- (i) Based on data collected pursuant to Provisions D.2.a.(3), the assessments under Provision D.4.b.(2)(b) must be included in the Transitional Monitoring and Assessment Program Annual Reports required pursuant to Provision F.3.b.(2).
  - (ii) Based on the data collected pursuant to Provisions D.2.c, the assessments required under Provision D.4.b.(2)(c) must be included in the Water Quality Improvement Plan Annual Reports required pursuant to Provision F.3.b.(3).
  - (iii) Based on the data collected pursuant to Provisions D.2.c, the assessment required under Provisions D.4.b.(2)(c)-(d) must be included in the Report of Waste Discharge required pursuant to F.5.b.
- (b) Based on the transitional wet weather MS4 outfall discharge monitoring required pursuant to Provision D.2.a.(3) the Copermittees must assess and report the following:

- (i) The Copermittees must analyze the monitoring data collected pursuant to Provision D.2.a.(3), and utilize a watershed model or other method, to calculate or estimate the following for each monitoring year:
    - [a] The average storm water runoff coefficient for each land use type within the Watershed Management Area;
    - [b] The volume of storm water and pollutant loads discharged from each of the Copermittee's monitored MS4 outfalls in its jurisdiction to receiving waters within the Watershed Management Area for each storm event with measurable rainfall greater than 0.1 inch;
    - [c] The total flow volume and pollutant loadings discharged from the Copermittee's jurisdiction within the Watershed Management Area over the course of the wet season, extrapolated from the data produced from the monitored MS4 outfalls; and
    - [d] The percent contribution of storm water volumes and pollutant loads discharged from each land use type within each hydrologic subarea with a major MS4 outfall to receiving waters or within each major MS4 outfall to receiving waters in the Copermittee's jurisdiction within the Watershed Management Area for each storm event with measurable rainfall greater than 0.1 inch.
  - (ii) Identify modifications to the wet weather MS4 outfall discharge monitoring locations and frequencies necessary to identify pollutants in storm water discharges from the MS4s in the Watershed Management Area pursuant to Provision D.2.c.(1).
- (c) Based on the wet weather MS4 outfall discharge monitoring required pursuant to Provision D.2.c the Copermittees must assess and report the following:
- (i) The assessments required pursuant to Provision D.4.b.(2)(b);
  - (ii) Based on the data collected and applicable SALs in the Water Quality Improvement Plan, analyze and compare the monitoring data to the analyses and assumptions used to develop the Water Quality Improvement Plans, including strategies developed pursuant to Provision B.3, and evaluate whether those analyses and assumptions should be updated as a component of the adaptive management efforts pursuant to Provision B.5 for follow-up action to update the Water Quality Improvement Plan;
  - (iii) The Copermittees must review the data collected pursuant to Provision D.2.c and findings from the assessments required pursuant to Provisions D.4.b.(2)(c)(i)-(ii) at least once during the term of this Order to:

- [a] Identify reductions or progress in achieving reductions in pollutant concentrations and/or pollutant loads from different land uses and/or drainage areas discharging from the Copermitees' MS4s in the Watershed Management Area;
- [b] Assess the effectiveness of water quality improvement strategies being implemented by the Copermitees within the Watershed Management Area toward reducing pollutants in storm water discharges from the MS4s to receiving waters within the Watershed Management Area to the MEP, with an estimate, if possible, of the pollutant load reductions attributable to specific water quality strategies implemented by the Copermitees; and
- [c] Identify modifications necessary to increase the effectiveness of the water quality improvement strategies implemented by the Copermitees in the Watershed Management Area toward reducing pollutants in storm water discharges from the MS4s to receiving waters in the Watershed Management Area to the MEP.

(iv) Identify data gaps in the monitoring data necessary to assess Provisions D.4.b.(2)(c)(i)-(iii).

(d) The Copermitees must evaluate all the data collected pursuant to Provision D.2.c, and incorporate new outfall monitoring data into time series plots for each long-term monitoring constituent for the Watershed Management Area, and perform statistical trends analysis on the cumulative long-term wet weather MS4 outfall discharge water quality data set.

#### **c. SPECIAL STUDIES ASSESSMENTS**

The Copermitees must annually evaluate the results and findings from the special studies developed and implemented pursuant to Provision D.3, and assess their relevance to the Copermitees' efforts to characterize receiving water conditions, understand sources of pollutants and/or stressors, and control and reduce the discharges of pollutants from the MS4 outfalls to receiving waters in the Watershed Management Area. The Copermitees must report the results of the special studies assessments applicable to the Watershed Management Area, and identify any necessary modifications or updates to the Water Quality Improvement Plan based on the results in the Water Quality Improvement Plan Annual Reports required pursuant to Provision F.3.b.(3).

#### **d. INTEGRATED ASSESSMENT OF WATER QUALITY IMPROVEMENT PLAN**

As part of the iterative approach and adaptive management process required for the Water Quality Improvement Plan pursuant to Provision B.5, the Copermitees in each Watershed Management Area must integrate the data collected pursuant to Provisions D.1-D.3, the findings from the assessments required pursuant to

Provisions D.4.a-c, and information collected during the implementation of the jurisdictional runoff management programs required pursuant to Provision E to assess the effectiveness of, and identify necessary modifications to, the Water Quality Improvement Plan as follows:

- (1) The Copermittees must re-evaluate the priority water quality conditions and numeric goals for the Watershed Management Area, as needed, during the term of this Order pursuant to Provision B.5.a. The re-evaluation and recommendations for modifications to the priority water quality conditions, and/or numeric goals and corresponding schedules may be provided in the Water Quality Improvement Plan Annual Reports required pursuant to Provision F.3.b.(3), but must at least be provided in the Report of Waste Discharge pursuant to Provision F.5.b. The priority water quality conditions and numeric goals for the Watershed Management Area must be re-evaluated as follows:
  - (a) Re-evaluate the receiving water conditions in the Watershed Management Area in accordance with Provision B.2.a;
  - (b) Re-evaluate the impacts on receiving waters in the Watershed Management Area from MS4 discharges in accordance with Provision B.2.b;
  - (c) Re-evaluate the identification of MS4 sources of pollutants and/or stressors in accordance with Provision B.2.d;
  - (d) Identify beneficial uses of the receiving waters that are protected in accordance with Provision D.4.a;
  - (e) Evaluate the progress toward achieving the interim and final numeric goals for protecting impacted beneficial uses in the receiving waters.
- (2) The Copermittees must re-evaluate the water quality improvement strategies for the Watershed Management Area during the term of this Order pursuant to Provision B.5.b. The re-evaluation and recommendations for modifications to the water quality improvement strategies and schedules may be provided in the Water Quality Improvement Plan Annual Reports required pursuant to Provision F.3.b.(3), but must at least be provided in the Report of Waste Discharge pursuant to Provision F.5.b. The water quality improvement strategies for the Watershed Management Area must be re-evaluated as follows:
  - (a) Identify the non-storm water and storm water pollutant loads from the Copermittees' MS4 outfalls in the Watershed Management Area, calculated or estimated pursuant to Provisions D.4.b;

- (b) Identify the non-storm water and storm water pollutant load reductions, or other improvements to receiving water or water quality conditions, that are necessary to attain the interim and final numeric goals identified in the Water Quality Improvement Plan for protecting beneficial uses in the receiving waters;
  - (c) Identify the non-storm water and storm water pollutant load reductions, or other improvements to the quality of MS4 discharges, that are necessary for the Copermittees to demonstrate that non-storm water and storm water discharges from their MS4s are not causing or contributing to exceedances of receiving water limitations;
  - (d) Evaluate the progress of the water quality improvement strategies toward achieving the interim and final numeric goals identified in the Water Quality Improvement Plan for protecting beneficial uses in the receiving waters.
- (3) The Copermittees must re-evaluate and adapt the water quality monitoring and assessment program for the Watershed Management Area when new information becomes available to improve the monitoring and assessment program pursuant to Provision B.5.c. The re-evaluation and recommendations for modifications to the monitoring and assessment program may be provided in the Water Quality Improvement Plan Annual Reports required pursuant to Provision F.3.b.(3), but must at least be provided in the Report of Waste Discharge pursuant to Provision F.5.b. Modifications to the water quality monitoring and assessment program must be consistent with the requirements of Provision D.1-D.3. The re-evaluation of the water quality monitoring and assessment program for the Watershed Management Area must consider the data gaps identified by the assessments required pursuant to Provisions D.4.a-b, and results of the special studies implemented pursuant to Provision D.4.c.

## **5. Monitoring Provisions**

Each Copermittee must comply with all the monitoring, reporting, and recordkeeping provisions of the Standard Permit Provisions and General Provisions contained in Attachment B to this Order.

This page left intentionally blank

## **E. JURISDICTIONAL RUNOFF MANAGEMENT PROGRAMS**

The purpose of this provision is for each Copermittee to implement a program to control the contribution of pollutants to and the discharges from the MS4 within its jurisdiction. The goal of the jurisdictional runoff management programs is to implement strategies that effectively prohibit non-storm water discharges to the MS4 and reduce the discharge of pollutants in storm water to the MEP. This goal will be accomplished through implementing the jurisdictional runoff management programs in accordance with the strategies identified in the Water Quality Improvement Plans.

Each Copermittee must update its jurisdictional runoff management program document, in accordance with Provision F.2.a, to incorporate all the requirements of Provision E. Until the Copermittee has updated its jurisdictional runoff management program document with the requirements of Provision E, the Copermittee must continue implementing its current jurisdictional runoff management program.

### **1. Legal Authority Establishment and Enforcement**

- a. Each Copermittee must establish, maintain, and enforce adequate legal authority within its jurisdiction to control pollutant discharges into and from its MS4 through statute, ordinance, permit, contract, order, or similar means. This legal authority must, at a minimum, authorize the Copermittee to:
  - (1) Prohibit and eliminate all illicit discharges and illicit connections to its MS4;
  - (2) Control the contribution of pollutants in discharges of runoff associated with industrial and construction activity to its MS4 and control the quality of runoff from industrial and construction sites, including industrial and construction sites which have coverage under the statewide General Permit for Discharges of Storm Water Associated with Industrial Activities (Industrial General Permit) or General Permit for Discharges of Storm Water Associated with Construction Activities (Construction General Permit), as well as to those sites which do not;
  - (3) Control the discharge of spills, dumping, or disposal of materials other than storm water into its MS4;
  - (4) Control through interagency agreements among Copermittees the contribution of pollutants from one portion of the MS4 to another portion of the MS4;
  - (5) Control, by coordinating and cooperating with other owners of the MS4 such as Caltrans, the U.S. federal government, or sovereign Native American Tribes through interagency agreements, where possible, the contribution of pollutants from their portion of the MS4 to the portion of the MS4 within the Copermittee's jurisdiction;

- (6) Require compliance with conditions in its statutes, ordinances, permits, contracts, orders, or similar means to hold dischargers to its MS4 accountable for their contributions of pollutants and flows;
  - (7) Require the use of BMPs to prevent or reduce the discharge of pollutants in storm water from its MS4 to the MEP;
  - (8) Require documentation on the effectiveness of BMPs implemented to prevent or reduce the discharge of pollutants in storm water from its MS4 to the MEP;
  - (9) Utilize enforcement mechanisms to require compliance with its statutes, ordinances, permits, contracts, orders, or similar means; and
  - (10) Carry out all inspections, surveillance, and monitoring procedures necessary to determine compliance and noncompliance with its statutes, ordinances, permits, contracts, orders, or similar means and with the requirements of this Order, including the prohibition of illicit discharges and connections to its MS4; the Copermittee must also have authority to enter, monitor, inspect, take measurements, review and copy records, and require regular reports from industrial facilities, including construction sites, discharging into its MS4.
- b. With the first Water Quality Improvement Plan Annual Report required pursuant to Provision F.3.b.(3), each Copermittee must submit a statement certified by its Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative that the Copermittee has taken the necessary steps to obtain and maintain full legal authority within its jurisdiction to implement and enforce each of the requirements contained in this Order.

## **2. Illicit Discharge Detection and Elimination**

Each Copermittee must implement a program to actively detect and eliminate illicit discharges and improper disposal into the MS4, or otherwise require the discharger to apply for and obtain a separate NPDES permit. The illicit discharge detection and elimination program must be implemented in accordance with the strategies in the Water Quality Improvement Plan described pursuant to Provision B.3.b.(1) and include, at a minimum, the following requirements:

### **a. NON-STORM WATER DISCHARGES**

Each Copermittee must address all non-storm water discharges as illicit discharges unless a non-storm water discharge is either identified as a discharge authorized by a separate NPDES permit, or identified as a category of non-storm water discharges or flows that must be addressed pursuant to the following requirements:

- PROVISION E: JURISDICTIONAL RUNOFF MANAGEMENT PROGRAMS
- E.1. Legal Authority Establishment and Enforcement
  - E.2. Illicit Discharge Detection and Elimination

- (1) Discharges of non-storm water to the MS4 from the following categories must be addressed as illicit discharges unless the discharge has coverage or meets the exception criteria under NPDES Permit No. CAG919003 (Order No. R9-2015-0013, as it may be amended or reissued) for discharges to surface waters within the San Diego Region:
  - (1) Uncontaminated pumped ground water;
  - (2) Discharges from foundation drains;<sup>23</sup>
  - (3) Water from crawl space pumps; and
  - (4) Water from footing drains.<sup>20</sup>
- (2) Discharges of non-storm water from water line flushing and water main breaks to the MS4 must be addressed as illicit discharges unless the discharge has coverage under NPDES Permit No. CAG679001 (Order No. R9-2010-0003, as it may be amended or reissued) or NPDES General Permit No. CAG140001 (Order 2014-0194-DWQ, as it may be amended or reissued). This category includes water line flushing and water main break discharges from water purveyors issued a water supply permit by the California Department of Public Health or federal military installations. Discharges from recycled or reclaimed water lines to the MS4 must be addressed as illicit discharges, unless the discharges have coverage under a separate NPDES permit.
- (3) Discharges of non-storm water to the MS4 from the following categories must be addressed by the Copermittee as illicit discharges only if the Copermittee or the San Diego Water Board identifies the discharge as a source of pollutants to receiving waters:
  - (a) Diverted stream flows;
  - (b) Rising ground waters;
  - (c) Uncontaminated ground water infiltration to MS4s;
  - (d) Springs;
  - (e) Flows from riparian habitats and wetlands;
  - (f) Discharges from potable water sources;

---

<sup>23</sup> Provision E.2.a.(1) only applies to this category of non-storm water if the system is designed to be located at or below the groundwater table to actively or passively extract groundwater during any part of the year.

- (g) Discharges from foundation drains;<sup>24</sup> and
  - (h) Discharges from footing drains.<sup>21</sup>
- (4) Discharges of non-storm water to the MS4 from the following categories must be controlled by the requirements given below through statute, ordinance, permit, contract, order, or similar means. Discharges of non-storm water to the MS4 from the following categories not controlled by the requirements given below through statute, ordinance, permit, contract, order, or similar means must be addressed by the Copermittee as illicit discharges.
- (a) Air conditioning condensation
    - The discharge of air conditioning condensation should be directed to landscaped areas or other pervious surfaces, or to the sanitary sewer, where feasible.
  - (b) Individual residential vehicle washing
    - (i) The discharge of wash water should be directed to landscaped areas or other pervious surfaces where feasible; and
    - (ii) The minimization of water, washing detergent and other vehicle wash products used for residential vehicle washing, and the implementation of other practices or behaviors that will prevent the discharge of pollutants associated with individual residential vehicle washing from entering the MS4 must be encouraged.
  - (c) Dechlorinated swimming pool discharges
    - (i) Residual chlorine, algaecide, filter backwash, or other pollutants from swimming pools must be eliminated prior to discharging to the MS4; and
    - (ii) The discharge of saline swimming pool water must be directed to the sanitary sewer, landscaped areas, or other pervious surfaces that can accommodate the volume of water, unless the saline swimming pool water can be discharged via a pipe or concrete channel directly to a naturally saline water body (e.g. Pacific Ocean).
- (5) Firefighting discharges to the MS4 must be addressed by the Copermittee as illicit discharges only if the Copermittee or the San Diego Water Board identifies the discharge as a significant source of pollutants to receiving waters. Firefighting discharges to the MS4 not identified as a significant

---

<sup>24</sup> Provision E.2.a.(3) only applies to this category of non-storm water discharge if the system is designed to be located above the groundwater table at all times of the year, and the system is only expected to discharge non-storm water under unusual circumstances.

source of pollutants to receiving waters, must be addressed, at a minimum, as follows:

(a) Non-emergency firefighting discharges

- (i) Building fire suppression system maintenance discharges (e.g. sprinkler line flushing) to the MS4 must be addressed as illicit discharges unless BMPs are implemented to prevent pollutants associated with such discharges to the MS4.
- (ii) Non-emergency firefighting discharges (i.e., discharges from controlled or practice blazes, firefighting training, and maintenance activities not associated with building fire suppression systems) must be addressed by a program, to be developed and implemented by the Copermittee, to reduce or eliminate pollutants in such discharges from entering the MS4.

(b) Emergency firefighting discharges

Each Copermittee should develop and encourage implementation of BMPs to reduce or eliminate pollutants in emergency firefighting discharges to the MS4s and receiving waters within its jurisdiction. During emergency situations, priority of efforts should be directed toward life, property, and the environment (in descending order). BMPs should not interfere with immediate emergency response operations or impact public health and safety.

- (6) If the Copermittee or San Diego Water Board identifies any category of non-storm water discharges listed under Provisions E.2.a.(1)-(4) as a source of pollutants to receiving waters, the category must be prohibited through ordinance, order, or similar means and addressed as an illicit discharge. Alternatively, the Copermittee may propose controls to be implemented for the category of non-storm water discharges as part of the Water Quality Improvement Plan instead of prohibiting the category of non-storm water discharges, and implement the controls if accepted by the San Diego Water Board as part of the Water Quality Improvement Plan.
- (7) Each Copermittee must, where feasible and priorities and resources allow, reduce or eliminate non-storm water discharges listed under Provisions E.2.a.(1)-(4) into its MS4, unless a non-storm water discharge is identified as a discharge authorized by a separate NPDES permit.

**b. PREVENT AND DETECT ILLICIT DISCHARGES AND CONNECTIONS**

Each Copermittee must include the following measures within its program to prevent and detect illicit discharges to the MS4:

- (1) Each Copermittee must maintain an updated map of its entire MS4 and the

corresponding drainage areas. The accuracy of the MS4 map must be confirmed during the field screening required pursuant to Provision E.2.c. The MS4 map must be included as part of the jurisdictional runoff management program document. Any geographic information system (GIS) layers or files used by the Copermittee to maintain the MS4 map must be made available to the San Diego Water Board upon request. The MS4 map must identify the following:

- (a) All segments of the MS4 owned, operated, and maintained by the Copermittee;
  - (b) All known locations of inlets that discharge and/or collect runoff into the Copermittee's MS4;
  - (c) All known locations of connections with other MS4s not owned or operated by the Copermittee (e.g. Caltrans MS4s);
  - (d) All known locations of MS4 outfalls and private outfalls that discharge runoff collected from areas within the Copermittee's jurisdiction;
  - (e) All segments of receiving waters within the Copermittee's jurisdiction that receive and convey runoff discharged from the Copermittee's MS4 outfalls;
  - (f) Locations of the MS4 outfalls, identified pursuant to Provision D.2.a.(1), within its jurisdiction; and
  - (g) Locations of the non-storm water persistent flow MS4 outfall discharge monitoring stations, identified pursuant to Provision D.2.b.(2), within its jurisdiction.
- (2) Each Copermittee must use Copermittee personnel and contractors to assist in identifying and reporting illicit discharges and connections during their daily employment activities.
  - (3) Each Copermittee must promote, publicize, and facilitate public reporting of the presence of illicit discharges or water quality impacts associated with discharges to or from the MS4, including the following methods for public reporting:
    - (a) Operate a public hotline, which can be Copermittee-specific or shared by the Copermittees, and must be capable of receiving reports in both English and Spanish 24 hours per day and seven days per week; and
    - (b) Designate an e-mail address for receiving electronic reports from the public, which can be Copermittee-specific or shared by the Copermittees,

and must be prominently displayed on the Copermittee's webpage and the Regional Clearinghouse required pursuant to Provision F.4.

- (4) Each Copermittee must implement practices and procedures (including a notification mechanism) to prevent, respond to, contain, and clean up any spills that may discharge into the MS4 within its jurisdiction from any source. The Copermittee must coordinate, to the extent possible, with spill response teams to prevent entry of spills into the MS4, and prevent contamination of surface water, ground water, and soil. The Copermittee must coordinate spill prevention, containment, and response activities throughout all appropriate Copermittee departments, programs, and agencies.
- (5) Each Copermittee must implement practices and procedures to prevent and limit infiltration of seepage from sanitary sewers (including private laterals and failing septic systems) to the MS4.
- (6) Each Copermittee must coordinate, when necessary, with upstream Copermittees and/or entities to prevent illicit discharges from upstream sources into the MS4 within its jurisdiction.

**c. FIELD SCREENING**

Each Copermittee must conduct field screening (i.e. visual observations, field testing, and/or analytical testing) of MS4 outfalls and other portions of its MS4 within its jurisdiction to detect non-storm water and illicit discharges and connections to the MS4 in accordance with the dry weather MS4 outfall discharge monitoring requirements in Provisions D.2.a.(2) and D.2.b.(1).

**d. INVESTIGATE AND ELIMINATE ILLICIT DISCHARGES AND CONNECTIONS**

Each Copermittee must include the following measures within its program to investigate and eliminate illicit discharges to the MS4:

- (1) Each Copermittee must prioritize and determine when follow-up investigations will be performed in response to visual observations and/or water quality monitoring data collected during an investigation of a detected non-storm water or illicit discharge to or from the MS4. The criteria for prioritizing investigations must consider the following:
  - (a) Pollutants identified as causing or contributing to the highest water quality priorities identified in the Water Quality Improvement Plan;
  - (b) Pollutants identified as causing or contributing, or threatening to cause or contribute to impairments in water bodies on the 303(d) List and/or in environmentally sensitive areas (ESAs), located within its jurisdiction;
  - (c) Pollutants identified from sources or land uses known to exist within the

area, drainage basin, or watershed that discharges to the portion of the MS4 within its jurisdiction included in the investigation;

- (d) Pollutants identified as causing or contributing to an exceedance of a NAL in the Water Quality Improvement Plan; and
  - (e) Pollutants identified as a threat to human health or the environment.
- (2) Each Copermittee must implement procedures to investigate and inspect portions of its MS4 that, based on reports or notifications, field screening, or other appropriate information, indicate a reasonable potential of receiving, containing, or discharging pollutants due to illicit discharges, illicit connections, or other sources of non-storm water. The procedures must include the following:
- (a) Each Copermittee must develop criteria to:
    - (i) Assess the validity of each report or notification received; and
    - (ii) Prioritize the response to each report or notification received.
  - (b) Each Copermittee must prioritize and respond to each valid report or notification (e.g., public reports, staff or contractor reports and notifications, etc.) of an incident in a timely manner.
  - (c) In accordance with the requirements of Provision E.2.d.(1), each Copermittee must investigate and seek to identify the source(s) of discharges of non-storm water where flows are observed in and from the MS4 during the field screening required pursuant to Provision D.2.b.(1) as follows:
    - (i) Obvious illicit discharges must be immediately investigated to identify the source(s) of non-storm water discharges;
    - (ii) The investigation must include field investigations to identify sources or potential sources for the discharge, unless the source or potential source has already been identified during previous investigations; and
    - (iii) The investigation may include follow-up field investigations and/or reviewing Copermittee inventories and other land use data to identify potential sources of the discharge.
  - (d) Each Copermittee must maintain records and a database of the following information:
    - (i) Location of incident, including hydrologic subarea, portion of MS4

- receiving the non-storm water or illicit discharge, and point of discharge or potential discharge from MS4 to receiving water;
- (ii) Source of information initiating the investigation (e.g., public reports, staff or contractor reports and notifications, field screening, etc.);
  - (iii) Date the information used to initiate the investigation was received;
  - (iv) Date the investigation was initiated;
  - (v) Dates of follow-up investigations;
  - (vi) Identified or suspected source of the illicit discharge or connection, if determined;
  - (vii) Known or suspected related incidents, if any;
  - (viii) Result of the investigation; and
  - (ix) If a source cannot be identified and the investigation is not continued, document the response pursuant to the requirements of Provision E.2.d.(4).
- (e) Each Copermittee must maintain records and, in accordance with the priorities of the Water Quality Improvement Plan, seek to identify the source(s) of non-storm water discharges from the MS4 where there is evidence of non-storm water having been discharged into or from the MS4 (e.g., pooled water), in accordance with MS4 outfall discharge monitoring requirements in Provisions D.2.a.(2) and D.2.b.(1).
- (3) Each Copermittee must initiate the implementation of procedures, in a timely manner, to eliminate all detected and identified illicit discharges and connections within its jurisdiction. The procedures must include the following responses:
- (a) Each Copermittee must enforce its legal authority, as required under Provision E.1, to eliminate illicit discharges and connections to the MS4.
  - (b) If the Copermittee identifies the source as a controllable source of non-storm water or illicit discharge or connection, the Copermittee must implement its Enforcement Response Plan pursuant to Provision E.6 and enforce its legal authority to prohibit and eliminate illicit discharges and connections to its MS4.
  - (c) If the Copermittee identifies the source of the discharge as a category of non-storm water discharges in Provision E.2.a, and the discharge is in exceedance of NALs in the Water Quality Improvement Plan, then the Copermittee must determine if: (1) this is an isolated incident or set of circumstances that will be addressed through its Enforcement Response Plan pursuant to Provision E.6, or (2) the category of discharge must be

addressed through the prohibition of that category of discharge as an illicit discharge pursuant to Provision E.2.a.(6).

- (d) If the Copermittee suspects the source of the non-storm water discharge as natural in origin (i.e. non-anthropogenically influenced) and in conveyance into the MS4, then the Copermittee must document and provide the data and evidence necessary to demonstrate to the San Diego Water Board that it is natural in origin and does not require further investigation.
  - (e) If the Copermittee is unable to identify and document the source of a recurring non-storm water discharge to or from the MS4, then the Copermittee must address the discharge as an illicit discharge and update its jurisdictional runoff management program to address the common and suspected sources of the non-storm water discharge within its jurisdiction in accordance with the Copermittee's priorities.
- (4) Each Copermittee must submit a summary of the non-storm water discharges and illicit discharges and connections investigated and eliminated within its jurisdiction with each Water Quality Improvement Plan Annual Report required under Provision F.3.b.(3) of this Order.

### **3. Development Planning**

Each Copermittee must use their land use and planning authorities to implement a development planning program in accordance with the strategies in the Water Quality Improvement Plan described pursuant to Provision B.3.b.(1) and includes, at a minimum, the following requirements:

#### **a. BMP REQUIREMENTS FOR ALL DEVELOPMENT PROJECTS**

Each Copermittee must prescribe the following BMP requirements during the planning process (i.e. prior to project approval and issuance of local permits) for all development projects (regardless of project type or size), where local permits are issued, including unpaved roads and flood management projects:

##### (1) General Requirements

- (a) Onsite BMPs must be located so as to remove pollutants from runoff prior to its discharge to any receiving waters, and as close to the source as possible;
- (b) Structural BMPs must not be constructed within waters of the U.S.
- (c) Onsite BMPs must be designed and implemented with measures to avoid the creation of nuisance or pollution associated with vectors (e.g.

mosquitos, rodents, or flies).

## (2) Source Control BMP Requirements

The following source control BMPs must be implemented at all development projects where applicable and feasible:

- (a) Prevention of illicit discharges into the MS4;
- (b) Storm drain system stenciling or signage;
- (c) Protect outdoor material storage areas from rainfall, run-on, runoff, and wind dispersal;
- (d) Protect materials stored in outdoor work areas from rainfall, run-on, runoff, and wind dispersal;
- (e) Protect trash storage areas from rainfall, run-on, runoff, and wind dispersal; and
- (f) Any additional BMPs determined to be necessary by the Copermittee to minimize pollutant generation at each project.

## (3) Low Impact Development (LID) BMP Requirements

The following LID BMPs must be implemented at all development projects where applicable and feasible:

- (a) Maintenance or restoration of natural storage reservoirs and drainage corridors (including topographic depressions, areas of permeable soils, natural swales, and ephemeral and intermittent streams);<sup>25</sup>
- (b) Buffer zones for natural water bodies (where buffer zones are technically infeasible, require project applicant to include other buffers such as trees, access restrictions, etc.);
- (c) Conservation of natural areas within the project footprint including existing trees, other vegetation, and soils;
- (d) Construction of streets, sidewalks, or parking lot aisles to the minimum widths necessary, provided public safety is not compromised;
- (e) Minimization of the impervious footprint of the project;

---

<sup>25</sup> Development projects proposing to dredge or fill materials in waters of the U.S. must obtain a CWA Section 401 Water Quality Certification. Projects proposing to dredge or fill waters of the state must obtain waste discharge requirements.

- (f) Minimization of soil compaction to landscaped areas;
- (g) Disconnection of impervious surfaces through distributed pervious areas;
- (h) Landscaped or other pervious areas designed and constructed to effectively receive and infiltrate, retain and/or treat runoff from impervious areas, prior to discharging to the MS4;
- (i) Small collection strategies located at, or as close as possible to, the source (i.e. the point where storm water initially meets the ground) to minimize the transport of runoff and pollutants to the MS4 and receiving waters;
- (j) Use of permeable materials for projects with low traffic areas and appropriate soil conditions;
- (k) Landscaping with native or drought tolerant species; and
- (l) Harvesting and using precipitation.

**b. PRIORITY DEVELOPMENT PROJECTS**

Priority Development Projects are land development projects that fall under the planning and building authority of the Copermittee for which the Copermittee must impose specific requirements, in addition to those described in Provision E.3.a, including the implementation of structural BMPs to meet the performance requirements described in Provision E.3.c.

(1) Definition of Priority Development Project

Priority Development Projects include the following:

- (a) New development projects that create 10,000 square feet or more of impervious surfaces (collectively over the entire project site). This includes commercial, industrial, residential, mixed-use, and public development projects on public or private land.
- (b) Redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface (collectively over the entire project site on an existing site of 10,000 square feet or more of impervious surfaces). This includes commercial, industrial, residential, mixed-use, and public development projects on public or private land.
- (c) New and redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface (collectively over the entire project

site), and support one or more of the following uses:

- (i) Restaurants. This category is defined as a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC code 5812).
  - (ii) Hillside development projects. This category includes development on any natural slope that is twenty-five percent or greater.
  - (iii) Parking lots. This category is defined as a land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce.
  - (iv) Streets, roads, highways, freeways, and driveways. This category is defined as any paved impervious surface used for the transportation of automobiles, trucks, motorcycles, and other vehicles.
- (d) New or redevelopment projects that create and/or replace 2,500 square feet or more of impervious surface (collectively over the entire project site), and discharging directly to an Environmentally Sensitive Area (ESA). "Discharging directly to" includes flow that is conveyed overland a distance of 200 feet or less from the project to the ESA, or conveyed in a pipe or open channel any distance as an isolated flow from the project to the ESA (i.e. not commingled with flows from adjacent lands).
- (e) New development projects, or redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface, that support one or more of the following uses:
- (i) Automotive repair shops. This category is defined as a facility that is categorized in any one of the following Standard Industrial Classification (SIC) codes: 5013, 5014, 5541, 7532-7534, or 7536-7539.
  - (ii) Retail gasoline outlets (RGOs). This category includes RGOs that meet the following criteria: (a) 5,000 square feet or more or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day.
- (f) New or redevelopment projects that result in the disturbance of one or more acres of land and are expected to generate pollutants post construction.

## (2) Special Considerations for Redevelopment Projects

The structural BMP performance requirements of Provision E.3.c are applicable to redevelopment Priority Development Projects, as defined in E.3.b.(1), as follows:

- (a) Where redevelopment results in the creation or replacement of impervious surface in an amount of less than fifty percent of the surface area of the previously existing development, then the structural BMP performance requirements of Provision E.3.c apply only to the creation or replacement of impervious surface, and not the entire development; or
- (b) Where redevelopment results in the creation or replacement of impervious surface in an amount of more than fifty percent of the surface area of the previously existing development, then the structural BMP performance requirements of Provision E.3.c apply to the entire development.

### (3) Priority Development Project Exemptions

Each Copermittee has the discretion to exempt the following projects from being defined as Priority Development Projects:

- (a) New or retrofit paved sidewalks, bicycle lanes, or trails that meet the following criteria:
  - (i) Designed and constructed to direct storm water runoff to adjacent vegetated areas, or other non-erodible permeable areas; OR
  - (ii) Designed and constructed to be hydraulically disconnected from paved streets or roads; OR
  - (iii) Designed and constructed with permeable pavements or surfaces in accordance with USEPA Green Streets guidance.<sup>26</sup>
- (b) Retrofitting or redevelopment of existing paved alleys, streets or roads that are designed and constructed in accordance with the USEPA Green Streets guidance.<sup>27</sup>

### **C. PRIORITY DEVELOPMENT PROJECT STRUCTURAL BMP PERFORMANCE REQUIREMENTS**

In addition to the BMP requirements listed for all development projects under Provision E.3.a, Priority Development Projects must also implement structural BMPs that conform to performance requirements described below.

#### (1) Storm Water Pollutant Control BMP Requirements

Each Copermittee must require each Priority Development Project to implement onsite structural BMPs to control pollutants in storm water that may be discharged from a project as follows:

---

<sup>26</sup> See “Managing Wet Weather with Green Infrastructure – Municipal Handbook: Green Streets” (USEPA, 2008).

<sup>27</sup> Ibid.

- (a) Each Priority Development Project must be required to implement LID BMPs that are designed to retain (i.e. intercept, store, infiltrate, evaporate, and evapotranspire) onsite the pollutants contained in the volume of storm water runoff produced from a 24-hour 85<sup>th</sup> percentile storm event (design capture volume);<sup>28</sup>
- (i) If a Copermittee determines that implementing BMPs to retain the full design capture volume onsite for a Priority Development Project is not technically feasible, then the Copermittee may allow the Priority Development Project to utilize biofiltration BMPs. Biofiltration BMPs must be designed to have an appropriate hydraulic loading rate to maximize storm water retention and pollutant removal, as well as to prevent erosion, scour, and channeling within the BMP,<sup>29</sup> and must be sized to:
- [a] Treat 1.5 times the design capture volume not reliably retained onsite, OR
- [b] Treat the design capture volume not reliably retained onsite with a flow-thru design that has a total volume, including pore spaces and pre-filter detention volume, sized to hold at least 0.75 times the portion of the design capture volume not reliably retained onsite.
- (ii) If a Copermittee determines that biofiltration is not technically feasible, then the Copermittee may allow the Priority Development Project to utilize flow-thru treatment control BMPs to treat runoff leaving the site, AND mitigate for the design capture volume not reliably retained onsite pursuant to Provision E.3.c.(1)(b). Flow thru treatment control BMPs must be sized and designed to:
- [a] Remove pollutants from storm water to the MEP;
- [b] Filter or treat either: 1) the maximum flow rate of runoff produced from a rainfall intensity of 0.2 inch of rainfall per hour, for each hour of a storm event, or 2) the maximum flow rate of runoff produced by the 85<sup>th</sup> percentile hourly rainfall intensity (for each hour of a storm event), as determined from the local historical rainfall record, multiplied by a factor of two;

---

<sup>28</sup> This volume is not a single volume to be applied to all areas covered by this Order. The size of the 85<sup>th</sup> percentile storm event is different for various parts of the San Diego Region. The Copermittees are encouraged to calculate the 85<sup>th</sup> percentile storm event for each of its jurisdictions using local rain data pertinent to its particular jurisdiction. In addition, isopluvial maps may be used to extrapolate rainfall data to areas where insufficient data exists in order to determine the volume of the local 85<sup>th</sup> percentile storm event in such areas. Where the Copermittees will use isopluvial maps to determine the 85<sup>th</sup> percentile storm event in areas lacking rain data, the Copermittees must describe their method for using isopluvial maps in its BMP Design Manuals.

<sup>29</sup> As part of the Copermittee's update to its BMP Design Manual, pursuant to Provision E.3.d, the Copermittee must provide guidance for hydraulic loading rates and other biofiltration design criteria necessary to maximize storm water retention and pollutant removal.

- [c] Be ranked with high or medium pollutant removal efficiency for the Priority Development Project's most significant pollutants of concern. Flow-thru treatment control BMPs with a low removal efficiency ranking must only be approved by a Copermittee when a feasibility analysis has been conducted which exhibits that implementation of flow-thru treatment control BMPs with high or medium removal efficiency rankings are infeasible for a Priority Development Project or portion of a Priority Development Project.
- (b) A Priority Development Project may be allowed to utilize alternative compliance under Provision E.3.c.(3) in lieu of complying with the storm water pollutant control BMP performance requirements of Provision E.3.c.(1)(a). The Priority Development Project must mitigate for the portion of the pollutant load in the design capture volume not retained onsite if Provision E.3.c.(3) is utilized. If a Priority Development Project is allowed to utilize alternative compliance, flow-thru treatment control BMPs must be implemented to treat the portion of the design capture volume that is not reliably retained onsite. Flow-thru treatment control BMPs must be sized and designed in accordance with Provisions E.3.c.(1)(a)(ii)[a]-[c].

## (2) Hydromodification Management BMP Requirements

Each Copermittee must require each Priority Development Project to implement onsite BMPs to manage hydromodification that may be caused by storm water runoff discharged from a project as follows:

- (a) Post-project runoff conditions (flow rates and durations) must not exceed pre-development runoff conditions by more than 10 percent (for the range of flows that result in increased potential for erosion, or degraded instream habitat downstream of Priority Development Projects).
  - (i) In evaluating the range of flows that results in increased potential for erosion of natural (non-hardened) channels, the lower boundary must correspond with the critical channel flow that produces the critical shear stress that initiates channel bed movement or that erodes the toe of channel banks.
  - (ii) The Copermittees may use monitoring results collected pursuant to Provision D.1.a.(2) to re-define the range of flows resulting in increased potential for erosion, or degraded instream habitat conditions, as warranted by the data.
- (b) Each Priority Development Project must avoid critical sediment yield areas known to the Copermittee or identified by the optional Watershed Management Area Analysis pursuant to Provision B.3.b.(4), or implement measures that allow critical coarse sediment to be discharged to receiving waters, such that there is no net impact to the receiving water.

(c) A Priority Development Project may be allowed to utilize alternative compliance under Provision E.3.c.(3) in lieu of complying with the performance requirements of Provision E.3.c.(2)(a). The Priority Development Project must mitigate for the post-project runoff conditions not fully managed onsite if Provision E.3.c.(3) is utilized.

(d) Exemptions

Each Copermittee has the discretion to exempt a Priority Development Project from the hydromodification management BMP performance requirements of Provisions E.3.c.(2) where the project discharges storm water runoff to:

- (i) Existing underground storm drains discharging directly to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean;
- (ii) Conveyance channels whose bed and bank are concrete lined all the way from the point of discharge to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean; or
- (iii) An area identified by the Copermittees as appropriate for an exemption by the optional Watershed Management Area Analysis incorporated into the Water Quality Improvement Plan pursuant to Provision B.3.b.(4).

(e) Interim Timeframe Exemptions

Until the Copermittees have updated their BMP Design Manual in accordance with Provision F.2.b with the requirements of Provision E, the Copermittees have the discretion to exempt a Priority Development Project from the hydromodification management BMP performance requirements of Provision E.3.c.(2) where the project discharges storm water runoff directly to:

- (i) An engineered channel conveyance system with a capacity to convey peak flows generated by the 10-year storm event all the way from the point of discharge to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean; and
- (ii) Large river reaches with a drainage area larger than 100 square miles and a 100-year flow capacity in excess of 20,000 cubic feet per second, provided that properly sized energy dissipation is included at all Priority Development Project discharge points.

### (3) Alternative Compliance Program to Onsite Structural BMP Implementation

At the discretion of each Copermittee, Priority Development Projects may be allowed to participate in an alternative compliance program in lieu of implementing the onsite structural BMP performance requirements of Provisions E.3.c.(1) and E.3.c.(2)(a), provided that the Water Quality Improvement Plan includes the optional Watershed Management Area Analysis described in Provision B.3.b.(4), and Water Quality Equivalency calculations have been accepted by the San Diego Water Board's Executive Officer pursuant to Provision E.3.c.(3)(a). The alternative compliance program is available to a Priority Development Project only if the Priority Development Project applicant enters into a voluntary agreement with the Copermittee authorizing this arrangement. In addition to the voluntary agreement, relief from implementing structural BMPs onsite may be authorized by the Copermittee under the following conditions:

#### (a) Water Quality Equivalency

Copermittees must submit Water Quality Equivalency calculations for acceptance by the San Diego Water Board's Executive Officer prior to administering an alternative compliance program in order to establish a regional and technical basis for determining the water quality benefits associated with alternative compliance projects. Accepted Water Quality Equivalency calculations must be incorporated as part of any Copermittee's alternative compliance program necessary for evaluating Watershed Management Area Analysis candidate projects, project applicant-proposed alternative compliance projects, alternative compliance in lieu fee structures, and alternative compliance water quality credit systems as described in Provisions E.3.c.(3)(b)-(e).

#### (b) Watershed Management Area Analysis Candidate Projects

The Priority Development Project applicant agrees to fund, contribute funds to, or implement a candidate project identified by the Copermittees in the Watershed Management Area Analysis included in the Water Quality Improvement Plan, pursuant to Provisions B.3.b.(4) subject to the following conditions:

- (i) The Copermittee must determine that implementation of the candidate project will have a greater overall water quality benefit for the Watershed Management Area than fully complying with the performance requirements of Provisions E.3.c.(1) and E.3.c.(2)(a) onsite;
- (ii) If the Priority Development Project applicant chooses to fully or partially fund a candidate project, then the in-lieu fee structure described in Provision E.3.c.(3)(c) must be followed;

- (iii) If the Priority Development Project applicant chooses to fully or partially fund a candidate project, then the Copermittee must ensure that the funds to be obtained from the Priority Development Project applicant are sufficient to mitigate for impacts caused by not fully implementing structural BMPs onsite, pursuant to the performance requirements described in Provisions E.3.c.(1) and E.3.c.(2)(a);
  - (iv) If the Priority Development Project applicant chooses to implement a candidate project, then the Copermittee must ensure that pollutant control and/or hydromodification management within the candidate project are sufficient to mitigate for impacts caused by not implementing structural BMPs fully onsite, pursuant to the performance requirements described in Provisions E.3.c.(1) and E.3.c.(2)(a);
  - (v) The voluntary agreement to fund, partially fund, or implement a candidate project must include reliable sources of funding for operation and maintenance of the candidate project;
  - (vi) Design of the candidate project must be conducted under an appropriately qualified engineer, geologist, architect, landscape architect, or other professional, licenses where applicable, and competent and proficient in the fields pertinent to the candidate project design;
  - (vii) The candidate project must be constructed as soon as possible, but no later than 4 years after the certificate of occupancy is granted for the first Priority Development Project that contributed funds toward the construction of the candidate project, unless a longer period of time is authorized by the San Diego Water Board Executive Officer; and
  - (viii) If the candidate project is constructed after the Priority Development Project is constructed, the Copermittee must require temporal mitigation for pollutant loads and altered flows that are discharged from the Priority Development Project.
- (c) Project Applicant Proposed Alternative Compliance Projects

The Copermittee may allow a Priority Development Project applicant to propose and fund, contribute funds to, or implement an alternative compliance project not identified by the Watershed Management Area Analysis included in the Water Quality Improvement Plan pursuant to Provisions B.3.b.(4). This option is allowed provided the Copermittee determines that implementation of the alternative compliance project will have a greater overall water quality benefit for the Watershed Management Area than fully complying with the performance requirements of Provisions E.3.c.(1) and E.3.c.(2)(a) onsite, and is subject to the requirements described in Provisions E.3.c.(3)(a)(ii)-(viii).

(d) Alternative Compliance In-Lieu Fee Structure

If a Copermittee chooses to allow a Priority Development Project applicant to fund, or partially fund a candidate project or an alternative compliance project, then the Copermittee must develop and implement an in-lieu fee structure. This may be developed individually or with other Copermittees and/or entities, as a means for designing, developing, constructing, operating and maintaining offsite alternative compliance projects. The in-lieu fee must be transferred to the Copermittee (for public projects) or an escrow account (for private projects) prior to the construction of the Priority Development Project.

(e) Alternative Compliance Water Quality Credit System Option

The Copermittee may develop and implement an alternative compliance water quality credit system option, individually or with other Copermittees and/or entities, provided that such a credit system clearly exhibits that it will not allow discharges from Priority Development Projects to cause or contribute to a net impact over and above the impact caused by projects meeting the onsite structural BMP performance requirements of Provisions E.3.c.(1) and E.3.c.(2)(a). Any credit system that a Copermittee chooses to implement must be submitted to the San Diego Water Board Executive Officer for review and acceptance as part of the Water Quality Improvement Plan.

(4) Long-Term Structural BMP Maintenance

Each Copermittee must require the project applicant to submit proof of the mechanism under which ongoing long-term maintenance of all structural BMPs will be conducted.

(5) Infiltration and Groundwater Protection

(a) Structural BMPs designed to primarily function as large, centralized infiltration devices (such as large infiltration trenches and infiltration basins) must not cause or contribute to an exceedance of an applicable groundwater quality objective. At a minimum, such infiltration BMPs must be in conformance with the design criteria listed below, unless the development project applicant demonstrates to the Copermittee that one or more of the specific design criteria listed below are not necessary to protect groundwater quality. The design criteria listed below do not apply to small infiltration systems dispersed throughout a development project.

- (i) Runoff must undergo pretreatment such as sedimentation or filtration prior to infiltration;

- (ii) Pollution prevention and source control BMPs must be implemented at a level appropriate to protect groundwater quality at sites where infiltration BMPs are to be used;
  - (iii) Infiltration BMPs must be adequately maintained to remove pollutants in storm water to the MEP;
  - (iv) The vertical distance from the base of any infiltration BMP to the seasonal high groundwater mark must be at least 10 feet. Where groundwater basins do not support beneficial uses, this vertical distance criteria may be reduced, provided groundwater quality is maintained;
  - (v) The soil through which infiltration is to occur must have physical and chemical characteristics (e.g., appropriate cation exchange capacity, organic content, clay content, and infiltration rate) which are adequate for proper infiltration durations and treatment of runoff for the protection of groundwater beneficial uses;
  - (vi) Infiltration BMPs must not be used for areas of industrial or light industrial activity, and other high threat to water quality land uses and activities as designated by each Copermittee, unless source control BMPs to prevent exposure of high threat activities are implemented, or runoff from such activities is first treated or filtered to remove pollutants prior to infiltration; and
  - (vii) Infiltration BMPs must be located a minimum of 100 feet horizontally from any water supply wells.
- (b) The Copermittee may develop, individually or with other Copermittees, alternative mandatory design criteria to that listed above for infiltration BMPs which are designed to primarily function as centralized infiltration devices. Before implementing the alternative design criteria in the development planning process the Copermittee(s) must:
- (i) Notify the San Diego Water Board of the intent to implement the alternative design criteria submitted; and
  - (ii) Comply with any conditions set by the San Diego Water Board.

#### **d. BMP DESIGN MANUAL UPDATE**

Each Copermittee must update its BMP Design Manual<sup>30</sup> pursuant to Provision F.2.b. Until the Copermittee has updated its BMP Design Manual pursuant to Provision F.2.b.(1), the Copermittee must continue implementing its current BMP Design Manual. The Copermittee must implement the updated BMP Design Manual within 180 days following completion of the update pursuant to Provision

---

<sup>30</sup> The BMP Design Manual was formerly known as the Standard Storm Water Mitigation Plan under Order Nos. R9-2007-0001, R9-2009-0002, and R9-2010-0016.

F.2.b.(1), unless directed otherwise by the San Diego Water Board Executive Officer. The date the BMP Design Manual is implemented is the “effective date” of the BMP Design Manual. The update of the BMP Design Manual required pursuant to Provision F.2.b.(1) must include the following:

- (1) Updated procedures to determine the nature and extent of storm water requirements applicable to a potential development or redevelopment projects. These procedures must inform project applicants of the storm water management requirements applicable to their project including, but not limited to, general requirements for all development projects, structural BMP design procedures and requirements, hydromodification management requirements, requirements specific to phased projects, and procedures specific to private developments and public improvement projects;
- (2) Updated procedures to identify pollutants and conditions of concern for selecting the most appropriate structural BMPs that consider, at a minimum, the following:
  - (a) Receiving water quality (including pollutants for which receiving waters are listed as impaired under the CWA section 303(d) List);
  - (b) Pollutants, stressors, and/or receiving water conditions that cause or contribute to the highest priority water quality conditions identified in the Water Quality Improvement Plan;
  - (c) Land use type of the project and pollutants associated with that land use type; and
  - (d) Pollutants expected to be present onsite.
- (3) Updated procedures for designing structural BMPs, including any updated performance requirements to be consistent with the requirements of Provision E.3.c for all structural BMPs listed in the BMP Design Manual;
- (4) Long-term maintenance criteria for each structural BMP listed in the BMP Design Manual; and
- (5) Alternative compliance criteria, in accordance with the requirements under Provision E.3.c.(3), if the Copermittee elects to allow Priority Development Projects within its jurisdiction to utilize alternative compliance.

**e. PRIORITY DEVELOPMENT PROJECT BMP IMPLEMENTATION AND OVERSIGHT**

Each Copermittee must implement a program that requires and confirms structural BMPs on all Priority Development Projects are designed, constructed, and maintained to remove pollutants in storm water to the MEP.

(1) Structural BMP Approval and Verification Process

- (a) Each Copermittee must require and confirm that all Priority Development Projects implement the requirements of Provision E.3, except that the Copermittee may allow previous land development requirements to apply to a Priority Development Project if the conditions of Provision E.3.e.(1)(a)(i) or Provision E.3.e.(1)(a)(ii) are met:
- (i) The Copermittee has, prior to the effective date of the BMP Design Manual required to be developed pursuant to Provision E.3.d:
- [a] Approved<sup>31</sup> a design that incorporates the storm water drainage system for the Priority Development Project in its entirety, including all applicable structural pollutant treatment control and hydromodification management BMPs consistent with the previous applicable MS4 permit requirements;<sup>32</sup> AND
  - [b] Issued a private project permit or approval, or functional equivalent for public projects, that authorizes the Priority Development Project applicant to commence construction activities based on a design that incorporates the storm water drainage system approved in conformance with Provision E.3.e.(1)(a)(i)[a]; AND
  - [c] Confirmed that there have been construction activities on the Priority Development Project site within the 365 days prior to the effective date of the BMP Design Manual, *OR* the Copermittee confirms that construction activities have commenced on the Priority Development Project site within the 180 days after the effective date of the BMP Design Manual, where construction activities are undertaken in reliance on the permit or approval, or functional equivalent for public projects, issued by the Copermittee in conformance with Provision E.3.e.(1)(a)(i)[b]; AND
  - [d] Issued all subsequent private project permits or approvals, or functional equivalent for public projects, that are needed to implement the design initially approved in conformance with Provision E.3.e.(1)(a)(i)[a] within 5 years of the effective date of the BMP Design Manual. The storm water drainage system for the Priority Development Project in its entirety, including all applicable structural pollutant treatment control and hydromodification management BMPs must remain in substantial conformity with the design initially approved in conformance with Provision E.3.e.(1)(a)(i)[a].

---

<sup>31</sup> For public projects, a design stamped by the City or County Engineer, or engineer of record for the project is considered an approved design.

<sup>32</sup> Order Nos. R9-2007-0001, R9-2009-0002, and R9-2010-0016 for San Diego County, Orange County, and Riverside County Copermittees, respectively

- (ii) The Copermittee demonstrates it lacks the land use authority or legal authority to require a Priority Development Project to implement the requirements of Provision E.3.
- (b) Each Copermittee must identify the roles and responsibilities of its various municipal departments in implementing the structural BMP requirements, including each stage of a project from application review and approval through BMP maintenance and inspections.
- (c) Each Copermittee must require and confirm that appropriate easements and ownerships are properly recorded in public records and the information is conveyed to all appropriate parties when there is a change in project or site ownership.
- (d) Each Copermittee must require and confirm that prior to occupancy and/or intended use of any portion of the Priority Development Project, each structural BMP is inspected to verify that it has been constructed and is operating in compliance with all of its specifications, plans, permits, ordinances, and the requirements of this Order.

(2) Priority Development Project Inventory and Prioritization

- (a) Each Copermittee must develop, maintain, and update at least annually, a watershed-based database to track and inventory all Priority Development Projects and associated structural BMPs within its jurisdiction. Inventories must be accurate and complete beginning from December 2002 for the San Diego County Copermittees, February 2003 for the Orange County Copermittees, and July 2005 for the Riverside County Copermittees. The use of an automated database system, such as GIS, is highly recommended. The database must include, at a minimum, the following information:
  - (i) Priority Development Project location (address and hydrologic subarea);
  - (ii) Descriptions of structural BMP type(s);
  - (iii) Date(s) of construction;
  - (iv) Party responsible for structural BMP maintenance;
  - (v) Dates and findings of structural BMP maintenance verifications; and
  - (vi) Corrective actions and/or resolutions, when applicable.
- (b) Each Copermittee must prioritize the Priority Development Projects with structural BMPs within its jurisdiction. The designation of Priority Development Projects as high priority must consider the following:

- (i) The highest water quality priorities identified in the Water Quality Improvement Plan;
- (ii) Receiving water quality;
- (iii) Number and sizes of structural BMPs;
- (iv) Recommended maintenance frequency of structural BMPs;
- (v) Likelihood of operation and maintenance issues of structural BMPs;
- (vi) Land use and expected pollutants generated; and
- (vii) Compliance record.

(3) Structural BMP Maintenance Verifications and Inspections

Each Copermittee is required to verify that structural BMPs on each Priority Development Project are adequately maintained, and continue to operate effectively to remove pollutants in storm water to the MEP through inspections, self-certifications, surveys, or other equally effective approaches.

- (a) All (100 percent) of the structural BMPs at Priority Development Projects that are designated as high priority must be inspected directly by the Copermittee annually prior to each rainy season;
- (b) For verifications performed through a means other than direct Copermittee inspection, adequate documentation must be required by the Copermittee to provide assurance that the required maintenance of structural BMPs at each Priority Development Project has been completed; and
- (c) Appropriate follow-up measures (including re-inspections, enforcement, etc.) must be conducted to ensure that structural BMPs at each Priority Development Project continue to reduce pollutants in storm water to the MEP as originally designed.

**f. DEVELOPMENT PROJECT ENFORCEMENT**

Each Copermittee must enforce its legal authority established pursuant to Provision E.1 for all development projects, as necessary, to achieve compliance with the requirements of this Order, in accordance with its Enforcement Response Plan pursuant to Provision E.6.

#### **4. Construction Management**

Each Copermittee must implement a construction management program in accordance with the strategies in the Water Quality Improvement Plan described pursuant to Provision B.3.b.(1) and includes, at a minimum, the following requirements:

##### **a. PROJECT APPROVAL PROCESS**

Prior to issuance of any local permit(s) that allows the commencement of construction projects that involve ground disturbance or soil disturbing activities that can potentially generate pollutants in storm water runoff, each Copermittee must:

- (1) Require a pollution control plan, construction BMP plan, and/or an erosion and sediment control plan, to be submitted by the project applicant to the Copermittee;
- (2) Confirm the pollution control plan, construction BMP plan, and/or erosion and sediment control plan, complies with the local grading ordinance, other applicable local ordinances, and the requirements of this Order;
- (3) Confirm the pollution control, construction BMP, and/or erosion and sediment control plan, includes seasonally appropriate and effective BMPs and management measures described in Provision E.4.c, as applicable to the project; and
- (4) Verify that the project applicant has obtained coverage under the statewide Construction General Permit (Order 2009-0009-DWQ or subsequent Order), if applicable.

##### **b. CONSTRUCTION SITE INVENTORY AND TRACKING**

- (1) Each Copermittee must maintain and update, at least quarterly, a watershed-based inventory of all construction projects issued a local permit that allows ground disturbance or soil disturbing activities that can potentially generate pollutants in storm water runoff. The use of an automated database system, such as GIS, is highly recommended. The inventory must include:
  - (a) Relevant contact information for each site (e.g., name, address, phone, and email for the owner and contractor);
  - (b) The basic site information including location (address and hydrologic subarea), Waste Discharge Identification (WDID) number (if applicable), size of the site, and approximate area of disturbance;

- (c) Whether or not the site is considered a high threat to water quality, as defined in Provision E.4.b.(2) below;
  - (d) The project start and completion dates;
  - (e) The required inspection frequency, as defined in the Copermittee's jurisdictional runoff management program document;
  - (f) The date the Copermittee accepted or approved the pollution control plan, construction BMP plan, and/or erosion and sediment control plan; and
  - (g) Whether or not there are ongoing enforcement actions administered to the site.
- (2) Each Copermittee must identify all construction sites within its jurisdiction that represent a high threat to downstream surface water quality. The designation of construction sites as high threat to water quality must consider the following:
- (a) Sites located within a hydrologic subarea where sediment is known or suspected to contribute to the highest priority water quality conditions identified in the Water Quality Improvement Plan;
  - (b) Sites located within the same hydrologic subarea and tributary to a water body segment listed as impaired for sediment on the CWA section 303(d) List;
  - (c) Sites located within, directly adjacent to, or discharging directly to a receiving water within an ESA; and
  - (d) Other sites determined by the Copermittees or the San Diego Water Board as a high threat to water quality.

**c. CONSTRUCTION SITE BMP IMPLEMENTATION**

Each Copermittee must implement, or require the implementation of effective BMPs to reduce discharges of pollutants in storm water from construction sites to the MEP, and effectively prohibit non-storm water discharges from construction sites into the MS4. These BMPs must be site specific, seasonally appropriate, and construction phase appropriate. BMPs must be implemented at each construction site year round. Dry season BMP implementation must plan for and address unseasonal rain events that may occur during the dry season (May 1 through September 30). Copermittees must implement, or require the implementation of, BMPs in the following categories:

- (1) Project Planning;
- (2) Good Site Management “Housekeeping”, including waste management;
- (3) Non-storm Water Management;
- (4) Erosion Control;
- (5) Sediment Control;
- (6) Run-on and Run-off Control; and
- (7) Active/Passive Sediment Treatment Systems, where applicable.

**d. CONSTRUCTION SITE INSPECTIONS**

Each Copermittee must conduct construction site inspections to require and confirm compliance with its local permits and applicable local ordinances, and the requirements of this Order. Priority for site inspections must consider threat to water quality pursuant to Provision E.4.b as well as the nature of the construction activity, topography, and the characteristics of soils and receiving water quality.

(1) Inspection Frequency

- (a) Each Copermittee must conduct inspections at all inventoried sites, including high threat to water quality sites, at an appropriate frequency for each phase of construction to confirm the site reduces the discharge of pollutants in storm water from construction sites to the MEP, and effectively prohibits non-storm water discharges from entering the MS4.
- (b) Each Copermittee must establish appropriate inspection frequencies for high threat to water quality sites, and all other sites, for each phase of construction. Inspection frequencies appropriate for addressing the highest water quality priorities identified in the Water Quality Improvement Plan, and for complying with the requirements of this Order must be identified in each Copermittee’s jurisdictional runoff management program document.
- (c) Based upon inspection findings, each Copermittee must implement all follow-up actions (i.e., re-inspection, enforcement) necessary to require and confirm site compliance with its local permits and applicable local ordinances, and the requirements of this Order.

## (2) Inspection Content

Inspections of construction sites by the Copermittee must include, at a minimum:

- (a) Verification of coverage under the Construction General Permit (Notice of Intent (NOI) and/or WDID number) during initial inspections, when applicable;
- (b) Assessment of compliance with its local permits and applicable local ordinances related to pollution prevention, including the implementation and maintenance of applicable BMPs;
- (c) Assessment of BMP adequacy and effectiveness;
- (d) Visual observations of actual non-storm water discharges;
- (e) Visual observations of actual or potential discharge of sediment and/or construction related materials from the site;
- (f) Visual observations of actual or potential illicit connections; and
- (g) If any violations are found and BMP corrections are needed, inspectors must take and document appropriate actions in accordance with the Enforcement Response Plan pursuant to Provision E.6.

## (3) Inspection Tracking and Records

Each Copermittee must track all inspections and re-inspections at all inventoried construction sites. The Copermittee must retain all inspection records in an electronic database or tabular format, which must be made available to the San Diego Water Board upon request. Inspection records must include, at a minimum:

- (a) Site name, location (address and hydrologic subarea), and WDID number (if applicable);
- (b) Inspection date;
- (c) Approximate amount of rainfall since last inspection;
- (d) Description of problems observed with BMPs and indication of need for BMP addition/repair/replacement and any scheduled re-inspection, and date of re-inspection;
- (e) Descriptions of any other specific inspection comments which must, at a minimum, include rationales for longer compliance time;

- (f) Description of enforcement actions issued in accordance with the Enforcement Response Plan pursuant to Provision E.6; and
- (g) Resolution of problems noted and date problems fixed.

**e. CONSTRUCTION SITE ENFORCEMENT**

Each Copermittee must enforce its legal authority established pursuant to Provision E.1 for all its inventoried construction sites, as necessary, to achieve compliance with the requirements of this Order, in accordance with its Enforcement Response Plan pursuant to Provision E.6.

**5. Existing Development Management**

Each Copermittee must implement an existing development management program in accordance with the strategies in the Water Quality Improvement Plan described pursuant to Provision B.3.b.(1) and includes, at a minimum, the following requirements:

**a. EXISTING DEVELOPMENT INVENTORY AND TRACKING**

Each Copermittee must maintain, and update at least annually, a watershed-based inventory of the existing development within its jurisdiction that may discharge a pollutant load to and from the MS4. The use of an automated database system, such as GIS, is highly recommended. The inventory must, at a minimum, include:

- (1) Name, location (hydrological subarea and address, if applicable) of the following types of existing development with its jurisdiction:
  - (a) Commercial facilities or areas;
  - (b) Industrial facilities;
  - (c) Municipal facilities, including:
    - (i) MS4 and related structures,<sup>33</sup>
    - (ii) Roads, streets, and highways;
    - (iii) Parking facilities;
    - (iv) Municipal airfields;
    - (v) Parks and recreation facilities;

---

<sup>33</sup> The inventory may refer to the MS4 map required to be maintained pursuant to Provision E.2.b.(1).

- (vi) Flood management facilities, flood control devices and structures;
  - (vii) Operating or closed municipal landfills;
  - (viii) Publicly owned treatment works (including water and wastewater treatment plants) and sanitary sewer collection systems;
  - (ix) Corporate yards, including maintenance and storage yards for materials, waste, equipment, and vehicles;
  - (x) Hazardous waste collection facilities;
  - (xi) Other treatment, storage or disposal facilities for municipal waste; and
  - (xii) Other municipal facilities that the Copermittee determines may contribute a significant pollutant load to the MS4.
- (d) Residential areas, which may be designated by one or more of the following:
- (i) Residential management area;
  - (ii) Drainage basin or area;
  - (iii) Land use (e.g., single family, multi-family, rural);
  - (iv) Neighborhood;
  - (v) Common Interest Area;
  - (vi) Home Owner Association;
  - (vii) Mobile home park; and/or
  - (viii) Other designations accepted by the San Diego Water Board Executive Officer.
- (2) A description of the facility or area, including the following information:
- (a) Classification as commercial, industrial, municipal, or residential;
  - (b) Status of facility or area as active or inactive;
  - (c) Identification if a business is a mobile business;
  - (d) SIC Code or NAICS Code, if applicable;
  - (e) Industrial General Permit NOI and/or WDID number, if applicable;
  - (f) Identification if a residential area is or includes a Common Interest Area / Home Owner Association, or mobile home park;

- (g) Identification of pollutants generated and potentially generated by the facility or area;
  - (h) Whether the facility or area is adjacent to an ESA;
  - (i) Whether the facility or area is tributary to and within the same hydrologic subarea as a water body segment listed as impaired on the CWA section 303(d) List and generates pollutants for which the water body segment is impaired; and
- (3) An annually updated map showing the location of inventoried existing development, watershed boundaries, and water bodies.

**b. EXISTING DEVELOPMENT BMP IMPLEMENTATION AND MAINTENANCE**

Each Copermittee must designate a minimum set of BMPs required for all inventoried existing development, including special event venues. The designated minimum BMPs must be specific to facility or area types and pollutant generating activities, as appropriate.

(1) Commercial, Industrial, and Municipal Facilities and Areas

(a) Pollution Prevention

Each Copermittee must require the use of pollution prevention methods by the commercial, industrial, and municipal facilities and areas in its inventoried existing development to address the priorities and strategies in the Water Quality Improvement Plan.

(b) BMP Implementation

Each Copermittee must require the implementation of designated BMPs at commercial facilities and areas, industrial facilities, and implement designated BMPs at municipal facilities in its inventoried existing development.

(c) BMP Operation and Maintenance

- (i) Each Copermittee must properly operate and maintain, or require the proper operation and maintenance of designated BMPs at commercial facilities and areas, industrial facilities, and municipal facilities in its inventoried existing development.
- (ii) Each Copermittee must implement a schedule of operation and maintenance activities for its MS4 and related structures (including

but not limited to catch basins, storm drain inlets, detention basins, etc.), and verify proper operation of all its municipal structural treatment controls designed to reduce pollutants (including floatables) in storm water discharges to or from its MS4s and related drainage structures. Operation and maintenance activities may include, but is not limited to, the following:

- [a] Inspections of the MS4 and related structures;
- [b] Cleaning of the MS4 and related structures; and
- [c] Proper disposal of materials removed from cleaning of the MS4 and related structures.

- (iii) Each Copermittee must implement a schedule of operation and maintenance for public streets, unpaved roads, paved roads, and paved highways within its jurisdiction to minimize pollutants that can be discharged in storm water.
- (iv) Each Copermittee must implement controls to prevent infiltration of sewage into the MS4 from leaking sanitary sewers. Copermittees that operate both a municipal sanitary sewer system and a MS4 must implement controls and measures to prevent and eliminate seeping sewage from infiltrating the MS4. Copermittees that do not operate both a municipal sanitary sewer system and a MS4 must coordinate with sewerage agencies to keep themselves informed of relevant and appropriate maintenance activities and sanitary sewage projects in their jurisdiction that may cause or contribute to seepage of sewage into the MS4.

(d) Pesticides, Herbicides, and Fertilizers BMPs

Each Copermittee must require the implementation of BMPs to reduce pollutants in storm water discharges to the MEP and effectively prohibit non-storm water discharges associated with the application, storage, and disposal of pesticides, herbicides and fertilizers from commercial facilities and areas and industrial facilities, and implement BMPs at municipal facilities in its inventoried existing development. Such BMPs must include, as appropriate, educational activities, permits, certifications and other measures for applicators and distributors.

(2) Residential Areas

(a) Pollution Prevention

Each Copermittee must promote and encourage the use of pollution prevention methods, where appropriate, by the residential areas in its inventoried existing development.

(b) BMP Implementation

Each Copermittee must promote and encourage the implementation of designated BMPs at residential areas in its inventoried existing development.

(c) BMP Operation and Maintenance

Each Copermittee must properly operate and maintain, or require the proper operation and maintenance of designated BMPs at residential areas in its inventoried existing development.

(d) Pesticides, Herbicides, and Fertilizers BMPs

Each Copermittee must promote and encourage the implementation of BMPs to reduce pollutants in storm water discharges to the MEP and effectively prohibit non-storm water discharges associated with the application, storage, and disposal of pesticides, herbicides and fertilizers from residential areas in its inventoried existing development.

**c. EXISTING DEVELOPMENT INSPECTIONS**

Each Copermittee must conduct inspections of inventoried existing development to ensure compliance with applicable local ordinances and permits, and the requirements of this Order.

(1) Inspection Frequency

- (a) Each Copermittee must establish appropriate inspection frequencies for inventoried existing development in accordance with the following requirements:
- (i) At a minimum, inventoried existing development must be inspected once every five years utilizing one or more of the following methods:
    - [a] Drive-by inspections by Copermittee municipal and contract staff;
    - [b] Onsite inspections by Copermittee municipal and contract staff; and/or
    - [c] Visual inspections of publicly accessible inventoried facilities or areas by volunteer monitoring or patrol programs that have been trained by the Copermittee;
  - (ii) The frequency of inspections must be appropriate to confirm that BMPs are being implemented to reduce the discharge of pollutants in storm water from the MS4 to the MEP and effectively prohibit non-storm water discharges to the MS4;

- (iii) The frequency of inspections must be based on the potential for a facility or area to discharge non-storm water and pollutants in storm water, and should reflect the priorities set forth in the Water Quality Improvement Plan;
  - (iv) Each Copermittee must annually perform onsite inspections of an equivalent of at least 20 percent of the commercial facilities and areas, industrial facilities, and municipal facilities in its inventoried existing development;<sup>34</sup> and
  - (v) Inventoried existing development must be inspected by the Copermittee, as needed, in response to valid public complaints.
- (b) Based upon inspection findings, each Copermittee must implement all follow-up actions (i.e. education and outreach, re-inspection, enforcement) necessary to require and confirm compliance with its applicable local ordinances and permits and the requirements of this Order, in accordance with its Enforcement Response Plan pursuant to Provision E.6.

## (2) Inspection Content

- (a) Inspections of existing development must include, at a minimum:
- (i) Visual inspections for the presence of actual non-storm water discharges;
  - (ii) Visual inspections for the presence of actual or potential discharge of pollutants;
  - (iii) Visual inspections for the presence of actual or potential illicit connections; and
  - (iv) Verification that the description of the facility or area in the inventory, required pursuant to Provision E.5.a.(2), has not changed.
- (b) Onsite inspections of existing development by the Copermittee must include, at a minimum:
- (i) Assessment of compliance with its applicable local ordinances and permits related to non-storm water and storm water discharges and runoff;
  - (ii) Assessment of the implementation of the designated BMPs;
  - (iii) Verification of coverage under the Industrial General Permit, when applicable; and

---

<sup>34</sup> If any commercial, industrial, or municipal facilities or areas require multiple onsite inspections during any given year, those additional inspection may count toward the total annual inspection requirement. This requirement excludes linear municipal facilities (i.e., MS4 linear channels, sanitary sewer collection systems, streets, roads and highways).

- (iv) If any problems or violations are found, inspectors must take and document appropriate actions in accordance with the Enforcement Response Plan pursuant to Provision E.6.

### (3) Inspection Tracking and Records

Each Copermittee must track all inspections and re-inspections at all inventoried existing development. The Copermittee must retain all inspection records in an electronic database or tabular format, which must be made available to the San Diego Water Board upon request. Inspection records must include, at a minimum:

- (a) Name and location of the facility or area (address and hydrologic subarea) consistent with the inventory name and location, pursuant to Provision E.5.a.(1);
- (b) Inspection and re-inspection date(s);
- (c) Inspection method(s) (i.e. drive-by, onsite);
- (d) Observations and findings from the inspection(s);
- (e) For onsite inspections of existing development by Copermittee municipal or contract staff, the records must also include, as applicable:
  - (i) Description of any problems or violations found during the inspection(s);
  - (ii) Description of enforcement actions issued in accordance with the Enforcement Response Plan pursuant to Provision E.6; and
  - (iii) The date problems or violations were resolved.

#### **d. EXISTING DEVELOPMENT ENFORCEMENT**

Each Copermittee must enforce its legal authority established pursuant to Provision E.1 for all its inventoried existing development, as necessary, to achieve compliance with the requirements of this Order, in accordance with its Enforcement Response Plan pursuant to Provision E.6.

#### **e. RETROFITTING AND REHABILITATING AREAS OF EXISTING DEVELOPMENT**

##### (1) Retrofitting Areas of Existing Development

Each Copermittee must describe in its jurisdictional runoff management program document, a program to retrofit areas of existing development within its jurisdiction to address identified sources of pollutants and/or stressors that

contribute to the highest priority water quality conditions in the Watershed Management Area. The program must be implemented as follows:

- (a) Each Copermittee must identify areas of existing development as candidates for retrofitting, focusing on areas where retrofitting will address pollutants and/or stressors that contribute to the highest priority water quality conditions identified in the Water Quality Improvement Plan;
- (b) Candidates for retrofitting projects may be utilized to reduce pollutants that may be discharged in storm water from areas of existing development, and/or address storm water runoff flows and durations from areas of existing development that cause or contribute to hydromodification in receiving waters;
- (c) Each Copermittee must develop a strategy to facilitate the implementation of retrofitting projects in areas of existing development identified as candidates;
- (d) Each Copermittee should identify areas of existing development where Priority Development Projects may be allowed or should be encouraged to implement or contribute toward the implementation of alternative compliance retrofitting projects; and
- (e) Where retrofitting projects within specific areas of existing development are determined to be infeasible to address the highest priority water quality conditions in the Water Quality Improvement Plan, the Copermittee should collaborate and cooperate with other Copermittees and/or entities in the Watershed Management Area to identify, develop, and implement regional retrofitting projects (i.e. projects that can receive and/or treat storm water from one or more areas of existing development and will result in a net benefit to water quality and the environment) adjacent to and/or downstream of the areas of existing development.

## (2) Stream, Channel and/or Habitat Rehabilitation in Areas of Existing Development

Each Copermittee must describe in its jurisdictional runoff management program document, a program to rehabilitate streams, channels, and/or habitats in areas of existing development within its jurisdiction to address the highest priority water quality conditions in the Watershed Management Area. The program must be implemented as follows:

- (a) Each Copermittee must identify streams, channels, and/or habitats in areas of existing development as candidates for rehabilitation, focusing on areas where stream, channel, and/or habitat rehabilitation projects will address the highest priority water quality conditions identified in the Water Quality Improvement Plan;

- (b) Candidates for stream, channel, and/or habitat rehabilitation projects may be utilized to address storm water runoff flows and durations from areas of existing development that cause or contribute to hydromodification in receiving waters, rehabilitate channelized or hydromodified streams, restore wetland and riparian habitat, restore watershed functions, and/or restore beneficial uses of receiving waters;
- (c) Each Copermittee must develop a strategy to facilitate the implementation of stream, channel, and/or habitat rehabilitation projects in areas of existing development identified as candidates;
- (d) Each Copermittee should identify areas of existing development where Priority Development Projects may be allowed or should be encouraged to implement or contribute toward the implementation of alternative compliance stream, channel, and/or habitat rehabilitation projects; and
- (e) Where stream, channel, and/or habitat rehabilitation projects within specific areas of existing development are determined to be infeasible to address the highest priority water quality conditions in the Water Quality Improvement Plan, the Copermittee should collaborate and cooperate with other Copermittees and/or entities in the Watershed Management Area to identify, develop, and implement regional stream, channel, and/or habitat rehabilitation projects (i.e. projects that can receive storm water from one or more areas of existing development and will result in a net benefit to water quality and the environment).

## **6. Enforcement Response Plans**

Each Copermittee must develop and implement an Enforcement Response Plan as part of its jurisdictional runoff management program document. The Enforcement Response Plan must describe the applicable approaches and options to enforce its legal authority established pursuant to Provision E.1, as necessary, to achieve compliance with the requirements of this Order. The Enforcement Response Plan must be in accordance with the strategies in the Water Quality Improvement Plan described pursuant to Provision B.3.b.(1) and include the following:

### **a. ENFORCEMENT RESPONSE PLAN COMPONENTS**

The Enforcement Response Plan must include the following individual components:

- (1) Illicit Discharge Detection and Elimination Enforcement Component;
- (2) Development Planning Enforcement Component;
- (3) Construction Management Enforcement Component; and

PROVISION E: JURISDICTIONAL RUNOFF MANAGEMENT PROGRAMS  
E.5. Existing Development Management  
E.6. Enforcement Response Plans

(4) Existing Development Enforcement Component.

**b. ENFORCEMENT RESPONSE APPROACHES AND OPTIONS**

Each component of the Enforcement Response Plan must describe the enforcement response approaches that the Copermittee will implement to compel compliance with its statutes, ordinances, permits, contracts, orders, or similar means, and the requirements of this Order. The description must include the protocols for implementing progressively stricter enforcement responses. The enforcement response approaches must include appropriate sanctions to compel compliance, including, at a minimum, the following tools or their equivalent:

- (1) Verbal and written notices of violation;
- (2) Cleanup requirements;
- (3) Fines;
- (4) Bonding requirements;
- (5) Administrative and criminal penalties;
- (6) Liens;
- (7) Stop work orders; and
- (8) Permit and occupancy denials.

**c. CORRECTION OF VIOLATIONS**

- (1) Violations must be corrected in a timely manner with the goal of correcting the violations within 30 calendar days after the violations are discovered, or prior to the next predicted rain event, whichever is sooner.
- (2) If more than 30 calendar days are required to achieve compliance, then a rationale must be recorded in the applicable electronic database or tabular system used to track violations.

**d. ESCALATED ENFORCEMENT**

- (1) The Enforcement Response Plan must include a definition of “escalated enforcement.” Escalated enforcement must include any enforcement scenario where a violation or other non-compliance is determined to cause or contribute to the highest priority water quality conditions identified in the Water Quality Improvement Plan. Escalated enforcement may be defined differently for development planning, construction sites, commercial facilities or areas, industrial facilities, municipal facilities, and residential areas.

- (2) Where the Copermittee determines escalated enforcement is not required, a rationale must be recorded in the applicable electronic database or tabular system used to track violations.
- (3) Escalated enforcement actions must continue to increase in severity, as necessary, to compel compliance as soon as possible.

**e. REPORTING OF NON-COMPLIANT SITES**

- (1) Each Copermittee must notify the San Diego Water Board in writing within five (5) calendar days of issuing escalated enforcement (as defined in the Copermittee's Enforcement Response Plan) to a construction site that poses a significant threat to water quality as a result of violations or other non-compliance with its permits and applicable local ordinances, and the requirements of this Order. Written notification may be provided electronically by email to the appropriate San Diego Water Board staff.
- (2) Each Copermittee must notify the San Diego Water Board of any persons required to obtain coverage under the statewide Industrial General Permit and Construction General Permit and failing to do so, within five (5) calendar days from the time the Copermittee become aware of the circumstances. Written notification may be provided electronically by email to [RB9\\_Nonfilers@waterboards.ca.gov](mailto:RB9_Nonfilers@waterboards.ca.gov).

**7. Public Education and Participation**

Each Copermittee must implement, individually or with other Copermittees, a public education and participation program in accordance with the strategies identified in the Water Quality Improvement Plan to promote and encourage the development of programs, management practices, and behaviors that reduce the discharge of pollutants in storm water to the MEP, prevent controllable non-storm water discharges from entering the MS4, and protect water quality standards in receiving waters. The public education and participation program must be implemented in accordance with the strategies in the Water Quality Improvement Plan described pursuant to Provision B.3.b.(1) and include, at a minimum, the following requirements:

**a. PUBLIC EDUCATION**

The public education program component implemented within the Copermittee's jurisdiction must include, at a minimum, the following:

- (1) Educational activities, public information activities, and other appropriate outreach activities intended to reduce pollutants associated with the application of pesticides, herbicides and fertilizer and other pollutants of

- concern in storm water discharges to and from its MS4 to the MEP, as determined and prioritized by the Copermittee(s) by jurisdiction and/or watershed to address the highest priority water quality conditions identified in the Water Quality Improvement Plan;
- (2) Educational activities, public information activities, and other appropriate outreach activities to facilitate the proper management and disposal of used oil and toxic materials; and
  - (3) Appropriate education and training measures for specific target audiences, such as construction site operators, residents, underserved target audiences and school-aged children, as determined and prioritized by the Copermittee(s) by jurisdiction and/or watershed, based on high risk behaviors and pollutants of concern.

**b. PUBLIC PARTICIPATION**

The public participation program component implemented within the Copermittee's jurisdiction must include, at a minimum, the following:

- (1) A process for members of the public to participate in updating the highest priority water quality conditions, numeric goals, and water quality improvement strategies in the Water Quality Improvement Plan;
- (2) Opportunities for members of the public to participate in providing the Copermittee recommendations for improving the effectiveness of the water quality improvement strategies implemented within its jurisdiction; and
- (3) Opportunities for members of the public to participate in programs and/or activities that can result in the prevention or elimination of non-storm water discharges to the MS4, reduction of pollutants in storm water discharges from the MS4, and/or protection of the quality of receiving waters.

**8. Fiscal Analysis**

- a. Each Copermittee must secure the resources necessary to meet all the requirements of this Order.
- b. Each Copermittee must conduct an annual fiscal analysis of its jurisdictional runoff management program in its entirety. The fiscal analysis must include the following:
  - (1) Identification of the various categories of expenditures necessary to implement the requirements of this Order, including a description of the specific capital, operation and maintenance, and other expenditure items to be accounted for in each category of expenditures;

- (2) The staff resources needed and allocated to meet the requirements of this Order, including any development, implementation, and enforcement activities required;
  - (3) The estimated expenditures for Provisions E.8.b.(1) and E.8.b.(2) for the current fiscal year; and
  - (4) The source(s) of funds that are proposed to meet the necessary expenditures described in Provisions E.8.b.(1) and E.8.b.(2), including legal restrictions on the use of such funds, for the current fiscal year and next fiscal year.
- c. Each Copermittee must submit a summary of the annual fiscal analysis with each Water Quality Improvement Plan Annual Report required pursuant to Provision F.3.b.(3).
  - d. Each Copermittee must provide the documentation used to develop the summary of the annual fiscal analysis upon request by the San Diego Water Board.

## **F. REPORTING**

The purpose of this provision is to determine and document compliance with the requirements set forth in this Order. The goal of reporting is to communicate to the San Diego Water Board and the people of the State of California the implementation status of each jurisdictional runoff management program and compliance with the requirements of this Order. This goal is to be accomplished through the submittal of specific deliverables to the San Diego Water Board by the Copermittees.

### **1. Water Quality Improvement Plans**

The Copermittees for each Watershed Management Area must develop and submit the Water Quality Improvement Plan in accordance with the following requirements:

#### **a. WATER QUALITY IMPROVEMENT PLAN DEVELOPMENT**

Each Water Quality Improvement Plan must be developed in accordance with the following process:

##### **(1) Public Participation Process**

The Copermittees must implement a public participation process to solicit data, information, and recommendations to be utilized in the development of the Water Quality Improvement Plan. The public participation process must include the following:

- (a) The Copermittees must develop a publicly available and noticed schedule of the opportunities for the public to participate and provide comments during the development of the Water Quality Improvement Plan. The schedule may be adjusted as necessary by the Copermittees, provided the public is provided timely notification of the changes to the schedule.
- (b) The Copermittees must form a Water Quality Improvement Consultation Panel to provide recommendations during the development of the Water Quality Improvement Plan. The Water Quality Improvement Consultation Panel must consist of at least the following members:
  - (i) A representative of the San Diego Water Board;
  - (ii) A representative of the environmental community familiar with the water quality conditions of concern of the receiving waters in the Watershed Management Area, preferably from an environmental interest group associated with a water body within the Watershed Management Area; and
  - (iii) A representative of the development community familiar with the opportunities and constraints for implementing structural BMPs,

retrofitting projects, and stream, channel or habitat rehabilitation projects in the Watershed Management Area, preferably with relevant engineering, hydrology, and/or geomorphology experience in the Watershed Management Area.

- (c) The Copermittees must coordinate the schedules for the public participation process among the Watershed Management Areas to provide the public time and opportunity to participate during the development of the Water Quality Improvement Plans.

(2) Priority Water Quality Conditions

- (a) The Copermittees must solicit data, information and recommendations from the public to be utilized in the development and identification of the priority water quality conditions and potential water quality improvement strategies for the Watershed Management Area.
- (b) The Copermittees must review the priority water quality conditions the Copermittees plan on including in the Water Quality Improvement Plan with the Water Quality Improvement Consultation Panel to receive recommendations or concurrence.
- (c) The Copermittees must consider revisions to the priority water quality conditions based on recommendations from the Water Quality Improvement Consultation Panel.
- (d) The Copermittees must include all the potential water quality improvement strategies identified by the public and the Water Quality Improvement Consultation Panel with the submittal of the priority water quality conditions to the San Diego Water Board.
- (e) The Copermittees must submit the Water Quality Improvement Plan requirements of Provision B.2 to the San Diego Water Board as early as 6 months and no later than 12 months after the commencement of coverage under this Order. Upon receipt, the San Diego Water Board will issue a public notice and release the proposed priority water quality conditions and potential water quality improvement strategies for public review and comment for a minimum of 30 days.
- (f) The Copermittees must consider revisions to the priority water quality conditions and potential water quality improvement strategies developed pursuant to Provision B.2 based on public comments received by the close of the comment period.

**(3) Water Quality Improvement Goals, Strategies and Schedules**

- (a) The Copermittees must solicit recommendations from the public on potential numeric goals for the highest priority water quality conditions identified for the Watershed Management Area, and recommendations on the strategies that should be implemented to achieve the potential numeric goals.
- (b) The Copermittees must consult with the Water Quality Improvement Consultation Panel and consider revisions to the following items based on the Panel's recommendations:
  - (i) The numeric goals and schedules the Copermittees propose to include in the Water Quality Improvement Plan;
  - (ii) The water quality improvement strategies and schedules the Copermittees propose to implement in the Watershed Management Area and include in the Water Quality Improvement Plan; and
  - (iii) If the Copermittees choose to implement Provision B.3.b.(4), the results of the Watershed Management Area Analysis the Copermittees proposed to incorporate into the Water Quality Improvement Plan.
- (c) The Copermittees must submit the Water Quality Improvement Plan requirements of Provision B.3 to the San Diego Water Board as early as 9 months and no later than 18 months after the commencement of coverage under this Order. Upon receipt, the San Diego Water Board will issue a public notice and release the proposed water quality improvement goals, strategies and schedules for public review and comment for a minimum of 30 days.
- (d) The Copermittees must consider revisions to the water quality improvement goals, strategies and schedules developed pursuant to Provision B.3 based on public comments received by the close of the comment period.

**b. WATER QUALITY IMPROVEMENT PLAN SUBMITTAL AND IMPLEMENTATION**

- (1) Within 24 months after the commencement of coverage under this Order, the Copermittees for each Watershed Management Area must submit a complete Water Quality Improvement Plan in accordance with the requirements of Provision B of this Order to the San Diego Water Board. The San Diego Water Board will issue a public notice and release the Water Quality Improvement Plan for public review and comment for a minimum of 30 days.

- (2) The Copermittees must consider revisions to the Water Quality Improvement Plan based on written comments received by the close of the public comment period.
- (3) The Copermittees must promptly submit any revisions to the Water Quality Improvement Plan to the San Diego Water Board no later than 60 days after the close of the public comment period.
- (4) If issues concerning the Water Quality Improvement Plan are resolved informally through discussions among the Copermittees, the San Diego Water Board and interested parties, the San Diego Water Board Executive Officer may provide written notification of acceptance to the Copermittees that the Water Quality Improvement Plan meets the requirements of Provision B. However, if the Executive Officer determines that significant issues with the Water Quality Improvement Plan remain, the matter will be scheduled for San Diego Water Board consideration at a public meeting.
- (5) The Copermittees must commence with implementation of the Water Quality Improvement Plan, in accordance with the water quality improvement strategies and schedules therein, upon written notification of acceptance with the Water Quality Improvement Plan by the San Diego Water Board Executive Officer.
- (6) During implementation of the Water Quality Improvement Plan the Copermittees must correct any deficiencies in the Plan identified by the San Diego Water Board in the updates submitted with the Water Quality Improvement Plan Annual Report following a request by the Board to do so.
- (7) The Water Quality Improvement Plan must be made available on the Regional Clearinghouse required pursuant to Provision F.4 within 30 days of receiving notification of acceptance with the Water Quality Improvement Plan by the San Diego Water Board Executive Officer.

## **2. Updates**

### **a. JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM DOCUMENT UPDATES**

Each Copermittee must update its jurisdictional runoff management program document in accordance with the following requirements:

- (1) Each Copermittee is encouraged to seek public and key stakeholder participation and comments, as early and often as possible during the process of developing updates to its jurisdictional runoff management program document;

- (2) Each Copermittee must update its jurisdictional runoff management program document to incorporate the requirements of Provision E concurrent with the submittal of the Water Quality Improvement Plan. Each Copermittee must correct any deficiencies in the jurisdictional runoff management program document based on comments received from the San Diego Water Board in the updates submitted with the Water Quality Improvement Plan Annual Report;
- (3) Each Copermittee must submit updates to its jurisdictional runoff management program, with the supporting rationale for the modifications, either in the Water Quality Improvement Plan Annual Report required pursuant to Provision F.3.b.(3), or as part of the Report of Waste Discharge required pursuant to Provision F.5.b;
- (4) The Copermittee must revise proposed modifications to its jurisdictional runoff management program as directed by the San Diego Water Board Executive Officer; and
- (5) Updated jurisdictional runoff management program documents must be made available on the Regional Clearinghouse required pursuant to Provision F.4 within 30 days of submitting the Water Quality Improvement Plan Annual Report.

**b. BMP DESIGN MANUAL UPDATES**

Each Copermittee must update its BMP Design Manual in accordance with the following requirements:

- (1) Each Copermittee must update its BMP Design Manual to incorporate the requirements of Provisions E.3.a-d concurrent with the submittal of the Water Quality Improvement Plan. Each Copermittee must correct any deficiencies in the BMP Design Manual based on comments received from the San Diego Water Board in the updates submitted with the Water Quality Improvement Plan Annual Report;
- (2) Any future updates to the BMP Design Manual made after its update pursuant to Provision F.2.b.(1) is completed must be consistent with the requirements of Provisions E.3.a-d and must be submitted as part of the Water Quality Improvement Plan Annual Reports required pursuant to Provision F.3.b.(3), or as part of the Report of Waste Discharge required pursuant to Provision F.5.b; and
- (3) BMP Design Manuals must be made available on the Regional Clearinghouse required pursuant to Provision F.4 within 30 days of completing the update.
- (4) If the San Diego Water Board amends Provisions E.3.a-d during the permit term but after the Copermittee has completed the update pursuant to Provision F.2.b.(1), the Copermittee must revise its BMP Design Manual to

incorporate the amended Provision E.3.a-d requirements as soon as possible but not later than 90 days after the date the San Diego Water Board adopts the amendments to Provisions E.3.a-d, unless otherwise directed by the San Diego Water Board Executive Officer. Under these circumstances, the effective date of the BMP Design Manual is no later than 90 days after the date the San Diego Water Board adopts the amendments to Provisions E.3.a-d, unless otherwise directed by the San Diego Water Board Executive Officer.

**c. WATER QUALITY IMPROVEMENT PLAN UPDATES**

- (1) The Water Quality Improvement Plans must be updated in accordance with the following process:
  - (a) The Copermittees must develop and implement a public participation process to obtain data, information and recommendations for updating the Water Quality Improvement Plan. The public participation process must provide for a publicly available and noticed schedule of opportunities for the public to participate and provide comments during the development of updates to the Water Quality Improvement Plan;
  - (b) The Copermittees must consult with the Water Quality Improvement Consultation Panel on proposed updates of the Water Quality Improvement Plan, and consider the Water Quality Improvement Consultation Panel's recommendations in finalizing the proposed updates;
  - (c) The Copermittees for each Watershed Management Area must submit 1) proposed updates to the Water Quality Improvement Plan and supporting rationale, and 2) recommendations received from the public and the Water Quality Improvement Consultation Panel and the rationale for the requested updates, either in the Water Quality Improvement Plan Annual Reports required pursuant to Provision F.3.b.(3), or as part of the Report of Waste Discharge required pursuant to Provision F.5.b. The updates submitted will be deemed accepted for inclusion in the Water Quality Improvement Plan ninety (90) days after submission unless otherwise directed in writing by the San Diego Water Board Executive Officer;
  - (d) The Copermittees must revise the requested updates as directed by the San Diego Water Board Executive Officer; and
  - (e) Updated Water Quality Improvement Plans must be made available on the Regional Clearinghouse required pursuant to Provision F.4 within 30 days of acceptance of the requested updates by the San Diego Water Board.
- (2) No later than six months following Office of Administrative Law and USEPA approval of any TMDL Basin Plan amendment with wasteload allocations (WLAs) assigned to the Copermittees during the term of this Order, the

Copermittees must initiate an update to the applicable Water Quality Improvement Plans in accordance with Provision F.1 or Provision F.2.c.(1) to incorporate the requirements of the TMDL WLAs.

### **3. Progress Reporting**

#### **a. PROGRESS REPORT PRESENTATIONS**

The Copermittees for each Watershed Management Area must periodically appear before the San Diego Water Board, as requested by the Board, to provide progress reports on the implementation of the Water Quality Improvement Plan and jurisdictional runoff management programs.

#### **b. ANNUAL REPORTS**

##### (1) Transitional Jurisdictional Runoff Management Program Annual Reports

- (a) Each Copermittee must complete and submit a Jurisdictional Runoff Management Program Annual Report Form (contained in Attachment D to this Order or a revised form accepted by the San Diego Water Board) no later than October 31 of each year for each jurisdictional runoff management program reporting period (i.e. July 1 to June 30) during the transitional period, until the first Water Quality Improvement Plan Annual Reports are required to be submitted.
- (b) Each Copermittee must submit the information on the Jurisdictional Runoff Management Program Annual Report Form (contained in Attachment D to this Order or a revised form accepted by the San Diego Water Board) specific to the area within its jurisdiction in each Watershed Management Area.
- (c) In addition to submitting the Jurisdictional Runoff Management Program Annual Report Form during the transitional reporting period, each Copermittee may continue to utilize and submit the jurisdictional runoff management program annual reporting format of its previous NPDES permit until the first Water Quality Improvement Plan Annual Report is required to be submitted.

##### (2) Transitional Monitoring and Assessment Program Annual Reports

The Copermittees for each Watershed Management Area must submit a Transitional Monitoring and Assessment Program Annual Report no later than January 31 for each complete transitional monitoring and assessment program reporting period (i.e. October 1 to September 30) during the transitional period, until the first Water Quality Improvement Plan Annual Reports are required to be submitted under this Order. The Transitional

Monitoring and Assessment Program Annual Reports must include:

- (a) The receiving water and MS4 outfall discharge monitoring data collected pursuant to Provisions D.1.a and D.2.a, summarized and presented in tabular and graphical form; and
- (b) The findings from the assessments required pursuant to Provisions D.4.a.(1)(a), D.4.b.(1)(a)(i), D.4.b.(2)(a)(i).

(3) Water Quality Improvement Plan Annual Reports

The Copermittees for each Watershed Management Area must submit a Water Quality Improvement Plan Annual Report for each reporting period no later than January 31 of the following year. The annual reporting period consists of two different periods: 1) July 1 to June 30 of the following year for the jurisdictional runoff management programs, 2) October 1 to September 30 of the following year for the monitoring and assessment programs. The Water Quality Improvement Plan Annual Reports must be made available on the Regional Clearinghouse required pursuant to Provision F.4. Each Annual Report must include the following:

- (a) The receiving water and MS4 outfall discharge monitoring data collected pursuant to Provisions D.1 and D.2, summarized and presented in tabular and graphical form;
- (b) The progress of the special studies required pursuant to Provision D.3, and the findings, interpretations and conclusions of a special study, or each phase of a special study, upon its completion;
- (c) The findings, interpretations and conclusions from the assessments required pursuant to Provision D.4;
- (d) The progress of implementing the Water Quality Improvement Plan, including, but not limited to, the following:
  - (i) The progress toward achieving the interim and final numeric goals for the highest water quality priorities for the Watershed Management Area;
  - (ii) The water quality improvement strategies that were implemented and/or no longer implemented by each of the Copermittees during the reporting period and previous reporting periods;
  - (iii) The water quality improvement strategies planned for implementation during the next reporting period;
  - (iv) Proposed modifications to the water quality improvement strategies, the public comments received and the supporting rationale for the

proposed modifications;

- (v) Previous modifications or updates incorporated into the Water Quality Improvement Plan and/or each Copermittee's jurisdictional runoff management program document and implemented by the Copermittees in the Watershed Management Area; and
  - (vi) Proposed modifications or updates to the Water Quality Improvement Plan and/or each Copermittee's jurisdictional runoff management program document;
- (e) A completed Jurisdictional Runoff Management Program Annual Report Form (contained in Attachment D to this Order or a revised form accepted by the San Diego Water Board) for each Copermittee in the Watershed Management Area, certified by a Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative; and
- (f) Each Copermittee must provide any data or documentation utilized in developing the Water Quality Improvement Plan Annual Report upon request by the San Diego Water Board. Any Copermittee monitoring data utilized in developing the Water Quality Improvement Plan Annual Report must be uploaded to the California Environmental Data Exchange Network (CEDEN).<sup>35</sup> Any Copermittee monitoring and assessment data utilized in developing the Water Quality Improvement Plan Annual Report must be available for access on the Regional Clearinghouse required pursuant to Provision F.4.

### **C. REGIONAL MONITORING AND ASSESSMENT REPORT**

- (1) The Copermittees must submit a Regional Monitoring and Assessment Report no later than 180 days prior to the expiration date of this Order. The Regional Monitoring and Assessment Report may be submitted as part of the Report of Waste Discharge required pursuant to Provision F.5.b. In preparing the report the Copermittees must consider the receiving water and MS4 outfall discharge monitoring data collected pursuant to Provisions D.1 and D.2, and the findings, interpretations, and conclusions from the assessments required pursuant to Provision D.4. Based on these considerations the report must assess the following:

---

<sup>35</sup> Data must be uploaded to CEDEN Southern California Regional Data Center (<http://www.sccwrp.org/Data/DataSubmission/SouthernCaliforniaRegionalDataCenter.aspx>) using the templates provided on the CEDEN website.

- (a) The beneficial uses of the receiving waters within the San Diego Region that are supported and not adversely affected by the Copermittees' MS4 discharges;
  - (b) The beneficial uses of the receiving waters within the San Diego Region that are adversely impacted by the Copermittees' MS4 discharges;
  - (c) The progress toward protecting the beneficial uses in the receiving waters within the San Diego Region from the Copermittees' discharges; and
  - (d) Pollutants or conditions of emerging concern that may impact beneficial uses in the receiving waters within the San Diego Region.
- (2) The Regional Monitoring and Assessment Report must include recommendations for improving the implementation and assessment of the Water Quality Improvement Plans and jurisdictional runoff management programs.
  - (3) Each Copermittee must provide any data or documentation utilized in developing the Regional Monitoring and Assessment Report upon request by the San Diego Water Board. Any Copermittee monitoring and assessment data utilized in developing the Regional Monitoring and Assessment Report must be available for access on the Regional Clearinghouse required pursuant to Provision F.4.

#### **4. Regional Clearinghouse**

The Copermittees must develop, update, and maintain an internet-based Regional Clearinghouse that is made available to the public no later than 18 months after the effective date of this Order.<sup>36</sup>

- a. The Copermittees, through the Regional Clearinghouse, must make the following documents and data available for access, and organized by Watershed Management Area. The documents and data may be linked to other internet-based data portals and databases where the original documents are stored:
  - (1) Water Quality Improvement Plan for the Watershed Management Area, and all updated versions with date of update;
  - (2) Annual Reports for the Watershed Management Area;
  - (3) Jurisdictional Runoff Management Program document for each Copermittee within the Watershed Management Area, and all updated versions with date of update;

---

<sup>36</sup> The Copermittees may develop, update and maintain the clearinghouse(s) of other Copermittees or agencies.

- (4) BMP Design Manual for each Copermittee within the Watershed Management Area, and all updated versions with date of update;
  - (5) Reports from special studies (e.g. source identification, BMP effectiveness assessment) conducted in the Watershed Management Area;
  - (6) Monitoring data collected pursuant to Provision D for each Watershed Management Area must be uploaded to CEDEN,<sup>37</sup> with links to the uploaded data; and
  - (7) Available GIS data, layers, and/or shapefiles used to develop the maps generated and maintained by the Copermittees for the Water Quality Improvement Plans, Annual Reports, and jurisdictional runoff management program documents.
- b.** The Copermittees, through the Regional Clearinghouse, must make the following information and documents available for access:
- (1) Contact information (point of contact, phone number, email address, and mailing address) for each Copermittee;
  - (2) Public hotline number for reporting non-storm water and illicit discharges for each Copermittee;
  - (3) Email address for reporting non-storm water and illicit discharges for each Copermittee;
  - (4) Link to each Copermittee's website, if available, where the public may find additional information about the Copermittee's storm water management program and for requesting records for the implementation of its program;
  - (5) Information about opportunities for the public to participate in programs and/or activities that can result in the prevention or elimination of non-storm water discharges to the MS4, reduction of pollutants in storm water discharges from the MS4, and/or protection of the quality of receiving waters; and
  - (6) Reports from regional monitoring programs in which the Copermittees participate (e.g. Southern California Monitoring Coalition, Southern California Coastal Water Research Project Bight Monitoring);
  - (7) Regional Monitoring and Assessment Reports; and
  - (8) Any other information, data, and documents the Copermittees determine as appropriate for making available to the public.

---

<sup>37</sup> Data must be uploaded to CEDEN Southern California Regional Data Center (<http://www.sccwrp.org/Data/DataSubmission/SouthernCaliforniaRegionalDataCenter.aspx>) using the templates provided on the CEDEN website.

## **5. Report of Waste Discharge**

The Copermittees subject to the requirements of this Order must submit to the San Diego Water Board a complete Report of Waste Discharge as an application for the re-issuance of this Order and NPDES permit. The Report of Waste Discharge must be submitted no later than 180 days in advance of the expiration date of this Order. The Report of Waste Discharge must contain the following minimum information:

- a. Names and addresses of the Copermittees;
- b. Names and titles of the primary contacts of the Copermittees;
- c. Proposed changes to the Copermittees' Water Quality Improvement Plans and the supporting justification;
- d. Proposed changes to the Copermittees' jurisdictional runoff management programs and the supporting justification;
- e. Any other information necessary for the re-issuance of this Order;
- f. Any information to be included as part of the Report of Waste Discharge pursuant to the requirements of this Order; and
- g. Any other information required by federal regulations for NPDES permit reissuance.

## **6. Reporting Provisions**

Each Copermittee must comply with all the reporting and recordkeeping provisions of the Standard Permit Provisions and General Provisions contained in Attachment B to this Order.

## **G. PRINCIPAL WATERSHED COPERMITTEE RESPONSIBILITIES**

- 1.** The Copermittees within each Watershed Management Area must designate a Principal Watershed Copermittee and notify the San Diego Water Board of the name of the Principal Watershed Copermittee. An individual Copermittee should not be designated a Principal Watershed Copermittee for more than two Watershed Management Areas. The notification may be submitted with the Water Quality Improvement Plan required pursuant to Provision F.1 of this Order.
- 2.** The Principal Watershed Copermittee is responsible for, at a minimum, the following:
  - a.** Serving as liaison between the Copermittees in the Watershed Management Area and the San Diego Water Board on general permit issues, and when necessary and appropriate, representing the Copermittees in the Watershed Management Area before the San Diego Water Board;
  - b.** Facilitating the development of the Water Quality Improvement Plan in accordance with the requirements of Provision B of this Order;
  - c.** Coordinating the submittal of the deliverables required by Provisions F.1, F.2, F.3.a, and F.3.b of this Order; and
  - d.** Coordinating and developing, with the other Principal Watershed Copermittees, the requirements of Provisions F.3.c, F.4, and F.5.b of this Order.
- 3.** The Principal Watershed Copermittee is not responsible for ensuring that the other Copermittees within the Watershed Management Area are in compliance with the requirements of this Order. Each Copermittee within the Watershed Management Area is responsible for complying with the requirements of this Order.

## **H. MODIFICATION OF ORDER**

- 1.** Modifications of the Order may be initiated by the San Diego Water Board or by the Copermittees. Requests by Copermittees must be made to the San Diego Water Board.
- 2.** Minor modifications to the Order may be made by the San Diego Water Board where the proposed modification complies with all the prohibitions and limitations, and other requirements of this Order.
- 3.** This Order may also be re-opened and modified, revoked and, reissued or terminated in accordance with the provisions of 40 CFR 122.44, 122.62 to 122.64, and 124.5. Causes for taking such actions include, but are not limited to, failure to comply with any condition of this Order and permit, and endangerment to human health or the environment resulting from the permitted activity.
- 4.** This Order may be re-opened for modification for cause including but not limited to the following:
  - a.** Any of the TMDLs in Attachment E to this Order are amended in the Basin Plan by San Diego Water Board, and the amendment is approved by the State Water Board, Office of Administrative Law, and the USEPA;
  - b.** The Basin Plan is amended by the San Diego Water Board to incorporate a new TMDL, and the amendment is approved by the State Water Board, Office of Administrative Law, and the USEPA; or
  - c.** Updating or revising the monitoring and reporting requirements is determined to be necessary, at the discretion of the San Diego Water Board. Such modification(s) may include, but is (are) not limited to, revision(s) to: (i) implement recommendations from Southern California Coastal Water Research Project (SCCWRP), (ii) develop, refine, implement, and/or coordinate a regional monitoring program, (iii) develop and implement improved monitoring and assessment programs in keeping with San Diego Water Board Resolution No. R9-2012-0069, Resolution in Support of a Regional Monitoring Framework, and/or (iv) add provisions to require the Copermittees to evaluate and provide information on cost and values of the monitoring and reporting program.

## **I. STANDARD PERMIT PROVISIONS AND GENERAL PROVISIONS**

Each Copermittee must comply with all the Standard Permit Provisions and General Provisions contained in Attachment B to this Order.

This page left intentionally blank

## ATTACHMENT A

### DISCHARGE PROHIBITIONS AND SPECIAL PROTECTIONS

#### 1. Basin Plan Waste Discharge Prohibitions

California Water Code Section 13243 provides that a Regional Water Board, in a water quality control plan, may specify certain conditions or areas where the discharge of waste or certain types of waste is not permitted. The following waste discharge prohibitions in the Water Quality Control Plan for the San Diego Basin (Basin Plan) are applicable to any person, as defined by Section 13050(c) of the California Water Code, who is a citizen, domiciliary, or political agency or entity of California whose activities in California could affect the quality of waters of the state within the boundaries of the San Diego Region.

1. The discharge of waste to waters of the state in a manner causing, or threatening to cause a condition of pollution, contamination or nuisance as defined in California Water Code Section 13050, is prohibited.
2. The discharge of waste to land, except as authorized by waste discharge requirements or the terms described in California Water Code Section 13264 is prohibited.
3. The discharge of pollutants or dredged or fill material to waters of the United States except as authorized by a National Pollutant Discharge Elimination System (NPDES) permit or a dredged or fill material permit (subject to the exemption described in California Water Code Section 13376) is prohibited.
4. Discharges of recycled water to lakes or reservoirs used for municipal water supply or to inland surface water tributaries thereto are prohibited, unless this San Diego Water Board issues a NPDES permit authorizing such a discharge; the proposed discharge has been approved by the State Department of Health Services (DHS) and the operating agency of the impacted reservoir; and the discharger has an approved fail-safe long-term disposal alternative.
5. The discharge of waste to inland surface waters, except in cases where the quality of the discharge complies with applicable receiving water quality objectives, is prohibited. Allowances for dilution may be made at the discretion of the San Diego Water Board. Consideration would include streamflow data, the degree of treatment provided and safety measures to ensure reliability of facility performance. As an example, discharge of secondary effluent would probably be permitted if streamflow provided 100:1 dilution capability.
6. The discharge of waste in a manner causing flow, ponding, or surfacing on lands not owned or under the control of the discharger is prohibited, unless the discharge is authorized by the San Diego Water Board.

7. The dumping, deposition, or discharge of waste directly into waters of the state, or adjacent to such waters in any manner which may permit its being transported into the waters, is prohibited unless authorized by the San Diego Water Board.
8. Any discharge to a storm water conveyance system that is not composed entirely of "*storm water*" is prohibited unless authorized by the San Diego Water Board. [The federal regulations, 40 CFR 122.26(b)(13), define storm water as storm water runoff, snow melt runoff, and surface runoff and drainage. 40 CFR 122.26(b)(2) defines an illicit discharge as any discharge to a storm water conveyance system that is not composed entirely of storm water except discharges pursuant to a NPDES permit and discharges resulting from firefighting activities.] [§122.26 amended at 56 FR 56553, November 5, 1991; 57 FR 11412, April 2, 1992].
9. The unauthorized discharge of treated or untreated sewage to waters of the state or to a storm water conveyance system is prohibited.
10. The discharge of industrial wastes to conventional septic tank/subsurface disposal systems, except as authorized by the terms described in California Water Code Section 13264, is prohibited.
11. The discharge of radioactive wastes amenable to alternative methods of disposal into the waters of the state is prohibited.
12. The discharge of any radiological, chemical, or biological warfare agent into waters of the state is prohibited.
13. The discharge of waste into a natural or excavated site below historic water levels is prohibited unless the discharge is authorized by the San Diego Water Board.
14. The discharge of sand, silt, clay, or other earthen materials from any activity, including land grading and construction, in quantities which cause deleterious bottom deposits, turbidity or discoloration in waters of the state or which unreasonably affect, or threaten to affect, beneficial uses of such waters is prohibited.
15. The discharge of treated or untreated sewage from vessels to Mission Bay, Oceanside Harbor, Dana Point Harbor, or other small boat harbors is prohibited.
16. The discharge of untreated sewage from vessels to San Diego Bay is prohibited.
17. The discharge of treated sewage from vessels to portions of San Diego Bay that are less than 30 feet deep at mean lower low water (MLLW) is prohibited.
18. The discharge of treated sewage from vessels, which do not have a properly functioning US Coast Guard certified Type I or Type II marine sanitation device, to portions of San Diego Bay that are greater than 30 feet deep at mean lower low water (MLLW) is prohibited.

## **2. Attachment B to State Water Board Resolution 2012-0012, as amended by State Water Board Resolution No. 2012-0031.**

### **Special Protections for Areas of Special Biological Significance (ASBS), Governing Point Source Discharges of Storm Water and Nonpoint Source Waste Discharges**

#### **I. PROVISIONS FOR POINT SOURCE DISCHARGES OF STORM WATER AND NONPOINT SOURCE WASTE DISCHARGES**

The following terms, prohibitions, and special conditions (hereafter collectively referred to as special conditions) are established as limitations on point source storm water and nonpoint source discharges. These special conditions provide Special Protections for marine aquatic life and natural water quality in Areas of Special Biological Significance (ASBS), as required for State Water Quality Protection Areas pursuant to California Public Resources Code Sections 36700(f) and 36710(f). These Special Protections are adopted by the State Water Board as part of the California Ocean Plan (Ocean Plan) General Exception.

The special conditions are organized by category of discharge. The State Water Resources Control Board (State Water Board) and Regional Water Quality Control Boards (Regional Water Boards) will determine categories and the means of regulation for those categories [e.g., Point Source Storm Water National Pollutant Discharge Elimination System (NPDES) or Nonpoint Source].

#### **A. PERMITTED POINT SOURCE DISCHARGES OF STORM WATER**

##### **1. General Provisions for Permitted Point Source Discharges of Storm Water**

- a. Existing storm water discharges into an ASBS are allowed only under the following conditions:
  - (1) The discharges are authorized by an NPDES permit issued by the State Water Board or Regional Water Board;
  - (2) The discharges comply with all of the applicable terms, prohibitions, and special conditions contained in these Special Protections; and
  - (3) The discharges:
    - (i) Are essential for flood control or slope stability, including roof, landscape, road, and parking lot drainage;
    - (ii) Are designed to prevent soil erosion;
    - (iii) Occur only during wet weather;
    - (iv) Are composed of only storm water runoff.
- b. Discharges composed of storm water runoff shall not alter natural ocean water quality in an ASBS.
- c. The discharge of trash is prohibited.

- d. Only discharges from existing storm water outfalls are allowed. Any proposed or new storm water runoff discharge shall be routed to existing storm water discharge outfalls and shall not result in any new contribution of waste to an ASBS (i.e., no additional pollutant loading). "Existing storm water outfalls" are those that were constructed or under construction prior to January 1, 2005. "New contribution of waste" is defined as any addition of waste beyond what would have occurred as of January 1, 2005. A change to an existing storm water outfall, in terms of re-location or alteration, in order to comply with these special conditions, is allowed and does not constitute a new discharge.
- e. Non-storm water discharges are prohibited except as provided below:
- (1) The term "non-storm water discharges" means any waste discharges from a municipal separate storm sewer system (MS4) or other NPDES permitted storm drain system to an ASBS that are not composed entirely of storm water.
  - (2) (i) The following non-storm water discharges are allowed, provided that the discharges are essential for emergency response purposes, structural stability, slope stability or occur naturally:
    - (a) Discharges associated with emergency fire fighting operations.
    - (b) Foundation and footing drains.
    - (c) Water from crawl space or basement pumps.
    - (d) Hillside dewatering.
    - (e) Naturally occurring groundwater seepage via a storm drain.
    - (f) Non-anthropogenic flows from a naturally occurring stream via a culvert or storm drain, as long as there are no contributions of anthropogenic runoff.
  - (ii) An NPDES permitting authority may authorize non-storm water discharges to an MS4 with a direct discharge to an ASBS only to the extent the NPDES permitting authority finds that the discharge does not alter natural ocean water quality in the ASBS.
  - (3) Authorized non-storm water discharges shall not cause or contribute to a violation of the water quality objectives in Chapter II of the Ocean Plan nor alter natural ocean water quality in an ASBS.
2. Compliance Plans for Inclusion in Storm Water Management Plans (SWMP) and Storm Water Pollution Prevention Plans (SWPPP).

The discharger shall specifically address the prohibition of non-storm water runoff and the requirement to maintain natural water quality for storm water discharges to an ASBS in an ASBS Compliance Plan to be included in its SWMP or a SWPPP, as appropriate to permit type. If a statewide permit includes a SWMP, then the discharger shall prepare a stand-alone compliance plan for ASBS discharges. The ASBS Compliance Plan is subject to approval by the Executive Director of the State Water Board (statewide permits) or Executive Officer of the Regional Water Board (for permits issued by Regional Water Boards).

- a. The Compliance Plan shall include a map of surface drainage of storm water runoff, showing areas of sheet runoff, prioritize discharges, and describe any structural Best Management Practices (BMPs) already employed and/or BMPs to be employed in the future. Priority discharges are those that pose the greatest water quality threat and which are identified to require installation of structural BMPs. The map shall also show the storm water conveyances in relation to other features such as service areas, sewage conveyances and treatment facilities, landslides, areas prone to erosion, and waste and hazardous material storage areas, if applicable. The SWMP or SWPPP shall also include a procedure for updating the map and plan when changes are made to the storm water conveyance facilities.
- b. The ASBS Compliance Plan shall describe the measures by which all non-authorized non-storm water runoff (e.g., dry weather flows) has been eliminated, how these measures will be maintained over time, and how these measures are monitored and documented.
- c. For Municipal Separate Storm Sewer System (MS4s), the ASBS Compliance Plan shall require minimum inspection frequencies as follows:
  - (1) The minimum inspection frequency for construction sites shall be weekly during rainy season;
  - (2) The minimum inspection frequency for industrial facilities shall be monthly during the rainy season;
  - (3) The minimum inspection frequency for commercial facilities (e.g., restaurants) shall be twice during the rainy season; and
  - (4) Storm water outfall drains equal to or greater than 18 inches (457 mm) in diameter or width shall be inspected once prior to the beginning of the rainy season and once during the rainy season and maintained to remove trash and other anthropogenic debris.
- d. The ASBS Compliance Plan shall address storm water discharges (wet weather flows) and, in particular, describe how pollutant reductions in storm water runoff, that are necessary to comply with these special conditions, will be achieved through BMPs. Structural BMPs need not be installed if the discharger can document to the satisfaction of the State Water Board Executive Director (statewide permits) or Regional Water Board Executive Officer (Regional Water Board permits) that such installation would pose a threat to health or safety. BMPs to control storm water runoff discharges (at the end-of-pipe) during a design storm shall be designed to achieve on average the following target levels:
  - (1) Table B Instantaneous Maximum Water Quality Objectives in Chapter II of the Ocean Plan; or
  - (2) A 90% reduction in pollutant loading during storm events, for the applicant's total discharges.

The baseline for these determinations is the effective date of the Exception, except for those structural BMPs installed between January 1, 2005 and adoption of these Special Protections, and the reductions must be achieved and documented within six (6) years of the effective date.

- e. The ASBS Compliance Plan shall address erosion control and the prevention of anthropogenic sedimentation in ASBS. The natural habitat conditions in the ASBS shall not be altered as a result of anthropogenic sedimentation.
- f. The ASBS Compliance Plan shall describe the non-structural BMPs currently employed and planned in the future (including those for construction activities), and include an implementation schedule. The ASBS Compliance Plan shall include non-structural BMPs that address public education and outreach. Education and outreach efforts must adequately inform the public that direct discharges of pollutants from private property not entering an MS4 are prohibited. The ASBS Compliance Plan shall also describe the structural BMPs, including any low impact development (LID) measures, currently employed and planned for higher threat discharges and include an implementation schedule. To control storm water runoff discharges (at the end-of-pipe) during a design storm, permittees must first consider, and use where feasible, LID practices to infiltrate, use, or evapotranspire storm water runoff on-site, if LID practices would be the most effective at reducing pollutants from entering the ASBS.
- g. The BMPs and implementation schedule shall be designed to ensure that natural water quality conditions in the receiving water are achieved and maintained by either reducing flows from impervious surfaces or reducing pollutant loading, or some combination thereof.
- h. If the results of the receiving water monitoring described in IV.B. of these special conditions indicate that the storm water runoff is causing or contributing to an alteration of natural ocean water quality in the ASBS, the discharger shall submit a report to the State Water Board and Regional Water Board within 30 days of receiving the results.
  - (1) The report shall identify the constituents in storm water runoff that alter natural ocean water quality and the sources of these constituents.
  - (2) The report shall describe BMPs that are currently being implemented, BMPs that are identified in the SWMP or SWPPP for future implementation, and any additional BMPs that may be added to the SWMP or SWPPP to address the alteration of natural water quality. The report shall include a new or modified implementation schedule for the BMPs.
  - (3) Within 30 days of the approval of the report by the State Water Board Executive Director (statewide permits) or Regional Water Board Executive Officer (Regional Water Board permits), the discharger shall revise its ASBS Compliance Plan to incorporate any new or modified BMPs that have been or will be implemented, the implementation schedule, and any additional monitoring required.
  - (4) As long as the discharger has complied with the procedures described above and is implementing the revised SWMP or SWPPP, the discharger does not have to repeat the same procedure for continuing or recurring exceedances of natural ocean water quality conditions due to the same constituent.

(5) The requirements of this section are in addition to the terms, prohibitions, and conditions contained in these Special Protections.

### 3. Compliance Schedule

- a. On the effective date of the Exception, all non-authorized non-storm water discharges (e.g., dry weather flow) are effectively prohibited.
- b. Within eighteen (18) months from the effective date of the Exception, the discharger shall submit a draft written ASBS Compliance Plan to the State Water Board Executive Director (statewide permits) or Regional Water Board Executive Officer (Regional Water Board permits) that describes its strategy to comply with these special conditions, including the requirement to maintain natural water quality in the affected ASBS. The ASBS Compliance Plan shall include a description of appropriate non-structural controls and a time schedule to implement structural controls (implementation schedule) to comply with these special conditions for inclusion in the discharger's SWMP or SWPPP, as appropriate to permit type. The final ASBS Compliance Plan, including a description and final schedule for structural controls based on the results of runoff and receiving water monitoring, must be submitted within thirty (30) months from the effective date of the Exception.
- c. Within 18 months of the effective date of the Exception, any non-structural controls that are necessary to comply with these special conditions shall be implemented.
- d. Within six (6) years of the effective date of the Exception, any structural controls identified in the ASBS Compliance Plan that are necessary to comply with these special conditions shall be operational.
- e. Within six (6) years of the effective date of the Exception, all dischargers must comply with the requirement that their discharges into the affected ASBS maintain natural ocean water quality. If the initial results of post-storm receiving water quality testing indicate levels higher than the 85<sup>th</sup> percentile threshold of reference water quality data and the pre-storm receiving water levels, then the discharger must re-sample the receiving water, pre- and post-storm. If after re-sampling the post-storm levels are still higher than the 85<sup>th</sup> percentile threshold of reference water quality data, and the pre-storm receiving water levels, for any constituent, then natural ocean water quality is exceeded. See attached Flowchart.
- f. The Executive Director of the State Water Board (statewide permits) or Executive Officer of the Regional Water Board (Regional Water Board permits) may only authorize additional time to comply with the special conditions d. and e., above if good cause exists to do so. Good cause means a physical impossibility or lack of funding.

If a discharger claims physical impossibility, it shall notify the Board in writing within thirty (30) days of the date that the discharger first knew of the event or circumstance that caused or would cause it to fail to meet the deadline in d. or e. The notice shall describe the reason for the noncompliance or anticipated noncompliance and specifically refer to this Section of this Exception. It shall describe the anticipated length of time the delay in compliance may persist, the cause or causes of the delay as well as measures to minimize the impact of the delay on water quality, the measures taken or to be taken by

the discharger to prevent or minimize the delay, the schedule by which the measures will be implemented, and the anticipated date of compliance. The discharger shall adopt all reasonable measures to avoid and minimize such delays and their impact on water quality.

The discharger may request an extension of time for compliance based on lack of funding. The request for an extension shall require:

1. for municipalities, a demonstration of significant hardship to discharger ratepayers, by showing the relationship of storm water fees to annual household income for residents within the discharger's jurisdictional area, and the discharger has made timely and complete applications for all available bond and grant funding, and either no bond or grant funding is available, or bond and/or grant funding is inadequate; or
2. for other governmental agencies, a demonstration and documentation of a good faith effort to acquire funding through that agency's budgetary process, and a demonstration that funding was unavailable or inadequate.

## **B. NONPOINT SOURCE DISCHARGES**

### 1. General Provisions for Nonpoint Sources

a. Existing nonpoint source waste discharges are allowed into an ASBS only under the following conditions:

- (1) The discharges are authorized under waste discharge requirements, a conditional waiver of waste discharge requirements, or a conditional prohibition issued by the State Water Board or a Regional Water Board.
- (2) The discharges are in compliance with the applicable terms, prohibitions, and special conditions contained in these Special Protections.
- (3) The discharges:
  - (i) Are essential for flood control or slope stability, including roof, landscape, road, and parking lot drainage;
  - (ii) Are designed to prevent soil erosion;
  - (iii) Occur only during wet weather;
  - (iv) Are composed of only storm water runoff.

b. Discharges composed of storm water runoff shall not alter natural ocean water quality in an ASBS.

c. The discharge of trash is prohibited.

d. Only existing nonpoint source waste discharges are allowed. "Existing nonpoint source waste discharges" are discharges that were ongoing prior to January 1, 2005. "New nonpoint source discharges" are defined as those that commenced on or after January 1,

2005. A change to an existing nonpoint source discharge, in terms of relocation or alteration, in order to comply with these special conditions, is allowed and does not constitute a new discharge.

- e. Non-storm water discharges from nonpoint sources (those not subject to an NPDES Permit) are prohibited except as provided below:
- (1) The term “non-storm water discharges” means any waste discharges that are not composed entirely of storm water.
  - (2) The following non-storm water discharges are allowed, provided that the discharges are essential for emergency response purposes, structural stability, slope stability, or occur naturally:
    - (i) Discharges associated with emergency fire fighting operations.
    - (ii) Foundation and footing drains.
    - (iii) Water from crawl space or basement pumps.
    - (iv) Hillside dewatering.
    - (v) Naturally occurring groundwater seepage via a storm drain.
    - (vi) Non-anthropogenic flows from a naturally occurring stream via a culvert or storm drain, as long as there are no contributions of anthropogenic runoff.
  - (3) Authorized non-storm water discharges shall not cause or contribute to a violation of the water quality objectives in Chapter II of the Ocean Plan nor alter natural ocean water quality in an ASBS.
- f. At the San Clemente Island ASBS, discharges incidental to military training and research, development, test, and evaluation operations are allowed. Discharges incidental to underwater demolition and other in-water explosions are not allowed in the two military closure areas in the vicinity of Wilson Cove and Castle Rock. Discharges must not result in a violation of the water quality objectives, including the protection of the marine aquatic life beneficial use, anywhere in the ASBS.
- g. At the San Nicolas Island and Begg Rock ASBS, discharges incidental to military research, development, testing, and evaluation of, and training with, guided missile and other weapons systems, fleet training exercises, small-scale amphibious warfare training, and special warfare training are allowed. Discharges incidental to underwater demolition and other in-water explosions are not allowed. Discharges must not result in a violation of the water quality objectives, including the protection of the marine aquatic life beneficial use, anywhere in the ASBS.
- h. All other nonpoint source discharges not specifically authorized above are prohibited.

## 2. Planning and Reporting

- a. The nonpoint source discharger shall develop an ASBS Pollution Prevention Plan, including an implementation schedule, to address storm water runoff and any other nonpoint source discharges from its facilities. The ASBS Pollution Prevention Plan must be equivalent in contents to an ASBS Compliance Plan as described in I (A)(2) in this document. The ASBS Pollution Prevention Plan is subject to approval by the Executive Director of the State Water Board (statewide waivers or waste discharge requirements) or Executive Officer of the Regional Water Board (Regional Water Board waivers or waste discharge requirements).
- b. The ASBS Pollution Prevention Plan shall address storm water discharges (wet weather flows) and, in particular, describe how pollutant reductions in storm water runoff that are necessary to comply with these special conditions, will be achieved through Management Measures and associated Management Practices (Management Measures/Practices). Structural BMPs need not be installed if the discharger can document to the satisfaction of the State Water Board Executive Director or Regional Water Board Executive Officer that such installation would pose a threat to health or safety. Management Measures to control storm water runoff during a design storm shall achieve on average the following target levels:
- (1) Table B Instantaneous Maximum Water Quality Objectives in Chapter II of the Ocean Plan; or
  - (2) A 90% reduction in pollutant loading during storm events, for the applicant's total discharges.

The baseline for these determinations is the effective date of the Exception, except for those structural BMPs installed between January 1, 2005 and adoption of these Special Protections, and the reductions must be achieved and documented within six (6) years of the effective date.

- c. If the results of the receiving water monitoring described in IV.B. of these special conditions indicate that the storm water runoff or other nonpoint source pollution is causing or contributing to an alteration of natural ocean water quality in the ASBS, the discharger shall submit a report to the State Water Board and the Regional Water Board within 30 days of receiving the results.
- (1) The report shall identify the constituents that alter natural water quality and the sources of these constituents.
  - (2) The report shall describe Management Measures/Practices that are currently being implemented, Management Measures/Practices that are identified in the ASBS Pollution Prevention Plan for future implementation, and any additional Management Measures/Practices that may be added to the Pollution Prevention Plan to address the alteration of natural water quality. The report shall include a new or modified implementation schedule for the Management Measures/Practices.
  - (3) Within 30 days of the approval of the report by the State Water Board Executive Director (statewide waivers or waste discharge requirements) or Executive Officer of the Regional Water Board (Regional Water Board waivers or waste discharge requirements), the discharger shall revise its ASBS Pollution Prevention Plan to incorporate any new or modified Management Measures/Practices that have been or

will be implemented, the implementation schedule, and any additional monitoring required.

(4) As long as the discharger has complied with the procedures described above and is implementing the revised ASBS Pollution Prevention Plan, the discharger does not have to repeat the same procedure for continuing or recurring exceedances of natural water quality conditions due to the same constituent.

(5) The requirements of this section are in addition to the terms, prohibitions, and conditions contained in these Special Protections.

### 3. Compliance Schedule

- a. On the effective date of the Exception, all non-authorized non-storm water discharges (e.g., dry weather flow) are effectively prohibited.
- b. Within eighteen (18) months from the effective date of the Exception, the dischargers shall submit a draft written ASBS Pollution Prevention Plan to the State Water Board Executive Director (statewide waivers or waste discharge requirements) or Executive Officer of the Regional Water Board (Regional Water Board waivers or waste discharge requirements) that describes its strategy to comply with these special conditions, including the requirement to maintain natural ocean water quality in the affected ASBS. The Pollution Prevention Plan shall include a description of appropriate non-structural controls and a time schedule to implement structural controls to comply with these special conditions for inclusion in the discharger's Pollution Prevention Plan. The final ASBS Pollution Prevention Plan, including a description and final schedule for structural controls based on the results of runoff and receiving water monitoring, must be submitted within thirty (30) months from the effective date of the Exception.
- c. Within 18 months of the effective date of the Exception, any non-structural controls that are necessary to comply with these Special Protections shall be implemented.
- d. Within six (6) years of the effective date of the Exception, any structural controls identified in the ASBS Pollution Prevention Plan that are necessary to comply with these special conditions shall be operational.
- e. Within six (6) years of the effective date of the Exception, all dischargers must comply with the requirement that their discharges into the affected ASBS maintain natural ocean water quality. If the initial results of post-storm receiving water quality testing indicate levels higher than the 85<sup>th</sup> percentile threshold of reference water quality data and the pre-storm receiving water levels, then the discharger must re-sample the receiving water pre- and post-storm. If after re-sampling the post-storm levels are still higher than the 85<sup>th</sup> percentile threshold of reference water quality data and the pre-storm receiving water levels, for any constituent, then natural ocean water quality is exceeded. See attached Flowchart.
- f. The Executive Director of the State Water Board (statewide waivers or waste discharge requirements) or Executive Officer of the Regional Water Board (Regional Water Board waivers or waste discharge requirements) may only authorize additional time to comply with the special conditions d. and e., above if good cause exists to do so. Good cause means a physical impossibility or lack of funding.

If a discharger claims physical impossibility, it shall notify the Board in writing within thirty (30) days of the date that the discharger first knew of the event or circumstance that caused or would cause it to fail to meet the deadline in (d.) or (e.). The notice shall describe the reason for the noncompliance or anticipated noncompliance and specifically refer to this Section of this Exception. It shall describe the anticipated length of time the delay in compliance may persist, the cause or causes of the delay as well as measures to minimize the impact of the delay on water quality, the measures taken or to be taken by the discharger to prevent or minimize the delay, the schedule by which the measures will be implemented, and the anticipated date of compliance. The discharger shall adopt all reasonable measures to avoid and minimize such delays and their impact on water quality.

The discharger may request an extension of time for compliance based on lack of funding. The request for an extension shall require:

1. a demonstration that the discharger has made timely and complete applications for all available bond and grant funding, and either no bond or grant funding is available, or bond and/or grant funding is inadequate; or
2. for governmental agencies, a demonstration and documentation of a good faith effort to acquire funding through that agency's budgetary process, and a demonstration that funding was unavailable or inadequate.

## II. ADDITIONAL REQUIREMENTS FOR PARKS AND RECREATION FACILITIES

In addition to the provisions in Section I (A) or I (B), respectively, a discharger with parks and recreation facilities shall comply with the following:

- A. The discharger shall include a section in an ASBS Compliance Plan (for NPDES dischargers) or an ASBS Pollution Prevention Plan (for nonpoint source dischargers) to address storm water runoff from parks and recreation facilities.
  1. The plan shall identify all pollutant sources, including sediment sources, which may result in waste entering storm water runoff. Pollutant sources include, but are not limited to, roadside rest areas and vistas, picnic areas, campgrounds, trash receptacles, maintenance facilities, park personnel housing, portable toilets, leach fields, fuel tanks, roads, piers, and boat launch facilities.
  2. The plan shall describe BMPs or Management Measures/Practices that will be implemented to control soil erosion (both temporary and permanent erosion controls) and reduce or eliminate pollutants in storm water runoff in order to achieve and maintain natural water quality conditions in the affected ASBS. The plan shall include BMPs or Management Measures/Practices to ensure that trails and culverts are maintained to prevent erosion and minimize waste discharges to ASBS.
  3. The plan shall include BMPs or Management Measures/Practices to prevent the discharge of pesticides or other chemicals, including agricultural chemicals, in storm water runoff to the affected ASBS.

4. The plan shall include BMPs or Management Measures/Practices that address public education and outreach. The goal of these BMPs or Management Measures/Practices is to ensure that the public is adequately informed that waste discharges to the affected ASBS are prohibited or limited by special conditions in these Special Protections. The BMPs or Management Measures/Practices shall include signage at camping, picnicking, beach and roadside parking areas, and visitor centers, or other appropriate measures, which notify the public of any applicable requirements of these Special Protections and identify the ASBS boundaries.
  5. The plan shall include BMPs or Management Measures/Practices that address the prohibition against the discharge of trash to ASBS. The BMPs or Management Measures/Practices shall include measures to ensure that adequate trash receptacles are available for public use at visitor facilities, including parking areas, and that the receptacles are adequately maintained to prevent trash discharges into the ASBS. Appropriate measures include covering trash receptacles to prevent trash from being wind blown and periodically emptying the receptacles to prevent overflows.
  6. The plan shall include BMPs or Management Measures/Practices to address runoff from parking areas and other developed features to ensure that the runoff does not alter natural water quality in the affected ASBS. BMPs or Management Measures/Practices shall include measures to reduce pollutant loading in runoff to the ASBS through installation of natural area buffers (LID), treatment, or other appropriate measures.
- B. Maintenance and repair of park and recreation facilities must not result in waste discharges to the ASBS. The practice of road oiling must be minimized or eliminated, and must not result in waste discharges to the ASBS.

