (02/20/2008)</p>
<p>10. a) Preparation and Consideration of a Basin Plan Amendment (BPA) to revise the chloride objective by the Regional Board.</p> <p>b) Evaluation of Alternative Water Supplies for Agricultural Beneficial Uses: The SCVSD will quantify water needs, identify alternative water supplies, evaluate necessary facilities, and report results, including the long-term application of this remedy.</p> <p>c) Analysis of Feasible Compliance Measures to Meet Final Conditional Wasteload Allocations for Proposed Chloride Objective. The SCVSD will assess and report on feasible implementation actions to meet the chloride objective established pursuant to Task 10a).</p> <p>d) Reconsideration of and action taken on the Chloride TMDL and Final Conditional Wasteload Allocations for the Upper Santa Clara River by the Regional Board.</p>	<p>3.5 years after Effective Date of TMDL (12/11/2008)</p>
<p>11. Trend monitoring: The SCVSD will submit a monitoring plan to conduct chloride, TDS, and sulfate trend monitoring to ensure that the goal of chloride export in the watershed is being achieved, water quality objectives are being met, and downstream groundwater and surface water quality is not degraded due to implementation of compliance measures. The SCVSD monitoring plan shall include plans to monitor chloride, TDS, and sulfate in groundwater and identify representative wells to be approved by the Regional Board Executive Officer, in the following locations: (a) Shallow alluvium layer in east Piru Basin, (b) San Pedro Formation in east Piru Basin,</p>	<p>4 years after Effective Date of TMDL (05/04/2009)</p>

Table 7-6.2. Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks	Completion Date
<p>and (c) groundwater basins under Reaches 5 and 6, which shall be equivalent or greater than existing groundwater monitoring required by NPDES permits for Saugus and Valencia WRPs. The monitoring plan shall also include a plan for chloride, TDS, and sulfate trend monitoring for surface water for Reaches 4B, 5 and 6. The monitoring plan shall include plans to monitor chloride, TDS, and sulfate at a minimum of once per quarter for groundwater and at a minimum of once per month for surface water. The plan should propose a monitoring schedule that extends beyond the completion date of this TMDL to evaluate impacts of compliance measures to downstream groundwater and surface water quality. This TMDL shall be reconsidered if chloride, TDS, and sulfate trend monitoring indicates degradation of groundwater or surface water due to implementation of compliance measures.</p>	
<p>12. Trend monitoring: The Reach 4A Permittee will submit a monitoring plan to conduct chloride, TDS, and sulfate trend monitoring to ensure that the goal of chloride export in the watershed is being achieved, water quality objectives are being met, and downstream groundwater and surface water quality is not degraded due to implementation of compliance measures. The Reach 4A permittee monitoring plan shall include plans to monitor chloride, TDS, and sulfate in groundwater and identify representative wells to be approved by the Regional Board Executive Officer in the following locations: (a) Fillmore Basin, and (b) Santa Paula Basin. The monitoring plan shall also include a plan for chloride, TDS, and sulfate trend monitoring for surface water for Reaches 3 and 4A. The monitoring plan should include plans to monitor chloride, TDS, and sulfate at a minimum of once per quarter for groundwater and at a minimum of once per month for surface water. The plan should propose a monitoring schedule that shall extend beyond the completion date of this TMDL to evaluate impacts of compliance measures to downstream groundwater and surface water quality. This TMDL shall be reconsidered if chloride, TDS, and sulfate trend monitoring indicates degradation of groundwater or surface water due to implementation of compliance measures.</p>	<p>Submitted with permit application</p>
<p>13. Begin monitoring per approved SVCSD monitoring plan completed in Task 11.</p>	<p>One year after Executive Officer approval of Task 11 monitoring plan for SVCSD</p>

Table 7-6.2. Upper Santa Clara River Chloride TMDL Implementation Implementation Tasks	Completion Date
14. Begin monitoring per approved Reach 4A Permittee monitoring plan.	One year after Executive Officer approval of Task 12 monitoring plan for Reach 4A Permittee
<p>15. a) Implementation of Compliance Measures, Planning: The SCVSD shall submit a report of planning activities which include but are not limited to: (1) identifying lead state/federal agencies; (2) administering a competitive bid process for the selection of EIR/EIS and Engineering Consultants; (3) Development of Preliminary Planning and Feasibility Analyses; (4) Submittal of Project Notice of Preparation/Notice of Intent; (5) Preparation of Draft Wastewater Facilities Plan and Programmatic EIR; (6) Administration of Public Review and Comment Periods; (7) Development of Final Wastewater Facilities Plan and Programmatic EIR and incorporation and response to comments; (8) Administration of final public review and certification process; and (9) Filing a Notice of Determination and Record of Decision.</p> <p>b) Implementation of Compliance Measures, Planning: The SCVSD shall provide a schedule of related tasks and subtasks related to Task 15a), and provide semi-annual progress reports on progress of planning activities, thereafter, until completion of Final Wastewater Facilities Plan and Programmatic EIR.</p>	<p>5 years after Effective Date of TMDL (05/04/2010)</p> <p>5 years after Effective Date of TMDL (05/04/2010)</p>
16. The Regional Board staff will re-evaluate the schedule to implement control measures needed to meet final conditional WLAs adopted pursuant to Task 10 d) and the schedule for Task 17. The Regional Board, at a public meeting will consider extending the completion date of Task 17 and reconsider the schedule to implement control measures to meet final conditional WLAs adopted pursuant to Task 10 d). The SCVSD will provide the justification for the need for an extension to the Regional Board Executive Officer at least 6 months in advance of the deadline for this task.	6 years after Effective Date of TMDL (05/04/2011)
<p>17. a) Implementation of Compliance Measures, Complete Environmental Impact Report: The SCVSD shall complete a Wastewater Facilities Plan and Programmatic Environmental Impact Report for facilities to comply with final effluent permit limits for chloride.</p> <p>b) Implementation of Compliance Measures, Engineering Design:</p>	<p>6 years after Effective Date of TMDL (05/04/2011)</p> <p>6 years after</p>

Table 7-6.2. Upper Santa Clara River Chloride TMDL Implementation	Completion Date
Implementation Tasks	
The SCVSD will begin the engineering design of the recommended project wastewater facilities.	Effective Date of TMDL (05/04/2011)
c) Implementation of Compliance Measures, Engineering Design: The SCVSD will provide a design schedule of related tasks and sub-tasks, and provide semi-annual progress reports on progress of design activities, thereafter, until completion of Final Design. In addition the SCVSD will provide a construction schedule of related tasks and sub-tasks, and provide semi-annual progress reports on progress of construction activities, thereafter, until completion of recommended project wastewater facilities.	7 years after Effective Date of TMDL (05/04/2012)
d) Implementation of Compliance Measures, Construction: The SCVSD shall have applied and received all appropriate permits and have completed construction of the recommended project wastewater facilities.	9.5 years after Effective Date of TMDL (11/04/2014)
e) Implementation of Compliance Measures, Start-Up: The SCVSD shall have completed start-up, testing and certification of the recommended project wastewater facilities.	10 years after Effective Date of TMDL (05/04/2015)
18. The Regional Board Executive Officer may consider conditional SSOs for TDS and sulfate for Reaches 4B, 5, and 6 based on results of groundwater-surface water interaction studies on accumulation of TDS and sulfate in groundwater, potential impacts to beneficial uses, and an anti-degradation analysis.	7 years after Effective Date of TMDL (05/04/2012)
19. The Regional Board staff will re-evaluate the schedule to implement control measures needed to meet final conditional WLAs adopted pursuant to Task 10 d) and the schedule for Task 17. The Regional Board, at a public meeting will consider extending the completion of Task 17 and reconsider the schedule to implement control measures to meet final conditional WLAs adopted for chloride pursuant to Task 10 d). The SCVSD will provide the justification for the need for an extension to the Regional Board Executive Officer at least 6 months in advance of the deadline for this task. The Regional Board will also consider conditional SSOs and final conditional WLAs for TDS and sulfate based on results of Task 18.	9.5 years after Effective Date of TMDL (11/04/2014)
20. The interim WLAs for chloride shall remain in effect for no more	10 years after

FINAL STAFF REPORT

CALIFORNIA REGIONAL WATER QUALITY CONTROL
BOARD - LOS ANGELES REGION

January 2009

Executive Summary

Chloride levels in the upper Santa Clara River (USCR) and in nearby groundwater basins have increased over the past three decades due to increased salt loadings from water imported into the Santa Clarita Valley and the increased number of self regenerating water softeners in the Santa Clarita Valley. Since the 1970s, growth in the Santa Clarita Valley has led to chloride levels that exceed the water quality objective and impair beneficial uses for agricultural supply. Agriculture is the largest industry in the Santa Clara River Valley and the Regional Board has adopted a TMDL to restore the Santa Clara River to attain its beneficial uses.

This Staff Report discusses efforts under the Upper Santa Clara River Chloride TMDL to address these impairments with particular emphasis on the recent studies which have led to a stakeholder developed plan for complying with the TMDL. The stakeholder plan, termed "Alternative Water Resources Management Plan" (AWRM) considers the results of key TMDL studies on the chloride sensitivity of crops and aquatic life and the interaction of groundwater and surface water in the USCR to fashion a plan that provides reduction of chloride loads from current levels, enhancement of water supplies for recycling and downstream uses, restoration of groundwater basins underlying the Upper Santa Clara River, and consideration of critical conditions such as a sustained drought. The AWRM requires a revision to existing water quality objectives for chloride, but it provides a significant reduction in chloride loading from current levels such that the most stringent beneficial uses are attained. During the critical condition of sustained drought, growers are provided alternative water to meet requirements and the chloride exported from the watershed still exceeds chloride into the watershed so that groundwater conditions will continue to improve.

The Regional Board first adopted a Total Maximum Daily Load (TMDL) for chloride in the USCR in 2000. The TMDL showed that chloride is loaded primarily into the Santa Clara River from Water Reclamation Plants serving residential, commercial and industrial users in the Santa Clarita Valley. The sources of the chloride which are loaded into the SCR are primarily chloride contained in the imported source water and chloride added by domestic uses, including self regenerating water softeners. As the Santa Clarita Valley has grown over the past decades, these TMDL source analyses also showed that the water quality objectives could not be met with source control alone, and that some type of advanced treatment would be necessary.

The identification of remedies for chloride impairments is challenging due to stakeholders with widely different interests in Los Angeles and Ventura Counties and potentially costly implementation measures. These factors lead to a remand of the TMDL from State Water Resources Control Board and after reconsideration by the Regional Board, the TMDL became effective on May 5, 2005. Key provisions of this TMDL include special studies to address scientific uncertainties and a consideration of site specific objectives by the Regional Board. This Staff Report summarizes the results of the special studies and discussions with stakeholders, which lead to an AWRM program to comply with the TMDL. This report considers the antidegradation and Water

Staff Report: Upper Santa Clara River

3

Code Section 13241 requirements and recommends conditional site specific objectives to implement the AWRM.

Prior to completion of the special studies, the presumed implementation plan included two options: advanced treatment of effluent from the Saugus and Valencia water reclamation plants and disposal of brine in a new ocean outfall or disposal of effluent from the Saugus and Valencia water reclamation plants in a new ocean outfall. Both options entail construction of a pipeline from the Santa Clarita Valley WRPs and an ocean outfall. Concerns regarding the cost and feasibility of constructing this line lead caused controversy amongst stakeholders.

The TMDL Special Studies, all conducted in a facilitated stakeholder process in which stakeholders in scoping and reviewing the studies addressed three scientific uncertainties: 1) the levels of chloride required to support irrigation of salt sensitive crops; 2) the interaction of surface water and groundwater and the fate and transport of chloride in the USCR; 3) the effects of chloride on threatened and endangered fish in the USCR.

Regional Board staff finds that the work to date provides sufficient information on the chloride hazard threshold for salt-sensitive crops, the chloride threshold for endangered species, and the hydraulic and contaminant interactions between surface waters and groundwater basins in the USCR watershed to demonstrate that conditional site specific objectives can be combined with reverse osmosis technology to effectively reduce chloride loadings to the USCR and protect beneficial uses. Completion of the Literature Review and Evaluation (LRE) provided a scientifically defensible baseline to support a Water Quality Objective (WQO) of 117 milligrams per liter (mg/L) that is protective of agricultural supply beneficial use (AGR). The endangered species study shows that the chloride threshold for protection of salt sensitive agriculture is also protective of threatened and endangered species. The groundwater surface water interaction model shows that surface flows in the river recharge the Piru Basin with attendant chloride accumulation in that groundwater Basin. The AWRM consists of chloride source reduction actions and chloride load reduction through advanced treatment of the Valencia WRP effluent in conjunction with conditional site specific objectives. These source and load reductions mitigate the effect of any chloride accumulation in the groundwater basin.

The TMDL provides a ten-year schedule to attain compliance with the conditional SSOs. Key uncertainties at this point relate to identification of the optimum method for brine disposal. Several options, including deep-well injection in the vicinity of old oil fields in the Santa Clarita Valley, and drying and landfill disposal will be considered by the Santa Clarita Sanitation District of Los Angeles County in the first two years of the TMDL Implementation Plan. The recommended water quality objective changes before the Board are conditioned on implementation of the AWRM program; if the AWRM system is not built, the water quality objectives revert back to the current levels in the Basin Plan.

Staff Report: Upper Santa Clara River
Chloride TMDL Reconsideration and Conditional SSOs

Staff's recommendation is to adopt the conditional site specific objectives for chloride. Staff finds that the costs of implementing the AWRM program will not increase monthly sewage rates substantially above the state average and median rates. Staff notes that the existing TMDL schedule can be accelerated by one year from 11 years to 10 years.

Chloride TMDL Reconsideration and Conditional SSOs

List of Acronyms

AGR – Agricultural Supply Beneficial Use
AWRM – Alternative Water Resources Management
BPA – Basin Plan Amendment
cfs – cubic feet per second
CLWA – Castaic Lake Water Agency
EIR – Environmental Impact Report
ESA – Extended Study Alternatives
ESP – Endangered Species Protection
GWR – Groundwater Recharge Beneficial Use
GSWI – Groundwater and Surface Water Interaction Model
LA – load allocation
LRE – Literature Review and Evaluation
LWA – Larry Walker Associates
MCL – Maximum Contaminant Level
MF/RO – microfiltration-reverse osmosis
MGD – million gallons per day
mg/L – milligrams per liter
NPDES – National Pollutant Discharge Elimination System
O&M – operation and maintenance
ppd – pounds per day
RARE – Rare and Endangered Species Habitat Beneficial Use
RO – Reverse Osmosis
SARI – Santa Ana Regional Interceptor
SB475 – Senate Bill 475
SCV – Santa Clarita Valley
SCVJSS – Santa Clarita Valley Joint Sewerage System
SCVSD – Santa Clarita Valley Sanitation District of Los Angeles County
SRWS – Self-Regenerating Water Softener
SSO – Site Specific Objective
SWP – State Water Project
SWRCB – State Water Resources Control Board
TAP – Technical Advisory Panel
TDS – Total Dissolved Solids
TMDL – Total Maximum Daily Load
USBR – United States Bureau of Reclamation
USCR – Upper Santa Clara River
USEPA – United States Environmental Protection Agency
USGS – United States Geological Survey
UWCD – United Water Conservation District
WLA – Wasteload Allocation
WQO – Water Quality Objective
WRP – Water Reclamation Plant

1. Introduction

This staff report discusses the scientific and regulatory basis for proposed Basin Plan amendments to revise the Upper Santa Clara River Chloride Total Maximum Daily Load (TMDL) and establish conditional site-specific water quality objectives (SSOs) for chloride in reaches and groundwater basins in the Upper Santa Clara River watershed.

The Los Angeles Regional Water Quality Control Board (Regional Board) adopted a TMDL to address chloride impairments of the USCR on July 10, 2003 (Resolution 03-008). On May 6, 2004, the Regional Board amended the USCR chloride TMDL to revise the interim wasteload allocations (WLAs) and implementation schedule (Resolution 04-004). The amended TMDL was approved by the State Water Resources Control Board (State Board), Office of Administrative Law and United States Environmental Protection Agency (USEPA), and became effective on May 4, 2005.

At the time the TMDL was adopted and approved, there were key scientific uncertainties regarding the sensitivity of crops to chloride and the complex interactions between surface water and groundwater in the Upper Santa Clara River watershed. However, the TMDL found that the chloride sources are primarily imported source water from the State Water Project and chloride added by domestic uses, including self regenerating water softeners. These chloride sources are loaded into the USCR in effluent from the Saugus and Valencia Water Reclamation Plants (WRPs) that serve residents and industries in the Santa Clarita Valley. The TMDL recognized the possibility of revised chloride water quality objectives (WQOs) and included mandatory reconsiderations by the Regional Board to consider SSOs. The TMDL required the Santa Clarita Valley Sanitation District of Los Angeles County (SCVSD¹) to implement special studies and actions to reduce chloride loadings from the Saugus and Valencia WRPs. The TMDL included the following special studies to be considered by the Regional Board:

- Literature Review and Evaluation (LRE) – review agronomic literature to determine a chloride threshold for salt sensitive crops.
- Extended Study Alternatives (ESA) – identify agricultural studies, including schedules and costs, to refine the chloride threshold.
- Endangered Species Protection (ESP) – review available literature to determine chloride sensitivities of endangered species in the USCR.
- Groundwater and Surface Water Interaction Study (GSWI) – determine chloride transport and fate from surface waters to groundwater basins underlying the USCR.

¹Prior to 2005, the Santa Clarita Valley was historically served by the County Sanitation District Number 26 of Los Angeles County (Saugus WRP) and County Sanitation District Number 32 of Los Angeles County (Valencia WRP). Both of these Districts were collectively referred to as the County Sanitation Districts of Los Angeles County or CSDLAC in previous documents related to the Upper Santa Clara River Chloride TMDL. These two districts were merged into a single district, the Santa Clarita Valley Sanitation District of Los Angeles County or SCVSD as of July 1, 2005.

Staff Report: Upper Santa Clara River
Chloride TMDL Reconsideration and Conditional SSOs

8

- Conceptual Compliance Measures – identify potential chloride control measures and costs based on different hypothetical WQO and final WLA scenarios.
- Site Specific Objectives and Antidegradation Analysis - consider a site-specific objective for chloride based on the results of the agricultural chloride threshold study and the GSWI.

The TMDL special studies were conducted in a facilitated stakeholder process in which stakeholders participated in scoping and reviewing the studies. This process has lead stakeholders to develop an alternative TMDL implementation plan that addresses chloride impairment of surface waters and degradation of groundwater. The alternative, termed Alternative Water Resources Management (AWRM) was first set forth by Upper Basin water purveyors and United Water Conservation District (UWCD), the management agency for groundwater resources in the Ventura County portions of Upper Santa Clara River watershed.

This Staff Report first presents a background on the TMDL, including regulatory history, the stakeholder collaborative process, a description of the watershed and the sources of chloride, and other salinity management programs in the state. The report then discusses the results and conclusions of the special studies which led to the development of the AWRM Program and proposed conditional SSOs. The AWRM Program and the proposed conditional SSOs needed to support the AWRM are then discussed. The report then discusses one of the special studies in detail, the Site Specific Objectives/Antidegradation Analysis, which provides the regulatory basis for the conditional SSOs. Finally, the staff report reviews the alternatives for TMDL implementation based on the results of the special studies, provides staff's recommendation for conditional SSOs and TMDL revisions, and discusses how the recommended conditional SSOs and TMDL revisions would be implemented.

2. Background

This section provides background information on chloride issues in the USCR watershed.

2.1. Regulatory History

The Regional Board has adopted several resolutions that regulated chloride in the USCR, starting with Resolution 75-21 in 1975, which established WQOs throughout the region.

In 1990, the Regional Board adopted the Drought Policy, Resolution 90-04. This resolution was intended to provide short-term and temporary relief to dischargers who were unable to comply with limits for chloride due to the effects of drought on chloride levels in supply waters imported to the Region. The Regional Board temporarily reset limits on concentration of chloride at the lesser of: (i) 250 mg/L, or (ii) the chloride concentration of supply water plus 85 mg/L. The Regional Board renewed the Drought Policy in 1993 and again in 1995 because the chloride levels in supply waters remained higher than the chloride levels before the onset of the drought. The Regional Board did not revise the chloride WQOs in the Santa Clara River and Calleguas Creek because of the potential to affect present and anticipated agricultural beneficial uses.

In 1997, the Regional Board adopted the Chloride Policy, Resolution No. 97-02. The Chloride Policy revised the chloride objective for the Los Angeles River, Rio Hondo, and San Gabriel River. Due to concerns expressed about the potential for future adverse impacts to agricultural resources in Ventura County, WQOs for chloride in the Santa Clara River and Calleguas Creek were not revised. Rather, the chloride policy provided surface water interim limits of 190 mg/L in the Santa Clara River that extended for three years following approval of the amendment. The Regional Board did not revise the chloride WQOs in the Santa Clara River and Calleguas Creek because of the potential to affect existing and anticipated AGR. Similarly, the Regional Board did not revise the groundwater objectives for chloride.

The Regional Board first adopted a TMDL for chloride in the USCR in October 2002 (Resolution No. 2002-018). The TMDL showed that the chloride sources are primarily chloride contained in the imported source water from the State Water Project and chloride added by domestic uses, including self regenerating water softeners. These chloride sources are loaded into the USCR in effluent from the Saugus and Valencia WRPs that serve residents and industries in the Santa Clarita Valley. The TMDL source analysis also showed that the water quality objectives could not be met with source control alone, and that some type of advanced treatment would be necessary. The TMDL contained an 8-1/2 year implementation plan to attain chloride WQOs.

Because of differing stakeholder interests and potentially costly implementation measures, the State Board remanded the Chloride TMDL (State Board Resolution No. 2003-0014) to the Regional Board in February 2003 due to concerns about the duration of the interim effluent limits and concerns that the original implementation plan could have required the SCVSD to embark on planning and construction of an advanced treatment even though such studies might have demonstrated a need that could have been proved unnecessary in the end. The remand resolution also directs the Regional Board to consider an integrated solution for all water quality pollutants in the SCR basin on the Clean Water Act 303(d) list. The Regional Board revised the TMDL Implementation Plan to extend the interim wasteload allocations and final compliance date to 13 years after the TMDL effective date. It also included two additional special studies and several mandatory reconsiderations of the TMDL by the Regional Board. The Regional Board adopted the revised TMDL in July 2003 (Resolution No. 2003-008).

The TMDL was amended in 2004 (Resolution No. 04-004) to conform the interim wasteload allocations for the Saugus and Valencia WRPs to the effluent limits in 1994 Time Schedule Orders associated with National Pollutant Discharge Elimination System (NPDES) permits. In May 2004, the Regional Board and SCVSD signed a Settlement Agreement and Stipulation Concerning Chlorides in the UCSR. The Regional Board and SCVSD agreed that, if or when new or revised NPDES permits are subsequently issued to the Saugus or Valencia treatment plants prior to the date that a revised WQO or final wasteload allocations take effect in accordance with the Chloride TMDL Amendments, interim chloride effluent limitations reflecting the interim wasteload allocations in the TMDL, including any revisions thereto, will be included in the revised permits.

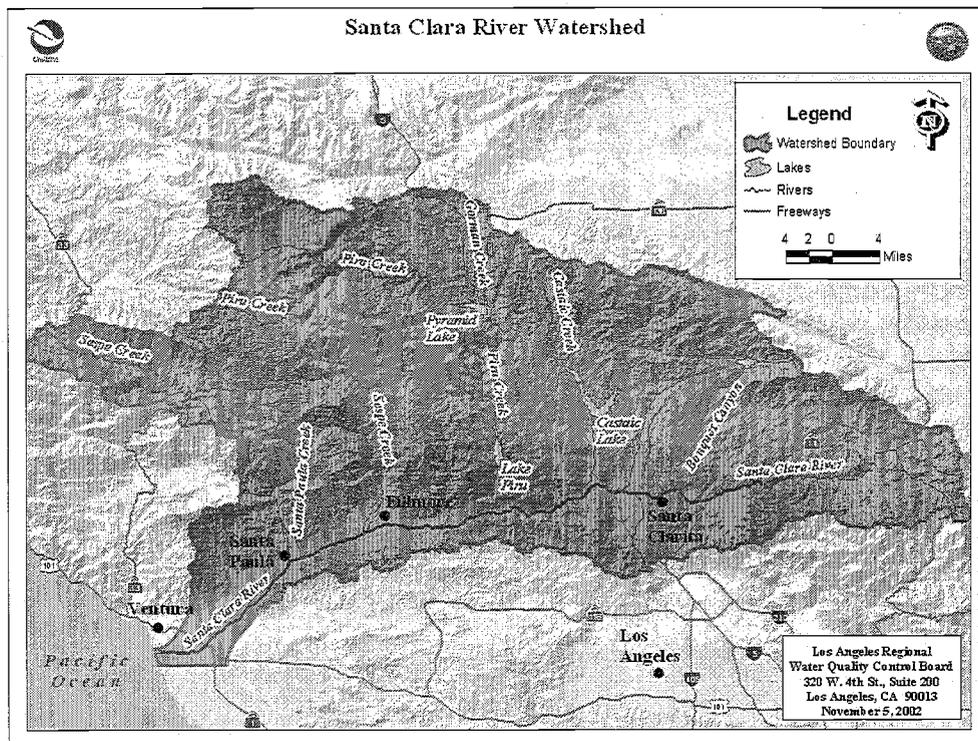

In 2006, the Regional Board reconsidered the TMDL and amended the TMDL schedule. The Board considered the results of the special studies to date and found it appropriate to accelerate the study period of the Implementation Plan based on the Literature Review and Evaluation, which showed that the range of chloride values protective of AGR and GWR beneficial uses was significantly smaller than originally anticipated.

In 2007, the Regional Board amended the Basin Plan to divide Reach 4 into two separate reaches. This action was based on historical and current water quality, flow, and land use data showing significant water quality differences between the western and eastern portions of Reach 4. Staff found that Reach 4 of the SCR contains unique hydrogeologic conditions due to the significant alterations to land uses and waste discharges within the UCSR watershed that supported the separation of the reach into two separate reaches, 4A and 4B, divided at the confluence of Piru Creek.

This proposed action represents the second Regional Board reconsideration of the TMDL, which is scheduled 3-years after the TMDL effective date. Specifically, Tasks 10.a and 10.d of the TMDL Implementation Schedule state, "Preparation and Consideration of a Basin Plan Amendment (BPA) to revise the chloride objective by the Regional Board" and "Reconsideration of and action taken on the Chloride TMDL and Final Wasteload Allocations for the Upper Santa Clara River by the Regional Board."

The predominant land uses in the Santa Clara River watershed include agriculture, open space, and residential uses. Revenue from the agricultural industry within the Santa Clara River watershed is estimated at over \$700 million annually. Residential use is increasing rapidly both in the upper and lower watershed. The number of housing units in the watershed is estimated to increase by 187 percent from 1997 to 2025.

Figure 1. Santa Clara River Watershed

The upper reaches of the Santa Clara River include Reaches 5 and 6, which are located upstream of the Blue Cut gauging station, west of the Los Angeles - Ventura County line between the Cities of Fillmore and Santa Clarita. The upper boundary extends to Bouquet Canyon, upstream of the City of Santa Clarita. The portion of the river within Los Angeles County is generally described as the Upper Santa Clara River, and the portion within Ventura County is generally referred to as the Lower Santa Clara River. Two major point sources, the Saugus and Valencia WRPs, discharge to the USCR. Below Reach 5 are reaches 4A and 4B, divided at the confluence of Piru Creek (Figure 2).

2.2. Stakeholder Collaborative Process

Based on the Chloride Agreement and Stipulation discussed in Section 2.1, the Regional Board and the SCVSD entered into a collaborative process in June of 2004 to implement the TMDL special studies. The Regional Board and SCVSD have set up a facilitated process to allow for stakeholder input and review of the special studies as they are developed. The SCVSD, Regional Board, facilitators, consultants and stakeholders attended Technical Working Group meetings on a monthly basis in the Cities of Santa Clarita, Fillmore, and Santa Paula to discuss the TMDL special studies as well as other planning issues regarding chloride impairments within the Santa Clara River. About thirty people who represent a wide range of stakeholder interests, including Municipalities, County government, agricultural interests, water purveyors, and environmental interests, attend the meetings. There is a website, www.santaclarariver.org, which updates activities and progress on the USCR Chloride TMDL.

Additionally, an independent technical advisory panel (TAP) of recognized agricultural experts was engaged to review the results of the LRE. The TAP issued a separate report, which provides technical guidance on the use of the LRE for policy development. The TAP report largely confirmed the results of the LRE. Both the TAP Report and LRE are available to the public on the website listed above.

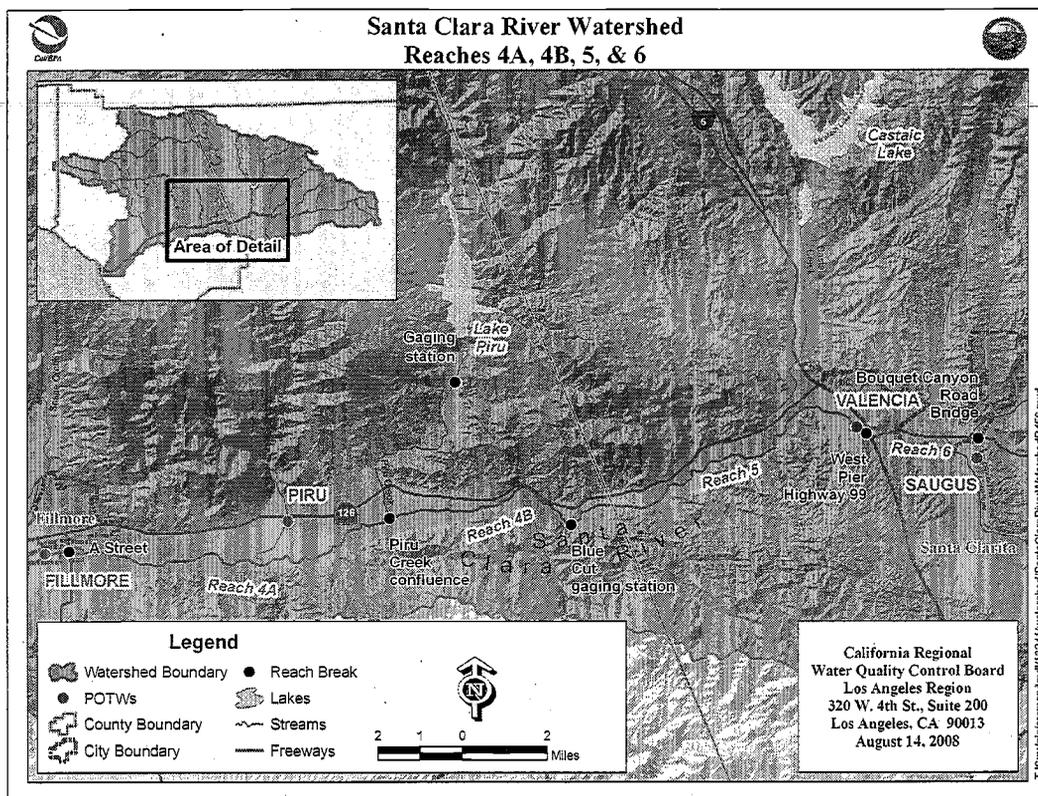

Finally, Regional Board staff has been meeting with SCVSD' staff and representatives of the Upper Basin Water Purveyors, UWCD, and Ventura County Agricultural Water Quality Coalition, to explore the potential implementation actions and site specific objectives for the TMDL. This process has lead to development of the AWRM and the development of proposed conditional SSOs to support the AWRM and protect beneficial uses.

2.3. Environmental Setting

The Santa Clara River is the largest river system in Southern California that remains in a relatively natural state. The river originates on the northern slope of the San Gabriel Mountains in Los Angeles County, traverses Ventura County, and flows into the Pacific Ocean between the cities of San Buenaventura (Ventura) and Oxnard. Municipalities within the watershed include Santa Clarita, Newhall, Fillmore, Santa Paula, and Ventura (Figure 1).

Extensive patches of high quality riparian habitat exist along the length of the river and its tributaries. Two endangered fish, the unarmored stickleback and the steelhead trout, are resident in the river. One of the Santa Clara River's largest tributaries, Sespe Creek, is designated a wild trout stream by the state of California and a wild and scenic river by the United States Forest Service. Piru and Santa Paula Creeks, tributaries to the Santa Clara River, also support steelhead habitat. In addition, the river serves as an important wildlife corridor. The Santa Clara River drains to the Pacific Ocean through a lagoon that supports a large variety of wildlife.

Figure 2. Santa Clara River Watershed Reaches 4A, 4B, 5, and 6

2.4. Beneficial Uses and WQOs

Key beneficial uses and WQOs for the USCR are described in the Basin Plan and include agricultural supply (AGR), groundwater recharge (GWR) and rare and endangered species habitat (RARE). A full description of each of these beneficial uses is included in the Basin Plan. AGR is designated as existing or potential for all reaches of the Santa Clara River, including the USCR, except the headwaters. GWR is designated as an existing or potential beneficial use for the USCR. RARE is an existing and potential designated beneficial use for the upper reaches included in this TMDL. Two types of endangered and rare aquatic species are known to reside in the watershed: steelhead trout and unarmored three-spine stickleback.

The current WQO for chloride in Reaches 4A, 4B, 5 and 6 of the Santa Clara River is 100 milligrams per liter (mg/L). The groundwater quality objectives for the Santa Clara – Piru Creek area are: 200 mg/L chloride in the Upper area (above Lake Piru), 200 mg/L in the Lower area east of Piru Creek, and 100 mg/L west of Piru Creek.

2.5. Chloride Sources and Water Quality

This section summarizes chloride sources in the USCR watershed and projections of the effects of future growth and chloride reduction measures on the final WRPs effluent quality. Regional Board and SCVSD staff analyzed chloride sources in the USCR watershed in the 2002 Regional Board TMDL Staff Report and in the SCVSD's 2002, 2005, 2006 and 2007 chloride reports. These analyses utilized mass balance techniques to identify and quantify chloride loads from imported water and residential, commercial, and industrial sources.

The key findings from these reports include:

- The average chloride concentration in the USCR, as measured at the Blue Cut gauging station and at the Ventura/Los Angeles county line, was 131 mg/L in 2002 and 126 mg/L in 2003. The average chloride concentration at the Blue Cut gauging station frequently exceeds the WQO of 100 mg/L.
- The total chloride load from the Saugus and Valencia WRPs ranged from 23,500 pounds per day (ppd) to 28,500 ppd in 2001 through 2007.
- The WRP effluent chloride load is comprised of two main sources: chloride present in the imported water supply and chloride added by residents, businesses, and institutions in the Saugus and Valencia WRP service area. The chloride load added by users can be further divided into two parts: brine discharge from self-regenerating water softeners (SRWSs) and all other loads added by users. Excluding the imported chloride load that exists in the water supply, non-SRWS sources of chloride include: residential, commercial, industrial, infiltration, and wastewater disinfection. The two largest sources of chloride in the WRP effluent are the imported water supply and SRWSs, which have historically comprised from 37% to 45% and from 26% to 33% of the chloride in the WRP effluent, respectively.
- Municipal supply in Santa Clarita Valley (SCV) water supply is a blend of State Water Project (SWP) water and local groundwater. Over the past 30 years, chloride concentrations in water from the SWP ranged from 28 mg/L to 128 mg/L. The quantity of SWP water served by SCV water purveyors has increased from 41,768 acre-feet in 2002 to 47,205 acre-feet in 2004. The use of imported water has grown steadily. As reported by the Castaic Lake Water Agency (CLWA), the use of SWP water by SCV water purveyors is projected to grow to 69,500 acre-feet by 2015.
- The chloride loads from SRWSs increased markedly from 1997 to 2003, when a ban on residential SRWSs was struck down by legislative action in 1997. A prospective ban on installation of new SRWSs was reinstated in 2003. The SCVSD reported a sharp decline in residential SRWS chloride contribution from 66 mg/L in 2004 to 35 mg/L during the first half of 2007. This large change in chloride loading represents the removal or inactivation of roughly 2,200 SRWSs, from a high in 2004 of 6,800 to 4,600 by July of 2007.

- In 2006, The SCVSD and the City of Santa Clarita co-sponsored Senate Bill 475 (SB475), which is authored by Senator George Runner of the 17th Senate District. SB 475 provides the SCVSD with the authority to require removal all SRWS remaining in the Santa Clara Valley that were installed prior to SCVSD's 2003 ordinance. SB 475 also includes establishments of a phased voluntary and mandatory program to compensate residents for the reasonable value and cost of removal and disposal of SRWS. SB 475 was passed by the Legislature on August 31, 2006, and signed into law on September 22, 2006. The SCVSD has enacted a new ordinance on June 11, 2008 banning the use of existing SRWS, which will become effective on January 1, 2009, contingent upon voter approval by the qualified voters in the SCVSD's service area. This ordinance will be considered for voter approval by qualified voters in the district's service area in the November 2008 general election.

The relative magnitude of chloride loads from different sources is summarized below:

Table 1. Relative Chloride Loadings to Saugus and Valencia WRPs Effluent by Source

Year	Water Supply	Ind.	Com.	Residential Non-SRWS	Residential SRWS	Inf.	Disinf.	Total Load
2001	42%	3%	4%	14%	33%	0%	4%	100%
2002	45%	2%	3%	13%	29%	0%	8%	100%
2003	45%	1%	3%	13%	31%	0%	7%	100%
2004	41%	1%	3%	14%	33%	0%	8%	100%
2005	37%	2%	3%	16%	30%	3%	9%	100%
2006	42%	2%	3%	18%	26%	0%	9%	100%
2007 (through June)	43%	2%	4%	17%	26%	0%	8%	100%

Note: Ind. indicates Industrial, Com. indicates Commercial, Inf. indicates Infiltration, Disinf. indicates Disinfection

2.6. Future Growth

Presently, there is extensive residential growth planned for the USCR watershed over the next several decades. The population of the SCV is growing very rapidly. The City of Santa Clarita is projected to grow from 151,800 residents in 2000 to 243,104 residents in 2010. The SCVSD estimates effluent flow from wastewater treatment plants will grow from approximately 20 million gallons per day (MGD) presently to about 34 MGD by 2027. The effects of this growth on the chloride levels in the Santa Clara River and underlying aquifers were investigated through GSWI Study (see Section 3.4).

The Landmark Village project site is located in unincorporated Los Angeles County, within the SCV. The project site is located along the SCR, immediately west of the confluence of Castaic Creek and the SCR. The county line forms the western

boundary. The SCR forms the southern boundary of the project site, while the northern project boundary is defined by State Route 126. The project applicant proposes to develop the 292.6-acre Landmark Village tract map site, located in the first phase of the Riverwood Village within the boundary of the approved Newhall Ranch Specific Plan. The Landmark Village tract map site proposes construction of 1,444 residential dwelling units, 1,033,000 square feet of mixed-use/commercial uses, a 9-acre elementary school, a 16-acre community park, public and private recreational facilities, trails, and road improvements. Several off-site project-related components would also be developed on an additional 679.2 acres of land. The project also includes a 6.8 MGD WRP (Newhall Ranch WRP) as associated facility (Impact Sciences, Inc., 2006).

Projections of future chloride loading to the USCR are dependent on several factors. Most importantly, the chloride contribution from the blended water supply varies greatly according to hydrologic conditions in Northern California because the salinity of SWP is dependent on the mix of fresh and brackish water in the San Francisco Bay – Delta which is the source of the water imported into the SCV. The timing and duration of future droughts are uncertain but based on review of more than thirty years of water quality data it is not unreasonable to conclude that California will experience several droughts within the next few decades.

Staff notes that growth within the SCV is accompanied by increasing demand for imported water and increasing chloride loads. In 1980, imported SWP comprised 1,125 acre-feet, approximately 5% of the total water supply to the SCV. By 1998, imported SWP comprised approximately 20,000 acre-feet, approximately 50% of the total water supply to the SCV.

Additionally, staff notes that the SCVSD's chloride report indicates that that chloride loading from non-SRWS residential sources in terms of ppd has been increasing. This increase is likely correlated with residential growth and increased residential wastewater flow and increased demand on water resources. The chloride load from non-SRWS residential sources increased from 3,562 ppd in 2002 to 4,272 ppd in 2006.

2.7. Salinity Management – Recent State and Regional Boards Actions

Water quality impairments by salts and chloride are a statewide issue. This section provides a brief overview of several current issues addressed by the State Board and the Central Valley, Santa Ana, and Los Angeles Regional Boards. It also reviews the status of salinity implementation activities in Northern California.

In the Central Valley region, salts in surface and ground water are largely derived from supply water from the SWP and the Delta Mendota Canal and from surface soil. Salinity impairments are exacerbated locally by other sources, such as discharges to land associated with municipal wastewater disposal. The Central Valley Regional Board has adopted several approaches for basin management within their jurisdiction. The Central Valley Regional Board established a policy to control groundwater degradation for the Tulare Basin, a policy to promote the maximum export of salt from the San Joaquin River

Basin, and a policy to control point source discharges to the Sacramento River Basin. At this time, salinity TMDL for the San Joaquin River has been developed to meet the objectives at Vernalis and a second phase of this TMDL is being developed for upstream stretches of the river. Further, the State Board may consider whether to adopt Cease and Desist Orders against the United States Bureau of Reclamation (USBR) and the Department of Water Resources with regard to their potential violation of conditions in their water right permits that require the USBR and the California Department of Water Resources to meet salinity standards in the Southern Delta.

In southern California, the USBR led a comprehensive regional salinity management study in support of the Southern California Water Recycling Projects Initiative. The study was conducted by CH2M Hill and identified a range of projected brine discharge volumes for Southern California. Some of the factors influencing this projected range are the salinity of imported water, the stringency of wastewater effluent regulation, and the level of seawater desalting. The study predicted a regional brine discharge volume ranging from 43.7 MGD to 2,011 MGD. In addition to predicting future brine discharge volumes, the study identified the location of existing and potential future brine/concentrate management facilities in southern California. These facilities include 86 pipelines, 113 wastewater treatment plants, 32 groundwater desalters, 9 seawater desalination facilities, and 9 major groundwater basins (with 91 sub-basins).

An established Southern California salinity management facility is the Arlington Desalter Facility and the Santa Ana Regional Interceptor (SARI). The Desalter, using Reverse Osmosis (RO) technology, produces up to 6 MGD of blended desalinated water, with another estimated 1 MGD of concentrated brine generated by the plant discharged to the SARI line. The SARI line, a regional brine line, is designed to convey 30 MGD of non-reclaimable wastewater from the upper Santa Ana River basin to the ocean for disposal, after treatment. The non-reclaimable wastewater consists of Desalter concentrate and industrial wastewater. Domestic wastewater is also received on a temporary basis. To date over 73 miles of the SARI line have been completed. The most recent extension (23 miles in length), the Temescal Valley Regional Interceptor line was completed in 2002. The upstream extension was completed in 1995 to the City of San Bernardino Wastewater Treatment Plant. The SARI also serves the Chino Basin area and the City of Riverside.

Desalination treatment facilities have been planned in several regions of the state. The Northern California Salinity Coalition is planning RO treatment facilities to draw and treat water with a high salinity concentration from shallow aquifers in order to reduce net salt loading in groundwater basins of the Bay Area. The USBR proposed using RO to treat reused drainage water from an agricultural subsurface drainage system in the San Luis and Northern Area of the Central Valley. Drainage will be collected from the fields and sent to one of 16 reuse areas to irrigate salt tolerant crops. The drainage from the reuse areas will then be collected and sent to Point Estero for ocean disposal or to a treatment facility.

Staff also notes that within the Region, the City of Los Angeles has implemented a RO facility at the Terminal Island Treatment Plant in order to meet local water quality targets. The facility processes 4.5 MGD and produces potable water for injection to the seawater barrier in the Dominguez Gap. The reverse osmosis effluent meets standards established by the Department of Health Services and is suitable not only for injecting into groundwater basins but also as boiler feed water for local industries.

In 2006, the Los Angeles Regional Board adopted the Calleguas Creek Watershed Salts TMDL based on a salts balance for that watershed. The Regional Board found that the water quality impairments and groundwater degradation in the Calleguas Creek watershed are due to a greater mass of salts imported to the watershed than exported from the watershed. The TMDL requires salt export throughout the watershed to achieve a salt balance, reduce salt load to surface and groundwater, and achieve and maintain water quality objectives for salts in the watershed. The Calleguas Creek watershed TMDL Implementation Plan is based on construction of a regional brine line and ocean outfall through which brines from the advanced treatment of degraded groundwater in the Calleguas Creek watershed are discharged directly to the ocean in compliance with the state Ocean Plan. The TMDL implementation plan also includes increased use of POTW effluent and advanced treated (reverse osmosis) groundwater for recycled water use. This plan has collateral benefits of increasing local sources of water supply in the watershed.

3. Results of TMDL Special Studies

This section describes the results of TMDL Special Studies and other chloride management activities in the USCR watershed, which were considered by staff in proposing TMDL revisions and conditional SSOs for the USCR watershed.

3.1. Literature Review and Evaluation

The first TMDL special study, the LRE, was completed in September 2005 and presented to the Regional Board on November 3, 2005. The LRE reviewed approximately 200 technical articles on the chloride and salinity sensitivities of avocado, strawberry and nursery plants. The LRE found a guideline concentration range for chloride sensitivity for avocado of 100 –117 mg/L. There is not sufficient technical literature to determine a guideline range for strawberry and nursery crops. The LRE concluded that a conservative guideline concentration for chloride hazard is 100-117 mg/L. The LRE was reviewed by an independent TAP and the majority TAP opinion concurred with the 100 –117 mg/L guideline concentration range. One minority TAP opinion advocated a higher guideline concentration and another minority TAP opinion recommended a maximum guideline concentration of 100 mg/L. As a supplement to the LRE, a memorandum on averaging period analysis was prepared by Newfields Agricultural and Environmental Resources (Newfields), in consultation with the TAP co-chairs, to determine what the applicable compliance averaging periods are for the LRE guideline concentration. The memorandum found that the minimum time between the beginning of exposure to chloride stress and signs of visible leaf chloride injury is between 2 and 9 weeks when high chloride concentrations are applied (at least 170 mg/L), and usually between 4 and 8 weeks. Based on an analysis of the literature and the receiving water variability, a three-month averaging period was recommended. (Newfields, 2008)

3.2. Extended Study Alternatives

This task provided an overview of the types of agricultural studies that are available to further define an appropriate threshold for protection of AGR in the Santa Clara River Watershed. The ESA evaluated study options ranging from surveys to field experiments and estimated a period of 2 to 10 years to develop adequate local data to define a site-specific threshold different from the threshold determined by the LRE. The ESA also documented the complexities of determining the effects of chloride on crop productivity under field conditions. Staff finds that the duration of time and the treatments proposed by the ESA might not be sufficient to address all the factors that may affect the chloride threshold level, and, absent a lengthy TMDL schedule extension, might not provide conclusive data to meet the TMDL requirements.

3.3. Endangered Species Protection

This task provided a review of technical literature regarding the chloride sensitivity of several endangered aquatic and riparian species to better understand the potential exposure and tolerance of these species to chlorides in the USCR. Special attention was given to resident species including Unarmored Three-Spine Stickleback, Steelhead Trout, Arroyo Toad, Red-Legged Frog and Cottonwood tree. Evaluation of overall toxicity data indicates that chloride concentrations for acute and chronic toxicity would be fully protective of Threatened and Endangered species in the USCR. Thus, the existing US EPA chronic chloride criteria of 230 mg/L can be considered to be fully protective of local biota. These conclusions indicate that endangered species can tolerate higher levels of chloride than salt-sensitive agricultural crops. The study results were reviewed by an independent TAP with the TAP finding the report supports the conclusion that the existing US EPA criteria are protective of threatened and endangered species in the Santa Clara River.

3.4. Groundwater and Surface Water Interaction Model

The GSWI model study was developed to determine the linkage between surface water and groundwater quality with respect to chloride and total dissolved solids (TDS) in the USCR. The model simulated historical water levels, flows, and concentrations and movement of chloride in surface water and groundwater in the USCR watershed from 1975 through 2005. The calibrated model was reviewed and approved as an appropriate and adequate modeling tool by the stakeholders and an independent GSWI TAP. The model was then used to assess the assimilative capacity of the surface water in Reaches 4, 5 and 6 and the groundwater basins underlying those reaches. The model was also used to determine the gradient of chloride concentrations from the Saugus and Valencia WRP outfalls to downstream receiving water stations and to assess the impacts of WRP effluent on underlying groundwater in the USCR. The model was then used to simulate future potential chloride impacts from 2007 to 2030 based on various combinations of high, intermediate and low reuse of recycled water from the with various levels of advanced treatment or SRWS removal rates. The results of the initial GSWI study are presented in a report entitled "Task 2B-1 Numerical Model Development and Scenario Results" (CH2M Hill, 2008; Geomatrix, 2008a).

Based on the model, none of the alternatives were predicted to comply with the existing chloride WQO of 100 mg/L at all times and at all locations (Table 2).

Staff Report: Upper Santa Clara River
Chloride TMDL Reconsideration and Conditional SSOs

Table 2. Attainment Frequencies of Compliance Options-Existing Water Quality Objective

Compliance Options	Surface Water at Blue Cut Reach 4B	East Piru Basin Groundwater Reach 4B		West Piru Basin Groundwater Reach 4A	
	Surface Water	Surface Water	Ground-water	Surface Water	Ground-water
	WQO 100 mg/L	WQO 100 mg/L	WQO 200 mg/L	WQO 100 mg/L	WQO 100 mg/L
Advanced Treatment	66.8	55.0	100.0	100.0	100.0
Minimal Discharge	65.5	62.1	100.0	100.0	100.0
Zero Discharge	63.8	68.3	100.0	100.0	100.0
Alternate WRP Discharge	48.9	46.1	100.0	100.0	100.0
Location AWRM	43.5	56.3	100.0	100.0	100.0

Note: Values represents percentage of days during simulation period that chloride is predicted to be equal to or less than the WQO concentration

Only the advanced treatment scenarios would produce surface water chloride concentrations less than the upper bound of the LRE chloride threshold of 120 mg/L (Table 3).

Table 3. Attainment Frequencies of the Compliance Options-LRE Water Quality Objective

Compliance Options	Surface Water at Blue Cut Reach 4B	East Piru Basin Groundwater Reach 4B		West Piru Basin Groundwater Reach 4A	
	Surface Water	Surface Water	Ground-water	Surface Water	Ground-water
	WQO 120 mg/L	WQO 120 mg/L	WQO 200 mg/L	WQO 120 mg/L	WQO 100 mg/L
Advanced Treatment	99.0	99.6	100.0	100.0	100.0
Minimal Discharge	87.8	98.8	100.0	100.0	100.0
Zero Discharge	80.7	97.5	100.0	100.0	100.0
Alternate WRP Discharge	76.0	80.5	100.0	100.0	100.0
Location AWRM	88.0	93.0	100.0	100.0	100.0

Note: Values represents percentage of days during simulation period that chloride is predicted to be equal to or less than the WQO concentration

As a result, stakeholders in the USCR developed the AWRM Program, which increases chloride WQOs in certain groundwater basins and reaches of the USCR watershed, decreases the chloride objectives in the eastern Piru Basin, and results in an overall reduction in chloride loading as well as water supply benefits.

3.5. Conceptual Compliance Measures (AWRM)

The GSWI model was used to assess the ability of the AWRM to achieve compliance with proposed conditional SSOs under future water use scenarios within the USCR watershed. The model was based on design capacities at Valencia WRP and Saugus WRP of 27.6 MGD and 6.5 MGD, for a total system design capacity of 34.1 MGD by year 2027. The results of this effort are presented in a report entitled “Task 2B-2 Assessment of Alternatives for Compliance Options Using the Groundwater/Surface Water Interaction Model” (Geomatrix, 2008b). The model predicted that the AWRM could achieve proposed conditional SSOs for chloride under both drought and non-drought conditions (Table 4).

Table 4. Attainment Frequencies of the AWRM Compliance Option for Revised WQO

Compliance Options	Reach 4B (at Blue Cut)			Reach 5		Reach 6	
	Surface Water WQO	Surface Water WQO	Ground-water WQO	Surface Water WQO	Ground-water WQO	Surface Water WQO	Ground-water WQO
	117 mg/L	130 mg/L	150 mg/L	150 mg/L	150 mg/L	150 mg/L	150 mg/L
AWRM Alternative	99.9	99.2	100.0	98.3-99.7	100.0	98.6-99.7	100.0

Note: Values represents percentage of days during simulation period that chloride is predicted to be equal to or less than the WQO concentration

3.6. Site Specific Objectives and Antidegradation Analysis

The Site Specific Objectives and Antidegradation analysis has been completed and is included in a report entitled “Task 7 and 8 Report Site Specific Objective and Antidegradation Analysis” prepared by Larry Walker Associates (LWA). This report also presents the costs associated with the AWRM compliance alternatives identified in the GSWI reports. The report found that adoption of proposed conditional SSOs, when implemented with the AWRM Program, would be consistent with the state and federal antidegradation policies. The results of the SSO/Antidegradation analysis are discussed further in Sections 6 and 7.

4. Alternative Water Resources Management Program

The AWRM Program is a result of joint efforts of the Upper Basin Water Purveyors², Ventura County agricultural and water interests³, and the SCVSD to find a regional watershed solution for compliance with the TMDL that benefits parties in both Los Angeles and Ventura Counties. The AWRM Program, which is described in detail in the GSWI Task 2B-2 Report (Geomatrix, 2008b), consists of advanced treatment for a portion of the recycled water from the SCVSD's Valencia WRP, constructing a well field in the eastern Piru basin to pump out higher chloride groundwater, discharging the blended pumped groundwater and advanced treated recycled water to Reach 4A at the western end of the Piru basin at a chloride concentration not to exceed 95 mg/L (Reach 4A WQO is 100 mg/L), and providing supplemental water and advanced treated recycled water to the river.

The objectives of the AWRM program are to lower chloride concentrations crossing the County Line, comply with conditional SSOs, protect agricultural water users in the eastern Piru basin, mitigate high-chloride groundwater in the eastern Piru basin, and maximize water resources in Ventura County. The key elements of the AWRM Program focus on reducing chloride in the water reclamation plant effluent through:

- SRWS removal
- Conversion of treated wastewater disinfection from chlorine injection to ultra-violet light disinfection
- Construction of 3 MGD microfiltration-reverse osmosis (MF/RO) facility at the Valencia WRP
- Brine disposal via deep well injection
- Groundwater extraction from the Piru Basin
- Discharges of blended MF/RO water and extracted groundwater in Reaches 4A and 4B

These facilities would typically be operated in two modes depending on the SCVSD's ability to comply with applicable water quality objectives, which is correlated to chloride concentrations in the State Water Project (SWP) supply water (Figure 3). During typical hydrologic cycles, when the supply water concentration is below 80 mg/l, the SCVSD WRPs would be able to comply with applicable water quality objectives a majority of the time without having to discharge RO permeate produced at the Valencia WRP to the Santa Clara River. Under these conditions, the RO permeate could be

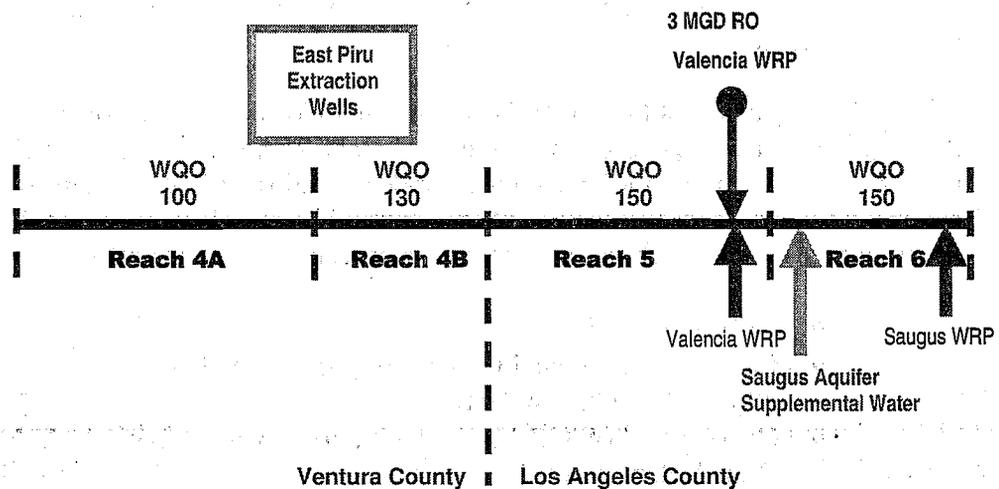

² The Upper Basin Water Purveyors are the Castaic Lake Water Agency, Valencia Water Company, Newhall County Water District, Los Angeles County Water Works District No. 36, and the Santa Clarita Water Division of the Castaic Lake Water Agency

³ Represented by Ventura County Agricultural Water Quality Coalition (VCAWQC) and UWCD

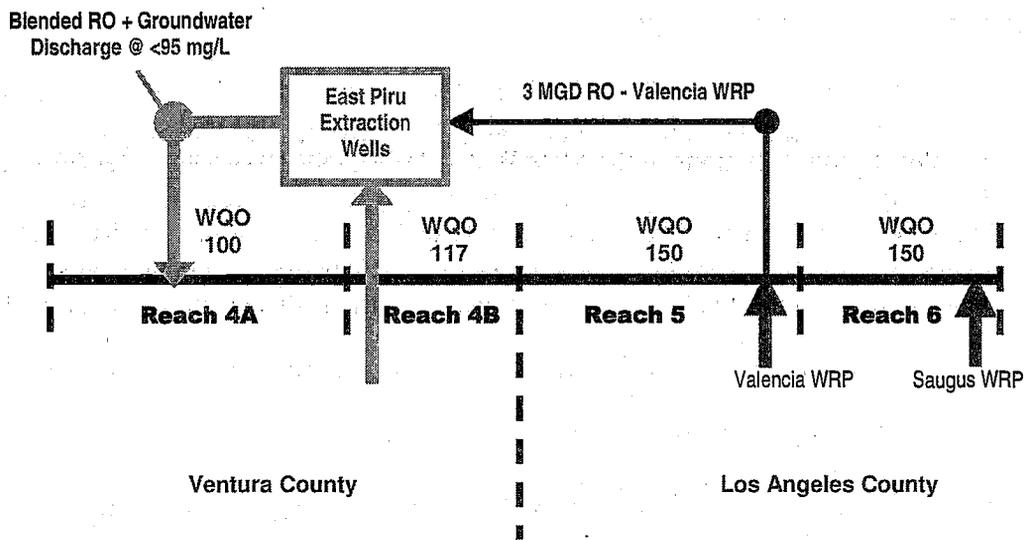

delivered to the extraction wells, blended with pumped groundwater, and discharged to Reach 4A for Ventura County water supply benefit. This option provides further water quality benefits for Ventura County because increased flows can mitigate sea water intrusion to the Oxnard Plain. During periods when the supply water concentration is above 80 mg/l is typically when most, if not all of the RO permeate will need to be discharged directly to the Santa Clara River to comply with applicable water quality objectives. In addition some supplemental water would also be discharged as necessary to the Santa Clara River to reduce chloride concentrations in Reach 4B and comply with applicable water quality objectives.

Figure 3. Schematic of AWRM Facilities

Typical AWRM facility operation to comply with WQOs, when SWP > 80 mg/L

Typical AWRM facility operation to comply with WQOs, when SWP < 80 mg/L

Staff Report: Upper Santa Clara River
Chloride TMDL Reconsideration and Conditional SSOs

Stakeholders have agreed upon the primary objectives for the uses of RO permeate from the MF/RO facility at the Valencia WRP. The primary objectives are prioritized as follows:

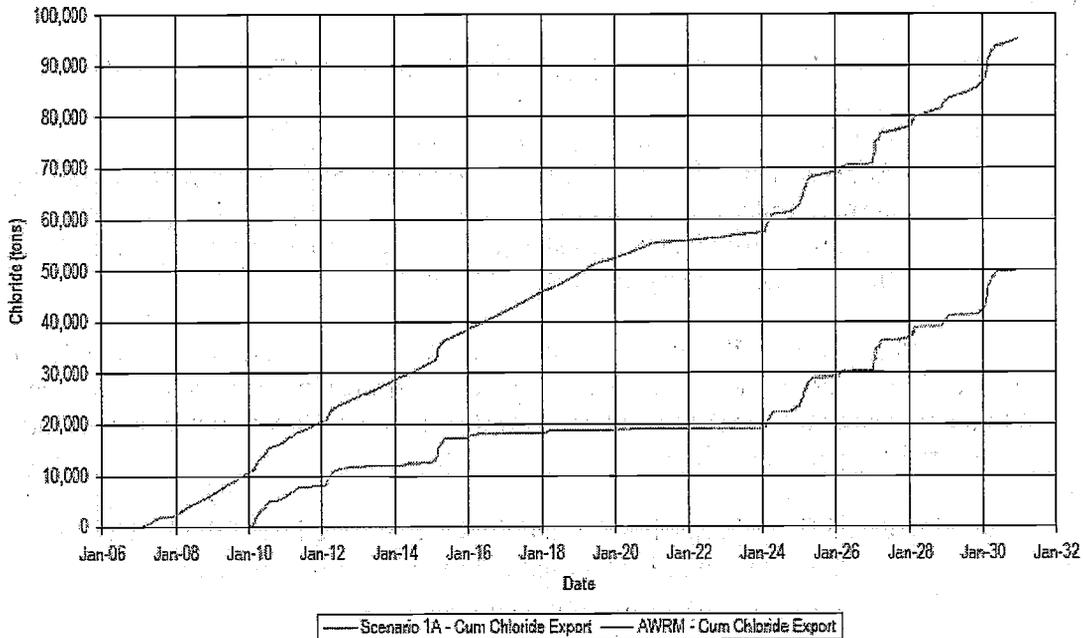

- 1) Compliance with conditional SSOs in the Santa Clara River at the County Line.
- 2) Provide alternative water supply to Camulos Ranch.
- 3) Achieve salt-balance in East Piru groundwater basin for past loading from surface water greater than 117 mg/L.
- 4) Achieve salt-balance in East Piru groundwater basin for any future loading from surface water greater than 117 mg/L.

The effects of the AWRM on surface water and groundwater have been evaluated using several tools. For Reaches 4B, 5, and 6 and the Piru basin, the primary tool was the GSWI model. Using the GSWI model, the AWRM has been shown to provide multiple water resource benefits, including:

- Increased flows in reaches 4A and downstream reaches of the USCR
- Improvement of groundwater quality in the Eastern Piru Basin
- Increased availability of irrigation and barrier water

The results of the GSWI model were used to calculate a mass balance to compare the predicted amount of salt exported under the AWRM compliance option with the predicted amount of salt exported under other compliance options to demonstrate the benefits to the East Piru Basin under the AWRM. Figure 4 illustrates the cumulative salt export capabilities of the AWRM compliance option compared with the salt export capabilities of a maximum advanced treatment compliance option to meet the 100 mg/L chloride WQO (Scenario 1A).

Figure 4. Cumulative Chloride Mass Export from East Piru Groundwater Basin: AWRM Option vs. Advanced Treatment Option (Scenario 1A)

Additionally, a study was prepared analyzing the effects of the AWRM Program in Ventura County (Bachman, 2008). The report found that the lowering of chloride concentrations in Reach 4B results in improved quality of water recharged to the East Piru Basin. Additionally, high chloride water that is pumped from the basin is recharged by lower chloride water during wet years. Using output from the GSWI model, UWCD's routing and percolation model was used to predict increased yield at the Freeman Diversion from implementation of the AWRM Program. The difference in yield at the Freeman Diversion between the Minimum Discharge option and the AWRM option is 11,500 AFY, which is approximately double the increased yield of 6,000 AFY when the permanent Freeman Diversion was constructed. This could result in a significant decrease in saline intrusion in the Oxnard Plain.

4.1. Conditional Site Specific Objectives to Support AWRM

The AWRM compliance option provides greater benefits than other potential scenarios and compliance options that have been identified. However, it will not result in compliance with the 100 mg/L water quality objectives at all times and in all locations for Reaches 4B, 5 and 6 of the USCR. Given the benefits of chloride reduction and protectiveness of the AWRM compliance option and in the context of achieving a salt balance for the watershed and protecting beneficial uses, staff proposes conditional SSOs that support the AWRM, while still being protective of beneficial uses (see Sections 5 and 6). Conditional SSOs for surface water and groundwater are presented in Tables 5

Staff Report: Upper Santa Clara River
Chloride TMDL Reconsideration and Conditional SSOs

and 6. These conditional SSOs shall apply and supersede the existing regional water quality objectives of 100 mg/L only when chloride load reductions and/or chloride export projects are in operation by the SCVSD according to the implementation provisions in Section 8 of the staff report.

Table 5. Conditional SSOs for Surface Water to Support AWRM Program

Reach	Current Instantaneous Chloride Objective (mg/L)	Conditional Chloride SSO (mg/L) ^a	Averaging Period
6	100	150	12-month
5	100	150	12-month
4B	100	117	3-month
4B Critical Conditions	100	130 ^b	3-month ^c

a. The conditional SSOs for chloride in the surface water of Reaches 4B, 5, and 6 shall apply and supersede the existing regional water quality objectives of 100 mg/L only when chloride load reductions and/or chloride export projects are in operation by SCVSD according to the implementation provisions in Section 8.

b. The conditional SSO for Reach 4B under critical condition applies, only if the following conditions and implementation requirements are met:

1. Water supply concentrations measured in Castaic Lake are ≥ 80 mg/L.
2. Salt-sensitive agricultural uses that are irrigated with surface water are provided supplemental water during periods when Reach 4B surface water exceeds 117 mg/L.
3. By May 4, 2020, the 10-year cumulative net chloride loading above 117 mg/L ($CNCl_{117}$)ⁱ to Reach 4B of the SCR, calculated annually, from the SCVSD Water Reclamation Plants (WRPs) shall be zero or less.

$${}^i CNCl_{117} = Cl_{(Above\ 117)} - Cl_{(Below\ 117)} - Cl_{(Export\ Ews)}$$

Where:

$$Cl_{(Above\ 117)} = [WRP\ Cl\ Load^1 / Reach\ 4B\ Cl\ Load^2] * [Reach\ 4B\ Cl\ Load_{>117}^3]$$

$$Cl_{(Below\ 117)} = [WRP\ Cl\ Load^1 / Reach\ 4B\ Cl\ Load^2] * [Reach\ 4B\ Cl\ Load_{\leq 117}^4]$$

$$Cl_{(Export\ EWs)} = Cl\ Load\ Removed\ by\ Extraction\ Wells$$

¹ WRP Cl Load is determined as the monthly average Cl concentration multiplied by the monthly average flow measured at the Valencia WRP.

² Reach 4B Cl Load is determined as the monthly average Cl concentration at SCVSD Receiving Water Station RF multiplied by the monthly average flow measured at USGS Gauging Station 11109000 (Las Brisas Bridge).

³ Reach 4B Cl Load_{>117} means the calculated Cl load to Reach 4B when monthly average Cl concentration in Reach 4B is above 117 mg/L.

⁴ Reach 4B Cl Load_{≤117} means the calculated Cl load to Reach 4B when monthly average Cl concentration in Reach 4B is below or equal to 117 mg/L.

4. The chief engineer of the SCVSD signs under penalty of perjury and submits to the Los Angeles Regional Water Quality Control Board (Regional Board) a letter documenting the fulfillment of conditions 1, 2, and 3.

c. The averaging period for the critical condition SSO may be reconsidered based on results of chloride trend monitoring after the alternative water resources management (AWRM) system is applied.

The conditional SSOs for chloride in Reach 4B are applied as 3 month rolling averages because there is salt-sensitive agriculture in the area of Reach 4B and the LRE supplemental study recommended a three-month averaging period for salt-sensitive crops (Newfields, 2008). The conditional SSOs for chloride in Reaches 5 and 6 are applied as 12-month rolling averages since agriculture in these reaches is identified as non-salt sensitive. Twelve-month averaging periods have been used historically in the Los Angeles Region and throughout California for salts objectives, and an 12-month average would protect the groundwater recharge and non-salt sensitive agricultural beneficial uses in Reaches 5 and 6 (LWA, 2008).

Table 6. Conditional SSOs for Groundwater to Support AWRM Program

Constituent	Santa Clara--Bouquet & San Francisquito Canyons		Castaic Valley		Lower area east of Piru Creek ¹	
	Conditional SSO (mg/L)	Current Objective (mg/L)	Conditional SSO (mg/L)	Current Objective (mg/L)	Conditional SSO (mg/L)	Current Objective (mg/L)
Chloride	150	100	150	150	150	200
Averaging period	12-month	None	12-month	None	12-month	None

¹ Applies only to San Pedro formation. Existing objective of 200 mg/L applies to shallow alluvium layer above San Pedro formation.

The conditional SSOs for chloride in groundwater in Santa Clara-Bouquet & San Francisquito Canyons, Castaic Valley, and the lower area east of Piru Creek (San Pedro formation) shall apply and supersede the existing regional water quality objectives only when chloride load reductions and/or chloride export projects are in operation by the SCVSD according to the implementation provisions in Section 8 of the staff report.

4.2. Conditional Wasteload Allocations to Support AWRM

Staff Report: Upper Santa Clara River
 Chloride TMDL Reconsideration and Conditional SSOs

The conditional WLAs for chloride for all point sources shall apply only when chloride load reductions and/or chloride export projects are in operation by the SCVSD according to the implementation provisions in Section 8 of the staff report. If these conditions are not met, WLAs are based on existing water quality objectives for chloride of 100mg/L.

Discharges to Reach 4B by the Saugus and Valencia WRPs will receive the concentration-based conditional wasteload allocations for chloride presented in Table 7.

Table 7. Conditional Reach 4B Wasteload Allocations for chloride for Saugus and Valencia WRPs

Reach	Conditional Chloride SSO (mg/L)
4B	117 (3-month Average), 230 (Daily Maximum)
4B Critical Conditions	130 ^a (3-month Average ^b), 230 (Daily Maximum)

- a. The Conditional WLA under critical conditions shall apply only if the following conditions and implementation requirements are met:
1. Water supply concentrations measured in Castaic Lake are ≥ 80 mg/L.
 2. Salt-sensitive agricultural uses that are irrigated with surface water are provided supplemental water during periods when Reach 4B surface water exceeds 117 mg/L.
 3. By May 4, 2020, the 10-year cumulative net chloride loading above 117 mg/L (CNCI₁₁₇)¹ to Reach 4B of the SCR, calculated annually, from the Saugus and Valencia WRPs shall be zero or less.

$${}^1 \text{CNCI}_{117} = \text{Cl}_{(\text{Above } 117)} - \text{Cl}_{(\text{Below } 117)} - \text{Cl}_{(\text{Export Ews})}$$

Where:

$$\begin{aligned} \text{Cl}_{(\text{Above } 117)} &= ([\text{WRP Cl Load}^1 / \text{Reach 4B Cl Load}^2] * [\text{Reach 4B Cl Load}_{>117}^3]) \\ \text{Cl}_{(\text{Below } 117)} &= ([\text{WRP Cl Load}^1 / \text{Reach 4B Cl Load}^2] * [\text{Reach 4B Cl Load}_{\leq 117}^4]) \\ \text{Cl}_{(\text{Export Ews})} &= [\text{Cl Load Removed by Extraction Wells}] \end{aligned}$$

¹ WRP Cl Load is determined as the as the monthly average Cl concentration multiplied by the monthly average flow measured at the Valencia WRP.

² Reach 4B Cl Load is determined as the monthly average Cl concentration at SCVSD Receiving Water Station RF multiplied by the monthly average flow measured at USGS Gauging Station 11109000 (Las Brisas Bridge).

³ Reach 4B Cl Load_{>117} means the calculated Cl load to Reach 4B when monthly average Cl concentration is above 117 mg/L.

⁴ Reach 4B Cl Load_{≤117} means the calculated Cl load to Reach 4B when monthly average Cl concentration is below or equal to 117 mg/L.

4. The chief engineer of the SCVSD signs under penalty of perjury and submits to the Regional Board a letter documenting the fulfillment of conditions 1, 2, and 3.
- b. The averaging period for the critical condition WLA may be reconsidered based on results of chloride trend monitoring after the AWRM system is applied.

Beginning May 4, 2015, discharges to Reaches 5 and 6 by the Saugus and Valencia WRPs, will have conditional concentration-based and mass-based WLAs for chloride based on conditional SSOs (Table 8).

Table 8. Conditional WLAs for Saugus and Valencia WRPs

WRP	Concentration-based Conditional WLA for Chloride	Mass-based Conditional WLA for Chloride (12-month Average)
Saugus	150 mg/L (12-month Average), 230 (Daily Maximum)	$Q_{Design} * 150 \text{ mg/L} * 8.34$
Valencia	150 mg/L (12-month Average), 230 (Daily Maximum)	$Q_{Design} * 150 \text{ mg/L} * 8.34 - AF_{RO}$

AF_{RO} is the chloride mass loading adjustment factor for operation of RO facilities, where:

If RO facilities are operated at $\geq 50\%$ Capacity Factor^a in preceding 12 months

$$AF_{RO} = 0$$

If RO facilities are operated at $< 50\%$ Capacity Factor^b in preceding 12 months

$$AF_{RO} = (50\% \text{ Capacity Factor} - \%RO \text{ Capacity}) * ChlorideLoadRO^c$$

^a Capacity Factor is based on 3 MGD of recycled water treated with RO, 90% of the time.

^b If operation of RO facilities at $< 50\%$ capacity factor is the result of conditions that are outside the control of SCVSD, then under the discretion of the Executive Officer of the Regional Board, the AF_{RO} may be set to 0.

^c Chloride load reduction is based on operation of a RO treatment plant treating 3 MGD of recycled water with chloride concentration of 50 mg/L + Water Supply Chloride. Assumes operational capacity factor of 90% and RO membrane chloride rejection rate of 95%. Determination of chloride load based on the following:

$$ChlorideLoadRO = 90\% \times [(Q_{RO} \times C_{WRP} \times 8.34) \times r] \times \left(\frac{30 \text{ Days}}{\text{Month}} \right)$$

where:

Staff Report: Upper Santa Clara River
Chloride TMDL Reconsideration and Conditional SSOs

$Q_{RO} = 3$ MGD of recycled water treated with RO
 $C_{WRP} =$ Chloride Concentration in State Water Project + 50 mg/L
 $r =$ % RO chloride rejection (95% or 0.95)
8.34 = Conversion factor (ppd/(mg/L*MGD))

The GSWI model accounted for existing major and minor NPDES dischargers located within the model boundaries. The future modeling scenarios were based on:

- projected flow for the Saugus and Valencia WRPs and chloride concentrations equal to conditional WLAs,
- projected flow for the Newhall WRP and a chloride concentration of 100 mg/L, and
- existing flow and chloride concentrations for the other major and minor NPDES dischargers.

The affect of assigning conditional WLAs to the Newhall WRP and the other major and minor NPDES discharges on net chloride loading was not modeled. Therefore, other major NPDES dischargers (as defined in Table 4-1 of the Basin Plan), including Newhall WRP, receive WLAs equal to 100 mg/L. The Newhall Ranch WRP already has a permit limit of 100 mg/L for chloride in Order No. R4-2007-0046 based on the current WQO. The Regional Board may consider assigning conditional WLAs for other major NPDES dischargers, including Newhall WRP, based on an analysis of the downstream increase in net chloride loading to surface water and groundwater as a result of implementation of conditional WLAs. The Regional Board may require chloride mass removal quantity that is proportional to mass based chloride removal required for the Valencia WRP in order to receive conditional WLAs.

Other minor NPDES dischargers (as defined in Table 4-1 of the Basin Plan) receive conditional WLAs. Minor discharges receive conditional WLAs without the additional analysis because, based on their flows, the impact of minor discharges is negligible compared to the WRPs.

The conditional WLAs for minor point sources are presented in Table 9.

Table 9. Conditional WLAs for Minor NPDES Discharges

Reach	Concentration-based Conditional WLA for Chloride (mg/L)
6	150 (12-month Average), 230 (Daily Maximum)
5	150 (12-month Average), 230 (Daily Maximum)
4B	117 (3-month Average), 230 (Daily Maximum)

The WLA of 230 mg/L for daily maximum for chloride is to protect threatened and endangered species. The Endangered Species Protection study indicates that the existing US EPA chronic chloride criteria of 230 mg/L can be considered to be fully protective of local biota.

The final WLAs for TDS and sulfate are equal to existing surface water and groundwater quality objectives for TDS and sulfate in Tables 3-8 and 3-10 of the Basin Plan. The Regional Board may revise the final WLAs based on review of trend monitoring data as detailed in the monitoring section (Section 8.7) of this staff report.

4.3. Conditional Load Allocations to Support AWRM

The source analysis indicates nonpoint sources are not a major source of chloride. The conditional load allocations (LAs) for nonpoint sources are presented in Table 10.

Table 10. Conditional LAs for Nonpoint Sources

Reach	Concentration-based Conditional LA for Chloride (mg/L)
6	150 (12-month Average), 230 (Daily Maximum)
5	150 (12-month Average), 230 (Daily Maximum)
4B	117 (3-month Average), 230 (Daily Maximum)

The conditional LAs shall apply only when chloride load reductions and/or chloride export projects are in operation by the SCVSD according to the implementation

Staff Report: Upper Santa Clara River
Chloride TMDL Reconsideration and Conditional SSOs

33

provisions in Section 8 of the Staff Report. If these conditions are not met, LAs are based on existing water quality objectives of 100 mg/L.

The LA of 230 mg/L for daily maximum for chloride is to protect threatened and endangered species. The Endangered Species Protection study indicates that the existing US EPA chronic chloride criteria of 230 mg/L can be considered to be fully protective of local biota.

5. Water Code Section 13241 Analysis

In setting site specific objectives, Porter-Cologne section 13241 requires consideration of six factors relating to beneficial uses, economics, the environmental setting, water quality that can be reasonably attained, housing and the need for recycled water. Further, because some of these site specific objectives are greater than the existing water quality objectives, state and federal antidegradation provisions must be considered. These considerations were provided in the Task 7 and 8 Report (LWA, 2008) and are summarized below. Because the agricultural beneficial use of water has been determined to be the most sensitive use under the chloride TMDL, the 13241 analysis focused on salt sensitive agricultural uses. Based on an analysis of the Task 7 and 8 Report, staff concludes that the conditional SSOs, when implemented with the AWRM Program, will support beneficial uses and is in the best interests of the people of California.

5.1. Past, present, and probable future beneficial uses of water

Probable future beneficial uses of the surface waters in Reaches 4, 5, and 6 are likely to remain consistent with past and present uses with the exception of agriculture supply. Agricultural uses in Reaches 5 and 6 will likely decline over time due to increasing urbanization. Agricultural uses in Reaches 4A and 4B will likely remain constant.

The proposed conditional SSOs of 150 mg/L for surface and groundwater within Reaches 5 and 6 are protective of the AGR beneficial use because these waters are not currently and have not historically been used as an irrigation supply for salt-sensitive crops. Newhall Land and Farm is the only landowner with existing agricultural operations that could potentially be impacted by groundwater-surface water interactions within Reach 5 of the Santa Clara River. Newhall has not historically and does not plan in the future to cultivate salt-sensitive crops in Reaches 5 or 6 because of adverse climatic conditions. A number of commercial and wholesale nurseries are located in the Santa Clarita Valley along the Castaic Creek and South Fork tributaries and east of Reach 6, but these nurseries are not likely impacted by surface flows from the Santa Clara River. This situation is unlikely to change due to climatic conditions that impact the ability to grow salt sensitive crops and because the use of irrigation water for crops is anticipated to decline in Reaches 5 and 6 due to planned urban development.

When implemented with the AWRM compliance option, the proposed conditional SSOs of 117 mg/L during normal conditions and 130 mg/L during drought conditions in Reach 4B and the underlying groundwater will protect agricultural uses in the area. Local growers in this area irrigate crops primarily with groundwater from local aquifers fed by releases from Lake Piru and the Santa Clara River, as well as surface diversions from the Santa Clara River. Agricultural supply water originating from Lake Piru are unaffected by chloride levels in the Santa Clara River because Lake Piru is fed with State Water Project water and local runoff. Camulos Ranch is the only known avocado grower that irrigates crops using water originating from Reach 4B waters. The proposed

conditional SSOs in Reach 4B and the underlying groundwater are fully protective of agricultural uses in this area based on the result of the LRE for salt-sensitive crops (a 117 mg/L chloride threshold value) and supplemental water supply to Camulos during drought conditions.

5.2. Environmental characteristics

The environmental setting of the proposed conditional SSOs and TMDL conditional WLA revisions is presented in Section 2.3. The proposed conditional SSOs and TMDL revisions will impact reaches 4B, 5, and 6 of the Santa Clara River and the groundwater basins underlying those reaches. The proposed conditional SSOs, when implemented with the AWRM Program, will ensure protection of beneficial uses considering the environmental characteristics of and the water quality available to the USCR.

Surface flows in the USCR correspond to seasonal precipitation within the region. Portions of the river are perennial, but various reaches are ephemeral and intermittent and flow only during significant storm events. Base flow in the USCR is comprised of surfacing groundwater, discharges from the Saugus and Valencia WRPs, conservation releases of imported and local waters from reservoirs, and agricultural and urban runoff. Base flow in Reach 6 is largely dependent on discharges from the Saugus WRP. Base flows in Reaches 5 and 4B are dependent on Saugus and Valencia WRP discharges as well as rising ground water. Further downstream, in Reach 4A between the confluence at Piru Creek and Las Brisas, surface flow is typically present only during parts of the wet season, which varies by water year. This "dry gap" seasonally separates the upper Santa Clara River hydrologically from the lower river, which, during normal or below normal water years, impedes inter-reach migration and movement of aquatic life. The Vern Freeman Diversion, at the bottom of Reach 3, diverts up to 375 cubic feet per second (cfs) from the Santa Clara River to the El Rio and Saticoy spreading grounds, where the water recharges the underground aquifers and is distributed for agricultural irrigation.

The largest source of chloride to the Upper Santa Clara River is the water supply (see Section 2.5). Dry and critically dry periods affecting the Sacramento and San Joaquin River Valleys reduce fresh-water flow into the Sacramento-San Joaquin Delta and result in higher than normal chloride concentrations in the SWP supply within the California aqueduct system. Typically, water pumped through the Sacramento-San Joaquin Delta takes approximately 1 to 2 years to show up as deliverable SWP water sold by the Santa Clarita Valley wholesaler, CLWA, to local retail water purveyors, due to reservoir storage and turnover time. Salinity fluctuations in the SWP are reflected in both the imported water treated and delivered by the CLWA and the WRP effluent quality. The quality of the SWP water can be high enough to cause or contribute to exceedances of the current water quality objective.

The proposed conditional SSOs are more stringent than historical effluent limitations for the Saugus and Valencia WRPs and would result in improved water quality over existing conditions. In addition, the proposed conditional SSOs are below

the USEPA aquatic life chloride criteria, which according to the TES Study are protective of the most chloride-sensitive organisms for which data are available. Therefore, it is not expected that the proposed conditional SSOs will harm in-stream or riparian species or habitat.

5.3. Water quality conditions that could reasonably be achieved

A detailed discussion of the compliance options and water quality that can be achieved through different approaches to compliance is presented in the Task 2B-1 and Task 2B-2 Reports (Geomatrix, 2008a, CH2MHill 2008, and Geomatrix 2008b). As discussed in Section 5, the AWRM compliance strategy will result in compliance with the proposed conditional SSOs. Other compliance measures, such as large scale advanced treatment facilities, could achieve 100 mg/L in Reaches 5 and 6, but would not meet 100 mg/L during all times in Reach 4B. Given the technical constraints on large scale advanced treatment facilities and the environmental and water resource benefits of the AWRM, staff recommends the adoption of conditional SSOs. Implementation of the AWRM will protect beneficial uses, improve the water quality in the Eastern Piru groundwater basin through export of salts, and result in an overall salt balance in the watershed.

5.4. Economic Considerations

Costs of complying with the existing WQOs were compared with costs of complying with conditional SSOs, including with facility upgrades to the Saugus and Valencia WRPs and other AWRM actions and summarized below.

5.4.1 Compliance with existing WQOs

The costs of two advanced treatment alternatives were analyzed for compliance with existing WQOs. One alternative involves constructing a 3.6 MGD MF/RO facility at the Saugus and WRP and a 15.4 MF/RO facility at the Valencia WRP, so that the entire discharge at each plant meets 100 mg/L in all conditions. This alternative would require brine waste disposal through a pipeline and ocean outfall. A second alternative involves reducing the amount of discharge from each WRP, so that only the minimum amount of discharge necessary to maintain habitat complies with 100 mg/L under all conditions. In this alternative, approximately 6 MGD would be treated with MF/RO at both plants and the remaining balance of effluent would be disposed to a pipeline to the ocean. The estimated capital and operation and maintenance (O&M) costs for these treatment alternatives are in Table 11.

Table 11: Costs for Advanced Treatment to Comply with Existing Objectives

Facility	Capital Cost	Annual O&M
Maximum Advanced Treatment	\$118,000,000	\$9,00,000
Brine Disposal	\$230,000,000	\$700,000
Total Maximum Advanced Treatment and Brine Disposal	348,000,000	\$9, 700,000
Minimum Advanced Treatment	\$52,000,000	\$4, 400,000
Ocean Discharge	\$419,000,000	\$500,000
Total Minimum Advanced Treatment and Ocean Discharge	\$471,000,000	\$4, 900,000

Assuming an interest rate of 5.5% and a period of 20 years, the combined present worth of the estimated Capital and O&M Costs for compliance by providing maximum advanced treatment and brine disposal is approximately \$470 Million and by providing minimum advanced treatment and ocean discharge is \$530 Million. Therefore, the range of costs for facilities required to comply with the existing water quality objectives is between \$470 Million and \$530 Million.

5.4.2 Compliance with Conditional SSOs

Cost estimates were prepared for the various elements of the AWRM Program (Table 12). The costs of source control measures are based on SRWS removal and conversion of bleach-based disinfection processes at the WRPs to UV disinfection facilities. The AWRM program also includes construction and operation of a 3-MGD MF/RO facility at the Valencia WRP and brine waste disposal through deep well injection technology. During periods of extreme drought and prior to construction and operation of the MF/RO facility, the AWRM Program includes supplemental water from local water purveyors to reduce chloride levels in the surface water in Reach 4B. Costs for this element were estimated based on a need for approximately 30,000 acre-feet of supplemental water at an assumed cost of approximately \$1,000 per acre-feet (based on discussions with local water purveyors) as well as infrastructure for conveyance of the supplemental water at a cost of approximately \$7.5 Million. Finally, the costs of water supply facilities needed to achieve salt export from the Piru groundwater basin and blend groundwater with RO permeate include the costs of 10 groundwater extraction wells, a 12-mile RO permeate conveyance pipeline, and a 6-mile blended water supply pipeline.

Table 12. Costs for AWRM Program

AWRM Element	Capital Cost	Present Worth O&M	TOTAL
Source Control Measures	\$18,900,000	\$6,000,000	\$24,900,000
Advanced Treatment and Brine Disposal	\$78,400,000	\$44,200,000	\$122,600,000
Supplemental Water	\$37,500,000	N/A	\$37,500,000
Ventura Water Supply Facilities	\$70,100,000	\$3,600,000	\$73,700,000
TOTAL AWRM Program	\$204,900,000	\$53,800,000	\$258,700,000

Note: All costs are as of September 2007

Assuming an interest rate of 5.5% and a period of 20 years, the combined present worth of the Capital and O&M cost for the AWRM facilities required to comply with the proposed site-specific objectives is estimated at approximately \$259 Million.

Amortizing the total costs at 5.5% per year for 20 years yields an annual cost estimate of \$36.40 per month per connection for maximum advanced treatment and brine disposal, \$41.55 for minimum advanced treatment and ocean discharge, and \$20.30 for the AWRM. Amortizing the total costs at 5.5% per year for 30 years yields an annual cost estimate of \$31.54 per month per connection for maximum advanced treatment and brine disposal, \$34.97 for minimum advanced treatment and ocean discharge, and \$17.43 for AWRM. This rate analysis does not include additional costs related to procurement of bonds, provision for rate ramp-up periods, nor actual increased costs of project implementation that can occur in the field (e.g., construction change orders, increased cost of materials, and increased cost of construction).

Regional Board staff also reviewed the State Board report, Wastewater User Charge Survey Report F.Y. 2007-2008. This report is prepared annually by the State Board and summarizes and analyzes cost data from a survey of California wastewater agencies. The report shows that the monthly user charge for the City of Santa Clarita was \$16.29 per month. The report also shows the statewide monthly service charge average is \$33.82 per month and the median is \$26.83 per month, with a high of \$231.92. For Los Angeles County, the monthly service charge average is \$23.90 per month and the median is \$12.28 per month. For Ventura County, the monthly service charge average is \$38.47 per month and the median is \$35.35 per month. The rate will likely increase to a level not substantially above the statewide average if applying the AWRM program, and to a level substantially higher than the statewide average if applying the other two options. Potential cost savings to community residents which could be acquired through funding programs to assist in the construction costs, and avoidance of additional treatment costs for other pollutants (i.e. future TMDL requirements) are not included.

5.5. The Need to Develop Housing

The proposed water quality objectives would not restrict the development of housing near the reaches of the Santa Clara River affected by the proposed conditional SSOs because they do not result in discharge requirements that affect housing or housing development. The proposed conditional SSOs and AWRM Program were developed based on projected population and housing growth in the Santa Clarita Valley. The GSWI model considered increased effluent flow from the WRPs and the effects of this growth on the chloride levels in the Santa Clara River and underlying aquifers. The proposed conditional SSOs will support water recycling and the use of the AWRM compliance option in the USCR. Both of these factors will provide water resources to support housing that may be lost with other compliance options.

5.6. The Need to Develop and Use Recycled Water

The proposed water quality objectives will support the expansion of recycled water uses in the Santa Clarita Valley consistent with the California's stated goal of increasing the use of recycled water to help meet the state's growing demand for potable water. The CLWA 2005 Urban Water Management Plan projects that water demand in the area will continue to increase, and that additional sources of water including recycled water will be necessary to meet projected demand. Recycled water use in CLWA's service area is projected to increase from 448 acre-feet per year (actual use in 2004) to 17,400 acre-feet per year by 2030. This 2030 figure represents 70% of the imported water portion of the ultimate wastewater flow projected for the Saugus and Valencia WRPs of approximately 34 MGD. The increased flow from the WRPs from current flows of 21 MGD to future flows of 34 MGD is expected to accommodate most of the increased recycled water demand in the watershed.

The proposed conditional SSOs will support the expansion of recycled water uses by protecting municipal supply. For groundwater recharge reuse projects, Maximum Contaminant Level (MCL) codified in California Administrative Code, Title 22 provide reasonable protection of groundwater quality for the beneficial use of municipal supply. The proposed groundwater objectives for chloride are below the Recommended Secondary Maximum Contaminant Levels for drinking water sources codified in Title 22. Given the demonstrated need to expand recycling in the USCR to meet the region's future water requirements, the proposed conditional SSOs are needed to ensure the required compliance mechanisms allow for the recycling to take place. Additionally, the proposed conditional SSOs are consistent with the secondary MCLs in Title 22 and will not result in water quality for chloride that exceeds these levels.

6. Antidegradation Analysis

State Board Resolution 68-16, "Statement of Policy with Respect to Maintaining High Quality Water" in California, known as the "Antidegradation Policy," protects surface and ground waters from degradation. It states that waters having quality that is better than that established in effective policies shall be maintained unless any change will be consistent with the maximum benefit to the people of the State, will not unreasonably affect present and anticipated beneficial uses, and will not result in water quality less than that prescribed in the policies.

The federal antidegradation policy (40 CFR 131.12) requires states to maintain and protect existing instream water uses and the water quality necessary to protect the existing uses (Tier I), maintain high quality waters unless the State finds after satisfaction of intergovernmental and public participation provisions of the states continuous planning process that allowing lowering water quality is necessary to accommodate important economic and social development (Tier II), and maintain and protect water quality in waters the state has designated as outstanding National resource waters (Tier III).

Adoption of proposed conditional SSOs, when implemented the AWRM Program, would be consistent with the state and federal antidegradation policies. Staff worked with stakeholders to develop a complete antidegradation analysis that is contained in the Task 7 and 8 report (LWA, 2008). The following contains a summary of the antidegradation analysis.

The proposed conditional site specific surface and groundwater objectives are protective of present and anticipated beneficial uses. The proposed conditional SSOs in Reaches 5 and 6 of 150 mg/L are protective of present and anticipated uses for irrigation of non-salt sensitive crops in the area, municipal supply, and aquatic life. The proposed conditional SSOs for Reach 4B, when implemented with the AWRM compliance option, are protective of the present and anticipated beneficial uses of these waters, including the most sensitive beneficial use, salt sensitive agriculture. The proposed SSO of 117 mg/L is within the LRE guidelines for protection of salt sensitive agricultural uses. The proposed SSO of 130 mg/L, which applies during critical conditions when source water is greater than 80 mg/L chloride, is protective when alternative water supplies are provided to salt sensitive agriculture uses (conditional SSO = 130 mg/L) and salt export projects as described in Section 8 are operated such that the net chloride loading above 117 mg/L is zero or less.

The proposed implementation activities, which will increase chloride export from the East Piru groundwater basin, will offset any increases in chloride discharges. If higher water quality objectives (130 mg/L) are in place in Reach 4B due to elevated concentrations in source water, the groundwater basin will be protected from degradation through the required salt export. The AWRM proposal will improve water quality in the basin over time and offset any increase in chloride concentrations that result from the

higher objective during some periods. The AWRM proposal was evaluated based on design capacities at Valencia WRP and Saugus WRP of 27.6 MGD and 6.5 MGD, for a total system design capacity of 34.1 MGD. If the capacity of the WRPs ever exceeds the current total system design capacity of 34.1 MGD, then the amount of water required for salt reduction and/or export should increase proportionally to the increase in the total system design capacity, and an additional antidegradation analysis should be conducted.

Under the AWRM Program, the blended extraction well and RO permeate discharge into Reach 4A will not exceed a chloride concentration of 95 mg/L. The current chloride WQO of 100 mg/L in Reaches 3 and 4A is within the LRE guidelines and will protect salt-sensitive agricultural uses. Therefore, the blended extraction well and RO permeate discharge into Reach 4A will not exceed the WQO of the receiving water at the point of discharge (Reach 4A) or in the reach downstream of the discharge point (Reach 3) and the designated beneficial uses for the reaches are still protected. This satisfies EPA's Tier 1 requirements in 40 CFR 131.12(a). Ongoing trend monitoring and additional modeling will determine whether the blended extraction well and RO permeate discharge would increase chloride concentrations in high quality waters downstream in Reaches 4A and 3 and in the Fillmore and Santa Paula groundwater basins. The GSWI model will be extended to the Freeman Diversion to assess the interaction of groundwater and surface water through the Piru, Fillmore, and Santa Paula groundwater basins and the overlying surface waters.

The proposed conditional SSOs and implementation of the AWRM are consistent with the maximum benefit to the people of the state and will result in social and economic benefits. It has been shown that AWRM Program will support water recycling and provide for additional water resources for agriculture and aquatic habitat. The GSWI model demonstrates that the AWRM compliance option results in benefits from the County Line to the area of seawater intrusion on the Oxnard Plain. The model shows that the AWRM option allows for more water diverted at the Freeman Diversion than conventional advanced treatment options, which then has a significant effect on saline intrusion in the Oxnard Plain. At the downstream end of the Piru basin, modeled surface water chloride concentrations are higher in the river about 40% of the time with the AWRM operating, but still in compliance with the existing water quality objective of 100 mg/L. Groundwater chloride concentrations in Piru Basin are improved by pumping and replacing groundwater with stormwater recharge during wet years when chloride concentrations are lower. As a result, surfacing groundwater from the Piru basin in Reach 4A may decrease over time as a result of the AWRM. The AWRM will also result in increased surface water flows in Reaches 3 and 4A as compared to other compliance options. Additionally, the proposed groundwater and surface water objectives for Reaches 5 and 6 will support the expansion of recycled water uses in the Santa Clarita Valley, which is consistent with the maximum public benefit and not unreasonably adverse to present and anticipated beneficial uses. Finally, in general, the AWRM compliance option has more water quality benefits to Ventura County than do the conventional advanced treatment based compliance options.

The proposed conditional SSOs will not result in water quality less than that prescribed in the policies. The proposed conditional SSOs comport with the Chloride Policy in Regional Board resolution 97-002 and its requirements for a watershed chloride reduction plan.

Finally, the proposed conditional SSOs will be implemented through NPDES permits, including effluent limits and required minimum salt export requirements. The effluent limits will ensure that the current performance of the WRPs continues at a minimum and will most likely require additional actions to achieve the water quality objectives. Additionally, receiving water limits will ensure that downstream water quality is not degraded as a result of wastes discharged. Finally, minimum salt export requirements will be included to ensure that excess salt loadings to the groundwater basin due to periods of elevated water supply concentrations are removed from the groundwater basin through pumping and export.

7. Alternatives Analysis and Staff Recommendation

Based on the results of the TMDL special studies, Regional Board staff analyzed two alternatives for Regional Board consideration. The first entails a TMDL based on the existing surface water Basin Plan objectives; the second alternative entails a TMDL based on a suite of site specific objectives for both surface water and groundwater underlying the Upper Santa Clara River to support the AWRM approach. Both alternatives rely on implementation of RO technology; however, the first alternative requires larger capacity RO facilities and ocean brine disposal while the second alternative requires smaller capacity RO facilities and no ocean disposal.

7.1. Alternative 1 - Maintain Current Basin Plan Objectives – No Action

Under this alternative, the Regional Board takes no action at this time to adopt SSOs or amend the TMDL Wasteload Allocations and Implementation Schedule. Staff notes several concerns with Alternative 1.

First, a key factor in implementation of RO is safe disposal of the resultant brine waste. Several options for brine disposal include ocean discharge, deep well injection, and drying and subsequent landfill disposal. Cost-effective brine disposal is based on several factors including the brine quantity generated and proximity to available disposal facilities. Because it requires larger capacity RO to meet more stringent objectives, the first alternative would require brine disposal via an ocean discharge. The second alternative, which requires smaller capacity RO, would enable disposal via deep well injection. Ocean disposal options generally provide greater capacity than disposal wells, but for the Santa Clarita Valley, would require construction of a large pipeline through two counties over 43-miles. Deep well injection involves retrofitting abandoned oil production wells or constructing new injection wells in areas near the Santa Clarita Valley and injecting the brine into stable geological formations. Local disposal of the smaller volumes brine associated with second alternative through deep well injection or landfilling is likely more cost effective and would likely have less environmental impacts than ocean disposal for this site. In particular, facilities for deep well injection are closer to the RO facilities than ocean disposal sites and therefore require a shorter pipeline. Further, the capacity limits the size of the RO plant so that electrical resources are lower than the first option.

Another concern with the first alternative is under an ocean disposal scenario, a pipeline and outfall could potentially be used for discharge of treated wastewater rather than the discharge of brine. If the SCVSD were to discharge wastewater directly to the Ocean, this option would reduce flows in the Upper Santa Clara River.

7.2. Alternative 2 - Adopt Conditional SSOs and Revised TMDL Conditional WLAs

Under this alternative, the Regional Board adopts a suite of site specific objectives that are conditioned on implementing a chloride balance that is based on advanced treatment of the Valencia WRP effluent to reduce chloride loading to the USCR by a level greater than any loading contributed by the Valencia WRP in excess of loading corresponding to 117 mg/L (see section 8.2). TMDL conditional WLAs for chloride are revised to reflect the conditional SSOs. In addition, interim WLAs for sulfate and TDS are included to facilitate the use of supplemental water to Reach 4B when chloride objectives exceed 117 mg/L.

The AWRM Program uses smaller-scale reverse osmosis to provide greater flexibility for disposal of brine generated by the reverse osmosis system. The AWRM Program also provides capability for aquifer restoration and resource conservation through blending the advanced treated wastewater with extracted groundwater from degraded underlying basin in the upper Santa Clara River. In order to implement an alternative implementation plan, conditional SSOs that are in excess of the existing WQOs for surface water are required. However, because the AWRM facilitates the feasibility of aquifer restoration, the groundwater WQOs can be more stringent. This alternative is analyzed in accordance with a salt balance in the Upper Santa Clara River Watershed.

7.3. Staff Recommendation

Staff recommends the adoption of Alternative 2- adopt conditional site specific objectives and revised TMDL conditional WLAs. The conditional site specific objectives will maintain beneficial uses and the implementation of the AWRM program will result in decreased salt loading to the USCR with fewer environmental and economic impacts than Alternative 1. Additional benefits in both water supply and water quality accrue in areas downstream of the USCR.

- Staff finds that the key technical issues of cumulative chloride impacts to groundwater have been addressed by GSWI. Details of staff's findings on the GSWI model are presented in Appendix I, "GSWI Study for the USCR Chloride TMDL – Staff Report."
- Staff find that the GSWI model has been adequately calibrated by 88 groundwater level, 50 groundwater chloride, 6 streamflow, and 12 surface-water quality target locations that are spatially distributed throughout the GSWI domain and it has been considered as an appropriate model for groundwater and surface water interaction modeling purposes.
- Staff finds that, based on the GWSI model, none of the simulated chloride concentrations derived from the proposed compliance options result in chloride concentrations less than the existing WQO of 100 mg/L in surface water at all

Staff Report: Upper Santa Clara River
Chloride TMDL Reconsideration and Conditional SSOs

45

times over 24-year simulation periods (2007-2030) and at all locations in Reaches 4B, 5 and 6. All of the predicted chloride concentrations in groundwater for all compliance options consistently met the existing WQO of 200 mg/L in groundwater of the Piru Basin except the area between Blue Cut and SCR-RF monitoring locations.

- Staff finds that the model predicted high chloride concentrations of 350 mg/L or greater in the alluvial groundwater (thickness of 50-100 ft) in the areas between Blue Cut and receiving water station SCR-RF during drought periods for all proposed compliance options. The high chloride concentration in this area will migrate downstream through the pumping activity in the proposed extraction well locations for the AWRM compliance option and will affect the chloride concentration of the mixed water with RO and then will affect the chloride concentration in SCR in Reach 4A. Geomatrix has prepared a technical memo stating that there is no current or expected future use of the shallow groundwater for beneficial uses in this area (Geomatrix, 2008c). The memo states that groundwater production in Reach 4B for existing beneficial uses occurs downstream of Blue Cut area, where the aquifer has a greater saturated thickness, yields more water, and has lower chloride concentrations. The memo also states that the alluvial groundwater concentrations are predicted to quickly recover once the drought period has ended. Staff therefore recommends that the proposed SSOs of 150 mg/L be set for the deeper San Pedro Formation and that the existing WQOs of 200 mg/L be retained for the shallow alluvium layer.
- Staff finds that the predicted chloride concentrations in both groundwater and surface water at Blue Cut were generally related to concentrations of chloride in the discharges to the SCR from the Saugus and Valencia WRPs.
- Staff finds that the Advanced Treatment and Brine Disposal Compliance Option can not result in full attainment of the 100 mg/L WQO for the USCR at Blue Cut at all times and in all locations of the receiving water. In addition, other compliance options like conveying all recycled water discharges from the Valencia and Saugus WRPs to the ocean outfall (Zero Discharge Compliance Option), limiting discharges from the WRPs and conveying the balance of WRPs recycled water discharges to ocean outfall (Minimal Discharge Compliance Option), and moving the discharge location of WRPs to the beginning of Reach 7 near Lang gauge (Alternative WRP Discharge Location Compliance Option) are also not likely to achieve attainment of the existing 100 mg/L WQO at all times and all locations.
- Staff notes that an alternative compliance option is required to achieve the site specific objectives (SSOs) when the original proposed compliance options were not able to achieve the existing WQO of 100 mg/L. Staff also notes that the SSOs shall be carefully evaluated based on the GSWI model results of different averaging periods to ensure they are fully protective of the agricultural beneficial uses in the study area.

- Staff finds that the AWRM compliance option can produce better chloride concentrations than other proposed compliance options during drought periods and the salt export capability of the AWRM compliance option will help to substantially reduce the amount of chloride loading from salt-water intrusion in the Oxnard Plain.
- Staff finds that the AWRM compliance alternative will result in timely attainment of conditional SSOs and reduce the chloride load to the USCR and underlying groundwater basins during the TMDL implementation period. Staff further finds that the AWRM will help provide enough mass loading to protect the SCR downstream from sea water intrusion.
- Staff finds that the proposed conditional SSOs would be consistent with state and federal antidegradation policies. The antidegradation analysis shows that the Alternative Water Resources Management Plan, involving conditional SSOs that are less stringent than existing WQOs used in conjunction with advanced treatment and salt export, are protective of beneficial uses in the USCR.
- Staff finds that the proposed conditional SSOs considered section 13241 requirements including: (a) past, present, and probable future beneficial uses of water, (b) environmental characteristics of the hydrographic unit under consideration, (c) water quality conditions that could reasonably be achieved, (d) economic considerations, (e) the need for developing housing within the Region, and (f) the need to develop and use recycled water.
- Staff finds that the AWRM Program is consistent with the draft State Board Water Recycling Policy. A stakeholder draft of the policy was presented to the State Board on September 3, 2008. This draft policy states that salts from all sources should be managed on a basin-wide or sub basin-wide basis to attain water quality objectives and support beneficial uses through the development of regional salt management plans. The draft policy provides some specific requirements to be met in the salt management plans, including:
 1. Basin or sub basin-wide monitoring;
 2. Determination of all sources and loading of salts, the basin's assimilative capacity of salts, and fate and transport of salts;
 3. Implementation measures to manage salt loading on a sustainable basis;
 4. An antidegradation analysis demonstrating that projects included with the plan will satisfy State Board Resolution 68-16; and
 5. Water recycling and stormwater recharge/reuse goals and objectives.

Staff Report: Upper Santa Clara River
Chloride TMDL Reconsideration and Conditional SSOs

47

Although no salt management plan has yet been developed for the Santa Clara River watershed, the AWRM program can serve as a basis for a future salt management plan. The AWRM Program elements have many similarities to the required salinity management plan elements. The AWRM Program was developed using the GSWI model. Based on the total system design capacity of 34.1 MGD for the Saugus and Valencia WRPs and accommodated future growth, the GSWI model assessed the fate and transport of chloride from all sources in the surface waters and groundwater in the Santa Clara River watershed. The GSWI model also assessed water quality impacts associated with the planned recycled water uses in the future. Given that the AWRM program will eventually be implemented through various NPDES permits issued in the future, it also will involve a number of monitoring requirements to assess actual fate and transport of chloride during and after project implementation. While the GSWIM was developed specifically to assess the fate and transport of chloride, the evaluations and assessments will largely apply to other salts in the region, which behave similarly to chloride. The facilities that will be implemented through the AWRM (i.e., advanced treatment of wastewater, salt export facilities) will also remove and manage other salts. Hence, with some minor modifications and assessments, the AWRM program could be deemed a salinity management plan for the watershed, since it would provide for (1) watershed-wide monitoring, (2) determination of all sources, loading, fate and transport of salts, (3) salt management measures and implementation, (4) an antidegradation analysis; and (5) water recycling goals and objectives.

8. Implementation

The conditional SSOs proposed in Section 4.1 are conditioned on implementation of the AWRM program; if the AWRM system is not built, the water quality objectives revert back to the current levels in the Basin Plan (100 mg/L). These conditions comport with the Chloride Policy in Regional Board resolution 97-002 and its requirements for a watershed chloride reduction plan. The watershed chloride reduction plan will be implemented through NPDES permits for the Valencia WRP and a new NPDES permit for discharge into Reach 4A. The conditional site specific objectives for chloride in the USCR watershed shall apply and supersede the regional water quality objectives only when chloride load reductions and/or chloride export projects are in operation and reduce chloride loading in accordance with Table 13.

Table 13. Watershed Chloride Reduction Plan

Water Supply Chloride ¹	Chloride Load Reductions ²
40 mg/L	58,000 lbs per month
50 mg/L	64,000 lbs per month
60 mg/L	71,000 lbs per month
70 mg/L	77,000 lbs per month
80 mg/L	83,000 lbs per month
90 mg/L	90,000 lbs per month
100 mg/L	96,000 lbs per month

¹ Based on measured chloride of the SWP water stored in Castaic Lake

² Chloride load reduction is based on operation of a RO treatment plant treating 3 MGD of recycled water with chloride concentration of 50 mg/L + Water Supply Chloride. Assumes operational capacity factor of 90% and RO membrane chloride rejection rate of 95%. Determination of chloride load based on the following:

$$\text{ChlorideLoad} = 90\% \times [(Q_{RO} \times C_{WRP} \times 8.34) \times r] \times \left(\frac{30 \text{ Days}}{\text{Month}} \right)$$

where r = % chloride rejection (95%)
 Q_{RO} = 3 MGD of recycled water treated with RO
 C_{WRP} = SWP Cl + 50 mg/L

8.1. Implementation of Reach 4B Conditional WLAs

The Saugus and Valencia WRP NPDES permits will have receiving water limits for the District's receiving water station, RF, located in Reach 4B of the Santa Clara River. The receiving water limits will be based on the Reach 4B conditional WLAs for chloride as presented in section 4.2.

8.2. Implementation of Reach 5 and 6 Conditional WLAs

Beginning May 4, 2015, Reach 5 and 6 conditional WLAs for the Saugus and Valencia WRPs (Table 5) will become effective. Prior to May 4, 2015, Saugus and Valencia WRPs will have interim WLAs for chloride equal to the interim limit for chloride specified in order No. R4-04-004.

Table 14. Interim WLAs for Valencia and Saugus WRPs

Reach	Interim Chloride WLA (mg/L)	Interim Sulfate WLA (mg/L)	Interim TDS WLA (mg/L)	Averaging Period
5	[SWP] + 114 not to exceed 230	450	1000	12-month
6	[SWP] + 134 not to exceed 230	450	1000	12-month

In addition, in order to support water recycling in the USCR, which is critical to the success of and stakeholder support for the AWRM Program, the Saugus and Valencia WRPs will receive interim WLAs for sulfate and TDS (Table 14). When the water reclamation requirements for these WRPs are renewed, they will likely contain limits based on groundwater WQOs. Current levels of sulfate and TDS in the WRP effluent will not meet limits based on existing WQOs. Instead the Saugus and Valencia WRPs must meet interim WLAs equal to 450 mg/L sulfate and 1000 mg/L TDS, which will apply for discharges to the Santa Clara River and recycled water uses from the Saugus Valencia WRPs. This will allow the SCVSD time to conduct special studies on the impacts of sulfate and TDS concentrations at these levels on groundwater quality and the potential for sulfate and TDS SSOs. These interim WLAs will expire on May 4, 2015 and will be replaced either with final WLAs based on the results of SSOs, if developed, or existing WQOs.

The interim WLAs are protective of beneficial uses and consistent with historical surface and groundwater objectives for basins underlying Reaches 5 and 6. A recent report prepared for the SCVSD used a weight of evidence approach to demonstrate that the interim WLAs for sulfate are protective of USCR aquatic life uses, including threatened and endangered fish and amphibians, and their prey organisms (Environ, 2008). The report states that the species mean acute value of the most acutely sulfate-sensitive invertebrate species was more than four times greater than the interim WLA of 450 mg/L. The report also states that the available toxicity data for sulfate confirm the relatively low sensitivity of fish, including threatened and endangered species in the USCR, to sulfate. Thus, protective values based on highly sensitive invertebrates will be additionally protective of TES fish and amphibians given their low sensitivity to ions.

Additionally, the interim WLAs are protective of groundwater recharge uses. These levels are consistent with the upper range of the secondary MCLs in Title 22.

8.3. Blended RO and Groundwater Discharge to Reach 4A

An NPDES permit and associated Monitoring and Reporting Program (MRP) will be required for any new discharge of the blend of RO-treated recycled water and extracted groundwater from the east Piru Basin, as contemplated in the AWRM Program. The Permittee shall submit a report of waste discharge and initiate an application to receive an NPDES permit for these facilities prior to their discharge to the SCR. Permit writers will consider ambient water quality when establishing permit limits to meet WQOs for Reach 4A.

8.4. Supplemental Water

Supplemental water released to Reach 6 of the Santa Clara River will require an NPDES permit. The AWRM contemplates the use of existing Saugus aquifer wells to deliver low chloride supplemental water directly to the USCR because infrastructure already exists and would not need to be constructed. These supplemental waters would be delivered through contractual arrangements between the SCVSD and the Upper Basin Water Purveyors and would be discharged directly to the USCR. However, although chloride concentrations in these alternative supplemental water wells are very low (20 to 42 mg/L), sulfate concentrations consistently exceed the existing surface water quality objective of 300 mg/L for Reach 6 and the TDS groundwater objectives of 700 mg/L for the groundwater basin underlying Reach 6.

Interim wasteload allocations (Table 12) are developed for sulfate and TDS for the dilution water discharges. These wasteload allocations would apply until then end of the TMDL Implementation period in order to allow (1) time for construction of infrastructure to connect the supplemental water to the Valencia WRP and be diluted with the RO permeate, or (2) time for the SCVSD to conduct additional special studies to provide adequate justification for SSOs for sulfate and TDS. If infrastructure to remove the direct discharge of supplemental water to the USCR is not constructed or if the Regional Board does not approve SSOs for sulfate and TDS, the interim WLAs would expire.

Table 12. Interim WLAs for Reach 6 Supplemental Water Discharges

Reach	Interim Sulfate WLA (mg/L)	Interim TDS WLA (mg/L)	Averaging Period
6	450	1000	12-month

The interim WLAs are protective of beneficial uses and consistent with historical surface and groundwater objectives for Reach 6 (see discussion in section 8.2).

The final WLAs for TDS and sulfate are equal to existing surface water and groundwater quality objectives for TDS and sulfate in Tables 3-8 and 3-10 of the Basin Plan. The Regional Board may revise the final WLAs based on review of trend monitoring data as detailed in the monitoring section (Section 8.7) of this staff report.

8.5. Downstream Effects of TMDL Implementation

Implementation of the USCR Chloride TMDL, including implementation of AWRM and the discharge to Reach 4A of the blended RO permeate and pumped groundwater will not cause exceedances of surface water quality objectives for downstream reaches. The water discharged to Reach 4A will meet the WQO of 100 mg/L for Reaches 4A and 3. Furthermore, US EPA has established a TMDL for chloride in Reach 3 of the Santa Clara River (US EPA, 2003). The TMDL for Reach 3 sets a numeric target of 80 mg/L of chloride. The linkage analysis for the Reach 3 TMDL demonstrates that the numeric target of 80 mg/L will be attained if upstream discharges from Reach 4 have a chloride concentration of 100 mg/L.

Although the discharge to Reach 4A will have a concentration below the surface WQO of 100 mg/L, it will have a concentration greater than the existing chloride concentrations in Reach 4A and the Fillmore groundwater basin downstream. The average chloride concentration in Reach 4A is 59 mg/L, based on data collected from 1992 to 2006 downstream of the Fillmore Fish Hatchery. The GWSI model was used to calculate the average mass loading, average chloride concentration, and average flow from the discharge to 4A of blended RO permeate and extracted groundwater. This was compared with historic chloride concentration and flow data to determine the incremental increase in Reach 4A surface water chloride concentrations caused by the blended discharge. Depending on the flows and existing surface chloride concentrations, the discharge could increase chloride concentrations by up to 20 mg/L in Reach 4A.

The increased concentrations in surface water could impact groundwater quality in the Fillmore Basin, depending on how much surface water recharges the groundwater. The average chloride concentration in the Fillmore Basin is 49 mg/L, 62 mg/L, and 46 mg/L based on data collected at wells V-0309, V-0340, and V-0342, respectively, located in the eastern portion of the Fillmore Basin from 1987 to 2006. Therefore, there is a potential to degrade water quality below existing ambient conditions in groundwater by implementation of the AWRM compliance option. The extent of this potential degradation needs to be further assessed through an evaluation of hydrology and the amount of surface water recharge that occurs in Reach 4A and downstream.

In addition, the potential increases in chloride concentrations in the Fillmore Basin, which is the water supply for the City of Fillmore, could impact the levels of chloride in Fillmore treatment plant effluent discharged to Reach 3.

Therefore, it is likely that an antidegradation analysis will be required during the permitting stage for the discharge to Reach 4A. The permit will require further evaluation of this discharge and any impacts on downstream uses, groundwater and surface water monitoring, and enforceable effluent limits. An initial antidegradation analysis is presented here. State and federal antidegradation requirements include the following conditions:

- The reduction in water quality will not unreasonably affect actual or potential beneficial uses.
- The proposed action is necessary to accommodate important economic or social development in the area.
- The reduction in water quality is consistent with maximum public benefit.
- Water quality will not increase above water quality objectives prescribed in the Basin Plan.

The current chloride WQO of 100 mg/L in Reaches 3 and 4A will protect the most sensitive beneficial use of the river's water, which is salt-sensitive agricultural use and has threshold value of 117 mg/L. Under the AWRM Program, the blended extraction well and RO permeate discharge into Reach 4A will not exceed a chloride concentration of 95 mg/L, and may be further adjusted downward as needed to protect water quality. Therefore, the blended extraction well and RO permeate discharge into Reach 4A will not exceed the water quality objective of the receiving water at the point of discharge or in the reach downstream of the discharge point.

Further water quality assessments will be used to determine whether the discharge to 4A would increase chloride concentrations in groundwater in the Fillmore and Santa Paula Basins. Responsible parties, including SCVSD and the ultimate permit holder for the 4A discharge, will be required to conduct chloride trend monitoring in the Fillmore Basin and in Reaches 3, 4A to evaluate impacts of compliance measures to downstream groundwater and surface water quality, including areas downstream of the Fillmore treatment plant. This TMDL shall be reconsidered if chloride trend monitoring indicates degradation of groundwater or surface water due to implementation of compliance measures.

The water quality analyses discussed above will be utilized in conjunction with an extension of the GSWI model to assess the interaction of groundwater and surface water and any potential impacts to downstream water quality by the AWRM option. Specifically, key stakeholders have agreed through a memorandum of understanding to extend the GSWI model through the Piru, Fillmore, and Santa Paula groundwater basins and the overlying surface waters to the Freeman Diversion. If the extended GSWI model results indicate the blended extraction well and RO permeate discharge as currently proposed by the AWRM option would cause an exceedance of water quality objectives, the GSWIM will be utilized to determine the level of chloride in the blended extraction well and RO permeate discharge necessary to preclude such an exceedance.

The important social and economic benefits of the AWRM Program could warrant some degradation of the downstream reaches. It has been shown that AWRM Program will support water recycling and provide for additional water resources for agriculture and aquatic habitat. Additionally, chloride concentrations in the Santa Clara River will be lower at the Ventura-Los Angeles County Line, and will result in better-quality recharge to the east Piru basin. As a result, surfacing groundwater from the Piru basin in Reach 4A may decrease over time as a result of the AWRM. The AWRM will also result in increased surface water flows in Reaches 3 and 4A as compared to other compliance options. Finally, in general, the AWRM compliance option has more water quality benefits to Ventura County than do the conventional advanced treatment based compliance options.

It is important to note that any degradation in water quality can be averted by operating the extraction wells in the Piru basin in a manner that will not cause increases in the baseline water quality for the Fillmore and Santa Paula groundwater basins and surface water reaches (4A and 3). For example, the maximum concentration of the extraction well and RO permeate blend could be adjusted downward from 95 mg/L, as warranted based on GSWIM modeling.

The Reach 3 Chloride TMDL may be re-evaluated in the context of the findings of the Upper Santa Clara River Chloride TMDL studies, chloride trend monitoring, and the extended GSWI model results.

8.6. Implementation Schedule

The TMDL provides a ten-year schedule to attain compliance with the conditional SSOs and conditional wasteload allocations. Key uncertainties at this point relate to identification of the optimum method for brine disposal. Several options, including deep-well injection in the vicinity of old oil fields in the Santa Clarita Valley, and drying and landfill disposal will be considered by the SCVSD in the first two years of the TMDL Implementation Plan.

The Implementation schedule includes 6 years for implementation of compliance measures including planning, completing Environmental Impact Report, engineering design, and construction. The Regional Board will re-valuate the schedule to implement control measures needed to meet final conditional WLAs at year 6 (2011) and year 9.5 (2014) after the effective date of the TMDL.

8.7. Monitoring for the AWRM Program

NPDES Permittee will conduct TDS, chloride, and sulfate monitoring to ensure that water quality objectives are being met. This monitoring will be consistent with and at least equivalent to monitoring specified in existing permits.

The SCVSD will submit a monitoring plan to conduct chloride, TDS, and sulfate trend monitoring to ensure that the goal of chloride export in the watershed is being achieved, water quality objectives are being met, and downstream groundwater and surface water quality is not degraded due to implementation of compliance measures. The SCVSD monitoring plan shall include plans to monitor chloride, TDS, and sulfate in groundwater and identify representative wells to be approved by the Regional Board Executive Officer, in the following locations: (a) Shallow alluvium layer in east Piru Basin, (b) San Pedro Formation in east Piru Basin, and (c) groundwater basins under Reaches 5 and 6, which shall be equivalent or greater than existing groundwater monitoring required by NPDES permits for Saugus and Valencia WRPs. The monitoring plan shall also include a plan for chloride, TDS, and sulfate trend monitoring for surface water for Reaches 4B, 5 and 6. The monitoring plan shall include plans to monitor chloride, TDS, and sulfate at a minimum of once per quarter for groundwater and at a minimum of once per month for surface water. The plan should propose a monitoring schedule that extends beyond the completion date of this TMDL to evaluate impacts of compliance measures to downstream groundwater and surface water quality. This TMDL shall be reconsidered if chloride, TDS, and sulfate trend monitoring indicates degradation of groundwater or surface water due to implementation of compliance measures.

The Reach 4A permittee will submit a monitoring plan to conduct chloride, TDS, and sulfate trend monitoring to ensure that the goal of chloride export in the watershed is being achieved, water quality objectives are being met, and downstream groundwater and surface water quality is not degraded due to implementation of compliance measures. The Reach 4A permittee monitoring plan shall include plans to monitor chloride, TDS, and sulfate in groundwater and identify representative wells to be approved by the Regional Board Executive Officer in the following locations (a) Fillmore Basin, and (b) Santa Paula Basin. The monitoring plan shall also include a plan for chloride, TDS, and sulfate trend monitoring for surface water for Reaches 3 and 4A. The monitoring plan should include plans to monitor chloride, TDS, and sulfate at a minimum of once per quarter for groundwater and at a minimum of once per month for surface water. The plan should propose a monitoring schedule that shall extend beyond the completion date of this TMDL to evaluate impacts of compliance measures to downstream groundwater and surface water quality. This TMDL shall be reconsidered if chloride, TDS, and sulfate trend monitoring indicates degradation of groundwater or surface water due to implementation of compliance measures.

PETERS SHORTHAND REPORTING CORPORATION (916) 362-2345

1 the Consideration of the Proposed Basin Plan Amendment
2 to Revise the Upper Santa Clara River Chloride TMDL.

3 And this is Item number 14.

4 I'm going to ask Ms. Harris to open up the
5 hearing --

6 BOARD MEMBER RICHARDSON: Madam Chair?

7 CHAIRPERSON DIAMOND: Yes.

8 BOARD MEMBER RICHARDSON: On advice of
9 counsel, because I sit as a member and director of the
10 United Water Conservation District and because United
11 is directly involved in what is going to be discussed
12 here in Item 14, unfortunately I'm going to have to
13 recuse myself. So.

14 CHAIRPERSON DIAMOND: All right. We'll see
15 you in a little bit.

16 BOARD MEMBER RICHARDSON: Okay.

17 (Whereupon, Board Member Richardson left
18 the area of the proceedings.)

19 CHAIRPERSON DIAMOND: So I'm going to ask
20 Ms. Harris to please open up this hearing. Right after
21 we gave you the award.

22 (Laughter)

23 EXECUTIVE ASSISTANT HARRIS: This the public
24 hearing for consideration of a proposed resolution to
25 revise the Upper Santa Clara River chloride TMDL

1 including interim waste load allocations for sulfate
2 and total dissolved solids and to adopt conditional
3 site specific objectives for chloride to support the
4 TMDL.

5 Copies of the proposed resolution were sent to
6 the Environmental Protection Agency, State Water
7 Resources Control Board, and other known interested
8 agencies and organizations.

9 All persons appearing before the Board today
10 should leave written copies of their testimony if
11 available.

12 The Board will consider all testimony;
13 however, in the interests of time, it is requested that
14 all repetitive and redundant statements be avoided.

15 Madam Chair, would you now please open the
16 hearing and administer the oath?

17 CHAIRPERSON DIAMOND: Yes. Will all those who
18 intend to testify on Item 14 please raise your right
19 hand and repeat after me:

20 I promise to tell the truth --

21 PROSPECTIVE WITNESSES: I promise to tell the
22 truth --

23 CHAIRPERSON DIAMOND: -- the whole truth --

24 PROSPECTIVE WITNESSES: -- the whole truth --

25 CHAIRPERSON DIAMOND: -- and nothing but the

1 truth --

2 PROSPECTIVE WITNESSES: -- and nothing but the

3 truth --

4 CHAIRPERSON DIAMOND: -- under penalty of

5 perjury.

6 PROSPECTIVE WITNESSES: -- under penalty of

7 perjury.

8 CHAIRPERSON DIAMOND: Thank you.

9 The order of this item will be the following,
10 and we're going to keep to the time allotted so that we
11 have enough time to do this and with full Board
12 consideration.

13 The staff presentation will be 30 minutes;
14 followed by Santa Clarita Valley Sanitation District,
15 15 minutes; United Water Conservation District, 15
16 minutes.

17 And then we will have the speaker cards which
18 will be three minutes per person. And that will be
19 followed by Board questions and discussion.

20 So thank you, Mr. Unger.

21 SECTION CHIEF UNGER: Thank you. Good
22 morning, Chair Diamond and members of the Regional
23 Board.

24 I am Sam Unger, Chief of the Regional Programs
25 Section of the Board, and today we are presenting a

1 reconsideration of the Upper Santa Clara River chloride
2 TMDL.

3 As we will describe in this presentation, this
4 Board has previously adopted a TMDL for chloride in the
5 Upper Santa Clara River, and that TMDL is currently in
6 effect.

7 The TMDL requires a number of special studies
8 to have been completed, and based on these studies a
9 reconsideration to establish site-specific objectives
10 for salts in the Upper Santa Clara River and to revise
11 the waste load allocations for the Saugus and Valencia
12 Water Reclamation Plants. Those are the major
13 dischargers of chloride to the Upper Santa Clara River.

14 The TMDL special studies are now complete, and
15 today's item presents for your consideration a suite of
16 conditional site-specific objectives for chloride,
17 dissolved solids, and sulfate in surface and
18 groundwaters of the Upper Santa Clara River and a suite
19 of revised waste load allocations for the Saugus and
20 Valencia Water Reclamation Plants.

21 These conditional site-specific objectives and
22 revised waste load allocations are designed to protect
23 the beneficial uses of the Upper Santa Clara River for
24 the beneficial use of agriculture and for aquatic
25 habitat and to facilitate the development of

1 cost-effective, environmentally sound remedies to
2 reduce the chloride loadings.

3 These remedies will support increased water
4 reclamation in the Santa Clarita Valley and increase
5 local water supplies for agricultural irrigation and
6 domestic use throughout the Santa Clara River; and it
7 will also increase water supply down to the Lower Santa
8 Clara River and help offset seawater intrusion which is
9 a current problem in the Oxnard area.

10 Before I get started, I would like to
11 acknowledge the contributions of three Regional Board
12 staff members. I think two of them are here that I
13 know.

14 The first is Dr. C.P. Lai, and I hope he can
15 stand up for us, please. Dr. Lai has been at the Board
16 for more than nine years and is a nationally known
17 expert in water quality modeling.

18 This TMDL includes some of the most complex
19 modeling to date in any of our work; and his direct
20 input on the Board's behalf, his modeling effort, has
21 essentially led to a lot of information that we'll be
22 presenting here today. Dr. Lai is our representative
23 on surface water quality.

24 Dr. Yanjie Chu -- I'm not sure if he's here
25 today -- he is. Dr. Yanjie Chu has earned a bachelor's

1 degree in agricultural chemistry from the preeminent
2 university in agriculture in China, and he has gone on
3 to earn a PhD in plants and soil sciences from the
4 University of Delaware. He works on all of our
5 pesticide-related issues and works on our Conditional
6 Waiver as well.

7 And finally, we have significant contributions
8 from Jenny Newman, the Unit Chief of TMDL Unit 3; and
9 Ms. Newman has an MS degree in environmental sciences,
10 and she'll making part of this presentation with me.

11 For the staff presentation today, I'll first
12 go over the background of the TMDL and why we're
13 proposing the adoption of conditional site-specific
14 objectives and revision of the waste load allocations.

15 Then Jenny Newman will discuss the specific
16 suite of objectives and waste load allocations that has
17 been developed for your consideration.

18 Two stakeholders, as Chair Diamond mentioned,
19 the Santa Clarita Valley Sanitation Districts and
20 United Water Conservation District, will present the
21 details of the plan in order to conserve time today so
22 that we don't have to be redundant there.

23 Next slide, please.

24 This slide shows a map of the Upper Santa
25 Clara River including the reaches that are subject to

1 this TMDL consideration.

2 The Santa Clara River is the largest river
3 system in southern California that remains in a
4 relatively natural state. The river originates on the
5 northern slope of the San Gabriel Mountains in Los
6 Angeles County and transverses Ventura County and flows
7 to the Pacific Ocean between the cities of Ventura and
8 Oxnard.

9 This map just shows the portion that we're
10 considering today and shows the major hydrological,
11 geographical, and jurisdictional features of the Upper
12 Santa Clara River.

13 From right to left, the purple area is Los
14 Angeles County, and the yellow area is Ventura County.
15 And going from right to left, the yellow line
16 represents Reach 6, the green line represents Reach 5,
17 and the red line is Reach 4.

18 Two managed reservoirs, the Castaic Lake and
19 Piru Lake, both shown on this map, are tributaries to
20 the Upper Santa Clara River through Castaic Creek and
21 Piru Creek, and the flows here are managed by various
22 agencies.

23 The major chloride sources are the Saugus and
24 Valencia Water Reclamation Plants which are shown on
25 the map right above the legend. And a major feature of

1 Reach 4, the dry gap, approximately six miles long, is
2 shown in red there in Reach 4.

3 The Board took action a year and a half ago to
4 stop the dry gap reach into Reach 4A and 4B. This is
5 an area where the surface flow typically infiltrates
6 into the underlying groundwater basin which then
7 exfiltrates back into the surface flow downstream.

8 The middle of the dry gap is the Piru Creek
9 confluence; and this too mostly infiltrates into the
10 underlying groundwater basin during dry weather.

11 The major groundwater basins are also shown on
12 the map with the east basin which underlies Reaches 5
13 and 6 in red, and the light green and blue green
14 represent the eastern and western sides of the Piru
15 Basin.

16 The major land uses vary considerably by
17 county. In Los Angeles County, the predominant land
18 uses are commercial, industrial, and residential;
19 whereas in Ventura County, the predominant land use in
20 the vicinity of the river is agricultural.

21 In both counties, there is considerable open
22 space under the jurisdiction of the National Forest
23 Service surrounding the river.

24 Beneficial uses established in the Basin Plan
25 for this watershed include agricultural supply,

1 groundwater recharge, aquatic life habitat, and
2 endangered species habitat.

3 The water quality objective for chloride
4 include -- present water quality objectives for surface
5 water for Reaches 4, 5, and 6 is 100 milligrams per
6 liter for chloride. And the groundwater objectives are
7 100 milligrams per liter for the western part of Piru
8 but 200 milligrams per liter for the eastern part of
9 Piru Basin.

10 For those of you who have been Board Members,
11 have been through this for a few years, I apologize for
12 this slide; but I think it's a good idea to try to get
13 everyone up to speed on the history.

14 The issue of chloride in our region's waters
15 has a long history. Chloride is a mineral that is
16 naturally occurring in the water, but as concentrations
17 of chloride increase in fresh water, it impairs the use
18 of that water to irrigate agricultural crops. At even
19 higher levels, it can impair aquatic life and drinking
20 water uses.

21 The Santa Clara River, as I mentioned, flows
22 through some of the most important agricultural areas
23 of our region, and the increasing levels of chloride in
24 the river over the past decades are impairing its use
25 for irrigation of salt-sensitive crops such as avocado,

1 strawberries and nursery stock.

2 Chlorine is contained in imported water which
3 is distributed to residences and discharged by POTWs
4 through the region and to surface and groundwaters. In
5 addition to chloride contained in imported water,
6 chloride loading is increased by domestic household
7 practices including the use of self-regenerating water
8 softeners, by industrial uses, and by disinfection of
9 wastewater with chlorine at the treatment plants before
10 it's discharged into the rivers.

11 Over the past several decades, growth in our
12 region has necessitated increasing amounts of imported
13 water, and that water has got chloride levels which
14 have increased and are discharged throughout the
15 region.

16 The POTWs throughout our region could no
17 longer comply with the original chloride objectives set
18 in 1975, and the Board's response at that time was to
19 adopt chloride and drought policies which relaxed the
20 chloride objectives in many areas of the region.

21 However, these policies were not applied to
22 the Santa Clara River and to the Piru Creek watersheds
23 due to the heavy agricultural use of water in these
24 watersheds and the sensitivity of crops to chloride.

25 Rather, the Board took a TMDL approach to

1 dealing with the chloride build-up in the Santa Clara
2 River and Calleguas Creek. And the Board first adopted
3 a TMDL for chloride in 2002.

4 That TMDL identified the wastewater discharges
5 from the two Santa Clarita Valley Sanitation Districts,
6 Saugus and Valencia Water Reclamation Plants, as the
7 primary sources of chloride and set forth numeric
8 targets of 100 milligrams per liter of chloride.

9 This TMDL met with quite a bit controversy
10 over several issues.

11 The first was the need for a numeric target of
12 100 to protect salt-sensitive agriculture. It did not
13 appear to be fully vetted through the scientific
14 literature, and the fact that implementation actions to
15 attain this level would require advanced treatment --
16 that is, reverse osmosis -- of the full effluent from
17 the Saugus and Valencia plants with discharge into the
18 ocean through a 43-mile brine line. The cost of that
19 system is considerable, which we'll discuss later.

20 So for those two reasons, the State Board
21 remanded the TMDL back to the Regional Board in 2003.

22 And in response to the remand, the Regional
23 Board readopted the TMDL to include a phased
24 implementation approach where we first do the studies
25 that were necessary to set the proper site-specific

1 objectives and waste load allocations, and there would
2 be mandatory reconsiderations by the Regional Board
3 before the implementation design is initiated.

4 Essentially, that's where we are today.

5 Because the core standard of 100 milligrams
6 per liter was controversial, the special studies first
7 focused on determining the chloride threshold for
8 salt-sensitive crops and endangered and threatened
9 species.

10 It then focussed on determining the chloride
11 loading from surface waters to the underlying
12 groundwater basins which are also a major source of
13 irrigation water for the agricultural growers in Santa
14 Clara River.

15 The TMDL was then considered, reconsidered in
16 2004, to comport the TMDL to the NPDES permits in the
17 Saugus and Valencia WRPs and to revise the
18 implementation schedule and set this two-phase approach
19 in place.

20 As part of its approval of the 2006 TMDL
21 amendment, the State Board directed the Regional Board
22 to develop site-specific objectives that take into
23 account the variability of chloride concentrations in
24 imported water and also consider provisions for
25 increased chloride concentrations during critical

1 drought conditions.

2 This slide is just a brief slide to show you
3 ~~how the chloride in the wastewater treatment plant~~
4 effluent, in the reddish line, tracks the water supply
5 which is State Water Project chloride levels in the
6 lower line.

7 Of course, we're taking actions to try to
8 minimize the gap between the two as much as possible.
9 That's what added by the domestic use. But in general,
10 one of the big challenges of this TMDL has been to deal
11 with the chloride that is imported with the State Water
12 Project water supplies.

13 This slide provides a summary of some of the
14 key findings of the special studies that we've been
15 doing for the past three years.

16 I want to say that the studies were conducted
17 over a three-year period in a publicly accessible
18 venue. Monthly meetings were held in Fillmore and
19 Santa Clarita where a wide variety of stakeholders
20 participated.

21 Public members, representatives from Ventura
22 County Agricultural Water Coalition, and individual
23 growers, municipal representatives, state and county
24 elected staffs, water purveyors, landowners,
25 groundwater management agencies, and environmental

1 groups all participated in these meetings over the past
2 three years.

3 Stakeholders had direct input on the scopes of
4 work and an opportunity to comment on the draft
5 reports, and they also had direct contact to the
6 consultant team who were performing the work.

7 The meetings were managed and recorded by a
8 professional facilitation team, and the Regional Board
9 staff greatly appreciates the expertise and dedication
10 of all who participated in these studies. And I think
11 a lot of these people who participated in these studies
12 and gave up their time are here today.

13 And I'd also like to recognize the
14 facilitator. Will you please stand up? Paul Downs. I
15 think all of those who participated are greatly
16 appreciative of the talent in bringing a group like
17 this together, and he's available to address any
18 questions that you may have.

19 So as previously reported to this Board, the
20 literature study, which is what we did, we looked at
21 all the available scientific literature to try to set a
22 chloride threshold for avocado, strawberries and
23 nursery stock was found to be 117 milligrams per liter.

24 The study also found there was not exactly
25 analogous studies for strawberries and nursery stock,

1 but there was available information to support best
2 professional judgment regarding the use of the avocado
3 threshold level of 117 to be appropriate for other
4 salt-sensitive crops.

5 The endangered species special study showed
6 that a chloride level of 117 protects the sensitive
7 aquatic and rare and endangered organisms in the Upper
8 Santa Clara River, the trout. We stick with that fish.

9 The Groundwater Surface Water Interaction
10 study again was probably one of the most intensive
11 modeling efforts that's been undertaken by this Board
12 and that this Board has participated in, and it shows
13 quite clearly that the surface flows in the river
14 recharge Piru Basin, and these result in accumulation
15 in that groundwater basin of chloride.

16 We call it the GSWI, Groundwater Surface Water
17 Interaction, study. That was used to simulate future
18 potential chloride impacts based on various compliance
19 alternatives.

20 GSWI also showed that no compliance
21 alternative could mitigate the magnitude of the advance
22 treatment process and project that would be required to
23 protect the existing beneficial uses and -- which,
24 again, would require advance treatment and flow through
25 a 43-mile pipeline to the ocean.

1 In general, chloride reduction actions fall
2 into one of four categories: Source reduction, advance
3 treatment, increased use of reclaimed water, and
4 management of the assimilative capacity of the river.

5 The nature of the specific plan, how we mix
6 all four of these elements together, is determined by
7 the effectiveness of these actions individually and
8 also by the site-specific objectives and the waste load
9 allocations that will be established by this Board.

10 Some of these implementation approaches have
11 already begun, and we'll hear about them shortly.

12 The Sanitation Districts implemented a buyback
13 program for self-regenerating water softeners in the
14 Santa Clarita Valley and has recently sponsored
15 legislation to ban the use of existing water softeners.
16 And in last November's election, I'm happy to report
17 that that measure was passed by the voters by almost a
18 two-thirds majority.

19 Additional chloride load reductions are also
20 being planned by converting the water reclamation plans
21 to ultraviolet disinfection rather than chlorine
22 disinfection.

23 Water purveyors in the Santa Clarita Valley
24 are already planning increased uses for recycled water
25 from the plants and are reviewing their water

1 management plans for Castaic and Piru Lakes to modify
2 discharge requirements and flows to provide
3 assimilative capacity in critical dry months.

4 And finally, there's the issue of the most
5 costly and largest issue, that of the advanced
6 treatment system.

7 Again, the sizing and cost of the advance
8 treatment team can be optimized by optimizing the
9 effectiveness of these other chloride reduction actions
10 and by setting water quality objectives and waste load
11 allocations based on special study results required to
12 protect beneficial adjusts.

13 During the last year while these special
14 studies were being completed, the upper watershed water
15 purveyors and groundwater management agency for Piru
16 Basin started discussions on what is termed an
17 Alternative Water Resources Management plan.

18 And these discusses then came over to our
19 group. These stakeholders, after they had formulated
20 the genesis of this plan, they approached the Board
21 staff and management about an alternative plan and to
22 determine the regulatory framework that would be
23 necessary to support this approach.

24 Our response was that the plan must protect
25 the existing beneficial uses. We also have the

1 requirement that we would like to see the plan restore
2 the Piru Basin back to its original levels of low
3 chloride so it could be a source of supply of water for
4 agriculture for many years to come.

5 With these requirements in mind, the
6 stakeholders and staff undertook new studies to
7 evaluate the AWRM, the Alternative Water Resources
8 Management plan, which will require higher
9 site-specific objectives than the current objective,
10 100 milligrams per liter.

11 As these new studies were also completed, key
12 stakeholders executed a Memorandum of Understanding
13 that the delineates their responsibilities in
14 implementing the MOU and -- implementing the AWRM, and
15 that Memorandum of Understanding is included in your
16 Board package.

17 In the interest of time, I'm just going to go
18 through this slide very the quickly because the
19 Sanitation Districts will talk about it.

20 But what you see in the red dot there really
21 is the desalination facilities. And essentially what
22 can happen with desalination facilities, depending on
23 whether the State Water Project is above or below 80
24 milligrams per liter of chloride, can be used in a
25 number of different ways.

1 It can be essentially blended right back in
2 with the effluent from the plants when -- the bottom
3 slide -- when the supply's above 80 milligrams per
4 liter to attain compliance with the 117 milligrams per
5 liter objective we're proposing in Reach 4B.

6 In the top one, basically what happens, when
7 the supplies are lower -- when the water supplies are
8 lower in chloride, that water can then be used with
9 extracted wells from Piru Basin and delivered
10 downstream for better uses in the Lower Santa Clara
11 River.

12 This will also provide similar capacity during
13 precipitation events for low chloride water to
14 infiltrate into Piru Basin and start restoration.

15 However, the main point is: In analyzing the
16 AWRM, it was concluded that to increase the surface
17 water objectives and revised groundwater objectives
18 would be required in order to restore the Piru Basin.

19 And I think with that, I will turn it over to
20 Jenny to talk about the specific issues of what you're
21 actually going to be looking at today.

22 CHAIRPERSON DIAMOND: Thank you.

23 SENIOR ENVIRONMENTAL SCIENTIST NEWMAN: Good
24 morning.

25 Staff is proposing two amendments to the Basin

1 Plan to reflect the regulatory scheme that Sam just
2 went over. The amendments are included as Attachments
3 A and B to the Tentative Resolution in your Board
4 package.

5 Attachment A contains the conditional
6 site-specific objectives for chloride in Reaches 4B and
7 5 and 6 and the groundwater basins underlying those
8 reaches.

9 And Attachment B includes the changes to the
10 TMDL, changes to the waste load allocation and the
11 implementation plan that are based on the conditional
12 site-specific objectives.

13 The revised TMDL provides conditional waste
14 load allocations for chloride as well interim waste
15 load allocations for sulfate and TDS that support the
16 supplemental water and the water recycling components
17 of the AWRM.

18 The revised TMDL also requires trend
19 monitoring to ensure that the goal of chloride export
20 in the watershed is being achieved, water quality
21 objectives are being met, and that downstream
22 groundwater and surface water quality is not degraded.

23 This slide shows the proposed surface water
24 site-specific objectives.

25 The site-specific objectives are only put in

1 place if significant salt removal from the Valencia
2 plant effluent or from the East Piru Basin is
3 implemented; hence, they are termed conditional site
4 specific objectives.

5 Reaches 5 and 6 are assigned a conditional
6 site-specific objective of 150 because there are no
7 current or potential future salt-sensitive agriculture
8 uses in these reaches, and the 150 objective will
9 protect all other beneficial uses in these reaches.

10 The site-specific objectives are applied as
11 12-month rolling averages which have been historically
12 used in the Los Angeles region in California for salts
13 objectives, and they will protect the groundwater
14 recharge and nonsalt-sensitive agriculture beneficial
15 uses in the lower reaches.

16 Reach 4B is assigned a conditional
17 site-specific objective of 117 to protect the
18 salt-sensitive agriculture in this reach. And under
19 critical conditions, this is defined as the period when
20 the water supply concentration is greater than or equal
21 to 80 milligrams per liter. Reach 4B is assigned a
22 conditional site-specific objective of 130 milligrams
23 per liter.

24 To ensure that there is no net accumulation of
25 chloride in the watershed, the TMDL -- excuse me -- the

1 TMDL contains implementation language requiring
2 sanitation district to export the cumulative mass of
3 chloride that's added by these temporary increases in
4 chloride concentrations above 117.

5 Also during these critical conditions, the
6 sanitation district shall provide alternate water
7 supply to salt-sensitive agriculture that uses surface
8 water. The conditional SSOs in Reach 4B are applied as
9 three-month rolling average based on the
10 recommendations of the LRE studies.

11 This slide shows the proposed groundwater
12 site-specific objectives.

13 The groundwater objective in the Santa
14 Clara-Bouquet and San Francisquito Canyons, which
15 underlie Reach 6, it's proposed to increase from 100 to
16 150 milligrams per liter. This is based on review of
17 historical data and will protect the beneficial uses of
18 those basins.

19 The groundwater objective in the lower area
20 east of Piru Creek which underlies 4B is proposed to
21 decrease from 200 to 150 milligrams per liter. And
22 this is also based on a review of historical data and
23 is set to require chloride export to restore this
24 basin.

25 The objective in Castaic Valley is unchanged

1 except to specify a 12-month averaging period, and
2 12-month averaging periods are proposed for all
3 groundwater basins listed in this table.

4 These are the changes to the TMDL based on
5 conditional SSOs.

6 Conditional chloride waste load allocations
7 for the Saugus and Valencia plants are set equal to the
8 site-specific objectives. These conditional waste load
9 allocations will be implemented as effluent limits with
10 12-month averaging periods.

11 Conditions for the waste load allocations
12 include operation of a three million gallon per day
13 reverse osmosis facility the Valencia plant as well as
14 dilution water to ensure attainment of the 117
15 objective in Reach 4B.

16 In addition, a Reach 4B waste load allocation
17 of 117 is assigned to the Valencia and Saugus plants as
18 a receiving water limit with a three-month averaging
19 period to further ensure attainment of the Reach 4B
20 objectives.

21 Also the daily maximum waste load allocations
22 equal to 230 milligrams per liter are assigned to
23 Reaches 5 and 6 and 4B to protect the aquatic life
24 beneficial uses in those reaches.

25 Other major NPDES discharges receive waste

1 load allocation equal to 100 milligrams per liter.
2 This is because the effect of assigning conditional
3 waste load allocations to these permits was not
4 analyzed by the GSWI model.

5 Minor NPDES discharges do receive conditional
6 waste load allocations without mass removal
7 requirements because the impact of minor discharges is
8 negligible compared to the water reclamation plants.

9 Finally, in order to accommodate the discharge
10 of supplemental water to Reach 6 to attain the
11 objective, interim waste load allocations are provided
12 for sulfate of 450 milligrams per liter and TDS of 1000
13 milligrams per liter as 12-month averages.

14 This will allow the permittee to conduct trend
15 monitoring and analysis to justify possible conditional
16 SSO and waste load allocations for these constituents
17 when the TMDL is reconsidered.

18 For now, the final waste load allocations are
19 equal to the existing objectives for these constituents
20 in the Basin Plan.

21 This slide shows the chloride reductions that
22 are required as the condition of the waste load
23 allocations for the Valencia and Saugus plants.

24 The table shows that the chloride reductions
25 are based on the concentration of chloride in the water

1 supply and are also based on operation of the 3 MGD RO
2 plant at the Valencia facility.

3 This table is also provided in the attachment,
4 if it's not showing up too clear here.

5 The condition are if the AWRM system is not
6 built and these reductions not achieved, then the water
7 quality objective and waste load allocations will
8 revert back to the current level of 100 milligrams per
9 liter.

10 So in addition to the special studies that
11 were required by the TMDL, staff needed to conduct
12 three additional analyses to support the AWRM and
13 conditional SSOs. These are the antidegradation
14 analysis, the environmental analysis, and the cost
15 analysis.

16 Staff worked with stakeholders to develop the
17 antidegradation analysis. It shows that adoption of
18 the proposed conditional SSOs, when implemented with
19 all of the AWRM components, would be consistent with
20 state and federal antidegradation policies.

21 First, the proposed conditional SSOs protect
22 present and anticipated beneficial uses.

23 Second, the proposed SSOs will not result in
24 water quality that's less than prescribed in policies.
25 The conditional SSOs comport with the chloride policy

1 and the Regional Board resolution 97-002 and its
2 requirements for a watershed chloride reduction plan.

3 Third, the proposed implementation activities,
4 which will increase chloride export from the East Piru
5 groundwater basin, would significantly offset any
6 temporary increases in chloride during drought
7 conditions.

8 Fourth, the blended extraction well and RO
9 permeate discharge into Reach 4A under the AWRM program
10 will not exceed the water quality objectives for Reach
11 4A or 3 downstream of this discharge. The beneficial
12 uses for these reaches are still protected, and ongoing
13 trend monitoring and additional modeling will determine
14 the impact of the discharges on high quality waters
15 downstream.

16 Finally, the proposed conditional
17 site-specific objectives and implementation of the AWRM
18 are consistent with maximum benefit to the people of
19 the state and will result in social and economic
20 benefits.

21 Next, staff conducted a CEQA analysis to
22 analyze potential alternatives, mitigation measures,
23 and significant environmental effects from
24 implementation of the revised TMDL.

25 Staff held a CEQA scoping meeting on July 29

1 of this year to receive comments on the substitute
2 environmental document; and based on the comments
3 received, staff prepared final substitute environmental
4 document.

5 These compare the environmental impacts of the
6 proposed TMDL and site-specific objectives to support
7 the AWRM program with the impacts from a no-action
8 alternative.

9 And the no-action alternative, as Sam
10 discussed, will likely require the construction of 19
11 million gallons per day advanced RO facilities at both
12 the Saugus and Valencia plants to achieve the existing
13 water quality objective of 100 milligrams per liter.

14 This level of treatment would result in a
15 significant amount of brine waste that would require
16 disposal by the development of a 43-mile brine
17 discharge pipeline and a three-mile ocean outfall.

18 Therefore, staff found that the AWRM is the
19 preferred alternative. It's the most environmentally
20 feasible alternative, and it has the least significant
21 adverse impacts.

22 Implementation of the AWRM could have
23 potentially significant adverse impacts; however, there
24 are feasible mitigation measures that would
25 substantially lessen the impacts.

1 Staff then compared the cost of complying with
2 the existing water quality objectives, which would
3 require the maximum advanced treatment, with the cost
4 of complying with the conditional SSO which would
5 include facility upgrades to the Saugus and Valencia
6 plants and the other AWRM actions.

7 Staff estimated a cost of \$38.96 per month per
8 connection for the maximum advanced treatment
9 alternative and \$19.50 for the AWRM alternative.

10 Staff also reviewed the State Board wastewater
11 User Charge Survey Report for fiscal year 2007-2008.
12 This report summarizes and analyzes cost data from a
13 survey of California wastewater agencies.

14 Staff found the current wastewater user charge
15 for the Santa Clarita area would likely increase above
16 the statewide average under the maximum treatment
17 alternative and would likely be similar to the
18 statewide average under the AWRM program.

19 The cost analysis thus supports the
20 conditional SSOs and AWRM program as the prefer
21 alternative.

22 Staff received a total of 13 comment letters
23 from agricultural groups, municipalities, the
24 Sanitation Districts, landowners, and water purveyors.
25 The majority of these comments were in support of the

1 AWRM program, the proposed SSOs, and TMDL revisions
2 that support this program. However, there were a few
3 issues raised, and I'll go over those now.

4 First, the City of Fillmore and a resident of
5 Fillmore expressed concern that the downstream
6 groundwater quality in the Fillmore Basin, which lies
7 beneath Reaches 4A and 3, may be degraded by the
8 implementation of the AWRM, specifically the discharge
9 of the RO permeate blend and groundwater to Reach 4A.

10 Staff's response is that the TMDL maintains
11 the surface water and groundwater objectives in Reach
12 4A in the Fillmore Basin. And chloride trend
13 monitoring will be conducted, and the TMDL should be
14 reopened if the monitoring indicates degradation of the
15 high quality groundwater or surface water downstream.

16 The second comment was raised by Newhall Land
17 & Farming.

18 The TMDL as proposed assigns to Newhall a
19 waste load allocation equal to the existing water
20 quality objective of 100 milligrams per liter. In
21 order to receive a conditional waste load allocation,
22 the TMDL would require Newhall to remove a chloride
23 mass quantity that is proportional to the chloride
24 removal required for the Valencia plant.

25 Newhall asked for language allowing them

1 conditional waste load allocations based on analysis of
2 the significance of the downstream impact.

3 But staff's response is that the GSWI Model
4 was run with a Newhall discharge of 100 milligrams per
5 liter, and additional analysis of the significance of
6 assigning a conditional waste load allocation of 150
7 milligrams per liter would need to be conducted to
8 justify a conditional waste load allocation.

9 The third comment received was that the AWRM
10 program could reduce groundwater levels in the Piru
11 Basin due to the extraction wells.

12 Staff's response is that we found that the
13 drawdown ranges under the AWRM program would operate
14 within the historic drawdown ranges for Piru Basin, and
15 that any potential impacts could be managed through the
16 MOU.

17 Alternatively, the Regional Board may consider
18 imposing flow restrictions on the forthcoming NPDES
19 permit for the discharge of the RO groundwater blend to
20 Reach 4A.

21 Staff proposes a few changes that were made
22 after you received your agenda package. This is
23 because it's a very complicated TMDL, and there are a
24 lot of deadlines for various implementation tasks and
25 compliance milestones.

1 Working with our permitting staff, we felt it
2 was necessary to make a few nonsubstantive changes just
3 to clarify where the waste load allocations apply.

4 There are three changes on the change sheet we
5 gave you this morning.

6 The first change is to correct a typo. The
7 other two changes are to link up the compliance dates
8 to make the compliance deadlines more clear.

9 And if you have any questions on these
10 changes, staff can answer them at the end.

11 So there are two alternatives before the
12 Board. The first is no action. Under this
13 alternative, the Board will take no action at this time
14 to adopt the conditional SSOs or amend the TMDL waste
15 load allocation and the current implementation plan.

16 This would likely require the construction of
17 the maximum advance treatment facilities and would
18 require the brine disposal via a 43-mile discharge
19 pipeline to the ocean.

20 The second alternative is to adopt a suite of
21 conditional site-specific objectives and to revise the
22 TMDL to include conditional waste load allocations and
23 an implementation plan that would facilitate the AWRM
24 program implementation.

25 Staff is the recommending Alternative 2 with

1 the changes that we provide in the change sheet. We
2 find that the conditional site-specific objectives will
3 protect beneficial uses, and implementation of the AWRM
4 will result in decreased salt loading to the watershed
5 with fewer environmental impacts and economic impacts
6 than Alternative 1.

7 Additional benefits in both water supply and
8 water quality will accrue in areas downstream as a
9 result of the AWRM.

10 And in the interest of time the Sanitation
11 Districts and unity water will discuss these benefits
12 in their presentation.

13 This concludes staff's presentation.

14 CHAIRPERSON DIAMOND: Thank you.

15 SENIOR STAFF COUNSEL LEVY: Chair Diamond?

16 CHAIRPERSON DIAMOND: Yes.

17 SENIOR STAFF COUNSEL LEVY: One more
18 nonsubstantive change, if I may, which is on pages
19 14-17 and 14-18. We refer to the table as 7.6-1. It
20 should be 7-6.1.

21 CHAIRPERSON DIAMOND: Thanks.

22 I'm going to ask the first speaker to be
23 Supervisor John Flynn.

24 MR. FLYNN: Yes. Good morning, Madam Chair
25 and Board Members. Thank you very much.

1 I'm just going to be very brief. We've
2 listened to this issue many, many times. And today, I
3 support Alternative 2. I hope that you move with that
4 issue.

5 Chloride issues in the Santa Clara River
6 Valley, as you have learned and are concerned about and
7 have shown that, are very significant to agricultural
8 production and certain crops.

9 And not only in the United States and our area
10 and our region, but countries throughout the world,
11 agricultural areas are very sensitive about chloride
12 issues. And I've read some of the literature on it.
13 So I hope you support Alternative 2, and I say that
14 with some experience.

15 I initiated the order from the State Water
16 Board to create a groundwater management agency in
17 Ventura County; so I've been involved with that issue
18 for about 30 years, so have some of that experience in
19 looking at the issue here before us today.

20 But I would like to end by saying to you, even
21 though it doesn't relate directly to this issue, that I
22 want to thank the staff for all the assistance they
23 have given to me and to Ventura County on the El Rio
24 sewer project, which is a very sensitive project.

25 And I especially want to thank and single out

1 Wendy Phillips who has been so great in helping us with
2 that issue. You know, it's not been an issue with
3 quiet residents. Quite concerned about it. She's
4 helped very much pull us through that, and we're making
5 progress.

6 Thank you for allowing me to speak.

7 CHAIRPERSON DIAMOND: Thank you for that. We
8 appreciate all the comments.

9 Now we're going to go on to the discharger
10 presentation in the order that I have. We'll begin
11 with supervisor Kathy -- oh, who is going to do the
12 presentation for the dischargers?

13 Okay. Sorry. Come on up. I was moving to
14 the Public Comments.

15 MR. MAGUIN: Chair Diamond and Members of the
16 Board, my name is Steve Maguin. I'm the chief engineer
17 and general manager of the Sanitation Districts of Los
18 Angeles County, and I'm here today as the chief
19 engineer of the Santa Clarita Valley Sanitation
20 District which is the agency that owns and operates the
21 two water reclamation plants that serve the Santa
22 Clarita Valley and discharge to the Santa Clara River.

23 My purpose for being here, and I'm extremely
24 happy to say this, is to give unequivocal support to
25 the recommendation of your staff on this item.

1 Let me give you just a couple minutes of
2 background. We have 15 minutes, and you're going to
3 hear a more extensive presentation from my associate,
4 Phil Friess. I just wanted to give you a little bit of
5 background context for this.

6 As Mr. Unger said, it's a long process to
7 develop the current TMDL that just became effective in
8 2005. Even before it became effective, we did embark
9 on a number of programs aimed towards compliance and
10 resolution of the chloride issue.

11 First, we embarked on and completed all of the
12 studies that were required in the TMDL your Board
13 adopted. And I think Mr. Unger gave you some -- a feel
14 for just how extensive and difficult those were.

15 Second, we are still involved in a three-phase
16 program to eliminate the single largest controlled
17 source of chloride to our system, automatic water
18 softeners that are recharged with salt and discharge
19 very salty brine to the sewer system.

20 We sponsored -- and not without difficulty,
21 and not that we were successful the first time -- but
22 we sponsored legislation to get the authority in 2003
23 to prohibit new automatic water softeners in our
24 service area.

25 We implemented a program of both public

1 education and an incentive program, a buyback program,
2 to encourage folks to voluntarily get rid of their
3 water softeners.

4 Those two programs to date have gotten more
5 than half of the water softeners in the valley out.
6 We're down to less than 3,000 from a high of between 6-
7 and 7,000. Very successful program.

8 And as Mr. Unger mentioned, we're very pleased
9 that last month Proposition S on the ballot that was
10 sponsored by the Santa Clarita Valley Sanitation
11 District had a very large aye vote.

12 It will become effective January 1st. It will
13 give our board of directors the authority to order the
14 removal of existing water softeners in the valley.

15 But note, since that election, the number of
16 voluntary removals has peaked. We're now getting about
17 a hundred a week.

18 (Laughter)

19 MR. MAGUIN: That's what happens. The
20 incentive drops when there's a mandate. So it's more
21 valuable to volunteer today than it will be next month.

22 We also, about the time of your TMDL, began
23 the evaluation of how we comply with the Board's order.
24 We defined two different projects that could achieve
25 compliance.

1 One, Mr. Unger mentioned, was the installation
2 of large scale desalination to desalt the WRP effluent.

3 The other was to minimize flow to the river to
4 as small a flow as possible and waste the rest of the
5 water to the Pacific Ocean, and thus avoid the TMDL and
6 avoid the discharge of chloride to the river.

7 Both those options had tremendous negatives
8 associated with them. Let me just list some of them.

9 They either -- they wasted some or most of the
10 very valuable recycled water resource, something that
11 we shouldn't allow.

12 Both required substantial new quantities of
13 electricity.

14 Both created substantial new carbon
15 footprints.

16 And both diverted or would likely divert the
17 bulk of the reclaimed water from the downstream
18 agricultural users, all bad ramifications of the
19 projects identified to comply.

20 That was the origin of what became the
21 stakeholder process, a very long, very challenging
22 process involving all the interests, the water
23 interests, in the Santa Clarita Valley, the water
24 interests in Ventura County, and most importantly the
25 agricultural interests in Ventura County, your staff,

1 and our staff.

2 The proposal before you today is the result
3 and culmination of that stakeholder process. And I'm
4 just going to give you the qualitative benefits as
5 opposed to the negatives of what would have to have
6 been done without the proposed action today.

7 It will result in greater, not less, flow of
8 water to the downstream agricultural users in Ventura
9 County.

10 It will help reduce chloride in a very high
11 chloride groundwater basin, the Piru Basin.

12 It will reduce or help reduce saltwater
13 intrusion in the Oxnard Plain.

14 It will operate a substantially lower new
15 electrical requirement and have a very much smaller
16 carbon footprint than projects earlier described.

17 In a nutshell, I think this has been a
18 difficult process with an extremely good outcome.
19 Again, it's going to be all the components, very
20 complex -- and I'll let Phil who is much more
21 technically competent describe them to you.

22 But in an overview, I think we have developed
23 something very, very good. You're going to hear a lot
24 of people support it because it has a bright -- a lot
25 of very good ramifications.

1 Thank you. And with that, I'm going to
2 introduce Mr. Phil Friess who is head of our technical
3 services department and who has been our lead in this
4 entire stakeholder process to define this project.

5 CHAIRPERSON DIAMOND: Thank you very much.

6 MR. MAGUIN: That you Madam Chair.

7 MR. FRIESS: Chair Diamond, Members of the
8 Board. Again, my name is Phil Friess, tech services
9 department head for the Sanitation Districts.

10 I'm very happy to be here today to describe
11 the recommended Alternative Water Resources Management
12 TMDL compliance option, the MOU among the watershed
13 stakeholders, and the commitments that have been made
14 by the stakeholders should you adopt conditional
15 site-specific objectives to support implementation of
16 this Alternative Water Resources Management compliance
17 plan.

18 On this slide, very similar to the slide that
19 Sam Unger showed. On the right-hand side is the City
20 of Santa Clarita, our two water reclamation plants, the
21 discharge to the Santa Clara River, the Saugus and
22 Valencia Water Reclamation Plants, the Los
23 Angeles/Ventura County line.

24 Just over the county line is Camulos Ranch
25 which is a large agricultural operation, surface

1 diverting agricultural operation, that includes
2 salt-sensitive agriculture, avocados and strawberries
3 among the crops that they grow.

4 Camulos Ranch overlies the east Piru Basin
5 groundwater basin, and downstream to the west is the
6 City of Fillmore.

7 The alternative water resources management
8 compliance option is a watershed-based solution that
9 incorporates five major elements.

10 The first of those elements, as Steve alluded
11 to, is to reduce the levels of chloride in the effluent
12 from the treatment plants by removing all the remaining
13 self-regenerating water softeners in the surface area
14 for the two plants. And we hope to reduce the chloride
15 level in the effluent by 25 milligrams per liter by
16 that action.

17 And in converting the current bleached-based
18 disinfection systems at the two plants to an
19 ultraviolet system, with that action, we hope to reduce
20 the chloride level another 8 milligrams per liter.

21 The second element of the AWRM option is to
22 implement a 3 million gallon per day microfiltration
23 reverse osmosis advance treatment upgrade at the
24 Valencia Water Reclamation Plant.

25 The brine waste produced by this process would

1 be disposed of locally, in Los Angeles County, through
2 deep well injection.

3 The desalinated recycled water produced by
4 this process would be used first to achieve water
5 quality objectives by blending with the discharge from
6 the Valencia plant by co-discharging with the tertiary
7 effluent to the Santa Clara River, also be used as a
8 first priority to protect beneficial uses.

9 When those objectives have been achieved,
10 desalinated recycled water which is left over will be
11 used to achieve and maintain the salt balance in the
12 watershed, the East Piru Groundwater Basin as the point
13 of action, and to provide a water supply benefit.

14 The third element of the AWRM program is the
15 implementation of salt management facilities in Ventura
16 County. Those consist of a large new extraction well
17 field in the East Piru Groundwater Basin and the
18 pipelines that you see in yellow and orange.

19 When the desalinated recycled water is not
20 needed for compliance with water quality objectives, it
21 will be delivered down the yellow pipeline to the
22 extraction well field where it can be blended with high
23 chloride East Piru Groundwater.

24 The blend will have a chloride concentration
25 of less than 100 milligrams per liter, and it can be

1 discharged through the orange pipeline downstream of
2 the dry gap of the Santa Clara River.

3 This ability to extract, blend, and discharge
4 not only exports salt from the East Piru Basin, it also
5 creates a water supply benefit that will increase yield
6 at Freeman Diversion and, as you've heard, reduce the
7 need for groundwater pumping on the Oxnard Plain and
8 reduce seawater intrusion on the Oxnard Plain.

9 It's because of these benefits that the
10 Ventura County stakeholders, who previously opposed any
11 relaxation in water quality standards, now support the
12 conditional site-specific objectives and the AWRM plan.

13 The fourth element to AWRM the plan is to use
14 supplemental dilution water to lower levels of chloride
15 in the river, both before or after implementation of
16 the AWRM infrastructure.

17 After implementation of the AWRM
18 infrastructure, the use of supplemental dilution water
19 will allow us to meet water quality objectives when
20 State Water Project chloride levels are very high
21 without constructing large-scale desalination
22 facilities.

23 The source for this supplemental dilution
24 water is proposed to be low chloride Saugus aquifer
25 groundwater, local groundwater.

1 The last major element of the AWRM plan is to
2 provide an alternative water supply to Camulos Ranch
3 whenever the surface water quality does not support
4 Camulos' salt-sensitive agricultural operations.

5 Again, when State Water Project water chloride
6 levels are high, the chloride levels in the river can
7 be driven to above 117 milligrams per liter. That's
8 the level that's needed to protect the avocados and
9 strawberries that Camulos grows.

10 So whenever the surface water is above 117, we
11 would provide an alternative source of water of
12 sufficient quality to fully protect that use. The
13 proposed source for that alternative water is a blend
14 of desalinated recycled water from the desalination
15 facility, Valencia Water Reclamation Plant, blended
16 with local groundwater or diverted surface water.

17 This slide contrasts the energy and water
18 resources impacts of large scale reverse osmosis and
19 AWRM planning.

20 The large scale reverse osmosis upgrades would
21 essentially double electrical consumption in Saugus and
22 Valencia Water Reclamation Plants and substantially
23 reduce flows to the river, as Steve pointed out.

24 Due to brine losses and due to projected
25 demand to that desalinated, recycled water to augment

1 water supplies in Los Angeles County, it's projected
2 that the large scale RO upgrade would eventually reduce
3 flows to the river by about 71 percent.

4 And that level of discharge to the river would
5 not only adversely impact water quantity in the river
6 of Ventura County during drought conditions, it would
7 also seriously impact water quality.

8 In contrast, the AWRM option increases
9 electrical consumption to plants by only 15 percent and
10 wastes very, very little water as brine, essentially
11 maintaining current flow levels to the river.

12 This slide shows that the AWRM facilities will
13 be very effective tools with which to manage salts in
14 the Santa Clara watershed. The existing water quality
15 objective of 100 would allow a certain amount of salt
16 loading to the river. The projected annual average
17 amount above that that would be associated with AWRM
18 discharge would be 325 tons a year, so the difference
19 between a hundred and the site-specific objectives
20 would result in an estimated 325 tons a year of
21 additional salt loading.

22 But the amount of chloride that can be
23 exported by the extraction wells at East Piru is about
24 2,000 tons per year, and the amount of chloride loading
25 that can be prevented by preventing seawater intrusion

1 is about 6,000 tons a year. So the additional salt
2 loading associated with this project is much more than
3 overcome by the salt export capability and seawater
4 intrusion prevention capability of the project.

5 On October 23rd of this year, a group of the
6 key stakeholders in the watershed executed a Memorandum
7 of Understanding to implement the Alternative Water
8 Resources Management solution.

9 The commitments are summarized in this slide.
10 As the discharger seeking site-specific objectives,
11 obviously the Santa Clarita Valley Sanitation District
12 is going to fund the AWRM elements, including source
13 control, the facility upgrades, the Ventura County salt
14 management facilities, purchase of supplemental water
15 provision of alternative water supply to Camulos Ranch.

16 In addition, we will financially incentivize
17 additional water -- is that my time?

18 We will financially incentivize additional
19 water recycling in the Santa Clarita area and co-fund
20 with United Water Conservation District extension of
21 that groundwater surface water interaction model out to
22 Freeman Diversion so it can be used to model impacts in
23 the Fillmore and Santa Paula areas.

24 The Santa Clarita Valley area water purveyors
25 and United Water Conservation District have agreed to,

1 on behalf of Santa Clarita Valley Sanitation District,
2 purchase imported water and transfer it to replace
3 Saugus aquifer groundwater that's delivered to this
4 project as supplemental dilution water.

5 They've also agreed to support site-specific
6 objectives and AWRM implementation.

7 It should be noted that United Water
8 Conservation District's mission is to manage the water
9 resources to the maximum benefit of all the
10 stakeholders in Ventura County, and they will
11 incorporate AWRM operations into their effort to carry
12 out that mission.

13 CHAIRPERSON DIAMOND: I don't want to
14 interrupt you. I just want to know if you're coming
15 toward the close because we are trying to keep to a
16 timeline this morning so that we have enough time for
17 Board questions.

18 MR. FRIESS: Yes, ma'am. One or two minutes
19 at the most.

20 CHAIRPERSON DIAMOND: Okay. Thank you.

21 MR. FRIESS: Thank you.

22 And last, Ventura County Agricultural Water
23 Quality Coalition, which represents farming interests
24 throughout Ventura County, will agree to support the
25 SSOs and AWRM implementation.

1 Last slide.

2 There's important works still to be done to
3 actually implement this solution.

4 During 2009, the district will work to reach
5 agreement with the water purveyors for provision of
6 supplemental dilution water.

7 We will work with Camulos Ranch to address
8 their concerns and to reach agreement with them on
9 provision of alternative water supply to Camulos.

10 United will have to work with Camulos to reach
11 agreement on construction and operation of those
12 extraction wells.

13 We will -- also during 2009, we will extend
14 our groundwater surface water interaction model to
15 address stakeholder concerns over water levels and
16 water quality in the Piru, Fillmore, and Santa Paula
17 Basins and to identify any measures needed to control
18 and mitigate any adverse impacts.

19 2009 to 2011, pursuant to state law
20 requirements, we will develop the facilities, plans,
21 and environmental documents.

22 2011 to 2015, will be design and construction
23 of facilities, completion in May of 2015, one year
24 ahead of the current TMDL implementation schedule.

25 But in closing, we think the AWRM will improve

1 surface water and groundwater quality, conserve water
2 and electricity, and it will protect all beneficial
3 uses. It's the only option that can increase yield at
4 Freeman and reduce seawater intrusion. We think it
5 does the best overall job, and we hope you'll adopt
6 site-specific objectives to support it.

7 And last, I'd just like to recognize the hard
8 work of your staff, their openness, their willingness
9 to consider recommending this option. They met with us
10 almost every Friday for the last 18 months, and we
11 truly appreciate their efforts.

12 CHAIRPERSON DIAMOND: Thank you. As do we.

13 I'm going to ask United Water Conservation
14 District, and you will also have 15 minutes. This is a
15 15-minute presentation, I understand.

16 DR. BACHMAN: Actually a little less than
17 that.

18 CHAIRPERSON DIAMOND: Great.

19 (Laughter)

20 MR. BACHMAN: I'm still surprised I'm standing
21 here and agreeing with anything that has happened with
22 the County Sanitation Districts.

23 As many of you who are Board Members and have
24 been here for a while know, this has been very
25 contentious for a long time; and over the last two or

<http://www.waterboards.ca.gov/losangeles/>

ORDER NO. R4-2009-0074
NPDES NO. CA0054216

**WASTE DISCHARGE REQUIREMENTS
 FOR THE SANTA CLARITA VALLEY SANITATION DISTRICT OF LOS ANGELES COUNTY,
 VALENCIA WATER RECLAMATION PLANT
 DISCHARGE TO SANTA CLARA RIVER**

The following Discharger is subject to waste discharge requirements as set forth in this Order:

Table 1. Discharger Information

Discharger	Santa Clarita Valley Sanitation District of Los Angeles County
Name of Facility	Valencia Water Reclamation Plant
Facility Address	28185 The Old Road
	Santa Clarita, CA 91355
	Los Angeles County
The U.S. Environmental Protection Agency (USEPA) and the Regional Water Quality Control Board (Regional Water Board) have classified this discharge as a major discharge.	

The discharge by the Santa Clarita Valley Sanitation District of Los Angeles County from the discharge points identified below is subject to waste discharge requirements as set forth in this Order:

Table 2. Discharge Location

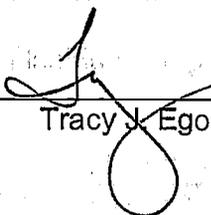

Discharge Point	Effluent Description	Discharge Point Latitude	Discharge Point Longitude	Receiving Water
001	Tertiary treated effluent	34 °, 25', 49.6" N	118°, 35',33.37" W	Santa Clara River
002	Tertiary treated effluent	34 °, 25', 48.27" N	118°, 35',31.95" W	Santa Clara River

February 25, 2009
 Revised: 04/07/09, 4/20/09, 5/14/09, and 6/4/09

Table 3. Administrative Information

This Order was adopted by the Regional Water Board on:	June 4, 2009
This Order shall become effective on:	July 24, 2009
This Order shall expire on:	May 10, 2014
The Discharger shall file a Report of Waste Discharge in accordance with title 23, California Code of Regulations, as application for issuance of new waste discharge requirements no later than:	180 days prior to the Order expiration date (Title 40, Code of Federal Regulations, part 122.21(d))

I, Tracy J. Egoscue, Executive Officer, do hereby certify that this Order with all attachments is a full, true, and correct copy of an Order adopted by the California Regional Water Board, Los Angeles Region, on June 4, 2009.

Tracy J. Egoscue, Executive Officer

Santa Clarita Valley Sanitation District of Los Angeles County
 Valencia Water Reclamation Plant

ORDER NO. R4-2009-0074
 NPDES NO. CA0054216

IV. EFFLUENT LIMITATIONS AND DISCHARGE SPECIFICATIONS

A. Effluent Limitations – Discharge Points 001 and 002

1. Final Effluent Limitations – Discharge Points 001 and 002

- a. The Discharger shall maintain compliance with the following effluent limitations at Discharge Points 001 and 002 into Santa Clara River, with compliance measured at Monitoring Locations EFF001 and EFF002, respectively, as described in the attached Monitoring and Reporting Program:

Table 6. Effluent Limitations

Parameter	Units	Effluent Limitations				
		Average Monthly	Ave. Weekly	Maximum Daily	Instant. Minimum	Instant. Maximum
Biochemical Oxygen Demand 5-day @ 20°C	mg/L	20	30	45	--	--
	lbs/day ¹	3600	5400	8100	--	--
Total Suspended Solids	mg/L	15	40	45	--	--
	lbs/day ¹	2700	7200	8100	--	--
pH	standard units	--	--	--	6.5	8.5
Settleable Solids	ml/L	0.1	--	0.3	--	--
Oil and grease	mg/L	10	--	15	--	--
	lbs/day ¹	1800	--	2700	--	--
Total Residual Chlorine	mg/L	--	--	0.1	--	--
Total dissolved solids (TDS)	mg/L	1,000	--	--	--	--
	lbs/day ¹	180,000	--	--	--	--
Sulfate	mg/L	400	--	--	--	--
	lbs/day ¹	72,000	--	--	--	--
Boron	mg/L	1.5	--	--	--	--
	lbs/day ¹	270	--	--	--	--
MBAS	mg/L	0.5	--	--	--	--
	lbs/day ¹	90	--	--	--	--

¹ The mass emission rates are based on the plant design flow rate of 21.6 MGD, and are calculated as follows: Flow(MGD) x Concentration (mg/L) x 8.34 (conversion factor) = lbs/day. During wet-weather storm events in which the flow exceeds the design capacity, the mass discharge rate limitations shall not apply, and concentration limitations will provide the only applicable effluent limitations.

Santa Clarita Valley Sanitation District of Los Angeles County
Valencia Water Reclamation Plant

ORDER NO. R4-2009-0074
NPDES NO. CA0054216

Parameter	Units	Effluent Limitations				
		Average Monthly	Ave. Weekly	Maximum Daily	Instant. Minimum	Instant. Maximum
Chloride	mg/L	--	--	100 ²	--	--
Ammonia Nitrogen (NH ₃ -N)	mg/L	1.75 ³	--	5.2 ³	--	--

	lbs/day	14	--	--	--	--

b. Percent Removal: The average monthly percent removal of BOD 5-day 20°C and total suspended solids shall not be less than 85 percent.

² This limitation is derived from the waste load allocation for chloride, as set forth in the *Chloride TMDL for the Upper Santa Clara River*, Resolution No. 004-004, Revision of interim waste load allocations and implementation plan for chloride in the Amendment to the Water Quality Control Plan for the Los Angeles Region to include a TMDL for Chloride in the Upper Santa Clara River (Resolution No. 03-008), adopted by the Regional Water Board on May 6, 2004. This effluent limitation is superceded by the interim effluent limit for chloride, based upon the interim waste load allocation, shown in Table 7 of this NPDES Order. According to Resolution No. R4-2006-016, *Amendment to the Water Quality Control Plan for the Los Angeles Region through revision of the Implementation Plan for the Upper Santa Clara River Chloride TMDL*, which proposed to shorten the compliance period by two years, the WLA-based final effluent limit for chloride shall become operative 11 years after the effective date of the Upper Santa Clara River Chloride TMDL.

³ This limitation is derived from the final waste load allocation, as set forth in Resolution No. 03-011, *Amendment to the Water Quality Control Plan for the Los Angeles Region to include a TMDL for Nitrogen Compounds in the Santa Clara River*, adopted by the Regional Water Board on August 7, 2003. The TMDL Implementation section specifies that the Waste Load Allocation shall become operative after the completion of additional treatment or modifications to achieve WLAs by POTWs, in as short a period of time as possible, but no later than eight years after the effective date of the TMDL (before March 23, 2012). At the Regional Water Board's discretion, interim limits based upon the interim waste load allocations, were allowed for a period not to exceed five years from the effective date of the TMDL. Since the Valencia WRP has completed its nitrification/denitrification upgrades, this effluent limitation is in effect.

⁴ Total trihalomethanes is the sum of concentrations of the trihalomethane compounds: bromodichloromethane, bromoform, chloroform, and dibromochloromethane. This limit is based on the Basin Plan WQO incorporation of MCLs by reference.

- c. The temperature of wastes discharged shall not exceed 86 °F except as a result of external ambient temperature.
- d. The radioactivity of the wastes discharged shall not exceed the limits specified in Title 22, Chapter 15, Article 5, Section 64443, of the California Code of Regulations (CCR), or subsequent revisions.
- e. The wastes discharged to water courses shall at all times be adequately disinfected. For the purpose of this requirement, the wastes shall be considered adequately disinfected if: 1) the median number of total coliform bacteria measured in the disinfected effluent does not exceed an MPN or CFU of 2.2 per 100 milliliters utilizing the bacteriological results of the last seven days for which analyses have been completed; 2) the number of total coliform organisms does not exceed an MPN or CFU of 23 per 100 milliliters in more than one sample in any 30-day period; and, 3) no sample exceeds 240 MPN or CFU of total coliform bacteria per 100 milliliters. Samples shall be collected at a time when wastewater flow and characteristics are most demanding on treatment facilities and the disinfection processes.
- f. For the protection of the water contact recreation beneficial use, the wastes discharged to water courses shall have received adequate treatment, so that the turbidity of the treated wastewater does not exceed: (a) an average of 2 Nephelometric turbidity units (NTUs) within a 24 hour period; (b) 5 NTUs more than 5 percent of the time (72 minutes) during any 24 hour period; and (c) 10 NTUs at any time.
- g. To protect underlying ground water basins, pollutants shall not be present in the wastes discharged at concentrations that pose a threat to ground water quality.
- h. Acute Toxicity Limitation and Effluent Requirements:
 - i. The acute toxicity of the effluent shall be such that:
 - (a) The average survival in the undiluted effluent for any three (3) consecutive 96-hour static renewal bioassay tests shall be at least 90%, and
 - (b) No single test produces less than 70% survival.
 - ii. If either of the above requirements (h)(i)(a) or (h)(i)(b) is not met, the Discharger shall conduct six additional tests over a twelve-week period. The Discharger shall ensure that they receive results of a failing acute toxicity test within 24 hours of the completion of the test and the additional tests shall begin within 5 business days of the receipt of the result. If the additional tests indicate compliance with acute toxicity limitation, the Discharger may resume testing at the regular frequency as specified in the monitoring and reporting program. However, if the results of any two of the six accelerated tests are less than 90% survival, then the Discharger shall begin a Toxicity

Identification Evaluation (TIE). The TIE shall include all reasonable steps to identify the sources of toxicity. Once the sources are identified, the Discharger shall take all reasonable steps to reduce toxicity to meet the limits.

- iii. If the initial test and any of the additional six acute toxicity bioassay tests result in less than 70 % survival, the Discharger shall immediately implement the Initial Investigation Toxicity Reduction Evaluation (TRE) Workplan described later in this section.
- iv. The Discharger shall conduct acute toxicity monitoring as specified in Attachment E - Monitoring and Reporting Program (MRP).

i. Chronic Toxicity Trigger and Requirements:

- i. The chronic toxicity of the effluent shall be expressed and reported in toxic units, where:

$$TU_c = \frac{100}{NOEC}$$

The No Observable Effect Concentration (NOEC) is expressed as the maximum percent effluent concentration that causes no observable effect on test organisms, as determined by the results of a critical life stage toxicity test.

- ii. There shall be no chronic toxicity in the effluent discharge.
- iii. If the chronic toxicity of the effluent exceeds the 1.0 TU_c monthly median trigger, the Discharger shall immediately implement accelerated chronic toxicity testing according to Attachment E –MRP, Section V.B.3. If any three out of the initial test and the six accelerated test results exceed 1.0 TU_c, the Discharger shall initiate a TIE and implement the Initial Investigation TRE Workplan, as specified in Attachment E – MRP, Sections V.D and V.E.
- iv. The Discharger shall conduct chronic toxicity monitoring as specified in Attachment E – MRP.

2. Interim Effluent Limitations

- a. Consistent with the Santa Clara River Watershed Chloride TMDL, during the period beginning July 24, 2009 (permit effective date) and ending on May 10, 2014⁵ (permit expiration date), the Discharger shall maintain compliance with the

⁵ Should this NPDES permit be administratively extended, beyond the May 10, 2014 expiration date, then the chloride compliance date shall also be administratively extended, but not beyond the compliance date established in the Upper Santa Clara River Chloride TMDL.

following interim effluent limitation in Table 7 of this NPDES Order, at Discharge Points 001 and 002 compliance measured at Monitoring Location EFF-001 and EFF-002, as described in the attached MRP. This interim effluent limitation shall apply in lieu of the corresponding final effluent limitations, until the final effluent limitation becomes operative as delineated in Footnote 2 of Table 6, for the same parameter during the time period indicated in this provision.

Table 7. Interim Effluent Limitations

Parameter	Units	Effluent Limitations

 Valencia Water Reclamation Plant

ORDER NO. R4-2009-0074
 NPDES NO. CA0054216

Attachment K
 TMDL-Related Tasks

Task No. ¹	Implementation Action and Required Submission from the Upper Santa Clara River Chloride TMDL (Resolution No. R4-2008-012)	Completion Date ²
11 ³	Trend monitoring: The SCVSD will submit a monitoring plan to conduct chloride, TDS, and sulfate trend monitoring to ensure that the goal of chloride export in the watershed is being achieved, water quality objectives are being met, and downstream groundwater and surface water quality is not degraded due to implementation of compliance measures. The SCVSD monitoring plan shall include plans to monitor chloride, TDS, and sulfate in groundwater and identify representative wells to be approved by the Regional Board Executive Officer, in the following locations: (a) Shallow alluvium layer in east Piru Basin, (b) San Pedro Formation in east Piru Basin, and (c) groundwater basins under Reaches 5 and 6, which shall be equivalent or greater than existing groundwater monitoring required by NPDES permits for Saugus and Valencia WRPs. The monitoring plan shall also include a plan for chloride, TDS, and sulfate trend monitoring for surface water for Reaches 4B, 5 and 6. The monitoring plan shall include plans to monitor chloride, TDS, and sulfate at a minimum of once per quarter for groundwater and at a minimum of once per month for surface water. The plan should propose a monitoring schedule that extends beyond the completion date of this TMDL to evaluate impacts of compliance measures to downstream groundwater and surface water quality. This TMDL shall be reconsidered if chloride, TDS, and sulfate trend monitoring indicates degradation of groundwater or surface water due to implementation of compliance measures.	4 years after Effective Date of TMDL (05/04/2009)
12 ³	Trend monitoring: The Reach 4A Permittee will submit a monitoring plan to conduct chloride, TDS, and sulfate trend monitoring to ensure that the goal of chloride export in the watershed is	Submitted with permit application

¹ The annual report shall include a statement verifying which of the applicable TMDL tasks, included in Attachment K, have been completed.

² The dates may be modified by the Regional Board for just cause.

³ This Task was not included in Resolution No. 2006-016. The task was added when Resolution No. R4-2008-012 was adopted by the Regional Board on December 11, 2008. If Resolution No. R4-2008-012 does not go into effect, then the Discharger does not have to complete this task.

 NPDES NO. CA0054216

Task No. ¹	Implementation Action and Required Submission from the Upper Santa Clara River Chloride TMDL (Resolution No. R4-2008-012)	Completion Date ²
	conditional WLAs for chloride in Reaches 4B, 5, and 6 shall apply by May 5, 2015. The Regional Board may consider extending the completion date of this task as necessary to account for events beyond the control of the SCVSD.	TMDL (05/04/2015)
21 ³	The interim WLAs for TDS and sulfate contained in this BPA (Resolution No. R4-2008-012) shall be implemented no sooner than the effective date of this BPA, and shall remain in effect until May 4, 2015. Final WLAs shall apply by May 5, 2015 unless conditional SSOs and final conditional WLAs for TDS and sulfate are adopted as described in Task 19.	10 years after Effective Date of TMDL (05/04/2015)

⁵ This Task was similar to Task 14 in Resolution No. 2006-016. However, it was modified when Resolution No. R4-2008-012 was adopted by the Regional Board on December 11, 2008. If Resolution No. R4-2008-012 does not go into effect, the Discharger would have to complete Task 14 of Resolution No. 2006-016, instead of Task 20 of Resolution No. R4-2008-012.

ORDER NO. R4-2009-0075
NPDES NO. CA0054313

**WASTE DISCHARGE REQUIREMENTS
 FOR THE SANTA CLARITA VALLEY SANITATION DISTRICT OF LOS ANGELES COUNTY,
 SAUGUS WATER RECLAMATION PLANT
 DISCHARGE TO SANTA CLARA RIVER**

The following Discharger is subject to waste discharge requirements as set forth in this Order:

Table 1. Discharger Information

Discharger	Santa Clarita Valley Sanitation District of Los Angeles County
Name of Facility	Saugus Water Reclamation Plant
Facility Address	26200 Springbrook Avenue
	Santa Clarita, CA 91350
	Los Angeles County
The U.S. Environmental Protection Agency (USEPA) and the Regional Water Quality Control Board have classified this discharge as a major discharge.	

The discharge by the Santa Clarita Valley Sanitation District of Los Angeles County from the discharge point identified below is subject to waste discharge requirements as set forth in this Order:

Table 2. Discharge Location

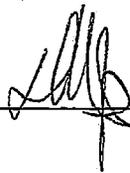

Discharge Point	Effluent Description	Discharge Point Latitude	Discharge Point Longitude	Receiving Water
001	Tertiary treated effluent	34°25'23" N	-118°32'24" W	Santa Clara River

Table 3. Administrative Information

This Order was adopted by the Regional Water Quality Control Board on:	June 4, 2009
This Order shall become effective on:	July 24, 2009
This Order shall expire on:	May 10, 2014
The Discharger shall file a Report of Waste Discharge in accordance with title 23, California Code of Regulations, as application for issuance of new waste discharge requirements no later than:	180 days prior to the Order expiration date (Title 40, Code of Federal Regulations, part 122.21(d))

Adopted: June 4, 2009

I, Tracy J. Egoscue, Executive Officer, do hereby certify that this Order with all attachments is a full, true, and correct copy of an Order adopted by the California Regional Water Quality Control Board, Los Angeles Region, on June 4, 2009.

Chief Deputy ED
Tracy J. Egoscue, Executive Officer
fe-

Adopted: June 4, 2009

IV. EFFLUENT LIMITATIONS AND DISCHARGE SPECIFICATIONS

A. Effluent Limitations – Discharge Point 001

1. Final Effluent Limitations – Discharge Point 001

- a. The Discharger shall maintain compliance with the following effluent limitations at Discharge Point 001 into Santa Clara River, with compliance measured at Monitoring Location EFF001, as described in the attached Monitoring and Reporting Program:

Table 6. Effluent Limitations

Parameter	Units	Effluent Limitations				
		Average Monthly	Ave. Weekly	Maximum Daily	Instant. Minimum	Instant. Maximum
Biochemical Oxygen Demand 5-day @ 20°C	mg/L	20	30	45	--	--
	lbs/day ¹	1080	1630	2440	--	--
Total Suspended Solids	mg/L	15	40	45	--	--
	lbs/day ¹	810	2170	2440	--	--
pH	standard units	--	--	--	6.5	8.5
Settleable Solids	ml/L	0.1	--	0.3	--	--
Oil and grease	mg/L	10	--	15	--	--
	lbs/day ¹	540	--	810	--	--
Total Residual Chlorine	mg/L	--	--	0.1	--	--
Total dissolved solids (TDS)	mg/L	1,000	--	--	--	--
	lbs/day ¹	54,210	--	--	--	--
Sulfate	mg/L	300	--	--	--	--
	lbs/day ¹	16,260	--	--	--	--
Chloride	mg/L	--	--	100 ²	--	--

¹ The mass emission rates are based on the plant design flow rate of 6.5 MGD, and are calculated as follows: Flow(MGD) x Concentration (mg/L) x 8.34 (conversion factor) = lbs/day. During wet-weather storm events in which the flow exceeds the design capacity, the mass discharge rate limitations shall not apply, and concentration limitations will provide the only applicable effluent limitations.

² This limitation is derived from the waste load allocation for chloride, as set forth in the *Chloride TMDL for the Upper Santa Clara River*, Resolution No. 004-004, Revision of interim waste load allocations and implementation plan for chloride in the Amendment to the Water Quality Control Plan for the Los Angeles Region to include a TMDL for Chloride in the Upper Santa Clara River (Resolution No. 03-008), adopted by the Regional Board on May 6, 2004. This effluent limitation is superseded by the interim effluent limit for chloride, based upon the interim waste load allocation, shown in Table 7 of this NPDES Order. According to Resolution No. R4-2006-016, *Amendment to the Water Quality Control Plan for the Los Angeles Region through revision of the Implementation Plan for the Upper Santa Clara River Chloride TMDL*, which proposed to shorten the compliance period by two years, the WLA-based final effluent limit for chloride shall become operative 11 years after the effective date of the Upper Santa Clara River Chloride TMDL.

	lbs/day ¹	0.33	--	--	--	--
Total Trihalomethanes ⁴	µg/L	80	--	--	--	--
	lbs/day ¹	4.34	--	--	--	--

b. **Percent Removal:** The average monthly percent removal of BOD 5-day 20°C and total suspended solids shall not be less than 85 percent.

c. The temperature of wastes discharged shall not exceed 86°F except as a result of external ambient temperature.

³ This limitation is derived from the final waste load allocation, as set forth in Resolution No. 03-011, *Amendment to the Water Quality Control Plan for the Los Angeles Region to include a TMDL for Nitrogen Compounds in the Santa Clara River*, adopted by the Regional Board on August 7, 2003. The TMDL Implementation section specifies that the Waste Load Allocation shall become operative after the completion of additional treatment or modifications to achieve WLAs by POTWs, in as short a period of time as possible, but no later than eight years after the effective date of the TMDL (before March 23, 2012). At the Regional Board's discretion, interim limits based upon the interim waste load allocations, were allowed for a period not to exceed five years from the effective date of the TMDL. Since Saugus WRP has completed its nitrification/denitrification upgrades, this effluent limitation is in effect.

⁴ Total trihalomethanes is the sum of concentrations of the trihalomethane compounds: bromodichloromethane, bromoform, chloroform, and dibromochloromethane. This limit is based on the Basin Plan WQO incorporation of MCLs by reference.

- d. The radioactivity of the wastes discharged shall not exceed the limits specified in Title 22, Chapter 15, Article 5, Section 64443, of the California Code of Regulations (CCR), or subsequent revisions.
- e. The wastes discharged to water courses shall at all times be adequately disinfected. For the purpose of this requirement, the wastes shall be considered adequately disinfected if: 1) the median number of total coliform bacteria measured in the disinfected effluent does not exceed an MPN or CFU of 2.2 per 100 milliliters utilizing the bacteriological results of the last seven days for which analyses have been completed; 2) the number of total coliform bacteria does not exceed an MPN or CFU of 23 per 100 milliliters in more than one sample in any 30-day period; and 3) no sample exceeds 240 MPN or CFU of total coliform bacteria per 100 milliliters. Samples shall be collected at a time when wastewater flow and characteristics are most demanding on treatment facilities and the disinfection processes.
- f. For the protection of the water contact recreation beneficial use, the wastes discharged to water courses shall have received adequate treatment, so that the turbidity of the treated wastewater does not exceed: (a) an average of 2 Nephelometric turbidity units (NTUs) within a 24 hour period; (b) 5 NTUs more than 5 percent of the time (72 minutes) during any 24 hour period; and (c) 10 NTUs at any time.
- g. To protect underlying ground water basins, pollutants shall not be present in the wastes discharged at concentrations that pose a threat to ground water quality.
- h. Acute Toxicity Limitation and Effluent Requirements:
 - i. The acute toxicity of the effluent shall be such that:
 - (a) The average survival in the undiluted effluent for any three (3) consecutive 96-hour static renewal bioassay tests shall be at least 90%, and
 - (b) No single test produces less than 70% survival.
 - ii. If either of the above requirements (h)(i)(a) or (h)(i)(b) is not met, the Discharger shall conduct six additional tests over a twelve-week period. The Discharger shall ensure that they receive results of a failing acute toxicity test within 24 hours of the completion of the test and the additional tests shall begin within 5 business days of the receipt of the result. If the additional tests indicate compliance with acute toxicity limitation, the Discharger may resume testing at the regular frequency as specified in the monitoring and reporting program. However, if the results of any two of the six accelerated tests are less than 90% survival, then the Discharger shall begin a Toxicity Identification Evaluation (TIE). The TIE shall include all reasonable steps to identify the sources of toxicity. Once the sources are identified, the Discharger shall take all reasonable steps to reduce toxicity to meet the limits.

- iii. If the initial test and any of the additional six acute toxicity bioassay tests result in less than 70 % survival, the Discharger shall immediately implement the Initial Investigation Toxicity Reduction Evaluation (TRE) Workplan described later in this section.
- iv. The Discharger shall conduct acute toxicity monitoring as specified in Attachment E - Monitoring and Reporting Program (MRP).
- i. Chronic Toxicity Trigger and Requirements:
 - i. The chronic toxicity of the effluent shall be expressed and reported in toxic units, where:
$$TU_c = \frac{100}{NOEC}$$

The No Observable Effect Concentration (NOEC) is expressed as the maximum percent effluent concentration that causes no observable effect on test organisms, as determined by the results of a critical life stage toxicity test.
 - ii. There shall be no chronic toxicity in the effluent discharge.
 - iii. If the chronic toxicity of the effluent exceeds the 1.0 TU_c monthly median trigger, the Discharger shall immediately implement accelerated chronic toxicity testing according to Attachment E –MRP, Section V.B.3. If any three out of the initial test and the six accelerated test results exceed 1.0 TU_c, the Discharger shall initiate a TIE and implement the Initial Investigation TRE Workplan, as specified in Attachment E – MRP, Sections V.D and V.E.
 - iv. The Discharger shall conduct chronic toxicity monitoring as specified in Attachment E – MRP.

2. Interim Effluent Limitations

- a. Consistent with the Santa Clara River Watershed Chloride TMDL, during the period beginning July 24, 2009 (permit effective date) and ending on May 10, 2014⁵ (permit expiration date), the Discharger shall maintain compliance with the following interim effluent limitations in Table 7 of this NPDES Order, at Discharge Point 001 compliance measured at Monitoring Location EFF-001, as described in the attached MRP. This interim effluent limitation shall apply in lieu of the corresponding final effluent limitations, until the final effluent limitation becomes operative as delineated in Footnote 2 of Table 6, for the same parameter during the time period indicated in this provision.

⁵ Should this NPDES permit be administratively extended, beyond the May 10, 2014 expiration date, then the chloride compliance date shall also be administratively extended, but not beyond the compliance date established in the Upper Santa Clara River Chloride TMDL.

Table 7. Interim Effluent Limitations

Parameter	Units	Effluent Limitations			
		Average Monthly	Maximum Daily	Instantaneous Minimum	Instantaneous Maximum
Chloride	mg/L	⁶	230	--	--

C. Reclamation Specifications

Water Reclamation Requirements for Irrigation & Industrial Use. The treated effluent is also regulated under Water Reclamation Requirements (WRR) Order No. 87-49, adopted by this Regional Water Board on April 27, 1987. Currently, there is no offsite, direct reuse of the final treated effluent.

Table 9. Reclamation Discharge Specifications

Parameter	Units	Discharge Specifications		
		Average Monthly	Maximum Daily	Average Annual
N/A		--	--	--

⁶ The chloride interim limit is equal to the sum of the State Water Project treated water supply chloride concentration plus 114 mg/L, expressed as a 12-month rolling average, not to exceed a daily maximum of 230 mg/L.

Attachment K
 TMDL-Related Tasks

Task No. ¹	Implementation Action and Required Submission from the Upper Santa Clara River Chloride TMDL (Resolution No. R4-2008-012)	Completion Date ²
11 ³	<p>Trend monitoring: The SCVSD will submit a monitoring plan to conduct chloride, TDS, and sulfate trend monitoring to ensure that the goal of chloride export in the watershed is being achieved, water quality objectives are being met, and downstream groundwater and surface water quality is not degraded due to implementation of compliance measures. The SCVSD monitoring plan shall include plans to monitor chloride, TDS, and sulfate in groundwater and identify representative wells to be approved by the Regional Board Executive Officer, in the following locations: (a) Shallow alluvium layer in east Piru Basin, (b) San Pedro Formation in east Piru Basin, and (c) groundwater basins under Reaches 5 and 6, which shall be equivalent or greater than existing groundwater monitoring required by NPDES permits for Saugus and Valencia WRPs. The monitoring plan shall also include a plan for chloride, TDS, and sulfate trend monitoring for surface water for Reaches 4B, 5 and 6. The monitoring plan shall include plans to monitor chloride, TDS, and sulfate at a minimum of once per quarter for groundwater and at a minimum of once per month for surface water. The plan should propose a monitoring schedule that extends beyond the completion date of this TMDL to evaluate impacts of compliance measures to downstream groundwater and surface water quality. This TMDL shall be reconsidered if chloride, TDS, and sulfate trend monitoring indicates degradation of groundwater or surface water due to implementation of compliance measures.</p>	4 years after Effective Date of TMDL (05/04/2009)
12 ³	<p>Trend monitoring: The Reach 4A Permittee will submit a monitoring plan to conduct chloride, TDS, and sulfate trend monitoring to ensure that the goal of chloride export in the watershed is being achieved, water quality objectives are being met, and downstream groundwater and</p>	Submitted with permit application

¹ The annual report shall include a statement verifying which of the applicable TMDL tasks, included in Attachment K, have been completed.

² The dates may be modified by the Regional Board for just cause.

³ This Task was not included in Resolution No. 2006-016. The task was added when Resolution No. R4-2008-012 was adopted by the Regional Board on December 11, 2008. If Resolution No. R4-2008-012 does not go into effect, then the Discharger does not have to complete this task.

STATE WATER RESOURCES CONTROL BOARD

RESOLUTION NO. 68-16

STATEMENT OF POLICY WITH RESPECT TO
MAINTAINING HIGH QUALITY OF WATERS IN CALIFORNIA

WHEREAS the California Legislature has declared that it is the policy of the State that the granting of permits and licenses for unappropriated water and the disposal of wastes into the waters of the State shall be so regulated as to achieve highest water quality consistent with maximum benefit to the people of the State and shall be controlled so as to promote the peace, health, safety and welfare of the people of the State; and

WHEREAS water quality control policies have been and are being adopted for waters of the State; and

WHEREAS the quality of some waters of the State is higher than that established by the adopted policies and it is the intent and purpose of this Board that such higher quality shall be maintained to the maximum extent possible consistent with the declaration of the Legislature;

NOW, THEREFORE, BE IT RESOLVED:

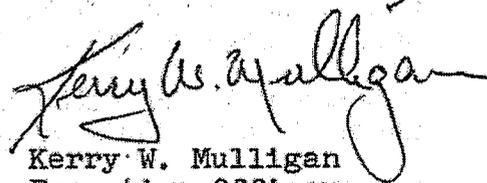

1. Whenever the existing quality of water is better than the quality established in policies as of the date on which such policies become effective, such existing high quality will be maintained until it has been demonstrated to the State that any change will be consistent with maximum benefit to the people of the State, will not unreasonably affect present and anticipated beneficial use of such water and will not result in water quality less than that prescribed in the policies.
2. Any activity which produces or may produce a waste or increased volume or concentration of waste and which discharges or proposes to discharge to existing high quality waters will be required to meet waste discharge requirements which will result in the best practicable treatment or control of the discharge necessary to assure that (a) a pollution or nuisance will not occur and (b) the highest water quality consistent with maximum benefit to the people of the State will be maintained.
3. In implementing this policy, the Secretary of the Interior will be kept advised and will be provided with such information as he will need to discharge his responsibilities under the Federal Water Pollution Control Act.

BE IT FURTHER RESOLVED that a copy of this resolution be forwarded to the Secretary of the Interior as part of California's water quality control policy submission.

CERTIFICATION

The undersigned, Executive Officer of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on October 24, 1968.

Dated: October 28, 1968

EXECUTIVE SUMMARY

This report identifies potential alternatives to achieve compliance with various water quality objectives (WQOs) within the Upper Santa Clara River (USCR) watershed and describes results of the assessment of those alternatives utilizing the numerical Groundwater/Surface Water Interaction Model (the GSWI model, or GSWIM). This work was performed as part of the Groundwater/Surface Water Interaction Model Study that is being jointly conducted by the Santa Clarita Valley Sanitation District (SCVSD, or the District) and the Los Angeles Regional Water Quality Control Board (Regional Board) as part of the USCR Chloride Total Maximum Daily Load (TMDL). This report also satisfies the requirements of Task 9 of the USCR Chloride TMDL Implementation Schedule requiring the SCVSD to develop a report on conceptual compliance measures to meet different chloride WQOs and final waste load allocations.

This report presents the potential compliance options to the chloride TMDL issues in the SCR and the results of the assessment of those alternatives, utilizing the GSWIM. The GSWI numerical model was developed by CH2M Hill and HydroGeoLogic, Inc (HGL) (2008) for a portion of the USCR watershed to evaluate fate and transport of chloride in surface water and groundwater basins underlying Reaches 4, 5, 6 and 7 (as designated by the Regional Board) of the SCR in accordance with the chloride TMDL collaborative process. The compliance alternatives evaluated as part of this effort include:

- 1) Advanced Treatment and Brine Disposal;
- 2) Minimal Advanced Treatment / Zero Discharge and Secondary Effluent Pipeline and Outfall;
- 3) Alternate Water Reclamation Plant (WRP) Discharge Location; and
- 4) Alternative Water Resource Management (AWRM)

As required in Task 9 of the Chloride TMDL process, the report evaluated these potential chloride control measures in terms of complying with existing and revised WQOs. The Advanced Treatment and Brine Disposal alternative, the Minimal Advanced Treatment / Zero Discharge and Secondary Effluent Pipeline and Outfall alternatives, and the Alternate WRP

Discharge Location alternative were evaluated for compliance with the existing WQOs. The results of this evaluation are summarized in Table E-1.

As shown on the table, none of the alternatives were predicted to achieve compliance with the 100 mg/L WQO for chloride at all times and at all locations. Because compliance with the existing WQO was not possible at all times and all locations in the SCR receiving waters, revisions to these WQOs were considered that would still be protective of all beneficial uses in Reaches 4B, 5 and 6. An AWRM alternative was jointly developed by various TMDL stakeholders, which will achieve compliance with proposed Site-Specific Objectives (SSOs) and provide for a diverse mix of water quality and water supply benefits. The key elements of the AWRM alternative include:

- implementing measures to reduce chloride in the recycled water from the District's WRPs;
- constructing advanced treatment for a portion of the recycled water from the District's Valencia WRP;
- procuring local groundwater for release to the SCR as supplemental water during drought periods;
- constructing water supply facilities in Ventura County to facilitate export of existing salts in groundwater;
- providing alternative water supply to protect salt-sensitive agricultural beneficial uses of the SCR;
- supporting the expansion of recycled water uses within the Santa Clarita Valley; and
- revising surface water and groundwater WQOs to support all of these elements.

The AWRM alternative provides for a regional watershed solution for chloride as an alternative to compliance with the existing 100 mg/L WQO, considers the use of SSOs and water resource management facilities that would allow for the full protection of all beneficial uses, while simultaneously providing a more feasible compliance solution, maintains a chloride balance in the USCR Watershed, and provides salt export and water supply benefits to Los Angeles and

Ventura County stakeholders. The proposed SSOs are summarized on Figures E-1 and E-2. The results of the evaluation for the AWRM compliance with proposed SSOs are summarized in Table E-2. As shown on the table, the GWSWIM analysis predicts that the AWRM alternative provides for compliance with the proposed SSOs for chloride under both drought and non-drought conditions.

1.0 INTRODUCTION

This report identifies potential alternatives to achieve compliance with various water quality objectives (WQOs) within the Upper Santa Clara River (USCR) watershed and describes results of the assessment of those alternatives utilizing the numerical Groundwater/Surface Water Interaction Model (the GSWI model, or GSWIM). This work was performed as part of the Groundwater/Surface Water Interaction Model Study that is being jointly conducted by the Santa Clarita Valley Sanitation District (SCVSD, or the District) and the Los Angeles Regional Water Quality Control Board (Regional Board) as part of the USCR Chloride Total Maximum Daily Load (TMDL). This report also satisfies the requirements of Task 9 of the USCR Chloride TMDL Implementation Schedule requiring the SCVSD to develop a report on conceptual compliance measures to meet different chloride WQOs and final waste load allocations.

1.1 UPPER SANTA CLARA RIVER CHLORIDE TMDL BACKGROUND

The Regional Board adopted the USCR Chloride TMDL in 2002, establishing chloride waste-load allocations for the SCVSD's Valencia and Saugus water reclamation plants (WRPs) at 100 mg/L. Amendments to the TMDL in 2004 and 2006 established a phased TMDL approach, which allowed for the development of several scientific studies and potential site-specific objectives (SSOs) for chloride that the Regional Board may consider as part of any revisions to the existing 100 mg/L WQO. The TMDL implementation schedule specified, among other requirements, that special scientific studies be conducted to: a) evaluate the appropriate chloride threshold for the protection of sensitive agriculture; b) evaluate the appropriate chloride threshold for the protection of endangered species; and c) develop a groundwater/surface water interaction model to evaluate the impacts of chloride loading from all sources on water quality. The results of these studies would then become the technical basis by which potential SSOs for chloride could be developed for Regional Board consideration. The TMDL required development of these studies in a collaborative process through Technical Working Groups (TWGs) to ensure substantial agreement between the Regional Board staff, SCVSD staff, and other stakeholders, regarding the scientific and technical basis for establishing WQOs for chloride. Each of the major studies conducted as part of the TMDL and their current status are summarized as follows.

Threatened and Endangered Species Chloride Threshold Study (T&Es Study) – The T&Es Study was completed in November 2007 and determined that the 1988 United States

Environmental Protection Agency ambient water quality criteria for chloride for the protection of aquatic life (230 mg/L as chronic and 860 mg/L as acute) are protective of locally important T&Es (Advent-Environ, 2007). Therefore, the chloride threshold for the protection of locally important T&Es was found to be considerably higher than the threshold range for the protection of salt-sensitive agriculture.

Agricultural Chloride Threshold Study (Ag Study) - The Ag Study was a two-part study, with a Literature Review and Evaluation (LRE) completed in September 2005 (CH2M Hill, 2005), and an evaluation of the appropriate averaging period completed in January 2008 (Newfields, 2008). The Ag Study determined that the appropriate chloride threshold for salt-sensitive agriculture (avocados, strawberries, and nursery crops) grown in the USCR watershed is a guideline chloride concentration ranging between 100 and 117 mg/L, with an averaging period for chloride concentrations of approximately 3 months.

Groundwater – Surface Water Interaction Model (GSWIM) Study – The GSWIM Study developed a calibrated numerical model that was completed in March 2008 (CH2M Hill-HydroGeoLogic, Inc [HGL], 2008, Geomatrix 2008), to evaluate the impact of WRP effluent discharges to the river on downstream surface water and groundwater in the Los Angeles and Ventura County portion of the SCR watershed. This Report presents ongoing results from application of the GSWIM to evaluate various alternatives to comply with the existing WQOs and potential SSOs in consideration. One of the alternatives described in this Report is the Alternative Water Resources Management (AWRM) Program (Section 5.0), which represents a basin-wide set of options.

Site Specific Objectives (SSO) and Anti Degradation Analysis (ADA) Study – The SSO and ADA Study is currently being developed to provide the technical and regulatory basis for the Regional Board to consider potential SSOs that support the AWRM Program, as discussed in more detail below. As part of the SSO effort, a white paper on the agricultural beneficial uses in Reaches 5 and 6 of the USCR was developed in September 2007 (SCVSD, 2007), which assessed whether salt-sensitive agriculture was an existing or potential beneficial use. The white paper concluded that salt-sensitive agriculture was not an existing or potential beneficial use for surface water or underlying groundwater that could be impacted by surface water in Reaches 5 and 6. Since salt-sensitive agriculture was not an existing or potential beneficial use for the surface waters or underlying groundwater that could be impacted by surface water in

these reaches, SSOs higher than the Ag Study threshold range of 100-117 mg/L are potentially possible, and are being considered as part of the AWRM Program (Section 5.0).

1.2 GSWIM BACKGROUND

The GSWI numerical model was developed by CH2M Hill and HGL for a portion of the USCR watershed to evaluate fate and transport of chloride in surface water and groundwater basins underlying Reaches 4, 5, 6 and 7 (as designated by the Regional Board) of the SCR in accordance with the chloride TMDL collaborative process. The GSWI model was developed as a tool to improve the understanding of the interaction between surface water and groundwater and the linkage between surface-water quality and groundwater quality with respect to chloride. The GSWIM study area is shown on Figure 1-1. The development and calibration of GSWIM is documented in the Task 2B-1 Report (CH2M Hill-HGL, 2008). GSWIM has been used by the CH2M Hill-HGL team and by Geomatrix to assess the potential relationships between chloride loading from recycled water discharges at SCVSD's Valencia and Saugus WRPs and the downstream groundwater and surface water environments for various future scenarios under a variety of future hydrology, land use, and water use assumptions developed as part of the USCR Chloride TMDL Collaborative Process by the GSWIM Study TWG consisting of the SCVSD, the Regional Board and stakeholders from both Los Angeles and Ventura County.

These future scenarios focused on identifying the effects of individual water management and treatment options on chloride levels in the surface and subsurface flow systems, including:

- Various levels of use of recycled water from the WRPs in the East Subbasin.
- Removal of residential self-regenerating water softeners (SRWS), which contribute chloride to the WRP recycled water.
- Conversion of the current bleach-based disinfection facilities, which contribute chloride to the WRP recycled water, to Ultra-Violet Light Disinfection (UV) technology at the WRPs.
- Application of advanced treatment through use of Micro-Filtration (MF) and Reverse Osmosis (RO) treatment technologies.

The results of the GSWIM analysis for these future scenarios are documented in the Task 2B-1 Report (CH2M Hill-HGL, 2008) and the Supplement to the Task 2B-1 Report (Geomatrix,

2008). This Task 2B-2 Report describes additional compliance scenarios/alternatives that involve a broader range and mix of water management options that were developed to assess overall compliance with existing WQOs and proposed SSOs for the SCR watershed and includes the development of the AWRM option described in Section 5.0.

1.3 PREVIOUS GSWIM RESULTS

The future scenario GSWIM simulations reported by CH2M Hill-HGL (2008) and Geomatrix (2008) represent potential hydrology, land use, and water use conditions during calendar years 2007 through 2030 developed collaboratively with the GSWIM Study TWG, based on historical hydrologic years 1975 through 1998. Land use build-out proceeded from 2005 conditions to estimated build-out conditions projected in 2027 which were based on the Santa Clarita Valley Area Plan, the City of Santa Clarita General Plan, the Newhall Ranch Specific Plan, the City of Fillmore Plan and the 2007 cropping data for Ventura County (CH2M Hill-HGL, 2008). Imported water rates and distribution were established for these simulations based on these future build-out plans as well as plans for increased water reuse (Kennedy/Jenks Consultants, 2002; Forma, 2003). Table 1-1 summarizes the scenario set evaluated as part of the GSWIM Study, which includes combinations of high, intermediate and low reuse of recycled water from the Valencia WRP with various levels of advanced treatment (MF/RO) or SRWS removal rates to control the chloride levels in the recycled water discharge. With respect to compliance with the existing 100 mg/L WQO and LRE guidelines of 100-120 mg/L for the SCR, results from the simulations suggested that:

- None of the scenarios simulate chloride concentrations less than the existing WQO of 100 mg/L at all times and locations in Reaches 4B, 5 and 6. Simulated daily chloride concentrations were equal to or less than the existing WQO during approximately 16 to 66 percent of the future simulation period at the top of Reach 4B at Blue Cut.
- Only Scenarios 2 a and 3a (medium and low future recycled water reuse with advanced treatment using MF/RO at the WRPs to achieve 100 mg/L in the recycled water discharge) produced surface-water chloride concentrations less than the upper bound of the avocado threshold of 120 mg/L at all times at the top of Reach 4B of the SCR at Blue Cut. The remaining scenarios produced surface-water chloride concentrations that were less than 120 mg/L during approximately 28 to 99 percent of the future simulation period.

- All of the scenarios predicted chloride concentrations in groundwater that consistently met the existing WQO of 200 mg/L in groundwater east of Piru Creek. None of the simulations predicted chloride concentrations less than the lower (100 mg/L) or upper (120 mg/L) avocado thresholds at all times during the period, with attainment ranging from 0 percent of the future simulation period for the lower threshold up to 99 percent for the upper threshold.
- All simulations predicted chloride concentrations in groundwater that consistently met the existing 100 mg/L WQO in groundwater west of the Piru Creek confluence.

Other significant observations from these future scenario simulations include:

- Simulated chloride concentrations at Blue Cut were generally related to concentrations of recycled water discharges to the SCR from the Saugus and Valencia WRPs, as modeled by the various MF-RO and SWRS removal scenarios.
- Additional sources of chloride loading, above the loading from the WRP discharges, exist between the Valencia WRP and Blue Cut, with concentrations at Blue Cut being higher than the concentration of the discharge of Valencia WRP recycled water during periods of drought. This condition is also noted for the calibration simulation but is more pronounced in the some of the future scenario simulations.
- The scenarios simulating greater reuse of recycled water (and subsequent lower WRP discharges to the SCR) show increased chloride concentration in the groundwater in the Piru Subbasin and in surface-water at Blue Cut during drought periods, as compared to scenarios simulating limited reuse of recycled water. This is due to less WRP discharge to the SCR (which has a diluting effect during drought periods to other sources of chlorides between the WRPs and Blue Cut) as well as more outdoor use of high chloride water for irrigation, which is subject to evaporation and subsequent return of more concentrated water to the SCR as runoff and base flow.

1.4 ALTERNATIVES FOR COMPLIANCE OPTIONS

This report assesses a range of options for achieving compliance with various chloride WQOs in both the East Subbasin and the Piru Basin, including the AWRM option, which involved other local stakeholders and agencies, who jointly developed a water management option

during drought and non-drought conditions. Four general alternatives, or strategies, have been identified and assessed in terms of the likelihood of achieving compliance with WQOs and proposed SSOs, including:

- **Advanced Treatment and Brine Disposal** – this alternative consists of constructing and operating MF/RO treatment facilities to remove chloride from the recycled water produced at the Valencia and Saugus WRPs. Sufficient advanced treatment capacity would be required to reduce all chloride concentrations in WRP recycled water to below the existing WQO of 100 mg/L for the SCR downstream of the discharges (Reaches 5 and 6). MF/RO treatment would result in a significant amount of waste brine that would require disposal, most likely through a dedicated brine conveyance pipeline from the WRPs to a new Pacific Ocean outfall in Ventura County.
- **Minimal Advanced Treatment and Secondary Effluent Pipeline and Outfall** – this alternative consists of constructing and operating MF/RO treatment facilities for a limited amount of WRP recycled water. The facilities would be sized to produce sufficient recycled water to meet the existing WQO of 100 mg/L, for discharge to the SCR to maintain river habitat.¹ The balance of the WRP recycled water would be conveyed to the Pacific Ocean in Ventura County via a dedicated pipeline and ocean outfall. The objective of this alternative is to export the chlorides in the WRP recycled water exceeding the existing WQOs directly to the ocean rather than discharging them locally to the SCR.
- **Alternate WRP Discharge Location** – this alternative consists of relocating the Valencia WRP recycled water discharge location upstream to the upper extent of Reach 7 of the SCR near the United States Geological Survey (USGS) gauging station at Lang (e.g. the Lang Gauge). The objective of this alternative is to move the discharge farther away from downstream salt-sensitive agricultural beneficial uses in Ventura County, and utilize the potential assimilative capacity in upgradient surface water and groundwater, to minimize impacts in Ventura County from the chloride in the WRP recycled water.
- **Alternative Water Resource Management** – this alternative consists of working with the local water supply, agricultural, and development stakeholders in Los Angeles and

Ventura Counties on a regional watershed solution to help achieve compliance with the USCR Chloride TMDL. The objective of this alternative is to identify the best set of options for compliance that results in the maximum net benefit for all water users along the river, while protecting the salt sensitive agricultural beneficial uses of the SCR in Ventura County.

The descriptions and assessments of compliance alternatives and the AWRM alternative provided in this Report are intended to fulfill a portion of the TMDL Task 9 requirements for the USCR Chloride TMDL which requires that the SCVSD:

Develop a pre-planning report on conceptual compliance measures to meet different hypothetical final waste load allocations. County Sanitation Districts of Los Angeles County (CSDLAC) shall solicit proposals and develop and submit a report to the Regional Board that identifies potential chloride control measures and costs based on different hypothetical scenarios for chloride water quality objectives and final waste load allocations.

Information on the costs associated with the compliance alternatives identified in this report is discussed in a separate report submitted by the SCVSD (2008).

A variety of future scenarios were developed and simulated with GSWIM to assess the potential for the above alternatives to achieve compliance with the WQOs, as summarized on Table 1-2. The results of these scenarios are discussed in Sections 2 through 5 of this report.

¹ The minimum amount of recycled water discharge to the SCR to maintain river habitat has not been determined. For purposes of this study, a minimum discharge from each WRP is assumed based on information in the SCVSD's 2015 Santa Clarita Valley Joint Sewerage System Facilities Plan and Environmental Impact Report.

2.0 ADVANCED TREATMENT AND BRINE DISPOSAL

The Advanced Treatment and Brine Disposal alternative assumes that SCVSD would install and operate MF/RO treatment facilities at the Valencia and Saugus WRPs. Under this alternative, all flows to the WRPs would be subject to MF/RO treatment and/or blending to achieve a relatively constant recycled water discharge with a chloride concentration of 100 mg/L or lower. Operation of MF/RO treatment facilities would result in a significant stream of waste brine, which would require disposal. Given the amount of brine flow produced from MF-RO operation required to comply with the existing 100 mg/L WQO for chloride, a dedicated 43-mile brine conveyance pipeline from the WRPs to a new ocean outfall in Ventura County is required for this compliance alternative.

Model simulations for this alternative were developed assuming that WRP recycled water discharge would have a constant concentration of 100 mg/L. These simulations were performed as part of Task 2B-1 assessments, and results have been reported in detail in CH2M Hill-HGL, 2008, and Geomatrix, 2008.

Figure 2-1 presents model predicted chloride concentrations in the SCR at Blue Cut for the three simulations performed assuming a chloride concentration of 100 mg/L for all WRP discharges (labeled 1a, 2a, and 3a in Task 2B-1, assuming varying levels of water reuse over time). Also included on the graph are results from Task 2B-1 Scenario 1g_UV, which represents predicted conditions with no treatment but with other changes that are considered likely to occur, including use of UV disinfection technology, full development of recycled water reuse, and a high level of SRWS removals in the next few years. Results of Scenario 1g_UV are provided for comparison and as a means to assess potential improvement in achieving WQOs from application of advanced treatment.

Figure 2-2 shows simulated frequencies of WQO attainment from the "a" series scenarios and Scenario 1g_UV for the SCR at Blue Cut and in groundwater within the Piru Basin. In the SCR at Blue Cut, attainment frequencies of the existing 100 mg/L chloride WQO for the Advanced Treatment and Brine Disposal alternatives range from approximately 65.8% (3a) to 66.4% (1a and 2a), versus 41.2% for Scenario 1g_UV. However, the predicted improvement in attainment from advanced treatment is generally drought-dependent. As shown on Figure 2-1, model predictions indicate that the existing chloride WQO of 100 mg/L are consistently achieved during early periods in the simulation (i.e. 2007 through 2019, simulating hydrology based on 1975 through 1987). However, predicted concentrations in the SCR at Blue Cut are

consistently above the 100 mg/L WQO for an extended period generally beginning in 2019 and extending through approximately 2027 (hydrology based on 1987 through 1995, which includes drought conditions in the later 1980s and early 1990s). Maximum predicted chloride concentrations occur at the peak of the simulated drought in 2022 and 2023, and range from approximately 115 mg/L (3a) to 121 mg/L (1a).

Predicted chloride concentrations in the SCR at Blue Cut that are higher than those in WRP recycled water discharge are generally the result of other sources of salt loading to the river during drought periods. These include accumulation of chlorides at the surface due to evapoconcentration of outdoor irrigation (i.e. moisture discharged due to evapotranspiration results in increased concentrations of the chloride remaining in the near-surface system) with runoff, infiltration, and subsequent base flow of these elevated concentrated chlorides into the SCR and other ephemeral tributaries near Blue Cut.

CH2M Hill-HGL performed supplemental simulations to assess the general influence of WRP discharges on chloride mass loading in the SCR and downstream groundwater (CH2M Hill-HGL, 2008). Results from these simulations indicated that 10 to 15% of flows within the SCR at Blue Cut are derived from sources other than WRP discharges (i.e. groundwater inflows and/or surface water and tributary runoff). Geomatrix also performed a variety of simulations with GSWIM to determine how well the model was simulating all physical and chemical mechanisms contributing salt load to the SCR near Blue Cut. One significant simulation involved allowing salts to evaporate numerically with evaporating water. The results of this simulation indicated that the outdoor applied water concentrations did not increase due to evapoconcentration, instead removing vast amounts of chlorides that would otherwise remain in the system. These results were indicative of the large amount of chloride mass that is retained at the surface when appropriately simulating evapoconcentration effects.

For chloride concentrations in groundwater east of Piru Creek in the Piru Basin, both Scenario 1g_UV and the Advanced Treatment and Brine Disposal alternatives predicted that the current WQO of 200 mg/L would be achieved 100% of the simulated time period. The advanced treatment options were predicted to improve general attainment of the stricter objectives for salt-sensitive agriculture, achieving groundwater concentrations less than 100 mg/L approximately 55% of the simulated period and achieving 120 mg/L approximately 99% of the simulated period. This represents improved conditions over those predicted in Scenario 1g_UV (100 mg/L achieved 44% and 120 mg/L achieved 76% of the simulated period). For

groundwater chloride concentrations west of Piru Creek, both Scenario 1g_UV and the Advanced Treatment and Brine Disposal alternatives predicted that the current WQO of 100 mg/L would be achieved 100% of the simulated time period.

While implementation of Advanced Treatment and Brine Disposal alternative to achieve 100 mg/L in the recycled water discharge to the river resulted in generally improved attainment of the existing 100 mg/L chloride WQO in the receiving water, the simulations did not result in full attainment of the 100 mg/L WQO for the SCR at Blue Cut at all times and in all locations of the receiving water, due to the impacts from other sources of chloride to the river. In addition, the application of MF/RO facilities at both the Valencia and Saugus WRPs to achieve 100 mg/L in its recycled water discharges to the river would entail expensive upgrades in terms of both capital facilities and significantly increased long-term operating and maintenance costs, and energy usage. Furthermore, a brine conveyance pipeline, extending approximately 43 miles from the WRPs to the ocean and ocean outfall would have to be built for the disposal of the highly concentrated wastewater brines generated from the RO facilities. Such a pipeline would be significantly more expensive than other contemplated alternatives and would require significant environmental review, planning, design and construction through an extended area, including development across both public and private right-of-ways through numerous jurisdictions.

3.0 MINIMAL ADVANCED TREATMENT AND SECONDARY PIPELINE AND OUTFALL

An option that would reduce and/or eliminate the amount of advanced treatment capacity needed to comply with the existing 100 mg/L WQO would be to discharge all or most of the WRP recycled water directly to the ocean through the construction of a secondary effluent conveyance pipeline and ocean outfall in Ventura County. This option would achieve the greatest export of chloride load from the WRPs out of the SCR watershed since most, if not all of the recycled water would be discharged into an ocean disposal pipeline. The diversion of recycled water into an ocean disposal pipeline would also serve to dilute and dispose of any highly concentrated wastewater brine waste from the RO processes necessary to maintain minimum flows for habitat in the river that meet the existing 100 mg/L WQO. Two future alternatives were developed to assess this general option:

- **Zero Discharge Alternative:** Conveyance of all recycled water discharges from the Valencia and Saugus WRPs to the Pacific Ocean off the Ventura County coast via a new secondary effluent conveyance pipeline and ocean outfall, resulting in a simulation of zero discharge from the WRPs to the SCR within the GSWIM domain. This option would reduce the chloride load from recycled water discharges to the river to zero.
- **Minimal Discharge Alternative:** Limit discharges to 4.6 million gallons per day (MGD) from the Valencia WRP and 5.0 MGD from the Saugus WRP,² and convey the balance of WRP recycled water discharges to the Pacific Ocean off the Ventura County coast via a new secondary effluent conveyance pipeline and ocean outfall. It is assumed that the minimal discharges from the WRPs to the SCR require compliance with the existing WQO of 100 mg/L and therefore, MF/RO treatment on a portion of the recycled water is necessary to assure that the WRP discharges comply with the 100 mg/L WQO. These discharges are assumed to have chloride concentrations at a constant value of 100 mg/L.

Both model simulations were based on assumptions used in model Scenario 1g_UV, with only modifications to the WRP discharges as described above. Figure 3-1 presents a graph illustrating the predicted discharges from the Valencia WRP under Scenario 1g_UV versus the reduction to 4.6 MGD. Discharges from the Saugus WRP were predicted in Scenario 1g_UV

² Estimates for minimum discharge required from each WRP are based on information in the SCVSD's 2015 Santa Clarita Valley Joint Sewerage System Facilities Plan and Environmental Impact Report.

to average approximately 5.7 MGD with minor seasonal fluctuations based on the overall plant capacity. These discharges were modified to a constant 5.0 MGD for the minimal discharge option.

Figure 3-2 presents predicted chloride concentrations in the SCR at Blue Cut from the Zero Discharge alternative, Minimal Discharge alternative, and Scenario 1g_UV simulations, while attainment frequencies for WQOs predicted by each simulation are shown on Figure 3-3. In the SCR at Blue Cut, the chloride WQO of 100 mg/L was predicted to be achieved approximately 63.8% of the simulated period for the Zero Discharge alternative and 65.5% for the Minimal Discharge alternative. These predicted attainment frequencies are comparable to those predicted for the Advanced Treatment and Brine Disposal alternative discussed in Section 2.0, with non-attainment of the 100 mg/L WQO in the receiving water at Blue Cut occurring during the predicted drought situation. Further, overall flow in the SCR at Blue Cut is predicted to decline significantly under the Zero and Minimal Discharge alternatives, as illustrated in Figure 3-4.

The drought related increases in predicted chloride concentrations in the SCR at Blue Cut are generally greater in the Zero and Minimal Discharge alternatives. Maximum predicted concentrations occur at the peak of the simulated drought in 2022 and 2023, with a maximum predicted chloride concentration of approximately 148 mg/L for the Minimal Discharge alternative and approximately 206 mg/L for the Zero Discharge alternative. As before, decreasing WRP discharge and chloride loading results in the increased influence of other chloride loading sources and mechanisms on predicted chloride concentrations in Reach 4B during drought periods.

For chloride concentrations in groundwater east of Piru Creek in the Piru Basin, both Scenario 1g_UV and the Zero and Minimal Discharge alternatives predicted that the current WQO of 200 mg/L would be achieved 100% of the simulated time period. The Zero and Minimal Discharge alternatives were predicted to improve general attainment of the stricter chloride objectives for salt-sensitive agriculture, achieving groundwater concentrations less than 100 mg/L approximately 62 and 68% of the simulated period, respectively versus 43% for Scenario 1g_UV. The alternatives were predicted to achieve 120 mg/L approximately 98% (Zero Discharge) and 99% (Minimal Discharge) of the simulated period. This represents improved conditions over those predicted in Scenario 1g_UV (100 mg/L achieved 44% and 120 mg/L achieved 76% of the simulated period). For chloride concentrations in groundwater west of

Piru Creek, both Scenario 1g_UV and the Zero and Minimal Discharge alternatives predicted that the current WQO of 100 mg/L would be achieved 100% of the simulated time period.

As with the Advanced Treatment and Brine Disposal alternative discussed in Section 2.0, while reducing the total WRP recycled water discharge to the river is predicted to improve attainment of 100 mg/L WQO in the receiving water as compared with Scenario 1g_UV, the 100 mg/L WQO is not met at all times and all locations in the receiving waters, even if WRP discharges to the river ceased to exist (Zero Discharge) or were reduced only to those levels necessary to maintain habitat (9.6 MGD). Predicted chloride concentrations were also typically worst during drought periods. These results indicate that other sources and/or mechanisms of chloride loading are responsible for non-attainment of the existing WQO for the Zero and Minimal Discharge alternatives contemplated in this section.

4.0 ALTERNATE WRP DISCHARGE LOCATION

A third alternative to the scenarios discussed in Sections 2.0 and 3.0, would be to move the Valencia WRP discharge location upstream from its current location in Reach 5 of the SCR, to the beginning of Reach 7 of the SCR, near the USGS gauging station at Lang. This alternative would attempt to make use of potential additional assimilative capacity for chloride in areas that are currently far removed from salt-sensitive agricultural beneficial uses of SCR and groundwater supply. A simulation based on Scenario 1g_UV was developed that moved the discharge location from the current Valencia WRP outfall to an upstream location at the beginning of Reach 7. The simulated discharge location is shown on Figure 4-1. Discharge from the Saugus WRP was not changed to provide flows to support habitat in Reach 6 of the SCR.

Figure 4-2 presents predicted chloride concentrations at Blue Cut from Alternate WRP Discharge Location alternative and Scenario 1g_UV simulations, while attainment frequencies for WQOs predicted by each simulation are shown on Figure 4-3. In the SCR at Blue Cut, the chloride WQO of 100 mg/L was predicted to be achieved approximately 48.9% of the simulated period, compared to 43% for Scenario 1g_UV. Maximum predicted chloride concentrations in the SCR at Blue Cut are comparable for both simulations, with a maximum of 176 mg/L predicted in the Alternate WRP Discharge Location alternative versus 160 mg/L for Scenario 1g_UV. In addition, overall surface flows at Blue Cut are predicted to decline as shown on Figure 4-4, as a result of moving the Valencia WRP discharge location to Reach 7 of the SCR.

As expected, groundwater concentrations within the East Subbasin are predicted to increase significantly as a result of increased salt loading from the Valencia WRP discharge in Reach 7. Figures 4-5 and 4-6 show predicted chloride concentrations in groundwater at the Newhall County Water District's (NCWD) Pinetree well and Valencia Water Company's well Q2, which represent the upper and lower reaches of the alluvial aquifer underlying Reach 7 of the SCR. As shown on the graphs, maximum predicted concentrations are almost double for the Alternate WRP Discharge Location alternative over Scenario 1g_UV.

For chloride concentrations in groundwater east of Piru Creek in the Piru Basin, both Scenario 1g_UV and the Alternate WRP Discharge Location alternative predicted that the current WQO of 200 mg/L would be achieved 100% of the simulated time period. The Alternate WRP Discharge Location alternative was predicted to slightly improve general attainment of the

stricter objectives for salt-sensitive agriculture, achieving groundwater concentrations less than 100 mg/L approximately 46% of the simulated period and 120 mg/L approximately 80% of the period. This represents a small improvement over those predicted in Scenario 1g_UV (100 mg/L achieved 44% and 120 mg/L achieved 76% of the simulated period). For chloride concentrations in groundwater west of Piru Creek, both Scenario 1g_UV and the Alternate WRP Discharge Location alternative predicted that the current WQO of 100 mg/L would be achieved 100% of the simulated time period.

Moving the discharge location of the current Valencia WRP outfall to the SCR, to the beginning of Reach 7 near the USGS Lang gauge did not result in significant improvement in attainment of chloride WQOs in receiving waters over Scenario 1g_UV. This alternative involves the construction and operation of a conveyance pipeline and pumping facilities to relocate the Valencia WRP recycled water discharge approximately 16 miles upstream from the Valencia WRP to the USGS Lang gauge.

5.0 ALTERNATIVE WATER RESOURCE MANAGEMENT

Recognizing that the alternatives discussed in Sections 2.0 (Advanced Treatment and Brine Disposal), 3.0 (Minimal and/or Zero Discharge) and 4.0 (Alternate WRP Discharge Location) are not likely to achieve attainment of the existing 100 mg/L WQO at all times and all locations in the receiving water, a fourth alternative was developed that involves an alternative water resources management (AWRM) approach in conjunction with the development of SSOs, whereby the AWRM alternative was developed to achieve compliance with SSOs at all times and at all locations in the receiving water, with mitigation measures put in place to protect salt-sensitive agricultural beneficial uses and groundwater, when necessary. Therefore, the SCVSD and other stakeholders have jointly developed this regional watershed solution for chloride as an alternative to compliance with the existing 100 mg/L-WQO.

The following sections provide a description of the development and key aspects of the AWRM Program. Geomatrix worked with the TMDL stakeholders to develop individual simulations of various water management elements of the AWRM scenario and presented and discussed these results with the TMDL stakeholders on a weekly basis during the spring of 2008. The results of the GSWIM simulation of the final AWRM scenario are provided in Section 5.2.

5.1 ALTERNATIVE WATER RESOURCE MANAGEMENT DEVELOPMENT

Since November 2007, SCVSD, Ventura County Agricultural Water Quality Coalition (VCAWQC), United Water Conservation District (UWCD), and the Upper Basin Water Purveyors³ have been working together to develop an AWRM Program for the USCR Chloride TMDL. As noted, the purpose of the AWRM Program is to develop a regional watershed solution for chloride as an alternative to compliance with the existing 100 mg/L WQO, recognizing that compliance with the existing 100 mg/L WQO at all times and all locations in the receiving water was not possible with the existing alternatives considered and would likely be a challenging and costly project, requiring many years to implement. The AWRM Program considers the use of SSOs and water resource management facilities that would allow for the full protection of all beneficial uses, while simultaneously providing a more feasible compliance solution, maintaining a chloride balance in the USCR Watershed, and providing salt export and water supply benefits to Ventura County stakeholders. Through this process, the SCVSD, VCAWQC, UWCD, and the Upper Basin Water Purveyors have come to a

³ Castaic Lake Water Agency, Valencia Water Company, Newhall County Water District, Los Angeles County Water Works District No. 36, and the Santa Clarita Water Division of the Castaic Lake Water Agency.

conceptual agreement on the key elements of the AWRM Program. Discussion of these specific elements of the AWRM Program is presented in the following sections.

Several key elements were developed as part of the AWRM Program, which when combined result in a regional watershed solution for the USCR Chloride TMDL that benefits all stakeholders within the watershed. The key elements were developed during the stakeholder process and form the basis for the AWRM Program. The elements represent feasible management options and decisions, and include:

- implementing measures to reduce chloride in the recycled water at the District's WRP discharges;
- constructing advanced treatment for a portion of the recycled water from the District's Valencia WRP;
- procuring supplemental water (i.e. local groundwater or surface water) for release to the SCR to enhance its assimilative capacity, improve water quality conditions and attain WQOs, when needed;
- constructing water supply facilities in Ventura County;
- providing alternative water supply when necessary, to protect salt-sensitive agricultural beneficial uses of the SCR;
- supporting the expansion of recycled water uses within the Santa Clarita Valley; and
- revising the surface water and groundwater WQOs to support all of these elements.

A conceptual schematic of the application of these elements is provided in Figure 5-1. The GSWIM was used to simulate these elements to examine the resultant effects on surface water and groundwater flow and chloride concentrations. The results of the GSWIM simulation are provided in Section 5.2. Details of each of these elements are as follows:

Element No. 1: Reduction of Chloride Levels in WRP Recycled Water

As part of the AWRM Program as well as any solution to the TMDL, the SCVSD will reduce the chloride levels in the recycled water discharged from the Valencia and Saugus WRPs. Reduction in recycled water chloride levels would be achieved through enhanced source control, specifically the removal of SRWSs, which are a significant source of chloride to the District's sanitary sewer collection system, and conversion of the current beach-based disinfection facilities (which contribute an additional 10 mg/L of chloride in recycled water at each WRP) to UV disinfection technology. Through removal of SRWS and conversion to UV disinfection technologies, the incremental chloride contribution from wastewater sources above the contribution from water supply can be reduced to a level of approximately 50 mg/L. This reduction in chloride will allow for the Valencia and Saugus WRPs to comply with revised WQOs under varying water supply chloride conditions⁴, and minimize the amount of advanced treatment required. As discussed below, revisions to the existing WQOs would be necessary to support this AWRM Program element.

Element No. 2 Advanced Treatment at the District's Valencia WRP

While removal of chloride loading through enhanced source control would help the Saugus and Valencia WRPs comply with revised WQOs a majority of the time, additional chloride reduction would still be necessary for compliance with downstream revised WQOs in Reach 4B, through the construction and operation of a 3 MGD advanced treatment facility using MF/RO treatment technologies at the Valencia WRP. These facilities would serve three purposes: (1) continuous removal of approximately 3,200 pounds per day⁵ of chloride from the WRP recycled water; (2) reducing chloride levels in the SCR in Reach 4B, through conveyance and discharge of the high quality Valencia RO permeate water near the Los Angeles-Ventura County line, when necessary to achieve compliance with revised WQOs for this reach; and (3) providing a salt export and water supply benefit to Ventura County through delivery of the high quality Valencia RO permeate water to the Ventura County water supply facilities. These facilities and the salt export and water supply benefits associated with these facilities are discussed in greater detail below.

⁴ Imported water supply chloride concentrations have often exceeded 100 mg/L during drought conditions, due to the influence of poor quality imported water supplies delivered from the State Water Project stored at the Castaic Lake Reservoir.

In addition to the advanced treatment facilities, construction of brine disposal facilities to dispose of brine waste from the RO treatment process via deep well injection would be required. Unlike the other RO options that assume a higher volume of water treated using RO and thus a more significant brine waste stream, the use of deep well injection for the AWRM option represents a more plausible and sustainable brine disposal option, based on a smaller advanced treatment facility. The brine disposal for a 3MGD MF/RO facility (AWRM Program) is estimated at 0.5 MGD.

As mentioned above, when necessary, the high quality Valencia RO permeate water would be discharged directly to the SCR near the Los Angeles - Ventura County line to reduce chloride levels in the river and comply with revised WQOs in Reach 4B. Valencia RO permeate water would be delivered to the river when chloride levels in the State Water Project (SWP) water stored in the Castaic Lake Reservoir are greater than or equal to 80 mg/L. In addition to discharging this high quality Valencia RO permeate water to the river, the GSWIM study also found that the use of additional supplemental water released to the SCR, discussed in more detail below, is needed in certain critical conditions of extreme drought to assure compliance with the revised WQOs in Reach 4B. A schematic of this operational management of the Valencia RO deliveries to the SCR is presented in Figure 5-2.

For conditions when the chloride levels in the SWP water stored in the Castaic Lake Reservoir are below 80 mg/L, the high quality Valencia RO permeate water does not need to be delivered to the SCR to comply with revised WQOs for Reach 4B. In fact, results from the GSWIM simulation (Section 5.2) suggest that this condition occurs approximately 76% of the time, which then would allow for the high quality Valencia RO permeate water to be delivered to the water supply facilities to be developed in Ventura County, in order to blend high saline groundwater⁶ underlying Reach 4B and produce a blended water supply that can be discharged into the wetted portions of Reach 4A of the SCR to comply with the existing 100 mg/L WQO for this reach. The discharge of this blended water supply in the wetted reaches of the SCR, where the "Dry Gap" ends, allows for greater flow in the river, which ultimately can then be diverted at the Freeman Diversion to increase water supplies for Ventura County. This

⁵ The chloride load removed by RO is based on the long-term average Valencia WRP final effluent chloride concentration of 117 mg/L, over the projected model period 2007-2030. The chloride load removed by RO is variable and dependent on the amount of chloride in the water supply and recycled water

⁶ The groundwater in Reach 4B of the SCR currently has chloride concentrations as high as approximately 150 mg/L.

operational management of the Valencia RO deliveries to the Ventura County water supply facilities is presented conceptually on Figure 5-1.

Element No. 3: Procuring Local Groundwater for Supplemental Water Releases to the Santa Clara River

Recognizing that conducting environmental studies, permitting, designing and constructing an MF/RO facility at the Valencia WRP will take a significant period of time, the AWRM Program includes a commitment (contingent upon the necessary environmental assessments required under the California Environmental Quality Act and compliance with Regional Board permit limits), to provide supplemental water pumped from the Saugus Aquifer or some other local water resource to the SCR as an interim measure prior to completion of the AWRM Program facilities. Additionally, as discussed previously, results from the GSWIM simulation suggest that release of supplemental water to the SCR would be required during extreme drought conditions to comply with revised WQOs for Reach 4B. These supplemental waters would be delivered through contractual arrangements between the SCVSD and the Upper Basin Water Purveyors.

Element No. 4: Ventura County Salt Export and Water Supply Benefits

In order to export accumulated salt in groundwater in East Piru and provide water supply benefits for Ventura County, a key element of the AWRM Program is the construction of the Ventura County water supply facilities, as shown conceptually in Figure 5-1. These facilities would allow for salt export and water supply benefits by blending high quality Valencia RO permeate water with the more saline groundwater in East Piru, to develop a blended water supply that is less than 95 mg/L in chloride. The Ventura County water supply facilities would be comprised of the following:

- 10 groundwater extraction wells in the East Piru groundwater basin;
- a 12-mile RO permeate pipeline from the Valencia WRP to the East Piru extraction wells; and
- a 6-mile conveyance pipeline for the blended East Piru groundwater and Valencia WRP RO water (East Piru Pipeline) for discharge to Reach 4A of the SCR, downstream of the "Dry Gap."

These facilities would be utilized to deliver high quality RO permeate water for a water supply and salt export benefit, when RO permeate water is not needed for compliance with revised WQOs.

Through the blending of high quality Valencia RO permeate water with more saline groundwater underlying Reach 4B, a new blended water supply can be developed and managed that will not only export salt accumulated in groundwater in the East Piru basin, but comply with downstream surface water WQOs, and ultimately increase water supplies in Ventura County through increased flows at the Freeman Diversion (Bachman, 2008). In addition, the extraction of more saline groundwater underlying Reach 4B, will allow for greater recharge of high quality storm flows in the SCR, which are typically low in chloride, lowering chloride levels in the groundwater. GSWIM results showing predicted reductions in chloride levels in groundwater under Reach 4B are presented in Section 5.2.

Element No. 5: Protection of Salt-Sensitive Agriculture in Reach 4B

The AWRM Program recognizes that chloride levels in Reach 4B of the SCR may exceed the protective range for salt sensitive agriculture (100 - 117 mg/L chloride concentration), as determined by the Ag. Study (CH2M HILL, 2005). In order to protect this salt sensitive agricultural beneficial use along Reach 4B of the SCR, the AWRM Program proposes to provide surface water diverters along this reach of the SCR with a suitable alternative water supply, when chloride concentrations in surface water exceed 117 mg/L (making surface water quality unsuitable for the direct irrigation of salt-sensitive crops). Alternative water supplies of suitable water quality will be provided to temporarily protect salt-sensitive agricultural uses in Reach 4B. The use of alternative water supplies allows for the full protection of beneficial uses, during temporary and intermittent periods when water quality due to extreme drought conditions does not support those beneficial uses.

Element No. 6: Supporting the Expansion of Recycled Water Uses in the Santa Clarita Valley

The AWRM Program includes provisions to support recycled water uses in the Upper Basin Water Purveyor service areas. Increasing recycled water uses in the Santa Clarita Valley will not only improve water supply reliability in the area, but also reduce the chloride loading directly discharged to the SCR from the WRP discharges.

Element No. 7: Revisions to Surface Water and Groundwater WQOs to support the AWRM Program

As indicated above, the feasibility of the AWRM Program is dependent upon revising the existing WQOs for surface water and groundwater to various levels that support the different elements of the AWRM Program. Proposed revisions to surface water and groundwater chloride WQOs are discussed in Section 5.3.

5.2 GWSIM SIMULATION OF THE AWRM ELEMENTS

Geomatrix performed a number of simulations using the GSWIM in an iterative process during development of the final AWRM alternative to test and assess the feasibility and results of many of the individual elements discussed in the previous section. Simulations included evaluation of the impact of supplemental flows on chloride concentrations in the SCR, quantification of salt export from pumping groundwater in the Piru Basin, optimization of the number and location of wells used for potential water supply and salt export pumping, optimization of the locations on the SCR for both assimilative capacity enhancement and salt export discharges, assessment of volumes and impacts of groundwater pumping for supplemental supplies, and assessment of volumes of supplemental water pumping required to achieve various chloride threshold concentrations in the SCR. Results from these model simulations were regularly presented and distributed to the stakeholders as part of the working process toward a final AWRM scenario.

5.2.1 GSWIM Input and Development for the AWRM Alternative

The final AWRM alternative was simulated using GSWIM based on the following considerations:

- Scenario 1g_UV was used as a base case for the final AWRM simulation, which includes an assumption of recycled water reuse in the East Subbasin in accordance with Castaic Lake Water Agency's recycled water master plan, removal of self-regenerating water softeners and the implementation of UV disinfection at the WRPs.
- While a variety of concentration thresholds were evaluated by the model, the final AWRM water routing and supplemental water pumping requirements were developed based on achieving chloride concentrations less than 117 mg/L in Reach 4B of the SCR during periods when SWP concentrations are less than 80 mg/L (generally during non-

drought conditions) and achieving chloride concentrations less than 130 mg/L in Reach 4B of the SCR, during periods when SWP concentrations are greater than 80 mg/L (generally during drought conditions). Figure 5-3 presents the simulated non-drought and drought periods, as defined by simulated SWP concentrations. As shown on the figure, non-drought periods represent approximately 76% of the simulation, with drought periods representing the remaining 24%.

- 3.5 MGD was subtracted from predicted Valencia WRP discharges to account for 3.0 MGD of RO permeate water for available use (at an assumed chloride concentration of 10 mg/L) with approximately 0.5 MGD lost to brine waste in the MF/RO process. For the GSWIM simulations, the 3 MGD high quality RO permeate water was then utilized in the following manner, in order of priority of use: (1) discharged directly to the SCR to achieve compliance with the Reach 4B SSO, when Reach 4B receiving water chloride concentrations were predicted to exceed the upper end of the LRE guidelines (117 mg/L); (2) mixed with groundwater pumping in Reach 4B to provide an alternative water supply, when Reach 4B surface water exceeded 117 mg/L, to protect salt-sensitive agricultural uses; and (3) mixed with groundwater pumping in Reach 4B to provide water supply and salt export benefits to Ventura County, when Valencia RO permeate water is not needed to comply with Reach 4B WQOs and/or is not needed to provide an alternative water supply to Reach 4B surface water diverters.
- A total of 10 new groundwater extraction wells were simulated within the San Pedro Formation (model layers 4 and 5) in the eastern portion of the Piru Basin, as shown on Figure 5-4. The pumping rates for the East Piru extraction well network were developed based on an estimate of groundwater concentrations mixed with the available high quality RO permeate water at 10 mg/L chloride to achieve a blended water chloride concentration of 95 mg/L chloride or less, which would comply with Reach 4A chloride WQO of 100 mg/L, plus a factor of safety. Figure 5-5 presents the estimated pumping rates over time for the extraction wells. The blend of extracted groundwater and RO permeate water is routed in the East Piru Pipeline and discharged to the SCR near the Fillmore Fish Hatchery, as shown on Figure 5-6. This particular location is where the "Dry Gap" historically ends, and where surface flows in the SCR are perennial, which ensures that flow and salt export out of the basin occurs.

- During conditions of drought (i.e. when SWP supplies have concentrations greater than 80 mg/L chloride), additional supplemental water (above the 3.0 MGD RO permeate water from the Valencia WRP) is required to achieve compliance with the Reach 4B SSO. It was assumed that this supplemental water could be derived from pumping the lower chloride Saugus aquifer in the Eastern Basin (that has a simulated chloride concentration of approximately 60 mg/L), and releasing this pumped groundwater to the SCR to further lower chloride concentrations in the receiving waters in Reach 4B to achieve the SSO. The amount of Saugus aquifer water that would be released as supplemental water would be replaced as supply with an equivalent amount of imported water procured from State Water Project through the use of Castaic Lake Water Agency facilities, keeping the total groundwater pumping the same. Figure 5-7 presents estimated supplemental water pumping requirements derived from both MF/RO treated water and from pumping of the Saugus aquifer, along with assumed SWP concentrations for reference. Supplemental water from the Saugus aquifer was simulated as being pumped equally from a total of three wells (two future wells to be owned and operated by the Castaic Lake Water Agency and the Valencia Water Company (VWC) well 206), as shown on Figure 5-8. During periods when the Saugus aquifer was being pumped as a source of the supplemental water, the total groundwater available for supply was reduced by that amount and it was assumed to be derived from all remaining VWC wells per the Urban Water Management Plan, in a similar fashion to Scenario 1g_UV.
- Supplemental water discharges were simulated to be added to the SCR immediately upgradient of Blue Cut, as shown on Figure 5-9.
- Portions of the 3 MGD RO permeate water from the Valencia WRP were blended with the extracted groundwater underlying Reach 4B to provide an alternative water supply to Reach 4B surface water diverters when chloride concentrations in the river exceed 117 mg/L.

5.2.2 GSWIM Results for the AWRM Alternative

With the development of the final AWRM alternative, attainment frequencies for the SSOs proposed in Section 5.3 of this report were evaluated. Simulated surface water and groundwater chloride concentrations, flows and groundwater levels associated with the AWRM

alternative are evaluated and discussed in Section 5.2.2.1, while benefits related to salt export capability of the AWRM alternative are discussed in Section 5.2.2.2.

5.2.2.1 Surface Water and Groundwater - AWRM Alternative

Figure 5-10 presents chloride concentrations for surface water predicted at Blue Cut for the AWRM alternative. Also included on the figure are results from Scenario 1g_UV and the Zero Discharge alternative for comparison. As shown on the figure, the AWRM alternative is predicted to generally achieve chloride concentrations of less than the 117 mg/L threshold at Blue Cut during non-drought periods and the 130 mg/L threshold during drought periods.

Figure 5-11 presents predicted cumulative surface flows at Blue Cut. As shown in the figure, the AWRM scenario results in approximately 60,000 acre-ft less surface flows at Blue Cut over the simulated period than Scenario 1g_UV, primarily due to the reduction of Valencia WRP discharges to the river that are being diverted for MF-RO treatment and utilized for water supply, salt export and/or as an alternative water supply, as well as the loss of flow as brine waste..

Figure 5-12 presents predicted attainment frequencies for the AWRM alternative for various chloride thresholds (100 mg/L, 117 mg/L and 130 mg/L) for surface water at Blue Cut. As shown on the figure, the AWRM alternative is predicted to achieve attainment of the Reach 4B chloride SSO of 117 mg/L in non-drought conditions (SWP chloride < 80 mg/L) 99.9% of the simulation time period, versus 90.7% for Scenario 1g_UV. During drought conditions (SWP chloride > 80 mg/L), the AWRM alternative is predicted to achieve attainment of the Reach 4B chloride SSO of 130 mg/L 99.2% of the simulation period, versus 45.0% for Scenario 1g_UV. Thus the AWRM alternative is predicted to achieve the proposed Reach 4B surface water SSOs at virtually all times during the simulation period.

Figure 5-13 presents predicted attainment frequencies for the AWRM alternative for surface and groundwater along SCR Reaches 5 (between the Valencia WRP and Blue Cut) and 6 (between the Saugus and Valencia WRPs). The SSO for chloride in both surface and groundwater in these reaches is 150 mg/L. Attainment of the 150 mg/L chloride SSO is predicted to range from 98 to 100% in surface water along Reaches 5 and 6, while groundwater concentrations (based on an average from production wells along the reaches) are always predicted to be less than 150 mg/L.

Figure 5-14 presents predicted attainment frequencies for the AWRM alternative for groundwater beneath the Piru Basin (Reaches 4A and B). Average groundwater chloride concentrations from production wells in the eastern portion of the Piru Basin under Reach 4B are predicted to be less than 130 mg/L 99.9% of the simulation period, versus 90.2% for Scenario 1g_UV. This represents a general predicted reduction in chloride concentrations in groundwater in the Piru Basin over the Scenario 1g_UV. Figure 5-15 presents simulated groundwater concentrations for a well located within Reach 4B in the eastern portion of the Piru Basin (designated V-0013). As shown on the figure, concentration reductions of approximately 20 mg/L are evident during general drought periods (model years 2008 through 2011 and 2021 through 2023, representing hydrology from 1976 through 1979 and 1989 through 1991, respectively). Simulated groundwater chloride concentrations for wells located in the central and western portions of Piru Basin (designated V-105 and V-176, respectively) are shown on Figures 5-16 and 5-17. As shown on the figures, chloride concentrations are predicted to improve through implementation of the AWRM alternative, as compared to the Scenario 1g_UV.

The impact of the AWRM alternative on groundwater elevations was also assessed for both the 10 well water supply and salt export system proposed for the Piru Basin, as well as from pumping water from the Saugus aquifer for supplemental water flows. Figure 5-18 presents the predicted groundwater elevations in the Piru Basin near the simulated extraction well systems (in a well designated V-0036). A comparison of the AWRM scenario and Scenario 1g_UV indicates that additional groundwater depression during dry periods is predicted. However, groundwater levels are predicted to respond quickly to storm flow periods that result in "re-filling" of the basin. In addition, the predicted water levels in the well in response to the AWRM alternative are generally consistent with historically observed water levels (i.e. the pumping of groundwater for salt export is not predicted to produce lower water levels than historically observed) (Bachman, 2008).

Figure 5-19 presents a map of groundwater level differences in the Saugus aquifer surrounding the wells simulated for use as dilution pumping. The groundwater level differences plotted on the map represent predicted differences between the AWRM alternative and the Scenario 1g_UV at the end of the period of maximum pumping (at the end of September of model year 2023, corresponding to the hydrology of 1991) in model layer 8 (note the wells are simulated to be screened in model layers 4 to 8). As shown on the figure, maximum groundwater level differences of up to 30 feet are predicted near the simulated wells. In general, groundwater

levels in the Saugus formation were predicted to recover to “pre-AWRM pumping” levels in approximately 5 months after pumping has ceased, as shown in Figure 5-20 (representing conditions at the end of February, model year 2024). As noted previously, any Saugus aquifer groundwater utilized as supplemental water to the SCR is replaced in the simulation with imported SWP water and served in-lieu of Saugus aquifer water that would otherwise be served to Santa Clarita Valley residents.

5.2.2.2 Salt Export Capabilities of the AWRM Alternative

The GSWIM results for Scenario 1g_UV at Blue Cut were also utilized to evaluate the amount of chloride loading in excess of the existing surface water 100 mg/L WQO and proposed 117 mg/L SSO for Reach 4B, as well as the amount of salt export achieved through the use of RO, and the East Piru extraction wells. In addition, Dr. Steve Bachman (2008) evaluated that amount of chloride loading from coastal salt water intrusion that is prevented as a result of the AWRM alternative, in comparison with the Minimal Discharge alternative, discussed in Section 3.0. Dr. Bachman (2008) further evaluated the increase in surface flows that can be diverted at the Freeman Diversion, which can be directly used for in-lieu deliveries of water supply as opposed to pumping groundwater in overdraft areas of the Oxnard Plain. Based on Dr. Bachman’s analysis, greater than 10,000 AFY of water supply at the Freeman Diversion could be achieved with the AWRM alternative, which would also substantially reduce the amount of chloride loading from salt-water intrusion in the Oxnard Plain.

The salt export from East Piru Basin and resultant reduction in coastal saltwater intrusion provided by the increased water supply benefits, vastly outweigh the incremental loading above the WQO that occurs during extreme drought conditions, when SWP chloride levels are elevated. A comparison of the yearly excess chloride loading above the existing 100 mg/L WQO and proposed 117 mg/L SSO in Reach 4B, with the predicted yearly chloride export through the extraction wells and prevention of saline intrusion are shown in Figure 5-21. As shown on the figure, salt export from East Piru Basin is approximately 6 times greater than the incremental loading above 100 mg/L, and almost 70 times the incremental loading above 117 mg/L. The resulting reduction in coastal salt water intrusion is approximately 17 times greater than the loading above 100 mg/L and 200 times the loading above 117 mg/L, representing a significant reduction in salt load in the SCR watershed. In addition, significant chloride load is also removed by RO of wastewater at the Valencia plant for the AWRM alternative.

5.3 PROPOSED REVISIONS TO THE CHLORIDE WATER QUALITY OBJECTIVES

The feasibility of the AWRM Program is dependent upon revising the existing WQOs for surface water and groundwater to various SSOs that support the different elements of the AWRM alternative. A summary of the recommended SSOs for surface water and groundwater, in support of the AWRM alternative, is presented in Table 5-1 and shown graphically on Figures 5-22 and 5-23. The regulatory and technical justification for these SSOs is discussed extensively in the TMDL Task 7 and 8 Report (Larry Walker and Associates, 2008).

Through revision of these surface water and groundwater WQOs, the amount of advanced treatment required to achieve compliance with these SSOs is significantly reduced, which allows for the disposal of brine wastes generated from the RO processes through deep well injection as opposed to the construction of a 43-mile brine line through Ventura County with an associated ocean outfall. Preliminary feasibility studies on deep well injection for brine disposal indicate that the brine waste from a 3 MGD RO production facility could potentially allow for as much as 20 years of brine disposal capacity (CH2M Hill, 2008). The use of brine concentration and zero liquid discharge technologies could further improve RO recoveries, and minimize brine generation and increase brine disposal capacities of deep well injection. In addition, a revision of these WQOs would better facilitate the permitting of recycled water uses in the Santa Clarita Valley, which will improve water supply reliability in the area, and reduce the direct chloride loading from recycled water that can now be beneficially reused, as opposed to being discharged to the SCR.

In Ventura County, the proposed SSOs support an AWRM alternative, which will substantially increase water supplies and help to prevent coastal salt water intrusion in the Oxnard Plain, due to overdraft conditions. As noted in Bachman (2008), the AWRM alternative will increase the amount of surface flows in the SCR that can be diverted at the Freeman Diversion, and be delivered to overdraft areas in the Oxnard Plain in-lieu of groundwater pumping in those areas, resulting in a potential reduction of chloride loading from salt water intrusion. Furthermore, the AWRM alternative indicates an overall improvement in water quality for groundwater and surface water throughout Piru Basin. Ultimately, the cumulative benefits of the AWRM alternative will improve water quality in surface water and groundwater, improve water supplies to Ventura County, protect all beneficial uses, and reduce the amount of advanced treatment and associated brine disposal needed for compliance.

6.0 SUMMARY AND CONCLUSIONS

This report presents the potential compliance options to the chloride TMDL issues in the SCR and the results of the assessment of those alternatives, utilizing the GSWIM. The compliance alternatives evaluated as part of this effort include:

- 1) Advanced Treatment and Brine Disposal;
- 2) Minimal Advanced Treatment / Zero Discharge and Secondary Effluent Pipeline and Outfall;
- 3) Alternate WRP Discharge Location; and
- 4) Alternative Water Resource Management

As required in Task 9 of the Chloride TMDL process, the report evaluated these potential chloride control measures in terms of complying with existing and revised WQOs. The Advanced Treatment and Brine Disposal alternative, the Minimal Advanced Treatment / Zero Discharge and Secondary Effluent Pipeline and Outfall alternative, and the Alternate WRP Discharge Location alternative were evaluated for compliance with the existing WQOs. The results of this evaluation are summarized in Table 6-1.

Because compliance with the existing 100 mg/L WQO was not possible at all times and all locations in the SCR receiving waters, revisions to these WQOs were considered that would still be protective of all beneficial uses in Reaches 4B, 5 and 6. An AWRM alternative was jointly developed by various TMDL stakeholders, which will achieve compliance with proposed SSOs and provide for a diverse mix of water quality and water supply benefits. The key elements of the AWRM alternative include:

- implementing measures to reduce chloride in the recycled water from the District's WRPs;
- constructing advanced treatment for a portion of the recycled water from the District's Valencia WRP;
- procuring local groundwater for release to the SCR as supplemental water during drought periods;

- constructing water supply facilities in Ventura County to facilitate export of existing salts in groundwater;
- providing alternative water supply to protect salt-sensitive agricultural beneficial uses of the SCR;
- supporting the expansion of recycled water uses within the Santa Clarita Valley; and
- revising surface water and groundwater WQOs to support all of these elements.

The AWRM alternative provides for a regional watershed solution for chloride as an alternative to compliance with the existing 100 mg/L WQO, considers the use of SSOs and water resource management facilities that would allow for the full protection of all beneficial uses, while simultaneously providing a more feasible compliance solution, maintains a chloride balance in the USCR watershed, and provides salt export and water supply benefits to Los Angeles and Ventura County stakeholders. The results of the evaluation for the AWRM compliance with proposed SSOs are summarized in Table 6-2.

Notes:
 Scenarios performed by Geomatrix Consultants, Inc. are shown in ***bold italics and underlined***. Scenarios that were not performed are shown in *italics*.
 The remaining scenarios were performed by CH2M HILL. Scenarios 2e and 2g were conducted using chloride loadings computed by assuming additional wastewater treatment using an ultraviolet (UV) treatment process. SRWS refers to Self Regenerating Water Softeners.

TABLE 1-2

GSWIM SIMULATIONS OF ALTERNATIVE COMPLIANCE OPTIONS
 Upper Santa Clara River Chloride TMDL
 Santa Clara River Valley, California

GSWIM Alternative Compliance Scenarios			
Compliance Alternatives	Elements	Potential Benefits	Infrastructure Requirements
Advanced Treatment	Treat all Valencia and Saugus WRP discharges to 100 mg/L	Chloride mass removal, reduced concentrations in SCR at Blue Cut	Installation and operation of MF/RO treatment at both WRPs and development of 43 mile brine discharge piping to ocean
Zero Discharge	Divert all Valencia and Saugus WRP discharges to ocean	Chloride mass removal	Development of 43 mile discharge piping to ocean to accommodate all WRP discharge, plus new ocean outfall
Minimal Discharge	Treat 4.6 MGD of Valencia WRP discharge and 5.0 MGD of Saugus discharge using MF/RO, all other discharges to ocean	Chloride mass removal, maintain minimal SCR flows for habitat	Installation and operation of MF/RO treatment at both WRPs and development of 43 mile brine waste and WRP discharge piping to ocean, plus new ocean outfall
Alternate WRP Discharge Location	Move Valencia WRP discharge location to top of SCR Reach 7	Better use of basin assimilative capacity	Development of 16 miles of pipeline for alternative discharge
Alternative Water Resource Management	Treat 3 MGD of Valencia WRP discharges using MF/RO, develop salt export pumping in Piru Basin, use dilution flows to moderate chloride concentrations in SCR	Basin-wide approach, chloride mass removal, reduced concentrations in SCR at Blue Cut, water supply benefits in Ventura County	Installation and operation of MF/RO treatment at Valencia WRP, 12-mile permeate pipeline for RO flows, outfall to SCR near Blue Cut, brine discharge via deep-well injection, installation of 100 well water supply system and piping in Piru Basin, replacement water for dilution flows during drought

 1. Attainment frequency represents the percent of time during the future simulation period that chloride concentrations were at or below the indicated daily chloride concentration.
 2. "Drought" refers to time periods when simulated imported State Water Project (SWP) water chloride concentrations are greater than 80 mg/L (2,130 simulation days), and "non-drought" refers to time periods when simulated imported SWP water chloride concentrations are less than 80 mg/L (6,638 simulation days).

CSD C# 4435

MEMORANDUM OF UNDERSTANDING FOR IMPLEMENTATION OF
AN ALTERNATIVE WATER RESOURCES MANAGEMENT PROGRAM

Among the

SANTA CLARITA VALLEY SANITATION DISTRICT OF LOS ANGELES COUNTY
UPPER BASIN WATER PURVEYORS
UNITED WATER CONSERVATION DISTRICT, AND
VENTURA COUNTY AGRICULTURAL WATER QUALITY COALITION

October 2008

Final - September 3, 2008

MEMORANDUM OF UNDERSTANDING FOR THE IMPLEMENTATION OF
AN ALTERNATIVE WATER RESOURCES MANAGEMENT PROGRAM

This Memorandum of Understanding for the Implementation of an Alternative Water Resources Management Program ("MOU") is entered into effective October 23, 2008, by and among CASTAIC LAKE WATER AGENCY ("CLWA"), CLWA's SANTA CLARITA WATER DIVISION ("SCWD"), VALENCIA WATER COMPANY ("VWC"), NEWHALL COUNTY WATER DISTRICT ("NCWD"), and LOS ANGELES COUNTY WATERWORKS DISTRICT NO. 36 ("LACWD"), which are collectively referred to as the "UPPER BASIN WATER PURVEYORS ("UBWPs")," the SANTA CLARITA VALLEY SANITATION DISTRICT OF LOS ANGELES COUNTY ("SCVSD"), the UNITED WATER CONSERVATION DISTRICT ("UWCD"), and the VENTURA COUNTY AGRICULTURAL WATER QUALITY COALITION ("VCAWQC"), individually referred to as a "Party" and collectively as the "Parties."

RECITALS

- A. A total maximum daily load (TMDL) for chloride in the Upper Santa Clara River (Reaches 5 and 6) was adopted by the California Regional Water Quality Control Board – Los Angeles Region ("Regional Board") and became effective on May 5, 2005. The TMDL established waste load allocations of 100 mg/L for the SCVSD's Saugus and Valencia Water Reclamation Plants (WRPs). The TMDL implementation schedule allows for several special studies to determine whether existing water quality objectives and waste-load allocations for chloride can be revised, and provides for an 11-year schedule to attain compliance with the final water quality objectives and waste-load allocations for chloride.
- B. The conventional approach to achieving compliance with the existing 100 mg/L water quality objective and waste-load allocations for chloride would be through constructing desalination facilities at the SCVSD's Saugus and Valencia WRPs and a 43-mile brine line through the Santa Clara River Watershed to an ocean outfall off the Ventura coast. The Parties have collaboratively developed an alternative approach to water resources management that will achieve TMDL compliance, which is set forth in an exhibit to this MOU (Exhibit 1) and entitled "the Alternative Water Resources Management Program" ("the AWRM Program"). This program uses a basin water supply management approach to achieve the final water quality objectives and waste load allocation for chloride determined through the TMDL collaborative process. The AWRM Program, in comparison with the conventional approach, would have economic, public acceptance, feasibility, timing, environmental quality, and water supply benefits.
- C. The Parties recognize that the AWRM Program provides multiple benefits for stakeholders in Los Angeles and Ventura Counties. These benefits include the revision of water quality objectives, provision of tertiary recycled water and potential provision of desalinated recycled water that will support increased water recycling and thereby increase water supplies in the City of Santa Clarita and unincorporated areas of Los Angeles County. In addition, the AWRM Program will implement water supply facilities in Ventura County and provide desalinated recycled water to these water supply facilities that will allow for the conjunctive use of groundwater and surface water resources to increase water supplies and improve water quality in groundwater and surface waters of the Santa Clara River watershed.

Final - September 3, 2008

- D. The Parties have determined that this MOU is an appropriate format for initiating implementation of the AWRM Program, and will benefit the water resources of the Santa Clara River Watershed.
- E. The Parties desire to establish and maintain cooperative and reciprocal relationships with each other for the planning and preliminary design of facilities and operations that will implement and monitor the effectiveness of the AWRM Program. In order to do this, the Parties are willing to designate individual representatives to participate in an Oversight Committee that will provide oversight of the implementation of the AWRM Program.
- F. The Parties acknowledge that a Joint Powers Authority (JPA) may be formed to implement specific activities anticipated by this MOU.
- G. The Parties recognize and acknowledge SCVSD's rights under California Water Code, Section 1210, as it pertains to the recycled water, whether tertiary or desalinated, that is produced from the SCVSD's facilities. The Parties further recognize and acknowledge that the primary and first use of all desalinated recycled water is to comply with requirements of the USCR Chloride TMDL.
- H. The UBWPs and UWCD have conferred and come to an agreement on the call for any desalinated recycled water for secondary uses in Los Angeles and Ventura Counties.
- I. The Parties recognize that the implementation of the AWRM Program is subject to the California Environmental Quality Act, Public Resources Code Sections 21000 *et seq* ("CEQA"). The Parties intend by this MOU to address the manner in which they intend to fulfill their responsibilities under CEQA in regard to the AWRM program and the project specific actions that may be taken by the Parties. This MOU is not intended to limit the Parties' discretion to consider alternatives and additional mitigation measures in regard to the AWRM Program.

MEMORANDUM OF UNDERSTANDING

The Parties therefore agree as follows:

- 1.1 **Guiding Principles for AWRM Program.** The Parties agree to abide by a set of guiding principles, as described in Exhibit 1, for the implementation of the AWRM Program, as well as any adaptation of the AWRM Program, if necessary, in the future.
- 1.2 **Revisions to Surface Water and Groundwater Water Quality Objectives and Associated Final Chloride Waste-Load Allocations and Effluent Permit Limits.** The Parties agree to support the revisions to the surface water and groundwater water quality objectives and all associated final chloride waste-load allocations and final effluent permit limits for the Saugus and Valencia WRPs set forth in Exhibit 1, as well as any regulatory actions necessary to allow groundwater to be discharged. The Parties agree to submit written and oral testimony to the Regional Board, the State Water Resources Control Board, and the United States Environmental Protection Agency, Region IX encouraging adoption of such revisions. The Parties also agree to undertake advocacy and outreach activities necessary to obtain the support and acceptance of stakeholder groups within their jurisdictional boundaries for the revisions to water quality objectives and associated final waste-load allocations and effluent permit limits necessary to implement the AWRM Program.

Final - September 3, 2008

- 1.3 Uses of Desalinated Recycled Water.** In accordance with the California Water Code, Section 1210, the SCVSD will designate uses of its desalinated recycled water, at its sole discretion, as follows:
- 1.3.1 Primary Uses of Desalinated Recycled Water.** The primary and first use of all desalinated recycled water is for SCVSD compliance-related purposes, which include but are not limited to: (1) complying with water quality objectives for Reaches 4A, 4B, and 5; (2) protecting salt-sensitive agricultural beneficial uses irrigated with Reach 4B surface water as required in the USCR Chloride TMDL; (3) removing past excess chloride load above 117 mg/L from East Piru Basin groundwater that is attributed to the District's facilities; and (4) maintaining a salt balance so that any future cumulative incremental chloride load above 117 mg/L to Reach 4B surface water that is attributed to the District's facilities is removed through the AWRM Program, as required in the USCR Chloride TMDL.
- 1.3.2 Secondary Uses of Desalinated Recycled Water.** To the extent that SCVSD does not use its desalinated recycled water for the primary uses identified in Section 1.3.1, and there is sufficient supply available for secondary uses, the SCVSD will make available an amount up to 3 MGD of its remaining desalinated recycled water for calls for utilization by the UBWPs and the UWCD. In the event that the UBWPs desire to implement a program to augment local water supplies by beneficial use of the desalinated recycled water when the desalinated recycled water is not needed to meet the primary uses described in Paragraph 1.3.1, the UBWPs and UWCD shall meet and confer in good faith to develop a mutually agreed-upon division of any available desalinated recycled water for secondary uses. Deliveries of secondary use desalinated recycled water to the UBWPs or UWCD will be accommodated under recycled water agreement(s) between the party(ies) receiving deliveries and the SCVSD.
- 1.3.3 Future Rights to Desalinated Recycled Water.** Because SCVSD's primary and first use of desalinated recycled water from facilities implemented under the AWRM program is for compliance related purposes, in accordance with Section 1.3.1, any secondary uses of desalinated water or delivery to the UBWPs or UWCD are not guaranteed. As such, any secondary use of desalinated recycled water from the AWRM Program or delivery to Los Angeles or Ventura Counties will not establish any right on the part of any recipient or other entity to future deliveries of any quantity of desalinated recycled water from the SCVSD.
- 1.4 Implementation of Party Commitments.** Subject to completion of any required procedures under CEQA, each Party agrees to implement their respective commitments as described in the AWRM Program, and as follows:
- 1.4.1 SCVSD Commitments.** Subject to compliance with CEQA, the SCVSD agrees to implement the following commitments in support of the AWRM Program:
- (a) Self-regenerating Water Softeners: The SCVSD shall continue with the planning and implementation of outreach programs and legal procedures for voluntary and mandatory removal of self-regenerating water softeners (SRWS).
- (b) Other Source Control Activities. The SCVSD shall consider funding other cost-effective source control activities on a case-by-case basis, if circumstances in the future necessitate the need for additional chloride reduction.

Final - September 3, 2008

- (c) AWRM Environmental Impact Report and Wastewater Facilities Plan: The SCVSD shall act as the Lead Agency and complete planning and programmatic environmental analysis under the California Environmental Quality Act ("CEQA") of the AWRM Program elements specified in Exhibit I in an Environmental Impact Report (EIR). In addition, the SCVSD shall complete facilities planning and project level CEQA analysis of the following wastewater-treatment related elements of the AWRM Program:
- i. Conversion of the disinfection processes at the Saugus and Valencia WRPs to Ultra-Violet Light Technologies.
 - ii. Construction of an advanced treatment facility at Valencia WRP, consisting of microfiltration (MF) and reverse osmosis (RO).
 - iii. Construction of brine disposal facilities associated with the brine generated from reverse osmosis technologies.
 - iv. Construction of a desalinated recycled water conveyance pipeline from Valencia WRP to the Camulos Ranch surface water diversion.
- (d) Certification of AWRM EIR and Wastewater Facilities Plan: The SCVSD shall act as the Lead Agency and consider certification of the AWRM EIR and Wastewater Facilities Plan in accordance with CEQA, which will include an assessment of the elements identified in 1.4.1(c) of this MOU by May 4, 2011 (TMDL Task 13a due date). Other signatories to this MOU may act as responsible agencies for the AWRM EIR, or use the AWRM EIR in connection with their own project approval processes.
- (e) Early Start Recycled Water Project: The SCVSD shall work with the UBWPs to develop an early start recycled water project. The objectives of the early start recycled water project are to utilize recycled water from the Saugus Water Reclamation Plant and to reduce the risk of invasive fish migration to critical downstream habitats.
- (f) Recycled Water Agreement: The SCVSD and CLWA shall amend or replace the existing recycled water agreement to expand the quantity of recycled water that can be purchased by CLWA from the SCVSD.
- (g) CLWA's Recycled Water Program: The SCVSD shall support the implementation of the CLWA's Recycled Water Program, through in-kind services to support regulatory reports/activities needed to utilize recycled water, lobbying efforts to secure grant funds for recycled water infrastructure investments, and in-kind technical support for the CLWA's application for low-interest State Revolving Fund (SRF) loans for the construction of recycled water infrastructure facilities.
- (h) Minimum Streamflow Study: Because the supply of recycled water is limited by minimum streamflow requirements in Reach 5 of the Santa Clara River, the SCVSD, together with the UBWPs and possibly others, shall fund a minimum streamflow study to quantify the habitat requirements of Reach 5. The cost allocation of this study shall be determined by mutual agreement.
- (i) Groundwater Recharge Program in Los Angeles County: In the event that the UBWPs desire to implement a groundwater recharge program with recycled water, for the purpose of augmenting Los Angeles County water supplies, the SCVSD shall support the UBWPs efforts to obtain regulatory approvals from the Los Angeles Regional Water Quality Control Board, California Department of Public Health, and State Water Resources Control Board, as necessary. Support shall include written

Final - September 3, 2008

and oral testimony and in-kind technical support on regulatory and technical reports and documents needed to utilize secondary use desalinated recycled water to augment local water supplies.

- (j) Completion of Wastewater Facilities: Subject to the scheduling provisions of Section 1.4.5, the SCVSD shall complete and operate the approved wastewater facilities addressed in the Final AWRM EIR and Wastewater Facilities Plan by May 4, 2015 (Revised TMDL Task 13d due date).
- (k) Ventura County Water Supply Facilities Scope of Work: The SCVSD shall contract with a firm or firm(s) that are jointly selected by the SCVSD and UWCD, to prepare a conceptual engineering design and engineer's cost estimate for the following Ventura County water supply facilities within 12 months of the approval date of the revised Chloride TMDL:
 - i. East Piru extraction well network, consisting of 10 extraction wells, with a rated pumping capacity of 2,000 gallons per minute per well.
 - ii. East Piru conveyance pipelines, consisting of:
 - 1. Desalinated recycled water conveyance pipeline from the Camulos Ranch surface water diversion to the East Piru extraction well network.
 - 2. Blended discharge (RO + Extracted Groundwater) conveyance pipeline from the East Piru extraction well network to the Santa Clara River near the Fillmore Fish Hatchery, in Reach 4A of the Santa Clara River.

The engineer's cost estimate will include the cost for CEQA documentation and construction permitting of the Ventura County water supply facilities. Once completed and approved by the SCVSD and UWCD (or another designated Lead Agency), the conceptual engineering design and cost estimate shall be identified as Exhibit 2 of this MOU, and serve as the agreed-upon scope of work and the basis for the SCVSD's financial commitment and CEQA analysis for the implementation of the Ventura County water supply facilities for the AWRM Program.

- (l) Financing – Design, Permitting, CEQA Documentation and Construction of the Ventura County Water Supply Facilities: The SCVSD shall finance the design, construction permitting, CEQA documentation, construction and construction management of the facilities identified in Exhibit 2 of this MOU, subject to and contingent upon all of the following:
 - i. The Lead Agency for the implementation of the facilities identified in Exhibit 2 has completed and certified a Project Level EIR, procured all necessary permits for construction of the recommended project, and completed all commitments identified in Section 1.4.3(c);
 - ii. The construction and cost of the facilities is in accordance with the final design and bid documents for the specific facilities identified in Exhibit 2.
 - iii. The SCVSD's financial responsibility is limited to the cost of design, construction permitting, CEQA documentation, construction, and construction management for only those facilities identified in Exhibit 2 of this MOU. The SCVSD's financial commitment for CEQA documentation and construction permitting will not exceed the cost estimate for these tasks, as identified in Exhibit 2, unless approved by the SCVSD. Any incremental

Final - September 3, 2008

costs associated with the design, permitting, CEQA documentation, construction, and construction management of other facilities implemented by the Lead Agency that are outside the agreed upon scope of work, will be the responsibility of the Lead Agency.

- iv. The SCVSD has the right to review and approve design and bid documents, with the selection of the recommended contractor(s) by the Lead Agency, based on the lowest competitive bid.
- v. The SCVSD has reviewed all pertinent construction management records, for the purpose of resolving any disputes related to cost of constructing the facilities identified in Exhibit 2.
- vi. The SCVSD has established an escrow account with the Lead Agency to fund the implementation of the Ventura County water supply facilities through a mutually agreed upon disbursement process that is tied to the achievement of project milestones and deliverables approved by the SCVSD.

(m) Operation and Maintenance Costs of Ventura County Water Supply Facilities:

During the operation of the Ventura County water supply facilities, the SCVSD shall pay the proportionate cost of the operation and maintenance of the Ventura County water supply facilities associated with removing past excess chloride load above 117 mg/L from East Piru Basin groundwater attributed to its facilities and any future incremental load of chloride above 117 mg/L to Reach 4B surface water attributed to its facilities. The proportionate cost of operation and maintenance of these facilities will be calculated based on procedures that will be mutually determined by the SCVSD and UWCD. When these procedures are determined, they will be identified as Exhibit 3 of this MOU.

(n) Alternative Water Supplies to Reach 4B Surface Water Diverters:

The SCVSD shall provide an alternative water supply that is of suitable quality and quantity to surface water diverters in Reach 4B of the Santa Clara River, when the surface water quality exceeds 117 mg/L at the Santa Clara River near the Los Angeles – Ventura County Line. This provision is contingent upon the execution of a separate agreement between the SCVSD and Reach 4B surface water diverter(s) which, when completed, will be identified as Exhibit 4 of this MOU, and will, at a minimum, include the following terms and conditions:

- i. Any Reach 4B surface water diverter must provide evidence of its legal right to divert surface water from Reach 4B of the Santa Clara River;
- ii. Any Reach 4B surface water diverter must identify the acreage and location by street address or assessor's parcel number of each salt-sensitive crop (i.e. avocados, strawberries, and nursery crops) that is irrigated with surface water diverted from Reach 4B of the Santa Clara River.

(o) Early Start Supplemental Water Releases:

Prior to the completion of the wastewater treatment facilities identified in Section 1.4.1(c), the SCVSD shall make all reasonable efforts to procure supplemental waters for release to the Santa Clara River for the purpose of enhancing the assimilative capacity of the Santa Clara River, improving water quality conditions in Reach 4B, and if possible, attaining water quality objectives. The procurement of these early start supplemental waters is contingent upon a number of factors and will be obtained through a separate agreement with the UBWPs, as discussed in Section 1.4.2.

Final - September 3, 2008

- (p) Performance Requirements for Supplemental Water Release: The SCVSD shall establish performance requirements for supplemental water releases to Reaches 5 and 6 of the Santa Clara River, and provide them to the UBWPs to develop a plan, approved by the SCVSD, that provides for supplemental water releases in accordance with Section 1.4.2(b).
- (q) Financing – Design, Permitting, CEQA Documentation and Construction of New Supplemental Water Facilities. If the supplemental water plan in Section 1.4.2(b) involves the construction of new facilities (i.e. conveyance pipelines to the Santa Clara River), the SCVSD will finance the design, construction permitting, CEQA documentation, construction and construction management of any new supplemental water facilities subject to and contingent upon all of the following:
- i. The SCVSD and Lead Agency, identified in Section 1.4.2(c) shall agree on the scope of work and cost estimate for any new supplemental water facilities necessary to implement the AWRM Program. The SCVSD will contract with a firm or firms that are jointly selected by the SCVSD and UBWPs, to prepare a conceptual engineering design and engineer's cost estimate for new supplemental water facilities identified in the supplemental water plan. The engineer's cost estimate shall include the cost for CEQA documentation and construction permitting of the new supplemental water facilities. Once completed and approved by the SCVSD and Lead Agency, the conceptual engineering design and cost estimate shall be attached with Exhibit 5 of this MOU (supplemental water agreement and plan), and serve as the agreed-upon scope of work and the basis for the SCVSD's financial commitment and CEQA analysis for the implementation of new supplemental water facilities.
 - ii. The Lead Agency has completed and certified a Project Level EIR, procured all necessary permits for construction of the recommended project, and completed all commitments identified in Section 1.4.2(d).
 - iii. The construction and cost of the facilities is in accordance with the final design and bid documents for the new supplemental water facilities.
 - iv. The SCVSD's financial responsibility is limited to the cost of design, construction permitting, CEQA documentation, construction, and construction management for only those facilities in the agreed upon scope of work (attached in Exhibit 5). The SCVSD's financial commitment for CEQA documentation and construction permitting will not exceed the cost estimate for these tasks, unless approved by the SCVSD. Any incremental costs associated with the design, construction permitting, CEQA documentation, construction, and construction management of other facilities implemented by the Lead Agency that are outside the agreed upon scope of work, will be the responsibility of the Lead Agency.
 - v. The SCVSD has the right to review and approve design and bid documents with the selection of the recommended contractor(s) by the Lead Agency, based on the lowest competitive bid.
 - vi. The SCVSD has reviewed all pertinent construction management records, for the purpose of resolving any disputes related to cost of constructing any new supplemental water facilities.

Final - September 3, 2008

- vii. The SCVSD has established an escrow account with the Lead Agency to fund the implementation of any new supplemental water facilities through a mutually agreed upon disbursement process that is tied to the achievement of project milestones and deliverables approved by the SCVSD.
- (r) Modification of the Castaic Lake Flood Flow Agreement: The West Branch Contractors of the State Water Project and Downstream Water Users to the 1978 Castaic Lake Flood Flow Agreement, anticipate requesting a modification of the 1978 Castaic Lake Flood Flow Agreement with the California Department of Water Resources. In the event that such a modification is requested, the SCVSD shall support the modifications request through written and oral testimony to any necessary regulatory agencies, so long as these modifications are consistent with compliance with WQOs and requirements of the USCR Chloride TMDL.
- (s) Extension of the Groundwater-Surface Water Interaction Model (GSWIM): Together with the UWCD, the SCVSD agrees to participate in the financing of the extension of the existing GSWIM from its current model boundary at the "A Street, Fillmore," to the "Santa Clara River at the Freeman Diversion." SCVSD's financial contribution shall be 75% of the total cost to extend the model boundary and will be contingent upon UWCD contributing the remaining cost to extend the GSWIM boundary and, in good faith, negotiating and securing low cost supplemental water, if available, on an annual basis for the term of the MOU, in accordance with Section 1.4.3(f).
- (t) SCVSD Commitment Contingencies: The commitments described in Section 1.4.1 of this MOU may be terminated (by SCVSD) if any of the termination contingencies set forth in Section 1.9 of the MOU occur.
- 1.4.2 UBWPs Commitments.** Subject to compliance with CEQA, the UBWPs agree to implement the following commitments in support of the AWRM Program:
- (a) Support for Revisions to WQOs and Implementation of AWRM Program:
- i. Revisions to WQOs: In accordance with the AWRM Program and Section 1.2 of this MOU, the Upper Basin Water Purveyors agree to support the necessary revisions to surface water and groundwater quality objectives and associated final waste-load allocations and effluent permit limits for chloride for the Saugus and Valencia WRPs.
 - ii. Implementation of AWRM: The implementation of the AWRM Program will require the SCVSD to make changes to the point of discharge, place of use, and/or purpose of use of its recycled water, and may require the SCVSD to file a wastewater change petition with the State Water Resources Control Board, in accordance with the California Water Code, Section 1211. The Upper Basin Water Purveyors will support the SCVSD efforts in the submittal of any wastewater change petitions required to support the AWRM Program, which include:
 1. Wastewater change petitions for the purpose of recycled water uses in the Santa Clarita Valley and Piru Basin;
 2. Wastewater change petitions for the purpose of changing the location of the point of discharge of the SCVSD's water reclamation plants.

Final - September 3, 2008

- (b) Procurement of Supplemental Waters: Based on the performance requirements provided by the SCVSD, the UBWPs shall develop a supplemental water plan involving an imported water-local groundwater exchange program, in support of the AWRM Program. The CLWA, on behalf of the UBWPs, shall develop a plan to procure, make reliable, deliver, treat, and convey imported water to replace local groundwater utilized as supplemental water as envisioned in the AWRM Program. To the fullest extent possible, the plan shall be developed to utilize available and unused Ventura County annual State Water Project (SWP) Table A and other water allocations, in cooperation with the UWCD as described in Section 1.4.3(f). The plan and its estimated costs shall be submitted to the SCVSD for review, comment, and approval. Based on the approved plan, the Upper Basin Water Purveyors shall execute the plan in accordance with an agreement to be negotiated (Exhibit 5). The SCVSD shall pay for the costs of executing the plan in accordance with the agreement (Exhibit 5) as well as provisions identified in Section 1.4.1(q), if applicable. The UBWPs shall make all reasonable efforts to execute the supplemental water plan for the AWRM Program. However, the UBWPs shall have no obligation to provide supplemental water for the AWRM Program to the SCVSD if extenuating factors outside the control of the UBWPs (i.e., earthquake, flood, fire, or legal challenges to use of banked or imported SWP water), prevent or impede the ability to execute the supplemental water plan.
- (c) Lead Agency CEQA Responsibilities: The UBWPs (or another designated agency) agree(s) to be the Lead Agency for the purpose of completing any necessary project-level environmental assessments under CEQA related to the procurement of supplemental water, operating an imported water – groundwater exchange program, releasing supplemental waters to the Santa Clara River to improve water quality and attain water quality objectives, or constructing conveyance pipelines to route supplemental water to the Santa Clara River.
- (d) Planning, Permitting, Design and Construction Costs for New Supplemental Water Facilities: If new supplemental water facilities are necessary, the Lead Agency will make all reasonable efforts to control the cost of any new supplemental water facilities that will be financed by the SCVSD in accordance with Section 1.4.1(q), and at a minimum, include the following review procedures:
- i. The Lead Agency shall develop for SCVSD review and approval, a detailed project implementation schedule that identifies key project milestones/deliverables and a schedule for financial disbursements. When completed, the project implementation and finance disbursement schedule shall be attached within Exhibit 5.
 - ii. The Lead Agency shall document all change orders and impacts to project budget and submit them to the SCVSD for approval. Any cost overruns associated with change orders for the planning, construction permitting, design, construction, or construction management of new supplemental water facilities that are not approved by the SCVSD shall be the responsibility of the Lead Agency. SCVSD shall not unreasonably withhold approval of change orders that appropriately relate to the project.

The Lead Agency shall receive financial disbursements related to the planning, design, construction and construction management activities for new supplemental water facilities, through an escrow account that will be funded based on an agreed upon disbursement process between the Lead Agency and SCVSD that is tied to the

Final - September 3, 2008

completion of key project milestones and project deliverables in accordance with the detailed implementation schedule and bid documents.

(e) UBWPs Commitment Contingencies: The UBWPs commitments in Sections 1.4.2(a) through 1.4.2(c) are contingent upon the execution of a separate agreement between the SCVSD and UBWPs, which when completed, shall be identified as Exhibit 5 of this MOU, and which will be based on the following principles:

- i. The UBWPs are made financially whole, in terms of the total cost to implement any supplemental water releases that support the AWRM Program.
- ii. The UBWPs are provided replacement water of suitable quality and reliability for any local groundwater that is utilized as supplemental water in an exchange program with imported water supplies.

In addition, the UBWPs commitments in Sections 1.4.2 may be terminated (by the UBWPs) if any of the termination contingencies set forth in Section 1.9 of the MOU occur.

1.4.3 UWCD Commitments. Subject to compliance with CEQA, the UWCD agrees to implement the following commitments in support of the AWRM Program:

(a) Support for Revisions to WQOs and Implementation of AWRM Program:

- i. Revisions to WQOs: In accordance with the AWRM Program and Section 1.2 of this MOU, the UWCD agrees to support the required revisions to surface water and groundwater quality objectives and associated final waste-load allocations and effluent permit limits for chloride for the Saugus and Valencia WRPs to implement the AWRM plan.
- ii. Implementation of AWRM: The implementation of the AWRM Program will require the SCVSD to make changes to the point of discharge, place of use, or purpose of use of its recycled water, which may require the SCVSD to file a wastewater change petition with the State Water Resources Control Board, in accordance with the California Water Code, Section 1211. The UWCD will support the SCVSD efforts in the submittal of any wastewater change petitions required to support the AWRM Program, which include:
 1. Wastewater change petitions for the purpose of recycled water uses in the Santa Clarita Valley and Piru Basin;
 2. Wastewater change petitions for the purpose of changing the location of the point of discharge of the SCVSD's water reclamation plants.

(b) Lead Agency CEQA Responsibilities: UWCD (or another designated agency) agrees to act as the Lead Agency for the implementation of the Ventura County water supply facilities identified in Exhibit 2, and shall be responsible for any project-level environmental analysis required under CEQA for these facilities, and the procurement of any permits necessary for construction of these facilities.

(c) Planning, Permitting, Design and Construction Costs: The Lead Agency will make all reasonable efforts to control the cost of the Ventura County Water Supply facilities

Final - September 3, 2008

that will be financed by the SCVSD in accordance with Section 1.4.1(i), and at a minimum, include the following review procedures:

- i. The Lead Agency shall develop for SCVSD review and approval, a detailed project implementation schedule that identifies key project milestones/deliverables and a schedule for financial disbursements. When completed, the project implementation and finance disbursement schedule shall be attached within Exhibit 2.
- ii. The Lead Agency shall document all change orders and impacts to project budget and submit them to the SCVSD for approval. Any cost overruns associated with change orders for the planning, construction permitting, design, construction, and construction management of the Ventura County water supply facilities that are not approved by the SCVSD shall be the responsibility of the Lead Agency. SCVSD shall not unreasonably withhold approval of change orders that appropriately relate to the project.

The Lead Agency shall receive financial disbursements related to the planning, design, construction and construction management activities for new supplemental water facilities, through an escrow account that will be funded based on an agreed upon disbursement process between the Lead Agency and SCVSD that is tied to the completion of key project milestones and project deliverables in accordance with the detailed implementation schedule and bid documents.

- (d) Ownership and Maintenance of Ventura County water supply facilities: Once constructed, the UWCD (or another designated agency) will assume ownership and maintenance responsibilities of the Ventura County water supply facilities and any permitting responsibilities associated with the operation and maintenance of the facilities identified in Exhibit 2 of this MOU.
- (e) Use of Developed Water Supplies: To the extent that AWRM Program activities result in water supplies that would otherwise not be available to UWCD, UWCD shall utilize its best efforts to utilize the developed water supplies from the AWRM Program to achieve sustainability with respect to current groundwater demand-supply imbalances within its service area.
- (f) Procurement of Supplemental Waters: Based on the UBWPs supplemental water plan (1.4.2(b)), the UWCD shall make good faith efforts to secure any available SWP water annually, as needed, from the Ventura County Table A allocation as supplemental water in support of the AWRM Program. UWCD's groundwater recharge operations receive primary consideration for any available SWP water from Ventura County's Table A allocation with any available balance secured to support the AWRM Program. UWCD, in good faith, will annually negotiate the purchase of any available SWP water at the lowest possible agreed upon rate with its partners, City of Ventura and Casitas Municipal Water District, review the purchase agreement with CLWA and SCVSD, execute the appropriate purchase agreement documents, and invoice CLWA and copy the SCVSD for the cost of purchasing any secured SWP water for the AWRM Program. The parties acknowledge that the City of Ventura and Casitas may not wish to enter into a purchase agreement with UWCD. Thus, there is no guarantee that supplemental water can be obtained.

Final - September 3, 2008

- (g) UWCD Commitment Contingencies: The commitments described in Sections 1.4.3 of this MOU may be terminated (by UWCD) if any of the termination contingencies set forth in Section 1.9 of the MOU occur.

1.4.4 VCAWQC Commitments. The VCAWQC agrees to implement the following commitments in support of the AWRM Program:

(a) Support for Revisions to WQOs and Implementation of AWRM Program:

- i. Revisions to WQOs: In accordance with the AWRM Program and Section 1.2 of this MOU, the VCAWQC agrees to support the necessary revisions to surface water and groundwater quality objectives and associated final waste-load allocations and effluent permit limits for chloride for the Saugus and Valencia WRPs.
- ii. Implementation of AWRM: The implementation of the AWRM Program will require the SCVSD to make changes to the point of discharge, place of use, and/or purpose of use of its recycled water, which may require the SCVSD to file a waste water change petition with the State Water Resources Control Board, in accordance with the California Water Code, Section 1211. The VCAWQC will support the SCVSD efforts in the submittal of any wastewater change petitions required to support the AWRM Program, which include:
 1. Wastewater change petitions for the purpose of recycled water uses in the Santa Clarita Valley and Piru Basin;
 2. Wastewater change petitions for the purpose of changing the location of the point of discharge of the SCVSD's water reclamation plants.

- (b) Use of Developed Water Supplies. VCAWQC shall support UWCD's efforts to utilize developed water supplies from the AWRM program to achieve sustainability with respect to current groundwater demand-supply imbalances within its service area.

- (c) VCAWQC Commitment Contingencies: The commitments described in Sections 1.4.4 of this MOU may be terminated (by VCAWQC) if any of the termination contingencies set forth in Section 1.9 of the MOU occur.

1.4.5 Schedule of Implementation Commitments. The Parties have prepared a preliminary schedule, attached in Exhibit 1, which describes the tasks and estimated time to implement the AWRM Program by each of the respective parties. The SCVSD shall be responsible for implementing all wastewater related facilities as identified in Section 1.4.1(c). The UWCD or another designated Lead Agency shall be responsible for implementing all Ventura County water supply facilities as identified in Exhibit 2. The UBWPs or another designated agency shall be responsible for implementing all supplemental water activities and, if necessary, construct facilities as identified in Section 1.4.2(b) and 1.4.2(d). Detailed schedules of the implementation activities of each party shall replace the schedules in Exhibit 1, as they are developed and completed. The Parties acknowledge that the AWRM Program implementation will be an ongoing and evolving process and may change due to future amendments to the AWRM Program, challenging implementation issues or other unforeseen circumstances. The Parties agree that if delays in the implementation schedule occur because of the circumstances

Final - September 3, 2008

discussed above, the SCVSD will request and the UWCD and VCAWQC will support extensions in the TMDL Implementation Schedule from the Regional Board, as appropriate, in order to accommodate such delays for the TMDL. Any changes or adaptations to the AWRM Program or AWRM Program implementation schedule shall be made in accordance with Section 1.6 of this MOU.

- 1.5 **Program Committee Oversight.** The General Manager or President of each Party (or their designees) shall meet as the AWRM Program Oversight Committee ("Oversight Committee") within 30 days of the execution of this MOU. The Oversight Committee may establish appropriate subcommittees, if necessary, to implement the AWRM Program and determine the meeting times and locations for the various committee/subcommittee meetings. The Oversight Committee or subcommittees will discuss and coordinate the implementation and monitoring of the AWRM Program, and, if necessary, develop a mutually agreed upon mediation process to resolve any disputes that may arise between the Parties during the implementation of the AWRM Program.
- 1.6 **Adaptation of the AWRM Program.** The Oversight Committee will be responsible for making determinations of any necessary adaptations of the AWRM Program that are necessary during implementation. Adaptation of the AWRM Program must be approved by all Parties, and effectuated through an amendment of the MOU describing the adaptations of the AWRM Program mutually agreed upon by all Parties.
- 1.7 **Term.** This MOU shall remain in effect until May 4, 2016 and shall be automatically renewed for additional one-year increments thereafter unless otherwise unanimously decided by members of the Oversight Committee that the term of the MOU shall be allowed to expire.
- 1.8 **Duplicate Originals.** This MOU shall be executed as duplicate originals, each of which, when so executed, will be deemed to be an original and all of which taken together will constitute one and the same agreement.
- 1.9 **Termination Contingencies.** The Parties may elect to terminate this MOU in the event of any of the following contingencies, in which case this MOU shall be of no further force and effect:
 - 1.9.1 Should the Regional Board, State Water Resources Control Board, U.S. EPA, Region IX, or the California Office of Administrative Law fail to revise the water quality objectives for groundwater and surface water to the values shown in Exhibit 1, as necessary to implement the AWRM Program.
 - 1.9.2 Should any of the Lead Agencies responsible for implementing major elements (i.e. Conversion to Ultra Violet Disinfection Technology, Procurement of Supplemental Waters, Advanced Treatment Facilities at the Valencia WRP, Brine Disposal Facilities, East Piru Extraction Well Network, Desalinated Recycled Water Pipelines to Camulos Ranch and East Piru, or East Piru Blended Discharge Conveyance Pipeline – Exhibit 1) of the AWRM Program fail to complete or certify the necessary environmental impact reports or other assessments needed to comply with CEQA.
 - 1.9.3 Should any of the Parties not implement their specific commitments as specified in Sections 1.4.1 through 1.4.4 of this MOU.

If such termination contingencies occur, all commitments described in Sections 1.4.1 through 1.4.4 of this MOU shall terminate and be of no further force or effect. In the event of MOU termination, each party shall bear their own project-specific costs incurred prior to termination. Any controversies concerning the responsibility for such costs shall be subject to mediation upon

Final - September 3, 2008

terms to be agreed upon by the Oversight Committee. This MOU does not in any way relieve the Parties of any obligations under the TMDL. Inability by any Party to complete AWRM Program element implementation on schedule (Exhibit 1), due to circumstances beyond the Party's reasonable control as determined by the Oversight Committee, shall not constitute grounds for termination of this MOU.

- 1.10 Warranties of Authority.** Each Party hereby represents and warrants that it is fully authorized to enter into this MOU; that it has taken all necessary internal legal actions to duly approve the making and performance of this MOU; that no further internal approval is necessary; and that the making and performance of this MOU does not violate any provision of any governing statutes or regulations, articles of incorporation, charters or by-laws.
- 1.11 Exhibits for the MOU.** The exhibits for this MOU are as follows, with Exhibits 2 through 5 to be included in the future, when such exhibits are developed by the parties and become available:
- 1.11.1 Exhibit 1 – The Alternative Water Resources Management Program**
 - 1.11.2 Exhibit 2 – Conceptual Engineering Design, Cost Estimate and Scope of Work for the Ventura County Water Supply Facilities of the AWRM Program**

(To be developed and attached to this MOU in the future)
 - 1.11.3 Exhibit 3 – Procedures for the Determination of Future Operation & Maintenance Costs of the Ventura County Water Supply Facilities of the AWRM Program Between the SCVSD and the UWCD**

(To be developed and attached to this MOU in the future)
 - 1.11.4 Exhibit 4 – Alternative Water Supply Agreements Between the SCVSD and Santa Clara River, Reach 4B Surface Water Diverters**

(To be developed and attached to this MOU in the future)
 - 1.11.5 Exhibit 5 – Supplemental Water Agreement, Supplemental Water Plan, and Conceptual Engineering Design / Cost Estimate / Scope of Work for the Supplemental Water Facilities of the AWRM Program**

(To be developed and attached to this MOU in the future)

Upper Santa Clara River Chloride TMDL Background

The California Regional Water Quality Control Board - Los Angeles Region (Regional Board) adopted the Upper Santa Clara River (USCR) Chloride Total Maximum Daily Load (TMDL) in 2002, establishing waste-load allocations for the Santa Clarita Valley Sanitation District's (SCVSD) Valencia and Saugus WRPs at 100 mg/L. Amendments to the TMDL in 2004 and 2006 established a phased TMDL approach, which allowed for the development of several scientific studies and potential site-specific objectives (SSOs) for chloride that the Regional Board may consider to revise the existing 100-mg/L water quality objectives (WQOs). The TMDL implementation schedule specified, among other requirements, that special scientific studies be conducted to: a) evaluate the appropriate chloride threshold for the protection of sensitive agriculture; b) evaluate the appropriate chloride threshold for the protection of endangered species; and c) develop a groundwater/surface water interaction model to evaluate the impacts of chloride loading from all sources on water quality. The results of these studies would then become the technical basis by which potential SSOs for chloride could be developed for Regional Board consideration. The TMDL required development of these studies in a collaborative process to ensure substantial agreement between the Regional Board staff, SCVSD's staff, and other stakeholders, regarding the scientific and technical basis for establishing water quality objectives for chloride. Each of the major studies conducted as part of the TMDL and their current status are summarized as follows.

Threatened and Endangered Species Chloride Threshold Study (T&Es Study) – The T&Es Study was completed in November 2007 and determined that the 1988 United States Environmental Protection Agency ambient water quality criteria for chloride for the protection of aquatic life (230 mg/L Cl as chronic and 860 mg/L Cl as acute) are protective of locally important T&Es.ⁱ The chloride threshold for the protection of locally important T&Es was considerably higher than the threshold range for the protection of salt-sensitive agriculture.

Agricultural Chloride Threshold Study (Ag Study) - The Ag Study was a two-part study, with a Literature Review and Evaluation (LRE) completed in September 2005,ⁱⁱ and an evaluation of the appropriate averaging period completed in January 2008.ⁱⁱⁱ The Ag Study determined that the appropriate chloride threshold for salt-sensitive agriculture

Exhibit 1 - Alternative Water Resources Management Program

(avocados, strawberries, and nursery crops) grown in the USCR watershed is a guideline range between 100 and 117 mg/L Cl, with an averaging period of approximately 3 months.

Groundwater – Surface water Interaction Model (GSWIM) Study – The GSWIM Study developed a calibrated numerical model in March 2008,^{iv} to evaluate the impact of WRP effluent discharges to the river on downstream surface water and groundwater in the Los Angeles and Ventura County portion of the Santa Clara River watershed. The GSWIM is now being utilized to evaluate various alternatives to comply with the existing water quality objectives and potential SSOs in consideration. One of the alternatives being considered is the Alternative Water Resources Management (AWRM) Program, which is described in more detail below.

Site Specific Objectives (SSO) and Anti Degradation Analysis (ADA) Study – The SSO and ADA Study provides the technical and regulatory basis for the Regional Board to consider potential SSOs that support the AWRM Program, as discussed in more detail below. As part of the SSO effort, a white paper on the agricultural beneficial uses in Reaches 5 and 6 of the USCR was developed in September 2007,^v which assessed whether salt-sensitive agriculture was an existing or potential beneficial use. The white paper concluded that salt-sensitive agriculture was not an existing or potential beneficial use for surface water or underlying groundwater that could be impacted by surface water in Reaches 5 and 6. Since salt-sensitive agriculture was not an existing or potential beneficial for the surface waters or underlying groundwater that could be impacted by surface water in these reaches, SSOs higher than the Ag Study threshold range of 100-117 mg/L are potentially possible, and are being considered as part of the AWRM Program. The SSO-ADA study^{vi} has recommended the following SSOs for chloride, TDS and sulfate for surface water reaches and groundwater in the USCR watershed, as shown in Table 1:

Exhibit 1 - Alternative Water Resources Management Program

Table 1 –SSOs to Support AWRM Program

Surface Water SSOs for AWRM Program			
Mineral WQO	Reach 4B* (3 to 12-month avg.)	Reach 5 (12-month avg.)	Reach 6 (12-month avg.)
Chloride	400 117 (SWP Cl < 80 ppm) 130 (SWP Cl >= 80 ppm)	400 150	400 150
TDS	1300	1000	1000
Sulfate	600	400	250 450
Groundwater SSOs for AWRM Program			
Mineral WQO	East Piru (3 to 12-month avg.)	Castaic Valley (12-month avg.)	Santa Clara - Bouquet & S.F. Canyons (12-month avg.)
Chloride	200 130 to 150 (TBD)	150	400 150
TDS	2500 1300 (TBD)	1000	700 1000
Sulfate	1200 600 (TBD)	350	250 450

* When water quality in Reach 4B (Blue Cut) exceeds 117 mg/L, an alternative water supply will be provided to Reach 4B surface water diverters to protect salt-sensitive agricultural uses.

Alternative Water Resources Management Program Background

Since November 2007, the Santa Clarita Valley Sanitation District (SCVSD), Ventura County Agricultural Water Quality Coalition (VCAWQC), United Water Conservation District (United Water), and the Upper Basin Water Purveyors^{vi} have been working together to develop an alternative water resources management (AWRM) Program for the USCR Chloride TMDL. The purpose of the AWRM Program is to develop a regional watershed solution for chloride as an alternative to compliance with the existing 100 mg/L water quality objective, recognizing that compliance with the existing 100 mg/L WQO would be a challenging and costly project, requiring many years to implement. The AWRM Program considers the use of SSOs and water resource management facilities that would allow for the full protection of all beneficial uses, while simultaneously providing a more feasible compliance solution, maintaining a chloride balance in the USCR Watershed, and providing salt export and water supply benefits to Ventura County stakeholders. Through this process, the SCVSD, VCAWQC, United Water, and the Upper Basin Water Purveyors have come to conceptual agreement on the guiding principles,

^{vi} Castaic Lake Water Agency, Valencia Water Company, Newhall County Water District, Los Angeles County Water Works District No. 36, and the Santa Clarita Water Division of the Castaic Lake Water Agency.

Exhibit 1 - Alternative Water Resources Management Program

key elements, implementation tasks and agency responsibilities associated with the AWRM Program. Discussion of the guiding principles, each of these specific elements of the AWRM Program, and implementation task and agency responsibilities, is presented in the following sections.

The Guiding Principles of the AWRM Program

The following guiding principles have been established between the SCVSD, VCAWQC, United Water, and the Upper Basin Water Purveyors for the development and implementation of the AWRM Program:

- The AWRM Program will strive to avoid and, if necessary, mitigate any water quality impacts to direct agricultural users of surface and groundwater from the Santa Clara River in East Piru (i.e., Camulos Ranch).
- The AWRM Program will not cause long-term water quality degradation of groundwater, and agricultural uses of groundwater will be protected. (i.e., salt balance in any affected basin can be achieved within a reasonable time).
- The AWRM Program will include a plan to improve groundwater quality in East Piru Basin and expedite water quality improvements. (i.e., water quality in groundwater and surface water in East Piru Basin will be improved before the end of the USCR Chloride TMDL implementation compliance period).
- The AWRM Program will improve water supplies in Ventura County.
- The AWRM Program will be implemented, monitored and funded by the Santa Clarita Valley Sanitation District.
- The AWRM Program will provide for stakeholder oversight during implementation.
- The AWRM Program must comply with regulations and protect all beneficial uses.

Key Elements of the AWRM Program

The AWRM Program consists of several key elements, which combined, would provide a regional watershed solution for the Upper Santa Clara River Chloride TMDL that benefits all stakeholders within the watershed. The key elements of the AWRM Program include: (1) implementing measures to reduce chloride in the recycled water at the SCVSD's WRP discharges; (2) constructing advanced treatment for a portion of the recycled water from the SCVSD's Valencia WRP; (3) procuring supplemental water (i.e. local groundwater or surface water) for release to the Santa Clara River to improve water quality conditions and attain

Exhibit 1 - Alternative Water Resources Management Program

WQOs; (4) constructing water supply facilities in Ventura County; (5) providing alternative water supply to protect salt-sensitive agricultural beneficial uses of the Santa Clara River; (6) supporting the expansion of recycled water uses within the Santa Clarita Valley; and (7) revising the surface water and groundwater WQOs to support all of these elements. Each of these key elements is discussed in further detail, below.

Element No. 1: Reduction of Chloride Levels in WRP Recycled Water

As part of the AWRM Program, as well as any solution to the TMDL, the SCVSD will reduce the chloride levels in the recycled water discharged from the Valencia and Saugus WRPs. Reduction in the recycled water chloride levels would be achieved through enhanced source control, specifically the removal of self-regenerating water softeners (SRWS), which are a significant source of chloride to the SCVSD's sanitary sewer collection system, and conversion of the current beach-based disinfection facilities, which contribute an additional 10 mg/L of chloride in recycled water at each WRP, to Ultra-Violet Light Disinfection technology. Through removal of SRWS and conversion to UV disinfection technologies, the incremental chloride contribution from wastewater sources above the contribution from water supply can be reduced to a level of approximately 50 mg/L. This reduction in chloride will allow for the SCVSD's Valencia and Saugus WRPs to comply with revised WQOs in varying water supply chloride conditions,^{viii} and minimize the amount of advanced treatment required. As discussed below, revisions to the existing WQOs are necessary to support this AWRM Program element.

Element No. 2 Advanced Treatment at the SCVSD's Valencia WRP

While removal of chloride loading through enhanced source control would help the Saugus and Valencia WRPs comply with revised WQOs a majority of the time, additional chloride reduction would still be necessary for compliance with downstream revised WQOs in Reach 4B, through the construction and operation of a 3 MGD advanced treatment facility, using Micro-Filtration (MF) and Reverse Osmosis (RO) treatment technologies at the Valencia WRP. These facilities would serve four purposes: (1) continuous removal of approximately 3,200 pounds per day of chloride from the WRP effluent; (2) reducing chloride levels in the Santa Clara River in Reach 4B, through discharge of the high quality Valencia RO product water to the Santa Clara River, when necessary to achieve compliance with revised WQOs for this reach; (3) delivering high quality Valencia RO product water to blend with surface water diversions in Reach 4B so that the irrigation water quality is of sufficient quality to protect salt-

^{viii} Imported water supply chloride concentrations have often exceeded 100 mg/L during drought conditions, due to the influence of poor quality imported water supplies delivered from the State Water Project stored at the Castaic Lake Reservoir.

Exhibit 1 - Alternative Water Resources Management Program

sensitive agricultural uses, when necessary; and (4) providing a salt export and water supply benefit to Ventura County through delivery of the high quality Valencia RO product water to the Ventura County water supply facilities. These facilities and the salt export and water supply benefits associated with these facilities are discussed in greater detail below.

In addition to the advanced treatment facilities, construction of brine disposal facilities to dispose of the brine waste from the RO treatment process via deep well injection would be required. The use of deep well injection becomes a more plausible and sustainable brine disposal option, with a smaller advanced treatment facility, as proposed in the AWRM Program. The brine disposal for a 3MGD MF-RO facility is estimated at 0.5 MGD.

As mentioned above, when necessary, the high quality Valencia RO product water would be discharged directly to the Santa Clara River to reduce chloride levels in the river and comply with revised WQOs. Based on the results of the GSWIM Study, the discharge of Valencia RO product water to the river would occur, when chloride levels in the State Water Project (SWP) water stored in the Castaic Lake Reservoir are greater than or equal to 80 mg/L. The GSWIM study also found that the use of supplemental water released to the Santa Clara River, discussed in more detail below, is needed in certain critical conditions of extreme drought to assure compliance with the revised WQOs in Reach 4B. Finally, a portion of the high quality Valencia RO product water would also be delivered to blend with surface water diverted for irrigation of salt-sensitive agriculture, so that the irrigation water quality is less than 117 mg/L. A schematic of this operational management of the Valencia RO during conditions when the imported SWP exceeds 80 mg/L is presented in Figure 1a.