### III. ADDITIONAL REQUIREMENTS – WATERFRONT AND MARINE OPERATIONS

In addition to the provisions in Section I (A) or I (B), respectively, a discharger with waterfront and marine operations shall comply with the following:

- A. For discharges related to waterfront and marine operations, the discharger shall develop a Waterfront and Marine Operations Management Plan (Waterfront Plan). This plan shall contain appropriate Management Measures/Practices to address nonpoint source pollutant discharges to the affected ASBS.
  1. The Waterfront Plan shall contain appropriate Management Measures/Practices for any waste discharges associated with the operation and maintenance of vessels, moorings, piers, launch ramps, and cleaning stations in order to ensure that beneficial uses are protected and natural water quality is maintained in the affected ASBS.
  2. For discharges from marinas and recreational boating activities, the Waterfront Plan shall include appropriate Management Measures, described in The Plan for California's Nonpoint Source Pollution Control Program, for marinas and recreational boating, or equivalent practices, to ensure that nonpoint source pollutant discharges do not alter natural water quality in the affected ASBS.
  3. The Waterfront Plan shall include Management Practices to address public education and outreach to ensure that the public is adequately informed that waste discharges to the affected ASBS are prohibited or limited by special conditions in these Special

Protections. The management practices shall include appropriate signage, or similar measures, to inform the public of the ASBS restrictions and to identify the ASBS boundaries.

4. The Waterfront Plan shall include Management Practices to address the prohibition against trash discharges to ASBS. The Management Practices shall include the provision of adequate trash receptacles for marine recreation areas, including parking areas, launch ramps, and docks. The plan shall also include appropriate Management Practices to ensure that the receptacles are adequately maintained and secured in order to prevent trash discharges into the ASBS. Appropriate Management Practices include covering the trash receptacles to prevent trash from being windblown, staking or securing the trash receptacles so they don't tip over, and periodically emptying the receptacles to prevent overflow.
  5. The discharger shall submit its Waterfront Plan to the by the State Water Board Executive Director (statewide waivers or waste discharge requirements) or Executive Officer of the Regional Water Board (Regional Water Board waivers or waste discharge requirements) within six months of the effective date of these special conditions. The Waterfront Plan is subject to approval by the State Water Board Executive Director or the Regional Water Board Executive Officer, as appropriate. The plan must be fully implemented within 18 months of the effective date of the Exception.
- B. The discharge of chlorine, soaps, petroleum, other chemical contaminants, trash, fish offal, or human sewage to ASBS is prohibited. Sinks and fish cleaning stations are point source discharges of wastes and are prohibited from discharging into ASBS. Anthropogenic accumulations of discarded fouling organisms on the sea floor must be minimized.
- C. Limited-term activities, such as the repair, renovation, or maintenance of waterfront facilities, including, but not limited to, piers, docks, moorings, and breakwaters, are authorized only in accordance with Chapter III.E.2 of the Ocean Plan.
- D. If the discharger anticipates that the discharger will fail to fully implement the approved Waterfront Plan within the 18 month deadline, the discharger shall submit a technical report as soon as practicable to the State Water Board Executive Director or the Regional Water Board Executive Officer, as appropriate. The technical report shall contain reasons for failing to meet the deadline and propose a revised schedule to fully implement the plan.
- E. The State Water Board or the Regional Water Board may, for good cause, authorize additional time to comply with the Waterfront Plan. Good cause means a physical impossibility or lack of funding.

If a discharger claims physical impossibility, it shall notify the Board in writing within thirty (30) days of the date that the discharger first knew of the event or circumstance that caused or would cause it to fail to meet the deadline in Section III.A.5. The notice shall describe the reason for the noncompliance or anticipated noncompliance and specifically refer to this Section of this Exception. It shall describe the anticipated length of time the delay in compliance may persist, the cause or causes of the delay as well as measures to minimize the impact of the delay on water quality, the measures taken or to be taken by the

discharger to prevent or minimize the delay, the schedule by which the measures will be implemented, and the anticipated date of compliance. The discharger shall adopt all reasonable measures to avoid and minimize such delays and their impact on water quality. The discharger may request an extension of time for compliance based on lack of funding. The request for an extension shall require:

1. a demonstration of significant hardship by showing that the discharger has made timely and complete applications for all available bond and grant funding, and either no bond or grant funding is available, or bond and/or grant funding is inadequate.
2. for governmental agencies, a demonstration and documentation of a good faith effort to acquire funding through that agency's budgetary process, and a demonstration that funding was unavailable or inadequate.

#### IV. MONITORING REQUIREMENTS

Monitoring is mandatory for all dischargers to assure compliance with the Ocean Plan. Monitoring requirements include both: (A) core discharge monitoring, and (B) ocean receiving water monitoring. The State and Regional Water Boards must approve sampling site locations and any adjustments to the monitoring programs. All ocean receiving water and reference area monitoring must be comparable with the Water Boards' Surface Water Ambient Monitoring Program (SWAMP).

Safety concerns: Sample locations and sampling periods must be determined considering safety issues. Sampling may be postponed upon notification to the State and Regional Water Boards if hazardous conditions prevail.

Analytical Chemistry Methods: All constituents must be analyzed using the lowest minimum detection limits comparable to the Ocean Plan water quality objectives. For metal analysis, all samples, including storm water effluent, reference samples, and ocean receiving water samples, must be analyzed by the approved analytical method with the lowest minimum detection limits (currently Inductively Coupled Plasma/Mass Spectrometry) described in the Ocean Plan.

##### **A. CORE DISCHARGE MONITORING PROGRAM**

1. General sampling requirements for timing and storm size:

Runoff must be collected during a storm event that is greater than 0.1 inch and generates runoff, and at least 72 hours from the previously measurable storm event. Runoff samples shall be collected during the same storm and at approximately the same time when post-storm receiving water is sampled, and analyzed for the same constituents as receiving water and reference site samples (see section IV B) as described below.

2. Runoff flow measurements
  - a. For municipal/industrial storm water outfalls in existence as of December 31, 2007, 18 inches (457mm) or greater in diameter/width (including multiple outfall pipes in combination having a width of 18 inches, runoff flows must be measured or calculated, using a method acceptable to and approved by the State and Regional Water Boards.

b. This will be reported annually for each precipitation season to the State and Regional Water Boards.

3. Runoff samples – storm events

a. For outfalls equal to or greater than 18 inches (0.46m) in diameter or width:

- (1) samples of storm water runoff shall be collected during the same storm as receiving water samples and analyzed for oil and grease, total suspended solids, and, within the range of the southern sea otter indicator bacteria or some other measure of fecal contamination; and
- (2) samples of storm water runoff shall be collected and analyzed for critical life stage chronic toxicity (one invertebrate or algal species) at least once during each storm season when receiving water is sampled in the ASBS.
- (3) If an applicant has no outfall greater than 36 inches, then storm water runoff from the applicant's largest outfall shall be further collected during the same storm as receiving water samples and analyzed for Ocean Plan Table B metals for protection of marine life, Ocean Plan polynuclear aromatic hydrocarbons (PAHs), current use pesticides (pyrethroids and OP pesticides), and nutrients (ammonia, nitrate and phosphates).

b. For outfalls equal to or greater than 36 inches (0.91m) in diameter or width:

- (1) samples of storm water runoff shall be collected during the same storm as receiving water samples and analyzed for oil and grease, total suspended solids, and, within the range of the southern sea otter indicator bacteria or some other measure of fecal contamination; and
- (2) samples of storm water runoff shall be further collected during the same storm as receiving water samples and analyzed for Ocean Plan Table B metals for protection of marine life, Ocean Plan polynuclear aromatic hydrocarbons (PAHs), current use pesticides (pyrethroids and OP pesticides), and nutrients (ammonia, nitrate and phosphates); and
- (3) samples of storm water runoff shall be collected and analyzed for critical life stage chronic toxicity (one invertebrate or algal species) at least once during each storm season when receiving water is sampled in the ASBS.

c. For an applicant not participating in a regional monitoring program [see below in Section IV (B)] in addition to (a.) and (b.) above, a minimum of the two largest outfalls or 20 percent of the larger outfalls, whichever is greater, shall be sampled (flow weighted composite samples) at least three times annually during wet weather (storm event) and analyzed for all Ocean Plan Table A constituents, Table B constituents for marine aquatic life protection (except for toxicity, only chronic toxicity for three species shall be required), DDT, PCBs, Ocean Plan PAHs, OP pesticides, pyrethroids, nitrates, phosphates, and Ocean Plan indicator bacteria. For parties discharging to ASBS in

more than one Regional Water Board region, at a minimum, one (the largest) such discharge shall be sampled annually in each Region.

4. The Executive Director of the State Water Board (statewide permits) or Executive Officer of the Regional Water Board (Regional Water Board permits) may reduce or suspend core monitoring once the storm runoff is fully characterized. This determination may be made at any point after the discharge is fully characterized, but is best made after the monitoring results from the first permit cycle are assessed.

## **B. Ocean Receiving Water and Reference Area Monitoring Program**

In addition to performing the Core Discharge Monitoring Program in Section II.A above, all applicants having authorized discharges must perform ocean receiving water monitoring. In order to fulfill the requirements for monitoring the physical, chemical, and biological characteristics of the ocean receiving waters within their ASBS, dischargers may choose either (1) an individual monitoring program, or (2) participation in a regional integrated monitoring program.

1. Individual Monitoring Program: The requirements listed below are for those dischargers who elect to perform an individual monitoring program to fulfill the requirements for monitoring the physical, chemical, and biological characteristics of the ocean receiving waters within the affected ASBS. In addition to Core Discharge Monitoring, the following additional monitoring requirements shall be met:
  - a. Three times annually, during wet weather (storm events), the receiving water at the point of discharge from the outfalls described in section (IV)(A)(3)(c) above shall be sampled and analyzed for Ocean Plan Table A constituents, Table B constituents for marine aquatic life, DDT, PCBs, Ocean Plan PAHs, OP pesticides, pyrethroids, nitrates, phosphates, salinity, chronic toxicity (three species), and Ocean Plan indicator bacteria.
 

The sample location for the ocean receiving water shall be in the surf zone at the point of discharges; this must be at the same location where storm water runoff is sampled. Receiving water shall be sampled prior to (pre-storm) and during (or immediately after) the same storm (post storm). Post storm sampling shall be during the same storm and at approximately the same time as when the runoff is sampled. Reference water quality shall also be sampled three times annually and analyzed for the same constituents pre-storm and post-storm, during the same storm seasons when receiving water is sampled. Reference stations will be determined by the State Water Board's Division of Water Quality and the applicable Regional Water Board(s).
  - b. Sediment sampling shall occur at least three times during every five (5) year period. The subtidal sediment (sand or finer, if present) at the discharge shall be sampled and analyzed for Ocean Plan Table B constituents for marine aquatic life, DDT, PCBs, PAHs, pyrethroids, and OP pesticides. For sediment toxicity testing, only an acute toxicity test using the amphipod *Eohaustorius estuarius* must be performed.
  - c. A quantitative survey of intertidal benthic marine life shall be performed at the discharge and at a reference site. The survey shall be performed at least once every five (5) year period. The survey design is subject to approval by the Regional Water Board and the State Water Board's Division of Water Quality. The results of the survey shall be

completed and submitted to the State Water Board and Regional Water Board at least six months prior to the end of the permit cycle.

- d. Once during each five (5) year period, a bioaccumulation study shall be conducted to determine the concentrations of metals and synthetic organic pollutants at representative discharge sites and at representative reference sites. The study design is subject to approval by the Regional Water Board and the State Water Board's Division of Water Quality. The bioaccumulation study may include California mussels (*Mytilus californianus*) and/or sand crabs (*Emerita analoga* or *Blepharipoda occidentalis*). Based on the study results, the Regional Water Board and the State Water Board's Division of Water Quality, may adjust the study design in subsequent permits, or add or modify additional test organisms (such as shore crabs or fish), or modify the study design appropriate for the area and best available sensitive measures of contaminant exposure.
  - e. Marine Debris: Representative quantitative observations for trash by type and source shall be performed along the coast of the ASBS within the influence of the discharger's outfalls. The design, including locations and frequency, of the marine debris observations is subject to approval by the Regional Water Board and State Water Board's Division of Water Quality.
  - f. The monitoring requirements of the Individual Monitoring Program in this section are minimum requirements. After a minimum of one (1) year of continuous water quality monitoring of the discharges and ocean receiving waters, the Executive Director of the State Water Board (statewide permits) or Executive Officer of the Regional Water Board (Regional Water Board permits) may require additional monitoring, or adjust, reduce or suspend receiving water and reference station monitoring. This determination may be made at any point after the discharge and receiving water is fully characterized, but is best made after the monitoring results from the first permit cycle are assessed.
2. Regional Integrated Monitoring Program: Dischargers may elect to participate in a regional integrated monitoring program, in lieu of an individual monitoring program, to fulfill the requirements for monitoring the physical, chemical, and biological characteristics of the ocean receiving waters within their ASBS. This regional approach shall characterize natural water quality, pre- and post-storm, in ocean reference areas near the mouths of identified open space watersheds and the effects of the discharges on natural water quality (physical, chemical, and toxicity) in the ASBS receiving waters, and should include benthic marine aquatic life and bioaccumulation components. The design of the ASBS stratum of a regional integrated monitoring program may deviate from the otherwise prescribed individual monitoring approach (in Section IV.B.1) if approved by the State Water Board's Division of Water Quality and the Regional Water Boards.
    - a. Ocean reference areas shall be located at the drainages of flowing watersheds with minimal development (in no instance more than 10% development), and shall not be located in CWA Section 303(d) listed waterbodies or have tributaries that are 303(d) listed. Reference areas shall be free of wastewater discharges and anthropogenic non- storm water runoff. A minimum of low threat storm runoff discharges (e.g. stream highway overpasses and campgrounds) may be allowed on a case-by-case basis. Reference areas shall be located in the same region as the ASBS receiving water monitoring occurs. The reference areas for each Region are subject to approval by the participants in the regional monitoring program and the State Water

Board's Division of Water Quality and the applicable Regional Water Board(s). A minimum of three ocean reference water samples must be collected from each station, each from a separate storm during the same storm season that receiving water is sampled. A minimum of one reference location shall be sampled for each ASBS receiving water site sampled per responsible party. For parties discharging to ASBS in more than one Regional Water Board region, at a minimum, one reference station and one receiving water station shall be sampled in each region.

- b. ASBS ocean receiving water must be sampled in the surf zone at the location where the runoff makes contact with ocean water (i.e. at "point zero"). Ocean receiving water stations must be representative of worst-case discharge conditions (i.e. co-located at a large drain greater than 36 inches, or if drains greater than 36 inches are not present in the ASBS then the largest drain greater than 18 inches.) Ocean receiving water stations are subject to approval by the participants in the regional monitoring program and the State Water Board's Division of Water Quality and the applicable Regional Water Board(s). A minimum of three ocean receiving water samples must be collected during each storm season from each station, each from a separate storm. A minimum of one receiving water location shall be sampled in each ASBS per responsible party in that ASBS. For parties discharging to ASBS in more than one Regional Water Board region, at a minimum, one reference station and one receiving water station shall be sampled in each region.
  - c. Reference and receiving water sampling shall commence during the first full storm season following the adoption of these special conditions, and post-storm samples shall be collected during the same storm event when storm water runoff is sampled. Sampling shall occur in a minimum of two storm seasons. For those ASBS dischargers that have already participated in the Southern California Bight 2008 ASBS regional monitoring effort, sampling may be limited to only one storm season.
  - d. Receiving water and reference samples shall be analyzed for the same constituents as storm water runoff samples. At a minimum, constituents to be sampled and analyzed in reference and discharge receiving waters must include oil and grease, total suspended solids, Ocean Plan Table B metals for protection of marine life, Ocean Plan PAHs, pyrethroids, OP pesticides, ammonia, nitrate, phosphates, and critical life stage chronic toxicity for three species. In addition, within the range of the southern sea otter, indicator bacteria or some other measure of fecal contamination shall be analyzed.
3. Waterfront and Marine Operations: In addition to the above requirements for ocean receiving water monitoring, additional monitoring must be performed for marinas and boat launch and pier facilities:
- a. For all marina or mooring field operators, in mooring fields with 10 or more occupied moorings, the ocean receiving water must be sampled for Ocean Plan indicator bacteria, residual chlorine, copper, zinc, grease and oil, methylene blue active substances (MBAS), and ammonia nitrogen.
    - (1) For mooring field operators opting for an individual monitoring program (Section IV.B.1 above), this sampling must occur weekly (on the weekend) from May through October.

- (2) For mooring field operators opting to participate in a regional integrated monitoring program (Section IV.B.2 above), this sampling must occur monthly from May through October on a high use weekend in each month. The Water Boards may allow a reduction in the frequency of sampling, through the regional monitoring program, after the first year of monitoring.
- b. For all mooring field operators, the subtidal sediment (sand or finer, if present) within mooring fields and below piers shall be sampled and analyzed for Ocean Plan Table B metals (for marine aquatic life beneficial use), acute toxicity, PAHs, and tributyltin. For sediment toxicity testing, only an acute toxicity test using the amphipod *Eohaustorius estuarius* must be performed. This sampling shall occur at least three times during a five (5) year period. For mooring field operators opting to participate in a regional integrated monitoring program, the Water Boards may allow a reduction in the frequency of sampling after the first sampling effort's results are assessed.

## Glossary

At the point of discharge(s) – Means in the surf zone immediately where runoff from an outfall meets the ocean water (a.k.a., at point zero).

Areas of Special Biological Significance (ASBS) – Those areas designated by the State Water Board as ocean areas requiring protection of species or biological communities to the extent that alteration of natural water quality is undesirable. All Areas of Special Biological Significance are also classified as a subset of State Water Quality Protection Areas.

Design storm – For purposes of these Special Protections, a design storm is defined as the volume of runoff produced from one inch of precipitation per day or, if this definition is inconsistent with the discharger's applicable storm water permit, then the design storm shall be the definition included in the discharger's applicable storm water permit.

Development – Relevant to reference monitoring sites, means urban, industrial, agricultural, grazing, mining, and timber harvesting land uses.

Higher threat discharges - Permitted storm drains discharging equal to or greater than 18 inches, industrial storm drains, agricultural runoff discharged through an MS4, discharges associated with waterfront and marina operations (e.g., piers, launch ramps, mooring fields, and associated vessel support activities, except for passive discharges defined below), and direct discharges associated with commercial or industrial activities to ASBS.

Low Impact Development (LID) – A sustainable practice that benefits water supply and contributes to water quality protection. Unlike traditional storm water management, which entails collecting and conveying storm water runoff through storm drains, pipes, or other conveyances to a centralized storm water facility, LID focuses on using site design and storm water management to maintain the site's pre-development runoff rates and volumes. The goal of LID is to mimic a site's predevelopment hydrology by using design techniques that infiltrate, filter, store, evaporate, and detain runoff close to the source of rainfall.

Marine Operations – Marinas or mooring fields that contain slips or mooring locations for 10 or more vessels.

Management Measure (MM) - Economically achievable measures for the control of the addition of pollutants from various classes of nonpoint sources of pollution, which reflect the greatest degree of pollutant reduction achievable through the application of the best available nonpoint pollution control practices, technologies, processes, siting criteria, operating methods, or other alternatives. For example, in the "marinas and recreational boating" land- use category specified in the Plan for California's Nonpoint Source Pollution Control Program (NPS Program Plan) (SWRCB, 1999), "boat cleaning and maintenance" is considered a MM or the source of a specific class or type of NPS pollution.

Management Practice (MP) - The practices (e.g., structural, non-structural, operational, or other alternatives) that can be used either individually or in combination to address a specific MM class or classes of NPS pollution. For example, for the “boat cleaning and maintenance” MM, specific MPs can include, but are not limited to, methods for the selection of environmentally sensitive hull paints or methods for cleaning/removal of hull copper anti-fouling paints.

Municipal Separate Storm Sewer System (MS4) – A municipally-owned storm sewer system regulated under the Phase I or Phase II storm water program implemented in compliance with Clean Water Act section 402(p). Note that an MS4 program’s boundaries are not necessarily congruent with the permittee’s political boundaries.

Natural Ocean Water Quality - The water quality (based on selected physical, chemical and biological characteristics) that is required to sustain marine ecosystems, and which is without apparent human influence, *i.e.*, an absence of significant amounts of: (a) man-made constituents (e.g., DDT); (b) other chemical (e.g., trace metals), physical (temperature/thermal pollution, sediment burial), and biological (e.g., bacteria) constituents at concentrations that have been elevated due to man’s activities above those resulting from the naturally occurring processes that affect the area in question; and (c) non-indigenous biota (e.g., invasive algal bloom species) that have been introduced either deliberately or accidentally by man. Discharges “*shall not alter natural ocean water quality*” as determined by a comparison to the range of constituent concentrations in reference areas agreed upon via the regional monitoring program(s). If monitoring information indicates that *natural ocean water quality* is not maintained, but there is sufficient evidence that a discharge is not contributing to the alteration of natural water quality, then the Regional Water Board may make that determination. In this case, sufficient information must include runoff sample data that has equal or lower concentrations for the range of constituents at the applicable reference area(s).

Nonpoint source – Nonpoint pollution sources generally are sources that do not meet the definition of a point source. Nonpoint source pollution typically results from land runoff, precipitation, atmospheric deposition, agricultural drainage, marine/boating operations or hydrologic modification. Nonpoint sources, for purposes of these Special Protections, include discharges that are not required to be regulated under an NPDES permit.

Non-storm water discharge – Any runoff that is not the result of a precipitation event. This is often referred to as “dry weather flow.”

Non-structural control – A Best Management Practice that involves operational, maintenance, regulatory (e.g., ordinances) or educational activities designed to reduce or eliminate pollutants in runoff, and that are not structural controls (*i.e.* there are no physical structures involved).

Physical impossibility - Means any act of God, war, fire, earthquake, windstorm, flood or natural catastrophe; unexpected and unintended accidents not caused by discharger or its employees’ negligence; civil disturbance, vandalism, sabotage or terrorism; restraint by court order or public authority or agency; or action or non-action by, or inability to

obtain the necessary authorizations or approvals from any governmental agency other than the permittee.

Representative sites and monitoring procedures – Are to be proposed by the discharger, with appropriate rationale, and subject to approval by Water Board staff.

Sheet-flow – Runoff that flows across land surfaces at a shallow depth relative to the cross-sectional width of the flow. These types of flow may or may not enter a storm drain system before discharge to receiving waters.

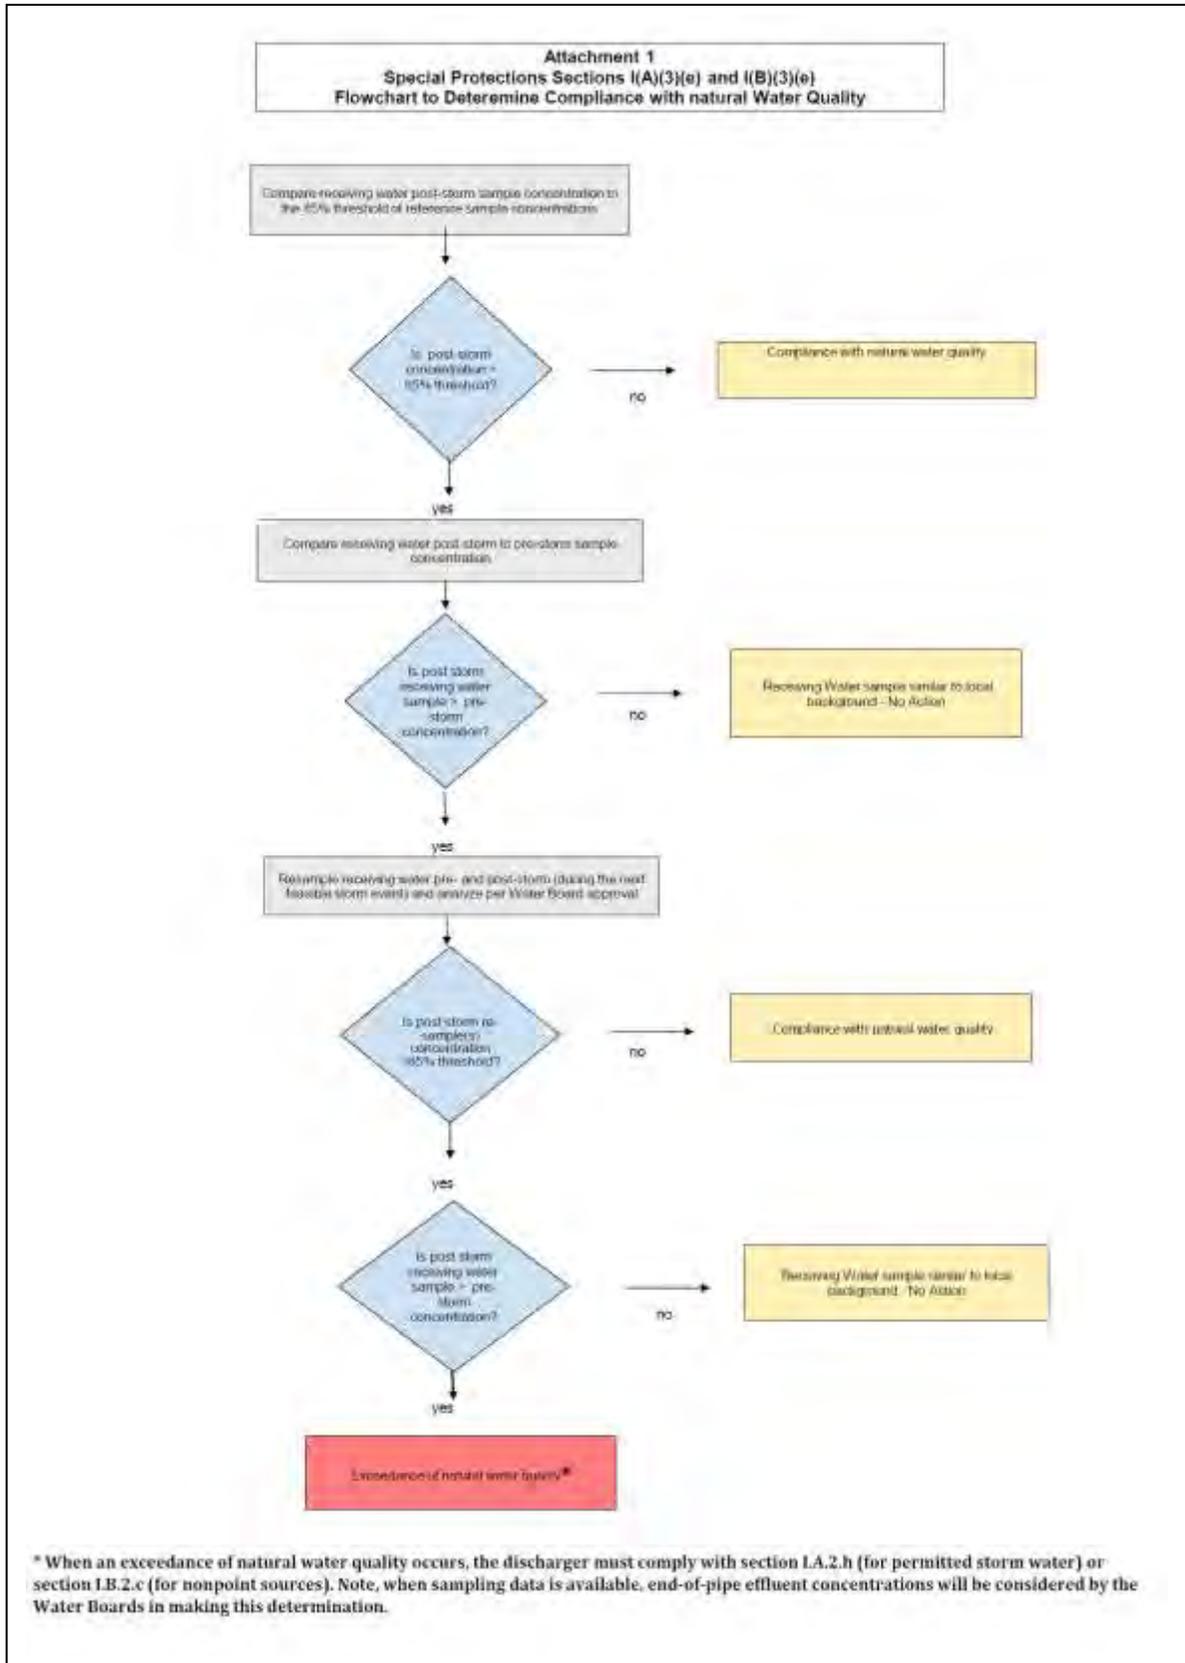

Storm Season – Also referred to as rainy season, means the months of the year from the onset of rainfall during autumn until the cessation of rainfall in the spring.

Structural control – A Best Management Practice that involves the installation of engineering solutions to the physical treatment or infiltration of runoff.

Surf Zone - The surf zone is defined as the submerged area between the breaking waves and the shoreline at any one time.

Surface Water Ambient Monitoring Program (SWAMP) comparable – Means that the monitoring program must 1) meet or exceed 2008 SWAMP Quality Assurance Program Management Plan (QAPP) Measurement Quality Objectives, or 2) have a Quality Assurance Project Plan that has been approved by SWAMP; in addition data must be formatted to match the database requirements of the SWAMP Information Management System. Adherence to the measurement quality objectives in the Southern California Bight 2008 ASBS Regional Monitoring Program QAPP and data base management comprises being SWAMP comparable.

Waterfront Operations - Piers, launch ramps, and cleaning stations in the water or on the adjacent shoreline.

## ATTACHMENT B

### STANDARD PERMIT PROVISIONS AND GENERAL PROVISIONS

#### 1. Standard Permit Provisions

Code of Federal Regulations Title 40 Section 122.41 (40 CFR 122.41) includes conditions, or provisions, that apply to all National Pollutant Discharge Elimination System (NPDES) permits. Additional provisions applicable to NPDES permits are in 40 CFR 122.42. All applicable provisions in 40 CFR 122.41 and 40 CFR 122.42 must be incorporated into this Order and NPDES permit. The applicable 40 CFR 122.41 and 40 CFR 122.42 provisions are as follows:

**a. DUTY TO COMPLY** [40 CFR 122.41(a)]

The Copermittee must comply with all of the provisions of this permit. Any permit noncompliance constitutes a violation of the Clean Water Act (CWA) and is grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or denial of a permit renewal application.

- (1) The Copermittee must comply with effluent standards or prohibitions established under Section 307(a) of the CWA for toxic pollutants and with standards for sewage sludge use or disposal established under Section 405(d) of the CWA within the time provided in the regulations that establish these standards or prohibitions or standards for sewage sludge use or disposal, even if the permit has not yet been modified to incorporate the requirement. [40 CFR 122.41(a)(1)]
- (2) The CWA provides that any person who violates Section 301, 302, 306, 307, 308, 318 or 405 of the CWA, or any permit condition or limitation implementing any such sections in a permit issued under Section 402, or any requirement imposed in a pretreatment program approved under Section 402(a)(3) or 402(b)(8) of the CWA, is subject to a civil penalty not to exceed \$25,000 per day for each violation. The CWA provides that any person who *negligently* violates Section 301, 302, 306, 307, 308, 318, or 405 of the CWA, or any condition or limitation implementing any of such sections in a permit issued under Section 402 of the CWA, or any requirement imposed in a pretreatment program approved under Section 402(a)(3) or 402(b)(8) of the CWA, is subject to criminal penalties of \$2,500 to \$25,000 per day of violation, or imprisonment of not more than 1 year, or both. In the case of a second or subsequent conviction for a negligent violation, a person shall be subject to criminal penalties of not more than \$50,000 per day of violation, or by imprisonment of not more than 2 years, or both. Any person who *knowingly* violates such sections, or such conditions or limitations is subject to criminal penalties of \$5,000 to \$50,000 per day of violation, or imprisonment for not more than 3 years, or both. In the case of a second or subsequent conviction for a knowing violation, a person shall be subject to criminal penalties of not more than \$100,000 per day of violation, or imprisonment of not more than 6 years, or both. Any person who knowingly violates Section 301, 302, 303, 306, 307, 308, 318 or 405 of the CWA, or any permit condition or limitation implementing any of such sections in a permit issued under Section 402 of the CWA, and who knows at that time that he thereby places another person in imminent

danger of death or serious bodily injury, shall, upon conviction, be subject to a fine of not more than \$250,000 or imprisonment of not more than 15 years, or both. In the case of a second or subsequent conviction for a knowing endangerment violation, a person shall be subject to a fine of not more than \$500,000 or by imprisonment of not more than 30 years, or both. An organization, as defined in Section 309(c)(3)(B)(iii) of the CWA, shall, upon conviction of violating the imminent danger provision, be subject to a fine of not more than \$1,000,000 and can be fined up to \$2,000,000 for second or subsequent convictions.

[40 CFR 122.41(a)(2)]

- (3) Any person may be assessed an administrative penalty by the San Diego Regional Water Quality Control Board (San Diego Water Board), State Water Resources Control Board (State Water Board), or United States Environmental Protection Agency (USEPA) for violating Section 301, 302, 306, 307, 308, 318 or 405 of the CWA, or any permit condition or limitation implementing any of such sections in a permit issued under section 402 of this Act. Administrative penalties for Class I violations are not to exceed \$10,000 per violation, with the maximum amount of any Class I penalty assessed not to exceed \$25,000. Penalties for Class II violations are not to exceed \$10,000 per day for each day during which the violation continues, with the maximum amount of any Class II penalty not to exceed \$125,000.

[40 CFR 122.41(a)(3)]

**b. DUTY TO REAPPLY** [40 CFR 122.41(b)]

If a Copermittee wishes to continue an activity regulated by this permit after the expiration date of this permit, the Copermittee must apply for and obtain a new permit.

**c. NEED TO HALT OR REDUCE ACTIVITY NOT A DEFENSE** [40 CFR 122.41(c)]

It shall not be a defense for a Copermittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.

**d. DUTY TO MITIGATE** [40 CFR 122.41(d)]

The Copermittee must take all reasonable steps to minimize or prevent any discharge or prevent any discharge or sludge use or disposal in violation of this permit that has a reasonable likelihood of adversely affecting human health or the environment.

**e. PROPER OPERATION AND MAINTENANCE** [40 CFR 122.41(e)]

The Copermittee must at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the Copermittee to achieve compliance with the conditions of this permit. Proper operation and maintenance also includes adequate laboratory controls and appropriate quality assurance procedures. This provision requires the operation of back-up or auxiliary facilities or similar systems that are installed by a Copermittee only when the operation is necessary to achieve compliance with the conditions of this permit.

**f. PERMIT ACTIONS** [40 CFR 122.41(f)]

This permit may be modified, revoked and reissued, or terminated for cause. The filing of a request by the Copermittee for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any permit condition.

**g. PROPERTY RIGHTS** [40 CFR 122.41(g)]

This permit does not convey any property rights of any sort, or any exclusive privilege.

**h. DUTY TO PROVIDE INFORMATION** [40 CFR 122.41(h)]

The Copermittee must furnish to the San Diego Water Board, State Water Board, or USEPA within a reasonable time, any information which the San Diego Water Board, State Water Board, or USPEA may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit or to determine compliance with this permit. The Copermittee must also furnish to the San Diego Water Board, State Water Board, or USPEA upon request, copies of records required to be kept by this permit.

**i. INSPECTION AND ENTRY** [40 CFR 122.41(i)]

The Copermittee must allow the San Diego Water Board, State Water Board, USEPA, and/or their authorized representative (including an authorized contractor acting as their representative), upon presentation of credentials and other documents as may be required by law, to:

- (1) Enter upon the Copermittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this permit; [40 CFR 122.41(i)(1)]
- (2) Have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit; [40 CFR 122.41(i)(2)]
- (3) Inspect and photograph at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this permit; [40 CFR 122.41(i)(3)] and
- (4) Sample or monitor at reasonable times, for the purpose of assuring permit compliance or as otherwise authorized by the CWA, any substances or parameters at any location. [40 CFR 122.41(i)(4)]

**j. MONITORING AND RECORDS** [40 CFR 122.41(j)]

- (1) Samples and measurements taken for the purpose of monitoring must be representative of the monitored activity. [40 CFR 122.41(j)(1)]
- (2) Except for records of monitoring information required by this permit related to the Copermittee's sewage sludge use and disposal activities, which shall be retained for

a period of at least five (5) years (or longer as required by 40 CFR Part 503), the Copermittee must retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this permit, and records of all data used to complete the application for this permit, for a period of at least three (3) years from the date of the sample, measurement, report or application. This period may be extended by request of the San Diego Water Board at any time. [40 CFR 122.41(j)(2)]

(3) Records for monitoring information must include: [40 CFR 122.41(j)(3)]

- (a) The date, exact place, and time of sampling or measurements; [40 CFR 122.41(j)(3)(i)]
- (b) The individual(s) who performed the sampling or measurements; [40 CFR 122.41(j)(3)(ii)]
- (c) The date(s) analyses were performed; [40 CFR 122.41(j)(3)(iii)]
- (d) The individual(s) who performed the analyses; [40 CFR 122.41(j)(3)(iv)]
- (e) The analytical techniques or methods used; [40 CFR 122.41(j)(3)(v)] and
- (f) The results of such analyses. [40 CFR 122.41(j)(3)(vi)]

(4) Monitoring must be conducted according to test procedures under 40 CFR Part 136 unless another method is required under 40 CFR Subchapters N or O. [40 CFR 122.41(j)(4)]

In the case of pollutants for which there are no approved methods under 40 CFR Part 136 or otherwise required under 40 CFR Subchapters N and O, monitoring must be conducted according to a test procedure specified in the permit for such pollutants. [40 CFR 122.44(i)(1)(iv)]

(5) The CWA provides that any person who falsifies, tampers with, or knowingly renders inaccurate any monitoring device or method required to be maintained under this permit shall, upon conviction, be punished by a fine of not more than \$10,000, or by imprisonment for not more than 2 years, or both. If a conviction of a person is for a violation committed after a first conviction of such person under this paragraph, punishment is a fine of not more than \$20,000 per day of violation, or by imprisonment of not more than 4 years, or both. [40 CFR 122.41(j)(5)]

**k. SIGNATORY REQUIREMENT** [40 CFR 122.41(k)]

(1) All applications, reports, or information submitted to the San Diego Water Board, State Water Board, or USEPA must be signed and certified. (See 40 CFR 122.22) [40 CFR 122.41(k)(1)]

- (a) *For a municipality, State, Federal, or other public agency.* [All applications must be signed] by either a principal executive officer or ranking elected official. [40 CFR 122.22(a)(3)]
- (b) All reports required by permits, and other information requested by the San Diego Water Board, State Water Board, or USEPA must be signed by a person described in paragraph (a) of this section, or by a duly authorized

representative of that person. A person is a duly authorized representative only if: [40 CFR 122.22(b)]

- (i) The authorization is made in writing by a person described in paragraph (a) of this section; [40 CFR 122.22(b)(1)]
- (ii) The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity such as the position of plant manager, operator of a well or a well field, superintendent, position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company, (A duly authorized representative may thus be either a named individual or any individual occupying a named position.) [40 CFR 122.22(b)(2)] and,
- (iii) The written authorization is submitted to the San Diego Water Board and State Water Board. [40 CFR 122.22(b)(3)]

(c) *Changes to authorization.* If an authorization under paragraph (b) of this section is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new authorization satisfying the requirements of paragraph (b) of this section must be submitted to the San Diego Water Board prior to or together with any reports, information, or applications to be signed by an authorized representative. [40 CFR 122.22(c)]

(d) *Certification.* Any person signing a document under paragraph (a) or (b) of this section shall make the following certification:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations." [40 CFR 122.22(d)]

(2) The CWA provides that any person who knowingly makes any false statement, representation, or certification in any record or other document submitted or required to be maintained under this permit, including monitoring reports or reports of compliance or non-compliance shall, upon conviction, be punished by a fine of not more than \$10,000 per violation, or by imprisonment for not more than 6 months per violation, or by both. [40 CFR 122.41(k)(2)]

#### **I. REPORTING REQUIREMENTS** [40 CFR 122.41(l)]

(1) *Planned changes.* The Copermittee must give notice to the San Diego Water Board as soon as possible of any planned physical alterations or additions to the permitted facility. Notice is required only when: [40 CFR 122.41(l)(1)]

- (a) The alteration or addition to a permitted facility may meet one of the criteria for determining whether a facility is a new source in 40 CFR 122.29(b); [40 CFR 122.41(l)(1)(i)] or

- (b) The alteration or addition could significantly change the nature or increase the quantity of pollutants discharged. This notification applies to pollutants which are subject neither to effluent limitations in the permit, nor to notification requirements under 40 CFR 122.42(a)(1).  
[40 CFR 122.41(l)(1)(ii)]
  - (c) The alteration or addition results in a significant change in the Copermitttee's sludge use or disposal practices, and such alteration, addition, or change may justify the application of permit conditions that are different from or absent in the existing permit, including notification of additional use or disposal sites not reported during the permit application process or not reported pursuant to an approved land application plan. [40 CFR 122.41(l)(1)(iii)]
- (2) *Anticipated noncompliance.* The Copermitttee must give advance notice to the San Diego Water Board or State Water Board of any planned changes in the permitted facility or activity which may result in noncompliance with permit requirements.  
[40 CFR 122.41(l)(2)]
- (3) *Transfers.* This permit is not transferable to any person except after notice to the San Diego Water Board. The San Diego Water Board may require modification or revocation and reissuance of the permit to change the name of the Copermitttee and incorporate such other requirements as may be necessary under the CWA.  
[40 CFR 122.41(l)(3)]
- (4) *Monitoring reports.* Monitoring results must be reported at the intervals specified elsewhere in this permit. [40 CFR 122.41(l)(4)]
- (a) Monitoring results must be reported on a Discharge Monitoring Report (DMR) form or forms provided or specified by the San Diego Water Board or State Water Board for reporting results of monitoring of sludge use or disposal practices. [40 CFR 122.41(l)(4)(i)]
  - (b) If the Copermitttee monitors any pollutant more frequently than required by the permit using test procedures approved under 40 CFR Part 136 or another method required for an industry-specific waste stream under 40 CFR Subchapters N or O, the results of this monitoring must be included in the calculation and reporting of the data submitted in the DMR or sludge reporting form specified by the San Diego Water Board or State Water Board.  
[40 CFR 122.41(l)(4)(ii)]
  - (c) Calculations for all limitations which require averaging of measurements must utilize an arithmetic mean unless otherwise specified in the permit.  
[40 CFR 122.41(l)(4)(iii)]
- (5) *Compliance schedules.* Reports of compliance or noncompliance with, or any progress reports on, interim and final requirements contained in any compliance schedule of this permit must be submitted no later than 14 days following each schedule date. [40 CFR 122.41(l)(5)]

(6) *Twenty-four hour reporting.*

- (a) The Copermittee must report any noncompliance that may endanger health or the environment. Any information must be provided orally within 24 hours from the time the Copermittee becomes aware of the circumstances. A written submission must also be provided within five (5) days of the time the Copermittee becomes aware of the circumstances. The written submission must contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance. [40 CFR 122.41(l)(6)(i)]
- (b) The following must be included as information which must be reported within 24 hours under this paragraph: [40 CFR 122.41(l)(6)(ii)]
  - (i) Any unanticipated bypass that exceeds any effluent limitation in the permit (See 40 CFR 122.41(g)). [40 CFR 122.41(l)(6)(ii)(A)]
  - (ii) Any upset which exceeds any effluent limitation in the permit. [40 CFR 122.41(l)(6)(ii)(B)] and,
  - (iii) Violation of a maximum daily discharge limitation for any of the pollutants listed by the San Diego Water Board in the permit to be reported within 24 hours. (See 40 CFR 122.44(g)) [40 CFR 122.41(l)(6)(ii)(C)]
- (c) The San Diego Water Board may waive the above-required written report on a case-by-case basis if the oral report has been received within 24 hours. [40 CFR 122.41(l)(6)(iii)]

(7) *Other noncompliance.* The Copermittee must report all instances of noncompliance not reported in accordance with the standard provisions required under 40 CFR 122.41(l)(4), (5), and (6), at the time monitoring reports are submitted. The reports must contain the information listed in the standard provisions required under 40 CFR 122.41(l)(6). [40 CFR 122.41(l)(7)]

(8) *Other information.* When the Copermittee becomes aware that it failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application or in any report to the San Diego Water Board, State Water Board, or USEPA, the Copermittee must promptly submit such facts or information. [40 CFR 122.41(l)(8)]

**m. BYPASS** [40 CFR 122.41(m)]

(1) *Definitions.*

- (a) "Bypass" means the intentional diversion of waste streams from any portion of a treatment facility. [40 CFR 122.41(m)(1)(i)] or
- (b) "Severe property damage" means substantial physical damage to property, damage to the treatment facilities which causes them to become inoperable, or

substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.

[40 CFR 122.41(m)(1)(ii)]

- (2) *Bypass not exceeding limitations.* The Copermittee may allow any bypass to occur which does not cause effluent limitations to be exceeded, but only if it also is for essential maintenance to assure efficient operation. These bypasses are not subject to the standard provisions required under 40 CFR 122.41(m)(3) and (4).

[40 CFR 122.41(m)(2)]

- (3) *Notice.*

- (a) *Anticipated bypass.* If the Copermittee knows in advance of the need for a bypass, it must submit a notice, if possible at least ten days before the date of the bypass. [40 CFR 122.41(m)(3)(i)] or

- (b) *Unanticipated bypass.* The Copermittee must submit notice of an unanticipated bypass in accordance with the standard provisions required under 40 CFR 122.41(l)(6) (24-hour notice).

[40 CFR 122.41(m)(3)(ii)]

- (4) *Prohibition of Bypass.*

- (a) Bypass is prohibited, and the San Diego Water Board may take enforcement action against a Copermittee for bypass, unless:

[40 CFR 122.41(m)(4)(i)]

- (i) Bypass was unavoidable to prevent loss of life, personal injury, or severe property damage; [40 CFR 122.41(m)(4)(i)(A)]

- (ii) There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance;

[40 CFR 122.41(m)(4)(i)(B)] and,

- (iii) The Copermittee submitted notice in accordance with the standard provisions required under 40 CFR 122.41(m)(3).

[40 CFR 122.41(m)(4)(i)(C)]

- (b) The San Diego Water Board may approve an anticipated bypass, after considering its adverse effects, if the San Diego Water Board determines that it will meet the three conditions listed above.

[40 CFR 122.41(m)(4)(ii)]

**n. UPSET** [40 CFR 122.41(n)]

- (1) *Definition.* "Upset" means an exceptional incident in which there is unintentional and temporary noncompliance with technology based permit effluent limitations because

of factors beyond the reasonable control of the Copermittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation. [40 CFR 122.41(n)(1)]

- (2) *Effect of an upset.* An upset constitutes an affirmative defense to an action brought for noncompliance with such technology based permit effluent limitations if the standard provisions required under 40 CFR 122.41(n)(3) are met. No determination made during administrative review of claims that noncompliance was caused by upset, and before an action for noncompliance, is final administrative action subject to judicial review. [40 CFR 122.41(n)(2)]
- (3) *Conditions necessary for a demonstration of upset.* A Copermittee who wishes to establish the affirmative defense of upset must demonstrate, through properly signed, contemporaneous operating logs, or other relevant evidence that:  
[40 CFR 122.41(n)(3)]
- (a) An upset occurred and that the Copermittee can identify the cause(s) of the upset; [40 CFR 122.41(n)(3)(i)]
  - (b) The permitted facility was at the time being properly operated;  
[40 CFR 122.41(n)(3)(ii)] and
  - (c) The Copermittee submitted notice of the upset in accordance with the standard provisions required under 40 CFR 122.41(l)(6)(ii)(B) (24-hour notice).  
[40 CFR 122.41(n)(3)(iii)]
  - (d) The Copermittee complied with any remedial measures pursuant to the standard provisions required under 40 CFR 122.41(d).  
[40 CFR 122.41(n)(3)(iii)]
- (4) *Burden of proof.* In any enforcement proceeding, the Copermittee seeking to establish the occurrence of an upset has the burden of proof.  
[40 CFR 122.41(n)(4)]

**o. STANDARD PERMIT PROVISIONS FOR MUNICIPAL SEPARATE STORM SEWER SYSTEMS**  
[40 CFR 122.42(c)]

The operator of a large or medium municipal separate storm sewer system or a municipal separate storm sewer that has been designated by the San Diego Water Board or State Water Board under 40 CFR 122.26(a)(1)(v) must submit an annual report by the anniversary of the date of the issuance of the permit for such system. The report must include:

- (1) The status of implementing the components of the storm water management program that are established as permit conditions; [40 CFR 122.42(c)(1)]
- (2) Proposed changes to the storm water management programs that are established as permit conditions. Such proposed changes must be consistent with 40 CFR 122.26(d)(2)(iii); [40 CFR 122.42(c)(2)] and
- (3) Revisions, if necessary, to the assessment of controls and the fiscal analysis reported in the permit application under 40 CFR 122.26(d)(2)(iv) and (v);  
[40 CFR 122.42(c)(3)]

- (4) A summary of data, including monitoring data, that is accumulated throughout the reporting year; [40 CFR 122.42(c)(4)]
- (5) Annual expenditures and budget for year following each annual report; [40 CFR 122.42(c)(5)]
- (6) A summary describing the number and nature of enforcement actions, inspections, and public education programs; [40 CFR 122.42(c)(6)]
- (7) Identification of water quality improvements or degradation. [40 CFR 122.42(c)(7)]

**p. STANDARD PERMIT PROVISIONS FOR STORM WATER DISCHARGES** [40 CFR 122.42(d)]

The initial permits for discharges composed entirely of storm water issued pursuant to 40 CFR 122.26(e)(7) must require compliance with the conditions of the permit as expeditiously as practicable, but in no event later than three years after the date of issuance of the permit.

## 2. General Provisions

In addition to the standard provisions required to be incorporated into the Order and NPDES permit pursuant to 40 CFR 122.41 and 40 CFR 122.42, several other general provisions apply to this Order. The general provisions applicable to this Order and NPDES permit are as follows:

**a. DISCHARGE OF WASTE IS A PRIVILEGE**

No discharge of waste into the waters of the State, whether or not such discharge is made pursuant to waste discharge requirements, shall create a vested right to continue such discharge. All discharges of waste into waters of the State are privileges, not rights. [CWC Section 13263(g)]

**b. DURATION OF ORDER AND NPDES PERMIT**

- (1) *Effective date.* This Order supersedes Order No. R9-2007-0001 for the San Diego County Copermittees listed in Table 1a and became effective on June 27, 2013. This Order as amended by Order R9-2015-0001 supersedes Order No. R9-2009-0002 for the Orange County Copermittees listed in Table 1b and its amendments through Order No. R9-2015-0001 became effective April 1, 2015. This Order as amended by Order Nos. R9-2015-0001 and R9-2015-0100 supersedes Order No. R9-2010-0016 for the Riverside County Copermittees listed in Table 1c and its amendments through Order No. R9-2015-0100 became effective January 7, 2016.
- (2) *Expiration.* This Order and NPDES permit expires five years after June 27, 2013, its initial effective date. [40 CFR 122.46(a)]
- (3) *Continuation of expired order.* After this Order and NPDES permit expires, the terms and conditions of this Order and NPDES permit are automatically continued pending issuance of a new permit if all requirements of the federal NPDES regulations on the continuation of expired permits (40 CFR 122.6) are complied with.

ATTACHMENT B: STANDARD PERMIT PROVISIONS AND GENERAL PROVISIONS

- 1. Standard Permit Provisions
- 2. General Provisions

**c. AVAILABILITY**

A copy of this Order must be kept at a readily accessible location and must be available to on-site personnel at all times.

**d. CONFIDENTIALITY OF INFORMATION**

Except as provided for in 40 CFR 122.7, no information or documents submitted in accordance with or in application for this Order will be considered confidential, and all such information and documents shall be available for review by the public at the San Diego Water Board office.

Claims of confidentiality for the following information will be denied:  
[40 CFR 122.7(b)]

- (1) The name and address of any permit applicant or Copermittee;  
[40 CFR 122.7(b)(1)] and
- (2) Permit applications and attachments, permits, and effluent data.  
[40 CFR 122.7(b)(2)]

**e. EFFLUENT LIMITATIONS**

- (1) *Interim effluent limitations.* The Copermittee must comply with any interim effluent limitations as established by addendum, enforcement action, or revised waste discharge requirements which have been, or may be, adopted by the San Diego Water Board.
- (2) *Other effluent limitations and standards.* If any applicable toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is promulgated under Section 307(a) of the CWA for a toxic pollutant and that standard or prohibition is more stringent than any limitation on the pollutant in the permit, the San Diego Water Board shall institute proceedings under these regulations to modify or revoke and reissue the permit to conform to the toxic effluent standard or prohibition. [40 CFR 122.44(b)(1)]

**f. DUTY TO MINIMIZE OR CORRECT ADVERSE IMPACTS**

The Copermittee must take all reasonable steps to minimize or correct any adverse impact on the environment resulting from noncompliance with this Order, including such accelerated or additional monitoring as may be necessary to determine the nature and impact of the noncompliance.

**g. PERMIT ACTIONS**

The filing of a request by the Copermittee for modification, revocation and reissuance, or termination of this Order, or a notification of planned change in or anticipated noncompliance with this Order does not stay any condition of this Order. (See 40 CFR 122.41(f)) In addition, the following provisions apply to this Order:

- (1) Upon application by any affected person, or on its own motion, the San Diego Water Board may review and revise the requirements in this Order. All requirements must be reviewed periodically. [CWC Section 13263(e)]
- (2) This Order may be terminated or modified for cause, including, but not limited to, all of the following: [CWC Section 13381]
  - (a) Violation of any condition contained in the requirements of this Order. [CWC Section 13381(a)]
  - (b) Obtaining the requirements in this Order by misrepresentation, or failure to disclose fully all relevant facts. [CWC Section 13381(b)]
  - (c) A change in any condition that requires either a temporary or permanent reduction or elimination of the permitted discharge. [CWC Section 13381(c)]
- (3) When this Order is transferred to a new owner or operator, such requirements as may be necessary under the CWC may be incorporated into this Order.

#### **h. NPDES PERMITTED NON-STORM WATER DISCHARGES**

The San Diego Water Board has, in prior years, issued a limited number of individual NPDES permits for non-storm water discharges to MS4s. The San Diego Water Board or State Water Board may in the future, upon prior notice to the Copermittee(s), issue an NPDES permit for any non-storm water discharge (or class of non-storm water discharges) to an MS4.

#### **i. MONITORING**

In addition to the standard provisions required under 40 CFR 122.41(j) and (l)(4), the following general monitoring provisions apply to this Order:

- (1) Where procedures are not otherwise specified in Order, sampling, analysis and quality assurance/quality control must be conducted in accordance with the Quality Assurance Management Plan (QAMP) for the State of California's Surface Water Ambient Monitoring Program (SWAMP), adopted by the State Water Resources Control Board (State Water Board).
- (2) Pursuant to 40 CFR 122.41(j)(2) and CWC Section 13383(a), each Copermittee must retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this permit, and records of all data used to complete the application for this permit, for a period of at least five (5) years from the date of the sample, measurement, report or application. This period may be extended by request of the San Diego Water Board at any time.
- (3) All chemical, bacteriological, and toxicity analyses must be conducted at a laboratory certified for such analyses by the California Department of Public Health or a laboratory approved by the San Diego Water Board.

- (4) For priority toxic pollutants that are identified in the California Toxics Rule (CTR) (65 Fed. Reg. 31682), the Copermittees must instruct their laboratories to establish calibration standards that are equivalent to or lower than the Minimum Levels (MLs) published in Appendix 4 of the Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California (SIP). If a Copermittee can demonstrate that a particular ML is not attainable, in accordance with procedures set forth in 40 CFR Part 136, the lowest quantifiable concentration of the lowest calibration standard analyzed by a specific analytical procedure (assuming that all the method specified sample weights, volumes, and processing steps have been followed) may be used instead of the ML listed in Appendix 4 of the SIP. The Copermittee must submit documentation from the laboratory to the San Diego Water Board for approval prior to raising the ML for any priority toxic pollutant.

**j. ENFORCEMENT**

- (1) The San Diego Water Board is authorized to enforce the terms of this Order under several provisions of the CWC, including, but not limited to, CWC Sections 13385, 13386, and 13387.
- (2) Nothing in this Order shall be construed to protect the Copermittee from its liabilities under federal, state, or local laws.
- (3) The CWC provides for civil and criminal penalties comparable to, and in some cases greater than, those provided for under the CWA.
- (4) Except as provided in the standard conditions required under 40 CFR 122.41(m) and (n), nothing in this Order shall be construed to relieve the Copermittee from civil or criminal penalties for noncompliance.
- (5) Nothing in this Order shall be construed to preclude the institution of any legal action or relieve the Copermittee from any responsibilities, liabilities, or penalties to which the Copermittee is or may be subject to under Section 311 of the CWA.
- (6) Nothing in this Order shall be construed to preclude institution of any legal action or relieve the Copermittee from any responsibilities, liabilities, or penalties established pursuant to any applicable state law or regulation under authoring preserved by Section 510 of the CWA.

**k. SEVERABILITY**

The provisions of this Order are severable, and if any provision of this Order, or the application of any provisions of this Order to any circumstance, is held invalid, the application of such provision to other circumstances and the remainder of this Order shall not be affected thereby.

**l. APPLICATIONS**

Any application submitted by a Copermittee for reissuance or modification of this Order must satisfy all applicable requirements specified in federal regulations as well as any additional requirements for submittal of a Report of Waste Discharge specified in the CWC and the California Code of Regulations.

**m. IMPLEMENTATION**

All plans, reports and subsequent amendments submitted in compliance with this Order must be implemented immediately (or as otherwise specified). All submittals by Copermittees must be adequate to implement the requirements of this Order.

**n. REPORT SUBMITTALS**

- (1) All report submittals must include an executive summary, introduction, conclusion, recommendations, and signed certified statement.
- (2) Each Copermittee must submit a signed certified statement covering its responsibilities for each applicable submittal.
- (3) The Principal Watershed Copermittee(s) must submit a signed certified statement covering its responsibilities for each applicable submittal and the sections of the submittals for which it is responsible.
- (4) Unless otherwise directed, the Copermittees must submit one electronic copy of each report required under this Order to the San Diego Water Board at [SanDiego@waterboards.ca.gov](mailto:SanDiego@waterboards.ca.gov).
- (5) When hard copies are requested or required, the Copermittees must submit reports and provide notifications as required by this Order to:

WDID	Waste Discharge Identification Number
WLA	Waste Load Allocation
WQBEL	Water Quality Based Effluent Limitation

## DEFINITIONS

**Active/Passive Sediment Treatment** - Using mechanical, electrical or chemical means to flocculate or coagulate suspended sediment for removal from runoff from construction sites prior to discharge.

**Anthropogenic Litter** – Trash generated from human activities, not including sediment.

**Average Monthly Action Level** – The highest allowable average of daily discharges over a calendar month.

**Beneficial Uses** - The uses of water necessary for the survival or wellbeing of man, plants, and wildlife. These uses of water serve to promote tangible and intangible economic, social, and environmental goals. “Beneficial Uses” of the waters of the State that may be protected include, but are not limited to, domestic, municipal, agricultural and industrial supply; power generation; recreation; aesthetic enjoyment; navigation; and preservation and enhancement of fish, wildlife, and other aquatic resources or preserves. Existing beneficial uses are uses that were attained in the surface or ground water on or after November 28, 1975; and potential beneficial uses are uses that would probably develop in future years through the implementation of various control measures. “Beneficial Uses” are equivalent to “Designated Uses” under federal law. [California Water Code Section 13050(f)].

**Best Management Practices (BMPs)** - Defined in 40 CFR 122.2 as schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of waters of the United States. BMPs also include treatment requirements, operating procedures and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.

**Bioassessment** - The use of biological community information to evaluate the biological integrity of a water body and its watershed. With respect to aquatic ecosystems, bioassessment is the collection and analysis of samples of the benthic macroinvertebrate community together with physical/habitat quality measurements associated with the sampling site and the watershed to evaluate the biological condition (i.e. biotic integrity) of a water body.

**Biofiltration** - Practices that use vegetation and amended soils to detain and treat runoff from impervious areas. Treatment is through filtration, infiltration, adsorption, ion exchange, and biological uptake of pollutants.

**Biological Integrity** - Defined in Karr J.R. and D.R. Dudley. 1981. Ecological perspective on water quality goals. *Environmental Management* 5:55-68 as: “A balanced, integrated, adaptive community of organisms having a species composition, diversity, and functional organization comparable to that of natural habitat of the region.” Also referred to as ecosystem health.

**BMP Design Manual** – A plan developed to eliminate, reduce, or mitigate the impacts of runoff from development projects, including Priority Development Projects.

**Chronic Toxicity** – A measurement of sublethal effect (e.g. reduced growth, reproduction) to experimental test organisms exposed to an effluent or receiving waters compared to that of the control organisms.

**Clean Water Act Section 303(d) Water Body** - An impaired water body in which water quality does not meet applicable water quality standards and/or is not expected to meet water quality standards, even after the application of technology based pollution controls required by the CWA. The discharge of runoff to these water bodies by the Copermittees is significant because these discharges can cause or contribute to violations of applicable water quality standards.

**Construction Activities** – Actions implemented during construction of development or redevelopment projects during the Preliminary Task (including rough grading and/or disking, clearing and grubbing operations, or any soil disturbance prior to mass grading), Grading or Land Development (including topography and slope reconfiguration, alluvium removals, canyon cleanouts, rock undercuts, keyway excavations, land form grading, and stockpiling of select material for capping operations), Streets and Utility Installation (including excavation and street paving, lot grading, curbs, gutters and sidewalks, public utilities, public water facilities including fire hydrants, public sanitary sewer systems, storm sewer systems and/or other drainage improvements), or Vertical Construction (including the build out of structures from foundations to roofing, including rough landscaping).

**Construction Site** – Any project, including projects requiring coverage under the Construction General Permit, that involves soil disturbing activities including, but not limited to, clearing, grading, disturbances to ground such as stockpiling, and excavation.

**Contamination** - As defined in the Porter-Cologne Water Quality Control Act, contamination is “an impairment of the quality of waters of the State by waste to a degree which creates a hazard to the public health through poisoning or through the spread of disease. ‘Contamination’ includes any equivalent effect resulting from the disposal of waste whether or not waters of the State are affected.”

**Copermittee** – A permittee to a NPDES permit that is only responsible for permit conditions relating to the discharge for which it is operator [40 CFR 122.26(b)(1)]. For the purposes of this Order, a Copermittee is one of the individual permittees identified in Tables 1a-1c of this Order.

**Copermittees** – All of the individual Copermittees, collectively.

**Critical Channel Flow (Qc)** – The channel flow that produces the critical shear stress that initiates bed movement or that erodes the toe of channel banks. When measuring Qc, it should be based on the weakest boundary material – either bed or bank.

**Daily Discharge** – Defined as either: (1) the total mass of the constituent discharged over the calendar day or any 24 hour period that reasonably represents a calendar day for purposes of sampling (as specified in the permit), for a constituent with limitations expressed in units of mass or; (2) the unweighted arithmetic mean measurement of the constituent over the day for a constituent with limitations expressed in other units of measurement (e.g. concentration.)

The Daily Discharge may be determined by the analytical results of a composite sample taken over the course of one day (a calendar day, or other 24 hour period other than a day), or by the arithmetic mean of analytical results from one or more grab samples taken over the course of a day.

**Development Projects** - Construction, rehabilitation, redevelopment, or reconstruction of any public or private projects.

**Dry Season** – May 1 to September 30.

**Dry Weather** – Weather is considered dry if the preceding 72 hours has been without measurable precipitation (>0.1 inch).

**Enclosed Bays** – Enclosed bays are indentations along the coast that enclose an area of oceanic water within distinct headlands or harbor works. Enclosed bays include all bays where the narrowest distance between the headlands or outermost bay works is less than 75 percent of the greatest dimension of the enclosed portion of the bay. Enclosed bays do not include inland surface waters or ocean waters.

**Erosion** – When land is diminished or worn away due to wind, water, or glacial ice. Often the eroded debris (silt or sediment) becomes a pollutant via storm water runoff. Erosion occurs naturally but can be intensified by land clearing activities such as farming, development, road building, and timber harvesting.

**Environmentally Sensitive Areas (ESAs)** - Areas that include but are not limited to all Clean Water Act Section 303(d) impaired water bodies; areas designated as Areas of Special Biological Significance by the State Water Board and San Diego Water Board; State Water Quality Protected Areas; water bodies designated with the RARE beneficial use by the State Water Board and San Diego Water Board; areas designated as preserves or their equivalent under the Natural Communities Conservation Program within the Cities and County of Orange; and any other equivalent environmentally sensitive areas which have been identified by the Copermitees.

**Estuaries** – Waters, including coastal lagoons, located at the mouth of streams that serve as areas of mixing fresh and ocean waters. Coastal lagoons and mouths of streams that are temporarily separated from the ocean by sandbars shall be considered estuaries. Estuarine waters shall be considered to extend from a bay or the open ocean to a point upstream where there is no significant mixing of fresh water and ocean water. Estuaries do not include inland surface waters or ocean waters.

**Existing Development** – Any area that has been developed and exists for municipal, commercial, industrial, or residential purposes, uses, or activities. May include areas that are not actively used for its originally developed purpose, but may be re-purposed or redeveloped for another use or activity.

**Flow Duration** – The long-term period of time that flows occur above a threshold that causes significant sediment transport and may cause excessive erosion damage to creeks and streams (not a single storm event duration). The simplest way to visualize this is to consider a histogram of pre- and post-project flows using long-term records of hourly data. To maintain pre-development flow duration means that the total number of hours (counts) within each range of flows in a flow-duration histogram cannot increase between the pre- and post-development condition. Flow duration within the range of geomorphologically significant flows is important for managing erosion.

**Grading** - The cutting and/or filling of the land surface to a desired slope or elevation.

**Groundwater** – Subsurface water that occurs beneath the water table in soils and geologic formations that are fully saturated.

**Hazardous Material** – Any substance that poses a threat to human health or the environment due to its toxicity, corrosiveness, ignitability, explosive nature or chemical reactivity. These also include materials named by the USEPA in 40 CFR 116 to be reported if a designated quantity of the material is spilled into the waters of the U.S. or emitted into the environment.

**Hazardous Waste** - Hazardous waste is defined as “any waste which, under Section 600 of Title 22 of this code, is required to be managed according to Chapter 30 of Division 4.5 of Title 22 of this code” [CCR Title 22, Division 4.5, Chapter 11, Article 1].

**Household Hazardous Waste** – Paints, cleaning products, and other hazardous wastes generated during home improvement or maintenance activities.

**Hydromodification** – The change in the natural watershed hydrologic processes and runoff characteristics (i.e., interception, infiltration, overland flow, and groundwater flow) caused by urbanization or other land use changes that result in increased stream flows and sediment transport. In addition, alteration of stream and river channels, such as stream channelization, concrete lining, installation of dams and water impoundments, and excessive streambank and shoreline erosion are also considered hydromodification, due to their disruption of natural watershed hydrologic processes.

**Illicit Connection** – Any man-made conveyance or drainage system through which a non-storm water discharge to the storm water drainage system occurs or may occur. Any connection to the MS4 that conveys an illicit discharge.

**Illicit Discharge** - Any discharge to the MS4 that is not composed entirely of storm water except discharges pursuant to a NPDES permit and discharges resulting from firefighting activities [40 CFR 122.26(b)(2)].

**Inactive Areas** – Areas of construction activity that are not active and those that have been active and are not scheduled to be re-disturbed for at least 14 days.

**Infiltration** – In the context of low impact development, infiltration is defined as the percolation of water into the ground. Infiltration is often expressed as a rate (inches per hour), which is determined through an infiltration test. In the context of non-storm water, infiltration is water other than wastewater that enters a sewer system (including sewer service connections and foundation drains) from the ground through such means as defective pipes, pipe joints, connections, or manholes. Infiltration does not include, and is distinguished from, inflow [40 CFR 35.2005(20)].

**Inland Surface Waters** – Includes all surface waters of the State that do not include the ocean, enclosed bays, or estuaries.

**Jurisdictional Runoff Management Program Document** – A written description of the specific jurisdictional runoff management measures and programs that each Copermittee will implement to comply with this Order and ensure that storm water pollutant discharges in runoff are reduced to the MEP and do not cause or contribute to a violation of water quality standards.

**Low Impact Development (LID)** – A storm water management and land development strategy that emphasizes conservation and the use of on-site natural features integrated with engineered, small-scale hydrologic controls to more closely reflect pre-development hydrologic functions.

**Low Impact Development Best Management Practices (LID BMPs)** – LID BMPs include schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of waters of the United States through storm water management and land development strategies that emphasize conservation and the use of on-site natural features integrated with engineered, small-scale hydrologic controls to more closely reflect pre-development hydrologic functions. LID BMPs include retention practices that do not allow runoff, such as infiltration, rain water harvesting and reuse, and evapotranspiration. LID BMPs also include flow-through practices such as biofiltration that may have some discharge of storm water following pollutant reduction.

**Major Outfall** – As defined in the Code of Federal Regulations, a major outfall is a MS4 outfall that discharges from a single pipe with an inside diameter of 36 inches or more or its equivalent (i.e. discharge from a single conveyance other than a circular pipe which is associated with a drainage area of more than 50 acres); or, for MS4s that receive storm water from lands zoned for industrial activity (based on comprehensive zoning plans or equivalent), a MS4 outfall that discharges from a single pipe with an inside diameter of 12 inches or more or from its equivalent (i.e. discharge from other than a circular pipe associated with a drainage area of 2 acres or more).

**Maximum Daily Action Level (MDAL)** –The highest allowable daily discharge of a pollutant, over a calendar day (or 24 hour period). For pollutants with action levels expressed in units of mass, the daily discharge is calculated as the total mass of the pollutant discharged over the day. For pollutants with action levels expressed in other units of measurement, the daily discharge is calculated as the arithmetic mean measurement of the pollutant over the day.

**Maximum Extent Practicable (MEP)** – The technology-based standard established by Congress in CWA section 402(p)(3)(B)(iii) for storm water that operators of MS4s must meet. Technology-based standards establish the level of pollutant reductions that dischargers must achieve, typically by treatment or by a combination of source control and treatment control BMPs. MEP generally emphasizes pollution prevention and source control BMPs primarily (as the first line of defense) in combination with treatment methods serving as a backup (additional line of defense). MEP considers economics and is generally, but not necessarily, less stringent than BAT. A definition for MEP is not provided either in the statute or in the regulations. Instead the definition of MEP is dynamic and will be defined by the following process over time: municipalities propose their definition of MEP by way of their runoff management programs. Their total collective and individual activities conducted pursuant to the runoff management programs becomes their proposal for MEP as it applies both to their overall effort, as well as to specific activities (e.g., MEP for street sweeping, or MEP for MS4 maintenance). In the absence of a proposal acceptable to the San Diego Water Board, the San Diego Water Board defines MEP.

In a memo dated February 11, 1993, entitled "Definition of Maximum Extent Practicable," Elizabeth Jennings, Senior Staff Counsel, SWRCB addressed the achievement of the MEP standard as follows:

*“To achieve the MEP standard, municipalities must employ whatever Best Management Practices (BMPs) are technically feasible (i.e., are likely to be effective) and are not cost prohibitive. The major emphasis is on technical feasibility. Reducing pollutants to the MEP means choosing effective BMPs, and rejecting applicable BMPs only where other effective BMPs will serve the same purpose, or the BMPs would not be technically feasible, or the cost would be prohibitive. In selecting BMPs to achieve the MEP standard, the following factors may be useful to consider:*

- a. Effectiveness: Will the BMPs address a pollutant (or pollutant source) of concern?*
- b. Regulatory Compliance: Is the BMP in compliance with storm water regulations as well as other environmental regulations?*
- c. Public Acceptance: Does the BMP have public support?*
- d. Cost: Will the cost of implementing the BMP have a reasonable relationship to the pollution control benefits to be achieved?*
- e. Technical Feasibility: Is the BMP technically feasible considering soils, geography, water resources, etc.?*

*The final determination regarding whether a municipality has reduced pollutants to the maximum extent practicable can only be made by the Regional or State Water Boards, and not by the municipal discharger. If a municipality reviews a lengthy menu of BMPs and chooses to select only a few of the least expensive, it is likely that MEP has not been met. On the other hand, if a municipal discharger employs all applicable BMPs except those where it can show that they are not technically feasible in the locality, or whose cost would exceed any benefit derived, it would have met the standard. Where a choice may be made between two BMPs that should provide generally comparable effectiveness, the discharger may choose the least expensive alternative and exclude the more expensive BMP. However, it would not be acceptable either to reject all BMPs that would address a pollutant source, or to pick a BMP based solely on cost, which would be clearly less effective. In selecting BMPs the municipality must make a serious attempt to comply and practical solutions may not be lightly rejected. In any case, the burden would be on the municipal discharger to show compliance with its permit. After selecting a menu of BMPs, it is the responsibility of the discharger to ensure that all BMPs are implemented.”*

**Monitoring Year** – October 1 to September 30

**Municipal Separate Storm Sewer System (MS4)** – A conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains): (i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or designated and approved management agency under section 208 of the CWA that discharges to waters of the United States; (ii) Designated or used for collecting or conveying storm water; (iii) Which is not a combined sewer; (iv) Which is not part of the Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.26.

**National Pollutant Discharge Elimination System (NPDES)** - The national program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under Sections 307, 318, 402, and 405 of the CWA.

**Non-Storm Water** - All discharges to and from a MS4 that do not originate from precipitation events (i.e., all discharges from a MS4 other than storm water). Non-storm water includes illicit discharges and NPDES permitted discharges.

**Nuisance** - As defined in the Porter-Cologne Water Quality Control Act, a nuisance is “anything which meets all of the following requirements: 1) Is injurious to health, or is indecent, or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property. 2) Affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal. 3) Occurs during, or as a result of, the treatment or disposal of wastes.”

**Ocean Waters** – The territorial marine waters of the State as defined by California law to the extent these waters are outside of enclosed bays, estuaries, and coastal lagoons. Discharges to ocean waters are regulated in accordance with the State Board’s California Ocean Plan.

**Order** – Unless otherwise specified, refers to this Order, Order No. R9-2013-0001 (NPDES No. CAS0109266)

**Outfall** - Outfall means a point source as defined by 40 CFR 122.2 at the point where a municipal separate storm sewer discharges to waters of the US and does not include open conveyances connecting two municipal separate storm sewers, or pipes, tunnels or other conveyances which connect segments of the same stream or other waters of the US and are used to convey waters of the US.

**Persistent Flow** - Persistent flow is defined as the presence of flowing, pooled, or ponded water more than 72 hours after a measureable rainfall event of 0.1 inch or greater during three consecutive monitoring and/or inspection events. All other flowing, pooled, or ponded water is considered transient.

**Person** - A person is defined as an individual, association, partnership, corporation, municipality, State or Federal agency, or an agent or employee thereof [40 CFR 122.2].

**Point Source** - Any discernible, confined, and discrete conveyance, including, but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operations, landfill leachate collection systems, vessel, or other floating craft from which pollutants are or may be discharged. This term does not include return flows from irrigated agriculture or agricultural storm water runoff.

**Pollutant** - Any agent that may cause or contribute to the degradation of water quality such that a condition of pollution or contamination is created or aggravated.

**Pollution** - As defined in the Porter-Cologne Water Quality Control Act, pollution is “the alteration of the quality of the waters of the State by waste, to a degree which unreasonably affects either of the following: 1) The waters for beneficial uses; or 2) Facilities that serve these beneficial uses.” Pollution may include contamination.

**Pollution Prevention** - Pollution prevention is defined as practices and processes that reduce or eliminate the generation of pollutants, in contrast to source control BMPs, treatment control BMPs, or disposal.

**Pre-Development Runoff Conditions** – Approximate flow rates and durations that exist or existed onsite before land development occurs. For new development projects, this equates to runoff conditions immediately before project construction. For redevelopment projects, this equates to runoff conditions from the project footprint assuming infiltration characteristics of the underlying soil, and existing grade. Runoff coefficients of concrete or asphalt must not be used. A redevelopment Priority Development Project must use available information pertaining to existing underlying soil type and onsite existing grade to estimate pre-development runoff conditions.

**Priority Development Projects** - New development and redevelopment projects defined under Provision E.3.b of Order No. R9-2013-0001, as amended by Order Nos. R9-2015-0001 and R9-2015-0100.

**Rainy Season (aka Wet Season)** –October 1 to April 30

**Receiving Waters** – Waters of the United States.

**Receiving Water Limitations** - Waste discharge requirements issued by the San Diego Water Board typically include both: (1) “Effluent Limitations” (or “Discharge Limitations”) that specify the technology-based or water-quality-based effluent limitations; and (2) “Receiving Water Limitations” that specify the water quality objectives in the Basin Plan as well as any other limitations necessary to attain those objectives. In summary, the “Receiving Water Limitations” provision is the provision used to implement the requirements of CWA section 402(p)(3)(B).

**Redevelopment** - The creation and/or replacement of impervious surface on an already developed site. Examples include the expansion of a building footprint, road widening, the addition to or replacement of a structure. Replacement of impervious surfaces includes any activity where impervious material(s) are removed, exposing underlying soil during construction. Redevelopment does not include routine maintenance activities, such as trenching and resurfacing associated with utility work; pavement grinding; resurfacing existing roadways, sidewalks, pedestrian ramps, or bike lanes on existing roads; and routine replacement of damaged pavement, such as pothole repair.

**Regional Clearinghouse** – A central location for the collection and distribution of information developed and maintained by the Copermittees including, but not limited to, plans, reports, manuals, data, contact information, and/or links to such documents and information.

**Rehabilitation** - Remedial measures or activities for the purpose of improving or restoring the beneficial uses of streams, channels or river systems. Techniques may vary from in-stream restoration techniques to off-line storm water management practices installed in the system corridor or upland areas, or a combination of in-stream and out of stream techniques. Rehabilitation techniques may include, but are not limited to the following: riparian zone restoration, constructed wetlands, channel modifications that improve habitat and stability, and daylighting of drainage systems.

**Reporting Period** – The period of information that is reported in the Water Quality Improvement Plan Annual Report. The reporting period consists of two components: 1) July 1 to June 30, consistent with the fiscal year, for the implementation of the jurisdictional runoff management programs, and 2) October 1 to September 30, consistent with the monitoring year for the monitoring and assessment programs. Together, these two time periods constitute the reporting year for the Water Quality Improvement Plan Annual Report due January 31 following the end of the monitoring year.

**Retain** – Keep or hold in a particular place, condition, or position without discharge to surface waters.

**Retrofitting** – Storm water management practice put into place after development has occurred in watersheds where the practices previously did not exist or are ineffective. Retrofitting of developed areas is intended to improve water quality, protect downstream channels, reduce flooding, or meet other specific objectives. Retrofitting developed areas may include, but is not limited to replacing roofs with green roofs, disconnecting downspouts or impervious surfaces to drain to pervious surfaces, replacing impervious surfaces with pervious surfaces, installing rain barrels, installing rain gardens, and trash area enclosures.

**Runoff** - All flows in a storm water conveyance system that consists of the following components: (1) storm water (wet weather flows) and (2) non-storm water including dry weather flows.

**San Diego Water Board** – As used in this document the term "San Diego Water Board" is synonymous with the term "Regional Board" as defined in Water Code section 13050(b) and is intended to refer to the California Regional Water Quality Control Board for the San Diego Region as specified in Water Code Section 13200.

**Sediment** - Soil, sand, and minerals washed from land into water. Sediment resulting from anthropogenic sources (i.e. human induced land disturbance activities) is considered a pollutant. This Order regulates only the discharges of sediment from anthropogenic sources and does not regulate naturally occurring sources of sediment. Sediment can destroy fish-nesting areas, clog animal habitats, and cloud waters so that sunlight does not reach aquatic plants.

**Source Control BMP** – Land use or site planning practices, or structural or nonstructural measures that aim to prevent runoff pollution by reducing the potential for contamination at the source of pollution. Source control BMPs minimize the contact between pollutants and runoff.

**Storm Water** – Per 40 CFR 122.26(b)(13), means storm water runoff, snowmelt runoff and surface runoff and drainage. Surface runoff and drainage pertains to runoff and drainage resulting from precipitation events.

**Structural BMPs** - A subset of BMPs which detains, retains, filters, removes, or prevents the release of pollutants to surface waters from development projects in perpetuity, after construction of a project is completed.

**Test of Significant Toxicity (TST)** - A statistical approach used to analyze toxicity test data. The TST incorporates a restated null hypothesis, Welch's t-test, and biological effect thresholds for chronic and acute toxicity.

**Total Maximum Daily Load (TMDL)** - The maximum amount of a pollutant that can be discharged into a water body from all sources (point and non-point) and still maintain water quality standards. Under CWA section 303(d), TMDLs must be developed for all water bodies that do not meet water quality standards after application of technology-based controls.

**Toxicity** - Adverse responses of organisms to chemicals or physical agents ranging from mortality to physiological responses such as impaired reproduction or growth anomalies. The water quality objectives for toxicity provided in the Basin Plan, state in part...“All waters shall be

free of toxic substances in concentrations that are toxic to, or that produce detrimental physiological responses in human, plant, animal, or aquatic life....The survival of aquatic life in surface waters subjected to a waste discharge or other controllable water quality factors, shall not be less than that for the same water body in areas unaffected by the waste discharge.”

**Toxicity Identification Evaluation (TIE)** - A set of procedures for identifying the specific chemical(s) responsible for toxicity. These procedures are performed in three phases (characterization, identification, and confirmation) using aquatic organism toxicity tests.

**Toxicity Reduction Evaluation (TRE)** - A study conducted in a step-wise process designed to identify the causative agents of effluent or ambient toxicity, isolate the sources of toxicity, evaluate the effectiveness of toxicity control options, and then confirm the reduction in toxicity. The first steps of the TRE consist of the collection of data relevant to the toxicity, including additional toxicity testing, and an evaluation of facility operations and maintenance practices, and best management practices. A Toxicity Identification Evaluation (TIE) may be required as part of the TRE, if appropriate.

**Treatment Control BMP** – Any engineered system designed to remove pollutants by simple gravity settling of particulate pollutants, filtration, biological uptake, media absorption or any other physical, biological, or chemical process.

**Unpaved Road** – Any long, narrow stretch without pavement used for traveling by motor passenger vehicles between two or more points. Unpaved roads are generally constructed of dirt, gravel, aggregate or macadam and may be improved or unimproved.

**Waste** - As defined in CWC Section 13050(d), “waste includes sewage and any and all other waste substances, liquid, solid, gaseous, or radioactive, associated with human habitation, or of human or animal origin, or from any producing, manufacturing, or processing operation, including waste placed within containers of whatever nature prior to, and for purposes of, disposal.”

Article 2 of CCR Title 23, Chapter 15 (Chapter 15) contains a waste classification system that applies to solid and semi-solid waste, which cannot be discharged directly or indirectly to water of the state and which therefore must be discharged to land for treatment, storage, or disposal in accordance with Chapter 15. There are four classifications of waste (listed in order of highest to lowest threat to water quality): hazardous waste, designated waste, non-hazardous solid waste, and inert waste.

**Water Quality Objective** - Numerical or narrative limits on constituents or characteristics of water designated to protect designated beneficial uses of the water. [California Water Code Section 13050 (h)]. California’s water quality objectives are established by the State and Regional Water Boards in the Water Quality Control Plans. Numeric or narrative limits for pollutants or characteristics of water designed to protect the beneficial uses of the water. In other words, a water quality objective is the maximum concentration of a pollutant that can exist in a receiving water and still generally ensure that the beneficial uses of the receiving water remain protected (i.e., not impaired). Since water quality objectives are designed specifically to protect the beneficial uses, when the objectives are violated the beneficial uses are, by definition, no longer protected and become impaired. This is a fundamental concept under the Porter Cologne Act. Equally fundamental is Porter Cologne’s definition of pollution. A condition of pollution exists when the water quality needed to support designated beneficial uses has

become unreasonably affected or impaired; in other words, when the water quality objectives have been violated. These underlying definitions (regarding beneficial use protection) are the reason why all waste discharge requirements implementing the federal NPDES regulations require compliance with water quality objectives. (Water quality objectives are also called water quality criteria in the CWA.)

**Water Quality Standards** - Water quality standards, as defined in Clean Water Act section 303(c) consist of the beneficial uses (e.g., swimming, fishing, municipal drinking water supply, etc.,) of a water body and criteria (referred to as water quality objectives in the California Water Code) necessary to protect those uses. Under the Water Code, the water boards establish beneficial uses and water quality objectives in water quality control or basin plans. Together with an anti-degradation policy, these beneficial uses and water quality objectives serve as water quality standards under the Clean Water Act. In Clean Water Act parlance, state beneficial uses are called “designated uses” and state water quality objectives are called “criteria.” Throughout this Order, the relevant term is used depending on the statutory scheme.

**Waters of the State** - Any water, surface or underground, including saline waters within the boundaries of the State [CWC section 13050 (e)]. The definition of the Waters of the State is broader than that for the Waters of the United States in that all water in the State is considered to be a Waters of the State regardless of circumstances or condition.

**Waters of the United States** - As defined in the 40 CFR 122.2, the Waters of the U.S. are defined as: “(a) All waters, which are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide; (b) All interstate waters, including interstate “wetlands;” (c) All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, “wetlands,” sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds the use, degradation or destruction of which would affect or could affect interstate or foreign commerce including any such waters: (1) Which are or could be used by interstate or foreign travelers for recreational or other purposes; (2) From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or (3) Which are used or could be used for industrial purposes by industries in interstate commerce; (d) All impoundments of waters otherwise defined as waters of the United States under this definition; (e) Tributaries of waters identified in paragraphs (a) through (d) of this definition; (f) The territorial seas; and (g) “Wetlands” adjacent to waters (other than waters that are themselves wetlands) identified in paragraphs (a) through (f) of this definition. Waters of the United States do not include prior converted cropland. Notwithstanding the determination of an area’s status as prior converted cropland by any other federal agency, for the purposes of the Clean Water Act, the final authority regarding Clean Water Act jurisdiction remains with the EPA.”

**Watershed** - That geographical area which drains to a specified point on a water course, usually a confluence of streams or rivers (also known as drainage area, catchment, or river basin).

**Wet Season (aka Rainy Season)** – October 1 to April 30

**Wet Weather** – Weather is considered wet up to 72 hours after a storm event of 0.1 inches and greater, unless otherwise defined by another regulatory mechanism (e.g. a TMDL).

Copermittee Primary Contact Information:	
Address:	
City:	County:
State:	Zip:
Telephone:	Fax:
Email:	
<b>II. LEGAL AUTHORITY</b>	
Has the Copermittee established adequate legal authority within its jurisdiction to control pollutant discharges into and from its MS4 that complies with Order No. R9-2013-0001?	YES <input type="checkbox"/> NO <input type="checkbox"/>
A Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative has certified that the Copermittee obtained and maintains adequate legal authority?	YES <input type="checkbox"/> NO <input type="checkbox"/>
<b>III. JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM DOCUMENT UPDATE</b>	
Was an update of the jurisdictional runoff management program document required or recommended by the San Diego Water Board?	YES <input type="checkbox"/> NO <input type="checkbox"/>
If YES to the question above, did the Copermittee update its jurisdictional runoff management program document and make it available on the Regional Clearinghouse?	YES <input type="checkbox"/> NO <input type="checkbox"/>
<b>IV. ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM</b>	
Has the Copermittee implemented a program to actively detect and eliminate illicit discharges and connections to its MS4 that complies with Order No. R9-2013-0001?	YES <input type="checkbox"/> NO <input type="checkbox"/>
Number of non-storm water discharges reported by the public	
Number of non-storm water discharges detected by Copermittee staff or contractors	
Number of non-storm water discharges investigated by the Copermittee	
Number of sources of non-storm water discharges identified	
Number of non-storm water discharges eliminated	
Number of sources of illicit discharges or connections identified	
Number of illicit discharges or connections eliminated	
Number of enforcement actions issued	
Number of escalated enforcement actions issued	
<b>V. DEVELOPMENT PLANNING PROGRAM</b>	
Has the Copermittee implemented a development planning program that complies with Order No. R9-2013-0001?	YES <input type="checkbox"/> NO <input type="checkbox"/>
Was an update to the BMP Design Manual required or recommended by the San Diego Water Board?	YES <input type="checkbox"/> NO <input type="checkbox"/>
If YES to the question above, did the Copermittee update its BMP Design Manual and make it available on the Regional Clearinghouse?	YES <input type="checkbox"/> NO <input type="checkbox"/>
Number of proposed development projects in review	
Number of Priority Development Projects in review	
Number of Priority Development Projects approved	
Number of approved Priority Development Projects exempt from any BMP requirements	
Number of approved Priority Development Projects allowed alternative compliance	
Number of Priority Development Projects granted occupancy	
Number of completed Priority Development Projects in inventory	
Number of high priority Priority Development Project structural BMP inspections	
Number of Priority Development Project structural BMP violations	
Number of enforcement actions issued	
Number of escalated enforcement actions issued

### **SPECIFIC PROVISIONS FOR TOTAL MAXIMUM DAILY LOADS APPLICABLE TO ORDER NO. R9-2013-0001, AS AMENDED BY ORDER NOS. R9-2015-0001 AND R9-2015-0100**

These provisions implement load allocations (LAs) and wasteload allocations (WLAs) of the Total Maximum Daily Loads (TMDLs) established by the San Diego Water Board or USEPA under Clean Water Act section 303(c), applicable to discharges regulated under this Order. The provisions and schedules for implementation of the TMDLs described below must be incorporated into the Water Quality Improvement Plans, required pursuant to Provision B of this Order, for the specified Watershed Management Areas.

1. Total Maximum Daily Load for Diazinon in Chollas Creek Watershed
2. Total Maximum Daily Loads for Dissolved Copper in Shelter Island Yacht Basin
3. Total Maximum Daily Loads for Total Nitrogen and Total Phosphorus in Rainbow Creek Watershed
4. Total Maximum Daily Loads for Dissolved Copper, Lead, and Zinc in Chollas Creek
5. Total Maximum Daily Loads for Indicator Bacteria, Baby Beach in Dana Point Harbor and Shelter Island Shoreline Park in San Diego Bay
6. Revised Total Maximum Daily Loads for Indicator Bacteria, Project I – Twenty Beaches and Creeks in the San Diego Region (Including Tecolote Creek)
7. Total Maximum Daily Load for Sediment in Los Peñasquitos Lagoon

Order No. R9-2013-0001  
As amended by Order No. R9-2015-0001

**1. Total Maximum Daily Load for Diazinon in Chollas Creek Watershed****a. APPLICABILITY**(1) TMDL Basin Plan Amendment: Resolution No. R9-2002-0123(2) TMDL Adoption and Approval Dates:

San Diego Water Board Adoption Date:	August 14, 2002
State Water Board Approval Date:	July 16, 2003
Office of Administrative Law Approval Date:	September 11, 2003
US EPA Approval Date:	November 3, 2003

(3) TMDL Effective Date: September 11, 2003(4) Watershed Management Area: San Diego Bay(5) Water Body: Chollas Creek(6) Responsible Copermittees: City of La Mesa, City of Lemon Grove, City of San Diego, County of San Diego, San Diego Unified Port District**b. FINAL TMDL COMPLIANCE REQUIREMENTS**

The final diazinon TMDL compliance requirements for Chollas Creek consist of the following:

(1) Final TMDL Compliance Date

The Responsible Copermittees must be in compliance with the final TMDL compliance requirements as of December 31, 2010.

(2) Final Water Quality Based Effluent Limitations

(a) Final Receiving Water Limitations

Discharges from the MS4s must not cause or contribute to the exceedance of the following receiving water limitations:

**Table 1.1***Final Receiving Water Limitations Expressed as Concentrations in Chollas Creek*

Constituent	Exposure Duration	Receiving Water Limitation	Averaging Period
Diazinon	Acute	0.08 µg/L	1 hour
	Chronic	0.05 µg/L	4 days

### (b) Final Effluent Limitations

Discharges from the MS4s containing concentrations that do not exceed the following effluent limitations will not cause or contribute to exceedances of the receiving water limitations under Specific Provision 1.b.(2)(a):

**Table 1.2**

*Final Effluent Limitations Expressed as Concentrations in MS4 Discharges to Chollas Creek*

Constituent	Exposure Duration	Effluent Limitation	Averaging Period
Diazinon	Acute	0.072 µg/L	1 hour
	Chronic	0.045 µg/L	4 days

### (c) Best Management Practices

The following BMPs for Chollas Creek must be incorporated into the Water Quality Improvement Plan for the San Diego Bay Watershed Management Area and implemented by the Responsible Copermittees:

- (i) The Responsible Copermittees must implement BMPs to achieve the receiving water limitations under Specific Provision 1.b.(2)(a) and/or the effluent limitations under Specific Provision 1.b.(2)(b) for Chollas Creek.
- (ii) The Responsible Copermittees must implement the Diazinon Toxicity Control Plan and Diazinon Public Outreach/Education Program as described in the report titled, *Technical Report for Total Maximum Daily Load for Diazinon in Chollas Creek Watershed, San Diego County*, dated August 14, 2002, including subsequent modifications, in order to achieve the receiving water limitations under Specific Provision 1.b.(2)(a) and/or the effluent limitations under Specific Provision 1.b.(2)(b).
- (iii) The Responsible Copermittees should coordinate any BMPs implemented to address this TMDL with Caltrans as possible.

### (3) Final TMDL Compliance Determination

Compliance with the final WQBELs, on or after the final TMDL compliance date, may be demonstrated via one of the following methods:

- (a) There is no direct or indirect discharge from the Responsible Copermittee's MS4s to the receiving water; OR
- (b) There are no exceedances of the final receiving water limitations under Specific Provision 1.b.(2)(a) in the receiving water at, or downstream of the Responsible Copermittee's MS4 outfalls; OR

- (c) There are no exceedances of the final effluent limitations under Specific Provision 1.b.(2)(b) at the Responsible Copermittee's MS4 outfalls; OR
- (d) The Responsible Copermittees develop and implement the Water Quality Improvement Plan as follows:
  - (i) Incorporate the BMPs required under Specific Provision 1.b.(2)(c) as part of the Water Quality Improvement Plan,
  - (ii) Include an analysis in the Water Quality Improvement Plan, utilizing a watershed model or other watershed analytical tools, to demonstrate that the implementation of the BMPs required under Provision 1.b.(2)(c) achieves compliance with Specific Provisions 1.b.(3)(a), 1.b.(3)(b) and/or 1.b.(3)(c),
  - (iii) The results of the analysis must be accepted by the San Diego Water Board as part of the Water Quality Improvement Plan,
  - (iv) The Responsible Copermittees continue to implement the BMPs required under Specific Provision 1.b.(2)(c), AND
  - (v) The Responsible Copermittees continue to perform the specific monitoring and assessments specified in Specific Provision 1.d, to demonstrate compliance with Specific Provisions 1.b.(3)(a), 1.b.(3)(b) and/or 1.b.(3)(c).

#### **c. INTERIM TMDL COMPLIANCE REQUIREMENTS**

The Responsible Copermittees must be in compliance with the final diazinon TMDL compliance requirements as of December 31, 2010.

#### **d. SPECIFIC MONITORING AND ASSESSMENT REQUIREMENTS**

- (1) The Responsible Copermittees must implement the monitoring and assessment requirements issued under Investigation Order No. R9-2004-0277, *California Department of Transportation and San Diego Municipal Separate Storm Sewer System Copermittees Responsible for the Discharge of Diazinon into the Chollas Creek Watershed*. The monitoring reports required under Investigation Order No. R9-2004-0277 must be submitted as part of the Transitional Monitoring and Assessment Program and Water Quality Improvement Plan Annual Reports required under Provision F.3.b of this Order.
- (2) The Responsible Copermittees must monitor the effluent of the MS4 outfalls for diazinon within the Chollas Creek watershed, and calculate or estimate the annual diazinon loads, in accordance with the requirements of Provisions D.2, D.4.b.(1), and D.4.b.(2) of this Order. The monitoring and assessment results must be submitted as part of the Transitional Monitoring and Assessment

Program and Water Quality Improvement Plan Annual Reports required under Provision F.3.b of this Order.

- (3) For assessing and determining compliance with the concentration-based effluent limitations under Specific Provision 1.b.(2)(b), dry and wet weather discharge concentrations may be calculated based on a flow-weighted average across all major MS4 outfalls along a water body segment or within a jurisdiction if samples are collected within a similar time period.

**2. Total Maximum Daily Loads for Dissolved Copper in Shelter Island Yacht Basin**

**a. APPLICABILITY**

(1) TMDL Basin Plan Amendment: Resolution No. R9-2005-0019

(2) TMDL Adoption and Approval Dates:

San Diego Water Board Adoption Date:	February 9, 2005
State Water Board Approval Date:	September 22, 2005
Office of Administrative Law Approval Date:	December 2, 2005
US EPA Approval Date:	February 8, 2006

(3) TMDL Effective Date: December 2, 2005

(4) Watershed Management Area: San Diego Bay

(5) Water Body: Shelter Island Yacht Basin

(6) Responsible Copermittee: City of San Diego

**b. FINAL TMDL COMPLIANCE REQUIREMENTS**

The final dissolved copper TMDL compliance requirements for Shelter Island Yacht Basin consist of the following:

(1) Final TMDL Compliance Date

The Responsible Copermittee must be in compliance with the final TMDL compliance requirements as of December 2, 2005.

(2) Final Water Quality Based Effluent Water Limitations

(a) Final Receiving Water Limitations

Discharges from the MS4s must not cause or contribute to the exceedance of the following receiving water limitations:

**Table 2.1**

*Final Receiving Water Limitations Expressed as Concentrations in Shelter Island Yacht Basin*

Constituent	Exposure Duration	Receiving Water Limitation	Averaging Period
Dissolved Copper	Acute	4.8 µg/L x WER*	1 hour
	Chronic	3.1 µg/L x WER*	4 days

Notes:

\* The Water Effect Ratio (WER) is assumed to be 1.0 unless there is a site-specific and chemical-specific WER provided in the Basin Plan.

**(b) Final Effluent Limitations**

Discharges from the MS4s containing pollutant loads that do not exceed the following effluent limitations will not cause or contribute to exceedances of the receiving water limitations under Specific Provision 2.b.(2)(a):

**Table 2.2**

*Final Effluent Limitations as Expressed as Annual Loads in MS4 Discharges to Shelter Island Yacht Basin*

Constituent	Effluent Limitation
Dissolved Copper	30 kg/yr*

\* If the water quality objectives for dissolved copper in Shelter Island Yacht Basin are changed in the future, then the margin of safety (MOS), TMDL and allocations will be recalculated using the *Method for Recalculation of the Total Maximum Daily Load for Dissolved Copper in the Shelter Island Yacht Basin, San Diego Bay* in the Basin Plan (p. 7-14).

**(c) Best Management Practices**

The Responsible Copermittee must implement BMPs to achieve the receiving water limitations under Specific Provision 2.b.(2)(a) and/or the effluent limitations under Specific Provision 2.b.(2)(b) for Shelter Island Yacht Basin. The BMPs must be incorporated into the Water Quality Improvement Plan for the San Diego Bay Watershed Management Area.

**(3) Final TMDL Compliance Determination**

Compliance with the final WQBELs, on or after the final TMDL compliance date, may be demonstrated via one of the following methods:

- (a) There is no direct or indirect discharge from the Responsible Copermittee's MS4s to the receiving water; OR
- (b) There are no exceedances of the final receiving water limitations under Specific Provision 2.b.(2)(a) in the receiving water at, or downstream of the Responsible Copermittee's MS4 outfalls; OR
- (c) There are no exceedances of the final effluent limitations under Specific Provision 2.b.(2)(b) at the Responsible Copermittee's MS4 outfalls; OR
- (d) The Responsible Copermittee develops and implements the Water Quality Improvement Plan as follows:
  - (i) Incorporate the BMPs required under Specific Provision 2.b.(2)(c) as part of the Water Quality Improvement Plan,

- (ii) Include an analysis in the Water Quality Improvement Plan, utilizing a watershed model or other watershed analytical tools, to demonstrate that the implementation of the BMPs required under Provision 2.b.(2)(c) achieves compliance with Specific Provisions 2.b.(3)(a), 2.b.(3)(b) and/or 2.b.(3)(c),
- (iii) The results of the analysis must be accepted by the San Diego Water Board as part of the Water Quality Improvement Plan,
- (iv) The Responsible Copermittees continue to implement the BMPs required under Specific Provision 2.b.(2)(c), AND
- (v) The Responsible Copermittees continue to perform the specific monitoring and assessments specified in Specific Provision 2.d, to demonstrate compliance with Specific Provisions 2.b.(3)(a), 2.b.(3)(b) and/or 2.b.(3)(c).

**c. INTERIM TMDL COMPLIANCE REQUIREMENTS**

The Responsible Copermittees must be in compliance with the final dissolved copper TMDL compliance requirements as of December 2, 2005.

**d. SPECIFIC MONITORING AND ASSESSMENT REQUIREMENTS**

The Responsible Copermittee must monitor the effluent of its MS4 outfalls for dissolved copper, and calculate or estimate the monthly and annual dissolved copper loads, in accordance with the requirements of Provisions D.2, D.4.b.(1), and D.4.(b)(2) of this Order. The monitoring and assessment results must be submitted as part of the Transitional Monitoring and Assessment Program and Water Quality Improvement Plan Annual Reports required under Provision F.3.b of this Order.

### 3. Total Maximum Daily Loads for Total Nitrogen and Total Phosphorus in Rainbow Creek Watershed

#### a. APPLICABILITY

(1) TMDL Basin Plan Amendment: Resolution No. R9-2005-0036

(2) TMDL Adoption and Approval Dates:

San Diego Water Board Adoption Date:	February 9, 2005
State Water Board Approval Date:	November 16, 2005
Office of Administrative Law Approval Date:	February 1, 2006
US EPA Approval Date:	March 22, 2006

(3) TMDL Effective Date: February 1, 2006

(4) Watershed Management Area: Santa Margarita River

(5) Water Body: Rainbow Creek

(6) Responsible Copermittee: County of San Diego

#### b. FINAL TMDL COMPLIANCE REQUIREMENTS

The final total nitrogen and total phosphorus TMDL compliance requirements for Rainbow Creek consist of the following

(1) Final TMDL Compliance Date

The Responsible Copermittee must comply with final TMDL compliance requirements by December 31, 2021.

(2) Final Water Quality Based Effluent Water Limitations

(a) Final Receiving Water Limitations

Discharges from the MS4s must not cause or contribute to the exceedance of the following receiving water limitations by the compliance date under Specific Provision 3.b.(1):

**Table 3.1**

*Final Receiving Water Limitations Expressed as Concentrations in Rainbow Creek*

Constituent	Receiving Water Limitation
Nitrate (as N)	10 mg/L
Total Nitrogen	1 mg/L
Total Phosphorus	0.1 mg/L

## (b) Final Effluent Limitations

- (i) Discharges from the MS4s containing concentrations that do not exceed the following effluent limitations by the compliance date under Specific Provision 3.b.(1) will not cause or contribute to exceedances of the receiving water limitations under Specific Provision 3.b.(2)(a):

**Table 3.2**

*Final Effluent Limitations Expressed as Concentrations in MS4 Discharges to Rainbow Creek*

Constituent	Effluent Limitation
Nitrate (as N)	10 mg/L
Total Nitrogen	1 mg/L
Total Phosphorus	0.1 mg/L

- (ii) Annual pollutant loads from given land uses discharging to and from the MS4s that do not exceed the following annual loads by the compliance date under Specific Provision 3.b.(1) will not cause or contribute to exceedances of the receiving water limitations under Specific Provision 3.b.(2)(a):

**Table 3.3**

*Final Effluent Limitations Expressed as Annual Loads in MS4 Discharges to Rainbow Creek*

Land Use	Total N	Total P
Commercial nurseries	116 kg/yr	3 kg/yr
Park	3 kg/yr	0.1 kg/yr
Residential areas	149 kg/yr	12 kg/yr
Urban areas	27 kg/yr	6 kg/yr

## (c) Best Management Practices

- (i) The Responsible Copermitttee must implement BMPs to achieve the receiving water limitations under Specific Provision 3.b.(2)(a) and/or the effluent limitations under Specific Provision 3.b.(2)(b) for Rainbow Creek.
- (ii) The Responsible Copermitttee should coordinate any BMPs implemented to address this TMDL with Caltrans and other sources as possible.

(3) Final TMDL Compliance Determination

Compliance with the final WQBELs, on or after the final TMDL compliance date, may be demonstrated via one of the following methods:

- (a) There is no direct or indirect discharge from the Responsible Copermitttee's MS4s to the receiving water; OR

- (b) There are no exceedances of the final receiving water limitations under Specific Provision 3.b.(2)(a) in the receiving water at, or downstream of the Responsible Copermittee's MS4 outfalls; OR
- (c) There are no exceedances of the final effluent limitations under Specific Provision 3.b.(2)(b)(i) at the Responsible Copermittee's MS4 outfalls; OR
- (d) The annual pollutant loads from given land uses discharging to and from the MS4s do not exceed the final effluent limitations under Specific Provision 3.b.(2)(b)(ii); OR
- (e) The Responsible Copermittee develops and implements the Water Quality Improvement Plan as follows:
  - (i) Incorporate the BMPs required under Specific Provision 3.b.(2)(c) as part of the Water Quality Improvement Plan,
  - (ii) Include an analysis in the Water Quality Improvement Plan, utilizing a watershed model or other watershed analytical tools, to demonstrate that the implementation of the BMPs required under Specific Provision 3.b.(2)(c) achieves compliance with Specific Provisions 3.b.(3)(a), 3.b.(3)(b), 3.b.(3)(c) and/or 3.b.(3)(d),
  - (iii) The results of the analysis must be accepted by the San Diego Water Board as part of the Water Quality Improvement Plan,
  - (iv) The Responsible Copermittees continue to implement the BMPs required under Specific Provision 3.b.(2)(c), AND
  - (v) The Responsible Copermittees continue to perform the specific monitoring and assessments specified in Specific Provision 3.d, to demonstrate compliance with Specific Provisions 3.b.(3)(a), 3.b.(3)(b), 3.b.(3)(c) and/or 3.b.(3)(d).

### **C. INTERIM TMDL COMPLIANCE REQUIREMENTS**

The interim total nitrogen and total phosphorus TMDL compliance requirements for Rainbow Creek consist of the following:

#### **(1) Interim Compliance Dates and WQBELs**

The Responsible Copermittee must comply with the interim WQBELs, expressed as annual loads, by December 31 of the interim compliance year given in Table 3.4.

**Table 3.4***Interim Water Quality Based Effluent Limitations Expressed as Annual Loads in MS4 Discharges from Specific Land Uses to Rainbow Creek*

Land Use	Total N Interim Effluent Limitations (kg/yr)			Total P Interim Effluent Limitations (kg/yr)		
	Interim Compliance Date			Interim Compliance Date		
	2009	2013	2017	2009	2013	2017
Commercial nurseries	390	299	196	20	16	10
Park	5	3	3	0.15	0.10	0.10
Residential areas	507	390	260	99	74	47
Urban areas	40	27	27	9	6	6

**(2) Interim TMDL Compliance Determination**

Compliance with interim WQBELs, on or after the interim TMDL compliance dates, may be demonstrated via one of the following methods:

- (a) There is no direct or indirect discharge from the Responsible Copermittee's MS4s to the receiving water; OR
- (b) There are no exceedances of the final receiving water limitations under Specific Provision 3.b.(2)(a) in the receiving water at, or downstream of the Responsible Copermittee's MS4 outfalls; OR
- (c) There are no exceedances of the final effluent limitations under Specific Provision 3.b.(2)(b)(i) at the Responsible Copermittee's MS4 outfalls; OR
- (d) The annual pollutant loads from given land uses discharging to and from the MS4s do not exceed the final effluent limitations under Specific Provision 3.b.(2)(b)(ii); OR
- (e) The annual pollutant loads from given land uses discharging to and from the MS4s do not exceed the interim effluent limitations under Specific Provision 3.c.(1); OR
- (f) The Responsible Copermittee has submitted and is fully implementing a Water Quality Improvement Plan, accepted by the San Diego Water Board, which provides reasonable assurance that the interim TMDL compliance requirements will be achieved by the interim compliance dates.

**d. SPECIFIC MONITORING AND ASSESSMENT REQUIREMENTS**

- (1) The Responsible Copermittee must incorporate into the Water Quality Improvement Plan and implement the Sampling and Analysis Plan for Rainbow Creek Nutrient Reduction TMDL Implementation Water Quality Monitoring, dated January 2010.

- (2) The results of any monitoring conducted during the reporting period, and assessment of whether the interim and final TMDL compliance requirements have been achieved must be submitted as part of the Transitional Monitoring and Assessment Program and Water Quality Improvement Plan Annual Reports required under Provision F.3.b of this Order.
- (3) For assessing and determining compliance with the concentration-based effluent limitations under Specific Provision 3.b.(2)(b)(i), dry and wet weather discharge concentrations may be calculated based on a flow-weighted average across all major MS4 outfalls along a water body segment or within a jurisdiction if samples are collected within a similar time period.

#### 4. Total Maximum Daily Loads for Dissolved Copper, Lead, and Zinc in Chollas Creek

##### a. APPLICABILITY

- (1) TMDL Basin Plan Amendment: Resolution No. R9-2007-0043
- (2) TMDL Adoption and Approval Dates:

San Diego Water Board Adoption Date:	June 13, 2007
State Water Board Approval Date:	July 15, 2008
Office of Administrative Law Approval Date:	October 22, 2008
US EPA Approval Date:	December 18, 2008
- (3) TMDL Effective Date: October 22, 2008
- (4) Watershed Management Area: San Diego Bay
- (5) Water Body: Chollas Creek
- (6) Responsible Copermittees: City of La Mesa, City of Lemon Grove, City of San Diego, County of San Diego, San Diego Unified Port District

##### b. FINAL TMDL COMPLIANCE REQUIREMENTS

The final dissolved copper, lead, and zinc TMDL compliance requirements for Chollas Creek consist of the following:

- (1) Final TMDL Compliance Date

The Responsible Copermittees must comply with the final TMDL compliance requirements by October 22, 2028.

- (2) Final Water Quality Based Effluent Limitations

- (a) Final Receiving Water Limitations

Discharges from the MS4s must not cause or contribute to the exceedance of the following receiving water limitations by the compliance date under Specific Provision 4.b.(1):

**Table 4.1**  
*Final Receiving Water Limitations Expressed as Concentrations in Chollas Creek*

Constituent	Exposure Duration	Receiving Water Limitation (µg/L)	Averaging Period
Dissolved Copper	Acute	$(0.96) \times e^{[0.9422 \times \ln(\text{hardness}) - 1.700]} \times \text{WER}^*$	1 hour
	Chronic	$(0.96) \times e^{[0.8545 \times \ln(\text{hardness}) - 1.702]} \times \text{WER}^*$	4 days
Dissolved Lead	Acute	$[1.46203 - 0.145712 \times \ln(\text{hardness})] \times e^{[1.273 \times \ln(\text{hardness}) - 1.460]} \times \text{WER}^*$	1 hour
	Chronic	$[1.46203 - 0.145712 \times \ln(\text{hardness})] \times e^{[1.273 \times \ln(\text{hardness}) - 4.705]} \times \text{WER}^*$	4 days
Dissolved Zinc	Acute	$(0.978) \times e^{[0.8473 \times \ln(\text{hardness}) + 0.884]} \times \text{WER}^*$	1 hour
	Chronic	$(0.986) \times e^{[0.8473 \times \ln(\text{hardness}) + 0.884]} \times \text{WER}^*$	4 days

Notes:

\* The Water Effect Ratio (WER) is assumed to be 1.0 unless there is a site-specific and chemical-specific WER provided in the Basin Plan.

**(b) Final Effluent Limitations**

Discharges from the MS4s containing pollutant loads that do not exceed the following effluent limitations by the compliance date under Specific Provision 4.b.(1) will not cause or contribute to exceedances of the receiving water limitations under Specific Provision 4.b.(2)(a):

**Table 4.2**  
*Final Effluent Limitations as Expressed Concentrations in MS4 Discharges to Chollas Creek*

Constituent	Exposure Duration	Effluent Limitation (µg/L)	Averaging Period
Dissolved Copper	Acute	$90\% \times (0.96) \times e^{[0.9422 \times \ln(\text{hardness}) - 1.700]} \times \text{WER}^*$	1 hour
	Chronic	$90\% \times (0.96) \times e^{[0.8545 \times \ln(\text{hardness}) - 1.702]} \times \text{WER}^*$	4 days
Dissolved Lead	Acute	$90\% \times [1.46203 - 0.145712 \times \ln(\text{hardness})] \times e^{[1.273 \times \ln(\text{hardness}) - 1.460]} \times \text{WER}^*$	1 hour
	Chronic	$90\% \times [1.46203 - 0.145712 \times \ln(\text{hardness})] \times e^{[1.273 \times \ln(\text{hardness}) - 4.705]} \times \text{WER}^*$	4 days
Dissolved Zinc	Acute	$90\% \times (0.978) \times e^{[0.8473 \times \ln(\text{hardness}) + 0.884]} \times \text{WER}^*$	1 hour
	Chronic	$90\% \times (0.986) \times e^{[0.8473 \times \ln(\text{hardness}) + 0.884]} \times \text{WER}^*$	4 days

Notes:

\* The Water Effect Ratio (WER) is assumed to be 1.0 unless there is a site-specific and chemical-specific WER provided in the Basin Plan.

(c) Best Management Practices

- (i) The Responsible Copermittees must implement BMPs to achieve the receiving water limitations under Specific Provision 4.b.(2)(a) and/or the effluent limitations under Specific Provision 4.b.(2)(b) for Chollas Creek.
- (ii) The Responsible Copermittees should coordinate any BMPs implemented to address this TMDL with Caltrans and the U.S. Navy as possible.

(3) Final TMDL Compliance Determination

Compliance with the final WQBELs, on or after the final TMDL compliance date, may be demonstrated via one of the following methods:

- (a) There is no direct or indirect discharge from the Responsible Copermittee's MS4s to the receiving water; OR
- (b) There are no exceedances of the final receiving water limitations under Specific Provision 4.b.(2)(a) in the receiving water at, or downstream of the Responsible Copermittee's MS4 outfalls; OR
- (c) There are no exceedances of the final effluent limitations under Specific Provision 4.b.(2)(b) at the Responsible Copermittee's MS4 outfalls; OR
- (d) The Responsible Copermittees develop and implement the Water Quality Improvement Plan as follows:
  - (i) Incorporate the BMPs required under Specific Provision 4.b.(2)(c) as part of the Water Quality Improvement Plan,
  - (ii) Include an analysis in the Water Quality Improvement Plan, utilizing a watershed model or other watershed analytical tools, to demonstrate that the implementation of the BMPs required under Provision 4.b.(2)(c) achieves compliance with Specific Provisions 4.b.(3)(a), 4.b.(3)(b) and/or 4.b.(3)(c),
  - (iii) The results of the analysis must be accepted by the San Diego Water Board as part of the Water Quality Improvement Plan,
  - (iv) The Responsible Copermittees continue to implement the BMPs required under Specific Provision 4.b.(2)(c), AND
  - (v) The Responsible Copermittees continue to perform the specific monitoring and assessments specified in Specific Provision 4.d, to demonstrate compliance with Specific Provisions 4.b.(3)(a), 4.b.(3)(b) and/or 4.b.(3)(c).

**c. INTERIM TMDL COMPLIANCE REQUIREMENTS**

The interim dissolved copper, lead, and zinc TMDL compliance requirements for Chollas Creek consist of the following:

**(1) Interim Compliance Date and WQBELs**

The Responsible Copermittee must comply with the interim WQBELs, expressed as concentrations, by the interim compliance date given in Table 4.3:

**Table 4.3**

*Interim Water Quality Based Effluent Limitations Expressed as Concentrations in MS4 Discharges to Chollas Creek*

Interim Compliance Date	Constituent	Exposure Duration	Effluent Limitation (µg/L)	Averaging Period
October 22, 2018	Dissolved Copper	Acute	$1.2 \times 90\% \times (0.96) \times e^{[0.9422 \times \ln(\text{hardness}) - 1.700]} \times \text{WER}^*$	1 hour
		Chronic	$1.2 \times 90\% \times (0.96) \times e^{[0.8545 \times \ln(\text{hardness}) - 1.702]} \times \text{WER}^*$	4 days
	Dissolved Lead	Acute	$1.2 \times 90\% \times [1.46203 - 0.145712 \times \ln(\text{hardness})] \times e^{[1.273 \times \ln(\text{hardness}) - 1.460]} \times \text{WER}^*$	1 hour
		Chronic	$1.2 \times 90\% \times [1.46203 - 0.145712 \times \ln(\text{hardness})] \times e^{[1.273 \times \ln(\text{hardness}) - 4.705]} \times \text{WER}^*$	4 days
	Dissolved Zinc	Acute	$1.2 \times 90\% \times (0.978) \times e^{[0.8473 \times \ln(\text{hardness}) + 0.884]} \times \text{WER}^*$	1 hour
		Chronic	$1.2 \times 90\% \times (0.986) \times e^{[0.8473 \times \ln(\text{hardness}) + 0.884]} \times \text{WER}^*$	4 days

Notes:

\* The Water Effect Ratio (WER) is assumed to be 1.0 unless there is a site-specific and chemical-specific WER provided in the Basin Plan.

**(2) Interim TMDL Compliance Determination**

Compliance with interim WQBELs, on or after the interim TMDL compliance date, may be demonstrated via one of the following methods:

- (a) There is no direct or indirect discharge from the Responsible Copermittee’s MS4s to the receiving water; OR
- (b) There are no exceedances of the applicable receiving water limitations under Specific Provision 4.b.(2)(a) in the receiving water at, or downstream of the Responsible Copermittee’s MS4 outfalls; OR
- (c) There are no exceedances of the final effluent limitations under Specific Provision 4.b.(2)(b) at the Responsible Copermittee’s MS4 outfalls; OR
- (d) There are no exceedances of the interim effluent limitations under Specific Provision 4.c.(1) at the Responsible Copermittee’s MS4 outfalls; OR

- (e) The Responsible Copermittees have submitted and is fully implementing a Water Quality Improvement Plan, accepted by the San Diego Water Board, which provides reasonable assurance that the interim TMDL compliance requirements will be achieved by the interim compliance date.

**d. SPECIFIC MONITORING AND ASSESSMENT REQUIREMENTS**

- (1) The Responsible Copermittees must implement the monitoring and assessment requirements issued under Investigation Order No. R9-2004-0277, *California Department of Transportation and San Diego Municipal Separate Storm Sewer System Copermittees Responsible for the Discharge of Diazinon into the Chollas Creek Watershed*, when it is amended to include monitoring requirements for the Total Maximum Daily Loads for Dissolved Copper, Lead, and Zinc in Chollas Creek. The monitoring reports required under Investigation Order No. R9-2004-0277 must be submitted as part of the Transitional Monitoring and Assessment Program and Water Quality Improvement Plan Annual Reports required under Provision F.3.b of this Order.
- (2) The Responsible Copermittees must monitor the effluent of the MS4 outfalls discharging to Chollas Creek for dissolved copper, lead, and zinc, and calculate or estimate the monthly and annual dissolved copper, lead, and zinc loads, in accordance with the requirements of Provisions D.2, D.4.b.(1), and D.4.b.(2) of this Order. The monitoring and assessment results must be submitted as part of the Transitional Monitoring and Assessment Program and Water Quality Improvement Plan Annual Reports required under Provision F.3.b of this Order.
- (3) For assessing and determining compliance with the concentration-based effluent limitations under Specific Provision 4.b.(2)(b) or 4.c.(1), dry and wet weather discharge concentrations may be calculated based on a flow-weighted average across all major MS4 outfalls along a water body segment or within a jurisdiction if samples are collected within a similar time period.

**5. Total Maximum Daily Loads for Indicator Bacteria, Baby Beach in Dana Point Harbor and Shelter Island Shoreline Park in San Diego Bay**

**a. APPLICABILITY**

(1) TMDL Basin Plan Amendment: Resolution No. R9-2008-0027

(2) TMDL Adoption and Approval Dates:

San Diego Water Board Adoption Date:	June 11, 2008
State Water Board Approval Date:	June 16, 2009
Office of Administrative Law Approval Date:	September 15, 2009
US EPA Approval Date:	October 26, 2009

(3) TMDL Effective Date: September 15, 2009

(4) Watershed Management Areas: See Table 5.0

(5) Water Bodies: See Table 5.0

(6) Responsible Copermittees: See Table 5.0

**Table 5.0**

*Applicability of Total Maximum Daily Loads for Indicator Bacteria  
 Baby Beach in Dana Point Harbor and Shelter Island Shoreline Park in San Diego Bay*

<b>Watershed Management Area</b>	<b>Water Body</b>	<b>Segment or Area</b>	<b>Responsible Copermittees</b>
South Orange County	Dana Point Harbor	Baby Beach	-City of Dana Point -County of Orange
San Diego Bay	San Diego Bay	Shelter Island Shoreline Park	- San Diego Unified Port District

**b. FINAL TMDL COMPLIANCE REQUIREMENTS**

The final indicator bacteria TMDL compliance requirements for segments or areas of the water bodies listed in Table 5.0 consist of the following:

(1) Final TMDL Compliance Dates

(a) Baby Beach in Dana Point Harbor

The Responsible Copermittees for MS4 discharges to Baby Beach must be in compliance with the final TMDL compliance requirements according to the following compliance dates:

**Table 5.1**

*Compliance Dates to Achieve Final TMDL Compliance Requirements  
 For Baby Beach in Dana Point Harbor*

<b>Constituent</b>	<b>Dry Weather WLA Compliance Date</b>	<b>Wet Weather WLA Compliance Date</b>
Total Coliform	September 15, 2014	September 15, 2009
Fecal Coliform		September 15, 2009
<i>Enterococcus</i>		September 15, 2019

(b) Shelter Island Shoreline Park in San Diego Bay

The Responsible Copermittee for MS4 discharges to Shelter Island Shoreline Park must be in compliance with the final TMDL compliance requirements as of December 31, 2012.

(2) Final Water Quality Based Effluent Water Limitations

(a) Final Receiving Water Limitations

Discharges from the MS4s must not cause or contribute to the exceedance of the following receiving water limitations by the compliance dates under Specific Provision 5.b.(1):

**Table 5.2**

*Final Receiving Water Limitations Expressed as Bacteria Densities in  
 the Water Body*

<b>Receiving Water Limitations</b>		
<b>Constituent</b>	<b>Single Sample Maximum<sup>1,2</sup></b>	<b>30-Day Geometric Mean<sup>2</sup></b>
Total Coliform	10,000 MPN/100mL	1,000 MPN/100mL
Fecal Coliform	400 MPN/100mL	200 MPN/100mL
<i>Enterococcus</i>	104 MPN/100mL	35 MPN/100mL

Notes:

1. During wet weather days, only the single sample maximum receiving water limitations are required to be achieved.
2. During dry weather days, the single sample maximum and 30-day geometric mean receiving water limitations are required to be achieved.

## (b) Final Effluent Limitations

- (i) Discharges from the MS4s containing indicator bacteria densities that do not exceed the following effluent limitations by the compliance dates under Specific Provision 5.b.(1) will not cause or contribute to exceedances of the receiving water limitations under Specific Provision 5.b.(2)(a):

**Table 5.3a**

*Final Effluent Limitations as Expressed as Bacteria Densities in MS4 Discharges to the Water Body*

Effluent Limitations		
Constituent	Single Sample Maximum <sup>1,2</sup>	30-Day Geometric Mean <sup>2</sup>
Total Coliform	10,000 MPN/100mL	1,000 MPN/100mL
Fecal Coliform	400 MPN/100mL	200 MPN/100mL
<i>Enterococcus</i>	104 MPN/100mL	35 MPN/100mL

Notes:

1. During wet weather days, only the single sample maximum effluent limitations are required to be achieved.
2. During dry weather days, the single sample maximum and 30-day geometric mean effluent limitations are required to be achieved.

- (ii) Discharges from the MS4s containing indicator bacteria loads that do not exceed the following effluent limitations by the compliance dates under Specific Provision 5.b.(1) will not cause or contribute to exceedances of the receiving water limitations under Specific Provision 5.b.(2)(a):

**Table 5.4a**

*Final Effluent Limitations Expressed as Bacteria Loads in MS4 Discharges to the Baby Beach in Dana Point Harbor*

Constituent	Dry Weather	Wet Weather
	Final Effluent Limitation	Final Effluent Limitation
Total Coliform	$0.86 \times 10^9$ MPN/day	$3,254 \times 10^9$ MPN/30days
Fecal Coliform	$0.17 \times 10^9$ MPN/day	$112 \times 10^9$ MPN/30days
<i>Enterococcus</i>	$0.03 \times 10^9$ MPN/day	$114 \times 10^9$ MPN/30days

**Table 5.4b**

*Final Effluent Limitations Expressed as Bacteria Loads in MS4 Discharges to the Shelter Island Shoreline Park in San Diego Bay*

Constituent	Dry Weather	Wet Weather
	Final Effluent Limitation	Final Effluent Limitation
Total Coliform	0 MPN/day	$198 \times 10^9$ MPN/30days
Fecal Coliform	0 MPN/day	$8 \times 10^9$ MPN/30days
<i>Enterococcus</i>	0 MPN/day	$26 \times 10^9$ MPN/30days

- (iii) Indicator bacteria percent load reductions from the Responsible Copermittes' MS4s that are greater than or equal to the following effluent limitations by the compliance dates under Specific Provision 5.b.(1) will not cause or contribute to exceedances of the receiving water limitations under Specific Provision 5.b.(2)(a):

**Table 5.5a**

*Final Effluent Limitations Expressed as Percent Load Reductions\* in MS4 Discharges to Baby Beach in Dana Point Harbor*

Constituent	Dry Weather	Wet Weather
	Final Effluent Limitation	Final Effluent Limitation
Total Coliform	90.4%	0%
Fecal Coliform	82.7%	0%
<i>Enterococcus</i>	96.2%	62.2%

Notes:

\* The percent load reductions are relative to data collected between 1996-2002. For pollutant load reductions of 0%, pollutant loads discharged from the Responsible Copermittes' MS4s must not exceed the loads in Table 5.4a, unless an updated model or analysis, accepted by the San Diego Water Board, identifies a different allowable pollutant load that can be discharged from the Responsible Copermittes' MS4s to the water body.

**Table 5.5b**

*Final Effluent Limitations Expressed as Percent Load Reductions\*\* in MS4 Discharges to Shelter Island Shoreline Park in San Diego Bay*

Constituent	Dry Weather	Wet Weather
	Final Effluent Limitation	Final Effluent Limitation
Total Coliform	0%	0%
Fecal Coliform	0%	0%
<i>Enterococcus</i>	0%	0%

Notes:

\* The percent load reductions are relative to data collected between 1999-2004. For pollutant load reductions of 0%, pollutant loads discharged from the Responsible Copermittes' MS4s must not exceed the loads in Table 5.4b, unless an updated model or analysis, accepted by the San Diego Water Board, identifies a different allowable pollutant load that can be discharged from the Responsible Copermittes' MS4s to the water body.

(c) Best Management Practices

- (i) The Water Quality Improvement Plans for the applicable Watershed Management Areas in Table 5.0 must incorporate the Bacteria Load Reduction Plan (BLRP) required to be developed pursuant to Resolution No. R9-2008-0027.
- (ii) The Responsible Copermittes must implement BMPs to achieve the receiving water limitations under Specific Provision 5.b.(2)(a) and/or the effluent limitations under Specific Provision 5.b.(2)(b) for the segments or areas of the water bodies listed in Table 5.0

### (3) Final TMDL Compliance Determination

Compliance with the final WQBELs, on or after the final TMDL compliance dates, may be demonstrated via one of the following methods:

- (a) There is no direct or indirect discharge from the Responsible Copermittee's MS4s to the receiving water; OR
- (b) There are no exceedances of the final receiving water limitations under Specific Provision 5.b.(2)(a) in the receiving water at, or downstream of the Responsible Copermittee's MS4 outfalls; OR
- (c) There are no exceedances of the final effluent limitations under Specific Provision 5.b.(2)(b)(i) at the Responsible Copermittee's MS4 outfalls; OR
- (d) The pollutant loads discharging from the Responsible Copermittees' MS4 outfalls do not exceed the final effluent limitations under Specific Provision 5.b.(2)(b)(ii); OR
- (e) The pollutant load reductions for discharges from the Responsible Copermittees' MS4 outfalls are greater than or equal to the final effluent limitations under Specific Provision 5.b.(2)(b)(iii); OR
- (f) The Responsible Copermittees can demonstrate that exceedances of the final receiving water limitations under Specific Provision 5.b.(2)(a) in the receiving water are due to loads from natural sources, AND pollutant loads from the Copermittees' MS4s are not causing or contributing to the exceedances; OR
- (g) The Responsible Copermittees develop and implement the Water Quality Improvement Plan as follows:
  - (i) Incorporate the BMPs required under Specific Provision 5.b.(2)(c) as part of the Water Quality Improvement Plan,
  - (ii) Include an analysis in the Water Quality Improvement Plan, utilizing a watershed model or other watershed analytical tools, to demonstrate that the implementation of the BMPs required under Provision 5.b.(2)(c) achieves compliance with Specific Provisions 5.b.(3)(a), 5.b.(3)(b), 5.b.(3)(c), 5.b.(3)(d), 5.b.(3)(e) and/or 5.b.(3)(f),
  - (iii) The results of the analysis must be accepted by the San Diego Water Board as part of the Water Quality Improvement Plan,
  - (iv) The Responsible Copermittees continue to implement the BMPs required under Specific Provision 5.b.(2)(c), AND

- (v) The Responsible Copermittees continue to perform the specific monitoring and assessments specified in Specific Provision 5.d, to demonstrate compliance with Specific Provisions 5.b.(3)(a), 5.b.(3)(b), 5.b.(3)(c), 5.b.(3)(d), 5.b.(3)(e) and/or 5.b.(3)(f).

### C. INTERIM TMDL COMPLIANCE REQUIREMENTS

The interim indicator bacteria TMDL compliance requirements for segments or areas of the water bodies listed in Table 5.0 consist of the following:

#### (1) Baby Beach in Dana Point Harbor

##### (a) Interim TMDL Compliance Dates and WQBELS

The Responsible Copermittees for MS4 discharges to Baby Beach must comply with the following interim WQBELS by the interim compliance dates given in Tables 5.6a and/or 5.6b:

**Table 5.6a**

*Interim Water Quality Based Effluent Limitations Expressed as Bacteria Loads in MS4 Discharges to Baby Beach in Dana Point Harbor*

Constituent	Interim Compliance Dates	Dry Weather	Wet Weather
		Interim Effluent Limitation	Interim Effluent Limitation
Total Coliform	September 15, 2012	4.93x10 <sup>9</sup> MPN/day	3,254x10 <sup>9</sup> MPN/30days*
Fecal Coliform	September 15, 2012	0.59x10 <sup>9</sup> MPN/day	112x10 <sup>9</sup> MPN/30days*
Enterococcus	September 15, 2012	0.42x10 <sup>9</sup> MPN/day	301x10 <sup>9</sup> MPN/30days
	September 15, 2016	0.03x10 <sup>9</sup> MPN/day *	207x10 <sup>9</sup> MPN/30days

Notes:

\* Same as the final effluent limitations in Table 5.4a.

**Table 5.6b**

*Interim Water Quality Based Effluent Limitations Expressed as Percent Load Reductions\* in MS4 Discharges to Baby Beach in Dana Point Harbor*

Constituent	Interim Compliance Dates	Dry Weather	Wet Weather
		Interim Effluent Limitation	Interim Effluent Limitation
Total Coliform	September 15, 2012	45.2%	0%**
Fecal Coliform	September 15, 2012	41.4%	0%**
Enterococcus	September 15, 2012	48.1%	0%
	September 15, 2016	96.2%**	31.1%

Notes:

\* The percent load reductions are relative to data collected between 1996-2002. For pollutant load reductions of 0%, pollutant loads discharged from the Responsible Copermittees' MS4s must not exceed the loads in Table 5.6a, unless an updated model or analysis, accepted by the San Diego Water Board, identifies a different allowable pollutant load that can be discharged from the Responsible Copermittee's MS4s to the waterbody.

\*\* Same as the final effluent limitations in Table 5.5a.

**(b) Interim Compliance Determination**

Compliance with interim WQBELs, on or after the interim TMDL compliance dates, may be demonstrated via one of the following methods:

- (i) There is no direct or indirect discharge from the Responsible Copermittee's MS4s to the receiving water; OR
- (ii) There are no exceedances of the final receiving water limitations under Specific Provision 5.b.(2)(a) in the receiving water at, or downstream of the Responsible Copermittee's MS4 outfalls; OR
- (iii) There are no exceedances of the final effluent limitations under Specific Provision 5.b.(2)(b)(i) at the Responsible Copermittee's MS4 outfalls; OR
- (iv) The pollutant loads discharging from the Responsible Copermittees' MS4 outfalls do not exceed the final effluent limitations under Specific Provision 5.b(2)(b)(ii); OR
- (v) The Responsible Copermittees can demonstrate that exceedances of the applicable receiving water limitations under Specific Provision 5.b.(2)(a) in the receiving water are due to loads from natural sources, AND pollutant loads from the Copermittees' MS4s are not causing or contributing to the exceedances; OR
- (vi) The pollutant loads discharging from the Responsible Copermittees' MS4 outfalls do not exceed the interim effluent limitations under Table 5.6a of Specific Provision 5.c.(1)(a); OR
- (vii) The pollutant load reductions for discharges from the Responsible Copermittees' MS4 outfalls are greater than or equal to the interim effluent limitations under Table 5.6b of Specific Provision 5.c.(1)(a); OR
- (viii) The Responsible Copermittees have submitted and are fully implementing a Water Quality Improvement Plan, accepted by the San Diego Water Board, which provides reasonable assurance that the interim TMDL compliance requirements will be achieved by the interim compliance dates.