Figure 1a. AWRM Operation when SWP Cl \geq 80 mg/L

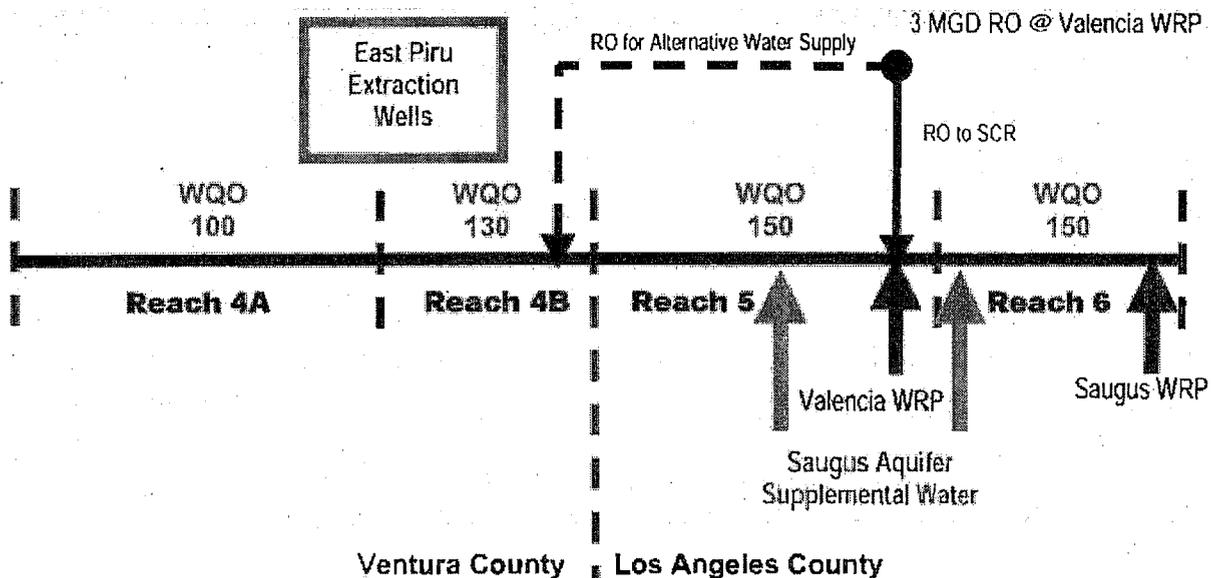

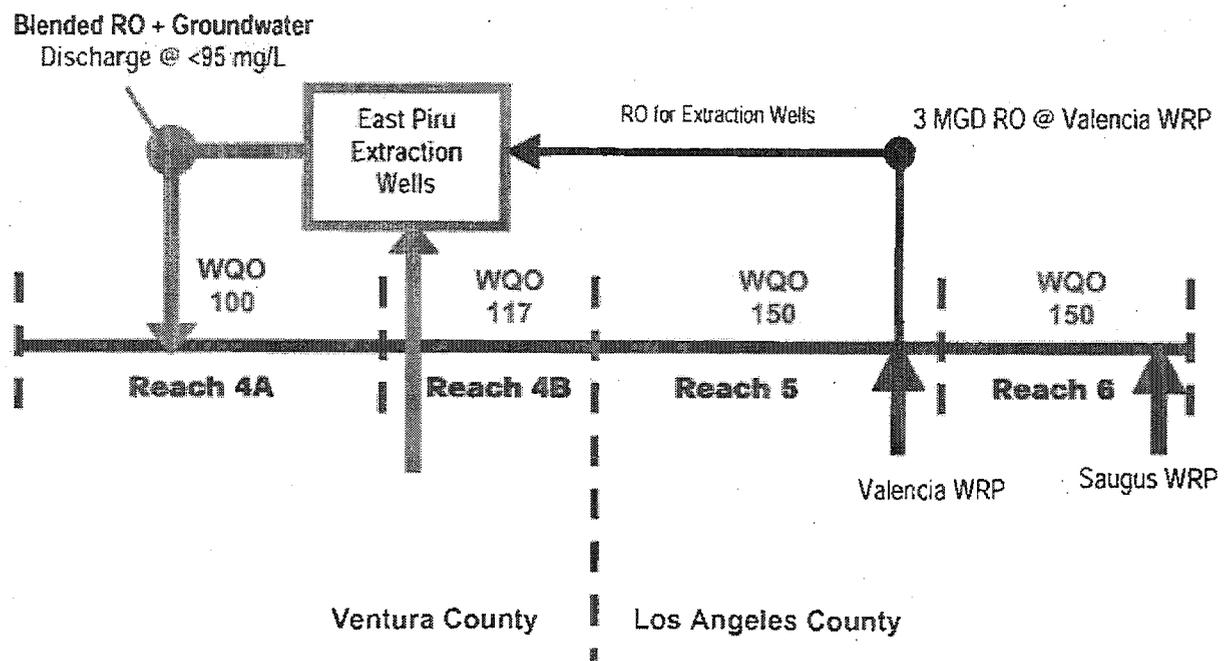

Exhibit 1 - Alternative Water Resources Management Program

In conditions when the chloride levels in the SWP water stored in the Castaic Lake Reservoir are below 80 mg/L, the GSWIM Study found that the high quality Valencia RO product water does not need to be discharged to the Santa Clara River to comply with revised WQOs. In fact, the GSWIM study estimates this condition occurs approximately 70% of the time, which then would allow for the high quality Valencia RO product water to be delivered to the Ventura County water supply facilities, in order to blend with high saline groundwater* underlying Reach 4B and produce a blended water supply that can be discharged into the wetted portions of Reach 4A of the Santa Clara River and comply with the existing 100 mg/L WQO for this reach. The discharge of this blended water supply in the wetted reaches of the Santa Clara River, where the "Dry Gap" ends, allows for greater base flow in the river, which ultimately can then be diverted at the Freeman Diversion and increase water supplies for Ventura County. A schematic of this operational management of the Valencia RO deliveries to the Ventura County water supply facilities during conditions when the imported SWP is less than 80 mg/L is presented in Figure 1b.

Figure 1b. AWRM Operation when SWP Cl < 80 mg/L

* The groundwater in Reach 4B has chloride concentrations at 150 mg/L.

Exhibit 1 - Alternative Water Resources Management Program

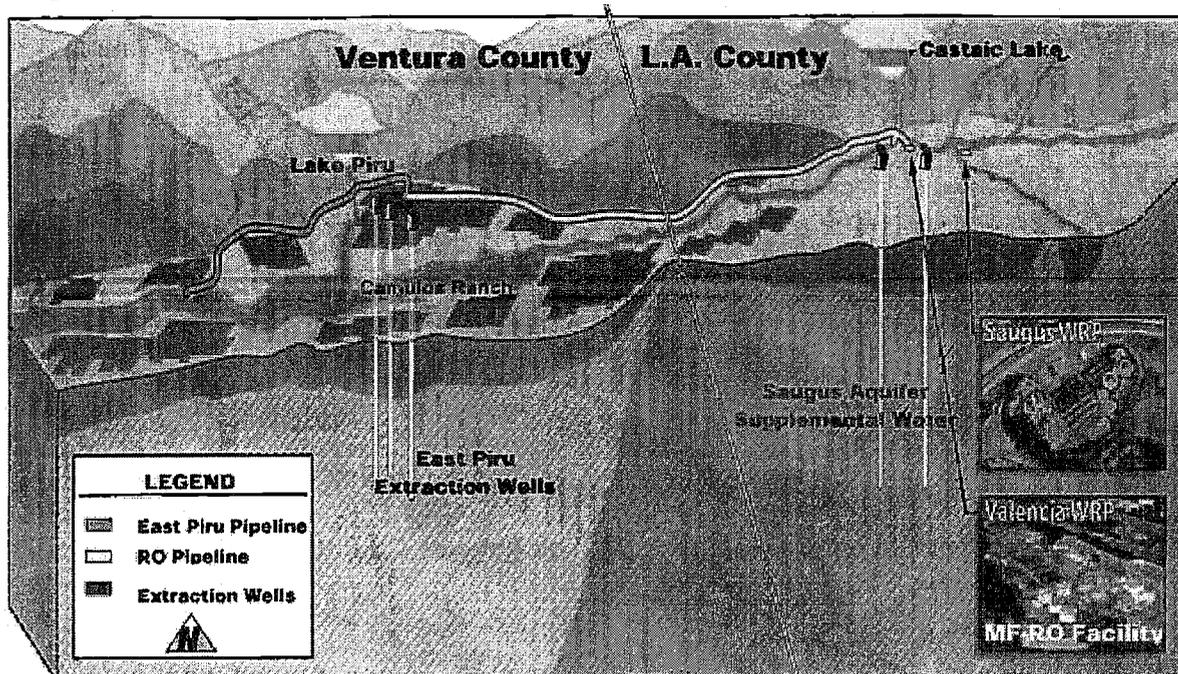

Element No. 3: Procuring Supplemental Water for Releases to the Santa Clara River

Recognizing that conducting environmental studies, permitting, designing and constructing an MF-RO facility at the Valencia WRP will take a significant period of time, the AWRM Program includes a commitment, contingent upon the necessary environmental assessments required under the California Environmental Quality Act, to provide supplemental water from the Saugus Aquifer and/or some other local water resource, to the Santa Clara River as an interim measure prior to completion of the AWRM Program facilities. Additionally, as discussed previously, the GSWIM study found that the use of supplemental water released to the Santa Clara River would be needed during extreme drought conditions to comply with revised WQOs for Reach 4B. These supplemental waters would be delivered through contractual arrangements between the SCVSD and the Upper Basin Water Purveyors.

Element No. 4: Ventura County Salt Export and Water Supply Benefits

In order to export accumulated salt in groundwater and provide the water supply benefits for Ventura County, a key element of the AWRM Program is the construction of the Ventura County water supply facilities, as shown in Figure 2.

Figure 2. AWRM Program Facilities

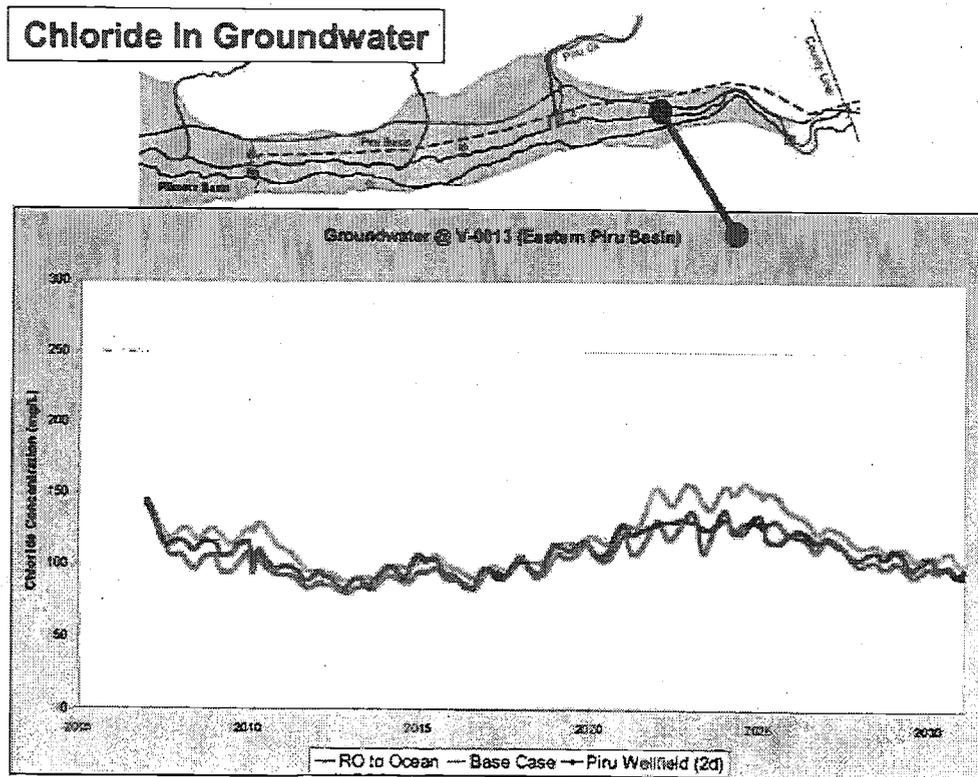

These facilities which would allow for salt export and water supply benefits by blending high quality Valencia RO product water with more saline groundwater in East Piru, to develop a

Exhibit 1 - Alternative Water Resources Management Program

blended water supply that is less than 95 mg/L in chloride. The Ventura County water supply facilities would be comprised of the following: (1) 10 groundwater extraction wells in the East Piru groundwater basin; (2) a 12-mile RO product water conveyance pipeline from the Valencia WRP to the East Piru extraction wells; and (3) a 6-mile conveyance pipeline for the blended East Piru groundwater and Valencia WRP RO product water (East Piru Pipeline) for discharge to Reach 4A of the Santa Clara River, downstream of the "Dry Gap."

Collectively, these facilities would be utilized for water supply and salt export benefits. Through the blending of high quality Valencia RO product water with more saline groundwater underlying Reach 4B, a new blended water supply can be developed and managed, which will not only export salt accumulated in groundwater in the East Piru basin, but comply with downstream surface water WQOs in Reach 4A, and increase water supplies in Ventura County. In addition, the extraction of more saline groundwater underlying Reach 4B, will allow for greater recharge of high quality storm flows in the SCR, which are typically low in chloride, lowering chloride levels in the groundwater. The reduction in chloride levels associated with AWRM Program, identified as "Piru Wellfield (Option 2d)," is presented in Figure 3.

Figure 3. Chloride in Groundwater in East Piru

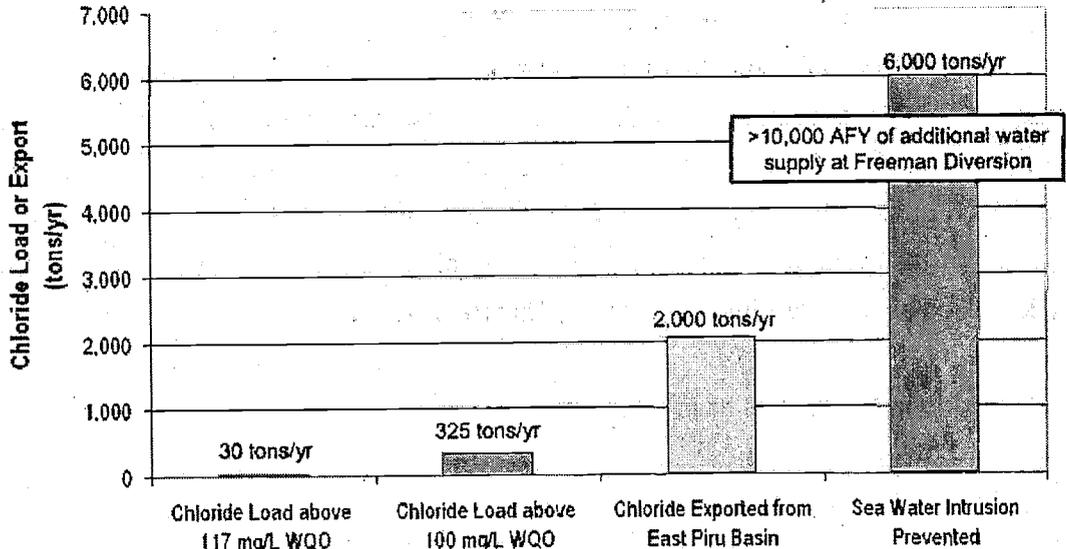

Source: Bachman, Steve, 2008. *Alternative Water Resources Management Program-Effects in Ventura County*. June 2008.

August 15, 2008

Exhibit 1 - Alternative Water Resources Management Program

The salt export from East Piru Basin and resultant reduction in saltwater intrusion provided by the increased water supply benefits, vastly outweigh the incremental loading above the WQO that occurs during extreme drought conditions, when SWP chloride levels are elevated.* A comparison of the yearly excess chloride loading above the existing (100 mg/L) and revised (117 mg/L) WQOs in Reach 4B, with the yearly chloride export through the extraction wells and prevention of saline intrusion are shown in Figure 4.

Figure 4. Chloride Balance with the AWRM Program

Element No. 5: Protection of Salt-Sensitive Agricultural in Reach 4B

The AWRM Program recognizes that chloride levels in Reach 4B of the Santa Clara River may exceed the protective range for salt sensitive agriculture of 100 - 117 mg/L chloride, as determined by the Ag. Study, discussed previously. In order to protect this salt sensitive agricultural beneficial use along Reach 4B of the SCR, the AWRM Program proposes to protect surface water diverters along this reach of the SCR with a suitable alternative water supply, when chloride concentrations in surface water exceed 117 mg/L making surface water quality unsuitable for the direct irrigation of salt-sensitive crops with surface water. Alternative water supplies of will be provided to temporarily protect salt-sensitive agricultural uses in Reach 4B, through the delivery of high quality RO product water to blend with Reach 4B surface water

* Imported water supply chloride concentrations have often exceeded 100 mg/L during drought conditions, due to the influence of poor quality imported water supplies delivered from the State Water Project stored at the Castaic Lake Reservoir.

Exhibit 1 - Alternative Water Resources Management Program

diverted for irrigation of salt-sensitive crops, so that the blended irrigation water quality is 117 mg/L or less. The use of alternative water supplies allows for the full protection of beneficial uses, during temporary and intermittent periods when water quality due to extreme drought conditions does not support those beneficial uses.

Element No. 6: Support for Expansion of Recycled Water Uses in the Santa Clarita Valley

The AWRM Program includes provisions to support recycled water uses in the Upper Basin Water Purveyor service areas. Increasing recycled water uses in the Santa Clarita Valley, will not only improve water supply reliability in the area, but also, reduce the chloride loading directly discharged to the Santa Clara River From the WRP discharges.

Element No. 7: Revisions to WQOs to support the AWRM Program

As indicated above, the feasibility of the AWRM Program is dependent upon revising the existing water quality objectives for surface water and groundwater to various levels that support the different elements of the AWRM Program. A summary of the recommended WQO revisions for surface water and groundwater, in support of the AWRM Program, were previously presented in Table 1. Through revision of these surface water and groundwater WQOs, the amount of advanced treatment required to achieve compliance with these WQOs is significantly reduced, which allows for the disposal of brine wastes generated from the RO processes through deep well injection as opposed to the construction of a 43-mile brine line and ocean outfall. In addition, the revision of these WQOs would better facilitate the permitting of recycled water uses in the Santa Clarita Valley, which will improve water supply reliability in the area, and reduce the chloride loading from recycled water that can now be beneficially reused, as opposed to directly discharged to the Santa Clara River. Ultimately, the cumulative benefits of the AWRM Program elements will improve water quality in surface water and groundwater, improve water supplies to Ventura County, protect all beneficial uses, and reduce the amount of advanced treatment and associated brine disposal needed for compliance.

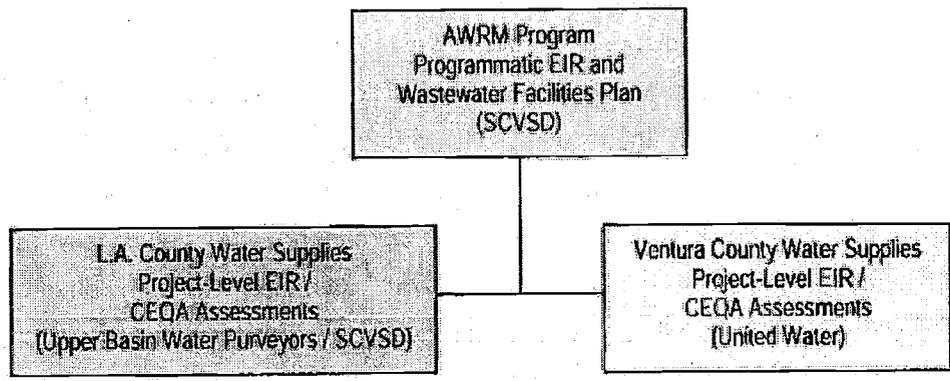

Implementation Tasks and Responsibilities for the AWRM Program

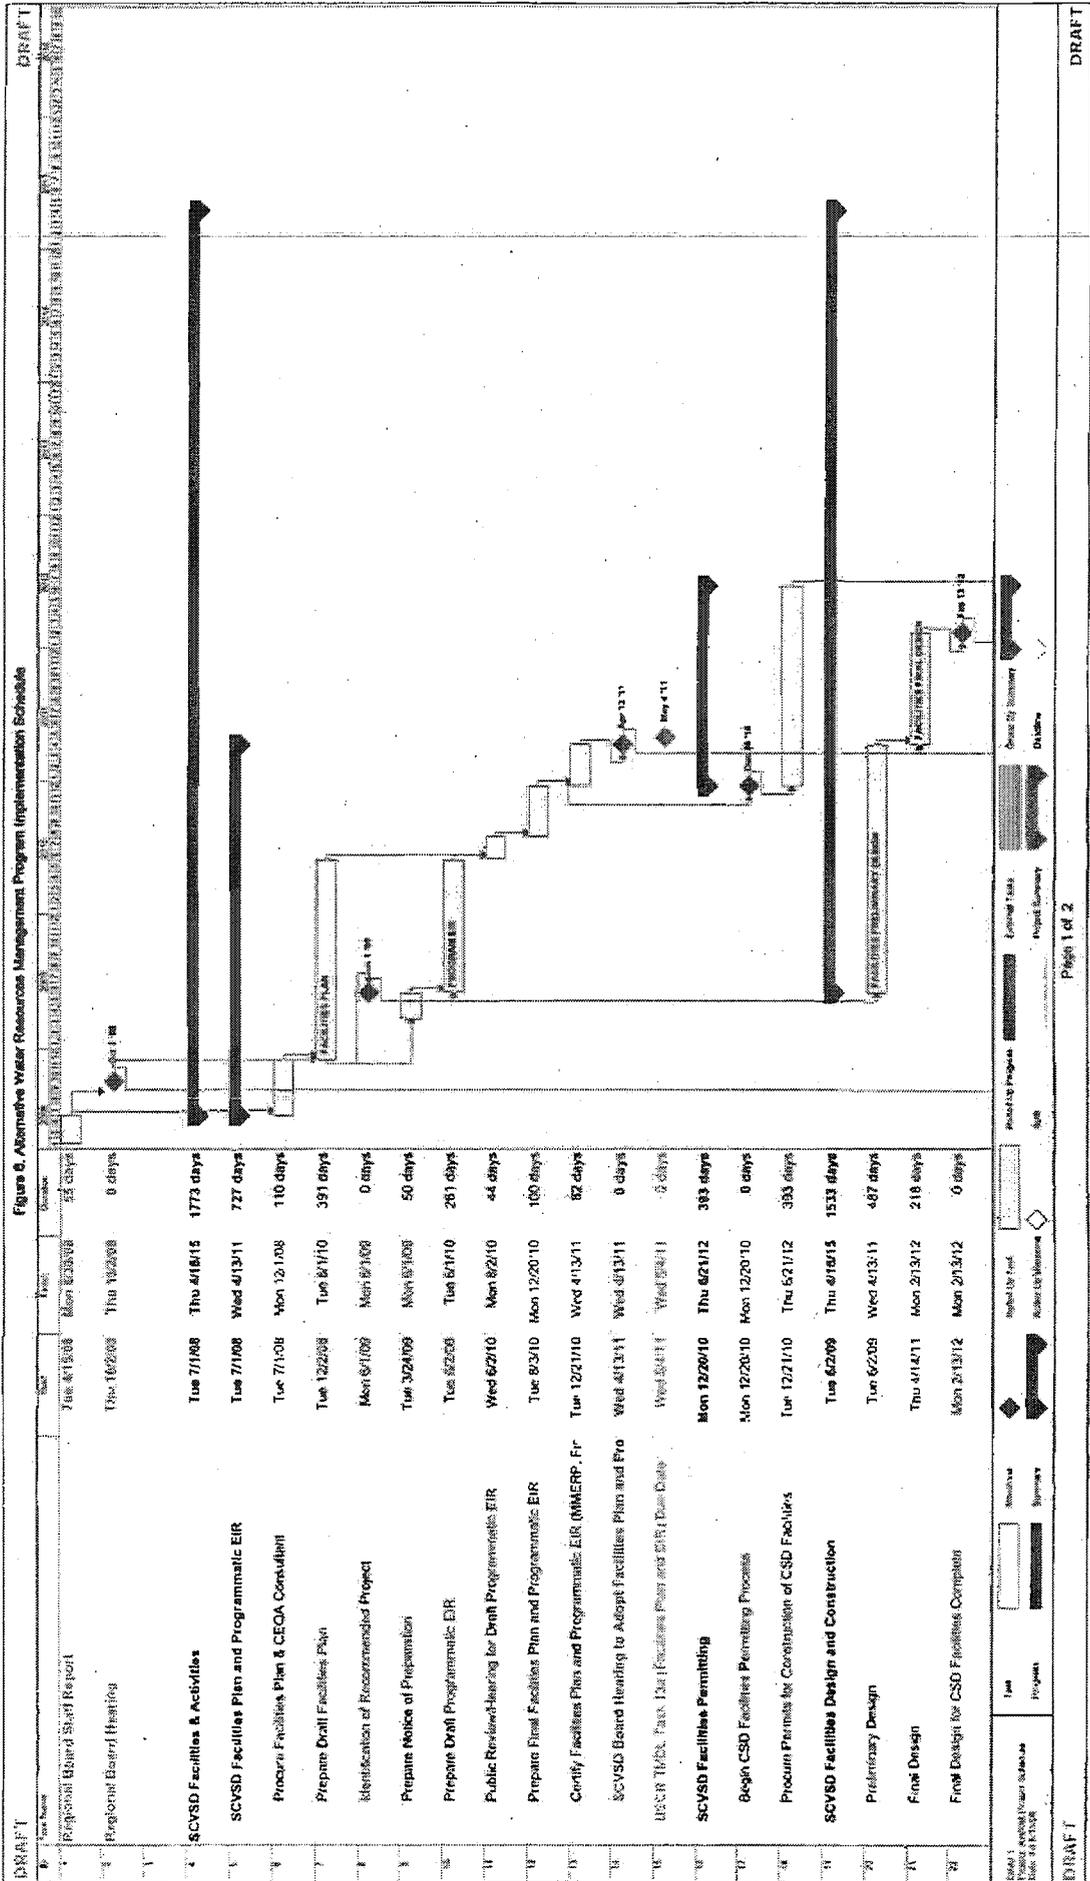

The SCVSD will be the lead agency for the development of a Programmatic Environmental Impact Report (PEIR) to assess the AWRM Program, and if appropriate, certify the PEIR, make CEQA findings, and approve the project. The SCVSD has the principal responsibility for carrying out and implementing the AWRM Program, because it is a necessary program to comply with the Upper Santa Clara River Chloride TMDL. In addition to the PEIR, the SCVSD will conduct a Facilities Plan for the necessary wastewater treatment facilities

Exhibit 1 - Alternative Water Resources Management Program

associated with AWRM Program (i.e. UV Disinfection, MF-RO Facilities and Brine Disposal Facilities). The United Water Conservation District (or another agency in Ventura County with water supply responsibilities) will become the lead agency responsible for conducting Project Level EIR / CEQA Assessments to implement the Ventura County water supply facilities associated with AWRM Program (i.e. Conveyance pipelines, East Piru extraction wells, and East Piru pipeline). Finally, the Upper Basin Water Purveyors/SCVSD will identify a lead agency for the purpose of conducting Project-Level EIR / CEQA Assessments to utilize and deliver supplemental water to achieve compliance on an interim and long-term basis for the AWRM Program. Figure 5 is a schematic that defines the proposed agency roles and responsibilities for implementing the necessary planning elements of the AWRM Program. Figure 6 is a preliminary implementation schedule associated with various, planning, design and construction activities required to implement the AWRM Program. The AWRM Program will achieve compliance with the schedule deadlines associated with TMDL Tasks 13a, 13b, 13c and 13d of the Upper Santa Clara River Chloride TMDL.

STEPHEN R. MAGUIN
Chief Engineer and General Manager

November 14, 2008
File No. 31-370-40.4A

Ms. Tracy Egoscue, Executive Officer
California Regional Water Quality Control Board
Los Angeles Region
320 West 4th Street, Suite 200
Los Angeles, CA 90013

Dear Ms. Egoscue:

**Comment Letter - Proposed Amendment to the Water Quality Control
Plan for the Los Angeles Region to Re-consider the Upper Santa Clara River
Chloride TMDL and Consider Conditional Site Specific Objectives for Chloride**

The Santa Clarita Valley Sanitation District of Los Angeles County (Sanitation District), would like to thank the California Regional Water Quality Control Board – Los Angeles Region (Regional Board) for the opportunity to provide comments on the proposed amendment to the Water Quality Control Plan (Basin Plan) for the Los Angeles Region to re-consider the Upper Santa Clara River (USCR) Chloride Total Maximum Daily Load (TMDL) and to consider conditional site specific objectives (SSOs) for chloride. The Sanitation District owns and operates the Valencia and the Saugus Water Reclamation Plants (WRPs) located within the Santa Clarita Valley, which provide primary, secondary and tertiary treatment to produce recycled water that is reused or discharged to the Upper Santa Clara River.

The Sanitation District strongly supports the proposed amendment to the Basin Plan because it provides an opportunity for the implementation of the Alternative Water Resources Management (AWRM) Program, an innovative watershed-wide and stakeholder-supported program to comply with the Upper Santa Clara River Chloride TMDL. Since November 1, 2007, various Los Angeles and Ventura County stakeholders within the Santa Clara River watershed, including the Sanitation District, have worked together to develop the AWRM Program as a viable alternative for Regional Board consideration. The AWRM Program is a watershed-based approach to manage chloride in Santa Clara River and underlying groundwater basins and involves: (1) reducing chloride levels in recycled water through automatic water softener removals and conversion to ultraviolet light disinfection processes; (2) small-scale advanced treatment of wastewater with local brine disposal; (3) supplemental water to reduce chloride levels in the river; (4) alternative water supplies to protect salt-sensitive agriculture, when necessary; and (5) facilities to remove high chloride groundwater in Ventura County from the watershed. The stakeholders¹ have entered into a Memorandum of Understanding (MOU) for the Implementation of

¹ The stakeholders to the AWRM Program MOU include the following: (1) Santa Clarita Valley Sanitation District of Los Angeles County; (2) United Water Conservation District; (3) Ventura County Agricultural Water Quality Coalition; and (4) Upper Basin Water Purveyors, comprised of the Castaic Lake Water Agency (CLWA), Valencia Water Company, Newhall County Water District, Santa Clarita Water Division of CLWA, and Los Angeles County Waterworks District No. 36.

Ms. Tracy Egoscue, Executive Officer

-2-

November 14, 2008

the AWRM Program. This MOU, effective October 23, 2008, is submitted for inclusion in the administrative record as Attachment A. The MOU represents the collective commitment of the stakeholders to implement a watershed-wide solution to the chloride problem that not only protects all beneficial uses, but provides the most diverse set of water resource benefits for the watershed.

Among the key elements of the AWRM Program MOU is a commitment by the Sanitation District to implement source control measures to reduce chloride in recycled water at the Saugus and Valencia WRPs. The Sanitation District has already made significant progress on source control measures through the adoption of the Santa Clara River Chloride Reduction Ordinance of 2008, which requires the removal of all automatic water softeners, from the Sanitation District's service area by June 30, 2009. In accordance with California Health and Safety Code Section 116787, the ordinance was approved by a majority of voters in the November 4, 2008 General Election, and will become effective on January 1, 2009. A copy of the ordinance is included as Attachment B.

In addition, the AWRM Program MOU specifies a commitment by both the Sanitation District and the United Water Conservation District (United Water) to jointly fund an extension of the Groundwater-Surface Water Interaction Model (GSWIM) to the Freeman Diversion. The GSWIM extension will be able to better address potential water level and water quality concerns raised by the City of Fillmore, inform decisions regarding the future operation of the AWRM Program extraction wells discharging to Reach 4A, and also identify mitigation measures that may be required of the Reach 4A discharge permittee to assure that the operation of the AWRM Program extraction wells protects downstream beneficial uses.

Both the Sanitation District and United Water are also working with the Camulos Ranch to address their potential concerns related to water levels and interim/future water quality in East Piru, associated with AWRM Program. Future agreements related to the operation of AWRM Program extraction wells and the provision for an alternative water supply of suitable quality, will have to be developed between the Sanitation District, United Water and the Camulos Ranch to implement the AWRM Program and assure that the AWRM facilities are operated in a manner that does not impair the Ranch's beneficial uses.

Minor Comments on the Staff Report, Tentative Resolution and Attachments to the Tentative Resolution

Attachment C is comprised of copies of the Staff Report, Tentative Resolution, and Attachments to the Tentative Resolution, which include recommended edits proposed by both Regional Board and Sanitation District staff.

Comments on the Staff Report are summarized as follows:

1. Recommendations on the appropriate compliance period to assess the cumulative net chloride loading above 117 mg/L trigger for the Reach 4B critical condition SSO (Section 4.1.b.3, and Section 4.2.a.3);
2. Clarifications related to future projected growth and WRP flows and how that was modeled by GSWIM and how they affect the anti-degradation analysis discussion. (Sections 2.6, Section 3.5, Section 6, and Section 7.3);
3. Clarifications on the typical operational modes of the AWRM Program (Section 4 and Figure 3);

Ms. Tracy Egoscue, Executive Officer

-3-

November 14, 2008

4. Clarifications on "rated capacity" versus capacity factor as it relates to the operation of RO membranes.(see Section 4.2, Table 8, and Section 8.0);
5. Recommendation to include an annual average conditional SSO for groundwater in the Castaic Valley area, to be consistent with similar averaging periods recommended for groundwater in the Santa Clara – Bouquet & San Francisquito Canyons and Lower areas East of Piru Creek;
6. Clarifications on compliance costs presented in Sections 5.4.1 and 5.4.2, and in Table 11; and
7. Various minor editorial comments.

Comments on the Tentative Resolution and Attachments to the Tentative Resolution are summarized as follows:

1. Recommendations on the appropriate compliance period to assess the cumulative net chloride loading above 117 mg/L trigger for the Reach 4B critical condition SSO;
2. Clarifications on "rated capacity" versus capacity factor as it relates to the operation of RO membranes;
3. Recommendation to include an annual average conditional SSO for groundwater in the Castaic Valley area, to be consistent with similar averaging periods recommended for groundwater in the Santa Clara – Bouquet & San Francisquito Canyons and Lower areas East of Piru Creek;
4. Recommendation to include language in the Tentative Resolution acknowledging that the required TMDL studies for TMDL Tasks 4, 5, 6, 7, 8, 9, 10b and 10c have been completed;
5. Clarifying language in the Tentative Resolution that effective October 23, 2008, Los Angeles and Ventura County stakeholders have entered into a MOU to implement the AWRM Program;
6. Clarifying language related to the implementation and schedules for required groundwater and surface water trend monitoring by the Sanitation District and the future Reach 4A Permittee;
7. Various minor editorial comments.

Final Reports for TMDL Task Nos. 3, 4, 5, 6, 7, 8, 9, 10b and 10c

The Sanitation District has enclosed a CD (Attachment D) for inclusion in the administrative record that contains the electronic copies of all final reports related to the TMDL special studies. The inclusion of these final reports completes the Sanitation District's requirements related to the various special studies identified in TMDL Task Nos. 3, 4, 5, 6, 7, 8, 9, 10b and 10c.

Summary and Conclusions

In closing, the Sanitation District would like to reiterate its strong support for the Regional Board staff's recommendation to adopt conditional SSOs for chloride and urges the Regional Board to approve this important Basin Plan amendment. The Sanitation District believes that the proposed amendment to

Ms. Tracy Egoscue, Executive Officer

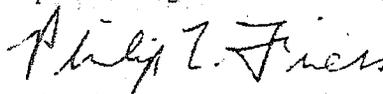

-4-

November 14, 2008

the Basin Plan and the resultant chloride SSOs necessary to implement the AWRM Program, will provide an opportunity to implement a solution to the Chloride TMDL that provides the maximum benefit to the people of the State. The Sanitation District would like to commend the Regional Board staff for their dedication and support during the TMDL collaborative process studies, which have been instrumental in the development of a stakeholder consensus solution to the Chloride TMDL for the Regional Board's consideration. If you have any questions or comments, please contact the undersigned at (562) 908-4288, extension 2501.

Very truly yours,

Stephen R. Maguin

MINUTES OF THE ADJOURNED REGULAR MEETING
OF THE BOARD OF DIRECTORS OF THE
SANTA CLARITA VALLEY SANITATION DISTRICT
HELD AT THE SANTA CLARITA CITY HALL
COUNCIL CHAMBERS, FIRST FLOOR
23920 WEST VALENCIA BOULEVARD,
SANTA CLARITA, CALIFORNIA

May 26, 2009
3:30 o'clock, P.M.

The Board of Directors of Santa Clarita Valley Sanitation District of Los Angeles County met pursuant to adjournment as ordered by this Board of Directors at the regular meeting held May 13, 2009. The Secretary reported that a copy of the Order of Adjournment was posted as required by law and that proper affidavits of the posting are on file in the Secretary's office.

There were present: Laurene Weste, Director from Santa Clarita
Frank Ferry, Chairperson, Director from Santa Clarita

Absent: Donald R. Knabe, Director from Los Angeles County

Also present: Kimberly S. Compton, Secretary of the District

RE: SERVICE CHARGE, INDUSTRIAL
WASTEWATER SURCHARGE AND
CONNECTION FEE PROGRAMS, SERVICE
CHARGE REPORT AND COLLECTION
ON TAX ROLL - HOLD COMBINED
PUBLIC HEARING

The Chairperson announced that today the Board would hold a combined public hearing on the proposed service charge rates, the collection of the 2009-10 service charge on the property tax roll, the proposed industrial wastewater surcharge rates, and the proposed connection fee rates.

A letter from the Chief Engineer and General Manager dated May 21, 2009, accompanied the agenda and described the recommended Board actions, together with a copy of the Service Charge Report, the preliminary budget, the proposed Service Charge Ordinance providing for the collection of the service charge on the tax roll, the proposed Industrial Wastewater Surcharge Rate Ordinance, and the proposed Connection fee Rate Ordinance. The proposed rate increases are substantial and needed primarily to comply with the Regional Water Quality Control Board (RWQCB) chloride limit but also to provide for continued operation of existing facilities, including coverage of existing debt service, over the next three fiscal years, as discussed in the letter to the Board.

The Chief Engineer and General Manager gave a brief history of chloride regulation and compliance. He stated that in 1961, the RWQCB, which governs the discharge of the Saugus and Valencia Water Reclamation Plants (WRPs), adopted the first chloride limit for effluent discharge to the Santa Clara River. The limit adopted at that time was established at a fixed level above the chloride content of the water supply. The District responded to the new limits by adopting an ordinance to ban all self-regenerating water softeners that discharge brine to the sewer. Those two factors, the nexus to the water supply quality and the reduction in chlorides to the WRPs from removal of water softeners, along with drought relief, allowed compliance until 1997. In that year, the water softener industry was successful with litigation challenging softener bans in other parts of California that invalidated the effect of the District's 1961 ordinance. Also, at that time, the RWQCB sought a fixed chloride limit that would apply regardless of the quality of the water supply. He then discussed the subsequent efforts of the staff to work with the RWQCB concerning reasonable chloride limits, also addressed in the May 21, 2009 letter. The RWQCB adopted a total maximum daily load (TMDL) standard for chloride in 2002 for the discharge to the Santa Clara River. The District did not agree with the standard that was adopted due to the lack of supporting science. The District was hopeful that additional scientific studies would provide support for a higher limit to allow compliance solely with the removal of automatic water softeners.

He discussed the District's very successful program to remove water softeners which is important because of the contribution softener use has on the chloride levels in the wastewater. He also discussed the importance of the legislative success to reinstate the authority to ban water softeners including SB 475 by Senator George Runner and Proposition S. As of the meeting date, approximately 70 percent of the water softeners had been removed. He mentioned two benefits of the water softener removal program. The first benefit of the softener removal program is that the overall cost to comply with the chloride limit will be reduced by about \$75 million. Secondly, the program was crucial in demonstrating Santa Clarita Valley's

commitment to chloride reduction, which was necessary for negotiations with stakeholders to even begin on the Alternative Compliance Plan. He noted that the Santa Clarita Valley water agencies were involved in those negotiations.

He described the three general elements of the Alternative Compliance Plan: advanced treatment at a capacity greatly reduced from that originally needed to comply with the RWQCB limits; facilities to reduce chlorides in the groundwater basin; and, at times, an alternative water supply for a surface water user of the Santa Clara River. This plan, approved by the RWQCB in December, cut the project cost (after softener removal) in half from \$500 million for the project required to meet the original RWQCB standard to \$250 million for the Alternative Compliance Plan. Nevertheless, in part because of the brief seven-year period allowed for implementation, the annual increases proposed over that period are substantial. He noted that the proposed actions before the Board were to cover only the first three years of the seven-year project implementation period.

He then introduced Mr. Phil Friess, Head of the Technical Services Department for the Sanitation Districts, to further discuss the components of the Alternative Compliance Plan including source control, advanced treatment, and salt management facilities.

Using PowerPoint slides, Mr. Friess advised that the first part of source control efforts is the water softener removal. With the elimination of all the water softeners, approximately 50 milligrams per liter of chloride will have been removed from the effluent at a cost of \$3.9 million dollars, which is the most cost-effective salt removal element in the Alternative Compliance Plan.

He stated that the second part of source control efforts would be conversion of effluent disinfection from a bleach-based process to ultraviolet light treatment at a cost of \$17 million. This will remove about 12 milligrams per liter of chloride from our effluent and is the second most cost-effective element of our program.

He advised that another element of the Alternative Compliance Plan is a 3-million gallon per day (MGD) micro-filtration reverse-osmosis treatment plant upgrade. This will provide an equivalent effluent chloride removal capacity of 19 milligrams per liter. Local brine disposal via deep well injection will eliminate the need for a 43-mile pipeline to the ocean for brine disposal. This advanced treatment upgrade with brine disposal via deep well injection is the most expensive element of effluent chloride removal in the Alternative Compliance Plan.

In response to Director Weste, Mr. Friess advised that a small micro-filtration reverse-osmosis upgrade at the Valencia WRP would be used to produce 3 MGD of desalinated wastewater and the brine from that process would be injected over a mile deep, isolated by bedrock beneath the Saugus aquifer.

He further stated that another major element of the Alternative Compliance Plan is the Ventura County Salt Management Facilities. These are needed to remove excess salt from the East Piru groundwater basin, by pumping salty groundwater and blending with desalinated effluent. The excess salt in the East Piru basin is in part due to the historical discharge from the wastewater treatment plants. In addition, during drought conditions in the future, higher salt will still be discharged from the treatment plants and will have to be removed by the salt management facilities.

The last obligation of the Alternative Compliance Plan is an alternative water supply for Camulos Ranch. The salt management facilities will also supply water to Camulos Ranch during drought conditions with a blend of pumped East Piru groundwater and desalinated wastewater.

He reiterated that taking the removal of self-regenerating water softeners into account, the implementation of the Alternative Compliance Plan is estimated to cost \$250 million. While still very expensive, the Alternative Compliance Plan project is half the cost of the project that would have been required to meet the original RWQCB limit.

At this time, Mr. Friess introduced Mr. John Gullede, Head of the Financial Planning Department for the Sanitation Districts, who gave a summary of the major financial rate impacts and the proposed rates.

Using PowerPoint slides, Mr. Gullede presented the proposed and projected rates through fiscal year 2015-16. He noted that the current service charge rate is about \$15 per month per single-family home and that, without the Alternative Compliance Plan, based on what is known today, the current service charge rate projected out over the seven-year period would be about \$23 per month per single-family home. At that point in time (2015-16), the Alternative Compliance Plan is projected to add approximately \$19 in capital needs and another

\$5 per month for operation and maintenance of the new facilities for a total projected monthly service charge of approximately \$47 in 2015-16.

He stated that the Alternative Compliance Plan would be financed either through the State Revolving Fund loan program over a twenty-year period or through bond sales over a 30-year period. The preferred alternative would be to use the State Revolving Fund loan program; however, he cannot guarantee the availability of this funding source at this time.

He then presented a slide showing the current wastewater service charge rate and the proposed rates for fiscal years 2009-10, 2010-11, and 2011-12. He also showed slides comparing the District's current and proposed rates with those of other nearby communities and for other utilities and services available in the Santa Clarita Valley. He stated that as the project is implemented, future costs will be better known; for instance, as bids are received for construction of various elements of the project. Projected rates beyond the proposed three-year period would be adjusted accordingly.

Director Ferry asked a question concerning the footnote on the slide that compared the current rates for Santa Clarita Valley with those of other agencies. Mr. Gullledge responded that the approximate \$7 figure referred to in the footnote would be added to the proposed service charge rate to obtain an estimate of the total cost to the homeowner for sewerage services including fees for local services.

Director Weste stated that she wanted to hold her questions until after the public testimony. She stated that a lot of emails, letters and calls have been received on this issue. She stated it was important for everyone to understand that the water and the habitat in the Santa Clara River, now regulated by Federal and State statutes, was created from Santa Clarita's wastewater effluent, which comes out clean enough, after treatment, to drink. She noted that the effluent has created abundant beauty and natural resources from here to Oxnard and that she is a strong supporter of protecting the river. She noted that the city, as well as the District, had taken actions to make sure that the water in the river is healthy and clean and the issue before the Board is not about the water being unhealthy, but rather about the salt content. She also noted there are potential fines for not complying with the chloride limits. The Chief Engineer and General Manager confirmed that fines could be in the millions of dollars for non-compliance. She voiced concern about the Alternative Compliance Plan in that she believed it was an unreasonable impact on homeowners.

The Chief Engineer and General Manager noted that, before beginning public testimony, he wanted to summarize the public input the Sanitation Districts has received. He stated that 42 protest letters were submitted with one letter containing 12 signatures. He also stated that 150 emails of protest were received as well as seven telephone calls in protest. The Chairperson advised that he would like to enter into the record approximately 200 emails that were received by the City of Santa Clarita.

Upon motion of Director Weste, duly seconded and unanimously carried, the Chairperson opened a combined public hearing scheduled at this time and place on the Service Charge, Industrial Wastewater Rates, and Connection Fee Programs, as well as on the Service Charge Report and on the collection of the service charge on the property tax roll.

The Secretary then called the following speakers:

1. Samuel Unger
2. Ed Dunn
3. Joan Dunn—who declined to speak.
4. Alan Ferdman
5. Geraldine Maurovich
6. Rudolph Maurovich
7. Richard Trimble
8. John Brooks
9. Ken Dean
10. Walter Watson
11. Larry L. Bird
12. Armine Jones
13. Timben Boydston
14. Brian Roney
15. Jackie Bick, representing Senator George Runner.
16. Marsha McLean
17. Allen Cameron
18. Larry Blanton

19. Cam Noltemeyer
20. Bill Arens
21. Tony Natoli
22. Mike Solomon
23. Stacey Kelleher

A local television company for the City of Santa Clarita videotaped the presentation, along with the public testimony. Director Weste requested the Secretary to have a transcript, attached, prepared from the videotape and provided to each Director; the Secretary filed the transcript with the public hearing documents. The following is a summary of the questions raised as taken from the transcript.

Director Ferry asked the following questions to the staff:

1. Has a regulatory limit ever been legally challenged? Has any Sanitation District ever legally challenged limits?
2. Can the Sanitation District re-circulate the Prop 218 notice?
3. Can the Sanitation District provide a simple analysis of the concentration of chloride?

Director Weste asked the following questions to the staff:

1. What are fines involved for non-compliance (\$/day)?
2. What happens to chloride levels after water softeners are all removed?
3. What is the criteria to protect agriculture in Clean Water Act / Porter-Cologne Act? Are they intended to protect any crop that a farmer can possibly plant?
4. Are there Special District dollars that can be taken away?
5. When do the costs drop off or go away? Will rates drop down after the project is built?
6. Is Peter Pitchess included in the chloride assessment and what does it contribute? What are its requirements for chloride?
7. What is the concentration in Piru Basin? What is it past Piru Basin?
8. Are farmers downstream paying for State Water Project (SWP) water? If they are on groundwater, are they over-pumping their wells?
9. If SWP is treated, what would the cost be?
10. Does Newhall Ranch have to meet the same standard? Do they have to build their own plant?
11. Is our water being pumped to solve a Ventura County salt-water intrusion problem?
12. Are there technologies that can be placed in individual homes that could solve the problem?
13. Are we the only ones facing this dilemma? Are there other communities facing this dilemma over salt? What is the concentration of chloride allowed in other communities?
14. What is the chloride in the State Water Project (SWP) water right now? Is it the policy of the State that they can send it to you any way they want and you have to treat it before it goes out?
15. Is it true that the residential community only contributes 20% of the chloride?
16. What are the impacts of farmer's activities and what do they contribute, and how are they regulated?
17. What are the requirements for deep well injection and how is this regulated?
18. With 1,500-2,000 softeners left, what will be impact on water quality? When do you plan to measure chloride levels?
19. Have we explored all of our options?

The speakers asked the following questions to the staff:

1. How is Alternative Compliance Plan related to Newhall Ranch development?
2. Can the Sanitation District make any other adjustments now to keep taxes as low as possible?

3. How is Peter Pitchess detention center related to project?
4. Where can I find key studies done by the District?
5. What are the alternatives? Are there cheaper options that can be explored with onsite residential reverse-osmosis units?
6. What is the natural salinity of river before discharge of effluent? Are we having to clean up water because it simply runs through our Valley?
7. Who conducted the studies and who paid for them?
8. What are the administrative procedures for tax increases for the Sanitation District? Can rates be reduced after project is built? What is the cost breakdown between capital and O&M for the project? Can the capital cost be billed separately from the property tax bill?
9. What has changed since the 1999-2002, when the Sanitation District believed that the impact to agriculture and groundwater was unfounded?

Director Ferry advised the public that the District is not the responsible party for creating the need to raise the rates. The District is responding to the federal and state mandates on chloride limits. He stated that he has many concerns regarding the science and the effects on the avocado and strawberry farms.

The Directors stated that they would like to see the water softener removal program completed prior to moving forward. They also requested that a meeting be arranged with RWQCB representatives to discuss the causation issues and more reasonable chloride regulation with drought consideration, and to also meet with State Senator Runner, Assemblyman Smythe, and Congressman McKeon regarding potential legislative relief as well as the Governor.

Director Weste stated that she doesn't believe that all options have been explored yet. She believes that the farmers are getting better water, free of charge, than the City receives. And, at this time, she does not support this large increase because it is an unreasonable impact on homeowners. She stated that she is not refusing in any way to solve the problem, but would like to be part of the solution.

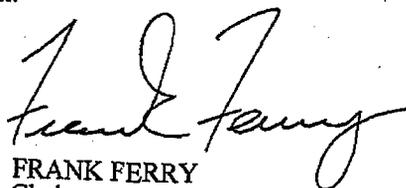

The Chief Engineer and General Manager proposed that the District staff prepare a response to issues raised by the Directors and members of the public regarding the proposed rate increases, and that another meeting be scheduled in the City of Santa Clarita for further consideration of the rates, the Directors concurred.

There being no further public comment, the Chairperson closed the public hearing.

RE: SERVICE CHARGE REPORT AND
COLLECTION ON TAX ROLL - SERVICE
CHARGE, INDUSTRIAL WASTEWATER
SURCHARGE AND CONNECTION FEE
ORDINANCES - DEFER

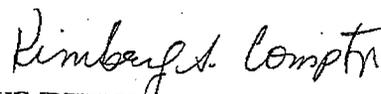

Following the public hearing, upon motion of Director Weste, duly seconded and unanimously carried, the Board of Directors of Santa Clarita Valley Sanitation District of Los Angeles County deferred the adoption of the Service Charge Report, the proposed Service Charge Ordinance, the proposed Industrial Wastewater Surcharge Rate Ordinance, and the proposed Connection fee Rate Ordinance to a later date.

The meeting was adjourned by the Chairperson.

FRANK FERRY
Chairperson

MINUTES OF THE ADJOURNED REGULAR MEETING OF THE
BOARD OF DIRECTORS OF
SANTA CLARITA VALLEY SANITATION DISTRICT
HELD AT THE OFFICE OF THE DISTRICT

July 27, 2010
6:30 o'clock, P.M.

The Board of Directors of Santa Clarita Valley Sanitation District of Los Angeles County met in adjourned regular session.

There were present: Marsha McLean, Director from Santa Clarita
Michael D. Antonovich, Alternate Director from Los Angeles County
Laurene Weste, Chairperson, Director from Santa Clarita

Absent: None

Also present: Stephen R. Maguin, Secretary pro tem

Upon motion of Director Weste, duly seconded and unanimously carried, Mr. Stephen R. Maguin was appointed Secretary pro tem.

Upon motion of Director Antonovich, duly seconded and unanimously carried, the minutes of the special meeting held June 2, 2010, and regular meeting held June 9, 2010, were approved.

RE: WARRANTS

trict, in the amount of \$902,825.79, were approved.

Upon motion of Director Antonovich, duly seconded and unanimously carried, warrants issued by the Dis-

RE: DEPARTMENTAL INVOICE

Antonovich, duly seconded and unanimously carried, was approved:

The following departmental invoice for the month of May 2010 was presented and upon motion of Director

RE: SERVICE CHARGE PROGRAM
INDUSTRIAL WASTE SURCHARGE;
CONNECTION FEE RATES; SERVICE
CHARGE REPORT AND COLLECTION
ON TAX ROLL - HOLD COMBINED
PUBLIC HEARING

He advised that a letter describing the required Board actions together with a copy of the Service Charge Report, the preliminary budget, a resolution for collection of the service charge on the tax roll, the proposed ordinance prescribing the service charge rates and loading assumptions, the proposed ordinance prescribing the industrial wastewater surcharge rates, and the proposed ordinance prescribing the connection fee rates and loading assumptions were attached to the agenda.

The Chief Engineer and General Manager announced that today the Board would hold a combined public hearing, and presented the proposed rate increases associated with the service charge, industrial wastewater surcharge, and connection fee rates, and the collection of the service charge on the property tax roll.

The Chief Engineer and General Manager presented the service charge program and displayed several slides depicting the proposed rates including the portion necessary for continued support of existing facilities, and that necessary to support the planning and design of the facilities necessary to comply with chloride limits imposed as part of the Total Maximum Daily Load (TMDL) approval process. He then summarized the history of the chloride compliance mandate and described the 10-year battle with the Los Angeles Regional Water Quality Control Board (Regional Board) over the chloride standard, which culminated in 2006. After

the State Water Resources Control Board affirmed the Regional Board's action by unanimous vote in 2007, staff efforts turned toward development of the most cost-effective means of compliance with the Regional Board's mandate. The alternative compliance project was developed which involved a number of stakeholders including Ventura County agriculture interests. The alternative compliance plan would require a much smaller scale of advanced treatment facilities than originally required. Critical to the Regional Board's approval of the alternative compliance plan was the community's commitment to removing self-regenerating water softeners, which resulted in a reduction of approximately 60 mg/L in chloride levels discharged to the Santa Clara River. He commended the community for their efforts in removing these devices.

In 2009, the Board elected not to move forward with the alternative compliance project and directed staff to seek additional regulatory relief. Since then, the Chief Engineer and General Manager had negotiated a tentative extension of the compliance schedule and a tentative relaxation of the chloride standard. If approved by the Regional Board, these changes, assumed in the currently proposed rates, would reduce the project costs by \$40 million. He advised that failure to approve the rates to support the project would jeopardize the Regional Board's approval of the changes resulting in higher chloride standards, increased project costs and substantial fines.

The Chief Engineer and General Manager also described the proposed connection fee increases and stated that these fees were born solely by new users of the system, and those who have experienced significantly increased flows, to pay for future expansion of the system.

Director Weste described in detail the history of efforts to control self-regenerating water softeners by the District, the regulatory history of chlorides, and the possible fines for non-compliance under state and federal law. She also stated that she had reviewed in depth state and federal law requiring the Regional Boards to adopt TMDLs for water bodies in their region. She thanked the Santa Clarita Signal Newspaper, and radio station KHDS, for their coverage of the chloride issue, as well as the community, for removing their self-regenerating water softeners, which gave the community credibility with the Regional Board.

Director Weste asked District staff to evaluate the effectiveness of switching to ultraviolet (UV) light disinfection at the water reclamation plants to further reduce chlorides in the effluent. She also asked that District staff develop a plan to remove the remaining self-regenerating water softeners. She reiterated her request to evaluate the science underlying the chloride standard. She also requested further efforts to seek funding and legislative relief.

Director Antonovich expressed his concern with state and federal mandates to remove chloride despite the fact that much of the chloride comes from upstream via the State Water Project water supply. He stated his support for pursuing legislative relief.

Director McLean expressed her concern that the proposed rate increases would be devastating to businesses. She requested that an item be placed on a future agenda to discuss pursuing filing a claim for reimbursement with the California Commission on State Mandates. Director Weste and Director Antonovich concurred.

Director McLean requested a breakdown of the proposed service charges between what is needed to fund ongoing operations, and the chloride compliance project.

In response to Director McLean, the Chief Engineer and General Manager noted that \$3.92 of the proposed \$8.09 monthly increase over four years was needed to support existing facilities. He also stated a portion of the increase was to repay funds borrowed from the capital improvement fund over the last several years during which rates were below those recommended.

The Chief Engineer and General Manager stated that 7,732 written protests had been received. Director McLean asked if additional protests could be accepted after tonight. In response to Director McLean, the Chief Engineer and General Manager indicated that after the public hearing, no further protests could be accepted.

Upon motion of Director McLean, the Chairperson opened a combined public hearing scheduled at this time and place on Service Charge; Industrial Wastewater Surcharge, and Connection Fee Rates; and Collection of the Service Charge on the Property Tax Roll.

The Secretary pro tem then called the following speakers:

1) Lynne Planbeck; 2) Allan Cameron; 3) Valerie Thomas; 4) Robert Kelly; 5) Berta Gonzalez-Harper; 6) Patti Crossley; 7) Joseph Jasik; 8) Davit Lutness; 9) Michael Strahs; 10) David Lutness; 11) Judd Honadel; 12) Charles Werner; 13) Chuck Zimmerman; 14) Nancy Tujetsch; 15) Don Harbeson; 16) Dick Jeffrey; 17) Kevin Korenthal; 18) Alan Ferdman; 19) Tim Ben Boydston; 20) Ed Dunn; 21) Joan Dunn; 22) Natalie Danesh; 23) John Conley; 24) Ed Masterson; 25) Stephen Winkler; 26) B. J. Atkins (written

comments); 27) Carmillis Noltemeyer (written comments); 28) Donald and Sueko Ladeau; and 29) Brian Roney.

The City of Santa Clarita videotaped the meeting, along with the public testimony and staff responses. The Secretary filed the video transcript with the public hearing documents, and the video transcript is on file at the Districts' Administrative Office.

In response to questions from the public regarding water sources, the Chief Engineer and General Manager noted that increased imports in State Water Project water are not the only cause of the chloride compliance issue and that local groundwater supply currently has almost the same level of chloride as imported water. In addition, the chloride content of Lake Piru in Ventura County is lower than State Water Project water supplied to the District since it is diluted with local rainfall runoff. The use of other fresh water sources was looked at as a possible alternative to advanced treatment but was considered infeasible since it is usually not available during a drought, when it would be needed by the District for compliance. Lastly, given that the concrete-lined Los Angeles River was recently determined to be a federal jurisdictional water (i.e., navigable), it would be extremely unlikely that the natural Santa Clara River would ever be considered a non-navigable waterway and therefore not subject to federal laws.

There being no further public comment, the Chairperson closed the public hearing.

RE: SERVICE CHARGE PROGRAM
ADOPT SERVICE CHARGE REPORT
ADOPT RESOLUTION PROVIDING FOR
COLLECTION OF CHARGES ON TAX ROLL

Following a public hearing, the Chief Engineer and General Manager noted that there was no motion for the proposed rates. He requested alternatively that the service charges necessary to fund existing programs be adopted and presented a proposed Resolution providing

for collection of the service charges, and an increase of \$3.92 per month over four years, on the property tax roll, and recommended that the Resolution and Revised Service Charge Report be adopted.

Director McLean made a motion in support of introduction of a revised service charge report and introduction of a revised ordinance for the existing facilities only. The motion failed for lack of a second. Director Antonovich noted that, while the proposed rate increases associated with chloride compliance had been discussed in detail, the public had not been given adequate opportunity to comment on rate increases to support ongoing programs.

The Chief Engineer and General Manager recommended the Board adopt a Revised Service Charge Report and Resolution to collect the existing rates for service charge on the property tax roll.

Upon motion of Director Antonovich, duly seconded and unanimously carried, the Board of Directors of Santa Clarita Valley Sanitation District of Los Angeles County approved and adopted a Resolution providing for the existing rates for collection on the tax roll of service charges for fiscal year 2010-11; and the Revised *Santa Clarita Valley Sanitation District Service Charge Report for Fiscal Year 2010-11*, filed with the Board on July 27, 2010.

The following Resolution was adopted:

RESOLUTION PROVIDING FOR
COLLECT SERVICE CHARGES ON TAX ROLL
FOR FISCAL YEAR 2010-11 FOR
SANTA CLARITA VALLEY SANITATION DISTRICT OF LOS ANGELES COUNTY

BE IT RESOLVED, that pursuant to Section 5473 of the California Health and Safety Code, the Santa Clarita Valley Sanitation District of Los Angeles County elects to have the service charge imposed pursuant to Sections 3.01 through 3.08 of the Master Service Charge Ordinance of Santa Clarita Valley Sanitation District of Los Angeles County for fiscal year 2010-11 collected on the tax roll in the same manner, by the same persons, and at the same time as, together with and not separately from, the ad valorem taxes collected by the County of Los Angeles.

RE: SERVICE CHARGE PROGRAM
INTRODUCE ORDINANCE PRESCRIBING
SERVICE CHARGE RATE AND MEAN
LOADINGS PER UNIT OF USAGE - NOT
PASSED

The Chief Engineer and General Manager presented *An Ordinance Prescribing the Service Charge Rate and Mean Loadings per Unit of Usage for Santa Clarita Valley Sanitation District of Los Angeles County*, and waive reading of said ordinance in its entirety. He advised over the four-year period, approximately half

of the proposed rate increase is for continued operation of existing facilities. The other half of the proposed increase is related to planning and design of chloride management facilities to comply with the Regional Water Quality Control Board's requirements. A breakdown of the proposed rates was provided in the table attached

to the agenda. Multiple dwelling units and commercial properties are charged in proportion to their use compared to a single-family home.

Proposed Rates Including Chloride Compliance Efforts

	Current	Proposed			
	FY 2009-10	FY 2010-11	FY 2011-12	FY 2012-13	FY 2013-14
Existing Facilities	\$16.58 / month	\$18.50 / month (\$1.92 increase)	\$19.17 / month (\$0.67 increase)	\$19.83 / month (\$0.66 increase)	\$20.50 / month (\$0.67 increase)
Chloride Compliance Efforts	\$0 / month	\$0 / month (\$0.00 increase)	\$1.33 / month (\$1.33 increase)	\$2.75 / month (\$1.42 increase)	\$4.17 / month (\$1.42 increase)
Total Rate*	\$16.58 / month	\$18.50 / month (\$1.92 increase)	\$20.50 / month (\$2.00 increase)	\$22.58 / month (\$2.08 increase)	\$24.67 / month (\$2.09 increase)

* Equivalent to annual rates as follows: \$199.00 for current fiscal year; \$222.00 for fiscal year 2010-11; \$246.00 for fiscal year 2011-12; \$271.00 for fiscal year 2012-13; and \$296.00 for fiscal year 2013-14.

Upon motion of Director McLean, there being no second, *An Ordinance Prescribing the Service Charge Rate and Mean Loadings per Unit of Usage for Santa Clarita Valley Sanitation District of Los Angeles County*, was not passed.

RE: SERVICE CHARGE PROGRAM
 INTRODUCE ORDINANCE PRESCRIBING
 INDUSTRIAL WASTEWATER SURCHARGE
 RATES - NOT PASSED

The Chief Engineer and General Manager presented *An Ordinance Prescribing Industrial Wastewater Surcharge Rates for Santa Clarita Valley Sanitation District of Los Angeles County*, and waive reading of said ordinance in its entirety. He advised the proposed

industrial wastewater surcharge rate increases are consistent with the proposed service charge rate increases.

Upon motion of Director McLean, there being no second, *An Ordinance Prescribing Industrial Wastewater Surcharge Rates for Santa Clarita Valley Sanitation District of Los Angeles County*, was not passed.

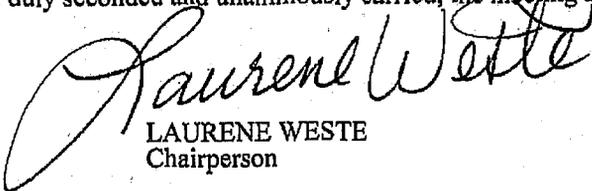

RE: SERVICE CHARGE PROGRAM
 INTRODUCE ORDINANCE PRESCRIBING
 THE CONNECTION FEE RATE AND MEAN
 LOADINGS PER UNIT OF USAGE - NOT
 PASSED

The Chief Engineer and General Manager presented *An Ordinance Prescribing the Connection Fee Rate and Mean Loadings per Unit of Usage for Santa Clarita Valley Sanitation District of Los Angeles County*, and waive reading of said ordinance in its entirety. He advised in this District, the current connection fee rate

is \$3,800 per capacity unit. The proposed rates for fiscal years 2010-2011, 2011-12, 2012-13, and 2013-2014 are \$4,300 per capacity unit, \$4,800 per capacity unit, \$5,200 per capacity unit, and \$5,500 per capacity unit, respectively.

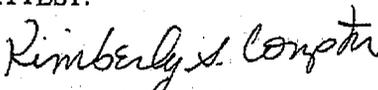

Upon motion of Director McLean, there being no second, *An Ordinance Prescribing the Connection Fee Rate and Mean Loadings per Unit of Usage for Santa Clarita Valley Sanitation District of Los Angeles County*, was not passed.

Upon motion of Director McLean, duly seconded and unanimously carried, the meeting adjourned.

ATTACHMENT 75

STATE OF CALIFORNIA
COMMISSION ON STATE MANDATES

MINUTES OF THE SPECIAL MEETING OF THE
BOARD OF DIRECTORS OF THE
SANTA CLARITA VALLEY SANITATION DISTRICT
HELD AT THE SANTA CLARITA CITY HALL

April 14, 2011
6:00 o'clock, P.M.

Pursuant to the call of the Chairperson and upon written notice of the secretary setting the time and place of a special meeting and mailed to each Director at least 24 hours before the meeting, a special meeting of the Board of Directors of Santa Clarita Valley Sanitation District of Los Angeles County was held, at the Santa Clarita City Hall, 23920 Valencia Boulevard, Santa Clarita, California, on April 14, 2011, at 6:00 p.m., for the purpose of:

1. Receive and Order Filed Action Appointing Ms. Laurie Ender as Alternate Director from the City of Santa Clarita
2. Approve Minutes of Regular Meeting Held March 9, 2011
3. Approve Warrants in Amount of \$726,815.25
4. Approve Departmental Invoice in Amount of \$845,295.69
5. Re: Wastewater Rates
 - (a) Hold Combined Public Hearing on Service Charge Report, Service Charge Rates, Industrial Wastewater Surcharge Rates, Connection Fee Rates, and Collection of Service Charge on Property Tax Roll
 - (b) Adopt Service Charge Report
 - (c) Introduce *An Ordinance Prescribing the Service Charge Rate and Mean Loadings per Unit of Usage for Santa Clarita Valley Sanitation District of Los Angeles County and Providing for the Collection of Such Charges on the Tax Roll*, and Waive Reading of Ordinance in its Entirety
 - (d) Introduce *An Ordinance Prescribing Industrial Wastewater Surcharge Rates for Santa Clarita Valley Sanitation District of Los Angeles County*, and Waive Reading of Ordinance in its Entirety
 - (e) Introduce *An Ordinance Prescribing the Connection Fee Rate and Mean Loadings per Unit of Usage for Santa Clarita Valley Sanitation District of Los Angeles County*, and Waive Reading of Ordinance in its Entirety

There were present: Marsha McLean, Director from Santa Clarita
Laurene Weste, Chairperson, Director from Santa Clarita

Absent: Gloria Molina, Director from Los Angeles County

Also present: Stephen R. Maguin, Secretary pro tem

Upon motion of Director Antonovich, duly seconded and unanimously carried, Mr. Stephen R. Maguin was appointed Secretary pro tem.

RE: ALTERNATE DIRECTOR
FROM CITY OF SANTA CLARITA

Ender, a member of the City Council of the City of Santa Clarita, from the city.

The Secretary presented a copy of an action taken by the City Council of the City of Santa Clarita at a meeting held January 25, 2011, stating that Ms. Laurie

Ender, was appointed to serve as alternate Director

Upon motion of Director McLean, duly seconded and unanimously carried, the action was accepted and ordered filed.

Upon motion of Director McLean, duly seconded and unanimously carried, the minutes of the regular meeting held March 9, 2011, were approved.

RE: WARRANTS
Upon motion of Director McLean, duly seconded and unanimously carried, warrants issued by the District, in the amount of \$726,815.25, were approved.

RE: DEPARTMENTAL INVOICE
The following departmental invoice for the month of February was presented and upon motion of Director McLean, duly seconded and unanimously carried, was approved:

No. 288

DEBIT:

S.C.V. - Operating Fund - Operation & Maintenance	\$693,073.23
S.C.V. - Operating Fund - Joint Administration - Capital	1,982.53

--	--------------

RE: SERVICE CHARGE PROGRAM
HOLD COMBINED PUBLIC HEARING
ON SERVICE CHARGE REPORT AND
COLLECTION ON TAX ROLL
The Chief Engineer and General Manager announced that today the Board would hold a combined public hearing, and presented the proposed rate increases associated with the service charge, industrial wastewater surcharge, and connection fee rates, and the collection of the service charge on the property tax roll.

Upon motion of Director Weste, duly seconded and unanimously carried, the Chairperson opened a combined public hearing scheduled at this time and place on the Service Charge Report, service charge rates, industrial wastewater surcharge rates, connection fee rates, and collection of service charge on property tax roll for the Santa Clarita Valley Sanitation District of Los Angeles County. The Chief Engineer and General Manager advised that a letter describing the required Board actions together with a copy of the Service Charge Report and preliminary budget accompanied the agenda. He advised that notices were mailed to 68,281 residential, commercial, and small industrial parcels, and that the District was contacted by 10 property owners, five were telephone calls and five submitted letters of opposition. Copies of the letters in opposition to the proposed increase were attached to the agenda.

In accordance with Section 5473 of the Health and Safety Code of the State of California, the *Santa Clarita Valley Sanitation District Service Charge Report for Fiscal Year 2011-12*, was filed on February 9, 2011, and publication of two newspaper notices for today's public hearing were published in *The Signal Newspaper*. The Service Charge Report addresses the continued collection of the service charge for the District on the tax roll. These charges are needed to supplement the District's existing revenue sources for the forthcoming fiscal year, as discussed in the letter dated April 6, 2011, to the Boards, which also included copies of ordinances prescribing the service charge rates and mean loadings and providing for the collection of the service charge on the tax roll, industrial wastewater surcharge rates, and connection fee rates and mean loadings for fiscal year 2011-12.

The Chairperson stated that he would like to smooth the proposed connection fee rates as part of an effort to be friendly to business during these tough economic times. After some discussion between the Board members and the Chief Engineer and General Manager, the Chairperson made a motion to smooth the proposed connection fees rates for fiscal years 2011-12, 2012-13, and 2013-14 from staff's recommendation to \$4,400, \$5,000, and \$5,500 respectively. The motion passed unanimously.

The Chairperson announced this was the time for any questions or comments by members of the public. The following individuals addressed the Board.

Alan Ferdman, Canyon Country Advisory Committee, 27248 Walnut Springs, Canyon Country: Mr. Ferdman complimented District's staff for their efforts to provide additional information to the public in an effort to provide justification for the proposed service charge rate increases. He stated that the additional information did provide him sufficient information for him to conclude that the proposed rate increase was justified and he could support the increase. However, he further stated that he still did not have enough information to feel comfortable supporting the proposed connection fee increases. In particular, he was

concerned that the total amount of revenue the fees would generate is more than needed to expand the treatment facilities.

The Chief Engineer and General Manager responded that he appreciated the efforts of Mr. Ferdman to understand the need for the proposed service charge rate increase and his support in that regard. As for the connection fee rates, he responded that they are established based upon an analysis of the total cost of providing service to new users and that the District evaluates those costs on an annual basis.

Ed Dunn, Canyon Country: Mr. Dunn addressed a number of issues related to lack of justification for the proposed rate increases, the funds should not be used to build new facilities for chloride compliance, and further stated that existing users should not be paying to provide capacity to new users, especially as it relates to future Newhall Ranch users (a copy of Mr. Dunn's written testimony is on file at the District's office).

The Chief Engineer and General Manager responded that District's staff had held a series of eight workshops in the community as part of an effort to inform the community about the proposed rate increase. He further stated that none of the proposed rate increase would be used for facilities to comply with the chloride standard. With respect to the Newhall Ranch project, he indicated that those temporary connections would pay a connection fee and service charge to the District such that existing users would not be subsidizing them.

Sandy Sanchez, Building Industry Association, Santa Clarita: Ms. Sanchez addressed the connection fee and requested that the Board either delay the fee completely or reduce the overall amount by smoothing out the transition from the current level to the proposed level for the future connection fee. She discussed the economic hard times facing her industry and requested whatever relief the Board could support. She further requested that the connection fees be paid by developers when they get the occupancy permit and not the building permit.

The Chief Engineer and General Manager responded by stating that the Board has already shown their support to smoothing out the rate increase for the connection fees and that he would be happy to work with the building industry to see if we could reach an arrangement that would provide some additional relief regarding the timing of the payment, but at the same time be protective of the District's interest.

Cam Noltemeyer, SCOPE, 25936 Sardinia Court, Santa Clarita: Ms. Noltemeyer objected to the proposed rate increases and criticized both the District and City of Santa Clarita for allowing extensive growth which has brought us to the problems that we face today.

There being no further comments, the Chairperson closed the public hearing.

RE: SERVICE CHARGE PROGRAM
ADOPT SERVICE CHARGE REPORT
INTRODUCE ORDINANCE PRESCRIBING
SERVICE CHARGE RATE AND MEAN
LOADINGS PER UNIT OF USAGE

Following the public hearing, upon motion of Director Weste, duly seconded and unanimously carried, the Board of Directors of Santa Clarita Valley Sanitation District of Los Angeles County approved and adopted the *Santa Clarita Valley Sanitation District Service Charge Report for Fiscal Year 2011-12*, which was

filed with the Clerk of the Board on February 9, 2011.

The Chief Engineer and General Manager presented *An Ordinance Prescribing the Service Charge Rate and Mean Loadings per Unit of Usage for Santa Clarita Valley Sanitation District of Los Angeles County and Providing for the Collection of Such Charges on the Tax Roll*, and waive the reading of the ordinance in its entirety, and recommended that the Ordinance be introduced. He advised that in this District, the current service charge rate per single-family home (SFH) is \$16.58 per month (\$199 per year). The proposed rates for fiscal years 2011-12, 2012-13, and 2013-14, are \$17.92 per month (\$215 per year), \$19.25 per month (\$231 per year), and \$20.58 per month (\$247 per year), respectively, an increase of \$1.33 per month per SFH. The proposed service charge rates are based on the District continuing to receive its current allocation of the property taxes. Multiple dwelling units and commercial properties are charged in proportion to their use compared to a SFH.

Upon motion of Director Weste, duly seconded and unanimously carried, *An Ordinance Prescribing the Service Charge Rate and Mean Loadings per Unit of Usage for Santa Clarita Valley Sanitation District of Los Angeles County and Providing for the Collection of Such Charges on the Tax Roll*, was introduced and, after a reading of the title thereof, further reading of the Ordinance was waived.

RE: WASTEWATER DISPOSAL
INTRODUCE ORDINANCE PRESCRIBING
UNIT CHARGE RATES FOR SURCHARGE

Following the public hearing, the Chief Engineer and General Manager presented *An Ordinance Prescribing Industrial Wastewater Surcharge Rates for Santa Clarita Valley Sanitation District of Los Angeles County*, and waive the reading of the ordinance in its entirety, and recommended that the Ordinance be

introduced. The industrial wastewater surcharge rates are consistent with the proposed service charge rates. The proposed rates, as set forth in the Ordinance, are as follows:

Parameter	Proposed Rates - Fiscal Years		
	2011-12	2012-13	2013-14
Flow (per million gallons)	\$ 861.00	\$ 903.00	\$ 946.00
COD (per 1,000 lbs. of chemical oxygen demand)	\$ 196.10	\$ 205.70	\$ 215.30
SS (per 1,000 lbs. of suspended solids)	\$ 482.40	\$ 506.10	\$ 529.80
Peak Flow (gallons per minute of peak flow)	\$ 121.80	\$ 127.80	\$ 133.80
Short Form (flat rate per million gallons)	\$ 2,917.00	\$ 3,060.00	\$ 3,203.00

Upon motion of Director Weste, duly seconded and unanimously carried, *An Ordinance Prescribing Industrial Wastewater Surcharge Rates for Santa Clarita Valley Sanitation District of Los Angeles County*, was introduced and, after a reading of the title thereof, further reading of the Ordinance was waived.

RE: WASTEWATER DISPOSAL
 INTRODUCE ORDINANCE
 PRESCRIBING CONNECTION
 FEE RATE

Following the public hearing, the Chief Engineer and General Manager presented *An Ordinance Prescribing the Connection Fee Rate and Mean Loadings per Unit of Usage for Santa Clarita Valley Sanitation District of Los Angeles County*, and waive the reading of the

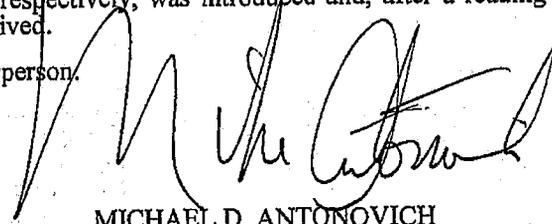

ordinance in its entirety, and recommended that the Ordinance be introduced. In this District, the current connection fee rate is \$3,800 per capacity unit. The proposed rates for fiscal years 2011-12, 2012-13, and 2013-14 are \$4,800, \$5,200, and \$5,500 per capacity unit, respectively.

Upon discussion of the Board and staff, the Santa Clarita Valley Sanitation District of Los Angeles County, proposed revised connection fee rates for fiscal years 2011-12, 2012-13, and 2013-14 to \$4,400, \$5,000, and \$5,500, per capacity unit, respectively.

The Chief Engineer and General Manager recommended that the Board introduce the revised connection fee rates for fiscal years 2011-12, 2012-13, and 2013-14.

Upon motion of Director Weste, duly seconded and unanimously carried, *An Ordinance Prescribing the Connection Fee Rate and Mean Loadings per Unit of Usage for Santa Clarita Valley Sanitation District of Los Angeles County*, with connection fee rates for fiscal years 2011-12, 2012-13, and 2013-14 revised to \$4,400, \$5,000, and \$5,500, per capacity unit, respectively, was introduced and, after a reading of the title thereof, further reading of the Ordinance was waived.

The meeting was adjourned by the Chairperson.

Dear Councilmembers:

**Response to Comments Made During the May 25, 2010
City Council Meeting – Public Hearing on Proposed Rate Increases**

At the May 25, 2010 City Council meeting of the City of Santa Clarita, you instructed staff to prepare a response to issues raised by the councilmembers and members of the public regarding the proposed rate increases. With this letter, I am transmitting the written responses.

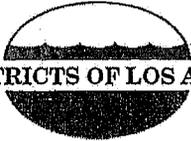

If you have any questions regarding the material, please call me at (562) 908-4238.

Very truly yours,

Stephen R. Maguin

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

QUESTIONS FROM MAYOR LAURENE WESTE

(W-1) Can you simply describe how the Clean Water Act began and how it led to a federal and state mandate to reduce chloride? Where we were, where we are now, and what are our options?

The Federal Water Pollution Control Act of 1948 was the first major U.S. law to address water pollution. Growing public awareness of significant water pollution problems and widespread public support for strong new measures to address water pollution led to sweeping amendments of the Act in 1972 and 1977, whereby the law became commonly known as the Clean Water Act (CWA). The CWA required States to establish beneficial uses and water quality standards to protect all uses for waters of the United States. Additionally, the CWA gave the U.S. Environmental Protection Agency the authority to implement stringent water quality based discharge limits and pollution control programs called Total Maximum Daily Loads (TMDL) for waters of the United States that were not meeting established water quality standards. The EPA delegated authority to the State Water Resources Control Board (SWRCB) to implement the requirements of the CWA in California. The Los Angeles Regional Water Quality Control Board (RWQCB), one of nine RWQCBs within the SWRCB, implements the requirements of the CWA and state law for our local waters. In 1975, as required by the CWA, the RWQCB established beneficial uses for the Santa Clara River, a water of the United States, including agricultural water supply and groundwater recharge. In 1978, the RWQCB established a 100 milligram per liter (mg/L) standard for chloride for the Santa Clara River to protect the agricultural supply use and to reflect the background water quality conditions at that time. Subsequently, in 1989, discharge permits were adopted for the Saugus and Valencia WRPs that included discharge limits for chloride at 100 mg/L, which were unattainable with the existing treatment system. In 2002, because the Santa Clara River was not attaining water quality standards, the RWQCB, as required by the CWA, adopted a TMDL prescribing a compliance schedule for the Saugus and Valencia Water Reclamation Plants (WRPs) to achieve a 100 mg/L discharge limit.

(W-2) What options have been considered? What are the costs for these options? Can we just take our discharge out of the river or recycle it all? Pump it out to the ocean? Pump it to the Castaic Lake Reservoir? What about pumping back future Newhall Ranch RO water to dilute Santa Clarita treatment plant discharges?

The Sanitation District has explored many alternatives for compliance with the chloride standards. The main options identified for compliance with the original 100-mg/L standard included 1) large-scale advanced treatment of the treatment plant discharges to the Santa Clara River, 2) conveyance and ocean disposal of all treatment plant discharges, 3) discharge of treated wastewater effluent at alternate location upstream on the Santa Clara River.

Advanced Treatment. Advanced treatment of the treatment plant discharges to the river require a large micro filtration and reverse osmosis facility, approximately 20 million gallons per day (MGD) and waste brine discharge facilities consisting of a 43-mile conveyance pipeline and a 3-mile ocean outfall. The estimated cost for this option was approximately \$500 Million (assuming all automatic water softeners are removed).

Ocean Disposal. Ocean disposal of treatment plant discharges requires a large 43-mile conveyance pipeline and 3-mile ocean outfall sufficient to convey the majority of treatment plant discharges (34 MGD) to the Pacific Ocean off the coast of Ventura. Due to protection of endangered species in the river, the Sanitation District would be required to provide advanced treatment of enough treatment plant discharges to support the aquatic habitat. The amount of advanced treatment under this option would also likely exceed the 3 MGD of small-

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

scale advanced treatment for the alternative compliance plan. This option would drastically reduce the hydrologic support to the river. The estimated cost for this option was approximately \$550 - \$600 Million.

Alternate Discharge Location. Discharging of the treatment plant effluent at an alternate location upstream on the Santa Clara River requires the conveyance pipelines and pumping facilities to discharge the recycled water to the upper reaches of the river, away from downstream salt-sensitive agriculture. It was thought this would minimize the impacts to the downstream users by taking advantage of the assimilative capacity of the river. The estimated cost for this option was approximately \$300 Million, however, modeling conducted by the Sanitation District showed this alternative would not achieve compliance with the existing 100 mg/L standard, and also degraded groundwater basins in eastern Santa Clarita Valley, which are used for potable water supply.

Several other options, such as taking all discharge out of the river through recycling all water and/or pumping to Castaic Lake, and pumping back Newhall Ranch Sanitation District WRP advanced treated recycled water to dilute Sanitation District treatment plant discharges are not feasible for the reasons discussed below, and would likely be more costly than the alternative compliance plan.

- Taking all treatment plant effluent produced by the Sanitation District would leave the river substantially drier and adversely affect the environmental and social value of the river to the community, and would likely not be permitted by the RWQCB, SWRCB, the California Department of Fish & Game or the U.S. Fish & Wildlife Service due to the threatened & endangered species that may occur in the river or in the adjacent riparian habitat.
- Even if taking all discharge out of the river was permitted, recycling 100% of the treatment plants' effluent is not a viable option because there is not enough demand for recycled water all of the time, particularly during cold and rainy winter weather, resulting in the need to still discharge significant amounts of water to river that have to meet the 100 mg/L standard. During times of discharge to the river, the amount of advanced treatment needed to still comply with permit limits would exceed the 3 MGD of small-scale advanced treatment for the alternative compliance plan. It should be noted that Castaic Lake Water Agency's (CLWA) regional recycled water master plan identifies a maximum demand for approximately 50% of the recycled water produced by the Sanitation District, with the distribution system planned to be built over the next 20 years. Currently only 400 Acre Feet per year (AFY) of recycled water is actually used by CLWA, which is less than 2% of the total treatment plant discharges to the river. As such, there will always be a need to discharge to the river, which would require that such discharge meet the 100 mg/L chloride limit.
- Even if taking all discharge out of the river were permitted, pumping it to Castaic Lake would not be feasible for regulatory, political and economic reasons. The State Department of Public Health would not permit the direct use of recycled water (whether tertiary or advanced treated) for public consumption. In addition all users of imported potable water stored behind Castaic Lake, would not permit an activity that allows recycled water to be discharged and mixed in the reservoir. There would also be significant "Toilet-to-Tap" concerns from local residents. Finally, the cost of this option would greatly exceed the large scale advanced treatment option, since more advanced treatment and brine disposal would be necessary, and infrastructure to pump the advanced treated water to Castaic Lake would have to be built and operated at great expense.

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

- Pumping back Newhall Ranch Sanitation District advanced treated recycled would not be feasible because to comply with the 100 mg/L standard requires 20 MGD of advanced treatment. The total capacity of the Newhall Ranch Sanitation District WRP at build-out is only 6.8 MGD, and given recent economic downturn, the build-out is not likely to be achieved for several years, beyond the May 2015 compliance date for the TMDL. The cost of pumping back this advanced treated recycled water would also be very high.

(W-3) Are we in compliance today with 100 mg/L standard? What about the relaxed standards?

Neither the treatment plant discharges nor chloride in the river meet the 100 mg/L standard, which is the only limit that currently applies. The figures below (see response to question W-4) show the historical chloride in treatment plant discharges and in the river since the enactment of the Clean Water Act in the early 1970's. It is clear that the treatment plant discharges have rarely met the 100 mg/L standard, and the river, particularly over the last decade, has consistently exceeded the standard. Because the river was not meeting the 100 mg/L standard, it was listed as a Federally impaired water body, requiring a TMDL.

When comparing more recent water quality conditions to the relaxed standards, the treatment plant discharges are easily achieving the 150 mg/L, and the river has generally met 117 mg/L over the last few months. But compliance with the relaxed 150 mg/L objective for treatment plant discharges is to be expected because this limit was specifically negotiated to ensure the treatment plant discharges always comply. Compliance with the 117 mg/L river objective during drier periods will require some desalinated water from the proposed advanced treatment plant upgrade proposed in the Alternative Compliance Plan. The key issue is that these relaxed limits are *conditional*, contingent on the Sanitation District implementing the alternative compliance plan.

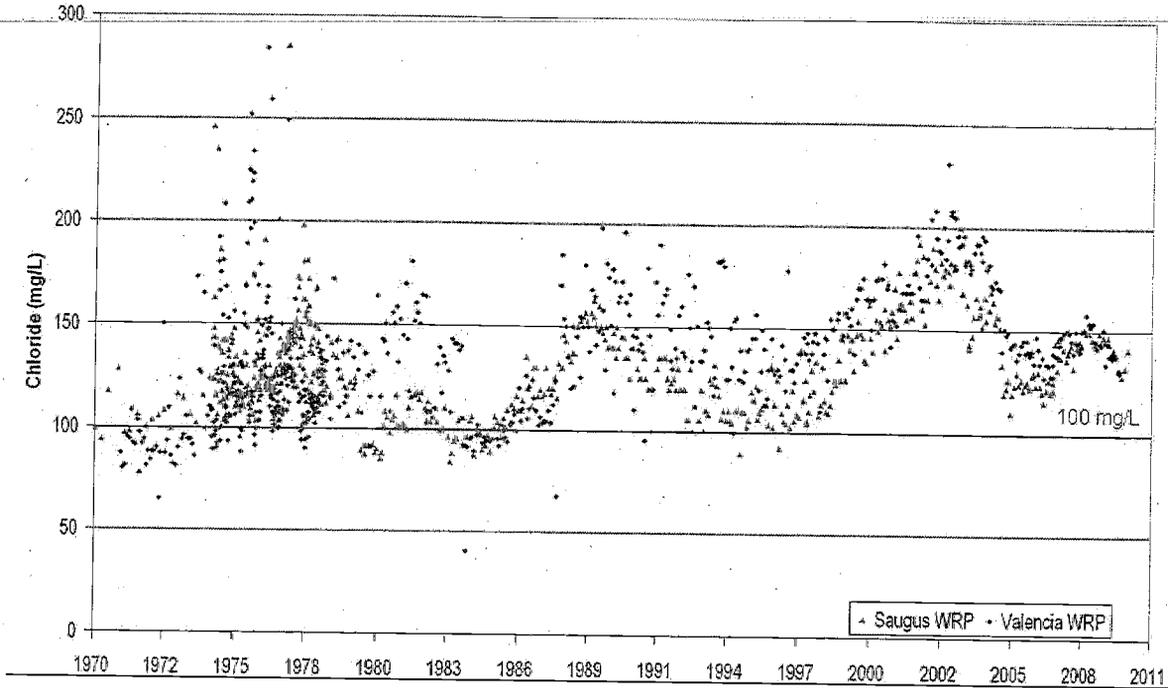

The Sanitation District is seeking additional relief during drought to raise the 130 mg/L river limit during drought to 150 mg/L, which would avoid the need to purchase dilution water and discharge it to the river to mitigate high chloride levels in drought times. This additional drought relief would reduce costs by \$40 million.

(W-4) What is Ventura County willing to accept? Are they getting free water with the Alternative Compliance Plan?

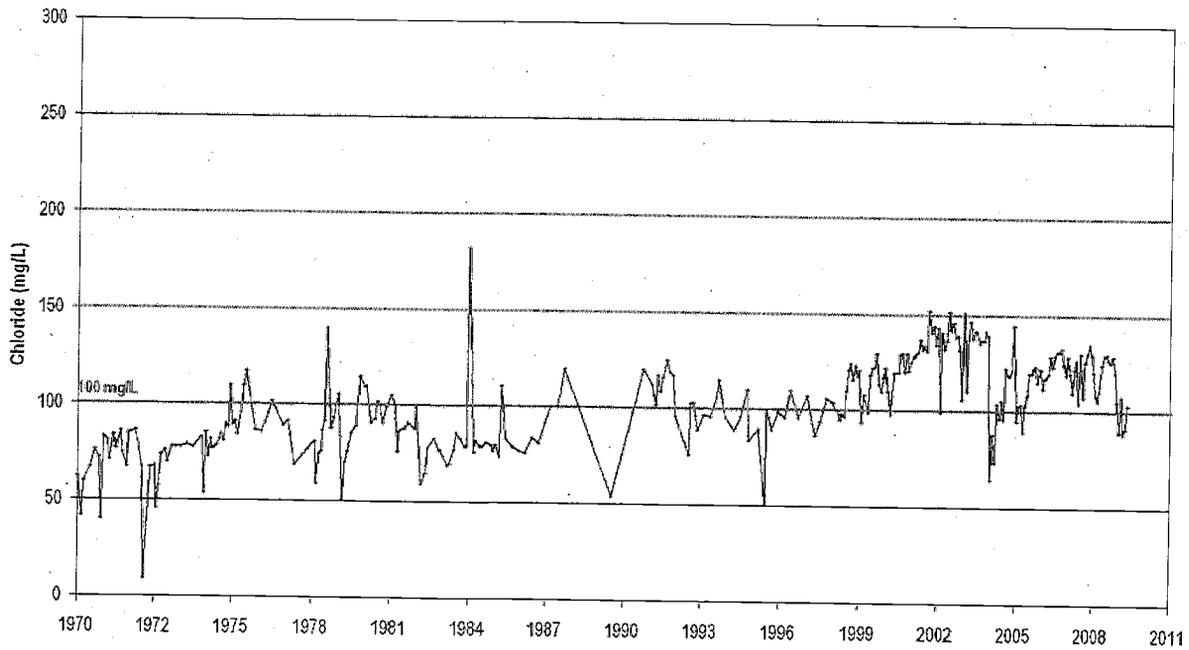

The United Water Conservation District, which manages the surface water and groundwater resources for the Ventura County portion of the Santa Clara River watershed, has expressed concerns about increasing chloride levels in the East Piru groundwater basin, due to the recharge of the groundwater from river flows that originate from Los Angeles County. During drought, Sanitation District WRP discharges comprise the majority of river flows that cross the County Line, at elevated chloride concentrations, and then infiltrate into the local groundwater aquifers. As a result, the chloride levels build-up in groundwater. This has been seen in the past in the 2000-2004 time frame, when drought conditions, coupled with the community's high usage of automatic water softeners, led to treatment plant discharges over 200 mg/L, and river and groundwater chloride concentrations near 170 mg/L. The figures below show the historic chloride trends in treatment plant discharges and in the river at the County Line and groundwater levels in East Piru Basin.

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

Chloride Concentrations in Treatment Plant Discharges to the Santa Clara River

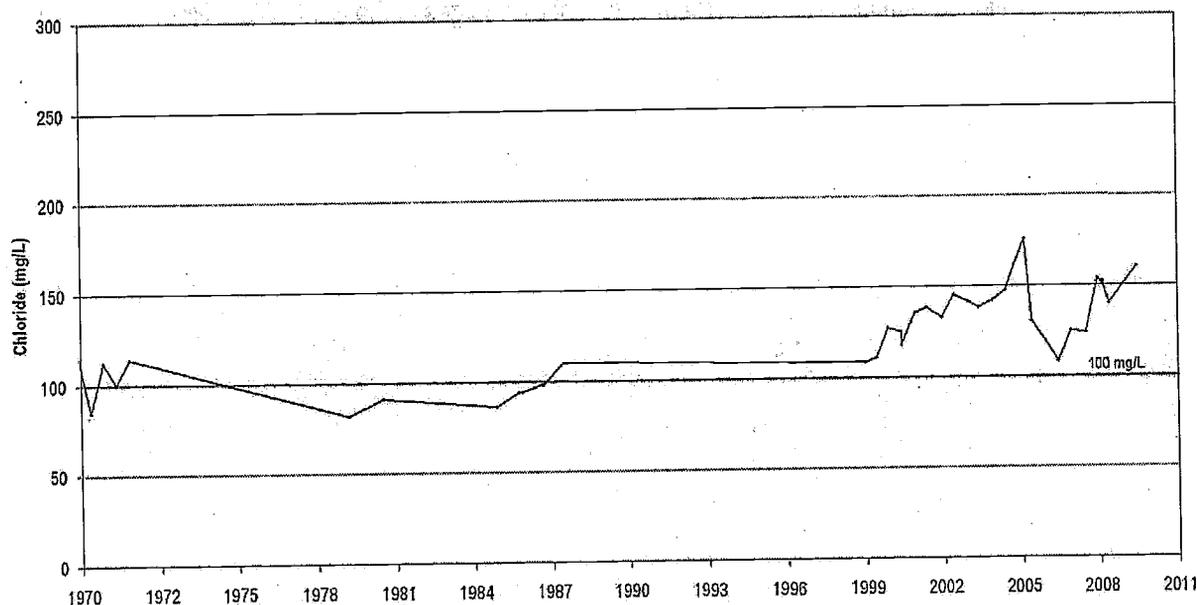

Chloride Concentrations in the Santa Clara River at the Los Angeles-Ventura County Line

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

Chloride Concentrations in Groundwater – East Piru Basin

Recent chloride monitoring in the East Piru groundwater basin, conducted by the United Water Conservation District, appears to indicate that chloride levels are still elevated, even with lower chloride river levels at the County line. It is for this reason that salt management facilities were a key element, in combination with the Sanitation District's commitment to remove the automatic water softeners, in the Alternative Compliance Plan, because it provided a mechanism to export salt loading from the East Piru groundwater basin. The salt management facilities contemplated in the Alternative Compliance Plan would extract high chloride groundwater in East Piru that was impacted by treatment plant discharges and blend the groundwater with advanced treated recycled water to facilitate removal of the excessive chloride loading in East Piru. The blended advanced treated recycled water and groundwater would be exported out of the basin and still meet downstream water quality standards at 100 mg/L, while also increasing surface water flows than can be captured for irrigation water in Ventura County. Hence, while the primary purpose of salt management facilities is to mitigate excessive chloride loading to East Piru groundwater basin caused by historic and future recycled water discharges in LA County, a secondary benefit of the facilities derived by Ventura County was a new irrigation water supply. The secondary benefit derived by the salt management facilities was a key reason, in combination with the Sanitation District's commitment to remove the automatic water softeners, that Ventura County stakeholders, who had previously opposed any relaxation of standards, overwhelmingly supported the revised standards that the Sanitation District received in December 2008.

The salt management facilities also address the primary concern from the RWQCB and Camulos Ranch (the 1,800-acre farming operation that uses river water and East Piru groundwater to cultivate salt-sensitive agriculture) that the salt-sensitive agricultural use is being protected in the East Piru groundwater basin, during drought. When river flows exceed the conditional relaxed standard of 117 mg/L, some portion of advanced treated water would be provided to Camulos Ranch to protect its salt-sensitive use. This mitigation measure was required by the RWQCB as a condition to approve any relaxed standards for chloride in the river during drought.

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

(W-5) How many other Ventura County cities along the Santa Clara River, have removed softeners? What are their chloride limits, current discharge levels, and what are they doing to comply?

- The Piru Wastewater Treatment Plant (WWTP) is located near the confluence of the Santa Clara River and Piru Creek and has a design capacity of 0.5 MGD but does not directly discharge to the Santa Clara River. The Piru WWTP discharges to percolation ponds along the Santa Clara River. The Piru WWTP has a permit limit for chloride at 100 mg/L. Piru WWTP is required to undertake a study to identify, monitor, and estimate mass loadings of possible sources of chloride and propose a mitigation plan to mitigate chloride loadings from controllable sources and bring chloride levels in the effluent into compliance with the 100 mg/L within two years of approval of the plan by the RWQCB. The Piru WWTP is located along Reach 4A of the Santa Clara River, which is not currently listed for exceeding chloride water quality objectives due to the dilution from Piru Creek. It should be noted that the Piru WWTP discharges 2.5% of flow that the Sanitation District WRPs' discharge.
- The City of Fillmore has constructed a new treatment plant utilizing a membrane bioreactor treatment system with UV disinfection. Fillmore has eliminated all discharge to the Santa Clara River, through water recycling and/or subsurface disposal. The elimination of direct discharge to the river reduces the City's liability under federal NPDES permits (i.e. mandatory minimum penalties and TMDLs), and is a viable option because they only discharge 1 MGD, which is 5% of the flow that the Sanitation District WRPs discharge. Prior to 2009, the City was discharging effluent to Reach 3 of the Santa Clara River, which is currently listed as impaired for chloride and has a water quality objective of 100 mg/L. The City of Fillmore had received notices of violation for its discharge from the existing WWTP, including for exceedences of suspended solids, coliform and chloride effluent limits, and in September 2005 the RWQCB imposed an administrative civil liability penalty on the City for these violations in the amount of \$264,000. In 2004, The City passed an ordinance in which made it illegal to install brine-discharging water softeners and in Fall 2008, the City initiated a buyback program for water softeners. The use of UV disinfection would minimize chloride added through treatment processes such as with disinfection using sodium hypochlorite. Because the City's water supply is primarily local groundwater with low levels of chloride, 30-40 mg/L, these actions are expected to bring the City into compliance with the chloride effluent limits of 100 mg/L. To date the City has removed 65 softeners, and expects to remove 350 more. Due to the small volume of flow that is treated (1 MGD) as compared to Sanitation District (20 MGD), the removal of these softeners is expected to greatly improve water quality for the treatment plant discharges.
- The City of Santa Paula has constructed a new treatment plant utilizing a membrane bioreactor treatment system and UV disinfection. The City's new plant has been online since Mid-May 2010, and will soon eliminate all discharge to the Santa Clara River, through water recycling, percolation and/or evaporation ponds. The elimination of direct discharge to the river reduces the City's liability under federal discharge permits (i.e. mandatory minimum penalties, TMDLs). The City was discharging effluent to Reach 3 of the Santa Clara River, which is listed as impaired for chloride and has a water quality objective of 100 mg/L. The City intends to comply with a groundwater chloride limit of 110 mg/L through a combination of source control and UV disinfection. In 2007, the City passed an ordinance in which made it illegal to install brine-discharging water softeners and authorized the City Manager to initiate a buyback program for water softeners. The use of UV disinfection would minimize chloride added through treatment processes such as with disinfection using sodium hypochlorite. Because the City's water supply is primarily local groundwater with low levels of chloride, 40-50 mg/L, these actions are expected to bring the City into compliance with the chloride effluent limits of 110 mg/L. The City is also contemplating centralized softening to encourage and/or require their residents to remove their softeners

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

- The City of Ventura operates the Ventura Water Reclamation Facility, which has a design capacity of 14 MGD and discharges treated effluent to the Santa Clara River Estuary. The estuary has no chloride objectives, nor are there any agricultural beneficial uses. As such, the City has no compliance issues with chloride.
- The City of Oxnard operates an ocean discharging treatment plant. The ocean has no chloride objectives, nor are there any agricultural beneficial uses designated, since seawater has chloride concentrations of 19,000 mg/L. As such, the City has no compliance issues with chloride. The City is contemplating rebates for softeners in order to improve its recycled water quality and provide more and better quality recycled water to customers to relieve capacity of their ocean outfall and allow for more growth in the future.

(W-6) What is the criteria to protect agriculture in Clean Water Act / Porter-Cologne Act? Are they intended to protect any crop that a farmer can possibly plant?

Both the State's Porter-Cologne Act and the Federal Clean Water Act require that water quality standards be established to protect existing and potential beneficial uses supported by surface water and/or groundwater resources in the State and under Federal jurisdiction, respectively. As part of the State's Basin Planning process, in 1975, the RWQCB established beneficial uses for the Santa Clara River Watershed, which includes the Agricultural (AGR) beneficial use. Once these beneficial uses have been designated, water quality objectives are required to protect *the entire* spectrum of uses that fall under this category. In 2007, the Sanitation District conducted a study to evaluate whether salt-sensitive agriculture exists or has the potential to exist in Reaches 5 and 6 of the SCR, where the Valencia and Saugus WRPs discharge recycled water. The key findings from this evaluation were that salt-sensitive crops do not exist nor have the potential to exist in Reaches 5 and 6. In response to that study, the RWQCB conditionally upon implementation of the Alternative Compliance Plan revised the standard in the Santa Clarita Valley reaches to 150 mg/L, even though this relaxation exceeded the threshold for salt-sensitive crops of 117 mg/L. For the Ventura County Reach 4B, salt-sensitive crops are an existing use, which requires full protection under the Clean Water Act, regardless of whether the Sanitation District "buys out the farmer," as has been suggested by the community.

(W-7) Can we discuss the potential liabilities for fines with the public?

Under Government Code §54963(a), a person may not disclose confidential information that has been acquired by being present in a closed session authorized by various sections of the Brown Act, including conferences with legal counsel re litigation under section 54956.9, to a person not entitled to receive it, unless the legislative body authorizes the disclosure of that information.

(W-8) Does State Law trump the Federal Clean Water Act, if the Prop 218 process (as required by the State) leads to a rejection of rate increases by the public?

No, state law does not trump the Clean Water Act. Under Proposition 218 a service charge rate increase proposed for adoption by the District board would be overturned if a majority of the ratepayers file a written protest. In that event, the Sanitation District would not have the funds available to implement the compliance project but the requirement for compliance with federal law is not eliminated. Non-compliance would presumably lead to enforcement actions by the RWQCB including enforcement orders and fines.

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

(W-9) What happens if we refuse to pay the fines imposed by the State? Is there any case law about this scenario?

This issue will be discussed in closed session.

(W-10) When will fines be issued by Regional Water Quality Control Board? How long can this be delayed? How much has to be done right now - can't some of the project/rate increase wait?

The RWQCB is authorized to take enforcement action against the Sanitation District if and when the Sanitation District is in violation of or threatening to violate any of its future permit requirements based on the TMDL (effluent limitations (interim or final), interim implementation plan deadlines, reporting, etc.).

The current compliance schedule requires that a progress report on Planning and Design activities be provided to the RWQCB by November 4, 2010, with an environmental impact report and facilities plan completed by May 4, 2011, and completion of the project for compliance by 2015.

Should the Sanitation District fail to comply with these deadlines or should the RWQCB determine that the Sanitation District is not making substantial progress, the RWQCB may determine that the Sanitation District is threatening to violate its permit requirements and would have the authority to take enforcement action.

In order to stretch out the compliance schedule as long as possible, the Sanitation District staff have negotiated with the RWQCB staff on a phased approach to the implementation of the alternative compliance plan, which will, if approved by the RWQCB, extend the schedule for the completion of the implementation plan interim deadlines such as the environmental impact report and facilities plan to May 2012, and construct the ACP facilities in phases with final compliance by May 2022. If the proposed rate package to support planning and design of the Alternative Compliance Plan facilities is approved by the Sanitation District Board, the negotiated schedule relief with the RWQCB could materialize and provide substantial reduction in service charge rates, while providing more time to seek state and federal funding for the project phases.

Nevertheless, the Sanitation District must immediately initiate work on a facilities plan and environmental documents followed by design and construction of the required facilities. Any delays in implementing the Alternative Compliance Plan may obstruct the Sanitation District's ability to complete the necessary facilities on time and may expose the Sanitation District to enforcement actions by the RWQCB.

(W-11) What is the status of receiving state and federal funding for the project?

In response the Sanitation District Board's direction in 2009 and in order to minimize the impact of implementing the Alternative Compliance Plan to the ratepayers, the Sanitation District has aggressively pursued outside sources of federal and state funding. The Sanitation District submitted an appropriations request for fiscal year 2011 to Congressman McKeon, Congressman Gallegly, Senator Boxer, and Senator Feinstein for funding under the State and Tribal Assistance Grants (STAG) program (through the U.S. Environmental Protection Agency) for \$1 million but were unsuccessful in being awarded an appropriation. The Sanitation District also submitted, but unfortunately did not receive funding for, an appropriations request in fiscal year 2010 for STAG funding.

The Sanitation District prepared requests for an Army Corps of Engineers Water Resources Development Act (WRDA) funding authorization for \$8 million that were submitted to Congressman McKeon, Congressman

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

Galleghy, and Congresswoman Capps in 2009. Congressmen McKeon and Galleghy submitted our request for consideration to the House Transportation and Infrastructure Committee. However, both Congressmen withdrew all of their requests under the House Republican caucus policy against requesting earmarked funding for local projects. The Sanitation District submitted requests for \$12 million for WRDA funding authorization to Senators Feinstein and Boxer in May 2010. Senator Feinstein did not act on this request, and the request is still pending with Senator Boxer.

The Sanitation District will submit additional requests for STAG funding and WRDA authorization for funding (and subsequent appropriations) in the future. However, Congressional appropriations committees, as well as the Obama Administration, have policies against funding "new start" projects until the current backlog of authorized (but not yet funded) projects has been cleared, which may delay funding being awarded.

Within the State, voters passed Proposition 84 in 2006, which provides up to \$900 Million dollars statewide to fund water and water quality related projects. The Sanitation District has participated in the Department of Water Resources Integrated Regional Water Management Program as part of the Upper Santa Clara River IRWM Group. The Sanitation District has submitted several projects that comprise the Alternative Compliance Plan for consideration in future funding applications for the region. Up to \$215 Million in funding is projected to be available for the Los Angeles and Ventura County funding area, which includes four separate IRWM regions including the Upper Santa Clara River.

In the November 2010 General Election, California Voters will have the opportunity to vote on an \$11 Billion Statewide Water Bond Proposition, the Safe, Clean, and Reliable Drinking Water Supply Act of 2010, which may provide additional funding opportunities to minimize the impact of implementing the Alternative Compliance Plan on the Sanitation District's ratepayers.

Over the long-term, the Sanitation District estimates that up to \$10,000,000 in state and federal funds would be available for implementation of the Alternative Compliance Plan by 2020.

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

QUESTIONS FROM MAYOR PRO-TEM MARSHA McLEAN

(M-1) How often do drought conditions occur? How long do they last?

The TMDL defines that critically dry conditions (i.e. drought) occur, when the imported State Water Project water exceeds 79 mg/L. Since 1980, when imported State Water Project water deliveries began in the Santa Clarita Valley, the concentration of chloride in the State Water Project water has exceeded 79 mg/L, approximately 25% of the time, with this condition of drought lasting for up to 6 years.

(M-2) What is the breakdown in chloride contribution from various sources? Are our residents having to pay for the enormous cost to comply with chloride, even though they contribute only a small fraction of the chloride load?

Based on current conditions, the breakdown on sources of chloride in treatment plant discharges is as follows:

Sector	Chloride Contribution	% Contribution
Water Supply (GW and surface)	80 mg/L	61%
Residential	28 mg/L	22%
Treatment Plant (Disinfection)	12 mg/L	9%
Commercial & Industrial	10 mg/L	8%
Total	130 mg/L	100%

The water supply that comes from local groundwater and imported water stored in Castaic Lake has chloride levels currently near 80 mg/L. Residents who consume this water for indoor uses (toilets, showers, dishwashing, cooking, washing clothes, etc.) and discharge to the sewer add about 28 mg/L of chloride, or 22% of the total chloride in treatment plant discharges. Commercial and Industrial sectors who consume this water and then discharge to the sewer add 10 mg/L of chloride. When wastewater is treated, it must be adequately disinfected with chlorine before discharge to the river, which adds another 12 mg/L to the treatment plant discharges.

In total the municipal use of water (i.e., the residential, commercial, industrial and treatment plant disinfection contribution) adds 50 mg/L of chloride to the chloride already in the water supply. Of the 50 mg/L of municipal use, 28 mg/L or 56% is from residential sources. The cost of chloride compliance will be borne by all users of water who discharge their wastewater to the sewer system, based on the amount of water that is used by each connection.

(M-3) What are our legislative options? How do we get the process going, and what are our chances of success?

The Sanitation District Board could take action at a Board meeting to direct staff to seek an author for a bill to seek state and/or federal legislative relief from the requirements of the chloride TMDL. Unfortunately, most water quality legislation that has been enacted in recent years has either created new or expanded regulatory programs or tightened existing regulatory programs. We are unaware of any attempts to relax water quality requirements or lengthen schedules for compliance that have succeeded in the state Legislature or in Congress.

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

Even if state legislation could be implemented, it is possible that the US Environmental Protection Agency (USEPA) would step in and establish its own TMDL for the Santa Clara River. Federal legislation would also be needed but would be very unlikely given the democratic controlled legislature and democrat president.

In summary, a legislative solution has a low probability of success.

(M-4) What is the Prop 218 process? What action are you asking the Sanitation District Board to take at the next meeting of the Board? Who votes on the rate increase, the residents or Board members?

Implementation of rates under Prop. 218 is a multi-step process involving individual noticing, a public hearing, and then introduction and adoption of the implementing ordinances. Specifically, the process begins when the Sanitation District Board receives and files a service charge report pursuant to the requirements of the California Health & Safety Code. The service charge report itself does not set the rates; however, it does provide information on what charges are being proposed for collection on the property tax roll. At the same time the Board receives and files the service charge report, it will also authorize the printing and mailing of the public notices required under Prop. 218. The Board is being requested to take these two actions at its next meeting.

Once the Board takes these actions, Sanitation District staff will coordinate the printing and mailing of the public notices. Under Prop. 218, an individual notice must be mailed to every property owner whose parcel is connected to the sewer system. At a minimum, the notice must provide the amount of the fee or charge proposed to be imposed, the basis upon which the amount of the proposed fee or charge was calculated, the reason for the fee or charge, together with the date, time, and location of a public hearing on the proposed fee or charge. The Sanitation District has typically gone beyond the minimum requirements by including more detailed information on the nature of the projects being undertaken, providing links to other resources such as the Sanitation District's website, and providing contact information (including a toll free number). We also include information on the availability of a rebate program for parcels with low water use. In addition, the notice provides information to the property owners on how to submit a protest. For more detailed information, see the response to the following question.

Before any action can be taken to implement new rates, the Sanitation District Board must hold a public hearing. By law, this public hearing must be held a minimum of 45 days after the Prop. 218 notices are mailed. Although not required by Prop. 218, the Sanitation District has frequently held information meetings during this 45-day period and proposes to do so again this year. The dates and locations of the information meetings are provided in the Prop. 218 notice. At these meetings, staff makes a detailed presentation regarding the proposed actions and then is available to answer any and all questions.

At the public hearing, the Board will consider all input received. Under the provisions of Prop. 218, the Sanitation District Board can take no action on the proposed rates if written protests are submitted by more than 50% of the owners of the impacted parcels. Assuming that less than 50% of the property owners submit a written protest, the proposal then moves to the Sanitation District Board for their consideration. While most fees and charges are subject to a vote of the property owners, Prop. 218 specifically exempts water, wastewater, and trash collection fees from this requirement. Hence, only the Sanitation District Board members will vote on the proposed rates. After considering all of the public input, the Sanitation District Board can elect to implement a different rate than what was proposed so long as the new rate is less than or equal to

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

the proposed rate. It cannot implement a higher rate without going through the Prop. 218 process all over again.

If the Sanitation District Board opts to implement the proposed rate, it does so by introducing a service charge rate ordinance. The Sanitation District Board will then consider adoption of the service charge rate ordinance at a subsequent Board meeting that occurs at a minimum of 5 days after introduction. Adoption of the ordinance requires a two-thirds vote.

One of the ways the Sanitation District has undertaken to minimize expenses is to have the County collect the service charge on the property tax bill on our behalf at a cost of only 25¢ per parcel. In order to take advantage of this low-cost option, the Sanitation District must comply with the statutory requirement that the Prop. 218 process be completed by August 10. To this end, the following dates are recommended:

Receive and File Service Charge Report	June 2
Mail Prop. 218 Notice	June 11
Hold Public Hearing, Introduce Ordinance	July 27 (45 days after notices are mailed)
Adopt Ordinance	Week of August 2

(M-5) What educational materials will go out with the Prop 218 notice, and will these materials prominently state that residents have a right to protest?

Public notices regarding the proposed sewer service charge rate increase will be sent to every property owner within the Sanitation District service area in accordance with Proposition 218. These notices will provide property owners basic information about the Sanitation District, the regulatory mandates that resulted in the chloride limits, the efforts by the Sanitation District to develop the most cost effective approach to complying with the chloride limit including the Alternative Compliance Plan, and the proposed rate increases for the next four years which are to support the continued operation of the existing facilities along with the planning and design work for facilities required to meet the current regulatory requirements provided they are not revised. The notice will also direct people to the Sanitation District's website for more detailed information, including links to relevant technical studies. Additional information will also be provided with respect to contacting the District for more information including a toll free telephone number and the process for protesting the proposed rate increase. The public notice will also provide information on dates and times for six planned workshops to be held at the Santa Clarita City Hall and two Town Council Meetings, West Ranch and Castaic Area. Staff will also be working closely with City of Santa Clarita staff to respond to requests for additional information from the community. Lastly, in addition to legally required publications related to the public hearing the Sanitation District staff will be providing press releases and meeting with the editorial board for the paper to provide further opportunities for information to be made available to the community.

(M-6) How many parcel owners are there in the Sanitation District? How many protests are needed to stop the process from going forward?

There are currently 68,897 parcels connected to the sewerage system in the Sanitation District service area. If 50% (34,449) of the parcel owners submit written protest, the rate setting would stop pursuant to the provisions of prop. 218.

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

(M-7) Why did the RWQCB cut the schedule for the scientific studies in 2006? Why didn't they allow more time for the studies to be carried out?

In 2006, the RWQCB reconsidered the TMDL and amended the TMDL schedule. The RWQCB considered the results of the special studies that had been completed to date, which included the Literature Review and Evaluation (LRE) and the Extended Study Alternatives (ESA) Report and found it appropriate to accelerate the study period of the Implementation Plan, because the studies showed that the range of chloride values (100 – 117 mg/L), protective of AGR and groundwater recharge (GWR) beneficial uses, was significantly smaller than originally anticipated. The RWQCB made the following findings as their basis to the decision to cut the implementation schedule:

- "Staff finds that the work to date provides critical information on the chloride hazard concentration for salt-sensitive crops. Completion of the first Special Study, the Literature Review and Evaluation (LRE), provided a scientifically defensible baseline to support a Water Quality Objective (WQO) that is protective of agricultural supply beneficial use (AGR). The LRE established a chloride guideline concentration of 100-117 milligrams per liter. The chloride guideline concentration established by the LRE may be further refined through extended agricultural studies, which may take decades to complete.
- Staff finds that the duration of time and the treatments for an extended field study (proposed in the ESA Report) might not be sufficient to address all the factors that may affect the chloride threshold level, and, absent a lengthy TMDL schedule extension, might not provide conclusive data to meet the TMDL schedule.
- Staff finds that advanced treatment most likely will be needed to improve the effluent chloride concentration and consistently meet chloride targets ranging from 100 - 117 mg/L established by the LRE."

(M-8) Wouldn't the cost of the peripheral canal be less expensive, because it would be shared by other State Water Project Contractors, than the cost of the Alternative Compliance Plan? What about treating SWP water?

Based on discussions with staff of CLWA, they claim that cost of the peripheral canal is between \$9 and \$11 billion, and the proportionate share to the Santa Clarita Valley residents costing about the same as the alternative compliance program. However, there is no guarantee that completion of the long-proposed peripheral canal or other project would sufficiently reduce chloride levels in the Santa Clarita Valley's imported water at all times. There is no guarantee as to the timing when a project to build around-the-Delta Conveyance Facilities will be completed. The Sanitation District is required to comply with the requirements of the chloride TMDL by 2015. Unless there was a guarantee that the long-awaited fix to the State Water Project (SWP) would be built in a similar timeframe and would result in compliance, it is difficult to see how the RWQCB would accept it as a compliance alternative. As such, the mere prospect that it may be built does not preclude the need for the Sanitation District to comply with the RWQCB's requirements by May 2015, or else face significant imposition of fines.

The Sanitation District has not conducted a formal cost estimate of treating all of the SWP water as an alternative to large scale advanced treatment of wastewater because it believed this alternative would be significantly more expensive. Treating the water supply was thought to be a more expensive option because only a fraction of the imported water is used for indoor residential, industrial and commercial use which ends up in the local sewer system, the larger portion of the potable water supply is used for outdoor irrigation, which does not reach to the sewer system. In 2008, CLWA reported the potable water supply consisted of

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

approximately 42,000 AFY of SWP water and 34,000 AFY of local groundwater, or 76,000 AFY of water supply for potable uses. In comparison, the Sanitation District discharged approximately 20 MGD or 23,000 AF of recycled water to the Santa Clara River in 2008, representing about 1/3 of the potable water supply utilized in the Santa Clarita Valley.

The Sanitation District has estimated that in order to comply with a 100-mg/L chloride standard by treating its recycled water, it would need to provide advanced treatment for nearly 60% of the projected flow by the year 2030, or about 20 MGD, at a cost of approximately \$500 Million (assuming all automatic water softeners have been removed). In order to comply with the same standard by treating the SWP water before it reaches the sewer system, the Sanitation District estimates that it would need to provide advanced treatment for up to 85% of the projected imported SWP water, or about 73,000 AFY (66 MGD). Based on the previous cost estimates for treating the recycled water (20 MGD), the cost of this alternative could be up to three times the previous estimate, exceeding \$1.5 Billion.

In addition, approximately 11,000 AFY (10 MGD) of the potable water treated would be wasted in the form of the brine generated by the reverse osmosis treatment process. In order to make up the water supply lost, additional water resources would need to be developed to meet the full water demand of the Santa Clarita Valley. Hence, both on a cost-basis and a water resource basis, an upstream desalination plant to treat the SWP water is not a feasible alternative for compliance with the TMDL.

(M-9) Doesn't the SWRCB and RWQCB have the right to set water quality standards? Why is this a Federal Clean Water Act issue?

See response to question W-1 above.

(M-10) Is the science justified to set limits as they have been established by the RWQCB? Who has the scientific studies to set these limits for chloride?

See response to question to M-7.

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

QUESTIONS FROM COUNCILMEMBER LAURIE ENDER

(E-1) What is the make-up of the State Water Resources Control Board and the Los Angeles Regional Water Quality Control Board?

The SWRCB consists of five full-time salaried Members, each filling a different specialty position. Each board member is appointed to a four-year term by the Governor and confirmed by the Senate. The mission of the SWRCB is to ensure the highest reasonable quality for waters of the State, while allocating those waters to achieve the optimum balance of beneficial uses.

There are nine Regional Water Quality Control Boards (RWQCBs). The mission of the RWQCBs is to develop and enforce water quality objectives and implementation plans that will best protect the beneficial uses of the State's waters, recognizing local differences in climate, topography, geology and hydrology. Each RWQCB has nine part-time Members also appointed by the Governor and confirmed by the Senate. RWQCBs develop "basin plans" for their hydrologic areas, govern requirements/issue waste discharge permits, take enforcement action against violators, and monitor water quality.

Overall, the RWQCB members must by law be selected to represent the following categories: water supply, conservation, and production (1 member); irrigated agriculture (1 member); industrial water use (1 member); municipal government (1 member); county government (1 member); a responsible nongovernmental organization association with recreation, fish, or wildlife (1 member); and 3 members not associated with any of the above categories, 2 of whom have special competence in areas related to water quality problems

(E-2) What are state and federal fines for non-compliance (\$/day)?

Mandatory minimum fines of approximately \$2 million per year plus discretionary fines in the amount of \$100's million per year are possible. This question will be discussed in closed session.

(E-3) If we are fined, where does this money go?

Administrative civil liabilities and civil penalties assessed under the Water Code are paid into special state funds to be used for specific environmental purposes such as cleanups

(E-4) Who do we need to battle to resolve this issue? What can be done?

The water quality standards were established and approved by the RWQCB and the SWRCB respectively in accordance with state and federal law. Actions by the water boards to establish water quality standards can be challenged in court. These options will be discussed in closed session. Legislative actions can be taken but would likely need to be both state and federal to result in any relief from the need to comply with water quality standards.

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

QUESTIONS FROM COUNCILMEMBER BOB KELLAR

(K-1) Are there any more appeals left in the regulatory process with the SWRCB?

This will be discussed in closed session.

QUESTIONS FROM COUNCILMEMBER FRANK FERRY

(F-1) Can fines imposed by the State go toward paying for the project needed for compliance? Where else has this happened in the Los Angeles Region?

The SWRCB's Enforcement Policy states that use of fine monies for compliance projects is authorized only in connection with Mandatory Minimum Penalties for small communities with a financial hardship. The Sanitation District does not fit this description.

(F-2) Does the State have the ability to make the compliance project move forward absent the rates required pay for the project?

Through the courts, the state can place the Sanitation District under receivership in order to move forward. The receiver would not be exempt from the state constitution, however, and would have to comply with Proposition 218 in order to raise rates.

(F-3) What does the proposed rate increase for the next four years cover?

Approximately half of the proposed rate increases for the next four years will allow for the continued operation of existing facilities while the other half will provide funding for planning and design work for facilities that will be needed if the current regulatory requirements are not revised

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

QUESTIONS FROM SPEAKERS

(S-1) How can this chloride issue be our responsibility, if the State delivers us salty water?

The State and Federal mandate for chloride is for point sources of chloride that have National Pollutant Discharge Elimination System (NPDES) permits and chloride limits. Under current Federal policy, water transfers (including releases by water agencies from reservoirs) are not subject to federal regulation under NPDES permits that would require salt removal. The State would have to implement its own requirements to regulate salt in water transfers, as it deemed necessary, and there is currently no state mechanism in place to regulate pollutants in water transfers.

Further, while chloride levels in the imported water brought into the Santa Clarita Valley do contribute to the salinity problems, imported water would actually meet the 100 mg/L chloride standard for discharge to the river except in periods of severe drought. Approximately 40% of the chloride in treatment plant discharges is added by the Santa Clarita Valley community through municipal uses. The ratepayers of the Santa Clarita Valley have taken great steps to reduce their chloride burden by removing self-regenerating water softeners. Further reductions through source control are likely not practical and therefore additional treatment to remove the chloride added by municipal uses is necessary. Under federal law, the Santa Clarita Valley ratepayers must pay to reduce a portion of the chloride in treatment plant discharges originating from their use of the water.

(S-2) Why can't we ask the farmer to change his crops? Why can't we buy out the farm? Wouldn't this be cheaper?

Once the use has been established, the CWA requires that such a use always be protected, even if the farmer changes his crops or is bought out as suggested by the community. See response to question W-6 for more details.

(S-3) Why is it that the only appointed RWQCB member that does not have to meet conflict of interest issues is Agriculture?

Two types of conflict of interest rules pertain to RWQCB membership. The first, known as "income restriction" rules, actually affects who may be appointed to the SWRCB or a Regional Water Board. These rules are in the federal CWA, as well in provisions of the state's Porter-Cologne Water Quality Act that are designed to conform to the federal act. In summary, these provisions state that, if an individual received 10% or more of their income from the holder of an NPDES permit during the current or previous 2 years, they are ineligible to serve on either the State or Regional Water Quality Control Boards. The threshold is higher (50%) if the person is retired. These rules apply to Regional Water Quality Control Board members because Regional Water Quality Control Boards approve NPDES permits. Most farmers in California are either not permitted at all and are considered "nonpoint sources," or are subject to "waivers" of waste discharge requirements. These agricultural waivers establish conditions such as monitoring requirements that must be met. Since most of the agricultural community (with the exception of confined animal facilities) do not receive NPDES permits, they are not subject to the income restriction rules when it comes to appointment to the State or Regional Water Boards.

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

Additionally, Section 13207 of the California Water Code prohibits Regional Water Board members from participating in any board action related to permit issuance or enforcement actions in which the board member has a direct or indirect financial interest.

Note: The statute pertaining to Regional Water Quality Control Board membership was modified in 2003 to specify that one member of each Regional Water Quality Control Board must be a municipal elected official (city council member or mayor) and one member be a county elected official (supervisor). In many, if not most, instances, the county supervisors have been precluded from serving on the Regional Water Quality Control Boards due to the income restriction rule described above, due to the fact that counties hold municipal stormwater NPDES permits and the fact that many supervisors are paid full-time officials so are unable to meet the income restriction rule. For our RWQCB, Mary Ann Lutz fulfills the requirement for a municipal elected official representative.

(S-4) Isn't one of the reasons why the chloride issue is looming over Santa Clarita because of the amount of imported water that is delivered for development?

Increases in imported water to the Santa Clarita Valley have contributed to the chloride problem. Beginning in 1980, the Santa Clarita Valley imported 1,100 acre feet of SWP water. With more growth in the Santa Clarita Valley, there has been need for more imported water (increasing to 45,000 AFY by 2007), and treatment plant discharges have increased from approximately 5 MGD in 1975, when the Basin Plan for the Los Angeles region was established by the RWQCB, to over 20 MGD in 2010. The load of chloride in the river has also increased from approximately 5,400 pounds per day of chloride discharged to the river to over 23,000 pounds per day of chloride discharged to the river today.

(S-5) The treatment plant data over the last 2 years shows we are in compliance with 150 mg/L and over the last 6 months we are in compliance with the 117 mg/L in the river. More recent data shows that in the river at County line, we are now in compliance with the 100 mg/L level? Why do we need to do anything?

If the 150 and 117 mg/L limits were in effect, we would still need advanced treatment in the alternative compliance plan to meet the 117 mg/L limit in the river during drier conditions. Additionally, these limits are conditional upon implementation of the Alternative Compliance Plan. If the Alternative Compliance Plan is NOT implemented, then these limits will not apply. The only limits in effect right now are 100 mg/L for the treatment plant discharges and the river, which are both in a state of non-compliance. See response to question W-3.

(S-6) What is the scientific basis of the 100-117 mg/L range to protect agriculture? Is it junk science? What was the make-up of the Technical Advisors Panel?

The Agricultural Chloride Threshold Study identified a conservative protective range of 100 – 117 milligrams per liter of chloride. This protective range was affirmed by an independent Technical Advisor Panel (TAP) comprised of local experts and academia, indicating the 117 mg/l number came from a study characterized as the "most rigorous effort in developing irrigation water guidelines in crops." These experts also found that water quality that does not impact avocados is not likely to impact strawberry or nursery crops. A description of each TAP member is provided below.

Oleg Daugovish, Ph.D.

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

Dr. Daugovish works with the Ventura County Cooperative Extension, where he serves as the farm advisor for strawberry and vegetable crops in Ventura County. He conducts research and educational programs with emphases on pest control and environmental quality of production, addressing the needs of organic farmers in Ventura County. He has also served as a research assistant with the Department of Plant, Soil and Entomological Sciences at the University of Idaho; Department of Agronomy at the University of Nebraska; and the Stensund Ecological Center. Dr. Daugovish received his Ph.D. from the University of Idaho; M.S. from the University of Nebraska, B.S. from Latvia University of Agriculture. He is the author and co-author of 4 technical publications, 4 abstracts, and 6 technical proceedings.

Ben A. Faber, Ph.D.

Dr. Faber works with the Ventura County Cooperative Extension, serving as the soils/water/subtropical horticulture advisor in Ventura County. He has research experience in plant nutrition and soil management. His current research focuses on irrigation requirements of avocado and citrus, methods of controlling groundwater nitrate pollution, effects of yard waste mulches on citrus production and various methods for controlling micronutrient deficiencies in avocado. Dr. Faber received his Ph.D. from the University of California, Davis; M.S. Soil Fertility, University of California, Davis; B.S. Biology, University of California, Santa Cruz. He is the author and co-author of multiple technical papers and publications, including 18 publications developed over the last six years.

S.R. Grattan, Ph.D.

Dr. Grattan is a professor at the University of California, Davis, where he serves as the plant-water relations specialist in the Department of Land, Air, and Water Resources, Hydrologic Science Division. His research areas include irrigation management with saline water; plant response in saline environments; uptake of nutrients and trace elements by plants in saline environments; and crop water use. He also performs international consulting work with the World Bank, USDA/OICD, and USAID, and has previously served as a research assistant with the University of California, Riverside, and as a research plant physiologist at the USDA/ARS Salinity Laboratory. Dr. Grattan received his Ph.D. in Soil Science from the University of California, Riverside; M.S. in Soil Science from the University of California, Riverside; B.S. Soil and Water Science from the University of California, Davis. He is the author and coauthor of 15 technical proceedings/presentations, 74 refereed publications, and over 100 reports.

John Letey, Jr. Ph.D.

Dr. Letey is Professor Emeritus of Soil Science, Soil and Water Sciences Unit, University of California, Riverside and Director of the Center for Water Resources, University of California, Riverside. He has also served as the Chair, Department of Soil and Environmental Sciences; Director, University of California Kearney Foundation of Soil Science; Associate Director, University of California Water Resources Center; California State Water Quality Coordinator; and Director, University of California Salinity/Drainage Program. His research areas include irrigation, salinity, drainage, and plant-water relationships. He received his Ph.D. in Soil Science from the University of Illinois, and his B.S. in Agronomy from Colorado State University, and has served on numerous state, federal and international advisory committees; University of California and Soil Science Society of America task

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

forces and committees; and editorial boards. He is the author and co-author of over 80 international presentations, technical papers, publications and reports.

Darrell H. Nelson, B.S.

Mr. Nelson is a consultant with Fruit Growers Laboratory, and a farm operations manager and farmer in Ventura County. He is the former President and Laboratory Director of the Santa Paula and Stockton Fruit Growers Laboratory. He received his B.S. in Soil and Water Science from the University of California, Davis, and has made presentations on the use of scientific information to implement best management practices and the use of nutrient budgets. He has also been active in the appraisal of drinking water quality for regulatory purposes and irrigation water for suitability to specific crops. He has advised the Los Angeles Regional Water Quality Control Board on Best Management Practices and the use of Nutrient Budgets as they relate to Total Maximum Daily Loads (TMDLs), and is currently serving on the California Avocado Commission Research Committee as co-chairman of the management and physiology sub committee.

Kenneth K. Tanji, Sc.D.

Dr. Tanji is Professor Emeritus of Hydrology, Department of Land, Air and Water Resources, University of California, Davis. He has also served as the Senior and Principal Laboratory Technician, Department of Irrigation; Lecturer in Water Science, Department of Water Science and Engineering; Professor of Water Science, Department of Land, Air and Water Resources; Vice Chair and Chair, Department of Land, Air and Water Resources; and Professor of Hydrology, Department of Land, Air and Water Resources. He has more than 45 years of research experience dealing with salinity in agricultural lands in California, the Western U.S. and foreign countries, and is currently involved with developing a salinity management guide for irrigation of landscapes using recycled water. Dr. Tanji received his Sc.D. in Agricultural Science-Irrigation, Drainage and Hydrological Engineering from Kyoto University; M.S. in Soil Science-Soil Chemistry from the University of California, Davis; B.S. in Chemistry from the University of Hawaii. He is the author and co-author of 6 books, 28 book chapters, 158 papers, and more than 200 technical reports and proceedings.

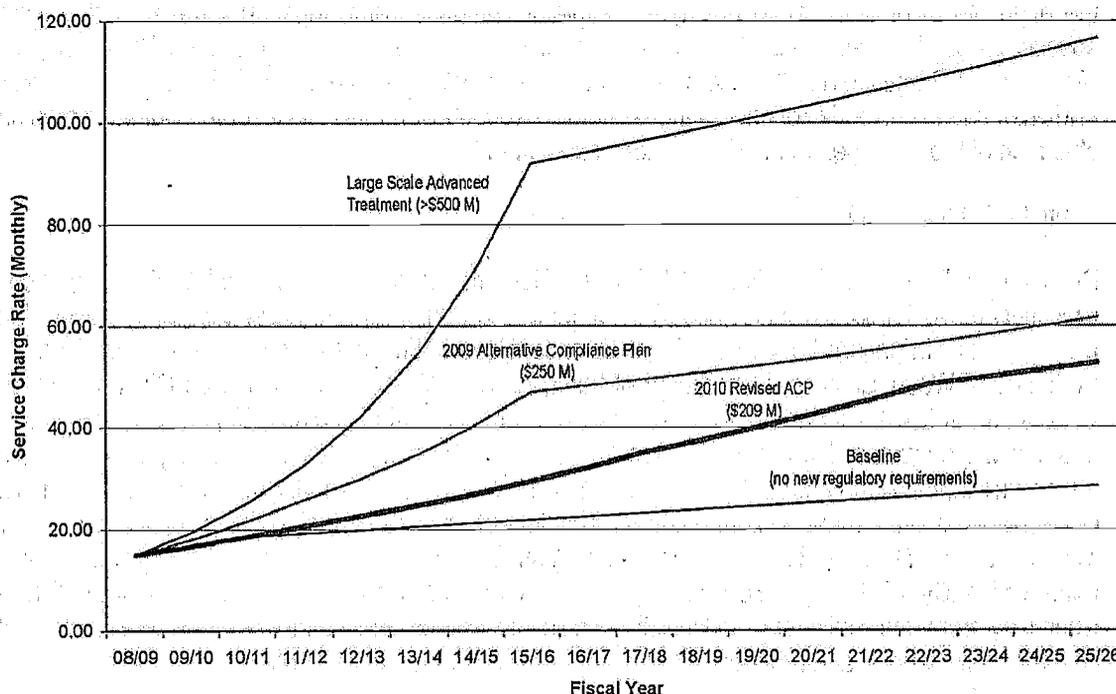

The studies also looked at what additional field studies could be done to further assess the protective range. It was determined that site-specific field studies were not appropriate to pursue, since they would have taken years to implement, would have cost millions of dollars, and might have had inconclusive results (due to confounding factors that could not be controlled, such as unusual frost or other events).

(S-7) There have been numerous letters and reports from the Sanitation District between 2008 through 2010 that has various information about the wide range of costs for compliance and how much chloride is being contributed by softeners. Why are there such discrepancies? Why is there such a sway in numbers?

As described in our May 18, 2010 letter to the City Council, the difference between what was proposed in 2009 and what is now proposed in 2010 is related to the direction received from the Sanitation District Board to reduce project costs, and the ongoing negotiations with the RWQCB. Over the past year, in response to Board direction, Sanitation District's staff and the RWQCB have been discussing a phased approach to the construction of required facilities that would spread project costs over a longer time. This approach has the advantage of minimizing the impact to ratepayers and allows additional time to solicit grant funding; however,

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

this approach is contingent on the RWQCB approving (1) a significant extension of the compliance schedule and (2) further revision of the downstream chloride standard during drought conditions, which would result in additional cost savings of approximately \$41 million. This revision, if granted by the RWQCB, would reduce the cost of the Alternative Compliance Plan to approximately \$210 million. The combination of schedule relief and chloride standard revision, if approved by the RWQCB, together with some level of grant funding assistance, would result in the significantly smaller rate increase currently proposed than was proposed last year. A comparison of estimated service charge rates needed for the original and revised Alternative Compliance Plan implementation, as well as the project needed to comply with the original standard (large scale advanced treatment) is shown in the figure below.

It should be noted that the proposed service charge rate increases over the next four years will cover the costs for environmental and facilities planning and preliminary design. The projected service rates for the 2010 Revised Alternative Compliance Plan, as described above, were based on preliminary engineering estimates, and will be refined once construction bids are received and all funding sources needed for the full implementation of the revised Alternative Compliance Plan are better known.

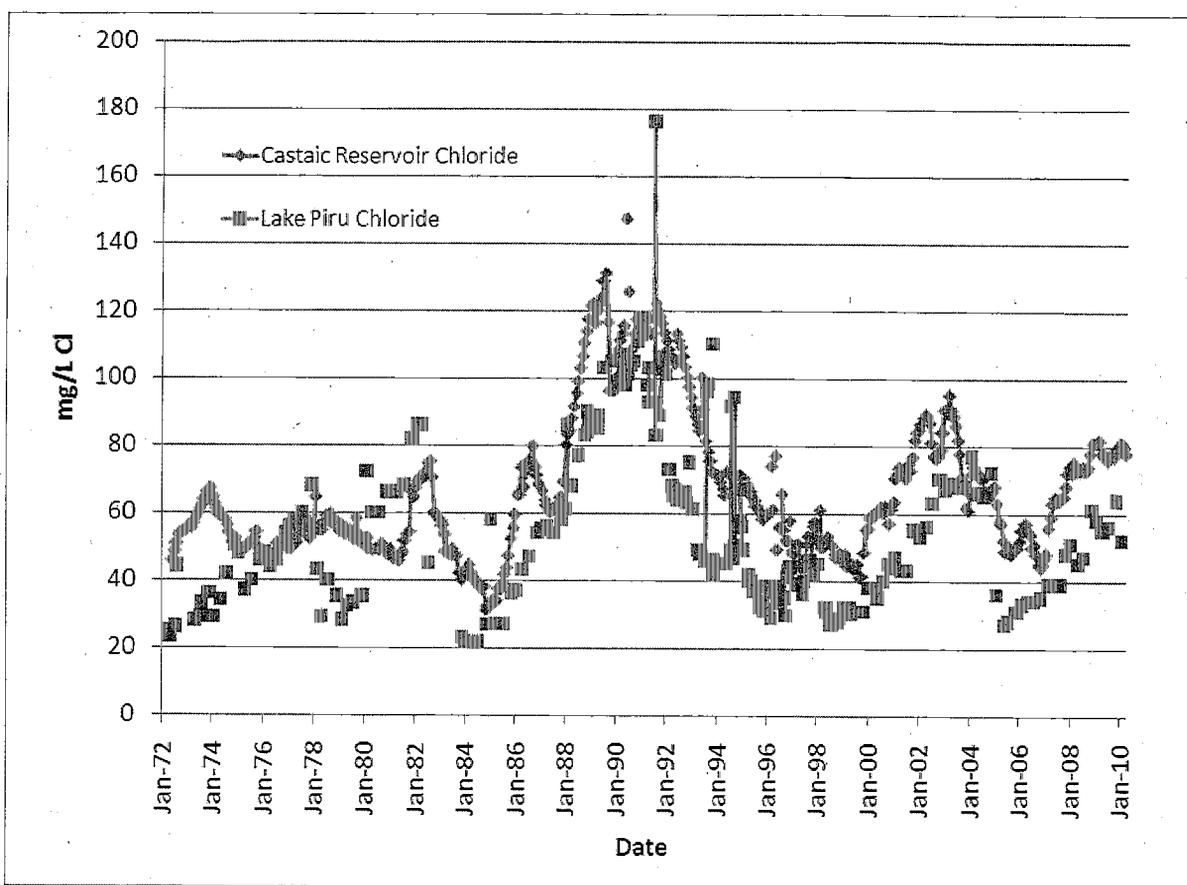

With respect to the differences between the contribution from self-regenerating water softeners as reported in 2008 versus as recently reported in the May 18, 2010 letter to the City Council, the community should be commended for approving Measure S (the 2008 ballot initiative to discontinue the use of self-regenerating water softeners) and taking out all self-regenerating water softeners, as this action saved the Sanitation District service area over \$70 million in facility costs. In November 2008, the Sanitation District reported that there were approximately 3,900 self-regenerating water softeners, contributing 30 mg/L of chloride to treatment plant dischargers. Post Measure-S, the contribution from self-regenerating water softeners has been reduced to about 5 mg/L of chloride to treatment plant dischargers, as reported in the May 18, 2010 letter to the City Council.

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

(S-8) Isn't it true that the water stored behind Piru Dam and released to the Santa Clara River is the same imported water stored in Castaic Lake? Why isn't this being regulated by the RWQCB?

It is true that imported water that is conveyed and stored in Pyramid Lake eventually is conveyed and stored in Lake Piru and the Castaic Lake Reservoir. However, there is significant natural inflow from tributaries to Lake Piru that reduces the chloride levels associated with the imported water flows stored behind the Lake. In general, chloride levels in Piru are lower than Castaic Lake, as shown below, and are well below 100 mg/L standard. Water transfers (including releases by water agencies from reservoirs) are not subject to regulation under NPDES permits by the RWQCB.

Chloride Levels in Lake Piru and Castaic Reservoir

(S-9) What is the Alternative Compliance Plan? What are the salt management facilities? Why do farmers get all the benefits? What are the benefits to SCV residents?

The Alternative Compliance Plan is a greener, watershed-based alternative approach to reduce chloride levels in the Santa Clara River and underlying groundwater basins, as compared to large scale advanced treatment facilities needed to comply with the original standard. The major elements of the Alternative Compliance Plan include: (1) self-regenerating water softener removals, (2) a small-scale advanced treatment plant to remove salt at the Valencia WRP, (3) regulatory relief to expand water recycling, (4) salt management facilities to mitigate and protect groundwater resources from salt build-up, and (5) consideration of other facility upgrades

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

or mitigation measures, as necessary, to reduce chloride levels in the river. The RWQCB was willing to conditionally revise the chloride limits, contingent upon the Alternative Compliance Plan project being undertaken. These relaxed limits provided regulatory relief to reduce the cost of compliance from over \$500 million (for large scale advanced treatment to meet original standards) to \$250 million (for the Alternative Compliance Plan facilities to meet relaxed standards). The Sanitation District is pursuing additional regulatory relief, through slightly higher limits during drought conditions, which would reduce the projected cost of compliance to \$209 million. More details on the Alternative Compliance Plan can be found at our website www.lacsd.org

See response to question W-4, related to the purpose of the salt management facilities as it relates to managing salinity in groundwater, and providing ancillary water supply benefits to Ventura County.

There are significant benefits of the Alternative Compliance Plan to residents of the Santa Clarita Valley. First, the Alternative Compliance Plan is the lowest cost option that complies with the State and Federal mandate for chloride. Secondly, it provides regulatory compliance and cost certainty needed for future economic development in the Santa Clarita Valley. Thirdly, it provides substantial regulatory relief to ensure the expansion of recycled water projects throughout the Santa Clarita Valley, without which, these recycled water projects would be required to comply with 100 mg/L, making it cost prohibitive as a supplemental water resource for the Santa Clarita Valley water supply portfolio. Fourth, in accordance with a RWQCB finding, the Alternative Compliance Plan could be deemed a salinity management plan for the watershed, as required by the SWRCB, since it would provide for (1) watershed-wide monitoring, (2) determination of all sources, loading, fate and transport of salts, (3) salt management measures and implementation, (4) an antidegradation analysis; and (5) water recycling goals and objectives.

(S-10) The Sanitation District told us that if we get all the softeners out we would solve the problem? Why do we still have to pay for costly treatment plant upgrades?

Some of the Sanitation District's ratepayers have indicated that they were under the belief that the removal of automatic water softeners from the community through Measure S would be allow the Sanitation District to achieve compliance with the chloride standards.

The impact of self-regenerating water softeners was evaluated and it was determined that approximately one third of the overall chloride loading in the treated wastewater could be eliminated through the removal of these units, reducing rate increases tied to wastewater treatment. Santa Clarita Valley residents who have removed their self-regenerating water softeners and passed Measure S (the 2008 ballot initiative requiring the removal of all Automatic Water Softeners in the community) must be commended for their role in keeping rate as low as possible, saving over \$70 million in project facility costs. Although the self-regenerating water softeners ban made major strides in lowering chloride levels in the treatment plant discharge, it was not sufficient to bring the plants into full compliance. Full compliance, without the need for advanced treatment, would have required significantly higher chloride limits during drought conditions, which the Sanitation District fought so hard to get, but that the RWQCB was not willing to grant.

Because users in the Santa Clarita Valley still contribute a significant amount of chloride to the treated wastewater effluent, through everyday activities such as doing dishes, washing clothes and taking showers, in order to comply with the standard, the community must reduce a portion of the chloride in the treated wastewater, originating from its use of the water. The Alternative Compliance Plan, the compromise solution

Response to Questions Raised at May 25, 2010 City of Santa Clarita Council Meeting

developed collaboratively by the Sanitation District, RWQCB and Santa Clara River stakeholders in Los Angeles and Ventura County, is the most cost effective way complying with the chloride standards. The estimated cost of the Alternative Compliance Plan is approximately \$250 million; however, the cost to comply with the standards originally developed by the RWQCB would have been in excess of \$500 million even with removal of automatic water softeners.

(S-11) Won't the peripheral canal fix the chloride problem? Why not wait for this to be constructed in 15-20 years, so that community doesn't have to pay for treatment that will be no longer needed, when the peripheral canal is finished.

See response to question M-8

(S-12) How is brine from the small-scale advanced treatment plant going to be disposed? What are the requirements for deep well injection and how is this regulated?

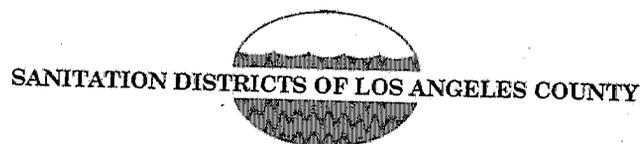

The proposed method to dispose of brine from small-scale advanced treatment is through deep well injection, in local abandoned oil formations and/or subsurface areas. Deep well injection to dispose of brine is an environmentally and technically sound waste disposal method. The suitability of this technology for a specific location depends on the presence of geologic formations which have the natural capability to store and confine the wastes. Historically, deep well injection has been widely used in the Santa Clarita Valley for the disposal of waste brine generated during oil production, which is of worse quality than the brine produced by reverse osmosis treatment of recycled water.

The US EPA's Underground Injection Control Program has developed minimum federal requirements for injection practices that protect public health by preventing injection wells from contaminating underground sources of drinking water. The US EPA has developed several different types, or 'classes,' of injection wells. Disposal of waste brine from oil field operations requires a Class II injection well and is regulated by the California Division of Oil, Gas and Geothermal Resources. The disposal of brine waste from reverse osmosis treatment would require permitting as a Class I injection well and would require a permit from the US EPA. Class I wells allow injection of reverse osmosis brine wastes into deep, isolated formations, below the lowermost underground sources of drinking water and separated by impermeable layers.

An extensive evaluation of brine disposal options will be conducted as part of the facilities planning. The potential environmental impacts will be described in an associated Environmental Impact Report and, if any potentially significant impacts are identified, mitigation measures would be implemented.

June 10, 2010

DOC # 1594249

STATE OF CALIFORNIA
COMMISSION ON STATE MANDATES

REPORT OF THE COMMISSION
ON STATE MANDATES

FOR THE YEAR 2011

(Speaker-1) What is the basis of the standard to protect agriculture. The LRE indicates there is not enough evidence to propose an absolute chloride threshold.

The Agricultural Chloride Threshold Study identified a conservative protective range of 100 – 117 milligrams per liter of chloride. This protective range was affirmed by an independent Technical Advisor Panel (TAP) comprised of local experts and academia, indicating the 117 milligrams per liter (mg/L) number came from a study characterized as the “most rigorous effort in developing irrigation water guidelines in crops.” These experts also found that water quality that does not impact avocados is not likely to impact strawberry or nursery crops.

In 2006, the Los Angeles Regional Water Quality Control Board (RWQCB) found that the “Completion of the first Special Study, the Literature Review and Evaluation (LRE), provided a scientifically defensible baseline to support a Water Quality Objective (WQO) that is protective of agricultural supply beneficial use. The LRE established a chloride guideline concentration of 100-117 milligrams per liter. The chloride guideline concentration established by the LRE may be further refined through extended agricultural studies, which may take decades to complete.” For more information, see question M-7 in the document *Response to Questions Raised at the May 25, 2010 City of Santa Clarita Council Meeting*, available on the Sanitation District’s website.

The studies also looked at what extended agricultural studies could be done to further assess the protective range. It was determined that site-specific field studies were not appropriate to pursue, since they would have taken years to implement, would have cost millions of dollars, and might have had inconclusive results (due to confounding factors that could not be controlled in the field).

What is the make up of the Technical Advisor’s Panel?

The Technical Advisory Panel (TAP) members were nominated by the TMDL Technical Working Group (TWG), which included stakeholders in Los Angeles and Ventura County, and were approved by the Regional Board. A list of each TAP member, including a summary of their qualifications, is provided in question S-6 of the document, *Response to Questions Raised at the May 25, 2010 City of Santa Clarita Council Meeting*, available on the Sanitation District’s website.

(Speaker-2) Can we look at trying to recycle more of the water?

The Alternative Compliance Plan provides for the implementation of Castaic Lake Water Agency’s recycled water master plan to use 17,000 acre feet, approximately half of the water produced at the treatment plants. Recycling of all the treatment plant effluent produced by the Sanitation District would leave the river substantially drier and could adversely affect the environmental and social value of the river to the community, and would likely not be permitted by the RWQCB, State Water Resources Control Board, the California Department of Fish & Game or the U.S. Fish & Wildlife Service due to the threatened and endangered species that may occur in the river or in the adjacent riparian habitat.

Further, recycling 100% of the treatment plants' effluent is not a viable option because there is not enough demand for recycled water all of the time, particularly during cold and rainy winter weather. Without significant amounts of seasonal storage capacity, which is impractical in an urban setting, this results in the need to still discharge significant amounts of water to the river and meet the standard.

Can we follow the example of other cities along the river of not putting water back in the river to limit our liability?

There are several communities along the Santa Clara River that are facing chloride requirements similar to those faced by the Sanitation District. Please see the document *Response to Questions Raised at the May 25, 2010 City of Santa Clarita Council Meeting*, available on the Sanitation District's website, for specific information on what these agencies are doing to comply, including source control and changes in discharge.

Several significant differences between these communities and the Sanitation District allow them more options to comply with their requirements. In general these agencies have significantly smaller volumes of treated wastewater to manage, ranging from 2.5% to 13% of the volume of the Sanitation District's treated wastewater, which allow them to cease discharge to the river without substantially affecting flow and habitat in the river. As described above, these options are not available to the Sanitation District due to the magnitude of our discharges. Further, many of these communities are pursuing the removal of automatic water softeners, following the example set by the Santa Clarita Valley community. Because the water supply in some of these areas is primarily local groundwater with low levels of chloride, these actions are expected to allow these communities to comply with their chloride limits.

(Speaker-3) We must determine if in fact avocados and strawberries are being affected.

The RWQCB has the authority to establish water quality standards whether or not an effect is demonstrated to occur. Both the State's Porter-Cologne Act and the Federal Clean Water Act require that water quality standards be established to protect existing and potential beneficial uses supported by surface water and/or groundwater resources in the State. As part of the State's Basin Planning process, in 1975, the RWQCB established beneficial uses for the Santa Clara River Watershed, which includes the Agricultural (AGR) beneficial use. Once these beneficial uses have been designated, water quality objectives are required to protect the entire spectrum of uses that fall under this category.

As indicated in the response to Speaker 1, the Regional Board found that the LRE established a protective range for chloride of 100-117 mg/L and that further studies would have taken years to implement, would have cost millions of dollars, and might have had inconclusive results.

Isn't the obvious solution a new Delta water conveyance project?

With respect to fixing the State Water Project's delta conveyance facilities, the Sanitation District has no jurisdiction over the State Water Project. There is no guarantee as to the timing of the long-proposed peripheral canal to allow the Sanitation District to comply with the discharge limits and the chloride TMDL schedule.

The Sanitation District is required to comply with the requirements of the chloride TMDL by 2015. Unless there was a guarantee that the long-awaited fix to the State Water Project would be built in a similar timeframe and would result in compliance, it is difficult to see how the Regional Board would accept it as a compliance alternative. As such, the prospect that it may be built does not preclude the need for the Sanitation District to comply with the RWQCB's requirements by May 2015.

(Speaker-4) Shouldn't new connections to the wastewater treatment system pay for the Alternative Compliance Plan since they are the reason we need to import State Water Project Water?

Connection fees are not dedicated for potential treatment upgrade costs, only for future incremental expansion of the existing treatment system to accommodate greater flows. Existing users must bear the cost of any modification or upgrades not related to building additional capacity. Any future expansions (chloride related or not) will be accounted for in the future connection fee rates.

Notwithstanding, new connections over the past 15 years have contributed to the increased water demand in the Santa Clarita Valley. In response to the increased demand, Castaic Lake Water Agency has had to steadily increase the amount of imported State Water Project water as a potable water supply source in the Santa Clarita Valley. While chloride levels in the imported State Water Project water have ranged from 40 mg/L to over 140 mg/L, chloride levels in the local groundwater have also ranged from 40 mg/L to nearly 100 mg/L. Santa Clarita Valley community use of the water adds approximately 50 mg/L of chloride which would result in the discharges from the treatment plant exceeding the existing 100 mg/L standard even without the imported State Project Water.

Why was money borrowed from the CIF (Connection Fees) and why should we pay it back?

New users of the sewerage system or those existing users who significantly increase their discharge are required to pay connection fees in order to fund the future expansion of the system. These fees are placed into a Capital Improvement Fund (CIF) dedicated for expansion of the existing system and are withdrawn as necessary to pay for expansion-related facilities. In order to minimize spikes in the service charge rates, money was borrowed from the CIF to help fund the rehabilitation/repair of existing facilities in the near term (e.g. a sewer under the Santa Clara River that was damaged by a severe winter storm). Because CIF monies are dedicated for expansion (i.e. building more capacity) of the existing system, the borrowed funds must be paid back by existing users – out of the operating funds

– so that the CIF monies are available when needed to accommodate needed expansion projects.

(Speaker-5) *The proposed service charge increase is in violation of Proposition 13, Proposition 218, and the State Constitution. Why should we pay this tax?*

Unfortunately, the speaker did not elaborate or provide any specifics as to why he believes the service charge increase to be in violation of existing law. Hence, it is difficult to provide a direct response to those charges since the Sanitation District believes the service charge program to be in full compliance with the law.

As Proposition 13 primarily deals with property taxes, there may be some confusion since the service charge is collected as a separate line item on the property tax bill. The service charge rates proposed are not taxes. They are charges for wastewater management services that the District is authorized to impose under Health and Safety Code Section 5471. Under authority provided in Health and Safety Code section 5473, the Sanitation District is authorized to collect its fees and charges on the tax rolls. The service charge is billed on the property tax bill as the most cost-effective means of collection. The County currently charges us 25¢ per parcel for this service, with a very low rate of delinquency. If the Sanitation District were to do the billing and collection on its own, this cost would be substantially higher with a significantly higher rate of delinquency. This added cost would all come back to the existing users in the form of higher service charges. As discussed below, the service charge is based on usage of the sewer system and is not related in any way to property values (i.e. a property tax).

In relation to Proposition 218, Article 13D of the state constitution provides specific guidance as to the criteria for a fee/charge. Specifically, it states that (1) the fee shall not exceed the cost to provide the service, (2) the fee shall not be used for any other purpose, (3) the fee shall not exceed the proportional cost of the service, and (4) the fee shall not be imposed unless the service is used by the property owner. In the case of the District's service charge, the charges are necessary to bring the treatment facilities into compliance with the currently adopted discharge standards (i.e. the cost of service). The charges are not used for any other purpose and are not diverted to any type of general fund. The charges are proportioned to each user based on actual usage as measured in terms of flow and strength. The charges are only imposed on parcels that are connected to the sewer system; parcels not connected (e.g. utilizing septic tanks) do not get charged. As such, the District's service charge clearly meets all of the criteria for fees/charges.

Pursuant to Proposition 218, the District is in the process of mailing out individual notices to every property owner that will be impacted by the proposed increase. The notice includes information on the amount of the charge, the basis for the charge, the reason for the charge, and the schedule for the public hearing, all in accordance with the law. In fact, the notice goes beyond the requirements of the law by providing information on how parcel owners may protest and provides a form for doing so. The public hearing is scheduled to be held 45 days later in Santa Clarita, again in accordance with the law.