**(2) Shelter Island Shoreline Park in San Diego Bay**

The Responsible Copermittee for MS4 discharges to Shelter Island Shoreline Park must be in compliance with the final indicator bacteria TMDL requirements as of December 31, 2012.

#### **d. SPECIFIC MONITORING AND ASSESSMENT REQUIREMENTS**

##### **(1) Monitoring Stations**

Monitoring locations should consist of, at a minimum, the same locations used to collect data required pursuant to Order Nos. R9-2007-0001 and R9-2009-0002, and beach monitoring for Health and Safety Code section 115880.<sup>38</sup> If discharges of bacteria from the MS4 exceed the applicable interim or final WQBELs, additional monitoring locations and/or other source identification methods must be implemented to identify the sources causing the exceedances. The additional monitoring locations must also be used to demonstrate that the bacteria loads from the identified anthropogenic sources have been addressed and are no longer causing exceedances in the receiving waters.

##### **(2) Monitoring Procedures**

- (a) The Responsible Copermittees must collect dry weather monitoring samples from the receiving water monitoring stations at least monthly. Dry weather samples collected from additional monitoring stations established to identify sources must be collected at an appropriate frequency to demonstrate bacteria loads from the identified anthropogenic sources have been addressed and are no longer causing exceedances in the receiving waters.
- (b) The Responsible Copermittees must collect wet weather monitoring samples within the first 24 hours of a storm event<sup>39</sup> of the rainy season (i.e. October 1 through April 30). Wet weather samples collected from receiving water stations and any additional monitoring stations established to identify sources must be collected at an appropriate frequency to demonstrate bacteria loads from the identified sources have been addressed and are no longer causing exceedances in the receiving waters.
- (c) Samples must be analyzed for total coliform, fecal coliform, and *Enterococcus* indicator bacteria.

---

<sup>38</sup> Commonly referred to as AB 411 monitoring

<sup>39</sup> Wet weather days are defined by the TMDL as storm events of 0.2 inches or greater and the following 72 hours. The Responsible Copermittees may choose to limit their wet weather sampling requirements to storm events of 0.2 inches or greater, or also include storm events of 0.1 inches or greater as defined by the federal regulations [40CFR122.26(d)(2)(iii)(A)(2)].

### (3) Assessment and Reporting Requirements

- (a) The Responsible Copermittees must analyze the dry weather and wet weather monitoring data to assess whether the interim and final WQBELs have been achieved.
- (b) For assessing and determining compliance with the concentration-based effluent limitations under Specific Provision 5.b.(2)(b)(i), dry and wet weather discharge bacteria densities may be calculated based on a flow-weighted average across all major MS4 outfalls along a water body segment or within a jurisdiction if samples are collected within a similar time period.
- (c) The Responsible Copermittees must analyze the dry weather and wet weather monitoring data to correlate elevated bacteria levels with known or suspected sewage spills from wastewater collection systems and treatment plants or boats.
- (d) The monitoring and assessment results must be submitted as part of the Transitional Monitoring and Assessment Program and Water Quality Improvement Plan Annual Reports required under Provision F.3.b of this Order.

**6. Revised Total Maximum Daily Loads for Indicator Bacteria, Project I – Twenty Beaches and Creeks in the San Diego Region (Including Tecolote Creek)**

**a. APPLICABILITY**

(1) TMDL Basin Plan Amendment: Resolution No. R9-2010-0001

(2) TMDL Adoption and Approval Dates:

San Diego Water Board Adoption Date:	February 10, 2010
State Water Board Approval Date:	December 14, 2010
Office of Administrative Law Approval Date:	April 4, 2011
US EPA Approval Date:	June 22, 2011

(3) TMDL Effective Date: April 4, 2011

(4) Watershed Management Areas: See Table 6.0

(5) Water Bodies: See Table 6.0

(6) Responsible Copermittees: See Table 6.0

**Table 6.0**

**b. FINAL TMDL COMPLIANCE REQUIREMENTS**

The final indicator bacteria TMDL compliance requirements for the water bodies listed in Table 6.0 consist of the following:

(1) Final TMDL Compliance Dates

The Responsible Copermittees for MS4 discharges to the water bodies listed in Table 6.0 must be in compliance with the final TMDL compliance requirements according to the following compliance dates:

**Table 6.1**

*Compliance Dates to Achieve Final TMDL Compliance Requirements*

<b>Constituent</b>	<b>Dry Weather TMDL Compliance Date</b>	<b>Wet Weather TMDL Compliance Date*</b>
Total Coliform	April 4, 2021	April 4, 2031 (April 4, 2021)
Fecal Coliform		
<i>Enterococcus</i>		

\* The Wet Weather TMDL Compliance Date in parenthesis applies if the applicable Water Quality Improvement Plan does not include load reduction programs for other constituents (e.g. metals, pesticides, trash, nutrients, sediment, etc.) together with bacteria load reduction requirements of these TMDLs.

**(2) Final Water Quality Based Effluent Limitations**

**(a) Final Receiving Water Limitations**

Discharges from the MS4s must not cause or contribute to the exceedance of the following receiving water limitations by the compliance dates under Specific Provision 6.b.(1):

**Table 6.2a**

*Final Receiving Water Limitations Expressed as Bacteria Densities and Allowable Exceedance Frequencies for Beaches*

Constituent	Wet Weather Days		Dry Weather Days	
	Single Sample Maximum <sup>a,b</sup> (MPN/100mL)	Single Sample Maximum Allowable Exceedance Frequency <sup>c</sup>	30-Day Geometric Mean <sup>b</sup> (MPN/100mL)	30-Day Geometric Mean Allowable Exceedance Frequency
Total Coliform	10,000	22%	1,000	0%
Fecal Coliform	400	22%	200	0%
<i>Enterococcus</i>	104	22%	35	0%

Notes:

- a. During wet weather days, only the single sample maximum receiving water limitations are required to be achieved.
- b. During dry weather days, the single sample maximum and 30-day geometric mean receiving water limitations are required to be achieved.
- c. The 22% single sample maximum allowable exceedance frequency only applies to wet weather days. For dry weather days, the dry weather bacteria densities must be consistent with the single sample maximum REC-1 water quality objectives in the Ocean Plan.

**Table 6.2b**

*Final Receiving Water Limitations Expressed as Bacteria Densities and Allowable Exceedance Frequencies for Creeks*

Constituent	Wet Weather Days		Dry Weather Days	
	Single Sample Maximum <sup>a,b</sup> (MPN/100mL)	Single Sample Maximum Allowable Exceedance Frequency <sup>c</sup>	30-Day Geometric Mean <sup>b</sup> (MPN/100mL)	30-Day Geometric Mean Allowable Exceedance Frequency
Fecal Coliform	400	22%	200	0%
<i>Enterococcus</i>	61 (104)	22%	33	0%

Notes:

- a. During wet weather days, only the single sample maximum receiving water limitations are required to be achieved.
- b. During dry weather days, the single sample maximum and 30-day geometric mean receiving water limitations are required to be achieved.
- c. The 22% single sample maximum allowable exceedance frequency only applies to wet weather days. For dry weather days, the dry weather bacteria densities must be consistent with the single sample maximum REC-1 water quality objectives in the Basin Plan.
- d. A single sample maximum of 104 MPN/100ml for *Enterococcus* may be applied as a receiving water limitation for creeks, instead of 61 MPN/100mL, if one or more of the creeks addressed by these TMDLs (San Juan Creek, Aliso Creek, Tecolote Creek, Forrester Creek, San Diego River, and/or Chollas Creek) is designated with a “moderately to lightly used area” or less frequent usage frequency in the Basin Plan. Otherwise, the single sample maximum of 61 MPN/100mL for *Enterococcus* must be used to assess compliance with the allowable exceedance frequency.

## (b) Final Effluent Limitations

- (i) Discharges from the MS4s containing indicator bacteria densities that do not exceed the following effluent limitations by the compliance dates under Specific Provision 6.c.(1) will not cause or contribute to exceedances of the receiving water limitations under Specific Provision 6.b.(2)(a):

**Table 6.2c**

*Final Effluent Limitations Expressed as Bacteria Densities and Allowable Exceedance Frequencies in MS4 Discharges to the Water Body*

Constituent	Concentration-Based Effluent Limitations			
	Single Sample Maximum <sup>a,b</sup> (MPN/100mL)	Single Sample Maximum Allowable Exceedance Frequency <sup>c</sup>	30-Day Geometric Mean <sup>b</sup> (MPN/100mL)	30-Day Geometric Mean Allowable Exceedance Frequency
Total Coliform <sup>d</sup>	10,000	22%	1,000	0%
Fecal Coliform	400	22%	200	0%
<i>Enterococcus</i>	104 <sup>e</sup> / 61 <sup>f</sup>	22%	35 <sup>e</sup> / 33 <sup>f</sup>	0%

## Notes:

- During wet weather days, only the single sample maximum effluent limitations are required to be achieved.
- During dry weather days, the single sample maximum and 30-day geometric mean effluent limitations are required to be achieved.
- The 22% single sample maximum allowable exceedance frequency only applies to wet weather days. For dry weather days, the dry weather bacteria densities must be consistent with the single sample maximum REC-1 water quality objectives in the Ocean Plan for discharges to beaches, and the Basin Plan for discharges to creeks and creek mouths.
- Total coliform effluent limitations only apply to MS4 outfalls that discharge to the Pacific Ocean Shorelines and creek mouths listed in Table 6.0.
- This *Enterococcus* effluent limitation applies to MS4 discharges to segments of areas of Pacific Ocean Shoreline listed in Table 6.0.
- This *Enterococcus* effluent limitation applies to MS4 discharges to segments or areas of creeks or creek mouths listed in Table 6.0.

- (ii) Indicator bacteria percent load reductions from the Responsible Copermittees' MS4s that are greater than or equal to the following effluent limitations by the compliance dates under Specific Provision 6.b.(1) will not cause or contribute to exceedances of the receiving water limitations under Specific Provision 6.b.(2)(a):

**Table 6.3**

*Final Effluent Limitations Expressed as Percent Load Reductions\* in MS4 Discharges to the Water Body*

Watershed Management Areas	Watershed and Water Bodies	Load-Based Effluent Limitations					
		Dry Weather			Wet Weather		
		Total Coliform	Fecal Coliform	Enterococcus	Total Coliform	Fecal Coliform	Enterococcus
South Orange County	San Joaquin Hills HSA (901.11) and Laguna Hills HSA (901.12) - Pacific Ocean Shoreline	91.78%	91.72%	98.28%	46.85%	52.07%	51.26%
	Aliso HSA (901.13) - Pacific Ocean Shoreline - Aliso Creek - Aliso Creek mouth	95.47%	95.58%	99.13%	25.29%	26.62%	27.52% (27.37%)**
	Dana Point HSA (901.14) - Pacific Ocean Shoreline	95.04%	95.03%	98.98%	13.15%	14.86%	15.16%
	Lower San Juan HSA (901.27) - Pacific Ocean Shoreline - San Juan Creek - San Juan Creek mouth	72.96%	74.21%	94.94%	19.21%	12.82%	27.12% (26.90%)**
	San Clemente HA (901.30) - Pacific Ocean Shoreline	94.28%	94.23%	98.83%	23.85%	24.58%	25.26%
San Luis Rey River	San Luis Rey HU (903.00) - Pacific Ocean Shoreline	38.13%	39.09%	87.38%	5.62%	3.12%	11.69%

**Table 6.3 (Cont'd)***Final Effluent Limitations Expressed as Percent Load Reductions\* in  
MS4 Discharges to the Water Body*

Watershed Management Areas	Watershed and Water Bodies	Load-Based Effluent Limitations					
		Dry Weather			Wet Weather		
		Total Coliform	Fecal Coliform	Enterococcus	Total Coliform	Fecal Coliform	Enterococcus
Carlsbad	San Marcos HA (904.50)	82.82%	82.55%	96.03%	18.47%	18.98%	20.19%
	- Pacific Ocean Shoreline						
San Dieguito River	San Dieguito HU (905.00)	14.39%	20.72%	83.48%	4.29%	1.46%	7.72%
	- Pacific Ocean Shoreline						
Penasquitos	Miramar Reservoir HA (906.10)	96.50%	96.59%	99.42%	1.61%	1.99%	1.93%
	- Pacific Ocean Shoreline						
Mission Bay	Scripps HA (906.30)	96.44%	96.42%	99.25%	16.32%	21.14%	18.82%
	- Pacific Ocean Shoreline						
	Tecolote HA (906.50)	94.51%	94.59%	98.94%	16.51%	20.47%	18.15% (18.08%)**
	- Tecolote Creek						
San Diego River	Mission San Diego HSA (907.11) and Santee HSA (907.12)	74.03%	69.44%	93.96%	38.14%	53.22%	42.74% (42.47%)**
	- Pacific Ocean Shoreline						
	- Forrester Creek (lower 1 mile) - San Diego River (lower 6 miles)						
San Diego Bay	Chollas HSA (908.22)	92.06%	92.15%	98.46%	17.82%	24.84%	21.46% (21.36%)**
	- Chollas Creek						

## Notes:

\* The percent load reductions are based on reducing loads compared to pollutant loads from 2001 to 2002.

\*\* The alternative *Enterococcus* percent load reduction was calculated based on a numeric target of 104 MPN/100mL instead of 61 MPN/100mL, protective of the REC-1 "moderately to lightly used area" usage frequency that is protective of freshwater creeks and downstream beaches. Acceptable evidence that impaired freshwater creeks can be considered "moderately to lightly used areas" must be provided before these alternative pollutant load reductions can be utilized.

(c) Best Management Practices

- (i) The Water Quality Improvement Plans for the applicable Watershed Management Areas in Table 6.0 must incorporate the Bacteria Load Reduction Plans (BLRPs) or Comprehensive Load Reduction Plans (CLRPs) required to be developed pursuant to Resolution No. R9-2010-0001.
- (ii) The Responsible Copermittee must implement BMPs to achieve the receiving water limitations under Specific Provision 6.b.(2)(a) and/or the effluent limitations under Specific Provision 6.b.(2)(b) for the segments or areas of the water bodies listed in Table 6.0.
- (iii) The Responsible Copermittees should coordinate any BMPs implemented to address this TMDL with Caltrans, owners/operators of small MS4s, and agricultural dischargers as possible.

(3) Final TMDL Compliance Determination

Compliance with the final WQBELs, on or after the final TMDL compliance dates, may be demonstrated via one of the following methods:

- (a) There is no direct or indirect discharge from the Responsible Copermittee's MS4s to the receiving water; OR
- (b) There are no exceedances of the final receiving water limitations under Specific Provision 6.b.(2)(a) in the receiving water at, or downstream of the Responsible Copermittee's MS4 outfalls; OR
- (c) There are no exceedances of the final effluent limitations under Specific Provision 6.b.(2)(b)(i) at the Responsible Copermittee's MS4 outfalls; OR
- (d) The pollutant load reductions for discharges from the Responsible Copermittees' MS4 outfalls are greater than or equal to the final effluent limitations under Specific Provision 6.b.(2)(b)(ii); OR
- (e) The Responsible Copermittees can demonstrate that exceedances of the final receiving water limitations under Specific Provision 6.b.(2)(a) in the receiving water are due to loads from natural sources, AND pollutant loads from the Copermittees' MS4s are not causing or contributing to the exceedances; OR
- (f) The Responsible Copermittees develop and implement the Water Quality Improvement Plan as follows:
  - (i) Incorporate the BMPs required under Specific Provision 6.b.(2)(c) as part of the Water Quality Improvement Plan,

- (ii) Include an analysis in the Water Quality Improvement Plan, utilizing a watershed model or other watershed analytical tools, to demonstrate that the implementation of the BMPs required under Provision 6.b.(2)(c) achieves compliance with Specific Provisions 6.b.(3)(a), 6.b.(3)(b), 6.b.(3)(c), 6.b.(3)(d), and/or 6.b.(3)(e),
- (iii) The results of the analysis must be accepted by the San Diego Water Board as part of the Water Quality Improvement Plan,
- (iv) The Responsible Copermittees continue to implement the BMPs required under Specific Provision 6.b.(2)(c), AND
- (v) The Responsible Copermittees continue to perform the specific monitoring and assessments specified in Specific Provision 6.d, to demonstrate compliance with Specific Provisions 6.b.(3)(a), 6.b.(3)(b), 6.b.(3)(c), 6.b.(3)(d), 6.b.(3)(e) and/or 6.b.(3)(f).

#### **c. INTERIM TMDL COMPLIANCE REQUIREMENTS**

The interim indicator bacteria TMDL compliance requirements for the water bodies listed in Table 6.0 consist of the following:

##### (1) Interim TMDL Compliance Dates

The Responsible Copermittees must achieve compliance with the interim TMDL compliance requirements, as determined in accordance with Specific Provision 6.c.(3), by the interim compliance dates given in Table 6.4, unless alternative interim compliance dates are accepted by the San Diego Water Board Executive Officer as part of the Water Quality Improvement Plan.

**Table 6.4**  
*Interim Compliance Dates to Achieve Interim TMDL Compliance Requirements*

Watershed Management Area and Watershed	Water Body	Segment or Area	Interim Compliance Dates	
			Interim Dry Weather WQBELs	Interim Wet Weather WQBELs*

\* The Interim Compliance Dates to achieve the Interim Wet Weather WQBELs in parenthesis apply if the applicable Water Quality Improvement Plan does not include load reduction programs for other constituents (e.g. metals, pesticides, trash, nutrients, sediment, etc.) together with bacteria load reduction requirements of these TMDLs.

## (2) Interim Water Quality Based Effluent Limitations

The Responsible Copermittees for discharges to the water bodies in Table 6.0 must comply with the following interim WQBELs by the interim compliance dates given in Specific Provision 6.c.(1):

### (a) Interim Receiving Water Limitations

#### (i) *Interim Dry Weather Receiving Water Limitations*

The Responsible Copermittee must calculate the “existing” exceedance frequencies of the 30-day geometric mean water quality objectives for each of the indicator bacteria by analyzing the available monitoring data collected between January 1, 1996 and December 31, 2002. “Existing” exceedance frequencies may be calculated by water body and/or by Watershed Management Area listed in Table 6.0. Separate “existing” exceedance frequencies must be calculated for beaches and creeks/creek mouths.

The Responsible Copermittees must achieve a 50 percent reduction in the “existing” exceedance frequency of the 30-day geometric mean WQBELs for the water bodies listed in Table 6.0 by the interim compliance dates given in Table 6.4. A 50 percent reduction in the “existing” exceedance frequency is equivalent to half of the “existing” exceedance frequency of the 30-day geometric mean WQBELs.

The “existing” exceedance frequencies and the interim dry weather allowable exceedance frequencies (i.e. interim dry weather receiving water limitations) calculated by the Responsible Copermittees must be included in the Water Quality Improvement Plans for the applicable Watershed Management Areas.

(ii) *Interim Wet Weather Receiving Water Limitations*

The Responsible Copermitees must achieve the interim wet weather receiving water limitations in Table 6.5, expressed as interim wet weather allowable exceedance frequencies, by the interim compliance dates given in Table 6.4.

**Table 6.5**  
*Interim Wet Weather Receiving Water Limitations Expressed as Interim Wet Weather Allowable Exceedance Frequencies*

(b) Interim Effluent Limitations

Indicator bacteria percent load reductions from the Responsible Copermittees' MS4s that are greater than or equal to the following effluent limitations by the interim compliance dates under Specific Provision 6.c.(1) will not cause or contribute to exceedances of the receiving water limitations under Specific Provision 6.c.(2)(a):

**Table 6.6**  
*Interim Effluent Limitations Expressed as Percent Load Reductions\* in MS4 Discharges to the Water Body*

	- Pacific Ocean Shoreline - Forrester Creek (lower 1 mile) - San Diego River (lower 6 miles)						
San Diego Bay	Chollas HSA (908.22)	46.03%	46.08%	49.23%	8.91%	12.42%	10.73% (10.68%)**
	- Chollas Creek						

## Notes:

\* The percent load reductions are based on reducing loads compared to pollutant loads from 2001 to 2002.

\*\* The alternative *Enterococcus* percent load reduction was calculated based on a numeric target of 104 MPN/100mL instead of 61 MPN/100mL, protective of the REC-1 "moderately to lightly used area" usage frequency that is protective of freshwater creeks and downstream beaches. Acceptable evidence that impaired freshwater creeks can be considered "moderately to lightly used areas" must be provided before these alternative pollutant load reductions can be utilized.

### (3) Interim TMDL Compliance Determination

Compliance with the interim WQBELs, on or after the interim TMDL compliance dates, may be demonstrated via one of the following methods:

- (a) There is no direct or indirect discharge from the Responsible Copermitee's MS4s to the receiving water; OR

- (b) There are no exceedances of the final receiving water limitations under Specific Provision 6.b.(2)(a) in the receiving water at, or downstream of the Responsible Copermittee's MS4 outfalls; OR
- (c) There are no exceedances of the final effluent limitations under Specific Provision 6.b.(2)(b)(i) at the Responsible Copermittee's MS4 outfalls; OR
- (d) The pollutant load reductions for discharges from the Responsible Copermittees' MS4 outfalls are greater than or equal to the final effluent limitations under Specific Provision 6.b.(2)(b)(ii); OR
- (e) The Responsible Copermittees can demonstrate that exceedances of the final receiving water limitations under Specific Provision 6.b.(2)(a) in the receiving water are due to loads from natural sources, AND pollutant loads from the Copermittees' MS4s are not causing or contributing to the exceedances; OR
- (f) There are no exceedances of the interim receiving water limitations under Specific Provision 6.c.(2)(a) in the receiving water at, or downstream of the Responsible Copermittees' MS4 outfalls; OR
- (g) The pollutant load reductions for discharges from the Responsible Copermittees' MS4 outfalls are greater than or equal to the interim effluent limitations under Specific Provision 6.c.(2)(b); OR
- (h) The Responsible Copermittees have submitted and are fully implementing a Water Quality Improvement Plan, accepted by the San Diego Water Board, which provides reasonable assurance that the interim TMDL compliance requirements will be achieved by the interim compliance dates.

#### **d. SPECIFIC MONITORING AND ASSESSMENT REQUIREMENTS**

##### **(1) Monitoring and Assessment Requirements for Beaches**

###### **(a) Monitoring Stations**

For beaches addressed by the TMDL, monitoring locations should consist of, at a minimum, the same locations used to collect data required pursuant to Order Nos. R9-2007-0001 and R9-2009-0002, and beach monitoring for Health and Safety Code section 115880.<sup>40</sup> If exceedances of the applicable interim or final receiving water limitations are observed in the monitoring data, additional monitoring locations and/or other source

---

<sup>40</sup> Commonly referred to as AB 411 monitoring

identification methods must be implemented to identify the sources causing the exceedances. The additional monitoring locations must also be used to demonstrate that the bacteria loads from the identified anthropogenic sources have been addressed and are no longer causing exceedances in the receiving waters.

(b) Monitoring Procedures

- (i) The Responsible Copermittees must collect dry weather monitoring samples from the receiving water monitoring stations at least monthly. Dry weather samples collected from additional monitoring stations established to identify sources must be collected at an appropriate frequency to demonstrate bacteria loads from the identified sources have been addressed and are no longer causing exceedances in the receiving waters.
- (ii) The Responsible Copermittees must collect wet weather monitoring samples from the receiving water monitoring stations at least once within the first 24 hours of the end of a storm event<sup>41</sup> during the rainy season (i.e. October 1 through April 30). Wet weather samples collected from receiving water stations and any additional monitoring stations established to identify sources must be collected at an appropriate frequency to demonstrate bacteria loads from the identified sources have been addressed and are no longer in exceedance of the allowable exceedance frequencies in the receiving waters.
- (iii) Samples must be analyzed for total coliform, fecal coliform, and *Enterococcus* indicator bacteria.
- (iv) For Pacific Ocean Shoreline segments or areas listed in Table 6.0 that have been de-listed from the Clean Water Act Section 303(d) List, the Responsible Copermittees may propose alternative monitoring procedures to demonstrate that the water bodies continue to remain in compliance with water quality standards under wet weather and dry weather conditions. The alternative monitoring procedures must be submitted as a part of the Water Quality Improvement Plans or any updates required under Provisions F.1 and F.2.c of the Order.

---

<sup>41</sup> Wet weather days are defined by the TMDL as storm events of 0.2 inches or greater and the following 72 hours. The Responsible Copermittees may choose to limit their wet weather sampling requirements to storm events of 0.2 inches or greater, or also include storm events of 0.1 inches or greater as defined by the federal regulations [40CFR122.26(d)(2)(iii)(A)(2)].

(c) Assessment and Reporting Requirements

- (i) The Responsible Copermittees must analyze the dry weather and wet weather monitoring data to assess whether the interim and final WQBELs for the Pacific Ocean Shoreline segments or areas listed in Table 6.0 have been achieved.
- (ii) Dry weather exceedance frequencies must be calculated as follows:
  - [a] 30-day geometric means must be calculated from the results of any dry weather samples collected from the segments or areas for each water body listed in Table 6.0;
  - [b] The method and number of samples need for calculating the 30-day geometric means must be consistent with the number of samples required by the Ocean Plan;
  - [c] Where there are multiple segments or areas associated with a water body listed in Table 6.0, the Copermittees may calculate geometric means for each segment or area, or combine the dry weather monitoring data from all the segments or areas to calculate geometric means for the water body;
  - [d] The exceedance frequency must be calculated by dividing the number of geometric means that exceed the geometric mean receiving water limitations in Table 6.2 by the total number of geometric means calculated from samples collected during the dry season.
- (iii) Wet weather exceedance frequencies must be calculated as follows:
  - [a] If only one sample is collected for a storm event, the bacteria density for every wet weather day associated with that storm event must be assumed to be equal to the results from the one sample collected;
  - [b] If more than one sample is collected for a storm event, but not on a daily basis, the bacteria density for all wet weather days of the storm event not sampled must be assumed to be equal to the highest bacteria density result reported from the samples collected;
  - [c] If there are any storm events not sampled, the bacteria density for every wet weather day of those storm events must be assumed to be equal to the average of the highest bacteria densities reported from each storm event sampled; and
  - [d] The single sample maximum exceedance frequency must be calculated by dividing the number of wet weather days that exceed the single sample maximum receiving water limitations in Table 6.2 by the total number of wet weather days during the rainy season.
  - [e] The data collected for dry weather must be used in addition to the data collected for wet weather to calculate the wet weather 30-

day geometric means. The exceedance frequency of the wet weather 30-day geometric means must be calculated by dividing the number of geometric means that exceed the geometric mean receiving water limitations in Table 6.2 by the total number of geometric means calculated from samples collected during the wet season.

- (iv) For assessing and determining compliance with the concentration-based effluent limitations under Specific Provision 6.b.(2)(b)(i), dry and wet weather discharge bacteria densities may be calculated based on a flow-weighted average across all major MS4 outfalls along a water body segment or within a jurisdiction if samples are collected within a similar time period.
- (v) The monitoring and assessment results must be submitted as part of the Transitional Monitoring and Assessment Program and Water Quality Improvement Plan Annual Reports required under Provision F.3.b of this Order.

## (2) Monitoring and Assessment Requirements for Creeks and Creek Mouths

### (a) Monitoring Stations

For creeks addressed by the TMDL, monitoring locations should consist of, at a minimum, a location at or near the mouth of the creek (e.g. Mass Loading Station or Mass Emission Station) and one or more locations upstream of the mouth (e.g. Watershed Assessment Station). If exceedances of the applicable interim or final receiving water limitations are observed in the monitoring data, additional monitoring locations and/or other source identification methods must be implemented to identify the sources causing the exceedances. The additional monitoring locations must also be used to demonstrate that the bacteria loads from the identified sources have been addressed and are no longer causing exceedances in the receiving waters.

### (b) Monitoring Procedures

- (i) The Responsible Copermittees must collect dry weather monitoring samples from the receiving water monitoring stations in accordance with the requirements of Provision D.
- (ii) The Responsible Copermittees must collect wet weather monitoring samples from the receiving water monitoring stations within the first 24 hours of the end of a storm event<sup>42</sup> during the rainy season (i.e. October 1 through April 30).

<sup>42</sup> Wet weather days are defined by the TMDL as storm events of 0.2 inches or greater and the following 72 hours. The Responsible Copermittees may choose to limit their wet weather sampling requirements to

- (iii) Samples collected from receiving water monitoring stations must be analyzed for fecal coliform and *Enterococcus* indicator bacteria.
- (iv) For creeks or creek mouths listed in Table 6.0 that have been de-listed from the Clean Water Act Section 303(d) List, the Responsible Copermittees may propose alternative monitoring procedures to demonstrate that the water bodies continue to remain in compliance with water quality standards under wet weather and dry weather conditions. The alternative monitoring procedures must be submitted as a part of the Water Quality Improvement Plans or any updates required under Provisions F.1 and F.2.c of the Order.

(c) Assessment and Reporting Requirements

- (i) The Responsible Copermittees must analyze the receiving water monitoring data to assess whether the interim and final receiving water WQBELs for the creeks and creek mouths listed in Table 6.0 have been achieved.
- (ii) Dry weather exceedance frequencies must be calculated as follows:
  - [a] 30-day geometric means must be calculated from the results of any dry weather samples collected from the segment or area for each water body listed in Table 6.0;
  - [b] The method and number of samples need for calculating the 30-day geometric means must be consistent with the number of samples required by the Basin Plan;
  - [c] The exceedance frequency must be calculated by dividing the number of 30-day geometric means that exceed the 30-day geometric mean receiving water limitations in Table 6.2 by the total number of 30-day geometric means calculated from samples collected during the dry season.
- (iii) Wet weather exceedance frequencies must be calculated as follows:
  - [a] If only one sample is collected for a storm event, the bacteria density for every wet weather day associated with that storm event must be assumed to be equal to the results from the one sample collected;
  - [b] If more than one sample is collected for a storm event, but not on a daily basis, the bacteria density for all wet weather days of the storm event not sampled must be assumed to be equal to the highest bacteria density result reported from the samples collected;

---

storm events of 0.2 inches or greater, or also include storm events of 0.1 inches or greater as defined by the federal regulations [40CFR122.26(d)(2)(iii)(A)(2)].

- [c] If there are any storm events not sampled, the bacteria density for every wet weather day of those storm events must be assumed to be equal to the average of the highest bacteria densities reported from each of the storm events sampled; and
  - [d] The exceedance frequency must be calculated by dividing the number of wet weather days that exceed the single sample maximum receiving water limitations in Table 6.2 by the total number of wet weather days during the rainy season.
  - [e] The data collected for dry weather must be used in addition to the data collected for wet weather to calculate the wet weather 30-day geometric means. The exceedance frequency of the wet weather 30-day geometric means must be calculated by dividing the number of geometric means that exceed the geometric mean receiving water limitations in Table 6.2 by the total number of geometric means calculated from samples collected during the wet season.
- (iv) The Responsible Copermittee must identify and incorporate additional MS4 outfall and receiving water monitoring stations and/or adjust monitoring frequencies to identify sources causing exceedances of the receiving water WQBELs.
  - (v) For assessing and determining compliance with the concentration-based effluent limitations under Specific Provision 6.b.(2)(b)(i), dry and wet weather discharge bacteria densities may be calculated based on a flow-weighted average across all major MS4 outfalls along a water body segment or within a jurisdiction if samples are collected within a similar time period.
  - (vi) The monitoring and assessment results must be submitted as part of the Transitional Monitoring and Assessment Program and Water Quality Improvement Plan Annual Reports required under Provision F.3.b of this Order.

## 7. Total Maximum Daily Loads for Sediment in Los Peñasquitos Lagoon

### a. APPLICABILITY

- (1) TMDL Basin Plan Amendment: Resolution No. R9-2012-0033
- (2) TMDL Adoption and Approval Dates:
 

San Diego Water Board Adoption Date:	June 13, 2012
State Water Board Approval Date:	January 21, 2014
Office of Administrative Law Approval Date:	July 14, 2014
US EPA Approval Date:	October 30, 2014
- (3) TMDL Effective Date: July 14, 2014
- (4) Watershed Management Area: Peñasquitos
- (5) Water Body: Los Peñasquitos Lagoon
- (6) Responsible Copermittees: County of San Diego, City of San Diego, City of Del Mar, and City of Poway

### b. FINAL TMDL COMPLIANCE REQUIREMENTS

The final sediment TMDL compliance requirements for Los Peñasquitos Lagoon consist of the following:

#### (1) Final TMDL Compliance Date

The Responsible Copermittees must be in compliance with the final TMDL compliance requirements by December 31, 2034.

#### (2) Final Water Quality Based Effluent Limitations

##### (a) Final Receiving Water Limitations

Discharges from the MS4s must not prohibit the sustainable restoration of tidal and non-tidal saltmarsh vegetation of at least 346 acres.

##### (b) Final Effluent Limitations

Discharges from the MS4s containing pollutant loads that do not exceed the following effluent limitations by the compliance date under Provision 7.b(1) will not cause or contribute to a failure of the receiving water condition specified under Specific Provision 7.b.(2)(a):

**Table 7.1**

*Final Effluent Limitations as Expressed as Wet Season Loads in MS4 Discharges to Los Peñasquitos Lagoon\**

Constituent	Effluent Limitation
Sediment	2,580 tons/wet season

\* Final effluent limitations are to be achieved by the following Responsible Parties: County of San Diego, City of San Diego, City of Del Mar, City of Poway, Phase II MS4 permittees, Caltrans, general construction storm water NPDES permittees, and general industrial storm water NPDES permittees.

(c) **Best Management Practices**

- (i) The Water Quality Improvement Plan for the Los Peñasquitos Watershed Management Area must incorporate the Sediment Load Reduction Plan required to be developed pursuant to Resolution No. R9-2012-0033.
- (ii) The Responsible Copermittees must implement BMPs to achieve the receiving water limitations under Specific Provision 7.b.(2)(a) and/or the Copermittee's portion of the effluent limitations under Specific Provision 7.b.(2)(b) for Los Peñasquitos Lagoon.

(3) Final TMDL Compliance Determination

Compliance determination with the final WQBELs, on or after the final TMDL compliance date, may be demonstrated via one of the following methods:

- (a) Successful restoration of 80 percent of the 1973 acreage of tidal and non-tidal lagoon salt marsh (346 acres) as described in Attachment A of Resolution No. R9-2010-0033; OR
- (b) The Responsible Copermittees develop and implement the Water Quality Improvement Plan as follows:
  - (i) Incorporate the BMPs required under Specific Provision 7.b.(2)(c)(ii) and/or other implementation actions to achieve compliance with Specific Provision 7.b.(3)(a) as part of the Water Quality Improvement Plan,
  - (ii) Include an analysis in the Water Quality Improvement Plan, utilizing a watershed model or other watershed analytical tools, to demonstrate that the implementation of the BMPs required under Provision 7.b.(2)(c)(ii) or other implementation actions to achieve compliance with Specific Provision 7.b.(3)(a),
  - (iii) The results of the analysis must be accepted by the San Diego Water Board as part of the Water Quality Improvement Plan,

- (iv) The Responsible Copermittees continue to implement the BMPs required under Specific Provision 7.b.(2)(c)(ii) or other implementation actions, AND
- (v) The Responsible Copermittees continue to perform the specific monitoring and assessments specified in Specific Provision 7.d to demonstrate compliance with Specific Provision 7.b.(3)(a).

### c. INTERIM TMDL COMPLIANCE REQUIREMENTS

The interim sediment TMDL compliance requirements for Los Peñasquitos Lagoon consist of the following:

#### (1) Interim Compliance Dates and WQBELs

The Responsible Copermittees must comply with the interim WQBELs, expressed as wet season loads, by December 31 of the interim compliance year set forth in Table 7.2.

**Table 7.2**

*Interim Water Quality Based Effluent Limitations Expressed as Wet Season Loads in MS4 Discharges\**

Interim Compliance Date	Interim Effluent Limitations (tons/wet season)
December 31, 2019	6,691
December 31, 2023	5,663
December 31, 2027	4,636
December 31, 2029	3,608

\* Interim effluent limitations are to be achieved by the following Responsible Parties: County of San Diego, City of San Diego, City of Del Mar, City of Poway, Phase II MS4 permittees, Caltrans, general construction storm water NPDES permittees, and general industrial storm water NPDES permittees.

#### (2) Interim TMDL Compliance Determination

Compliance with interim WQBELs, on or after the interim TMDL compliance dates, may be demonstrated via one of the following methods:

- (a) There is no direct or indirect discharge from the Responsible Copermittee's MS4s to the receiving water; OR
- (b) The final receiving water limitation under Specific Provision 7.b.(2)(a) is met; OR
- (c) There are no exceedances of the Copermittee's portion of interim effluent limitations under Table 7.2 at the Responsible Copermittee's MS4 outfalls; OR

- (d) The Responsible Copermittees have submitted and is fully implementing a Water Quality Improvement Plan, accepted by the San Diego Water Board, which provides reasonable assurance that the Copermittee's portion of the interim TMDL compliance requirements described in Attachment A of Resolution No. R9-2010-0033 will be achieved by the interim compliance date.

**d. SPECIFIC MONITORING AND ASSESSMENT REQUIREMENTS**

(1) Watershed Monitoring

The Responsible Copermittees must conduct suspended sediment, bed load, and flow monitoring to calculate total sediment loading to the Los Peñasquitos Lagoon for each wet season (October 1 thru April 30) as set forth below:

- (a) The Responsible Copermittees must monitor enough storm events throughout the season to quantify sediment loading over each wet season, and
- (b) The Responsible Copermittees must monitor at least 3 stations to quantify cumulative sediment loading into Los Peñasquitos Lagoon. Stations must be located within the Los Peñasquitos, Carroll Canyon, and Carmel Creek tributaries prior to discharging into Los Peñasquitos Lagoon.

(2) Lagoon Monitoring

The Responsible Copermittees must monitor Los Peñasquitos Lagoon each Fall for changes in the extent of the vegetation types as set forth below:

- (a) The Responsible Copermittees must acquire aerial photos of Los Peñasquitos Lagoon and digitize them at an approximate scale of 1:2,500,
- (b) The Responsible Copermittees must appropriately interpret the vegetation and classify the various types as saltmarsh, non-tidal saltmarsh, freshwater marsh, non-tidal saltmarsh –*Lolium perrene* infested, southern willow scrub/mulefat scrub, herbaceous wetland, or upland land cover.

(3) Assessment and Reporting Requirements

- (a) The Responsible Copermittees must analyze the monitoring data collected under Specific Provision 7.d(1) and 7.d(2) to assess whether the interim and final WQBELs have been achieved.
- (b) For assessing and determining compliance with the final receiving water limitations under Specific Provision 7.b.(2)(a), the Responsible Copermittees must use the data acquired under Specific Provision 7.d.(2) to estimate the acreage of tidal and non-tidal saltmarsh actually restored.

- (c) For assessing and determining compliance with the final effluent limitations under Specific Provision 7.b.(2)(b), the Responsible Copermittees must use the data acquired under Specific Provision 7.d.(1) to estimate sediment loading into Los Peñasquitos Lagoon. Sediment loading must be evaluated using a 3-year, weighted rolling average. The first reported average shall be calculated using data collected in the year, 2015-2016, 2016-2017, and 2017-2018 wet seasons.
- (d) The monitoring and assessment results must be submitted as part of the Water Quality Improvement Plan Annual Reports required under Provision F.3.b of this Order.

## I. FACT SHEET FORMAT

This Fact Sheet briefly sets forth the principal facts and the significant factual, legal, methodological, and policy questions that the California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) considered in preparing Order No. R9-2013-0001 (Order), as amended by Order Nos. R9-2015-0001 and R9-2015-0100. In accordance with the Code of Federal Regulations (CFR) Title 40 Parts 124.8 and 124.56 (40 CFR 124.8 and 40 CFR 124.56), this Fact Sheet includes, but is not limited to, the following information:

1. Contact information
2. Public process and notification procedures
3. Background of municipal storm water permits
4. Regional MS4 Permit approach
5. Economic considerations
6. Applicable statutes, regulations, plans and policies
7. Discussion of the provisions in the Order

Tentative Order No. R9-2013-0001 was distributed for public review on October 31, 2012. The San Diego Water Board accepted written comments on Tentative Order No. R9-2013-0001 until January 11, 2013. A public hearing was subsequently held on April 10 and 11, 2013, that was continued to May 8, 2013 to receive oral comments from interested persons. The San Diego Water Board adopted Order No. R9-2013-0001 on May 8, 2013.

Tentative Order No. R9-2015-0001, an Order amending Order No. R9-2013-0001, was distributed for public review on September 19, 2014. The San Diego Water Board accepted written comments on Tentative Order No. R9-2015-0001 until November 19, 2014. A public hearing was held on February 11, 2015, to receive oral comments from Copermittees and interested persons. The San Diego Water Board adopted Order No. R9-2015-0001 amending Order No. R9-2013-0001 on February 11, 2015. Order No. R9-2015-0001 amended the findings and provisions of Order No. R9-2013-0001 to:

- a. Enroll the County of Orange, the Orange County Flood Control District and the south Orange County Cities of Aliso Viejo, Dana Point, Laguna Beach, Laguna Hills, Laguna Niguel, Laguna Woods, Mission Viejo, Rancho Santa Margarita, San Clemente, and San Juan Capistrano as Copermittees responsible for compliance with the terms and conditions of Order No. R9-2013-0001, as amended by Order No. R9-2015-0001;
- b. Designate the San Diego Water Board to regulate all Phase I MS4 discharges within the jurisdiction of the Cities of Laguna Woods and Laguna Hills and agree to the designation of the Santa Ana Water Board to regulate all Phase I MS4 discharges within the jurisdiction of the City of Lake Forest, subject to the

terms of the February 10, 2015 agreement between San Diego Water Board and the Santa Ana Water Board described in Finding 29 of this Order, upon the later effective date of Order No. R9-2015-0001 or Order No. R8-2015-0001 (superseding Order No. R8-2009-0030);

- c. Establish interim exceptions to land development requirements for those priority development projects that discharge to engineered channels and large river reaches as described in Provision E.3.c.(2)(e) of this Order;
- d. Incorporate the amended requirements of the State Water Resources Control Board's (State Water Board) General Exception to require that pollutant reductions be achieved within 6 years for storm water and nonpoint source discharges to ASBS within the Region;
- e. Incorporate applicable requirements of the Los Peñasquitos Lagoon Sediment TMDL; and
- f. Require the Orange County Copermittees to implement the "*Workgroup Recommendation for a Unified Beach Water Quality Monitoring and Assessment Program in South Orange County*," dated October 2014, made effective in the Monitoring and Reporting Program/Order issued pursuant to California Water Code section 13383 in the December 5, 2014 San Diego Water Board Letter Directive and subject to future revisions by the Executive Officer after appropriate public input.

Tentative Order No. R9-2015-0100, an Order amending Order No. R9-2013-0001 as amended by Order No. R9-2015-0001, was distributed for public review on July 31, 2015. The San Diego Water Board accepted written comments on Tentative Order No. R9-2015-0100 until September 14, 2015. A public hearing was held on November 18, 2015, to receive oral comments from Copermittees and interested persons. The San Diego Water Board adopted Order No. R9-2015-0100 amending Order No. R9-2013-0001 as amended by Order No. R9-2015-0001, on November 18, 2015. Order No. R9-2015-0100 amended the findings and provisions of Order No. R9-2013-0001 as amended by Order No. R9-2015-0001 to:

- a. Enroll the County of Riverside, the Cities of Murrieta, Temecula, and Wildomar, and the Riverside County Flood Control and Water Conservation District as Copermittees responsible for compliance with the terms and conditions of Order No. R9-2013-0001, as amended by Order Nos. R9-2015-0001 and R9-2015-0100;
- b. Continue designation of the San Diego Water Board to regulate Phase I MS4 discharges within the jurisdictions of the Cities of Murrieta and Wildomar, including areas within the Santa Ana Region; and, agree to continue designation of the Santa Ana Water Board to regulate all Phase I MS4 discharges within the jurisdiction of the City of Menifee, including areas within

the San Diego Region, subject to the terms of the October 26, 2015 agreement between San Diego Water Board and the Santa Ana Water Board described in Finding 29 of this Order;

- d. Incorporate Provision B.3.c, which provides an option that allows a Copermittee to utilize the watershed-based Water Quality Improvement Plan to be deemed in compliance with the prohibitions and limitations of Provisions A.1.a, A.1.c, A.1.d, A.2, and A.3.b;
- e. Incorporate minor revisions to Provisions E.2.a.(1) and E.2.a.(2) to include San Diego Water Board Order No. R9-2015-0013 and State Water Board Order 2014-0194-DWQ into the requirements for addressing non-storm water discharges to a Copermittee's MS4;
- e. Incorporate minor revisions to Provision E.3.b.(1) to correct inconsistencies in the definition of a Priority Development Project as compared to the definitions in Order No. R9-2009-0002 (Fourth Term Orange County MS4 Permit) and Order No. R9-2010-0016 (Fourth Term Riverside County MS4 Permit), and requirements for incorporating the corrected definitions into the BMP Design Manual;
- f. Incorporate revisions to Provision E.3.e.(1)(a) to provide additional clarity on when the structural BMP performance requirements of Provision E.3.c are applicable to Priority Development Projects;
- e. Incorporate minor revisions to the Revised TMDLs for Indicator Bacteria, Project I – Twenty Beaches and Creeks in the San Diego Region and the TMDLs for Sediment in Los Peñasquitos Lagoon in Attachment E to the Order to make the requirements consistent with the Basin Plan amendments adopted by the San Diego Water Board; and
- f. Remove provisions related to allowing the Riverside County Copermittees to apply for early coverage under the Regional MS4 Permit.

The San Diego Water Board files applicable to the issuance of Order No. R9-2013-0001 and amendments thereto are incorporated into the administrative record in support of the findings and requirements of the Order.

The Order and other related documents can be downloaded from the San Diego Water Board website at

[http://www.waterboards.ca.gov/sandiego/water\\_issues/programs/stormwater/index.shtml](http://www.waterboards.ca.gov/sandiego/water_issues/programs/stormwater/index.shtml)

The documents referenced in this Fact Sheet and in Order No. R9-2013-0001 and amendments thereto are available for public review at the San Diego Water Board office, located at the address listed above. Public records are available for inspection during regular business hours, from 8:00 am to 5:00 pm Monday through Friday. To schedule an appointment to inspect public records, contact the San Diego Water Board Records Management Officer at 619-516-1990.

## COPERMITTEES

### Orange County Copermittees

- County of Orange
  - City of Aliso Viejo
  - City of Dana Point
  - City of Laguna Beach
  - City of Laguna Hills
  - City of Laguna Niguel
  - City of Laguna Woods
- City of Lake Forest \*
- City of Mission Viejo
- City of Ranch Santa Margarita
- City of San Clemente
- City of San Juan Capistrano
- Orange County Flood Control District

\* While not listed in the above table, the City of Lake Forest remains a Copermittee under this Order until the later effective date of this Order or Santa Ana Water Board Tentative Order No. R8-2015-0001. Thereafter, the City of Lake Forest will no longer be considered a Copermittee under this Order because its Phase I MS4 discharges will be regulated by the Santa Ana Water Board pursuant to Water Code section 13328 designation. The requirements of this Order that apply to the City of Lake Forest for the duration of this Order, consistent with the Water Code section 13228 agreement dated February 10, 2015, are described in Finding 29 and Footnote 2 to Table B-1.

### Riverside County Copermittees

- County of Riverside
  - City of Menifee\*\*
  - City of Murrieta
  - City of Temecula
- City of Wildomar
- Riverside County Flood Control and Water Conservation District

\*\* The City of Menifee is not regulated as a Copermittee under this Order because its Phase I MS4 discharges are regulated by Santa Ana Water Board Order No. R8-2010-0033 as it may be amended or issued pursuant to Water Code section 13228 designation. The requirements of this Order that apply to the City of Menifee for the duration of this Order, consistent with the Water Code section 13228 written agreement dated October 26, 2015, are described in Finding 29 and Footnote 3 to Table B-1.

### San Diego County Copermittees

- County of San Diego
  - City of Carlsbad
  - City of Chula Vista
  - City of Coronado
  - City of Del Mar
  - City of El Cajon
  - City of Encinitas
  - City of Escondido
  - City of Imperial Beach
  - City of La Mesa
  - City of Lemon Grove
- City of National City
- City of Oceanside
- City of Poway
- City of San Diego
- City of San Marcos
- City of Santee
- City of Solana Beach
- City of Vista
- San Diego County Regional Airport Authority
- San Diego Unified Port District

### III. PUBLIC PROCESS AND NOTIFICATION PROCEDURES

The San Diego Water Board followed the schedule listed below for the preparation of Order No. R9-2013-0001 and amendments thereto:

#### **San Diego County Copermittee Permit Reissuance Process**

1. On February 8, 2011, the San Diego Water Board met with the San Diego County Copermittees to discuss the Report of Waste Discharge required pursuant to Order No. R9-2007-0001.
2. Between February and May 2011, the San Diego Water Board met with select San Diego County, Orange County, and Riverside County Copermittees, as well as representatives of the environmental community to discuss concepts and receive recommendations for elements to be incorporated in a Regional Municipal Separate Storm Sewer System Permit (Regional MS4 Permit).
3. On June 27, 2011 the San Diego Water Board received the Report of Waste Discharge from the San Diego County Copermittees for the renewal of their NPDES permit, Order No. R9-2007-0001.
4. On April 9, 2012, the San Diego Water Board released an administrative draft of Tentative Order No. R9-2013-0001 for preliminary informal comments and feedback.
5. On April 25, 2012, the San Diego Water Board held an informal public workshop to present the administrative draft of Tentative Order No. R9-2013-0001 and receive verbal comments.
6. Between June and August 2012, the San Diego Water Board held four (4) focused meetings with representatives of the principal stakeholders (the Copermittees, the environmental community, the development/business community, and USEPA) to discuss and receive preliminary comments and feedback about specific elements in the administrative draft of Tentative Order No. R9-2013-0001.
7. On September 5, 2012, the San Diego Water Board held an informal public workshop to present the modifications that were expected to be incorporated into the Tentative Order based on the preliminary comments and feedback received during the focused meetings held between June and August 2012.
8. Informal written comments on the administrative draft of Tentative Order No. R9-2013-0001 were accepted until September 14, 2012.
9. On October 12, 2012, the San Diego Water Board released a revised administrative draft of Tentative Order No. R9-2013-0001.

10. On October 24, 2012, the San Diego Water Board held a focused meeting with representatives of the principal stakeholders (the Copermittees, the environmental community, the development/business community, and USEPA) to discuss modifications incorporated into the administrative draft of Tentative Order No. R9-2013-0001.
11. On October 31, 2012, the San Diego Water Board released Tentative Order No. R9-2013-0001 for formal public review and comment.
12. On November 13, 2012 and December 12, 2012, the San Diego Water Board held a formal public Board workshop to present the public draft of Tentative Order No. R9-2013-0001 and receive verbal comments.
13. Formal written comments on the public draft of Tentative Order No. R9-2013-0001 were accepted until January 11, 2013.
14. A public hearing of Tentative Order No. R9-2013-0001 was conducted on April 10 and 11, 2013, that was continued to May 8, 2013.

#### **Orange County Copermittee Permit Reissuance Process**

15. On May 20, 2014 the San Diego Water Board received the Report of Waste Discharge from the Orange County Copermittees for the renewal of their MS4 NPDES permit, Order No. R9-2009-0002.
16. On June 24, 2014, the San Diego Water Board met with the Orange County Copermittees to discuss the Report of Waste Discharge required pursuant to Order No. R9-2009-0002 and the process for enrollment as Copermittees under Regional MS4 Permit Order No. R9-2013-0001.
17. On July 1, 2014, the San Diego Water Board held a public meeting to discuss the Orange County Report of Waste Discharge and receive comments on potential modifications to Order No. R9-2013-0001. Based on comments received from the Orange County Copermittees and other interested persons at this meeting, the San Diego Water Board determined that additional public meetings were not needed prior to release of Tentative Order No. R9-2015-0001, amending Order No. R9-2013-0001 in redlined – strikeout format for public review and comment.
18. On September 19, 2014, the San Diego Water Board released Tentative Order No. R9-2015-0001 for a 60 day public review and comment period.
19. On October 8, 2014, the San Diego Water Board held a formal public workshop at a regular board meeting to receive information and discuss the proposed amendments to Order No. R9-2013-0001 described in Tentative Order No. R9-2015-0001.

20. In accordance with State and federal laws and regulations, the San Diego Water Board notified San Diego County, Orange County and Riverside County Copermittees, and all known interested agencies and persons of its intent to adopt Tentative Order No. R9-2015-0001 and provided them with an opportunity to submit their written comments and recommendations. Written comments and recommendations on Tentative Order No. R9-2015-0001 were accepted until November 19, 2014.
21. The San Diego Water Board held a public workshop on October 8, 2014, and a public hearing on February 11, 2015, and heard and considered all comments pertaining to the adoption of Tentative Order No. R9-2015-0001 on February 11, 2015.

### **Riverside County Copermittee Permit Reissuance Process**

22. Between April and June 2015, the San Diego Water Board held three (3) public workshops with representatives of the principal stakeholders (the Copermittees, the environmental community, the development/business community) to discuss and receive comments and feedback about amending Order No. R9-2013-0001 to incorporate a definition of prior lawful approval for Priority Development Projects, and an alternative compliance pathway for prohibitions and limitations in Provision A of the Order. A San Diego Water Board member attended the April and May 2015 public workshops, but no actions or voting took place.
23. On April 15, 2015, the San Diego Water Board met with the Riverside County Copermittees to discuss the Report of Waste Discharge required pursuant to Order No. R9-2010-0016 and the process for enrollment as Copermittees under Order No. R9-2013-0001 (Regional MS4 Permit).
24. On May 8, 2015 the San Diego Water Board received a Report of Waste Discharge from the Riverside County Copermittees for the renewal of their MS4 NPDES permit, Order No. R9-2010-0016.
25. On July 31, 2015, the San Diego Water Board released Tentative Order No. R9-2015-0100 for a formal public review and comment period.
26. Formal written comments on the public draft of Tentative Order No. R9-2015-0100 were accepted until September 14, 2015, a formal public written comment period of 46 days.
27. A public hearing to receive oral comments on Tentative Order No. R9-2015-0100 was conducted on November 18, 2015.

#### **IV. BACKGROUND OF THE SAN DIEGO REGION MUNICIPAL STORM WATER PERMITS**

In developed and developing areas, storm water runoff is commonly transported through municipal separate storm sewer systems (MS4s) and discharged into local receiving water bodies. As the storm water runs off and flows over the land or impervious surfaces (e.g., paved streets, parking lots, and building rooftops), it accumulates debris, chemicals, sediment, and other pollutants that can adversely affect receiving water quality if discharged untreated. The United States Environmental Protection Agency (USEPA) recognizes wet weather flows from urban areas as the number one source of estuarine pollution in coastal communities,<sup>1</sup> such as those within the San Diego Region.

The federal Clean Water Act (CWA) was amended in 1987 to address and regulate discharges of storm water associated with industrial activities and from municipal storm sewers. With the amendments, many municipalities throughout the United States were obligated for the first time to obtain National Pollutant Discharge Elimination System (NPDES) permits for discharges of storm water from their MS4s.

In response to the CWA 1987 amendment, as well as the pending federal NPDES regulations which would implement the amendment, the San Diego Water Board issued “early” MS4 permits. The San Diego Water Board adopted and issued Order Nos. 90-38, 90-42, and 90-46 to regulate storm water discharges from the MS4s in Orange County, San Diego County, and Riverside County, respectively, within the San Diego Region on July 16, 1990.

The “early” MS4 permits, or First Term Permits, were issued prior to the November 1990 promulgation of the final federal NPDES storm water regulations. By issuing these First Term Permits before the federal regulations took effect, the San Diego Water Board was able to provide the Copermittees additional flexibility in addressing and managing storm water discharges. The First Term Permits contained the essentials of the 1990 regulations, and required the Copermittees to develop and implement runoff management programs, but provided little specificity about what was required to be included in or actually achieved by those programs.

The flexibility provided in the First Term Permits was generally continued through the Second Term Permits. The combination of the lack of specificity in the First and Second Term Permits, a general lack of meaningful action by the Copermittees and a general lack of corresponding reaction (i.e. enforcement) by the San Diego Water Board during the first ten years of the storm water program, resulted in few substantive steps towards achieving improvements in the quality of receiving waters or storm water discharges from the MS4s.

---

<sup>1</sup> US EPA. 1999. 40 CFR Parts 9, 122, 123, and 124. National Pollutant Discharge Elimination System – Regulations for Revision of the Water Pollution Control Program Addressing Storm Water Discharges; Final Rule. 64 FR 68727.

From 2001, the regulatory approach incorporated into Third Term Permits was a significant departure from the regulatory approach of the First and Second Term Permits. The Third Term Permits issued by the San Diego Water Board included more detailed requirements that outlined the minimum level of implementation required for the Copermittees' programs to meet the maximum extent practicable (MEP) standard for storm water. The Third Term Permits included more detail to emphasize and enhance the jurisdictional runoff management programs developed by the Copermittees and introduced requirements for developing and implementing watershed-based programs.

The Third Term Permits also incorporated two precedent setting decisions by the State Water Board. In Order WQ 99-05, the State Water Board established receiving water limitation language to be included in all MS4 permits. The State Water Board's precedential language clarified that municipal storm water permits must include provisions requiring discharges to be controlled to attain water quality standards in receiving waters. Unlike previously adopted versions of the receiving water limitation language in the First and Second Term Permits, the language no longer stated that "*violations of water quality standards are not violations of the municipal storm water permit under certain conditions.*" In addition, the receiving water limitation language no longer indicated that the "*implementation of best management practices is the 'functional equivalent' of meeting water quality standards.*" State Water Board Order WQ 99-05 specifically requires language in MS4 permits for the Copermittees to comply with water quality standards based discharge prohibitions and receiving water limitations through timely implementation of control measures and other actions to reduce pollutants in discharges. (See State Water Board Order WQ 99-05 (*Environmental Health Coalition*)).

In Order WQ 2000-11, also a precedential decision, the State Water Board addressed design standards for structural post-construction best management practices (BMPs) for new development and significant redevelopment. The State Water Board found that the design standards, which require that runoff generated by 85 percent of storm events from specific development categories be infiltrated or treated, reflect the MEP standard. State Water Board Order WQ 2000-11 also found that the post-construction BMP provisions, or Standard Storm Water Mitigation Plan (SSMP) provisions, constitute MEP for addressing storm water pollutant discharges resulting from specific development categories.

The Third Term San Diego County and Orange County Permits (Order Nos. 2001-01 and R9-2002-0001, respectively) were appealed to the State Water Board. Minor modifications were made by the State Water Board, but the requirements were largely upheld. In State Water Board Order WQ 2001-15, the State Water Board upheld the Third Term San Diego County Permit requirements with certain modifications. The State Water Board removed the prohibition of storm water discharges *into* the MS4 that cause or contribute to exceedances of water quality objectives. The revision allows for treatment of pollutants in storm water runoff after the pollutants have entered the MS4.

State Water Board Order WQ 2001-15 otherwise upheld all the other requirements of the permit.

In addition to the modification to the discharge prohibition in Order WQ 2001-15, the State Water Board refined Order WQ 99-05 by making clear that the Copermitees may use an iterative approach to achieving compliance with water quality standards that involves ongoing assessments and revisions. Thus, the language for the discharge prohibitions and receiving water limitations was revised to explicitly require the Copermitees to implement an iterative process of assessments and revisions to comply with the discharge prohibitions and receiving water limitations. The San Diego Water Board retained the authority to enforce receiving water limitations and discharge prohibitions even if the Copermitee is engaged in the iterative process.

The Third Term San Diego County Permit was subsequently challenged in the Superior Court of the State of California and the Court of Appeal, Fourth Appellate District. The Court of Appeal, Fourth Appellate District, found that the approach of the Third Term San Diego County Permit to regulating discharges into the MS4 was appropriate (*Building Industry Ass'n. v. State Water Resources Control Bd., et al.*, 124 Cal.App.4<sup>th</sup> 866 (2004)). The State of California Supreme Court denied review sought by the Building Industry Association in March 2005.

The Fourth Term Permits began with the adoption of Order No. R9-2007-0001 issued to the Copermitees of San Diego County in January 2007. Order Nos. R9-2009-0002 and R9-2010-0016 were subsequently issued to the Copermitees of Orange County and Riverside County. The Fourth Term Permits continued to include more detailed requirements to be implemented by each Copermitee's jurisdictional runoff management program. The Fourth Term Permits also included requirements to further emphasize a watershed management approach and for more coordination among jurisdictional runoff management programs. In addition, the Fourth Term Permits included more requirements for assessing the effectiveness of the runoff management programs being implemented by the Copermitees. The intent of the inclusion of additional requirements was to enhance and better define elements of the permit that were expected to be incorporated into the iterative process for managing runoff from each Copermitee's jurisdiction and within the watersheds of the San Diego Region.

The Fourth Term Permits included several new and emerging approaches for managing storm water runoff and discharges. Low impact development (LID) requirements are included for development and significant redevelopment to reduce pollutants in storm water runoff from sites through more natural processes such as infiltration and biofiltration closer to the source, rather than utilizing conventional mechanical end-of-pipe treatment systems. Hydrograph modification (hydromodification) management requirements also are included to mitigate the potential for increased erosion in receiving waters due to increased runoff rates and durations often caused by development and increased impervious surfaces. The Fourth Term Orange County and Riverside County Permits introduced requirements to identify areas of existing

development where retrofitting with LID projects would be feasible and could be implemented to reduce storm water runoff and pollutants in storm water discharges.

The Fourth Term Orange County and Riverside County Permits included a clearer distinction between storm water and non-storm water discharges. The term “urban runoff” was completely removed, and a distinction between storm water (wet weather) runoff and non-storm water (dry weather) runoff was emphasized. This clarification was made to prevent any potential misunderstanding that regulation under the MS4 permits is limited only to urbanized areas, and to prevent non-storm water runoff from being managed in the same manner as storm water runoff. The term “urban runoff” is not defined in the Code of Federal Regulations (CFR) or Federal Register (FR) in the regulation of MS4 discharges. According to the CWA 402(p)(3)(B)(ii), MS4 permits must include a requirement to effectively prohibit non-storm water discharges into the MS4s.

Finally, for the Fourth Term Orange County and Riverside County Permits the San Diego Water Board found that non-storm water discharges to the MS4 from over application of irrigation water are sources of pollutants. The San Diego Water Board found that non-storm water discharges resulting from over-irrigation must be prohibited from entering the MS4 in accordance with the requirements of the CWA and pursuant to 40 CFR 122.26(d)(2)(iv)(B)(1).

The requirements of the Fourth Term Permits issued to the Copermittees in each county within the San Diego Region now have substantively the same core requirements such as discharge prohibitions, receiving water limitations, jurisdictional runoff management program components, and monitoring program requirements. There are, however, several inconsistencies that exist among the three Fourth Term Permits which complicate oversight and implementation of the permits by the San Diego Water Board.

The Fourth Term San Diego County Permit expired in January 2012. The Fourth Term Orange County permit expired in December 2014 and the Fourth Term Riverside County Permit expired in November 2015. Issuing the Fifth Term Permits within five years for three counties under three different permits would have required the San Diego Water Board to expend significant time and resources for the issuance of the permits through three separate public proceedings, thereby greatly reducing the time and resources available to oversee implementation and compliance. Multiple permits also create confusion for determining compliance among regulated entities, especially for the land development community.

The San Diego Water Board acknowledged that issuing a single MS4 permit for all the Copermittees in the San Diego Region can and is expected to result in more consistent implementation, improve communication among agencies within watersheds crossing multiple jurisdictions, and minimize resources spent with each permit renewal process. Within the findings of the Fourth Term Riverside County Permit issued in November 2010, the San Diego Water Board notified the public of its intent to develop and issue a single Regional MS4 Permit.

## **V. REGIONAL MS4 PERMIT APPROACH**

The Fifth Term Permit, or Regional MS4 Permit, shifts the focus of the permit requirements from a minimum level of actions to be implemented by the Copermitees to identifying outcomes to be achieved by those actions. Order No. R9-2013-0001 represents an important paradigm shift in the approach for MS4 permits within the San Diego Region.

### **Historical Permitting Approach**

The First and Second Term Permits were very broad and provided little specificity about what was required to be developed and implemented by the Copermitees. The Third Term Permits began to become more specific about the minimum level of implementation required by the Copermitees. The Fourth Term Permits subsequently increased in specificity. The MS4 permits have progressively become more detailed and focused on specifying the minimum level of actions expected to be implemented by the Copermitees. As detailed and specific as the MS4 permits have become, however, they include very little detail about what the desired outcomes of the required actions are expected to achieve. Compliance with the permit requirements has essentially been tracking numbers of actions and reporting, not tracking progress or actual improvements in the quality of receiving waters or discharges from the MS4s. The result has been an increase in actions being implemented by the Copermitees with little or no ability or expectations to determine whether or not improvements in water quality are being achieved.

The Fourth Term Permits result in significant resource expenditure by the Copermitees to report permit compliance information to the San Diego Water Board in the form of annual jurisdictional runoff management program, watershed program, and monitoring program reports. The San Diego Water Board was required to expend much of its limited resources on reviewing more than 50 voluminous reports submitted annually by the Copermitees. The information reported by the Copermitees was of limited value when trying to measure progress toward achieving improvements in the quality of receiving waters or discharges from the MS4s. Oversight of the MS4 permits was further complicated by the inconsistencies among the requirements issued to the Orange County, San Diego County, and Riverside County Copermitees under three separate MS4 permits.

Under the Fourth Term Permits, the Copermitees were required to expend a significant portion of their limited resources collecting data of limited value, and putting together reports to submit that information to the San Diego Water Board. Likewise, the San Diego Water Board was required to expend most of its limited resources reviewing reports, and developing permits instead of working directly with the Copermitees to identify solutions to problems causing impacts to water quality. This was an unsustainable course that would have continued to demand more resources

from the Copermittees and the San Diego Water Board, and would have continued to result in unknown water quality benefits.

### **New Permitting Approach**

The goal of the Regional MS4 Permit is twofold: 1) bring a consistent set of MS4 permit requirements to all of the Copermittees within the San Diego Region; and, 2) provide an MS4 permit with requirements that will allow the Copermittees to focus their efforts and resources on achieving goals and desired outcomes toward the improvement of water quality rather than completing specific actions.

The overall approach included in the Regional MS4 Permit with respect to the jurisdictional runoff management programs will not differ significantly from the current permits. The general requirements for the jurisdictional runoff management program components and compliance with those requirements will remain and be applied consistently throughout the San Diego Region under the Regional MS4 Permit.

The most significant difference in the new permitting approach is the specific manner of implementation for those jurisdictional runoff management programs. Implementation will be based on decisions made by the Copermittees in accordance with what they have identified as their highest priority water quality conditions. In other words, the Copermittees will have significant control in how to implement the jurisdictional runoff management programs to best utilize their available resources in addressing a specific set of priorities effectively, instead of trying to address all the water quality priorities ineffectively.

The Copermittees are given the responsibility of identifying their highest priority water quality conditions that they intend to address. The Copermittees will develop goals that can be used to measure and demonstrate progress or improvements toward addressing those priorities. In addition to the goals, the Copermittees will provide a schedule for achieving the goals for those highest priorities. The measurement of progress toward achieving the goals for those highest priorities requires a better defined and more focused program of monitoring and assessment than under the Fourth Term Permits.

The monitoring and assessment program must be designed to inform the Copermittees of their progress, and the need for modifications in their jurisdictional runoff management programs and schedules to achieve their goals to improve water quality. The monitoring and assessment program requirements will have a more central role in the Regional MS4 Permit than in earlier permits. The monitoring and assessment requirements must also be designed to enable the Copermittees to focus and direct their efforts in implementing their jurisdictional runoff management programs toward their stated desired outcomes to improve the quality of receiving waters and/or discharges from the MS4s.

By providing an MS4 permit that allows the Copermittees to make more decisions about how to utilize and focus their resources, along with a better defined monitoring and assessment program to inform their water quality management decisions, the Copermittees have the opportunity to:

- 1) *Plan strategically.* The Copermittees must have the ability to identify their available resources and develop and implement long term plans that can organize, collect, and use those resources in the most strategically advantageous and efficient manner possible. This ability to develop long term plans will allow the Copermittees to focus and utilize their resources in a more concerted way over the short term and long term to address specific water quality priorities through stated desired outcomes.
- 2) *Manage adaptively.* The Copermittees must be given the ability to modify their plans as additional information and data are collected from the monitoring and assessment programs. The Copermittees' plans may require modifications to the programs, priorities, goals, strategies, and/or schedules in order for the Copermittees to achieve a stated desired outcome.
- 3) *Identify synergies.* The Copermittees must be given more flexibility to identify efficiencies within and among their jurisdictional runoff management programs as the strategies are developed and implemented to increase the Copermittees' collective effectiveness. The Copermittees must also be able to identify and utilize resources available from other agencies and entities to further augment and enhance their jurisdictional runoff management programs and/or to collectively work with those other agencies and entities toward achieving a stated desired outcome.

The Regional MS4 Permit requirements provide the Copermittees the flexibility and responsibility to decide what actions will be necessary to achieve an outcome that is tailored and designed by the Copermittees to improve specific prioritized water quality conditions. The San Diego Water Board expects the approach of the Regional MS4 Permit to give the Copermittees a greater sense of ownership for restoring the quality of receiving waters in the San Diego Region by becoming an integral part of the decision making process in identifying water quality conditions to be addressed, as well as determining the best use of their resources.

## VI. ECONOMIC CONSIDERATIONS

### Statutory Considerations

California Water Code (CWC) section 13241 requires the San Diego Water Board to consider certain factors, including economic considerations, in the adoption of water quality objectives. CWC section 13263 requires the San Diego Water Board to take into consideration the provisions of CWC section 13241 in adopting waste discharge requirements.

In *City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4<sup>th</sup> 613, the California Supreme Court considered whether Regional Water Boards must comply with CWC section 13241 when issuing waste discharge requirements under CWC section 13263(a) by taking into account the costs a permittee will incur in complying with the permit requirements. The Court concluded that whether it is necessary to consider such cost information “*depends on whether those restrictions meet or exceed the requirements of the federal Clean Water Act.*” (*Id.* at p. 627.) The Court ruled that Regional Water Boards may not consider the factors in CWC section 13241, including economics, to justify imposing pollutant restrictions that are less stringent than applicable federal law requires. (*Id.* At pp. 618, 626-627 [“*[Water Code section 13377 specifies that [ ] discharge permits issued by California’s regional boards must meet the federal standards set by federal law. In effect, section 13377 forbids a regional board’s consideration of any economic hardship on the part of the permit holder if doing so would result in the dilution of the requirements set by Congress in the Clean Water Act...Because CWC section 13263 cannot authorize what federal law forbids, it cannot authorize a regional board, when issuing a [ ] discharge permit, to use compliance costs to justify pollutant restrictions that do not comply with federal clean water standards.*”]). However, when pollutant restrictions in an NPDES permit are more stringent than federal law requires, CWC section 13263 requires that the Regional Water Boards consider the factors described in CWC section 13241 as they apply to those specific restrictions.

As discussed in Section VII.F, Unfunded State Mandates, the San Diego Water Board finds that the requirements in this Order are not more stringent than the minimum federal requirements. Among other requirements, federal law requires MS4 permits to include requirements to effectively prohibit non-storm water discharges into the MS4s, in addition to requiring controls to reduce the discharge of pollutants in storm water to the MEP, and other provisions as USEPA or the State determines are appropriate for the control of pollutants in MS4 discharges.

The requirements in this Order may be more specific or detailed than those enumerated in federal regulations under 40 CFR 122.26 or in the USEPA guidance. However, the requirements have been designed to be consistent with and within the federal statutory mandates described in CWA section 402(p)(3)(B)(ii) and (iii) and the related federal regulations and guidance. Consistent with federal law, all of the

conditions in this Order could have been included in a permit adopted by USEPA in the absence of the in lieu authority of California to issue NPDES permits.

Moreover, the inclusion of numeric WQBELs in this Order does not cause this Order to be more stringent than federal law. Federal law authorizes both narrative and numeric effluent limitations to meet state water quality standards. The inclusion of WQBELs as discharge specifications in an NPDES permit in order to achieve compliance with water quality standards is not a more stringent requirement than the inclusion of BMP based permit limitations to achieve water quality standards (State Water Board Order No. WQ 2006-0012 (*Boeing*)). Therefore, consideration of the factors set forth in CWC section 13241 is not required for permit requirements to implement the effective prohibition on the discharge of non-storm water discharges into the MS4 or for controls to reduce the discharge of pollutants in storm water to the MEP, or other provisions that the San Diego Water Board has determine appropriate to control such pollutants, as those requirements are mandated by federal law.

Included in the provisions of the Order are monitoring and reporting requirements that are designed to demonstrate that the Copermittees are implementing programs to comply with the CWA municipal storm water requirements. CWA section 308(a) and 40 CFR 122.41(h), (j)-(l), 122.44(i) and 122.48 require that all NPDES permits specify monitoring and reporting requirements. Federal regulations applicable to large and medium MS4s (40 CFR 122.26(d)(1)(iv)(D), 122.26(d)(1)(v)(B), 122.26(d)(2)(i)(F), 122.26(d)(2)(iii)(D), 122.26(d)(2)(iv)(B)(2) and 122.42(c)) also specify additional monitoring and reporting requirements. In addition to the federal requirements of the CWA, the San Diego Water Board also has the authority in CWC 13383 to establish monitoring, reporting, and recordkeeping requirements that implement federal and state laws and regulations through NPDES permits.

The monitoring and assessment information that will be reported to the San Diego Water Board is necessary to determine if the Copermittees are making progress toward achieving compliance with the discharge prohibitions, receiving water limitations, and effluent limitations under Provision A of the Order. The monitoring and assessment information that will be reported is also expected to be key to the iterative approach and adaptive management process that is required to be implemented by the Copermittees if they cannot meet the discharge prohibitions and receiving water limitations under the present conditions, which is also part of the requirements under Provision A of the Order.

Notwithstanding the above, the San Diego Water Board has considered cost information in issuing this Order, as discussed below. The San Diego Water Board has also considered all of the evidence that has been presented to the San Diego Water Board regarding the CWC section 13241 factors in adopting this Order. The San Diego Water Board finds that the requirements in this Order are reasonably necessary to protect beneficial uses identified in the Basin Plan and the economic information related to costs of compliance and other CWC section 13241 factors are not sufficient to justify failing to protect those beneficial uses. Where appropriate, the

San Diego Water Board has provided or will consider providing the Copermittees with additional time to implement control measures to achieve final WQBELs and/or water quality standards.

### **Cost Information**

Discussions of the financial and economic ramifications of municipal storm water management programs tend to focus on the significant costs incurred by municipalities in developing and implementing the programs. When considering the cost of implementing the programs, however, it is also important to consider the alternative costs that are incurred when programs are not fully implemented, as well as the economic benefits which result from effective program implementation.

The recent financial and economic conditions have amplified the concerns about the costs incurred by the municipalities in developing and implementing their programs. The reduction in resources resulting from the recent financial and economic conditions has been cited by many of the Copermittees as a justification for reducing the requirements that must be met by their programs. While the recent conditions are a cause for concern in the short term, these programs also have an opportunity to identify and implement improvements and efficiencies before the next period of growth and development, resulting in more effective and sustainable programs over the long term.

In addition, it is very difficult to ascertain the true cost of implementation of the Copermittees' management programs because of inconsistencies in reporting by the Copermittees. Reported costs of compliance for the same program element can vary widely from city to city, often by a very wide margin that is not easily explained.<sup>2</sup> Despite these problems, efforts have been made to identify management program costs, which can be helpful in understanding the costs of program implementation.

The San Diego Water Board recognizes that the Copermittees will incur costs in implementing this Order, potentially above and beyond the costs from the Copermittees' prior permits. The San Diego Water Board also recognizes that, due to California's current economic condition, many Copermittees currently have limited staff and resources to implement actions to address its MS4 discharges. Based on the economic considerations below, the San Diego Water Board has provided the Copermittees a significant amount of flexibility to choose how to implement the requirements of the Order.

The Order also allows the Copermittees to customize their plans, programs, and monitoring requirements. In the end, it is up to the Copermittees to determine the effective BMPs and measures necessary to comply with this Order. The Copermittees can choose to implement the least expensive measures that are effective in meeting

---

<sup>2</sup> Los Angeles Water Board, 2003. Review and Analysis of Budget Data Submitted by the Permittees for Fiscal Years 2000-2003. P. 2.

the requirements of this Order. This Order also does not require the Copermittees to fully implement all requirements within a single permit term. Where appropriate, the Board has provided the Copermittees with additional time outside of the permit term to implement control measures to achieve final WQBELs and/or water quality standards.

The San Diego Water Board has considered available cost information associated with compliance with this Order. It is not possible to predict accurately the cost impact of the requirements that involve an unknown level of implementation or that depend on environmental variables that are as yet undefined. Only general conclusions can be drawn from this information.

### **Estimated Municipal Storm Water Program Implementation Costs**

The USEPA, the State Water Board, and the California Regional Water Quality Control Boards (Regional Water Boards) have attempted to evaluate the costs of implementing municipal storm water programs. The assessments have demonstrated that the true costs are difficult to ascertain and reported costs vary widely. In addition, reported fiscal analyses tend to neglect the costs incurred to municipalities when storm water and non-storm water runoff is not effectively managed, which are incurred as a result of pollution, contamination, nuisance, and damage to ecosystems, property, and human health. Nonetheless, they provide a useful context for considering the costs of requirements within Order No. R9-2013-0001.

In 1999, the USEPA reported on multiple studies it conducted to determine the cost of management programs. A study of Phase II municipalities determined that the annual cost of the Phase II program was expected to be \$9.16 per household. The USEPA also studied 35 Phase I municipalities, finding costs to be \$9.08 per household annually, similar to those anticipated for Phase II municipalities.<sup>3</sup>

The State Water Board commissioned a study by the California State University, Sacramento to assess costs of the Phase I MS4 program. This study includes an assessment of costs incurred by Phase I MS4s throughout the state to implement their programs. Annual cost per household in the study ranged from \$18 to \$46, with the Fresno-Clovis Metropolitan Area representing the lower end of the range, and the City of Encinitas (in San Diego County) representing the upper end of the range.<sup>4</sup>

A study on Phase I MS4 program costs was also conducted by the California Regional Water Quality Control Board, Los Angeles Region (Los Angeles Water Board), where program costs reported in the municipalities' annual reports were assessed. The Los

<sup>4</sup> State Water Board, 2005. NPDES Stormwater Cost Survey. P. ii.

Angeles Water Board estimated that average per household cost to implement the MS4 program in Los Angeles County was \$12.50.<sup>5</sup>

It is important to note that reported program costs are not all attributable to solely complying with MS4 permits. Many program components, and their associated costs, existed before any MS4 permits were ever issued. For example, street sweeping and trash collection costs cannot be solely or even principally attributable to MS4 permit compliance, since these practices have long been expected from and implemented by municipalities.

Therefore, true program cost resulting from MS4 permit requirements is some fraction of reported costs. The California State University, Sacramento study found that only 38 percent of program costs are new costs fully attributable to MS4 permits. The remainder of the program costs was either pre-existing or resulted from enhancement of pre-existing programs.<sup>6</sup> In 2000, the County of Orange found that even lower amounts of program costs are solely attributable to MS4 permit compliance, reporting that the amount attributable to implement the County of Orange Drainage Area Management Plan (DAMP), was less than 20 percent of the total budget. The remaining 80 percent was attributable to pre-existing programs.<sup>7</sup> More current data from the County of Orange is not used in this discussion because the County of Orange no longer reports such information.

### **Estimated Value of Healthy Water Quality**

Economic considerations of municipal storm water management programs cannot be limited only to program costs. Evaluation of programs must also consider information on the benefits derived from environmental protection and improvement.<sup>8</sup> Attention is often focused on municipal storm water management program costs, but the programs must also be viewed in terms of their value to the public.

Placing a value on healthy receiving waters is very difficult. Often the value of receiving waters with good water quality manifests in other forms, such as tourism, recreational opportunities, and/or increased property values. When surface water bodies are degraded, thereby degrading the habitat within and adjacent to the water bodies, the public loses the value and benefits associated with being able to use the area in and around the water bodies. Surface waters that are able to support the beneficial uses designated in the Basin Plan can sustain plants and wildlife that can attract visitors and residents, providing aesthetic, recreational, as well as monetary value to the public. At this time, however, there have been no studies for the San

Diego Region to quantify the added value that surface waters with healthy water quality can provide.

USEPA has estimated that household willingness to pay for improvements in fresh water quality for fishing and boating is approximately \$158-\$210.<sup>9</sup> This estimate can be considered conservative, since it does not include important considerations such as marine waters benefits, wildlife benefits, or flood control benefits. Another study conducted by California State University, Sacramento reported that the annual household willingness to pay for statewide clean water is approximately \$180.<sup>10</sup>

A study conducted by the University of Southern California and University of California, Los Angeles assessed the costs and benefits of implementing various approaches for achieving compliance with the MS4 permits in the Los Angeles region. The study found that non-structural systems would cost \$2.8 billion but provide \$5.6 billion in benefit. If structural systems were determined to be needed, the study found that total costs would be \$5.7 to \$7.4 billion, while benefits could reach \$18 billion.<sup>11</sup> Costs are anticipated to be borne over many years, probably at least ten years.

As can be seen, the benefits of the municipal storm water management programs are expected to considerably exceed their costs. Such findings are corroborated by USEPA, which found that the benefits of implementation of its Phase II storm water rule would also outweigh the costs.<sup>12</sup>

## VII. APPLICABLE STATUTES, REGULATIONS, PLANS AND POLICIES

### A. Legal Authorities – Federal Clean Water Act and California Water Code

This Order is issued pursuant to section 402 of the CWA and implementing regulations adopted by the USEPA and chapter 5.5, division 7 of the CWC (commencing with section 13370). This Order serves as an NPDES permit for point source discharges to surface waters. This Order also serves as waste discharge requirements pursuant to article 4, chapter 4, division 7 of the CWC (commencing with section 13260).

The objective of the CWA is “*to restore and maintain the chemical, physical, and biological integrity of the Nation’s waters.*” To carry out this objective, the CWA requires the implementation of permit programs to regulate the discharge of pollutants and dredged or fill material to the navigable waters of the U.S. and to regulate the use and disposal of sewage sludge. CWA section 402 provides the legal authority to issue a permit for the discharge of pollutants to waters of the U.S. under the NPDES. The CWA provides that NPDES permits may be issued by states which are authorized to implement the provisions of that act. California became authorized to implement the NPDES permit program on May 14, 1973.

The Porter-Cologne Water Quality Control Act (Division 7, commencing with CWC section 13000) established the State Water Resources Control Board (State Water Board) and nine Regional Water Quality Control Boards (Regional Water Boards) as the principal state agencies with primary responsibility for the coordination and control of water quality. CWC section 13200(f) established the San Diego Water Board, which has the primary responsibility for the coordination and control of water quality in the San Diego Region, which includes all the basins draining into the Pacific Ocean between the southern boundary of the Santa Ana Region and the California-Mexico boundary. The San Diego Water Board implements the CWA through Chapter 5.5 of the CWC, commencing with section 13370. CWC section 13377 provides the San Diego Water Board the legal authority to issue waste discharge requirements to ensure compliance with all applicable provisions of the CWA and acts amendatory thereof or supplementary, thereto, to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance.

CWA section 402(p) requires the USEPA or authorized state to issue NPDES permits for storm water discharges from MS4s to waters of the U.S. CWA section 402(p)(3)(B)(ii) requires that NPDES permits for storm water discharges from MS4s “*effectively prohibit non-storm water discharges*” into the MS4s. CWA section 402(p)(3)(B)(iii) requires that NPDES permits for storm water discharges from MS4s to “*require controls to reduce the discharge of pollutants [in storm water] to the maximum extent practicable [MEP], including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.*”

The USEPA published implementing regulations (Code of Federal Regulations [CFR] Title 40, Part 122 [40 CFR 122]), which prescribe permit application requirements for storm water discharges from MS4s pursuant to CWA 402(p), on November 16, 1990. The USEPA published an Interpretive Policy Memorandum on Reapplication Requirements for Municipal Separate Storm Sewer Systems, which provided guidance on permit application requirements for regulated MS4s, on May 17, 1996. The federal regulations in 40 CFR 122 and guidance issued by USEPA serve as the foundation for the provisions of Order No. R9-2013-0001. The legal authorities provided by the above statutes and regulations are included as part of the discussions in Section VIII of this Fact Sheet.

## **B. Legal Authority for the Permit Issued on a Region-wide Basis**

CWA section 402(p)(3)(B) provides the San Diego Water Board the legal authority to issue an NPDES permit for the San Diego Region as compared to separate MS4 permits based upon County- and partial County-wide boundaries as they existed within the San Diego Region. CWA section 402(p)(3)(B) states that “*Permits for discharges from municipal storm sewers- (i) may be issued on a system- or jurisdiction-wide basis ...*” The federal regulations in 40 CFR 122.26(a)(1)(v) also state that the San Diego Water Board “*may designate dischargers from municipal separate storm sewers on a system-wide or jurisdiction-wide basis. In making this determination, the [San Diego Water Board] may consider the following factors: (A) the location of the discharge with respect to waters of the United States; (B) the size of the discharge; (C) the quantity and nature of the pollutants discharged to waters of the United States; and (D) other relevant factors.*”

More specifically, the federal regulations provide that for large and medium MS4 systems, the San Diego Water Board may issue a regional permit. Specifically, the federal regulation in 40 CFR 122.26(a)(3) provide:

- "(ii) The Director may either issue one system-wide permit covering all discharges from municipal separate storm sewers within a large or medium municipal storm sewer system or issue distinct permits for appropriate categories of discharges within a large or municipal separate storm sewer system including, but not limited to: all discharges owned or operated by the same municipality; located within the same jurisdiction; all discharges within a system that discharge to the same watershed; discharges within a system that are similar in nature; or for individual discharges from municipal separate storm sewers within the system.*
- (iii) The operator of a discharge from a municipal separate storm sewer which is part of a large or medium municipal separate storm sewer system must either: (A) Participate in a permit application (to be a permittee or a co-permittee) with one or more other operator of discharges from the large or medium municipal storm sewer system which covers all, or a portion of all, discharges from the municipal separate storm sewer system; (B) Submit a distinct permit application which only covers discharges from the municipal separate storm sewers for*

*which the operator is responsible; or (C) A regional authority may be responsible for submitting a permit application under the following guidelines...*

- (iv) One permit application may be submitted for all or a portion of all municipal separate storm sewers within adjacent or interconnected large or medium municipal separate storm sewer systems. The Director may issue one systemwide permit covering all, or a portion of all municipal separate storm sewers in adjacent or interconnected large or medium municipal separate storm sewer systems.*
- (v) Permits for all or a portion of all discharges from large or medium municipal separate storm sewer systems that are issued on a system-wide, jurisdiction-wide, watershed or other basis may specify different conditions relating to different discharges covered by the permit, including different management programs for different drainage areas which contribute storm water to the system."*

Based on these regulations, the San Diego Water Board may issue a region-wide MS4 permit. The regulations also clarify that the permit may include different conditions for separate discharges covered by the permit. This allows the San Diego Water Board to ensure that suitable water quality conditions and provisions are identified for each watershed.

The USEPA's responses to comments in the Final Rule for the above-mentioned regulations also make it clear that the permitting authority, in this case the San Diego Water Board, has the flexibility to establish system- or region-wide, permits. In the Final Rule published in the Federal Register and containing the responses to comments, USEPA notes that 40 CFR 122.26(a)(3)(iv) would allow an entire system in a geographical region under the purview of a State agency to be designated under a permit.<sup>13</sup> USEPA also states that many commenters wanted to allow the permitting authority broad discretion to establish system-wide permits, and that EPA believes that paragraphs 40 CFR 122.26 (a)(1)(v) and (a)(3)(ii) allow for such broad discretion.<sup>14</sup>

This Order creates watershed requirements that apply to multiple counties. The regional nature of this Order will ensure consistency of regulation within watersheds and is expected to result in overall cost savings for the Copermittees. Managing storm water on a regional and watershed basis is expected to result in improved water quality, as the Order focuses on monitoring and management practices necessary to improve each watershed rather than political boundaries. A single permit also allows the San Diego Water Board staff to expend fewer resources developing successive multiple permits and allows more resources to be devoted to working cooperatively with all three current groups of Copermittees to ensure implementation of this Order results in improved water quality.

---

<sup>13</sup> 55 Federal Register 47990-01, 48042.

<sup>14</sup> Ibid.

### **C. Federal and California Endangered Species Acts**

This Order does not authorize any act that results in the taking of a threatened or endangered species or any act that is now prohibited, or becomes prohibited in the future, under either the California Endangered Species Act (Fish and Game Code sections 2050 to 2115.5) or the Federal Endangered Species Act (16 United States Code [USC] sections 1531 to 1544). This Order requires compliance with requirements to protect the beneficial uses of waters of the U.S. The Copermittees are responsible for meeting all requirements of the applicable Endangered Species Act.

### **D. California Environmental Quality Act**

The action to adopt an NPDES Permit is exempt from the provisions of Chapter 3 of the California Environmental Quality Act (CEQA) (Public Resources Code section 21100, et seq.) pursuant to CWC section 13389. (*County of Los Angeles v. Cal. Water Boards* (2006) 143 Cal.App.4th 985.)

### **E. State and Federal Regulations, Plans and Policies**

The legal authority provided by the following regulations, plans, and policies are also included as part of the discussions in Section VIII of this Fact Sheet.

#### Water Quality Control Plan for the San Diego Basin

The CWA requires the San Diego Water Board to establish water quality standards for each water body in its region. Water quality standards include beneficial uses, water quality objectives and criteria that are established at levels sufficient to protect beneficial uses, and an antidegradation policy to prevent degrading of waters. On September 8, 1994, the San Diego Water Board adopted the *Water Quality Control Plan for the San Diego Basin* (Basin Plan). The Basin Plan designates beneficial uses, establishes water quality objectives, and contains implementation programs and policies to achieve those objectives for all waters in the San Diego Region. The San Diego Water Board has amended the Basin Plan on multiple occasions since 1994. In addition, the Basin Plan implements State Water Board Resolution No. 88-63, which established state policy that all waters, with certain exceptions, should be considered suitable or potentially suitable for municipal or domestic supply. Beneficial uses applicable to the surface water bodies that receive discharges from the MS4s within the San Diego Region generally include those listed below:

The Basin Plan identifies the following existing and potential beneficial uses for inland surface waters in the San Diego Region:

- Municipal and Domestic Supply (MUN)
- Agricultural Supply (AGR)
- Industrial Process Supply (PROC)

- Industrial Service Supply (IND)
- Ground Water Recharge (GWR)
- Contact Water Recreation (REC1)
- Non-contact Water Recreation (REC2)
- Warm Freshwater Habitat (WARM)
- Cold Freshwater Habitat (COLD)
- Wildlife Habitat (WILD)
- Rare, Threatened, or Endangered Species (RARE)
- Freshwater Replenishment (FRSH)
- Hydropower Generation (POW)
- Preservation of Biological Habitats of Special Significance (BIOL)

The following additional existing and potential beneficial uses are identified for coastal waters of the San Diego Region:

- Navigation (NAV)
- Commercial and Sport Fishing (COMM)
- Estuarine Habitat (EST)
- Marine Habitat (MAR)
- Aquaculture (AQUA)
- Migration of Aquatic Organisms (MIGR)
- Spawning, Reproduction, and/or Early Development (SPWN)
- Shellfish Harvesting (SHELL)

Pursuant to Water Code sections 13263 and 13377, the requirements of this Order implement the Basin Plan.

#### Water Quality Control Plan for Ocean Waters of California, California Ocean Plan

In 1972, the State Water Board adopted the Water Quality Control Plan for Ocean Waters of California, California Ocean Plan (Ocean Plan). The State Water Board adopted the most recent amended Ocean Plan on October 16, 2012. The Office of Administrative Law approved it on July 3, 2013. The amended Ocean Plan became effective on August 19, 2013. The Ocean Plan is applicable, in its entirety, to ocean waters of the State. In order to protect beneficial uses, the Ocean Plan establishes water quality objectives and a program of implementation. Pursuant to Water Code sections 13263 and 13377, the requirements of this Order implement the Ocean Plan. The Ocean Plan identifies the beneficial uses of ocean waters of the State to be protected as summarized below:

- Industrial water supply
- Water contact and non-contact recreation, including aesthetic enjoyment; navigation
- Commercial and sport fishing

- Mariculture
- Preservation and enhancement of designated Areas of Special Biological Significance
- Rare and endangered species
- Marine habitat
- Fish spawning and shellfish harvesting

On March 20, 2012, the State Water Board approved Resolution No. 2012-0012 approving an exception to the Ocean Plan prohibition against discharges to Areas of Special Biological Significance (ASBS) for certain nonpoint source discharges and NPDES permitted municipal storm water discharges. On June 19, 2012, the State Water Board adopted Order No. 2012-0031, amending Order No. 2012-0012 to require pollutant load reductions to be achieved within six years for the ASBS Compliance Plans, section A.2.d(2) and ASBS Pollution Prevention Plans, section B.2.b(2). The State Water Board Resolution No. 2012-0012, as amended requires monitoring and testing of marine aquatic life and water quality in several ASBS to protect California's coastline during storms when rain water overflows into coastal waters. Specific terms, prohibitions, and special conditions were adopted to provide special protections for marine aquatic life and natural water quality in ASBS. The City of San Diego's municipal storm water discharges to the San Diego Marine Life Refuge in La Jolla, and the City of Laguna Beach's municipal storm water discharges to the Heisler Park ASBS are subject terms and conditions of State Water Board Resolution No. 2012-0012, as amended. The Special Protections contained in Attachment B to State Water Board Resolution No. 2012-0012, as amended, applicable to these discharges, are incorporated in Attachment A of this Order. Requirements of this Order implement the Ocean Plan.

#### Water Quality Control Plan for Enclosed Bays and Estuaries – Part 1 Sediment Quality

On September 16, 2008, the State Water Board adopted the Water Quality Control Plan for Enclosed Bays and Estuaries – Part 1 Sediment Quality (Sediment Quality Control Plan). The Sediment Quality Control Plan became effective on August 25, 2009. The Sediment Quality Control Plan establishes 1) narrative sediment quality objectives for benthic community protection from exposure to contaminants in sediment and to protect human health, and 2) a program of implementation using a multiple lines of evidence approach to interpret the narrative sediment quality objectives. Requirements of this Order implement the Sediment Quality Control Plan.

#### Antidegradation Policy

Federal regulations (40 CFR 131.12) require that the state water quality standards include an antidegradation policy consistent with the federal antidegradation policy. The State Water Board established California's antidegradation policy in State Water Board Resolution No. 68-16 ("Statement of Policy with Respect to Maintaining the Quality of the Waters of the State"). State Water Board Resolution No. 68-16 incorporates the

federal antidegradation policy where the federal policy applies under federal law.

The San Diego Water Board's Basin Plan implements and incorporates by reference both the State and federal antidegradation policies. State Water Board Resolution No. 68-16 and 40 CFR 131.12 require the San Diego Water Board to maintain high quality waters of the State unless degradation is justified based on specific findings. First, the Board must ensure that "existing instream uses and the level of water quality necessary to protect the existing uses" are maintained and protected. Second, if the baseline quality of a water body for a given constituent exceeds levels necessary to support propagation of fish, shellfish, and wildlife and recreation in and on the water, that quality shall be maintained and protected through the requirements of the Order unless the Board makes findings that (1) any lowering of the water quality is necessary to accommodate important economic or social development in the area in which the waters are located; (2) water quality adequate to protect existing uses fully is assured; and (3) the highest statutory and regulatory requirements for all new and existing point sources and all cost-effective and reasonable best management practices for nonpoint source control are achieved. The San Diego Water Board must also comply with any requirements of State Water Board Resolution No. 68-16 beyond those imposed through incorporation of the federal antidegradation policy. In particular, the Board must find that not only present, but also anticipated future uses of water are protected, and must ensure best practicable treatment or control of the discharges. The baseline quality considered in making the appropriate findings is the best quality of the water since 1968, the year of the adoption of Resolution No. 68-16, or a lower level if that lower level was allowed through a permitting action that was consistent with the federal and state antidegradation policies.

The discharges permitted in this Order are consistent with the antidegradation provisions of 40 CFR 131.12 and State Water Board Resolution No. 68-16 as set forth below:

1. Many of the waters within the area covered by this Order are impaired for multiple pollutants discharged through MS4s and are not high quality waters with regard to these pollutants. In most cases, there is insufficient data to determine whether these water bodies were impaired as early as 1968, but the limited available data shows impairment dating back for more than two decades. Many such water bodies are listed on the State's CWA Section 303(d) List and the San Diego Water Board has established TMDLs to address the impairments. This Order ensures that existing instream (beneficial) water uses and the level of water quality necessary to protect the existing uses is maintained and protected. This Order requires the Copermitttees to comply with permit provisions to implement the WLAs set forth in the TMDLs in order to restore the beneficial uses of the impaired water bodies consistent with the assumptions and requirements of the TMDLs. This Order further requires compliance with receiving water limitations to meet water quality standards in the receiving water either by demonstrating compliance pursuant to Provision A and the Copermitttees' monitoring and assessment program pursuant to Provision D of this Order, or by implementing Provision B.3.c with a schedule to achieve compliance

with receiving water limitations. This Order includes requirements to develop and implement storm water management programs, achieve WQBELs, and effectively prohibit non-storm water discharges into the MS4. The issuance of this Order does not authorize an increase in the amount of discharge of waste.

2. To the extent that water bodies within the area covered by this Order are high quality waters with regard to some constituents, this Order finds as follows:
  - a. Allowing limited degradation of high quality water bodies through MS4 discharges is necessary to accommodate important economic or social development in the area and is consistent with the maximum benefit to the people of the state. The discharge of storm water in certain circumstances is to the maximum benefit to the people of the state because it can assist with maintaining instream flows that support beneficial uses, may spur the development of multiple-benefit projects, and may be necessary for flood control, and public safety as well as to accommodate development in the area. The alternative – capturing all storm water from all storm events – would be an enormous opportunity cost that would preclude MS4 permittees from spending substantial funds on other important social needs. The Order ensures that any limited degradation does not affect existing and anticipated future uses of the water and does not result in water quality less than established standards. The Order requires compliance with receiving water limitations that act as a floor to any limited degradation.
  - b. The Order requires the highest statutory and regulatory requirements and requires that the Copermitees meet best practicable treatment or control. The Order prohibits all non-storm water discharges, with a few enumerated exceptions, through the MS4 to the receiving waters. As required by 40 CFR section 122.44(a), the Copermitees must comply with the “maximum extent practicable” technology-based standard set forth in CWA section 402(p), and implement extensive minimum control measures in a storm water management program. Recognizing that best practicable treatment or control may evolve over time, the Order includes new and more specific requirements as compared to the prior Phase I MS4 permits for the San Diego County, Orange County and Riverside County Copermitees. The Order incorporates options to implement Water Quality Improvement Plans that must specify detailed structural and non-structural storm water controls that must be implemented in accordance with an accepted proposed time schedule. The Order contains provisions to encourage, wherever feasible, retention of the storm water from the 85th percentile 24-hour storm event.

### Anti-Backsliding Requirements

CWA sections 402(o) and 303(d)(4) and federal regulations at 40 CFR 122.44(l) prohibit backsliding in NPDES permits. These anti-backsliding provisions require effluent limitations in a reissued permit to be as stringent as those in the previous permit, with some exceptions where limitations or conditions may be relaxed. While this Order

allows implementation of an alternative compliance pathway option in Provision B.3.c to constitute compliance with receiving water limitations under certain circumstances, the availability of that alternative and the corresponding availability of additional time to come into compliance with receiving water limitations does not violate the anti-backsliding provisions. The receiving water limitations provisions of this Order are imposed under section 402(p)(3)(B) of the Clean Water Act rather than based on best professional judgment, or based on section 301(b)(1)(C) or sections 303(d) or (e), and are accordingly not subject to the anti-backsliding requirements of section 402(o). Although the non-applicability is less clear with respect to the regulatory anti-backsliding provisions in 40 CFR 122.44(l), the regulatory history suggests that USEPA's intent was to establish the anti-backsliding regulations with respect to evolving technology standards for traditional point sources. (See, e.g., 44 Fed.Reg. 32854, 32864 (Jun. 7, 1979)). It is unnecessary, however, to resolve the ultimate applicability of the regulatory anti-backsliding provisions, because the alternative compliance pathway option in Provision B.3.c qualifies for an exception to backsliding as based on new information.

The alternative compliance pathway option in Provision B.3.c of this Order was informed by new information available to the Board from experience and knowledge gained through storm water permitting at the Regional Water Boards in the last ten years. There has been a statewide paradigm shift in storm water management. State Water Board Order WQ 2015-0075 directed all of the Regional Water Boards to consider the Los Angeles Water Board's alternative compliance path to receiving water limitations in all Phase I MS4 permits going forward (State Water Board Order WQ 2015-0075 at page 51), and the Los Angeles Water Board's process of developing over 30 watershed-based TMDLs and implementing several TMDLs since the adoption of the previous permits. In particular, the Los Angeles Water Board recognized the significance of allowing time to plan, design, fund, operate and maintain watershed-based BMPs necessary to attain water quality improvements and additionally recognized the potential for municipal storm water to benefit water supply. Similarly, the San Diego Water Board's experience developing and implementing the Fourth Term MS4 Permits and TMDLs that apply on a region-wide scale (e.g. TMDLs for Indicator Bacteria, Project I – Twenty Beaches and Creeks in the San Diego Region) has resulted in a similar recognition of the need for a watershed-based approach that allows time to plan, design, fund, operate and maintain BMPs to address impaired waters that have been impacted by MS4 discharges. Thus, even if the receiving water limitations are subject to anti-backsliding requirements, they were revised based on new information that would support an exception to the anti-backsliding provisions. (33 U.S.C. § 1342(o)(2)(B)(i); 40 C.F.R. § 122.44(l)(1); 40 C.F.R. §122.44(l)(2)(i)(B)(1)).

#### Clean Water Act Section 303(d) List

CWA section 303(d)(1) requires each State to identify specific water bodies within its boundaries where water quality standards are not being met or are not expected to be met after implementation of technology-based effluent limitations on point sources. Water bodies that do not meet water quality standards are considered impaired and are placed on the state's "303(d) List." Periodically, USEPA approves the State's 303(d) List.

Most recently, USEPA approved the State's 2010 303(d) List of impaired water bodies on October 11, 2011, which includes certain receiving waters in the San Diego Region. For each listed water body, the state or USEPA is required to establish a TMDL of each pollutant impairing the water quality standards in that water body. A TMDL is a tool for implementing water quality standards and is based on the relationship between pollution sources and in-stream water quality conditions. The TMDL establishes the allowable pollutant loadings for a water body and thereby provides the basis to establish water quality-based controls. These controls should provide the pollution reduction necessary for a water body to meet water quality standards.

A TMDL is the sum of the allowable pollutant loads of a single pollutant from all contributing point sources (the waste load allocations or WLAs) and non-point sources (load allocations of LAs) plus the contribution from background sources and a margin of safety (40 CFR 130.2(i)). MS4 discharges are considered point source discharges. For 303(d)-listed water bodies and pollutants in the San Diego Region, the San Diego Water Board or USEPA develops and adopts TMDLs that specify these requirements.

Since 2002, the San Diego Water Board has established seven (7) TMDLs to remedy water quality impairments in various water bodies within the San Diego Region (see Attachment E to the Order). These TMDLs identify MS4 discharges as a source of pollutants to these water bodies, and, as required, establish WLAs for MS4 discharges to reduce the amount of pollutant discharged to receiving waters. CWA section 402(p)(3)(B)(iii) requires the San Diego Water Board to impose permit conditions, including: "management practices, control techniques and system, design and engineering methods, and *such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.*" (Emphasis added.) CWA section 402(a)(1) also requires states to issue permits with conditions necessary to carry out the provisions of the CWA. Federal regulations also require that NPDES permits contain WQBELs consistent with the assumptions and requirements of all available WLAs (40 CFR 122.44(d)(1)(vii)(B)). CWC section 13377 also requires that NPDES permits include limitations necessary to implement water quality control plans. Therefore, this Order includes WQBELs and other provisions to implement the TMDL WLAs assigned to Copermitttees regulated by this Order.

### Other Regulations, Plans and Policies

This Order implements all other applicable federal regulations and State regulations, plans and policies, including the California Toxics Rule at 40 CFR 131.38 (Water Quality Standards; Establishment of Numeric Criteria for Priority Toxic Pollutants for the State of California Rule [California Toxics Rule or CTR]), and State Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California (State Implementation Policy or SIP).

## F. Unfunded State Mandates

Article XIII B, Section 6(a) of the California Constitution provides that whenever “*any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service.*” The requirements of this Order do not constitute state mandates that are subject to a subvention of funds for several reasons, including, but not limited to, the following.

First, the requirements of this Order do not constitute a new program or a higher level of service as compared to the requirements contained in the previous Fourth Term Permits. The overarching requirement to impose controls to reduce the pollutants in discharges from MS4s is dictated by the CWA and is not new to this permit cycle (33 USC section 1342(p)(3)(B)). The inclusion of new and advanced measures as the MS4 programs evolve and mature over time is anticipated under the CWA (55 FR 47990, 48052 (Nov. 16, 1990)), and to the extent requirements in this Order are interpreted as new advanced measures, they do not constitute a new program or higher level of service.

Second, and more broadly, mandates imposed by federal law, rather than by a state agency, are exempt from the requirement that the local agency’s expenditures be reimbursed (Cal. Const., art. XIII B, section 9, subd. (b)). This Order implements federally mandated requirements under the CWA and its requirements are therefore not subject to subvention of funds. This includes federal requirements to effectively prohibit non-storm water discharges, to reduce the discharge of pollutants in storm water to the MEP, and to include such other provisions as the Administrator or the State determines appropriate for the control of such pollutants (33 USC section 1342(p)(3)(B)). Federal cases have held these provisions require the development of permits and permit provisions on a case-by-case basis to satisfy federal requirements. (*Natural Resources Defense Council, Inc., v. USEPA* (9<sup>th</sup> Cir. 1992) 966 F.2d 1292, 1308, fn. 17.)

The authority exercised under this Order is not reserved state authority under the CWA’s savings clause (cf. *Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4<sup>th</sup> 613, 627-628 [relying on 33 USC section 1370, which allows a state to develop requirements which are not “less stringent” than federal requirements]), but instead is part of a federal mandate to develop pollutant reduction requirements for municipal separate storm sewer systems. To this extent, it is entirely federal authority that forms the legal basis to establish the permit provisions. (See, *City of Rancho Cucamonga v. Regional Water Quality Control Board, Santa Ana Region* (2006) 135 Cal.App.4<sup>th</sup> 1377, 1389; *Building Industry Ass’n of San Diego Co. v. State Water Resources Control Bd.* (2004) 124 Cal.App.4<sup>th</sup> 866, 882-883.)

The MEP standard is a flexible standard that balances a number of considerations, including technical feasibility, cost, public acceptance, regulatory compliance, and effectiveness. (*Building Ind. Ass’n., supra*, 124 Cal.App.4<sup>th</sup> at pp. 873-874, 889.) Such considerations change over time with advances in technology and with experience

gained in storm water management (55 FR 47990, 48052 (Nov. 16, 1990)). Accordingly, a determination of whether the conditions contained in this Order exceed the requirements of federal law cannot be based on a point by point comparison of the permit conditions and the minimum control measures that are required “at a minimum” to reduce pollutants to the maximum extent practicable and to protect water quality (40 CFR 122.34). Rather, the appropriate focus is whether the permit conditions, as a whole, exceed the MEP standard.

In recent months, the County of Los Angeles and County of Sacramento Superior Courts have granted writs setting aside decisions of the Commission on State Mandates that held certain requirements in Phase I permits constituted unfunded mandates. In both cases, the courts have found that the correct analysis in determining whether an MS4 permit constituted a state mandate was to evaluate whether the permit as a whole exceeds the MEP standard. (*State of Cal. v. Comm. on State Mandates* (Super. Ct. Sacramento County, 2012, No. 34-2010-80000604), *State of California v. County of Los Angeles* (Super. Ct. Los Angeles County, 2011, No. BS130730.) Both cases are currently pending appeal.

The requirements of the Order, taken as a whole rather than individually, are necessary to reduce the discharge of pollutants to the MEP and to protect water quality. The San Diego Water Board finds that the requirements of the Order are practicable, do not exceed federal law, and thus do not constitute an unfunded mandate. These findings are the expert conclusions of the principal state agency charged with implementing the NPDES program in California (CWC sections 13001, 13370).

It should also be noted that the provisions in this Order to effectively prohibit non-storm water discharges are also mandated by the CWA (33 USC section 1342(p)(3)(B)(ii)). Likewise, the provisions of this Order to implement TMDLs are federal mandates. The CWA requires TMDLs to be developed for water bodies that do not meet federal water quality standards (33 USC section 1313(d)). Once the USEPA or a state establishes or adopts a TMDL, federal law requires that permits must contain effluent limitations consistent with the assumptions and requirements of any applicable waste load allocation in a TMDL (40 CFR 122.44(d)(1)(vii)(B)).

Third, the local agency Copermittees’ obligations under this Order are similar to, and in many respects less stringent than, the obligations of non-governmental dischargers who are issued NPDES permits for storm water discharges. With a few inapplicable exceptions, the CWA regulates the discharge of pollutants from point sources (33 USC section 1342) and the Porter-Cologne Act regulates the discharge of waste (CWC section 13263), both without regard to the source of the pollutant or waste. As a result, the “costs incurred by local agencies” to protect water quality reflect an overarching regulatory scheme that places similar requirements on governmental and non-governmental dischargers. (See *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 57-58 [finding comprehensive workers’ compensation scheme did not create a cost for local agencies that was subject to state subvention].)

The CWA and the Porter-Cologne Act largely regulate storm water with an even hand, but to the extent there is any relaxation of this even-handed regulation, it is in favor of the local agencies. Generally, the CWA requires point source dischargers, including dischargers of storm water associated with industrial or construction activity, to comply strictly with water quality standards (33 USC section 1311(b)(1)(C); *Defenders of Wildlife v. Browner* (9<sup>th</sup> Cir. 1999) 191 F.3d 1159, 1164-1165 [noting that industrial discharges must strictly comply with water quality standards]). As discussed in prior State Water Board decisions, certain provisions of this Order do not require strict compliance with water quality standards (State Water Board Order No. WQ 2001-0015, p. 7). Those provisions of this Order regulate the discharge of waste in municipal storm water under the CWA's MEP standard, not the BAT/BCT standard that applies to other types of discharges. These provisions, therefore, regulate the discharge of waste in municipal storm water more leniently than the discharge of waste from non-governmental sources.

Fourth, the Copermittees have requested permit coverage in lieu of compliance with the complete prohibition against the discharge of pollutants contained in CWA section 301(a) (33 USC section 1311(a)). To the extent that the local agency Copermittees have voluntarily availed themselves of the permit, the program is not a state mandate. (Accord, *County of San Diego v. State of California* (1997) 15 Cal.4<sup>th</sup> 68, 107-108.)

Fifth, the local agency Copermittees' responsibility for preventing discharges of waste that can create conditions of pollution or nuisance from conveyances that are within their ownership or control under state law predates the enactment of Article XIII B, Section (6) of the California Constitution.

Finally, even if any of the permit provisions could be considered unfunded mandates, under Government Code section 17556, subdivision (d), a state mandate is not subject to reimbursement if the local agency has the authority to charge a fee. The local agency Copermittees have the authority to levy service charges, fees, or assessments sufficient to pay for compliance with this Order, subject to certain voting requirements contained in the California Constitution. (See Cal. Const., Art. XIII D, section 6, subd. (c); see also *Howard Jarvis Taxpayers Ass'n v. City of Salinas* (2002) 98 Cal.App.4<sup>th</sup> 1351, 1358-1359.) The Fact Sheet demonstrates that numerous activities contribute to the pollutant loading in the MS4. Local agencies can levy service charges, fees, or assessments on these activities, independent of real property ownership. (See, e.g., *Apartment Ass'n of Los Angeles County, Inc., v. City of Los Angeles* (2001) 24 Cal.4<sup>th</sup> 830, 842 [upholding inspection fees associated with renting property].) The authority and ability of a local agency to defray the cost of a program without raising taxes indicates that a program does not entail a cost subject to subvention. (*Clovis Unified School Dist. V. Chiang* (2010) 188 Cal.App.4<sup>th</sup> 794, 812, citing *Connell v. Sup. Ct.* (1997) 59 Cal.App.4<sup>th</sup> 382, 401; *County of Fresno v. State of California* (1991) 53 Cal. 3d. 482, 487-488.)

## VIII. PROVISIONS

The provisions (i.e. NPDES permit requirements) of the Order are discussed below.

### A. Prohibitions and Limitations

**Purpose:** Provision A includes the prohibitions and limitations requirements that are the foundation of all the subsequent requirements included in the Order. Compliance with the prohibitions and limitations will restore and protect receiving waters from impacts that may be caused by discharges into and from the Copermittees' MS4s and ultimately achieve the objective of the CWA.

In meeting the requirements set forth in the Order, the Copermittees must be cognizant that the prohibitions and limitations exist and will be the standard by which the San Diego Water Board will be measuring the progress and success of their implementation of the NPDES permit requirements.

**Discussion:** The objective of the CWA is to “*restore and maintain the chemical, physical, and biological integrity of the Nation’s waters.*” The CWA requires the implementation of NPDES permit programs to regulate discharges of pollutants and dredged or fill material to the navigable waters of the U.S. For discharges into and from MS4s, the CWA requires the NPDES permits to “*effectively prohibit non-stormwater discharges into the storm sewers*” and “*require controls to reduce the discharge of pollutants [in storm water] to the maximum extent practicable.*”

Provision A includes limitations, consistent with the requirements of the CWA for discharges from MS4s. Provision A expresses these limitations as discharge prohibitions, receiving water limitations, and effluent limitations. Compliance with the discharge prohibitions and receiving water limitations is also explicitly described, in conformance with precedential State Water Board Orders.

More specific and detailed discussions of the requirements of Provision A are provided below.

Provision A.1 (Discharge Prohibitions) prohibits the discharge of specific types of waste into and/or from the Copermittees' MS4s.

Provision A.1.a restates and reiterates Basin Plan Waste Discharge Prohibition 1, by prohibiting discharges into and from MS4s in a manner causing, or threatening to cause, a condition of pollution, contamination, or nuisance in receiving waters of the

state. The terms pollution,<sup>15</sup> contamination,<sup>16</sup> and nuisance<sup>17</sup> are defined under CWC 13050. Provision A.1.c incorporates all the waste discharge prohibitions of the Basin Plan into the requirements of the Order. The waste discharge prohibitions from the Basin Plan have been reproduced and provided in Attachment A to the Order.

Provision A.1.b requires non-storm water discharges into the MS4s to be effectively prohibited, consistent with the requirements of the CWA for MS4 permits to “*effectively prohibit non-stormwater discharges into the storm sewers.*” The effective prohibition is required to be implemented by each Copermittee within its jurisdiction through the illicit discharge detection and elimination requirements under Provision E.2. The prohibition does not apply to NPDES permitted discharges into the Copermittees’ MS4s.

The CWA employs the strategy of prohibiting the discharge of any pollutant from a point source into waters of the United States unless the discharger of the pollutant(s) obtains an NPDES permit pursuant to CWA Section 402. The 1987 amendment to the CWA includes provision 402(p) that specifically addresses NPDES permitting requirements for storm water discharges from MS4s. CWA section 402(p) prohibits the discharge of pollutants from specified MS4s to waters of the U.S. except as authorized by an NPDES permit and identifies two substantive standards for MS4 storm water permits. MS4 permits (1) “*shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers*” and (2) “*shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or State determines appropriate for the control of such pollutants.*” (CWA section 402(p)(3)(B)(ii)-(iii).)

In November 1990, the USEPA published regulations addressing storm water discharges from MS4s (55 FR 47990 and following (Nov. 16, 1990) (Phase I Final Rule)). The regulations establish minimum requirements for MS4 permits, and generally focus on the requirement that MS4s implement programs to reduce the amount of pollutants found in storm water discharges to the MEP. The CWA’s municipal storm water MEP standard does not require storm water discharges to strictly meet water quality standards, as is required for other NPDES permitted

<sup>15</sup> CWC 13050(l): “(1) ‘Pollution’ means an alteration of the quality of waters of the state by waste to a degree which unreasonably affects either of the following: (A) The water for beneficial uses. (B) Facilities which serve beneficial uses. (2) ‘Pollution’ may include ‘contamination.’

<sup>16</sup> CWC 13050(k): “Contamination’ means an impairment of the quality of waters of the state by waste to a degree which creates a hazard to public health through poisoning or through the spread of disease. ‘Contamination’ includes any equivalent effect resulting from the disposal of waste, whether or not waters of the state are affected.”

<sup>17</sup> CWC 13050(m): ‘Nuisance’ means anything which meets all of the following requirements: (1) Is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property. (2) Affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal. (3) Occurs during, or as a result of, the treatment or disposal of wastes.”

discharges. Compliance is achieved through an iterative approach of continuous implementation of improved BMPs. This distinction reflects Congress's recognition that variability in flow and intensity of storm events render difficult strict compliance with water quality standards by MS4 permittees. In describing the controls that permits must include to reduce pollutants in storm water discharges to the MEP, the statute (CWA section 402(p)(3)(B)(iii)) states that the controls shall include: "*management practices, control techniques and system, design and engineering methods, and such other provisions as the [permit writer] determines appropriate for the control of such pollutants.*"

In contrast, non-storm water discharges from the MS4 that are not authorized by separate NPDES permits are subject to requirements under the NPDES program, including discharge prohibitions, technology based effluent limitations and water quality-based effluent limitations (40 CFR 122.44). The regulations also require the Copermitee's program to include an element to detect and remove illicit discharges and improper disposal into the storm sewer (40 CFR 122.26(d)(2)(iv)(B)).

While "non-storm water" is not defined in the CWA or federal regulations, the federal regulations (at 40 CFR 122.26(b)(2)) define "*illicit discharge*" as "*any discharge to a municipal separate storm sewer that is not composed entirely of storm water and that is not covered by an NPDES permit (other than the NPDES permit for discharges from the municipal separate storm sewer and discharges resulting from fire fighting activities).*" This definition is the most closely applicable definition of "non-storm water" contained in federal law. As stated in the Phase I Final Rule, USEPA added the illicit discharge program requirement to begin implementation of the 'effective prohibition' requirement to detect and control non-storm water discharges to their municipal system.

Thus, federal law mandates that permits issued to MS4s must require management practices that will result in reducing storm water pollutants to the MEP yet at the same time requires that non-storm water discharges be effectively prohibited from entering the MS4. "Effectively" prohibit does not mean that non-storm water discharges are authorized to be discharged into and from the Copermitees' MS4s. The Phase I Final Rule clarifies what "effectively prohibit" means (55 FR 47995):

*"Section 402(p)(3)(B) requires that permits for discharges from municipal separate storm sewers require the municipality to "effectively prohibit" non-storm water discharges from the municipal separate storm sewer...Ultimately, such non-storm water discharges through a municipal separate storm sewer must either be removed from the system or become subject to an NPDES permit (other than the permit for the discharge from the municipal separate storm sewer)" [Emphasis added].*

Consistent with federal law, unless non-storm water discharges to the MS4 are authorized by a separate NPDES permit, non-storm water discharges are

appropriately subject to the effective prohibition requirement in the CWA and Regional Water Boards are not limited by the iterative MEP approach to storm water regulation in crafting appropriate regulations for non-storm water discharges.

The federal regulations (40CFR122.26(d)(2)(i)(B)) require the Copermitees to establish the legal authority which authorizes or enables the Copermitees to prohibit illicit discharges to the MS4s. The federal regulations (40 CFR 122.26(d)(2)(vi)(B)(1)) require the Copermitees to “*implement and enforce an ordinance, order or similar means*” to prevent non-storm water discharges to their MS4s. Thus, the Copermitees are required to “*effectively*” prohibit non-storm water discharges to their MS4s through enforcing their legal authority established under “*ordinance, order or similar means*” and either remove those discharges to their MS4s, or require those discharges to obtain coverage under a separate NPDES permit. More detail about the program that must be implemented to “*effectively*” prohibit non-storm water discharges to the Copermitees’ MS4s is provided under the discussion for Provision E.2.

Provision A.1.d was included to be consistent with Resolution No. 2012-0012, adopted by the State Water Board on March 20, 2012. Provision A.1.d prohibits discharges from MS4s to Areas of Special Biological Significance (ASBS), except for storm water discharges from the City of San Diego’s MS4 to the San Diego Marine Life Refuge in La Jolla, and the City of Laguna Beach to the Heisler Park ASBS subject to the Special Protections contained in Attachment B to State Water Board Resolution No. 2012-0012. The pertinent Special Protections contained in Attachment B to State Water Board Resolution No. 2012-0012 are provided in Attachment A to the Order.

Provision A.2 (Receiving Water Limitations) specifies the condition of the receiving waters that must be achieved when there are discharges from the Copermitees’ MS4s. Receiving water limitations are included in all NPDES permits issued pursuant to the CWA section 402. CWA section 402(p)(3)(B)(iii) authorizes the inclusion of “*such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.*” This requirement gives USEPA or the State permitting authority, in this case the San Diego Water Board, discretion to determine what permit conditions are necessary to control pollutants.

In its Phase I Final Rule (see 55 FR 47990, 47994 (Nov. 16, 1990)), USEPA elaborated on these requirements, stating that, “*permits for discharges from municipal separate storm sewer systems must require controls to reduce the discharge of pollutants to the maximum extent practicable, and where necessary water quality-based controls.*” USEPA reiterated in its Phase II Final Rule (64 FR 68722, 68737), that MS4 “*permit conditions must provide for attainment of applicable water quality standards (including designated uses), allocations of pollutant loads established by a TMDL, and timing requirements for implementation of a TMDL.*” CWC section 13377 also requires that NPDES permits include limitations necessary to implement water quality control plans. Both the State Water Board and the San Diego Water Board have previously concluded that discharges from the MS4 contain pollutants that have

the reasonable potential to cause or contribute to excursions above water quality standards. As such, inclusion of receiving water limitations is appropriate to control MS4 discharges.

The inclusion of receiving water limitations is also consistent with the Ninth Circuit Court of Appeals' ruling in *Defenders of Wildlife v. Browner* (191 F.3d 1159, 1166 (1999)) that the permitting authority has discretion regarding the nature and timing of requirements that it includes as MS4 permit conditions to attain water quality standards. The Ninth Circuit Court of Appeals recently explained that, "[w]ater quality standards are used as a supplementary basis for effluent limitations [guidelines] so that numerous dischargers, despite their individual compliance with technology based effluent limitations, can be regulated to prevent water quality from falling below acceptable levels." (*Natural Resources Defense Council v. County of Los Angeles* (9<sup>th</sup> Cir. 2011) 673 F.3d 880, 886 (revd. On other grounds and remanded by *Los Angeles County Flood Control District v. Natural Resources Defense Council* (133 S.Ct. 710 (2013)))

The receiving water limitations included in this Order consist of all applicable numeric or narrative water quality objectives or criteria, or limitations to implement the applicable water quality objectives or criteria, for receiving waters as contained in the Basin Plan or in water quality control plans or policies adopted by the State Water Board, including State Water Board Resolution No. 68-16, or in federal regulations, including but not limited to 40 CFR 131.12 and 131.38. The water quality objectives in the Basin Plan and other State Water Board plans and policies have been approved by USEPA and combined with designated beneficial uses constitute the water quality standards required under federal law.

Provision A.2.a requires that discharges from the Copermittees' MS4s must not cause or contribute to the violation of water quality standards in receiving waters. The water quality standards of the receiving waters must be protected from the impacts that may be caused by the Copermittees' MS4 discharges. Water quality standards applicable to the surface waters in the San Diego Region must be achieved through meeting the technology based standard of MEP through an iterative process of improved management actions. Provision A.2.a is also consistent with State Water Board Order WQ 99-05 precedent-setting language requiring discharges from MS4s to attain receiving water quality standards. The water quality control plans and policies with water quality standards applicable to the waters in the San Diego Region are included under Provision A.2.a.

Provisions A.2.b was included to be consistent with the requirements of State Water Board Resolution No. 2012-0012, adopted on March 20, 2012.

Provision A.3 (Effluent Limitations) specifies the condition of the discharges from the Copermittees' MS4s that must be achieved if and when there are discharges.

Consistent with CWA section 301(b)(1)(A) and 40 CFR 122.44(a), Provision A.3.a includes the technology-based effluent limitations that must be included in the Order. The technology-based effluent limits, representing the minimum level of control that must be imposed in a permit under CWA section 402, requires that pollutants in discharges of storm water from the Copermittees' MS4s be reduced to the MEP. This provision applies specifically to storm water discharges. Non-storm water discharges must be effectively prohibited, as required under Provision A.1.b. Non-storm water (dry weather) discharges from the MS4 are not considered storm water (wet weather) discharges and therefore are not subject to the MEP standard.

The technology-based MEP standard is an ever-evolving, flexible, and advancing concept. Neither Congress nor USEPA has specifically defined the term "maximum extent practicable." Congress established this flexible MEP standard so that the administrative bodies would have "*the tools to meet the fundamental goals of the Clean Water Act in the context of storm water pollution.*" (*Building Industry Ass'n of San Diego County v. State Water Resources Control Bd.* (2004) 124 Cal.App.4<sup>th</sup> 866, 884.) As knowledge about controlling storm water runoff and discharges continues to evolve, so does the knowledge which constitutes MEP. Reducing the discharge of pollutants in storm water from the MS4 to the MEP requires the Copermittees to assess each program component and revise activities, control measures, BMPs, and measurable goals, as necessary to meet MEP.

The San Diego Water Board or the State Water Board ultimately define MEP, and may include requirements that provide specific guidance on what is expected to demonstrate MEP. It is the responsibility of the Copermittees to propose actions that implement BMPs to reduce storm water pollution to the MEP. In other words, the Copermittees' runoff management programs developed and implemented under the Order are the Copermittees' proposals for achieving MEP. Their total collective and individual activities conducted pursuant to their runoff management programs become their proposal for achieving MEP as it applies both to their overall effort, as well as to specific activities. Provisions B through E of the Order provides a minimum framework to guide the Copermittees in achieving the MEP standard for discharges of pollutants in storm water.

Provision A.3.b incorporates any water quality based effluent limitations (WQBELs) applicable to the MS4s established for TMDLs adopted and approved for the San Diego Region and requires the Copermittees to comply with those WQBELs. This is consistent with 40 CFR 122.44(d)(1)(vii)(B), which requires that NPDES permits to incorporate WQBELs "*developed to protect a narrative water quality criterion, a numeric water quality criterion, or both...consistent with the assumptions and requirements of any available wasteload allocation for the discharge...*"

Pursuant to CWA section 303(d), for surface water bodies identified as impaired by one or more pollutants, the San Diego Water Board is required to establish TMDLs "*at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety which takes into account any lack of knowledge*

*concerning the relationship between effluent limitations and water quality.”* The TMDLs identify sources of the pollutants causing the impairments and assign portions of the TMDL as WLAs to point sources, which include MS4s.

WLAs must be expressed in NPDES permits as WQBELs, which may include one or more numeric components such as numeric effluent limits, and/or receiving water limitations, and/or BMP requirements. Because numeric targets for TMDLs typically include a component that will be protective of water quality standards, a TMDL will likely include one or more numeric receiving water limitations and/or effluent limitations as part of the assumptions or requirements of the TMDL. Any numeric receiving water limitations and/or effluent limitations developed as part of the assumptions or requirements of a TMDL must be incorporated and included as part of WQBELs for the MS4s.

Because the development and approval of new TMDLs, or modification of existing TMDLs, may occur during the term of this Order, the specific provisions of those TMDLs, including effluent limitations applicable to MS4s are provided within Attachment E to the Order. Attachment E will be updated with new TMDLs and modifications to existing TMDLs in a timely manner as they occur.

Provision A.4 (Compliance with Discharge Prohibitions and Receiving Water Limitations) describes the process required to be implemented by the Copermittees if compliance with the discharge prohibitions of Provisions A.1.a and A.1.c and receiving water limitations of Provision A.2.a are not being achieved under current conditions.

In its Phase II Stormwater Regulations, Final Rule, USEPA states that MS4 *“permit conditions must provide for attainment of applicable water quality standards (including designated uses), allocations of pollutant loads established by a TMDL, and timing requirements for implementation of a TMDL.”*<sup>18</sup> In a series of comment letters on MS4 permits issued by various Regional Water Boards, USEPA has also reiterated that MS4 discharges must meet water quality standards.<sup>19</sup> In addition, the Ninth Circuit Court of Appeals explained in a recent ruling that, *“[w]ater quality standards are used as a supplementary basis for effluent limitations [guidelines] so that numerous dischargers, despite their individual compliance with technology based effluent limitations, can be regulated to prevent water quality from falling below acceptable levels.”*<sup>20</sup>

<sup>18</sup> Phase II Stormwater Regulations, Final Rule, 64 Fed. Reg. 68722, 68737.

<sup>19</sup> Letter from Alexis Strauss, Acting Director, Water Division, USEPA Region IX, to Walt Pettit, Executive Director, State Water Board, re: SWRCB/OCC File A-1041 for Orange County, dated January 21, 1998.

<sup>20</sup> NRDC v. County of Los Angeles (9<sup>th</sup> Cir. 2011), 673 F.3d 880, 886 (revd. on other grounds and remanded by *Los Angeles County Flood Control District v. Natural Resources Defense Council* (133 S.Ct. 710 (2013))). See also, *Building Industry Ass’n of San Diego County v. State Water Resources Control Bd.* (2004) 124 Cal.App.4<sup>th</sup> 866, 884-886, citing *Defenders of Wildlife v. Browning*, (9<sup>th</sup> Cir. 1999) 191 F.3d 1159.)

Water quality standards for the San Diego Region are established in the Basin Plan. The water quality standards of the Basin Plan are incorporated into this Order as the discharge prohibitions under Provisions A.1.a and A.1.c and receiving water limitations under Provision A.2.a. The discharge prohibitions and receiving water limitations in this Order consist of all applicable numeric or narrative water quality objectives or criteria, or limitations or prohibitions to implement the applicable water quality objectives or criteria, for receiving waters as contained in the Basin Plan, water quality control plans or policies adopted by the State Water Board, including Resolution No. 68-16, or federal regulations, including but not limited to, 40 CFR 131.12 and 131.38. The waste discharge prohibitions and water quality objectives in the Basin Plan have been approved by USEPA and combined with the designated beneficial uses constitute the water quality standards required under federal law.

Under federal law (CWA section 402(p)(3)(B)(iii)), an MS4 permit must include “*controls to reduce the discharge of pollutants to the maximum extent practicable...and such other provision as...the State determines appropriate for control of such pollutants.*” The State Water Board has previously determined that limitations necessary to meet water quality standards are appropriate for the control of pollutants discharged by MS4s and must be included in MS4 permits. (State Water Board Orders WQ 91-03, 98-01, 99-05, 2001-15; see also *Defenders of Wildlife v. Browner* (9<sup>th</sup> Cir. 1999) 191 F.3d 1159.) This Order prohibits discharges that cause or contribute to violations of water quality standards.

The discharge prohibitions under Provisions A.1.a and A.1.c and receiving water limitations under Provision A.2.a are included in this Order to ensure that discharges from the MS4s do not cause or contribute to exceedances of water quality objectives necessary to protect the beneficial uses of the receiving waters.

Provision A.4 is consistent with the precedent-setting language in State Water Board Order WQ 99-05 required to be included in municipal storm water permits. State Water Board Order WQ 2001-15 refined Order WQ 99-05 by requiring an iterative approach to compliance with water quality standards involving ongoing assessments and revisions, referred to as the “iterative process.” The “iterative process” is a fundamental NPDES requirement for municipal storm water permits to achieve the objectives of the CWA.

The State Water Board and Regional Water Boards have stated that the provisions under Provisions A.1.a, A.1.c, A.2.a, and A.4 are independently applicable, meaning that compliance with one provision does not provide a “safe harbor” where there is non-compliance with another provision (i.e., compliance with the Provision A.4 does not shield a Copermitttee who may have violated Provision A.1.a, A.1.c, or A.2.a from an enforcement action). The intent of Provision A.4 is to ensure that the Copermitttees have the necessary storm water management programs and controls in place, and that they are modified by the Copermitttees in a timely fashion when necessary, so that compliance with Provisions A.1.a, A.1.c, and/or A.2.a is achieved as soon as possible. USEPA expressed the importance of this independent applicability in a series of

comment letters on MS4 permits proposed by various Regional Water Boards. At that time, USEPA expressly objected to certain MS4 permits that included language stating, “*permittees will not be in violation of this [receiving water limitation] provision ... [if certain steps are taken to evaluate and improve the effectiveness of the jurisdictional runoff management programs],*” concluding that this phrase would not comply with the CWA.<sup>21</sup>

The Ninth Circuit held in *Natural Resources Defense Council v. County of Los Angeles* (2011) 673 F3d. 880, 886 (revd. on other grounds and remanded by *Los Angeles County Flood Control District v. Natural Resources Defense Council* (133 S.Ct. 710 (2013))) that engagement in the iterative process does not provide a safe harbor from liability for violations of permit terms prohibiting exceedances of water quality standards. The Ninth Circuit holding is consistent with the position of the State and Regional Water Boards that exceedances of water quality standards in an MS4 permit constitute violations of permit terms subject to enforcement by the Water Boards or through a citizen suit. While the Water Boards have generally directed dischargers to achieve compliance by improving control measures through the iterative process, the San Diego Water Board retains the discretion to take other appropriate enforcement and the iterative process does not shield dischargers from citizen suits under the CWA.

The requirements of Provision A.4, therefore, are required to be implemented until the water quality standards expressed under Provisions A.1.a, A.1.c, and A.2.a are achieved. The CWA requires MS4 permits to “*require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.*” The requirements of this Order have been deemed or determined to be “appropriate” to achieve water quality standards in receiving waters.

Part of the “controls” required by the Order is the process described in Provision A.4. Provision A.4 includes the process that is ultimately expected to achieve compliance with the requirement that discharges from the MS4 do not cause or contribute to violations of water quality standards in the receiving waters. The implementation of Provision A.4 is required when the Copermittees or the San Diego Water Board have determined that discharges from the MS4 are causing or contributing to violations of water quality standards in the receiving waters.

The Copermittees must effectively prohibit non-storm water discharges into the MS4s, reduce the discharge of pollutants in storm water from the MS4s to the MEP, and ensure that their MS4 discharges do not cause or contribute to violations of water quality standards. If the Copermittees have effectively prohibited non-storm water

---

<sup>21</sup> Letter from Alexis Strauss, Acting Director, Water Division, USEPA Region IX, to Walt Pettit, Executive Director, State Water Board, re: SWRCB/OCC File A-1041 for Orange County, dated January 21, 1998.

discharges and reduced storm water pollutant discharges to the MEP, but their discharges are still causing or contributing to violations of water quality standards, Provision A.4 provides a clear “iterative process” for the Copermittees to follow.

Provision A.4 essentially requires the Copermittees to implement additional BMPs until MS4 discharges no longer cause or contribute to a violation of water quality standards.

In assessing compliance and potential enforcement actions, the San Diego Water Board looks at the Copermittees’ efforts in total to meet the requirements of Provisions A.1.a, A.1.c, A.2.a and Provision A.4. The Copermittees need to demonstrate that they are making improvements to their programs and making progress toward achieving the discharge prohibitions and receiving water limitations in Provisions A.1.a, A.1.c, and A.2.a by implementing the requirements of Provision A.4. The San Diego Water Board would consider these efforts prior to strictly enforcing the requirements of Provisions A.1.a, A.1.c, and A.2.a. Causes of exceedances of the receiving water limitations can often be more difficult to identify and attribute solely to the Copermittees’ MS4s. The intent of the Order is to provide the Copermittees more clarity and flexibility in addressing these exceedances through the iterative approach and adaptive management process until the requirements under Provisions A.1.a, A.1.c, and A.2.a are fully achieved.

An exception to the iterative approach and adaptive management process would be in receiving waters subject to adopted and approved TMDLs. For TMDLs that are incorporated into the Order, there is a specific date for compliance to be achieved, after which the iterative approach and adaptive management process required under Provision A.4 no longer provides the flexibility to achieve compliance. Where compliance dates for a TMDL have passed, compliance with the WQBELs incorporated into the Order established by a TMDL in Attachment E to protect water quality standards is required. Thus, after the interim or final compliance dates for a TMDL have passed, if the discharges from the Copermittees’ MS4s are causing or contributing to a violation of WQBELs, exceedances of WQBELs must be strictly enforced by the San Diego Water Board. In the meantime, however, the Copermittees are in compliance with the interim or final TMDL requirements in Attachment E as long as the interim or final WQBELs are being achieved in accordance with the interim or final compliance dates.

In addition, this Order includes an optional pathway that incorporates the requirements of Provision A.4 and would allow a Copermittee to be deemed in compliance with the requirements under Provisions A.1.a, A.1.c, A.1.d, A.2, and A.3.b during implementation of a Water Quality Improvement Plan that incorporates specific additional requirements. This alternative compliance pathway and the additional specific requirements are described below under the discussion for Provision B.3.c.

## **B. Water Quality Improvement Plans**

**Purpose:** Since 1990, the Copermittees have been developing and implementing programs and BMPs intended to effectively prohibit non-storm water discharges to the MS4s and control pollutants in storm water discharges from the MS4s to receiving waters. As a result, several water body / pollutant combinations have been de-listed from the CWA Section 303(d) List, beach closures have been significantly reduced, and public awareness of water quality issues has increased. The Copermittees have been able to achieve improvements in water quality in some respects, but significant improvements to the quality of receiving waters and discharges from the MS4s are still necessary to meet the requirements and objectives of the Clean Water Act.

Provision B includes requirements for the Copermittees to develop and implement Water Quality Improvement Plans to ultimately comply with the prohibitions and limitations under Provision A. The Water Quality Improvement Plans will provide the Copermittees a comprehensive program that can achieve the requirements and further the objectives of the CWA. Implementation of the Water Quality Improvement Plans will also improve the quality of the receiving waters in the San Diego Region.

The Water Quality Improvement Plan is the backbone of the Regional MS4 Permit requirements. Provision B provides the guidance, criteria, and minimum expectations and requirements for the elements of the Water Quality Improvement Plan to be developed and implemented by the Copermittees. The Water Quality Improvement Plans will be implemented in the Watershed Management Area by the Copermittees within their jurisdictions through their jurisdictional runoff management programs.

The Water Quality Improvement Plan also incorporates a program to monitor and assess the progress of the Copermittees' jurisdictional runoff management programs toward improving the quality of discharges from the MS4s, as well as tracking improvements to the quality of receiving waters. A process to adapt and improve the effectiveness of the Water Quality Improvement Plans has also been incorporated into the requirements of Provision B to be consistent with the "iterative approach" required to achieve compliance with discharge prohibitions of Provisions A.1.a and A.1.c and receiving water limitations of Provision A.2.a, pursuant to the requirements of Provision A.4.

The Water Quality Improvement Plans have also been structured to incorporate the requirements of any TMDLs that have been adopted for the San Diego Region. Incorporating the requirements of the TMDLs into the requirements of Provision B allows the Copermittees to develop a single plan, instead of separate plans, to coordinate their non-storm water and storm water runoff management programs. The Water Quality Improvement Plans allow the Copermittees to meet the requirements of this Order, as well as fulfill the requirements of the TMDLs.

As an added benefit, if the Copermitees demonstrate that impaired water bodies within the Watershed Management Area listed on the 303(d) List will be addressed with their Water Quality Improvement Plans in a reasonable period of time, the San Diego Water Board may be able to remove the water bodies from the 303(d) List, which would greatly reduce the need for the San Diego Water Board to develop additional TMDLs that would have to be incorporated into the Order and implemented by the Copermitees.

***Discussion:*** The federal NPDES regulations require the Copermitees to develop a proposed management program (40 CFR 122.26(d)(2)(iv)). The proposed management program must include “*a comprehensive planning process*” and “*where necessary intergovernmental coordination*” for the “*duration of the permit.*” The Water Quality Improvement Plan is the Copermitees’ “*comprehensive planning process*” document for the proposed management program that will be implemented within a Watershed Management Area. Implementation of the Water Quality Improvement Plan requires “*intergovernmental coordination*” among the Copermitees for at least the “*duration of the permit,*” and likely into and beyond the next iteration of the permit.

Developing Water Quality Improvement Plans based upon watersheds is consistent with federal regulations that support the development of permit conditions, as well as implementation of storm water management programs, at a watershed scale (40 CFR 122.26(a)(3)(ii), 122.26(a)(3)(v), and 122.26(d)(2)(iv)). In 2003, USEPA issued a Watershed-Based NPDES Permitting Policy Statement (USEPA, 2003) that defines watershed-based permitting as an approach that produces NPDES permits that are issued to point sources on a geographic or watershed basis. In this policy statement, USEPA explains that “[*t*]he utility of this tool relies heavily on a detailed, integrated, and inclusive watershed planning process.” USEPA identifies a number of important benefits of watershed permitting, including more environmentally effective results, the ability to emphasize measuring the effectiveness of targeted actions on improvements in water quality, reduced cost of improving the quality of the nation’s waters and more effective implementation of watershed plans, including TMDLs, among others.

An emphasis on watersheds is appropriate at this stage in the San Diego Region’s MS4 program to shift the focus to more targeted, water quality driven planning and implementation. Addressing discharges on a watershed scale focuses on water quality results by emphasizing the receiving waters in the watershed. The conditions of the receiving waters drive management actions, which in turn focus measures to address pollutant contributions from MS4 discharges.

The Water Quality Improvement Plan gives the Copermitees the responsibility of developing a comprehensive plan to coordinate the efforts of their jurisdictional runoff management programs for addressing the problems related to MS4 discharges causing impacts to water quality in the Watershed Management Area. The development of the plan provides the Copermitees the opportunity to provide

significant input on how to implement their jurisdictional runoff management programs, and how to best utilize their available resources in addressing a focused set of priorities that they believe will result in measureable improvements to water quality within the Watershed Management Area.

The Copermittees are encouraged to separate the Watershed Management Area into subwatersheds, as appropriate. This allows the Copermittees to identify priorities applicable to a subset of the Copermittees or specific water bodies or areas within the Watershed Management Area.

Included in the requirements for the elements to be included in the Water Quality Improvement Plan are monitoring and assessment requirements that are necessary to implement, as well as ensure the Copermittees are in compliance with, the requirements of the Order. In addition to the federal requirements of the CWA section 308(a) and 40 CFR 122.26(d), the San Diego Water Board has the authority to establish monitoring, reporting, and recordkeeping requirements for NPDES permits under CWC 13383.

More specific and detailed discussions of the requirements of Provision B are provided below.

Provision B.1 (Watershed Management Areas) requires the Copermittees to develop a Water Quality Improvement Plan for each of the Watershed Management Areas defined by the San Diego Water Board.

Pursuant to 40 CFR 122.26(d)(2)(iv), proposed management programs “*may impose controls on a...watershed basis...*” The Water Quality Improvement Plan is the Copermittees’ proposed management program. A Water Quality Improvement Plan must be developed for each Watershed Management Area identified in the Order.

The Watershed Management Areas are identified in Table B-1. Table B-1 establishes ten (10) Watershed Management Areas, and identifies the Copermittees that are responsible for developing and implementing the Water Quality Improvement Plan for each Watershed Management Area.

The Copermittees from each of the three counties within the San Diego Region were phased in as their respective NPDES municipal storm water permits expired. Order No. R9-2007-0001 expired in January 2012, and the San Diego County Copermittees became covered under the Regional MS4 Permit on June 27, 2013, the effective date of the Order. Order No. R9-2009-0002 expired in December 2014, and the Orange County Copermittees became covered under the Regional MS4 Permit on April 1, 2015, the effective date of Order No. R9-2013-0001 as amended by Order No. R9-2015-0001. Order No. R9-2010-0016 expired in November 2015, and the Riverside County Copermittees became covered under the Regional MS4 Permit on January 7, 2016, the effective date of Order No. R9-2013-0001 as amended by Order No. R9-2015-0100.

The Cities of Laguna Woods, Laguna Hills, Murrieta, and Wildomar are located partially within the jurisdictions of both the California Regional Water Quality Control Board, Santa Ana Region (Santa Ana Water Board) and the San Diego Water Board. Written requests for designation of a single Regional Water Board to regulate matters pertaining to permitting of Phase I MS4 discharges were submitted to the San Diego Water Board and the Santa Ana Water Board by the City of Laguna Woods by letter dated September 8, 2014, the City of Laguna Hills by letter dated March 12, 2014, the City of Murrieta by letter dated June 22, 2015, and the City of Wildomar by letter dated June 23, 2015. The Cities of Laguna Woods, Laguna Hills, Murrieta, and Wildomar requested designation of the San Diego Water Board pursuant to CWC section 13228.

The Cities of Laguna Woods, Laguna Hills, Murrieta, and Wildomar reported that management and implementation of municipal programs to comply with two different Phase I MS4 permits creates a significant administrative and financial burden and inhibits their ability to contribute to greater overall water quality improvements in either Region. In an effort to address these concerns, the San Diego Water Board and the Santa Ana Water Board have entered into written agreements, whereby the San Diego Water Board is designated to regulate Phase I MS4 discharges within the jurisdictions of the Cities of Laguna Woods, Laguna Hills, Murrieta, and Wildomar including the portions of the jurisdictions within the Santa Ana Region. The San Diego Water Board and the Santa Ana Water Board entered into an agreement dated February 10, 2015 to designate the San Diego Water Board to regulate Phase I MS4 discharges within the jurisdictions of the Cities of Laguna Woods and Laguna Hills, including the portions of the jurisdictions within the Santa Ana Region, upon the later effective date of Order No. R9-2015-0001 or Santa Ana Water Board Tentative Order No. R8-2015-0001. The San Diego Water Board and the Santa Ana Water Board entered into an agreement dated October 26, 2015 to designate the San Diego Water Board to regulate Phase I MS4 discharges within the jurisdictions of the Cities of Murrieta and Wildomar, including the portions of the jurisdictions within the Santa Ana Region upon the effective date of Order R9-2015-0100.

Under the terms of the agreements, each Regional Water Board retains the authority to enforce provisions of the Phase I MS4 permits issued to each city but compliance will be determined based upon the Phase I MS4 permit in which a particular city is regulated as a Copermittee (Water Code section 13228 (b)). Also under the terms of the agreements, any TMDL and associated MS4 permit requirements issued by the San Diego Water Board or the Santa Ana Water Board which include the Cities of Laguna Woods, Laguna Hills, Murrieta, or Wildomar as a responsible party, will be incorporated into the appropriate Phase I MS4 permit by reference. Enforcement of the applicable TMDL would remain with the Regional Water Board which has jurisdiction over the targeted impaired water body. Applicable TMDLs subject to the terms of the agreement include, but are not limited to, the Santa Ana Water Board's San Diego Creek/Newport Bay TMDL and Lake Elsinore/Canyon Lake Nutrient TMDLs, and the San Diego Water Board's Indicator Bacteria Project I Beaches and Creeks TMDL.

In conformance with the agreements, footnotes to Table B-1 are included to specify coverage under Order No. R9-2013-0001 for those Phase I MS4 discharges within the jurisdictional boundaries of the Cities of Laguna Woods, Laguna Hills, Murrieta, and Wildomar within the Santa Ana Region. Footnote 1 to Table B-1 specifies that the Cities of Laguna Woods and Laguna Hills are identified as responsible Copermitttees in the San Diego Creek/Newport Bay TMDL in the Santa Ana Region and remain obligated to comply with the San Diego Creek/Newport Bay TMDL pursuant to section XVIII of Tentative Order No. R8-2015-0001 (NPDES No. CAS618030) and any reissuance thereof. Footnote 4 to Table B-1 specifies that the Cities of Murrieta and Wildomar are identified as responsible Copermitttees in the Lake Elsinore/Canyon Lake Nutrient TMDLs in the Santa Ana Region and remain obligated to comply with the Lake Elsinore/Canyon Lake Nutrient TMDLs pursuant to section VI.D.2 of Order No. R8-2010-0033 (NPDES No. CAS618030) or corresponding section as it may be amended or reissued.

The Cities of Lake Forest and Menifee are located partially within the jurisdictions of both the Santa Ana Water Board and the San Diego Water Board. Written requests for designation of a single Regional Water Board to regulate matters pertaining to permitting of Phase I MS4 discharges were submitted to the San Diego Water Board and the Santa Ana Water Board by the City of Lake Forest by letters dated January 14, 2013 and April 4, 2014, and the City of Menifee by letter dated June 25, 2015. The Cities of Lake Forest and Menifee requested designation of the San Ana Water Board pursuant to CWC section 13228.

The Cities of Lake Forest and Menifee reported that management and implementation of municipal programs to comply with two different Phase I MS4 permits creates a significant administrative and financial burden and inhibits their ability to contribute to greater overall water quality improvements in either Region. In an effort to address these concerns, the San Diego Water Board and the Santa Ana Water Board have entered into written agreements, whereby the Santa Ana Water Board is designated to regulate Phase I MS4 discharges within the jurisdictions of the Cities of Lake Forest and Menifee including the portions of the jurisdictions within the San Diego Region. The San Diego Water Board and the Santa Ana Water Board entered into an agreement dated February 10, 2015 to designate the San Ana Water Board to regulate Phase I MS4 discharges within the jurisdiction of the City of Lake Forest, including portions of the jurisdiction within the Santa Diego Region, upon the later date of Order No. R9-2015-0001 or Santa Ana Water Board Tentative Order No. R8-2015-0001. The San Diego Water Board and the Santa Ana Water Board entered into an agreement dated October 26, 2015 to designate the San Ana Water Board to regulate Phase I MS4 discharges within the jurisdiction of the City of Menifee, including portions of the jurisdiction within the San Diego Region, under Order No. R8-2010-0033 (NPDES No. CAS618030) as it may be amended or reissued upon the effective date of Order No. R9-2015-0100.

Under the terms of the agreements, each Regional Water Board retains the authority to enforce provisions of the Phase I MS4 permits issued to each city but compliance will be determined based upon the Phase I MS4 permit in which a particular city is regulated as a Copermittee (Water Code section 13228 (b)). Also under the terms of the agreements, any TMDL and associated Phase I MS4 permit requirements issued by the San Diego Water Board or the Santa Ana Water Board which include the Cities of Lake Forest or Menifee as a responsible party, will be incorporated into the appropriate Phase I MS4 permit by reference. Enforcement authority for the applicable TMDL would remain with the Regional Water Board which has the jurisdiction over the targeted impaired water body. Applicable TMDLs subject to the terms of the agreement include, but are not limited to, the Santa Ana Water Board's San Diego Creek/Newport Bay TMDL and Lake Elsinore/Canyon Lake Nutrient TMDLs, and the San Diego Water Board's Indicator Bacteria Project I Beaches and Creeks TMDL.

In conformance with the agreements, Footnote 2 to Table B-1 has been included to specify that Phase I MS4 discharges within the jurisdictional boundaries of the City of Lake Forest located within the San Diego Region will be regulated under Santa Ana Water Board Order No. R8-2015-0001 (NPDES No. CAS618030) and any reissuance thereof. The footnote specifies that the City of Lake Forest is an identified responsible Copermittee in the Indicator Bacteria Project I Beaches and Creeks TMDL (Bacteria TMDL) in the San Diego Region and remains obligated to comply with the Bacteria TMDL pursuant to Attachment E of Order No. R9-2013-0001 and any reissuance thereto. The City of Lake Forest is also identified as a responsible Copermittee in the San Diego Creek/Newport Bay TMDL established by the Santa Ana Water Board. The City remains obligated to comply with the San Diego Creek/New Port Bay TMDL pursuant to the Santa Ana Water Board's Phase I MS4 Permit (Tentative Order No. R8-2015-0001 (NPDES No. CAS618030), as it may be amended or reissued). Under the terms of the agreement, the City of Lake Forest must retain and continue implementation of the over irrigation prohibition in Title 15, Chapter 15, Section 14.030, List (b) of the City Municipal Code throughout its jurisdiction. Also under the terms of the agreement, the City of Lake Forest must actively participate in the development and implementation of the South Orange County Watershed Management Area Water Quality Improvement Plan required pursuant to Order No. R9-2013-0001, and any reissuance thereof.

Footnote 3 to Table B-1 has been included to specify that Phase I MS4 discharges within the jurisdictional boundaries of the City of Menifee located within the San Diego Region will be regulated under Santa Ana Water Board Order No. R8-2010-0033 (NPDES No. CAS618033) and any reissuance thereof. At this time, the City of Menifee is not identified as a responsible Copermittee for any TMDLs established by the San Diego Water Board. Under the terms of the agreement, the City of Menifee must actively participate in the development and implementation of the Santa Margarita River Watershed Management Area Water Quality Improvement Plan required pursuant to Order No. R9-2013-0001, and any reissuance thereof.

The basis supporting the Cities of Laguna Woods, Laguna Hills, Lake Forest, Menifee, Murrieta, and Wildomar requests to designate a specific Regional Water Board for regulatory oversight of Phase I MS4 discharges may change under future conditions and circumstances, therefore the San Diego Water Board will periodically review the effectiveness of the agreements during each MS4 permit reissuance. Based on this periodic review the San Diego Water Board may terminate one or both of the agreements with the Santa Ana Water Board or otherwise modify the agreements subject to the approval of the Santa Ana Water Board.

Provision B.2 (Priority Water Quality Conditions) requires the Copermittees in each Watershed Management Area to identify the highest priority water quality conditions which will be the focus of the Water Quality Improvement Plan implementation.

Provisions B.2.a and B.2.b provide the criteria that must be assessed when characterizing the receiving water quality and potential impacts from MS4 discharges of the receiving waters within the Watershed Management Area. The criteria are based primarily on the requirements in 40 CFR 122.26(d)(1)(iv)(C) and (C)(1)-(9). Characterizing the receiving water quality and identifying the potential impacts caused by MS4 discharges to receiving waters in the Watershed Management Area is necessary to identify the impacts to receiving waters associated with MS4 discharges that are of the most concern to the Copermittees.

Based on the information required to be considered under Provisions B.2.a and B.2.b, Provision B.2.c requires to Copermittees to identify the highest priority water quality conditions related to discharges from the MS4s that will be the primary focus of the Water Quality Improvement Plan in the Watershed Management Area. Addressing and improving these highest priority water quality conditions will become the focus of each Copermittee's jurisdictional runoff management program as the Water Quality Improvement Plan is implemented in the Watershed Management Area. The highest priority water quality conditions are expected to include sources of pollutants and/or stressors, and/or receiving water conditions, that the Copermittees consider the highest threats or most likely to have adverse impacts on the physical, chemical, and biological integrity of receiving waters. Addressing these threats and/or adverse impacts should restore the physical, chemical, and biological integrity of receiving waters, and result in the restoration and protection of the beneficial uses of the receiving waters in the Watershed Management Area.

Provision B.2.d requires the Copermittees to identify known and suspected sources of pollutants and/or stressors contributing to the highest priority water quality conditions. The requirements of Provision B.2.d are based primarily on the requirements in 40 CFR 122.26(d)(1)(iii)(B)(1)-(6). The Copermittees are required to evaluate several factors in the identification of those sources. The Copermittees must consider and evaluate the following: (1) the land uses that may contribute toward impacts to receiving waters, (2) the locations of the Copermittees' MS4s that can convey and discharge runoff and pollutants to receiving waters, (3) other sources that discharge

into the Copermittees' MS4s and receiving waters, and (4) other information and data that can help the Copermittees to evaluate the relative importance of or contribution from those sources toward the highest priority water quality conditions. Identifying the known and suspected sources, and their relative contribution toward the highest priority water quality conditions, will help the Copermittees to focus, direct, and prioritize their resources and implementation efforts within their jurisdictions.

Provision B.2.e requires the Copermittees to identify potential strategies that can result in improvements to water quality in MS4 discharges and/or receiving waters within the Watershed Management Area. Potential water quality improvement strategies will not necessarily be implemented by the Copermittees, but provide a "menu" of options that the Copermittees will consider for implementation. The public participation process that will be implemented during the development of the Water Quality Improvement Plan is where the potential water quality improvement strategies will be identified.

Provision B.3 (Water Quality Improvement Goals, Strategies and Schedules) requires the Copermittees in each Watershed Management Area to identify the goals that the Copermittees' jurisdictional runoff management programs will work toward achieving to address and improve the highest priority water quality conditions identified under Provision B.2.c; the strategies that will be implemented by the Copermittees within their jurisdictions and the Watershed Management Area to achieve the goals; and, the schedules for implementing the strategies and achieving the goals. The element of the Water Quality Improvement Plan required under Provision B.3 is where the "*comprehensive planning*" and "*intergovernmental coordination*" [40 CFR 122.26(d)(2)(iv)] of the Copermittees' actions for the proposed management programs within the Watershed Management Area is required to be described.

Provision B.3.a requires the Copermittees to identify interim and final numeric goals, and schedules to achieve those goals as part of the Water Quality Improvement Plans. Provision B.3.a.(1) requires the Copermittees to identify two types of numeric goals to be achieved:

- (1) Final numeric goals in the receiving waters and/or MS4 discharges that will result in the protection of the water quality standards of the receiving waters for the highest priority water quality conditions identified by the Copermittees for Provision B.2.c. These final numeric goals are the ultimate goals for the Water Quality Improvement Plan, and the achievement and maintenance of these final numeric goals will indicate that one or more beneficial uses have been successfully restored and/or protected from MS4 discharges.
- (2) Interim numeric goals that can be used by the Copermittees to demonstrate progress toward achieving the final numeric goals in the receiving waters and/or MS4 discharges for the highest priority water quality conditions in the Watershed Management Area. Achievement of the interim numeric goals will demonstrate to the San Diego Water Board that the Copermittees' implementation efforts are progressing toward achieving the final numeric goals.

Provision B.3.a.(1) does not specify what the interim and final numeric goals must be based on, but they essentially must be designed to achieve compliance with water quality standards in the receiving waters. To that end, the interim goals must be based on measureable criteria or indicators capable of demonstrating progress toward achieving the numeric goals.

The interim and final numeric goals can be based on the water quality objectives in the Basin Plan. The water quality objectives in the Basin Plan, however, consist of numeric and narrative water quality objectives. Numeric water quality objectives can be directly used as numeric goals. Narrative water quality objectives, on the other hand, will require some interpretation to identify numeric goals. The achievement of multiple numeric goals based on the water quality objectives, used in combination, may be necessary to demonstrate that beneficial uses have been restored and/or protected.

The Copermittees could also propose other numeric goals that are not necessarily water quality objectives from the Basin Plan. For example, the Copermittees could propose a numeric goal that consists of achieving some percent improvement of a measureable indicator, such as acreage of a specific habitat or increase in a specific plant or animal species population. Other examples may include pollutant load reductions, number of impaired waterbodies delisted from the List of Water Quality Impaired Segments, Index of Biological Integrity (IBI) scores, etc.

The Copermittees may choose to develop interim numeric goals based on the final numeric goals they develop, such as incremental steps toward ultimately achieving the final numeric goals. The Copermittees may also choose to develop interim numeric goals that are based on other measureable indicators that can indirectly indicate improvements and progress toward the final numeric goals.

There are no limits to the types of interim numeric goals that could be proposed by the Copermittees, other than the goals must be based on measureable criteria or indicators capable of demonstrating progress toward achieving the numeric goals. Likewise, there are no limits to the types of final numeric goals that could be proposed by the Copermittees, other than the goals must “*restore and protect the water quality standards of the receiving waters.*”

Finally, Provision B.3.a.(2) also requires the Copermittees to develop schedules for measuring progress and achieving the interim and final numeric goals. Several criteria are included for the development of the schedules, but the Copermittees are required to achieve the numeric goals as soon as possible, consistent with federal NPDES regulations (40 CFR 122.47(a)(1)).

The Copermittees are also required to incorporate any compliance schedules for applicable ASBS or TMDL requirements. Applicable ASBS and TMDL compliance schedules are set forth in Attachment A and Attachment E to the Order, respectively.

The information provided by the Copermittees under Provision B.3.a.(2) will be used by the Copermittees and the San Diego Water Board to gauge and track the progress of the Copermittees' efforts in addressing the highest priority water quality conditions identified in the Water Quality Improvement Plan.

Provision B.3.b requires the Copermittees to identify the strategies and schedules to implement those strategies as part of the Water Quality Improvement Plans. Provision B.3.b requires the Copermittees to identify the water quality improvement strategies that will be and may be implemented within the Watershed Management Area to 1) reduce pollutants in storm water discharged from the MS4 to the MEP, 2) effectively prohibit non-storm water discharges from entering the MS4, 3) protect water quality standards in receiving waters by controlling MS4 discharges so that they do not cause or contribute to exceedances of receiving water limitations, and 4) achieve applicable WQBELs that implement TMDLs. The Copermittees will select the strategies to be implemented based on the likely effectiveness and efficiency of the potential water quality improvement strategies identified under Provision B.2.e to effectively prohibit non-storm water discharges to the MS4, reduce pollutants in storm water discharges from the MS4 to the MEP, and/or achieve the interim and final numeric goals identified under Provision B.3.a.

Provision B.3.b.(1) requires each Copermittee to identify the strategies that will be or may be implemented within its jurisdiction. Each Copermittee is required to describe the strategies it is committed to implementing as part of its jurisdictional runoff management requirements under Provisions E.2 through E.7, and the optional jurisdictional strategies that the Copermittee will implement, as necessary, to achieve the numeric goals.

Each Copermittee is expected to implement the optional jurisdictional strategies identified under Provisions B.3.b.(1)(b) when the jurisdictional strategies it has committed to implement under Provision B.3.b.(1)(a) are not making adequate progress toward the interim and final numeric goals in accordance with the schedules established under Provision B.3.a. Provision B.3.b.(1)(b)(v) requires each Copermittee to describe the circumstances necessary to trigger implementation of the optional jurisdictional strategies, in addition to the requirements of Provisions B.3.b.(1)(a).

The San Diego Water Board recognizes that there may be optional jurisdictional strategies that will likely require funding and/or resources for planning, permitting, procurement of labor and materials, and implementation. Thus, Provision B.3.b.(1)(b)(iv) requires each Copermittee to describe the funding and/or resources that are necessary to implement these optional jurisdictional strategies. This information may provide interested groups and members of the public an understanding of the resources that they could provide or assist in obtaining to implement these optional jurisdictional strategies.

Provision B.3.b.(2) requires the Copermittees in the Watershed Management Area to identify the regional or multi-jurisdictional strategies that may be implemented, as necessary, to achieve the numeric goals. Similar to the requirements of Provision B.3.b.(1)(b), these regional or multi-jurisdictional strategies will likely require funding and/or resources for planning, permitting, procurement of labor and materials, and implementation, and San Diego Water Board recognizes that these strategies may be difficult to implement with only Copermittee resources. Thus, Provision B.3.b.(2)(d) requires the Copermittees to describe the funding and/or resources necessary to implement these optional regional or multi-jurisdictional strategies. This information may provide interested groups and members of the public an understanding of the resources that they could provide or assist in obtaining to implement these optional regional or multi-jurisdictional strategies.

Provision B.3.b.(3) requires the Copermittees to develop and include schedules in the Water Quality Improvement Plan for implementing the water quality improvement strategies identified under Provisions B.3.b.(1) and B.3.b.(2). The schedule for implementing the water quality improvement strategies will be used by the Copermittees and San Diego Water Board to measure and demonstrate the progress of the Copermittees' implementation efforts toward reducing pollutants in storm water discharged from the MS4 to the MEP, and eliminating illicit non-storm water discharges from entering the MS4.

Provision B.3.b.(4) provides the Copermittees in each Watershed Management Area the option of implementing watershed-specific structural BMP requirements for Priority Development Projects. Historically, storm water permits have included very specific performance standards for permanent, structural BMPs. These standards describe the expectation for the capture or treatment of pollutants and control of excessive flow before storm water is discharged from a site. The Copermittees were also allowed to develop waiver programs for Priority Development Projects to avoid implementing the structural BMPs; however, the waiver programs were not necessarily tied into any sort of holistic watershed strategy. The result is that implementation of BMP requirements is largely done on a site-by-site basis. This requires proper design on the part of the Priority Development Project and strict oversight on the part of the Copermittee.

Provision B.3.b.(4) promotes the evaluation of multiple strategies for water quality improvement, in addition to the implementation of permanent structural BMPs, on a watershed-scale versus the site-by-site approach. In a report issued by the Southern California Coastal Water Research Project (SCCWRP) and several other research institutions, the report emphasized that a successful hydromodification management program will involve watershed analysis as a first step, and that integrating multiple watershed-based strategies is preferable over a site-by-site approach. Indeed, the report states that the watershed analysis "*...should lead to identification of existing opportunities and constraints that can be used to help prioritize areas of greater concern, areas of restoration potential, infrastructure constraints, and pathways for*

*potential cumulative effects.*<sup>22</sup> Provision B.3.b.(4) promotes the findings and recommendations of the report by providing a pathway for Copermittees to develop an integrated approach to their land development programs.

Under Provision B.3.b.(4), the Copermittees in a Watershed Management Area must first perform an analysis by gathering as much information pertaining to the physical characteristics of the Watershed Management Area as possible. This includes, for example, identifying potential areas of coarse sediment supply, present and anticipated future land uses, and locations of physical structures within receiving streams and upland areas that affect the watershed hydrology (such as bridges, culverts, and flood management basins). Once this information is collected, the Copermittees must produce GIS layers (maps) that include this information.

From there, the Copermittees must use the results of the Watershed Management Area Analysis to identify and compile a list of candidate projects that could potentially be used as alternative compliance options for Priority Development Projects. Such projects include, for example, opportunities for stream or riparian area rehabilitation, opportunities for retrofitting existing infrastructure to incorporate storm water retention or treatment, and opportunities for regional BMPs, among others. Once these candidate projects are identified, Copermittees may allow Priority Development Projects to fund, partially fund, or completely implement these candidate projects. The Copermittees must first find that implementing such a candidate project would provide greater overall benefit to the watershed than requiring implementation of the structural BMPs onsite, and also enter into a voluntary agreement with the Priority Development Project that authorizes this arrangement. The Copermittees may use Provision B.3.b.(4) as both 1) a mechanism to reach their stated goals of the Water Quality Improvement Plan by using Priority Development Projects to either fund or implement projects that will provide water quality benefit, and 2) an alternative to requiring strict adherence to the structural BMP design standards.

Additionally, Provision B.3.b.(4) allows the Copermittees to use the results of the Watershed Management Area Analysis to identify areas within the Watershed Management Area where it is appropriate to allow Priority Development Projects to be exempt from the hydromodification management BMP performance requirements. Provision E.3.c.(2) already allows exemptions for Priority Development Projects that discharge to a conveyance channel whose bed and bank are concrete lined from the point of discharge to an enclosed embayment or the Pacific Ocean. However, there may be cases where further exemptions are warranted. The Copermittees may identify such cases on a watershed basis and include them in the Watershed Management Area Analysis; however, they must provide the supporting rationale to support all claims for exemptions.

---

<sup>22</sup> 2012. ED Stein, F Federico, DB Booth, BP Bledsoe, C Bowles, Z Rubin, GM Kondolf, A Sengupta. Technical Report 667. Southern California Coastal Water Research Project. Costa Mesa, CA.

Provision B.3.b.(4) provides an innovative pathway for Copermittees to regulate their land development programs by allowing alternative compliance in lieu of implementing structural BMPs on each and every Priority Development Project. This approach facilitates the integration of watershed-scale solutions for improving overall water quality and assisting Copermittees to achieve their stated goals of the Water Quality Improvement Plan. The San Diego Water Board understands, however, that undertaking this approach, which involves extensive planning, could be resource intensive for the Copermittees. Therefore, the Watershed Management Area Analysis is optional and not a requirement. The Copermittees can choose not to perform the watershed planning and mapping exercise described in Provision B.3.b.(4), and instead choose to require strict implementation of the structural BMPs onsite, pursuant to Provision E.3.c.

Provision B.3.c is included to provide the Copermittees an option that allows the Copermittees to be deemed in compliance with the prohibitions and limitations (receiving water limitations) of Provisions A.1.a, A.1.c, A.1.d, A.2, and A.3.b. One or more Copermittees within a Watershed Management Area can choose to implement this option. This option is only expected to be utilized by a Copermittee that wishes to be deemed in compliance with the requirements of Provisions A.1.a, A.1.c, A.1.d, A.2, and A.3.b.

The alternative compliance pathway option included in Provision B.3.c is consistent with the approach described in Order WQ 2015-0075, *In the Matter of Review of Order No. R4-2012-0175, NPDES Permit No. CAS004001, Waste Discharge Requirements for Municipal Separate Storm Sewer System (MS4) Discharges within the Coastal Watersheds of Los Angeles County, Except Those Discharges Originating from the City of Long Beach MS4*, adopted by the State Water Board on June 16, 2015. State Water Board Order WQ 2015-0075 directs the Regional Water Boards to consider a watershed-based planning and implementation approach to compliance with receiving water limitations when issuing Phase I MS4 permits going forward. Order WQ 2015-0075 included seven principles that the Regional Water Boards are expected to follow when incorporating an alternative compliance pathway into a MS4 permit. The San Diego Water Board incorporated the seven principles stipulated in State Water Board Order WQ 2015-0075 into the Regional MS4 Permit as follows:

1. Provision A of this Order continues to require compliance with water quality standards in the receiving water and does not deem good faith engagement in the iterative process to constitute compliance with receiving water limitations. Provision A of this Order continues to be consistent with the receiving water limitations provisions from State Water Board Order WQ 99-05.
2. Compliance with Provision B.3.c constitutes compliance with the requirements of the Provision A.3.b, which requires compliance with the WQBELs of the TMDLs in Attachment E to the Order, and is considered compliance with receiving water limitations for those TMDL water body-pollutant combinations.

3. Provision B.3.c is an ambitious, rigorous, and transparent alternative compliance pathway that allows a Copermittee appropriate time to come into compliance with receiving water limitations without being in violation of the receiving water limitations during implementation of the compliance alternative.
4. Provision B.3.c requirements are incorporated into a Water Quality Improvement Plan. Water Quality Improvement Plans are a watershed-based planning and implementation approach, which address multiple contaminants, and incorporate TMDL requirements.
5. The strategies required to be included in the Water Quality Improvement Plans promote and incentivize the use of green infrastructure and requires the implementation of low impact development principles.
6. The strategies required to be included in the Water Quality Improvement Plans encourage multi-benefit regional projects that capture, infiltrate, and reuse storm water and support a local sustainable water supply.
7. The alternative compliance pathway of Provision B.3.c includes rigor and accountability. The Copermittee is required, through a transparent public process, to demonstrate that water quality issues in the watershed have been analyzed and prioritized, and that appropriate solutions are proposed. The Copermittee is also required, through a transparent process, to monitor the results and return to their analysis to verify assumptions and update the solutions. The Copermittee is required to conduct this type of adaptive management on its own initiative without waiting for direction from the San Diego Water Board.

In order for a Copermittee to utilize this option, the Copermittee is required to include three components in the Water Quality Improvement Plan. The first component is a comprehensive set of numeric goals and schedules that will demonstrate the requirements of Provisions A.1.a, A.1.c, A.1.d, A.2, and A.3.b will be achieved within a specified period of time. The criteria provided in the Order will require the Copermittee to demonstrate that the discharges from its MS4s will not cause or contribute to exceedances of water quality objectives in the receiving waters, and/or the receiving waters will be adequately protected from adverse impacts attributable to the Copermittee's MS4 discharges. The Copermittee is also required to specify annual milestones to be achieved each year, which adds rigor, accountability, and transparency to the process. The annual milestones may consist of water quality improvement strategy implementation phases, interim numeric goals, and other acceptable metrics, which are expected to build upon previous milestones and lead to the achievement of the final numeric goals.

The second component is an analysis to demonstrate that implementation of the water quality improvement strategies required under Provision B.3.b will achieve the numeric goals within the established schedules required under Provisions B.3.a and B.3.c.(1).

Because the development of the analysis may require significant resources, the Order allows the Copermittees in each Watershed Management Area that choose to implement this option to perform the analysis individually, or pool their resources for the analysis collectively.

The analysis must “reasonably” and “quantitatively” demonstrate that the implementation of the water quality improvement strategies can achieve the numeric goals within the established schedules. However, as more data and information are collected during implementation of the Water Quality Improvement Plan to demonstrate progress toward achieving the numeric goals, the numeric goals, water quality improvement strategies and schedules may need to be modified. If the data and information indicate that modification is needed, the Copermittee must also update the analysis. With the exception of numeric goals and schedules associated with TMDLs from Attachment E to the Order, the modification to the analysis would be allowed as part of the adaptive management process of the Water Quality Improvement Plan. For TMDLs, modification of numeric goals or schedules would likely require an amendment to the Basin Plan and Attachment E to the Order before the analysis and Water Quality Improvement Plan could include such modifications.

Thus, the third component is the key component that allows a Copermittee to demonstrate the implementation of the water quality improvement strategies within its jurisdiction is making progress toward achieving the final numeric goals. Each Copermittee must specify the monitoring and assessments that will be performed to confirm that implementation of the water quality improvement strategies are making progress toward achieving the numeric goals within the established schedules, and whether the interim and final numeric goals have been achieved.

These three components must then be reviewed by the Water Quality Improvement Consultation Panel. The Water Quality Improvement Consultation Panel is required to be formed as part of the public participation process for the development of the Water Quality Improvement Plans. The Water Quality Improvement Consultation Panel is described under Provision F.1.a.(1)(b). Review by the Water Quality Improvement Consultation Panel is included to provide an additional layer of input, support, and accountability for the implementation of this option.

Compliance with the requirements of Provisions A.1.a, A.1.c, A.1.d, A.2, and A.3.b begins when the Water Quality Improvement Plan, incorporating the requirements of Provision B.3.c.(1), is accepted by the San Diego Water Board. Each Copermittee that chooses to implement and continues to implement this option will be deemed in compliance with the requirements of Provisions A.1.a, A.1.c, A.1.d, A.2, and A.3.b as long as the Copermittee continues to implement the strategies, monitoring and assessments as incorporated in the Water Quality Improvement Plan in accordance with Provision B.3.c.(1), and the Copermittee reports the achievement of the annual milestones each year, or provides acceptable rationale and recommends appropriate modifications to the interim numeric goals, and/or water quality improvement

strategies, and/or schedules to improve the rate of progress toward achieving the final numeric goals. The Copermittee continues to be deemed in compliance with the requirements of Provisions A.1.a, A.1.c, A.1.d, A.2, and A.3.b during the time the San Diego Water Board reviews the rationale and recommended modifications to the interim numeric goals, and/or water quality improvement strategies, and/or schedules. If and when the San Diego Water Board determines that it does not accept the rationale or recommendations, the Copermittee will be notified they are no longer deemed in compliance with Provisions A.1.a, A.1.c, A.1.d, A.2, and A.3.b.

Provision B.4 (Water Quality Improvement Monitoring and Assessment) requires the Copermittees to develop an integrated monitoring and assessment program to track the progress of the Water Quality Improvement Plan toward meeting the implementation goals and schedules, and improving the water quality of the Watershed Management Area. Provision B.4 is the part of the Water Quality Improvement Plan where the Copermittees describe the monitoring data that will be collected, which is not only necessary to implement the “iterative approach” required by Provision A.4, but inform the adaptive management and “*comprehensive planning process*” that allows the Copermittees to make adjustments and modifications to the Water Quality Improvement Plans and the jurisdictional runoff management programs.

Provision B.4 requires the Copermittees, at a minimum, to include the requirements of Provision D as part of the water quality improvement monitoring and assessment program for the Water Quality Improvement Plan. The Copermittees, however, are not limited to the requirements of Provision D and may include additional monitoring and assessment methods to track progress toward improving water quality in the Watershed Management Area.

In addition to incorporating the requirements of Provision D, the water quality improvement monitoring and assessment program must incorporate any monitoring and assessment requirements specified for any applicable TMDLs included in Attachment E to the Order, and the monitoring requirements of Attachment B to State Water Board Resolution No. 2012-0012 for Watershed Management Areas with ASBS.

The monitoring and assessments required to be incorporated into the Water Quality Improvement Plan are necessary to implement, as well as ensure the Copermittees are in compliance with, the requirements of the Order.

Provision B.5 (Iterative Approach and Adaptive Management Process) requires the Copermittees to implement the iterative approach pursuant to Provision A.4 to adapt the Water Quality Improvement Plan, monitoring and assessment program, and jurisdictional runoff management programs to become more effective toward achieving compliance with Provisions A.1.a, A.1.c and A.2.a.

Provision B.5 requires the Copermittees in each Watershed Management Area to re-evaluate the highest priority water quality conditions and potential water quality

improvement strategies, the water quality improvement goals, strategies and schedules, and the water quality improvement monitoring and assessment program and provide recommendations for modifying those elements to improve the effectiveness of the Water Quality Improvement Plan. The re-evaluation of the Water Quality Improvement Plan is part of the assessment requirements of Provision D.

Provision B.6 (Water Quality Improvement Plan Submittal, Updates, and Implementation) requires to Copermittees to submit, update, and implement the Water Quality Improvement Plans.

The requirements for the process to develop and submit the Water Quality Improvement Plans is described in more detail under the discussion for Provision F.1. The process will include several opportunities for the public to provide input during the development of the Water Quality Improvement Plans. The process for updating the Water Quality Improvement Plans is described in more detail under the discussion for Provision F.3.c. Upon acceptance of the Water Quality Improvement Plan and updates, the Copermittees are required to immediately begin implementing the Water Quality Improvement Plan and subsequent updates.

The Water Quality Improvement Plan is expected to be a dynamic document that will evolve over time. The Water Quality Improvement Plan is also expected to be a long term plan that focuses the Copermittees' efforts and resources on a limited set of priority water quality conditions, with the ultimate goal of protecting all the beneficial uses of the receiving waters within the Watershed Management Area from impacts that may be caused or contributed to by MS4 discharges. As the Copermittees collect data, implement their jurisdictional runoff management programs, and review the results from their water quality improvement monitoring and assessment program, the Water Quality Improvement Plan is expected to be continually reviewed and updated until compliance with Provisions A.1.a, A.1.b, and A.2.a is achieved.

However, in specific cases supported by robust analytical documentation the implementation of the Water Quality Improvement Plans may demonstrate that TMDLs are not necessary for identified impaired water bodies within the Watershed Management Area if the analytical record demonstrates that technology-based effluent limitations required by the CWA, more stringent effluent limitations required by state, local, or federal authority, and/or other pollution control requirements (e.g., best management practices) required by local, state or federal authority are stringent enough to implement applicable water quality standards within a reasonable period of time.<sup>23</sup>

The San Diego Water Board submits an Integrated Report to USEPA to comply with the reporting requirements of CWA sections 303(d), 305(b) and 314, which lists the attainment status of water quality standards for water bodies in the San Diego Region.

---

<sup>23</sup> 40 CFR 130.7(b)(1)

According to USEPA guidance for the Integrated Report,<sup>24</sup> water bodies are placed in one of five categories. Water bodies included in Category 5 in the Integrated Report indicate at least one beneficial use is not being supported or is threatened, and a TMDL is required. Water bodies included in Category 5 are placed on the 303(d) List.

Category 4 in the Integrated Report is for water bodies where available data and/or information indicate that at least one beneficial use is not being supported or is threatened, but a TMDL is not needed.<sup>25</sup> Impaired surface water bodies may be included in Category 4 if a TMDL has been adopted and approved (Category 4a); if other pollution control requirements required by a local, state or federal authority are stringent enough to implement applicable water quality standards within a reasonable period of time (Category 4b); or, if the failure to meet an applicable water quality standard is not caused by a pollutant, but caused by other types of pollution (Category 4c).

Impaired water bodies can be included in Category 4a if a TMDL has been adopted and approved. The TMDLs in Attachment E to the Order implement the requirements of the TMDLs adopted by the San Diego Water Board, and approved by the State Water Board and USEPA. The water bodies in Attachment E will be included in Category 4a in the Integrated Report and removed from the 303(d) List.

Impaired water bodies can be included in Category 4b if there are *acceptable* “pollution control requirements” required by a local, state or federal authority stringent enough to implement applicable water quality standards within a reasonable period of time (e.g., a compliance date is set). When evaluating whether a particular set of pollution controls are “requirements,” the USEPA considers a number of factors, including: (1) the authority (local, state, federal) under which the controls are required and will be implemented with respect to sources contributing to the water quality impairment (examples may include: self-executing state or local regulations, permits, and contracts and grant/funding agreements that require implementation of necessary controls), (2) existing commitments made by the sources and completion or soon to be completed implementation of the controls (including an analysis of the amount of actual implementation that has already occurred), (3) the certainty of dedicated funding for the implementation of the controls, and (4) other relevant factors as determined by USEPA depending on case-specific circumstances.<sup>26</sup>

Impaired water bodies can be included in Category 4c if the failure to meet an applicable water quality standard is not caused by a pollutant, but caused by other types of pollution. Pollution, as defined by the CWA is “the man-made or man-induced alteration of the chemical, physical, biological, and radiological integrity of water.”<sup>27</sup> In

---

<sup>24</sup> USEPA, 2005. Guidance for 2006 Assessment, Listing and Reporting Requirements Pursuant to Sections 303(d), 305(b) and 314 of the Clean Water Act

<sup>25</sup> Ibid

<sup>26</sup> Ibid

<sup>27</sup> CWA section 502(19)

other cases, pollution does not result from a pollutant and a TMDL is not required. Examples of circumstances where an impaired segment may be placed in Category 4c include segments impaired solely due to lack of adequate flow, stream channelization, or hydromodification. In these situations, there may be water quality management actions that can address the cause(s) of the impairment, but a TMDL may not be required to implement the actions.

The Water Quality Improvement Plans will require the implementation of pollution controls and water quality management actions (i.e. water quality improvement strategies) which can result in the attainment of water quality standards in water bodies impaired by discharges from the Copermittees' MS4s. The Water Quality Improvement Plans also include requirements that are expected to attain water quality standards in a reasonable period of time. The San Diego Water Board considers the Water Quality Improvement Plans to be a commitment by the Copermittees to develop, plan, budget for, and implement pollution controls that will attain water quality standards in receiving waters in a reasonable period of time, or as soon as possible. The results of the Copermittees' efforts in implementing the Water Quality Improvement Plans can be used to re-evaluate the condition of the impaired water bodies during the next update to the 303(d) List.

After the Copermittees submit the Water Quality Improvement Plans and demonstrate that water quality standards are being attained or will be attained in a reasonable period of time, the San Diego Water Board may re-evaluate the water bodies on the 303(d) List. These water bodies on the 303(d) List may be re-evaluated and placed into Category 4b or Category 4c in the Integrated Report. The water bodies placed in Category 4b or Category 4c in the Integrated Report must show a record that the water bodies are attaining water quality standards or supporting the identified beneficial uses, or will attain water quality standards or support identified beneficial uses in a reasonable period of time, in order for the water bodies to be appropriately removed from the 303(d) List.

## C. Action Levels

**Purpose:** Provision C includes requirements for the Copermittees to identify and include numeric action levels in the Water Quality Improvement Plan to direct and focus the Copermittees' jurisdictional runoff management program implementation efforts for controlling MS4 discharges to receiving waters.

**Discussion:** Under Provision C, the numeric action levels required are for non-storm water discharges and storm water discharges. The non-storm water action levels (NALs) are applicable to non-storm water discharges from the Copermittees' MS4s, which can occur year-round. The storm water action levels (SALs) are applicable to storm water discharges from the Copermittees' MS4s, which occur during the rainy season defined as the period between October 1 and April 30.

The action levels required by Provision C are based on the action level requirements that were developed and incorporated into Order Nos. R9-2009-0002 and R9-2010-0016, the Orange County and Riverside County MS4 Permits, respectively. The Fact Sheets for these Orders provide detailed discussions about the development of the numeric NALs and SALs included in this Order.

Order Nos. R9-2009-0002 and R9-2010-0016 required the Copermittees to perform prescribed actions if the NALs or SALs are exceeded. The actions required under Order Nos. R9-2009-0002 and R9-2010-0016 generally included conducting additional monitoring and source investigations when a discharge from the MS4 is observed to exceed one or more NALs and/or SALs.

For this Order, however, the action levels of Provision C are to be used by the Copermittees to prioritize the actions to be implemented as part of the Water Quality Improvement Plan. Monitoring data collected by the Copermittees from MS4 outfalls will be compared with the NALs and SALs. Exceedances of the NALs and SALs will not require the Copermittees to immediately identify sources causing exceedances, but will provide some numeric indicator levels that can give the Copermittees a way to measure the relative severity of a pollutant contributing to receiving water quality impacts.

NALs and SALs must be included in the Water Quality Improvement Plans to be used by the Copermittees in directing and focusing their water quality improvement strategies. The Copermittees are expected to utilize the NALs and SALs to help focus their implementation efforts on addressing pollutants that have the most significant potential or observed impacts to receiving waters. The NALs and SALs will be used as part of the MS4 discharges assessments required under Provision D.4.b. The NALs and SALs may also be used by the Copermittees as the numeric goals to be achieved in MS4 discharges and/or receiving waters as the Water Quality Improvement Plans are implemented.

More specific and detailed discussions of the requirements of Provision C are provided below.

Provision C.1 (Non-storm Water Action Levels) requires the Copermittees to incorporate NALs into the Water Quality Improvement Plan for pollutants and/or constituents that are causing or contributing, or may be causing or contributing, to the highest priority water quality conditions identified in the Water Quality Improvement Plan related to non-storm water discharges from the MS4s. NALs generally must be consistent with the water quality objectives found within the Basin Plan.

The NALs have been included to ensure that the Copermittees are implementing and complying with several requirements of the MS4 permit. The federal CWA requires permits for municipal storm sewer systems to “*effectively prohibit non-storm water discharges into the storm sewers.*” The federal NPDES regulations, which were promulgated to implement the CWA requirements for discharges from municipal storm sewers, require a program to address illicit discharges, which are non-storm water discharges. Provision A.1.b prohibits “[*n*]on-storm water discharges into MS4s” unless the non-storm water discharge authorized by a separate NPDES permit. The NALs will be used as part of the illicit discharge detection and elimination program required pursuant to Provision E.2, as well as part of the MS4 discharges assessments required pursuant to Provision D.4.b.

Provision A.1.a prohibits non-storm water discharges from the MS4 from “*causing, or threatening to cause, a condition of pollution, contamination, or nuisance (as defined in CWC section 13050), in waters of the state.*” In addition, pursuant to Provision A.2.a, non-storm water discharges “*must not cause or contribute to the violation of water quality standards in any receiving waters.*”

Ideally, the Copermittees’ jurisdictional runoff management programs will eliminate all non-storm water discharges entering the MS4s within their jurisdictions. The complete elimination of non-storm water discharges to the Copermittees’ MS4s would be in compliance with the CWA requirements for non-storm water discharges, as well as the prohibitions and limitations of Provisions A.1.a and A.2.a.

The federal regulations, however, also refer to several non-storm water discharge categories that must be addressed as illicit discharges if they are found to be a source of pollutants. The federal regulations thus identify some non-storm water discharges that are not required to be addressed as illicit discharges if they are not a source of pollutants (e.g. non-storm water discharges specified in Provisions E.2.a.(1)-(5)). Thus, these regulations imply that some non-storm water discharges into and from the MS4 may occur even if non-storm water discharges are “effectively” prohibited by the Copermittees.

If the source of a non-storm water discharge is identified as a category of non-storm water specified in Provisions E.2.a.(1)-(5), the NALs can be used to determine if the category of non-storm water discharges is a source of pollutants. For other non-storm water discharges not specified in Provisions E.2.a.(1)-(5), the CWA requires those discharges to be “*effectively*” prohibited by removing the discharge to the MS4 through enforcement of the Copermittees’ legal authority established under “*ordinance, order or similar means*” to prohibit illicit discharges to the MS4s.

If there are non-storm water discharges that are not required to be addressed as illicit discharges, those discharges must comply, at a minimum, with the discharge prohibitions and receiving water limitations of Provision A. Thus, the non-storm water discharges from the MS4 must be at levels that will not cause or contribute to a condition of pollution, contamination, or nuisance (Provision A.1.a), and must not cause or contribute to a violation of water quality standards in receiving waters (Provision A.2.a) to be consistent with the discharge prohibitions and receiving water limitations of Provisions A.1.a and A.2.a.

Furthermore, the San Diego Region has predominantly intermittent and ephemeral rivers and streams which vary in flow volume and duration at spatial and temporal scales. For most of these river and stream systems, non-storm water discharges from the MS4 are likely to be the most significant or the only source contributing to surface flows present within the receiving water, especially during the dry season.

Therefore, because of the prohibitions and limitations of Provision A.1.a and A.2.a, and the likelihood that non-storm water discharges from the MS4 are the most significant or only source contributing to surface flows present within the receiving water, NALs generally must be consistent with the water quality objectives found within the Basin Plan. Non-storm water discharges that are meeting the NALs would not be expected to cause or contribute to an exceedance of water quality objectives in receiving waters, which would be consistent with the discharge prohibitions and receiving water limitations of Provisions A.1.a and A.2.a.

Exceedances of the NALs would then provide an indication of the relative severity of a pollutant in non-storm water discharges from the MS4 contributing to potential or observed receiving water quality impacts. The relative severity or significance of a pollutant in non-storm water discharges from the MS4 will provide the Copermittees a valuable source of information that can be used to identify priority water quality conditions within a Watershed Management Area and within each Copermittee’s jurisdiction.

Tables C-1 through C-4 under Provision C.1.a specify numeric NALs for several parameters or pollutant constituents for non-storm water discharges from the MS4 to several water body types. The NALs for MS4 discharges given under Provision C.1.a are based on the water quality objectives for inland surface waters in the Basin Plan, and the water quality objectives for ocean waters in the Ocean Plan. The NALs for

most of the metals were calculated based on the State Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California (State Implementation Policy or SIP). The NALs provided in Tables C-1 through C-4 must be included in the Water Quality Improvement Plans required to be developed pursuant to Provision B.

Provision C.1.b requires the Copermittees to identify NALs for pollutants and/or constituents, not specified in Provision C.1.a, which are causing or contributing, or may be causing or contributing, to the highest priority water quality conditions of the Watershed Management Area related to non-storm water discharges from the MS4s. The NALs must be based on the water quality objectives in the Basin Plan. The NALs identified under Provision C.1.b must be included in the Water Quality Improvement Plan.

The San Diego Water Board recognizes that some of the NALs required pursuant to Provisions C.1.a and C.1.b may be exceeded more frequently than not. Thus, Provision C.1.c has been included in the Order to provide the Copermittees the option to develop secondary NALs that are set at levels greater than the levels required pursuant to Provisions C.1.a and C.1.b to further refine the prioritization and assessment of water quality improvement strategies for addressing non-storm water discharges to and from the MS4s, as well as the detection and elimination of non-storm water and illicit discharges to and from the MS4.

Provision C.2 (Storm Water Action Levels) requires the Copermittees to incorporate SALs into the Water Quality Improvement Plan for pollutants and/or constituents causing or contributing, or may be causing or contributing, to the highest priority water quality conditions identified in the Water Quality Improvement Plan related to storm water discharges from the MS4s.

The SALs have been included to ensure that the Copermittees are implementing and complying with several requirements of the MS4 permit. Provision A.1.a prohibits storm water discharges from the MS4 from *“causing, or threatening to cause, a condition of pollution, contamination, or nuisance (as defined in CWC section 13050), in waters of the state.”* In addition, pursuant to Provision A.2.a, storm water discharges *“must not cause or contribute to the violation of water quality standards in any receiving waters.”*

Provision A.3.a, however, implicitly acknowledges that compliance with Provisions A.1.a and A.2.a cannot be achieved immediately for discharges of storm water from the MS4 by applying the MEP standard. Thus, Provision A.4 requires the Copermittees to implement an iterative approach to demonstrate that MEP is being achieved. This approach is supported by USEPA.

The federal CWA requires permits for municipal storm sewer systems to *“require controls to reduce the discharge of pollutants [in storm water] to the maximum extent practicable, including management practices, control techniques and system, design*

*and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.*” MEP is an ever-evolving, flexible, and advancing concept. As knowledge about controlling storm water runoff and discharges evolves, so does the knowledge which constitutes MEP. Reducing the discharge of storm water pollutants from the MS4 to the MEP requires the Copermittees to assess their jurisdictional runoff management programs and revise activities, control measures, BMPs, and measurable goals, as necessary to meet MEP. The SALs provide the Copermittees measureable goals that may be used to demonstrate the achievement of MEP for reducing pollutants in storm water discharges from the MS4. The SALs will be used as part of the MS4 discharges assessments required under Provision D.4.a.

In June of 2006, the State Water Board’s Blue Ribbon Storm Water Panel released its report titled “*The Feasibility of Numerical Effluent Limits Applicable to Discharges of Storm Water Associated with Municipal, Industrial and Construction Activities.*” In the recommendations, the Blue Ribbon panel proposed storm water effluent limitations which are computed using statistical based population approaches. The SALs specified in Table C-5 under Provision C.2.a were developed from a regional subset of nationwide Phase I MS4 data by using USEPA Rain Zone 6 (arid west) data.<sup>28</sup> Additionally, utilization of regional data is appropriate due to the addition of data into the nationwide Phase I MS4 monitoring dataset in February 2008. This additional data increased the number of USEPA Rain Zone 6 samples to more than 400, and included additional monitoring events within Southern California.

Utilizing data from USEPA Rain Zone 6 resulted in SALs which closely reflect the environmental conditions experienced in the San Diego Region. The localized subset of data includes sampling events from multiple Southern California locations including Orange, San Diego, Riverside, Los Angeles, and San Bernardino Counties. The dataset includes samples taken from highly built-out impervious areas and from storm events representative of Southern California conditions.

The SALs for cadmium, copper, lead and zinc require the measurement of hardness and to provide more specificity in the assessment of samples with SALs for total metal concentrations. While USEPA Rain Zone 6 data include a large sample size for concentrations of total metals, the impact the concentration will have on receiving waters will vary with receiving water hardness. Since it is the goal of the SALs, through the iterative process and MEP standard, to have MS4 storm water discharges meet all applicable water quality objectives, the hardness of the receiving water should be used when assessing the total metal concentration of a sample.

Thus, when there is an exceedance of a SAL for a metal, the Copermittee must determine if that exceedance is above the existing applicable water quality objectives based upon the hardness of the receiving water. The water quality objectives

---

<sup>28</sup> Data used to develop SAL were obtained from <http://rpitt.eng.ua.edu/Research/ms4/mainms4.shtml>

Copermittees must use to assess total metal SAL exceedances are the California Toxic Rule (CTR) and USEPA National Recommended Water Quality Criteria for Freshwater Aquatic Life 1 hour maximum concentrations. The 1-hour maximum concentration is to be used for comparison since it is expected to most replicate the impacts to waters of the State from the first flush following a precipitation event.

The statistically calculated SALs given in Table C-5 are at levels greater than the water quality objectives in the Basin Plan or Ocean Plan. Because the objective of the CWA is to *“to restore and maintain the chemical, physical, and biological integrity of the Nation’s waters”*, meaning eventually pollutants in storm water discharges must be reduced to a level that cannot cause or contribute to an exceedance of water quality objectives in receiving waters, over time the SALs are expected to be reduced to a level that is based on the water quality objectives rather than statistical calculations. The San Diego Water Board will review the SALs as more data for discharges of storm water from the MS4s are collected, and revise them as conditions improve and the MEP standard advances. For the Water Quality Improvement Plans required under this Order, the SALs identified under Provision C.2.a must be included.

Provision C.2.b requires the Copermittees to identify SALs for pollutants and/or constituents, not specified in Provision C.2.a, which are causing or contributing, or may be causing or contributing, to the highest priority water quality conditions of the Watershed Management Area related to storm water discharges from the MS4s. The SALs identified under Provision C.2.b must be included in the Water Quality Improvement Plan.

The San Diego Water Board recognizes that some of the SALs required pursuant to Provisions C.2.a and C.2.b may be exceeded more frequently than not. Thus, Provision C.2.c has been included in the Order to provide the Copermittees the option to develop secondary SALs that are set at levels greater than the levels required pursuant to Provisions C.2.a and C.2.b to further refine the prioritization and assessment of water quality improvement strategies for reducing pollutants in storm water discharges from the MS4s.

## D. Monitoring and Assessment Program Requirements

**Purpose:** Provision D includes minimum monitoring and assessment requirements that must be developed and implemented by the Copermittees as part of the Water Quality Improvement Plans. Implementation of the monitoring and assessment requirements of Provision D will allow the Copermittees to demonstrate that the requirements of the CWA to effectively prohibit non-storm water discharges to the MS4 and reduce pollutants in storm water discharges from the MS4 to the MEP are being achieved. Implementation of the monitoring and assessment requirements of Provision D will also allow the Copermittees and the San Diego Water Board to track improvements to the water quality in the San Diego Region. The monitoring and assessment program requirements are necessary to implement, as well as ensure the Copermittees are in compliance with, the requirements of the Order.

**Discussion:** The San Diego Water Board recognized that changes to the monitoring and assessment requirements of the Fourth Term Permit were necessary to improve the usefulness and usability of monitoring data collected by the Copermittees to support their jurisdictional storm water programs more efficiently and with increased effectiveness. The data collected are needed to better inform the Copermittees' understanding of the physical, chemical, and biological condition of the receiving waters and the quality of the MS4 discharges. The monitoring program needs to provide opportunities for the Copermittees to integrate regional monitoring efforts into municipal storm water monitoring requirements to provide a cost-effective approach to monitoring and avoid duplication of efforts.

The requirements in Provision D were largely recommended by the Copermittees as an outcome of the San Diego Water Boards Focused Meeting process. The monitoring and assessment program requirements now require collection of more specific information necessary for each Copermittee to adapt its jurisdictional runoff management program in such a way that focuses resources on a watershed's highest priority water quality conditions. The monitoring and assessment program will require the Copermittees to collect data that can be utilized to answer both watershed level management questions (e.g. Are the chemical, physical, and biological conditions of a receiving water protective, or likely protective of beneficial uses?), and specific jurisdictional runoff management program activity questions (e.g. Are the water quality improvement strategies of the jurisdictional program effectively eliminating non-storm water discharges to the MS4?).

The monitoring data collected and assessment information that will be reported to the San Diego Water Board are necessary to determine if the Copermittees are complying with the prohibitions and limitations of Provision A. The required monitoring and assessments that must be reported to the San Diego Water Board will be utilized for three purposes:

- (1) Inform the Copermittees, San Diego Water Board, and the public on the progress of the Copermittees' efforts to effectively prohibit non-storm water discharges to the MS4 and reduce pollutants in storm water discharges from the MS4 to the MEP;
- (2) Inform the Copermittees, San Diego Water Board, and the public on the condition of water bodies receiving discharges from the Copermittees' MS4, and the progress of the Copermittees' water quality improvement implementation efforts toward improving the receiving water quality; and
- (3) Inform the Copermittees, the San Diego Water Board, and the public on the effectiveness of the Water Quality Improvement Plan toward achieving (1) and (2).

The monitoring and assessment information reported pursuant to Provision F is also expected to be key to the iterative approach and adaptive management process required under Provision A.4 and implemented through the Water Quality Improvement Plan required under Provision B. As required by Provision A.4, the iterative approach and adaptive management process is required if the Copermittees cannot meet the discharge prohibitions and receiving water limitations of Provisions A.1.a, A.1.c, and/or A.2.a under the present conditions.

Provision D provides the minimum monitoring and assessment requirements that must be included in each Water Quality Improvement Plan to be developed and implemented by the Copermittees. The Copermittees, however, are not limited to the requirements of Provision D and may include additional methods to track progress toward improving water quality in a Watershed Management Area.

More specific and detailed discussions of the requirements of Provision D are provided below.

Provision D.1 (Receiving Water Monitoring Requirements) specifies the minimum receiving water monitoring that the Copermittees must conduct within the Watershed Management Area and include as part of the Water Quality Improvement Plan.

Provision D.1 establishes minimum monitoring requirements that must be conducted by the Copermittees within each Watershed Management Area. Provision D.1 requires the Copermittees to collect and develop the data and information necessary to determine potential impacts to the beneficial uses in the receiving waters due to discharges from the MS4s. The monitoring required under Provision D.1 will also provide the data that will allow the Copermittees to gauge the effectiveness and progress of its Water Quality Improvement Plan implementation efforts toward improving the quality of receiving waters.

The receiving water monitoring requirements of Provision D.1 are focused primarily on monitoring the conditions and response of the receiving waters to the Copermittees'

collective implementation efforts to reduce receiving water impacts that may be caused by the discharges from the MS4s. The preference of the San Diego Water Board is for the Copermittees to spend their resources achieving tangible and observable improvements in receiving water conditions instead of collecting samples and analyzing data that has consistently indicated that receiving water conditions are degraded and require improvement. In general, the ability to measure potential improvements in receiving water conditions due to any actions implemented by the Copermittees as part of the Water Quality Improvement Plan may require several years before a response can be observed. Thus, the frequency of collecting receiving water monitoring data has been kept to a minimum.

During the transitional period between adoption of this Order and San Diego Water Board acceptance of a Water Quality Improvement Plan, the Copermittees must conduct receiving water monitoring in accordance with Provision D.1.a. This approach to collecting receiving water data is different from what was required in the Fourth Term Permits, but one that truly embraces the concept of an integrated, cost-effective, streamlined receiving water monitoring approach.

Provision D.1.a requires Copermittees to continue performing the receiving water monitoring programs required in Order Nos. R-2007-0001, R9-2009-002, and R9-2010-0016; plus participation in: hydromodification management plan monitoring approved by the San Diego Water Board, monitoring plans as part of load reduction plans (either Bacteria Load Reduction Plans or Comprehensive Load Reduction Plans) for TMDLs in Attachment E of the Order, Storm Water Monitoring Coalition Regional Monitoring, Southern California Bight Regional Monitoring, Sediment Quality Monitoring, and ASBS Monitoring as applicable to a Watershed Management Area.

Provision D.1.a also provides an opportunity for the Copermittees to use third party data to meet receiving water monitoring requirements where feasible. Allowing the Copermittees to use the data currently collected through its participation in existing regional receiving water programs and that of third parties provides an efficiency of resources in obtaining the data necessary to inform the Copermittees and the San Diego Water Board about the physical, chemical, and biological conditions of the receiving waters, which can also help to focus the receiving water monitoring during the implementation of the Water Quality Improvement Plan. Once a Water Quality Improvement Plan is developed for a Watershed Management Area in compliance with Provision B of this Order, the transitional period is over and Copermittees are required to conduct receiving water monitoring according to the requirements of Provisions D.1.b-e.

Provision D.1.b requires each Copermittee to identify at least one long term receiving water monitoring station to be representative of receiving water quality within each Watershed Management Area. Long term receiving water monitoring stations can be located at any existing mass loading stations, temporary watershed assessment stations, bioassessment stations, and stream assessment stations previously established by the Copermittees. The requirements under Provision D.1.b. are

consistent with 40 CFR 122.26(d)(2)(iii)(D), which specifies that a “*monitoring program for representative data collection for the term of the permit*” may include “*instream locations*.” For each Watershed Management Area, at least one long term watershed monitoring station is required to be established and monitored. The Copermittees may choose to establish additional long term monitoring stations where necessary to support the implementation and adaptation of the Water Quality Improvement Plan.

Provision D.1.b. requires the Copermittees to locate the long term receiving water monitoring station at one of these existing receiving water monitoring stations to provide the Copermittees an opportunity to experience monitoring cost savings while continuing to collect the necessary data to assess the status and trends of receiving water quality conditions in 1) coastal water, 2) enclosed bays, harbors, estuaries, and lagoons, and 3) streams under both dry weather and wet weather conditions. Ideally these stations will continue to be monitored as part of the receiving water monitoring for each Watershed Management Area to maintain a consistent set of locations and a period of data that can be built upon with the monitoring required under this Order.

The receiving water monitoring requirements are separated into monitoring required during dry weather conditions pursuant to Provision D.1.c, and wet weather conditions pursuant to Provision D.1.d.

At each long term monitoring station the Copermittees must conduct at least three dry weather monitoring events as required pursuant to Provision D.1.c and at least three wet weather monitoring events as required pursuant to Provision D.1.d per permit term. Provisions D.1.c and D.1.d require the Copermittees to monitor priority water quality conditions identified in the Water Quality Improvement Plan, constituents listed as causing impairment of receiving waters in the Watershed Management Area, applicable NALs, toxicity, constituents listed in Tables D-2 and D-3, and constituents for implementation plans (e.g. Bacteria Load Reduction Plans and Comprehensive Load Reduction Plans). Required toxicity monitoring was changed to reflect an updated understanding of the unique challenges associated with sampling storm water for toxicity. Copermittees are required to sample receiving water for toxicity during each dry weather and each wet weather event pursuant to Provision D.1.c.(4) and D.1.d.(4). Required toxicity monitoring is now consistent with the State Water Resources Control Board Policy for Toxicity Assessment and Control (Draft June 2012) and recently adopted MS4 permits for Caltrans and Los Angeles Water Board. Receiving water monitoring efforts in this Order have been streamlined to redirect resources to monitoring efforts that better support pollutant reduction solutions with an increasing emphasis on MS4 outfall monitoring, source identification, and source abatement activities.

In addition to the receiving water monitoring requirements under Provisions D.1.b-d, Provision D.1.e requires the Copermittees participate in and/or conduct other types of receiving water monitoring. As recommended and requested by the Copermittees, Provision D.1.e.(1) requires the Copermittees to participate in existing regional monitoring, as applicable to each Watershed Management Area. Existing regional

monitoring includes monitoring conducted by the Storm Water Monitoring Coalition and for the Southern California Bight. Participation in and use of monitoring data collected from these existing regional water quality monitoring programs provide the Copermittees a greater opportunity for efficiency in the use of their resources to manage their storm water programs and those controllable discharges under their authority.

Provision D.1.e.(1)(c) requires the south Orange County MS4 Copermittees to participate in “unified regional beach water quality monitoring.” This monitoring replaces requirements to conduct “core monitoring” of beach water quality, as provided for in Appendix III of the Ocean Plan.

Several different public agencies currently conduct routine, ongoing beach water quality monitoring in south Orange County in accordance with several different sets of requirements. The monitoring programs implemented to meet those requirements overlap temporally and spatially. These monitoring programs are partially but not fully integrated. In November 2010, the State Water Board adopted Resolution No. 2010-0053, which directed Regional Water Boards to work with dischargers to modify beach water quality monitoring programs required by Regional Water Board-issued permits in order to eliminate redundancies and incorporate beach water quality monitoring required by beach water quality statutes, where appropriate.

In April 2012, the San Diego Water Board requested that its staff review beach water quality monitoring conducted in south Orange County. To assist in responding to that request, staff of the Board convened a workgroup that included representatives of the three public agencies that currently conduct almost all of the routine, ongoing beach water quality monitoring in south Orange County, i.e., South Orange County Wastewater Authority (SOCWA), Orange County Public Works, and Orange County Health Care Agency (OCHCA). The workgroup also included other interested parties, including representatives of the Sierra Club and Surfrider Foundation. In December 2012, the San Diego Water Board adopted Resolution No. R9-2012-0069, which endorsed the San Diego Water Board staff report entitled “A Framework for Monitoring and Assessment in the San Diego Region,” dated November 2012.

The unified program is consistent with and will meet or exceed the minimum requirements for beach water quality monitoring and related public notification and reporting established by State law, including the Ocean Plan. The unified program is consistent with State Water Board Resolution No. 2010-0053. The unified program is also consistent with and will help implement, “A Framework for Monitoring and Assessment in the San Diego Region,” which emphasizes the need for question-driven, beneficial use-oriented monitoring and assessment. The primary purpose of the unified program will be to answer the question “Does beach water quality meet standards for the beneficial use of water contact recreation?”

The unified program is intended to be protective; it will help protect the health of swimmers, surfers, and others who use south Orange County beach waters for water

contact recreational activities. The unified program is also intended to be reasonable; it will eliminate duplicative monitoring and will include triggers for public notification and additional sampling at all sampling stations year-round. The unified program is intended to be equitable; responsibility for implementation of the unified program will be shared and the responsible agencies will jointly make arrangements to implement the program and will have the flexibility to jointly make short and/or long term changes in those arrangements.

The San Diego Water Board Executive Officer issued a written directive on December 5, 2014, pursuant to California Water Code section 13383, for SOCWA and the south Orange County MS4 Copermittees to implement the unified program in cooperation with OCHCA. The Executive Officer may make revisions to the unified program, provided that the unified program, as revised, continues to be consistent with and meet the requirements of State law, including the Ocean Plan, for beach water quality monitoring and related public notification and reporting. Following a thirty day public comment period, and subject to a request for a hearing before the San Diego Water Board, any such revision shall take effect as specified in a written directive issued by the Executive Officer pursuant to CWC section 13383. The program and any Executive Officer issued revisions to the program are subject to CWC section 13320 right of review from the date of issuance.

The unified program will supersede the existing routine, ongoing, beach water quality monitoring programs in south Orange County that are conducted in accordance with the existing requirements of the NPDES permits for discharges from the SOCWA ocean outfalls and the south Orange County MS4s. The requirement to participate in “regional monitoring” of beach water quality replaces requirements to conduct “core monitoring” of beach water quality, as provided for in Appendix III of the Ocean Plan.

The State Water Resources Control Board adopted the Water Quality Control Plan for Enclosed Bays and Estuaries of California – Part 1 Sediment Quality which became effective August 25, 2009 (Sediment Quality Monitoring Policy). Provision D.1.e.(2) requires any Copermittees with MS4 discharges to an enclosed bay or estuary to monitor the sediments in the enclosed bay or estuary receiving water in accordance with the sediment quality monitoring procedures as prescribed in the Sediment Quality Monitoring Policy.

The State Water Board adopted Resolution No. 2012-0012 which approved exceptions to the California Ocean Plan for selected discharges into Areas of Special Biological Significance (ASBS), including special protections for beneficial uses. State Board Resolution No. 2012-0012 became effective on March 20, 2012, and Attachment B to the Resolution established limitations on point source storm water discharges to ASBS. Copermittees with MS4s that discharge to an ASBS must monitor its discharge to assure compliance with State Board Resolution No. 2012-0012 as required pursuant to Provision D.1.e.(3).

The San Diego Water Board is developing a regional monitoring strategy to assess the conditions of receiving waters in the San Diego Region. The monitoring requirements of Provision D.1 are expected to be incorporated or serve as a foundation of this regional monitoring strategy, but may require some modifications. When the San Diego Water Board develops an alternative regional monitoring strategy, the Copermittees will be required to participate in the development and implementation of the alternative regional monitoring program pursuant to Provision D.1.f.

Provision D.2 (MS4 Outfall Discharge Monitoring Requirements) specifies the minimum MS4 outfall discharge monitoring requirements that the Copermittees must incorporate and implement as part of the Water Quality Improvement Plan.

The dry weather MS4 outfall discharge monitoring requirements are included under Provisions D.2.a.(2) and D.2.b. The dry weather MS4 outfall discharge monitoring requirements are part of the “*program, including a schedule, to detect and remove (or require the discharger to the municipal separate storm sewer to obtain a separate NPDES permit for) illicit discharges and improper disposal into the storm sewer*” required by 40 CFR 122.26(d)(2)(iv)(B), which is expected to achieve compliance with the CWA section 402(p)(3)(B)(ii) statutory requirement for municipal storm water permits to require the Copermittees to “*effectively prohibit non-storm water discharges into the storm sewers.*” The dry weather MS4 outfall discharge monitoring data collection requirements are based on requirements under 40 CFR 122.26(d)(1)(iv)(D) and 122.26(d)(2)(iv)(B)(3).

The dry weather MS4 outfall discharge monitoring requirements are designed to provide wide spatial and temporal coverage of each jurisdiction to better understand the extent and magnitude of non-storm water discharges to receiving waters, and make a distinction between persistent and transient non-storm water flows. This information is expected to allow each Copermittee to focus its resources on eliminating and controlling the highest priority threats to receiving water quality, as well as integrating other elements of the storm water programs (e.g. complaint call response) and third party data to efficiently and effectively assist in efforts to eliminate non-storm water discharges.

The dry weather MS4 outfall discharge monitoring requirements of Provision D.2.a.(2) and D.2.b are separated into monitoring required before and after the San Diego Water Board accepts the Copermittees’ Water Quality Improvement Plan. Outfall monitoring conducted prior to acceptance of the Water Quality Improvement Plan is referred to in the Order as Transitional MS4 Outfall Discharge Monitoring. Provision D.2.a.(2) includes the transitional dry weather MS4 outfall discharge monitoring requirements.

The requirements under Provision D.2.a.(2) are based on the requirements under 40 CFR 122.26(d)(1)(iv)(D), (d)(1)(v)(B) and (d)(2)(iv)(B), which include the requirements for a monitoring program to identify, detect, and eliminate illicit connections and illegal discharges to the MS4s. The federal regulations (40 CFR 122.26(d)(1)(iv)(D)) require

the monitoring program to include “a *field screening analysis for illicit connections and illegal dumping [that]...[a]t a minimum, include[s] a narrative description, for either each field screening point or major outfall, of visual observations made during dry weather periods.*” The federal regulations (40 CFR 122.26(d)(1)(v)(B)) require the monitoring program to include “*inspection procedures and methods for detecting and preventing illicit discharges, and describe areas where this program has been implemented.*” Furthermore, the monitoring program is required by federal regulations (40 CFR 122.26(d)(2)(iv)(B)) to include “*a schedule, to detect and remove (or require the discharger to the municipal separate storm sewer to obtain a separate NPDES permit for) illicit discharges and improper disposal into the storm sewer.*”

Dry weather transitional MS4 outfall discharge monitoring requires each Copermittee to field screen (inspect) its major MS4 outfalls to classify the MS4 outfall locations as having persistent dry weather flows, transient dry weather flows, or no dry weather flows. To account for the variance in size of the 39 jurisdictions covered under this Order, the Copermittees recommended a tiered approach to the number of major MS4 outfalls that must be inspected. Provision D.2.a.(2)(a) provides a tiered approach to the number of major MS4 outfalls that must be visually inspected per jurisdiction as well as a minimum frequency each Copermittee must inspect each major MS4 outfall per year. This tiered approach is based on the total number of major MS4 outfalls within a Copermittees jurisdiction within each Watershed Management Area.

Based on the field screening, each Copermittee is required to make a determination whether any observed flowing, pooled, or ponded waters are transient or persistent flows. Based on this field screening information, other jurisdictional program information, and third party information, each Copermittee is required to prioritize the MS4 outfalls within its jurisdiction for follow up investigation and elimination of the non-storm water discharge, as part of its illicit discharge detection and elimination program required pursuant to Provision E.2. In accordance with the requirements of Provision E.2, each Copermittee is required to immediately investigate obvious illicit discharges (e.g. outfall discharges with unusual color, unusual odor, or high flows).

This approach allows a Copermittee to use all of its resources, as well as leverage resources and information provided by third parties, to effectively eliminate non-storm water discharges from its MS4 outfalls. If the source of the non-storm water discharge cannot be immediately eliminated, the Copermittee uses the persistent flow or transient flow classification along with other programmatic implementation data to prioritize the MS4 outfalls for future investigation. In accordance with the adaptive management approach deployed throughout this Order, Provision D.2.a.(2)(c) requires each Copermittee to update its MS4 outfall discharge monitoring station inventory, compiled pursuant to Provision D.2.a.(1), with any new information on the classification of whether the MS4 outfall produces persistent flow, transient flow, or no dry weather flow. The requirement of Provision D.2.a.(2)(c) assures that each Copermittee is collecting data that can be used to demonstrate compliance with the CWA requirement that each Copermittee must implement a program to “*effectively*

*prohibit non-storm water discharges into the [MS4]" and with the requirements under 40 CFR 122.26(d)(1)(iv)(D), (d)(1)(v)(B) and (d)(2)(iv)(B).*

Provision D.2.b describes the dry weather MS4 outfall discharge monitoring required to be incorporated and implemented as part of the Water Quality Improvement Plan. Dry weather MS4 outfall discharge monitoring must be performed by each Copermittee to identify non-storm water and illicit discharges within its jurisdiction pursuant to Provision E.2.c, and to prioritize the dry weather MS4 discharges that will be investigated and eliminated pursuant to Provision E.2.d. The emphasis of the dry weather MS4 outfall discharge monitoring required pursuant to Provision D.2.b is consistent with the requirements under 40 CFR 122.26(d)(1)(iv)(D), (d)(1)(v)(B) and (d)(2)(iv)(B).

Provision D.2.b.(1) requires each Copermittee to continue field screening its major MS4 outfalls and identifying those with persistent flows and transient flows, as conducted during the transitional period (i.e. before the Water Quality Improvement Plan was developed). However, each Copermittee now has the flexibility to adjust the field screening monitoring frequencies and locations for the MS4 outfalls in its inventory, as needed, to identify and eliminate sources of non-storm water persistent flow discharges in accordance with the highest priority water quality conditions identified in the Water Quality Improvement Plan. In order to ensure a minimum number of outfalls are inspected, Provision D.2.b.(1) requires the number of visual inspections be equal to the number of visual inspections required in the tiered inspection program pursuant to Provision D.2.a.(2)(a).

Provision D.2.b.(2)(b) requires each Copermittee to monitor a minimum of 5 major MS4 outfalls with persistent flows identified as the highest priorities within a Copermittee's jurisdiction, within each Watershed Management Area. In other words, Copermittees located in more than one Watershed Management Area must identify at least 5 major MS4 outfalls with persistent flows in its jurisdiction in each Watershed Management Area. If a Copermittee is located in more than one Watershed Management Area, and they have less than 5 major MS4 outfalls with persistent flows per jurisdictional area per Watershed Management Area, all of the major MS4 outfalls must be identified as high priority dry weather persistent flow MS4 outfalls. The Copermittees identified as Responsible Copermittees by a TMDL in Attachment E of the Order may need to monitor more than 5 dry weather major MS4 outfall locations to determine compliance with the requirements of the TMDL(s).

Monitoring must occur at the highest priority outfall locations at least semi-annually until the non-storm water discharges have been eliminated for three consecutive dry weather monitoring events; identified to be authorized by a separate NPDES Permit; or reprioritized to a lower priority. Persistent flow MS4 outfall monitoring stations that have been removed must be replaced with the next highest prioritized MS4 major outfall in the Copermittee's jurisdiction within the Watershed Management Area, unless there are no remaining qualifying major MS4 outfalls within the Copermittees jurisdiction. The Copermittees must continually update their dry weather persistent

flow MS4 outfall discharge monitoring locations with the next highest priority non-storm water flow that have yet to be eliminated until all persistent and transient flows are eliminated or its threat reduced.

Non-storm water persistent flow MS4 outfall discharge monitoring data collected during each semi-annual monitoring event, must be collected and analyzed according to the requirements of Provision D.2.b.(2)(b)-(e). These monitoring requirements are consistent with the requirements under 40 CFR 122.26(d)(1)(iv)(D), (d)(1)(v)(B) and (d)(2)(iv)(B).

The wet weather MS4 outfall discharge monitoring requirements are included under Provisions D.2.a.(3) and D.2.c. The wet weather MS4 outfall discharge monitoring requirements are necessary for the Copermittees to implement a *“management program...to reduce the discharge of pollutants to the maximum extent practicable, using management practices, control techniques and system, design and engineering methods, and such other provisions which are appropriate”* required by 40CFR 122.26(d)(2)(iv), which is expected to achieve compliance with the CWA section 402(p)(3)(B)(iii) statutory requirement for municipal storm water permits to require *“controls to reduce the discharge of pollutants [in storm water] to the maximum extent practicable.”* The wet weather MS4 outfall discharge monitoring data collection requirements are based on requirements under 40 CFR 122.26(d)(2)(iii), 122.26(d)(2)(iii)(A) and 122.26(d)(2)(iii)(A)(1)-(4), and 40 CFR 122.21(g)(7)(i)-(ii).

The wet weather MS4 outfall discharge monitoring requirements of Provision D.2.a.(3) and D.2.c are separated into monitoring required before and after the San Diego Water Board accepts the Copermittees' Water Quality Improvement Plan. Outfall monitoring conducted prior to acceptance of the Water Quality Improvement Plan is referred to in the Order as Transitional MS4 Outfall Discharge Monitoring. Provision D.2.a.(3) includes the transitional wet weather MS4 outfall discharge monitoring requirements.

Until the wet weather MS4 outfall discharge monitoring requirements of Provision D.2.c are incorporated into a Water Quality Improvement Plan that is accepted by the San Diego Water Board, the Copermittees must comply with the requirements of transitional wet weather MS4 outfall monitoring requirements pursuant to Provision D.2.a.(3). Provision D.2.a.(3) requires the Copermittees in each Watershed Management Area to sample, at least five of the major MS4 outfalls inventoried pursuant to Provision D.2.a.(1) once per wet season for the monitoring data required to be collected pursuant to Provision D.2.a.(3)(c)-(e). Provision D.2.a.(3) further requires at least one major MS4 outfall monitoring station be located in each Copermittee's jurisdiction within the Watershed Management Area.

At a minimum, the five sampling locations chosen must be representative of storm water discharges from residential, commercial, industrial, and typical mixed-use land uses present within a Watershed Management Area. The San Diego Water Board expects the Copermittees to extrapolate from these data to similar land uses

throughout the Watershed Management Area to better inform the Water Quality Improvement Plan development process by prioritizing drainages for implementation of storm water control efforts required pursuant to Provision E.

Provision D.2.c describes the wet weather MS4 outfall discharge monitoring required to be included and implemented as part of the Water Quality Improvement Plan. Provision D.2.c provides the Copermittees the flexibility to adjust the wet weather MS4 outfall discharge monitoring locations and frequencies in the Watershed Management Area, as needed, to identify sources of pollutants in storm water discharges from MS4s in accordance with the highest priority water quality conditions identified in the Water Quality Improvement Plan.

Although Provision D.2.c.(1) allows the Copermittees to adaptively manage the wet weather MS4 outfall discharge monitoring locations and frequencies, the provision requires a minimum of at least five wet weather outfall stations to be monitored. Provision D.2.c.(2) further allows the Copermittees to modify the monitoring frequency at each wet weather MS4 outfall station to meet the goals of the Water Quality Improvement Plan as long as the monitoring frequency occurs at least once per year and is at an appropriate frequency to identify sources of pollutants in storm water discharges, guide pollutant source identification efforts, or determine compliance with the requirements of the applicable TMDLs in Attachment E to the Order.

The wet weather MS4 outfall discharge monitoring requirements of Provisions D.2.c.(3) and D.2.c.(4) are the same as the transitional wet weather MS4 outfall discharge monitoring. In contrast, the requirements of Provision D.2.c.(5) are focused on collecting analytical data specific to the highest priority water quality conditions in the Watershed Management Area identified in the Water Quality Improvement Plan. The wet weather MS4 outfall discharge monitoring data collection requirements are consistent with the requirements under 40 CFR 122.26(d)(2)(iii), 122.26(d)(2)(iii)(A) and 122.26(d)(2)(iii)(A)(1)-(4), and 40 CFR 122.21(g)(7)(i)-(ii).

Provision D.3 (Special Studies) requires the Copermittees to develop special studies that will be conducted for each Watershed Management Area and the entire San Diego Region. Data collected pursuant to Provision D.3 is to be used by the Copermittees to improve the effectiveness of the strategies implemented by the jurisdictional runoff management programs toward achieving the numeric goals identified in the Water Quality Improvement Plans and ultimately achieve compliance with the discharge prohibitions and receiving water limitations of Provisions A.1.a, A.1.c, and A.2.a, which is consistent with the requirements of Provision A.4.

Special studies are often necessary to fill data gaps or provide more refined information that allow the Copermittees to better manage the generation or elimination of pollutants and discharges to and from the MS4. In the Fourth Term Permits, the Copermittees have been required to implement special studies as directed by the San Diego Water Board. The special studies required by this Order provide the Copermittees more flexibility to identify and implement special studies that will be most

useful to improving the effectiveness of their jurisdictional runoff management programs.

Provision D.3.a.(1) requires the Copermittees to develop and conduct at least two special studies per Watershed Management Area, to be determined by the Copermittees. One of the two special studies may be accomplished through participation in a Regional Special Study required under Provision D.3.a.(2). The requirements provide the Copermittees great latitude in identifying and developing the special studies. Watershed Management Area special studies are required, at a minimum, to: (a) relate in some way to the highest water quality priorities identified by the Copermittees in the Water Quality Improvement Plan, (b) be conducted within the Watershed Management Area, and (c) include some form of participation (e.g. contribution of funds, personnel services, project management) by all the responsible Copermittees within the Watershed Management Area.

Examples of Watershed Management Area special studies might include, but are not limited to: (1) focused pollutant source identification studies, (2) BMP effectiveness and/or comparison studies, (3) pilot tests for new or emerging pollutant control methods, (4) receiving water pollutant or stressor source identification and/or mitigation studies, or (5) pollutant fate and transport studies. The Watershed Management Area special studies are expected to provide data that can be utilized by the Copermittees to improve the Water Quality Improvement Plan or implementation of the Copermittees' jurisdictional runoff management programs to address the highest priority water quality conditions.

Provision D.3.a.(2) requires the Copermittees to develop at least one special study that will be conducted for the entire San Diego region. The regional special study is expected to provide data that can be utilized by the Copermittees to improve the Water Quality Improvement Plan or implementation of the Copermittees' jurisdictional runoff management programs to identify or address regional water quality concerns and priorities.

An example of a regional special study would be to develop and establish allowable exceedance frequencies of the bacteria water quality objectives for several types of water bodies, during different wet and dry weather conditions the San Diego region. The special study would be related to bacteria, which is a priority for the San Diego region due to the adoption of "*Bacteria TMDL Project I – Beaches and Creeks in the San Diego Region*." The study results could be used to inform the Copermittees and the San Diego Water Board about the indicator bacteria water quality objective exceedance frequencies that occur in natural or reference watersheds.

Provision D.4 (Assessment Requirements) specifies the assessments that the Copermittees are required to perform, based on the monitoring data collected, and will be reported as part of the Annual Report for the Water Quality Improvement Plan implementation. Provision D.4 requires the Copermittees assess the progress of the

water quality improvement strategies in the Water Quality Improvement Plan toward achieving compliance with Provisions A.1.a, A.1.c, and A.2.a.

Provision D.4 specifies the assessments that Copermittees must perform for each Watershed Management Area to assess the effectiveness of each Copermittee's jurisdictional runoff management program and the Water Quality Improvement Plan. The effectiveness of each Copermittee's jurisdictional runoff management program and Water Quality Improvement Plan is measured through these types of assessments: (a) Receiving Waters Assessments (b) MS4 Outfall Discharges Assessments, (c) Special Studies Assessments, and (d) Integrated Assessment of Water Quality Improvement Plan.

Provision D.4.a requires the Copermittees to assess the status of receiving water conditions annually during the transitional monitoring period (during development of the Water Quality Improvement Plan) and after acceptance of the Water Quality Improvement Plan. The monitoring data collected pursuant to Provision D.1 will be evaluated, among other information, to assess the condition of a Watershed Management Area's streams, coastal waters, enclosed bays, harbors, estuaries, and lagoons. The focus of the receiving waters assessments is to measure progress toward the objective of the CWA to "*restore and maintain the chemical, physical, and biological integrity of the Nation's waters*" as the Water Quality Improvement Plan and each Copermittee's jurisdictional runoff management program are implemented within a Watershed Management Area. Provision D.4.a is consistent with 40 CFR 122.42(c)(7) which requires the Copermittees to annually report the "[i]dentification of water quality improvements or degradation."

Provision D.4.b includes the MS4 outfall discharges assessment requirements. The focus of MS4 outfall discharges assessments is to determine if the Copermittees' are implementing programs that comply with the requirements of the CWA for MS4 permits to "*effectively prohibit non-stormwater discharges into the storm sewers*" and "*require controls to reduce the discharge of pollutants [in storm water] to the maximum extent practicable.*" The monitoring data collected pursuant to Provisions D.2 will be evaluated, among other information, to assess the effectiveness of the transitional MS4 outfall field screening monitoring, the implementation of the Water Quality Improvement Plan and each Copermittee's jurisdictional runoff management program. The MS4 outfall discharge assessments consist of Non-Storm Water Discharges Reduction Assessments and Storm Water Pollutant Discharges Reduction Assessments.

The Non-Storm Water Discharges Reduction Assessments are how each Copermittee will demonstrate that its jurisdictional runoff management program implementation efforts are achieving the CWA requirement to "*effectively prohibit non-stormwater discharges into the storm sewers.*" Provision D.4.b.(1) requires each Copermittee to assess and report on its illicit discharge detection and elimination program required pursuant to Provision E.2 to reduce and effectively prohibit non-storm water and illicit discharges into the MS4 within its jurisdiction. The Non-Storm Water Discharges

Reduction Assessments include specific assessment requirements applicable to each Copermitttee.

As each Copermitttee collects and analyzes the data collected pursuant to dry weather MS4 outfall discharges monitoring requirements of Provisions D.2.a.(2) and D.2.b, Provision D.4.b.(1) requires each Copermitttee to assess the progress, assess the effectiveness of its current actions, and identify modifications necessary to increase the effectiveness of its actions toward reducing and eliminating non-storm water and illicit discharges to its MS4. The findings from these assessments are expected to be utilized by the Copermitttee as part of its procedures to prioritize the non-storm water discharges that will be addressed by its Illicit Discharge Detection and Elimination program required pursuant to Provision E.2.

The assessment requirements of Provision D.4.a.(1) are consistent with 40 CFR 122.26(d)(2)(iv)(B) and 122.26(d)(2)(iv)(B)(3) which require *“procedures...to investigate portions of the separate storm sewer system that, based on the results of the field screen, or other appropriate information [emphasis added], indicate a reasonable potential of contain illicit discharges or other sources of non-storm water”* as part of a *“program...to detect and remove...illicit discharges and improper disposal into the storm sewer.”* The assessment requirements of Provision D.4.a.(1) are also consistent with 40 CFR 122.42(c)(1) requires the Copermitttees to annually report the *“status of implementing the components of the storm water management program that are established as permit conditions.”*

The Storm Water Pollutant Discharges Reduction Assessment is how the Copermitttees in each Watershed Management Area will demonstrate that their jurisdictional runoff management program implementation efforts are achieving the CWA requirement to *“reduce the discharge of pollutants [in storm water] to the maximum extent practicable.”* Provision D.4.b.(2) requires the Copermitttees in each Watershed Management Area to assess and report the progress of the Copermitttees’ efforts to reduce pollutants in storm water discharges from the MS4s to the MEP. The Storm Water Pollutant Discharges Reduction Assessments include specific assessment requirements during both the transitional monitoring period and after acceptance of the Water Quality Improvement Plan applicable to the Watershed Management Area and each Copermitttee.

As the Copermitttees collect and analyze the data collected pursuant to wet weather MS4 outfall discharges monitoring requirements of Provisions D.2.a.(3) and D.2.c, Provision D.4.b.(2) requires the Copermitttees to assess runoff conditions during the transitional period, and the progress of the Water Quality Improvement Plan strategies toward reducing pollutants in storm water from the MS4 to the MEP. The findings from these assessments are expected to be utilized by the Copermitttees to identify any modifications to the wet weather MS4 outfall discharge monitoring locations and frequencies necessary to identify sources of pollutants in storm water discharges from the MS4s, as well as focus, modify, and improve the water quality improvement

strategies implemented by each Copermittee within its jurisdiction to reduce pollutants in storm water discharges to the MEP.

The assessment requirements of Provision D.4.b.(2) are consistent with 40 CFR 122.26(d)(2)(iii)(B) which requires “[e]stimates of the annual pollutant load of the cumulative discharges to waters of the United States from all identified municipal outfalls...during a storm event...accompanied by a description of the procedures for estimating constituent loads and concentrations, including any modeling, data analysis, and calculation methods.” The assessment requirements of Provision D.4.a.(2) are consistent with 40 CFR 122.26(d)(2)(v) which requires that each Copermittee assesses the “estimated reductions in loadings of pollutants from discharges of municipal storm sewer constituents from municipal storm sewer systems expected as the result of the municipal storm water quality management program.” The assessment requirements of Provision D.4.b.(2) are also consistent with 40 CFR 122.42(c)(1) which requires the Copermittees to annually report the “status of implementing the components of the storm water management program that are established as permit conditions.”

Provision D.4.c includes the special studies assessment requirements. Performing special studies are how the Copermittees will address data gaps identified during the development of and updates to the Water Quality Improvement Plan. The relevant findings from the special studies assessments are expected to be incorporated as part of the applicable receiving water assessments, MS4 outfall discharge assessments, and integrated water quality improvement assessments required in Provision D.4.a, D.4.b, and D.4.d, respectively.

The assessment requirements in Provision D.4.d are part of the iterative approach and adaptive management process required by Provision A.4. The Copermittees are required to integrate the data collected pursuant to Provisions D.4.a-c, and information collected during the implementation of the jurisdictional runoff management programs required pursuant to Provision E to re-evaluate the Water Quality Improvement Plan.

The monitoring data collected pursuant to Provisions D.1 and D.2, and the results of the assessment required pursuant to Provisions D.4.a-c, will be used to determine whether the Water Quality Improvement Plan and each Copermittee’s jurisdictional runoff management program are effective, or require modifications or improvements to become more effective to achieve the requirements of the CWA. The assessments required by Provision D.4.d are consistent with 40 CFR 122.42(c)(1) which requires that the Copermittees to report the “[t]he status of implementing the components of the storm water management program that are established as permit conditions.”

## E. Jurisdictional Runoff Management Programs

**Purpose:** Provision E includes the requirements for the jurisdictional runoff management programs to be implemented by each of the Copermittees. Compliance with the requirements for the jurisdictional runoff management programs will allow the Copermittees to demonstrate that they are implementing programs to effectively prohibit non-storm water discharges to the MS4 and reduce pollutants in storm water discharges from the MS4 to the MEP. The jurisdictional runoff management program document prepared by each Copermittee will also provide the details for implementing the water quality improvement strategies identified in the Water Quality Improvement Plan specifically within its jurisdiction.

**Discussion:** Implementation of the jurisdictional runoff management program requirements under Provision E is how the Copermittees “*effectively prohibit non-stormwater discharges into the storm sewer,*” and outlines the “*controls to reduce the discharge of pollutants to the maximum extent practicable*” consistent with the federal regulations under 40 CFR 122.26. The jurisdictional runoff management program is part of the “*comprehensive planning process*” that is required pursuant to 40 CFR 122.26(d)(2)(iv). Where the Water Quality Improvement Plan is the “*comprehensive planning process*” on a Watershed Management Area scale, requiring “*intergovernmental coordination,*” the jurisdictional runoff management program document is the “*comprehensive planning process*” on a jurisdictional scale that should be coordinated with the other Copermittees in the Watershed Management Area to achieve the goals of the Water Quality Improvement Plan.

The jurisdictional runoff management program requirements are included to provide each Copermittee criteria that can be used to demonstrate that its storm water management program is implementing the “*comprehensive planning process*” within its jurisdiction to “*effectively prohibit non-stormwater discharges into the storm sewers,*” and to identify and implement the most effective “*controls to reduce the discharge of pollutants to the maximum extent practicable*” in accordance with the performance standards given in the CWA.

Provision E includes the requirements for each of the components that must be included in the Copermittee’s jurisdictional runoff management program document that will be implemented by the Copermittee within its jurisdiction. Implementation of the components of each Copermittee’s jurisdictional runoff management program must incorporate the water quality improvement strategies identified by each Copermittee in the Water Quality Improvement Plans, described pursuant to Provision B.3.b.(1)(a).

More specific and detailed discussions of the requirements of Provision E are provided below.

Provision E.1 (Legal Authority Establishment and Enforcement) requires each Copermittee to establish and enforce sufficient legal authority to control discharges to the MS4 within its jurisdiction.

Pursuant to 40 CFR 122.26(d)(1)(ii) and 40 CFR 122.26(d)(2)(i), each Copermittee must have sufficient *“legal authority to control discharges to the municipal separate storm sewer system”* and be able to demonstrate that it can *“operate pursuant to legal authority established by statute, ordinance or series of contracts.”* Provision E.1.a describes the minimum legal authorities each Copermittee must establish for itself within its jurisdiction to control discharges to its MS4. The requirements of Provision E.1.a are consistent with the requirements set forth in 40 CFR 122.26(d)(2)(i)(A)-(F).

The certification statement required from each Copermittee by Provision E.1.b is included to provide the San Diego Water Board additional documentation that each Copermittee has established the legal authorities consistent with Provision E.1.a and 40 CFR 122.26(d)(2)(i)(A)-(F), and the Copermittee can *“operate pursuant to legal authority established by statute, ordinance or series of contracts.”*

Provision E.2 (Illicit Discharge Detection and Elimination) requires each Copermittee to implement an illicit discharge detection and elimination program to effectively prohibit non-storm water discharges to the MS4 by actively detecting and eliminating illicit discharges and disposal into its MS4. If the San Diego Water Board finds that a Copermittee is fully implementing the requirements of Provision E.2, then the Copermittee is deemed in compliance with the effective prohibition of non-storm water discharges to the MS4 required under Provision A.1.b.

Provision E.2 establishes the minimum requirements that each Copermittee must implement within its jurisdiction to effectively prohibit non-storm water discharges from entering its MS4. The federal CWA requires permits for municipal storm sewer systems to *“effectively prohibit non-storm water discharges into the storm sewers.”* The federal regulations (40CFR122.26(d)(2)(i)(B)) require each Copermittee to establish the legal authority to prohibit illicit discharges to its MS4s. Under 40 CFR 122.26(d)(2)(iv)(B), each Copermittee must implement a *“program...to detect and remove...illicit discharges and improper disposal into the storm sewer.”* The federal NPDES regulations, under 40 CFR 122.26(b)(2), define illicit discharges as *“any discharge to a municipal separate storm sewer that is not composed entirely of storm water.”* Thus, non-storm water discharges are not authorized to enter the MS4 and are considered to be illicit discharges, unless authorized by a separate NPDES permit.

The Phase I Final Rule clarifies that non-storm water discharges through an MS4 are not authorized under the CWA (55 FR 47995):

*“Today’s rule defines the term “illicit discharge” to describe any discharge through a municipal separate storm sewer system that is not composed entirely of storm water and that is not covered by an NPDES permit. Such illicit discharges are not*

*authorized under the Clean Water Act. Section 402(p)(3)(B) requires that permits for discharges from municipal separate storm sewers require the municipality to “effectively prohibit” non-storm water discharges from the municipal separate storm sewer...Ultimately, such non-storm water discharges through a municipal separate storm sewer must either be removed from the system or become subject to an NPDES permit.”*

The federal NPDES requirements for the program to address illicit discharges must include “*inspections, to implement and enforce an ordinance, orders, or other similar means to prevent illicit discharges to the MS4.*” The federal NPDES regulations also reference several categories of “*non-storm water discharges or flows [which] shall be addressed where such discharges are identified...as sources of pollutants to waters of the United States.*” The Phase I Final Rule (55 FR 48037) further clarified the requirements of 40 CFR 122.26(d)(2)(iv)(B)(1) as follows:

*“EPA is clarifying that section 402(p)(3)(B) of the CWA (which requires permits for municipal separate storm sewers to ‘effectively’ prohibit non-storm water discharges) does not require permits for municipalities to prohibit certain discharges or flows of nonstorm water to waters of the United States through municipal separate storm sewers in all cases.”*

In previous iterations of the municipal storm water permits for the San Diego Region, these categories were simply listed and referred to as categories of non-storm water discharges “not prohibited” unless identified as a source of pollutants. The Copermittees have often referred to these categories as “exempt” discharges. In both cases, however, the language is inconsistent with the federal CWA and NPDES regulations. And, the clarification provided in the Phase I Final Rule does not specifically state that such discharges are “not prohibited” or “exempt” or in any way authorized. The federal NPDES regulations do, however, state that specific categories of non-storm water discharges must be “*addressed*” if identified as “*sources of pollutants to waters of the United States.*”

The language of Provision E.2.a has been revised to be fully consistent with the language of the CWA and the requirements of the federal regulations under 40 CFR 122.26(d)(2)(iv)(B)(1). Provision E.2.a requires each Copermittee to address all types of non-storm water discharges into its MS4 as illicit discharges, unless the discharge is authorized by a separate NPDES permit, or identified as a category of non-storm water discharges or flows that must be addressed pursuant to Provisions E.2.a.(1) through E.2.a.(5). Only non-NPDES-permitted non-storm water discharges identified as a category of non-storm water discharges under Provisions E.2.a.(1) through E.2.a.(5) and not identified as a source of pollutants do not have to be addressed as illicit discharges. Categories of non-storm water discharges that meet the requirements of Provisions E.2.a.(1) through E.2.a.(5) do not have to be addressed by the Copermittee as illicit discharges.

Several of the non-storm water categories listed in 40 CFR 122.26(d)(2)(iv)(B)(1) have not been included in Provisions E.2.a.(1) through E.2.a.(5), including: street wash water, landscape irrigation, irrigation water, and lawn watering. Because these are no longer included within the categories listed under Provisions E.2.a.(1) through E.2.a.(5), the Copermittees must prohibit these types of non-storm water discharges from entering the MS4. This is consistent with the clarification of 40 CFR 122.26(d)(2)(iv)(B)(1) in the Phase I Final Rule (55 FR 48037), which states:

*“[T]he Director may include permit conditions that either require municipalities to prohibit or otherwise control any of these types of discharges where appropriate.”*

Street wash water is a category of non-storm water discharges that was removed when the Third Term Permits were issued. Street wash water is a source of several pollutants (e.g., metals, oil and grease, petroleum hydrocarbons, chlorinated solvents, sediment) which are generated during the street washing process. The removal of this category requires the Copermittees to prohibit this type of non-storm water discharge from entering the MS4.

The landscape irrigation, irrigation water, and lawn watering categories, collectively referred to hereafter as “over-irrigation” discharges, were removed from the list of non-storm water discharge categories in the Fourth Term Orange County and Riverside County Permits. Non-storm water discharges resulting from over-irrigation have been found to be a source of several types of pollutants (e.g., nutrients, bacteria, pesticides, sediment) in receiving waters. The San Diego Water Board and the Copermittees have identified categories of non-storm water discharges associated with over-irrigation as a source of pollutants and conveyance of pollutants to the MS4 and waters of the United States in the following documents:

- **SmartTimer/EdgescapE Evaluation Program (SEEP) Grant Application**

The State Water Board allocated grant funding to the SEEP project grant application submitted in 2006, which targeted irrigation runoff by retrofitting areas of existing development and documenting the conservation and runoff improvements. The basis of this grant project is that over-irrigation (landscape irrigation, irrigation water and lawn watering) into the MS4 is a source and conveyance of pollutants. In addition, the grant application indicated that this alteration of natural flows is impacting the beneficial uses of waters of the state and U.S. Results from the study indicate that that over-irrigation (landscape irrigation, irrigation water and lawn watering) into the MS4 is a source and conveyance of pollutants. The results of this study can be applied broadly to any area where over-irrigation takes place. The grant application included the following statements:

*“Irrigation runoff contributes flow & pollutant loads to creeks and beaches that are 303(d) listed for bacteria indicators.”*

*“Regional program managers agree that the reduction and/or elimination of irrigation-related urban flows and associated pollutant loads may be key to successful attainment of water quality and beneficial use goals as outlined in the San Diego Basin Plan and Bacteria TMDL over the long term.”*

*“Elevated dry-weather storm drain flows, composed primarily ... of landscape irrigation water wasted as runoff, carry pollutants that impair recreational use and aquatic habitats all along Southern California’s urbanized coastline. Storm drain systems carry the wasted water, along with landscape derived pollutants such as bacteria, nutrients and pesticides, to local creeks and the ocean. Given the local Mediterranean climate, excessive perennial dry season stream flows are an unnatural hydrologic pattern, causing species shifts in local riparian communities and warm, unseasonal contaminated freshwater plumes in the near-shore marine environment.”*

- **2006-2007 Orange County Watershed Action Plan Annual Reports**

The Watershed Action Plan Annual Reports for the 2006-2007 reporting period were submitted by the County of Orange, Orange County Flood Control District and Copermittees within the San Juan Creek, Laguna Coastal Streams, Aliso Creek, and Dana Point Coastal Streams Watersheds. San Juan Creek, Laguna Coastal Streams, Aliso Creek and Dana Point Coastal Streams are all currently 303(d) listed as impaired for indicator bacteria within their watersheds and/or in the Pacific Ocean at the discharge points of their watersheds. The Orange County Copermittees, within their Watershed Action Strategy Table for fecal indicator bacteria included the following:

*“Support programs to reduce or eliminate the discharge of anthropogenic dry weather nuisance flow throughout the ... watershed. Dry weather flow is the transport medium for bacteria and other 303(d) constituents of concern.”*

*Additionally, they state that “conditions in the MS4 contribute to high seasonal bacteria propagation in-pipe during warm weather. Landscape irrigation is a major contributor to dry weather flow, both as surface runoff due to over-irrigation and overspray onto pavements; and as subsurface seepage that finds its way into the MS4.”*

- **Fiscal Year 2008 Carlsbad Watershed Urban Runoff Management Program Annual Report**

The Carlsbad Watershed Urban Runoff Management Program Annual Report for Fiscal Year 2008 was submitted by the Carlsbad Watershed Copermittees (Cities of Carlsbad, Encinitas, Escondido, Oceanside, San Marcos, Solana Beach, and Vista, and the County of San Diego). In the Annual Report, the Carlsbad Watershed Copermittees stated the following:

*“The Carlsbad Watershed Management Area (WMA) collective watershed strategy identifies bacteria, sediment, and nutrients as high priority water quality pollutants in the Agua Hedionda (904.3 – bacteria and sediment), Buena Vista (904.2 – bacteria), and San Marcos Creek (904.5 – nutrients) Hydrologic Areas. Bacteria, sediment, and nutrients have been identified as potential discharges from over-irrigation.”*

- **2007-2008 San Diego Bay Watershed Urban Runoff Management Program Annual Report**

The San Diego Bay Watershed Urban Runoff Management Program 2007-2008 Annual Report was submitted by the San Diego Bay Watershed Copermittees (Cities of Chula Vista, Coronado, Imperial Beach, La Mesa, Lemon Grove, National City, and San Diego, the County of San Diego, the Port of San Diego, and the San Diego County Airport Authority). In Appendix D of the Annual Report, titled “Likely Sources of Pollutants,” the San Diego Bay Watershed Copermittees identified over-irrigation of lawns as a pollutant generating activity from business and/or residential land uses for bacteria, pesticides, and sediment.

- **Copermittee Public Education Materials**

The Orange County Public Works *Tips for Landscape & Gardening* public education brochure states: *“Fertilizers, pesticides and other chemicals that are left on yards or driveways can be blown or washed into storm drains that flow to the ocean. Overwatering lawns can also send materials into storm drains.”*

The Riverside County Flood Control and Water Conservation District *Landscape and Garden* public education brochure states: *“Soil, yard wastes, over-watering and garden chemicals become part of the urban runoff mix that winds its way through streets, gutters and storm drains before entering lakes, rivers, streams, etc. Urban runoff pollution contaminates water and harms aquatic life!”*

- **Los Peñasquitos Lagoon Sedimentation/Siltation TMDL Technical Report**

The Los Peñasquitos Lagoon Sedimentation/Siltation TMDL technical report was prepared for the City of San Diego and USEPA in October 2010. The technical report was included as a technical supporting document attached to the Sediment TMDL for Los Peñasquitos Lagoon staff report prepared by the San Diego Water Board, dated June 13, 2012. Under the Source Assessment section, the technical report states the following:

*“Dry weather loading is dominated by nuisance flows from urban land use activities such as car washing, sidewalk washing, and lawn over-irrigation, which pick up and transport sediment into receiving waters.”*

These documents confirm that non-storm water discharges associated with over-irrigation are a source of pollutants and should be addressed as illicit discharges to the MS4. Prohibiting non-storm water discharges associated with over-irrigation, however, is not a new requirement for the Copermittees because it is also consistent with and required by the Water Conservation in Landscaping Act (AB 1881, Laird).

The Water Conservation in Landscaping Act required the Department of Water Resources (DWR) to prepare a Model Water Efficient Landscape Ordinance for use by local agencies (e.g. the Copermittees). All local agencies were required to adopt a water efficient landscape ordinance by January 1, 2010. Local agencies could adopt the Water Efficient Landscape Ordinance developed by DWR, or an ordinance considered at least as effective as the Model Ordinance. The Water Efficient Landscape Ordinance includes a requirement that local agencies prohibit runoff from irrigation (§ 493.2):

*“Local agencies shall prevent water waste resulting from inefficient landscape irrigation by prohibiting runoff from leaving the target landscape [emphasis added] due to low head drainage, overspray, or other similar conditions where water flows onto adjacent property, non-irrigated areas, walks, roadways, parking lots, or structures. Penalties for violation of these prohibitions shall be established locally.”*

Furthermore, non-storm water discharges from over-irrigation not only transport and discharge pollutants to receiving waters, but are also a likely source of the dry weather flows causing changes to habitat within and along the receiving water bodies. Examples of habitat changes from the dry weather flows include perennialization of ephemeral streams, and conversion of saltwater and brackish water marsh habitats to freshwater marsh habitats (e.g. Los Peñasquitos Lagoon). Both of these examples have resulted in the promotion of invasive species in several areas of the San Diego Region.

The removal of the over-irrigation discharges categories does not require the Copermittees to strictly prohibit lawn and landscape irrigation, but does require the prohibition of excessive irrigation water that results in non-storm water discharges to the MS4. Non-storm water discharges to the MS4 from over-irrigation must be addressed as illicit discharges by the Copermittees pursuant to the requirements of Provision E.2.

The remaining non-storm water categories listed in 40 CFR 122.26(d)(2)(iv)(B)(1) are listed under Provisions E.2.a.(1) through E.2.a.(5) and generally fall into four categories: (1) non-storm water discharges subject to existing San Diego Water Board waste discharge requirements and NPDES permits; (2) non-storm water discharges generally not expected to be a source of pollutants to receiving waters; (3) non-storm water discharges likely to contain pollutants requiring some form of control to address

the pollutants prior to discharging to the MS4; and (4) non-storm water discharges or flows associated with firefighting.

Provisions E.2.a.(1) and E.2.a.(2) include several categories of non-storm water discharges listed in 40 CFR 122.26(d)(2)(iv)(B)(1) for which the San Diego Water Board already has developed general waste discharge requirements and NPDES permits to address the discharges. The Copermittees are only required to address these types of non-storm water discharges as illicit discharges if the Copermittees or the San Diego Water Board identifies these non-storm water discharges not having coverage under the applicable NPDES permit.

Provision E.2.a.(3) includes several categories of non-storm water discharges listed in 40 CFR 122.26(d)(2)(iv)(B)(1) which are generally not expected to be a source of pollutants to receiving waters, many of which originate from what are typically natural, uncontrollable sources. The Copermittees are only required to address these types of non-storm water discharges as illicit discharges if the Copermittees or the San Diego Water Board identifies these non-storm water discharges as a source of pollutants to receiving waters. Because many of these sources are generally uncontrollable, enforcing a prohibition may not be a possibility for the Copermittees. The Copermittees would be able to address these non-storm water discharges by preventing these non-storm water discharges from entering the MS4. This could potentially be achieved by sealing their MS4 structures so the discharges cannot enter the MS4.

Provision E.2.a.(4) includes several categories of non-storm water discharges listed in 40 CFR 122.26(d)(2)(iv)(B)(1) that are likely to contain pollutants requiring some form of control to address the pollutants prior to discharging to the MS4. At this time, an outright prohibition of these types of non-storm water discharges does not yet appear to be warranted. Thus, Provision E.2.a.(4) includes several requirements for the Copermittees to control the pollutants from these types of non-storm water discharges. This is consistent with the clarification of the federal regulations in the Phase I Final Rule (55 FR 48037), which states the San Diego Water Board has the authority to require the Copermittees to “*control any of these types of discharges where appropriate.*”

Unlike non-storm water discharges from over-irrigation, these types of non-storm water discharges are not expected to occur in close proximity to each other or very frequently. Provided these types of non-storm water discharges are controlled as required in Provision E.2.a.(4), the Copermittees would only be required to address these types of non-storm water discharges as illicit discharges if the Copermittee or the San Diego Water Board identifies these non-storm water discharges as a source of pollutants to receiving waters.

Provision E.2.a.(5) includes specific requirements for fire fighting discharges and flows. The requirements for non-storm water discharges and flows associated with fire

fighting have been separated into requirements for: a) non-emergency fire fighting discharges and flows, and b) emergency fire fighting discharges and flows.

The San Diego Water Board has found that discharges from building fire suppression system maintenance (e.g. fire sprinklers) contain waste and potentially a significant source of pollutants to receiving waters. As such, the San Diego Water Board is requiring these discharges be addressed as illicit discharges by the Copermittees. Thus, the discharges to the MS4 are to be prohibited via ordinance, order or similar means. For other non-emergency firefighting discharges and flows (i.e. flows from controlled or practice blazes, firefighting training, and maintenance activities not associated with building fire suppression systems), the Copermittees are required to develop and implement a program to address pollutants in these non-storm water discharges and flows. This is consistent with the clarification of the federal regulations in the Phase I Final Rule (55 FR 48037), which states the San Diego Water Board has the authority to require the Copermittees to “*control any of these types of discharges where appropriate.*”

For emergency firefighting discharges and flows, the Phase I Final Rule (55 FR 48037) has clarified the requirements of 40 CFR 122.26(d)(2)(iv)(B)(1) pertaining to emergency firefighting flows and discharges, which states:

*“In the case of firefighting it is not the intention of these rules to prohibit in any circumstances the protection of life and public or private property through the use of water or other fire retardants that flow into separate storm sewers.”*

Thus, the requirements have been made to be consistent with the guidance provided by the Phase I Final Rule. The Order recommends that the Copermittees develop and encourage implementation of BMPs to reduce or eliminate the discharge of pollutants from emergency firefighting flows to the MS4s and receiving waters. The Order does not include any requirements that should be interpreted as requiring the implementation of BMPs for emergency firefighting flows to the MS4s and receiving waters.

The Copermittees are expected to review the dry weather MS4 outfall discharge monitoring data they collect to determine if and when there are non-storm water discharges to or from their MS4s that are a source of pollutants to receiving waters. If the Copermittees identify one of the types of non-storm water discharges listed in Provisions E.2.a.(1) through E.2.a.(4) as a source of pollutants to receiving waters based on the review and evaluation of monitoring data, Provision E.2.a.(6) requires the Copermittees to prohibit those categories of discharges from entering the MS4 through ordinance, order or similar means. In addition, Provision E.2.a.(6) clarifies that the San Diego Water Board may identify categories of non-storm water discharges or flows listed under Provisions E.2.a.(1) through E.2.a.(4) that must be prohibited.

Provision E.2.a.(6) also provides the Copermitees an option to propose controls to be implemented for the category of non-storm water discharges as part of the Water Quality Improvement Plan instead of prohibiting the category of non-storm water discharges. If the Water Quality Improvement Plan is accepted by the San Diego Water Board with the proposed controls, the Copermitees will not be required to prohibit the category of non-storm water discharges to their MS4s as long as the controls are implemented. This is consistent with the clarification of 40 CFR 122.26(d)(2)(iv)(B)(1) in the Phase I Final Rule (55 FR 48037), which states the San Diego Water Board may “*require municipalities to prohibit or otherwise control any of these types of discharges where appropriate.*”

Finally, Provision E.2.a.(7) has been included in the requirements for non-storm water discharges to clarify that any non-storm water discharges to the Copermitee’s MS4, even those identified pursuant to Provisions E.2.a.(1) through E.2.a.(4), must be reduced or eliminated, unless a non-storm water discharge is identified as a discharge authorized by a separate NPDES permit. Provision E.2.a.(7) is consistent with the requirements of CWA section 402(p)(3)(B)(ii) and 40 CFR 122.26(d)(1)(v)(B), as clarified in the Phase I Final Rule (55 FR 47995) that “[u]ltimately, such non-storm water discharges through a municipal separate storm sewer must either be removed from the system or become subject to an NPDES permit.” However, the reduction or elimination of those non-storm water discharges are expected to be achieved as feasible, in accordance with the priorities in the Water Quality Improvement Plan and when the resources are available to the Copermitee.

Consistent with 40 CFR 122.26(d)(2)(iv)(B) and 122.26(d)(2)(iv)(B)(1), each Copermitee must implement a “*program...to prevent illicit discharges to the municipal storm sewer system*” and “*detect...illicit discharges and improper disposal into the storm sewer.*” Provision E.2.b requires each Copermitee to implement measures to prevent and detect illicit discharges and connections to its MS4 as part of its illicit discharge detection and elimination program.

As part of the program to prevent and detect illicit discharges to the MS4, 40 CFR 122.26(d)(2)(iv)(B)(2) requires “*procedures to conduct on-going field screening activities during the life of the permit, including areas or locations that will be evaluated by such field screens.*” As part of the procedures, each Copermitee is required to maintain an updated map of its entire MS4 and the corresponding drainage areas within its jurisdiction. Having knowledge about where inlets, access points, connections with other MS4s, and outfalls are located is necessary for each Copermitee to track, identify, and eliminate illicit discharges and connections. Thus, Provision E.2.b.(1) of the Order specifies that the map must include the segments of the storm sewer system owned, operated, and maintained by the Copermitee, and include locations of all known inlets, connections with other MS4s, and outfalls to the Copermitee’s MS4. The remaining requirements of Provision E.2.b are consistent with the requirements of 40 CFR 122.26(d)(2)(iv)(B)(3)-(7) related to implementing measures to prevent and detect illicit discharges and connections to the MS4.

Provision E.2.c requires each Copermittee to conduct field screening and monitoring of MS4 outfalls and other portions of its MS4 within its jurisdiction to detect non-storm water and illicit discharges and connections to the MS4. Field screening is a required element of the program to detect and eliminate illicit discharges and connections to the MS4, pursuant to 40 CFR 122.26(d)(2)(iv)(B)(2). The field screening requirement will be implemented through the dry weather MS4 outfall discharge monitoring required under Provisions D.2.a.(2) and D.2.b.(1).

Provision E.2.d specifies the measures each Copermittee must implement to eliminate illicit discharges and connections to its MS4. Elimination of illicit discharges and connections to the MS4 is consistent with the requirement of 40 CFR 122.26(d)(2)(iv)(B) *“to detect and remove [emphasis added]...illicit discharges and improper disposal into the storm sewer”* and will achieve the CWA requirement for MS4 permits to *“effectively prohibit non-storm water discharges into the storm sewers.”*

Generally, each Copermittee is responsible for prioritizing its efforts to eliminate non-storm water and illicit discharges or connections to its MS4 based on field screening and monitoring data, NALs, illicit discharge investigation records, and the known or suspected sources. Sources of non-storm water and illicit discharges or connections must be eliminated by enforcing the legal authority established by each Copermittee pursuant to Provision E.1.

Provision E.3 (Development Planning) requires each Copermittee to use its land use and planning authority to implement a development planning program to control and reduce the discharge of pollutants in storm water from new development and significant redevelopment to the MEP. Proper implementation of the development planning program will also contribute toward effectively prohibiting non-storm water discharges from development projects to the MS4.

Pursuant to 40 CFR 122.26(d)(2)(iv), each Copermittee is required to implement a *“management program...to reduce the discharge of pollutants to the maximum extent practicable using management practices, control techniques and system, design and engineering methods, and other such provisions where applicable.”* As part of the management program, 40 CFR 122.26(d)(2)(iv)(A)(2) requires *“planning procedures including a comprehensive master plan to develop, implement and enforce controls to reduce the discharge of pollutants from municipal storm sewers which receive discharges from areas of new development and significant redevelopment.”*

Land development generally alters the natural conditions of the land by removing vegetative cover, compacting soil, and/or placement of concrete, asphalt, or other impervious surfaces. These impervious surfaces concentrate urban pollutants (such as pesticides, petroleum hydrocarbons, heavy metals, and pathogens) that are otherwise not found in high concentrations in the natural environment. Pollutants that

accumulate on impervious surfaces are not easily biodegraded nor subject to natural treatment processes.

Impervious surfaces greatly affect the natural hydrology of the land because they do not allow natural infiltration and treatment of storm water runoff to take place. Instead, storm water runoff from impervious surfaces is typically directed through pipes, curbs, gutters, and other hardscape into receiving waters, with little treatment, at significantly increased volumes and accelerated flow rates over what would occur naturally. The increased pollutant loads, storm water volume, discharge rates and velocities, and discharge durations from the MS4 adversely impact stream habitat by causing accelerated, unnatural erosion and scouring within creek bed and banks. Placement of impervious surfaces also encapsulates “good” sediment (such as sand, gravel, rocks and cobbles) that would normally replenish creek beds and banks to help stabilize them. Collectively, these changes to natural hydrologic processes are termed hydrograph modification, or hydromodification.

Hydromodification, which is caused by both altered storm water flow and altered sediment flow regimes, is largely responsible for degradation of creeks, streams, and associated habitats in the San Diego Region. In an ongoing study by the Stormwater Monitoring Coalition to assess the health of streams throughout Southern California, researchers found that three of the four highest risk stressors to creeks (percent sands and fines present, channel alteration, and riparian disturbance) were related to physical habitat.<sup>29</sup> Researchers studying flood frequencies in Riverside County have found that increases in watershed imperviousness of only 9-22 percent can result in increases in peak flow rates for the two-year storm event of up to 100 percent.<sup>30</sup> Such changes in runoff have significant impacts on channel morphology.

In addition, a technical report issued by the Southern California Coastal Water Research Project (SCCWRP) stated that “[r]ecent studies indicate that California’s intermittent and ephemeral streams are more susceptible to the effects of hydromodification than streams from other parts of the United States. Physical degradation of stream channels in the central and eastern United States can initially be detected when watershed impervious cover approaches 10 percent, although biological effects (which may be more difficult to detect) may occur at lower levels. In contrast, initial response of streams in the semi-arid portions of California appears to occur between 3 and 5 percent impervious cover.”<sup>31</sup> These studies highlight the extent to which impacts originating from impervious surfaces created by land development are responsible for the degradation of creek and stream habitat.

<sup>29</sup> Assessing the Health of Southern California Streams, Stormwater Monitoring Coalition, Fact Sheet

<sup>30</sup> Schueler and Holland, 2000. Storm Water Strategies for Arid and Semi-Arid Watersheds (Article 66). The Practice of Watershed Protection.

<sup>31</sup> Stein, E. and Zaleski, S., 2005. Technical Report 475, Managing Runoff to Protect Natural Streams: The Latest Development on Investigation and Management of Hydromodification in California. December 30, 2005.

This is consistent with what USEPA has noted, that “[m]ost stormwater runoff is the result of the man-made hydrologic modifications that normally accompany development. The addition of impervious surfaces, soil compaction, and tree and vegetation removal result in alterations to the movement of water through the environment. As interception, evapotranspiration, and infiltration are reduced and precipitation is converted to overland flow, these modifications affect not only the characteristics of the developed site but also the watershed in which the development is located. Stormwater has been identified as one of the leading sources of pollution for all waterbody types in the United States. Furthermore, the impacts of stormwater pollution are not static; they usually increase with more development and urbanization.”<sup>32</sup>

Reducing the impact from the increased pollutant loads and flows generated by impervious surfaces within a watershed is essential to protecting and restoring the integrity of the receiving waters. Provision E.3 includes the minimum “*management practices, control techniques and system, design and engineering methods, and other such provisions where applicable*” to be included in the “*planning procedures...to reduce the discharge of pollutants...from areas of new development and significant redevelopment.*” The requirements of Provision E.3 will 1) minimize the generation and discharge of pollutants in storm water from the MS4, and 2) minimize the potential of storm water discharges from the MS4 from causing altered flow regimes and excessive downstream erosion in receiving waters.

The requirements of Provision E.3.a include the minimum “*management practices, control techniques and system, design and engineering methods, and other such provisions where applicable*” to be included in the “*planning procedures...to reduce the discharge of pollutants...from areas of new development and significant redevelopment*” applicable to all development projects, regardless of size or purpose of development. In general, all development projects must implement onsite BMPs to remove pollutants from runoff prior to its discharge to any receiving waters, as close to the pollutant generating source as possible, and structural BMPs must not be constructed within waters of the U.S.

Furthermore, the onsite BMPs must be designed and implemented with measures to avoid the creation of nuisance or pollution associated with vectors (e.g. mosquitos, rodents, and flies). If not properly designed or maintained, certain BMPs implemented or required by municipalities may create a habitat for vectors. Monitoring studies conducted by the California Department of Public Health (CDPH) have documented that mosquitoes opportunistically breed in structural storm water BMPs, particularly those that hold standing water for over 96 hours. Certain site design features that hold standing water may similarly produce mosquitoes.

---

<sup>32</sup> USEPA, 2007. Reducing Stormwater Costs through Low Impact Development (LID) Strategies and Practices, December 2007.

Structural BMPs and site design features should incorporate design, construction, and maintenance principles to promote drainage within 96 hours to minimize standing water available to mosquitoes. Nuisances and public health impacts resulting from vector breeding can be prevented with close collaboration and cooperative effort between municipalities and local vector control agencies and the CDPH during the development and implementation of storm water runoff management programs. The CDPH also has issued guidance for BMP implementation that will minimize potential nuisances and public health impacts resulting from vector breeding.<sup>33</sup>

All development projects are required to implement source control BMPs that will minimize the generation of pollutants. Additionally, each development project must implement, where applicable and feasible, low impact development (LID) BMPs to mimic the natural hydrology of the site and retain and/or treat pollutants in storm water runoff prior to discharging to and from the MS4.

The LID Center defines LID as “*a comprehensive land planning and engineering design approach with a goal of maintaining and enhancing the pre-development hydrologic regime of urban and developing watersheds.*”<sup>34</sup> LID designs seek to control storm water at the source, using small-scale integrated site design and management practices to mimic the natural hydrology of a site, retain storm water runoff by minimizing soil compaction and impervious surfaces, and disconnect storm water runoff from conveyances to the storm drain system.

LID BMPs may utilize interception, storage, evaporation, evapotranspiration, infiltration, and filtration processes to retain and/or treat pollutants in storm water before it is discharged from a site. Because of these numerous options, the San Diego Water Board expects that every development project will be able to implement some form of LID BMPs. Examples of LID BMPs include using permeable pavements, rain gardens, rain barrels, grassy swales, soil amendments, and native plants.

Provision E.3.a also includes requirements for all development projects to, where feasible, landscape with native and/or low water use plants to minimize the discharge of non-storm water discharges associated with excessive irrigation, as well as harvest (i.e., storage) and use precipitation to promote the concept of utilizing storm water as a resource.