Failure to approve the proposed rate increase would impair the Sanitation District's planned and budgeted operation and maintenance facilities that provide an essential public service and could result in the imposition of significant fines, possibly greater than the cost of the project, and potentially a much more expensive project than what is currently recommended.

(Speaker-6) There is a lot of misinformation about the sources of chloride added by the community?

Based on current conditions, the breakdown on sources of chloride in treatment plant discharges is estimated as follows:

<u>Sector</u>	<u>Chloride Contribution</u>	<u>% Contribution</u>
Water Supply (groundwater and imported surface water)	80 mg/L	61%
Residential	28 mg/L	22%
Treatment Plant (Disinfection)	12 mg/L	9%
Commercial & Industrial	10 mg/L	8%
Total	130 mg/L	100%

The water supply that comes from local groundwater and imported water stored in Castaic Lake has chloride levels currently near 80 mg/L. Residents who consume this water for indoor uses (toilets, showers, dishwashing, cooking, washing clothes, etc.) and discharge to the sewer add about **28 mg/L** of chloride, or 22% of the total chloride in treatment plant discharges. Commercial and Industrial sectors that consume this water and then discharge to the sewer add 10 mg/L of chloride. When wastewater is treated, it must be adequately disinfected with chlorine before discharge to the river, which adds another 12 mg/L to the treatment plant discharges.

In total the municipal use of water (i.e., the residential, commercial, industrial and treatment plant disinfection contribution) adds about **50 mg/L** of chloride to the chloride already in the water supply. On a per sewage unit (equal to the discharge from a single family home) basis, Residential and Commercial and Industrial users contribute approximately the same amount of chloride to wastewater. All users within the Sanitation District's service area pay a proportional share of the cost for treatment of the wastewater based on the quantity and quality of their contribution relative to a single family home.

These fines are against Sanitation District not against the City. What happens if the Sanitation District declares bankruptcy?

RWQCB fines and penalties can be collected under Water Code section 13328, which provides that after the time for judicial review of the RWQCB's order imposing fines or penalties expires, the RWQCB may apply to the court for a judgment. The court must enter a judgment in conformity with the RWQCB's order. Public agencies have a duty to pay judgments, and this duty is enforceable by court order. Local agencies are required to include in their budgets a provision to provide funds sufficient to pay all judgments.

While municipalities may, under rare circumstances, file petitions in bankruptcy under Chapter 9, it is highly unlikely that the District would be allowed to use bankruptcy as a means to avoid RWQCB fines. Under Chapter 9, a debtor can obtain a restructuring, but not a discharge from its debts. The policy of the Bankruptcy Act does not generally favor the discharge of government-imposed restitution, fines, and penalties, which are classified as non-dischargeable debts under Chapter 7. In summary, filing for bankruptcy will not provide relief from fines and penalties imposed by the RWQCB.

(Speaker-7) Why wasn't the June 2, 2010 meeting properly noticed?

The June 2, 2010 was a properly noticed adjourned meeting of the Sanitation District's Board of Directors. Public notice for Sanitation District's Board Meetings is posted at least 72 hours prior to the meeting at the Sanitation District's office, in accordance with the Ralph M. Brown Act. As an additional courtesy to the public, the meeting agenda was also posted on the Sanitation District's website, www.lacsd.org, on Monday, May 31, 2010. The City of Santa Clarita was also given the public notice and posted the agenda for the meeting at Santa Clarita City Hall and on the City website.

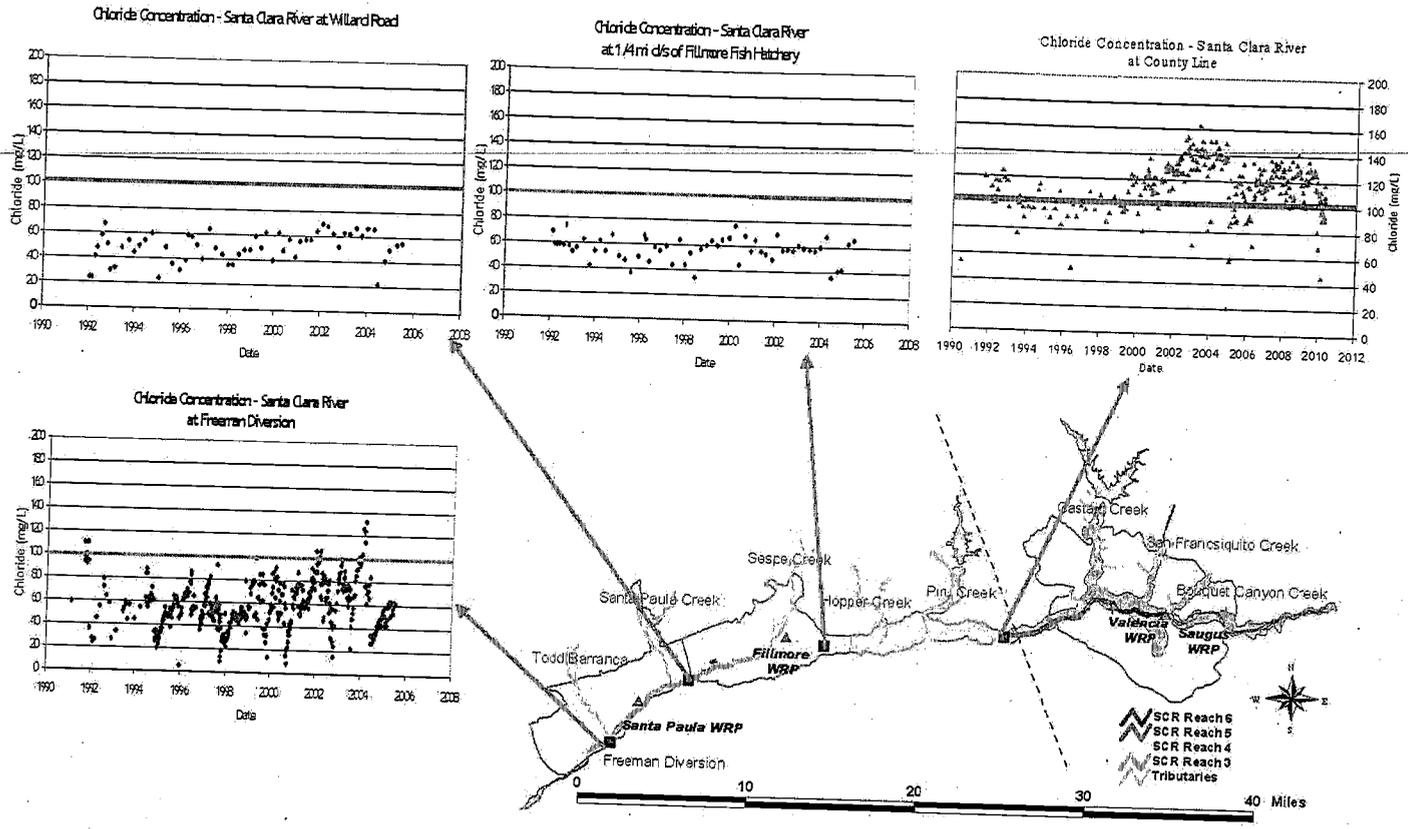

The cost to businesses also needs to be addressed.

All users within the Sanitation District's service area pay a proportional share of the cost for treatment of the wastewater based on the quantity and strength of their contribution relative to a single family home. New businesses connecting to the sewer system would also be required to pay a connection fee based on the type and size of business. For a new 1,000 square foot restaurant, the current connection fee would be \$26,182 and the service charge would be \$1,763 per year, under the new proposed rates, the connection fee would be \$37,895 and the service charge would be \$2,623 per year in FY 13-14, at the end of the proposed four-year rate increase period.

There is no information about the chloride levels along the length of the Santa Clara River in the administrative record to determine the actual sources.

As part of the TMDL Implementation Plan, the Regional Board required the development of a groundwater/surface water interaction model to determine the interaction between surface water and groundwater and its linkage to surface water quality and groundwater quality with respect to chloride. This study was conducted in a public process, directed by the Regional Board, which included stakeholders within Los Angeles and Ventura County.

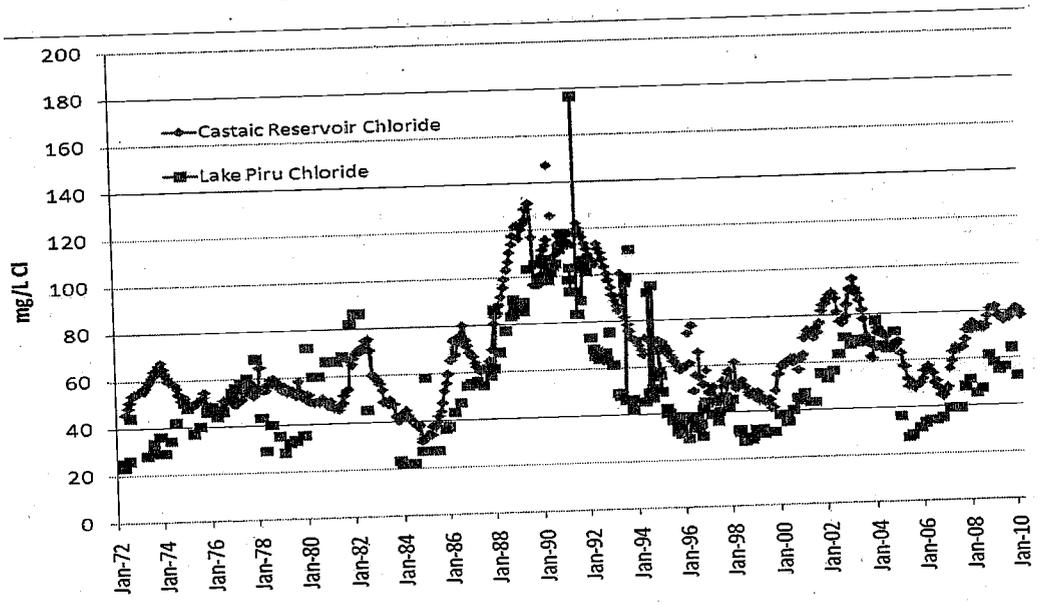

In addition, the Sanitation District has conducted extensive monitoring of the Santa Clara River in Los Angeles County. The United Water Conservation District is the Ventura County water agency that monitors the surface water and groundwater conditions for the Santa Clara River Watershed in Ventura County. Chloride levels at key locations along the Santa Clara River are shown in the figure below.

Why doesn't the water coming from Piru creek need to be cleaned up if it is the same water that comes from Castaic Lake (i.e. imported State Water Project water).

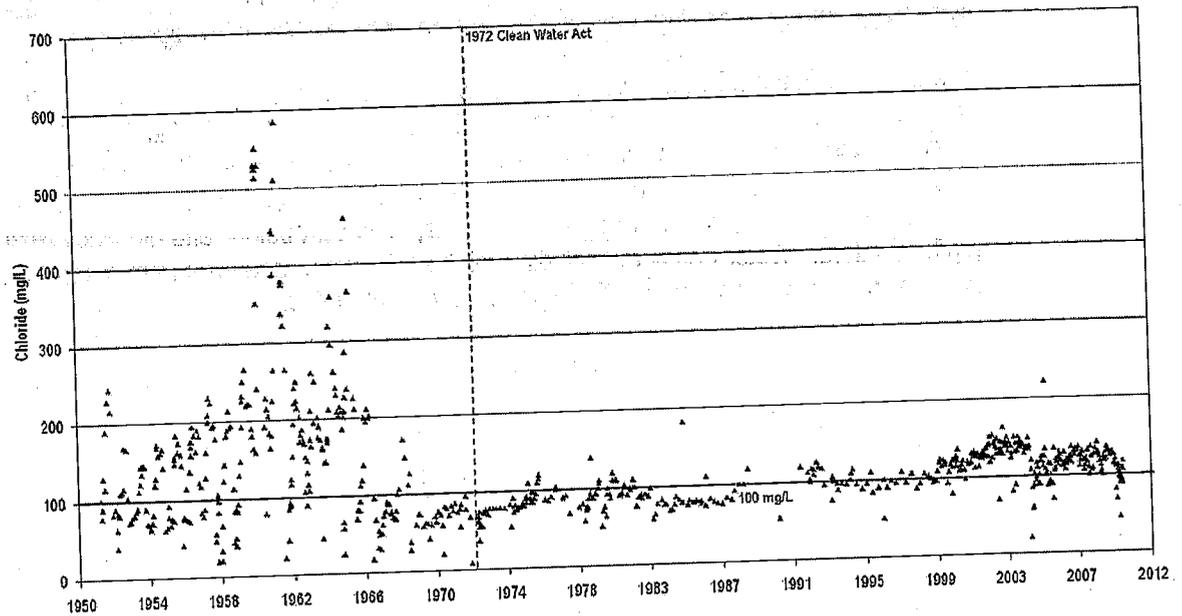

It is true that imported State Water Project water that is conveyed and stored in Pyramid Lake eventually is conveyed and stored in Lake Piru and the Castaic Lake Reservoir. However, there is significant natural inflow from tributaries to Lake Piru that reduces the chloride levels associated with the imported water flows stored in the Lake. In general, chloride levels in Piru are lower than Castaic Lake, as shown below, and are well below 100 mg/L standard. Water transfers (including releases by water agencies from reservoirs) are not subject to regulation under NPDES permits by the RWQCB.

Chloride Levels in Lake Piru and Castaic Reservoir

(Speaker-8) Is it true that in the 1960s chloride levels were much higher?

The figure below contains the historical chloride levels in the river crossing the Los Angeles and Ventura County line since the early 1950s. Elevated chloride levels in the river during the 1950s and 1960s, as much as approximately 600 mg/L, are primarily due to the discharge of brine waste from oil operations in the Santa Clarita Valley directly to the river, before enactment of the Federal Clean Water Act in the 1972. This practice is no longer permitted.

Why doesn't farmer rip out avocados and put back a crop that is not affected by chloride?

As indicated in the response to Speaker 3, as part of the State's Basin Planning process in 1975, the RWQCB established beneficial uses for the Santa Clara River Watershed, which includes the Agricultural (AGR) beneficial use. Once these beneficial uses have been designated, water quality objectives are required to protect the entire spectrum of uses that fall under this category. Since salt sensitive crops such as avocado and strawberry are an existing use, the use must be protected under the Clean Water Act.

(Speaker-9) How will information be provided to the community?

Public notices regarding the proposed sewer service charge rate increase were sent to every property owner within the Sanitation District service area in accordance with Proposition 218. These notices provide property owners basic information about the Sanitation District, the regulatory mandates that resulted in the chloride limits, the efforts by the Sanitation District to develop the most cost effective approach to complying with the chloride limit including the Alternative Compliance Plan, and the proposed rate increases for the next four years which are to support the continued operation of the existing facilities along with the planning and design work for facilities required to meet the current regulatory requirements provided they are not revised. The notice also directs people to the Sanitation District's website for more detailed information, including links to relevant technical studies. Contact information for the Sanitation District, including a toll free telephone number, and the information on the process for protesting the proposed rate increase were also provided.

The public notice will also provide information on dates and times for six planned workshops to be held at the Santa Clarita City Hall and two Town Council Meetings, West Ranch and Castaic Area. Staff will also be working closely with City of Santa Clarita staff to respond to requests for additional information from the community.

How can resident's protest the proposed service charge rate increase?

In accordance with Proposition 218, residents can submit written protest to the proposed service charge rate increase. Information is provided on the Prop 218 notice that is being sent to every property owner within the Sanitation District service area. Under the provisions of Prop. 218, the Sanitation District Board of Directors can take no action on the proposed rates if written protests are submitted by more than 50% of the owners of the impacted parcels.

If sufficient protests are not submitted, then the Sanitation District Board of Directors, at a public hearing, will consider the proposal along with all of the public input.

We voted to get rid of AWS but many people still have them, who checks?

With the passage of Measure S in 2008, the vast majority of Santa Clarita Valley residents have complied with the Sanitation District's ordinance and contacted the Sanitation District to

have their automatic water softeners removed. As of June 2010, the Sanitation District has removed approximately 6,900 automatic water softeners from service. Based on recent sampling of the wastewater entering the treatment plant, the Sanitation District estimates several hundred automatic water softeners remain in service in the community.

The Sanitation District will continue to work cooperatively with residents who are still voluntarily complying with the ordinance to remove their water softeners, with more than 150 applications for rebates still being processed. In addition, the Sanitation District has worked with local retailers, asking them to voluntarily remove from their shelves the salt tablets that are primarily used in automatic water softeners. If necessary, the next phase of the Sanitation District's program will involve additional sampling and site inspections, as well as possible administrative enforcement actions. The Sanitation District believes that the majority of residents will continue to voluntarily comply with the ordinance, saving the ratepayers the costs of additional enforcement.

(Speaker-10) What are the impacts to public schools?

Please see response to question Board-3 below.

(Speaker-11) Why can't we clean up the source water before it goes to residents in the Santa Clarita Valley?

The Sanitation District has not conducted a formal cost estimate of treating all of the State Water Project water as an alternative to large scale advanced treatment of wastewater because it is believed this alternative would be significantly more expensive. Treating the water supply was thought to be a more expensive option because only a fraction of the imported water is used for indoor residential, industrial and commercial use which ends up in the local sewer system; the larger portion of the potable water supply is used for outdoor irrigation, which does not reach the sewer system. In 2008, Castaic Lake Water Agency reported the potable water supply consisted of approximately 42,000 AFY of SWP water and 34,000 AFY of local groundwater, or 76,000 AFY of water supply for potable uses. In comparison, the Sanitation District discharged approximately 20 MGD or 23,000 AF of recycled water to the Santa Clara River in 2008, representing about 1/3 of the potable water supply utilized in the Santa Clarita Valley. Removing chlorides from the source water would increase the volume of water to be treated three times over the current proposal.

In addition, approximately 11,000 AFY (10 MGD) of the potable water treated would be wasted in the form of the brine generated by the reverse osmosis treatment process. In order to make up the water supply lost, additional water resources would need to be developed to meet the full water demand of the Santa Clarita Valley. Hence, both on a cost-basis and a water resource basis, an upstream desalination plant to treat the State Water Project water is not a feasible alternative for compliance with the TMDL.

Board-1 ***Are we currently meeting the standard? Why can't we pursue drought relief?***

Neither the treatment plant discharges nor chloride in the river meet the 100 mg/L standard, which is current standard for chloride. The revised standards for chloride approved by the RWQCB in December 2008 will only be in effect if the Sanitation District implements the Alternative Compliance Plan. When comparing more recent water quality conditions to the revised standards, the treatment plant discharges are achieving the revised 150 mg/L standard, and the river has generally met revised 117 mg/L standard over the last few months. Compliance with the 117 mg/L river objective during drier periods will require some desalinated water from the proposed advanced treatment plant upgrade proposed in the Alternative Compliance Plan. The revised standards include drought relief in the form of higher chloride standards, 130 mg/L, for the river during critically dry conditions defined in the TMDL as when the imported State Water Project water is equal to or greater than 80 mg/L.

The Sanitation District is seeking additional relief during these critically dry periods to raise the 130 mg/L river limit during drought to 150 mg/L, which would avoid the need to purchase supplemental water for the river to mitigate high chloride levels in drought times. This additional drought relief would reduce costs by an estimated \$41 million.

Board-2 ***Who appoints the Regional Board?***

The SWRCB consists of five full-time salaried Members, each filling a different specialty position. Each board member is appointed to a four-year term by the Governor and confirmed by the Senate. The mission of the SWRCB is to ensure the highest reasonable quality for waters of the State, while allocating those waters to achieve the optimum balance of beneficial uses.

There are nine Regional Water Quality Control Boards (RWQCBs). The mission of the RWQCBs is to develop and enforce water quality objectives and implementation plans that will best protect the beneficial uses of the State's waters, recognizing local differences in climate, topography, geology and hydrology. Each RWQCB has nine part-time Members also appointed by the Governor and confirmed by the Senate. RWQCBs develop "basin plans" for their hydrologic areas, govern requirements/issue waste discharge permits, take enforcement action against violators, and monitor water quality.

Overall, the RWQCB members must by law be selected to represent the following categories: water supply, conservation, and production (1 member); irrigated agriculture (1 member); industrial water use (1 member); municipal government (1 member); county government (1 member); a responsible nongovernmental organization association with recreation, fish, or wildlife (1 member); and 3 members not associated with any of the above categories, 2 of whom have special competence in areas related to water quality.

Board-3 ***Are any public agencies exempt from the connection fees and service charge?
Specially, are public schools and hospitals exempt?***

Local government-owned parcels that are located within the District, used solely for governmental as opposed to proprietary functions, and not subject to industrial wastewater treatment surcharges pursuant to the wastewater ordinance are exempt from paying service charges and connection fees. Public schools, governmental administration buildings (e.g. City Hall), local parks and community centers are typically considered to be local government parcels and are exempt.

Government owned parcels that are used for a proprietary interest (i.e. rental properties or redeveloped commercial lots) or for the benefit of a specific group or single class of people, are not exempt. Hospitals – even publicly operated - are not exempt. Hospitals pay for sewer service through the District's surcharge program based on number of beds and/or size of facility.

Santa Clarita, CA 91310

ATTENTION

This notice contains important information about a proposed increase in rates for wastewater service.

Please read.

NOTICE OF PUBLIC HEARING SANTA CLARITA VALLEY SANITATION DISTRICT OF LOS ANGELES COUNTY REGARDING A PROPOSED SEWER SERVICE CHARGE RATE INCREASE TO THE OWNER OF RECORD OF

Assessor's Parcel No. 1234-567-890
1234 Main Street, Santa Clarita, CA 91310

Notice is hereby given that the Santa Clarita Valley Sanitation District will conduct a public hearing on July 27, 2010, at 6:30 p.m. in the Santa Clarita City Council Chambers, 23920 Valencia Boulevard to consider public input on the proposed increase in sewer service charge rates.

Important Dates

Information Meetings:

Location	Date	Time(s)
Santa Clarita City Hall	June 29	7:00 pm
West Ranch Town Council Meeting	July 7	7:00 pm
Santa Clarita City Hall	July 8	1:00 pm and 7:00 pm
Santa Clarita City Hall	July 14	1:00 pm and 7:00 pm
Santa Clarita City Hall	July 19	7:00 pm
Castaic Area Town Council Meeting	July 21	7:00 pm

Public Hearing:

Location	Date	Time
Santa Clarita City Hall	July 27	6:30 pm

Protest Procedure

How To Protest The Proposed Rates

Under Proposition 218, the owner of record for a parcel that is subject to the proposed increase can submit a written protest against the proposed rate increases to the District at or before the time set for the public hearing. If a majority of affected property owners submit written protests, the proposed rate increases will not go into effect.

The written protest must identify the parcel(s) in which the party signing the protest has an interest. The best means of identifying the parcel(s) is by the Assessor's Parcel Number (APN), shown above. If the party signing the protest is not shown on the last equalized assessment roll of Los Angeles County as the owner of the parcel(s) (e.g. if you recently bought the parcel), the protest must contain or be accompanied by written evidence that such party is the owner of the parcel(s).

Using the enclosed envelope and form on page 3, please mail written protests to:

Secretary of the Board
Santa Clarita Valley Sanitation District
P.O. Box 4000
Whittier, CA 90607

Basis for the Rates*

	Current	Proposed			
	FY 2009-10	FY 2010-11	FY 2011-12	FY 2012-13	FY 2013-14
Existing Facilities	\$16.58 / month (\$199 / year)	\$18.50 / month (\$222 / year)	\$19.17 / month (\$230 / year)	\$19.83 / month (\$238 / year)	\$20.50 / month (\$246 / year)
Chloride - Related Efforts	\$0 / month (\$0 / year)	\$0 / month (\$0 / year)	\$1.33 / month (\$16 / year)	\$2.75 / month (\$33 / year)	\$4.17 / month (\$50 / year)
Total Rate	\$16.58 / month (\$199 / year)	\$18.50 / month (\$222 / year)	\$20.50 / month (\$246 / year)	\$22.58 / month (\$271 / year)	\$24.67 / month (\$296 / year)

* Rate per sewage unit (equivalent to the discharge from one single family home).

Total Charge for Your Parcel*

	Current	Proposed			
	FY 2009-10	FY 2010-11	FY 2011-12	FY 2012-13	FY 2013-14
Your Charge	\$16.58 / month (\$199 / year)	\$18.50 / month (\$222 / year)	\$20.50 / month (\$246 / year)	\$22.58 / month (\$271 / year)	\$24.67 / month (\$296 / year)

* The District offers a sewer service charge rebate program for parcels that have low water usage. Details of this program, including claim forms, are available on the District's website (www.lacsd.org).

Background Information

- This notice is about a proposal to increase your wastewater service charge over the next four years as shown above.
- Santa Clarita Valley Sanitation District is the public agency responsible for managing the wastewater that is generated on your parcel.
- Approximately half of the proposed increase is for the continued operation of the existing treatment facilities. The other half is for planning and design efforts related to the facilities that are needed to comply with state-mandated chloride limits.

Regulatory Issues (Chlorides)

- In 2002, the Regional Water Quality Control Board (state regulatory agency) adopted a chloride standard that would have necessitated the construction of large-scale advanced treatment facilities costing over \$500 million.
- The District appealed that decision and, in 2004, the Regional Board agreed to allow additional studies to assess the correctness of the chloride standard as adopted.
- In 2006, the Regional Board halted the studies after the first study's conclusion supported their position and took action to reaffirm the chloride standard as adopted.
- In 2008, after lengthy negotiations, the Regional Board agreed to relax the standard in exchange for the District implementing an alternative project that included the removal of water softeners, much smaller advanced treatment facilities, and salt management facilities. The estimated cost of this alternative project is \$250 million.
- In 2008, the community took the initiative to pass Measure S to discontinue the use of self-regenerating water softeners.
- In 2009, the District's Board of Directors instructed staff to work with the Regional Board with the goal of further lowering the cost of the project.

- Based upon this direction, District's staff developed a phased approach to the project that would spread the cost of the project over significantly more years and would provide some additional relief during drought conditions, reducing the total project cost to approximately \$209 million, if ultimately approved by the Regional Board.

Recommendation

- After opposing the strict standards for over ten years, negotiating with the Regional Board, exploring all technical alternatives, and considering potential large fines and penalties for non-compliance, the Sanitation District staff is recommending the proposed increases as the lowest cost of all viable options that will allow for compliance with the adopted chloride standards.
- While the recommendation is for a four-year rate increase that will keep the District on the path to compliance, we will continue to work with the regulators to revise the adopted chloride limits and grant additional regulatory relief during drought conditions, to work with state and federal legislatures for regulatory relief during these tough economic times, and to pursue all state and federal grant funding opportunities.
- Please note that the proposed recommendation will only fund the facilities planning and design support work. Additional service charge rate increases related to compliance with the chloride standards beginning in fiscal year 2014-15 through fiscal year 2022-23 will be necessary if the project is approved and proceeds to construction.

Protest Process

- You may file a protest against the proposed rate increase following the procedure outlined on the first page. Pursuant to Proposition 218, the protest must be submitted in writing and must be received by the District prior to or at the public hearing on July 27, 2010. For your convenience, you may submit your protest using the enclosed self-addressed envelope and the form at the bottom of this page.
- Protesting the proposed rates does not negate the District's responsibility to comply with all legally adopted discharge standards. Consequently, failure to adequately fund the necessary facilities could result in the District (and, ultimately, you the ratepayer) being subject to significant fines and penalties, and potentially a much more expensive project than what is currently recommended.

More Information / Contact Us

- Telephone: (800) 388-4602 (toll free)
- Regular Mail: P.O. Box 4000
Whittier, CA 90607-4000
- E-mail: rates@lacs.org
- Internet: www.lacs.org
- Please include your name, address, telephone number, and Assessor's Parcel Number (shown just under the title of this notice) with any correspondence to help us promptly and accurately respond. Normal business hours are Monday through Friday, 7:30 am to 4:00 pm.

¿Acerca de qué es este aviso?

El Distrito Sanitario Santa Clarita Valley del Condado de Los Angeles propone aumentar la tasa por Cargo de Servicio de alcantarillado y tratamiento de aguas residuales. Este aviso discute las razones y la cantidad del aumento propuesto. Además, se le notifica que se conducirá una Audiencia Pública el día 27 de Julio del 2010 a las 6:30 p.m. en la Cámara de Consejo de la Ciudad de Santa Clarita, que se encuentra localizada en la siguiente dirección 23920 Valencia Boulevard, para considerar los aumentos que se proponen. Si usted recibió este aviso, los aumentos propuestos de Cargo de Servicio son aplicables a su propiedad. ¡Favor de notar que ESTO NO ES UN COBRO! ¡No mande dinero!

¿Si usted desea recibir este aviso y más información en español, por favor llame a los Distritos Sanitarios al teléfono (800) 388-4602. También usted nos puede visitar en nuestra pagina en la Internet en www.lacsd.org.

ATTACHMENT 79

LACSD Website

SANTA CLARITA VALLEY SANITATION DISTRICT PROPOSED SEWER SERVICE CHARGE RATE INCREASE

The Santa Clarita Valley Sanitation District (District) is the public agency that takes care of sewage generated in most of the City of Santa Clarita and some of the adjacent unincorporated county area. The District's Board of Directors is being asked to consider a proposal to increase the rates over the next three years to provide, solely, for the continued operation and maintenance of existing facilities and Board-directed activities. Increasingly more restrictive options for the management of biosolids (the solid matter removed from the wastewater) have caused operational costs to grow at a pace faster than that of normal inflation. Upgrades to the existing power distribution system are needed to replace outdated equipment and to help insure operational reliability at the water reclamation plants (WRPs). Likewise, improvements are being made to the existing pumping plant to provide facilities that will minimize the chances of a spill from the sewer system. Lastly, in accordance with the direction of the District's Board of Directors, the District has initiated activities related to compliance with Measure S. Board-directed activities to work toward a resolution of the chlorides TMDL issue include: test claim for State reimbursement of unfunded mandates, legislative relief efforts, evaluation of the potential use of ultra-violet disinfection technology at the WRPs, studies of water supply options, and continued negotiations with State regulators to develop a workable solution for the Santa Clarita community. None of the proposed rate increase is being budgeted for the development of facilities to control chloride in the Santa Clara River. Any rate increases that may be necessary to support a chloride solution will not be proposed until an acceptable plan is developed.

It is important that residents of the City of Santa Clarita and the surrounding communities have a good understanding of the financial factors necessitating the proposed rate increases. To help answer questions and provide interested parties with more background, there will be a series of information meetings in the community as well as tours of the Valencia Water Reclamation Plant as shown below. All of this is to lead up to a public hearing to be held on **Thursday, April 14, 2011 at 6:00 p.m.** at the Santa Clarita City Hall when the District's Board of Directors will consider public input before deciding on whether to enact the proposed rates.

A Proposition 218 notice was mailed to property owners on Friday, February 25, 2011. For a generic copy of the Proposition 218 notice, which shows the charge for a single family home, please click [here](#) (for Spanish click [here](#)).

Information Meetings:

Location	Date	Time(s)
Castaic Area Town Council Meeting	March 16	7:00 p.m.
Santa Clarita City Hall	March 23	7:00 p.m.
Santa Clarita City Hall	March 29	1:00 p.m. and 7:00 p.m.
Santa Clarita City Hall	April 4	7:00 p.m.
West Ranch Town Council Meeting	April 6	7:00 p.m.

Public Tour of Valencia Water Reclamation Plant:

Location	Date	Time(s)
Valencia WRP	March 19	9:00 a.m. and 11:00 a.m.

Due to safety considerations, each tour will be limited to 30 people, so you must make a reservation prior to attending. Please RSVP for a tour by telephone at (562) 908-4288, extension 2300, or by email at nmadigan@lacs.org. If more people than can be accommodated sign up, additional tours will be scheduled. Click [here](#) for the tour flyer.

Public Hearing:

Location	Date	Time(s)
Santa Clarita City Hall	April 14	6:00 p.m.

SCVSD Current and Proposed Rates per Single Family Home:

	Proposed			
	FY 2010-11	FY 2011-12	FY 2012-13	FY 2013-14
Existing Facilities Only	\$16.58 / month (\$199/year)	\$17.92 / month (\$215/year)	\$19.25 / month (\$231/year)	\$20.58 / month (\$247/year)

As shown in the table below, even with the proposed rate increases, the service charge rate in the District in the fourth year will be less than what other similar wastewater agencies are currently charging.

Service Charge Rates Comparison:

COMMUNITY	SERVICE CHARGE	
	\$/month	\$/year
Santa Clarita ^a (2013-14)	\$ 20.58	\$ 247.00
Ventura (current)	\$ 25.00	\$ 300.00
Glendale (current)	\$ 33.70	\$ 404.40
Los Angeles (current)	\$ 35.24	\$ 422.83
Dist. 14 ^b (Lancaster) (2014-15)	\$ 39.00	\$ 468.00
Dist. 20 ^c (Palmdale) (2014-15)	\$ 44.58	\$ 535.00
Ojai (2010-11)	\$ 52.07	\$ 624.84
Santa Paula (current)	\$ 77.21	\$ 926.52
Fillmore (current)	\$ 82.00	\$ 984.00

^aThe Sanitation District also receives \$5.69 per month of ad valorem taxes. The County Department of Public Works charges \$3.38 per month of local sewer maintenance.

^bIn addition, the District also receives \$1.80 per month of ad valorem (property) taxes and the City of Lancaster charges residents \$6.50 per month for local sewer maintenance.

^cIn addition, the District also receives \$2.14 per month of ad valorem (property) taxes and the City of Palmdale charges residents \$8.64 per month for local sewer maintenance.

How To Protest The Proposed Rates

You may file a protest against the proposed rate increase. Pursuant to Proposition 218, **the protest must be submitted in writing and must be received by the District prior to or at the public hearing on April 14, 2011.**

Protesting the proposed rates does not negate the District's responsibility to comply with all legally adopted discharge standards. Consequently, failure to adequately fund the necessary facilities could result in the District (and, ultimately, you the ratepayer) being subject to significant fines and

penalties.

**FOR MORE INFORMATION PLEASE CONTACT THE SANITATION DISTRICT'S FINANCIAL
MANAGEMENT DEPARTMENT AT 1-888-808-1118 OR (562) 908-4871 OR AT
RATES@LACSD.ORG.**

SANITATION DISTRICTS OF LOS ANGELES COUNTY

1955 Workman Mill Road, P.O. Box 4000, Whittier, CA 90607-4000
Telephone: (888) 808-1118
or (562) 908-4871

NOTICE OF PUBLIC HEARING SANTA CLARITA VALLEY SANITATION DISTRICT OF LOS ANGELES COUNTY REGARDING A PROPOSED SEWER SERVICE CHARGE RATE INCREASE TO THE OWNER OF RECORD OF

Assessor's Parcel No. 1234567890
12345 CALYPSO LN, SANTA CLARITA, CA 91351

You are receiving this official notice because the sewage generated on your property is discharged to the local sewer system for treatment and disposal by the Santa Clarita Valley Sanitation District. The District is responsible for properly treating and managing the wastewater generated in most of the City of Santa Clarita and some of the adjacent unincorporated county area. Your wastewater is first collected in the local sewer in front of your property and then transported by large regional trunk sewers to one of two regional treatment facilities, either the Saugus or Valencia Water Reclamation Plant (WRP). These two facilities treat approximately 20 million gallons of wastewater each day. The cost of operating the regional system is proportioned to each property owner based on the amount and strength of wastewater discharged from that parcel. The District works closely with members of your community and the surrounding area to ensure that all of your wastewater is managed in a safe, environmentally friendly, and cost-effective manner.

Operational costs and capital projects required to maintain the existing level of service show that a service charge rate increase is needed in the District. Increasingly more restrictive options for the management of biosolids (the solid matter removed from the wastewater) have caused operational costs to grow at a pace faster than that of normal inflation. Upgrades to the existing power distribution system are needed to replace outdated equipment and to help insure operational reliability at the WRPs. Likewise, improvements are being made to the existing pumping plant to provide facilities that will minimize the chances of a spill from the sewer system. Lastly, in accordance with the direction of the District's Board of Directors, the District has initiated activities related to compliance with Measure S. Accordingly, the District is proposing three years of sewerage service charge rate increases solely for the continued operation and maintenance of the sewers, pumping plants, and water reclamation plants in the most cost-efficient means available.

None of this increase will fund development of facilities to control chlorides in the Santa Clara River. While District staff will continue to work with the regulators, pursuant to Board Direction, to resolve the chloride issue in the most cost-effective and reasonable manner possible, no rate increase to support chloride-related facilities will be proposed until an acceptable plan is developed.

The cost of operating and maintaining the District's facilities and repaying the internal loans must be borne by existing users of the system. All property owners pay for use of the wastewater system based on the amount and strength of wastewater discharged. The current service charge rate is \$16.58 per month (\$199.00 per year) per sewage unit (a sewage unit is equal to the average discharge from a single-family home). In order to adequately plan and budget for the District's annual financial obligations, the service charge rate will need to increase over the next three years. The recommended increase is \$1.33 per month (\$16.00 per year) per sewage unit each year for three years. As shown in the table below, even with the proposed rate increases, the service charge rate in the District will still be considerably less than what other similar wastewater agencies are currently charging. It should be noted that, in an effort to smooth rate increases in the near term to adjust to the full cost of service, the District has borrowed internally from restricted funds that were collected from new users of the sewerage system to pay for future expansions, with additional borrowing projected for next fiscal year. While this internal borrowing will allow the District meet budgetary expenditures in the near term, the borrowed funds will ultimately have to be paid back.

Service Charge Rate Comparison (For comparable communities)

Community	Service Charge	
	\$ per month	\$ per year
Santa Clarita Valley ^a	20.58	247.00
Ventura ^b	25.00	300.00
Dist. 14 (Lancaster) ^c	30.00	360.00
Dist. 20 (Palmdale) ^d	31.75	381.00
Glendale ^b	33.70	404.40
City of Los Angeles ^b	35.24	422.83
Ojai ^b	52.07	624.84
Santa Paula ^b	77.21	926.52
Fillmore ^b	82.00	984.00

^a Fiscal year 2013-14. District also receives \$5.69 per month of ad valorem taxes. The County Department of Public Works charges \$3.38 per month for local sewer maintenance.

^b Fiscal year 2010-11.

^c Fiscal year 2010-11. District also receives \$1.80 per month of ad valorem taxes. The City of Lancaster charges \$6.50 per month for local sewer maintenance.

^d Fiscal year 2010-11. District also receives \$2.14 per month of ad valorem taxes. The City of Palmdale charges \$8.64 per month for local sewer maintenance.

You are currently paying \$16.58 per month (\$199.00 per year) for the wastewater you discharge from your property. If the proposed rate increase is approved, your charges in fiscal years 2011-12, 2012-13 and 2013-14 will be \$17.92 per month (\$215.00 per year), \$19.25 per month (\$231.00 per year), and \$20.58 per month (\$247.00 per year) respectively.

The District's Board of Directors (the mayor of Santa Clarita, a second member of the Santa Clarita City Council, and the chairperson of the County Board of Supervisors) will hold a public hearing on April 14, 2011, to consider public input on the proposed sewer service charge rates. The hearing will be held at 6:00 p.m. in the Santa Clarita City Council Chambers, 23920 Valencia Boulevard, Santa Clarita. Written comments may also be submitted through the mail to the District at P.O. Box 4000, Whittier, CA 90607-4000 and must be received prior to the hearing. You may also call Districts staff at (888) 808-1118 or (562) 908-4871 with questions and comments.

Additionally, in order to provide you with more information and to answer questions you may have, information meetings will be held in the Santa Clarita City Hall on March 23 (7 pm), March 29 (1 pm and 7 pm), and April 4 (7 pm). Presentations will also be made at the Castaic Area Town Council Meeting (March 16) and the West Ranch Town Council meeting (April 6). Lastly, walking tours of the Valencia WRP will be held on March 19 (9 am and 11 am). Please see the reverse side of this notice for more details on signing up for the tour.

Proposition 218
Notice Regarding
Proposed Sewer
Service Charges

SMITH, JOHN AND MARY
12345 DEARBORN ST
NORTH HILLS, CA 91343

We know you probably have questions and we've tried to answer some general ones below. But if you have other questions or want more information, you can call us toll free at (888) 808-1118 or (562) 908-4871 between 7:30 am and 4:00 pm Monday through Friday, contact us by e-mail at RATES@lacs.org, or write to us at P.O. Box 4000, Whittier, CA 90607-4000. Please include your name, address, telephone number, and Assessor's Parcel Number (shown on the reverse side) with any correspondence to help us promptly respond.

QUESTIONS & ANSWERS

Will any portion of the proposed rate increase be used for chlorides removal and/or Ventura County facilities?

No. None of this increase will fund development of facilities to control chlorides in the Santa Clara River, nor facilities to improve groundwater in Ventura County. No rate increases to support chloride-related facilities will be proposed until an acceptable plan is developed.

How can I obtain more information?

In addition to directly contacting us, you can visit our Internet web site (www.lacs.org), which contains general information about the Sanitation Districts, specific information about the service charge program, and information about the issues impacting the Santa Clarita Valley Sanitation District's revenue programs. Also, information meetings will be held on March 23, 2011 (7 pm), March 29 (1 and 7 pm), and April 4 (7 pm) in the Santa Clarita City Hall. Information will also be presented at the Castaic Area Town Council meeting on March 16 and at the West Ranch Town Council meeting on April 6. In addition, walking tours of the Valencia Water Reclamation Plant (VWRP) will be given on March 19 at 9 am and 11 am. Due to safety considerations each tour will be limited to 30 people, so you must make a reservation prior to attending. Please RSVP for a tour by phone at (562) 908-4288 extension 2300 or by e-mail at nmadigan@lacs.org. If more people than can be accommodated sign up, additional tours will be scheduled. Tours will start at the VWRP at 28185 The Old Road, Valencia, CA 91355. For non-tour related questions, please call (888) 808-1118 or (562) 908-4871.

What is a service charge? How is it calculated?

The cost of operating, maintaining, and upgrading the sewerage system is distributed proportionately among all users of the system based on their wastewater discharge. The resulting charge, after taking all other sources of revenue into consideration, is called the service charge. Although the service charge is a fee for services rendered and not a tax, it is collected annually on the property tax bill as the simplest and most cost effective means of collection. The wastewater discharge for a given parcel is estimated based on the type and size of the structures located on the parcel. For residential properties, use is based on the number of dwelling units (e.g., single-family home, apartments, etc.). For commercial parcels, use is primarily based on square footage although other measures may be used in limited cases (e.g., rooms in hotels). Information on the type and size of your property is obtained from the County Assessor's Office, and the service charge is calculated based on established rates for that type of property.

I use a septic system. Do I need to pay this charge?

No. Parcels that use a septic system are exempt from the District's service charges. If you are on a septic system and you received this notice, please send the District a completed Claim for Service Charge Refund and proof that your property is on a septic system to the District at P.O. Box 4000, Whittier, CA 90607-4000. The claim form is available on our web site (www.lacs.org) or you can call us and we'll mail you a copy. Once we receive your completed form, we'll do the rest to make sure you don't get charged in the future and to refund any charges you've paid in the past.

My water use is low. Can my service charge be reduced?

Single-family homes that have a substantially lower water consumption rate than an average single-family home may be eligible for a reduced charge. If your water usage is less than or equal to 123 hcf (hundred cubic feet) per year (252 gallons per day), you may qualify. If you believe you qualify, please send a completed Claim Form, Water Consumption Form for Rebate, and copies of your water bills showing your water consumption in the last completed fiscal year (July 1st through June 30th period) to the address above. We will review and notify you of your qualification. Once you qualify, the reduced rate will stay in effect until you sell your property. You may download these forms from the Districts' Internet web site (www.lacs.org) or you may contact the District and we will mail you a copy.

Do existing users of the system subsidize new users?

No. New users, as well as users who significantly increase their use of the system, pay a one time fee called the connection fee. These monies are used to pay for the expansion of facilities needed to treat the new wastewater. Once they are connected to the sewerage system, the new users will begin to pay the annual service charge.

What have you done to control the costs that impact the service charge?

The District continues to strive for cost-efficient operation and maintenance of the sewerage system. Through a joint agreement with the other sanitation districts in Los Angeles County that provides a single administrative and management staff, the District only pays a fraction of the administrative costs it would otherwise encounter with a staff dedicated exclusively to the District affairs. When cash flow projections indicate a financial need for large project development and funding, the District will continue to pursue low-interest loans from the State and/or sell bonds in order to spread the project cost over a greater number of years.

¿Acerca de qué es este aviso?

El Distrito Sanitario Santa Clarita Valley del Condado de Los Angeles propone aumentar la tasa de Cargo al Servicio de alcantarillado y tratamiento de aguas residuales. Este aviso discute las razones y la cantidad del aumento propuesto. Además, se le notifica que se conducirán Audiencias Pública el 14 de Abril del 2011 a la 6:00 pm en la Cámara de Consejo de la Ciudad de Santa Clarita, que se encuentra localizada en la siguiente dirección 23920 Valencia Boulevard, para considerar los aumentos que se proponen. Si usted recibió este aviso, los aumentos propuestos de Cargo de Servicio son aplicables a su propiedad. ¡Favor de notar que ESTO NO ES UN COBRO! ¡No mande dinero!

- When can the Los Angeles Regional Water Quality Control Board impose fines?

What is a Sanitation District?

A Sanitation District is a special district charged with the responsibility of collecting, treating, and disposing of wastewater (sewage) and industrial waste. It is a public agency, separate from county or city government, established under the State Health and Safety Code to provide sewerage service to a specific geographic area.

What services does the Sanitation District provide?

The sewage generated on your property is collected in local sewers. These local collector sewers then discharge the sewage into trunk sewers owned by the Sanitation District, which in turn convey it to wastewater treatment facilities. At the wastewater treatment facilities, owned and operated by the Sanitation District, the sewage is treated to a level by which the water can be discharged to receiving waters, i.e. the Santa Clara River.

SANTA CLARITA VALLEY SANITATION DISTRICT PROPOSED SEWER SERVICE CHARGE RATE INCREASE

What is a service charge? How is it calculated?

The cost of operating, maintaining, and upgrading the sewerage system is distributed proportionately among all users of the system based on their wastewater discharge. The resulting charge, after taking all other sources of revenue into consideration, is called the service charge. Although the service charge is a fee for services rendered and not a tax, it is collected annually on the property tax bill as the simplest and most cost effective means of collection. The wastewater discharge for a given parcel is estimated based on the type and size of the structures located on the parcel. For residential properties, use is based on the number of dwelling units (e.g., single-family home, apartments, etc.). For commercial parcels, use is primarily based on square footage although other measures may be used in limited cases (e.g., rooms in hotels). Information on the type and size of your property is obtained from the County Assessor's Office, and the service charge is calculated based on established rates for that type of property.

My water use is low. Can my service charge be reduced?

The District offers a rebate program on the sewer service charge for parcels that have low water usage. Details of this program, including claim forms, are available by clicking [here](#).

I use a septic system. Do I need to pay a service charge?

No. Parcels that use a septic system are exempt from the District's service charges. If you are on a septic system and you received this notice, please send the District a completed *Claim for Service Charge Refund* and proof that your property is on septic system. Once we receive your completed form, we'll do the rest to make sure you don't get charged in the future and to refund any charges you've paid in the past.

Do existing users of the system subsidize new users?

No. New users, as well as users who significantly increase their use of the system, pay a one time fee called the connection fee. These monies are used to pay for the expansion of facilities needed to treat the new wastewater. Once they are connected to the sewerage system, the new users will begin to pay the annual service charge.

What have you done to control the costs that impact the service charge?

The District continues to strive for cost-efficient operation and maintenance of the sewerage system. Through a joint agreement with the other sanitation districts in Los Angeles County that provides a single administrative and management staff, the District only pays a fraction of the administrative costs it would otherwise encounter with a staff dedicated exclusively to the District affairs. When cash flow projections indicate a financial need for large project development and funding, the District will continue to pursue low-interest loans from the State and/or sell bonds in order to spread the project cost over a greater number of years. The Sanitation District also has aggressively pursued outside sources of federal and state funding for such projects to minimize the financial impact to ratepayers.

SANTA CLARITA VALLEY SANITATION DISTRICT PROPOSED SEWER SERVICE CHARGE RATE INCREASE

What is the Proposition 218 process?

Implementation of rates under Prop. 218 is a multi-step process involving individual noticing, a public hearing, and then introduction and adoption of the implementing ordinances. See question M-4 of the document *Response to Questions Raised at the May 25, 2010 City of Santa Clarita Council Meeting* for detailed information on the process.

What will the proposed Service Charge Increase pay for?

Approximately half of the proposed increase is for the continued operation of the existing treatment facilities. The other half is for planning and design efforts related to the facilities that are needed to comply with state-mandated chloride limits.

Is outside funding available to reduce the cost to the community?

In response to the Sanitation District Board's direction in 2009 and in order to minimize the impact of implementing the Alternative Compliance Plan to the ratepayers, the Sanitation District has aggressively pursued outside sources of federal and state funding. Over the long-term, the Sanitation District estimates that up to \$10,000,000 in state and federal funds would be available for implementation of the Alternative Compliance Plan by 2020. See question W-11 of the document *Response to Questions Raised at the May 25, 2010 City of Santa Clarita Council Meeting* for more detailed information on the status of the Sanitation District's efforts to procure state and federal funding.

How can we protest the proposed rate increase?

In accordance with Proposition 218, residents can submit written protests to the proposed service charge rate increase. Information is provided on the Prop. 218 notice that has been sent to every property owner within the Sanitation District service area. Under the provisions of Prop. 218, the Sanitation District Board of Directors can take no action on the proposed rates if written protests are submitted by more than 50% of the owners of the impacted parcels.

If sufficient protests are not submitted, then the Sanitation District Board of Directors, at a public hearing, will consider the proposal along with all of the public input.

What is the cost to businesses?

All users within the Sanitation District's service area pay a proportional share of the cost for treatment of the wastewater based on the quantity and quality of their contribution relative to a single family home. New businesses connecting to the sewer system are required to pay a connection fee based on the type and size (square footage) of the business. For a new 1,000 square foot restaurant, the current connection fee would be \$26,182 and the service charge would be \$1,763 per year, under the new proposed rates, the connection fee would be \$37,895 and the service charge would be \$2,623 per year in FY 13-14, at the end of the proposed four-year rate increase period.

SANTA CLARITA VALLEY SANITATION DISTRICT PROPOSED SEWER SERVICE CHARGE RATE INCREASE

Are any public agencies exempt from the connections fees and service charge?

Local government owned parcels that are located within the District, used solely for governmental as opposed to proprietary functions, and not subject to wastewater treatment surcharges pursuant to the wastewater ordinance are exempt from paying service charges and connection fees. Public schools, governmental administration buildings (e.g. City Hall), local parks and community centers are typically considered to be local government parcels and are exempt.

Government owned parcels that are used for a proprietary interest (i.e. rental properties or redeveloped commercial lots) or for the benefit of a specific group or single class of people, are not exempt. Hospitals – even publicly operated - are not exempt. Hospitals pay for sewer service through the District's surcharge program based on number of beds and/or size of facility.

Why do we need to remove chloride from the Santa Clara River?

In 1978, the Los Angeles Regional Water Quality Control Board (RWQCB) established a 100 milligram per liter (mg/L) standard for chloride for the Santa Clara River to protect the agricultural supply use and to reflect the background water quality conditions at that time. Subsequently, in 1989, discharge permits were adopted for the Saugus and Valencia Water Reclamation Plants that included discharge limits for chloride at 100 mg/L, which were unattainable with the existing treatment system. In 2002, because the Santa Clara River was not attaining water quality standards, the RWQCB, as required by the Clean Water Act, adopted a Total Maximum Daily Load prescribing a compliance schedule for the Saugus and Valencia Water Reclamation Plants to achieve a 100 mg/L discharge limit.

Who is the Los Angeles Regional Water Quality Control Board?

The Los Angeles Regional Water Quality Control Board (RWQCB), one of nine RWQCB's within the state, implements the requirements of the Clean Water Act and state law for our local waters. They do this through issuing discharge permits and implementing Total Maximum Daily Loads for impaired water bodies. Additional information on the RWQCB is available online at <http://www.waterboards.ca.gov/losangeles>.

How can the Los Angeles Regional Water Quality Control Board require us to remove chloride?

The Santa Clara River was listed as impaired for chloride, so the Los Angeles Regional Water Quality Control Board, in 2002, adopted a Total Maximum Daily Load prescribing a compliance schedule to achieve 100 mg/L in the river and treatment plant discharges. For more details, see response to question W-1 of the document *Response to Questions Raised at the May 25, 2010 City of Santa Clarita Council Meeting*.

What is the State standard for chloride for the Santa Clara River?

The original water quality objective (standard) for chloride in the Santa Clara River is 100 milligrams per liter (mg/L). In December 2008, the Los Angeles Regional Water Quality Control Board (RWQCB) was willing to conditionally revise the chloride limits, contingent upon the Alternative Compliance Plan project being undertaken. The conditional revised standards are 150 mg/L at the treatment plant discharges and 117 mg/L at the Los Angeles / Ventura County line.

SANTA CLARITA VALLEY SANITATION DISTRICT PROPOSED SEWER SERVICE CHARGE RATE INCREASE

The RWQCB also granted conditional drought relief in the form of a more relaxed standard of 130 mg/L at the Los Angeles / Ventura County line during periods of critically dry weather. These relaxed limits would provide regulatory relief to reduce the cost of compliance from over \$500 million (for large scale advanced treatment to meet original standards) to \$250 million (for the Alternative Compliance Plan facilities to meet relaxed standards).

The Sanitation District is seeking additional relief to raise the 130 mg/L river limit during drought to 150 mg/L, which would further reduce the cost of complying with the State standards to \$209 million.

What is the scientific basis for the chloride Standard?

The Agricultural Chloride Threshold Study identified a conservative protective range of 100 – 117 milligrams per liter (mg/L) of chloride. This protective range was affirmed by an independent Technical Advisor Panel comprised experts in the field, indicating the 117 mg/L number came from a study characterized as the "most rigorous effort in developing irrigation water guidelines in crops." These experts also found that water quality that does not impact avocados is not likely to impact strawberry or nursery crops.

Where can I get more information on the studies supporting the chloride Standard?

Additional information on the chloride Total Maximum Daily Load and reports from the special studies conducted as part of the chloride Total Maximum Daily Load are available on the project website, www.santaclarariver.org.

What are the sources of chloride in the treatment plant discharges?

The water supply that comes from local groundwater and imported water stored in Castaic Lake has chloride levels currently near 80 milligrams per liter (mg/L). Residents who consume this water for indoor uses (toilets, showers, dishwashing, cooking, washing clothes, remaining automatic water softeners, etc.) and discharge to the sewer add about 28 mg/L of chloride, or 22% of the total chloride in treatment plant discharges. Commercial and Industrial sectors who consume this water and then discharge to the sewer add 10 mg/l of chloride. When wastewater is treated, it must be adequately disinfected with chlorine before discharge to the river, which adds another 12 mg/L to the treatment plant discharges.

<u>Sector</u>	<u>Chloride Contribution</u>	<u>% Contribution</u>
Water Supply (groundwater and imported surface water)	80 mg/L	61%
Residential	28 mg/L	22%
Treatment Plant (Disinfection)	12 mg/L	9%
Commercial & Industrial	10 mg/L	8%
Total	130 mg/L	100%

In total the municipal use of water (i.e., the residential, commercial, industrial, and treatment plant disinfection contribution) adds 50 mg/L of chloride to the chloride already in the water supply. On a per sewage unit (equal to the discharge from a single family home) basis, Residential and

SANTA CLARITA VALLEY SANITATION DISTRICT PROPOSED SEWER SERVICE CHARGE RATE INCREASE

Commercial and Industrial users contribute approximately the same amount of chloride to wastewater. All users within the Sanitation District's service area pay a proportional share of the cost for treatment of the wastewater based on the quantity and quality of their contribution relative to a single family home.

What are the chloride levels in the imported water?

Chloride levels in water coming from the State Water Project vary depending on hydrological conditions in Northern California and have historically fluctuated from 50 milligrams per liter (mg/L) to over 100 mg/L, and during extreme drought have gone over 140 mg/L. Castaic Lake Water Agency provides treatment of the state water, adding a small amount of chloride (about 2-3 mg/L), before it is delivered to local water purveyors (users).

While chloride levels in the imported water brought into the Santa Clarita Valley do contribute to the salinity problems, imported water would actually meet the chloride standards for discharge to the river except in periods of severe drought. Approximately 40% of the chloride in treatment plant discharges is added by the Santa Clarita Valley community through municipal uses. The ratepayers of the Santa Clarita Valley have taken great steps to reduce their chloride burden by removing automatic water softeners. Further reductions through source control are likely not practical and therefore additional treatment to remove the chloride added by municipal uses is necessary. Under federal law, the Santa Clarita Valley ratepayers must pay to reduce a portion of the chloride in treatment plant discharges originating from their use of the water.

What are other communities along the Santa Clara River doing?

See question W-5 of the document *Response to Questions Raised at the May 25, 2010 City of Santa Clarita Council Meeting*.

What is the Alternative Compliance Plan?

The Alternative Compliance Plan is a greener, watershed-based alternative approach to reduce chloride levels in the Santa Clara River and underlying groundwater basins, as compared to large scale advanced treatment facilities needed to comply with the original standard. The major elements of the Alternative Compliance Plan include: (1) self-regenerating water softener removals, (2) a small-scale advanced treatment plant to remove salt at the Valencia Water Reclamation Plant, (3) regulatory relief to expand water recycling, (4) salt management facilities to mitigate and protect groundwater resources from salt build-up, and (5) consideration of other facility upgrades or mitigation measures, as necessary, to reduce chloride levels in the river. For additional information, see the document *Background Information on Need for Service Charge Rate Increase* and question S-9 of the document *Response to Questions Raised at the May 25, 2010 City of Santa Clarita Council Meeting*.

Didn't removing Automatic Water Softeners through Measure S solve the problem?

The impact of self-regenerating water softeners was evaluated and it was determined that approximately one third of the overall chloride loading in the treated wastewater could be eliminated through the removal of these units, reducing rate increases tied to wastewater.

SANTA CLARITA VALLEY SANITATION DISTRICT PROPOSED SEWER SERVICE CHARGE RATE INCREASE

treatment. Santa Clarita Valley residents who have removed their Automatic Water Softeners and passed Measure S (the 2008 ballot initiative requiring the removal of all Automatic Water Softeners in the community) must be commended for their role in keeping service charge rates as low as possible, saving over \$70 million in project facility costs. Although the Automatic Water Softener ban made major strides in lowering chloride levels in the treatment plant discharge, it was not sufficient to bring the plants into full compliance. Full compliance, without the need for advanced treatment, would have required significantly higher chloride limits during drought conditions, which the Sanitation District fought so hard to get, but that the Los Angeles Regional Water Quality Control Board was not willing to grant.

Won't the new Delta water conveyance project solve the problem?

With respect to fixing the State Water Project's delta conveyance facilities, the Sanitation District has no jurisdiction over the State Water Project. There is no guarantee as to the timing of the long-proposed peripheral canal to allow the Sanitation District to comply with the chloride discharge limits and the chloride Total Maximum Daily Load schedule of 2015. Unless there is a guarantee that the long-awaited fix to the State Water Project would be built in a similar timeframe and would result in compliance, it is difficult to see how the Los Angeles Regional Water Quality Control Board (RWQCB) would accept it as a compliance alternative. As such, the mere prospect that it may be built does not preclude the need for the Sanitation District to comply with the RWQCB's requirements by May 2015.

Can we try to recycle more of the water?

Recycling of all the treatment plant effluent produced by the Sanitation District would leave the river substantially drier and adversely affect the environmental and social value of the river to the community, and would likely not be permitted by the Los Angeles Regional Water Quality Control Board, State Water Resources Control Board, the California Department of Fish & Game, or the U.S. Fish & Wildlife Service due to the threatened & endangered species that may occur in the river or in the adjacent riparian habitat.

Further, recycling 100% of the treatment plants' effluent is not a viable option because there is not enough demand for recycled water all of the time, particularly during cold and rainy winter weather, resulting in the need to still discharge significant amounts of water to river and meet the standard. In fact, Castaic Lake Water Agency's regional recycled water master plan identifies demand for only approximately 50% of the recycled water to be produced by the Sanitation District, with the distribution system planned to be built over the next 20 years. Currently only 2% of the available treatment plant discharges are recycled.

Why can't we clean the source water before it goes to residents?

Treating the water supply was thought to be a more expensive option because only a fraction of the imported water is used for indoor residential, industrial and commercial use which ends up in the local sewer system, the larger portion of the potable water supply is used for outdoor irrigation, which does not reach to the sewer system. See response to Speaker 11 of the document *Response to Questions from June 2, 2010 Board Hearing*.

SANTA CLARITA VALLEY SANITATION DISTRICT PROPOSED SEWER SERVICE CHARGE RATE INCREASE

When can the Los Angeles Regional Water Quality Control Board impose fines?

The Los Angeles Regional Water Quality Control Board is authorized to take enforcement action against the Sanitation District if and when the Sanitation District is in violation of its permit requirements. The current compliance schedule requires completion of the Alternative Compliance Plan project by 2015. The permit also requires that the District undertake interim activities, including planning and design, commencing in November 2010.

October 14, 2010

Mr. Samuel Unger, PE
Executive Officer
California Regional Water Quality Control Board
Los Angeles Region
320 W. 4th Street, Suite 200
Los Angeles, CA 90013

Dear Mr. Unger:

Upper Santa Clara River Chloride TMDL Implementation

The Santa Clarita Valley Sanitation District (SCVSD) is in receipt of your letter dated September 29, 2010 requesting an update on SCVSD's implementation of the Upper Santa Clara River Chloride TMDL, and also requesting effluent, receiving water, and groundwater chloride data for the past 12 months.

With regard to the status of several of the specific tasks for which you requested an update, as you are aware, ratepayers in the SCVSD have expressed very strong concerns at many public meetings about the justification for, and the cost of, the chloride TMDL compliance programs proposed by SCVSD staff. In light of the very strong public opposition and the current deep economic recession, the Board of Directors of the SCVSD declined to approve the large service charge rate increases that were proposed by District staff to implement the compliance programs in May, 2009 and again in July, 2010, pending further analysis of an alternative, more cost-effective means of compliance.

We have made significant progress on an internal evaluation of alternative project components and will soon be ready to brief the SCVSD Board of Directors, and to begin working with your office and stakeholders to develop a solution that will allow us to move forward to compliance.

The current status of each specified TMDL implementation task identified in your letter is shown on Attachment 1.

Mr. Samuel Unger, PE

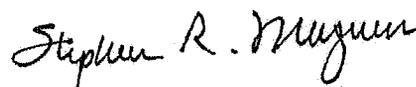

-2-

October 14, 2010

The requested effluent, receiving water and groundwater chloride data for the past 12 months, with an accompanying analysis, are enclosed as Attachment 2.

I hope this satisfactorily addresses your request for an update on Upper Santa Clarita River Chloride TMDL implementation status. Please contact me directly or have staff contact Phil Friess at 562-908-4288, extension 2501 or at pfriess@lacsdsd.org if you have any questions.

Very truly yours,

Stephen R. Maguin

ATTACHMENT 2
 Upper Santa Clara River Surface Water and Groundwater Chloride Analysis
 2009 – 2010

The Regional Water Quality Control Board – Los Angeles Region has requested a compilation and analysis of the past 12 months of chloride in effluent, receiving water, and groundwater data.

Effluent Chloride

The Sanitation District reports monthly chloride levels for the Saugus and Valencia Water Reclamation Plant (WRP) final effluent. A significant portion of the chloride in the WRP final effluent is attributable to chloride levels in the local water supply, which is approximately 55% imported State Water Project (SWP) water and 45% local groundwater. Chloride data for the SWP water is provided by Castaic Lake Water Agency and chloride data for local groundwater is provided by Valencia Water Company, Newhall County Water District, and Santa Clarita Water Division. The Sanitation District estimates a combined chloride level for the blended local water supply based on this information. The following Table 1 and Figure 1 present the WRP final effluent chloride and estimated local water supply chloride levels for the years 2009 and 2010.

Table 1
SCV Water Supply and WRP Chloride levels 2009-2010

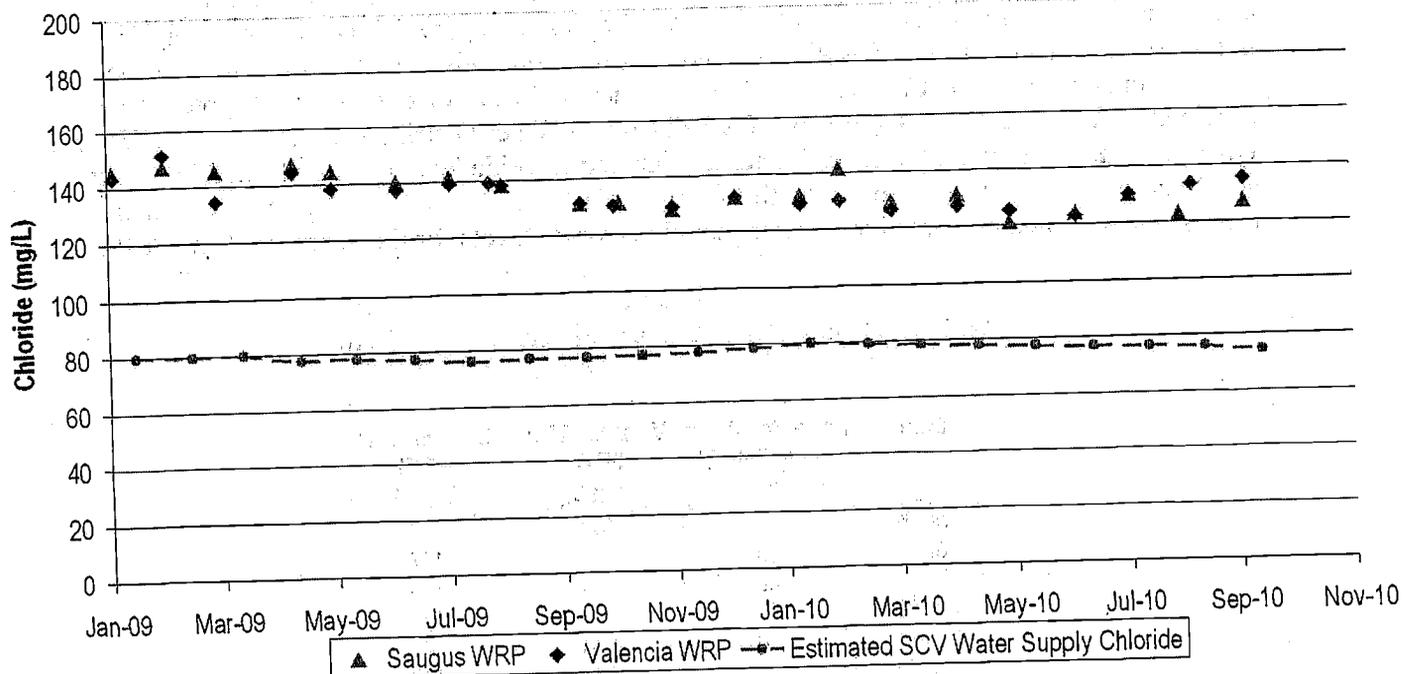

Date	Estimated Water Supply Chloride (mg/L)	Valencia WRP FE Cl (mg/L)	Saugus WRP FE Cl (mg/L)
Jan-09	79	143	145
Feb-09	79	151	147
Mar-09	80	134	145
Apr-09	77	144	147
May-09	78	138	144
Jun-09	77	137	140
Jul-09	76	139	141
Aug-09	76	138	138
Sep-09	76	131	131
Oct-09	77	130	131
Nov-09	78	129	128
Dec-09	78	132	132
Jan-10	80	129	132
Feb-10	79	130	141
Mar-10	79	126	129
Apr-10	78	127	131
May-10	77	125	121
Jun-10	77	123	124
Jul-10	76	130	130
Aug-10	76	133	123
Sep-10	74	135	127

Chloride levels in the Saugus and Valencia WRP final effluent have decreased from an average of 139 mg/L at the Saugus WRP and 137 at the Valencia WRP mg/L in 2009 down to an average of 129 mg/L at both the Saugus and Valencia WRPs in 2010. During the same period, the estimated water supply chloride remained relatively constant, from an annual average of 78 mg/L in 2009 to an average of 77 mg/L in 2010. Therefore, the Sanitation District believes the main reason for this decrease in final effluent chloride from 2009 to 2010 is the removal of Automatic Water Softeners from the community pursuant to the 2008 Santa Clarita Valley Chloride

ATTACHMENT 2
 Upper Santa Clara River Surface Water and Groundwater Chloride Analysis
 2009 – 2010

Reduction Ordinance, which was approved by voters in the Santa Clarita Valley in 2008 and became effective January 1, 2009.

Figure 1
Saugus and Valencia WRP Effluent and SCV Water Supply Chloride

Receiving Water Chloride

Historically, surface water monitoring was conducted at the USGS Station 11108500 Santa Clara River at L.A.-Ventura Co. Line (Blue Cut) until approximately 2003 when the gaging station was discontinued and relocated to the Las Brisas Bridge gaging station. Since approximately 2003, UWCD established a new monitoring station and conducts monthly surface water monitoring in the Santa Clara River at Newhall Crossing. The SCVSD has also conducted monthly monitoring at its receiving water monitoring station RF, located approximately ¼ mile downstream of Blue Cut (Figure 2).

Chloride levels in the Santa Clara River near the Los Angeles/Ventura County line since 2009, represented by the average of data from the Newhall Crossing and RF monitoring stations, are presented in Table 2 and Figure 3. As shown, chloride levels in surface water near the Los Angeles – Ventura County line vary seasonally, with higher chloride levels during the summer periods. Lower chloride levels observed during winter months coincide with increased rainfall and reduced evapotranspiration during the period and releases from Castaic Reservoir according to United Water Conservation District.

Figure 3
 Santa Clara River Receiving Water Chloride near LA/Ventura County Line

Groundwater Chloride

East Piru Basin

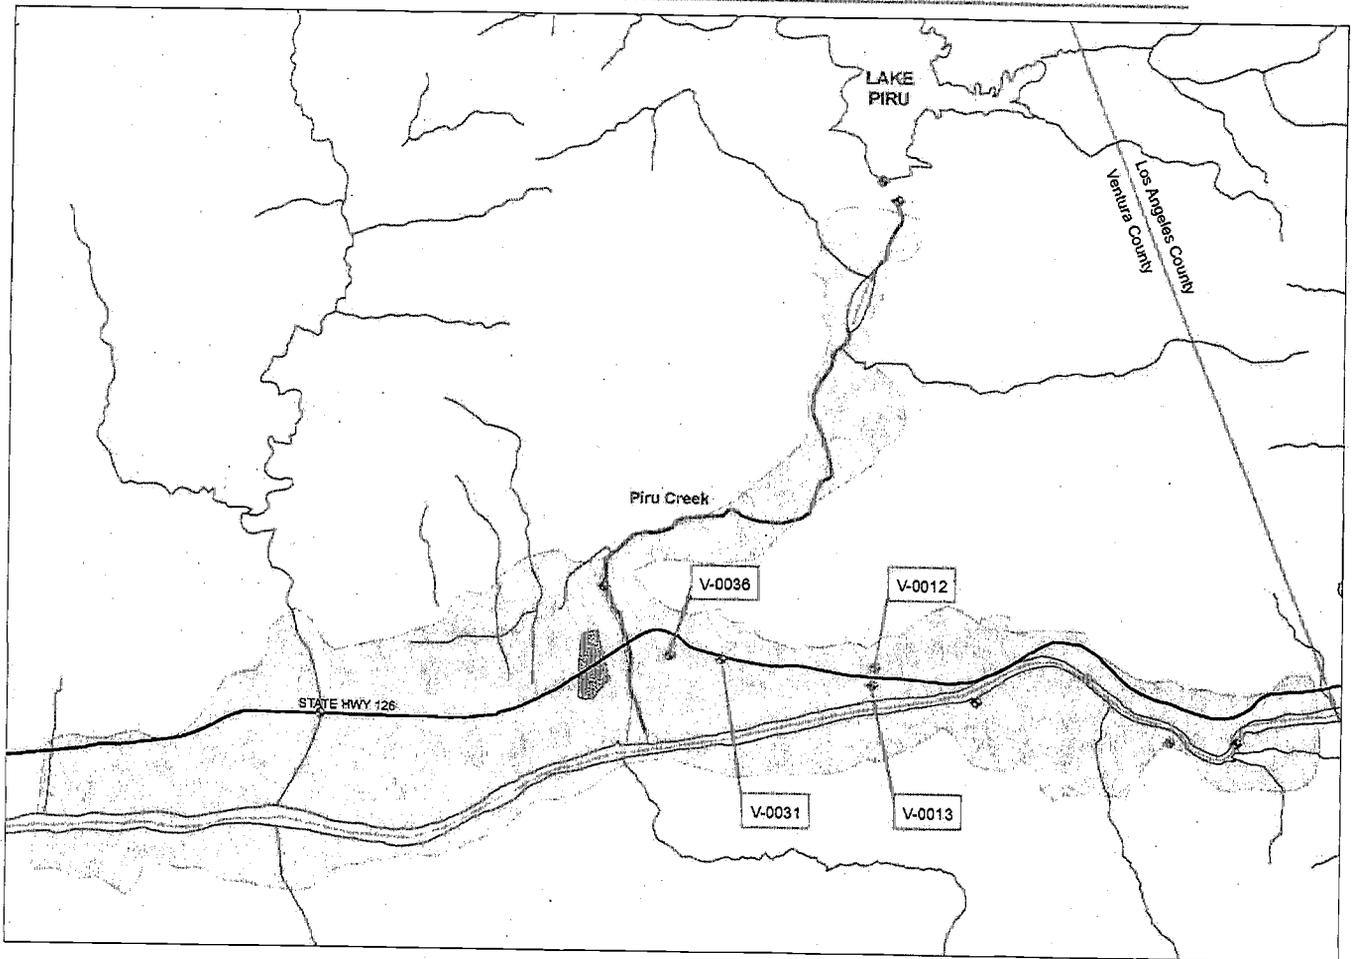

There are a limited number of groundwater supply wells, used primarily for agricultural supply, located in the eastern portion of the Piru Subbasin along Reach 4B of the SCR. These wells extract groundwater from the San Pedro Formation and from the younger river alluvium of the eastern portion of the Piru Subbasin (Figure 4). Groundwater quality data is currently collected on a semi-annual basis by the UWCD under agreement with the well owner and shown on Table 3 and Figure 5. Although data was requested for only the previous 12 months, data over a longer period of time is provided due to the limited monitoring data available from UWCD. As shown in the figure, chloride levels vary between wells, with some wells decreasing slightly over the last 4-5 years (V-0036), while others are increasing over a similar period (V-0012). It should be noted that WRP discharge levels over that period have decreased from approximately 195 mg/L in 2004 to 129 mg/L in 2010.

The Sanitation District has proposed quarterly groundwater monitoring in the East Piru Basin in the Upper Santa Clara River Chloride TMDL Task 11 Report: Surface Water/Groundwater Sampling and Monitoring Plan, submitted to the Regional Board. The Sanitation District will

ATTACHMENT 2
Upper Santa Clara River Surface Water and Groundwater Chloride Analysis
2009 – 2010

implement the plan and begin working on the necessary access agreements with the well owners upon approval of the plan by the Regional Board.

STEPHEN R. MAGUIN
Chief Engineer and General Manager

November 4, 2010

Mr. Samuel Unger, Executive Officer
California Regional Water Quality Control Board
Los Angeles Region
320 West 4th Street, Suite 200
Los Angeles, CA 90013

Dear Mr. Unger:

Upper Santa Clara River Chloride TMDL Resolution No. R4-2008-012
Task 15 Semi-annual Status Report of Planning Activities, November 2010

The Santa Clarita Valley Sanitation District of Los Angeles County (Sanitation District) submits this report and the attached schedule pursuant to the reporting requirements of Task 15 of the Upper Santa Clara River Chloride Total Maximum Daily Load (TMDL), Board Resolution No R4-2008-012, adopted by the California Regional Water Quality Control Board, Los Angeles Region on December 11, 2008.

Task 15 of the TMDL Implementation Plan requires the Sanitation District to submit a report of planning activities and a schedule of related tasks to the Regional Board by May 4, 2010 and semi-annually thereafter until completion of the Final Facilities Plan and its Environmental Impact Report (EIR). This report satisfies the requirements of Task 15 for the November 4, 2010 semi-annual report.

With regard to the status of the specific tasks in the TMDL, the Sanitation District's ratepayers have expressed very strong concerns at many public meetings about the justification for, and the cost of, the chloride TMDL compliance programs proposed by the Sanitation District's staff. In light of the very strong public opposition and the current deep economic recession, the Board of Directors of the Sanitation District declined to approve the large service charge rate increases that were proposed by staff to implement the compliance programs in May 2009 and again in July 2010, pending further analysis of an alternative, more cost-effective means of compliance.

The Sanitation District recently conducted an initial briefing of potential alternative project components with the Regional Board and will continue with additional meetings and briefings with stakeholders, the Regional Board, and the Sanitation District's Board of Directors to develop a solution that will allow us to move forward to compliance. The Sanitation District is open to direction from the Regional Board as to the structure and schedule for this continuing process. The Sanitation District believes the circumstances described above provide justification to utilize the reopener clause under Task 16 of the current TMDL implementation plan for the Regional Board to establish a revised TMDL implementation schedule.

DOC# 1726059

Mr. Samuel Unger, Executive Officer

-2-

November 4, 2010

The current status of each of the reporting requirements is addressed individually below.

Schedule (Task 15b)

The original project schedule is shown in Attachment 1 and contains the major facilities planning and CEQA tasks and milestones. As indicated in the Task 15 Semi-annual Status Report, submitted to the Regional Board in May 2010, release of the NOP and subsequent EIR activities have been postponed as a result of the Sanitation District Board's direction to evaluate an alternative, more cost-effective means of compliance.

A revised planning schedule will be prepared upon reaching agreement on an alternate solution to the TMDL with the Regional Board and stakeholders and approval from the Sanitation District's Board of Directors.

Task 15a (i) - Lead State/ Federal Agency

The Sanitation District will serve as the state lead agency for CEQA purposes. To date, a federal nexus to trigger an environmental analysis under the National Environmental Policy Act (NEPA) has not been identified and is not expected. Thus, there is no need for a federal lead agency.

Task 15a (ii) - Procurement of Facilities Plan and EIR Consultants

On August 19, 2008, the Sanitation District released a Request for Proposals for "Services Relating to the Preparation of a Facilities Plan for the Santa Clarita Valley." The Sanitation District received two proposals on September 22, 2008. On November 12, 2008, the Sanitation District awarded a contract for preparation of the Santa Clarita Valley Sanitation District Chloride TMDL Facilities Plan to a consulting team led by MWH. Notice to Proceed was given on December 1, 2008.

In September 2008, the Sanitation District released a Request for Proposals for "Services Relating to the Preparation of Environmental Documents for the Santa Clarita Valley Sanitation District Facilities Plan." The Sanitation District received five proposals and interviewed two of the consulting firms as part of the competitive selection process. On January 14, 2009, the Sanitation District awarded a contract for preparation of the Santa Clarita Valley Chloride TMDL Environmental Impact Report to a consulting team led by Environmental Science Associates (ESA). Notice to Proceed was given on January 28, 2009.

Task 15a (iii) - Preliminary Planning and Feasibility Analyses

During the reporting period, Sanitation District staff proposed new sewer service charge rate increases necessary to implement TMDL compliance programs. Due to the very strong public opposition and the current economic recession, the Sanitation District Board declined to approve the increases pending further analysis of alternative, more cost-effective compliance options.

Nevertheless, the Sanitation District Board did authorize staff to proceed with a program to remove the remaining Automatic Water Softeners (AWS) in the Sanitation District's service area. The Sanitation District's AWS Rebate Program has been very successful in reducing chloride levels coming into the Valencia and Saugus Water Reclamation Plants. As of July 2010, approximately 7,000 AWS have been removed from the Sanitation District's service area.

Mr. Samuel Unger, Executive Officer

-3-

November 4, 2010

resulting in a cost-effective and significant reduction in the amount of chloride discharged from the treatment plants to the Santa Clara River, a decrease of approximately 50 mg/L. The Sanitation District estimates there are approximately 400-500 AWS remaining in operation in the Sanitation District's service area. The Sanitation District will continue the program to remove the remaining AWS, which includes continued sampling, ongoing public outreach, rebates, household inspections and enforcement, as a cost-effective means of compliance with the chloride TMDL.

The Sanitation District continues to evaluate additional chloride TMDL compliance project alternatives, including conversion from chlorination to ultraviolet light (UV) disinfection and revised water supply management strategies. As previously noted, the Sanitation District staff will next initiate meetings and briefings with stakeholders, the Regional Board, and the Sanitation District Board of Directors to develop agreement on a new TMDL compliance program.

Task 15a (iv) - CEQA Notice of Preparation (NOP)

As noted above, the CEQA process begins with release of a NOP. The original schedule called for the NOP to be released on August 3, 2009. However, release of the NOP has been postponed as a result of the Sanitation District Board's direction to evaluate alternative, more cost-effective means of compliance.

Task 15a (v) - Draft Facilities Plan and EIR

As noted above, the formal CEQA effort has not begun due to the postponement of the NOP.

Task 15a (vi) - Public Review and Comment Periods

The public review and comment period will begin once the draft Facilities Plan and EIR are released and will run for at least 45 calendar days. As noted in the schedule discussion, a revised date for the release is not available at this time.

Task 15a (vii) - Final Facilities Plan and EIR

The Sanitation District will respond to comments from the public comment period and prepare the Final Facilities Plan and EIR after the public comment period closes.

Task 15a (viii) - EIR Certification

The Sanitation District will prepare CEQA findings, a mitigation monitoring and reporting program, and, potentially, a statement of overriding consideration after completion of the Final Facilities Plan and EIR. The entire package will be sent to the Sanitation District Board for approval of the Facilities Plan and its recommended project and certification of the Final EIR.

Task 15a (ix) - Notice of Determination

Upon certification of the Final EIR, the Sanitation District will file a Notice of Determination with the County Clerk and State Clearinghouse.

Mr. Samuel Unger, Executive Officer

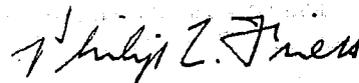

-4-

November 4, 2010

In summary, the Sanitation District is making a good faith effort to advance the project and meet compliance deadlines while carrying out the direction of the Sanitation District's Board to work further with the Regional Board to reduce project costs.

If you have any questions regarding this report, please contact me at (562) 908-4288, extension 2501 or at pfriess@lacsds.org.

Very truly yours,
Stephen R. Maguin

SECTION 1 INTRODUCTON AND BACKGROUND

The County Sanitation Districts of Los Angeles County (CSDLAC) provide sewerage services to the Santa Clarita Valley, which is located in the northwest portion of Los Angeles County, California. CSDLAC owns and operates a regional wastewater collection, treatment and disposal system referred to as the Santa Clarita Valley Joint Sewerage System (SCVJSS). The SCVJSS service area consists of the City of Santa Clarita and a portion of unincorporated Los Angeles County. The SCVJSS is made up of an interconnected network of more than thirty miles of trunk sewers, one pumping plant, and two interconnected water reclamation plants (WRPs)¹, the Saugus WRP and the Valencia WRP. Present design capacity is 6.5 MGD for Saugus and 12.6 MGD for Valencia. The Valencia WRP is presently undergoing expansion to 21.6 MGD and upgrade for nitrogen removal (nitrification/denitrification - NdN) using the modified Ludzack Ettinger (MLE) process in completion of Stage 5 of the facility master plan. Stage 6, anticipated for completion in 2015 will expand the WRP design capacity to 27.6 MGD and will result in build-out of the facility to the property boundaries. The Saugus WRP site is severely constrained on four acres with no plans for future expansion. Process schematics for the two facilities are provided in Figure 1-1 and Figure 1-2. Both WRPs consist of comminutors, pumping, grit chambers, primary sedimentation, flow equalization, activated sludge aeration, secondary sedimentation, dual-media pressure filtration, and chlorine disinfection with discharge of the final effluent to the Santa Clara River. All sludges generated are anaerobically digested and dewatered at the Valencia WRP.

The Santa Clara River (SCR) is the largest of two remaining river systems in Southern California remaining in relatively natural states. Beginning in the San Gabriel Mountains east of Santa Clarita, the SCR flows approximately 84 miles westward to the Pacific Ocean at the City of Ventura. In the Upper SCR (LA County Portion of the SCR), water flow in the stream canyons is considered to be ephemeral and diminishes rapidly after most rainfall events. The river's surface flow typically occurs during the rainy season or snowmelt season; however, portions of the river have surface flow year round. Natural "rising water," reclaimed water from the Saugus and Valencia WRPs, agricultural runoff, and other miscellaneous flows contribute to this year round flow. Without effluent from the Saugus and Valencia WRPs, the river would likely be ephemeral (that is, normally dry) in portions of the urban reach flowing through Santa Clarita and the downstream agricultural reach. Typically the river is dry (except during heavy rainfall events) upstream of the Saugus WRP outfall, located near the Bouquet Canyon Bridge.

Site locations of the Valencia and Saugus WRPs relative to the Santa Clara River are provided in Figure 1-3. Reach 3 in Ventura County and Reaches 7 and 8 in Los Angeles

¹ The two plants are interconnected by interceptors that allow a portion of the raw wastewater generated in the Saugus WRP service area to be conveyed for subsequent treatment at the Valencia WRP. In addition, wastewater solids generated at the Saugus WRP are conveyed by trunk sewer or a waste activated sludge force main to the Valencia WRP for treatment.

County were identified as impaired due to chloride and placed on the 1998 303(d) List by the Los Angeles Regional Water Quality Control Board (Regional Board). All three reaches were listed for chloride and given a medium priority ranking for the development of chloride waste load allocations (WLAs).² The Regional Board has released final WLAs for the Santa Clarita WRPs, which are 100 mg/L as an instantaneous maximum for both the Saugus and Valencia WRPs, to protect downstream agricultural beneficial uses. Water from the Santa Clara River recharges the Piru, Fillmore, and Santa Paula Basins and growers in the Santa Clara River watershed primarily utilize the groundwater for irrigation of salt sensitive crops such as avocados and strawberries. Two farmers, located just west of the LA/Ventura County Line, are known to divert surface water for irrigation purposes.

The Valencia and Saugus WRPs do not have the ability to consistently meet the proposed total maximum daily load (TMDL) chloride WLA as an end-of-pipe limit without the addition of demineralization facilities. Wastewater treatment processes are not designed for the removal of dissolved salts and the chloride levels in the WRP treated effluents can change significantly over both short and long term periods of time due to variability in the WRP influent concentration levels. Short-term influent chloride concentration variability is believed due to the extensive residential use of water softeners that results in as much as a five-fold increase in average influent chloride levels during early morning hours when these systems automatically regenerate. Long-term variability is dependent upon weather patterns with drought conditions resulting in higher chloride levels due to reliance upon imported water supplies. These sources of long-term and short-term variation lie outside of CSDLAC's jurisdiction, resulting in the need for demineralization facilities in order to reliably control the chloride concentration (i.e. comply with the proposed 100 mg/L WLA) in the Valencia and Saugus WRP effluent discharge to the Santa Clara River.

² On December 7, 2000, the Regional Board approved a revision to the chloride water quality objective for Reach 3. The objective was revised from 80 to 100 mg/L and Reach 3 was found to no longer be impaired to the 100 mg/L chloride objective. Consequently Reach 3 was removed from the 303(d) list.

SECTION 2 SAUGUS AND VALENCIA CHLORIDE LEVELS AND FLOWS

The demineralization capacity needed to achieve the anticipated TMDL waste load allocations (WLA) will be a function of the wastewater plant effluent flow rate and the chloride reduction requirement. This section presents existing and projected WRP chloride levels and existing and projected flow data for the Valencia and Saugus WRPs. The chloride and flow data are evaluated and worst-case chloride and flow conditions are identified. These worst-case conditions will form the basis for the sizing of demineralization facilities required at each plant to ensure compliance to the chloride WLA.

CHLORIDE LEVELS

An anticipated chloride TMDL requirement of 100 mg/L as an instantaneous maximum at both the Saugus and Valencia WRPs is used in this report as the basis for sizing demineralization facilities. In addition to the discharge requirement, the demineralization facility size requirements are a function of the worst-case instantaneous effluent chloride concentration at each WRP and the WRP effluent flow. This approach will ensure compliance with the proposed WLA. A discussion of chloride data related to the instantaneous effluent chloride TMDL requirement follows.

Instantaneous Effluent Chloride

Under the anticipated instantaneous effluent chloride TMDL, chloride levels observed in grab samples collected from river (and WRP effluents) should not exceed 100 mg/L. To determine the daily variations in chloride concentrations, hourly grab samples were collected from both the WRP influents and effluents. Figure 2-1 shows influent chloride concentration, based on hourly grab samples, over two 48-hour periods, at the Saugus WRP.

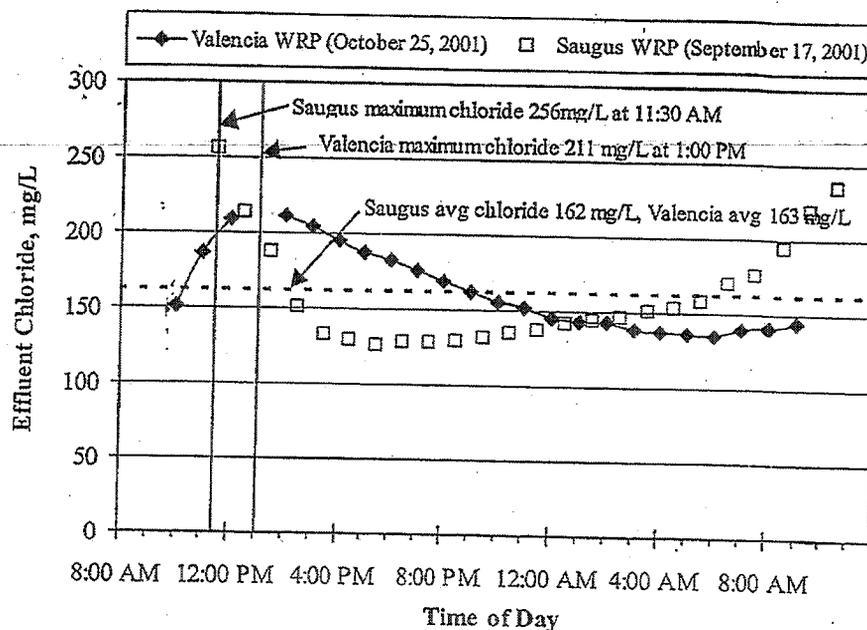

Figure 2-2 Hourly Effluent Chloride Profile at Saugus and Valencia WRPs

Figure 2-2 shows a peak hourly effluent chloride concentration of 256 mg/L at the Saugus WRP, which was 1.6 times higher than the average effluent chloride concentration of 162 mg/L. The Valencia peak hourly effluent chloride of 211 mg/L was 1.3 times higher than the average concentration of 163 mg/L.

WRP flows during the hourly effluent sampling periods were typical, with 5.7 MGD effluent flow on the day of Saugus sampling and 11 MGD effluent flow on the day of Valencia sampling. Both WRPs have off-line equalization of influent flow, but flows are not diverted to equalization tanks when these chloride spikes arrive at the WRPs.³ The flow equalization capacity at Valencia is 4.4 million gallons and the flow equalization capacity at Saugus is 1 million gallons.

Flow-weighted 24-Hour Composite Chloride

24-hour flow-weighted composite chloride samples are collected from each WRP effluent on one day each month. The samples are obtained by collecting effluent every fifteen minutes over six intervals of 4-hour duration each day. The 24-hour flow weighted composite is obtained by determining the percent of total flow contributed during each 4-hour period and using these percentages to determine the percentage of the composite sample contributed from each 4-hour sampling interval. Thus, the 24-hour composite

³ A portion of the primary effluent flow is typically diverted to the flow equalization basin (FEB) during peak flow conditions. The diverted flow stored in the FEB is then discharged to secondary treatment during low flow periods (e.g. in early morning period of the following day).

chloride concentration, when multiplied by the average daily flow, is representative of the total mass of chloride discharged that day.

Figure 2-3 shows historical flow weighted 24-hour composite effluent chloride concentrations at Saugus and Valencia WRPs covering the time period from approximately 1970 through 2001.

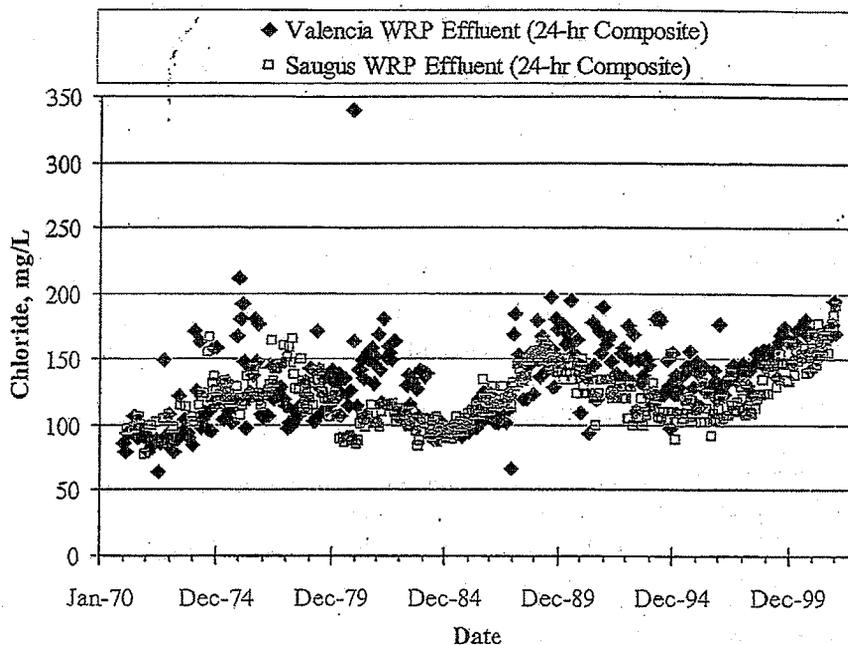

Figure 2-3 Historical Flow-Weighted 24-hour Composite Chloride Concentration (Sampled Monthly)

Figure 2-3 shows an overall variability in chloride concentrations at each WRP. The figure shows a cyclic variation in the chloride concentrations at each WRP, with local minimums in chloride concentration occurring approximately every 10 to 12 years. This variability appears to be related to weather patterns, as the local minimum in chloride occurring in 1984-1985 corresponds with a local maximum in 5-year moving average annual rainfall presented in Figure 2-4. Likewise, increases in chloride from 1984-1989 and 1995-2001 correspond with decreases in annual rainfall over the same time periods.

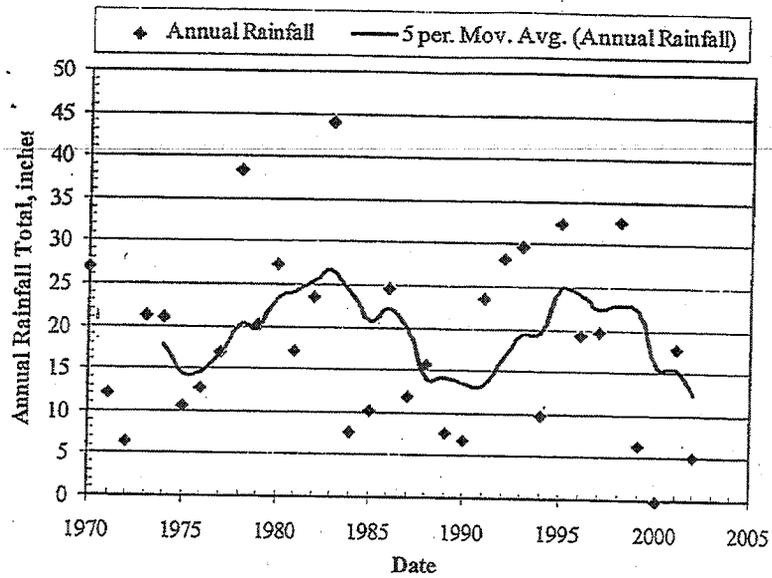

Figure 2-4 Annual Rainfall Totals at California Irrigation Management Information System Weather Station #101, Piru California

Figure 2-5 presents a probability plot of the flow-weighted 24-hour composite chloride data presented in Figure 2-3.

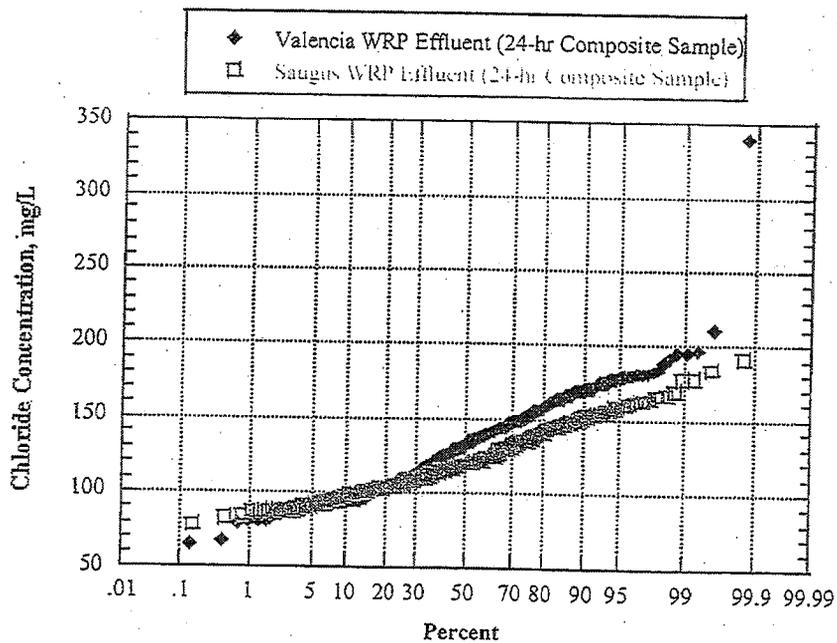

Figure 2-5 Probability Plot of Historical Flow-Weighted 24-hour Composite Chloride Concentration

To estimate historical instantaneous maximum chloride concentrations, the chloride peaking factors based on Figure 2-2 (1.6 for Saugus WRP and 1.3 for Valencia WRP) were applied to the data of Figure 2-5. These estimated instantaneous chloride concentrations are presented in Figure 2-6.

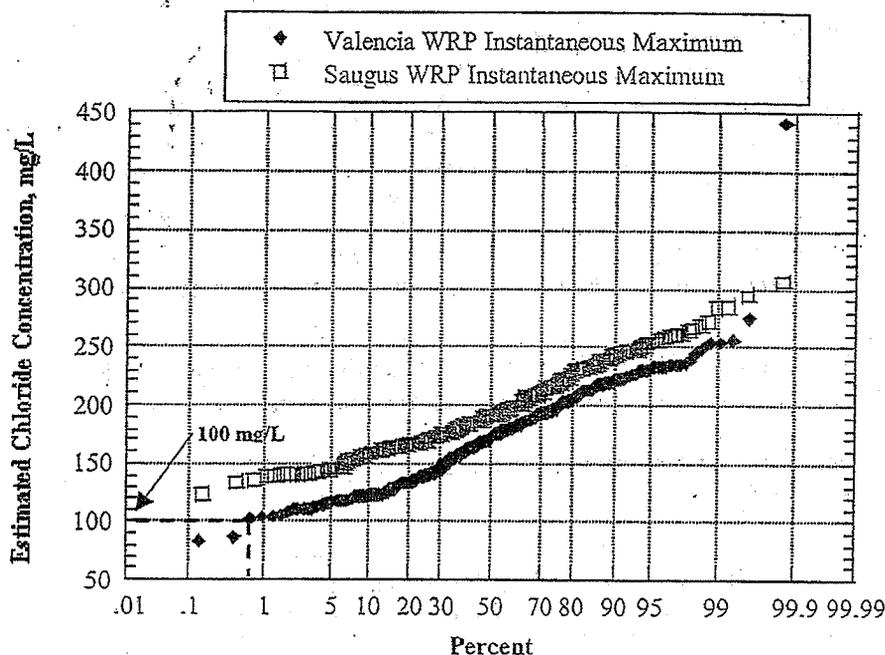

Figure 2-6 Probability Plot of Projected Instantaneous Chloride Concentration

Figure 2-6 shows that the instantaneous chloride discharge limit of 100 mg/L would be exceeded 100 percent of times at Saugus and over 99 percent of times at Valencia, based on the previous 30 years of composite chloride data and the limited peaking factor data from 2001. With the 99.9 percentile estimated historical instantaneous chloride levels at approximately 310 mg/L at both WRPs, a 68 percent reduction in instantaneous chloride peaks would be required to achieve the 100 mg/L instantaneous discharge limit. The Valencia data point at approximately 450 mg/L was considered an outlier and was not included in this analysis.

Comparison of Saugus and Valencia Chloride Concentrations

The historical effluent chloride concentrations presented in Figure 2-3 show that chloride concentrations in Valencia effluent tended to be higher than Saugus effluent. More recent data collected in year 2001 demonstrate that this is no longer the case. Table 2-1 presents average annual 24-hour composite effluent chloride at Saugus and Valencia for 1999, 2000 and 2001. The table shows chloride levels were the same at both WRPs during 2001. This was likely due to a change in plant operations from the use of ferric chloride to ferric sulfate. The change from ferric chloride to ferric sulfate occurred in

May 2000 at the Saugus WRP and in November 2000 at the Valencia WRP. Since then, sodium hypochlorite has been the only chemical contributing chloride at the two WRPs. During 2001, the incremental chloride contribution from this source was on average 6.5 mg/L at Valencia and 5.5 mg/L at Saugus.

Table 2-1 Annual Average 24-hour Composite Chloride

	Year 1999	Year 2000	Year 2001
Saugus WRP	141 mg/L	152 mg/L	168 mg/L
Valencia WRP	160 mg/L	167 mg/L	168 mg/L

Projected Chloride Levels

The CSDLAC recently conducted a chloride source study for the SCVJSS to determine the current contribution of chloride loads from the industrial, commercial, liquid waste disposal and residential sources tributary to the Saugus and Valencia WRPs. In the chloride source study, the Districts also estimated future annual chloride concentrations for the SCVJSS assuming the current rate of increase in chloride loading to the Saugus and Valencia WRPs (e.g. no prohibition of self-regenerating water softeners). Based on these projections, and assuming a blended water supply chloride concentration of 55 mg/L (i.e. non-drought conditions), the Districts estimate the projected future annual average chloride concentrations in 2010, 2015 and 2050 to be 200, 215 and 245 mg/L, respectively.⁴

Worst-case WRP effluent instantaneous chloride levels were then estimated based on SCVJSS annual chloride projections for the years 2010, 2015 and 2050 under drought conditions, assuming that the blended water supply chloride concentration increases to 150 mg/L.⁵ The adjustment applied to SCVJSS annual projections to obtain future worst-case instantaneous chloride was derived from variations observed in approximately 30 years of historical 24-hour composite effluent chloride data from each WRP. The following procedure was used. First, the median and 99.9 percentile from the historical chloride data was calculated for each year from 1971 to 2001 at both WRPs. A variability factor was then calculated for each year, at each WRP, by dividing the 99.9 percentile chloride by median chloride. The data were sorted by median chloride concentration for each WRP and the upper quartile (8 years with the highest median chloride) were selected. The maximum variability factor was determined for each WRP (from the 8 years with highest median chloride), and then a combined flow-weighted variability factor was calculated based on these maximum factors and the respective plant flows for the years 2010, 2015 and 2050. This variability factor of 1.23 was then applied to SCVJSS projections, resulting in estimates of future 24-hour composite chloride. Finally,

⁴ Los Angeles County Sanitation Districts, *Santa Clarita Valley Joint Sewerage System Chloride Source Study, October, 2002.*

⁵ During the last major drought between 1987 and 1991, the imported water supply chloride concentrations were measured as high as 150 mg/L.

the worst-case instantaneous chloride was estimated from these results by multiplying them by the hourly effluent peaking factors determined from Figure 2-2 (1.3 for Valencia and 1.6 for Saugus).

The SCVJSS projected annual average chloride concentrations (assuming drought conditions) for years 2010, 2015 and 2050 are presented in Table 2-2, below, along with the estimated worst case instantaneous maximum WRP effluent chloride concentrations calculated as described above.

Table 2-2 Projected WRP Effluent Chloride Concentrations

	Year 2010	Year 2015	Year 2050
SCVJSS-based 24-hour Composite Estimates	341 mg/L	359 mg/L	397 mg/L
Saugus WRP Worst-case Instantaneous Max	545 mg/L	575 mg/L	634 mg/L
Valencia WRP Worst-case Instantaneous Max	443 mg/L	467 mg/L	516 mg/L

Chloride Levels Used in Demineralization Facility Sizing

In order to assure the ability of the Santa Clarita WRPs to meet TMDL chloride discharge requirements, the demineralization facilities at each WRP must be sized to remove instantaneous chloride concentrations encountered under worst case conditions. These worst case chloride conditions would result from a combination of chloride increases due to a drought cycle and increased salt loading from new housing.

This report will use the projected worst-case instantaneous maximum chloride concentrations from Table 2-2 for the year 2015 as the basis for sizing the demineralization facilities. These estimates may be high if an extended period of high annual rainfalls is encountered and if, as in the past, chloride levels begin to decrease for an extended period of time. Conversely these estimates may be low if the imported water supply chloride concentrations increase due to extended dry conditions which cause poor salinity conditions in the Bay-Delta region near where the imported water originates.

WRP FLOWS

The Saugus and Valencia WRPs will be required to meet the instantaneous maximum chloride discharge requirement under all flow conditions. If worst-case chloride conditions can occur at high flow conditions, the demineralization facilities must be sized to treat these flows.

Correlations Between Flow and Chloride

Figure 2-7 presents 24-hour flow weighted composite chloride based on monthly samples over the period approximately 1970 through 2001 as a function of daily flow at the Valencia WRP. The figure shows there is no correlation between flow and chloride and that the highest chloride levels have occurred under high flow conditions at this WRP. As a result, the demineralization facilities at the Valencia WRP will have to be sized to remove the highest levels of chloride under the highest flow conditions.

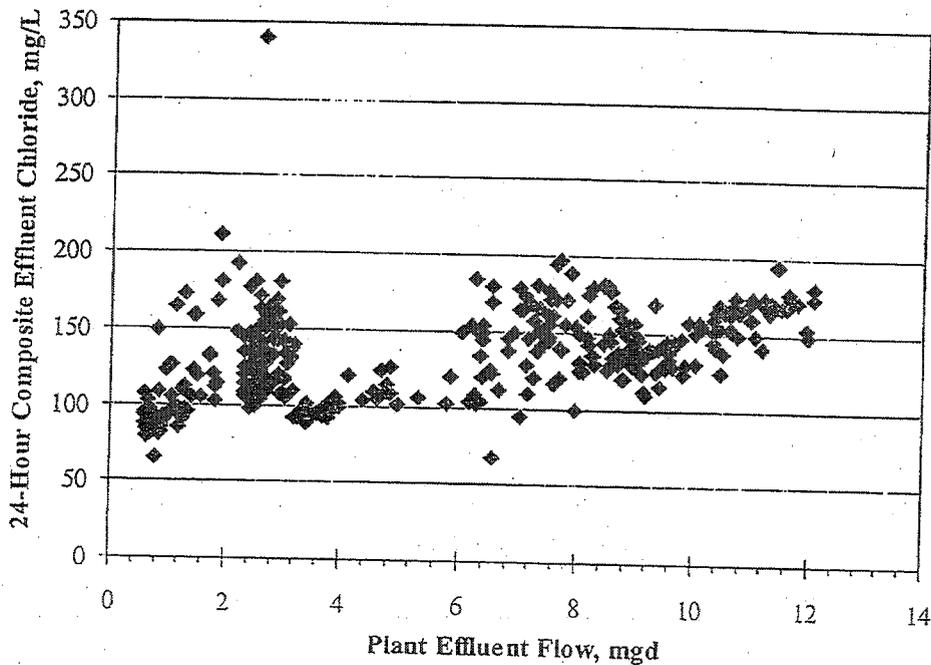

Figure 2-7 Correlation Between Flow and Chloride for Valencia WRP

Figure 2-8 presents 24-hour flow weighted composite chloride based on monthly samples over the period approximately 1970 through 2001 as a function of daily flow at the Saugus WRP. This figure shows there is no correlation between flow and chloride level at the Saugus WRP. As a result, the demineralization capacity at the Saugus WRP must also be sized to remove the highest levels of chloride under the highest flow conditions.

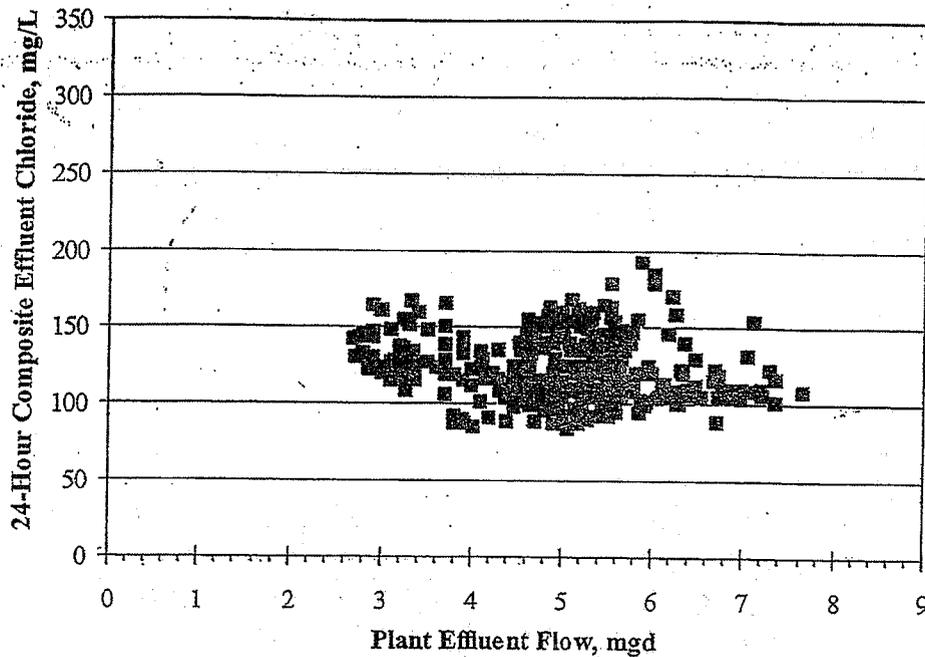

Figure 2-8 Correlation Between Flow and Chloride for Saugus WRP

Historical Flows

Figure 2-9 presents historical average daily effluent flows for the Saugus and Valencia WRPs. These flows correspond to days of monthly composite chloride sampling and cover the time period from approximately 1970 through 2001.

The figure shows a steady increase in effluent flows at the Valencia WRP to near current influent design capacity of 12.6 MGD. Based on the linear regression through Valencia historical effluent flow data, the flows are increasing at a rate of 0.37 MGD per year. The Saugus effluent flows have been at or near the design capacity flow of 6.5 MGD since approximately 1994. It should be noted that portions of the flow tributary to the Saugus WRP can be also diverted to the Valencia WRP for treatment.

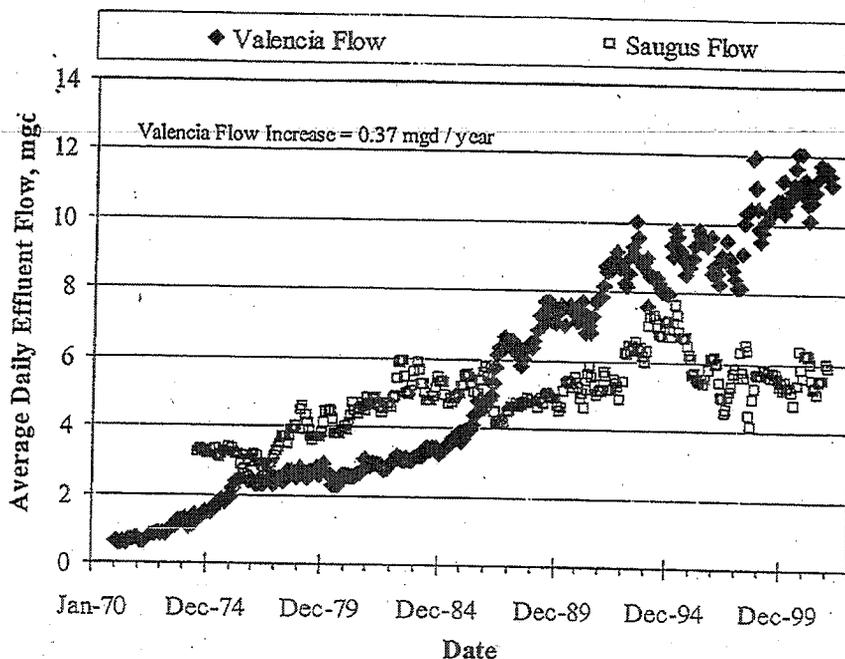

Figure 2-9 Historical Flows at Saugus and Valencia WRPs

Daily Influent and Effluent Flow Profiles

Figures 2-10 through 2-13 show Valencia WRP influent flow profiles (before equalization) and effluent flow profiles on recent normal and rain days. The influent flow profiles presented in Figures 2-10 and 2-11 show a relatively consistent influent flow from approximately 10 AM to 12 midnight each day with periods of decreased flow from midnight to 10 AM. The Valencia WRP effluent flow profiles, for normal and rain days, presented in Figures 2-12 and 2-13 show a consistent flow rate with the exception of low flow conditions from approximately 7 AM to 11 AM. The intermittent decreases in the effluent flow profiles are caused by the diversion of a portion of the effluent flow for backwashing the media filters. The peak effluent flows from the Valencia WRP were the same on both normal and rain days, but the average flow was lower on the non-rain day.

Figures 2-14 through 2-17 show Saugus WRP influent flow profile (before equalization) and effluent flow profiles on recent normal and rain days. The influent flow profiles presented in Figures 2-14 and 2-15 show a morning peak in influent flow with a period of decreased flows following. High flow rates are maintained for a greater portion of the rain day. The Saugus WRP effluent flow profiles, for normal and rain days, presented in Figures 2-16 and 2-17 show a relatively consistent flow rate with a period of low flow beginning in the early morning hours. The peak effluent flow from the Saugus WRP was actually higher on the normal day than on the rain day.

Projected Flows

Projected 2015 Flows. The CSDLAC SCVJSS 2015 Plan uses projected population growth and per capita water consumption to estimate the treatment capacity required at the Valencia and Saugus WRPs through year 2015. 2015 projected flows will be the basis for sizing the demineralization facilities at Saugus and Valencia WRPs and for the deep well injection brine disposal option.

The design capacity of the Valencia WRP is currently 12.6 MGD. The WRP is nearing completion of Stage 5 expansion that will increase capacity to 21.6 MGD and provide sufficient capacity until the year 2010. Stage 6 expansion is scheduled for completion in 2010 and will further increase the capacity of the WRP to 27.6 MGD. Completion of Stage 6 expansion will provide sufficient capacity through the year 2015.

The design capacity of the Saugus WRP is 6.5 MGD. There are currently no plans for increasing the capacity of the Saugus WRP.

Ultimate Build-Out Flows. For purposes of compliance analysis, on March 7, 2002 CSDLAC issued a memorandum with projected ultimate build out flows for WRPs serving the Santa Clarita Valley. It is estimated these flows will be achieved within approximately fifty years. Ultimate build out flows will be the basis for sizing and costing the brine pipeline disposal options.

The ultimate build out flow for the Valencia WRP is estimated to be 59 MGD. There are no plans to increase the capacity of the Saugus WRP, which will remain at 6.5 MGD.

The ultimate build out flow memorandum includes an additional 6.9 MGD plant flow from the proposed water reclamation plant serving the Newhall Ranch development. Any potential flows from this WRP were not included in the sizing and costing of the facilities or the brine flow disposal options.

Demineralization Treatment Flows

In order to reliably meet the instantaneous chloride limit, the demineralization facilities must be sized for maximum sustained design flow conditions.

Valencia WRP Demineralization Treatment Flows. Using 2015 design flows as a basis, the demineralization treatment facility at the Valencia WRP would have to be sized to treat 27.6 MGD. In order to operate the demineralization facility at a constant flow rate, flow equalization will be required downstream from the chlorine contactors. The size of this equalization tank will be dependent on considerations outside the scope of this evaluation.

Saugus WRP Demineralization Treatment Flows. The demineralization treatment facility at the Saugus WRP will be sized for 6.5 MGD as an average flow. In order to operate the demineralization facility at this WRP at a constant flow rate, this

facility will also require significant storage capacity downstream of the chlorine contactors for flow equalization. The size of this storage tank will be dependent on considerations outside the scope of this evaluation.

Heavy Rain-Day Flows. WRP flows can increase significantly during rain days due to infiltration of rainwater into pipes. During a heavy rain day on February 22, 1998, an instantaneous flow rate of 17.5 MGD was recorded on the effluent hydrograph for the Valencia WRP. Demineralization facilities at the two WRPs are not sized to treat these flow rates. It is assumed that low chloride rainwater will decrease chloride concentrations in the wastewater plant effluents, but no data is available to estimate this dilution effect and at what point MF RO treatment would be necessary to treat storm flow tail water. Further analysis of this condition is required in order to assure constant compliance.

DEMINERALIZATION SIZING FACTORS

The required demineralization treatment capacity can be determined by multiplying the required chloride reduction and the corresponding design flow. This calculation provides a sizing factor that is a rough approximation of the portion of the flow that must be demineralized water. Table 2-3 presents year 2015 sizing factors.

Table 2-3 Demineralization Treatment Sizing Factors at Saugus and Valencia WRPs to Achieve 100 mg/L Instantaneous Maximum Chloride

WRP	Year	Chloride TMDL Requirement	Required Chloride Reduction	Projected Flow (MGD)	Treatment Sizing Factor
Saugus	2015	Instantaneous	83%	6.5	5.4
Valencia	2015	Instantaneous	79%	27.6	21.7

SECTION 3 DESCRIPTION OF TREATMENT ALTERNATIVES

A review of potential chloride reduction technologies was performed and feasible treatment alternatives identified under this task. These include thermal desalination technologies: Multi-Stage Flash Distillation (MSF), Multi-Effect Distillation (MED), Mechanical Vapor Compression (MVC); Ion Exchange and Membrane technologies: Electrodialysis/Electrodialysis Reversal (ED/EDR) and Reverse Osmosis (RO).

THERMAL DISTILLATION

The most widely used thermal desalination technology is Multi-Stage Flash (MSF) Distillation Process. In this process the feedwater is heated by condensing steam in a vessel called the brine heater. This heated water then flows into another vessel where the pressure is lower than the first stage causing the steam to immediately boil or "flash". This vapor is then passed through demisters to remove brine droplets and condenses to freshwater on tubes of heat exchangers that run through each stage. These tubes are cooled by incoming feedwater, which in turn is preheated before being fed to the brine heater. The uncondensed brine is sent to the next stage, which is under a lower pressure, and the process is repeated. Typically, an MSF plant can contain from 15 to 25 stages. The MSF distillers can operate at top brine temperatures (at the inlet to the first flash chamber) around 110 C, using scale control polymers. The MSF process has been extensively used for seawater desalination but applications to desalination of reclaimed water is not common. This technology will not be considered further for chloride removal.

Multiple Effect Distillation (MED) is another thermal desalination process. In this process vapor formed in each effect flows to the condensing side of the heat transfer surface in the next effect. The latent heat of condensation is transferred through the tube wall to evaporate part of the water flowing across the surface. The main difference between the MSF and the MED process is in the method of evaporation and heat transfer. In the MED process the saline water film is evaporated by heat transfer through the condenser tube surface while in the MSF process evaporation occurs by "flashing" the brine in each stage. High heat transfer rates can be achieved in the MED process due to thin film boiling and condensing conditions. Diverse designs have been used for the heat exchanger, such as vertical tubes with falling brine films or rising liquids, horizontal tubes with falling film, or plates with a falling brine film. The most common heat exchanger design consists of horizontal tubes with a falling film. Traditional uses for MED have been in the field of industrial distillation for the production of sugar from sugarcane juice and in production of salt. Application to wastewater desalination was not found in the extensive literature search conducted, thus, this technology will not be considered further.

The Vapor Compression (VC) Distillation process is generally used in combination with other processes like MED and MSF and by itself for small and medium scale seawater

desalination applications. The heat for evaporating the water comes from the compression of vapor rather than direct exchange of heat from steam produced in a boiler. There are two classes of vapor compression distillation – thermal vapor compression where steam ejectors are used, and mechanical vapor compression where mechanical compressors are used in the compression cycle to run the process.

VC units have been built in a variety of configurations. In a mechanical vapor compression unit, all steam is removed by a mechanical compressor from the last effect and introduced as heating steam into the first effect after compression where it condenses on the cold side of the heat transfer surface. Water high in salts is distributed on the other side of the heat transfer surface where it boils and partially evaporates to produce more vapor. In a thermal vapor compression unit a steam ejector operated using 45-300 psi motive steam removes part of the vapor from the vessel. In the ejector the removed vapor is compressed to the necessary heating steam pressure and reintroduced into the first effect. VC has been extensively used for seawater desalination for resorts, industries, and drilling sites where freshwater is not readily available and relatively smaller quantities are needed. Its application to reclaimed water desalination has not been tested and, therefore, there is no further consideration of this technology.

ELECTRODIALYSIS REVERSAL

In the Electrodialysis Removal (EDR) process, charged ions are removed from solution by applying an electrical potential across a stream of water. This causes the ions to move towards the opposite charged electrode. Ion selective membranes separate the stream from the electrode allowing only positive or negatively charged ions to pass through. These membranes are arranged alternately, with an anion selective membrane followed by a cation selective membrane. A spacer sheet is then placed between these two membranes. This forms channels in the EDR cell. As the electrodes are charged and feed water flows along the product water spacer at right angles to the electrodes, the anions (like chloride and carbonate) in the water are attracted and diverted through the anion selective membrane towards the positive electrode. This dilutes the salt content of the water in the product water channel. The anions pass through the anion selective membranes but cannot pass through the cation selective membrane and hence the anions are concentrated in the brine channel. Similarly, cations (like calcium and sodium) under the influence of the negatively charged electrode pass through the cation selective membrane and are trapped in the brine channel on the other side. This results in concentrated and dilute solutions being created in the spaces between the alternating membranes. These spaces, bound by two membranes (one cationic and one anionic) are called cells. The cell pair consists of two cells, one from which the ions migrated (dilute cell for product water) and the other in which the ions concentrate (the concentrate cell for the brine). The basic EDR unit consists of several hundred cell pairs bound together with electrodes on the outside and is referred to as a membrane stack. Feed water passes through the feed paths in parallel providing a continuous flow of desalted water and concentrate from the stack.

EDR has been tested for reclaimed water in the past. The City of San Diego has 1.1 MGD of EDR capacity at their North City Reclamation Plant for reduction of TDS in reclaimed water used for irrigation. Their experience with EDR has been that frequent cleaning and constant operator attention was required leading to prohibitive operational costs. The City of San Diego currently has plans to replace the EDR process with MF followed by RO. In light of the above facts, EDR as a technology for chloride removal is not given further consideration.

ION EXCHANGE:

Ion exchange (IX) is a sorption process where ions from the liquid phase are exchanged for ions held by electrostatic forces to charged functional groups on the surfaces of a solid. Ion exchangers have fixed ionic groups that are balanced by counterions of opposite charge. These counterions, which can be cations or anions, are exchanged for ions in the solution during the ion exchange process. The majority of ion exchange resins are made by the copolymerization of styrene and divinylbenzene. The styrene molecules provide the basic matrix while the divinylbenzene molecules provide crosslinking for strength. To provide various types of cationic and anionic resins, the styrene divinylbenzene copolymer is reacted with either acids or bases. Strong acid IX resins use strong acids like sulfuric acid to incorporate strong acid groups into the matrix. Similarly, weak acid IX resins use weak acids, strong base anionic resins use strong bases, and weak base anionic resins use weak bases. For chloride removal, a strong base ion exchange resin can be used. The strong base anion exchange resins operate well throughout the entire pH range and split neutral salts into their corresponding bases.

For most strong base anion exchange resins, the selectivity of nitrate is higher than chloride for exchange. Nitrate removal might be required if this technology is to be used for treating reclaimed water. Also particle removal will be required as particulate matter and suspended solids can cause plugging of the ion exchange bed. Water reclamation using ion exchange is an untested technology and will not be considered in this case.

REVERSE OSMOSIS

Reverse Osmosis (RO) is a pressure driven membrane separation process where dissolved solutes are separated from the solution by forcing the water through a semipermeable membrane under a pressure higher than the osmotic pressure of the solution. It has been selected as a best available technology (BAT) by the USEPA for removal of inorganics like sulfate and nitrate that comprise a large percentage of the TDS present in water and wastewater. It has been extensively tested for treatment of reclaimed water and several full scale facilities have been constructed. An important aspect of reverse osmosis treatment of reclaimed water is the selection of the pretreatment process. Membrane pretreatment has been found to be the ideal pretreatment for the RO process in studies conducted by MWH at San Diego. Pretreatment of the reclaimed water using microfiltration or ultrafiltration helps in particle removal and

provides a higher quality of feed water to the RO process as compared to the conventional pretreatment process. Also, since reclaimed water quality is highly variable, the membrane process is an ideal selection because product water quality from these membrane processes are not dependent on feedwater quality.

SUMMARY

The results from the discussion of applicable technologies are summarized in Table 3-1. Of all the processes considered in the discussion above, EDR and RO are the only processes with a proven track record for reclaimed water treatment. MWH has significant experience in treating reclaimed water using both these technologies. In an earlier study EDR was found to be much more operator intensive than RO with MF pretreatment. Also significant costs can accrue due to frequent chemical cleanings that were found necessary for consistent EDR operation. Therefore, RO treatment of the reclaimed water with MF pretreatment was selected for chloride reduction in this project.

Table 3-1 Evaluation of Technologies for Chloride Reduction in Treated Wastewater

Technology	Economical	Energy Intensiveness	Complexity	Applicability
Thermal Desalination	-	-	-	-
Ion Exchange	+	+	+	--
EDR	-	+	+	+
MF/RO	+	+	+	+

Note: "-" indicates low score with respect to evaluation criteria
 "+" high score with respect to evaluation criteria.

BRINE REDUCTION TECHNOLOGIES

Brine disposal from any demineralization system can represent a major expense if the facility is not close to an acceptable disposal site such as the ocean. Brine treatment to reduce the volume of brine might be a cost-effective alternative to transporting or disposing large amounts of brine. Brine reduction technologies have not, however, kept pace with the rapid development of demineralization systems such as RO and significant progress may be required in the future to develop an economical process to treat brine generated from demineralization. The most common technique used for brine reduction has been solar evaporation. Other brine reduction technologies have been studied that include distillation technologies such as crystallization, membrane technologies to further concentrate the brine, and electrodialysis processes. Chemical precipitation can be used as a step in reducing the concentration of the brine before using distillation or membrane techniques. Freeze drying has also been proposed as an alternative but has not been used on a large scale. Biological processes are also being developed for reverse osmosis brine containing high levels of ammonia.

Solar evaporation is a land intensive process and its application is dependent on geographical location. A low precipitation, high evaporation scenario is necessary for use of this technology. Specially lined lagoons are required to prevent salt water intrusion into the ground water. The concentrated brine still requires ultimate disposal.

Crystallizers can be used to concentrate the brine produced from membrane operations. These crystallizers are energy intensive. Also the brine might require chemical treatment (precipitation) to prevent scaling inside the equipment. A process being researched at UCLA combines crystallization with low pressure membrane separation of the formed crystals to treat brine. The complexity of this treatment process is high and its applicability to brine concentration appears very limited at the present time.

Chemical precipitation is used to remove some of the sparingly soluble salts to enhance the applicability of some of the brine concentration techniques. It involves in most cases increasing the pH to precipitate these salts. Lime is widely used for this application. A process currently being developed at Texas A&M University involves addition of high levels of lime and aluminum salts to precipitate salts from brine solutions. This process is called Ultra High Lime with Aluminum process (UHLA). The researchers claim that this process can remove many of the compounds that can limit recycling - like sulfates, chlorides, and organics. Use of waste alum sludge from water treatment plants has been suggested for this process to lower costs. The treated brine can then be concentrated using reverse osmosis after pH adjustment. There are no full scale systems in operation at the present time and therefore this technology remains experimental.

Reverse osmosis membranes using brine concentrating membranes is an energy intensive option. Brine concentrating membranes are essentially seawater membranes and require very high operating pressures. Chemical pretreatment might also be required to prevent membrane scaling. Electrodialysis reversal can also be used to concentrate brine.

Freeze drying has been used in the past to extract water from highly saline waters. Salt lowers the freezing point of water and partial freezing occurs when saline solutions are cooled to the freezing point of water. Relatively pure ice crystals form along with an unfrozen brine solution, which contains an increased concentration of salt. With a higher density than purified ice, the brine flows away from the ice, separating it from the clean water. A process employing freeze drying consists of spraying the saline water into the air under below freezing temperature conditions. This causes large quantities of relatively clean ice to form. The unfrozen concentrated brine solution is pumped away for disposal while the frozen clean ice is melted to obtain water with low levels of salinity.

In summary, available brine treatment systems for volume reduction prior to disposal by deep well injection, truck haul, or brine pipeline have significant limitations. Potential disadvantages include being land intensive, energy intensive or representing unproven technology. None of these approaches to brine reduction will be given further consideration within this cost analysis.

SECTION 4 COST AND SCHEDULE EVALUATION OF MF RO

An interactive spreadsheet model was developed to facilitate the investigation of different chloride removal requirements on MF RO plant size and cost. The required model inputs are:

- wastewater plant effluent flow rate,
- wastewater plant effluent chloride concentration, and
- target blended water chloride concentration.

Model outputs are calculated for:

- total capital and annual O&M cost, and
- required MF RO treatment capacity.

Values are provided for both the Saugus and Valencia WRPs.

The costs of three different brine disposal options can also be evaluated from the spreadsheet model. These options are:

- brine pipeline to Ventura – ocean outfall
- brine pipeline to CSDLAC JWPCP, and
- deep well injection of brine.

A fourth brine disposal option, trucking to the CSDLAC Joint Water Pollution Control Plant (JWPCP) in Carson, is presented in this report section, but not included within the spreadsheet model. The model includes separate screens with a breakdown of cost factors for MF RO and the different brine disposal options. Individual costing parameters can be modified as needed. The spreadsheet model provides an easy way to interactively evaluate the costs of MF RO treatment for different WRP flows, influent chloride concentrations and blended water chloride concentrations.

This report section presents spreadsheet model MF RO size and cost estimates based on projected worst case flow and chloride reduction requirements for the year 2015. Brine disposal pipeline costs are based on ultimate build out flows, while deep well injection costs are based on 2015 flow estimates.

MICROFILTRATION AND REVERSE OSMOSIS

RO removes dissolved solids by forcing water under pressure through a membrane that is permeable to water but impermeable to dissolved components. Approximately 95 percent of chloride ion is removed in a two stage RO system. MF pretreatment to RO is recommended to remove particulate solids and decrease the fouling rate of the RO membranes. The required MF RO treatment capacity and cost is a function of wastewater plant effluent flow, wastewater plant effluent chloride concentration, target

blended water chloride concentration, MF feed water recovery, RO recovery, and RO chloride rejection.

MF RO Treatment Flow Model

The MF RO treatment facilities will treat a portion of the WRP tertiary effluent flow sufficient to meet the target blended water chloride concentration. Tertiary treatment is still required for the portion of flows that will bypass MF RO. The RO treated water will then be recombined with the portion of the wastewater plant flow not RO treated, before discharge to the river. Figure 4-1 presents a schematic of the MF RO treatment process. Table 4-1 presents the definitions for the descriptors used in the treatment process flow model.

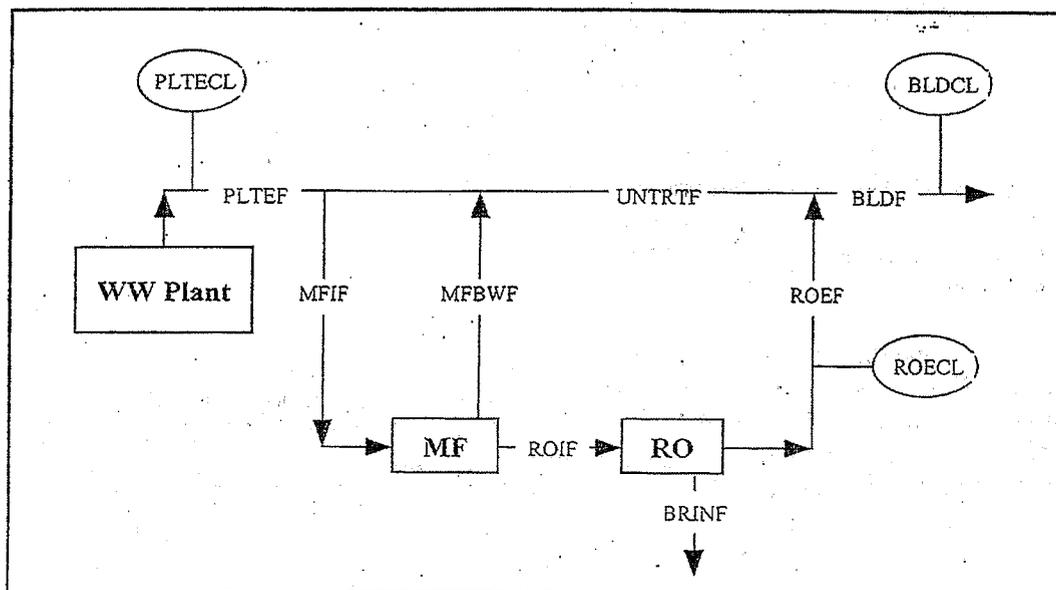

Figure 4-1 MF RO Treatment Process

Table 4-1 Treatment Process Descriptor Definitions

Descriptor	Parameter
PLTECL	Plant effluent chloride concentration
PLTEF	Plant effluent flow rate
UNTRTF	Untreated flow rate
MFIF	MF influent flow rate
MFBWF	MF backwash flow rate
ROIF	RO influent flow rate
BRINF	RO brine flow rate
ROEF	RO effluent flow rate
ROECL	RO effluent chloride concentration
BLDF	Blended plant flow rate
BLDCL	Blended effluent chloride concentration
MFFWR	MF feed water recovery rate
ROFWR	RO feed water recovery rate

MF RO Treatment Process Equations

The following equations apply to the MF RO treatment process.

- [1] $BLDF = PLTEF - BRINF$
- [2] $BLDF = UNTRTF + ROEF$
- [3] $MFBWF = MFIF - ROIF$
- [4] $BRINF = ROIF - ROEF$
- [5] $MFFWR = ROIF / MFIF$
- [6] $ROFWR = ROEF / ROIF$
- [7] $BLDF \times BLDCL = (UNTRTF \times PLTECL) + (ROEF \times ROECL)$

This series of equations can be solved for ROIF, the RO influent flow. The value of the following parameters in equations 1 through 7 are known: PLTEF, PLTECL, ROECL, BLDCL, MFFWR and ROFWR.

To solve equation [7] in terms of the unknown ROIF, note the following:

[7a] $BLDF =$

$$\begin{aligned}
 & PLTEF - BRINF, \text{ from [1]} \\
 & PLTEF + ROEF - ROIF \\
 & PLTEF + (ROFWR \times ROIF) - ROIF \\
 & PLTEF + \{ROIF \times (ROFWR - 1)\}
 \end{aligned}$$

$$\begin{aligned} [7b] \quad UNTRTF = & \quad BLDF - ROEF, \text{ from [2]} \\ & \quad PLTEF + \{ROIF \times (ROFWR - 1)\} - ROEF, \text{ from [7a] line 4} \\ & \quad PLTEF + \{ROIF \times (ROFWR - 1)\} - (ROFWR \times ROIF) \\ & \quad PLTEF - ROIF \end{aligned}$$

$$[7c] \quad ROEF = ROFWR \times ROIF.$$

Substitution of the results of [7a], [7b] and [7c] into [7] and solving in terms of ROIF gives the following:

$$[8] \quad ROIF = \{PLTEF \times (PLTECL - BLDCL)\} / \{(ROFWR \times BLDCL) - BLDCL + PLTECL - (ROFWR \times ROECL)\}$$

The other process flows are calculated from the equations above, once RO influent flow is known.

MF RO Model Cost Basis

The MF RO model capital and O&M costs are based on costs prepared for a reclaimed wastewater facility, with 5 MGD RO product water flow rate, recently put into operation in the Southern California area.⁶ The model uses linear scaling of costs based on RO product water flow rate, with the exception of the MF membrane racks, which are added in increments of 96 module racks. MF RO model O&M costs are adjusted to account for the percentage of MF RO capacity that is currently being utilized. Savings on O&M costs for unused MF RO capacity are estimated at 70 percent. The percentage of MF RO capacity being utilized is calculated by determining the percentage of wastewater plant capacity that is currently being utilized on an annual average flow basis.

Other sources were used to verify the cost basis of the MF RO model used in this report, including information in the literature and costs from engineering reports prepared for other projects. Both the capital and O&M costs from this model compare well with cost estimates from these other sources.

Feed Water Recovery and Chloride Rejection.⁷ The default model settings for feed water recovery for both the MF and RO are 85 percent. Both MF and RO feedwater recoveries can be adjusted in the "Design Data" screen of the spreadsheet model. Increases in MF recovery beyond 85 percent assume addition of a second stage of MF for recovery of backwash water. MF capital costs are increased accordingly. An error message prompting the user to increase MF feedwater recovery appears on the model "Size and Cost Summary" screen when required chloride reduction targets are not achievable at 85 percent MF recovery.

⁶ Backup MF RO cost basis information available on request.

⁷ Backup feedwater recovery and chloride rejection information available on request.

RO feedwater recoveries above 85 percent are assumed by the spreadsheet model to be achievable with existing RO capacity on current water quality. Therefore, no adjustments are made to RO capital costs for feedwater recoveries greater than 85 percent.

The default model chloride rejection for RO is 95 percent. This is based on a membrane manufacturer's RO model projections for two-stage RO using thin-film composite membranes at 85 percent feed water recovery.

MF RO Size and Cost

MF RO Treatment Requirements – Year 2015. The projected flows, projected wastewater plant effluent chloride concentration and target blended chloride concentration for worst-case treatment conditions are presented in Table 4-2.

Table 4-2 Worst-case MF RO Treatment Requirements in Year 2015

WRP	Chloride TMDL Requirement	WRP Effluent Chloride (mg/L)	TMDL Chloride (mg/L)	Projected WRP Flow (MGD)
Saugus	Instantaneous	575	100	6.5
Valencia	Instantaneous	467	100	27.6

MF RO – Size and Cost Estimate – Year 2015. With the treatment requirements from Table 4-2 as inputs to the spreadsheet model, the required MF RO design capacity and associated costs were calculated. The required RO product flow was not achievable at 85 percent MF feedwater recovery at Saugus WRP with these inputs, so the MF feed water recovery was adjusted to 90 percent. The size and cost estimates based on these inputs are presented in Table 4-3.

Table 4-3 MF RO Size and Costs⁸

	Valencia WRP MF RO	Saugus WRP MF RO
Design Flows, RO product water	20 MGD	4.9MGD
Total Capital Cost	\$142M	\$35.5M
Annual O&M Cost	\$7.5M	\$1.9M

MF RO O&M costs are based on 2015 design flows at both WRPs.

MF RO – Project Constraints. In addition to the uncertainty in the year 2015 WRP effluent chloride concentration, the MF RO cost estimate does not account for some

⁸ MF RO capital costs do not include costs for equalization of flows to MF and RO at each WRP.

additional cost items that will require more detailed evaluation to estimate and could add significantly to project costs. These additional cost items are:

- Site acquisition and site preparation costs
- MF RO influent flow equalization tanks.

MF RO Building Sizes and Siting

The spreadsheet model estimates of the space requirement for the 4.9 MGD product flow MF RO facility at Saugus are 19,000 square feet for the MF building and chemical storage tanks and 6,200 square feet for the RO building and control center. The siting of these facilities at the Saugus WRP presents a challenge. The Saugus WRP is extremely space constrained by railroad tracks on one side and a fairly steep hillside on the other. The two potential locations for the structures and tanks required for the MF RO that were identified during a site visit were either 1) build on top of existing process facilities, or 2) add fill to the hillside to create an elevated plateau. Both these siting options will add significantly to construction costs.

The spreadsheet model estimates of the space requirement for the 20 MGD product flow MF RO facility at Valencia are 76,000 square feet for the MF building and chemical storage tanks and 25,000 square feet for the RO building and control center. The potential location for these new facilities, identified during a site visit, was beyond the boundary of the current facility downstream to the west. The CSDLAC would have to procure this additional property.

BRINE DISPOSAL ALTERNATIVES

A waste product of the reverse osmosis treatment process is a brine solution, which is the concentrated reject waste stream from the RO process. The brine waste contains all constituents in the water that are rejected by the RO membranes. RO membranes reject most of the dissolved compounds in the water and as such, will contain constituents that exist in the effluent of the existing Valencia and Saugus WRPs. The brine waste may contain high concentrations of total dissolved solids, pathogens, and heavy metals and therefore, may be classified as a hazardous waste. This presents a challenge in disposing the brine waste, which is typically 5 to 25 percent of the influent flow to the RO process. Spreadsheet model estimates of brine flow for ultimate WRP flows were 8.6 MGD. The 30-inch pipe required would have sufficient brine flow capacity for up to 12 MGD.

The four brine disposal alternatives being considered for the Valencia and Saugus WRPs are listed below. The first three alternatives involve ultimate discharge of the brine waste to the ocean. The fourth alternative involves the injection of the brine waste into a subsurface geologic formation.

1. Brine pipeline to Ventura
2. Brine pipeline to Carson, CSDLAC JWPCP
3. Truck brine to Joint Plant in Carson
4. Brine disposal via deep well injection

A description of each alternative and conceptual-level costs are provided in the following sections.

Alternative 1: Brine Pipeline to Ventura

Alternative 1 involves a gravity pipeline to transport brine waste from the Valencia and Saugus water reclamation plants to the City of Ventura for discharge to a 3-mile dedicated ocean outfall. The pipeline alignment would generally follow highway 126 from Valencia to Ventura. See Figure 4-2 in the Appendix for a plan view of the pipeline alignment. The total length of the brine pipeline is approximately 42 miles. The elevation drop from Valencia to Ventura is approximately 1,000 feet and elevations along the pipeline alignment indicate that it may be feasible to flow by gravity to the ocean.

Unlike the MF RO treatment process, which can be incrementally expanded as necessary, the brine pipeline is sized for the ultimate capacity flow. The ultimate brine flow is projected to be approximately 8.6 MGD, which requires a 30-inch pipeline. The pipeline would be a reinforced concrete pipe with manholes installed every 500 feet. Depending on brine pH, other pipeline materials could be selected with no major impact on costs. The majority of the pipeline alignment along Highway 126 is open country with the remainder passing through developed areas such as Fillmore, Santa Paula, and Ventura. Considering the general geographic conditions along the pipeline alignment, it is assumed that construction may include some rock excavation, tunneling, dewatering, and river undercrossings. These factors have been generally factored into the construction cost estimate for the pipeline with additional construction contingency intended to account for unknown conditions. A 3-mile long ocean outfall constructed of ductile iron pipe would ultimately discharge brine waste to the ocean. Other pipe materials could be substituted for ductile iron without a major impact on costs. Table 4-4 presents conceptual-level capital costs for a brine pipeline and ocean outfall.

⁹ Backup brine disposal cost information available on request.

Table 4-4 Capital Costs for Alternative 1: Brine Pipeline to Ventura

	Unit	Value
Design Parameter		
Brine Flow	MGD	8.6
Pipeline Diameter	inches	30
Length – Brine Pipeline	mile	42
Length – Ocean Outfall	mile	3
Construction Costs		
Brine Pipeline	\$ million	\$135 M
Ocean Outfall	\$ million	\$60 M
Engineering, Legal, Administration	\$ million	\$49 M
Total Capital Cost	\$ million	\$244 M

O&M costs for transmission sewers can be applied to a brine pipeline to estimate annual O&M costs. The primary O&M costs can be classified as pipeline inspection/cleaning and pipeline repair. A 50-year service life for the brine pipeline was used as the basis for estimating O&M costs. Pipeline inspection and cleaning is recommended on an annual basis to monitor the integrity of the pipeline and promote continuous service of the pipeline. Inspection and cleaning of the pipeline can be performed with portable closed-circuit television cameras and hydrojetting equipment, respectively. It is proposed to inspect and clean 10 percent of the total pipeline length per year, excluding the ocean outfall. This strategy allows the entire brine pipeline to be inspected and cleaned every 10 years. The ocean outfall is excluded from inspection and cleaning due to difficult access.

Pipeline repairs will be necessary throughout the service life of the brine pipeline. The magnitude and frequency of repairs cannot be predicted; therefore, it is recommended that an annual repair fund be established to respond to pipeline repairs. The contribution to the annual fund would be approximately 0.2 percent of the total construction costs for the brine pipeline. Over a 50-year period, this equates to a total contribution of 10 percent of the construction costs to the repair fund. Money in the annual fund would accumulate each year if unused. This strategy assumes that repairs will be minimal during the early life of the pipeline and will increase as the pipeline reaches the end of its service life. Table 4-5 presents conceptual-level O&M costs for a brine pipeline.

Table 4-5 O&M Costs for Alternative 1: Brine Pipeline to Ventura

	Unit	Value
Pipeline Inspection and Cleaning		
Inspection and Cleaning	\$/ft	\$2
Length - Brine Pipeline	ft/yr	23,000
Annual Cost	\$/yr	\$46,000
Pipeline Repair		
Annual Repair Fund	\$/yr	\$270,000
Total Annual O&M Cost	\$/yr	\$316,000

Brine Pipeline to Ventura – Project Constraints. The pipeline alignment from Valencia to Ventura should be feasible in concept; however, there are considerations that must be investigated in detail to determine the actual feasibility of the construction. The potential project constraints and considerations listed below should be evaluated prior to selecting this alternative. The list is not all-inclusive, but provides issues that could substantially impact implementation and project costs and could potentially render the alternative infeasible or impractical. Note, the following constraints and considerations were not factored into the construction cost estimate.

- Geologic conditions
- River or stream undercrossings
- Traffic control
- Property acquisition and rights-of-way
- Permitting (and impacts to impairment determination)
- Environmental assessment
- Permit for ocean discharge
- Dewatering flows that cannot be discharged to the Santa Clara River

Alternative 2: Brine Pipeline to JWPCP

Alternative 2 involves a pipeline and pump station to transport brine waste from the Valencia and Saugus WRPs to the CSDLAC JWPCP located in the City of Carson. The brine waste would be discharged to the ocean via the existing tunnel and ocean outfall connected to the JWPCP. The challenge of this alternative is that the pipeline would be installed in densely populated and highly urban areas along the majority of the pipeline alignment. See Figure 4-3 in the Appendix for a plan view of the pipeline alignment. The total length of the brine pipeline is approximately 46 miles. A booster pump station would also be required to transport the brine over the mountain range just south of Valencia. From that point, it may be feasible to transport the brine via gravity pipeline to the JWPCP.

The brine pipeline would be sized for an ultimate brine flow of 8.6 mgd, which requires a 30-inch pipeline. The pipeline would be a reinforced concrete pipe with manholes installed every 500 feet. Depending on brine pH, other pipeline materials could be selected with no major impact on costs. Considering the highly urban areas of the pipeline alignment, construction would be very difficult and may require significant tunneling to cross under freeways and major streets. Existing utilities such as sewer, water, gas, power, and telecommunication lines will also create a challenge to find adequate space for the brine pipeline. Construction of a railroad corridor for the Alameda Corridor Project through urban areas of Los Angeles required five years to complete. These challenges result in a higher construction cost estimate for the pipeline with additional construction contingency intended to account for unknown conditions. Table 4-6 presents conceptual-level capital costs for a brine pipeline and pump station.

Table 4-6 Capital Costs for Alternative 2: Brine Pipeline to JWPCP

	Unit	Value
Design Parameter		
Brine Flow	MGD	8.6
Pipeline Diameter	inches	30
Length – Brine Pipeline	miles	46
Pump Station Horsepower	hp	1,020
Construction Costs		
Brine Pipeline	\$ million	\$224 M
Booster Pump Station	\$ million	\$6.0 M
Engineering, Legal, Administration	\$ million	\$58.0 M
Total Capital Cost	\$ million	\$288 M

The O&M strategy for pipeline inspection, cleaning, and repairs is identical to the strategy proposed in Alternative 1. Additional O&M costs are included for a booster pump station. Table 4-7 presents conceptual-level O&M costs for a brine pipeline and pump station.

Table 4-7 O&M Costs for Alternative 2: Brine Pipeline to JWPCP

	Unit	Value
Pipeline Inspection and Cleaning		
Inspection and Cleaning	\$/ft	\$2
Length – Brine Pipeline	ft/yr	27,000
Annual Cost	\$/yr	\$54,000
Pipeline Repair		
Annual Repair Fund	\$/yr	\$447,000
Booster Pump Station		
Annual Energy Cost	\$/yr	\$661,000
Annual Labor Cost	\$/yr	\$240,000
Total Annual O&M Cost	\$/yr	\$1,402,000

Brine Pipeline to JWPCP – Project Constraints. The pipeline alignment from Valencia to Carson should be feasible in concept; however, there are considerations that must be investigated in detail to determine the actual feasibility of the construction. The potential project constraints and considerations listed below should be evaluated prior to selecting this alternative. The list is not all-inclusive, but provides issues that could render the alternative infeasible or impractical. Note, the following constraints and considerations were not factored into the construction cost estimate.

- Geologic conditions
- Freeway and major street undercrossings
- Traffic control
- Property acquisition and rights-of-way
- Permitting (and impacts of impairment determination)
- Environmental assessment
- Permit for ocean discharge
- Dewatering.

Alternative 3: Truck Brine to JWPCP

This alternative involves transporting brine waste via 5,000 gallon trucks from the Valencia and Saugus WRPs to the CSDLAC JWPCP located in the City of Carson. Brine waste would be loaded into trucks and hauled to the JWPCP, where it would then be discharged into the existing tunnel and ocean outfall. Preliminary calculations were performed to estimate the number of truck loads that would be required to haul brine waste. Calculations were performed for brine waste flow of 4.4 MGD and 8.6 MGD, which are the projected brine flows from the RO treatment process for the years 2015 and ultimate capacity, respectively. For brine flows of 4.4 MGD and 8.6 MGD, approximately 880 and 1,720 truck loads, respectively, would be required per day to haul

brine waste to the JWPCP. Additionally, an equalization basin in the range of 6 to 12 million gallons would be required at the water reclamation plants to equalize the flow from the RO treatment facilities to allow for loading into the trucks. The number of truck deliveries required per day make this alternative infeasible; and therefore, this alternative will not be given further consideration.

Alternative 4: Brine Disposal via Deep Well Injection

Deep well injection is a method used for disposal of non-hazardous liquid wastes. The wastes are injected into porous subsurface formations in areas where there is no communication with potable groundwater supplies. This lack of connection is vital to successful development of disposal wells. It has been theorized that deep well injection could be used as a method for brine disposal in existing oil fields in the Santa Clarita valley. Injection wells are used extensively for disposal of concentrate brine in Florida. In California, however, there is very limited experience with this disposal methodology.

Numerous issues must be investigated in detail prior to proceeding with this alternative. The geology, hydrogeology, and existing well conditions must be evaluated in detail. Adjacent groundwater supplies, both existing and potential, must be identified and favorable conclusions must indicate that water supplies will not be negatively impacted by the brine injection. Permit issues must also be resolved to proceed with deep well injection. Injection wells in California are regulated under the Toxic Injection Well Control Act enforced by the State Department of Health Services (DHS). One requirement of the Act is a permit can be issued only if DHS determines that the wastes cannot be disposed of in an alternative way.

Data from existing oil fields in the Santa Clarita valley were examined to estimate geologic characteristics. The oil fields are mostly in the Pico and Repetto formations. The depths of these wells range up to approximately 2,000 feet. The formations consist of interbedded marine siltstone, sandstone, mudstone and conglomerate. The Pico and Repetto formations are approximately 1,000 feet in total thickness. The total storage capacity of the formations is finite; therefore, the capacity must be estimated to determine the duration that deep well injection may be utilized.

Deep Well Injection – Cost Estimate. Preliminary calculations for the deep well injection alternative indicate that approximately 44 wells are necessary to inject 4.4 MGD of brine waste into the subsurface environment. Each well would have a tubing diameter of 6-inches and a total depth of 2,000 feet. In addition to the deep injection system, a system of monitoring wells will be required. At this level of evaluation, the exact number of wells is unknown, but it is estimated that at least 15 monitoring wells should be installed. A pump station and brine pipeline are also required to transport the brine waste from the Valencia and Saugus water reclamation plants to the injection wells. Table 4-8 presents a breakdown of conceptual-level capital costs for the deep well injection alternative.

Table 4-8 Capital Costs for Alternative 4: Deep Well Injection

	Unit	Value
Deep Injection Well (each)	\$ M/well	\$ 2.2 M
Total for 44 wells	\$ million	\$ 96 M
Monitoring Well (each)	\$ M/well	\$ 0.5 M
Total for 15 wells	\$ million	\$ 7.5 M
Brine Pipeline		
Length	mile	10
Construction Cost	\$ million	\$ 19 M
Pump Station		
Horsepower	hp	424
Capital Cost	\$ million	\$ 4 M
Engineering, Legal, Administration	\$ million	\$ 32 M
Total Capital Cost	\$ million	\$ 159 M ¹⁰

Operation and maintenance costs for the deep well injection alternative are estimated to be associated with the sampling of monitoring wells and the O&M for the brine pipeline and pump station. Table 4-9 presents conceptual-level O&M costs for the deep well injection alternative.

Table 4-9 O&M Costs for Alternative 4: Deep Well Injection

	Unit	Value
Brine Injection Wells		
Annual Labor Cost	\$/yr	\$240,000
Pipeline Repair		
Annual Repair Fund	\$/yr	\$38,000
Pump Station		
Annual Energy Cost	\$/yr	\$278,000
Annual Labor Cost	\$/yr	\$160,000
Total Annual O&M Cost	\$/yr	\$716,000

¹⁰ The total capital cost of a deep well injection system for a capacity of 8.6 MGD (brine flow estimated for ultimate buildout of the SCV) is estimated to be \$295 million with an annual operation and maintenance cost of \$1.0 million per year. It is estimated that a total of 86 injection wells and 29 monitoring wells would be required to handle the disposal of ultimate buildout brine flows for the SCV.

Brine Disposal via Deep Well Injection – Project Constraints. Deep well injection of brine should be feasible in concept; however, there are considerations that must be investigated in detail to determine the actual feasibility of this option. The storage capacity of the underground formation could be insufficient to make this a long-term disposal option. In addition, the DHS may not issue permits for deep well injection if other disposal options appear to be feasible. The potential project constraints and considerations listed below should be evaluated prior to selecting this alternative. The list is not all-inclusive, but provides issues that could substantially impact implementation and project costs and could potentially render the alternative infeasible or impractical. Note, the following constraints and considerations were not factored into the construction cost estimate.

- Determination of well storage capacity
- Impact on adjacent groundwater supplies
- Property acquisition and rights-of-way
- Permitting
- Environmental assessment.

IMPLEMENTATION SCHEDULE

The alternatives presented in the preceding sections for MF RO treatment and brine disposal involve difficult construction issues and will likely be confronted with significant environmental and permitting challenges. The construction of a brine pipeline to Ventura or Carson will be complex and could encounter construction difficulties such as dewatering, rock excavation, and stream crossings. The preparation of an environmental impact report and permits is anticipated to be extensive, especially considering that brine discharge to the ocean is being proposed. Right-of-way and property acquisition issues will also be extensive since a brine pipeline to Ventura or Carson will pass through many communities and involve numerous utilities and municipal organizations.

Conceptual-level implementation schedules were prepared for the MF RO facilities at the Saugus and Valencia WRPs and the various brine disposal alternatives presented in this report. Only major project activities that require significant time expenditure were included in the implementation schedules to provide an overall estimate of project duration. Activities that were presented in the schedules include preliminary design, pilot-testing, geotechnical evaluation, environmental impact report, permitting, right-of-way acquisition, design, and construction. A projected implementation timeline for each alternative is presented in Figure 4-4.

Space restrictions at Saugus will make MF RO site selection difficult and site preparation more costly. The brine disposal options are anticipated to be the most difficult and contentious components of the project. The environmental impact report and permitting process associated with the brine disposal options are anticipated to add significant effort and time to the project. Approval for the discharge of brine either to the ocean or a subsurface formation will require extensive evaluation of environmental impacts and will

be under close scrutiny by regulatory agencies. The estimated project duration for each alternative is presented in Table 4-10.

Table 4-10 Estimated Project Duration for Chloride Reduction Alternatives

Alternative	Description	Project Duration
MF RO		2 yr., 9 mo.
Brine Alternative 1	MF RO and Brine Pipe to Ventura	7 yr., 9 mo.
Brine Alternative 2	MF RO and Brine Pipe to JWPCP (Carson)	8 yr.
Brine Alternative 4	MF RO and Brine Deep Well Injection	7 yr., 3 mo.