While all development projects are subject to the requirements of Provision E.3.a, Provision E.3.b identifies Priority Development Projects that exceed given size thresholds and/or fit under specific use categories. Priority Development Projects are required to incorporate specific performance criteria for structural BMPs into the

---

<sup>33</sup> California Department of Public Health, 2012. Best Management Practices for Mosquito Control in California. (<http://www.cdph.ca.gov/HealthInfo/discond/Documents/BMPforMosquitoControl07-12.pdf>)

<sup>34</sup> [www.lowimpactdevelopment.org](http://www.lowimpactdevelopment.org)

project plan to reduce the generation of pollutants, and address potential impacts from hydromodification.

The Priority Development Project categories are based on the requirements of the Fourth Term Permits for Orange County and Riverside County (Order Nos. R9-2009-0002 and R9-2010-0016, respectively), and do not differ significantly from the Fourth Term Permit for San Diego County. Furthermore, the Priority Development Project categories are consistent with Santa Ana Water Board Order Nos. R8-2009-0030 and R8-2010-0033 (Orange County and Riverside County MS4 Permits, respectively), and Los Angeles Water Board Order No. R4-2010-0108 (Ventura County MS4 Permit).

Because of the impact of relatively small increases in watershed impervious surfaces to receiving waters, Provision E.3.b.(1)(c)(iv) has been updated to include large driveways that are 5,000 square feet or more. The San Diego Water Board finds that large driveways can exacerbate altered flow regimes if not properly controlled.

Provision E.3.b.(3) describes projects that are exempt from Priority Development Project status. These include new or retrofit paved sidewalks, bicycle lanes, or trails that are designed and constructed to direct runoff to vegetated areas or be hydraulically disconnected from paved areas. The exemptions have been provided to encourage these types of projects because they provide multiple environmental benefits, such as promoting walking rather than driving, which will in turn improve air quality. Additionally, retrofitting of existing alleys, streets, or roads are exempt from Priority Development Project status if they are constructed using USEPA Green Streets guidance.<sup>35</sup> By doing so, retrofitting of these types of projects is encouraged. The San Diego Water Board recognizes that there are spatial constraints associated with these projects, and implementation of structural BMPs are not always feasible.

For development projects identified as Priority Development Projects, the requirements of Provision E.3.c are the minimum "*management practices, control techniques and system, design and engineering methods, and other such provisions where applicable*" to be included in the "*planning procedures...to reduce the discharge of pollutants...from areas of new development and significant redevelopment.*" Provisions E.3.c.(1)-(3) describe the performance criteria for the structural BMPs that must be implemented for each Priority Development Project defined by Provision E.3.b.

Provision E.3.c.(1) describes the storm water pollutant control BMP requirements that must be implemented by all Priority Development Projects. The purpose of Provision E.3.c.(1) is to reduce pollutants in storm water runoff to the MEP from Priority Development Projects before it is discharged to the MS4. Of all the available treatment processes available, retention of storm water, and therefore capture of the

---

<sup>35</sup> "Managing Wet Weather with Green Infrastructure – Municipal Handbook: Green Streets" (USEPA, 2008).

pollutants in the storm water, will achieve 100 percent pollutant removal efficiency for the volume of storm water retained. No other method of treatment can achieve 100 percent pollutant removal efficiency. Thus, retention of as much storm water onsite is the most effective way to reduce pollutants in storm water discharges to, and consequently from the MS4, and controls pollutants in storm water discharges from a site to the MEP.

Under Provision E.3.c.(1)(a), retention of the pollutants in the runoff produced from the 85<sup>th</sup> percentile storm event (“design capture volume”) is the design standard to which Priority Development Projects must comply. Since the 85<sup>th</sup> percentile storm event has previously been used as the numeric design standard for treatment control BMPs, this same size storm event is used as the numeric design standard for storm water retention. This is the MEP standard recognized by the San Diego Water Board and is consistent with the Fourth Term Permits for Orange County and Riverside County (Order Nos. R9-2009-0002 and R9-2010-0016, respectively), as well as Santa Ana Water Board Order Nos. R8-2009-0030 and R8-2010-0033 (Orange County and Riverside County MS4 Permits, respectively), Los Angeles Water Board Order No. R4-2010-0108 (Ventura County MS4 Permit), and Los Angeles Water Board Order No. R4-2012-0175 (Los Angeles County MS4 Permit).

The 85<sup>th</sup> percentile storm event is the event that has a precipitation total greater than or equal to 85 percent of all storm events over a given period of record in a specific area or location. For example, to determine what the 85<sup>th</sup> percentile storm event is in a specific location, all 24 hour storms that have recorded values over a 30 year period would be tabulated and a 85<sup>th</sup> percentile storm would be determined from this record (i.e. 15 percent of the storms would be greater than the number determined to be the 85<sup>th</sup> percentile storm). Most jurisdictions in the San Diego Region have already developed isopluvial maps that can provide this type of information. The 85<sup>th</sup> percentile storm might be determined to be a number such as 1.0 inch, and this would be multiplied by the total area of the project footprint producing runoff to calculate the design capture volume. The Priority Development Project designer would then select a system of BMPs that would retain (i.e. intercept, store, infiltrate, evaporate, or evapotranspire) the pollutants contained in the design capture volume onsite.

Retention BMPs are necessary to capture and retain pollutants generated from a Priority Development Project. In a recent study performed by SCCWRP in the Los Angeles Region, they found *“that the magnitude of constituent load associated with storm water runoff depends, at least in part, on the amount of time available for pollutant build-up on land surfaces. The extended dry period that typically occurs in arid climates such as southern California maximizes the time for constituents to build-up on land surfaces, resulting in proportionally higher concentrations and loads during*

*initial storms of the season.*<sup>36</sup> This implies that the “first flush” of a rainy season and the first storm events after long antecedent dry periods tend to have the highest pollutant loads. Capturing and retaining the pollutant loads of the “first flush” of a rainy season and the first storm events after long antecedent dry periods will reduce a significant portion of the pollutants in storm water discharged to and from the MS4.

The San Diego Water Board, however, acknowledges that in some situations retention of the full design capture volume onsite may not be technically feasible. In this event, the Copermittee may allow the Priority Development Project to use biofiltration BMPs to treat 1.5 times the design capture volume not reliably retained onsite, or biofiltration BMPs with a flow-thru design that has a total volume, including pore spaces and pre-filter detention volume, sized to hold at least 0.75 times the portion of the design capture volume not reliably retained onsite.

The 1.5 multiplier is based on the finding in the Ventura County Technical Guidance Manual that biofiltration of 1.5 times the design capture volume not retained onsite will provide approximately the same pollutant removal as retention of the design capture volume on an annual basis.<sup>37</sup> This standard is consistent with the Los Angeles Water Board’s Los Angeles County and Ventura County municipal storm water permits (Order Nos. R4-2012-0175 and R4-2010-0108, respectively). The flow-thru design of 0.75 times the portion of the design capture volume not reliably retained onsite is consistent with the San Diego Water Board’s Fourth Term Permits for Orange County and Riverside County (Order Nos. R9-2009-0002 and R9-2010-0016, respectively). In either case, the biofiltration BMPs must be designed with an appropriate hydraulic loading rate to maximize storm water retention and pollutant removal, as well as to prevent erosion, scour, and channeling within the BMP. Each Copermittee is required to update its BMP Design Manual to provide guidance for hydraulic loading rates and other biofiltration design criteria necessary to maximize storm water retention and pollutant removal.

The San Diego Water Board further recognizes that, in addition to not being technically feasible, retention of the full design capture storm onsite may be cost prohibitive, or may not provide as much water quality benefit to the Watershed Management Area as would implementing BMPs elsewhere in the watershed. Thus, Provision E.3.c.(1)(b) allows for the use of a combination of onsite retention BMPs, and the implementation of an Alternative Compliance Program described in Provision E.3.c.(3). Provision E.3.c.(3) is discussed in more detail below.

If the full design capture volume is not retained onsite either because biofiltration is not technically feasible, or a Copermittee grants a Priority Development Project permission

---

<sup>36</sup> Stein, E.D., Tiefenthaler, L.L., and Schiff, K.C., 2007. Technical Report 510, Sources, Patterns and Mechanisms of Storm Water Pollutant Loading from Watershed and Land Uses of the Greater Los Angeles Area, California, USA. March 20, 2007.

<sup>37</sup> Ventura Countywide Stormwater Management Program. 2011. Ventura Technical Guidance Manual, Manual Update, 2011.

to utilize the Alternative Compliance Program, then the pollutants in the portion of the design capture volume that are not reliably retained onsite must still be reduced to the MEP. Thus, flow-thru treatment control BMPs are required to be implemented on Priority Development Projects in addition to the retention BMPs. The requirements of Provisions E.3.c.(1)(a)(ii)[a]-[c] include the performance standards for flow-thru treatment control BMPs, consistent with the Fourth Term Permits in the San Diego Region.

Whereas the purpose of the requirements under Provision E.3.c.(1) is to reduce pollutants in storm water runoff to the MEP, the purpose of the requirements under Provision E.3.c.(2) is to maintain or restore more natural hydrologic flow regimes to prevent accelerated, unnatural erosion in downstream receiving waters, also to the MEP standard. Provision E.3.c.(2) describes hydromodification management BMP requirements that must be implemented by all Priority Development Projects.

The performance criteria for the implementation of hydromodification management BMPs on Priority Development Projects are consistent with the requirements in the Fourth Term Permits for Orange and Riverside Counties (Order Nos. R9-2009-0002 and R9-2010-0016, respectively). Modifications to the Orange County and Riverside County Hydromodification Management Plans (HMPs) will likely be minor, or may not be necessary. The HMP for San Diego County will likely require some minor modifications to incorporate the requirements of Provision E.3.c.(2) and become consistent with the Orange County and Riverside County HMPs. The San Diego Water Board does not, however, expect that it will be necessary for the San Diego County Copermittees to develop a new approach or significantly re-write the San Diego County HMP. This is because the premise of the hydromodification management BMP requirements, which are to control storm water runoff conditions (flow rates and durations) for Copermittee-defined range of flows, is unchanged from all Fourth Term Permits in the San Diego Region.

Provision E.3.c.(2)(a) requires that post-project runoff conditions mimic the *pre-development* runoff conditions, and not the *pre-project* runoff conditions. Fundamentally, the San Diego Water Board believes that using a hydrology baseline that approximates that of an undeveloped, natural watershed is the only way to facilitate the return of more natural hydrological conditions to already built-out watersheds, and ultimately improved stream health. On the other hand, using the *pre-project* hydrology as a baseline for redevelopment projects results in propagating the unnatural hydrology of urbanized areas. Propagating the urbanized flow regime does not support conditions for restoring degraded or channelized stream segments, and would forever sentence such streams to the degraded state. Furthermore, reducing the volume of storm water runoff associated with the urbanized flow regime will also result in reducing the discharge of pollutants into receiving waters, since storm water runoff from impervious surfaces contains untreated pollutants.

The San Diego Water Board understands that approximating the pre-development runoff condition associated with a redevelopment site is not necessarily straightforward because factors such as natural grade and native vegetation for the site cannot be precisely known. Therefore, the San Diego Water Board does not expect project designers to estimate historical conditions associated with redevelopment sites. Rather, the San Diego Water Board expects project designers and the Copermittees to approximate pre-development runoff conditions using the parameters of a *pervious* area rather than an *impervious* area. This means that for redevelopment sites, approximating pre-development runoff conditions equates to using existing onsite grade and assuming the infiltration characteristics of the underlying soil. A redevelopment Priority Development Project must not use runoff coefficients of concrete or asphalt to estimate pre-development runoff conditions. Rather, redevelopment projects must use available information pertaining to existing underlying soil type (such as soil maps published by the National Resource Conservation Service), onsite existing grade, and any other readily available pertinent information to estimate pre-development runoff conditions.

The San Diego Water Board understands, indeed asserts, that the pre-development hydrology of an area in question can only be roughly estimated and cannot be precisely known. However, using the hydrology of a natural condition, even if not precisely known, will provide significant benefit to receiving waters over using the hydrology associated with impervious (developed) surfaces. Therefore in order to achieve the goals of the Clean Water Act, which are to “*restore and maintain the chemical, physical, and biological integrity of the nation’s waters* [emphasis added],” the most appropriate standard to use for hydromodification management is the standard associated with the pre-development condition.

Provision E.3.c.(2)(b) requires Priority Development Projects to avoid known critical sediment yield areas or implement measures that would allow coarse sediment to be discharged to receiving waters, such that the natural sediment supply is unaffected by the project. This is necessary because the availability of coarse sediment supply is as much an issue for causing erosive conditions to receiving streams as are accelerated flows.

The San Diego Water Board recognizes that in some situations implementing the hydromodification management BMP requirements for flow control fully onsite may not be technically feasible, may be cost prohibitive, or may not provide any overall water quality benefits to the Watershed Management Area. Thus, Provision E.3.c.(2)(c) allows for the use of a combination of onsite hydromodification management BMPs for flow control and alternative compliance options described in Provision E.3.c.(3).

Provision E.3.c.(3) allows for alternative compliance in instances where the Copermittee determines that offsite measures will have a greater overall water quality benefit for the Watershed Management Area than if the Priority Development Project were to implement structural BMPs onsite. Consequently, watershed-specific

structural BMP requirements are present in this Order in the form of allowable compliance offsite. The Alternative Compliance Program to Onsite Structural BMP Implementation Provision is intended to integrate with the Copermittees' planning efforts in the Water Quality Improvement Plans.

The Alternative Compliance Program is an option for Priority Development Projects where the governing Copermittee has participated in the development of a Watershed Management Area Analysis as part of the Water Quality Improvement Plan (described in Provision B.3.b.(4)). Such an approach is consistent with the latest findings in hydromodification management by the scientific community. In a Technical Report entitled *Hydromodification Assessment and Management in California*,<sup>38</sup> the report states:

*“An effective [hydromodification] management program will likely include combinations of on-site measures (e.g., low-impact development techniques, flow-control basins), in-stream measures (e.g., stream habitat restoration), floodplain and riparian zone actions, and off-site measures. Off-site measures may include compensatory mitigation measures at upstream locations that are designed to help restore and manage flow and sediment yield in the watershed.”*

Consistent with the ideas brought forth in the report, in the Watershed Management Area Analysis of Provision B.3.b.(4), which is optional, the Copermittees will develop watershed maps that include as much detail about factors that affect the hydrology of the watershed as is available. Such factors included identification of areas suitable for infiltration, coarse sediment supply areas, and locating stream channel structures and constrictions. Once these factors are mapped and studied, the Copermittees can identify areas in the watershed where candidate projects may be implemented that are expected to improve water quality in the watershed by providing more opportunity for infiltration, slowing down storm water flows, or attenuation of pollutants naturally via healthy stream habitat. These candidate projects may be in the form of retrofitting existing development, rehabilitating degraded stream segments, identifying regional BMPs, purchasing land to preserve valuable floodplain functions, and any other project(s) that the Copermittees identify.

Under the Alternative Compliance Program, Priority Development Projects may be allowed to fund, partially fund, or implement a candidate project, in lieu of implementing structural BMPs onsite, if they enter into a voluntary agreement with the governing Copermittee permitting this arrangement. Project proponents may also propose an alternative project not previously identified by the Copermittees. In either case, whether a project proponent implements a candidate project identified by the Copermittees or a separate alternative compliance project, the governing Copermittee must determine that implementation of the project will have a greater overall water

---

<sup>38</sup> 2012. ED Stein, F Federico, DB Booth, BP Bledsoe, C Bowles, Z Rubin, GM Kondolf, A Sengupta. Technical Report 667. Southern California Coastal Water Research Project. Costa Mesa, CA.

quality benefit for the Watershed Management Area than fully implementing structural BMPs onsite. Determination of greater overall water quality benefits associated with alternative compliance projects would be accomplished by utilizing Water Quality Equivalency calculations developed pursuant to Provision E.3.c.(3)(a). Water Quality Equivalency calculations are necessary to establish a regional and technical basis for determining water quality benefits associated with alternative compliance projects, which can be consistently used by all Copermittees in the San Diego Region. Finally, if alternative compliance involves funding or implementing a project that is outside the jurisdiction of the governing Copermittee, then that Copermittee may enter into an inter-agency agreement with the appropriate jurisdiction.

Finally, Provision E.3.c.(2)(d) allows Priority Development Projects to be exempt from the hydromodification management BMP requirements if there is no threat of erosion to downstream receiving waters (i.e. the receiving stream is concrete lined from the point of discharge all the way to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean). If the Copermittees believe that more exemptions are warranted, then they must perform the optional Watershed Management Area Analysis of Provision B.3.b.(4). Additional exemptions other than those specified in this Order may be established on a watershed basis, provided the Copermittees perform the analysis, provide supporting rationale for the exemptions, and complete the Water Quality Improvement Plan approval process pursuant to Provision F.1.

To facilitate the transition to this Order from the Fourth Term Permits for Orange and Riverside County Copermittees, Provision E.3.c.(2)(e) allows two additional temporary exemptions from hydromodification management BMP implementation. The first temporary exemption allows relief from hydromodification management BMP implementation for Priority Development Projects discharging directly to an engineered channel conveyance system with a capacity to convey peak flows generated by the 10-year storm event all the way from the point of discharge to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean. Similar to the exemption allowed for concrete-lined channels, this exemption is premised on the concept that there is little threat of erosion to these types of engineered channel systems.

The second temporary exemption allows relief from hydromodification management BMP implementation for Priority Development Projects discharging directly to large river reaches with drainage areas larger than 100 square miles and a 100-year flow capacity in excess of 20,000 cubic feet per second. If this exemption is claimed, then properly sized energy dissipation is required at all discharge points associated with the Priority Development Project. This exemption is premised on the concept that large river reaches can essentially assimilate the accelerated flow rates associated with individual Priority Development Projects because they are inconsequential compared

to the flow rate in the large river reach. Both of these exemptions are included in the Hydromodification Management Plan for San Diego County<sup>39</sup>.

These temporary exemptions are allowed as a means to facilitate Orange and Riverside County Copermittees' transition to this Order from the Fourth Term Permits and are not meant to reside as permanent exemptions without additional rigorous technical analyses specific to each County. Therefore, these exemptions will no longer apply once the Copermittees' land development programs are fully updated to reflect the requirements of this Order, i.e., upon implementation of the BMP Design Manual pursuant to Provision F.2.b. If the Copermittees believe that these or other exemptions are warranted in the context of water quality improvement and stream restoration opportunities, then the Copermittees must perform the optional Watershed Management Area Analysis of Provision B.3.b.(4) and provide supporting rationale for the exemptions. The San Diego County Copermittees are also required to perform the optional Watershed Management Area Analysis to provide supporting rationale to justify use of these and other exemptions. Updated BMP Design Manuals including rationale to justify use of exemptions will be reviewed by the San Diego Water Board pursuant to Provision F.2.b.

Provisions E.3.c.(4) and E.3.c.(5) were included under the BMP requirements applicable to all development projects in the Fourth Term Permits for San Diego, Orange, and Riverside Counties (Order Nos. R9-2007-0001, R9-2009-0002, and R9-2010-0016, respectively). In this Order, the long-term BMP maintenance and infiltration and groundwater protection requirements apply to structural BMPs implemented by Priority Development Projects only.

Provision E.3.d requires the Copermittees to update their BMP Design Manual as needed to incorporate the requirements of Provision E.3. The BMP Design Manual is formerly known as the Standard Storm Water Mitigation Plan, or SSMP, and was renamed so that the title has a more accurate description of the document content. The contents of the BMP Design Manual are largely unchanged from the previous Standard Storm Water Mitigation Plans required under the Fourth Term Permits. The BMP Design Manual fulfills the 40 CFR 122.26(d)(2)(iv)(A)(2) requirement that the Copermittee's development planning program includes "*a comprehensive master plan to develop, implement and enforce controls to reduce the discharge of pollutants from municipal storm sewers which receive discharges from areas of new development and significant redevelopment.*"

As part of the "*planning procedures,*" 40 CFR 122.26(d)(2)(iv)(A)(2) requires the procedures to "*address controls to reduce pollutants in discharges from municipal separate storm sewers after construction is completed.*" The requirements applicable to the implementation and oversight of structural BMPs at Priority Development Projects are provided under Provision E.3.e.

---

<sup>39</sup> Final Hydromodification Management Plan Prepared for County of San Diego, March 2011

Proper installation of the structural BMPs approved for a Priority Development Project is necessary to ensure that pollutants in storm water discharges will be reduced to the MEP after the project is completed. In addition to the proper installation of structural BMPs, the maintenance of structural BMPs on Priority Development Projects is necessary to ensure that pollutants in storm water discharges will continue to be reduced to the MEP. Provision E.3.e.(1) includes the minimum requirements that each Copermittee must implement to ensure structural BMPs are properly installed and will be properly maintained.

Provisions E.3.e.(1)(a)(i)-(ii) have been included to provide additional clarification regarding when a Copermittee may allow land development requirements from earlier MS4 permits to apply to a Priority Development Project. Since the MS4 permits issued from 2001 to the adoption of Order No. R9-2015-0001 amending Order No. R9-2013-0001 (Regional MS4 Permit), a Copermittee could allow development projects with “prior lawful approval” to be “grandfathered” into implementing BMP requirements from previous MS4 permits. The Copermittees were given the discretion to use their land use authority to determine when it was appropriate to allow a development project with prior lawful approval to implement BMP requirements from the previous MS4 permits, and when the most recent BMP requirements should be required to achieve the reduction of pollutants in storm water runoff from development projects to the MEP. However, the San Diego Water Board has found that the Copermittees and the development community frequently disagree about when a development project has prior lawful approval and what is necessary to reduce pollutants in storm water runoff from development projects to the MEP.

Therefore, Provisions E.3.e.(1)(a)(i)-(ii) were included to provide more clarity and certainty for the Copermittees, the land development community, and the general public about when the structural BMP performance standards of earlier MS4 permits may be allowed to be implemented. A Copermittee may allow a Priority Development Project to implement BMP requirements of the previous MS4 permit only if all requirements of Provisions E.3.e.(1)(a)(i)[a]-[d] have been met. Otherwise, the Copermittees must require all Priority Development Projects to incorporate the BMP requirements of Provision E.3 into the project to reduce pollutants in storm water runoff from development projects to the MEP.

Provisions E.3.e.(1)(a)(i)[a]-[d] are dependent upon the effective date of the BMP Design Manual. Unless otherwise directed by the San Diego Water Board, the effective date of the BMP Design Manual is December 24, 2015 for the San Diego County Copermittees, September 28, 2017 for the Orange County Copermittees, and July 5, 2018 for the Riverside County Copermittees.

Alternatively, if the Copermittee can demonstrate a lack of land use authority or legal authority to require a Priority Development Project to implement the requirements of Provision E.3, the Copermittee may allow land development requirements from the previous MS4 permits to apply. However, under these circumstances the San Diego

Water Board expects the Copermittee to utilize its available land use authority or legal authority to require the implementation of as much of Provision E.3 as possible to reduce the discharge of pollutants in storm water from development and redevelopment projects within its jurisdiction to the MEP.

In cases where BMP requirements from the earlier MS4 permits govern the structural BMP design requirements of a Priority Development Project, the San Diego Water Board expects the Copermittees to be able to demonstrate, in a programmatic audit or other means, that a Priority Development Project met all the requirements listed under Provisions E.3.e.(1)(a)(i)[a]-[d], or have evidence that the Copermittee did not have the land use or legal authority to require the implementation of Provision E.3 for a Priority Development Project.

The requirements under Provision E.3.e.(2)-(3) are necessary to demonstrate each Copermittee is implementing a program that complies with Provisions E.3.b-c and E.3.e.(1), and ensure structural BMPs at Priority Development Project will continue to be able to reduce pollutants in storm water discharges to the MEP.

Pursuant to 40 CFR 122.26(d)(1)(ii) and 40 CFR 122.26(d)(2)(i), each Copermittee must have sufficient *“legal authority to control discharges to the municipal separate storm sewer system.”* Where enforcement is necessary for any development projects to compel compliance with the requirements of Provision E.3 and ensure the pollutants in storm water discharges from the MS4 are reduced and continue to be reduced to the MEP, Provision E.3.f requires each Copermittee to enforce its legal authority established pursuant to Provision E.1, and in accordance with its Enforcement Response Plan required to be developed pursuant to Provision E.6.

Provision E.4 (Construction Management) requires each Copermittee to implement a construction management program to control and reduce the discharge of pollutants in storm water from construction sites to the MEP. Proper implementation of the construction management program will also contribute toward effectively prohibiting non-storm water discharges from construction sites to the MS4.

Pursuant to 40 CFR 122.26(d)(2)(iv), each Copermittee is required to implement a *“management program...to reduce the discharge of pollutants to the maximum extent practicable using management practices, control techniques and system, design and engineering methods, and other such provisions where applicable.”* As part of the management program, 40 CFR 122.26(d)(2)(iv)(D) requires *“a program to implement and maintain structural and non-structural best management practices to reduce pollutants in storm water runoff from construction sites to the municipal storm sewer system.”*

Construction sites can be significant sources of sediment, trash, and other pollutants to receiving waters. Although sediment is naturally occurring in the natural environment, the discharge of sediment under unnatural conditions is problematic to receiving waters. Fine sediment in creeks causes high turbidity that interferes with the

functionality of native flora and fauna in local creeks. For example, turbidity interferes with both photosynthesis of water-philic plants, as well as successful foraging and reproduction of benthic macroinvertebrates. Sediment can also make it difficult for fish to breathe because it clogs fish gills. Other pollutants such as heavy metals or pesticides can adhere to sediment and are transported to receiving waters during storm events, where they dissolve in the water column and become bioavailable to aquatic organisms. Sediment is recognized as a major stressor to surface waters and is responsible for the impairment of several lagoons and creeks in the San Diego Region.

Provision E.4 includes requirements that each Copermittee must implement to minimize the discharge of sediment and other pollutants from construction sites to the MS4 within its jurisdiction. The requirements under Provision E.4 are consistent with the Fourth Term Permits for San Diego, Orange, and Riverside Counties. Therefore, Copermittees are expected to implement the requirements seamlessly, with minimal changes to their existing construction management programs. The Copermittees, however, are given more flexibility to run their programs as needed to maximize efficiency, and also to be consistent with the Water Quality Improvement Plan for the Watershed Management Area.

As part of the construction management program, 40 CFR 122.26(d)(2)(iv)(D)(1) requires “*procedures for site planning which incorporate consideration of potential water quality impacts.*” Provision E.4.a describes the minimum elements each Copermittee is required to include as part of the construction site planning and project approval process. The construction site planning and approval process is based primarily on ensuring each project had an adequate site-specific pollution control, construction BMP, and/or erosion and sediment control plan that will be implemented to minimize the discharge of pollutants in storm water to the MEP, and minimize impacts to receiving waters.

The requirements under Provision E.4.b provide the data and information necessary to identify “*priorities for inspecting sites and enforcing control measures*” required pursuant to 40 CFR 122.26(d)(2)(iv)(D)(3). Under Provision E.4.b, each Copermittee must identify construction sites that are considered a high threat to downstream surface waters. Designation of “high threat to water quality” construction sites will necessitate the Copermittees to develop criteria to identify such sites. Provision E.4.b.(2) describes a list of factors that must be considered when the Copermittee considers threat to water quality. For example, a Copermittee must identify sites as “high threat to water quality” if it is located within a hydrologic subarea where sediment is known or suspected to contribute to the highest priority water quality conditions, according to the Water Quality Improvement Plan. This ensures that construction management program implementation is compatible with the Copermittee’s identified highest priority water quality conditions.

Pursuant to 40 CFR 122.26(d)(2)(iv)(D)(2) each Copermittee is required describe “*requirements for nonstructural and structural best management practices*” at

construction sites. Provision E.4.c includes the types of construction site BMPs that the Copermittees must implement, or require the implementation of, at each construction site to reduce pollutants in storm water discharges to the MEP.

Each Copermittee is expected to require the implementation of appropriate BMPs given specific site conditions, the season and likelihood of rain events, and construction phase (i.e. grading vs. vertical construction). This means that throughout the life of the project construction, the appropriate BMPs will vary, especially if the construction of the project spans multiple wet seasons. As opposed to describing specific minimum BMPs that must be implemented, the Order describes major BMP categories that should be considered for each site.

Each Copermittee is expected to use its 20 years of storm water experience and knowledge to require implementation of appropriate BMPs from the various categories at each construction site within its jurisdiction. For example, the San Diego Water Board expects that each site will be required to implement erosion control and sediment control. The San Diego Water Board also expects each Copermittee to require implementation of active/passive sediment treatment systems at sites where other BMPs have been tried and are known to be inadequate, and discharges of sediment are causing or contributing to water quality impairment downstream. Each Copermittee is granted flexibility in specifying the minimum level of BMP requirements at each site, but the San Diego Water Board expects each site to be capable of controlling pollutants in storm water discharges to the MEP and preventing illicit discharges.

The requirements under Provision E.4.d are necessary to demonstrate that each Copermittee is implementing a program that complies with Provisions E.4.a and E.4.c and ensure BMPs at construction sites will reduce pollutants in storm water discharges to the MEP.

Provision E.4.d does not include minimum required inspection frequencies for construction sites. Each Copermittee must use its experience and knowledge to specify an appropriate inspection frequency for both high priority and lower priority sites in their jurisdictional runoff management program documents, and in accordance with the Water Quality Improvement Plan. Appropriate inspection frequencies may vary by Copermittee, but the San Diego Water Board expects that the stated frequency will be adequate for each Copermittee to properly oversee the construction sites within its jurisdiction, confirm BMPs are implemented to reduce pollutants in storm water discharges from constructions sites to the MEP, and make needed changes to its program on an ongoing basis as necessary.

Pursuant to 40 CFR 122.26(d)(1)(ii) and 40 CFR 122.26(d)(2)(i), each Copermittee must have sufficient *“legal authority to control discharges to the municipal separate storm sewer system.”* Where enforcement is necessary for any development projects to compel compliance with the requirements of Provision E.4 and ensure the pollutants in storm water discharges from the MS4 are reduced and continue to be reduced to

the MEP, Provision E.4.e requires each Copermittee to enforce its legal authority established pursuant to Provision E.1, and in accordance with its Enforcement Response Plan required to be developed pursuant to Provision E.6.

Provision E.5 (Existing Development Management) requires each Copermittee to implement an existing development management program to control and reduce the discharge of pollutants in storm water from areas of existing development to the MEP. Proper implementation of the existing development management program will also contribute toward effectively prohibiting non-storm water discharges from areas of existing development to the MS4.

Pursuant to 40 CFR 122.26(d)(2)(iv), each Copermittee is required to implement a *“management program...to reduce the discharge of pollutants to the maximum extent practicable using management practices, control techniques and system, design and engineering methods, and other such provisions where applicable.”* Within 40 CFR 122.26(d)(2)(iv)(A) and (C), the management program is required to reduce impacts on receiving waters and reduce pollutants in storm water discharges to the MEP from commercial and residential areas, industrial facilities, and municipal facilities.

Commercial and residential areas, industrial facilities, and municipal facilities must be addressed by each Copermittee with the existing development management program required under Provision E.5. All other areas within each Copermittee’s jurisdiction should be either undeveloped open space, or areas that are being developed or under construction. Areas being developed or under construction will be addressed by the Copermittee under the requirements of Provision E.3 (Development Planning) or Provision E.4 (Construction Management).

Areas of existing development typically include impervious surfaces such as sidewalks, driveways, roads, and rooftops, which generate and concentrate pollutants (such as pesticides, petroleum hydrocarbons, heavy metals, and pathogens) that are otherwise not found in high concentrations in the natural environment. Pollutants that accumulate on impervious surfaces are not easily biodegraded or not subject to natural treatment processes. When it rains, these pollutants are transported in storm water runoff from these impervious surfaces into receiving waters, resulting in poor water quality and degradation of beneficial uses.

In addition to the generation of pollutants, areas of existing development have generally altered the natural conditions of the land and removed vegetative cover, reduced the perviousness of the surface, and reduced the capacity of storm water that can be intercepted, captured, stored, infiltrated, evaporated, and/or evapotranspired. The alteration of the natural conditions and the impervious surfaces associated with areas of existing development causes water quality problems due to the alteration of natural flow regimes within the watersheds; resulting in hydromodification of channels, streams, and habitats that exist within or adjacent to the areas of existing development.

Thus, storm water discharges from areas of existing development are responsible for poor water quality, degraded habitats, and hydromodified channels throughout the developed portions of the watersheds in the San Diego Region. To improve the health and functionality of the receiving waters in a Watershed Management Area, land use practices and the amount of impervious surfaces in areas of existing development must change to reduce the various impacts caused by hydromodification and pollutants from storm water runoff generated in developed areas. Each Copermittee must be aggressive to address pollutant sources and runoff from areas of existing development to be able to reduce pollutants in storm water discharges from the MS4 to the MEP.

There is some overlap in the requirements under Provision E.5 with the requirements under Provisions E.2 (Illicit Discharge Detection and Elimination), E.3 (Development Planning), and E.4 (Construction Management). Illicit discharges frequently originate from areas of existing development. New development projects, when completed will become some type of residential, commercial, industrial or municipal existing development. Redevelopment projects are, by definition, redeveloping areas of existing development. And, redevelopment projects become construction sites located in areas of existing development. Much of the data and information collected, inspections performed, and enforcement actions taken for the requirements under Provisions E.2 to E.4 may also be utilized by the existing development management program. The requirements under Provision E.5, however, are focused primarily on reducing pollutants generated in areas of existing development that can be transported in storm water runoff and discharged to and from the MS4.

The requirements under Provision E.5 build upon existing program elements being implemented by the Copermittees. Provision E.5 is generally consistent with the existing development requirements of the Fourth Term Permits for Orange and Riverside Counties (Order Nos. R9-2009-0002 and R9-2010-0016, respectively), but modified to provide more flexibility to implement the programs so resources can be better focused toward addressing the highest priority water quality conditions identified in the Water Quality Improvement Plans.

For a Copermittee to properly manage areas of existing development, having knowledge of what development exists within its jurisdiction is essential. Provision E.5.a requires each Copermittee to maintain a watershed-based inventory of all the existing development within its jurisdiction. This requirement is necessary for each Copermittee to implement the requirements of Provision E.5.b-e.

As opposed to just maintaining separate inventories based on the type of site, each Copermittee must maintain a watershed-based inventory that includes all types of existing development within its jurisdiction. By utilizing a watershed-based inventory, the Copermittees within a Watershed Management Area can combine their inventories and review the inventories by watershed in addition to by jurisdiction. Pollutant

sources and strategies for abatement can then be evaluated on a watershed level, as opposed to evaluating sources and strategies strictly by type of site.

Provision E.5.a includes the information that must be included in the inventory. Provision E.5.a.(1) specifies what facilities or areas must be included in the inventory. A commercial type of existing development may be identified in the inventory as a facility (e.g. individual building, individual business) or an area (e.g. shopping center, commercial zone). An industrial type of existing development must be identified in the inventory by facility (e.g. individual industrial entity). A municipal type of existing development must be identified in the inventory by facility, with a list of specific municipal facilities that must be included in the inventory. A residential type of existing development must be identified by areas to be designated by the Copermittee. For each of the facilities and areas identified in the Copermittee's inventory developed pursuant to Provision E.5.a.(1), Provision E.5.a.(2) specifies the information that must be included in the description for the facility or area.

Provision E.5.a.(3) requires each Copermittee to maintain an updated map showing the location of inventoried existing development, watershed boundaries, and water bodies. This requirement was included because this information is expected to help the Copermittees in a Watershed Management Area identify and prioritize sources of pollutants and/or stressors in areas of existing development that contribute toward the highest priority water quality conditions identified in the Water Quality Improvement Plans.

Knowledge of the existing development that are likely to be sources of pollutants contributing to the highest priority water quality conditions is expected to be a key element in the Copermittees' development of the water quality improvement strategies that will be included in the Water Quality Improvement Plans. The strategies described in the Water Quality Improvement Plans will direct efforts within the existing development management programs implemented by each Copermittee.

Pursuant to 40 CFR 122.26(d)(2)(iv)(A) each Copermittee is required describe "*structural and source control measures to reduce pollutants*" in storm water runoff discharged from areas of existing development. Provision E.5.b includes the BMP implementation and maintenance requirements that the each Copermittee must require at areas of existing development to reduce pollutants in storm water discharges to the MEP. The San Diego Water Board, however, recognizes that BMP implementation and maintenance for residential areas will require much more education and encouragement through less authoritative measures than for commercial, industrial and municipal facilities and areas. Thus, the BMP implementation and maintenance requirements have been separated between requirements under Provision E.5.b.(1) for commercial, industrial and municipal facilities and areas, and Provision E.5.b.(2) for residential areas.

Most of the requirements in Provision E.5.b are consistent with the related requirements in the Fourth Term Permits. The level of specificity, however, has been changed to allow each Copermittee the flexibility to implement its program to achieve maximum efficiency, and to perform functions that will address the highest priority water quality conditions identified in the Water Quality Improvement Plans.

Each Copermittee is expected to require the implementation of appropriate BMPs to address the expected pollutants from each facility or area. The Third and Fourth Term Permits described specific minimum BMPs that must be implemented at various sites. This Order, however, requires each Copermittee to designate minimum BMPs themselves and require implementation. Consistent with the Fourth Term Permits, each Copermittee is required to maintain, or require the maintenance of, all BMPs as needed.

The BMP implementation and maintenance requirements include a schedule of operation and maintenance activities for the MS4 and related structures (such as catch basins, storm drain inlets, and detention basins), as well as public streets and roads. Public streets and roads specifically include public unpaved roads. The San Diego Water Board identified, through investigations and complaints, sediment discharges from unpaved roads as a significant source of water quality problems in the San Diego Region. Inspection activities conducted by the San Diego Water Board since the Third Term Permits have found a lack of source control for many unpaved roads within the jurisdiction of the Copermittees.

Unpaved roads are a source of sediment that can be discharged in runoff to receiving waters, especially during storm events. Erosion of unpaved roadways occurs when soil particles are loosened and carried away from the roadway base, ditch, or road bank by water, wind, traffic, or other transport means. Exposed soils, high runoff velocities and volumes, sandy or silty soil types, and poor compaction increase the potential for erosion.

Road construction, culvert installation, and other maintenance activities can disturb the soil and drainage patterns to streams in undeveloped areas, causing excess runoff and thereby erosion and the release of sediment. Poorly designed unpaved roads can act as preferential drainage pathways that carry runoff and sediment into natural streams, impacting water quality. In addition, other public works activities along unpaved roads have the potential to significantly affect sediment discharge and transport within streams and other waterways, which can degrade the beneficial uses of those waterways.

USEPA also recognizes that discharges from unpaved roads pose a significant potential threat to water quality. USEPA guidance<sup>40</sup> emphasizes the threat of unpaved roads to water quality:

---

<sup>40</sup> USEPA, 2006. Environmentally Sensitive Maintenance for Dirt and Gravel Roads. Gesford and Anderson, USEPA-PA-2005.

*“Dirt and gravel roads are a major potential source of these pollutants [sediment] and pollutants that bind to sediment such as oils, nutrients, pesticides, herbicides, and other toxic substances. Many roads have unstable surfaces and bases. Roads act like dams, concentrating flows that accelerate erosion of road materials and roadsides. Both unstable surfaces and accelerated erosion then lead to sediment and dust.”*

There are several guidance documents, developed by the USEPA,<sup>41</sup> the US Forest Service,<sup>42</sup> the University of California,<sup>43</sup> and others, that include design and construction specifications and BMPs that are readily available for implementation by public entities. Implementing design and other source control BMPs for unpaved roads in the region is necessary to reduce and minimize the impacts of sediment discharged during storm events from unpaved roads to the MS4s and receiving waters.

Provision E.5.c describes existing development site inspection frequency, content, and tracking that each Copermittee must incorporate into their existing development management programs. The requirements under Provision E.5.c are necessary to demonstrate each Copermittee is implementing a program that complies with Provision E.5.b and ensure BMPs implemented in areas of existing development will reduce pollutants in storm water discharges to the MEP. Provision E.5.c has been modified to include a minimum of once every 5 years for all inventoried facilities and areas of existing development, utilizing one or more methods of inspection.

In addition to onsite inspections, the methods of inspection have been expanded to include drive-by inspections. Inspections may be performed by the Copermittee’s municipal and contract staff, or by volunteer monitoring or patrol programs. Volunteer monitoring or patrol programs are not expected to enforce the Copermittee’s ordinances, or to inspect areas or facilities where members of the public are not allowed access. Volunteer monitoring or patrol programs must be trained by the Copermittee, and are only expected to collect visual observations. By utilizing drive-by inspections and volunteer monitoring or patrol programs, the Copermittees will be able to maximize and efficiently use their resources to identify and address sources of pollutants in areas of existing development.

The municipal and contract staff of each Copermittee must annually perform onsite inspections of an equivalent of at least 20 percent of the commercial, industrial, and municipal facilities and areas in its inventoried existing development pursuant to Provision E.5.c.(1)(a)(iv). An “equivalent” of at least 20 percent means if any commercial, industrial, or municipal facilities or areas require multiple onsite

inspections during any given year, those additional inspections may count toward the total annual inspection requirement. Linear municipal facilities (i.e. MS4 linear channels, sanitary sewer collection systems, streets, roads and highways) in the Copermittee's existing development inventory are not subject to the inspection frequency requirement of Provision E.5.c.(1)(a)(iv).

The inspection content specified in Provision E.5.c.(2)(a) includes the information required to be collected during an inspection by any method. The inspection content specified in Provision E.5.c.(2)(b) includes additional information that must be collected when a Copermittee's municipal or contract staff perform an onsite inspection. Provision E.5.c.(3) specifies the information that each Copermittee must maintain in its existing development inspection records.

Pursuant to 40 CFR 122.26(d)(1)(ii) and 40 CFR 122.26(d)(2)(i), each Copermittee must have sufficient "*legal authority to control discharges to the municipal separate storm sewer system.*" Where enforcement is necessary to compel compliance with the requirements of Provision E.5 and ensure the pollutants in storm water discharges from the MS4 are reduced and continue to be reduced to the MEP, Provision E.5.d requires each Copermittee to enforce its legal authority established pursuant to Provision E.1, and in accordance with its Enforcement Response Plan required to be developed pursuant to Provision E.6.

Provisions E.5.e.(1)-(2) specifically require the Copermittee to identify areas of existing development as candidates for retrofitting, and streams, channels, and/or habitats as candidates for rehabilitation. Provisions E.5.e.(1)-(2) are based on the retrofitting requirements of the Fourth Term Permits for Orange and Riverside Counties, but modified to also include identifying projects to rehabilitate channels within areas of existing development. The requirements have also been modified to be more focused on utilizing these types of projects for addressing the highest priority water quality conditions identified in the Water Quality Improvement Plans.

Interest and opportunity to retrofit areas of existing development and rehabilitate channels located in areas of existing development has been observed in several programs the San Diego Water Board oversees (e.g., CWA Section 401 Water Quality Certification program, supplemental environmental projects, and grant programs). Each jurisdiction has miles and miles of streets that could be retrofitted to become green streets. Reshaping landscaped areas from convex to concave configurations can detain storm water instead of directing runoff as quickly as possible to the MS4. Retrofit projects could also include simply replacing impervious surfaces with permeable surfaces.

Retrofitting projects do not necessarily have to be expensive. Retrofitting projects could be as simple as redirecting downspouts from roofs to pervious or landscaped areas instead of to hardscaped areas discharging directly to the MS4, providing rain barrels to harvest storm water from downspouts for use at a later time, or planting more trees in areas with little vegetation to provide canopy that can intercept storm

water. The San Diego Water Board encourages the Copermittees to identify simple, low-cost retrofitting opportunities that can be easily implemented, in addition to other more expensive retrofitting and channel rehabilitation projects.

Rehabilitation of channels, streams, and/or habitat will require more significant planning and resources to implement. There are, however, also abundant opportunities to rehabilitate channels, streams and/or habitats in or adjacent to areas of existing development. Each Watershed Management Area likely has several creeks and stream reaches that have been undergrounded, artificially hardened, or hydromodified that could be rehabilitated to be more sustainably configured, which would slow down storm water flows and potentially have more assimilative capacity for pollutants while still being supportive of designated beneficial uses.

The San Diego Water Board recognizes that it may be infeasible to implement retrofitting or channel rehabilitation projects within certain areas of a Copermittee's jurisdictions. For such areas, the Copermittee must instead identify, develop, and implement regional retrofitting and channel rehabilitation projects (i.e. projects that can retain and/or treat storm water from one or more areas of existing development) adjacent to and/or downstream of the areas of existing development.

Provisions E.5.e.(1)-(2) do not require the implementation of retrofitting and rehabilitation projects, but do require the Copermittee to develop a program with strategies to facilitate the implementation of these types of projects in areas of existing development. The strategies are expected to include allowing and encouraging Priority Development Projects to implement retrofitting types of projects as a means of compliance with the structural BMP performance criteria requirements of Provisions E.3.c.(1) and E.3.c.(2).

Provision E.6 (Enforcement Response Plans) requires each Copermittee to develop an Enforcement Response Plan as part of its jurisdictional runoff management program document. Proper implementation of the Enforcement Response Plans is necessary to effectively prohibit non-storm water discharges to the MS4, and reduce the discharge of pollutants in storm water from the MS4 to the MEP.

Pursuant to 40 CFR 122.26(d)(1)(ii) and 40 CFR 122.26(d)(2)(i), each Copermittee must have sufficient "*legal authority to control discharges to the municipal separate storm sewer system*" and be able to demonstrate that it can "*operate pursuant to legal authority established by statute, ordinance or series of contracts*" to control the discharge of non-storm water and pollutants in storm water to and from its MS4. Pursuant to 40 CFR 122.26(d)(2)(i)(E) each Copermittee is specifically required to have the legal authority to "*[r]equire compliance with conditions in ordinances, permits, contracts or orders.*"

The requirements under Provision E.6 are necessary to demonstrate that each Copermittee can enforce its legal authority to "*effectively prohibit non-stormwater discharges*" and "*reduce the discharge of pollutants to the maximum extent*

*practicable*” as well as “[r]equire compliance with conditions in ordinances, permits, contracts or order.”

The Enforcement Response Plan required under Provision E.6 will serve as a reference for the Copermittee and the San Diego Water Board to determine if consistent enforcement actions are being implemented to achieve timely and effective compliance from all public and private entities that are not in compliance with the Copermittee’s ordinances, permits, or other requirements. The Enforcement Response Plan must contain clear direction for the Copermittee to take immediate enforcement action, when appropriate and necessary, in their illicit discharge detection and elimination, development planning, construction management, and existing development management programs.

If the entities subject to the Copermittee’s legal authority do not implement appropriate corrective actions in a timely manner, or if violations repeat, the Copermittee must take progressively stricter responses to enforce its legal authority and achieve compliance with its ordinances, permits, or other requirements to “*effectively prohibit non-stormwater discharges*” and “*reduce the discharge of pollutants to the maximum extent practicable*.”

Provision E.7 (Public Education and Participation) requires each Copermittee to implement a public education and participation program. Proper implementation of the public education and participation program as part of its jurisdictional runoff management program will contribute toward effectively prohibiting non-storm water discharges to the MS4, and toward the reduction of pollutants in storm water from the MS4 to the MEP.

Provision E.7 establishes the minimum requirements that each Copermittee must implement to engage members of the public as part of its jurisdictional runoff management program. In the Fourth Term Permits, the public education program requirements and the public participation requirements were included as separate jurisdictional runoff management program components. In this Order, the public education requirements have been consolidated with the public participation requirements, as both sets of requirements are related to the engagement of the public by each Copermittee. Engagement of the public is critical for the success of each Copermittee’s jurisdictional runoff management program.

The Copermittees have been implementing public education programs for the last 20 years, which are now well established. The specificity of expected public education program elements of the Fourth Term Permits has been removed. For the most part, the public education program requirements in Provision E.7.a have been reduced to a set of requirements that are specifically included in the federal regulations under 40 CFR 122.26(d)(2)(iv)(A)(6), 122.26(d)(2)(B)(6) and 122.26(d)(2)(D)(4), which should already be incorporated into each Copermittee’s existing public education program. Each Copermittee is expected to utilize the information and data collected from the monitoring and assessments conducted within the Watershed Management Area, and

from its inventories and inspections to best direct its public education program resources toward addressing the highest priority water quality conditions identified within the Water Quality Improvement Plan.

According to 40 CFR 122.26(d)(2)(iv), public participation is required to be included as part of the “*comprehensive planning process*”, which includes the development and implementation of the Water Quality Improvement Plan and jurisdictional runoff management programs. The requirements under Provision E.7.b specify the opportunities that the public must be provided to be involved in the “*comprehensive planning process*”, as required by to 40 CFR 122.26(d)(2)(iv).

Provision E.8 (Fiscal Analysis) requires each Copermittee to secure the resources and provide an analysis of the resources that will be necessary to implement the requirements of the Order. Adequate fiscal resources are necessary for a jurisdictional runoff management program to effectively prohibit non-storm water discharges to the MS4, and reduce pollutants in storm water from the MS4 to the MEP.

According to 40 CFR 122.26(d)(2)(vi), each Copermittee is responsible for providing “a *fiscal analysis of the necessary capital and operation and maintenance expenditures necessary to accomplish the activities*” required by this Order, including “a *description of the source of funds that are proposed to meet the necessary expenditures, including legal restrictions on the use of such funds.*” The fiscal analysis requirements of Provision E.8 are consistent with 40 CFR 122.26(d)(2)(vi).

The San Diego Water Board has chosen not to require a description of fiscal benefits realized from implementation of the jurisdictional runoff management programs. This is a recommendation from the National Association of Flood and Stormwater Management Agencies.<sup>44</sup> For instance, the fiscal analysis requirements do not address city-wide fiscal benefits of protection (e.g., public health, tourism, property values, economic activity, beneficial uses, etc.), even though many costs currently reported to the San Diego Water Board are for related activities. This type of assessment may help Copermittees improve the allocation of resources and it may help the Copermittees secure adequate funding for the program. Qualitative assessments, however, could be overly subjective and most Copermittees likely lack the ability to provide accurate quantitative assessments. The San Diego Water Board encourages the Copermittees to consider means for conducting assessments of fiscal benefits derived from the programs. Such assessments could be conducted on a regional scale similar to studies of program costs conducted by the State Water Board.<sup>45</sup>

## F. Reporting

**Purpose:** Provision F includes the requirements for the documents and reports that the Copermittees must prepare and provide to the San Diego Water Board. The documents prepared by the Copermittees and provided to the San Diego Water Board and made available to the public will provide the documentation that the Copermittees are complying with the requirements of the Order.

**Discussion:** Provision F requires the Copermittees to prepare several documents and reports that must be provided to the San Diego Water Board and made available to the public. The reporting requirements have been significantly reduced compared to the Fourth Term Permit reporting requirements. The reduction in reporting requirements was recommended by the San Diego County Copermittees in the Report of Water Discharge submitted in June 2011.

More specific and detailed discussions of the requirements of Provision F are provided below.

Provision F.1 (Water Quality Improvement Plans) requires the Copermittees in each Watershed Management Area to develop and submit a Water Quality Improvement Plan in accordance with the requirements of Provision B.

Of all the requirements of Provision F, the Water Quality Improvement Plans will likely be the documents requiring the most significant effort to develop. The content of the Water Quality Improvement Plans, however, is expected to include content that should already have been developed for the Watershed Plans and several elements that are included in the Monitoring and Reporting Programs required under the Fourth Term Permits.

Because the Water Quality Improvement Plan is part of the “*comprehensive planning process which involves public participation*,” Provision F.1 includes requirements to give multiple opportunities to the public to provide input on the content of the plans.

Provision F.1.a.(1) specifies the elements that the Copermittees must include in the public participation process for the development of the Water Quality Improvement Plans. In order for the public to be aware of the opportunities to provide input, Provision F.1.a.(1)(a) requires the Copermittees to develop a publicly available and noticed schedule of the opportunities for the public to participate and provide comments during the development of the Water Quality Improvement Plan. These opportunities are when the public can provide the data, information, and recommendations that the Copermittees can consider during the development of the Water Quality Improvement Plans.

The San Diego Water Board recognizes, however, that the Copermittees cannot be expected to incorporate all the data, information, and recommendations that the public may provide into the Water Quality Improvement Plans. The Copermittees will have to

review the data, information, and recommendations received and make some decisions on what to incorporate into the Water Quality Improvement Plans. Before the Copermittees finalize their decisions, members of the public should be allowed to review the Copermittees' decisions. Thus, Provision F.1.a.(1)(b) requires the Copermittees to form a Water Quality Improvement Consultation Panel (Panel).

The Panel will consist of a member from the environmental community and a member from the development community familiar with the Watershed Management Area. A representative from the San Diego Water Board staff will also be part of the Panel. The Copermittees may choose to include additional members, but the Panel is only required to include three panel members.

The Panel will serve as an additional public participation and input mechanism during the development of the Water Quality Improvement Plans. The knowledge and expertise from these Panel members are expected to provide the Copermittees valuable direction during their decision-making process. The Copermittees will review the content of their planned submittals with the Panel members to receive recommendations. If the Panel provides recommendations, the Copermittees must consider revisions to the Water Quality Improvement Plan submittals.

The San Diego Water Board recognizes that the development of multiple Water Quality Improvement Plans concurrently may limit the ability of the public to review and provide comments to the Copermittees. Thus, Provision F.1.a.(1)(c) requires the Copermittees to coordinate the schedules for the public participation process among the Watershed Management Areas to provide the public time and opportunity to participate during the development of the Water Quality Improvement Plans.

Provision F.1.a.(2) requires the Copermittees to develop and submit the first Water Quality Improvement Plan component, in accordance with the requirements of Provision B.2, which includes the identification of the priority water quality conditions and potential water quality improvement strategies. The public must be provided an opportunity to provide data, information and recommendations to be utilized in the development and identification of the priority water quality conditions and potential water quality improvement strategies for the Watershed Management Area. The Copermittees must consult with the Panel and consider making revisions. The Copermittees may submit the requirements of Provision B.2 as early as 6 months and no later than 12 months after the commencement of coverage under this Order. After the requirements of Provision B.2 are submitted to the San Diego Water Board, the public will be provided another opportunity to provide comments.

Provision F.1.a.(3) requires the Copermittees to develop and submit the second Water Quality Improvement Plan component, in accordance with the requirements of Provision B.3, which includes the identification of the numeric goals for the highest priority water quality conditions identified for the Watershed Management Area, and the strategies that will be implemented to achieve the potential numeric goals. The Copermittees may also develop the Optional Watershed Management Area Analysis, in accordance with the requirements of Provision B.3.b.(4), as part of this submittal.

The public must be provided an opportunity to provide data, information and recommendations to be utilized in the development and identification of the numeric goals and water quality improvement strategies for the Watershed Management Area. The Copermittees must consult with the Panel and consider making revisions. The Copermittees may submit the requirements of Provision B.3 as early as 9 months and no later than 18 months after the commencement of coverage under this Order. After the requirements of Provision B.3 are submitted to the San Diego Water Board, the public will be provided another opportunity to provide comments.

Finally, Provision F.1.b describes the process for the submittal and implementation of the Water Quality Improvement Plans. The complete Water Quality Improvement Plans are required to be submitted by the Copermittees within 24 months after the commencement of coverage under this Order. The San Diego Water Board will provide the public an opportunity to provide comments on each complete Water Quality Improvement Plan.

The San Diego Water Board will review each Water Quality Improvement Plan and the public comments received to determine if the Copermittees have submitted a Water Quality Improvement Plan that meets the requirements of Provision B. If a Water Quality Improvement Plan does not meet the requirements of Provision B, the Copermittees will be considered out of compliance and directed in writing by the San Diego Water Board Executive Officer to correct the deficiencies.

When a Water Quality Improvement Plan meets the requirements of Provision B, the San Diego Water Board will determine whether to hold a public hearing or to limit public input to submittal of written comments before accepting the Water Quality Improvement Plan. Implementation of the Water Quality Improvement Plan must begin within 30 days of acceptance.

The San Diego Water Board expects that any deficiencies in the Water Quality Improvement Plan will be identified either in the public comments or during the review by the San Diego Water Board before implementation begins. In the event any deficiencies are identified after the implementation of the Water Quality Improvement Plan, Provision F.1.b.(7) clarifies that the San Diego Water Board maintains the right to require the Copermittees to correct any deficiencies that may be identified.

Provision F.2 (Updates) requires the Copermittees to update specific documents that the Copermittees will utilize to implement the requirements of this Order.

Each Copermittee is required to continue implementing a jurisdictional runoff management program, as required under Provision E. Implementation of each Copermittee's jurisdictional runoff management program is directed by its jurisdictional runoff management program document. Provision F.2.a requires each Copermittee to update its jurisdictional runoff management program document to be consistent with the requirements of Provision E concurrent with the submittal of the Water Quality Improvement Plan.

Likewise, each Copermittee must continue to require new development and redevelopment projects to implement BMPs to control pollutants in storm water runoff. The control of pollutants in storm water runoff from development and redevelopment projects within each Copermittee's jurisdiction is guided and directed by its BMP Design Manual, formerly known as a Standard Storm Water Mitigation Plan (SSMP). Provision F.2.b requires each Copermittee to update its BMP Design Manual to be consistent with the requirements of Provision E.3 concurrent with the submittal of the Water Quality Improvement Plan.

For situations where the San Diego Water Board may amend the requirements of Provisions E.3.a-d after a Copermittee has updated its BMP Design Manual pursuant to Provision F.2.b.(1), Provision F.2.b.(4) gives the Copermittee up to 90 days to incorporate the amended requirements of Provision E.3.a-d into its BMP Design Manual. The San Diego Water Board Executive Officer has discretion to modify the 90-day time period depending on the complexity of the amendments or other information that warrants a change in the 90-day time period.

In general, the requirements of the Order should not necessitate a complete rewrite of each Copermittee's jurisdictional runoff management program document or BMP Design Manual, as was required by the Third Term Permits. The jurisdictional runoff management program and BMP Design Manual requirements of this Order are not significantly different than the requirements of the Fourth Term Permits. Thus, only sections of the Order which are new or have been significantly changed should warrant revisions to specific sections of the Copermittee's jurisdictional runoff management program document and BMP Design Manual.

Finally, the Water Quality Improvement Plans are expected to require updates as the iterative approach and adaptive management process included in the Water Quality Improvement Plan, as required under Provision B.5, is implemented by the Copermittees. Provision F.2.c.(1) requires the Copermittees to implement a public participation process for the proposed updates, review the proposed updates with the Panel, and submit the updates to the Water Quality Improvement Plan as part of the Annual Reports required under Provision F.3.b.

Also, because TMDLs are likely to be developed, adopted and approved during the term of the Order, Provision F.2.c.(2) has been included to expedite the incorporation of TMDLs into the Copermittees' Water Quality Improvement Plans as part of the update process, potentially before the Order is re-opened to incorporate the requirements of the new TMDLs.

Provision F.3 (Progress Reporting) requires the Copermittees to report on the progress of implementing the Water Quality Improvement Plans.

The requirements of Provision F.3 are to report the progress toward improving water quality that the Copermittees are achieving with the implementation of the Water Quality Improvement Plans and each Copermittee's jurisdictional runoff management program. The Progress Report Presentations required under Provision F.3.a are

included to provide the Copermittees an opportunity to communicate directly with the San Diego Water Board and the public. The Progress Report Presentations will also provide the members of the San Diego Water Board and members of the public an opportunity to become more acquainted with the Copermittees and their projects and programs to address non-storm water and storm water discharges into and from their MS4s.

The Annual Report requirements of Provision F.3.b are a consolidation of several reporting requirements from the Fourth Term Permits, including the Jurisdictional Runoff Management Program Annual Reports, the Watershed Annual Reports, and the Monitoring and Reporting Program Annual Reports. Furthermore, the Annual Report requirements are consistent with the requirements under 40 CFR 122.42(c).

Pursuant to 40 CFR 122.42(c), “[t]he operator of a large or medium municipal separate storm sewer system or a municipal separate storm sewer that has been designated by the Director...must submit an annual report”, which must include the following:

- (1) *The status of implementing the components of the storm water management program that are established as permit conditions [40 CFR 122.42(c)(1)];*
- (2) *Proposed changes to the storm water management programs that are established as permit conditions [40 CFR 122.42(c)(2)];*
- (3) *Revisions, if necessary, to the assessment of controls and fiscal analysis [40 CFR 122.42(c)(3)];*
- (4) *A summary of data, including monitoring data, that is accumulated throughout the reporting year [40 CFR 122.42(c)(4)];*
- (5) *Annual expenditures and budget for year following each annual report [40 CFR 122.42(c)(5)];*
- (6) *A summary describing the number and nature of enforcement actions, inspections, and public education programs [40 CFR 122.42(c)(6)];*
- (7) *Identification of water quality improvements or degradation [40 CFR 122.42(c)(7)].*

Under the Fourth Term Permits, each Copermittee is responsible for submitting a Jurisdictional Runoff Management Program Annual Report; the Copermittees in each designated watershed are responsible for submitting a Watershed Annual Report; and the Copermittees from each county are responsible for submitting a Monitoring and Reporting Program Annual Report.

There are 39 Copermittees in the San Diego Region, each required to prepare and submit a Jurisdictional Runoff Management Program Annual Report. There are 9 designated watersheds in San Diego County, 6 designated watersheds in Orange County, and 1 designated watershed in Riverside County for a total of 16 designated watersheds, each requiring a Watershed Annual Report. There are 3 sets of

Copermittees in 3 counties in the San Diego Region, requiring Copermittees from each county to prepare and submit a Monitoring and Reporting Program Annual Report. Thus each Copermittee is currently required to prepare, or participate in the preparation of at least 3 annual reports. In addition, the San Diego County Copermittees are required to prepare and submit a Regional Urban Runoff Management Plan Annual Report.

In total, there are 59 annual reports that are prepared by the Copermittees and submitted to the San Diego Water Board for the Fourth Term Permits. The preparation of these annual reports requires significant time and resources from each Copermittee, which could otherwise be expended on actions that could improve water quality within its jurisdiction. In turn, significant time and resources are required from the San Diego Water Board staff to review these reports, which could otherwise be expended on working directly with the Copermittees to improve their implementation efforts toward restoring and protecting water quality.

Until the Water Quality Improvement Plans are developed, there will be a transitional period during which the Copermittees will continue to implement their existing jurisdictional runoff management programs. There will also be a transitional period during which the Copermittees will implement the transitional monitoring and assessment requirements of Provision D. During the transitional period, the Copermittees will submit annual reports pursuant to the requirements of Provisions F.3.b.(1) and F.3.b.(2).

Provision F.3.b.(1) includes the transitional annual reporting requirements for each Copermittee's jurisdictional runoff management program. The reporting of the jurisdictional runoff management program implementation efforts have been reduced to a single 2-page form. Each Copermittee is required to complete and submit a Jurisdictional Runoff Management Program Annual Report Form (contained in Attachment D or a revised form accepted by the San Diego Water Board) no later than October 31 of each year for each jurisdictional runoff management program reporting period (i.e. July 1 to June 30) during the transitional period, until the first Water Quality Improvement Plan Annual Reports are required to be submitted. The Jurisdictional Runoff Management Program Annual Report Form will certify that each Copermittee has implemented its jurisdictional runoff management program in accordance with the requirements of Provision E. Each Copermittee may choose to continue to utilize and submit the jurisdictional runoff management program annual reporting format of its current Order until the first Water Quality Improvement Plan Annual Report is required to be submitted.

Provision F.3.b.(2) includes the transitional annual reporting requirements for the transitional monitoring and assessment program for each Watershed Management Area. The Copermittees in the Watershed Management Area are required to submit a Transitional Monitoring and Assessment Program Annual Report no later than January 31 for each complete transitional monitoring and assessment program reporting period (i.e. October 1 to September 30) during the transitional period, until the first Water

Quality Improvement Plan Annual Reports are required to be submitted. The Transitional Monitoring and Assessment Program Annual Report is required to include the transitional period monitoring data collected pursuant to Provisions D.1.a and D.2.a, and the findings from the transitional period findings from the assessments required pursuant to Provisions D.4.a.(1)(a), D.4.b.(1)(a)(i), D.4.b.(2)(a)(i).

Provision F.3.b.(3) includes the Water Quality Improvement Plan Annual Report requirements. Only one Water Quality Improvement Plan Annual Report is required for each of the ten (10) Watershed Management Areas designated under Provision B.1, which is a significant reduction in the number of annual reports required to be prepared and submitted by the Copermittees. The Water Quality Improvement Plan Annual Report will document the Copermittees' efforts to implement the Water Quality Improvement Plan. Each Water Quality Improvement Plan Annual Report will be focused primarily on reporting the analysis of the monitoring data collected pursuant to Provisions D.1-D.3 during the reporting period, and the assessments that are required pursuant to Provision D.4 based on the data. The monitoring data analyses and the assessments that are provided in the Water Quality Improvement Plan Annual Report will be the core of the report. The reporting of the jurisdictional runoff management program implementation efforts have been reduced to a single 2-page form, and will no longer be the primary focus of the reporting requirements as in the Third and Fourth Term Permits.

Each Copermittee will continue to prepare and submit a Jurisdictional Runoff Management Program Annual Report Form as part of the Water Quality Improvement Plan Annual Report to certify that each Copermittee has implemented its jurisdictional runoff management program in accordance with the requirements of Provision E. Instead of reviewing a voluminous report from each Copermittee, as was required under the Third and Fourth Term Permits, the San Diego Water Board will conduct audits of each Copermittee's jurisdictional runoff management program to investigate and confirm the information provided by each Copermittee on its Jurisdictional Runoff Management Program Annual Report Form. The audits will allow the San Diego Water Board to become more familiar with the each Copermittee's jurisdictional runoff management program, and each Copermittee will become more informed about the expectations of the San Diego Water Board.

The reduction in the number and content of the Water Quality Improvement Plan Annual Reports should result in significant time, cost and resource savings for the Copermittees, as well as the San Diego Water Board. Those savings should offset a significant portion of any additional costs that may be incurred to develop the Water Quality Improvement Plans and to implement the monitoring and assessment program requirements of Provision D.

The reporting period for the Water Quality Improvement Plan Annual Reports consists of two periods. Because the jurisdictional runoff management programs are typically budgeted and implemented during a fiscal year, the information provided on the

Jurisdictional Runoff Management Program Annual Report Forms will cover the period from July 1 to June 30 of the following year.

The Water Quality Improvement Plan Annual Reports, however, are focused primarily on the monitoring data and the assessments based on the monitoring data. The monitoring data is collected during the monitoring year, which begins October 1 and ends September 30 of the following year. The monitoring year begins after the beginning of the fiscal year and ends after the end of the fiscal year. Therefore, to accommodate and capture the information collected during the fiscal year and the monitoring year, the Annual Report reporting period incorporates both periods.

Finally, Provision F.3.c requires the Copermittees to develop and submit a Regional Monitoring and Assessment Report. The Regional Monitoring and Assessment Report is similar to the Long Term Effectiveness Assessment required under the Fourth Term San Diego County Permit. The Regional Monitoring and Assessment Report is expected to utilize the entire body of data and information collected by the Copermittees during the term of this Order to assess improvements to water quality on a regional scale.

Provision F.4 (Regional Clearinghouse) requires the Copermittees to develop, update, and maintain an internet-based Regional Clearinghouse that can be used to store, disseminate, and share the Copermittees' documents, monitoring data, special studies, and any other data or information.

Most of the documents and data that are generated by the Copermittees can be provided in electronic format, and made available to the San Diego Water Board and the public on the internet. The San Diego Water Board has been gradually transitioning its document submittal requirements to electronic submittals. Provision F.4 has been included to further these efforts.

Provision F.4 has also been included to improve the exchange and availability of information among the Copermittees, as well as between the Copermittees and the San Diego Water Board. Provision F.4 will also make the information generated during the implementation of the Order more accessible to the public.

Provision F.5 (Report of Waste Discharge) requires the Copermittees to submit a Report of Waste Discharge to reapply for renewal of the Order prior to its expiration, in accordance with 40 CFR 122.21(d)(2) and CWC section 13376.

Provision F.5 requires the Copermittees to submit a Report of Waste Discharge 180 days in advance of the expiration of this Order. Provision F.5 also describes the minimum information to be included in the Report of Waste Discharge, based on USEPA guidance "Interpretive Policy Memorandum on Reapplication Requirements for Municipal Separate Storm Sewer Systems," dated May 17, 1996.

## **G. Principal Watershed Copermittee Responsibilities**

**Purpose:** Provision G includes the requirements for the Principal Watershed Copermittee designated by the Copermittees in each Watershed Management Area.

**Discussion:** Unlike previous NPDES requirements, there will no longer be a single Principal Copermittee. Provision G.1 requires the Copermittees to designate a Principal Watershed Copermittee for each Watershed Management Area. There are ten (10) Watershed Management Areas in the San Diego Region, as defined in Table B-1 under Provision B.1 of the Order. An individual Copermittee should not be the Principal Watershed Copermittee for more than two (2) Watershed Management Areas. There could be up to ten (10) Principal Water Copermittees designated for the Watershed Management Areas in the San Diego Region.

Provision G.2 describes the minimum responsibilities of each Principal Watershed Copermittee. The primary responsibility of the Principal Watershed Copermittees is to serve as the liaison between the Copermittees in the Watershed Management Area and the San Diego Water Board on general permit issues. Ideally, the Principal Watershed Copermittee can represent the interests of all the Copermittees within a Watershed Management Area during discussions or meetings to facilitate communication with the San Diego Water Board. The Principal Watershed Copermittees are also responsible for facilitating and coordinating the implementation efforts of the Copermittees and submittals of required documents and reports.

The Principal Watershed Copermittee is responsible for facilitating the efforts of the Copermittees within the Watershed Management Area to develop the Water Quality Improvement Plan required under Provision B, and submit it for approval in accordance with Provision F.1. The Principal Watershed Copermittee is also responsible for coordinating the submittal of the document updates, Progress Report Presentations, and Annual Reports required from the Copermittees within each Watershed Management Area under Provisions F.2, F.3.a, and F.3.b. The Principal Watershed Copermittees are responsible for coordinating with each other to develop and submit the Regional Clearinghouse, Regional Monitoring and Assessment Report, and the Report of Waste Discharge required under Provisions F.3.c, F.4, and F.5.

The designated Principal Watershed Copermittee for each Watershed Management Area does not necessarily have to serve as the Principal Watershed Copermittee for the entire term of the Order. If the Copermittees in a Watershed Management Area choose to designate a new Principal Watershed Copermittee, the change may be submitted as part of the Annual Report required under Provision F.3.b, with an update to the Water Quality Improvement Plan in accordance with Provision F.2.c.

Provision G.3 specifies that the Principal Watershed Copermittee is not responsible for ensuring that the other Copermittees within the Watershed Management Area are in compliance with the requirements of this Order

## H. Modification of Order

**Purpose:** Provision H provides the conditions under which modifications to Order No. R9-2013-0001, as amended, may occur.

**Discussion:** Provision H allows for modifications to Order No. R9-2013-0001, as amended, for bases in addition to modifications (minor and major) allowed under the federal regulations at 40 CFR 122.62 and 122.63.

Modifications to the Order require re-opening the Order (see Water Code section 13223), subject to the requirements of 40 CFR 122.44, 122.62 to 122.64, and 124.5, but only for the specific provisions subject to the modification. Proposed modifications of the Order will be made available for public review, a public notice and comment period, and a public hearing if requested. Comments on the provisions not subject to the proposed modifications are not required to be considered in the San Diego Water Board's responses to comments or during the public hearing.

Provision H.4 was included to specify that the Order will be re-opened for modifications if the Basin Plan is amended to modify an existing TMDL or incorporate a new TMDL, or the monitoring and assessment program requirements need to be updated or revised.

## I. Standard Permit Provisions and General Provisions

**Purpose:** Provision I incorporates the standard permit provisions required to be included in all NPDES permits, as well as several other general provisions.

**Discussion:** Provision I refers to Attachment B to the Order. Attachment B expressly incorporates the conditions applicable to all NPDES permits as provided under 40 CFR 122.41(a)-(n), as well as the applicable conditions for MS4s and storm water discharges provided under 40 CFR 122.42(c) and 40 CFR 122.42(d), respectively. Attachment B also includes several general provisions that are typically included in or applicable to waste discharge requirements issued by the San Diego Water Board.

## **IX. ATTACHMENTS**

The attachments to the Order are discussed below. The discussions describe the content of the attachments.

### **Attachment A – Discharge Prohibitions and Special Protections**

Section 1 of Attachment A includes the Waste Discharge Prohibitions from the Basin Plan. They have been provided verbatim in their entirety.

Section 2 of Attachment A includes the “*Special Protections for Areas of Special Biological Significance, Governing Point Source Discharges of Storm Water and Nonpoint Source Waste Discharges*” applicable to permitted point source discharges of storm water, adopted under State Water Board Resolution No. 2012-0012, as amended by Resolution No. 2012-0031. The terms, prohibitions, and special conditions (collectively referred to as special conditions) are established as limitations on point source storm water discharges. These special conditions provide Special Protections for marine aquatic life and natural water quality in ASBS, as required for State Water Quality Protection Areas pursuant to California Public Resources Code sections 36700(f) and 36710(f). These Special Protections were adopted by the State Water Board as part of the Ocean Plan General Exception.

## **Attachment B – Standard Permit Provisions and General Provisions**

Conditions applicable to all NPDES permits, as required under 40 CFR 122.41, and conditions applicable to MS4s and storm water discharges, as required under 40 CFR 122.42(c) and 122.42(d), respectively are provided in Attachment B to the Order. They have been provided expressly in their entirety.

In addition to the standard provisions required to be incorporated into the Order and NPDES permit pursuant to 40 CFR 122.41 and 40 CFR 122.42, several other general provisions apply to this Order. These general provisions are typically included in or applicable to waste discharge requirements issued by the San Diego Water Board. Many of the general provisions were developed by the State Water Board. Where a general provision is derived from statute or regulation, a citation of the statute or regulation section is provided. General provisions that do not provide a citation are included under the authority provided CWC 13377.

## **Attachment C – Acronyms, Abbreviations and Definitions**

The acronyms and abbreviations that are used in the Order are provided in Attachment C. Attachment C also includes definitions that may provide an explanation or description of the meaning or intent of specific terms or phrases included in the Order.

## **Attachment D – Jurisdictional Runoff Management Program Annual Report Form**

An example of the Jurisdictional Runoff Management Program Annual Report Form required to be submitted by each Copermittee as part of the Annual Reports required under Provision F.3.b.(1)(e) is provided as Attachment D to the Order. An electronic version of the form will be available from the San Diego Water Board after the adoption of the Order.

The Jurisdictional Runoff Management Program Annual Report Form includes the minimum information necessary to demonstrate that the Copermittee is implementing and in compliance with the requirements of Provision E, and includes much of the information required to be reported pursuant to 40 CFR 122.42(c).

The information that must be provided on the Jurisdictional Runoff Management Program Annual Report Form is limited to the fiscal year, which begins July 1 and ends June 30 of the following year. The information expected to be provided by the Copermittees in each section of the Jurisdictional Runoff Management Program Annual Report Form is discussed below.

### **I. COPERMITTEE INFORMATION**

The name of the Copermittee (e.g. name of city, county, or special district) and the contact information for the storm water program manager are provided under this section.

### **II. LEGAL AUTHORITY**

The Copermittee must confirm whether or not the legal authorities under Provision E.1.a have been established for itself within its jurisdiction.

The Copermittee must also confirm whether or not a Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative has certified that the Copermittee obtained and maintains adequate legal authority, as required under Provision E.1.b. The certification statement required by Provision E.1.b is only required to be submitted with the first Annual Report required under Provision F.3.b.

### **III. JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM DOCUMENT UPDATE**

The Copermittee must inform the San Diego Water Board whether or not an update to its jurisdictional runoff management program document was required or recommended by the San Diego Water Board during the reporting period. An update to the jurisdictional runoff management program is required under Provision F.2.a. The San Diego Water Board may recommend modifications to the jurisdictional runoff management program as part of the iterative approach and adaptive management process required under Provision B.5, which may result in an update that is necessary for the Copermittee's jurisdictional runoff management document.

If an update was required or recommended, the Copermittee must confirm whether or not the update was completed and made available on the Regional Clearinghouse within the reporting period. If no update was required or recommended, an answer is not required. If the answer is NO, meaning the required or recommended update was not completed and/or made available on the Regional Clearinghouse, the Copermittee must attach a

schedule for the completion of the update and/or posting of the updated document on the Regional Clearinghouse.

#### IV. ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM

The Copermittee must confirm whether or not a program was implemented during the fiscal year to actively detect and eliminate illicit discharges and connections in accordance with the requirements under Provision E.2.

In addition to confirming that a program to detect and eliminate illicit discharges was implemented during the reporting period, the Copermittee is also required to report on several items related to the program. The information that must be reported is limited to the fiscal year for the Annual Report.

All non-storm water discharges are considered illicit discharges unless the source is identified as one of the categories on non-storm water discharges under Provisions E.2.a.(1)-(5). If a non-storm water discharge is identified as one of the categories on non-storm water discharges under Provisions E.2.a.(1)-(5), the discharge is a non-storm water discharge, but not an illicit discharge. If a non-storm water discharge is identified but not in one of the categories on non-storm water discharges under Provisions E.2.a.(1)-(5), the discharge is both a non-storm water discharge and an illicit discharge.

#### V. DEVELOPMENT PLANNING PROGRAM

The Copermittee must confirm whether or not a development planning program was implemented during the fiscal year in accordance with the requirements under Provision E.3.

The Copermittee must also inform the San Diego Water Board whether or not an update to its BMP Design Manual was required or recommended by the San Diego Water Board during the fiscal year. An update to the BMP Design Manual is required under Provision F.2.b. The San Diego Water Board may recommend modifications to the BMP Design Manual, which may result in an update that is necessary for Copermittee's the BMP Design Manual.

If an update was required or recommended, the Copermittee must confirm whether or not the update was completed and made available on the Regional Clearinghouse within the reporting period. If no update was required or recommended, an answer is not required. If the answer is NO, meaning the required or recommended update was not completed and/or made available on the Regional Clearinghouse, the Copermittee must attach a schedule for the completion of the update and/or posting of the updated document on the Regional Clearinghouse.

The Copermittee is also required to report on several items related to the program. For the development and redevelopment projects that are reviewed under the program, the Copermittee must report the total number projects submitted for review during the fiscal year. Of those projects, the Copermittee must report the number that are Priority Development Projects, as defined under Provision E.3.b.(1). The Copermittee must also report the number of Priority Development Projects that were approved and/or granted occupancy during the fiscal year, regardless of when the project was originally submitted for review. Any projects that were approved during the fiscal year and granted any

exemptions from the BMP Design Manual requirements and/or allowed to implement alternative compliance options in accordance with Provision E.3.c.(3) must be reported.

Finally, the Copermittee must also report on several items related to its oversight of permanent BMPs on Priority Development Projects within its jurisdiction, as required under Provision E.3.e. The information that must be reported is limited to the fiscal year for the Annual Report.

#### VI. CONSTRUCTION MANAGEMENT PROGRAM

The Copermittee must confirm whether or not a construction management program was implemented during the fiscal year in accordance with the requirements under Provision E.4.

The Copermittee is also required to report on several items related to its oversight construction projects within its jurisdiction. The information that must be reported is limited to the fiscal year for the Annual Report.

#### VII. EXISTING DEVELOPMENT MANAGEMENT PROGRAM

The Copermittee must confirm whether or not an existing development management program was implemented during the fiscal year in accordance with the requirements under Provision E.5.

The Copermittee is also required to report on several items related to its oversight in areas of existing development within its jurisdiction. The information that must be reported is limited to the fiscal year for the Annual Report. The information must also be separated into four categories of existing development: municipal, commercial, industrial, and residential.

#### VIII. PUBLIC EDUCATION AND PARTICIPATION

The Copermittee must confirm whether or not a public education program component was implemented during the fiscal year in accordance with the requirements under Provision E.7.a.

The Copermittee must also confirm whether or not a public participation program component was implemented during the fiscal year in accordance with the requirements under Provision E.7.b.

#### IX. FISCAL ANALYSIS

The Copermittee must confirm a summary of its fiscal analysis, conducted in accordance with the requirements under Provision E.8, has been attached to the form.

#### X. CERTIFICATION

A Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative must sign and certify the Jurisdictional Runoff Management Program Annual Report Form. The appropriate box must be checked to indicate the whether a Principal Executive Officer, Ranking Elected Official, or Duly Authorized Representative is signing the form.

## Attachment E – Specific Provisions for Total Maximum Daily Loads

Attachment E provides specific provisions for implementing the load allocations (LAs) and wasteload allocations (WLAs) of Total Maximum Daily Loads (TMDLs) adopted by the San Diego Water Board and approved by USEPA in which the Copermitees are identified as responsible for discharges subject to the requirements of the TMDLs. Federal regulations require that NPDES requirements incorporate water quality based effluent limitations (WQBELs) that must be consistent with the requirements and assumptions of any available WLAs,<sup>46</sup> which may be expressed as numeric effluent limitations, when feasible, and/or as a best management practice (BMP) program of expanded or better-tailored BMPs.<sup>47</sup> Where the TMDL includes WLAs that provide numeric pollutant load or pollutant parameter objectives, the WLA has been, where feasible, translated into numeric WQBELs.<sup>48</sup>

For each TMDL in Attachment E, four sections are included:

- a. **Applicability:** This section provides the resolution under which the TMDL Basin Plan amendment was adopted and approved, with the applicable adoption and approval dates. This section also gives the effective date of the TMDL and where the TMDL is applicable (i.e. Watershed Management Area and water body). The Copermitees that are responsible for implementing the specific provisions are also given in this section.
- b. **Final TMDL Compliance Requirements:** For each TMDL, the final TMDL compliance requirements consist of the final TMDL compliance date(s), the final WQBELs, and the final TMDL compliance determination requirements. The final WQBELs are expressed in terms of receiving water limitations, effluent limitations, and/or best management practices (BMPs). The final WQBELs for the TMDLs are incorporated by reference into Provision A of the Order. The final WQBELs become enforceable when the final TMDL compliance dates have passed. Applicable BMPs within the final WQBELs must be incorporated into the Water Quality Improvement Plans. Compliance with the final WQBELs will be determined in accordance with the options provided under the final TMDL compliance determination requirements.
- c. **Interim TMDL Compliance Requirements:** If the final TMDL compliance date has not passed and there are interim TMDL compliance requirements, they are included in this section. If there are interim WQBELs with interim compliance dates, the interim WQBELs become enforceable when the corresponding interim compliance dates have passed. Compliance with the interim WQBELs will be determined in accordance with the options provided under the interim TMDL compliance determination requirements.
- d. **Specific Monitoring and Assessment Requirements:** If there are specific monitoring and assessment requirements that cannot be met with the monitoring and assessment program

<sup>46</sup> 40 CFR 122.44(d)(1)(vii)(B)

<sup>47</sup> 40 CFR 122.44(k)(2) and 40 CFR 122.44(k)(3)

<sup>48</sup> November 26, 2014 Memorandum from the USEPA, Revisions to the November 22, 2002 Memorandum "Establishing Total Maximum Daily Load (TMDL) Wasteload Allocations (WLAs) for Storm Water Sources and NPDES Permit Requirements Based on Those WLA"

requirements under Provision D of the Order, the additional requirements are included in this section.

The requirements of the TMDLs are based on and consistent with the assumptions and requirements of any available adopted and approved TMDLs that have been incorporated into the Basin Plan. Modifications to the requirements for the TMDLs in Attachment E cannot be made unless the TMDLs are modified in the Basin Plan.

A modification to any aspect of a TMDL in the Basin Plan requires a Basin Plan amendment. A Basin Plan amendment to modify a TMDL will require the San Diego Water Board to adopt a resolution to amend the Basin Plan, which includes a separate public process. When the San Diego Water Board adopts a Basin Plan amendment, it subsequently requires approval from the State Water Board, the Office of Administrative Law, and the USEPA before it becomes effective.

If and when the TMDLs are modified in the Basin Plan, the San Diego Water Board will revise the requirements of the Order in accordance with the Basin Plan amendment. When a Basin Plan amendment to modify a TMDL becomes effective, the San Diego Water Board will modify the requirements of the Order pursuant to the requirements of Provision H.4 of the Order as soon as possible.

**SUBJECT: Tentative Order No. R9-2016-0205, Investigative Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds within the San Diego Region to Submit Technical and Monitoring Reports Pertaining to the Control of Trash From Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays and Estuaries in the San Diego Region**

The California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) is releasing for public review and comment Tentative Order No. R9-2016-0205. The Tentative Order implements specific statewide requirements of amendments adopted by the State Water Resources Control Board in 2015 to the *Water Quality Control Plan for Ocean Waters of California* (Ocean Plan) and the *Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California* (ISWEBE Plan) addressing the impacts of trash to the surface waters of California (collectively referred to hereafter as the Trash Amendments).<sup>1</sup> Pursuant to the Trash Amendments, the Tentative Order proposes to require each municipal Copermittee in the San Diego Region to submit written notice indicating whether Track 1 or Track 2 control measures will be used to comply with the trash discharge prohibition. If Track 2 is selected, the Tentative Order requires submittal of an implementation plan within eighteen months.

The enclosed "Notice of Opportunity to Review and Comment" provides detailed information on the procedures for submittal of written comments on the Tentative Order and notice of the San Diego Water Board Executive Officer's intent to issue the Tentative Order. The Tentative Order is enclosed with this letter and is also available on the San Diego Water Board website at:

[http://www.waterboards.ca.gov/sandiego/board\\_decisions/tentative\\_orders/](http://www.waterboards.ca.gov/sandiego/board_decisions/tentative_orders/).

In the subject line of any response, please include the requested "**In reply refer to:**" information located in the header of this letter. If you have any questions or comments,

---

<sup>1</sup> The Trash Amendments can be accessed for review on the State Water Board website at [http://www.waterboards.ca.gov/water\\_issues/programs/trash\\_control/documentation.shtml](http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml)

Transmittal Letter  
Tentative Order No. R9-2016-0205

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD  
SAN DIEGO REGION**

**TENTATIVE INVESTIGATIVE ORDER NO. R9-2016-0205**

**AN ORDER DIRECTING THE OWNERS AND OPERATORS OF  
PHASE I MUNICIPAL SEPARATE STORM SEWER SYSTEMS (MS4s)  
DRAINING THE WATERSHEDS WITHIN THE SAN DIEGO REGION**

**TO SUBMIT TECHNICAL AND MONITORING REPORTS PERTAINING TO  
THE CONTROL OF TRASH IN DISCHARGES FROM PHASE I MS4s  
TO OCEAN WATERS, INLAND SURFACE WATERS,  
ENCLOSED BAYS, AND ESTUARIES  
IN THE SAN DIEGO REGION**

The California Regional Water Quality Control Board, San Diego Region (hereinafter San Diego Water Board) finds:

- 1. Legal and Regulatory Authority.** This Order conforms to and implements policies and requirements of the Porter-Cologne Water Quality Control Act (division 7 of the Water Code, commencing with Section 13000) including (1) sections 13267 and 13383; (2) applicable state and federal regulations; (3) all applicable provisions of statewide Water Quality Control Plans adopted by the State Water Resources Control Board (State Water Board) and the *Water Quality Control Plans for the San Diego Basin* (Basin Plan) adopted by the San Diego Water Board including beneficial uses, water quality objectives, and implementation plans; (4) State Water Board policies and regulations, including Resolution No. 68-16 (Statement of Policy with Respect to Maintaining High Quality of Waters in California); and (5) relevant standards, criteria, and advisories adopted by other state and federal agencies.
- 2. Trash Amendments.** On April 7, 2015, the State Water Board adopted Resolution No. 2015-0019, amending the *Water Quality Control Plan for Ocean Waters of California* (Ocean Plan) and the *Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California* (ISWEBE Plan) to address the impacts of trash to the surface waters of California (referred to hereafter as the Trash Amendments). The effective date of the Trash Amendments is December 2, 2015.
- 3. Trash Amendments Implementation.** The Trash Amendments establish a statewide narrative water quality objective and implementation requirements to control trash, including a prohibition against the discharge of trash to ocean waters, inland surface waters, enclosed bays, and estuaries in California. Within eighteen (18) months of the effective date (i.e. by June 2, 2017), for each MS4 that has been issued a National Pollutant Discharge Elimination System (NPDES) permit by the San Diego Water Board with regulatory authority over priority land uses in the San Diego Region, the San Diego Water Board is required to modify, re-issue, or adopt an applicable MS4 permit, or issue an order pursuant to Water Code section 13267 or 13383 to implement the Trash Amendments.

**4. Persons Responsible for the Discharges of Trash.** The owners and operators of Phase I MS4s are responsible for discharges of waste, including trash, from land uses and locations within their jurisdictions through their MS4s to ocean waters, inland surface waters, enclosed bays, and estuaries in the San Diego Region. In the San Diego Region, owners and operators of Phase I MS4s (herein referred to as MS4 permittees) include the following entities:

- County of Orange
  - City of Aliso Viejo
  - City of Dana Point
  - City of Laguna Beach
  - City of Laguna Hills
  - City of Laguna Niguel
  - City of Laguna Woods
- County of Riverside
  - City of Menifee<sup>2</sup>
  - City of Murrieta
  - City of Temecula
  - City of Wildomar
- County of San Diego
  - City of Carlsbad
  - City of Chula Vista
  - City of Coronado
  - City of Del Mar
  - City of El Cajon
  - City of Encinitas
  - City of Escondido
  - City of Imperial Beach
  - City of La Mesa
  - City of Lemon Grove
- City of Lake Forest<sup>1</sup>
- City of Mission Viejo
- City of Ranch Santa Margarita
- City of San Clemente
- City of San Juan Capistrano
- Orange County Flood Control District
- Riverside County Flood Control and Water Conservation District
- City of National City
- City of Oceanside
- City of Poway
- City of San Diego
- City of San Marcos
- City of Santee
- City of Solana Beach
- City of Vista
- San Diego County Regional Airport Authority
- San Diego Unified Port District

**5. Water Quality Standards.** The Trash Amendments established the following statewide narrative water quality objectives for trash in ocean waters, inland surface waters, enclosed bays, and estuaries in California.

<sup>1</sup> On February 10, 2015, the San Diego Water Board and the Santa Ana Water Board entered into an agreement, pursuant to Water Code section 13228, regarding MS4 discharges within the City of Lake Forest geographically located in the San Diego Region. According to the agreement, the City of Lake Forest must participate in preparation and implementation of the Water Quality Improvement Plan for the Aliso Creek Watershed Management Area. The requirements of the Trash Amendments will be incorporated into the Regional MS4 Permit during reissuance which may require an update to the Water Quality Improvement Plan.

<sup>2</sup> On October 26, 2015, the San Diego Water Board and the Santa Ana Water Board entered into an agreement, pursuant to Water Code section 13228, regarding MS4 discharges within the City of Menifee geographically located in the San Diego Region. According to the agreement, the City of Menifee must participate in preparation and implementation of the Water Quality Improvement Plan for the Santa Margarita River Watershed Management Area. The requirements of the Trash Amendments will be incorporated into the Regional MS4 Permit during reissuance which may require an update to the Water Quality Improvement Plan.

- a. The Trash Amendments established the following narrative water quality objective for trash in Chapter II.C.5 of the Ocean Plan:

*“Trash shall not be present in ocean waters, along shorelines or adjacent areas in amounts that adversely affect beneficial uses or cause nuisance.”*

- b. The Trash Amendments established the following narrative water quality objective or trash in Chapter III.A of the ISWEBE Plan:

*“Trash shall not be present in inland surface waters, enclosed bays, estuaries, and along shorelines or adjacent areas in amounts that adversely affect beneficial uses or cause nuisance.”*

Meeting these narrative water quality objectives for trash will be protective and supportive of numerous beneficial uses for the ocean waters, inland surface waters, enclosed bays, and estuaries in the San Diego Region, including but not limited to, wildlife habitat (WILD), marine habitat (MAR), preservation of rare and endangered species (RARE), fish migration (MIGR), navigation (NAV), and water contact and non-contact recreation (REC1 and REC2).

- 6. Trash Discharge Prohibition.** The Trash Amendments established the following discharge prohibition in Chapter III.I.6 of the Ocean Plan and Chapter IV.A.2 of the ISWEBE Plan:

*“The discharge of trash to surface waters of the State or the deposition of trash where it may be discharged into surface waters of the State is prohibited.”*

- 7. MS4 Permit Implementation of the Trash Amendments.** The Trash Amendments are required to be implemented through the incorporation of the trash narrative water quality objectives and discharge prohibition into NPDES MS4 permits. The NPDES MS4 permit then will require the MS4 permittees to comply with the trash narrative water quality objectives and discharge prohibition through the implementation of one of two measures to be selected by the MS4 permittees.

To comply with the trash narrative water quality objectives and discharge prohibition, the MS4 permittees are required to implement either of the following measures:

*Track 1:* Install, operate, and maintain full capture systems for all storm drains that capture runoff from the priority land uses in their jurisdictions; or

*Track 2:* Install, operate, and maintain any combination of full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls within either the jurisdiction of the MS4 permittee or within the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee shall demonstrate that such combination achieves full capture system equivalency. The MS4 permittee may determine which controls to implement to achieve compliance with full capture system equivalency. It is, however, the State Water Board’s expectation

that the MS4 permittee will elect to install full capture systems where such installation is not cost-prohibitive.

Within three (3) months of the effective date of the first implementing permit, or the receipt of an order issued by the San Diego Water Board pursuant to Water Code section 13267 or 13383, each MS4 permittee is required to provide written notice to the San Diego Water Board stating whether the MS4 permittee elects to comply with the trash discharge prohibition by implementing Track 1 or Track 2. MS4 permittees that elect to implement Track 2 are also required to submit an implementation plan to the San Diego Water Board within eighteen (18) months of the effective date of the first implementing permit, or the receipt of the order issued pursuant to Water Code section 13267 or 13383. The implementation plan is required to describe: (i) the combination of controls selected by the MS4 permittee and the rationale for the selection, (ii) how the combination of controls is designed to achieve full capture system equivalency, and (iii) how full capture equivalency will be demonstrated. The implementation plan is subject to approval by the San Diego Water Board.

**8. Full Capture System Equivalency.** The Trash Amendments define full capture system equivalency as follows:

*“Full capture system equivalency is the trash load that would be reduced if full capture systems were installed, operated, and maintained for all storm drains that capture runoff from the relevant areas of land (priority land uses, significant trash generating areas, facilities or sites regulated by NPDES permits for discharges of storm water associated with industrial activity, or specific land uses or areas that generate substantial amounts of trash, as applicable). The full capture system equivalency is a trash load reduction target that the permittee quantifies by using an approach, and technically acceptable and defensible assumptions and methods for applying the approach, subject to the approval of permitting authority. Examples of such approaches include the following:*

*(1) Trash Capture Rate Approach. Directly measure or otherwise determine the amount of trash captured by full capture systems for representative samples of all similar types of land uses, facilities, or areas within the relevant areas of land over time to identify specific trash capture rates. Apply each specific trash capture rate across all similar types of land uses, facilities, or areas to determine full capture system equivalency. Trash capture rates may be determined either through a pilot study or literature review. Full capture systems selected to evaluate trash capture rates may cover entire types of land uses, facilities, or areas, or a representative subset of types of land uses, facilities, or areas. With this approach, full capture system equivalency is the sum of the products of each type of land use, facility, or area multiplied by trash capture rates for that type of land use, facility, or area.*

*(2) Reference Approach. Determine the amount of trash in a reference receiving water in a reference watershed where full capture systems have been installed for all storm drains that capture runoff from all relevant areas of land. The reference watershed must be comprised of similar types and extent of sources*

*of trash and land uses (including priority land uses and all other land uses), facilities, or areas as the permittee's watershed. With this approach, full capture system equivalency would be demonstrated when the amount of trash in the receiving water is equivalent to the amount of trash in the reference receiving water."*

- 9. Land Uses and Locations Requiring Trash Controls.** The Trash Amendments define land uses and locations that are to be controlled for trash discharges by MS4 permittees:
- a. Priority Land Uses:** Those developed sites, facilities, or land uses (i.e. not simply zoned land uses) within a MS4 permittee's jurisdiction from which discharges of trash are regulated by the Ocean Plan or ISWEBE Plan as follows:
    - High-density residential: all land uses with at least ten (10) developed dwelling units/acre.
    - Industrial: land uses where the primary activities on the developed parcels involve product manufacture, storage, or distribution (e.g., manufacturing businesses, warehouses, equipment storage lots, junkyards, wholesale businesses, distribution centers, or building material sales yards).
    - Commercial: land uses where the primary activities on the developed parcels involve the sale or transfer of goods or services to consumers (e.g., business or professional buildings, shops, restaurants, theaters, vehicle repair shops, etc.).
    - Mixed urban: land uses where high-density residential, industrial, and/or commercial land uses predominate collectively (i.e., are intermixed).
    - Public transportation stations: facilities or sites where public transit agencies' vehicles load or unload passengers or goods (e.g., bus stations and stops).
  - b. Equivalent Alternative Land Uses:** An MS4 permittee with regulatory authority over priority land uses may issue a request to the San Diego Water Board that the MS4 permittee be allowed to substitute a land use identified above with an alternate land use within the MS4 permittee's jurisdiction that generates rates of trash that is equivalent to or greater than the priority land use being substituted. Comparative trash generation rates shall be established through the reporting of quantification measures such as street sweeping and catch basin cleanup records; mapping; visual trash presence surveys, such as the "Keeping America Beautiful Visible Litter Survey"; or other information as required by the San Diego Water Board.
  - c. Coordination with California Department of Transportation (Caltrans).** The Trash Amendments (Ocean Plan Chapter III.L.2.b and ISWEBE Plan Chapter IV.A.3.b) require that Caltrans and MS4 permittees coordinate their efforts to install, operate, and maintain full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls in significant trash generating areas and/or priority land

uses.

- d. *Specific Land Uses or Locations Determined by the San Diego Water Board:* The Trash Amendments (Ocean Plan Chapter III.L.2.d and ISWEBE Plan Chapter IV.A.3.d) provide the San Diego Water Board with the authority to determine that specific land uses or locations generate substantial amounts of trash in addition to the priority land uses defined above. In the event the San Diego Water Board makes that determination, the San Diego Water Board may require the MS4 permittees to comply with the requirements of the Trash Amendments with respect to such land uses or locations.

The San Diego Water Board has evaluated the San Diego River Park Foundation's 2013, 2014, and 2015 State of the River reports, and information received in regard to Item 5 on the May 14, 2014 Board meeting agenda pertaining to trash generated by transient encampments in the San Diego River watershed and related water quality issues. Based on this information the San Diego Water Board has determined that transient encampments in the San Diego River watershed are generating substantial trash in amounts that adversely affect beneficial uses or cause nuisance in the San Diego River. This Order requires MS4 permittees in the San Diego River Watershed Management Area to develop plans to address trash runoff from the relevant areas of land affected by transient encampments through Track 1 or Track 2 controls as stipulated in the Trash Amendments (Ocean Plan Chapter III.L.2.d and ISWEBE Plan Chapter IV.A.3.d).

- 10. Compliance Time Schedule.** The Trash Amendments require the implementing permit to state that full compliance with the trash discharge prohibition shall occur within ten (10) years of the effective date of the first implementing permit. In addition, the implementing permit must require the MS4 permittees to demonstrate achievements of interim milestones. In no case may the final compliance date be later than fifteen (15) years from the effective date of the Trash Amendments (i.e. December 2, 2030).
- 11. Monitoring and Reporting.** The Trash Amendments require the implementing permit to include monitoring and reporting requirements. The MS4 permittees will be required to provide reports to the San Diego Water Board on an annual basis to monitor progress toward achieving full compliance with the trash discharge prohibition. The monitoring and reporting requirements are dependent on the measures elected to be implemented by a MS4 permittee.
- 12. Regional MS4 Permit.** On May 8, 2013, the San Diego Water Board adopted Order No. R9-2013-0001, NPDES No. CAS0109266, National Pollutant Discharge Elimination System (NPDES) Permit and Waste Discharge Requirements for Discharges from the Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds within the San Diego Region (Regional MS4 Permit). The Regional MS4 Permit initially only incorporated the owners and operators of Phase I MS4s in San Diego County (San Diego County MS4 permittees). The Regional MS4 Permit was subsequently amended in 2015 to incorporate the owners and operators of the Phase I MS4s in south Orange County (Orange County MS4 permittees) and in southwest Riverside County (Riverside

County Copermittees). The San Diego Water Board intends to incorporate the requirements of the Trash Amendments into the Regional MS4 Permit after it expires (June 27, 2018). The renewed Regional MS4 Permit will be the first implementing permit of the Trash Amendments for the MS4 permittees.

**13. Water Quality Improvement Plans.** The Regional MS4 Permit requires the MS4 permittees to develop and implement Water Quality Improvement Plans for ten (10) Watershed Management Areas, designated in the Regional MS4 Permit as shown in Table 1 below:

**Table 1. San Diego Region Watershed Management Areas**

Hydrologic Unit(s)	Watershed Management Area	Major Surface Water Bodies	Responsible MS4 permittees

Notes:

1. By agreement dated February 10, 2015, pursuant to Water Code section 13228, the Phase I MS4 discharges within the jurisdiction of the City of Laguna Hills and the City of Laguna Woods located in the Santa Ana Region are regulated by San Diego Water Board Order No. R9-2013-0001 as amended by Order No. R9-2015-0001, upon the later effective date of Order No. R9-2015-0001 or Santa Ana Water Board Tentative Order No. R8-2015-0001. The City of Laguna Hills and Laguna Woods must also comply with the requirements of the San Diego Creek/Newport Bay TMDL in section XVIII of Santa Ana Water Board Order No. R8-2015-0001.
2. By agreement dated February 10, 2015, pursuant to Water Code section 13228, Phase I MS4 discharges within the City of Lake Forest located within the San Diego Water Board Region are regulated by the Santa Ana Water Board Order No. R8-2015-0001 (NPDES No. CAS618030) upon the later effective date of this Order or Santa Ana Water Board Tentative Order No. R8-2015-0001. In accordance with the terms of the agreement between the San Diego Water Board and the Santa Ana Water Board, the City of Lake Forest must implement the requirements of the Bacteria TMDL in Attachment E of this Order, participate in preparation and implementation of the Water Quality Improvement Plan for the Aliso Creek Watershed Management Area as described in Provision B of this Order and continue implementation of its over-irrigation discharge prohibition in its City Ordinance, Title 15, Chapter 15, section 14.030, List (b).
3. By agreement dated October 26, 2015, pursuant to Water Code section 13228, Phase I MS4 discharges within the City of Menifee located within the San Diego Water Board Region are regulated by the Santa Ana Water Board Order No. R8-2010-0033 as it may be amended or reissued (NPDES No. CAS618033) upon the later effective date of this Order. In accordance with the terms of the agreement between the San Diego Water Board and the Santa Ana Water Board, the City of Menifee must participate in preparation and implementation of the Water Quality Improvement Plan for the Santa Margarita River Watershed Management Area as described in Provision B of this Order.
4. By agreement dated October 26, 2015, pursuant to Water Code section 13228, the Phase I MS4 discharges within the jurisdiction of the City of Murrieta and the City of Wildomar located in the Santa Ana Region are regulated by San Diego Water Board Order No. R9-2013-0001 as amended by Orders No. R9-2015-0001 and R9-2015-0100. The City of Murrieta and City of Wildomar must also comply with the requirements of the Lake Elsinore/Canyon Lake Nutrient TMDLs in section VI.D.2 of Santa Ana Water Board Order No. R8-2010-0033, or corresponding section as it may be amended or reissued.

The Water Quality Improvement Plans include the following: (a) identification of priority water quality conditions that need to be addressed to improve the water quality in each Watershed Management Area; (2) numeric goals for the highest priority water quality conditions to be achieved that will demonstrate discharges from the MS4s are not causing or contributing to exceedances of applicable water quality objectives, or water quality objectives are being attained in receiving waters; (3) a description of the water quality improvement strategies that will be and may be implemented to achieve the numeric goals; and (4) schedules for implementing the water quality improvement strategies and achieving the numeric goals.

The Regional MS4 Permit also requires incorporation of implementation plans for applicable Total Maximum Daily Loads (TMDLs) and Areas of Special Biological Significance (ASBS), which include interim and final water quality-based effluent limitations, compliance strategies, and compliance schedules, into the Water Quality Improvement Plans. The implementation measures, interim milestones, and

compliance schedules for Track 1 or Track 2 of the Trash Amendments shall also be incorporated into the Water Quality Improvement Plans to be implemented by the MS4 permittees as part of the adaptive management process.

Through the issuance of this Order pursuant to Water Code section 13267, the San Diego Water Board intends the MS4 permittees to incorporate the requirements of the Trash Amendments into the Water Quality Improvement Plans after renewal of the Regional MS4 Permit.

**14. Basis for Requiring Technical and Monitoring Reports.** Water Code section 13267 provides that the San Diego Water Board may require dischargers, past dischargers, or suspected dischargers to furnish those technical or monitoring reports as the San Diego Water Board may specify, provided that the burden, including costs, of these reports, must bear a reasonable relationship to the need for the reports and the benefits to be obtained from the reports. The technical and monitoring reports required under this Investigative Order are needed to provide information to the San Diego Water Board regarding (a) the measures each MS4 permittee is electing to implement (i.e. Track 1 or Track 2) within its jurisdiction to comply with the trash discharge prohibition, (b) the plan that will be implemented by each MS4 permittee to comply with the trash discharge prohibition, (c) the interim milestones that each MS4 permittee will achieve within its jurisdiction, (d) the schedules to achieving the interim milestones, and full compliance with the trash discharge prohibition, and (e) the monitoring and reporting that will be implemented to demonstrate progress toward achieving full compliance with the trash discharge prohibition.

**15. California Environmental Quality Act.** Adoption of this Order is for the protection of the environment and is exempt from the provisions of the California Environmental Quality Act (CEQA) (Public Resources Code section 21000 et seq.) in accordance with section 15308, Chapter 3, Title 14 of the California Code of Regulations (CCR). This action is also exempt from the provisions of CEQA in accordance with section 15061(b)(3) of Chapter 3, Title 14 of the CCR because it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment.

**IT IS HEREBY ORDERED**, pursuant to California Water Code section 13267, that the MS4 Permittees must comply with the following directives:

#### **A. TECHNICAL AND MONITORING REPORTS**

- 1. Written Notices.** Each MS4 permittee must submit to the San Diego Water Board, **no later than three (3) months from the date of this Order [INSERT DATE]**, a written notice stating whether the MS4 permittee will implement Track 1 or Track 2 to comply with the trash discharge prohibition in the Ocean Plan and ISWEBE Plan.
- 2. Track 2 Implementation Plans.** Each MS4 permittee electing to comply with Track 2 must submit, **no later than eighteen (18) months from the date of this Order**

**[INSERT DATE]**, an implementation plan for each Watershed Management Area described in Table 1 in Finding 13 above that describes:

- a. The combination of controls<sup>3</sup> selected by the MS4 permittee and the rationale for each selection;
  - b. How the combination of controls is designed to achieve full capture system equivalency;
  - c. How full capture system equivalency will be demonstrated;
  - d. How the trash implementation plans will be monitored and assessed in Water Quality Improvement Plan Annual Reports;
  - e. Requests by MS4 permittees, if any, for authorization to substitute a Priority Land Use described in Finding 9 above with an Equivalent Alternate Land Use that generates rates of trash equivalent to, or greater than, the Priority Land Use being substituted. The MS4 permittees must provide data or information which establishes that trash generation rates from the Alternate Land Use(s) are greater than the Priority Land Use(s) being substituted;
  - f. A compliance time schedule based on the shortest practicable time to achieve full compliance with the trash discharge prohibition, including interim milestones (such as average load reductions of ten percent per year) and a final compliance date. The final compliance date must not be later than fifteen (15) years from the effective date of the Trash Amendments (i.e. December 2, 2030).
- 3. Coordination with Caltrans.** Each MS4 permittee subject to this Order must submit, **no later than eighteen (18) months from the date of this Order [INSERT DATE]**, a description of how MS4 permittees will coordinate their efforts to install, operate, and maintain full capture systems, multi-benefit projects, and other controls with Caltrans in significant trash generating areas and/or priority land uses, as applicable.
- 4. Transient Encampments in the San Diego River.** MS4 permittees discharging to the San Diego River watershed (Cities of San Diego, Santee, El Cajon, La Mesa, and County of San Diego), must submit, **no later than eighteen (18) months from the date of this Order [INSERT DATE]**, a description of how trash generated from transient encampments in the San Diego River Watershed Management Area will be addressed.

---

<sup>3</sup> Controls include, but are not limited to, treatment controls and institutional controls, as defined in the Appendix D to the California Ocean Plan and Appendix E of the Inland Surface Waters, Enclosed Bays, and Estuaries of California.

## B. PROVISIONS

### 1. **Signatory Requirements.** All documents submitted to the San Diego Water Board must be signed and certified.

#### a. All reports required by this Order must be signed as follows:

- (1) For a corporation, by a principal executive officer of at least the level of vice-president;
- (2) For a partnership or sole proprietorship, by a general partner or the proprietor, respectively;
- (3) For a municipality, state, federal or other public agency, by either a principal executive or ranking elected official.
- (4) By a duly authorized representative of the person designated above (B.6.a.(1), B.6.a.(ii), or B.6.a.(iii)). A person is a duly authorized representative only if:
  - (a) The authorization is made in writing by a person described in paragraph B.6.a above;
  - (b) The authorization specifies either an individual or position having responsibility for the overall operation of the regulated facility or activity; and
  - (c) The written authorization is submitted to the San Diego Water Board.

#### b. Any person signing a document required by this Order must make the following certification:

*"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

### 2. **Submittal of Documents.** All documents submitted to the San Diego Water Board in compliance with this Order must be submitted in electronic format (compact disk (CD-ROM or CD) in a Portable Document Format (PDF), unless otherwise directed. All electronic format documents required under this Order must be submitted to:

Executive Officer  
California Regional Water Quality Control Board  
San Diego Region  
2375 Northside Drive, Suite 100  
San Diego, CA 92108  
Attn: Laurie Walsh, PE, Storm Water Management Unit

- 3. Changes to Order.** This Order may be amended, rescinded, or updated by the Executive Officer. The MS4 permittees may propose changes or alternatives to the requirements in this Order if a valid rationale for the changes is shown. The filing of a request by a MS4 permittees for amending, rescinding, or updating this Order, or notification of planned changes or anticipated noncompliance does not stay any condition of this Order.

## C. NOTIFICATIONS

- 1. Enforcement Discretion.** The San Diego Water Board reserves its right to take any enforcement action authorized by law for violations of the terms and conditions of this Order.
- 2. Requesting Administrative Review by the State Water Board.** Any aggrieved person may petition the State Water Board regarding this Order in accordance with Water Code section 13320 and the California Code of Regulations title 23 sections 2050 and following. The State Water Board must receive the petition by 5:00 p.m., 30 days following the date of this Order. Copies of the laws and regulations applicable to filing petitions may be found on the State Water Board website at [http://www.waterboards.ca.gov/public\\_notices/petitions/water\\_quality](http://www.waterboards.ca.gov/public_notices/petitions/water_quality) or will be provided upon request.

For instructions on how to file a petition for review, see the State Water Board website at:  
[http://www.waterboards.ca.gov/public\\_notices/petitions/water\\_quality/wqpetition\\_instr.shtml](http://www.waterboards.ca.gov/public_notices/petitions/water_quality/wqpetition_instr.shtml)

Ordered By: \_\_\_\_\_  
David W. Gibson  
EXECUTIVE OFFICER  
Date

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD  
SAN DIEGO REGION**

**NOTICE OF OPPORTUNITY TO REVIEW AND COMMENT**

**PROPOSED ISSUANCE OF TENTATIVE ORDER NO. R9-2016-0205, AN INVESTIGATIVE  
ORDER TO THE OWNERS AND OPERATORS OF THE PHASE I MUNICIPAL SEPARATE  
STORM SEWER SYSTEMS (MS4s) DRAINING THE WATERSHEDS  
WITHIN THE SAN DIEGO REGION**

**TO SUBMIT TECHNICAL AND MONITORING REPORTS PERTAINING TO  
THE CONTROL OF TRASH IN DISCHARGES FROM PHASE I MS4s TO OCEAN WATERS,  
INLAND SURFACE WATERS, ENCLOSED BAYS, AND ESTUARIES  
IN THE SAN DIEGO REGION**

The California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) is releasing, for public review and comment:

- Tentative Order No. R9-2016-0205 (Tentative Order) an Investigative Order directing the owners and operators of the Phase I MS4s (municipal Copermittees) draining the watersheds within the San Diego Region to submit technical and monitoring reports pertaining to the control of trash in discharges from MS4s to ocean waters, inland surface waters, enclosed bays, and estuaries in the San Diego Region.

On April 7, 2015, the State Water Resources Control Board adopted Resolution No. 2015-0019, amending the *Water Quality Control Plan for Ocean Waters of California* (Ocean Plan) and the *Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California* (ISWEBE Plan) to address the impacts of trash to the surface waters of California (referred to hereafter as the Trash Amendments).

This Tentative Order will require each municipal Copermittee to comply with the Trash Amendments by: 1) submitting a written notice to the San Diego Water Board, no later than three (3) months from the date of the Order, stating whether the Copermittee will implement Track 1 or Track 2 (as described in the Trash Amendments), and 2) if Track 2 is selected, submitting a trash control implementation plan to the San Diego Water Board within eighteen (18) months from the date of the Order.

**Document Availability**

The Tentative Order and attachments thereto, and other related documents are available on the San Diego Water Board website at:

[http://www.waterboards.ca.gov/sandiego/board\\_decisions/tentative\\_orders/](http://www.waterboards.ca.gov/sandiego/board_decisions/tentative_orders/).

Interested persons may also receive copies of the Tentative Order by contacting Ms. Christina Arias at (619) 521-3361 or email at [Christina.Arias@waterboards.ca.gov](mailto:Christina.Arias@waterboards.ca.gov) or by visiting the San Diego Water Board's office at 2375 Northside Drive, Suite 100, San Diego, California 92108-2700, weekdays between 8:00 a.m. and 5:00 p.m.

**Submission of Written Comments**

The submission of written comments is the opportunity for interested persons to raise and comment on issues pertaining to the Tentative Order. All written comments pertaining to the Tentative Order to be considered by the San Diego Water Board must be received no later than

**5:00 p.m. on Wednesday December 14, 2016.** Written comments must be e-mailed to [sandiego@waterboards.ca.gov](mailto:sandiego@waterboards.ca.gov) with attention to Christina Arias. Please indicate in the subject line of written comments "Comment - Tentative Order No.R9-2016-0205" indicating the Tentative Order being addressed. The early submission of written comments on the Tentative Order is encouraged. The San Diego Water Board will prepare written responses to significant comments that are timely received.

Consistent with State Water Resources Control Board regulations that apply to this proceeding, written comments received after 5:00 p.m. on Wednesday December 14, 2016, will not be accepted and will not be incorporated into the administrative record if doing so would prejudice any party.

**Procedure for Issuance of Tentative Order**

On the basis of preliminary staff review and application of lawful standards and regulations, the Executive Officer of the San Diego Water Board, pursuant to delegated authority from the San Diego Water Board, tentatively proposes to issue Order No. R9-2016-0205 without a public hearing. Because interested persons may not have an opportunity to make oral comments, interested persons must submit all comments in writing as described above. The Executive Officer will consider all timely written comments prior to administratively issuing Order No. R9-2016-0205.

**Contact for Further Information**

Please contact Christina Arias by phone at (619) 521-3361 or e-mail at [Christina.Arias@waterboards.ca.gov](mailto:Christina.Arias@waterboards.ca.gov) for information regarding the above listed proposed action. Please bring the foregoing to the attention of any person known to you who would be interested in these matters.

Dear Regional MS4 Permit Copermittees,

The San Diego Water Board is preparing to issue an Investigative Order to all parties regulated under the Regional MS4 Permit, as part of implementation of the Trash Amendments that were adopted by the State Water Resources Control Board in 2015. We are issuing a draft of the Investigative Order for a 30-day review and comment period, and hope to receive feedback from you before a final version is issued early in 2017. Attached please find a cover letter, the draft Investigative Order, and a Notice with instructions for submitting comments.

You are invited to meet with us on Wednesday November 16, 2016 to discuss the draft Investigative Order. We have set up a meeting at the City of Vista:

Wednesday Nov. 16, 2016, 9:30-11:30 am  
City of Vista—Community Room  
200 Civic Center Drive

WEBEX conference calling will be available if you cannot attend in person.

Please review the attached documents and submit comments by **December 14, 2016**. Thanks and hope to see you on the 16<sup>th</sup>.

*Christina Arias, PE*

 This is a message from the California Regional Water Quality Control Board, San Diego Region (9).

Dear Region 9 MS4 Permit Stakeholder,

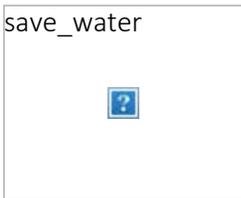

The San Diego Water Board is preparing to issue an Investigative Order to all parties regulated under the Regional MS4 Permit, as part of implementation of the Trash Amendments that were adopted by the State Water Resources Control Board in 2015. We are issuing a draft of the Investigative Order for a 30-day review and comment period. Attached please find a cover letter, the draft Investigative Order, and a Notice with instructions for submitting comments.

Comments on the draft Investigative Order are due no later than 5 p.m., December 14, 2016.

Thank you and feel free to contact me with any questions.

Summary of Questions/Comments from San Diego Region Phase I MS4 Copermittees-  
Draft Trash Investigative Order No. R9-2016-0205

Meeting with Copermittees and San Diego Water Board, 12/1/16

QUESTIONS

- What does the Tentative Investigative Order (Draft IO)/Trash Amendments mean for current Water Quality Improvement Plan priorities?
- What other sorts of guidance will be provided by the State Water Board? For instance, swapping Priority Land Uses (with alternatives) and development of monitoring plans?
- What guidance will the State Water Board be providing to Phase I MS4 Copermittees on switching between Tracks 1 and 2?
- Wonder if the Draft Trash IO is the best regulatory mechanism for addressing homeless camps? Would a separate order issued by the San Diego Water Board be better at addressing homeless camp trash issues? Homeless camps are more of a nonpoint source rather than a point source.
- Was there a particular segment(s) of the San Diego River of particular interest by the San Diego Water Board in regards to homeless camps?
- What are the San Diego Water Board's expectations of the Copermittees to coordinate with CalTrans?
- Why is CalTrans not included in this Draft IO?
- What is the timeline for the State Water Board to issue a similar trash IO for CalTrans?
- What about coordination efforts with schools?
- Are Phase II permittees going to have similar efforts to comply with the Trash Amendments?
- How does the San Diego Water Board envision monitoring and reporting requirements to be different between Tracks 1 and 2?
- Is water quality monitoring required for both Tracks?
- Can a Phase I Copermittee declaring Track 2 for its jurisdiction, implement Track 1 for specific drainage areas?
- Can a larger city, with multiple watersheds, place more effort on reducing trash in one watershed versus another? Can the monitoring and reporting requirements be flexible to reflect the varying level of effort?
- Is the San Diego Water Board okay with Phase I Copermittees focusing efforts more strongly on one watershed over another?
- Is there going to be any leniency granted for Phase I Copermittees inheriting/inundated with trash from other jurisdictions, CalTrans, or other entities where the Copermittees do not have any legal authority?
- The Trash Amendments require Copermittees to establish milestones. What is the relationship between Trash milestones and the milestones for other constituents in the Water Quality Improvement Plans?
- If Phase I Copermittees implement full capture systems, can they be modified based on new information to ensure 100% compliance?
- Wonder if Draft IO should say less about Water Quality Improvement Plans since the Amendments envision this as a jurisdictional requirement?
- Is the intent of the Draft IO to use the specific terms as defined in the Trash Amendments?
- If a Phase I Copermittee monitors and demonstrates that they can achieve compliance with the Trash Amendments (full capture equivalency), can the Copermittee then reduce/eliminate the required monitoring and reporting?
- What does the Water Board expect from home owners associations, Native American groups, and other private entities in terms of retrofitting?

Summary of Questions/Comments from San Diego Region Phase I MS4 Copermittees-  
Draft Trash Investigative Order No. R9-2016-0205

Meeting with Copermittees and San Diego Water Board, 12/1/16

- What part of Water Code Section 13267 allows the Water Boards to require Copermittees to make a decision (choose a Track), as opposed to conducting an investigation?
- If a Phase I Copermittee implements Track 2, can current, ongoing efforts be used as credit towards compliance, or would the Copermittee be required to describe and implement totally new efforts?
- If a Phase I Copermittee chooses Track 1, looking at land uses, would the IO require municipalities to go into private properties to perform retrofitting?
- For the San Diego River, there are already trash measures described in the Water Quality Improvement Plan. What does the Draft IO require in addition?
- When does the San Diego Water Board anticipate incorporating the Trash Amendments into the Regional MS4 Permit?
- What is the first “implementing permit”?
- What will be the Copermittee’s responsibility with trash from transients, the wind, boaters, or beach users?
- Can Phase I Copermittees prioritize/de-prioritize receiving water bodies based on current information?
- What happens if trash becomes a High Priority in a Water Quality Improvement Plan—would the numeric milestones need to be developed jointly with all Copermittees, or could each Copermittee use the individual numeric goals developed as part of the Trash Amendments?

COMMENTS

- Important to have an approved list of Full Capture Devices and guidance from the State Water Board before the issuance of the Final IO.
- The approved list of Full Capture Devices and guidance from the State Water Board will be important to know in evaluating implementation of Track 1/Track 2, specifically the crafting of cost analysis presented to managements.
- Addressing homeless camps is very complicated, requiring multiple departments to coordinate efforts.
- Phase I Copermittees express the importance of other dischargers (Phase II, CalTrans, etc.) to have consistent requirements with regards to the Trash Amendments.
- Many permittees supportive of jurisdictional reporting over watershed reporting.
- Since enforcement will focus on individual Copermittees, the Draft IO should focus on jurisdictional approach and not watershed approach.
- The nexus between land uses subject to trash requirements and receiving water conditions is missing.

Ms. Christina Arias  
San Diego Regional Water Quality Control Board  
2375 Northside Dr. Ste 100  
San Diego, CA 92108

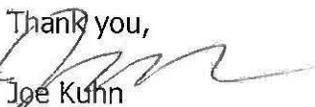

**Subject: Comment: Tentative Order R9-2016-0205**

Ms. Arias,

Upon review of the Tentative Order, the City of La Mesa has the following comments.

1. Item 9 Section d discusses transient encampments within the San Diego River Watershed. The City of La Mesa requests that this topic be removed from the Tentative Order. Transient encampments involve legal issues that are much more complicated than the scope of this Tentative Order. Transient encampments involve property rights and human rights issues and often involve persons living within the designated waterbody. Litter from transients should be addressed identically to that of any other. Requiring additional plans for the San Diego River Watershed is not appropriate, as much of the issue revolves around persons living in the waterbody with significant legal and ethical hurdles regarding encampments.
2. The City of La Mesa does not dispute the water quality benefits of controlling trash, however, the amendments represent added costs, and may take away from other planned water quality efforts. Not only are we concerned with the initial cost of installing these full capture devices but also the ongoing costs of managing and maintaining them. The City of La Mesa recommends that the State and Regional Water Boards partner with permittees to explore possible ways to fund these trash control measures.

Thank you,

  
Joe Kuhn  
Storm Water Program Manager  
City of La Mesa

# County of San Diego

San Diego, CA 92108-2700

Electronic submission: [sandiego@waterboards.ca.gov](mailto:sandiego@waterboards.ca.gov)

Dear Ms. Arias:

**COMMENTS ON TENTATIVE INVESTIGATIVE ORDER - NO. R9-2016-0205  
REFERENCE 786088: CARIAS**

The County of San Diego (County) appreciates the opportunity to comment on Tentative Investigative Order R9-2016-0205, An Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems (MS4s) draining the Watersheds within the San Diego Region to submit Technical and Monitoring Reports Pertaining to the Control of Trash in Discharges from Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays, and Estuaries in the San Diego Region (Tentative Order). The County acknowledges that the San Diego Regional Water Quality Control Board released the Tentative Investigative Order to meet the requirements of the Statewide Trash Amendments to the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California (ISWEBE Plan) and the Water Quality Control Plan for Ocean Waters of California (Ocean Plan) (referred to hereafter as "Trash Amendments"). With this in mind, the County respectfully submits the following comments to reflect our concerns with the Tentative Order as drafted and to propose improvements to the revised Order.

The County has identified eight key areas of concern within the Tentative Order as described in the detailed comments below. For each area of concern, a recommendation is included. Related detailed suggestions for modifications to the Tentative Order are included in "redline/strikeout" form in Attachment A.

Ms. Arias  
December 14, 2016  
Page 2

***Issue #1 – Clear Definition of Track 1 and Track 2 Requirements and Consistency with Trash Amendments***

***(Findings 7, 8, 9.a, 9.b, 11, 14; Directives A.2.e, A.3.f)***

The Trash Amendments provide jurisdictions with two tracks for compliance. The tracks differ in terms of compliance methodology, timelines, and reporting and monitoring requirements. Selecting which track to follow is one of the first decisions the County and other jurisdictions will face, and this choice will guide future implementation efforts. Moreover, because the Tentative Order will be issued prior to incorporation of the Trash Amendments into the Regional MS4 Permit, it will be the regulatory document that most directly defines the minimum requirements for complying with a Track 1 or Track 2 approach. It is therefore essential that the Tentative Order's findings and directives clearly define the requirements for Track 1 and 2 and the differences between them.

In addition, the County requests revisions to the Tentative Order to ensure that its language is consistent with language from the Trash Amendments. Statewide consistency is a stated goal of the State Water Resources Control Board (State Water Board) in developing the Trash Amendments. There are several portions of the Tentative Order, such as Findings 7 and 9, where Amendment language has been incompletely incorporated. These omissions reduce needed flexibility that will help ensure effective and efficient trash reduction over the long-term.

***Recommendations (with specific language suggestions provided in Attachment A):***

- 1. Finding 7. Under a Track 2 approach, implementation actions are not limited to the priority land use areas. Add language from the Trash Amendments.***
- 2. Finding 8 presents the definition for Full Capture System Equivalency. However, the definition omits some of the language from the Trash Amendments that provides flexibility to the MS4 Permittees. Add the omitted language from the Trash Amendments to the Tentative Investigative Order.***
- 3. Finding 9.a should clarify that the priority land uses only apply under a Track 1 approach.***
- 4. Finding 9.b should include all language from the Trash Amendments.***
- 5. Finding 11 needs to provide more clarity regarding the reporting requirements under Track 1 vs. Track 2. Add language from the Trash Amendments.***
- 6. Finding 14 should include clarifying language to specify which requirements apply to Track 1, Track 2, or both.***
- 7. Directive A.2.e incorrectly links Priority Land Uses and Equivalent Alternative Land Uses with a Track 2 approach. Suggest deletion of A.2.e.***
- 8. Directive A.2.f imposes a schedule based on the "shortest practicable time", which is not consistent with the schedule requirements within the Trash Amendments. Recommend deletion of "based on the shortest practicable time" to maintain consistency. Footnote 3 should also be revised for consistency with the Trash Amendments.***

Ms. Arias  
December 14, 2016  
Page 3

## **Issue #2 – Incorporation of Compliance Time Schedule in Implementing Permit**

### ***(Finding 10)***

The inclusion of an enforceable compliance schedule is not an appropriate subject to be addressed in an Investigative Order according to the statutory terms and conditions of Water Code Sections 13267 and 13383 combined. It is imperative that any compliance schedule be adopted directly into the MS4 Permit to ensure proper legal protection for permittees while they implement the plans and practices to meet the timeframes contained within the Trash Amendments.

*Recommendation: Revise language from the Compliance Time Schedule finding (Finding 10) to state the Regional MS4 Permit reissued after June 27, 2018 will be the first implementing permit and will contain a compliance time schedule consistent with the requirements of the Trash Amendments.*

## **Issue #3 – Incorporation into the Water Quality Improvement Plan**

### ***(Finding 13, Directive A.2)***

The Trash Amendments were developed to focus on trash originating from the combinations of land uses and landscape features which are unique to every jurisdiction. By offering the track choices, the State Water Board has shown its desire to develop a tool that is functional for the particular characteristics of each jurisdiction founded on the premise that different kinds of land uses “produce” trash at different rates and each jurisdiction has different combinations and locations of those land uses. For this reason, the Amendments do not fit well into a watershed-based regulatory context, as they are designed for use on a jurisdiction-by-jurisdiction basis. For example, under Track 2, a jurisdiction’s Full Capture System Equivalency value is developed based on its own combination of Priority Land Uses and is a value specific only to that jurisdiction.

The County is a Copermittee in eight watersheds within the San Diego region, and will develop compliance approaches based on its own jurisdictional responsibilities, which reflect the characteristics of the unincorporated portions of San Diego County at large, not based on watershed boundaries. For this reason, the County feels that Finding 13 of the Tentative Order should provide flexibility for jurisdictions by including the option of incorporating Amendment compliance language into the Water Quality Improvement Plans or the Jurisdictional Runoff Management Plan (JRMP) or a combination of the Water Quality Improvement Plans and JRMP. Jurisdictions would then have the choice of determining which method best meets their situation. As discussed with Regional Board staff during a meeting on December 1, 2016, it is possible that over time, trash could be raised to the highest priority water quality condition in a particular watershed. If this happens, then a goal based on watershed or sub-watershed scale implementation may be appropriate.

*Recommendation: Delete Finding 13 and Revise Finding 12 to allow the flexibility for agencies to include their approach for compliance with the Trash Amendments, whether Track 1 or Track 2, within the Water Quality Improvement Plans or their respective JRMPs or in a combination of the Water Quality Improvement Plans and JRMPs. The options should also be supported with revisions to the language in Directive A.2.*

Ms. Arias  
December 14, 2016  
Page 4

#### **Issue #4 – Compliance through Implementation of a Track 1 or Track 2 Approach and Approval of Track 2 Implementation Plan**

##### ***(Finding 7)***

The County requests a modification to the Tentative Order to clarify that the timely and complete implementation of an approved Track 1 or 2 compliance approach will meet the narrative water quality objective and constitute compliance with the trash discharge prohibitions. Revisions to Finding 7 of the Tentative Order should be made to reflect these needed clarifications. In addition, in order to better understand the process through which the required implementation plans under Track 2 will be approved by the Regional Water Board, language outlining the milestones and timing for approval involved should be added to Finding 7.

*Recommendation: Include language in Finding 7 describing the Regional Board's approval process for Implementation Plans developed under a Track 2 approach. Add language indicating that timely and complete implementation under a Track 1 or Track 2 approach will meet the narrative water quality objective (Finding 5) and constitute compliance with the trash discharge prohibitions (Finding 6).*

#### **Issue #5 – Clarification of a Jurisdiction's Ability to Change Compliance Tracks with Supporting Justification**

##### ***(Finding 7)***

Jurisdictions should be provided with the ability to change their initial determination of which compliance track to pursue. Implementation of the Trash Amendments will surely involve many lessons learned and efficiencies to be gained along the way. The State Water Board has clearly expressed its expectation "that the MS4 permittee will elect to install full capture systems where such installation is not cost-prohibitive". The County may be inclined to pursue Track 1 because of the simplicity of the approach and the compliance certainty it provides. However, with an MS4 that includes nearly 4,000 storm drain inlets within high priority land use areas; there may be some limited number of locations where installation of full capture systems is either not possible or cost-prohibitive. We will not know whether this is the case by the time we are required to submit our choice of compliance track, thus potentially forcing us to select Track 2. Allowing jurisdictions to change tracks during the implementation period, with sufficient supporting justification, is reasonable and would provide jurisdictions with much needed flexibility to implement this 10-year program. It will also likely encourage more jurisdictions to take a full capture approach, which appears to be the intent of the State Water Board.

*Recommendation: Add language to Finding 7 stating MS4 permittees may change tracks, provided they submit sufficient supporting justification. In addition, this language should be added to the first implementing permit (Regional MS4 Permit reissued after June 27, 2018).*

Ms. Arias  
December 14, 2016  
Page 5

## **Issue #6 – Transient Encampments in the San Diego River Watershed**

### ***(Finding 9.d, Directive A.4)***

The County supports CASQA's December 14, 2016 comment letter on the Tentative Order, which refers to the State Water Board's Responses to Comments on transient encampments during consideration of the Trash Amendments. Clearly, the intent of the Trash Amendments was not to address transient encampments.

The County has two key concerns with the methods proposed to address transient encampments within the San Diego River Watershed. First, transient encampments are by their nature a non-point source of trash and should be regulated as such. Therefore, they should not be regulated within an MS4 Permit which is a point source permit. As noted in their Response to Comments for the Trash Amendments, the State Water Board intended for the Trash Amendments to apply to NPDES Permits issued pursuant to Federal Clean Water Act Section 402(p) (see response 10.6), with other sources addressed through Waste Discharge Requirements (WDRs) or waivers of WDRs (see response 34.2). As has been found in other regions (e.g., Ventura River Estuary), only addressing MS4 sources of trash, when the problem stems from transient encampments, has little effect on the overall levels of trash. The transient encampments simply pick up and move, at least temporarily, to another part of the watershed. Further, Copermitees often do not have effective "regulatory control" over properties where transient encampments are common, i.e., private, state, and federal properties. The request for the Permittees to "address trash runoff from the relevant areas of land affected by transient encampments" via the MS4 Permit is inappropriate as it is the wrong mechanism for controlling this type of discharge. In order to effectively address the issue, participation from all land owners and key responsible parties, particularly those beyond the control of the MS4 permit, will be needed. Further, it will be necessary to involve other agencies to holistically address the transient problems within the watershed (e.g., social services, law enforcement) to ensure that the issue is not simply transferred from one portion of the region to another.

Second, the requirement to address trash from transient encampments for an entire watershed under the Trash Amendments limits the ability of the permittee to be in compliance with Track 1 or Track 2. To implement a Track 1 approach, consistent with the intent of the Amendments, full capture devices would only treat MS4 discharges from priority land use areas, not other non-priority land uses or receiving waters where many transient encampments occur. To implement a Track 2 approach, "transient encampments" would have to be identified as a "land use" and a "full capture equivalency" would need to be demonstrated. Such an approach is cumbersome, certainly not the intent of the Amendments, and may be counterproductive to actually solving the problem.

***Recommendations:*** *Finding 9.d and Directive A.4 should be removed. The San Diego Board should maintain consistency with the State Water Board and other Regional Boards in addressing trash generated from transient encampments as non-point in nature. In order to effectively address this particular source, the Regional Board could issue a separate Conditional Waiver of Waste Discharge Requirement to all land owners/responsible parties where trash from transient encampments has been determined to be a problem. However, if the San Diego Board does not remove Finding 9.d and Directive A.4, then consider the revision proposed in redline/strikeout that requests that the MS4s coordinate with entities under their jurisdiction to address trash from transient encampments.*

Ms. Arias  
December 14, 2016  
Page 6

**Issue #7 – Coordination with Caltrans*****(Directive A.3)***

The County requests a modification to the Tentative Order to be consistent with the Trash Amendments and with the MS4 Permit with respect to coordination with Caltrans. The Amendments and the MS4 Permit already require coordination with Caltrans, as applicable, but neither requires a submittal to the Regional Board describing these efforts. In general, the County and Copermitees have established a good working relationship with Caltrans through the Water Quality Improvement Plans. As this coordination continues, it will include implementation of the requirements under the Trash Amendments as appropriate for Caltrans and for the MS4 Permittees to be compliant. Coordination should not necessitate a new reporting requirement for the Copermitees.

*Recommendation: Require coordination with Caltrans, as applicable, to effectively implement the requirements of the Amendments, but remove the requirement to describe this coordination in a separate submittal to the Regional Board.*

**Issue #8 - Clarification of the Monitoring and Reporting requirements of the 13267 Order*****(Finding 11, New Directive)***

Finding 11 does not provide adequate information related to the monitoring and reporting requirements specific to the Track 1 and Track 2 compliance options as detailed in the Trash Amendments. By not providing the specific requirements for the Track 1 and Track 2 compliance options, the Tentative Order leaves the monitoring and reporting requirements ambiguous and could cause unnecessary monitoring and/or reporting by the MS4 Permittees. Furthermore, including the monitoring requirements as a finding rather than a directive is also problematic. Including the monitoring and reporting requirements as a directive would clearly indicate what the MS4 Permittees are responsible for.

*Recommendation: Revise Finding 11 language and add a new Directive A.3 to describe the specific monitoring and reporting requirements applicable to each track.*

Thank you for your time and consideration of these comments offered in an effort to improve the Tentative Order and ensure consistency with the Trash Amendments. If you have questions or require additional information, please contact Jo Ann Weber, Planning Manager, at (858) 495-5317 or e-mail at [JoAnn.Weber@sdcounty.ca.gov](mailto:JoAnn.Weber@sdcounty.ca.gov).

Sincerely,

TODD E. SNYDER, Manager  
Watershed Protection Program

Attachment: County of San Diego Recommended Redline-Strikeout of Tentative Order

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD  
SAN DIEGO REGION**

**TENTATIVE INVESTIGATIVE ORDER NO. R9-2016-0205**

**AN ORDER DIRECTING THE OWNERS AND OPERATORS OF  
PHASE I MUNICIPAL SEPARATE STORM SEWER SYSTEMS (MS4s)  
DRAINING THE WATERSHEDS WITHIN THE SAN DIEGO REGION**

**TO SUBMIT TECHNICAL AND MONITORING REPORTS PERTAINING TO  
THE CONTROL OF TRASH IN DISCHARGES FROM PHASE I MS4s  
TO OCEAN WATERS, INLAND SURFACE WATERS,  
ENCLOSED BAYS, AND ESTUARIES  
IN THE SAN DIEGO REGION**

The California Regional Water Quality Control Board, San Diego Region (hereinafter San Diego Water Board) finds:

- 1. Legal and Regulatory Authority.** This Order conforms to and implements policies and requirements of the Porter-Cologne Water Quality Control Act (division 7 of the Water Code, commencing with Section 13000) including (1) sections 13267 and 13383; (2) applicable state and federal regulations; (3) all applicable provisions of statewide Water Quality Control Plans adopted by the State Water Resources Control Board (State Water Board) and the *Water Quality Control Plans for the San Diego Basin* (Basin Plan) adopted by the San Diego Water Board including beneficial uses, water quality objectives, and implementation plans; (4) State Water Board policies and regulations, including Resolution No. 68-16 (Statement of Policy with Respect to Maintaining High Quality of Waters in California); and (5) relevant standards, criteria, and advisories adopted by other state and federal agencies.
- 2. Trash Amendments.** On April 7, 2015, the State Water Board adopted Resolution No. 2015-0019, amending the *Water Quality Control Plan for Ocean Waters of California* (Ocean Plan) and the *Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California* (ISWEBE Plan) to address the impacts of trash to the surface waters of California (referred to hereafter as the Trash Amendments). The effective date of the Trash Amendments is December 2, 2015.
- 3. Trash Amendments Implementation.** The Trash Amendments establish a statewide narrative water quality objective and implementation requirements to control trash, including a prohibition against the discharge of trash to ocean waters, inland surface waters, enclosed bays, and estuaries in California. Within eighteen (18) months of the effective date (i.e. by June 2, 2017), for each MS4 that has been issued a National Pollutant Discharge Elimination System (NPDES) permit by the San Diego Water Board with regulatory authority over priority land uses in the San Diego Region, the San Diego Water Board is required to modify, re-issue, or adopt an applicable MS4 permit, or issue an order pursuant to Water Code section 13267 or 13383 to implement the Trash Amendments.

**4. Persons Responsible for the Discharges of Trash.** The owners and operators of Phase I MS4s are responsible for discharges of waste, including trash, from land uses and locations within their jurisdictions through their MS4s to ocean waters, inland surface waters, enclosed bays, and estuaries in the San Diego Region. In the San Diego Region, owners and operators of Phase I MS4s (herein referred to as MS4 permittees) include the following entities:

- County of Orange
  - City of Aliso Viejo
  - City of Dana Point
  - City of Laguna Beach
  - City of Laguna Hills
  - City of Laguna Niguel
  - City of Laguna Woods
- County of Riverside
  - City of Menifee<sup>2</sup>
  - City of Murrieta
  - City of Temecula
  - City of Wildomar
- County of San Diego
  - City of Carlsbad
  - City of Chula Vista
  - City of Coronado
  - City of Del Mar
  - City of El Cajon
  - City of Encinitas
  - City of Escondido
  - City of Imperial Beach
  - City of La Mesa
  - City of Lemon Grove
- City of Lake Forest<sup>1</sup>
- City of Mission Viejo
- City of Ranch Santa Margarita
- City of San Clemente
- City of San Juan Capistrano
- Orange County Flood Control District
- Riverside County Flood Control and Water Conservation District
- City of National City
- City of Oceanside
- City of Poway
- City of San Diego
- City of San Marcos
- City of Santee
- City of Solana Beach
- City of Vista
- San Diego County Regional Airport Authority
- San Diego Unified Port District

**5. Water Quality Standards.** The Trash Amendments established the following statewide narrative water quality objectives for trash in ocean waters, inland surface waters, enclosed bays, and estuaries in California.

<sup>1</sup> On February 10, 2015, the San Diego Water Board and the Santa Ana Water Board entered into an agreement, pursuant to Water Code section 13228, regarding MS4 discharges within the City of Lake Forest geographically located in the San Diego Region. According to the agreement, the City of Lake Forest must participate in preparation and implementation of the Water Quality Improvement Plan for the Aliso Creek Watershed Management Area. The requirements of the Trash Amendments will be incorporated into the Regional MS4 Permit during reissuance which may require an update to the Water Quality Improvement Plan.

<sup>2</sup> On October 26, 2015, the San Diego Water Board and the Santa Ana Water Board entered into an agreement, pursuant to Water Code section 13228, regarding MS4 discharges within the City of Menifee geographically located in the San Diego Region. According to the agreement, the City of Menifee must participate in preparation and implementation of the Water Quality Improvement Plan for the Santa Margarita River Watershed Management Area. The requirements of the Trash Amendments will be incorporated into the Regional MS4 Permit during reissuance which may require an update to the Water Quality Improvement Plan.

- a. The Trash Amendments established the following narrative water quality objective for trash in Chapter II.C.5 of the Ocean Plan:

*"Trash shall not be present in ocean waters, along shorelines or adjacent areas in amounts that adversely affect beneficial uses or cause nuisance."*

- b. The Trash Amendments established the following narrative water quality objective or trash in Chapter III.A of the ISWEBE Plan:

*"Trash shall not be present in inland surface waters, enclosed bays, estuaries, and along shorelines or adjacent areas in amounts that adversely affect beneficial uses or cause nuisance."*

Meeting these narrative water quality objectives for trash will be protective and supportive of numerous beneficial uses for the ocean waters, inland surface waters, enclosed bays, and estuaries in the San Diego Region, including but not limited to, wildlife habitat (WILD), marine habitat (MAR), preservation of rare and endangered species (RARE), fish migration (MIGR), navigation (NAV), and water contact and non-contact recreation (REC1 and REC2).

- 6. Trash Discharge Prohibition.** The Trash Amendments established the following discharge prohibition in Chapter III.I.6 of the Ocean Plan and Chapter IV.A.2 of the ISWEBE Plan:

*"The discharge of trash to surface waters of the State or the deposition of trash where it may be discharged into surface waters of the State is prohibited."*

- 7. MS4 Permit Implementation of the Trash Amendments.** The Trash Amendments are required to be implemented through the incorporation of the trash narrative water quality objectives and discharge prohibition into NPDES MS4 permits. The NPDES MS4 permit then will require the MS4 permittees to comply with the trash narrative water quality objectives and discharge prohibition through the implementation of one of two measures to be selected by the MS4 permittees.

To comply with the trash narrative water quality objectives and discharge prohibition, the MS4 permittees are required to implement either of the following measures:

*Track 1:* Install, operate, and maintain full capture systems for all storm drains that capture runoff from the priority land uses in their jurisdictions; or

*Track 2:* Install, operate, and maintain any combination of full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls within either the jurisdiction of the MS4 permittee or within the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. The MS4 permittee shall demonstrate that such combination achieves full capture system equivalency. The MS4 permittee may determine which controls to implement to achieve compliance with full capture system equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to

install full capture systems where such installation is not cost-prohibitive.

Within three (3) months of the effective date of the first implementing permit, or the receipt of an order issued by the San Diego Water Board pursuant to Water Code section 13267 or 13383, each MS4 permittee is required to provide written notice to the San Diego Water Board stating whether the MS4 permittee elects to comply with the trash discharge prohibition by implementing Track 1 or Track 2. MS4 permittees that elect to implement Track 2 are also required to submit an implementation plan to the San Diego Water Board within eighteen (18) months of the effective date of the first implementing permit, or the receipt of the order issued pursuant to Water Code section 13267 or 13383. The implementation plan is required to describe: (i) the combination of controls selected by the MS4 permittee and the rationale for the selection, (ii) how the combination of controls is designed to achieve full capture system equivalency, and (iii) how full capture equivalency will be demonstrated. The implementation plan is subject to approval by the San Diego Water Board. Track 2 Implementation Plans will be deemed approved by the San Diego Water Board ninety (90) days after submission unless otherwise directed in writing by the San Diego Water Board Executive Officer. MS4 permittees may elect to change tracks through their adaptive management process during the 10-year implementation period, provided they submit sufficient, supporting justification to the San Diego Water Board. MS4 permittees fully complying with Track 1 or Track 2 are deemed to be in compliance with the trash discharge prohibition and narrative water quality objectives incorporated into the MS4 permit.

**8. Full Capture System Equivalency.** The Trash Amendments define full capture system equivalency as follows:

*“Full capture system equivalency is the trash load that would be reduced if full capture systems were installed, operated, and maintained for all storm drains that capture runoff from the relevant areas of land (priority land uses, significant trash generating areas, facilities or sites regulated by NPDES permits for discharges of storm water associated with industrial activity, or specific land uses or areas that generate substantial amounts of trash, as applicable). The full capture system equivalency is a trash load reduction target that the permittee quantifies by using an approach, and technically acceptable and defensible assumptions and methods for applying the approach, subject to the approval of permitting authority. Examples of such approaches include, but are not limited to, the following:*

- (1) *Trash Capture Rate Approach. Directly measure or otherwise determine the amount of trash captured by full capture systems for representative samples of all similar types of land uses, facilities, or areas within the relevant areas of land over time to identify specific trash capture rates. Apply each specific trash capture rate across all similar types of land uses, facilities, or areas to determine full capture system equivalency. Trash capture rates may be determined either through a pilot study or literature review. Full capture systems selected to evaluate trash capture rates may cover entire types of land uses, facilities, or areas, or a representative subset of types of land uses, facilities, or areas. With this approach, full capture system equivalency is the sum of the products of each type of land use, facility, or area multiplied by trash capture rates for that type of land use, facility, or area.*

(2) *Reference Approach. Determine the amount of trash in a reference receiving water in a reference watershed where full capture systems have been installed for all storm drains that capture runoff from all relevant areas of land. The reference watershed must be comprised of similar types and extent of sources of trash and land uses (including priority land uses and all other land uses), facilities, or areas as the permittee's watershed. With this approach, full capture system equivalency would be demonstrated when the amount of trash in the receiving water is equivalent to the amount of trash in the reference receiving water."*

**9. Land Uses and Locations Requiring Trash Controls.** The Trash Amendments define land uses and locations that are to be controlled for trash discharges by MS4 permittees using the Track 1 compliance option:

- a. *Priority Land Uses:* Those developed sites, facilities, or land uses (i.e. not simply zoned land uses) within a MS4 permittee's jurisdiction from which discharges of trash are regulated by the Ocean Plan or ISWEBE Plan as follows:
- High-density residential: all land uses with at least ten (10) developed dwelling units/acre.
  - Industrial: land uses where the primary activities on the developed parcels involve product manufacture, storage, or distribution (e.g., manufacturing businesses, warehouses, equipment storage lots, junkyards, wholesale businesses, distribution centers, or building material sales yards).
  - Commercial: land uses where the primary activities on the developed parcels involve the sale or transfer of goods or services to consumers (e.g., business or professional buildings, shops, restaurants, theaters, vehicle repair shops, etc.).
  - Mixed urban: land uses where high-density residential, industrial, and/or commercial land uses predominate collectively (i.e., are intermixed).
  - Public transportation stations: facilities or sites where public transit agencies' vehicles load or unload passengers or goods (e.g., bus stations and stops).
- b. *Equivalent Alternative Land Uses:* An MS4 permittee with regulatory authority over priority land uses may issue a request to the San Diego Water Board that the MS4 permittee be allowed to substitute a land use identified above with an alternate land use within the MS4 permittee's jurisdiction that generates rates of trash that is equivalent to or greater than the priority land use being substituted. The land use area requested to substitute for a priority land use need not be an acre-for-acre substitution but may involve one or more priority land uses, or a fraction of a priority land use, or both, provided the total trash generated in the equivalent alternative land use is equivalent or greater than the total trash generated from the priority land uses for which substitution is requested. Comparative trash generation rates shall be established through the reporting of quantification measures such as street sweeping and catch basin cleanup records; mapping; visual trash presence surveys, such as the "Keeping America Beautiful Visible

Litter Survey"; or other information as required by the San Diego Water Board.

- c. *Coordination with California Department of Transportation (Caltrans).* The Trash Amendments (Ocean Plan Chapter III.L.2.b and ISWEBE Plan Chapter IV.A.3.b) require that Caltrans and MS4 permittees coordinate their efforts to install, operate, and maintain full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls in significant trash generating areas and/or priority land uses.
- d. *Specific Land Uses or Locations Determined by the San Diego Water Board:* The Trash Amendments (Ocean Plan Chapter III.L.2.d and ISWEBE Plan Chapter IV.A.3.d) provide the San Diego Water Board with the authority to determine that specific land uses or locations generate substantial amounts of trash in addition to the priority land uses defined above. In the event the San Diego Water Board makes that determination, the San Diego Water Board may require the MS4 permittees to comply with the requirements of the Trash Amendments with respect to such land uses or locations.

[Note: The County of San Diego requests the removal of this paragraph, but if Regional Board must keep, then recommended edits are shown] The San Diego Water Board has evaluated the San Diego River Park Foundation's 2013, 2014, and 2015 State of the River reports, and information received in regard to Item 5 on the May 14, 2014 Board meeting agenda pertaining to trash generated by transient encampments in the San Diego River watershed and related water quality issues. Based on this information the San Diego Water Board has determined that transient encampments in the San Diego River watershed are generating substantial trash in amounts that adversely affect beneficial uses or cause nuisance in the San Diego River. ~~This Order requires MS4 permittees in the San Diego River Watershed Management Area to develop plans to address trash runoff from the relevant areas of land affected by transient encampments through Track 1 or Track 2 controls as stipulated in the Trash Amendments (Ocean Plan Chapter III.L.2.d and ISWEBE Plan Chapter IV.A.3.d)~~ This Order requires MS4 permittees in the San Diego River watershed to coordinate with other entities within the watershed, as appropriate, to address trash associated with transient encampments from areas under their jurisdiction. Because this may involve entities not subject to the MS4 Permit, the coordination may be implemented through another regulatory mechanism, such as a Conditional Waiver of Waste Discharge Requirements, or cooperative agreements which would be separate from the NPDES permit for the MS4 permittees.

**10. Compliance Time Schedule.** ~~The Trash Amendments require the implementing permit to state that full compliance with the trash discharge prohibition shall occur within ten (10) years of the effective date of the first implementing permit. In addition, the implementing permit must require the MS4 permittees to demonstrate achievements of interim milestones. In no case may the final compliance date be later than fifteen (15) years from the effective date of the Trash Amendments (i.e. December 2, 2030).~~ The current Regional MS4 Permit (Order R9-2013-0001, as amended by Orders R9-2015-0001 and R9-2015-0100) will expire on June 27, 2018. The Regional MS4 Permit reissued after June 27, 2018 will be the first implementing permit and will contain a compliance time schedule consistent with the requirements of the Trash Amendments.

Full compliance with the Trash Amendments will be within 10 years of the effective date of the re-issued Regional MS4 Permit.

**11. Monitoring and Reporting.** The Trash Amendments require the implementing permit to include monitoring and reporting requirements. The MS4 permittees will be required to provide reports to the San Diego Water Board on an annual basis to monitor progress toward achieving full compliance with the trash discharge prohibition. ~~The monitoring and reporting requirements are dependent on the measures elected to be implemented by a MS4 permittee.~~

**12. Regional MS4 Permit and Incorporation into Copermittee Planning Documents.** On May 8, 2013, the San Diego Water Board adopted Order No. R9-2013-0001, NPDES No. CAS0109266, National Pollutant Discharge Elimination System (NPDES) Permit and Waste Discharge Requirements for Discharges from the Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds within the San Diego Region (Regional MS4 Permit). The Regional MS4 Permit initially only incorporated the owners and operators of Phase I MS4s in San Diego County (San Diego County MS4 permittees). The Regional MS4 Permit was subsequently amended in 2015 to incorporate the owners and operators of the Phase I MS4s in south Orange County (Orange County MS4 permittees) and in southwest Riverside County (Riverside County Copermittees). The San Diego Water Board intends to incorporate the requirements of the Trash Amendments into the Regional MS4 Permit after it expires (June 27, 2018). The renewed Regional MS4 Permit will be the first implementing permit of the Trash Amendments for the MS4 permittees.

The Regional MS4 Permit requires the MS4 Copermittees to develop and implement Water Quality Improvement Plans for ten (10) Watershed Management Areas (WMAs), designated in Table B-1 of the Permit. Each jurisdiction is also required to develop and implement a Jurisdictional Runoff Management Plan (JRMP) that describes how specific strategies in the Water Quality Improvement Plans are implemented as well as how other agency specific permit requirements are met. While the JRMPs are not explicitly part of the Water Quality Improvement Plan, reporting related to JRMP programs is accomplished through the Water Quality Improvement Plan Annual Reporting Process.

Compliance with the Trash Amendments is based on implementation of specific measures to control trash within a jurisdiction. There may be synergy to be gained through implementation of watershed scale efforts to mitigate trash impacts also. The implementation measures, interim milestones, and compliance schedules for Track 1 or Track 2 of the Trash Amendments shall be incorporated into the Water Quality Improvement Plans for the watershed, into the jurisdictional specific JRMPs, or a combination of the two, to be implemented by the MS4 permittees as part of the adaptive management process.

Through the issuance of this Order pursuant to Water Code section 13267, the San Diego Water Board intends the MS4 permittees to incorporate the requirements of the Trash Amendments into the Water Quality Improvement Plans, into the Jurisdictional Runoff Management Plans, or a combination of the two, after renewal of the Regional MS4 Permit. Reporting on implementation of measures to comply with the Trash Amendments will be provided through JRMP Annual Report forms, which are submitted as part of the WQIP Annual Reports.

**13. Water Quality Improvement Plans.** The Regional MS4 Permit requires the MS4 permittees to develop and implement Water Quality Improvement Plans for ten (10) Watershed Management Areas, designated in the Regional MS4 Permit as shown in Table 1 below:

**Table 1. San Diego Region Watershed Management Areas**

Hydrologic Unit(s)	Watershed Management Area	Major Surface Water Bodies	Responsible MS4 permittees
San Juan (901.00)	South Orange County	- Aliso Creek - San Juan Creek - San Mateo Creek - Pacific Ocean - Hoisler Park ASBS	- City of Aliso Viejo - City of Dana Point - City of Laguna Beach - City of Laguna Hills <sup>1</sup> - City of Laguna Niguel - City of Laguna Woods <sup>1</sup> - City of Lake Forest <sup>2</sup> - City of Mission Viejo - City of Rancho Santa Margarita - City of San Clemente - City of San Juan Capistrano - County of Orange - Orange County Flood Control District - City of Menifee <sup>3</sup> - City of Murrieta <sup>4</sup>
Santa Margarita (902.00)	Santa Margarita River	- Murrieta Creek - Temecula Creek - Santa Margarita River - Santa Margarita Lagoon - Pacific Ocean	- City of Temecula - City of Wildomar <sup>4</sup> - County of Riverside - County of San Diego - Riverside County Flood Control and Water Conservation District
San Luis Rey (903.00)	San Luis Rey River	- San Luis Rey River - San Luis Rey Estuary - Pacific Ocean	- City of Oceanside - City of Vista - County of San Diego
Carlsbad (904.00)	Carlsbad	- Loma Alta Slough - Buena Vista Lagoon - Agua Hedionda Lagoon - Batiquitos Lagoon - San Elijo Lagoon - Pacific Ocean	- City of Carlsbad - City of Encinitas - City of Escondido - City of Oceanside - City of San Marcos - City of Solana Beach - City of Vista - County of San Diego
San Dieguito (905.00)	San Dieguito River	- San Dieguito River - San Dieguito Lagoon - Pacific Ocean	- City of Del Mar - City of Escondido - City of Poway - City of San Diego - City of Solana Beach - County of San Diego
Penasquitos (906.00)	Penasquitos	- Los Penasquitos Lagoon - Pacific Ocean	- City of Del Mar - City of Poway - City of San Diego - County of San Diego

**Table 1. San Diego Region Watershed Management Areas**

Hydrologic Unit(s)	Watershed Management Area	Major Surface Water Bodies	Responsible MS4 permittees
--------------------	---------------------------	----------------------------	----------------------------

	Mission Bay	- Mission Bay - Pacific Ocean - San Diego Marine Life Refuge ASBS	- City of San Diego
San Diego (907.00)	San Diego River	- San Diego River - Pacific Ocean	- City of El Cajon - City of La Mesa - City of San Diego - City of Santee - County of San Diego
Pueblo San Diego (908.00) Sweetwater (909.00) Otay (910.00)	San Diego Bay	- Sweetwater River - Otay River - San Diego Bay - Pacific Ocean	- City of Chula Vista - City of Coronado - City of Imperial Beach - City of La Mesa - City of Lemon Grove - City of National City - City of San Diego - County of San Diego - San Diego County Regional Airport Authority - San Diego Unified Port District
Tijuana (911.00)	Tijuana River	- Tijuana River - Tijuana Estuary - Pacific Ocean	- City of Imperial Beach - City of San Diego - County of San Diego

Notes:

1. By agreement dated February 10, 2015, pursuant to Water Code section 13228, the Phase I MS4 discharges within the jurisdiction of the City of Laguna Hills and the City of Laguna Woods located in the Santa Ana Region are regulated by San Diego Water Board Order No. R9-2013-0001 as amended by Order No. R9-2015-0001, upon the later effective date of Order No. R9-2015-0001 or Santa Ana Water Board Tentative Order No. R8-2015-0001. The City of Laguna Hills and Laguna Woods must also comply with the requirements of the San Diego Creek/Newport Bay TMDL in section XVIII of Santa Ana Water Board Order No. R8-2015-0001.
2. By agreement dated February 10, 2015, pursuant to Water Code section 13228, Phase I MS4 discharges within the City of Lake Forest located within the San Diego Water Board Region are regulated by the Santa Ana Water Board Order No. R8-2015-0004 (NPDES No. CAS618030) upon the later effective date of this Order or Santa Ana Water Board Tentative Order No. R8-2015-0001. In accordance with the terms of the agreement between the San Diego Water Board and the Santa Ana Water Board, the City of Lake Forest must implement the requirements of the Bacteria TMDL in Attachment E of this Order, participate in preparation and implementation of the Water Quality Improvement Plan for the Alice Creek Watershed Management Area as described in Provision B of this Order and continue implementation of its over-irrigation discharge prohibition in its City Ordinance, Title 15, Chapter 15, section 14.030, List (b).
3. By agreement dated October 26, 2015, pursuant to Water Code section 13228, Phase I MS4 discharges within the City of Menifee located within the San Diego Water Board Region are regulated by the Santa Ana Water Board Order No. R8-2010-0033 as it may be amended or reissued (NPDES No. CAS618033) upon the later effective date of this Order. In accordance with the terms of the agreement between the San Diego Water Board and the Santa Ana Water Board, the City of Menifee must participate in preparation and implementation of the Water Quality Improvement Plan for the Santa Margarita River Watershed Management Area as described in Provision B of this Order.
4. By agreement dated October 26, 2015, pursuant to Water Code section 13228, the Phase I MS4 discharges within the jurisdiction of the City of Murietta and the City of Wildomar located in the Santa Ana Region are regulated by San Diego Water Board Order No. R9-2013-0001 as amended by Orders No. R9-2015-0001 and R9-2015-0100. The City of Murietta and City of Wildomar must also comply with the requirements of the Lake Elsinore/Canyon Lake Nutrient TMDLs in section VI.D.2 of Santa Ana Water Board Order No. R8-2010-0033, or corresponding section as it may be amended or reissued.

The Water Quality Improvement Plans include the following: (a) identification of priority water quality conditions that need to be addressed to improve the water quality in each Watershed Management Area; (2) numeric goals for the highest priority water quality conditions to be achieved that will demonstrate discharges from the MS4s are not causing or contributing to exceedances of applicable water quality objectives, or water quality objectives are being attained in receiving waters; (3) a description of the water quality improvement strategies that will be and may be implemented to achieve the numeric goals; and (4) schedules for implementing the water quality improvement strategies and achieving the numeric goals.

The Regional MS4 Permit also requires incorporation of implementation plans for applicable Total Maximum Daily Loads (TMDLs) and Areas of Special Biological Significance (ASBS), which include interim and final water quality-based effluent limitations, compliance strategies, and compliance schedules, into the Water Quality Improvement Plans. The implementation measures, interim milestones, and compliance schedules for Track 1 or Track 2 of the Trash Amendments shall also be incorporated into the Water Quality Improvement Plans to be implemented by the MS4 permittees as part of the adaptive management process.

Through the issuance of this Order pursuant to Water Code section 13267, the San Diego Water Board intends the MS4 permittees to incorporate the requirements of

~~the Trash Amendments into the Water Quality Improvement Plans after renewal of the Regional MS4 Permit.~~

**14.13. Basis for Requiring Technical and Monitoring Reports.** Water Code section 13267 provides that the San Diego Water Board may require dischargers, past dischargers, or suspected dischargers to furnish those technical or monitoring reports as the San Diego Water Board may specify, provided that the burden, including costs, of these reports, must bear a reasonable relationship to the need for the reports and the benefits to be obtained from the reports. The technical and monitoring reports required under this Investigative Order are needed to provide information to the San Diego Water Board regarding (a) the measures each MS4 permittee is electing to implement (i.e. Track 1 or Track 2) within its jurisdiction to comply with the trash discharge prohibition (Track 1 and Track 2), (b) the plan that will be implemented by each MS4 permittee to comply with the trash discharge prohibition (Track 2 only), (c) the interim milestones that each MS4 permittee will achieve within its jurisdiction (Track 1 and Track 2), (d) the schedules to achieving the interim milestones, and full compliance with the trash discharge prohibition (Track 1 and Track 2), and (e) the monitoring (Track 2 only) and reporting (Track 1 and Track 2) that will be implemented to demonstrate progress toward achieving full compliance with the trash discharge prohibition.

**15.14. California Environmental Quality Act.** Adoption of this Order is for the protection of the environment and is exempt from the provisions of the California Environmental Quality Act (CEQA) (Public Resources Code section 21000 et seq.) in accordance with section 15308, Chapter 3, Title 14 of the California Code of Regulations (CCR). This action is also exempt from the provisions of CEQA in accordance with section 15061(b)(3) of Chapter 3, Title 14 of the CCR because it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment.

**IT IS HEREBY ORDERED**, pursuant to California Water Code section 13267, that the MS4 Permittees must comply with the following directives:

#### **A. TECHNICAL AND MONITORING REPORTS**

1. **Written Notices.** Each MS4 permittee must submit to the San Diego Water Board, **no later than three (3) months from the date of this Order** INSERT DATE, a written notice stating whether the MS4 permittee will implement Track 1 or Track 2 to comply with the trash discharge prohibition in the Ocean Plan and ISWEBE Plan.
2. **Track 2 Implementation Plans.** Each MS4 permittee electing to comply with Track 2 must submit, **no later than eighteen (18) months from the date of this Order** INSERT DATE, an implementation plan, which shall also be incorporated into the applicable Water Quality Improvement Plan or Jurisdictional Runoff Management Plan, or combination of the two, after renewal of the Regional MS4 Permit, for each Watershed Management Area described in Table 1 in Finding 13-above that describes:

- a. The combination of controls<sup>3</sup> selected by the MS4 permittee and the rationale for each selection;
  - b. How the combination of controls is designed to achieve full capture system equivalency;
  - c. How full capture system equivalency will be demonstrated;
  - d. How the trash implementation plans will be monitored and assessed ~~in Water Quality Improvement Plan Annual Reports;~~
  - ~~e. Requests by MS4 permittees, if any, for authorization to substitute a Priority Land Use described in Finding 9 above with an Equivalent Alternate Land Use that generates rates of trash equivalent to, or greater than, the Priority Land Use being substituted. The MS4 permittees must provide data or information which establishes that trash generation rates from the Alternate Land Use(s) are greater than the Priority Land Use(s) being substituted;~~
  - f. A compliance time schedule ~~based on the shortest practicable time~~ to achieve full compliance with the trash discharge prohibition, including interim milestones (such as average load reductions of ten percent per year) and a final compliance date. The final compliance date must not be later than fifteen (15) years from the effective date of the Trash Amendments (i.e. December 2, 2030).
- 3. Monitoring and Reporting.** Upon adoption of the implementing MS4 Permit, the MS4 permittees are required to provide reports to the San Diego Water Board on an annual basis to demonstrate progress toward achieving full compliance with the trash discharge prohibition. The monitoring and reporting requirements are dependent on the compliance track selected by a MS4 permittee. Reporting may be performed using the Jurisdictional Urban Runoff Management Plan form, submitted with the Water Quality Improvement Plan Annual Report.
- a. MS4 permittees that elect to comply with the Statewide Trash Amendments via the Track 1 compliance option shall provide a report to the Regional Board demonstrating installation, operation, maintenance, and the Geographic Information System- (GIS-) mapped location and drainage area served by its full capture systems on an annual basis as part of the JRMP reporting form within the Water Quality Improvement Plan Annual Report.
  - b. MS4 permittees that elect to comply with the Statewide Trash Amendments via the Track 2 compliance option shall develop and implement monitoring plans that demonstrate the effectiveness of the full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls, and compliance with full capture system equivalency. Monitoring reports shall be provided on an annual basis as part of the JRMP reporting form within the Water Quality Improvement Plan Annual Report and shall include GIS-mapped locations and drainage area served for each of the full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls installed or utilized by the MS4 permittee.

4. **Coordination with Caltrans.** Each MS4 permittee subject to this Order must ~~submit, no later than eighteen (18) months from the date of this Order [INSERT DATE], a description of how MS4 permittees will~~ coordinate their efforts to install, operate, and maintain full capture systems, multi-benefit projects, and other controls with Caltrans in significant trash generating areas and/or priority land uses, as applicable.
  
5. **[Note: The County of San Diego requests removal of this paragraph, if Regional Board keeps in then recommended edits presented.]** **Transient Encampments in the San Diego River Watershed.** MS4 permittees discharging to the San Diego River watershed (Cities of San Diego, Santee, El Cajon, La Mesa, and County of San Diego), must ~~submit, no later than eighteen (18) months from the date of this Order [INSERT DATE], a description of how~~ coordinate with other entities in the watershed, as appropriate, to address trash generated from transient encampments in areas under their jurisdiction in the San Diego River Watershed Management Area will be addressed. These efforts may be implemented under another regulatory mechanism, such as a Conditional Waiver of Waste Discharge Requirements, or non-regulatory cooperative agreements, separate from the NPDES permit for the MS4 permittees.

---

<sup>3</sup> Controls include, but are not limited to, full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls ~~treatment controls and institutional controls~~, as defined in ~~the~~ Appendix D to the Water Quality Control Plan for Ocean Waters of California California Ocean Plan and Appendix E of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California.

**B. PROVISIONS**

1. **Signatory Requirements.** All documents submitted to the San Diego Water Board must be signed and certified.

a. All reports required by this Order must be signed as follows:

(1) For a corporation, by a principal executive officer of at least the level of vice-president;

(2) For a partnership or sole proprietorship, by a general partner or the proprietor, respectively;

(3) For a municipality, state, federal or other public agency, by either a principal executive or ranking elected official.

(4) By a duly authorized representative of the person designated above (B.6.a.(1), B.6.a.(ii), or B.6.(a)(iii)). A person is a duly authorized representative only if:

(a) The authorization is made in writing by a person described in paragraph B.6.a above;

(b) The authorization specifies either an individual or position having responsibility for the overall operation of the regulated facility or activity; and

(c) The written authorization is submitted to the San Diego Water Board.

b. Any person signing a document required by this Order must make the following certification:

*"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

2. **Submittal of Documents.** All documents submitted to the San Diego Water Board in compliance with this Order must be submitted in electronic format (compact disk (CD-ROM or CD) in a Portable Document Format (PDF), unless otherwise directed. All electronic format documents required under this Order must be submitted to:

Executive Officer  
 California Regional Water Quality Control Board  
 San Diego Region  
 2375 Northside Drive, Suite 100  
 San Diego, CA 92108  
 Attn: Laurie Walsh, PE, Storm Water Management Unit

3. **Changes to Order.** This Order may be amended, rescinded, or updated by the Executive Officer. The MS4 permittees may propose changes or alternatives to the requirements in this Order if a valid rationale for the changes is shown. The filing of a request by a MS4 permittees for amending, rescinding, or updating this Order, or notification of planned changes or anticipated noncompliance does not stay any condition of this Order.

### C. NOTIFICATIONS

1. **Enforcement Discretion.** The San Diego Water Board reserves its right to take any enforcement action authorized by law for violations of the terms and conditions of this Order.
2. **Requesting Administrative Review by the State Water Board.** Any aggrieved person may petition the State Water Board regarding this Order in accordance with Water Code section 13320 and the California Code of Regulations title 23 sections 2050 and following. The State Water Board must receive the petition by 5:00 p.m., 30 days following the date of this Order. Copies of the laws and regulations applicable to filing petitions may be found on the State Water Board website at [http://www.waterboards.ca.gov/public\\_notices/petitions/water\\_quality](http://www.waterboards.ca.gov/public_notices/petitions/water_quality) or will be provided upon request.

For instructions on how to file a petition for review, see the State Water Board website at:

[http://www.waterboards.ca.gov/public\\_notices/petitions/water\\_quality/wqpetition\\_instr.shtml](http://www.waterboards.ca.gov/public_notices/petitions/water_quality/wqpetition_instr.shtml)

**Re: Comment- Tentative Order No. R9-2016-0205**

Dear Mr. Gibson:

The City of Santee ("City") has reviewed Tentative Order No. R9-2016-0205, a draft of the *Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems Draining the Watersheds within the San Diego Region to Submit Technical and Monitoring Reports Pertaining to the Control of Trash in Discharges from Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays, and Estuaries in the San Diego Region* ("Draft Order"). As an entity subject to the Draft Order, which is intended to fulfill the requirements of the Amendment to the Water Quality Control Plan for Ocean Waters ("Ocean Plan") and for Inland Surface Waters, Enclosed Bays, and Estuaries ("ISWEBE Plan") of California (collectively the "Trash Amendments"), the City appreciates the opportunity to provide comments.

For the reasons set forth in this letter, the City requests that the San Diego Regional Water Quality Control Board ("Regional Board") not issue the Draft Order until a source of funding and State guidelines are provided and remove requirements that exceed the scope and intent of the Trash Amendments.

## 1. The Draft Order Is Premature

The State's guidelines on Track 2 are not yet available. This leaves uncertainty regarding issues, especially interjurisdictional matters, such as how a downstream MS4 monitors and evaluates compliance under Track 2 when upstream MS4s continue to discharge trash into a common MS4.

Without guidance from the State, it is difficult to make an informed choice between Track 1 and Track 2. Similarly, if the City wishes to switch tracks, there is no information regarding how or whether this can be accomplished. The City requests that the Regional Board issue the Draft Order after the State guidance is available, so that the City can make a properly informed selection.

## **2. The Draft Order Exceeds the Mandates in the Trash Amendments**

The City is concerned that the Draft Order imposes requirements on the City that are not required in the Trash Amendments and requests that these requirements and related findings be removed from the Draft Order. The Trash Amendments require the Regional Board to modify, re-issue, or adopt an MS4 permit to add requirements implementing the Trash Amendments for dischargers permitted pursuant to Clean Water Act Section 402(p) or to:

Issue an order pursuant to Water Code section 13267 or 13383 requiring the MS4 permittee to submit, within three (3) months from receipt of the order, written notice to the PERMITTING AUTHORITY stating whether such MS4 permittee will comply with the prohibition of discharge under Chapter IV.A.3.a.1 (Track 1) or Chapter IV.A.3.a.2 (Track 2). ... Within eighteen (18) months of the receipt of the Water Code section 13267 or 13383 order, MS4 permittees that have elected to comply with Track 2 shall submit an implementation plan to the PERMITTING AUTHORITY that describes: (i) the combination of controls selected by the MS4 permittee and the rationale for the selection, (ii) how the combination of controls is designed to achieve FULL CAPTURE SYSTEM EQUIVALENCY, and (iii) how FULL CAPTURE SYSTEM EQUIVALENCY will be demonstrated. The implementation plan is subject to approval by the PERMITTING AUTHORITY.<sup>1</sup>

The Trash Amendments thus only require a Water Code section 13267 or 13383 order to direct MS4 Permittees to select between Track 1 and Track 2, and if selecting Track 2, to submit an implementation plan. Requirements in the Draft Order to coordinate with Caltrans and to address transient encampments exceed the direction in the Trash Amendments. For these reasons, the City requests removal of Findings 9.c and 9.d and Provisions A.3 and A.4 from the Draft Order.

### **a. Remove Requirements to Coordinate with Caltrans (Draft Order Finding 9.c and Section A.3)**

---

<sup>1</sup> Ocean Plan Chapter III.L.4.a(1)A, B and ISWEBE Plan Chapter IV.A.5.a(1)A, B.

The Draft Order requires the City to describe how it “will coordinate ... efforts to install, operate, and maintain full capture systems, multi-benefit projects, and other controls with Caltrans in significant trash generating areas and/or priority land uses” (“Caltrans Requirements”).<sup>2</sup> As noted above, the Trash Amendments only require an investigative order to address the selection of Track 1 or 2; they do not require the Regional Board to address the City’s role in coordinating with Caltrans. Requiring the City to describe how it will coordinate with Caltrans exceeds the direction in the Trash Amendments.

The City is concerned that including the Caltrans Requirements in the Draft Order is also unnecessarily duplicative. First, the MS4 Permit already requires the City to coordinate with Caltrans in controlling the contribution of pollutants.<sup>3</sup> Including additional requirements in the Draft Order appears to be duplicative of the City’s obligations under the MS4 Permit’s WQIP provisions. Second, requiring a description of how the City will coordinate with Caltrans shifts Caltrans’ responsibility to the City. Under the Trash Amendments, Caltrans is required to develop an implementation plan identifying significant trash generating areas, describing trash controls, and describing how it will demonstrate full capture system equivalency.<sup>4</sup> The City’s obligation under the Trash Amendments is to cooperate in Caltrans’ efforts. Caltrans is in the best position to identify what cooperative efforts are needed from the City. The Draft Order shifts the obligation to identify cooperative efforts to the City.

The City has and intends to continue cooperating with Caltrans to control the contribution of pollutants to the City’s MS4. Because the Draft Order duplicates provisions already in the MS4 Permit and shifts Caltrans’ responsibilities on the City, the City requests that the Caltrans Requirements be removed from the Draft Order.

**b. Remove Requirements to Address Transients Encampments (Draft Order Finding 9.d and Section A.4)**

The City is concerned that the Transient Encampment Requirements (defined below) exceed the scope and intent of the Trash Amendments in three ways and make the Draft Order an inappropriate mechanism to impose such requirements. First, the City’s land use authority does not extend to transient encampments. Second, implementing Track 1 and/or Track 2 will not control the trash issues described in the Draft Order. Third, significant constitutional and statutory restraints limit the City’s ability to address trash from these programs. For these reasons, the City requests that the Transient Encampments Requirements be removed from the Draft Order and that the Regional Board consider alternative regulatory mechanisms targeted to specific areas known to generate the greatest amounts of trash.

---

<sup>2</sup> Draft Order, Finding 9.c and Section A.3.

<sup>3</sup> San Diego Regional Water Quality Control Board Order No. R9-2013-0001, Provisions B.3.b.(1)(c); E.1.a.(5).

<sup>4</sup> Ocean Plan Chapter III.L.4.b(1) and ISWEBE Plan Chapter IV.A.5.b(1).

***i. Land Use Authority Does Not Address Transient Encampments***

The Trash Amendments are written in terms of the City’s “regulatory authority over land uses”<sup>5</sup> and authorize the Regional Board to make a determination that a specific land use or location generates a substantial amount of trash.<sup>6</sup> If the Regional Board makes this determination, it may require the MS4 to comply with Track 1 or Track 2 with respect to such land uses or locations.<sup>7</sup> The Draft Order identifies “transient encampments in the San Diego River watershed” as generating substantial trash in amounts that adversely affect beneficial uses or cause nuisance in the San Diego River.<sup>8</sup> It then requires certain MS4 permittees to develop “plans to address trash runoff from the relevant areas of land affected by transient encampments through Track 1 or Track 2 controls” (“Transient Encampment Requirements”).<sup>9</sup>

The “San Diego River watershed” and “transient encampments” are not priority land uses as defined in the Trash Amendments. Priority land uses are high density residential, industrial, commercial, mixes of these uses, and public transportation stations.<sup>10</sup> The San Diego River watershed is also not a specific land use or location; instead, it is a vast geographical designation covering multiple local agency jurisdictions. Similarly, transient encampments are not specific land uses or locations; they are generally illegal activities that occur on a wide range of land use designations.

The City is concerned that including requirements to address transient encampments represents a dramatic divergence from the land use-based structure of the Trash Amendments, and, as a result, distracts from the intended focus on and prioritization of specific land-use based controls.

***ii. Track 1 and 2 Land Use Controls Will Not Effectively Control Trash From Transient Encampments***

The intent of the Trash Amendments is “to allow MS4s to allocate trash-control resources to the developed areas that generate the highest sources of trash.”<sup>11</sup> The City is concerned, however, that Tracks 1 and 2, as required by the Draft Order and future MS4 Permit, will be largely ineffective at addressing a complex social issue spanning multiple land uses and locations because these controls are not designed to capture trash from transient encampments.

The Draft Order relies on information received in regard to Item 5 on the Regional Board’s May 14, 2014 agenda (“Transient Encampment Information”), for the determination that transient encampments in the San Diego River watershed generate substantial trash. The Executive Officer’s report for that item states, in part:

---

<sup>5</sup> Ocean Plan Chapter III.L.2.a and ISWEBE Plan Chapter IV.A.3.a.

<sup>6</sup> Ocean Plan Chapter III.L.2.d and ISWEBE Plan Chapter IV.A.2.d (emphasis added).

<sup>7</sup> *Ibid.*

<sup>8</sup> Draft Order, Finding 9.d.

<sup>9</sup> Draft Order, Finding 9.d; Section A.4.

<sup>10</sup> Ocean Plan Appendix I and ISWEBE Plan Appendix A.

<sup>11</sup> Staff Report for Trash Amendments, p. 13.

Transient encampments within the San Diego River present the largest challenge for trash abatement for both the municipal storm water Copermittees and Caltrans. Specific and lengthy procedures must be followed to assist and disperse identified transient populations and post notices of abatement and intent to cleanup sites prior to initiation of trash removal at these sites.<sup>12</sup>

Transient encampments within the river – i.e., encampments that discharge directly to a receiving water – are not discharges from an MS4. A Draft Order or MS4 permit regulating discharges from an MS4 should not regulate transient encampments within a receiving water because these encampments do not cause or contribute to discharges to or from an MS4.

As noted above, even though the Draft Order relies on the Transient Encampment Information, it directs certain MS4 permittees to address transient encampments within the entire San Diego River watershed using Track 1 or 2. In addition to the problems with this approach noted above, the City is concerned that such overreach will be ineffective. It is possible that transient encampments may be located within priority land use areas that discharge to an MS4. In these cases, trash from the encampments will be addressed, together with all other sources of trash from priority land uses, through implementation of the Trash Amendments based on priority land uses. To the extent transient encampments may be located in areas other than priority land uses that discharge to an MS4, the Trash Amendments explicitly prioritize control of trash through the use of land use designations and specific locations. As noted above, transient encampments are not land use designations or specific locations. It is contrary to the intent of the Trash Amendments to direct MS4 permittees to address trash by means other than land use designations or specific locations.

It is also possible that transient encampments may be located within an MS4 that discharges to the San Diego River. There are two issues associated with regulating discharges of trash from transient encampments located within an MS4. As noted above, a transient encampment within an MS4 is not a land use designation or specific location. It is contrary to the express intent of the Trash Amendments to require controls unrelated to an MS4's land use authority. Further, even if an MS4 implements Track 1 or 2 with respect to such discharges, the Trash Amendments expect that full capture systems will be installed where installation is not cost-prohibitive,<sup>13</sup> but full capture systems are generally not designed or intended to address such trash discharges. This is because the currently certified devices are designed to be installed primarily in catch

---

<sup>12</sup> Emphasis added. The 2013, 2014, and 2015 State of the River reports, cited in the Draft Order, also note that “trash/debris [and] homeless encampments” were observed at all monitoring sites. See, San Diego River Park Foundation, State of the River Report, Water Quality Monitoring Supplemental Report, Table E.3 (2013-2015). Each monitoring site is located within a reach or tributary of the San Diego River, suggesting that the observed encampments were located within the San Diego River. *Id.* at Table E.1.

<sup>13</sup> Ocean Plan Chapter III.L.2.a.(2) and ISWEBE Plan Chapter IV.A.3.a.(2)

basins and pipes.<sup>14</sup> Transient encampments within MS4s are often found in close proximity to the river, after the places where full capture devices are installed. As a result, Track 1 and Track 2 are poorly designed to address trash generated by transient encampments.

***iii. Statutory and Constitutional Provisions Limit City's Ability to Address Trash from Transient Encampments***

Finally, to the extent that transient encampments are located within a non-priority land use area in the San Diego River watershed, including within the MS4 and within the riverbed, MS4 permittees may need to undertake activities other than Track 1 or Track 2 to address the trash. MS4 permittees face significant constitutional and statutory restraints on their ability to address trash from these encampments. As the Executive Officer's Report for Item 5 on the Regional Board's May 14, 2014 meeting notes, "[s]pecific and lengthy procedures must be followed to assist and disperse identified transient populations and post notices of abatement and intent to cleanup sites prior to initiation of trash removal[.]" For example, under the Fourth and Fourteenth Amendments, unattended property cannot be searched, seized, destroyed or discarded without reasonable notice and opportunity for the person to reclaim the property.<sup>15</sup> In many cases, local government control over activities associated with transient encampments may be limited under the Eighth Amendment when there is inadequate shelter space in the area.<sup>16</sup>

Because the San Diego River watershed and transient encampments are not specific land uses or locations, the Draft Order exceeds the scope and intent of the Trash Amendments by requiring control of trash generated from transient encampments in the San Diego River Watershed Management Area. In addition, the Transient Encampment Information identified encampments within the river as presenting the largest challenge for trash abatement, but neither Track 1 nor Track 2 will address trash from encampments within the River because these encampments do not discharge to an MS4. Finally, actions beyond Track 1 and 2 that may be necessary to control trash from transient encampments are circumscribed by constitutional limitations. The complex problem of transient encampments is not an appropriate subject for the Draft Order or a subsequent MS4 permit. For these reasons, the City requests that Finding 9.d and Section A.4 be removed from the Draft Order. It is appropriate for the Regional Board to conduct further studies into the issue of trash from transient encampments, identify specific locations known to generate the greatest amounts of trash, and possible issue a separate order targeted to controls at those areas.

**3. Provide a Source of Funding for the State Mandates in the Draft Order**

The Investigative Order and implementation of the Trash Amendments through a renewed MS4 Permit constitute unfunded state mandates. Section 6 of Article XIII B of the California

---

<sup>14</sup> Certified full capture devices include those certified by the Los Angeles Regional Water Quality Control Board prior to April 7, 2015 and those listed in Appendix I of the Bay Area-wide Trash Capture Demonstration Project, Final Project Report (May 8, 2014). Ocean Plan Appendix I and ISWEBE Plan Appendix A.

<sup>15</sup> U.S. Const. Amends. IV and XIV; see also *Lavan v. City of Los Angeles* (9th Cir. 2012) 693 F.3d 1022, 1032; *Joyce v. City and County of San Francisco* (N.D. Cal. 1994) 846 F.Supp. 843, 863.

<sup>16</sup> See, e.g., *Jones v. City of Los Angeles* (9th Cir. 2006) 444 F.3d 1118, *vacated after settlement* by 505 F.3d 1006.

Constitution requires the State to provide a subvention of funds to local agencies any time the Legislature or a state agency requires the local agency to implement a new program or provide a higher level of service under an existing program. The purpose of Section 6 “is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are ‘ill equipped’ to assume increased financial responsibilities because of the taxing and spending limitations that articles XIII A and XIII B impose.”<sup>17</sup> The section “was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues.”<sup>18</sup>

Government Code section 17556 identifies seven exceptions to the subvention requirement of Section 6, including statutes or executive orders that impose a requirement mandated by a federal law or regulation, which results in costs mandated by the federal government.<sup>19</sup> When considering this exception, California’s Supreme Court determined that requirements which are “animated” by flexible federal laws and regulations do not constitute federal requirements unless, perhaps, the requirements constitute “the only means by which the [flexible] standard could be implemented[.]”<sup>20</sup> To demonstrate the applicability of this exemption, “the party claiming the applicability of an exception bears the burden of demonstrating that it applies.”<sup>21</sup>

The Draft Order constitutes a new program or higher level of service by requiring the City to submit a notice stating: (1) whether the City will implement Track 1 or Track 2; (2) how the City will coordinate with Caltrans to install, operate, and maintain full capture systems, multi-benefit projects, and other controls; and (3) for the cities of San Diego, Santee, El Cajon, La Mesa and the County of San Diego, how trash generated from transient encampments will be addressed. When incorporated into a future MS4 Permit, implementation of the Trash Amendments will also constitute a new program. The activities mandated by the Draft Order and implementation of the Trash Amendments through a future MS4 Permit are referred to in this letter as “Programs.”

The Programs are State mandates. According to the Draft Order, the Programs are required pursuant to state laws, policies and regulations: California’s Porter-Cologne Water Quality Control Act, including sections 13267 and 13383 of the California Water Code, State and Regional Water Quality Control Plans, and State Water Board policies and regulations.<sup>22</sup> The Draft Order also alleges it conforms to and implements “applicable state and federal regulations” and “relevant standards, criteria, and advisories adopted by other state and federal agencies.” No federal regulations, standards, criteria, or advisories are identified as mandating the new programs, however. There is no evidence in the Draft Order that the Programs constitute “the

<sup>22</sup> Draft Order, Finding 1.

only means” by that the unnamed federal regulations, standards criteria, or advisories could be implemented.<sup>23</sup> Consistent with the Supreme Court’s decision, the Programs are state mandates.

The City does not have a source of funding to dedicate to the Programs and requests that the Regional Board not issue the Draft Order until a source of funding is provided or provide funding to implement the Programs.

### Conclusion

The City takes the region’s water quality seriously and appreciates the opportunity to provide comments on the Draft Order. Because the Trash Amendments establish a system that prioritizes trash controls through land use regulations, the City respectfully requests that the Regional Board consider the City’s request to provide a means to fund implementation of the chosen Track, delay issuance of the Draft Order until after the State’s guidelines and funding are available, and remove the Caltrans Requirements and Transient Encampment Requirements from the Draft Order.

Sincerely,

Melanie Kush, AICP  
Development Services Director  
City of Santee

2375 Northside Drive, No. 100  
San Diego, CA 92108

Attention: Christina Arias

**RE: COMMENT – TENTATIVE ORDER NO. R9-2016-0205**

Dear Ms. Arias:

The County of San Bernardino and San Bernardino County Flood Control District (collectively referred to herein as "County") appreciate the opportunity to provide these comments to the San Diego Regional Water Quality Control Board ("Regional Board") regarding its Tentative Instigative Order R9-2016-0205, An Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems (MS4s) draining the Watersheds within the San Diego Region to submit Technical and Monitoring Reports Pertaining to the Control of Trash in Discharges from Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays, and Estuaries in the San Diego Region ("Tentative Order").

The County appreciates the Regional Board's cooperative approach in seeking public review and comment to the Tentative Order as the Tentative Order establishes the implementation of policy which could have broader implications for other agencies, such as the County. Therefore, the County respectfully submits this comment letter on the Tentative Order.

Also, as a threshold matter, the County notes the existing San Bernardino County MS4 permit, and most MS4 permits, already contain comprehensive municipal inspection programs, which encompasses construction, industrial, commercial and residential activities. See, e.g., Order No. 08-2010-0036 (NPDES No. CAS 618036), at Section X. Under those MS4 permits, the Permittees are already required to evaluate and prioritize sources of pollutants within their geographical boundaries, including trash and to take action for those sources causing impairments.

For brevity and to avoid duplication of comments, the County hereby supports and joins in the comments made by the City of San Juan Capistrano.

2016 DEC 19 AM 8:14

### BOARD OF SUPERVISORS

ROBERT A. LOVINGOOD  
Vice Chairman, First District

JANICE RUTHERFORD

JOSIE GONZALES  
Fifth District

GREGORY C. DEVEREAUX  
Chief Executive Officer

The County's submittal of this letter shall not be deemed to preclude additional comments to the Santa Ana Regional Water Quality Control Board and other regional boards having jurisdiction over the County related to the control of trash and the County hereby reserves the right to raise additional comments in response to an order issued for Phase I MS4s related to the control of trash in San Bernardino County by the Santa Ana Regional Water Quality Control Board and other regional boards.

Please note the County Board of Supervisors has not adopted an official position on the Tentative Order, however, to assist the Regional Board with its consideration of the Tentative Order, the undersigned has provided the above comments.

We are available to provide any further assistance so the Regional Board clearly understands the comments submitted by the County. If you wish to discuss the County's comments, please contact Marc Rodabaugh or Harold Zamora at (909) 387-8109.

Sincerely,

**GERRY NEWCOMBE**, Director  
Flood Control District

**Re: Comment- Tentative Order No. R9-2016-0205**

2016 DEC 16 PM 1:11  
 SAN JUAN CAPISTRANO

Dear Mr. Gibson:

The City of San Juan Capistrano ("City") has reviewed Tentative Order No. R9-2016-0205, a draft of the *Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems Draining the Watersheds within the San Diego Region to Submit Technical and Monitoring Reports Pertaining to the Control of Trash in Discharges from Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays, and Estuaries in the San Diego Region* ("Draft Order"). As an entity subject to the Draft Order, which is intended to fulfill the requirements of the Amendment to the Water Quality Control Plan for Ocean Waters ("Ocean Plan") and for Inland Surface Waters, Enclosed Bays, and Estuaries ("ISWEBE Plan") of California (collectively the "Trash Amendments"), the City appreciates the opportunity to provide comments.

For the reasons set forth in this letter, the City requests that the San Diego Regional Water Quality Control Board ("Regional Board") not issue the Draft Order until a source of funding and State guidelines are provided and remove requirements that exceed the scope and intent of the Trash Amendments.

#### **1. The Draft Order Is Premature**

The State's guidelines on implementing the Trash Amendments are not yet available. Without guidance from the State, it is difficult to make an informed choice between Track 1 and Track 2. Uncertainty surrounds the expectations relating to full capture system equivalency, existing drainages that currently meet the full capture system equivalency, and the perpetual monitoring and reporting requirements in Track 2. Similarly, if the City wishes to switch tracks, there is no information regarding how or whether this can be accomplished.

The City requests that the Regional Board issue the Draft Order after the State guidance is available, so that the City can make a properly informed selection. Alternatively, the City requests that guidance regarding these and other issues be included in the Draft Order if it will be issued before the State's guidelines.

## 2. The Draft Order Exceeds the Mandates in the Trash Amendments

The City is concerned that the Draft Order imposes requirements on the City that are not required in the Trash Amendments and requests that these requirements and related findings be removed from the Draft Order. The Trash Amendments require the Regional Board to modify, re-issue, or adopt an MS4 permit to add requirements implementing the Trash Amendments for dischargers permitted pursuant to Clean Water Act Section 402(p) or to:

Issue an order pursuant to Water Code section 13267 or 13383 requiring the MS4 permittee to submit, within three (3) months from receipt of the order, written notice to the PERMITTING AUTHORITY stating whether such MS4 permittee will comply with the prohibition of discharge under Chapter IV.A.3.a.1 (Track 1) or Chapter IV.A.3.a.2 (Track 2). ... Within eighteen (18) months of the receipt of the Water Code section 13267 or 13383 order, MS4 permittees that have elected to comply with Track 2 shall submit an implementation plan to the PERMITTING AUTHORITY that describes: (i) the combination of controls selected by the MS4 permittee and the rationale for the selection, (ii) how the combination of controls is designed to achieve FULL CAPTURE SYSTEM EQUIVALENCY, and (iii) how FULL CAPTURE SYSTEM EQUIVALENCY will be demonstrated. The implementation plan is subject to approval by the PERMITTING AUTHORITY.<sup>1</sup>

The Trash Amendments thus only require a Water Code section 13267 or 13383 order to direct MS4 Permittees to select between Track 1 and Track 2, and if selecting Track 2, to submit an implementation plan. Requirements in the Draft Order to coordinate with Caltrans and to address transient encampments exceed the direction in the Trash Amendments. For these reasons, the City requests removal of Findings 9.c and 9.d and Provisions A.3 and A.4 from the Draft Order.

### a. Remove Requirements to Coordinate with Caltrans (Draft Order Finding 9.c and Section A.3)

The Draft Order requires the City to describe how it “will coordinate ... efforts to install, operate, and maintain full capture systems, multi-benefit projects, and other controls with Caltrans in significant trash generating areas and/or priority land uses” (“Caltrans Requirements”).<sup>2</sup> As noted above, the Trash Amendments only require an investigative order to address the selection of Track 1 or 2; they do not require the Regional Board to address the City’s role in coordinating with Caltrans. Requiring the City to describe how it will coordinate with Caltrans exceeds the direction in the Trash Amendments.

The City is concerned that including the Caltrans Requirements in the Draft Order is also unnecessarily duplicative. First, the MS4 Permit already requires the City to coordinate with Caltrans in controlling the contribution of pollutants.<sup>3</sup> Including additional requirements in the Draft Order appears to be duplicative of the City’s obligations under the MS4 Permit’s WQIP provisions. Second, requiring a description of how the City will coordinate with Caltrans shifts Caltrans’ responsibility to the City. Under the Trash Amendments, Caltrans is required to develop an implementation plan identifying significant trash generating areas, describing trash controls, and describing how it will demonstrate full capture system.

<sup>1</sup> Ocean Plan Chapter III.L.4.a(1)A, B and ISWEBE Plan Chapter IV.A.5.a(1)A, B.

<sup>2</sup> Draft Order, Finding 9.c and Section A.3.

<sup>3</sup> San Diego Regional Water Quality Control Board Order No. R9-2013-0001, Provisions B.3.b.(1)(c); E.1.a.(5).

equivalency.<sup>4</sup> The City's obligation under the Trash Amendments is to cooperate in Caltrans' efforts. Caltrans is in the best position to identify what cooperative efforts are needed from the City. The Draft Order shifts the obligation to identify cooperative efforts to the City.

The City has and intends to continue cooperating with Caltrans to control the contribution of pollutants to the City's MS4. Because the Draft Order duplicates provisions already in the MS4 Permit and shifts Caltrans' responsibilities on the City, the City requests that the Caltrans Requirements be removed from the Draft Order.

**b. Remove Requirements to Address Transients Encampments (Draft Order Finding 9.d and Section A.4)**

The City is concerned that the Transient Encampment Requirements (defined below) exceed the scope and intent of the Trash Amendments in three ways and make the Draft Order an inappropriate mechanism to impose such requirements. First, the City's land use authority does not extend to transient encampments. Second, implementing Track 1 and/or Track 2 will not control the trash issues described in the Draft Order. Third, significant constitutional and statutory restraints limit the City's ability to address trash from these programs. For these reasons, the City requests that the Transient Encampments Requirements be removed from the Draft Order and that the Regional Board consider alternative regulatory mechanisms targeted to specific areas known to generate the greatest amounts of trash.

***i. Land Use Authority Does Not Address Transient Encampments***

The Trash Amendments are written in terms of the City's "regulatory authority over land uses"<sup>5</sup> and authorize the Regional Board to make a determination that a specific land use or location generates a substantial amount of trash.<sup>6</sup> If the Regional Board makes this determination, it may require the MS4 to comply with Track 1 or Track 2 with respect to such land uses or locations.<sup>7</sup>

The Draft Order identifies "transient encampments in the San Diego River watershed" as generating substantial trash in amounts that adversely affect beneficial uses or cause nuisance in the San Diego River.<sup>8</sup> It then requires certain MS4 permittees to develop "plans to address trash runoff from the relevant areas of land affected by transient encampments through Track 1 or Track 2 controls" ("Transient Encampment Requirements").<sup>9</sup>

The "San Diego River watershed" and "transient encampments" are not priority land uses as defined in the Trash Amendments. Priority land uses are high density residential, industrial, commercial, mixes of these uses, and public transportation stations.<sup>10</sup> The San Diego River watershed is also not a specific land use or location; instead, it is a vast geographical designation covering multiple local agency jurisdictions. Similarly, transient encampments are not specific land uses or locations; they are generally illegal activities that occur on a wide range of land use designations.

The City is concerned that including requirements to address transient encampments represents a dramatic divergence from the land use-based structure of the Trash Amendments, and, as a result, distracts from the intended focus on and prioritization of specific land-use based controls.

<sup>4</sup> Ocean Plan Chapter III.L.4.b(1) and ISWEBE Plan Chapter IV.A.5.b(1).

<sup>5</sup> Ocean Plan Chapter III.L.2.a and ISWEBE Plan Chapter IV.A.3.a.

<sup>6</sup> Ocean Plan Chapter III.L.2.d and ISWEBE Plan Chapter IV.A.2.d (emphasis added).

<sup>7</sup> *Ibid.*

<sup>8</sup> Draft Order, Finding 9.d.

<sup>9</sup> Draft Order, Finding 9.d; Section A.4.

<sup>10</sup> Ocean Plan Appendix I and ISWEBE Plan Appendix A.

***ii. Track 1 and 2 Land Use Controls Will Not Effectively Control Trash From Transient Encampments***

The intent of the Trash Amendments is “to allow MS4s to allocate trash-control resources to the developed areas that generate the highest sources of trash.”<sup>11</sup> The City is concerned, however, that Tracks 1 and 2, as required by the Draft Order and future MS4 Permit, will be largely ineffective at addressing a complex social issue spanning multiple land uses and locations because these controls are not designed to capture trash from transient encampments.

The Draft Order relies on information received in regard to Item 5 on the Regional Board’s May 14, 2014 agenda (“Transient Encampment Information”), for the determination that transient encampments in the San Diego River watershed generate substantial trash. The Executive Officer’s report for that item states, in part:

Transient encampments within the San Diego River present the largest challenge for trash abatement for both the municipal storm water Copermittees and Caltrans. Specific and lengthy procedures must be followed to assist and disperse identified transient populations and post notices of abatement and intent to cleanup sites prior to initiation of trash removal at these sites.<sup>12</sup>

Transient encampments within the river – i.e., encampments that discharge directly to a receiving water – are not discharges from an MS4. A Draft Order or MS4 permit regulating discharges from an MS4 should not regulate transient encampments within a receiving water because these encampments do not cause or contribute to discharges to or from an MS4. Further, the City’s authority to implement BMPs within a water of the United States is limited.

As noted above, even though the Draft Order relies on the Transient Encampment Information, it directs certain MS4 permittees to address transient encampments within the entire San Diego River watershed using Track 1 or 2. In addition to the problems with this approach noted above, the City is concerned that such overreach will be ineffective. It is possible that transient encampments may be located within priority land use areas that discharge to an MS4. In these cases, trash from the encampments will be addressed, together with all other sources of trash from priority land uses, through implementation of the Trash Amendments based on priority land uses. To the extent transient encampments may be located in areas other than priority land uses that discharge to an MS4, the Trash Amendments explicitly prioritize control of trash through the use of land use designations and specific locations. As noted above, transient encampments are not land use designations or specific locations. It is contrary to the intent of the Trash Amendments to direct MS4 permittees to address trash by means other than land use designations or specific locations.

It is also possible that transient encampments may be located within an MS4 that discharges to the San Diego River. There are two issues associated with regulating discharges of trash from transient encampments located within an MS4. As noted above, a transient encampment within an MS4 is not a land use designation or specific location. It is contrary to the express intent of the Trash Amendments to

<sup>11</sup> Staff Report for Trash Amendments, p. 13.

<sup>12</sup> Emphasis added. The 2013, 2014, and 2015 State of the River reports, cited in the Draft Order, also note that “trash/debris [and] homeless encampments” were observed at all monitoring sites. See, San Diego River Park Foundation, State of the River Report, Water Quality Monitoring Supplemental Report, Table E.3 (2013-2015). Each monitoring site is located within a reach or tributary of the San Diego River, suggesting that the observed encampments were located within the San Diego River. *Id.* at Table E.1.

require controls unrelated to an MS4's land use authority. Further, even if an MS4 implements Track 1 or 2 with respect to such discharges, the Trash Amendments expect that full capture systems will be installed where installation is not cost-prohibitive,<sup>13</sup> but full capture systems are generally not designed or intended to address such trash discharges. This is because the currently certified devices are designed to be installed primarily in catch basins and pipes.<sup>14</sup> Transient encampments within MS4s are often found in close proximity to the river, after the places where full capture devices are installed. The City is unaware of any certified full capture system or device applicable to Transient Encampments. As a result, Track 1 and Track 2 are poorly designed to address trash generated by transient encampments.

### ***iii. Statutory and Constitutional Provisions Limit City's Ability to Address Trash from Transient Encampments***

Finally, to the extent that transient encampments are located within a non-priority land use area in the San Diego River watershed, including within the MS4 and within the riverbed, MS4 permittees may need to undertake activities other than Track 1 or Track 2 to address the trash. MS4 permittees face significant constitutional and statutory restraints on their ability to address trash from these encampments. As the Executive Officer's Report for Item 5 on the Regional Board's May 14, 2014 meeting notes, "[s]pecific and lengthy procedures must be followed to assist and disperse identified transient populations and post notices of abatement and intent to cleanup sites prior to initiation of trash removal[.]" For example, under the Fourth and Fourteenth Amendments, unattended property cannot be searched, seized, destroyed or discarded without reasonable notice and opportunity for the person to reclaim the property.<sup>15</sup> In many cases, local government control over activities associated with transient encampments may be limited under the Eighth Amendment when there is inadequate shelter space in the area.<sup>16</sup>

Because the San Diego River watershed and transient encampments are not specific land uses or locations, the Draft Order exceeds the scope and intent of the Trash Amendments by requiring control of trash generated from transient encampments in the San Diego River Watershed Management Area. In addition, the Transient Encampment Information identified encampments within the river as presenting the largest challenge for trash abatement, but neither Track 1 nor Track 2 will address trash from encampments within the River because these encampments do not discharge to an MS4. Finally, actions beyond Track 1 and 2 that may be necessary to control trash from transient encampments are circumscribed by constitutional limitations. The complex problem of transient encampments is not an appropriate subject for the Draft Order or a subsequent MS4 permit. For these reasons, the City requests that Finding 9.d and Section A.4 be removed from the Draft Order. It is appropriate for the Regional Board to conduct further studies into the issue of trash from transient encampments, identify specific locations known to generate the greatest amounts of trash, and possibly issue a separate order targeted to controls at those areas.

### **3. Provide a Source of Funding for the State Mandates in the Draft Order**

The Investigative Order and implementation of the Trash Amendments through a renewed MS4 Permit constitute unfunded state mandates. Section 6 of Article XIII B of the California Constitution requires the State to provide a subvention of funds to local agencies any time the Legislature or a state agency requires

<sup>13</sup> Ocean Plan Chapter III.L.2.a.(2) and ISWEBE Plan Chapter IV.A.3.a.(2)

<sup>14</sup> Certified full capture devices include those certified by the Los Angeles Regional Water Quality Control Board prior to April 7, 2015 and those listed in Appendix I of the Bay Area-wide Trash Capture Demonstration Project, Final Project Report (May 8, 2014). Ocean Plan Appendix I and ISWEBE Plan Appendix A.

<sup>15</sup> U.S. Const. Amends. IV and XIV; see also *Lavan v. City of Los Angeles* (9th Cir. 2012) 693 F.3d 1022, 1032; *Joyce v. City and County of San Francisco* (N.D. Cal. 1994) 846 F.Supp. 843, 863.

<sup>16</sup> See, e.g., *Jones v. City of Los Angeles* (9th Cir. 2006) 444 F.3d 1118, *vacated after settlement* by 505 F.3d 1006.

the local agency to implement a new program or provide a higher level of service under an existing program. The purpose of Section 6 “is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are ‘ill equipped’ to assume increased financial responsibilities because of the taxing and spending limitations that articles XIII A and XIII B impose.”<sup>17</sup> The section “was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues.”<sup>18</sup>

Government Code section 17556 identifies seven exceptions to the subvention requirement of Section 6, including statutes or executive orders that impose a requirement mandated by a federal law or regulation, which results in costs mandated by the federal government.<sup>19</sup> When considering this exception, California’s Supreme Court determined that requirements which are “animated” by flexible federal laws and regulations do not constitute federal requirements unless, perhaps, the requirements constitute “the only means by which the [flexible] standard could be implemented[.]”<sup>20</sup> To demonstrate the applicability of this exemption, “the party claiming the applicability of an exception bears the burden of demonstrating that it applies.”<sup>21</sup>

The Draft Order constitutes a new program or higher level of service by requiring the City to submit a notice stating: (1) whether the City will implement Track 1 or Track 2; (2) how the City will coordinate with Caltrans to install, operate, and maintain full capture systems, multi-benefit projects, and other controls; and (3) for the cities of San Diego, Santee, El Cajon, La Mesa and the County of San Diego, how trash generated from transient encampments will be addressed. When incorporated into a future MS4 Permit, implementation of the Trash Amendments will also constitute a new program. The activities mandated by the Draft Order and implementation of the Trash Amendments through a future MS4 Permit are referred to in this letter as “Programs.”

The Programs are State mandates. According to the Draft Order, the Programs are required pursuant to state laws, policies and regulations: California’s Porter-Cologne Water Quality Control Act, including sections 13267 and 13383 of the California Water Code, State and Regional Water Quality Control Plans, and State Water Board policies and regulations.<sup>22</sup> The Draft Order also alleges it conforms to and implements “applicable state and federal regulations” and “relevant standards, criteria, and advisories adopted by other state and federal agencies.” No federal regulations, standards, criteria, or advisories are identified as mandating the new programs, however. There is no evidence in the Draft Order that the Programs constitute “the only means” by that the unnamed federal regulations, standards criteria, or advisories could be implemented.<sup>23</sup> Consistent with the Supreme Court’s decision, the Programs are state mandates.

The City does not have a source of funding to dedicate to the Programs and requests that the Regional Board not issue the Draft Order until a source of funding is provided or provide funding to implement the Programs.

<sup>17</sup> *County of San Diego v. State of California* (1997) 15 Cal.4th 68, 81; *County of Fresno v. State of California* (1991) 53 Cal.3d 482, 487.

<sup>19</sup> Gov. Code, § 17556, subd. (c).

<sup>20</sup> *Dep’t of Finance v. Comm’n on State Mandates* (2016) 1 Cal.5th 749, 768.

<sup>21</sup> *Id.* at p. 769, citing *Simpson Strong-Tie Co., Inc. v. Gore* (2010) 49 Cal.4th 12, 23.

<sup>22</sup> Draft Order, Finding 1.

<sup>23</sup> *Dep’t of Finance v. Comm’n on State Mandates* (2016) 1 Cal.5th 749, 768.

**Conclusion**

The City takes the region's water quality seriously and appreciates the opportunity to provide comments on the Draft Order. Because the Trash Amendments establish a system that prioritizes trash controls through land use regulations, the City respectfully requests that the Regional Board consider the City's request to provide a means to fund implementation of the chosen Track, delay issuance of the Draft Order until after the State's guidelines and funding are available, and remove the Caltrans Requirements and Transient Encampment Requirements from the Draft Order.

Sincerely,

Email: sandiego@waterboards.ca.gov

Subject: **Comment – Tentative Order No. R9-2016-0205 Reference 786088,  
Attn: CArias**

Dear Ms. Arias:

The San Diego Unified Port District (District) appreciates the opportunity to provide comments in response to the Tentative Order No.R9-2016-0205, *Investigative Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds within the San Diego Region to Submit Technical and Monitoring Reports Pertaining to the Control of Trash From Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays and Estuaries in the San Diego Region* (referred to herein as Tentative Investigative Order). Pursuant to Statewide Trash Amendments, the Tentative Investigative Order proposes to require written notice from each San Diego Regional municipal Copermittee (Copermittee) of their chosen trash control measure selection that complies with the State Water Quality Control Board's (State Board) trash discharge prohibition, as well as implementation plan submittals, where required.

As public trustee of San Diego Bay (Bay), the District shares a common interest with the San Diego Regional Water Quality Control Board (Regional Board) in ensuring the protection of the Bay's beneficial uses. The District supports the Regional Board's continued efforts to address trash issues within the Bay and the surrounding inland waters, and remains committed to working collaboratively with the Regional Board to fulfill our respective agencies' shared goals. To this end, the District respectfully submits the following comments on the Tentative Investigative Order.

Subject: **Comment – Tentative Order No. R9-2016-0205 Reference 786088**

Attention: Christina Arias

Page 2

- 1. The deadlines for Copermittees to select an implementation track (Track 1 or 2) and submit an implementation plan (Track 2 only) should be extended until guidance for using full-capture devices has been released from the State Board.**

Per the Tentative Investigative Order, written notices from Copermittees are due within three (3) months from the date of adoption of the Tentative Investigative Order regardless of whether Track 1 or Track 2 is selected. Since the adoption of the Statewide Trash Amendments, the State Board has been developing new guidance pertaining to the identification of certified full-capture devices, full capture equivalency, and alternate/equivalent land uses; however, this guidance has not been completed. The State's guidance on approved full-capture devices can help Copermittees make informed management decisions, as the devices vary significantly in upfront, operating, and maintenance costs. The District recommends the Tentative Investigative Order timelines be set in accordance with the release of the State's guidance document so Copermittees can incorporate the related information into their track selection process (i.e. three (3) months after State's guidance is released).

In addition, Copermittees that select Track 2 are required to submit an Implementation Plan within 18 months of the adoption of the Tentative Investigative Order. However, the 2018 permit language has not been drafted, and Track 2 Copermittees will be required to submit an Implementation Plan without having a clear understanding of the trash related requirements that may be included in the permit. The District strongly recommends the Implementation Plan submittal correspond with the release of permit language that will be included in the 2018 MS4 permit.

- 2. Remove Directive 3 requiring a written plan for Copermittee and Caltrans coordination.**

Directive 3 (page 10) of the Tentative Investigative Order requires Copermittees to coordinate with Caltrans, yet there is no language within the current Caltrans permit; nor is there a Tentative Investigative Order issued to Caltrans requiring the same actions. As such, there is nothing that mandates Caltrans to reciprocate coordination. The District suggests either removing the Caltrans coordination requirement from the Tentative Investigative Order until the same language is issued to Caltrans by means of a permit amendment or Investigative Order; or softening the language to match the current MS4 permit in regards to Caltrans (which simply advises working with Caltrans when possible).

Subject: **Comment – Tentative Order No. R9-2016-0205 Reference 786088**

Attention: Christina Arias

Page 3

**3. The specific monitoring and reporting requirements related to the State Trash Amendments should be available to Copermittees prior to the track selection deadline.**

The Tentative Investigative Order has no specific language regarding Track 2 monitoring and reporting requirements. As a result, there are many unknown factors relating to associated monitoring costs and resource requirements that may result from selecting Track 2. Copermittees cannot reasonably be expected to submit their track selection without a clear awareness of the monitoring and reporting requirements for each track. The District recommends including specific monitoring and reporting language in the Tentative Investigative Order.

**4. The Tentative Investigative Order should include guidance language and provisions for selecting a track and switching tracks.**

Currently the Tentative Investigative Order does not provide language for adjusting management approaches and options to pursue an alternate track should a Copermittee realize, upon initial implementation, that the track declared by their agency is not the most effective approach to manage trash within their MS4. Given that these regulations are new, guidance and flexibility is necessary during the initial implementation process. In the spirit of adaptive management, a provision describing a structured process that enables a Copermittee to switch tracks after their original declaration should be included in the Tentative Investigative Order.

**5. Language addressing the jurisdictional liability related to trash from sources outside a Copermittee's jurisdictional authority and nonpoint sources should be added to the Tentative Investigative Order.**

The District requests that the Regional Board include language clarifying that a Copermittee is not liable for any trash resulting from MS4 facilities that the Copermittee does not own or operate. The District recognizes that trash from upstream jurisdictions has the potential to impact receiving waters or portions of the MS4 at or near "end of pipe" locations. For example, San Diego Bay is the receiving water body for a large watershed in which the District is located at the extreme end. Several portions of MS4 systems traverse District tidelands but are owned or operated by upstream Copermittees. Further, the District recognizes that trash also may enter the receiving water from the ocean via tidal transport and surface currents. With this in mind, the District supports jurisdictional accountability throughout the watershed and encourages the Regional Board to incorporate these concepts in both the Tentative Investigative Order and the 2018 MS4 permit renewal.

The comments offered in this document by the District are suggestions to assist the Regional Board in effectively implementing the State Trash Amendments. The District also supports the County of San Diego's red-line version of the Tentative Investigative Order as many of the District's aforementioned comments are addressed by the County's proposed changes. The District is committed to participating in management programs that assist in achieving our respective agencies' shared goal of improving water quality in San Diego Bay. The District greatly appreciates the Regional Board's continued efforts to achieve clean water and looks forward to continued collaboration on cleanup and monitoring efforts throughout the Bay.

If you have any questions or would like additional information related to the comments submitted herein, please contact Kelly Tait at (619) 686-6372 or via email at [ktait@portofsandiego.org](mailto:ktait@portofsandiego.org).

Sincerely,

Re: Comments on Tentative Order No. R9-2016-0205

Dear Ms. Arias:

The undersigned organizations, representing many of the state’s leading employers, appreciate the opportunity to provide comments on the San Diego Regional Water Quality Control Board’s (Board) proposed issuance of Tentative Order No. R9-2016-0205 (Tentative Order), an Investigative Order directing the owners and operators of the Phase I MS4s draining into the watersheds within the San Diego Region to submit technical and monitoring reports pertaining to the control of trash in discharges from MS4s to ocean waters, inland surface waters, enclosed bays, and estuaries in the San Diego Region.

Our organizations believe that reducing trash in California's waterways is an important water quality issue, and we are committed to doing our part to keep trash out of our waterways. To that end, our organizations participated, commented, and supported the final State Water Resources Control Board’s trash policy (Resolution No. 2015-0019) that was adopted on April 7,

2015, including the policy's recognition that the use of full capture systems as identified in "Track 1" compliance option is the preferred method of dealing with trash in our waterways. We agree that full capture systems offer the most effective solution in preventing all forms of trash from entering the state's waterways. These types of infrastructure controls are essentially working 24/7 and their effectiveness in meeting the trash reduction objectives in the Tentative Order can be appropriately monitored and measured.

As stated in the Notice of Opportunity to Review and Comment regarding the proposed Tentative Order, each municipal Copermittee needs to comply with the Trash Amendments by:

- 1) submitting a written notice to the San Diego Water Board, no later than three (3) months from the date of the Order, stating whether the municipal Copermittee will implement Track 1 or Track 2 (as described in the Trash Amendments), and
- 2) if Track 2 is selected, submitting a trash control implementation plan to the San Diego Water Board within eighteen (18) months from the date of the Order.

As previously mentioned, our organizations believe that Track 1 is the most effective way of complying with the trash amendments and we agree that it is the State Water Board's expectation that the municipal Copermittee will elect to install full capture systems where such installation is not cost-prohibitive.

However, in those instances where a municipal Copermittee decides to implement Track 2, it is our understanding that the municipal Copermittee must install, operate and maintain any combination of full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls within its jurisdiction and demonstrate that such combinations achieve full capture system equivalency.

Our organizations recognize that the ability to install full capture systems throughout a municipal Copermittee's jurisdiction may be too costly and that other types of projects or controls like street sweeping, litter education, and enforcement of existing litter laws can assist a municipal Copermittee in achieving full capture system equivalency in a more cost-effective manner. We believe the implementation plans that are required as part of choosing Track 2 will show how the combination of controls will be designed to achieve full capture system equivalency and how full capture equivalency will be demonstrated.

We caution the Board that when reviewing these implementation plans to make sure institutional controls cited by a municipal Copermittee will achieve full capture system equivalency based on required monitoring and assessments. For example, our organizations have witnessed municipalities attempting to use the adoption of local product ban ordinances as a way to comply with trash requirements in municipal stormwater permits. This very issue was discussed during the State Water Board's adoption of the trash policy. In the final staff report, the Board states:

"Contrary to ordinances or laws that prohibit distribution of plastic carry-out bags, which are typically accompanied with requirements and/or incentives to utilize reusable bags to avoid a product-substitution effect (such as Senate Bill 270), other types of product bans

enacted by an ordinance, such as take-out items, may involve a substitution of the banned item. Mere substitution would not result in reduced trash generation if such product substitution would be discarded in the same manner as the banned item. Any such product ban enacted by an ordinance that would not reduce trash would not assist in achieving compliance.”<sup>1</sup>

We agree with the conclusion reached by the State Water Board regarding product ban ordinances and the fact that product substitution does not result in a reduction in trash.

Our organizations believe that the Tentative Order is an appropriate first step in complying with the State Water Board’s trash policy. And, as implementation of the Tentative Order begins, our organizations and member companies look forward to working with the Board and municipal Copermittees to identify opportunities for collaborative efforts - provided that such efforts are balanced; economically and environmentally sustainable; and represent real reductions in overall trash loads.

Thank you in advance for your consideration of our comments. If you have any questions, please feel free to contact Becky Warren at (310) 446-4800. We look forward to working with the Board on this important issue.

Re: City of Escondido Comments – Tentative Order No. R9-2016-0205 on Trash Control

Dear Ms. Arias:

The City of Escondido (the City) respectfully submits the following comments on Tentative Order No. R9-2016-0205, *Investigative Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds within the San Diego Region to Submit Technical and Monitoring Reports Pertaining to the Control of Trash from Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays and Estuaries in the San Diego Region* ("Tentative Order"). The City understands that the San Diego Regional Water Quality Control Board (Regional Water Board) developed this order in response to the requirements of the Statewide Trash Amendments from the California State Water Resources Control Board.<sup>1</sup>

The City of Escondido appreciates the opportunity to comment on the Tentative Order. The City has reviewed the final comment letter developed by the County of San Diego, and supports each recommendation and key area of concern, listed below, as well as the specific language changes in the redline strikeout (Attachment A).

1. Clear Definition of Track 1 and Track 2 Requirements and Consistency with Trash Amendments  
*Recommendation: Revise Order (Findings 7, 8, 9.a, 9.b, 11, 14; Directives A.2.e, A.3.f) in accordance with attached redline strikeout.*
2. Incorporation of Compliance Time Schedule in Implementing Permit  
*Recommendation: Revise language from the Compliance Time Schedule finding (Finding 10) to state the Regional MS4 Permit reissued after June 27, 2018 will be the first implementing permit and will contain a compliance time schedule consistent with the requirements of the Trash Amendments.*
3. Incorporation into the Water Quality Improvement Plan  
*Recommendation: Delete Finding 13 and Revise Finding 12 to allow the flexibility for agencies to include their approach for compliance with the Trash Amendments, whether Track 1 or Track 2, within the Water*

<sup>1</sup> Statewide Trash Amendments to the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California (ISWEBE Plan) and the Water Quality Control Plan for Ocean Waters of California (Ocean Plan); collectively referred to as the "State Trash Amendments"

*Quality Improvement Plans or their respective JRMPs or in a combination of the Water Quality Improvement Plans and JRMPs. The options should be supported with revisions to Directive A.2.*

4. Compliance through Track 1 or Track 2 Implementation; Approval of Track 2 Implementation Plan  
*Recommendation: Include language in Finding 7 describing the Regional Board's approval process for Implementation Plans developed under a Track 2 approach. Add language indicating that timely and complete implementation under a Track 1 or Track 2 approach will meet the narrative water quality objective (Finding 5) and constitute compliance with the trash discharge prohibitions (Finding 6).*
5. Clarification of a Jurisdiction's Ability to Change Compliance Tracks with Supporting Justification  
*Recommendation: Add language to Finding 7 stating MS4 permittees may change tracks, provided they submit sufficient supporting justification. In addition, this language should be added to the first implementing permit (Regional MS4 Permit reissued after June 27, 2018).*
6. Transient Encampments in the San Diego River Watershed  
*Recommendations: Finding 9.d and Directive A.4 should be removed.*
7. Coordination with Caltrans  
*Recommendation: Require coordination with Caltrans, as applicable, to effectively implement the requirements of the Amendments, but remove the requirement to describe this coordination in a separate submittal to the Regional Board.*
8. Clarification of the Monitoring and Reporting requirements of the 13267 Order  
*Recommendation: Revise Finding 11 language and add a new Directive A.3 to describe the specific monitoring and reporting requirements applicable to each track.*

Finally, the City views these amendments as an unfunded mandate. While the City has not completed an in-depth analysis of the optimal course of implementation, initial estimates suggest that purchase and installation costs will be between \$9-\$12 million over twenty years. The Tentative Order does not identify a funding source for these requirements, so presumably the City will be required to fund it out of its budget. This will be a significant burden to city finances unless permanent alternative funding sources are established.

Thank you for your consideration of these comments.

Sincerely,

A handwritten signature in blue ink that reads "Helen M. Davies".

Helen M. Davies  
Environmental Programs Manager  
City of Escondido

Attachment A: County of San Diego Recommended Redline – Strikeout of Tentative Order

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD  
SAN DIEGO REGION**

**TENTATIVE INVESTIGATIVE ORDER NO. R9-2016-0205**

**AN ORDER DIRECTING THE OWNERS AND OPERATORS OF  
PHASE I MUNICIPAL SEPARATE STORM SEWER SYSTEMS (MS4s)  
DRAINING THE WATERSHEDS WITHIN THE SAN DIEGO REGION**

**TO SUBMIT TECHNICAL AND MONITORING REPORTS PERTAINING TO  
THE CONTROL OF TRASH IN DISCHARGES FROM PHASE I MS4s  
TO OCEAN WATERS, INLAND SURFACE WATERS,  
ENCLOSED BAYS, AND ESTUARIES  
IN THE SAN DIEGO REGION**

The California Regional Water Quality Control Board, San Diego Region (hereinafter San Diego Water Board) finds:

- 1. Legal and Regulatory Authority.** This Order conforms to and implements policies and requirements of the Porter-Cologne Water Quality Control Act (division 7 of the Water Code, commencing with Section 13000) including (1) sections 13267 and 13383; (2) applicable state and federal regulations; (3) all applicable provisions of statewide Water Quality Control Plans adopted by the State Water Resources Control Board (State Water Board) and the *Water Quality Control Plans for the San Diego Basin* (Basin Plan) adopted by the San Diego Water Board including beneficial uses, water quality objectives, and implementation plans; (4) State Water Board policies and regulations, including Resolution No. 68-16 (Statement of Policy with Respect to Maintaining High Quality of Waters in California); and (5) relevant standards, criteria, and advisories adopted by other state and federal agencies.
- 2. Trash Amendments.** On April 7, 2015, the State Water Board adopted Resolution No. 2015-0019, amending the *Water Quality Control Plan for Ocean Waters of California* (Ocean Plan) and the *Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California* (ISWEBE Plan) to address the impacts of trash to the surface waters of California (referred to hereafter as the Trash Amendments). The effective date of the Trash Amendments is December 2, 2015.
- 3. Trash Amendments Implementation.** The Trash Amendments establish a statewide narrative water quality objective and implementation requirements to control trash, including a prohibition against the discharge of trash to ocean waters, inland surface waters, enclosed bays, and estuaries in California. Within eighteen (18) months of the effective date (i.e. by June 2, 2017), for each MS4 that has been issued a National Pollutant Discharge Elimination System (NPDES) permit by the San Diego Water Board with regulatory authority over priority land uses in the San Diego Region, the San Diego Water Board is required to modify, re-issue, or adopt an applicable MS4 permit, or issue an order pursuant to Water Code section 13267 or 13383 to implement the Trash Amendments.

**4. Persons Responsible for the Discharges of Trash.** The owners and operators of Phase I MS4s are responsible for discharges of waste, including trash, from land uses and locations within their jurisdictions through their MS4s to ocean waters, inland surface waters, enclosed bays, and estuaries in the San Diego Region. In the San Diego Region, owners and operators of Phase I MS4s (herein referred to as MS4 permittees) include the following entities:

- County of Orange
  - City of Aliso Viejo
  - City of Dana Point
  - City of Laguna Beach
  - City of Laguna Hills
  - City of Laguna Niguel
  - City of Laguna Woods
- County of Riverside
  - City of Menifee<sup>2</sup>
  - City of Murrieta
  - City of Temecula
  - City of Wildomar
- County of San Diego
  - City of Carlsbad
  - City of Chula Vista
  - City of Coronado
  - City of Del Mar
  - City of El Cajon
  - City of Encinitas
  - City of Escondido
  - City of Imperial Beach
  - City of La Mesa
  - City of Lemon Grove
- City of Lake Forest<sup>1</sup>
- City of Mission Viejo
- City of Ranch Santa Margarita
- City of San Clemente
- City of San Juan Capistrano
- Orange County Flood Control District
- Riverside County Flood Control and Water Conservation District
- City of National City
- City of Oceanside
- City of Poway
- City of San Diego
- City of San Marcos
- City of Santee
- City of Solana Beach
- City of Vista
- San Diego County Regional Airport Authority
- San Diego Unified Port District

**5. Water Quality Standards.** The Trash Amendments established the following statewide narrative water quality objectives for trash in ocean waters, inland surface waters, enclosed bays, and estuaries in California.

---

<sup>1</sup> On February 10, 2015, the San Diego Water Board and the Santa Ana Water Board entered into an agreement, pursuant to Water Code section 13228, regarding MS4 discharges within the City of Lake Forest geographically located in the San Diego Region. According to the agreement, the City of Lake Forest must participate in preparation and implementation of the Water Quality Improvement Plan for the Aliso Creek Watershed Management Area. The requirements of the Trash Amendments will be incorporated into the Regional MS4 Permit during reissuance which may require an update to the Water Quality Improvement Plan.

<sup>2</sup> On October 26, 2015, the San Diego Water Board and the Santa Ana Water Board entered into an agreement, pursuant to Water Code section 13228, regarding MS4 discharges within the City of Menifee geographically located in the San Diego Region. According to the agreement, the City of Menifee must participate in preparation and implementation of the Water Quality Improvement Plan for the Santa Margarita River Watershed Management Area. The requirements of the Trash Amendments will be incorporated into the Regional MS4 Permit during reissuance which may require an update to the Water Quality Improvement Plan.

- a. The Trash Amendments established the following narrative water quality objective for trash in Chapter II.C.5 of the Ocean Plan:

*“Trash shall not be present in ocean waters, along shorelines or adjacent areas in amounts that adversely affect beneficial uses or cause nuisance.”*

- b. The Trash Amendments established the following narrative water quality objective or trash in Chapter III.A of the ISWEBE Plan:

*“Trash shall not be present in inland surface waters, enclosed bays, estuaries, and along shorelines or adjacent areas in amounts that adversely affect beneficial uses or cause nuisance.”*

Meeting these narrative water quality objectives for trash will be protective and supportive of numerous beneficial uses for the ocean waters, inland surface waters, enclosed bays, and estuaries in the San Diego Region, including but not limited to, wildlife habitat (WILD), marine habitat (MAR), preservation of rare and endangered species (RARE), fish migration (MIGR), navigation (NAV), and water contact and non-contact recreation (REC1 and REC2).

- 6. Trash Discharge Prohibition.** The Trash Amendments established the following discharge prohibition in Chapter III.I.6 of the Ocean Plan and Chapter IV.A.2 of the ISWEBE Plan:

*“The discharge of trash to surface waters of the State or the deposition of trash where it may be discharged into surface waters of the State is prohibited.”*

- 7. MS4 Permit Implementation of the Trash Amendments.** The Trash Amendments are required to be implemented through the incorporation of the trash narrative water quality objectives and discharge prohibition into NPDES MS4 permits. The NPDES MS4 permit then will require the MS4 permittees to comply with the trash narrative water quality objectives and discharge prohibition through the implementation of one of two measures to be selected by the MS4 permittees.

To comply with the trash narrative water quality objectives and discharge prohibition, the MS4 permittees are required to implement either of the following measures:

*Track 1:* Install, operate, and maintain full capture systems for all storm drains that capture runoff from the priority land uses in their jurisdictions; or

*Track 2:* Install, operate, and maintain any combination of full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls within either the jurisdiction of the MS4 permittee or within the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. The MS4 permittee shall demonstrate that such combination achieves full capture system equivalency. The MS4 permittee may determine which controls to implement to achieve compliance with full capture system equivalency. It is, however, the State Water Board’s expectation that the MS4 permittee will elect to

install full capture systems where such installation is not cost-prohibitive.

Within three (3) months of the effective date of the first implementing permit, or the receipt of an order issued by the San Diego Water Board pursuant to Water Code section 13267 or 13383, each MS4 permittee is required to provide written notice to the San Diego Water Board stating whether the MS4 permittee elects to comply with the trash discharge prohibition by implementing Track 1 or Track 2. MS4 permittees that elect to implement Track 2 are also required to submit an implementation plan to the San Diego Water Board within eighteen (18) months of the effective date of the first implementing permit, or the receipt of the order issued pursuant to Water Code section 13267 or 13383. The implementation plan is required to describe: (i) the combination of controls selected by the MS4 permittee and the rationale for the selection, (ii) how the combination of controls is designed to achieve full capture system equivalency, and (iii) how full capture equivalency will be demonstrated. The implementation plan is subject to approval by the San Diego Water Board. Track 2 Implementation Plans will be deemed approved by the San Diego Water Board ninety (90) days after submission unless otherwise directed in writing by the San Diego Water Board Executive Officer. MS4 permittees may elect to change tracks through their adaptive management process during the 10-year implementation period, provided they submit sufficient, supporting justification to the San Diego Water Board. MS4 permittees fully complying with Track 1 or Track 2 are deemed to be in compliance with the trash discharge prohibition and narrative water quality objectives incorporated into the MS4 permit.

**8. Full Capture System Equivalency.** The Trash Amendments define full capture system equivalency as follows:

*“Full capture system equivalency is the trash load that would be reduced if full capture systems were installed, operated, and maintained for all storm drains that capture runoff from the relevant areas of land (priority land uses, significant trash generating areas, facilities or sites regulated by NPDES permits for discharges of storm water associated with industrial activity, or specific land uses or areas that generate substantial amounts of trash, as applicable). The full capture system equivalency is a trash load reduction target that the permittee quantifies by using an approach, and technically acceptable and defensible assumptions and methods for applying the approach, subject to the approval of permitting authority. Examples of such approaches include, but are not limited to, the following:*

- (1) *Trash Capture Rate Approach. Directly measure or otherwise determine the amount of trash captured by full capture systems for representative samples of all similar types of land uses, facilities, or areas within the relevant areas of land over time to identify specific trash capture rates. Apply each specific trash capture rate across all similar types of land uses, facilities, or areas to determine full capture system equivalency. Trash capture rates may be determined either through a pilot study or literature review. Full capture systems selected to evaluate trash capture rates may cover entire types of land uses, facilities, or areas, or a representative subset of types of land uses, facilities, or areas. With this approach, full capture system equivalency is the sum of the products of each type of land use, facility, or area multiplied by trash capture rates for that type of land use, facility, or area.*

(2) *Reference Approach. Determine the amount of trash in a reference receiving water in a reference watershed where full capture systems have been installed for all storm drains that capture runoff from all relevant areas of land. The reference watershed must be comprised of similar types and extent of sources of trash and land uses (including priority land uses and all other land uses), facilities, or areas as the permittee's watershed. With this approach, full capture system equivalency would be demonstrated when the amount of trash in the receiving water is equivalent to the amount of trash in the reference receiving water."*

**9. Land Uses and Locations Requiring Trash Controls.** The Trash Amendments define land uses and locations that are to be controlled for trash discharges by MS4 permittees using the Track 1 compliance option:

- a. *Priority Land Uses:* Those developed sites, facilities, or land uses (i.e. not simply zoned land uses) within a MS4 permittee's jurisdiction from which discharges of trash are regulated by the Ocean Plan or ISWEBE Plan as follows:
- High-density residential: all land uses with at least ten (10) developed dwelling units/acre.
  - Industrial: land uses where the primary activities on the developed parcels involve product manufacture, storage, or distribution (e.g., manufacturing businesses, warehouses, equipment storage lots, junkyards, wholesale businesses, distribution centers, or building material sales yards).
  - Commercial: land uses where the primary activities on the developed parcels involve the sale or transfer of goods or services to consumers (e.g., business or professional buildings, shops, restaurants, theaters, vehicle repair shops, etc.).
  - Mixed urban: land uses where high-density residential, industrial, and/or commercial land uses predominate collectively (i.e., are intermixed).
  - Public transportation stations: facilities or sites where public transit agencies' vehicles load or unload passengers or goods (e.g., bus stations and stops).
- b. *Equivalent Alternative Land Uses:* An MS4 permittee with regulatory authority over priority land uses may issue a request to the San Diego Water Board that the MS4 permittee be allowed to substitute a land use identified above with an alternate land use within the MS4 permittee's jurisdiction that generates rates of trash that is equivalent to or greater than the priority land use being substituted. The land use area requested to substitute for a priority land use need not be an acre-for-acre substitution but may involve one or more priority land uses, or a fraction of a priority land use, or both, provided the total trash generated in the equivalent alternative land use is equivalent or greater than the total trash generated from the priority land uses for which substitution is requested. Comparative trash generation rates shall be established through the reporting of quantification measures such as street sweeping and catch basin cleanup records; mapping; visual trash presence surveys, such as the "Keeping America Beautiful Visible

Litter Survey”; or other information as required by the San Diego Water Board.

- c. *Coordination with California Department of Transportation (Caltrans).* The Trash Amendments (Ocean Plan Chapter III.L.2.b and ISWEBE Plan Chapter IV.A.3.b) require that Caltrans and MS4 permittees coordinate their efforts to install, operate, and maintain full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls in significant trash generating areas and/or priority land uses.
- d. *Specific Land Uses or Locations Determined by the San Diego Water Board.* The Trash Amendments (Ocean Plan Chapter III.L.2.d and ISWEBE Plan Chapter IV.A.3.d) provide the San Diego Water Board with the authority to determine that specific land uses or locations generate substantial amounts of trash in addition to the priority land uses defined above. In the event the San Diego Water Board makes that determination, the San Diego Water Board may require the MS4 permittees to comply with the requirements of the Trash Amendments with respect to such land uses or locations.

[Note: The County of San Diego requests the removal of this paragraph, but if Regional Board must keep, then recommended edits are shown] The San Diego Water Board has evaluated the San Diego River Park Foundation’s 2013, 2014, and 2015 State of the River reports, and information received in regard to Item 5 on the May 14, 2014 Board meeting agenda pertaining to trash generated by transient encampments in the San Diego River watershed and related water quality issues. Based on this information the San Diego Water Board has determined that transient encampments in the San Diego River watershed are generating substantial trash in amounts that adversely affect beneficial uses or cause nuisance in the San Diego River. ~~This Order requires MS4 permittees in the San Diego River Watershed Management Area to develop plans to address trash runoff from the relevant areas of land affected by transient encampments through Track 1 or Track 2 controls as stipulated in the Trash Amendments (Ocean Plan Chapter III.L.2.d and ISWEBE Plan Chapter IV.A.3.d)~~ This Order requires MS4 permittees in the San Diego River watershed to coordinate with other entities within the watershed, as appropriate, to address trash associated with transient encampments from areas under their jurisdiction. Because this may involve entities not subject to the MS4 Permit, the coordination may be implemented through another regulatory mechanism, such as a Conditional Waiver of Waste Discharge Requirements, or cooperative agreements which would be separate from the NPDES permit for the MS4 permittees.

**10. Compliance Time Schedule.** ~~The Trash Amendments require the implementing permit to state that full compliance with the trash discharge prohibition shall occur within ten (10) years of the effective date of the first implementing permit. In addition, the implementing permit must require the MS4 permittees to demonstrate achievements of interim milestones. In no case may the final compliance date be later than fifteen (15) years from the effective date of the Trash Amendments (i.e. December 2, 2030). The current Regional MS4 Permit (Order R9-2013-0001, as amended by Orders R9-2015-0001 and R9-2015-0100) will expire on June 27, 2018. The Regional MS4 Permit reissued after June 27, 2018 will be the first implementing permit and will contain a compliance time schedule consistent with the requirements of the Trash Amendments.~~

~~Full compliance with the Trash Amendments will be within 10 years of the effective date of the re-issued Regional MS4 Permit.~~

**11. Monitoring and Reporting.** The Trash Amendments require the implementing permit to include monitoring and reporting requirements. The MS4 permittees will be required to provide reports to the San Diego Water Board on an annual basis to monitor progress toward achieving full compliance with the trash discharge prohibition. ~~The monitoring and reporting requirements are dependent on the measures elected to be implemented by a MS4 permittee.~~

**12. Regional MS4 Permit and Incorporation into Copermittee Planning Documents.** On May 8, 2013, the San Diego Water Board adopted Order No. R9-2013-0001, NPDES No. CAS0109266, National Pollutant Discharge Elimination System (NPDES) Permit and Waste Discharge Requirements for Discharges from the Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds within the San Diego Region (Regional MS4 Permit). The Regional MS4 Permit initially only incorporated the owners and operators of Phase I MS4s in San Diego County (San Diego County MS4 permittees). The Regional MS4 Permit was subsequently amended in 2015 to incorporate the owners and operators of the Phase I MS4s in south Orange County (Orange County MS4 permittees) and in southwest Riverside County (Riverside County Copermittees). The San Diego Water Board intends to incorporate the requirements of the Trash Amendments into the Regional MS4 Permit after it expires (June 27, 2018). The renewed Regional MS4 Permit will be the first implementing permit of the Trash Amendments for the MS4 permittees.

~~The Regional MS4 Permit requires the MS4 Copermittees to develop and implement Water Quality Improvement Plans for ten (10) Watershed Management Areas (WMAs), designated in Table B-1 of the Permit. Each jurisdiction is also required to develop and implement a Jurisdictional Runoff Management Plan (JRMP) that describes how specific strategies in the Water Quality Improvement Plans are implemented as well as how other agency specific permit requirements are met. While the JRMPs are not explicitly part of the Water Quality Improvement Plan, reporting related to JRMP programs is accomplished through the Water Quality Improvement Plan Annual Reporting Process.~~

~~Compliance with the Trash Amendments is based on implementation of specific measures to control trash within a jurisdiction. There may be synergy to be gained through implementation of watershed scale efforts to mitigate trash impacts also. The implementation measures, interim milestones, and compliance schedules for Track 1 or Track 2 of the Trash Amendments shall be incorporated into the Water Quality Improvement Plans for the watershed, into the jurisdictional specific JRMPs, or a combination of the two, to be implemented by the MS4 permittees as part of the adaptive management process.~~

~~Through the issuance of this Order pursuant to Water Code section 13267, the San Diego Water Board intends the MS4 permittees to incorporate the requirements of the Trash Amendments into the Water Quality Improvement Plans, into the Jurisdictional Runoff Management Plans, or a combination of the two, after renewal of the Regional MS4 Permit. Reporting on implementation of measures to comply with the Trash Amendments will be provided through JRMP Annual Report forms, which are submitted as part of the WQIP Annual Reports.~~

**13. Water Quality Improvement Plans.** The Regional MS4 Permit requires the MS4 permittees to develop and implement Water Quality Improvement Plans for ten (10) Watershed Management Areas, designated in the Regional MS4 Permit as shown in Table 1 below:

**Table 1. San Diego Region Watershed Management Areas**

Hydrologic Unit(s)	Watershed Management Area	Major Surface Water Bodies	Responsible MS4 permittees
San Juan (901.00)	South Orange County	<ul style="list-style-type: none"> <li>-Aliso Creek</li> <li>-San Juan Creek</li> <li>-San Mateo Creek</li> <li>-Pacific Ocean</li> <li>-Heisler Park ASBS</li> </ul>	<ul style="list-style-type: none"> <li>-City of Aliso Viejo</li> <li>-City of Dana Point</li> <li>-City of Laguna Beach</li> <li>-City of Laguna Hills<sup>1</sup></li> <li>-City of Laguna Niguel</li> <li>-City of Laguna Woods<sup>1</sup></li> <li>-City of Lake Forest<sup>2</sup></li> <li>-City of Mission Viejo</li> <li>-City of Rancho Santa Margarita</li> <li>-City of San Clemente</li> <li>-City of San Juan Capistrano</li> <li>-County of Orange</li> <li>-Orange County Flood Control District</li> <li>-City of Menifee<sup>3</sup></li> <li>-City of Murrieta<sup>4</sup></li> <li>-City of Temecula</li> <li>-City of Wildomar<sup>4</sup></li> <li>-County of Riverside</li> <li>-County of San Diego</li> <li>-Riverside County Flood Control and Water Conservation District</li> </ul>

Notes:

1. By agreement dated February 10, 2015, pursuant to Water Code section 13228, the Phase I MS4 discharges within the jurisdiction of the City of Laguna Hills and the City of Laguna Woods located in the Santa Ana Region are regulated by San Diego Water Board Order No. R9-2013-0001 as amended by Order No. R9-2015-0001, upon the later effective date of Order No. R9-2015-0001 or Santa Ana Water Board Tentative Order No. R8-2015-0001. The City of Laguna Hills and Laguna Woods must also comply with the requirements of the San Diego Creek/Newport Bay TMDL in section XVIII of Santa Ana Water Board Order No. R8-2015-0001.
2. By agreement dated February 10, 2015, pursuant to Water Code section 13228, Phase I MS4 discharges within the City of Lake Forest located within the San Diego Water Board Region are regulated by the Santa Ana Water Board Order No. R8-2015-0001 (NPDES No. CAS618030) upon the later effective date of this Order or Santa Ana Water Board Tentative Order No. R8-2015-0001. In accordance with the terms of the agreement between the San Diego Water Board and the Santa Ana Water Board, the City of Lake Forest must implement the requirements of the Bacteria TMDL in Attachment E of this Order, participate in preparation and implementation of the Water Quality Improvement Plan for the Aliso Creek Watershed Management Area as described in Provision B of this Order and continue implementation of its over-irrigation discharge prohibition in its City Ordinance, Title 15, Chapter 15, section 14.030, List (b).
3. By agreement dated October 26, 2015, pursuant to Water Code section 13228, Phase I MS4 discharges within the City of Menifee located within the San Diego Water Board Region are regulated by the Santa Ana Water Board Order No. R8-2010-0033 as it may be amended or reissued (NPDES No. CAS618033) upon the later effective date of this Order. In accordance with the terms of the agreement between the San Diego Water Board and the Santa Ana Water Board, the City of Menifee must participate in preparation and implementation of the Water Quality Improvement Plan for the Santa Margarita River Watershed Management Area as described in Provision B of this Order.
4. By agreement dated October 26, 2015, pursuant to Water Code section 13228, the Phase I MS4 discharges within the jurisdiction of the City of Murrieta and the City of Wildomar located in the Santa Ana Region are regulated by San Diego Water Board Order No. R9-2013-0001 as amended by Orders No. R9-2015-0001 and R9-2015-0100. The City of Murrieta and City of Wildomar must also comply with the requirements of the Lake Elsinore/Canyon Lake Nutrient TMDLs in section VI.D.2 of Santa Ana Water Board Order No. R8-2010-0033, or corresponding section as it may be amended or reissued.

~~The Water Quality Improvement Plans include the following: (a) identification of priority water quality conditions that need to be addressed to improve the water quality in each Watershed Management Area; (2) numeric goals for the highest priority water quality conditions to be achieved that will demonstrate discharges from the MS4s are not causing or contributing to exceedances of applicable water quality objectives, or water quality objectives are being attained in receiving waters; (3) a description of the water quality improvement strategies that will be and may be implemented to achieve the numeric goals; and (4) schedules for implementing the water quality improvement strategies and achieving the numeric goals.~~

~~The Regional MS4 Permit also requires incorporation of implementation plans for applicable Total Maximum Daily Loads (TMDLs) and Areas of Special Biological Significance (ASBS), which include interim and final water quality based effluent limitations, compliance strategies, and compliance schedules, into the Water Quality Improvement Plans. The implementation measures, interim milestones, and compliance schedules for Track 1 or Track 2 of the Trash Amendments shall also be incorporated into the Water Quality Improvement Plans to be implemented by the MS4 permittees as part of the adaptive management process.~~

~~Through the issuance of this Order pursuant to Water Code section 13267, the San Diego Water Board intends the MS4 permittees to incorporate the requirements of~~

~~the Trash Amendments into the Water Quality Improvement Plans after renewal of the Regional MS4 Permit.~~

**14.13. Basis for Requiring Technical and Monitoring Reports.** Water Code section 13267 provides that the San Diego Water Board may require dischargers, past dischargers, or suspected dischargers to furnish those technical or monitoring reports as the San Diego Water Board may specify, provided that the burden, including costs, of these reports, must bear a reasonable relationship to the need for the reports and the benefits to be obtained from the reports. The technical and monitoring reports required under this Investigative Order are needed to provide information to the San Diego Water Board regarding (a) the measures each MS4 permittee is electing to implement (i.e. Track 1 or Track 2) within its jurisdiction to comply with the trash discharge prohibition (Track 1 and Track 2), (b) the plan that will be implemented by each MS4 permittee to comply with the trash discharge prohibition (Track 2 only), (c) the interim milestones that each MS4 permittee will achieve within its jurisdiction (Track 1 and Track 2), (d) the schedules to achieving the interim milestones, and full compliance with the trash discharge prohibition (Track 1 and Track 2), and (e) the monitoring (Track 2 only) and reporting (Track 1 and Track 2) that will be implemented to demonstrate progress toward achieving full compliance with the trash discharge prohibition.

**15.14. California Environmental Quality Act.** Adoption of this Order is for the protection of the environment and is exempt from the provisions of the California Environmental Quality Act (CEQA) (Public Resources Code section 21000 et seq.) in accordance with section 15308, Chapter 3, Title 14 of the California Code of Regulations (CCR). This action is also exempt from the provisions of CEQA in accordance with section 15061(b)(3) of Chapter 3, Title 14 of the CCR because it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment.

**IT IS HEREBY ORDERED**, pursuant to California Water Code section 13267, that the MS4 Permittees must comply with the following directives:

#### **A. TECHNICAL AND MONITORING REPORTS**

1. **Written Notices.** Each MS4 permittee must submit to the San Diego Water Board, **no later than three (3) months from the date of this Order [INSERT DATE]**, a written notice stating whether the MS4 permittee will implement Track 1 or Track 2 to comply with the trash discharge prohibition in the Ocean Plan and ISWEBE Plan.
2. **Track 2 Implementation Plans.** Each MS4 permittee electing to comply with Track 2 must submit, **no later than eighteen (18) months from the date of this Order [INSERT DATE]**, an implementation plan, which shall also be incorporated into the applicable Water Quality Improvement Plan or Jurisdictional Runoff Management Plan, or combination of the two, after renewal of the Regional MS4 Permit, for each Watershed Management Area described in Table 1 in Finding 13-above that describes:

- a. The combination of controls<sup>3</sup> selected by the MS4 permittee and the rationale for each selection;
  - b. How the combination of controls is designed to achieve full capture system equivalency;
  - c. How full capture system equivalency will be demonstrated;
  - d. How the trash implementation plans will be monitored and assessed ~~in Water Quality Improvement Plan Annual Reports~~;
  - e. ~~Requests by MS4 permittees, if any, for authorization to substitute a Priority Land Use described in Finding 9 above with an Equivalent Alternate Land Use that generates rates of trash equivalent to, or greater than, the Priority Land Use being substituted. The MS4 permittees must provide data or information which establishes that trash generation rates from the Alternate Land Use(s) are greater than the Priority Land Use(s) being substituted;~~
  - f. A compliance time schedule ~~based on the shortest practicable time~~ to achieve full compliance with the trash discharge prohibition, including interim milestones (such as average load reductions of ten percent per year) and a final compliance date. The final compliance date must not be later than fifteen (15) years from the effective date of the Trash Amendments (i.e. December 2, 2030).
- 3. Monitoring and Reporting.** Upon adoption of the implementing MS4 Permit, the MS4 permittees are required to provide reports to the San Diego Water Board on an annual basis to demonstrate progress toward achieving full compliance with the trash discharge prohibition. The monitoring and reporting requirements are dependent on the compliance track selected by a MS4 permittee. Reporting may be performed using the Jurisdictional Urban Runoff Management Plan form, submitted with the Water Quality Improvement Plan Annual Report.
- a. MS4 permittees that elect to comply with the Statewide Trash Amendments via the Track 1 compliance option shall provide a report to the Regional Board demonstrating installation, operation, maintenance, and the Geographic Information System- (GIS-) mapped location and drainage area served by its full capture systems on an annual basis as part of the JRMP reporting form within the Water Quality Improvement Plan Annual Report.
  - b. MS4 permittees that elect to comply with the Statewide Trash Amendments via the Track 2 compliance option shall develop and implement monitoring plans that demonstrate the effectiveness of the full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls, and compliance with full capture system equivalency. Monitoring reports shall be provided on an annual basis as part of the JRMP reporting form within the Water Quality Improvement Plan Annual Report and shall include GIS-mapped locations and drainage area served for each of the full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls installed or utilized by the MS4 permittee.

4. **Coordination with Caltrans.** Each MS4 permittee subject to this Order must ~~submit, no later than eighteen (18) months from the date of this Order [INSERT DATE], a description of how MS4 permittees will~~ coordinate their efforts to install, operate, and maintain full capture systems, multi-benefit projects, and other controls with Caltrans in significant trash generating areas and/or priority land uses, as applicable.
5. **[Note: The County of San Diego requests removal of this paragraph, if Regional Board keeps in then recommended edits presented.]** **Transient Encampments in the San Diego River Watershed.** MS4 permittees discharging to the San Diego River watershed (Cities of San Diego, Santee, El Cajon, La Mesa, and County of San Diego), must ~~submit, no later than eighteen (18) months from the date of this Order [INSERT DATE], a description of how~~ coordinate with other entities in the watershed, as appropriate, to address trash generated from transient encampments in areas under their jurisdiction in the San Diego River Watershed Management Area ~~will be addressed. These efforts may be implemented under another regulatory mechanism, such as a Conditional Waiver of Waste Discharge Requirements, or non-regulatory cooperative agreements, separate from the NPDES permit for the MS4 permittees.~~

---

<sup>3</sup> Controls include, but are not limited to, full capture systems, multi-benefit projects, other treatment

~~controls, and/or institutional controls treatment controls and institutional controls~~, as defined in ~~the~~ Appendix D to the ~~Water Quality Control Plan for Ocean Waters of California California Ocean Plan~~ and Appendix E of the ~~Water Quality Control Plan for~~ Inland Surface Waters, Enclosed Bays, and Estuaries of California.

## B. PROVISIONS

1. **Signatory Requirements.** All documents submitted to the San Diego Water Board must be signed and certified.

a. All reports required by this Order must be signed as follows:

- (1) For a corporation, by a principal executive officer of at least the level of vice-president;
- (2) For a partnership or sole proprietorship, by a general partner or the proprietor, respectively;
- (3) For a municipality, state, federal or other public agency, by either a principal executive or ranking elected official.
- (4) By a duly authorized representative of the person designated above (B.6.a.(1), B.6.a.(ii), or B.6.(a)(iii)). A person is a duly authorized representative only if:
  - (a) The authorization is made in writing by a person described in paragraph B.6.a above;
  - (b) The authorization specifies either an individual or position having responsibility for the overall operation of the regulated facility or activity; and
  - (c) The written authorization is submitted to the San Diego Water Board.

b. Any person signing a document required by this Order must make the following certification:

*"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

2. **Submittal of Documents.** All documents submitted to the San Diego Water Board in compliance with this Order must be submitted in electronic format (compact disk (CD-ROM or CD) in a Portable Document Format (PDF), unless otherwise directed. All electronic format documents required under this Order must be submitted to:

Executive Officer  
 California Regional Water Quality Control Board  
 San Diego Region  
 2375 Northside Drive, Suite 100  
 San Diego, CA 92108  
 Attn: Laurie Walsh, PE, Storm Water Management Unit

3. **Changes to Order.** This Order may be amended, rescinded, or updated by the Executive Officer. The MS4 permittees may propose changes or alternatives to the requirements in this Order if a valid rationale for the changes is shown. The filing of a request by a MS4 permittees for amending, rescinding, or updating this Order, or notification of planned changes or anticipated noncompliance does not stay any condition of this Order.

### C. NOTIFICATIONS

1. **Enforcement Discretion.** The San Diego Water Board reserves its right to take any enforcement action authorized by law for violations of the terms and conditions of this Order.
2. **Requesting Administrative Review by the State Water Board.** Any aggrieved person may petition the State Water Board regarding this Order in accordance with Water Code section 13320 and the California Code of Regulations title 23 sections 2050 and following. The State Water Board must receive the petition by 5:00 p.m., 30 days following the date of this Order. Copies of the laws and regulations applicable to filing petitions may be found on the State Water Board website at [http://www.waterboards.ca.gov/public\\_notices/petitions/water\\_quality](http://www.waterboards.ca.gov/public_notices/petitions/water_quality) or will be provided upon request.

For instructions on how to file a petition for review, see the State Water Board website at:

[http://www.waterboards.ca.gov/public\\_notices/petitions/water\\_quality/wqpetition\\_instr.shtml](http://www.waterboards.ca.gov/public_notices/petitions/water_quality/wqpetition_instr.shtml)

Attn: Christina Arias

Christina Arias, PE  
California Regional Water Quality Control Board, San Diego Region

Subject: Comment – Tentative Order No. R9-2016-0205  
Reference 786088: CArias

Dear Ms. Arias:

The City of Menifee (City) would like to thank you for the opportunity to provide comments on Tentative Order No. R9-2016-0205, Investigative Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds within the San Diego Region to Submit Technical and Monitoring Reports Pertaining to the Control of Trash From Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays and Estuaries in the San Diego Region (Tentative Order). The City is committed to developing and implementing jurisdictional and regional programs and strategies that will improve overall water quality.

The City is located primarily within the jurisdiction of the Santa Ana Regional Water Quality Control Board (Santa Ana Regional Board), but a small portion of the City totaling less than 1.3 square miles is located within the jurisdiction of the San Diego Regional Water Quality Control Board (San Diego Regional Board). Finding 29.b. of the San Diego MS4 Permit (Order No. R9-2013-001 as amended by Order No. R9-2015-0001 and Order No. R9-2015-0100) states:

*“... the City of Menifee is largely regulated by the Santa Ana Water Board under Order No. R8- 2010-0033 as it may be amended or reissued, including those portions of the City of Menifee within the San Diego Water Board’s jurisdiction, upon the effective date of this Order. The agreement also requires the City of Menifee to actively participate during development and implementation of the Santa Margarita River Watershed Management Area Water Quality Improvement Plan required pursuant to this Order.”*

In accordance with the above language, the City of Menifee is not included in Table 1c. at the beginning of the San Diego MS4 Permit, which lists the Riverside County Co-Permittees regulated by that order

In contrast to Table 1c. of the San Diego MS4 Permit, Section 4 of the Tentative Order includes the City of Menifee in the list of agencies which it defines as “MS4 permittees.” The designation of the City as an MS4 permittee inaccurately implies that all of the requirements of the Tentative Order are applicable to the City. It is the City’s opinion that this designation is inconsistent with the San Diego Regional Board Designation described in Finding 29.b. of the San Diego MS4 Permit (quoted above). The City understands that both the San Diego Regional Board and the Santa Ana Regional Board will be required by the State to implement the requirements of the Trash Amendments (State Water Board Resolution No. 2015-0019) through MS4 permit reissuance or through a Water Code Section 13267 or 13383 Order. Therefore, there is the distinct possibility that the same or—even more troubling—conflicting, requirements of the Trash Amendments will be imposed on the City by both the Santa Ana Regional Board and the San Diego Regional Board, even though the City of Menifee believe it is not an MS4 discharger to the Santa Margarita River watershed. Since the State Board Trash Amendment requirements are not unique to the San Diego Region, and since the Regional Board’s two proposed compliance tracks are jurisdiction-based rather than watershed-based, designating two separate Regional Water Boards to regulate the Trash Amendments requirements within the City of Menifee has the potential to create confusion and increased burden on the City without providing water quality benefits to the Santa Margarita River Watershed.

For example, the City reports to the Santa Ana Regional Board on all of its jurisdiction-wide activities, including activities within the portion of the City in the Santa Margarita Watershed. By the San Diego Regional Board applying its monitoring and reporting requirements, and requiring the City to choose a compliance track that will be enforced via the *San Diego Regional MS4 Permit*, the San Diego Regional Board has arguably *de facto* brought Menifee under the San Diego Regional MS4 Permit without naming the City as a discharger. Proceeding in this manner simply raises more problems than it solves given the very small portion of the City within the Santa Margarita Watershed. The City will likely end up reporting on that same area to two separate Regional Water Boards under two separate MS4 permits, with potential conflicts in compliance timetables and performance standards. .

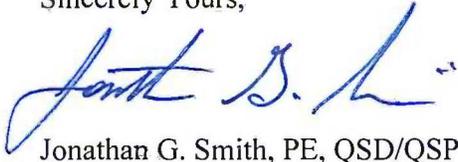

The small portion of the City within the Santa Margarita River WMA does not currently contain any Priority Land Use (PLU) areas, as defined by the Trash Amendments. Since the City of Menifee has no jurisdiction over any PLUs in the San Diego Region but does have jurisdiction over PLUs in the Santa Ana Region, it seems appropriate for only the Santa Ana Regional Board to issue the requirements of the Trash Amendments to the City on a jurisdictional basis.

**Recommendation:**

It is the City’s recommendation that the City of Menifee be removed from Section 4 of the draft order as indicated in Exhibit 1 attached hereto. Additionally, the Tentative Order should be amended to: (1) clarify that Menifee is not an MS4 discharger regulated by the San Diego Regional MS4 Permit; (2) specify which of the planning, implementation, and reporting requirements do not apply to the City of Menifee so as to prevent duplicative or contradicting requirements from two separate Regional Boards; 3) establish a compliance track for a City such as Menifee that does not have PLUs in the San Diego region and cannot feasibly select either Track 1 or Track 2 because the vast majority of the City falls outside the Santa Margarita Watershed.

If you have any questions or need additional information with regards to this comment letter, please contact me at 951-723-3704 or email at [jsmith@cityofmenifee.us](mailto:jsmith@cityofmenifee.us). You may also contact Yolanda Macalalad, Principal Engineer, Public Works-Engineering Department at 951-723-3718 or email at [ymacalalad@cityofmenifee.us](mailto:ymacalalad@cityofmenifee.us).

Sincerely Yours,

A handwritten signature in blue ink, appearing to read "Jonathan G. Smith".

## EXHIBIT 1: CITY OF MENIFEE RECOMMENDED REVISIONS TO TENTATIVE ORDER

**Persons Responsible for the Discharges of Trash.** The owners and operators of Phase I MS4s are responsible for discharges of waste, including trash, from land uses and locations within their jurisdictions through their MS4s to ocean waters, inland surface waters, enclosed bays, and estuaries in the San Diego Region. In the San Diego Region, owners and operators of Phase I MS4s (herein referred to as MS4 permittees) include the following entities:

- County of Orange
  - City of Aliso Viejo
  - City of Dana Point
  - City of Laguna Beach
  - City of Laguna Hills
  - City of Laguna Niguel
  - City of Laguna Woods
- County of Riverside
  - ~~City of Menifee<sup>2</sup>~~
  - City of Murrieta
  - City of Temecula
  - City of Wildomar
- County of San Diego
  - City of Carlsbad
  - City of Chula Vista
  - City of Coronado
  - City of Del Mar
  - City of El Cajon
  - City of Encinitas
  - City of Escondido
  - City of Imperial Beach
  - City of La Mesa
  - City of Lemon Grove
- City of Lake Forest<sup>1</sup>
- City of Mission Viejo
- City of Ranch Santa Margarita
- City of San Clemente
- City of San Juan Capistrano
- Orange County Flood Control District
- Riverside County Flood Control and Water Conservation District
- City of National City
- City of Oceanside
- City of Poway
- City of San Diego
- City of San Marcos
- City of Santee
- City of Solana Beach
- City of Vista
- San Diego County Regional Airport Authority
- San Diego Unified Port District

---

<sup>1</sup> On February 10, 2015, the San Diego Water Board and the Santa Ana Water Board entered into an agreement, pursuant to Water Code section 13228, regarding MS4 discharges within the City of Lake Forest geographically located in the San Diego Region. According to the agreement, the City of Lake Forest must participate in preparation and implementation of the Water Quality Improvement Plan for the Aliso Creek Watershed Management Area. The requirements of the Trash Amendments will be incorporated into the Regional MS4 Permit during reissuance which may require an update to the Water Quality Improvement Plan.

~~<sup>2</sup> On October 26, 2015, the San Diego Water Board and the Santa Ana Water Board entered into an agreement, pursuant to Water Code section 13228, regarding MS4 discharges within the City of Menifee geographically located in the San Diego Region. According to the agreement, the City of Menifee must participate in preparation and implementation of the Water Quality Improvement Plan for the Santa Margarita River Watershed Management Area. The requirements of the Trash Amendments will be incorporated into the Regional MS4 Permit during reissuance which may require an update to the Water Quality Improvement Plan.~~

San Diego Region  
2375 Northside Drive, Suite 100  
San Diego, CA 92108

**SUBJECT: City of Solana Beach Comments, Tentative Investigative Order  
No. R9-2016-0205, Reference 786088: CArias**

Dear Ms. Arias:

The City of Solana Beach (City) appreciates the opportunity to comment on Tentative Investigative Order R9-2016-0205, An Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems (MS4s) draining the Watersheds within the San Diego Region to submit Technical and Monitoring Reports Pertaining to the Control of Trash in Discharges from Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays, and Estuaries in the San Diego Region (Tentative Order). The City acknowledges the San Diego Regional Water Quality Control Board released the Tentative Investigative Order to meet the requirements of the Statewide Trash Amendments to the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California (ISWEBE Plan) and the Water Quality Control Plan for Ocean Waters of California (Ocean Plan) (referred to hereafter as "Trash Amendments").

The City generally supports the intent of the Tentative Investigative Order to the extent that it is necessary to implement the Statewide Trash Amendments. We respectfully submit the following comments and suggested revisions to address certain issues.

**Issue #1 – Consistency with Trash Amendments and Clear Definition of Track 1 and Track 2 Requirements (Findings 7, 8, 9.b, 11, 14; Directive A.2.f)**

The City requests revisions to the Tentative Order to ensure that its language is consistent with language from the Trash Amendments and that Track 1 and Track 2 requirements are clearly defined and distinguished. Statewide consistency is a stated goal of the State Water Resources Control Board (State Water Board) in developing the Trash Amendments. Since the Tentative Order will be issued prior to incorporation of the Trash Amendments into the Regional MS4 Permit, it will be the regulatory document defining key required components. It is therefore essential that the Tentative Order

findings and directives include the same language and clarity as the Trash Amendments. Suggested revisions are provided for the following Tentative Order items:

**Finding 7.** *Language from the Trash Amendments regarding Track 2 implementation is omitted.*

**Finding 8.** *Definition of Full Capture System Equivalency omits some of the language from the Trash Amendments.*

**Finding 9.b.** *Language from the Trash Amendments regarding Equivalent Alternative Land Uses is omitted.*

**Finding 10.** *Language from the Trash Amendments regarding interim milestones is omitted.*

**Finding 11.** *Language from the Trash Amendments regarding Track 1 and Track 2 monitoring and reporting is omitted.*

**Finding 14.** *Language should be clarified to specify which requirements apply to Track 1, Track 2, or both.*

**Directive A.2.f.** *Language imposes a schedule based on the “shortest practicable time,” which is not consistent with the schedule requirements within the Trash Amendments.*

### **Finding 7. MS4 Permit Implementation of the Trash Amendments**

Finding 7 presents the Track 1 and Track 2 compliance options detailed in the Statewide Trash Amendments. However, the Track 2 language omits some of the Track 2 language within the Statewide Trash Amendments.

Recommendation: Add the omitted language (underlined below) from the Statewide Trash Amendments to the Tentative Investigative Order. Suggested revision:

*Track 2: Install, operate, and maintain any combination of full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls within either the jurisdiction of the MS4 permittee or within the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. The MS4 permittee shall demonstrate that such combination achieves full capture system equivalency. The MS4 permittee may determine which controls to implement to achieve compliance with full capture system equivalency. It is, however, the State Water Board’s expectation that the MS4 permittee will elect to install full capture systems where such installation is not cost-prohibitive.*

### **Finding 8. Full Capture System Equivalency**

Finding 8 presents the definition for Full Capture System Equivalency. However, the definition omits some of the language within the Statewide Trash Amendments.

Recommendation: Add the omitted language (underlined below) from the Statewide Trash Amendments to the Tentative Investigative Order. Suggested revision:

*Examples of such approaches include, but are not limited to, the following:*

### **Finding 9.b. Land Uses and Locations Requiring Trash Controls – Equivalent Alternative Land Uses**

Finding 9.b does not contain the full language from the Equivalent Land Use Provisions in the Statewide Trash Amendments. Finding 9.b omits “*The land use area requested to substitute for a priority land use need not be an acre-for-acre substitution but may involve one or more priority land uses, or a fraction of a priority land use, or both, provided the total trash generated in the equivalent alternative land use is equivalent or greater than the total trash generated from the priority land uses for which substitution is requested.*” The Statewide Trash Amendments included this language because the State Water Board recognized there is variability in trash generation within the same land use type based on local conditions. Omitting this language reduces the flexibility MS4 Permittees have to define the priority land uses within their jurisdictions using local trash-generation information.