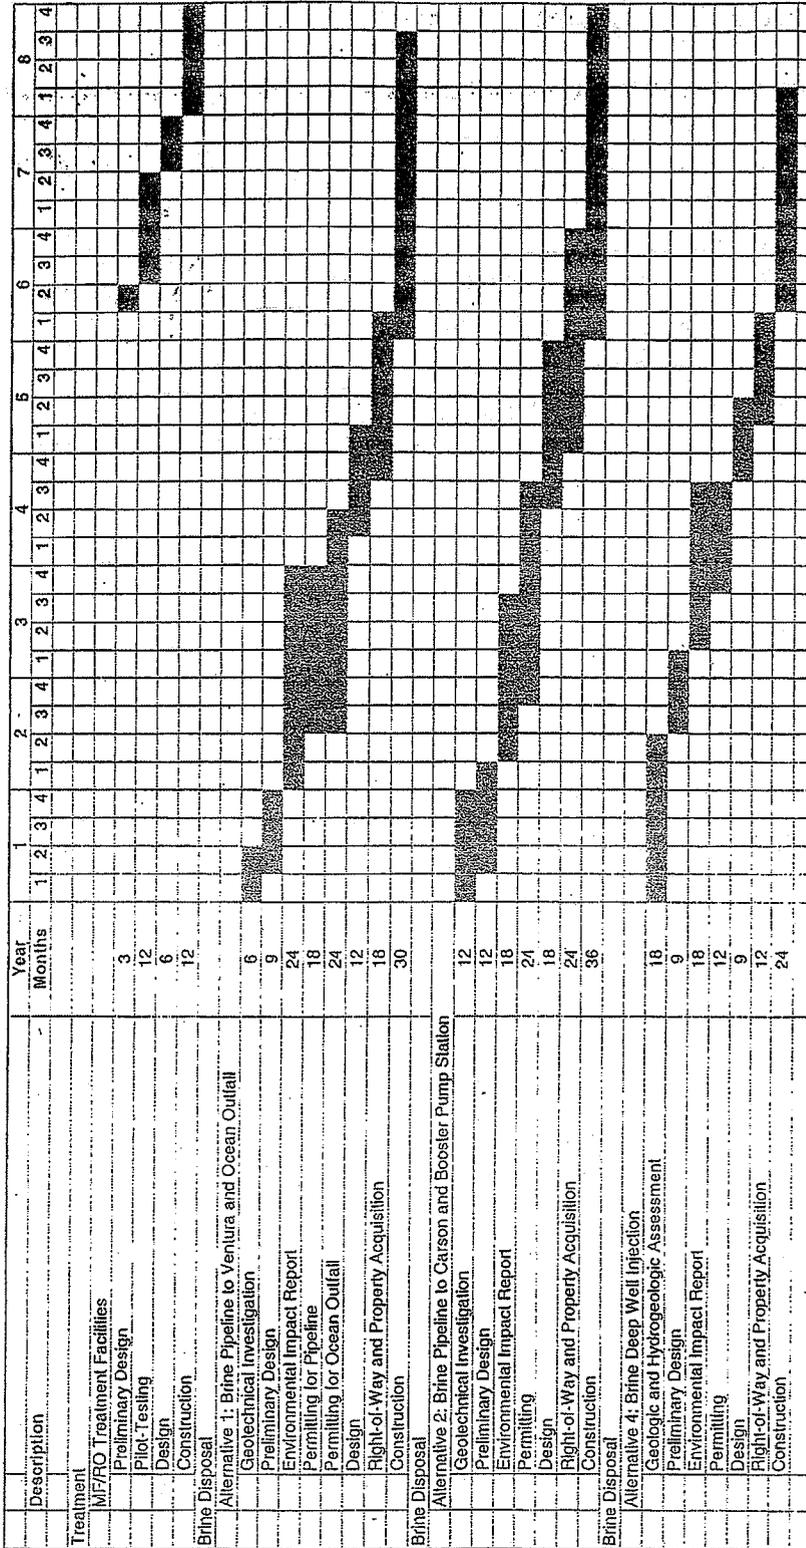

Figure 4-4 Project Conceptual Level Implementation Schedule

**SECTION 5
 SUMMARY AND CONCLUSIONS**

TMDL CHLORIDE REQUIREMENT

The TMDL chloride WLAs for the Saugus and Valencia WRPs are in the process of being developed. In this report an instantaneous chloride discharge limit of 100 mg/L for both the Saugus and Valencia WRPs is used as the basis for demineralization facility sizing.

CURRENT AND PROJECTED FLOWS AND CHLORIDE LEVELS

Table 5-1 presents the projected flows for the Saugus and Valencia WRPs. The flows presented in Table 5-1 through the year 2015 are based on the CSDLAC Facilities Plan. Ultimate build out flow projections were evaluated in a recent internal memorandum within CSDLAC. It is anticipated ultimate buildout flows will be reached within the next 50 years.

Table 5-1 Projected Flows

	Current	2010	2015	Ultimate
Saugus WRP	6.5 MGD	6.5 MGD	6.5 MGD	6.5 MGD
Valencia WRP	12.6 MGD	21.6 MGD	27.6 MGD	59 MGD

Projected worst-case WRP effluent instantaneous chloride concentrations for the year 2015 formed the basis for sizing the demineralization facilities. These projections were based on SCVJSS estimates of future annual average WRP effluent chloride concentrations under drought conditions assuming the current rate of increase in chloride loading to the Saugus and Valencia WRPs (e.g. no prohibition of self regenerating water softeners). These worst-case instantaneous maximum chloride concentrations for the year 2015 are presented in Table 5-2.

Table 5-2 Worst-Case Instantaneous Chloride Estimates

	Year 2015
Instantaneous Chloride	
Saugus Effluent	575 mg/L
Valencia Effluent	467 mg/L

CHLORIDE REDUCTION ALTERNATIVES

A number of technologies for chloride reduction were considered, including MF RO, thermal distillation, ion exchange and electro dialysis/electrodialysis reversal. RO with MF pretreatment was selected based on its proven application for this purpose.

CHLORIDE REDUCTION COST ESTIMATES

A spreadsheet model was developed for estimating capital and O&M costs for MF RO facilities at the Saugus and Valencia WRPs as well as the costs for three brine disposal options. The MF RO facilities were sized for treating year 2015 flows, instantaneous maximum chloride concentrations of 575 mg/L at Saugus WRP and 467 mg/L at Valencia WRP and a chloride discharge requirement of 100 mg/L as an instantaneous maximum. Brine pipelines were sized to handle ultimate buildout flows of 59 MGD at Valencia and 6.5 MGD at Saugus. The 30-inch pipe required has sufficient capacity for up to 12 MGD of brine flow. Deep well injection of brine was sized for 2015 flow rates. Table 5-3 presents the design criteria for sizing the MF RO facilities and the brine disposal options.

Table 5-3 MF RO and Brine Disposal Design Criteria

	Year	WRP Effluent Flow	WRP Effluent Chloride	Chloride Discharge Limit
Saugus WRP MF RO	2015	6.5 mgd	575 mg/L	100 mg/L
Valencia WRP MF RO	2015	27.6 mgd	467 mg/L	100 mg/L
Pipeline Brine Disposal Options 1 & 2	2050	65.5 mgd	634 mg/L (Saugus) 516 mg/L (Val.)	100 mg/L
Deep Well Injection Brine Disposal Option 4	2015	34.1 mgd	575 mg/L (Saugus) 467 mg/L (Val.)	100 mg/L

Table 5-4 presents the spreadsheet model total capital costs and annual O&M costs using the design criteria of Table 5-3. Costs are presented for MF RO facilities at the two WRPs and for each of the three brine disposal options.

Table 5-4 Total Capital and O&M Costs for Chloride Reduction with MF RO¹¹

	Saugus WRP MF RO	Valencia WRP MF RO	Brine Pipe to JWPCP	Brine Pipe to Ventura	Well Injection of Brine ¹²
Design Flow, RO product for MF RO	4.9 MGD	20 MGD	8.6 MGD	8.6 MGD	4.4 MGD
Total Capital Cost	\$ 36 M	\$ 142 M	\$ 288 M	\$ 244 M	\$ 159 M ¹³
Annual O&M Cost	\$ 1.9 M	\$ 7.5 M	\$ 1.4 M	\$ 0.32 M	\$ 0.72 M

PROJECT ASSUMPTIONS AND CONSTRAINTS

The implementation of MF RO at the Saugus and Valencia WRPs for chloride reduction is feasible in concept, however there were a number of assumptions made in projecting future flows and future chloride concentrations that affect the size and cost of the facilities required. These assumptions include:

- The chloride TMDL discharge requirement is assumed to be 100 mg/L instantaneous for both WRPs. This may change once the final TMDL requirement is issued.
- SCVJSS projections of future annual chloride concentrations and the resultant estimates of future worst-case instantaneous chloride concentrations are accurate.
- The relative height of instantaneous chloride spikes at each WRP is assumed to remain the same in the future.
- The influent flow equalization capacity and mode of operation at the Valencia WRP, relative to design capacity, is assumed to remain the same.

The following assumptions affecting the costs of implementing MF RO at the two WRPs were made:

- The cost estimates do not include costs associated with equalizing the WRP effluent flows.
- Special siting requirements at the plants may greatly add to the cost of MF RO facilities.

¹¹ MF RO capital costs do not include costs for equalization of flows to the MF and RO facilities at each WRP.

¹² The option of disposing brine waste via injection wells may not be feasible since the CA DHS would not likely issue permits for deep well injection if other disposal options appear to be feasible. In addition, the storage capacity of the underground formation could be insufficient to make this a long-term disposal option.

¹³ The total capital cost of a deep well injection system for a capacity of 8.6 MGD (brine flow estimated for ultimate buildout of the SCV) is estimated to be \$295 million with an annual operation and maintenance cost of \$1.0 million per year. It is estimated that a total of 86 injection wells and 29 monitoring wells would be required to handle the disposal of ultimate buildout brine flows for the SCV.

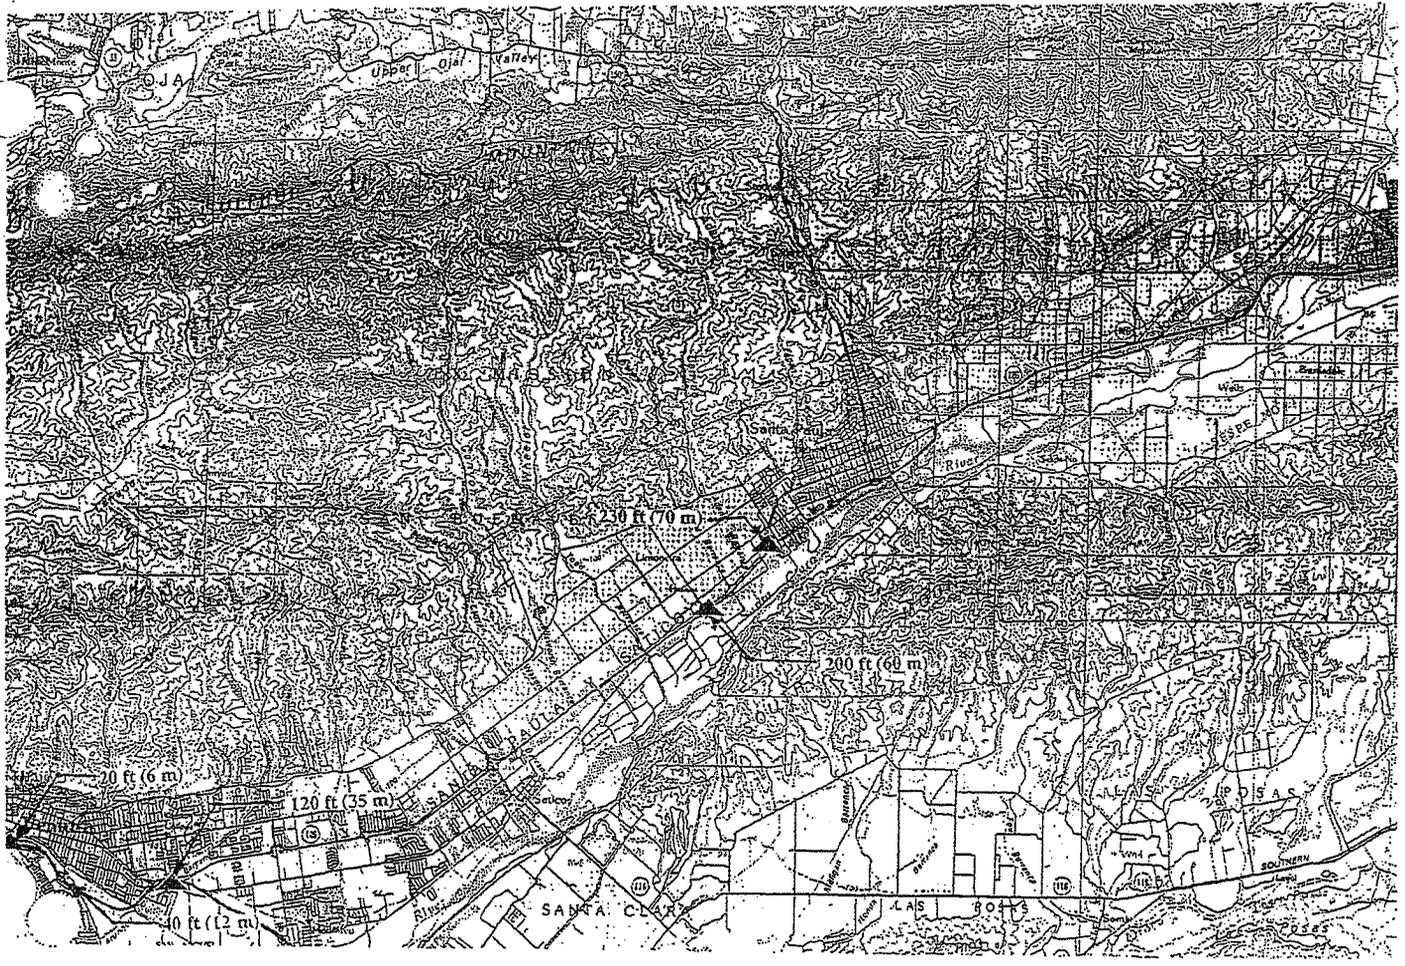

- MF RO and brine disposal capacities are based on the assumption of treating worst-case instantaneous maximum chloride concentrations at plant design flow rates. It may be feasible to implement limited chloride equalization by diverting influent flows during chloride peaks to separate off-line equalization for this purpose. Further data would be needed to assess the potential impact of chloride equalization on facility size and cost. At best, this chloride equalization would result in the equivalent of treating worst-case 24-hour composite chloride concentrations. Preliminary costs based on estimated worst-case 24-hour composite chloride concentrations suggest that total capital cost savings would be only three to four percent (not including the cost of additional equalization capacity).

With respect to the brine pipeline disposal options, the following constraints and considerations may affect the feasibility of the project. These include:

- Geologic conditions
- Freeway and major street undercrossings
- Traffic control
- Property acquisition and rights-of-way
- Permitting (and impact of impairment determinations)
- Environmental assessment
- Permit for ocean discharge
- Dewatering activities.

Phase 1

Final Report

Literature Review Evaluation

Upper Santa Clara River Chloride TMDL Collaborative Process

Prepared for
Upper Santa Clara River
Agricultural Technical
Working Group

Prepared by
CH2MHILL

September 2005

Executive Summary

Background

On May 6, 2004, the Los Angeles Regional Water Quality Control Board (Board) adopted an amendment to the Water Quality Control Plan for the Los Angeles Region to revise the interim waste-load allocations and Implementation Plan of the Upper Santa Clara River (SCR) Total Maximum Daily Load. The Implementation Plan incorporated four major studies, including an evaluation of the appropriate chloride (Cl) threshold for the reasonable protection of salt-sensitive agriculture. The Los Angeles County Sanitation Districts (Districts) and the Board are working jointly on these studies. The Districts own and operate two water reclamation plants (the Valencia and the Saugus Water Reclamation Plants) in Los Angeles County that discharge tertiary-treated effluent to the Upper SCR. This report references both the Santa Clara River and the project study area/areas of concern as the "Upper SCR." Within the reaches of the river, avocado, strawberry, and some nursery crops have been identified as the most Cl- and salt-sensitive crops that are currently grown and that are likely to be grown in the future.

Purpose

This report focuses on the Cl effects on these three crop types, and many other factors related to Cl effects, such as salinity, ion interactions, and management through a comprehensive literature evaluation. As part of Phase 1, Literature Review and Evaluation Task 1 efforts, approximately 200 articles were acquired and reviewed. This report, presenting the evaluation, is the deliverable for Phase 1, Literature Review and Evaluation Task 2 efforts. It presents the criteria, methodology, and results of the evaluation used to characterize and evaluate the literature found in the literature search and review. The main objective of the evaluation is to develop a matrix that ranks each study on its usefulness in developing a Cl threshold for the reasonable protection of salt-sensitive agriculture. This report then takes that ranking, coupled with a detailed scientific evaluation of each article, and recommends (if possible) a threshold value or range for each of the three crop types of concern: avocado, strawberry, and nursery crops.

Crop Types

Avocados

Avocados are grown in several Southern California counties. According to the California Avocado Commission in 2004, the California avocado crop was valued at \$380,000,000 and accounted for over 60,000 acres of producing agricultural crops. Ventura County produces the second largest avocado crop (San Diego is the largest) in California, with about 15,000 producing acres in 2003-2004. Los Angeles County reported very small acreage in 2003-2004 (135 acres) and only accounted for 0.2 percent of the California crop. Most of California avocado crops (90 percent) are Hass variety.

EXECUTIVE SUMMARY

The avocado is known as one of the most sensitive species among woody plants to both salinity and Cl. Because Cl is a component of a salt, it can cause osmotic stress and stress related to specific physiological effects of the Cl ion. Cl, like other salt ions, accumulates in irrigated soils in arid and semiarid regions. Because the avocado is a tropical plant that is native to regions where rainfall is frequent, avocado commercial production in semiarid regions requires irrigation. Therefore, it is likely that without adequate management, most irrigated soils on which avocados are grown eventually accumulate Cl, even where the natural levels of Cl in the soil and irrigation water are low. Irrigation management, including appropriate leaching fractions, is commonly considered necessary to avoid Cl buildup in the soil matrix.

In most cases, avocados take up Cl and transport it to the shoots and leaves. Cl is mobile in plants for the same reason that it is mobile in the soil solution - it easily moves with water and is negatively charged, similar to the exchange sites of the soil and humic matter. However, when a plant transpires water from the leaf, Cl is left behind. This process is how Cl accumulates in leaves, and is why Cl accumulation in avocado leaves is directly related to transpiration. Therefore, the most distinctive symptom of Cl injury is leaf-tip burn, which is a result of high levels of Cl accumulation in leaves. Cl and/or salts can also affect other avocado growth parameters, such as root weight, trunk growth, shoot growth, yield, fruit quality, and photosynthesis.

Strawberries

California strawberry production accounts for 88 percent of the national total for fresh and frozen strawberries, and it is the seventh most valuable fruit crop grown in the state. Although the strawberry is a perennial plant, it is primarily grown as an annual in California. This partially accounts for the high yield in the state, which is over 50 percent higher than that obtained in most states. Strawberry plants are shallow rooted and, thus, sensitive to osmotic stress from soil moisture deficit.

Relative to avocados, limited research has been performed to specifically address Cl toxicity in strawberries. The research information available on strawberries and Cl was often integrated in salinity-focused studies. Most studies involved growing berries in nutrient solutions with variable salinity from added salt treatments. Results of these studies proved that salinity and Cl uptake have significant negative effects on strawberry plant growth, survivorship, and fruit production, and that there is a strong positive correlation between Cl supply and uptake. Other studies showed that Cl uptake was roughly proportional to the concentrations in soil or substrate solutions. Cl toxicity symptoms were characterized by discoloration, followed by necrosis from margins toward base of leaves, and, finally, leaf abscission.

Nursery Crops

California has the largest nursery and floral industry in the United States, responsible for approximately 22 percent of United States receipts in 2002. A vast array of nursery/ornamental crops are grown in Southern California. Irrigation and cultural methods are also diverse, including flood, drip, sprinkler, microspray, and a continuous fine mist or fog. These crops can be grown in natural soil or in containers.

Effects of elevated salt or Cl on growth of nursery crops are typically not a major concern unless visual impacts are noticed. In most cases, value of plants is determined by aesthetics rather than growth or yield. Therefore, any evidence of leaf burn, necrosis, or abscission can greatly reduce the value of the crop. Much less is known about salt tolerance and Cl injury in nursery crops relative to many agricultural crops. It is widely accepted that certain nursery crop species are the most salt- and Cl-sensitive species (e.g., azaleas, camellias, and rhododendrons). It is also widely known that most woody crops, such as many nursery species, tend to be more sensitive to Cl toxicity than herbaceous crops. Relatively few research studies are available examining Cl tolerance in nursery crops. The studies that are available vary widely in approach, objectives, and conclusions, making comparison of results among studies difficult. The appropriate threshold for Cl appears to depend greatly on the specific nursery crop and irrigation method to be used.

Evaluation

Three types of evaluation criteria were used to assess the value of the literature found during the literature review, as follows:

- **Scope** - The study scope criteria were used to evaluate the presence or absence of valuable information. These criteria cannot be compared to any known conditions or practices; however, they indicated whether or not the literature provided valuable information on a specific aspect of the project topic. Each piece of literature was scored with a 0 or 1 for each scope of study criterion, depending on whether or not it was present in the study.
- **Applicability** - The study applicability criteria were used to evaluate how relevant the study was to the project area in terms of environmental conditions and agricultural practices. These criteria were compared with known conditions and/or practices in the Upper SCR, and were therefore used to evaluate how applicable the literature is to the project area. Literature was given a score of 0 to 3 for each criterion, depending on the extent the criterion is examined in the literature.
- **Quality** - The study quality criteria were used to evaluate the scientific merit of the literature. Scores of 0 to 3 were given to each piece of literature for each study quality criterion, depending on factors such as the presence or absence of standard requirements for scientific experimentation, analysis and interpretation of results, source of literature, and currency and duration of the study.

Thorough discussion is dedicated to the actual evaluation of the articles for each of the three crop types and the formulation of supporting information and trends that might or might not support establishment of a Cl threshold for these crops. The reader is encouraged to carefully review Section 3.0, Evaluation, of this report to completely understand the findings and limitations of this evaluation.

Recommendations

Avocados

No evidence indicates that the CI hazard level for avocados is below 100 milligrams per liter (mg/L). No scientific studies or extension specialists with experience in the project study area have indicated that CI injury occurs below 100 mg/L. Therefore, the lower limit of the CI hazard range is reasonably certain.

The upper range is less certain. Above this concentration (100 mg/L), the CI hazard level has been interpreted up to 178 mg/L by at least one author. There are various reasons to believe that this upper limit is too high. The reader is referred to Section 4.0, Recommendations, of this report for detailed justification and discussion on this topic. At CI concentrations between 120 and 178 mg/L, CI injury has been demonstrated to occur in several studies. For this reason, the recommendations for the CI thresholds that are above 100 mg/L converge on approximately 120 mg/L. The applicability of this value has some limitations because it is derived from sources that are not specific to the project study area; however, no valuable evidence suggests another proposed CI level anywhere between 120 and 178 mg/L. Therefore, although there is clearly not enough evidence to propose an absolute threshold with the literature presently available, the best estimate of a CI hazard concentration ranges from 100 to 120 mg/L.

Again, the reader is strongly encouraged to review the detailed information and justification of this threshold range provided in Section 4.0, Recommendations, of this report.

Strawberries

The studies that were evaluated provided valuable information about strawberry CI uptake and correlated increased uptake with increased leaf burn. However, they did not provide sufficient data to determine an appropriate CI threshold for irrigation water. The primary factors that lead to this conclusion are as follows:

- Insufficient data were collected to correlate CI uptake to yield and fruit-quality impacts.
- The studies noted variability in plants or plant injury in control treatments, suggesting potential outside factors in the results.
- Study applicability to the Upper SCR was limited primarily with respect to the following factors found in the literature:
 - Varieties grown
 - Different or unknown irrigation methods
 - Different or unknown irrigation management
 - Different or unknown climate
 - Different or unknown cultural practices

Nursery Crops

The available information does not provide sufficient evidence upon which to base a recommendation for a Cl threshold for nursery crops. The primary factors that lead to this conclusion are as follows:

- Studies by Wu et al., come the closest to providing the needed information, but they showed evidence of adverse effects with sprinkler irrigation at 300 mg/L Cl, suggesting that the threshold value is lower than 300 mg/L. In this case, it is difficult to justify establishing a standard based on the results of only a few experiments by one research group.
- Studies by the United States Salinity Laboratory provide much information on the relative salt tolerance for soil-planted and surface-irrigated plants, but include no information on sprinkler irrigation effects. Given the importance of sprinkler irrigation to Upper SCR nursery crop production, and the differential effects of root zone as compared to foliar exposure, the value of these studies in setting an irrigation water standard is limited.
- Thresholds suggested by extension pamphlets and local experts are not clearly tied to experimental data, making it difficult, again, to justify at the threshold level.
- Production of nursery crops in large containers (specimen trees) is a significant component of the industry, and no data are available on Cl standards for the production of these crops.
- Hundreds of plants potentially important to the industry are grown in the SCR, but data are only available on a limited number of these species.

I. Introduction and Summary of Key Findings

A. Purpose

The Upper Santa Clara River (USCR) Chloride TMDL Collaborative Process was instituted to determine a threshold for chloride in the eastern end of reach 4, as well as the entirety of reaches 5 and 6 of the Santa Clara River. As part of the Collaborative Process, an Agricultural Chloride Threshold Study (ACT Study) was conducted. This study consisted of a Literature Review and Evaluation (LRE) prepared by CH2M Hill, which was then examined by a panel of experts in the fields of agriculture, chemistry, and soil science. This panel of experts, known as the Technical Advisory Panel (TAP) met several times over the course of the study to provide oversight and advice to the stakeholders and consulting teams. In their final meeting on July 11th 2005, they were asked to examine a draft of the LRE, and come to a decision as to its accuracy. During their deliberation, six key questions were developed. These questions served to guide the overall discussion of the TAP as they made their decision.

The TAP identified six key scientific issues to structure their discussion:

- 1. Please comment on the adequacy of the literature for supporting an interim number or guideline for the level of chloride that will reduce plant yields. Please comment specifically on the adequacy of the literature to justify the avocado threshold recommendations in the Literature Review Evaluation and provide your opinion on the accuracy of CH2M Hill's conclusion that there is insufficient literature to provide a recommended number or range for strawberries and nursery crops. If you are not in agreement with the range provided in the LRE, how would you modify it to feel the guideline concentration range would prevent detrimental impacts on avocado yields?*
- 2. What are the relative impacts of TDS and chloride on avocado yield? Do you believe that it is scientifically possible to separate the effects of the two stresses? Please document the evidence supporting your conclusions.*
- 3. Would you recommend that an experimental study be conducted to produce more meaningful information than is available in the current literature? Why or why not? If yes, what elements or characteristics should such a study include?*
- 4. How can local knowledge best be integrated into the study? Describe, "what works" based on information from local experience.*
- 5. Please discuss the validity of plant injury, growth, and yield as metrics of injury. Do you conclude that if there is plant injury there will be a reduction in yield? On what do you base your conclusion?*
- 6. Please provide any general comments on the Literature Review Evaluation.*

The TWG, which is comprised of a variety of stakeholders representing growers, water purveyors, elected officials, public agencies, environmental organizations, and other interested parties, examined the Literature Review Report and then generated a list of comments which were then forwarded to the TAP for their consideration. The TAP response to comments is included as an appendix to this document.

B. TAP Membership Information

Oleg Daugovish, Ph.D.

Dr. Daugovish works with the Ventura County Cooperative Extension, where he serves as the farm advisor for strawberry and vegetable crops in Ventura County. He conducts research and educational programs with emphases on pest control and environmental quality of production, addressing the needs of organic farmers in Ventura County. He has also served as a research assistant with the Department of Plant, Soil and Entomological Sciences at the University of Idaho; Department of Agronomy at the University of Nebraska; and the Stensund Ecological Center. Dr. Daugovish received his Ph.D. from the

University of Idaho; M.S. from the University of Nebraska, B.S. from Latvia University of Agriculture. He is the author and co-author of 4 technical publications, 4 abstracts, and 6 technical proceedings.

Ben A. Faber, Ph.D.

Dr. Faber works with the Ventura County Cooperative Extension, serving as the soils/water/subtropical horticulture advisor in Ventura County. He has research experience in plant nutrition and soil management. His current research focuses on irrigation requirements of avocado and citrus, methods of controlling groundwater nitrate pollution, effects of yard waste mulches on citrus production and various methods for controlling micronutrient deficiencies in avocado. Dr. Faber received his Ph.D. from the University of California, Davis; M.S. Soil Fertility, University of California, Davis; B.S. Biology, University of California, Santa Cruz. He is the author and co-author of multiple technical papers and publications, including 18 publications developed over the last six years.

S.R. Grattan, Ph.D.

Dr. Grattan is a professor at the University of California, Davis, where he serves as the plant-water relations specialist in the Department of Land, Air, and Water Resources, Hydrologic Science Division. His research areas include irrigation management with saline water; plant response in saline environments; uptake of nutrients and trace elements by plants in saline environments; and crop water use. He also performs international consulting work with the World Bank, USDA/OICD, and USAID, and has previously served as a research assistant with the University of California, Riverside, and as a research plant physiologist at the USDA/ARS Salinity Laboratory. Dr. Grattan received his Ph.D. in Soil Science from the University of California, Riverside; M.S. in Soil Science from the University of California, Riverside; B.S. Soil and Water Science from the University of California, Davis. He is the author and co-author of 15 technical proceedings/presentations, 74 refereed publications, and over 100 reports.

John Letey, Jr. Ph.D.

Dr. Letey is Professor Emeritus of Soil Science, Soil and Water Sciences Unit, University of California, Riverside and Director of the Center for Water Resources, University of California, Riverside. He has also served as the Chair, Department of Soil and Environmental Sciences; Director, University of California Kearney Foundation of Soil Science; Associate Director, University of California Water Resources Center; California State Water Quality Coordinator; and Director, University of California Salinity/Drainage Program. His research areas include irrigation, salinity, drainage, and plant-water relationships. He received his Ph.D. in Soil Science from the University of Illinois, and his B.S. in Agronomy from Colorado State University, and has served on numerous state, federal and international advisory committees; University of California and Soil Science Society of America task forces and committees; and editorial boards. He is the author and co-author of over 80 international presentations, technical papers, publications and reports.

Darrell H. Nelson, B.S.

Mr. Nelson is a consultant with Fruit Growers Laboratory, and a farm operations manager and farmer in Ventura County. He is the former President and Laboratory Director of the Santa Paula and Stockton Fruit Growers Laboratory. He received his B.S. in Soil and Water Science from the University of California, Davis, and has made presentations on the use of scientific information to implement best management practices and the use of nutrient budgets. He has also been active in the appraisal of drinking water quality for regulatory purposes and irrigation water for suitability to specific crops. He has advised the Los Angeles Regional Water Quality Control Board on Best Management Practices and the use of Nutrient Budgets as they relate to Total Maximum Daily Loads (TMDLs), and is currently serving on the California Avocado Commission Research Committee as co-chairman of the management and physiology sub committee.

Kenneth K. Tanji, Sc.D.

Dr. Tanji is Professor Emeritus of Hydrology, Department of Land, Air and Water Resources, University of California, Davis. He has also served as the Senior and Principal Laboratory Technician, Department of Irrigation; Lecturer in Water Science, Department of Water Science and Engineering; Professor of Water Science, Department of Land, Air and Water Resources; Vice Chair and Chair, Department of Land, Air and Water Resources; and Professor of Hydrology, Department of Land, Air and Water Resources. He has more than 45 years of research experience dealing with salinity in agricultural lands in California, the Western U.S. and foreign countries, and is currently involved with developing a salinity management guide for irrigation of landscapes using recycled water. Dr. Tanji received his Sc.D. in Agricultural Science-Irrigation, Drainage and Hydrological Engineering from Kyoto University; M.S. in Soil Science-Soil Chemistry from the University of California, Davis; B.S. in Chemistry from the University of Hawaii. He is the author and co-author of 6 books, 28 book chapters, 158 papers, and more than 200 technical reports and proceedings.

C. Definitions

In an effort to clarify the work of the Agricultural Chloride Study, the TAP developed the following definitions to differentiate the terms "Threshold" and "Guideline":

Threshold Concentration for Chloride Injury: A specific and absolute numerical value of chloride concentration beyond which, according to the scientific literature, plant injury will occur. In the case of avocados this refers to the concentration beyond which leaf injury will occur.

Guideline Concentration for Chloride Injury: A range of numerical values of chloride concentration beyond which, according to the scientific literature, plant injury is likely to occur. The range establishes the likely lowest value at which injury might begin to occur and the likely highest value at which injury might begin to occur. For example, a guideline range for a hypothetical constituent might begin at 3 ppm as the lower bound or 5 ppm as the upper, depending on conditions.

D. Summary of Findings

The key differences between the majority report and the two minority reports center on three key issues: threshold value, the importance of TDS and ion-specific effects, and handling the need for incorporating local knowledge into the study. The chart below summarizes the positions of the majority and two minority reports on each of these issues.

	Threshold Value	TDS Vs. Ion-Specific Effects	Local Conditions
Majority Report	The lower limit at which chloride would be unlikely to cause damage to avocados on Mexican rootstock is somewhere around 100 mg/L. The upper limit, however, is much less clear to the panelists. The TAP majority suggests that 117 mg/L would be a conservative upper-protective limit and a limit of 140 mg/L may be protective but only under ideal, non-restricting conditions.	It seems clear that TDS has a negative impact on avocado as it does with other salt-sensitive crops. Chloride is a contributor to salinity, and studies have shown that avocado is sensitive to this specific ion. Separating the two effects (TDS and chloride) might be possible by controlled experiments, but it would be extremely difficult and long-term in nature. Extrapolating the results back to irrigation water Cl guidelines would again be difficult.	A correlational survey of local water quality, yield and management practices would provide useful information. However, establishing a precise relationship between chloride and yield may not be possible in light of the large number of management and environmental factors that can impact tree yield.
Minority Report 1	Using the soil concentration range of 355 to 540 mg/L from table 4 results in a range of 177 to 270 mg/L in the irrigation water.	All of the experimental evidence strongly leads to the conclusion that TDS is the critical factor for avocados and chloride is minor except to the extent that it contributes to TDS.	Although I agreed that a survey-based study to document local information on water quality and yield would be helpful, the probability of gaining definitive information is very low.
Minority Report 2	To utilize a level above 100 mg/l, which has been used successfully for the past 40 plus years, would be detrimental to the continued health of these crops.	I feel that the difference between the effects of chloride and total dissolved solids (TDS) are easily observed in the field and can therefore be separated in research trials.	Local knowledge and experience must be integrated into the study process for the determination of chloride thresholds for the plants in question.

E. Structure of the Critical Review Report

What follows is the Critical Review Report (CRR) of the TAP. This report contains three sections:

- First, a *majority report* containing majority responses to each of the questions, supplemental information, and the responses of the four individual TAP members that contributed to the majority decision.
- Second, a section containing the *minority report of John Letey*, which includes supplemental information and an explanation of the differences between his opinion and that of the majority.
- Third, the *minority report of Darrell Nelson* is included. This section includes supplemental information and an explanation of the differences between his opinion and that of the majority.

CHLORIDE SOURCE IDENTIFICATION/REDUCTION, POLLUTION PREVENTION, AND PUBLIC OUTREACH PLAN

NOTICE

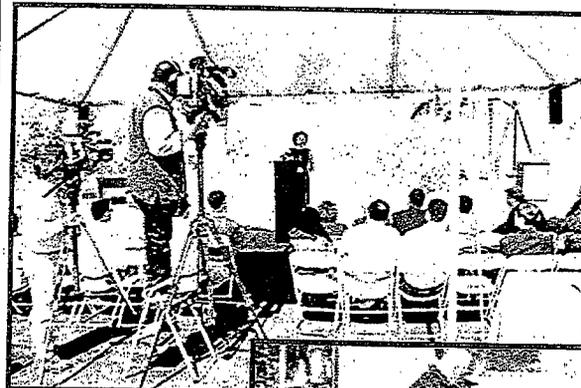

FACTS

- FACT** All homes must unplug automatic water softeners or sewer bills *may triple to \$400+.*
- FACT** Automatic water softeners produce a salty waste with high chloride levels.
- FACT** High chloride levels in the Santa Clara River could harm downstream aquatic life and agriculture.
- FACT** New automatic water softener installations become illegal in 2003 because of the high salt levels.
- FACT** The 7,000 households that DO use automatic water softeners must remove them or a new chloride treatment plant must be built to reduce salt going to the Santa Clara River.
- NEW FACT** Over 15 alternative water conditioning systems are available **NOW.**
- NEW FACT** Product reviews of these systems by community members are available on the chloride web site.

To find the right alternative for your home, visit www.lacsd.org/chloride or call 877-CUT-SALT. **UNPLUG your automatic water softener. TODAY!**

*To reduce water softeners are one kind to remove salt out of your house

NOVEMBER 2005

SANITATION DISTRICTS OF LOS ANGELES COUNTY

2005 NOV 16 PM 2:33
QUALITY CONTROL BOARD
LOS ANGELES HERON

Section 1. Executive Summary

EXECUTIVE SUMMARY

1.1 Introduction

The purpose of this report is to address measures taken and planned to be taken by the County Sanitation Districts of Los Angeles County (Districts) to quantify and control sources of chloride in the Santa Clarita Valley. The Districts currently operate eleven wastewater treatment facilities in Los Angeles County, California, including two water reclamation plants (WRPs) in the Santa Clarita Valley of northern Los Angeles County. These two plants, the Saugus and Valencia WRP, comprise the Santa Clarita Valley Joint Sewerage System (SCVJSS), along with more than thirty miles of Districts' operated trunk lines and one pumping plant. The system is operated by the Santa Clarita Valley Sanitation District of Los Angeles County.

The Saugus and Valencia WRPs discharge treated wastewater into the upper reaches of the Santa Clara River. The Districts are currently facing significant water quality and regulatory challenges regarding the concentration of chloride being discharged to the river from the Saugus and Valencia WRPs. The discharges contain chloride in excess of the water quality objective for the upper Santa Clara River of 100 mg/L, which was established by the California Regional Water Quality Control Board, Los Angeles Region (Regional Board) in 1978 to reflect existing water quality conditions.

To address chloride in the upper reaches of the Santa Clara River, the Regional Board adopted Resolution 04-004 on May 6, 2004. This resolution is known as the Upper Santa Clara River Chloride Total Maximum Daily Load (TMDL), and it sets forth a comprehensive Implementation Plan for evaluating and attaining the water quality objective for the upper Santa Clara River. It became effective May 4, 2005. One of the tasks required under the TMDL Implementation Plan, Task 3, requires the Districts to submit a plan addressing measures that have been taken, and are planned, to quantify and control sources of chloride in the SCVJSS. This report was prepared in partial fulfillment of the requirements under Task 3 of the Upper Santa Clara River Chloride TMDL Implementation Plan.

1.2 Sources of Chloride Loadings

This report addresses chloride sources for the years 2002 through the first half of 2005. Chloride loadings for the year 2001 were fully characterized in a previous report by the Districts, *Santa Clarita Valley Joint Sewerage System Chloride Source Report, October 2002*. This report builds upon the methodologies established in the previous report.

The primary source of chloride in the SCVJSS is chloride present in potable water served to the community. Potable water in the area is derived from two sources: imported water delivered under the State Water Project (SWP) and local groundwater. The chloride concentration in these two sources varies depending on a number of factors, most notably rainfall patterns. To estimate chloride loading in the potable water supply, water quality and quantity data from the local water suppliers were used.

Other sources of chloride in the SCVJSS include the industrial sector, the commercial sector, and hauled waste. Industrial loadings of chloride were estimated using chloride sampling data from industrial dischargers, combined with flow information from Districts' permit and surcharge records. Commercial loadings of chloride were estimated using concentration data taken from the *Santa Clarita Valley Joint Sewerage System Chloride Source Report, October 2002*, along with flow information taken from Districts' service charge records. The contribution of chloride from hauled waste was determined using sample data to characterize concentration and waste manifests to determine volume. Chloride introduced

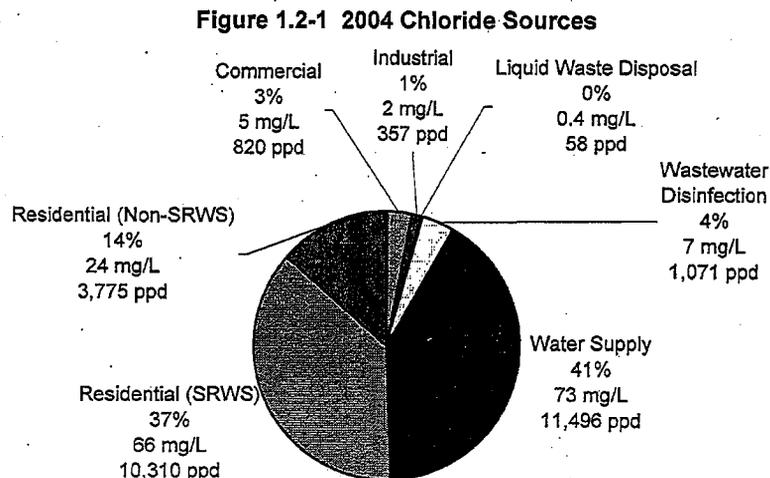

Section 1. Executive Summary

at the Saugus and Valencia WRP's during disinfection of wastewater using sodium hypochlorite was quantified using Districts' operational records.

The residential sector also contributes a substantial chloride loading. Chloride concentrations in residential wastewater, exclusive of contributions from self-regenerating water softeners (SRWS), were transferred from the *Santa Clarita Valley Joint Sewerage System Chloride Source Report, October 2002*. The flow volume for residential discharges was estimated using a differential method, whereby other known flow volumes were subtracted from the total system flow volume to obtain the residential wastewater flow rate. This method was validated in the *Santa Clarita Valley Joint Sewerage System Chloride Source Report, October 2002*, in which residential flow volumes were determined using both this differential method and a rigorous modeling technique based on extensive field data collection. There was excellent agreement between the two methods. The chloride loading contributed from SRWS was also estimated using a differential method, whereby all other chloride loadings were subtracted from the total chloride loading and the difference was assumed to be contributed by SRWS.

The results of the updated quantification of chloride sources in the SCVJSS indicate that the two largest sources of chloride on the system continue to be the water supply and residential SRWS. The estimated chloride from water supply peaked in 2003 at 12,800 pounds per day of chloride, representing 85 mg/L chloride in the system effluent. This peak coincided with drought conditions in northern California and thus a high chloride content in SWP water provided in the area. With extensive rainfall in both northern California and locally, the concentration of chloride in the water supply dropped to approximately 55 mg/L for the first half of 2005, and the mass loading of chloride from the water supply dropped to about 9,600 pounds per day. The chloride loading from SRWS peaked in 2003/2004 at approximately 10,000 pounds per day, representing 66 mg/L in the system effluent. This coincided with implementation of a prohibition on the installation of SRWS in the Santa Clarita Valley. The SRWS contribution fell significantly in the first half of 2005, as a community-wide public outreach effort to convince residents to remove existing SRWS began to take full effect. For the first half of 2005, the chloride loading from SRWS was an estimated 8,700 pounds per day, representing 50 mg/L in the system effluent.

Based on the SRWS chloride loading for the first half of 2005, there are an estimated 6,500 SRWS still present in the community. This is down from a peak of about 7,600 in the 2003/2004 time frame. The 6,500 estimate was corroborated by a survey conducted by a local water purveyor in May 2005. A graphical depiction of the breakdown in chloride sources for the last full year available, 2004, is presented below in Figure 1.2-1.

Section 1. Executive Summary

The Districts will continue to monitor and quantify chloride sources on an on-going basis. Continued efforts will include collection of data on industrial chloride concentrations and flowrates, industrial self-monitoring of chloride concentrations, quantification of commercial flowrates, tracking of treatment plant sodium hypochlorite use, tracking of volumes of wastes accepted at the Saugus Liquid Waste Disposal Station, collection of groundwater chloride data from local water purveyors, and monitoring of chloride concentrations and flowrates at the Saugus and Valencia WRPs. The Districts also plan to begin semi-annual effluent chloride sampling events at the Saugus and Valencia WRPs. These sampling events would consist of collection of hourly chloride samples over a period of several days. The purpose of the sampling events would be to determine if the magnitude of peak chloride concentrations in the early morning hours caused by discharge of SRWS brines decrease as chloride source control efforts continue. A summary of chloride sources will be submitted to the Regional Board each year as part of the annual progress report required under the Upper Santa Clara River Chloride TMDL Implementation Plan, Task 3.

1.3 Chloride Source Control Measures

The Districts have conducted a ground breaking, nationally recognized source control program for chloride in the Santa Clarita Valley. Because SRWS are the largest added source of chloride in the Santa Clarita Valley, the source control efforts have focused on these units. However, such efforts have also extended to the industrial sector, commercial sector, hauled waste, and treatment plant operations. Chloride in water supply is also being examined.

The Districts' chloride source control efforts in the SCVJSS began in 1961 with passage of resolutions prohibiting the discharge of SRWS brines from all industrial, commercial, and residential sources. Chloride source control efforts have continued since, but were significantly expanded in the early 2000s, well in advance of deadlines required under the Upper Santa Clara River Chloride TMDL.

The cornerstone of residential source control efforts in the Santa Clarita Valley was adoption of ordinances in 2003 prohibiting the installation of residential SRWS. The ordinances were the first of their kind enacted under a new California law authorizing such ordinances. The ordinances were widely publicized using press releases, a web site, a direct mailing to the entire community, telephone calls to developers, letters to developers, letters to licensed contractors, letters to water conditioning system vendors, outreach at community fairs, and a brochure. Additionally, the Districts worked with the Regional Board and the City of Santa Clarita to obtain agreement from local retailers to voluntarily stop selling automatic water softeners.

Residential community outreach efforts began prior to enactment of the 2003 ordinances, with a pilot-scale outreach program in two neighborhoods having a high incidence of SRWS. The program included pre- and post-outreach surveys, two mailings that were sent to all residents, a web site, a mailing to realtors, and mailings to community opinion leaders. Although the pilot-scale outreach program was successful at increasing awareness of the chloride issue among the target audience, it was not successful in convincing any residents to remove their SRWS.

After enactment of the ordinances, a community-wide public outreach program was developed. Because the pilot program was not as successful as desired, new market research was conducted prior to program development to devise new strategies and messages. Market research included conducting two focus groups, which were held in late 2003. The resulting campaign that was developed relies heavily on cable television advertising and direct mailings to residents. It also includes a web site, a toll-free hotline that is answered by Districts' engineering staff, press releases, and participation in community fairs. The program was launched in March 2004 and is still underway. As the program continued, several new

Section 1. Executive Summary

features were added. These include direct mailings each month to homeowners that have purchased a house in the Santa Clarita Valley in the previous month and an innovative website that collects and presents performance reviews of alternatives to automatic water softeners.

The community-wide public outreach program has proven to be highly successful. Through August 2005, the Districts had received 668 responses to the campaign, including 261 requests for information on alternatives to SRWS. The campaign's web site has been very popular, reaching a peak of 6300 page views per month in June 2005, including over 1400 page views of the page presenting performance reviews of alternatives to automatic water softeners. Based on telephone survey results, the awareness level of the community regarding the chloride issue increased from 4% in mid-2002 to 61% in May 2005. Most notably, the number of SRWS in the Santa Clarita Valley has declined significantly. Information on the program has been sent to numerous other organizations, and six public presentations have been made to share the program with others. The program has been recognized with local, state, and national awards.

Concurrent with the outreach program to residents, the Districts have been working with local retailers to request that they stop selling rock salt and potassium for use in SRWS. These efforts have paid off, as Costco, Sears, and OSH have stopped selling these products. Other stores, such as Albertsons, Vons, and Pavilions, are still carrying rock salt and potassium but have agreed to post signage where the products are sold that provide information about the harm caused by SRWS. Although it does not sell rock salt or potassium, the operator of the Valencia Town Center, Westfield Group, agreed to help increase public awareness by posting signage at the Center about the problems with SRWS.

The Districts have also conducted research into the use of financial incentive programs and disincentive programs to further encourage residents to stop using SRWS. After an extensive investigation, the Districts chose to design an incentive program modeled after a highly successful rebate program conducted by the Santa Clara Water District. The financial incentive program will consist of a \$150 rebate for SRWS users that remove their unit and replace it with an acceptable alternative, such as a portable exchange tank service or a non-salt water conditioning device. For households with SRWS that choose to no longer soften their water, a \$100 rebate will be offered simply for removal of the SRWS from the household with no replacement. The Districts are in the process of completing the detailed design for the program and plan to implement the program by the end of 2005. A grant request for funding of such a program was also submitted.

The Districts are also in the process of expanding the residential source control program to include saltwater pools. Saltwater pools are swimming pools that perform disinfection by using an electrolysis process to create chlorine gas in-situ at the pool from sodium chloride that has been added to the pool. High chloride concentrations are maintained in such swimming pools, and discharges of filter backwash from the pools and/or draining of the pools for repairs could cause excessive chloride loading to the system if these systems become popular. Therefore, the Board of the Santa Clarita Valley Sanitation District of Los Angeles County introduced an ordinance prohibiting new discharges from such pools to the sewerage system and prohibiting the conversion of existing pools that discharge to the sewerage system to saltwater pools. The ordinance was introduced on October 12, 2005 and will be considered for adoption by the Board of the Santa Clarita Valley Sanitation District on November 9, 2005.

The Districts are firmly committed to conducting residential chloride source control efforts in the Santa Clarita Valley. The Districts plan to continue the award-winning community-wide public outreach program. The program will be periodically reassessed to determine its value to overall chloride reduction. Efforts to work with retailers on a voluntary sales ban of rock salt/potassium and on placement of signage

Section 1. Executive Summary

will continue as an important element of the outreach program. The Districts plan to implement the incentive program for removal/replacement of SRWS as previously described. This program will also be periodically reassessed to determine its impact on chloride, and will be continued as appropriate. The Districts will consider formal approval of the saltwater pool prohibition and, if it is adopted, will take steps to maximize its effectiveness. It is anticipated that this will include publicizing the ordinances through press releases and direct mailings, and contacting swimming pool supply retailers to request a voluntary sales ban on these units.

Implementation of the incentive program for removal/replacement of SRWS and enactment of an ordinance regarding saltwater pools are expected to accelerate reductions in the chloride concentrations of effluent from the Saugus and Valencia WRPs. The Districts will continue to identify opportunities to reduce residential chloride discharges, and modify the residential source control program as appropriate to strengthen its impact. The Districts have already taken a number of ground-breaking steps in its residential chloride source control program, and plan to continue to remain the national leader in residential chloride source control efforts.

Although source control efforts have focused on the residential sector, the Districts have also conducted extensive source control efforts for other sectors. For the industrial sector, the Districts operate a comprehensive industrial waste source control program that includes permitting, inspections, monitoring, and enforcement. Under this program, industrial dischargers in the Santa Clarita Valley have either been assigned a chloride discharge limit of 100 mg/L or assigned a performance-based chloride limit that reflects implementation of chloride reduction practices to the extent technologically and economically feasible. For the commercial sector, the Districts are aggressively enforcing their prohibition on the use of SRWS. Numerous notifications about the prohibition have been made to commercial businesses, and hundreds of on-site inspections to verify compliance have been conducted. On-site inspections have included inspections of all establishments in the commercial sectors most likely to have SRWS including all restaurants, hotels, bars, billiard halls, and dry cleaners. No illegal SRWS have been found at commercial businesses since 2002. In addition, the Districts conducted a comprehensive assessment of sources of saline discharges at commercial businesses, to identify such discharges and develop measures to reduce these sources to the extent technologically and economically feasible. As a result of this assessment, the Districts required implementation of management practices to reduce chloride discharges from commercial swimming pools. The liquid waste disposal station at the Saugus WRP was also evaluated for potential chloride reductions, and a program put in place whereby incoming septage loads are checked for conductivity.¹

The Districts have also made substantial changes to operation of the Saugus and Valencia WRPs to minimize the amount of chloride added to wastewater during treatment. In 2000 and 2001, the Districts discontinued use of ferric chloride and ferrous chloride at the plants, resulting in an average 17 mg/L chloride reduction in the combined effluent from the two plants. The only significant remaining source of chloride at the treatment plants is use of sodium hypochlorite for disinfection. The Districts are continuing to evaluate alternative disinfection methods that could further reduce this source.

Finally, the Districts have applied for grant funding to conduct a Water Supply Chloride Contribution Study, which would characterize the relationship between chloride in water supply and WRP effluent and explore potential management strategies to minimize the water supply contribution of chloride to WRP effluent. The Districts have also applied for grant funding to work with one of the local water purveyors, the Valencia Water Company, on a demonstration project regarding wellhead softening

¹ Conductivity generally correlates well with total dissolved solids and chloride is part of total dissolved solids. Ensuring that loads with excessive conductivity are not accepted helps ensure that loads with excessive chloride are not accepted.

Section 1. Executive Summary

of groundwater served to the community. It is believed that serving softened water to the community could further reduce usage of SRWS in the area, thus leading to decreased chloride loadings.

The Districts are firmly committed to reducing chloride sources in the SCVJSS to the maximum extent that is technologically and economically feasible, and will continue to explore innovative and effective means to bring about this reduction.

Meeting Summary

Attendees: Sam Unger (Regional Board), Yanjie Chu (Regional Board), Eric Wu (Regional Board), Ashli Desai (Larry Walker & Associates), Phil Friess (LACSD), Brian Louie (LACSD), Francisco Guerrero (LACSD)

1. Review meeting summaries and action items

RB staff indicated that they did not have time to review 8/17 meeting summary due to work on the Reach 4 re-definition staff report. RB staff will approve of meeting summary at the next face-to-face meeting.

2. De-brief on August 21 TWG Meeting

Key Action Items — RB staff indicated that they were again disappointed by the lack of substance related to UWCD Upper Basin Purveyor proposal on alternative water management strategies. RB staff thought that while the UWCD-Upper Basin Purveyor proposal on alternative water management strategies proposal has the potential to make sense "technically," there were a

7-185

FINAL

number of regulatory issues that had not been sufficiently addressed in the alternative water management proposal to date. These regulatory issues include: (1) lack of enforceable commitments; (2) the use of best effort/BMP style implementation measures for compliance; (3) the reliance on point-of-use for compliance; and (4) lack of alignment between numeric targets vs. numeric limits. District and RB staff discussed that if the alternative water management option is to be further explored, there would need to be a nexus that links the concepts being considered in the alternative water management proposal with a regulatory framework that will work for the RB. District staff discussed the Santa Ana Watershed Protection Authority (SAWPA) Nitrogen-TDS Task Force model as a potential framework that used "tiered objectives" (anti-degradation WQOs vs. Maximum Benefit WQOs) as a means to allow for higher WQOs, so long as agency commitments (implementation projects) are being honored in the watershed. RB staff noted that they needed more time to review the SAWPA model, but based on preliminary understanding, they are not necessarily sure that it could be used in this TMDL setting. RB staff indicated that they understood that the basis of the SAWPA model was the need to increase water supply through more Colorado river recharge projects, and the greater use of recycled water. District staff noted, that the technical issues might be different but the concepts as a regulatory framework has potential to give RB some regulator certainty that is based on achieving certain deadlines through the use of tiered objectives. Both parties agreed that these concepts and others needed to be further investigated. As such, District staff tasked Ashli Desai to draft up white paper on the regulatory framework that the RB could potentially utilize to facilitate a potential alternative water management option. This draft white paper would be presented and discussed at the next face-to-face meeting between staff on September 7, 2007.

GSWIM Base Scenario Recommendations – District staff has had discussions with CH2M Hill, who has indicated that they were on track with completion of GSWIM, inclusive of 21 Base Scenarios agreed upon by District and RB staff. However, CH2M Hill noted that the completion of the 21 GSWIM Base Scenarios would likely squeeze the collaborative process and TWG stakeholder review time to achieve schedule. District staff inquired about the possibility of truncating the GSWIM base scenarios from 21 to 8 scenarios in order to bracket the range of potential compliance options. This would give the full range of compliance options, and would make work products and TWG review cycles more manageable for all parties involved. RB staff agreed with reduction in GSWIM Base Scenarios that would be delivered for the November 20, 2007 Final Report. The remaining 13 scenarios would be considered as "additional scenarios" that could be simulated in the future as part of the SSO-ADA efforts.

Camulos Well – District staff indicated that UWCD and District are working on an agreement, that would facilitate the construction of a multi-port monitoring well on Camulos Ranch property. UWCD indicated that Camulos Ranch would allow the UWCD to construct and sample a multi-port monitoring well on its property and grant them an easement to the monitoring well. In preliminary conversations with District staff, UWCD would own well and pay for all necessary permits, while the District would pay for drilling and installation costs. The District would be afforded the opportunity to collect split samples at the well on all samples collected by UWCD.

3. Reach Redefinition Staff Report & November/December Hearing

RB staff indicated that the Reach Redefinition Staff Report is in final stages and will likely be finalized for public notice on Monday August 27, 2007. RB staff noted that based on comments from legal counsel, the term "reach redefinition" has been re-characterized as "reach subdivision," to note the distinction that the Reach 4 will maintain the same boundaries (Blue Cut to A Street, Fillmore) as previously, but will only be split or subdivided at Piru Creek. Reach

7-186

FINAL

Subdivision will be the new term that is utilized for this potential action and Basin Plan Amendment in the future.

4. White Paper No. 2 (AGR BU Clarification)

Ashli Desai discussed the status of White Paper No.2 as well as some of the preliminary elements. The white paper will likely be distributed for review in the next few weeks. Ashli Desai provided an overview of the UAA factors and analyses that will be considered and described the potential approaches that the RB can consider in clarifying the AGR BUs for Reaches 5 and 6. These approaches include through a clarification/correction in the Basin Plan, through a site-specific objective process, or through a formal UAA process. Ashli described the pros and cons for each option and that her staff are still working on the UAA-type analyses.

5. White Paper No.3 (Reach 4 SSO Considerations)

RB and District staff discussed Reach 4 SSO considerations, with the bulk of discussion related to the necessary averaging period for the LRE guidelines. RB staff provided an overview of a technical memorandum they developed, which in their opinion suggested that the averaging period for the LRE guidelines was 2 days. District staff discussed their perspective and analyses that suggested that the averaging period was more of a 6-month to 12-month period. RB and District staff agreed that additional work needed to be conducted to better determine the appropriate averaging period applicable to the LRE guidelines. District staff will investigate whether Joel Kimmelshue (principal author of LRE report) is available to do additional work to clarify averaging periods for LRE guidelines and salt-sensitive crops.

6. Max Benefit Approach for USCR CI TMDL

This agenda item was discussed in Agenda Item 2, and RB and Districts staff agreed that a white paper on the regulatory framework that supports alternative water supply options and/or other max benefit approaches be developed for RB review.

7. Phase I SSO-ADA Report (time permitting)

not discussed

8. Next Steps / Next Meeting

Next meeting was scheduled for September 7, 2007 at RB offices. Joint meeting with State Board Member Fran Spivy-Weber, tentatively set at October 12, 2007.

**Action Item(s) / Agreement(s) for USCR Chloride TMDL
(Rev. 8/16/2007)**

ID	Major Action Item(s) / Agreement(s)	Meeting Date	Responsibility	Resolution
1	Outreach to Friends of SCR and USFWS and CA DFG to assure they are given opportunity to review completed TES Study materials to support process	June 11, 2007	Brian Louie	Will be resolved after completion of Report Addendum and TAP Critical Review Report by October 2007
2	Brian Louie to send Sam Unger revised scope of Trussell-MWH Cost Study	June 11, 2007	Brian Louie	RESOLVED- Revised scope was hand-delivered to Sam Unger at 6/12/2006 Meeting
3	Regional Board commits to complete review of AGR BU White Paper by 6/28/2007. SCVSD will send White Paper to RB by 6/21/2007	June 11, 2007	Regional Board	RESOLVED
	Regional Board could not complete review until July 5, 2007 due to vacations schedules	June 22, 2007		Sam Unger provided Regional Board comments on White Paper No.2
4	Deb Smith to contact USEPA and receive clarification on UAA decision as soon as possible to provide direction to SCVSD	June 11, 2007	Deb Smith	Resolved – RB staff could not get a timeline on getting EPA feedback and advised that we conduct UAA-like analyses in White Paper to cover all possibilities.
	Sam Unger to provide date as to when EPA will provide feedback on White Paper No. 2. (AGR BU Clarification)	July 6, 2007	Sam Unger	
	Due to uncertainty of EPA feedback, project team determined that UAA-like analyses should be conducted to cover all bases. UAA factors will be analyzed as part of White Paper No. 2	July 13, 2007	Project Team	UAA-like analyses will be included in Final White Paper No.2
	Project Team discussed possibility of an alternative option to conducting UAA that could be modeled after Ammonia SSO, which delineated ELS absent/present area and applicable objectives, without making changes to applicable Basin Plan Use Designations.	August 3, 2007	Project Team	This option will be included in Final White Paper No.2
5	October 2, 2007 Joint State Board – Regional Board Hearing will consider BPA to redefine Reaches 4 and 5 of the SCR.	June 12, 2007 June 22, 2007 July 6, 2007	Project Team	SCVSD – completion of White Paper No. 1 (Reach Redefinition) to RB by July 17, 2007 to support BPA processes. RESOLVED – SCVSD submitted Draft White Paper to RB on July 17, 2007.
	RB mentions that joint State Board – Regional Board hearing will not occur	August 3, 2007		
	RB mentions that they will not make October 4 Board Hearing and may potentially not be able to make November 1 Board date as well. RB has put this agenda item on Dec 5 Board Calendar as worst-case.	August 15, 2007 Conference Call		
6	October 2, 2007 Joint State Board – Regional Board Hearing will include informational item(s) on Reaches 5 and 6 AGR BU Clarifications and Reach 4 SSO considerations in preparation for the May 2008 TMDL re-opener.	June 12, 2007 June 22, 2007 July 6, 2007	Project Team	RB – completion of staff report supporting docs, and public noticing by September 20, 2007 to support informational item(s) for the November 1, 2007 Regional Board Hearing.

**Action Item(s) / Agreement(s) for USCR Chloride TMDL

11	Sam Unger to have staff send information of commercial nurseries located in the Santa Clarita Valley, from AG waiver program	July 6, 2007	Regional Board	RESOLVED – Yanjie Chu emailed Brian Louie on 7/10/2007 a list of commercial nurseries located in the Santa Clarita Valley.

Excerpts from Resolution R8-2004-01, amending the Santa Ana Regional Water Quality Control Plan (Basin Plan)

"MAXIMUM BENEFIT" WATER QUALITY OBJECTIVES

As part of the 2004 update of the TDS/Nitrogen Management plan in the Basin Plan, several agencies proposed that alternative, less stringent TDS and/or nitrate-nitrogen water quality objectives be adopted for specific groundwater management zones and surface waters. These proposals were based on additional consideration of the factors specified in Water Code Section 13241 and the requirements of the State's antidegradation policy (State Board Resolution No. 68-16). Since the less-stringent objectives would allow a lowering of water quality, the agencies were required to demonstrate that their proposed objectives would protect beneficial uses, and that water quality consistent with maximum benefit to the people of the state would be maintained (thus, the use of the term "maximum benefit" water quality objectives).

Appropriate beneficial use protection/maximum benefit demonstrations were made by the Chino Basin Watermaster / Inland Empire Utilities Agency, the Yucaipa Valley Water District and the City of Beaumont / San Timoteo Watershed Management Authority to justify alternative "maximum benefit" objectives for the Chino North, Cucamonga, Yucaipa, Beaumont and San Timoteo groundwater management zones. These "maximum benefit" proposals, which are described in detail in Chapter 5 – Implementation, entail commitments by the agencies to implement specific projects and programs. While these agencies' efforts to develop these proposals indicate their strong interest to proceed with these commitments, unforeseen circumstances may impede or preclude it. To address this possibility, this Plan includes both the "antidegradation" and "maximum benefit" objectives for the subject waters (See Table 4-1). Chapter 5 specifies the requirements for implementation of these objectives. Provided that these agencies' commitments are met, then the agencies have demonstrated maximum benefit, and the "maximum benefit" objectives included in Table 4-1 for these waters apply for regulatory purposes. However, if the Regional Board finds that these commitments are not being met and that "maximum benefit" is thus not demonstrated, then the "antidegradation" objectives for these waters will apply.

VI. Maximum Benefit Implementation Plans for Salt Management

As discussed in Chapter 4, with some limited exceptions, TDS and nitrate-nitrogen objectives for groundwater management zones in the Santa Ana Region were established to ensure that historical quality is maintained, pursuant to the State's antidegradation policy (State Board Resolution No. 68-16). However, alternative, less stringent "maximum benefit" objectives are also specified in Chapter 4 for certain groundwater management zones. These "maximum benefit" objectives, which would allow the lowering of water quality, were established based on demonstrations by the agencies recommending them that antidegradation requirements were satisfied. First, these agencies demonstrated that beneficial uses would continue to be protected. Second, these agencies showed that water quality consistent with maximum benefit to the people of the state would be maintained. Other factors such as economics, the need to use recycled water, and the need to develop housing in the area were also taken into account in establishing the objectives (see Chapter 4).

The demonstrations of "maximum benefit" by these agencies are contingent on the implementation of specific projects and programs by the agencies. As discussed in Chapter 4, if these projects and programs are not implemented to the Regional Board's satisfaction, then the alternative "antidegradation" objectives apply to these waters for regulatory purposes.

White Paper No. 3
SCR Reach 4(B) SSO Considerations - Outline

I. Purpose

- a. Identify Options for Regional Board to Consider Site Specific Objectives for Reach 4 (B) of the Santa Clara River.
-

II. Background

- a. Existing Beneficial Uses & Water Quality Objectives
- b. How Existing Beneficial Uses & Objectives were set in Basin Plan
- c. Reason SSO – ADA necessary
- d. Reach 3 Objective Change Discussion (80 to 100 mg/L)

III. SSO to Revise Objective to 100-117 mg/L

- a. LRE Guidelines (Irrigation)
- b. Oster Arpaia Paper – Salinity and Water Effects on Hass Avocado yields
- c. Rain Dilution – Letey Article (Margin of Safety)

IV. SSO to Revise Averaging Period to (Monthly, Annual)

- a. Ag Tap Recommendations
- b. District/Regional Board Analysis based on Ag Tap Recommendations
- c. Blue Cut Historical Data Analysis (Pre-1997)

V. Summary & Alternatives

- a. 100 mg/L Instantaneous (No Change)
 - b. 100 mg/L Daily Average
 - c. 100 mg/L Monthly Average
 - d. 100 mg/L 6-Month Average
 - e. 100 mg/L Irrigation Seasonal Average
 - f. 100 mg/L 12-Month Average
-

- g. 110 mg/L Instantaneous
 - h. 110 mg/L Daily Average
 - i. 110 mg/L Monthly Average
 - j. 110 mg/L 6-Month Average
 - k. 110 mg/L 12-Month Average
 - l. 110 mg/L Irrigation Seasonal Average
-

- m. 117 mg/L Instantaneous
- n. 117 mg/L Daily Average
- o. 117 mg/L Monthly Average
- p. 117 mg/L 6-Month Average
- q. 117 mg/L 12-Month Average
- r. 117 mg/L Irrigation Seasonal Average

Upper Santa Clara River GSWIM Base Scenario Recommendations

Reuse Scenarios

- Scenario 1: High Water Reuse (Planned Re-Use based on CLWA Recycled Water Master Plan and Newhall Ranch Specific Plan by 2030)
- Scenario 2: Intermediate Reuse (50% Planned Re-Use based on CLWA Recycled Water Master Plan and 100% Planned Re-Use based on Newhall Ranch Specific Plan by 2030)
- Scenario 3: Low Water Reuse (No Re-Use Beyond 2005-06 Levels and 100% Planned Re-Use based on Newhall Ranch Specific Plan by 2030)

Compliance Option	Base Scenarios					
	Non-Drought (Typical Conditions)			Drought (Critical Conditions)		
	Re-use Scenario 1	Re-use Scenario 2	Re-use Scenario 3	Re-use Scenario 1	Re-use Scenario 2	Re-use Scenario 3
MF/RO @ 100 mg/L (Both WRPs)	X	X	X	X	X	X
MF/RO @ 120 mg/L (Both WRPs)	X	X	X	X	X	X
Fixed Discharge @ 140 mg/L (Both WRPs)	X	X	X	X	X	X
Fixed Discharge @ 160 mg/L (Both WRPs)	X	X	X	X	X	X
CL Loading Above WS (0% SRWS removal)	X	X	X	X	X	X
CL Loading Above WS (50% SRWS removal)	X	X	X	X	X	X
CL Loading Above WS (100% SRWS removal)	X	X	X	X	X	X

ATTACHMENT 88

Upper Santa Clara River Chloride TMDL
September 7, 2007 Meeting
10:00 AM – 12:00 PM
Los Angeles Regional Board Offices

A G E N D A

1. Review meeting summaries and action items
2. White Paper No.2 (AGR BU Clarification) Status
3. White Paper No.3 (Reach 4 SSO Considerations)
 - a. Update on additional work for Joel Kimmelshue
 - b. Preliminary Scope of Work
 - c. Preliminary Schedule of deliverables
4. Regulatory Framework for Alternative Water Management / Maximum Benefit Approaches to the TMDL
5. Phase I SSO-ADA Report
 - a. Progress on identification/description of additional scenarios
 - b. Reach 4 SSO considerations
 - c. Baseline analyses for 13241 factors
 - d. Revised schedule
6. Next Steps / Next Meeting

Meeting Summary

Attendees: Sam Unger (Regional Board), Yanjie Chu (Regional Board), Eric Wu (Regional Board), Ashli Desai (Larry Walker & Associates), Brian Louie (LACSD), Francisco Guerrero (LACSD)

1. Review meeting summaries and action items

RB staff requested minor changes to the meeting summaries for 8/17 and 8/24, related to discussions on the UWCD-CLWA Alternative Water Management Proposal as well as expected submittal dates for the Draft White Paper No.2. Final summaries reflect requested changes.

RB and District staff also discussed to change the TWG meeting date from October 16 to October 23, because of potential schedule conflicts for agencies participating in WEFTEC, which is scheduled for the week of 10/15-19. The October TWG meeting will now be scheduled for October 23, 2007.

2. White Paper No.2 (AGR BU Clarification) Status

District staff informed Regional Board staff that additional time was needed to complete White Paper No.2 and it would be submitted by early next week. The final draft report will include an executive summary that summarizes the available information and approaches that can be taken to potentially clarify the AGR beneficial use for Reaches 5 and 6. RB staff indicated that they may only discuss/provide information on the AGR BU for Reaches 5 and 6 for the November 1 Informational

Item, and will likely not discuss the details of regulatory implications. District staff indicated that such an approach is acceptable, and that the District would work with RB staff to edit the document as necessary to support the informational item.

District staff requested direction from Regional Board on the need to contact individual riparian property owners given that land use zoning for these properties indicates that only Newhall Land and Farm and the District are legally zoned for commercial agriculture. Regional Board staff indicated they still recommend that individual riparian property owners be contacted about whether they have plans to claim riparian surface water rights for the purpose of irrigating salt-sensitive agriculture.

3. White Paper No.3 (Reach 4 SSO Considerations)

RB Staff indicated that they would like some revisions on the scope of work submitted to Joel Kimmelshue with NewFields Agricultural and Environmental Resources, LLC, (formerly with CH2M Hill) to provide greater clarification on averaging periods for the LRE guidelines. RB staff was concerned with the usage of the term acute averaging period, as it implies that the project team is tasking Joel et al. to weigh in on chloride levels that would cause death for salt-sensitive crops. Districts and RB staff agreed that scope would be revised so that the term "acute averaging period" is replaced with the term "critical averaging period" to reflect averaging periods for different critical conditions, related to management, and seasonal conditions/considerations (i.e. Santa Ana winds, cultivation patterns, rainfall patterns, etc.). Districts and RB staff also agreed that scope would reflect desire that any new literature reviews go through the same screening processes that were employed for the LRE to assure that literature found is applicable and weighted/scored appropriately. RB staff requested that Joel be available for a conference call to discuss at a future meeting.

Regional Board and District staff discussed informing the TWG about work tasked to NewFields at the September 25 TWG meeting. District staff discussed that they have tasked Joel Kimmelshue to complete the work in time for future discussions at the October 23, 2007 TWG meeting. A draft tech memo is to be delivered by October 15.

4. Regulatory Framework for Alternative Water Management / Maximum Benefit Approaches to the TMDL

Ashli Desai discussed how some of the elements and approaches being advocated by the Upper Basin Water Purveyors and United Water Conservation District, could be implemented through a regulatory approach that is acceptable to the Regional Board. RB staff indicated that they did not have time to review the draft document, but did make some general recommendations that the document be revised with respect to issues of tone, and overall organization of the document. A revised framework will be prepared by Ashli Desai to reflect those requested changes. This framework will be discussed in future meetings, and after further review of the document by RB management.

5. Phase I SSO-ADA Report

- a. Progress on identification/description of additional scenarios
- b. Reach 4 SSO considerations
- c. Baseline analyses for 13241 factors
- d. Revised schedule

District staff discussed an 8th revision to the Gantt chart that reflects changes in the schedule for Phase I SSO/ADA reports. Both reports now are to be submitted to RB by late September. With respect to White Paper No.3 (Reach 4 SSO Considerations), District and RB staff agreed that this white paper

would be delayed pending technical memo being developed by Joel Kimmelshue on averaging periods for LRE guidelines.

6. Next Steps / Next Meeting

District and RB staff to meet September 14, where the principal discussion will be about the scope of work related to clarifications on the averaging period for the LRE guidelines.

**Action Item(s) / Agreement(s) for USCR Chloride TMDL
 (Rev. 8/16/2007)**

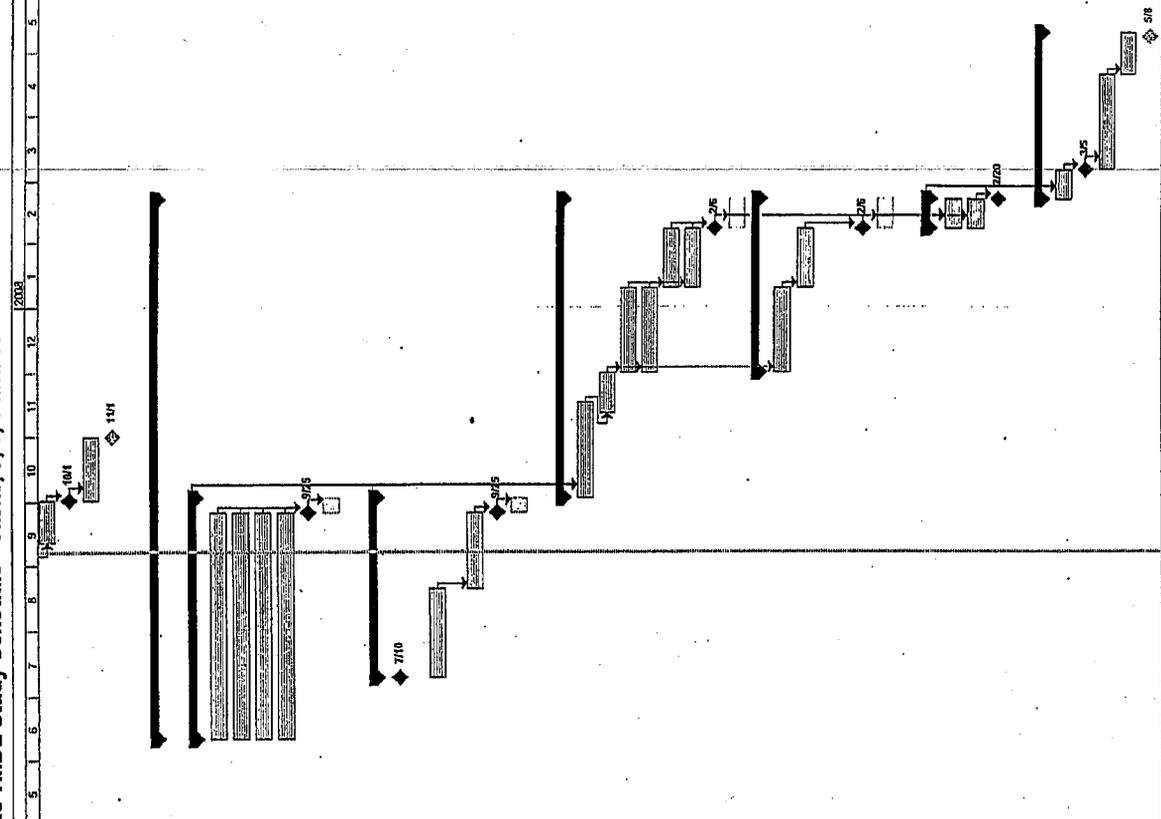

ID	Major Action Item(s) / Agreement(s)	Meeting Date	Responsibility	Resolution
1	Outreach to Friends of SCR and USFWS and CA DFG to assure they are given opportunity to review completed TES Study materials to support process	June 11, 2007	Brian Louie	Will be resolved after completion of Report Addendum and TAP Critical Review Report by October 2007
2	Brian Louie to send Sam Unger revised scope of Trussell-MWH Cost Study	June 11, 2007	Brian Louie	RESOLVED- Revised scope was hand-delivered to Sam Unger at 6/12/2006 Meeting
3	Regional Board commits to complete review of AGR-BU White Paper by 6/28/2007. SCVSD will send White Paper to RB by 6/21/2007	June 11, 2007	Regional Board	RESOLVED
	Regional Board could not complete review until July 5, 2007 due to vacations schedules	June 22, 2007		Sam Unger provided Regional Board comments on White Paper No.2
4	Deb Smith to contact USEPA and receive clarification on UAA decision as soon as possible to provide direction to SCVSD	June 11, 2007	Deb Smith	Resolved – RB staff could not get a timeline on getting EPA feedback and advised that we conduct UAA-like analyses in White Paper to cover all possibilities.
	Sam Unger to provide date as to when EPA will provide feedback on White Paper No. 2. (AGR BU Clarification)	July 6, 2007	Sam Unger	
	Due to uncertainty of EPA feedback, project team determined that UAA-like analyses should be conducted to cover all bases. UAA factors will be analyzed as part of White Paper No. 2	July 13, 2007	Project Team	UAA-like analyses will be included in Final White Paper No.2
	Project Team discussed possibility of an alternative option to conducting UAA that could be modeled after Ammonia SSO, which delineated ELS absent/present area and applicable objectives, without making changes to applicable Basin Plan Use Designations.	August 3, 2007	Project Team	This option will be included in Final White Paper No.2
5	October 2, 2007 Joint State Board – Regional Board Hearing will consider BPA to redefine Reaches 4 and 5 of the SCR.	June 12, 2007 June 22, 2007 July 6, 2007	Project Team	SCVSD – completion of White Paper No. 1 (Reach Redefinition) to RB by July 17, 2007 to support BPA processes. RESOLVED – SCVSD submitted Draft White Paper to RB on July 17, 2007.
	RB mentions that joint State Board – Regional Board hearing will not occur	August 3, 2007		
	RB mentions that they will not make October 4 Board Hearing and may potentially not be able to make November 1 Board date as well. RB has put this agenda item on Dec 5 Board Calendar as worst-case.	August 15, 2007 Conference Call		RB – completion of staff report supporting docs, tentative resolutions, public noticing by August 1, 2007 to support BPA processes DELAYED - RB has not completed staff report, makes commitment to complete staff report in time for public noticing of the November 1, 2007 Regional Board Hearing.
6	October 2, 2007 Joint State Board – Regional Board Hearing will include informational item(s) on Reaches 5 and 6 AGR BU Clarifications and Reach 4 SSO considerations in preparation for the May 2008 TMDL re-opener.	June 12, 2007 June 22, 2007 July 6, 2007	Project Team	RB – completion of staff report supporting docs, and public noticing by September 20, 2007 to support informational item(s) for the November 1, 2007 Regional Board Hearing.

**Action Item(s) / Agreement(s) for USCR Chloride TMDL
 (Rev. 8/16/2007)**

ID	Major Action Item(s)/Agreement(s)	Meeting Date	Responsibility	Resolution

Task Spat

Progress Milestone

Summary Project Summary

External Tasks External Milestones

Deadline

**Scope of Work on Clarifying Applicable Averaging Periods for LRE Guidelines
NewFields Agricultural and Environmental Resources**

Tasks

1. Develop a technical memorandum on the following:
 - a. Review the basis for LRE Guidelines and how the supporting literature informs on potential compliance averaging periods that would be applicable for the guidelines, as well for any acute exposure conditions, and report on findings.
 - b. Conduct an additional literature review (as necessary) on any studies that would inform on applicable averaging periods for the LRE guidelines, as well for any acute exposure conditions, and report on findings.
 - c. Review Project Team questions (1-6 only), AG TAP responses (1-6 only) and Project Team analyses to determine if the available information (including any new info from literature reviews) will inform on applicable averaging periods for the LRE guidelines, as well for any acute exposure conditions; and report on findings. (This may require some consultation with AG TAP co-chairs)
 - d. Determine the feasibility of establishing a range of compliance averaging periods for acute/chronic exposures that are coupled with site-specific seasonal considerations and/or conditions. (e.g. effects of rainfall, Santa Ana winds, cultivation patterns, flowering/fruited periods, etc.), and report on findings.
 - e. Make recommendations on applicable compliance averaging periods for the LRE guidelines, as well for acute exposure periods.
2. Participate in five monthly conference calls with Project Team from September – December
3. Attend two (2) technical working group meetings and one (1) Technical Advisors Panel meetings, as necessary.

Schedule

- Task 1 – Draft completed by September 30, 2007
Final completed by October 15, 2007
- Task 2 – TBD, but typically on Fridays from 10:00 AM – 12:00 PM
- Task 3 – TWG Meetings on 3rd Tuesday in October (10/16) and November (11/20)
TAP Meeting in November/December pending TAP availability, and if necessary
(web conference call for TAP is a possibility)

**Regulatory Framework for Alternative Water Management / Maximum Benefit
Approaches for the Upper Santa Clara River Chloride TMDL**

DRAFT

In the proposed Alternative Water Management Strategy as well as for other maximum benefit approaches, regulatory flexibility is being sought in the following areas:

1. Compliance point at the LA/Ventura County Line
2. Target of 117 mg/L, but maintain objective at 100 mg/L at the County Line
3. Compliance determined through implementing measures.
4. Drought relief given by supplying agricultural users with alternative water supplies.

This document provides a regulatory framework that may potentially facilitate regulatory flexibility in the areas listed above.

To help establish the boundaries of the available regulatory flexibility, the fixed requirements of the TMDL were identified. Two key fixed requirements were determined:

1. The TMDL must result in compliance with water quality standards.
2. For Reach 4, the water quality objective cannot exceed 117 mg/L with a yet to be determined averaging period based on the LRE results.

Outside of these two requirements, the Regional Board likely has some regulatory flexibility that can be utilized to develop a solution. The following provides regulatory options to address each of the four points above.

Compliance point at the LA/Ventura County Line and Target of 117 mg/L

Both the compliance point at the LA/Ventura County Line and the target of 117 mg/L can be addressed through the development of site-specific objectives. Three possible site-specific objective approaches were identified.

1. Site-specific objective between 100 and 117 mg/L (with to be determined averaging period) determined at the County Line or at end of Reach 4B.
2. Site-specific objectives determined for each Reach 4B, 5 and 6 applied at the end of each reach.
3. Site-specific objectives determined for each Reach 4B, 5 and 6 applied at any point in the reach.

If objectives are determined for each reach, Reach 4B would be between 100 and 117 mg/L, Reach 5 and Reach 6 objectives will be determined based on the chloride concentrations necessary to protect the beneficial uses within Reaches 4, 5 and 6.

**Regulatory Framework for Alternative Water Management / Maximum Benefit
Approaches for the Upper Santa Clara River Chloride TMDL**

DRAFT

Compliance determined through implementing measures

For stormwater and agricultural entities, compliance with TMDL allocations has been allowed through the implementation of best management practices. However, this mechanism has not been utilized in the Los Angeles Region for POTW discharges. Although it is a potentially feasible regulatory mechanism, it is unlikely that it would be acceptable to the Regional Board and other entities in the region. As a result, other options for regulatory flexibility to address this request were identified:

Based on the information provided by Kennedy Jenks in their white paper and their presentation on August 21, 2007, the primary reason for allowing compliance through implementing measures is twofold. First, it allows flexibility for meeting the TMDL requirements even if water quality objectives are not met and secondly, it ensures that required actions are taken to implement the TMDL. The rationale is problematic because the TMDL must result in compliance with water quality objectives and the required actions are not necessarily controllable by the responsible parties in the TMDL. Therefore, a regulatory mechanism must be developed that results in compliance with the water quality objectives and links the implementation actions back to the responsible parties in the TMDL. Possible approaches include:

1. Linking the POTW allocations to the available assimilative capacity in the river.
2. Linking the POTW allocations to the implementation of specified actions.
3. Making the water agencies a responsible party to the TMDL. This could be done through a discharge permit, waiver, or other mechanism, but a discharge source must be identified.

For the first two approaches, multiple allocations could be provided that are linked to implementation of actions that provide assimilative capacity or export salts out of the watershed (e.g., meeting water reuse goals, salt load export/reductions). So, the lowest allocation would correspond to meeting the site-specific objectives with the existing assimilative capacity. Then, higher allocations would be assigned corresponding to the increase in assimilative capacity or salt export from implementation actions. If the actions do not occur or cease to operate, the minimum allocations would apply. If the linked allocations result in receiving water concentrations that are greater than the existing objective, site-specific objectives would need to be developed. The water quality objectives could be tiered and based on commitments made either by the discharger and/or by other entities. (e.g., salt export/reductions, enhancements of assimilative capacity)

**Regulatory Framework for Alternative Water Management / Maximum Benefit
Approaches for the Upper Santa Clara River Chloride TMDL**

DRAFT

Drought Relief

The best mechanism for providing drought relief is to include drought provisions in the site-specific objectives that are adopted by the Regional Board. Changing the objective would permanently allow for deviations from the water quality objectives during drought conditions. Several options exist for developing drought provisions. Some examples are:

1. Linking the objective to the water supply (i.e. only allowing a certain amount of salt addition above the water supply concentrations).
2. Providing a set higher objective during drought conditions. This would likely need to be linked to the protection of agriculture through other mechanisms, such as the provision of alternative water supplies.
3. Developing a variable objective based on climatic patterns, irrigation rates, etc. This would be complicated to develop, but would provide the most flexibility. It would be similar to the metals objectives that vary based on hardness.

If the objective does not include drought provisions, the TMDL would require compliance with the objective during drought conditions. However, the allocations could change during droughts if they are connected to actions that result in compliance with the objective. Possible actions include increasing the assimilative capacity of the River, reducing discharge volume, or increasing salt exports.

Summary

In summary, because of the fundamental requirement that the TMDL must result in compliance with water quality objectives, site-specific objectives need to be developed that includes a drought provision. Once the site-specific objectives are in place, a number of mechanisms are available to adjust the allocations and provide operational flexibility for the implementation program.

Meeting Summary

Attendees: Sam Unger (Regional Board), Eric Wu (Regional Board), Yanjie Chu (Regional Board), Ashli Desai (LWA), Phil Friess (LACSD), Brian Louie (LACSD), Frank Guerrero (LACSD)

1. Review meeting summaries and action items

RB staff had changes related to discussions on the status of additional studies on the LRE guidelines averaging period. Changes to the summary are noted in track changes mode of the revised final summary. RB and Districts staff disagreed on the issue of whether discussions/concepts on averaging periods for other salt-sensitive crops (i.e strawberries, and nursery crops) needed to be included as part of the analysis that is conducted by NewFields. The issue relates to the fact that the LRE guidelines are based on protection of avocados, since existing literature did not provide enough information on guidelines for strawberries and nursery crops. Implicit in the LRE guidelines is the

Final

November 14, 2007

7-211

assumption that avocados are the most sensitive crop and that the irrigation guideline established through LRE would be sufficiently protective of the other salt-sensitive crops. RB staff mentioned that they would like averaging periods for strawberries and nurseries to be included in a revised scope for NewFields. District staff expressed concerns that there is no guideline for strawberries or nursery crops and that without that information, it is difficult to establish a meaningful averaging period. RB Staff expressed concern that the LRE did not find chloride thresholds for strawberry and nursery crops that are significantly higher than the threshold for avocados and therefore they should not be excluded from the averaging period study. RB and District staff agreed to continue discussing this issue in the future. RB staff indicated that with or without that information, they will have to make a decision on this issue based on their best professional judgment.

RB staff also requested some changes to the September 21, 2007 summary related to discussions about the effects that TDS stressors had on the applicable LRE guideline range. District staff disagreed in the RB staff's assessment of the issue and both parties will continue to discuss the issue and seek answers through correspondences with NewFields.

2. November 1, 2007 Regional Board Hearing

RB staff provided an update of stakeholder comments/discussions they have had to date about the Reach 4 subdivision as well as the Reach 5/6 AGR BU Clarification. RB staff mentioned they have had discussions with Rob Roy (Ventura County Agricultural Water Quality Coalition) and Newhall Land and Farm about both issues. RB Staff indicated that both parties intend to submit comments and appear supportive of the Reach 4 Subdivision, and are reviewing the Reach 5/6 AGR BU Clarification.

District staff inquired about how RB staff plan to present information on the Reach 4 Subdivision Basin Plan Amendment and Information Item on the Reach 5/6 AGR BU Clarification. RB staff noted that they are comfortable with the Reach 4 Subdivision and expect it to be approved. RB staff indicated they are open to ideas for the presentation and requested that District staff help put together an initial outline of a presentation for the information item, and provide presentation materials as necessary to help RB staff in preparation for November 1 Board hearing on that agenda item. District staff will work on a presentation outline and presentation materials to support RB staff on this information item.

3. Update on Alternative Water Management Options

Districts' meeting with Lynn Takaichi

District staff provided a summary of a meeting between the District, Lynn Takaichi of Kennedy Jenks and Ashli Desai (LWA), regarding the CLWA-UWCD proposal for an alternative water resource management solution for the TMDL. District staff mentioned that the purpose of the meeting was to determine the type of elements that were critical to both the water purveyors and Ventura County interests in order for an alternative water resource management solution to be viable and supported by all the stakeholders. District staff indicated that the Upper Basin Water Purveyors and Ventura County stakeholders (United Water and Agricultural Community) expressed that they may be supportive of relaxed objectives in the LA County, if the solution involved enhancing the assimilative capacity of the SCR by providing dilution flows to achieve the Reach 4B WQO, and that extraction well and blending facilities in East Piru were constructed for the purpose of exporting salts during wet weather conditions, and reducing existing chloride levels in the groundwater. District staff indicated that they would commit to funding such solutions so long as it is cost effective solution and a win-win solution for all stakeholders

Final

November 14, 2007

7-212

District staff inquired with RB staff about the possibility of inviting Lynn Takaichi (who represents the Upper Basin Purveyors), Dana Wisheart / Steve Bachman (United Water) and Rob Roy to next Friday's meeting with Fran Spivy-Weber to express their support for an alternative water resource management option directly to the RB, as well as to discuss progress on the alternative water resource solution and tentative concepts and potential commitments and agreements between stakeholders. RB staff agreed that such a meeting would be very useful and that it would be a good opportunity to discuss with RB management as well as with State Board Member Spivy-Weber, as to how such a solution could be developed and implemented as an SSO option for the TMDL. One of the important issues that will need critical discussion relates to drought provisions and how that will be considered in any future SSO.

District staff offered to develop an agenda for the meeting as well as presentation materials on the alternative water resource proposal. In addition, Ashli Desai will provide a presentation on some of the regulatory issues related to the SSOs, drought considerations, and AGR beneficial use clarification approaches for Reaches 5 and 6.

Regulatory Framework for Alternative Water Management / Maximum Benefit Approaches to the TMDL

District staff discussed this preliminary assessment of various regulatory strategies to implement compliance options for the TMDL. District staff noted that this is a preliminary document that listed potential options knowing that many of the options included are non-starters. District staff requested that Regional Board review this document and provide official written comments as soon as possible so that the types of strategies and acceptable regulatory framework(s) for implementation can be narrowed down quickly and consensus on how to proceed on the SSO can be established.

RB staff committed to reviewing this information and providing comments by Tuesday, October 9. District staff would then revise the document with RB staff's comments for distribution at next Friday's meeting.

4. SSO-ADA Studies

White Paper No. 2B

District staff mentioned that White Paper No. 2B was not yet distributed to the TWG because it had not yet been reviewed by Regional Board management. District staff requested that this white paper be reviewed as soon as possible so that the regulatory approach for potentially clarifying the AGR BUs in Reaches 5 and 6 could be better defined for the implementation of TMDL Tasks 7 and 8. RB staff requested that District staff (Phil Friess) directly contact Deb Smith to request her review of the document with potential discussion at the October 12, 2007 meeting between staffs.

White Paper No. 3 (Reach 4B SSO Considerations)

District staff mentioned that work on this has been delayed and is pending additional analyses being conducted by NewFields on the averaging period, as well as ongoing discussions about drought provisions.

5. GSWIM / Collaborative Process Issues

Final

November 14, 2007

7-213

District staff discussed concerns raised by GSWIM TAP members related to being able to have ample review time for their consideration and critical review report of the GSWIM report. As such, current GSWIM schedule will only give TAP a 1-2 week review time of the GSWIM model, which will only incorporate model calibration and a partial list of future scenarios. District staff recommended a revised schedule to provide greater review time for TAP as well as allow for them to also review future scenarios considerations. This schedule would include delivering an Interim report by Nov 20, and then a Final Report by mid January, to include all additional scenarios, with TAP review in January-February.

RB staff discussed that staff also under time pressures and that the May 2008 Regional Board re-opener may have to be pushed back a couple of months. Both RB and District staff discussed the merits of extended the TMDL re-opener and linked study tasks (i.e. Task 5 – GSWIM, Task 7 – SSO and Task 8 – ADA) by a couple of months in order to accommodate necessary reviews by TWG and TAP, as well as to reflect potential delay in the May 2008 re-opener. Both District and RB staff also noted that this extension would help in the development of an alternative water management solution that may be supported by stakeholders.

RB staff mentioned that they will contact Ventura County Ag representatives to discuss potential schedule extensions for May 2008 re-opener and linked study tasks (Tasks 5, 7 and 8), and see if this is acceptable to them.

6. October 12, 2007 Meeting with Fran Spivy-Weber

District and RB staff discussed potential agenda items for next week meeting with Fran Spivy-Weber as follows:

- Alternative Water Management Compliance Options
 - Stakeholder perspectives and consensus
- Status update on TMDL studies:
 - LRE averaging periods
 - Reach 4 subdivision BPA
 - Reach 5/6 AGR BU Clarification Information Item
 - GSWIM Study update
 - TES Study update
 - Potential TMDL Study Schedule Extension
- Presentation on SSO Options
 - Approaches to clarify AGR BU in Reaches 5 and 6
 - Regulatory framework(s) to support various compliance options
 - Drought considerations

District staff will develop a draft agenda by early next week (Oct 9-10), and will also work on presentation materials in coordination with RB staff, in preparation for the Oct 12 meeting with Fran Spivy-Weber.

7-214

Strategies for Implementing Compliance Options for the Upper Santa Clara River Chloride TMDL DRAFT

Introduction

As part of the process of identifying compliance options for the Upper Santa Clara River Chloride TMDL, a number of "alternative" strategies have been identified that provide multiple benefits to the watershed, including water resource benefits. To effectively implement many of the strategies, changes to the water quality objectives and TMDL allocations would need to be identified. This document summarizes some possible options for making adjustments to the objectives and allocations that would provide for compliance with the TMDL and implementation of the alternative strategies.

In considering the options available, the fixed requirements of the TMDL were identified. Two key fixed requirements were determined:

1. The TMDL must result in compliance with water quality standards.
2. For Reach 4B, the water quality objective cannot exceed 117 mg/L with a yet to be determined averaging period based on the LRE results.

All of the alternatives presented were determined based on the two fixed requirements above.

Site-Specific Objectives

Because the TMDL must result in compliance with water quality objectives, any alternative strategy will likely need to develop site-specific objectives. Three possible site-specific objective approaches were identified.

1. Site-specific objective between 100 and 117 mg/L (with to be determined averaging period) determined at the County Line (Blue Cut) or at end of Reach 4B.
2. Site-specific objectives determined for each Reach 4B, 5 and 6 applied at the end of each reach.
3. Site-specific objectives determined for each Reach 4B, 5 and 6 applied at any point in the reach.

If objectives are determined for each reach, Reach 4B would be between 100 and 117 mg/L, Reach 5 and Reach 6 objectives will be determined based on the chloride concentrations necessary to protect the beneficial uses in the reach.

Allocation Alternatives

Many of the alternative approaches require the implementation of actions that are not directly related to the discharge of chloride to the waterbody. For example, assimilative capacity in the reach may be increased by water releases that are outside the control of the dischargers. As a result, a mechanism must be developed that results in compliance with the water quality objectives and links the implementation actions back to the

responsible parties in the TMDL. Adjusting the TMDL allocations provides a possible mechanism for making this link. Possible approaches include:

1. Linking the POTW allocations to the available assimilative capacity in the river.
2. Linking the POTW allocations to the implementation of specified actions.
3. Making the water agencies a responsible party to the TMDL. This could be done through a discharge permit, waiver, or other mechanism, but a discharge source must be identified.

For the first two approaches, multiple allocations could be provided that are linked to implementation of actions that provide assimilative capacity or export salts out of the watershed. So, the lowest allocation would correspond to meeting the site-specific objectives with the existing assimilative capacity. Then, higher allocations would be assigned corresponding to the increase in assimilative capacity or salt export from implementation actions. If the actions do not occur or cease to operate, the minimum allocations would apply.

Drought Relief

The best mechanism for providing drought relief is to include drought provisions in the site-specific objectives that are adopted by the Regional Board. Changing the objective would permanently allow for deviations from the water quality objectives during drought conditions. Several options exist for developing drought provisions. Some examples are:

1. Linking the objective to the water supply (i.e. only allowing a certain amount of salt addition above the water supply concentrations), up to a maximum capped level.
2. Providing a set higher objective during drought conditions. This would likely need to be linked to the protection of agriculture through other mechanisms, such as the provision of alternative water supplies.
3. Developing a variable objective based on climatic patterns, irrigation rates, etc. This would be complicated to develop, but would provide the most flexibility. It would be similar to the metals objectives that vary based on hardness.

If the objective does not include drought provisions, the TMDL would require compliance with the objective during drought conditions. However, the allocations could change during droughts if they are connected to actions that result in compliance with the objective. Possible actions include increasing the assimilative capacity of the River, reducing discharge volume, or increasing salt exports.

Castaic Lake Alternative Water Management Strategy Compliance Option Requests

The Alternative Water Management Strategy that has been proposed by a number of water agencies requested "regulatory flexibility" in a number of areas:

1. Compliance point at the LA/Ventura County Line
2. Target of 117 mg/L, but maintain objective at 100 mg/L at the County Line
3. Compliance determined through implementing measures.
4. Drought relief given by supplying agricultural users with alternative water supplies.

The strategy shown above, should provide a mechanism for addressing all of the issues identified in this alternative strategy.

Summary

In summary, because of the fundamental requirement that the TMDL must result in compliance with water quality objectives, site-specific objectives need to be developed to implement any alternative strategies in lieu of extensive advanced treatment. Additionally, the site-specific objectives should include a drought provision, either in the form of higher objectives or increased allocations coupled to actions that would protect the beneficial uses. Even in non-drought conditions, site-specific objectives should allow for a number of mechanisms to adjust the allocations and provide operational flexibility for the implementation program.

Meeting Summary

Attendees: Frances Spivy-Weber (State Water Resources Control Board), Deb Smith (Regional Board), Sam Unger (Regional Board), Eric Wu (Regional Board), Yanjie Chu (Regional Board), Rob Roy (Ventura County Agricultural Water Quality Coalition; via teleconference), Dana Wisehart (United Water Conservation District), Jeff Ford (Castaic Lake Water Agency), Lynn Takaichi (Kennedy Jenks Consultants), Tracy Quinn (Kennedy Jenks Consultants), Ashli Desai (Larry Walker and Associates), Phil Friess (LACSD), Brian Louie (LACSD), Frank Guerrero (LACSD).

1. Introductions

After a round of introductions RB staff discussed with participants that RB and Districts have been meeting more or less on a weekly basis to discuss the implementation of the accelerated TMDL schedule, after State Board hearing approved the schedule revision in May. Significant progress has been made on the implementation of the SSO-ADA work.

2: Review meeting summaries and action items

Final

November 1, 2007

RB and District staff deferred discussion of the remaining summaries for a future discussion.

3. Update on November 1, 2007 Regional Board Hearing

RB staff discussed that they have received 6 comment letters that were generally favorable for the reach subdivision. Some commentators were concerned about any revisions to the WQOs for the proposed Reach 4 subdivision. RB staff indicated that any WQO revision to the subdivided reaches would be handled in the May 2008 re-opener, and that the action before the Regional Board on November 1, is solely looking at subdividing Reach 4 based on unique hydrogeologic and water quality conditions.

RB staff also mentioned that an information item will be discussed on salt-sensitive AGR BUs in Reaches 5 and 6 of the SCR. RB staff noted that the only potential salt-sensitive crop that is being cultivated in the vicinity of Reaches 5 and 6 are ornamentals (nursery crops), but that these crops are using groundwater and not surface water for irrigation. RB staff have made attempts to outreach to LA County agriculture.

4. Update on TMDL Studies/Milestones

District staff provided an update on the TMDL studies and milestones. See attached presentation. District staff gave a brief introduction of the watershed, chloride issue, and collaborative process studies. District staff noted that they believe that the current TMDL schedule would not support the implementation of an advanced wastewater treatment and brine disposal option. Because of the tight schedule, the District will commence CEQA work after completion of TMDL studies (Feb-April 2008) and before RB decision on final WQO and WLAs. District staff also noted that if advanced treatment of wastewater is the final option, the District would likely begin design work prior to the required milestone due date in the TMDL implementation schedule (May 2011), because of the tight compliance schedule. District staff stated that they are willing to tolerate some inefficiencies and usage of staff resources in order to demonstrate to the stakeholders and Regional Board that good-faith efforts are being employed to achieve timely compliance.

5. Alternatives for Compliance Options

District staff provided an analysis of potential alternative compliance options under consideration. See attached presentation. Four alternative compliance options have been identified, though it was recognized that a hybrid of one or more of these options could also be considered. Districts staff briefly described the four compliance alternatives under consideration, with the focus of the presentation on the alternative water management option. The following table summarizes the general stakeholder viewpoints comments at the meeting on the various options being considered

Stakeholder	Potential Compliance Options		
	Advanced Treatment Brine Disposal Effluent Pipeline Ocean Outfall	Alternative Discharge Location	Alternative Water Mgt.
Ventura County Agriculture (Rob Roy)	No comment	No comment	Supports this option. Considers this a good option to achieve timely compliance with TMDL
United Water (Dana Wischart)	No comment	No comment	Supports this option. Maximizes water supply and water resources and benefits everyone.

Final

November 1, 2007

Stakeholder	Potential Compliance Options		
	Advanced Treatment + Brine Disposal	Alternative Discharge Location	Alternative Water Mgt.
Upper Basin Purveyors (Lynn Takaichi and Jeff Ford)	Concerned about cost of these options as it relates to costs for recycled water	Concerned about impacts to Upper Basin alluvial groundwater wells	Supports this option. Maximizes water supply and water resources and benefits multiple parties. Increases recycled water in Upper Basin.
State Board (Fran Spivy- Weber)	No comment	No comment	Happy Pleased to see progress and that stakeholders are working together for a joint solution. Some key questions: How does this option work within the TMDL schedule? What needs to be done to revise operations agreement for Castaic Lake?
Regional Board (Deb Smith and Sam Unger)	Some of these elements in these options may be necessary to support Alternative Water Mgt option. Expressed that there may be a hybrid of options that would work.	No comment	Willing to support. Regulatory framework needs to be worked out. Concerns over how to handle long-term drought conditions, and availability of dilution waters for such a situation.

Overall, stakeholders opined that the alternative water management option has merit and should be considered as a potential compliance option for the TMDL.

6. Potential Schedule Revision

RB staff discussed that the May 2008 TMDL re-opener hearing could be delayed to July 2008. RB and District staff have discussed the possibility of delaying the decision date and subsequent due dates of the linked tasks by 2 months. District staff provided a revised summary schedule and detailed Gantt schedule reflecting a 2-month delay in final work products for the TMDL studies and TMDL re-opener. RB staff mentioned that this potential schedule delay will be discussed at the November 1 Regional Board hearing as well as vetted among the TWG stakeholders, and that RB staff will receive further direction from their Board on November 1, about the schedule delay issues.

7. Next Steps / Next Meeting

Next meeting will be between RB and District staff for 10/19/2007, at RB offices.

- **Alternative WRP Discharge Location**
 - Move WRP discharge to upstream location to reduce d/s impacts
 - Move WRP discharge out of Santa Clara River Watershed

Alternatives for Compliance Options

- **Alternative Water Resource Management**
 - **Source Control to minimize WRP Chloride loadings**
 - SRWS removal incentives
 - Voter referendum
 - **UV Disinfection**
 - **Maximize Recycled Water Uses in Santa Clarita Valley**
 - **Enhance Assimilative Capacity in Reaches 5 and 6**
 - Management of local storm-flow releases at Castaic Reservoir
 - Purchase/discharge of additional dilution flows
 - **Salt export following drought conditions**
 - East Piru Extraction Wells and Blending Facilities
 - Blend with Piru Creek releases to achieve downstream surface water quality objectives

TMDL Compliance Options

Compliance Option	WRP Discharge Reaches 5 & 6 (AFY)	Chloride SCVSD WRPs		Dilution Flow (AFY)	Chloride Reach 4B*	
		Non Drought (mg/L)	Drought (mg/L)		Non Drought (mg/L)	Drought (mg/L)
Advanced Treatment and Brine Disposal	34,800	90-120	100-120	0	70-100	80-100
Minimal Advanced Treatment and Secondary Effluent Pipeline	11,200	90-120	100-120	0	70-100	80-100
Alternative Discharge Location	38,200 (Reaches 6, & 7)	90-130	130-167	0	60-100**	100-137**
Alternative Water Resource Management	20,800	90-130	130-167	Up to 25,000	<=100	<=117

* Assumes chloride gradient of 20 mg/L between WRP outfalls and Reach 4B (to be confirmed by GSWIM).
 ** Assumes chloride gradient of 30 mg/L between alternative discharge location and Reach 4B (to be confirmed by GSWIM).

TMDL Compliance Options

Compliance Option	Advantages	Disadvantages
Advanced Treatment and Brine Disposal	<ul style="list-style-type: none"> ▪ High effluent quality in Reaches 5 and 6 under all conditions ▪ Maintains existing hydrologic support for the SCR watershed ▪ Salt export/removal capability 	<ul style="list-style-type: none"> ▪ Maximum carbon footprint ▪ Brine disposal impacts ▪ Does not promote water recycling
Minimal Advanced Treatment and Secondary Effluent Pipeline	<ul style="list-style-type: none"> ▪ Facilitates Regional effluent disposal and water recycling through shared pipeline ▪ High effluent quality in Reaches 5 and 6 under all conditions ▪ Salt export/removal capability 	<ul style="list-style-type: none"> ▪ Decreases hydrologic support to the SCR Watershed
Alternative Discharge Location	<ul style="list-style-type: none"> ▪ Restores/enhances habitat in Eastern SCR Watershed ▪ Promotes greater water recycling in Eastern Santa Clara Valley 	<ul style="list-style-type: none"> ▪ Potential impacts on water supply wells in Eastern SCR Watershed ▪ Decreases hydrologic support to the SCR Watershed ▪ Low stakeholder support
Alternative Water Resource Management	<ul style="list-style-type: none"> ▪ Promotes water recycling ▪ Increases hydrologic support for the SCR watershed ▪ Salt export/removal capability ▪ Minimum carbon footprint ▪ High stakeholder support 	<ul style="list-style-type: none"> ▪ Uncertain regulatory framework ▪ Potential high cost during drought

**Upper Santa Clara River Chloride TMDL
April 11, 2008 Meeting Summary
10:00 AM – 12:00 AM**

Meeting Summary

Attendees:	
Regional Board Staff:	Sam Unger, Deb Smith, Jenny Newman, Yanjie Chu
SCVSD Staff:	Phil Friess, Raymond Tremblay, Brian Louie, Francisco Guerrero
Larry Walker and Associates:	Ashli Desai
City of Santa Clarita:	Travis Lange, Heather Merenda
Newhall Land and Farming:	Mark Subbotin
United Water Conservation District:	Dana Wisehart, Steve Bachman
Kennedy Jenks Consultants:	Lynn Takaichi
Newhall County Water District:	Steve Cole
Valencia Water Company:	Bob DiPrimio
Castaic Lake Water Agency (CLWA):	Dirk Marks
Santa Clarita Water Division of CLWA:	Mauricio Guardado
Ventura Co. Agricultural Water Quality Coalition:	Rob Roy
Farm Bureau of Ventura County:	John Krist
Ventura County Supervisor Cathy Long's Office	Martin Hernandez (Phone)

Presentations

SCVSD presented a summary of AWRM compliance option (attached)

UWCD presented a summary of AWRM water quality and water supply benefits to Ventura County (attached)

Regional Board presented a summary of potential AWRM Implementation items (attached)

Discussion

Rob Roy, representing the VCAWQC, commented that they support the AWRM compliance option. Mr. Roy indicated the VCAWQC had several concerns with implementing the compliance option associated with the existing 100 mg/L WQO, including the possibility that surface flow in the Santa Clara River would be reduced because the highly treated RO product water would have significant value and could be marketed as a water resources as opposed to discharged to the river. Mr. Roy also indicated the VCAWQC had concerns with the 100 mg/L WQO compliance option, as it would require disposal of brine waste from a large MF/RO facility through Ventura County to the Pacific Ocean. Specifically, Mr. Roy was concerned about environmental issues that may arise and the possibility of lawsuits challenging any such project from environmental organizations in and out of the region. Such lawsuits would delay implementation of any such project for many years, 10 – 20 years, over which, degradation of the SCR watershed would continue and no benefit would be provided to the farmers. Mr. Roy also indicated that the reaction received from local farmers to the proposed AWRM compliance option has been positive and supportive.

Dana Wisehart, representing the UWCD, commented that they support the AWRM compliance option. The key concern expressed by the UWCD Board has been the long-term degradation in water quality in the Piru Basin, which may be addressed in a shorter time period by the AWRM option. Ms. Wisehart indicated that the UWCD Board thought the AWRM was a balanced solution, and that although it relaxes standards, in the end, does not negatively impact farmers and provides substantial benefits to Ventura

FINAL - April 23, 2008

7-408

FINAL

County. Ms. Wisheart indicated that although the UWCD Board supports the AWRM compliance option, there are many details and commitments that need to be worked out and added that the UWCD Board might pull their support if those commitments are not met.

John Krist with the Farm Bureau of Ventura County also indicated the Farm Bureau was supportive of the AWRM compliance option, adding they were guardedly optimistic of the proposal. He also indicated many details still needed to be worked out.

Deb Smith, Regional Board AEO, commented that it was clear that a good amount of work has been done to get to this point by all the stakeholders and that she was pleased to see so many stakeholders together supporting the AWRM compliance option and that the Regional Board was open to considering the proposal. She further indicated she looked forward to seeing how some of the details of the AWRM are further developed. Ms. Smith commented that conceptually, the AWRM compliance option appeared to be a good plan.

Sam Unger, Regional Board staff, reviewed potential implementation requirements and potential permitting actions (see attached presentation slide) that would need to be clarified before presenting AWRM to the Regional Board.

Lynn Takaichi with Kennedy Jenks inquired about the possibility of implementing certain aspects of the AWRM sooner. Regional Board staff indicating they were open to considering various implementation plans and schedules. Regional Board AEO indicated they prefer to have the entire AWRM package together to present to the Regional Board, rather than presenting the AWRM in several pieces.

Alternative Water Resources Management Program

Background

Since November 2007, the Santa Clarita Valley Sanitation District (District), Ventura County Agricultural Water Quality Coalition (VCAWQC), United Water Conservation District (United Water), and the Upper Basin Water Purveyors¹ have been working together to develop an alternative water resources management (AWRM) Program for the Upper Santa Clara River (USCR) Chloride TMDL. Through this process, the District, VCAWQC, United Water, and the Upper Basin Water Purveyors have come to an agreement on the guiding principles and key elements of the AWRM Program.

The Guiding Principles of the AWRM Program

The following guiding principles have been established between the District, VCAWQC, United Water, and the Upper Basin Water Purveyors for the development and implementation of the AWRM Program:

1. The AWRM Program will strive to avoid and, if necessary, mitigate any water quality impacts to direct agricultural users of surface and groundwater from the Santa Clara River in East Piru (i.e., Camulos Ranch).
2. The AWRM Program will not cause long-term water quality degradation of groundwater, and agricultural uses of groundwater will be protected. (i.e., salt balance in any affected basin can be achieved within a reasonable time).
3. The AWRM Program will include a plan to improve groundwater quality in East Piru Basin and expedite water quality improvements. (i.e., water quality in groundwater and surface water in East Piru Basin will be improved before the end of the USCR Chloride TMDL implementation compliance period).
4. The AWRM Program will improve water supplies in Ventura County.
5. The AWRM Program will be implemented, monitored and funded by the Santa Clarita Valley Sanitation District.
6. The AWRM Program will provide for stakeholder oversight during implementation.

Key Elements of the AWRM Program

1. Santa Clarita Valley Sanitation District Commitments
 - Reduce the chloride in WRP effluent through:
 - Self-regenerating water softener (SRWS) removals
 - Conversion to Ultra-Violet Light Disinfection
 - Construction of 3 MGD Microfiltration-Reverse Osmosis (MF-RO) facility at the Valencia WRP
 - Delivered to extraction wells for Ventura County water supply benefit (Figure 1a)
 - Discharged to SCR to comply with water quality objectives, when necessary (Figure 1b)
 - Construction of Ventura County water supply facilities (Figure 2)
 - RO pipeline
 - East Piru extraction wells
 - Extraction well and RO blend pipeline (East Piru Pipeline)
 - Provide dilution water to Santa Clara River as an interim measure prior to completion of MF-RO and Ventura County water supply facilities, and after completion of facilities as needed to comply with WQOs.
 - Protect Reach 4B agriculture (i.e. Camulos Ranch) with a suitable alternative water supply when chloride concentrations in Reach 4B exceed 117 mg/L.
 - Support recycled water uses in the Upper Basin Water Purveyor service areas

¹ Castaic Lake Water Agency, Valencia Water Company, Newhall County Water District, Los Angeles County Water Works District No. 36, and the Santa Clarita Water Division of the Castaic Lake Water Agency.

Alternative Water Resources Management Program

2. Revised surface water and groundwater water quality objectives (WQOs) as follows:

Proposed WQOs for Surface Waters				
Mineral WQO	Reach 4B	Reach 5	Reach 6	Reach 7
Chloride	400 117 (low SWP Cl)** 130 (high SWP Cl)**	400 150 (12-month avg.)	400 150 (12-month avg.)	100
Proposed WQOs for Groundwater				
Mineral WQO	East Piru	Castaic Valley	Santa Clara Bout. & SF Canyons	Santa Clara Mint Canyon
Chloride	200 130 to 150	150	400 150	150
TDS	2500 1300	1000	700 1000	800 1000
Sulfate	4200 600	350	250 300	450 300

* When water quality in Reach 4B (Blue Cut) exceeds 117 mg/L, an alternative water supply will be provided to Camulos Ranch to protect salt-sensitive agricultural uses.

** Trigger between low and high State Water Project (SWP) chloride based on Castaic Reservoir chloride at 80 mg/L.

Next Steps

- District and key stakeholders to meet with Regional Board staff and State Board member Fran Spivey-Weber to discuss AWRM Program on April 11, 2008
- USCR Chloride TMDL Studies to be completed in April-May 2008
- District, United Water, VCAWQC, and Upper Basin Water Purveyors to enter into a Memorandum of Understanding on AWRM Program by May 2008
- Regional Board Staff Report and Hearing on Chloride TMDL
 - Staff Report released in June 2008
 - Regional Board Hearing in September-October 2008
- District Initiates SRWS Ordinance and Referendum Process (Tentative Schedule)
 - Late April – Santa Clarita City Council Information Session on SRWS ordinance/voter referendum process
 - Early May – Introduce SRWS ordinance/voter referendum process to SCVSD Board
 - Mid May – SCVSD Board adopts SRWS ordinance and authorizes voter referendum process
 - Late May – SCVSD submits application to County Registrar's Office to place voter referendum on the November 2008 General Election Ballot
 - January 1, 2009 – SCVSD SRWS ordinance becomes effective, pending voter referendum

Update on Chloride TMDL Schedule

- TMDL Special Studies
 - Agricultural Threshold Study (Completed)
 - Threatened & Endangered Species Study (Completed)
 - Groundwater / Surface Water Model April – May 2008
 - Site-Specific Objective Study April – May 2008
- Regional Board Staff Report June 2008
- Regional Board Hearing September – October 2008

7-417

Regional Board Alternatives

Regional Board will likely consider two alternatives at the Fall 2008 TMDL Re-opener Hearing...

Alternative 1

- No change in WQOs (100 mg/L)

Alternative 2

- Revise WQOs through adoption of SSOs

Compliance Options for Regional Board Alternatives

Alternative 1 (100 mg/L)	Alternative 2 (AWRM)
<ul style="list-style-type: none"> • Advanced Treatment at Saugus and Valencia WRP • 43-mile brine line and ocean outfall <p style="text-align: center;">Or</p> <ul style="list-style-type: none"> • Minimal Advanced Treatment • 43-mile effluent disposal pipeline and ocean outfall 	<ul style="list-style-type: none"> • Reduce Chloride in WRP Effluent • 3 MGD Advanced Treatment Facility • Dilution Water as necessary • Ventura County Water Supply Facilities • Protect Existing Beneficial Uses • Support Water Recycling • Revised surface water and groundwater WQOs

Guiding Principles for the AWRM Program

1. The AWRM Program will strive to avoid and, if necessary, mitigate any water quality impacts to direct agricultural users of surface and groundwater from the Santa Clara River in East Piru (i.e., Reach 4B)
2. The AWRM Program will not cause long-term water quality degradation of groundwater, and agricultural uses of groundwater will be protected. (i.e., salt balance in any affected basin can be achieved within a reasonable time).
3. The AWRM Program will include a plan to improve groundwater quality in East Piru Basin and expedite water quality improvements. (i.e., water quality in groundwater and surface water in East Piru Basin will be improved before the end of the USCR Chloride TMDL implementation compliance period).

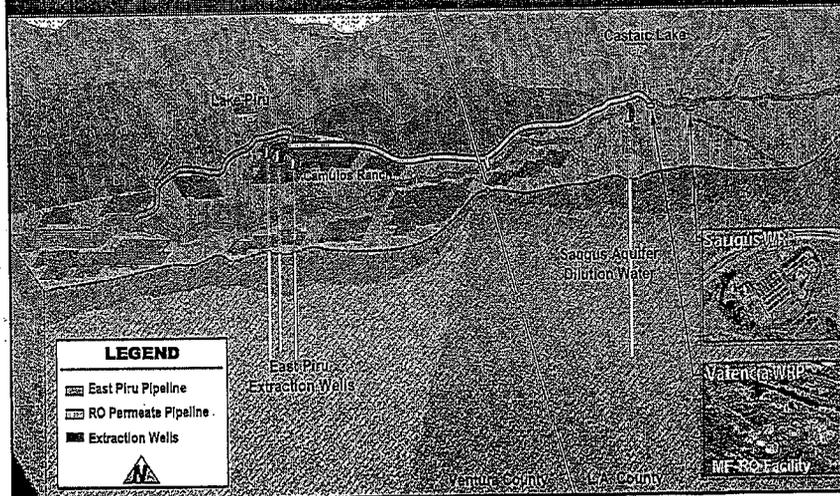

Guiding Principles for the AWRM Program (Cont'd)

4. The AWRM Program will improve water supplies in Ventura County.
5. The AWRM Program will be implemented, monitored and funded by the Santa Clarita Valley Sanitation District.
6. The AWRM Program will provide for stakeholder oversight during implementation.

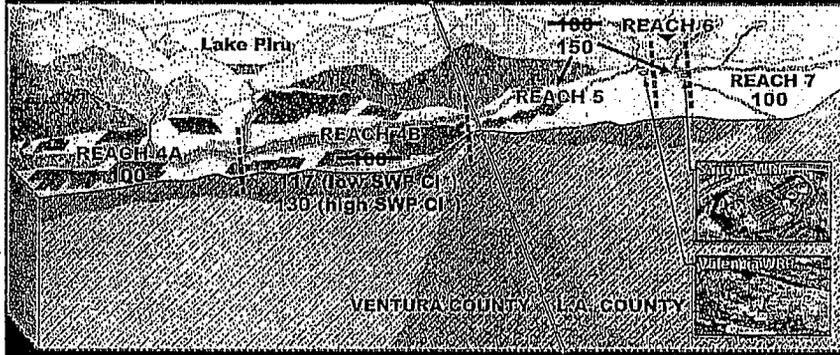

Elements of the AWRM Program

- Reduce Chloride in WRP Effluent
 - Remove all SRWS
 - Convert to UV-Disinfection Technology
- Build 3 MGD MF-RO Facility
 - Brine disposal via deep well injection (abandoned oil fields)
- Purchase dilution waters from CLWA to achieve WQO as needed
- Build Water Supply Facilities in East Piru
 - 10 Extraction Wells
 - Water Supply Conveyance Pipelines
 - RO pipeline to East Piru
 - Extracted groundwater/RO blend pipeline
- Alternative Water Supply to Camulos Ranch
- Support Water Recycling in the Santa Clarita Valley
- Revisions to some surface water and groundwater WQOs

Elements of the AWRM Program

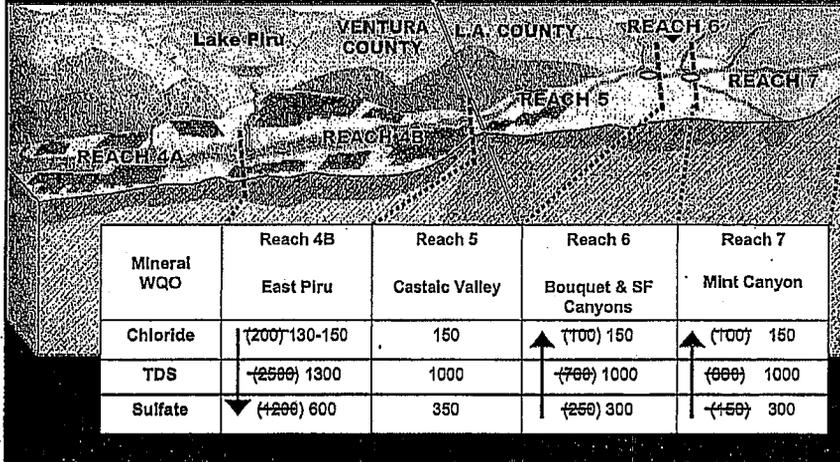

Upper Santa Clara River AWRM Surface Water WQOs

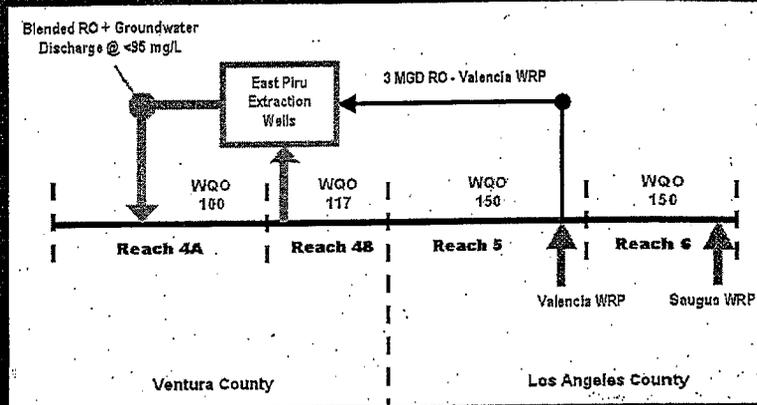

* Trigger at 80 mg/L Chloride in SWP water at Castaic Lake

Upper Santa Clara River AWRM Groundwater WQOs

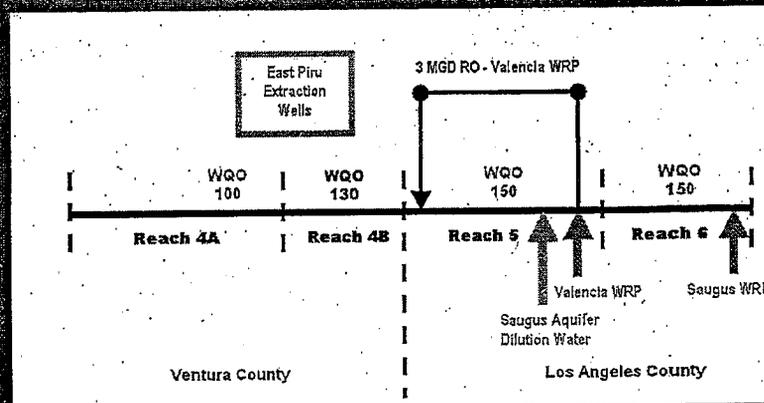

AWRM Operation – Low SWP CI

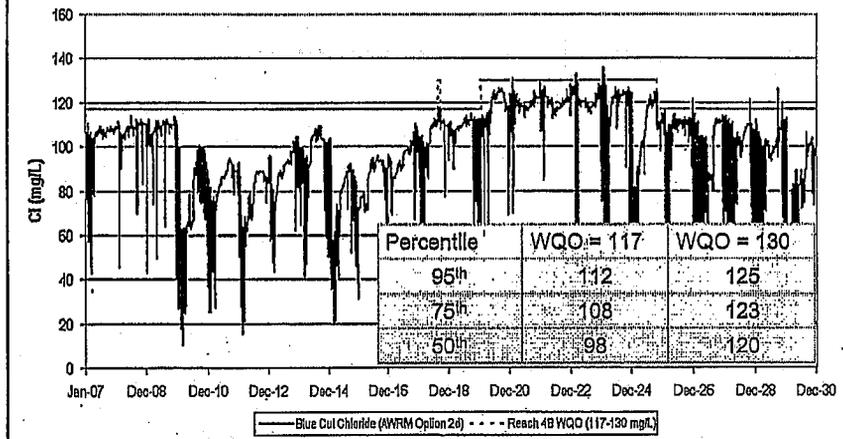

- Valencia RO delivered to East Piru Extraction Wells
- Blended RO + Groundwater discharged to Reach 4A @ < 95 mg/L
- Salt export and water supply benefits to Ventura County

AWRM Operation – High SWP CI

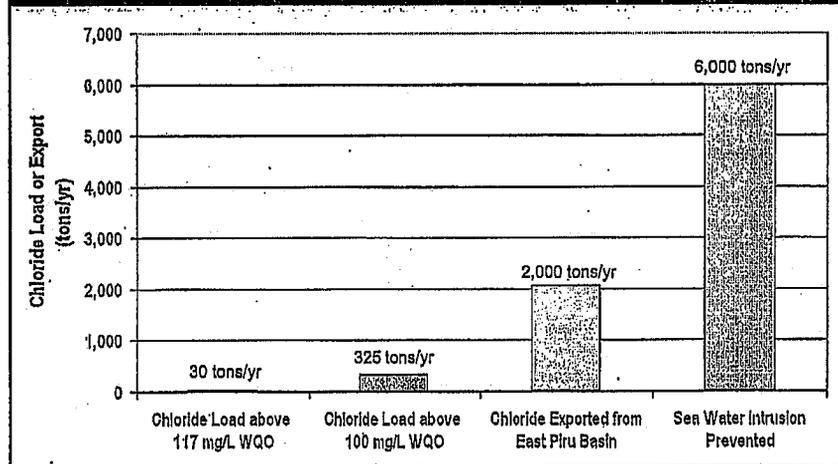

- Valencia RO discharged at LA-Ventura County Line
- Reach 4B WQO (@ 130 mg/L) attained
- Alternative water supply to Camulos Ranch

Reach 4B Chloride with AWRM Program

Chloride Balance with AWRM Program

Potential AWRM Implementation

Reach 4B WQQ	Valencia WRP Permit - Receiving Water Limit
East Piru Basin WQQ	New Valencia WRP WRR - Groundwater Limit
Reverse Osmosis Facility	Valencia WRP Permit - Salt Export Effluent Limit
Saugus Wellfield Discharge	New NPDES Permit - TBD
Reach 4A WQQ	New NPDES Permit - TBD

**Ventura County
Water Quality and Water Supply Benefits**

**Steve Bachman
United Water Conservation District**

Next Steps

- **Brief Key Stakeholders (Ongoing)**
 - Upper Basin Water Purveyors (L.A. County)
 - City of Santa Clarita
 - United Water Conservation District
 - Ventura County Agricultural WQ Coalition
 - Ventura County Board of Supervisors
 - Camulos Ranch, Cities of Piru, Fillmore and Santa Paula
 - Ventura County Watershed Protection District
 - Calleguas Creek TMDL Water Resources Subcommittee
 - Fox Canyon Groundwater Management Agency
 - Friends of the SCR, SCOPE, Surf-Rider, Heal the Bay
- **Complete TMDL Studies (April – May 2008)**
- **Regional Board Processes (June – Oct 2008)**
 - Staff Report
 - Regional Board Hearing

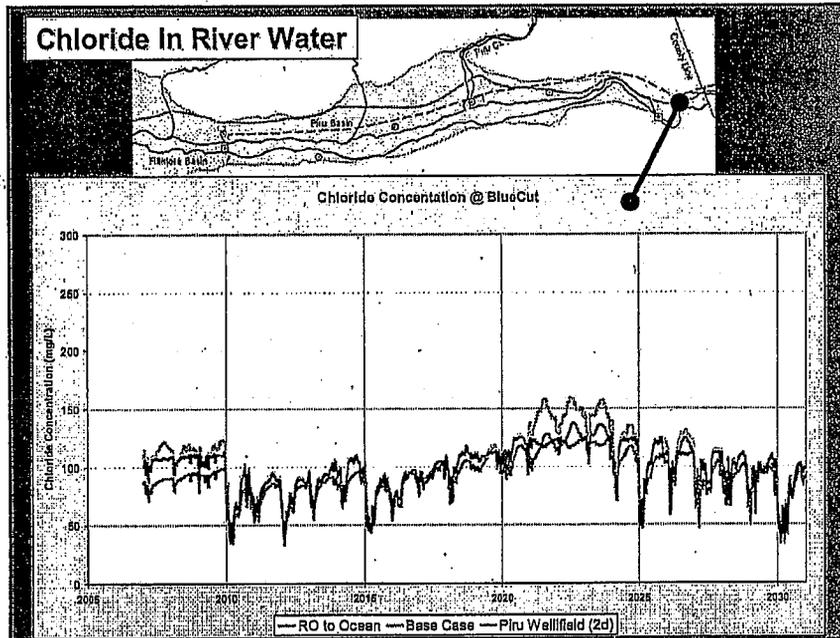

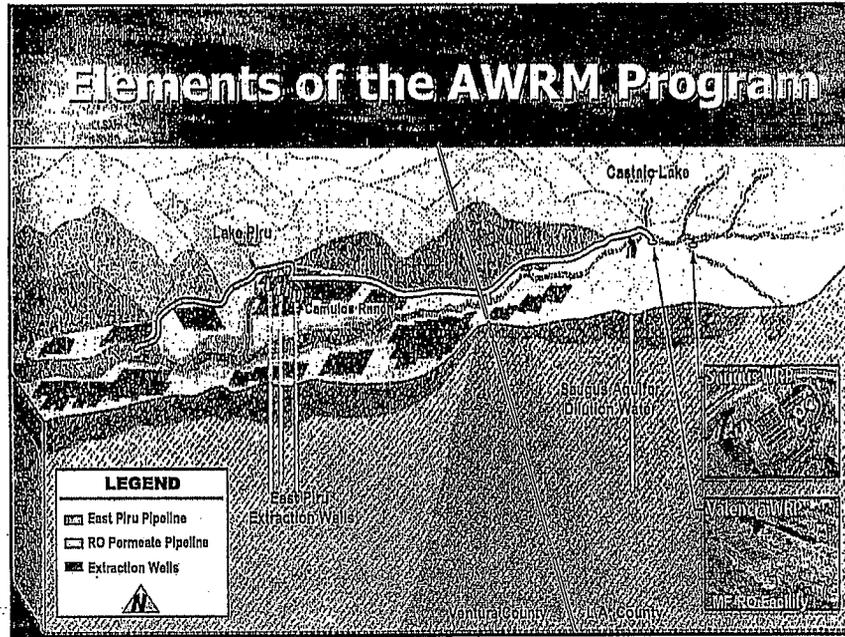

7-425

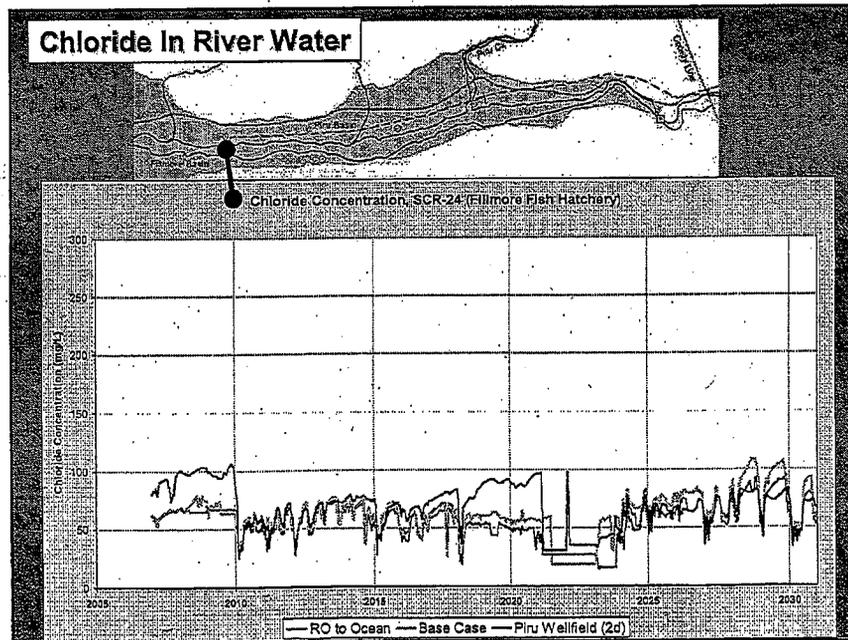

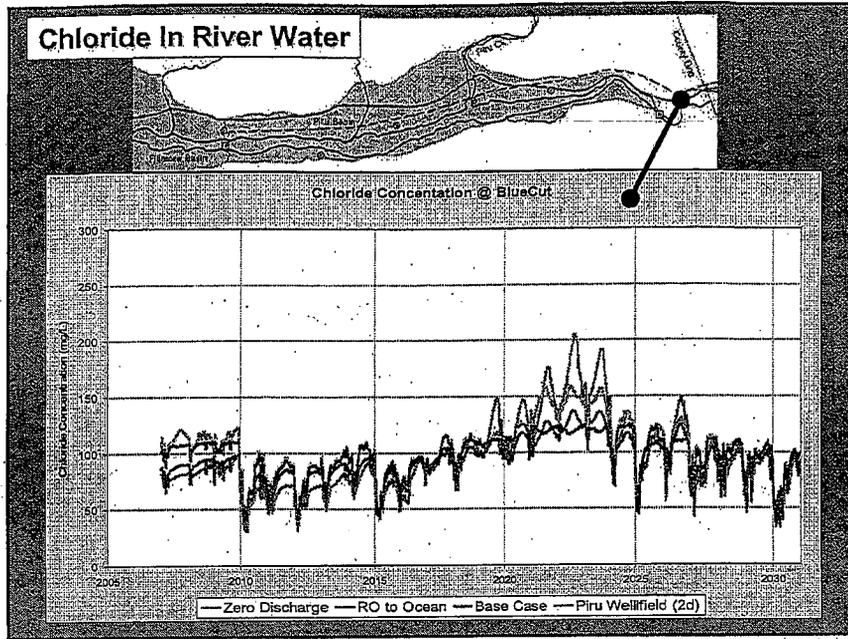

Key Questions for Ventura County

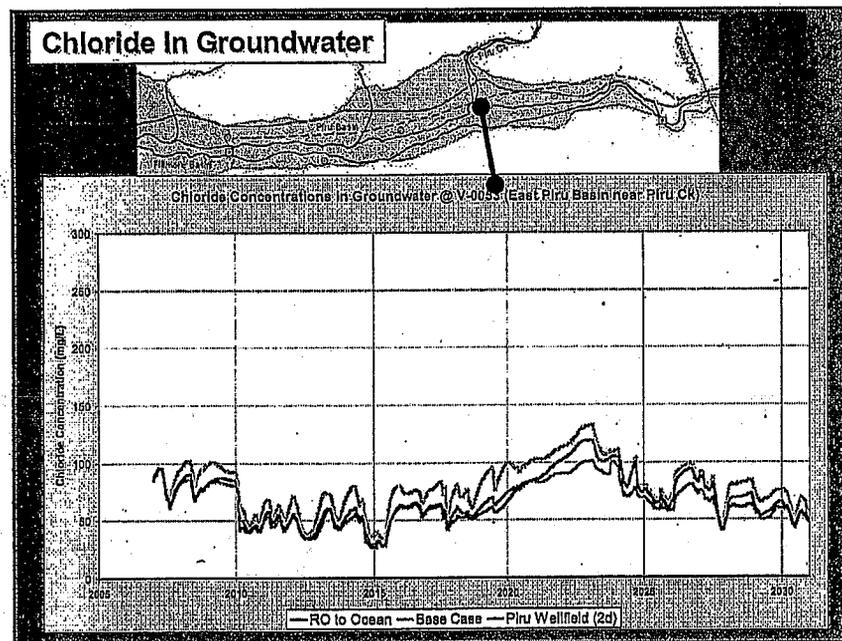

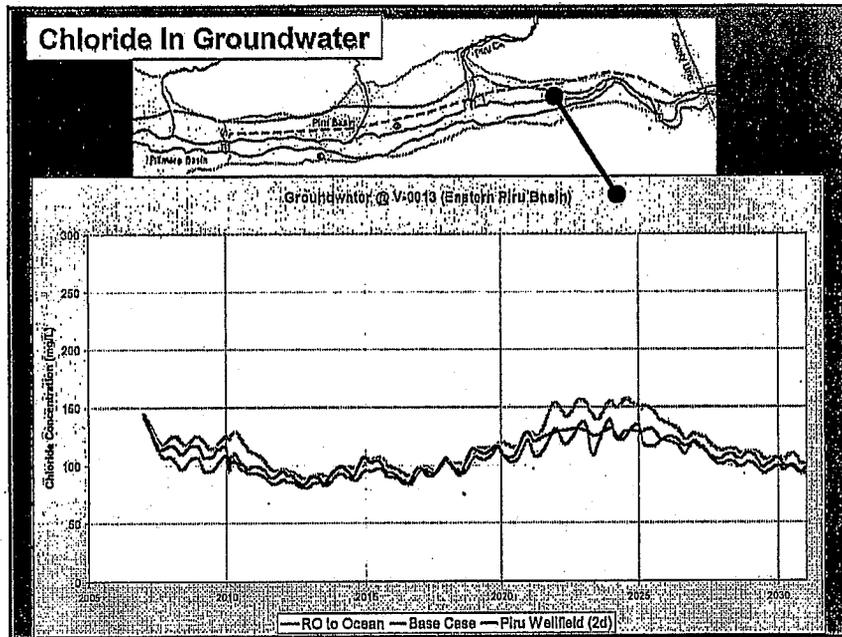

- How will chloride concentrations change along the river?
- How will chloride concentrations change in groundwater?
- How will river flow change?
- Are there benefits for overdraft and seawater intrusion?
- Are there tradeoffs – e.g., drawdown in Piru Basin?

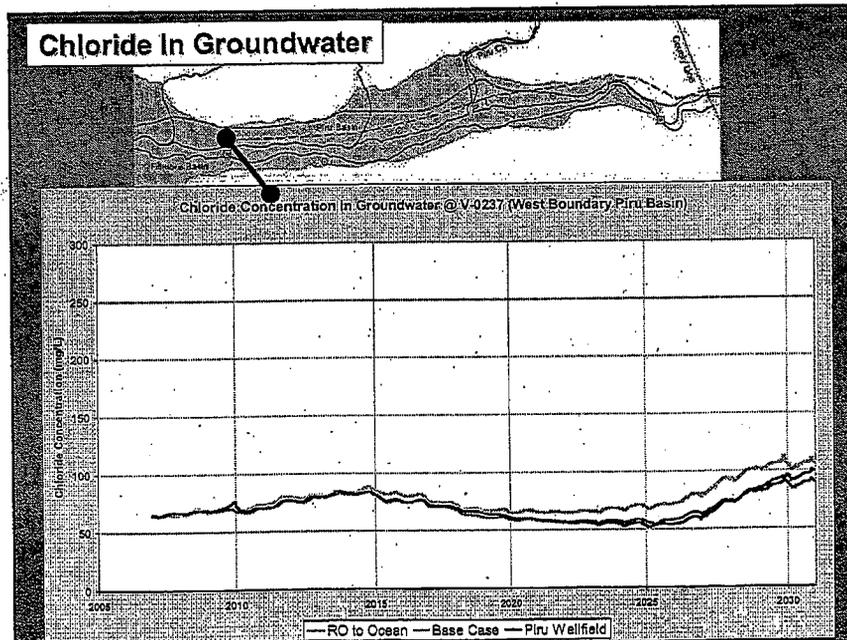

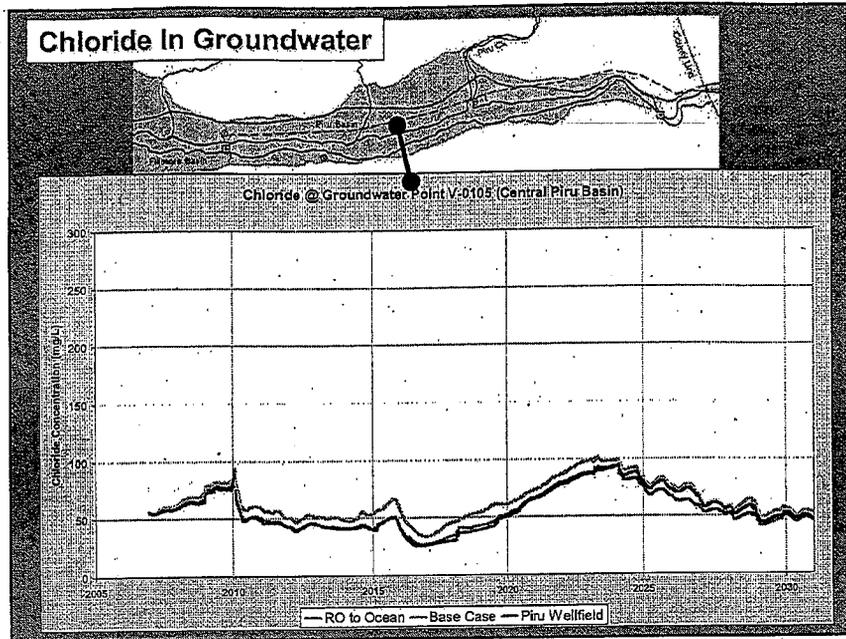

Three Options Evaluated

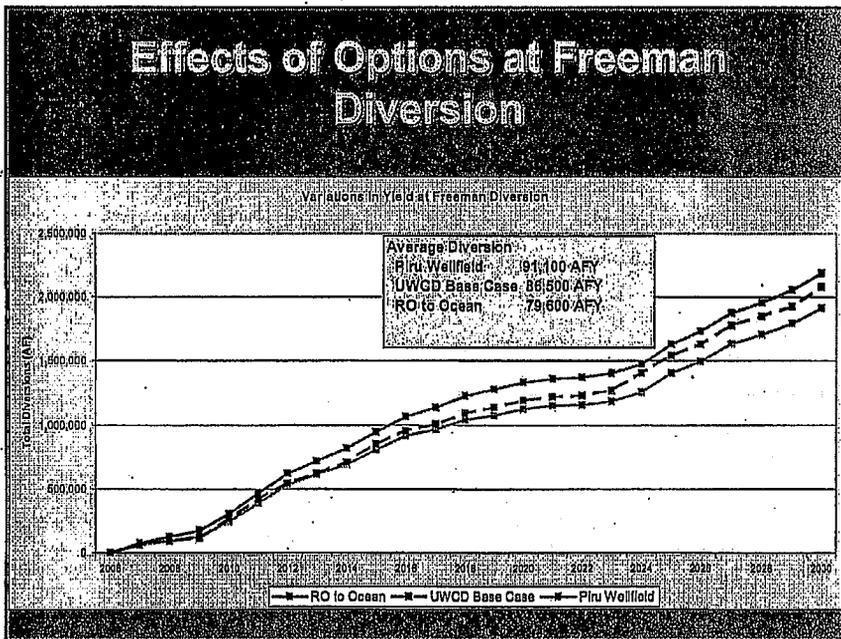

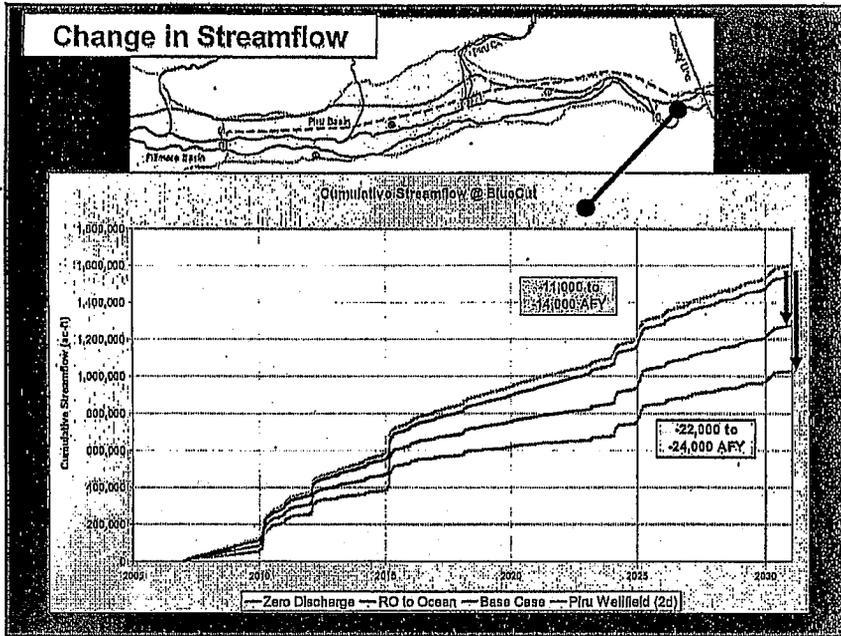

- **RO to Ocean**
 - Brine line to ocean
 - Treated water used primarily in LA County
 - Option Zero Discharge
- **Base Case**
 - Similar to today's situation, except reduction in water softeners, more LA County reuse.
- **Piru Wellfield**
 - Pump east Piru, combine w/RO, discharge Piru/Fillmore

Meeting Summary

Attendees:

Sam Unger (Regional Board), Jenny Newman (Regional Board), Yanjie Chu (Regional Board),
Brian Louie (SCVSD), Francisco Guerrero (SCVSD), Ashli Desai (Larry Walker Associates)

1. Review meeting summaries and action items

Regional Board reviewed meeting summary for May 9, 2008 and had no changes. Meeting summary was approved and made final.

Final – June 10, 2008

i |

7-454

2. Progress on Various Action Items / Issues

Meeting with Board Member Fran Spivy-Weber

Briefing of the AWRM Program for State Board Member Fran Spivy-Weber is scheduled for the June 13, 2008 meeting at the Regional Board offices. Regional Board and District staff will develop the agenda and format for the briefing. Regional Board and District staff agreed to notify stakeholders of briefing and indicate attendance is open to anyone interested. Regional Board staff will contact VCAWQC and SCVSD staff will contact UWCD and Upper SCR water purveyors to inform them of the meeting.

TMDL Task 7, 8 and 9 Acceptance Letter

Regional Board staff indicated that TMDL Task 7, 8 and 9 acceptance letter is going through final review by Regional Board management, and that they expect sending the letter out in soon.

SRWS Update

District staff reported that an ordinance banning / requiring the removal of SRWS was introduced to the SCVSD Board of Directors on May 27, 2008, and is agendized for the June 11th SCVSD Board of Directors meeting for adoption. District staff informed Regional Board staff that the next step required would be preparation of ballot materials in accordance with LA County Registrar's office requirements. Regional Board staff indicated they thought it would be good to present an information item at the July or August Regional Board meeting on the status of the SRWS program and ordinance. District staff indicated they would discuss with District management. District staff also indicated they anticipate having a press release after adoption of the ordinance and may request participation from Regional Board member(s). Regional Board staff requested that the District's Chief Engineer discuss this issue with the Regional Board Executive Officer directly.

Regional Board CEQA/SED Documents

District staff provided requested information regarding AWRM program. Regional Board staff indicated they are moving ahead with preparing the substitute environmental documents and would contact District staff if any additional information is needed.

3. GSWIM/AWRM Issues

Regional Board GSWIM Technical Issues

GSWIM consultants have been in contact with Regional Board staff to address concerns regarding Reach 4B groundwater chloride levels. GSWIM consultants are drafting a technical memorandum to address the Regional Board staff concerns, which is expected to be completed by May 30, 2008.

GSWIM Task 2B-2/TMDL Task 9 Report

Draft of GSWIM 2B-2 Report is expected to be completed within the next week or so.

AWRM Water Resource Benefits Report

District staff indicated they have provided comments on the initial draft report and expect Dr. Bachman to complete report and address comments in the next couple of weeks.

AWRM Program MOU

District staff notified RB staff that a meeting with Camulos Ranch and VCAWQC is scheduled for the afternoon of June 13, 2008 to discuss possible MOU with Camulos Ranch for alternative water supplies. District staff also plans to meet with upper basin water purveyors in mid June to continue discussions on the MOU.

4. SSO-ADA Issues

Draft SSO-ADA Report

LWA indicated they have prepared preliminary draft of SSO-ADA report and received comments from the District staff. LWA is currently completing the Draft Report and addressing the District's comments, expect to be complete next week or so.

Reach 4B Groundwater SSOs

One issue that still needs to be resolved is groundwater objectives in Reach 4B. Ashli Desai noted that the SSO-ADA report will recommend different options that the Regional Board may consider for the Reach 4B groundwater objectives, because of the more recent monitoring results that were collected in groundwater near the Blue Cut area. These options, include: (1) no change to existing groundwater WQOs; (2) use of a point of compliance for revised groundwater WQOs; and (3) subdividing the groundwater basin to reflect water quality and revised WQOs for different areas of the groundwater in East Piru Basin. RB staff indicated that this approach was reasonable and wanted to see the options that could be considered.

Dilution water

District staff indicated there has been considerable interest on the part of the UWCD, VCAWQC and stakeholders in Ventura County to begin using dilution water to lower chloride levels in the interim period before planning, design and construction activates for the AWRM facilities are completed. Upper basin water purveyors have identified potential candidate wells as the source of interim dilution water that could be released to the SCR, without having to construct conveyance facilities to discharge to the river or to the WRP outfalls. The location of these wells is located 1.5 miles upstream of the Valencia WRP, and would discharge to Reach 6 of the SCR Mineral water quality from these wells indicates sulfate levels may be higher than the current Reach 6 objective of 300 mg/L. District staff asked if Regional Board would consider permit limits for dilution water discharges to the SCR that would determine compliance with a weighted average for sulfate, chloride and TDS of the combined dilution water and the WRP recycled water discharges. Regional Board staff indicated that a main concern was that the dilution water discharges to the SCR be covered by an NPDES permit and that so long as these discharges of interim dilution water are covered by an NPDES permit, they ~~could~~ may consider a weighted average approach as a potential means to establish a permit limit for these interim dilution water discharges.

Approaches to permitting

Regional Board staff indicated they are currently drafting potential language for a basin plan amendment that considers the inclusion of provisional Site Specific Objectives for the agreed-upon surface water and groundwater WQO revisions in Chapter 3 of the Basin Plan, with an asterisk noting that these SSOs would become effective upon the implementation of various actions described in Chapter 4 (Implementation Section) of the Basin Plan. Regional Board staff suggested that additional

language could be included in Chapter 4 of the Basin Plan that would address implementation actions (chloride load reductions or facilities) that would effectuate the SSOs. An implementation schedule for these activities would also be included. District staff indicated that such an approach would work, and that District staff will review when draft of potential approach is received. District staff noted that in response to requests from Regional Board staff a few weeks ago, various permitting approaches (Receiving water limits for Reach 4B, Dilution water limits, WRP WLAs) are also being developed and would be shared with RB staff, when available, likely early next week. Regional Board staff indicated that in the development of potential Basin Plan Amendment language for the TMDL, Resolution 97-002 (Chloride Policy) appeared to work well as a template for the actions they are considering. RB staff to send a copy of this resolution and marked-up changes to District staff.

Implementation schedule

Implementation schedule would be included in the Basin Plan. District staff indicated that VCAWQC has expressed a desire to have an acceleration of the implementation schedule. District staff has proposed to reduce the current implementation schedule by approximately 1 ½ years. District staff will develop a draft implementation schedule and provide to Regional Board staff for discussion next week.

5. Next Steps / Next Meeting

Next meeting is scheduled for Friday, June 6th, either at the Regional Board offices or by conference call. Agenda items for the meeting will include additional discussion of approaches to permitting, Basin Plan amendment language and implementation schedule. Regional Board and District staff will also discuss preparation for AWRM briefing of State Board Member Spivy-Weber on June 13th.

Next TWG meeting has been tentatively scheduled for June 24th.

 - c. East Piru Technical Memorandum (Geomatrix)
- 11:15 AM 5. USCR CI TMDL Implementation
- a. Implementation of SSOs
 - i. Regional Board Draft Basin Plan Language
 - ii. Approaches to Permitting
 - b. TMDL Implementation schedule revisions
- 11:30 AM 6. CEQA/TWG Planning
- a. CEQA Scoping / Substitute Environmental Documents
 - b. June 24, 2008 TWG Meeting Agenda
 - i. GSWI/AWRM Status Update
 - 1. Task 2B-2 Report (TMDL Task 9)
 - 2. AWRM Water Resource Benefits Report
 - ii. SSO-ADA Update
 - iii. Regional Board CEQA Scoping/SED Documents
 - iv. SRWS Ordinance Update
 - v. TMDL Schedule Update
- 11:45 PM 7. Next Steps / Next Meeting
- a. June 27, 2008 RB-SCVSD Meeting

Meeting Summary

Attendees:

Phil Friess (SCVSD), Francisco Guerrero (SCVSD), Jenny Newman (Regional Board), Yanjie Chu (Regional Board), Ashli Desai (Larry Walker Associates)

1. Review meeting summaries and action items

Regional Board staff reviewed meeting summary for June 6, 2008 and provided comments. Meeting summary with revisions was approved and made final.

2. Progress on Various Action Items/Issues

TMDL Task 7, 8, and 9 Acceptance Letter

District staff indicated they were in receipt of the acceptance letter from the Regional Board for TMDL Task 7, 8, and 9 submittal.

SRWS Update

District staff indicated the District's Board of Directors adopted an Ordinance requiring removal of existing SRWS on June 10, 2008. District staff is working on preparing ballot measure and materials for the November General Election.

AWRM MOU Update

District staff indicated progress is continuing on development of AWRM MOU agreements between the District, Ventura stakeholders, and LA County stakeholders. District staff notified Regional Board staff of recent meetings with Camulos Ranch on June 13, 2008 and Upper Basin Water Purveyors on June 16, 2008. District staff noted that Camulos was receptive to utilizing blend of RO permeate with groundwater as a means for protecting salt sensitive agriculture beneficial use when surface water chloride levels do not support the use. Camulos did indicate water use in the area for these types of crops may be higher than normally expected due to the local climate. District staff notified Regional Board that one issue that still needs to be worked out with Upper Basin Water Purveyors is dividing of use rights to RO permeate when it is not needed for compliance with WQOs. District will continue to work with Ventura and Los Angeles county stakeholders to develop the MOUs and will update Regional Board staff at future meetings.

3. Briefing for Board Member Fran Spivy-Weber

Regional Board staff reported that at a SWRCB meeting this week, Board Member Fran Spivy-Weber praised the efforts being made by the District and Regional Board. Board Member Spivy-Weber expressed enthusiasm for the progress being made and was cautiously optimistic that the TMDL would be resolved through these efforts.

4. TMDL Studies Update

Draft SSO-ADA Report status/schedule

District staff indicated the draft SSO/ADA report would not be ready for distribution at next weeks TWG meeting. LWA indicated they would provide revised draft of report to District

today. District anticipates completing final review and having a draft available for Regional Board staff review mid-late next week.

Reach 4B Groundwater SSOs

LWA indicated SSO/ADA report presents all the available information and list all potential options previously discussed by District and Regional Board staff in the final SSO-ADA report.

Permitting for Supplemental Water

LWA indicated they incorporated discussion of option for revising sulfate water quality objectives in Reach 6, as recommended by Regional Board staff previously, as way to resolve permitting of supplemental water. LWA indicated they included more recent information than that include in 1993 DWR report that first recommended the revision of objectives in the Basin Plan.

Regional Board asked if possibility of discharging supplemental water through Valencia WRP outfall was still being considered. District staff indicated this option would require facilities that would need to be covered under the project EIR and therefore could not be completed prior to construction of the proposed advanced treatment facilities and could not deliver dilution water in the interim as desired by the Ventura County stakeholders.

Draft GSWIM Task 2B-2 Report

Regional Board staff indicated they have downloaded the draft GSWIM Task 2B-2 Report for review.