Recommendation: Add the omitted language (underlined below) from the Statewide Trash Amendments to the Tentative Investigative Order. Suggested revision:

*An MS4 permittee with regulatory authority over priority land uses may issue a request to the San Diego Water Board that the MS4 permittee be allowed to substitute one or more a land uses identified above with an alternate land uses within the MS4 permittee’s jurisdiction that generates rates of trash that is equivalent to or greater than the priority land use(s) being substituted. The land use area requested to substitute for a priority land use need not be an acre-for-acre substitution but may involve one or more priority land uses, or a fraction of a priority land use, or both, provided the total trash generated in the equivalent alternative land use is equivalent or greater than the total trash generated from the priority land uses for which substitution is requested. Comparative trash generation rates shall be established through the reporting of quantification measures such as street sweeping and catch basin cleanup records; mapping; visual trash presence surveys, such as the “Keeping America Beautiful Visible Litter Survey”; or other information as required by the San Diego Water Board.*

### **Finding 10. Compliance Time Schedule**

Finding 10 presents the compliance time schedule and states that, through the implementing permit, MS4 permittees will be required to demonstrate achievements of interim milestones. Clarity on interim milestones is provided in the Trash Amendments but is omitted in the Tentative Order.

Recommendation: Add omitted language (underlined below) from the Statewide Trash Amendments to the Tentative Order. Suggested revision:

*In addition, the implementing permit must require the MS4 Permittees to demonstrate achievements of interim milestones such as average load reductions of ten percent (10%) per year or other progress.*

The State Water Board also included a footnote in the Trash Amendments to add clarity to “other progress.” Since Track 1 is an implementation-based compliance option, interim milestones shall not be exclusive to water quality or load reduction measures. Per the language in the Trash Amendments, other progress should be clarified to include measures of implementation such as ten percent (10%) of full capture systems installed per year. The ambiguity implies that interim milestones may not include implementation-based milestones. Implementation-based milestone as an example of “other progress” would be appropriate for Track 1 as Track 1 does not requiring monitoring.

Recommendation: Add a footnote to add clarity for interim milestones. Suggested revision:

*In addition, the implementing permit must require the MS4 Permittees to demonstrate achievements of interim milestones<sup>1</sup>...*

<sup>1</sup> Interim milestones are quantitative measures of progress towards full compliance of Track 1 or Track 2. An example may be average load reductions of ten percent (10%) per year or other progress such as 10% of full capture systems installed per year.

## **Finding 11. Monitoring and Reporting**

Finding 11 does not provide adequate information related to the monitoring and reporting requirements specific to the Track 1 and Track 2 compliance options as detailed in the Trash Amendments. By not providing the specific requirements for the Track 1 and Track 2 compliance options, the Tentative Order leaves the monitoring and reporting requirements ambiguous and could cause unnecessary or noncompliant monitoring and/or reporting by the MS4 Permittees.

Recommendation: Add the omitted language (underlined below) from the Statewide Trash Amendments to the Tentative Order. Suggested revision:

*The MS4 permittees will be required to provide reports to the San Diego Water Board on an annual basis to monitor progress toward achieving full compliance with the trash discharge prohibition. The monitoring and reporting requirements are dependent on the measures elected to be implemented by a MS4 permittee.*

- a. MS4 permittees that elect to comply with the Track 1 compliance option shall provide a report to the Regional Board demonstrating installation, operation, maintenance, and the Geographic Information System- (GIS-) mapped location and drainage area served by its full capture systems on an annual basis

- b. MS4 permittees that elect to comply with the Track 2 compliance option shall develop and implement monitoring plans that demonstrate the effectiveness of the full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls, and compliance with full capture system equivalency. Monitoring reports shall be provided on an annual basis and shall include GIS-mapped locations and drainage area served for each of the full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls installed or utilized by the MS4 permittee.

#### **Finding 14. Basis for Requiring Technical and Monitoring Reports**

Finding 14 states that the technical and monitoring reports are needed to provide information, however, the language does not specify which of the items relate to Track 1 and/or Track 2. Without the specific requirements, the Tentative Order leaves the monitoring and reporting requirements ambiguous and could cause unnecessary monitoring and/or reporting by the MS4 Permittees.

Recommendation: Revise language in Finding 14 to specify which items relate to Track 1 and/or Track 2. Suggested revision:

*The technical and monitoring reports required under this Investigative Order are needed to provide information to the San Diego Water Board regarding (a) the measures each MS4 permittee is electing to implement (i.e. Track 1 or Track 2) within its jurisdiction to comply with the trash discharge prohibition (Track 1 and Track 2), (b) the plan that will be implemented by each MS4 permittee to comply with the trash discharge prohibition (Track 2), (c) the interim milestones that each MS4 permittee will achieve within its jurisdiction (Track 1 and Track 2), (d) the schedules to achieving the interim milestones, and full compliance with the trash discharge prohibition (Track 1 and Track 2), and (e) the monitoring (Track 2) and reporting (Track 1 and Track 2) that will be implemented to demonstrate progress toward achieving full compliance with the trash discharge prohibition.*

#### **Directive A.2.f. Technical and Monitoring Reports – Implementation Plans**

Directive A.2.f states that a compliance schedule should be developed and based on the “shortest practicable time.” This schedule requirement is not consistent with the schedule requirements within the Trash Amendments.

Recommendation: Delete “based on the shortest practicable time” to maintain consistency with the Trash Amendments. Suggested revision:

*A compliance time schedule ~~based on the shortest practicable time~~ to achieve full compliance with the trash discharge prohibition, including interim milestones (such as average load reductions of ten percent per year) and a final compliance date. The final compliance date must not be later than fifteen (15) years from the effective date of the Trash Amendments (i.e. December 2,*

2030).

## **Issue #2 – Compliance through Implementation of Track 1 or Track 2 and Approval Process for Track 2 Implementation Plan (Finding 7)**

Finding 7 does not clearly state that the MS4 Permittee will be in compliance with the Trash discharge prohibitions and water quality objectives through implementation of Track 1 or Track 2.

Recommendation: Include language that clearly states that permittees in full and timely compliance with Track 1 or Track 2 are deemed to be in compliance with the discharge prohibition and narrative water quality objectives as incorporated into the MS4 Permit. Suggested language to include:

*MS4 Permittees fully complying with Track 1 or Track 2 are deemed to be in compliance with the trash discharge prohibition and narrative water quality objectives incorporated into the MS4 Permit.*

MS4 Permittees that choose Track 2 need to submit an Implementation Plan “*subject to approval by the San Diego Water Board.*” However, there is no language that identifies what the process and timing are for the Regional Water Board’s review and approval of the Track 2 Implementation Plans.

Recommendation: Include language in Finding 7 describing the Regional Board’s approval process for Implementation Plans developed under a Track 2 approach. Suggested language to include:

*Track 2 Implementation Plans will be deemed approved by the San Diego Water Board ninety (90) days after submission unless otherwise directed in writing by the San Diego Water Board Executive Officer.*

## **Issue #3 – Clarification of a Jurisdiction’s Ability to Change Compliance Tracks with Supporting Justification (Finding 7)**

Jurisdictions should be provided with the ability to change their initial determination of which compliance track to pursue. Implementation of the Trash Amendments will surely involve many lessons learned and efficiencies to be gained along the way. The State Water Board has clearly expressed its expectation “that the MS4 permittee will elect to install full capture systems where such installation is not cost-prohibitive.” A jurisdiction may be inclined to pursue Track 1 because of the simplicity of the approach and the compliance certainty it provides. As implementation progresses, installation of some full capture systems may be found to be not possible or cost-prohibitive. Allowing jurisdictions to change tracks during the implementation period, with sufficient, supporting justification, is reasonable and would provide jurisdictions with much needed flexibility to implement this 10-year program.

Recommendation: Add language to Finding 7 stating MS4 permittees may change tracks, provided they submit sufficient, supporting justification. In addition, this

language should be added to the first implementing permit (Regional MS4 Permit reissued after June 27, 2018). Suggested language to include:

*MS4 Permittees may elect to change tracks through their adaptive management process during the 10-year implementation period, provided they submit sufficient, supporting justification to the San Diego Water Board through a written request. Track change will be deemed approved by the San Diego Water Board forty-five (45) days after submission unless otherwise directed in writing by the San Diego Water Board Executive Officer.*

#### **Issue #4 – Clarification of Controls (Finding 7)**

Under Track 2, the MS4 Permittee may use a combination of controls within its jurisdiction to achieve full capture system equivalency. The Tentative Order does not clarify that existing controls may be used and monitored to achieve full capture system equivalency. MS4 Permittees may have dedicated resources to address trash within their jurisdiction and should be able to receive credit for their current and on-going efforts.

Recommendation: Include a footnote in Finding 7 stating that controls implemented to achieve full capture system equivalency may include pre-existing implementation efforts. Suggested revision:

*The MS4 Permittee shall demonstrate that such combination achieves full capture system equivalency. The MS4 Permittee may determine which controls<sup>1</sup> to implement to achieve compliance with full capture system equivalency.*

<sup>1</sup>Controls to achieve full capture system equivalency may include full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls already implemented by the MS4 Permittee.

#### **Issue #5 – Implementation Plans Format (Directive A.2)**

Directive A.2 requires each MS4 Permittee electing to comply with Track 2 to submit an Implementation Plan for each Watershed Management Area. Due to the uniqueness of jurisdictional land use combinations, trash rates, and Full Capture System Equivalency values, watershed-based implementation plans may not be the appropriate approach for compliance with the Trash Amendments. The MS4 Permittees should have the flexibility to determine the appropriate approach for compliance with the Trash Amendments and include the Implementation Plan in their respective JRMP or WQIP(s).

Recommendation: Revise language in Directive A.2 to eliminate the requirement for Implementation Plans to be developed for each Watershed Management Area. Suggested revision:

***Track 2 Implementation Plans.*** *Each MS4 permittee electing to comply with Track 2 must submit, **no later than eighteen (18) months from the date of this Order** [INSERT DATE], an implementation Pplan for each Watershed*

Ms. Christina Arias  
December 14, 2016  
Page 8 of 8

Management Area described in Table 1 in Finding 13 above that describes...

**Issue #6 – Monitoring and Assessment Components in the Implementation Plan (Directive A.2.d)**

The Trash Amendments require that the Implementation Plans describe “how full capture system equivalency will be demonstrated.” Under this requirement, MS4 Permittees are expected to describe their monitoring plan. The monitoring plan will outline efforts the MS4 Permittee plans to implement to measure efficacy of implemented controls in achieving full capture system equivalency. The language in Directive A.2.d is ambiguous and implies the monitoring and assessment of implementation plans is required rather than monitoring and assessment of efficacy of implementation controls in achieving full capture system equivalency.

Recommendation: Revise language to more accurately convey requirements in Trash Amendments. Suggested revision:

*How the implemented controls identified in the trash implementation plans will be monitored and assessed in ~~Water Quality Improvement Plan Annual Reports~~;*

Thank you for your time and consideration of these comments offered to clarify specific items in the Tentative Order and ensure consistency with the Trash Amendments. If you have questions, please contact Ron Borromeo at (858) 720-2487 or at [rborromeo@cosb.org](mailto:rborromeo@cosb.org).

Sincerely,

Mohammad Sammak  
City Engineer / Public Works Director

Christina Arias, PE

Water Resource Control Engineer

California Regional Water Quality Control Board, San Diego Region

**Subject: Comment - Tentative Order No. R9-2016-0205 (786088 C.Arias)**

Dear Ms. Arias:

The County of Orange, as Principal Permittee of the Orange County Stormwater Program, and the Orange County Flood Control District (collectively, County) appreciate the opportunity to provide comments on *Tentative Order No. R9-2016-0205, Investigative Order Directing the Owners and Operators of the Phase I Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds within the San Diego Region to Submit Technical and Monitoring Reports Pertaining to the Control of Trash From Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays and Estuaries in the San Diego Region*, issued on November 10, 2016 (hereafter, "TIO"). To the extent they are consistent, these comments support those submitted by the California Stormwater Quality Association (CASQA) as well as the City of San Diego and County of San Diego, and were prepared in consultation with our co-permittees. The cities of Aliso Viejo, Dana Point, Laguna Hills, Laguna Niguel, Lake Forest, Mission Viejo and Rancho Santa Margarita have directed that they be recognized as concurring entities..

The San Diego Regional Water Quality Control Board (Regional Board) released the TIO in response to Amendments to the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California (ISWEBE Plan) and the Water Quality Control Plan for Ocean Waters of California (Ocean Plan) adopted by the State Water Resources Control Board on April 7, 2015, in Resolution No. 2015-0019 (hereinafter, "Trash Amendments").

The County and Cities provide the following comments to the TIO:

1. Finding 3 of the TIO indicates that the Regional Board is required to "modify, re-issue, or adopt an applicable MS4 permit, or issue an order pursuant to Water Code section 13267 or 13383 to implement the Trash Amendments. (Emphasis added). This finding suggests that the Trash Amendments may be implemented pursuant to an investigative order issued under Water Code 13267. This is contrary to the Trash Amendments, and beyond the scope of a section 13267 order. Sections IV.A.1.a and III.L.1.A of the Trash Amendments provide, in pertinent part, that the Trash Amendments shall be implemented through a prohibition of discharge and through NPDES permits issued pursuant to section 402(p) of the Federal Clean Water Act. Furthermore, sections IV.A.3 and III.L.2 of the Trash Amendments specifically set forth the specific provisions to be

included in NPDES permits, including the requirement to comply with the discharge prohibition by either Track 1 or Track 2, as well as coordination efforts with Caltrans.

While the Trash Amendments allow for the Regional Board to issue a 13267 order in the interim period prior to modification, re-issuance or adoption of NPDES permits that are subject to the Trash Amendments (see Section IV.A.5, for example), the orders included in the TIO go far beyond what the Trash Amendments call for in a 13267 order.

2. TIO Order A.2.f requires that the implementation plan should include a compliance time schedule based on the shortest practicable time to achieve compliance with the trash discharge prohibition. The Amendments state, however, that their implementation is to be through a prohibition of discharge and through NPDES permits. Further, under sections IV.A.5.a.(1).B and III.L.2.a.(2), the information to be required in response to a 13267 order does include the proposal of a compliance time schedule on the part of permittees. Based upon this language, compliance schedule provisions should be incorporated into the implementing permit and not implemented through a 13267/13383 order. This will ensure proper legal protection for the permittees while they implement the Trash Amendments.
  - It is requested that Regional Board staff strike TIO Order A.2.F. Alternatively, the deletion of “based on the shortest practicable time” is requested. Footnote 3 should also be revised for consistency with the Trash Amendments.
3. TIO Order A.3 requires permittees to submit a description of how they will coordinate their efforts to install, operate and maintain full capture systems, multi-benefit projects and other controls with Caltrans. Again, this order goes beyond the scope of a 13267 order, and beyond what sections IV.A.5.a.(1).B and III.L.2.a.(2) of the Trash Amendments call for in 13267 orders issued by the Regional Board.
  - It is requested that Regional Board staff strike TIO order A.3.
  - For the same reasons, it is requested that Regional Board staff strike TIO Order A.2.d.
4. In adopting the Trash Amendments, the State Board was clear that the amendments were to be implemented and not interpreted by the Regional Boards. The TIO is not entirely consistent with the Trash Amendments. To ensure that the Amendments are implemented as intended by the State Board, the following changes are requested:
  - Finding 7 Finding 7 does not properly reflect the text of the Trash Amendments with respect to the discretion of a permittee opting to implement Track 2. Specifically, the Trash Amendments allow that Track 2 permittees “may determine the locations or land uses within its jurisdiction to implement any combination of controls.” This specific language is missing from Finding 7. It is requested that Finding 7 be modified to include the above-specified language and that Finding 7 overall accurately reflect the language of Trash Amendments section IV.A.3 and III.L.2.
  - Finding 8 presents the definition for Full Capture System Equivalency. However, the definition omits some of the language from the Trash Amendments that provides

- flexibility to the MS4 Permittees. Add the omitted language from the Trash Amendments to the Tentative Investigative Order.
- Finding 9.a should clarify that the priority land uses only apply under a Track 1 approach.
  - Finding 9.b should include all language from the Trash Amendments.
  - Finding 11 needs to provide more clarity regarding the reporting requirements under Track 1 vs. Track 2. Language from the Trash Amendments should be added.
  - Finding 14 should include clarifying language to specify which requirements apply to Track 1, Track 2, or both.
  - Directive A.2.e incorrectly links Priority Land Uses and Equivalent Alternative Land Uses with a Track 2 approach. Suggest deletion of A.2.e.
5. The Tentative Investigative Order requires the incorporation of the requirements of the Statewide Trash Amendments into the WQIPs. The Statewide Trash Amendments were not, however, written to be part of a watershed-based management approach. Indeed, mandating that trash be a focus of the WQIP may be construed as antithetical to the watershed management approach which emphasizes local prioritization of issues. It should be noted, for example, that trash was not identified as a high priority condition in South Orange County Watershed Management Area. Moreover, for Track 1, incorporation of the Amendments into the WQIP provision unnecessarily complicates what was intended to be a very simple scheme of control device implementation. The Tentative Investigative Order therefore needs to allow jurisdictions the flexibility to determine the best option for incorporating the Trash Amendments, either through the WQIPs or the Jurisdictional Runoff Management Plan (JRMP) or a combination of both.
- It is requested that Regional Board staff delete Finding 13 and revise Finding 12 to enable agencies to include their approach for compliance with the Trash Amendments, whether Track 1 or Track 2, within the Water Quality Improvement Plans or their respective JRMPs, or in a combination of the Water Quality Improvement Plans and JRMPs. TIO Order A.2.d should also be deleted.
6. As recognized by the State Water Resources Control Board and other Regional Boards throughout California, transient encampments have been identified as a non-point source of trash. Public works departments can address some of the consequences of homelessness but not the root causes. While the Regional Water Board's keen interest in tackling the trash and debris associated with transient encampments within flood control infrastructure is recognized, this interest needs to be addressed using an alternative non-point source regulatory construct that includes all responsible parties and is not tied to compliance with the municipal stormwater Permit.

TIO Finding 9.d. seeks to designate "transient encampments" in the San Diego Watershed as "specific land use or locations determined to generate substantial amounts of trash," and requires permittees in the San Diego River Watershed Management Area to develop plans to address trash runoff from the relevant areas of land affected by transient encampments.

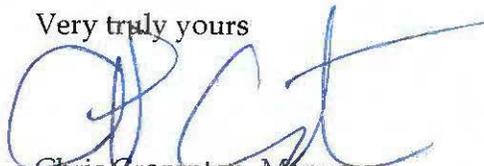

Sections III.L.2.d and IV.A.3.d of the Trash Amendments provides that a permitting authority may determine that specific land uses or locations generate substantial amounts of trash, and that in the event this determination is made, the permitting authority may require the MS4 to comply with IV.A.3.a.1 (Track 1) or IV.A.3.a.2 (Track 2). However, the San Diego Watershed is a large geographic area, and is not a specific location, such as a park, stadium, school, campus, or road, all examples provided in the Trash Amendments. Further, "transient encampments," if this term is meant to exclude specific grounds designated as recreational campground, is not an otherwise sanctioned "land use." The requirement to address trash generated within the entirety of the San Diego Watershed as a result of "transient encampments," is thus overbroad and ambiguous, and fails to identify the "specific land uses or locations" for purposes of Sections III.L.2.d and IV.A.3.d of the Trash Amendments. Further, the requirement to address "how trash generated from transient encampments will be addressed" raises a myriad of other issues, including feasibility, and, importantly, constitutional concerns, especially under the Fourth and Fifth Amendments.

- o In light of the above considerations, it is requested that Regional Board staff strike the second paragraph of Finding 9.d, and also strike Order A.4, in favor of considering alternative regulatory mechanisms outside of the Trash Amendments, which have the capability of addressing the issue.

In addition to the above comments, as various letters submitted by cities subject to the TIO have set forth, the TIO represents a state agency order directed to local government and requiring those local governments to expend funds to implement a new program or higher level of service, i.e., the requirements set forth in the TIO. As such, the TIO is a state mandate for which funding has not been provided, and thus is subject to the provisions of Calif. Const. article XIII B, section 6.

Thank you for your attention to our comments. Please contact Richard Boon at (714) 955-0670, with any questions.

Very truly yours

Ms. Christina Arias  
RWQCB – San Diego Region  
2375 Northside Drive, Suite 100  
San Diego, CA 92108

Dear Ms. Arias:

Re: Comment – Tentative Order  
No. R9-2016-0205 (786088 C. Arias)

The County of Riverside (County) appreciates this opportunity to provide comment on the Draft Investigative Order to address State Water Board Resolution No. 2015-0019 (the Trash Amendments), Tentative Order No. R9-2016-0205 (Draft IO). The County is submitting this comment letter on behalf of itself and the Cities of Murrieta, Temecula, and Wildomar (the "upper Santa Margarita Co-Permittees"), the Municipal Separate Storm Sewer System (MS4) Co-Permittees located within the Riverside County portion of the Santa Margarita Watershed Management Area. The Riverside County Flood Control and Water Conservation District and the City of Menifee are submitting separate comment letters to address their unique concerns. The San Diego Regional Water Board's (Regional Board) careful consideration of each of these comments is appreciated.

The upper Santa Margarita Co-Permittees' comments pertain to several key areas of the Draft IO. Specifically, we request the following modifications:

1. Revise Draft IO Finding 13 to allow flexibility for Co-Permittees to address the Trash Amendments either within a Water Quality Improvement Plan (WQIP) or in their respective Jurisdictional Runoff Management Programs (JRMPS);
2. Delete Draft IO Finding 9.d and Directive A.4, the proposed requirement to address transient encampments under the Regional MS4 Permit for the San Diego River Watershed Management Area (WMA);
3. Assure that the language of the Draft IO is consistent with the language of the Trash Amendments;
4. Clarify a Co-Permittee's ability to change compliance tracks, with justification; and
5. Modify Draft IO Directive A.3 to remove the requirement to report coordination with Caltrans to the Regional Board.

These modifications are requested to ensure that, upon adoption, the requirements of the Draft IO are consistent with the State Board's Trash Amendments.

Re: Comment – Tentative Order

No. R9-2016-0205 (786088 C. Arias)

**COMMENT # 1 – REVISE DRAFT IO FINDING 13 TO ALLOW FLEXIBILITY FOR CO-PERMITTEES TO ADDRESS THE TRASH AMENDMENTS WITHIN THE WQIP, OR RESPECTIVE JRMPS**

Finding 13 states that the Regional Board intends that MS4 permittees would "incorporate the requirements of the Trash Amendments into the [WQIPs] after renewal of the regional MS4 Permit." Incorporation of trash controls into WQIPs would effectively require that trash be addressed on a watershed scale. We believe that this proposed approach would be inconsistent with the intent of the State Board in adopting the Trash Amendments and the wrong policy choice for the following reasons.

First, the State Board intended for the Trash Amendments to be addressed at the jurisdictional level. For example, Trash Amendments Chapter IV.A.3.a(1) states that Track 1 shall be implemented by MS4 permittees, "in their jurisdictions." Chapter IV.A.3.a(2) states that Track 2 shall be implemented "within either the jurisdiction of the MS4 permittee or within the jurisdiction of the MS4 permittee and contiguous MS4 permittees." This language indicates a clear State Board intent that trash controls be adopted within jurisdictions, not watersheds. This makes sense, as many areas which are sources for trash in a watershed are not within MS4 permittee jurisdiction (e.g., federal, state, and tribal lands).

Second, incorporation of trash control provisions into the WQIP could result in requirements which exceed the scope of the efforts intended by the State Board in adopting the Trash Amendments. For example, Regional MS4 Permit Provisions B3.b(1)(b)-(2) set forth that in developing or revising a WQIP, watershed Co-Permittees must collaborate to develop jurisdictional strategies, optional jurisdictional strategies, and watershed management area strategies, to be implemented in a tiered fashion to address the watershed's identified highest priority water quality conditions. Placing Trash Amendment requirements into the WQIP would require that all Co-Permittees perform these steps to address trash. However, Trash Amendments Chapter IV.A.3.a(1)-(2) provides that compliance with the trash discharge prohibition shall be achieved through implementation of Track 1 or 2, and clearly prescribes and defines the trash control strategies which must be implemented. These prescribed strategies do not include requirements for development or implementation of tiered optional jurisdictional or watershed management area strategies.

This regulatory misfit also applies to monitoring. Regional MS4 Permit Provisions B.4 and B.5 require that WQIPs include watershed monitoring for the highest priority water quality conditions. Trash Amendments Chapter IV.A.6 also sets forth trash monitoring and reporting programs, the requirements of which vary depending upon which Track a Co-Permittee chooses and the specifics detailed within each individual Co-Permittee's developed monitoring plan. The upper Santa Margarita Co-Permittees anticipate that within the Santa Margarita WMA, different Co-Permittees may select different Tracks. Further, it is anticipated that significant differences will exist among the Co-Permittees' respective Track 2 strategies and their resultant monitoring programs. This anticipated level of specificity in individual jurisdictional trash monitoring programs will be significantly and unnecessarily burdensome to incorporate into a watershed-wide monitoring program, which aims to measure attainment of watershed goals for trash.

The upper Santa Margarita Co-Permittees submit that the State Board adopted the Trash Amendments with the intent that they would be implemented at the jurisdictional scale, so as to avoid conflicts with watershed-based planning documents both in terms of the development and implementation of trash control strategies, and in monitoring and reporting. For these reasons, the Draft IO should not require that the Trash Amendment requirements be incorporated into WQIPs, but instead Co-Permittees should have the flexibility to address trash on a jurisdictional or watershed scale, at their discretion. Therefore, our request is that the Regional Board revise the last sentence of Draft IO Finding 13 as follows (recommended revision in *italics*):

Re: Comment – Tentative Order  
No. R9-2016-0205 (786088 C. Arias)

Through the issuance of this Order pursuant to Water Code section 13267, the San Diego Water Board intends the MS4 permittees *either* to incorporate the requirements of the Trash Amendments into the Water Quality Improvement Plans *or into their Jurisdictional Runoff Management Plans* after renewal of the Regional MS4 Permit.

**COMMENT # 2: DELETE DRAFT IO FINDINGS 9.d AND DIRECTIVE A.4, THE PROPOSED REQUIREMENT TO ADDRESS TRANSIENT ENCAMPMENTS UNDER THE REGIONAL MS4 PERMIT FOR THE SAN DIEGO RIVER WMA**

Draft IO Finding 9.d and Directive A.4 requires certain Co-Permittees within the San Diego River WMA to address trash from transient encampments. While this requirement does not apply to the upper Santa Margarita Co-Permittees, we believe that this requirement should not be contained in the IO.

Transient encampments are just that, transient. Encampment locations, size, and the numbers of inhabitants within them cannot be known by MS4 Co-Permittees at any given moment, because these factors are constantly in flux. Thus, these encampments are fundamentally non-point sources of trash, and not appropriate for regulation in an NPDES permit. In fact, as the comment letter being filed concurrently by the California Stormwater Quality Association (CASQA) sets forth, the State Board in responses to comments on the Trash Amendments suggested that non-point source trash should be addressed by specific waste discharge requirements or waivers. (See CASQA comment letter, Issue #3.)

It is evident in the language of Chapter IV.A.3.d of the Trash Amendments that the State Board did not intend to require Co-Permittees to address non-point, mobile sources of trash throughout an entire watershed. Instead, the State Board focused on the targeting of specific locations or land uses which might generate high amounts of trash. This is evidenced in the Chapter's language, which directs Regional Boards to include "specific *land uses* or *locations* (e.g., parks, stadia, schools, campuses, or roads leading to landfills)" (emphasis added), if those specific locations have been determined to generate substantial amounts of trash. Transient encampments which move throughout a watershed are neither a specific land use nor a specific location.

Moreover, transient encampment locations may be located in areas that are not under MS4 Co-Permittee control (e.g., such as on Federal, tribal, state or private lands); this severely limits the Co-Permittees' capability to address trash from transient encampments. Similarly, as the Trash Amendments' Track 1 compliance option requires installation of full capture devices to treat MS4 discharges from priority land use areas, the Co-Permittees' ability to implement Track 1 to address transient encampments would be limited. Also, transient encampments often can be located within receiving waters themselves. Trash generated in encampments under these conditions does not ever enter the MS4, and would thereby constitute a discharge which is beyond the scope of the MS4 permit. Last, we note that a Track 2 approach requiring monitoring and demonstration of full capture would be extremely challenging given the diffuse and constantly mobile nature of transient encampments. Therefore, we request that the Regional Board *delete Draft IO Finding 9.d and Directive A.4 and instead regulate trash from transient encampments pursuant to Trash Amendments Chapter IV.A.4.*

**COMMENT # 3: ASSURE THAT THE LANGUAGE OF THE DRAFT IO IS CONSISTENT WITH THE LANGUAGE OF THE TRASH AMENDMENTS**

CASQA's comment letter, as filed concurrently on this matter, sets forth in Issue #2 how the findings in the Draft IO need to be modified to be consistent with the Trash Amendments. We incorporate such comments

Re: Comment – Tentative Order  
No. R9-2016-0205 (786088 C. Arias)

as if set forth in full and respectfully request the Regional Board to make the language modifications requested by CASQA.

**COMMENT # 4: PROVIDE CLARIFICATION OF A CO-PERMITTEE'S ABILITY TO CHANGE COMPLIANCE TRACKS, WITH JUSTIFICATION**

Co-Permittees must be provided with the ability to change their initial determination of which compliance Track to pursue, without being at risk of non-compliance with the trash discharge prohibition. California is a pioneer in implementing statewide requirements for MS4s to address trash, and because of that "leading edge" stance, the Co-Permittees will face challenges and the need to absorb lessons learned. For example, while we understand that some Co-Permittees have expressed an initial preference for Track 1 because of its simplicity and the compliance certainty it provides, due to structural differences among various drainage and flow collection structures in a watershed, installation of full capture systems may be cost-prohibitive or not structurally possible in certain areas. It is highly likely that a discovery like this would occur after a Co-Permittee's selection of compliance Track.

Enabling Co-Permittees to change tracks during the implementation period, so long as sufficient justification is provided, would provide appropriate flexibility to implement this 10-year program. Therefore, our recommendation is that the Regional Board *revise the Draft IO to provide clarification of a Co-Permittee's ability to change compliance Tracks, with justification.*

**COMMENT # 5: MODIFY DRAFT IO DIRECTIVE 3 TO REMOVE REQUIREMENTS TO REPORT COORDINATION WITH CALTRANS TO THE REGIONAL BOARD**

Trash Amendments Chapter IV.A.3.b requires that "the Department and MS4 permittees that are subject to the provisions of Chapter IV.A.3.a herein shall coordinate their efforts" in the implementation of Track 1 or 2. Additionally, various Regional MS4 Permit provisions require coordination with Caltrans. The upper Santa Margarita Co-Permittees currently coordinate with Caltrans on various issues, and will continue to coordinate with them, including, as required on implementation of the Trash Amendments.

Directive A.3 of the Draft IO requires the Co-Permittees subject to the Order to provide a report describing how they will coordinate with Caltrans. The upper Santa Margarita Co-Permittees submit that the requirement to produce yet another report and plan for coordination is over-burdensome, unnecessary, and not required under the Trash Amendments. Further, the Regional Board does not specify how it intends to utilize this submittal. Our recommendation is that the Regional Board *revise Draft IO Directive A.3 to require coordination with Caltrans, as applicable, but remove the requirement to describe this coordination in a submittal to the Regional Board.*

In summary, the upper Santa Margarita Co-Permittees request that the Regional Board revise the Draft IO to be consistent with the Trash Amendments by (1) revising Draft IO Finding 13 to allow flexibility for Co-Permittees to address the Trash Amendments either within the WQIP or their respective JRMPs, (2) deleting Draft IO Finding 9.d, and Directive A.4, and instead regulating trash from transient encampments pursuant to Trash Amendments Chapter IV.A.4, (3) assuring that the language of the Draft IO is consistent with the language of the Trash Amendments, (4) revising the Draft IO to provide clarification of a Co-Permittee's ability to change compliance Tracks, with justification, and (5) revising Draft IO Directive A.3 to require coordination with Caltrans, as applicable, but removing the requirement to describe this coordination in a submittal to the Regional Board.

December 14, 2016

Ms. Christina Arias

Re: Comment – Tentative Order

No. R9-2016-0205 (786088 C. Arias)

The upper Santa Margarita Co-Permittees are committed to water quality in the Santa Margarita WMA, and look forward to the continued collaboration with Regional Board staff. Thank you for your consideration of these comments. If you have any questions, please contact me at [shorn@rceo.org](mailto:shorn@rceo.org) or 951.955.1110.

Very truly yours,

STEVE HORN

Principal Management Analyst

RIVERSIDE COUNTY FLOOD CONTROL  
AND WATER CONSERVATION DISTRICT

December 14, 2016

*Sent via email: [sandiego@waterboards.ca.gov](mailto:sandiego@waterboards.ca.gov)*

Ms. Christina Arias  
RWQCB – San Diego Region  
2375 Northside Drive, Suite 100  
San Diego, CA 92108

Dear Ms. Arias:

Re: Comment – Tentative Order  
No. R9-2016-0205 (786088 C. Arias)

The Riverside County Flood Control and Water Conservation District (District) appreciates this opportunity to provide comment on the draft investigative order to address State Water Board Resolution No. 2015-0019 (the Trash Amendments), Tentative Order No. R9-2016-0205 (Draft IO). Comments set forth herein are specific to the District. The County of Riverside and the Cities of Murrieta, Temecula, and Wildomar (the "upper Santa Margarita Co-Permittees") will submit a separate joint comment letter. Without waiving the District's position that it should not be included within the Draft IO, the District concurs with each of the comments of the upper Santa Margarita Co-Permittees, and incorporates those comments herein by reference. The City of Menifee will also submit a separate comment letter to address its unique concerns. The San Diego Regional Water Quality Control Board's (Regional Board) careful consideration of each of these comments is appreciated.

The District's comments pertain to Draft IO Section 4, Persons Responsible for the Discharge of Trash, and Section 13, Water Quality Improvement Plans (WQIPs). Specifically, we request the following modifications:

- Remove the District as a "Person Responsible for the Discharge of Trash" under Finding 4 of the Draft IO, as the District does not have regulatory authority over priority land uses and modify the language of Provision A.1 to set forth that "Each MS4 permittee *listed in Finding 4* must, etc."; and
- Revise Draft IO Finding 13 to allow flexibility for Co-Permittees to address the Trash Amendments either within a WQIP or in their respective Jurisdictional Runoff Management Programs (JRMPs).

These modifications are requested to ensure that, upon adoption, the requirements of the Draft IO are consistent with the State Board's Trash Amendments.

**COMMENT # 1 – REMOVE THE DISTRICT AS A "PERSON RESPONSIBLE FOR THE DISCHARGE OF TRASH" UNDER FINDING 4 OF THE DRAFT IO, AS THE DISTRICT DOES NOT HAVE REGULATORY AUTHORITY OVER PRIORITY LAND USES**

Chapters IV.A.3.a and IV.A.5.a of the Trash Amendments require that in implementing the Trash Amendments, Regional Water Boards must place requirements into NPDES permits for "MS4 permittees *with regulatory authority over PRIORITY LAND USES*" (emphasis added). This language highlights the State Board's decision to implement a land-use based approach toward addressing trash, and its recognition that Co-Permittees can vary significantly in their structure and function. Vital to the Amendments' land-use based approach is the need for land use authority to condition development projects and require retrofit of street-level drainage structures to capture trash (i.e., implement Track 1 controls), and utilize police powers to create trash control ordinances, inspect property, and enforce those ordinances (i.e., implement Track 2 controls). The Riverside County Flood Control and Water Conservation District Act (Act 6642 of State Legislature) does not afford it with land use authority or police powers to control new or existing development. Additionally, the District does not maintain street-level drainage and flow collection structures, such as street catch basins, which most typically collect trash from high priority land use areas.

Therefore, to recognize the District's unique function and to remain consistent with the Trash Amendments, we recommend that the Draft IO remove the District from Draft IO Finding 4 and modify Provision A. 1 to read as follows (recommended revision in *italics*):

1. **Written Notices.** Each MS4 permittee *listed in Finding 4* must submit to the San Diego Regional Water Quality Control Board, a written notice stating whether the MS4 permittee will implement Track 1 or Track 2 to comply with the trash discharge prohibition in the Ocean Plan and ISWEBE Plan.

**COMMENT # 2 - REVISE DRAFT IO FINDING 13 TO ALLOW FLEXIBILITY FOR CO-PERMITTEES TO ADDRESS THE TRASH AMENDMENTS WITHIN THE WQIP, OR RESPECTIVE JRMPS**

The upper Santa Margarita Co-Permittee's comment letter, as filed concurrently on this matter, sets forth in Comment #1 how the Regional Board's proposal to require that Co-Permittees address trash in WQIPs would be inconsistent with the intent of the State Board in adopting the Trash Amendments, and the wrong policy choice for addressing trash. The District concurs with each of these comments. However, while the District submits that it is not a jurisdiction "with regulatory authority over priority land uses" and thus should not be covered under the Draft IO, because the District is a Co-Permittee under the Regional MS4 Permit and is subject to WQIP requirements under that permit, it has specific concerns regarding Draft IO Finding 13.

Regional MS4 Permit Provision B.3.a requires that any priority water quality conditions listed in the WQIP include watershed-based interim and final goals; if the Trash Amendment requirements are incorporated into a WQIP, such watershed-based goals would need to be developed for trash. This is of concern to the District, because the Regional MS4 Permit requires periodic assessment of attainment of interim and final watershed goals, and adaptation of strategies as a watershed to meet those goals, when necessary. These requirements could result in the District having to implement such strategies when, as previously noted, the Trash Amendments are not applicable to the District. Moreover, the

Ms. Christina Arias  
Re: Comment – Tentative Order  
No. R9-2016-0205 (786088 C. Arias)

RB9 001966  
- 3 -

December 14, 2016

District is concerned that pursuant to Trash Amendments Chapters IV.A.3.a(1)-(2), compliance with the trash discharge prohibition can only be achieved through implementation of Track 1 or 2. If watershed assessments revealed that more rigorous watershed strategies were necessary to meet interim or final watershed goals for trash, the District might be required to implement strategies beyond its authority, but without being afforded compliance with the Trash Amendment's discharge prohibition.

The Trash Amendments do not require development of watershed goals for trash. Therefore, because development of such watershed goals would exceed Trash Amendment requirements, and because the intent of the State Board in adopting the Trash Amendments was that they be addressed at the jurisdictional level, and to avoid the regulatory complexity and confusion noted above, the District joins with the upper Santa Margarita Co-Permittees in requesting that the Regional Board revise the last sentence of Draft IO Finding 13 as follows:

Through the issuance of this Order pursuant to Water Code section 13267, the San Diego Water Board intends the MS4 permittees *either* to incorporate the requirements of the Trash Amendments into the Water Quality Improvement Plans *or into their Jurisdictional Runoff Management Plans* after renewal of the Regional MS4 Permit.

The District is committed to water quality in the Santa Margarita Watershed Management Area, and looks forward to the continued collaboration with Regional Board staff. Thank you for your consideration of these comments. If you have any questions, please contact me at smckibbi@rcflood.org or 951. 955.1273.

Very truly yours,

STUART E. MCKIBBIN  
Chief of Watershed Protection Division

**Re: Comment- Tentative Order No. R9-2016-0205**

Dear Mr. Gibson:

The City of Lake Forest ("City") has reviewed Tentative Order No. R9-2016-0205, a draft of the *Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems Draining the Watersheds within the San Diego Region to Submit Technical and Monitoring Reports Pertaining to the Control of Trash in Discharges from Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays, and Estuaries in the San Diego Region* ("Draft Order"). As an entity subject to the Draft Order, which is intended to fulfill the requirements of the Amendment to the Water Quality Control Plan for Ocean Waters ("Ocean Plan") and for Inland Surface Waters, Enclosed Bays, and Estuaries ("ISWEBE Plan") of California (collectively the "Trash Amendments"), the City appreciates the opportunity to provide comments.

For the reasons set forth in this letter, the City requests that the San Diego Regional Water Quality Control Board ("Regional Board") not issue the Draft Order until a source of funding and State guidelines are provided and remove requirements that exceed the scope and intent of the Trash Amendments.

### **1. The Draft Order Is Premature**

The State's guidelines on Track 2 are not yet available. This leaves uncertainty regarding issues, especially interjurisdictional matters, such as how a downstream MS4 monitors and evaluates compliance under Track 2 when upstream MS4s continue to discharge trash into a common MS4.

Without guidance from the State, it is difficult to make an informed choice between Track 1 and Track 2. Similarly, if the City wishes to switch tracks, there is no information regarding how or whether this can be accomplished. The City requests that the Regional Board issue

the Draft Order after the State guidance is available, so that the City can make a properly informed selection.<sup>1</sup>

## 2. The Draft Order Exceeds the Mandates in the Trash Amendments

The City is concerned that the Draft Order imposes requirements on the City that are not required in the Trash Amendments and requests that these requirements and related findings be removed from the Draft Order. The Trash Amendments require the Regional Board to modify, re-issue, or adopt an MS4 permit to add requirements implementing the Trash Amendments for dischargers permitted pursuant to Clean Water Act Section 402(p) or to:

Issue an order pursuant to Water Code section 13267 or 13383 requiring the MS4 permittee to submit, within three (3) months from receipt of the order, written notice to the PERMITTING AUTHORITY stating whether such MS4 permittee will comply with the prohibition of discharge under Chapter IV.A.3.a.1 (Track 1) or Chapter IV.A.3.a.2 (Track 2). ... Within eighteen (18) months of the receipt of the Water Code section 13267 or 13383 order, MS4 permittees that have elected to comply with Track 2 shall submit an implementation plan to the PERMITTING AUTHORITY that describes: (i) the combination of controls selected by the MS4 permittee and the rationale for the selection, (ii) how the combination of controls is designed to achieve FULL CAPTURE SYSTEM EQUIVALENCY, and (iii) how FULL CAPTURE SYSTEM EQUIVALENCY will be demonstrated. The implementation plan is subject to approval by the PERMITTING AUTHORITY.<sup>2</sup>

The Trash Amendments thus only require a Water Code section 13267 or 13383 order to direct MS4 Permittees to select between Track 1 and Track 2, and if selecting Track 2, to submit an implementation plan. Requirements in the Draft Order to coordinate with Caltrans and to address transient encampments exceed the direction in the Trash Amendments. For these reasons, the City requests removal of Findings 9.c and 9.d and Provisions A.3 and A.4 from the Draft Order.

### a. Remove Requirements to Coordinate with Caltrans (Draft Order Finding 9.c and Section A.3)

The Draft Order requires the City to describe how it “will coordinate ... efforts to install, operate, and maintain full capture systems, multi-benefit projects, and other controls with Caltrans in significant trash generating areas and/or priority land uses” (“Caltrans Requirements”).<sup>3</sup> As noted above, the Trash Amendments only require an investigative

<sup>1</sup> Section 13267 of the Water Code does not create any authority for the Regional Board to require an implementation plan. This section only authorizes an investigation into the quality of waters or a monitoring program report. (Water Code, § 13267, subds. (a), (b)(1); see also State Water Resources Control Board, *Water Quality Enforcement Policy*, May 20, 2010, Appx. A, § C.3.)

<sup>2</sup> Ocean Plan Chapter III.L.4.a(1)A, B and ISWEBE Plan Chapter IV.A.5.a(1)A, B.

<sup>3</sup> Draft Order, Finding 9.c and Section A.3.

order to address the selection of Track 1 or 2; they do not require the Regional Board to address the City's role in coordinating with Caltrans. Requiring the City to describe how it will coordinate with Caltrans exceeds the direction in the Trash Amendments.

The City is concerned that including the Caltrans Requirements in the Draft Order is also unnecessarily duplicative. First, the MS4 Permit already requires the City to coordinate with Caltrans in controlling the contribution of pollutants.<sup>4</sup> Including additional requirements in the Draft Order appears to be duplicative of the City's obligations under the MS4 Permit's WQIP provisions. Second, requiring a description of how the City will coordinate with Caltrans shifts Caltrans' responsibility to the City. Under the Trash Amendments, Caltrans is required to develop an implementation plan identifying significant trash generating areas, describing trash controls, and describing how it will demonstrate full capture system equivalency.<sup>5</sup> The City's obligation under the Trash Amendments is to cooperate in Caltrans' efforts. Caltrans is in the best position to identify what cooperative efforts are needed from the City. The Draft Order shifts the obligation to identify cooperative efforts to the City.

The City has and intends to continue cooperating with Caltrans to control the contribution of pollutants to the City's MS4. Because the Draft Order duplicates provisions already in the MS4 Permit and shifts Caltrans' responsibilities on the City, the City requests that the Caltrans Requirements be removed from the Draft Order.

**b. Remove Requirements to Address Transients Encampments (Draft Order Finding 9.d and Section A.4)**

The City is concerned that the Transient Encampment Requirements (defined below) exceed the scope and intent of the Trash Amendments in three ways and make the Draft Order an inappropriate mechanism to impose such requirements. First, the City's land use authority does not extend to transient encampments. Second, implementing Track 1 and/or Track 2 will not control the trash issues described in the Draft Order. Third, significant constitutional and statutory restraints limit the City's ability to address trash from these programs. Although the Transient Encampment Requirements do not apply directly to the City, the City has concerns about these or similar requirements being applied beyond the San Diego River. For these reasons, the City requests that the Transient Encampments Requirements be removed from the Draft Order and that the Regional Board consider alternative regulatory mechanisms targeted to specific areas known to generate the greatest amounts of trash.

***i. Land Use Authority Does Not Address Transient Encampments***

The Trash Amendments are written in terms of the City's "regulatory authority over land uses"<sup>6</sup> and authorize the Regional Board to make a determination that a specific land use or location generates a substantial amount of trash.<sup>7</sup> If the Regional Board makes this

<sup>4</sup> San Diego Regional Water Quality Control Board Order No. R9-2013-0001, Provisions B.3.b.(1)(c); E.1.a.(5).

<sup>5</sup> Ocean Plan Chapter III.L.4.b(1) and ISWEBE Plan Chapter IV.A.5.b(1).

<sup>6</sup> Ocean Plan Chapter III.L.2.a and ISWEBE Plan Chapter IV.A.3.a.

<sup>7</sup> Ocean Plan Chapter III.L.2.d and ISWEBE Plan Chapter IV.A.2.d (emphasis added).

determination, it may require the MS4 to comply with Track 1 or Track 2 with respect to such land uses or locations.<sup>8</sup>

The Draft Order identifies “transient encampments in the San Diego River watershed” as generating substantial trash in amounts that adversely affect beneficial uses or cause nuisance in the San Diego River.<sup>9</sup> It then requires certain MS4 permittees to develop “plans to address trash runoff from the relevant areas of land affected by transient encampments through Track 1 or Track 2 controls” (“Transient Encampment Requirements”).<sup>10</sup>

The “San Diego River watershed” and “transient encampments” are not priority land uses as defined in the Trash Amendments. Priority land uses are high density residential, industrial, commercial, mixes of these uses, and public transportation stations.<sup>11</sup> The San Diego River watershed is also not a specific land use or location; instead, it is a vast geographical designation covering multiple local agency jurisdictions. Similarly, transient encampments are not specific land uses or locations; they are generally illegal activities that occur on a wide range of land use designations.

The City is concerned that including requirements to address transient encampments represents a dramatic divergence from the land use-based structure of the Trash Amendments, and, as a result, distracts from the intended focus on and prioritization of specific land-use based controls.

***ii. Track 1 and 2 Land Use Controls Will Not Effectively Control Trash From Transient Encampments***

The intent of the Trash Amendments is “to allow MS4s to allocate trash-control resources to the developed areas that generate the highest sources of trash.”<sup>12</sup> The City is concerned, however, that Tracks 1 and 2, as required by the Draft Order and future MS4 Permit, will be largely ineffective at addressing a complex social issue spanning multiple land uses and locations because these controls are not designed to capture trash from transient encampments.

The Draft Order relies on information received in regard to Item 5 on the Regional Board’s May 14, 2014 agenda (“Transient Encampment Information”), for the determination that transient encampments in the San Diego River watershed generate substantial trash. The Executive Officer’s report for that item states, in part:

Transient encampments within the San Diego River present the largest challenge for trash abatement for both the municipal storm water Copermittees and Caltrans. Specific and lengthy procedures must be followed to assist and disperse identified transient populations and post notices of abatement and intent to cleanup sites prior to initiation of trash removal at these sites.<sup>13</sup>

<sup>8</sup> *Ibid.*

<sup>9</sup> Draft Order, Finding 9.d.

<sup>10</sup> Draft Order, Finding 9.d; Section A.4.

<sup>11</sup> Ocean Plan Appendix I and ISWEBE Plan Appendix A.

<sup>12</sup> Staff Report for Trash Amendments, p. 13.

<sup>13</sup> Emphasis added. The 2013, 2014, and 2015 State of the River reports, cited in the Draft Order, also note that “trash/debris [and] homeless encampments” were observed at all monitoring sites. See, San Diego River

Transient encampments within the river – i.e., encampments that discharge directly to a receiving water – are not discharges from an MS4. A Draft Order or MS4 permit regulating discharges from an MS4 should not regulate transient encampments within a receiving water because these encampments do not cause or contribute to discharges to or from an MS4. Further, the City’s authority to implement BMPs within a water of the United States is limited.

As noted above, even though the Draft Order relies on the Transient Encampment Information, it directs certain MS4 permittees to address transient encampments within the entire San Diego River watershed using Track 1 or 2. In addition to the problems with this approach noted above, the City is concerned that such overreach will be ineffective. It is possible that transient encampments may be located within priority land use areas that discharge to an MS4. In these cases, trash from the encampments will be addressed, together with all other sources of trash from priority land uses, through implementation of the Trash Amendments based on priority land uses. To the extent transient encampments may be located in areas other than priority land uses that discharge to an MS4, the Trash Amendments explicitly prioritize control of trash through the use of land use designations and specific locations. As noted above, transient encampments are not land use designations or specific locations. It is contrary to the intent of the Trash Amendments to direct MS4 permittees to address trash by means other than land use designations or specific locations.

It is also possible that transient encampments may be located within an MS4 that discharges to the San Diego River. There are two issues associated with regulating discharges of trash from transient encampments located within an MS4. As noted above, a transient encampment within an MS4 is not a land use designation or specific location. It is contrary to the express intent of the Trash Amendments to require controls unrelated to an MS4’s land use authority. Further, even if an MS4 implements Track 1 or 2 with respect to such discharges, the Trash Amendments expect that full capture systems will be installed where installation is not cost-prohibitive,<sup>14</sup> but full capture systems are generally not designed or intended to address such trash discharges. This is because the currently certified devices are designed to be installed primarily in catch basins and pipes.<sup>15</sup> Transient encampments within MS4s are often found in close proximity to the river, after the places where full capture devices are installed. The City is unaware of any certified full capture system or device applicable to transient encampments. As a result, Track 1 and Track 2 are poorly designed to address trash generated by transient encampments.

### ***iii. Statutory and Constitutional Provisions Limit City’s Ability to Address Trash from Transient Encampments***

---

Park Foundation, State of the River Report, Water Quality Monitoring Supplemental Report, Table E.3 (2013-2015). Each monitoring site is located within a reach or tributary of the San Diego River, suggesting that the observed encampments were located within the San Diego River. *Id.* at Table E.1.

<sup>14</sup> Ocean Plan Chapter III.L.2.a.(2) and ISWEBE Plan Chapter IV.A.3.a.(2)

<sup>15</sup> Certified full capture devices include those certified by the Los Angeles Regional Water Quality Control Board prior to April 7, 2015 and those listed in Appendix I of the Bay Area-wide Trash Capture Demonstration Project, Final Project Report (May 8, 2014). Ocean Plan Appendix I and ISWEBE Plan Appendix A.

Finally, to the extent that transient encampments are located within a non-priority land use area in the San Diego River watershed, including within the MS4 and within the riverbed, MS4 permittees may need to undertake activities other than Track 1 or Track 2 to address the trash. MS4 permittees face significant constitutional and statutory restraints on their ability to address trash from these encampments. As the Executive Officer's Report for Item 5 on the Regional Board's May 14, 2014 meeting notes, "[s]pecific and lengthy procedures must be followed to assist and disperse identified transient populations and post notices of abatement and intent to cleanup sites prior to initiation of trash removal[.]" For example, under the Fourth and Fourteenth Amendments, unattended property cannot be searched, seized, destroyed or discarded without reasonable notice and opportunity for the person to reclaim the property.<sup>16</sup> In many cases, local government control over activities associated with transient encampments may be limited under the Eighth Amendment when there is inadequate shelter space in the area.<sup>17</sup> Stormwater controls are ill-suited to address complex issues arising from transient encampments.

Because the San Diego River watershed and transient encampments are not specific land uses or locations, the Draft Order exceeds the scope and intent of the Trash Amendments by requiring control of trash generated from transient encampments in the San Diego River Watershed Management Area. In addition, the Transient Encampment Information identified encampments within the river as presenting the largest challenge for trash abatement, but neither Track 1 nor Track 2 will address trash from encampments within the River because these encampments do not discharge to an MS4. Finally, actions beyond Track 1 and 2 that may be necessary to control trash from transient encampments are circumscribed by constitutional limitations. The complex socioeconomic challenges posed by transient encampments are not an appropriate subject for the Draft Order or a subsequent MS4 permit. For these reasons, the City requests that Finding 9.d and Section A.4 be removed from the Draft Order. It is appropriate for the Regional Board to conduct further studies into the issue of trash from transient encampments, identify specific locations known to generate the greatest amounts of trash, and possibly issue a separate order targeted to controls at those areas.

### **3. Provide a Source of Funding for the State Mandates in the Draft Order**

The Investigative Order and implementation of the Trash Amendments through a renewed MS4 Permit constitute unfunded state mandates. Section 6 of Article XIII B of the California Constitution requires the State to provide a subvention of funds to local agencies any time the Legislature or a state agency requires the local agency to implement a new program or provide a higher level of service under an existing program. The purpose of Section 6 "is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are 'ill equipped' to assume increased financial responsibilities because of the taxing and spending limitations that articles XIII A

<sup>16</sup> U.S. Const. Amends. IV and XIV; see also *Lavan v. City of Los Angeles* (9th Cir. 2012) 693 F.3d 1022, 1032; *Joyce v. City and County of San Francisco* (N.D. Cal. 1994) 846 F.Supp. 843, 863.

<sup>17</sup> See, e.g., *Jones v. City of Los Angeles* (9th Cir. 2006) 444 F.3d 1118, *vacated after settlement* by 505 F.3d 1006.

and XIII B impose.”<sup>18</sup> The section “was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues.”<sup>19</sup>

Government Code section 17556 identifies seven exceptions to the subvention requirement of Section 6, including statutes or executive orders that impose a requirement mandated by a federal law or regulation, which results in costs mandated by the federal government.<sup>20</sup> When considering this exception, California’s Supreme Court determined that requirements which are “animated” by flexible federal laws and regulations do not constitute federal requirements unless, perhaps, the requirements constitute “the only means by which the [flexible] standard could be implemented[.]”<sup>21</sup> To demonstrate the applicability of this exemption, “the party claiming the applicability of an exception bears the burden of demonstrating that it applies.”<sup>22</sup>

The Draft Order constitutes a new program or higher level of service by requiring the City to submit a notice stating: (1) whether the City will implement Track 1 or Track 2; (2) how the City will coordinate with Caltrans to install, operate, and maintain full capture systems, multi-benefit projects, and other controls; and (3) for the cities of San Diego, Santee, El Cajon, La Mesa and the County of San Diego, how trash generated from transient encampments will be addressed. When incorporated into a future MS4 Permit, implementation of the Trash Amendments will also constitute a new program. The activities mandated by the Draft Order and implementation of the Trash Amendments through a future MS4 Permit are referred to in this letter as “Programs.”

The Programs are State mandates. According to the Draft Order, the Programs are required pursuant to state laws, policies and regulations: California’s Porter-Cologne Water Quality Control Act, including sections 13267 and 13383 of the California Water Code, State and Regional Water Quality Control Plans, and State Water Board policies and regulations.<sup>23</sup> The Draft Order also alleges it conforms to and implements “applicable state and federal regulations” and “relevant standards, criteria, and advisories adopted by other state and federal agencies.” No federal regulations, standards, criteria, or advisories are identified as mandating the new programs, however. There is no evidence in the Draft Order that the Programs constitute “the only means” by that the unnamed federal regulations, standards criteria, or advisories could be implemented.<sup>24</sup> Consistent with the Supreme Court’s decision, the Programs are state mandates.

The City does not have a source of funding to dedicate to the Programs and requests that the Regional Board not issue the Draft Order until a source of funding is provided or provide funding to implement the Programs.

<sup>18</sup> *County of San Diego v. State of California* (1997) 15 Cal.4th 68, 81; *County of Fresno v. State of California* (1991) 53 Cal.3d 482, 487.

<sup>23</sup> Draft Order, Finding 1.

<sup>24</sup> *Dep’t of Finance v. Comm’n on State Mandates* (2016) 1 Cal.5th 749, 768.

**Conclusion**

The City takes the region's water quality seriously and appreciates the opportunity to provide comments on the Draft Order. Because the Trash Amendments establish a system that prioritizes trash controls through land use regulations, the City respectfully requests that the Regional Board consider the City's request to provide a means to fund implementation of the chosen Track, delay issuance of the Draft Order until after the State's guidelines and funding are available, and remove the Caltrans Requirements and Transient Encampment Requirements from the Draft Order.

Sincerely,

**Subject:** Comment – Tentative Order No. R9-2016-0205

The City of Dana Point (City) appreciates the opportunity to comment on the Tentative Investigative Order No. R9-2016-0205, an order directing the owners and operators of Phase I MS4s Draining the Watersheds within the San Diego Region to Submit Technical and Monitoring Reports Pertaining to the Control of Trash in the Discharges from Phase I MS4s to Ocean Waters, inland Surface Waters, Enclosed Bays and Estuaries in the San Diego Region (TIO).

The City also appreciated staff's effort to hold the public workshop on December 8, 2016 and looks forward to some needed clarification and resolution to some of the items that were discussed at the workshop. The City provides the following comments:

1. It is understood that the State Water Resources Control Board (SWRCB) is finalizing the list of "certified" BMPs, including Low Impact Development (LID) type BMPs, and guidance documents on topics such as demonstration of full capture equivalency and proposing equivalent alternative land uses, etc. It is imperative that the MS4 permittees have these final documents available to them prior to issuance of this Investigative Order so the MS4 permittees have all the information available in order to conduct a comprehensive evaluation and make well-informed decisions regarding the selection of Track 1 or Track 2.<sup>1</sup>

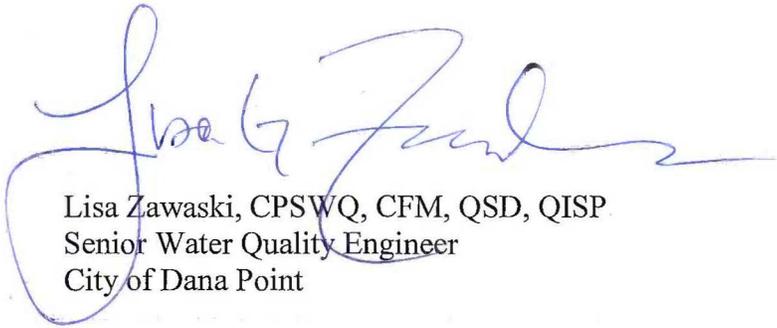

---

<sup>1</sup> As the Regional Board is likely aware, the City has already undertaken significant efforts, per the requirements of the Regional Permit, and the prior S. Orange County MS4 Permit(s), to install, operate, and maintain Best Management Practice (BMP) systems for storm drains, including inlet filters, trash separation units and diversions that capture dry weather flows within the City's MS4. However, to the extent that the TIO can be read to require the City to go above and beyond the BMPs that the City already has in place, the City is concerned that such requirements would appear to constitute an unfunded state mandate for which the City has no fee authority. The City would benefit from understanding how the Regional Board intends for the City to pay for the "full capture systems" or equivalent level of stormwater treatment that the TIO appears to envision.

2. It is unclear why Caltrans and Phase II permittees are not being issued a consistent Investigative Order at the same time. Without clear and consistent requirements, applicable to all regulated parties at the same time, effective cooperation and coordination is challenging.
3. The TIO inappropriately addresses transient encampments as a point source of trash. The State and other Regional Boards consider transient encampments a non-point source of trash. An alternative program or mechanism is needed to address this issue, recognizing limits of land use authority and significant constitutional and statutory restraints.
4. Although the TIO provides for electronic submittal of documents, it specifies a CD-ROM or CD, however many new computers do not have optical drives. Can email or file sharing options (such as hightail or dropbox) also be provided?

Thank you for your consideration of these comments. If you have any questions, please contact me at (949) 248-3584 or [lzawaski@danapoint.org](mailto:lzawaski@danapoint.org).

Respectfully,

Attn: Christina Arias

**Re: Comment - Tentative Order No. R9-2016-0205**

Dear Mr. Gibson:

The City of San Clemente has reviewed Tentative Order No. R9-2016-0205, a draft of the *Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems Draining the Watersheds within the San Diego Region to Submit Technical and Monitoring Reports Pertaining to the Control of Trash in Discharges from Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays, and Estuaries in the San Diego Region* ("Draft Order"). As an entity subject to the Draft Order, which is intended to fulfill the requirements of the Amendment to the Water Quality Control Plan for Ocean Waters ("Ocean Plan") and for Inland Surface Waters, Enclosed Bays, and Estuaries ("ISWEBE Plan") of California (collectively the "Trash Amendments"), the City appreciates the opportunity to provide comments.

For the reasons set forth in this letter, the City requests that the San Diego Regional Water Quality Control Board ("Regional Board") not issue the Draft Order until a source of funding and State guidelines are provided and remove requirements that exceed the scope and intent of the Trash Amendments.

## **1. The Draft Order Is Premature**

The State's guidelines on Track 2 are not yet available. This leaves uncertainty regarding issues, especially interjurisdictional matters, such as how a downstream MS4 monitors and evaluates compliance under Track 2 when upstream MS4s continue to discharge trash into a common MS4.

Without guidance from the State, it is difficult to make an informed choice between Track 1 and Track 2. Similarly, if the City wishes to switch tracks, there is no information regarding how or whether this can be accomplished. The City requests that the Regional Board issue the Draft Order after the State guidance is available, so that the City can make a properly informed selection.

## **2. The Draft Order Exceeds the Mandates in the Trash Amendments**

The City is concerned that the Draft Order imposes requirements on the City that are not required in the Trash Amendments and requests that these requirements and related findings be removed from the Draft Order. The Trash Amendments require the Regional Board to modify, re-issue, or adopt an MS4 permit to add requirements implementing the Trash Amendments for dischargers permitted pursuant to Clean Water Act Section 402(p) or to:

Issue an order pursuant to Water Code section 13267 or 13383 requiring the MS4 permittee to submit, within three (3) months from receipt of the order, written notice to the PERMITTING AUTHORITY stating whether such MS4 permittee will comply with the prohibition of discharge under Chapter IV.A.3.a.1 (Track 1) or Chapter IV.A.3.a.2 (Track 2). ... Within eighteen (18) months of the receipt of the Water Code section 13267 or 13383 order, MS4 permittees that have elected to comply with Track 2 shall submit an implementation plan to the PERMITTING AUTHORITY that describes: (i) the combination of controls selected by the MS4 permittee and the rationale for the selection, (ii) how the combination of controls is designed to achieve FULL CAPTURE SYSTEM EQUIVALENCY, and (iii) how FULL CAPTURE SYSTEM EQUIVALENCY will be demonstrated. The implementation plan is subject to approval by the PERMITTING AUTHORITY.<sup>1</sup>

The Trash Amendments thus only require a Water Code section 13267 or 13383 order to direct MS4 Permittees to select between Track 1 and Track 2, and if selecting Track 2, to submit an implementation plan. Requirements in the Draft Order to coordinate with Caltrans and to address transient encampments exceed the direction in the Trash Amendments. For these reasons, the City requests removal of Findings 9.c and 9.d and Provisions A.3 and A.4 from the Draft Order.

### **a. Remove Requirements to Coordinate with Caltrans (Draft Order Finding 9.c and Section A.3)**

The Draft Order requires the City to describe how it “will coordinate ... efforts to install, operate, and maintain full capture systems, multi-benefit projects, and other controls with

---

<sup>1</sup> Ocean Plan Chapter III.L.4.a(1)A, B and ISWEBE Plan Chapter IV.A.5.a(1)A, B.

Requirements”).<sup>2</sup> As noted above, the Trash Amendments only require an investigative order to address the selection of Track 1 or 2; they do not require the Regional Board to address the City’s role in coordinating with Caltrans. Requiring the City to describe how it will coordinate with Caltrans exceeds the direction in the Trash Amendments.

The City is concerned that including the Caltrans Requirements in the Draft Order is also unnecessarily duplicative. First, the MS4 Permit already requires the City to coordinate with Caltrans in controlling the contribution of pollutants.<sup>3</sup> Including additional requirements in the Draft Order appears to be duplicative of the City’s obligations under the MS4 Permit’s WQIP provisions. Second, requiring a description of how the City will coordinate with Caltrans shifts Caltrans’ responsibility to the City. Under the Trash Amendments, Caltrans is required to develop an implementation plan identifying significant trash generating areas, describing trash controls, and describing how it will demonstrate full capture system equivalency.<sup>4</sup> The City’s obligation under the Trash Amendments is to cooperate in Caltrans’ efforts. Caltrans is in the best position to identify what cooperative efforts are needed from the City. The Draft Order shifts the obligation to identify cooperative efforts to the City.

The City has and intends to continue cooperating with Caltrans to control the contribution of pollutants to the City’s MS4. Because the Draft Order duplicates provisions already in the MS4 Permit and shifts Caltrans’ responsibilities on the City, the City requests that the Caltrans Requirements be removed from the Draft Order.

**b. Remove Requirements to Address Transient Encampments (Draft Order Finding 9.d and Section A.4)**

The City is concerned that the Transient Encampment Requirements (defined below) exceed the scope and intent of the Trash Amendments in three ways and make the Draft Order an inappropriate mechanism to impose such requirements. First, the City’s land use authority does not extend to transient encampments. Second, implementing Track 1 and/or Track 2 will not control the trash issues described in the Draft Order. Third, significant constitutional and statutory restraints limit the City’s ability to address trash from these programs. For these reasons, the City requests that the Transient Encampments Requirements be removed from the Draft Order and that the Regional Board consider alternative regulatory mechanisms targeted to specific areas known to generate the greatest amounts of trash.

***i. Land Use Authority Does Not Address Transient Encampments***

The Trash Amendments are written in terms of the City’s “regulatory authority over land uses”<sup>5</sup> and authorize the Regional Board to make a determination that a specific land use

<sup>2</sup> Draft Order, Finding 9.c and Section A.3.

<sup>3</sup> San Diego Regional Water Quality Control Board Order No. R9-2013-0001, Provisions B.3.b.(1)(c); E.1.a.(5).

<sup>4</sup> Ocean Plan Chapter III.L.4.b(1) and ISWEBE Plan Chapter IV.A.5.b(1).

<sup>5</sup> Ocean Plan Chapter III.L.2.a and ISWEBE Plan Chapter IV.A.3.a.

or location generates a substantial amount of trash.<sup>6</sup> If the Regional Board makes this determination, it may require the MS4 to comply with Track 1 or Track 2 with respect to such land uses or locations.<sup>7</sup>

The Draft Order identifies “transient encampments in the San Diego River watershed” as generating substantial trash in amounts that adversely affect beneficial uses or cause nuisance in the San Diego River.<sup>8</sup> It then requires certain MS4 permittees to develop “plans to address trash runoff from the relevant areas of land affected by transient encampments through Track 1 or Track 2 controls” (“Transient Encampment Requirements”).<sup>9</sup>

The “San Diego River watershed” and “transient encampments” are not priority land uses as defined in the Trash Amendments. Priority land uses are high density residential, industrial, commercial, mixes of these uses, and public transportation stations.<sup>10</sup> The San Diego River watershed is also not a specific land use or location; instead, it is a vast geographical designation covering multiple local agency jurisdictions. Similarly, transient encampments are not specific land uses or locations; they are generally illegal activities that occur on a wide range of land use designations.

The City is concerned that including requirements to address transient encampments represents a dramatic divergence from the land use-based structure of the Trash Amendments, and, as a result, distracts from the intended focus on and prioritization of specific land-use based controls.

***ii. Track 1 and 2 Land Use Controls Will Not Effectively Control Trash From Transient Encampments***

The intent of the Trash Amendments is “to allow MS4s to allocate trash-control resources to the developed areas that generate the highest sources of trash.”<sup>11</sup> The City is concerned, however, that Tracks 1 and 2, as required by the Draft Order and future MS4 Permit, will be largely ineffective at addressing a complex social issue spanning multiple land uses and locations because these controls are not designed to capture trash from transient encampments.

The Draft Order relies on information received in regard to Item 5 on the Regional Board’s May 14, 2014 agenda (“Transient Encampment Information”), for the determination that transient encampments in the San Diego River watershed generate substantial trash. The Executive Officer’s report for that item states, in part:

Transient encampments within the San Diego River present the largest challenge for trash abatement for both the municipal storm

water Copermittees and Caltrans. Specific and lengthy procedures must be followed to assist and disperse identified transient populations and post notices of abatement and intent to cleanup sites prior to initiation of trash removal at these sites.<sup>12</sup>

Transient encampments within the river – i.e., encampments that discharge directly to a receiving water – are not discharges from an MS4. A Draft Order or MS4 permit regulating discharges from an MS4 should not regulate transient encampments within a receiving water because these encampments do not cause or contribute to discharges to or from an MS4.

As noted above, even though the Draft Order relies on the Transient Encampment Information, it directs certain MS4 permittees to address transient encampments within the entire San Diego River watershed using Track 1 or 2. In addition to the problems with this approach noted above, the City is concerned that such overreach will be ineffective. It is possible that transient encampments may be located within priority land use areas that discharge to an MS4. In these cases, trash from the encampments will be addressed, together with all other sources of trash from priority land uses, through implementation of the Trash Amendments based on priority land uses. To the extent transient encampments may be located in areas other than priority land uses that discharge to an MS4, the Trash Amendments explicitly prioritize control of trash through the use of land use designations and specific locations. As noted above, transient encampments are not land use designations or specific locations. It is contrary to the intent of the Trash Amendments to direct MS4 permittees to address trash by means other than land use designations or specific locations.

It is also possible that transient encampments may be located within an MS4 that discharges to the San Diego River. There are two issues associated with regulating discharges of trash from transient encampments located within an MS4. As noted above, a transient encampment within an MS4 is not a land use designation or specific location. It is contrary to the express intent of the Trash Amendments to require controls unrelated to an MS4's land use authority. Further, even if an MS4 implements Track 1 or 2 with respect to such discharges, the Trash Amendments expect that full capture systems will be installed where installation is not cost-prohibitive,<sup>13</sup> but full capture systems are generally not designed or intended to address such trash discharges. This is because the currently certified devices are designed to be installed primarily in catch basins and pipes.<sup>14</sup> Transient encampments within MS4s are often found in close proximity to the river, after the places where full

Each monitoring site is located within a reach or tributary of the San Diego River, suggesting that the observed encampments were located within the San Diego River. *Id.* at Table E.1.

<sup>13</sup> Ocean Plan Chapter III.L.2.a.(2) and ISWEBE Plan Chapter IV.A.3.a.(2)

<sup>14</sup> Certified full capture devices include those certified by the Los Angeles Regional Water Quality Control Board prior to April 7, 2015 and those listed in Appendix I of the Bay Area-wide Trash Capture Demonstration Project, Final Project Report (May 8, 2014). Ocean Plan Appendix I and ISWEBE Plan Appendix A.

capture devices are installed. As a result, Track 1 and Track 2 are poorly designed to address trash generated by transient encampments.

**iii. *Statutory and Constitutional Provisions Limit City's Ability to Address Trash from Transient Encampments***

Finally, to the extent that transient encampments are located within a non-priority land use area in the San Diego River watershed, including within the MS4 and within the riverbed, MS4 permittees may need to undertake activities other than Track 1 or Track 2 to address the trash. MS4 permittees face significant constitutional and statutory restraints on their ability to address trash from these encampments. As the Executive Officer's Report for Item 5 on the Regional Board's May 14, 2014 meeting notes, "[s]pecific and lengthy procedures must be followed to assist and disperse identified transient populations and post notices of abatement and intent to cleanup sites prior to initiation of trash removal[.]" For example, under the Fourth and Fourteenth Amendments, unattended property cannot be searched, seized, destroyed or discarded without reasonable notice and opportunity for the person to reclaim the property.<sup>15</sup> In many cases, local government control over activities associated with transient encampments may be limited under the Eighth Amendment when there is inadequate shelter space in the area.<sup>16</sup>

Because the San Diego River watershed and transient encampments are not specific land uses or locations, the Draft Order exceeds the scope and intent of the Trash Amendments by requiring control of trash generated from transient encampments in the San Diego River Watershed Management Area. In addition, the Transient Encampment Information identified encampments within the river as presenting the largest challenge for trash abatement, but neither Track 1 nor Track 2 will address trash from encampments within the River because these encampments do not discharge to an MS4. Finally, actions beyond Track 1 and 2 that may be necessary to control trash from transient encampments are circumscribed by constitutional limitations. The complex problem of transient encampments is not an appropriate subject for the Draft Order or a subsequent MS4 permit. For these reasons, the City requests that Finding 9.d and Section A.4 be removed from the Draft Order. It is appropriate for the Regional Board to conduct further studies into the issue of trash from transient encampments, identify specific locations known to generate the greatest amounts of trash, and possibly issue a separate order targeted to controls at those areas.

**3. Provide a Source of Funding for the State Mandates in the Draft Order**

The Investigative Order and implementation of the Trash Amendments through a renewed MS4 Permit constitute unfunded state mandates. Section 6 of Article XIII B of the California Constitution requires the State to provide a subvention of funds to local agencies any time the Legislature or a state agency requires the local agency to implement a new program or provide a higher level of service under an existing program.

<sup>15</sup> U.S. Const. Amends. IV and XIV; see also *Lavan v. City of Los Angeles* (9th Cir. 2012) 693 F.3d 1022, 1032; *Joyce v. City and County of San Francisco* (N.D. Cal. 1994) 846 F.Supp. 843, 863.

<sup>16</sup> See, e.g., *Jones v. City of Los Angeles* (9th Cir. 2006) 444 F.3d 1118, *vacated after settlement* by 505 F.3d 1006.

The purpose of Section 6 “is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are ‘ill equipped’ to assume increased financial responsibilities because of the taxing and spending limitations that articles XIII A and XIII B impose.”<sup>17</sup> The section “was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues.”<sup>18</sup>

Government Code section 17556 identifies seven exceptions to the subvention requirement of Section 6, including statutes or executive orders that impose a requirement mandated by a federal law or regulation, which results in costs mandated by the federal government.<sup>19</sup> When considering this exception, California’s Supreme Court determined that requirements which are “animated” by flexible federal laws and regulations do not constitute federal requirements unless, perhaps, the requirements constitute “the only means by which the [flexible] standard could be implemented[.]”<sup>20</sup> To demonstrate the applicability of this exemption, “the party claiming the applicability of an exception bears the burden of demonstrating that it applies.”<sup>21</sup>

The Draft Order constitutes a new program or higher level of service by requiring the City to submit a notice stating: (1) whether the City will implement Track 1 or Track 2; (2) how the City will coordinate with Caltrans to install, operate, and maintain full capture systems, multi-benefit projects, and other controls; and (3) for the cities of San Diego, Santee, El Cajon, La Mesa and the County of San Diego, how trash generated from transient encampments will be addressed. When incorporated into a future MS4 Permit, implementation of the Trash Amendments will also constitute a new program. The activities mandated by the Draft Order and implementation of the Trash Amendments through a future MS4 Permit are referred to in this letter as “Programs.”

The Programs are State mandates. According to the Draft Order, the Programs are required pursuant to state laws, policies and regulations: California’s Porter-Cologne Water Quality Control Act, including sections 13267 and 13383 of the California Water Code, State and Regional Water Quality Control Plans, and State Water Board policies and regulations.<sup>22</sup> The Draft Order also alleges it conforms to and implements “applicable state and federal regulations” and “relevant standards, criteria, and advisories adopted by other state and federal agencies.” No federal regulations, standards, criteria, or advisories are identified as mandating the new programs, however. There is no evidence in the Draft Order that the Programs constitute “the only means” by that the unnamed federal regulations, standards criteria, or advisories could be implemented.<sup>23</sup> Consistent with the Supreme Court’s decision, the Programs are state mandates.

<sup>17</sup> *County of San Diego v. State of California* (1997) 15 Cal.4th 68, 81; *County of Fresno v. State of California* (1991) 53 Cal.3d 482, 487.

<sup>18</sup> *County of Fresno v. State of California* (1991) 53 Cal.3d 482, 487; *Redevelopment Agency v. Commission on State Mandates* (1997) 55 Cal.App.4th 976, 984-985.

<sup>19</sup> Gov. Code, § 17556, subd. (c).

<sup>20</sup> *Dep’t of Finance v. Comm’n on State Mandates* (2016) 1 Cal.5th 749, 768.

<sup>21</sup> *Id.* at p. 769, citing *Simpson Strong-Tie Co., Inc. v. Gore* (2010) 49 Cal.4th 12, 23.

<sup>22</sup> Draft Order, Finding 1.

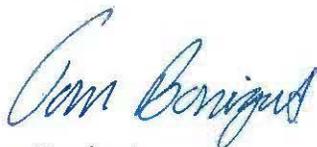

<sup>23</sup> *Dep’t of Finance v. Comm’n on State Mandates* (2016) 1 Cal.5th 749, 768.

The City does not have a source of funding to dedicate to the Programs and requests that the Regional Board not issue the Draft Order until a source of funding is provided or provide funding to implement the Programs.

#### **Conclusion**

The City takes the region's water quality seriously and appreciates the opportunity to provide comments on the Draft Order. Because the Trash Amendments establish a system that prioritizes trash controls through land use regulations, the City respectfully requests that the Regional Board consider the City's request to provide a means to fund implementation of the chosen Track, delay issuance of the Draft Order until after the State's guidelines and funding are available, and remove the Caltrans Requirements and Transient Encampment Requirements from the Draft Order.

Sincerely,

Subject: City of San Diego Comments to Tentative Investigative Order No. R9-2016-0205; Reference 786088: Carias

Dear Ms. Arias:

The City of San Diego (City) appreciates the opportunity to provide comments on TENTATIVE INVESTIGATIVE ORDER NO. R9-2016-0205, AN ORDER DIRECTING THE OWNERS AND OPERATORS OF PHASE I MUNICIPAL SEPARATE STORM SEWER SYSTEMS (MS4s) DRAINING THE WATERSHEDS WITHIN THE SAN DIEGO REGION TO SUBMIT TECHNICAL AND MONITORING REPORTS PERTAINING TO THE CONTROL OF TRASH FROM PHASE I MS4s TO OCEAN WATERS, INLAND SURFACE WATERS, ENCLOSED BAYS AND ESTUARIES IN THE SAN DIEGO REGION released for public review on November 10, 2016 (referred to hereinafter as the "Tentative Investigative Order"). The City of San Diego is committed to reducing trash in our beaches, bays and creeks and offer three key suggestions to improve the efficiency of the City's implementation of the requirements in the Tentative Investigative Order.

The San Diego Water Board released the Tentative Investigative Order to meet the requirements of the Statewide Trash Amendments to the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California (ISWEBE Plan) and the Water Quality Control Plan for Ocean Waters of California (Ocean Plan). Namely, the Tentative Investigative Order is intended to meet the requirements of Chapter IV.A.5.a.(1).B of the ISWEBE Plan and Chapter III.L.4.a.(1).B of the Ocean Plan, which require the San Diego Water Board to issue an order pursuant to Water Code section 13267 or 13383 requiring the MS4 Permittees to submit, within three (3) months from receipt of the order, written notice stating the compliance option (Track 1 or Track 2) to be used to comply with the Statewide Trash Amendments. Per the Statewide Trash Amendments, MS4 Permittees selecting Track 2 must submit an Implementation Plan within 18 months of receiving the Tentative Investigative Order.

The Tentative Investigative Order appears to meet these requirements; however, the City requests that the San Diego Water Board address three key concerns that appear counter to the intent of the Statewide Trash Amendments:

1. *Several findings and provisions within the Tentative Investigative Order need to be clarified to ensure the requirements are directly related to the provisions in the Statewide Trash Amendments.* This typically involves better articulation with respect to Track 1 versus Track 2 requirements and clear differentiation between the two tracks. In some places, additional omitted language from the Statewide Trash Amendments should be included to ensure the findings and directives of the Tentative Investigative Order are consistent with the provisions in the Statewide Trash Amendments (see comments 2, 3, 4, 6, 8, and 9 in the attached table for specific examples). These clarifications will allow for implementation of the requirements of Tentative Investigative Order as envisioned in the State Trash Amendments, which will result in more streamlined, targeted and effective trash management programs.
2. *The approach to addressing transient encampments within the San Diego River Watershed is inappropriate for inclusion in a Tentative Investigative Order issued solely to MS4 Permittees, and should be removed from this Tentative Investigative Order.* While trash from transient encampments is an issue impacting the San Diego River, this specific source of trash is nonpoint source in nature, as has been recognized by the State and other Regional Water Boards across California. Historically, nonpoint sources have been better addressed through mechanisms other than an MS4 permit requirement, and transient encampments in particular require holistic programs that involve multiple responsible parties. A more effective regulatory approach would include a separate Investigative Order, specific Waste Discharge Requirements or a conditional waiver that includes all responsible parties that own property where encampments are an issue. This approach has been successful in other regions (e.g., Ventura River Estuary). Furthermore, as there are often no MS4s within the areas of the river where transient encampments exist, the MS4 Permittees would not be able to utilize the TRACK 1 compliance option to address these sources. The City will continue to support the San Diego Water Board in developing appropriate solutions to address nonpoint sources of trash related to transient encampments. However, the City believes the implementation actions that address trash already included in the San Diego River Water Quality Improvement Plan (WQIP) are a more appropriate and effective response from the MS4 Permittees that can be built upon to address this specific source.
3. *The City's recommendation is to include its implementation approach to the Statewide Trash Amendments within the City's Jurisdictional Runoff Management Plan (JRMP), rather than Water Quality Improvement Plans (WQIPs).* The Tentative Investigative Order requires the City to incorporate the requirements of the Statewide Trash Amendments into the WQIPs. While this seems practical given the emphasis placed on the WQIPs in the MS4 Permit, the Statewide Trash Amendments were written specific to individual jurisdictions. As such, incorporation of the City's compliance approach, whether Track 1 or Track 2, would be challenging to include within the WQIPs because the City is involved in six plans across the region. This presents particular problems with a Track 2 approach, as the Full Capture System Equivalency value, and approach to meeting this value, is developed on a jurisdictional basis. Dividing the requirements across the six watersheds is not practical and is counter to the intent of the Statewide Trash Amendments, which direct MS4 Permittees to focus on trash generating priority land uses within their jurisdiction, independent of watershed boundaries. The MS4 Permittees raised this concern at the public meeting with San Diego Water Board staff on December 1, 2016. San Diego Water Board staff acknowledged that cities in multiple watersheds will need to focus efforts more in some watersheds than others and were open to the possibility of including the

Page 3

Ms. Christina Arias, PE

December 14, 2016

implementation plan as an appendix to the WQIP or the JRMP. Upon doing so, the Tentative Investigative Order, and ultimately the re-issued MS4 Permit, should clearly state that MS4 Permittees are in compliance with the trash discharge prohibition and any receiving water limitations resulting from the narrative trash water quality objectives, provided the MS4 Permittees fully implement either the Track 1 or Track 2 compliance option under their JRMP.

To further expand these key points, specific suggestions to address these and other concerns are included in the attached comment table as Attachment 1. Overall, the City supports the approach the San Diego Water Board has proposed, but requests several important revisions to the Tentative Investigative Order as described herein.

If you have questions, please contact Clement Brown at (858) 541-4336 or at [CMBrown@sandiego.gov](mailto:CMBrown@sandiego.gov).

Sincerely,

Drew Kleis  
Deputy Director

CITY OF SAN DIEGO COMMENTS - TENTATIVE INVESTIGATIVE ORDER R9-2016-0205, REGIONAL BOARD 9 — SAN DIEGO REGION			
Comment #	Tentative Order Location	Reason for Proposed Changes/Comments	Comments/Proposed Changes
1	General Comment	<ul style="list-style-type: none"> <li>The Tentative Order provides narrative water quality objectives (WQOs) and a trash discharge prohibition in Finding 5 and Finding 6, respectively. To comply with the WQOs and the trash discharge prohibition, the MS4 Permittees are required to implement either the Track 1 or Track 2 compliance option. However, the Tentative Order does not indicate that meeting the trash discharge prohibition requirements (via implementing Track 1 or Track 2) would also mean the MS4 Permittees are in compliance with receiving water limitations (i.e., meeting the WQOs).</li> </ul>	<ul style="list-style-type: none"> <li>Add language to the Tentative Order indicating the MS4 Permittees are in compliance with the receiving water limitations (i.e., meeting the WQOs), so long as they are fully implementing Track 1 or Track 2.</li> </ul>
2	Finding 7, Page 3	<ul style="list-style-type: none"> <li>Finding 7 of the Tentative Order presents the Track 1 and Track 2 compliance options detailed in the Statewide Trash Amendments. However, the Track 2 language in the Tentative Order omits some of the Track 2 language in the Statewide Trash Amendments: <i>“The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.”</i></li> <li>Finding 7 also presents the requirement for the MS4 Permittees, which choose Track 2 as their compliance option, to submit an Implementation Plan. However, there is no language in the Tentative Order that provides information regarding the Regional Board’s review and approval of the Track 2 Implementation Plans. Having an understanding of the review and approval process would provide the MS4 Permittees a clearer picture of implementation expectations, which would allow for better water quality protection/watershed planning.</li> </ul>	<ul style="list-style-type: none"> <li>Add the omitted language from the Statewide Trash Amendments to the Tentative Order <i>“Track 2: Install, operate, and maintain any combination of full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls within either the jurisdiction of the MS4 permittee or within the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. The MS4 permittee shall demonstrate that such combination achieves full capture system equivalency. The MS4 permittee may determine which controls to implement to achieve compliance with full capture system equivalency. It is, however, the State Water Board’s expectation that the MS4 permittee will elect to install full capture systems where such installation is not cost-prohibitive.”</i></li> <li>Clarify the review and approval process for the Track 2 Implementation Plans.</li> </ul>
3	Finding 9.a, Page 5	<ul style="list-style-type: none"> <li>Finding 9.a of the Tentative Order details the Priority Land Uses defined by the Statewide Trash Amendments that are to be addressed for controlling trash discharges. However, Finding 9.a does not state that the Priority Land Uses are the land use types to be addressed via the Track 1 compliance option. Per the Statewide Trash Amendments, the Track 2 compliance option is valid for all land uses within each MS4 Permittees jurisdiction they have “Regulatory Control” over. That is, under the Track 2 compliance option, the MS4 Permittees can implement a suite of best management practices (BMPs) throughout their jurisdictions to control trash discharges, not just in the Priority Land Uses.</li> </ul>	<ul style="list-style-type: none"> <li>Clarify the Priority Land Uses are for the Track 1 compliance option <i>“Land Uses and Locations Requiring Trash Controls. The Trash Amendments define land uses and locations that are to be controlled for trash discharges by MS4 permittees using the Track 1 compliance option.”</i></li> </ul>

<p>4</p>	<p>Finding 9.b, Page 5</p>	<ul style="list-style-type: none"> <li>• Finding 9.b does not contain the full language from the Equivalent Land Use Provisions in the Statewide Trash Amendments. Finding 9.b omits <i>“The land use area requested to substitute for a priority land use need not be an acre-for-acre substitution but may involve one or more priority land uses, or a fraction of a priority land use, or both, provided the total trash generated in the equivalent alternative land use is equivalent or greater than the total trash generated from the priority land uses for which substitution is requested.”</i> The Statewide Trash Amendments included this language because the identification of the Priority Land Uses was done on a state level and the State Board recognized there is variability in trash generation between the same land use types based on local conditions. Omitting this language reduces the flexibility the MS4 Permittees have to define the priority land uses within their jurisdictions using local trash-generation information.</li> <li>• Finding 9.b is really a subset of Finding 9.a, which could be confusing since it is listed as an individual Finding.</li> </ul>	<ul style="list-style-type: none"> <li>• Add the omitted language from the Statewide Trash Amendments to Finding 9.b <i>“An MS4 permittee with regulatory authority over priority land uses may issue a request to the San Diego Water Board that the MS4 permittee be allowed to substitute a land use identified above with an alternate land use within the MS4 permittee’s jurisdiction that generates rates of trash that is equivalent to or greater than the priority land use being substituted. <u>The land use area requested to substitute for a priority land use need not be an acre-for-acre substitution but may involve one or more priority land uses, or a fraction of a priority land use, or both, provided the total trash generated in the equivalent alternative land use is equivalent or greater than the total trash generated from the priority land uses for which substitution is requested.</u> Comparative trash generation rates shall be established through the reporting of quantification measures such as street sweeping and catch basin cleanup records; mapping; visual trash presence surveys, such as the “Keeping America Beautiful Visible Litter Survey”; or other information as required by the San Diego Water Board.</i></li> <li>• Change Finding 9.b to Finding 9.a.i to clarify that the Equivalent Alternative Land Uses Finding is really a subset of the Priority Land Uses Finding.</li> </ul>
----------	--------------------------------	---	--

Comment #	Tentative Order Location	Reason for Proposed Changes/Comments	Comments/Proposed Changes
5	Finding 9.d, Page 6	<ul style="list-style-type: none"> <li>Finding 9.d contains a determination that transient encampments in the San Diego River Watershed Management Area (WMA) are generating substantial trash in amounts that adversely affect the beneficial uses or cause nuisance in the San Diego River. Finding 9.d also requires the MS4 Permittees in the San Diego River WMA to develop plans to address trash runoff from the relevant areas of land affected by the transient encampments through the Track 1 or Track 2 compliance options.</li> <li>While the Tentative Order provides the information sources that led to the determination that transient encampments in the San Diego River WMA are generating substantial trash in amounts that adversely affect the beneficial uses or cause nuisance in the San Diego River, the Tentative Order does not provide access to or justification as to the inclusion of the Finding.</li> <li>Although the Statewide Trash Amendments provide the Regional Board the authority to require the MS4 Permittees to implement trash controls for other land uses or specific locations this language is specific to areas subject to the MS4 NPDES permit. Other areas or facilities that may generate trash, such as high usage campgrounds, picnic areas, beach recreation areas, parks not subject to a MS4 permit, marinas, etc., are discussed under the section for "Other Dischargers" and there is no language stating trash sources originating in, or directly discharging to, receiving waters should be addressed by MS4 Permittees. According to the San Diego River Park Foundation's 2016 <i>State of the San Diego River Report</i>, transient encampments within the San Diego River riverbed account for 89 percent of the trash found in the riverbed, by volume.<sup>1</sup> The Statewide Trash Amendments require MS4 Permittees to install full capture systems in their MS4s or implement a suite of BMPs focusing on the land areas serviced by their MS4s that they have "Regulatory Control" over. The Statewide Trash Amendments did not intend for the MS4 Permittees to address trash sources within receiving waters, which they do not have "Regulatory Control" over.</li> <li>Transient encampments are nonpoint sources of trash and should not be included in the Tentative Investigative Order. Transient encampments would be more effectively regulated under individual Waste Discharge Requirements (WDR) Permits or Conditional Waivers of WDR<sup>2</sup> that are inclusive of all responsible parties with land use authority or ownership in those areas identified as problematic.</li> <li>Furthermore, as there are often no MS4s within the areas surrounding the receiving waters where transient encampments exist, the MS4 Permittees would not be able to utilize the Track 1 compliance option to address these areas. The Tentative Order should refer to Track 1 or Track 2 as they are compliance options specific to point source discharges and are not applicable to nonpoint sources, such as transient encampments.</li> </ul>	<ul style="list-style-type: none"> <li>The issue of transient encampments should be addressed in a separate regulatory action that is more appropriate to nonpoint sources and more inclusive of all responsible parties. For this reason, all language regarding encampments should be removed from the Tentative Investigative Order.</li> <li>If the Regional Board decides to keep this issues within the Tentative Investigative Order, the following modifications are recommended:             <ul style="list-style-type: none"> <li>Provide justification and specific locations regarding the inclusion of the finding that transient encampments in the San Diego River WMA are generating substantial trash in amounts that adversely affect the beneficial uses or cause nuisance in the San Diego River.</li> <li>Revise the second paragraph of Finding 9.d <i>"The San Diego Water Board has evaluated the San Diego River Park Foundation's 2013, 2014, and 2015 State of the River reports, and information received in regard to Item 5 on the May 14, 2014 Board meeting agenda pertaining to trash generated by transient encampments in the San Diego River watershed and related water quality issues. Based on this information the San Diego Water Board has determined that transient encampments in the San Diego River watershed are generating substantial trash in amounts that adversely affect beneficial uses or cause nuisance in the San Diego River. This Order requires MS4 permittees in the San Diego River watershed to coordinate with other entities within the watershed, as appropriate, to address trash associated with transient encampments from areas under their jurisdiction. Coordination may be implemented through another regulatory mechanism such as a Conditional Waiver of Waste Discharge Requirements, which would be separate from the NPDES permit for the MS4 permittees, through Track 1 or Track 2 controls as stipulated in the Trash Amendments (Ocean Plan Chapter III.L.2.d and ISWEEB Plan Chapter IV.A.3.d)."</i></li> <li>The City believes the implementation actions addressing trash already included in the San Diego River Water Quality Improvement Plan are a more appropriate and effective response from the MS4 Permittees that can be built upon to address this specific source. The MS4 Permittees in the San Diego River WMA are open to collaborative efforts to address trash in the relevant areas of land affected by the transient encampments, but those efforts should be developed under another regulatory construct, that includes all parties, and is not tied to compliance with the MS4 Permit or with the Statewide Trash Amendments.</li> </ul> </li> </ul>

Comment #	Tentative Order Location	Reason for Proposed Changes/Comments	Comments/Proposed Changes
6	Finding 11, Page 6	<ul style="list-style-type: none"> <li>Finding 11 does not provide adequate information related to the monitoring and reporting requirements specific to the Track 1 and Track 2 compliance options as detailed in the Statewide Trash Amendments. Finding 11 simply states: "The MS4 permittees will be required to provide reports to the San Diego Water Board on an annual basis to monitor progress toward achieving full compliance with the trash discharge prohibition. The monitoring and reporting requirements are dependent on the measures elected to be implemented by a MS4 permittee." By not providing the specific requirements for the Track 1 and Track 2 compliance options, the Tentative Order leaves the monitoring and reporting requirements ambiguous and could cause unnecessary monitoring and/or reporting by the MS4 Permittees.</li> </ul>	<ul style="list-style-type: none"> <li>Revise language under Finding 11 "The MS4 permittees will be required to provide reports to the San Diego Water Board on an annual basis to monitor progress toward achieving full compliance with the trash discharge prohibition. The monitoring and reporting requirements are dependent on the measures elected to be implemented by a MS4 permittee."                         <ul style="list-style-type: none"> <li>MS4 permittees that elect to comply with the Statewide Trash Amendments via the Track 1 compliance option shall provide a report to the Regional Board demonstrating installation, operation, maintenance, and the Geographic Information System- (GIS-) mapped location and drainage area served by its full capture systems on an annual basis.</li> <li>MS4 permittees that elect to comply with the Statewide Trash Amendments via the Track 2 compliance option shall develop and implement monitoring plans that demonstrate the effectiveness of the full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls, and compliance with full capture system equivalency. Monitoring reports shall be provided on an annual basis and shall include GIS-mapped locations and drainage area served for each of the full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls installed or utilized by the MS4 permittee.</li> </ul> </li> </ul>

<sup>1</sup> See the San Diego River Park Foundation's Web Viewer for locations of current and historical transient encampments: <http://www.immappler.com/sandiego16/>.

<sup>2</sup> See State Water Board Response to Comments on page F-31 explaining that transient encampments are a nonpoint source that should be addressed through a WDR or conditional waiver of WDR and requirement on page 12 of the 2007 Ventura River Estuary Trash TMDL Staff Report for precedent that direct disposal (e.g. trash from transient encampments) is a nonpoint source that is addressed through a Conditional Waiver.

Comment #	Tentative Order Location	Reason for Proposed Changes/Comments	Comments/Proposed Changes
7	Finding 13, Page 7	<ul style="list-style-type: none"> <li>Finding 13 states that the Regional Board intends for the MS4 Permittees to incorporate the requirements of the Statewide Trash Amendments into the Water Quality Improvement Plans (WQIPs) after renewal of the Regional MS4 Permit. The implementation measures, interim milestones, and compliance schedules for Track 1 and Track 2 of the Statewide Trash Amendments shall be incorporated into the WQIPs to be implemented by the MS4 Permittees as part of the adaptive management process. A watershed approach is not the best implementation mechanism for the trash programs and is counter to the intent of the State Board. The WQIP is based around defining a highest priority watershed condition. While addressing trash is important, it may not be the highest priority condition within every watershed. The trash requirements are more aligned with requirements in the jurisdictional runoff management programs and could easily be incorporated into these plans without potentially causing a shift to trash being a highest priority in every watershed. Additionally, watershed scale implementation presents particular challenges with respect to the determination of full capture system equivalency, which is developed on a jurisdictional basis independent of watershed boundaries, and demonstration of attainment. Since both are performed on a jurisdictional scale, it is not practical or necessary to revise compliance approaches to make them fit into watershed plans.</li> </ul>	<ul style="list-style-type: none"> <li>Rather than include the trash compliance approaches within the WQIPs, the City recommends that the Track 1 or Track 2 approach be included within the City's Jurisdictional Runoff Management Plan (JRMP). In order to do so, Finding 13 should be completely revised to address appropriate inclusion within the JRMP.</li> </ul>
8	Finding 14, Page 9	<ul style="list-style-type: none"> <li>Finding 14 states that the technical and monitoring reports are needed to provide information "regarding (a) the measures each MS4 permittee is electing to implement (i.e. Track 1 or Track 2) within its jurisdiction to comply with the trash discharge prohibition, (b) the plan that will be implemented by each MS4 permittee to comply with the trash discharge prohibition, (c) the interim milestones that each MS4 permittee will achieve within its jurisdiction, (d) the schedules to achieving the interim milestones, and full compliance with the trash discharge prohibition, and (e) the monitoring and reporting that will be implemented to demonstrate progress toward achieving full compliance with the trash discharge prohibition." However, Finding 14 does not specify which of the items relate to MS4 Permittees complying via Track 1 or Track 2. By not providing the specific requirements for the Track 1 and Track 2 compliance options, the Tentative Order leaves the monitoring and reporting requirements ambiguous and could cause unnecessary monitoring and/or reporting by the MS4 Permittees.</li> </ul>	<ul style="list-style-type: none"> <li>Revise language in Finding 14 to specify which of the items relate to Track 1 and Track 2 "Water Code section 13267 provides that the San Diego Water Board may require dischargers, past dischargers, or suspected dischargers to furnish those technical or monitoring reports as the San Diego Water Board may specify, provided that the burden, including costs, of these reports, must bear a reasonable relationship to the need for the reports and the benefits to be obtained from the reports. The technical and monitoring reports required under this Investigative Order are needed to provide information to the San Diego Water Board regarding (a) the measures each MS4 permittee is electing to implement (i.e. Track 1 or Track 2) within its jurisdiction to comply with the trash discharge prohibition (Track 1 and Track 2), (b) the plan that will be implemented by each MS4 permittee to comply with the trash discharge prohibition (Track 2), (c) the interim milestones that each MS4 permittee will achieve within its jurisdiction (Track 1 and Track 2), (d) the schedules to achieving the interim milestones, and full compliance with the trash discharge prohibition (Track 1 and Track 2), and (e) the monitoring (Track 2) and reporting (Track 1 and Track 2) that will be implemented to demonstrate progress toward achieving full compliance with the trash discharge prohibition.</li> </ul>

Comment #	Tentative Order Location	Reason for Proposed Changes/Comments	Comments/Proposed Changes
9	Directive A.2, Pages 9-10	<ul style="list-style-type: none"> <li>• Directive A.2 states that “Each MS4 permittee electing to comply with Track 2 must submit, no later than eighteen (18) months from the date of this Order <u>[INSERT DATE]</u>, an implementation plan for each Watershed Management Area described in Table 1 in Finding 13 above....” However, the Statewide Trash Amendments clearly identify individual jurisdictions, and specific land uses within the individual jurisdictions, as the implementation locations. As discussed in Comment #7, requiring implementation on a watershed-scale could affect the MS4 Permittees’ implementation approaches and implementation schedules as trash generation is site-specific and varies between jurisdictions.</li> <li>• In addition, Directive A.2.a contains a footnote that states “Controls include, but are not limited to, treatment controls and institutional controls, as defined in the Appendix D to the California Ocean Plan and Appendix E of the Inland Surface Waters, Enclosed Bays, and Estuaries of California.” The footnote does not provide adequate information regarding the types of controls allowed.</li> <li>• Furthermore, Directive A.2.e incorrectly links Priority Land Uses with the Track 2 compliance option. Directive A.2.e states “Requests by MS4 permittees, if any, for authorization to substitute a Priority Land Use described in Finding 9 above with an Equivalent Alternate Land Use that generates rates of trash equivalent to, or greater than, the Priority Land Use being substituted. The MS4 permittees must provide data or information which establishes that trash generation rates from the Alternate Land Use(s) are greater than the Priority Land Use(s) being substituted.” Priority Land Uses/Equivalent Alternate Land Uses are only relevant if a MS4 Permittee selects the Track 1 compliance option.</li> <li>• Finally, Directive A.2.f states the Track 2 implementation plan should include “A compliance time schedule based on the shortest practicable time to achieve full compliance with the trash discharge prohibition, including interim milestones (such as average load reductions of ten percent per year) and a final compliance date. The final compliance date must not be later than fifteen (15) years from the effective date of the Trash Amendments (i.e. December 2, 2030).” However, the Statewide Trash Amendments do not include any language where the compliance time schedule must be based on the shortest practicable time to achieve full compliance with the trash discharge prohibition. The Statewide Trash Amendments state compliance must be achieved ten years from the effective date of the first implementing permit and not longer than fifteen years from the effective date of the Statewide Trash Amendments.</li> </ul>	<ul style="list-style-type: none"> <li>• Consistent with Comment #7, revise Directive A.2 “Each MS4 permittee electing to comply with Track 2 must submit, no later than eighteen (18) months from the date of this Order <u>[INSERT DATE]</u>, an implementation plan, <u>which shall also be incorporated into the applicable Jurisdictional Runoff Management Plan after renewal of the Regional MS4 Permit, for each Watershed Management Area described in Table 1 in Finding 13 above that describes....”</u></li> <li>• Revise the footnote in Directive A.2.a “Controls include, but are not limited to, <u>full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls-treatment controls and institutional controls</u>, as defined in <u>the Appendix D to the Water Quality Control Plan for Ocean Waters of California California Ocean Plan and Appendix E of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California.</u>”</li> <li>• Delete Directive A.2.e “<u>Requests by MS4 permittees, if any, for authorization to substitute a Priority Land Use described in Finding 9 above with an Equivalent Alternate Land Use that generates rates of trash equivalent to, or greater than, the Priority Land Use being substituted. The MS4 permittees must provide data or information which establishes that trash generation rates from the Alternate Land Use(s) are greater than the Priority Land Use(s) being substituted.</u>”</li> <li>• Revise Directive A.2.f “A compliance time schedule <u>based on the shortest practicable time to achieve full compliance with the trash discharge prohibition, including interim milestones (such as average load reductions of ten percent per year) and a final compliance date. The final compliance date must not be later than fifteen (15) years from the effective date of the Trash Amendments (i.e. December 2, 2030).</u>”</li> </ul>

Comment #	Tentative Order Location	Reason for Proposed Changes/Comments	Comments/Proposed Changes
10	Directive A.4, Page 10	<ul style="list-style-type: none"> <li>Directive A.4 states “MS4 permittees discharging to the San Diego River watershed (Cities of San Diego, Santee, El Cajon, La Mesa, and County of San Diego), must submit, no later than eighteen (18) months from the date of this Order [INSERT DATE], a description of how trash generated from transient encampments in the San Diego River Watershed Management Area will be addressed.” The title of Directive A.4 omits “watershed” after “San Diego River”.</li> <li>In addition, as detailed above (see Comment #5) regarding Finding 9.d, there are several issues related to addressing transient encampments. Specifically, many transient encampments are nonpoint sources located in areas outside of the MS4. As such, clarification is required to ensure developing plans to address trash runoff from the relevant areas of land affected by the transient encampments are independent of the MS4 Permit and the Statewide Trash Amendments and not tied to compliance.</li> </ul>	<ul style="list-style-type: none"> <li>The City believes the implementation actions addressing trash already included in the San Diego River Water Quality Improvement Plan are a more appropriate and effective response from the MS4 Permittees that can be built upon to address this specific source. The MS4 Permittees in the San Diego River WMA are open to collaborative efforts to address trash in the relevant areas of land affected by the transient encampments, but those efforts should be developed under another regulatory construct, that includes all parties, and is not tied to compliance with the MS4 Permit or with the Statewide Trash Amendments. For these reasons, the City recommends that the Regional Board remove references to the regulation of transient encampments from the Tentative Investigative Order.</li> <li>However, should the transient encampment issue remain in the Tentative Order, the following revisions are recommended for Directive A.4:             <ul style="list-style-type: none"> <li>Revise the title of Directive A.4 “<i>Transient Encampments in the San Diego River Watershed</i>”</li> <li>Revise Directive A.4 “<i>MS4 permittees discharging to the San Diego River watershed (Cities of San Diego, Santee, El Cajon, La Mesa, and County of San Diego), must submit, no later than eighteen (18) months from the date of this Order [INSERT DATE], collaborate with other entities in the watershed as appropriate to a description of how address trash generated from transient encampments in the San Diego River Watershed Management Area. These efforts may be implemented under another regulatory mechanism, such as a Conditional Waiver of Waste Discharge Requirements, that would be separate from the NPDES permit for the MS4 permittees.</i></li> </ul> </li> </ul>

Subject: Comments – Tentative Order No.R9-2016-0205

Dear Ms. Arias:

The City of Carlsbad appreciates the opportunity to comment on Tentative Investigative Order R9-2016-0205, An Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems (MS4s) draining the Watersheds within the San Diego Region to submit Technical and Monitoring Reports Pertaining to the Control of Trash in Discharges from Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays, and Estuaries in the San Diego Region (Tentative Order). The issuance of the Tentative Order and opportunity for comment demonstrates the collaborative approach of the San Diego Regional Water Quality Control Board (Regional Board) when issuing new regulation.

The County of San Diego prepared and submitted a detailed comment letter in which they identified key issues of the Tentative Order that should be addressed. The City of Carlsbad generally agrees with the comments submitted by the County of San Diego and requests the Regional Board review and include these comments in a revised Tentative Order.

If you have questions, please contact James Wood at 760-602-2799 or [james.wood@carlsbadca.gov](mailto:james.wood@carlsbadca.gov). Thank you for your time and consideration.

Sincerely,

A handwritten signature in blue ink that reads "James Wood".

RE: COMMENTS ON TENTATIVE INVESTIGATIVE ORDER – NO. R9-2016-0205  
REFERENCE 786088: CARIAS

Ms. Arias,

Thank you for the opportunity to comment on Tentative Investigative Order R9-2016-0205, Investigative Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems (MS4s) draining the Watersheds within the San Diego Region to Submit Technical and Monitoring Reports Pertaining to the Control of Trash from Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays and Estuaries in the San Diego Region. Additionally, thank you for holding a meeting on December 1, 2016 to allow for helpful dialogue on this matter.

The City of Encinitas has collaborated with the San Diego Region Stormwater Copermittees in review of Tentative Investigative Order No. R9-2016-0205, and by this correspondence offers formal support and concurrence with the comment letter, received under separate cover, submitted by the County of San Diego, dated December 14, 2014. The City of Encinitas would like to request your careful consideration of the comments and recommendations provided by the County of San Diego, including specific language changes.

Please feel free contact me with any questions or to discuss this matter in more detail.

Sincerely,

Erik Steenblock  
Environmental Programs Manager

Subject: Letter of Support for County of San Diego Comments on Tentative  
Investigative Order No. R9-2016-0205--Reference 786088: CArias

Dear Ms. Arias:

The City of Vista (City) appreciates the opportunity to comment on Tentative Investigative Order R9-2016-0205 (Tentative Order). In doing so, the City broadly supports the comments and recommendations prepared by the County of San Diego (attached), who is a responsible party in most of the region's watersheds, as well as in the two watersheds in which Vista participates: Carlsbad and San Luis Rey.

Of particular concern to the City is delineating in the Tentative Order the clear distinctions between Track 1 and Track 2 that are identified in the Trash Amendments, i.e., compliance methodology, timelines, as well as reporting and monitoring requirements. Given the immediate and ongoing resources that will be required to implement either track, it is important to clearly define and thereby distinguish them so that agencies can make reasonable compliance decisions and commitments. Related to track selection, the City also supports the County's recommendation to allow agencies to change their initial track selection—with proper justification. Like the County, the City may be inclined to choose Track 1 because of the seeming compliance clarity of this regulatory pathway. However, the feasibility of this choice will not be fully known by the compliance selection deadline in early 2017.

Again, the City appreciates the opportunity to comment on Investigative Order No. R9-2016-0205 to ensure consistency with the Trash Amendments.

Sincerely,

Cheryl Filar  
Storm Water Program Manager

Electronic submission: [sandiego@waterboards.ca.gov](mailto:sandiego@waterboards.ca.gov)

Dear Ms. Arias:

**COMMENTS ON TENTATIVE INVESTIGATIVE ORDER - NO. R9-2016-0205  
REFERENCE 786088: CARIAS**

The County of San Diego (County) appreciates the opportunity to comment on Tentative Investigative Order R9-2016-0205, An Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems (MS4s) draining the Watersheds within the San Diego Region to submit Technical and Monitoring Reports Pertaining to the Control of Trash in Discharges from Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays, and Estuaries in the San Diego Region (Tentative Order). The County acknowledges that the San Diego Regional Water Quality Control Board released the Tentative Investigative Order to meet the requirements of the Statewide Trash Amendments to the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California (ISWEBE Plan) and the Water Quality Control Plan for Ocean Waters of California (Ocean Plan) (referred to hereafter as "Trash Amendments"). With this in mind, the County respectfully submits the following comments to reflect our concerns with the Tentative Order as drafted and to propose improvements to the revised Order.

The County has identified eight key areas of concern within the Tentative Order as described in the detailed comments below. For each area of concern, a recommendation is included. Related detailed suggestions for modifications to the Tentative Order are included in "redline/strikeout" form in Attachment A.

Ms. Arias  
 December 14, 2016  
 Page 2

***Issue #1 – Clear Definition of Track 1 and Track 2 Requirements and Consistency with Trash Amendments***

***(Findings 7, 8, 9.a, 9.b, 11, 14; Directives A.2.e, A.3.f)***

The Trash Amendments provide jurisdictions with two tracks for compliance. The tracks differ in terms of compliance methodology, timelines, and reporting and monitoring requirements. Selecting which track to follow is one of the first decisions the County and other jurisdictions will face, and this choice will guide future implementation efforts. Moreover, because the Tentative Order will be issued prior to incorporation of the Trash Amendments into the Regional MS4 Permit, it will be the regulatory document that most directly defines the minimum requirements for complying with a Track 1 or Track 2 approach. It is therefore essential that the Tentative Order's findings and directives clearly define the requirements for Track 1 and 2 and the differences between them.

In addition, the County requests revisions to the Tentative Order to ensure that its language is consistent with language from the Trash Amendments. Statewide consistency is a stated goal of the State Water Resources Control Board (State Water Board) in developing the Trash Amendments. There are several portions of the Tentative Order, such as Findings 7 and 9, where Amendment language has been incompletely incorporated. These omissions reduce needed flexibility that will help ensure effective and efficient trash reduction over the long-term.

***Recommendations (with specific language suggestions provided in Attachment A):***

1. ***Finding 7. Under a Track 2 approach, implementation actions are not limited to the priority land use areas. Add language from the Trash Amendments.***
2. ***Finding 8 presents the definition for Full Capture System Equivalency. However, the definition omits some of the language from the Trash Amendments that provides flexibility to the MS4 Permittees. Add the omitted language from the Trash Amendments to the Tentative Investigative Order.***
3. ***Finding 9.a should clarify that the priority land uses only apply under a Track 1 approach.***
4. ***Finding 9.b should include all language from the Trash Amendments.***
5. ***Finding 11 needs to provide more clarity regarding the reporting requirements under Track 1 vs. Track 2. Add language from the Trash Amendments.***
6. ***Finding 14 should include clarifying language to specify which requirements apply to Track 1, Track 2, or both.***
7. ***Directive A.2.e incorrectly links Priority Land Uses and Equivalent Alternative Land Uses with a Track 2 approach. Suggest deletion of A.2.e.***
8. ***Directive A.2.f imposes a schedule based on the "shortest practicable time", which is not consistent with the schedule requirements within the Trash Amendments. Recommend deletion of "based on the shortest practicable time" to maintain consistency. Footnote 3 should also be revised for consistency with the Trash Amendments.***

Ms. Arias  
December 14, 2016  
Page 3

## **Issue #2 – Incorporation of Compliance Time Schedule in Implementing Permit**

### ***(Finding 10)***

The inclusion of an enforceable compliance schedule is not an appropriate subject to be addressed in an Investigative Order according to the statutory terms and conditions of Water Code Sections 13267 and 13383 combined. It is imperative that any compliance schedule be adopted directly into the MS4 Permit to ensure proper legal protection for permittees while they implement the plans and practices to meet the timeframes contained within the Trash Amendments.

***Recommendation:** Revise language from the Compliance Time Schedule finding (Finding 10) to state the Regional MS4 Permit reissued after June 27, 2018 will be the first implementing permit and will contain a compliance time schedule consistent with the requirements of the Trash Amendments.*

## **Issue #3 – Incorporation into the Water Quality Improvement Plan**

### ***(Finding 13, Directive A.2)***

The Trash Amendments were developed to focus on trash originating from the combinations of land uses and landscape features which are unique to every jurisdiction. By offering the track choices, the State Water Board has shown its desire to develop a tool that is functional for the particular characteristics of each jurisdiction founded on the premise that different kinds of land uses “produce” trash at different rates and each jurisdiction has different combinations and locations of those land uses. For this reason, the Amendments do not fit well into a watershed-based regulatory context, as they are designed for use on a jurisdiction-by-jurisdiction basis. For example, under Track 2, a jurisdiction’s Full Capture System Equivalency value is developed based on its own combination of Priority Land Uses and is a value specific only to that jurisdiction.

The County is a Copermitee in eight watersheds within the San Diego region, and will develop compliance approaches based on its own jurisdictional responsibilities, which reflect the characteristics of the unincorporated portions of San Diego County at large, not based on watershed boundaries. For this reason, the County feels that Finding 13 of the Tentative Order should provide flexibility for jurisdictions by including the option of incorporating Amendment compliance language into the Water Quality Improvement Plans or the Jurisdictional Runoff Management Plan (JRMP) or a combination of the Water Quality Improvement Plans and JRMP. Jurisdictions would then have the choice of determining which method best meets their situation. As discussed with Regional Board staff during a meeting on December 1, 2016, it is possible that over time, trash could be raised to the highest priority water quality condition in a particular watershed. If this happens, then a goal based on watershed or sub-watershed scale implementation may be appropriate.

***Recommendation:** Delete Finding 13 and Revise Finding 12 to allow the flexibility for agencies to include their approach for compliance with the Trash Amendments, whether Track 1 or Track 2, within the Water Quality Improvement Plans or their respective JRMPs or in a combination of the Water Quality Improvement Plans and JRMPs. The options should also be supported with revisions to the language in Directive A.2.*

Ms. Arias  
December 14, 2016  
Page 4

**Issue #4 – Compliance through Implementation of a Track 1 or Track 2 Approach and Approval of Track 2 Implementation Plan**

***(Finding 7)***

The County requests a modification to the Tentative Order to clarify that the timely and complete implementation of an approved Track 1 or 2 compliance approach will meet the narrative water quality objective and constitute compliance with the trash discharge prohibitions. Revisions to Finding 7 of the Tentative Order should be made to reflect these needed clarifications. In addition, in order to better understand the process through which the required implementation plans under Track 2 will be approved by the Regional Water Board, language outlining the milestones and timing for approval involved should be added to Finding 7.

*Recommendation: Include language in Finding 7 describing the Regional Board's approval process for Implementation Plans developed under a Track 2 approach. Add language indicating that timely and complete implementation under a Track 1 or Track 2 approach will meet the narrative water quality objective (Finding 5) and constitute compliance with the trash discharge prohibitions (Finding 6).*

**Issue #5 – Clarification of a Jurisdiction's Ability to Change Compliance Tracks with Supporting Justification**

***(Finding 7)***

Jurisdictions should be provided with the ability to change their initial determination of which compliance track to pursue. Implementation of the Trash Amendments will surely involve many lessons learned and efficiencies to be gained along the way. The State Water Board has clearly expressed its expectation "that the MS4 permittee will elect to install full capture systems where such installation is not cost-prohibitive". The County may be inclined to pursue Track 1 because of the simplicity of the approach and the compliance certainty it provides. However, with an MS4 that includes nearly 4,000 storm drain inlets within high priority land use areas; there may be some limited number of locations where installation of full capture systems is either not possible or cost-prohibitive. We will not know whether this is the case by the time we are required to submit our choice of compliance track, thus potentially forcing us to select Track 2. Allowing jurisdictions to change tracks during the implementation period, with sufficient supporting justification, is reasonable and would provide jurisdictions with much needed flexibility to implement this 10-year program. It will also likely encourage more jurisdictions to take a full capture approach, which appears to be the intent of the State Water Board.

*Recommendation: Add language to Finding 7 stating MS4 permittees may change tracks, provided they submit sufficient supporting justification. In addition, this language should be added to the first implementing permit (Regional MS4 Permit reissued after June 27, 2018).*

Ms. Arias  
December 14, 2016  
Page 5

**Issue #6 – Transient Encampments in the San Diego River Watershed**

***(Finding 9.d, Directive A.4)***

The County supports CASQA's December 14, 2016 comment letter on the Tentative Order, which refers to the State Water Board's Responses to Comments on transient encampments during consideration of the Trash Amendments. Clearly, the intent of the Trash Amendments was not to address transient encampments.

The County has two key concerns with the methods proposed to address transient encampments within the San Diego River Watershed. First, transient encampments are by their nature a non-point source of trash and should be regulated as such. Therefore, they should not be regulated within an MS4 Permit which is a point source permit. As noted in their Response to Comments for the Trash Amendments, the State Water Board intended for the Trash Amendments to apply to NPDES Permits issued pursuant to Federal Clean Water Act Section 402(p) (see response 10.6), with other sources addressed through Waste Discharge Requirements (WDRs) or waivers of WDRs (see response 34.2). As has been found in other regions (e.g., Ventura River Estuary), only addressing MS4 sources of trash, when the problem stems from transient encampments, has little effect on the overall levels of trash. The transient encampments simply pick up and move, at least temporarily, to another part of the watershed. Further, Copermitees often do not have effective "regulatory control" over properties where transient encampments are common, i.e., private, state, and federal properties. The request for the Permittees to "address trash runoff from the relevant areas of land affected by transient encampments" via the MS4 Permit is inappropriate as it is the wrong mechanism for controlling this type of discharge. In order to effectively address the issue, participation from all land owners and key responsible parties, particularly those beyond the control of the MS4 permit, will be needed. Further, it will be necessary to involve other agencies to holistically address the transient problems within the watershed (e.g., social services, law enforcement) to ensure that the issue is not simply transferred from one portion of the region to another.

Second, the requirement to address trash from transient encampments for an entire watershed under the Trash Amendments limits the ability of the permittee to be in compliance with Track 1 or Track 2. To implement a Track 1 approach, consistent with the intent of the Amendments, full capture devices would only treat MS4 discharges from priority land use areas, not other non-priority land uses or receiving waters where many transient encampments occur. To implement a Track 2 approach, "transient encampments" would have to be identified as a "land use" and a "full capture equivalency" would need to be demonstrated. Such an approach is cumbersome, certainly not the intent of the Amendments, and may be counterproductive to actually solving the problem.

***Recommendations:*** *Finding 9.d and Directive A.4 should be removed. The San Diego Board should maintain consistency with the State Water Board and other Regional Boards in addressing trash generated from transient encampments as non-point in nature. In order to effectively address this particular source, the Regional Board could issue a separate Conditional Waiver of Waste Discharge Requirement to all land owners/responsible parties where trash from transient encampments has been determined to be a problem. However, if the San Diego Board does not remove Finding 9.d and Directive A.4, then consider the revision proposed in redline/strikeout that requests that the MS4s coordinate with entities under their jurisdiction to address trash from transient encampments.*

Ms. Arias  
December 14, 2016  
Page 6

**Issue #7 – Coordination with Caltrans**

**(Directive A.3)**

The County requests a modification to the Tentative Order to be consistent with the Trash Amendments and with the MS4 Permit with respect to coordination with Caltrans. The Amendments and the MS4 Permit already require coordination with Caltrans, as applicable, but neither requires a submittal to the Regional Board describing these efforts. In general, the County and Copermitees have established a good working relationship with Caltrans through the Water Quality Improvement Plans. As this coordination continues, it will include implementation of the requirements under the Trash Amendments as appropriate for Caltrans and for the MS4 Permittees to be compliant. Coordination should not necessitate a new reporting requirement for the Copermitees.

Recommendation: *Require coordination with Caltrans, as applicable, to effectively implement the requirements of the Amendments, but remove the requirement to describe this coordination in a separate submittal to the Regional Board.*

**Issue #8 - Clarification of the Monitoring and Reporting requirements of the 13267 Order**

**(Finding 11, New Directive)**

Finding 11 does not provide adequate information related to the monitoring and reporting requirements specific to the Track 1 and Track 2 compliance options as detailed in the Trash Amendments. By not providing the specific requirements for the Track 1 and Track 2 compliance options, the Tentative Order leaves the monitoring and reporting requirements ambiguous and could cause unnecessary monitoring and/or reporting by the MS4 Permittees. Furthermore, including the monitoring requirements as a finding rather than a directive is also problematic. Including the monitoring and reporting requirements as a directive would clearly indicate what the MS4 Permittees are responsible for.

Recommendation: *Revise Finding 11 language and add a new Directive A.3 to describe the specific monitoring and reporting requirements applicable to each track.*

Thank you for your time and consideration of these comments offered in an effort to improve the Tentative Order and ensure consistency with the Trash Amendments. If you have questions or require additional information, please contact Jo Ann Weber, Planning Manager, at (858) 495-5317 or e-mail at [JoAnn.Weber@sdcounty.ca.gov](mailto:JoAnn.Weber@sdcounty.ca.gov).

Sincerely,

TODD E. SNYDER, Manager  
Watershed Protection Program

Attachment: County of San Diego Recommended Redline-Strikeout of Tentative Order

ATTACHMENT A – County of San Diego Recommended Redline-Strikeout of Tentative Order

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD  
SAN DIEGO REGION**

**TENTATIVE INVESTIGATIVE ORDER NO. R9-2016-0205**

**AN ORDER DIRECTING THE OWNERS AND OPERATORS OF  
PHASE I MUNICIPAL SEPARATE STORM SEWER SYSTEMS (MS4s)  
DRAINING THE WATERSHEDS WITHIN THE SAN DIEGO REGION**

**TO SUBMIT TECHNICAL AND MONITORING REPORTS PERTAINING TO  
THE CONTROL OF TRASH IN DISCHARGES FROM PHASE I MS4s  
TO OCEAN WATERS, INLAND SURFACE WATERS,  
ENCLOSED BAYS, AND ESTUARIES  
IN THE SAN DIEGO REGION**

The California Regional Water Quality Control Board, San Diego Region (hereinafter San Diego Water Board) finds:

- 1. Legal and Regulatory Authority.** This Order conforms to and implements policies and requirements of the Porter-Cologne Water Quality Control Act (division 7 of the Water Code, commencing with Section 13000) including (1) sections 13267 and 13383; (2) applicable state and federal regulations; (3) all applicable provisions of statewide Water Quality Control Plans adopted by the State Water Resources Control Board (State Water Board) and the *Water Quality Control Plans for the San Diego Basin* (Basin Plan) adopted by the San Diego Water Board including beneficial uses, water quality objectives, and implementation plans; (4) State Water Board policies and regulations, including Resolution No. 68-16 (Statement of Policy with Respect to Maintaining High Quality of Waters in California); and (5) relevant standards, criteria, and advisories adopted by other state and federal agencies.
- 2. Trash Amendments.** On April 7, 2015, the State Water Board adopted Resolution No. 2015-0019, amending the *Water Quality Control Plan for Ocean Waters of California* (Ocean Plan) and the *Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California* (ISWEBE Plan) to address the impacts of trash to the surface waters of California (referred to hereafter as the Trash Amendments). The effective date of the Trash Amendments is December 2, 2015.
- 3. Trash Amendments Implementation.** The Trash Amendments establish a statewide narrative water quality objective and implementation requirements to control trash, including a prohibition against the discharge of trash to ocean waters, inland surface waters, enclosed bays, and estuaries in California. Within eighteen (18) months of the effective date (i.e. by June 2, 2017), for each MS4 that has been issued a National Pollutant Discharge Elimination System (NPDES) permit by the San Diego Water Board with regulatory authority over priority land uses in the San Diego Region, the San Diego Water Board is required to modify, re-issue, or adopt an applicable MS4 permit, or issue an order pursuant to Water Code section 13267 or 13383 to implement the Trash Amendments.

**4. Persons Responsible for the Discharges of Trash.** The owners and operators of Phase I MS4s are responsible for discharges of waste, including trash, from land uses and locations within their jurisdictions through their MS4s to ocean waters, inland surface waters, enclosed bays, and estuaries in the San Diego Region. In the San Diego Region, owners and operators of Phase I MS4s (herein referred to as MS4 permittees) include the following entities:

- County of Orange
  - City of Aliso Viejo
  - City of Dana Point
  - City of Laguna Beach
  - City of Laguna Hills

**5. Water Quality Standards.** The Trash Amendments established the following statewide narrative water quality objectives for trash in ocean waters, inland surface waters, enclosed bays, and estuaries in California.

<sup>1</sup> On February 10, 2015, the San Diego Water Board and the Santa Ana Water Board entered into an agreement, pursuant to Water Code section 13228, regarding MS4 discharges within the City of Lake Forest geographically located in the San Diego Region. According to the agreement, the City of Lake Forest must participate in preparation and implementation of the Water Quality Improvement Plan for the Aliso Creek Watershed Management Area. The requirements of the Trash Amendments will be incorporated into the Regional MS4 Permit during reissuance which may require an update to the Water Quality Improvement Plan.

<sup>2</sup> On October 26, 2015, the San Diego Water Board and the Santa Ana Water Board entered into an agreement, pursuant to Water Code section 13228, regarding MS4 discharges within the City of Menifee geographically located in the San Diego Region. According to the agreement, the City of Menifee must participate in preparation and implementation of the Water Quality Improvement Plan for the Santa Margarita River Watershed Management Area. The requirements of the Trash Amendments will be incorporated into the Regional MS4 Permit during reissuance which may require an update to the Water Quality Improvement Plan.

- a. The Trash Amendments established the following narrative water quality objective for trash in Chapter II.C.5 of the Ocean Plan:

*"Trash shall not be present in ocean waters, along shorelines or adjacent areas in amounts that adversely affect beneficial uses or cause nuisance."*

- b. The Trash Amendments established the following narrative water quality objective or trash in Chapter III.A of the ISWEBE Plan:

*"Trash shall not be present in inland surface waters, enclosed bays, estuaries, and along shorelines or adjacent areas in amounts that adversely affect beneficial uses or cause nuisance."*

Meeting these narrative water quality objectives for trash will be protective and supportive of numerous beneficial uses for the ocean waters, inland surface waters, enclosed bays, and estuaries in the San Diego Region, including but not limited to, wildlife habitat (WILD), marine habitat (MAR), preservation of rare and endangered species (RARE), fish migration (MIGR), navigation (NAV), and water contact and non-contact recreation (REC1 and REC2).

6. **Trash Discharge Prohibition.** The Trash Amendments established the following discharge prohibition in Chapter III.I.6 of the Ocean Plan and Chapter IV.A.2 of the ISWEBE Plan:

*"The discharge of trash to surface waters of the State or the deposition of trash where it may be discharged into surface waters of the State is prohibited."*

7. **MS4 Permit Implementation of the Trash Amendments.** The Trash Amendments are required to be implemented through the incorporation of the trash narrative water quality objectives and discharge prohibition into NPDES MS4 permits. The NPDES MS4 permit then will require the MS4 permittees to comply with the trash narrative water quality objectives and discharge prohibition through the implementation of one of two measures to be selected by the MS4 permittees.

To comply with the trash narrative water quality objectives and discharge prohibition, the MS4 permittees are required to implement either of the following measures:

*Track 1:* Install, operate, and maintain full capture systems for all storm drains that capture runoff from the priority land uses in their jurisdictions; or

*Track 2:* Install, operate, and maintain any combination of full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls within either the jurisdiction of the MS4 permittee or within the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. The MS4 permittee shall demonstrate that such combination achieves full capture system equivalency. The MS4 permittee may determine which controls to implement to achieve compliance with full capture system equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to

install full capture systems where such installation is not cost-prohibitive.

Within three (3) months of the effective date of the first implementing permit, or the receipt of an order issued by the San Diego Water Board pursuant to Water Code section 13267 or 13383, each MS4 permittee is required to provide written notice to the San Diego Water Board stating whether the MS4 permittee elects to comply with the trash discharge prohibition by implementing Track 1 or Track 2. MS4 permittees that elect to implement Track 2 are also required to submit an implementation plan to the San Diego Water Board within eighteen (18) months of the effective date of the first implementing permit, or the receipt of the order issued pursuant to Water Code section 13267 or 13383. The implementation plan is required to describe: (i) the combination of controls selected by the MS4 permittee and the rationale for the selection, (ii) how the combination of controls is designed to achieve full capture system equivalency, and (iii) how full capture equivalency will be demonstrated. The implementation plan is subject to approval by the San Diego Water Board. Track 2 Implementation Plans will be deemed approved by the San Diego Water Board ninety (90) days after submission unless otherwise directed in writing by the San Diego Water Board Executive Officer. MS4 permittees may elect to change tracks through their adaptive management process during the 10-year implementation period, provided they submit sufficient, supporting justification to the San Diego Water Board. MS4 permittees fully complying with Track 1 or Track 2 are deemed to be in compliance with the trash discharge prohibition and narrative water quality objectives incorporated into the MS4 permit.

**8. Full Capture System Equivalency.** The Trash Amendments define full capture system equivalency as follows:

*“Full capture system equivalency is the trash load that would be reduced if full capture systems were installed, operated, and maintained for all storm drains that capture runoff from the relevant areas of land (priority land uses, significant trash generating areas, facilities or sites regulated by NPDES permits for discharges of storm water associated with industrial activity, or specific land uses or areas that generate substantial amounts of trash, as applicable). The full capture system equivalency is a trash load reduction target that the permittee quantifies by using an approach, and technically acceptable and defensible assumptions and methods for applying the approach, subject to the approval of permitting authority. Examples of such approaches include, but are not limited to, the following:*

- (1) *Trash Capture Rate Approach. Directly measure or otherwise determine the amount of trash captured by full capture systems for representative samples of all similar types of land uses, facilities, or areas within the relevant areas of land over time to identify specific trash capture rates. Apply each specific trash capture rate across all similar types of land uses, facilities, or areas to determine full capture system equivalency. Trash capture rates may be determined either through a pilot study or literature review. Full capture systems selected to evaluate trash capture rates may cover entire types of land uses, facilities, or areas, or a representative subset of types of land uses, facilities, or areas. With this approach, full capture system equivalency is the sum of the products of each type of land use, facility, or area multiplied by trash capture rates for that type of land use, facility, or area.*

*(2) Reference Approach. Determine the amount of trash in a reference receiving water in a reference watershed where full capture systems have been installed for all storm drains that capture runoff from all relevant areas of land. The reference watershed must be comprised of similar types and extent of sources of trash and land uses (including priority land uses and all other land uses), facilities, or areas as the permittee's watershed. With this approach, full capture system equivalency would be demonstrated when the amount of trash in the receiving water is equivalent to the amount of trash in the reference receiving water."*

**9. Land Uses and Locations Requiring Trash Controls.** The Trash Amendments define land uses and locations that are to be controlled for trash discharges by MS4 permittees using the Track 1 compliance option:

- a. **Priority Land Uses:** Those developed sites, facilities, or land uses (i.e. not simply zoned land uses) within a MS4 permittee's jurisdiction from which discharges of trash are regulated by the Ocean Plan or ISWEBE Plan as follows:
- High-density residential: all land uses with at least ten (10) developed dwelling units/acre.
  - Industrial: land uses where the primary activities on the developed parcels involve product manufacture, storage, or distribution (e.g., manufacturing businesses, warehouses, equipment storage lots, junkyards, wholesale businesses, distribution centers, or building material sales yards).
  - Commercial: land uses where the primary activities on the developed parcels involve the sale or transfer of goods or services to consumers (e.g., business or professional buildings, shops, restaurants, theaters, vehicle repair shops, etc.).
  - Mixed urban: land uses where high-density residential, industrial, and/or commercial land uses predominate collectively (i.e., are intermixed).
  - Public transportation stations: facilities or sites where public transit agencies' vehicles load or unload passengers or goods (e.g., bus stations and stops).
- b. **Equivalent Alternative Land Uses:** An MS4 permittee with regulatory authority over priority land uses may issue a request to the San Diego Water Board that the MS4 permittee be allowed to substitute a land use identified above with an alternate land use within the MS4 permittee's jurisdiction that generates rates of trash that is equivalent to or greater than the priority land use being substituted. The land use area requested to substitute for a priority land use need not be an acre-for-acre substitution but may involve one or more priority land uses, or a fraction of a priority land use, or both, provided the total trash generated in the equivalent alternative land use is equivalent or greater than the total trash generated from the priority land uses for which substitution is requested. Comparative trash generation rates shall be established through the reporting of quantification measures such as street sweeping and catch basin cleanup records; mapping; visual trash presence surveys, such as the "Keeping America Beautiful Visible

Litter Survey"; or other information as required by the San Diego Water Board.