East Piru Technical Memorandum

Regional Board staff indicated they have downloaded the East Piru Technical Memorandum for review.

4. USCR CI TMDL Implementation

Implementation of SSOs

Regional Board and District staff indicated proposed SSOs and Basin Plan language were presented at last weeks meeting and no additional changes have been made at this time.

4. CEQA/TWG Planning

CEQA Scoping/ SED

Regional Board staff indicated they will not conduct the CEQA scoping meeting as a part of the June TWG meeting, but would be ready to combine with the July TWG meeting, tentatively scheduled for July 15 in Fillmore.

June 24 TWG Meeting Agenda

Proposed meeting agenda for the June 24 TWG meeting was acceptable to Regional Board and District staff. Regional Board indicated they would not provide a separate update for CEQA scoping for AWRM but would provide a brief update with the general TMDL schedule update. Proposed Agenda is as follows:

- i. GSWI/AWRM Status Update
 1. Task 2B-2 Report (TMDL Task 9) (Geomatrix)
 2. AWRM Water Resource Benefits Report (Dr. Bachman)
- ii. SSO-ADA Update (LWA)
- iii. SRWS Ordinance Update (SCVSD)
- iv. TMDL Schedule Update (SCVSD/RWQCB)

6. Next Meeting

Next meeting is tentatively set for June 27, 2008. Due to scheduling, meeting may be held in early afternoon rather than at usual 10:30 start time. Regional Board and District staff will confirm early next week whether meeting/conference call is necessary.

Summary and Overview

*TWG Meeting #26
November 27, 2007
Fillmore, California*

Meeting Overview

On November 27, 2007 the Upper Santa Clara River Chloride TMDL Study Project Team held the 26th meeting of the Technical Working Group in the City Council Chambers of the Fillmore City Hall in Fillmore, California. Paul Downs, of Moore Iacofano Goltsman, Inc. (MIG), facilitated the meeting. The TWG participants and consulting staff in attendance were:

Agenda

- 1:30 pm I. Welcome and Introduction
- 1:35 pm II. TES Study
- 1:50 pm III. Groundwater Surface Water Modeling Effort
- Initial Eight Scenarios
 - Calibration
- 2:50 pm IV. Alternatives for Compliance Options
- 3:15 pm V. Discussion of the SSO-ADA Process
- Update/Overview
 - LRE Averaging Period Study
- 3:55 pm VI. Summary and Next Steps

Summary of Main Points

The following summary presents the main points of the meeting, generally in the order that they were presented. Comments are paraphrased. The summary presents a record of discussions and does not include official statements of policy, nor any commitments to undertake any regulatory or agency action. During the Upper Santa Clara River Chloride TMDL Collaborative Process, any policy agreements or statements will be published in documents, other than meeting summaries, in which it will be explicitly stated that a policy statement is being presented. MIG drafted this summary, which was then reviewed and approved by staff of the Regional Board and the Santa Clara Valley Sanitation District.

DECISIONS, PROGRESS UPDATES, AND ACTION ITEMS

- The TES TAP has completed its review of the Aquatic Life Report. This review is now available on the project website located at www.santaclarariver.org.
- The LACSD is pursuing memoranda of understanding with water suppliers to ensure that sufficient water is available for purchase in the event of drought conditions. These agreements will include the Department of Water Resources if possible.
- The GSWI Model will not be run against a "base case scenario." The modelers have not been asked to create a base case to test specific scenarios against, but have instead been asked to develop 8 scenarios for review that will allow for informed policy decisions to be made regarding potential impacts of a variety of options for achieving compliance.
- The NewFields report recommends that a 3 month rolling average be used for the measuring chloride in the project area. This report is being reviewed by the Co-Chairs of the AGTAP.

II. THREATENED AND ENDANGERED SPECIES (TES) STUDY UPDATE

Study Status Report

The TES TAP has completed its review of the Aquatic Life Report. This review is now available on the project website located at www.santaclarariver.org. Brian Louie explained the general background of the TES Study to the TWG. He states that the TES study consists of a report developed by ADVENT-ENVIRON. This report (The Aquatic Life Report) outlines potential impacts of elevated chloride levels on threatened and endangered species in the Upper Santa Clara River. After this report was presented, the

TWG requested that an independent panel review the report. A team of reviewers was empanelled to review and comment on the report in response to this TWG request. The final document and the review are both available on the project website.

(The Agenda was altered to accommodate participants' schedules. The TWG skipped ahead to agenda Item IV before returning to the regular agenda order)

IV. ALTERNATIVES FOR COMPLIANCE OPTIONS

Alternatives Presentations

Phil Friess of the LACSD gives a presentation on potential alternative compliance options to the TWG. His presentation focused on four main options:

- Advanced Treatment and Brine Disposal
 - Advanced Treatment to achieve WQO for WRP discharges
 - 43 mile brine-line and ocean outfall through Ventura County
 - 10 mile brine-line to deep well injection field
- Minimal Advanced Treatment and Secondary Effluent Pipeline and Outfall
 - Advanced Treatment to achieve WQO for minimum flows
 - 43 mile secondary effluent pipeline and ocean outfall through Ventura County
- Alternative WRP Discharge Location
 - Move WRP discharge to upstream location
 - Increase use of SCR Assimilative Capacity
- Alternative Water Resource Management (AWRM)
 - Source Control to minimize WRP Chloride loadings
 - o SRWS removal incentives
 - o Voter referendum
 - UV Disinfection
 - Maximize Recycled Water Uses in Santa Clarita Valley
 - Enhance Assimilative Capacity in Reaches 5 and 6
 - o Management of local storm-flow releases at Castaic Reservoir
 - o Purchase/discharge of additional dilution flows
 - Salt export following drought conditions
 - o East Piru Extraction Wells and Blending Facilities
 - o Blend with Piru Creek releases, maintain compliance with surface water quality objectives

Removal of Self Regenerating Water Softeners (SRWS)

Rob Roy of the VAWQC asks what enforcement mechanisms have been considered to ensure removal of SRWS. Phil Friess responds that the LACSD expects that compliance will largely be voluntary, and that aggressive mechanisms will likely not be necessary. If voluntary compliance does not achieve expected results, the LACSD may consider different incentive mechanisms.

Provision of Additional Purchased Water

Mr. Roy asks how the AWRM will ensure that sufficient water is available for purchase in the event of drought conditions. Mr. Friess states that the LACSD is pursuing memoranda of understanding with water suppliers to fill this need if it arises. These agreements will include the Department of Water

Resources if possible. Additionally, the LACSD will be looking to mix alternative discharges with supplied water to ensure compliance.

Averaging Period for Compliance

Brandon Steets asks what averaging period will be used to measure compliance of the various alternative compliance options. Mr. Friess states that this has yet to be decided, and that the Board and LACSD are currently working to determine this averaging period in cooperation with the Co-Chairs of the Agricultural Study TAP's Co-Chairs, Drs. Grattan and Faber.

Additional Presentations

At this point, Tracy Quinn of Kennedy/Jenks consulting, and Steve Bachman representing the United Water Conservation District give supporting presentations outlining other possible directions for the Alternative Compliance Options. These presentations are available on the project website at www.santaclarariver.org.

III. GROUNDWATER SURFACE WATER MODELING EFFORT

Calibration Status

Terry Foreman of CH2M Hill gives an update on the calibration of the GSWI Model. He states that the calibrations effort is largely completed, and is looking good. The calibration of the model has had extensive vetting by the GSWI Technical Subcommittee of the TWG.

Scenario Presentation

Mr. Foreman gives a presentation on the initial 8 scenarios to be run on the GSWI Model. The scenarios are currently being finalized and the parameters will be distributed later in the week. Mr. Steets asks if the data is available for review. Mr. Foreman states that any participant interested in specific data should contact Mr. Foreman to receive the files.

Base Case Scenario

Mr. Foreman states that the 8 scenarios will not be run against a "base case" scenario. The modelers have not been asked to create a base case to test specific scenarios against, but have instead been asked to develop 8 scenarios for review that will allow for informed policy decisions to be made regarding potential impacts of a variety of options for achieving compliance.

V. DISCUSSION OF THE SITE SPECIFIC OBJECTIVES/ANTI DEGRADATION ANALYSIS (SSO-ADA) PROCESS

Overview

Ashli Desai of Larry Walker and associates gives a presentation on the status and schedule of the SSO/ADA. This presentation is available for download on the project website at www.santaclarariver.org. She states that the Agricultural Beneficial Uses whitepaper that was earlier issued by the Project Team (also available at www.santaclarariver.org) is the key paper for this effort, and will require input from the Regional Board. The Alternative Compliance Options/Alternative Water Management Options that have been previously discussed are linked to this SSO/ADA effort, and will be an important aspect of the analysis that goes in to the Regional Board's decision-making process.

Averaging Period Presentation

Joel Kimmelshue and Stephanie Tillman of NewFields gives a presentation on choosing an averaging period to use for analysis purposes. They recommend a 3 month rolling average be used. C.P. Lai of the Regional Board asks why a weekly averaging period was not considered. Ms. Tillman answers that weekly data was not available, but that NewFields is comfortable recommending that a 3 month averaging period provides good information with a minimum of difficulty and expense. Other TWG

members ask whether a 3-month averaging period would not allow for very high "pulses" of chloride that could damage the crops, despite being in compliance with the quality objective using a 3-month average.

Rob Roy asks how this averaging period information will be used in the overall process. Mr. Kimmelshue explains that a three month rolling average refers to the process for measuring chloride levels in the Santa Clara River. When averaged out over 3 months on a rolling basis, data is "smoothed," removing potential anomalous peaks and valleys in the chloride levels that could distort the measurements. This has advantages and disadvantages, in that it reduces fluctuations and allows for efficient measurement; however spikes or troughs in chloride levels can also be missed by this method of sampling and measuring. The balance between the advantages and disadvantages need to be carefully considered.

Heather Merenda of the City of Santa Clarita asks about gradients used in measuring, and whether any trends can be discerned from the averaged data. The NewFields Team states that patterns in the gradients beyond what one would typically expect have not been identified.

Heather Merenda asks if the NewFields Team feels that this three month average is "very protective" of crops and species in the study area. Mr. Kimmelshue states that his team feels that the 3-month average is the best balance of efficiency and protection, but ultimately there are a wide variety of stresses, including the potential for quick pulses of chloride that are not picked up in the 3-month average. Representatives of the Regional Board state that there are many complex factors involved that make determining an averaging period very difficult, in particular in those instances when damage to the crops may not be visible.

Joel Kimmelshue states that the NewFields Team settled on the 3-month average as the best choice under difficult circumstances. The Ag-TAP Co-Chairs were asked to weigh in on this report and provide their findings to the TWG for this specific reason. The Co-Chairs review of the NewFields report will be available to the TWG shortly, and will be posted to the project website for review.

ALTERNATIVES FOR COMPLIANCE OPTIONS

Phil Finess
Technical Services

November 27, 2007

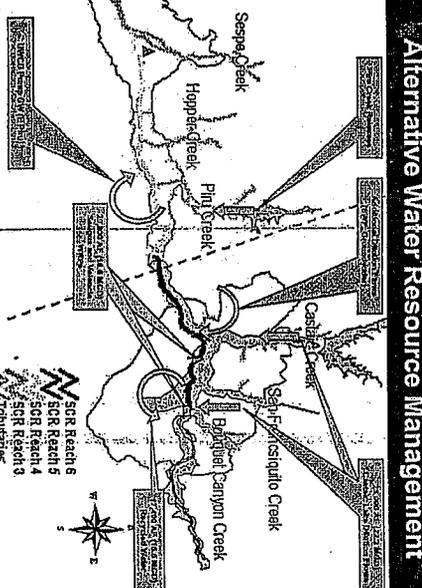

Alternatives for Compliance Options

- Alternative Water Resource Management
 - Source Control to minimize WRP Chloride loadings
 - SRWIS removal incentives
 - Water rereleasum
 - UV Disinfection
 - Maximize Recycled Water Uses in Santa Clarita Valley
 - Enhance Assimilative Capacity in Reaches 5 and 6
 - Management of local storm-flow releases at Castaic Reservoir
 - Purchase/discharge of additional dilution flows
 - Salt export following drought conditions
 - East Piru Extraction Wells and Blending Facilities
 - Blend with Piru Creek releases, maintain compliance with surface water quality objectives

Alternatives for Compliance Options

- Advanced Treatment and Brine Disposal
- Minimal Advanced Treatment and Secondary Effluent Pipeline and Outfall
- Alternative WRP Discharge Location
- Alternative Water Resource Management

Alternative Water Resource Management

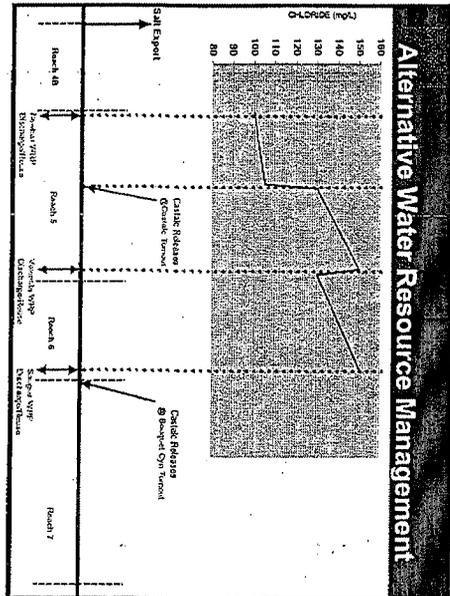

Alternatives for Compliance Options

- Advanced Treatment and Brine Disposal
 - Advanced Treatment to achieve WQO for WRP discharges
 - 43 mile brine-line and ocean outfall through Ventura County
 - 10 mile brine-line to deep well injection field
- Minimal Advanced Treatment and Secondary Effluent Pipeline and Outfall
 - Advanced Treatment to achieve WQO for minimum flows
 - 43 mile secondary effluent pipeline and ocean outfall through Ventura County
- Alternative WRP Discharge Location
 - Move WRP discharges to upstream location
 - Increase use of SCR Assimilative Capacity

Example WQOs for TMDL Compliance Options

Compliance Option	WRP Discharge (WB)	Chloride		Dilution Flow (WB)	Chloride	
		WQO (WB)	Depth		WQO (WB)	Depth
Advanced Treatment and Brine Disposal	34,880	120	120	0	100	100
Minimal Advanced Treatment and Secondary Effluent Pipeline	11,280	120	120	0	100	100
Alternative WRP Discharge Location	38,200 (Reaches 3&7)	130	157	0	100	157
Alternative Water Resource Management	20,800	130	157	Up to 25,000	100	117

Summary and Overview

TWG Meeting #27
January 8, 2008
Fillmore, California

Meeting Overview

On January 8, 2008 the Upper Santa Clara River Chloride TMDL Study Project Team held the 27th meeting of the Technical Working Group in the City Council Chambers of the Fillmore City Hall in Fillmore, California. Paul Downs, of Moore Iacofano Goltsman, Inc. (MIG), facilitated the meeting. The TWG participants and consulting staff in attendance were:

Agenda

- 1:00 **I. Welcome and Introduction**
 A. Meeting Purpose
 B. Agenda Overview
- 1:05 **II. Site Specific Objective / Anti-Degradation Analysis Study**
 A. Overview – Ashli Desai
 B. Agricultural Beneficial Use Clarification – Ashli Desai and Sam Unger
 C. Compliance Averaging Period for Chloride Threshold Guidelines in Avocado
 – Joel Kimmelshue
- 2:00 **III. Alternative Water Resource Management (AWRM) Scenario**
 A. Overview – Sanitation District
 B. Ventura County – Steve Bachman
 C. LA County – Traci Quinn
 D. Relationship of the AWRM to other Studies – Sanitation District
- 2:45 **IV. Groundwater-Surface Water Interaction Model**
 A. Overview of GSWIM Progress
 B. Technical Subcommittee Discussion
- 3:55 **V. Summary and Next Steps**
- 4:00 *Close*

Summary of Main Points

The following summary presents the main points of the meeting, generally in the order that they were presented. Comments are paraphrased. The summary presents a record of discussions and does not include official statements of policy, nor any commitments to undertake any regulatory or agency action. During the Upper Santa Clara River Chloride TMDL Collaborative Process, any policy agreements or statements will be published in documents, other than meeting summaries, in which it will be explicitly stated that a policy statement is being presented. MIG drafted this summary, which was then reviewed and approved by staff of the Regional Board and the Santa Clara Valley Sanitation District.

DECISIONS, PROGRESS UPDATES, AND ACTION ITEMS

- The GSWI Task 2B-1 report will be submitted on January 21st, 2008
- The GSWI 2B-2 report will be released in March/April, 2008
- The LRE Averaging Period report will be released by Joel Kimmelshue and Stephanie Tillman of NewFields in January of 2008
- The TMDL Task 7, 8, and 9 reports will be released in April, 2008
- Several TWG participants express the need for the averaging period study and other efforts of the Collaborative Effort address strawberries and nursery crops, and not just avocado crops
- Terry Foreman of CH2M Hill states that it is important for the Alternative Water Resource Management Study (AWRM) to determine if pumping in the western portion of the basin will adequately induce recharge in the groundwater. The developers of the AWRM will likely need to test this assumption (and others) with the GSWI Model, and so should make sure to ask this question early on in their work.

- The terms used in the AWRM effort are very similar to the GSWI Model naming protocol, i.e., both use the term "scenario". Sam Unger asks that the AWRM use a different method for naming its reports to avoid confusion.

II. SITE SPECIFIC OBJECTIVES/ANTI-DEGRADATION ANALYSIS (SSO/ADA)

A. Overview of SSO/ADA Process

Ashli Desai of Larry Walker and Associates provided an overview of the SSO-ADA process and the interrelationship between studies and gave an update on the progress of the SSO/ADA. Ms. Desai discussed the elements of the SSO-ADA and the Regional Board's regulatory process and the current schedule.

B. Agricultural Beneficial Use Clarification

Ms. Desai provided an overview of the AGR BU Clarification issues and reviewed the two white papers on agricultural beneficial uses that have been prepared - the first, a technical analysis, and the second a regulatory analysis. Ms. Desai's report is available on the project website at www.santaclarariver.org. Regional Board staff indicated the planned Regional Board information item has not been scheduled for a future Board meeting and staff believes this may no longer be necessary and that this information could be included in an SSO.

Dan Detmer clarifies that salt sensitive agriculture includes nursery crops, strawberries and avocados and asks if there are nurseries in the reach under question. SCVSD indicated that nursery growers in the SCR are typically wholesalers that are provided nursery stock grown outside of the SCV and they are generally provided "served water." One nursery has been identified in close proximity to Reach 6 of the SCR; however, the nursery is provided water from the SCWD of CLWAY, utilizing imported SWP water. Heather Merenda explains that nurseries also typically pretreat their water in order to customize it for the particular crop they are growing at the time. Mr. Detmer states that nursery operations are a high growth area.

Diversions

Lynn Takaichi asks if diversions in the SCR are only on the mainstem of the river. Participants familiar with the area explain that this is the case. Diversions in the SCR watershed are taken from the mainstem of the river.

Impact of Changing the Water Quality Objectives

Rob Roy of the VCAWQC asks how modification of water quality in Reaches 5 and 6 of the SCR would be protective of the downstream Ventura County reaches of the SCR? Sam Unger of the Regional Board states that the goal is to always keep in mind strategies for ensuring protection of downstream beneficial uses, and that the Groundwater Surface Water Interaction Model will help to clarify and answer this question. He states that the current agricultural beneficial uses may not need to be de-designated, but instead a new SSO could be established that still supports agricultural uses. Heather Merenda asks if the May 2008 Regional Board date to address the USCR TMDL has been delayed. Regional Board staff indicated that the hearing has not been calendared and the intent is to be responsive to the discussion of potential consensus solutions by stakeholders. Given the progress being made on the alternative water resource management (AWRM) compliance option, Regional Board staff feels additional time is necessary to allow this option to be further developed.

C. Compliance Averaging Period for Chloride Threshold Guidelines in Avocado

Joel Kimmelshue and Stephanie Tillman of NewFields join the meeting by conference call to report on the progress of the Averaging Periods study. They state that the technical memorandum has been reviewed and commented on by District and Regional Board staff, and a response to comments report has been prepared. Both reports have been submitted to the TWG for review and comments by January 22, 2008. Additionally, the Agricultural LRE Technical Advisory Panel co-chairs will review the memo and the

response to comments report and will provide their comments shortly. The current recommendation by Newfields is for a three month averaging period. Their presentation and reports are available on the project website at www.santaclarariver.org.

Historical Variability

Lynn Takaichi asks how the averaging period will deal with changes to the historical variability of chloride in the basin as a result of implementation of compliance options, such as the AWRM which is intended to smooth variability and maintain a more consistent chloride level. Mr. Takaichi asked if a longer averaging period could be considered under these conditions. Joel Kimmelshue states that his team was asked to look at effects under current conditions, not under proposed scenarios, but that they would be able to look at the possibility of extending the averaging period under these considerations if requested to do so by the Project Team. SCVSD staff indicated the AG TAP co chairs would be asked to weigh in on the averaging period issue as it relates to the AWRM option. Regional Board staff also indicated that modeling the AWRM scenario might help to answer the questions regarding whether longer averaging periods were appropriate..

Strawberries and Nursery Crops

Several TWG participants express the need for all efforts of the Collaborative Effort take in to account strawberries and nursery crops, and not just avocado crops. Nursery crops in particular are expected to be important in the study area for the foreseeable future. Newfields indicated that the LRE determined there was insufficient scientific literature to be able to recommend a threshold for strawberries and nursery crops and that without knowing the what the appropriate threshold is, it is not possible to recommend a particular averaging period for these crops. Stakeholders discussed whether the LRE guidelines, although based on avocados, were protective of other salt sensitive crops. MIG indicated that the LRE TAP Critical Review report specifically noted that the guidelines for avocados would be protective of strawberries and nursery crops. MIG was tasked to reference the specific statements in the LRE TAP Critical Review report.

Permitting and the Averaging Period

Brandon Steets of Geosyntek asks if the Regional Board's future decisions regarding averaging periods will apply only to one discharge permit or to the whole reach. Regional Board staff stated that the averaging period will apply to both, however results of the GSWI model will be needed before a decision can be made. If necessary, the Regional Board can reopen and change the permit.

III. ALTERNATIVE WATER RESOURCES MANAGEMENT SCENARIOS (AWRM)

Brian Louie, Traci Quinn, and Steve Bachman give a series of presentations on possible alternatives for water management the Ventura County and Los Angeles County. These presentations are available on the project website at www.santaclarariver.org.

A. Overview – SCVSD

SCVSD gave a presentation on the overview of alternatives being considered for compliance; (1) Advanced Treatment, (2) Minimal Advanced Treatment Discharge plus Secondary Effluent Pipeline/Outfall, (3) Alternative Discharge Location, and (4) Alternative Water Resource Management. Indicated SCVSD working with water agencies (UWCD and CLWA) to retain Kennedy Jenks Consultants and Dr. Steven Bachman to further develop AWRM compliance option. SCVSD presented the proposed development of the AWRM scenario and the roles of Kennedy Jenks and Dr. Bachman in the first phase of the process.

B. Ventura County – Dr. Stephen Bachman

Dr. Bachman provided an overview of work for assessing salt export for East Piru subbasin using proposed extraction wells to clean up saline conditions in the basin. The extraction wells would then be used to mitigate drought conditions. Dr. Bachman reviewed possible scenarios (1) to operate extraction

wells during precipitation events when flow in the SCR would export salt to the Pacific Ocean (2) to operate extraction wells when Freeman Diversion is operated to divert greater than 80% of flows for "in-lieu" deliveries to agriculture in the Oxnard Plain, and (3) to operate wells for the purpose of drought management to dilute high chloride flows at the Ventura/Los Angeles County Line. Dr. Bachman presented his recommendation to further develop only Scenario 1, due to concerns of salt export to Oxnard Plain and relatively equal cost of Scenario 2. Dr. Bachman discussed the need to model this scenario using the GSWIM as part of next phase of the AWRM study.

Piru Basin Groundwater Water Quality Objective

Rob Roy asked if the GW water quality objective would be lowered under this proposal. Regional Board staff responded that there is a possibility that a revision of the Piru groundwater water quality objective, based on knowledge gained from this study, could be considered as part of the TMDL.

Speed of Groundwater Dispersal

Lynn Takaichi asks if there is any evidence on how fast chloride moves through the Piru basin. Steve Bachman of United Water states that preliminary results show that it takes approximately 10 years for chloride to disperse in the basin.

Additional Operation of Piru Extraction Wells

Lynn Takaichi asked if the Piru extraction wells could be operated more frequently once the groundwater basin was cleaned up. Dr. Bachman responded that the current plan only calls for operation of the wells approximately 10% of the time and consideration could be given to operating the Piru extraction wells for water supply management once the basin is cleaned up.

C. Los Angeles County – Kennedy Jenks

Kennedy Jenks provided an overview of their work assessing volume and quality of dilution water, and availability under various possible hydrologic conditions: (1) locally above normal conditions and (2) locally below normal conditions, and considering Northern California SWP conditions under each based on chloride levels within Castaic Lake: (a) wet conditions, between 25-52 mg/L, (b) dry conditions, between 52-75 mg/L, and (c) critically dry, between 75-106 mg/L. Under each condition, a mass balance was used to determine amounts of dilution water required to meet proposed water quality objectives. Kennedy Jenks determined that under non drought conditions (locally above normal and SWP wet or dry conditions) relatively little dilution water was required; however, under drought conditions (locally below normal and SWP wet, dry or critically dry conditions and locally above normal and SWP critically dry conditions) the amount of dilution water required made the AWRM unfeasible.

Chloride Gradient Assumption

Regional Board staff questioned whether the assumption used in the study that there was a 20 mg/L gradient in chloride concentrations between the SCVSD WRP discharge and the LA/Ventura County Line was a valid assumption. SCVSD staff indicated that over the entire period of analysis (20 years) the assumption was valid, however, during drought this may not be the case. SCVSD staff indicated this issue would be assessed in the GSWIM study.

Removal of Self Regenerating Water Softeners (SRWS)

Stakeholders requested information on the SCVSD's SRWS removal program. SCVSD staff indicated that the District was implementing a voluntary rebate program and pursuing a referendum for the 2008 general election to authorize the District to enact ordinances banning existing SRWS, the earliest possible date for such a ban being January 2009. SCVSD staff indicated that no official ordinance has been drafted yet to require removal of the SRWS. Under the current programs, approximately 1000 have been removed and the District has negotiated agreements with SRWS rental companies for the removal of an additional 1,500 units.

Stakeholders asked if the District believed they would be able to remove additional units or if the current removals are sufficient to help meet objectives. SCVSD staff indicated that since the peak of SRWS usage in 2003, the District is seeing substantial reductions in the chloride loading from the SCVSD WRPs

above the levels in the local water supply (from 100-110 mg/L to approx 75-80 mg/L). SCVSD staff indicated the District is committed to removing all SRWS in its service area because it is the most cost-effective method for removing chloride from the WRP discharges. Cost for advanced treatment to remove chloride is more than \$5 per pound of chloride while cost is much less per pound of chloride removed through source control.

D. Relationship the AWRM to other studies

SCVSD provided an overview of where this phase of the AWRM study fits in with the SSO/ADA study and the GSWIM study. Discussed that results from the Kennedy Jenks and Dr. Bachman work will be incorporated into a GSWIM predictive scenario as part of Phase II of the AWRM study. Phase III of the AWRM study would analyze the model results and develop a feasible AWRM compliance option to present to the Regional Board.

Terry Foreman of CH2M Hill states that it is important for the AWRM to determine if pumping in the western portion of the basin will adequately induce recharge in the groundwater. The developers of the AWRM will likely need to test this assumption (and others) with the GSWI Model, and so should make sure to ask this question early on in their work.

Other areas that will need to be tested by the GSWI Model include: assumptions of water blending, the effects at the dry gap, the interaction of reused and banked water, and the gradients during extreme drought conditions.

Naming Confusion

The names of the reports of the AWRM effort are very similar to the GSWI Model naming protocol. Regional Board staff asks that the AWRM use a different method for naming its reports to avoid confusion.

GROUNDWATER SURFACE WATER INTERACTION MODEL (GSWIM)

A. Overview of GSWI Progress

Terry Foreman of CH2M Hill provides an update on the work of the GSWI Model Team. This presentation is available on the project website at www.sanataclariver.org. Mr. Foreman discussed the results of the 17 predictive scenarios that are being analyzed through the GSWIM Model and indicated the full set of results are available on their ftp website for download. Mr. Foreman presented the following key general conclusions from these scenarios:

- No Scenario complied with the existing 100 mg/L WQO at Blue Cut at all times
- There was very little difference in the results between the high reuse and minimal reuse conditions.
- Under high reuse conditions, results at blue cut were worsened due to lack of flow in river from SCVSD WRP discharge diversion to reuse.
- Some scenarios that fixed WRP chloride discharges (120, 150 mg/L at all times) artificially added chloride to the system when compared with scenarios assuming chloride loading from WRP was set as a loading above the potable water supply as predicted by the model.
- Results indicated chloride levels above WQO objective at Blue Cut even when SCVSD WRP discharges are below objective indicated an additional source of chloride exists between Valencia WRP and Blue Cut
- Groundwater Observation points after the model was initially developed reveal unrealistic results due to the model discretization in the area (MW01, MW03).

The GSWI Team will provide a detailed explanation of these results in their upcoming Task 2B-1 report. This report will be tentatively submitted on January 21st, 2008.

Sam Unger asks how drought is determined in the model. Terry Foreman says the historical definition of drought is used. Rob Roy asks if the Regional Board will address the 200 mg/L groundwater standard since this was set a long time ago. Sam Unger responds that Regional Board staff will look at the GSWI results and decide whether there is any action needed in this area. On a separate point, Sam Unger suggests that the modelers look at seasonality in the chloride gradient.

B. Technical Sub-Committee Discussion

Note: At this time, the TWG meeting transitioned in to a meeting of the GSWI Technical Subcommittee. The summary for this separate meeting is available for review.

Key points discussed during the technical sub-committee:

Stakeholders (Rob Roy) asked the modeling team what level the SCVSD WRPs needed to treat to in order to achieve the existing 100 mg/L WQO during drought. The modeling team indicated that, from their experience with the model and although this has not been run in the model, they estimate a discharge of approximately 80-85 mg/L chloride would achieve compliance with the existing objective.

Dan Detmer with UWCD asked the modeling team whether they determined the cause of the negative chloride gradient during drought conditions. The modeling team (Geomatrix) indicated they believed evapo-concentration effects and the thinning of the shallow alluvium likely resulted in increased chloride concentrations at Blue Cut during drought conditions. This would be further evaluated in the Task 2 reports. Kennedy Jenks indicated another possible source of chloride was agriculture near the LA/Ventura County Line.

Summary and Overview

TWG Meeting #28
February 19, 2008
Santa Clarita, California

Meeting Overview

On February 19, 2008 the Upper Santa Clara River Chloride TMDL Study Project Team held the 28th meeting of the Technical Working Group in the City Council Chambers of the Fillmore City Hall in Fillmore, California. Paul Downs, of Moore Iacofano Goitsman, Inc. (MIG), facilitated the meeting. The TWG participants and consulting staff in attendance were:

Attendance

- | | |
|-----------------------|---|
| 1. Jeff Weaver | Geomatrix |
| 2. Sorab Panday | Geomatrix |
| 3. Ashil Desai | LWA |
| 4. Cris Perez | Newhall Land |
| 5. Cameron Tana | HydroMetrics LLC |
| 6. Dan Detmer | United Water Conservation district |
| 7. Heather Merenda | City of Santa Clarita |
| 8. Ray Tremblay | LACSD |
| 9. Francisco Guerrero | SCVSD |
| 10. Lynne Plambeck | Santa Clarita Organization for Planning and the Environment |
| 11. Bert Rapp | City of Fillmore |
| 12. Yanjie Chu | LA Regional Board |
| 13. C.P. Lai | LA Regional Board |
| 14. Cathy Hollomon | SCWD |
| 15. Jeff Ford | CLWA |
| 16. Sam Unger | RWQCB-LA |
| 17. Jenny Newman | RWQCB-LA |
| 18. Riel Johnson | NCWD |
| 19. Bob DiPrimio | Valencia Water Company |
| 20. Mark Subbotin | Newhall Land |
| 21. Ed Masterson | Assemblyman Cameron Smyth |
| 22. Rob Roy | VCAWQC |

Agenda

- 1:30 pm I. Welcome and Introduction
- 1:35 pm II. Groundwater Surface Water Modeling Effort
- Subcommittee Recap
 - Technical Advisory Panel Recap
 - Task 2B-1 Report Discussion
- 2:25 pm III. Alternative Water Resources Management Discussion
- 3:15 pm IV. Averaging Periods for Salt Sensitive Agriculture Update
- 3:30 V. Self Regenerating Water Softener Update
- 3:45 pm VI. Summary and Next Steps

Summary of Main Points

The following summary presents the main points of the meeting, generally in the order that they were presented. Comments are paraphrased. The summary presents a record of discussions and does not include official statements of policy, nor any commitments to undertake any regulatory or agency action. During the Upper Santa Clara River Chloride TMDL Collaborative Process, any policy agreements or statements will be published in documents, other than meeting summaries, in which it will be explicitly stated that a policy statement is being presented. MIG drafted this summary, which was then reviewed and by staff of the Regional Board and the Santa Clara Valley Sanitation District.

DECISIONS, PROGRESS UPDATES, AND ACTION ITEMS

- Terry Foreman of CH2M Hill and Paul Downs of MIG reported that the participating GSWI TAP reviewers were in agreement that the GSWI model was a valuable and appropriate tool, and that Task 2B-1 report was of good quality.
- The focus of the Collaborative Process is shifting to the TMDL Task 7, 8, and 9 reports, i.e., the tasks comprising the Site Specific Objective and the Anti Degradation Analysis. The Tasks 7/8 report is due April 1, with comments due April 15.
- The AGTAP CO Chairs were asked to review the question of the length of possible averaging periods and what the impacts of the length would be. They have produced a report. Sam Unger said that AGTAP comments and the results from the NewFields study are technical opinions, and that the Regional Board will set the actual compliance averaging period. (NewFields and AGTAP reports, available for download at www.santaclarariver.org.)

II. GROUNDWATER-SURFACE WATER MODELING

Terry Foreman and Nate Brown of CH2M Hill presented an overview of the GSWIM modeling effort. Terry reported that the Subcommittee met earlier in the day and provided comments on the model. He also reported that the Technical Advisory Panel held a conference call on February 13, 2008, which was attended by Dennis Williams and Arturo Keller. Terry and Paul Downs reported that the two participants were in agreement that the GSWI model was a valuable and appropriate tool, and that Task 2B-1 report was of good quality.

During the presentation, TWG members provided comments and asked questions:

- Mark Subbotin said he thought that the water supply chart misrepresented Newhall Ranch's water supply; he said that Newhall is not relying on State Water Project water.
- Bob DiPrimio asked what amount of reduction of chloride in the first five years of the scenarios.
- Mark Subbotin asked for clarification of the causes of the chloride to spike in 2018-2020?
- Sam Unger asked how the report defines drought conditions. Lynne Plambeck asked how many inches of rain constitutes a drought? Terry Foreman responded that drought was defined as less than the 31-year average. Bob DiPrimio suggested the use of two drought triggers: One that reflects northern California hydrology, and one that reflects the local hydrology.
- Jeff Ford asked if lowest reclaimed water reuse scenario reduce chloride at Blue Cut. Terry Foreman replied that low reuse actually increases chloride at Blue Cut. Bert Rapp followed up to ask why does low re-use equate to low chloride. Francisco Guerrero replied that high re-use reduces a diluting source. Sorab Panday elaborated that it will take a long time for chloride in recycled water to return to the river.
- Bob DiPrimio suggested that there would be a long time delay in reducing chloride loads at Blue Cut because there is a lot of geology that would retain chloride. He also observed that the reduction of chloride associated with removing SRWS is significant.
- Bob DiPrimio suggested that the quality of the SWP project water will be different because of new operating parameters for the State Water Project. He asked whether the team has assessed the likely impact changes to new projected water quality data, including pumping restrictions in the Delta will decrease chloride. Terry Foreman suggested that the Regional Board will need to take this into consideration when they set the standard.

III. ALTERNATIVE WATER RESOURCES MANAGEMENT DISCUSSION

Compliance Options

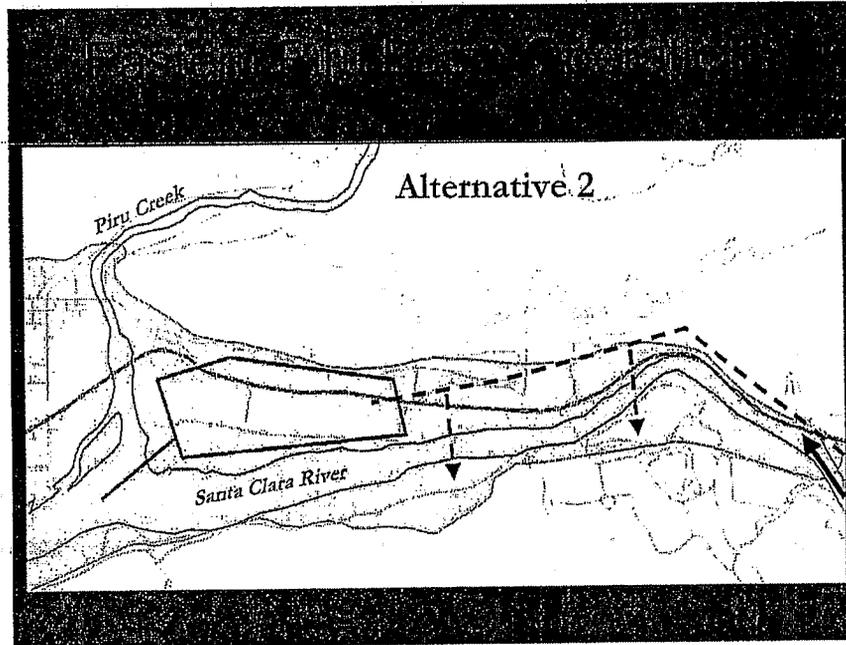

Frank Guerrero and Dan Detmer presented a progress report on the Alternative Water Resource Management alternative. Lynne Plambeck suggested that the approach would require a dedicated source of water because when the Sanitation Districts need water, the other SWP users will need it, too. Ray Tremblay provided background on the District's efforts to secure water in the future. (Power point presentations are available for download at www.santaclarariver.org.)

Lynne Plambeck asked what the term "minimal fish issues" meant when it was used in relation to the upper reaches of river. Dan Detmer replied that this phrase meant that fish issues are not as significant in the upper reaches relative to the lower reaches of the river from a regulatory perspective, i.e., United Water has observed that there is more focus on threatened and endangered issues in other reaches than those being considered here.

Yanjie Chu asked what the impact would be to water balance of pumping water to the fish hatchery. He also asked if a constant pumping rate was being used, or is it a faster rate when you draw down the water levels. Pumping rates can be adjusted as needed. Impacts to the water balance will need further examination as the discussions over potential compliance options progress.

Site Specific Objective / Anti Degradation Analysis

Ashli Desai presented an overview of the work on the SSO/ADA. She reviewed timeline of work conducted and yet to be undertaken. She indicated that with the completion of the Threatened and Endangered Species and Agricultural Chloride Threshold studies, the focus is shifting to the TMDL Task 7, 8, and 9 reports, i.e., the tasks comprising the Site Specific Objective and the Anti Degradation Analysis. The Tasks 7/8 report is due April 1, with comments due April 15.

Pros and Cons of Alternative 2

■ Pros

- Significant increase to yield of our water supply (with minimal fish issues)
- Yield to Oxnard Plain could offset high-priced project
- Camulos is protected from high salts
- Improves salt balance

■ Cons

- Eastern Piru basin chloride fluctuations
- Need buy-in from Piru pumpers
- Potential impact to nearby wells

SANITATION DISTRICTS OF LOS ANGELES COUNTY

ALTERNATIVES FOR COMPLIANCE OPTIONS

Francisco Guerrero – Senior Engineer
Santa Clarita Valley Sanitation District

February 19, 2008

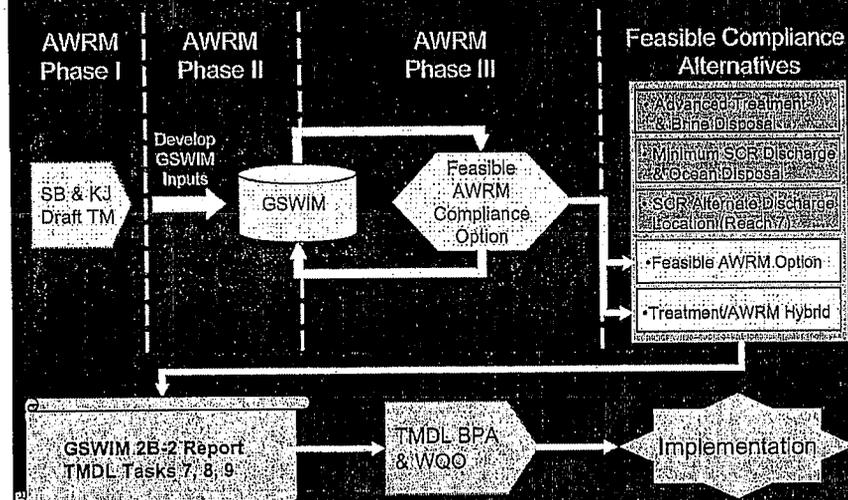

Alternatives for Compliance Options

- **Advanced Treatment and Brine Disposal**
 - Valencia and Saugus WRP MF/RO
- **Minimal Advanced Treatment and Secondary Effluent Pipeline and Outfall**
 - MF/RO Discharge to River to Support Habitat
 - Secondary Effluent Pipeline and Ocean Outfall for Balance of WRP Flow
- **Alternative WRP Discharge Location**
- **Alternative Water Resource Management**

Alternative Water Resource Management

- **Phase I Analyses (Nov - Dec 07)**
 - Dr. Steven Bachman
 - Salt Extraction Wells for East Piru
 - Kennedy Jenks
 - Determine Dilution Water Required to Meet WQO at Blue Cut Under Various Reuse Scenarios
 - Evaluate Potential Sources of Dilution Water
- **Phase II GSWIM Iterative Process (Jan - Feb '08)**
 - Model AWRM Option
 - Assess Feasible AWRM Options
- **Phase III - Feasible AWRM Options (Mar '08)**
 - Add to Feasible Compliance Alternatives List

AWRM and Compliance Alternative Development Process

AWRM Compliance Alternative(s)

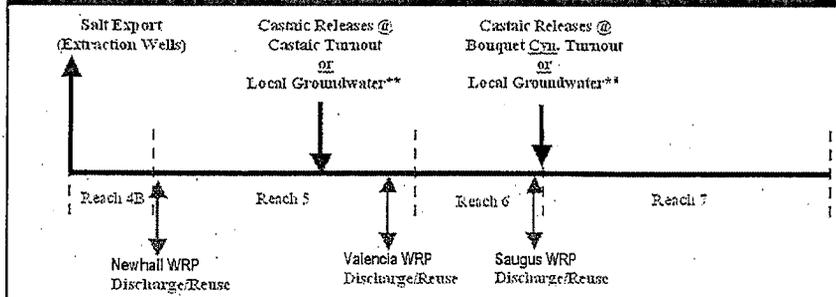

• Option 1

- Provide Dilution Flows (Imported or Local GW)
- East Piru Basin Extraction Wells
- Salt export during flow though to ocean

• Option 2

- Small MF/RO Facility at Valencia WRP
- RO conveyance pipeline to Reach 4A
- East Piru Basin Extraction Wells
- Blend RO/GW to comply with 100 mg/L WQO in 4A

AWRM Compliance Alternative(s) Option 1

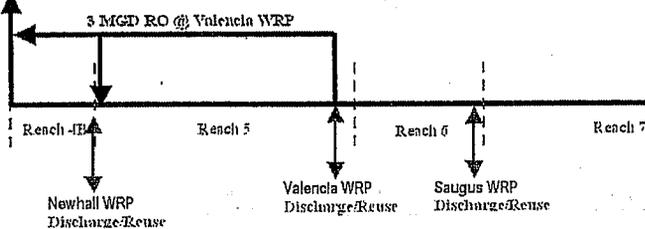

- Release up to 10,000 AFY Banked Dilution Flow during Drought
- Piru Groundwater Extraction Wells
- Alternative Water Supply to Camulos if necessary (> LRE)
- UV Disinfection, SRWS Removal, Support Water Recycling
- Adaptive Drought Response Measures

AWRM Compliance Alternative(s) Option 1 – Adaptive Drought Response

- Objective
 - Remove Incremental Chloride above Reach 4B WQO
- Tier I
 - 0 – 2 Years after Drought
 - East Piru Extraction Wells
 - Salt export during flow through to ocean
- Tier II
 - 2 – 4 Years after Drought
 - Newhall Ranch WRP Operated 100% RO
 - Salt removal (brine disposal) via deep well injection
- Tier III
 - > 4 Years after Drought
 - MF/RO at Valencia WRP (as needed)
 - Salt removal (brine disposal) via deep well injection

AWRM Compliance Alternative(s) Option 2

Blended Discharge
(RO + GW) @ < 100 mg/L

- Small MF/RO Facility at Valencia WRP
- Piru Groundwater Extraction Wells
- Alternative Water Supply to Camulos if necessary (>LRE)
- UV Disinfection, SRWS Removal, Support Water Recycling

ATTACHMENT 97

Summary and Overview

TWG Meeting #29
April 8, 2008
Fillmore, California

Meeting Overview

On April 8, 2008 the Upper Santa Clara River Chloride TMDL Study Project Team held the 28th meeting of the Technical Working Group in the City Council Chambers of the Fillmore City Hall in Fillmore, California. Paul Downs, of Moore Iacofano Goltsman, Inc. (MIG), facilitated the meeting. The TWG participants and consulting staff in attendance were:

 A. GSWIM Task 2B-2 Report Status and Progress
 B. SSO-ADA Report Status and Progress
- 3:55 **VI. Summary and Next Steps**
- 4:00 *Close*

Summary of Main Points

The following summary presents the main points of the meeting, generally in the order that they were presented. Comments are paraphrased. The summary presents a record of discussions and does not include official statements of policy, nor any commitments to undertake any regulatory or agency action. During the Upper Santa Clara River Chloride TMDL Collaborative Process, any policy agreements or statements will be published in documents, other than meeting summaries, in which it will be explicitly stated that a policy statement is being presented. MIG drafted this summary, which was then reviewed and by staff of the Regional Board and the Santa Clara Valley Sanitation District.

DECISIONS, PROGRESS UPDATES, AND ACTION ITEMS

- The May Regional Board meeting has been postponed to allow for the Alternative Water Resources Management (AWRM) effort to develop. The May meeting has now been scheduled tentatively for October [please verify] in order to allow for additional time to complete the process and craft the necessary regulatory language.
- Comments from United Water were not included in the initial response to comments report. These comments have been collected, and the responses will be included in the 2B-1 Report as an addendum.
- Brian Louie states that the AWRM development will continue, and that they are working to put specific agreements in to place with individual partners.
- Bob DiPrimio states that the water purveyors will be investigating the information related to the Saugus Aquifer in depth, and may need more than two weeks review time. A joint meeting between the Modeling Team and the water purveyors is needed. The Modeling Team will contact the purveyors to conduct this meeting.
- Terry Foreman asks about the need to apply for permission to change a waste discharge location. This will need to be addressed before implementation can move forward. Sam Unger of the Regional Board agrees that this will be a major point of consideration for the State Board and asks that this be investigated and resolved as soon as possible. Steve Bachman states that the Sanitation districts would be the most likely candidates for holding the permit.

II. COLLABORATIVE PROCESS UPDATES

The May Regional Board meeting has been postponed to allow for the Alternative Water Resources Management (AWRM) effort to develop. The AWRM is making good progress, and the Regional Board would like to see how it progresses. The May meeting has now been scheduled tentatively for October in order to allow for additional time to complete the process and craft the necessary regulatory language.

The Regional Board will follow an independent regulatory process to evaluate the TMDL agreements. A staff report will be submitted outlining a Basin Plan amendment. The Regional Board will then decide whether or not to amend the Basin Plan. Regulatory requirements will be in effect ensuring that all reports are publicly noticed and that public comments are collected and considered.

Rob Roy of the VAWQC inquires if the AWRM effort will interfere with the SSO/ADA process. Sam Unger of the Regional Board states that the AWRM will have significant impacts on the SSO/ADA. The AWRM will be integrated in the SSO/ADA. This will occur using the Porter Cologne Act that requires protection of beneficial uses and improvement to groundwater. The Regional Board is a "certified regulatory program," so it is required to analyze the AWRM and the SSO/ADA under CEQA, but not perform a full EIR. The CEQA scoping meeting will be held some time in the Summer of 2008. After the TMDL is adopted, project level CEQA analyses will be conducted.

III. GROUNDWATER SURFACE WATER INTERACTION MODEL (GSWIM)

Terry Foreman gives the TWG an update on the comments received for the 2B-1 Report. He states that comments received fall in to four categories. First, the bulk of the comments expressed satisfaction with the 2B-1 Report and congratulated the Modeling Team on their work. Second, commenters asked the Modeling Team to provide more background statistics, including plots and charts. This request was fulfilled, and the final draft of the report reflects this change. Similarly, the third category of comments came from commenters asking for additional clarification and explanation on specific issues. Terry Foreman stated that additional clarification/explanation was added to the 2b-1 Report as appropriate. Finally, some commenters asked for more detail on certain issues so that they could conduct their own analysis of these issues. These requests were fulfilled by the Modeling Team.

Comments from United Water were not included in the initial response to comments report. These comments have been collected, and the responses will be included in the 2B-1 Report as an addendum.

IV. ALTERNATIVE WATER RESOURCE MANAGEMENT (AWRM)

Brian Louie gives a presentation on the AWRM process. This presentation is available on the project website at www.santaciarariver.org. The AWRM would provide a series of integrated management strategies for protecting beneficial uses in the USCR. These include: removal of water softener systems, some source treatment, acquiring alternate water supplies, and a system of groundwater pumping and injection that would recharge the aquifer and then draw it down when needed. This alternative has been developed through a long process of cooperation and discussion with a wide range of stakeholders in the basin, and is a potential solution to the need for protecting water quality and beneficial uses in the USCR.

Bert Rapp asks for clarification on the timing of potential groundwater pumping in the AWRM plan. He asks if pumping is expected to occur during drought years. Mr. Louie answers that pumping will be conducted when the water is needed, and that this is expected to occur during drought conditions.

Mr. Rapp asks about potential pump tax costs and who will be responsible for these taxes. Mr. Louie states that the AWRM has not yet reached the point of discussing this issue.

Rob Roy adds some clarification on the AWRM, stating that agriculture is not anticipated to use irrigation water pumped directly from the river in reaches 5 and 6, while in reach 4b water would be shipped in to protect beneficial uses as needed.

Mr. Louie states that the chloride concentrations expected under the AWRM plan are well below thresholds for protection of threatened and endangered species.

Martin Hernandez asks if there is sufficient water supply available to make the AWRM feasible. Brian Louie responded by saying that this issue has been investigated by Bob DiPrimio of United Water, and that the yields under consideration are expected to be sustainable over time. Steve Bachman adds that the AWRM calls for banking water in wet years to ensure that there is adequate supply.

Frank Brommenschenkel inquires if there are contingencies in the event that a well needed for the AWRM process goes offline. Brian Louie responds that there are three potential wells that are candidates to be the recharge/discharge wells under the AWRM proposal. Mr. Louie states that the Sanitation Districts and the team developing the AWRM are confident that these wells should be adequate for the long term. Bob DiPrimio adds that the AWRM is also investigating drawing from the Saugus Aquifer which is not linked to the alluvium or the potential Newhall build out, and so should stay viable. Also, the AWRM will bank water outside the Santa Clara River valley and can be brought in when there is additional need. This will be adequate back up for the wells.

Brian Louie states that the AWRM development will continue, and that they are working to put specific agreements in to place with individual partners.

Steve Bachman of United Water gives a presentation on the impacts of the AWRM on Ventura County. This presentation is available on the project website at www.santaciarariver.org. Mr. Bachman explains

that he examined several scenarios to understand the potential impacts on downstream users. He began by examining the impacts of implementing just a reverse osmosis plant with a brine line to the sea (an option that had been discussed early in the collaborative process). His investigations show that this method actually decreases the amount of water flowing in to groundwater basins in Ventura County, and increases seawater intrusion as these aquifers are drawn down. The AWRM, on the other hand, flushes much larger amounts of water in to downstream aquifers and helps to recharge the aquifers and protect against seawater intrusion.

Mr. Bachman states that a chloride pulse from a high chloride discharge year seems to flush through Piru Basin in approximately 15 years.

Mr. Bachman states that his interactions with pumpers in Ventura County have been very positive. The AWRM has received great interest, and they seemed excited to begin working with Los Angeles County and hear more about the potential benefits.

Rob Roy states that his organization has worked to develop some guiding principles for dealing with agricultural user's concerns. The AWRM is satisfying these principles. He also states that the AWRM has required a large amount of cooperation between many agencies and people to reach the stage it has. Its success is owed to this spirit of cooperation amongst multiple parties. He continues by adding that there is a "safety valve" in the AWRM. If, in 10 to 15 years, the AWRM is not effective, the State Board can determine that the Basin Plan should return to a TMDL.

Ron Bottorff of Friends of the Santa Clara River asks what the potential impacts are of the AWRM on fish. Steve Bachman responds that the AWRM team will need to check to see what the impacts are at critical times, but that information gathered so far indicates that there will not be any negative impacts on fish. In fact, the AWRM will be adding water to the basin during drought periods, which can be expected to help the fish. This issue will be an important aspect of the CEQA work.

Bert Rapp inquires about the capacity for pumping in the USCR. Steve Bachman replies that the capacity is approximately 20,000 gallons; however this occurs only during wet periods, so draw down of the aquifers does not occur. He adds that pumping operation protocols would be put in place to protect the aquifers, and reduce or stop pumping if conditions would lead to a harmful draw down.

Sam Unger asks if the planned small scale reverse osmosis plant is expected to run continuously. It will need to run continuously, as the filtration membranes need to stay wet to maintain effectiveness.

Sam Unger asks if the City of Santa Clarita is supportive of the AWRM process. Heather Merenda of the City of Santa Clarita states that the City is interested in finding solutions, and is supportive of the AWRM if it offers such a solution.

Rob Roy states that the original TMDL for the USCR was imposed on the watershed. This AWRM solution has been developed by many partners throughout the watershed, and it seems as if the process is on the verge of developing a won/win alternative to the TMDL.

Jeff Weaver of Geomatrix gives a presentation on the AWRM Water Resources Report. This presentation is available on the project website at www.santaclarariver.org. The Task 2b-2 Report will be available at the end of April, 2008.

Bob DiPrimio states that the water purveyors will be investigating the information related to the Saugus Aquifer in depth, and may need more than two weeks review time. Sam Unger asks if the purveyors can begin a preliminary review for now. Ultimately though, a joint meeting between the Modeling Team and the water purveyors is needed. The Modeling Team will get in touch with Bob DiPrimio after the meeting.

V. SSO-ADA STATUS UPDATE AND PROGRESS REPORT

Ashli Desai gives a presentation on the SSO-ADA process. This presentation is available on the project website at www.santaclarariver.org.

 USGS CHLORIDE TMDL AND ALTERNATIVE WATER RESOURCES MANAGEMENT

Brian Louie
 Steve Bachman
 April 8, 2008

Presentation Overview

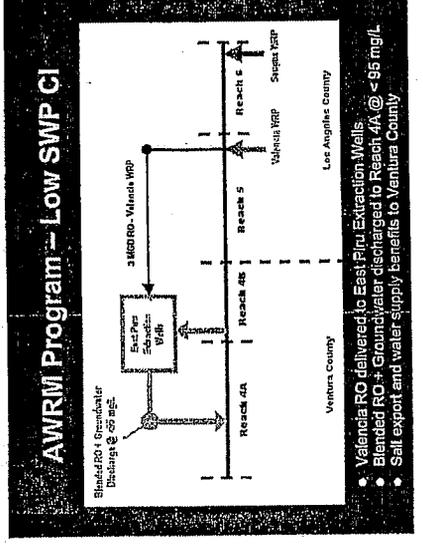

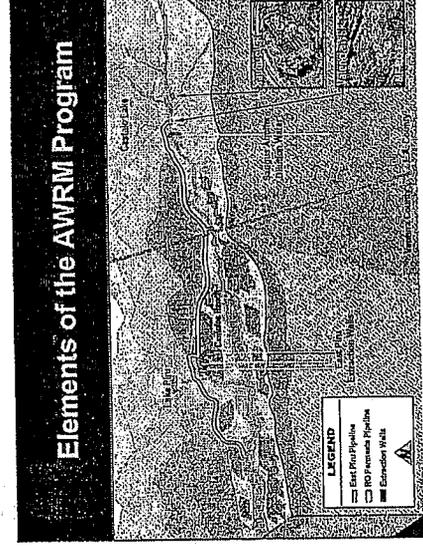

- SCVSD Compliance Options for TMDL - 100 mg/L vs. AWRM
- Elements of the Alternative Water Resources Management (AWRM) Program
- Water Supply Benefits of AWRM Program (Steve Bachman, United Water)
- Next Steps

Compliance Options for Regional Board Alternatives

Alternative 1 (100 mg/L)	Alternative 2 (AWRM)
<ul style="list-style-type: none"> • Advanced Treatment at Salinas and Valencia WRP • 43-mile brine line and ocean outfall Or	<ul style="list-style-type: none"> • Reduce Chloride in WRP Effluent • 3 MGD Advanced Treatment Facility • Dilution Water as necessary • Ventura County Water-Supply Facilities • Protect Existing Beneficial Uses • Support Water Recycling
<ul style="list-style-type: none"> • Minimal Advanced Treatment • 43-mile effluent disposal pipeline and ocean outfall 	

Elements of the AWRM Program

- Reduce Chloride in WRP Effluent
 - Remove all SRWS
 - Convert to UV-Disinfection Technology
- Build 3 MGD MF-RO Facility
 - Brine disposal via deep well injection (abandoned oil fields)
 - Purchase dilution waters from CLWA to achieve WQO as needed
- Build Water-Supply Facilities in East Piru
 - 10 Extraction Wells
 - Water-Supply Conveyance Pipelines
 - RO pipeline to East Piru
 - Extracted groundwater/RO blend pipeline
- Alternative Water-Supply to Camulos Ranch
- Support Water-Recycling in the Santa Clarita Valley
- AWRM Surface Water and Groundwater WQOs

0-1054

AWRM Program -- High SWP CI

- Valencia RO discharged at LA-Ventura County Line
- Reach 4B WQO @ 130 mg/L attained
- Alternative water supply to Camulos Ranch

Upper Santa Clara River AWRM Surface Water WQOs

Tripper at 80 mg/L Chloride in SWP water at Castaic Lake

Upper Santa Clara River AWRM Groundwater WQOs

Mineral WQO	Reach 4B	Reach 5	Reach 6	Reach 7
Chloride	12000 (130-150)	150	1000	1000
TDS	45000 (1300)	1000	1000	1000
Sulfate	40000 (100)	350	1000	1000

Ventura County Water Supply and Water Quality Benefits

Steve Bachman

Next Steps

- Brief Key Stakeholders** (Ongoing)
 - Upper Basin Water Purveyors (L.A. County)
 - City of Santa Clarita
 - United Water Conservation District

Test Claim 10-TC-09 "Upper Santa Clara River Chloride Requirements"

Dear Mr. Bohan:

The Department of Finance (Finance) has reviewed the test claim on the Upper Santa Clara River Chloride TMDL regulations submitted by the Santa Clarita Valley Sanitation District of Los Angeles County. The claimant alleges the TMDL regulations are a reimbursable state mandate because the Regional Water Board was not required to issue the regulations under federal law.

Finance asserts the TMDL regulations do not impose a reimbursable state mandate because 1) the regulations are required by section 303(d) of the federal Clean Water Act, 2) the regulations by themselves do not require the claimant to act, and 3) even if the regulations required action, claimant has fee authority sufficient to pay its costs. Government Code section 17556, subdivisions (c) (federal mandate) and (d) (fee authority) provide bases for denying the claim if the Commission finds the regulations require claimant action.

However, Finance believes the TMDL regulations alone, without further administrative action in the form of a permit issuance, for example, do not require claimant conduct. In *City of Arcadia v. State Water Resources Control Board* (2006) 135 Cal.App.4th 1392, 1414-1415, the court said "[a] TMDL does not, by itself, prohibit any conduct or require any actions. Instead, each TMDL represents a goal that may be implemented by adjusting pollutant discharge requirements in individual NPDES permits or establishing nonpoint source controls. A TMDL forms the basis for further administrative actions that may require or prohibit conduct with respect to particularized pollutant discharges and water bodies." Consistent with this case law, the claimed TMDL regulations do not require action that would be subject to a mandates analysis.

Even if the Commission were to conclude the regulations required any action, fee authority in Health and Safety Code section 5471 is sufficient to cover costs of any activities not found to be federal mandates. Further, while claimant mentions "fierce public opposition" in the face of attempts to exercise its fee authority, there is no information in the claim that such opposition even came close to the majority protest required to stop the fee imposition.

Mr. Drew Bohan
July 29, 2011
Page 2

Also, Finance asserts this test claim may be barred by the statute of limitations in Government Code section 17551. Subdivision (c) of that section specifies that "local agency and school district test claims shall be filed not later than 12 months following the effective date of a statute or executive order, or within 12 months of incurring increased costs as a result of a statute or executive order, whichever is later." Claim 10-TC-09 was filed on March 30, 2011. The claimant asserts the TMDL regulations had an effective date of December 11, 2008. The claimant further asserts that eligible costs under the claim include those for the entire fiscal year 2009-10. If no allegedly state-mandated costs were incurred until fiscal year 2009-10, all claimed costs for that fiscal year would have had to be incurred after March 30, 2010 to not be time barred. Such an unlikely scenario is not presented in the claim.

As required by the Commission's regulations, a "Proof of Service" has been enclosed indicating that the parties included on the June 24, 2011 mailing list have been provided with copies of this letter via either United States Mail or email. Pursuant to section 1181.2, subdivision (c)(1)(E) of the California Code of Regulations, "documents e-filed with the Commission need not be otherwise served on persons that have provided an e-mail address for the mailing list."

If you have any questions regarding this letter, please contact Jeff Carosone, Principal Program Budget Analyst at (916) 445-8913.

Sincerely,

NONA MARTINEZ
Assistant Program Budget Manager

Rebuttal Regarding Upper Santa Clara River Chloride Requirements Imposed by
Los Angeles Regional Water Quality Control Board Resolution No. R4-2008-012,
Effective December 11, 2008, Test Claim No. 10-TC-09.**

Dear Mr. Bohan:

On behalf of our client, the Santa Clarita Valley Sanitation District (the "District"), attached please find a copy of the District's rebuttal, concerning Test Claim No. 10-TC-09, in response to the Los Angeles Regional Water Quality Control Board and the California Department of Finance's comments filed on July 29, 2011.

Pursuant to section 1181.2, subdivision (c)(1)(E) of the California Code of Regulations, "documents e-filed with the Commission need not be otherwise served on persons that have provided an e-mail address for the mailing list." In accordance with the Commission's regulations, a "Proof of Service" is not necessary in this instance since all of the parties listed on the August 22, 2011 service list have provided e-mail addresses.

If you have any questions regarding the District's submittal, please contact me at (213) 580-3907.

Very truly yours,

/s/

Re: **Santa Clarita Valley Sanitation District of Los Angeles County's ("Claimant")
Rebuttal Regarding Upper Santa Clara River Chloride Requirements
Imposed by Los Angeles Regional Water Quality Control Board Resolution
No. R4-2008-012, Effective December 11, 2008, Test Claim No. 10-TC-09.**

Dear Mr. Bohan:

I. INTRODUCTION.

The Santa Clarita Valley Sanitation District of Los Angeles County (the "District") has filed a test claim ("Test Claim") seeking a subvention of funds from the state to comply with orders made by the California Water Quality Control Board - Los Angeles Region ("Regional Board"). These orders (the "Chloride Orders") require the District to meet excessively stringent chloride limits for the Valencia and Saugus Water Reclamation Plants that will require the construction of facilities providing a new and advanced level of wastewater treatment at a projected cost of up to \$250 million.

The Regional Board's decisions to issue these orders are discretionary acts of the Regional Board that impose unfunded mandates for which the District is entitled to subvention. The standards that the Regional Board has imposed on the District exceed the requirements of the federal Clean Water Act ("CWA"). The District neither proposed nor requested those standards. Any attempt by the District to raise the funds necessary to meet these unnecessary mandates through substantial rate increases on its ratepayers will

Drew Bohan, Executive Director
September 28, 2011
Page 2

be unsuccessful. The Regional Board's attempt to disclaim responsibility for its own mandate is without merit.¹

II. THE DISTRICT IS ELIGIBLE FOR SUBVENTION.

A. The Chloride Orders are Not Federal Mandates.

The Respondents erroneously contend that the Regional Board's issuance of orders adopting water quality objectives for chloride and the total maximum daily load ("TMDL") for chloride were nondiscretionary duties imposed on the state by the CWA and therefore constitute a federal mandate. The Respondents support this incorrect contention with a generalized discussion of the framework of the CWA and the federal regulations implementing the CWA. The applicable statutes and regulations show that the Regional Board's Chloride Orders were discretionary actions performed by the Regional Board under authority granted to it by the Porter-Cologne Act.

1. **The CWA Delegates Significant Discretion to States to Regulate Water Quality under the Clean Water Act.**

The Regional Board repeatedly cites Section 303 of the CWA (33 U.S.C. §1313) as its basis for asserting that the CWA mandates all state action taken to adopt water quality standards (beneficial uses and/or water quality objectives) and TMDLs, and that its own actions are outside of its discretion. (*See* Regional Board's Response at pp. 23-24). Although water quality standards adopted by the states are a foundational element of the CWA, and states must prepare TMDLs for waters that fail to attain water quality standards, the CWA does not prescribe any specific outcome or standard. Instead, the CWA authorizes each state to exercise its discretion and independent legal authority to regulate water quality within this general framework. (*See, e.g.*, 33 U.S.C. §§1313(c) and (e); *see also* 40 C.F.R. §130.0(a) ["The water quality management process described in the Act and in this regulation provides the authority for a consistent national approach for maintaining, improving, and protecting water quality while allowing [s]tates to implement the most effective individual program"] and §130.0(b) ["water quality standards are the [s]tate's goals for individual water bodies and provide the legal basis for control decisions under the Act"].)

¹ The Department of Finance, along with the Regional Board, submitted comments opposing the Test Claim. Because that department's response letter mirrors the arguments articulated in the Regional Board's response, all references made throughout the rebuttal address assertions made by both entities (collectively referred to, "Respondents").

Drew Bohan, Executive Director
September 28, 2011
Page 3

The Regional Board's Response seeks to obscure the discretionary authority granted to it by the CWA and applicable regulations by generally citing inapplicable provisions of that act and those regulations. The Regional Board's frequent changes to the water quality objective for chloride in the Santa Clara River, as well as its changes in implementing and enforcing the objectives described in the Test Claim², discredit its hollow claim that it has "no true choice" with respect to water quality decisions. (See Regional Board's Response at p. 23). The Regional Board admits that it does not take a "one-size-fits-all approach" to setting these objectives, and that "water quality standards are specific to each individual waterbody, and often to individual segments of that water body." (See Regional Board's Response at pp. 25-26) Application of these standards, by definition, requires discretion by the Regional Board, not the United States Environmental Protection Agency ("U.S. EPA").

An example of discretionary actions taken by regional boards throughout California is their adoption of varying water quality objectives. For instance, this Regional Board and others throughout the state have adopted a wide-array of chloride water quality objectives to protect similar salt-sensitive agricultural uses.³ (See Test Claim at p. 7.) Numerous regional watersheds have a chloride water quality objective of 150 to 190 mg/L, including two watersheds within this Regional Board's jurisdiction - the Calleguas Creek and Los Angeles River, respectively. The Regional Board's standards reflect its discretion. In this case, the Regional Board exercised its discretion under the Porter-Cologne Act to impose unreasonable and costly requirements without providing a subvention of funds to reimburse the District. This is contrary to the constitutional provisions that regulate this type of mandate.

² See District's Test Claim at pp. 4-9.

³ The Regional Board implies that the heightened Chloride TMDL threshold was set because of the allegedly "serious environmental problem of chloride discharged from the Claimant's point sources into the Santa Clara River." (Regional Board's Response at p. 1.) This is a gross misrepresentation of the current water quality trends concerning chloride discharges into the Santa Clara River. Current chloride levels for 2011 are approximately 125 mg/L, measured at discharge points for the Valencia and Saugus Water Reclamation Plants. Current chloride levels for the Santa Clara River measured at the county line (after which the agricultural beneficial use commences), however, are approximately 105 mg/L. (See *Supplemental Exh. "A"* - Attachment 1 to District Letter re Upper Santa Clara River Chloride TMDL to Regional Board, May 9, 2011 at p. A-3.) In fact, as demonstrated by *Figure 1* attached hereto, surface water chloride concentrations in the Santa Clara River have improved over recent years. There is absolutely no data to support the Respondents' belief that the Chloride TMDL is somehow necessary to maintaining water quality levels.

Drew Bohan, Executive Director
September 28, 2011
Page 4

The Regional Board possesses substantial discretion with respect to all aspects of the TMDL process. CWA section 303(d), cited by the Regional Board to support its contention that it lacks discretion, simply describes the framework used by states to identify water bodies that have not attained water quality standards (called “impaired water bodies”). The relevant federal mandate requires that regional boards prepare TMDLs for impaired water bodies. 40 C.F.R. §130.2(i), also cited by the Regional Board, simply defines the term “TMDL”. Neither of these provisions mandates any specific TMDL, waste load allocation (“WLA”), or other discharge constraint that the state must enact or restricts the state’s discretion in either evaluating its waters for impairment or for determining appropriate provisions of a TMDL. Instead, federal regulations specifically promote the states’ independent role in all facets of the TMDL process. (See 40 C.F.R. §130.7 [identifying “the State” as the entity with the responsibility and authority for making all TMDL-related determinations consistent with the Clean Water Act’s framework].)

The Regional Board has previously stated that, while it “has no discretion not to establish a TMDL, the Board exercises discretion in assigning WLAs and load allocations, determining the program implementation, and setting various milestones in achieving the water quality standards.” (Exh. 23 to District’s Test Claim, October 8, 2009 Memorandum re: Chloride TMDL at p. 7, emphasis added.) Further, *Pronsolino v. Nastri*, 291 F.3d 1123 (9th Cir. 2002) (“*Pronsolino*”), also cited by the Regional Board, expressly recognizes the independent role of the states in creating TMDLs.⁴ *Pronsolino* states that “the CWA leaves to the states the responsibility of developing plans to achieve water quality standards if the statutorily-mandated point source controls will not alone suffice . . . States must implement TMDLs only to the extent that they seek to avoid losing federal grant money; there is no pertinent statutory provision otherwise requiring implementation of §303 plans or providing for their enforcement.” (*Pronsolino*, 291 F.3d at 1129, 1140.)

Further, as noted in *Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, 1581-1582, a determination as to whether a state’s participation in a federal program is “truly voluntary” depends on “such factors as the nature and purpose of the federal program; whether its design suggests an intent to coerce; when state and/or local participation began; the penalties, if any assessed for withdrawal or refusal to participate or comply and any other legal and practical consequences of nonparticipation, noncompliance, or withdrawal.” (*Ibid.*) As is the case in California, the Porter-Cologne Water Quality Control Act establishes a comprehensive statewide program for water

⁴ Other case law cited by the Regional Board also supports the District’s claim. In *Alaska Center for the Environment v. Reilly* (W.D. Wash. 1991) 762 F.Supp. 1422, the court cited to a GAO report that highlights the breadth of discretion of the states in the TMDL process, including the states’ authority to determine that compliance with water quality standards is infeasible.

Drew Bohan, Executive Director
September 28, 2011
Page 5

quality control and regulation of discharges to waters of the state. Therefore, California maintains flexibility in determining the scope and type of discharge restriction that may be necessary given the particular water body or region at issue.

This case is easily distinguished from the recent, non-precedential Los Angeles County Superior Court case, *State of California Department of Finance, et al. v. County of Los Angeles*, Case No. BS130730, (Sept. 6, 2011). That case involved claims of unfunded mandates in the context of a municipal storm water National Pollutant Discharge Elimination System ("NPDES") permit that imposed various actions pursuant to the CWA's specific mandate that such stormwater discharges be regulated to "reduce the discharge of pollutants to the maximum extent practicable ("MEP")." (*See* 33 U.S.C. §1342(p)(3)(B).) In that case, the Superior Court determined that the Regional Board had "no real choice" in implementing the CWA's targeted MEP requirement for the storm water discharges at issue, and that the requirements imposed upon the permittees were not inconsistent with or more stringent than the MEP requirement. (*See Supplemental Exh. "B", Smt. of Decision at pp. 7-8*).

The regulatory framework and role of the Regional Board in the *County of Los Angeles* case are quite different from those relating to the unfunded mandates described in the Test Claim. The court in that case explicitly recognized that different factual circumstances could support a claim for subvention. (*Id.* at p. 9, fn. 14 ("While there may be other cases in which the state agencies may impose standards that clearly exceed those imposed under a 'maximum extent practicable' approach to storm water pollutants in the Clean Water Act, this case does not present that situation.")) In contrast to the Regional Board's implementation of a narrow, specific MEP standard in the *County of Los Angeles* case, the Regional Board in this case maintains absolute discretion and "choice" by: (1) designating beneficial uses beyond the mandated "fishable/swimmable" uses; (2) selecting ultra-conservative water quality objectives for chlorides in the Santa Clara River to protect the most sensitive salt-sensitive use; and, (3) creating WLAs in a TMDL and related compliance schedules designed to attain the Regional Board's objective. Since the Regional Board's actions, by definition, exceed the regulatory floor set by the CWA, its actions are more stringent than those required by the CWA. Therefore, subvention of funds is appropriate with regard to the mandate described in the Test Claim.

2. The Regional Board Exercises its Discretion by Designating and Protecting Certain "Beneficial Uses".

The Regional Board also contends that it has no discretion regarding the designation and protection of beneficial uses. (*See* Regional Board's Response at pp. 24 - 25). This argument is based on two underlying theories: (1) that the CWA imposes upon the Regional Board a mandatory duty to designate and protect all beneficial uses equally; and, (2) that the CWA requires the Regional Board to protect the most sensitive aspect of a

Drew Bohan, Executive Director
September 28, 2011
Page 6

beneficial use. (*Id.*) Both premises are demonstrably false and legally unsupported by the CWA and related regulations.

(a) *The CWA Does Not Mandate Equal Protection of all Beneficial Uses.*

The Regional Board's assertion that the CWA creates a mandatory duty to protect all beneficial uses with the same priority ignores federal regulations and guidance from the U.S. EPA. The Test Claim, while acknowledging that the CWA mandates the designation and protection of "fishable/swimmable" beneficial uses where attainable (*e.g.*, fish, shellfish, and wildlife and recreation), noted that no similar *mandatory* duty exists for the remaining beneficial uses. (See District's Test Claim at pp. 8-9.) For example, an applicable federal regulation provides, in part, that:

"...water quality standards should, wherever attainable, provide water quality for the protection and propagation of fish, shellfish, and wildlife and for recreation in and on the water, and take into *consideration* their use and value for public water supplies, propagation of fish, shellfish, wildlife, recreation in and on the waters, and agricultural, industrial, and other purposes including navigation."

(See 40 C.F.R. §131.10(a), emphasis added.)

This language is echoed in 40 C.F.R. section 131.2, and supports the position that the state retains flexibility and discretion with respect to non-"fishable/swimmable" uses. (See *Kansas Natural Resource Council, Inc. v. Whitman*, 255 F.Supp.2d 1208, 1209 (D. Kansas 2003), citations omitted ["Under 33 U.S.C. § 1313(c), states are responsible for developing, adopting, and maintaining intrastate and interstate water quality standards . . . States must designate a use for each body of water and determine the level of water quality necessary to support such use. In developing water quality standards, states must consider water bodies' 'use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes, and ... their use and value for navigation.'"]; *Idaho Mining Ass'n, Inc. v. Browner*, 90 F.Supp.2d 1078, 1080 (D. Idaho 2000).) Federal courts in California have confirmed this interpretation of the CWA and federal regulations. (See *Cities of Los Angeles, Burbank, and Simi Valley and the Los Angeles County Sanitation District v. U.S. EPA*, December 18, 2001 Order Granting Plaintiffs' Motion for Summary Judgment and Remanding Action to EPA, ["Except as necessary to protect existing uses, the CWA does not require any water quality standard more stringent than necessary for the protection of the CWA's default fishable/swimmable use."].)

Drew Bohan, Executive Director
September 28, 2011
Page 7

The U.S. EPA provides similar guidance in its Water Quality Standards Handbook. “States **must** provide water quality for the protection and propagation of fish, shellfish, and wildlife, and provide for the recreation in and on the water (“fishable/swimmable”) where attainable.” (See U.S. EPA Water Quality Standards Handbook: Second Edition (Aug. 1994), §2.1, emphasis added.) Other beneficial uses are to be taken *into consideration* - a clearly distinct category from the mandated “fishable/swimmable” use designation. The Handbook illustrates this point by separating the two categories of uses (the “must provide” and the “take into consideration”) into bullet points and addressing each separately. The Regional Board cannot credibly assert that the designation of the agricultural beneficial use and the conservative protection of downstream salt-sensitive crops are mandated by the CWA.⁵

The Regional Board also blatantly mischaracterizes the Test Claim by asserting that the District’s interpretation of the relevant federal regulations would require that agricultural uses not be protected “at all.” (See Regional Board’s Response at p. 24.) Actually, the District asserts only that the Regional Board’s choice to exercise its discretion to designate the agricultural beneficial use and its imposition of an excessively-stringent water quality standard to protect the most sensitive aspect of that use are not mandated by federal law. Therefore, the state should provide a subvention of funds to reimburse the District for the actions necessary to comply with this state mandate.

(b) *The CWA Does not Mandate Protection of the Most Sensitive Aspect of a Beneficial Use.*

The Regional Board’s second argument similarly misconstrues federal regulations. Federal law does not require the Regional Board to protect the most sensitive agricultural use or require the Regional Board to set chloride standards at any specific amount. The standards established in the CWA only require that the waters of the U.S. be “fishable and swimmable” and only provide for “consideration” of other beneficial uses. Even if the CWA could be construed to require protection of agriculture, the Act does not require protection of the most salt-sensitive agriculture or the accomplishment of such a result through the imposition of an instantaneous maximum “end of pipe” limit. The Regional Board invoked

⁵ The Regional Board’s discussion of “existing” and “designated” uses is irrelevant to the District’s claim. (See Regional Board’s Response at pp. 24-25.) The mandates imposed by the Regional Board seek to protect a “designated” use as specified in water quality standards found in the Regional Board’s Basin Plan. The Regional Board’s Response provides no evidence to support its contention that the agricultural beneficial use at issue here is an “existing” use as defined by the CWA.

Drew Bohan, Executive Director
September 28, 2011
Page 8

its discretion in setting a 100 mg/L chloride standard for the Santa Clara River. As previously stated, other basins in California have 150 to 190 mg/L objectives and discharge limits.

One regulation cited by the Regional Board to support its argument, 40 C.F.R. section 131.11(a), states that water quality criteria and objectives promulgated by states must support the most sensitive use for waters with "multiple use designations". Water bodies with multiple use designations are those that contain, for instance, cold and warm aquatic habitat and shellfish harvesting, where the most sensitive of those uses must be protected when water quality objectives are adopted for aquatic life protection. The regulation does not require strict protection of the most sensitive subcategory of a use (*e.g.*, salt-sensitive crops, as opposed to those more salt tolerant). This protection effort by the Regional Board is not federally-mandated and has resulted in the application of unreasonable water quality standards and compliance requirements to the District.

Contrary to the Regional Board's assertion, the CWA does not mandate specific designation or protection of agricultural beneficial uses. These uses are simply raised by the CWA as matters for the each state to consider in making its own, discretionary, site-specific determinations as to beneficial uses that will be protected through the regulatory process and the enactment of water quality objectives. In this case, the Regional Board initially elected to adopt water quality standards of 100 mg/L for Reaches 5 and 6 of the Santa Clara River to protect off-stream agricultural beneficial uses and to protect the most salt-sensitive crops grown in the downstream region. The Regional Board's regulatory choices reflect a state mandate, for which the District must be reimbursed.

B. The Regional Board's Discretionary Mandate Requires the District to Comply with the TMDL Threshold.

The Regional Board contends that the District is not mandated to comply with the Chloride TMDL because "TMDLs are not self-implementing" and because the "EPA cannot directly enforce implementation of a TMDL once it is established."⁶ (Regional Board's

⁶ The Regional Board further contends that if U.S. EPA were to have adopted the Chloride TMDL for the Santa Clara River, it would have done so without an implementation plan (*e.g.*, a schedule for compliance) and the District would not have the benefit of the schedule imposed by the Regional Water Board. (*See* Regional Board's Response at p. 26.) The argument is irrelevant to the instant claim, but given the inaccuracy of the assertion, a reply is appropriate. When importing a wasteload allocation from a TMDL adopted by U.S. EPA in an NPDES Permit, the state is nonetheless required to address implementation. (*See* 33 U.S.C. §1313(e); Cal. Water Code §13242; *see accord* (footnote continued))

Drew Bohan, Executive Director
September 28, 2011
Page 9

Response at p. 7.) However, the Regional Board incorporated all of the provisions of the TMDL into the District's NPDES permits, which require the District to act in accordance with the permits' requirements. The Regional Board acknowledges that "[o]nce set and approved, the regional water boards implement water quality objectives *through waste discharge permits and other programs.*" (Regional Board's Response at p. 8, emphasis added.) Accordingly, the District has an affirmative obligation to comply with the Regional Board's TMDL requirements.

TMDLs are, as the Regional Board acknowledges, "program[s] of implementation" pursuant to Water Code section 13242 that are state actions to implement existing water quality standards determined by the state and regional boards. (Regional Board's Response at p. 8.) Even though the U.S. EPA must approve basin plan amendments, the Regional Board's decision to set the TMDL threshold at 100 mg/L mandates action by the District that constitutes a new "project" within the parameters of California Constitution Article XIII B, section 6.

C. The District Does Not Have Unlimited Fee Authority and Has Been Unable to Impose Rate Increases.

Respondents erroneously assert that the District has the unfettered ability and authority to impose rate increases to fund compliance with the Regional Board's mandates, and that the District is, therefore, exempt from reimbursement under Article XIII B, section 6. The term "authority" implies that the District has the requisite support among its ratepayers to pass the proposed rate increases without the increases later being nullified by the ratepayers. The Regional Board's Chloride Orders lacked the requisite support. In order to fund the planning and design of the AWRM Program and to cover the then-current operation and maintenance costs, the District's staff proposed a rate increase from \$16.58 per month per single family home to \$24.67. Before the hearing, the District received 7,732 written protests from property owners in response to Proposition 218 notices. After considering all of the public input, the District's elected officials could not implement the proposed rate increase in the face of fierce public opposition.

The Regional Board relies on *Connell v. Superior Court of Sacramento County* (1997) 59 Cal.App.4th 382 ("*Connell*"). In that case, local water districts claimed that they lacked sufficient fee authority to cover the costs of a state-mandated program because it was not economically feasible for them to raise fees sufficient to cover the costs of the program. The court held that Government Code section 17556(d) precludes subvention

Pronsolino v. Nastri, 291 F.3d 1123, 1140 (9th Cir. 2002).) This further illustrates the important and independent role of the Regional Board in the TMDL process.

Drew Bohan, Executive Director
September 28, 2011
Page 10

when a local agency has the “authority” to raise fees, not when it is not “economically feasible” for the local agency to do so.

Connell dealt with regulatory requirements enacted in 1978 that mandated higher costs on local water agencies to produce reclaimed water, but it did not consider the effects of Proposition 218, as codified at Section XIID of the California Constitution. Proposition 218 was adopted by the voters in November, 1996, and its express purpose was to limit local government revenue and enhance taxpayer consent. Proposition 218 substantially limits local agencies’ ability to raise fees and charges to cover state mandates. In view of the provisions of and the intent underlying Proposition 218, local governments may not have effective “authority” to raise fees where they cannot obtain the requisite approval to implement proposed fee increases but are still burdened with expensive state-imposed mandates.⁷

Under section 3 of Proposition 218, the voters within the District may reduce or repeal any fee or charge by an initiative that will be qualified for the ballot by gathering the signatures of five percent of the total number of voters in the District who cast votes for governor in the 2010 election. (Cal. Election Code section 9035; Cal. Const. Art. XIIC and XIID.) The District received 7,732 written protests of the proposed rate increase. This number of written protests exceeded the number of signatures needed to qualify an initiative that would overturn the rate increase.⁸ Accordingly, the District’s Board quite reasonably believed that this large rate increase would be rejected if challenged by initiative because the benefits of the mandated levels of treatment would be received by downstream Ventura County farming interests who did not pay for them.

⁷ Though this potential conflict appears to be an issue of first impression for the appellate courts, this question was addressed by the Commission in March 2010. Pursuant to the Commission’s Statement of Final Decision concerning the Discharge of Stormwater Runoff, this Commission found that the fee exception does not apply when a local agency is unable to leverage fees from its taxpayers. (Commission Stmt. of Dec. re: Discharge of Stormwater Runoff, Claim No. 07-TC-09 at p. 106.) This finding supports a broad interpretation of when an agency is able or has the requisite “authority” to levy charges. Oddly, the Regional Board makes no mention of this recent decision issued by the Commission.

⁸ The total gubernatorial vote during the last election for the 38th Assembly District, which includes the City of Santa Clarita, was approximately 130,000, 5% of which would be about 6,500 votes. The Assembly District appears somewhat larger than the District, so this number is conservative.

Drew Bohan, Executive Director
September 28, 2011
Page 11

D. The District Neither Proposed nor Requested the Chloride TMDL Threshold as Mandated by the Regional Board.

Since the early 2000s, the District has struggled to collaborate with the Regional Board to obtain reasonable chloride standards for the Santa Clara region. Because of the ever-changing nature of the Regional Board's approach to assigning chloride WLAs to the Saugus and Valencia Water Reclamation Plants (which is clearly delineated in the Regional Board's lengthy recitation of the "regulatory history"), the District attempted to work with the Regional Board and other stakeholders to develop a reasonable and scientifically-supportable alternative compliance plan.⁹

Though the District is committed to complying with all applicable legal and regulatory requirements, the District exhausted all avenues of appeal outside of litigation to negotiate a reasonable standard that would adequately protect water quality in the Santa Clara River. The District began to actively engage in negotiations with the Regional Board, which ultimately led to the Chloride Orders only to protect, to the best of its ability, the interests of its ratepayers. The Regional Board's incorrect categorization of the District's involvement in the regulatory process as rising to the level of "enthusias[ti]c support . . ." grossly oversimplifies actual events and is a smoke screen designed to obscure the Regional Board's own mandate to pass fiscal obligations for funding massive water treatment programs onto the District, including those necessary to meet the requirements set forth in the Chloride Orders.

⁹ The Regional Board further contends that the provisions of the Chloride TMDL do not implement a new program because "[t]he Los Angeles Water Board first established water quality objectives for chloride in the Upper Santa Clara River in 1975. Despite the various revisions to the Chloride TMDL over the years, the water quality objective of 100 mg/L for chloride designated in 1978 remains the water quality objective today." (Regional Board's Response at p. 22.) The Regional Board fails to note, however, that in 1994 it revised the Basin Plan and deleted a footnote, which changed the standard from 100 mg/L at end of a reach of the river from an "annual average" to an "instantaneous maximum" requirement at all locations in the river. This seemingly small change significantly alters the scope of the District's proposed plan to ensure TMDL compliance.

Drew Bohan, Executive Director
September 28, 2011
Page 12

The District, following directives from the State Water Quality Control Board¹⁰, after years of protracted discussions regarding appropriate TMDL levels, actively engaged in negotiations concerning the Chloride Orders only to protect the interests of its ratepayers under the threat of crippling fines that could be imposed by the Regional Board. Contrary to the Regional Board's misguided representation that the District staff "expressed an unprecedented level of cooperation and support for the Chloride Orders, the fact remains that the District did not "request" or "initiate" the implementation of the Regional Board's stringent 100 mg/L chloride threshold. While the alternative compliance plan that is reflected in the Chloride Orders seemed at the time to require a lower-cost compliance option with potentially relaxed chloride limits, new information regarding state and local water quality indicates that the District could now, if permitted, meet the site-specific chloride objectives associated with the alternative compliance plan without the need for costly and energy-intensive advanced wastewater treatment facilities.

E. The Applicable Filing Period Does Not Bar the Test Claim Because the District is Seeking Reimbursement for Expenses Incurred Within One Year.

The Respondents argue that the test claim is barred by the applicable limitation period set forth in Government Code section 17551, subdivision (c) ("Section 17551"). That subdivision provides that claims must be filed within 12 months following the effective date of a statute or within 12 months of incurring increased costs as a result of the statute or executive order. The latter provision means that costs that can be recovered are those incurred no more than 12 months prior to or after the filing of the test claim. In this instance, various costs were incurred during fiscal year 2009-2010 that were set forth in the Test Claim, as well as additional projected costs for fiscal year 2010-2011.

As the District has not yet approved a project to comply with the state mandate, little expense was incurred in the year after the TMDL was adopted. Therefore, the District's Test Claim was timely filed to include actual costs expended in during fiscal year 2009 through 2010 and thereafter. In accordance with the statutory framework set forth in Section 17551, the District intends to seek reimbursement on an annual forward-going basis for costs incurred during the prior fiscal year. This approach is necessary in this instance since the final timeline of the project and projected costs remain uncertain.

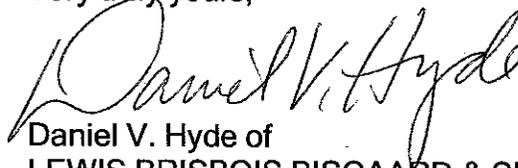

¹⁰ At the May 2007 State Water Quality Control Board ("State Board") hearing, whereby the State Board was to consider the Regional Board's 2006 Chloride TMDL revisions (which the District vehemently opposed), the State Board members directed the District to coordinate with the Regional Board and interests within Ventura County interests to reach a mutually agreeable resolution.

Drew Bohan, Executive Director
September 28, 2011
Page 13

III. CONCLUSION

As a result of the Regional Board's Chloride Orders, the District will be required to construct facilities that will cost up to \$250 million. The Regional Board's discretionary actions cannot reasonably be construed as a federal mandate. The Regional Board maintains discretion in this area of CWA regulation, and the Regional Board's actions are clearly more stringent than the CWA's minimum requirements. Not surprisingly, the District's ratepayers will not approve substantial rate increases to pay for the construction of these facilities, which are designed to benefit agricultural interests in Ventura County. The Regional Board's Chloride Orders are a paradigm of an unfunded state mandate. Therefore, the District is entitled to subvention of the costs that have been and will be incurred as a result of this mandate.

Very truly yours,

Daniel V. Hyde of

STEPHEN R. MAGUIN
Chief Engineer and General Manager

May 9, 2011

Mr. Samuel Unger, Executive Officer
California Regional Water Quality Control Board
Los Angeles Region
320 West 4th Street, Suite 200
Los Angeles, CA 90013

Dear Mr. Unger:

Upper Santa Clara River Chloride TMDL

The Santa Clarita Valley Sanitation District of Los Angeles County (Sanitation District) submits this letter in response to concerns raised in letters from Ventura County Supervisor Kathy Long, the Ventura County Agricultural Water Quality Coalition (VCAWQC) and the United Water Conservation District (UWCD) to the California Regional Water Quality Control Board – Los Angeles Region, dated April 26, April 29, and April 29, 2011, respectively. The letters from the Ventura County stakeholders cite a perceived lack of progress by the SCVSD toward compliance with the Upper Santa Clara River Chloride TMDL (Chloride TMDL) and request that the Regional Board take punitive actions against the Sanitation District at its next board meeting. While the Sanitation District recognizes the Ventura County stakeholders' concern with the Sanitation District's decision not to implement certain elements of the Alternative Water Resources Management Plan (AWRM, also known as the Alternative Compliance Plan or ACP), action on the part of the Regional Board is not necessary at this time as substantial progress is continuing and water quality has improved greatly since the Chloride TMDL was adopted.

Improvement to water quality is the direct result of the Sanitation District's unprecedented removal of nearly all automatic water softeners in the community and a lowering of the chloride level in imported water. Effluent quality from the Sanitation District's Water Reclamation Plants has greatly improved in recent years as shown in the attached Figure 1. These improvements in effluent quality have also contributed to chloride levels at the point of compliance in the Santa Clara River being close to or below the 117 mg/L site specific objective for the last several years as shown in the attached Figure 2.

The letters submitted by Ventura County stakeholders generally claim threats to Ventura County interests that are not and cannot be supported factually and are clearly meant to incite the Regional Board. There has never been a threat to public health as a result of chlorides in the Santa Clara River as claimed by Supervisor Long. The secondary drinking water maximum contaminant level for chlorides established by the State (for aesthetics only, not protection of public health) is 250 mg/L yet the highest observed levels at the Los Angeles / Ventura County line have not exceeded 160 mg/L in decades. Further, UWCD has never provided the Regional Board or the Sanitation District any scientifically valid analysis of their claims of westward progression of an elevated groundwater chloride front. Even if movement of

Mr. Samuel Unger, Executive Officer

-2-

May 9, 2011

a front could be proven, the effect of the substantial improvement in water quality the last several years would not be observed due to the very slow travel time in groundwater. Finally, the condition and sustainability of the Ventura County agricultural industry has only a limited connection to Sanitation District discharges to the Santa Clara River. It is hard to corroborate the alleged damage associated with the Sanitation District's discharge as agricultural crop values continue to increase from year to year.

Although there is no apparent impairment of the agricultural beneficial use, the Sanitation District is not suggesting it halt its efforts to reduce chloride levels and continues to work toward a compliance solution in good faith. The Sanitation District has proposed a Revised ACP that, if approved by the Regional Board, will maintain the water quality the stakeholders and the Regional Board sought with the original ACP while preserving and enhancing the environment with a lower carbon footprint at a lesser cost to the ratepayers.

The suggestion in the Ventura County's stakeholders' letters that the Regional Board require the Sanitation District to comply immediately with a 100 mg/L effluent standard is not based on good science or policy and will only result in a waste of limited public funds. The Sanitation District urges the Regional Board instead to continue to work with Sanitation District staff and other stakeholders and allow the Sanitation District to complete the studies your staff requires to evaluate the merits of the Revised ACP before taking further action. This request, further elaboration of the Sanitation District's position, and the Sanitation District's responses to some of the assertions made in the Ventura County Stakeholders' letters are detailed in the Attachment.

Very truly yours,

Stephen R. Maguin

Raymond Tremblay

Attachment 1

Sanitation District's Position

Implementation of All of the Elements of the ACP is No Longer Necessary To Protect Water Quality

As you are aware, the stakeholder-led process that developed the original ACP was based on the best available information at the time and was approved by the Regional Board under Resolution R4-2008-012. In the 2.5 years since then, water quality at the Los Angeles/Ventura County line where the beneficial use must be protected has been generally in compliance with the Site Specific Objective (SSO) for chloride of 117 mg/L (See Figure 2). This is especially remarkable given the fact that the period of 2007 through March 2011 was a drought¹. This improvement can be attributed to removal of automatic water softeners and improved quality of imported water.

Historically, chloride levels in the Santa Clara River at this location have been much higher due in part to high levels of chloride in imported State Water Project deliveries during drought periods. The local State Water Project (SWP) water wholesaler, the Castaic Lake Water Agency (CLWA) has provided new information regarding the assumptions of future water quality in imported SWP water. CLWA has indicated that changes in SWP operation due to recent Biological Opinions for the protection of endangered species (Wanger Decision) and completion of water banking programs have and will continue to result in lower peak chloride levels in the imported water delivered to the Santa Clarita Valley. This is evidenced in the data (Figure 3) which indicate that chloride levels in imported water were as high as 140 mg/L in 1987-1992, only reach the low 80's during the most recent drought (2007-2011). This indicates that some elements of the ACP may no longer needed since the original ACP was designed to provide compliance with the Chloride TMDL assuming the worst observed conditions from the 1987-1992 drought that are not likely to repeat themselves.

Revised ACP Proposal Will Ensure Compliance and Provide Similar Quality and Supply Benefits

The Sanitation District has already done considerable work in developing the preliminary elements of a Revised ACP for Regional Board and Ventura County stakeholder consideration. Immediately following the service charge hearings in July 2010, during which rates to support chloride reduction facilities were not approved, the Sanitation District met with CLWA and local water agencies in order to validate the predictions of improved future SWP water quality. The Sanitation District believes this will enable compliance with the SSOs adopted by the Regional Board in 2008 under future hydrological conditions and provide a similar level of water quality and water supply benefits as the original ACP, without the need for costly and energy-intensive advanced wastewater treatment facilities (Reverse Osmosis or RO). Elimination of RO from the ACP will also eliminate the need for associated brine disposal and RO permeate conveyance facilities. This will reduce the construction impacts and energy intensity of the compliance project. The Revised ACP is fully outlined in the Sanitation District's May 2, 2011 submittal to the Regional Board.

The Sanitation District Needs Time to Evaluate the Revised ACP In Accordance with Regional Board Requirements

The Ventura County stakeholder letters contend there is a lack of progress on compliance on the part of the Sanitation District but this only speaks to the Sanitation District's lack of progress on some of the original ACP program elements Ventura County stakeholders desire that are no longer necessary to

¹In 2008, Governor Arnold Schwarzenegger signed Executive Order S-06-08, which proclaimed a condition of statewide drought beginning in 2007. In March 2011, Governor Jerry Brown issued a proclamation declaring the statewide drought at an end.

Attachment 1

achieve the same water quality the original ACP was designed to achieve. The Sanitation District continues to vigorously enforce the automatic water softener ban in an attempt to remove the remaining units. Furthermore, the Sanitation District is moving forward with an evaluation of future SWP water quality as suggested by the Regional Board. As you recall, the Sanitation District met with Regional Board staff to discuss conditions under which the Regional Board would consider new alternatives for compliance with the Chloride TMDL. The feedback received from the Regional Board indicated that any Chloride TMDL compliance alternative would have to provide similar benefits as the original ACP in order to justify water quality objectives in the range of the conditional SSOs adopted by the Regional Board in December 2008. The Regional Board also indicated additional scientific studies supporting the predicted improvements to future SWP water quality would be required in order for the Regional Board to consider revisions to the Chloride TMDL based on these predictions. Accordingly, the Sanitation District funded a study conducted by the CLWA to provide the required scientific basis to support the predictions of improved SWP water quality. In addition, the Santa Clarita Valley water agencies are evaluating changes in groundwater management practices that would limit chloride levels in the groundwater portion of the local water supply. In combination, these changes are likely to result in maximum chloride levels of 80-85 mg/L in the overall water supply to the community, which would enable the Sanitation District to meet the 2008 conditional SSOs through the Revised ACP proposed by the Sanitation District.

The Sanitation District expects the CLWA study to be completed by late summer 2011 and, if the results are favorable, the Sanitation District proposes to evaluate the Revised ACP using the GSWI Model and prepare SSO and anti-degradation studies in support. As discussed in the May 2, 2011 report, the Sanitation District proposes to confirm feasibility of the Revised ACP and establish revised regulatory requirements through a collaborative process. These steps would allow finalization of the Revised ACP, further development of the facilities plan, completion of associated CEQA analysis, and implementation of the final ACP.

Ventura County Stakeholder Requests for Regional Board Action Are Not Warranted and Will Not Ensure Compliance

In the letters sent to the Regional Board, the Ventura County Stakeholders requested the Regional Board take immediate action on the Chloride TMDL to bring the Sanitation District into compliance. These include requests for punitive remedies, immediate reversion to the 100 mg/L standards and issuance of a Cease and Desist Order to the Sanitation District with "a short as possible time schedule to comply. These requested actions are all punitive in nature and will not lead to more rapid achievement of better water quality. As you are aware, the SSOs adopted by the Regional Board were conditioned on implementation of the original ACP. The Chloride TMDL is clear in that if these criteria are not met, the existing water quality objectives in the Basin Plan revert back to 100 mg/L. Pending the results of the Sanitation District's studies, the Sanitation District has requested the Regional Board reopen the Chloride TMDL to incorporate the Revised ACP. This likely cannot happen until 2012 after the studies are completed and the Regional Board has reviewed them. Therefore, no action is required by the Regional Board to rescind the conditional SSOs adopted in 2008 at this time.

Further, the requests by Ventura County stakeholders to impose immediate effluent limits of 100 mg/L in the Sanitation District's NPDES permits is inappropriate as this would go far beyond the need to protect the beneficial uses of the river. The Literature Review Evaluation study conducted as part of the Chloride TMDL found that a protective range for salt sensitive agricultural crops from 100 - 117 mg/L for chloride in irrigation water. Chloride levels in the Sanitation District's Saugus and Valencia Water Reclamation Plant discharges are typically 15-20 mg/L higher than chloride levels in the Santa Clara River near the point of compliance. It is very clear that dilution occurs between the discharges and the point of use over the long term. Failing to consider this fact would result in overstringent regulation. Specifically, imposing effluent limits of 100 mg/L for the WRPs would require large expenditures of

Attachment 1

public funds without providing additional protection to beneficial uses. This would also result in substantially more environmental impacts associated with the construction of facilities to convey and dispose of brine and the greenhouse gas emissions from the energy needed to operate the necessary treatment and disposal facilities.

Compliance with a strict 100 mg/L chloride effluent limits requires implementation of advanced treatment facilities that would require considerable time for planning, design and construction. The Sanitation District could not immediately comply and would in fact need a time extension from the 2016 date contemplated in the Chloride TMDL for compliance with 100 mg/L.² The original Chloride TMDL Implementation Schedule provided an eight-year period for the planning, design and construction of the required facilities. In 2006, the Regional Board reduced the Chloride TMDL implementation period but kept intact the eight-year period required for planning, design and construction of the required facilities. In 2008, the original ACP, which included a smaller-scale advanced treatment facility and local brine disposal, allowed the Chloride TMDL implementation schedule to be revised to include only six years for planning, design and construction of the required facilities. If the Regional Board requires 100 mg/L as an effluent limit, the Sanitation District will likely need eight years to comply.

Sanitation District's Responses to Specific Points in Ventura County Stakeholder Letters

The following comments are in response to specific comments made by Supervisor Long (April 26, 2011), the United Water Conservation District (UWCD, April 29, 2011), and the Ventura County Agricultural Water Quality Coalition (VCAWQC, April 29, 2011).

VCAWQC and UWCD Comment (Page 2, last paragraph):

*... **the chloride problem has continued unabated in the East Piru Basin** along Reaches 4A and 4B and is beginning to contaminate groundwater wells farther west and adjacent to the Santa Clara River.*

Response:

The VCAWQC letter inaccurately states that the chloride problem has continued unabated. As shown in Figure 1, chloride levels in the Sanitation District's WRP discharges have decreased since 2002. Chloride levels in the WRP discharges when the Regional Board originally adopted the Chloride TMDL in 2002 were approximately 190 mg/L. Current chloride levels in the WRP discharge for 2011 are approximately 125 mg/L. During the same periods, chloride in SWP water averaged 83 mg/L in 2002, and 72 mg/L in 2011, a decrease of only 11 mg/L while chloride in the WRP discharges decreased approximately 65 mg/L.

In addition, there is no clear evidence of groundwater well contamination further west based on available data provided by the UWCD, shown in the tables below. Presentations made by UWCD staff at past Regional Board meetings claiming to demonstrate increases in chloride levels are misleading and based on an incomplete data set. UWCD has presented figures that seem to indicate an increase in the number of wells over 100 mg/L in the West Piru basin, however, these figures are misleading as the increase in the number of wells is a direct result of this increase in sampling of additional wells (two wells sampled in 2008 and eight in 2010), not evidence of an "unabated" chloride problem. As shown in the tables below, the sampling frequency in the Piru Basin has been inconsistent and therefore it is difficult to

² Regional Board Resolution No. R4-2006-016 revised the TMDL Implementation plan to achieve compliance with final waste load allocations for chloride of 100 mg/L by May 4, 2016.

Attachment 1

discern a trend of chloride in groundwater. Furthermore, it's inappropriate to look at a set of well data without also considering hydrology and other potential sources of chloride.

Attachment 1

VCAWQC and UWCD Comment (Page 3, third paragraph):

In July 2010, the Sanitation District sent a Prop 218-style notice to approximately 35,000 ratepayers in the Santa Clarita Area serviced by the Sanitation District. The Coalition is informed and believes that approximately 7,000 ratepayers responded negatively to the proposed increase. Accordingly, the rate increase should have gone into effect. However, the Sanitation District, responding to a vocal minority outcry of citizens, unilaterally rejected the rate increase thereby eliminating the key source of funding for the Sanitation District to comply with its obligations under the AWRM.

Response:

While the Sanitation District is exempt from the voting requirements, it must still follow the process specified under Proposition 218. Implementation of rates under Prop 218 is a multi-step process involving individual noticing, a public hearing, and then introduction and adoption of the implementing ordinances. Specifically, the process begins when the Sanitation District Board receives and files a service charge report pursuant to the requirements of the California Health & Safety Code. The service charge report itself does not set the rates; however, it does provide information on what charges are being proposed for collection on the property tax roll. At the same time the Board receives and files the service charge report, it will also authorize the printing and mailing of the public notices required under Prop 218.

Under Prop. 218, an individual notice must be mailed to every property owner whose parcel is connected to the sewer system. In addition to information about the proposed rate increase, the notice provides information to the property owners on how to submit a protest. While most fees and charges are subject to a vote of the property owners, Prop 218 specifically exempts water, wastewater, and trash collection fees from this requirement. Before any action can be taken to implement new rates, the Sanitation District Board must hold a public hearing to consider all public input received. Under the provisions of Prop 218, the Sanitation District Board can take no action on the proposed rates if written protests are submitted by more than 50% of the owners of the impacted parcels. After considering all of the public input, the Sanitation District Board can vote either to introduce a service charge rate ordinance and consider adoption of the ordinance at a subsequent Board meeting, requiring a two-thirds vote, or not approve the rate increases.

In 2009 and 2010, the Sanitation District attempted to implement the Prop 218 process by proposing increased sewer service charge rate increases necessary to implement the original ACP program. Upon providing notice to the affected property owners, the Sanitation District received strong opposition from its constituents. The Sanitation District's elected officials could not support the proposed rate increase in the face of this public opposition, declining to adopt the proposed rate increases.

VCAWQC and UWCD Comment (Page 4, second paragraph) in VCAWQC letter:

One of the arguments being made is that economic hardship to the Sanitation District's ratepayers will result if the Sanitation District is required to proceed with the AWRM program. While the Coalition is sympathetic to these rate payers during recent economic times, it should be noted that the Sanitation District's sewer rates, compared with other water/wastewater rates in California, are one of the lowest in Southern California, even taking into account the proposed rate increase that includes the AWRM program. Indeed, the rate proposed by the Sanitation District would have been phased in over a 5-year period and would not have exceeded approximately \$50.00 per month per ratepayer.

Attachment 1

and

Supervisor Long's Comment (Page 2, fourth paragraph):

One of the arguments being made is that economic hardship to the SCVSD-LA County ratepayers will result if they proceed with the AWRM program. While I am sympathetic in these economic times, it should be noted that the SCVSD-LA County's rates, compared with other water/wastewater rates in California, are one of the lowest in Southern California, even taking into account the proposed rate increase that includes the AWRM program.

Response:

The Sanitation District takes pride in providing a high level of service in the most economical way possible. It should be noted that in addition to the Sanitation District's service charge, ratepayers pay a portion of their property tax, which comes to the Sanitation District, as well as fees for local sewer service. The reason the Sanitation District has been able to maintain competitive service rates is that the Sanitation District's ratepayers supported an investment in modern water recycling facilities and have paid for them over the last several decades, in part with federal funding that was available at the time. Communities that are currently implementing wastewater facilities equivalent to those currently operated by the Sanitation District would be expected to require significant rate increases due to increased costs of construction and lack of available federal funding. The Regional Board should not attempt to penalize the Sanitation District for making these environmentally and financially sound investments many years ago, resulting in the current service charge rates. It should be noted, however, that adoption of the rates necessary to implement the original ACP would not have left the Sanitation District with rates among the lowest in Southern California, as the most recent data indicates the statewide average charge for sewer service is approximately \$33.82 (2007-08).

VCAWQC and UWCD Comment (Page 4, third paragraph):

The efforts of the Sanitation District to avoid its obligations under the AWRM, do not end there. In a recent Notice of Public Hearing regarding a proposed sewer service charge rate increase in Santa Clarita, the Sanitation District conducted still another Prop 218 vote with respect to a proposed sewer service charge rate increase in April 2011. In the Notice of Public Hearing it states in pertinent part:

"None of this increase will fund development of facilities to control chlorides in the Santa Clara River. While the District staff will continue to work with the regulators, pursuant to Board direction, to resolve the chloride issue in the most cost-effective and reasonable manner possible, no rate increase to support chloride-related facilities will be proposed until an acceptable plan is developed..."

Clearly, the Sanitation District's Board has evinced a clear intent to not comply with the terms of the AWRM.

Response:

As previously explained, while the Sanitation District must follow certain requirements, Prop 218 specifically exempts water, wastewater, and trash collection fees from requiring a vote of the ratepayers.

Attachment 1

The Sanitation District must ensure sufficient funding to maintain continued operation of its existing treatment facilities to protect public health and the environment. Due to the strong public opposition to raising service charge rates to pay for implementation of Chloride TMDL compliance projects, the Sanitation District declined to adopt any increase in service charge rates as necessary to cover existing operations and maintenance costs for its facilities. In order to ensure adequate funding for these costs, it was necessary to separate the rate increase necessary for these additional expenses to facilitate public understanding of the difference between the rate increases needed for existing facilities with the rate increases needed for Chloride TMDL compliance.

The Sanitation District fully understands the necessity of future rate increases to implement Chloride TMDL compliance measures. However, as the Sanitation District continues to work on developing the Revised ACP, there remains considerable uncertainty as to cost. The Sanitation District is unable to propose increased service charge rates until additional work is completed.

VCAWQC and UWCD Comment (Page 4, fifth paragraph):

Furthermore, in a recent meeting conducted at the offices of the United Water Conservation District in February 2011, representatives of the Sanitation District had the audacity to propose still a new alternative, with no specific plan in mind, and no basic studies supporting their supposed alternative plan. The Coalition believes that this meeting was scheduled for the sole purpose of providing the Sanitation District with a reason to go back to the Board's staff to indicate that the stakeholders were receptive to still another alternative that was more amenable to the Sanitation District and its constituents.

Response:

The Sanitation District did have a specific plan that it presented to the Ventura County stakeholders in February 2011, which does provide very substantial benefits to Ventura County.

VCAWQC and UWCD Comment (Pages 4-5, sixth paragraph):

As if this were not a compelling story already, there is one last piece of the puzzle that has recently surfaced demonstrating that the chloride situation in the upper Santa Clara River will worsen without the LA Board's intervention. The Coalition is in receipt of the attached letter dated March 16, 2011, from the Santa Clarita Organization for Planning and the Environment ("SCOPE") to the Los Angeles County Region Planning Commission with reference to a proposed development of approximately 6,000 homes in a proposed Mission Village development that would have been treated by the Newhall Ranch Water Treatment Plant. As the attached letter demonstrates, in a letter dated 2003, commenting on this issue for the specific plan DEIR for this proposed development project, the LA Board stated that the chloride issue would be addressed in the permitting process by requiring releases to the Santa Clara River to meet the chloride TMDL. The permit, granted in 2007, in fact required that the 100 mg/L TMDL be met, with the thought that this water treatment plant, promising to be operated with reverse osmosis, would reduce the overall chloride level in the River. Now, however, Newhall is instead proposing to run the first 6,000 units in this project development through the existing Valencia Sanitation District!

Response:

Attachment 1

The interconnection Agreement with Newhall Ranch was executed in 2002. The Sanitation District does not itself approve growth but it is the Sanitation District's obligation to serve approved growth. The wastewater from Newhall Ranch will be similar in quality to the wastewater from the Valencia WRP and will not raise the chloride concentration of the Valencia WRP discharge.

VCAWQC and UWCD Comment (Page 5, fourth paragraph):

The foregoing process, which began in 2002, remains unabated for the last nine years, and if left to the control of the Sanitation District, will continue unabated through the end of the Chloride TMDL Implementation Plan in 2015. Clearly, the foregoing actions of the Sanitation District evince an intent to delay and fail to comply with the mandates under the AWRM and Chloride Implementation Plan under the guise of economic difficulties. This argument is wearing thin on the stakeholders of Ventura County and should be acknowledged by this Honorable Board as nothing more than a ploy to delay the Sanitation District's obligations under the foregoing laws.

Response:

As indicated above, the Sanitation District has made considerable progress in reducing chloride levels in its WRP discharges to the Santa Clara River. As shown in Figure 1, chloride levels in the Saugus and Valencia WRPs have been reduced from approximately 190 mg/L in 2002 down to approximately 125 mg/L in 2011, a decrease of approximately 65 mg/L. During the same period, chloride in SWP water averaged 83 mg/L in 2002 down to 72 mg/L in 2011, a decrease of only 11 mg/L. Much of the decrease in chloride levels is a direct result of the Sanitation District's efforts.

Additionally, chloride levels in SWP water during the most recent drought, 2007 to 2010, averaged approximately 75 mg/L, whereas chloride levels during the previous statewide drought, 1987 to 1992, averaged nearly 110 mg/L. CLWA has indicated that this is a result of changes in SWP operation due to recent Biological Opinions for the protection of endangered species (Wanger Decision) and completion of water banking programs along the SWP.

Supervisor Long's Comment (Page 2, fifth paragraph):

Unfortunately, further delay in the implementation and compliance with the Chloride TMDL results in daily degradation of our water resources, and continual impairment of Ventura County's agricultural beneficial uses.

Response:

As previously indicated, evidence of "daily degradation" in the Piru basin has not been provided. Chloride levels in the Sanitation District's discharges and the Santa Clara River continue to improve as a direct result of the Sanitation District's efforts as shown on the attached figures. This substantial improvement in water quality over the last several years would not be expected to be immediately observed in groundwater further downstream due to the very slow travel time in groundwater. Furthermore, as discussed above, there is no evidence of continual impairment based on data available today. Please see response above to VCAWQC and UWCD letters.

CASE NO. BS130730

**COURT'S RULING ON PETITION FOR WRIT OF MANDATE HEARD ON
AUGUST 10, 2011**

Petitioners State of California Department of Finance, the State Water Resource Control Board ("State Board") and the Los Angeles California Regional Water Quality Control Board ("Regional Board") seek to set aside a decision of the Respondent Commission of State Mandates ("Commission").

After considering the parties' briefs and relevant evidence¹, having heard argument and having taken the matter under submission, the Court rules as follows:

Statement of the Case

This case involves the efforts of the Real Parties in Interest to obtain a subvention of funds for costs resulting from an executive order mandated by a state agency and contained in a storm water permit issued in 2001 to these cities and other cities in Los Angeles County and the Los Angeles Flood Control District.

An understanding of the interplay of the varied regulatory schemes underlying these orders and permits is necessary to an evaluation of the matters before the Court.

1. Environmental Regulations Under the Clean Water Act.

In 1972, Congress passed the Clean Water Act. The Clean Water Act sought to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters." 33

¹ In addition to the administrative record, the court takes judicial notice of the matters sought to be noticed by Petitioners and Real Parties.

U.S.C. § 1251(a). The Clean Water Act prohibits the discharge of pollutants from “point sources” to waters of the United States unless provided for under the national Pollutant Discharge Elimination System (“NPDES”). 33 U.S.C. § 1311, 1342; Communities for a Better Environment v. State Water Resources Control Board, 109 Cal. App. 4th 1089, 1092-93 (2003).

Either the United States Environmental Protection Agency (“EPA”) or a U.S. EPA-approved state may issue NPDES permits.² 33 U.S.C. § 1342(a)(1) & (b). Congress concluded that the U.S. EPA could not only issue permits, but also allowed states to elect to take on that federal responsibility. Environmental Protection Agency v. California ex rel. State Water Resources Board, 426 U.S. 200, 219 (1976). California has the approval of the U.S. EPA to issue NPDES permits. Building Industry Association of San Diego County v. State Water Resources Control Board, 124 Cal. App. 4th 866, 875 (2004).

If a state elects to issue NPDES permits, it must ensure that the permits comply with many different federal requirements, including effluent limitations and national standards, and states must also provide for the continued inspection and monitoring of pollutants into the waters. 33 U.S.C. §§ 1342(b)(1), 1311, 1312, 1316, 1317, 1319(a)(1), (3) and 1365(a)(1). And, to ensure that the state programs comply with these federal mandates, the EPA maintains oversight and supervision of these programs. For example, the state must provide the U.S. EPA with proposed permits and notice of any action related to a discharger’s permit application. 33 U.S.C. § 1342(d)(1). The EPA may object to the permit and should the federal agency find that a state program does not comply with NPDES program guidelines, it may withdrawal approval of the state program. 33 U.S.C. § 1342(c)(3).

While many types of discharge require NPDES permits under the Clean Water Act, this case deals only with one type – discharge of pollutants through municipal storm sewer systems. This type of discharge is referred to as either MS4 or storm sewer systems. Controlling municipal storm water runoff is important because it constitutes one of the most significant sources of water pollution. Environmental Defense Center, Inc. v. EPA, 344 F.3d 832, 840 (9th Cir. 2003).

The Clean Water Act requires municipal storm water discharges, such those from the County of Los Angeles, “to reduce the discharge of pollutants to the maximum extent practicable,” including management practices, control techniques and system, design and

² In 1973, pursuant to an amendment to the Porter Cologne Water Quality Control Act, California became the first state to be approved by the U.S. EPA to administer the NPDES permit program. County Sanitation Dist. No. 2 of Los Angeles County v. County of Kern, 127 Cal. App. 4th 1544, 1565-66 (2005). As amended, the Porter-Cologne Act mandates that “waste discharge requirements for discharge from point sources to navigable waters shall be issued and administered in accordance with the currently applicable federal regulations for the . . . (NPDES) program.” 23 Cal. Code of Regulations § 2235.2. Nine regional boards, including the Los Angeles California Regional Water Quality Control Board, administer the program, with oversight by the State Board. See Water Code §§ 13140, 13200 et seq.. While the Porter-Cologne Act requires that Chapter 5.5 be “construed to ensure consistency with the requirements for state programs,” state regulators may impose restrictions in NPDES permits that go beyond the requirements of the Clean Water Act. Water Code section 13377.

engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.” 33 U.S.C. § 1342(p)(3)(B). The “maximum extent practicable” standard is a technology-forcing requirement designed to foster innovation. See, e.g., Chemical Mfrs. Ass’n v. Natural Resources Defense Council, 470 U.S. 116, 155-56 (1985).

But, unlike many other technology-based requirements, the U.S. EPA directed that permit writers would identify the municipal storm water requirements on a permit-by-permit basis.³ Natural Resources Defense Council v. U.S. EPA, 966 F.2d 1292, 1308 n. 17 (9th Cir. 1992); 55 Fed. Reg. 47990, 48043 (Nov. 16, 1990). “

“Unlike NPDES industrial wastewater permits which typically contain specific end-of-pipe effluent limits based on . . . available treatment technology, MS4 permits usually include programmatic requirements involving the implementation of best management practices (BMP) in order to reduce pollutants discharged to the maximum extent practicable (MEP).

(AR 3393). See also Natural Resources Defense Council, *supra*, 568 F. 2d at 1380. Federal regulations define these practices to mean, *inter alia*, “schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of ‘waters of the United States’.”⁴ 40 C.F.R. § 122.2. Permittees are often allowed flexibility in the types of BMP and activities implemented to meet permit requirements. (AR 3393).

Before discharging pollutants from point sources under an MS4 permit, a public entity must file an application that addresses, among other things, the management programs in place to reduce the discharge of pollution using the maximum extent practicable standard. 40 C.F.R. § 122.26 et seq. These management programs must address discharges into the storm system from both the general population and from industrial and construction activities within the jurisdiction. *Id.*

Starting in 1990, the Regional Board issued municipal storm water permits to the County of Los Angeles.⁵ At issue in this case is Regional Order No. 01-182, NPDES permit

³ Regulating storm water discharges is generally considered to be more difficult than regulating traditional point resources, e.g. effluent levels discharged at factories or from sanitary treatment systems. (AR 5151). These traditional point sources have engineered treatment systems and the NPDES permits for these facilities generally contain numeric effluent limitations that must be met at the end of the discharge pipe. (*Id.*) By contrast, municipal storm water systems require controls to reduce the discharge of pollutants to the maximum extent practicable. (*Id.*)

⁴ The U.S. EPA issues guidance documents that discuss the types of “best management practices.” At the time that the claims at issue in this case were considered by Commission, the U.S. EPA had an MS4 Program Evaluation Guide. (AR 3391-94). In that Guide, the EPA addressed inspections of businesses and refuse-related issues. (AR 3468-69, 3440).

⁵ Before 1990, storm water discharges were not regulated under either state or federal law. On June 18, 1990, the first permit (90-079) was issued. This NPDES permit for the discharge of municipal storm water

number CAS004001, adopted on December 31, 2001. (AR 3495-3576). As part of that permit, the Regional Board made 66 findings concerning the permit's factual and legal basis. (AR 3505-19). For example, the Regional Board found that the proposed permit "[was] intended to develop, achieve and implement a timely, comprehensive, cost-effective storm water pollution control program to reduce the discharge of pollutants in storm water to the Maximum Extent Practicable . . ." (AR 3507).

2. Subvention and the Commission on State Mandates.

In November 1979, the voters adopted Proposition 4, which added article XIII B to the State Constitution. Hayes v. Commission on State Mandates, 11 Cal. App. 4th 1564, 1580 (1992). Article XIII B, called the "Gann limit," restricts the amounts that state and local governments may appropriate and spend each year from the proceeds of taxes. City of Sacramento v. State of California, 50 Cal. 3d 51, 58-59 (1990). Section 6 of article XIII B calls for state subvention by requiring the state to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. County of Los Angeles v. State of California, 43 Cal. 3d 46, 56 (1987).

But, constitutional subvention is not required when the costs implement federal law. Article XIII B, section 9, subdivision (b) excludes from the state or local spending limit any "appropriations required to comply with mandates of the . . . federal government." See also Sand Diego Unified School Dist. v. Commission on State Mandates, 33 Cal. 4th 859, 879-80 (2004) (the Gann limit provides for reimbursement of state-mandated costs, not federal ones). This prohibition against reimbursement for activities imposed by federal law is specifically stated in Government Code section 17556, subdivision (c). Redevelopment Agency of the City of San Marcos v. Commission on State Mandates, 55 Cal. App. 4th 976, 984 (1996). The Commission shall not find "costs mandated by the state" if "the statute or executive order "imposes a requirement that is mandated by federal law or regulation and results in costs mandated by the federal government, *unless the statute or executive order mandates costs that exceed the mandate in the federal law or regulation.*"⁶ Gov't Code section 17556, subdivision (c) (emphasis added).

The Commission on State Mandates is a quasi-judicial agency vested with the sole and exclusive authority to adjudicate all disputes over the existence and reimbursement of state-mandated programs within the meaning of article XIII B of the California Constitution. Kinlaw v. State of California, 54 Cal. 3d 326, 342-43 (1991). Local agencies file claims with the Commission for reimbursement of state-mandated costs under article XIII B, section 6. Gov't Code §§ 17551, 17560. The first claim filed by a local agency alleging that a statute or executive order imposes a reimbursable cost is a

was replaced on July 15, 1995 (96-054). (AR 3501). In addition, the State Board has issued two general NPDES permits for storm water discharges from industrial and construction sites. (AR 3511).

⁶ "Costs mandated by the federal government" is defined as "any increased costs incurred by a local agency or school district after January 1, 1975, in order to comply with the requirements of a federal statute or regulation." Gov't Code section 17514.

“test claim.” Gov’t Code § 17521. A public hearing is held on the test claim at which time evidence may be presented by the claimant, the Department of Finance, or any other state agency affected by the claim, and any interested organization or individual. Gov’t Code § 17555.

The Commission determines in the first instance if a state-mandated program exists. Gov’t Code § 17551. If so, the Commission adopts parameters and guidelines for the reimbursement of claims submitted by eligible claimants. Gov’t Code § 17557, subdivision (a). Thereafter, the Controller issues claiming instructions for each mandate that requires reimbursement. Gov’t Code § 17558, subdivisions (a) and (c). Judicial review of the final Commission decision is available through a petition for writ of mandate filed pursuant to Cal. Code of Civ. P. section 1094.5. Gov’t Code § 17559.

3. The Test Claims at Issue Here

The County of Los Angeles and several cities, who are the Real Parties in Interest, presented “test claims” to the Respondent Commission in September 2003. The Real Parties sought subvention of state funds for four requirements contained in the NPDES permit number CAS004001, adopted on December 31, 2001: (1) to place and maintain trace receptacles at transit stops; (2) to inspect certain commercial facilities; (3) to inspect certain industrial facilities; and (4) to inspect construction sites.⁷ (AR 13-14). These parties asserted that these requirements exceeded the federal mandate under the law and regulations of the Clean Water Act.

The Commission initially rejected the claims, citing Government Code section 17516(c), exempting from the term “executive order” any orders issued by regional quality control boards or the State Board. The Commission’s ruling was ultimately reversed by the Superior Court, and that decision was affirmed by the Court of Appeal. See also County of Los Angeles v. Commission on State Mandates, 150 Cal. App. 4th 898, 904 (2007).

The test claims were re-filed with the Commission. (AR 5557). On July 31, 2009, Respondent issued a Statement of Decision. (AR 5555- 5625). In relevant part, the Commission determined that the challenged permit provisions were not federal mandates. (AR 5574-5603). And, the Commission determined that the permit activities challenged here imposed new programs or higher level of services on the County of Los Angeles.⁸ (AR 5603-04).

With respect to the federal mandate findings, the Commission found that these four challenged provisions exceeded the requirements of the CWA and federal regulations and

⁷ None of these challenged requirements was proposed by the Real Parties when they applied for the NPDES permit at issue in this case. (AR 3663-3794). Rather, these requirements were added by the Regional Board, over the real parties’ objections. (AR 3553, 3533-338, 3546-49).

⁸ The Commission further found that the state was required to reimburse the real parties for the trash receptacle obligation, but not for the inspection obligations as the real parties had the ability to raise fees to pay for these inspections. This aspect of the Commission’s decision necessarily fails under the analysis described below, but will not be specifically considered as the subject of this petition involves whether these inspections are state mandates in the first instance, not whether they are properly reimbursable.

that the state “freely chose” to impose them on the Real Parties. (AR 5578, 5582-86). The Commission analyzed the federal regulations, including 40 CFR 122.26 *et seq.*, and concluded that these rules did not expressly require the installation and maintenance of receptacles, or conducting certain inspections. (AR 5578, 5584, 5590, 5591, 5595, 5601). As for the conclusion that these four permit requirements were “new programs,” the Commission noted that these activities were not contained in the previous permits issued to the County of Los Angeles, and were imposed only on local agencies and not on the general public. (AR 5603-04).

On July 20, 2010, Petitioners filed this Petition.

Standard of Review

Petitioner seeks review of the Board’s decision under CCP section 1094.5. CCP section 1094.5 is the administrative mandamus provision which structures the procedure for judicial review of adjudicatory decisions rendered by administrative agencies. Topanga Ann’s for a Scenic Community v. County of Los Angeles, 11 Cal. 3d 506, 514-15 (1974).

The pertinent issues under section 1094.5 are (1) whether the respondent has proceeded without jurisdiction, (2) whether there was a fair trial, and (3) whether there was a prejudicial abuse of discretion. CCP § 1094.5(b). An abuse of discretion is established if the respondent has not proceeded in the manner required by law, the decision is not supported by the findings, or the findings are not supported by the evidence. CCP § 1094.5(c).

A review of the Commission’s factual determinations proceeds under the substantial evidence test. City of Richmond v. Commission on State Mandates, 64 Cal. App. 4th 1190, 1194-95 (1998). Applying that test, the Court must ensure that findings are legally relevant as well as supported by the evidence. See City and County of San Francisco v. Board of Permit Appeals, 207 Cal. App. 3d 1099, 1110 (1989). Substantial evidence review also includes a duty to determine whether the agency committed errors of law in applying the facts before it. *Id.* at 1111. Whether a statute creates a reimbursable state mandate is a question of law. Connell v. Superior Court, 59 Cal. App. 4th 382, 395 (1997); Long Beach Unified School Dist. v. State of California, 225 Cal. App. 3d 155, 174 (1990). Questions of law are subject to *de novo* review. City of Richmond, supra, 64 Cal. App. 4th at 1105.

An agency is presumed to have regularly performed its official duties. (Ev. Code § 664). The Petitioner, therefore, has the burden of proof to demonstrate wherein the proceedings were unfair, in excess of jurisdiction, or showed prejudicial abuse of discretion. Alford v. Pierno, 27 Cal. App. 3d 682, 691 (1972).

Analysis

Petitioners assert two arguments in support of their contention that the Commission erred and must be reversed. They shall be evaluated separately.

1. The Challenged Receptacle Requirement Is a Federal Mandate.

There is a two-step test to determine whether a particular program is mandated by federal law and not, therefore, subject to state subvention.

First, did the state have “no real choice” in deciding whether to comply with the federal act? Hayes, supra, 11 Cal. App. 4th at 1594. A federal mandate exists even if “the state has adopted an implementing statute or regulation pursuant to the federal mandate, so long as the state had no true choice in the manner of implementation of the federal mandate. Id. at 1593. But, “[t]his reasoning would not hold true where the manner of implementation of the federal program was left to the true discretion of the state.” Id. For example, in City of Sacramento, supra, 50 Cal. 3d at 73-74, the Supreme Court explained that certain regulatory standards imposed by the federal government are “coercive . . . in every practical sense.” But, there is no requirement of such compulsion under article XIII B. Id. at 76 (there is “no final test for ‘mandatory’ versus ‘optional’ compliance with federal law.”) Rather, the standard depends on a number of factors, such as the nature and purpose of the federal program; whether its design suggests an intention to coerce; when state participation began, and the practical consequences of non-participation, non-compliance or withdrawal. Id.

Second, did the program exceed the requirements of a compulsory federal law? San Diego Unified School Dist. v. Commission on State Mandates, 33 Cal. 4th 859, 880 (2004).

Petitioners assert that the Commission’s entire analysis is analytically defective as a matter of law. For the reasons set forth below, the Court agrees.

First, the Commission’s conclusion that the state has “freely chosen” to implement the storm water permit program is legally incorrect. The reasons given, *i.e.*, (1) that California “voluntarily adopts the [NPDES] permitting program” and (2) because federal law “does not expressly require states to have this program,” do not equate with a conclusion that the NPDES permitting program at issue here is optional.

A review of the Clean Water Act clearly dictates that NPDES permits issued – by either the U.S. EPA or a qualified state agency – are not voluntary. Federal law requires the County of Los Angeles to have an NPDES permit for municipal storm water discharges. That same federal law compels those permits to educe the discharge of pollutants to the maximum extent practicable.⁹ This federal statutory scheme mandates NPDES permitting, even if California took no action at all. And, if California did not administer its own water quality program through the Porter-Cologne Act, California’s dischargers,

⁹ Congress established the maximum extent practicable standard because municipal storm water runoff, unlike other pollutant discharges, could not be adequately addressed by blanket effluent limitations. Building Industry Ass’n of San Diego County v. State Water Resources Control Board, 124 Cal. App. 4th 866, 884 (2004).

both private and governmental, would still have to comply with federal law – and be directly regulated by the federal government.¹⁰

Second, there is no substantial evidence in the administrative record to support the Commission's conclusion that the state's mandate in this instance was inconsistent with or more stringent than the Clean Water Act's "maximum extent practicable" requirement.¹¹ Rather, the Commission simply concluded that the claimed permit requirements were in excess of federal mandates because they could not be located in certain identified federal regulations.¹² (AR 5584, 5591, 5595). Unless expressly dictated by an identifiable federal regulation, the Commission concluded that such requirements are state mandates.

The search for a comparable federal regulation as the pre-condition for finding a federal mandate utterly ignores and misapplies the flexible regulatory standard inherent in the Clean Water Act. The "maximum extent practicable standard" is designed to provide administrative bodies the "tools to meet the fundamental goals of the Clean Water Act in the context of storm water pollution." Building Industry Ass'n of San Diego County v. State Water Resources Control Board, 124 Cal. App. 4th 866, 884 (2004). That flexible standard was designed to allow permit writers to use a combination of pollution controls that may be different in different permits. In re City of Irving, Texas, Municipal Storm Sewer System, (July 16, 2001), 10 E.A.D. 111 (E.P.A.), *6. And, the flexible standard provides an agency to tailor permits to the "site-specific nature of MS4," and the ability

¹⁰ And, such an outcome would be clearly contrary to the Legislative intention behind Porter-Cologne. "It is in the interest of the people of the state, in order to avoid direct regulation by the federal government of persons already subject to regulation under state law pursuant to this division, to enact this chapter in order to authorize the state to implement the provisions of the Federal Water Pollution Control Act. Water Code § 13370, subdivision (c).

¹¹ The Real Parties assert that the State Board has held that the "maximum extent practicable" standard does not apply to permit requirements that address the entry of pollutants into the storm sewer system. See In the Matter of the Petitions of Building Industry Association of San Diego County and Western States Petroleum Association, State Water Board Order WQ 2001-15. A review of that case, however, fails to support that contention. The administrative decision presented different circumstances and involved different permit requirements. That order concerned an attempted prohibition on all discharges into the municipal storm sewer system until the pollutants had been reduced to the maximum extent practicable. The State Board found the order to broad because it restricted all discharges and, therefore, necessarily interfered with a flexible approach to the mix of pollutant reductions before reaching the storm sewer system, and after – so long as the overall reductions are to the maximum extent practicable. Water Quality Order WQ 2001-15 does not undermine the EPA's recognition that municipal storm water programs will include requirements that reduce pollutants before reaching the storm sewer, including *inter alia*, the capacity to direct permit requirements at the sources of pollution, rather than solely at the end of the pipe. City of Irving, supra, 10 EAD 111 at * 6. The Water Board Order simply did not consider the issue of whether the maximum extent practicable standard contained in the Clean Water Act prohibits control of discharges into a municipal storm sewer system.

¹² The Commission's reliance on Long Beach School Dist. v. State of California, 225 Cal. App. 3d 155, 173 (1990) is misplaced. In that case, the court concluded that a state executive order mandating desegregation was a state mandate because it required schools to provide a higher level of service than was required by the federal constitution. *Id.* at 187. In this case, the federal applicable law, *i.e.*, the maximum extent practicable standard, directly mandates the type of requirements included in the instant permit.

to direct permit requirements “at the sources of pollution in the MS4 rather than solely at the end of the pipe.” Id.

To ignore this flexible standard imposed and mandated under the Clean Water Act, and instead to require a comparable federal regulatory dictates, is legally erroneous.¹³ Under the Commission’s approach, a permit requirement that is merely practicable or easy (not even practicable to the maximum extent) would be a state mandate if the U.S. EPA failed to express the requirement as a regulation.¹⁴ Such an approach is clearly erroneous.

Third, the Commission erred in isolating a specific requirement to conclude that the issued NPDES permit was a state mandate. One permit provision cannot exceed the “maximum extent practicable” standard imposed by the Clean Water where the permit as a whole does not. (AR 3517). For example, the placement and maintenance of trash receptacles is fairly included within those management practices for maintaining public streets in such a way to reduce the impact on receiving waters of discharges from municipal sewer systems. See, e.g., 40 C.F.R. § 122.26(d)(2)(iv)(A)(3).

That the receptacle and inspection requirements were not included in previous permits issued by the County does not take this regulation out of the purview of the Clean Water Act. The U.S. EPA “anticipates that storm water management programs will evolve and mature over time.” 55 Fed. Reg. 48052. Thus, the permits for discharges from municipal separate storm sewer systems will be written to reflect changing conditions that result from program development and implementation and corresponding improvements in water quality. Id. Given that the federal regulatory scheme anticipates changing permit requirements, that these requirements have not yet been articulated does not mean that the requirement exceeds the “maximum extent practicable” standard.

As Petitioners argue, if litter and debris cannot be properly disposed of by persons waiting at transit stops, the inevitable downstream result will be the introduction of pollutants into the streets and, thereafter, into the storm drains – leading inevitably to the discharge of pollutants into the nearby waterways. It cannot be seriously doubted that the placement and maintenance of trash receptacles at transit stops will help prevent the introduction of these known contaminants into the water. As the trash receptacle requirement is an obvious remedy, it is clearly within the maximum extent practicable

¹³ “The permitting agency has discretion to decide what practices, techniques, methods, and other provisions are appropriate and necessary to control the discharge of pollutants.” City of Rancho Cucamonga v. Regional Water Quality Control Board-Santa Ana Region, 135 Cal. App. 4th 1377, 1389 (2006). The only requirement is that the Regional Board comply with federal law requiring detailed conditions for NPDES permits. Id.

¹⁴ While there may be other cases in which the state agencies may impose standards that clearly exceed those imposed under a “maximum extent practicable” approach to storm water pollutants in the Clean Water Act, this case does not present that situation. See, e.g., Water Code § 13377 (allowing for more stringent state effluent standards); 33 U.S.C. § 1370 (allowing for more stringent state pretreatment standards). See also City of Burbank v. State Water Resources Control Board, 35 Cal. 4th 613, 628 (2005). There is nothing in the administrative record here to support a conclusion that placing receptacles at transit stops is not practicable, much less not practicable to the maximum extent.

standard. In fact, the County's own proposal recommended minimizing trash from entering waterways by removing trash from open channels, and controlling litter and debris in the street. (AR 3677-78).

As the trash receptacle requirement of the NPDES permit is within the maximum extent practicable standard under the mandatory provisions of the Clean Water Act, it is imposed by federal law and is not subject to reimbursement under article XIII B, section 6 of the California Constitution.

2. The Inspection Provisions in the Permit Are Not State Mandates.

The remaining challenged permit activities related to the inspection of certain commercial and industrial facilities and construction sites. A portion of the permit pertains to inspections of commercial facilities, such as restaurants, automotive service facilities and retail gasoline stations. While each commercial property has unique inspection requirements, the permit requires that all facilities be inspected on a regular basis, twice during the five year permit period, to confirm that best management practices are being effectively implements with the law. (AR 3533-36). Another portion of the permit requires the inspection of certain industrial facilities referred to in the permit as Phase I Facilities. (AR 3535-36). And, a third part of the permit provides that a program be implemented to control runoff from construction activity to storm drains at all construction sites within its jurisdiction. (AR 3546-47).

As with the receptacle requirement, these inspection mandates are clearly pursuant to the maximum extent practicable standard under the Clean Water Act.¹⁵ And, in addition, federal regulations also specifically contemplate inspections of industrial facilities (40 C.F.R. § 122.26 (d)(2)(iv)(B) & (C)), and construction sites (40 C.F.R. § 122.26 (d)(2)(iv)(D)). As discussed above, the Commission's rationale that these are not federal mandates because they are not expressly dictated by federal regulation is erroneous.¹⁶ (AR 5591, 5600). A federal mandate does not require explicit mention of every mandated activity. Rather, the relevant inquiry is whether these inspection activities fall within the Clean Water Act's maximum extent practicable standard. As there is nothing in the record to suggest that they exceed this standard, the Commission's conclusion to the contrary must fail.

¹⁵ The County of Los Angeles acknowledged that site inspections are within the maximum extent practicable standard because they recommended inspections in their permit applications as well. (AR 3671).

¹⁶ Nor does the Commission's reliance upon the existence of a statewide general industrial permit (GIASP) to negate the existence of a federal mandate make sense. (AR 5594). The issue properly framed is whether the inspection requirements are mandated under the federal Clean Water Act, not whether they may also be required under the GIASP permit. At most, "the GIASP permit may add additional inspections at the time and expense of the state." Opening Brief at 28. Although extensively argued to the Court, the existence of mutual inspection schemes does not constitute a derogation of state responsibilities to the real parties, in violation of Hayes. There is only a single question (asking for a certain permit number) that is obtained by the real parties under the existing permits that would otherwise be obtained by the state under its separate inspection obligations.

Nor are these inspections create requirements in excess of the federal mandate because they were not previously imposed.¹⁷ While they had not been previously required, this fact does not dictate the conclusion that they are not federal mandates. A requirement that the discharge of pollutants requires a NPDES permit is neither new nor different. And, the inclusion of new and advanced measures is clearly anticipated under the Clean Water Act. 55 Fed. Reg. 48052. As conditions and technologies change, the maximum extent practicable standard will similarly change. *Id.* Given that the federal regulatory scheme anticipates changing permit requirements, that these requirements have not yet been articulated does not mean that the requirement exceeds the “maximum extent practicable” standard.

Accordingly, these inspection requirements are federal, not state, mandates and are not subject to reimbursement under article XIII B, section 6 of the California Constitution.

Conclusion

For these reasons, the writ is GRANTED and the matter is remanded for further proceedings consistent with this decision and judgment.

Counsel for Petitioners is to submit to this Department a proposed judgment and a proposed writ within 10 days with a proof of service showing that copies were served on Respondent by hand delivery or fax. The Court will hold these documents for ten days before signing and filing the judgment and causing the clerk to issue the writ.

The administrative record is ordered returned to the party who lodged it to be preserved without alteration until a final judgment is rendered and to forward it to the Court of Appeal in the event of appeal.

The Court’s ruling, signed and filed this date, shall be deemed to be the Court’s Statement of Decision.

DATED: AUGUST 15, 2011

ANN I. JONES, JUDGE OF THE SUPERIOR COURT

¹⁷Although not previously required, the County of Los Angeles specifically included the inspection of commercial and industrial facilities in its application. (AR 3680-71). Essentially, the County admitted that its “site visit program” was clearly mandated under the maximum extent practicable standard. The County also included extensive and detailed measures relating to the control and containment of construction site wastes and erosion, including inspection of these sites. (AR 3672-74).

Re: **Draft Staff Analysis, Schedule for Comments, and Notice of Hearing**
Upper Santa Clara River Chloride Requirements, 10-TC-09
Los Angeles Regional Water Quality Control Board Resolution No. R4-2008-012,
Effective December 11, 2008
Santa Clarita Valley Sanitation District of Los Angeles County, Claimant

Dear Mr. Hyde:

The draft staff analysis for the above-named matter is enclosed for your review and comment.

Written Comments

Any party or interested person may file written comments on the draft staff analysis by **October 11, 2013**. You are advised that comments filed with the Commission are required to be simultaneously served on the other interested parties on the mailing list, and to be accompanied by a proof of service. However, this requirement may also be satisfied by electronically filing your documents. Please see <http://www.csm.ca.gov/dropbox.shtml> on the Commission's website for instructions on electronic filing. (Cal. Code Regs., tit. 2, § 1181.2.)

If you would like to request an extension of time to file comments, please refer to section 1183.01(c)(1) of the Commission's regulations.

Hearing

This matter is set for hearing on **Friday, December 6, 2013**, at 10:00 a.m., State Capitol, Room 447, Sacramento, California. The final staff analysis will be issued on or about November 22, 2013. Please let us know in advance if you or a representative of your agency will testify at the hearing, and if other witnesses will appear. If you would like to request postponement of the hearing, please refer to section 1183.01(c)(2) of the Commission's regulations.

Please contact Matt Jones at (916) 323-3562 if you have any questions.

Sincerely,

A handwritten signature in black ink, appearing to read "Heather Halsey".

Heather Halsey

PROPOSED STATEMENT OF DECISION

Los Angeles Regional Water Quality Control Board
Resolution No. R4-2008-012, adopted December 11, 2008,
approved by United States Environmental Protection Agency
April 6, 2010.

Upper Santa Clara River Chloride Requirements

10-TC-09

Santa Clarita Valley Sanitation District of Los Angeles County, Claimant

Attached is the draft proposed statement of decision for this matter. This draft proposed statement of decision also functions as the draft staff analysis, as required by section 1183.07 of the Commission's regulations.

EXECUTIVE SUMMARY

Overview

This test claim alleges a reimbursable state mandate resulting from Resolution R4-2008-012, adopted December 11, 2008 by the Regional Water Quality Control Board for the Los Angeles region (Regional Board). To assist the reader, there is a glossary of frequently used water quality related terms and acronyms on page 50. The prior Basin Plan had imposed a maximum pollutant concentration for chloride, or total maximum daily load (TMDL) of 100 mg/L for the Santa Clara River and waste load allocations (WLAs) of 100 mg/L for the Santa Clarita Valley Sanitation District's (District) two Water Reclamation Plants (WRPs). The test claim Resolution revised that Basin Plan and TMDL to include a revised, less stringent, TMDL and WLAs, providing greater flexibility to claimant with regard to chloride discharges into the river. The amended Plan also significantly reduced the costs to comply with the TMDL and WLAs when compared to the prior TMDL. The revised TMDL calls for the implementation of an Alternative Water Resources Management program (AWRM), in order to meet conditional site-specific objectives (SSOs) for water quality in Reaches 4B, 5, and 6 of the Santa Clara River, and conditional WLAs of 150 mg/L for discharges to Reaches 5 and 6, and 117 mg/L for discharge to Reach 4B for the District's two WRPs.

The District alleges, however, that meeting the SSOs and WLAs will require significant advanced treatment and other technological upgrades, and a number of other water supply control measures to control chloride concentrations in the Santa Clara River, especially during periods of higher concentration in the water supply and groundwater (i.e., during periods of lower precipitation). The District alleges that these upgrades and control measures result in costs

of approximately \$250.7 million. R4-2008-012 also includes a number of Implementation Tasks, consisting primarily of requirements to perform technical and scientific studies of the surface and groundwater, and evaluation of appropriate chloride thresholds, which the District alleges impose costs of approximately \$6.6 million.

Staff recommends the Commission deny this test claim on the following grounds: (1) several of the Implementation Tasks included in the TMDL are not new; (2) accelerating the implementation of final waste load allocations (discharge limitations) by one year is not a new program or higher level of service, and no increased costs are alleged; (3) the Alternative Water Resources Management program does not impose a new program or higher level of service, but a lower level of service, and reduced costs with respect to prior law; and (4) even if the Alternative Water Resources Management program did impose a new program or higher level of service, there are no costs mandated by the state, because the claimant has sufficient fee authority to cover the costs of any required activities.

Because staff recommends that this test claim be denied on the grounds stated above, the proposed statement of decision does not make findings on whether claimant is practically compelled to implement the Alternative Water Resources Management activities or whether the Alternative Water Resources Management activities, TMDLs or WLAs are mandated by federal law.

Background

The federal Clean Water Act (CWA) states that it is the policy of Congress “to recognize, preserve, and protect the primary responsibilities and rights of States to prevent, reduce, and eliminate pollution...” The CWA employs two primary mechanisms for the control and prevention of water pollution: identification and standard-setting for bodies of water, and identification and regulation of dischargers of pollutants. Section 1313 provides for standard-setting for both intra- and inter-state bodies of water, “such as to protect the public health or welfare, enhance the quality of water,” and take into consideration the waters’ “use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes.” Section 1313(d) provides that each state shall identify those waters for which the applicable water quality standards are not being met, and establish “the total maximum daily load [TMDL]...at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality.” A TMDL is defined as the sum of the amount of a pollutant allocated to all point sources (or WLAs), plus the amount of a pollutant allocated for nonpoint sources and natural background; a TMDL should be set for each pollutant identified by the [EPA] Administrator, and constitutes, essentially, a plan or objective setting the amount of a pollutant that will attain the water quality standard necessary for the protection of beneficial uses.¹ The CWA also expressly provides that effluent limitations for a point source discharger may not be renewed or revised to contain limitations less stringent than the previous discharge permit.

In addition to the federal requirements of the CWA, in 1968, the State Water Resources Control Board (SWRCB) adopted Resolution 68-16, formally entitled, “Statement of Policy With

¹ Code of Federal Regulations, title 40, section 130.2.

Respect to Maintaining High Quality of Waters In California,” to prevent the degradation of surface waters where background water quality is higher than the established level necessary to protect beneficial uses. This executive order is commonly referred to as the California Antidegradation Policy and has been continuously in effect since 1968.

The Santa Clara River is the largest river system in southern California that remains in a relatively natural state. The River originates in the San Gabriel Mountains in Los Angeles County, runs through Ventura County, and flows into the Pacific Ocean between the cities of San Buenaventura (Ventura) and Oxnard. Reaches 5 and 6 of the Santa Clara River are located upstream of the Blue Cut gauging station near the Los Angeles/Ventura County line, between the cities of Fillmore (in Ventura County) and Santa Clarita in Los Angeles County; Reach 4B is in Ventura County.

The Regional Board first established water quality objectives for chloride in the Santa Clara River in 1975, and in 1978 the Board set the water quality objectives for chloride at 100 mg/L for both reaches. In 1998 the Santa Clara River was first listed as an impaired water body under section 1313(d) of the federal Clean Water Act: Reaches 5 and 6 of the Upper Santa Clara River did not meet the 100 mg/L water quality objective, and “[b]eneficial uses of the Upper Santa Clara River, including agricultural supply water and groundwater recharge were listed as impaired.” The Valencia and Saugus Water Reclamation Plants, which are owned and operated by claimant, Santa Clarita Valley Sanitation District, are responsible for approximately 70 percent of the chloride loading to the River. The Valencia and Saugus WRPs were not designed to remove chloride from waste water, and in fact have been contributing to elevated chloride concentrations due to the use of chlorine disinfection.

In October of 2002, the Regional Board adopted a TMDL for chloride in the Santa Clara River, including WLAs on the two WRPs of 100 mg/L chloride in their discharge into the River, to be fully implemented within two and one half years. The District appealed the decision to the State Water Resources Control Board (SWRCB), which remanded the TMDL to the Regional Board in 2003, for reconsideration of various items including: (1) an extension of the interim effluent chloride limits, and (2) re-evaluation of the water quality objectives accounting for the beneficial uses to be protected, the quality of the imported water supply, and the impacts of drought periods. In response, the Regional Board adopted Resolution No. 03-008 which included interim WLAs and an implementation plan for the chloride TMDL, extending the time for full implementation of the limits to thirteen years and calling for various studies. Claimant again filed a petition with the SWRCB, but the matter was settled between claimant and the Regional Board, resulting in further amendments to the interim WLA and Implementation Plan for the Chloride TMDL that were adopted by the Regional Board in Resolution No. 04-004.

The version of the TMDL adopted by Resolution No. 04-004 was approved by the EPA on April 28, 2005. In 2006, the Regional Board revised the TMDL, by shortening the time for completing the special studies and implementing the control measures required by the TMDL by two years, and in 2008, the Regional Board shortened the time for full implementation by an additional year, but relaxed the chloride requirements as described in the next paragraph. That 2008 Resolution, as discussed below, is the subject of this test claim.

Alleged Executive Order, Resolution No. R4-2008-012

Between 2005 and 2008 several special studies were conducted, as required under the TMDL adopted in Resolution No. 04-004. “The completion of these TMDL special studies...has led to the development of an alternative TMDL implementation plan that addresses chloride impairment of surface waters and degradation of groundwater.”² The alternative plan, which was adopted by the Regional Board in a basin plan amendment effected by Resolution No. R4-2008-012 (the alleged executive order in this test claim), is known as the Alternative Water Resources Management program (AWRM); the AWRM includes:

...the development of site-specific objectives [SSOs] for chloride while protecting beneficial uses; chloride source reduction actions through the removal of self-regenerating water softeners; a switch from chlorine-based disinfection to ultraviolet disinfection at both WRPs; chloride load reduction actions through advanced treatment (like reverse osmosis and microfiltration) of a portion of the Valencia WRP’s effluent; supplemental water to enhance assimilative capacity of local groundwater or surface water; alternative water supply to protect salt-sensitive agricultural beneficial uses during drought conditions; construction of extraction wells and pipelines; and expansion of recycled water uses with[in] the Santa Clarita Valley.³

The new SSOs adopted are 150 mg/L in Reaches 5 and 6, and 117 mg/L for Reach 4B, which is adjusted to 130 mg/L when the supply water has chloride levels above 80 mg/L.⁴ The new conditional WLAs for the Valencia and Saugus facilities are also 150 mg/L for discharges to Reaches 5 and 6, and 117 mg/L for discharge to Reach 4B.⁵ Resolution No. R4-2008-012 provides for the construction and implementation of advanced treatment (reverse osmosis desalination) at the Valencia facility, as well as a number of water supply control measures designed to attain the site specific objectives as a condition of the relaxed TMDL and WLAs.⁶ The newly relaxed requirements are conditioned upon “the Claimant’s full and ongoing implementation of the AWRM program.”⁷ If claimant fails to implement or chooses not to implement AWRM program, the TMDL reverts to the prior TMDL and WLAs of 100 mg/L. Resolution No. R4-2008-012 was approved by SWRCB, the Office of Administrative Law (OAL), and the U.S. EPA, and became effective on April 6, 2010.⁸

⁸ Exhibit A, Test Claim, at p. 11; Exhibit B, LA Regional Board Comments, at p. 17.

Procedural History

This test claim was filed by Santa Clarita Valley Sanitation District on March 30, 2011. On July 29, 2011, the Regional Board filed comments on the test claim. On August 8, 2011, the Department of Finance (Finance) filed comments on the test claim. On August 28, 2011, the Claimant filed rebuttal comments.

Commission Responsibilities

Under article XIII B, section 6 of the California Constitution, local agencies and school districts are entitled to reimbursement for the costs of state-mandated new programs or higher levels of service. In order for local government to be eligible for reimbursement, one or more similarly situated local agencies or school districts must file a test claim with the Commission. “Test claim” means the first claim filed with the Commission alleging that a particular statute or executive order imposes costs mandated by the state. Test claims function similarly to class actions and all members of the class have the opportunity to participate in the test claim process and all are bound by the final decision of the Commission for purposes of that test claim.

The Commission is the quasi-judicial body vested with exclusive authority to adjudicate disputes over the existence of state-mandated programs within the meaning of article XIII B, section 6. In making its decisions, the Commission cannot apply article XIII B as an equitable remedy to cure the perceived unfairness resulting from political decisions on funding priorities.

Claims

The following chart provides a brief summary of the claims and issues raised and staff’s recommendation.

Subject	Description	Staff Recommendation
Implementation Tasks 4, 5, 6, 7, 8, 9, 17a (Resolution R4-2008-012, Attachment B), and the default waste load allocations of 100 mg/L for both water reclamation plants operated by the District.	The District is required to conduct a literature review to evaluate an appropriate chloride threshold; develop a groundwater/surface water interaction model to evaluate impacts of the chloride TMDL; evaluate the appropriate chloride threshold for the protection of sensitive agricultural supply water and endangered species protection; develop site-specific objectives for chloride for sensitive agriculture; develop an anti-degradation analysis for revision of the chloride objectives; develop pre-planning report on compliance to meet different hypothetical final waste load allocations; complete an	Deny – The required activities do not impose a new program or higher level of service. Implementation Tasks 4, 5, 6, 7, 8, 9, and 17a and the default TMDL and WLAs were required by prior law. The 100 mg/L TMDL, including 100 mg/L WLAs, have been in effect since Resolution 02-018, which was adopted by the Regional Board October 24, 2002 and approved by U.S. EPA April 28, 2005. Tasks 4-9 were required by Resolution 04-004 and task 17a was added by Resolution R4-2006-016. Therefore these activities are not new, and by definition cannot impose a reimbursable <i>new</i> program or

	<p>environmental impact report for facilities to comply with final effluent permit limits for chloride.</p> <p>If the AWRM is not fully and continually implemented, the prior TMDL is triggered, including the default WLAs of 100 mg/L chloride.</p>	higher level of service.
Implementation Task 20 (Resolution R4-2008-012, Attachment B).	Implementation task 20 accelerates the implementation period for final WLAs by one year. The prior TMDL provided for interim WLAs to apply for no more than 11 years, Resolution R4-2008-012 provides for interim WLAs to apply for no more than 10 years.	Deny – Implementing the underlying final WLAs one year sooner is not a new program or higher level of service; the final WLAs are not made more stringent or more costly by this resolution, and a mere increase in costs is not tantamount to a higher level of service in any event. Furthermore, the claimant has not alleged increased costs due to implementing final WLAs one year sooner.
Conditional site-specific objectives and waste load allocations of 117 mg/L for Reach 4B, and 150 mg/L for Reaches 5 and 6.	Attachment B to Resolution R4-2008-012 provides for conditional SSOs and WLAs for the two WRPs of 117 mg/L for Reach 4B, and the water discharged by the WRPs into Reach 4B; and 150 mg/L for Reaches 5 and 6 and the water discharged into Reaches 5 and 6. The SSOs and WLAs contemplate facilities upgrades and advanced treatment technologies at the two WRPs, and outline certain water management activities to reach and maintain the SSOs and WLAs, including during periods of higher chloride concentrations in the supply water.	Deny –The Conditional SSOs and WLAs are a lower level of service than was required under the prior TMDL, and result in reduced costs to claimant.
Costs incurred as a result of the	The facilities upgrades and other technological controls and water	Deny – Even if the test claim executive order, Resolution R4-

Implementation Tasks and AWRM steps to comply with the SSOs and WLAs, totaling approximately \$257 million.	management activities are estimated to result in approximately \$250 million in increased costs. The Implementation Tasks are alleged to result in approximately \$7 million in increased costs.	2008-012, imposed a new program or higher level of service resulting in state-mandated increased costs, such costs would not be reimbursable because the District has sufficient fee authority to cover the costs of any additional activities, unconstrained by the voter approval requirements of Proposition 218.
---	--	--

Analysis

Staff finds that this test claim should be denied on the following grounds: (1) several of the Implementation Tasks included in the TMDL are not new; (2) accelerating the implementation of final waste load allocations (discharge limitations) by one year is not a new program or higher level of service, and no increased costs are alleged; (3) the Alternative Water Resources Management program does not impose a new program or higher level of service, but a lower level of service, and reduced costs with respect to prior law; and (4) even if the Alternative Water Resources Management program did impose a new program or higher level of service, there are no costs mandated by the state, because the claimant has sufficient fee authority to cover the costs of any required activities.