- c. *Coordination with California Department of Transportation (Caltrans)*. The Trash Amendments (Ocean Plan Chapter III.L.2.b and ISWEBE Plan Chapter IV.A.3.b) require that Caltrans and MS4 permittees coordinate their efforts to install, operate, and maintain full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls in significant trash generating areas and/or priority land uses.
- d. *Specific Land Uses or Locations Determined by the San Diego Water Board*: The Trash Amendments (Ocean Plan Chapter III.L.2.d and ISWEBE Plan Chapter IV.A.3.d) provide the San Diego Water Board with the authority to determine that specific land uses or locations generate substantial amounts of trash in addition to the priority land uses defined above. In the event the San Diego Water Board makes that determination, the San Diego Water Board may require the MS4 permittees to comply with the requirements of the Trash Amendments with respect to such land uses or locations.

[Note: The County of San Diego requests the removal of this paragraph, but if Regional Board must keep, then recommended edits are shown] The San Diego Water Board has evaluated the San Diego River Park Foundation's 2013, 2014, and 2015 State of the River reports, and information received in regard to Item 5 on the May 14, 2014 Board meeting agenda pertaining to trash generated by transient encampments in the San Diego River watershed and related water quality issues. Based on this information the San Diego Water Board has determined that transient encampments in the San Diego River watershed are generating substantial trash in amounts that adversely affect beneficial uses or cause nuisance in the San Diego River. ~~This Order requires MS4 permittees in the San Diego River Watershed Management Area to develop plans to address trash runoff from the relevant areas of land affected by transient encampments through Track 1 or Track 2 controls as stipulated in the Trash Amendments (Ocean Plan Chapter III.L.2.d and ISWEBE Plan Chapter IV.A.3.d)~~ This Order requires MS4 permittees in the San Diego River watershed to coordinate with other entities within the watershed, as appropriate, to address trash associated with transient encampments from areas under their jurisdiction. Because this may involve entities not subject to the MS4 Permit, the coordination may be implemented through another regulatory mechanism, such as a Conditional Waiver of Waste Discharge Requirements, or cooperative agreements which would be separate from the NPDES permit for the MS4 permittees.

**10. Compliance Time Schedule.** ~~The Trash Amendments require the implementing permit to state that full compliance with the trash discharge prohibition shall occur within ten (10) years of the effective date of the first implementing permit. In addition, the implementing permit must require the MS4 permittees to demonstrate achievements of interim milestones. In no case may the final compliance date be later than fifteen (15) years from the effective date of the Trash Amendments (i.e. December 2, 2030).~~ The current Regional MS4 Permit (Order R9-2013-0001, as amended by Orders R9-2015-0001 and R9-2015-0100) will expire on June 27, 2018. The Regional MS4 Permit reissued after June 27, 2018 will be the first implementing permit and will contain a compliance time schedule consistent with the requirements of the Trash Amendments.

~~Full compliance with the Trash Amendments will be within 10 years of the effective date of the re-issued Regional MS4 Permit.~~

**11. Monitoring and Reporting.** The Trash Amendments require the implementing permit to include monitoring and reporting requirements. The MS4 permittees will be required to provide reports to the San Diego Water Board on an annual basis to monitor progress toward achieving full compliance with the trash discharge prohibition. ~~The monitoring and reporting requirements are dependent on the measures elected to be implemented by a MS4 permittee.~~

**12. Regional MS4 Permit and Incorporation into Copermitee Planning Documents.** On May 8, 2013, the San Diego Water Board adopted Order No. R9-2013-0001, NPDES No. CAS0109266, National Pollutant Discharge Elimination System (NPDES) Permit and Waste Discharge Requirements for Discharges from the Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds within the San Diego Region (Regional MS4 Permit). The Regional MS4 Permit initially only incorporated the owners and operators of Phase I MS4s in San Diego County (San Diego County MS4 permittees). The Regional MS4 Permit was subsequently amended in 2015 to incorporate the owners and operators of the Phase I MS4s in south Orange County (Orange County MS4 permittees) and in southwest Riverside County (Riverside County Copermitees). The San Diego Water Board intends to incorporate the requirements of the Trash Amendments into the Regional MS4 Permit after it expires (June 27, 2018). The renewed Regional MS4 Permit will be the first implementing permit of the Trash Amendments for the MS4 permittees.

The Regional MS4 Permit requires the MS4 Copermitees to develop and implement Water Quality Improvement Plans for ten (10) Watershed Management Areas (WMAs) designated in Table B-1 of the Permit. Each jurisdiction is also required to develop and implement a Jurisdictional Runoff Management Plan (JRMP) that describes how specific strategies in the Water Quality Improvement Plans are implemented as well as how other agency specific permit requirements are met. While the JRMPs are not explicitly part of the Water Quality Improvement Plan, reporting related to JRMP programs is accomplished through the Water Quality Improvement Plan Annual Reporting Process.

Compliance with the Trash Amendments is based on implementation of specific measures to control trash within a jurisdiction. There may be synergy to be gained through implementation of watershed scale efforts to mitigate trash impacts also. The implementation measures, interim milestones, and compliance schedules for Track 1 or Track 2 of the Trash Amendments shall be incorporated into the Water Quality Improvement Plans for the watershed, into the jurisdictional specific JRMPs, or a combination of the two, to be implemented by the MS4 permittees as part of the adaptive management process.

Through the issuance of this Order pursuant to Water Code section 13267, the San Diego Water Board intends the MS4 permittees to incorporate the requirements of the Trash Amendments into the Water Quality Improvement Plans, into the Jurisdictional Runoff Management Plans, or a combination of the two, after renewal of the Regional MS4 Permit. Reporting on implementation of measures to comply with the Trash Amendments will be provided through JRMP Annual Report forms, which are submitted as part of the WQIP Annual Reports.

**13. Water Quality Improvement Plans.** The Regional MS4 Permit requires the MS4 permittees to develop and implement Water Quality Improvement Plans for ten (10) Watershed Management Areas, designated in the Regional MS4 Permit as shown in Table 1 below:

**Table 1. San Diego Region Watershed Management Areas**

Hydrologic Unit(s)	Watershed-Management Area	Major Surface Water Bodies	Responsible-MS4 permittees
San Juan (901.00)	South Orange County	- Aliso Creek - San Juan Creek - San Mateo Creek - Pacific Ocean - Heisler Park ASBS	- City of Aliso Viejo - City of Dana Point - City of Laguna Beach - City of Laguna Hills <sup>1</sup> - City of Laguna Niguel - City of Laguna Woods <sup>3</sup> - City of Lake Forest <sup>2</sup> - City of Mission Viejo - City of Rancho Santa Margarita - City of San Clemente - City of San Juan Capistrano - County of Orange - Orange County Flood Control District - City of Menifee <sup>3</sup> - City of Murrieta <sup>4</sup> - City of Temecula - City of Wildomar <sup>4</sup> - County of Riverside - County of San Diego - Riverside County Flood Control and Water Conservation District

Notes:

- By agreement dated February 10, 2016, pursuant to Water Code section 13228, the Phase I MS4 discharges within the jurisdiction of the City of Laguna Hills and the City of Laguna Woods located in the Santa Ana Region are regulated by San Diego Water Board Order No. R9-2013-0001 as amended by Order No. R9-2015-0001, upon the later effective date of Order No. R9-2016-0001 or Santa Ana Water Board Tentative Order No. R9-2015-0001. The City of Laguna Hills and Laguna Woods must also comply with the requirements of the San Diego Creek/Newport Bay TMDL in section XVIII of Santa Ana Water Board Order No. R9-2016-0001.
- By agreement dated February 10, 2016, pursuant to Water Code section 13228, Phase I MS4 discharges within the City of Lake Forest located within the San Diego Water Board Region are regulated by the Santa Ana Water Board Order No. R9-2015-0001 (NPDES No. CAS618030) upon the later effective date of this Order or Santa Ana Water Board Tentative Order No. R9-2015-0001. In accordance with the terms of the agreement between the San Diego Water Board and the Santa Ana Water Board, the City of Lake Forest must implement the requirements of the Bacteria TMDL in Attachment 5 of this Order, participate in preparation and implementation of the Water Quality Improvement Plan for the Aliso Creek Watershed Management Area as described in Provision B of this Order and continue implementation of its over-irrigation discharge prohibition in its City Ordinance, Title 15, Chapter 15, section 14.030, List (b).
- By agreement dated October 26, 2016, pursuant to Water Code section 13228, Phase I MS4 discharges within the City of Menifee located within the San Diego Water Board Region are regulated by the Santa Ana Water Board Order No. R9-2010-0033 as it may be amended or reissued (NPDES No. CAS618033) upon the later effective date of this Order. In accordance with the terms of the agreement between the San Diego Water Board and the Santa Ana Water Board, the City of Menifee must participate in preparation and implementation of the Water Quality Improvement Plan for the Santa Margarita River Watershed Management Area as described in Provision B of this Order.
- By agreement dated October 26, 2016, pursuant to Water Code section 13228, the Phase I MS4 discharges within the jurisdiction of the City of Murietta and the City of Wildomar located in the Santa Ana Region are regulated by San Diego Water Board Order No. R9-2013-0001 as amended by Order No. R9-2015-0001 and R9-2015-0100. The City of Murietta and City of Wildomar must also comply with the requirements of the Lake Elmore/Canyon Lake Nutrient TMDLs in section VI.D.2 of Santa Ana Water Board Order No. R9-2010-0033, or corresponding section as it may be amended or reissued.

The Water Quality Improvement Plans include the following: (a) identification of priority water quality conditions that need to be addressed to improve the water quality in each Watershed Management Area; (2) numeric goals for the highest priority water quality conditions to be achieved that will demonstrate discharges from the MS4s are not causing or contributing to exceedances of applicable water quality objectives, or water quality objectives are being attained in receiving waters; (3) a description of the water quality improvement strategies that will be and may be implemented to achieve the numeric goals; and (4) schedules for implementing the water quality improvement strategies and achieving the numeric goals.

The Regional MS4 Permit also requires incorporation of implementation plans for applicable Total Maximum Daily Loads (TMDLs) and Areas of Special Biological Significance (ASBS), which include interim and final water quality-based effluent limitations, compliance strategies, and compliance schedules, into the Water Quality Improvement Plans. The implementation measures, interim milestones, and compliance schedules for Track 1 or Track 2 of the Trash Amendments shall also be incorporated into the Water Quality Improvement Plans to be implemented by the MS4 permittees as part of the adaptive management process.

Through the issuance of this Order pursuant to Water Code section 13267, the San Diego Water Board intends the MS4 permittees to incorporate the requirements of

~~the Trash Amendments into the Water Quality Improvement Plans after renewal of the Regional MS4 Permit.~~

**14.13. Basis for Requiring Technical and Monitoring Reports.** Water Code section 13267 provides that the San Diego Water Board may require dischargers, past dischargers, or suspected dischargers to furnish those technical or monitoring reports as the San Diego Water Board may specify, provided that the burden, including costs, of these reports, must bear a reasonable relationship to the need for the reports and the benefits to be obtained from the reports. The technical and monitoring reports required under this Investigative Order are needed to provide information to the San Diego Water Board regarding (a) the measures each MS4 permittee is electing to implement (i.e. Track 1 or Track 2) within its jurisdiction to comply with the trash discharge prohibition (Track 1 and Track 2), (b) the plan that will be implemented by each MS4 permittee to comply with the trash discharge prohibition (Track 2 only), (c) the interim milestones that each MS4 permittee will achieve within its jurisdiction (Track 1 and Track 2), (d) the schedules to achieving the interim milestones, and full compliance with the trash discharge prohibition (Track 1 and Track 2), and (e) the monitoring (Track 2 only) and reporting (Track 1 and Track 2) that will be implemented to demonstrate progress toward achieving full compliance with the trash discharge prohibition.

**15.14. California Environmental Quality Act.** Adoption of this Order is for the protection of the environment and is exempt from the provisions of the California Environmental Quality Act (CEQA) (Public Resources Code section 21000 et seq.) in accordance with section 15308, Chapter 3, Title 14 of the California Code of Regulations (CCR). This action is also exempt from the provisions of CEQA in accordance with section 15061(b)(3) of Chapter 3, Title 14 of the CCR because it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment.

**IT IS HEREBY ORDERED**, pursuant to California Water Code section 13267, that the MS4 Permittees must comply with the following directives:

#### **A. TECHNICAL AND MONITORING REPORTS**

1. **Written Notices.** Each MS4 permittee must submit to the San Diego Water Board, **no later than three (3) months from the date of this Order** INSERT DATE, a written notice stating whether the MS4 permittee will implement Track 1 or Track 2 to comply with the trash discharge prohibition in the Ocean Plan and ISWEBE Plan.
2. **Track 2 Implementation Plans.** Each MS4 permittee electing to comply with Track 2 must submit, **no later than eighteen (18) months from the date of this Order** INSERT DATE, an implementation plan, which shall also be incorporated into the applicable Water Quality Improvement Plan or Jurisdictional Runoff Management Plan, or combination of the two, after renewal of the Regional MS4 Permit, for each Watershed Management Area described in Table 1 in Finding 13 above that describes:

- a. The combination of controls<sup>3</sup> selected by the MS4 permittee and the rationale for each selection;
  - b. How the combination of controls is designed to achieve full capture system equivalency;
  - c. How full capture system equivalency will be demonstrated;
  - d. How the trash implementation plans will be monitored and assessed ~~in Water Quality Improvement Plan Annual Reports;~~
  - e. ~~Requests by MS4 permittees, if any, for authorization to substitute a Priority Land Use described in Finding 9 above with an Equivalent Alternate Land Use that generates rates of trash equivalent to, or greater than, the Priority Land Use being substituted. The MS4 permittees must provide data or information which establishes that trash generation rates from the Alternate Land Use(s) are greater than the Priority Land Use(s) being substituted;~~
  - f. A compliance time schedule ~~based on the shortest practicable time~~ to achieve full compliance with the trash discharge prohibition, including interim milestones (such as average load reductions of ten percent per year) and a final compliance date. The final compliance date must not be later than fifteen (15) years from the effective date of the Trash Amendments (i.e. December 2, 2030).
3. Monitoring and Reporting. Upon adoption of the implementing MS4 Permit, the MS4 permittees are required to provide reports to the San Diego Water Board on an annual basis to demonstrate progress toward achieving full compliance with the trash discharge prohibition. The monitoring and reporting requirements are dependent on the compliance track selected by a MS4 permittee. Reporting may be performed using the Jurisdictional Urban Runoff Management Plan form, submitted with the Water Quality Improvement Plan Annual Report.
- a. MS4 permittees that elect to comply with the Statewide Trash Amendments via the Track 1 compliance option shall provide a report to the Regional Board demonstrating installation, operation, maintenance, and the Geographic Information System- (GIS-) mapped location and drainage area served by its full capture systems on an annual basis as part of the JRMP reporting form within the Water Quality Improvement Plan Annual Report.
  - b. MS4 permittees that elect to comply with the Statewide Trash Amendments via the Track 2 compliance option shall develop and implement monitoring plans that demonstrate the effectiveness of the full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls, and compliance with full capture system equivalency. Monitoring reports shall be provided on an annual basis as part of the JRMP reporting form within the Water Quality Improvement Plan Annual Report and shall include GIS-mapped locations and drainage area served for each of the full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls installed or utilized by the MS4 permittee.

4. **Coordination with Caltrans.** Each MS4 permittee subject to this Order must submit, ~~no later than eighteen (18) months from the date of this Order [INSERT DATE], a description of how MS4 permittees will~~ coordinate their efforts to install, operate, and maintain full capture systems, multi-benefit projects, and other controls with Caltrans in significant trash generating areas and/or priority land uses, as applicable.
  
5. **[Note: The County of San Diego requests removal of this paragraph, if Regional Board keeps in then recommended edits presented.]** **Transient Encampments in the San Diego River Watershed.** MS4 permittees discharging to the San Diego River watershed (Cities of San Diego, Santee, El Cajon, La Mesa, and County of San Diego), must submit, ~~no later than eighteen (18) months from the date of this Order [INSERT DATE], a description of how~~ coordinate with other entities in the watershed, as appropriate, to address trash generated from transient encampments in areas under their jurisdiction in the San Diego River Watershed Management Area will be addressed. These efforts may be implemented under another regulatory mechanism, such as a Conditional Waiver of Waste Discharge Requirements, or non-regulatory cooperative agreements, separate from the NPDES permit for the MS4 permittees.

---

<sup>3</sup> **Controls include, but are not limited to, full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls ~~treatment controls and institutional controls~~, as defined in the Appendix D to the Water Quality Control Plan for Ocean Waters of California ~~California Ocean Plan~~ and Appendix E of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California.**

**B. PROVISIONS**

1. **Signatory Requirements.** All documents submitted to the San Diego Water Board must be signed and certified.

a. All reports required by this Order must be signed as follows:

- (1) For a corporation, by a principal executive officer of at least the level of vice-president;
- (2) For a partnership or sole proprietorship, by a general partner or the proprietor, respectively;
- (3) For a municipality, state, federal or other public agency, by either a principal executive or ranking elected official.
- (4) By a duly authorized representative of the person designated above (B.6.a.(1), B.6.a.(ii), or B.6.(a)(iii)). A person is a duly authorized representative only if:

(a) The authorization is made in writing by a person described in paragraph B.6.a above;

(b) The authorization specifies either an individual or position having responsibility for the overall operation of the regulated facility or activity; and

(c) The written authorization is submitted to the San Diego Water Board.

b. Any person signing a document required by this Order must make the following certification:

*"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

2. **Submittal of Documents.** All documents submitted to the San Diego Water Board in compliance with this Order must be submitted in electronic format (compact disk (CD-ROM or CD) in a Portable Document Format (PDF), unless otherwise directed. All electronic format documents required under this Order must be submitted to:

Executive Officer  
 California Regional Water Quality Control Board  
 San Diego Region  
 2375 Northside Drive, Suite 100  
 San Diego, CA 92108  
 Attn: Laurie Walsh, PE, Storm Water Management Unit

3. **Changes to Order.** This Order may be amended, rescinded, or updated by the Executive Officer. The MS4 permittees may propose changes or alternatives to the requirements in this Order if a valid rationale for the changes is shown. The filing of a request by a MS4 permittees for amending, rescinding, or updating this Order, or notification of planned changes or anticipated noncompliance does not stay any condition of this Order.

### C. NOTIFICATIONS

1. **Enforcement Discretion.** The San Diego Water Board reserves its right to take any enforcement action authorized by law for violations of the terms and conditions of this Order.
2. **Requesting Administrative Review by the State Water Board.** Any aggrieved person may petition the State Water Board regarding this Order in accordance with Water Code section 13320 and the California Code of Regulations title 23 sections 2050 and following. The State Water Board must receive the petition by 5:00 p.m., 30 days following the date of this Order. Copies of the laws and regulations applicable to filing petitions may be found on the State Water Board website at [http://www.waterboards.ca.gov/public\\_notices/petitions/water\\_quality](http://www.waterboards.ca.gov/public_notices/petitions/water_quality) or will be provided upon request.

For instructions on how to file a petition for review, see the State Water Board website at:

[http://www.waterboards.ca.gov/public\\_notices/petitions/water\\_quality/wqpetition\\_instr.shtml](http://www.waterboards.ca.gov/public_notices/petitions/water_quality/wqpetition_instr.shtml)

Ordered By: \_\_\_\_\_

David W. Gibson  
 EXECUTIVE OFFICER  
 Date

December 14, 2016

Christina Arias, PE  
California Regional Water Quality Control Board, San Diego Region

**Subject: Comment – Tentative Order No. R9-2016-0205 (786088 C.Arias)**

Dear Ms. Arias:

On behalf of the California Stormwater Quality Association (CASQA), thank you for the opportunity to provide comments on Tentative Order No. R9-2016-0205, Investigative Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds within the San Diego Region to Submit Technical and Monitoring Reports Pertaining to the Control of Trash From Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays and Estuaries in the San Diego Region, which was distributed for public review on November 10, 2016 (referred to hereinafter as the “Tentative Investigative Order”).

CASQA understands the California Regional Water Quality Control Board, San Diego Region (Regional Water Board) released the Tentative Investigative Order to meet the requirements of the Statewide Trash Amendments to the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California (ISWEBE Plan) and the Water Quality Control Plan for Ocean Waters of California (Ocean Plan) (referred to hereafter as “Statewide Trash Amendments”). Since the Tentative Investigative Order is the first such Order implementing the Statewide Trash Amendments for municipalities in California and could be precedent setting, we greatly appreciate the opportunity to comment and the intent of Regional Water Board staff to provide written responses to “significant” comments received.

CASQA recognizes that issuance of a Tentative Investigative Order is consistent with Chapter IV.A.5.a.(1).B of the ISWEBE Plan and Chapter III.L.4.a.(1).B of the Ocean Plan that require the Regional Water Board to issue an investigative order pursuant to Water Code section 13267 or 13383 requiring the MS4 Permittees to submit, within three (3) months from receipt of a final investigative order, written notice stating the compliance option (Track 1 or Track 2) that the permittee chooses to follow to comply with the Statewide Trash Amendments. The Tentative Investigative Order would also require MS4 Permittees, which choose the Track 2 compliance option, to submit an Implementation Plan within 18 months of receiving a final investigative order.

CASQA generally supports the intent of the Tentative Investigative Order to the extent that it is necessary to implement the Statewide Trash Amendments. We provide comments and suggested revisions to address certain issues of particular concern for CASQA and its members with respect to the Tentative Investigative Order as issued, and subsequent incorporation of the Statewide Trash Amendment provisions into MS4 permits. These issues include:

1. Purpose and intent of the Tentative Investigative Order;
2. Clarifications to ensure that the findings and directives within the Tentative Investigative Order are consistent with the Statewide Trash Amendments (especially as they pertain to the differences between Track 1 and Track 2 compliance), including clarification that compliance with either Track 1 or Track 2 provides a compliance pathway for the trash discharge prohibition and meeting water quality objectives; and
3. Utilization of a different approach to address transient encampments.
4. Other recommendations related to technical and monitoring reports and coordination with Caltrans.

Our recommendations are based on lessons learned in other areas of the state with trash management. The order of presentation of our recommendations is based on sequential location of each issue in the Tentative Investigative Order.

### **Issue #1 – Purpose and Intent of Tentative Investigative Order**

As a preliminary matter, CASQA comments to clarify and understand the intent and purpose of the Tentative Investigative Order, and how information submitted in compliance with the order will subsequently be used by the Regional Water Board to further revise the existing MS4 Permit. Based on our review of the Tentative Investigative Order, it appears that the Regional Water Board is seeking to obtain information regarding: (1) which track permittees seek to follow; (2) development of implementation plans if following track 2; (3) how coordination with Caltrans would occur; and, (4) how transient encampments might be addressed. In general, the information sought (except as commented on further below) appears to be appropriately subject to the statutory terms and conditions of Water Code sections 13267 and 13383 combined.

However, CASQA wants to be certain that the Tentative Investigative Order, and plans prepared pursuant to the Tentative Investigative Order, will not be used subsequently to implement the Statewide Trash Amendment provisions without actually revising an implementing permit. For example, Hereby Ordered Directive A.2.f indicates that the Track 2 implementation plan should include a compliance time schedule based on the shortest practicable time to achieve compliance with the trash discharge prohibition. It is imperative that any compliance schedule be adopted directly into the MS4 permit to ensure proper legal protection for permittees while they implement the plans and practices to meet the timeframes contained within the Statewide Trash Amendments.

As indicated in Finding 10, the Statewide Trash Amendments require an implementing permit to require compliance within ten (10) years of the effective date of the implementing permit, but no later than 15 years from the effective date of the Statewide Trash Amendments. Thus, by this language, it is clear that compliance schedule provisions need to be incorporated into the implementing permit, and cannot be implemented through a 13267/13383 order.

In other words, CASQA seeks clarification with respect to the process that the Regional Water Board will undertake after it receives the information requested pursuant to the Tentative

Investigative Order, and how the Regional Water Board will then proceed to implement the Statewide Trash Amendments.

## **Issue #2 – Revisions to Findings to Ensure Consistency with Trash Amendments**

The State Water Resources Control Board (State Water Board) made it clear that one of the primary reasons for developing and adopting Statewide Trash Amendments was to ensure a consistent approach across the state:

*“A consistent statewide approach is needed to control trash discharges into surface waters of the state.”<sup>1</sup>*

*“There is a strong need for a statewide consistency within the Water Boards regarding trash control.”<sup>2</sup>*

*“Waters continue to be impaired by trash, the regulatory control approaches vary, and there is a need for statewide uniformity to control trash.”<sup>3</sup>*

In its Alternatives Analysis, Substitute Environmental Documentation, the State Water Board noted<sup>4</sup>:

*“State Water Board regulations require this draft SED to contain an analysis of range of reasonable alternatives to the project and reasonably foreseeable methods of compliance that could feasibly meet the project objectives and to avoid or substantially reduce any potentially significant adverse environmental impacts. (23 CCR §3777, subd. (b)(3))”*

One of the alternatives analyzed by the State Water Board was the “Regional Water Board Alternative.” Among the reasons the State Water Board determined this was not the preferred approach were:

*“There is, however, the potential that the individual regional water boards would develop different trash water quality objectives and implementation provisions, resulting in a continued lack of statewide consistency. Furthermore, it would be an inefficient use of staff time (and corresponding costs) to develop up to eight different approaches to trash-control in state waters.”*

Following are Findings in the Tentative Investigative Order that are inconsistent with the Statewide Trash Amendments, descriptions of the inconsistencies, and CASQA Recommendations for making the Findings consistent with the Statewide Trash Amendments.

---

<sup>1</sup> Agenda Item 8, April 7, 2015 State Water Board Meeting.

<sup>2</sup> Proposed Final Staff Report and proposed Final Trash Amendments, April 7, 2015.

<sup>3</sup> Resolution 2015-0019, Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California, Whereas #6, State Water Board, April 7, 2015.

<sup>4</sup> Revised Proposed Final Staff Report for Trash Amendments, including the Substitute Environmental Documentation, March 26, 2015.

### **Findings 5 and 6: Trash Water Quality Objectives and Discharge Prohibition**

Finding 5 recites the water quality objective for trash and Finding 6 recites the trash discharge prohibition contained within the Statewide Trash Amendments, however the Findings do not include language identifying a compliance pathway as is provided for within the Amendments. In addition, Finding 7 states that the narrative water quality objectives and the discharge prohibitions will be incorporated into the permit, but does not clearly state that the MS4 will be in compliance with those prohibitions and water quality objectives through implementation of Track 1 or Track 2.

**CASQA Recommendation:** Include compliance pathway language that links Finding 6 to Finding 7 and clearly states that permittees in full compliance with Track 1 or Track 2 are deemed to be in compliance with the discharge prohibition and narrative water quality objectives as incorporated into the MS4 Permit.

***Trash Discharge Prohibition.*** *The Trash Amendments established the following discharge prohibition in Chapter III.I.6 of the Ocean Plan and Chapter IV.A.2 of the ISWEBE Plan:*

*The discharge of trash to surface waters of the State or the deposition of trash where it may be discharged into surface waters of the State is prohibited*

*MS4 permittees in full compliance with Track 1 or Track 2 are deemed to be in compliance with the trash discharge prohibition and narrative water quality objectives incorporated into the MS4 permit.*

### **Finding 7: MS4 Permit Implementation of the Trash Amendments**

Finding 7 presents the Track 1 and Track 2 compliance options detailed in the Statewide Trash Amendments. However, the Track 2 language omits some of the Track 2 language within the Statewide Trash Amendments.

Finding 7 also identifies that those MS4 Permittees that choose Track 2 as their compliance option need to submit an Implementation Plan “*subject to approval by the San Diego Water Board.*” However, there is no language that identifies what the process and timing are for the Regional Water Board’s review and approval of the Track 2 Implementation Plans.

**CASQA Recommendations:** Add the omitted language (underlined below) from the Statewide Trash Amendments to the Tentative Investigative Order.

*Track 2: Install, operate, and maintain any combination of full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls within either the jurisdiction of the MS4 permittee or within the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. The MS4 permittee shall demonstrate that such combination achieves full capture system equivalency. The MS4 permittee may determine which controls to implement to achieve compliance with full capture system*

*equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install full capture systems where such installation is not cost-prohibitive.*

In addition, clarify the review and approval process and timeline for the Track 2 Implementation Plans.

### **Finding 8: Full Capture System Equivalency**

Finding 8 presents the definition for Full Capture System Equivalency. However, the definition omits some of the language within the Statewide Trash Amendments.

**CASQA Recommendation:** Add the omitted language (underlined below) from the Statewide Trash Amendments to the Tentative Investigative Order.

*Examples of such approaches include, but are not limited to, the following:*

### **Finding 9.a: Land Uses and Locations Requiring Trash Controls – Priority Land Uses**

Finding 9.a details the Priority Land Uses that are to be addressed for controlling trash discharges. However, the language does not clarify that the “Priority Land Uses” are the land use types to be addressed via the Track 1 compliance option.

Pursuant to the Statewide Trash Amendments, the Track 2 compliance option is valid for all land uses within each MS4 Permittee’s jurisdiction over which they have “regulatory control” – “*The MS4 permittee may determine the locations of land uses within its jurisdiction to implement any combination of controls.*” That is, under the Track 2 compliance option, the MS4 Permittees can implement a suite of full capture systems, multi-benefit projects, other treatment controls, or institutional controls throughout their jurisdictions to control trash discharges; they are not constrained by the Priority Land Use definition.

**CASQA Recommendation:** Clarify that the Priority Land Use definition applies to the Track 1 compliance option.

- a. **Priority Land Uses (Track 1 Compliance Option):** Those developed sites, facilities, or land uses (i.e., not simply zoned land uses) within the MS4 permittee’s jurisdiction from which discharges of trash are regulated by the Ocean Plan or ISWEBE Plan as follows:*

### **Finding 9.b: Land Uses and Locations Requiring Trash Controls – Equivalent Alternative Land Uses**

Finding 9.b does not contain the full language from the Equivalent Land Use Provisions in the Statewide Trash Amendments. Finding 9.b omits “*The land use area requested to substitute for a priority land use need not be an acre-for-acre substitution but may involve one or more priority land uses, or a fraction of a priority land use, or both, provided the total trash generated in the equivalent alternative land use is equivalent or greater than the total trash generated from the priority land uses for which substitution is requested.*” The Statewide Trash Amendments

included this language because the State Water Board recognized there is variability in trash generation within the same land use type based on local conditions. Omitting this language reduces the flexibility MS4 Permittees have to define the priority land uses within their jurisdictions using local trash-generation information.

In addition, pursuant to the Trash Amendments, the Equivalent Alternate Land Uses are directly linked and apply to the Priority Land Uses. As a result, Finding 9.b needs to be a subset of Finding 9.a.

**CASQA Recommendations:** Add the omitted language (underlined below) from the Statewide Trash Amendments to the Tentative Investigative Order.

*An MS4 permittee with regulatory authority over priority land uses may issue a request to the San Diego Water Board that the MS4 permittee be allowed to substitute one or more ~~a~~ land uses identified above with ~~an~~ alternate land uses within the MS4 permittee's jurisdiction that generates rates of trash that is equivalent to or greater than the priority land use(s) being substituted. The land use area requested to substitute for a priority land use need not be an acre-for-acre substitution but may involve one or more priority land uses, or a fraction of a priority land use, or both, provided the total trash generated in the equivalent alternative land use is equivalent or greater than the total trash generated from the priority land uses for which substitution is requested. Comparative trash generation rates shall be established through the reporting of quantification measures such as street sweeping and catch basin cleanup records; mapping; visual trash presence surveys, such as the "Keeping America Beautiful Visible Litter Survey"; or other information as required by the San Diego Water Board.*

In addition, the numbering for Finding 9.b should be changed to Finding 9.a.i to clarify that the Equivalent Alternative Land Uses Finding is really a subset of the Priority Land Uses Finding.

### **Finding 11: Monitoring and Reporting**

Finding 11 is inconsistent with the differences in the monitoring and reporting requirements for the two tracks as provided for in the Statewide Trash Amendments. By not including the specific requirements for the Track 1 and Track 2 compliance options, the Tentative Investigative Order leaves the monitoring and reporting requirements ambiguous which could cause unnecessary monitoring and/or reporting by the MS4 Permittees.

**CASQA Recommendation:** Add the omitted language (underlined below) from the Statewide Trash Amendments to the Tentative Investigative Order.

*The MS4 permittees will be required to provide reports to the San Diego Water Board on an annual basis to monitor progress toward achieving full compliance with the trash discharge prohibition. The monitoring and reporting requirements are dependent on the measures elected to be implemented by a MS4 permittee.*

- a. MS4 permittees that elect to comply with the Track 1 compliance option shall provide a report to the Regional Board demonstrating installation, operation, maintenance, and the Geographic Information System- (GIS-) mapped location and drainage area served by its full capture systems on an annual basis.
- b. MS4 permittees that elect to comply with the Track 2 compliance option shall develop and implement monitoring plans that demonstrate the effectiveness of the full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls, and compliance with full capture system equivalency. Monitoring reports shall be provide on an annual basis and shall include GIS-mapped locations and drainage area served for each of the full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls installed or utilized by the MS4 permittee.

### **Issue #3: Utilization of a Different Approach to Address Transient Encampments.**

Litter or trash is virtually ubiquitous and its sources and transport to receiving waters are well beyond that which happens to enter and exit a MS4 or over which MS4 permittees have control. That is why in adopting the Statewide Trash Amendments, the State Water Board recognized:

*“Implementation of the proposed Trash Amendments will occur through National Pollution [sic] Discharge Elimination System Storm Water Permits (municipal separate storm sewer system phase I and phase II permits, California Department of Transportation permit, industrial general permit, and construction general permit), waste discharge requirements (WDRs), and waivers of WDRs.”<sup>5</sup>*

*“The water quality objective shall be implemented through the prohibition of discharge and other implementation requirements through permits issued pursuant to section 402, subsection (p), of the Clean Water Act, waste discharge requirements, or waivers of waste discharge requirements.”<sup>6</sup>*

### **Finding 9.d: Specific Land Uses or Locations Determined by the San Diego Water Board**

Although Finding 9.d recognizes that the Regional Water Board can determine that other specific land uses or locations generate substantial amounts of trash, it does not recognize that some of the sources may be nonpoint sources, which would be addressed through other regulatory mechanisms such as Waste Discharge Requirements (WDRs) or conditional waivers of WDRs. In fact, the State Water Board recognized this within its response to comments to the Statewide Trash Amendments in response to a request to add requirements to address homeless encampments [Emphasis added]:

<sup>5</sup> Agenda Item 8, April 7, 2015 State Water Board Meeting.

<sup>6</sup> Resolution 2015-0019, Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California, Whereas #12, State Water Board, April 7, 2015.

Response 6.5 - Although the implementation provisions for compliance with the prohibition of discharge focus on trash discharge via storm water, it is well recognized that trash is transported to surface waters via both point and non-point sources. Statewide nonpoint source discharges of trash cause less of an impact to state water than point sources; however, at the local or regional level nonpoint sources can be a substantial source of trash. These areas may include high usage campgrounds, picnic areas, beach recreation areas, and marinas, which can be subject to waste discharge requirements (WDRs) or conditional waivers of WDRs. These types of areas would be assessed by the Water Boards to determine if trash controls are necessary for compliance with the proposed Trash Amendments. For such areas determined to require trash controls within a WDR or waiver of a WDR, management practices could include enforcement of litter laws, education, recycling programs, more or better placement of trash receptacles, and/or more frequent servicing of trash receptacles. (Ocean Plan Amendment at III.L.3; Part I ISWEBE at IV.A.4.). The Trash Amendments are more land-use focused, and in the future the State Water Board could address non-point source trash in a more focused program as suggested by the commenter.

Response 10.6 - Statewide the transport of trash through storm water systems to receiving waters is a substantial source of trash. The Trash Amendments specify provisions for NPDES permits issued pursuant to Federal Clean Water section 402(p). Statewide, nonpoint source discharges of trash cause less of an impact to state water than do point sources. However, at the local or regional level, nonpoint sources can be a substantial source of trash. “Dischargers without NPDES permits, WDRs, or waivers of WDRs must comply with [the] prohibition of discharge.” (Ocean Plan Amendment at III.I.6.d; Part I ISWEBE at IV.A.2.d.) .....

Response 34.2 - Although the implementation provisions for compliance with the prohibition of discharge focus on trash discharge via storm water, it is well recognized that trash is transported in surface waters via both point and non-point sources. .... Additionally, the permitting authority has the discretion to determine other land use or locations generate substantial amounts of trash and require trash controls. The permitting authority may also issue WDRs or waivers of WDRs to the land owner for other trash generating areas or facilities to address trash.

CASQA fails to see how the findings provide justification for requiring plans to address transient encampments. The language of the finding references information in general regarding trash generated at transient encampments, but it does not explain or justify why the MS4 permittees should be responsible for such trash. CASQA recommends that Finding 9.d and Directive A.4 (see below) be removed from the Tentative Investigative Order for the following reasons:

- Transient encampments are non-point sources of trash and should not be included in the Regional MS4 Permit that addresses point sources. Nonpoint sources should, instead, be regulated under individual Waste Discharge Requirements (WDR) or Conditional Waivers of WDR.

- The Statewide Trash Amendments did not intend for the MS4 Permittees to address trash sources within receiving waters, which they do not have “Regulatory Control” over.
- MS4 permittees often do not have access to properties needed to do cleanups of transient encampments; thus, all of the land-owners and key responsible parties would need to be involved<sup>7</sup>.
- There are legal, social, and political complications in managing/cleaning up areas with transient encampments that necessarily require the involvement of a number of other agencies (social services, police, health care, etc.)<sup>8</sup>.
- The Tentative Investigative Order did not provide a robust technical analysis demonstrating why the specific land use or location needed to be regulated, nor did it identify the responsible parties who have regulatory control over the range of land uses<sup>9</sup>.

### **CASQA Recommendations:**

Add the omitted language from the Statewide Trash Amendments to the Tentative Investigative Order.

*The Trash Amendments (Ocean Plan Chapter III.L.2.d and ISWEBE Plan Chapter IV.A.3.d) provide the San Diego Water Board with the authority to determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash in addition to the priority land uses defined above. In the event the San Diego Water Board makes that determination, the San Diego Water Board may require the MS4 permittees to comply with the requirements of the Trash Amendments with respect to such land uses or locations.*

Delete Finding 9.d from the Tentative Investigative Order and, instead issue a WDR or a Conditional Waiver of a WDR, to the appropriate land owner(s).

*~~Specific Land Uses or Locations Determined by the San Diego Water Board: The Trash Amendments (Ocean Plan Chapter III.L.2.d and ISWEBE Plan Chapter IV.A.3.d) provide the~~*

---

<sup>7</sup> MS4 permittees in the Los Angeles Region that have addressed trash associated with transient encampments have done so under TMDLs as a non-point source in conjunction with the other landowners and non-point sources in the vicinity of the waterbody. Programs implemented solely by the MS4 were ineffective at addressing the trash associated with transient encampments because of the lack of access to all areas and the inability of the MS4 to address underlying issues on those properties that encouraged transient populations (e.g., vegetation that provided shelter).

<sup>8</sup> Trash associated with transient populations is usually considered private property. Notice must be provided prior to cleaning up trash and law enforcement is generally required to remove transients prior to cleaning up trash to ensure what is picked up is not personal property. Depending on the location, it may not be possible to require transients to leave the area, thereby preventing trash removal.

<sup>9</sup> In fact, it is unclear what data and/or information from the San Diego River Park Foundation’s 2013, 2014, and 2015 State of the River Reports and Executive Officer Summary Report (May 14, 2014) was used to make this determination.

~~San Diego Water Board with the authority to determine that specific land uses or locations generate substantial amounts of trash in addition to the priority land uses defined above. In the event the San Diego Water Board makes that determination, the San Diego Water Board may require the MS4 permittees to comply with the requirements of the Trash Amendments with respect to such land uses or locations. The San Diego Water Board has evaluated the San Diego River Park Foundation's 2013, 2014, and 2015 State of the River reports, and information received in regard to Item 5 on the May 14, 2014 Board meeting agenda pertaining to trash generated by transient encampments in the San Diego River watershed and related water quality issues. Based on this information the San Diego Water Board has determined that transient encampments in the San Diego River watershed are generating substantial trash in amounts that adversely affect beneficial uses or cause nuisance in the San Diego River. This Order requires MS4 permittees in the San Diego River Watershed Management Area to develop plans to address trash runoff from the relevant areas of land affected by transient encampments through Track 1 or Track 2 controls as stipulated in the Trash Amendments (Ocean Plan Chapter III.L.2.d and ISWEBE Plan Chapter IV.A.3.d).~~

#### **Hereby Ordered Directive A.4: Transient Encampments in the San Diego River**

Directive A.4 requires the MS4 permittees discharging to the San Diego River Watershed to submit a description how the trash generated from transient encampments will be addressed. For the reasons mentioned above for Finding 9.d, CASQA recommends deleting this Directive.

#### **CASQA Recommendations:**

Delete Directive A.4:

~~Transient Encampments in the San Diego River. MS4 permittees discharging to the San Diego River watershed (Cities of San Diego, Santee, El Cajon, La Mesa, and County of San Diego), must submit, no later than eighteen (18) months from the date of this Order [INSERT DATE], a description of how trash generated from transient encampments in the San Diego River Watershed Management Area will be addressed.~~

#### **Issue #4: Other Recommendations**

#### **Finding 14: Basis for Requiring Technical and Monitoring Reports**

Finding 14 states that the technical and monitoring reports are needed to provide information, however, the language does not specify which of the items relate to Track 1 and/or Track 2. Without the specific requirements, the Tentative Investigative Order leaves the monitoring and reporting requirements ambiguous and could cause unnecessary monitoring and/or reporting by the MS4 Permittees.

**CASQA Recommendation:** Revise language in Finding 14 to specify which items relate to Track 1 and/or Track 2.

*The technical and monitoring reports required under this Investigative Order are needed to provide information to the San Diego Water Board regarding (a) the measures each MS4 permittee is electing to implement (i.e. ~~Track 1 or Track 2~~) within its jurisdiction to comply with the trash discharge prohibition (Track 1 and Track 2), (b) the plan that will be implemented by each MS4 permittee to comply with the trash discharge prohibition (Track 2), (c) the interim milestones that each MS4 permittee will achieve within its jurisdiction (Track 1 and Track 2), (d) the schedules to achieving the interim milestones, and full compliance with the trash discharge prohibition (Track 1 and Track 2), and (e) the monitoring (Track 2) and reporting (Track 1 and Track 2) that will be implemented to demonstrate progress toward achieving full compliance with the trash discharge prohibition.*

### **Hereby Ordered Directive A.2: Track 2 Implementation Plans**

Directive A.2.a contains a footnote (Footnote 3) that is inconsistent with the Statewide Trash Amendments.

Directive A.2.e incorrectly links Priority Land Uses with the Track 2 compliance option. Priority Land Uses/Equivalent Alternate Land Uses are only relevant if a MS4 Permittee selects the Track 1 compliance option. Pursuant to the Statewide Trash Amendments, the Track 2 compliance option is valid for all land uses within each MS4 Permittees jurisdiction over which they have “regulatory control” (see also the comments provided under Finding 9.a and Finding 9.b).

#### **CASQA Recommendations:**

Revise Footnote 3 in Directive A.2.a:

*~~Controls include, but are not limited to, full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls treatment controls and institutional controls, as defined in the Appendix D to the Water Quality Control Plan for Ocean Waters of California California Ocean Plan and Appendix E of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California.~~*

Delete Directive A.2.e:

*~~Requests by MS4 permittees, if any, for authorization to substitute a Priority Land Use described in Finding 9 above with an Equivalent Alternate Land Use that generates rates of trash equivalent to, or greater than, the Priority Land Use being substituted. The MS4 permittees must provide data or information which establishes that trash generation rates from the Alternate Land Use(s) are greater than the Priority Land Use(s) being substituted.~~*

### **Hereby Ordered Directive A.3: Coordination with Caltrans**

Directive A.3 requires each MS4 permittee to submit, no later than eighteen (18) months from the date of the Tentative Investigative Order, a description of how the permittee will coordinate their efforts to install, operate, and maintain full capture systems, multi-benefit projects, and

other controls with Caltrans. Instead of requiring a separate submittal, it is recommended that the coordination efforts be included within the annual reports.

**CASQA Recommendations:**

Revise Directive A.3:

*Each MS4 permittee subject to this Order must submit, as a part of the annual report ~~no later than eighteen (18) months from the date of this Order~~ [INSERT DATE], a description of how MS4 permittees will coordinate their efforts to install, operate, and maintain full capture systems, multi-benefit projects, and other controls with Caltrans in significant trash generating areas and/or priority land uses, as applicable.*

Lastly, in order to allow for more robust public input, CASQA recommends that the San Diego Regional Water Board hold a public hearing prior to the adoption of the Order to discuss the comments received and corresponding modifications.

Thank you again for the opportunity to comment on Tentative Investigative Order No. R9-2016-0205. If you have any questions, please contact CASQA Executive Director Geoff Brosseau at (650) 365-8620.

Sincerely,

Jill Bicknell, Chair  
California Stormwater Quality Association

---

 This is a message from the California Regional Water Quality Control Board, San Diego Region (9).

Dear Regional MS4 Permit stakeholders,

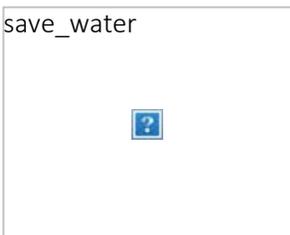

In April 2015, the State Water Resources Control Board adopted amendments to the Water Quality Control Plan for Ocean Waters of California (Ocean Plan) and the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California (ISWEBE Plan) addressing the impacts of trash to the surface waters of California (collectively referred to hereafter as the [Trash Amendments](#)). Pursuant to the Trash Amendments, in November, 2016, the San Diego Water Board released for public comment Tentative Order No. R9-2016-0205, *Investigative Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds within the San Diego Region to Submit Technical and Monitoring Reports Pertaining to the Control of Trash From Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays and Estuaries in the San Diego Region*.

**The issuance of a final San Diego Water Board Investigative Order implementing the Trash Amendments has been deferred pending consultation with the State Water Resources Control Board and other Regional Water Boards regarding a consistent statewide approach. The San Diego Water Board will resume issuance of an Investigative Order, including responses to comments, once this occurs.**

Comments received on Tentative Order No. R9-2016-0205 can be viewed here:  
[http://www.waterboards.ca.gov/sandiego/water\\_issues/programs/stormwater/trash\\_amendments.shtml](http://www.waterboards.ca.gov/sandiego/water_issues/programs/stormwater/trash_amendments.shtml)

Please contact me for further questions regarding the San Diego Water Board's implementation of the Trash Amendments.

FROM: David T. Barker, P.E.  
Supervising Water Resource Control Engineer  
Surface Water Protection Branch

DATE: May 23, 2017

SUBJECT: **Order No. R9-2017-0077, An Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds within the San Diego Region to Submit Reports Pertaining to the Control of Trash in Discharges From Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays, and Estuaries in the San Diego Region**

The subject Order No. R9-2017-0077 (Order) has been developed to address regional implementation of the statewide amendments to the *Water Quality Control Plan for Ocean Waters of California* (Ocean Plan) and *Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California* (ISWEBE Plan) to control the impacts of trash in State surface waters (collectively referred to the Trash Amendments).<sup>1</sup> Staff requests that you approve and issue the Order on or before June 2, 2017.

The Trash Amendments require regional water boards to take certain steps towards implementing the trash narrative water quality objective and trash discharge prohibition by June 2, 2017 through requirements incorporated into MS4 permits or through monitoring and reporting orders issued pursuant to Water Code section 13267 or 13383. The San Diego Water Board will not be amending the Regional MS4 Permit within the time frame specified by the Trash Amendments and staff has therefore prepared the Order for issuance in accordance with Water Code section 13383. Staff intends to incorporate the requirements of the Trash Amendments into the Regional MS4 Permit during its next reissuance in Fiscal Year 2018-19.

The Order requires owners and operators of Phase I MS4s (MS4 permittees) to submit written notice indicating whether Track 1 or Track 2 control measures will be used to

<sup>1</sup> The Trash Amendments can be accessed for review on the State Water Board website: [http://www.waterboards.ca.gov/water\\_issues/programs/trash\\_control/documentation.shtml](http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml)

comply with the trash discharge prohibition as described in the Trash Amendments within three months of the date of the Order. If Track 1 is selected, the Order requires MS4 permittees to submit, within eighteen months of the date of the Order, a jurisdictional map indicating 1) priority land uses, 2) the MS4 permittees' storm drain network, and 3) proposed locations for installation of full capture devices and associated drainage areas. If Track 2 is selected, the Order requires MS4 permittees to submit, within eighteen months of the date of the Order, a trash reduction implementation plan. In either case, MS4 permittees must also submit implementation time schedules consistent with the Trash Amendments.

Order No. R9-2017-0077 is the finalized version of Tentative Order No. R9-2016-0205, which was released to MS4 permittees and other stakeholders for review and comment on November 10, 2016. The San Diego Water Board provided public notice of the Tentative Order by e-mail to MS4 permittees and lyris list subscribers, and by posting the Tentative Order on the San Diego Water Board website at the link below:

[http://www.waterboards.ca.gov/sandiego/board\\_decisions/tentative\\_orders/](http://www.waterboards.ca.gov/sandiego/board_decisions/tentative_orders/).

The 34-day public comment period closed on December 14, 2016. The San Diego Water Board received 22 comment letters from MS4 permittees, the California Stormwater Quality Association (CASQA), and the California Manufactures & Technology Association. The Board did not receive any comment letters from environmental non-governmental organizations. Staff has considered and responded to all of the comments received in finalizing the Tentative Order. Comment letters are posted on the San Diego Water Board's website at the link below:

[http://www.waterboards.ca.gov/rwqcb9/water\\_issues/programs/stormwater/trash\\_amendments.shtml](http://www.waterboards.ca.gov/rwqcb9/water_issues/programs/stormwater/trash_amendments.shtml).

Enclosed for your review are the following documents:

1. Transmittal letter;
2. A final signature version of a conformed copy of Order No. R9-2017-0077;
3. Tentative Order No. R9-2016-0205 showing changes made in response to comments received in red-underline for added text and strikeout for deleted text;  
*and*
4. Staff Response to Comments Report.

If you have any questions or concerns regarding this matter, please see Christina Arias, the lead staff person for the development of the Order.

EDMUND G. BROWN, JR.  
GOVERNORMATTHEW RODRIGUEZ  
SECRETARY FOR  
ENVIRONMENTAL PROTECTION

## State Water Resources Control Board

JUN 01 2017

Shaila Chowdhury, Chief Environmental Engineer  
Division of Environmental Analysis  
California Department of Transportation  
P.O. Box 942873, MS-27  
Sacramento, California 94273-0001

Dear Ms. Chowdhury:

### **WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; CALIFORNIA DEPARTMENT OF TRANSPORTATION**

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions<sup>1</sup> to address pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through storm water discharges. Storm water and non-storm water discharges from the California Department of Transportation (Department) transportation system and facilities are regulated through the Statewide Storm Water Permit (Permit)<sup>2</sup> pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions require issuance of an Order to the Department by June 2, 2017, in accordance with Water Code section 13383,<sup>3</sup> to initiate compliance with the Trash Provisions through submittal of planning information as described below.

The Trash Provisions establish a statewide water quality objective for trash<sup>\*4,5</sup> and a prohibition of the discharge of trash to surface waters of the State or the deposition of trash where it may be discharged into surface waters of the State.<sup>6</sup>

<sup>1</sup> Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California (ISWEBE Plan). Documents may be downloaded from our website at [http://www.waterboards.ca.gov/water\\_issues/programs/trash\\_control/documentation.shtml](http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml).

<sup>2</sup> National Pollutant Discharge Elimination System (NPDES) Statewide Storm Water Permit for Waste Discharge Requirements for State of California, Department of Transportation, Order 2012-0011-DWQ, NPDES No. CAS000003.

<sup>3</sup> Specified in Chapter IV.A.5.b.1 of the ISWEBE Plan and Chapter III.L.4.b.1 of the Ocean Plan

<sup>4</sup> Water quality objectives specified in Chapter III.A of the ISWEBE Plan and Chapter II.C.5 of the Ocean Plan

<sup>5</sup> All terms marked with an asterisk "\*" are defined in the *Trash Provisions Glossary* enclosure provided with this letter.

<sup>6</sup> Prohibition of discharge specified in Chapter IV.A.2 of the ISWEBE Plan and Chapter III.I.6 of the Ocean Plan

The Trash Provisions require the Department to comply with the prohibition of discharge by installing, operating, and maintaining any combination of full capture systems,\* multi-benefit projects,\* other treatment controls,\* and/or institutional controls\* for all storm drains that captures trash from significant trash generating areas.\* The Department is required to demonstrate that the selected combination achieves full capture system equivalency.\* Furthermore, the Department and MS4 permittees are directed to coordinate their efforts to install, operate, and maintain full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls in applicable areas.<sup>7</sup>

The implementation requirements of the Trash Provisions are expected to be incorporated into the Permit at the time of next reissuance of the Permit. The Trash Provisions require the Department to demonstrate full compliance with the requirements within 10 years of the effective date of the reissued Permit, along with achievements of interim milestones such as average load reductions of 10 percent per year. In no case may the final compliance date be later than December 3, 2030, 15 years from the effective date of the Trash Provisions.<sup>8</sup>

This 13383 Order is issued to order the Department to submit an implementation plan that anticipates the above requirements by setting out (1) the specific locations of significant trash generating areas, (2) the combination of controls selected by the Department and the rationale for the selections, and (3) how the Department will demonstrate full capture system equivalency.

The implementation plan is being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions, and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h).

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for the Department to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the Department in response to this Order substitute for some or all of the actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Accordingly, this Order is issued to implement federal law. Consistent with the Trash Provisions, this Order nevertheless allows the Department flexibility in the specific actions it proposes to meet the federal requirements.

---

<sup>7</sup> Provisions from Chapter IV.A.3.b of the ISWEBE Plan and Chapter III.L.2.b of the California Ocean Plan

<sup>8</sup> Provisions from Chapter IV.A.5.b.2 of the ISWEBE Plan and Chapter III.L.4.b.2 of the California Ocean Plan

Ms. Shaila Chowdhury

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT** the Department shall:

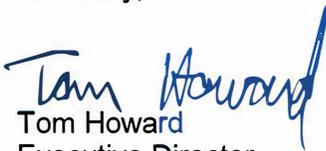

1. By **December 1, 2018**, submit an implementation plan to the State Water Board Executive Director that includes the following:
  - i. Geographic Information System- mapped information identifying specific locations of significant trash generating areas;
  - ii. The combination of full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls selected by the Department and the rationale for the selections; and
  - iii. The Department's method for demonstrating full capture system equivalency.
  
2. Signed and certified information with supporting documentation required by this Order must be submitted electronically to SMARTS<sup>9</sup> by the same Legally Responsible Person identified for the Department's Permit deliverables. The Legally Responsible Person signing any letter, technical report, or document required by this Order must include the following certification:

*"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order for submittal of information, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding the requirements of this Order or any requests for assistance should be directed to Ms. Ariana Villanueva at (916) 341-5586 or [ariana.villanueva@waterboards.ca.gov](mailto:ariana.villanueva@waterboards.ca.gov).

Sincerely,

  
Tom Howard  
Executive Director

RB9 002041  
Enclosure  
Trash Provisions Glossary

This glossary is an excerpt of the Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California, and the California Ocean Plan.

**Full Capture System:** A treatment control\*, or series of treatment controls, including but not limited to, a multi-benefit project\* or a low-impact development control\* that traps all particles that are 5 mm or greater, and has a design treatment capacity that is either:

- a) of not less than the peak flow rate, Q, resulting from a one-year, one-hour, storm in the subdrainage area, or
- b) appropriately sized to, and designed to carry at least the same flows as, the corresponding storm drain.

[Rational equation is used to compute the peak flow rate:  $Q = C \times I \times A$ , where Q = design flow rate (cubic feet per second, cfs); C = runoff coefficient (dimensionless); I = design rainfall intensity (inches per hour, as determined per the rainfall isohyetal map specific to each region, and A = subdrainage area (acres).]

Prior to installation, full capture systems\* must be certified by the Executive Director, or designee, of the State Water Board. Uncertified full capture systems will not satisfy the requirements of these Trash Provisions\*. To request certification, a permittee shall submit a certification request letter that includes all relevant supporting documentation to the State Water Board's Executive Director. The Executive Director, or designee, shall issue a written determination approving or denying the certification of the proposed full capture system or conditions of approval, including a schedule to review and reconsider the certification. Full capture systems certified by the Los Angeles Regional Water Board prior to the effective date of these Trash Provisions and full capture systems listed in Appendix I of the Bay Area-wide Trash Capture Demonstration Project, Final Project Report (May 8, 2014) will satisfy the requirements of these Trash Provisions, unless the Executive Director, or designee, of the State Water Board determines otherwise.

**Full Capture System Equivalency:** The trash\* load that would be reduced if full capture systems were installed, operated, and maintained for all storm drains that capture runoff from the relevant areas of land (priority land uses\*, significant trash generating areas\*, facilities or sites regulated by NPDES permits for discharges of storm water\* associated with industrial activity, or specific land uses or areas that generate substantial amounts of trash, as applicable). The full capture system equivalency\* is a trash load reduction target that the permittee quantifies by using an approach, and technically acceptable and defensible assumptions and methods for applying the approach, subject to the approval of permitting authority\*. Examples of such approaches include, but are not limited to, the following:

- (1) Trash Capture Rate Approach. Directly measure or otherwise determine the amount of trash captured by full capture systems for representative samples of all similar types of

\* Defined within this document.

land uses, facilities, or areas within the relevant areas of land over time to identify specific trash capture rates. Apply each specific trash capture rate across all similar types of land uses, facilities, or areas to determine full capture system equivalency. Trash capture rates may be determined either through a pilot study or literature review. Full capture systems selected to evaluate trash capture rates may cover entire types of land uses, facilities, or areas, or a representative subset of types of land uses, facilities, or areas.

With this approach, full capture system equivalency is the sum of the products of each type of land use, facility, or area multiplied by trash capture rates for that type of land use, facility, or area.

- (2) **Reference Approach.** Determine the amount of trash in a reference receiving water in a reference watershed where full capture systems have been installed for all storm drains that capture runoff from all relevant areas of land. The reference watershed must be comprised of similar types and extent of sources of trash and land uses (including priority land uses and all other land uses), facilities, or areas as the permittee's watershed. With this approach, full capture system equivalency would be demonstrated when the amount of trash in the receiving water is equivalent to the amount of trash in the reference receiving water.

**Institutional Controls:** Non-structural best management practices (i.e., no structures are involved) that may include, but not be limited to, street sweeping, sidewalk trash\* bins, collection of the trash, anti-litter educational and outreach programs, producer take-back for packaging, and ordinances.

**Low-Impact Development Controls:** Treatment controls that employ natural and constructed features that reduce the rate of storm water runoff, filter out pollutants, facilitate storm water storage onsite, infiltrate storm water into the ground to replenish groundwater supplies, or improve the quality of receiving groundwater and surface water. (See Water Code § 10564.)

**Multi-Benefit Project:** a treatment control\* project designed to achieve any of the benefits set forth in section 10562, subdivision (d) of the Water Code. Examples include projects designed to: infiltrate, recharge, or store storm water for beneficial reuse; develop or enhance habitat and open space through storm water and non-storm water management; and/or reduce storm water and non-storm water runoff volume.

**Municipal Separate Storm Sewer System (MS4):** Same meaning set forth in 40 Code of Federal Regulations section 122.26(b)(8).

**Preproduction Plastic:** Same meaning set forth in section 13367(a) of the Water Code.

**Priority Land Uses:** Those developed sites, facilities, or land uses (i.e., not simply

zoned land uses) within the MS4 permittee's jurisdiction from which discharges of trash\* are regulated by these Trash Provisions\* as follows:

- (1) High-density residential: all land uses with at least ten (10) developed dwelling units/acre.
- (2) Industrial: land uses where the primary activities on the developed parcels involve product manufacture, storage, or distribution (e.g., manufacturing businesses, warehouses, equipment storage lots, junkyards, wholesale businesses, distribution centers, or building material sales yards).
- (3) Commercial: land uses where the primary activities on the developed parcels involve the sale or transfer of goods or services to consumers (e.g., business or professional buildings, shops, restaurants, theaters, vehicle repair shops, etc.)
- (4) Mixed urban: land uses where high-density residential, industrial, and/or commercial land uses predominate collectively (i.e., are intermixed).
- (5) Public transportation stations: facilities or sites where public transit agencies' vehicles load or unload passengers or goods (e.g., bus stations and stops).

Equivalent alternate land uses: An MS4 permittee with regulatory authority over priority land uses may issue a request to the applicable permitting authority\* that the MS4 permittee be allowed to substitute one or more land uses identified above with alternate land uses within the MS4 permittee's jurisdiction that generates rates of trash that is equivalent to or greater than the priority land use(s) being substituted. The land use area requested to substitute for a priority land use need not be an acre-for-acre substitution but may involve one or more priority land uses, or a fraction of a priority land use, or both, provided the total trash generated in the equivalent alternative land use is equivalent to or greater than the total trash generated from the priority land use(s) for which substitution is requested. Comparative trash generation rates shall be established through the reporting of quantification measures such as street sweeping and catch basin cleanup records; mapping; visual trash presence surveys, such as the "Keep America Beautiful Visible Litter Survey"; or other information as required by the permitting authority.

**Permitting Authority:** The State Water Board or Regional Water Board, whichever issues the permit.

**Significant Trash Generating Areas:** All locations or facilities within the Department's jurisdiction where trash\* accumulates in substantial amounts, such as:

- (1) Highway on- and off-ramps in high density residential, commercial, and industrial land uses (as such land uses are defined under priority land uses\* herein).
- (2) Rest areas and park-and-rides.
- (3) State highways in commercial and industrial land uses (as such land uses are defined under priority land uses herein).
- (4) Mainline highway segments to be identified by the Department through pilot studies and/or surveys.

\* Defined within this document.

**Storm Water:** Same meaning set forth in 40 Code of Federal Regulations section 122.26(b)(13) (Nov. 16, 1990).

**Treatment Controls:** Structural best management practices to either (a) remove pollutants and/or solids from storm water\* runoff, wastewater, or effluent, or (b) capture, infiltrate or reuse storm water runoff, wastewater, or effluent treatment controls\* include full capture systems\* and low impact development controls\*.

**Trash:** All improperly discarded solid material from any production, manufacturing, or processing operation including, but not limited to, products, product packaging, or containers constructed of plastic, steel, aluminum, glass, paper, or other synthetic or natural materials.

**Trash Provisions:** The water quality objective for trash\*, as well as the prohibition of discharge and implementation requirements set forth in Implementation of Water Quality Objectives of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California Plan.

**SUBJECT: Order No. R9-2017-0077, An Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds within the San Diego Region to Submit Technical and Monitoring Reports Pertaining to the Control of Trash From Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays and Estuaries in the San Diego Region**

The California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) is hereby issuing Order No. R9-2017-0077 (Order) to the following MS4 permittees:

County of Orange	County of Riverside	County of San Diego	
City of Aliso Viejo	City of Murrieta	City of Carlsbad	City of Oceanside
City of Dana Point	City of Temecula	City of Chula Vista	City of Poway
City of Laguna Beach	City of Wildomar	City of Coronado	City of San Diego
City of Laguna Hills	Riverside County Flood Control and Water Conservation District	City of Del Mar	City of San Marcos
City of Laguna Niguel		City of El Cajon	City of Santee
City of Laguna Woods		City of Encinitas	City of Solana Beach
City of Lake Forest		City of Escondido	City of Vista
City of Mission Viejo		City of Imperial Beach	San Diego County Regional Airport Authority
City of Rancho Santa Margarita		City of La Mesa	San Diego Unified Port District
City of San Clemente		City of Lemon Grove	
Orange County Flood Control District		City of National City	

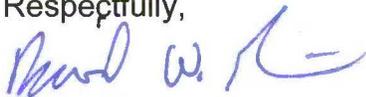

This Order implements specific statewide requirements to address the impacts of trash discharges to surface waters of California. These requirements were adopted in 2015 when the State Water Resources Control Board amended the Water Quality Control Plan for Ocean Waters of California (Ocean Plan) and the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California (ISWEBE Plan)

(collectively referred to hereafter as the Trash Amendments).<sup>1</sup> Pursuant to the Trash Amendments, the Order requires MS4 permittees to submit written notice indicating whether Track 1 or Track 2 control measures will be used to comply with the trash discharge prohibition within three months of the date of this letter. If Track 1 is selected, the Order requires MS4 permittees to submit a jurisdictional map indicating 1) priority land uses, 2) the MS4 permittees' storm drain network, and 3) proposed locations for installation of full capture devices and associated drainage areas. If Track 2 is selected, the Order requires MS4 permittees to submit a trash reduction implementation plan. In either case, MS4 permittees must also include implementation time schedules consistent with the Trash Amendments. Jurisdictional maps and implementation plans must be submitted to the San Diego Water Board within eighteen months of the date of this letter.

Order No. R9-2017-0077 is the finalized version of Tentative Order No. R9-2016-0205, which was released to MS4 permittees and other stakeholders for review and comment on November 10, 2016. The San Diego Water Board received 22 comment letters during the comment solicitation period. The responses to significant comments received, Tentative Order No. R9-2016-0205 showing revisions, and a conformed copy of the final Order are included as attachments to this letter. These documents along with the comment letters are also posted on the San Diego Water Board's website: [http://www.waterboards.ca.gov/sandiego/water\\_issues/programs/stormwater/trash\\_amendments.shtml](http://www.waterboards.ca.gov/sandiego/water_issues/programs/stormwater/trash_amendments.shtml).

In the subject line of any response, please include the requested **"In reply refer to:"** information located in the header of this letter. If you have any questions or comments, please contact Christina Arias at (619) 521-3361, or e-mail at [Christina.Arias@waterboards.ca.gov](mailto:Christina.Arias@waterboards.ca.gov).

Respectfully,

David W. Gibson  
Executive Officer

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD  
SAN DIEGO REGION**

**ORDER NO. R9-2017-0077**

**AN ORDER DIRECTING THE OWNERS AND OPERATORS OF  
PHASE I MUNICIPAL SEPARATE STORM SEWER SYSTEMS (MS4s)  
DRAINING THE WATERSHEDS WITHIN THE SAN DIEGO REGION**

**TO SUBMIT REPORTS PERTAINING TO THE CONTROL OF TRASH  
IN DISCHARGES FROM PHASE I MS4s  
TO OCEAN WATERS, INLAND SURFACE WATERS,  
ENCLOSED BAYS, AND ESTUARIES  
IN THE SAN DIEGO REGION**

The California Regional Water Quality Control Board, San Diego Region (hereinafter San Diego Water Board) finds:

- 1. Trash Amendments.** On April 7, 2015, the State Water Board adopted Resolution No. 2015-0019, amending the Water Quality Control Plan for Ocean Waters of California (Ocean Plan) and the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California (ISWEBE Plan) to address the impacts of trash to the surface waters of California (referred to hereafter as the Trash Amendments). The effective date of the Trash Amendments is December 2, 2015.
- 2. Regional MS4 Permit.** Throughout the State, trash is typically generated on land and transported to surface water, predominantly through storm water discharges from MS4s. These storm water discharges occur in part from Phase I MS4s in the San Diego Region regulated through a regional general permit adopted by the San Diego Water Board (Regional MS4 Permit) pursuant to section 402(p) of the Clean Water Act. The term Regional MS4 Permit refers to the San Diego Water Board's Order No. R9-2013-0001, as amended by Order Nos. R9-2015-0001 and R9-2015-0100, NPDES No. CAS0109266, *National Pollutant Discharge Elimination System (NPDES) Permit and Waste Discharge Requirements for Discharges from the Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds within the San Diego Region*.
- 3. Trash Amendments Implementation.** The Trash Amendments establish a statewide narrative water quality objective and implementation requirements to control trash, including a prohibition against the discharge of trash to ocean waters, inland surface waters, enclosed bays, and estuaries in California. For Phase I MS4 permittees with regulatory authority over priority land uses, the Trash Amendments require the San Diego Water Board to take certain steps towards implementation of the narrative water quality objective and prohibition by June 2, 2017 through requirements incorporated into the Regional MS4 Permit or through a monitoring and reporting order issued pursuant to Water Code section 13267 or 13383. The San Diego Water Board will not be amending the Regional MS4 Permit within the time frame specified by the Trash Amendments; therefore, the initial steps in planning for the implementation of the Trash Amendments are being required through this Order in accordance with Water Code

section 13383. The San Diego Water Board intends to incorporate the requirements of the Trash Amendments into the Regional MS4 Permit during its next reissuance in Fiscal Year 2018-19.

**4. Persons Responsible for the Discharges of Trash.** The owners and operators of Phase I MS4s are responsible for discharges of waste, including trash, from land uses and locations within their jurisdictions through their MS4s to ocean waters, inland surface waters, enclosed bays, and estuaries in the San Diego Region. In the San Diego Region, owners and operators of Phase I MS4s subject to the requirements of this Order (herein referred to as MS4 permittees) include the following entities:

- County of Orange
    - City of Aliso Viejo
    - City of Dana Point
    - City of Laguna Beach
    - City of Laguna Hills
    - City of Laguna Niguel
    - City of Laguna Woods
  - City of Lake Forest
  - City of Mission Viejo
  - City of Rancho Santa Margarita
  - City of San Clemente
  - City of San Juan Capistrano
  - Orange County Flood Control District
- 
- County of Riverside
    - City of Murrieta
    - City of Temecula
    - City of Wildomar
  - Riverside County Flood Control and Water Conservation District<sup>1</sup>
- 
- County of San Diego
    - City of Carlsbad
    - City of Chula Vista
    - City of Coronado
    - City of Del Mar
    - City of El Cajon
    - City of Encinitas
    - City of Escondido
    - City of Imperial Beach
    - City of La Mesa
    - City of Lemon Grove
  - City of National City
  - City of Oceanside
  - City of Poway
  - City of San Diego
  - City of San Marcos
  - City of Santee
  - City of Solana Beach
  - City of Vista
  - San Diego County Regional Airport Authority
  - San Diego Unified Port District

**5. Water Quality Objectives.** The Trash Amendments established the following statewide narrative water quality objectives for trash in ocean waters, inland surface waters, enclosed bays, and estuaries in California.

---

<sup>1</sup> Riverside County Flood Control and Water Conservation District (District) lacks regulatory authority over Priority Land Uses. As noted in Finding 9.d of this Order, the Trash Amendments (Appendix D of the Ocean Plan Chapter III.L.2.d and Appendix E of the ISWEBE Plan Chapter IV.A.3.d) provide the San Diego Water Board with the authority to investigate whether specific land uses or locations within the District's jurisdiction generate substantial amounts of trash and determine that compliance with Track 1 or Track 2 trash control measures for those land uses or locations is necessary.

- a. The Trash Amendments established the following narrative water quality objective for trash in Chapter II.C.5 of Appendix D of the Ocean Plan:

“Trash shall not be present in ocean waters, along shorelines or adjacent areas in amounts that adversely affect beneficial uses or cause nuisance.”

- b. The Trash Amendments established the following narrative water quality objective or trash in Chapter III.A of Appendix E of the ISWEBE Plan:

“Trash shall not be present in inland surface waters, enclosed bays, estuaries, and along shorelines or adjacent areas in amounts that adversely affect beneficial uses or cause nuisance.”

Meeting these narrative water quality objectives for trash will be protective and supportive of numerous beneficial uses for the ocean waters, inland surface waters, enclosed bays, and estuaries in the San Diego Region, including but not limited to, wildlife habitat (WILD), marine habitat (MAR), preservation of rare and endangered species (RARE), fish migration (MIGR), navigation (NAV), and water contact and non-contact recreation (REC1 and REC2).

- 6. Trash Discharge Prohibition.** The Trash Amendments established the following discharge prohibition in Chapter III.I.6 of Appendix D of the Ocean Plan and Chapter IV.A.2 of Appendix E of the ISWEBE Plan:

“The discharge of trash to surface waters of the State or the deposition of trash where it may be discharged into surface waters of the State is prohibited.”

- 7. Regional MS4 Permit Implementation of the Trash Amendments.** The Trash Amendments require the incorporation of the trash narrative water quality objectives and discharge prohibition into the Regional MS4 Permit. The Regional MS4 Permit then will require the MS4 permittees to comply with the trash narrative water quality objectives and discharge prohibition through the implementation of one of two measures to be selected by the MS4 permittees.

To comply with the trash narrative water quality objectives and discharge prohibition, the MS4 permittees are required to implement either of the following measures:

*Track 1:* Install, operate, and maintain full capture systems for all storm drains that capture runoff from the priority land uses in their jurisdictions; or

*Track 2:* Install, operate, and maintain any combination of full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls within either the jurisdiction of the MS4 permittee or within the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. The MS4 permittee shall demonstrate that such combination achieves full capture system equivalency. The MS4 permittee may determine which controls to implement to achieve compliance with full capture system equivalency. It is,

however, the State Water Board's expectation that the MS4 permittee will elect to install full capture systems where such installation is not cost-prohibitive.

The Trash Amendments require that within three (3) months of the effective date of this Order, each MS4 permittee is required to provide written notice to the San Diego Water Board stating whether the MS4 permittee elects to comply with the trash discharge prohibition by implementing Track 1 or Track 2. MS4 permittees that elect to implement Track 2 are also required to submit an implementation plan to the San Diego Water Board within eighteen (18) months of receipt of this Order. The implementation plan is required to describe: (i) the combination of controls selected by the MS4 permittee and the rationale for the selection, (ii) how the combination of controls is designed to achieve full capture system equivalency, and (iii) how full capture equivalency will be demonstrated. The implementation plan is subject to approval by the San Diego Water Board. Track 2 implementation plans will be deemed accepted by the San Diego Water Board ninety (90) days after submission unless otherwise directed in writing by the San Diego Water Board Executive Officer. MS4 permittees may elect to change Tracks through their adaptive management process during the compliance time schedule described in Finding 10, provided they submit supporting justification to the San Diego Water Board.

**8. Full Capture System Equivalency.** The Trash Amendments define full capture system equivalency as follows:

"Full capture system equivalency is the trash load that would be reduced if full capture systems were installed, operated, and maintained for all storm drains that capture runoff from the relevant areas of land (priority land uses, significant trash generating areas, facilities or sites regulated by NPDES permits for discharges of storm water associated with industrial activity, or specific land uses or areas that generate substantial amounts of trash, as applicable). The full capture system equivalency is a trash load reduction target that the permittee quantifies by using an approach, and technically acceptable and defensible assumptions and methods for applying the approach, subject to the approval of permitting authority. Examples of such approaches include, but are not limited to, the following:

*(1) Trash Capture Rate Approach. Directly measure or otherwise determine the amount of trash captured by full capture systems for representative samples of all similar types of land uses, facilities, or areas within the relevant areas of land over time to identify specific trash capture rates. Apply each specific trash capture rate across all similar types of land uses, facilities, or areas to determine full capture system equivalency. Trash capture rates may be determined either through a pilot study or literature review. Full capture systems selected to evaluate trash capture rates may cover entire types of land uses, facilities, or areas, or a representative subset of types of land uses, facilities, or areas. With this approach, full capture system equivalency is the sum of the products of each type of land use, facility, or area multiplied by trash capture rates for that type of land use, facility, or area.*

*(2) Reference Approach. Determine the amount of trash in a reference receiving water in a reference watershed where full capture systems have been installed for all storm drains that capture runoff from all relevant areas of land. The reference watershed must be comprised of similar types and extent of sources of trash and land uses (including priority land uses and all other land uses), facilities, or areas as the permittee's watershed. With this approach, full capture system equivalency would be demonstrated when the amount of trash in the receiving water is equivalent to the amount of trash in the reference receiving water."*

**9. Land Uses and Locations Requiring Trash Controls.** The Trash Amendments define land uses and locations that are to be controlled for trash discharges by MS4 permittees:

- a. Priority Land Uses:** Those developed sites, facilities, or land uses (i.e. not simply zoned land uses) within a MS4 permittee's jurisdiction from which discharges of trash are regulated by the Ocean Plan or ISWEBE Plan as follows:
- High-density residential: all land uses with at least ten (10) developed dwelling units/acre.
  - Industrial: land uses where the primary activities on the developed parcels involve product manufacture, storage, or distribution (e.g., manufacturing businesses, warehouses, equipment storage lots, junkyards, wholesale businesses, distribution centers, or building material sales yards).
  - Commercial: land uses where the primary activities on the developed parcels involve the sale or transfer of goods or services to consumers (e.g., business or professional buildings, shops, restaurants, theaters, vehicle repair shops, etc.).
  - Mixed urban: land uses where high-density residential, industrial, and/or commercial land uses predominate collectively (i.e., are intermixed).
  - Public transportation stations: facilities or sites where public transit agencies' vehicles load or unload passengers or goods (e.g., bus stations and stops).
- b. Equivalent Alternative Land Uses:** An MS4 permittee with regulatory authority over priority land uses may issue a request to the San Diego Water Board that the MS4 permittee be allowed to substitute one or more land uses identified above with an alternate land use within the MS4 permittee's jurisdiction that generates rates of trash that is equivalent to or greater than the priority land use(s) being substituted. The land use area requested to substitute for a priority land use need not be an acre-for-acre substitution but may involve one or more priority land uses, or a fraction of a priority land use, or both, provided the total trash generated in the equivalent alternative land use is equivalent to or greater than the total trash generated from the priority land use(s) for which substitution is requested. Comparative trash generation rates shall be established through the reporting of quantification measures such as street sweeping and catch basin cleanup records;

mapping; visual trash presence surveys, such as the “Keeping America Beautiful Visible Litter Survey”; or other information as required by the San Diego Water Board.

- c. *Coordination with California Department of Transportation (Caltrans).* The Trash Amendments (Appendix D of the Ocean Plan Chapter III.L.2.b and Appendix E of the ISWEBE Plan Chapter IV.A.3.b) require that Caltrans and MS4 permittees coordinate their efforts to install, operate, and maintain full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls in significant trash generating areas and/or priority land uses.
- d. *Specific Land Uses or Locations Determined by the San Diego Water Board:* The Trash Amendments (Appendix D of the Ocean Plan Chapter III.L.2.d and Appendix E of the ISWEBE Plan Chapter IV.A.3.d) provide the San Diego Water Board with the authority to determine that specific land uses or locations (e.g., parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the San Diego Water Board makes that determination, the Board may require the MS4 permittees to comply with the requirements of the Trash Amendments with respect to such land uses or locations.

**10. Compliance Time Schedule.** The Trash Amendments require the implementing permit (i.e. the Regional MS4 Permit) to state that full compliance with the trash discharge prohibition shall occur within ten (10) years of the effective date of the first implementing permit. In addition, the Regional MS4 Permit must require the MS4 permittees to demonstrate achievements of interim milestones such as average load reductions of ten percent (10%) per year or other progress to full implementation. In no case may the final compliance date, which will be included in the Regional MS4 Permit, be later than fifteen (15) years from the effective date of the Trash Amendments (i.e. December 2, 2030).

**11. Monitoring and Reporting.** The Trash Amendments require the implementing Regional MS4 Permit to include monitoring and reporting requirements to ensure adequate trash control. The MS4 permittees will be required to provide reports to the San Diego Water Board on an annual basis to describe progress toward achieving full compliance with the trash discharge prohibition. The monitoring and reporting requirements are dependent on the measures elected to be implemented by a MS4 permittee<sup>2</sup>.

**12. Water Quality Improvement Plans and Jurisdictional Runoff Management Plans.** The Regional MS4 Permit requires the MS4 permittees to develop and implement Water Quality Improvement Plans for ten (10) Watershed Management Areas, designated in the Regional MS4 Permit as shown in Table 1 below:

---

<sup>2</sup> The minimum monitoring and reporting requirements that will be considered for inclusion in the Regional MS4 Permit reissuance are described in the Trash Amendments at Appendix D: Chapter III, section L.5 of the Ocean Plan and Appendix E: Chapter IV, section A.6 of the ISWEBE Plan.

Pueblo San Diego (908.00) Sweetwater (909.00) Otay (910.00)	San Diego Bay	- Sweetwater River - Otay River - San Diego Bay - Pacific Ocean	- City of Chula Vista - City of Coronado - City of Imperial Beach - City of La Mesa - City of Lemon Grove - City of National City - City of San Diego - County of San Diego - San Diego County Regional Airport Authority - San Diego Unified Port District
Tijuana (911.00)	Tijuana River	- Tijuana River - Tijuana Estuary - Pacific Ocean	- City of Imperial Beach - City of San Diego - County of San Diego

**Notes:**

1. By agreement dated February 10, 2015, pursuant to Water Code section 13228, the Phase I MS4 discharges within the jurisdiction of the City of Laguna Hills and the City of Laguna Woods located in the Santa Ana Region are regulated by San Diego Water Board Order No. R9-2013-0001 as amended by Order No. R9-2015-0001, upon the later effective date of Order No. R9-2015-0001 or Santa Ana Water Board Tentative Order No. R8-2015-0001. The City of Laguna Hills and Laguna Woods must also comply with the requirements of the San Diego Creek/Newport Bay TMDL in section XVIII of Santa Ana Water Board Order No. R8-2015-0001.
2. By agreement dated February 10, 2015, pursuant to Water Code section 13228, Phase I MS4 discharges within the City of Lake Forest located within the San Diego Water Board Region are regulated by the Santa Ana Water Board Order No. R8-2015-0001 (NPDES No. CAS618030) upon the later effective date of this Order or Santa Ana Water Board Tentative Order No. R8-2015-0001. In accordance with the terms of the agreement between the San Diego Water Board and the Santa Ana Water Board, the City of Lake Forest must implement the requirements of the Bacteria TMDL in Attachment E of this Order, participate in preparation and implementation of the Water Quality Improvement Plan for the Aliso Creek Watershed Management Area as described in Provision B of this Order and continue implementation of its over-irrigation discharge prohibition in its City Ordinance, Title 15, Chapter 15, section 14.030, List (b).
3. By agreement dated October 26, 2015, pursuant to Water Code section 13228, Phase I MS4 discharges within the City of Menifee located within the San Diego Water Board Region are regulated by the Santa Ana Water Board Order No. R8-2010-0033 as it may be amended or reissued (NPDES No. CAS618033) upon the later effective date of this Order. In accordance with the terms of the agreement between the San Diego Water Board and the Santa Ana Water Board, the City of Menifee must participate in preparation and implementation of the Water Quality Improvement Plan for the Santa Margarita River Watershed Management Area as described in Provision B of this Order.
4. By agreement dated October 26, 2015, pursuant to Water Code section 13228, the Phase I MS4 discharges within the jurisdiction of the City of Murrieta and the City of Wildomar located in the Santa Ana Region are regulated by San Diego Water Board Order No. R9-2013-0001 as amended by Orders No. R9-2015-0001 and R9-2015-0100. The City of Murrieta and City of Wildomar must also comply with the requirements of the Lake Elsinore/Canyon Lake Nutrient TMDLs in section VI.D.2 of Santa Ana Water Board Order No. R8-2010-0033, or corresponding section as it may be amended or reissued.

The Water Quality Improvement Plans include the following: (a) identification of priority water quality conditions that need to be addressed to improve the water quality in each Watershed Management Area; (2) numeric goals for the highest priority water quality conditions to be achieved that will demonstrate discharges from the MS4s are not causing or contributing to exceedances of applicable water quality objectives, or water quality objectives are being attained in receiving waters; (3) a description of the water quality improvement strategies that will be and may be implemented to achieve the numeric goals; and (4) schedules for implementing the water quality improvement strategies and achieving the numeric goals.

The Regional MS4 Permit also requires incorporation of implementation plans for applicable Total Maximum Daily Loads (TMDLs) and Areas of Special Biological Significance (ASBS), which include interim and final water quality-based effluent limitations, compliance strategies, and compliance schedules, into the Water Quality Improvement Plans.

In addition to Water Quality Improvement Plan development, each MS4 permittee is also required to develop and implement a jurisdictional runoff management plan (JRMP) that describes how specific strategies in the Water Quality Improvement Plans will be implemented by each MS4 permittee. While the JRMPs are not explicitly part of the Water Quality Improvement Plan, reporting relating to JRMP programs is accomplished through the Water Quality Improvement Plan annual reporting process.

The implementation measures, interim milestones, and compliance schedules for Track 1 or Track 2 of the Trash Amendments shall also be incorporated into either the Water Quality Improvement Plans, the JRMPs, or a combination of the two, to be implemented by the MS4 permittees as part of the adaptive management process.

Compliance with the Trash Amendments is based on implementation of specific measures to control trash within a MS4 permittee's jurisdiction; however, inclusion of trash control strategies may be beneficial on a watershed scale. Through the issuance of this Order pursuant to Water Code section 13383, the San Diego Water Board intends the MS4 permittees to incorporate the requirements of the Trash Amendments into either the Water Quality Improvement Plans, the JRMPs, or a combination of the two, after reissuance of the Regional MS4 Permit. Reporting on implementation measures to comply with the Trash Amendments will be required through jurisdictional runoff management program annual report forms, which are submitted as part of the Water Quality Improvement Plan Annual Reports.

**13. Basis for Requiring Submittals from MS4 Permittees.** This Order is issued under federal authority. The water quality objectives established by the Trash Amendments described in Finding 5 serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations (33 U.S.C. § 1312, 40 C.F.R. § 131). This water quality standard was specifically approved by the United States Environmental Protection Agency (USEPA) following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4 permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Amendments may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7). In those cases, the specific actions that will be proposed by the MS4 permittees in response to this Order substitute for some or all the actions that would otherwise be required consistent with any waste load allocations in a trash TMDL (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B)). Accordingly, this Order is issued pursuant to federal law. Consistent with the Trash Amendments, this Order nevertheless allows MS4 permittees flexibility in the specific actions they propose to meet the federal requirements.

**14. California Environmental Quality Act.** Issuance of this Order is not subject to CEQA in accordance with section 15061(b)(3) of Chapter 3, Title 14 of the CCR because it can be seen with certainty that there is no possibility that the required activities in question may have a significant effect on the environment.

**IT IS HEREBY ORDERED**, pursuant to California Water Code section 13383, that the MS4 permittees must comply with the following directives:

**A. REQUIRED SUBMITTALS<sup>3</sup>**

1. **Written Notices.** Each MS4 permittee identified in Finding 4 must submit to the San Diego Water Board, **no later than three (3) months from the date of this Order (September 5, 2017)**, a written notice stating whether the MS4 permittee will implement Track 1 or Track 2 to comply with the trash discharge prohibition in the Ocean Plan and ISWEBE Plan.
2. **Track 1 Jurisdictional Maps and Time Schedule.** Each MS4 permittee identified in Finding 4 electing to comply with Track 1 must submit the following information **no later than eighteen (18) months from the date of this Order (December 3, 2018)**:
  - a. A jurisdictional map identifying Priority Land Uses, the corresponding storm drain network including all storm drain inlets and drainage, proposed full capture system installation locations and associated drainage areas; *and*
  - b. A time schedule to achieve full compliance with the trash discharge prohibition, including interim milestones (such as average load reductions of ten percent per year or other progress) to full implementation. The final compliance date must not be later than fifteen (15) years from the effective date of the Trash Amendments (i.e. December 2, 2030).
3. **Track 2 Implementation Plans.** Each MS4 permittee identified in Finding 4 electing to comply with Track 2 must submit, **no later than eighteen (18) months from the date of this Order (December 3, 2018)**, an implementation plan that describes:
  - a. The combination of controls<sup>4</sup> selected by the MS4 permittee and the rationale for each selection;
  - b. How the combination of controls is designed to achieve full capture system equivalency;
  - c. How full capture system equivalency will be demonstrated;
  - d. How the implemented controls identified in the trash implementation plans will be monitored and assessed in jurisdictional runoff management program or Water Quality Improvement Plan Annual Reports;
  - e. Proposals by MS4 permittees, if any, to substitute Priority Land Uses described in Finding 9 above with other locations or land uses, provided that the total trash

---

<sup>3</sup> Directives A.1, A.2, A.3, and A.5 do not apply to the Riverside County Flood Control and Water Conservation District because it does not have land use authority over Priority Land Uses.

<sup>4</sup> Controls include full capture systems, multi-benefit projects, other treatment controls, and/or institutional controls, as defined in Appendix D of the Ocean Plan and Appendix E of the ISWEBE Plan.

generated in other locations or land uses is equivalent to, or greater than, the total trash generated in the Priority Land Use being substituted; *and*

- f. A time schedule to achieve full compliance with the trash discharge prohibition, including interim milestones (such as average load reductions of ten percent per year or other progress) to full implementation. The proposed final compliance date must not be later than fifteen (15) years from the effective date of the Trash Amendments (i.e. December 2, 2030).

**4. Identification of Substantial Trash Generating Land Uses or Locations Within Riverside County Flood Control and Water Conservation District's**

**Jurisdiction.** The Riverside County Flood Control and Water Conservation District (District) must submit, **no later than eighteen (18) months from the date of this Order (December 3, 2018)**, a report identifying land uses or locations within its jurisdiction including but not limited to, facilities, drainage structures, and easements that generate a substantial amount of trash.

- 5. Coordination with Caltrans.** Each MS4 permittee identified in Finding 4 must submit, **no later than eighteen (18) months from the date of this Order (December 3, 2018)**, a description of how MS4 permittees will coordinate their efforts to install, operate, and maintain full capture systems, multi-benefit projects, and other controls with Caltrans in significant trash generating areas and/or priority land uses, as applicable.

**B. PROVISIONS**

- 1. Signatory Requirements.** All documents submitted to the San Diego Water Board must be signed and certified.

a. All reports required by this Order must be signed as follows:

- (1) For a corporation, by a principal executive officer of at least the level of vice-president;
- (2) For a partnership or sole proprietorship, by a general partner or the proprietor, respectively;
- (3) For a municipality, state, federal or other public agency, by either a principal executive or ranking elected official.
- (4) By a duly authorized representative of the person designated above (B.1.a.(1), B.1.a.(ii), or B.1.(a)(iii)). A person is a duly authorized representative only if:

- (a) The authorization is made in writing by a person described in paragraph B.6.a above;

(b) The authorization specifies either an individual or position having responsibility for the overall operation of the regulated facility or activity; and

(c) The written authorization is submitted to the San Diego Water Board.

**b.** Any person signing a document required by this Order must make the following certification:

*"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

**2. Submittal of Documents.** All documents submitted to the San Diego Water Board in compliance with this Order must be submitted in electronic format (compact disk (CD-ROM or CD) in a Portable Document Format (PDF), unless otherwise directed. All electronic format documents required under this Order must be submitted to:

Executive Officer  
California Regional Water Quality Control Board  
San Diego Region  
2375 Northside Drive, Suite 100  
San Diego, CA 92108  
Attn: Laurie Walsh, PE, Storm Water Management Unit

**3. Changes to Order.** This Order may be amended, rescinded, or updated by the Executive Officer. The MS4 permittees may propose changes or alternatives to the requirements in this Order if a valid rationale for the changes is shown. The filing of a request by a MS4 permittees for amending, rescinding, or updating this Order, or notification of planned changes or anticipated noncompliance does not stay any condition of this Order.

## C. NOTIFICATIONS

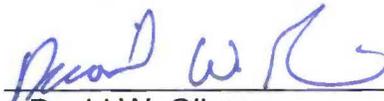

**1. Enforcement Discretion.** The San Diego Water Board reserves its right to take any enforcement action authorized by law for violations of the terms and conditions of this Order.

**2. Requesting Administrative Review by the State Water Board.** Any aggrieved person may petition the State Water Board regarding this Order in accordance with Water Code section 13320 and the California Code of Regulations title 23 sections 2050 and following. The State Water Board must receive the petition by 5:00 p.m.,

30 days following the date of this Order. Copies of the laws and regulations applicable to filing petitions may be found on the State Water Board website at [http://www.waterboards.ca.gov/public\\_notices/petitions/water\\_quality](http://www.waterboards.ca.gov/public_notices/petitions/water_quality) or will be provided upon request.

For instructions on how to file a petition for review, see the State Water Board website at:  
[http://www.waterboards.ca.gov/public\\_notices/petitions/water\\_quality/wqpetition\\_instr.shtml](http://www.waterboards.ca.gov/public_notices/petitions/water_quality/wqpetition_instr.shtml)

## Introduction

This report contains the California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) responses to written comments received on Tentative Order No. R9-2016-0205, *An Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds Within the San Diego Region to Submit Technical and Monitoring Reports Pertaining to the Control of Trash in Discharges From Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays, and Estuaries in the San Diego Region*. The San Diego Water Board provided public notice of the release of the Tentative Order on November 10, 2016 and provided a period of 34 days for public review and comment. The public comment period ended on December 14, 2016. Summaries of the written comments and San Diego Water Board responses are in the table that follows. The comments are organized according to related sections in Tentative Order No. R9-2016-0205. The table indicates if the Tentative Order was revised in response to the comment.

The San Diego Water Board received 22 comment letters during the comment solicitation period.

### List of Commenters:

1. California Manufacturers & Technology Association
2. California Stormwater Quality Association (CASQA)
3. City of Carlsbad
4. City of Coronado
5. City of Dana Point
6. City of Encinitas
7. City of Escondido
8. City of La Mesa
9. City of Lake Forest
10. City of Menifee
11. City of San Clemente
12. City of San Juan Capistrano
13. City of Santee
14. City of Solana Beach
15. City of Vista
16. City of San Diego

17. County of Orange (on behalf of itself and the Cities of Aliso Viejo, Dana Point, Laguna Hills, Laguna Niguel, Lake Forest, Mission Viejo, and Rancho Santa Margarita)
18. County of San Diego
19. Riverside County Flood Control and Water Conservation District
20. San Bernardino County
21. Unified Port of San Diego
22. Upper Santa Margarita River Copermittees (County of Riverside and Cities of Murrieta, Temecula, and Wildomar)

Abbreviations used in this document:

Caltrans	California Department of Transportation

State Water Board	State Water Resources Control Board
Tentative Order	Tentative Order No. R9-2016-0205

Comment No.	Tentative Order Location/Subject	Comment Summary	Submitted By	San Diego Water Board Response
1	General Comment <i>Need for Public Hearing</i>	The San Diego Water Board should hold a public hearing prior to issuance of an Investigative Order.	<ul style="list-style-type: none"> <li>• CASQA</li> </ul>	The San Diego Water Board Executive Officer has reviewed the revised Tentative Order, written comments, and responses in this matter and made the determination to issue the final Order under his delegated authority.
2	General Comment <i>Compliance with Receiving Water Limitations</i>	The Tentative Order should indicate that meeting the trash discharge prohibition via Track 1 or Track 2 would also mean the MS4 permittees are in compliance with Receiving Water Limitations (i.e., meeting the water quality objectives).	<ul style="list-style-type: none"> <li>• City of San Diego</li> </ul>	The San Diego Water Board disagrees that the Tentative Order needs to stipulate that compliance with the trash discharge prohibition means compliance with the receiving water limitations. The Trash Amendments specifically state that MS4 permittees that are in full compliance with requirements for the control of trash, as specified in the implementing permit, shall be determined to be in compliance with the <i>discharge prohibition</i> . However, no such language is included in the Trash Amendments to indicate that full compliance with requirements for the control of trash would also mean an MS4 permittee would be in compliance with either receiving water limitations or water quality objectives. This was not an oversight; this was intended by the State Water Board (see responses to Comment Numbers 4.1 and 10.9 of Appendix F to the State Water Board's Final Staff Report for Trash Amendments dated April 7, 2015). <sup>1</sup>

<sup>1</sup> Appendix F of the State Water Board Final Staff Report on the Trash Amendments is available on the State Water Board website at [http://www.waterboards.ca.gov/water\\_issues/programs/trash\\_control/docs/trash\\_sr\\_040715.pdf](http://www.waterboards.ca.gov/water_issues/programs/trash_control/docs/trash_sr_040715.pdf) (as of May 17, 2016).

Comment No.	Tentative Order Location/Subject	Comment Summary	Submitted By	San Diego Water Board Response
3	General Comment <i>Unfunded Mandate</i>	The requirements associated with the Tentative Order are state-issued unfunded mandates for which funding has not been provided, and thus the requirements are subject to the provisions of Calif. Const. article XIII B, section 6. The Tentative Order should provide a funding source for these requirements.	<ul style="list-style-type: none"> <li>• City of Dana Point</li> <li>• City of Escondido</li> <li>• City of Lake Forest</li> <li>• City of San Clemente</li> <li>• City of San Juan Capistrano</li> <li>• City of Santee</li> <li>• County of Orange</li> <li>• San Bernardino County</li> </ul>	The San Diego Water Board disagrees that the requirements associated with the Tentative Order are state-issued unfunded mandates. The water quality objective established by the Trash Amendments serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations (33 U.S.C. § 1312, 40 C.F.R. § 131). This water quality standard was specifically approved by USEPA following adoption by the State Water Board and approval by the Office of Administrative Law. The final Order is issued under federal authority. The San Diego Water Board has included revisions to clarify the legal authority forming the basis for the final Order.
4	General Comment <i>State Guidelines Needed</i>	The Tentative Order should not be issued until State guidelines on Track 2 implementation (such as interjurisdictional matters including compliance monitoring when trash is discharged into a common MS4) are provided.	<ul style="list-style-type: none"> <li>• City of Lake Forest</li> <li>• City of San Clemente</li> <li>• City of San Juan Capistrano</li> <li>• City of Santee</li> <li>• San Bernardino County</li> </ul>	The San Diego Water Board disagrees that the Tentative Order should not be issued until State guidelines on Track 2 implementation are provided. The San Diego Water Board will issue the final Order in accordance with the timing requirements stipulated in the Trash Amendments. It is the San Diego Water Board's understanding that the State Water Board is not planning to provide guidance on compliance monitoring. However, the San Diego Water Board encourages the MS4 permittees to initiate dialogue with stakeholders, including the San Diego Water Board, to discuss trash reduction proposals. The San Diego

Comment No.	Tentative Order Location/Subject	Comment Summary	Submitted By	San Diego Water Board Response
				Water Board will assist MS4 permittees during Track 2 implementation plan development to clarify interpretation of the final Order requirements.
5	General Comment <i>Jurisdictional Liability</i>	The Tentative Order and implementing permit should include language clarifying that an MS4 permittee is not liable for any trash resulting from other MS4 permittees upstream.	<ul style="list-style-type: none"> <li>• Unified Port of San Diego</li> </ul>	The San Diego Water Board disagrees that the Tentative Order and implementing permit should include language clarifying that an MS4 permittee is not liable for any trash resulting from other MS4 permittees upstream. The purpose of the Order is to implement the statewide Trash Amendments. The requirements therein will be incorporated into the Regional MS4 Permit upon permit reissuance. Provision E.2.b.(6) of the Regional MS4 Permit states that “Each Copermittee must coordinate, when necessary, with upstream Copermittees and/or entities to prevent illicit discharges from upstream sources into the MS4 within its jurisdiction.” Therefore, the San Diego Water Board’s expectation is that MS4 permittees (identified as Copermittees in the Regional MS4 Permit) coordinate to prevent illicit discharges, including trash, as necessary. Downstream MS4 permittees may consider trash monitoring at jurisdictional boundaries to demonstrate that trash discharges originate from upstream areas, beyond their jurisdictional authority.
6	General Comment	The Tentative Order should not be issued until a list of “certified”	<ul style="list-style-type: none"> <li>• City of Dana Point</li> </ul>	The State Water Board will issue a list of “certified” full capture devices

Comment No.	Tentative Order Location/Subject	Comment Summary	Submitted By	San Diego Water Board Response
	<i>List of "Certified" Full Capture Devices and Demonstration of Full Capture Equivalency Needed</i>	full capture devices is made available, as well as guidance on topics such as demonstration of full capture equivalency. This is needed before MS4 permittees can make an informed decision on choosing Track 1 or Track 2.	<ul style="list-style-type: none"> <li>• City of Lake Forest</li> <li>• City of San Diego</li> <li>• City of San Juan Capistrano</li> <li>• San Bernardino County</li> <li>• Unified Port of San Diego</li> </ul>	simultaneously with their planned issuance of a Water Code section 13383 Order to Phase II MS4 permittees regarding implementation of the Trash Amendments. This will occur within the same general time frame as the issuance of the San Diego Water Board's Order to Phase 1 MS4 permittees in the San Diego Region. The State Water Board may provide limited guidance on demonstrating full capture equivalency. However, the San Diego Water Board encourages the MS4 permittees to initiate dialogue with stakeholders, including the San Diego Water Board, to discuss trash control proposals. The San Diego Water Board will assist with Track 2 implementation plan development as it pertains to interpretation of the requirements of the final Order.
7	General Comment <i>Review of Track 2 Implementation Plans</i>	As Track 1 is the State Board's preferred option for compliance with the Trash Amendments, Regional Boards should be cautious when reviewing Track 2 Implementation Plans to ensure that full capture system equivalency will be met. Adoption of local product ban ordinances is ineffective.	<ul style="list-style-type: none"> <li>• California Manufacturers &amp; Technology Association</li> </ul>	The San Diego Water Board appreciates the comment. The San Diego Water Board intends to closely review Track 2 implementation plans to ensure proposed strategies comply with the requirement to achieve full capture system equivalency. The definition of institutional controls in the Trash Amendments does not preclude the adoption of local product ban ordinances.
8	General Comment <i>Caltrans and Phase II MS4s</i>	Clear and consistent requirements should be applicable to all regulated parties	<ul style="list-style-type: none"> <li>• City of Dana Point</li> </ul>	The San Diego Water Board agrees that Caltrans and Phase II permittees should be required to address trash at the same time to promote cooperation and

Comment No.	Tentative Order Location/Subject	Comment Summary	Submitted By	San Diego Water Board Response
	<i>Should Have Same Requirements as Phase I Permittees</i>	at the same time to promote cooperation and coordination.		coordination. The State Water Board is the lead agency for issuance of requirements to both Caltrans and Phase II MS4 permittees pertaining to the Trash Amendments. In terms of timing, the Trash Amendments require that Regional Water Boards either modify, re-issue, or adopt an MS4 permit to implement the requirements of the Trash Amendments, or issue an Investigative Order pursuant to Water Code section 13267 or 13383 to implement the requirements of the Trash Amendments within eighteen months of the effective date. The San Diego Water Board has chosen to require the initial steps in planning for the implementation of the Trash Amendments through issuance of a final Order pursuant to Water Code section 13383 on or before June 2, 2017.
9	<i>Finding 4 Inclusion of City of Menifee</i>	The designation of the City of Menifee as an MS4 permittee in the Tentative Order incorrectly implies that all of the requirements of the Tentative Order are applicable to the City, which is inconsistent with Finding 29.b of the San Diego Regional MS4 Permit, which states that the City of Menifee is largely regulated by the Santa Ana Water Board. The Trash Amendments are to be implemented on a jurisdictional	<ul style="list-style-type: none"> <li>• City of Menifee</li> </ul>	The San Diego Water Board agrees that inclusion of the City of Menifee in the Tentative Order is not necessary because the City of Menifee is regulated by the Santa Ana Water Board under Order No. R8-2010-0033 (as it may be amended or reissued). The Santa Ana Water Board is the “permitting authority” with regulatory oversight over the City of Menifee’s jurisdictional runoff management program.

Comment No.	Tentative Order Location/Subject	Comment Summary	Submitted By	San Diego Water Board Response
		basis, and the City of Menifee reports jurisdiction-wide activities to the Santa Ana Water Board.		
10	Finding 4 and Directive A.1 <i>Inclusion of Riverside Co. Flood Control and Water Conservation District</i>	The Riverside County Flood Control and Water Conservation District (District) should not be included in the Tentative Order because the District does not have regulatory authority over priority land uses.	<ul style="list-style-type: none"> <li>• Riverside County Flood Control and Water Conservation District</li> </ul>	The San Diego Water Board concurs with the District that it lacks regulatory authority over Priority Land Uses and is not subject to the requirements of the Tentative Order to declare implementation of Track 1 or Track 2 compliance tracks, as required by Chapter IV.A.3.a of Appendix E of the ISWEBE Plan and Chapter III.L.2.a. of Appendix D of the Ocean Plan. Therefore a footnote was added to Directive A indicating that the requirements applicable to other dischargers described in Finding 4 do not apply to the District. However, the San Diego Water Board disagrees that the District should not be required to implement trash controls in land uses and locations within its jurisdiction that generate substantial amounts of trash. The Trash Amendments were intended to reduce discharges of trash to receiving waters from land uses or locations that generate substantial amounts of trash, not just Priority Land Uses. The District may have facilities, drainage structures, or easements within its jurisdiction that in fact do generate trash, therefore the revised Tentative Order has a new requirement specific to the District (Directive A.4) that requires such areas to

Comment No.	Tentative Order Location/Subject	Comment Summary	Submitted By	San Diego Water Board Response
				<p>be identified. In accordance with the Trash Amendments (Appendix E of the Ocean Plan Chapter III.L.2.d and Appendix D to the ISWEBE Plan Chapter IV.A.3.d), the San Diego Water Board has the authority to determine that specific land uses or locations generate substantial amounts of trash, and may require MS4 permittees to comply with the requirements of the Trash Amendments. The San Diego Water Board may use information submitted as required by Directive A.4 to require the District to comply with the requirements of the Trash Amendments upon Regional MS4 Permit reissuance.</p>
11	<p>Finding 7 <i>Compliance with Water Quality Objective and Trash Prohibition</i></p>	<p>The Tentative Order should clarify that timely and complete implementation of Track 1 or Track 2 will meet the narrative water quality objectives and constitute compliance with the trash discharge prohibition as described in the Trash Amendments.</p>	<ul style="list-style-type: none"> <li>• CASQA</li> <li>• City of Carlsbad</li> <li>• City of Coronado</li> <li>• City of Encinitas</li> <li>• City of Escondido</li> <li>• City of Solana Beach</li> <li>• City of Vista</li> <li>• County of San Diego</li> <li>• Unified Port of San Diego</li> </ul>	<p>The San Diego Water Board agrees that MS4 permittees in full compliance with the requirements to control trash as described in the Trash Amendments shall be determined to be in compliance with the trash discharge prohibition. The San Diego Water Board disagrees that a MS4 permittee meeting the discharge prohibition is to be deemed in compliance with either receiving water limitations or narrative water quality objectives (see Response to Comment 2). The San Diego Water Board has not modified the Tentative Order in response to this comment. Full compliance with such requirements (Appendix D, Chapter III, section I.6.a of the Ocean Plan and</p>

Comment No.	Tentative Order Location/Subject	Comment Summary	Submitted By	San Diego Water Board Response
				<p>Appendix E, Chapter IV, section A.2.a of the ISWBE Plan) is more than just fully implementing the requirements of Track 1 or Track 2—it also includes compliance with the requirements to meet the schedule, coordinate efforts with Caltrans, and monitor and report. The more appropriate location for describing compliance with trash control requirements is either the implementing Regional MS4 Permit or the associated fact sheet. The San Diego Water Board will consider adding language to the Regional MS4 Permit with respect to a compliance pathway with the discharge prohibition, that is consistent with language from the Trash Amendments, during re-issuance of the Regional MS4 Permit.</p>
12	<p>Finding 7 <i>Omission of Language Providing Flexibility</i></p>	<p>Finding 7 of the Tentative Order describing the Track 2 language omits some of the Track 2 language in the Trash Amendments. <i>“The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.”</i></p>	<ul style="list-style-type: none"> <li>• CASQA</li> <li>• City of Carlsbad</li> <li>• City of Coronado</li> <li>• City of Encinitas</li> <li>• City of Escondido</li> <li>• City of Solana Beach</li> <li>• City of Vista</li> <li>• City of San Diego</li> </ul>	<p>The San Diego Water Board agrees that the Tentative Order omits some of the Track 2 language in the Trash Amendments and has modified the Tentative Order as suggested by the commenters in Finding 7.</p>

Comment No.	Tentative Order Location/Subject	Comment Summary	Submitted By	San Diego Water Board Response
			<ul style="list-style-type: none"> <li>• County of San Diego</li> <li>• County of Orange</li> <li>• Riverside County Flood Control and Water Conservation District</li> <li>• Unified Port of San Diego</li> <li>• Upper Santa Margarita River MS4 Permittees</li> </ul>	
13	<p>Finding 7 <i>Review and Approval Process for Track 2 Implementation Plans</i></p>	<p>The Tentative Order does not describe the San Diego Water Board’s review and approval process for Track 2 implementation plans. Language outlining the milestones and timing for approval should be added to Finding 7. This is needed to understand implementation expectations.</p>	<ul style="list-style-type: none"> <li>• CASQA</li> <li>• City of Carlsbad</li> <li>• City of Coronado</li> <li>• City of Encinitas</li> <li>• City of Escondido</li> <li>• City of Vista</li> <li>• City of San Diego</li> <li>• County of San Diego</li> <li>• Unified Port of San Diego</li> </ul>	<p>The San Diego Water Board agrees and added language to Finding 7 stating that “Track 2 implementation plans will be deemed accepted by the San Diego Water Board ninety (90) days after submission unless otherwise directed in writing by the San Diego Water Board Executive Officer.”</p>

Comment No.	Tentative Order Location/Subject	Comment Summary	Submitted By	San Diego Water Board Response
14	Finding 7 <i>Implementation Plan Submittal Should Correspond with Implementing MS4 Permit</i>	The due date for the Track 2 Implementation Plans should correspond with the language that is released in the next iteration of the MS4 permit (implementing permit). Otherwise, MS4 permittees will not have a clear understanding of trash related requirements in the implementing permit.	<ul style="list-style-type: none"> <li>• Unified Port of San Diego</li> </ul>	The San Diego Water Board intends to propose language, consistent with the requirements in the Trash Amendments, in the next iteration of the Regional MS4 Permit. The San Diego Water Board will assist during Track 2 implementation plan development to clarify interpretation of the final Order requirements.
15	Finding 7 <i>Ability to Change Compliance Tracks</i>	The Tentative Order should clearly state that MS4 permittees may change tracks, provided they submit sufficient supporting justification. MS4 permittees may wish to choose Track 1 because of simplicity and compliance certainty it provides, but find some locations where full capture system implementation is not possible and therefore need to switch to Track 2.	<ul style="list-style-type: none"> <li>• City of Carlsbad</li> <li>• City of Encinitas</li> <li>• City of Escondido</li> <li>• City of Lake Forest</li> <li>• City of San Clemente</li> <li>• City of San Juan Capistrano</li> <li>• City of Santee</li> <li>• City of Solana Beach</li> <li>• City of Vista</li> <li>• County of San Diego</li> <li>• Riverside County Flood Control and Water</li> </ul>	The San Diego Water Board agrees with this recommendation and has modified Finding 7 of the Tentative Order to clarify that MS4 permittees may change Tracks through the adaptive management process, provided they submit supporting justification to the San Diego Water Board.

			Conservation District <ul style="list-style-type: none"> <li>• San Bernardino County</li> <li>• Unified Port of San Diego</li> <li>• Upper Santa Margarita River MS4 Permittees</li> </ul>	
16	Finding 7 <i>Credit for Existing Efforts</i>	The Tentative Order should clarify that existing controls may be used and monitored to achieve full capture system equivalency.	<ul style="list-style-type: none"> <li>• City of Solana Beach</li> </ul>	The San Diego Water Board agrees that MS4 permittees should evaluate existing controls to determine appropriateness of including such controls in Track 2 implementation plans. "Determining appropriateness" should include evaluation of existing BMP performance against performance standards of "certified" full capture devices. The San Diego Water Board is amenable to inclusion of existing controls in a MS4 permittee's implementation plan provided that rationale is included to support that determination. Since this analysis is done in the implementation plan (consistent with what is required in the Trash Amendments), no change to the Tentative Order was made.
17	Finding 8 <i>Full Capture System</i>	The definition for full capture system equivalency omits some language from the Trash Amendments that provides	<ul style="list-style-type: none"> <li>• CASQA</li> <li>• City of Carlsbad</li> </ul>	The San Diego Water Board agrees and has modified Finding 8 of the Tentative Order as suggested by the commenters.

Comment No.	Tentative Order Location/Subject	Comment Summary	Submitted By	San Diego Water Board Response
	<i>Equivalency Definition</i>	needed flexibility to the MS4 permittees. The Tentative Order should read: “ <i>Examples of such approaches include, <u>but are not limited to</u>, the following...</i> ”	<ul style="list-style-type: none"> <li>• City of Encinitas</li> <li>• City of Escondido</li> <li>• City of Solana Beach</li> <li>• City of Vista</li> <li>• County of Orange</li> <li>• County of San Diego</li> <li>• Riverside County Flood Control and Water Conservation District</li> <li>• Unified Port of San Diego</li> <li>• Upper Santa Margarita River MS4 Permittees</li> </ul>	
18	<i>Finding 9.a Priority Land Use Application</i>	Finding 9.a should clarify that the Priority Land Use definition only applies to Track 1.	<ul style="list-style-type: none"> <li>• CASQA</li> <li>• County of Orange</li> <li>• City of Carlsbad</li> <li>• City of Encinitas</li> <li>• City of Escondido</li> <li>• City of Vista</li> </ul>	The San Diego Water Board disagrees that Finding 9 in the Tentative Order should clarify that the Priority Land Use definition only applies to Track 1. The term “priority land uses” was not meant to apply only to the Track 1 compliance option. Section 2.4.1 of the State Water Board’s Final Staff Report for Trash Amendments dated April 7, 2015, states that “ <i>Under the final Trash Amendments,</i>

Comment No.	Tentative Order Location/Subject	Comment Summary	Submitted By	San Diego Water Board Response
			<ul style="list-style-type: none"> <li>• City of San Diego</li> <li>• County of San Diego</li> <li>• Riverside County Flood Control and Water Conservation District</li> <li>• Unified Port of San Diego</li> <li>• Upper Santa Margarita River MS4 Permittees</li> </ul>	<p><i>MS4 Phase I and Phase II NPDES permittees with regulatory authority over land uses can comply with the prohibition of discharge of trash under a dual alternative compliance approach or “Tracks.” The Track requirements would be inserted into NPDES permits. <u>Both Tracks have permittees focus their trash control efforts on priority land uses...</u></i> (emphasis added). Further, the State Water Board’s Response to Comments (Appendix F to the Staff Report), Response to Comment 10.1, states that, <i>“The State Water Board recognizes that other land uses may generate higher rates of trash. To allow for these occurrences the Trash Amendments include a provision for a MS4 permittee to focus on “equivalent alternate land uses” under both Track 1 and Track 2. (See Ocean Plan Amendment and Part I ISWEBE, Definitions Section, for “priority land uses.”) Quantification measures such as street sweeping, mapping, and visual trash presence surveys can be used to prioritize these land uses for Track 1 or Track 2 controls”</i> (emphasis added). Finally, several of the State Water Board’s responses to comments with regards to source control strategies state that <i>“Regulatory source control was included in the proposed amendment as one of several treatment controls that could be utilized by MS4 permittees with</i></p>

Comment No.	Tentative Order Location/Subject	Comment Summary	Submitted By	San Diego Water Board Response
				<p><i>regulatory control over <u>priority land uses</u> to comply with the prohibition of trash under <u>Track 2</u></i> (emphasis added). Based on these citations of the State Water Board’s Final Staff Report, it is clear that that “priority land uses” was intended to apply to both Track 1 and Track 2 compliance tracks. In terms of substituting more appropriate areas or land uses than the “priority land uses” as defined in the Trash Amendments, the process for doing so is similar, but distinct for the two compliance tracks. An MS4 permittee choosing Track 1 must obtain San Diego Water Board approval for substituting “priority land uses” with “equivalent alternate land uses.” An MS4 permittee choosing Track 2 may propose controls in “locations or land uses” other than the “priority land uses” in their implementation plans, which are subject to San Diego Water Board approval. In either case, MS4 permittees must start with assessing trash generated in, and implementing controls in, areas with “priority land uses” first. Based on these considerations, no change to the Tentative Order was made.</p>
19	Finding 9.b	<p>The Tentative Order does not contain the full language from the equivalent land use provisions in the Trash Amendments: “<i>The land use area requested to substitute for a priority land use</i>”</p>	<ul style="list-style-type: none"> <li>• CASQA</li> <li>• County of Orange</li> <li>• City of Carlsbad</li> </ul>	<p>The San Diego Water Board agrees with the comment and modified Finding 9.b of the Tentative Order to include the suggested language.</p>

Comment No.	Tentative Order Location/Subject	Comment Summary	Submitted By	San Diego Water Board Response
		<p><i>need not be an acre-for-acre substitution but may involve one or more priority land uses, or a fraction of a priority land use, or both, provided the total trash generated in the equivalent alternative land use is equivalent or greater than the total trash generated from the priority land uses for which substitution is requested.</i>” Omitting this language reduces the flexibility the MS4 permittees have to define priority land uses within their jurisdictions using local trash-generation information.</p>	<ul style="list-style-type: none"> <li>• City of Coronado</li> <li>• City of Encinitas</li> <li>• City of Escondido</li> <li>• City of Solana Beach</li> <li>• City of Vista</li> <li>• City of San Diego</li> <li>• County of San Diego</li> <li>• Riverside County Flood Control and Water Conservation District</li> <li>• Unified Port of San Diego</li> <li>• Upper Santa Margarita River MS4 Permittees</li> </ul>	
20	<p>Finding 9.d; Directive A.4 <i>Requirement to Address Transient Encampments</i></p>	<ul style="list-style-type: none"> <li>• The Tentative Order requirement to address transient encampments exceeds the scope and intent of the Trash Amendments;</li> <li>• Full capture systems are not designed to capture trash generated within the receiving</li> </ul>	<ul style="list-style-type: none"> <li>• CASQA</li> <li>• City of Carlsbad</li> <li>• City of Coronado</li> <li>• City of Dana Point</li> </ul>	<p>The San Diego Water Board carefully reviewed the intent of the Trash Amendments and agrees that the Tentative Order proposed for issuance under Water Code section 13383 is meant to implement the requirements of the statewide Trash Amendments and is not the appropriate regulatory mechanism</p>

Comment No.	Tentative Order Location/Subject	Comment Summary	Submitted By	San Diego Water Board Response
		<p>water as they are usually installed in catch basins and pipes;</p> <ul style="list-style-type: none"> <li>• Transient encampments are nonpoint sources of trash, and the Trash Amendments will ultimately be included in the MS4 Permit issued to point source dischargers;</li> <li>• “Transient encampments in the San Diego River Watershed” are neither a <u>specific land use</u> nor <u>location</u> as discussed in the Trash Amendments;</li> <li>• Full capture systems/suite of BMPs are intended to be placed in areas where MS4 permittees have “regulatory control” over; MS4 permittees do not have effective “regulatory control” over private, state, or federal properties where encampments are common;</li> <li>• MS4 permittees face significant constitutional and statutory restraints on their ability to address trash from encampments;</li> <li>• The requirement to address transient encampments limits the ability of MS4 permittees to be in compliance with either Track 1 or Track 2 because</li> </ul>	<ul style="list-style-type: none"> <li>• City of Encinitas</li> <li>• City of Escondido</li> <li>• City of La Mesa</li> <li>• City of Lake Forest</li> <li>• City of San Clemente</li> <li>• City of San Diego</li> <li>• City of San Juan Capistrano</li> <li>• City of Santee</li> <li>• City of Vista</li> <li>• City of San Diego</li> <li>• County of San Diego</li> <li>• County of Orange</li> <li>• Riverside County Flood Control and Water Conservation District</li> <li>• San Bernardino County</li> </ul>	<p>for addressing trash impacts to the San Diego River generated by transient encampments. As a result, the requirement to describe how the MS4 permittees will address trash generated from transient encampments has been removed. Nevertheless, the San Diego Water Board is committed to finding solutions to the ongoing trash problem in the San Diego River watershed, including trash generated from transient encampments. The San Diego Water Board will continue to seek solutions to this issue with the MS4 permittees and other stakeholders in the watershed.</p>

Comment No.	Tentative Order Location/Subject	Comment Summary	Submitted By	San Diego Water Board Response
		<p>these compliance pathways will be ineffective at addressing a complex social issue;</p> <ul style="list-style-type: none"> <li>• The Tentative Order references information regarding trash generation at encampments but does not explain why MS4 permittees are responsible;</li> <li>• Encampments would be better regulated under WDRs, or waivers of WDRs inclusive of all responsible parties with land use authority or ownership in those areas.</li> </ul>	<ul style="list-style-type: none"> <li>• Unified Port of San Diego</li> <li>• Upper Santa Margarita River MS4 Permittees</li> </ul>	
21	Finding 10 <i>Compliance Schedule Inclusion in Tentative Order</i>	The inclusion of an enforceable compliance schedule is not appropriate for an Investigative Order according to Water Code Sections 13267 and 13383. It is more appropriate to include any compliance schedule directly into the implementing permit (Regional MS4 Permit).	<ul style="list-style-type: none"> <li>• CASQA</li> <li>• City of Carlsbad</li> <li>• City of Encinitas</li> <li>• City of Escondido</li> <li>• City of Vista</li> <li>• County of Orange</li> <li>• County of San Diego</li> <li>• Unified Port of San Diego</li> </ul>	The San Diego Water Board agrees that the appropriate location for an enforceable compliance schedule is within the implementing Regional MS4 Permit. That is why the Tentative Order does not include an enforceable compliance schedule, but rather describes the compliance schedule that <i>likely will be proposed</i> for inclusion in the Regional MS4 Permit. Nevertheless, language was added to Finding 10 to further explain that the final compliance <i>date</i> , in addition to the full compliance schedule, will be included in the Regional MS4 Permit.

Comment No.	Tentative Order Location/Subject	Comment Summary	Submitted By	San Diego Water Board Response
22	Finding 10 <i>Interim Milestone Language</i>	The Tentative Order omits language from the Trash Amendments applicable to Track 1 that is needed to demonstrate that interim milestones may take the form of load reductions or “other progress.” Additionally, add a footnote giving examples of interim milestones.	<ul style="list-style-type: none"> <li>• City of Solana Beach</li> </ul>	The San Diego Water Board agrees that additional language from the Trash Amendments pertaining to the forms of interim milestones should be added to the language in the Tentative Order. Therefore, Finding 10 was amended to include language from the Trash Amendments to describe interim milestones “such as average load reductions of ten percent (10%) per year or other progress.”
23	Findings 11 and 14 <i>Reporting Requirements</i>	The Tentative Order needs to provide clarity regarding the monitoring and reporting requirements under Track 1 vs. Track 2. Not doing so could cause unnecessary monitoring and reporting by the MS4 permittees. Language from the Trash Amendments should be added as provided by the commenters.	<ul style="list-style-type: none"> <li>• CASQA</li> <li>• City of Carlsbad</li> <li>• City of Coronado</li> <li>• City of Encinitas</li> <li>• City of Escondido</li> <li>• City of Solana Beach</li> <li>• City of Vista</li> <li>• City of San Diego</li> <li>• County of San Diego</li> <li>• County of Orange</li> <li>• Unified Port of San Diego</li> </ul>	The San Diego Water Board agrees the requirements regarding monitoring and reporting on an annual basis should be clarified in the Tentative Order. A footnote was added to Finding 11 describing the minimum monitoring and reporting requirements that will be considered for inclusion in the Regional MS4 Permit upon reissuance. The footnote references language from the Trash Amendments at Appendix D: Chapter III, section L.5 of the Ocean Plan and Appendix E: Chapter IV, section A.6 of the ISWEBE Plan.

Comment No.	Tentative Order Location/Subject	Comment Summary	Submitted By	San Diego Water Board Response
24	Finding 13 & Directive A.2 Watershed vs. Jurisdictional Approach	<ul style="list-style-type: none"> <li>• A watershed approach to implementing the Trash Amendments was not the intent of the State Water Board;</li> <li>• Trash may not be the most important priority in every watershed;</li> <li>• Watershed scale presents challenges with respect to the determination of Full Capture System Equivalency, which is determined on a jurisdictional basis using local land use trash generation rates;</li> <li>• Flexibility should be given to MS4 permittees to include requirements of Trash Amendments into Water Quality Improvement Plans, jurisdictional runoff management plans, or both.</li> </ul>	<ul style="list-style-type: none"> <li>• City of Carlsbad</li> <li>• City of Coronado</li> <li>• City of Encinitas</li> <li>• City of Escondido</li> <li>• City of Solana Beach</li> <li>• City of Vista</li> <li>• City of San Diego</li> <li>• County of San Diego</li> <li>• County of Orange</li> <li>• Riverside County Flood Control and Water Conservation District</li> <li>• Unified Port of San Diego</li> <li>• Upper Santa Margarita River MS4 Permittees</li> </ul>	The San Diego Water Board agrees with the commenters and modified the Tentative Order at Finding 13 and Directive A.2 (renumbered to Directive A.3) to allow MS4 permittees the option of including trash implementation plans and monitoring and reporting either in the Water Quality Improvement Plans, the MS4 permittees' jurisdictional runoff management plans (JRMPs), or both.
25	Directive A.2	The Tentative Order does not provide adequate information regarding the types of treatment	<ul style="list-style-type: none"> <li>• City of San Diego</li> </ul>	Appendices to both the Ocean Plan and ISWEBE Plan define terms, including "treatment controls" and "institutional

Comment No.	Tentative Order Location/Subject	Comment Summary	Submitted By	San Diego Water Board Response
	<i>Acceptable Types of Controls</i>	controls and institutional controls that would be acceptable for use.		controls.” Both definitions include examples of the types of controls that would be acceptable. Additionally, the State Water Board will issue a list of “certified” full capture devices that are treatment controls and considered acceptable for use.
26	Directive A.2.d <i>Assessment of Controls vs. Plans</i>	The Tentative Order implies that the monitoring and assessment of <i>implementation plans</i> is required rather than monitoring and assessment of efficacy of <i>implementation controls</i> .	<ul style="list-style-type: none"> <li>• City of Solana Beach</li> </ul>	The San Diego Water Board agrees and has modified Directive A.2.d (renumbered to A.3.d) of the Tentative Order as suggested by the commenter.
27	Directive A.2.e <i>Equivalent Alternate Land Uses</i>	The Tentative Order incorrectly links the equivalent alternate land uses with the Track 2 compliance option. Priority land uses/equivalent alternate land uses are only relevant if a MS4 permittee selects the Track 1 compliance option.	<ul style="list-style-type: none"> <li>• CASQA</li> <li>• City of Carlsbad</li> <li>• City of Encinitas</li> <li>• City of Escondido</li> <li>• City of Vista</li> <li>• City of San Diego</li> <li>• County of San Diego</li> <li>• County of Orange</li> <li>• Riverside County Flood Control and Water Conservation District</li> </ul>	The San Diego Water Board disagrees that the Tentative Order incorrectly links the equivalent alternative land uses with the Track 2 compliance option for the reasons cited in the Response to Comment 18, therefore, no change was made to the Tentative Order.

Comment No.	Tentative Order Location/Subject	Comment Summary	Submitted By	San Diego Water Board Response
			<ul style="list-style-type: none"> <li>• Unified Port of San Diego</li> <li>• Upper Santa Margarita River MS4 Permittees</li> </ul>	
28	<p>Directive A.2.f <i>Compliance Schedule Inconsistent with Trash Amendments</i></p>	<p>The Tentative Order includes language that MS4 permittees include a compliance time schedule based on the “shortest practicable time” to achieve full compliance with the discharge prohibition; however, the Trash Amendments do not include similar language. It is improper to require a compliance schedule through a 13267/13383 Order and it is more appropriately included in the implementing permit.</p>	<ul style="list-style-type: none"> <li>• CASQA</li> <li>• City of Carlsbad</li> <li>• City of Encinitas</li> <li>• City of Escondido</li> <li>• City of San Diego</li> <li>• City of Solana Beach</li> <li>• City of Vista</li> <li>• County of Orange</li> <li>• County of San Diego</li> <li>• Riverside County Flood Control and Water Conservation District</li> <li>• Unified Port of San Diego</li> <li>• Upper Santa Margarita</li> </ul>	<p>The San Diego Water Board disagrees that Directive A.2.f, requiring submission of a time schedule, should be removed from the Tentative Order (the word “compliance” has been deleted). A time schedule is described in Appendix D of the Ocean Plan at Chapter III section L.4.a.(2) and (3), and Appendix E of the ISWEBE Plan at Chapter IV Section A.5.a.(2) and (3). A schedule will be included in the implementing Regional MS4 Permit upon reissuance. MS4 permittees should include schedules during plan development in order to ensure interim milestones and the final compliance date, as specified in the Trash Amendments, are met. This requirement was added to the Track 1 compliance pathway (not just Track 2 implementation plans). The language to achieve full compliance with the discharge prohibition based on the “shortest practicable time” has been removed from the Order to be consistent with the language of the Trash Amendments.</p>

Dear San Diego Region MS4 Copermittees:

Today the San Diego Water Board is issuing **Order No. R9-2017-0077, *An Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds Within the San Diego Region to Submit Reports Pertaining to the Control of Trash in Discharges from Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays, and Estuaries in the San Diego Region.*** Order No. 2017-0077 implements the statewide amendments made in April 2015 by the State Water Resources Control Board to the *Water Quality Control Plan for Ocean Waters of California* (Ocean Plan) and the *Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California* (ISWEBE Plan). The amendments to the Ocean Plan and ISWEBE Plan address the impacts of trash to the surface waters of California.

Order No. R9-2017-0077 is the finalized version of Tentative Order No. R9-2016-0205, which was released for public review and comment in November 2016. Please find attached the following 5 documents:

- Order No. R9-2017-0077;
- Transmittal Letter addressed to San Diego Region MS4 permittees;
- Revised Tentative Order with revisions shown in redline text;
- Response to Comments Report; and
- Electronic submittal instructions.

In short, Order No. R9-2017-0077 requires MS4 permittees to submit written notice indicating whether Track 1 or Track 2 control measures will be used to comply with the trash discharge prohibition within three months. If Track 1 is selected, the Order requires MS4 permittees to submit a jurisdictional map indicating 1) priority land uses, 2) the MS4 permittees' storm drain network, and 3) proposed locations for installation of full capture devices and associated drainage areas. If Track 2 is selected, the Order requires MS4 permittees to submit a trash reduction implementation plan. Jurisdictional maps and implementation plans must be submitted to the San Diego Water Board within eighteen months. The attached documents are also available on our website here:

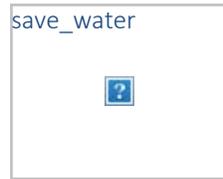

[http://www.waterboards.ca.gov/sandiego/water\\_issues/programs/stormwater/trash\\_amendments.shtml](http://www.waterboards.ca.gov/sandiego/water_issues/programs/stormwater/trash_amendments.shtml).

Thanks to everyone who submitted comments on the Tentative Order. Please feel free to contact me with any questions.

Sincerely,

*Christina Arias, PE*

---

 This is a message from the California Regional Water Quality Control Board, San Diego Region (9).

Dear San Diego Region Storm Water Stakeholder:

Today the San Diego Water Board issued **Order No. R9-2017-0077, An Order Directing the Owners and Operators of Phase I Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds Within the San Diego Region to Submit Reports Pertaining to the Control of Trash in Discharges from Phase I MS4s to Ocean Waters, Inland Surface Waters, Enclosed Bays, and Estuaries in the San Diego Region.** Order No. 2017-0077 implements the statewide amendments made in April 2015 by the State Water Resources Control Board to the *Water Quality Control Plan for Ocean Waters of California* (Ocean Plan) and the *Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California* (ISWEBE Plan). The amendments to the Ocean Plan and ISWEBE Plan address the impacts of trash to the surface waters of California.

Order No. R9-2017-0077 (attached with Transmittal Letter to the San Diego Region MS4 Permittees) is the finalized version of Tentative Order No. R9-2016-0205, which was released for public review and comment in November 2016.

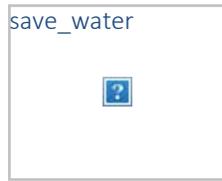

In short, Order No. R9-2017-0077 requires MS4 permittees to submit written notice indicating whether Track 1 or Track 2 control measures will be used to comply with the trash discharge prohibition within three months. If Track 1 is selected, the Order requires MS4 permittees to submit a jurisdictional map indicating 1) priority land uses, 2) the MS4 permittees' storm drain network, and 3) proposed locations for installation of full capture devices and associated drainage areas. If Track 2 is selected, the Order requires MS4 permittees to submit a trash reduction implementation plan. Jurisdictional maps and implementation plans must be submitted to the San Diego Water Board within eighteen months.

Order No. R9-2017-0077, the Transmittal Letter, revised Tentative Order R9-2016-0205, and a Response to Comments Report is available for download from our website here:  
[http://www.waterboards.ca.gov/sandiego/water\\_issues/programs/stormwater/trash\\_amendments.shtml](http://www.waterboards.ca.gov/sandiego/water_issues/programs/stormwater/trash_amendments.shtml).

Have a nice weekend and please contact me with any questions.

*Christina Arias, PE*