A. Threshold Issues: the Santa Clarita Valley Sanitation District is an Eligible Claimant Before the Commission; Resolution R4-2008-012 is an Executive Order within the Meaning of Article XIII B, Section 6; and the Test Claim is Timely Filed.

1. The Santa Clarita Valley Sanitation District is an eligible claimant before the Commission.

Staff finds that SCVSD receives *at least some amount* of its funding from local taxes, and is subject to an appropriations limit for at least a portion of its revenues, and is therefore an eligible claimant. The State Controller’s Special Districts Annual Report for 2010-2011 indicates that SCVSD was subject to an appropriations limit for approximately one-third of its total revenue (nearly \$11 million), and made total appropriations subject to the appropriations limit in the amount of \$5,778,450. While a substantial amount of the District’s revenue comes from user fees and other sources not considered “proceeds of taxes,” it cannot be said categorically that the District’s revenue is not subject to the limitations of articles XIII A and XIII B.

Based on the foregoing, the staff finds that the Santa Clarita Valley Sanitation District is an eligible claimant before the Commission.

2. The Regional Water Board’s order is an executive order within the meaning of Article XIII B, section 6.

Article XIII B, section 6 provides that “[w]henver the *Legislature or any state agency* mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such programs or

increased level of service...” Government Code section 17514 provides that costs mandated by the state includes “any increased costs which a local agency or school district is required to incur...as a result of...any executive order implementing any statute...which mandates a new program or higher level of service of an existing program...” Government Code section 17516 defines an “executive order” as “any order, plan, requirement, rule, or regulation issued by...[a]ny agency, department, board, or commission of state government.” Because Resolution No. R4-2008-012 is an order of a state board, it is an executive order for purposes of Government Code 17516 and may result in a reimbursable state-mandated program under article XIII B, section 6 if all required mandates elements are established.

3. The test claim was timely filed.

Section 17551 provides that “[l]ocal agency and school district claims shall be filed not later than 12 months following the effective date of a statute or executive order, or within 12 months of incurring increased costs as a result of a statute or executive order, whichever is later.” Section 1183 of the Commission’s regulations states that “within 12 months,” for purposes of test claim filing, “means by June 30 of the fiscal year following the fiscal year in which increased costs were first incurred by the claimant.”

Finance has raised the statute of limitations found in section 17551, arguing that the test claim was filed on March 30, 2011, while the Resolution had an effective date of December 11, 2008. Finance further argues that “all claimed costs for that fiscal year would have had to be incurred after March 30, 2010 to not be time barred.”

Finance’s first point, that the effective date of the Resolution would place this test claim beyond the time bar, has some merit. An effective date of December 11, 2008 would require that a valid test claim be filed by June 30, 2010. However, because TMDLs and waste load allocations must be approved by the SWRCB, OAL, and the Administrator of U.S.EPA,⁹ there is an open question, for purposes of applying section 17551, whether the Resolution at issue is “effective” on the date it was approved by the Regional Board or on the date that it is approved by the Administrator (here, April 6, 2010). Fortunately, that issue need not be resolved by the Commission at this time, because the Government Code states that a test claim shall be filed not later than 12 months following the effective date of the test claim statute or executive order, or not later than 12 months following the first costs incurred. The section allows a claimant to take advantage of “whichever is later,” and here the District has declared that it first incurred costs in fiscal year 2009-2010. There is no evidence in the record to rebut the District’s declaration.

Based on the foregoing, the staff finds that this test claim was timely filed.

B. The Regional Water Board’s Resolution and Order does not Mandate a New Program or Higher Level of Service within the Meaning of Article XIII B, Section 6.

The District states that “Regional Board Resolution No. R4-2008-012, the revised TMDL, requires: (1) compliance with specific waste load allocations that will also be incorporated into the Saugus and Valencia WRPs’ NPDES permits; and (2) specific ‘implementation tasks’ necessary for compliance.” The Implementation Tasks, along with the final waste load allocations, “are the subject of this test

⁹ Exhibit B, LA Regional Board Comments, at p. 8 [citing 33 U.S.C. § 1313(c)(3); 40 C.F.R. § 131.20(c)]. See also, Exhibit A, Test Claim, at p. 6.

claim.”¹⁰ Attachment B to Resolution R4-2008-012 outlines the conditional SSOs for Reaches 4B, 5, and 6, and conditional WLAs for the water discharged from the Valencia and Saugus WRPs to Reaches 4B, 5, and 6. The WLAs for the District’s WRP facilities are based on, and numerically identical to, the SSOs for the respective reaches (117 mg/L for Reach 4B, and the discharge into Reach 4B; 150 mg/L for Reaches 5 and 6, and for the discharge into Reaches 5 and 6). All other point sources are assigned WLAs equal to 100 mg/L. Attachment B also outlines the operation of reverse osmosis treatment at the Valencia WRP, the provision of supplemental water to Reach 4B when chloride concentrations exceed 117 mg/L, and the design and construction of advanced treatment facilities. In addition, Attachment B outlines a number of implementation tasks, primarily consisting of technical studies to assess the appropriate threshold for chloride to protect agricultural uses and to determine how best to reach that threshold, including preparation of an Environmental Impact Report (EIR) for the advanced treatment facilities and other upgrades necessary to meet the SSOs and WLAs.

The District has alleged the required activities resulting from Resolution R4-2008-012 impose costs of approximately \$257 million. Though claimant alleges that this \$257 million constitutes *increased costs*, claimant does acknowledge that the costs would be nearly double, approximately \$500 million, if it operated under the prior TMDL. The analysis below concludes that none of the Implementation Tasks, or the AWRM program elements, of Resolution R4-2008-012 constitutes a mandated new program or higher level of service, because the alleged activities and costs either are not new or they impose a lower level of service and reduced costs when compared to prior law. In addition, the claimant has fee authority sufficient to cover the costs of any required activities and, thus, pursuant to Government Code section 17556(d), there can be no costs mandated by the state.

1. Some of the Implementation Tasks described in the Resolution are not new.

Implementation Tasks 4, 5, 6, 7, 8, and 9 of Resolution R4-2008-012 are found also, in nearly identical language, in Resolution 04-004, and again in Resolution R4-2006-016. These prior TMDLs were approved by EPA on April 28, 2005, and June 12, 2008, respectively. Additionally, Implementation Tasks 4-9 all are listed in the revised TMDL as having completion dates *prior to* the adoption and approval of the 2008 Resolution. Moreover, these tasks had in fact *been completed* prior to the adoption of the revised TMDL incorporating the AWRM: the Resolution states that “[t]he Santa Clarita Valley Sanitation District (SCVSD) has completed all of the necessary special studies required by the Chloride TMDL (TMDL Task Nos 3, 4, 5, 6, 7, 8, 9, 10b, and 10c).” Therefore none of these implementation tasks, or the costs alleged, are reimbursable, both because they are not new, and because the costs incurred are outside the period of eligibility for this test claim (prior to July 1, 2009).

Implementation Task 17a, “Implementation of Compliance Measures, Complete Environmental Impact Report...” was required by identical language in Resolution R4-2006-016. Resolution R4 2006-016 is stated as having an effective date (presumably meaning the date approved by the U.S. EPA) of June 12, 2008. It is unknown, from the test claim exhibits, or any other information in the record, exactly when costs might first have been incurred to complete the Environmental Impact Report; but the direction to implement compliance measures and to

¹⁰ Exhibit A, Test Claim, at p. 13.

complete an EIR is not *new*, with respect to prior law.¹¹ In fact, claimant was required to prepare the draft EIR by May 4, 2010 under prior law and was fined “for the failure to complete Wastewater Facilities Plans and Programmatic Environmental Impact Reports by the required due date in 2011,”¹² and Resolution R4-2006-016 which first required this activity was not pled in this test claim.

Finally, the default TMDL, including WLAs of 100 mg/L for the Saugus and Valencia WRPs, which takes effect “if the District cannot comply with the AWRM program,” is not a new requirement. The Regional Board adopted a TMDL for Reaches 5 and 6 of the Santa Clara River in 2002, “which became effective May 4, 2005,” and includes WLAs of 100 mg/L for Valencia WRP and 100 mg/L for Saugus WRP.”

Based on the foregoing, staff finds that Implementation Tasks 4, 5, 6, 7, 8, 9, and 17a, and the waste load allocations, are not new, but rather were required by prior law. Therefore none of these provisions imposes a state-mandated new program or higher level of service.

2. Implementation Task 20 only accelerates the schedule of implementation of final waste load allocations and is not a new program or higher level of service resulting in increased costs mandated by the state.

Implementation Task 20 shortens the applicable period of the interim WLAs for the Saugus and Valencia WRPs from 11 years to 10 years, commencing with the effective date of the 2002 TMDL. The interim WLAs are designed to accommodate the time needed for the WRPs to implement desalination and other chloride reduction improvements to meet the final WLAs. For the Saugus WRP, the interim WLA is described as “the sum of State Water Project treated water supply concentration plus 114 mg/L, as a twelve month rolling average,” but not to exceed 230 mg/L. For the Valencia WRP, the interim WLA is described as “the sum of State Water Project treated water supply concentration plus 134 mg/L, as a twelve month rolling average,” but not to exceed 230 mg/L. There is no new program inherent in shortening the time frame for the interim WLAs. The requirements of the interim WLAs remain the same, but are shortened, and the final WLAs attach one year sooner. It may be argued that it costs more to implement the final WLAs one year sooner, but this change does not of itself constitute a new program or higher level of service.

The court of appeal in *Long Beach Unified School District* declared that “[a] mere increase in the cost of providing a service which is the result of a requirement mandated by the state is *not tantamount to a higher level of service.*” The Supreme Court has also spoken on the requirement of a new program, in terms often repeated in later decisions: “We recognize that, as its made indisputably clear from the language of the constitutional provision, *local entities are not entitled to reimbursement for all increased costs mandated by state law*, but only those costs resulting from a new program or an increased level of service imposed upon them by the state.” Finally, not only is an increase in costs not tantamount to a higher level of service, but there is no evidence in the record of the incremental cost increase which might be alleged based on accelerating the implementation of the final WLAs by one year.

¹¹ Resolution R4-2006-016.

¹² LA Regional Board, Enforcement News, November 26, 2012.

Based on the foregoing, Implementation Task 20 does not impose any new state mandated activities and does not result in a new program or higher level of service.

3. The Alternative Water Resources Management program is not a new program or higher level of service.

The California Supreme Court, in *County of Los Angeles I*, articulated a multi-faceted test for “new program or higher level of service:” reimbursement requires (1) a new task or activity; (2) which constitutes an increase in service as compared to prior law; (3) and which either provides a service to the public, or imposes requirements uniquely upon government, rather than upon all persons and entities equally.

The Regional Board argues that the test claim executive order, Resolution R4-2008-012, cannot impose a new program or higher level of service because it “amended the Basin Plan to, among other things, adopt site-specific objectives for chloride in the Santa Clara River that are *less stringent* than the generally applicable water quality objectives that apply to other major dischargers to the Santa Clara River...” The LA Regional Board argues: “thus, if anything, the 2008 Resolution imposes a *lower level of service* in order to make it less expensive for the Claimant to implement” the TMDL. In 2002, the 100 mg/L objective was incorporated into a TMDL, pursuant to the impairment listing of certain reaches of the Santa Clara River, and the threat to salt-sensitive agriculture uses both within Reaches 5 and 6 and downstream. Both the District and the Regional Board agree that the AWRM contains “relaxed” requirements, as compared with the current water quality objectives.

In addition, both the District and the Regional Board recognize that under the prior TMDL “implementation actions to attain this level would require advanced treatment – that is, reverse osmosis – of the full effluent from the Saugus *and* Valencia plants with discharge into the ocean through a 43-mile brine line.” The District estimated the costs of the facilities upgrades and other compliance tasks at approximately \$500 million. Under the AWRM, reverse osmosis desalination is only required at the Valencia WRP, and the waste is permitted to be disposed of through deep well injection. The District estimates that implementing the advanced treatment upgrades at only one of the two facilities, along with other tasks, will cost just over half of the amount of compliance with the prior TMDL, or approximately \$250 million.

Staff finds that there is nothing in the AWRM that imposes a higher level of service on this claimant. Resolution R4-2008-012 calls for the implementation of less-stringent requirements than under prior law, which the District has acknowledged will be less expensive to implement.

Based on the foregoing, staff finds that Resolution R4-2008-012, which includes the AWRM, does not impose a new program or higher level of service, and the costs and activities thereunder should be denied.

C. Even if Resolution R4-2008-012 Did Impose a State Mandated New Program or Higher Level of Service, it Would Not Impose Costs Mandated by the State Under Section 17556(d) Because the Claimant has Sufficient Fee Authority to Fully Fund the Costs of the Required Activities.

Government Code section 17556(d) provides that the Commission “shall not find costs mandated by the state, as defined in Section 17514...if...the local agency or school district has the

authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.”

The California Supreme Court held, in *County of Fresno v. State of California*, that “read in its textual and historical context section 6 of article XIII B requires subvention only when the costs in question can be recovered *solely from tax revenues.*” Accordingly, in *Connell v. Superior Court of Sacramento County*, the Santa Margarita Water District, among others, was denied reimbursement on the basis of its authority to impose fees on water users. The Districts argued that they did not have “sufficient” authority to levy such fees, because the cost of reclaimed water would make it impractical to market to the users if the Districts were forced to raise fees. The court concluded that the “Districts do not demonstrate that anything in Water Code section 35470 limits the authority of the Districts to levy fees ‘sufficient’ to cover their costs,” and that “[t]hus, the economic evidence presented by SMWD to the Board [of Control] was irrelevant and injected improper factual questions into the inquiry.” Similarly, in *Clovis Unified School District v. Chiang*, the court found that the Controller’s office was not acting in excess of its authority in reducing reimbursement claims to the full extent of the districts’ authority to impose fees, even if there existed practical impediments to collecting the fees. In making its decision the court stated: “[t]o the extent a local agency or school district ‘has the authority’ to charge for the mandated program or increased level of service, that charge cannot be recovered as a state-mandated cost.” The court endorsed the Controller’s view that “‘Claimants can choose not to require these fees, but not at the state’s expense.’”

Here, the LA Regional Board argues that the District “is authorized to impose and increase fees and charges for wastewater management services under Health and Safety Code section 5471.” The District argues that it is constrained by the “the Proposition 218 process...[and] fierce public opposition.” The District further argues that *Connell*, discussed above, “ignored the then-recent passage of Proposition 218.”

Health and Safety Code section 5471 provides “authority,” within the meaning of section 17556(d), “to prescribe, revise and collect, fees tolls, rates, rentals, or territorial limits, in connection with its water, sanitation, storm drainage, or sewerage system.”

Proposition 218, adopted by the voters in 1996, added articles XIII C and XIII D to the Constitution; the plain language of article XIII D, section 6 provides that an agency seeking to impose or increase fees must identify the parcels and the amount proposed, and must provide written notice by mail to the record owners of the identified parcels, including notice of a public hearing, at which the agency is required to “consider all protests.” Section 6 further provides that if written protests are submitted by more than half of the owners of parcels affected, a fee or assessment may not be raised. In addition, new or increased fees are required to “not exceed the funds required to provide the property related service;” “not be used for any purpose other than that for which the fee or charge was imposed;” “not exceed the proportional cost of the service attributable to the parcel;” and be “actually used by, or immediately available to, the owner of the property in question.” Finally, voter approval is required “[e]xcept for fees or charges for sewer, water, and refuse collection services.”

The District asserts that the case law related to fee authority is no longer on point “because the most significant cases predate the passage of [Proposition 218].” The District asserts that it “attempted to implement the Proposition 218 process, but the elected public officials could not

support the proposed rate increase in the face of fierce public opposition.” The District claims that the “political realities...limit the ability of local government to raise fees in a way that makes it impossible for a local agency to raise sufficient funding for state mandate projects.”

Here, the fee authority is that of a sanitation district, and relates to the fees charged to users of the sewerage system; based on the plain language of article XIII D, section 6, voter approval is not required for increases to water and sewer rates. However, the other requirements of XIII D do apply, requiring the District to ensure that any fee increase is noticed to the affected property owners, that the increase is directly related to and proportional to the service provided, and that at a public hearing the District considers all protests. In addition, the voters have the power, either by referendum, or by written protests of a majority of owners of the affected parcels, to defeat a fee increase. Only the “written protests” provision is raised by the parties’ comments. The LA Regional Board argues that there are nearly 69,000 parcels connected to the District’s sewerage system, and therefore “at least 34,449 written protests” would be a majority required under XIII D to defeat a rate increase. At the May 26, 2009 and July 27, 2010 hearings the District received “203 written protests and 7,732 written protests, respectively.”

The District does not dispute the number of written protests needed to defeat a fee increase, or the number received (the Regional Board’s argument assumes, without evidence, that all 69,000 parcels represent a single voting property owner); rather the District argues that the District’s Board “quite reasonably believed that this large rate increase would be rejected if challenged by initiative.”¹³ The District implies that because an initiative to overturn the fee increase would qualify for the ballot with approximately 6,500 votes, the 7,732 written protests “exceeded the number of signatures needed to qualify an initiative that would overturn the rate increase.”¹⁴

But written protests are not tantamount to an initiative petition, and an initiative petition is not a successful referendum. The District’s board “declined to adopt the proposed rate increases based on the expectation that any substantive rate increase would be overturned by way of referendum.” Nothing in the California Constitution requires a local legislative body to bend to political pressure. As the Regional Board concluded, “[t]he Claimant cannot rely on mere speculation as to what could happen as a defense to the fee increase exception” of section 17556(d).

It is true, as the District argues, that *Connell* did not discuss Proposition 218, because the water districts did not allege that their authority to raise fees was impacted by Proposition 218. The water districts in *Connell* instead urged an interpretation of “authority” under section 17556(d) that required a “practical ability in light of surrounding economic circumstances,” and the court rejected that interpretation. Here, as in *Connell*, “the plain language of the statute defeats the Districts’ position.” The District here would have the Commission recognize political undesirability as an element of the District’s “authority” under Health and Safety Code section 5471 to raise fees. In the same way that the court in *Connell* declined to find that economic considerations undermine the “sufficiency” of the water districts’ authority to raise fees, staff recommends that the Commission here decline to make a finding that *political opposition* undermines the authority of a sanitation district to raise fees.

¹³ Exhibit D, Claimant Rebuttal Comments, at p. 11.

¹⁴ *Ibid.*

Based on the foregoing, staff finds that the District has not incurred increased costs mandated by the state, pursuant to section 17556(d).

Conclusion

Based on the foregoing discussion and analysis, staff concludes that Resolution No. R4-2008-012, adopted December 11, 2008, by the Los Angeles Regional Water Quality Control Board, does not constitute a reimbursable state-mandated program within the meaning of article XIII B, section 6 of the California Constitution and Government Code section 17514.

Staff Recommendation

Staff recommends that the Commission adopt the proposed statement of decision to deny this test claim.

Staff also recommends that the Commission authorize staff to make any non-substantive, technical corrections to the parameters and guidelines following the hearing.

BEFORE THE
COMMISSION ON STATE MANDATES
STATE OF CALIFORNIA

IN RE TEST CLAIM ON:

Los Angeles Regional Water Quality Control Board Resolution No. R4-2008-012, adopted December 11, 2008; approved by United States Environmental Protection Agency April 6, 2010

Filed on March 30, 2011

By Santa Clarita Valley Sanitation District of Los Angeles County, claimant.

Case No.: 10-TC-09

Upper Santa Clara River Chloride Requirements

STATEMENT OF DECISION PURSUANT TO GOVERNMENT CODE SECTION 17500 ET SEQ.; TITLE 2, CALIFORNIA CODE OF REGULATIONS, DIVISION 2, CHAPTER 2.5, ARTICLE 7.

(Proposed for Adoption: December 6, 2013)

DRAFT PROPOSED STATEMENT OF DECISION

The Commission on State Mandates (Commission) heard and decided this test claim during a regularly scheduled hearing on December 6, 2013. [Witness list will be included in the final statement of decision.]

The law applicable to the Commission's determination of a reimbursable state-mandated program is article XIII B, section 6 of the California Constitution, Government Code sections 17500 et seq., and related case law.

The Commission [adopted/modified] the proposed statement of decision to [approve/deny] the test claim at the hearing by a vote of [vote count will be included in the final statement of decision].

Summary of the Findings

This test claim alleges a reimbursable state mandate resulting from Resolution R4-2008-012, adopted December 11, 2008 by the Regional Water Quality Control Board for the Los Angeles region (Regional Board). To assist the reader, there is a glossary of frequently used water quality related terms and acronyms on page 50. The Resolution amended the prior Basin Plan, which had imposed a total maximum daily load (TMDL) of 100 mg/L for the Santa Clara River and waste load allocations (WLAs) of 100 mg/L for the District's two Water Reclamation Plants (WRPs), to include a revised, less stringent, TMDL and WLAs, providing greater flexibility to claimant with regard to chloride discharges into the river and significantly reducing the costs of claimant to comply with the TMDL and WLAs for the Upper Santa Clara River. The revised TMDL calls for the implementation of an Alternative Water Resources Management program (AWRM), in order to meet conditional site-specific objectives (SSOs) for water quality in

Reaches 4B, 5, and 6 of the river, and conditional WLAs of 150 mg/L for discharges to Reaches 5 and 6, and 117 mg/L for discharge to Reach 4B for the District's two WRPs.

The District alleges that meeting the SSOs and WLAs will require significant advanced treatment and other technological upgrades, and a number of water supply control measures to control chloride concentrations in the Santa Clara River, especially during periods of higher concentration in the water supply and groundwater (i.e., during periods of lower precipitation). The District alleges that these upgrades and control measures result in increased costs of approximately \$250.7 million. R4-2008-012 also includes a number of Implementation Tasks, primarily consisting of requirements to perform technical and scientific studies of the surface and groundwater and evaluation of appropriate chloride thresholds, which the District alleges imposed increased costs of approximately \$6.6 million.

The Commission finds that Resolution R4-2008-012 does not constitute a reimbursable state-mandated program within the meaning of article XIII B, section 6 of the California Constitution and Government Code section 17514 on the following grounds: (1) several of the Implementation Tasks included in the TMDL are not new and so cannot impose a *new* program or higher level of service; (2) accelerating the implementation of final waste load allocations (discharge limitations) by one year is not a new program or higher level of service, and no increased costs are alleged; (3) the Alternative Water Resources Management program is not a new program or higher level of service, but a lower level of service, and reduced costs with respect to prior law; and (4) even if the Alternative Water Resources Management program did impose a new program or higher level of service, there are no costs mandated by the state, because the claimant has sufficient fee authority to cover the costs of any required activities.

Because this test claim is denied on the grounds stated above, the Commission declines to make findings on whether claimant is practically compelled to implement the Alternative Water Resources Management activities or whether the Alternative Water Resources Management activities, TMDLs or WLAs are mandated by federal law.

COMMISSION FINDINGS

I. Chronology

- | | |
|------------|---|
| 03/30/2011 | Claimant, Santa Clarita Valley Sanitation District, filed test claim <i>Upper Santa Clara River Chloride Requirements</i> (10-TC-09) with the Commission on State Mandates (Commission) ¹⁵ |
| 04/14/2011 | Commission staff issued a completeness review letter for the test claim and requested comments from state agencies. |

08/19/2011 Claimant requested for extension of time for rebuttal comments to September 28, 2011.

08/22/2011 Commission staff granted claimant’s extension of time for rebuttal comments.

09/28/2011 Claimant filed rebuttal comments to agencies’ comments.¹⁸

II. Introduction

A. History and Framework of Federal Water Pollution Control

Regulation of water pollution in the United States finds its beginnings in the Rivers and Harbors Appropriation Act of 1899, which made it unlawful to throw or discharge “any refuse matter of any kind or description...into any navigable water of the United States, or into any tributary of any navigable water.”¹⁹ This provision survives in the current United States Code, qualified by more recent provisions discharge permits issued by the U.S. EPA or by states on behalf of the EPA.²⁰

In 1948, the Federal Water Pollution Control Act “adopted principles of state and federal cooperative program development, limited federal enforcement authority, and limited federal financial assistance.”²¹ Pursuant to further amendments to the Act made in 1965, “States were directed to develop water quality standards establishing water quality goals for interstate waters.” However, “[d]ue to enforcement complexities and other problems, an approach based solely on water quality standards was deemed insufficiently effective.”²² The Federal Water Pollution Control Act was therefore significantly expanded in 1972. Later, major amendments to the Federal Water Pollution Control Act were enacted in the Clean Water Act of 1977, and the federal act is now commonly referred to as the Clean Water Act (CWA). The CWA states:

¹⁶ Exhibit B, LA Regional Board Comments.

¹⁷ Exhibit C, Department of Finance Comments.

¹⁸ Exhibit D, Claimant’s Rebuttal Comments.

¹⁹ United States Code, title 33, section 407 (Mar. 3, 1899, c. 425, § 13, 30 Stat. 1152).

²⁰ See United States Code, title 33, sections 401; 1311-1342.

²¹ Statutory History of Water Quality Standards, available at <http://water.epa.gov/scitech/swguidance/standards/history.cfm>.

²² *Ibid.*

It is the policy of the Congress to recognize, preserve, and protect the primary responsibilities and rights of States to prevent, reduce, and eliminate pollution, to plan the development and use (including restoration, preservation, and enhancement) of land and water resources, and to consult with the Administrator in the exercise of his authority under this chapter. It is the policy of Congress that the States manage the construction grant program under this chapter and implement the permit programs under sections 1342 and 1344 of this title.²³

The United States Supreme Court observes the cooperative nature of the regulation of water quality for the waters of the United States through the CWA as follows:

The Clean Water Act anticipates a partnership between the States and the Federal Government, animated by a shared objective: “to restore and maintain the chemical, physical, and biological integrity of the Nation's waters.” (33 U.S.C. § 1251(a).) Toward this end, the Act provides for two sets of water quality measures. “Effluent limitations” are promulgated by the EPA and restrict the quantities, rates, and concentrations of specified substances which are discharged from point sources. (See §§ 1311, 1314.) “[W]ater quality standards” are, in general, promulgated by the States and establish the desired condition of a waterway. (See § 1313.) These standards supplement effluent limitations “so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels.” (*EPA v. California ex rel. State Water Resources Control Bd.*, 426 U.S. 200, 205, n. 12, 96 S.Ct. 2022, 2025, n. 12, 48 L.Ed.2d 578 (1976).)²⁴

The CWA thus employs two primary mechanisms for controlling water pollution: identification and standard-setting for bodies of water, and identification and regulation of dischargers.

With respect to standard-setting for bodies of water, section 1313(a) provides that existing water quality standards can remain in effect unless the standards are not consistent with the CWA, and that the Administrator may “promptly prepare and publish” water quality standards for any waters for which a state fails to submit water quality standards, or for which the standards are not consistent with the CWA.²⁵ In addition, states are required to “at least once each three year period” hold public hearings for the purpose of reviewing applicable water quality standards and, as appropriate, modifying and adopting standards:

Such revised or new water quality standard shall consist of the designated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses. Such standards shall be such as to protect the public health or welfare, enhance the quality of water and serve the purposes of this chapter. Such standards shall be established taking into consideration their use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and

²³ United States Code, title 33, section 1251(b).

²⁴ *Arkansas v. Oklahoma* (1992) 503 U.S. 91, at pp. 101-102.

²⁵ United States Code, title 33, section 1313(a).

agricultural, industrial, and other purposes, and also taking into consideration their use and value for navigation.²⁶

And with respect to regulating dischargers, section 1311 requires that point source dischargers be identified and effluent limitations be set, “sufficient to implement the applicable State water quality standards, to assure the protection of public water supplies and protection and propagation of a balanced, indigenous population of shellfish, fish, fauna, wildlife, and other aquatic organisms, and to allow recreational activities in and on the water.”²⁷ Section 1312 provides that effluent limitations must promote the attainment of water quality objectives, while section 131.10 of the applicable regulations requires also taking into consideration the water quality standards of downstream waters.²⁸

Section 1313(d) requires that each state “identify those waters within its boundaries for which the effluent limitations...are not stringent enough to implement any water quality standard applicable to such waters.” This list is called the 303(d) List, after CWA section 303(d), codified at section 1313(d), which requires the listing of impaired waters. The state is then required to “establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters.” The state then “shall establish for the waters identified...and in accordance with the priority ranking, the total maximum daily load [known as a TMDL], for those pollutants which the Administrator identifies...as suitable for such calculation.” The TMDL “shall be established at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality.” A TMDL is defined as the sum of the amount of a pollutant allocated to all point sources (waste load allocation, or WLA), plus the amount of a pollutant allocated for nonpoint sources and natural background; a TMDL should be set for each pollutant identified by the Administrator, and is essentially a plan setting the amount of a pollutant that will attain the water quality standard necessary for beneficial uses.²⁹ TMDLs are required to be submitted to the Administrator “from time to time,” and the Administrator “shall either approve or disapprove such identification and load not later than thirty days after the date of submission.” If the Administrator disapproves the 303(d) List or a TMDL, the Administrator “shall not later than thirty days after the date of such disapproval identify such waters in such State and establish such loads for such waters as he determines necessary to implement [water quality standards].” Finally, the identification of waters and setting of standards and TMDLs is required as a part of a

²⁸ United States Code, title 33, section 1312; Code of Federal Regulations, title 40, section 131.10(b) (57 FR 60910) [“In designating uses of a water body and the appropriate criteria for those uses, the State shall take into consideration the water quality standards of downstream waters and shall ensure that its water quality standards provide for the attainment and maintenance of the water quality standards of downstream waters.”].

²⁹ Code of Federal Regulations, title 40, section 130.2.

state's "continuing planning process approved [by the Administrator] which is consistent with this chapter."³⁰

Section 1342 provides for the National Pollutant Discharge Elimination System (NPDES). NPDES is the final piece of the regulatory framework under which discharges of pollutants are regulated and permitted, and applies whether or not a TMDL has been established. Section 1342 states that "the Administrator may, after opportunity for public hearing, issue a permit for the discharge of any pollutant, or combination of pollutants, notwithstanding section 1311(a) of this title."³¹ Section 1342 further provides that states may submit a plan to administer the NPDES permit program, and that upon review of the state's submitted program "[t]he Administrator shall authorize a State, which he determines has the capability of administering a permit program which will carry out the objective of this chapter to issue permits for discharges into the navigable waters within the jurisdiction of such State."³² Whether issued by the Administrator or by a state permitting program, all NPDES permits must ensure compliance with the requirements of sections 1311, 1312, 1316, 1317, and 1343; must be for fixed terms not exceeding five years; can be terminated or modified for cause, including violation of any condition of the permit; and must control the disposal of pollutants into wells.³³ In addition, NPDES permits are generally prohibited, with some exceptions, from containing effluent limitations that are "less stringent than the comparable effluent limitations in the previous permit."³⁴ An NPDES permit for a point source discharging into an impaired water body must be consistent with the waste load allocations made in a TMDL, if a TMDL is approved.³⁵

B. State Water Pollution Control Program

Porter-Cologne Water Quality Control Act

California's water pollution control laws were substantially overhauled in 1969 with the Porter-Cologne Water Quality Control Act (Porter-Cologne).³⁶ Beginning with section 13000, Porter-Cologne provides:

The Legislature finds and declares that the people of the state have a primary interest in the conservation, control, and utilization of the water resources of the state, and that the quality of all the waters of the state shall be protected for use and enjoyment by all the people of the state.

The Legislature further finds and declares that activities and factors which may affect the quality of the waters of the state shall be regulated to attain the highest water quality which is reasonable, considering all demands being made and to be

³⁶ Water Code section 13020 (Stats. 1969, ch. 482).

made on those waters and the total values involved, beneficial and detrimental, economic and social, tangible and intangible.

The Legislature further finds and declares that the health, safety, and welfare of the people of the state requires that there be a statewide program for the control of the quality of all the waters of the state...and that the statewide program for water quality control can be most effectively administered regionally, within a framework of statewide coordination and policy.³⁷

The state water pollution control program was again modified, beginning in 1972, so that the code would substantially comply with the federal Act, and “on May 14, 1973, California became the first state to be approved by the EPA to administer the NPDES permit program.”³⁸

Section 13160 provides that the state water resources control board (SWRCB or State Board) “is designated as the state water pollution control agency for all purposes stated in the Federal Water Pollution Control Act...[and is] authorized to exercise any powers delegated to the state by the Federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.) and acts amendatory thereto.”³⁹ Section 13001 describes the state and regional boards as being “the principal state agencies with primary responsibility for the coordination and control of water quality.”

In order to achieve the objectives of conserving and protecting the water resources of the state, and in exercise of the powers delegated, Porter-Cologne, like the CWA, employs a combination of water body standards and point source pollution controls.⁴⁰

Porter Cologne sections 13240-13247 address the development and implementation of regional water quality control plans, including “water quality objectives,” defined in section 13050 to mean “the limits or levels of water quality constituents or characteristics which are established for the reasonable protection of beneficial uses of water or the prevention of nuisance within a specific area.”⁴¹ Section 13241 provides that each regional board “shall establish such water quality objectives in water quality control plans as in its judgment will ensure the reasonable protection of beneficial uses and the prevention of nuisance.” The section directs the regional boards to consider, when developing water quality objectives:

- (a) Past, present, and probable future beneficial uses of water.
- (b) Environmental characteristics of the hydrographic unit under consideration, including the quality of water available thereto.

³⁷ Water Code section 13000 (Stats. 1969, ch. 482).

³⁹ Water Code section 13160 (Stats. 1969, ch. 482; Stats. 1971, ch. 1288; Stats 1976, ch. 596).

⁴⁰ Water Code section 13142 (Stats. 1969, ch. 482; Stats. 1971, ch. 1288; Stats. 1979, ch. 947; Stats. 1995, ch. 28).

⁴¹ Water Code section 13050 (Stats. 1969, ch. 482; Stats. 1969, ch. 800; Stats. 1970, ch. 202; Stats. 1980, ch. 877; Stats. 1989, ch. 642; Stats. 1991, ch. 187 (AB 673); Stats. 1992, ch. 211 (AB 3012); Stats. 1995, ch. 28 (AB 1247), ch. 847 (SB 206); Stats. 1996, ch. 1023 (SB 1497)).

- (c) Water quality conditions that could reasonably be achieved through the coordinated control of all factors which affect water quality in the area.
- (d) Economic considerations.
- (e) The need for developing housing within the region.
- (f) The need to develop and use recycled water.⁴²

Beneficial uses, in turn, are defined in section 13050 as including, but not limited to “domestic, municipal, agricultural and industrial supply; power generation; recreation; aesthetic enjoyment; navigation; and preservation and enhancement of fish, wildlife, and other aquatic resources or preserves.”⁴³ In addition, section 13243 permits a regional board to define “certain conditions or areas where the discharge of waste, or certain types of waste, will not be permitted.”⁴⁴

Sections 13260-13274 address the development of “waste discharge requirements,” which section 13374 states “is the equivalent of the term ‘permits’ as used in the Federal Water Pollution Control Act, as amended.”⁴⁵ Section 13263 permits the regional boards, after a public hearing, to prescribe waste discharge requirements “as to the nature of any proposed discharge, existing discharge, or material change in an existing discharge, except discharges into a community sewer system.” Section 13263 also provides that the regional boards “need not authorize the utilization of the full waste assimilation capacities of the receiving waters,” and that the board may prescribe requirements although no discharge report has been filed, and may review and revise requirements on its own motion. The section further provides that “[a]ll discharges of waste into waters of the state are privileges, not rights.”⁴⁶ Section 13377 permits a regional board to issue waste discharge requirements “which apply and ensure compliance with all applicable provisions of the [Federal Water Pollution Control Act].”⁴⁷ In effect, sections 13263 and 13377 permit the issuance of waste discharge requirements concurrently with an NPDES permit “if a discharge is to waters of both California and the United States.”⁴⁸

California's Antidegradation Policy (State Water Resources Control Board Resolution NO. 68-16 adopted October 24, 1968)

In 1968, the SWRCB adopted Resolution 68-16, formally entitled "Statement of Policy With Respect to Maintaining High Quality of Waters In California," to prevent the degradation of surface waters where background water quality is higher than the established level necessary to protect beneficial uses. That executive order states the following:

WHEREAS the California Legislature has declared that it is the policy of the State that the granting of permits and licenses for unappropriated water and the disposal of wastes into the waters of the State shall be so regulated as to achieve highest water quality consistent with maximum benefit to the people of the State and shall be controlled so as to promote the peace, health, safety and welfare of the people of the State; and

WHEREAS water quality control policies have been and are being adopted for waters of the State; and

WHEREAS the quality of some waters of the State is higher than that established by the adopted policies and it is the intent and purpose of this Board that such higher quality shall be maintained to the maximum extent possible consistent with the declaration of the Legislature;

NOW, THEREFORE, BE IT RESOLVED:

Whenever the existing quality of water is better than the quality established in policies as of the date on which such policies become effective, such existing high quality will be maintained until it has been demonstrated to the State that any change will be consistent with maximum benefit to the people of the State, will not unreasonably affect present and anticipated beneficial use of such water and will not result in water quality less than that prescribed in the policies.

Any activity which produces or may produce a waste or increased volume or concentration of waste and which discharges or proposes to discharge to existing high quality waters will be required to meet waste discharge requirements which will result in the best practicable treatment or control of the discharge necessary to assure that (a) a pollution or nuisance will not occur and (b) the highest water quality consistent with maximum benefit to the people of the State will be maintained.

In implementing this policy, the Secretary of the Interior will be kept advised and will be provided with such information as he will need to discharge his responsibilities under the Federal Water Pollution Control Act.

C. Regulatory History

The Santa Clara River is the largest river system in southern California that remains in a relatively natural state. The River originates in the San Gabriel Mountains in Los Angeles County, runs through Ventura County, and flows into the Pacific Ocean between the cities of San Buenaventura (Ventura) and Oxnard. Land uses within the watershed include agriculture, open

space, and residential uses.⁴⁹ Resolution R4-2008-012, adopted by the Regional Board, states that “[r]evenue from the agricultural industry within the Santa Clara watershed is estimated at over \$700 million annually, and residential use is increasing rapidly both in the upper and lower watershed.”⁵⁰ Reaches 5 and 6 of the Santa Clara River are located upstream of the Blue Cut gauging station, near the Los Angeles/Ventura County line, between the cities of Fillmore (in Ventura County) and Santa Clarita in Los Angeles County; Reach 4B is in Ventura County.⁵¹ Claimant operates two WRPs that discharge into Reaches 4B, 5 and 6.⁵²

In 1975, the Regional Board established water quality objectives for chloride in the Santa Clara River. The 1975 objectives for surface waters were established, in accordance with the State Antidegradation Policy (State Board Resolution No. 68-16), and the federal antidegradation policy (40 C.F.R. 131.12), at a chloride concentration of 90mg/L in Reach 5 and 80 mg/L in Reach 6 (then known as Reaches 7 and 8).⁵³ The 1975 objectives were based on background concentrations of chloride and intended to protect the beneficial uses identified in the 1975 Basin Plan, including off-stream agricultural irrigation.”⁵⁴ The Basin Plan included chloride objectives between 50 and 150 mg/L for the remaining reaches of the Santa Clara River.⁵⁵ When the SWRCB set the water quality objectives in 1975, it “assumed the chloride concentrations in imported waters would remain relatively low.”⁵⁶ However, in the years following, “chloride concentrations in the imported water supply into the Los Angeles Region increased,” and in 1978 the Board “modified the water quality objectives for chloride...to 100 mg/L for both reaches.”⁵⁷

In 1990 the Regional Board adopted a resolution responding to the changing conditions of the imported water supply related to drought (referred to by both the claimant and the Regional Board as the “Drought Policy”). For dischargers into the Santa Clara River who applied for relief under the Drought Policy, chloride concentrations were permitted “in the discharger’s effluent to be the lesser of: (1) 250 mg/L; or (2) the chloride concentration of supply water plus 85 mg/L.”⁵⁸ The board renewed the Drought Policy in 1993 and 1995 “because the chloride levels in supply waters remained higher than the chloride levels before the onset of the drought.”

⁵⁷ Exhibit B, at p. 502, Attachment 56, 1978 Revisions to the Water Quality Control Plan for the Santa Clara River Basin.

⁵⁸ See Exhibit B, Attachment 57, at p. 507, L.A. Regional Board Resolution 97-02, paragraph 2.

In 1997, the Regional Board rescinded the Drought Policy and revised the water quality objectives for chloride for the Los Angeles River, Rio Hondo, and the San Gabriel River, but not for the Santa Clara River, “due to the potential for future adverse impacts to agricultural resources in Ventura County.” The board “granted temporary variances to certain dischargers in the Santa Clara River watershed, including the Valencia and Saugus [Waste Reclamation Plants].”⁵⁹ The interim effluent limits of 190 mg/L were applied for three years to the two facilities.⁶⁰

In 1998 the Santa Clara River “appeared for the first time on the state’s federally required 303(d) list of impaired waterbodies for chloride.”⁶¹ Reaches 5 and 6 of the Upper Santa Clara River did not meet the 100 mg/L water quality objective (WQO), and “[b]eneficial uses of the Upper Santa Clara River, including agricultural supply water and groundwater recharge were listed as impaired.”⁶² The Valencia and Saugus WRPs, which are owned and operated by the District, are two major point sources that discharge to the upper reaches of the River.⁶³ The two WRPs are responsible for approximately 70 percent of the chloride loading to the River.⁶⁴ The Valencia and Saugus WRPs were not designed to remove chloride from waste water, and in fact have been contributing to elevated chloride concentrations due to the use of chlorine disinfection.⁶⁵

In October of 2002, the Regional Board adopted Resolution 02-018, amending the Basin Plan to include a TMDL for chloride in the Santa Clara River. The same resolution also assigned “final WLAs to the Valencia and Saugus WRPs of 100 mg/L to be included also in their NPDES permits.” However, the TMDL resolution also included “interim WLAs for the [Saugus and Valencia facilities], to provide the District time to implement chloride source reduction, complete site-specific objective (“SSO”) studies, and make any necessary modifications to the WRPs.”⁶⁶ The District determined at the time that the TMDL would require approximately \$500 million in upgrades to its treatment facilities, including advanced treatment (desalination) at both WRPs in order to meet the effluent limitations of 100 mg/L chloride. The District appealed the decision to the SWRCB, which adopted Resolution 2003-0014, remanding the TMDL to the

Regional Board for reconsideration of various items including: (1) an extension of the interim chloride limits, and (2) re-evaluation of the water quality objectives accounting for the beneficial uses to be protected, the quality of the imported water supply, and the impacts of drought periods. In response, the Regional Board adopted Resolution 03-008,⁶⁷ which included interim WLAs and an implementation plan for the chloride TMDL, including required studies to justify a potentially higher level for the WLAs and TMDL under the California Antidegradation Policy.⁶⁸ The TMDL was approved by the EPA, as amended by Resolution 03-008, on April 28, 2005. On May 6, 2004, the Regional Board adopted Resolution 04-004, which revised and superseded the interim WLAs and implementation plan adopted by Resolution 03-008.

In 2006, the board shortened the compliance period and the interim WLAs by two years,⁶⁹ and in 2008, the board shortened the compliance period by an additional year, but relaxed the chloride requirements as described in the next paragraph.⁷⁰

Between 2005 and 2008, several special studies were conducted, as required under the prior TMDL.⁷¹ On December 11, 2008, the Regional Board adopted Resolution R4-2008-012, saying: “The completion of these TMDL special studies...has led to the development of an alternative TMDL implementation plan that addresses chloride impairment of surface waters and degradation of groundwater.”⁷² The alternative plan is known as the Alternative Water Resources Management program; the AWRM includes:

...the development of site-specific objectives [SSOs] for chloride while protecting beneficial uses; chloride source reduction actions through the removal of self-regenerating water softeners; a switch from chlorine-based disinfection to ultraviolet disinfection at both WRPs; chloride load reduction actions through advanced treatment (like reverse osmosis and microfiltration) of a portion of the Valencia WRP’s effluent; supplemental water to enhance assimilative capacity of local groundwater or surface water; alternative water supply to protect salt-sensitive agricultural beneficial uses during drought conditions; construction of extraction wells and pipelines; and expansion of recycled water uses with[in] the Santa Clarita Valley.⁷³

⁶⁸ Exhibit X, Resolution 68-016, California Antidegradation Policy.

⁶⁹ Exhibit B, Attachment 60, at p. 566, Regional Board Resolution R4-2006-016, Implementation Task 14.

⁷⁰ Exhibit B, Attachment 63, at p. 624, Regional Board Resolution R4-2006-016, Implementation Task 21.

⁷¹ See Exhibit A, Attachment 1, at pp. 34-36 [Regional Board Resolution R4-2008-012, paragraphs 10-16].

⁷² Exhibit A, Attachment 1, at p. 36 [Regional Board Resolution R4-2008-012, paragraph 15].

⁷³ Exhibit A, Attachment 1, at p. 42 [Regional Board Resolution R4-2008-012, Table 3-A “Conditional Site Specific Objectives for the Santa Clara River Surface Waters].

The SSOs adopted are 150 mg/L in Reaches 5 and 6 and 117 mg/L for Reach 4B, which is adjusted to 130 mg/L when the supply water has chloride levels above 80 mg/L.⁷⁴ The conditional WLAs for the Valencia and Saugus facilities are also 150 mg/L for discharges to Reaches 5 and 6, and 117 mg/L for discharge to Reach 4B.⁷⁵ The Resolution provides for the construction and implementation of advanced treatment (reverse osmosis desalination) at the Valencia facility, as well as a number of water supply control measures designed to attain the site specific objectives.⁷⁶ The relaxed requirements are conditioned upon “the Claimant’s full and ongoing implementation of the AWRM program.”⁷⁷ The 2008 resolution was approved by the State Water Board, OAL, and then finally by the U.S. EPA on April 6, 2010.⁷⁸

This test claim was filed by Santa Clarita Valley Sanitation District on March 30, 2011. On July 29, 2011, the Regional Board filed comments on test claim.⁷⁹ On August 8, 2011, the Department of Finance (Finance) filed comments on the test claim.⁸⁰ On September 28, 2011, the District filed rebuttal comments in response to both Finance and Regional Board comments.⁸¹

III. Positions of the Parties

Santa Clarita Valley Sanitation District Position

The District seeks reimbursement for costs associated with implementing the Alternative Water Resources Management program (AWRM) described in Resolution R4-2008-012. The AWRM includes technology upgrades at the two WRPs, as well as alternative water supply and groundwater management techniques in order to attain the site-specific objectives and waste load allocations of 150 mg/L for Reaches 5 and 6, and 117 mg/L for Reach 4B.⁸² The District also alleges costs incurred in fiscal years 2009-2010 and 2010-2011 associated with Implementation Tasks outlined in the Resolution; these tasks primarily involve conducting studies and developing suggested revisions to the TMDL over a span of years commencing on the effective date of the 2002 TMDL (April 28, 2005).⁸³

⁷⁹ Exhibit B, LA Regional Board Comments.

⁸⁰ Exhibit C, Department of Finance Comments.

⁸¹ Exhibit D, Claimant’s Rebuttal Comments.

⁸² Exhibit A, Test Claim, at pp. 16; 49-51.

⁸³ Exhibit A, Test Claim, at pp. 13-17; 59-63.

The District explains that the Clean Water Act “requires states to adopt water quality standards for the beneficial uses of waters of the United States and the water quality criteria for specific uses of those waters.” The Act further requires “continuing review and revision of the standards,” and requires states to “continually identify those waters of the United States within their boundaries that do not meet water quality standards (the ‘303(d) List’), rank them in order of priority for enforcement, and prepare TMDLs for those waters that will ensure re-attainment of the standard through action by regulated dischargers.” However, the District asserts that “[w]hile the Clean Water Act mandates these planning activities, it leaves to the states their evaluation and specific determination of regulatory requirements based, in part, upon site-specific factors.”⁸⁴

The District argues that the Regional Board’s determination of water quality objectives, and eventually a TMDL for chloride, was discretionary regulatory activity that was not mandated by federal law. The District bases its conclusion that the TMDL was discretionary on the fact that the TMDL and WLAs have changed over time.

The District asserts that it “now faces enormous costs to ‘solve’ a problem that it has not created and that it does not control, and has already substantially mitigated by implementing a comprehensive chloride source reduction program within the sewer service area.” The District estimates its costs “to comply with the TMDL’s conditional SSOs and WLAs is \$250 million.”⁸⁵ The District acknowledges that “[s]ome of the compliance project costs may be paid from service charges,” but the District asserts that its “elected officials could not support the proposed rate increases in the face of fierce public opposition.” The District maintains that “a local agency does not fall under the fee increase exception [of section 17556(d)] if it is unable to obtain the requisite approval under the Proposition 218 process,” which requires a local agency to provide notice of any new or increased assessment. The District provided the notice, as required, and alleges that it “received strong opposition amongst its constituents,” and “[a]s a result, the District has been unable to successfully implement a rate increase due to public resistance.”⁸⁶

In response to the LA Regional Board’s comments on the test claim, the District’s rebuttal comments stress the discretion available to the Regional Board, which it believes demonstrates that the Resolution is not necessary to implement a federal mandate. The comments further stress that the District’s “elected officials could not implement the proposed rate increase in the face of fierce public opposition;” that the District participated in developing the AWRM “only to protect, to the best of its ability, the interests of its ratepayers;” and that therefore “the District is entitled to subvention of the costs that have been and will be incurred as a result of this mandate.”⁸⁷

Los Angeles Regional Water Board Position.

The Regional Board maintains that this test claim does not qualify for subvention. The Regional Board argues that it is required by the CWA to establish a TMDL for chlorides for an impaired

⁸⁴ Exhibit A, Test Claim, at p. 5.

⁸⁵ Exhibit A, Test Claim, at p. 12.

⁸⁶ *Id.*, at p. 25.

⁸⁷ Exhibit D, Rebuttal Comments, at pp. 2-14.

water body. In addition the Regional Board asserts that that absent the AWRM plan, the claimant would be required to meet the water quality standard established for the Santa Clara River in the 2002 TMDL (and maintained in the revisions of 2004 and 2006) by the year 2015. The Regional Board argues that it has no discretion whether to adopt water quality objectives due to the listing of the Santa Clara River under section 1313(d) of the CWA. The Regional Board asserts that “[w]ater quality standards are adopted pursuant to the Clean Water Act, and *any* TMDL is required to attain and maintain the applicable water quality standards, no matter how many times these regulatory mechanisms are modified and amended.”⁸⁸ The Regional Board further argues that the alleged discretion exercised in allocating pollutant loading among various dischargers does not make the Resolution a state-mandated program: “a TMDL is not valid unless it contains wasteload and load allocations.” The Regional Board holds that “to protect beneficial uses, the Los Angeles Water Board had no choice but to assign wasteload allocations to each point source discharger, including the Claimant.”⁸⁹

In addition, the Regional Board also argues that the Resolution does not impose a new program or higher level of service. The Regional Board argues that the chloride water quality objective was first established in 1975, and the 2008 Resolution was intended “to incorporate less-stringent site-specific objectives in order to support the Claimant’s AWRM program.” The Regional Board continues: “[t]hus, if anything, the 2008 Resolution imposed a *lower level* of service in order to make it less expensive for the Claimant to implement the existing 100 mg/L chloride water quality objective.” The Regional Board also asserts that it did not impose this program: “[t]he AWRM is the Claimant’s chosen method of complying with the Chloride TMDL and the water quality objectives.” Finally, the Regional Board argues that if the U.S. EPA had adopted a chloride TMDL for the Santa Clara River, which the applicable laws permit if the state fails to do so, “it would have done so without an implementation plan, since the U.S. EPA does not include implementation plans as part of their TMDLs.” In other words, the District has the Regional Board to thank for the gradual and phased implementation of the TMDL, which the Regional Board implied is less burdensome and expensive than a TMDL adopted by the Administrator of the U.S. EPA.⁹⁰

Moreover, the Regional Board argues that the Resolution does not impose requirements that are unique to government. The Regional Board holds that “the 2008 Resolution is a regulatory provision of general applicability and not a new program or higher level of service.” The Regional Board asserts that “[w]ater quality objectives apply to a waterbody as a whole, and all dischargers are subject to them.” The Regional Board further states that “[l]ikewise, TMDLs must assign wasteload allocations and load allocations to all sources of the pollutant, both public agencies and private industry alike.” Therefore, the Regional Board concludes that “the challenged provisions treat dischargers with an even hand, irrespective of status (any point or nonpoint source) and are not peculiar to local agencies.”⁹¹

⁸⁸ Exhibit B, LA Regional Board Comments, at pp. 22-23.

⁸⁹ Exhibit B, LA Regional Board Comments, at p. 24.

⁹⁰ Exhibit B, LA Regional Board Comments, at p. 26.

⁹¹ Exhibit B, LA Regional Board comments, at pp. 26-27.

Finally, the Regional Board argues that three of the statutory exceptions of Government Code section 17556 are applicable. The Regional Board argues that the water quality standards and the TMDL contained in the Resolution are federally mandated, and therefore section 17556(c) applies.⁹² The Regional Board argues also that section 17556(a) applies to bar this test claim because “the Claimant itself developed and proposed the AWRM program and then requested the Los Angeles Water Board to adopt the AWRM as part of its 2008 Resolution.”⁹³ And, the Regional Board argues that the Claimant possesses fee authority within the meaning of section 17556(d). The Regional Board dismisses the claimant’s assertion that “the District’s board declined to adopt the proposed rate increases based on the expectations that any substantive rate increase would be overturned by way of referendum due to fierce opposition from the district’s ratepayer.”⁹⁴ The Regional Board argues that “[t]he plain language of this exception is based on the Claimant’s authority, not on the Claimant’s practical ability in light of surrounding economic circumstances, to levy fees.”⁹⁵ The Regional Board concludes that “[t]he Claimant cannot rely on mere speculation as to what could happen as a defense to the fee increase exception” of section 17556(d).⁹⁶

Department of Finance Position

Finance argues that the TMDL does not impose a reimbursable state mandate because “(1) the regulations are required by section 303(d) of the federal Clean Water Act, (2) the regulations by themselves do not require the claimant to act, and (3) even if the regulations required action, claimant has fee authority sufficient to pay its costs.” Finance also questions whether the claim may be time barred, because the Resolution was adopted by the LA Regional Board in December 2008, and the test claim was filed on March 30, 2011.⁹⁷

IV. Discussion

Article XIII B, section 6 of the California Constitution provides in relevant part the following:

Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such programs or increased level of service...

The purpose of article XIII B, section 6 is to “preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are ‘ill equipped’ to assume increased financial responsibilities because of the taxing and spending limitations that

⁹² See Exhibit B, LA Regional Board Comments, at p. 28.

⁹⁶ Exhibit B, LA Regional Board Comments, at p. 31.

⁹⁷ Exhibit C, Department of Finance Comments, at pp. 1-2.

articles XIII A and XIII B impose.”⁹⁸ Thus, the subvention requirement of section 6 is “directed to state-mandated increases in the services provided by [local government] ...”⁹⁹ Reimbursement under article XIII B, section 6 is required when the following elements are met:

1. A state statute or executive order requires or “mandates” local agencies or school districts to perform an activity.¹⁰⁰
2. The mandated activity either:
 - a. Carries out the governmental function of providing a service to the public; or
 - b. Imposes unique requirements on local agencies or school districts and does not apply generally to all residents and entities in the state.¹⁰¹
3. The mandated activity is new when compared with the legal requirements in effect immediately before the enactment of the test claim statute or executive order and it increases the level of service provided to the public.¹⁰²
4. The mandated activity results in the local agency or school district incurring increased costs, within the meaning of section 17514. Increased costs, however, are not reimbursable if an exception identified in Government Code section 17556 applies to the activity.¹⁰³

The determination of whether a statute or executive order imposes a reimbursable state-mandated program is a question of law.¹⁰⁴ The Commission is vested with exclusive authority to adjudicate disputes over the existence of state-mandated programs within the meaning of article XIII B, section 6.¹⁰⁵ In making its decisions, the Commission must strictly construe article XIII B, section 6, and not apply it as an “equitable remedy to cure the perceived unfairness resulting from political decisions on funding priorities.”¹⁰⁶

A. Threshold Issues: the Santa Clarita Valley Sanitation District is an Eligible Claimant Before the Commission; Resolution R4-2008-012 is an Executive Order within the Meaning of Article XIII B, Section 6; and the Test Claim is Timely Filed.

1. The Santa Clarita Valley Sanitation District is an Eligible Claimant before the Commission

Article XIII B, section 6 requires reimbursement for increased costs mandated by the state. “Costs mandated by the state” is defined to mean “any increased costs which a local agency or school district is required to incur...as a result of any statute...or any executive order implementing any statute...which mandates a new program or higher level of service of an existing program.”¹⁰⁷ “Local agency,” in turn, is defined to include “any city, county, special district, authority, or other political subdivision of the state.”¹⁰⁸

However, not every “local agency,” as defined, is an eligible claimant before the Commission. In addition to an entity fitting the description above, the entity must also be subject to the tax and spend limitations of articles XIII A and XIII B. The California Supreme Court, in *County of Fresno v. State of California*,¹⁰⁹ explained the constitutional subvention requirement as follows:

Section 6 was included in article XIII B in recognition that article XIII A of the Constitution severely restricted the taxing powers of local governments...Specifically, it was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues. Thus, although its language broadly declares that the “state shall provide a subvention of funds to reimburse ... local government for the costs [of a state-mandated new] program or higher level of service,” read in its textual and historical context section 6 of article XIII B requires subvention only when the costs in question can be recovered *solely from tax revenues*.¹¹⁰

Accordingly, in *Redevelopment Agency of San Marcos v. Commission on State Mandates*,¹¹¹ the Fourth District Court of Appeal concluded that redevelopment agencies were not eligible to claim reimbursement because their funding came primarily from tax increment financing, which the court determined, due to a valid statutory exemption, was not subject to the taxing and spending limitations of articles XIII A and XIII B:

Because of the nature of the financing they receive, tax increment financing, redevelopment agencies are not subject to this type of appropriations limitations or spending caps; they do not expend any “proceeds of taxes.” Nor do they raise, through tax increment financing, “general revenues for the local entity.” The

¹⁰⁷ Government Code section 17514 (Stats. 1984, ch. 1459).

¹⁰⁸ Government Code section 17518 (Stats. 1984, ch. 1459).

¹⁰⁹ *County of Fresno, supra*, 53 Cal.3d 482.

¹¹⁰ *Id.*, at p. 487. Emphasis in original.

¹¹¹ (Cal. Ct. App. 4th Dist. 1997) 55 Cal.App.4th 976

purpose for which state subvention of funds was created, to protect local agencies from having the state transfer its cost of government from itself to the local level, is therefore not brought into play when redevelopment agencies are required to allocate their tax increment financing in a particular manner...¹¹²

Therefore, a local agency that does not collect and expend “proceeds of taxes” is not an eligible claimant before the Commission.¹¹³

Here, the District receives *at least some amount* of its funding from local taxes, and is subject to an appropriations limit for at least a portion of its revenues, and is therefore an eligible claimant. The State Controller’s Special Districts Annual Report for 2010-2011 indicates that the Santa Clarita Valley Sanitation District was subject to an appropriations limit for approximately one-third of its total revenue (nearly \$11 million), and made total appropriations subject to the appropriations limit in the amount of \$5,778,450.¹¹⁴ Based on the foregoing, the Commission finds that the Santa Clarita Valley Sanitation District is an eligible claimant before the Commission.

2. The Regional Water Board’s Order is an Executive Order within the Meaning of Article XIII B, Section 6.

Article XIII B, section 6 provides that “[w]henver the *Legislature or any state agency* mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such programs or increased level of service...” Government Code section 17514 provides that costs mandated by the state includes “any increased costs which a local agency or school district is required to incur...as a result of...any executive order implementing any statute...which mandates a new program or higher level of service of an existing program...” Government Code section 17516 defines an “executive order” to mean “any order, plan, requirement, rule, or regulation issued by...[a]ny agency, department, board, or commission of state government.”¹¹⁵

Because Resolution R4-2008-012 is an order of a state board, the Commission finds that Resolution R4-2008-012 is an executive order within the meaning of article XIII B, section 6.

3. The Test Claim was Timely Filed

Section 17551 provides that “[l]ocal agency and school district claims shall be filed not later than 12 months following the effective date of a statute or executive order, or within 12 months of incurring increased costs as a result of a statute or executive order, whichever is later.”¹¹⁶

¹¹² *Redevelopment Agency of San Marcos, supra*, 55 Cal.App.4th at p. 986 [internal citations omitted].

¹¹³ *Ibid.* See also, *County of Fresno, supra* (1991) 53 Cal.3d 482, at p. 487 [“[R]ead in its textual and historical context section 6 of article XIII B requires subvention only when the costs in question can be recovered solely from tax revenues.”].

¹¹⁴ Exhibit X, 2010-2011 Special Districts Annual Report Excerpts 1 and 2.

¹¹⁵ Government Code section 17516 (as amended by Stats. 2010, ch. 288 (SB 1169)).

¹¹⁶ Government Code section 17551 (Stats. 2007, ch. 329 (AB 1222)).

Section 1183 of the Commission’s regulations states that “within 12 months,” for purposes of test claim filing, “means by June 30 of the fiscal year following the fiscal year in which increased costs were first incurred by the claimant.”¹¹⁷

Finance has raised the statute of limitations found in section 17551, arguing that the test claim was filed on March 30, 2011, while the Resolution had an effective date of December 11, 2008. Finance further argues that the District “asserts that eligible costs under the claim include those for the entire fiscal year 2009-10.” Finance concludes that “[i]f no allegedly state-mandated costs were incurred until fiscal year 2009-2010, all claimed costs for that fiscal year would have had to be incurred after March 30, 2010 to not be time barred.”¹¹⁸

Finance’s first point, that the effective date of the Resolution would place this test claim beyond the time bar, has some merit. An effective date of December 11, 2008 would require that a valid test claim be filed by June 30, 2010. However, because TMDLs and waste load allocations must be approved by the SWRCB, OAL,¹¹⁹ and the Administrator of the EPA,¹²⁰ there is an open question, for purposes of applying section 17551, whether the Resolution at issue is “effective” on the date it was approved by the Regional Board, or on the date that it is approved by the Administrator (here, April 6, 2010).¹²¹ Fortunately, that issue need not be resolved by the Commission at this time, because the Government Code states that a test claim shall be filed not later than 12 months following the effective date of the test claim statute or executive order, *or not later than 12 months following the first costs incurred*. Section 17551 allows a claimant to take advantage of “whichever is later,” and here the District has declared that it first incurred costs in fiscal year 2009-2010.¹²² There is no evidence in the record to rebut the District’s declaration.

The Government Code allows for a claim to be filed 12 months after the date costs were first incurred; the filing date does not necessarily turn on the effective date of the statute or executive order. And, section 1183, as cited above, states that “within 12 months” means the end of the fiscal year following the fiscal year in which costs were incurred.¹²³ Therefore, if the filing date of this test claim is based on first incurring costs during fiscal year 2009-2010, a claimant would need to file by June 30, 2011.

Based on the foregoing, the Commission finds that this test claim was timely filed.

B. The Regional Water Board’s Resolution and Order does not Mandate a New Program or Higher Level of Service within the Meaning of Article XIII B, Section 6.

The District states that “Regional Board Resolution No. R4-2008-012 requires: (1) compliance with specific waste load allocations that will also be incorporated into the Saugus and Valencia WRPs' NPDES permits; and (2) specific "implementation tasks" necessary for compliance.” The Implementation Tasks, along with the final waste load allocations, “are the subject of this test claim.”¹²⁴

Attachment B to Resolution R4-2008-012 outlines the conditional site-specific objectives for Reaches 4B, 5, and 6, and conditional waste load allocations for the water discharged from the Valencia and Saugus WRPs to Reaches 4B, 5, and 6. The WLAs for the District’s WRP facilities are based on, and numerically identical to, the SSOs for the respective reaches (117 mg/L chloride for Reach 4B, and the discharge into Reach 4B; 150 mg/L chloride for Reaches 5 and 6, and for the discharge into Reaches 5 and 6).¹²⁵ All other point sources are assigned WLAs equal to 100 mg/L.¹²⁶ Attachment B also provides for the operation of reverse osmosis treatment at the Valencia WRP, the provision of supplemental water to Reach 4B when chloride concentrations exceed 117 mg/L, and the design and construction of advanced treatment facilities.¹²⁷ In addition, Attachment B outlines the following implementation tasks:

4. The SCVSD will convene a technical advisory committee or committees (TAC(s)) in cooperation with the Regional Board to review literature, develop a methodology for assessment, and provide recommendations with detailed timelines and task descriptions to support any needed changes to the time schedule for evaluation of appropriate chloride threshold for Task 6...¶

5. Groundwater/Surface Water Interaction Model: The SCVSD will solicit proposals, collect data, develop a model in cooperation with the Regional Board, obtain peer review, and report results. The impact of source waters and reclaimed water plans on achieving the water quality objective and protecting beneficial uses, including impacts on underlying groundwater quality, will also be assessed and specific recommendations for management developed for Regional Board consideration. The purpose of the modeling and sampling effort is to determine the interaction between surface water and groundwater as it may affect the loading of chloride from groundwater and its linkage to surface water quality.

6. Evaluation of Appropriate Chloride Threshold for the Protection of Sensitive Agricultural Supply Use and Endangered Species Protection: The SCVSD will prepare and submit a report on endangered species protection thresholds. The SCVSD will also prepare and submit a report presenting the results of the evaluation of chloride thresholds for salt sensitive agricultural uses, which shall consider the impact of drought and low rainfall conditions and the associated

¹²⁴ Exhibit A, Test Claim, at p. 13.

¹²⁵ Exhibit A, Test Claim, at pp. 46-53.

¹²⁶ Exhibit A, Test Claim, at p. 52.

¹²⁷ Exhibit A, Test Claim, at pp. 50-52; 58; 63.

increase in imported water concentrations on downstream crops utilizing the result of Task 5.

7. *Develop SSO for Chloride for Sensitive Agriculture: The SCVSD will solicit proposals and develop technical analyses upon which the Regional Board may base a Basin Plan amendment.*

8. *Develop Anti-Degradation Analysis for Revision of Chloride Objective by SSO: The SCVSD will solicit proposals and develop draft anti-degradation analysis for Regional Board consideration.*

9. *Develop a pre-planning report on conceptual compliance measures to meet different hypothetical final conditional wasteload allocations. The SCVSD shall solicit proposals and develop and submit a report to the Regional Board that identifies potential chloride control measures and costs based on different hypothetical scenarios for chloride SSOs and final conditional wasteload allocations.*

¶...¶

17. a) *Implementation of Compliance Measures, Complete Environmental Impact Report: The SCVSD shall complete a Wastewater Facilities Plan and Programmatic Environmental Impact Report for facilities to comply with final effluent permit limits for chloride.*

¶...¶

20. *The interim WLAs for chloride shall remain in effect for no more than 10 years after the effective date of the TMDL. Conditional SSO for chloride in the USCR shall be achieved. Final conditional WLAs for chloride in Reaches 4B, 5, and 6 shall apply by May 5, 2015. The Regional Board may consider extending the completion date of this task as necessary to account for events beyond the control of the SCVSD.*¹²⁸

The District alleges the following costs mandated by Resolution R4-2008-012:

Summary of the Implementation Tasks Completed to Date:

<u>TMDL Study/Task</u>	<u>Cost</u>
TMDL Collaborative Process Facilitation Services (Task 4)	\$0.8 million
Ground Water Surface Water Interaction Model (Task 5)	\$3.1 million
Agricultural Chloride Threshold Study (Task 6)	\$0.7 million
Threatened and Endangered Species Study (Task 6)	\$0.1 million
Site Specific Objectives and Anti-Degradation Study (Task 7 & 8)	\$0.3 million
Chloride Compliance Cost Study (Task 9)	\$0.5 million
Facilities Plan & EIR (Task 17a)	\$1.1 million
Total TMDL Study Costs to Date	\$6.6 million

¹²⁸ Exhibit A, Test Claim, at pp. 59-63.

¶...¶

As previously indicated, the District has implemented a comprehensive chloride source reduction program within the sewer service area designed to reduce chloride levels in the WRP discharges in order to comply with final WLAs for chloride. (See Exh. 19). Specifically, the District implemented an innovative automatic water softener public outreach and rebate program, in compliance with Senate Bill 475, to remove automatic water softeners, which contribute significant amounts of chloride to the WRP discharges. The total cost of the program for removal of automatic water softeners, not including the cost of the District's staff time, is approximately \$4.8 million.¹²⁹

The District goes on to state that compliance with the conditional SSOs and WLAs will require implementation of “ultra-violet light disinfection at both WRPs;” construction of advanced treatment facilities such as microfiltration-reverse osmosis and brine disposal for desalination; salt management facilities such as extraction wells and water supply conveyance pipelines; supplemental water; and alternative water supplies for the protection of beneficial uses.¹³⁰ These activities and costs are described as the AWRM. The District’s “present estimate of the cost to comply with the TMDL’s conditional SSOs and WLAs is \$250 million.”¹³¹

The District estimates its costs to implement the AWRM program as follows:

<u>AWRM Project Element</u>	<u>Estimated Capital Cost</u>
Facilities Plan & Environmental Impact Report (EIR)	\$2.5 million
Advanced Treatment [MF & RO]	\$30.0 million
Brine Disposal (Deep Well Injection, DWI)	\$53 million
Ventura Salt Export Facilities	
(a) MF/RO Conveyance Pipeline from Valencia WRP	\$46.5 million
(b) GW Extraction Wells in Ventura County	\$5.5 million
(c) Blend Water Pipeline from Wells to River	\$52.3 million
Supplemental Water from local pumped groundwater	\$30.0 million
Supplemental Water conveyance	\$12.0 million
UV Disinfection Facilities at Saugus & Valencia WRP	\$16.5 million
Removal of Automatic Water Softeners	\$2.4 million
Total Estimated Capital Cost	\$250.7 million ¹³²

Thus the District has alleged the above activities required by the 2008 Resolution, totaling approximately \$257 million in alleged increased costs. The analysis below addresses whether the activities alleged in the Implementation Tasks and the AWRM program constitute a new program or higher level of service.

¹²⁹ Exhibit A, Test Claim, at pp. 13-16.

¹³⁰ Exhibit A, Test Claim, at pp. 11-12.

¹³¹ *Id.*, at p. 12.

¹³² Exhibit A, Test Claim, at p. 16

1. Some of the Implementation Tasks described in the Resolution are not new.

Resolution R4-2008-012 constitutes a revision to the existing chloride TMDL for the Upper Santa Clara River, and therefore many of the implementation tasks included in the resolution may have already been completed, or, at minimum, were included in earlier versions of the TMDL that continued to be required when the 2008 Resolution was adopted and which have not been pled in this test claim, and are therefore not new, with respect to prior law. Activities that are not new, as compared with an earlier order or resolution in effect at the time the 2008 Resolution was adopted, do not constitute a new program or higher level of service and, thus, are not reimbursable in the context of the current test claim.¹³³

Implementation Tasks 4, 5, 6, 7, 8, and 9, quoted above from Resolution R4-2008-012, are found in nearly identical language in Resolution 04-004,¹³⁴ and again in Resolution R4-2006-016.¹³⁵ Additionally, Implementation Tasks 4-9 are listed in the revised TMDL as having completion dates *prior to* the adoption and approval of the 2008 Resolution.¹³⁶ Moreover, these tasks appear to have indeed been *completed* prior to the adoption of Resolution R4-2008-012: the Resolution states that “[t]he Santa Clarita Valley Sanitation District (SCVSD) has completed all of the necessary special studies required by the Chloride TMDL (TMDL Task Nos 3, 4, 5, 6, 7, 8, 9, 10b, and 10c).” The Resolution further states that “[t]he completion of these TMDL special studies...has led to the development of an alternative TMDL implementation plan that addressed chloride impairment of surface waters and degradation of groundwater.”¹³⁷

Based on the plain language of the Resolution itself, these Implementation Tasks were completed prior to the adoption of the Resolution. It appears that the tasks were repeated in the revised TMDL adopted December 11, 2008, but activities that were completed (and the costs thereby incurred) prior to July 1, 2009 are outside the period of eligibility for this test claim.¹³⁸ Moreover, activities that were required by a prior version of the TMDL are not new. Therefore, all costs and activities alleged for Implementation Tasks 4, 5, 6, 7, 8, and 9 do not result in a state-mandated new program or higher level of service and are denied.

Implementation Task 17a, “Implementation of Compliance Measures, Complete Environmental Impact Report...” is found in Resolution R4-2006-016.^{139, 140} The claimant alleges \$613,530 for

¹³³ *Lucia Mar Unified School District, supra*, (1988) 44 Cal.3d 830, at p. 835.

¹³⁴ See Exhibit B, LA Regional Board Comments, at p. 537 and following.

¹³⁵ Exhibit B, LA Regional Board Comments, at pp. 564-565.

¹³⁶ E.g., Task 4: Convening a technical advisory committee to conduct literature review and develop methodology for assessment; Completion Date 05/04/2006; Task 5: Groundwater/Surface Water Interaction Model; Completion Date 11/20/2007.

¹³⁷ Exhibit A, Test Claim, at p. 36.

¹³⁸ Government Code section 17557(e) [“A test claim shall be submitted on or before June 30 following a fiscal year in order to establish eligibility for reimbursement for that fiscal year.” This test claim was submitted on March 30, 2011, establishing eligibility for reimbursement beginning July 1, 2009].

¹³⁹ Exhibit B, LA Regional Board Comments, at p. 566.

“Facilities Plan & EIR – Task 17” and \$774,890 for “Consultants (TMDL Task 17)” incurred in fiscal year 2009-2010. However, the activities of implementing compliance measures and to completing an EIR are not *new*, with respect to prior law, and the resolution which first required these activities was not pled in this test claim. Therefore, these implementation tasks are not new and do not impose a new program or higher level of service.

Finally, the default TMDL, including WLAs of 100 mg/L for the Saugus and Valencia WRPs, which takes effect “if the District cannot comply with the AWRM program,” is not a new requirement. The Regional Board adopted a TMDL for Reaches 5 and 6 of the Santa Clara River in 2002, which “required the Districts to reduce the chloride levels in the Plants’ discharge.”¹⁴¹ That TMDL was revised in 2004 and 2006, but the numerical limits were not altered. The TMDL in effect prior to the 2008 Resolution “has a numeric target of 100 mg/L, measured instantaneously and expressed as a chloride concentration, required to attain the water quality objective and protect agricultural supply beneficial use.”¹⁴² In addition, the TMDL includes “waste load allocations (WLAs) [of] 100 mg/L for Valencia WRP and 100 mg/L for Saugus WRP.”¹⁴³ The numerical limits adopted in 2002, which the parties acknowledge will control if the AWRM program is not fully and continuously implemented, have not changed, and are therefore not new, irrespective of whatever costs might be incurred to implement them.

Based on the foregoing, Implementation Tasks 4, 5, 6, 7, 8, 9, and 17a are not new, with respect to prior law. In addition, the waste load allocations are not new, with respect to prior law. Therefore the Commission finds that none of these provisions constitutes a state-mandated new program or higher level of service.

2. Accelerating the implementation period of the final waste load allocations under Implementation Task 20 is not a new program or higher level of service resulting in increased costs mandated by the state.

Implementation Task 20 shortens the applicable period of the interim WLAs, thus accelerating the implementation of the final WLAs for the Saugus and Valencia WRPs, from 11 years to 10 years, commencing with the effective date of the 2002 TMDL.¹⁴⁴ The interim WLAs are designed to accommodate the time needed for the WRPs to implement desalination and other chloride reduction improvements. For the Saugus WRP, the interim WLA is described as “the sum of State Water Project treated water supply concentration plus 114 mg/L, as a twelve month rolling average,” but not to exceed 230 mg/L. For the Valencia WRP, the interim WLA is described as “the sum of State Water Project treated water supply concentration plus 134 mg/L, as a twelve month rolling average,” but not to exceed 230 mg/L.¹⁴⁵ These interim WLAs were

¹⁴³ *Id.*, at p. 192.

¹⁴⁴ The 2002 Resolution was approved by U.S. EPA, after appeal, remand, and revision, on April 28, 2005. (See Exhibit A, Test Claim, at p. 45 [Attachment B to Resolution R4-2008-012].)

¹⁴⁵ Exhibit B, LA Regional Board Comments, at p. 543 [Resolution R4-04-004].

originally intended to apply for two and one-half years, pursuant to the 2002 TMDL adopted by the Regional Board. That period was expanded to 13 years after appeal and remand from the SWRCB, and the revised schedule was approved by the SWRCB, OAL, and the Administrator of the U.S. EPA.¹⁴⁶ Resolution R4-2006-016 shortened the interim WLA period by two years, as follows:

The interim effluent limits for chloride shall remain in effect for *no more than 11 years after the effective date of the TMDL*. Water Quality Objective for chloride in the Upper Santa Clara River shall be achieved. The Regional Board may consider extending the completion date of this task as necessary to account for events beyond the control of the [District].¹⁴⁷

Resolution R4-2008-012 shortened the implementation schedule again, providing that the interim WLAs “shall remain in effect for no more than 10 years after the effective date of the TMDL.”¹⁴⁸

There is no new program inherent in shortening the time frame for the interim WLAs. The requirements of the interim WLAs remain the same, only the schedule is accelerated, and the final WLAs attach one year sooner. It may be argued that it costs more to implement the final WLAs one year sooner, but this change does not of itself constitute a new program or higher level of service.

The court of appeal in *Long Beach Unified School District* declared that “[a] mere increase in the cost of providing a service which is the result of a requirement mandated by the state is *not tantamount to a higher level of service*.”¹⁴⁹ The Supreme Court has also spoken on the requirement of a new program, in terms often repeated in later decisions: “We recognize that, as its made indisputably clear from the language of the constitutional provision, *local entities are not entitled to reimbursement for all increased costs mandated by state law*, but only those costs resulting from a new program or an increased level of service imposed upon them by the state.”¹⁵⁰ Accordingly, in *City of San Jose v. State of California*,¹⁵¹ the court held that “withdrawal of funds to reimburse [for a program] was not a ‘new program’ under section 6,”¹⁵² and that “there is no basis for applying section 6 as an equitable remedy to cure the perceived

unfairness resulting from political decisions on funding priorities.”¹⁵³ Finally, not only is an increase in costs not tantamount to a higher level of service, there is no evidence in the record of the incremental cost increase which might be alleged based on accelerating the implementation of the final WLAs by one year.

Based on the foregoing, Implementation Task 20 does not impose any new state mandated activities and does not result in a new program or higher level of service.

3. The Alternative Water Resources Management program is not a new program or higher level of service.

The California Supreme Court, in *County of Los Angeles I*,¹⁵⁴ addressed the phrase “new program or higher level of service” as follows:

Looking at the language of section 6 then, it seems clear that by itself the term “higher level of service” is meaningless. It must be read in conjunction with the predecessor phrase “new program” to give it meaning... We conclude that the drafters and the electorate had in mind the commonly understood meanings of the term – programs that carry out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state.¹⁵⁵

Thus the Supreme Court articulated a multi-faceted test for “new program or higher level of service:” reimbursement requires (1) a new task or activity; (2) which constitutes an increase in service as compared to prior law; (3) and which either provides a service to the public, or imposes requirements uniquely upon government, rather than upon all persons and entities equally.

The Regional Board has argued that the Resolution cannot impose a new program or higher level of service because water quality objectives and TMDLs apply to a water body as a whole, and all dischargers are subject to them, “both public agencies and private industry alike.” The Commission need not address this argument since the AWRM program is an optional alternative to complying with prior law which claimant may choose to reject. Moreover, the requirements of the AWRM are less stringent and provide a lower level of service when compared to the law in effect immediately prior to the adoption of R4-2008-012. Therefore the Commission finds that the AWRM does not impose a state mandated new program or higher level of service.

The Regional Board argues that Resolution issue, R4-2008-12, cannot impose a new program or higher level of service because it “amended the Basin Plan to, among other things, adopt site-specific objectives for chloride in the Santa Clara River that are *less stringent* than the generally applicable water quality objectives that apply to other major dischargers to the Santa Clara

¹⁵³ 45 Cal.App.4th at p. 1813 [citing *County of Los Angeles v. Commission on State Mandates*, *supra* (1995) 32 Cal.App.4th 805, at p. 817].

¹⁵⁴ (1987) 43 Cal.3d 46, at p. 56.

¹⁵⁵ *Ibid.*

River...”¹⁵⁶ The LA Regional Board argues: “thus, if anything, the 2008 Resolution imposes a *lower level of service* in order to make it less expensive for the Claimant to implement” the TMDL.¹⁵⁷ The Commission agrees.

The first water quality objectives for the Santa Clara River were established in 1975, in which chloride objectives were set at 90 mg/L for Reach 5 and 80 mg/L for Reach 6.¹⁵⁸ In 1978, the LA Regional Board modified the chloride objectives to 100 mg/L for both Reaches 5 and 6. In 2002, the 100 mg/L objective was incorporated into a TMDL, pursuant to the impairment listing under section 303(d) of the Clean Water Act of certain reaches of the Santa Clara River, and the threat to salt-sensitive agriculture uses both within Reaches 5 and 6 and downstream.¹⁵⁹ Aside from variances and temporary relaxation of the objectives due to drought conditions in the 1990s, the 100 mg/L objective has remained the underlying standard from 1978 to the present.¹⁶⁰ Resolution R4-2008-012 plainly states that the TMDL then in effect is being amended, conditionally, to include the elements of the AWRM.¹⁶¹ Therefore, the underlying water quality objectives and TMDL in effect are outside the subvention requirement, because any activities or requirements to meet the 100 mg/L objectives, or the TMDL, are not new, and are not pled in this test claim.

Both the District and the Regional Board agree that the AWRM contains “relaxed” requirements, as compared with the prior water quality objectives. The District describes the Resolution as follows:

The December 11, 2008 amendment to the Basin Plan also modified the chloride requirements. This amendment included the enactment of *relaxed site specific objectives (“SSOs”)* for chloride in the Santa Clara River conditioned upon the completion of activities set forth in the revised TMDL that contained new final WLAs and a detailed implementation plan.¹⁶²

The LA Regional Board states:

In addition, the 2008 Resolution reduces the compliance costs the Claimant would otherwise incur. As detailed above, the 2008 Resolution was specifically adopted to incorporate relaxed site-specific objectives into the Basin Plan in order to implement the Claimant’s proposed AWRM program.¹⁶³

¹⁶² Exhibit A, Test Claim, at p. 11 [emphasis added].

¹⁶³ Exhibit B, LA Regional Board Comments, at p. 29.

In addition, “implementation actions to attain [the prior TMDL] would require advanced treatment – that is, reverse osmosis – of the full effluent from the Saugus *and* Valencia plants with discharge into the ocean through a 43-mile brine line.”¹⁶⁴ Under the AWRM, reverse osmosis desalination is only required at the Valencia WRP, and the waste is permitted to be disposed of through deep well injection.¹⁶⁵ The District estimates that implementing the advanced treatment upgrades at only one of the two facilities, along with other tasks, will cost only approximately \$250 million, as opposed to \$500 million under the prior TMDL.¹⁶⁶

There is nothing in the AWRM that imposes a higher level of service on this claimant. Resolution R4-2008-012 calls for the implementation of less-stringent requirements than under prior law, which the District has acknowledged will be less-expensive to implement. In addition, those requirements are conditional, and the default requirements, should the AWRM not continue to be fully implemented, are not new.

Based on the foregoing, the Commission finds that the AWRM program is not a new program or higher level of service, and the costs and activities thereunder are denied.

C. Even if the Resolution Imposed a State-Mandated New Program or Higher Level of Service, it Would not Impose Costs Mandated by the State Under Section 17556(d) Because the Claimant Has Sufficient Fee Authority, as a Sanitation District, to Cover the Costs of the Program.

Government Code section 17556(d) provides that the Commission “shall not find costs mandated by the state, as defined in Section 17514” if the Commission finds that “the local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.” The California Supreme Court upheld the constitutionality of Government Code section 17556, subdivision (d), in *County of Fresno v. State of California*.¹⁶⁷ The court, in holding that the term “costs” in article XIII B, section 6, excludes expenses recoverable from sources other than taxes, stated:

Section 6 was included in article XIII B in recognition that article XIII A of the Constitution severely restricted the taxing powers of local governments. (See *County of Los Angeles I, supra*, 43 Cal.3d at p. 61.) The provision was intended to preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities that were ill equipped to handle the task. (*Ibid.*; see *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 836, fn. 6 [244 Cal.Rptr. 677, 750 P.2d 318].) Specifically, it was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues. Thus, although its language broadly declares that the “state shall provide a subvention of funds to reimburse ... local

¹⁶⁴ Exhibit B, LA Regional Board Comments, at p. 719 [transcript of December 11, 2008 meeting] [emphasis added]. See also, Exhibit A, Test Claim, at p. 10 [TMDL estimated to cost \$500 million].

¹⁶⁷ *County of Fresno v. State of California, supra*, 53 Cal.3d 482.

government for the costs [of a state-mandated new] program or higher level of service,” read in its textual and historical context section 6 of article XIII B requires subvention only when the costs in question can be recovered *solely from tax revenues*.¹⁶⁸

Accordingly, in *Connell v. Superior Court of Sacramento County*,¹⁶⁹ the Santa Margarita Water District, among others, was denied reimbursement on the basis of its authority to impose fees on water users. The water districts submitted evidence “that rates necessary to cover the increased costs [of pollution control regulations] would render the reclaimed water unmarketable and would encourage users to switch to potable water.”¹⁷⁰ The court concluded that “[t]he question is whether the Districts have authority, i.e., the right or power, to levy fees sufficient to cover the costs.” Water Code section 35470 authorized the levy of fees to “correspond to the cost and value of the service,” and “to defray the ordinary operation or maintenance expenses of the district and for any other lawful district purpose.”¹⁷¹ The court held that the Districts had not demonstrated “that anything in Water Code section 35470 limits the authority of the Districts to levy fees “sufficient” to cover their costs,” and that therefore “the economic evidence presented by SMWD to the Board [of Control] was irrelevant and injected improper factual questions into the inquiry.”¹⁷²

Likewise, in *Clovis Unified School District v. Chiang*, the court found that the Controller’s office was not acting in excess of its authority in reducing reimbursement claims to the full extent of the districts’ authority to impose fees, even if there existed practical impediments to collecting the fees. In making its decision the court noted that the concept underlying the state mandates process that Government Code sections 17514 and 17556(d) embody is that “[t]o the extent a local agency or school district ‘has the authority’ to charge for the mandated program or increased level of service, that charge cannot be recovered as a state-mandated cost.”¹⁷³ The court further noted that, “this basic principle flows from common sense as well. As the Controller succinctly puts it, ‘Claimants can choose not to require these fees, but not at the state’s expense.’”¹⁷⁴

Here, Health and Safety Code section 5471 permits a sanitation district, “by ordinance approved by a two-thirds vote of the members of the legislative body thereof, to prescribe, revise and collect, fees tolls, rates, rentals, or territorial limits, in connection with its water, sanitation, storm drainage, or sewerage system.”¹⁷⁵ This section provides “authority,” within the meaning of

¹⁷⁴ *Ibid.*

¹⁷⁵ Health and Safety Code section 5471(a) (Stats. 2007, ch. 27 (SB 444)).

section 17556(d), based on the plain language of both Health and Safety Code section 5471 and Government Code section 17556.

Proposition 218, adopted by the voters in 1996, also known as the “Right to Vote on Taxes Act,” declared its purpose to protect taxpayers “by limiting the methods by which local governments exact revenue from taxpayers without their consent.” Proposition 218 added articles XIII C and XIII D to the Constitution;¹⁷⁶ article XIII D, section 6 lays out the procedures and requirements for “new or existing increased fees and charges:”

(a) Procedures for New or Increased Fees and Charges. An agency shall follow the procedures pursuant to this section in imposing or increasing any fee or charge as defined pursuant to this article, including, but not limited to, the following:

(1) The parcels upon which a fee or charge is proposed for imposition shall be identified. The amount of the fee or charge proposed to be imposed upon each parcel shall be calculated. The agency shall provide written notice by mail of the proposed fee or charge to the record owner of each identified parcel upon which the fee or charge is proposed for imposition, the amount of the fee or charge proposed to be imposed upon each, the basis upon which the amount of the proposed fee or charge was calculated, the reason for the fee or charge, together with the date, time, and location of a public hearing on the proposed fee or charge.

(2) The agency shall conduct a public hearing upon the proposed fee or charge not less than 45 days after mailing the notice of the proposed fee or charge to the record owners of each identified parcel upon which the fee or charge is proposed for imposition. At the public hearing, the agency shall consider all protests against the proposed fee or charge. *If written protests against the proposed fee or charge are presented by a majority of owners of the identified parcels, the agency shall not impose the fee or charge.*

(b) Requirements for Existing, New or Increased Fees and Charges. A fee or charge shall not be extended, imposed, or increased by any agency unless it meets all of the following requirements:

(1) Revenues derived from the fee or charge shall not exceed the funds required to provide the property related service.

(2) Revenues derived from the fee or charge shall not be used for any purpose other than that for which the fee or charge was imposed.

(3) The amount of a fee or charge imposed upon any parcel or person as an incident of property ownership shall not exceed the proportional cost of the service attributable to the parcel.

(4) No fee or charge may be imposed for a service unless that service is actually used by, or immediately available to, the owner of the property in question. Fees or charges based on potential or future use of a service are not permitted. Standby charges, whether characterized as charges or assessments, shall be classified as

¹⁷⁶ Exhibit X, Text of Proposition 218.

assessments and shall not be imposed without compliance with Section 4.

(5) No fee or charge may be imposed for general governmental services including, but not limited to, police, fire, ambulance or library services, where the service is available to the public at large in substantially the same manner as it is to property owners. Reliance by an agency on any parcel map, including, but not limited to, an assessor's parcel map, may be considered a significant factor in determining whether a fee or charge is imposed as an incident of property ownership for purposes of this article. In any legal action contesting the validity of a fee or charge, the burden shall be on the agency to demonstrate compliance with this article.

(c) Voter Approval for New or Increased Fees and Charges. *Except for fees or charges for sewer, water, and refuse collection services*, no property related fee or charge shall be imposed or increased unless and until that fee or charge is submitted and approved by a majority vote of the property owners of the property subject to the fee or charge or, at the option of the agency, by a two-thirds vote of the electorate residing in the affected area. The election shall be conducted not less than 45 days after the public hearing. An agency may adopt procedures similar to those for increases in assessments in the conduct of elections under this subdivision...

Section 6 thus provides that an agency seeking to impose or increase fees must identify the parcels and the amount proposed, and must provide written notice by mail to the record owners of the identified parcels, including notice of a public hearing, at which the agency is required to “consider all protests.” Written protests by a majority of owners of the affected parcels are sufficient to defeat a fee increase. Furthermore, new or increased fees are required to “not exceed the funds required to provide the property related service;” “not be used for any purpose other than that for which the fee or charge was imposed;” “not exceed the proportional cost of the service attributable to the parcel;” and be “actually used by, or immediately available to, the owner of the property in question.” In addition, new fees or charges may not be imposed for general services such as police and fire protection. Finally, voter approval is required “[e]xcept for fees or charges for sewer, water, and refuse collection services.”¹⁷⁷

The District asserts that the fee authority case law discussed above is no longer on point “because the most significant cases predate the passage of [Proposition 218].” The District contends that “[t]his potential conflict is significant where a local agency is unable to obtain the requisite approval to implement a proposed fee increase.” The District asserts that it “attempted to implement the Proposition 218 process, but the elected public officials could not support the proposed rate increase in the face of fierce public opposition.” The District states that “[i]n 2010, the District’s board declined to adopt the proposed rate increases based on the expectation that any substantive rate increase would be overturned by way of referendum due to fierce opposition from the District’s ratepayers.”¹⁷⁸

Based on the plain language of article XIII D, section 6, above, voter approval is not required for

¹⁷⁷ California Constitution, article XIII D, section 6 (adopted November 5, 1996).

¹⁷⁸ Exhibit A, Test Claim, at p. 26.

increases to water and sewer rates.¹⁷⁹ Here, the fee authority is that of a sanitation district, and relates to the fees charged to the users of the sewerage system; voter approval is therefore not required. All remaining limitations of article XIII D, however, must be satisfied (e.g., parcels must be identified, and amounts proposed must be calculated; fees shall not exceed the funds required to provide service; revenues may not be used for any other purpose; amount of a fee must be proportional to the cost of the service attributable to a parcel; a public hearing must be held and *if written protests against the proposed fee or charge are presented by a majority of owners of the identified parcels, the agency shall not impose the fee or charge*). The parties' comments identify "written protests" as a limitation at issue here.

The Regional Board argues that "assuming that Proposition 218 does apply to Claimant's proposals for rate increases...the number of written protests necessary to preclude the Board of Directors from passing rate increases under Proposition 218 was noticeably lacking. Section 6(a)(2), states that "[i]f *written protests* against the proposed fee or charge are *presented by a majority of owners of the identified parcels*, the agency shall not impose the fee or charge." The LA Regional Board argues that there are nearly 69,000 parcels connected to the District's sewerage system, and therefore "at least 34,449 written protests" would be a majority of the owners required to defeat a rate increase. At the May 26, 2009 and July 27, 2010 hearings the District received "203 written protests and 7, 732 written protests, respectively."¹⁸⁰

The District does not dispute the number of written protests needed, or the number received (the Regional Board's mathematical reasoning presumes that all 69,000 parcels represent a single voting property owner, but the District fails to argue the point); rather the District argues that the District's Board "quite reasonably believed that this large rate increase would be rejected if challenged by initiative."¹⁸¹ Section 3 of Proposition 218 provides that the initiative power to overturn a tax, fee, or assessment "shall not be prohibited or otherwise limited," and the District maintains that an initiative to overturn the fee increase would qualify for the ballot with approximately 6,500 votes, based on the estimated number of voters in the last gubernatorial election who would be affected by the increase.¹⁸² Therefore, the District concludes that the 7,732 written protests "exceeded the number of signatures needed to qualify an initiative that would overturn the rate increase."¹⁸³

But written protests are not tantamount to an initiative petition, and an initiative petition is not a successful referendum. The District acknowledges that its own board "declined to adopt the proposed rate increases based on the expectation that any substantive rate increase would be overturned by way of referendum."¹⁸⁴ The Commission agrees with the Regional Board, in that

¹⁷⁹ California Constitution, article XIII D, section 6(c) (adopted November 5, 1996).

¹⁸⁴ Exhibit A, Test Claim, at p. 26.

“[t]he Claimant cannot rely on mere speculation as to what could happen as a defense to the fee increase exception” of section 17556(d).¹⁸⁵

The District argues that the Commission’s decision on *Discharge of Stormwater Runoff* (07-TC-09) reflects the tension between Proposition 218 and the precedent of *Connell*,¹⁸⁶ discussed above, because the Commission found in that earlier test claim decision that Proposition 218 limited the authority of the local government to raise the necessary fees. *Connell* did not address Proposition 218, because the water districts did not allege that their authority to raise fees was impacted by Proposition 218.¹⁸⁷ The water districts in *Connell* instead urged an interpretation of “authority” under section 17556(d) that would necessarily include economic feasibility as a test of “sufficiency,” and the court rejected that interpretation. Moreover, the Commission’s decision in *Discharge of Stormwater Runoff* concluded that Proposition 218 was a barrier to raising assessments or fees only because stormwater management charges were not “water” or “sewer” services provided directly to users, and thus exempt from the voter approval requirement of Proposition 218. The Commission concluded that without the exemption from voter approval under section 6(c), “it is possible that the local agency’s voters or property owners may never adopt the proposed fee or assessment, but the local agency would still be required to comply with the state mandate.”¹⁸⁸

Therefore the Commission’s earlier decision, though it would not in any event be precedential, is distinguishable on the very same ground that renders *Connell* significantly poignant. The District cannot rely on the unwillingness of voters to raise fees, because the fees in question fall, based on the plain language of the Constitution, outside voter-approval requirement of article XIII D, section 6(c). The District would have the Commission recognize “political realities” as a test of the District’s “authority” under Health and Safety Code section 5471 to raise fees, but here, as in *Connell*, “the plain language of the statute defeats the Districts’ position.” The District asserts that “political realities...[made] it impossible” for the District to raise fees, but ultimately “the District’s board declined to adopt the proposed rate increases...”¹⁸⁹ In the same way that the court in *Connell* declined to find that an inability to market reclaimed water would undermine the “sufficiency” of the districts’ authority to raise fees, the Commission here declines to make a finding that political opposition undermines the authority of a sanitation district to raise fees.

Based on the foregoing, the Commission finds that the District has not incurred increased costs mandated by the state, pursuant to section 17556(d).

City of Salinas* (2002) 98 Cal.App.4th 1351, at pp. 1358-1359 (concluding that city’s charges on developed parcels to fund stormwater management were property-related fees, but not covered by the exemption for water and sewer fees, and thus required voter approval)].

¹⁸⁹ Exhibit A, Test Claim, at p. 26 [emphasis added].

V. Conclusion

Based on the foregoing discussion and analysis, the Commission denies this test claim and concludes that Resolution No. R4-2008-012, adopted December 11, 2008, by the Los Angeles Regional Water Quality Control Board does not constitute a reimbursable state-mandated program within the meaning of article XIII B, section 6 of the California Constitution and Government Code section 17514.

Glossary of Frequently Used Water Quality Related Terms and Acronyms:

Alternative Water Resources Management program (AWRM)	An alternative to meeting the prior TMDL and WLA requirements of the former basin plan. The requirements for the AWRM were included in a MOU entered into by the stakeholders which was then included in the revised Upper Santa Clara River TMDL and SSOs by Resolution R4-2008-012.
California Antidegradation Policy	A 1968 State Board policy that precludes water quality degradation in the state unless specific conditions are satisfied.
Clean Water Act (CWA)	The primary federal law governing water pollution. The CWA was enacted in 1972, to restore and maintain the chemical, physical, and biological integrity of the nation's waters and includes a goal to eliminate the discharge of pollutants into the navigable waters by 1985.
Effluent	Wastewater - treated or untreated - that flows out of a treatment plant, sewer, or industrial outfall; generally refers to wastes discharged into surface waters.
Environmental Impact Report (EIR)	A detailed statement prepared in accordance with California Environmental Quality Act (CEQA) whenever it is established that a project may have a potentially significant effect on the environment. The EIR describes a proposed project, analyzes potentially significant environmental effects of the proposed project, identifies a reasonable range of alternatives, and discusses possible ways to mitigate or avoid the significant environmental effects. (Pub. Resources Code §§ 21061, 21100 and 21151; Cal. Code Regs., tit. 14, § 15362.)
Federal Antidegradation Policy	The CWA's antidegradation policy is found in section 303(d) (and further detailed in federal regulations). Its goals are to 1) ensure that no activity will lower water quality to support existing uses, and 2) to maintain and protect high quality waters.

Porter-Cologne Water Quality Control Act	California's Porter-Cologne Water Quality Control Act was enacted in 1969 to allocate and to protect the waters of California. Through it, the State Board and regional boards were established. Many of its provisions mirror those of the CWA which was modeled, in part, on Porter-Cologne.
Reclaimed Water	Treated effluent that is considered to be of appropriate quality for an intended reuse application.
Regional Water Quality Control Boards (RWQCBs or Regional Boards)	The nine RWQCBs develop and enforce water quality objectives and implementation plans to protect the State's waters, recognizing local differences in climate, topography, geology and hydrology.
Site Specific Objective (SSO)	Water Quality Objectives (WQOs) adjusted to reflect localized site specific conditions. Usually initiated by a discharger to allow discharge of pollutants at greater than background levels.
State Water Resources Control Board(SWRCB or State Board)	The state board charged with protecting the waters of California. The SWRCB has joint authority of water allocation and water quality protection. It also oversees and supports the work of the regional boards (RWQCBs).
Total Maximum Daily Load (TMDL)	A calculation of the maximum amount of a pollutant that a waterbody can receive and still safely meet water quality standards.
Waste Load Allocation (WLA)	The portion of a receiving water's loading capacity that is allocated to one of its existing or future point sources of pollution (e.g., permitted waste treatment facilities).
Water Quality Objectives (WQOs)	Define the level of water quality that shall be maintained in a water body or portion thereof.
Water Reclamation Plant (WRP)	A plant which treats sewage and produces reclaimed water.

DECLARATION OF SERVICE BY EMAIL

I, the undersigned, declare as follows:

I am a resident of the County of Yolo and I am over the age of 18 years, and not a party to the within action. My place of employment is 980 Ninth Street, Suite 300, Sacramento, California 95814.

On September 20, 2013, I served the:

Draft Staff Analysis, Schedule for Comments, and Notice of Hearing
Upper Santa Clara River Chloride Requirements, 10-TC-09
Los Angeles Regional Water Quality Control Board Resolution No. R4-2008-012,
Effective December 11, 2008
Santa Clarita Valley Sanitation District of Los Angeles County, Claimant

by making it available on the Commission's website and providing notice of how to locate it to the email addresses provided on the attached mailing list.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct, and that this declaration was executed on September 20, 2013 at Sacramento, California.

October 7, 2013

Ms. Heather Halsey
Executive Director
Commission on State Mandates
980 Ninth Street, Suite 300
Sacramento, CA. 95814

Dear Ms. Halsey:

**Draft Staff Analysis on the Upper Santa Clara River Chloride Requirements Test Claim,
10-TC-09**

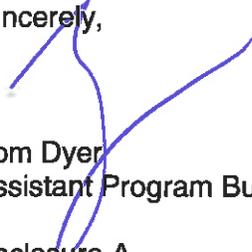

The Department of Finance (Finance) has reviewed the draft staff analysis for the test claim on the Upper Santa Clara River Chloride Requirements submitted by the Santa Clarita Valley Sanitation District of Los Angeles County. The test claim alleges that Resolution R4-2008-012, adopted December 11, 2008 by the Regional Water Quality Control Board for the Los Angeles region, imposed a maximum daily load for the discharge of chloride which would result in new requirements on the Sanitation District's water reclamation plants creating a reimbursable state mandate.

Finance concurs with the draft staff analysis that Resolution No. R4-2008-012 does not constitute a reimbursable state-mandated program and recommends that this test claim be denied.

Pursuant to section 1181.2, subdivision (c)(1)(E) of the California Code of Regulations, "documents that are e-filed with the Commission on State Mandates need not be otherwise served on persons that have provided an email address for the mailing list."

If you have any questions regarding this letter, please contact Michael Byrne, Principal Program Budget Analyst at (916) 445-3274.

Sincerely,

Tom Dyer
Assistant Program Budget Manager

Enclosure A

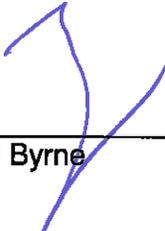

DECLARATION OF MICHAEL BYRNE
DEPARTMENT OF FINANCE
CLAIM NO. 10-TC-09

I am currently employed by the State of California, Department of Finance (Finance), am familiar with the duties of Finance, and am authorized to make this declaration on behalf of Finance.

I certify under penalty of perjury that the facts set forth in the foregoing are true and correct of my own knowledge except as to the matters therein stated as information or belief and, as to those matters, I believe them to be true.

10/7/2013

at Sacramento, California.

Michael Byrne

DECLARATION OF SERVICE BY EMAIL

I, the undersigned, declare as follows:

I am a resident of the County of Solano and I am over the age of 18 years, and not a party to the within action. My place of employment is 980 Ninth Street, Suite 300, Sacramento, California 95814.

On October 8, 2013, I served the:

**Department of Finance Comments;
Claimant Request for Extension of Time; and
Extension Approval**

Upper Santa Clara River Chloride Requirements, 10-TC-09
Los Angeles Regional Water Quality Control Board Resolution No. R4-2008-012,
Effective December 11, 2008
Santa Clarita Valley Sanitation District of Los Angeles County, Claimant

by making it available on the Commission's website and providing notice of how to locate it to the email addresses provided on the attached mailing list.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct, and that this declaration was executed on October 8, 2013 at Sacramento, California.

Comments on Upper Santa Clara River Chloride Requirements, 10-TC-09
Los Angeles Regional Water Quality Control Board Resolution No. R4-2008-012

I am sending these comments based on a local reporting of a Staff decision that says that Chloride costs should be paid by local ratepayers. The assumption of the article indicates that should be the residents of the Santa Clarita Valley.

Santa Clarita residents have already paid much in our willingness to replace chloride water softeners, which were approved at the time we built or bought our homes. Although there were credits given for replacing these devices, it in no way covered the complete cost of the replacement.

If the residents of Santa Clarita were the sole reason that the chloride is considered too high in the Santa Clara River, I would then consider that there could be cause to expect locale ratepayers to contribute to the cost of the desalination system. However, based on my research, that is not the case. The water comes into us a ppm higher than you expect when it goes on down river.

How one valley on the long trip down from the delta can be held responsible for this is not reasonable. Between the County and the State we seem to be the target for all water related issues. I thought all taxes had to be passed with a two-thirds majority and could not just be assessed. This is a tax, no matter what you call it, in that if we don't pay it, we could lose our property.

I find it hard to believe that in this era of high technology a better solution to the problem can not be proposed. For \$250 million dollars, we should get a better solution than what has been proposed and will probably be obsolete before it's even completed.

Councilmember

Dear Commission on State Mandates:

Subject: Test Claim Comments

Frank Ferry
Councilmember

Thank you for the opportunity to comment on the State Mandate Test Claim for the Upper Santa Clara River Chloride Requirements. This is a very important issue for our community.

Marsha McLean
Councilmember

Water quality laws and their implementation by State agencies create a substantial monetary burden on local municipalities. According to the Sanitation District of Los Angeles County (District), compliance with the Upper Santa Clara River Chloride Total Maximum Daily Load will cost our Santa Clarita Valley residents and businesses millions of dollars. This is in addition to the cost of numerous programs already in place to meet other State and Federal requirements. It is essential for the vitality of our community that compliance with State-created regulations, such as this one, be supported by the State.

I urge you to carefully consider the arguments made by the District. Unfunded mandates must be addressed by the State to maintain fairness and protect the financial stability of local municipalities.

Thank you for your time and consideration regarding this important issue.

Sincerely,

Bob Kellar
Mayor

Commission on
State Mandates

Dear Ms. Halsey:

UPPER SANTA CLARA RIVER CHLORIDE REQUIREMENTS, 10-TC-09: COMMENTS
ON DRAFT STAFF ANALYSIS AND PROPOSED STATEMENT OF DECISION

The Los Angeles Regional Water Quality Control Board (Los Angeles Water Board or Board) appreciates the careful and thoughtful work of the Commission on State Mandates staff and concurs with the conclusion reached in the Draft Staff Analysis and Proposed Statement of Decision (collectively, Proposed Decision). The Proposed Decision correctly concludes that Resolution No. R4-2008-012 (Resolution) does not constitute a reimbursable state-mandated program and recommends that the test claim be denied.

The Board agrees with the rationale of the Proposed Decision as to why the Resolution does not impose a new program or higher level of service. For completeness, though, the Board encourages the Commission to also consider alternative grounds that the Board has advanced for denying the test claim.

In the Los Angeles Water Board's response to the test claim, it also argued that the Resolution is not a new program or higher level of service because the Resolution does not impose requirements unique to local agencies and is not a mandate peculiar to government. This is because the Resolution is a regulatory provision of general applicability. Laws of general application are not entitled to subvention.¹ Water quality objectives apply to a waterbody as a whole, and all dischargers are subject to them.² Likewise, total maximum daily loads (TMDLs) must assign wasteload allocations and load allocations to all sources

¹ *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56-58.

² See 40 C.F.R. § 130.3 ("A water quality standard defines the water quality goals of a water body, or portion thereof, by designating the use or uses to be made of the water and by setting [objectives] necessary to protect the uses.").

of the pollutant, both public agencies and private industry alike.³ As such, the challenged provisions in the Resolution treat dischargers with an even hand, and are not peculiar to local agencies such as the Santa Clarita Valley Sanitation District of Los Angeles County (Claimant). The fact that the Claimant has to spend more money than other persons and entities to comply with the water quality objective and TMDL is not relevant to a subvention claim.⁴ That is merely a reflection of the Claimant's need to undertake greater activities to achieve compliance with a rule of general application.

The Proposed Statement of Decision states that the "Commission need not address this argument since the AWRM [Alternative Water Resources Management] program is an optional alternative to complying with prior law which claimant may choose to reject."⁵ The Board fully agrees that the AWRM program is an optional alternative to compliance that the Claimant may choose to implement, or not. Nevertheless, the Board made the argument in the context of the Resolution as a whole, and not solely in the context of the provisions concerning the AWRM program. As such, the Board believes that this argument constitutes independent grounds for the Commission to determine that the Resolution does not impose a new program or higher level of service and for denying the test claim. The Board therefore respectfully requests that the Commission address this argument in the context of the Resolution as a whole and determine that the Resolution does not impose requirements unique to the government.

In addition, the Los Angeles Water Board seeks to clarify one issue with regards to antidegradation requirements. The Proposed Decision's background discussion addresses California's antidegradation policy. The Board notes for clarification that State Water Resources Control Board (State Water Board) Resolution No. 68-16, the "Statement of Policy with Respect to Maintaining High Quality of Waters in California," satisfies the requirements that California have a policy which, at a minimum, is consistent with the federal antidegradation policy contained in 40 Code of Federal Regulations section 131.12. In order to ensure consistency with federal Clean Water Act requirements, the State Water Board has interpreted Resolution No. 68-16 to incorporate the federal antidegradation policy in situations where the federal antidegradation policy is applicable.⁶ As noted in its response to the test claim, the Los Angeles Water Board established the water quality objectives for chloride based on background concentrations of chloride in accordance with both the federal and state antidegradation policies.

Lastly, in your letter dated September 20, 2013, you requested that interested parties and affected state agencies let you know in advance if a representative will testify at the hearing, and if other witnesses will appear. Representatives of the Los Angeles Water Board

³ See 40 C.F.R. § 130.2(i) (defining total maximum daily loads as the sum of all individual discharges of the impairing pollutant).

⁴ See *City of Richmond v. Commission on State Mandates* (1998) 64 Cal.App.4th 1190, 1197 (citing *County of Los Angeles, supra*, 43 Cal.3d at pp. 56-57).

⁵ Proposed Statement of Decision, p. 41.

⁶ See State Water Board Order No. WQ 86-17 (*Rimmon C. Fay*), pp. 16-19.

consisting of myself, Michael Lauffer, and/or Lori Okun, will be present at the hearing on January 24, 2014 to answer any questions the Commission may have.

The Los Angeles Water Board sincerely appreciates the extension of time to submit comments on the Proposed Decision in this matter, as well as the postponement of the hearing to January 24, 2014. If you have any questions concerning this letter, please contact me by email at jfordyce@waterboards.ca.gov or by phone at (916) 324-6682.

Sincerely,

Jennifer L. Fordyce
Senior Staff Counsel

DECLARATION OF SERVICE BY EMAIL

I, the undersigned, declare as follows:

I am a resident of the County of Sacramento and I am over the age of 18 years, and not a party to the within action. My place of employment is 980 Ninth Street, Suite 300, Sacramento, California 95814.

On November 4, 2013, 2013, I served the:

California Regional Water Quality Control Board Comments; and Claimant Comments

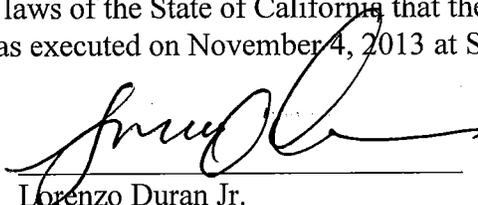

Upper Santa Clara River Chloride Requirements, 10-TC-09

Mailing List

TO ALL PARTIES AND INTERESTED PARTIES:

Each commission mailing list is continuously updated as requests are received to include or remove any party or person on the mailing list. A current mailing list is provided with commission correspondence, and a copy of the current mailing list is available upon request at any time. Except as provided otherwise by commission rule, when a party or interested party files any written material with the commission concerning a claim, it shall simultaneously serve a copy of the written material on the parties and interested parties to the claim identified on the mailing list provided by the commission. However, this requirement may also be satisfied by electronically filing your documents. Please see <http://www.csm.ca.gov/dropbox.shtml> on the Commission's website for instructions on electronic filing. (Cal. Code Regs., tit. 2, § 1181.2.)

Re: **Santa Clarita Valley Sanitation District's Comments on the Draft Staff
Analysis Regarding the Upper Santa Clara River Chloride Requirements,
Test Claim No. 10-TC-09**

Dear Ms. Halsey:

This firm represents the claimant, Santa Clarita Valley Sanitation District (the "District") in Test Claim No. 10-TC-09 relating to Upper Santa Clara River Chloride Requirements ("Test Claim").

The District has reviewed the draft staff analysis and proposed statement of decision with respect to the chloride limit that is the subject of the Test Claim ("staff analysis"), but believes that the analysis misses the forest for the trees and results in an incorrect and unfair outcome.

The District is caught between a rock and a hard place: it is the passive recipient of imported high-chloride drinking water, which it must treat to prevent a speculative harm. As a result, the chloride limit requires the District to pay more than its fair share of cleanup costs to prevent speculative damage. The District has no legal authority to obtain reimbursement from the parties responsible for much of the chloride nor from the beneficiaries of the treatment. The District is being required to pay to solve a problem that has its origins in other regions of the state. The level of service required by the state is greater than the current service level and clearly exceeds federal requirements, as detailed in the District's original Test Claim. This is an unfunded state mandate.

A single community has been burdened with the exorbitant costs of a capital-intensive project that implements an over-protective state-established water quality standard. The California Constitution at Art. XIII B § 6 states that: “Whenever . . . any state agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service.” In interpreting this provision, the California Supreme Court has held that “the drafters and the electorate had in mind subvention for the expense or increased cost of programs administered locally and for expenses occasioned by laws that impose unique requirements on local governments and do not apply generally to all state residents or entities.” *County of Los Angeles v. State of California* (Cal. 1987) 43 Cal. 3d 46, 49-50.

The chloride limit is a unique requirement, imposed by a state agency upon a local government. This requirement does not apply to all state residents or entities, and the facilities necessary to comply with the requirement is not financed by them.

The chloride limit at issue was imposed by the Regional Board, a state agency. Chloride is a naturally-occurring salt that generally benignly exists in the potable water delivered to District residents. Although District residents contribute approximately one-third of the chloride that exists in the current effluent, 50% or more of the chloride in the effluent is merely “passed through” from the water supply.¹ The District is a passive recipient of the majority of the chloride. But the chloride limit requires only the District’s ratepayers to pay for all of the expensive facilities necessary to remove chloride from wastewater prior to discharge of the treated effluent to the Santa Clara River. The Regional Board has required the District to “clean up” the chloride, essentially desalinating of millions of gallons of wastewater per day. The District is burdened with this responsibility (1) because the District happens to be the last “point source” on the Santa Clara River before Ventura County, an accident of geography; and (2) because the chloride level *may theoretically someday* be harmful to highly specialized and apparently heretofore unaffected downstream agricultural users of the river.

To be clear: current effluent chloride levels largely result from chloride that exists in the water *before that water reaches Santa Clarita Valley*. Chloride occurs naturally in the State Water Project water and groundwater that flows to taps in every home and business in Santa Clarita Valley. Based on engineering estimates, approximately 60% of all chloride

¹ Santa Clarita Valley Sanitation District: *2013 Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan*, page 3-23 at table 3.9-3, attached as Exhibit 1.

came from the water supply in 2012.² In years past, a significant proportion of the chloride also came from in-District sources, especially self-regenerating water softeners. But the District's source-control efforts over the last 10 years - outlawing and removing water softeners in the District - have led to significant reductions. As a result of the removal of over 7,900 water softeners, the chloride loadings have dropped from approximately 30% of total effluent chloride in 2002 to an undetectable amount in 2012.³

Residents of the District are outraged that the Regional Water Quality Control Board has imposed effluent chloride limits of 100 mg/L. That limit is not based on any demonstrated scientific study. Furthermore, the chloride levels in the pertinent reaches of the Santa Clara River have far exceeded the 100m/L limit for decades, but no appreciable impact on Ventura County agriculture interests has been documented. Avocados and strawberries, the allegedly impacted crops, continue to be grown using downstream Santa Clara River water.

Even if avocado and strawberry crops were affected, federal law does not require the Regional Board to protect the most sensitive agricultural use. The standards established in the federal Clean Water Act only require that the waters of the U.S. be "fishable and swimmable" and only provide for "consideration" of other beneficial uses. Even if the Clean Water Act could be construed to require protection of agriculture, the Act does not require protection of the most salt-sensitive agriculture or the accomplishment of such a result through the imposition of an instantaneous maximum "end of pipe" limit. The Regional Board abused its discretion in setting a 100 mg/L chloride standard for the Santa Clara River.

Nevertheless, in order to comply with Regional Board orders, and a settlement agreement reached after a \$225,000 fine imposed in 2012, the District's Board of Directors undertook extensive environmental review, approved a Chloride Compliance Facilities Plan on Monday, October 28, 2013, and authorized the development of a chloride treatment and disposal facilities project. The planning and environmental review have cost \$7.4 million to date; estimated capital costs of the project exceed \$130 million, and increased operation and maintenance costs are projected at \$4.1 million per year.⁴ The District maintains that these are costs mandated by the state for a new or increased level of service over pre-TMDL limits, that the District cannot collect these costs from the source

of the chloride, and that therefore this is a reimbursable state-mandated program within the meaning of article XIII B, section 6 of the California Constitution.

Response to Itemized Staff Recommendations

The draft staff analysis summarizes the claims and issues raised in the Test Claim, and provides a staff recommendation. The narratives, especially in the summary, are misleading and result in an incorrect analysis. The District's comments on each section of the analysis are provided below.

1. Implementation Tasks 4-9, 17a, and the default waste load allocation of 100mg/L

The staff analysis concludes that "the required activities do not impose a new program or higher level of service" because they were "required by prior law."⁵ The staff bases this conclusion on the grounds that the Implementation Tasks are "not new" because they were previously approved by the Regional Board and EPA between 2002 and 2006. This conclusion completely ignores the fact that the 2008 TMDL is the result of the final appeal of the original 2002 approval. The entire TMDL process began in 2002 with the initial adoption of the TMDL, and was repeatedly administratively appealed and negotiated over six years until the District had exhausted all of its administrative remedies and was forced to accept the 2008 order in the face of the threat of crippling fines. This process is described in significant detail in the Test Claim and supporting materials, and because the 2002, 2005, and 2006 approvals are part and parcel of the 2008 TMDL, they were "pled" in this Test Claim.⁶ To deny the Test Claim on the grounds that the state mandate is not "new" would be a Catch-22, since any Test Claim during the appeals process would have been unripe. The Commission cannot have it both ways.

The proper measure of whether the TMDL is a new or higher level of service is to compare the TMDL's requirements with the existing or pre-TMDL requirements. The District's present chloride effluent limitations are: at Saugus WRP - chloride concentration in water supply plus 114mg/L as a 12-month rolling average, not to exceed 230 mg/L; and at Valencia WRP - water supply chloride concentration plus 134 mg/L as a 12-month rolling average, not to exceed 230 mg/L. Actual concentrations are approximately 130 mg/L. The TMDL's requirement of 100 mg/L chloride at both WRPs therefore **results in a reduction of the limit to 56% below the current chloride daily limit.** Every reduction in a limit requires a new or higher level of service. The mere fact that this more stringent treatment requirement

⁵ Draft staff analysis at p. 5.

⁶ Test Claim at pp. 7-8 and exhibits 12-17.

will cost ratepayers \$130 million in otherwise unnecessary capital costs demonstrates that this is a new or higher level of service.

With respect to Implementation Task 17a, the environmental impact report was certified only this week, on Monday, October 28, 2013.⁷

2. Implementation Task 20 - Acceleration of Implementation Schedule.

The draft staff analysis concludes that acceleration of the implementation schedule for the massive public works project necessitated by the TMDL is “not a new program or higher level of service.” Just as accelerating a car is a higher level of speed, accelerating a compliance schedule is a higher level of service. If the DMV could process our driver’s licenses in a shorter amount of time, that would be a higher level of service. If FedEx delivers our packages sooner than USPS, that is a higher level of service. If a home builder can build a home in nine months instead of the originally-forecast 12-month schedule, that is a higher level of service. And if the Regional Board requires a project to be built 23% faster than its original mandate, that is a higher level of service. The reduction of the time schedule from 13 years to 10 years is therefore a higher level of service mandated by the state.

The reliance on case law for the proposition that an accelerated compliance schedule’s increased costs are “not tantamount to a higher level of service” is misplaced. The facts of both cited cases are completely distinguishable: *Long Beach Unified School District v. State of California* (1990) 225 Cal.App.3d 155 deals with mandatory racial integration of schools and *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46 deals with a claim for subvention for the increased costs of providing workers compensation benefits to local agency employees. Neither case addresses the issue of accelerated timetables for completion of a project.

3. AWRM As A New Program or Higher Level of Service.

The AWRM program was not adopted by the District and will not be implemented. However, as discussed above, both AWRM and the compliance plan adopted by the District on October 28, 2013 are designed to comply with Regional Board requirements that are far more stringent than the pre-TMDL standard. As stated in Section 1, above, the comparison must be between the pre-TMDL conditions and the present TMDL conditions – not comparisons between the various TMDL standards adopted during the appeals process spanning from 2002 to 2008.

⁷ See Notice of Determination attached as Exhibit 3.

4. Authority to Cover Costs of the Program

The District has no legal authority to obtain reimbursement from the parties responsible for the majority of the chloride concentration, nor does it have the legal authority to obtain reimbursement from the beneficiaries of the treatment.

Further, the case law cited in the staff analysis and proposed statement of decision is distinguishable from this Test Claim. The cited language of *Clovis Unified School District v. Chiang* (2010) 188 Cal.App.4th 794 relates to whether the state must reimburse community colleges for health fees that are separately and explicitly authorized by law. In that case, a community college district was authorized under the Education Code to collect a specified sum of money from each student for health fees. Because the community college district was required by state law to provide health services, the state reimbursed the community college for health care costs *only in excess of the authorized per-student health fee*. The court held that the state was not required to reimburse the community college for the health fee, since that fee was clearly legally authorized to be collected from each student.

The facts at issue in this Test Claim have no relationship to the facts in *Clovis*. There, the Education Code authorizes \$10 per semester to be charged to students, who directly benefit from that health fee by receiving health services. The District, in contrast, has no authority to raise sewer fees by a sum certain. The District has no ability to collect fees from the source of more than 50% of the chloride that the District must treat. The District is subject to Prop. 218 protests and referenda on the rates necessary to support the TMDL facilities. The community college district in *Clovis* was not subject to Prop. 218 or referenda on the health fee because it was directly established by state law.

Conclusion.

At its essence, this Test Claim is about a state agency requiring a local agency to spend over \$130 million to “clean up” a natural condition in order to prevent an unproven harm to an adjacent county. Santa Clarita Valley is being forced to pay to solve a speculative problem with origins and effects that are outside its jurisdiction.

Heather Halsey, Executive Director
Commission on State Mandates
November 1, 2013
Page 7

This is a state-mandated "new program or higher level of service" for which the state should provide a subvention of funds to reimburse the District under Article XIII B, Section 6 of the California Constitution.

Very truly yours,

Claire Hervey Collins of
LEWIS BRISBOIS BISGAARD & SMITH LLP

2010	100%	60%	0%	9%	3%	4%	0%	19%	5%
2011	100%	56%	0%	9%	4%	5%	0%	20%	6%
2012	100%	60%	0%	10%	4%	6%	0%	20%	0%

The relative contribution to chloride loadings of the industrial sector, commercial sector, liquid waste disposal station, disinfection, and residential non-SRWS has stayed relatively constant over the past several years. The industrial sector discharges one to four percent of the total loading, representing 2 to 5 mg/L of chloride in the final system effluent. The commercial sector discharges three to six percent of the total chloride loading, representing 4 to 7 mg/L chloride in the final system effluent. The liquid waste disposal station discharges less than one percent of the total chloride loading, representing about 0.4 mg/L chloride in the final system effluent. Disinfection at the WRPs contributes seven to ten percent of the total chloride loading, representing 11 to 15 mg/L in the final system effluent. Residential non-SRWS contributes 13 to 20 percent of the total chloride loading, representing approximately 22 to 25 mg/L in the final system effluent.

The two sources of chloride that have significantly varied over the past several years are chloride in the potable water supply and chloride from residential SRWS. The estimated chloride loading from water supply between 2002 and 2012 peaked in 2009 at 13,242 pounds per day of chloride, representing 78 mg/L chloride in the system effluent. In 2012, the potable water supply contributed 60 percent of the chloride load in the District's sewerage system. The estimated chloride loading from SRWS peaked in 2003/2004 at about 9,000 pounds per day, representing 59 mg/L in the system effluent. This coincided with enactment of the prohibition on installation of SRWS in the District in 2003. The SRWS contribution maintained a downward trend in 2012, as the Automatic Water Softener Rebate Program –

RECEIVED

OCT 30 2013

STATE CLEARING HOUSE

Project Description: The Santa Clarita Valley Sanitation District of Los Angeles County (SCVSD) prepared the Final Santa Clarita Valley Sanitation District Chloride Compliance Facilities Plan and Environmental Impact Report (Final Facilities Plan and EIR) to meet project objectives including compliance with the Upper Santa Clara River Chloride Total Maximum Daily Load (Chloride TMDL).

A Draft Facilities Plan and EIR was released on April 24, 2013, for an extended public review period that ended on July 24, 2013. The comments received and the SCVSD's responses were incorporated into the Final Facilities Plan and EIR, which was released on October 10, 2013.

The Final Facilities Plan recommended Alternative 4 with Alternative 2 as a backup alternative. After the Final Facilities Plan was released, Ventura County subsequently withdrew essential support for Alternative 4, which made that alternative infeasible. On October 28, 2013, the recommended project (Project) was revised to only include Alternative 2, which is described in the Final Facilities Plan. Under the Project, a portion of the Valencia Water Reclamation Plant's (VWRP's) effluent will receive advanced treatment to remove chloride and meet the Chloride TMDL limit of 100 mg/L. A portion of the advanced-treated water will be pumped to the Saugus Water Reclamation Plant (SWRP) for blending with its effluent through a new pump station and conveyance pipeline. The brine waste from the advanced treatment facilities will be disposed by deep well injection. Brine will be pumped to the injection site by a new pump station and pipeline. Approximately five injection wells will be constructed at the injection site along with appurtenant facilities. The existing chlorine-based disinfection systems at the VWRP and SWRP will be replaced with ultraviolet light disinfection facilities. The Project will be located within the City of Santa Clarita and adjacent portions of unincorporated Los Angeles County.

EXHIBIT 3

This is to advise that the Board of Directors of the Santa Clarita Valley Sanitation District certified the Final EIR and approved the Facilities Plan at its Board meeting on October 28, 2013, and has made the following determinations regarding the Project:

1. An EIR was prepared for the Project pursuant to the provisions of the California Environmental Quality Act (CEQA).
2. Mitigation measures were made a condition of the approval of the Project, and a Mitigation Monitoring and Reporting Program was adopted pursuant to the provisions of CEQA.
3. The Project, as approved with mitigation measures, will have the following significant impacts on the environment: air quality (during construction).
4. Findings of Fact were made for the Project pursuant to the provisions of CEQA.
5. A Statement of Overriding Considerations was issued for the Project pursuant to the provisions of CEQA.

This is to certify that the Final EIR, with comments and responses, and the record of Project approval are available to the public at the Sanitation Districts' Joint Administration Office, 1955 Workman Mill Road, Whittier, California 90601.

DECLARATION OF PHILIP L. FRIESS

I, Philip L. Friess, declare as follows:

1. I am the department head of the Technical Services Department of the County Sanitation Districts of Los Angeles County. One of these districts is the Santa Clarita Valley Sanitation District of Los Angeles County (the "District"), the claimant in this proceeding.

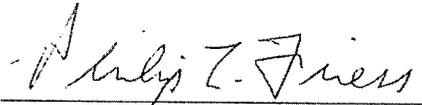

2. I have personal knowledge of the facts set forth herein, and if called as a witness to testify thereto, I could competently and truthfully do so.

3. Exhibit 1 to the attached comment letter of Claire Hervey Collins on behalf of the District is a true and correct copy of page 3-23 of the District's 2013 Chloride Source Identification/Reduction, Pollution Prevention, and Public Outreach Plan.

4. Exhibit 2 to the comment letter is a true and correct copy of page 6-63 of the final Santa Clarita Valley Sanitation District Chloride Compliance Facilities Plan and Environmental Impact Report ("Final EIR").

5. Exhibit 3 to the comment letter is a true and correct copy of the Notice of Determination regarding the Final EIR filed by the District with the County of Los Angeles on October 30, 2013.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct and that this declaration was executed on November 1, 2013, at Whittier, California.

Philip L. Friess

DECLARATION OF SERVICE BY EMAIL

I, the undersigned, declare as follows:

I am a resident of the County of Sacramento and I am over the age of 18 years, and not a party to the within action. My place of employment is 980 Ninth Street, Suite 300, Sacramento, California 95814.

On November 4, 2013, 2013, I served the:

California Regional Water Quality Control Board Comments; and Claimant Comments

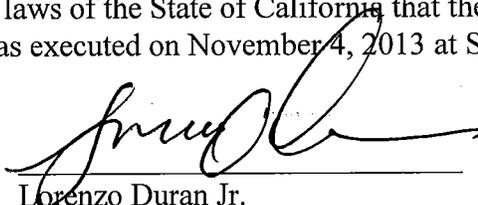

Upper Santa Clara River Chloride Requirements, 10-TC-09

Los Angeles Regional Water Quality Control Board Resolution No. R4-2008-012,
Effective December 11, 2008

Santa Clarita Valley Sanitation District of Los Angeles County, Claimant

by making it available on the Commission's website and providing notice of how to locate it to the email addresses provided on the attached mailing list.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct, and that this declaration was executed on November 4, 2013 at Sacramento, California.

LAWS AND REGULATIONS

3.1 INTRODUCTION

The collection and treatment of wastewater and the management of treated wastewater effluent is subject to federal, state, and local regulations. Furthermore, federal and state funding for capital projects is contingent upon the fulfillment of additional regulatory requirements. This section provides a broad summary of federal, state, and local laws, regulations, and plans that must be considered when planning for wastewater treatment and effluent management facilities.

3.2 REGULATIONS GOVERNING FEDERAL AND STATE WATERS

This section discusses regulations pertaining to federal and state waters that typically impact publicly owned treatment works (POTWs). The Santa Clarita Valley Sanitation District of Los Angeles County's (SCVSD's) Saugus and Valencia Water Reclamation Plants (SWRP and VWRP, respectively) are subject to the regulations listed below because they discharge to the Santa Clara River (SCR), which is considered waters of the United States (waters of the U.S.). Waters of the U.S. are defined as all waters that are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters that are subject to the ebb and flow of the tide. Further definition can be found in Part 328.3 of Title 33 of the Code of Federal Regulations (33 CFR Part 328.3).

3.2.1 Evolution of Federal Regulations

3.2.1.1 Refuse Act

Federal regulation of discharges to bodies of water began in 1899 with the passage of the Refuse Act, which was primarily intended to protect navigation by preventing discharges that might interfere with the use of the nation's waterways as transportation corridors.

3.2.1.2 Water Pollution Control Act

The Water Pollution Control Act of 1948 was the first federal legislation to address water quality, which had been historically regulated on state and local levels. This act reaffirmed that water pollution control was primarily a state responsibility, but did provide the federal government with the authority to conduct investigations, research, and surveys. In 1956, the Water Pollution Control Act was amended to include provisions for federal grants to support the construction of POTWs and direct federal regulation of waste discharges.

3.2.1.3 Water Quality Control Act

The Water Quality Control Act, enacted in 1965, required states to establish federally approved ambient water quality standards for interstate watercourses and to develop federally approved implementation plans for controlling pollution sufficiently to meet these standards.

3.2.2 Federal Regulations

3.2.2.1 Clean Water Act

The 1972 amendments to the federal Water Pollution Control Act marked the beginning of the current system of federal water quality regulation and increased the level of federal grant funding for municipal wastewater treatment facilities. Goals of the 1972 amendments included elimination of pollutant discharges to navigable waters of the U.S. by 1985 and protection of fishable and swimmable waters, wherever attainable, by 1983. The 1972 amendments initiated the National Pollutant Discharge Elimination System (NPDES) permit program, which required the issuance of discharge permits for all municipal and industrial point sources that discharge into waters of the U.S.

The 1972 amendments preserved the system of state-established water quality criteria promulgated under the 1965 Water Quality Control Act, but the states were additionally required to review and update these standards every three years and submit revisions to the United States Environmental Protection Agency (EPA) for approval. Water quality standards consisting of the designated uses of the navigable waters and the water quality criteria for such waters were to be established. These standards were to consider the water's use and value for public water supplies; propagation of fish and wildlife; recreational purposes; and agricultural, industrial, navigation, and other purposes. Where compliance with identified technology-based standards was not sufficient to ensure attainment of approved water quality standards, the 1972 amendments directed the permitting agency to impose water quality-based, effluent limitations in permits.

The federal Water Pollution Control Act was amended a third time in 1977, and the amended act was renamed the Clean Water Act (CWA). The 1977 amendments extended some of the deadlines identified in 1972 and more clearly delineated the manner in which conventional and toxic water pollutants were to be treated. The 1977 CWA required that toxic pollutants be managed through the effluent guidelines program for major industrial dischargers or the pretreatment program for specified industries discharging to POTWs.

The 1987 amendments to the CWA: (1) ended the construction grant program and replaced it with the state revolving fund (SRF) loan program for the construction of municipal sewerage facilities, (2) required states to promulgate water quality standards for toxic water pollutants for which advisory water quality criteria had been developed pursuant to §304(a) of the CWA, and (3) established new requirements for states to develop and implement programs to control nonpoint source pollution. To address nonpoint source pollution, the 1987 amendments also required the issuance of NPDES permits for stormwater discharges associated with municipal, industrial, and construction activities.

3.2.2.2 National Pretreatment Program

The National Pretreatment Program, established through the CWA in Part 403 of Title 40 of the CFR (40 CFR Part 403), requires the implementation of pretreatment programs for POTWs with

capacities greater than 5 million gallons per day (mgd) that receive pollutants that may interfere with POTW operations. POTWs are required to prohibit or limit discharges of pollutants from industrial facilities that could pass through the treatment processes into receiving waters, interfere with treatment plant operations, or limit biosolids management options. Smaller POTWs with significant industrial influent, treatment process problems, or violations of effluent limitations are also required to implement pretreatment programs. In addition, federal standards have been established to regulate sewer discharges from specific types of industries.

POTWs are responsible for developing, implementing, and enforcing their own pretreatment programs. If POTWs fail to properly administer pretreatment programs, they are subject to oversight by state and federal regulatory agencies including enforcement actions, penalties, fines, or other remedies provided for by the CWA.

The Sanitation Districts of Los Angeles County (Sanitation Districts) developed and implemented an industrial wastewater pretreatment program in 1972 with the adoption of the Wastewater Ordinance. Local discharge limits for industrial wastewater dischargers were adopted in 1975, and the EPA approved the Sanitation Districts' program in March 1985. Local industrial wastewater discharge limits were established to ensure compliance with NPDES and waste discharge requirements (WDRs) permit limits for each treatment plant, as well as to protect treatment plant operations and biosolids quality. The pretreatment program has been very successful in reducing the discharge of contaminants.

The existing industrial wastewater discharge limits are presented in Table 3-1. The Sanitation Districts regularly review these limits to determine if modifications are needed. Modifications to the discharge limits may be made if determined necessary to maintain biosolids quality and/or meet NPDES and WDRs permit limits.

In addition, the following numerical requirements from the Sanitation Districts' Wastewater Ordinance apply:

- The pH of the wastewater discharged shall not be below 6.0 at any time
- The dissolved sulfide concentration of the wastewater shall not exceed 0.1 milligrams per liter (mg/L) at any time
- The temperature of the wastewater shall not exceed 140 degrees Fahrenheit (°F) at any time, and shall not cause the wastewater influent to a Sanitation Districts' treatment plant to exceed 104°F

3.2.2.3 National Toxics Rule and California Toxics Rule

In 1992, EPA promulgated toxic pollutant water-quality criteria for California in the National Toxics Rule (NTR). EPA promulgated the California Toxics Rule (CTR) in response to litigation that overturned two statewide water quality control plans in 1994, the Inland Surface Waters Plan (ISWP) and the Enclosed Bays and Estuaries Plan. The CTR took effect in May 2000 and established numeric criteria for the remaining priority toxic pollutants to meet the requirements of §303(c)(2)(B) of the CWA. The NTR and CTR criteria are regulatory criteria adopted pursuant to §303(c) of the CWA that apply to inland surface waters and enclosed bays and estuaries in California that are waters of the U.S. The NTR and CTR include criteria for the protection of aquatic life and human health. Aquatic life and human health criteria (organisms

Table 3-1. SCVSD Industrial Wastewater Discharge Limits

Constituent	Instantaneous Maximum Limit (mg/L)

Zinc	25

mg/L = milligrams per liter

^a Total Identifiable Chlorinated Hydrocarbons (TICH) include pesticides such as aldrin, dieldrin, chlordane, dichlorodiphenyltrichloroethane (DDT), endrin, hexachloro-cyclohexane, toxaphene, and polychlorinated biphenyls (PCBs).

^b TICH must be maintained below detection levels.

only) apply to all inland surface waters and enclosed bays and estuaries, while human health criteria (water and organisms) apply to all waters with a municipal and domestic water supply (MUN) Beneficial Use (BU) designation as indicated in regional basin plans. In translating these criteria to effluent limitations in permits, California Regional Water Quality Control Boards (RWQCBs) determine which designated BUs apply to the receiving waters and base permit limits on the most stringent applicable criterion.

3.2.2.4 Clean Water Act §404 and §401 Permits

§404 of the CWA established a permit program for regulation of the discharge of dredged material or fill into waters of the U.S. The permit program is administered by the Secretary of the Army, acting through the United States Army Corps of Engineers (Corps). §404 authorizes the EPA to regulate the discharge of any dredged material or fill that can cause adverse effects on municipal water supplies, recreational areas, wildlife, fisheries, or shellfish beds.

§401 of the CWA provided the authority for the state-operated 401 Certification Programs. The 401 Certification process is used by the state to regulate hydrologic modification projects that require §404 permits.

3.2.3 State Regulations

3.2.3.1 The Porter-Cologne Water Quality Control Act

The Porter-Cologne Water Quality Control Act of 1969 (PCA) established the current legal framework for water quality regulation in California. The PCA requires the California State Water Resources Control Board (SWRCB) to adopt water quality control plans and policies for the protection of water quality. The PCA also established nine RWQCBs to develop regional water quality control plans and implement water quality protection programs at the local level. A water quality control plan must:

- Identify the BUs of the waters to be protected
- Establish water quality objectives for the reasonable protection of those BUs
- Establish an implementation program for achieving water quality objectives

The SWRCB is the primary agency responsible for formulating policies to protect surface waters and groundwater supplies within the State of California. The SWRCB has delegated authority for the day-to-day administration and enforcement of the PCA to the regional level. Each RWQCB develops a water quality control plan that identifies important water resources within its region and specifies the BUs for each of these resources. Each water quality control plan must be approved by the SWRCB, the Office of Administrative Law (OAL), and the EPA. Water quality control plans are generally reviewed and updated every three years.

The SCVSD's facilities are under the jurisdiction of the RWQCB-Los Angeles Region (RWQCB-LA). The RWQCB-LA is responsible for administering and enforcing the regional water quality control plans, NPDES permits, WDRs, and pretreatment programs within the Los Angeles basin.

The PCA authorizes RWQCBs to regulate all discharges to water and/or land to protect water quality. RWQCBs issue WDRs to all dischargers in accordance with §13263 of the California Water Code (CWC) and are authorized to review WDRs periodically. These WDRs also serve as NPDES permits for discharge from the SCVSD facilities (see Section 3.4.2 for more information on NPDES permits). Authority delegated to RWQCBs includes the issuance of WDRs, review of self-monitoring reports submitted by dischargers, performance of independent compliance checks, and enforcement for non-compliance. Enforcement actions, which may be taken by RWQCBs under the authority provided by the PCA, range from orders requiring relatively simple corrective actions to monetary penalties levied for failure to comply with permit provisions.

The RWQCBs have also been delegated responsibilities associated with administering and enforcing the provisions of the CWA. When discharges are made to waters of the U.S., NPDES/WDRs for point source discharges are issued. Under Chapter 5.5 of the PCA, WDRs are deemed equivalent to NPDES permits issued under the CWA. Thus, NPDES permits are generally issued as both federal and state permits in California and generally have both a State Order Number and an NPDES permit number.

3.2.3.2 California Water Code §1211

Water Code §1211 states that before a wastewater treatment plant owner may make “any change in the point of discharge, place of use, or purpose of use of treated wastewater, the owner of any wastewater treatment plant shall obtain approval of the [State Water Resources Control] [B]oard for that change.” §1211 applies when this change results in a decreased flow to any portion of a watercourse (CWC§1211[b]). If the proposed change is expected to have an adverse impact to biological resources, the applicant must include mitigation measures, which may include a minimum discharge rate.

3.2.3.3 Statewide Implementation Policy

In March 2000, the SWRCB adopted a policy establishing provisions to implement the priority toxic pollutant criteria in the CTR and NTR and implement priority pollutant objectives in the basin plans of each RWQCB. The Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California (also known as the Statewide

Implementation Policy) establishes provisions for translating CTR criteria, NTR criteria, and basin plan water quality objectives for toxic pollutants into:

- NPDES permit effluent limits
- Compliance determinations
- Monitoring for 2, 3, 7, 8-tetrachlorodibenzo-p-dioxin equivalents
- Chronic toxicity control
- Initiating site-specific objective development
- Granting exceptions

3.2.4 Local Regulations

3.2.4.1 Water Quality Control Plan-Los Angeles Region

The Water Quality Control Plan-Los Angeles Region: Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties (Basin Plan) was adopted by RWQCB-LA on June 13, 1994. Chapters 2 and 7 of the Basin Plan were updated in November 2011 and September 2011, respectively. The Basin Plan provides the basis for the RWQCB-LA's regulatory program by designating BUs for all surface and groundwater bodies and setting forth narrative and numerical water quality objectives that must be maintained or attained to protect these BUs. The Basin Plan also identifies general types of water quality problems that can threaten BUs of water resources in the basin and identifies required or recommended control measures for these problems. RWQCB-LA orders are based on applicable water quality objectives and/or prohibitions specified in the Basin Plan. The Basin Plan is reviewed and updated every 3 years or as necessary (CWA §303[c]). The most recent Triennial Review began in 2011 and was completed in February 2012. The findings of the Triennial Review are summarized in Resolution No. R12-001.

Basin Plan Amendments Related to the Santa Clara River

There have been several Basin Plan Amendments that affect the SCR watershed WRPs since the 1994 adoption of the Basin Plan. The majority of these amendments have concerned attainment of BUs.

Water bodies that do not meet basin plan requirements are considered "impaired." Impaired water bodies are identified in a published list of Water Quality Limited Segments (CWA §303[d] List) and are evaluated through a prescribed study approach to: (1) characterize the sources and degree of impairment, (2) determine total maximum daily loadings (TMDLs) of the pollutants of concern to meet water quality objectives (WQOs) and obtain Bus, and (3) allocate pollutant loadings among the identified sources as Waste Load Allocations (WLAs). After adoption by the RWQCB-LA, SWRCB, State Office of Administrative Law (OAL), and the EPA, TMDLs become amendments to the Basin Plan.

The SCR has been divided into sections, called reaches, that exhibit consistent hydrological, water quality, or adjacent land use characteristics. Several of these reaches are listed/impaired and have defined TMDLs for nutrients (nitrogen compounds) and chloride that impact the SWRP and VWRP (see Figure 3-1). The Basin Plan amendments that impact the SCR watershed are shown in Table 3-2.

Beneficial Uses

The portion of the SCR most impacted by the SCVSD facilities generally coincides with Reach 5, which is the SCR reach west of Soledad Canyon and east of the Los Angeles-Ventura County line. Discharged effluent flows downstream into Reaches 5 to 1.

The Basin Plan identifies existing BUs for surface waters in these reaches as industrial service supply (IND), industrial process supply (PRO), agricultural water supply (AGR), groundwater recharge (GWR), freshwater replenishment (FRSH), water contact recreation (REC1), non-contact water recreation (REC2), warm freshwater habitat (WARM), wildlife habitat (WILD), preservation of rare and endangered species (RARE), and wetland habitat (WET). A potential BU is MUN, which currently has no regulatory impact. The designated BUs for Santa Clara Basin groundwater are MUN, IND, and ARG.

WQOs have been established in the Basin Plan to ensure that a water body can support its designated BUs. WQOs are stated as numeric and/or narrative limits for water quality constituents. Current numeric WQOs in the Basin Plan for selected constituents in the SCR reaches immediately affected by SWRP and VWRP discharges are presented in Table 3-3. Note that for the SCR, conditional site specific objectives (SSOs) for chloride have been adopted, but only apply if certain requirements are met.

Table 3-3. Selected Numeric Surface Water Quality Objectives for Santa Clara River Reaches 4 Through 6

Reach	TDS (mg/L)	Sulfate (mg/L)	Chloride ^a (mg/L)	Boron (mg/L)	Nitrogen (mg/L)
Reach 6. Between Bouquet Canyon Road Bridge and West Pier Highway 99	1,000	300	100	1.6	10
Reach 5. Between West Pier Highway 99 and Blue Cut gauging station	1,000	400	100	1.5	5
Reach 4A. Between Piru Creek and A Street Bridge, Fillmore	1,300	600	100	1.5	5
Reach 4B. Between Blue Cut gauging station and Piru Creek	1,300	600	100	1.5	5

^a In 2010, conditional SSOs of 150 mg/L, 150 mg/L, and 117/130 mg/L were adopted for chloride in Reaches 6, 5, and 4B, respectively, if certain requirements are met.

3.3 TMDLs FOR THE SANTA CLARA RIVER

A TMDL is a written, quantitative assessment of water quality problems and contributing pollutant sources. A TMDL identifies one or more numeric targets based on applicable WQO's; specifies the maximum amount of a pollutant that can be discharged (or the amount of a pollutant that needs to be reduced) to meet WQO's; allocates pollutant loads among sources in the watershed; and provides a basis for taking actions needed to meet the numeric target(s) and implement water quality standards. More than 500 water bodies or segments have been identified as needing TMDLs in California, many for multiple pollutants. TMDLs for nutrients (nitrogen compounds), bacteria, and chloride are in place for the SCR along reaches that affect the SWRP and the VWRP.

3.3.1 Nitrogen Compounds TMDL

On August 7, 2003, the RWQCB-LA adopted Resolution No. 03-011, the Santa Clara River Nitrogen Compounds TMDL (Nitrogen Compounds TMDL) which limits nitrate, nitrite, and ammonia. The associated TMDL implementation schedule required the SCVSD to develop a work plan to monitor and assess surface water quality in the SCR and evaluate the effectiveness in meeting nitrogen WLAs. On March 23, 2005, the SCVSD submitted the required work plan, which specified collection of ambient water quality and biological data from the upper SCR watershed. The work plan was supplemented with a detailed sampling and analysis plan that was finalized on May 31, 2006. On December 27, 2007, a report on the results was submitted. The results indicated that current TMDL objectives for nitrate, nitrite, and ammonia were achieved in the USCR; that WLAs were being met by the SWRP and VWRP; and that the relevant portions of the river were not impaired for nutrients. The USCR was subsequently delisted for nitrate, nitrite, and ammonia.

3.3.2 Indicator Bacteria TMDL

On July 8, 2010, the RWQCB-LA adopted Resolution No. R10-006, the Santa Clara River Estuary and Reaches 3, 5, 6, and 7 Indicator Bacteria TMDL (Indicator Bacteria TMDL), which limits indicator bacteria densities. The SWRP and VWRP were assigned WLAs for indicator

bacteria, but no action was necessary on the part of these WRPs because they were already in compliance with the WLAs.

3.3.3 Upper Santa Clara River Chloride TMDL Development

In 1990, the RWQCB-LA adopted a Drought Policy (Resolution No. 90-04) in response to drought conditions persisting since 1987 providing a variance to the applicable chloride WQO. During this drought period, most of the wastewater treatment plants in the Los Angeles Region could not comply with their discharge limits for chloride, primarily as a result of increased chloride concentration in imported water supplies. Interim chloride objectives for the SCR of 190 mg/L were set in 1997 and RWQCB-LA staff were directed to conduct a 3-year study to determine appropriate chloride objectives that would protect salt-sensitive crops and address the costs and environmental tradeoffs that could occur if end-of-pipe treatment were required at wastewater treatment plants.

During the 3-year study, the RWQCB-LA proposed listing several reaches of the SCR on the 303(d) list of Water Quality Limited Segments for chloride and in May 1999, EPA listed Reaches 5 and 6 of the SCR (the VWRP discharges to Reach 5 and SWRP discharges to Reach 6). The RWQCB-LA developed Chloride TMDLs for the Upper SCR (USCR) and, in 2002, adopted Resolution No. 02-018 setting a WLA of 100 mg/L for these reaches.

In 2003, the SWRCB remanded Resolution No. 02-018 back to the RWQCB-LA for reconsideration of various items including: (1) an extension of the interim effluent chloride limits, and (2) re-evaluation of the WQO accounting for the BUs to be protected, the quality of the imported water supply, and the impacts of drought periods. In response, the RWQCB-LA adopted Resolution No. 03-008 setting the time frame for compliance with the Chloride TMDLs. Also in 2003, the RWQCB-LA adopted NPDES permits and Time Schedule Orders (TSOs) for the SWRP and the VWRP. The SCVSD filed petitions for review of these permits and TSOs with the SWRCB following their adoption. The petition was resolved when the RWQCB-LA and the SCVSD signed a Settlement Agreement and Stipulation Concerning Chlorides in the Upper Santa Clara River (Settlement Agreement).

After the Settlement Agreement was signed, the RWQCB-LA adopted Resolution No. 04-004 revising the interim WLA and Implementation Plan for the Chloride TMDL. The interim chloride WLAs for the SWRP and the VWRP were based on floating limits consisting of State Water Project water supply chloride levels plus an incremental loading for each plant. The Implementation Plan required completion of several special studies to characterize the sources, fate, transport, and specific impacts of chloride in the USCR, followed by the development and implementation of appropriate control measures for meeting the WQO.

3.3.3.1 Threatened and Endangered Species Chloride Threshold Study

The Threatened and Endangered Species Chloride Threshold Study (T&Es Study), completed in November 2007, determined that the 1988 EPA ambient water quality criteria for chloride for the protection of aquatic life (230 mg/L as chronic; 860 mg/L as acute) are protective of locally important threatened and endangered species (Advent-Environ 2007).

3.3.3.2 Agricultural Chloride Threshold Study

The Agricultural Chloride Threshold Study (Ag Study) was designed to support the AGR BU for the USCR. The Ag Study consisted of two parts – a Literature Review Evaluation completed in September 2005 (CH2M HILL 2005), and an evaluation of the appropriate averaging period completed in January 2008 (NewFields Agricultural and Environmental Resources 2008). The Ag Study determined that the appropriate chloride threshold for salt-sensitive agriculture (avocados, strawberries, and nursery crops) grown in the USCR watershed is in the range of 100 to 117 mg/L, with an averaging period of 3 months. The Ag Study was reviewed by an independent Technical Advisory Panel.

3.3.3.3 Groundwater-Surface Water Interaction Model Study

The Groundwater-Surface Water Interaction Model (GSWIM) Study resulted in preparation of a calibrated numerical model in March 2008 (CH2M HILL 2008) that enables evaluation of the impact of WRP recycled water discharges to the SCR on downstream surface water and groundwater quality. The GSWIM was also used to evaluate various compliance alternatives including potential SSOs.

3.3.3.4 Site-Specific Objectives and Anti-Degradation Analysis Study

The SSO and Anti-Degradation Analysis Study (SSO and ADA Study), completed in November 2008, provided the technical and regulatory basis for the RWQCB-LA to consider potential SSOs for the USCR. As part of the SSO and ADA Study, salt-sensitive agriculture was found not to be an existing or potential BU in Reaches 5 and 6.

3.3.4 Upper Santa Clara River Chloride TMDL Implementation Plan

In 2006, the TMDL Implementation Plan was amended in RWQCB-LA Resolution No. R4-2006-016, shortening the time schedule for completing the special studies and implementing control measures. After completing the special studies (T&Es Study, Ag Study, GSWIM Study, and SSO and ADA Study), and with the input of various stakeholders including the SCVSD, Ventura County Agricultural Water Quality Coalition (VCAWQC), United Water Conservation District (United Water), and the Upper Basin Water Purveyors, an alternative compliance plan known as Alternative Water Resources Management Plan (AWRM) was developed to address chloride while protecting BUs. The RWQCB-LA then adopted Resolution No. R4-2008-012 in 2008 (see Appendix 3-A) which set conditional SSOs for chloride and shortened the implementation deadline from May 4, 2016 to May 4, 2015. These conditional SSOs allow a higher (117 mg/L) chloride limit but are contingent upon implementation of the specific facilities described in the AWRM. Therefore, SSOs higher than the Ag Study range of 100 to 117 mg/L were adopted for Reaches 5 and 6.

The AWRM consisted of chloride source reduction measures and a 3-mgd advanced wastewater treatment facility, brine disposal facilities, and salt management facilities. The AWRM is further described in Section 6.

3.3.5 Basin Plan Amendment – Subdivision of Santa Clara River Reach 4

SCR Reach 4, between the Blue Cut gauging station and A Street in Fillmore, has a “Dry Gap” where surface water in the upper portion of Reach 4 infiltrates into the Piru groundwater basin and resurfaces approximately 6 miles downstream. Flow from Piru Creek, a major tributary, also infiltrates into the groundwater basin.

Initially, one WQO for chloride had been assigned to all of Reach 4 despite the changes in hydrologic conditions along its course. To allow for the development of more geographically precise SSOs and to better represent the hydraulic regime of the SCR, the RWQCB-LA adopted Resolution R4-2007-018 on November 1, 2007, which subdivided Reach 4 of the SCR into two separate reaches, Reach 4A and Reach 4B. Reach 4A now consists of the river segment between the A Street Bridge in Fillmore and the confluence of Piru Creek. Reach 4B lies between the Piru Creek confluence and the Blue Cut gauging station.

3.4 DISCHARGE REGULATIONS

3.4.1 Discharge Points and Receiving Waters

The VWRP has two discharge points to the SCR. The primary discharge point is used during normal conditions. The second is located a few feet away and is only used when the water level rises in the river to the extent that the primary discharge point is partially or completely submerged (i.e., during heavy storm events). Both discharge points are within Reach 5 of the SCR, about 3,500 feet downstream of the Interstate 5 (I-5) Freeway Bridge.

The SWRP has one discharge point just downstream of the Bouquet Canyon Road Bridge in Reach 6 of the SCR. The SCR ultimately drains to the Pacific Ocean in Ventura County, and is considered waters of the U.S., as discussed in the beginning of Section 3.2.

3.4.2 NPDES Permits

Discharges from the SCVSD WRP to the SCR are regulated by NPDES permits issued by the RWQCB-LA. Updated NPDES permits for discharge to the SCR were adopted for both the SWRP and VWRP on June 4, 2009. Permits are renewed every 5 years unless conditions change that require a permit reopening (e.g., plant capacity expansion, treatment upgrade, or change in Basin Plan). Current NPDES permits for the SWRP and VWRP are identified in Table 3-4.

Table 3-4. SWRP and VWRP Waste Discharge and Water Reuse Permits

Facility	NPDES Permit		
	Permit No.	RWQCB-LA Order No.	WRR Order No.
SWRP	CA0054313	R4-2009-0075	97-072
VWRP	CA0054216	R4-2009-0074	97-072

An NPDES permit generally contains the following components:

- **Findings:** Official description of the facility, process, type and quantity of wastes, existing requirements, enforcement actions, public notice, and applicable basin plans

- **Effluent Limitations:** Narrative and numerical limits for effluent; discharge prohibitions
- **Receiving Water Limitations:** Narrative and numerical objectives for the receiving waters
- **Provisions:** Standard provisions required by the RQWCB and by federal law; expiration date of permit
- **Compliance/Task Schedule:** Time schedules and interim reporting deadlines for compliance
- **Pretreatment Requirements:** Standard pretreatment requirements for municipal facilities

Average and daily maximum pollutant discharge limitations are presented in Table 3-5. The NPDES permits issued for the VWRP and SWRP by the RWQCB-LA in 2009 also include interim effluent limits for chloride. The chloride interim limit is equal to the sum of the State Water Project treated water supply chloride concentration plus 114 mg/L (for SWRP) or 134 mg/L (for VWRP), not to exceed a daily maximum of 230 mg/L. The interim limits apply until the Chloride TMDL compliance date.

Disinfection requirements for the VWRP and SWRP are also contained in the NPDES permits. Adequate disinfection is determined by testing for the levels of coliform bacteria present in the effluent. See Table 3-5 for coliform limits.

In addition to the discharge limitations listed in Table 3-5, the NPDES Permits for the SWRP and VWRP include the following discharge requirements.

- 86°F maximum temperature
- The pH of wastes discharged must be within the range of 6.5 and 8.5 at all times
- The wastes discharged to watercourses must be adequately disinfected at all times
- Maximum turbidity of 2 Nephelometric turbidity units (NTUs) average within a 24-hour period, 5 NTUs more than 5 percent of the time (72 minutes) during any 24-hour period, and 10 NTUs at any time
- To protect underlying ground water basins, pollutants must not be present in the wastes discharged at concentrations that pose a threat to ground water quality
- Incorporation of radioactivity limits from Title 22, *Drinking Water Standards* to protect BUs
- Acute and chronic toxicity limitations are based upon the Basin Plan
- The permit contains a narrative chronic toxicity effluent limitation with a numeric trigger of 1 Toxicity Unit (TU_c) for accelerated monitoring

3.4.2.1 Watershed-Wide Monitoring Program

The NPDES permits include the requirement that the SCVSD participate in development of an updated comprehensive Watershed-Wide Monitoring Program and develop an implementation plan for this monitoring program in conjunction with other interested stakeholders. The Watershed-Wide Monitoring Program seeks to assess impacts on water quality and ecological resources from nonpoint source runoff and aerial fallout as well as point source discharges. The stated goals of the program are to:

- Determine compliance with receiving water limits
- Monitor trends in surface water quality

Table 3-5. SWRP and VWRP NPDES Permit Discharge Limitations for Conventional, Nonconventional, and Toxic Pollutants

Constituent	Units	Discharge Limitations ^a			Basis
		30-day Avg.	7-day Avg.	Daily Max.	
BOD ₅ @ 20°C (BOD)	mg/L	20	30	45	40CFR133 ^b

Total Trihalomethanes ^c	µg/L	80	--	--	Basin Plan
Coliform Bacteria	MPN/100 mL	23	2.2	--	Basin Plan

BOD₅ = Biochemical Oxygen Demand 5-day

TSS = Total Suspended Solids

MBAS = Methylene Blue Active Substances

MPN = Most Probable Number

^a Mass emission rates (based on plant design flow rates of 21.6 mgd and 6.5 mgd for the SWRP and the VWRP, respectively), can be calculated as follows: Flow (mgd) x Concentration (mg/L) x 8.34 (conversion factor) = lbs/day. During wet-weather storm events in which the flow exceeds the design capacity, the mass discharge rate limitations shall not apply, and concentration limitations will provide the only applicable effluent limitations.

^b CWA 40 Code of Federal Regulations Part 133.

^c Total Trihalomethanes is the sum of concentrations of the trihalomethane compounds: bromodichloromethane, bromoform, chloroform, and dibromochloromethane. This limit is based on the Basin Plan WQO incorporation of MCLs by reference.

- Ensure protection of BUs
- Provide data for modeling contaminants of concern
- Characterize water quality including seasonal variation of surface waters within the watershed
- Assess the health of the biological community
- Determine mixing dynamics of effluent and receiving waters in the estuary

3.5 REGULATIONS GOVERNING WATER REUSE

The discharge and reuse of recycled water is regulated under a number of authorities on the state and local level.

3.5.1 State Regulations

State requirements for production, discharge, distribution, and use of recycled water are contained in the following codes:

- CWC, Division 6 – Conservation, Development, and Utilization of State Water Resources, §§10610 through 10655, and Division 7 – Water Quality, §§13000 through 13633
- California Health and Safety Code, Division 6 – Sanitary Districts, §6512, and Division 104 – Environmental Health Sciences, §§116800 through 116820
- California Code of Regulations (CCR), Title 22 – Social Security, Division 4 – Environmental Health, Chapter 3 – Recycling Criteria, §§60001 through 60355
- CCR, Title 17-Public Health, Division 1 – State Department of Health, Chapter 5, Sanitation (Environmental), Subchapter 1, Engineering (Sanitary), Group 4, Drinking Water Supplies, §§7583 through 7605

In addition, guidelines for production, distribution, and use of recycled water have been prepared or endorsed by state agencies administering recycled water regulations

3.5.1.1 California Water Code

The CWC contains requirements for the production, discharge, and use of recycled water. Division 7, Chapter 7, of the CWC specifically addresses requirements for water recycling. This chapter requires California Department of Public Health (CDPH) to establish water-recycling criteria and gives the RWQCBs responsibility for prescribing specific Water Reclamation Requirements (WRRs) for water that is used or proposed to be used as recycled water. In addition, Division 7, Chapter 7, of the CWC provides for regulation of recycled water injection into the ground and requires that greenbelt areas and certain other applications use recycled water rather than potable water where recycled water is available at a cost-effective price.

The CWC (§§1210 through 1212), added in 1980, focus on the definition of property rights to recycled water and require that the owner of a wastewater treatment plant obtain approval from the SWRCB prior to making any change to the point of discharge, place of use, and/or purpose of use of recycled water.

3.5.1.2 Title 22

The CWC (§13521) requires the CDPH to establish water reclamation criteria. In 1975, the CDPH prepared Title 22 regulations to fulfill this requirement. Title 22 was subsequently revised in 1978 to conform with the 1977 amendments to the CWA and revised again in December 2000. The requirements of Title 22 regulate production and use of recycled water in California.

Title 22 establishes four categories of recycled water:

- Undisinfected Secondary Recycled Water: oxidized effluent.

- Disinfected Secondary-23 Recycled Water: oxidized and disinfected effluent that does not exceed a most probable number (MPN) of 23 total coliform bacteria per 100 milliliters (mL) median concentration in a 7-day period.
- Disinfected Secondary-2.2 Recycled Water: oxidized and disinfected effluent that does not exceed an MPN of 2.2 total coliform bacteria per 100 mL median concentration in a 7-day period.
- Disinfected Tertiary Recycled Water: oxidized, coagulated, clarified, filtered, and disinfected effluent.

Criteria for reuse of secondary and tertiary effluent in various reuse applications include limits on the maximum numbers of total coliform bacteria present within the water. A partial list of suitable uses of recycled water, as defined by Title 22, is summarized in Table 3-6.

Table 3-6. Suitable Uses of Recycled Water

Use ^a	Disinfected Tertiary Recycled Water	Disinfected Secondary-2.2 Recycled Water	Disinfected Secondary-23 Recycled Water	Undisinfected Secondary Recycled Water
Surface Irrigation				
Parks, playgrounds and School yards	Allowed	Not Allowed	Not Allowed	Not Allowed

Cleaning roads, sidewalks and outdoor work areas	Allowed	Allowed	Allowed	Not Allowed
Industrial process water that may not contact workers	Allowed	Allowed	Allowed	Not Allowed

^a This list is not all inclusive.

^b With monitoring for viruses, bacteria, and protozoa cysts.

In addition to defining permitted uses of recycled water and treatment requirements, Title 22 defines sampling and analysis requirements for treatment plant effluent, requires preparation of an engineering report prior to production or use of recycled water, specifies general design criteria for treatment facilities, establishes reliability requirements, and addresses alternative methods of treatment.

Water Recycling Requirements

Use of recycled water is usually regulated by the RWQCB under WRRs (also known as reuse permits). WRRs include findings that provide an official description of the facility using the recycled water and specifications for use of the water. The SCVSD WRR Order was issued in 1987.

The reuse permit contains limits that are consistent with specific WQOs of the Basin Plan. Table 3-7 summarizes the numerical limits listed in the WRRs. The reuse permits also require that reclaimed water shall not contain trace constituents or other substances in concentrations exceeding the limits of the current CDWS.

Table 3-7. SWRP and VWRP WRR Constituent Limits

pH	TDS (mg/L)	Sulfate (mg/L)	Chloride ^a (mg/L)
6.0 – 9.0	800	250	300

^a Revised WRRs may be issued at any time. It is expected that new limits would be closer to 100-150 mg/L.

3.5.1.3 SWRCB Recycled Water Policy

On February 3, 2009, the SWRCB released a recycled water policy (Resolution No. 2009-0011). The purpose of this policy is to increase the use of recycled water in a manner that implements state and federal water quality laws and provides direction to RWQCBs, proponents of recycled water projects, and the public regarding appropriate criteria to be used by the SWRCB and RWQCBs in issuing permits for recycled water projects. The policy includes language that:

- Establishes goals to increase the use of recycled water in California and clarifies the roles of the SWRCB, RWQCBs, CDPH, and the California Department of Water Resources (DWR).
- Requires development of salt and nutrient management plans for each groundwater basin by 2014.
- Establishes a “blue-ribbon” advisory panel to guide future actions relating to Emerging Constituents/Constituents of Emerging Concern (CEC).

3.5.1.4 SWRCB Recycled Water General Irrigation Permit

The California Legislature declared its intent that the state undertake all possible steps to encourage development of water recycling facilities so that recycled water may be made available to help meet the growing water requirements of the state. In response, the SWRCB adopted a General Waste Discharge Requirements for Landscape Irrigation Uses of Municipal Recycled Water on July 7, 2009 to streamline the regulatory process for reuse of disinfected tertiary recycled water for:

- Parks, greenbelts, and playgrounds
- School yards

- Athletic fields
- Golf courses
- Cemeteries
- Residential landscaping, common areas
- Commercial landscaping, except eating areas
- Industrial landscaping, except eating
- Freeway, highway, and street landscaping

3.5.1.5 California Department of Public Health Draft Groundwater Recharge Regulations

The CDPH issued new Draft Groundwater Replenishment Reuse Regulations on November 21, 2011. For surface spreading projects not using full advanced treated recycled water (as defined in §60320.201 of the Draft Groundwater Replenishment Reuse Regulations, November 21, 2011), the draft regulations allow an initial recycled water contribution (RWC) of 20 percent, or a 20/80 blend ratio of recycled water to dilution water. For surface spreading projects and direct injection projects using full advanced treated recycled water, the initial maximum RWC is to be determined on a case-by-case basis by CDPH. The draft regulations propose methodology whereby the RWC could be increased above the initial value, which could lead to increased groundwater recharge. In addition to the RWC requirements, the draft regulations provide requirements for recycled water treatment, pathogen removal, wastewater source control, diluent water, soil treatment process, response retention time, monitoring wells, reporting, and various water quality constituent requirements.

3.5.1.6 Title 17

The focus of Title 17 of the CCR is the protection of potable water supplies through control of cross connections with potential contaminants. Examples of potential contaminants include sewage; nonpotable water supplies such as recycled water, irrigation water, and auxiliary water supplies; fire protection systems; and hazardous substances. Title 17, Group 4, Article 2 (Protection of Water System), Table 1, specifies the minimum backflow protection required on a potable water system when there is a potential for contamination of the potable water supply. Revisions to Title 17 of the CCR are being developed, with the most current draft dated December 8, 2005.

3.5.1.7 Recycled Water Guidelines

To assist in compliance with Title 22, CDPH has prepared a number of guidelines for production, distribution, and use of recycled water. Additionally, CDPH recommends the use of recycled water distribution guidelines prepared by the California-Nevada Section of the American Water Works Association (AWWA). These guidelines include:

- Guidelines for the Preparation of an Engineering Report on the Production, Distribution, and Use of Recycled Water
- Manual of Cross-Connection Control/Procedures and Practices
- Guidelines for the Distribution of Nonpotable Water

- Guidelines for the Use of Recycled Water
- Guidelines for the Use of Recycled Water for Construction Purposes

3.5.1.8 Recycled Water Administration

In the State of California, recycling requirements are administered by the SWRCB, the RWQCB, and CDPH. The direct involvement of each agency during a water recycling project is as follows:

- The SWRCB issue loans and approves petitions for a change in place and/or purpose of use of recycled water in accordance with the CWC.
- The RWQCB (1) prepares or revises WRRs in accordance with the CWC and Title 22, (2) reviews and approves engineering reports required under Title 22, and (3) reviews and approves recharge projects using recycled water in accordance with the CWC.
- The CDPH reviews and approves (1) engineering reports, (2) final plans for cross-section control and pipeline separations in accordance with Title 17 and inspects distribution systems prior to operation, and (3) final user system plans in conjunction with local health agencies for cross-section control in accordance with Title 17 and inspects systems prior to operations.

3.5.2 Recycled Water Local Regulations

Local requirements focus on the distribution and use of recycled water and, primarily, on the user systems. Local requirements generally emphasize cross-connection control. The state regulations and guidelines discussed above are the governing requirements. The Los Angeles County Department of Public Health (County DPH) generally establishes more specific requirements for separation and construction of potable and recycled water systems, specifies guidelines for user systems, and establishes criteria for identification of recycled water facilities.

3.6 REGULATIONS GOVERNING AIR QUALITY

3.6.1 Federal Regulations

3.6.1.1 Federal Clean Air Act

The Federal Clean Air Act (FCAA), passed in 1963 and amended significantly in 1970, 1977, and 1990, requires the EPA to establish national ambient air quality standards (NAAQS) for air pollutants. The EPA has promulgated NAAQS for criteria pollutants, including carbon monoxide (CO), ozone (O₃), sulfur oxides (SO_x), nitrogen oxides (NO_x), particulate matter with an aerodynamic diameter of less than 10 microns (PM₁₀), particulate matter with an aerodynamic diameter of less than 2.5 microns (PM_{2.5}), and lead. State governments, in turn, must develop attainment plans to meet these NAAQS by a specific date. As outlined in the California Health and Safety Code (CHSC) §39602, the Air Resources Board (ARB) is designated as the air pollution control agency of the state and is responsible for developing a state implementation plan as required by the FCAA. Areas not meeting the NAAQS, referred to as nonattainment areas, are required to implement specified air pollution control measures. In California, responsibility for air pollution control measures is divided between the ARB and local air districts. A brief description of the applicable titles of the FCAA follows.

Title V

Title V of the FCAA establishes a federal operating permit program for major sources of criteria or hazardous air pollutants to be administered by states. A Title V permit consolidates different FCAA requirements into a single document. Major sources are required to obtain a Title V permit. Facilities can also be required to obtain a Title V permit if they are not otherwise major sources, but are subject to New Source Performance Standards (NSPS – Title I) or National Emission Standards for Hazardous Air Pollutants (NESHAP – Title III). Neither the SWRP nor the VWRP is considered a major source by South Coast Air Quality Management District (SCAQMD) criteria, and Title V permits are not required for any SCVSD facilities at this time.

Title III

Title III of the FCAA directs the EPA to establish technology-based standards for 187 hazardous air pollutants (HAPs) based on the use of maximum achievable control technology (MACT). POTWs that provide treatment for industrial wastewater streams to comply with any industrial MACTs are defined as industrial POTWs. For the most part, MACT emission standards are to be imposed on major sources of HAPs. Under the MACT definition, the SCVSD facilities are considered non-industrial POTWs. The SCVSD facilities are not currently, nor are they expected to be, a major source of HAPs. Therefore, the MACT standard does not apply.

3.6.2 State Regulations

3.6.2.1 California Clean Air Act

The California Clean Air Act (CCAA), which was signed into law in 1988, requires attainment of state ambient air quality standards by the earliest practicable date. The CCAA is generally more stringent than the FCAA. Vehicular sources and consumer products are the primary responsibility of the ARB, while local air districts are primarily responsible for stationary and portable sources (CHSC 39002). The ARB retains oversight authority over the local air districts.

As with the CAA, nonattainment areas that do not meet the NAAQS are required to implement specified air pollution control measures. The CCAA divides nonattainment areas, based on background pollutant levels, into categories with progressively more stringent requirements. Each air district that is located in a nonattainment area is required to submit an air quality management plan (AQMP) to the ARB.

SCVSD facilities are located within the jurisdiction of the SCAQMD, which is classified as a severe nonattainment area for ozone and nonattainment area for PM₁₀ and PM_{2.5}.

3.6.2.2 Greenhouse Gas Legislation

In June 2005, in response to the increasing body of evidence that greenhouse gases (GHGs) will affect the global climate, Governor Schwarzenegger issued executive order (EO S-3-05), which established the following GHG emission reduction targets for California: by 2010, reduce GHG emissions to 2000 levels; by 2020, reduce GHG emissions to 1990 levels; by 2050, reduce GHG emissions to 80 percent below 1990 levels. Subsequent to the Governor's issuance of EO S-3-05, on September 27, 2006, the California State Legislature adopted Assembly Bill (AB) 32, also called the Global Warming Solutions Act of 2006. AB 32 sets forth the regulatory framework to achieve the 2020 reduction in statewide emissions levels called for in EO S-3-05. AB 32 assigns

ARB responsibility for monitoring and reducing GHG emissions as well as preparing a Scoping Plan to identify how best to reach the 2020 limit.

In December 2008, the SCAQMD approved an Interim Guidance Document on how to determine whether a project's GHG emissions are significant for CEQA purposes and included a numeric significance threshold for stationary sources. SCAQMD continues to refine this guidance through a workgroup process. The interim GHG significance threshold is only a recommendation for lead agencies and not a mandatory requirement, although the threshold (10,000 metric tons of CO₂ equivalents per year) will be used by SCAQMD when SCAQMD is the lead agency.

In August 2007, Governor Schwarzenegger signed Senate Bill (SB) 97, which requires the California Office of Planning and Research (OPR) to prepare CEQA guidelines for the mitigation of GHG emissions or the effects of GHG emissions and transmit these Guidelines to the Natural Resources Agency (NRA). On June 19, 2008, OPR released its Technical Advisory on CEQA and Climate Change, which was developed in cooperation with the NRA, the California Environmental Protection Agency (Cal-EPA), and ARB. The Technical Advisory encourages lead agencies to follow three basic steps: (1) identify and quantify the GHGs that could result from a proposed project, (2) analyze the effects of those emissions and determine whether the effect is significant, and (3) if the impact is significant, identify feasible mitigation measures or alternatives that will reduce the impact below a level of significance.

The NRA adopted amendments to the CEQA Guidelines for GHG emissions on January 1, 2010. The amendments encourage lead agencies to consider many factors in performing a CEQA analysis but preserve the discretion granted by CEQA to lead agencies in making their own determinations based on substantial evidence. The amendments also encourage public agencies to make use of programmatic mitigation plans and programs from which to tier when they perform individual project analyses.

3.6.3 Local Regulations

3.6.3.1 South Coast Air Quality Management District

The SCAQMD is responsible for stationary and indirect source control, air monitoring, enforcement of delegated mandates, and attainment plan preparation for Orange County; the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties; and the Riverside County portions of the Salton Sea Air Basin and the Mojave Desert Air Basin. All of the SCVSD facilities are within the jurisdiction of the SCAQMD.

3.6.3.2 Air Quality Management Plan

The FCAA requires that the appropriate air quality authorities prepare air quality plans designed to achieve the federal ambient air quality standards. As mentioned above, the SCAQMD is responsible for preparing an AQMP and submitting that plan to the ARB. The ARB then reviews the AQMP and, following approval, incorporates it into the California State Implementation Plan (SIP), which includes air quality plans prepared by other local air quality control districts. The ARB then forwards the State Implementation Plan to EPA Region IX for approval. Every three years, the SCAQMD updates the AQMP. The final 2012 AQMP was adopted by the SCAQMD Governing Board on December 7, 2012.

3.6.3.3 South Coast Air Quality Management District Permit Rules

The SCAQMD regulates stationary and area-wide sources through a variety of general “prohibitory” rules. These rules limit criteria pollutants irrespective of the source’s size. The rules include source-specific Regulation XI standards, New Source Review (Regulation XIII) that requires best available control technology (BACT) and offsets for new and modified sources, and implementation of federally-delegated rules.

Similarly, the SCAQMD has promulgated technology-based rules to limit emissions of toxic air pollutants from new and existing operations. The rules apply to all permit applications for new or modified facilities and/or equipment. Some of these rules were originated by the SCAQMD and some, such as those addressing diesel particulates, were based on airborne toxic control measures (ATCM) adopted by the ARB.

3.6.3.4 Regulation XIII (New Source Review)

The SCAQMD new source review (NSR) program applies when there is a permitting action resulting in increased emissions of any nonattainment air pollutant, precursors to a nonattainment pollutant, ammonia, or ozone depleting compounds (ODCs) from a new or modified source of emissions. The main elements of NSR are best available control technology (BACT) requirements, modeling, and offsets. Any new or modified facilities where the emissions increase is greater than the offset threshold must obtain offsets by purchasing emission reduction credits or reducing emissions elsewhere at the facility (simultaneous emissions reductions), thereby resulting in no net increase in emissions.

The SCAQMD’s NSR program has been modified several times since it was first adopted in 1976. Generally, each modification has reduced the offset requirement thresholds, which led to a concern that sufficient offsets would not be available to allow the permitting of essential public service projects, such as POTWs and landfills. Consequently, the SCAQMD created a pool of emission offsets known as the Priority Reserve to ensure offset availability for such projects. This pool can be accessed at no charge to satisfy emission offset requirements for essential public service projects. Access to the Priority Reserve does not eliminate the requirement to install BACT.

3.6.3.5 Rule 1401 (New Source Review of Toxic Air Contaminants) and Subsequent Rules

Rule 1401 is the SCAQMD’s NSR program for toxic emissions, while Rule 1402 addresses control of toxic air contaminants from existing sources and implements the state Air Toxics Hot Spot Program. Under Rule 1401, the SCAQMD reviews permit applications for new or modified sources to determine if the facility is required to submit a health risk assessment and to assess whether BACT for Toxics (T-BACT) is required. A permit application will be denied if the cancer burden is greater than 0.5 or if the maximum individual cancer risk (MICR) is greater than 1 in 1 million, or 10 in 1 million for sources that apply T-BACT. Rule 1402 requires facility-wide risk assessments for facilities notified by the SCAQMD, or under the original State Hot Spots program. Based upon the facility-wide MICR, cancer burden, or Hazard Index (HI), a facility may trigger different risk thresholds for public notification (10 in 1 million MICR or HI of 1.0), action level (25 in 1 million MICR, 0.5 cancer burden, or HI of 3.0), or significant risk (100 in 1 million MICR or HI of 5.0). The latter two triggers would require the facility to reduce

risk through specified Risk Reduction Plans. Neither SCVSD facility has ever triggered a facility-based public notice threshold or a mandatory risk reduction threshold.

As a result of increased concern over environmental justice and impacts to sensitive receptors, a more restrictive toxic emissions NSR rule, Rule 1401.1, was adopted to cap risk from new or relocated facilities locating near schools.

3.6.3.6 Regulation XXVII (Climate Change)

This SCAQMD climate change regulation, developed in response to AB 32, establishes the Southern California Climate Solutions Exchange Program. Through this program, entities can purchase carbon reductions from the exchange to mitigate emissions from new projects. Participation in the program is voluntary.

3.7 REGULATIONS GOVERNING BIOSOLIDS MANAGEMENT

All solids generated within the SCVSD are processed onsite at the VWRP. The disposal of solids and beneficial reuse of biosolids are subject to federal and state regulations. Depending upon the type and level of treatment provided, solids/biosolids are placed into different classifications, which determine allowable application of these materials.

3.7.1 Federal Regulations

The EPA promulgated Standards for the Use or Disposal of Sewage Sludge, Title 40 of the Code of Federal Regulations, Part 503 (Part 503) in 1993. Part 503 is a comprehensive, risk-based regulation that protects human health and the environment from pollutants of concern that can be present in biosolids. Biosolids are sewage sludges/solids that have been treated/stabilized to a degree suitable for beneficial reuse. Part 503 specifies general requirements, pollutant limits, management practices, and operational standards for various biosolids management options such as land application, surface disposal, and incineration. It provides the basis for classifying biosolids as Class A or Class B depending on the level of pathogen reduction, the degree of vector attraction reduction, and the concentration of regulated pollutants in the biosolids. Both Class A and Class B biosolids are both protective of public health and the environment.

All wastewater treatment plant solids produced in the SCVSD are processed at the VWRP, which produces Class B biosolids. Class B biosolids meet the pathogen and vector attraction reduction requirements of Part 503 and do not exceed the pollutant ceiling concentrations listed in Table 3-5. Class B biosolids may be applied in bulk to agricultural land, forest, public contact sites (e.g., public parks, ball fields, cemeteries, etc.) or a reclamation site provided either the cumulative loading rates or the pollutant concentrations listed in Table 3-7 are not exceeded and the applicable Part 503 site restrictions are maintained.

3.7.2 State Regulations

The SWRCB enacted State Water Quality Order No. 2000-10-DWQ in August 2000, which was later replaced by State Water Quality Order No. 2004-0012-DWQ to establish general WDRs for the reuse of biosolids. Table 3-8 lists pollutant limits for biosolids. The land application

requirements are more restrictive than those contained in Part 503 and are designed to account for conditions specific to California soils and local environments through the issuance and oversight of General Order Permits.

3.8 REGULATIONS GOVERNING HAZARDOUS MATERIALS

The EPA is the principal federal agency regulating hazardous materials. As such, the EPA broadly defines a hazardous waste as one that is specifically listed in EPA regulations; that has been tested and meets one of the characteristics (e.g., toxicity) established by the EPA; or that has been declared hazardous by the generator based on its knowledge of the waste.

Cal-EPA has been granted primary responsibility by the EPA for administering and enforcing hazardous materials management plans. Cal-EPA defines a hazardous material more generally as a material that, because of its quantity, concentration, physical characteristics or chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released (26 CCR 25501). Note that hazardous materials include chemicals used in the operation of a typical POTW.

Table 3-8. Pollutant Limits for Biosolids

Constituent	Ceiling Concentration ^a (mg/kg)	Pollutant Concentration ^a (mg/kg)	Cumulative Loading Rate (kg/ha)
Arsenic	75	41	41
Cadmium	85	39	39
Copper	4,300	1,500	1,500
Lead	840	300	300
Mercury	57	17	17
Molybdenum	75	–	–
Nickel	420	420	420
Selenium	100	100	100
Zinc	7,500	2,800	2,800

mg/kg = milligrams per kilogram

kg/ha = kilogram per hectare

^a Dry weight basis.

Source: EPA, 40 CFR 503 – Standards for the Use or Disposal of Sewage Sludge 1997.

3.9 REGULATIONS GOVERNING ENVIRONMENTAL IMPACTS

3.9.1 Federal Regulations

3.9.1.1 National Environmental Policy Act

The National Environmental Policy Act (NEPA), enacted in 1970, came in response to a national sentiment that federal agencies should take more direct responsibility in providing greater protection for the environment. NEPA is the nation's basic charter for the protection of the environment. It establishes environmental policy for the nation, provides an interdisciplinary

framework for federal agencies to prevent environmental damage, and contains procedures to ensure that federal agency decision makers take environmental factors into account (Bass, Herson, and Bogdan 1996).

Because there are no proposed federal actions under this Facilities Plan, no federal lead agency is required.

3.9.2 State Regulations

3.9.2.1 California Environmental Quality Act

The California Environmental Quality Act (CEQA), enacted in 1970, was modeled after NEPA. CEQA applies to all proposed discretionary activities that will be carried out or approved by California public agencies, such as the Sanitation Districts, unless such activities are specifically exempted. Under CEQA, the “Lead Agency” is the agency with the principal responsibility to approve a project and therefore is the agency responsible for preparing a CEQA document for a proposed project. For the Facilities Plan, the SCVSD will serve as the CEQA Lead Agency.

The purpose of CEQA is to minimize environmental damage. Key objectives of CEQA are to disclose to decision makers and the public the significant environmental effects of the proposed project to enable them to understand the environmental consequences of a project and to balance the benefits of a project against the environmental costs. Major elements of CEQA include (1) disclosing environmental impacts, (2) identifying and preventing environmental damage, (3) fostering intergovernmental coordination, (4) enhancing public participation, and (5) disclosing agency decision making (Bass, Herson, and Bogdan 1996).

3.10 REGULATIONS GOVERNING ENDANGERED SPECIES

3.10.1 Federal Regulations

3.10.1.1 The Federal Endangered Species Act

The Federal Endangered Species Act (FESA) regulates the take of species listed as threatened or endangered. Take is broadly defined as “to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct.”

Federal Endangered Species Act §7

§7 of the FESA applies when a project involves a federal action such as issuing a federal permit or federal funding. §7 requires the federal agency to consult with the USFWS regarding the potential effect of the agency’s action on species listed as threatened or endangered.

§7 compliance applies to agencies applying for SRF loans because some of the funding is from federal sources. This consultation typically results in preparation of a biological opinion that specifies whether the proposed action is likely to jeopardize the continued existence of the listed species or result in the adverse modification of critical habitat. The biological opinion may include an “incidental take” statement if the proposed action would result in the take of a listed species incidental to the federal action.

Federal Endangered Species Act §9

§9 of FESA prohibits all persons subject to the jurisdiction of the United States from taking, importing, exporting, transporting, or selling any species of fish or wildlife listed as endangered or threatened.

Federal Endangered Species Act §10

Although §9 prohibits the take of a federally listed species, §10 of FESA is the mechanism that may allow an incidental take of such species. The USFWS may issue a take permit for any taking that is incidental to, and not for the purpose of, carrying out an otherwise lawful activity. Along with the application for an incidental take permit, the applicant must submit a conservation plan that specifies likely impacts that would result from the take, mitigation measures to minimize those impacts, funding for the mitigation, and a project alternatives analysis.

3.10.2 State Regulations

3.10.2.1 The California Endangered Species Act

Under the California Endangered Species Act (Cal-ESA), all state Lead Agencies (as defined by CEQA) preparing Initial Studies, Negative Declarations, or environmental impact reports (EIRs) must consult with the California Department of Fish and Wildlife (CDFW) to ensure that any action authorized, funded, or carried out by that Lead Agency is not likely to jeopardize the continued existence of any endangered or threatened species. This Cal-ESA consultation requirement does not apply to local Lead Agencies, such as the SCVSD.

The Cal-ESA prohibits any party from importing into the state, exporting out of the state, or taking, possessing, purchasing, or selling within the state any part or product of any endangered or threatened species (except as provided in the Native Plant Protection Act or California Desert Native Plants Act). Through §2081 of the Cal-ESA, CDFW may enter into a management agreement with the project applicant to allow for an incidental take (similar to the USFWS mechanism under §10 of FESA).

3.10.2.2 California Fish and Game Code

The California Fish and Game Code (§§1601-1616) applies to any state or local government agency or any public utility that proposes to “substantially divert or obstruct the natural flow of, or substantially change or use any material from the bed, channel, or bank of, any river, stream, or lake, or deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake.” Any agency proposing such actions must apply with the CDFW for a Streambed Alteration Agreement (SAA), which is negotiated between CDFW and the applicant. The agreement may contain mitigation measures to reduce the effect of the activity on fish and wildlife resources. The agreement may also include monitoring to assess the effectiveness of the proposed mitigations.

3.10.3 Local Regulations

3.10.3.1 Significant Ecological Areas

Significant ecological areas (SEAs) were developed by the Los Angeles County Department of Regional Planning (DRP) as a way to protect biotic diversity including habitat for endangered species. Although SEAs do not preclude development or construction, they promote open space conservation. SEAs require another level of scrutiny in the CEQA review process by the Significant Ecological Areas Technical Advisory Committee (SEATAC). SEATAC reviews proposed projects to ensure consistency with SEA-recommended management practices before a SEA conditional use permit (CUP) can be issued and the project can be approved.

3.11 REGULATIONS GOVERNING CULTURAL RESOURCES

3.11.1 Federal Regulations

3.11.1.1 National Historic Preservation Act

A programmatic agreement between the SWRCB and the State Historic Preservation Officer (SHPO) requires that projects receiving federal funds administered by the SWRCB (such as SRF loan funding) comply with §106 of the National Historic Preservation Act (NHPA). Because the SCVSD intends to finance the Facilities Plan projects with SRF loan funds, compliance with §106 of the NHPA will be required.

The §106 review process uses a five-step procedure including: (1) the identification and evaluation of historic properties, (2) an assessment of the project's effects on properties that are eligible for listing on the National Register of Historic Places, (3) a consultation with the SHPO and other relevant agencies and, potentially, the development of an agreement that addresses the treatment of historic properties, (4) the receipt of comments on the agreement or consultation results from the Advisory Council on Historic Preservation, and (5) project implementation subject to conditions imposed by the consultation and any agreement.

3.11.2 State Regulations

The state requirements for cultural resources are outlined in §§5020, 5020.4, 5020.7, 5024.1, 5024.5, 5024.6, 21084, and 21084.1 of the California Public Resources Code (CPRC). In general, compliance with the requirements of §106 of the NHPA is sufficient to ensure compliance with CEQA.

Other state requirements outlined in §§7050.5-7055 of the CHSC and §5097 of the CPRC provide for the protection of Native American remains and identify special procedures to be followed when Native American burial sites are found. Compliance with the provisions of these laws is separate from the requirements of CEQA and NHPA.

3.12 OTHER APPLICABLE LAWS AND REGULATIONS

3.12.1 Federal Regulations

3.12.1.1 State Revolving Fund

Because a portion of the funding for the SRF program comes from federal sources, projects receiving SRF funds must meet a variety of federal requirements including compliance with the FESA, NHPA, and the following executive orders.

Executive Order 11988

This executive order relating to floodplain management was prepared in 1979 to avoid, to the extent possible, long- and short-term adverse impacts associated with the occupation and modification of floodplains and to avoid direct or indirect support of development in floodplains. This order requires that the agency reviewing the proposed action consider alternatives to avoid adverse effects and incompatible development in floodplains. If the only practicable alternative is to site a project in the floodplain and the reviewing agency concurs, then the action must be designed or modified to minimize potential harm to the floodplain. Further, a notice containing an explanation of why the action is proposed to be located in the floodplain must be prepared and circulated.

Executive Order 11990

This executive order was prepared to provide assistance for new construction located in wetlands if no practicable alternative exists, and to minimize the harm to wetlands that may result from the proposed use. The order requires early public review of any plans or proposals for new construction in wetlands and notification of the federal Office of Management and Budget regarding compliance with the order. The order establishes several factors that should be considered during evaluation of project effects on the survival and quality of wetlands including public health and welfare, maintenance of natural systems, and other uses of wetlands in the public interest.

Executive Order 11593

This executive order provides for the protection and enhancement of the cultural environment. Compliance with §106 of NHPA and with CEQA fulfills the requirements of this order.

Executive Order 12898

This executive order effectively expands the scope of complaints that may be filed with EPA under Title VI of the Civil Rights Act of 1964 to include issues of environmental justice. Environmental justice complaints typically allege that facilities generating adverse impacts associated with pollution and/or potential pollution are systemically sited in and/or permitted to operate in minority communities. Disproportionate adverse impacts on minority communities associated with pollution generated by facilities may constitute discrimination. Executive Order 12898 directs the EPA to address environmental justice concerns through the permitting process and applies to the permitting decisions of all agencies that receive or act as a conduit for federal monies.

The EPA's Title VI regulations apply to all programs and activities carried out by departments or agencies that receive EPA funding either directly or indirectly. The SWRCB administers a number of funding programs, including SRF, which are partially funded by federal monies. The SWRCB has delegated permitting authority to the local RWQCBs, including the RWQCB-LA. Accordingly, all of the permitting decisions of the RWQCB-LA, including the issuance, modification, or renewal of the WDRs for the SCVSD facilities, are subject to the mandates of Executive Order 12898 and the EPA guidelines implementing that order.

3.12.2 State Regulations

3.12.2.1 Worker Safety

Worker safety laws protect public health in the workplace. These laws are administered and enforced by the California Occupational Safety and Health Administration (Cal-OSHA). The laws apply to normal operational activities (including all provisions for standard injury and illness prevention), construction requirements, and requirements for chemical handling and infection and disease prevention.

3.12.3 Local Regulations

3.12.3.1 Construction Storm Water Program

For construction projects disturbing one or more acres of soil, a Notice of Intent (NOI) package must be submitted to the SWRCB to obtain coverage under the General Permit for Discharges of Storm Water Associated with Construction Activity (General Permit). The General Permit requires the development and implementation of a storm water pollution prevention plan (SWPPP). The major objectives of an SWPPP are to help identify sources of sediment and other pollutants that affect the quality of storm water discharges and to describe and ensure implementation of best management practices (BMPs). The SWPPP emphasizes the use of appropriately installed and maintained storm water pollution reduction BMPs.

Required elements of an SWPPP include:

- Site description addressing the elements and characteristics specific to the site
- Descriptions of BMPs for erosion and sediment controls
- BMPs for construction waste handling and disposal
- Implementation of approved local plans
- Proposed post-construction controls, including description of local post-construction erosion and sediment control requirements
- Non-storm water management

Proposition 218: Text of Proposed Law

This initiative measure is submitted to the people in accordance with the provisions of Article II, Section 8 of the Constitution.

This initiative measure expressly amends the Constitution by adding articles thereto; therefore, new provisions proposed to be added are printed in *italic type* to indicate that they are new.

PROPOSED ADDITION OF ARTICLE XIII C AND ARTICLE XIII D

RIGHT TO VOTE ON TAXES ACT

SECTION 1. TITLE. This act shall be known and may be cited as the "Right to Vote on Taxes Act."

SECTION 2. FINDINGS AND DECLARATIONS. The people of the State of California hereby find and declare that Proposition 13 was intended to provide effective tax relief and to require voter approval of tax increases. However, local governments have subjected taxpayers to excessive tax, assessment, fee and charge increases that not only frustrate the purposes of voter approval for tax increases, but also threaten the economic security of all Californians and the California economy itself. This measure protects taxpayers by limiting the methods by which local governments exact revenue from taxpayers without their consent.

SECTION 3. VOTER APPROVAL FOR LOCAL TAX LEVIES.

Article XIII C is added to the California Constitution to read:

ARTICLE XIII C

SECTION 1. Definitions. As used in this article:

- (a) "General tax" means any tax imposed for general governmental purposes.*
- (b) "Local government" means any county, city, city and county, including a charter city or county, any special district, or any other local or regional governmental entity.*
- (c) "Special district" means an agency of the state, formed pursuant to general law or a special act, for the local performance of governmental or proprietary functions with limited geographic boundaries including, but not limited to, school districts and redevelopment agencies.*
- (d) "Special tax" means any tax imposed for specific purposes, including a tax imposed for specific purposes, which is placed into a general fund.*

SEC. 2. Local Government Tax Limitation. Notwithstanding any other provision of this Constitution:

(a) *All taxes imposed by any local government shall be deemed to be either general taxes or special taxes. Special purpose districts or agencies, including school districts, shall have no power to levy general taxes.*

(b) *No local government may impose, extend, or increase any general tax unless and until that tax is submitted to the electorate and approved by a majority vote. A general tax shall not be deemed to have been increased if it is imposed at a rate not higher than the maximum rate so approved. The election required by this subdivision shall be consolidated with a regularly scheduled general election for members of the governing body of the local government, except in cases of emergency declared by a unanimous vote of the governing body.*

(c) *Any general tax imposed, extended, or increased, without voter approval, by any local government on or after January 1, 1995, and prior to the effective date of this article, shall continue to be imposed only if approved by a majority vote of the voters voting in an election on the issue of the imposition, which election shall be held within two years of the effective date of this article and in compliance with subdivision (b).*

(d) *No local government may impose, extend, or increase any special tax unless and until that tax is submitted to the electorate and approved by a two-thirds vote. A special tax shall not be deemed to have been increased if it is imposed at a rate not higher than the maximum rate so approved.*

SEC. 3. Initiative Power for Local Taxes, Assessments, Fees and Charges. Notwithstanding any other provision of this Constitution, including, but not limited to, Sections 8 and 9 of Article II, the initiative power shall not be prohibited or otherwise limited in matters of reducing or repealing any local tax, assessment, fee or charge. The power of initiative to affect local taxes, assessments, fees and charges shall be applicable to all local governments and neither the Legislature nor any local government charter shall impose a signature requirement higher than that applicable to statewide statutory initiatives.

SECTION 4. ASSESSMENT AND PROPERTY RELATED FEE REFORM.

Article XIII D is added to the California Constitution to read:

ARTICLE XIII D

SECTION 1. Application. Notwithstanding any other provision of law, the provisions of this article shall apply to all assessments, fees and charges, whether imposed pursuant to state statute or local government charter authority. Nothing in this article or Article XIII C shall be construed to:

(a) *Provide any new authority to any agency to impose a tax, assessment, fee, or charge.*

(b) *Affect existing laws relating to the imposition of fees or charges as a condition of property development.*

(c) *Affect existing laws relating to the imposition of timber yield taxes.*

SEC. 2. Definitions. As used in this article:

(a) *"Agency" means any local government as defined in subdivision (b) of Section 1 of Article XIII C.*

(b) *"Assessment" means any levy or charge upon real property by an agency for a special benefit conferred upon the real property. "Assessment" includes, but is not limited to, "special assessment," "benefit assessment," "maintenance assessment" and "special assessment tax."*

(c) "Capital cost" means the cost of acquisition, installation, construction, reconstruction, or replacement of a permanent public improvement by an agency.

(d) "District" means an area determined by an agency to contain all parcels which will receive a special benefit from a proposed public improvement or property-related service.

(e) "Fee" or "charge" means any levy other than an ad valorem tax, a special tax, or an assessment, imposed by an agency upon a parcel or upon a person as an incident of property ownership, including a user fee or charge for a property related service.

(f) "Maintenance and operation expenses" means the cost of rent, repair, replacement, rehabilitation, fuel, power, electrical current, care, and supervision necessary to properly operate and maintain a permanent public improvement.

(g) "Property ownership" shall be deemed to include tenancies of real property where tenants are directly liable to pay the assessment, fee, or charge in question.

(h) "Property-related service" means a public service having a direct relationship to property ownership.

(i) "Special benefit" means a particular and distinct benefit over and above general benefits conferred on real property located in the district or to the public at large. General enhancement of property value does not constitute "special benefit."

SEC. 3. Property Taxes, Assessments, Fees and Charges Limited. (a) No tax, assessment, fee, or charge shall be assessed by any agency upon any parcel of property or upon any person as an incident of property ownership except:

(1) The ad valorem property tax imposed pursuant to Article XIII and Article XIII A.

(2) Any special tax receiving a two-thirds vote pursuant to Section 4 of Article XIII A.

(3) Assessments as provided by this article.

(4) Fees or charges for property related services as provided by this article.

(b) For purposes of this article, fees for the provision of electrical or gas service shall not be deemed charges or fees imposed as an incident of property ownership.

SEC. 4. Procedures and Requirements for All Assessments. (a) An agency which proposes to levy an assessment shall identify all parcels which will have a special benefit conferred upon them and upon which an assessment will be imposed. The proportionate special benefit derived by each identified parcel shall be determined in relationship to the entirety of the capital cost of a public improvement, the maintenance and operation expenses of a public improvement, or the cost of the property related service being provided. No assessment shall be imposed on any parcel which exceeds the reasonable cost of the proportional special benefit conferred on that parcel. Only special benefits are assessable, and an agency shall separate the general benefits from the special benefits conferred on a parcel. Parcels within a district that are owned or used by any agency, the State of California or the United States shall not be exempt from assessment unless the agency can demonstrate by clear and convincing evidence that those publicly owned parcels in fact receive no special benefit.

(b) All assessments shall be supported by a detailed engineer's report prepared by a registered professional engineer certified by the State of California.

(c) The amount of the proposed assessment for each identified parcel shall be calculated and the record owner of each parcel shall be given written notice by mail of the proposed assessment, the total amount thereof chargeable to the entire district, the amount chargeable to the owner's particular parcel, the duration of the payments, the reason for the assessment and the basis upon which the amount of the proposed assessment was calculated, together with the date, time, and location of a public hearing on the proposed assessment. Each notice

shall also include, in a conspicuous place thereon, a summary of the procedures applicable to the completion, return, and tabulation of the ballots required pursuant to subdivision (d), including a disclosure statement that the existence of a majority protest, as defined in subdivision (e), will result in the assessment not being imposed.

(d) Each notice mailed to owners of identified parcels within the district pursuant to subdivision (c) shall contain a ballot which includes the agency's address for receipt of the ballot once completed by any owner receiving the notice whereby the owner may indicate his or her name, reasonable identification of the parcel, and his or her support or opposition to the proposed assessment.

(e) The agency shall conduct a public hearing upon the proposed assessment not less than 45 days after mailing the notice of the proposed assessment to record owners of each identified parcel. At the public hearing, the agency shall consider all protests against the proposed assessment and tabulate the ballots. The agency shall not impose an assessment if there is a majority protest. A majority protest exists if, upon the conclusion of the hearing, ballots submitted in opposition to the assessment exceed the ballots submitted in favor of the assessment. In tabulating the ballots, the ballots shall be weighted according to the proportional financial obligation of the affected property.

(f) In any legal action contesting the validity of any assessment, the burden shall be on the agency to demonstrate that the property or properties in question receive a special benefit over and above the benefits conferred on the public at large and that the amount of any contested assessment is proportional to, and no greater than, the benefits conferred on the property or properties in question.

(g) Because only special benefits are assessable, electors residing within the district who do not own property within the district shall not be deemed under this Constitution to have been deprived of the right to vote for any assessment. If a court determines that the Constitution of the United States or other federal law requires otherwise, the assessment shall not be imposed unless approved by a two-thirds vote of the electorate in the district in addition to being approved by the property owners as required by subdivision (e).

SEC. 5. Effective Date. Pursuant to subdivision (a) of Section 10 of Article II, the provisions of this article shall become effective the day after the election unless otherwise provided.

Beginning July 1, 1997, all existing, new, or increased assessments shall comply with this article. Notwithstanding the foregoing, the following assessments existing on the effective date of this article shall be exempt from the procedures and approval process set forth in Section 4:

(a) Any assessment imposed exclusively to finance the capital costs or maintenance and operation expenses for sidewalks, streets, sewers, water, flood control, drainage systems or vector control. Subsequent increases in such assessments shall be subject to the procedures and approval process set forth in Section 4.

(b) Any assessment imposed pursuant to a petition signed by the persons owning all of the parcels subject to the assessment at the time the assessment is initially imposed. Subsequent increases in such assessments shall be subject to the procedures and approval process set forth in Section 4.

(c) Any assessment the proceeds of which are exclusively used to repay bonded indebtedness of which the failure to pay would violate the Contract Impairment Clause of the Constitution of the United States.

(d) Any assessment which previously received majority voter approval from the voters voting in an election on the issue of the assessment. Subsequent increases in those assessments shall

be subject to the procedures and approval process set forth in Section 4.

SEC. 6. Property Related Fees and Charges. (a) Procedures for New or Increased Fees and Charges. An agency shall follow the procedures pursuant to this section in imposing or increasing any fee or charge as defined pursuant to this article, including, but not limited to, the following:

(1) The parcels upon which a fee or charge is proposed for imposition shall be identified. The amount of the fee or charge proposed to be imposed upon each parcel shall be calculated. The agency shall provide written notice by mail of the proposed fee or charge to the record owner of each identified parcel upon which the fee or charge is proposed for imposition, the amount of the fee or charge proposed to be imposed upon each, the basis upon which the amount of the proposed fee or charge was calculated, the reason for the fee or charge, together with the date, time, and location of a public hearing on the proposed fee or charge.

(2) The agency shall conduct a public hearing upon the proposed fee or charge not less than 45 days after mailing the notice of the proposed fee or charge to the record owners of each identified parcel upon which the fee or charge is proposed for imposition. At the public hearing, the agency shall consider all protests against the proposed fee or charge. If written protests against the proposed fee or charge are presented by a majority of owners of the identified parcels, the agency shall not impose the fee or charge.

(b) Requirements for Existing, New or Increased Fees and Charges. A fee or charge shall not be extended, imposed, or increased by any agency unless it meets all of the following requirements:

(1) Revenues derived from the fee or charge shall not exceed the funds required to provide the property related service.

(2) Revenues derived from the fee or charge shall not be used for any purpose other than that for which the fee or charge was imposed.

(3) The amount of a fee or charge imposed upon any parcel or person as an incident of property ownership shall not exceed the proportional cost of the service attributable to the parcel.

(4) No fee or charge may be imposed for a service unless that service is actually used by, or immediately available to, the owner of the property in question. Fees or charges based on potential or future use of a service are not permitted. Standby charges, whether characterized as charges or assessments, shall be classified as assessments and shall not be imposed without compliance with Section 4.

(5) No fee or charge may be imposed for general governmental services including, but not limited to, police, fire, ambulance or library services, where the service is available to the public at large in substantially the same manner as it is to property owners. Reliance by an agency on any parcel map, including, but not limited to, an assessor's parcel map, may be considered a significant factor in determining whether a fee or charge is imposed as an incident of property ownership for purposes of this article. In any legal action contesting the validity of a fee or charge, the burden shall be on the agency to demonstrate compliance with this article.

(c) Voter Approval for New or Increased Fees and Charges. Except for fees or charges for sewer, water, and refuse collection services, no property related fee or charge shall be imposed or increased unless and until that fee or charge is submitted and approved by a majority vote of the property owners of the property subject to the fee or charge or, at the option of the agency, by a two-thirds vote of the electorate residing in the affected area. The election shall be conducted not less than 45 days after the public hearing. An agency may adopt procedures

similar to those for increases in assessments in the conduct of elections under this subdivision.

(d) Beginning July 1, 1997, all fees or charges shall comply with this section.

SECTION 5. LIBERAL CONSTRUCTION. The provisions of this act shall be liberally construed to effectuate its purposes of limiting local government revenue and enhancing taxpayer consent.

SECTION 6. SEVERABILITY. If any provision of this act, or part thereof, is for any reason held to be invalid or unconstitutional, the remaining sections shall not be affected, but shall remain in full force and effect, and to this end the provisions of this act are severable.

Legislative Analyst's Office, December 1996

Understanding Proposition 218

Table of Contents

- Introduction
- Chapter 1: How Proposition 218 Changes Local Finance and Governance
- Chapter 2: Understanding the Vocabulary of Proposition 218
- Chapter 3: Are Existing Revenues Affected by Proposition 218?
- Chapter 4: What Must a Local Government Do to Raise New Revenues?
- Chapter 5: May Residents Overturn Local Taxes, Assessments, and Fees?
- Appendix I: Areas in Which Legislative or Judicial Clarification May Be Needed
- Appendix II: Text of Proposition 218

Introduction

Proposition 218 significantly changes local government finance. This constitutional initiative--approved by the state's voters in November 1996--applies to each of California's nearly 7,000 cities, counties, special districts, schools, community college districts, redevelopment agencies, and regional organizations.

The purpose of this guide is to help the Legislature, local officials, and other parties understand Proposition 218, including the actions local governments must take to implement it. The guide includes five chapters:

- How Proposition 218 Changes Local Finance and Governance.
- Understanding the Vocabulary of Proposition 218.
- Are Existing Revenues Affected by Proposition 218?
- What Must a Local Government do to Raise New Revenues?
- May Residents Overturn Local Taxes, Assessments, and Fees?

Finally, the appendix to this guide summarizes major areas of uncertainty pertaining to Proposition 218 (some of which the Legislature may wish to address), and includes the text of Proposition 218 (now Article XIII C and D of the California Constitution).

2167

Chapter 1

How Proposition 218 Changes Local Finance and Governance

Nearly two decades ago, Proposition 13 sharply constrained local governments' ability to raise property taxes, the mainstay of local government finance. Proposition 13 also specified that any local tax imposed to pay for specific governmental programs--a "special tax"--must be approved by two-thirds of the voters.

Since that time, many local governments have relied increasingly upon *other* revenue tools to finance local services, most notably: assessments, property-related fees, and a variety of small general purpose taxes (such as hotel, business license, and utility user taxes). It is the use of *these* local revenue tools that is the focus of Proposition 218.

In general, the intent of Proposition 218 is to ensure that all taxes and most charges on property owners are subject to voter approval. In addition, Proposition 218 seeks to curb some perceived abuses in the use of assessments and property-related fees, specifically the use of these revenue-raising tools to pay for general governmental services rather than property-related services.

In this chapter, we provide an overview and perspective on the impact of Proposition 218 on local finance and governance.

Proposition 218 Changes Local Government Finance

Proposition 218 makes several important changes regarding local government finance. Figure 1 summarizes our observations regarding their fiscal impact.

Figure 1	
Proposition 218's Impact on Local Finance	
◆	The measure's fiscal impact cannot be fully ascertained until the uncertainty regarding some of its provisions are resolved.
◆	Most local revenues are not affected.
◆	The impact on certain local governments could be substantial.
◆	Local government revenue reductions will begin in 1997.
◆	In the long term, local government revenues are likely to be somewhat lower and come from different sources.

Some Uncertainty Regarding Proposition 218's Provisions

Proposition 218's requirements span a large spectrum, including local initiatives, water standby charges, legal standards of proof, election procedures, and the calculation and use of sewer assessment revenues. Although the measure is quite detailed in many respects, some important provisions are not completely clear.

In this guide, we provide our interpretation of the measure's requirements. This interpretation is based

on our extensive review of the measure, as well as consultations with the measure's drafters, local government officials, and legal counsel. In some cases, however, we are not able to fully ascertain the meaning or scope of a Proposition 218 requirement. We believe our uncertainty--frequently shared by other analysts of the measure--will be resolved only when the Legislature enacts implementing statutes or court rulings become available.

Accordingly, throughout this guide we discuss Proposition 218 as we understand it. Where other parties have different opinions or the measure's requirements are not clear, we provide this information. Finally, we provide in Appendix I a summary of the areas in which clarifying legislative or judicial action may be necessary.

Most Local Revenues Are Not Affected

California local governments raise more than \$50 billion annually from taxes, assessments, and fees. As Figure 2 shows, most of these local revenues are *not* affected directly by Proposition 218. Instead, Proposition 218's provisions apply to a relatively small subset of local government revenues.

Figure 2	
Which Local Revenues Are Affected by Proposition 218?	
Affected	Not Directly Affected
Taxes	
New and some recently imposed "general" taxes.	Property taxes. Bradley-Burns sales taxes. Special taxes. Vehicle license taxes. Redevelopment revenues. Mello-Roos taxes. Timber taxes.
Assessments	
All new or increased assessments. Some existing assessments.	Most existing assessments.
Fees	
Property-related fees. (Fees imposed as an "incident of property ownership," not including gas, electric, or developer fees.)	Fees that are <i>not</i> property-related. Gas and electric fees. Developer fees.

Given the relatively small number and dollar value of local revenue sources that are affected by Proposition 218, we think it is highly unlikely that the measure could cause more than a 5 percent annual decrease in *aggregate* local government own-source revenues.

Impact on Certain Local Governments May Be Substantial

The actual impact of Proposition 218 on local public services may be greater than our 5 percent estimate would suggest, however, for a variety of reasons. First, some governments are highly reliant upon the types of assessments and fees that would be restricted by this measure. These local governments--typically, small, newly incorporated cities, and library, fire, and park and recreation special districts--may sustain revenue reductions of much more than 5 percent. Some special districts also lack the authority to propose taxes to replace the lost assessment and fee revenues.

Second, many local governments have limited flexibility to reduce programs when revenues decline. Most major county programs, for example, are subject to state and federal mandates and spending requirements. As a result, relatively small revenue losses can trigger significant reductions to the few programs over which the local government has control.

Finally, many local governments will experience both revenue reductions *and* cost increases to comply with Proposition 218. For example, some local governments will lose part of their assessment and fee revenues, and have to pay:

- Assessments charges to other local governments.
- Increased election, property-owner notification, and administrative costs.

These increased costs will increase the fiscal impact of this measure on local government programs.

Fiscal Impact Begins in 1997

The fiscal impact of Proposition 218 will begin almost immediately. Within eight months of Proposition 218's passage, local governments will need to reduce or eliminate certain existing assessments and fees to meet the measure's requirements. (These requirements are discussed in Chapter Three.) We estimate that these actions will reduce local government revenues by at least \$100 million in 1997-98.

Proposition 218 also requires local governments to place before the voters certain existing assessments and taxes. Unless the voters ratify these assessments and taxes, local governments will experience *additional* revenues losses, potentially exceeding \$100 million annually.

Longer Term: Different Revenue Sources, Probably Less Money

Proposition 218 restricts local governments' ability to impose assessments and property-related fees-- and requires elections to approve many local government revenue raising methods. Because of this, it is likely that over the long term local governments will raise fewer revenues from assessments, property-related fees, and some taxes.

Unless these reduced local revenues are replaced with other revenues, local government spending for local public services will decrease accordingly. What other revenues could offset these revenue reductions? It is likely that local governments will pursue one or more of the following sources of potential replacement revenues:

- Redevelopment revenues.
- Developer exactions.
- General taxes imposed on particular groups (such as business license, hotel occupancy, and sporting or entertainment admission taxes).
- Special taxes imposed on properties within small, discrete areas.
- Intergovernmental transfers.
- Non-property related fees.

Limited Ability to Raise Replacement Revenues. Local governments' ability to expand these six other revenue sources is not great. Various legal and practical restrictions limit a major expansion of redevelopment or developer exactions, for example. In addition, many local government observers believe that existing hotel and business taxes are already high and not all parts of the state have major entertainment or sporting centers. (We include these taxes on the above list because these taxes are not paid directly by most voters. Thus, the likelihood of their being approved by a majority of voters may be higher than other general taxes.)

Similarly, while local governments in California have had difficulty securing the requisite two-thirds vote to impose special taxes, it is likely that some additional special taxes will be approved. Special

taxes probably are more likely to be adopted in small, discrete areas of a community where the commonality of interest is high, however, rather than on a community-wide basis. Thus, the likelihood of generating significant revenues from special taxes is not great.

Additional major revenues from the state or federal government also do not appear likely, given the fiscal limitations faced by both these level of governments. (Please see our November 1996 publication, *California's Fiscal Outlook*, for our projections of the state's fiscal condition.)

This leaves the last revenue source on our list: non-property related fees. Ultimately, the ability of local government to expand this revenue source turns on how the term "property-related" fee is defined by the Legislature or courts. If the definition of a property-related fee is broad, then local government's ability to replace revenues lost by Proposition 218 is limited. Conversely, if this definition is narrow, then local government will have greater opportunities to replace lost revenues with expanded non property-related fees. (Even then, however, the state Constitution and statutes do not permit local government to charge fees in excess of costs.)

All in all, our review indicates that most local governments will have some ability to raise revenues to replace some of the funding lost by Proposition 218. This ability, however, is limited. Accordingly, we expect that in the long term, local governments will raise somewhat less revenues than they would have otherwise--and local government revenues will come from somewhat different sources. These revenue reductions will result in lower payments by people and businesses to government--and decreased spending for local public services.

Proposition 218 Changes Local Governance

In addition to changing local finance, Proposition 218 changes the governance roles and responsibilities of local residents and property owners, local government, and potentially, the state. While the full ramifications of these changes will not be known for years to come, some elements are already apparent.

Increased Role for Local Residents And Property Owners

Prior to Proposition 218, the local resident and property owner's role in approving most new local government revenue-raising measures was minimal. Local governments typically raised new funds by imposing new or increased assessments or fees, or in the case of charter cities, general-purpose taxes on utility use, business licences, and hotel occupancy. In most cases, California residents or property owners could object to these taxes or charges at a public hearing or during a statutory protest procedure, but these taxes or charges were not placed on the ballot. In short, locally elected governing bodies held most of the power over local revenue raising.

Proposition 218 shifts most of this power over taxation from locally elected governing boards to residents and property owners. In order to fulfill this considerable responsibility, local residents and property owners will need greater information on local government finances and responsibilities. Even with this information, however, the task of local residents and property owners will be difficult, given the frequently confusing manner in which program responsibilities are shared between state and local government, and among local governments.

Local Government Remains Responsible for Expenditures

Local government's powers, in contrast, become significantly constrained. While locally elected governing boards continue to be fully responsible for decision-making regarding the expenditure of public funds, they now have very little authority to raise funds without a vote of the residents or property owners. In addition, Proposition 218 limits local government's authority to call an election to raise revenues. Specifically, except in cases of emergency, local governments now may hold elections on general taxes only once every two years (consolidated with an election for members of the

governing board.) Moreover, Proposition 218 limits the amount of an assessment or property-related fee that may be put before the property owners for a vote.

State Government Role May Expand

Proposition 218 may also alter the state's role and responsibilities regarding local government in several important ways. First, the Legislature will be asked to play a large role in interpreting Proposition 218's requirements, and helping set the rules regarding local government finance. In some cases, local governments are likely to ask for urgency legislation to enact these measures because the deadline for compliance with some Proposition 218 provisions is July 1, 1997.

Second, the Legislature will probably receive requests for fiscal assistance from local governments. These requests are likely to begin in the spring of 1997, as the fiscal consequences of the assessment and fee restrictions become apparent. Local governments are likely to turn to the state because it has more fiscal flexibility than local government. For example, the Legislature may raise taxes at any time with a two-thirds vote of its members.

Finally, any effort to restructure state-local program responsibilities is now more complicated. Specifically, the Legislature will have less flexibility to realign programs in a manner that increases local government responsibility without providing a direct subvention of state funds. This is because local governments have little or no flexibility to adjust their own revenues.

Chapter 2

Understanding the Vocabulary of Proposition 218

Any discussion of Proposition 218 requires an explanation of several local government finance words and terms. This chapter explains the vocabulary.

What Is a Tax?

Taxes are government's most flexible revenue raising tool. A tax is a charge on an individual or business that pays for governmental services or facilities that benefit the public broadly. There need not be any direct relationship between how much tax a person pays and how much service he or she receives from government. Example of taxes include the property tax, sales tax, business licence tax, hotel occupancy tax, and utility users tax.

Special Tax Versus General Tax

A tax is called a "special" tax if its revenues are used for specific purposes and a "general" tax if its revenues may be used for any governmental purpose. This distinction is important because it determines whether a tax must be approved by a majority vote of the electorate (general tax)--or a two-thirds vote (special tax).

What Is an Assessment?

An assessment is a charge levied on property to pay for a public improvement or service that benefits

property. Assessments are usually collected on the regular property tax bill. They are different, however, from the regular 1 percent property tax and property tax debt overrides in that assessment rates are not based on the value of the property. Assessments are also different from another charge that sometimes is placed on the property tax bill, parcel taxes. Unlike parcel taxes, assessments typically were not voter approved prior to Proposition 218. In addition, assessment rates were linked to the cost of providing a service or improvement, whereas parcel taxes could be set at any amount. Typical assessments include those for flood control improvements, streets, and lighting and landscaping.

What Is a Fee?

A fee is a charge imposed on an individual or business for a service or facility provided directly to an individual or business. Local governments charge fees for a wide range of purposes, from park entry fees to building plan check fees. The amount of the fee may not exceed the cost of government to provide the service.

A New Term: "Property-Related Fee"

Proposition 218 restricts property-related fees, defined as fees imposed "as an incident of property ownership." At this time, there is no consensus as to which fees meet this definition. The drafters of Proposition 218 indicate that it was their intent to include most fees commonly collected on monthly bills to property owners, such as those for water delivery, garbage service, sewer service, and storm water management fees. Other analysts of Proposition 218 contend that fees that vary by level of service (for example, a fee for metered water usage) should not be considered a property-related fee, because it is based on service usage, rather than property ownership. Because Proposition 218 does not restrict nonproperty-related fees, the definition of this term will be an important and sensitive issue for the Legislature and courts.

Overlapping Terms

While the terms tax, assessment, and fee are each legally distinct, in practice they overlap. For example, communities in California may finance streets from taxes, assessments, and/or fees. In addition, local government officials sometimes call a charge one term, when it was legally adopted as another. As a result, the work of sorting out whether a particular charge must comply with Proposition 218's requirements for a tax, assessment, or fee will not always be easy.

Chapter 3

Are Existing Revenues Affected by Proposition 218?

Local governments must bring their existing taxes, assessments and property-related fees into conformity with Proposition 218. The deadline for each of these actions is:

- July 1, 1997--for assessment and property-related fees.
- November 6, 1998--for taxes.

Below, we discuss Proposition 218's requirements regarding *existing* taxes, assessments, and fees. (The requirements for *new* or *increased* revenue raising tools is the topic of the next chapter.) After

each section, we answer some common questions regarding Proposition 218's requirements.

Requirements for Existing Taxes

Proposition 218 does not affect existing special taxes or most general taxes. Proposition 218 affects only those *general* taxes that were imposed in 1995 or 1996 without a vote of the people.

In order to continue such a tax, Proposition 218 requires the governing body to place the tax before the voters by November 6, 1998. Unless the governing body unanimously votes to declare the election an emergency, the tax election must be consolidated with a regularly scheduled election for members of the governing body. The local government may continue an existing tax if it is approved by a majority vote.

Questions

Are general taxes imposed before 1995, without a vote of the people, safe from challenges?

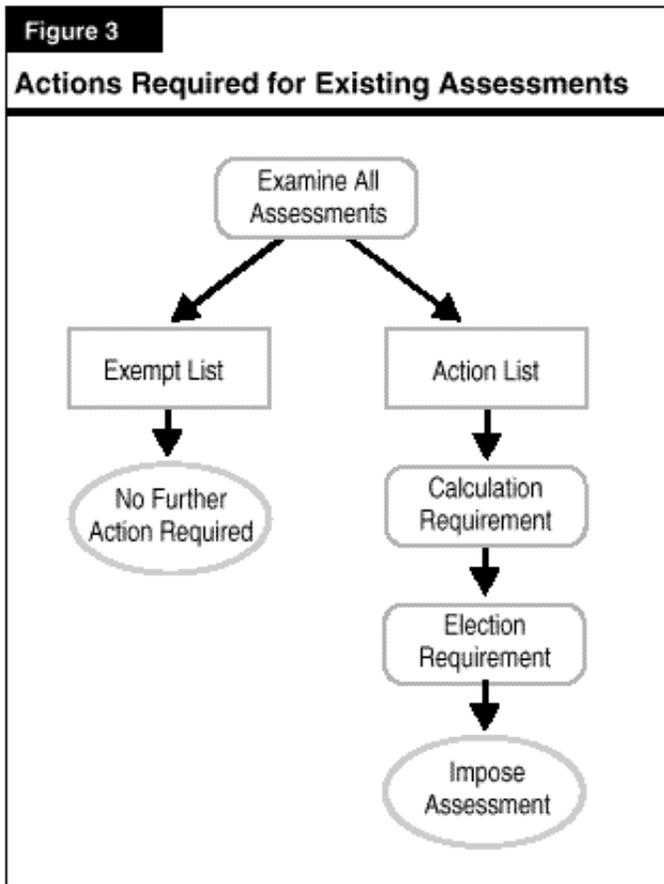

No. Our review indicates that general law cities and counties that imposed general taxes in the early 1990s, without a vote of the people, continue to be vulnerable to a challenge that they did not place their tax on the ballots required by Proposition 62. In 1995, the California Supreme Court reversed earlier lower court decisions and found Proposition 62 to be constitutional.

Are Mello-Roos taxes affected?

No. Mello-Roos taxes are not affected by Proposition 218. Mello-Roos taxes—usually imposed on new subdivisions to pay for infrastructure—are special taxes and already require a two-thirds vote. There are a very limited number of cases, however, where a local government has used Mello-Roos law to impose an *assessment* without a two-thirds vote. We believe local governments must bring these assessments into compliance with Proposition 218's assessments provisions (discussed below).

Requirements for Existing Assessments

Local governments must review all existing assessments, including standby-charges (which the measure defines as assessments). Figure 3 (see next page) shows the actions local governments must take to bring their existing assessments into compliance with Proposition 218.

The Examination Requirement: Many Assessments Will Qualify for Exempt List

Local government must examine each assessment to determine whether it meets one of the conditions for placement on the "exempt list." These conditions are:

- The assessment was previously approved by voters--or by all the property owners at the time the assessment was created.
- All of the assessment proceeds are pledged to bond repayment.
- All the assessment proceeds are used to pay for sidewalks, streets, sewers, water, flood control, drainage systems, or "vector control" (such as mosquito control).

Our review indicates that more than half of all existing assessments are likely to be exempt. Generally, this is because the assessment's funds are used for one of the approved purposes or are pledged to bond repayment--or the assessment was agreed to by a land developer, the sole property owner at the time the assessment was established.

If an assessment is not exempt, then the local government must eliminate the assessment or bring it into compliance with Proposition 218's assessment calculation and election requirements (described below). Our review indicates that the types of assessments that are not likely to satisfy any of the conditions for exemption are: fire, lighting and landscaping, and park and recreation assessments.

The Calculation Requirement: One of Proposition 218's Most Significant Changes

Local governments must recalculate all existing assessments that do not qualify for the exempt list. Our review indicates that in many cases, Proposition 218's provisions regarding the calculation of

assessments will result in local governments lowering the amount they collect in assessments from property owners, or eliminating the assessment. We identify the specific calculation provisions below.

First: Determine If a Project or Service Provides Special Benefits. The local government must determine whether property owners would receive a "special benefit" from the project or service to be financed by the assessment. Proposition 218 defines a special benefit as a particular benefit to land and buildings, not a general benefit to the public or a general increase in property values. If a project or service would not provide such a special benefit, Proposition 218 states that it may not be financed by an assessment. Our review indicates that local governments will find it difficult to demonstrate that some existing assessments for ambulance, library, police, business improvement, and other services satisfy this tightened definition of special benefit. As a consequence, some existing assessments may need to be eliminated.

Second: Estimate the Amount of Special Benefit. Local government must use a professional engineer's report to estimate the *amount* of special benefit landowners would receive from the project or service, as well as the *amount* of "general benefit." This step is needed because Proposition 218 allows local government to recoup from assessments only the proportionate share of cost to provide the special benefit. That is, if special benefits represent 50 percent of total benefits, local government may use assessments to recoup half the project or service's costs. Local governments must use other revenues to pay for any remaining costs. This limitation on the use of assessments represents a major change from the law prior to Proposition 218, when local governments could recoup from assessments the costs of providing both general and special benefits.

Third: Set Assessment Charges Proportionally. Finally, the local government must set individual assessment charges so that no property owner pays more than his or her proportional share of the total cost. This may require the local government to set assessment rates on a parcel-by-parcel basis. Properties owned by schools and other governmental agencies--previously exempt from some assessment charges--now must pay assessments.

Election Requirement: All Property-Owners Vote on Assessments

Local governments must mail information regarding assessments to all property owners. (Prior to Proposition 218, large communities could publish assessment information, rather than mail it to every property owner.) Each assessment notice must contain a mail-in ballot for the property owner to indicate his or her approval or disapproval of the assessment.

After mailing the notices, the local government must hold a public hearing. At the conclusion of the hearing, the local government must tabulate the ballots, weighing them in proportion to the amount of the assessment each property owner would pay. (For example, if homeowner Jones would pay twice as much assessment as homeowner Smith, homeowner Jones' vote would "count" twice as much as homeowner Smith's vote.) The assessment may be imposed only if 50 percent or more of the weighted ballots support the assessment.

Questions

Would part, or all, of an assessment be exempt if most of its proceeds are used for an approved program?

Probably not. Proposition 218 states that an assessment is exempt if its proceeds are used *exclusively* for one or more of seven approved programs. However, the measure does not define what costs may be included under these approved programs. Thus, it is not clear if an assessment that funds streets (an approved program) and curbs or street lighting (not identified as approved programs) is exempt. Legislative action may be needed to clarify this.

Is the difference between "general benefit" and "special benefit" clear?

No. Proposition 218 defines a "special benefit" as a distinct benefit to real property in a specific area. All other benefits—including benefits to people's health, education, or safety, or general enhancements to property values—are considered "general benefits." While these two benefits are distinct in concept, in practice they may be difficult to distinguish. Because of the importance of the term "special benefit," legislative or court action may be needed to clarify its definition.

Do renters get to vote?

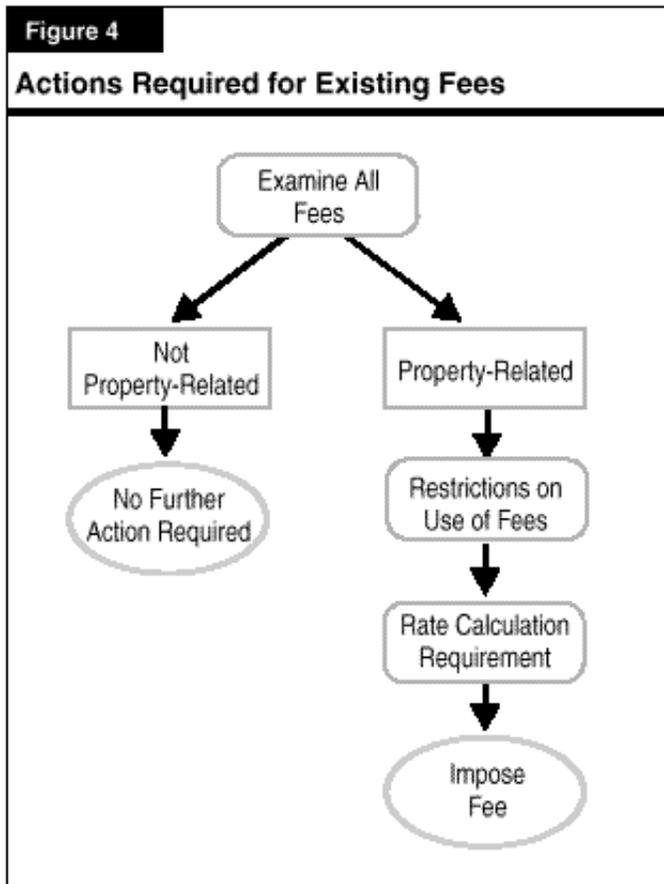

Renters may vote on an assessment if their lease agreement specifies that they are responsible for paying the assessment. This type of provision in a lease agreement is more common for commercial properties than for residential properties.

Who gets to vote when an assessment is to be levied on public property or properties with multiple owners?

This is not addressed in the measure. Thus, it would require clarification.

Requirements for Existing Fees

As with assessments, local governments must complete a multi-step review of all fees. Figure 4 summarizes the process.

Examination Requirement: Identifying Property-Related Fees

Local government must begin by examining all existing fees to determine whether they are "property-related" fees, imposed as an "incident of property ownership." (We discuss this term and the controversy surrounding it in Chapter Two). As Figure 4 shows, if a fee is *not* property-related, then the local government need not take any further action regarding the fee. Conversely, if the fee is property-related, then the local government must make sure that the fee complies with Proposition 218's restrictions on use of fee revenues and the rate calculation requirements. The deadline for these actions is July 1, 1997.

New Restrictions on Use of Fees

Proposition 218 specifies that no property-related fee may be:

- Levied to pay for a general governmental service, such as police or fire service.
- Imposed for a service not used by, or immediately available to, the property owner.
- Used to finance programs unrelated to the property-related service.

In order to comply with these restrictions, local governments will need to eliminate or reduce some existing fees. For example, some small cities currently charge property owners fees for ambulance or fire service. Proposition 218 does not permit governments to impose property-related fees for these purposes.

Similarly, some cities collect "franchise fees" or "in-lieu property taxes" from their water departments and deposit these revenues into their general funds. The cost of these franchise fees and taxes is passed onto local residents in terms of higher water fees. If water fees are considered property-related fees, then Proposition 218 would forbid this diversion of fee revenues. (Some local government

observers believe that this diversion of fee revenues was impermissible *prior* to Proposition 218, as well.)

Possible Local Government Response to Fee Restrictions. In some cases, it may be possible for a local government to restructure a property-related fee so that it would no longer be considered a fee imposed "as an incident of property ownership." For example, a mandatory per parcel garbage collection fee may be considered a property-related fee, while an optional garbage collection service charge may not. Similarly, some local governments may be able to show that their franchise fee or in-lieu property tax represents their water department's reasonable share of central administrative expenses. If so, then Proposition 218 would not prohibit this transfer of revenues from the water department. Finally, some local governments may elect to privatize certain functions formally financed by property-related fees. Proposition 218 imposes no limit on private fees.

Fee Rate Calculation Requirement

After complying with Proposition 218's restrictions on the use of property-related fees, the local government must make sure that its property-related fees comply with the measure's calculation requirements. Specifically, local governments must make sure that no property owner's fee is greater than the proportionate cost to provide the property-related service to his or her parcel. Like assessments, this requirement may result in local governments setting property-related fee rates on a block-by-block, or parcel-by-parcel basis.

This fee rate calculation requirement--sometimes called the "proportionality" requirement--will make it difficult for local government to continue certain programs, such as those that offer reduced rates to low-income residents. This is because local governments typically finance these lower rates by charging higher rates to other property-owners. If these fees are considered property-related fees, the higher rates would not be permitted by Proposition 218. In order to continue these programs in the future, therefore, the local government would need to offset the cost of the program with other revenues, such as general tax revenues.

Question

Are regulatory fees—such as rent control, alarm, and weed abatement fees—considered property-related fees?

This is not clear. Generally, we interpret Proposition 218's term "property-related fees" as including all fees that a property-owner has no feasible way to avoid. That is, a fee is property-related if land could not be owned and used without paying the fee. Accordingly, we do not consider fees for optional activities, such as the registration of alarm systems or the removal of weeds from neglected parcels, to be property-related. Rent control administrative fees are a closer call. Generally, we think these fees would be considered property-related if there were no practical way that the owner could avoid the fee, short of selling the property or fundamentally changing its use. Clearly, the definition of property-related fees will be a sensitive and important issue for the Legislature and courts.

Chapter 4

What Must a Local Government Do to Raise New Revenues?

In order to raise a new tax, assessment, or property-related fee, or to increase an existing one, local governments must comply with many of the same provisions discussed in the previous chapter. In general, these requirements are that local governments may use assessments and property-related fees only to finance projects and services that directly benefit property--and that most revenue-raising measures be approved in an election. Figure 5 summarizes the vote required in these elections.

Figure 5			
New or Increased Taxes, Assessment, and Fees			
What Vote is Needed?			
Type	Vote Needed	Who Votes	Vote Requirement
Taxes			
General	Yes	All voters in community or affected area.	Majority
Special	Yes	All voters in community or affected area.	Two-thirds
Assessments			
All	Yes	Property owners (and renters responsible for paying assessments) in affected area.	Majority, weighted in proportion to assessment liability.
Fees			
General, not property related	No	N/A	N/A
Property related	Yes, for any service other than water, sewer, or refuse collection.	Local government may choose: + Property owners (and renters responsible for paying fee) in affected area, or + Electorate in the affected area.	Majority of property owners or two-thirds of electorate. Local governments may weight ballots in proportion to fee liability.

This chapter explains the steps local government must take to raise a new tax, assessment or property-related fee, or to increase an existing one.

Requirements for New Taxes

In order to impose or increase a tax, local government must comply with the following provisions:

- All general taxes must be approved by a majority vote of the people. (A 1986 statutory initiative--Proposition 62-- previously imposed this vote requirement on *general law* cities and counties. Proposition 218 expands this requirement to include *charter* cities, such as Los Angeles, Oakland, and San Francisco.)
- Elections for general taxes must be consolidated with a regularly scheduled election for members of the local governing body. (In an emergency, this provision may be waived by a unanimous vote of the governing body.)
- Any tax imposed for a specific purpose is a "special tax," *even if its funds are placed into the community's general fund*. (Prior to Proposition 218, all taxes placed into a community's general fund were commonly considered general taxes, requiring only a majority vote.)

Requirements for New Assessments

All new or increased assessments must follow the assessment calculation and election requirements discussed in the previous chapter. There are no exceptions to this requirement.

As a practical matter, this requirement will mean that programs that benefit people, rather than specific properties--such as libraries, mosquito abatement, recreation programs, police protection, and some business improvement programs--must be financed by general or special taxes or by other nonassessment revenues.

Questions

Must a local government comply with both Proposition 218's assessment approval process and the existing statutory process for assessment approval?

Following both of these assessment approval processes is likely to be duplicative and confusing to property owners. Most local government observers agree that some legislative action to reconcile the two assessment approval processes is needed.

Is an assessment considered "new or increased" if it is raised by a cost-of-living factor that was part of the assessment's rate structure?

This is not clear. Proposition 218 states that a tax is not to be considered new or increased if it is increased to a level previously approved by the voters. However, the measure does not include any such provision regarding assessments or fees. It is possible that any increase in assessments may be subject to the new calculation and election requirements.

Requirements for New Fees

To impose a new or increased property-related fee, local government must comply with the fee restriction and fee rate calculation requirements discussed in the last chapter.

Local governments must also:

- Mail information regarding the proposed fee to every property owner.
- Hold a hearing at least 45 days after the mailing.
- Reject the proposed fee if written protests are presented by a majority of the affected property owners.
- Hold an election on any property-related fee, other than a fee for water, sewer, or refuse collection. (Figure 5 shows the vote required in these elections.)

As a practical matter, local governments will find it much more difficult--and expensive--to impose or increase property-related fees. In some cases, local governments are probably more likely to try to raise revenues through non property-related fees or taxes.

Question

Could a local government impose a charge on property owners that is not an assessment, tax, or property-related fee?

No. Proposition 218 states that all charges on property as an incident of property ownership must be a tax, assessment, or property-related fee. Proposition 218 further states that if such a charge on property is not a tax or an assessment, it is a property-related fee.

Chapter 5

May Residents Overturn Local Taxes, Assessments, and Fees?

Proposition 218 expands California residents' power to challenge local revenue raising measures.

Greater Initiative Powers

Prior to Proposition 218, the extent to which local residents could use an initiative to challenge local government revenue raising methods was not certain. In a 1995 case, *Rossi v. Brown*, the California Supreme Court ruled that people had the power to use the initiative to repeal a minor tax. There have been no court rulings, however, addressing the question of whether an initiative may be used to repeal a more substantial revenue source.

Proposition 218 eliminates any ambiguity regarding the power of local residents to use the initiative by stating that residents of California shall have the power to repeal or reduce *any* local tax, assessment, or fee. In addition, the measure forbids the Legislature and local governments from imposing a signature requirement for local initiatives that is higher than that applicable to statewide statutory initiatives. As a consequence of these provisions, the only limits on local residents' ability to overturn local revenue raising measures appear to be those in the federal constitution, such as the federal debt impairment clause.

Question

Could a local initiative or lawsuit eliminate a revenue stream that is pledged to bond repayment?

This question has evoked considerable controversy. Generally, many bond specialists indicate that the debt impairment clause in the federal constitution would prevent local residents from eliminating a new or existing revenue stream if that action would jeopardize the security of bonded indebtedness. Some local government observers, however, would like the Legislature to place a time limit on local initiatives or take other action to provide greater security to bond holders.

Shift of Burden of Proof

Prior to Proposition 218's passage, the courts allowed local governments significant flexibility in determining fee and assessment amounts. A business or resident challenging the validity of a fee or assessment carried the "burden of proof" to show the court that the fee or assessment was illegal. Proposition 218 changed this legal standard by shifting the burden of proof to local governments. Now local governments must prove that any disputed fee or assessment charge is legal.

Appendix I:

Areas in Which Legislative or Judicial Clarification May Be Needed

As we discuss throughout this guide, while Proposition 218 is quite detailed in many respects, some important provisions are not completely clear. This appendix summarizes the major questions regarding Proposition 218 that must be resolved so that local governments can begin implementation.

Because Proposition 218 sets a July 1, 1997 deadline for local governments to bring existing fees and assessments into conformity with the measure's requirements, legislative or judicial clarification on questions related to assessments and fees is needed as soon as possible.

Property-Related Fees

- What is included in the definition of a property-related fee?
- Are water charges that are based on metered use of water property-related fees?
- Are regulatory fees, such as rent control administrative fees, property-related fees?
- Are lease payments and other such charges on government-owned assets property-related fees?
- How precisely must local government allocate shares of costs for a property-related service? Can local government set general fee rate categories, or must local government determine the actual cost of service to every parcel?

Assessments

- What is a "special benefit" and how can it be distinguished from a "general benefit?"
- Existing assessments used exclusively for sidewalks, streets, sewers, water, flood control, drainage systems, and vector control are exempt from the measure's calculation and election requirements. How broadly should these exemptions be interpreted?
- How precisely must local government allocate shares of costs for an assessment? Can local government set general assessment rate categories, or must local government determine the actual cost of service to every parcel?
- If an existing assessment is increased by a formula that was set forth at the time the existing assessment was imposed, must the assessment comply with the measure's calculation and election requirements? Similarly, need the measure go through these processes again if a *future* assessment is increased by a formula set forth at the time the new assessment was imposed?
- How should the existing statutory assessment approval process be reconciled with Proposition 218's assessment approval process?
- Some assessments are annually re-imposed by local government. Must a local government annually repeat the calculation and election procedures required by Proposition 218?
- If an assessment that is annually re-imposed by local government is currently eligible for the exempt list, must it comply with Proposition 218's calculation and election procedures when it is re-imposed next year?

Elections

- What procedures should govern the assessment and fee elections?
- Who may vote on referendums to repeal assessments, fees, or taxes?
- How will a local government determine whether a renter is eligible to vote?
- Who gets to vote when a parcel is owned by multiple parties, or by a governmental entity?

Taxes

- Are Mello-Roos taxes affected in any way? Similarly, how should assessments imposed under Mello-Roos law be treated?
- Is the measure's requirement that certain existing taxes be ratified by the voters an unconstitutional referendum on taxes?

Debt

- Could a local initiative jeopardize a revenue stream pledged to the payment of existing (or future) debt?

Appendix II:

Text of Proposition 218

This initiative measure adds Articles XIII C and D to the California Constitution.

RIGHT TO VOTE ON TAXES ACT

SECTION 1. TITLE.

This act shall be known and may be cited as the "Right to Vote on Taxes Act."

SECTION 2. FINDINGS AND DECLARATIONS.

The people of the State of California hereby find and declare that Proposition 13 was intended to provide effective tax relief and to require voter approval of tax increases. However, local governments have subjected taxpayers to excessive tax, assessment, fee and charge increases that not only frustrate the purposes of voter approval for tax increases, but also threaten the economic security of all Californians and the California economy itself. This measure protects taxpayers by limiting the methods by which local governments exact revenue from taxpayers without their consent.

SECTION 3. VOTER APPROVAL FOR LOCAL TAX LEVIES.

Article XIII C is added to the California Constitution to read:

ARTICLE XIII C **2184**

SECTION 1. Definitions. As used in this article:

- (a) "General tax" means any tax imposed for general governmental purposes.
- (b) "Local government" means any county, city, city and county, including a charter city or county, any special district, or any other local or regional governmental entity.
- (c) "Special district" means an agency of the state, formed pursuant to general law or a special act, for the local performance of governmental or proprietary functions with limited geographic boundaries including, but not limited to, school districts and redevelopment agencies.
- (d) "Special tax" means any tax imposed for specific purposes, including a tax imposed for specific purposes, which is placed into a general fund.

SEC. 2. Local Government Tax Limitation. Notwithstanding any other provision of this Constitution:

- (a) All taxes imposed by any local government shall be deemed to be either general taxes or special taxes. Special purpose districts or agencies, including school districts, shall have no power to levy general taxes.
- (b) No local government may impose, extend, or increase any general tax unless and until that tax is submitted to the electorate and approved by a majority vote. A general tax shall not be deemed to have been increased if it is imposed at a rate not higher than the maximum rate so approved. The election required by this subdivision shall be consolidated with a regularly scheduled general election for members of the governing body of the local government, except in cases of emergency declared by a unanimous vote of the governing body.
- (c) Any general tax imposed, extended, or increased, without voter approval, by any local government on or after January 1, 1995, and prior to the effective date of this article, shall continue to be imposed only if approved by a majority vote of the voters voting in an election on the issue of the imposition, which election shall be held within two years of the effective date of this article and in compliance with subdivision (b).
- (d) No local government may impose, extend, or increase any special tax unless and until that tax is submitted to the electorate and approved by a two-thirds vote. A special tax shall not be deemed to have been increased if it is imposed at a rate not higher than the maximum rate so approved.

SEC. 3. Initiative Power for Local Taxes, Assessments, Fees and Charges. Notwithstanding any other provision of this Constitution, including, but not limited to, Sections 8 and 9 of Article II, the initiative power shall not be prohibited or otherwise limited in matters of reducing or repealing any local tax, assessment, fee or charge. The power of initiative to affect local taxes, assessments, fees and charges shall be applicable to all local governments and neither the Legislature nor any local government charter shall impose a signature requirement higher than that applicable to statewide statutory initiatives.

SECTION 4. ASSESSMENT AND PROPERTY RELATED FEE REFORM.

Article XIII D is added to the California Constitution to read:

ARTICLE XIII D

SECTION 1. Application. Notwithstanding any other provision of law, the provisions of this article shall apply to all assessments, fees and charges, whether imposed pursuant to state statute or local government charter authority. Nothing in this article or Article XIII C shall be construed to:

- (a) Provide any new authority to any agency to impose a tax, assessment, fee, or charge.

(b) Affect existing laws relating to the imposition of fees or charges as a condition of property development.

(c) Affect existing laws relating to the imposition of timber yield taxes.

SEC. 2. Definitions. As used in this article:

(a) "Agency" means any local government as defined in subdivision (b) of Section 1 of Article XIII C.

(b) "Assessment" means any levy or charge upon real property by an agency for a special benefit conferred upon the real property. "Assessment" includes, but is not limited to, "special assessment," "benefit assessment," "maintenance assessment" and "special assessment tax."

(c) "Capital cost" means the cost of acquisition, installation, construction, reconstruction, or replacement of a permanent public improvement by an agency.

(d) "District" means an area determined by an agency to contain all parcels which will receive a special benefit from a proposed public improvement or property-related service.

(e) "Fee" or "charge" means any levy other than an ad valorem tax, a special tax, or an assessment, imposed by an agency upon a parcel or upon a person as an incident of property ownership, including a user fee or charge for a property related service.

(f) "Maintenance and operation expenses" means the cost of rent, repair, replacement, rehabilitation, fuel, power, electrical current, care, and supervision necessary to properly operate and maintain a permanent public improvement.

(g) "Property ownership" shall be deemed to include tenancies of real property where tenants are directly liable to pay the assessment, fee, or charge in question.

(h) "Property-related service" means a public service having a direct relationship to property ownership.

(i) "Special benefit" means a particular and distinct benefit over and above general benefits conferred on real property located in the district or to the public at large. General enhancement of property value does not constitute "special benefit."

SEC. 3. Property Taxes, Assessments, Fees and Charges Limited. (a) No tax, assessment, fee, or charge shall be assessed by any agency upon any parcel of property or upon any person as an incident of property ownership except:

(1) The ad valorem property tax imposed pursuant to Article XIII and Article XIII A.

(2) Any special tax receiving a two-thirds vote pursuant to Section 4 of Article XIII A.

(3) Assessments as provided by this article.

(4) Fees or charges for property related services as provided by this article.

(b) For purposes of this article, fees for the provision of electrical or gas service shall not be deemed charges or fees imposed as an incident of property ownership.

SEC. 4. Procedures and Requirements for All Assessments. (a) An agency which proposes to levy an assessment shall identify all parcels which will have a special benefit conferred upon them and upon which an assessment will be imposed. The proportionate special benefit derived by each identified parcel shall be determined in relationship to the entirety of the capital cost of a public improvement, the maintenance and operation expenses of a public improvement, or the cost of the property related service being provided. No assessment shall be imposed on any parcel which exceeds the reasonable cost of the proportional special benefit conferred on that parcel. Only special benefits are assessable, and an agency shall separate the general benefits from the special benefits conferred on

a parcel. Parcels within a district that are owned or used by any agency, the State of California or the United States shall not be exempt from assessment unless the agency can demonstrate by clear and convincing evidence that those publicly owned parcels in fact receive no special benefit.

(b) All assessments shall be supported by a detailed engineer's report prepared by a registered professional engineer certified by the State of California.

(c) The amount of the proposed assessment for each identified parcel shall be calculated and the record owner of each parcel shall be given written notice by mail of the proposed assessment, the total amount thereof chargeable to the entire district, the amount chargeable to the owner's particular parcel, the duration of the payments, the reason for the assessment and the basis upon which the amount of the proposed assessment was calculated, together with the date, time, and location of a public hearing on the proposed assessment. Each notice shall also include, in a conspicuous place thereon, a summary of the procedures applicable to the completion, return, and tabulation of the ballots required pursuant to subdivision (d), including a disclosure statement that the existence of a majority protest, as defined in subdivision (e), will result in the assessment not being imposed.

(d) Each notice mailed to owners of identified parcels within the district pursuant to subdivision (c) shall contain a ballot which includes the agency's address for receipt of the ballot once completed by any owner receiving the notice whereby the owner may indicate his or her name, reasonable identification of the parcel, and his or her support or opposition to the proposed assessment.

(e) The agency shall conduct a public hearing upon the proposed assessment not less than 45 days after mailing the notice of the proposed assessment to record owners of each identified parcel. At the public hearing, the agency shall consider all protests against the proposed assessment and tabulate the ballots. The agency shall not impose an assessment if there is a majority protest. A majority protest exists if, upon the conclusion of the hearing, ballots submitted in opposition to the assessment exceed the ballots submitted in favor of the assessment. In tabulating the ballots, the ballots shall be weighted according to the proportional financial obligation of the affected property.

(f) In any legal action contesting the validity of any assessment, the burden shall be on the agency to demonstrate that the property or properties in question receive a special benefit over and above the benefits conferred on the public at large and that the amount of any contested assessment is proportional to, and no greater than, the benefits conferred on the property or properties in question.

(g) Because only special benefits are assessable, electors residing within the district who do not own property within the district shall not be deemed under this Constitution to have been deprived of the right to vote for any assessment. If a court determines that the Constitution of the United States or other federal law requires otherwise, the assessment shall not be imposed unless approved by a two-thirds vote of the electorate in the district in addition to being approved by the property owners as required by subdivision (e).

SEC. 5. Effective Date. Pursuant to subdivision (a) of Section 10 of Article II, the provisions of this article shall become effective the day after the election unless otherwise provided. Beginning July 1, 1997, all existing, new, or increased assessments shall comply with this article. Notwithstanding the foregoing, the following assessments existing on the effective date of this article shall be exempt from the procedures and approval process set forth in Section 4:

(a) Any assessment imposed exclusively to finance the capital costs or maintenance and operation expenses for sidewalks, streets, sewers, water, flood control, drainage systems or vector control. Subsequent increases in such assessments shall be subject to the procedures and approval process set forth in Section 4.

(b) Any assessment imposed pursuant to a petition signed by the persons owning all of the parcels subject to the assessment at the time the assessment is initially imposed. Subsequent increases in such assessments shall be subject to the procedures and approval process set forth in Section 4.

(c) Any assessment the proceeds of which are exclusively used to repay bonded indebtedness of which the failure to pay would violate the Contract Impairment Clause of the Constitution of the United States.

(d) Any assessment which previously received majority voter approval from the voters voting in an election on the issue of the assessment. Subsequent increases in those assessments shall be subject to the procedures and approval process set forth in Section 4.

SEC. 6. Property Related Fees and Charges. (a) Procedures for New or Increased Fees and Charges. An agency shall follow the procedures pursuant to this section in imposing or increasing any fee or charge as defined pursuant to this article, including, but not limited to, the following:

(1) The parcels upon which a fee or charge is proposed for imposition shall be identified. The amount of the fee or charge proposed to be imposed upon each parcel shall be calculated. The agency shall provide written notice by mail of the proposed fee or charge to the record owner of each identified parcel upon which the fee or charge is proposed for imposition, the amount of the fee or charge proposed to be imposed upon each, the basis upon which the amount of the proposed fee or charge was calculated, the reason for the fee or charge, together with the date, time, and location of a public hearing on the proposed fee or charge.

(2) The agency shall conduct a public hearing upon the proposed fee or charge not less than 45 days after mailing the notice of the proposed fee or charge to the record owners of each identified parcel upon which the fee or charge is proposed for imposition. At the public hearing, the agency shall consider all protests against the proposed fee or charge. If written protests against the proposed fee or charge are presented by a majority of owners of the identified parcels, the agency shall not impose the fee or charge.

(b) Requirements for Existing, New or Increased Fees and Charges. A fee or charge shall not be extended, imposed, or increased by any agency unless it meets all of the following requirements:

(1) Revenues derived from the fee or charge shall not exceed the funds required to provide the property related service.

(2) Revenues derived from the fee or charge shall not be used for any purpose other than that for which the fee or charge was imposed.

(3) The amount of a fee or charge imposed upon any parcel or person as an incident of property ownership shall not exceed the proportional cost of the service attributable to the parcel.

(4) No fee or charge may be imposed for a service unless that service is actually used by, or immediately available to, the owner of the property in question. Fees or charges based on potential or future use of a service are not permitted. Standby charges, whether characterized as charges or assessments, shall be classified as assessments and shall not be imposed without compliance with Section 4.

(5) No fee or charge may be imposed for general governmental services including, but not limited to, police, fire, ambulance or library services, where the service is available to the public at large in substantially the same manner as it is to property owners. Reliance by an agency on any parcel map, including, but not limited to, an assessor's parcel map, may be considered a significant factor in determining whether a fee or charge is imposed as an incident of property ownership for purposes of this article. In any legal action contesting the validity of a fee or charge, the burden shall be on the agency to demonstrate compliance with this article.

(c) Voter Approval for New or Increased Fees and Charges. Except for fees or charges for sewer, water, and refuse collection services, no property related fee or charge shall be imposed or increased unless and until that fee or charge is submitted and approved by a majority vote of the property owners of the property subject to the fee or charge or, at the option of the agency, by a two-thirds vote of the electorate residing in the affected area. The election shall be conducted not less than 45 days after the public hearing. An agency may adopt procedures similar to those for

increases in assessments in the conduct of elections under this subdivision.

(d) Beginning July 1, 1997, all fees or charges shall comply with this section.

SECTION 5. LIBERAL CONSTRUCTION.

The provisions of this act shall be liberally construed to effectuate its purposes of limiting local government revenue and enhancing taxpayer consent.

SECTION 6. SEVERABILITY.

If any provision of this act, or part thereof, is for any reason held to be invalid or unconstitutional, the remaining sections shall not be affected, but shall remain in full force and effect, and to this end the provisions of this act are severable.

STATE WATER RESOURCES CONTROL BOARD

RESOLUTION NO. 68-16

STATEMENT OF POLICY WITH RESPECT TO
MAINTAINING HIGH QUALITY OF WATERS IN CALIFORNIA

WHEREAS the California Legislature has declared that it is the policy of the State that the granting of permits and licenses for unappropriated water and the disposal of wastes into the waters of the State shall be so regulated as to achieve highest water quality consistent with maximum benefit to the people of the State and shall be controlled so as to promote the peace, health, safety and welfare of the people of the State; and

WHEREAS water quality control policies have been and are being adopted for waters of the State; and

WHEREAS the quality of some waters of the State is higher than that established by the adopted policies and it is the intent and purpose of this Board that such higher quality shall be maintained to the maximum extent possible consistent with the declaration of the Legislature;

NOW, THEREFORE, BE IT RESOLVED:

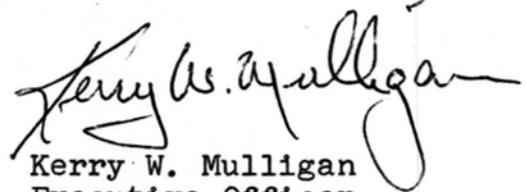

1. Whenever the existing quality of water is better than the quality established in policies as of the date on which such policies become effective, such existing high quality will be maintained until it has been demonstrated to the State that any change will be consistent with maximum benefit to the people of the State, will not unreasonably affect present and anticipated beneficial use of such water and will not result in water quality less than that prescribed in the policies.
2. Any activity which produces or may produce a waste or increased volume or concentration of waste and which discharges or proposes to discharge to existing high quality waters will be required to meet waste discharge requirements which will result in the best practicable treatment or control of the discharge necessary to assure that (a) a pollution or nuisance will not occur and (b) the highest water quality consistent with maximum benefit to the people of the State will be maintained.
3. In implementing this policy, the Secretary of the Interior will be kept advised and will be provided with such information as he will need to discharge his responsibilities under the Federal Water Pollution Control Act.

BE IT FURTHER RESOLVED that a copy of this resolution be forwarded to the Secretary of the Interior as part of California's water quality control policy submission.

CERTIFICATION

The undersigned, Executive Officer of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on October 24, 1968.

Dated: October 28, 1968

Kerry W. Mulligan

Statutory History

The first comprehensive legislation for water pollution control was the Water Pollution Control Act of 1948 (Pub. L. 845, 80th Congress). This law adopted principles of state and federal cooperative program development, limited federal enforcement authority, and limited federal financial assistance. These principles were continued in the Federal Water Pollution Control Act (Pub. L. 660, 84th Congress) in 1956 and in the Water Quality Act of 1965. Under the 1965 Act, States were directed to develop water quality standards establishing water quality goals for interstate waters. By the early 1970's, all the States had adopted such water quality standards. Since then, States have revised their standards to reflect new scientific information, the impact on water quality of economic development and the results of water quality controls.

Due to enforcement complexities and other problems, an approach based solely on water quality standards was deemed insufficiently effective. In the Federal Water Pollution Control Act Amendments of 1972 (Pub. L. 92500, Clean Water Act or CWA), Congress established the National Pollutant Discharge Elimination System (NPDES) whereby each point source discharger to waters of the U.S. is required to obtain a discharge permit. The 1972 Amendments require EPA to establish technology based effluent limitations that are to be incorporated into NPDES permits. In addition, the amendments extended the water quality standards program to intrastate waters and required NPDES permits to be consistent with applicable state water quality standards. Thus, the CWA established complementary technology-based and water quality-based approaches to water pollution control.

Water quality standards serve as the foundation for the water-quality based approach to pollution control and are a fundamental component of watershed management. Water quality standards are State or Tribal law or regulation that: define the water quality goals of a water body, or segment thereof, by designating the use or uses to be made of the water; criteria necessary to protect the uses; and protect water quality through antidegradation provisions. States and Tribes adopt water quality standards to protect public health or welfare, enhance the quality of water, and serve the purposes of the Act. "Serve the purposes of the Act" (as defined in Sections 101(a), 101(a)(2), and 303(c) of the Act) means that water quality standards should: 1) include provisions for restoring and maintaining chemical, physical, and biological integrity of State waters, 2) provide, wherever attainable, water quality for the protection and propagation of fish, shellfish, and wildlife and recreation in and on the water ("fishable/swimmable"), and 3) consider the use and value of State waters for public water supplies, propagation of fish and wildlife, recreation, agricultural and industrial purposes, and navigation. See 40 CFR 131.2.

Section 303(c) of the CWA establishes the basis for the current water quality standards program. Section 303(c):

1. Defines water quality standards;
2. Identifies acceptable beneficial uses: propagation of fish, shellfish and wildlife, public, agricultural, industrial water supplies and navigation;
3. Requires that State and Tribal standards protect public health or welfare, enhance the quality of water and serve the purposes of the Act;
4. Requires that States and Tribes review their standards at least every three years;
5. Establishes the process for EPA review of State and Tribal standards, including where necessary the promulgation of a superseding Federal rule in cases where a State's or Tribe's standards are not consistent with applicable requirements of the CWA or in situations where the Administrator determines that Federal standards are necessary to meet the requirements of the Act.

The decade of the 1970's saw State and EPA attention focus on creating the infrastructure necessary to support the NPDES permit program and development of technology-based effluent limitations. While the water quality standards program continued, it was a low priority in the overall CWA program. In the late 1970's and early 1980's, it became obvious that greater attention to the water quality-based approach to pollution control was needed to effectively protect and enhance the nation's waters.

The first statutory evidence of this was the enactment of a CWA requirement that after December 29, 1984, no construction grant could be awarded for projects that discharged into stream segments which had not, at least once since December 1981, had their water quality standards reviewed and revised or new standards adopted as appropriate under Section 303(c). The efforts by the States to comply with this onetime requirement essentially made the States' water quality standards current as of that date for segments with publicly-owned treatment works (POTWs) discharging into them.

Additional impetus to the water quality standards program occurred on February 4, 1987, when Congress enacted the Water Quality Act of 1987 (Pub. L. 1004). Congressional impatience with the lack of progress in State adoption of standards for toxics (which had been a national program priority since the early 1980's) resulted in the 1987 adoption of new water quality standard provisions in the Water Quality Act amendments. These amendments reflected Congress' conclusion that toxic pollutants in water are one of the most pressing water pollution problems. One concern Congress had was that States were relying, for the most part, on narrative criteria to control toxics (e.g. "no toxics in toxic amounts"), which made development of effluent limitations in permits difficult. To remedy this, Congress adopted section 303(c)(2)(B), which essentially required development of numeric criteria for those water body segments where toxic pollutants were likely to adversely affect designated uses.

The 1987 Amendments gave new teeth to the control of toxic pollutants. As Senator Mitchell put it, Section 303(c)(2)(B) requires "States to identify waters that do not meet water quality standards due to the discharge of toxic substances, to adopt numerical criteria for the pollutants in such waters, and to establish effluent limitations for individual discharges to such water bodies." (From Senator Mitchell, 133 Cong. Rec. S733).

To assist States in complying with Section 303(c)(2)(B), EPA issued program guidance in December 1988 and instituted an expanded program of training and technical assistance.

Section 518 was another major addition in the 1987 Amendments to the Act. This section extended participation in the water quality standards and 401 certification programs to certain Indian Tribes. The Act directed EPA to establish procedures by which a Tribe could "qualify for treatment as a State," at its option, for purposes of administering the standards and 401 certification programs. The Act also required EPA to create a mechanism to resolve disputes that might develop when unreasonable

consequences arise from a Tribe and a State or another Tribe adopting differing water quality standards on common bodies of water.

Furthermore, with the 1987 Amendments, the Act explicitly recognized EPA's antidegradation policy for the first time. The intent of the antidegradation policy in EPA's regulation was and is to protect existing uses and the level of water quality necessary to protect existing uses and to provide a means for assessing activities that may lower water quality in high quality waters. Section 303(d)(4) of the Act requires that water quality standards in those waters that meet or exceed levels necessary to support designated uses "may be revised only if such revision is subject to and consistent with the antidegradation policy established under this section."

Regulatory Requirements and Guidance

In the late 1960's and early 1970's the water quality standards program was initiated and administered based on minimal guidance and Federal policies--many of which are still reflected in the water quality standards program today.

EPA first promulgated a water quality standards regulation in 1975 (40 CFR 130.17, 40 FR 55334, November 28, 1975) as part of EPA's water quality management regulations mandated under Section 303(e) of the Act. As discussed earlier, the standards program had a relatively low priority during this time. This was reflected in the minimal requirements of the first Water Quality Standards Regulation. Few requirements on designating water uses and procedures were included. The Regulation merely required "appropriate" water quality criteria necessary to support designated uses. Toxic pollutants or any other specific criteria were not mentioned. The antidegradation policy was incorporated as a regulatory requirement.

State response to the initial regulation was varied and in some cases inadequate. Some States developed detailed water quality standards regulations while others adopted only general provisions which proved to be of limited use in the management of increasingly complex water quality problems. The few water quality criteria that were adopted addressed a limited number of pollutants and primarily described fundamental water quality conditions (e.g., pH, temperature, dissolved oxygen and suspended solids) or dealt with conventional pollutants.

In the late 1970s, a greater appreciation evolved on the need to expand and accelerate the control of pollutants in surface waters using water quality-based controls. It became clear that primary reliance on industry effluent guidelines or effluent standards under Section 307 of the Act would not comprehensively address pollutants, particularly toxic pollutants, and that existing State water quality standards needed to be better developed. EPA moved to strengthen the water quality program to complement the technology based controls.

To facilitate this effort, EPA decided to amend the Water Quality Standards Regulation to explicitly address toxic criteria requirements in State standards and other legal and programmatic issues. This effort culminated in the promulgation of a revised water quality standards regulation on November 8, 1983 (54 FR 51400), which is still in effect. This regulation is much more comprehensive than its predecessor and it includes many more specific regulatory and procedural requirements. Nonetheless, it is still a succinct and flexible regulation for a program with a scope as broad as the national water quality criteria and standards program.

The regulation specifies the roles of the States, Tribes and EPA and the administrative requirements for States and Tribes in adopting and submitting their standards to EPA for review. It also delineates the EPA requirements for review of State and Tribal standards and promulgation of federal standards.

The regulation provided States and subsequently Tribes with the option of refining their use designation process by allowing them to establish subcategories of uses, such as cold water and warm water aquatic life designations. The regulation expanded and clarified the factors that could be applied by a State in removing a designated use that is not an existing use. The regulation recognized that naturally occurring pollutant concentrations, naturally low or intermittent flow conditions, human caused conditions or sources of pollution that cannot be remedied, hydrologic modifications (such as dams or channelized streams), natural physical conditions, and widespread economic and social impact could be used to demonstrate that attaining a use designation is not feasible (see 40 CFR 131.10(g)). Part 131.10(h) identified circumstances in which States are prohibited from removing designated uses.

Much more specificity was provided in the 1983 regulation regarding the requirements for States on the form of water quality criteria adopted by the States. Under 40 CFR 131.11(b) of the regulation, States and Tribes may use the criteria developed by EPA under Section 304(a) of the Act, 304(a) guidance modified to reflect site-specific conditions, or criteria developed through other scientifically defensible methods. Section 304(a) criteria are the water quality criteria that EPA develops and provides in the form of guidance to States and Tribes pursuant to CWA section 304(a). In practice, States and Tribes have applied all of these provisions in setting water quality standards.

The 1983 regulation also clarified that States and subsequently Tribes may adopt discretionary policies affecting the implementation of standards, such as mixing zones, low flows, and variances. Such policies are subject to EPA review under 303(c). Section 131.11 of the regulation requires States and subsequently Tribes with water quality standards programs to review available information and "...to identify specific water bodies where toxic pollutants may be adversely affecting water quality ...and... adopt criteria for such toxic pollutants applicable to the water body sufficient to protect the designated use."

Under the statutory scheme, during the 3-year review period following EPA's 1980 publication of section 304(a) water quality criteria to protect human health and aquatic life, States were expected to review those criteria and adopt standards for many priority toxic pollutants. A few States adopted large numbers of numeric toxic criteria, primarily for the protection of aquatic life. Other States adopted few or no water quality criteria for priority toxic pollutants. Some relied on a narrative "free from toxicity" criterion, and "action levels" for toxic pollutants or occasionally calculated site-specific criteria. Few States addressed the protection of human health by adopting numeric human health criteria.

In support of the 1983 Regulation, EPA simultaneously issued program guidance entitled *Water Quality Standards Handbook* (December, 1983). The Handbook provided guidance on the interpretation and implementation of the Water Quality Standards Regulation. This document also contained information on scientific and technical analyses that are used in making decisions that would impact water quality standards. EPA also developed the *Technical Support Document for Water Quality Based Toxics Control* (EPA 44/485032, September, 1985)(TSD) which provided additional guidance for implementing State water quality standards. In 1991, EPA revised and expanded the TSD. (EPA 505/2-90-001, March 1991). In 1994, EPA issued the *Water Quality Standards Handbook: Second Edition* (EPA-823-B-94-006, August 1994).

To accelerate compliance with CWA section 303(c)(2)(B) (created by the 1987 Water Quality Act), EPA started action in 1990 to promulgate numeric water quality criteria for those States that had not adopted sufficient water quality standards for toxic pollutants. The intent of the rule making, known as the National Toxics Rule, was to strengthen State water quality management programs by increasing the level of protection afforded to aquatic life and human health through the adoption of all available criteria for toxic pollutants present or likely to be present in State waters. This action culminated on December 22, 1992, with EPA promulgating Federal water quality criteria for priority toxic pollutants for 14 States and Territories (see 57 FR 60848).

Subsequent to the promulgation of criteria under the National Toxics Rule, EPA altered its national policy on the expression of aquatic life criteria for metals. On May 4, 1995 at 60 FR 22228, EPA issued a stay of several metals criteria (expressed as total recoverable metal) previously promulgated under the National Toxics Rule for the protection of aquatic life. EPA simultaneously issued an interim final rule that changed these metal criteria promulgated under the National Toxics Rule from the total recoverable form to the dissolved form.

The Water Quality Standards Regulation was amended in 1991 to implement Section 518 of the Act to expand the standards program to include Indian Tribes (56 FR 64893, December 12, 1991). EPA added 40 CFR 131.7 to describe the requirements of the issue dispute resolution mechanism (to resolve unreasonable consequences that may arise between a Tribe and a State or another Tribe when differing water quality standards have been adopted for a common body of water) and 40 CFR 131.8 to establish the procedures by which a Tribe applies for authorization to assume the responsibilities of the water quality standards and section 401 certification programs.

Water quality standards are essential to a wide range of surface water activities, including: (1) setting and revising water quality goals for watersheds and/or individual water bodies, (2) monitoring water quality to provide information upon which water quality based decisions will be made, (3) calculating total maximum daily loads (TMDLs), waste load allocations (WLAs) for point sources of pollution, and load allocations (LAs) for non point sources of pollution, (4) issuing water quality certifications for activities that may affect water quality and that require a federal license or permit, (5) developing water quality management plans which prescribe the regulatory, construction, and management activities necessary to meet the water body goals, (6) calculating NPDES water quality-based effluent limitations for point sources, in the absence of TMDLs, WLAs, LAs, and/or water quality management plans; (7) preparing various reports and lists that document the condition of the State's or Tribe's water quality, and (8) developing, revising, and implementing an effective section 319 management plan which outlines the State's or Tribe's control strategy for non point sources of pollution.

Also, as described in EPA's 40 CFR 131.21, EPA requires that water quality standards adopted by states and authorized tribes on or after May 30, 2000 must be approved by EPA before they can be used as the basis for actions, such as establishing water quality-based effluent limitations or total maximum daily loads (TMDLs), under the Clean Water Act. (See 65 FR 24641, April 27, 2000, for more information regarding this requirement).

LOS ANGELES WATER BOARD CRACKS DOWN ON SANITATION DISTRICTS FOR FAILURE TO COMPLY WITH SANTA CLARA RIVER CHLORIDE LIMITATIONS

LOS ANGELES – The Los Angeles Regional Water Quality Control Board’s (Los Angeles Water Board) Executive Officer has issued an administrative civil liability complaint to the County Sanitation Districts of Los Angeles County (CSDLAC) for alleged violations of waste discharge requirements for its Valencia and Saugus Water Reclamation Plants.

The complaint seeks a total penalty of \$280,250 for the failure to complete Wastewater Facilities Plans and Programmatic Environmental Impact Reports by the required due date in 2011.

CSDLAC is required to submit the documents as part of a series of implementation tasks designed so that the Valencia and Saugus Water Reclamation Plants will meet waste load allocations for chloride in the Upper Santa Clara River.

The Upper Santa Clara River Total Maximum Daily Load for chloride was adopted in 2005 and updated in 2010 to protect the beneficial uses of the Santa Clara River, which include agricultural supply, groundwater recharge, and rare and endangered species habitat.

"The Los Angeles Regional Water Quality Control Board is committed to ensuring that all dischargers comply with the requirements of their permits," said Water Board Executive Officer Sam Unger. "This will protect and restore water quality and preserve the beneficial uses of the Santa Clara River as a source of irrigation water for agriculture in the Los Angeles Region."

The public has until December 26, 2012 to comment on the administrative civil liability complaint. The complaints are available for public review on the Los Angeles Water Board’s website at: http://www.swrcb.ca.gov/rwqcb4/water_issues/programs/enforcement/EnforcmntActions.shtml

The Los Angeles Water Board protects and restores water quality in coastal watersheds in Los Angeles and Ventura Counties and in portions of Kern and Santa Barbara counties. The Los Angeles Water Board is scheduled to consider the complaints on February 21, 2013.

Claim No. 7011 2970 0000 0645 4233

SETTLEMENT AGREEMENT AND STIPULATION FOR ENTRY OF ADMINISTRATIVE CIVIL LIABILITY ORDER – ORDER NO. R4-2012-0160 FOR THE SANTA CLARITA VALLEY SANITATION DISTRICT OF LOS ANGELES COUNTY, VALENCIA WATER RECLAMATION PLANT, 28185 THE OLD ROAD, VALENCIA, CA (ORDER NO. R4-2009-0074, NPDES PERMIT NO. CA0054216, CI 4993) AND SAUGUS WATER RECLAMATION PLANT, 26200 SPRINGBROOK AVENUE, SANTA CLARITA, CA (ORDER NO. R4-2009-0075, NPDES PERMIT NO. CA0054313, CI 2960)

Dear Ms. Chan:

On April 16, 2013, a Settlement Agreement and Stipulation for Entry of Administrative Civil Liability (Stipulation) was entered into between the Executive Officer of the Regional Board and the Santa Clarita Valley Sanitation District of Los Angeles County.

On June 28, 2013, the Chief Deputy Executive Officer executed the Stipulation on behalf of the Regional Board, a copy of which is attached.

As noted in the Stipulation, the Permittee has agreed to pay \$225,000 in administrative civil penalties of which \$97,500 shall be suspended pending completion of a Supplemental Environmental Project (SEP). Payment of the remaining \$127,500 assessment is due and payable no later than thirty (30) days from the date on which this Order is issued. A check in the amount of \$127,500 (payable to the State Water Pollution Cleanup and Abatement Account) must be received by the State Water Resources Control on or before **July 29, 2013**. A copy of the check shall be sent to the Regional Board.

If you have any questions please contact Chris Lopez at (213) 576-6806 / chlopez@waterboards.ca.gov regarding this matter.

Sincerely,

Deborah Smith
Chief Deputy Executive Officer

SETTLEMENT AGREEMENT AND STIPULATION FOR ENTRY OF
ADMINISTRATIVE CIVIL LIABILITY ORDER R4-2012-0160 (Proposed)

IN THE MATTER OF
SANTA CLARITA VALLEY SANITATION DISTRICT
OF LOS ANGELES COUNTY
(VALENCIA AND SAUGUS WATER RECLAMATION PLANTS)

This Settlement Agreement and Stipulation for entry of Administrative Civil Liability Order (Stipulated Order or Order) is entered into by and between the Executive Officer of the Regional Water Quality Control Board, Los Angeles Region (Los Angeles Water Board), on behalf of the Los Angeles Water Board Prosecution Team (Prosecution Team), and the Santa Clarita Valley Sanitation District (SCVSD or Discharger) (collectively known as the Parties) and is presented to the Los Angeles Water Board, or its delegee, for adoption as an order by settlement, pursuant to Government Code section 11415.60.

RECITALS

1. SCVSD owns and operates the Valencia Water Reclamation Plant (hereinafter Facility or Valencia WRP), a tertiary wastewater treatment plant located at 28185 The Old Road, Valencia, California. The facility has a design capacity of 21.6 million gallons per day (mgd). The facility discharges tertiary-treated wastewater from Discharge Points 001 and 002 to the Santa Clara River, a water of the United States. SCVSD also owns and operates the Saugus Water Reclamation Plant (hereinafter Saugus WRP), a tertiary wastewater treatment plant located at 26200 Springbrook Avenue, Santa Clarita, California. The facility has a design capacity of 6.5 mgd. The facility discharges tertiary-treated wastewater from Discharge Point 001 to the Santa Clara River.
2. On May 6, 2004, the Los Angeles Water Board adopted Resolution No. 04-004, which revised and adopted the Upper Santa Clara River Chloride Total Maximum Daily Load (TMDL). This TMDL was approved by the State Water Resources Control Board (State Water Board) on July 22, 2004; the Office of Administrative Law (OAL) on November 15, 2004; and the United States Environmental Protection Agency (USEPA) on April 28, 2005. It became effective on May 4, 2005.
3. On December 11, 2008, the Los Angeles Water Board adopted Resolution No. R4-2008-012, which adopted site-specific chloride objectives and revised the Upper Santa Clara River Chloride TMDL. This resolution was approved by the

State Water Board on October 20, 2009; the OAL on January 26, 2010; and the USEPA on April 6, 2010. It became effective on April 6, 2010.

4. On June 4, 2009, the Los Angeles Water Board adopted Order No. R4-2009-0074 *Waste Discharge Requirements for the Santa Clarita Valley Sanitation District of Los Angeles County, Valencia Water Reclamation Plant Discharge to the Santa Clara River*. This Order became effective on July 24, 2009, and serves as National Pollutant Discharge Elimination System (NPDES) Permit No. CA0054216. Order No. R4-2009-0074 incorporates the Upper Santa Clara River Chloride TMDL Implementation Plan.
5. On June 4, 2009, the Los Angeles Water Board adopted Order No. R4-2009-0075 *Waste Discharge Requirements for the Santa Clarita Valley Sanitation District of Los Angeles County, Saugus Water Reclamation Plant Discharge to the Santa Clara River*. This Order became effective on July 24, 2009, and serves as National Pollutant Discharge Elimination System (NPDES) Permit No. CA0054313. Order No. R4-2009-0075 incorporates the Upper Santa Clara River Chloride TMDL Implementation Plan.
6. Order No. R4-2009-0074, Provision VI.C.8. (page 41), and Order No. R4-2009-0075, Provision VI.C.8. (page 40), read: "The discharger shall comply with the applicable TMDL-related tasks, and future revisions thereto, in Attachment K of this Order." Task No. 17(a) of Attachment K for both Orders requires that by May 4, 2011, SCVSD complete a Wastewater Facilities Plan and Programmatic Environmental Impact Report (EIR) for facilities to comply with final effluent permit limits for chloride.
7. On May 2, 2011, SCVSD submitted a copy of a Notice of Exemption from the requirement to prepare an EIR or Negative Declaration. This Notice of Exemption did not meet the requirements of Task 17(a) because it did not constitute a programmatic EIR and it addresses actions to meet the conditional wasteload allocations (WLAs), not actions to meet the final effluent limits for chloride.
8. On May 2, 2011, SCVSD submitted a Wastewater Facilities Plan. The Wastewater Facilities Plan was inadequate because it was not a plan for actions to meet the final effluent limits for chloride of 100 mg/L. Additionally, the Wastewater Facilities Plan does not provide the facilities necessary to allow application of conditional WLAs.
9. On May 27, 2011, the Los Angeles Water Board issued a Notice of Violation (NOV) to SCVSD for failure to complete Task 17(a) from Attachment K of Order Nos. R4-2009-0074 and R4-2009-0075. The NOV directed SCVSD to complete Task 17(a) and submit the Wastewater Facilities Plan and Programmatic EIR for facilities to comply with final permit effluent limits for chloride to the Regional

Board. The NOV further directed SCVSD to submit a written response by June 27, 2011 that either: (1) confirms that SCVSD has corrected these violations with a brief description of how SCVSD has corrected them, or (2) identifies when SCVSD will have completed correcting these violations and a brief description of how SCVSD will correct them.

10. On June 27, 2011, SCVSD submitted a response to the NOV stating that SCVSD staff would recommend to its Board of Directors that staff prepare a Wastewater Facilities Plan and EIR for facilities to comply with a final effluent chloride limit of 100 mg/L. The response stated that, assuming the Board approved the staff recommendation, the Wastewater Facilities Plan and EIR would be completed by December 31, 2012.
11. On July 19, 2012, SCVSD submitted a letter to the Los Angeles Water Board with a compliance status update. According to the letter, at its July 26, 2011 meeting, the SCVSD Board of Directors approved their staff's recommendation to prepare a Wastewater Facilities Plan and EIR for facilities to comply with a final effluent chloride limit of 100 mg/L. SCVSD released a Notice of Preparation on January 6, 2012, seeking input on the scope for the Facilities Plan and EIR. According to the July 19, 2012 letter, due to the volume and nature of comments received in response to the Notice of Preparation, SCVSD would not be able to complete the Wastewater Facilities Plan and EIR by December 31, 2012. The letter stated that SCVSD would provide a new projected schedule for the production of the documents at a later date.
12. As of the date of this Order, SCVSD has not complied with Task 17(a) from Attachment K of Order Nos. R4-2009-0074 and R4-2009-0075.

Regulatory Considerations

1. As described in the above Recitals, SCVSD has violated Order Nos. R4-2009-0074 and R4-2009-0075 by failing to comply with Task 17(a) from Attachment K. The Los Angeles Water Board may assess administrative civil liability based on California Water Code Section 13385.
2. Water Code Section 13385(e) states: "*In determining the amount of civil liability imposed under this section, the regional board....shall take into account the nature, circumstances, extent, and gravity of the violation or violations, whether the discharge is susceptible to cleanup or abatement, the degree of toxicity of the discharge, and, with respect to the violator, the ability to pay, the effect on its ability to continue its business, any voluntary cleanup efforts undertaken, any prior history of violations, the degree of culpability, economic benefit or savings, if any, resulting from the violation, and other matters as justice may require. At a minimum, liability shall be assessed at a level that recovers the economic benefits, if any, derived from the acts that constitute the violation.*"

3. The Stipulated Order is consistent with both the California Water Code and the Enforcement Policy, as described more fully in Attachment A. The Discharger's economic benefit is recovered in accordance with Water Code section 13385(e).

Settlement

4. On 26 November 2012, the Executive Officer of the Los Angeles Water Board issued Administrative Civil Liability Complaint (ACLC) R4-2012-0160 to the Discharger for \$280,250. The Parties thereafter engaged in settlement negotiations and have agreed to settle the matter without administrative or civil litigation and by presenting this Stipulated Order to the Los Angeles Water Board, or its delegee, for adoption as an order by settlement pursuant to Government Code section 11415.60. The Prosecution Team believes that the resolution of the alleged violations is fair and reasonable and fulfills its enforcement objectives, that no further action is warranted concerning the violations alleged in the ACLC and that this Stipulated Order is in the best interest of the public.
5. The Parties have agreed to adjust three of the penalty calculation factors, as described in Attachment A to this Order (Potential for Harm; Per Day Factor; History of Violations). The basis for these factors is found in the State Water Resources Control Board's *Water Quality Enforcement Policy*.
6. To resolve the violations alleged in the ACLC by consent and without further administrative proceedings, the Parties have agreed to the imposition of \$225,000 in liability against the Discharger. Consistent with the *Water Quality Enforcement Policy*, up to 50% of that amount can be dedicated toward a Supplemental Environmental Project. Therefore, the Parties have agreed that \$97,500 of the total liability (50%, after subtracting staff costs) will be allocated to a SEP, as described in Attachment B. In addition, the Discharger shall pay a total of \$127,500 to the State Water Resources Control Board's Cleanup and Abatement Account. Of that amount, approximately \$30,000 consists of staff costs and the balance is stipulated penalties.

Stipulations

The Parties stipulate to the following:

1. **Administrative Civil Liability:** The Discharger hereby agrees to the imposition of an administrative civil liability totaling **two hundred twenty five thousand dollars (\$225,000)**. Of this amount:
 - a. **One hundred and twenty-seven thousand five hundred dollars (\$127,500)** shall be paid into the Cleanup and Abatement Account. A single payment shall

be made not later than 30 days after the final execution of the Order. The check should be made payable to the *State Water Pollution Cleanup and Abatement Account*, and shall indicate on the check the number of this Order. The Discharger shall send the original signed check to Julie Macedo, State Water Resources Control Board, Office of Enforcement, P.O. Box 100, Sacramento, CA 95812. A copy of the check shall be sent to Jenny Newman, Regional Water Quality Control Board, Los Angeles Region, 320 W. 4th Street, Los Angeles, CA 90013.

- b. The remaining liability of **ninety-seven thousand five hundred dollars (\$97,500)** shall be permanently suspended pending timely completion of the work, and submittal of the reports, described in Attachment B, *Supplemental Environmental Project*. The reports must document completion of the required tasks at a cost of at least \$97,500. If less than \$97,500 is spent on the project, then the Discharger shall submit the difference no later than 1 November 2015.
2. **Agreement of Discharger to Fund, Report, and Guarantee Implementation of SEP:** The Discharger represents that: (1) it will fund the SEP in the amount as described in this Stipulation; (2) it will provide certifications and written reports to the Los Angeles Water Board consistent with the terms of this Stipulation detailing the implementation of the SEP; and (3) will guarantee implementation of the SEP by remaining liable for the entire cost of the SEP until it is completed and accepted by the Los Angeles Water Board in accordance with the terms of this Stipulation. The Discharger agrees that the Los Angeles Water Board has the right to require an audit of the funds expended by it to implement the SEP.
3. **Oversight of SEP:** The Discharger is solely responsible for paying for all oversight costs incurred to oversee the SEP. The SEP oversight costs are in addition to the total administrative civil liability imposed against the Discharger and are not credited toward the Discharger's obligation to fund the SEP.
4. **Anticipated 2013 Submission from SCVSD.** SCVSD, as lead agency, will circulate for public review a draft Facilities Plan and EIR for a project that complies with the TMDL on or about April 30, 2013, consider for approval a final Facilities Plan and EIR on or before October 31, 2013, and thereafter submit to the Los Angeles Water Board, pursuant to Order Nos. R4-2009-0074 and R4-2009-0075, a final Facilities Plan and certified EIR.
5. **SCVSD Settlement Protection.** By resolving the violations brought pursuant to the ACLC, SCVSD will not face additional enforcement for failure to comply with Task 17(a) from Attachment K of Order Nos. R4-2012-0074 and R4-2012-0075 for possible violations that could be brought from November 27, 2012 through April 30, 2013. However, the Los Angeles Water Board reserves all of its other enforcement rights, including but not limited to submission of engineering designs. If SCVSD fails to submit its final Facilities Plan and certified EIR by October 31,

2013, the Los Angeles Water Board may pursue further enforcement for compliance with Task 17(a) and is permitted to calculate any penalties from May 1, 2013, although the Los Angeles Water Board agrees not to commence any enforcement action, for any violations arising from Order Nos. R4-2012-0074 or R4-2012-0075, until on or after November 1, 2013.

6. **Publicity:** Should Discharger or its agents or subcontractors publicize one or more elements of the SEP, they shall state in a prominent manner that the project is being partially funded as part of the settlement of an enforcement action by the Los Angeles Water Board against the Discharger.
7. **Compliance with Applicable Laws:** The Discharger understands that payment of administrative civil liability in accordance with the terms of this Stipulated Order and or compliance with the terms of this Stipulated Order is not a substitute for compliance with applicable laws, and that continuing violations of the type alleged in the Complaint may subject it to further enforcement, including additional administrative civil liability.
8. **Party Contacts for Communications related to Stipulated Order:**

For the Regional Water Board:
Jenny Newman
Regional Water Quality Control Board
Los Angeles Region
320 W. 4th Street, Suite 200
Los Angeles, CA 90013

For the Discharger:
Grace R. Chan
Chief Engineer and General Manager
County Sanitation Districts of Los Angeles County
1955 Workman Mill Road
Whittier, CA 90601
9. **Attorney's Fees and Costs:** Except as otherwise provided herein, each Party shall bear all attorneys' fees and costs arising from the Party's own counsel in connection with the matters set forth herein.
10. **Matters Addressed by Stipulation:** Upon the Los Angeles Water Board's, or its delegee's, adoption of this Stipulated Order, this Order represents a final and binding resolution and settlement of the violations alleged in the ACLC pursuant to Water Code sections 13323, 13350 and 13385. The provisions of this Paragraph are expressly conditioned on the full payment of the administrative civil liability, in accordance with Stipulation Paragraph 1 herein.

11. **Public Notice:** The Discharger understands that this Stipulated Order will be noticed for a 30-day public review and comment period prior to consideration by the Los Angeles Water Board, or its delegee. If significant new information is received that reasonably affects the propriety of presenting this Stipulated Order to the Los Angeles Water Board, or its delegee, for adoption, the Executive Officer may unilaterally declare this Stipulated Order void and decide not to present it to the Los Angeles Water Board, or its delegee. The Discharger agrees that it may not rescind or otherwise withdraw their approval of this proposed Stipulated Order.
12. **Addressing Objections Raised During Public Comment Period:** The Parties agree that the procedure contemplated for the Los Angeles Water Board's adoption of the settlement by the Parties and review by the public, as reflected in this Stipulated Order, will be adequate. In the event procedural objections are raised prior to the Stipulated Order becoming effective, the Parties agree to meet and confer concerning any such objections, and may agree to revise or adjust the procedure as necessary or advisable under the circumstances.
13. **No Waiver of Right to Enforce:** The failure of the Prosecution Team or Los Angeles Water Board to enforce any provision of this Stipulated Order shall in no way be deemed a waiver of such provision, or in any way affect the validity of the Order. The failure of the Prosecution Team or Los Angeles Water Board to enforce any such provision shall not preclude it from later enforcing the same or any other provision of this Stipulated Order.
14. **Interpretation:** This Stipulated Order shall be construed as if the Parties prepared it jointly. Any uncertainty or ambiguity shall not be interpreted against any one Party.
15. **Modification:** This Stipulated Order shall not be modified by any of the Parties by oral representation made before or after its execution. All modifications must be in writing, signed by all Parties, and approved by the Los Angeles Water Board.
16. **If Order Does Not Take Effect:** In the event that this Stipulated Order does not take effect because it is not approved by the Los Angeles Water Board, or its delegee, or is vacated in whole or in part by the State Water Board or a court, the Parties acknowledge that they expect to proceed to a contested evidentiary hearing before the Los Angeles Water Board to determine whether to assess administrative civil liabilities for the underlying alleged violations, unless the Parties agree otherwise. The Parties agree that all oral and written statements and agreements made during the course of settlement discussions will not be admissible as evidence in the hearing. The Parties agree to waive any and all objections based on settlement communications in this matter, including, but not limited to:

- a. Objections related to prejudice or bias of any of the Los Angeles Water Board members or their advisors and any other objections that are premised in whole or in part on the fact that the Los Angeles Water Board members or their advisors were exposed to some of the material facts and the Parties' settlement positions as a consequence of reviewing the Stipulation and/or the Order, and therefore may have formed impressions or conclusions prior to any contested evidentiary hearing on the Complaint in this matter; or
 - b. Laches or delay or other equitable defenses based on the time period for administrative or judicial review to the extent this period has been extended by these settlement proceedings.
17. **No Admission of Liability:** In settling this matter, the Discharger does not admit to any of the findings in the ACLC, this Stipulated Order, or that it has been or is in violation of the Water Code, or any other federal, state, or local law or ordinance; however, the Discharger recognizes that this Stipulated Order may be used as evidence of a prior enforcement action consistent with Water Code section 13327.
 18. **Waiver of Hearing:** The Discharger has been informed of the rights provided by CWC section 13323(b), and hereby waives its right to a hearing before the Los Angeles Water Board prior to the adoption of the Stipulated Order.
 19. **Waiver of Right to Petition:** The Discharger hereby waives its right to petition the Los Angeles Water Board's adoption of the Stipulated Order as written for review by the State Water Board, and further waives its rights, if any, to appeal the same to a California Superior Court and/or any California appellate level court.
 20. **Los Angeles Water Board is Not Liable:** Neither the Los Angeles Water Board members nor the Los Angeles Water Board staff, attorneys, or representatives shall be liable for any injury or damage to persons or property resulting from acts or omissions by the Discharger, its directors, officers, employees, agents, representatives or contractors in carrying out activities pursuant to this Stipulated Order.
 21. **Authority to Bind:** Each person executing this Stipulated Order in a representative capacity represents and warrants that he or she is authorized to execute this Stipulated Order on behalf of and to bind the entity on whose behalf he or she executes the Order.
 22. **No Third Party Beneficiaries.** This Stipulated Order is not intended to confer any rights or obligations on any third party or parties, and no third party or parties shall have any right of action under this Stipulated Order for any cause whatsoever.
 23. **Effective Date:** This Stipulated Order shall be effective and binding on the Parties upon the date the Los Angeles Water Board, or its delegee, enters the Order.

24. **Counterpart Signatures:** This Stipulated Order may be executed and delivered in any number of counterparts, each of which when executed and delivered shall be deemed to be an original, but such counterparts shall together constitute one document.

IT IS SO STIPULATED.

District Counsel

Order of the Los Angeles Water Board

1. In adopting this Stipulated Order, the Los Angeles Water Board or its delegee has considered, where applicable, each of the factors prescribed in CWC sections 13327 and 13385(e). The consideration of these factors is based upon information and comments obtained by the Los Angeles Water Board's staff in investigating the allegations in the Complaint or otherwise provided to the Los Angeles Water Board or its delegee by the Parties and members of the public. In addition to these factors, this settlement recovers the costs incurred by the staff of the Los Angeles Water Board for this matter.
2. This is an action to enforce the laws and regulations administered by the Los Angeles Water Board. The Los Angeles Water Board finds that issuance of this Order is exempt from the provisions of the California Environmental Quality Act (Public Resources Code, sections 21000 et seq.), in accordance with section 15321(a)(2), Title 14, of the California Code of Regulations.
3. The terms of the foregoing Stipulation are fully incorporated herein and made part of this Order of the Los Angeles Water Board.

Pursuant to CWC sections 13323, 13350, 13385 and Government Code section 11415.60, **IT IS HEREBY ORDERED** by the California Regional Water Quality Control Board, Los Angeles Region.

Attachment A: Penalty Calculation Methodology
Attachment B: Supplemental Environmental Project (SEP)

ATTACHMENT A to SETTLEMENT AGREEMENT AND STIPULATION
ACL Order R4-2012-0160
Santa Clarita Valley Sanitation District
Analysis of Enforcement Policy Penalty Methodology

California Water Code (CWC) section 13385(e) requires the State Water Board and Regional Water Boards to consider several factors when determining the amount of civil liability to impose. These factors include in part: "...the nature, circumstance, extent, and gravity of the violation or violations, whether the discharge is susceptible to cleanup and abatement, the degree of toxicity of the discharge, and, with respect to the violator, the ability to pay, the effect on ability to continue in business, any voluntary cleanup efforts undertaken, any prior history of violations, the degree of culpability, economic benefit or savings, if any, resulting from the violation, and other matters as justice may require."

On 17 November 2010, the State Water Board adopted Resolution No. 2009-0083 amending the Water Quality Enforcement Policy (Enforcement Policy). The Enforcement Policy was approved by the Office of Administrative Law and became effective on 20 May 2010. The Enforcement Policy establishes a methodology for assessing administrative civil liability. The use of this methodology addresses the factors that are required to be considered when imposing a civil liability as outlined in CWC section 13385(e). The entire Enforcement Policy can be found at: http://www.waterboards.ca.gov/water_issues/programs/enforcement/docs/enf_policy_final11179.pdf.

This attachment summarizes the Prosecution Team's selected factors presented in the original ACLC, and the ultimately selected factors agreed upon by the Parties (the Prosecution Team and Santa Clarita Valley Sanitation District) through settlement negotiations, which commenced after the ACLC was issued on November 26, 2012.

Step 1 – Potential for Harm for Discharge Violations

Not Applicable – This step does not apply since the violation of Order Nos. R4-2009-0074 and R4-2009-0075 alleged in the Complaint are non-discharge violations.

Step 2 – Assessment for Discharge Violations

Not Applicable – This step does not apply since the violation of Order Nos. R4-2009-0074 and R4-2009-0075 alleged in the Complaint are non-discharge violations.

Step 3 – Per Day Assessments for Non-Discharge Violations

Regional Board staff used the matrix set forth in Table 3 of the Enforcement Policy (page 16) to calculate an initial liability factor for the violation of the Orders, considering the **Potential for Harm** and the **Deviation from Requirement**.

a. Potential Harm

Staff determined that the **Potential for Harm was Moderate** because the violations of Task 17(a), which will lead to a delay in compliance with final effluent limits for chloride, will have an impact on salt sensitive agriculture beneficial uses. Thus, "the characteristics of the violation present a substantial threat to beneficial uses, and/or the circumstances of the violation indicate a substantial potential for harm" as described in the Enforcement Policy.

b. Deviation from Requirement

Staff determined that the **Deviation from Requirement was Moderate** because SCVSD did not submit the Wastewater Facilities Plan and Programmatic EIR by the required deadline, but it has taken steps to do so in the future. Thus, "the intended effectiveness of the requirement has been partially compromised (e.g., the requirement was not met, and the effectiveness of the requirement is only partially achieved)" as described in the Enforcement Policy.

c. Per Day Factor

From the range given in the matrix set forth in Table 3 of the Enforcement Policy non-discharge violations of this type, Staff selected a **Per Day Factor of 0.35**, which is the average factor in the given range.

d. Maximum per Day Liability Amount

Pursuant to CWC section 13385, the Regional Board may assess a maximum administrative civil liability of **\$10,000** for each day in which the Dischargers fail to comply with requirements of Order No. R4-2009-0074.

e. Days Subject to Liability

SCVSD has been in violation for **572 days** for each Order, calculated from the May 4, 2011 due date for the Wastewater Facilities Plan and Programmatic EIR through November 26, 2012, the date the ACLC was issued.

However, in accordance with the Enforcement Policy (page 18), an alternative approach to penalty calculation for violations that last more than 30 days may be used if the Los Angeles Water Board can make express findings that the violation(s):

- a. Is (are) not causing daily detrimental impacts to the environment or the regulatory program;
- b. Result(s) in no economic benefit from the illegal conduct that can be measured on a daily basis; or
- c. Occurred without the knowledge or control of the violator, who therefore did not take action to mitigate or eliminate the violation.

Los Angeles Water Board staff has determined that the alternative penalty calculation approach is appropriate since the violations result in no economic benefit from the illegal conduct that can be measured on a daily basis.

The alternative penalty calculation approach provides that for violations lasting more than 30 days, the liability shall not be less than an amount that is calculated based on an assessment of the initial liability amount for the first day of the violation, plus an assessment for each 5 day period of violation until the 30th day, plus an assessment for each 30 days of violation thereafter.

Using the alternative penalty calculation approach, **25 days** for the violation of each Order are subject to liability, based on a per day assessment for day 1, 5, 10, 15, 20, 25, 30, 60, 90, and so forth for every additional 30 days of violation within the 501 day total.

Using the above information, the Initial Liability assessed per day was calculated to be **\$87,500**:

(Per Day Factor) x (Days Subject to Liability) x (Maximum per Day Liability Amount)

= (0.35) x (25 days) x (\$10,000/day)

= \$87,500 for each facility (Valencia and Saugus)

Settlement Considerations: In settlement negotiations, the Parties agreed to reduce the Potential for Harm factor from moderate to minor (step a, above) and ultimately selected a Per Day factor of 0.30 (step c, above). The resulting calculation is \$75,000 for each facility.

Step 4 – Adjustment Factors

Staff considered certain Permittee Conduct Factors to calculate assessment for the Violations:

a. Culpability:

SCVSD is culpable for the violations. The completion date for Task No. 17(a) is clearly listed in Order Nos. R4-2009-0074 and R4-2009-0075. In addition, SCVSD was also given notice to submit the required documentation in letters from the Los Angeles Water Board dated September 29, 2010; April 1, 2011; and May 27, 2011. SCVSD therefore was fully aware of the requirement of Order Nos. R4-2009-0074 and R4-2009-0075 and failed to comply. SCVSD's compliance with the TMDL in 2015, while not at issue in this Complaint, is jeopardized by SCVSD's failure to submit the initial documentation. In addition, extensive communications between the Regional Board staff and SCVSD staff led the Regional Board staff to presume that the technical documents would be submitted timely. Instead, to the extent that SCVSD has changed course with its remedial and technical intentions, contrary to public statements made to Regional Board staff and to the Regional Board in developing the TMDL, we hope that this Complaint provides the deterrence against

further violations and SCVSD's correspondence stating that the plan would be submitted by December 31, 2012 is accurate. However, to the extent that SCVSD claims it simply needed more time to meet the existing schedule, the May 2011 submittals claiming an "exemption" could have been avoided. Upon receiving the first notice, a reasonable and prudent person would have submitted the required technical documents to come into compliance. For these reasons, staff selected a factor of 1.3. The selection of this factor increases the base liability.

b. Cleanup and Cooperation:

SCVSD has voluntarily cooperated in returning to compliance, although is not currently in compliance. As of the date of the Complaint, SCVSD has taken steps to come into compliance with the Orders by approving the staff recommendation to prepare a Wastewater Facilities Plan and EIR, and by releasing a Notice of Preparation. Therefore, Staff selected a factor of 1.0. The selection of this factor neither increases nor decreases the base liability.

c. History of Violations:

SCVSD has previously violated effluent limits under NPDES Permit No. CA0054216. Therefore, staff selected a factor of 1.1, which is the minimum multiplier for repeated violations. The selection of this factor increases the base liability.

Settlement Considerations: In settlement negotiations, the Parties agreed to reduce the History of Violations factor to 1.0. Therefore, the selection of 1 will not further increase the base liability.

Revised Assessment for Each Violation

The initial assessment for the Violation is multiplied by the above factors to give a revised assessment of **\$97,500**:

$$\begin{aligned} & (\text{Initial Assessment}) \times (\text{Culpability}) \times (\text{Cleanup and Cooperation}) \times (\text{History}) \\ & = (\$75,000) \times (1.3) \times (1.0) \times (1.0) \\ & = \$97,500 \text{ for each violation} \end{aligned}$$

Step 5 – Determination of Total Base Liability Amount

Since there are two violations being assessed liability, the **Total Base Liability Amount** is **\$195,000** (\$97,500 (Valencia, Order No. R4-2009-0074) + \$97,5000 (Saugus, Order No. R4-2009-0075).

Step 6 – Ability to Pay and Ability to Continue in Business

SCVSD is a large public agency that has the ability to increase rates. The Total Base

Liability Amount will not affect the Permittee's ability to continue in business. Accordingly, the Total Base Liability Amount was not adjusted. The burden of proof is on SCVSD to indicate if it has the inability to pay the recommended liability.

Step 7 – Other Factors as Justice May Require

If the amount determined using the above factors is inappropriate, the amount may be adjusted under the provision for "other factors as justice may require," but only if express findings are made to justify this adjustment. In addition, the costs of investigation and enforcement are "other factors as justice may require," and should be added to the liability amount.

Staff costs incurred by the Los Angeles Water Board to date are \$30,000. This amount was added to the Total Base Liability Amount, bringing the **adjusted Total Base Liability Amount to \$225,000:**

$$\begin{aligned} (\text{Adjusted Total Base Liability}) &= (\text{Total Base Liability}) + (\text{Staff Costs}) \\ &= (\$195,000) + (\$30,000) \\ &= \$225,000 \end{aligned}$$

Step 8 – Economic Benefit

The Economic Benefit Amount is any savings or monetary gain derived from the act or omission that constitutes the violation. The Enforcement Policy states that the adjusted Total Base Liability Amount shall be at least 10 percent higher than the Economic Benefit Amount so that liabilities are not construed as the cost of doing business and that the assessed liability provides a meaningful deterrent to future violations.

Staff estimates the benefit of non-compliance to be approximately \$10,000 which is an estimate based on the interest able to be generated by SCVSD between May 4, 2011, when the EIR and Wastewater Facilities Plan was due, and December 31, 2012, the date by which SCVSD has promised to come into compliance. This figure was generated using the ABEL model developed by the EPA. Staff is currently treating this cost as a delayed cost rather than an avoided cost.

Settlement Considerations: The negotiated settlement of \$225,000 will recover SCVSD's economic benefit, in accordance with the Water Code.

Step 9 – Maximum and Minimum Liability Amounts

The **Minimum Liability Amount** is equivalent to 110 percent of the **Economic Benefit** derived from the violation. Using the economic benefit estimated in Step 8, the minimum liability amount is **\$11,000** (economic benefit plus 10%).

The **Maximum Liability Amount** is \$11,440,000, which is calculated by multiplying the maximum \$10,000 per day rate under Water Code Section 13385, subdivision (c), and 1,144 days, the total number of days SCVSD has been in violation.

Settlement Considerations: The negotiated settlement of \$225,000 is between the maximum and minimum administrative civil liability amounts, and is therefore consistent with the Enforcement Policy.

Step 10 – Final Liability Amount

In accordance with the above methodology, Staff recommends a **Final Liability Amount** of \$280,250. This Final Liability Amount is within the statutory minimum and maximum amounts.

Settlement Considerations: The negotiated settlement of \$225,000 recovers a majority of the Prosecution Team's recommended administrative civil liability and, in the Prosecution Team's opinion, the settlement is in the best interests of the public.

Name of the independent management company who would report solely to the Regional Board, to oversee the implementation of the SEP, including all contact information (If applicable)

Not Applicable

Third party completing the project including all contact information (If applicable)

Not Applicable

Names and statement of qualifications and experience for key project team members

Travis Lange, Environmental Services manager, City of Santa Clarita

Heather Lea Merenda, Sustainability Planner, City of Santa Clarita

Qualifications: Qualified SWPPP Development, Certified Professional in Storm Water Quality

Name and location of the project, including watershed (creek, river, bay) where it is located

- Ventura Coastal, Ventura River, Santa Clara River, Santa Monica Bay, Los Angeles Country Coastal, Los Angeles River, or multiple watersheds

Name: City of Santa Clarita LID Parking Lot Retrofit

Location: The proposed project site would be located in the City of Santa Clarita (City). Project will retrofit one of the City owned parking lots within the City boundaries. Possible locations include the City Corporate Yard Employee Parking Lot at 25663 Avenue Stanford, Santa Clarita CA 91355 and City Parks Parking Lots (list of parks can be found at <http://www.santa-clarita.com/index.aspx?page=343>). The proposed project site is estimated to be approximately 5,000 square feet.

Watershed: Santa Clara River Watershed

Description of the project and how it fits into one or more of the following SEP categories:

- **Pollution prevention**
- **Environmental restoration**
- **Environmental auditing**
- **Compliance education/development of education materials**
- **Watershed assessment (e.g., citizen monitoring, coordination, and facilitation)**
- **Watershed management facilitation services**
- **Non-point source program implementation**

Project Description:

Background:

The Santa Clara River is regarded as the largest natural river system in Southern California. The Santa Clara River flows approximately 84 miles from its headwaters near Acton, in the San Gabriel Mountains, westward through Los Angeles and Ventura counties, to its delta between the cities of Ventura and Oxnard. The 45-mile long portion of the Santa Clara River and its tributaries within Los Angeles County is referred to as the "Upper Santa Clara River watershed" while the portion in Ventura County is referred to as the "Lower Santa Clara River watershed."

The Upper Santa Clara River watershed, where the proposed project is located, consists of approximately 680 square miles of mostly rugged topography and natural land. Urban development is concentrated in the City of Santa Clarita and its four communities (Canyon Country, Newhall, Saugus, and Valencia) and the Los Angeles County unincorporated communities of Stevenson Ranch, Castaic, West Ridge, and West Creek. There are also rural communities with some urbanization in Val Verde, Agua Dulce and Acton. Surface flows are ephemeral in Reach 7 (between Bouquet Canyon Creek and Lang Gauging Station) and Reach 8 (above Lang Gauging Station) and are perennial for the majority of Reach 5 (from Blue Cut to The Old Road) and Reach 6 (from The Old Road to Bouquet Canyon Creek). The beneficial use designations for the Upper Santa Clara River include IND, PROC, AGR, GWR, FRSH, REC1, REC2, WARM, WILD, BIOL, and WET.

Native habitats occupying the upland portions of the watershed include chaparral, coastal sage scrub, and oak woodlands. The floodplains of the Upper Santa Clara River and its tributaries support a mix of cover including open channel, a variety of native habitats, and developed areas. The most significant habitats are cottonwood woodlands, willow woodlands, and riparian scrub. Multiple threats to the health of the watershed exist. Runoff from parking lots is one of the urban runoff issues of concern.

Project Overview:

Infiltration of urban runoff has increasingly been recognized as a sustainable stormwater management strategy that helps protect water quality in surface and ground waters by reducing stormwater runoff and pollutant loadings. The State Water Resources Control Board and the California Coastal Commission have endorsed this type of best management practice as highly preferable to other stormwater treatment efforts. This has been recently reaffirmed by the "Reining in the Rain" statewide conference hosted by the Coastal Commission. The Low Impact Development Center, Inc. has also promoted infiltration with concern for parking lots. LID is a way, using engineering design, to help restore the pre-development hydrologic regime landscapes. This design approach incorporates strategic planning with best management practices to improve water quality, while allowing for development or infrastructure rehabilitation to occur. The proposed project will retrofit an existing City public parking lot by including LID strategies such as planting areas that allow for infiltration, permeable pavers, and/or porous concrete to allow for stormwater absorption below parking and walking areas.

How the Project Fits into the SEP Categories:

Pollution Prevention or Reduction – This proposed project would utilize LID strategies at an existing City owned parking lot to reduce stormwater runoff impacts. Pollutants of concern from parking lots can include sediment, nutrients, trash, metals, bacteria, oil, and grease. LID strategies can result in pollutant removal through settling, filtration, adsorption, and biological uptake.¹

Environmental Restoration – The proposed project will potentially lower pollutant loading to the Santa Clara River by better managing stormwater runoff at the source. Due to the high traffic volumes that regularly travel through City public parking lots, loading to the Santa Clara River could be reduced, which could improve wildlife habitats along the Santa Clara River and enhance recreational uses.

Description of how the project benefits water quality and/or quantity

In the Municipal Guide to Low Impact Development, it explains LID “is an ecologically friendly approach to site development and storm water management that aims to mitigate development impacts to land, water, and air. The approach emphasizes the integration of site design and planning techniques that conserve natural systems and hydrologic functions on a site ... Specifically, LID aims to ... decentralize and micromanage stormwater at its source.” Both permeable paving and infiltration trenches are elements of LID. Nutrients and metals are held in check by porous pavements. The trenches will remove sediment, nutrients, trash, metals, bacteria, oil, grease, and organics from stormwater runoff. All of these will reduce pollutants in the stormdrain system. Infiltration reduces hydro-modification impacts.

Description of how the project benefits the public

The City of Santa Clarita Low Impact Development (LID) Parking Lot Retrofit project benefits the public by better managing stormwater at City-related facilities, potentially improving local surface water quality, and restoring the direct hydrological connection between localized rainfall and the groundwater basin.

Documented support by one or more of the following:

- Other agencies
- Public groups
- Impacted persons

In addition to the City, non-profit organizations have provided support for these types of projects for years. SCOPE, the Santa Clarita Organization for Planning and the Environment, is a local non-profit organization that has actively lobbied and supported this project for ten years. Lynne Plambeck, president of SCOPE, can be contacted at (661) 255-6899.

Monitoring plan or Quality Assurance Project Plan (QAPP) if applicable – required for all projects and tasks involving use of existing environmental data and those involved with the collection of new information e.g. the sampling and analysis project

- Guidance for QAPP <http://www.epa.gov/quality/qs-docs/g5-final.pdf>

Detailed description of the scope of work, work products and project milestones

Scope of Work

The SEP is expected to occur over eighteen (18) months for site selection, design, bid process, permitting, construction, and final inspection.

The City of Santa Clarita has diverse soil types, varying by location, in the over 50 square miles of City land. Site selection for this project would assess soil type and permeability as part of the design, and would incorporate actions necessary, if any, to ensure successful project implementation (e.g., amending soils with more permeable structure). Further, site assessors would refer to guidance in the California Stormwater Quality Association (CASQA) LID Manual for Southern California, CASQA Best Management Practices (BMP) Handbook, and other professional design standards in selecting and developing the site. The proposed project site would be approximately 5,000 square feet.

The work will include the following: removal and excavation of asphalt, soil excavation, installation of subsurface material (piping, gravel, media), installation of LID materials (geotextile fabric, permeable pavers or porous concrete), and landscaping.

SEP Work Product

- Quarterly Progress Reports
- Final Report
- SEP Certificate of Completion

SEP Milestones

- Construction Plan
- Completion of LID Parking Lot Retrofit

Include or reference a scope of work, including a budget

A task list and estimated budget for the SEP is included in Attachment A

Schedule for periodic monitoring (quarterly at a minimum) on the performance of the SEP to monitor the timely and successful completion of the SEP

- Reports should include a list of all activities on the SEP since its adoption, all SEP activities during the quarter, an accounting of funds expended, and the proposed work for the following quarter
- Copies of the reports must be provided to the Regional Board and the Division of Financial Assistance of the State Board

The City will provide quarterly progress reports, as well as a final report, to the Regional Water Board and the Division of Financial Assistance at the State Water Resources Control Board, on activities undertaken with the proposed project. At a minimum, the reports will include a list of all activity on the SEP for each reporting period, an accounting of funds expended, and the proposed work for the following quarter. Reports will be submitted no later than the first of the second month following the end of each reporting period in accordance with the schedule shown below. Until such time as expenditure of SEP funds has commenced, the City may submit only the report due on August 1. The City shall submit progress reports on the SEP until the proposed project is completed and the SEP contribution is fully expended or otherwise approved by the Regional Board Executive Officer.

Reporting Period

Report Submittal Date

January - March

May 1

April - June

August 1

July - September

November 1

October - December

February 1

Time schedule for implementation with single or multiple milestones and which identifies the amount of liability that will be suspended or excused upon the timely and successful completion of each milestone

- Except for the final milestone, the amount of the liability suspended for any portion of a SEP cannot exceed the projected cost of performing that portion of the SEP

The SEP is expected to occur over eighteen (18) months for site selection, design, bid process, permitting, construction, and final inspection. The project will be completed by November 2015. A project schedule is included in Attachment B.

Milestones and Liability

Milestone	Deadline	Liability Suspended or Excused Upon Completion
Construction Plan	December 1, 2014	\$15,000
Completion of LID Parking Lot Retrofit	November 1, 2015	\$82,500
Total		\$97,500

Contain or reference performance standards and identify measures or indicators or performance in the scope of work

LID performance guidelines recommended by EPA (<http://water.epa.gov/polwaste/green/index.cfm>)

CASQA LID Manual for Southern California

CASQA BMP Handbook

U.S EPA, Reducing Stormwater Costs through Low Impact Development (LID) Strategies and Practices, December 2007.

Discharger responsibility

The Santa Clarita Valley Sanitation District is ultimately responsible for ensuring that the SEP monies are expended for the project described, and remains liable for the SEP amount under the Settlement Agreement and Stipulated ACL until the SEP is completed and accepted by the Los Angeles Water Board.

ATTACHMENT A: TASK LIST AND PROJECT BUDGET

Task	Amount of Work	\$/Unit	Estimated Cost
Design			\$15,000
Asphalt Removal and Recycling/Soil Excavation	Approx. 5,000 square feet	Approx. \$5 per square foot	\$25,000
Aggregate/Gravel/Media	Approx. 500 cubic yards	Approx. \$20 per cubic yard	\$10,000
Geotextile Fabric	Approx. 5,000 square feet	Approx. \$1.50 per square foot	\$7,500
Plant Material	Approx. 100 plants	Approx. \$50 per plant	\$5,000
Permeable Pavers or Porous Concrete	Approx. 1,400 square feet	Approx. \$25 per square foot	\$35,000

Total: \$97,500

Notes

- Depending on site location, amount of work for each task will vary. For example, potential sites will differ in requirements for the amount of plant material, permeable pavers, or porous pavers.
- Depending on the design, plants could range from 1 gallon to 15 gallon, and would consist of site-appropriate species of shrubs, perennials, and/or trees
- Unit Prices (\$/Unit) are preliminary estimates and will vary based on several factors such as site location, market value, and type and quantity of materials.
